PREFACE.

In preparing the present volume, the writer has been actuated by a conscientious desire to deepen and vivify our faith in the Christian system of truth, by showing that it does not rest *solely* on a special class of facts, but upon all the facts of nature and humanity; that its authority does not repose *alone* on the peculiar and supernatural events which transpired in Palestine, but also on the still broader foundations of the ideas and laws of the reason, and the common wants and instinctive yearnings of the human heart. It is his conviction that the course and constitution of nature, the whole current of history, and the entire development of human thought in the ages anterior to the advent of the Redeemer centre in, and can only be interpreted by, the purpose of redemption.

The method hitherto most prevalent, of treating the history of human thought as a series of isolated, disconnected, and lawless movements, without unity and purpose; and the practice of denouncing the religions and philosophies of the ancient world as inventions of satanic mischief, or as the capricious and wicked efforts of humanity to relegate itself from the bonds of allegiance to the One Supreme Lord and Lawgiver, have, in his judgment, been prejudicial to the interests of all truth, and especially injurious to the cause of Christianity. They betray an utter insensibility to the grand unities of nature and of thought, and a strange forgetfulness of that universal Providence which comprehends all nature and all history, and is yet so minute in its regards that it numbers the hairs on every human head, and takes note of every sparrow's fall. A juster method will lead us to regard the entire history of human thought as a development towards a specific end, and the providence of God as an all-embracing plan, which sweeps over all ages and all nations, and which, in its final consummation, will, through Christ, "gather together all things in one, both things which are in heaven and things which are on earth."

The central and unifying thought of this volume is *that the necessary ideas and laws of the reason, and the native instincts of the human heart, originally implanted by God, are the primal and germinal forces of history; and that these have been developed under conditions which were first ordained, and have been continually supervised by the providence of God.* God is the Father of humanity, and he is also the Guide and Educator of our race. As "the offspring of God," humanity is not a bare, indeterminate potentiality, but a living energy, an active reason, having definite qualities, and inheriting fundamental principles and necessary ideas which constitute it "the image and likeness of God." And though it has suffered a moral lapse, and, in the exercise of its freedom, has become alienated from the life of God, yet God has never abandoned the human race. He still "magnifies man, and sets his heart upon him." "He visits him every morning, and tries him every moment." "The inspiration of the Almighty still gives him understanding." The illumination of the Divine Logos still "teacheth man knowledge." The Spirit of God still comes near to and touches with strong emotion every human heart. "God has never left himself without a witness" in any nation, or in any age. The providence of God has always guided the dispersions and migrations of the families of the earth, and presided over and directed the education of the race. "He has foreordained the times of each nation's existence, and fixed the geographical boundaries of their habitations, *in order that they should seek the Lord*, and feel after and find Him who is not far from any one of us." The religions of the ancient world were the painful effort of the human spirit to return to its true rest and centre—the struggle to "find Him" who is so intimately near to every human heart, and who has never ceased to be the want of the human race. The philosophies of the ancient world were the earnest effort of human reason to reconcile the finite and the infinite, the human and the Divine, the subject and God. An overruling Providence, which makes even the wrath of man to praise Him, took up all these sincere, though often mistaken, efforts into his own plan, and made them sub-serve the purpose of redemption. They aided in developing among the nations "the desire of salvation," and in preparing the world for the advent of the Son of God. The entire course and history of Divine providence, in every

vii

nation, and in every age, has been directed towards the one grand purpose of "reconciling all things to Himself." Christianity, as a comprehensive scheme of reconciliation, embracing "all things," can not, therefore, be properly studied apart from the ages of earnest thought, of profound inquiry, and of intense religious feeling which preceded it. To despise the religions of the ancient world, to sneer at the efforts and achievements of the old philosophers, or even to cut them off in thought from all relation to the plans and movements of that Providence which has cared for, and watched over, and pitied, and guided all the nations of the earth, is to refuse to comprehend Christianity itself.

The author is not indifferent to the possibility that his purpose may be misconceived. The effort may be regarded by many conscientious and esteemed theologians with suspicion and mistrust. They can not easily emancipate themselves from the ancient prejudice against speculative thought. Philosophy has always been regarded by them as antagonistic to Christian faith. They are inspired by a commendable zeal for the honor of dogmatic theology. Every essay towards a profounder conviction, a broader faith in the unity of all truth, is branded with the opprobrious name of "rationalism." Let us not be terrified by a harmless word. Surely religion and right reason must be found in harmony. The author believes, with Bacon, that "the foundation of all religion is right reason." The abnegation of reason is not the evidence of faith, but the confession of despair. Sustained by these convictions, he submits this humble contribution to theological science to the thoughtful consideration of all lovers of Truth, and of Christ, the fountain of Truth. He can sincerely ask upon it the blessing of Him in whose fear it has been written, and whose cause it is the purpose of his life to serve.

The second series, on "Christianity and Modern Thought," is in an advanced state of preparation for the press.

NOTE.--It has been the aim of the writer, as far as the nature of the subject would permit, to adapt this work to general readers. The references to classic authors are, therefore, in all cases made to accessible English translations (in Bohn's Classical Library); such changes, however, have been made in the rendering as shall present the doctrine of the writers in a clearer and more forcible manner. For valuable services rendered in this department of the work, by Martin L. D'Ooge, m. A., Acting Professor of Greek Language and Literature in the University of Michigan, the author would here express his grateful acknowledgment.

"*Ye men of Athens*, all things which I behold bear witness to your carefulness in religion; for, as I passed through your city and beheld the objects of your worship, I found amongst them an altar with this inscription, TO THE UNKNOWN GOD; whom, therefore, ye worship, though ye know; Him not, Him declare I unto you. God who made the world and all things therein, seeing He is Lord of heaven and earth, dwelleth not in temples made with hands; neither is He served by the hands of men, as though he needed any thing; for He giveth unto all life, and breath, and all things. And He made of one blood all the nations of mankind to dwell upon the face of the whole earth; and ordained to each the appointed seasons of their existence, and the bounds of their habitation, that they should seek God, if haply they might feel after Him and find Him, though he be not far from every one of us: for in Him we live, and move, and have our being; as certain of your own poets have said, *For we are also His offspring*. Forasmuch, then, as we are the offspring of God, we ought not to think that the Godhead is like unto gold, or silver, or stone, graven by the art and device of man. Howbeit, those past times of ignorance God hath overlooked; but now He commandeth all men everywhere to repent, because He hath appointed a day wherein He will judge the world in righteousness by that Man whom He hath ordained; whereof He hath given assurance unto all, in that He hath raised Him from the dead."--Acts xvii. 22-31.

CHRISTIANITY AND GREEK PHILOSOPHY

CHAPTER I.

ATHENS, AND THE MEN OF ATHENS.

"Is it not worth while, for the sake of the history of men and nations, to study the surface of the globe in its relation to the inhabitants thereof?"--Goethe.

There is no event recorded in the annals of the early church so replete with interest to the Christian student, or which takes so deep a hold on the imagination, and the sympathies of him who is at all familiar with the history of Ancient Greece, as the one recited above. Here we see the Apostle Paul standing on the Areopagus at Athens, surrounded by the temples, statues, and altars, which Grecian art had consecrated to Pagan worship, and proclaiming to the inquisitive Athenians, "the strangers" who had come to Athens for business or for pleasure, and the philosophers and students of the Lyceum, the Academy, the Stoa, and the Garden, "*the unknown God*."

Whether we dwell in our imagination on the artistic grandeur and imposing magnificence of the

city in which Paul found himself a solitary stranger, or recall the illustrious names which by their achievements in arts and philosophy have shed around the city of Athens an immortal glory,--or whether, fixing our attention on the lonely wanderer amid the porticoes, and groves, and temples of this classic city, we attempt to conceive the emotion which stirred his heart as he beheld it "wholly given to idolatry;" or whether we contrast the sublime, majestic theism proclaimed by Paul with the degrading polytheism and degenerate philosophy which then prevailed in Athens, or consider the prudent and sagacious manner in which the apostle conducts his argument in view of the religious opinions and prejudices of his audience, we can not but feel that this event is fraught with lessons of instruction to the Church in every age.

That the objects which met the eye of Paul on every hand, and the opinions he heard everywhere expressed in Athens, must have exerted a powerful influence upon the current of his thoughts, as well as upon the state of his emotions, is a legitimate and natural presumption. Not only was "his spirit stirred within him"--his heart deeply moved and agitated when he saw the city wholly given to idolatry--but his thoughtful, philosophic mind would be engaged in pondering those deeply interesting questions which underlie the whole system of Grecian polytheism. The circumstances of the hour would, no doubt, in a large degree determine the line of argument, the form of his discourse, and the peculiarities of his phraseology. The more vividly, therefore, we can represent the scenes and realize the surrounding incidents; the more thoroughly we can enter into sympathy with the modes of thought and feeling peculiar to the Athenians; the more perfectly we can comprehend the spirit and tendency of the age; the more immediate our acquaintance with the religious opinions and philosophical ideas then prevalent in Athens, the more perfect will be our comprehension of the apostle's argument, the deeper our interest in his theme. Some preliminary notices of Athens and "the Men of Athens" will therefore be appropriate as introductory to a series of discourses on Paul's sermon on Mars' Hill.

15

The peculiar connection that subsists between Geography and History, between a people and the country they inhabit, will justify the extension of our survey beyond the mere topography of Athens. The people of the entire province of Attica were called Athenians (*Ἀθηναῖοι*) in their relation to the state, and Attics (*Ἀττικοί*) in regard to their manners, customs, and dialect. ¹ The climate and the scenery, the forms of contour and relief, the geographical position and relations of Attica, and, indeed, of the whole peninsula of Greece, must be taken into our account if we would form a comprehensive judgment of the character of the Athenian people.

The soil on which a people dwell, the air they breathe, the mountains and seas by which they are surrounded, the skies that overshadow them,--all these exert a powerful influence on their pursuits, their habits, their institutions, their sentiments, and their ideas. So that could we clearly group, and fully grasp all the characteristics of a region--its position, configuration, climate, scenery, and natural products, we could, with tolerable accuracy, determine what are the characteristics of the people who inhabit it. A comprehensive knowledge of the physical geography of any country will therefore aid us materially in elucidating the natural history, and, to some extent, the moral history of its population. "History does not stand *outside* of nature, but in her very heart, so that the historian only grasps a people's character with true precision when he keeps in full view its geographical position, and the influences which its surroundings have wrought upon it." ²

Footnote 2: [\(return\)](#) Ritter's "Geographical Studies," p. 34.

16

It is, however, of the utmost consequence the reader should understand that there are two widely different methods of treating this deeply interesting subject--methods which proceed on fundamentally opposite views of man and of nature. One method is that pursued by Buckle in his "History of Civilization in England." The tendency of his work is the assertion of the supremacy of material conditions over the development of human history, and indeed of every individual mind. Here man is purely passive in the hands of nature. Exterior conditions are the chief, if not the *only* causes of man's intellectual and social development. So that, such a climate and soil, such aspects of nature and local circumstances being given, such a nation necessarily follows. ³ The other method is that of Carl Ritter, Arnold Guyot, and Cousin. ⁴ These take account of the freedom of the human will, and the power of man to control and modify the forces of nature. They also take account of the original constitution of man, and the primitive type of nations; and they allow for results arising from the mutual conflict of geographical conditions. And they, especially, recognize the agency of a Divine Providence controlling those forces in nature by which the configuration of the earth's surface is determined, and the distribution of its oceans, continents, and islands is secured; and a providence, also, directing the dispersions and migrations of nations--determining the times of each nation's existence, and fixing the geographical bounds of their habitation, all in view of the *moral* history and spiritual development of the race,--"that they may feel after, and find the living God." The relation of man and nature is not, in their estimation, a relation of cause and effect. It is a relation of adjustment, of harmony, and of reciprocal action and reaction. "Man is not"--says Cousin--"an effect, and nature the cause, but there is between man and nature a manifest harmony of general laws."... "Man and nature are two great effects which, coming from the same cause, bear the same characteristics; so that the earth, and he who inhabits it, man and nature, are in perfect harmony." ⁵ God has created both man and the universe, and he has established between them a striking harmony. The earth was made for man; not simply to supply his physical wants, but also to minister to his intellectual and moral

17 development. The earth is not a mere dwelling-place of nations, but a school-house, in which God himself is superintending the education of the race. Hence we must not only study the *events* of history in their chronological order, but we must study the earth itself as the *theatre* of history. A knowledge of all the circumstances, both physical and moral, in the midst of which events take place, is absolutely necessary to a right judgment of the events themselves. And we can only elucidate properly the character of the actors by a careful study of all their geographical and ethnological conditions.

18 It will be readily perceived that, in attempting to estimate the influence which exterior conditions exert in the determination of national character, we encounter peculiar difficulties. We can not in these studies expect the precision and accuracy which is attained in the mathematical, or the purely physical sciences. We possess no control over the "materiel" of our inquiry; we have no power of placing it in new conditions, and submitting it to the test of new experiments, as in the physical sciences. National character is a *complex* result--a product of the action and reaction of primary and secondary causes. It is a conjoint effect of the action of the primitive elements and laws originally implanted in humanity by the Creator, of the free causality and self-determining power of man, and of all the conditions, permanent and accidental, within which the national life has been developed. And in cases where *physical* and *moral* causes are blended, and reciprocally conditioned and modified in their operation;--where primary results undergo endless modifications from the influence of surrounding circumstances, and the reaction of social and political institutions;--and where each individual of the great aggregate wields a causal power that obeys no specific law, and by his own inherent power sets in motion new trains of causes which can not be reduced to statistics, we grant that we are in possession of no instrument of exact analysis by which the complex phenomena of national character may be reduced to primitive elements. All that we can hope is, to ascertain, by psychological analysis, what are the fundamental ideas and laws of humanity; to grasp the exterior conditions which are, on all hands, recognized as exerting a powerful influence upon national character; to watch, under these lights, the manifestations of human nature on the theatre of history, and then apply the principles of a sound historic criticism to the recorded opinions of contemporaneous historians and their immediate successors. In this manner we may expect, at least, to approximate to a true judgment of history.

19 There are unquestionably fundamental powers and laws in human nature which have their development in the course of history. There are certain primitive ideas, imbedded in the constitution of each individual mind, which are revealed in the universal consciousness of our race, under the conditions of experience--the exterior conditions of physical nature and human society. Such are the ideas of cause and substance; of unity and infinity, which govern all the processes of discursive thought, and lead us to the recognition of Being *in se*;--such the ideas of right, of duty, of accountability, and of retribution, which regulate all the conceptions we form of our relations to all other moral beings, and constitute *morality*;--such the ideas of order, of proportion, and of harmony, which preside in the realms of art, and constitute the beau-ideal of *esthetics*;--such the ideas of God, the soul, and immortality, which rule in the domains of *religion*, and determine man a religious being. These constitute the identity of human nature under all circumstances; these characterize humanity in all conditions. Like permanent germs in vegetable life, always producing the same species of plants; or like fundamental types in the animal kingdom, securing the same homologous structures in all classes and orders; so these fundamental ideas in human nature constitute its sameness and unity, under all the varying conditions of life and society. The acorn must produce an oak, and nothing else. The grain of wheat must always produce its kind. The offspring of man must always bear his image, and always exhibit the same fundamental characteristics, not only in his corporeal nature, but also in his mental constitution.

But the germination of every seed depends on conditions *ab extra*, and all germs are modified, in their development, by geographical and climatal surroundings. The development of the acorn into a mature and perfect oak greatly depends on the exterior conditions of soil, and moisture, light, and heat. By these it may be rendered luxuriant in its growth, or it may be stunted in its growth. It may barely exist under one class of conditions, or it may perish under another. The Brassica oleracea, in its native habitat on the shore of the sea, is a bitter plant with wavy sea-green leaves; in the cultivated garden it is the cauliflower. The single rose, under altered conditions, becomes a double rose; and creepers rear their stalks and stand erect. Plants, which in a cold climate are annuals, become perennial when transported to the torrid zone. ⁶ And so human nature, fundamentally the same under all circumstances, may be greatly modified, both physically and mentally, by geographical, social, and political conditions. The corporeal nature of man--his complexion, his physiognomy, his stature; the intellectual nature of man--his religious, ethical, and esthetical ideas are all modified by his surroundings. These modifications, of which all men dwelling in the same geographical regions, and under the same social and political institutions, partake, constitute the *individuality* of nations. Thus, whilst there is a fundamental basis of unity in the corporeal and spiritual nature of man, the causes of diversity are to be sought in the circumstances in which tribes and nations are placed in the overruling providence of God.

20 The power which man exerts over material conditions, by virtue of his intelligence and freedom, is also an important element which, in these studies, we should not depreciate or ignore. We must accept, with all its consequences, the dictum of universal consciousness that man is *free*. He is not absolutely subject to, and moulded by nature. He has the power to control the circumstances by which he is surrounded--to originate new social and physical conditions--to determine his own individual and responsible character--and he can wield a mighty influence over the character of his fellow-men. Individual men, as Lyncurgus, Solon, Pericles, Alexander, Cæsar, and Napoleon have left the impress of their own mind and character upon the political institutions of nations, and, in indirect manner, upon the character of succeeding generations of men. Homer, Plato, Cicero, Bacon, Kant, Locke, Newton, Shakspeare, Milton have left a deep and permanent impression upon the forms of thought and speech, the language and literature, the science and philosophy of nations. And inasmuch as a nation is the aggregate of individual beings endowed with spontaneity and freedom, we must grant that exterior conditions are not omnipotent in the formation of national character. Still the free causality of man is exercised within a narrow field. "There is a strictly necessitative limitation drawing an impassable boundary-line around the area of volitional freedom." The human will "however subjectively free" is often "objectively unfree;" thus a large "uniformity of volitions" is the natural consequence. ⁷ The child born in the heart of China, whilst he may, in his personal freedom, develop such traits of character as constitute his individuality, must necessarily be conformed in his language, habits, modes of thought, and religious sentiments to the spirit of his country and age. We no more expect a development of Christian thought and character in the centre of Africa, unvisited by Christian teaching, than we expect to find the climate and vegetation of New England. And we no more expect that a New England child shall be a Mohammedan, a Parsee, or a Buddhist, than that he shall have an Oriental physiognomy, and speak an Oriental language. Indeed it is impossible for a man to exist in human society without partaking in the spirit and manners of his country and his age. Thus all the individuals of a nation represent, in a greater or less degree, the spirit of the nation. They who do this most perfectly are the *great* men of that nation, because they are at once both the product and the impersonation of their country and their age. "We allow ourselves to think of Shakspeare, or of Raphael, or of Phidias as having accomplished their work by the power of their individual genius, but greatness like theirs is never more than the highest degree of perfection which prevails widely around it, and forms the environment in which it grows. No such single mind in single contact with the facts of nature could have created a Pallas, a Madonna, or a Lear; such vast conceptions are the growth of ages, the creation of a nation's spirit; and the artist and poet, filled full with the power of that spirit, but gave it form, and nothing but form. Nor would the form itself have been attained by any isolated talent. No genius can dispense with experience.... Noble conceptions already existing, and a noble school of execution which will launch mind and hand upon their true courses, are indispensable to transcendent excellence. Shakspeare's plays were as much the offspring of the long generations who had pioneered the road for him, as the discoveries of Newton were the offspring of those of Copernicus." ⁸ The principles here enounced apply with equal force to philosophers and men of science. The philosophy of Plato was but the ripened fruit of the pregnant thoughts and seminal utterances of his predecessors,--Socrates, Anaxagoras, and Pythagoras; whilst all of them do but represent the general tendency and spirit of their country and their times. The principles of Lord Bacon's "Instauratio Magna" were incipient in the "Opus Majus" of Roger Bacon, the Franciscan friar. The sixteenth century matured the thought of the thirteenth century. The inductive method in scientific inquiry was immanent in the British mind, and the latter Bacon only gave to it a permanent form. It is true that great men have occasionally appeared on the stage of history who, like the reformers Luther and Wesley, have seemed to be in conflict with the prevailing spirit of their age and nation, but these men were the creations of a providence--that providence which, from time to time, has *supernaturally* interposed in the moral history of our race by corrective and remedial measures. These men were inspired and led by a spirit which descended from on high. And yet even they had their precursors and harbingers. Wyckliffe and John Huss, and Jerome of Prague are but the representatives of numbers whose names do not grace the historic page, who pioneered the way for Luther and the Reformation. And no one can read the history of that great movement of the sixteenth century without being persuaded there were thousands of Luther's predecessors and contemporaries who, like Staupitz and Erasmus, lamented the corruptions of the Church of Rome, and only needed the heroic courage of Luther to make them reformers also. Whilst, therefore, we recognize a free causal power in man, by which he determines his individual and responsible character, we are compelled to recognize the general law, that national character is mainly the result of those geographical and ethnological, and political and religious conditions in which the nations have been placed in the providence of God.

Footnote 7: [\(return\)](#) See Dr. Wheedon's "Freedom of the Will," pp. 164, 165.

Footnote 8: [\(return\)](#) Froude, "Hist. of England," pp. 73, 74.

22 Nations, like persons, have an *Individuality*. They present certain characteristic marks which constitute their proper identity, and separate them from the surrounding nations of the earth; such, for example, as complexion, physiognomy, language, pursuits, customs, institutions, sentiments, ideas. The individuality of a nation is determined mainly from *without*, and not, like human individuality, from within. The laws of a man's personal character have their home in the

23 soul; and the peculiarities and habits, and that conduct of life, which constitute his responsible character are, in a great degree, the consequence of his own free choice. But dwelling, as he does, in society, where he is continually influenced by the example and opinions of his neighbors; subject, as he is, to the ceaseless influence of climate, scenery, and other terrestrial conditions, the characteristics which result from these relations, and which are common to all who dwell in the same regions, and under the same institutions, constitute a national individuality. Individual character is *variable* under the same general conditions, national character is *uniform*, because it results from causes which operate alike upon all individuals.

Now, that man's complexion, his pursuits, his habits, his ideas are greatly modified by his geographical surroundings, is the most obvious of truths. No one doubts that the complexion of man is greatly affected by climatic conditions. The appearance, habits, pursuits of the man who lives within the tropics must, necessarily, differ from those of the man who dwells within the temperate zone. No one expects that the dweller on the mountain will have the same characteristics as the man who resides on the plains; or that he whose home is in the interior of a continent will have the same habits as the man whose home is on the islands of the sea. The denizen of the primeval forest will most naturally become a huntsman. The dweller on the extended plain, or fertile mountain slope, will lead a pastoral, or an agricultural life. Those who live on the margin of great rivers, or the borders of the sea, will "do business on the great waters." Commerce and navigation will be their chief pursuits. The people whose home is on the margin of the lake, or bay, or inland sea, or the thickly studded archipelago, are mostly fishermen. And then it is a no less obvious truth that men's pursuits exert a moulding influence on their habits, their forms of speech, their sentiments, and their ideas. Let any one take pains to observe the peculiarities which characterize the huntsman, the shepherd, the agriculturist, or the fisherman, and he will be convinced that their occupations stamp the whole of their thoughts and feelings; color all their conceptions of things outside their own peculiar field; direct their simple philosophy of life; and give a tone, even, to their religious emotions.

24 The general aspects of nature, the climate and the scenery, exert an appreciable and an acknowledged influence on the *mental* characteristics of a people. The sprightliness and vivacity of the Frank, the impetuosity of the Arab, the immobility of the Russ, the rugged sternness of the Scot, the repose and dreaminess of the Hindoo are largely due to the country in which they dwell, the air they breathe, the food they eat, and the landscapes and skies they daily look upon. The nomadic Arab is not only indebted to the country in which he dwells for his habit of hunting for daily food, but for that love of a free, untrammelled life, and for those soaring dreams of fancy in which he so ardently delights. Not only is the Swiss determined by the peculiarities of his geographical position to lead a pastoral life, but the climate, and mountain scenery, and bracing atmosphere inspire him with the love of liberty. The reserved and meditative Hindoo, accustomed to the profuse luxuriance of nature, borrows the fantastic ideas of his mythology from plants, and flowers, and trees. The vastness and infinite diversity of nature, the colossal magnitude of all the forms of animal and vegetable life, the broad and massive features of the landscape, the aspects of beauty and of terror which surround him, and daily pour their silent influences upon his soul, give vividness, grotesqueness, even, to his imagination, and repress his active powers. His mental character bears a peculiar and obvious relation to his geographical surroundings. ⁹

Footnote 9: [\(return\)](#) Ritter, "Geograph. Studies," p. 287.

25 The influence of external nature on the imagination--the *creative* faculty in man--is obvious and remarkable. It reveals itself in all the productions of man--his architecture, his sculpture, his painting, and his poetry. Oriental architecture is characterized by the boldness and massiveness of all its parts, and the monotonous uniformity of all its features. This is but the expression, in a material form, of that shadowy feeling of infinity, and unity, and immobility which an unbroken continent of vast deserts and continuous lofty mountain chains would naturally inspire. The simple grandeur and perfect harmony and graceful blending of light and shade so peculiar to Grecian architecture are the product of a country whose area is diversified by the harmonious blending of land and water, mountain and plain, all bathed in purest light, and canopied with skies of serenest blue. And they are also the product of a country where man is released from the imprisonment within the magic circle of surrounding nature, and made conscious of his power and freedom. In Grecian architecture, therefore, there is less of the massiveness and immobility of nature, and more of the grace and dignity of man. It adds to the idea of permanence a *vital* expression. "The Doric column," says Vitruvius, "has the proportion, strength, and beauty of man." The Gothic architecture had its birthplace among a people who had lived and worshipped for ages amidst the dense forests of the north, and was no doubt an imitation of the interlacing of the overshadowing trees. The clustered shaft, and lancet arch, and flowing tracery, reflect the impression which the surrounding scenery had woven into the texture of the Teutonic mind.

The history of painting and of sculpture will also show that the varied "styles of art" are largely the result of the aspects which external nature presented to the eye of man. Oriental sculpture, like its architecture, was characterized by massiveness of form and tranquillity of expression; and its painting was, at best, but colored sculpture. The most striking objects are colossal figures, in which the human form is strangely combined with the brute, as in the winged bulls of Nineveh and the sphinxes of Egypt. Man is regarded simply as a part of nature, he does not rise above the plane of animal life. The soul has its immortality only in an eternal metempsychosis--a cycle of life which sweeps through all the brute creation. But in Grecian sculpture we have less of nature, more of man; less of massiveness, more of grace and elegance; less repose, and more of action.

Now the connection between these styles of art, and the countries in which they were developed, is at once suggested to the thoughtful mind.

26 And then, finally, the literature of a people equally reveals the impress of surrounding cosmical conditions. "The poems of Ossian are but the echo of the wild, rough, cloudy highlands of his Scottish home." The forest songs of the wild Indian, the negro's plaintive melodies in the rice-fields of Carolina, the refrains in which the hunter of Kamtchatka relates his adventures with the polar bear, and in which the South Sea Islander celebrates his feats and dangers on the deep, all betoken the influence which the scenes of daily life exert upon the thoughts and feelings of our race. "To what an extent nature can express herself in, and modify the culture of the individual, as well as of an entire people, can be seen on Ionian soil in the verse of Homer, which, called forth under the most favorable sky, and on the most luxuriant shore of the Grecian archipelago, not only charms us to-day, but bearing this impress, has determined what shall be the classic form throughout all coming time." [10](#)

Footnote 10: [\(return\)](#) See Ritter, pp. 288, 289. Poetic art has unquestionably its *geographical* distributions like the fauna and flora of the globe. "If you love the images, not merely of a rich, but of a luxuriant fancy; if you are pleased with the most daring flights; if you would see a poetic creation full of wonders, then turn your eye to the poetry of the *orient*, where all forms appear in purple; where each flower glows like the morning ray resting on the earth. But if, on the contrary, you prefer depth of thought, and earnestness of reflection; if you delight in the colossal, yet pale forms, which float about in mist, and whisper of the mysteries of the spirit-land, and of the vanity of all things, except honor, then I must point you to the hoary *north*.... Or if you sympathize with that deep feeling, that longing of the soul, which does not linger on the earth, but evermore looks up to the azure tent of the stars, where happiness dwells, where the unquiet of the beating heart is still, then you must resort to the romantic poetry of the *west*."-- "*Study of Greek Literature*," Bishop Esaias Tegnér, p. 38.

In seeking, therefore, to determine correctly what are the characteristics of a nation, we must endeavor to trace how far the physical constitution of that people, their temperament, their habits, their sentiments, and their ideas have been formed, or modified, under the surrounding geographical conditions, which, as we have seen, greatly determine a nation's individuality. Guided by these lights, let us approach the study of "*the men of Athens*."

27 *Attica*, of which Athens was the capital, and whose entire populations were called "Athenians," was the most important of all the Hellenic states. It is a triangular peninsula, the base of which is defined by the high mountain ranges of Cithæron and Parnes, whilst the two other sides are washed by the sea, having their vertex at the promontory of Sunium, or Cape Colonna. The prolongation of the south-western line towards the north until it reaches the base at the foot of Mount Cithæron, served as the line of demarkation between the Athenian territory and the State of Megara. Thus Attica may be generally described as bounded on the north-east by the channel of the Negropont; on the south-west by the gulf of Ægina and part of Megara; and on the north-west by the territory which formed the ancient Bœotia, including within its limits an area of about 750 miles. [11](#)

Hills of inferior elevation connect the mountain ranges of Cithæron and Parnes with the mountainous surface of the south-east of the peninsula. These hills, commencing with the promontory of Sunium itself, which forms the vertex of the triangle, rise gradually on the south-east to the round summit of Hymettus, and onward to the higher peak of Pentelicus, near Marathon, on the east. The rest of Attica is all a plain, one reach of which comes down to the sea on the south, at the very base of Hymettus. Here, about five miles from the shore, an abrupt rock rises from the plain, about 200 feet high, bordered on the south by lower eminences. That rock is the Acropolis. Those lower eminences are the Areopagus, the Pnyx, and the Museum. In the valley formed by these four hills we have the Agora, and the varied undulations of these hills determine the features of the city of Athens. [12](#)

Footnote 11: [\(return\)](#) See art. "Attica," *Encyc. Brit.*

Footnote 12: [\(return\)](#) See Conybeare and Howson's "Life and Epistles of St. Paul," vol. i. p. 346.

28 Nearly all writers on the topography of Athens derive their materials from Pausanias, who visited the city in the early part of the second century, and whose "Itinerary of Greece" is still extant. [13](#) He entered the city by the Peiraic gate, the same gate at which Paul entered some sixty years before. We shall place ourselves under his guidance, and, so far as we are able, follow the same course, supplying some omissions, as we go along, from other sources. On entering the city, the first building which arrested the attention of Pausanias was the Pompeium, so called because it was the depository of the sacred vessels, and also of the garments used in the annual procession in honor of Athena (Minerva), the tutelary deity of Athens, from whom the city derived its name. Near this edifice stood a temple of Demeter (Ceres), containing statues of that goddess, of her daughter Persephone, and of Iacchus, all executed by Praxiteles; and beyond were several porticoes leading from the city gates to the outer Ceramicus, while the intervening space was occupied by various temples, the Gymnasium of Hermes, and the house of Polytion, the most magnificent private residence in Athens.

Footnote 13: [\(return\)](#) The account here given of the topography of Athens is derived mainly from the article on "Athens" in the *Encyc. Brit.*

There were two places in Athens known by the name of Ceramicus, one without the walls, forming part of the suburbs; and the other within the walls, embracing a very important section of the city. The outer Ceramicus was covered with the sepulchres of the Athenians who had been slain in battle, and buried at the public expense; it communicated with the inner Ceramicus by the gate Dipylum. The Ceramicus within the city probably included the Agora, the Stoa Basileios, and the Stoa Pœcile, besides various other temples and public buildings.

Having fairly passed the city gates, a long street is before us with a colonnade or cloister on either hand; and at the end of this street, by turning to the left, we might go through the whole Ceramicus to the open country, and the groves of the Academy. But we turn to the right, and enter the Agora,--the market-place, as it is called in the English translation of the sacred narrative.

29 We are not, however, to conceive of the market-place at Athens as bearing any resemblance to the bare, undecorated spaces appropriated to business in our modern towns; but rather as a magnificent public square, closed in by grand historic buildings, of the highest style of architecture; planted with palm-trees in graceful distribution, and adorned with statues of the great men of Athens and the deified heroes of her mythology, from the hands of the immortal masters of the plastic art. This "market-place" was the great centre of the public life of the Athenians,--the meeting-place of poets, orators, statesmen, warriors, and philosophers,--a grand resort for leisure, for conversation, for business, and for news. Standing in the Agora, and looking towards the south, is the *Museum*, so called because it was believed that *Musæus*, the father of poetry, was buried there. Towards the north-west is the *Pnyx*, a sloping hill, partially levelled into an open area for political assemblies. To the north is seen the craggy eminence of the *Areopagus*, and on the north-east is the *Acropolis* towering high above the scene, "the crown and glory of the whole."

30 The most important buildings of the Agora are the Porticoes or cloisters, the most remarkable of which are the Stoa Basileios, or Portico of the king; the Stoa Eleutherius, or Portico of the Jupiter of Freedom; and the Stoa Pœcile, or Painted Porch. These Porticoes were covered walks, the roof being supported by columns, at least on one side, and by solid masonry on the other. Such shaded walks are almost indispensable in the south of Europe, where the people live much in the open air, and they afford a grateful protection from the heat of the sun, as well as a shelter from the rain. Seats were also provided where the loungers might rest, and the philosophers and rhetoricians sit down for intellectual conversation. The "Stoic" school of philosophy derived its name from the circumstance that its founder, Zenon, used to meet and converse with his disciples under one of these porticoes,--the Stoa Pœcile. These porticoes were not only built in the most magnificent style of architecture, but adorned with paintings and statuary by the best masters. On the roof of the Stoa Basileios were statues of Theseus and the Day. In front of the Stoa Eleutherius was placed the divinity to whom it was dedicated; and within were allegorical paintings, celebrating the rise of "the fierce democracy." The Stoa Pœcile derived its name from the celebrated paintings which adorned its walls, and which were almost exclusively devoted to the representation of national subjects, as the contest of Theseus with the Amazons, the more glorious struggle at Marathon, and the other achievements of the Athenians; here also were suspended the shields of the Scionæans of Thrace, together with those of the Lacedæmonians, taken at the island of Sphacteria.

31 It is beyond our purpose to describe all the public edifices,--the temples, gymnasia, and theatres which crowd the Ceramic area, and that portion of the city lying to the west and south of the Acropolis. Our object is, if possible, to convey to the reader some conception of the ancient splendor and magnificence of Athens; to revive the scenes amidst which the Athenians daily moved, and which may be presumed to have exerted a powerful influence upon the manners, the taste, the habits of thought, and the entire character of the Athenian people. To secure this object we need only direct attention to the Acropolis, which was crowded with the monuments of Athenian glory, and exhibited an amazing concentration of all that was most perfect in art, unsurpassed in excellence, and unrivalled in richness and splendor. It was "the peerless gem of Greece, the glory and pride of art, the wonder and envy of the world."

31 The western side of the Acropolis, which furnished the only access to the summit of the hill, was about 168 feet in breadth; an opening so narrow that, to the artists of Pericles, it appeared practicable to fill up the space with a single building, which, in serving the purpose of a gateway to the Acropolis, should also contribute to adorn, as well as fortify the citadel. This work, the greatest achievement of civil architecture in Athens, which rivalled the Parthenon in felicity of execution, and surpassed it in boldness and originality of design, consisted of a grand central colonnade closed by projecting wings. This incomparable edifice, built of Pentelic marble, received the name of Propylæa from its forming the vestibule to the five-fold gates by which the citadel was entered. In front of the right wing there stood a small Ionic temple of pure white marble, dedicated to Niké Apteros (Wingless Victory).

A gigantic flight of steps conducted from the five-fold gates to the platform of the Acropolis, which was, in fact, one vast composition of architecture and sculpture dedicated to the national glory. Here stood the Parthenon, or temple of the Virgin Goddess, the glorious temple which rose in the proudest period of Athenian history to the honor of Minerva, and which ages have only partially effaced. This magnificent temple, "by its united excellences of materials, design, and decoration, internal as well as external, has been universally considered the most perfect which human genius ever planned and executed. Its dimensions were sufficiently large to produce an

impression of grandeur and sublimity, which was not disturbed by any obtrusive subdivision of parts; and, whether viewed at a small or greater distance, there was nothing to divert the mind of the spectator from contemplating the unity as well as majesty of mass and outline; circumstances which form the first and most remarkable characteristic of every Greek temple erected during the purer ages of Grecian taste and genius." ¹⁴

Footnote 14: [\(return\)](#) Leake's "Topography of Athens," p. 209 et seq.

It would be impossible to convey any just and adequate conception of the artistic decorations of this wonderful edifice. The two pediments of the temple were decorated with magnificent compositions of statuary, each consisting of about twenty entire figures of colossal size; the one on the western pediment representing the birth of Minerva, and the other, on the eastern pediment, the contest between that goddess and Neptune for the possession of Attica. Under the outer cornice were ninety-two groups, raised in high relief from tablets about four feet square, representing the victories achieved by her companions. Round the inner frieze was presented the procession of the Parthenon on the grand quinquennial festival of the Panathenæa. The procession is represented as advancing in two parallel columns from west to east; one proceeding along the northern, the other along the southern side of the temple; part facing inward after turning the angle of the eastern front, and part meeting towards the centre of that front.

The statue of the virgin goddess, the work of Phidias, stood in the eastern chamber of the cella, and was composed of ivory and gold. It had but one rival in the world, the Jupiter Olympus of the same famous artist. On the summit or apex of the helmet was placed a sphinx, with griffins on either side. The figure of the goddess was represented in an erect martial attitude, and clothed in a robe reaching to the feet. On the breast was a head of Medusa, wrought in ivory, and a figure of Victory about four cubits high. The goddess held a spear in her hand, and an ægis lay at her feet, while on her right, and near the spear, was a figure of a serpent, believed to represent that of Erichthonius.

According to Pliny, the entire height of the statue was twenty-six cubits (about forty feet), and the artist, Phidias, had ingeniously contrived that the gold with which the statue was encrusted might be removed at pleasure. The battle of the Centaurs and Lapithæ was carved upon the sandals; the battle of the Amazons was represented on the ægis which lay at her feet, and on the pedestal was sculptured the birth of Pandora.

The temple of Erechtheus, the most ancient structure in Athens, stood on the northern side of the Acropolis. The statue of Zeus Polieus stood between the Propylæa and the Parthenon. The brazen colossus of Minerva, cast from the spoils of Marathon, appears to have occupied the space between the Erechtheium and the Propylæa, near the Pelasgic or northern wall. This statue of the tutelary divinity of Athens and Attica rose in gigantic proportions above all the buildings of the Acropolis, the flashing of whose helmet plumes met the sailor's eye as he approached from the Sunian promontory. And the remaining space of the wide area was literally crowded with statuary, amongst which were Theseus contending with the Minotaur; Hercules strangling the serpents; the Earth imploring showers from Jupiter; and Minerva causing the olive to sprout, while Neptune raises the waves. After these works of art, it is needless to speak of others. It may be sufficient to state that Pausanias mentions by name towards three hundred remarkable statues which adorned this part of the city even after it had been robbed and despoiled by its several conquerors.

The Areopagus, or hill of Ares (Mars), so called, in consequence of that god having been the first person tried there for the crime of murder, was, beyond all doubt, the rocky height which is separated from the western end of the Acropolis by a hollow, forming a communication between the northern and southern divisions of the city. The court of the Areopagus was simply an open space on the highest summit of the hill, the judges sitting in the open air, on rude seats of stone, hewn out of the solid rock. Near to the spot on which the court was held was the sanctuary of the Furies, the avenging deities of Grecian mythology, whose presence gave additional solemnity to the scene. The place and the court were regarded by the people with superstitious reverence.

This completes, our survey of the principal buildings, monuments, and localities within the city of Athens. We do not imagine we have succeeded in conveying any adequate idea of the ancient splendor and glory of this city, which was not only the capital of Attica, but also

"The eye of Greece, mother of art and eloquence."

We trust, however, that we have contributed somewhat towards awakening in the reader's mind a deeper interest in these classic scenes, and enabling him to appreciate, more vividly, the allusions we may hereafter make to them.

The mere dry recital of geographical details, and topographical notices is, however, of little interest in itself, and by itself. A tract of country derives its chief interest from its historic *associations*-its immediate relations to man. The events which have transpired therein, the noble or ignoble deeds, the grand achievements, or the great disasters of which it has been the theatre, these constitute the living heart of its geography. Palestine has been rendered forever memorable, not by any remarkable peculiarities in its climate or scenery, but by the fact that it

was the home of God's ancient people--the Hebrews and still more, because the ardent imagination of the modern traveller still sees upon its mountains and plains the lingering footprints of the Son of God. And so Attica will always be regarded as a classic land, because it was the theatre of the most illustrious period of ancient history--*the period of youthful vigor in the life of humanity, when viewed as a grand organic whole.*

Here on a narrow spot of less superficies than the little State of Rhode Island there flourished a republic which, in the grandeur of her military and naval achievements, at Marathon, Thermopylæ, Plataea, and Salamis, in the sublime creations of her painters, sculptors, and architects, and the unrivalled productions of her poets, orators, and philosophers, has left a lingering glory on the historic page, which twenty centuries have not been able to eclipse or dim. The names of Solon and Pericles; of Socrates, Plato, and Aristotle; of Isocrates and Demosthenes; of Myron, Phidias, and Praxiteles; of Herodotus, Xenophon, and Thucydides; of Sophocles and Euripides, have shed an undying lustre on Athens and Attica.

How much of this universal renown, this imperishable glory attained by the Athenian people, is to be ascribed to their geographical position and surroundings, and to the elastic, bracing air, the enchanting scenery, the glorious skies, which poured their daily inspiration on the Athenian mind, is a problem we may scarcely hope to solve.

Of this, at least, we may be sure, that all these geographical and cosmical conditions were ordained by God, and ordained, also, for some noble and worthy end. That God, "the Father of all the families of the earth," cared for the Athenian people as much as for Jewish and Christian nations, we can not doubt. That they were the subjects of a Providence, and that, in God's great plan of human history, they had an important part to fulfill, we must believe. That God "determined the time of each nation's existence, and fixed the geographical bounds of its habitation," is affirmed by Paul. And that the *specific* end for which the nation had its existence was fulfilled, we have the fullest confidence. *So far, therefore, as we can trace the relation that subsists between the geographical position and surroundings of that nation, and its national characteristics and actual history, so far are we able to solve the problem of its destiny; and by so much do we enlarge our comprehension of the plan of God in the history of our race.*

The geographical position of Greece was favorable to the freest commercial and maritime intercourse with the great historic nations--those nations most advanced in science, literature, and art. Bounded on the west by the Adriatic and Ionian seas, by the Mediterranean on the south, and on the east by the Ægean Sea, her populations enjoyed a free intercommunication with the Egyptians, Hebrews, Persians, Phœnicians, Romans, and Carthaginians. This peculiarity in the geographical position of the Grecian peninsula could not fail to awaken in its people a taste for navigation, and lead them to active commercial intercourse with foreign nations. ¹⁵ The boundless oceans on the south and east, the almost impassable mountains on the west and north of Asia, presented insurmountable obstacles to commercial intercourse. But the extended borderlands and narrow inland seas of Southern Europe allured man, in presence of their opposite shores, to the perpetual exchange of his productions. An arm of the sea is not a barrier, but rather a tie between the nations. Appearing to separate, it in reality draws them together without confounding them. ¹⁶ On such a theatre we may expect that commerce will be developed on an extensive scale. ¹⁷ And, along with commerce, there will be increased activity in all departments of productive industry, and an enlarged diffusion of knowledge. "Commerce," says Ritter, "is the great mover and combiner of the world's activities." And it also furnishes the channels through which flow the world's ideas. Commerce, both in a material and moral point of view, is the life of nations. Along with the ivory and ebony, the fabrics and purple dyes, the wines and spices of the Syrian merchant, there flowed into Greece the science of numbers and of navigation, and the art of alphabetical writing from Phœnicia. Along with the fine wheat, and embroidered linen, and riches of the farther Indias which came from Egypt, there came, also, into Greece some knowledge of the sciences of astronomy and geometry, of architecture and mechanics, of medicine and chemistry; together with the mystic wisdom of the distant Orient. The scattered rays of light which gleamed in the eastern skies were thus converged in Greece, as on a focal point, to be rendered more brilliant by contact with the powerful Grecian intellect, and then diffused throughout the western world. Thus intercourse with surrounding nations, by commerce and travel, contact therewith by immigrations and colonizations, even collisions and invasions also, became, in the hands of a presiding Providence, the means of diffusing knowledge, of quickening and enlarging the active powers of man, and thus, ultimately, of a higher civilization.

Footnote 15: [\(return\)](#) Humboldt's "Cosmos," vol. ii. p. 143.

Footnote 16: [\(return\)](#) Cousin, vol. i. pp. 169, 170.

Footnote 17: [\(return\)](#) The advantageous situation of Britain for commerce, and the nature of the climate have powerfully contributed to the perfection of industry among her population. Had she occupied a central, internal station, like that of Switzerland, the facilities of her people for dealing with others being so much the less, their progress would have been comparatively slow, and, instead of being highly improved, their manufactures would have been still in infancy. But being surrounded on all sides by the sea, that "great highway of nations," they have been able to maintain an intercourse with the most remote as well as the nearest countries, to supply them on the easiest terms with their manufactures, and to profit by the peculiar products and capacities of production possessed by other nations. To the geographical position and climate of Great Britain, her people are mainly indebted for their position as the first commercial nation on earth.--See art. "Manufactures," p. 277, *Encyc. Brit.*

37 Then further, the peculiar configuration of Greece, the wonderful complexity of its coast-line, its peninsular forms, the number of its islands, and the singular distribution of its mountains, all seem to mark it as the theatre of activity, of movement, of individuality, and of freedom. An extensive continent, unbroken by lakes and inland seas, as Asia, where vast deserts and high mountain chains separate the populations, is the seat of immobility. ¹⁸ Commerce is limited to the bare necessities of life, and there are no inducements to movement, to travel, and to enterprise. There are no conditions prompting man to attempt the conquest of nature. Society is therefore stationary as in China and India. Enfolded and imprisoned within the overpowering vastness and illimitable sweep of nature, man is almost unconscious of his freedom and his personality. He surrenders himself to the disposal of a mysterious "fate" and yields readily to the despotic sway of superhuman powers. The State is consequently the reign of a single despotic will. The laws of the Medes and Persians are unalterable. But in Greece we have extended border-lands on the coast of navigable seas; peninsulas elaborately articulated, and easy of access. We have mountains sufficiently elevated to shade the land and diversify the scenery, and yet of such a form as not to impede communication. They are usually placed neither in parallel chains nor in massive groups, but are so disposed as to inclose extensive tracts of land admirably adapted to become the seats of small and independent communities, separated by natural boundaries, sometimes impossible to overleap. The face of the interior country,--its forms of relief, seemed as though Providence designed, from the beginning, to keep its populations socially and politically disunited. These difficulties of internal transit by land were, however, counteracted by the large proportion of coast, and the accessibility of the country by sea. The promontories and indentations in the line of the Grecian coast are hardly less remarkable than the peculiar elevations and depressions of the surface. "The shape of Peloponnesus, with its three southern gulfs, the Argolic, Laconian, and Messenian, was compared by the ancient geographers to the leaf of a plane-tree: the Pagasæan gulf on the eastern side of Greece, and the Ambrakian gulf on the western, with their narrow entrances and considerable area, are equivalent to internal lakes: Xenophon boasts of the double sea which embraces so large a portion of Attica; Ephorus, of the triple sea by which Bœotia was accessible from west, north, and south--the Eubœan strait, opening a long line of country on both sides to coasting navigation. But the most important of all Grecian gulfs are the Corinthian and Saronic, washing the northern and north-eastern shores of Peloponnesus, and separated by the narrow barrier of the Isthmus of Corinth. The former, especially, lays open Ætolia, Phokis, and Bœotia, as the whole northern coast of Peloponnesus, to water approach.... It will thus appear that there was no part of Greece proper which could be considered as out of the reach of the sea, whilst most parts of it were easy of access. The sea was thus the sole channel for transmitting improvements and ideas as well as for maintaining sympathies" between the Hellenic tribes. ¹⁹ The sea is not only the grand highway of commercial intercourse, but the empire of movement, of progress, and of freedom. Here man is set free from the bondage imposed by the overpowering magnitude and vastness of continental and oceanic forms. The boisterous and, apparently, lawless winds are made to obey his will. He mounts the sea as on a fiery steed and "lays his hand upon her mane." And whilst thus he succeeds, in any measure, to triumph over nature, he wakes to conscious power and freedom. It is in this region of contact and commingling of sea and land where man attains the highest superiority. Refreshing our historic recollections, and casting our eyes upon the map of the world, we can not fail to see that all the most highly civilized nations have lived, or still live, on the margin of the sea.

Footnote 18: [\(return\)](#) Cousin, vol. i. pp. 151, 170.

Footnote 19: [\(return\)](#) Grote's "Hist. of Greece," vol. ii. pp. 221, 225.

39 The peculiar configuration of the territory of Greece, its forms of relief, "so like, in many respects, to Switzerland," could not fail to exert a powerful influence on the character and destiny of its people. Its inclosing mountains materially increased their defensive power, and, at the same time, inspired them with the love of liberty. Those mountains, as we have seen, so unique in their distribution, were natural barriers against the invasion of foreign nations, and they rendered each separate community secure against the encroachments of the rest. The pass of Thermopylæ, between Thessaly and Phocis, that of Cithæron, between Bœotia and Attica; and the mountain ranges of Oneion and Geraneia, along the Isthmus of Corinth, were positions which could be defended against any force of invaders. This signal peculiarity in the forms of relief protected each section of the Greeks from being conquered, and at the same time maintained their separate autonomy. The separate states of Greece lived, as it were, in the presence of each other, and at the same time resisted all influences and all efforts towards a coalescence with each other, until the time of Alexander. Their country, a word of indefinite meaning to the Asiatic, conveyed to them as definite an idea as that of their own homes. Its whole landscape, with all its historic associations, its glorious monuments of heroic deeds, were perpetually present to their eyes. Thus their patriotism, concentrated within a narrow sphere, and kept alive by the sense of their individual importance, their democratic spirit, and their struggles with surrounding communities to maintain their independence, became a strong and ruling passion. Their geographical surroundings had, therefore, a powerful influence upon their political institutions. Conquest, which forces nations of different habits, characters, and languages into unity, is at last the parent of degrading servitude. These nations are only held together, as in the Roman empire, by the iron hand of military power. The despot, surrounded by a foreign soldiery, appears in the conquered provinces, simply to enforce tribute, and compel obedience to his arbitrary will. But the small Greek communities, protected by the barriers of their seas and gulfs and mountains, escaped, for centuries, this evil destiny. The people, united by identity of language and manners

and religion, by common interest and facile intercommunication, could readily combine to resist the invasions of foreign nations, as well as the encroachments of their own rulers. And they were able to easily model their own government according to their own necessities and circumstances and common interests, and to make the end for which it existed the sole measure of the powers it was permitted to wield. ²⁰

Footnote 20: [\(return\)](#) *Encyc. Brit.*, art. "Greece."

The soil of Attica was not the most favorable to agricultural pursuits. In many places it was stony and uneven, and a considerable proportion was bare rock, on which nothing could be grown. Not half the surface was capable of cultivation. In this respect it may be fitly compared to some of the New England States. The light, dry soil produced excellent barley, but not enough of wheat for their own consumption. Demosthenes informs us that Athens brought every year, from Byzantium, four hundred thousand *medimni* of wheat. The alluvial plains, under industrious cultivation, would furnish a frugal subsistence for a large population, and the mildness of the climate allowed all the more valuable products to ripen early, and go out of season last. Such conditions, of course, would furnish motives for skill and industry, and demand of the people frugal and temperate habits. The luxuriance of a tropical climate tends to improvidence and indolence. Where nature pours her fullness into the lap of ease, forethought and providence are little needed. There is none of that struggle for existence which awakens sagacity, and calls into exercise the active powers of man. But in a country where nature only yields her fruits as the reward of toil, and yet enough to the intelligent culture of the soil, there habits of patient industry must be formed. The alternations of summer and winter excite to forethought and providence, and the comparative poverty of the soil will prompt to frugality. Man naturally aspires to improve his condition by all the means within his power. He becomes a careful observer of nature, he treasures up the results of observation, he compares one fact with another and notes their relations, and he makes new experiments to test his conclusions, and thus he awakes to the vigorous exercise of all his powers. These physical conditions must develop a hardy, vigorous, prudent, and temperate race; and such, unquestionably, were the Greeks. "Theophrastus, and other authors, amply attest the observant and industrious agriculture prevalent in Greece. The culture of the vine and olive appears to have been particularly elaborate and the many different accidents of soil, level, and exposure which were to be found, afforded to observant planters materials for study and comparison." ²¹ The Greeks were frugal in their habits and simple in their modes of life. The barley loaf seems to have been more generally eaten than the wheaten loaf; this, with salt fish and vegetables, was the common food of the population. Economy in domestic life was universal. In their manners, their dress, their private dwellings, they were little disposed to ostentation or display.

Footnote 21: [\(return\)](#) Grote, "Hist. of Greece," vol. ii. p. 230.

The climate of Attica is what, in physical geography, would be called *maritime*. "Here are allied the continental vigor and oceanic softness, in a fortunate union, mutually tempering each other." ²² The climate of the whole peninsula of Greece seems to be distinguished from that of Spain and Italy, by having more of the character of an inland region. The diversity of local temperature is greater; the extremes of summer and winter more severe. In Arcadia the snow has been found eighteen inches thick in January, with the thermometer at 16° Fahrenheit, and it sometimes lies on the ground for six weeks. The summits of the central chains of Pindus and most of the Albanian mountains are covered with snow from the beginning of November to the end of March. In Attica, which, being freely exposed to the sea, has in some measure an insular climate, the winter sets in about the beginning of January. About the middle of that month the snow begins to fall, but seldom remains upon the plain for more than a few days, though it lies on the summit of the mountain for a month. ²³ And then, whilst Bœotia, which joins to Attica, is higher and colder, and often covered with dense fogs, Attica is remarkable for the wonderful transparency, dryness, and elasticity of its atmosphere. All these climatal conditions exerted, no doubt, a modifying influence upon the character of the inhabitants. ²⁴ In a tropical climate man is enfeebled by excessive heat. His natural tendency is to inaction and repose. His life is passed in a "strenuous idleness." His intellectual, his reflective faculties are overmastered by his physical instincts. Passion, sentiment, imagination prevail over the sober exercises of his reasoning powers. Poetry universally predominates over philosophy. The whole character of Oriental language, religion, literature is intensely imaginative. In the frozen regions of the frigid zone, where a perpetual winter reigns, and where lichens and mosses are the only forms of vegetable life, man is condemned to the life of a huntsman, and depends mainly for his subsistence on the precarious chances of the chase. He is consequently nomadic in his habits, and barbarous withal. His whole life is spent in the bare process of procuring a living. He consumes a large amount of oleaginous food, and breathes a damp heavy atmosphere, and is, consequently, of a dull phlegmatic temperament. Notwithstanding his uncertain supplies of food, he is recklessly improvident, and indifferent to all the lessons of experience. Intellectual pursuits are all precluded. There is no motive, no opportunity, and indeed no disposition for mental culture. But in a temperate climate man is stimulated to high mental activity. The alternations of heat and cold, of summer and of winter, an elastic, fresh, and bracing atmosphere, a diversity in the aspects of nature, these develop a vivacity of temperament, a quickness of sensibility as well as apprehension, and a versatility of feeling as well as genius. History marks out the temperate zone as the seat of the refined and cultivated nations.

Footnote 22: [\(return\)](#) Guyot, "Earth and Man," p. 181.

Footnote 23: [\(return\)](#) *Encyc. Brit.*, art. "Greece."

Footnote 24: [\(return\)](#) The influence of climatic conditions did not escape the attention of the Greeks. Herodotus, Hippocrates, and Aristotle speak of the climate of Asia as more enervating than that of Greece. They regarded the changeful character and diversity of local temperature in Greece as highly stimulating to the energies of the populations. The marked contrast between the Athenians and the Bœotians was supposed to be represented in the light and heavy atmosphere which they respectively breathed.--*Grote*, vol. ii. pp. 232-3.

The natural scenery of Greece was of unrivalled grandeur--surpassing Italy, perhaps every country in the world. It combined in the highest degree every feature essential to the highest beauty of a landscape except, perhaps, large rivers. But this was more than compensated for by the proximity of the sea, which, by its numerous arms, seemed to embrace the land on nearly every side. Its mountains, encircled with zones of wood, and capped with snow, though much lower than the Alps, are as imposing by the suddenness of their elevation--"pillars of heaven, the fosterers of enduring snows." ²⁵ Rich sheltered plains lie at their feet, covered with an unequally woven mantle of trees, and shrubs, and flowers,--"the verdant gloom of the thickly-mantling ivy, the narcissus steeped in heavenly dew, the golden-beaming crocus, the hardy and ever-fresh-sprouting olive-tree," ²⁶ and the luxuriant palm, which nourishes amid its branches the grape swelling with juice. But it is the combination of these features, in the most diversified manner, with beautiful inland bays and seas, broken by headlands, inclosed by mountains, and studded with islands of every form and magnitude, which gives to the scenery of Greece its proud pre-eminence. "Greek scenery," says Humboldt, "presents the peculiar charm of an intimate blending of sea and land, of shores adorned with vegetation, or picturesquely girt with rocks gleaming in the light of aerial tints, and an ocean beautiful in the play of the ever-changing brightness of its deep-toned wave." ²⁷ And over all the serene, deep azure skies, occasionally veiled by light fleecy clouds, with vapory purple mists resting on the distant mountain tops. This glorious scenery of Greece is evermore the admiration of the modern traveller. "In wandering about Athens on a sunny day in March, when the asphodels are blooming on Colones, when the immortal mountains are folded in a transparent haze, and the Ægean slumbers afar among his isles," he is reminded of the lines of Byron penned amid these scenes--

"Yet are thy skies as blue, thy crags as wild;
Sweet are thy groves, and verdant are thy fields,
Thine olives ripe as when Minerva smiled,
And still his honeyed wealth Hymettus yields;
There the blithe bee his fragrant fortress builds,
The freeborn wanderer of the mountain air;
Apollo still thy long, long summer gilds,
Still in his beams Mendeli's marbles glare;
Art, Glory, Freedom fail, but nature still is fair." ²⁸

Footnote 28: [\(return\)](#) Canto ii., v. lxxxvi., "Childe Harold."

The effect of this scenery upon the character, the imagination, the taste of the Athenians must have been immense. Under the influence of such sublime objects, the human mind becomes gifted as with inspiration, and is by nature filled with poetic images. "Greece became the birth-place of taste, of art, and eloquence, the chosen sanctuary of the muses, the prototype of all that is graceful, and dignified, and grand in sentiment and action."

And now, if we have succeeded in clearly presenting and properly grouping the facts, and in estimating the influence of geographical position and surroundings on national character, we have secured the natural *criteria* by which we examine, and even correct the portraiture of the Athenian character usually presented by the historian.

The character of the Athenians has been sketched by Plutarch ²⁹ with considerable minuteness, and his representations have been permitted, until of late years, to pass unchallenged. He has described them as at once passionate and placable, easily moved to anger, and as easily appeased; fond of pleasantries and repartee, and heartily enjoying a laugh; pleased to hear themselves praised, and yet not annoyed by criticism and censure; naturally generous towards those who were poor and in humble circumstances, and humane even towards their enemies; jealous of their liberties, and keeping even their rulers in awe. In regard to their intellectual traits, he affirms their minds were not formed for laborious research, and though they seized a subject as it were by intuition, yet wanted patience and perseverance for a thorough examination of all its bearings. "An observation," says the writer of the article on "*Attica*," in the *Encyclopædia Britannica*, "more superficial in itself, and arguing a greater ignorance of the Athenians, can not easily be imagined." Plutarch lived more than three hundred years after the palmy days of the Athenian Demos had passed away. He was a Bœotian by birth, not an Attic, and more of a Roman than a Greek in all his sympathies. We are tempted to regard him as writing under the influence of prejudice, if not of envy. He was scarcely reliable as a biographer, and as materials for history his "Parallel Lives" have been pronounced "not altogether trustworthy." ³⁰

Footnote 29: [\(return\)](#) "De Præcept."

Footnote 30: [\(return\)](#) *Encyc. of Biography*, art. "Plutarch."

46 That the Athenians were remarkable for the ardor and vivacity of their temperament,--that they were liable to sudden gusts of passion,--that they were inconstant in their affections, intolerant of dictation, impatient of control, and hasty to resent every assumption of superiority,--that they were pleased with flattery, and too ready to lend a willing ear to the adulation of the demagogue,--and that they were impetuous and brave, yet liable to be excessively elated by success, and depressed by misfortune, we may readily believe, because such traits of character are in perfect harmony with all the facts and conclusions already presented. Such characteristics were the natural product of the warm and genial sunlight, the elastic bracing air, the ethereal skies, the glorious mountain scenery, and the elaborate blending of sea and land, so peculiar to Greece and the whole of Southern Europe. ³¹ These characteristics were shared in a greater or less degree by all the nations of Southern Europe in ancient times, and they are still distinctive traits in the Frenchman, the Italian, and the modern Greek. ³²

Footnote 31: [\(return\)](#) "As the skies of Hellas surpassed nearly all other climates in brightness and elasticity, so, also, had nature dealt most lovingly with the inhabitants of this land. Throughout the whole being of the Greek there reigned supreme a quick susceptibility, out of which sprang a glad some serenity of temper, and a keen enjoyment of life; acute sense, and nimbleness of apprehension; a guileless and child-like feeling, full of trust and faith, combined with prudence and forecast. These peculiarities lay so deeply imbedded in the inmost nature of the Greeks that no revolutions of time and circumstances have yet been able to destroy them; nay, it may be asserted that even now, after centuries of degradation, they have not been wholly extinguished in the inhabitants of ancient Hellas."--"*Education of the Moral Sentiment amongst the Ancient Greeks.*" By FREDERICK JACOBS, p. 320.

Footnote 32: [\(return\)](#) These are described by the modern historian and traveller as lively, versatile, and witty. "The love of liberty and independence does not seem to be rooted out of the national character by centuries of subjugation. They love to command; but though they are loyal to a good government, they are apt readily to rise when their rights and liberties are infringed. As there is little love of obedience among them, so neither is there any toleration of aristocratic pretensions."--*Encyc. Brit.*, art. "Greece."

47 The consciousness of power, the feeling of independence, the ardent love of freedom induced in the Athenian mind by the objective freedom of movement which his geographical position afforded, and that subordination and subserviency of physical nature to man so peculiar to Greece, determined the democratic character of all their political institutions. And these institutions reacted upon the character of the people and intensified their love of liberty. This passionate love of personal freedom, amounting almost to disease, excited them to a constant and almost distressing vigilance. And it is not to be wondered at if it displayed itself in an extreme jealousy of their rulers, an incessant supervision and criticism of all their proceedings, and an intense and passionate hatred of tyrants and of tyranny. The popular legislator or the successful soldier might dare to encroach upon their liberties in the moment when the nation was intoxicated and dazzled with their genius, their prowess, and success; but a sudden revulsion of popular feeling, and an explosion of popular indignation, would overturn the one, and ostracism expel the other. Thus while inconstancy, and turbulence, and faction seem to have been inseparable from the democratic spirit, the Athenians were certainly constant in their love of liberty, faithful in their affection for their country, ³³ and invariable in their sympathy and admiration for that genius which shed glory upon their native land. And then they were ever ready to repair the errors, and make amends for the injustice committed under the influence of passionate excitement, or the headlong impetuosity of their too ardent temperament. The history of Greece supplies numerous illustrations of this spirit. The sentence of death which had been hastily passed on the inhabitants of Mytilene was, on sober reflection, revoked the following day. The immediate repentance and general sorrow which followed the condemnation of the ten generals, as also of Socrates, are notable instances.

Footnote 33: [\(return\)](#) When immense bribes were offered by the king of Persia to induce the Athenians to detach themselves from the alliance with the rest of the Hellenic States, she answered by the mouth of Aristides "that it was impossible for all the gold in the world to tempt the Republic of Athens, or prevail with it to sell its liberty and that of Greece!"

48 In their private life the Athenians were courteous, generous, and humane. Whilst bold and free in the expression of their opinions, they paid the greatest attention to rules of politeness, and were nicely delicate on points of decorum. They had a natural sense of what was becoming and appropriate, and an innate aversion to all extravagance. A graceful demeanor and a quiet dignity were distinguishing traits of Athenian character. They were temperate and frugal ³⁴ in their habits, and little addicted to ostentation and display. Even after their victories had brought them into contact with Oriental luxury and extravagance, and their wealth enabled them to rival, in costliness and splendor, the nations they had conquered, they still maintained a republican simplicity. The private dwellings of the principal citizens were small, and usually built of clay; their interior embellishments also were insignificant--the house of Polytion alone formed an exception. ³⁵ All their sumptuousness and magnificence were reserved for and lavished on their public edifices and monuments of art, which made Athens the pride of Greece and the wonder of the world. Intellectually, the Athenians were remarkable for their quickness of apprehension, their nice and delicate perception, their intuitional power, and their versatile genius. Nor were

they at all incapable of pursuing laborious researches, or wanting in persevering application and industry, notwithstanding Plutarch's assertion to the contrary. The circumstances of every-day life in Attica, the conditions which surrounded the Athenian from childhood to age, were such as to call for the exercise of these qualities of mind in the highest degree. Habits of patient industry were induced in the Athenian character by the poverty and comparative barrenness of the soil, demanding greater exertion to supply their natural wants. And an annual period of dormancy, though unaccompanied by the rigors of a northern winter, called for prudence in husbanding, and forethought and skill in endeavoring to increase their natural resources. The aspects of nature were less massive and awe-inspiring, her features more subdued, and her areas more circumscribed and broken, inviting and emboldening man to attempt her conquest. The whole tendency of natural phenomena in Greece was to restrain the imagination, and discipline the observing and reasoning faculties in man. Thus was man inspired with confidence in his own resources, and allured to cherish an inquisitive, analytic, and scientific spirit. "The French, in point of national character, hold nearly the same relative place amongst the nations of Europe that the Athenians held amongst the States of Ancient Greece." And whilst it is admitted the French are quick, sprightly, vivacious, perhaps sometimes light even to frivolity, it must be conceded they have cultivated the natural and exact sciences with a patience, and perseverance, and success unsurpassed by any of the nations of Europe. And so the Athenians were the Frenchmen of Greece. Whilst they spent their "leisure time" ³⁶ in the place of public resort, the porticoes and groves, "hearing and telling the latest news" (no undignified or improper mode of recreation in a city where newspapers were unknown), whilst they are condemned as "garrulous," "frivolous," "full of curiosity," and "restlessly fond of novelties," we must insist that a love of study, of patient thought and profound research, was congenial to their natural temperament, and that an inquisitive and analytic spirit, as well as a taste for subtle and abstract speculation, were inherent in the national character. The affluence, and fullness, and flexibility, and sculpture-like finish of the language of the Attics, which leaves far behind not only the languages of antiquity, but also the most cultivated of modern times, is an enduring monument of the patient industry of the Athenians. ³⁷ Language is unquestionably the highest creation of reason, and in the language of a nation we can see reflected as in a mirror the amount of culture to which it has attained. The rare balance of the imagination and the reasoning powers, in which the perfection of the human intellect is regarded as consisting, the exact correspondence between the thought and the expression, "the free music of prosaic numbers in the most diversified forms of style," the calmness, and perspicuity, and order, even in the stormiest moments of inspiration, revealed in every department of Greek literature, were not a mere happy stroke of chance, but a product of unwearied effort--and effort too which was directed by the criteria which reason supplied. The plastic art of Greece, which after the lapse of ages still stands forth in unrivalled beauty, so that, in presence of the eternal models it created, the modern artist feels the painful lack of progress was not a spontaneous outburst of genius, but the result of intense application and unwearied discipline. The achievements of the philosophic spirit, the ethical and political systems of the Academy, the Lyceum, the Stoa, and the Garden, the anticipations, scattered here and there like prophetic hints, of some of the profoundest discoveries of "inductive science" in more modern days,--all these are an enduring protest against the strange misrepresentations of Plutarch.

Footnote 34: [\(return\)](#) These are still characteristics of the Greeks. "They are an exceedingly temperate people; drunkenness is a vice remarkably rare amongst them; their food also is spare and simple; even the richest are content with a dish of vegetables for each meal, and the poor with a handful of olives or a piece of salt fish.... All other pleasures are indulged with similar propriety; their passions are moderate, and insanity is almost unknown amongst them."--*Encyc. Brit.*, art. "Greece."

Footnote 35: [\(return\)](#) Niebuhr's Lectures, vol. i. p. 101.

Footnote 36: [\(return\)](#) Εύκαιρέω corresponds exactly to the Latin *vacare*, "to be at leisure."

Footnote 37: [\(return\)](#) Frederick Jacobs, on "Study of Classic Antiquity," p. 57.

In Athens there existed a providential collocation of the most favorable conditions in which humanity can be placed for securing its highest natural development. Athenian civilization is the solution, on the theatre of history, of the problem--What degree of perfection can humanity, under the most favorable conditions, attain, without the supernatural light, and guidance, and grace of Christianity? ³⁸ "Like their own goddess Athene the people of Athens seem to spring full-armed into the arena of history, and we look in vain to Egypt, Syria, and India, for more than a few seeds that burst into such marvellous growth on the soil of Attica." ³⁹

Footnote 38: [\(return\)](#) It has been asserted by some theological writers, Watson for example, that no society of civilized men has been, or can be constituted without the aid of a religion directly communicated by revelation, and transmitted by oral tradition;--"that it is possible to raise a body of men into that degree of civil improvement which would excite the passion for philosophic investigation, without the aid of religion... can have no proof, and is contradicted by every fact and analogy with which we are acquainted." (*Institutes*, vol. i. p. 271; see also Archbishop Whately, "Dissertation," etc., vol. i. *Encyc. Brit.*, p. 449-455).

The fallacy of the reasoning by which this doctrine is sought to be sustained is found in the assumption "that to all our race the existence of a First Cause is a question of philosophy," and that the idea of God lies at the end of "a gradual process of inquiry" and induction, for which a high degree of "scientific culture" is needed. Whereas the idea of a First Cause lies at the beginning, not at the end of philosophy; and philosophy is simply the analysis of our natural

consciousness of God, and the presentation of the idea in a logical form. Faith in the existence of God is not the result of a conscious process of reflection; it is the spontaneous and instinctive logic of the human mind, which, in view of phenomena presented to sense, by a necessary law of thought immediately and intuitively affirms a personal Power, an intelligent Mind as the author. In this regard, there is no difference between men except the clearness with which they apprehend, and the logical account they can render to themselves, of this instinctive belief. Spontaneous intuition, says Cousin, is the genius of all men; reflection the genius of few men. "But Leibnitz had no more confidence in the principle of causality, and even in his favorite principle of sufficient reason, than the most ignorant of men;" the latter have this principle within them, as a law of thought, controlling their conception of the universe, and doing this almost unconsciously; the former, by an analysis of thought, succeeded in defining and formulating the ideas and laws which necessitate the cognition of a God. The function of philosophy is simply to transform ἀληθῆς δόξα into ἰτιστήμη--right opinion into science,--to elucidate and logically present the immanent thought which lies in the universal consciousness of man.

That the possession of the idea of God is essential to the social and moral elevation of man,--that is, to the civilization of our race, is most cheerfully conceded. That humanity has an end and destination which can only be secured by the true knowledge of God, and by a participation of the nature of God, is equally the doctrine of Plato and of Christ. Now, if humanity has a special end and destination, it must have some instinctive tendencies, some spermatic ideas, some original forces or laws, which determine it towards that end. All development supposes some original elements to be unfolded or developed. Civilization is but the development of humanity according to its primal idea and law, and under the best exterior conditions. That the original elements of humanity were unfolded in some noble degree under the influence of philosophy is clear from the history of Greece; there the most favorable natural conditions for that development existed, and Christianity alone was needed to crown the result with ideal perfection.

Footnote 39: [\(return\)](#) Max Muller, "Science of Language," p. 404, 2d series.

Here the most perfect ideals of beauty and excellence in physical development, in manners, in plastic art, in literary creations, were realized. The songs of Homer, the dialogues of Plato, the speeches of Demosthenes, and the statues of Phidias, if not unrivalled, are at least unsurpassed by any thing that has been achieved by their successors. Literature in its most flourishing periods has rekindled its torch at her altars, and art has looked back to the age of Pericles for her purest models. Here the ideas of personal liberty, of individual rights, of freedom in thought and action, had a wonderful expansion. Here the lasting foundations of the principal arts and sciences were laid, and in some of them triumphs were achieved which have not been eclipsed. Here the sun of human reason attained a meridian splendor, and illuminated every field in the domain of moral truth. And here humanity reached the highest degree of civilization of which it is capable under purely *natural* conditions.

And now, the question with which we are more immediately concerned is, what were the specific and valuable results attained by the Athenian mind in *religion* and *philosophy*, the two momenta of the human mind? This will be the subject of discussion in subsequent chapters.

52 The order in which the discussion shall proceed is determined for us by the natural development of thought. The two fundamental momenta of thought and its development are spontaneity and reflection, and the two essential forms they assume are religion and philosophy. In the natural order of thought spontaneity is first, and reflection succeeds spontaneous thought. And so religion is first developed, and subsequently comes philosophy. As religion supposes spontaneous intuition, so philosophy has religion for its basis, but upon this basis it is developed in an original manner. "Turn your attention to history, that living image of thought: everywhere you perceive religions and philosophies: everywhere you see them produced in an invariable order. Everywhere religion appears with new societies, and everywhere, just so far as societies advance, from religion springs philosophy." ⁴⁰ This was pre-eminently the case in Athens, and we shall therefore direct our attention first to the Religion of the Athenians.

Footnote 40: [\(return\)](#) Cousin, "Hist. of Philos.," vol. i. p. 302.

53

CHAPTER II.

THE PHILOSOPHY OF RELIGION.

All things which I behold bear witness to your carefulness in religion
δεισδαιμονεστέροις.--ST. PAUL.

As a prelude and preparation for the study of the religion of the Athenians, it may be well to consider religion in its more abstract and universal form; and inquire in what does religion essentially consist; how far is it grounded in the nature of man; and especially, what is there in the mental constitution of man, or in his exterior conditions, which determines him to a mode of life which may be denominated *religious*? As a preliminary inquiry, this may materially aid us in understanding the nature, and estimating the value of the religious conceptions and sentiments which were developed by the Greek mind.

Religion, in its most generic conception, may be defined as a form of thought, feeling, and action,

which has the *Divine* for its object, basis, and end. Or, in other words, it is a mode of life determined by the recognition of some relation to, and consciousness of dependence upon, a *Supreme Being*. This general conception of religion underlies all the specific forms of religion which have appeared in the world, whether heathen, Jewish, Mohammedan, or Christian.

54 That a religious destination appertains to man as man, whether he has been raised to a full religious consciousness, or is simply considered as capable of being so raised, can not be denied. In all ages man has revealed an instinctive tendency, or natural aptitude for religion, and he has developed feelings and emotions which have always characterized him as a religious being. Religious ideas and sentiments have prevailed among all nations, and have exerted a powerful influence on the entire course of human history. Religious worship, addressed to a Supreme Being believed to control the destiny of man, has been coeval and coextensive with the race. Every nation has had its mythology, and each mythologic system has been simply an effort of humanity to realize and embody in some visible form the relations in which it feels itself to be connected with an external, overshadowing, and all-controlling Power and Presence. The voice of all ancient, and all contemporaneous history, clearly attests that the *religious principle* is deeply seated in the nature of man; and that it has occupied the thought, and stirred the feelings of every rational man, in every age. It has interwoven itself with the entire framework of human society, and ramified into all the relations of human life. By its agency, nations have been revolutionized, and empires have been overthrown; and it has formed a mighty element in all the changes which have marked the history of man.

This universality of religious sentiment and religious worship must be conceded as a fact of human nature, and, as a universal fact, it demands an explanation. Every event must have a cause. Every phenomenon must have its ground, and reason, and law. The facts of religious history, the past and present religious phenomena of the world can be no exception to this fundamental principle; they press their imperious demand to be studied and explained, as much as the phenomena of the material or the events of the moral world. The phenomena of religion, being universally revealed wherever man is found, must be grounded in some universal principle, on some original law, which is connate with, and natural to man. At any rate, there must be something in the nature of man, or in the exterior conditions of humanity, which invariably leads man to worship, and which determines him, as by the force of an original instinct, or an outward, conditioning necessity, to recognize and bow down before a Superior Power. The full recognition and adequate explanation of the facts of religious history will constitute a *philosophy of religion*.

55 The hypotheses which have been offered in explanation of the religious phenomena of the world are widely divergent, and most of them are, in our judgment, eminently inadequate and unsatisfactory. The following enumeration may be regarded as embracing all that are deemed worthy of consideration.

I. The phenomenon of religion had its origin in SUPERSTITION, that is, in a *fear* of invisible and supernatural powers, generated by ignorance of nature.

II. The phenomenon of religion is part of that PROCESS or EVOLUTION OF THE ABSOLUTE (i.e., the Deity), which gradually unfolding itself in nature, mind, history, and *religion*, attains to perfect self-consciousness in philosophy.

III. The phenomenon of religion has its foundation in FEELING--*the feeling of dependence and of obligation*; and that to which the mind, by spontaneous intuition or instinctive faith, traces this dependence and obligation we call God.

IV. The phenomenon of religion had its outbirth in the spontaneous apperceptions of REASON, that is, the necessary *à priori ideas of the Infinite, the Perfect, the Unconditioned Cause, the Eternal Being*, which are evoked into consciousness in presence of the changeful and contingent phenomena of the world.

V. The phenomenon of religion had its origin in EXTERNAL REVELATION, to which *reason* is related as a purely passive organ, and *heathenism* as a feeble relic.

As a philosophy of religion--an attempt to supply the rationale of the religious phenomena of the world, the first hypothesis is a skeptical philosophy, which necessarily leads to *Atheism*. The second is an idealistic philosophy (absolute idealism), which inevitably lands in *Pantheism*. The third is an intuitional or "faith-philosophy," which finally ends in *Mysticism*. The fourth is a rationalistic or "spiritualistic" philosophy, which yields pure *Theism*. The last is an empirical philosophy, which derives all religion from instruction, and culminates in *Dogmatic Theology*.

56 In view of these diverse and conflicting theories, the question which now presents itself for our consideration is,--does any one of these hypotheses meet and satisfy the demands of the problem? does it fully account for and adequately explain all the facts of religious history? The answer to this question must not be hastily or dogmatically given. The arbitrary rejection of any theory that may be offered, without a fair and candid examination, will leave our minds in uncertainty and doubt as to the validity of our own position. A blind faith is only one remove from a pusillanimous skepticism. We can not render our own position secure except by comprehending, assaulting, and capturing the position of our foe. It is, therefore, due to ourselves and to the cause of truth, that we shall examine the evidence upon which each separate theory is based, and the arguments which are marshalled in its support, before we pronounce it inadequate and unphilosophical.

Such a criticism of opposite theories will prepare the way for the presentation of a philosophy of religion which we flatter ourselves will be found most in harmony with all the facts of the case.

I. *It is affirmed that the religious phenomena of the world had their origin in SUPERSTITION, that is, in a fear of unseen and supernatural powers, generated from ignorance of nature.*

This explanation was first offered by Epicurus. He felt that the universality of the religious sentiment is a fact which demands a cause; and he found it, or presumed he found it not in a spiritual God, which he claims can not exist, nor in corporeal god which no one has seen, but in "phantoms of the mind generated by fear." When man has been unable to explain any natural phenomenon, to assign a cause within the sphere of nature, he has had recourse to supernatural powers, or living personalities behind nature, which move and control nature in an arbitrary and capricious manner. These imaginary powers are supposed to be continually interfering in the affairs of individuals and nations. They bestow blessings or inflict calamities. They reward virtue and punish vice. They are, therefore, the objects of "sacred awe" and "superstitious fear."

57

Whate'er in heaven,
In earth, man sees mysterious, shakes his mind
With sacred awe o'erwhelms him, and his soul
Bows to the dust; the cause of things conceal
Once from his vision, instant to the gods
All empire he transfers, all rule supreme,
And doubtful whence they spring, with headlong haste
Calls them the workmanship of power divine.
For he who, justly, deems the Immortals live
Safe, and at ease, yet fluctuates in his mind
How things are swayed; how, chiefly, those discerned
In heaven sublime--to SUPERSTITION back
Lapses, and fears a tyrant host, and then
Conceives, dull reasoner, they can all things do,
While yet himself nor knows what may be done,
Nor what may never, nature powers defined
Stamping on all, and bounds that none can pass:
Hence wide, and wider errs he as he walks. [41](#)

Footnote 41: [\(return\)](#) Lucretius, "De Natura Rerum," book vi. vs. 50-70.

In order to rid men of all superstitious fear, and, consequently, of all religion, Epicurus endeavors to show that "nature" alone is adequate to the production of all things, and there is no need to drag in a "divine power" to explain the phenomena of the world.

This theory has been wrought into a somewhat plausible form by the brilliant and imposing generalizations of Aug. Comte. The religious phenomena of the world are simply one stage in the necessary development of mind, whether in the individual or the race. He claims to have been the first to discover the great law of the three successive stages or phases of human evolution. That law is thus enounced. Both in the individual mind, and in the history of humanity, thought, in dealing with its problems, passes, of necessity, through, first, a *Theological*, second, a *Metaphysical*, and finally reaches a third, or *Positive* stage.

58

In attempting an explanation of the universe, human thought, in its earliest stages of development, resorts to the idea of living personal agents enshrined in and moving every object, whether organic or inorganic, natural or artificial. In an advanced stage, it conceives a number of personal beings distinct from, and superior to nature, which preside over the different provinces of nature--the sea, the air, the winds, the rivers, the heavenly bodies, and assume the guardianship of individuals, tribes, and nations. As a further, and still higher stage, it asserts the unity of the Supreme Power which moves and vitalizes the universe, and guides and governs in the affairs of men and nations. The *Theological* stage is thus subdivided into three epochs, and represented as commencing in *Fetichism*, then advancing to *Polytheism*, and, finally, consummating in *Monotheism*.

The next stage, the *Metaphysical*, is a transitional stage, in which man substitutes abstract entities, as substance, force, Being *in se*, the Infinite, the Absolute, in the place of theological conceptions. During this period all theological opinions undergo a process of disintegration, and lose their hold on the mind of man. Metaphysical speculation is a powerful solvent, which decomposes and dissipates theology.

It is only in the last--the *Positive* stage--that man becomes willing to relinquish all theological ideas and metaphysical notions, and confine his attention to the study of phenomena in their relation to time and space; discarding all inquiries as to causes, whether efficient or final, and denying the existence of all entities and powers beyond nature.

The first stage, in its religious phase, is *Theistic*, the second is *Pantheistic*, the last is *Atheistic*.

The proofs offered by Comte in support of this theory are derived:

I. *From Cerebral Organization*. There are three grand divisions of the Brain, the Medulla

Oblongata, the Cerebellum, and the Cerebrum; the first represents the merely animal instincts the second, the more elevated sentiments, the third, the intellectual powers. Human nature must, therefore, both in the individual and in the race, be developed in the following order: (1.) in animal instincts; (2.) in social affections and communal tendencies; (3.) in intellectual pursuits. Infant life is a merely animal existence, shared in common with the brute; in childhood the individual being realizes his relation to external nature and human society; in youth and manhood he compares, generalizes, and classifies the objects of knowledge, and attains to science. And so the infancy of our race was a mere animal or savage state, the childhood of our race the organization of society, the youth and manhood of our race the development of science.

Now, without offering any opinion as to the merits of the phrenological theories of Gall and Spurzheim, we may ask, what relation has this order to the law of development presented by Comte? Is there any imaginable connection between animal propensities and theological ideas; between social affections and metaphysical speculations? Are not the intellectual powers as much concerned with theological ideas and metaphysical speculations as with positive science? And is it not more probable, more in accordance with facts, that all the powers of the mind, instinct, feeling, and thought, enter into action simultaneously, and condition each other? The very first act of perception, the first distinct cognition of an object, involves *thought* as much as the last generalization of science. We know nothing of *mind* except as the development of thought, and the first unfolding, even of the infant mind, reveals an intellectual act, a discrimination between a self and an object which is not self, and a recognition of resemblance, or difference between *this* object and *that*. And what does Positive science, in its most mature and perfect form, claim to do more than "to study actual phenomena in their orders of resemblance, coexistence, and succession."

Cerebral organization may furnish plausible analogies in favor of some theory of human development, but certainly not the one proposed by Aug. Comte. The attempt, however, to construct a chart of human history on such an *à priori* method,--to construct an ideal framework into which human nature must necessarily grow, is a violation of the first and most fundamental principle of the Positive science, which demands that we shall confine ourselves strictly to the study of actual phenomena in their orders of resemblance, coexistence, and succession. The history of the human race must be based on facts, not on hypotheses, and the facts must be ascertained by the study of ancient records and existing monuments of the past. Mere plausible analogies and *à priori* theories based upon them, are only fitted to mislead the mind; they insert a prism between the perceiving mind and the course of events which decomposes the pure white light of fact, and throws a false light over the entire field of history.

2. *The second order of proof is attempted to be drawn from the analogies of individual experience.*

It is claimed that the history of the race is the same as that of each individual mind; and it is affirmed that man is *religious* in infancy, *metaphysical* in youth, and *positive*, that is, scientific without being religious, in mature manhood; the history of the race must therefore have followed the same order.

We are under no necessity of denying that there is some analogy between the development of mind in the individual man, and in humanity as a whole, in order to refute the theory of Comte. Still, it must not be overlooked that the development of mind, in all cases and in all ages, is materially affected by exterior conditions. The influence of geographical and climatic conditions, of social and national institutions, and especially of education, however difficult to be estimated, can not be utterly disregarded. And whether all these influences have not been controlled, and collocated, and adjusted by a Supreme Mind in the education of humanity, is also a question which can not be pushed aside as of no consequence. Now, unless it can be shown that the same outward conditions which have accompanied the individual and modified his mental development, have been repeated in the history of the race, and repeated in the same order of succession, the argument has no value.

But, even supposing it could be shown that the development of mind in humanity has followed the same order as that of the individual, we confidently affirm that Comte has not given the true history of the development of the individual mind. The account he has given may perhaps be the history of his own mental progress, but it certainly is not the history of every individual mind, nor indeed, of a majority even, of educated minds that have arrived at maturity. It would be much more in harmony with facts to say childhood is the period of pure receptivity, youth of doubt and skepticism, and maturity of well-grounded and rational belief. In the ripeness and maturity of the nineteenth century the number of scientific men of the Comtean model is exceedingly small compared with the number of religious men. There are minds in every part of Europe and America as thoroughly scientific as that of Comte, and as deeply imbued with the spirit of the Inductive Philosophy, which are not conscious of any discordance between the facts of science and the fundamental principles of theology. It may be that, in his own immediate circle at Paris there may be a tendency to Atheism, but certainly no such tendency exists in the most scientific minds of Europe and America. The faith of Bacon, and Newton, and Boyle, of Descartes, Leibnitz, and Pascal, in regard to the fundamental principles of theology, is still the faith of Sedgwick, Whewell, Herschel, Brewster, Owen, Agassiz, Silliman, Mitchell, Hitchcock, Dana, and, indeed of the leading scientific minds of the world--the men who, as Comte would say, "belong to the élite of humanity." The mature mind, whether of the individual or the race, is not Atheistical.

3. *The third proof is drawn from a survey of the history of certain portions of our race.*

62 Comte is far from being assured that the progress of humanity, under the operation of his grand law of development, has been uniform and invariable. The majority of the human race, the vast populations of India, China, and Japan, have remained stationary; they are still in the Theological stage, and consequently furnish no evidence in support of his theory. For this reason he confines himself to the "élite" or advance-guard of humanity, and in this way makes the history of humanity a very "abstract history" indeed. Starting with Greece as the representative of ancient civilization, passing thence to Roman civilization, and onward to Western Europe, he attempts to show that the actual progress of humanity has been, on the whole, in conformity with his law. To secure, however, even this semblance of harmony between the facts of history and his hypothetical law, he has to treat the facts very much as Procrustes treated his victims,—he must stretch some, and mutilate others, so as to make their forms fit the iron bed. The natural organization of European civilization is distorted and torn asunder. "As the third or positive stage had accomplished its advent in his own person, it was necessary to find the metaphysical period just before; and so the whole life of the Reformed Christianity, in embryo and in manifest existence, is stripped of its garb of *faith*, and turned out of view as a naked metaphysical phenomenon. But metaphysics, again, have to be ushered in by theology; and of the three stages of theology Monotheism is the last, necessarily following on Polytheism, as that, again, on Fetichism. There is nothing for it, therefore, but to let the mediæval Catholic Christianity stand as the world's first monotheism, and to treat it as the legitimate offspring and necessary development of the Greek and Roman polytheism. This, accordingly, Comte actually does. Protestantism he illegitimizes, and outlaws from religion altogether, and the genuine Christianity he fathers upon the faith of Homer and the Scipios! Once or twice, indeed, it seems to cross him that there was such a people as the Hebrews, and that they were not the polytheists they ought to have been. He sees the fact, but pushes it out of his way with the remark that the Jewish monotheism was 'premature.'" [42](#)

Footnote 42: [\(return\)](#) Martineau's Essays, pp. 61, 62.

63 The signal defect of Comte's historical survey, however, is, that it furnishes no evidence of the general prevalence of Fetichism in primitive times. The writings of Moses are certainly entitled to as much consideration and credence as the writings of Berosus, Manetho, and Herodotus; and, it will not be denied, they teach that the faith of the earliest families and races of men was *monotheistic*. The early Vedas, the Institutes of Menu, the writings of Confucius, the Zendavesta, all bear testimony that the ancient faith of India, China, and Persia, was, at any rate, pantheistic; and learned and trustworthy critics, Asiatic as well as European, confidently affirm that the ground of the Brahminical, Buddhist, and Parsist faith is *monotheistic*; and that *one* Being is assumed, in the earliest books, to be the origin of all things. [43](#) Without evidence, Comte assumes that the savage state is the original condition of man; and instead of going to Asia, the cradle of the race, for some light as to the early condition and opinions of the remotest families of men, he turns to Africa, the *soudan* of the earth, for his illustration of the habit of man, in the infancy of our race, to endow every object in nature, whether organic or inorganic, with life and intelligence. The theory of a primitive state of ignorance and barbarism is a mere assumption—an hypothesis in conflict with the traditionary legends of all nations, the earliest records of our race, and the unanimous voice of antiquity, which attest the general belief in a primitive state of light and innocence.

Footnote 43: [\(return\)](#) "The Religions of the World in their Relation to Christianity" (Maurice, ch. ii., iii., iv.).

The three stages of development which Comte describes as necessarily successive, have, for centuries past, been simultaneous. The theological, the metaphysical, and the scientific elements coexist now, and there is no real, radical, or necessary conflict between them. Theological and metaphysical ideas hold their ground as securely under the influence of enlarged scientific discovery as before; and there is no reason to suppose they ever had more power over the mind of man than they have to-day. The notion that God is dethroned by the wonderful discoveries of modern science, and theology is dead, is the dream of the "*profond orage cérébral*" which interrupted the course of Comte's lectures in 1826. As easily may the hand of Positivism arrest the course of the sun, as prevent the instinctive thought of human reason recognizing and affirming the existence of a God. And so long as ever the human mind is governed by necessary laws of thought, so long will it seek...

64 [Transcriber's note: In the original document, page 64 is a duplication of page 63. The real page 64 seems to be missing.]

65eur, and consequently to develop its true philosophy. Its fundamental error is the assumption that all our knowledge is confined to the observation and classification of sensible phenomena—that is, to changes perceptible by the senses. Psychology, based, as it is, upon self-observation and self-reflection, is a "mere illusion; and logic and ethics, so far as they are built upon it as their foundation, are altogether baseless." Spiritual entities, forces, causes, efficient or final, are unknown and unknowable; all inquiry regarding them must be inhibited, "for Theology is inevitable if we permit the inquiry into causes at all."

II. The second hypothesis offered in explanation of the facts of religious history is, *that religion is part of that PROCESS OR EVOLUTION OF THE ABSOLUTE (i.e., the Deity) which, gradually*

unfolding itself in nature, mind, history, and religion, attains to the fullest self-consciousness in philosophy.

This is the theory of Hegel, in whose system of philosophy the subjective idealism of Kant culminates in the doctrine of "*Absolute Identity*." Its fundamental position is that thought and being, subject and object, the perceiving mind and the thing perceived, are ultimately and essentially *one*, and that the only actual reality is that which results from their mutual relation. The outward thing is nothing, the inward perception is nothing, for neither could exist alone; the only reality is the relation, or rather synthesis of the two; the essence or nature of being in itself accordingly consists in the coexistence of two contraries. Ideas, arising from the union or synthesis of two opposites, are therefore the *concrete realities* of Hegel; and the *process* of the evolution of ideas, in the human mind, is the process of all existence--*the Absolute Idea*.

66

The Absolute(die Idée) thus forms the beginning, middle, and end of the system of Hegel. It is the one infinite existence or thought, of which nature, mind, history, religion, and philosophy, are the manifestation. "The absolute is, with him, not the infinite *substance*, as with Spinoza; nor the infinite *subject*, as with Fichte; nor the infinite *mind*, as with Schelling; it is a perpetual *process*, an eternal thinking, without beginning and without end." ⁴⁴ This *living, eternal process of absolute existence is the God of Hegel*.

It will thus be seen that the *Absolute* is, with Hegel, the sum of all actual and possible existence; "nothing is true and real except so far as it forms an element of the Absolute Spirit." ⁴⁵ "What kind of an Absolute Being," he asks, "is that which does not contain in itself all that is actual, even evil included?" ⁴⁶ The Absolute, therefore, in Hegel's conception, does not allow of any existence out of itself. It is the *unity* of the finite and the infinite, the eternal and the temporal, the ideal and the real, the subject and the object. And it is not only the unity of these opposites so as to exclude all difference, but it contains in itself, all the differences and opposites as elements of its being; otherwise the distinctions would stand over against absolute as a limit, and the absolute would cease to be absolute.

God is, therefore, according to Hegel, "no motionless, eternally self-identical and unchangeable being, but a living, eternal *process* of absolute self-existence. This process consists in the eternal self-distinction, or antithesis, and equally self-reconciliation or synthesis of those opposites which enter, as necessary elements, into the constitution of the Divine Being. This *self-evolution*, whereby the absolute enters into antithesis, and returns to itself again, is the eternal *self-actualization* of its being, and which at once constitutes the beginning, middle, and end, as in the circle, where the beginning is at the same time the end, and the end the beginning." ⁴⁷

67

The whole philosophy of Hegel consists in the development of this idea of God by means of his, so-called, dialectic method, which reflects the objective life-process of the Absolute, and is, in fact, identical with it; for God, says he, "is only the Absolute Intelligence in so far as he knows himself to be the Absolute Intelligence, *and this he knows only in science* [dialectics], *and this knowledge alone constitutes his true existence*." ⁴⁸ This life-process of the Absolute has three "moments." It may be considered as the idea *in itself*-bare, naked, undetermined, unconscious idea; as the idea *out of itself*, in its objective form, or in its differentiation; and, finally, as the idea *in itself*, and *for itself*, in its regressive or reflective form. This movement of thought gives, *first*, bare, naked, indeterminate thought, or thought in the mere antithesis of Being and non-Being; *secondly*, thought externalizing itself in nature; and, *thirdly*, thought returning to itself, and knowing itself in mind, or consciousness. Philosophy has, accordingly, three corresponding divisions:--1. LOGIC, which here is identical with metaphysics; 2. PHILOSOPHY OF NATURE; 3. PHILOSOPHY OF MIND.

Footnote 48: [\(return\)](#) "Hist, of Philos.," iii. p. 399.

It is beyond our design to present an expanded view of the entire philosophy of Hegel. But as he has given to the world a *new* logic, it may be needful to glance at its general features as a help to the comprehension of his philosophy of religion. The fundamental law of his logic is the *identity of contraries or contradictions*. All thought is a synthesis of contraries or opposites. This antithesis not only exists in all ideas, but constitutes them. In every idea we form, there must be *two* things opposed and distinguished, in order to afford a clear conception. Light can not be conceived but as the opposite of darkness; good can not be thought except in opposition to evil. All life, all reality is thus, essentially, the union of two elements, which, together, are mutually opposed to, and yet imply each other.

The identity of Being and Nothing is one of the consequences of this law.

1. *The Absolute is the Being* (das Absolute ist das Seyn), and "the Being" is here, according to Hegel, bare, naked, abstract, undistinguished, indeterminate, unconscious idea.

2. *The Absolute is the Nothing* (das Absolute ist das Nichts). "Pure being is pure abstraction, and consequently the absolute-negative, which in like manner, directly taken, is *nothing*." Being and Nothing are the positive and negative poles of the Idea, that is, the Absolute. They both alike exist, they are both pure abstractions, both absolutely unconditioned, without attributes, and without consciousness. Hence follows the conclusion--

3. *Being and Nothing are identical* (das Seyn und das Nichts ist dasselbe), Being is non-Being. Non-Being is Being--the Anders-seyn--which becomes as Being to the Seyn. Nothing is, in some sense, an actual thing.

Being and *Nothing* are thus the two elements which enter into the one Absolute Idea as contradictories, and both together combine to form a complete notion of bare production, or the *becoming* of something out of nothing,--the unfolding of real existence in its lowest form, that is, of *nature*.

The "*Philosophy of Nature*" exhibits a series of necessary movements which carry the idea forward in the ascending scale of sensible existence. The laws of mechanics, chemistry, and physiology are resolved into a series of oppositions. But the law which governs this development requires the self-reconciliation of these opposites. The idea, therefore, which in nature was unconscious and ignorant of itself, returns upon itself, and becomes conscious of itself, that is, becomes *mind*. The science of the regression or self-reflection of the idea, is the "*Philosophy of Mind*."

The "*Philosophy of Mind*" is subdivided by Hegel into three parts. There is, first, the subjective or individual mind (*psychology*); then the objective or universal mind, as represented in society, the state, and in history (*ethics, political philosophy, or jurisprudence, and philosophy of history*); and, finally, the union of the subjective and objective mind, or *the absolute mind*. This last manifests itself again under three forms, representing the three degrees of the self-consciousness of the Spirit, as the eternal truth. These are, first, *art*, or the representation of beauty (æsthetics); secondly, *religion*, in the general acceptation of the term (philosophy of religion); and, thirdly, *philosophy* itself, as the purest and most perfect form of the scientific knowledge of truth. All historical religions, the Oriental, the Jewish, the Greek, the Roman, and the Christian, are *the successive stages in the development or self-actualization of God*. [49](#)

It is unnecessary to indicate to the reader that the philosophy of Hegel is essentially pantheistic. "God is not a *person*, but personality itself, *i.e.*, the universal personality, which realizes itself in every human consciousness, as so many separate thoughts of one eternal mind. The idea we form of the absolute is, to Hegel, the absolute itself, its essential existence being identical with our conception of it. Apart from, and out of the world, there is no God; and so also, apart from the universal consciousness of man, there is no Divine consciousness or personality." [50](#)

Footnote 49: [\(return\)](#) See art. "Hegelian Philosophy," in Herzog's *Real-Encyc.*, from whence our materials are chiefly drawn.

Footnote 50: [\(return\)](#) Morell, "Hist. of Philos.," p. 473.

This whole conception of religion, however, is false, and conflicts with the actual facts of man's religious nature and religious history. If the word "religion" has any meaning at all, it is "a mode of life determined by the consciousness of dependence upon, and obligation to God." It is reverence for, gratitude to, and worship of God as a being distinct from humanity. But in the philosophy of Hegel religion is a part of God--a stage in the development or self-actualization of God. Viewed under one aspect, religion is the self-adoration of God--the worship of God by God; under another aspect it is the worship of humanity, since God only becomes conscious of himself in humanity. The fundamental fallacy is that upon which his entire method proceeds, *viz.*, "the identity of subject and object, being and thought." Against this false position the consciousness of each individual man, and the universal consciousness of our race, as revealed in history, alike protest. If thought and being are identical, then whatever is true of ideas is also true of objects, and then, as Kant had before remarked, there is no difference between *thinking* we possess a hundred dollars, and actually *possessing* them. Such absurdities may be rendered plausible by a logic which asserts the "identity of contradictions," but against such logic common sense rebels. "The law of non-contradiction" has been accepted by all logicians, from the days of Aristotle, as a fundamental law of thought. "Whatever is contradictory is unthinkable. A=not A=O, or A--A=O." [51](#) Non-existence can not exist. Being can not be nothing.

Footnote 51: [\(return\)](#) Hamilton's Logic, p. 58.

III. The third hypothesis affirms *that the phenomenon of religion has its foundation in FEELING--the feeling of dependence and of obligation*; and that to which the mind, by spontaneous intuition of instinctive faith, traces that dependence and obligation we call God.

This, with some slight modification in each case, consequent upon the differences in their philosophic systems, is the theory of Jacobi, Schleiermacher, Nitzsch, Mansel, and probably Hamilton. Its fundamental position is, that we can not gain truth with absolute certainty either from sense or reason, and, consequently, the only valid source of real knowledge is *feeling--faith, intuition*, or, as it is called by some, *inspiration*.

There have been those, in all ages, who have made all knowledge of invisible, supersensuous, divine things, to rest upon an internal *feeling*, or immediate, inward vision. The Oriental Mystics, the Neo-Platonists, the Mystics of the Greek and Latin Church, the German Mystics of the 14th century, the Theosophists of the Reformation, the Quietists of France, the Quakers, have all appealed to some *special* faculty, distinct from the understanding and reason, for the immediate cognition of invisible and spiritual existences. By some, that special faculty was regarded as an "interior eye" which was illuminated by the "Universal Light;" by others, as a peculiar sensibility of the soul--a *feeling* in whose perfect calm and utter quiescence the Divinity was mirrored; or which, in an ecstatic state, rose to a communion with, and final absorption in the Infinite.

71

Jacobi was the first, in modern times, to give the "faith-philosophy," as it is now designated, a definite form. He assumes the position that all knowledge, of whatever kind, must ultimately rest upon intuition or faith. As it regards sensible objects, the understanding finds the impression from which all our knowledge of the external flows, ready formed. The process of sensation is a mystery; we know nothing of it until it is past, and the feeling it produces is present. Our knowledge of matter, therefore, rests upon faith in these intuitions. We can not doubt that the feeling has an objective cause. In every act of perception there is something actual and present, which can not be referred to a mere subjective law of thought. We are also conscious of another class of feelings which correlate us with a supersensuous world, and these feelings, also, must have their cause in some objective reality. Just as sensation gives us an immediate knowledge of an external world, so there is an internal sense which gives us an immediate knowledge of a spiritual world--God, the soul, freedom, immortality. Our knowledge of the invisible world, like our knowledge of the visible world, is grounded upon faith in our intuitions. All philosophic knowledge is thus based upon *belief*, which Jacobi regards as a fact of our inward sensibility--a sort of knowledge produced by an immediate *feeling* of the soul--a direct apprehension, without proof, of the True, the Supersensuous, the Eternal.

Jacobi prepared the way for, and was soon eclipsed by the deservedly greater name of Schleiermacher. His fundamental position was that truth in Theology could not be obtained by reason, but by a feeling, *insight*, or intuition, which in its lowest form he called *God-consciousness*, and in its highest form, *Christian-consciousness*. The God-consciousness, in its original form, is the *feeling of dependence* on the Infinite. The Christian consciousness is the perfect union of the human consciousness with the Divine, through the mediation of Christ, or what we would call a Christian experience of communion with God.

72

Rightly to understand the position of Schleiermacher we must take account of his doctrine of *self-consciousness*. "In all self-consciousness," says he, "there are two elements, a Being ein Seyn, and a Somehow-having-become (Irgendweigewordenseyn). The last, however, presupposes, for every self-consciousness, besides the ego, yet something else from whence the certainty of the same [self-consciousness] exists, and without which self-consciousness would not be just this." [52](#) Every determinate mode of the sensibility supposes an *object*, and a *relation* between the subject and the object, the subjective feeling deriving its determinations from the object. External sensation, the feeling, say of extension and resistance, gives world-consciousness. Internal sensation, the *feeling of dependence*, gives God consciousness. And it is only by the presence of world consciousness and God-consciousness that self consciousness can be what it is.

We have, then, in our self-consciousness a *feeling of direct dependence*, and that to which our minds instinctively trace that dependence we call God. "By means of the religious feeling, the Primal Cause is revealed in us, as in perception, the things external, are revealed in us." [53](#) The *felt*, therefore, is not only the first religious sense, but the ruling, abiding, and perfect form of the religious spirit; whatever lays any claim to religion must maintain its ground and principle in *feeling*, upon which it depends for its development; and the sum-total of the forces constituting religious life, inasmuch as it is a *life*, is based upon immediate self-consciousness. [54](#)

Footnote 52: [\(return\)](#) Glaubenslehre, ch. i. § 4.

Footnote 53: [\(return\)](#) Dialectic, p. 430.

Footnote 54: [\(return\)](#) Nietzsche, "System of Doctrine," p. 23.

The doctrine of Schleiermacher is somewhat modified by Mansel, in his "*Limits of Religious Thought*." He maintains, with Schleiermacher, that religion is grounded in *feeling*, and that the *felt* is the first intimation or presentiment of the Divine. Man "*feels* within him the consciousness of a Supreme Being, and the instinct to worship, before he can argue from effects to causes, or estimate the traces of wisdom and benevolence scattered through the creation." [55](#) He also agrees with Schleiermacher in regarding the *feeling of dependence* as a state of the sensibility, out of which reflection builds up the edifice of Religious Consciousness, but he does not, with Schleiermacher, regard it as pre-eminently *the* basis of religious consciousness. "The mere consciousness of dependence does not, of itself, exhibit the character of the Being on whom we depend. It is as consistent with superstition as with religion; with the belief in a malevolent, as in a benevolent Deity." [56](#) To the feeling of dependence he has added the *consciousness of moral obligation*, which he imagines supplies the deficiency. By this consciousness of moral obligation "we are compelled to assume the existence of a moral Deity, and to regard the absolute standard of right and wrong as constituted by the nature of that Deity." [57](#) "To these two facts of the inner consciousness the feeling of dependence, and consciousness of moral obligation may be traced,

73

as to their sources, the two great outward acts by which religion, in its various forms, has been manifested among men--*Prayer*, by which they seek to win God's blessing upon the future, and *Expiation*, by which they strive to atone for the offenses of the past. The feeling of dependence is the instinct which urges us to pray. It is the feeling that our existence and welfare are in the hands of a superior power; not an inexorable fate, not an immutable law; but a Being having at least so far the attribute of personality that he can show favor or severity to those who are dependent upon Him, and can be regarded by them with feelings of hope and fear, and reverence and gratitude." ⁵⁸ The feeling of moral obligation--"the law written in the heart"--leads man to recognize a Lawgiver. "Man can be a law unto himself only on the supposition that he reflects in himself the law of God." ⁵⁹ The conclusion from the whole is, there must be an *object* answering to this consciousness: there must be a God to explain these facts of the soul.

74

This "philosophy of feeling," or of faith generated by feeling, has an interest and a significance which has not been adequately recognized by writers on natural theology. Feeling, sentiment, enthusiasm, have always played an important part in the history of religion. Indeed it must be conceded that religion is a *right state of feeling towards God*--religion is *piety*. A philosophy of the religious emotion is, therefore, demanded in order to the full interpretation of the religious phenomena of the world.

But the notion that internal feeling, a peculiar determination of the sensibility, is the source of religious ideas--that God can be known immediately by feeling without the mediation of the truth that manifests God; that he can be *felt* as the qualities of matter can be felt; and that this affection of the inward sense can reveal the character and perfections of God, is an unphilosophical and groundless assumption. To assert, with Nitzsch, that "feeling has reason, and is reason, and that the sensible and felt God-consciousness generates out of itself fundamental conceptions," is to confound the most fundamental psychological distinctions, and arbitrarily bend the recognized classifications of mental science to the necessities of a theory. Indeed, we are informed that it is "by means of an *independent* psychology, and conformably to it," that Schleiermacher illustrates his "philosophy of feeling." ⁶⁰ But all psychology must be based upon the observation and classification of mental phenomena, as revealed in consciousness, and not constructed in an "independent" and à priori method. The most careful psychological analysis has resolved the whole complex phenomena of mind into thought, feeling, and volition. ⁶¹ These orders of phenomena are radically and essentially distinct. They differ not simply in degree but in kind, and it is only by an utter disregard of the facts of consciousness that they can be confounded. Feeling is not reason, nor can it by any logical dexterity be transformed into reason.

75

The question as to the relative order of cognition and feeling, that is, as to whether feeling is the first or original form of the religious consciousness, or whether feeling be not consequent upon some idea or cognition of God, is one which can not be determined on empirical grounds. We are precluded from all scrutiny of the incipient stages of mental development in the individual mind and in collective humanity. If we attempt to trace the early history of the soul, its beginnings are lost in a period of blank unconsciousness, beyond all scrutiny of memory or imagination. If we attempt the inquiry on the wider field of universal consciousness, the first unfoldings of mind in humanity are lost in the border-land of mystery, of which history furnishes no authentic records. All dogmatic affirmation must, therefore, be unjustifiable. The assertion that religious feeling precedes all cognition--that "the consciousness of dependence on a Supreme Being, and the instinct of worship" are developed *first* in the mind, before the reason is exercised, is utterly groundless. The more probable doctrine is that all the primary faculties enter into spontaneous action *simultaneously*--the reason with the senses, the feelings with the reason, the judgment with both the senses and the reason, and that from their primary and simultaneous action arises the complex result, called consciousness, or conjoint knowledge. ⁶² There can be no clear and distinct consciousness without the cognition of a *self* and a *not-self* in mutual relation and opposition. Now the knowledge of the self--the personal ego--is an intuition of reason; the knowledge of the not-self is an intuition of sense. All knowledge is possible only under condition of plurality, difference, and relation. ⁶³ Now the judgment is "the Faculty of Relations," or of comparison; and the affirmation "*this* is not *that*" is an act of judgment; to know is, consequently, to judge. ⁶⁴ Self-consciousness must, therefore, be regarded as a synthesis of sense, reason, and judgment, and not a mere self-feeling (cœnæsthesis).

Footnote 62: [\(return\)](#) Cousin, "Hist. of Philos.," vol. i. p. 357; vol. ii. p. 337.

Footnote 63: [\(return\)](#) Id., ib., vol. i. p. 88.

76

A profound analysis will further lead to the conclusion that if ideas of reason are not chronologically antecedent to sensation, they are, at least, the logical antecedents of all cognition. The mere feeling of resistance can not give the notion of without the *à priori* idea of space. The feeling of movement of change, can not give the cognition of event without the rational idea of time or duration. Simple consciousness can not generate the idea of personality, or selfhood, without the rational idea of identity or unity. And so the mere "feeling of dependence," of finiteness and imperfection, can not give the idea of God, without the rational *à priori* idea of the Infinite, the Perfect, the Unconditioned Cause. Sensation is not knowledge, and never can become knowledge, without the intervention of reason, and a concentrated self feeling can not rise essentially above animal life until it has, through the mediation of reason, attained the idea of the existence of a Supreme Being ruling over nature and man.

Mere feeling is essentially blind. In its *pathological* form, it may indicate a want, and even develop an unconscious appetency, but it can not, itself, reveal an *object*, any more than the feeling of hunger can reveal the actual presence, or determine the character and fitness, of any food. An undefinable fear, a mysterious presentiment, an instinctive yearning, a hunger of the soul, these are all irrational emotions which can never rise to the dignity of knowledge. An object must be conjured by the imagination, or conceived by the understanding, or intuitively apprehended by the reason, before the feeling can have any significance.

Regarded in its *moral* form, as "the feeling of obligation," it can have no real meaning unless a "law of duty" be known and recognized. Feeling, alone, can not reveal what duty is. When that which is right, and just, and good is revealed to the mind, then the sense of obligation may urge man to the performance of duty. But the right, the just, the good, are ideas which are apprehended by the reason, and, consequently, our moral sentiments are the result of the harmonious and living relation between the reason and the sensibilities.

77

Mr. Mansel asserts the inadequacy of Schleiermacher's "feeling of dependence" to reveal the character of the Being on whom we depend. He has therefore supplemented his doctrine by the "feeling of moral obligation," which he thinks "compels us to *assume* the existence of a moral Deity." We think his "fact of religious intuition" is as inadequate as Schleiermacher's to explain the whole phenomena of religion. In neither instance does feeling supply the actual knowledge of God. The feeling of dependence may indicate that there is a Power or Being upon whom we depend for existence and well-being, and which Power or Being "we call God." The feeling of obligation certainly indicates the existence of a Being to whom we are accountable, and which Being Mr. Mansel calls a "moral Deity." But in both instances the character, and even the existence of God is "*assumed*" and we are entitled to ask on what ground it is assumed. It will not be asserted that feeling alone generates the idea, or that the feeling is transformed into idea without the intervention of thought and reflection. Is there, then, a *logical* connection between the feeling of dependence and of obligation, and the idea of the Uncreated Mind, the Infinite First Cause, the Righteous Governor of the world. Or is there a fixed and changeless co-relation between *the feeling* and the *idea*, so that when the feeling is present, the idea also necessarily arises in the mind? This latter opinion seems to be the doctrine of Mansel. We accept it as the statement of a fact of consciousness, but we can not regard it as an account of the genesis of the idea of God in the human mind. The idea of God as the First Cause, the Infinite Mind, the Perfect Being, the personal Lord and Lawgiver, the creator, sustainer, and ruler of the world, is not a simple, primitive intuition of the mind. It is manifestly a complex, concrete idea, and, as such, can not be developed in consciousness, by the operation of a single faculty of the mind, in a simple, undivided act. It originates in the spontaneous operation of the whole mind. It is a necessary deduction from the facts of the universe, and the primitive intuitions of the reason,--a logical inference from the facts of sense, consciousness, and reason. A philosophy of religion which regards the feelings as supreme, and which brands the decisions of reason as uncertain, and well-nigh valueless, necessarily degenerates into mysticism--a mysticism "which pretends to elevate man directly to God, and does not see that, in depriving reason of its power, it really deprives man of that which enables him to know God, and puts him in a just communication with God by the intermediary of eternal and infinite truth." [65](#)

78

Footnote 65: [\(return\)](#) Cousin, "True, Beautiful, and Good," p. 110.

The religious sentiments in all minds, and in all ages, have resulted from the union of *thought* and *feeling*--the living and harmonious relation of reason and sensibility; and a philosophy which disregards either is inadequate to the explanation of the phenomena.

IV. The fourth hypothesis is, *that religion has had its outbirth in the spontaneous apperceptions of REASON*; that is, in the necessary, *à priori* ideas of the infinite, the perfect, the unconditioned Cause, the Eternal Being, which are evoked into consciousness in presence of the changeful, contingent phenomena of the world.

This will at once be recognized by the intelligent reader as the doctrine of Cousin, by whom *pure reason* is regarded as the grand faculty or organ of religion.

Religion, in the estimation of Cousin, is grounded on *cognition* rather than upon feeling. It is the knowledge of God, and the knowledge of duty in its relation to God and to human happiness; and as reason is the general faculty of all knowing, it must be the faculty of religion. "In its most

elevated point of view, religion is the relation of absolute truth to absolute Being," and as absolute truth is apprehended by the reason alone, reason "is the veridical and religious part of the nature of man." ⁶⁶ By "reason," however, as we shall see presently, Cousin does not mean the discursive or reflective reason, but the spontaneous or intuitive reason. That act of the mind by which we attain to religious knowledge is not a *process of reasoning*, but a pure appreciation, an instinctive and involuntary movement of the soul.

Footnote 66: [\(return\)](#) Henry's Cousin, p. 510.

The especial function of reason, therefore, is to reveal to us the invisible, the supersensuous, the Divine. "It was bestowed upon us for this very purpose of going, without any circuit of reasoning, from the visible to the invisible, from the finite to the infinite, from the imperfect to the perfect, and from necessary and eternal truths, to the eternal and necessary principle" that is God. ⁶⁷ Reason is thus, as it were, the bridge between consciousness and being; it rests, at the same time, on both; it descends from God, and approaches man; it makes its appearance in consciousness as a guest which brings intelligence of another world of real Being which lies beyond the world of sense.

Reason does not, however, attain to the Absolute Being directly and immediately, without any intervening medium. To assert this would be to fall into the error of Plotinus, and the Alexandrian Mystics. Reason is the offspring of God, a ray of the Eternal Reason, but it is not to be identified with God. Reason attains to the Absolute Being indirectly, and by the interposition of truth. Absolute truth is an attribute and a manifestation of God. "Truth is incomprehensible without God, and God is incomprehensible without truth. Truth is placed between human intelligence, and the supreme intelligence as a kind of mediator." ⁶⁸ Incapable of contemplating God face to face, reason adores God in the truth which represents and manifests Him.

Footnote 67: [\(return\)](#) Cousin, "True, Beautiful, and Good," p. 103.

Footnote 68: [\(return\)](#) Id., ib., p. 99.

Absolute truth is thus a revelation of God, made by God to the reason of man, and as it is a light which illuminates every man, and is perpetually perceived by all men, it is a universal and perpetual revelation of God to man. The mind of man is "the offspring of God," and, as such, must have some resemblance to, and some correlation with God. Now that which constitutes the image of God in man must be found in the reason which is correlated with, and capable of perceiving the truth which manifests God, just as the eye is correlated to the light which manifests the external world. Absolute truth is, therefore, the sole medium of bringing the human mind into communion with God; and human reason, in becoming united to absolute truth, becomes united to God in his manifestation in spirit and in truth. The supreme law, and highest destination of man, is to become united to God by seeking a full consciousness of, and loving and practising the Truth. ⁶⁹

Footnote 69: [\(return\)](#) Henry's Cousin, p. 511, 512.

It will at once be obvious that the grand crucial questions by which this philosophy of religion is to be tested are--

1st. *How will Cousin prove to us that human reason is in possession of universal and necessary principles or absolute truths?* and,

2d. *How are these principles shown to be absolute? how far do these principles of reason possess absolute authority?*

The answer of Cousin to the first question is that we prove reason to be in possession of universal and necessary principles by the analysis of the contents of consciousness, that is, by psychological analysis. The phenomena of consciousness, in their primitive condition, are necessarily complex, concrete, and particular. All our primary ideas are complex ideas, for the evident reason that all, or nearly all, our faculties enter at once into exercise; their simultaneous action giving us, at the same time, a certain number of ideas connected with each other, and forming a whole. For example, the idea of the exterior world, which is given us so quickly, is a complex idea, which contains a number of ideas. There is the idea of the secondary qualities of exterior objects; there is the idea of the primary qualities; there is the idea of the permanent reality of something to which you refer these qualities, to wit, matter; there is the idea of space which contains bodies; there is the idea of time in which movements are effected. All these ideas are acquired simultaneously, or nearly simultaneously, and together form one complex idea.

The application of analysis to this complex phenomenon clearly reveals that there are simple ideas, beliefs, principles in the mind which can not have been derived from sense and experience, which sense and experience do not account for, and which are the suggestions of reason alone: the idea of the *Infinite*, the *Perfect*, the *Eternal*; the true, the beautiful, the good; the principle of causality, of substance, of unity, of intentionality; the principle of duty, of obligation, of accountability, of retribution. These principles, in their natural and regular development, carry us beyond the limits of consciousness, and reveal to us a world of real being beyond the world of sense. They carry us up to an absolute Being, the fountain of all existence--a living, personal, righteous God--the author, the sustainer, and ruler of the universe.

The proof that these principles are absolute, and possessed of absolute authority, is drawn, first, from the *impersonality of reason*, or, rather, the impersonality of the ideas, principles, or truths of reason.

It is not we who create these ideas, neither can we change them at our pleasure. We are conscious that the will, in all its various efforts, is enstamped with the impress of our personality. Our volitions are our own. So, also, our desires are our own, our emotions are our own. But this is not the same with our rational ideas or principles. The ideas of substance, of cause, of unity, of intentionality do not belong to one person any more than to another; they belong to mind as mind, they are revealed in the universal intelligence of the race. Absolute truth has no element of personality about it. Man may say "my reason," but give him credit for never having dared to say "*my truth*." So far from rational ideas being individual, their peculiar characteristic is that they are opposed to individuality, that is, they are universal and necessary. Instead of being circumscribed within the limits of experience, they surpass and govern it; they are universal in the midst of particular phenomena; necessary, although mingled with things contingent; and absolute, even when appearing within us the relative and finite beings that we are. ⁷⁰ Necessary, universal, absolute truth is a direct emanation from God. "Such being the case, the decision of reason within its own peculiar province possesses an authority almost divine. If we are led astray by it, we must be led astray by a light from heaven." ⁷¹

Footnote 70: [\(return\)](#) Cousin, "True, Beautiful, and Good," p. 40.

Footnote 71: [\(return\)](#) Id., "Lectures," vol. ii. p. 32.

The second proof is derived from *the distinction between the spontaneous and reflective movements of reason*.

Reflection is voluntary, spontaneity is involuntary; reflection is personal, spontaneity is impersonal; reflection is analytic, spontaneity is synthetic; reflection begins with doubt, spontaneity with affirmation; reflection belongs to certain ones, spontaneity belongs to all; reflection produces science, spontaneity gives truth. Reflection is a process, more or less tardy, in the individual and in the race. It sometimes engenders error and skepticism, sometimes convictions that, from being rational, are only the more profound. It constructs systems, it creates artificial logic, and all those formulas which we now use by the force of habit, as if they were natural to us. But spontaneous intuition is the true logic of nature,—instant, direct, and infallible. It is a primitive affirmation which implies no negation, and therefore yields positive knowledge. To reflect is to return to that which was. It is, by the aid of memory, to return to the past, and to render it present to the eye of consciousness. Reflection, therefore, creates nothing; it supposes an anterior operation of the mind in which there necessarily must be as many terms as are discovered by reflection. Before all reflection there comes spontaneity—a spontaneity of the intellect, which seizes truth at once, without traversing doubt and error. "We thus attain to a judgment free from all reflection, to an affirmation without any mixture of negation, to an immediate intuition, the legitimate daughter of the natural energy of thought, like the inspiration of the poet, the instinct of the hero, the enthusiasm of the prophet." Such is the first act of knowing, and in this first act the mind passes from *idea to being* without ever suspecting the depth of the chasm it has passed. It passes by means of the power which is in it, and is not astonished at what it has done. It is subsequently astonished when by reflection it returns to the analysis of the results, and, by the aid of the liberty with which it is endowed, to do the opposite of what it has done, to deny what it has affirmed. "Hence comes the strife between sophism and common sense, between false science and natural truth, between good and bad philosophy, both of which come from free reflection." ⁷²

It is this spontaneity of thought which gives birth to *religion*. The instinctive thought which darts through the world, even to God, is natural religion. "All thought implies a spontaneous faith in God, and there is no such thing as natural atheism. Doubt and skepticism may mingle with reflective thought, but beneath reflection there is still spontaneity. When the scholar has denied the existence of God, listen to the man, interrogate him, take him unawares, and you will see that all his words envelop the idea of God, and that faith in God is, without his recognition, at the bottom, in his heart." ⁷³

Religion, then, in the system of Cousin, does not begin with reflection, with science, but with *faith*. There is, however, this difference to be noted between the theory of the "faith-philosophers" (Jacobi, Schleiermacher, etc.) and the theory of Cousin. With them, faith is grounded on sensation or *feeling*; with him, it is grounded on *reason*. "Faith, whatever may be its form, whatever may be its object, common or sublime, can be nothing else than the *consent of reason*. That is the foundation of faith." ⁷⁴

Footnote 72: [\(return\)](#) Cousin, "True, Beautiful, and Good," p. 106.

Footnote 73: [\(return\)](#) "Hist. of Philos.," vol. i. p. 137.

Footnote 74: [\(return\)](#) Ibid., vol. i. p. 90.

Religion is, therefore, with Cousin, at bottom, pure Theism. He thinks, however, that "true theism is not a dead religion that forgets precisely the fundamental attributes of God." It recognizes God as creator, preserver, and governor; it celebrates a providence; it adores a perfect, holy,

righteous, benevolent God. It holds the principle of duty, of obligation, of moral desert. It not only perceives the divine character, but feels its relation to God. The revelation of the Infinite, by reason, moves the feelings, and passes into sentiment, producing reverence, and love, and gratitude. And it creates worship, which recalls man to God a thousand times more forcibly than the order, harmony, and beauty of the universe can do.

The spontaneous action of reason, in its greatest energy, is *inspiration*. "Inspiration, daughter of the soul and heaven, speaks from on high with an absolute authority. It commands faith; so all its words are hymns, and its natural language is poetry." "Thus, in the cradle of civilization, he who possessed in a higher degree than his fellows the gift of inspiration, passed for the confidant and the interpreter of God. He is so for others, because he is so for himself; and he is so, in fact, in a philosophic sense. Behold the sacred origin of prophecies, of pontificates, and of modes of worship." ⁷⁵

Footnote 75: [\(return\)](#) "Hist. of Philos.," vol. i. p. 129.

As an account of the genesis of the idea of God in the human intelligence, the doctrine of Cousin must be regarded as eminently logical, adequate, and satisfactory. As a theory of the origin of religion, as a philosophy which shall explain all the phenomena of religion, it must be pronounced defective, and, in some of its aspects, erroneous.

First, it does not take proper account of that *living force* which has in all ages developed so much energy, and wrought such vast results in the history of religion, viz., the *power of the heart*. Cousin discourses eloquently on the spontaneous, instinctive movements of the reason, but he overlooks, in a great measure, the instinctive movements of the heart. He does not duly estimate the feeling of reverence and awe which rises spontaneously in presence of the vastness and grandeur of the universe, and of the power and glory of which the created universe is a symbol and shadow. He disregards that sense of an overshadowing Presence which, at least in seasons of tenderness and deep sensibility, seems to compass us about, and lay its hand upon us. He scarcely recognizes the deep consciousness of imperfection and weakness, and utter dependence, which prompts man to seek for and implore the aid of a Superior Being; and, above all, he takes no proper account of the sense of guilt and the conscious need of expiation. His theory, therefore, can not adequately explain the universal prevalence of sacrifices, penances, and prayers. In short, it does not meet and answer to the deep longings of the human heart, the wants, sufferings, fears, and hopes of man.

Cousin claims that the universal reason of man is illuminated by the light of God. It is quite pertinent to ask, Why may not the universal heart of humanity be touched and moved by the spirit of God? If the ideas of reason be a revelation from God, may not the instinctive feelings of the heart be an inspiration of God? May not God come near to the heart of man and awaken a mysterious presentiment of an invisible Presence, and an instinctive longing to come nearer to Him? May he not draw men towards himself by sweet, persuasive influences, and raise man to a conscious fellowship? Is not God indeed the *great want* of the human heart?

Secondly, Cousin does not give due importance to the influence of revealed truth as given in the sacred Scriptures, and of the positive institutions of religion, as a divine economy, supernaturally originated in the world. He grants, indeed, that "a primitive revelation throws light upon the cradle of human civilization," and that "all antique traditions refer to an age in which man, at his departure from the hand of God, received from him immediately all lights, and all truths." ⁷⁶ He also believes that "the Mosaic religion, by its developments, is mingled with the history of all the surrounding people of Egypt, of Assyria, of Persia, and of Greece and Rome." ⁷⁷ Christianity, however, is regarded as "the summing and crown of the two great religious systems which reigned by turn in the East and in Greece"--the maturity of Ethnicism and Judaism; a development rather than a new creation. The explanation which he offers of the phenomena of inspiration opens the door to religious skepticism. Those who were termed seers, prophets, inspired teachers of ancient times, were simply men who resigned themselves wholly to their intellectual instincts, and thus gazed upon truth in its pure and perfect form. They did not reason, they did not reflect, they made no pretensions to philosophy they received truth spontaneously as it flowed in upon them from heaven. ⁷⁸ This immediate reception of Divine light was nothing more than the *natural* play of spontaneous reason nothing more than what has existed to a greater or less degree in every man of great genius; nothing more than may now exist in any mind which resigns itself to its own unreflective apperceptions. Thus revelation, in its proper sense, loses all its peculiar value, and Christianity is robbed of its pre-eminent authority. The extremes of Mysticism and Rationalism here meet on the same ground, and Plotinus and Cousin are at one.

Footnote 76: [\(return\)](#) "Hist. of Philos.," vol. i. p. 148.

Footnote 77: [\(return\)](#) Ibid., vol. i. p. 216.

Footnote 78: [\(return\)](#) Morell, "Hist. of Philos.," p. 661.

V. The fifth hypothesis offered in explanation of the religious phenomena of the world is that they had their origin in EXTERNAL REVELATION, to which reason is related as a purely passive organ, and Ethnicism as a feeble relic.

87 This is the theory of the school of "dogmatic theologians," of which the ablest and most familiar presentation is found in the "Theological Institutes" of R. Watson. ⁷⁹ He claims that all our religious knowledge is derived from *oral revelation alone*, and that all the forms of religion and modes of worship which have prevailed in the heathen world have been perversions and corruptions of the one true religion first taught to the earliest families of men by God himself. All the ideas of God, duty, immortality, and future retribution which are now possessed, or have ever been possessed by the heathen nations, are only broken and scattered rays of the primitive traditions descending from the family of Noah, and revived by subsequent intercourses with the Hebrew race; and all the modes of religious worship--prayers, lustrations, sacrifices--that have obtained in the world, are but feeble relics, faint reminiscences of the primitive worship divinely instituted among the first families of men. "The first man received the knowledge of God by sensible converse with him, and that doctrine was transmitted, with the confirmation of successive manifestations, to the early ancestors of all nations." ⁸⁰ This belief in the existence of a Supreme Being was preserved among the Jews by continual manifestations of the presence of Jehovah. "The intercourses between the Jews and the states of Syria and Babylon, on the one hand, and Egypt on the other, powers which rose to great eminence and influence in the ancient world, was maintained for ages. Their frequent dispersions and captivities would tend to preserve in part, and in part to revive, the knowledge of the once common and universal faith." ⁸¹ And the Greek sages who resorted for instruction to the Chaldean philosophic schools derived from thence their knowledge of the theological system of the Jews. ⁸² Among the heathen nations this primitive revelation was corrupted by philosophic speculation, as in India and China, Greece and Rome; and in some cases it was entirely obliterated by ignorance, superstition, and vice, as among the Hottentots of Africa and the aboriginal tribes of New South Wales, who "have no idea of one Supreme Creator." ⁸³

Footnote 79: [\(return\)](#) We might have referred the reader to Ellis's "Knowledge of Divine Things from Revelation, not from Reason or Nature;" Leland's "Necessity of Revelation;" and Horsley's "Dissertations," etc.; but as we are not aware of their having been reprinted in this country, we select the "Institutes" of Watson as the best presentation of the views of "the dogmatic theologians" accessible to American readers.

Footnote 80: [\(return\)](#) Watson, "Theol. Inst.," vol. i. p. 270.

Footnote 81: [\(return\)](#) Id. ib., vol. i. p. 31.

Footnote 82: [\(return\)](#) See ch. v. and vi., "On the Origin of those Truths which are found in the Writings and Religious Systems of the Heathen."

Footnote 83: [\(return\)](#) Ibid., vol. i. p. 274.

88 The same course of reasoning is pursued in regard to the idea of duty, and the knowledge of right and wrong. "A direct communication of the Divine Will was made to the primogenitors of our race," and to this source *alone* we are indebted for all correct ideas of right and wrong. "Whatever is found pure in morals, in ancient or modern writers, may be traced to *indirect* revelation." ⁸⁴ Verbal instruction--tradition or scripture--thus becomes the source of all our moral ideas. The doctrine of immortality, and of a future retribution, ⁸⁵ the practice of sacrifice--precatory and expiatory, are also ascribed to the same source. ⁸⁶ Thus the only medium by which religious truth can possibly become known to the masses of mankind is *tradition*. The ultimate foundation on which the religious faith and the religious practices of universal humanity have rested, with the exception of the Jews, and the favored few to whom the Gospel has come, is uncertain, precarious, and easily corrupted tradition.

Footnote 84: [\(return\)](#) Watson, "Theol. Inst.," vol. ii. p. 470.

Footnote 85: [\(return\)](#) Id. ib., vol. i. p. 11.

Footnote 86: [\(return\)](#) Id. ib., vol. i. p. 26.

The improbability, inadequacy, and incompleteness of this theory will be obvious from the following considerations:

1. It is highly improbable that truths so important and vital to man, so essential to the well-being of the human race, so necessary to the perfect development of humanity as are the ideas of God, duty, and immortality, should rest on so precarious and uncertain a basis as tradition is admitted, even by Mr. Watson, to be.

89 The human mind needs the idea of God to satisfy its deep moral necessities, and to harmonize all its powers. The perfection of humanity can never be secured, the destination of humanity can never be achieved, the purpose of God in the existence of humanity can never be accomplished, without the idea of God, and of the relation of man to God, being present to the human mind. Society needs the idea of a Supreme Ruler as the foundation of law and government, and as the basis of social order. Without it, these can not be, or be conserved. Intellectual creatureship, social order, human progress, are inconceivable and impossible without the idea of God, and of accountability to God. Now that truths so fundamental should, to the masses of men, rest on tradition *alone*, is incredible. Is there no known and accessible God to the outlying millions of our race who, in consequence of the circumstances of birth and education, which are beyond their control, have had no access to an oral revelation, and among whom the dim shadowy rays of an

ancient tradition have long ago expired? Are the eight hundred millions of our race upon whom the light of Christianity has not shone unvisited by the common Father of our race? Has the universal Father left his "own offspring" without a single native power of recognizing the existence of the Divine Parent, and abandoned them to solitary and dreary orphanage? Could not he who gave to matter its properties and laws,--the properties and laws through whose operation he is working out his own purposes in the realm of nature,--could not he have also given to mind ideas and principles which, logically developed, would lead to recognition of a God, and of our duty to God, and, by these ideas and principles, have wrought out his sublime purposes in the realm of mind? Could not he who gave to man the appetency for food, and implanted in his nature the social instincts to preserve his physical being, have implanted in his heart a "feeling after God," and an instinct to worship God in order to the conservation of his spiritual being? How otherwise can we affirm the responsibility and accountability of all the race before God? Those theologians who are so earnest in the assertion that God has not endowed man with the native power of attaining the knowledge of God can not, on any principle of equity, show how the heathen are "without excuse" when, in involuntary ignorance of God, they "worship the creature instead of the Creator," and violate a law of duty of which they have no possible means to attain the barest knowledge.

2. This theory is utterly inadequate to the explanation of the *universality* of religious rites, and especially of religious ideas.

90 Take, for example, the idea of God. As a matter of fact we affirm, in opposition to Watson, the universality of this idea. The idea of God is connatural to the human mind. Wherever human reason has had its normal and healthy development ⁸⁷, this idea has arisen spontaneously and necessarily. There has not been found a race of men who were utterly destitute of some knowledge of a Supreme Being. All the instances alleged have, on further and more accurate inquiry, been found incorrect. The tendency of the last century, arbitrarily to quadruple all the facts of religious history with the prevalent sensational philosophy, had its influence upon the minds of the first missionaries to India, China, Africa, Australia, and the islands of the Pacific. They *expected* to find that the heathen had no knowledge of a Supreme Being, and before they had mastered the idioms of their language, or become familiar with their mythological and cosmological systems, they reported them as *utterly ignorant of God*, destitute of the idea and even the name of a Supreme Being. These mistaken and hasty conclusions have, however, been corrected by a more intimate acquaintance with the people, their languages and religions. Even in the absence of any better information, we should be constrained to doubt the accuracy of the authorities quoted by Mr. Watson in relation to Hindooism, when by one (Ward) we are told that the Hindoo "believes in a God destitute of *intelligence*" and by another (Moore) that "Brahm is the one eternal *Mind*, the self-existent, incomprehensible Spirit". Learned and trustworthy critics, Asiatic as well as European, however, confidently affirm that "the ground of the Brahminical faith is Monotheistic;" it recognizes "an Absolute and Supreme Being" as the source of all that exists. ⁸⁸ Eugene Burnouf, M. Barthélemy Saint-Hilaire, Kœppen, and indeed nearly all who have written on the subject of Buddhism, have shown that the metaphysical doctrines of Buddha were borrowed from the earlier systems of the Brahminic philosophy. "Buddha." we are told, is "*pure intelligence*" "*clear light*", "*perfect wisdom*;" the same as Brahm. This is surely Theism in its highest conception. ⁸⁹ In regard to the peoples of South Africa, Dr. Livingstone assures us "there is no need for beginning to tell even the most degraded of these people of the existence of a God, or of a future state--the facts being universally admitted.... On questioning intelligent men among the Backwains as to their former knowledge of good and evil, of God, and of a future state, they have scouted the idea of any of them ever having been without a tolerably clear conception on all these subjects." ⁹⁰ And so far from the New Hollanders having no idea of a Supreme Being, we are assured by E. Stone Parker, the protector of the aborigines of New Holland, they have a clear and well-defined idea of a "*Great Spirit*," the maker of all things.

Footnote 88: [\(return\)](#) Maurice, "Religions of the World," p. 59: *Edin. Review*, 1862, art "Recent Researches on Buddhism." See also Müller's "Chips from a German Workshop," vol. i. ch. i. to vi.

Footnote 89: [\(return\)](#) "It has been said that Buddha and Kapila were both atheists, and that Buddha borrowed his atheism from Kapila. But atheism is an indefinite term, and may mean very different things. In one sense every Indian philosopher was an atheist, for they all perceived that the gods of the populace could not claim the attributes that belong to a Supreme Being. But all the important philosophical systems of the Brahmans admit, in some form or another, the existence of an Absolute and Supreme Being, the source of all that exists, or seems to exist."--Müller, "Chips from a German Workshop," vol. i. pp. 224,5.

Buddha, which means "intelligence," "clear light," "perfect wisdom," was not only the name of the founder of the religion of Eastern Asia, but Adi Buddha was the name of the Absolute, Eternal Intelligence.--Maurice, "Religions of the World," p. 102.

Footnote 90: [\(return\)](#) "Missionary Travels and Researches in South Africa," p. 158.

Now had the idea of God rested *solely* on tradition, it were the most natural probability that it might be lost, nay, *must* be lost, amongst those races of men who were geographically and chronologically far removed from the primitive cradle of humanity in the East. The people who, in their migrations, had wandered to the remotest parts of the earth, and had become isolated from

92 the rest of mankind, might, after the lapse of ages, be expected to lose the idea of God, if it were not a spontaneous and native intuition of the mind,--a necessity of thought. A fact of history must be presumed to stick to the mind with much greater tenacity than a purely rational idea which has no visible symbol in the sensible world, and yet, even in regard to the events of history, the persistence and pertinacity of tradition is exceedingly feeble. The South Sea Islanders know not from whence, or at what time, their ancestors came. There are monuments in Tonga and Fiji of which the present inhabitants can give no account. How, then, can a pure, abstract idea which can have no sensible representation, no visible image, retain its hold upon the memory of humanity for thousands of years? The Fijian may not remember whence his immediate ancestors came, but he knows that the race came originally from the hands of the Creator. He can not tell who built the monuments of solid masonry which are found in his island-home, but he can tell who reared the everlasting hills and built the universe. He may not know who reigned in Vewa a hundred years ago, but he knows who now reigns, and has always reigned, over the whole earth. "The idea of a God is familiar to the Fijian, and the existence of an invisible superhuman power controlling and influencing nature, and all earthly things, is fully recognized by him." [91](#) The idea of God is a common fact of human consciousness, and tradition alone is manifestly inadequate to account for its *universality*.

Footnote 91: [\(return\)](#) "Fiji and the Fijians," p. 215.

3. A verbal revelation would be inadequate to convey the knowledge of God to an intelligence "*purely passive*" and utterly unfurnished with any *à priori* ideas or necessary laws of cognition and thought.

Of course it is not denied that important verbal communications relating to the character of God, and the duties we owe to God, were given to the first human pair, more clear and definite, it may be, than any knowledge attained by Socrates and Plato through their dialectic processes, and that these oral revelations were successively repeated and enlarged to the patriarchs and prophets of the Old Testament church. And furthermore, that some rays of light proceeding from this pure fountain of truth were diffused, and are still lingering among the heathen nations, we have no desire, and no need to deny.

93 All this, however, supposes, at least, a natural power and aptitude for the knowledge of God, and some configuration and correlation of the human intelligence to the Divine. "We have no knowledge of a dynamic influence, spiritual or natural, without a dynamic reaction." Matter can not be moved and controlled by forces and laws, unless it have properties which correlate it with those forces and laws. And mind can not be determined from without to any specific form of cognition, unless it have active powers of apprehension and conception which are governed by uniform laws. The "material" of thought may be supplied from without, but the "form" is determined by the necessary laws of our inward being. All our cognition of the external world is conditioned by the *à priori* ideas of time and space, and all our thinking is governed by the principles of causality and substance, and the law of "sufficient reason." The mind itself supplies an element of knowledge in all our cognitions. Man can not be taught the knowledge of God if he be not naturally possessed of a presentiment, or an apperception of a God, as the cause and reason of the universe. "If education be not already preceded by an innate consciousness of God, as an operative predisposition, there would be nothing for education and culture to act upon." [92](#) A mere verbal revelation can not communicate the knowledge of God, if man have not already the idea of a God in his mind. A name is a mere empty sign, a meaningless symbol, without a mental image of the object which it represents, or an innate perception, or an abstract conception of the mind, of which the word is the sign. The mental image or the abstract conception must, therefore, precede the name; cognition must be anterior to, and give the meaning of language. [93](#) The child knows a thing even before it can speak its name. And, universally, we must know the *thing* in itself, or image it by analogies and resemblances to some other thing we do know, before the name can have any meaning for us. As to purely rational ideas and abstract conceptions,--as space, cause, the infinite, the perfect,--language can never convey these to the mind, nor can the mind ever attain them by experience if they are not an original, connate part of our mental equipment and furniture. The mere verbal affirmation "there is a God" made to one who has no idea of a God, would be meaningless and unintelligible. What notion can a man form of "the First Cause" if the principle of causality is not inherent in his mind? What conception can he form of "the Infinite Mind" if the infinite be not a primitive intuition? How can he conceive of "a Righteous Governor" if he have no idea of right, no sense of obligation, no apprehension of a retribution? Words are empty sounds without ideas, and God is a mere name if the mind has no apperception of a God.

Footnote 92: [\(return\)](#) Nitzsch, "System of Christian Doctrine," p. 10.

Footnote 93: [\(return\)](#) "Ideas must pre-exist their sensible signs." See De Boismont on "Hallucination," etc., p. iii.

94 It may be affirmed that, preceding or accompanying the announcement of the Divine Name, there was given to the first human pair, and to the early fathers of our race, some visible manifestation of the presence of God, and some supernatural display of divine power. What, then, was the character of these early manifestations, and were they adequate to convey the proper idea of God? Did God first reveal himself in human form, and if so, how could their conception of God advance beyond a rude anthropomorphism? Did he reveal his presence in a vast columnar cloud or a pillar of fire? How could such an image convey any conception of the intelligence, the

omnipresence, the eternity of God? Nay, can the infinite and eternal Mind be represented by any visible manifestation? Can the human mind conceive an image of God? The knowledge of God, it is clear, can not be conveyed by any sensible sign or symbol if man has no prior rational idea of God as the Infinite and the Perfect Being.

95 If the facts of order, and design, and special adaptation which crowd the universe, and the *à priori* ideas of an unconditioned Cause and an infinite Intelligence which arise in the mind in presence of these facts, are inadequate to produce the logical conviction that it is the work of an intelligent mind, how can any preternatural display of *power* produce a rational conviction that God exists? "If the universe could come by chance or fate, surely all the lesser phenomena, termed miraculous, might occur so too." ⁹⁴ If we find ourselves standing amid an eternal series of events, may not miracles be a part of that series? Or if all things are the result of necessary and unchangeable laws, may not miracles also result from some natural or psychological law of which we are yet in ignorance? Let it be granted that man is *not* so constituted that, by the necessary laws of his intelligence, he must affirm that facts of order having a commencement in time prove mind; let it be granted that man has *no* intuitive belief in the Infinite and Perfect--in short, no idea of God; how, then, could a marvellous display of *power*, a new, peculiar, and startling phenomenon which even seemed to transcend nature, prove to him the existence of an infinite *intelligence*--a personal God? The proof would be simply inadequate, because not the right kind of proof. Power does not indicate intelligence, force does not imply personality.

Footnote 94: [\(return\)](#) Morell, "Hist. of Philos." p. 737.

96 Miracles, in short, were never intended to prove the existence of God. The foundation of this truth had already been laid in the constitution and laws of the human mind, and miracles were designed to convince us that He of whose existence we had a prior certainty, spoke to us by His Messenger, and in this way attested his credentials. To the man who has a rational belief in the existence of God this evidence of a divine mission is at once appropriate and conclusive. "Master, we know thou art a teacher sent from God; for no man can do the works which thou doest, except God be with him." The Christian missionary does not commence his instruction to the heathen, who have an imperfect, or even erroneous conception of "the Great Spirit," by narrating the miracles of Christ, or quoting the testimony of the Divine Book he carries along with him. He points to the heavens and the earth, and says, "There is a Being who made all these things, and Jehovah is his name; I have come to you with a message from Him!" Or he need scarce do even so much; for already the heathen, in view of the order and beauty which pervades the universe, has been constrained, by the laws of his own intelligence, to believe in and offer worship to the "ἄγνωστος Θεός"--the unseen and incomprehensible God; and pointing to their altars, he may announce with Paul, "this God *whom ye worship*, though ignorantly, him declare I unto you!"

The results of our study of the various hypotheses which have been offered in explanation of the religious phenomena of the world may be summed up as follows: The first and second theories we have rejected as utterly false. Instead of being faithful to and adequately explaining the facts, they pervert, and maltreat, and distort the facts of religious history. The last three each contain a precious element of truth which must not be undervalued, and which can not be omitted in an explanation which can be pronounced complete. Each theory, taken by itself, is incomplete and inadequate. The third hypothesis overrates *feeling*; the fourth, *reason*; the fifth, *verbal instruction*. The first extreme is Mysticism, the second is Rationalism, the last is Dogmatism. Reason, feeling, and faith in testimony must be combined, and mutually condition each other. No purely rationalistic hypothesis will meet and satisfy the wants and yearnings of the heart. No theory based on feeling alone can satisfy the demands of the human intellect. And, finally, an hypothesis which bases all religion upon historical testimony and outward fact, and despises and tramples upon the intuitions of the reason and the instincts of the heart can never command the general faith of mankind. Religion embraces and conditionates the whole sphere of life--thought, feeling, faith, and action; it must therefore be grounded in the entire spiritual nature of man.

Our criticism of opposite theories has thus prepared the way for, and obviated the necessity of an extended discussion of the hypothesis we now advance.

97 *The universal phenomenon of religion has originated in the à priori apperceptions of reason, and the natural instinctive feelings of the heart, which, from age to age, have been vitalized, unfolded, and perfected by supernatural communications and testamentary revelations.*

There are universal facts of religious history which can only be explained on the first principle of this hypothesis; there are special facts which can only be explained on the latter principle. The universal prevalence of the idea of God, and the feeling of obligation to obey and worship God, belong to the first order of facts; the general prevalence of expiatory sacrifices, of the rite of circumcision, and the observance of sacred and holy days, belong to the latter. To the last class of facts the observance of the Christian Sabbath, and the rites of Baptism and the Lord's Supper may be added.

The history of all religions clearly attests that there are two orders of principles--the *natural* and the *positive*, and, in some measure, two authorities of religious life which are intimately related without negating each other. The characteristic of the natural is that it is *intrinsic*, of the positive, that it is *extrinsic*. In all ages men have sought the authority of the positive in that which is immediately *beyond* and above man--in some "voice of the Divinity" toning down the stream of ages, or speaking through a prophet or oracle, or written in some inspired and sacred book. They

have sought for the authority of the natural in that which is immediately *within* man--the voice of the Divinity speaking in the conscience and heart of man. A careful study of the history of religion will show a reciprocal relation between the two, and indicate their common source.

We expect to find that our hypothesis will be abundantly sustained by the study of the *Religion of the Athenians*.

98

CHAPTER III.

THE RELIGION OF THE ATHENIANS.

"All things which I behold bear witness to your carefulness in religion (δεισιδαιμονεστέρους). For as I passed through your city, and beheld the objects of your worship, I found amongst them an altar with this inscription--'TO THE UNKNOWN GOD.' Whom therefore ye worship...."--ST. PAUL.

Through one of those remarkable counter-strokes of Divine Providence by which the evil designs of men are overruled, and made to subserve the purposes of God, the Apostle Paul was brought to Athens. He walked beneath its stately porticoes, he entered its solemn temples, he stood before its glorious statuary, he viewed its beautiful altars--all devoted to pagan worship. And "his spirit was stirred within him," he was moved with indignation "when he saw the city full of images of the gods." ⁹⁵ At the very entrance of the city he met the evidence of this peculiar tendency of the Athenians to multiply the objects of their devotion; for here at the gateway stands an image of Neptune, seated on horseback, and brandishing the trident. Passing through the gate, his attention would be immediately arrested by the sculptured forms of Minerva, Jupiter, Apollo, Mercury, and the Muses, standing near a sanctuary of Bacchus. A long street is now before him, with temples, statues, and altars crowded on either hand. Walking to the end of this street, and turning to the right, he entered the Agora, a public square surrounded with porticoes and temples, which were adorned with statuary and paintings in honor of the gods of Grecian mythology. Amid the plane-trees planted by the hand of Cimon are the statues of the deified heroes of Athens, Hercules and Theseus, and the whole series of the Eponymi, together with the memorials of the older divinities; Mercuries which gave the name to the streets on which they were placed; statues dedicated to Apollo as patron of the city and her deliverer from the plague; and in the centre of all the altar of the Twelve Gods.

99

Footnote 95: [\(return\)](#) Lange's Commentary, Acts xvii. 16.

Standing in the market-place, and looking up to the Areopagus, Paul would see the temple of Mars, from whom the hill derived its name. And turning toward the Acropolis, he would behold, closing the long perspective, a series of little sanctuaries on the very ledges of the rocks, shrines of Bacchus and Æsculapius, Venus, Earth, and Ceres, ending with the lovely form of the Temple of Unwinged Victory, which glittered in front of the Propylæa.

If the apostle entered the "fivefold gates," and ascended the flight of stone steps to the platform of the Acropolis, he would find the whole area one grand composition of architecture and statuary dedicated to the worship of the gods. Here stood the Parthenon, the Virgin House, the glorious temple which was erected during the proudest days of Athenian glory, an entire offering to Minerva, the tutelary divinity of Athens. Within was the colossal statue of the goddess wrought in ivory and gold. Outside the temple there stood another statue of Minerva, cast from the brazen spoils of Marathon; and near by yet another brazen Pallas, which was called by pre-eminence "the Beautiful."

Indeed, to whatever part of Athens the apostle wandered, he would meet the evidences of their "carefulness in religion," for every public place and every public building was a sanctuary of some god. The Metroum, or record-house, was a temple to the mother of the gods. The council-house held statues of Apollo and Jupiter, with an altar to Vesta. The theatre at the base of the Acropolis was consecrated to Bacchus. The Pnyx was dedicated to Jupiter on high. And as if, in this direction, the Attic imagination knew no bounds, abstractions were deified; altars were erected to Fame, to Energy, to Modesty, and even to Pity, and these abstractions were honored and worshipped as gods.

100

The impression made upon the mind of Paul was, that the city was literally "full of idols," or images of the gods. This impression is sustained by the testimony of numerous Greek and Roman writers. Pausanias declares that Athens "had more images than all the rest of Greece;" and Petronius, the Roman satirist, says, "it was easier to find a god in Athens than a man." ⁹⁶

Footnote 96: [\(return\)](#) See Conybeare and Howson's "Life and Epistles of St. Paul;" also, art. "Athens," in *Encyclopædia Britannica*, whence our account of the "sacred objects" in Athens is chiefly gathered.

No wonder, then, that as Paul wandered amid these scenes "his spirit was stirred in him." He burned with holy zeal to maintain the honor of the true and only God, whom now he saw dishonored on every side. He was filled with compassion for those Athenians who, notwithstanding their intellectual greatness, had changed the glory of God into an image made in the likeness of corruptible man, and who really worshipped the creature *more* than the Creator.

The images intended to symbolize the invisible perfections of God were usurping the place of God, and receiving the worship due alone to him. We may presume the apostle was not insensible to the beauties of Grecian art. The sublime architecture of the Propylæa and the Parthenon, the magnificent sculpture of Phidias and Praxiteles, could not fail to excite his wonder. But he remembered that those superb temples and this glorious statuary were the creation of the pagan spirit, and devoted to polytheistic worship. The glory of the supreme God was obscured by all this symbolism. The creatures formed by God, the symbols of his power and presence in nature, the ministers of his providence and moral government, were receiving the honor due to him. Over all this scene of material beauty and æsthetic perfection there rose in dark and hideous proportions the errors and delusions and sins against the living God which Polytheism nurtured, and unable any longer to restrain himself, he commenced to "reason" with the crowds of Athenians who stood beneath the shadows of the plane-trees, or lounged beneath the porticoes that surrounded the Agora. Among these groups of idlers were mingled the disciples of Zeno and Epicurus, who "encountered" Paul. The nature of these "disputations" may be easily conjectured, The opinions of these philosophers are even now familiarly known: they are, in one form or another, current in the literature of modern times. Materialism and Pantheism still "encounter" Christianity. The apostle asserted the personal being and spirituality of one supreme and only God, who has in divers ways revealed himself to man, and therefore may be "known." He proclaimed that Jesus is the fullest and most perfect revelation of God--the *only* "manifestation of God in the flesh." He pointed to his "resurrection" as the proof of his superhuman character and mission to the world. Some of his hearers were disposed to treat him with contempt; they represented him as an ignorant "babbler," who had picked up a few scraps of learning, and who now sought to palm them off as a "new" philosophy. But most of them regarded him with that peculiar Attic curiosity which was always anxious to be hearing some "new thing." So they led him away from the tumult of the market-place to the top of Mars' Hill, where, in its serene atmosphere, they might hear him more carefully, and said, "May we hear what this new doctrine is whereof thou speakest?"

Surrounded by these men of thoughtful, philosophic mind--men who had deeply pondered the great problem of existence, who had earnestly inquired after the "first principles of things;" men who had reasoned high of creation, fate, and providence; of right and wrong; of conscience, law, and retribution; and had formed strong and decided opinions on all these questions--he delivered his discourse on the *being*, the *providence*, the *spirituality*, and the *moral government* of God.

This grand theme was suggested by an inscription he had observed on one of the altars of the city, which was dedicated "To the Unknown God." "Ye men of Athens! every thing which I behold bears witness to your *carefulness in religion*. For as I passed by and beheld your sacred objects I found an altar with this inscription, 'To the Unknown God;' whom, therefore, ye worship, though ye know him not [adequately], Him declare I unto you." Starting from this point, the manifest carefulness of the Athenians in religion, and accepting this inscription as the evidence that they had some presentiment, some native intuition, some dim conception of the one true and living God, he strives to lead them to a deeper knowledge of Him. It is here conceded by the apostle that the Athenians were a *religious people*. The observations he had made during his short stay in Athens enabled him to bear witness that the Athenians were "a God-fearing people," ⁹⁷ and he felt that fairness and candor demanded that this trait should receive from him an ample recognition and a full acknowledgment. Accordingly he commences by saying in gentle terms, well fitted to conciliate his audience, "All things which I behold bear witness to your carefulness in religion." I recognize you as most devout; ye appear to me to be a God-fearing people, ⁹⁸ for as I passed by and beheld your sacred objects I found an altar with this inscription, "To the Unknown God," whom therefore ye worship.

Footnote 97: [\(return\)](#) Lange's Commentary, *in loco*.

Footnote 98: [\(return\)](#) "Ὡς before δεῖσιδ.--so imports. I recognize you as such."--Lange's Commentary.

The assertion that the Athenians were "a religious people" will, to many of our readers, appear a strange and startling utterance, which has in it more of novelty than truth. Nay, some will be shocked to hear the Apostle Paul described as complimenting these Athenians--these pagan worshippers--on their "carefulness in religion." We have been so long accustomed to use the word "heathen" as an opprobrious epithet--expressing, indeed, the utmost extremes of ignorance, and barbarism, and cruelty, that it has become difficult for us to believe that in a heathen there can be any good. From our childhood we have read in our English Bibles, Ye men of Athens, I perceive in all things ye are *too superstitious*

and we can scarcely tolerate another version, even if it can be shown that it approaches nearer to the actual language employed by Paul. We must, therefore, ask the patience and candor of the reader, while we endeavor to show, on the authority of Paul's words, that the Athenians were a "religious people," and that all our notions to the contrary are founded on prejudice and misapprehension.

First, then, let us commence even with our English version: "Ye men of Athens, I perceive that in all things ye are *too superstitious*." And what now is the meaning of the word "superstition?" It is true, we now use it only in an evil sense, to express a belief in the agency of invisible, capricious, malignant powers, which fills the mind with fear and terror, and sees in every unexplained phenomenon of nature an omen, or prognostic, of some future evil. But this is not its proper and original meaning. Superstition is from the Latin *superstitio*, which means a superabundance of

104 religion, ⁹⁹ an extreme exactitude in religious observance. And this is precisely the sense in which the corresponding Greek term is used by the Apostle Paul. Δεισιδαιμονία properly means "reverence for the gods." "It is used," says Barnes, "in the classic writers, in a good sense, to denote piety towards the gods, or suitable fear and reverence for them." "The word," says Lechler, "is, without doubt, to be understood here in a good sense; although it seems to have been intentionally chosen, in order to indicate the conception of *fear* (δειδω), which predominated in the religion of the apostle's hearers." ¹⁰⁰ This reading is sustained by the ablest critics and scholars of modern times. Bengel reads the sentence, "I perceive that ye are *very religious*" ¹⁰¹ Cudworth translates it thus: "Ye are every way *more than ordinarily religious*." ¹⁰² Conybeare and Howson read the text as we have already given it, "All things which I behold bear witness to your *carefulness in religion*." ¹⁰³ Lechler reads "very devout;" ¹⁰⁴ Alford, "carrying your *religious reverence very far*;" ¹⁰⁵ and Albert Barnes, ¹⁰⁶ "I perceive ye are greatly devoted to *reverence for religion*." ¹⁰⁷ Whoever, therefore, will give attention to the actual words of the apostle, and search for their real meaning, must be convinced he opens his address by complimenting the Athenians on their being more than ordinarily religious.

105 Nor are we for a moment to suppose the apostle is here dealing in hollow compliments, or having recourse to a "pious fraud." Such a course would have been altogether out of character with Paul, and to suppose him capable of pursuing such a course is to do him great injustice. If "to the Jews he became as a Jew," it was because he recognized in Judaism the same fundamental truths which underlie the Christian system. And if here he seems to become, in any sense, at one with "heathenism," that he might gain the heathen to the faith of Christ, it was because he found in heathenism some elements of truth akin to Christianity, and a state of feeling favorable to an inquiry into the truths he had to present. He beheld in Athens an altar reared to the God *he* worshipped, and it afforded him some pleasure to find that God was not totally forgotten, and his worship totally neglected, by the Athenians. The God whom they knew imperfectly, "*Him*" said he, "I declare unto you;" I now desire to make him more fully known. The worship of "the Unknown God" was a recognition of the being of a God whose nature transcends all human thought, a God who is ineffable; who, as Plato said, "is hard to be discovered, and having discovered him, to make him known to all, impossible." ¹⁰⁸ It is the confession of a *want* of knowledge, the expression of a *desire* to know, the acknowledgment of the *duty* of worshipping him. Underlying all the forms of idol-worship the eye of Paul recognized an influential Theism. Deep down in the pagan heart he discovered a "feeling after God"--a yearning for a deeper knowledge of the "unknown," the invisible, the incomprehensible, which he could not despise or disregard. The mysterious *sentiments* of fear, of reverence, of conscious dependence on a supernatural power and presence overshadowing man, which were expressed in the symbolism of the "sacred objects" which Paul saw everywhere in Athens, commanded his respect. And he alludes to their "devotions," not in the language of reproach or censure, but as furnishing to his own mind the evidence of the strength of their *religious instincts*, and the proof of the existence in their hearts of that *native apprehension* of the supernatural, the divine, which dwells alike in all human souls.

Footnote 108: [\(return\)](#) Timæus, ch. ix.

106 The case of the Athenians has, therefore, a peculiar interest to every thoughtful mind. It confirms the belief that religion is a necessity to every human mind, a want of every human heart. ¹⁰⁹ Without religion, the nature of man can never be properly developed; the noblest part of man--the divine, the spiritual element which dwells in man, as "the offspring of God"--must remain utterly dwarfed. The spirit, the personal being, the rational nature, is religious, and Atheism is the vain and the wicked attempt to be something less than man. If the spiritual nature of man has its normal and healthy development, he must become a worshipper. This is attested by the universal history of man. We look down the long-drawn aisles of antiquity, and everywhere we behold the smoking altar, the ascending incense, the prostrate form, the attitude of devotion. Athens, with her four thousand deities--Rome, with her crowded Pantheon of gods--Egypt, with her degrading superstitions--Hindustan, with her horrid and revolting rites--all attest that the religious principle is deeply seated in the nature of man. And we are sure religion can never be robbed of her supremacy, she can never be dethroned in the hearts of men. It were easier to satisfy the cravings of hunger by logical syllogisms, than to satisfy the yearnings of the human heart without religion. The attempt of Xerxes to bind the rushing floods of the Hellespont in chains was not

more futile nor more impotent than the attempt of skepticism to repress the universal tendency to worship, so peculiar and so natural to man in every age and clime.

Footnote 109: [\(return\)](#) The indispensable necessity for a religion of some kind to satisfy the emotional nature of man is tacitly confessed by the atheist Comte in the publication of his "Catechism of Positive Religion."

The unwillingness of many to recognize a religious element in the Athenian mind is further accounted for by their misconception of the meaning of the word "religion." We are all too much accustomed to regard religion as a mere system of dogmatic teaching. We use the terms "Christian religion," "Jewish religion," "Mohammedan religion," as comprehending simply the characteristic doctrines by which each is distinguished; whereas religion is a mode of thought, and feeling, and action, determined by the consciousness of our relation to and our dependence upon God. It does not appropriate to itself any specific department of our mental powers and susceptibilities, but it conditions the entire functions and circle of our spiritual life. It is not simply a mode of conceiving God in thought, nor simply a mode of venerating God in the affections, nor yet simply a mode of worshipping God in outward and formal acts, but it comprehends the whole. Religion (*religere*, respect, awe, reverence) regulates our thoughts, feelings, and acts towards God. "It is a reference and a relationship of our finite consciousness to the Creator and Sustainer and Governor of the universe." It is such a consciousness of the Divine as shall awaken in the heart of man the sentiments of reverence, fear, and gratitude towards God; such a sense of dependence as shall prompt man to pray, and lead him to perform external acts of worship.

107

Religion does not, therefore, consist exclusively in knowledge, however correct; and yet it must be preceded and accompanied by some intuitive cognition of a Supreme Being, and some conception of him as a free moral personality. But the religious sentiments, which belong rather to the heart than to the understanding of man--the consciousness of dependence, the sense of obligation, the feeling of reverence, the instinct to pray, the appetency to worship--these may all exist and be largely developed in a human mind even when, as in the case of the Athenians, there is a very imperfect knowledge of the real character of God.

Regarding this, then, as the generic conception of religion, namely, *that it is a mode of thought and feeling and action determined by our consciousness of dependence on a Supreme Being*, we claim that the apostle was perfectly right in complimenting the Athenians on their "more than ordinary religiousness," for,

1. They had, in some degree at least, that faith in the being and providence of God which precedes and accompanies all religion.

They had erected an altar to the unseen, the unsearchable, the incomprehensible, the unknown God. And this "unknown God" whom the Athenians "worshipped" was the true God, the God whom Paul worshipped, and whom he desired more fully to reveal to them; "*Him* declare I unto you." The Athenians had, therefore, some knowledge of the true God, some dim recognition, at least, of his being, and some conception, however imperfect, of his character. The Deity to whom the Athenians reared this altar is called "the unknown God," because he is unseen by all human eyes and incomprehensible to human thought. There is a sense in which to Paul, as well as to the Athenians--to the Christian as well as to the pagan--to the philosopher as well as to the peasant--God is "*the unknown*," and in which he must forever remain the incomprehensible. This has been confessed by all thoughtful minds in every age. It was confessed by Plato. To his mind God is "the ineffable," the unspeakable. Zophar, the friend of Job, asks, "Canst thou by searching find out God? Canst thou find out the Almighty to perfection?" This knowledge is "high as heaven; what canst thou do? deeper than hell; what canst thou know?" Does not Wesley teach us to sing,

"Hail, Father, whose creating call
Unnumbered worlds attend;
Jehovah, comprehending all,
Whom none can comprehend?"

108

To his mind, as well as to the mind of the Athenian, God was "the great unseen, unknown." "Beyond the universe and man," says Cousin, "there remains in God something unknown, impenetrable, incomprehensible. Hence, in the immeasurable spaces of the universe, and beneath all the profundities of the human soul, God escapes us in this inexhaustible infinitude, whence he is able to draw without limit new worlds, new beings, new manifestations. God is therefore to us *incomprehensible*." [110](#) And without making ourselves in the least responsible for Hamilton's "negative" doctrine of the Infinite, or even responsible for the full import of his words, we may quote his remarkable utterances on this subject: "The Divinity is in part concealed and in part revealed. He is at once known and unknown. But the last and highest consecration of all true religion must be an altar 'to the unknown God.' In this consummation nature and religion, Paganism and Christianity, are at one." [111](#)

Footnote 110: [\(return\)](#) "Lectures," vol. i. p. 104.

Footnote 111: [\(return\)](#) "Discussions on Philosophy," p. 23.

When, therefore, the apostle affirms that while the Athenians worshipped the God whom he proclaimed they "knew him not," we can not understand him as saying they were destitute of all

109 faith in the being of God, and of all ideas of his real character. Because for him to have asserted they had *no* knowledge of God would not only have been contrary to all the facts of the case, but also an utter contradiction of all his settled convictions and his recorded opinions. There is not in modern times a more earnest asserter of the doctrine that the human mind has an intuitive cognition of God, and that the external world reveals God to man. There is a passage in his letter to the Romans which is justly entitled to stand at the head of all discourses on "natural theology," Rom. i. 19-21. Speaking of the heathen world, who had not been favored, as the Jews, with a verbal revelation, he says, "That which may be known of God is manifest *in* them," that is, in the constitution and laws of their spiritual nature, "for God hath showed it unto them" in the voice of reason and of conscience, so that in the instincts of our hearts, in the elements of our moral nature, in the ideas and laws of our reason, we are taught the being of a God. These are the subjective teachings of the human soul.

110 Not only is the being of God revealed to man in the constitution and laws of his rational and moral nature, but God is also manifested to us objectively in the realm of things around us; therefore Paul adds, "The invisible things of him, even his eternal power and Godhead, from the creation are clearly seen, being understood by the things that are made." The world of sense, therefore, discloses the being and perfections of God. The invisible attributes of God are made apparent by the things that are visible. Forth out of nature, as the product of the Divine Mind, the supernatural shines. The forces, laws, and harmonies of the universe are indices of the presence of a presiding and informing Intelligence. The creation itself is an example of God's coming forth out of the mysterious depths of his own eternal and invisible being, and making himself apparent to man. There, on the pages of the volume of nature, we may read, in the marvellous language of symbol, the grand conceptions, the glorious thoughts, the ideals of beauty which dwell in the uncreated Mind, These two sources of knowledge--the subjective teachings of God in the human soul, and the objective manifestations of God in the visible universe--harmonize, and, together, fill up the complement of our natural idea of God. They are two hemispheres of thought, which together form one full-orbed fountain of light, and ought never to be separated in our philosophy. And, inasmuch as this divine light shines on all human minds, and these works of God are seen by all human eyes, the apostle argues that the heathen world "is without excuse, because, knowing God (γινόντες τὸν Θεόν) they did not glorify him as God, neither were thankful; but in their reasonings they went astray after vanities, and their hearts, being void of wisdom, were filled with darkness. Calling themselves wise, they were turned into fools, and changed the glory of the imperishable God for idols graven in the likeness of perishable man, or of birds, and beasts, and creeping things,...and they bartered the truth of God for lies, and revered and worshipped the things made rather than the Maker, who is blessed forever. Amen." [112](#)

Footnote 112: [\(return\)](#) Rom. i. 21-25, Conybeare and Howson's translation.

The brief and elliptical report of Paul's address on Mars' Hill must therefore, in all fairness, be interpreted in the light of his more carefully elaborated statements in the Epistle to the Romans. And when Paul intimates that the Athenians "knew not God," we can not understand him as saying they had *no* knowledge, but that their knowledge was imperfect. They did not know God as Creator, Father, and Ruler; above all, they did not know him as a pardoning God and a sanctifying Spirit. They had not that knowledge of God which purifies the heart, and changes the character, and gives its possessor eternal life.

The apostle clearly and unequivocally recognizes this truth, that the idea of God is connatural to the human mind; that in fact there is not to be found a race of men upon the face of the globe utterly destitute of some idea of a Supreme Being. Wherever human reason has had its normal and healthful development, it has spontaneously and necessarily led the human mind to the recognition of a God. The Athenians were no exception to this general law. They believed in the existence of one supreme and eternal Mind, invisible, incomprehensible, ineffable--"the unknown God."

2. The Athenians had also that consciousness of dependence upon God which is the foundation of all the primary religious emotions.

111 When the apostle affirmed that "in God we live, and move, and have our being," he uttered the sentiments of many, if not all, of his hearers, and in support of that affirmation he could quote the words of their own poets, for we are also his offspring; [113](#) and, as his offspring, we have a derived and a dependent being. Indeed, this consciousness of dependence is analogous to the feeling which is awakened in the heart of a child when its parent is first manifested to its opening mind as the giver of those things which it immediately needs, as its continual protector, and as the preserver of its life. The moment a man becomes conscious of his own personality, that moment he becomes conscious of some relation to another personality, to which he is subject, and on which he depends. [114](#)

Footnote 113: [\(return\)](#)

"Jove's presence fills all space, upholds this ball;
All need his aid; his power sustains us all,
For we his offspring are."

Aratus, "The Phænomena," book v. p. 5.

Aratus was a poet of Cilicia, Paul's native province. He flourished B.C. 277.

"Great and divine Father, whose names are many,
 But who art one and the same unchangeable, almighty power;
 O thou supreme Author of nature!
 That governest by a single unerring law!
 Hail King!
 For thou art able, to enforce obedience from all frail mortals,
Because we are all thine offspring,
 The image and the echo only of thy eternal voice."
 Cleanthes, "Hymn to Jupiter."

Cleanthes was the pupil of Zeno, and his successor as chief of the Stoic philosophers.

Footnote 114: [\(return\)](#) "As soon as a man becomes conscious of himself, as soon as he perceives himself as distinct from other persons and things, he at the same moment becomes conscious of a higher self, a higher power, without which he feels that neither he nor any thing else would have any life or reality. We are so fashioned that as soon as we awake we feel on all sides our dependence on something else; and all nations join in some way or another in the words of the Psalmist, 'It is He that made us, not we ourselves.' This is the first *sense* of the Godhead, the *sensus numinis*, as it has well been called; for it is a *sensus*, an immediate perception, not the result of reasoning or generalization, but an intuition as irresistible as the impressions of our senses.... This *sensus numinis*, or, as we may call it in more homely language, *faith*, is the source of all religion; it is that without which no religion, whether true or false, is possible."--Max Müller, "Science of Language," Second Series, p. 455.

A little reflection will convince us that this is the necessary order in which human consciousness is developed.

112 There are at least two fundamental and radical tendencies in human personality, namely, to *know* and to *act*. If we would conceive of them as they exist in the innermost sphere of selfhood, we must distinguish the first as *self-consciousness*, and the second as *self-determination*. These are unquestionably the two factors of human personality.

If we consider the first of these factors more closely, we shall discover that self-consciousness exists under limitations and conditions. Man can not become clearly conscious of *self* without distinguishing himself from the outer world of sensation, nor without distinguishing self and the world from another being upon whom they depend as the ultimate substance and cause. Mere *cæncæsthesis* is not consciousness. Common feeling is unquestionably found among the lowest forms of animal life, the protozoa; but it can never rise to a clear consciousness of personality until it can distinguish itself from sensation, and acquire a presentiment of a divine power, on which self and the outer world depend. The *Ego* does not exist for itself, can not perceive itself, but by distinguishing itself from the ceaseless flow and change of sensation, and by this act of distinguishing, the *Ego* takes place in consciousness. And the *Ego* can not perceive itself, nor cognize sensation as a state or affection of the *Ego* except by the intervention of the reason, which supplies the two great fundamental laws of causality and substance. The facts of consciousness thus comprehend three elements--self, nature, and God. The determinate being, the *Ego*, is never an absolutely independent being, but is always in some way or other codetermined by another; it can not, therefore, be an absolutely original and independent, but must in some way or another be a *derived* and *conditioned* existence.

113 Now that which limits and conditions human self-consciousness can not be mere *nature*, because nature can not give what it does not possess; it can not produce what is *toto genere* different from itself. Self-consciousness can not arise out of unconsciousness. This new beginning is beyond the power of nature. Personal power, the creative principle of all new beginnings, is alone adequate to its production. If, then, self-consciousness exists in man, it necessarily presupposes an absolutely *original*, therefore *unconditioned*, *self-consciousness*. Human self-consciousness, in its temporal actualization, of course presupposes a nature-basis upon which it elevates itself; but it is only possible on the ground that an eternal self-conscious Mind ordained and rules over all the processes of nature, and implants the divine spark of the personal spirit with the corporeal frame, to realize itself in the light-flame of human self-consciousness. The original light of the divine self-consciousness is eternally and absolutely first and before all. "Thus, in the depths of our own self-consciousness, as its concealed background, the God-consciousness reveals itself to us. This descent into our inmost being is at the same time an ascent to God. Every deep reflection on ourselves breaks through the mere crust of world-consciousness, which separates us from the inmost truth of our existence, and leads us up to Him in whom we live and move and are." [115](#)

Footnote 115: [\(return\)](#) Müller, "Christian Doctrine of Sin," vol. i. p. 81.

Self-determination, equally with self-consciousness, exists in us under manifold *limitations*. Self-determination is limited by physical, corporeal, and mental conditions, so that there is "an impassable boundary line drawn around the area of volitional freedom." But the most fundamental and original limitation is that of *duty*. The self-determining power of man is not only circumscribed by necessary conditions, but also by the *moral law* in the consciousness of man. Self-determination alone does not suffice for the full conception of responsible freedom; it only becomes, *will*, properly by its being an intelligent and conscious determination; that is, the rational subject is able previously to recognize "the right," and present before his mind that which he *ought* to do, that which he is morally bound to realize and actualize by his own self-determination and choice. Accordingly we find in our inmost being a *sense of obligation* to obey the moral law as revealed in the conscience. As we can not become conscious of self without also

becoming conscious of God, so we can not become properly conscious of self-determination until we have recognized in the conscience a law for the movements of the will.

Now this moral law, as revealed in the conscience, is not a mere autonomy--a simple subjective law having no relation to a personal lawgiver out of and above man. Every admonition of conscience directly excites the consciousness of a God to whom man is accountable. The universal consciousness of our race, as revealed in history, has always associated the phenomena of conscience with the idea of a personal Power above man, to whom he is subject and upon whom he depends. In every age, the voice of conscience has been regarded as the voice of God, so that when it has filled man with guilty apprehensions, he has had recourse to sacrifices, and penances, and prayers to expiate his wrath.

It is clear, then, that if man has *duties* there must be a self-conscious Will by whom these duties are imposed, for only a real will can be legislative. If man has a *sense of obligation*, there must be a supreme authority by which he is obliged. If he is *responsible*, there must be a being to whom he is accountable. ¹¹⁶ It can not be said that he is accountable to himself, for by that supposition the idea of duty is obliterated, and "right" becomes identical with mere interest or pleasure. It can not be said that he is simply responsible to society--to mere conventions of human opinions and human governments--for then "*right*" becomes a mere creature of human legislation, and "*justice*" is nothing but the arbitrary will of the strong who tyrannize over the weak. Might constitutes right. Against such hypotheses the human mind, however, instinctively revolts. Mankind feel, universally, that there is an authority beyond all human governments, and a higher law above all human laws, from whence all their powers are derived. That higher law is the Law of God, that supreme authority is the God of Justice. To this eternally just God, innocence, under oppression and wrong, has made its proud appeal, like that of Prometheus to the elements, to the witnessing clouds, to coming ages, and has been sustained and comforted. And to that higher law the weak have confidently appealed against the unrighteous enactments of the strong, and have finally conquered. The last and inmost ground of all obligation is thus the conscious relation of the moral creature to God. The sense of absolute dependence upon a Supreme Being compels man, even while conscious of subjective freedom, to recognize at the same time his obligation to determine himself in harmony with the will of Him "in whom we live, and move, and are."

Footnote 116: [\(return\)](#) "The thought of God will wake up a terrible monitor whose name is Judge."--Kant.

This feeling of dependence, and this consequent sense of obligation, lie at the very foundation of all religion. They lead the mind towards God, and anchor it in the Divine. They prompt man to pray, and inspire him with an instinctive confidence in the efficacy of prayer. So that prayer is natural to man, and necessary to man. Never yet has the traveller found a people on earth without prayer. Races of men have been found without houses, without raiment, without arts and sciences, but never without prayer any more than without speech. Plutarch wrote, eighteen centuries ago, If you go through all the world, you may find cities without walls, without letters, without rulers, without money, without theatres, but never without temples and gods, or without *prayers*, oaths, prophecies, and sacrifices, used to obtain blessings and benefits, or to avert curses and calamities. ¹¹⁷ The naturalness of prayer is admitted even by the modern unbeliever. Gerrit Smith says, "Let us who believe that the religion of reason calls for the religion of nature, remember that the flow of prayer is just as natural as the flow of water; the prayerless man has become an unnatural man." ¹¹⁸ Is man in sorrow or in danger, his most natural and spontaneous refuge is in prayer. The suffering, bewildered, terror-stricken soul turns towards God. "Nature in an agony is no atheist; the soul that knows not where to fly, flies to God." And in the hour of deliverance and joy, a feeling of gratitude pervades the soul--and gratitude, too, not to some blind nature-force, to some unconscious and impersonal power, but gratitude to God. The soul's natural and appropriate language in the hour of deliverance is thanksgiving and praise.

Footnote 117: [\(return\)](#) "Against Kalotes," ch. xxxi.

Footnote 118: [\(return\)](#) "Religion of Reason."

This universal tendency to recognize a superior Power upon whom we are dependent, and by whose hand our well-being and our destinies are absolutely controlled, has revealed itself even amid the most complicated forms of polytheistic worship. Amid the even and undisturbed flow of every-day life they might be satisfied with the worship of subordinate deities, but in the midst of sudden and unexpected calamities, and of terrible catastrophes, then they cried to the Supreme God. ¹¹⁹ "When alarmed by an earthquake," says Aulus Gellius, "the ancient Romans were accustomed to pray, not to some one of the gods individually, but to God in general, *as to the Unknown*." ¹²⁰

Footnote 119: [\(return\)](#) "At critical moments, when the deepest feelings of the human heart are stirred, the old Greeks and Romans seem suddenly to have dropped all mythological ideas, and to have fallen back on the universal language of true religion."--Max Müller, "Science of Language." p. 436.

Footnote 120: [\(return\)](#) Tholuck, "Nature and Influence of Heathenism," p. 23.

"Thus also Minutius Felix says, 'When they stretch out their hands to heaven they mention only God; and these forms of speech, *He is great*, and *God is true*, and *If God grant*(which are the

natural language of the vulgar), are a plain confession of the truth of Christianity.' And also Lactantius testifies, 'When they swear, and when they wish, and when they give thanks, they name not many gods, but God only; the truth, by a secret force of nature, thus breaking forth from them whether they will or no;' and again he says, 'They fly to God; aid is desired of God; they pray that God would help them; and when one is reduced to extreme necessity, he begs for God's sake, and by his divine power alone implores the mercy of men.'" ¹²¹ The account which is given by Diogenes Laertius ¹²² of the erection of altars bearing the inscription "to the unknown God," clearly shows that they had their origin in this general sentiment of dependence on a higher Power. "The Athenians being afflicted with pestilence invited Epimenides to lustrate their city. The method adopted by him was to carry several sheep to the Areopagus, whence they were left to wander as they pleased, under the observation of persons sent to attend them. As each sheep lay down it was sacrificed to *the propitious God*. By this ceremony it is said the city was relieved; but as it was still unknown what deity was propitious, an altar was erected to *the unknown God* on every spot where a sheep had been sacrificed." ¹²³

117

Footnote 121: [\(return\)](#) Cudworth, vol. i. p. 300.

Footnote 122: [\(return\)](#) "Lives of Philosophers," book i., Epimenides.

Footnote 123: [\(return\)](#) See Townsend's "Chronological Arrangement of New Testament," note 19, part xii.; Doddridge's "Exposition;" and Barnes's "Notes on Acts."

"The unknown God" was their deliverer from the plague. And the erection of an altar to him was a confession of their absolute dependence upon him, of their obligation to worship him, as well as of their need of a deeper knowledge of him. The gods who were known and named were not able to deliver them in times of calamity, and they were compelled to look beyond the existing forms of Grecian mythology for relief. Beyond all the gods of the Olympus there was "one God over all," the Father of gods and men, the Creator of all the subordinate local deities, upon whom even these created gods were dependent, upon whom man was absolutely dependent, and therefore in times of deepest need, of severest suffering, of extremest peril, then they cried to the living, supreme, eternal God. ¹²⁴

Footnote 124: [\(return\)](#) "The men and women of the Iliad and Odyssey are habitually religious. The language of religion is often on their tongues, as it is ever on the lips of every body in the East at this day. The thought of the gods, and of their providence and government of the world, is a familiar thought. They seem to have an abiding conviction of their *dependence* on the gods. The results of all actions depend on the will of the gods; *it lies on their knees* (θεῶν ἐν γούνασι κείται, Od. i. 267), is the often repeated and significant expression of their feeling of dependence."--Tyler, "Theology of Greek Poets," p. 165.

3. The Athenians developed in a high degree those religious emotions which always accompany the consciousness of dependence on a Supreme Being.

The first emotional element of all religion is *fear*. This is unquestionably true, whether religion be considered from a Christian or a heathen stand-point. "The *fear* of the Lord is the beginning of wisdom." Associated with, perhaps preceding, all definite ideas of God, there exists in the human mind certain feelings of *awe*, and *reverence*, and *fear* which arise spontaneously in presence of the vastness, and grandeur, and magnificence of the universe, and of the power and glory of which the created universe is but the symbol and shadow. There is the felt apprehension that, beyond and back of the visible and the tangible, there is a *personal, living Power*, which is the foundation of all, and which fashions all, and fills all with its light and life; that "the universe is the living vesture in which the Invisible has robed his mysterious loveliness." There is the feeling of an *overshadowing Presence* which "compasseth man behind and before, and lays its hand upon him."

118

This wonderful presentiment of an invisible power and presence pervading and informing all nature is beautifully described by Wordsworth in his history of the development of the Scottish herdsman's mind:

So the foundations of his mind were laid
In such communion, not from terror free.
While yet a child, and long before his time,
Had he perceived the presence and the power
Of greatness; and deep feelings had impressed
So vividly great objects, that they lay
Upon his mind like substances, whose presence
Perplexed the bodily sense.

... In the after-day

Of boyhood, many an hour in caves forlorn,
And 'mid the hollow depths of naked crags,
He sat, and even in their fixed lineaments,
Or from the power of a peculiar eye,
Or by creative feeling overborne,
Or by predominance of thought oppressed,
Even in their fixed and steady lineaments
He traced an ebbing and a flowing mind....
Such was the Boy,--but for the growing Youth,

What soul was his, when, from the naked top
Of some bold headland, he beheld the sun
Rise up, and bathe the world in light! He looked:
Ocean and earth, the solid frame of earth
And ocean's liquid mass, in gladness lay
Beneath him; far and wide the clouds were touched.
And in their silent faces could he read
Unutterable love. Sound needed none,
Nor any voice of joy; his spirit drank
The spectacle: sensation, soul, and form
All melted into him; they swallowed up
His animal being; in them did he live,
And by them did he live; they were his life,
In such access of mind, in such high hour
Of visitation from the living God. [125](#)

119

But it may be said this is all mere poetry; to which we answer, in the words of Aristotle, "Poetry is a thing more philosophical and weightier than history." [126](#) The true poet is the interpreter of nature. His soul is in the fullest sympathy with the grand ideas which nature symbolizes, and he "deciphers the universe as the autobiography of the Infinite Spirit." Spontaneous feeling is a kind of inspiration.

It is true that all minds may not be developed in precisely the same manner as Wordsworth's herdsman's, because the development of every individual mind is modified in some measure by exterior conditions. Men may contemplate nature from different points of view. Some may be impressed with one aspect of nature, some with another. But none will fail to recognize a mysterious *presence* and invisible *power* beneath all the fleeting and changeful phenomena of the universe. "And sometimes there are moments of tenderness, of sorrow, and of vague mystery which bring the feeling of the Infinite Presence close to the human heart." [127](#)

Footnote 125: [\(return\)](#) "The Wanderer."

Footnote 126: [\(return\)](#) Poet, ch. ix.

Footnote 127: [\(return\)](#) Robertson.

Now we hold that *this feeling and sentiment of the Divine*--the supernatural--exists in every mind. It may be, it undoubtedly is, somewhat modified in its manifestations by the circumstances in which men are placed, and the degree of culture they have enjoyed. The African Fetichist, in his moral and intellectual debasement, conceives a supernatural power enshrined in every object of nature. The rude Fijian regards with dread, and even terror, the Being who darts the lightnings and wields the thunderbolts. The Indian "sees God in clouds, and hears him in the wind." The Scottish "herdsman" on the lonely mountain-top "feels the presence and the power of greatness," and "in its fixed and steady lineaments he sees an ebbing and a flowing mind." The philosopher [128](#) lifts his eyes to "the starry heavens" in all the depth of their concave, and with all their constellations of glory moving on in solemn grandeur, and, to his mind, these immeasurable regions seem "filled with the splendors of the Deity, and crowded with the monuments of his power;" or he turns his eye to "the Moral Law within," and he hears the voice of an intelligent and a righteous God. In all these cases we have a revelation of the sentiment of the Divine, which dwells alike in all human minds. In the Athenians this sentiment was developed in a high degree. The serene heaven which Greece enjoyed, and which was the best-loved roof of its inhabitants, the brilliant sun, the mountain scenery of unsurpassed grandeur, the deep blue sea, an image of the infinite, these poured all their fullness on the Athenian mind, and furnished the most favorable conditions for the development of the religious sentiments. The people of Athens spent most of their time in the open air in communion with nature, and in the cheerful and temperate enjoyment of existence. To recognize the Deity in the living powers of nature, and especially in man, as the highest sensible manifestation of the Divine, was the peculiar prerogative of the Grecian mind. And here in Athens, art also vied with nature to deepen the religious sentiments. It raised the mind to ideal conceptions of a beauty and a sublimity which transcended all mere nature-forms, and by images, of supernatural grandeur and loveliness presented to the Athenians symbolic representations of the separate attributes and operations of the invisible God. The plastic art of Greece was designed to express religious ideas, and was consecrated by religious feeling. Thus the facts of the case are strikingly in harmony with the words of the Apostle: "All things which I behold bear witness to your carefulness in religion," your "reverence for the Deity," your "fear of God." [129](#) "The sacred objects" in Athens, and especially "the altar to the Unknown God," were all regarded by Paul as evidences of their instinctive faith in the invisible, the supernatural, the divine.

120

121

Footnote 128: [\(return\)](#) Kant, in "Critique of Practical Reason."

Footnote 129: [\(return\)](#) See Parkhurst's Lexicon, under *Δεισιδαιμονία*, which Suidas explains by εὐλάβεια περί τὸ θεῖον--*reverence for the Divine*, and Hesychius by Φοβουθία--*fear of God*. Also, Josephus, *Antiq.*, book x. ch. iii, § 2: "Manasseh, after his repentance and reformation, strove to behave himself (τῇ δεισιδαιμονία χρῆσθαι) in the *most religious manner* towards God." Also see A. Clarke on Acts xvii.

Along with this sentiment of the Divine there is also associated, in all human minds, an *instinctive yearning* after the Invisible; not a mere feeling of curiosity to pierce the mystery of being and of life, but what Paul designates "a feeling after God," which prompts man to seek after a deeper knowledge, and a more immediate consciousness. To attain this deeper knowledge--this more conscious realization of the being and the presence of God, has been the effort of all philosophy and all religion in all ages. The Hindoo Yogis proposes to withdraw into his inmost self, and by a complete suspension of all his active powers to become absorbed and swallowed up in the Infinite. ¹³⁰ Plato and his followers sought by an immediate abstraction to apprehend "the unchangeable and permanent Being," and, by a loving contemplation, to become "assimilated to the Deity," and in this way to attain the immediate consciousness of God. The Neo-Platonic mystic sought by asceticism and self-mortification to prepare himself for divine communings. He would contemplate the divine perfections in himself; and in an *ecstatic* state, wherein all individuality vanishes, he would realize a union, or identity, with the Divine Essence. ¹³¹ While the universal Church of God, indeed, has in her purest days always taught that man may, by inward purity and a believing love, be rendered capable of spiritually apprehending, and consciously feeling, the presence of God. Some may be disposed to pronounce this as all mere mysticism. We answer, The living internal energy of religion is always *mystical*, it is grounded in *feeling*--a "*sensus numinis*" common to humanity. It is the mysterious sentiment of the Divine; it is the prolepsis of the human spirit reaching out towards the Infinite; the living susceptibility of our spiritual nature stretching after the powers and influences of the higher world. It is upon this inner instinct of the supernatural that all religion rests. I do not say every religious idea, but whatever is positive, practical, powerful, durable, and popular. Everywhere, in all climates, in all epochs of history, and in all degrees of civilization, man is animated by the sentiment--I would rather say, the presentiment--that the world in which he lives, the order of things in the midst of which he moves, the facts which regularly and constantly succeed each other, are not *all*. In vain he daily makes discoveries and conquests in this vast universe; in vain he observes and learnedly verifies the general laws which govern it; *his thought is not inclosed in the world surrendered to his science*; the spectacle of it does not suffice his soul, it is raised beyond it; it searches after and catches glimpses of something beyond it; it aspires higher both for the universe and itself; it aims at another destiny, another master.

Footnote 130: [\(return\)](#) Vaughan, "Hours with the Mystics," vol. i. p. 44.

Footnote 131: [\(return\)](#) Id. ib., vol. i. p. 65.

"Par delà tous ces cieux le Dieu des cieux réside." ¹³²

So Voltaire has said, and the God who is beyond the skies is not nature personified, but a supernatural Personality. It is to this highest Personality that all religions address themselves. It is to bring man into communion with Him that they exist. ¹³³

Footnote 132: [\(return\)](#) "Beyond all these heavens the God of the heavens resides."

Footnote 133: [\(return\)](#) Guizot, "L'Eglise et la Société Chrétiennes" en 1861.

4. The Athenians had that deep consciousness of sin and guilt, and of consequent liability to punishment, which confesses the need of expiation by piacular sacrifices.

Every man feels himself to be an accountable being, and he is conscious that in wrong-doing he is deserving of blame and of punishment. Deep within the soul of the transgressor is the consciousness that he is a guilty man, and he is haunted with the perpetual apprehension of a retribution which, like the spectre of evil omen, crosses his every path, and meets him at every turn.

"Tis guilt alone,
Like brain-sick frenzy in its feverish mode,
Fills the light air with visionary terrors,
And shapeless forms of fear."

Man does not possess this consciousness of guilt so much as it holds possession of him. It pursues the fugitive from justice, and it lays hold on the man who has resisted or escaped the hand of the executioner. The sense of guilt is a power over and above man; a power so wonderful that it often compels the most reckless criminal to deliver himself up, with the confession of his deed, to the sword of justice, when a falsehood would have easily protected him. Man is only able by persevering, ever-repeated efforts at self-induration, against the remonstrances of conscience, to withdraw himself from its power. His success is, however, but very partial; for sometimes, in the moments of his greatest security, the reproaches of conscience break in upon him like a flood, and sweep away all his refuge of lies. "The evil conscience is the divine bond which binds the created spirit, even in deep apostasy, to its Original. In the consciousness of guilt there is revealed the essential relation of our spirit to God, although misunderstood by man until he has something higher than his evil conscience. The trouble and anguish which the remonstrances of this consciousness excite--the inward unrest which sometimes seizes the slave of sin--are proofs that he has not quite broken away from God." ¹³⁴

Footnote 134: [\(return\)](#) Müller, "Christian Doctrine of Sin," vol. i. pp. 225, 226.

In Grecian mythology there was a very distinct recognition of the power of conscience, and a reference of its authority to the Divinity, together with the idea of retribution. Nemesis was regarded as the impersonation of the upbraidings of conscience, of the natural dread of punishment that springs up in the human heart after the commission of sin. And as the feeling of remorse may be considered as the consequence of the displeasure and vengeance of an offended God, Nemesis came to be regarded as the goddess of retribution, relentlessly pursuing the guilty until she has driven them into irretrievable woe and ruin. The Erinyes or Eumenides are the deities whose business it is to punish, in hades, the crimes committed upon earth. When an aggravated crime has excited their displeasure they manifest their greatest power in the disquietude of conscience.

Along with this deep consciousness of guilt, and this fear of retribution which haunts the guilty mind, there has also rested upon the heart of universal humanity a deep and abiding conviction that *something must be done to expiate the guilt of sin*--some restitution must be made, some suffering must be endured, ¹³⁵ some sacrifice offered to atone for past misdeeds. Hence it is that men in all ages have had recourse to penances and prayers, to self-inflicted tortures and costly sacrifices to appease a righteous anger which their sins had excited, and avert an impending punishment. That sacrifice to atone for sin has prevailed universally--that it has been practised "*sem-per, ubique, et ab omnibus*," always, in all places, and by all men--will not be denied by the candid and competent inquirer. The evidence which has been collected from ancient history by Grotius and Magee, and the additional evidence from contemporaneous history, which is being now furnished by the researches of ethnologists and Christian missionaries, is conclusive. No intelligent man can doubt the fact. Sacrificial offerings have prevailed in every nation and in every age. "Almost the entire worship of the pagan nations consisted in rites of deprecation. Fear of the Divine displeasure seems to have been the leading feature of their religious impressions; and in the diversity, the costliness, the cruelty of their sacrifices they sought to appease gods to whose wrath they felt themselves exposed, from a consciousness of sin, unrelieved by any information as to the means of escaping its effects." ¹³⁶

Footnote 135: (return) Punishment is the penalty due to sin; or, to use the favorite expression of Homer, not unusual in the Scriptures also, it is the payment of a debt incurred by sin. When he is punished, the criminal is said to pay off or pay back (ἀποτίνειν) his crimes; in other words, to expiate or atone for them (Iliad, iv. 161,162),

σύν τε μεγάλῳ ἀπέτισαν
οἶν σφῆσι κεφαλῆσι γυναιξί τε καὶ τεκέεσσιν,

that is, they shall pay off, pay back, atone, etc., for their treachery with a great price, with their lives, and their wives and children.--Tyler, "Theology of Greek Poets," p. 194.

Footnote 136: (return) Magee, "On the Atonement," No. V. p. 30.

It must be known to every one at all acquainted with Greek mythology that the idea of *expiation*--atonement--was a fundamental idea of their religion. Independent of any historical research, a very slight glance at the Greek and Roman classics, especially the poets, who were the theologians of that age, can leave little doubt upon this head. ¹³⁷ Their language everywhere announces the notion of *propitiation*, and, particularly the Latin, furnishes the terms which are still employed in theology. We need only mention the words ἱλασμός, ἱλάσκομαι, λύτρον, περίψημα, as examples from the Greek, and *placare, propitiare, expiare, piaculum*, from the Latin. All these indicate that the notion of expiation was interwoven into the very modes of thought and framework of the language of the ancient Greeks.

Footnote 137: (return) In Homer the doctrine is expressly taught that the gods may, and sometimes do, remit the penalty, when duly propitiated by prayers and sacrifices accompanied by suitable reparations ("Iliad," ix. 497 sqq.). "We have a practical illustration of this doctrine in the first book of the Iliad, where Apollo averts the pestilence from the army, when the daughter of his priest is returned without ransom, and a *sacrifice* (ἐλατόμβη) is sent to the altar of the god at sacred Chrysa.... Apollo hearkens to the intercession of his priest, accepts the sacred hecatomb, is delighted with the accompanying songs and libations, and sends back the embassy with a favoring breeze, and a favorable answer to the army, who meanwhile had been *purifying* (ἀπελυμαίνοντο) themselves, and offering unblemished hecatombs of bulls and goats on the shore of the sea which washes the place of their encampment."

"The object of the propitiatory embassy to Apollo is thus stated by Ulysses: Agamemnon, king of men, has sent me to bring back thy daughter Chryses, and to offer a sacred hecatomb for (ὕπέρ) the Greeks, that we may *propitiate* (ἱλασόμεσθα) the king, who now sends woes and many groans upon the Argives" (442 sqq.).--Tyler, "Theology of Greek Poets," pp. 196, 197.

We do not deem it needful to discuss at length the question which has been so earnestly debated among theologians, as to whether the idea of expiation be a primitive and necessary idea of the human mind, or whether the practice of piacular sacrifices came into the post-diluvian world with Noah, as a positive institution of a primitive religion then first directly instituted by God. On either hypothesis the practice of expiatory rites derives its authority from God; in the latter case, by an outward and verbal revelation, in the former by an inward and intuitive revelation.

This much, however, must be conceded on all hands, that there are certain fundamental intuitions, universal and necessary, which underlie the almost universal practice of expiatory sacrifice, namely, *the universal consciousness of guilt, and the universal conviction that something must be done to expiate guilt*, to compensate for wrong, and to atone for past

misdeeds. But *how* that expiation can be effected, how that atonement can be made, is a question which reason does not seem competent to answer. That personal sin can be atoned for by vicarious suffering, that national guilt can be expiated and national punishment averted by animal sacrifices, or even by human sacrifices, is repugnant to rather than conformable with natural reason. There exists no discernible connection between the one and the other. We may suppose that eucharistic, penitential, and even deprecatory sacrifices may have originated in the light of nature and reason, but we are unable to account for the practice of piacular sacrifices for substitutional atonement, on the same principle. The ethical principle, that one's own sins are not transferable either in their guilt or punishment, is so obviously just that we feel it must have been as clear to the mind of the Greek who brought his victim to be offered to Zeus, as it is to the philosophic mind of to-day. ¹³⁸ The knowledge that the Divine displeasure can be averted by sacrifice is not, by Plato, grounded upon any intuition of reason, as is the existence of God, the idea of the true, the just, and good, but on "tradition," ¹³⁹ and the "interpretations" of Apollo. "To the Delphian Apollo there remains the greatest, noblest, and most important of legal institutions--the erection of temples, sacrifices, and other services to the gods,... and what other services should be gone through with a view to their *propitiation*. Such things as these, indeed, *we neither know ourselves, nor in founding the State would we intrust them to others*, if we be wise;... the god of the country is the natural interpreter to all men about such matters." ¹⁴⁰

127

Footnote 138: [\(return\)](#) "He that hath done the deed, to suffer for it--thus cries a proverb thrice hallowed by age."--Æschylus, "Choëph," 311.

Footnote 139: [\(return\)](#) "Laws," book vi. ch. xv.

Footnote 140: [\(return\)](#) "Republic," book iv. ch. v.

The origin of expiatory sacrifices can not, we think, be explained except on the principle of a primitive revelation and a positive appointment of God. They can not be understood except as a divinely-appointed symbolism, in which there is exhibited a confession of personal guilt and desert of punishment; an intimation and a hope that God will be propitious and merciful; and a typical promise and prophecy of a future Redeemer from sin, who shall "put away sin by the sacrifice of himself." This sacred rite was instituted in connection with the *protevangelium* given to our first parents; it was diffused among the nations by tradition, and has been kept alive as a general, and, indeed, almost universal observance, by that deep sense of sin, and consciousness of guilt, and personal urgency of the need of a reconciliation, which are so clearly displayed in Grecian mythology.

The legitimate inference we find ourselves entitled to draw from the words of Paul, when fairly interpreted in the light of the past religious history of the world, is, that the Athenians were a religious people; that is, *they were, however unknowing, believers in and worshippers of the One Supreme God.*

128

CHAPTER IV.

THE RELIGION OF THE ATHENIANS: ITS MYTHOLOGICAL AND SYMBOLICAL ASPECTS.

"That there is one Supreme Deity, both philosophers and poets, and even the vulgar worshippers of the gods themselves frequently acknowledge; which because the assertors of gods well understood, they affirm these gods of theirs to preside over the several parts of the world, yet so that there is only one chief governor. Whence it follows, that all their other gods can be no other than ministers and officers which one greatest God, who is omnipotent, hath variously appointed, and constituted so as to serve his command." --LACTANTIUS.

The conclusion reached in the previous chapter that the Athenians were believers in and worshippers of the One Supreme God, has been challenged with some considerable show of reason and force, on the ground that they were *Polytheists* and *Idolaters*.

An objection which presents itself so immediately on the very face of the sacred narrative, and which is sustained by the unanimous voice of history, is entitled to the fullest consideration. And as the interests of truth are infinitely more precious than the maintenance of any theory, however plausible, we are constrained to accord to this objection the fullest weight, and give to it the most impartial consideration. We can not do otherwise than at once admit that the Athenians were *Polytheists*--they worshipped "many gods" besides "the unknown God." It is equally true that they were *Idolaters*--they worshipped images or statues of the gods, which images were also, by an easy metonymy, called "gods."

But surely no one supposes that this is all that can be said upon the subject, and that, after such admissions, the discussion must be closed. On the contrary, we have, as yet, scarce caught a glimpse of the real character and genius of Grecian polytheistic worship, and we have not made the first approach towards a philosophy of Grecian mythology.

129

The assumption that the heathen regarded the images "graven by art and device of man" as the

real creators of the world and man, or as having any control over the destinies of men, sinks at once under the weight of its own absurdity. Such hypothesis is repudiated with scorn and indignation by the heathens themselves. Cotta, in *Cicero*, declares explicitly: "though it be common and familiar language amongst us to call corn Ceres, and wine Bacchus, yet who can think any one so mad as to take that to be really a god that he feeds upon?" [141](#) And *Plutarch* condemns the whole practice of giving the names of gods and goddesses to inanimate objects, as absurd, impious, and atheistical: "they who give the names of gods to senseless matter and inanimate things, and such as are destroyed by men in the using, beget most wicked and atheistical opinions in the minds of men, since it can not be conceived how these things should be gods, for nothing that is inanimate is a god." [142](#) And so also the Hindoo, the Buddhist, the American Indian, the Fijian of to-day, repel the notion that their visible images are real gods, or that they worship them instead of the unseen God.

Footnote 141: [\(return\)](#) Cudworth's "Intell. System," vol. ii. p. 257, Eng. ed.

Footnote 142: [\(return\)](#) Quoted in Cudworth's "Intell. System," vol. ii. p. 258, Eng. ed.

And furthermore, that even the invisible divinities which these images were designed to represent, were each independent, self-existent beings, and that the stories which are told concerning them by Homer and Hesiod were received in a literal sense, is equally improbable. The earliest philosophers knew as well as we know, that the Deity, in order to be Deity, must be either *perfect* or nothing--that he must be *one*, not many--without parts and passions; and they were scandalized and shocked by the religious fables of the ancient mythology as much as we are. *Xenophanes*, who lived, as we know, before Pythagoras, accuses Homer and Hesiod of having ascribed to the gods every thing that is disgraceful amongst men, as stealing, adultery, and deceit. He remarks "that men seem to have created their gods, and to have given them their own mind, and voice, and figure." He himself declares that "God is *one*, the greatest amongst gods and men, neither in form nor in thought like unto men." He calls the battles of the Titans and the Giants, and the Centaurs, "the inventions of former generations," and he demands that God shall be praised in holy songs and nobler strains. [143](#) Diogenes Laertius relates the following of *Pythagoras*, "that when he descended to the shades below, he saw the soul of Hesiod bound to a pillar of brass and gnashing his teeth; and that of Homer, as suspended on a tree, and surrounded by serpents; as a punishment for the things they had said of the gods." [144](#) These poets, who had corrupted theology, *Plato* proposes to exclude from his ideal Republic; or if permitted at all, they must be subjected to a rigid expurgation. "We shall," says he, "have to repudiate a large part of those fables which are now in vogue; and, especially, of what I call the greater fables,--the stories which Hesiod and Homer tell us. In these stories there is a fault which deserves the gravest condemnation; namely, when an author gives a *bad representation of gods and heroes*. We must condemn such a poet, as we should condemn a painter, whose pictures bear no resemblance to the objects which he tries to imitate. For instance, the poet Hesiod related an ugly story when he told how Uranus acted, and how Kronos had his revenge upon him. They are offensive stories, and must not be repeated in our cities. Not yet is it proper to say, in any case,--what is indeed untrue--that gods wage war against gods, and intrigue and fight among themselves. Stories like the chaining of Juno by her son Vulcan, and the flinging of Vulcan out of heaven for trying to take his mother's part when his father was beating her, and all other battles of the gods which are found in Homer, must be refused admission into our state, *whether they are allegorical or not*. For a child can not discriminate between what is allegorical and what is not; and whatever is adopted, as a matter of belief, in childhood, has a tendency to become fixed and indelible; and therefore we ought to esteem it as of the greatest importance that the fables which children first hear should be adapted, as far as possible, to promote virtue." [145](#)

Footnote 143: [\(return\)](#) Max Muller, "Science of Language," pp. 405, 406.

Footnote 144: [\(return\)](#) "Lives," bk. viii. ch. xix. p. 347.

Footnote 145: [\(return\)](#) "Republic," bk. ii. ch. xvii.

If, then, poetic and allegorical representations of divine things are to be permitted in the ideal republic, then the founders of the state are to prescribe "the moulds in which the poets are to cast their fictions."

"Now what are these moulds to be in the case of *Theology*? They may be described as follows: It is right always to represent God as he really is, whether the poet describe him in an epic, or a lyric, or a dramatic poem. Now God is, beyond all else, *good in reality*, and therefore so to be represented. But nothing that is good is hurtful. That which is good hurts not; does no evil; is the cause of no evil. That which is good is beneficial; is the cause of good. And, therefore, that which is good is not the cause of *all* which is and happens, but only of that which is as it should be.... The good things we must ascribe to God, whilst we must seek elsewhere, and not in him, the causes of evil things."

We must, then, express our disapprobation of Homer, or any other poet, who is guilty of such a foolish blunder as to tell us (*Iliad*, xxiv. 660) that:

'Fast by the threshold of Jove's court are placed
Two casks--one stored with evil, one with good:'placed

and that he for whom the Thunderer mingles both--

'He leads a life checkered with good and ill.'

But as for the man to whom he gives the bitter cup unmixed--

'He walks
The blessed earth unblest'd, go where he will.'

132 And if any one asserts that the violation of oaths and treaties by the act of Pandarus was brought about by Athené and Zeus (Iliad, ii. 60), we should refuse our approbation. Nor can we allow it to be said that the strife and trial of strength between the gods (Iliad, xx.) was instigated by Themis and Zeus.... Such language can not be used without irreverence; it is both injurious to us, and contradictory in itself. [146](#)

Inasmuch as God is perfect to the utmost in beauty and goodness, *he abides ever the same*, and without any variation in his form. Then let no poet tell us that (Odys. xvii. 582)

'In similitude of strangers oft
The Gods, who can with ease all shapes assume,
Repair to populous cities.'

And let no one slander Proteus and Thetis, or introduce in tragedies, or any other poems, Hera transformed into the guise of a princess collecting

'Alms for the life-giving children of Inachus, river of Argos,'

not to mention many other falsehoods which we must interdict. [147](#)

"When a poet holds such language concerning the gods, we shall be angry with him, and refuse him a chorus. Neither shall we allow our teachers to use his writings for the instruction of the young, if we would have our guards grow up to be as god-like and god-fearing as it is possible for men to be." [148](#)

We are thus constrained by the statements of the heathens themselves, as well as by the dictates of common sense, to look beyond the external drapery and the material forms of Polytheism for some deeper and truer meaning that shall be more in harmony with the facts of the universal religious consciousness of our race. The religion of ancient Greece consisted in something more than the fables of Jupiter and Juno, of Apollo and Minerva, of Venus and Bacchus. "Through the rank and poisonous vegetation of mythic phraseology, we may always catch a glimpse of an original stem round which it creeps and winds itself, and without which it can not enjoy that parasitical existence which has been mistaken for independent vitality." [149](#)

Footnote 149: [\(return\)](#) Max Müller, "Science of Language," 2d series, p. 433.

133 It is an obvious truth, attested by the voice of universal consciousness as revealed in history, that the human mind can never rest satisfied within the sphere of sensible phenomena. Man is impelled by an inward necessity to pass, in thought, beyond the boundary-line of sense, and inquire after causes and entities which his reason assures him must lie beneath all sensible appearances. He must and will interpret nature according to the forms of his own personality, or according to the fundamental ideas of his own reason. In the childlike subjectivity of the undisciplined mind he will either transfer to nature the phenomena of his own personality, regarding the world as a living organism which has within it an informing soul, and thus attain a *pantheistic* conception of the universe; or else he will fix upon some extraordinary and inexplicable phenomenon of nature, and, investing it with *supernatural* significance, will rise from thence to a religious and *theocratic* conception of nature as a whole. An intelligence--a mind *within* nature, and inseparable from nature, or else *above* nature and governing nature, is, for man, an inevitable thought.

It is equally obvious that humanity can never relegate itself from a supernatural origin, neither can it ever absolve itself from a permanent correlation with the Divine. Man feels within him an instinctive nobility. He did not arise out of the bosom of nature; in some mysterious way he has descended from an eternal mind, he is "the offspring of God." And furthermore, a theocratic conception of nature, associated with a pre-eminent regard for certain apparently supernatural experiences in the history of humanity, becomes the foundation of governments, of civil authority, and of laws. Society can not be founded without the aid of the Deity, and a commonwealth can only be organized by Divine interposition. "A Ceres must appear and sow the fields with corn." And a Numa or a Lycurgus must be heralded by the oracle as

"Dear to Jove, and all who sit in the halls of the Olympus."

He must be a "descendant of Zeus," appointed by the gods to rule, and one who will "prove himself a god." These divinely-appointed rulers were regarded as the ministers of God, the visible representatives of the unseen Power which really governs all. The divine government must also have its invisible agents--its Nemesis, and Themis, and Diké, the ministers of law, of justice, and of retribution; and its Jupiter, and Juno, and Neptune, and Pluto, ruling, with delegated powers, in the heavens, the air, the sea, and the nethermost regions. So that, in fact, there exists no nation, no commonwealth, no history without a Theophany, and along with it certain sacred legends detailing the origin of the people, the government, the country itself, and the world at large. This is especially true of India, Egypt, Greece, and Rome. Their primitive history is eminently *mythological*.

Grecian polytheism can not be otherwise regarded than as a poetico-historical religion of *myth* and *symbol* which is under-laid by a natural Theism; a parasitical growth which winds itself around the original stem of instinctive faith in a supernatural Power and Presence which pervades the universe. The myths are oral traditions, floating down from that dim; twilight of *poetic* history, which separates real history, with its fixed chronology, from the unmeasured and unrecorded eternity--faint echoes from that mystic border-land which divides the natural from the supernatural, and in which they seem to have been marvellously commingled. They are the lingering memories of those manifestations of God to men, in which he or his celestial ministers came into visible intercourse with our race; the reality of which is attested by sacred history. In all these myths there is a theogonic and cosmogonic element. They tell of the generation of the celestial and aerial divinities--the subordinate agents and ministers of the Divine government. They attempt an explanation of the genesis of the visible universe, the origin of humanity, and the development of human society. In the presence of history, the substance of these myths is preserved by *symbols*, that is, by means of natural or artificial, real or striking objects, which, by some analogy or arbitrary association, shall suggest the *idea* to the mind. These symbols were designed to represent the invisible attributes and operations of the Deity; the powers that vitalize nature, that control the elements, that preside over cities, that protect the nations: indeed, all the agencies of the physical and moral government of God. Beneath all the pagan legends of gods, and underlying all the elaborate mechanism of pagan worship, there are unquestionably philosophical ideas, and theological conceptions, and religious sentiments, which give as meaning, and even a mournful grandeur to the whole.

Whilst the pagan polytheistic worship is, under one aspect, to be regarded as a departure from God, inasmuch as it takes away the honor due to God alone, and transfers it to the creature; still, under another aspect, we can not fail to recognize in it the effort of the human mind to fill up the chasm that seemed, to the undisciplined mind, to separate God and man--and to bridge the gulf between the visible and the invisible, the finite and the infinite. It was unquestionably an attempt to bring God nearer to the sense and comprehension of man. It had its origin in that instinctive yearning after the supernatural, the Divine, which dwells in all human hearts, and which has revealed itself in all philosophies, mysticisms, and religions. ¹⁵⁰ This longing was stimulated by the contemplation of the living beauty and grandeur of the visible universe, which, to the lively fancy and deep feeling of the Greeks, seemed as the living vesture of the Infinite Mind--the temple of the eternal Deity. In this visible universe the Divinity was partly revealed, and partly concealed. The unity of the all-pervading Intelligence was veiled beneath an apparent diversity of power, and a manifoldness of operations. They caught some glimpses of this universal presence in nature, but were more immediately and vividly impressed by the several manifestations of the divine perfections and divine operations, as so many separate rays of the Divinity, or so many subordinate agents and functionaries employed to execute the will and carry out the purposes of the Supreme Mind. ¹⁵¹ That unseen, incomprehensible Power and Presence was perceived in the sublimity of the deep blue sky, the energy of the vitalizing sun, the surging of the sea, the rushing wind, the roaring thunder, the ripening corn, and the clustering vine. To these separate manifestations of the Deity they gave *personal names*, as Jupiter to the heavens, Juno to the air, Neptune to the sea, Ceres to the corn, and Bacchus to the vine. These personals denoted, not the things themselves, but the invisible, divine powers supposed to preside over those several departments of nature. By a kind of prosopopœia "they spake of the things in nature, and parts of the world, as persons--and consequently as so many gods and goddesses--yet so as the intelligent might easily understand their meaning, *that these were in reality nothing else but so many names and notions of that one Numen--divine force and power which runs through all the world, multiformly displaying itself.*" ¹⁵² "Their various deities were but different names, different conceptions, of that Incomprehensible Being which no *thought* can reach, and no *language* express." ¹⁵³ Having given to these several manifestations of the Divinity personal names, they now sought to represent them to the eye of sense by *visible forms*, as the symbols or images of the perfections of the unseen, the incomprehensible, the unknown God. And as the Greeks regarded man as the first and noblest among the phenomena of nature, they selected the human form as the highest sensible manifestation of God, the purest symbol of the Divinity. Grecian polytheism was thus a species of *mythical anthropomorphism*.

Footnote 150: [\(return\)](#) The original constitution of man is such that he "seeks after" God Acts xvii. 27. "All men yearn after the gods" (Homer, "Odys." iii. 48).

Footnote 151: [\(return\)](#) "Heathenism springs directly from this, that the mind lays undue stress upon the bare letter in the book of creation; that it separates and individualizes its objects as far as possible; that it places the sense of the individual part, in opposition to the sense of the whole--to the *analogia fidei* or *spiritus* which alone gives unity to the book of nature, while it

dilutes and renders as transitory as possible the sense of the universal in the whole.... And as it laid great stress upon the letter in the book of nature, it fell into polytheism. The particular symbol of the divine, or of the Godhead, became a myth of some special deity."--Lange's "Bible-work," Genesis, p. 23.

Footnote 152: [\(return\)](#) Cudworth, "Intellect. System," vol. i. p. 308.

Footnote 153: [\(return\)](#) Max Müller, "Science of Language," p. 431.

A philosophy of Grecian mythology, such as we have outlined in the preceding paragraphs, is, in our judgment, perfectly consistent with the views announced by Paul in his address to the Athenians. He intimates that the Athenians "thought that the Godhead was *like unto* (ἐν νοῦ ὁμοίου)--to be imaged or represented by human art--by gold, and silver, and precious stone graven by art, and device of man;" that is, they thought the perfections of God could be represented to the eye by an image, or symbol. The views of Paul are still more articulately expressed in Romans, i. 23, 25: "They changed the glory of the incorruptible God into the *similitude of an image* of corruptible man,... and they worshipped and served the thing made, *παρά--rather* than, or *more* than the Creator." Here, then, the apostle intimates, first, that the heathen *knew* God, [154](#) and that they worshipped God. They worshipped the creature besides or even more than God, but still they also worshipped God. And, secondly, they represented the perfections of God by an image, and under this, as a "*likeness*" or symbol, they indirectly worshipped God. Their religious system was, then, even to the eye of Paul, a *symbolic* worship--that is, the objects of their devotion were the *ὁμοιώματα*--the similitudes, the likenesses, the images of the perfections of the invisible God.

Footnote 154: [\(return\)](#) Verse 21.

138 It is at once conceded by us, that the "sensus numinis," the natural intuition of a Supreme Mind, whose power and presence are revealed in nature, can not maintain itself, as an influential, and vivifying, and regulative belief amongst men, without the continual supernatural interposition of God; that is, without a succession of Divine revelations. And further, we grant that, instead of this symbolic mode of worship deepening and vitalizing the sense of God as a living power and presence, there is great danger that the symbol shall at length unconsciously take the place of God, and be worshipped instead of Him. From the purest form of symbolism which prevailed in the earliest ages, there may be an inevitable descent to the rudest form of false worship, with its accompanying darkness, and abominations, and crimes; but, at the same time, let us do justice to the religions of the ancient world--the childhood stammerings of religious life--which were something more than the inventions of designing men, or the mere creations of human fancy; they were, in the words of Paul, "a *seeking after God*, if haply they might feel after him, and find him, who is not far from any one of us." It can not be denied that the more thoughtful and intelligent Greeks regarded the visible objects of their devotion as mere symbols of the perfections and operations of the unseen God, and of the invisible powers and subordinate agencies which are employed by him in his providential and moral government of the world. And whatever there was of misapprehension and of "ignorance" in the popular mind, we have the assurance of Paul that it was "*overlooked*" by God.

The views here presented will, we venture to believe, be found most in harmony with a true philosophy of the human mind; with the religious phenomena of the world; and, as we shall subsequently see, with the writings of those poets and philosophers who may be fairly regarded as representing the sentiments and opinions of the ancient world. At the same time, we have no desire to conceal the fact that this whole question as to the origin, and character, and philosophy of the mythology and symbolism of the religions of the ancient world has been a subject of earnest controversy from Patristic times down to the present hour, and that even to-day there exists a wide diversity of opinion among philosophers, as well as theologians.

139 The principal theories offered may be classed as the *ethical*, the *physical*, and the *historical*, according to the different objects the framers of the myths are supposed to have had in view. Some have regarded the myths as invented by the priests and wise men of old for the improvement and government of society, as designed to give authority to laws, and maintain social order. [155](#) Others have regarded them as intended to be allegorical interpretations of physical phenomena--the poetic embodiment of the natural philosophy of the primitive races of men; [156](#) whilst others have looked upon them as historical legends, having a substratum of fact, and, when stripped of the supernatural and miraculous drapery which accompanies fable, as containing the history of primitive times. [157](#) Some of the latter class have imagined they could recognize in Grecian mythology traces of sacred personages, as well as profane; in fact, a dimmed image of the patriarchal traditions which are preserved in the Old Testament scriptures. [158](#)

It is beyond our design to discuss all the various theories presented, or even to give a history of opinions entertained. [159](#) We are fully convinced that the hypothesis we have presented in the preceding pages, *viz., that Grecian mythology was a grand symbolic representation of the Divine as manifested in nature and providence*, is the only hypothesis which meets and harmonizes all the facts of the case. This is the theory of Plato, of Cudworth, Baumgarten, Max Müller, and many other distinguished scholars.

Footnote 157: [\(return\)](#) Hecataeus, Herodotus, some of the early Fathers, Niebuhr, J.H. Voss, Arnold.

Footnote 158: [\(return\)](#) Bochart, G.J. Vossius, Faber, Gladstone.

Footnote 159: [\(return\)](#) To the English reader who desires an extended and accurate acquaintance with the classic and patristic literature of this deeply interesting subject, we commend the careful study of Cudworth's "Intellectual System of the Universe," especially ch. iv. The style of Cudworth is perplexingly involved, and his great work is unmethodical in its arrangement and discussion. Nevertheless, the patient and persevering student will be amply rewarded for his pains. A work of more profound research into the doctrine of antiquity concerning God, and into the real import of the religious systems of the ancient world, is, probably, not extant in any language.

There are two fundamental propositions laid down by Cudworth which constitute the basis of this hypothesis.

1. *No well-authenticated instance can be furnished from among the Greek Polytheists of one who taught the existence of a multiplicity of independently uncreated, self-existent deities; they almost universally believed in the existence of ONE SUPREME, UNCREATED, ETERNAL GOD, "The Maker of all things"--"the Father of gods and men," --"the sole Monarch and Ruler of the world."*

2. *The Greek Polytheists taught a plurality of "GENERATED DEITIES," who owe their existence to the power and will of the Supreme God, who are by Him invested with delegated powers, and who, as the agents of his universal providence, preside over different departments of the created universe.*

The evidence presented by Cudworth in support of his theses is so varied and so voluminous, that it defies all attempts at condensation. His volumes exhibit an extent of reading, of patient research, and of varied learning, which is truly amazing. The discussion of these propositions involves, in fact, nothing less than a complete and exhaustive survey of the entire field of ancient literature, a careful study of the Greek and Latin poets, of the Oriental, Greek, and Alexandrian philosophers, and a review of the statements and criticisms of Rabbinical and Patristic writers in regard to the religions of the pagan world. An adequate conception of the varied and weighty evidence which is collected by our author from these fields, in support of his views, could only be conveyed by transcribing to our pages the larger portion of his memorable *fourth* chapter. But inasmuch as Grecian polytheism is, in fact, the culmination of all the mythological systems of the ancient world, the fully-developed flower and ripened fruit of the cosmical and theological conceptions of the childhood-condition of humanity, we propose to epitomize the results of his inquiry as to the *theological*, opinions of the Greeks, supplying additional confirmation of his views from other sources.

And first, he proves most conclusively that Orpheus, Homer, and Hesiod, [160](#) who are usually designated "the theologians" of Greece, but who were in fact the depravers and corrupters of pagan theology, do not teach the existence of a multitude of *unmade, self-existent, and independent deities*. Even they believed in the existence of *one* uncreated and eternal mind, *one Supreme God*, anterior and superior to all the gods of their mythology. They had some intuition, some apperception of the *Divine*, even before they had attached to it a sacred name. The gods of their mythology had all, save one, a temporal origin; they were generated of Chaos and Night, by an active principle called *Love*. "One might suspect," says Aristotle, that Hesiod, and if there be any other who made *love* or *desire* a principle of things, aimed at these very things (*viz.*, the designation of the efficient cause of the world); for Parmenides, describing the generation of the universe, says:

'First of all the gods planned he *love*;

and further, Hesiod:

'First of all was Chaos, afterwards Earth,
With her spacious bosom,
And *Love*, who is pre-eminent among all the immortals;'

as intimating here that in entities there should exist some *cause* that will impart motion, and hold bodies in union together. But how, in regard to these, one ought to distribute them, as to the order of priority, can be decided afterwards. [161](#)

Footnote 160: [\(return\)](#) We do not concern ourselves with the chronological antecedence of these ancient Greek poets. It is of little consequence to us whether Homer preceded Orpheus, or Orpheus Homer. They were not the real creators of the mythology of ancient Greece. The myths were a spontaneous growth of the earliest human thought even before the separation of the Aryan family into its varied branches.

The study of Comparative Mythology, as well as of Comparative Language, assures us that the myths had an origin much earlier than the times of Homer and Orpheus. They floated down from ages on the tide of oral tradition before they were systematized, embellished, and committed to writing by Homer, and Orpheus, and Hesiod. And between the systems of these three poets a perceptible difference is recognizable, which reflects the changes that verbal

recitations necessarily and imperceptibly undergo.

Footnote 161: [\(return\)](#) "Metaphysics," bk. i. ch. iv.

142 Now whether this "first principle," called "*Love*," "the cause of motion and of union" in the universe, was regarded as a personal Being, and whether, as the ancient scholiast taught, Hesiod's love was "the heavenly Love, which is also God, that other love that was born of Venus being junior," is just now of no moment to the argument. The more important inference is, that amongst the gods of Pagan theology but *one* is self-existent, or else none are. Because the Hesiodian gods, which are, in fact, all the gods of the Greek mythology, "were either all of them derived from chaos, love itself likewise being generated out of it; or else love was supposed to be distinct from chaos, and the active principle of the universe, from whence, together with chaos, all the theogony and cosmogony was derived." [162](#) Hence it is evident the poets did not teach the existence of a multiplicity of unmade, self-existent, independent deities.

Footnote 162: [\(return\)](#) "Cudworth," vol. i. p. 287.

The careful reader of Cudworth will also learn another truth of the utmost importance in this connection, viz., *that the theogony of the Greek poets was, in fact, a cosmogony*, the generation of the gods being, in reality, the generation of the heavens, the sun, the moon, the stars, and all the various powers and phenomena of nature. This is dimly shadowed forth in the very names which are given to some of these divinities. Thus Helios is the sun, Selena is the moon, Zeus the sky--the deep blue heaven, Eos the dawn, and Ersê the dew. It is rendered still more evident by the opening lines of Hesiod's "Theogonia," in which he invokes the muses:

"Hail ye daughters of Jupiter! Grant a delightsome song.
Tell of the race of immortal gods, always existing,
Who are the offspring of the earth, of the starry sky,
And of the gloomy night, whom also the ocean nourisheth.
Tell how the gods and the earth at first were made,
And the rivers, and the mighty deep, boiling with waves,
And the glowing stars, and the broad heavens above,
And the gods, givers of good, born of these."

143 Where we see plainly that the generation of the gods is the generation of the earth, the heaven, the stars, the seas, the rivers, and other things produced by them. "But immediately after invocation of the Muses the poet begins with Chaos, and Tartara, and Love, as the first principles, and then proceeds to the production of the earth and of night out of chaos; of the ether and of day, from night; of the starry heavens, mountains, and seas. All which generation of gods is really nothing but a poetic description of the cosmogonia; as through the sequel of the poem all seems to be physiology veiled under fiction and allegory.... Hesiod's gods are thus not only the animated parts of the world, but also the other things of nature personified and deified, or abusively called gods and goddesses." [163](#) The same is true both of the Orphic and Homeric gods. "Their generation of the gods is the same with the generation or creation of the world, both of them having, in all probability, derived it from the Mosaic cabala, or tradition." [164](#)

But in spite of all this mythological obscuration, the belief in one Supreme God is here and there most clearly recognizable. "That Zeus was originally to the Greeks the Supreme God, the true God--nay, at some time their only God--can be perceived in spite of the haze which mythology has raised around his name." [165](#) True, they sometimes used the word "Zeus" in a physical sense to denote the deep expanse of heaven, and sometimes in a historic sense, to designate a hero or deified man said to have been born in Crete. It is also true that the Homeric Zeus is full of contradictions. He is "all-seeing," yet he is cheated; he is "omnipotent," yet he is defied; he is "eternal," yet he has a father; he is "just," yet he is guilty of crime. Now, as Müller very justly remarks, these contradictions may teach us a lesson. If all the conceptions of Zeus had sprung from one origin, these contradictions could not have existed. If Zeus had simply and only meant the Supreme God, he could not have been the son of Kronos (Time). If, on the other hand, Zeus had been a mere mythological personage, as Eos, the dawn, and Helios, the sun, he could never have been addressed as he is addressed in the famous prayer of Achilles (*Iliad*, bk. xxi.). [166](#)

Footnote 163: [\(return\)](#) Cudworth, vol. i. pp. 321, 332.

Footnote 164: [\(return\)](#) *Id.*, *ib.*, vol. i. p. 478.

Footnote 165: [\(return\)](#) Max Müller, "Science of Language," p. 457.

Footnote 166: [\(return\)](#) *Id.*, *ib.*, p. 458.

144 In Homer there is a perpetual blending of the natural and the supernatural, the human and divine. The *Iliad* is an incongruous medley of theology, physics, and history. In its gorgeous scenic representations, nature, humanity, and deity are mingled in inextricable confusion. The gods are sometimes supernatural and superhuman personages; sometimes the things and powers of nature personified; and sometimes they are deified men. And yet there are passages, even in Homer, which clearly distinguish Zeus from all the other divinities, and mark him out as the Supreme. He is "the highest, first of Gods" (bk. xix. 284); "most great, most glorious Jove" (bk. ii. 474). He is "the universal Lord" (bk. xi. 229); "of mortals and immortals king supreme," (bk. xii. 263); "over all the immortal gods he reigns in unapproached pre-eminence of power" (bk. xv.

125). He is "the King of kings" (bk. viii. 35), whose "will is sovereign" (bk. iv. 65), and his "power invincible" (bk. viii. 35). He is the "eternal Father" (bk. viii. 77). He "excels in wisdom gods and men; all human things from him proceed" (bk. xiii. 708-10); "the Lord of counsel" (bk. i. 208), "the all-seeing Jove" (bk. xiii. 824). Indeed the mere expression "Father of gods and men" (bk. i. 639), so often applied to Zeus, and him *alone*, is proof sufficient that, in spite of all the legendary stories of gods and heroes, the idea of Zeus as the Supreme God, the maker of the world, the Father of gods and men, the monarch and ruler of the world, was not obliterated from the Greek mind. [167](#)

Footnote 167: [\(return\)](#) "In the order of legendary chronology Zeus comes after Kronos and Uranos, but in the order of Grecian conception Zeus is the prominent person, and Kronos and Uranos are inferior and introductory precursors, set up in order to be overthrown, and to serve as mementos of the powers of their conqueror. To Homer and Hesiod, as well as to the Greeks universally, Zeus is the great, the predominant God, 'the Father of gods and men,' whose power none of the gods can hope to resist, or even deliberately think of questioning. All the other gods have their specific potency, and peculiar sphere of action and duty, with which Zeus does not usually interfere; but it is he who maintains the lineaments of a providential government, as well over the phenomena of Olympus as over the earth."--Grote, "Hist. of Greece," vol. i. p. 3.

Zeus is not only lord of heaven but likewise the ruler of the lower world, and the master of the sea.--Welcher, "Griechische Götterlehre," vol. i. p. 164. The Zeus of the Greek poets is unquestionably the god of whom Paul declared: In him we live and move, and have our being, as certain of your own poets have also said--

"For we are his offspring."

Now whether this be a quotation from Aratus or Cleanthes, the language of the poets is, "We are the offspring of Zeus;" consequently the Zeus of the poets and the God of Christianity are the same God.

"The father of gods and men in Homer is, of course, the Universal Father of the Scriptures."--Tyler, "Theology of Greek Poets," p. 171.

145 "When Homer introduces Eumaios, the swineherd, speaking of this life and the higher powers that rule it, he knows only of just gods 'who hate cruel deeds, but honor justice and the righteous works of men' (Od. xiv. 83). His whole life is built up on a complete trust in the divine government of the world without any artificial helps, as the Erinys, the Nemesis, or Moira. 'Eat,' says the swineherd, 'and enjoy what is here, for *God* [168](#) will grant one thing, but another he will refuse, whatever he will in his mind, for he can do all things' (Od. xiv. 444; x. 306). This surely is religion, and it is religion untainted by mythology. Again, the prayer of the female slave, grinding corn in the house of Ulysses is religious in the truest sense--'Father Zeus, thou who rulest over gods and men, surely thou hast just thundered in the starry sky, and there is no cloud anywhere. Thou showest this as a sign to some one. Fulfill now, even to me, miserable wretch, the prayer which I now offer'" (Od. xx. 141-150). [169](#)

Footnote 168: [\(return\)](#) No sound reason can be assigned for translating *θεός* by "a god" as some have proposed, rather than "God." But even if it were translated "a god," this god must certainly be understood as Zeus. Plato tells us that Zeus is the most appropriate name for God. "For in reality the name Zeus is, as it were, a sentence; and persons dividing it in two parts, some of us make use of one part, and some of another; for some call him Ζήν, and some Δίς. But these parts, collected together into one, exhibit the nature of the God;... for there is no one who is more the cause of living, both to us and everything else, than he who is the ruler and king of all. It follows, therefore, that this god is rightly named, through whom *life* is present in all living beings."--Cratylus, § 28.

Θεός was usually employed, says Cudworth, to designate *God* by way of pre-eminence, *θεοί* to designate inferior divinities.

Footnote 169: [\(return\)](#) Müller, "Science of Language," p. 434.

146 The Greek tragedians were the great religious instructors of the Athenian people. "Greek tragedy grew up in connection with religious worship, and constituted not only a popular but a sacred element in the festivals of the gods.... In short, strange as it may sound to modern ears, the Greek stage was, more nearly than any thing else, the Greek pulpit. [170](#) With a priesthood that offered sacrifice, but did not preach, with few books of any kind, the people were, in a great measure, dependent on oral instruction for knowledge; and as they learned their rights and duties as citizens from their orators, so they hung on the lips of the 'lofty, grave tragedians' for instruction touching their origin, duty, and destiny as mortal and immortal beings.... Greek tragedy is essentially didactic, ethical, mythological, and religious." [171](#)

Footnote 170: [\(return\)](#) Pulpitum, a stage.

Footnote 171: [\(return\)](#) Tyler, "Theology of Greek Poets," pp. 205, 206.

Now it is unquestionable that, with the tragedians, Zeus is the Supreme God. Æschylus is pre-eminently the theological poet of Greece. The great problems which lie at the foundation of religious faith and practice are the main staple of nearly all his tragedies. Homer, Hesiod, the sacred poets, had looked at these questions in their purely poetic aspects. The subsequent philosophers, Plato and Aristotle, developed them more fully by their didactic method. Æschylus stands on the dividing-line between them, no less poetic than the former, scarcely less

philosophical than the latter, but more intensely practical, personal, and *theological* than either. The character of the Supreme Divinity, as represented in his tragedies, approaches more nearly to the Christian idea of God. He is the Universal Father--Father of gods and men; the Universal Cause (παναίτιος, Agamem. 1485); the All-seer and All-doer (παντόπτης, πανεργέτης, *ibid*, and Sup. 139); the All-wise and All-controlling (παγκρατής, Sup. 813); the Just and the Executor of justice (δικηφόρος, Agamem. 525); true and incapable of falsehood (Prom. 1031);

ψευδηγορεῖν γὰρ οὐκ ἐπίσταταί στόμα
τὸ δῖον, ἀλλὰ πᾶν ἔπος τελεῖ,--

147

holy (ἄγνός, Sup. 650); merciful (πρευμένης, *ibid*. 139); the God especially of the suppliant and the stranger (Supplices, *passim*); the most high and perfect One (τέλειον ὕψιστον, Eumen. 28); King of kings, of the happy, most happy, of the perfect, most perfect power, blessed Zeus (Sup. 522). [172](#) Such are some of the titles by which Zeus is most frequently addressed; such the attributes commonly ascribed to him in Æschylus.

Sophocles was the great master who carried Greek tragedy to its highest perfection. Only seven out of more than a hundred of his tragedies have come down to us. There are passages cited by Justin Martyr, Clemens Alexandrinus, and others which are not found in those tragedies now extant. The most famous and extensively quoted passage is given by Cudworth. [173](#)

Εἷς ταῖς ἀληθείαισιν, εἷς ἐστὶν θεός,
Ὅς οὐρανόν τ' ἔτευξε καὶ γαῖαν μακρὰν,
Πόντου τε χαροπὸν οἶδμα, κἀνέμων βίαν, κ. τ. λ. [174](#)

This "one only God" is Zeus, who is the God of justice, and reigns supreme:

"Still in yon starry heaven supreme,
Jove, all-beholding, all-directing, dwells--
To him commit thy vengeance."--"Electra," p. 174 sqq.

This description of the unsleeping, undecaying power and dominion of Zeus is worthy of some Hebrew prophet--

"Spurning the power of age, enthroned in might,
Thou dwell'st mid heaven's broad light;
This was in ages past thy firm decree,
Is now, and shall forever be:
That none of mortal race on earth shall know
A life of joy serene, a course unmarked by woe."
"Antigone," pp. 606-614. [175](#)

148

Whether we regard the poets as the principal theological teachers of the ancient Greeks, or as the compilers, systematizers, and artistic embellishers of the theological traditions and myths which were afloat in the primitive Hellenic families, we can not resist the conclusion that, for the masses of the people Zeus was the Supreme God, "the God of gods" as Plato calls him. Whilst all other deities in Greece are more or less local and tribal gods, Zeus was known in every village and to every clan. "He is at home on Ida, [176](#) on Olympus, at Dodona. [177](#) While Poseidon drew to himself the Æolian family, Apollo the Dorian, Athene the Ionian, there was one powerful God for all the sons of Hellen--Dorians, Æolians, Ionians, Achæans, viz., the Panhellenic Zeus." [178](#) Zeus was the name invoked in their solemn nuncupations of vows--

"O Zeus, father, O Zeus, king."

In moments of deepest sorrow, of immediate urgency and need, of greatest stress and danger, they had recourse to Zeus.

"Courage, courage, my child!
There is still in heaven the great Zeus;
He watches over all things, and he rules.
Commit thy exceeding bitter griefs to him,
And be not angry against thine enemies,
Nor forget them." [179](#)

Footnote 176: [\(return\)](#) "Iliad," bk. iii. 324.

Footnote 177: [\(return\)](#) Bk. xvi. 268.

Footnote 178: [\(return\)](#) Müller, p. 452.

He was supplicated, as the God who reigns on high, in the prayer of the Athenian--

"Rain, rain, O dear Zeus, on the land of the Athenians and on their fields."

149 It has been urged that, as Zeus means the sky, therefore he is no more than the deep concave of heaven personified and deified, and that consequently Zeus is not the true, the only God. This argument is only equalled in feebleness by that of the materialist, who argues that "spiritus" means simply breath, therefore the breath is the soul. Even if the Greeks remembered that, originally, Zeus meant the sky, that would have no more perplexed their minds than the remembrance that "thymos"--mind--meant originally blast. "The fathers of Greek theology gave to that Supreme Intelligence, which they instinctively recognized as above and ruling over the universe, the name of Zeus; but in doing so, they knew well that by Zeus they meant more than the sky. The unfathomable depth, the everlasting calm of the ethereal sky was to their minds an image of that Infinite Presence which overshadows all, and looks down on all. As the question perpetually recurred to their minds, 'Where is he who abideth forever?' they lifted up their eyes, and saw, as they thought, beyond sun, and moon, and stars, and all which changes, and will change, the clear blue sky, the boundless firmament of heaven. That never changed, that was always the same. The clouds and storms rolled far below it, and all the bustle of this noisy world; but there the sky was still, as bright and calm as ever. The Almighty Father must be there, unchangeable in the unchangeable heaven; bright, and pure, and boundless like the heavens, and like the heavens, too, afar off." [180](#) So they named him after the sky, *Zeus*, the God who lives in the clear heaven--the heavenly Father.

Footnote 180: [return](#) Kingsley, "Good News from God," p. 237, Am. ed.

The high and brilliant sky has, in many languages and many religions, been regarded as the dwelling-place of God. Indeed, to all of us in Christian times "God is above;" he is "the God of heaven;" "his throne is in the heavens;" "he reigns on high." Now, without doing any violence to thought, the name of the abode might be transferred to him who dwells in heaven. So that in our own language "heaven" may still be used as a synonym for "God." The prodigal son is still represented as saying, I have sinned against "*heaven*." And a Christian poet has taught us to sing--

"High *heaven*, that heard my solemn vow,
That vow renewed shall daily hear," etc.

150 Whenever, therefore, we find the name of heaven thus used to designate also the Deity, we must bear in mind that those by whom it was originally employed were simply transferring that name from an object visible to the eye of sense to another object perceived by the eye of reason. They who at first called God "*Heaven*" had some conception within them they wished to name--the growing image of a God, and they fixed upon the vastest, grandest, purest object in nature, the deep blue concave of heaven, overshadowing all, and embracing all, as the symbol of the Deity. Those who at a later period called heaven "*God*" had forgotten that they were predicating of heaven something more which was vastly higher than the heaven. [181](#)

Footnote 181: [return](#) See "Science of Language," p. 457.

Notwithstanding, then, that the instinctive, native faith of humanity in the existence of one supreme God was overlaid and almost buried beneath the rank and luxuriant vegetation of Grecian mythology, we can still catch glimpses here and there of the solid trunk of native faith, around which this parasitic growth of fancy is entwined. Above all the phantasmata of gods and goddesses who descended to the plains of Troy, and mingled in the din and strife of battle, we can recognize an overshadowing, all-embracing Power and Providence that dwells on high, which never descends into the battle-field, and is never seen by mortal eyes--*the Universal King and Father,--the "God of gods."*

151 Besides the direct evidence, which is furnished by the poets and mythologists, of the presence of this universal faith in "*the heavenly Father*," there is also a large amount of collateral testimony that this idea of one Supreme God was generally entertained by the Greek pagans, whether learned or unlearned. [182](#) Dio Chrysostomus says that "all the poets call the first and greatest God the Father, universally, of all rational kind, as also the King thereof. Agreeably with which doctrine of the poets do mankind erect altars to Jupiter-King (Διὸς βασιλέως) and hesitate not to call him Father in their devotions" (Orat. xxxvi.). And Maximus Tyrius declares that both the learned and the unlearned throughout the pagan world universally agree in this; that there is one Supreme God, the Father of gods and men. "If," says he, "there were a meeting called of all the several trades and professions,... and all were required to declare their sense concerning God, do you think that the painter would say one thing, the sculptor another, the poet another, and the philosopher another? No; nor the Scythian neither, nor the Greek, nor the hyperborean. In regard to other things, we find men speaking discordantly one to another, all men, as it were, differing from all men... Nevertheless, on this subject, you may find universally throughout the world one agreeing law and opinion; *that there is one God, the King and Father of all, and many gods, the sons of God, co-reigners together with God*" (Diss. i. p. 450).

Footnote 182: [return](#) Cudworth, vol. i. pp. 593, 594.

From the poets we now pass to the philosophers. The former we have regarded as reflecting the traditional beliefs of the unreasoning multitude. The philosophers unquestionably represent the reflective spirit, the speculative thought, of the educated classes of Greek society. Turning to the writings of the philosophers, we may therefore reasonably expect that, instead of the dim, undefined, and nebulous form in which the religious sentiment revealed itself amongst the unreflecting portions of the Greek populations, we shall find their theological ideas distinctly and articulately expressed, and that we shall consequently be able to determine their religious opinions with considerable accuracy.

Now that Thales, Pythagoras, Xenophanes, Anaxagoras, Empedocles, Socrates, Plato, and Aristotle were all believers in the existence of one supreme, uncreated, eternal God, has been, we think, clearly shown by Cudworth. [183](#)

Footnote 183: [\(return\)](#) Vol. i. pp. 491-554.

In subsequent chapters on "*the Philosophers of Athens*," we shall enter more fully into the discussion of this question. Meantime we assume that, with few exceptions, the Greek philosophers were "genuine Theists."

The point, however, with which we are now concerned is, *that whilst they believed in one supreme, uncreated, eternal God, they at the same time recognized the existence of a plurality of generated deities who owe their existence to the power and will of the Supreme God, and who, as the agents and ministers of His universal providence, preside over different departments of the created universe.* They are at once Monotheists and Polytheists--believers in "one God" and "many gods." This is a peculiarity, an anomaly which challenges our attention, and demands an explanation, if we would vindicate for these philosophers a rational Theism.

Now that there can be but one infinite and absolutely perfect Being--one supreme, uncreated, eternal God--is self-evident; therefore a multiplicity of such gods is a contradiction and an impossibility. The early philosophers knew this as well as the modern. The Deity, in order to be Deity, must be one and not many: must be perfect or nothing. If, therefore, we would do justice to these old Greeks, we must inquire what explanations they have offered in regard to "the many gods" of which they speak. We must ascertain whether they regarded these "gods" as created or uncreated beings, dependent or independent, temporal or eternal We must inquire in what sense the term "god" is applied to these lesser divinities,--whether it is not applied in an accommodated and therefore allowable sense, as in the sacred Scriptures it is applied to kings and magistrates, and those who are appointed by God as the teachers and rulers of men. "*They are called gods to whom the word of God came.*" [184](#) And if it shall be found that all the gods of which they speak, save *one*, are "generated deities"--dependent beings--creatures and subjects of the one eternal King and Father, and that the name of "god" is applied to them in an accommodated sense, then we have vindicated for the old Greek philosophers a consistent and rational Theism. In what relation, then, do the philosophers place "*the gods*" to the one Supreme Being?

Thales, one of the most ancient of the Greek philosophers, taught the existence of a plurality of gods, as is evident from that saying of his, preserved by Diogenes Laertius, "The world has life, and is full of gods." [185](#) At the same time he asserts his belief in one supreme, uncreated Deity; "God is the oldest of all things, because he is unmade, or ungenerated." [186](#) All the other gods must therefore have been "generated deities," since there is but one unmade God, one only that had "no beginning." [187](#)

Footnote 184: [\(return\)](#) See John x. 35.

Footnote 185: [\(return\)](#) "Lives," bk. i.; see also Aristotle's "De Anima," bk. i. ch. viii. πάντα θῶν πληρη.

Footnote 186: [\(return\)](#) "Lives," bk. i.

Footnote 187: [\(return\)](#) "Lives," bk. i.

Xenophanes was also an assertor of many gods, and one God; but his one God is unquestionably supreme. "There is one God, the greatest amongst gods and men;" or, "God is one, the greatest amongst gods and men." [188](#)

Empedocles also believed in one Supreme God, who "is wholly and perfectly mind, ineffable, holy, with rapid and swift-glancing thought pervading the whole world," and from whom all things else are derived,--"all things that are upon the earth, and in the air and water, may be truly called the works of God, who ruleth over the world, out of whom, according to Empedocles, proceed all things, plants, men, beasts, and *gods.*" [189](#) The minor deities are therefore *made* by God. It will not be denied that *Socrates* was a devout and earnest Theist. He taught that "there is a Being whose eye pierces throughout all nature, and whose ear is open to every sound; extending through all time, extended to all places; and whose bounty and care can know no other bounds than those fixed by his own creation." [190](#) And yet he also recognized the existence of a plurality of gods, and in his last moments expressed his belief that "it is lawful and right to pray to the gods that his departure hence may be happy." [191](#) We see, however, in his words addressed to Euthydemus, a marked distinction between these subordinate deities and "Him who raised this whole universe, and still upholds the mighty frame, who perfected every part of it in beauty and

in goodness, suffering none of these parts to decay through age, but renewing them daily with unfading vigor;... even he, *the Supreme God*, still holds himself invisible, and it is only in his works that we are capable of admiring him." [192](#)

154

It were needless to attempt the proof that *Plato* believed in one Supreme God, and *only* one. This one Being is, with him, "the first God;" "the greatest of the gods;" "the God over all;" "the sole Principle of the universe." He is "the Immutable;" "the All-perfect;" "the eternal Being." He is "the Architect of the world;" "the Maker of the universe; the Father of gods and men; the sovereign Mind which orders all things, and passes through all things; the sole Monarch and Ruler of the world." [193](#)

And yet remarkable as these expressions are, sounding, as they do, so like the language of inspiration, [194](#) there can be no doubt that *Plato* was also a sincere believer in a plurality of gods, of which, indeed, any one may assure himself by reading the *tenth* book of "the Laws."

Footnote 193: [\(return\)](#) See chap. xi.

Footnote 194: [\(return\)](#) Some writers have supposed that *Plato* must have had access through some medium to "the Oracles of God." See Butler, vol. ii. p. 41.

And, now that we have in *Plato* the culmination of Grecian speculative thought, we may learn from him the mature and final judgment of the ancients in regard to the gods of pagan mythology. We open the *Timæus*, and here we find his views most definitely expressed. After giving an account of the "generation" of the sun, and moon, and planets, which are by him designated as "visible gods," he then proceeds "to speak concerning the other divinities:" "We must on this subject assent to those who in former times have spoken thereon; who were, as they said, the offspring of the gods, and who doubtless were well acquainted with their own ancestors..... Let then the genealogy of the gods be, and be acknowledged to be, that which they deliver. Of Earth and Heaven the children were Oceanus and Tethys; and of these the children were Phorcys, and Kronos, and Rhea, and all that followed these; and from these were born Zeus and Hera, and those who are regarded as brothers and sisters of these, and others their offspring. "When, then, *all the gods were brought into existence*, both those which move around in manifest courses [the stars and planets], and those which appear when it pleases them [the mythological deities], the Creator of the Universe thus addressed them:

155

'Gods, and sons of gods, of whom I am the father and the author, produced by me, ye are indestructible because I will.... Now inasmuch as you have been *generated*, you are hence *not* immortal, nor wholly indissoluble; yet you shall never be dissolved nor become subject to the fatality of death, because *so I have willed*.... Learn, therefore, my commands. Three races of mortals yet remain to be created. Unless these be created, the universe will be imperfect, for it will not contain within it every kind of animal.... In order that these mortal creatures may be, and that this world may be really a cosmos, do you apply yourselves to the creation of animals, imitating the exercises of my power in *creating* you.'" [195](#)

Footnote 195: [\(return\)](#) "Timæus," ch. xv.

Here, then, we see that *Plato* carefully distinguishes between the sole Eternal Author of the universe, on one hand, and the "souls," vital and intelligent, which he attaches to the heavenly orbs, and diffuses through all nature, on the other. These subordinate powers or agents are all created, "*generated* deities," who owe their continued existence to the *will* of God; and though intrusted with a sort of deputed creation, and a subsequent direction and government of created things, they are still only the *servants* and the *deputies* of the Supreme Creator, and Director, and Ruler of all things. These subordinate agents and ministers employed in the creation and providential government of the world appear, in the estimation of *Plato*, to have been needed--

1. *To satisfy the demands of the popular faith*, which presented its facts to be explained no less than those of external nature. *Plato* had evidently a great veneration for antiquity, a peculiar regard for "tradition venerable through ancient report," and "doctrines hoary with years." [196](#) He aspired after supernatural light and guidance; he longed for some intercourse with, some communication from, the Deity. And whilst he found many things in the ancient legends which revolted his moral sense, and which his reason rejected, yet the sentiment and the lesson which pervades the whole of Grecian mythology, viz., that the gods are in ceaseless intercourse with the human race, and if men will do right the gods will protect and help them, was one which commended itself to his heart.

156

Footnote 196: [\(return\)](#) *Ibid.*, ch. v.

2. These intermediate agents seem to have been demanded to *satisfy the disposition and*

tendency which has revealed itself in all systems, of interposing some scale of ascent between the material creation and the infinite Creator.

The mechanical theory of the universe has interposed its long series of secondary causes--the qualities, properties, laws, forces of nature; the vital theory which attaches a separate "soul" to the various parts of nature as the cause and intelligent director of its movements. Of these "souls" or gods, there were different orders and degrees--deified men or heroes, aërial, terrestrial, and celestial divinities, ascending from nature up to God. And this tendency to supply some scale of ascent towards the Deity, or at least to people the vast territory which seems to swell between the world and God, finds some countenance in "the angels and archangels," "the thrones, and dominions, and principalities, and powers" of the Christian scriptures. [197](#)

3. These inferior ministers also seemed to Plato to *increase the stately grandeur and imperial majesty of the Divine government*. They swell the retinue of the Deity in his grand "circuit through the highest arch of heaven." [198](#) They wait to execute the Divine commands. They are the agents of Divine providence, "the messengers of God" to men.

Footnote 197: [\(return\)](#) "The gods of the Platonic system answer, in office and conception, to the angels of Christian Theology."--Butler, vol. i. p. 225.

Footnote 198: [\(return\)](#) "Phædrus," § 56,7.

4. And, finally, the host of inferior deities interposed between the material sensible world and God seemed to Plato as *needful in order to explain the apparent defects and disorders of sublunary affairs*. Plato was jealous of the Divine honor. "All good must be ascribed to God, and nothing but good. We must find evil, disorder, suffering, in some other cause." [199](#) He therefore commits to the junior deities the task of creating animals, and of forming "the mortal part of man," because the mortal part is "possessed of certain dire and necessary passions." [200](#)

Footnote 199: [\(return\)](#) "Republic," bk. ii. p.18.

Footnote 200: [\(return\)](#) "Timæus," xliv.

Aristotle seems to have regarded the popular polytheism of Greece as a perverted relic of a deeper and purer "Theology" which he conceives to have been, in all probability, perfected in the distant past, and then comparatively lost. He says-- "The tradition has come down from very ancient times, being left in a mythical garb to succeeding generations, that these (the heavenly bodies) are gods, and that the Divinity *encompasses the whole of nature*. There have been made, however, to these certain fabulous additions for the purpose of winning the belief of the multitude, and thus securing their obedience to the laws, and their co-operation towards advancing the general welfare of the state. These additions have been to the effect that these gods were of the same form as men, and even that some of them were in appearance similar to certain others amongst the rest of the animal creation. The wise course, however, would be for the philosopher to disengage from these traditions the false element, and to embrace that which is true; and the truth lies in that portion of this ancient doctrine which regards the first and deepest ground of all existence to be the *Divine*, and this he may regard as a divine utterance. In all probability, every art, and science, and philosophy has been over and over again discovered to the farthest extent possible, and then again lost; and we may conceive these opinions to have been preserved to us as a sort of fragment of these lost philosophers. We see, then, to some extent the relation of the popular belief to these ancient opinions." [201](#) This conception of a deep Divine ground of all existence (for the immateriality and unity of which he elsewhere earnestly contends) [202](#) is thus regarded by Aristotle as underlying the popular polytheism of Greece.

Footnote 201: [\(return\)](#) "Metaph.," xi. 8.

Footnote 202: [\(return\)](#) Bk. xi. ch. ii. § 4.

The views of the educated and philosophic mind of Greece in regard to the mythological deities may, in conclusion, be thus briefly stated--

I. *They are all created beings*--"GENERATED DEITIES," *who are dependent on, and subject to, the will of one supreme God.*

II. *They are the AGENTS employed by God in the creation of, at least some parts of, the universe, and in the movement and direction of the entire cosmos; and they are also the MINISTERS and MESSENGERS of that universal providence which he exercises over the human race.*

These subordinate deities are, 1. the greater parts of the visible mundane system animated by intelligent souls, and called "*sensible gods*"--the sun, the moon, the stars, and even the earth itself, and known by the names Helios, Selena, Kronos, Hermes, etc.

2. Some are *invisible powers*, having peculiar offices and functions and presiding over special places provinces and departments of the universe;--one ruling in the heavens (Zeus), another in the air (Juno), another in the sea (Neptune), another in the subterranean regions (Pluto); one god presiding over learning and wisdom (Minerva), another over poetry, music, and religion (Apollo), another over justice and political order (Themis), another over war (Mars), another over corn (Ceres), and another the vine (Bacchus).

3. Others, again, are *ethereal* and *aërial* beings, who have the guardianship of individual persons and things, and are called *demons, genii, and lares*; superior indeed to men, but inferior to the gods above named.

"Wherefore, since there were no other gods among the Pagans besides those above enumerated, unless their images, statues, and symbols should be accounted such (because they were also sometimes abusively called 'gods'), which could not be supposed by them to have been unmade or without beginning, they being the workmanship of their own hands, we conclude, universally, that all that multiplicity of Pagan gods which make so great a show and noise was really either nothing but several names and notions of one supreme Deity, according to his different manifestations, gifts, and effects upon the world personated, or else many inferior understanding beings, generated or created by one supreme: so that one unmade, self-existent Deity, and no more, was acknowledged by the more intelligent Pagans, and, consequently, the Pagan Polytheism (or idolatry) consisted not in worshipping a multiplicity of unmade minds, deities, and creators, self-existent from eternity, and independent upon one Supreme, but in mingling and blending some way or other, unduly, creature-worship with the worship of the Creator." [203](#)

159

Footnote 203: [\(return\)](#) Cudworth, "Intellectual System," vol. i. p. 311.

That the heathen regard the one Supreme Being as the first and chief object of worship is evident from the apologies which they offered for worshipping, besides Him, many inferior divinities.

1. They claimed to worship them *only* as inferior beings, and that therefore they were not guilty of giving them that honor which belonged to the Supreme. They claimed to worship the supreme God incomparably above all. 2. That this honor which is bestowed upon the inferior divinities does ultimately redound to the supreme God, and aggrandize his state and majesty, they being all his ministers and attendants. 3. That as demons are mediators between the celestial gods and men, so those celestial gods are also mediators between men and the supreme God, and, as it were, convenient steps by which we ought with reverence to approach him. 4. That demons or angels being appointed to preside over kingdoms, cities, and persons, and being many ways benefactors to us, thanks ought to be returned to them by sacrifice. 5. Lastly, that it can not be thought that the Supreme Being will envy those inferior beings that worship or honor which is bestowed upon them; nor suspect that any of these inferior deities will factiously go about to set up themselves against the Supreme God.

The Pagans, furthermore, apologized for worshipping God in images, statues, and symbols, on the ground that these were only schetically worshipped by them, the honor passing from them to the prototype. And since we live in bodies, and can scarcely, conceive of any thing without having some image or phantasm, we may therefore be indulged in this infirmity of human nature (at least in the vulgar) to worship God under a corporeal image, as a means of preventing men from falling into Atheism.

160

To the Christian conscience the above reasons assigned furnish no real justification of Polytheism and Idolatry; but they are certainly a tacit confession of their belief in the one Supreme God, and their conviction that, notwithstanding their idolatry, He only ought to be worshipped. The heathen polytheists are therefore justly condemned in Scripture, and pronounced to be "*inexcusable*." They had the knowledge of the true God--" they *knew God*" and yet "they glorified him not as God." "They changed the glory of the incorruptible God into a likeness of corruptible man." And, finally, they ended in "worshipping and serving the creature *more* than the Creator." [204](#)

Footnote 204: [\(return\)](#) Romans i. 21, 25.

It can not, then, with justice be denied that the Athenians had some knowledge of the true God, and some just and worthy conceptions of his character. It is equally certain that a powerful and influential religious sentiment pervaded the Athenian mind. Their extreme "carefulness in religion" must be conceded by us, and, in some sense, commended by us, as it was by Paul in his address on Mars' Hill. At the same time it must also be admitted and deplored that the purer theology of primitive times was corrupted by offensive legends, and encrusted by polluting myths, though not utterly defaced. [205](#) The Homeric gods were for the most part idealized, human personalities, with all the passions and weaknesses of humanity. They had their favorites and their enemies; sometimes they fought in one camp, sometimes in another. They were susceptible of hatred, jealousy, sensual passion. It would be strange indeed if their worshippers were not like unto them. The conduct of the Homeric heroes was, however, better than their creed. And there is this strange incongruity and inconsistency in the conduct of the Homeric gods,--they punish mortals for crimes of which they themselves are guilty, and reward virtues in men which they do not themselves always practise. "They punish with especial severity social and political crimes, such as perjury (Iliad, iii. 279), oppression of the poor (Od. xvii. 475), and unjust judgment in courts of justice (Iliad, xvi. 386)." Jupiter is the god of justice, and of the domestic hearth; he is the protector of the exile, the avenger of the poor, and the vigilant guardian of hospitality. "And with all the imperfections of society, government, and religion, the poem presents a remarkable picture of primitive simplicity, chastity, justice, and practical piety, under the three-fold influence of moral feeling, mutual respect, and fear of the divine displeasure; such, at least, are the motives to which Telemachus makes his appeal when he endeavors to rouse the assembled people of Ithaca to the performance of their duty (Od. ii. 64)." [206](#)

161

Footnote 205: [\(return\)](#) "There was always a double current of religious ideas in Greece; one spiritualist, the other tainted with impure legends."--Pressensé.

Footnote 206: [\(return\)](#): Tyler, "Theology of Greek Poets," pp. 167, 168; Pressensé, "Religion before Christ," p. 77.

The influence of the religious dramas of Æschylus and Sophocles on the Athenian mind must not be overlooked. No writer of pagan antiquity made the voice of conscience speak with the same power and authority that Æschylus did. "Crime," he says, "never dies without posterity." "Blood that has been shed congeals on the ground, crying out for an avenger." The old poet made himself the echo of what he called "the lyreless hymn of the Furies," who, with him, represented severe Justice striking the guilty when his hour comes, and giving warning beforehand by the terrors which haunt him. His dramas are characterized by deep religious feeling. Reverence for the gods, the recognition of an inflexible moral order, resignation to the decisions of Heaven, an abiding presentiment of a future state of reward and punishment, are strikingly predominant.

162

Whilst Æschylus reveals to us the sombre, terror-stricken side of conscience, Sophocles shows us the divine and luminous side. No one has ever spoken with nobler eloquence than he of moral obligation--of this immortal, inflexible law, in which dwells a God that never grows old--

"Oh be the lot forever mine
Unsullied to maintain,
In act and word, with awe divine,
What potent laws ordain.

"Laws spring from purer realms above:
Their father is the Olympian Jove.
Ne'er shall oblivion veil their front sublime,
Th' indwelling god is great, nor fears the wastes of time." [207](#)

The religious inspiration that animates Sophocles breaks out with incomparable beauty in the last words of Œdipus, when the old banished king sees through the darkness of death a mysterious light dawn, which illumines his blind eyes, and which brings to him the assurance of a blessed immortality. [208](#)

Footnote 207: [\(return\)](#) "Œdipus Tyran.," pp. 863-872.

Footnote 208: [\(return\)](#) Pressensé, "Religion before Christ," pp. 85-87.

Such a theology could not have been utterly powerless. The influence of truth, in every measure and degree, must be salutary, and especially of truth in relation to God, to duty, and to immortality. The religion of the Athenians must have had some wholesome and conserving influence of the social and political life of Athens. [209](#) Those who resign the government of this lower world almost exclusively to Satan, may see, in the religion of the Greeks, a simple creation of Satanic powers. But he who believes that the entire progress of humanity has been under the control and direction of a benignant Providence, must suppose that, in the purposes of God, even Ethnicism has fulfilled some end, or it would not have been permitted to live. God has "*never left himself without a witness*" in any nation under heaven. And some preparatory office has been fulfilled by Heathenism which, at least, repealed the *want*, and prepared the mind for, the advent of Christianity.

163

Footnote 209: [\(return\)](#) The practice, so common with some theological writers, of drawing dark pictures of heathenism, in which not one luminous spot is visible, in order to exalt the revelations given to the Jews, is exceedingly unfortunate, and highly reprehensible. It is unfortunate, because the skeptical scholar knows that there were some elements of truth and excellence, and even of grandeur, in the religion and civilization of the republics of Greece and Rome; and it is reprehensible, because it is a one-sided and unjust procedure, in so far as it withholds part of the truth. This species of argument is a two-edged sword which cuts both ways. The prevalence of murder, and slavery, and treachery, and polygamy, in Greece and Rome, is no more a proof that "the religions of the pagan nations were destructive of morality" (Watson, vol. i. p. 59), than the polygamy of the Hebrews, the falsehoods and impositions of Mediaeval Christianity, the persecutions and martyrdoms of Catholic Christianity, the oppressions and wrongs of Christian England, and the slavery of Protestant America, are proofs that the Christian religion is "destructive of morality." What a fearful picture of the history of Christian nations might be drawn to-day, if all the lines of light, and goodness, and charity were left out, and the crimes, and wrongs, and cruelties of the Christian nations were alone exhibited!

How much more convincing a proof of the truth of Christianity to find in the religions of the ancient world a latent sympathy with, and an unconscious preparation for, the religion of Christ. "The history of religions of human origin is the most striking evidence of the agreement of revealed religion with the soul of man--for each of these forms of worship is the expression of the wants of conscience, its eternal thirst for pardon and restoration--rather let us say, its thirst for God."--Pressensé, p. 6.

The religion of the Athenians was unable to deliver them from the guilt of sin, redeem them from its power, and make them pure and holy. It gave the Athenian no victory over himself, and, practically, brought him no nearer to the living God. But it awakened and educated the conscience, it developed more fully the sense of sin and guilt, and it made man conscious of his

inability to save himself from sin and guilt; and "the day that humanity awakens to the want of something more than mere embellishment and culture, that day it feels the need of being saved and restored from the consequences of sin" by a higher power. Æsthetic taste had found its fullest gratification in Athens; poetry, sculpture, architecture, had been carried to the highest perfection; a noble civilization had been reached; but "the need of something deeper and truer was written on the very stones." The highest consummation of Paganism was an altar to "the unknown God," the knowledge of whom it needed, as the source of purity and peace.

164

The strength and the weakness of Grecian mythology consisted in the contradictory character of its divinities. It was a strange blending of the natural and the supernatural, the human and the divine. Zeus, the eternal Father,--the immortal King, whose will is sovereign, and whose power is invincible,--the All-seeing Jove, has some of the weaknesses and passions of humanity. God and man are thus, in some mysterious way, united. And here that deepest longing of the human heart is met--the unconquerable desire to bring God nearer to the human apprehension, and closer to the human heart. Hence the hold which Polytheism had upon the Grecian mind. But in this human aspect was also found its weakness, for when philosophic thought is brought into contact with, and permitted critically to test mythology, it dethrones the false gods. The age of spontaneous religious sentiment must necessarily be succeeded by the age of reflective thought. Popular theological faiths must be placed in the hot crucible of dialectic analysis, that the false and the frivolous may be separated from the pure and the true. The reason of man demands to be satisfied, as well as the heart. Faith in God must have a logical basis, it must be grounded on demonstration and proof. Or, at any rate, the question must be answered, *whether God is cognizable by human reason?* If this can be achieved, then a deeper foundation is laid in the mind of humanity, upon which Christianity can rear its higher and nobler truths.

165

CHAPTER V.

THE UNKNOWN GOD.

"As I passed by, and beheld your sacred objects, I found an altar with this inscription, *To the Unknown God.*"--ST. PAUL.

"That which can be *known* of God is manifested in their hearts, God himself having shown it to them" [the heathen nations].--ST. PAUL.

Having now reached our first landing-place, from whence we may survey the fields that we have traversed, it may be well to set down in definite propositions the results we have attained. We may then carry them forward, as torches, to illuminate the path of future and still profounder inquiries.

The principles we have assumed as the only adequate and legitimate interpretation of the facts of religious history, and which an extended study of the most fully-developed religious system of the ancient world confirms, may be thus announced:

I. A religious nature and destination appertain to man, so that the purposes of his existence and the perfection of his being can only be secured in and through religion.

II. The idea of God as the unconditioned Cause, the infinite Mind, the personal Lord and Lawgiver, and the consciousness of dependence upon and obligation to God, are the fundamental principles of all religion.

III. Inasmuch as man is a religious being, the instincts and emotions of his nature constraining him to worship, there must also be implanted in his rational nature some original *à priori* ideas or laws of thought which furnish the necessary cognition of the object of worship; that is, some native, spontaneous cognition of God.

166

A mere blind impulse would not be adequate to guide man to the true end and perfection of his being without rational ideas; a tendency or appetency, without a revealed object, would be the mockery and misery of his nature--an "ignis fatuus" perpetually alluring and forever deceiving man.

That man has a native, spontaneous apperception of a God, in the true import of that sacred name, has been denied by men of totally opposite schools and tendencies of thought--by the Idealist and the Materialist; by the Theologian and the Atheist. Though differing essentially in their general principles and method, they are agreed in asserting that God is absolutely "*the unknown*;" and that, so far as reason and logic are concerned, man can not attain to any knowledge of the first principles and causes of the universe, and, consequently, can not determine whether the first principle or principles be intelligent or unintelligent, personal or impersonal, finite or infinite, one or many righteous or non-righteous, evil or good.

The various opponents of the doctrine that God can be cognized by human reason may be classified as follows: I. *Those who assert that all human knowledge is necessarily confined to the observation and classification of phenomena in their orders of co-existence, succession, and resemblance.* Man has no faculty for cognizing substances, causes, forces, reasons, first

principles--no power by which he can *know* God. This class may be again subdivided into--

1. Those who limit all knowledge to the observation and classification of *mental* phenomena (*e. g.*, Idealists like J. S. Mill).

2. Those who limit all knowledge to the observation and classification of *material* phenomena (*e. g.*, Materialists like Comte).

167 II. *The second class comprises all who admit that philosophic knowledge is the knowledge of effects as dependent on causes, and of qualities as inherent in substances; but at the same time assert that "all knowledge is of the phenomenal."* Philosophy can never attain to a positive knowledge of the First Cause. Of existence, absolutely and in itself, we know nothing. The infinite can not by us be comprehended, conceived, or thought. *Faith* is the organ by which we apprehend what is beyond knowledge. We believe in the existence of God, but we can not *know* God. This class, also, may be again subdivided into--

1. Those who affirm that our idea of the Infinite First Cause is grounded on an *intuitional* or subjective faith, necessitated by an "impotence of thought"--that is, by a mental inability to conceive an absolute limitation or an infinite illimitation, an absolute commencement or an infinite non-commencement. Both contradictory opposites are equally incomprehensible and inconceivable to us; and yet, though unable to view either as possible, we are forced by a higher law--the "Law of Excluded Middle"--to admit that one, and only one, is necessary (*e. g.*, Hamilton and Mansel).

2. Those who assert that our idea of God rests solely on an *historical* or objective faith in testimony--the testimony of Scripture, which assures us that, in the course of history, God has manifested his existence in an objective manner to the senses, and given verbal communications of his character and will to men; human reason being utterly incapacitated by the fall, and the consequent depravity of man, to attain any knowledge of the unity, spirituality, and righteousness of God (*e. g.*, Watson, and Dogmatic Theologians generally).

168 It will thus be manifest that the great question, the central and vital question which demands a thorough and searching consideration, is the following, to wit: *Is God cognizable by human reason?* Can man attain to a positive cognition of God--can he *know* God; or is all our supposed knowledge "a learned ignorance," [210](#) an unreasoning faith? We venture to answer this question in the affirmative. Human reason is now adequate to the cognition of God; it is able, with the fullest confidence, to affirm the being of a God, and, in some degree, to determine his character. The parties and schools above referred to answer this question in the negative form. Whether Theologians or Atheists, they are singularly agreed in denying to human reason all possibility of *knowing* God.

Footnote 210: [\(return\)](#) Hamilton's "Philosophy," p. 512.

Before entering upon the discussion of the negative positions enumerated in the above classification, it may be important we should state our own position explicitly, and exhibit what we regard as the true doctrine of the genesis of the idea of God in the human intelligence. The real question at issue will then stand out in clear relief, and precision will be given to the entire discussion.

169 (i.) *We hold that the idea of God is a common phenomenon of the universal human intelligence.* It is found in all minds where reason has had its normal and healthy development; and no race of men has ever been found utterly destitute of the idea of God. The proof of this position has already been furnished in chap, ii., [211](#) and needs not be re-stated here. We have simply to remark that the appeal which is made by Locke and others of the sensational school to the experiences of infants, idiots, the deaf and dumb, or, indeed, any cases wherein the proper conditions for the normal development of reason are wanting, are utterly irrelevant to the question. The acorn contains within itself the rudimental germ of the future oak, but its mature and perfect development depends on the exterior conditions of moisture, light, and heat. By these exterior conditions it may be rendered luxuriant in its growth, or it may be stunted in its growth. It may barely exist under one class of conditions; it may be distorted and perverted, or it may perish utterly under another. And so in the idiotic mind the ideas of reason may be wanting, or they may be imprisoned by impervious walls of cerebral malformation. In the infant mind the development of reason is yet in an incipient stage. The idea of God is immanent to the infant thought, but the infant thought is not yet matured. The deaf and dumb are certainly not in that full and normal correlation to the world of sense which is a necessary condition of the development of reason. Language, the great vehiculum and instrument of thought, is wanting, and reason can not develop itself without words. "Words without thought are dead sounds, *thoughts without words are nothing.* The word is the thought incarnate." [212](#) Under proper and normal conditions, the idea of God is the natural and necessary form in which human thought must be developed. And, with these explanations, we repeat our affirmation that the idea of God is a common phenomenon of the universal human intelligence.

Footnote 211: [\(return\)](#) Pp. 89,90.

Footnote 212: [\(return\)](#) Müller, " Science of Language," p. 384.

(ii.) *We do not hold that the idea of God, in its completeness, is a simple, direct, and immediate intuition of the reason alone, independent of all experience, and all knowledge of the external world.* The idea of God is a complex idea, and not a simple idea. The affirmation, "God exists," is a *synthetic* and *primitive* judgment spontaneously developed in the mind, and developed, too, independent of all reflective reasoning. It is a necessary deduction from the facts of the outer world of nature and the primary intuitions of the inner world of reason--a logical deduction from the self-evident truths given in sense, consciousness, and reason. "We do not *perceive* God, but we *conceive* Him upon the faith of this admirable world exposed to view, and upon the other world, more admirable still, which we bear in ourselves." ²¹³ Therefore we do not say that man is born with an "innate idea" of God, nor with the definite proposition, "there is a God," written upon his soul; but we do say that the mind is pregnant with certain natural principles, and governed, in its development, by certain necessary laws of thought, which determine it, by a *spontaneous logic*, to affirm the being of a God; and, furthermore, that this judgment may be called *innate* in the sense, that it is the primitive, universal, and necessary development of the human understanding which "is innate to itself and equal to itself in all men." ²¹⁴

Footnote 213: [\(return\)](#) Cousin, "True, Beautiful and Good," p.102.

Footnote 214: [\(return\)](#) Leibnitz.

170

As the vital and rudimentary germ of the oak is contained in the acorn; as it is quickened and excited to activity by the external conditions of moisture, light, and heat, and is fully developed under the fixed and determinative laws of vegetable life--so the germs of the idea of God are present in the human mind as the intuitions of pure reason (*Rational Psychology*); these intuitions are excited to energy by our experiential and historical knowledge of the facts and laws of the universe (*Phenomenology*); and these facts and intuitions are developed into form by the necessary laws of the intellect (*Nomology*, or *Primordial Logic*).

The *logical demonstration* of the being of God commences with the analysis of thought. It asks, What are the ideas which exist in the human intelligence? What are their actual characteristics, and what their primitive characteristics? What is their origin, and what their validity? Having, by this process, found that some of our ideas are subjective, and some objective that some are derived from experience, and that some can not be derived from experience, but are inherent in the very constitution of the mind itself, as *à priori* ideas of reason; that these are characterized as self-evident, universal, and necessary and that, as laws of thought, they govern the mind in all its conceptions of the universe; it has formulated these necessary judgments, and presented them as distinct and articulate propositions. These *à priori*, necessary judgments constitute the major premise of the Theistic syllogism, and, in view of the facts of the universe, necessitate the affirmation of the existence of a God as the only valid explanation of the facts.

171

The *natural* or *chronological order* in which the idea of God is developed in the human intelligence, is the reverse process of the scientific or logical order, in which the demonstration of the being of God is presented by philosophy; the latter is *reflective* and *analytic*, the former is *spontaneous* and *synthetic*. The natural order commences with the knowledge of the facts of the universe, material and mental, as revealed by sensation and experience. In presence of these facts of the universe, the *à priori* ideas of power, cause, reason, and end are evoked into consciousness with greater or less distinctness; and the judgment, by a natural and spontaneous logic, free from all reflection, and consequently from all possibility of error, affirms a necessary relation between the facts of experience and the *à priori* ideas of the reason. The result of this involuntary and almost unconscious process of thought is that natural cognition of a God found, with greater or less clearness and definiteness, in all rational minds. The *à posteriori*, or empirical knowledge of the phenomena of the universe, in their relations to time and space, constitute the minor premise of the Theistic syllogism.

172

The Theistic argument is, therefore, necessarily composed of both experiential and *à priori* elements. An *à posteriori* element exists as a condition of the logical demonstration. The rational *à priori* element is, however, the logical basis, the only valid foundation of the Theistic demonstration. The facts of the universe alone would never lead man to the recognition of a God, if the reason, in presence of these facts, did not enounce certain necessary and universal principles which are the logical antecedents, and adequate explanation of the facts. Of what use would it be to point to the events and changes of the material universe as proofs of the existence of a *First Cause*, unless we take account of the universal and necessary truth that "every change must have an efficient cause;" that all phenomena are an indication of *power*; and that "there is an ultimate and sufficient reason why all things exist, and are as they are, and not otherwise." There would be no logical force in enumerating the facts of order and special adaptation which literally crowd the universe, as proofs of the existence of an *Intelligent Creator*, if the mind did not affirm the necessary principle that "facts of order, having a commencement in time, suppose mind as their source and exponent." There is no logical conclusiveness in the assertion of Paley, "that *experience* teaches us that a designer must be a person," because, as Hume justly remarks, our "experience" is narrowed down to a mere point, "and can not be a rule for a universe;" but there is an infinitude of force in that dictum of reason, that "intelligence, self-consciousness, and self-determination necessarily constitute personality." A multiplicity of different effects, of which experience does not always reveal the connection, would not conduct to a single cause and to *one* God, but rather to a plurality of causes and a plurality of gods, did not reason teach us that "all plurality implies an ultimate indivisible unity," and therefore there must be a *First Cause* of all

causes, a *First Principle* of all principles, *the Substance* of all substances, *the Being* of all beings--*a God* "of whom, in whom, and to whom are all things" (πάντα ἐκ τοῦ θεοῦ, ἐν τῷ θεῷ, εἰς τὸν θεόν).

The conclusion, therefore, is, that, as the idea of God is a complex idea, so there are necessarily a number of simple *à priori* principles, and a variety of experiential facts conspiring to its development in the human intelligence.

(iii.) *The universe presents to the human mind an aggregation and history of phenomena which demands the idea of a God--a self-existent, intelligent, personal, righteous First Cause--as its adequate explanation.*

173 The attempt of Positivism to confine all human knowledge to the observation and classification of phenomena, and arrest and foreclose all inquiry as to causes, efficient, final, and ultimate, is simply futile and absurd. It were just as easy to arrest the course of the sun in mid-heaven as to prevent the human mind from seeking to pass beyond phenomena, and ascertain the ground, and reason, and cause of all phenomena. The history of speculative thought clearly attests that, in all ages, the inquiry after the Ultimate Cause and Reason of all existence--the ἀρχή, or First Principle of all things--has been the inevitable and necessary tendency of the human mind; to resist which, skepticism and positivism have been utterly impotent. The first philosophers, of the Ionian school, had just as strong a faith in the existence of a Supreme Reality--an Ultimate Cause--as Leibnitz and Cousin. But when, by reflective thought, they attempted to render an account to themselves of this instinctive faith, they imagined that its object must be in some way appreciable to sense, and they sought it in some physical element, or under some visible and tangible shrine. Still, however imperfect and inadequate the method, and however unsatisfactory the results, humanity has never lost its positive and ineradicable confidence that the problem of existence could be solved. The resistless tide of spontaneous and necessary thought has always borne the race onward towards the recognition of a great First Cause; and though philosophy may have erred, again and again, in tracing the logical order of this inevitable thought, and exhibiting the necessary nexus between the premises and conclusion, yet the human mind has never wavered in the confidence which it has reposed in the natural logic of thought, and man has never ceased to believe in a God.

We readily grant that all our empirical knowledge is confined to phenomena in their orders of co-existence, succession, and resemblance. "To our objective perception and comparison nothing is given but qualities and changes; to our inductive generalization nothing but the shifting and grouping of these in time and space." Were it, however, our immediate concern to discuss the question, we could easily show that sensationalism has never succeeded in tracing the genetic origin of our ideas of space and time to observation and experience; and, without the *à priori* idea of *space*, as the place of bodies, and of *time*, as the condition of succession, we can not conceive of phenomena at all. If, therefore, we know any thing beyond phenomena and their mutual relations; if we have any cognition of realities underlying phenomena, and of the relations of phenomena to their objective ground, it must be given by some faculty distinct from sense-perception, and in some process distinct from inductive generalization. The knowledge of real Being and real Power, of an ultimate Reason and a personal Will, is derived from the apperception of pure reason, which affirms the necessary existence of a Supreme Reality--an Uncreated Being beyond all phenomena, which is the ground and reason of the existence--the contemporaneousness and succession--the likeness and unlikeness, of all phenomena.

174 The immediate presentation of phenomena to sensation is the *occasion* of the development in consciousness of these *à priori* ideas of reason: the possession of these ideas or the immanence of these ideas, in the human intellect, constitutes the original *power* to know external phenomena. The ideas of space, time, power, law, reason, and end, are the logical antecedents of the ideas of body, succession, event, consecution, order, and adaptation. The latter can not be conceived as distinct notions without the former. The former will not be revealed in thought without the presentation to sense, of resistance, movement, change, uniformity, etc. All actual knowledge must, therefore, be impure; that is, it must involve both *à priori* and *à posteriori* elements; and between these elements there must be a necessary relation.

This necessary relation between the *à priori* and *à posteriori* elements of knowledge is not a mere subjective law of thought. It is both a law of thought and a law of things. Between the *à posteriori* facts of the universe and the *à priori* ideas of the reason there is an absolute nexus, a universal and necessary correlation; so that the cognition of the latter is possible only on the cognition of the former; and the objective existence of the realities, represented by the ideas of reason, is the condition, *sine qua non*, of the existence of the phenomena presented to sense. If, in one indivisible act of consciousness, we immediately perceive extended matter exterior to our percipient mind, then Extension exists objectively; and if Extension exists objectively, then Space, its *conditio sine qua non*, also exists objectively. And if a definite body reveals to us the *Space* in which it is contained, if a succession of pulsations or movements exhibit the uniform *Time* beneath, so do the changeful phenomena of the universe demand a living *Power* behind, and the existing order and regular evolution of the universe presuppose *Thought*--revision, and predetermination, by an intelligent mind.

175 If, then, the universe is a created effect, it must furnish some indications of the character of its cause. If, as Plato taught, the world is a "created image" of the eternal archetypes which dwell in the uncreated Mind, and if the subjective ideas which dwell in the human reason, as the offspring

of God, are "copies" of the ideas of the Infinite Reason--if the universe be "the autobiography of the Infinite Spirit which has also repeated itself in miniature within our finite spirit," then may we decipher its symbols, and read its lessons straight off. Then every approach towards a scientific comprehension and generalization of the facts of the universe must carry us upward towards the higher realities of reason. The more we can understand of Nature--of her comprehensive laws, of her archetypal forms, of her far-reaching plan spread through the almost infinite ages, and stretching through illimitable space--the more do we comprehend the divine Thought. The inductive generalization of science gradually *ascends* towards the universal; the pure, essential, *à priori* reason, with its universal and necessary ideas, *descends* from above to meet it. The general conceptions of science are thus a kind of *ideæ umbratiles*--shadowy assimilations to those immutable ideas which dwell in essential reason, as possessed by the Supreme Intelligence, and which are participated in by rational man as the offspring and image of God.

Without making any pretension to profound scientific accuracy, we offer the following tentative classification of the facts of the universe, material and mental, which may be regarded as hints and adumbrations of the ultimate ground, and reason, and cause, of the universe. We shall venture to classify these facts as indicative of some fundamental relation; (i.) to Permanent Being or Reality; (ii.) to Reason and Thought; (iii.) to Moral Ideas and Ends.

(i.) *Facts of the universe which indicate some fundamental relation to Permanent Being or Reality.*

1. *Qualitative* Phenomena (properties, attributes, qualities)--the predicates of a *subject*; which phenomena, being characterized by likeness and unlikeness, are capable of comparison and classification, and thus of revealing something as to the nature of the *subject*.

176

2. *Dynamical* Phenomena (protension, movement, succession)--events transpiring in *time*, having beginning, succession, and end, which present themselves to us as the expression of *power*, and throw back their distinctive characteristics on their *dynamic* source.

3. *Quantitative* Phenomena (totality, multiplicity, relative unity)--a multiplicity of objects having relative and composite unity, which suggests some relation to an absolute and indivisible *unity*.

4. *Statical* Phenomena (extension, magnitude, divisibility)--bodies co-existing in *space* which are limited, conditioned, relative, dependent, and indicate some relation to that which is self-existent, unconditioned, and absolute.

(ii.) *Facts of the universe which indicate some fundamental relation to Reason or Thought.*

1. *Numerical and Geometrical Proportion*--Definite proportion of elements (Chemistry), symmetrical arrangement of parts (Crystallography), numerical and geometrical relation of the forms and movements of the heavenly bodies (Spherical Astronomy), all of which are capable of exact mathematical expression.

2. *Archetypal Forms*--The uniform succession of new existences, and the progressive evolution of new orders and species, conformable to fixed and definite ideal archetypes, the indication of a comprehensive *plan*(Morphological Botany, Comparative Anatomy).

3. *Teleology of Organs*--The adaptation of organs to the fulfillment of special functions, indicating *design*(Comparative Physiology).

4. *Combination of Homotypes and Analogues*--Diversified homologous forms made to fulfill analogous functions, or special purposes fulfilled whilst maintaining a general plan, indicating *choice* and *alternativity*.

(iii.) *Facts of the universe which indicate some fundamental relation to Moral Ideas and Ends.*

177

1. *Ethical Distinctions*--The universal tendency to discriminate between voluntary acts as right or wrong, indicating some relation to an *immutable moral standard of right*.

2. *Sense of Obligation*--The universal consciousness of dependence and obligation, indicating some relation to Supreme *Power*, an Absolute *Authority*.

3. *Feeling of Responsibility*--The universal consciousness of liability to be required to give account for, and endure the consequences of our action, indicating some relation to a Supreme *Judge*.

4. *Retributive Issues*--The pleasure and pain resulting from moral action in this life, and the universal anticipation of pleasure or pain in the future, as the consequence of present conduct, indicate an *absolute Justice* ruling the world and man.

Now, if the universe be a *created effect*, it must, in some degree at least, reveal the character of its Author and cause. We are entitled to regard it as a created symbol and image of the Deity; it must bear the impress of his *power*; it must reveal his infinite *presence*; it must express his *thoughts*; it must embody and realize his *ideals*, so far, at least, as material symbols will permit. Just as we see the power and thought of man revealed in his works, his energy and skill, his ideal and his taste expressed in his mechanical, artistic, and literary creations, so we may see the mind

and character of God displayed in his works. The skill and contrivance of Watts, and Fulton, and Stephenson were exhibited in their mechanical productions. The pure, the intense, the visionary impersonation of the soul which the artist had conjured in his own imagination was wrought out in Psyché. The colossal grandeur of Michael Angelo's ideals, the ethereal and saintly elegance of Raphael's were realized upon the canvas. So he who is familiar with the ideal of the sculptor or the painter can identify his creations even when the author's name is not affixed. And so the "eternal Power" of God is "clearly seen" in the mighty orbs which float in the illimitable space. The vastness of the universe shadows forth the infinity of God. The indivisible unity of space and the ideal unity of the universe reflect the unity of God. The material forms around us are symbols of divine ideas, and the successive history of the universe is an expression of the divine thought; whilst the ethical ideas and sentiments inherent in the human mind are a reflection of the moral character of God.

178

The reader can not have failed to observe the form in which the Theistic argument is stated; "if the finite universe is a created effect, it must reveal something as to the nature of its cause: *if* the existing order and arrangement of the universe had a commencement in time, it must have an ultimate and adequate cause." The question, therefore, presents itself in a definite form: "*Is the universe finite or infinite; had the order of the universe a beginning, or is it eternal?*"

It will be seen at a glance that this is the central and vital question in the Theistic argument. If the order and arrangement of the universe is *eternal*, then that order is an inherent law of nature, and, as eternal, does not imply a cause *ab extra*: if it is not eternal, then the ultimate cause of that order must be a power above and beyond nature. In the former case the minor premise of the Theistic syllogism is utterly invalidated; in the latter case it is abundantly sustained.

Some Theistic writers--as Descartes, Pascal, Leibnitz, and Saisset--have made the fatal admission that the universe is, in some sense, *infinite* and *eternal*. In making this admission they have unwittingly surrendered the citadel of strength, and deprived the argument by which they would prove the being of a God of all its logical force. That argument is thus presented by Saisset: "The finite supposes the infinite. Extension supposes first space, then immensity: duration supposes first time, then eternity. A sudden and irresistible judgment refers this to the necessary, infinite, perfect being." ²¹⁵ But if "the world is infinite and eternal," ²¹⁶ may not nature, or the totality of all existence (τὸ πᾶν), be the necessary, infinite, and perfect Being? An infinite and eternal universe has the reason of its existence in itself, and the existence of such a universe can never prove to us the existence of an infinite and eternal God.

179

Footnote 215: [\(return\)](#) "Modern Pantheism," vol. ii. p. 205.

Footnote 216: [\(return\)](#) *Ibid*, p. 123.

A closer examination of the statements and reasonings of Descartes, Pascal, and Leibnitz, as furnished by Saisset, will show that these distinguished mathematicians were misled by the false notion of "*mathematical* infinitude." Their infinite universe, after all, is not an "absolute," but a "relative" infinite; that is, the indefinite. "The universe must extend *indefinitely* in time and space, in the infinite greatness, and in the infinite littleness of its parts--in the infinite variety of its species, of its forms, and of its degrees of existence. The finite can not express the infinite but by being *multiplied* infinitely. The finite, so far as it is finite, is not in any reasonable relation, or in any intelligible proportion to the infinite. But the finite, as *multiplied* infinitely, ²¹⁷ ages upon ages, spaces upon spaces, stars beyond stars, worlds beyond worlds, is a true expression of the Infinite Being. Does it follow, because the universe has no limits--that it must therefore be eternal, immense, infinite as God himself? No; that is but a vain scruple, which springs from the imagination, and not from the reason. The imagination is always confounding what reason should ever distinguish, eternity and time, immensity and space, *relative* infinity and *absolute* infinity. The Creator alone is eternal, immense, absolutely infinite." ²¹⁸

Footnote 217: [\(return\)](#) "The infinite is distinct from the finite, and consequently from the multiplication of the finite by itself; that is, from the *indefinite*. That which is not infinite, added as many times as you please to itself, will not become infinite."--Cousin, "Hist. of Philos.," vol. ii. p. 231.

Footnote 218: [\(return\)](#) Saisset, "Modern Pantheism," vol. ii. pp. 127, 128.

The introduction of the idea of "the mathematical infinite" into metaphysical speculation, especially by Kant and Hamilton, with the design, it would seem, of transforming the idea of infinity into a sensuous conception, has generated innumerable paralogisms which disfigure the pages of their philosophical writings. This procedure is grounded in the common fallacy of supposing that *infinity* and *quantity* are compatible attributes, and susceptible of mathematical synthesis. This insidious and plausible error is ably refuted by a writer in the "North American Review." ²¹⁹ We can not do better than transfer his argument to our pages in an abridged form.

180

Footnote 219: [\(return\)](#) "The Conditioned and the Unconditioned," No. CCV. art. iii. (1864).

Mathematics is conversant with quantities and quantitative relations. The conception of quantity, therefore, if rigorously analyzed, will indicate *à priori* the natural and impassable boundaries of the science; while a subsequent examination of the quantities called infinite in the mathematical sense, and of the algebraic symbol of infinity, will be seen to verify the results of this *à priori*

Quantity is that attribute of things in virtue of which they are susceptible of exact mensuration. The question *how much*, or *how many* (*quantus*), implies the answer, *so much*, or *so many* (*tantus*); but the answer is possible only through reference to some standard of magnitude or multitude arbitrarily assumed. Every object, therefore, of which quantity, in the mathematical sense, is predicable, must be by its essential nature *mensurable*. Now mensurability implies the existence of actual, definite limits, since without them there could be no fixed relation between the given object and the standard of measurement, and, consequently, no possibility of exact mensuration. In fact, since quantification is the object of all mathematical operations, mathematics may be not inaptly defined as *the science of the determinations of limits*. It is evident, therefore, that the terms *quantity* and *finitude* express the same attribute, namely, *limitation*—the former relatively, the latter absolutely; for quantity is limitation considered with relation to some standard of measurement, and finitude is limitation considered simply in itself. The sphere of quantity, therefore, is absolutely identical with the sphere of the finite; and the phrase *infinite quantity*, if strictly construed, is a contradiction in terms.

181

The result thus attained by considering abstract quantity is corroborated by considering concrete and discrete quantities. Such expressions as *infinite sphere*, *radius*, *parallelogram*, *line*, and so forth, are self-contradictory. A sphere is limited by its own periphery, and a radius by the centre and circumference of its circle. A parallelogram of infinite altitude is impossible, because the limit of its altitude is assigned in the side which must be parallel to its base in order to constitute it a parallelogram. In brief, all figuration is limitation. The contradiction in the term *infinite line* is not quite so obvious, but can readily be made apparent. Objectively, a line is only the termination of a surface, and a surface the termination of a solid; hence a line can not exist apart from an extended quantity, nor an infinite line apart from an infinite quantity. But as this term has just been shown to be self-contradictory, an infinite line can not exist objectively at all. Again, every line is extension in one dimension; hence a mathematical quantity, hence mensurable, hence finite; you must therefore, deny that a line is a quantity, or else affirm that it is finite.

The same conclusion is forced upon us, if from geometry we turn to arithmetic. The phrases *infinite number*, *infinite series*, *infinite process*, and so forth, are all contradictory when literally construed. Number is a relation among separate unities or integers, which, considered objectively as independent of our cognitive powers, must constitute an exact sum; and this exactitude, or synthetic totality, is limitation. If considered subjectively in the mode of its cognition, a number is infinite only in the sense that it is beyond the power of our imagination or conception, which is an abuse of the term. In either case the totality is fixed; that is, finite. So, too, of *series* and *process*. Since every series involves a succession of terms or numbers, and every process a succession of steps or stages, the notion of series and process plainly involves that of *number*, and must be rigorously dissociated from the idea of infinity. At any one step, at any one term, the number attained is determinate, hence finite. The fact that, by the law of the series or of the process, *we may continue the operation as long as we please*, does not justify the application of the term infinite to the operation itself; if any thing is infinite, it is the will which continues the operation, which is absurd if said of human wills.

182

Consequently, the attribute of infinity is not predicable either of 'diminution without limit,' 'augmentation without limit,' or 'endless approximation to a fixed limit,' for these mathematical processes continue only as we continue them, consist of steps successively accomplished, and are limited by the very fact of this serial incompleteness.

183

"We can not forbear pointing out an important application of these results to the Critical Philosophy. Kant bases each of his famous four antinomies on the demand of pure reason for unconditioned totality in a regressive series of conditions. This, he says, must be realized either in an absolute first of the series, conditioning all the other members, but itself unconditioned, or else in the absolute infinity of the series without a first; but reason is utterly unable, on account of mutual contradiction, to decide in which of the two alternatives the unconditioned is found. By the principles we have laid down, however, the problem is solved. The absolute infinity of a series is a contradiction *in adjecto*. As every number, although immeasurably and inconceivably great, is impossible unless *unity* is given as its basis, so every series, being itself a number, is impossible unless a *first term* is given as a commencement. Through a first term alone is the unconditioned possible; that is, if it does not exist in a first term, it can not exist at all; of the two alternatives, therefore, one altogether disappears, and reason is freed from the dilemma of a compulsory yet impossible decision. Even if it should be allowed that the series has no first term, but has originated *ab æterno*, it must always at each instant have a *last term*; the series, as a whole, can not be infinite, and hence can not, as Kant claims it can, realize in its wholeness unconditioned totality. Since countless terms forever remain unreached, the series is forever limited by them. Kant himself admits that it *can never be completed*, and is only potentially infinite; actually, therefore, by his own admission, it is finite. But a last term implies a first, as absolutely as one end of a string implies the other; the only possibility of an unconditioned lies in Kant's first alternative, and if, as he maintains Reason must demand it, she can not hesitate in her decisions. That *number is a limitation* is no new truth, and that every series involves number is self-evident; and it is surprising that so radical a criticism on Kant's system should never have suggested itself to his opponents. Even the so-called *moments* of time can not be regarded as constituting a real series, for a series can not be real except through its divisibility into members whereas time is indivisible, and its partition into moments is a conventional fiction. Exterior

limitability and interior divisibility result equally from the possibility of discontinuity. Exterior illimitability and interior indivisibility are simple phases of the same attribute of *necessary continuity* contemplated under different aspects. From this principle flows another upon which it is impossible to lay too much stress, namely; *illimitability and indivisibility, infinity and unity, reciprocally necessitate each other*. Hence the Quantitative Infinites must be also Units, and the division of space and time, implying absolute contradiction, is not even cogitable as an hypothesis. [220](#)

"The word *infinite*, therefore, in mathematical usage, as applied to *process* and to *quantity*, has a two-fold signification. An infinite process is one which we can continue *as long as we please*, but which exists solely in our continuance of it. [221](#) An infinite quantity is one which exceeds our powers of mensuration or of conception, but which, nevertheless, has bounds and limits in itself. [222](#) Hence the possibility of relation among infinite quantities, and of different orders of infinities. If the words *infinite, infinity, infinitesimal*, should be banished from mathematical treatises and replaced by the words *indefinite, indefinity, and indefinitesimal*, mathematics would suffer no loss, while, by removing a perpetual source of confusion, metaphysics would get great gain."

Footnote 220: [\(return\)](#) By the application of these principles the writer in the "North American Review" completely dissolves the antinomies by which Hamilton seeks to sustain his "Philosophy of the Conditioned." See "North American Review," 1864, pp. 432-437.

Footnote 222: [\(return\)](#) Id., ib., p. 25.

184

The above must be regarded as a complete refutation of the position taken by *Hume*, to wit, that the idea of nature eternally existing in a state of order, without a cause other than the eternally inherent laws of nature, is no more self-contradictory than the idea of an eternally-existing and infinite mind, who originated this order--a God existing without a cause. The eternal and infinite Mind is indivisible and illimitable; nature, in its totality, as well as in its individual parts, has interior divisibility, and exterior limitability. The infinity of God is not a *quantitative*, but a *qualitative* infinity. The miscalled eternity and infinity of nature is an *indefinite* extension and protension in time and space, and, as *quantitative*, must necessarily be limited and measurable, therefore *finite*.

The universe of sense-perception and sensuous imagination is a phenomenal universe, a genesis, a perpetual becoming, an entrance into existence, and an exit thence; the Theist is, therefore, perfectly justified in regarding it as disqualified for *self-existence*, and in passing behind it for the Supreme Entity that needs no cause. Phenomena demand causation, entities dispense with it. No one asks for a cause of the *space* which contains the universe, or of the Eternity on the bosom of which it floats. Everywhere the line is necessarily drawn upon the same principle; that entities *may* have self-existence, phenomena *must* have a cause. [223](#)

Footnote 223: [\(return\)](#) "Science, Nescience, and Faith," in Martineau's "Essays," p. 206.

IV. *Psychological analysis clearly attests that in the phenomena of consciousness there are found elements or principles which, in their regular and normal development, transcend the limits of consciousness, and attain to the knowledge of Absolute Being, Absolute Reason, Absolute Good, i.e., GOD.*

The analysis of thought clearly reveals that the mind of man is in possession of ideas, notions, beliefs, principles (as *e.g.*, the idea of space, duration, cause, substance, unity, infinity), which are not derived from sensation and experience, and which can not be drawn out of sensation and experience by any process of generalization. These ideas have this incontestable peculiarity, as distinguished from all the phenomena of sensation, that, whilst the latter are particular, contingent, and relative, the former are *universal, necessary, and absolute*. As an example, and a proof of the reality and validity of this distinction, take the ideas of *body* and of *space*, the former unquestionably derived from experience, the latter supplied by reason alone. "I ask you, can not you conceive this book to be destroyed? Without doubt you can. And can not you conceive the whole world to be destroyed, and no matter whatever in existence? You can. For you, constituted as you are, the supposition of the non-existence of bodies implies no contradiction. And what do we call the idea of a thing which we can conceive of as non-existing? We call it a *contingent* and *relative* idea. But if you can conceive this book to be destroyed, all bodies destroyed, can you suppose space to be destroyed? You can not. It is in the power of man's thought to conceive the non-existence of bodies; it is not in the power of man's thought to conceive the non-existence of space. The idea of space is thus a *necessary* and *absolute* idea." [224](#)

185

Footnote 224: [\(return\)](#) Cousin's "Hist. of Philos.," vol. ii. p. 214.

Take, again, the ideas of *event* and *cause*. The idea of an event is a *contingent* idea; it is the idea of something which might or might not have happened. There is no impossibility or contradiction in either supposition. The idea of cause is a *necessary* idea. An event being given, the idea of cause is necessarily implied. An uncaused event is an impossible conception. The idea of cause is also a *universal* idea extending to all events, actual or conceivable, and affirmed by all minds. It is a rational fact, attested by universal consciousness, that we can not think of an event transpiring without a cause; of a thing being the author of its own existence; of something

generated by and out of nothing. *Ex nihilo nihil* is a universal law of thought and of things. This universal "law of causality" is clearly distinguishable from a *general* truth reached by induction. For example, it is a very general truth that, during twenty-four hours, day is succeeded by night. But this is not a necessary truth, neither is it a universal truth. It does not extend to all known lands, as, for example, to Nova Zembla. It does not hold true of the other planets. Nor does it extend to all possible lands. We can easily conceive of lands plunged in eternal night, or rolling in eternal day. With another system of worlds, one can conceive other physics, but one can not conceive other metaphysics. It is impossible to imagine a world in which the law of causality does not reign. Here, then, we have one absolute principle (among others which may be enumerated), the existence and reality of which is revealed, not by sensation, but by reason--a principle which transcends the limits of experience, and which, in its regular and logical development, attains the knowledge of the Absolute Cause--the First Cause of all causes--God.

Thus it is evident that the human mind is in possession of two distinct orders of primitive cognitions,--one, contingent, relative, and phenomenal; the other universal, necessary, and absolute. These two distinct orders of cognition presuppose the existence in man of two distinct faculties or organs of knowledge--*sensation*, external and internal, which perceives the contingent, relative, and phenomenal, and *reason*, which apprehends the universal, necessary, and absolute. The knowledge which is derived from sensation and experience is called *empirical* knowledge, or knowledge *à posteriori*, because subsequent to, and consequent upon, the exercise of the faculties of observation. The knowledge derived from reason is called *transcendental* knowledge, or knowledge *à priori*, because it furnishes laws to, and governs the exercise of the faculties of observation and thought, and is not the result of their exercise. The sensibility brings the mind into relation with the *physical* world, the reason puts mind in communication with the *intelligible* world--the sphere of *à priori* principles, of necessary and absolute truths, which depend upon neither the world nor the conscious self, and which reveal to man the existence of the soul, nature, and God. Every distinct fact of consciousness is thus at once *psychological* and *ontological*, and contains these three fundamental ideas, which we can not go beyond, or cancel by any possible analysis--the *soul*, with its faculties; *matter*, with its qualities; *God*, with his perfections.

We do not profess to be able to give a clear explication and complete enumeration of all the ideas of reason, and of the necessary and universal principles or axioms which are grounded on these ideas. This is still the grand desideratum of metaphysical science. Its achievement will give us a primordial logic, which shall be as exact in its procedure and as certain in its conclusions as the mathematical sciences. Meantime, it may be affirmed that philosophic analysis, in the person of Plato, Aristotle, Kant, and Cousin, has succeeded in disengaging such *à priori* ideas, and formulating such principles and laws of thought, as lead infallibly to the cognition of the *Absolute Being*, the *Absolute Reason*, the *Absolute Good*, that is, GOD.

It would carry us too far beyond our present design were we to exhibit, in each instance, the process of *immediate abstraction* by which the contingent and relative element of knowledge is eliminated, and the necessary and absolute principle is disengaged. We shall simply state the method, and show its application by a single illustration.

There are unquestionably *two* sorts of abstraction: 1. "*Comparative* abstraction, operating upon several real objects, and seizing their resemblances in order to form an abstract idea, which is collective and mediate; collective, because different individuals concur in its formation; mediate, because it requires several intermediate operations." This is the method of the physical sciences, which comprises comparison, abstraction, and generalization. The result in this process is the attainment of a *general* truth. 2. "*Immediate* abstraction, not comparative; operating not upon several concretes, but upon a single one, eliminating and neglecting its individual and variable part, and disengaging the absolute part, which it raises at once to its pure form." The parts to be eliminated in a concrete cognition are, first, the quality of the object, and the circumstances under which the absolute unfolds itself; and secondly, the quality of the subject, which perceives but does not constitute it. The phenomena of the me and the not-me being eliminated, the absolute remains. This is the process of rational psychology, and the result obtained is a *universal* and *necessary* truth.

"Let us take, as an example, the principle of cause. To be able to say that the event I see must have a cause, it is not indispensable to have seen several events succeed each other. The principle which compels me to pronounce this judgment is already complete in the first as in the last event; it can not change in respect to its object, it can not change in itself; it neither increases nor decreases with the greater or less number of applications. The only difference that it is subject to in regard to us is that we apply it, whether we remark it or not, whether we disengage it or not from its particular application. The question is not to eliminate the particularity of the phenomenon wherein it appears to us, whether it be the fall of a leaf or the murder of a man, in order immediately to conceive, in a general and abstract manner, the necessity of a cause for every event that begins to exist. Here it is not because I am the same, or have been affected in the same manner in several different cases, that I have come to this general and abstract conception. A leaf falls; at the same moment I think, I believe, I declare that this falling of the leaf must have a cause. A man has been killed; at the same instant I believe, I proclaim that this death must have a cause. Each one of these facts contains particular and variable circumstances, and something universal and necessary, to wit, both of them can not but have a cause. Now I am perfectly able to disengage the universal from the particular in regard to

the first fact as well as in regard to the second fact, for the universal is in the first quite as well as in the second. In fact, if the principle of causality is not universal in the first fact, neither will it be in the second, nor in the third, nor in the thousandth; for a thousandth is not nearer than the first to the infinite--to absolute universality. It is the same, and still more evidently, with *necessity*. Pay particular attention to this point; if necessity is not in the first fact, it can not be in any; for necessity can not be formed little by little, and by successive increments. If, on the first murder I see, I do not exclaim that this murder had necessarily a cause, at the thousandth murder, although it shall be proved that all the others had causes, I shall have the right to think that this murder has, very probably, also a cause, but I shall never have the right to say that it *necessarily* had a cause. But when universality and necessity are already in a single case, that case is sufficient to entitle me to deduce them from it," [225](#) and we may add, also, to affirm them of every other event that may transpire.

Footnote 225: [\(return\)](#) Cousin, "True, Beautiful, and Good," pp. 57, 58.

The following *schema* will exhibit the generally accepted results of this method of analysis applied to the phenomena of thought:

(i.) *Universal and necessary principles, or primitive judgments from whence is derived the cognition of Absolute Being.*

1. *The principle of Substance*; thus enounced--"every quality supposes a *subject* or real being."
2. *The principle of Causality*; "every thing that begins to be supposes a *power* adequate to its production, *i.e.*, an efficient cause."
3. *The principle of Unity*; "all differentiation and plurality supposes an incomposite unity; all diversity, an ultimate and indivisible identity."
4. *The principle of the Unconditioned*; "the finite supposes the infinite, the dependent supposes the self-existent, the temporal supposes the eternal."

(ii.) *Universal and necessary principles, or primitive judgments, from which is derived the cognition of the Absolute Reason.*

1. *The principle of Ideality*; thus enounced, "facts of order--definite proportion, symmetrical arrangement, numerical relation, geometrical form--having a commencement in time, present themselves to us as the expression of *Ideas*, and refer us to *Mind* as their analogon, and exponent, and source."
2. *The principle of Consecution*; "the uniform succession and progressive evolution of new existences, according to fixed definite archetypes, suppose a unity of *thought*--a comprehensive *plan* embracing all existence."
3. *The principle of Intentionality or Final Cause*; "every means supposes an *end* contemplated, and a choice and adaptation of means to secure the *end*."
4. *The principle of Personality*; "intelligent purpose and voluntary choice imply a personal agent."

(iii.) *Universal and necessary principles, or primitive judgments, from whence is derived the cognition of the Absolute Good.*

1. *The principle of Moral Law*; thus enounced, "the action of a voluntary agent necessarily characterized as *right* or *wrong*, supposes an immutable and universal standard of right--an absolute moral Law."
2. *The principle of Moral Obligation*; "the feeling of obligation to obey a law of duty supposes a *Lawgiver* by whose authority we are obliged."
3. *The principle of Moral Desert*; "the feeling of personal accountability and of moral desert supposes a *judge* to whom we must give account, and who shall determine our award."
4. *The principle of Retribution*; "retributive issues in this life, and the existence in all minds of an impersonal justice which demands that, in the final issue, every being shall receive his just deserts, suppose a being of *absolute justice* who shall render to every man according to his works."

A more profound and exhaustive analysis may perhaps resolve all these primitive judgments into one universal principle or law, which Leibnitz has designated "*The principle or law of sufficient reason*," and which is thus enounced--there must be an ultimate and sufficient reason why any thing exists, and why it is, rather than otherwise; that is, if any thing begins to be, something else must be supposed as the adequate ground, and reason, and cause of its existence; or again, to state the law in view of our present discussion, "*if the finite universe, with its existing order and arrangement, had a beginning, there must be an ultimate and sufficient reason why it exists, and why it is as it is, rather than otherwise.*" In view of one particular class of phenomena, or special order of facts, this "principle of sufficient reason" may be varied in the form of its statement, and denominated "the principle of substance," "the principle of causality," "the principle of

intentionality," etc.; and, it may be, these are but specific judgments under the one fundamental and generic law of thought which constitutes the *major* premise of every Theistic syllogism.

These fundamental principles, primitive judgments, axioms, or necessary and determinate forms of thought, exist potentially or germinally in all human minds; they are spontaneously developed in presence of the phenomena of the universe, material and mental; they govern the original movement of the mind, even when not appearing in consciousness in their pure and abstract form; and they compel us to affirm a *permanent being* or *reality* behind all phenomena--a *power* adequate to the production of change, back of all events; a *personal Mind*, as the explanation of all the facts of order, and uniform succession, and regular evolution; and a *personal Lawgiver* and *Righteous Judge* as the ultimate ground and reason of all the phenomena of the moral world; in short, to affirm an *Unconditioned Cause of all finite and secondary causes*; a *First Principle of all principles*; an *Ultimate Reason of all reasons*; an *immutable Uncreated Justice, the living light of conscience*; a *King immortal, eternal, invisible, the only wise God, the ruler of the world and man*.

192 Our position, then, is, that the idea of God is revealed to man in the natural and spontaneous development of his intelligence, and that the existence of a Supreme Reality corresponding to, and represented by this idea, is rationally and logically demonstrable, and therefore justly entitled to take rank as part of our legitimate, valid, and positive *knowledge*.

And now from this position, which we regard as impregnable, we shall be prepared more deliberately and intelligibly to contemplate the various assaults which are openly or covertly made upon the doctrine that *God is cognizable by human reason*.

193

CHAPTER VI.

THE UNKNOWN GOD (*continued*).

IS GOD COGNIZABLE BY REASON?

"The abnegation of reason is not the evidence of faith, but the confession of despair."--LIGHTFOOT.

At the outset of this inquiry we attempted a hasty grouping of the various parties and schools which are arrayed against the doctrine that God is cognizable by human reason, and in general terms we sought to indicate the ground they occupy.

Viewed from a philosophical stand-point, we found one party marshalled under the standard of Idealism; another of Materialism and, again, another of Natural Realism. Regarded in their theological aspects, some are positive Atheists; others, strange to say, are earnest Theists; whilst others occupy a position of mere Indifferentism. Yet, notwithstanding the remarkable diversity, and even antagonism of their philosophical and theological opinions, they are all agreed in denying to reason any valid cognition of God.

194 The survey of Natural Theism we have completed in the previous chapter will enable us still further to indicate the exact points against which their attacks are directed, and also to estimate the character and force of the weapons employed. With or without design, they are, each in their way, assailing one or other of the principles upon which we rest our demonstration of the being of God. As we proceed, we shall find that Mill and the Constructive Idealists are really engaged in undermining "the *principle of substance*;" their doctrine is a virtual denial of all objective realities answering to our subjective ideas of matter, mind, and God. The assaults of Comte and the Materialists of his school are mainly directed against "the *principle of causality*" and "the *principle of intentionality*;" they would deny to man all knowledge of causes, efficient and final. The attacks of Hamilton and his school are directed against "the *principle of the unconditioned*," his philosophy of the conditioned is a plausible attempt to deprive man of all power to think the Infinite and Perfect, to conceive the Unconditioned and Ultimate Cause; whilst the Dogmatic Theologians are borrowing, and recklessly brandishing, the weapons of all these antagonists, and, in addition to all this, are endeavoring to show the insufficiency of "the *principle of unity*" and the weakness and invalidity of "the *moral principles*," which are regarded by us as relating man to a Moral Personality, and as indicating to him the existence of a righteous God, the ruler of the world. It is necessary, therefore, that we should concentrate our attention yet more specifically on these separate lines of attack, and attempt a minuter examination of the positions assumed by each, and of the arguments by which they are seeking, directly or indirectly, to invalidate the fundamental principles of Natural Theism.

(i.) *We commence with the Idealistic School*, of which John Stuart Mill must be regarded as the ablest living representative.

The doctrine of this school is that all our knowledge is necessarily confined to *mental* phenomena; that is, "to *feelings* or states of consciousness," and "the succession and co-existence, the likeness and unlikeness between these feelings or states of consciousness." [226](#) All our general notions, all our abstract ideas, are generated out of these feelings [227](#) by "*inseparable*

association," which registers their inter-relations of recurrence, co-existence, and resemblance. The results of this inseparable association constitute at once the sum total and the absolute limit of all possible cognition.

Footnote 226: [\(return\)](#) J. S. Mill, "Logic," vol. i. p. 83 (English edition).

Footnote 227: [\(return\)](#) In the language of Mill, every thing of which we are conscious is called "feeling." "Feeling, in the proper sense of the term, is a genus of which Sensation, Emotion, and Thought are the subordinate species."--"Logic," bk. i. ch. iii. § 3.

195

It is admitted by Mill that one *apparent* element in this total result is the general conviction that our own existence is really distinct from the external world, and that the personal *ego* has an essential identity distinct from the fleeting phenomena of sensation. But this persuasion is treated by him as a mere illusion--a leap beyond the original datum for which we have no authority. Of a real substance or substratum called Mind, of a real substance or substratum called Matter, underlying the series of feelings--"the thread of consciousness"--we do know and can know nothing; and in affirming the existence of such substrata we are making a supposition we can not possibly verify. The ultimate datum of speculative philosophy is not "*I think*," but simply "*Thoughts or feelings are*." The belief in a permanent subject or substance, called matter, as the ground and plexus of physical phenomena, and of a permanent subject or substance, called mind, as the ground and plexus of mental phenomena, is not a primitive and original intuition of reason. It is simply through the action of the principle of association among the ultimate phenomena, called feelings, that this (erroneous) separation of the phenomena into two orders or aggregates--one called mind or self; the other matter, or not self--takes place; and without this curdling or associating process no such notion or belief could have been generated. "The principle of substance," as an ultimate law of thought, is, therefore, to be regarded as a transcendental dream.

196

But now that the notion of *mind* or *self*, and of *matter* or not *self*, do exist as common convictions of our race, what is philosophy to make of them? After a great many qualifications and explanations, Mr. Mill has, in his "Logic," summed up his doctrine of Constructive Idealism in the following words: "As body is the mysterious *something* which excites the mind to feel, so mind is the mysterious *something* which feels and thinks." [228](#) But what is this "mysterious something?" Is it a reality, an entity, a subject; or is it a shadow, an illusion, a dream? In his "Examination of Sir Wm. Hamilton's Philosophy," where it may be presumed, we have his maturest opinions, Mr. Mill, in still more abstract and idealistic phraseology, attempts an answer. Here he defines matter as "*a permanent possibility of sensation*," [229](#) and mind as "*a permanent possibility of feeling*." [230](#) And "the belief in these permanent possibilities," he assures us, "includes all that is essential or characteristic in the belief in substance." [231](#) "If I am asked," says he, "whether I believe in matter, I ask whether the questioner accepts this definition of it. If he does, I believe in matter: and so do all Berkeleians. In any other sense than this, I do not. But I affirm with confidence that this conception of matter includes the whole meaning attached to it by the common world, apart from philosophical, and sometimes from theological theories. The reliance of mankind on the real existence of visible and tangible objects, means reliance on the reality and permanence of possibilities of visual and tactual sensations, when no sensations are actually experienced." [232](#) "Sensations," however, let it be borne in mind, are but a subordinate species of the genus feeling. [233](#) They are "states of consciousness"--phenomena of mind, not of matter; and we are still within the impassable boundary of ideal phenomena; we have yet no cognition of an external world. The sole cosmical conception, for us, is still a succession of sensations, or states of consciousness. This is the one phenomenon which we can not transcend in knowledge, do what we will; all else is hypothesis and illusion. The *non-ego*, after all, then, may be but a mode in which the mind represents to itself the possible modifications of the *ego*.

Footnote 228: [\(return\)](#) "Logic," bk. i. ch. iii. § 8.

Footnote 229: [\(return\)](#) "Examination of Sir Wm. Hamilton's Philosophy," vol. i. p. 243.

Footnote 230: [\(return\)](#) *Ibid.*, vol. i. p. 253.

Footnote 231: [\(return\)](#) *Ibid.*, vol. i. p. 246.

Footnote 232: [\(return\)](#) *Ibid.*, vol. i. pp. 243, 244.

Footnote 233: [\(return\)](#) "Logic," bk. i. ch. iii. § 3.

197

And now that matter, as a real existence, has disappeared under Mr. Mill's analysis, what shall be said of mind or self? Is there any permanent subject or real entity underlying the phenomena of feeling? In feeling, is there a personal self that feels, thinks, and wills? It would seem not. Mind, as well as matter, resolves itself into a "series of feelings," varying and fugitive from moment to moment, in a sea of possibilities of feeling. "My mind," says Mill, "is but a series of feelings, or, as it has been called, a thread of consciousness, however supplemented by believed possibilities of consciousness, which are not, though they might be, realized." [234](#)

Footnote 234: [\(return\)](#) "Examination of Sir Wm. Hamilton's Philosophy," vol. i. p. 254.

The ultimate fact of the phenomenal world, then, in the philosophy of Mill, is neither matter nor mind, but feelings or states of consciousness associated together by the relations, amongst

themselves, of recurrence, co-existence, and resemblance. The existence of self, except as "a series of feelings;" the existence of any thing other than self, except as a feigned unknown cause of sensation, is rigorously denied. Mr. Mill does not content himself with saying that we are ignorant of the *nature* of matter and mind, but he asserts we are ignorant of the *existence* of matter and mind as real entities.

The bearing of this doctrine of Idealism upon Theism and Theology will be instantly apparent to the reader. If I am necessarily ignorant of the existence of the external world, and of the personal *ego*, or real self, I must be equally ignorant of the existence of God. If one is a mere supposition, an illusion, so the other must be. Mr. Mill, however, is one of those courteous and affable writers who are always conscious, as it were, of the presence of their readers, and extremely careful not to shock their feelings or prejudices; besides, he has too much conscious self-respect to avow himself an atheist. As a speculative philosopher, he would rather regard Theism and Theology as "open questions," and he satisfies himself with saying, if you believe in the existence of God, or in Christianity, I do not interfere with you. "As a theory," he tells us that his doctrine leaves the evidence of the existence of God exactly as it was before. Supposing me to believe that the Divine mind is simply the series of the Divine thoughts and feelings prolonged through eternity, that would be, at any rate, believing God's existence to be *as real as my own* ²³⁵. And as for evidence, the argument of Paley's 'Natural Theology,' or, for that matter, of his 'Evidences of Christianity,' would stand exactly as it does.

198

The design argument is drawn from the analogies of human experience. From the relation which human works bear to human thoughts and feelings, it infers a corresponding relation between works more or less similar, but superhuman, and superhuman thoughts and feelings. *If* it prove these, nobody but a metaphysician needs care whether or not it proves a mysterious *substratum* for them. ²³⁶ The argument from design, it seems to us, however, would have no validity if there be no external world offering marks of design. If the external world is only a mode of feeling, a series of mental states, then our notion of the Divine Existence may be only "an association of feelings"--a mode of Self. And if we have no positive knowledge of a real self as existing, and God's existence is no more "real than our own," then the Divine existence stands on a very dubious and uncertain foundation. It can have no very secure hold upon the human mind, and certainly has no claim to be regarded as a fundamental and necessary belief. That it has a very precarious hold upon the mind of Mr. Mill, is evident from the following passage in his article on "*Later Speculations of A. Comte.*" ²³⁷ "We venture to think that a religion may exist without a belief in a God, and that a religion without a God may be, even to Christians, an instructive and profitable object of contemplation."

And now let us close Mr. Mill's book, and, introverting our mental gaze, interrogate *consciousness*, the verdict of which, even Mr. Mill assures us, is admitted on all hands to be a decision without appeal. ²³⁸

Footnote 237: [\(return\)](#) Westminster Review, July, 1835 (American edition), p. 3.

Footnote 238: [\(return\)](#) "Examination of Sir Wm. Hamilton's Philosophy," vol. i. p. 161.

1. We have an ineradicable, and, as it would seem, an intuitive faith in the real existence of an external world distinct from our sensations, and also of a personal self, which we call "I," "myself," as distinct from "my sensations," and "my feelings." We find, also, that this is confessedly the common belief of mankind. There have been a few philosophers who have affected to treat this belief as a "mere prejudice," an "illusion;" but they have never been able, practically, so to regard and treat it. Their language, just as plainly as the language of the common people, betrays their instinctive faith in an outer world, and proves their utter inability to emancipate themselves from this "prejudice," if such it may please them to call it. In view of this acknowledged fact, we ask--Does the term "*permanent possibility of sensations*" exhaust all that is contained in this conception of an external world? This evening I *remember* that at noonday I beheld the sun, and experienced a sensation of warmth whilst exposing myself to his rays; and I *expect* that to-morrow, under the same conditions, I shall experience the same sensations. I now *remember* that last evening I extinguished my light and attempted to leave my study, but, coming in contact with the closed door, experienced a sense of resistance to my muscular effort, by a solid and extended body exterior to myself; and I *expect* that this evening, under the same circumstances, I shall experience the same sensations. Now, does a belief in "a permanent possibility of sensations" explain all these experiences? does it account for that immediate knowledge of an *external* object which I had on looking at the sun, or that presentative knowledge of *resistance* and *extension*, and of an extended, resisting *substance*, I had when in contact with the door of my study? Mr. Mill very confidently affirms that this belief includes all; and this phrase expresses all the meaning attached to extended "matter" and resisting "substance" by the common world. ²³⁹ We as confidently affirm that it does no such thing; and as "the common world" must be supposed to understand the language of consciousness as well as the philosopher, we are perfectly willing to leave the decision of that question to the common consciousness of our race. If all men do not believe in a permanent *reality*--a substance which is external to themselves, a substance which offers resistance to their muscular effort, and which produces in them the sensations of solidity, extension, resistance,

199

200

etc.--they believe nothing and know nothing at all about the matter.

Footnote 239: [\(return\)](#) "Examination of Sir Wm. Hamilton's Philosophy," vol. i. p. 243.

201 Still less does the phrase "*a permanent possibility of feelings*" exhaust all our conception of a personal self. Recurring to the experiences of yesterday, I *remember* the feelings I experienced on beholding the sun, and also on pressing against the closed door, and I confidently *expect* the recurrence, under the same circumstances, of the same feelings. Does the belief in "a permanent possibility of feelings" explain the act of memory by which I recall the past event, and the act of prevision by which I anticipate the recurrence of the like experience in the future? Who or what is the "I" that remembers and the "I" that anticipates? The "ego," the personal mind, is, according to Mill, a mere "series of feelings," or, more correctly, a flash of "*present feelings*" on "a background of possibilities of present feelings." [240](#) If, then, there be no permanent substance or reality which is the subject of the present feeling, which receives and retains the impress of the past feeling, and which anticipates the recurrence of like feelings in the future, how can the *past* be recalled, how distinguished from the present? and how, without a knowledge of the past as distinguished from the present, can the *future* be forecast? Mr. Mill feels the pressure of this difficulty, and frankly acknowledges it. He admits that, on the hypothesis that mind is simply "a series of feelings," the phenomena of memory and expectation are "inexplicable" and "incomprehensible." [241](#) He is, therefore, under the necessity of completing his definition of mind by adding that it is a series of feelings which "*is aware of itself as a series;*" and, still further, of supplementing this definition by the conjecture that "*something which has ceased to exist, or is not yet in existence, can still, in a manner, be present.*" [242](#) Now he who can understand how a series of feelings can flow on in time, and from moment to moment drop out of the present into non-existence, and yet be *present* and *conscious of itself as a series*, may be accorded the honor of understanding Mr. Mill's definition of mind or self, and may be permitted to rank himself as a distinguished disciple of the Idealist school; for ourselves, we acknowledge we are destitute of the capacity to do the one, and of all ambition to be the other. And he who can conceive how the *past* feeling of yesterday and the *possible* feeling of to-morrow can be in any manner *present* today; or, in other words, how any thing which has ceased to exist, or which never had an existence, can *now* exist, may be permitted to believe that a thing can be and not be at the same moment, that a part is greater than the whole, and that two and two make five; but we are not ashamed to confess our inability to believe a contradiction. To our understanding, "possibilities of feeling" are not actualities. They may or may not be realized, and until realized in consciousness, they have no real being. If there be no other background of mental phenomena save mere "possibilities of feeling," then present feelings are the only existences, the only reality, and a loss of immediate consciousness, as in narcosis and coma, is the loss of all personality, all self-hood, and of all real being.

Footnote 240: [\(return\)](#) "Exam. of Hamilton," vol. i. p. 260.

Footnote 241: [\(return\)](#) Ibid, p. 262.

Footnote 242: [\(return\)](#) Ibid.

202 2. What, then, is the verdict of consciousness as to the existence of a permanent substance, an abiding existence which is the subject of all the varying phenomena? Of what are we really conscious when we say "I think," "I feel," "I will?" Are we simply conscious of thought, feeling, and volition, or of a self, a person, which thinks, feels, and wills? The man who honestly and unreservedly accepts the testimony of consciousness in all its integrity must answer at once, *we have an immediate consciousness, not merely of the phenomena of mind, but of a personal self as passively or actively related to the phenomena.* We are conscious not merely of the act of volition, but of a self, a power, producing the volition. We are conscious not merely of feeling, but of a being who is the subject of the feeling. We are conscious not simply of thought, but of a real entity that thinks. "It is clearly a flat contradiction to maintain that I am not immediately conscious of myself, but only of my sensations or volitions. Who, then, is that *I* that is conscious, and how can I be conscious of such states as *mine*?" [243](#)

Footnote 243: [\(return\)](#) Mansel, "Prolegomena Logica," p. 122, and note E, p. 281.

The testimony of consciousness, then, is indubitable that we have a direct, immediate cognition of *self*-I know myself as a distinctly existing being. This permanent self, to which I refer the earlier and later stages of consciousness, the past as well as the present feeling, and which I know abides the same under all phenomenal changes, constitutes my personal identity. It is this abiding self which unites the past and the present, and, from the present stretches onward to the future. We know self immediately, as existing, as in active operation, and as having permanence--or, in other words, as a "*substance.*" This one immediately presented substance, myself, may be regarded as furnishing a positive basis for that other notion of substance, which is representatively thought, as the subject of all sensible qualities.

3. We may now inquire what is the testimony of consciousness as to the existence of the extramental world? Are we conscious of perceiving external objects immediately and in themselves, or only mediately through some vicarious image or representative idea to which we fictitiously ascribe an objective reality?

The answer of common sense is that we are immediately conscious, in perception, of an *ego* and

a *non-ego* known together, and known in contrast to each other; we are conscious of a perceiving subject, and of an external reality, as the object perceived. ²⁴⁴ To state this doctrine of natural realism still more explicitly we add, that we are conscious of the immediate perception of certain essential attributes of matter objectively existing. Of these primary qualities, which are immediately perceived as real and objectively existing, we mention *extension* in space and *resistance* to muscular effort, with which is indissolubly associated the idea of *externality*. It is true that extension and resistance are only qualities, but it is equally true that they are qualities of something, and of something which is external to ourselves. Let any one attempt to conceive of extension without something which is extended, or of resistance apart from something which offers resistance, and he will be convinced that we can never know qualities without knowing substance, just as we can not know substance without knowing qualities. This, indeed, is admitted by Mr. Mill. ²⁴⁵ And if this be admitted, it must certainly be absurd to speak of substance as something "unknown." Substance is known just as much as quality is known, no less and no more.

Footnote 244: [\(return\)](#) Hamilton, "Lectures," vol. 1. p. 288.

Footnote 245: [\(return\)](#) "Logic," bk. i. ch. iii. § 6.

We remark, in conclusion, that if the testimony of consciousness is not accepted in all its integrity, we are necessarily involved in the Nihilism of Hume and Fichte; the phenomena of mind and matter are, on analysis, resolved into an absolute nothingness--"a play of phantasms in a void." ²⁴⁶

(ii.) We turn, secondly, to the *Materialistic School* as represented by Aug. Comte.

The doctrine of this school is that all knowledge is limited to *material* phenomena--that is, to appearances *perceptible to sense*. We do not know the essence of any object, nor the real mode of procedure of any event, but simply its relations to other events, as similar or dissimilar, co-existent or successive. These relations are constant; under the same conditions, they are always the same. The constant resemblances which link phenomena together, and the constant sequences which unite them, as antecedent and consequent, are termed *laws*. The laws of phenomena are all we know respecting them. Their essential nature and their ultimate causes, *efficient* or *final*, are unknown and inscrutable to us. ²⁴⁷

Footnote 246: [\(return\)](#) Masson, "Recent British Philos.," p. 62.

Footnote 247: [\(return\)](#) See art. "Positive Philos. of A. Comte," *Westminster Review*, April, 1865, p. 162, Am. ed.

It is not our intention to review the system of philosophy propounded by Aug. Comte; we are now chiefly concerned with his denial of all causation.

1. *As to Efficient Causes.*--Had Comte contented himself with the assertion that causes lie beyond the field of sensible observation, and that inductive science can not carry us beyond the relations of co-existence and succession among phenomena, he would have stated an important truth, but certainly not a new truth. It had already been announced by distinguished mental philosophers, as, for example, M. de Biran and Victor Cousin. ²⁴⁸ The senses give us only the succession of one phenomenon to another. I hold a piece of wax to the fire and it melts. Here my senses inform me of two successive phenomena--the proximity of fire and the melting of wax. It is now agreed among all schools of philosophy that this is all the knowledge the senses can possibly supply. The observation of a great number of like cases assures us that this relation is uniform. The highest scientific generalization does not carry us one step beyond this fact. Induction, therefore, gives us no access to causes beyond phenomena. Still, this does not justify Comte in the assertion that causes are to us absolutely *unknown*. The question would still arise whether we have not some faculty of knowledge, distinct from sensation, which is adequate to furnish a valid cognition of cause. It does not by any means follow that, because the idea of causation is not given as a "physical quæsitum" at the end of a process of scientific generalization, it should not be a "metaphysical datum" posited at the very beginning of scientific inquiry, as the indispensable condition of our being able to cognize phenomena at all, and as the law under which all thought, and all conception of the system of nature, is alone possible.

Footnote 248: [\(return\)](#) "It is now universally admitted that we have no perception of the causal nexus in the material world."--Hamilton, "Discussions," p. 522.

Now we affirm that the human mind has just as direct, immediate, and positive knowledge of *cause* as it has of *effect*. The idea of cause, the intuition *power*, is given in the immediate consciousness of *mind as determining its own* operations. Our first, and, in fact, our only presentation of power or cause, is that of *self as willing*. In every act of volition I am fully conscious that it is in my power to form a resolution or to refrain from it, to determine on this course of action or that; and this constitutes the immediate presentative knowledge of power. ²⁴⁹ The will is a power, a power in action, a productive power, and, consequently, a cause. This doctrine is stated with remarkable clearness and accuracy by Cousin: "If we seek the notion of cause in the action of one ball upon another, as was previously done by Hume, or in the action of the hand upon the ball, or the primary muscles upon the extremities, or even in the action of the will upon the muscles, as was done by M. Maine de Biran, we shall find it in none of these cases,

not even in the last; for it is possible there should be a paralysis of the muscles which deprives the will of power over them, makes it unproductive, incapable of being a cause, and, consequently, of suggesting the notion of one. But what no paralysis can prevent is the action of the will upon itself, the production of a resolution; that is to say, the act of causation entirely mental, the primitive type of all causality, of which all external movements are only symbols more or less imperfect. The first cause for us, is, therefore, the *will*, of which the first effect is volition. This is at once the highest and the purest source of the notion of cause, which thus becomes identical with that of personality. And it is the taking possession, so to speak, of the cause, as revealed in will and personality, which is the condition for us of the ulterior or simultaneous conception of external, impersonal causes." [250](#)

Footnote 249: [\(return\)](#) "It is our *immediate consciousness of effort*, when we exert force to put matter in motion, or to oppose and neutralize force, which gives us this internal conviction of *power* and *causation*, so far as it refers to the material world, and compels us to believe that whenever we see material objects put in motion from a state of rest, or deflected from their rectilinear paths and changed in their velocities if already in motion, it is in consequence of such an *effort* somehow exerted."--Herschel's "Outlines of Astronomy," p. 234; see Mansel's "Prolegomena," p. 133.

Footnote 250: [\(return\)](#) "Philosophical Fragments," Preface to first edition.

206

Thus much for the origin of the idea of cause. We have the same direct intuitive knowledge of cause that we have of effect; but we have not yet rendered a full and adequate account of the *principle of causality*. We have simply attained the notion of our personal causality, and we can not arbitrarily substitute our personal causality for all the causes of the universe, and erect our own experience as a law of the entire universe. We have, however, already seen (Chap. V.) that the belief in exterior causation is *necessary* and *universal*. When a change takes place, when a new phenomenon presents itself to our senses, we can not avoid the conviction that it must have a cause. We can not even express in language the relations of phenomena in time and space, without speaking of causes. And there is not a rational being on the face of the globe--a child, a savage, or a philosopher--who does not instinctively and spontaneously affirm that every movement, every change, every new existence, *must* have a cause. Now what account can philosophy render of this universal belief? One answer, and only one, is possible. The *reason* of man (that power of which Comte takes no account) is in fixed and changeless relation to the principle of causation, just as *sense* is in fixed and changeless relation to exterior phenomena, so that we can not know the external world, can not think or speak of phenomenal existence, except as *effects*. In the expressive and forcible language of Jas. Martineau: "By an irresistible law of thought *all phenomena present themselves to us as the expression of power*, and refer us to a causal ground whence they issue. This dynamic source we neither see, nor hear, nor feel; it is given in *thought*, supplied by the spontaneous activity of mind as the correlative prefix to the phenomena observed." [251](#) Unless, then, we are prepared to deny the validity of all our rational intuitions, we can not avoid accepting "this subjective postulate as a valid law for objective nature." If the intuitions of our reason are pronounced deceptive and mendacious, so also must the intuitions of the senses be pronounced illusory and false. Our whole intellectual constitution is built up on false and erroneous principles, and all knowledge of whatever kind must perish by "the contagion of uncertainty."

Footnote 251: [\(return\)](#) "Essays," p. 47.

207

Comte, however, is determined to treat the idea of causation as an illusion, whether under its psychological form, as *will*, or under its scientific form, as *force*. He feels that Theology is inevitable if we permit the inquiry into causes; [252](#) and he is more anxious that theology should perish than that truth should prevail. The human will must, therefore, be robbed of all semblance of freedom, lest it should suggest the idea of a Supreme Will governing nature; and human action, like all other phenomena, must be reduced to uniform and necessary law. All feelings, ideas, and principles guaranteed to us by consciousness are to be cast out of the account. Psychology, resting on self-observation, is pronounced a delusion. The immediate consciousness of freedom is a dream. Such a procedure, to say the least of it, is highly unphilosophical; to say the truth about it, it is obviously dishonest. Every fact of human nature, just as much as every fact of physical nature, must be accepted in all its integrity, or all must be alike rejected. The phenomena of mind can no more be disregarded than the phenomena of matter. Rational intuitions, necessary and universal beliefs, can no more be ignored than the uniform facts of sense-perception, without rendering a system of knowledge necessarily incomplete, and a system of truth utterly impossible. Every one truth is connected with every other truth in the universe. And yet Comte demands that a large class of facts, the most immediate and direct of all our cognitions, shall be rejected because they are not in harmony with the fundamental assumption of the positive philosophy that all knowledge is confined to *phenomena perceptible to sense*. Now it were just as easy to cast the Alps into the Mediterranean as to obliterate from the human intelligence the primary cognitions of immediate consciousness, or to relegate the human reason from the necessary laws of thought. Comte himself can not emancipate his own mind from a belief in the validity of the testimony of consciousness. How can he know himself as distinct from nature, as a living person, as the same being he was ten years ago, or even yesterday, except by an appeal to consciousness? Despite his earnestly-avowed opinions as to the inutility and fallaciousness of all psychological inquiries, he is compelled to admit that "the phenomena of life" are "*known by immediate consciousness*." [253](#) Now the knowledge of our personal freedom rests on precisely the same grounds as the knowledge of our personal existence. The same "immediate

208

consciousness" which attests that I exist, attests also, with equal distinctness and directness, that I am self-determined and free.

Footnote 252: [\(return\)](#) "The *inevitable tendency* of our intelligence is towards a philosophy radically theological, so often as we seek to penetrate, on whatever pretext, into the intimate nature of phenomena" (vol. iv. p. 664).

Footnote 253: [\(return\)](#) "Positive Philos," vol. ii. p. 648.

209 In common with most atheistical writers, Comte is involved in the fatal contradiction of at one time assuming, and at another of denying the freedom of the will, to serve the exigencies of his theory. To prove that the order of the universe can not be the product of a Supreme Intelligence, he assumes that the products of mind must be characterized by freedom and variety--the phenomena of mind must not be subject to uniform and necessary laws; and inasmuch as the phenomena presented by external nature are subject to uniform and changeless laws, they can not be the product of mind. "Look at the whole frame of things," says he; "how can it be the product of mind--of a supernatural Will? Is it not subject to regular laws, and do we not actually obtain *prevision* of its phenomena? If it were the product of mind, its order would be variable and free." Here, then, it is admitted that *freedom is an essential characteristic of mind*. And this admission is no doubt a thoughtless, unconscious betrayal of the innate belief of all minds in the freedom of the will. But when Comte comes to deal with this freedom as an objective question of philosophy, when he directs his attention to the only will of which we have a direct and immediate knowledge, he denies freedom and variety, and asserts in the most arbitrary manner that the movements of the mind, like all the phenomena of nature, must be subject to uniform, changeless, and necessary laws. And if we have not yet been able to reduce the movements of mind, like the movements of the planets, to statistics, and have not already obtained accurate prevision of its successions or sequences as we have of physical phenomena, it is simply the consequence of our inattention to, or ignorance of, all the facts. We answer, there are no facts so directly and intuitively known as the facts of consciousness; and, therefore, an argument based upon our supposed ignorance of these facts is not likely to have much weight against our immediate consciousness of personal freedom. There is not any thing we know so immediately, so certainly, so positively, as this fact--*we are free*.

210 The word "force," representing as it does a subtle mental conception, and not a phenomenon of sense, must also be banished from the domains of Positive Science as an intruder, lest its presence should lend any countenance to the idea of causation. "Forces in mechanics are only *movements*, produced, or tending to be produced." In order to "cancel altogether the old metaphysical notion of force," another form of expression is demanded. It is claimed that all we do know or can possibly know is the successions of phenomena in time. What, then, is the term which henceforth, in our dynamics, shall take the place of "force?" Is it "Time-succession?" Then let any one attempt to express the various forms and intensities of movement and change presented to the senses (as *e.g.*, the phenomena of heat, electricity, galvanism, magnetism, muscular and nervous action, etc.) in terms of Time-succession, and he will at once become conscious of the utter hopelessness of physics, without the hyperphysical idea of force, to render itself intelligible. [254](#) What account can be rendered of planetary motion if the terms "centrifugal force" and "centripetal force" are abandoned? "From the two great conditions of every Newtonian solution, viz., projectile impulse and centripetal tendency, eject the idea of *force*, and what remains? The entire conception is simply made up of this, and has not the faintest existence without it. It is useless to give it notice to quit, and pretend that it is gone when you have only put a new name upon the door. We must not call it 'attraction,' lest there should seem to be a *power* within; we are to speak of it only as 'gravitation,' because that is only 'weight,' which is nothing but a 'fact,' as if it were not a fact that holds a power, a true dynamic affair, which no imagination can chop into incoherent successions. [255](#) Nor is the evasion more successful when we try the phrase, 'tendency of bodies to mutual approach.' The approach itself may be called a phenomenon; but the 'tendency' is no phenomenon, and can not be attributed by us to the bodies without regarding them as the residence of force. And what are we to say of the *projectile impulse* in the case of the planets? Is that also a phenomenon? Who witnessed and reported it? Is it not evident that the whole scheme of physical astronomy is a resolution of observed facts into dynamic equivalents, and that the hypothesis posits for its calculations not phenomena, but proper forces? Its logic is this: *If* an impulse of certain intensity were given, and *if* such and such mutual attractions were constantly present, then the sort of motions which we observe in the bodies of our system *would follow*. So, however, they also would *if* willed by an Omnipotent Intelligence." [256](#) It is thus clearly evident that human science is unable to offer any explanation of the existing order of the universe except in terms expressive of Power or Force; that, in fact, all explanations are utterly unintelligible without the idea of causation. The language of universal rational intuition is, "all phenomena are the expression of power;" the language of science is, "every law implies a force."

Footnote 254: [\(return\)](#) See Grote's "Essay on Correlation of Physical Forces," pp. 18-20; and Martineau's "Essays," p. 135.

Footnote 255: [\(return\)](#) "Gravity is a real *power* of whose agency we have daily experience."--Herschel, "Outlines of Astronomy," p. 236.

Footnote 256: [\(return\)](#) Martineau's "Essays," p. 56.

It is furthermore worthy of being noted that, in the modern doctrine of the Correlation and

Conservation of Forces, science is inevitably approaching the idea that all kinds of force are but forms or manifestations of some *one* central force issuing from some *one* fountain-head of power. Dr. Carpenter, perhaps the greatest living physiologist, teaches that "the form of force *which may be taken as the type of all the rest*" is the consciousness of living effort in volition. ²⁵⁷ All force, then, is of one type, and that type is mind; in its last analysis external causation may be resolved into Divine energy. Sir John Herschel does not hesitate to say that "it is reasonable to regard the force of gravitation as the direct or indirect result of a consciousness or will exerted somewhere." ²⁵⁸ The humble Christian may, therefore, feel himself amply justified in still believing that "power belongs to God;" that it is through the Divine energy "all things are, and are upheld;" and that "in God we live, and move, and have our being;" he is the Great First Cause, the Fountain-head of all power.

Footnote 257: [\(return\)](#) "Human Physiology," p. 542.

Footnote 258: [\(return\)](#) "Outlines of Astronomy," p. 234.

2. *As to Final Causes*--that is, reasons, purposes, or ends *for* which things exist--these, we are told by Comte, are all "disproved" by Positive Science, which rigidly limits us to "the history of *what is*," and forbids all inquiry into reasons *why it is*. The question whether there be any intelligent purpose in the order and arrangement of the universe, is not a subject of scientific inquiry at all; and whenever it has been permitted to obtrude itself, it has thrown a false light over the facts, and led the inquirer astray.

The discoveries of modern astronomy are specially instanced by Comte as completely overthrowing the notion of any conscious design or intelligent purpose in the universe. The order and stability of the solar system are found to be the *necessary* consequences of gravitation, and are adequately explained without any reference to purposes or ends to be fulfilled in the disposition and arrangement of the heavenly bodies. "With persons unused to the study of the celestial bodies, though very likely informed on other parts of natural philosophy, astronomy has still the reputation of being a science eminently religious, as if the famous words, 'The heavens declare the glory of God, had lost none of their truth... No science has given more terrible shocks to the doctrine of *final causes* than astronomy." ²⁵⁹ The simple knowledge of the movement of the earth must have destroyed the original and real foundation of this doctrine--the idea of the universe subordinated to the earth, and consequently to man. Besides, the accurate exploration of the solar system could not fail to dispel that blind and unlimited admiration which the general order of nature inspires, by showing in the most sensible manner, and in a great number of different respects, that the orbs were certainly not disposed in the most advantageous manner, and that science permits us easily to conceive a better arrangement, by the development of true celestial mechanism, since Newton. All the theological philosophy, even the most perfect, has been henceforth deprived of its principal intellectual function, the most regular order being thus consigned as necessarily established and maintained in our world, and even in the whole universe, *by the simple mutual gravity of its several parts.*" ²⁶⁰

The task of "conceiving a better arrangement" of the celestial orbs, and improving the system of the universe generally, we shall leave to those who imagine themselves possessed of that omniscience which comprehends all the facts and relations of the actual universe, and foreknows all the details and relations of all possible universes so accurately as to be able to pronounce upon their relative "advantages." The arrogance of these critics is certainly in startling and ludicrous contrast with the affected modesty which, on other occasions, restrains them from "imputing any intentions to nature." It is quite enough for our purpose to know that the tracing of evidences of *design* in those parts of nature accessible to our observation is an essentially different thing from the construction of a scheme of *optimism* on *à priori* grounds which shall embrace a universe the larger portion of which is virtually beyond the field of observation. We are conscious of possessing some rational data and some mental equipment for the former task, but for the latter we feel utterly incompetent. ²⁶¹

Footnote 259: [\(return\)](#) In a foot-note Comte adds: "Nowadays, to minds familiarized betimes with the true astronomical philosophy, the heavens declare no other glory than that of Hipparchus, Kepler, Newton, and all those who have contributed to the ascertainment of their laws." It seems remarkable that the great men who *ascertained* these laws did not see that the saying of the Psalmist was emptied of all meaning by their discoveries. No persons seem to have been more willing than these very men named to ascribe all the glory to Him who *established* these laws. Kepler says: "The astronomer, to whom God has given to see more clearly with his inward eye, from what he has discovered, both can and will glorify God;" and Newton says: "This beautiful system of sun, planets, comets could have its origin in no other way than by the purpose and command of an intelligent and powerful Being. We admire him on account of his perfections, we venerate and worship him on account of his government."--Whewell's "Astronomy and Physics," pp. 197, 198.

Footnote 260: [\(return\)](#) "Positive Philosophy," vol. ii. pp. 36-38; Tulloch, "Theism," p. 115.

Footnote 261: [\(return\)](#) Chalmers's "Institutes of Theology," vol. i. pp. 117, 118.

The only plausible argument in the above quotation from Comte is, that the whole phenomena of the solar system are adequately explained by the law of gravitation, without the intervention of any intelligent purpose. Let it be borne in mind that it is a fundamental principle of the Positive philosophy that all human knowledge is necessarily confined to phenomena *perceptible to sense*,

and that the fast and highest achievement of human science is to observe and record "the invariable relations of resemblance and succession among phenomena." We can not possibly know any thing of even the existence of "causes" or "forces" lying back of phenomena, nor of "reasons" or "purposes" determining the relations of phenomena. The "law of gravitation" must, therefore, be simply the statement of a fact, the expression of an observed order of phenomena. But the simple statement of a fact is no *explanation* of the fact. The formal expression of an observed order of succession among phenomena is no *explanation* of that order. For what do we mean by an explanation? Is it not a "making plain" to the understanding? It is, in short, a complete answer to the questions *how* is it so? and *why* is it so? Now, if Comte denies to himself and to us all knowledge of efficient and final causation, if we are in utter ignorance of "forces" operating in nature, and of "reasons" for which things exist in nature, he can not answer either question, and consequently nothing is explained.

214

Practically, however, Comte regards gravitation as a force. The order of the solar system has been established and is still maintained by the mutual gravity of its several parts. We shall not stop here to note the inconsistency of his denying to us the knowledge of, even the existence of, force, and yet at the same time assuming to treat gravitation as a force really adequate to the explanation of the *how* and *why* of the phenomena of the universe, without any reference to a supernatural will or an intelligent mind. The question with which we are immediately concerned is whether gravitation *alone* is adequate to the explanation of the phenomena of the heavens? A review *in extenso* of Comte's answer to this question would lead us into all the inextricable mazes of the nebular hypothesis, and involve us in a more extended discussion than our space permits and our limited scientific knowledge justifies. For the masses of the people the whole question of cosmical development resolves itself into "a balancing of authorities;" they are not in a position to verify the reasonings for and against this theory by actual observation of astral phenomena, and the application of mathematical calculus; they are, therefore, guided by balancing in their own minds the statements of the distinguished astronomers who, by the united suffrages of the scientific world, are regarded as "authorities." For us, at present, it is enough that the nebular hypothesis is rejected by some of the greatest astronomers that have lived. We need only mention the names of Sir William Herschel, Sir John Herschel, Prof. Nichol, Earl Rosse, Sir David Brewster, and Prof. Whewell.

But if we grant that the nebular hypothesis is entitled to take rank as an established theory of the development of the solar system, it by no means proves that the solar system was formed without the intervention of intelligence and design. On this point we shall content ourselves with quoting the words of one whose encyclopædian knowledge was confessedly equal to that of Comte, and who in candor and accuracy was certainly his superior. Prof. Whewell, in his "Astronomy and Physics," says: "This hypothesis by no means proves that the solar system was formed without the intervention of intelligence and design. It only transfers our view of the skill exercised and the means employed to another part of the work; for how came the sun and its atmosphere to have such materials, such motions, such a constitution, and these consequences followed from their primordial condition? How came the parent vapor thus to be capable of coherence, separation, contraction, solidification? How came the laws of its motion, attraction, repulsion, condensation, to be so fixed as to lead to a beautiful and harmonious system in the end? How came it to be neither too fluid nor too tenacious, to contract neither too quickly nor too slowly for the successive formation of the several planetary bodies? How came that substance, which at one time was a luminous vapor, to be at a subsequent period solids and fluids of many various kinds? What but design and intelligence prepared and tempered this previously-existing element, so that it should, by its natural changes, produce such an orderly system"? ²⁶² "*The laws of motion alone will not produce the regularity which we admire in the motion of the heavenly bodies.* There must be an original adjustment of the system on which these laws are to act; a selection of the arbitrary quantities which they are to involve; a primitive cause which shall dispose the elements in due relation to each other, in order that regular recurrence may accompany constant change, and that perpetual motion may be combined with perpetual stability." ²⁶³

215

Footnote 262: [\(return\)](#) "Astronomy and Physics," p. 109.

Footnote 263: [\(return\)](#) Chalmers's "Institutes of Theology," vol. i. p. 119.

The harmony of the solar system in all its phenomena does not depend upon the operation of any *one* law, but from the special adjustment of several laws. There are certain agents operating throughout the entire system which have different properties, and which require special adjustment to each other, in order to their beneficial operation. 1st. There is *Gravitation*, prevailing apparently through all space. But it does not prevail alone. It is a force whose function is to balance other forces of which we know little, except that these, again, are needed to balance the force of gravitation. Each force, if left to itself, would be the destruction of the universe. Were it not for the force of gravitation, the centrifugal forces which impel the planets would fling them off into space. Were it not for these centrifugal forces, the force of gravitation would dash them against the sun. The ultimate fact of astronomical science, therefore, is not the law of gravitation, but the *adjustment* between this law and other laws, so as to produce and maintain the existing order. ²⁶⁴ 2d. There is *Light*, flowing from numberless luminaries; and *Heat*, radiating everywhere from the warmer to the colder regions; and there are a number of adjustments needed in order to the beneficial operation of these agents. Suppose we grant that by merely mechanical causes the sun became the centre of our system, how did it become also the *source of its vivifying influences*? "How was the fire deposited on this hearth? How was the candle placed

216

on this candlestick?" 3d. There is an all-pervading *Ether*, through which light is transmitted, which offers resistance to the movement of the planetary and cometary bodies, and tends to a dissipation of mechanical energy, and which needs to be counter-balanced by well-adjusted arrangements to secure the stability of the solar system. All this balancing of opposite properties and forces carries our minds upward towards Him who holds the balances in his hands, and to a Supreme Intelligence on whose adjustments and collocations the harmony and stability of the universe depends. [265](#)

Footnote 265: [\(return\)](#) M'Cosh, "Typical Forms and Special Ends," ch. xiii.

217 The recognition of all teleology of organs in vegetable and animal physiology is also persistently repudiated by this school. When Cuvier speaks of the combination of organs in such order as to adapt the animal to the part which it has to play in nature, Geoffroy Saint Hilaire replies, "I know nothing of animals which have to play a part in nature." "I have read, concerning fishes, that, because they live in a medium which resists more than air, their motive forces are calculated so as to give them the power of progression under these circumstances. By this mode of reasoning, you would say of a man who makes use of crutches, that he was originally destined to the misfortune of having a leg paralyzed or amputated. [266](#) "With a modesty which savors of affectation, he says, "I ascribe no intentions to God, for I mistrust the feeble powers of my reason. I observe facts merely, and go no farther. I only pretend to the character of the historian of *what is*." "I can not make Nature an intelligent being who does nothing in vain, who acts by the shortest mode, who does all for the best." [267](#) All the supposed consorting of means to ends which has hitherto been regarded as evidencing Intelligence is simply the result of "the elective affinities of organic elements" and "the differentiation of organs" consequent mainly upon exterior conditions. "*Functions are a result, not an end*. The animal undergoes the kind of life that his organs impose, and submits to the imperfections of his organization. The naturalist studies the play of his apparatus, and if he has the right of admiring most of its parts, he has likewise that of showing the imperfection of other parts, and the practical uselessness of those which fulfill no functions." [268](#) And it is further claimed that there are a great many structures which are clearly useless; that is, they fulfill no purpose at all. Thus there are monkeys, which have no thumbs for use, but only rudimental thumb-bones hid beneath the skin; the wingless bird of New Zealand (*Apteryx*) has wing-bones similarly developed, which serve no purpose; young whalebone whales are born with teeth that never cut the gums, and are afterwards absorbed; and some sheep have horns turned about their ears which fulfill no end. And inasmuch as there are some organisms in nature which serve no purpose of utility, it is argued there is no design in nature; things are *used* because there are antecedent conditions favorable for *use*, but that use is not the *end* for which the organ exists. The true naturalist will never say, "Birds have wings given them *in order* to fly;" he will rather say, "Birds fly *because* they have wings." The doctrine of final causes must, therefore, be abandoned.

Footnote 267: [\(return\)](#) Id., ib., vol. ii. p. 490.

Footnote 268: [\(return\)](#) Martin's "Organic Unity in Animals and Vegetables," in M. Q. Review, January, 1863.

218 It is hardly worth while to reply to the lame argument of Geoffroy, which needs a "crutch" for its support. The very illustration, undignified and irrelevant as it is, tells altogether against its author. For, first, the crutch is certainly a *contrivance* designed for locomotion; secondly, the length and strength and lightness of the crutch are all matters of calculation and *adjustment*; and, thirdly, all the adaptations of the crutch are well-considered, in order to enable the lame man to walk; the function of the crutch is the final cause of its creation. This crutch is clearly out of place in Geoffroy's argument, and utterly breaks down. It is in its place in the teleological argument, and stands well, though it may not behave as well as the living limb. The understanding of a child can perceive that the design-argument does not assert that men were intended to have amputated limbs, but that crutches are designed for those whose limbs are paralyzed or amputated.

219 The existence of useless members, of rudimentary and abortive limbs, does seem, at first sight, to be unfavorable to the idea of supremacy of purpose and all-pervading design. It should be remarked, however, that this is an argument based upon our ignorance, and not upon our knowledge. It does not by any means follow that because we have discovered no reasons for their existence, therefore there are no reasons. Science, in enlarging its conquests of nature, is perpetually discovering the usefulness of arrangements of which our fathers were ignorant, and the reasons of things which to their minds, were concealed; and it ill becomes the men who so far "mistrust their own feeble powers" as to be afraid of ascribing any intention to God or nature, to dogmatically affirm there is no purpose in the existence of any thing. And then we may ask, what right have these men to set up the idea of "utility" as the only standard to which the Creator must conform? How came they to know that God is a mere "utilitarian;" or, if they do not believe in God, that nature is a miserable "Benthamite?" Why may not the idea of beauty, of symmetry, of order, be a standard for the universe, as much as the idea of utility, or mere subordination to some practical end? May not conformity to one grand and comprehensive plan, sweeping over all nature, be perfectly compatible with the adaptation of individual existences to the fulfillment of

special ends? In civil architecture we have conformity to a general plan; we have embellishment and ornament, and we have adaptation to a special purpose, all combined; why may not these all be combined in the architecture of the universe? The presence of any one of these is sufficient to prove design, for mere ornament or beauty is itself a purpose, an object, and an end. The concurrence of all these is an overwhelming evidence of design. Wherever found, they are universally recognized as the product of intelligence; they address themselves at once to the intelligence of man, and they place him in immediate relation to and in deepest sympathy with the Intelligence which gave them birth. He that formed the eye of man to see, and the heart of man to admire beauty, shall He not delight in it? He that gave the hand of man its cunning to create beauty, shall He not himself work for it? And if man can and does combine both "ornament" and "use" in one and the same implement or machine, why should not the Creator of the world do the same? "When the savage carves the handle of his war-club, the immediate purpose of his carving is to give his own hand a firmer hold. But any shapeless scratches would be enough for this. When he carves it in an elaborate pattern, he does so for the love of ornament, and to satisfy the sense of beauty." And so "the harmonies, on which all beauty depends, are so connected in nature that *use* and *ornament* may often both arise out of the same conditions." [269](#)

Footnote 269: [\(return\)](#) Duke of Argyll, "Reign of Law," p. 203.

220

The "true naturalist," therefore, recognizes two great principles pervading the universe--a *principle of order*--a unity of plan, and a *principle of special adaptation*, by which each object, though constructed upon a general plan, is at the same time accommodated to the place it has to occupy and the purpose it has to serve. In other words, there is *homology of structure* and *analogy of function*, conformity to *archetypal forms* and *Teleology of organs*, in wonderful combination. Now, in the Materialistic school, it has been the prevalent practice to set up the unity of plan in animal structures, in opposition to the principle of Final Causes: Morphology has been opposed to Teleology. But in nature there is no such opposition; on the contrary, there is a beautiful co-ordination. The same bones, in different animals, are made subservient to the widest possible diversity of functions. The same limbs are converted into fins, paddles, wings, legs, and arms. "No comparative anatomist has the slightest hesitation in admitting that the pectoral fin of a fish, the wing of a bird, the paddle of the dolphin, the fore-leg of a deer, the wing of a bat, and the arm of a man, are the same organs, notwithstanding that their forms are so varied, and the uses to which they are applied so unlike each other." [270](#) All these are homologous in structure--they are formed after an ideal archetype or model, but that model or type is variously modified to adapt the animal to the sphere of life in which it is destined to move, and the organ itself to the functions it has to perform, whether swimming, flying, walking, or burrowing, or that varied manipulation of which the human hand is capable. These varied modifications of the vertebrated type, for special purposes, are unmistakable examples of final causation. Whilst the silent members, the rudimental limbs instanced by Oken, Martins, and others--as fulfilling no purpose, and serving no end, exist in conformity to an ideal archetype on which the bony skeletons of all vertebrated animals are formed, [271](#) and which has never been departed from since time began. This type, or model, or plan, is, however, itself an evidence of *design* as much as the plan of a house. For to what standard are we referring when we say that two limbs are morphologically the same? Is it not an *ideal* plan, a *mental* pattern, a metaphysical conception? Now an *ideal* implies a mind which preconceived the idea, and in which alone it really exists. It is only as "an *order of Divine thought*" that the doctrine of animal homologies is at all intelligible; and Homology is, therefore, the science which traces the outward embodiment of a Divine Idea. [272](#) The principle of intentionality or final causation, then, is not in any sense invalidated by the discovery of "a unity of plan" sweeping through the entire universe.

221

Footnote 270: [\(return\)](#) Carpenter's "Comparative Physiology," p. 37.

Footnote 271: [\(return\)](#) Agassiz, "Essay on Classification," p. 10.

Footnote 272: [\(return\)](#) Whewell's "History of Inductive Sciences," vol. i. p. 644; "The Reign of Law," p. 208; Agassiz, "Essay on Classification," pp. 9-11.

We conclude that we are justly entitled to regard "the principle of intentionality" as a primary and necessary law of thought, under which we can not avoid conceiving and describing the facts of the universe--*the special adaptation of means to ends necessarily implies mind*. Whenever and wherever we observe the adaptation of an organism to the fulfillment of a special end, we can not avoid conceiving of that *end* as foreseen and premeditated, the *means* as selected and adjusted with a view to that end, and creative energy put forth to secure the end--all which is the work of intelligence and will. [273](#) And we can not describe these facts of nature, so as to render that account intelligible to other minds, without using such terms as "contrivance," "purpose," "adaptation," "design." A striking illustration of this may be found in Darwin's volume "On the Fertilization of Orchids." We select from his volume with all the more pleasure because he is one of the writers who enjoins "caution in ascribing intentions to nature." In one sentence he says: "The *Labellum* is developed into a long nectary, *in order* to attract *Lepidoptera*; and we shall presently give reasons for suspecting the nectar is *purposely* so lodged that it can be sucked only slowly, *in order* to give time for the curious chemical quality of the viscid matter settling hard and dry" (p. 29). Of one particular structure he says: "This *contrivance* of the guiding ridges may be compared to the little instrument sometimes used for guiding a thread into the eye of a needle." The notion that every organism has a use or purpose seems to have guided him in his

222

discoveries. "The strange position of the *Labellum*, perched on the summit of the column, ought to have shown me that here was the place for experiment. I ought to have scorned the notion that the *Labellum* was thus placed *for no good purpose*. I neglected this plain guide, and for a long time completely failed to understand the flower" (p. 262). [274](#)

223 So that the assumption of final causes has not, as Bacon affirms, "led men astray" and "prejudiced further discovery;" on the contrary, it has had a large share in every discovery in anatomy and physiology, zoology and botany. The use of every organ has been discovered by starting from the assumption *that it must have some use*. The belief in a creative purpose led Harvey to discover the circulation of the blood. He says: "When I took notice that the valves in the veins of so many parts of the body were so placed that they gave a free passage to the blood towards the heart, but opposed the passage of the venal blood the contrary way, I was incited to imagine that so provident a cause as Nature has not placed so many valves *without design*, and no design seemed more probable than the circulation of the blood." [275](#) The wonderful discoveries in Zoology which have immortalized the name of Cuvier were made under the guidance of this principle. He proceeds on the supposition not only that animal forms have *some* plan, *some* purpose, but that they have an intelligible plan, a discoverable purpose. At the outset of his "*Règne Animal*" he says: "Zoology has a principle of reasoning which is peculiar to it, and which it employs to advantage on many occasions; that is, the principle of the conditions of existence, commonly called final causes." [276](#) The application of this principle enabled him to understand and arrange the structures of animals with astonishing clearness and completeness of order; and to restore the forms of extinct animals which are found in the rocks, in a manner which excited universal admiration, and has commanded universal assent. Indeed, as Professor Whewell remarks, at the conclusion of his "History of the Inductive Sciences," "those who have been discoverers in science have generally had minds, the disposition of which was to believe in an *intelligent Maker* of the universe, and that the scientific speculations which produced an opposite tendency were generally those which, though they might deal familiarly with known physical truths, and conjecture boldly with regard to unknown, do not add to the number of solid generalizations." [277](#)

CHAPTER VII.

THE UNKNOWN GOD (*continued*).

IS GOD COGNIZABLE BY REASON? (*continued*).

"The faith which can not stand unless buttressed by contradictions is built upon the sand. The profoundest faith is faith in the unity of truth. If there is found any conflict in the results of a right reason, no appeal to practical interests, or traditional authority, or intuitional or theological faith, can stay the flood of skepticism."--ABBOT.

In the previous chapter we have considered the answers to this question which are given by the Idealistic and Materialistic schools; it devolves upon us now to review (iii.) the position of the school of *Natural Realism* or *Natural Dualism*, at the head of which stands Sir William Hamilton.

It is admitted by this school that philosophic knowledge is "the knowledge of effects as dependent on their causes," [278](#) and "of qualities as inherent in substances." [279](#)

Footnote 278: [\(return\)](#) "Lectures on Metaphysics," vol. i. p. 58.

Footnote 279: [\(return\)](#) Ibid., vol. i. p. 138.

1. *As to Events and Causes.*--"Events do not occur isolated, apart, by themselves; they occur and are conceived by us only in connection. Our observation affords us no example of a phenomenon which is not an effect; nay, our thought can not even realize to itself the possibility of a phenomenon without a cause. By the necessity we are under of thinking some cause for every phenomenon, and by our original ignorance of what particular causes belong to what particular effects, it is rendered impossible for us to acquiesce in the mere knowledge of the fact of the phenomenon; on the contrary, we are determined, we are necessitated to regard each phenomenon as *only partially known until we discover the causes* on which it depends for its existence. [280](#) Philosophic knowledge is thus, in its widest acceptance, the knowledge of effects as dependent on causes. Now what does this imply? In the first place, as every cause to which we can ascend is only an effect, it follows that it is the scope, that is, the aim, of philosophy to trace

225

up the series of effects and causes until we arrive at *causes which are not in themselves effects*," [281](#)--that is, to ultimate and final causes. And then, finally, "Philosophy, as the knowledge of effects in their causes, necessarily tends, not towards a plurality of ultimate or final causes, but towards *one* alone." [282](#)

Footnote 280: [\(return\)](#) Ibid., vol. i. p. 56.

Footnote 281: [\(return\)](#) "Lectures on Metaphysics," vol. i. p. 58.

Footnote 282: [\(return\)](#) Ibid., vol. i. p. 60.

2. *As to Qualities and Substance, or Phenomena and Reality.*--As phenomena appear only in conjunction, we are compelled, by the constitution of our nature, to think them conjoined in and by something; and as they are phenomena, we can not think them phenomena of nothing, but must regard them as properties or qualities of something. [283](#) Now that which manifests its qualities--in other words, that in which the appearing causes inhere, that to which they belong--is called their *subject*, or *substance*, or *substratum*. [284](#) The subject of one grand series of phenomena (as, *e.g.*, extension, solidity, figure, etc.) is called *matter*, or *material substance*. The subject of the other grand series of phenomena (as, *e.g.*, thought, feeling, volition, etc.) is termed *mind*, or *mental substance*. We may, therefore, lay it down as an undisputed truth that consciousness gives, as an ultimate fact, a primitive duality--a knowledge of the *ego* in relation and contrast to the *non-ego*, and a knowledge of the *non-ego* in relation and contrast to the *ego* [285](#) Natural Dualism thus establishes the existence of two worlds of *mind* and *matter* on the immediate knowledge we possess of both series of phenomena; whilst the Cosmothetic Idealists discredit the veracity of consciousness as to our immediate knowledge of material phenomena, and, consequently, our *immediate knowledge of the existence of matter*. [286](#)

Footnote 283: [\(return\)](#) Ibid., vol. i. p. 137.

Footnote 284: [\(return\)](#) Ibid., vol. i. p. 137.

Footnote 285: [\(return\)](#) Ibid., vol. i. p. 292.

Footnote 286: [\(return\)](#) Ibid., vol. i. pp. 292, 295.

226

The obvious doctrine of the above quotations is, that we have an immediate knowledge of the "*existence of matter*" as well as of "*the phenomena of matter*;" that is, we know "*substance*" as immediately and directly as we know "*qualities*." Phenomena are known only as inherent in substance; substance is known only as manifesting its qualities. We never know qualities without knowing substance, and we can never know substance without knowing qualities. Both are known in one concrete act; substance is known quite as much as quality; quality is known no more than substance. That we have a direct, immediate, presentative "face to face" knowledge of matter and mind in every act of consciousness is asserted again and again by Hamilton, in his "Philosophy of Perception." [287](#) In the course of the discussion he starts the question, "*Is the knowledge of mind and matter equally immediate?*" His answer to this question may be condensed in the following sentences. In regard to the immediate knowledge of *mind* there is no difficulty; it is admitted to be direct and immediate. The problem, therefore, exclusively regards the intuitive perception of the qualities of *matter*. Now, says Hamilton, "if we interrogate consciousness concerning the point in question, the response is categorical and clear. In the simplest act of perception I am conscious of *myself* as a perceiving *subject*, and of an external *reality* as the object perceived; and I am conscious of both existences in the same indivisible amount of intuition." [288](#) Again he says, "I have frequently asserted that in perception we are conscious of the external object, immediately and *in itself*." "If, then, the veracity of consciousness be unconditionally admitted--*if the intuitive knowledge of matter and mind*, and the consequent reality of their antithesis, be taken as truths," the doctrine of Natural Realism is established, and, "without any hypothesis or demonstration, the *reality of mind* and the *reality of matter*." [289](#)

Footnote 287: [\(return\)](#) Philosophy of Sir William Hamilton, part ii.

Footnote 288: [\(return\)](#) Ibid., p. 181.

Footnote 289: [\(return\)](#) Ibid., pp. 34, 182.

227

Now, after these explicit statements that we have an intuitive knowledge of matter and mind--a direct and immediate consciousness of self as a real, "self-subsisting entity," and a knowledge of "an external reality, immediately and *in itself*," it seems unaccountably strange that Hamilton should assert "*that all human knowledge, consequently all human philosophy, is only of the Relative or Phenomenal*;" [290](#) and that "*of existence absolutely and in itself we know nothing*." [291](#) Whilst teaching that the proper sphere and aim of philosophy is to trace secondary causes up to ultimate or first causes, and that it *necessarily tends* towards one First and Ultimate Cause, he at the same time asserts that "first causes do not lie within the reach of philosophy," [292](#) and that it can never attain to the knowledge of the First Cause. [293](#) "The Infinite God can not, by us, be comprehended, conceived, or thought." [294](#) God, as First Cause, as infinite, as unconditioned, as eternal, is to us absolutely "*The Unknown*." The science of Real Being--of Being *in se*--of self-subsisting entities, is declared to be impossible. All science is only of the phenomenal, the

conditioned, the relative. Ontology is a delusive dream. Thus, after pages of explanations and qualifications, of affirmations and denials, we find Hamilton virtually assuming the same position as Comte and Mill--*all human knowledge is necessarily confined to phenomena.*

Footnote 290: [\(return\)](#) "Lectures on Metaphysics," vol. i. p. 136.

Footnote 291: [\(return\)](#) Ibid., vol. i. p. 138.

Footnote 292: [\(return\)](#) Ibid., vol. i. p. 58.

Footnote 293: [\(return\)](#) Ibid., vol. i. p. 60.

Footnote 294: [\(return\)](#) Ibid., vol. ii. p. 375.

It has been supposed that the chief glory of Sir William Hamilton rested upon his able exposition and defense of the doctrine of Natural Realism. There are, however, indications in his writings that he regarded "the Philosophy of the Conditioned" as his grand achievement. The Law of the Conditioned had "not been generalized by any previous philosopher;" and, in laying down that law, he felt that he had made a new and important contribution to speculative thought.

The principles upon which this philosophy is based are:

1. *The Relativity of all Human Knowledge.*--Existence is not cognized absolutely and in itself, but only under special modes which are related to our faculties, and, in fact, determined by these faculties themselves. All knowledge, therefore, is *relative*--that is, it is of phenomena only, and of phenomena "under modifications determined by our own faculties." Now, as the Absolute is that which exists out of all relation either to phenomena or to our faculties of knowledge, it can not possibly be *known*.

2. *The Conditionality of all Thinking.*--Thought necessarily supposes conditions. "To think is to condition; and conditional limitation is the fundamental law of the possibility of thought. As the eagle can not out-soar the atmosphere in which he floats, and by which alone he is supported, so the mind can not transcend the sphere of limitation within and through which the possibility of thought is realized. Thought is only of the conditioned, because, as we have said, to think is to condition." ²⁹⁵ Now the Infinite is the unlimited, the unconditioned, and as such can not possibly be *thought*.

3. *The notion of the Infinite--the Absolute, as entertained by man, is a mere "negation of thought."*--By this Hamilton does not mean that the idea of the Infinite is a negative idea. "The Infinite and the Absolute are *only* the names of two counter *imbecilities* of the human mind" ²⁹⁶--that is, a mental inability to conceive an absolute limitation, or an infinite illimitation; an absolute commencement, or an infinite non-commencement. In other words, of the absolute and infinite we have no conception at all, and, consequently, no knowledge. ²⁹⁷

The grand law which Hamilton generalizes from the above is, "*that the conceivable is in every relation bounded by the inconceivable.*" Or, again, "The conditioned or the thinkable lies between two extremes or poles; and these extremes or poles are each of them unconditioned, each of them inconceivable, each of them exclusive or contradictory of the other." ²⁹⁸ This is the celebrated "Law of the Conditioned."

Footnote 295: [\(return\)](#) "Discussions," p. 21.

Footnote 296: [\(return\)](#) Ibid., p. 28.

Footnote 297: [\(return\)](#) "Lectures on Metaphysics," vol. ii. pp. 368, 373.

Footnote 298: [\(return\)](#) Ibid., vol. ii. p. 373.

In attempting a brief criticism of "the Philosophy of the Conditioned," we may commence by inquiring:

I. *What is the real import and significance of the doctrine "that all human knowledge is only of the relative or phenomenal?"*

Hamilton calls this "the great axiom" of philosophy. That we may distinctly comprehend its meaning, and understand its bearing on the subject under discussion, we must ascertain the sense in which he uses the words "*phenomenal*" and "*relative*." The importance of an exact terminology is fully appreciated by our author; and accordingly, in three Lectures (VIII., IX., X.), he has given a full explication of the terms most commonly employed in philosophic discussions. Here the word "*phenomenon*" is set down as the necessary "*correlative*" of the word "*subject*" or "*substance*." "These terms can not be explained apart, for each is correlative of the other, each can be comprehended only in and through its correlative. The term '*subject*' is used to denote the unknown (?) basis which lies under the various *phenomena* or properties of which we become aware, whether in our external or internal experience." ²⁹⁹ "The term '*relative*' is *opposed* to the term '*absolute*;' therefore, in saying that we know only the relative, I virtually assert that we know nothing absolutely, that is, *in and for itself, and without relation to us and our faculties.*" ³⁰⁰ Now, in the philosophy of Sir William Hamilton, "the absolute" is defined as "that which is aloof from relation"--"that which is out of all relation." ³⁰¹ The *absolute* can not, therefore, be

"*the correlative*" of the conditioned--can not stand in any relation to the phenomenal. The *subject*, however, is the necessary correlative of the phenomenal, and, consequently, the subject and the absolute are not identical. Furthermore, Hamilton tells us the subject *may be comprehended* in and through its correlative--the phenomenon; but the absolute, being aloof from all relation, can not be comprehended or conceived at all. "The subject" and "the absolute" are, therefore, not synonymous terms; and, if they are not synonymous, then their antithetical terms, "phenomenal" and "relative," can not be synonymous.

Footnote 299: [\(return\)](#) "Lectures on Metaphysics," vol. i. p. 148.

Footnote 300: [\(return\)](#) Ibid., vol. i. p. 137.

Footnote 301: [\(return\)](#) "Discussions," p. 21.

230

It is manifest, however, that Hamilton does employ these terms as synonymous, and this we apprehend is the first false step in his philosophy of the conditioned. "All our knowledge is of the relative *or* phenomenal." Throughout the whole of Lectures VIII. and IX., in which he explains the doctrine of the relativity of human knowledge, these terms are used as precisely analogous. Now, in opposition to this, we maintain that the relative is not always the phenomenal. A thing may be "in relation" and yet not be a phenomenon. "The subject or substance" may be, and really is, on the admission of Hamilton himself, *correlated* to the phenomenon. The ego, "the conscious *subject*" [302](#) as a "*self-subsisting entity*" is necessarily related to the phenomena of thought, feeling, etc.; but no one would repudiate the idea that the conscious subject is a mere phenomenon, or "series of phenomena," with more indignation than Hamilton. Notwithstanding the contradictory assertion, "that the *subject* is unknown," he still teaches, with equal positiveness, "that in every act of perception I am conscious of self, as a perceiving *subject*." And still more explicitly he says: "As clearly as I am conscious of existing, so clearly am I conscious, at every moment of my existence, that the conscious Ego is not itself a mere modification [a phenomenon], nor a series of modifications [phenomena], but that it is itself different from all its modifications, and a *self-subsisting entity*." [303](#) Again: "Thought is possible only in and through the consciousness of Self. The Self, the I, is recognized in every act of intelligence as the *subject* to which the act belongs. It is I that perceive, I that imagine, I that remember, etc.; these special modes are all only the phenomena of the I." [304](#) We are, therefore, conscious of the *subject* in the most immediate, and direct, and intuitive manner, and the subject of which we are conscious can not be "*unknown*." We regret that so distinguished a philosophy should deal in such palpable contradictions; but it is the inevitable consequence of violating that fundamental principle of philosophy on which Hamilton so frequently and earnestly insists, viz., "that the testimony of consciousness must be accepted in all its integrity".

231

Footnote 302: [\(return\)](#) Philosophy of Sir William Hamilton (edited by O.W. Wight), p. 181.

Footnote 303: [\(return\)](#) "Lectures on Metaphysics," vol. i. p. 373.

Footnote 304: [\(return\)](#) Ibid., vol. i. p. 166.

It is thus obvious that, with proper qualifications, we may admit *the relativity of human knowledge*, and yet at the same time reject the doctrine of Hamilton, *that all human knowledge is only of the phenomenal*.

"The relativity of human knowledge," like most other phrases into which the word "relative" enters, is vague, and admits of a variety of meanings. If by this phrase is meant "that we can not know objects except as related to our faculties, or as our faculties are related to them," we accept the statement, but regard it as a mere truism leading to no consequences, and hardly worth stating in words. It is simply another way of saying that, in order to an object's being known, it must come within the range of our intellectual vision, and that we can only know as much as we are capable of knowing. Or, if by this phrase is meant "that we can only know things by and through the phenomena they present," we admit this also, for we can no more know substances apart from their properties, than we can know qualities apart from the substances in which they inhere. Substances can be known only in and through their phenomena. Take away the properties, and the thing has no longer any existence. Eliminate extension, form, density, etc., from matter, and what have you left? "The thing in itself," apart from its qualities, is nothing. Or, again, if by the relativity of knowledge is meant "that all consciousness, all thought are relative," we accept this statement also. To conceive, to reflect, to know, is to deal with difference and relation; the relation of subject and object; the relation of objects among themselves; the relation of phenomena to reality, of becoming to being. The reason of man is unquestionably correlated to that which is beyond phenomena; it is able to apprehend the necessary relation between phenomena and being, extension and space, succession and time, event and cause, the finite and the infinite. We may thus admit the *relative character of human thought*, and at the same time deny that it is an ontological disqualification. [305](#)

232

It is not, however, in any of these precise forms that Hamilton holds the doctrine of the relativity of knowledge. He assumes a middle place between Reid and Kant, and endeavors to blend the subjective idealism of the latter with the realism of the former. "He identifies the *phenomenon* of the German with the *quality* of the British philosophy," [306](#) and asserts, as a regulative law of thought, that the quality implies the substance, and the phenomenon the noumenon, but makes the substratum or noumenon (the object in itself) unknown and unknowable. The "phenomenon"

of Kant was, however, something essentially different from the "quality" of Reid. In the philosophy of Kant, *phenomenon* means an object as we envisage or represent it to ourselves, in opposition to the *noumenon*, or a thing as it is in itself. The phenomenon is composed, in part, of subjective elements supplied by the mind itself; as regards intuition, the forms of space and time; as regards thought, the categories of Quantity, Quality, Relation, and Modality. To perceive a thing in itself would be to perceive it neither in space nor in time. To think a thing in itself would be not to think it under any of the categories. The phenomenal is thus the product of the inherent laws of our own constitution, and, as such, is the sum and limit of all our knowledge. [307](#)

Footnote 305: [\(return\)](#) Martineau's "Essays," p. 234.

Footnote 306: [\(return\)](#) M'Cosh's "Defense of Fundamental Truth," p. 106.

Footnote 307: [\(return\)](#) Mansel's "Lectures on the Philosophy of Kant," pp. 21, 22.

This, in its main features, is evidently the doctrine propounded by Hamilton. The special modes in which existence is cognizable" are presented to, and known by, the mind *under modifications determined by the faculties themselves.*" [308](#) This doctrine he illustrates by the following supposition: "Suppose the total object of consciousness in perception is=12; and suppose that the external reality contributes 6, the material sense 3, and the mind 3; this may enable you to form some rude conjecture of the nature of the object of perception." [309](#) The conclusion at which Hamilton arrives, therefore, is that things are not known to us as they exist, but simply as they appear, and as our minds are capable of perceiving them.

Footnote 308: [\(return\)](#) Hamilton's "Lectures on Metaphysics," vol. i. p. 148.

Footnote 309: [\(return\)](#) Hamilton's "Lectures on Metaphysics," vol. ii. p. 129; and also vol. i. p. 147.

Let us test the validity of this majestic deliverance. No man is justified in making this assertion unless, 1. He knows things as they exist; 2. He knows things not only as they exist but as they appear; 3. He is able to compare things as they exist with the same things as they appear. Now, inasmuch as Sir William Hamilton affirms we do not know things as they exist, but only as they appear, how can he know that there is any difference between things as they exist and as they appear? What is this "*thing in itself*" about which Hamilton has so much to say, and yet about which he professes to know nothing? We readily understand what is meant by the *thing*; it is the object as existing--a substance manifesting certain characteristic qualities. But what is meant by *in itself*? There can be no *in itself* besides or beyond the *thing*. If Hamilton means that "the thing itself" is the thing apart from all relation, and devoid of all properties or qualities, we do not acknowledge any such thing. A thing apart from all relation, and devoid of all qualities, is simply pure nothing, if such a solecism may be permitted. With such a definition of Being *in se*, the logic of Hegel is invincible, "Being and Nothing are identical."

And now, if "the thing in itself" be, as Hamilton says it is, absolutely *unknown*, how can he affirm or deny any thing in regard to it? By what right does he prejudge a hidden reality, and give or refuse its predicates; as, for example, that it is conditioned or unconditioned, in relation or aloof from relation, finite or infinite? Is it not plain that, in declaring a thing in its inmost nature or essence to be inscrutable, it is assumed to be partially *known*? And it is obvious, notwithstanding some unguarded expressions to the contrary, that Hamilton does regard "the thing in itself" as partially known. "The external reality" is, at least, six elements out of twelve in the "total object of consciousness." [310](#) The primary qualities of matter are known as in the things themselves; "they develop themselves with rigid necessity out of the simple datum of *substance occupying space.*" [311](#) "The Primary Qualities are apprehended as they are in bodies"--"they are the attributes of *body as body,*" and as such "are known immediately in themselves," [312](#) as well as mediately by their effects upon us. So that we not only know by direct consciousness certain properties of things as they exist in things themselves, but we can also deduce them in an *à priori* manner. "The bare notion of matter being given, the Primary Qualities may be deduced *à priori*; they being, in fact, only evolutions of the conditions which that notion necessarily implies." If, then, we know the qualities of things as "in the things themselves," "the things themselves" must also be, at least, partially known; and Hamilton can not consistently assert the relativity of *all* knowledge. Even if it be granted that our cognitions of objects are only in part dependent on the objects themselves, and in part on elements superadded by our organism, or by our minds, it can not warrant the assertion that all our knowledge, but only the part so added, is relative. "The admixture of the relative element not only does not take away the absolute character of the remainder, but does not even (if our author is right) prevent us from recognizing it. The confusion, according to him, is not inextricable. It is for us 'to analyze and distinguish what elements,' in an 'act of knowledge,' are contributed by the object, and what by the organs or by the mind." [313](#)

Footnote 311: [\(return\)](#) Philosophy of Sir Wm. Hamilton, p. 357.

Footnote 312: [\(return\)](#) *Ibid.*, pp. 377, 378.

Footnote 313: [\(return\)](#) Mill's "Examination of Hamilton's Philosophy," vol. i. p. 44.

Admitting the relative character of human thought as a psychological fact, Mr. Martineau has conclusively shown that this law, instead of visiting us with disability to transcend phenomena, *operates as a revelation of what exists beyond*. "The finite body cut out before our visual perception, or embraced by the hands, lies as an island in the emptiness around, and without comparative reference to this can not be represented: the same experience which gives us the definite object gives us also the infinite space; and both terms--the limited appearance and the unlimited ground--are apprehended with equal certitude and clearness, and furnished with names equally susceptible of distinct use in predication and reasoning. The transient successions, for instance, the strokes of a clock, which we count, present themselves to us as dotted out upon a line of permanent duration; of which, without them, we should have no apprehension, but which as their condition, is unreservedly known." [314](#)

"What we have said with regard to space and time applies equally to the case of Causation. Here, too, the finite offered to perception introduces to an Infinite supplied by thought. As a definite body reveals also the space around, and an interrupted succession exhibits the uniform time beneath, so does the passing phenomenon demand for itself a power beneath. The space, and time, and power, not being part of the thing perceived, but its conditions, are guaranteed to us, therefore, on the warrant, not of sense, but of intellect." [315](#)

"We conclude, then, on reviewing these examples of Space, and Time, and Causation, that ontological ideas introducing us to certain fixed entities belong no less to our knowledge than scientific ideas of phenomenal disposition and succession." [316](#) In these instances of relation between a phenomenon given in perception and an entity as a logical condition, the correlatives are on a perfect equality of intellectual validity, and the relative character of human thought is not an ontological disqualification, but a cognitive power.

Footnote 315: [\(return\)](#) *Ibid.*, p. 197.

Footnote 316: [\(return\)](#) *Ibid.*, p. 195.

There is a thread of fallacy running through the whole of Hamilton's reasonings, consequent upon a false definition of the Absolute at the outset. The Absolute is defined as *that which exists in and by itself, aloof from and out of all relation*. An absolute, as thus defined, does not and can not exist; it is a pure abstraction, and, in fact, a pure non-entity. "The Absolute expresses perfect independence both in being and in action, and is applicable to God as self-existent." [317](#) It may mean the absence of all *necessary* relation, but it does not mean the absence of *all* relation. If God can not *voluntarily* call a finite existence into being, and thus stand in the relation of cause, He is certainly under the severest limitation. But surely that is not a limit which substitutes choice for necessity. To be unable to know God out of all relation--that is, apart from his attributes, apart from his created universe, is not felt by us to be any privation at all. A God without attributes, and out of all relations, is for us no God at all. God as a being of unlimited perfection, as infinitely wise and good, as the unconditioned cause of all finite being, and, consequently, as voluntarily related to nature and humanity, we can and do know; this is the living and true God. The God of a false philosophy is not the true God; the pure abstractions of Hegel and Hamilton are negations, and not realities.

2. We proceed to consider the second fundamental principle of Hamilton's philosophy of the conditioned, viz., that "conditional limitation is the fundamental law of the possibility of thought," and that thought necessarily imposes conditions on its object.

"Thought," says Hamilton, "can not transcend consciousness: consciousness is only possible under the antithesis of a subject and an object known only in correlation, and *mutually limiting each other*" [318](#) Thought necessarily supposes conditions; "to think is simply to condition," that is, to predicate limits; and as the infinite is the unlimited, it can not be thought. The very attempt to think the infinite renders it finite; therefore there can be no infinite *in thought*, and, consequently, the infinite can not be known.

Footnote 317: [\(return\)](#) Calderwood's "Philosophy of the Infinite," p. 179.

Footnote 318: [\(return\)](#) "Discussions," p. 21.

If by "the infinite in thought" is here meant the infinite compassed or contained in thought, we readily grant that the finite can not contain the infinite; it is a simple truism which no one has ever been so foolish as to deny. Even Cousin is not so unwise as to assert the absolutely comprehensibility of God. "In order absolutely to comprehend the Infinite, it is necessary to have an infinite power of comprehension, and this is not granted to us." [319](#) A finite mind can not have "an infinite thought." But it by no means follows that, because we can not have infinite thought, we can have no clear and definite thought of or concerning the Infinite. We have a precise and definite idea of infinitude; we can define the idea; we can set it apart without danger of being confounded with another, and we can reason concerning it. There is nothing we more certainly and intuitively know than that space is infinite, and yet we can not comprehend or grasp within the compass of our thought the infinite space. We can not form an *image* of infinite space, can not traverse it in perception, or represent it by any combination of numbers; but we can have the *thought* of it as an idea of Reason, and can argue concerning it with precision and accuracy. [320](#)

Hamilton has an idea of the Infinite; he defines it; he reasons concerning it; he says "we must believe in the infinity of God." But how can he define the Infinite unless he possesses some knowledge, however limited, of the infinite Being? How can he believe in the infinity of God if he has no definite idea of infinitude? He can not reason about, can not affirm or deny any thing concerning, that of which he knows absolutely nothing.

Footnote 319: [\(return\)](#) "Lectures on History of Philosophy," vol. i. p. 104.

Footnote 320: [\(return\)](#) "To form an *image* of any infinitude--be it of time or space [or power]; to go mentally through it by successive steps of representation--is indeed impossible; not less so than to traverse it in our finite perception and experience. But to have the *thought* of it as an idea of the reason, not of the phantasy, and assign that thought a constituent place in valid beliefs and consistent reasonings, appears to us as not only possible, but inevitable."--Martineau's "Essays," p. 205.

238

The grand logical barrier which Hamilton perpetually interposes to all possible cognition of God *as infinite* is, that to think is to condition--to limit; and as the Infinite is the unconditioned, the unlimited, therefore "the Infinite can not be *thought*." We grant at once that all human thought is limited and finite, but, at the same time, we emphatically deny that the limitation of our thought imposes any conditions or limits upon the object of thought. No such affirmation can be consistently made, except on the Hegelian hypothesis that "Thought and Being are identical," and this is a maxim which Hamilton himself repudiates. Our thought does not create, neither does it impose conditions upon, any thing.

There is a lurking sophism in the whole phraseology of Hamilton in regard to this subject. He is perpetually talking about "thinking a thing"--"thinking the Infinite." Now we do not think a thing, but we think *of* or *concerning* a thing. We do not think a man, neither does our thought impose any conditions upon the man, so that he must be as our thought conceives or represents him; but our thought is of the man, concerning or about the man, and is only so far true and valid as it conforms to the objective reality. And so we do not "think the Infinite;" that is, our thought neither contains nor conditions the Infinite Being, but our thoughts are *about* the Infinite One; and if we do not think of Him as a being of infinite perfection, our thought is neither worthy, nor just, nor true. [321](#)

Footnote 321: [\(return\)](#) Calderwood's "Philosophy of the Infinite," pp. 255, 256.

But we are told the law of all thought and of all being is determination; consequently, negation of some quality or some potentiality; whereas the Infinite is "*the One and the All*" (τὸ Ἐν καὶ Πᾶν), [322](#) or, as Dr. Mansel, the disciple and annotator of Hamilton, affirms, "the sum of all reality," and "the sum of all possible modes of being." [323](#) The Infinite, as thus defined, must include in itself all being, and all modes of being, actual and possible, not even excepting evil. And this, let it be observed, Dr. Mansel has the hardihood to affirm. "If the Absolute and the Infinite is an object of human conception at all, this, and none other, is the conception required." [324](#) "The Infinite Whole," as thus defined, can not be thought, and therefore it is argued the Infinite God can not be known. Such a doctrine shocks our moral sense, and we shrink from the thought of an Infinite which includes evil. There is certainly a moral impropriety, if not a logical impossibility, in such a conception of God.

239

Footnote 322: [\(return\)](#) Hamilton's "Lectures on Metaphysics," Appendix, vol. ii. p. 531.

Footnote 323: [\(return\)](#) "Limits of Religious Thought," p. 76.

Footnote 324: [\(return\)](#) Ibid.

The fallacy of this reasoning consists in confounding a *supposed* Quantitative Infinite with *the* Qualitative Infinite--the totality of existence with the infinitely perfect One. "Qualitative infinity is a secondary predicate; that is, the attribute of an attribute, and is expressed by the adverb *infinitely* rather than the adjective *infinite*. For instance, it is a strict use of language to say, that space is infinite, but it is an elliptical use of language to say, God is infinite. Precision of language would require us to say, God is infinitely good, wise, and great; or God is good, and his goodness is infinite. The distinction may seem trivial, but it is based upon an important difference between the infinity of space and time on the one hand, and the infinity of God on the other. Neither philosophy nor theology can afford to disregard the difference. Quantitative Infinity is illimitation by *quantity*. Qualitative Infinity is illimitation by *degree*. Quantity and degree alike imply finitude, and are categories of the finite alone. The danger of arguing from the former kind of infinitude to the latter can not be overstated. God alone possesses Qualitative Infinity, which is strictly synonymous with *absolute perfection*; and the neglect of the distinction between this and Quantitative Infinity, leads irresistibly to pantheistic and materialistic notions. Spinozism is possible only by the elevation of 'infinite extension' to the dignity of a divine attribute. Dr. Samuel Clarke's identification of God's immensity with space has been shown by Martin to ultimate in Pantheism. From ratiocinations concerning the incomprehensibility of infinite space and time, Hamilton and Mansel pass at once to conclusions concerning the incomprehensibility of God. The inconsequence of all such arguments is absolute; and if philosophy tolerates the transference of spatial or temporal analogies to the nature of God, she must reconcile herself to the negation of his personality and spirituality." [325](#) An Infinite Being, quite remote from the notion of *quantity*, may and does exist; which, on the one hand, does not include finite existence, and, on the other hand, does not render the finite impossible to thought. Without contradiction they may coexist,

240

and be correlated.

The thought will have already suggested itself to the mind of the reader that for Hamilton to assert that the Infinite, as thus defined (the One and the All), is absolutely unknown, is certainly the greatest absurdity, for in that case nothing can be known. This Infinite must be at least partially known, or all human knowledge is reduced to zero. To the all-inclusive Infinite every thing affirmative belongs, not only to be, but to be known. To claim it for being, yet deny it to thought, is thus impossible. The Infinite, which includes all real existence, is certainly possible to cognition.

The whole argument as regards the conditioning nature of all thought is condensed into four words by Spinoza--"*Omnis determinatio est negatio*;" all determination is negation. Nothing can be more arbitrary or more fallacious than this principle. It arises from the confusion of two things essentially different--*the limits of a being, and its determinate and distinguishing characteristics*. The limit of a being is its imperfection; the determination of a being is its perfection. The less a thing is determined, the more it sinks in the scale of being; the most determinate being is the most perfect being. "In this sense God is the only being absolutely determined. For there must be something indetermined in all finite beings, since they have all imperfect powers which tend towards their development after an indefinite manner. God alone, the complete Being in whom all powers are actualized, escapes by His own perfection from all progress, and development, and indetermination." [326](#)

Footnote 325: [\(return\)](#) North American Review, October, 1864, article, "The Conditioned and the Unconditioned," pp. 422, 423. See also Young's "Province of Reason," p. 72; and Calderwood's "Philosophy of the Infinite," p. 183.

Footnote 326: [\(return\)](#) Saisset, "Modern Pantheism," vol. ii. p. 71.

241

All real being must be determined; only pure Nothing can be undetermined. *Determination* is, however, one thing; and *limitation* is essentially another thing. "Even space and time, though cognized solely by negative characteristics, are determined in so far as differentiated from the existences they contain; but this differentiation involves no limitation of their infinity." If all distinction is determination, and if all determination is negation, that is (as here used), limitation, then the infinite, as distinguished from the finite, loses its own infinity, and either becomes identical with the finite, or else vanishes into pure nothing. If Hamilton will persist in affirming that all determination is limitation, he has no other alternatives but to accept the doctrine of Absolute Nihilism, or of Absolute Identity. If the Absolute is the indeterminate--that is, no attributes, no consciousness, no relations--it is pure non-being. If the Infinite is "the One and All," then there is but one substance, one absolute entity.

Herbert Spencer professes to be carrying out, a step farther, the doctrine put into shape by Hamilton and Mansel, viz., "the philosophy of the Unconditioned." In other words, he carries that doctrine forward to its rigidly logical consequences, and utters the last word which Hamilton and Mansel dare not utter--"Apprehensible by us there is no God." The Ultimate Reality is absolutely unknown; it can not be apprehended by the human intellect, and it can not present itself to the intellect at all. This Ultimate Reality can not be *intelligent*, because to think is to condition, and the Absolute is the unconditioned; can not be *conscious*, because all consciousness is of plurality and difference, and the Absolute is one; can not be *personal*, because personality is determination or limitation, and the Infinite is the illimitable. It is "audacious," "irreverent," "impious," to apply any of these predicates to it; to regard it as Mind, or speak of it as Righteous. [327](#) The ultimate goal of the philosophy of the Unconditioned is a purely subjective Atheism.

242

And yet of this Primary Existence--inscrutable, and absolutely unknown--Spencer knows something; knows as much as he pleases to know. He knows that this "ultimate of ultimates is *Force*," [328](#) an "*Omnipresent Power*," [329](#) is "*One*" and "*Eternal*." [330](#) He knows also that it can not be intelligent, self-conscious, and a personality. [331](#) This is a great deal to affirm and deny of an existence "absolutely unknown." May we not be permitted to affirm of this hidden and unknown something that it is *conscious Mind*, especially as Mind is admitted to be the only analogon of Power; and "the *force* by which we produce change, and which serves to symbolize the causes of changes in general, is the final disclosure of analysis." [332](#)

Footnote 332: [\(return\)](#) Ibid., p. 235.

3. We advance to the review of the third fundamental principle of Hamilton's philosophy of the Unconditioned, viz., that the terms infinite and absolute are names for a "mere negation of thought"--a "mental impotence" to think, or, in other words, the absence of all the conditions under which thought is possible.

This principle is based upon a distinction between "positive" and "negative" thought, which is made with an air of wonderful precision and accuracy in "the Alphabet of Human Thought." [333](#) "Thinking is *positive* when existence is predicated of an object." "Thinking is *negative* when existence is not attributed to an object." "Negative thinking," therefore, is not the thinking of an object as devoid of this or that particular attribute, but as devoid of all attributes, and thus of all existence; that is, it is "the negation of all thought"--*nothing*. "When we think a thing, that is done by conceiving it as possessed of certain modes of being or qualities, and the sum of these qualities constitutes its concept or notion." "When we perform an act of negative thought, this is done by thinking *something* as *not* existing in this or that determinate mode; and when we think it as existing in no determinate mode, we cease to think at all--it becomes a *nothing*." [334](#) Now the Infinite, according to Hamilton, can not be thought in any determinate mode; therefore we do not think it at all, and therefore it is for us "a logical Non-entity."

Footnote 333: [\(return\)](#) "Discussions," Appendix I. p. 567.

Footnote 334: [\(return\)](#) "Logic," pp. 54, 55.

It is barely conceivable that Hamilton might imagine himself possessed of this singular power of "performing an act of negative thought"--that is, of thinking and not thinking at once, or of "thinking something" that "becomes nothing;" we are not conscious of any such power. To think without an object of thought, or to think of something without any qualities, or to think "something" which in the act of thought melts away into "nothing," is an absurdity and a contradiction. We can not think about nothing. All thought must have an object, and every object must have some predicate. Even space has some predicates--as receptivity, unity, and infinity. Thought can only be realized by thinking something existing, and existing in a determinate manner; and when we cease to think something having predicates, we cease to think at all. This is emphatically asserted by Hamilton himself. [335](#) "Negative thinking" is, therefore, a meaningless phrase, a contradiction in terms; it is no thought at all. We are cautioned, however, against regarding "the negation of thought" as "a negation of all mental ability." It is, we are told, "an attempt to think, and a failure in the attempt." An attempt to think about *what*? Surely it must be about some object, and an object which is *known* by some sign, else there can be no thought. Let any one make the attempt to think without something to think about, and he will find that both the process and the result are blank nothingness. All thought, therefore, as Calderwood has amply shown, is, must be, *positive*. "Thought is nothing else than the comparison of objects known; and as knowledge is always positive, so must our thought be. All knowledge implies an object *known*; and so all thought involves an object about which we think, and must, therefore, be positive--that is, it must embrace within itself the conception of certain qualities as belonging to the object." [336](#)

Footnote 335: [\(return\)](#) "Logic," p. 55.

Footnote 336: [\(return\)](#) "Philosophy of the Infinite," p. 272.

The conclusion of Hamilton's reasoning in regard to "negative thinking" is, that we can form no notion of the Infinite Being. We have no positive idea of such a Being. We can think of him only by "the thinking away of every characteristic" which can be conceived, and thus "ceasing to think at all." We can only form a "negative concept," which, we are told, "is in fact no concept at all." We can form only a "negative notion," which, we are informed, "is only the negation of a notion." This is the impenetrable abyss of total gloom and emptiness into which the philosophy of the conditions leads us at last. [337](#)

Footnote 337: [\(return\)](#) Whilst Spencer accepts the general doctrine of Hamilton, that the Ultimate Reality is inscrutable, he argues earnestly against his assertion that the Absolute is a "mere negation of thought."

"Every one of the arguments by which the relativity of our knowledge is demonstrated distinctly postulates the *positive existence* of something beyond the relative. To say we can not know the Absolute is, by implication, to affirm there *is* an Absolute. In the very denial of our power to learn *what* the Absolute is, there lies hidden the assumption *that* it is; and the making of this assumption proves that the Absolute has been present to the mind, not as nothing, but as *something*. And so with every step in the reasoning by which the doctrine is upheld, the Noumenon, everywhere named as the antithesis of the Phenomenon, is throughout thought as actuality. It is rigorously impossible to conceive that our knowledge is a knowledge of appearances only, without, at the same time, conceiving a Reality of which these are appearances, for appearances without reality are unthinkable.

"Truly to represent or realize in thought any one of the propositions of which the argument consists, the unconditioned must be represented as *positive*, and not negative. How, then, can it be a legitimate conclusion from the argument that our consciousness of it is negative? An argument, the very construction of which assigns to a certain term a certain meaning, but which ends in showing that this term has no meaning, is simply an elaborate suicide. Clearly, then, the very demonstration that a definite consciousness [comprehension] of the Absolute is impossible, unavoidably presupposes an indefinite consciousness of it [an apprehension]."--
"First Principles," p. 88.

Still we have the word *infinite*, and we have *the notion* which the word expresses. This, at least, is spared to us by Sir William Hamilton. He who says we have no such notion asks the question *how we have it?* Here it may be asked, how have we, then, the word infinite? How have we the

notion which this word expresses? The answer to this question is contained in the distinction of positive and negative thought.

245

We have a positive concept of a thing when we think of it by the qualities of which it is the complement. But as the attribution of qualities is an affirmation, as affirmation and negation are relatives, and as relatives *are known only in and through each other*, we can not, therefore, have a *consciousness* of the affirmation of any quality without having, at the same time, the *correlative consciousness* of its negation. Now the one consciousness is a positive, the other consciousness is a negative notion; and as all language is the reflex of thought, the positive and negative notions are expressed by positive and negative names. Thus it is with the Infinite. [338](#) Now let us carefully scrutinize the above deliverance. We are told that "relatives are known only in and through each other;" that is, such relatives as *finite* and *infinite* are known necessarily in the same act of thought. The knowledge of one is as necessary as the knowledge of the other. We can not have a consciousness of the one without the correlative consciousness of the other. "For," says Hamilton, "a relation is, in truth, a thought, one and indivisible; and while the thinking a relation *necessarily involves the thought of its two terms*," so it is, with equal necessity, itself involved in the thought of either." If, then, we are *conscious* of the two terms of the relation in the same "one and indivisible" mental act--if we can not have "the consciousness of the one without the consciousness of the other"--if space and position, time and succession, substance and quality, infinite and finite, are given to us in pairs, then 'the *knowledge of one is as necessary as the knowledge of the other*;' and they must stand or fall together. The finite is known no more positively than the infinite; the infinite is known as positively as the finite. The one can not be taken and the other left. The infinite, discharged from all relation to the finite, could never come into apprehension; and the finite, discharged of all relation to the infinite, is incognizable too. "There can be no objection to call the one 'positive' and the other 'negative,' provided it be understood that *each* is so with regard to the other, and that the relation is convertible; the finite, for instance, being the negative of the infinite, not less than the infinite of the finite." [339](#)

246

Footnote 338: [\(return\)](#) *Logic*, p. 73.

Footnote 339: [\(return\)](#) Martineau's "Essays," p. 237.

To say that the finite is comprehensible in and by itself, and the infinite is incomprehensible in and by itself, is to make an assertion utterly at variance both with psychology and logic. The finite is no more comprehensible *in itself* than the infinite. "Relatives are known only in and through each other." [340](#) "The conception of one term of a relation necessarily implies that of the other, it being the very nature of a relative to be thinkable only through the conjunct thought of its correlative." We comprehend nothing more completely than the infinite; "for the idea of illimitation is as clear, precise, and intelligible as the idea of limitability, which is its basis. The propositions "A is X" "A is not X," are equally comprehensible; the conceptions A and X are in both cases positive data of experience, while the affirmation and negation consist solely in the copulative or disjunctive nature of the predication. Consequently, if X is comprehensible, so is not-X; if the finite is comprehensible, so is the infinite." [341](#)

Whilst denying that the infinite can by us be *known*, Hamilton tells us he is "far from denying that it is, must, and ought to be *believed*." [342](#) "We must believe in the infinity of God." "Faith--belief--is the organ by which we apprehend what is beyond knowledge." [343](#) We heartily assent to the doctrine that the Infinite Being is the object of faith, but we earnestly deny that the Infinite Being is not an object of knowledge. May not knowledge be grounded upon faith, and does not faith imply knowledge? Can we not obtain knowledge through faith? Is not the belief in the Infinite Being implied in our knowledge of finite existence? If so, then God as the infinite and perfect, God as the unconditioned Cause, is not absolutely "the unknown."

247

A full exposition of Sir William Hamilton's views of *Faith* in its connection with Philosophy would have been deeply interesting to us, and it would have filled up a gap in the interpretation of his system. The question naturally presents itself, how would he have discriminated between faith and knowledge, so as to assign to each its province? If our notion of the Infinite Being rests entirely upon faith, then upon what ultimate ground does faith itself rest? On the authority of Scripture, of the Church, or of reason? The only explicit statement of his view which has fallen in our way is a note in his edition of Reid. [344](#) "We *know* what rests upon reason; we *believe* what rests upon authority. But reason itself must rest at last upon authority; for the original data of reason do not rest upon reason, but are necessarily accepted by reason on the authority of what is beyond itself. These data are, therefore, in rigid propriety, Beliefs or Trusts. Thus it is that, in the last resort, we must, per force, philosophically admit that belief is the primary condition of reason, and not reason the ultimate ground of belief."

Footnote 344: [\(return\)](#) P. 760; also Philosophy of Sir William Hamilton, p. 61.

Here we have, first, an attempted distinction between faith and knowledge. "We *know* what rests upon reason;" that is, whatever we obtain by deduction or induction, whatever is capable of explication and proof, is *knowledge*. "We *believe* what rests upon authority;" that is, whatever we obtain by intellectual intuition or pure apperception, and is incapable of explication and of proof, is "a *belief or trust*." These instinctive beliefs, which are, as it were, the first principles upon which all knowledge rests, are, however, indiscriminately called by Hamilton "cognitions," "beliefs," "judgments." He declares most explicitly "that the principles of our knowledge must themselves be *knowledges*;" [345](#) and these first principles, which are "the primary condition of reason," are elsewhere called "*à priori cognitions*;" also "native, pure, or transcendental *knowledge*," in contradistinction to "*à posteriori cognitions*," or that knowledge which is obtained in the exercise of reason. [346](#) All this confusion results from an attempt to put asunder what God has joined together. As Clemens of Alexandria has said, "Neither is faith without knowledge, nor knowledge without faith." All faith implies knowledge, and all knowledge implies faith. They are mingled in the one operation of the human mind, by which we apprehend first principles or ultimate truths. These have their light and dark side, as Hamilton has remarked. They afford enough light to show *that* they are and must be, and thus communicate knowledge; they furnish no light to show *how* they are and *why* they are, and under that aspect demand the exercise of faith. There must, therefore, first be something *known* before there can be any *faith*. [347](#)

Footnote 345: [\(return\)](#) Ibid., p. 69.

Footnote 346: [\(return\)](#) "Lectures on Metaphysics," vol. ii. p. 26.

Footnote 347: [\(return\)](#) M'Cosh, "Intuitions," pp. 197, 198; Calderwood, "Philosophy of the Infinite," p. 24.

And now we seem to have penetrated to the centre of Hamilton's philosophy, and the vital point may be touched by one crucial question, *Upon what ultimate ground does faith itself rest?* Hamilton says, "we believe what rests upon *authority*." But what is that authority? I. It is not the authority of Divine Revelation, because beliefs are called "instinctive," "native," "innate," "common," "catholic," [348](#) all which terms seem to indicate that this "authority" lies within the sphere of the human mind; at any rate, this faith does not rest on the authority of Scripture. Neither is it the authority of Reason. "The original data of reason [the first principles of knowledge] do not rest upon the authority of reason, but *on the authority of what is beyond itself*." The question thus recurs, what is this ultimate ground beyond reason upon which faith rests? Does it rest upon any thing, or nothing?

Footnote 348: [\(return\)](#) Philosophy of Sir Wm. Hamilton, pp. 68, 69.

The answer to this question is given in the so-called "Law of the Conditioned," which is thus laid down: "*All that is conceivable in thought lies between two extremes, which, as contradictory of each other, can not both be true, but of which, as mutual contradictories, one must*." For example, we conceive *space*, but we can not conceive it as absolutely bounded or infinitely unbounded. We can conceive *time*, but we can not conceive it as having an absolute commencement or an infinite non-commencement. We can conceive of *degree*, but we can not conceive it as absolutely limited or as infinitely unlimited. We can conceive of *existence*, but not as an absolute part or an infinite whole. Therefore, "the Conditioned is that which is alone conceivable or cogitable; the Unconditioned, that which is inconceivable or incogitable. The conditioned, or the thinkable, lies between two extremes or poles; and each of these extremes or poles are unconditioned, each of them inconceivable, each of them exclusive or contradictory of the other. Of these two repugnant opposites, the one is that of Unconditional or Absolute Limitation; the other that of Unconditional or Infinite Illimitation, or, more simply, the Absolute and the Infinite; the term *absolute* expressing that which is finished or complete, the term *infinite* that which can not be terminated or concluded." [349](#)

"The conditioned is the mean between two extremes--two inconditionates, exclusive of each other, neither of which *can be conceived as possible*, but of which, on the principle of contradiction, and excluded middle, *one must be admitted as necessary*. We are thus warned from recognizing the domain of our knowledge as necessarily co-extensive with the horizon of our faith. And by a *wonderful revelation*, we are thus, in the very consciousness of our inability to conceive aught above the relative and the finite, *inspired with a belief in* the existence of something unconditioned beyond the sphere of all comprehensible reality." [350](#) Here, then, we have found the ultimate ground of our faith in the Infinite God. It is built upon a "mental imbecility," and buttressed up by "contradictions!" [351](#)

Footnote 349: [\(return\)](#) "Lectures on Metaphysics," vol. ii. pp. 368, 374. With Hamilton, the Unconditioned is a genus, of which the Infinite and Absolute are species.

Footnote 350: [\(return\)](#) "Discussions on Philosophy," p. 22.

Footnote 351: [\(return\)](#) The warmest admirers of Sir William Hamilton hesitate to apply the doctrine of the unconditioned to Cause and Free-will. See "Mansel's Prolegom.," Note C, p. 265.

Such a faith, however, is built upon the clouds, and the whole structure of this philosophy is "a castle in the air"--an attempt to organize Nescience into Science, and evoke something out of nothing. To pretend to believe in that respecting which I can form no notion is in reality not to believe at all. The nature which compels me to believe in the Infinite must supply me some object

upon which my belief can take hold. We can not believe in contradictions. Our faith must be a rational belief--a faith in the ultimate harmony and unity of all truth, in the veracity and integrity of human reason as the organ of truth; and, above all, a faith in the veracity of God, who is the author and illuminator of our mental constitution. "We can not suppose that we are created capable of intelligence in order to be made victims of delusion--that God is a deceiver, and the root of our nature a lie." [352](#) We close our review of Hamilton by remarking:

Footnote 352: [\(return\)](#) Philosophy of Sir William Hamilton, p. 21.

1. "The Law of the Conditioned," as enounced by Hamilton, is contradictory. It predicates contradiction of two extremes, which are asserted to be equally incomprehensible and incognizable. If they are utterly incognizable, how does Hamilton *know* that they are contradictory? The mutual *relation* of two objects is said to be known, but the objects themselves are absolutely unknown. But how can we know any relation except by an act of comparison, and how can we compare two objects so as to affirm their relation, if the objects are absolutely unknown? "The Infinite is defined as Unconditional Illimitation; the Absolute as Conditional Limitation. Yet almost in the same breath we are told that each is utterly inconceivable, each the mere negation of thought. On the one hand, we are told they *differ*; on the other, we are told they do *not differ*. Now which does Hamilton mean? If he insist upon the definitions as yielding a ground of conceivable difference, he must abandon the inconceivability; but if he insist upon the inconceivability, he must abandon the definition as sheer verbiage, devoid of all conceivable meaning. There is no possible escape from this dilemma. Further, two negations can never contradict; for contradiction is the asserting and the denying of the same proposition; two denials can not conflict. If Illimitation is negative, Limitation, its contradictory, is positive, whether conditional or unconditional. In brief, if the Infinite and Absolute are wholly incomprehensible, they are not distinguishable; but if they are distinguishable, they are not wholly incomprehensible. If they are indistinguishable, they are to us identical; and identity precludes contradiction. But if they are distinguishable, distinction is made by difference, which involves positive cognition; hence one, at least, must be conceivable. It follows, therefore, by inexorable logic, that either the contradiction or the inconceivability must be abandoned." [353](#)

251

Footnote 353: [\(return\)](#) North American Review, October, 1864, pp. 407, 408.

2. "The Law of the Conditioned," as a ground of faith in the Infinite Being, is utterly void, meaningless, and ineffectual. Let us re-state it in Hamilton's own words: "The conditioned is the *mean* between two extremes, two inconditionates exclusive of each other, neither of which *can be conceived as possible*, but of which, on the principle of Contradiction and Excluded Middle, *one must be admitted as necessary*." It is scarcely needful to explain to the intelligent reader the above logical principles; that they may, however, be clearly before the mind in this connection, we state that the principle of Contradiction is this: "A thing can not at the same time be and not be; *A is, A is not*, are propositions which can not both be true at once." The principle of Excluded Middle is this: "A thing either is or is not--*A either is or is not B*; there is no *medium*." [354](#) Now, to mention the law of Excluded Middle and two contradictories with a *mean* between them, in the same sentence, is really astounding. "If the two contradictory extremes are equally incogitable, yet include a cogitable mean, why insist upon the necessity of accepting either extreme? This necessity of accepting one of the contradictories is wholly based upon the supposed impossibility of a *mean*; if a mean exists, *that* may be true, and both contradictories together false. But if a mean between two contradictories be both impossible and absurd, Hamilton's 'conditioned' entirely vanishes." [355](#) If both contradictories are equally unknown and equally unthinkable, we can not discover *why*, on his principles, we are bound to believe *either*.

252

Footnote 354: [\(return\)](#) Hamilton's "Logic," pp. 58, 59; "Metaphysics," vol. ii. p. 368.

Footnote 355: [\(return\)](#) North British Review, October, 1864, pp. 415, 416.

3. The whole of this confusion in thought and expression results from the habit of confounding the sensuous imagination with the non-sensuous reason, and the consequent co-ordination of an imageable conception with an abstract idea. The objects of sense and the sensuous imagination may be characterized as extension, limitation, figure, position, etc.; the objects of the non-sensuous reason may be characterized as universality, eternity, infinity. I can form an *image* of an extended and figured object, but I can not form an *image* of space, time, or God; neither, indeed, can I form an image of Goodness, Justice, or Truth. But I can have a clear and precise idea of space, and time, and God, as I can of Justice, Goodness, and Truth. There are many things which I can most surely *know* that I can not possibly *comprehend*, if to comprehend is to form a mental image of a thing. There is nothing which I more certainly know than that space is infinite, and eternity unbeginning and endless; but I can not comprehend the infinity of space or the illimitability of eternity. I know that God is, that he is a being of infinite perfection, but I can not throw my thoughts around and comprehend the infinity of God.

(iv.) We come, lastly, to consider the position of the *Dogmatic Theologians*. [356](#) In their zeal to demonstrate the necessity of Divine Revelation, and to vindicate for it the honor of supplying to us all our knowledge of God, they assail every fundamental principle of reason, often by the very weapons which are supplied by an Atheistical philosophy. As a succinct presentation of the views of this school, we select the "*Theological Institutes*" of R. Watson.

253

Footnote 356: [\(return\)](#) Ellis, Leland, Locke, and Horsley, whose writings are extensively

1st. The invalidity of "*the principle of causality*" is asserted by this author. "We allow that the argument which proves that the *effects* with which we are surrounded have been *caused*, and thus leads us up through a chain of subordinate causes to one First Cause, has a simplicity, an obviousness, and a force which, when we are previously furnished with the idea of God, makes it, at first sight, difficult to conceive that men, under any degree of cultivation, should be inadequate to it; yet if ever the human mind commenced such an inquiry at all, it is highly probable that it would rest in the notion of an *eternal succession of causes and effects*, rather than acquire the ideas of creation, in the proper sense, and of a Supreme Creator." [357](#) "We feel that our reason rests with full satisfaction in the doctrine that all things are created by one eternal and self-existent Being; but the Greek philosophers held that matter was eternally co-existent with God. This was the opinion of Plato, who has been called the Moses of philosophy." [358](#)

For a defense of "the principle of causality" we must refer the reader to our remarks on the philosophy of Comte. We shall now only remark on one or two peculiarities in the above statement which betray an utter misapprehension of the nature of the argument. We need scarcely direct attention to the unfortunate and, indeed, absurd phrase, "an eternal succession of causes and effects." An "eternal succession" is a *contradictio in adjecto*, and as such inconceivable and unthinkable. No human mind can "rest" in any such thing, because an eternal succession is no rest at all. All "succession" is finite and temporal, capable of numeration, and therefore can not be eternal. [359](#) Again, in attaining the conception of a First Cause the human mind does not pass up "through a chain of subordinate causes," either definite or indefinite, "to one First Cause."

Footnote 357: [\(return\)](#) Watson's "Institutes of Theology," vol. i. p. 273.

Footnote 358: [\(return\)](#) Id., ib., vol. i. p. 21.

Footnote 359: [\(return\)](#) See *ante*, pp. 181, 182, ch. v.

254

Let us re-state the principle of causality as a universal and necessary law of thought. "*All phenomena present themselves to us as the expression of POWER*, and refer us to a causal ground whence they issue." That "power" is intuitively and spontaneously apprehended by the human mind as Supreme and Ultimate--"the causal ground" is a personal God. All the phenomena of nature present themselves to us as "effects," and we know nothing of "subordinate causes" except as modes of the Divine Efficiency. [360](#) The principle of causality compels us to think causation behind nature, and under causation to think of Volition. "Other forces we have no sort of ground for believing; or, except by artifices of abstraction, even power of conceiving. The dynamic idea is either this or nothing; and the logical alternative assuredly is that nature is either a mere Time-march of phenomena or an expression of Mind." [361](#) The true doctrine of philosophy, of science, and of revelation is not simply that God did create "in the beginning," but that he still creates. All the operations of Nature are the operations of the Divine Mind. "Thou takest away their breath, they die, and return to their dust. Thou sendest forth thy spirit, they are created; and thou renewest the face of the earth." [362](#)

Footnote 360: [\(return\)](#) The modern doctrine of the Correlation and Homogeneity of all Forces clearly proves that they are not many, but *one*--"a dynamic self-identity masked by transmigration."--Martineau's "Essays," pp. 134-144.

Footnote 361: [\(return\)](#) Martineau's "Essays," pp. 140, 141.

Footnote 362: [\(return\)](#) Psalm civ.

The assertion that Plato taught "the eternity of matter," and that consequently he did not arrive at the idea of a Supreme and Ultimate Cause, is incapable of proof. The term ὕλη = matter does not occur in the writings of Plato, or, indeed, of any of his predecessors, and is peculiarly Aristotelian. The ground of the world of sense is called by Plato "the receptacle" (ὑποδοχή), "the nurse" (τιθήνη) of all that is produced, and was apparently identified, in his mind, with *pure space*--a logical rather than a physical entity--the mere negative condition and medium of Divine manifestation. He never regards it as a "cause," or ascribes to it any efficiency. We grant that he places this very indefinite something (ὁποιοῦν τι) out of the sphere of temporal origination; but it must be borne in mind that he speaks of "creation in eternity" as well as of "creation in time;" and of time itself, though created, as "an eternal image of the generating Father." [363](#) This one thing, at any rate, can not be denied, that Plato recognizes creation in its fullest sense as the act of God.

255

The admission that something has always existed besides the Deity, as a mere logical condition of the exercise of divine power (*e.g.*, space), would not invalidate the argument for the existence of God. The proof of the Divine Existence, as Chalmers has shown, does not rest on the existence of matter, but on the orderly arrangement of matter; and the grand question of Theism is not whether the *matter of the world*, but whether the *present order of the world* had a commencement. [364](#)

2d. Doubt is cast by our author upon the validity of "*the principle of the Unconditioned or the Infinite*." "Supposing it were conceded that some faint glimmering of this great truth [the

existence of a First Cause] might, by induction, have been discovered by contemplative minds, by what means could they have *demonstrated* to themselves that he is eternal, self-existent, immortal, and independent?" [365](#) "Between things visible and invisible, time and eternity, beings finite and beings infinite, objects of sense and objects of faith, *the connection is not perceptible* to human observation. Though we push our researches, therefore, to the extreme point whither the light of nature can carry us, they will in the end be abruptly terminated, and we must stop short at an immeasurable distance between the creature and the Creator." [366](#)

Footnote 363: [\(return\)](#) Plato, "Timæus," § xiv.

Footnote 364: [\(return\)](#) Chalmers's "Natural Theology," bk. i. ch. v.; also Mahan's "Natural Theology," pp. 21-23.

Footnote 365: [\(return\)](#) Watson's "Institutes of Theol.," vol. i. p. 274.

Footnote 366: [\(return\)](#) Id., ib., vol. i. p. 273.

256

To this assertion that the connection of things visible and things invisible, finite and infinite, objects of sense and objects of faith, is utterly imperceptible to human thought, we might reply by quoting the words of that Sacred Book whose supreme authority our author is seeking, by this argument, to establish. "The *invisible* things of God, even his eternal power and god-head, from the creation, are clearly *seen*, being *understood by the things which are made*." We may also point to the fact that in every age and in every land the human mind has spontaneously and instinctively recognized the existence of an invisible Power and Presence pervading nature and controlling the destinies of man, and that religious worship--prayer, and praise, and sacrifice--offered to that unseen yet omnipresent Power is an universal fact of human nature. The recognition of an *immediate* and a *necessary* "connection" between the visible and the invisible, the objects of sense and the objects of faith, is one of the most obvious facts of consciousness--of universal consciousness as revealed in history, and of individual consciousness as developed in every rational mind.

That this connection is "not perceptible to human observation," if by this our author means "not perceptible to sense," we readily admit. No one ever asserted it was perceptible to human observation. We say that this connection is perceptible to human *reason*, and is revealed in every attempt to think about, and seek an explanation of, the phenomenal world. The Phenomenal and the Real, Genesis and Being, Space and Extension, Succession and Duration, Time and Eternity, the Finite and the Infinite, are correlatives which are given in one and the same indivisible act of thought. "The conception of one term of a relation necessarily implies that of the other; it being the very nature of a correlative to be thinkable only through the conjunct thought of its correlative; for a relation is, in truth, a thought one and indivisible; and whilst the thinking of one relation necessarily involves the thought of its two terms, so it is, with equal necessity, itself involved in the thought of either." [367](#) Finite, dependent, contingent, temporal existence, therefore, necessarily supposes infinite, self-existent, independent, eternal Being; the Conditioned and Relative implies the Unconditioned and Absolute--one is known only in and through the other. But inasmuch as the unconditioned is cognized solely *à priori*, and the conditioned solely *à posteriori*, the recognition by the human mind of their necessary correlation becomes the bridge whereby the chasm between the subjective and the objective may be spanned, and whereby Thought may be brought face to face with Existence.

257

Footnote 367: [\(return\)](#) Hamilton's "Metaphysics," vol. ii. pp. 536, 537.

The reverence which, from boyhood, we have entertained for the distinguished author of the "Institutes" restrains us from speaking in adequate terms of reprobation of the statement that "the *First Cause*" may be known, and yet not conceived "as eternal, self-existent, immortal, and independent". Surely that which is the ground and reason of all existence must have the ground and reason of its own existence in itself. That which is *first* in the order of existence, and in the logical order of thought, can have nothing prior to itself. If the supposed First Cause is not necessarily self-existent and independent, it is not the *first*; if it has a dependent existence, there must be a prior being on which it depends. If the First Cause is not eternal, then prior to this Ultimate Cause there was nothingness and vacuity, and pure nothing, by its own act, became something. But "*Ex nihilo nihilo*" is a universal law of thought. To ask the question whether the First Cause be self-existent and eternal, is, in effect, to ask the question "who made God?" and this is not the question of an adult theologian, but of a little child. Surely Mr. Watson must have penned the above passage without any reflection on its real import [368](#).

Footnote 368: [\(return\)](#) In an article on "the Impending Revolution in Anglo-Saxon Theology" Methodist Quarterly Review, (July, 1863), Dr. Warren seems to take it for granted that the "aiteological" and "teleological" arguments for the existence of God are utterly invalidated by the Dynamical theory of matter. "Once admit that *real power* can and does reside in matter, and all these reasonings fail. If inherent forces of matter are competent to the production of all the innumerable miracles of movement in the natural world, what is there in the natural world which they can not produce. If all *the exertions of power* in the universe can be accounted for without resort to something back of, and superior to, nature, what is there which can force the mind to such a resort?" (p. 463). "Having granted that *power*, or *self-activity*, is a natural attribute of all matter, what right have we to deny it *intelligence*?" (p. 465). "*Self-moving matter must have thought and design*" (p. 469).

It is not our intention to offer an extended criticism of the above positions in this note. We shall

discuss "the Dynamical theory" more fully in a subsequent work. If the theory apparently accepted by Dr. Warren be true, that "*the ultimate atoms of matter are as uniformly efficient as minds*, and that we have the same ground to regard the force exerted by the one *innate and natural* as that exerted by the other" (p. 464), then we grant that the conclusions of Dr. Warren, as above stated, are unavoidable. We proceed one step farther, and boldly assert that the existence of God is, on this hypothesis, incapable of proof, and the only logical position Dr. Warren can occupy is that of spiritualistic Pantheism.

Dr. Warren asserts that "the Dynamical theory of matter" is now generally accepted by "Anglo-Saxon *naturalists*." "One can scarcely open a scientific treatise without observing the altered stand-point" (p. 160). We confess that we are disappointed with Dr. Warren's treatment of this simple question of fact. On so fundamental an issue, the Doctor ought to have given the name of at least *one* "naturalist" who asserts that "the ultimate atoms of matter are as uniformly efficient as minds." Leibnitz, Morrell, Ulrici, Hickok, the authorities quoted by him, are metaphysicians and idealists of the extremest school. At present we shall, therefore, content ourselves with a general denial of this wholesale statement of Dr. Warren; and we shall sustain that denial by a selection from the many authorities we shall hereafter present. "No particle of matter possesses within itself the power of changing its existing state of motion or of rest. Matter has no spontaneous power either of rest or motion, but is equally susceptible to each as it may be acted on by *external* causes" (Silliman's "Principles of Physics," p. 13). The above proposition is "a truth on which the whole science of mechanical philosophy ultimately depends" (Encyclopædia Britannica, art. "Dynamics," vol. viii. p. 326). "A material substance existing alone in the universe could not produce any effects. There is not, so far as we know, a self-acting material substance in the universe" (M'Cosh, "Divine Government, Physical and Moral," p. 78). "Perhaps the only true indication of matter is *inertia*." "The cause of gravitation is *not resident* in the particles of matter merely," but also "*in all space*" (Dr. Faraday on "Conservation of Force," in "Correlation and Conservation of Force." (p. 368). He also quotes with approbation the words of Newton, "That gravity should be innate, inherent, and essential to matter, is so great an absurdity, that I believe no man who has in philosophic matters a competent faculty of thinking can ever fall into it" p. 368). "The 'force of gravity' is an improper expression" (p. 340). "Forces are transformable, indestructible, and, *in contradistinction from matter*, imponderable" (p. 346). "The first cause of things is Deity" (Dr. Mayer, in "Correlation and Conservation of Force," p. 341). "Although the word *cause* may be used in a secondary and subordinate sense, as meaning antecedent forces, yet in an abstract sense it is totally inapplicable; we can not predicate of any physical agent that it is abstractedly the cause of another" (p. 15). "Causation is the *will*," "creation is the act, of God" Grove on "Correlation of Physical Forces," (p. 199). "Between gravity and motion it is impossible to establish the equation required for a rightly-conceived *causal* relation" ("Correlation and Conservation of Force," p. 253). See also Herschel's "Outlines of Astronomy," p. 234.

It certainly must have required a wonderful effort of imagination on the part of Dr. Warren to transform "weight" and "density," mere passive affections of matter, into self-activity, intelligence, thought, and design. Weight or density are merely relative terms. Supposing one particle or mass of matter to exist alone, and there can be no attractive or gravitating force. There must be a cause of gravity which is distinct from matter.

258
259

3d. The validity of "*the principle of unity*" is also discredited by Watson. "If, however, it were conceded that some glimmerings of this great truth, the existence of a First Cause, might, by induction, have been discovered, by what means could they have demonstrated to themselves that the great collection of bodies which we call the world had but *one* Creator." [369](#)

Footnote 369: [\(return\)](#) "Institutes of Theology," vol. i. p. 275.

We might answer directly, and at once, that the oneness or unity of God is necessarily contained in "the very notion of a First Cause"--a *first* cause is not many causes, but *one*. By a First Cause we do not, however, understand the first of a numerical series, but an ἀρχή--a principle, itself unbeginning, which is the source of all beginning. Our categorical answer, therefore, must be that the unity of God is a sublime deliverance of reason--God is one God. It is a first principle of reason that all differentiation and plurality supposes an incomposite unity, all diversity implies an indivisible identity. The sensuous perception of a plurality of parts supposes the rational idea of an absolute unity, which has no parts, as its necessary correlative. For example, extension is a congeries of indefinitesimal parts; the continuity of matter, as *empirically* known by us, is never absolute. Space is absolutely continuous, incapable of division into integral parts, illimitable, and, as *rationally* known by us, an absolute unity. The cognition of limited extension, which is the subject of quantitative measurement, involves the conception of unlimited space, which is the negation of all plurality and complexity of parts. And so the cognition of a phenomenal universe in which we see only difference, plurality, and change, implies the existence of a Being who is absolutely unchangeable, identical, and one.

260

This law of thought lies at the basis of that universal desire of unity, and that universal effort to reduce all our knowledge to unity, which has revealed itself in the history of philosophy, and also of inductive science. "Reason, intellect, νοῦς, concatenating thoughts and objects into system, and tending upward from particular facts to general laws, from general laws to universal principles, is never satisfied in its ascent till it comprehends all laws in a single formula, and consummates all conditional knowledge in the unity of unconditional existence." "The history of philosophy is only the history of this tendency, and philosophers have borne ample testimony to its reality. 'The mind,' says Anaxagoras, 'only knows when it subdues its objects, when it reduces the many to the one.' 'The end of philosophy,' says Plato, 'is the intuition of unity.' 'All knowledge,' say the Platonists, 'is the gathering up into one, and the indivisible apprehension of this unity by the knowing mind.'" [370](#)

261 This law has been the guiding principle of the Inductive Sciences, and has led to some of its most important discoveries. The unity which has been attained in physical science is not, however, the absolute unity of a material substratum, but a unity of *Will* and of *Thought*. The late discovery of the monogenesis, reciprocal convertibility, and indestructibility of all Forces in nature, leads us upward towards the recognition of one Omnipresent and Omnipotent Will, which, like a mighty tide, sweeps through the universe and effects all its changes. The universal prevalence of the same physical laws and numerical relations throughout all space, and of the same archetypal forms and teleology of organs throughout all past time, reveals to us a Unity of Thought which grasps the entire details of the universe in one comprehensive plan. [371](#) The positive *à priori* intuitions of reason and the *à posteriori* inductions of science equally attest *that God is one*.

Footnote 371: [\(return\)](#) We refer with pleasure to the articles of Dr. Winchell, in the North-western Christian Advocate, in which the *à posteriori* proof of "the Unity of God" is forcibly exhibited, and take occasion to express the hope they will soon be presented to the public in a more permanent form.

4th. By denying that man has any intuitive cognitions of right and wrong, or any native and original feeling of obligation, Mr. Watson invalidates "the moral argument" for the existence of a Righteous God.

"As far as man's reason has applied itself to the discovery of truth or *duty* it has generally gone astray." [372](#) "Questions of morals do not, for the most part, lie level to the minds of the populace." [373](#) "Their conclusions have no *authority*, and place them under no *obligation*." [374](#) And, indeed, man without a revelation "is without *moral control*, without *principles of justice*, except such as may be slowly elaborated from those relations which concern the grosser interests of life, without *conscience*, without hope or fear in another life." [375](#)

Footnote 372: [\(return\)](#) "Institutes of Theology," vol. ii. p. 470.

Footnote 373: [\(return\)](#) *Ibid.*, vol. i. p. 15.

Footnote 374: [\(return\)](#) *Ibid.*, vol. i. p. 228.

Footnote 375: [\(return\)](#) *Ibid.*, vol. ii. p. 271.

262 Now we shall not occupy our space in the elaboration of the proposition that the universal consciousness of our race, as revealed in human history, languages, legislations, and sentiments, bears testimony to the fact that the ideas of right, duty, and responsibility are native to the human mind; we shall simply make our appeal to those Sacred Writings whose verdict must be final with all theologians. That the fundamental principles of the moral law do exist, subjectively, in all human minds is distinctly affirmed by Paul, in a passage which deserves to be regarded as the chief corner-stone of moral science. "The Gentiles (ἔθνη, heathen), which have not the written law, do by the guidance of nature (reason or conscience) the works enjoined by the revealed law; these, having no written law, are a law unto themselves; who show plainly the works of the law written on their hearts, their conscience bearing witness, and also their reasonings one with another, when they accuse, or else excuse, each other." [376](#) To deny this is to relegate the heathen from all responsibility. For Mr. Watson admits "that the will of a superior is not in justice binding unless it be in some mode sufficiently declared." Now in the righteous judgments of revelation the heathen are "without excuse." The will of God must, therefore, be "sufficiently declared" to constitute them accountable. Who will presume to say that the shadowy, uncertain, variable, easily and unavoidably corrupted medium of tradition running through forty muddy centuries is a "sufficient declaration of the will of God?" The law is "written on the heart" of every man, or all men are not accountable.

Footnote 376: [\(return\)](#) Romans, ch. ii. ver. 14-15.

Now this "law written within the heart" immediately and naturally suggests the idea of a Lawgiver who is over us. This felt presence of Conscience, approving or condemning our conduct, suggests, as with the speed of the lightning-flash, the notion of a Judge who will finally call us to account. This "accusing or excusing of each other," this recognition of good or ill desert, points us to, and constrains us to recognize, a future Retribution; so that some hope or fear of another life has been in all ages a universal phenomenon of humanity.

It is affirmed, however, that whilst this capacity to know God may have been an original endowment of human nature, yet, in consequence of the fall, "the understanding and reason are weakened by the deterioration of his whole intellectual nature." [377](#) "Without some degree of education, man is *wholly* the creature of appetite. Labor, feasting, and sleeping divide his time, and wholly occupy his thoughts." [378](#)

Footnote 377: [\(return\)](#) "Institutes of Theology," vol. i. p. 15.

Footnote 378: [\(return\)](#) *Ibid.*, vol. i. p. 271.

We reverently and believingly accept the teaching of Scripture as to the depravity of man. We acknowledge that "the understanding is darkened" by sin. At the same time, we earnestly

maintain that the Scriptures do not teach that the fundamental laws of mind, the first principles of reason, are utterly traversed and obliterated by sin, so that man is not able to recognize the existence of God, and feel his obligation to Him. "Though they(the heathen) *knew God* (διότι γνόοντες), they did not glorify him as God, neither were thankful, but became vain in their imagination, and their foolish hearts were darkened. They changed the truth of God into a lie, and worshipped and served the creature *more* than the Creator." "And as they did not *approve of holding God with acknowledgment*, God delivered them over to an unapproving mind, to work those things which are not suitable." After drawing a fearful picture of the darkness and depravity of the heathen, the Apostle adds, "Who, though they KNOW the law of God, that they who practise such things are worthy of death, not only do them, but even are well pleased with those who practise them." ³⁷⁹ The obvious and direct teaching of this passage is that the heathen, in the midst of their depravity and idolatry, are not utterly ignorant of God; "they know God"--"they know the law of God "--"they worship Him," though they worship the creature *more than* Him. They know God, and are unwilling to "acknowledge God." "They know the righteousness of God," and are "haters of God" on account of his purity; and their worshipping of idols does not proceed from ignorance of God, from an intellectual inability to know God, but from "corruption of heart," and a voluntary choice of, and a "pleasure" in, the sinful practices accompanying idol worship. Therefore, argues the Apostle, they are "without excuse." The whole drift and aim of the argument of Paul is, not to show that the heathen were, by their depravity, incapacitated to know God, but that because they knew God and knew his righteous law, therefore their depravity and licentiousness was "inexcusable."

Footnote 379: [\(return\)](#) Romans, ch. i. ver. 23-32.

We conclude our review of opposing schools by the re-affirmation of our position, *that God is cognizable by human reason*. The human mind, under the guidance of necessary laws of thought, is able, from the facts of the universe, to affirm the existence of God, and to attain some valid knowledge of his character and will. Every attempt to solve the great problem of existence, to offer an explanation of the phenomenal world, or to explore the fundamental idea of reason, when fairly and fully conducted, has resulted in the recognition of a Supreme *Intelligence*, a personal *Mind* and *Will*, as the ground, and reason, and cause of all existence. A survey of the history of Greek Philosophy will abundantly sustain this position, and to this we shall, in subsequent chapters, invite the reader's attention.

CHAPTER VIII.

THE PHILOSOPHERS OF ATHENS.

PRE-SOCRATIC SCHOOL.

SENSATIONAL: THALES--ANAXIMENES--HERACLITUS--ANAXIMANDER--LEUCIPPUS--DEMOCRITUS.

"Then certain philosophers of the Epicureans and of the Stoics encountered Paul."--Acts xvii. 18.

"Plato affirms that this is the most just cause of the creation of the world, that works which are good should be wrought by the God who is good; whether he had read these things in the Bible, or whether by his penetrating genius he beheld *the invisible things of God as understood by the things which are made*"--ST. AUGUSTINE, "De Civ. Dei," lib. xi. ch. 21.

Of all the monuments of the greatness of Athens which have survived the changes and the wastes of time, the most perfect and the most enduring is her philosophy. The Propylæa, the Parthenon, and the Erechtheum, those peerless gems of Grecian architecture, are now in ruins. The magnificent sculpture of Phidias, which adorned the pediment, and outer cornice, and inner frieze of these temples, and the unrivalled statuary of gods and heroes which crowded the platform of the Acropolis, making it an earthly Olympus, are now no more, save a few broken fragments which have been carried to other lands, and, in their exile, tell the mournful story of the departed grandeur of their ancient home. The brazen statue of Minerva, cast from the spoils of Marathon, which rose in giant grandeur above the buildings of the Acropolis, and the flashing of whose helmet plumes was seen by the mariner as soon as he had rounded the Sunian promontory; and that other brazen Pallas, called, by pre-eminence, "the Beautiful;" and the enormous Colossus of ivory and of gold, "the Immortal Maid"--the protecting goddess of the Parthenon--these have perished. But whilst the fingers of time have crumbled the Pentelic marble, and the glorious statuary has been broken to pieces by vandal hands, and the gold and brass have been melted in the crucibles of needy monarchs and converted into vulgar money, the philosophic *thought* of Athens, which culminated in the dialectic of Plato, still survives. Not one of all the vessels, freighted with immortal thought, which Plato launched upon the stream of time, has foundered. And after the vast critical movement of European thought during the past two centuries, in which all philosophic systems have been subjected to the severest scrutiny, the *method* of Plato still preserves, if not its exclusive authority unquestioned, at least its intellectual

pre-eminence unshaken. "Platonism is immortal, because its principles are immortal in the human intellect and heart." [380](#)

Footnote 380: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 9.

267 Philosophy is, then, the world-enduring monument of the greatness and the glory of Athens. Whilst Greece will be forever memorable as "the country of wisdom and of wise men," Athens will always be pre-eminently memorable as the University of Greece. This was the home of Socrates, and Plato, and Aristotle--the three imperial names which, for twenty centuries, reigned supreme in the world of philosophic thought. Here schools of philosophy were founded to which students were attracted from every part of the civilized world, and by which an impulse and a direction was given to human thought in every land and in every age. Standing on the Acropolis at Athens, and looking over the city and the open country, the Apostle would see these *places* which are inseparably associated with the names of the men who have always been recognized as the great teachers of the pagan world, and who have also exerted a powerful influence upon Christian minds of every age. "In opposite directions he would see the suburbs where Plato and Aristotle, the two pupils of Socrates, held their illustrious schools. The streamless bed of the Ilissus passes between the Acropolis and Hymettus in a south-westerly direction, until it vanishes in the low ground which separates the city from the Piræus." Looking towards the upper part of this channel, Paul would see gardens of plane-trees and thickets of angus-castus, "with other torrent-loving shrubs of Greece." Near the base of Lycabettus was a sacred inclosure which Pericles had ornamented with fountains. Here stood a statue of Apollo Lycius, which gave the name to the *Lyceum*. Here, among the plane-trees, Aristotle *walked*, and, as he walked, taught his disciples. Hence the name Peripatetics (the Walkers), which has always designated the disciples of the Stagirite philosopher.

On the opposite side of the city, the most beautiful of the Athenian suburbs, we have the scene of Plato's teaching. Beyond the outer Ceramicus, which was crowded with the sepulchres of those Athenians who had fallen in battle, and were buried at the public expense, the eye of Paul would rest on the favored stream of the Cephissus, flowing towards the west. On the banks of this stream the *Academy* was situated. A wall, built at great expense by Hipparchus, surrounded it, and Cimon planted long avenues of trees and erected fountains. Beneath the plane-trees which shaded the numerous walks there assembled the master-spirits of the age. This was the favorite resort of poets and philosophers. Here the divine spirit of Plato poured forth its sublimest speculations in streams of matchless eloquence; and here he founded a school which was destined to exert a powerful and perennial influence on human minds and hearts in all coming time.

268 Looking down from the Acropolis upon the Agora, Paul would distinguish a cloister or colonnade. This is the Stoa Pœcile, or "Painted Porch," so called because its walls were decorated with fresco paintings of the legendary wars of Greece, and the more glorious struggle at Marathon. It was here that Zeno first opened that celebrated school which thence received the name of *Stoic*. The site of the *garden* where Epicurus taught is now unknown. It was no doubt within the city walls, and not far distant from the Agora. It was well known in the time of Cicero, who visited Athens as a student little more than a century before the Apostle. It could not have been forgotten in the time of Paul. In this "tranquil garden," in the society of his friends, Epicurus passed a life of speculation and of pleasure. His disciples were called, after him, the Epicureans. [381](#)

Footnote 381: [\(return\)](#) See Conybeare and Howson's "Life and Epistles of St. Paul," vol. i., Lewes's "Biographical History of Philosophy;" and Encyclopædia Britannica, article, "Athens," from whence our materials for the description of these "places" are mainly derived.

269 Here, then, in Athens the Apostle was brought into immediate contact with all the phases of philosophic thought which had appeared in the ancient world. "Amongst those who sauntered beneath the cool shadows of the plane-trees in the Agora, and gathered in knots under the porticoes, eagerly discussing the questions of the day, were the philosophers, in the garb of their several sects, ready for any new question on which they might exercise their subtlety or display their rhetoric." If there were any in that motley group who cherished the principles and retained the spirit of the true Platonic school, we may presume they felt an inward intellectual sympathy with the doctrine enounced by Paul. With Plato, "philosophy was only another name for *religion*: philosophy is the love of perfect Wisdom; perfect Wisdom and perfect Goodness are identical: the perfect Good is God himself; philosophy is the love of God." [382](#) He confessed the need of divine assistance to attain "the good," and of divine interposition to deliver men from moral ruin. [383](#) Like Socrates, he longed for a supernatural--a divine light to guide him, and he acknowledged his need thereof continually. [384](#) He was one of those who, in heathen lands, waited for "the desire of nations;" and, had he lived in Christian times, no doubt his "spirit of faith" would have joyfully "embraced the Saviour in all the completeness of his revelation and advent." [385](#) And in so far as the spirit of Plato survived among his disciples, we may be sure they were not among the number who "mocked," and ridiculed, and opposed the "new doctrine" proclaimed by Paul. It was "the philosophers of the Epicureans and of the Stoics who *encountered* Paul." The leading tenets of both these sects were diametrically opposed to the doctrines of Christianity. The ruling spirit of each was alien from the spirit of Christ. The haughty *pride* of the Stoic, the Epicurean abandonment to *pleasure*, placed them in direct antagonism to him who proclaimed the crucified and risen Christ to be "*the wisdom* of God."

If, however, we would justly appreciate the relation of pagan philosophy to Christian truth, we must note that, when Paul arrived in Athens, the age of Athenian glory had passed away. Not only had her national greatness waned, and her national spirit degenerated, but her intellectual power exhibited unmistakable signs of exhaustion, and weakness, and decay. If philosophy had borne any fruit, of course that fruit remained. If, in the palmy days of Athenian greatness, any field of human inquiry had been successfully explored; if human reason had achieved any conquests; if any thing true and good had been obtained, that must endure as an heir-loom for all coming time; and if those centuries of agonizing wrestlings with nature, and of ceaseless questioning of the human heart, had yielded no results, then, at least, the *lesson* of their failure and defeat remained for the instruction of future generations. Either the problems they sought to solve were proved to be insoluble, or their methods of solution were found to be inadequate; for here the mightiest minds had grappled with the great problems of being and of destiny. Here vigorous intellects had struggled to pierce the darkness which hangs alike over the beginning and the end of human existence. Here profoundly earnest men had questioned nature, reason, antiquity, oracles, in the hope they might learn something of that invisible world of *real* being which they instinctively felt must lie beneath the world of fleeting forms and ever-changing appearances. Here philosophy had directed her course towards every point in the compass of thought, and touched every *accessible* point. The sun of human reason had reached its zenith, and illuminated every field that lay within the reach of human ken. And this sublime era of Greek philosophy is of inestimable value to us who live in Christian times, because *it is an exhaustive effort of human reason to solve the problem of being*, and in its history we have a record of the power and weakness of the human mind, at once on the grandest scale and in the fairest characters. [386](#)

Footnote 386: [\(return\)](#) See article "Philosophy," in Smith's "Dictionary of the Bible."

These preliminary considerations will have prepared the way for, and awakened in our minds a profound interest in, the inquiry--1st. What permanent *results* has Greek philosophy bequeathed to the world? 2d. In what manner did Greek philosophy fulfill for Christianity a *propædeutic* office?

It will at once be obvious, even to those who are least conversant with our theme, that it would be fruitless to attempt the answer to these important questions before we have made a careful survey of the entire history of philosophic thought in Greece. We must have a clear and definite conception of the problems they sought to solve, and we must comprehend their methods of inquiry, before we can hope to appreciate the results they reached, or determine whether they did arrive at any definite and valuable conclusions. It will, therefore, devolve upon us to present a brief and yet comprehensive epitome of the history of Grecian speculative thought.

"*Philosophy*," says Cousin, "*is reflection*, and nothing else than reflection, in a vast form"--"Reflection elevated to the rank and authority of a *method*." It is the mind looking back upon its own sensations, perceptions, cognitions, ideas, and from thence to the *causes* of these sensations, cognitions, and ideas. It is thought passing beyond the simple perceptions of things, beyond the mere spontaneous operations of the mind in the cognition of things to seek the *ground*, and *reason*, and *law* of things. It is the effort of reason to solve the great problem of "Being and Becoming," of appearance and reality, of the changeful and the permanent. Beneath the endless diversity of the universe, of existence and action, there must be a principle of unity; below all fleeting appearances there must be a permanent substance; beyond this everlasting flow and change, this beginning and ending of finite existence, there must be an *eternal being*, the source and cause of all we see and know, *What is that principle of unity, that permanent substance, or principle, or being?*

This fundamental question has assumed three separate forms or aspects in the history of philosophy. These forms have been determined by the objective phenomena which most immediately arrested and engaged the attention of men. If external nature has been the chief object of attention, then the problem of philosophy has been, *What is the ἀρχή--the beginning; what are the first principles--the elements from which, the ideas or laws according to which, the efficient cause or energy by which, and the reason or end for which the universe exists?* During this period reflective thought was a PHILOSOPHY OF NATURE. If the phenomena of mind--the opinions, beliefs, judgments of men--are the chief object of attention, then the problem of philosophy has been, *What are the fundamental Ideas which are unchangeable and permanent amid all the diversities of human opinions, connecting appearance with reality, and constituting a ground of certain knowledge or absolute truth?* Reflective thought is now a PHILOSOPHY OF IDEAS. Then, lastly, if the practical activities of life and the means of well-being be the grand object of attention, then the problem of philosophy has been, *What is the ultimate standard by which, amid all the diversities of human conduct, we may determine what is right and good in individual, social, and political life?* And now reflective thought is a PHILOSOPHY OF LIFE. These are the grand problems with which philosophy has grappled ever since the dawn of reflection. They all appear in Greek philosophy, and have a marked chronology. As systems they succeed each other, just as rigorously as the phenomena of Greek civilization. The Greek schools of

philosophy have been classified from various points of view. In view of their geographical relations, they have been divided into the *Ionian*, the *Italian*, the *Eleatic*, the *Athenian*, and the *Alexandrian*. In view of their prevailing spirit and tendency, they have been classified by Cousin as the Sensational, the Idealistic, the Skeptical, and the Mystical. The most natural and obvious method is that which (regarding Socrates as the father of Greek philosophy in the truest sense) arranges all schools from the Socratic stand point, and therefore in the chronological order of development:

I. THE PRE-SOCRATIC SCHOOLS.

II. THE SOCRATIC SCHOOLS.

III. THE POST-SOCRATIC SCHOOLS.

273 The history of philosophy is thus divided into three grand epochs. The first reaching from Thales to the time of Socrates (B.C. 639-469): the second from the birth of Socrates to the death of Aristotle (B.C. 469-322); the third from the death of Aristotle to the Christian era (B.C. 322, A.D. 1). Greek philosophy during the first period was almost exclusively a philosophy of nature; during the second period, a philosophy of mind; during the last period, a philosophy of life. Nature, man, and society complete the circle of thought. Successive systems, of course, overlap each other, both in the order of time and as subjects of human speculation; and the results of one epoch of thought are transmitted to and appropriated by another; but, in a general sense, the order of succession has been very much as here indicated. Setting aside minor schools and merely incidental discussions, and fixing our attention on the general aspects of each historic period, we shall discover that the first period was eminently *Physical*, the second *Psychological*, the last *Ethical*. Every stage of progress which reason, on *à priori* grounds, would suggest as the natural order of thought, or of which the development of an individual mind would furnish an analogy, had a corresponding realization in the development of Grecian thought from the time of Thales to the Christian era. "Thought," says Cousin, "in the first trial of its strength is drawn without." The first object which engages the attention of the child is the outer world. He asks the "*how*" and "*why*" of all he sees. His reason urges him to seek an explanation of the universe. So it was in the *childhood* of philosophy. The first essays of human thought were, almost without exception, discourses *περὶ φύσεως* (De rerum natura), of the nature of things. Then the rebound of baffled reason from the impenetrable bulwarks of the universe drove the mind back upon itself. If the youth can not interpret nature, he can at least "know himself," and find within himself the ground and reason of all existence. There are "*ideas*" in the human mind which are copies of those "*archetypal ideas*" which dwell in the Creative Mind, and after which the universe was built. If by "analysis" and "definition" these universal notions can be distinguished from that which is particular and contingent in the aggregate of human knowledge, then so much of eternal truth has been attained. The achievements of philosophic thought in this direction, during the Socratic age, have marked it as the most brilliant period in the history of philosophy--the period of its *youthful* vigor. Deeply immersed in the practical concerns and conflicts of public life, *manhood* is mainly occupied with questions of personal duty, and individual and social well-being. And so, during the hopeless turmoil of civil disturbance which marked the decline of national greatness in Grecian history, philosophy was chiefly occupied with questions of personal interest and personal happiness. The poetic enthusiasm with which a nobler age had longed for *truth*, and sought it as the highest good, has all disappeared, and now one sect seeks refuge from the storms and agitations of the age in Stoical indifference, the other in Epicurean effeminacy.

274 If now we have succeeded in presenting the real problem of philosophy, it will at once be obvious that the inquiry was not, in any proper sense, *theological*. Speculative thought, during the period we have marked as the era of Greek philosophy, was not an inquiry concerning the existence or nature of God, or concerning the relations of man to God, or the duties which man owes to God. These questions were all remitted to the *theologian*. There was a clear line of demarkation separating the domains of religion and philosophy. Religion rested solely on authority, and appealed to the instinctive faith of the human heart. She permitted no encroachment upon her settled usages, and no questioning of her ancient beliefs. Philosophy rested on reason alone. It was an independent effort of thought to interpret nature, and attain the fundamental grounds of human knowledge--to find an *ἀρχή*--a first principle, which, being assumed, should furnish a rational explanation of all existence. If philosophy reach the conclusion that the *ἀρχή* was water, or air, or fire, or a chaotic mixture of all the elements or atoms, extended and self-moved, or monads, or τὸ πᾶν, or uncreated mind, and that conclusion harmonized with the ancient standards of religious faith--well; if not, philosophy must present some method of conciliation. The conflicts of faith and reason; the stragglings of traditional authority to maintain supremacy; the accommodations and conciliations attempted in those primitive times, would furnish a chapter of peculiar interest, could it now be written.

275 The poets who appeared in the dim twilight of Grecian civilization--Orpheus, Musæus, Homer, Hesiod--seem to have occupied the same relation to the popular mind in Greece which the Bible now sustains to Christian communities. ³⁸⁷ Not that we regard them as standing on equal ground of authority, or in any sense a revelation. But, in the eye of the wondering Greek, they were invested with the highest sacredness and the supremest authority. The high poetic inspiration which pervaded them was a supernatural gift. Their sublime utterances were accepted as proceeding from a divine afflatus. They were the product of an age in which it was believed by all that the gods assumed a human form, ³⁸⁸ and held a real intercourse with gifted men. This universal faith is regarded by some as being a relic of still more distant times, a faint remembrance of the glory of patriarchal days. The more natural opinion is, that it was begotten

of that universal longing of the human heart for some knowledge of that unseen world of real being, which man instinctively felt must lie beyond the world of fleeting change and delusive appearances. It was a prolepsis of the soul, reaching upward towards its source and goal. The poet felt within him some native affinities therewith, and longed for some stirring breath of heaven to sweep the harp-strings of the soul. He invoked the inspiration of the Goddess of Song, and waited for, no doubt believed in, some "deific impulse" descending on him. And the people eagerly accepted his utterance as the teaching of the gods. They were too eager for some knowledge from that unseen world to question their credentials. Orpheus, Hesiod, Homer, were the θεολόγοι--the theologians of that age. [389](#)

Footnote 387: [\(return\)](#) "Homer was, in a certain sense, the Bible of the Greeks."--Whewell, "Platonic Dialogues," p. 283.

Footnote 388: [\(return\)](#) The universality of this belief is asserted by Cicero: "Vetus opinio est, jam usque ab heroicis ducta temporibus, eaque et populi Romani et omnium gentium firmata consensu, versari quidem inter homines divinationem."--Cicero, "De Divin." bk. i. ch. i.

Footnote 389: [\(return\)](#) Cicero.

276 These ancient poems, then, were the public documents of the religion of Greece--the repositories of the national faith. And it is deserving of especial note that the philosopher was just as anxious to sustain his speculations by quoting the high traditional authority of the ancient theologian, as the propounder of modern novelties is to sustain his notions by the authority of the Sacred Scriptures. Numerous examples of this solicitude will recur at once to the remembrance of the student of Plato. All encroachments of philosophy upon the domains of religion were watched as jealously in Athens in the sixth century before Christ, as the encroachments of science upon the fields of theology were watched in Rome in the seventeenth century after Christ. The court of the Areopagus was as earnest, though not as fanatical and cruel, in the defense of the ancient faith, as the court of the Inquisition was in the defense of the dogmas of the Romish Church. The people, also, as "the sacred wars" of Greece attest, were ready quickly to repel every assault upon the majesty of their religion. And so philosophy even had its martyrs. The tears of Pericles were needed to save Aspasia, because she was suspected of philosophy. But neither his eloquence nor his tears could save his friend Anaxagoras, and he was ostracized. Aristotle had the greatest difficulty to save his life. And Plato was twice imprisoned, and once sold into slavery. [390](#)

Footnote 390: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 305.

277 It is unnecessary that we should, in this place, again attempt the delineation of the theological opinions of the earlier periods of Grecian civilization. That the ancient Greeks believed in *one Supreme God* has been conclusively proved by Cudworth. The argument of his fourth chapter is incontrovertible. [391](#) However great the number of "generated gods" who crowded the Olympus, and composed the ghostly array of Greek mythology, they were all subordinate agents, "demiurges," employed in the framing of the world and all material things, or else the ministers of the moral and providential government of the εἷς θεὸς ἀγέντος--the one uncreated God. Beneath, or beyond the whole system of pagan polytheism, we recognize a faith in an *Uncreated Mind*, the Source of all the intelligence, and order, and harmony which pervades the universe the Fountain of law and justice; the Ruler of the world; the Avenger of injured innocence; and the final Judge of men. The immortality of the soul and a state of future retribution were necessary corollaries of this sublime faith. This primitive theology was unquestionably the people's faith; the faith, also, of the philosopher, in his inmost heart, however far he might wander in speculative thought. The instinctive feeling of the human heart, the spontaneous intuitions of the human reason, have led man, in every age, to recognize a God. It is within the fields of speculative thought that skepticism has had its birth. Any thing like atheism has only made its appearance amid the efforts of human reason to explain the universe. The native sentiments of the heart and the spontaneous movements of the reason have always been towards faith, that is, towards "a religious movement of the soul." [392](#) Unbridled speculative thought, which turns towards the outer world alone, and disregards "the voices of the soul," tends towards *doubt* and irreligion. But, as Cousin has said, "a complete extravagance, a total delusion (except in case of real derangement), is impossible." "Beneath reflection there is still spontaneity, when the scholar has denied the existence of a God; listen to the man, interrogate him unawares, and you will see that all his words betray the idea of a God, and that faith in a God is, without his recognition, at the bottom of his heart." [393](#)

Footnote 391: [\(return\)](#) "Intellectual System of the Universe;" see also ch. iii., "On the Religion of the Athenians."

Footnote 392: [\(return\)](#) Cousin's "Hist. of Philos.," vol. i. p. 22.

Footnote 393: [\(return\)](#) Id., ib., vol. i. p. 137.

Let us not, therefore, be too hasty in representing the early philosophers as destitute of the idea of a God, because in the imperfect and fragmentary representations which are given us of the philosophical opinions of Thales, and Anaximenes, and Heraclitus, and Diogenes of Apollonia, we find no explicit allusions to the *Uncreated Mind* as the first principle and cause of all. A few sentences will comprehend the whole of what remains of the opinions of the earliest philosophers, and these were transmitted for ages by *oral* tradition. To Plato and Aristotle we are

chiefly indebted for a stereotype of those scattered, fragmentary sentences which came to their hands through the dim and distorting medium of more than two centuries. Surely no one imagines these few sentences contain and sum up the results of a lifetime of earnest thought, or represent all the opinions and beliefs of the earliest philosophers! And should we find therein no recognition of a personal God, would it not be most unfair and illogical to assert that they were utterly ignorant of a God, or wickedly denied his being? If they say "there is no God," then they are foolish Atheists; if they are silent on that subject, we have a right to assume they were Theists, for it is most natural to believe in God. And yet it has been quite customary for Christian teachers, after the manner of some Patristic writers, to deny to those early sages the smallest glimpse of underived and independent knowledge of a Divine Being, in their zeal to assert for the Sacred Scriptures the exclusive prerogative of revealing Him.

278

Now in regard to the theological opinions of the Greek philosophers, we shall venture this general *lemma*--the majority of them recognized an "incorporeal substance" ³⁹⁴ an uncreated Intelligence, an ordering, governing Mind. Leucippus, Democritus, and Epicurus, who were Materialists, are perhaps the only exceptions. Many of them were Pantheists, in the higher form of Pantheism, which, though it associates the universe with its framer and mover, still makes "the moving principle" superior to that which is moved. The world was a living organism,

"Whose body nature is, and God the soul."

Unquestionably most on them recognized the existence of *two* first principles, substances essentially distinct, which had co-existed from eternity--an incorporeal Deity and matter. ³⁹⁵ We grant that the free production of a universe by a creative fiat--the calling of matter into being by a simple act of omnipotence--is not elementary to human reason. The famous physical axiom of antiquity, "*De nihilo nihil, in nihilum posse reverti*" under one aspect, may be regarded as the expression of the universal consciousness of a mental inability to conceive a creation out of nothing, or an annihilation. ³⁹⁶ "We can not conceive, either, on the one hand, nothing becoming something, or something becoming nothing, on the other hand. When God is said to create the universe out of nothing, we think this by supposing that he evolves the universe out of himself; and in like manner, we conceive annihilation only by conceiving the Creator to withdraw his creation from actuality into power." ³⁹⁷ "It is by *faith* we understand the worlds were framed by the *word of God*, so that things which are were not made from things which do appear"--that is, from pre-existent matter.

Footnote 397: [\(return\)](#) Sir William Hamilton's "Discussions on Philosophy," p. 575.

279

Those writers ³⁹⁸ are, therefore, clearly in error who assert that the earliest question of Greek philosophy was, What is God? and that various and discordant answers were given, Thales saying, water is God, Anaximenes, air; Heraclitus, fire; Pythagoras, numbers; and so on. The idea of God is a native intuition of the mind. It springs up spontaneously from the depths of the human soul. The human mind naturally recognizes God as an uncreated Mind, and recognizes itself as "the offspring of God." And, therefore, it is simply impossible for it to acknowledge water, or air, or fire, or any material thing to be its God. Now they who reject this fundamental principle evidently misapprehend the real problem of early Grecian philosophic thought. The external world, the material universe, was the first object of their inquiry, and the method of their inquiry was, at the first stage, purely physical. Every object of sense had a beginning and an end; it rose out of something, and it fell back into something. Beneath this ceaseless flow and change there must be some permanent principle. What is that στοιχείον--that first element? The changes in the universe seem to obey some principle of law--they have an orderly succession. What is that μορφή--that form, or ideal, or archetype, proper to each thing, and according to which all things are produced? These changes must be produced by some efficient cause, some power or being which is itself immobile, and permanent, and eternal, and adequate to their production. What is that ἀρχὴ τῆς κινήσεως--that first principle of movement? Then, lastly, there must be an end for which all things exist--a good reason why things are as they are, and not otherwise. What is that τὸ οὐ ἔνεκεν καὶ τὸ ἀγαθόν--that reason and good of all things? Now these are all ἀρχαί or first principles of the universe. "Common to all first principles," says Aristotle, "is the being, the original, from which a thing is, or is produced, or is known." ³⁹⁹ First principles, therefore, include both elements and causes, and, under certain aspects, elements are also causes, in so far as they are that without which a thing can not be produced. Hence that highest generalization by Aristotle of all first principles; as--1. The Material Cause; 2. The Formal Cause; 3. The Efficient Cause; 4. The Final Cause. The grand subject of inquiry in ancient philosophy was not alone what is the final *element* from which all things have been produced? nor yet what is the *efficient cause* of the movement and the order of the universe? *but what are those First Principles which, being assumed, shall furnish a rational explanation of all phenomena, of all becoming?*

280

Footnote 398: [\(return\)](#) As the writer of the article "Attica," in the Encyclopædia Britannica.

Footnote 399: [\(return\)](#) "Metaphysics," bk. iv. ch. i. p. 112 (Bohn's edition).

So much being premised, we proceed to consider the efforts and the results of philosophic thought in

THE PRE-SOCRATIC SCHOOLS.

"The first act in the drama of Grecian speculation was performed on the varied theatre of the Grecian colonies--Asiatic, insular, and Italian, verging at length (in Anaxagoras) towards Athens." During the progress of this drama two distinct schools of philosophy were developed, having distinct geographical provinces, one on the east, the other on the west, of the peninsula of Greece, and deriving their names from the localities in which they flourished. The earliest was the *Ionian*; the latter was the *Italian* school.

It would be extremely difficult, at this remote period, to estimate the influence which geographical conditions and ethnical relations exerted in determining the course of philosophic thought in these schools. Unquestionably those conditions contributed somewhat towards fixing their individuality. At the same time, it must be granted that the distinction in these two schools of philosophy is of a deeper character than can be represented or explained by geographical surroundings; it is a distinction reaching to the very foundation of their habits of thought. These schools represent two distinct aspects of philosophic thought, two distinct methods in which the human mind has essayed to solve the problem of the universe.

281

The ante-Socratic schools were chiefly occupied with the study of external nature. "Greek philosophy was, at its first appearance, a philosophy of nature." It was an effort of the reason to reach a "first principle" which should explain the universe. This early attempt was purely speculative. It sought to interpret all phenomena by *hypotheses*, that is, by suppositions, more or less plausible, suggested by physical analogies or by *à priori* rational conceptions.

Now there are two distinct aspects under which nature presents itself to the observant mind. The first and most obvious is the *simple phenomena* as perceived by the senses. The second is the *relations of phenomena*, cognized by the reason alone. Let phenomena, which are indeed the first objects of perception, continue to be the chief and almost exclusive object of thought, and philosophy is on the highway of pure physics. On the other hand, instead of stopping at phenomena, let their relations become the sole object of thought, and philosophy is now on the road of purely mathematical or metaphysical abstraction. Thus two schools of philosophy are developed, the one SENSATIONAL, the other IDEALIST. Now these, it will be found, are the leading and characteristic tendencies of the two grand divisions of the pre-Socratic schools; the Ionian is *sensational*, the Italian is *idealist*.

These two schools have again been the subject of a further subdivision based upon diverse habits of thought. The Ionian school sought to explain the universe by *physical analogies*. Of these there are two clear and obvious divisions--analogies suggested by living organisms, and analogies suggested by mechanical arrangements. One class of philosophers in the Ionian school laid hold on the first analogy. They regarded the world as a living being, spontaneously evolving itself--a vital organism whose successive developments and transformations constitute all visible phenomena. A second class laid hold on the analogy suggested by mechanical arrangements. For them the universe was a grand superstructure, built up from elemental particles, arranged and united by some ab-extra power or force, or else aggregated by some inherent mutual affinity. Thus we have two sects of the Ionian school; the first, *Dynamical* or vital; the second, *Mechanical*. [400](#)

282

Footnote 400: [\(return\)](#) Ritter's "Ancient Philosophy," vol. i. pp. 191, 192.

The Italian school sought to explain the universe by rational conceptions and *à priori* ideas. Now to those who seek, by simple reflection, to investigate the relations of the external world this marked distinction will present itself: some are relations *between* sensible phenomena--relations of time, of place, of number, of proportion, and of harmony; others are relations *of* phenomena to essential being--relations of qualities to substance, of becoming to being, of the finite to the infinite. The former constituted the field of Pythagorean the latter of Eleatic contemplation. The Pythagoreans sought to explain the universe by numbers, forms, and harmonies; the Eleatics by the *à priori* ideas of unity, substance, Being *in se*, the Infinite. Thus were constituted a *Mathematical* and a *Metaphysical* sect in the Italian school. The pre-Socratic schools may, therefore, be tabulated in the following order:

I. IONIAN (Sensational), (1.) PHYSICAL {Dynamical or Vital.
{Mechanical.

II. Italian (Idealist), {(2.) MATHEMATICAL Pythagoreans.
{(3.) METAPHYSICAL Eleatics.

I. *The Ionian or Physical School*--We have premised that the philosophers of this school attempted the explanation of the universe by physical analogies.

One class of these early speculators, the *Dynamical*, or vital theorists, proceeded on the supposition of a living energy infolded in nature, which in its spontaneous development continuously undergoes alteration both of quality and form. This imperfect analogy is the first hypothesis of childhood. The child personifies the stone that hurts him, and his first impulse is to resent the injury as though he imagined it to be endowed with consciousness, and to be acting

with design. The childhood of superstition (whose genius is multiplicity) personifies each individual existence--a rude Fetichism, which imagines a supernatural power and presence enshrined in every object of nature, in every plant, and stock, and stone. The childhood of philosophy (whose genius is unity) personifies the universe. It regards the earth as one vast organism, animated by one soul, and this soul of the world as a "created god." ⁴⁰¹ The first efforts of philosophy were, therefore, simply an attempt to explain the universe in harmony with the popular theological beliefs. The cosmogonies of the early speculators in the Ionian school were an elaboration of the ancient theogonies, but still an elaboration conducted under the guidance of that law of thought which constrains man to seek for *unity*, and reduce the many to the one.

Therefore, in attempting to construct a theory of the universe they commenced by postulating an ἀρχή--a first principle or element out of which, by a *vital* process, all else should be produced. "Accordingly, whatever seemed the most subtle or pliable, as well as *universal* element in the mass of the visible world, was marked as the seminal principle whose successive developments and transformations produced all the rest." ⁴⁰² With this seminal principle the living, *animating* principle seems to have been associated--in some instances perhaps confounded, and in most instances called by the same name. And having pursued this analogy so far, we shall find the *most decided and conclusive* evidence of a tendency to regard the soul of man as similar, in its nature, to the soul which animates the world.

Footnote 401: [\(return\)](#) Plato's "Laws," bk. x. ch. i.; "Timæus," ch. xii.

Footnote 402: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. 1. p. 292.

Thales of Miletus (B.C. 636-542) was the first to lead the way in the perilous inquiry after an ἀρχή, or first principle, which should furnish a rational explanation of the universe. Following, as it would seem, the genealogy of Hesiod, he supposed *water* to be the primal element out of which all material things were produced. Aristotle supposes he was impressed with this idea from observing that all things are nourished by moisture; warmth itself, he declared, proceeded from moisture; the seeds of all things are moist; water, when condensed, becomes earth. Thus convinced of the universal presence of water, he declared it to be the first principle of things. ⁴⁰³

And now, from this brief statement of the Thalean physics, are we to conclude that he recognized only a *material* cause of the universe? Such is the impression we receive from the reading of the First Book of Aristotle's *Metaphysics*. His evident purpose is to prove that the first philosophers of the Ionian school did not recognize an *efficient* cause. In his opinion, they were decidedly materialistic. Now to question the authority of Aristotle may appear to many an act of presumption. But Aristotle was not infallible; and nothing is more certain than that in more than one instance he does great injustice to his predecessors. ⁴⁰⁴ To him, unquestionably, belongs the honor of having made a complete and exhaustive classification of causes, but there certainly does appear something more than vanity in the assumption that he, of all the Greek philosophers, was the only one who recognized them all. His sagacious classification was simply a resumé of the labors of his predecessors. His "principles" or "causes" were incipient in the thought of the first speculators in philosophy. Their accurate definition and clearer presentation was the work of ages of analytic thought. The phrases "efficient," "formal," "final" cause, are, we grant, peculiar to Aristotle; the ideas were equally the possession of his predecessors.

Footnote 403: [\(return\)](#) Aristotle's "Metaphysics," bk. i. ch. iii.

Footnote 404: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 77; Cousin's "The True, the Beautiful, and the Good," p. 77.

The evidence, we think, is conclusive that, with this primal element (water), Thales associated a formative principle of motion; to the "material" he added the "efficient" cause. A strong presumption in favor of this opinion is grounded on the psychological views of Thales. The author of "De Placitis Philosophorum" associates him with Pythagoras and Plato, in teaching that the soul is incorporeal, making it naturally self-active, and an intelligent substance. ⁴⁰⁵ And it is admitted by Aristotle (rather unwillingly, we grant, but his testimony is all the more valuable on that account) that, in his time, the opinion that the soul is a principle, ἀεκίνητον--ever moving, or essentially self-active, was currently ascribed to Thales. "If we may rely on the notices of Thales, he too would seem to have conceived the soul as a *moving principle*." ⁴⁰⁶ Extending this idea, that the soul is a moving principle, he held that all motion in the universe was due to the presence of a living soul. "He is reported to have said that the loadstone possessed a soul because it could move iron." ⁴⁰⁷ And he taught that "the world itself is *animated*, and full of gods." ⁴⁰⁸ "Some think that *soul* and *life* is mingled with the whole universe; and thence, perhaps, was that [opinion] of Thales that all things are full of gods," ⁴⁰⁹ portions, as Aristotle said, of the universal soul. These views are quite in harmony with the theology which makes the Deity the moving energy of the universe--the energy which wrought the successive transformations of the primitive aqueous element. They also furnish a strong corroboration of the positive statement of Cicero--"Aquam, dixit Thales, esse initium rerum, Deum autem eam mentem quæ ex aqua cuncta fingeret." Thales said that water is the first principle of things, but God was that mind which formed all things out of water; ⁴¹⁰ as also that still more remarkable saying of Thales, recorded by Diogenes Laertius; "God is the most ancient of all things, for he had no birth; the world is the most beautiful of all things, for it is the workmanship of God." ⁴¹¹ We are aware that some

historians of philosophy reject the statement of Cicero, because, say they, "it does violence to the chronology of speculation." [412](#) Following Hegel, they assert that Thales could have no conception of God as Intelligence, since that is a conception of a more advanced philosophy. Such an opinion may be naturally expected from the philosopher who places God, not at the commencement, but at the *end* of things, God becoming conscious and intelligent in humanity. If, then, Hegel teaches that God himself has had a progressive development, it is no wonder he should assert that the idea of God has also had an historic development, the *last* term of which is an *intelligent God*. But he who believes that the idea of God as the infinite and the perfect is native to the human mind, and that God stands at the beginning of the entire system of things, will feel there is a strong *à priori* ground for the belief that Thales recognized the existence of an *intelligent God who fashioned the universe*.

Anaximenes of Miletus (B.C. 529-480) we place next to Thales in the consecutive history of thought. It has been usual to rank Anaximander next to the founder of the Ionian School. The entire complexion of his system is, however, unlike that of a pupil of Thales. And we think a careful consideration of his views will justify our placing him at the head of the Mechanical or Atomic division of the Ionian school. Anaximenes is the historical successor of Thales; he was unquestionably a vitalist. He took up the speculation where Thales had left it, and he carried it a step forward in its development. [413](#)

Pursuing the same method as Thales, he was not, however, satisfied with the conclusion he had reached. Water was not to Anaximenes the most significant, neither was it the most universal element. But air seemed universally present. "The earth was a broad leaf resting upon it. All things were produced from it; all things were resolved into it. When he breathed he drew in a part of this universal life. All things are nourished by air." [414](#) Was not, therefore, *air* the ἀρχή, or primal element of things?

Footnote 413: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. i. p. 203.

Footnote 414: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 7.

This brief notice of the physical speculations of Anaximenes is all that has survived of his opinions. We search in vain for some intimations of his theological views. On this merely negative ground, some writers have unjustly charged him with Atheism. Were we to venture a conjecture, we would rather say that there are indications of a tendency to Pantheism in that form of it which associates God necessarily with the universe, but does not utterly confound them. His fixing upon "*air*" as the primal element, seems an effort to reconcile, in some apparently intermediate substance, the opposite qualities of corporeal and spiritual natures. Air is invisible, impalpable, all-penetrating, and yet in some manner appreciable to sense. May not the vital transformations of this element have produced all the rest? The writer of the Article on Anaximenes in the Encyclopædia Britannica tells us (on what ancient authorities he saith not) that "he asserted this air was God, since the divine power resides in it and agitates it."

Some indications of the views of Anaximenes may perhaps be gathered from the teachings of Diogenes of Apollonia (B.C. 520-490,) who was the disciple, and is generally regarded as the commentator and expounder of the views of Anaximenes. The air of Diogenes was a soul; therefore it was *living*, and not only living, but conscious and *intelligent*. "It knows much," says he; "for without *reason* it would be impossible for all to be arranged duly and proportionately; and whatever objects we consider will be found to be so arranged and ordered in the best and most beautiful manner." [415](#) Here we have a distinct recognition of the fundamental axiom that *mind is the only valid explanation of the order and harmony which pervades the universe*. With Diogenes the first principle is a "divine air," which is vital, conscious, and intelligent, which spontaneously evolves itself, and which, by its ceaseless transformations, produces all phenomena. The soul of man is a detached portion of this divine element; his body is developed or evolved therefrom. The theology of Diogenes, and, as we believe, of his master, Anaximenes also, was a species of Materialistic Pantheism.

Footnote 415: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 8; Ritter's "History of Ancient Philosophy," vol. i. p. 214.

Heraclitus of Ephesus (B.C. 503-420) comes next in the order of speculative thought. In his philosophy, *fire* is the ἀρχή, or first principle; but not fire in the usual acceptance of that term. The Heraclitean "fire" is not flame, which is only an intensity of fire, but a warm, dry vapor--an

ether, which may be illustrated, perhaps, by the "caloric" of modern chemistry. This "*ether*" was the primal element out of which the universe was formed; it was also a vital power or principle which animated the universe, and, in fact, the *cause* of all its successive phenomenal changes. "The world," he said, "was neither made by the gods nor men, and it was, and is, and ever shall be, an *ever-living fire*, in due proportion self-enkindled, and in due measure self-extinguished." ⁴¹⁶ The universe is thus reduced to "an eternal fire," whose ceaseless energy is manifested openly in the work of dissolution, and yet secretly, but universally, in the work of renovation. The phenomena of the universe are explained by Heraclitus as "the concurrence of opposite tendencies and efforts in the motions of this ever-living fire, out of which results the most beautiful harmony. This harmony of the world is one of conflicting impulses, like the lyre and the bow. The strife between opposite tendencies is the parent of all things. All life is change, and change is strife." ⁴¹⁷

Footnote 416: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. i. p. 235.

Footnote 417: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 70; Ritter's "History of Ancient Philosophy," vol. i. p. 244.

Heraclitus was the first to proclaim the doctrine of the perpetual fluxion of the universe (τὸ ῥέον, τὸ γιγνόμενον--Unrest and Development), the endless changes of matter, and the mutability and perishability of all individual things. This restless, changing flow of things, which never *are*, but always are *becoming*, he pronounced to be the *One* and the *All*.

From this statement of the physical theory of Heraclitus we might naturally infer that he was a Hylopathean Atheist. Such an hypothesis would not, however, be truthful or legitimate. On a more careful examination, his system will be found to stand half-way between the materialistic and the spiritual conception of the Author of the universe, and marks, indeed, a transition from the one to the other. Heraclitus unquestionably held that all substance is material, for a philosopher who proclaims, as he did, that the senses are the only source of knowledge, must necessarily attach himself to a material element as the primary one. And yet he seems to have *spiritualized* matter. "The moving unit of Heraclitus--the Becoming--is as immaterial as the resting unit of the Eleatics--the Being." ⁴¹⁸ The Heraclitean "*fire*" is endowed with *spiritual* attributes. "Aristotle calls it ψυχή--soul, and says that it is ἀσωματώτατον, or absolutely incorporeal ("De Anima," i. 2. 16). It is, in effect, the common ground of the phenomena both of mind and matter it is not only the animating, but also the intelligent and regulating principle of the universe; the Εὐνὸς Λόγος, or universal Word or Reason, which it behooves all men to follow." ⁴¹⁹ The psychology of Heraclitus throws additional light upon his theological opinions. With him human intelligence is a detached portion of the Universal Reason. "Inhaling," said he, "through the breath the Universal Ether, which is Divine Reason, we become conscious." The errors and imperfections of humanity are consequently to be ascribed to a deficiency of the Divine Reason in man. Whilst, therefore, the theory of Heraclitus seems to materialize mind, it may, with equal fairness, be said to spiritualize matter.

Footnote 418: [\(return\)](#) Zeller's "History of Greek Philosophy," vol. i. p. 57.

Footnote 419: [\(return\)](#) Butler's "Lectures," vol. i. p. 297, note.

The general inference, therefore, from all that remains of the doctrine of Heraclitus is that he was a Materialistic Pantheist. His God was a living, rational, intelligent Ether--a soul pervading the universe. The form of the universe, its ever-changing phenomena, were a necessary emanation from, or a perpetual transformation of, this universal soul.

With Heraclitus we close our survey of that sect of the physical school which regarded the world as a living organism.

The second subdivision of the physical school, *the Mechanical or Atomist theorists*, attempted the explanation of the universe by analogies derived from mechanical collocations, arrangements, and movements. The universe was regarded by them as a vast superstructure built up from elemental particles, aggregated by some inherent force or mutual affinity.

Anaximander of Miletus (born B.C. 610) we place at the head of the Mechanical sect of the Ionian school; first, on the authority of Aristotle, who intimates that the philosophic dogmata of Anaximander "resemble those of Democritus," who was certainly an Atomist; and, secondly, because we can clearly trace a genetic connection between the opinions of Democritus and Leucippus and those of Anaximander.

The ἀρχή, or first principle of Anaximander, was τὸ ἄπειρον, *the boundless, the illimitable, the infinite*. Some historians of philosophy have imagined that the infinite of Anaximander was the "unlimited all," and have therefore placed him at the head of the Italian or "idealistic school." These writers are manifestly in error. Anaximander was unquestionably a sensationalist. Whatever his "infinite" may be found to be, one thing is clear, it was not a "metaphysical infinite"--it did not include infinite power, much less infinite mind.

The testimony of Aristotle is conclusive that by "the infinite" Anaximander understood the multitude of primary, material particles. He calls it "a μίγμα, or mixture of elements." ⁴²⁰ It was, in fact, a *chaos*--an original state in which the primary elements existed in a chaotic combination

without *limitation* or division. He assumed a certain "*prima materia*," which was neither air, nor water, nor fire, but a "mixture" of all, to be the first principle of the universe. The account of the opinions of Anaximander which is given by Plutarch ("De Placita," etc.) is a further confirmation of our interpretation of his infinite. "Anaximander, the Milesian, affirmed the infinite to be the first principle, and that all things are generated out of it, and corrupted again into it. *His infinite is nothing else but matter.*" "Whence," says Cudworth, "we conclude that Anaximander's infinite was nothing else but an infinite chaos of matter, in which were actually or potentially contained all manner of qualities, by the fortuitous secretion and segregation of which he supposed infinite worlds to be successively generated and corrupted. So that we may easily guess whence Leucippus and Democritus had their infinite worlds, and perceive how near akin these two Atheistic hypotheses were." [421](#) The reader, whose curiosity may lead him to consult the authorities collected by Cudworth (pp. 185-188), will find in the doctrine of Anaximander a rude anticipation of the modern theories of "spontaneous generation" and "the transmutation of species." In the fragments of Anaximander that remain we find no recognition of an ordering Mind, and his philosophy is the dawn of a Materialistic school.

Footnote 420: [\(return\)](#) Aristotle's "Metaphysics," bk. xi. ch. ii.

Footnote 421: [\(return\)](#) Cudworth's "Intellectual System," vol. i. pp. 186, 187.

Leucippus of Miletus (B.C. 500-400) appears, in the order of speculation, as the successor of Anaximander. *Atoms* and *space* are, in his philosophy, the ἀρχαί, or first principles of all things. "Leucippus (and his companion, Democritus) assert that the plenum and the vacuum [*i.e.*, body and space] are the first principles, whereof one is the Ens, the other Non-ens; the differences of the body, which are only figure, order, and position, are the causes of all others." [422](#)

Footnote 422: [\(return\)](#) Aristotle's "Metaphysics," p. 21 (Bohn's edition).

He also taught that the elements, and the worlds derived from them, are *infinite*. He describes the manner in which the worlds are produced as follows: "Many bodies of various kinds and shapes are borne by amputation from the infinite [*i.e.*, the chaotic μῆγμα of Anaximander] into a vast vacuum, and then they, being collected together, produce a vortex; according to which, they, dashing against each other, and whirling about in every direction, are separated in such a way that like attaches itself to like; bodies are thus, without ceasing, united according to the impulse given by the vortex, and in this way the earth was produced." [423](#) Thus, through a boundless void, atoms infinite in number and endlessly diversified in form are eternally wandering; and, by their aggregation, infinite worlds are successively produced. These atoms are governed in their movements by a dark negation of intelligence, designated "Fate," and all traces of a Supreme Mind disappear in his philosophy. It is a system of pure materialism, which, in fact, is Atheism.

Footnote 423: [\(return\)](#) Diogenes Laertius, "Lives," p. 389.

Democritus of Abdera (B.C. 460-357), the companion of Leucippus, also taught "that *atoms* and the *vacuum* were the beginning of the universe." [424](#) These atoms, he taught, were infinite in number, homogeneous, extended, and possessed of those primary qualities of matter which are necessarily involved in extension in space--as size, figure, situation, divisibility, and mobility. From the combination of these atoms all other existences are produced; fire, air, earth, and water; sun, moon, and stars; plants, animals, and men; the soul itself is an aggregation of round, moving atoms. And "motion, which is the cause of the production of every thing, he calls *necessity*." [425](#) Atoms are thus the only real existences; these, without any pre-existent mind, or intelligence, were the original of all things.

Footnote 424: [\(return\)](#) Diogenes Laertius, "Lives," p. 395.

Footnote 425: [\(return\)](#) Id, ib., p. 394.

The psychological opinions of Democritus were as decidedly materialistic as his physical theories. All knowledge is derived from sensation. It is only by material impact that we can know the external world, and every sense is, in reality, a kind of touch. Material images are being continually thrown off from the surface of external objects which come into actual contact with the organs of sense. The primary qualities of matter, that is, those which are involved in extension in space, are the only objects of real knowledge; the secondary qualities of matter, as softness, hardness, sweetness, bitterness, and the like, are but modifications of the human sensibilities. "The sweet exists only in form--the bitter in form, hot in form, color in form; but in causal reality only atoms and space exist. The sensible things which are supposed by opinion to exist have no real existence, but atoms and space alone exist." [426](#)

Footnote 426: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 96. The words of Democritus, as reported by Sextus Empiricus.

Thus by Democritus was laid the basis of a system of absolute materialism, which was elaborated and completed by Epicurus, and has been transmitted to our times. It has undergone some slight modifications, adapting it to the progress of physical science; but it is to-day substantially the theory of Democritus. In Democritus we have the culmination of the mechanical theory of the Ionian or Physical school. In physics and psychology it terminated in pure materialism. In theology it ends in positive Atheism.

The fundamental error of all the philosophers of the physical school was the assumption, tacitly or avowedly, that sense-perception is the only source of knowledge. This was the fruitful source of all their erroneous conclusions, the parent of all their materialistic tendencies. This led them continually to seek an ἀρχή, or first principle of the universe, which should, under some form, be appreciable to *sense*; and consequently the course of thought tended naturally towards materialism.

294

Thales was unquestionably a dualist. Instructed by traditional intimations, or more probably guided by the spontaneous apperceptions of reason, he recognized, with more or less distinctness, an incorporeal Deity as the moving, animating, and organizing cause of the universe. The idea of God is a truth so self-evident as to need no demonstration. The human mind does not attain to the idea of a God as the last consequence of a series of antecedent principles. It comes at once, by an inherent and necessary movement of thought, to the recognition of God as the First Principle of all principles. But when, instead of hearkening to the simple and spontaneous intuitions of the mind, man turns to the world of sense, and loses himself in discursive thought, the conviction of a personal God becomes obscured. Then, amid the endlessly diversified phenomena of the universe, he seeks for a cause or origin which in some form shall be appreciable to sense. The mere study of material phenomena, scientifically or unscientifically conducted, will never yield the sense of the living God. Nature must be interpreted, can only be interpreted in the light of certain *à priori* principles of reason, or we can never "ascend from nature up to nature's God." Within the circle of mere sense-perception, the dim and undeveloped consciousness of God will be confounded with the universe. Thus, in Anaximenes, God is partially confounded with "air," which becomes a symbol; then a vehicle of the informing mind; and the result is a semi-pantheism. In Heraclitus, the "ether" is, at first, a semi-symbol of the Deity; at length, God is utterly confounded with this ether, or "rational fire," and the result is a definite *materialistic pantheism*. And, finally, when this feeling or dim consciousness of God, which dwells in all human souls, is not only disregarded, but pronounced to be an illusion--a phantasy; when all the analogies which intelligence suggests are disregarded, and a purely mechanical theory of the universe is adopted, the result is the utter negation of an Intelligent Cause, that is, *absolute Atheism*, as in Leucippus and Democritus.

295

CHAPTER IX.

THE PHILOSOPHERS OF ATHENS (*continued*).

PRE-SOCRATIC SCHOOL (*continued*).

IDEALIST: PYTHAGORAS--XENOPHANES--PARMENIDES--ZENO. NATURAL REALIST: ANAXAGORAS.

SOCRATIC SCHOOL.

SOCRATES.

In the previous chapter we commenced our inquiry with the assumption that, in the absence of the true inductive method of philosophy which observes, and classifies, and generalizes facts, and thence attains a general principle or law, two only methods were possible to the early speculators who sought an explanation of the universe--1st, That of reasoning from physical analogies; or, 2d, That of deduction from rational conceptions, or *à priori* ideas.

Accordingly we found that one class of speculators fixed their attention solely on the mere phenomena of nature, and endeavored, amid sensible things, to find a *single* element which, being more subtle, and pliable, and universally diffused, could be regarded as the ground and original of all the rest, and from which, by a vital transformation, or by a mechanical combination and arrangement of parts, all the rest should be evolved. The other class passed beyond the simple phenomena, and considered only the abstract *relations* of phenomena among themselves, or the relations of phenomena to the necessary and universal ideas of the reason, and supposed that, in these relations, they had found an explanation of the universe. The former was the Ionian or Sensation school; the latter was the Italian or Idealist school.

296

We have traced the method according to which the Ionian school proceeded, and estimated the results attained. We now come to consider the method and results of

THE ITALIAN OR IDEALIST SCHOOL.

This school we have found to be naturally subdivided into--1st, The *Mathematical* sect, which attempted the explanation of the universe by the abstract conceptions of number, proportion, order, and harmony; and, 2d, The *Metaphysical* school, which attempted the interpretation of the universe according to the *à priori* ideas of unity, of Being *in se*, of the Infinite, and the Absolute.

Pythagoras of Samos (born B.C. 605) was the founder of the Mathematical school.

We are conscious of the difficulties which are to be encountered by the student who seeks to attain a definite comprehension of the real opinions of Pythagoras. The genuineness of many of those writings which were once supposed to represent his views, is now questioned. "Modern criticism has clearly shown that the works ascribed to Timæus and Archytas are spurious; and the treatise of Ocellus Lucanus on 'The Nature of the All' can not have been written by a Pythagorean." [427](#) The only writers who can be regarded as at all reliable are Plato and Aristotle; and the opinions they represent are not so much those of Pythagoras as "the Pythagoreans." This is at once accounted for by the fact that Pythagoras taught in secret, and did not commit his opinions to writing. His disciples, therefore, represent the *tendency* rather than the actual tenets of his system; these were no doubt modified by the mental habits and tastes of his successors.

Footnote 427: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 24.

297 We may safely assume that the proposition from which Pythagoras started was the fundamental idea of all Greek speculation--*that beneath the fleeting forms and successive changes of the universe there is some permanent principle of unity* [428](#) The Ionian school sought that principle in some common physical element; Pythagoras sought, not for "elements," but for "relations," and through these relations for ultimate laws indicating primal forces.

Footnote 428: [\(return\)](#) See Plato, "Timæus," ch. ix. p. 331 (Bohn's edition); Aristotle's "Metaphysics," bk. v. ch. iii.

Aristotle affirms that Pythagoras taught "that *numbers* are the first principles of all entities," and, "as it were, a *material* cause of things," [429](#) or, in other words, "that numbers are substances that involve a separate subsistence, and are primary causes of entities." [430](#)

Footnote 429: [\(return\)](#) Aristotle's "Metaphysics," bk. i. ch. v.

Footnote 430: [\(return\)](#) Id., ib., bk. xii. ch. vi.

298 Are we then required to accept the dictum of Aristotle as final and decisive? Did Pythagoras really teach that numbers are real entities--the *substance* and cause of all other existences? The reader may be aware that this is a point upon which the historians of philosophy are not agreed. Ritter is decidedly of opinion that the Pythagorean formula "can only be taken symbolically." [431](#) Lewes insists it must be understood literally. [432](#) On a careful review of all the arguments, we are constrained to regard the conclusion of Ritter as most reasonable. The hypothesis "that numbers are real entities" does violence to every principle of common sense. This alone constitutes a strong *à priori* presumption that Pythagoras did not entertain so glaring an absurdity. The man who contributed so much towards perfecting the mathematical sciences, who played so conspicuous a part in the development of ancient philosophy, and who exerted so powerful a determining influence on the entire current of speculative thought, did not obtain his ascendancy over the intellectual manhood of Greece by the utterance of such enigmas. And further, in interpreting the philosophic opinions of the ancients, we must be guided by this fundamental canon--"The human mind has, under the necessary operation of its own laws, been compelled to entertain the same fundamental ideas, and the human heart to cherish the same feelings in all ages." Now if a careful philosophic criticism can not render the *reported* opinions of an ancient teacher into the universal language of the reason and heart of humanity, we must conclude either that his opinions were misunderstood and misrepresented by some of his successors, or else that he stands in utter isolation, both from the present and the past. His doctrine has, then, no relation to the successions of thought, and no place in the history of philosophy. Nay, more, such a doctrine has in it no element of vitality, no germ of eternal truth, and must speedily perish. Now it is well known that the teaching of Pythagoras awakened the deepest intellectual sympathy of his age; that his doctrine exerted a powerful influence on the mind of Plato, and, through him, upon succeeding ages; and that, in some of its aspects, it now survives, and is more influential to-day than in any previous age; but this element of immutable and eternal truth was certainly not contained in the inane and empty formula, "that numbers are real existences, the causes of all other existences!" If the fame of Pythagoras had rested on such "airy nothings," it would have melted away before the time of Plato.

Footnote 431: [\(return\)](#) "History of Ancient Philosophy," vol. i. p. 359.

Footnote 432: [\(return\)](#) "Biographical History of Philosophy," p. 38.

We grant there is considerable force in the argument of Lewes. He urges, with some pertinence, the unquestionable fact that Aristotle asserts, again and again, that the Pythagoreans taught "that numbers are the principles and substance of things as well as the causes of their modifications;" and he argues that we are not justified in rejecting the authority of Aristotle, unless better evidence can be produced.

299 So far, however, as the authority of Aristotle is concerned, even Lewes himself charges him, in more than one instance, with strangely misrepresenting the opinions of his predecessors. [433](#) Aristotle is evidently wanting in that impartiality which ought to characterize the historian of philosophy, and, sometimes, we are compelled to question his integrity. Indeed, throughout his "Metaphysics" he exhibits the egotism and vanity of one who imagines that he alone, of all men, has the full vision of the truth. In Books I. and XII. he uniformly associates the "*numbers*" of Pythagoras with the "*forms*" and "*ideas*" of Plato. He asserts that Plato identifies "forms" and

"numbers," and regards them as real entities--substances, and causes of all other things. "*Forms are numbers* [434](#)... so Plato affirmed, similar with the Pythagoreans; and the dogma that numbers are causes to other things--of their substance--*he, in like manner, asserted with them.*" [435](#) And then, finally, he employs the *same* arguments in refuting the doctrines of both.

Footnote 433: [\(return\)](#) "Aristotle uniformly speaks disparagingly of Anaxagoras" (Lewes's "Biographical History of Philosophy"). He represents him as employing mind (*νοῦς*) simply as "a *machine*" for the production of the world;--"when he finds himself in perplexity as to the cause of its being necessarily an orderly system, he then drags it (mind) in by force to his assistance" "Metaphysics," (bk. i. ch. iv.). But he is evidently inconsistent with himself, for in "De Anima" (bk. i. ch. ii.) he tells us that "Anaxagoras saith that mind is at once a *cause of motion* in the whole universe, and also of *well* and *fit*." We may further ask, is not the idea of fitness--of the good and the befitting--the final cause, even according to Aristotle?

He also totally misrepresents Plato's doctrine of "Ideas." "Plato's Ideas," he says, "are substantial existences--real beings" ("Metaphysics," bk. i. ch. ix.). Whereas, as we shall subsequently show, "they are objects of pure conception for human reason, and they are attributes of the Divine Reason. It is there they substantially exist." (Cousin, "History of Philosophy," vol. i. p. 415). It is also pertinent to inquire, what is the difference between the "formal cause" of Aristotle and the archetypal ideas of Plato? and is not Plato's τὸ ἀγαθόν the "final cause?" Yet Aristotle is forever congratulating himself that he alone has properly treated the "formal" and the "final cause!"

Footnote 434: [\(return\)](#) This, however, was not the doctrine of Plato. He does not say "forms are numbers." He says: "God formed things as they first arose according to forms *and* numbers." See "Timaeus," ch. xiv. and xxvii.

Footnote 435: [\(return\)](#) Aristotle's "Metaphysics," bk. i. ch. vi.

Now the writings of Plato are all extant to-day, and accessible in an excellent English translation to any of our readers. Cousin has shown, [436](#) most conclusively (and we can verify his conclusions for ourselves), that Aristotle has totally misrepresented Plato. And if, in the same connection, and in the course of the same argument, and in regard to the same subjects, he misrepresents Plato, it is most probable he also misrepresents Pythagoras.

Footnote 436: [\(return\)](#) "The True, the Beautiful, and the Good," pp. 77-81.

300

It is, however, a matter of the deepest interest for us to find the evidence gleaming out here and there, on the pages of Aristotle, that he had some knowledge of the fact that the Pythagorean numbers were regarded as *symbols*. The "numbers" of Pythagoras are, in the mind of Aristotle, clearly identified with the "forms" of Plato. Now, in Chapter VI. of the First Book he says that Plato taught that these "forms" were παραδείγματα--models, patterns, exemplars after which created things were framed. The numbers of Pythagoras, then, are also models and exemplars. This also is admitted by Aristotle. The Pythagoreans indeed affirm that entities subsist by an *imitation* (μίμησις) of numbers. [437](#) Now if ideas, forms, numbers, were the models or paradigms after which "the Operator" formed all things, surely it can not be logical to say they were the "material" out of which all things were framed, much less the "efficient cause" of things. The most legitimate conclusion we can draw, even from the statements of Aristotle, is that the Pythagoreans regarded numbers as the best expression or representation of those laws of proportion, and order, and harmony, which seemed, to their eyes, to pervade the universe. Their doctrine was a faint glimpse of that grand discovery of modern science--that all the higher laws of nature assume the form of a precise quantitative statement.

Footnote 437: [\(return\)](#) Aristotle's "Metaphysics," bk. i. ch. vi.

The fact seems to be this, the Pythagoreans busied themselves chiefly with what Aristotle designates "the *formal* cause," and gave little attention to the inquiry concerning "the *material* cause." This is admitted by Aristotle. Concerning fire, or earth, or the other bodies of such kind, they have declared nothing whatsoever, inasmuch as affirming, in my opinion, nothing that is peculiar concerning *sensible* natures. [438](#) They looked, as we have previously remarked, to the relations of phenomena, and having discovered certain "numerical similitudes," they imagined they had attained an universal principle, or law. "If all the essential properties and attributes of things were fully represented by the relations of numbers, the philosophy which supplied such an explanation of the universe might well be excused from explaining, also, that existence of objects, which is distinct from the existence of all their qualities and properties. The Pythagorean doctrine of numbers might have been combined with the doctrine of atoms, and the combination might have led to results worthy of notice. But, so far as we are aware, no such combination was attempted, and perhaps we of the present day are only just beginning to perceive, through the disclosures of chemistry and crystallography, the importance of such an inquiry." [439](#)

301

Footnote 438: [\(return\)](#) Id., ib., bk. i. ch. ix.

Footnote 439: [\(return\)](#) Whewell's "History of Inductive Sciences," vol. i. p. 78.

These preliminary considerations will have cleared and prepared the way for a fuller presentation of the philosophic system of Pythagoras. The most comprehensive and satisfactory exposition of his "method" is that given by Wm Archer Butler in his "*Lectures on Ancient Philosophy*," and we feel we can not do better than condense his pages. [440](#)

Pythagoras had long devoted his intellectual adoration to the lofty idea of *order*, which seemed to reveal itself to his mind, as the presiding genius of the serene and silent world. He had, from his youth, dwelt with delight upon the eternal relations of space, and determinate form, and number, in which the very idea of *proportion* seems to find its first and immediate development, and without the latter of which (number), all proportion is absolutely inconceivable. To this ardent genius, whose inventive energies were daily adding new and surprising contributions to the sum of discoverable relations, it at length began to appear as if the whole secret of the universe was hidden in these mysterious correspondences.

302 In making this extensive generalization, Pythagoras may, on his known principles, be supposed to have reasoned as follows: The mind of man perceives the relations of an eternal *order* in the proportions of space, and form, and number. That mind is, no doubt, a portion of the soul which animates and governs the universe; for on what other supposition shall we account for its internal principle of activity--the very principle which characterizes the prime mover, and can scarce be ascribed to an inferior nature? And on what other supposition are we to explain the identity which subsists between the principles of order, authenticated by the reason and the facts of order which are found to exist in the forms and multiplicities around us, and independent of us? Can this sameness be other than the sameness of the internal and external principles of a common nature? The proportions of the universe inhere in its divine soul; they are indeed its very essence, or at least, its attributes. The ideas or principles of Order which are implanted in the human reason, must inhere in the Divine Reason, and must be reflected in the visible world, which is its product. Man, then, can boldly affirm the necessary harmony of the world, because he has in his own mind a revelation which declares that the world, in its real structure, must be the image and copy of that divine *proportion* which he inwardly adores. [441](#)

Footnote 441: [\(return\)](#) It is an opinion which goes as far back as the time of Plato, and even Pythagoras, and has ever since been widely entertained, that beauty of *form* consists in some sort of *proportion* or *harmony* which may admit of a mathematical expression; and later and more scientific research is altogether in its favor. It is now established that complementary colors, that is, colors which when combined make up the full beam, are felt to be beautiful when seen simultaneously; that is, the mind is made to delight in the unities of nature. At the basis of music there are certain fixed ratios; and in poetry, of every description, there are measures, and correspondencies. Pythagoras has often been ridiculed for his doctrine of "the music of the spheres;" and probably his doctrine was somewhat fanciful, but later science shows that there is a harmony in all nature--in its forms, in its forces, and in its motions. The highest unorganized and all organized objects take definite forms which are regulated by mathematical laws. The forces of nature can be estimated in numbers, and light and heat go in undulations, whilst the movements of the great bodies in nature admit of a precise quantitative expression. The harmonies of nature in respect of color, of number, of form, and of time are forcibly exhibited in "Typical Forms and Special Ends in Creation," by M'Cosh.

303 Again, the world is assuredly *perfect*, as being the sensible image and copy of the Divinity, the outward and multiple development of the Eternal Unity. It must, therefore, when thoroughly known and properly interpreted, answer to all which we can conceive as perfect; that is, it must be regulated by laws, of which we have the highest principles in those first and elementary properties of numbers which stand next to *unity*. "The world is then, through all its departments, *a living arithmetic in its development, a realized geometry in its repose.*" It is a κόσμος (for the word is purely Pythagorean)--the expression of *harmony*, the manifestation, to sense, of everlasting *order*.

Though Pythagoras found in geometry the fitting initiative for abstract speculation, it is remarkable that he himself preferred to constitute the science of Numbers as the true representative of the laws of the universe. The reason appears to be this: that though geometry speaks indeed of eternal truths, yet when the notion of symmetry and proportion is introduced, it is often necessary to insist, in preference, upon the properties of numbers. Hence, though the universe displays the geometry of its Constructor or Animator, yet nature was eminently defined as the μίμησις τῶν ἀριθμῶν--the imitation of numbers.

304 The key to all the Pythagorean dogmas, then, seems to be the general formula of *unity in multiplicity*--unity either evolving itself into multiplicity, or unity discovered as pervading multiplicity. The principle of all things, the same principle which in this philosophy, as in others, was customarily called *Deity*, is the primitive unit from which all proceeds in the accordant relations of the universal scheme. Into the sensible world of multitude, the all-pervading Unity has infused his own ineffable nature; he has impressed his own image upon that world which is to represent him in the sphere of sense and man. What, then, is that which is at once single and multiple, identical and diversified--which we perceive as the combination of a thousand elements, yet as the expression of a single spirit--which is a chaos to the sense, a cosmos to the reason? What is it but harmony--proportion--the one governing the many, the many lost in the one? The world is therefore a *harmony* in innumerable degrees, from the most complicated to the most simple: it is now a Triad, combining the Monad and the Duad, and partaking of the nature of both; now a Tetrad, the form of perfection; now a Decad, which, in combining the four former, involves, in its mystic nature, all the possible accordances of the universe. [442](#)

The psychology of the Pythagoreans was greatly modified by their physical, and still more, by their moral tenets. The soul was ἀριθμὸς ἐαυτὸν κινῶν--a self-moving number or Monad, the

copy (as we have seen) of that Infinite Monad which unfolds from its own incomprehensible essence all the relations of the universe. This soul has three elements, Reason (νοῦς), Intelligence (φρήν), and Passion (θυμός). The two last, man has in common with brutes, the first is his grand and peculiar characteristic. It has, hence, been argued that Pythagoras could not have held the doctrine of "transmigration." This clear separation of man from the brute, by this signal endowment of reason, which is sempiternal, seems a refutation of those who charge him with the doctrine.

In the department of morals, the legislator of Crotona found his appropriate sphere. In his use of numerical notation, moral good was essential unity--evil, essential plurality and division. In the fixed truths of mathematical abstractions he found the exemplars of social and personal virtue. The rule or law of all morality is resemblance to God; that is, the return of number to its root, to unity, [443](#) and virtue is thus a harmony.

Footnote 442: [\(return\)](#) That is, $1+2+3+4=10$. There are intimations that the Pythagoreans regarded the Monad as God, the Duad as matter, the Triad as the complex phenomena of the world, the Tetrad as the completeness of all its relations, the Decad as the cosmos, or harmonious whole.

Footnote 443: [\(return\)](#) Aristotle, "Nichomachian Ethics," bk. i. ch. vi.

Thus have we, in Pythagoras, the dawn of an *Idealist* school; for mathematics are founded upon abstractions, and there is consequently an intimate connection between mathematics and idealism. The relations of space, and number, and determinate form, are, like the relations of cause and effect, of phenomena and substance, perceptible *only in thought*; and the mind which has been disciplined to abstract thought by the study of mathematics, is prepared and disposed for purely metaphysical studies. "The looking into mathematical learning is a kind of prelude to the contemplation of real being." [444](#) Therefore Plato inscribed over the door of his academy, "Let none but Geometricians enter here." To the mind thus disciplined in abstract thinking, the conceptions and ideas of reason have equal authority, sometimes even superior authority, to the perceptions of sense.

Footnote 444: [\(return\)](#) Alcinous, "Introduction to the Doctrines of Plato," ch. vii.

Now if the testimony of both reason and sense, as given in consciousness, is accepted as of equal authority, and each faculty is regarded as, within its own sphere, a source of real, valid knowledge, then a consistent and harmonious system of *Natural Realism* or *Natural Dualism* will be the result. If the testimony of sense is questioned and distrusted, and the mind is denied any immediate knowledge of the sensible world, and yet the existence of an external world is maintained by various hypotheses and reasonings, the consequence will be a species of *Hypothetical Dualism* or *Cosmothetic Idealism*. But if the affirmations of reason, as to the unity of the cosmos, are alone accepted, and the evidence of the senses, as to the variety and multiplicity of the world, is entirely disregarded, then we have a system of *Absolute Idealism*. Pythagoras regarded the harmony which pervades the diversified phenomena of the outer world as a manifestation of the unity of its eternal principle, or as the perpetual evolution of that unity, and the consequent *tendency* of his system was to depreciate the *sensible*. Following out this tendency, the Eleatics first neglected, and finally denied the variety of the universe--denied the real existence of the external world, and asserted an absolute *metaphysical* unity.

Xenophanes of Colophon, in Ionia (B.C. 616-516), was the founder of this celebrated school of Elea. He left Ionia, and arrived in Italy about the same time as Pythagoras, bringing with him to Italy his Ionian tendencies; he there amalgamated them with Pythagorean speculations.

Pythagoras had succeeded in fixing the attention of his countrymen on the harmony which pervades the material world, and had taught them to regard that harmony as the manifestation of the intelligence, and unity, and perfection of its eternal principle. Struck with this idea of harmony and of unity, Xenophanes, who was a poet, a rhapsodist, and therefore by native tendency, rather than by intellectual discipline, an Idealist, begins already to attach more importance to *unity* than multiplicity in his philosophy of nature. He regards the testimony of reason as of more authority than the testimony of sense; "and he holds badly enough the balance between the unity of the Pythagoreans and the variety which Heraclitus and the Ionians had alone considered." [445](#)

We are not, however, to suppose that Xenophanes denied entirely the existence of *plurality*. "The great Rhapsodist of Truth" was guided by the spontaneous intuitions of his mind (which seemed to partake of the character of an inspiration), to a clearer vision of the truth than were his successors of the same school by their discursive reasonings. "The One" of Xenophanes was clearly distinguished from the outward universe (τὰ πολλὰ) on the one hand, and from the "*non-ens*" on the other. It was his disciple, Parmenides, who imagined the logical necessity of identifying plurality with the "*non-ens*" and thus denying all immediate cognition of the phenomenal world. The compactness and logical coherence of the system of Parmenides seems to have had a peculiar charm for the Grecian mind, and to have diverted the eyes of antiquity from the views of the more earnest and devout Xenophanes, whose opinions were too often confounded with those of his successors of the Eleatic school. "Accordingly we find that Xenophanes has obtained credit for much that is, exclusively, the property of Parmenides and Zeno, in particular for denying plurality, and for identifying God with the universe." [446](#)

Footnote 445: [\(return\)](#) Cousin, "History of Philosophy," vol. i. p. 440.

Footnote 446: [\(return\)](#) See note by editor, W.H. Thompson, M.A., on pages 331, 332 of Butler's "Lectures," vol. i. His authorities are "Fragments of Xenophanes" and the treatise "De Melisso, Xenophane, et Gorgia," by Aristotle.

307

In theology, Xenophanes was unquestionably a *Theist*. He had a profound and earnest conviction of the existence of a God, and he ridiculed with sarcastic force, the anthropomorphic absurdities of the popular religion. This one God, he taught, was self-existent, eternal, and infinite; supreme in power, in goodness, and intelligence. [447](#) These characteristics are ascribed to the Deity in the sublime words with which he opens his philosophic poem--

"There is one God, of all beings, divine and human, the greatest:
Neither in body alike unto mortals, neither in mind."

He has no parts, no organs, as men have, being

"All sight, all ear, all intelligence;
Wholly exempt from toil, he sways all things by *thought* and *will*." [448](#)

Xenophanes also taught that God is "uncreated" or "uncaused," and that he is "excellent" as well as "all-powerful." [449](#) And yet, regardless of these explicit utterances, Lewes cautions his readers against supposing that, by the "one God," Xenophanes meant a Personal God; and he asserts that his Monotheism was Pantheism. A doctrine, however, which ascribes to the Divine Being moral as well as intellectual supremacy, which acknowledges an outward world distinct from Him, and which represents Him as causing the changes in that universe by the acts of an intelligent volition, can only by a strange perversion of language be called pantheism.

308

Parmenides of Elea (born B.C. 536) was the philosopher who framed the psychological opinions of the Idealist school into a precise and comprehensive system. He was the first carefully to distinguish between *Truth* (ἀλήθειαν) and *Opinion* (δοξαν)--between ideas obtained through the reason and the simple perceptions of sense. Assuming that reason and sense are the only sources of knowledge, he held that they furnish the mind with two distinct classes of cognitions--one variable, fleeting, and uncertain; the other immutable, necessary, and eternal. Sense is dependent on the variable organization of the individual, and therefore its evidence is changeable, uncertain, and nothing but a mere "*seeming*." Reason is the same in all individuals, and therefore its evidence is constant, real, and true. Philosophy is, therefore, divided into two branches--*Physics* and *Metaphysics*; one, a science of absolute knowledge; the other, a science of mere appearances. The first science, *Physics*, is pronounced illusory and uncertain; the latter, *Metaphysics*, is infallible and immutable. [450](#)

Proceeding on these principles, he rejects the dualistic system of the universe, and boldly declared that all essences are fundamentally *one*--that, in fact, there is no real plurality, and that all the diversity which "appears" is merely presented under a peculiar aesthetic or sensible law. The senses, it is true, teach us that there are "many things," but reason affirms that, at bottom, there exists only "the one." Whatever, therefore, manifests itself in the field of sense is merely illusory--the mental representation of a phenomenal world, which to experience seems diversified, but which reason can not possibly admit to be other than "immovable" and "one." There is but one Being in the universe, eternal, immovable, absolute; and of this unconditioned being all phenomenal existences, whether material or mental, are but the attributes and modes. Hence the two great maxims of the Eleatic school, derived from Parmenides--τὰ πάντα ἔν, "*The All is One*" and τὸ αὐτὸ νοεῖν τε καὶ εἶναι (Idem est cogitare atque esse), "*Thought and Being are identical*." The last remarkable dictum is the fundamental principle of the modern pantheistic doctrine of "absolute identity" as taught by Schelling and Hegel. [451](#)

Footnote 450: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. i. pp. 447, 451.

Footnote 451: [\(return\)](#) Id., ib., vol. i. pp. 450, 455.

309

Lewes asserts that "Parmenides did not, with Xenophanes, call 'the One' God; he called it Being. [452](#) In support of this statement he, however, cites no ancient authorities. We are therefore justified in rejecting his opinion, and receiving the testimony of Simplicius, "the only authority for the fragments of the Eleatics," [453](#) and who had a copy of the philosophic poems of Parmenides. He assures us that Parmenides and Xenophanes "affirmed that '*the One*,' or unity, was the first Principle of all....they meaning by this One *that highest or supreme God*, as being the cause of unity to all things.... It remaineth, therefore, that that *Intelligence* which is the cause of all things, and therefore of mind and understanding also, in which all things are comprehended in unity, was Parmenides' one Ens or Being. [454](#) Parmenides was, therefore, a spiritualistic or idealistic Pantheist.

Zeno of Elea (born B.C. 500) was the logician of the Eleatic school. He was, says Diogenes Laertius, "the inventor of Dialectics." [455](#) Logic henceforth becomes the ὄργανον [456](#)--organon of the Eleatics.

Footnote 455: [\(return\)](#) "Lives," p. 387 (Bohn's edition).

Footnote 456: [\(return\)](#) Plato in "Parmen."

This organon, however, Zeno used very imperfectly. In his hands it was simply the "reductio ad absurdum" of opposing opinions as the means of sustaining the tenets of his own sect. Parmenides had asserted, on *à priori* grounds, the existence of "the One." Zeno would prove by his dialectic the non-existence of "the many." His grand position was that all phenomena, all that appears to sense, is but a *modification* of the absolute One. And he displays a vast amount of dialectic subtilty in the effort to prove that all "appearances" are unreal, and that all movement and change is a mere "seeming"--not a reality. What men call motion is only a name given to a series of conditions, each of which, considered separately, is rest. "Rest is force resistant; motion is force triumphant." [457](#) The famous puzzle of "Achilles and the Tortoise," by which he endeavored to prove the unreality of motion, has been rendered familiar to the English reader. [458](#)

Footnote 457: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 60.

Footnote 458: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. i. pp. 475, 476.

310

Aristotle assures us that Zeno, "by his one Ens, which neither was moved nor movable, meaneth God." And he also informs us that "Zeno endeavored to demonstrate that there is but one God, from the idea which all men have of him, as that which is the best, supremest, most powerful of all, or an absolutely perfect being" ("De Xenophane, Zenone, et Gorgia"). [459](#)

With Zeno we close our survey of the second grand line of independent inquiry by which philosophy sought to solve the problem of the universe. The reader will be struck with the resemblance which subsists between the history of its development and that of the modern Idealist school. Pythagoras was the Descartes, Parmenides the Spinoza, and Zeno the Hegel of the Italian school.

In this survey of the speculations of the pre-Socratic schools of philosophy, we have followed the course of two opposite streams of thought which had their common origin in one fundamental principle or law of the human mind--the *intuition of unity*--"or the desire to comprehend all the facts of the universe in a single formula, and consummate all conditional knowledge in the unity of unconditioned existence." The history of this tendency is, in fact, the history of all philosophy. "The end of all philosophy," says Plato, "is the intuition of unity." "All knowledge," said the Platonists, "is the gathering up into one." [460](#)

Footnote 459: [\(return\)](#) Cudworth's "Intellectual System," vol. i. p. 518.

Footnote 460: [\(return\)](#) Hamilton's "Metaphysics," vol. i. pp. 67-70 (English edition).

311

Starting from this fundamental idea, *that, beneath the endless flux and change of the visible universe, there must be a permanent principle of unity*, we have seen developed two opposite schools of speculative thought. As the traveller, standing on the ridges of the Andes, may see the head-waters of the great South American rivers mingling in one, so the student of philosophy, standing on the elevated plane of analytic thought, may discover, in this fundamental principle, the common source of the two great systems of speculative thought which divided the ancient world. Here are the head-waters of the sensational and the idealist schools. The Ionian school started its course of inquiry in the direction of *sense*; it occupied itself solely with the phenomena of the external world, and it sought this principle of unity in a *physical* element. The Italian school started its course of inquiry in the direction of *reason*; it occupied itself chiefly with rational conceptions or *à priori* ideas, and it sought this principle of unity in purely *metaphysical* being. And just as the Amazon and La Plata sweep on, in opposite directions, until they reach the extremities of the continent, so these two opposite streams of thought rush onward, by the force of a logical necessity, until they terminate in the two Unitarian systems of *Absolute Materialism* and *Absolute Idealism*, and, in their theological aspects, in a pantheism which, on the one hand, identifies God with matter, or, on the other hand, swallows up the universe in God.

The radical error of both these systems is at once apparent. The testimony of the primary faculties of the mind was not regarded as each, within its sphere, final and decisive. The duality of consciousness was not accepted in all its integrity; one school rejected the testimony of reason, the other denied the veracity of the senses, and both prepared the way for the *skepticism* of the Sophists.

We must not, however, lose sight of the fact that there were some philosophers of the pre-Socratic school, as Anaxagoras and Empedocles, who recognized the partial and exclusive

character of both these systems, and sought, by a method which Cousin would designate as Eclecticism, to combine the element of truth contained in each.

Anaxagoras of Clazomenæ (B.C. 500-428) added to the Ionian philosophy of a material element or elements the Italian idea of a *spirit* distinct from, and independent of the world, which has within itself the principle of a spontaneous activity--Νοῦς αὐτοκρατής, and which is the first cause of motion in the universe--ἀρχὴ τῆς κινήσεως. [461](#)

Footnote 461: [\(return\)](#) Cousin, "History of Philosophy," vol. i. p. 411.

312

In his physical theory, Anaxagoras was an Atomist. Instead of one element, he declared that the elements or first principles were numerous, or even infinite. No point in space is unoccupied by these atoms, which are infinitely divisible. He imagined that, in nature, there are as many kinds of principles as there are species of compound bodies, and that the peculiar form of the primary particles of which any body is composed is the same with the qualities of the compound body itself. This was the celebrated doctrine of *Homæomeria*, of which Lucretius furnishes a luminous account in his philosophic poem "De Natura Rerum"--

"That bone from bones
Minute, and embryo; nerve from nerves arise;
And blood from blood, by countless drops increased.
Gold, too, from golden atoms, earths concrete,
From earths extreme; from fiery matters, fire;
And lymph from limpen dews. And thus throughout
From primal kinds that kinds perpetual spring." [462](#)

These primary particles were regarded by Anaxagoras as eternal; because he held the dogma, peculiar to all the Ionians, that nothing can be really created or annihilated (*de nihilo nihil, in nihilum nil posse reverti*). But he saw, nevertheless, that the simple existence of "*inert*" matter, even from eternity, could not explain the motion and the harmony of the material world. Hence he saw the necessity of another power--*the power of Intelligence*. "All things were in chaos; then came Intelligence and introduced Order." [463](#)

Anaxagoras, unlike the pantheistic speculators of the Ionian school, rigidly separated the Supreme Intelligence from the material universe. The Νοῦς of Anaxagoras is a principle, infinite, independent (αὐτοκρατής), omnipresent (ἐν παντὶ παντὸς μοῖοα ἔσθιν), the subtlest and purest of things (λεπτότατον πάντων χρημάτων καὶ καθαρώτατον); and incapable of mixture with aught besides; it is also omniscient (πάντα ἔγνω), and unchangeable (πᾶς ὁμοῖός ἐστι).--Simplicius, in "Arist. Phys." i. 33. [464](#)

Footnote 462: [\(return\)](#) Good's translation, bk. i. p. 325.

Footnote 463: [\(return\)](#) Diogenes Laertius, "Lives," p. 59.

Footnote 464: [\(return\)](#) Butler's "Lectures on Philosophy," vol. i. p. 305, note.

313

Thus did Anaxagoras bridge the chasm between the Ionian and the Italian schools. He accepted both doctrines with some modifications. He believed in the real existence of the phenomenal world, and he also believed in the real existence of "The Infinite Mind," whose Intelligence and Omnipotence were manifested in the laws and relations which pervade the world. He proclaimed the existence of the Infinite Intelligence ("the ONE"), who was the Architect and Governor of the Infinite Matter ("the MANY").

On the question as to the origin and certainty of human knowledge, Anaxagoras differed both from the Ionians and the Eleatics. Neither the sense alone, nor the reason alone, were for him a ground of certitude. He held that reason (λόγος) was the regulative faculty of the mind, as the Νοῦς, or Supreme Intelligence, was the regulative power of the universe. And he admitted that the senses were veracious in their reports; but they reported only in regard to phenomena. The senses, then, perceive *phenomena*, but it is the reason alone which recognizes *noumena*, that is, the reason perceives being in and through phenomena, substance in and through qualities; an anticipation of the fundamental principle of modern psychology--"*that every power or substance in existence is knowable to us, so far only, as we know its phenomena*." Thus, again, does he bridge the chasm that separates between the Sensationalist and the Idealist. The Ionians relied solely on the intuitions of sense; the Eleatics accepted only the apperceptions of pure reason; he accepted the testimony of both, and in the synthesis of subject and object--the union of an element supplied by sensation, and an element supplied by reason, he found real, certain knowledge.

The harmony which the doctrine of Anaxagoras introduced into the philosophy of Athens, soon attracted attention and multiplied disciples. He was teaching when Socrates arrived in Athens, and the latter attended his school. The influence which the doctrine of Anaxagoras exerted upon the mind of Socrates (leading him to recognize Intelligence as the cause of order and special adaptation in the universe), [465](#) and also upon the course of philosophy in the Socratic schools, is the most enduring memorial of his name. [466](#)

314

Footnote 465: [\(return\)](#) "Phaedo," § 105.

We have devoted a much larger space than we originally designed to the ante-Socratic schools--quite out of proportion, indeed, with that we shall be able to appropriate to their successors. But inasmuch as all the great primary problems of thought, which are subsequently discussed by Plato and Aristotle, were started, and received, at least, typical answers in those schools, we can not hope to understand Plato, or Aristotle, or even Epicurus, or Zeno of Cittium, unless we have first mastered the doctrines of Heraclitus, Pythagoras, Parmenides, and Anaxagoras. [467](#) The attention we have bestowed on these early thinkers will, therefore, have been a valuable preparatory discipline for the study of

Footnote 467: [\(return\)](#) Maurice's "Ancient Philosophy," p. 114; Butler's "Lectures on Ancient Philosophy," vol. ii. pp. 87, 88.

II. THE SOCRATIC SCHOOL.

The first cycle of philosophy was now complete. That form of Grecian speculative thought which, during the first period of its development, was a philosophy of nature, had reached its maturity; it had sought "the first principles of all things" in the study of external nature, and had signally failed. In this pursuit of first principles as the basis of a true and certain knowledge of the system of the universe, the two leading schools had been carried to opposite poles of thought. One had asserted that *experience* alone, the other, that *reason* alone was the sole criterion of truth. As the last consequence of this imperfect method, Leucippus had denied the existence of "the one," and Zeno had denied the existence of "the many." The Ionian school, in Democritus, had landed in Materialism; the Italian, in Parmenides, had ended in Pantheism; and, as the necessary result of this partial and defective method of inquiry, which ended in doubt and contradiction, a spirit of general skepticism was generated in the Athenian mind. If doubt be cast upon the veracity of the primary cognitive faculties of the mind, the flood-gates of universal skepticism are opened. If the senses are pronounced to be mendacious and illusory in their reports regarding external phenomena, and if the intuitions of the reason, in regard to the ground and cause of phenomena, are delusive, then we have no ground of certitude. If one faculty is untruthful and unreliable, how can we determine that the other is not equally so? There is, then, no such thing as universal and necessary truth. Truth is variable and uncertain, as the variable opinion of each individual.

The Sophists, who belonged to no particular school, laid hold on the elements of skepticism contained in both the pre-Socratic schools of philosophy, and they declared that "the σοφία" was not only unattainable, but that no relative degree of it was possible for the human faculties. [468](#) Protagoras of Abdera accepted the doctrine of Heraclitus, that thought is identical with sensation, and limited by it; he therefore declared that there is no criterion of truth, and *Man is the measure of all things*. [469](#) Sextus Empiricus gives the psychological opinions of Protagoras with remarkable explicitness. "Matter is in a perpetual flux, whilst it undergoes augmentations and losses; the senses also are modified according to the age and disposition of the body. He said, also, that the reason of all phenomena resides in matter as substrata, so that matter, in itself, might be whatever it appeared to each. But men have different perceptions at different periods, according to the changes in the things perceived.... Man is, therefore, the criterion of that which exists; all that is perceived by him exists; *that which is perceived by no man does not exist*." [470](#) These conclusions were rigidly and fearlessly applied to ethics and political science. If there is no Eternal Truth, there can be no Immutable Right. The distinction of right and wrong is solely a matter of human opinion and conventional usage. [471](#) "That which *appears* just and honorable to each city, is so for *that city*, so long as the opinion prevails." [472](#)

Footnote 468: [\(return\)](#) Encyclopædia Britannica, article "Sophist."

Footnote 469: [\(return\)](#) Plato's "Theætetus" (ἀνθρώπου--"the individual is the measure of all things"), vol. i. p. 381 (Bohn's edition).

Footnote 470: [\(return\)](#) Lewes's "Biographical History of Philosophy," p. 117.

Footnote 471: [\(return\)](#) "Gorgias," § 85-89.

Footnote 472: [\(return\)](#) Plato's "Theætetus," § 65-75.

There were others who laid hold on the weapons which Zeno had prepared to their hands. He had asserted that all the objects of sense were mere phantoms--delusive and transitory. By the subtleties of dialectic quibbling, he had attempted to prove that "change" meant "permanence," and "motion" meant "rest." [473](#) Words may, therefore, have the most opposite and contradictory meanings; and all language and all opinion may, by such a process, be rendered uncertain. One opinion is, consequently, for the individual, just as good as another; and all opinions are equally true and untrue. It was nevertheless desirable, for the good of society, that there should be some agreement, and that, for a time at least, certain opinions should prevail; and if philosophy had failed to secure this agreement, rhetoric, at least, was effectual; and, with the Sophist, rhetoric was "the art of making the worst appear the better reason." All wisdom was now confined to a species of "word jugglery," which in Athens was dignified as "the art of disputation."

Footnote 473: [\(return\)](#) "And do we not know that the Eleatic Palamedes (Zeno) spoke by art in

317 SOCRATES (B.C. 469-399), the grand central figure in the group of ancient philosophers, arrived in Athens in the midst of this general skepticism. He had an invincible faith in truth. "He made her the mistress of his soul, and with patient labor, and unwearied energy, did his great and noble soul toil after perfect communion with her." He was disappointed and dissatisfied with the results that had been reached by the methods of his predecessors, and he was convinced that by these methods the problem of the universe could not be solved. He therefore turned away from physical inquiries, and devoted his whole attention to the study of the human mind, its fundamental beliefs, ideas, and laws. If he can not penetrate the mysteries of the outer world, he will turn his attention to the world within. He will "know himself," and find within himself the reason, and ground, and law of all existence. There he discovered certain truths which can not possibly be questioned. He felt he had within his own heart a faithful monitor--a *conscience*, which he regarded as the voice of God. ⁴⁷⁴ He believed "he had a divine teacher with him at all times. Though he did not possess wisdom, this teacher could put him on the road to seek it, could preserve him from delusions which might turn him out of the way, could keep his mind fixed upon the end for which he ought to act and live." ⁴⁷⁵ In himself, therefore, he sought that ground of certitude which should save him from the prevailing skepticism of his times. The Delphic inscription, Γνῶθι σεαυτόν, "*know thyself*" becomes henceforth the fundamental maxim of philosophy.

Footnote 474: [\(return\)](#) The Dæmon of Socrates has been the subject of much discussion among learned men. The notion, once generally received, that his *δαίμων* was "a familiar genius," is now regarded as an exploded error. "Nowhere does Socrates, in Plato or Xenophon, speak of a genius or demon, but always of a *dæmoniac something* (*το δαιμόνιον*, or *δαιμόνιον τι*), or of a *sign*, a *voice*, a *divine sign*, a *divine voice*" (Lewes's "Biographical History of Philosophy," p. 166). "Socrates always speaks of a *divine or supernatural somewhat* ('divinum quiddam,' as Cicero has it), the nature of which he does not attempt to divine, and to which he never attributes personality" (Butler's "Lectures on Ancient Philosophy," vol. i. p. 357). The scholar need not to be informed that *το δαιμόνιον*, in classic literature, means the divine Essence (Lat. *numen*), to which are attributed events beyond man's power, yet not to be assigned to any special god.

Footnote 475: [\(return\)](#) Maurice's "Ancient Philosophy," p. 124.

318 Truth has a rational, *à priori* foundation in the constitution of the human mind. There are *ideas* connatural to the human reason which are the copies of those archetypal ideas which belong to the Eternal Reason. The grand problem of philosophy, therefore, now is--*What are these fundamental IDEAS which are unchangeable and permanent, amid all the diversifies of human opinion, connecting appearance with reality, and constituting a ground of certain knowledge or absolute truth?* Socrates may not have held the doctrine of ideas as exhibited by Plato, but he certainly believed that there were germs of truth latent in the human mind--principles which governed, unconsciously, the processes of thought, and that these could be developed by reflection and by questioning. These were embryonate in the womb of reason, coming to the birth, but needing the "maieutic" or "obstetric" art, that they might be brought forth. ⁴⁷⁶ He would, therefore, become the accoucheur of ideas, and deliver minds of that secret truth which lay in their mental constitution. And thus *Psychology* becomes the basis of all legitimate metaphysics.

Footnote 476: [\(return\)](#) Plato's "Theætetus," § 22.

By the general consent of antiquity, as well as by the concurrent judgment of all modern historians of philosophy, Socrates is regarded as having effected a complete revolution in philosophic thought, and, by universal consent, he is placed at the commencement of a new era in philosophy. Schleiermacher has said, "the service which Socrates rendered to philosophy consisted not so much in the truths arrived at *as in the METHOD by which truth is sought.*" As Bacon inaugurated a new method in physical inquiry, so Socrates inaugurated a new method in metaphysical inquiry.

319 What, then, was this *new method*? It was no other than the *inductive* method applied to the facts of consciousness. This method is thus defined by Aristotle: "Induction is the process from particulars to generals;" that is, it is the process of discovering laws from facts, causes from effects, being from phenomena. But how is this process of induction conducted? By observing and enumerating the real facts which are presented in consciousness, by noting their relations of resemblance or difference, and by classifying these facts by the aid of these relations. In other words, it is *analysis* applied to the phenomena of mind. ⁴⁷⁷ Now Socrates gave this method of psychological analysis to Greek philosophy. There are two things of which Socrates must justly be regarded as the author,--the *inductive reasoning* and *abstract definition*. ⁴⁷⁸ We readily grant that Socrates employed this method imperfectly, for methods are the last things perfected in science; but still, the Socratic movement was a vast movement in the right direction.

Footnote 477: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 30.

Footnote 478: [\(return\)](#) Aristotle's "Metaphysics," vol. xii. ch. iv. p. 359 (Bohn's edition).

In what are usually regarded as the purely Socratic dialogues, ⁴⁷⁹ Plato evidently designs to

exhibit this method of Socrates. They proceed continually on the firm conviction that there is a standard or criterion of truth in the reason of man, and that, by *reflection*, man can apprehend and recognize the truth. To awaken this power of reflection; to compel men to analyze their language and their thoughts; to lead them from the particular and the contingent, to the universal and the necessary; and to teach them to test their opinions by the inward standard of truth, was the aim of Socrates. These dialogues are a picture of the conversations of Socrates. They are literally an education of the thinking faculty. Their purpose is to discipline men to think for themselves, rather than to furnish opinions for them. In many of these dialogues Socrates affirms nothing. After producing many arguments, and examining a question on all sides, he leaves it undetermined. At the close of the dialogue he is as far from a declaration of opinions as at the commencement. His grand effort, like that of Bacon's, is to furnish men a correct method of inquiry, rather than to apply that method and give them results.

Footnote 479: [\(return\)](#) "Laches," "Charmides," "Lysis," "The Rivals," "First and Second Alcibiades," "Theages," "Clitophon." See Whewell's translation, vol. i.

We must not, however, from thence conclude that Socrates did not himself attain any definite conclusions, or reach any specific and valuable results. When, in reply to his friends who reported the answer of the oracle of Delphi, that "Socrates was the wisest of men," he said, "he supposed the oracle declared him wise *because he knew nothing*," he did not mean that true knowledge was unattainable, for his whole life had been spent in efforts to attain it. He simply indicates the disposition of mind which is most befitting and most helpful to the seeker after truth. He must be conscious of his own ignorance. He must not exalt himself. He must not put his own conceits in the way of the thing he would know. He must have an open eye, a single purpose, an honest mind, to prepare him to receive light when it comes. And that there is light, that there is a source whence light comes, he avowed in every word and act.

Socrates unquestionably believed in one Supreme God, the immaterial, infinite Governor of all. He cherished that instinctive, spontaneous faith in God and his Providence which is the universal faith of the human heart. He saw this faith revealed in the religious sentiments of all nations, and in the tendency to worship so universally characteristic of humanity. [480](#) He appealed to the consciousness of absolute dependence--the persuasion, wrought by God in the minds of all men, that "He is able to make men happy or miserable," and the consequent sense of obligation which teaches man he ought to obey God. And he regarded with some degree of affectionate tenderness the common sentiment of his countrymen, that the Divine Government was conducted through the ministry of subordinate deities or generated gods. But he sought earnestly to prevent the presence of these subordinate agents from intercepting the clear view of the Supreme God.

The faith of Socrates was not, however, grounded on mere feeling and sentiment. He endeavored to place the knowledge of God on a rational basis. We can not read the arguments he employed without being convinced that he anticipated all the subsequent writers on Natural Theology in his treatment of the argument from *special ends* or *final causes*. We venture to abridge the account which is given by Xenophon of the conversation with Aristodemus: [481](#)

Footnote 480: [\(return\)](#) "Memorabilia," bk. i. ch. iv. § 16.

Footnote 481: [\(return\)](#) Ibid., bk. i. ch. iv.

"I will now relate the manner in which I once heard Socrates discoursing with Aristodemus concerning the Deity; for, observing that he never prayed nor sacrificed to the gods, but, on the contrary, ridiculed those who did, he said to him:

"Tell me, Aristodemus, is there any man you admire on account of his merits? Aristodemus having answered, 'Many,--'Name some of them, I pray you,' said Socrates. 'I admire,' said Aristodemus, 'Homer for his Epic poetry, Melanippides for his dithyrambics, Sophocles for his tragedy, Polycletus for statuary, and Zeuxis for painting.'

"But which seemed to you most worthy of admiration, Aristodemus--the artist who forms images void of motion and intelligence, or one who has skill to produce animals that are endued, not only with activity, but understanding?'

"The latter, there can be no doubt,' replied Aristodemus, 'provided the production was not the effect of chance, but of wisdom and contrivance.'

"But since there are many things, some of which we can easily see the use of, while we can not say of others to what purpose they are produced, which of these, Aristodemus, do you suppose the work of wisdom?'

"It would seem the most reasonable to affirm it of those whose fitness and utility are so evidently apparent,' answered Aristodemus.

"But it is evidently apparent that He who, at the beginning, made man, endued him with senses because they were good for him; eyes wherewith to behold what is visible, and ears to hear whatever was heard; for, say, Aristodemus, to what purpose should odor be prepared, if the sense of smelling had been denied or why the distinction of bitter or sweet, of savory or unsavory, unless a palate had been likewise given, conveniently placed to arbitrate between them and proclaim the difference? Is not that Providence, Aristodemus, in a most eminent manner

conspicuous, which, because the eye of a man is so delicate in its contexture, hath therefore prepared eyelids like doors whereby to secure it, which extend of themselves whenever it is needful, and again close when sleep approaches? Are not these eyelids provided, as it were, with a fence on the edge of them to keep off the wind and guard the eye? Even the eyebrow itself is not without its office, but, as a penthouse, is prepared to turn off the sweat, which falling from the forehead might enter and annoy that no less tender than astonishing part of us. Is it not to be admired that the ears should take in sounds of every sort, and yet are not too much filled with them? That the fore teeth of the animal should be formed in such a manner as is evidently best for cutting, and those on the side for grinding it to pieces? That the mouth, through which this food is conveyed, should be placed so near the nose and eyes as to prevent the passing unnoticed whatever is unfit for nourishment?... And canst thou still doubt, Aristodemus, whether a *disposition of parts like this should be a work of chance, or of wisdom and contrivance?*'

322

"I have no longer any doubt," replied Aristodemus; "and, indeed, the more I consider it, the more evident it appears to me that man must be the masterpiece of some great Artificer, carrying along with it infinite marks of the love and favor of Him who hath thus formed it."

"But, further (unless thou desirest to ask me questions), seeing, Aristodemus, thou thyself art conscious of reason and intelligence, supposest thou there is no intelligence elsewhere? Thou knowest thy body to be a small part of that wide-extended earth thou everywhere beholdest; the moisture contained in it thou also knowest to be a portion of that mighty mass of waters whereof seas themselves are but a part, while the rest of the elements contribute out of their abundance to thy formation. It is the *soul*, then, alone, that intellectual part of us, which is come to thee by some lucky chance, from I know not where. If so, there is no intelligence elsewhere; and we must be forced to confess that this stupendous universe, with all the various bodies contained therein--equally amazing, whether we consider their magnitude or number, whatever their use, whatever their order--all have been produced by chance, not by intelligence!"

"It is with difficulty that I can suppose otherwise," returned Aristodemus; "for I behold none of those gods whom you speak of as framing and governing the world; whereas I see the artists when at their work here among us."

323

"Neither yet seest thou thy soul, Aristodemus, which, however, most assuredly governs thy body; although it may well seem, by thy manner of talking, that it is chance and not reason which governs thee."

"I do not despise the gods," said Aristodemus; "on the contrary, I conceive so highly of their excellency, as to suppose they stand in no need of me or of my services."

"Thou mistakest the matter," Aristodemus, "the great magnificence they have shown in their care of thee, so much the more honor and service thou owest them."

"Be assured," said Aristodemus, "if I once could persuade myself the gods take care of man, I should want no monitor to remind me of my duty."

"And canst thou doubt, Aristodemus, if the gods take care of man? Hath not the glorious privilege of walking upright been alone bestowed on him, whereby he may with the better advantage survey what is around him, contemplate with more ease those splendid objects which are above, and avoid the numerous ills and inconveniences which would otherwise befall him? Other animals, indeed, they have provided with feet; but to man they have also given hands, with which he can form many things for use, and make himself happier than creatures of any other kind. A tongue hath been bestowed on every other animal; but what animal, except man, hath the power of forming words with it whereby to explain his thoughts and make them intelligible to others? But it is not with respect to the body alone that the gods have shown themselves bountiful to man. Their most excellent gift is that of a soul they have infused into him, which so far surpasses what is elsewhere to be found; for by what animal except man is even the existence of the gods discovered, who have produced and still uphold in such regular order this beautiful and stupendous frame of the universe? What other creature is to be found that can serve and adore them?... In thee, Aristodemus, has been joined to a wonderful soul a body no less wonderful; and sayest thou, after this, the gods take no thought for me? What wouldst thou, then, more to convince thee of their care?"

324

"I would they should send and inform me," said Aristodemus, "what things I ought or ought not to do, in like manner as thou sayest they frequently do to thee."

In reply, Socrates shows that the revelations of God which are made in nature, in history, in consciousness, and by oracles, are made *for* all men and *to* all men. He then concludes with these remarkable words: "As, therefore, amongst men we make best trial of the affection and gratitude of our neighbor by showing him kindness, and make discovery of his wisdom by consulting him in our distress, do thou, in like manner, behave towards the gods; and if thou wouldst experience what their wisdom and their love, render thyself deserving of some of those divine secrets which may not be penetrated by man, and are imparted to those alone who consult, who adore, and who obey the Deity. Then shalt thou, my Aristodemus, understand *there is a Being whose eye passes through all nature, and whose ear is open to every sound; extended to all places, extending through all time; and whose bounty and care can know no other bounds than those fixed by his own creation*". [482](#)

325 Socrates was no less earnest in his belief in the immortality of the soul, and a state of future retribution. He had reverently listened to the intuitions of his own soul--the instinctive longings and aspirations of his own heart, as a revelation from God. He felt that all the powers and susceptibilities of his inward nature were in conscious adaptation to the idea of immortality, and that its realization was the appropriate destiny of man. He was convinced that a future life was needed to avenge the wrongs and reverse the unjust judgments of the present life; [483](#) needed that virtue may receive its meet reward, and the course of Providence may have its amplest vindication. He saw this faith reflected in the universal convictions of mankind, and the "common traditions" of all ages. [484](#) No one refers more frequently than Socrates to the grand old mythologic stories which express this faith; to Minos, and Rhadamanthus, and Æacus, and Triptolemus, who are "real judges," and who, in "the Place of Departed Spirits, administer justice." [485](#) He believed that in that future state the pursuit of wisdom would be his chief employment, and he anticipated the pleasure of mingling in the society of the wise, and good, and great of every age.

Footnote 483: [\(return\)](#) "Apology," § 32, p. 329 (Whewell's edition).

Footnote 484: [\(return\)](#) Ibid.

Footnote 485: [\(return\)](#) "Apology," p. 330.

Whilst, then, Socrates was not the first to teach the doctrine of immortality, because no one could be said to have first *discovered* it any more than to have first discovered the existence of a God, he was certainly the first to place it upon a philosophic basis. The Phædo presents the doctrine and the *reasoning* by which Socrates had elevated his mind above the fear of death. Some of the arguments may be purely Platonic, the argument especially grounded on "ideas;" still, as a whole, it must be regarded as a tolerably correct presentation of the manner in which Socrates would prove the immortality of the soul.

In *Ethics*, Socrates was pre-eminently himself. The systematic resolution of the whole theory of society into the elementary principle of natural law, was peculiar to him. *Justice* was the cardinal principle which must lie at the foundation of all good government. The word σοφία--*wisdom*--included all excellency in personal morals, whether as manifested (reflectively) in the conduct of one's self, or (socially) towards others. And *Happiness*, in its purity and perfection, can only be found in virtuous action. [486](#)

Footnote 486: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. i. pp. 360, 361.

Socrates left nothing behind him that could with propriety be called a *school*. His chief glory is that he inaugurated a new *method* of inquiry, which, in Plato and Aristotle, we shall see applied. He gave a new and vital impulse to human thought, which endured for ages; "and he left, as an inheritance for humanity, the example of a heroic life devoted wholly to the pursuit of truth, and crowned with martyrdom."

CHAPTER X.

THE PHILOSOPHERS OF ATHENS (*continued*).

THE SOCRATIC SCHOOL (*continued*).

PLATO.

We have seen that the advent of Socrates marks a new era in the history of speculative thought. Greek philosophy, which at first was a philosophy of nature, now changes its direction, its character, and its method, and becomes a philosophy of mind. This, of course, does not mean that now it had mind alone for its object; on the contrary, it tended, as indeed philosophy must always tend, to the conception of a rational ideal or *intellectual system of the universe*. It started from the phenomena of mind, began with the study of human thought, and it made the knowledge of mind, of its ideas and laws, the basis of a higher philosophy, which should interpret all nature. In other words, it proceeded from psychology, through dialectics, to ontology. [487](#)

Footnote 487: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 413.

This new movement we have designated in general terms as the *Socratic School*. Not that we are to suppose that, in any technical sense, Socrates founded a school. The Academy, the Lyceum, the Stoa, and the Garden, were each the chosen resort of distinct philosophic sects, the locality of separate schools; but Athens itself, the whole city, was the scene of the studies, the conversations, and the labors of Socrates. He wandered through the streets absorbed in thought. Sometimes he stood still for hours lost in profoundest meditation; at other times he might be seen in the market-place, surrounded by a crowd of Athenians, eagerly discussing the great questions of the day.

Socrates, then, was not, in the usual sense of the word, a teacher. He is not to be found in the Stoa or the Grove, with official aspect, expounding a system of doctrine. He is "the garrulous oddity" of the streets, putting the most searching and perplexing questions to every bystander, and making every man conscious of his ignorance. He delivered no lectures; he simply talked. He wrote no books; he only argued: and what is usually styled his school must be understood as embracing those who attended him in public as listeners and admirers, and who caught his spirit, adopted his philosophic *method*, and, in after life, elaborated and systematized the ideas they had gathered from him.

Among the regular or the occasional hearers of Socrates were many who were little addicted to philosophic speculation. Some were warriors, as Nicias and Laches; some statesmen, as Critias and Critobulus; some were politicians, in the worst sense of that word, as Glaucon; and some were young men of fashion, as Euthydemus and Alcibiades. These were all alike delighted with his inimitable irony, his versatility of genius, his charming modes of conversation, his adroitness of reply; and they were compelled to confess the wisdom and justness of his opinions, and to admire the purity and goodness of his life. The magic power which he wielded, even over men of dissolute character, is strikingly depicted by Alcibiades in his speech at "the Banquet." [488](#) Of these listeners, however, we can not now speak. Our business is with those only who imbibed his philosophic spirit, and became the future teachers of philosophy. And even of those who, as Euclid of Megara, and Antisthenes the Cynic, and Aristippus of Cyrenaica, borrowed somewhat from the dialectic of Socrates, we shall say nothing. They left no lasting impression upon the current of philosophic thought, because their systems were too partial, and narrow, and fragmentary. It is in Plato and Aristotle that the true development of the Socratic philosophy is to be sought, and in Plato chiefly, as the disciple and friend of Socrates.

Footnote 488: [\(return\)](#) "Banquet," §§ 39, 40.

Plato (B.C. 430-347) was pre-eminently the pupil of Socrates. He came to Socrates when he was but twenty years of age, and remained with him to the day of his death.

Diogenes Laertius reports the story of Socrates having dreamed he found an unfledged cygnet on his knee. In a few moments it became winged and flew away, uttering a sweet sound. The next day a young man came to him who was said to reckon Solon among his near ancestors, and who looked, through him, to Codrus and the god Poseidon. That young man was Plato, and Socrates pronounced him to be the bird he had seen in his dream. [489](#)

Footnote 489: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. iii. ch. vii.

Some have supposed that this old tradition intimates that Plato departed from the method of his master--he became fledged and flew away into the air. But we know that Plato did not desert his master whilst he was living, and there is no evidence that he abandoned his method after he was dead. He was the best expounder and the most rigid observer of the Socratic "organon." The influence of Socrates upon the philosophy of Plato is everywhere discernible. Plato had been taught by Socrates, that beyond the world of sense there is a world of eternal truth, seen by the eye of reason alone. He had also learned from him that the eye of reason is purified and strengthened by *reflection*, and that to reflect is to observe, and analyze, and define, and classify the facts of consciousness. Self-reflection, then, he had been taught to regard as the key of real knowledge. By a completer induction, a more careful and exact analysis, and a more accurate definition, he carried this philosophic method forward towards maturity. He sought to solve the problem of *being* by the principles revealed in his own consciousness, and in the *ultimate ideas of the reason* to find the foundation of all real knowledge, of all truth, and of all certitude.

Plato was admirably fitted for these sublime investigations by the possession of those moral qualities which were so prominent in the character of his master. He had that same deep seriousness of spirit, that earnestness and rectitude of purpose, that longing after truth, that inward sympathy with, and reverence for justice, and purity, and goodness, which dwelt in the heart of Socrates, and which constrained him to believe in their reality and permanence. He could not endure the thought that all ideas of right were arbitrary and factitious, that all knowledge was unreal, that truth was a delusion, and certainty a dream. The world of sense might be fleeting and delusive, but the voice of reason and conscience would not mislead the upright man. The opinions of individual men might vary, but the universal consciousness of the race could not prevaricate. However conflicting the opinions of men concerning beautiful things, right actions, and good sentiments, Plato was persuaded there are ideas of Order, and Right, and Good, which are universal, unchangeable, and eternal. Untruth, injustice, and wrong may endure for a day or two, perhaps for a century or two, but they can not always last; they must perish. The *just* thing and the *true* thing are the only enduring things; these are eternal. Plato had a sublime conviction that his mission was to draw the Athenian mind away from the fleeting, the transitory, and the uncertain, and lead them to the contemplation of an Eternal Truth, an Eternal Justice, an Eternal Beauty, all proceeding from and united in an Eternal Being--the ultimate ἀγαθόν--*the Supremely Good*. The knowledge of this "Supreme Good" he regarded as the highest science. [490](#)

Footnote 490: [\(return\)](#) "Republic," bk. vi. ch. xvi. p. 193.

Added to these moral qualifications, Plato had the further qualification of a comprehensive knowledge of all that had been achieved by his predecessors. In this regard he had enjoyed advantages superior to those of Socrates. Socrates was deficient in erudition, properly so called.

He had studied men rather than books. His wisdom consisted in an extensive *observation*, the results of which he had generalized with more or less accuracy. A complete philosophic method demands not only a knowledge of contemporaneous opinions and modes of thought, but also a knowledge of the succession and development of thought in past ages. Its instrument is not simply psychological analysis, but also historical analysis as a counterproof. ⁴⁹¹ And this erudition Plato supplied. He studied carefully the doctrines of the Ionian, Italian, and Eleatic schools. Cratylus gave him special instruction in the theories of Heraclitus. ⁴⁹² He secured an intimate acquaintance with the lofty speculations of Pythagoras, under Archytas of Tarentum, and in the writings of Philolaus, whose books he is said to have purchased. He studied the principles of Parmenides under Hermogenes, ⁴⁹³ and he more than once speaks of Parmenides in terms of admiration, as one whom he had early learned to reverence. ⁴⁹⁴ He studied mathematics under Theodoras, the most eminent geometrician of his day. He travelled in Southern Italy, in Sicily, and, in search of a deeper wisdom, he pursued his course to Egypt. ⁴⁹⁵ Enriched by the fruits of all previous speculations, he returned to Athens, and devoted the remainder of his life to the development of a comprehensive system "which was to combine, to conciliate, and to supersede them all." ⁴⁹⁶ The knowledge he had derived from travel, from books, from oral instruction, he fused and blended with his own speculations, whilst the Socratic spirit mellowed the whole, and gave to it a unity and scientific completeness which has excited the admiration and wonder of succeeding ages. ⁴⁹⁷

The question as to *the nature, the sources, and the validity of human knowledge* had attracted general attention previous to the time of Socrates and Plato. As the results of this protracted controversy, the opinions of philosophers had finally crystallized in two well-defined and opposite theories of knowledge.

1. That which reduced all knowledge to the accidental and passively receptive quality of the organs of sense and which asserted, as its fundamental maxim, that "*Science consists in αἰσθησις--sensation.*" ⁴⁹⁸

This doctrine had its foundation in the physical philosophy of Heraclitus. He had taught that all things are in a perpetual flux and change. "Motion gives the appearance of existence and of generation." "Nothing *is*, but is always a *becoming*" ⁴⁹⁹ Material substances are perpetually losing their identity, and there is no permanent essence or being to be found. Hence Protagoras inferred that truth must vary with the ever-varying sensations of the individual. "Man (the individual) is the measure of all things." Knowledge is a purely relative thing, and every man's opinion is truth for him. ⁵⁰⁰ The law of right, as exemplified in the dominion of a party, is the law of the strongest; fluctuating with the accidents of power, and never attaining a permanent being. "Whatever a city enacts as appearing just to itself, this also is just to the city that enacts it, so long as it continues in force." ⁵⁰¹ "The just, then, is nothing else but that which is expedient for the strongest." ⁵⁰²

Footnote 500: [\(return\)](#) Ibid., §§ 39, 87.

Footnote 501: [\(return\)](#) Ibid., § 87.

Footnote 502: [\(return\)](#) "Republic," bk. i. ch. xii.

2. The second theory is that which denies the existence (except as phantasms, images, or mere illusions of the mind) of the whole of sensible phenomena, and refers all knowledge to the *rational apperception of unity* (τὸ ἓν) *or the One*.

This was the doctrine of the later Eleatics. The world of sense was, to Parmenides and Zeno, a blank negation, the *non ens*. The identity of thought and existence was the fundamental principle of their philosophy.

"Thought is the same thing as the cause of thought;
For without the thing in which it is announced,
You can not find the thought; for there is nothing, nor shall be,
Except the existing." ⁵⁰³

This theory, therefore, denied to man any valid knowledge of the external world.

332

It will at once be apparent to the intelligent reader that the direct and natural result of both these theories [504](#) of knowledge was a tendency to universal skepticism. A spirit of utter indifference to truth and righteousness was the prevailing spirit of Athenian society. That spirit is strikingly exhibited in the speech of Callicles, "the shrewd man of the world," in "Gorgias" (§85, 86). Is this new to our ears?" My dear Socrates, you talk of *law*. Now the laws, in my judgment, are just the work of the weakest and most numerous; in framing them they never thought but of themselves and their own interests; they never approve or censure except in reference to *this*. Hence it is that the cant arises that tyranny is improper and unjust, and to struggle for eminence, guilt. Unable to rise themselves, of course they would wish to preach liberty and equality. But nature proclaims the law of the stronger.... We surround our children from their infancy with preposterous prejudices about liberty and justice. The man of sense tramples on such impositions, and shows what Nature's justice is.... I confess, Socrates, philosophy is a highly amusing study--in moderation, and for boys. But protracted too long, it becomes a perfect plague. Your philosopher is a complete novice in the life *comme il faut*.... I like very well to see a child babble and stammer; there is even a grace about it when it becomes his age. But to see a man continue the prattle of the child, is absurd. Just so with your philosophy." The consequence of this prevalent spirit of universal skepticism was a general laxity of morals. The Aleibiades, of the "Symposium," is the ideal representative of the young aristocracy of Athens. Such was the condition of society generally, and such the degeneracy of even the Government itself, that Plato impressively declares "that God alone could save the young men of his age from ruin." [505](#)

333

Footnote 504: [\(return\)](#) Between these two extreme theories there were offered two, apparently less extravagant, accounts of the nature and limits of human knowledge--one declaring that "*Science*(real knowledge) *consists in right opinion*" (δόξα ἀληθής), but having no further basis in the reason of man ("Theætetus," § 108); and the other affirming that "*Science is right opinion with logical explication or definition*" (μετὰ λόχου), ("Theætetus," § 139). A close examination will, however, convince us that these are but modifications of the sensational theory. The latter forcibly remind us of the system of Locke, who adds "reflection" to "sensation," but still maintains that all on "simple ideas" are obtained from without, and that these are the only material upon which reflection can be exercised. Thus the human mind has no criterion of truth within itself, no elements of knowledge which are connatural and inborn.

Footnote 505: [\(return\)](#) "Republic," bk. vi. ch. vii.

Therefore the grand, the vital, the most urgent question for his times, as indeed for all times, was, *What is Truth? What is Right?* In the midst of all this variableness and uncertainty of human opinion, is there no ground of certainty? Amid all the fluctuations and changes around us and within us, is there nothing that is immutable and permanent? Have we no ultimate standard of Right? Is there no criterion of Truth? Plato believed most confidently there was such a criterion and standard. He had learned from Socrates, his master, to cherish an unwavering faith in the existence of an Eternal Truth, an Eternal Order, an Eternal Good, the knowledge of which is essential to the perfection and happiness of man, and which knowledge must therefore be presumed to be attainable by man. Henceforth, therefore, the ceaseless effort of Plato's life is to attain a standard (κριτήριον) [506](#)--a CRITERION OF TRUTH.

Footnote 506: [\(return\)](#) "Theætetus," § 89.

At the outset of his philosophic studies, Plato had derived from Socrates an important principle, which became the guide of all his subsequent inquiries. He had learned from him that the criterion of truth must be no longer sought amid the ever-changing phenomena of the "sensible world." This had been attempted by the philosophers of the Ionian school, and ended in failure and defeat. It must therefore be sought in the metaphenomenal--the "intelligible world;" that is, it must be sought in the apperceptions of the reason, and not in opinions founded on sensation. In other words, he must look *within*. Here, by reflection, he could recognize, dimly and imperfectly at first, but increasing gradually in clearness and distinctness, two classes of cognitions, having essentially distinct and opposite characteristics. He found one class that was complex (συγκεχυμένον), changeable (θάτερον), contingent and relative (τὰ πρὸς τι σχέσις ἔχοντα); the other, simple (κεχωρισμένον), unchangeable (ἀκίνητον), constant (ταύτῳ), permanent (τὸ ὄν ἀει), and absolute (ἀνυπόθετον = ἀπλοῦν). One class that may be questioned, the other admitting of no question, because self-evident and necessary, and therefore compelling belief. One class grounded on sense-perception, the other conceived by reason alone. But whilst the reason recognizes, it does not create them. They are not particular and individual, but universal. They belong not to the man, but to the race.

334

He found, then, that there are in all minds certain "principles" which are fundamental--principles which lie at the basis of all our cognitions of the objective world, and which, as "mental laws," determine all our forms of thought; and principles, too, which have this marvellous and undeniable character, that they are encountered in the most common experiences, and, at the same time, instead of being circumscribed within the limits of experience, transcend and govern it--principles which are *universal* in the midst of particular phenomena--*necessary*, though mingled with things contingent--to our eyes *infinite* and *absolute*, even when appearing in us the relative and finite beings that we are. [507](#) These first or fundamental principles Plato called IDEAS (ἰδέαι).

In attempting to present to the reader an adequate representation of the Platonic Ideas, we shall be under the necessity of anticipating some of the results of his Dialectical method before we have expounded that method. And, further, in order that it may be properly appreciated by the modern student, we shall avail ourselves of the lights which modern psychology, faithful to the method of Plato, has thrown upon the subject. Whilst, however, we admit that modern psychology has succeeded in giving more definiteness and precision to the "doctrine of Ideas," we shall find that all that is fundamentally valuable and true was present to the mind of Plato. Whatever superiority the "Spiritual" philosophy of to-day may have over the philosophy of past ages, it has attained that superiority by its adherence to the principles and method of Plato.

335

In order to the completeness of our preliminary exposition of the Platonic doctrine of Ideas, we shall conditionally assume, as a natural and legitimate hypothesis, the doctrine so earnestly asserted by Plato, that the visible universe, at least in its present form, is an *effect* which must have had a *cause*, [508](#) and that the Order, and Beauty, and Excellence of the universe are the result of the presence and operation of a "regulating Intelligence"--a *Supreme Mind*. [509](#) Now that, anterior to the creation of the universe, there must have existed in the Eternal Mind certain fundamental principles of Order, Right, and Good, will not be denied. Every conceivable *form*, every possible *relation*, every principle of *right*, must have been eternally present to the Divine thought. As pure intelligence, the Deity must have always been self-conscious--must have known himself as substance and cause, as the Infinite and Perfect. If then the Divine Energy is put forth in creative acts, that energy must obey those eternal principles of Order, Right, and Good. If the Deity operate at all, he must operate rightly, wisely, and well. The created universe must be an *image*, in the sphere of sense, of the ideas which inhere in the reason of the great First Cause.

Footnote 508: [\(return\)](#) "Timæus," ch. ix.

Footnote 509: [\(return\)](#) "Phædo," § 105.

"Let us declare," says Plato, "with what *motive* the Creator hath formed nature and the universe. He was *good*, and in the good no manner of envy can, on any subject, possibly subsist. Exempt from envy, he had wished that all things should, as far as possible, *resemble himself*... It was not, and is not to be allowed for the Supremely Good to do any thing except what is most *excellent* (κάλλιστον)--most *fair*, most *beautiful*." [510](#) Therefore, argues Plato, "inasmuch as the world is the most beautiful of things, and its artificer the best of causes, it is evident that the Creator and Father of the universe looked to the *Eternal Model* (παράδειγμα), pattern, or plan," [511](#) which lay in his own mind. And thus this one, only-generated universe, is the *image* (εἰκὼν) of that God who is the object of the intellect, the greatest, the best, and the most perfect Being. [512](#)

336

Footnote 510: [\(return\)](#) "Timæus," ch. x.

Footnote 511: [\(return\)](#) *Ibid.*, ch. ix.

Footnote 512: [\(return\)](#) "Timæus," ch. lxxiii.

And then, furthermore, if this Supreme Intelligence, this Eternal Mind, shall create another *mind*, it must, in a still higher degree, resemble him. Inasmuch as it is a rational nature, it must, in a peculiar sense, partake of the Divine characteristics. "The soul," says Plato, "is that which most partakes of the *Divine*" [513](#) The soul must, therefore, have native *ideas* and sentiments which correlate it with the Divine original. The ideas of substance and cause, of unity and identity, of the infinite and perfect, must be mirrored there. As it is the "offspring of God," [514](#) it must bear some traces and lineaments of its Divine parentage. That soul must be configured and correlated to those principles of Order, Right, and Good which dwell in the Eternal Mind. And because it has within itself the same ideas and laws, according to which the great Architect built the universe, therefore it is capable of knowing, and, in some degree, of comprehending, the intellectual system of the universe. It apprehends the external world by a light which the reason supplies. It interprets nature according to principles and laws which God has inwrought within the very essence of the soul. "That which imparts truth to knowable things, and gives the knower his power of knowing truth, is the *idea of the good*, and you are to conceive of this as the source of knowledge and of truth." [515](#)

Footnote 513: [\(return\)](#) "Laws," bk. v. ch. i.

Footnote 514: [\(return\)](#) *Ibid.*, bk. x.

Footnote 515: [\(return\)](#) "Republic," bk. vi. ch. xviii.

And now we are prepared to form a clear conception of the Platonic doctrine of Ideas. Viewed in their relation to the Eternal Reason, as giving the primordial thought and law of all being, these principles are simply εἶδη αὐτὰ καθ' αὐτά--*ideas in themselves*--the essential qualities or attributes of Him who is the supreme and ultimate Cause of all existence. When regarded as before the Divine imagination, giving definite forms and relations, they are the τύποι, the παραδείγματα--*the types, models, patterns, ideals* according to which the universe was fashioned. Contemplated in their actual embodiment in the laws, and typical forms of the material world, they are εἰκόνες--*images* of the eternal perfections of God. The world of sense pictures the world of reason by a participation (μέθεξις) of the ideas. And viewed as interwoven in the very texture

337

and framework of the soul, they are ὁμοιώματα--copies of the Divine Ideas which are the primordial laws of knowing, thinking, and reasoning. Ideas are thus the nexus of relation between God and the visible universe, and between the human and the Divine reason. [516](#) There is something divine in the world, and in the human soul, namely, *the eternal laws and reasons of things*, mingled with the endless diversity and change of sensible phenomena. These ideas are "the light of the intelligible world;" they render the invisible world of real Being perceptible to the reason of man. "Light is the offspring of the Good, which the Good has produced in his own likeness. Light in the visible world is what the *idea of the Good* is in the intelligible world. And this offspring of the Good--light--has the same relation to vision and visible things which the Good has to intellect and intelligible things." [517](#)

Footnote 516: [\(return\)](#) "Now, Idea is, as regards God, a mental operation by him (the notions of God, eternal and perfect in themselves); as regards us, the first things perceptible by mind; as regards Matter, a standard; but as regards the world, perceptible by sense, a pattern; but as considered with reference to itself, an existence."--Alcinous, "Introduction to the Doctrines of Plato," p. 261.

"What general notions are to our minds, he (Plato) held, ideas are to the Supreme Reason (νοῦς βασιλευς); they are the eternal thoughts of the Divine Intellect, and we attain truth when our thoughts conform with His--when our general notions are in conformity with the ideas."--Thompson, "Laws of Thought," p. 119.

Footnote 517: [\(return\)](#) "Republic," bk. vi. ch. xix.

338 *Science* is, then, according to Plato, *the knowledge of universal, necessary, unchangeable, and eternal ideas*. The simple cognition of the concrete phenomena of the universe is not regarded by him as *real* knowledge. "Science, or real knowledge, belongs to *Being*, and ignorance to *non-Being*." Whilst that which is conversant only "with that which partakes of both--of being and non-being--and which can not be said either to be or not to be"--that which is perpetually "becoming," but never "really is," is "simply *opinion*, and not real knowledge." [518](#) And those only are "philosophers" who have a knowledge of the *really-existing*, in opposition to the mere seeming; of the *always-existing*, in opposition to the transitory; and of that which exists *permanently*, in opposition to that which waxes and wanes--is developed and destroyed alternately. "Those who recognize many beautiful things, but who can not see the Beautiful itself, and can not even follow those who would lead them to it, they *opine*, but do not *know*. And the same may be said of those who recognize right actions, but do not recognize an absolute righteousness. And so of other ideas. But they who look at these ideas--permanent and unchangeable ideas--these men *really know*." [519](#) Those are the true philosophers alone who love the sight of truth, and who have attained to the vision of the eternal order, and righteousness, and beauty, and goodness in the Eternal Being. And the means by which the soul is raised to this vision of real Being (τὸ ὄντως ὄν) is THE SCIENCE OF REAL KNOWLEDGE.

Plato, in the "Theætetus," puts this question by the interlocutor Socrates, "What is Science (Ἐπιστήμη) or positive knowledge?" [520](#) Theætetus essays a variety of answers, such as, "Science is sensation," "Science is right judgment or opinion," "Science is right opinion with logical definition." These, in the estimation of the Platonic Socrates, are all unsatisfactory and inadequate. But after you have toiled to the end of this remarkable discussion, in which Socrates demolishes all the then received theories of knowledge, he gives you no answer of his own. He abruptly closes the discussion by naïvely remarking that, at any rate, Theætetus will learn that he does not understand the subject; and the ground is now cleared for an original investigation.

Footnote 518: [\(return\)](#) "Republic," bk. v. ch. xx.

Footnote 519: [\(return\)](#) *Ibid.*, bk. v. ch. xxii.

Footnote 520: [\(return\)](#) "Theætetus," § 10.

339 This investigation is resumed in the "Republic." This greatest work of Plato's was designed not only to exhibit a scheme of Polity, and present a system of Ethics, but also, at least in its digressions, to propound a system of Metaphysics more complete and solid than had yet appeared. The discussion as to the *powers or faculties* by which we obtain knowledge, the *method or process* by which real knowledge is attained, and the ultimate *objects or ontological grounds* of all real knowledge, commences at § 18, book v., and extends to the end of book vii.

That we may reach a comprehensive view of this "sublimest of sciences," we shall find it necessary to consider--

1st. *What are the powers or faculties by which we obtain knowledge, and what are the limits and degrees of human knowledge?*

2d. *What is the method in which, or the processes and laws according to which, the mind operates in obtaining knowledge?*

3d. *What are the ultimate results attained by this method? what are the objective and ontological grounds of all real knowledge?*

The answer to the first question will give the PLATONIC PSYCHOLOGY; the answer to the second will exhibit the PLATONIC DIALECTIC; the answer to the last will reveal the PLATONIC

I. PLATONIC PSYCHOLOGY.

Every successful inquiry as to the reality and validity of human knowledge must commence by clearly determining, by rigid analysis, what are the actual phenomena presented in consciousness, what are the powers or faculties supposed by these phenomena, and what reliance are we to place upon the testimony of these faculties? And, especially, if it be asserted that there is a science of absolute Reality, of ultimate and essential Being, then the most important and vital question is, By what power do we cognize real Being? through what faculty do we obtain the knowledge of that which absolutely *is*? If by sensation we only obtain the knowledge of the fleeting and the transitory, "*the becoming*" how do we attain to the knowledge of the unchangeable and permanent, "*the Being*?" Have we a faculty of universal, necessary, and eternal principles? Have we a faculty, an interior eye which beholds "*the intelligible*," ideal, spiritual world, as the eye of sense beholds the visible or "*sensible world*?" [521](#)

340

Plato commences this inquiry by first defining his understanding of the word δύναμις--*power* or *faculty*. "We will say *faculties* (δυνάμεις) are a certain kind of real existences by which we can do whatever we are able (*e.g.*, to know), as there are powers by which every thing does what it does: the eye has a *power* of seeing; the ear has a *power* of hearing. But these powers (of which I now speak) have no color or figure to which I can so refer that I can distinguish one power from another. *In order to make such distinction, I must look at the power itself, and see what it is, and what it does. In that way I discern the power of each thing, and that is the same power which produces the same effect, and that is a different power which produces a different effect.*" [522](#) That which is employed about, and accomplishes one and the same purpose, this Plato calls a *faculty*.

Footnote 521: [\(return\)](#) "Republic," bk. vi. ch. xviii.

Footnote 522: [\(return\)](#) Ibid., bk. v. ch. xxi.

We have seen that our first conceptions (*i.e.*, first in the order of time) are of the mingled, the concrete (τὸ συγκεχυμένον), "the multiplicity of things to which the multitude ascribe beauty, etc." [523](#) The mind "contemplates what is great and small, not as distinct from each other, but as confused." [524](#) Prior to the discipline of *reflection*, men are curious about mere sights and sounds, love beautiful voices, beautiful colors, beautiful forms, but their intelligence can not see, can not embrace, the essential nature of the Beautiful itself. [525](#) Man's condition previous to the education of philosophy is vividly presented in Plato's simile of the cave. [526](#) He beholds only the images and shadows of the ectypal world, which are but dim and distant adumbrations of the real and archetypal world.

341

Primarily nothing is given in the abstract (τὸ κενωρισμένον), but every thing in the concrete. The primary faculties of the mind enter into action spontaneously and simultaneously; all our primary notions are consequently synthetic. When reflection is applied to this primary totality of consciousness, that is, when we analyze our notions, we find them composed of diverse and opposite elements, some of which are variable, contingent, individual, and relative, others are permanent, unchangeable, universal, necessary, and absolute. Now these elements, so diverse, so opposite, can not have been obtained from the same source; they must be supplied by separate powers. "Can any man with common sense reduce under one what *is infallible*, and what is *not infallible*?" [527](#) Can that which is "*perpetually becoming*" be apprehended by the same faculty as that which "*always is*?" [528](#) Most assuredly not.

Footnote 523: [\(return\)](#) Ibid., bk. v. ch. xxii.

Footnote 524: [\(return\)](#) Ibid., bk. vii. ch. viii.

Footnote 525: [\(return\)](#) Ibid., bk. v. ch. xx.

Footnote 526: [\(return\)](#) Ibid., bk. vii. ch. i., ii.

Footnote 527: [\(return\)](#) "Republic," bk. v. ch. xxi.

Footnote 528: [\(return\)](#) Ibid., bk. v. ch. xxii.; also "Timæus," § 9.

These primitive intuitions--the simple perceptions of sense, and the *à priori* intuitions of the reason, which constitute the elements of all our complex notions, have essentially *diverse objects*--the sensible or ectypal world, seen by the eye and touched by the hand, which Plato calls δοξαστήν--*the subject of opinion*; and the noetic or archetypal world, perceived by reason, and which he calls διανοητικήν--*the subject of rational intuition or science*. "It is plain," therefore, argues Plato, "that *opinion* is a different thing from *science*. They must, therefore, have a different *faculty* in reference to a different object--science as regards that which *is*, so as to know the nature of real *being*--opinion as regards that which can not be said absolutely to be, or not to be. That which is known and that which is opined can not possibly be the same,... since they are naturally faculties of different things, and both of them are faculties--*opinion* and *science*, and each of them different from the other." [529](#) Here then are two grand divisions of the mental powers--a faculty of apprehending universal and necessary Truth, of intuitively beholding absolute Reality, and a faculty of perceiving sensible objects, and of judging according to

342

appearance.

Footnote 529: [\(return\)](#) Ibid., bk. v. ch. xxi., xxii.

According to the scheme of Plato, these two general divisions of the mental powers are capable of a further subdivision. He says: Consider that there are two kinds of things, the *intelligible* and the *visible*; two different regions, the intelligible world and the sensible world. Now take a line divided into two equal segments to represent these two regions, and again divide each segment in the same ratio--both that of the visible and that of the intelligible species. The parts of each segment are to represent differences of clearness and indistinctness. In the visible world the parts are *things* and *images*. By *images* I mean shadows, [530](#) reflections in water and in polished bodies, and all such like representations; and by *things* I mean that of which images are resemblances, as animals, plants, and things made by man.

You allow that this difference corresponds to the difference of *knowledge* and *opinion*; and the *opinionable* is to the *knowable* as the *image* to the *reality*. [531](#)

Footnote 530: [\(return\)](#) As in the simile of the cave ("Republic," bk. vii. ch. i. and ii.).

Footnote 531: [\(return\)](#) The analogy between the "images produced by reflections in water and on polished surfaces" and "the images of external objects produced in the mind by sensation" is more fully presented in the "Timæus," ch. 19.

The eye is a light-bearer, "made of that part of elemental fire which does not burn, but sheds a mild light, like the light of day.... When the light of the day meets the light which beams from the eye, then light meets like, and make a homogeneous body; the external light meeting the internal light, in the direction in which the eye looks. And by this homogeneity like feels like; and if this beam touches any object, or any object touches it, it transmits the motions through the body to the soul, and produces that sensation which we call *seeing*.... And if (in sleep) some of the strong motions remain in some part of the frame, they produce within us likenesses of external objects,... and thus give rise to dreams.... As to the images produced by mirrors and by smooth surfaces, they are now easily explained, for all such phenomena result from the mutual affinity of the external and internal fires. The light that proceeds from the face (as an object of vision), and the light that proceeds from the eye, become one continuous ray on the smooth surface."

343

Now we have to divide the segment which represents intelligible things in this way: The one part represents the knowledge which the mind gets by using things as images--the other; that which it has by dealing with the ideas themselves; the one part that which it gets by reasoning downward from principles--the other, the principles themselves; the one part, truth which depends on hypotheses--the other, unhypothetical or absolute truth.

Thus, to explain a problem in geometry, the geometers make certain hypotheses (namely, definitions and postulates) about numbers and angles, and the like, and reason from them--giving no reason for their assumptions, but taking them as evident to all; and, reasoning from them, they prove the propositions which they have in view. And in such reasonings, they use visible figures or diagrams--to reason about a square, for instance, with its diagonals; but these reasonings are not really about these visible figures, but about the mental figures, and which they conceive in thought.

The diagrams which they draw, being visible, are the images of thoughts which the geometer has in his mind, and these images he uses in his reasoning. There may be images of these images--shadows and reflections in water, as of other visible things; but still these diagrams are only images of conceptions.

This, then, is *one* kind of intelligible things: *conceptions*--for instance, geometrical conceptions of figures. But in dealing with these the mind depends upon assumptions, and does not ascend to first principles. It does not ascend above these assumptions, but uses images borrowed from a lower region (the visible world), these images being chosen so as to be as distinct as may be.

344

Now the *other* kind of intelligible things is this: that which the *Reason* includes, in virtue of its power of reasoning, when it regards the assumptions of the sciences as (what they are) assumptions only, and uses them as occasions and starting-points, that from these it may ascend to the *Absolute*, which does not depend upon assumption, the origin of scientific truth.

The reason takes hold of this first principle of truth, and availing itself of all the connections and relations of this principle, it proceeds to the conclusion--using no sensible image in doing this, but contemplates the *idea alone*; and with these ideas the process begins, goes on, and terminates.

"I apprehend," said Glaucon, "but not very clearly, for the matter is somewhat abstruse. *You wish to prove that the knowledge which by the reason, in an intuitive manner, we may acquire of real existence and intelligible things is of a higher degree of certainty than the knowledge which belongs to what are commonly called the Sciences*. Such sciences, you say, have certain assumptions for their basis; and these assumptions are by the student of such sciences apprehended not by sense, but by a mental operation--by conception.

"But inasmuch as such students ascend no higher than assumptions, and do not go to the first

principles of truth, they do not seem to have true knowledge, intellectual insight, intuitive reason, on the subjects of their reasonings, though the subjects are intelligible things. And you call this habit and practice of the geometers and others by the name of JUDGMENT (διάνοια), not reason, or insight, or intuition--taking judgment to be something between opinion, on the one side, and intuitive reason, on the other.

"You have explained it well," said I. "And now consider these four kinds of things we have spoken of, as corresponding to four affections (or faculties) of the mind. INTUITIVE REASON (νόησις), the highest; JUDGMENT (διάνοια)(or *discursive reason*), the next; the third, BELIEF (πίστις); and the fourth, CONJECTURE, or *guess* (εἰκασία); and arrange them in order, so that they may be held to have more or less certainty, as their objects have more or less truth." [532](#) The completeness, and even accuracy of this classification of all the objects of human cognition, and of the corresponding mental powers, will be seen at once by studying the diagram proposed by Plato, as figured on the opposite page.

Footnote 532: [\(return\)](#) "Republic," bk. vi. ch. xx. and xxi.

345

PLATONIC SCHEME OF THE OBJECTS OF COGNITION, AND THE RELATIVE MENTAL POWERS

	VISIBLE WORLD (the object of Opinion--δόξα).		INTELLIGIBLE WORLD (the object of Knowledge or Science--ἰσπτητήμη).	
	Things.	Images.	Intuitions.	Conceptions.
And may be thus further expanded:				
	VISIBLE WORLD.		INTELLIGIBLE WORLD.	
OBJECT	Things	Images	Ideas	Conceptions
	ζῶα. κ.τ.λ.	ικονες.	ιδεαί.	δυενοήματα.
PROCESS	Belief.	Conjecture.	Intuition.	Demonstration.
	πιστις.	εικασια.	νόησις.	ἰπισιητη.
FACULTY	SENSATION.	PHANTASY.	INTUITIVE REASON.	DISCURSIVE REASON.
	αισθησις.	φαντασία.	νοός.	λόγος.
MODERN NOMENCLATURE	SENSE.	IMAGINATION.	REASON.	JUDGMENT.
	Presentative Faculty.	Representative Faculty	Regulative Faculty.	Logical Faculty.
	MEMORY. μνημη. The Conservative Faculty-- "the preserver of sensation" (σωτηρια αισιυ, σεως) [533]		REMINISCENCE αναμνησις. The Reproductive Faculty-- "the recollection of the things which the soul saw (in Eternity) when journeying in the train of the Deity." [534]	
	[Footnote 533: "Philebus," § 67]		[Footnote 534: Phædrus, § 62.]	

346

The foregoing diagram, borrowed from Whewell, with some modifications and additions we have ventured to make, exhibits a perfect view of the Platonic scheme of the *cognitive powers*--the faculties by which the mind attains to different degrees of knowledge, "having more or less certainty, as their objects have more or less truth." [535](#)

1st. SENSATION (αἴσθησις).--This term is employed by Plato to denote the passive mental states or affections which are produced within us by external objects through the medium of the vital organization, and also the cognition or vital perception or consciousness [536](#) which the mind has of these mental states.

2d. PHANTASY (φαντασία).--This term is employed to describe the power which the mind possesses of imagining or representing whatever has once been the object of sensation. This may be done involuntarily as "in dreams, disease, and hallucination," [537](#) or voluntarily, as in reminiscence. Φαντάσματα are the images, the life-pictures (ζωγράφημα) of sensible things which are present to the mind, even when no external object is present to the sense.

Footnote 535: [\(return\)](#) "Republic," bk. vii. ch. xix.

Footnote 536: [\(return\)](#) "In Greek philosophy there was no term for 'consciousness' until the decline of philosophy, and in the latter ages of the language. Plato and Aristotle, to say nothing of other philosophers, had no special term to express the knowledge which the mind has of the operation of its own faculties, though this, of course, was necessarily a frequent matter of consideration. Intellect was supposed by them to be cognizant of its own operations.... In his 'Theætetus' Plato accords to sense the power of perceiving that it perceives."--Hamilton's "Metaphysics," vol. i. p. 198 (Eng. ed.).

Footnote 537: [\(return\)](#) "Theætetus," § 39.

347 The conjoint action of these two powers results in what Plato calls *opinion* (δόξα). "Opinion is the complication of memory and sensation. For when we meet for the first time with a thing perceptible by a sense, and a sensation is produced by it, and from this sensation a memory, and we subsequently meet again with the same thing perceived by a sense, we combine the memory previously brought into action with the sensation produced a second time, and we say within ourselves [this is] Socrates, or a horse, or fire, or whatever thing there may be of such a kind. Now this is called *opinion*, through our combining the recollection brought previously into action with the sensation recently produced. And when these, placed along each other, agree, a true opinion is produced; but when they swerve from each other, a false one." [538](#) The δόξα of Plato, therefore answers to the experience, or the *empirical knowledge* of modern philosophy, which is concerned only with appearances (phenomena), and not with absolute realities, and can not be elevated to the dignity of *science* or real knowledge.

We are not from hence to infer that Plato intended to deny all reality whatever to the objects of sensible experience. These transitory phenomena were not real existences, but they were *images* of real existences. The world itself is but the image, in the sphere of sense, of those ideas of Order, and Proportion, and Harmony, which dwell in the Divine Intellect, and are mirrored in the soul of man. "Time itself is a moving image of Eternity." [539](#) But inasmuch as the immediate object of sense-perception is a representative image generated in the vital organism, and all empirical cognitions are mere "conjectures" (εἰκασίαι) founded on representative images, they need to be certified by a higher faculty, which immediately apprehends real Being (τὸ ὄν). Of things, as they are in themselves, the senses give us no knowledge; all that in sensation we are conscious of is certain affections of the mind (πάθος); the existence of self, or the perceiving subject, and a something external to self, a perceived object, are revealed to us, not by the senses, but by the reason.

Footnote 538: [\(return\)](#) Alcinous, "Introduction to the Doctrine of Plato," p. 247.

Footnote 539: [\(return\)](#) "Timæus," § 14.

348 3d. JUDGMENT (διάνοια, λόγος), *the Discursive Faculty, or the Faculty of Relations*.--According to Plato, this faculty proceeds on the assumption of certain principles as true, without inquiring into their validity, and reasons, by deduction, to the conclusions which necessarily flow from these principles. These assumptions Plato calls hypotheses (ὑποθέσεις). But by hypotheses he does not mean baseless assumptions--"mere theories"--but things self-evident and "obvious to all;" [540](#) as for example, the postulates and definitions of Geometry. "After laying down hypotheses of the odd and even, and three kinds of angles [right, acute, and obtuse], and figures [as the triangle, square, circle, and the like], he *proceeds on them as known, and gives no further reason about them*, and reasons downward from these principles," [541](#) affirming certain judgments as consequences deducible therefrom.

Footnote 540: [\(return\)](#) "Republic," bk. vi. ch. xx.

Footnote 541: [\(return\)](#) *Ibid.*, bk. vi. ch. xx.

349 All judgments are therefore founded on *relations*. To judge is to compare two terms. "Every judgment has three parts: the subject, or notion about which the judgment is; the predicate, or notion with which the subject is compared; and the copula, or nexus, which expresses the connection or relation between them. [542](#) Every act of affirmative judgment asserts the agreement of the predicate and subject; every act of negative judgment asserts the predicate and subject do not agree. All judgment is thus an attempt to reduce to unity two cognitions, and reasoning (λογίζεσθαι) is simply the extension of this process. When we look at two straight lines of equal length, we do not merely think of them separately as *this* straight line, and *that* straight line, but they are immediately connected together by a comparison which takes place in the mind. We perceive that these two lines are alike; they are of equal length, and they are both straight; and the connection which is perceived as existing between them is a *relation of sameness or identity*. [543](#) When we observe any change occurring in nature, as, for example, the melting of wax in the presence of heat, the mind recognizes a causal efficiency in the fire to produce that change, and the relation now apprehended is a *relation of cause and effect* [544](#) But the fundamental principles, the necessary ideas which lie at the basis of all the judgments (as the ideas of space and time, of unity and identity, of substance and cause, of the infinite and perfect) are not given by the judgment, but by the "highest faculty"--"the *Intuitive Reason*, [545](#) which is, for us, the source of all unhypothetical and absolute knowledge.

Footnote 542: [\(return\)](#) Thompson's "Laws of Thought," p. 134.

Footnote 543: [\(return\)](#) "Phædo," §§ 50-57, 62.

Footnote 544: [\(return\)](#) "Timæus," ch. ix.; "Sophocles," § 109.

Footnote 545: [\(return\)](#) "Republic," bk. vi. ch. xxi.

The knowledge, therefore, which is furnished by the Discursive Reason, Plato does not regard as "real Science." "It is something between Opinion on the one hand, and Intuition on the other." [546](#)

Footnote 546: [\(return\)](#) Ibid., bk. vi. ch. xxi.

4th. REASON (νοῦς)--*Intuitive Reason*, is the organ of self-evident, necessary, and universal Truth. In an immediate, direct, and intuitive manner, it takes hold on truth with absolute certainty. The reason, through the medium of *ideas*, holds communion with the world of real Being. These ideas are the *light* which reveals the world of unseen realities, as the sun reveals the world of sensible forms. "*The idea of the good* is the *sun* of the Intelligible World; it sheds on objects the light of truth, and gives to the soul that knows, the power of knowing." [547](#) Under this light, the eye of reason apprehends the eternal world of being as truly, yes more truly, than the eye of sense apprehends the world of phenomena. This power the rational soul possesses by virtue of its having a nature kindred, or even homogeneous with the Divinity. It was "generated by the Divine Father," and, like him, it is in a certain sense "*eternal*." [548](#) Not that we are to understand Plato as teaching that the rational soul had an independent and underived existence; it was created or "generated" in eternity, [549](#) and even now, in its incorporate state, is not amenable to the conditions of time and space, but, in a peculiar sense, dwells in eternity; and therefore is capable of beholding eternal realities, and coming into communion with absolute beauty, and goodness, and truth--that is, with God, the *Absolute Being*.

Footnote 547: [\(return\)](#) Ibid., bk. vi. ch. xix.; see also ch. xviii.

Footnote 548: [\(return\)](#) The reader must familiarize himself with the Platonic notion of "*eternity*" as a *fixed state out of time existing contemporaneous with one in time*, to appreciate the doctrine of Plato as stated above. If we regard his idea of eternity as merely an indefinite extension of time, with a past, a present, and a future, we can offer no rational interpretation of his doctrine of the eternal nature of the rational essence of the soul. An eternal nature "generated" in a "past" or "present" time is a contradiction. But that was not Plato's conception of "eternity," as the reader will discover on perusing the "Timæus" (ch. xiv.). "God resolved to create a moving image of eternity, and out of that eternity which reposes in its own *unchangeable unity* he framed an eternal image moving according to numerical succession, which we call *Time*. Nothing can be more inaccurate than to apply the terms, *past, present, future*, to real Being, which is immovable. Past and future are expressions only suitable to generation which proceeds through time." Time reposes on the bosom of eternity, as all bodies are in space.

Footnote 549: [\(return\)](#) "Timæus," ch. xvi., and "Phædrus," where the soul is pronounced ἀρχὴ δὲ ἀγέννητον.

Thus the soul (ψυχή) as a composite nature is on one side linked to the eternal world, its essence being generated of that ineffable element which constitutes the real, the immutable, and the permanent. It is a beam of the eternal Sun, a spark of the Divinity, an emanation from God. On the other side it is linked to the phenomenal or sensible world, its emotive part [550](#) being formed of that which is relative and phenomenal. The soul of man thus stands midway between the eternal and the contingent, the real and the phenomenal, and as such, it is the mediator between, and the interpreter of, both.

Footnote 550: [\(return\)](#) Θυμειδής, the seat of the nobler--ἐπιθυμητικόν, the seat of the baser passions.

In the allegory of the "Chariot and Winged Steeds" [551](#) Plato represents the lower or inferior part of man's nature as dragging the soul down to the earth, and subjecting it to the slavery and debasement of corporeal conditions. Out of these conditions there arise numerous evils that disorder the mind and becloud the reason, for evil is inherent to the condition of finite and multiform being into which we have "fallen by our own fault." The present earthly life is a fall and a punishment. The soul is now dwelling in "the grave we call the body." In its incorporate state, and previous to the discipline of education, the rational element is "asleep." "Life is more of a dream than a reality." Men are utterly the slaves of sense, the sport of phantoms and illusions. We now resemble those "captives chained in a subterranean cave," so poetically described in the seventh book of the "Republic;" their backs are turned to the light, and consequently they see but the shadows of the objects which pass behind them, and they "attribute to these shadows a perfect reality." Their sojourn upon earth is thus a dark imprisonment in the body, a dreamy exile from their proper home. "Nevertheless these pale fugitive shadows suffice to revive in us the reminiscence of that higher world we once inhabited, if we have not absolutely given the reins to the impetuous untamed horse which in Platonic symbolism represents the emotive sensuous nature of man." The soul has some dim and shadowy recollection of its ante-natal state of bliss, and some instinctive and proleptic yearnings for its return.

Footnote 551: [\(return\)](#) "Phædrus," § 54-62.

"Our birth is but a sleep and a forgetting;

The soul that rises with us, our life's star,
Has had elsewhere its setting,
And cometh from afar,
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory, do we come
From God, who is our home." [552](#)

Footnote 552: ([return](#)) Wordsworth, "Ode on the Intimations of Immortality," vol. v.

Exiled from the true home of the spirit, imprisoned in the body, disordered by passion, and beclouded by sense, the soul has yet longings after that state of perfect knowledge, and purity, and bliss, in which it was first created. Its affinities are still on high. It yearns for a higher and nobler form of life. It essays to rise, but its eye is darkened by sense, its wings are besmeared by passion and lust; it is "borne downward, until at length it falls upon and attaches itself to that which is material and sensual," and it flounders and grovels still amid the objects of sense.

And now, with all that seriousness and earnestness of spirit which is peculiarly Christian, Plato asks how the soul may be delivered from the illusions of sense, the distemping influence of the body, and the disturbances of passion, which becloud its vision of the real, the good, and the true?

352

Plato believed and hoped this could be accomplished by *philosophy*. This he regarded as a grand intellectual discipline for the purification of the soul. By this it was to be disenthralled from the bondage of sense [553](#) and raised into the empyrean of pure thought "where truth and reality shine forth." All souls have the faculty of knowing, but it is only by reflection, and self-knowledge, and intellectual discipline, that the soul can be raised to the vision of eternal truth, goodness, and beauty--that is, to the vision of God. And this intellectual discipline was the *Platonic Dialectic*.

Footnote 553: ([return](#)) Not, however, fully in this life. The consummation of the intellectual struggle into "the intelligible world" is death. The intellectual discipline was therefore μελέτη θανάτου, a *preparation for death*.

353

CHAPTER XI.

THE PHILOSOPHERS OF ATHENS (*continued*.)

THE SOCRATIC SCHOOL (*continued*).

PLATO.

II. THE PLATONIC DIALECTIC.

The Platonic Dialectic is the Science of Eternal and Immutable Principles, and the *method* (ὄργανον) by which these first principles are brought forward into the clear light of consciousness. The student of Plato will have discovered that he makes no distinction between logic and metaphysics. These are closely united in the one science to which he gives the name of "*Dialectic*" and which was at once the science of the ideas and laws of the Reason, and of the mental process by which the knowledge of Real Being is attained, and a ground of absolute certainty is found. This science has, in modern times, been called *Primordial* or *Transcendental Logic*.

We have seen that Plato taught that the human reason is originally in possession of fundamental and necessary ideas--the copies of the archetypal ideas which dwell in the eternal Reason; and that these ideas are the primordial laws of thought--that is, they are the laws under which we conceive of all objective things, and reason concerning all existence. These ideas, he held, are not derived from sensation, neither are they generalizations from experience, but they are inborn and connatural. And, further, he entertained the belief, more, however, as a reasonable hypothesis [554](#) than as a demonstrable truth, that these standard principles were acquired by the soul in a pre-existent state in which it stood face to face with ideas of eternal order, beauty, goodness, and truth. [555](#) "Journeying with the Deity," the soul contemplated justice, wisdom, science--not that science which is concerned with change, and which appears under a different manifestation in different objects, which we choose to call beings; but such science as is in that which alone is indeed *being*. [556](#) Ideas, therefore, belong to, and inhere in, that portion of the soul which is properly οὐσία--*essence* or *being*; which had an existence anterior to time, and even now has no relation to time, because it is now in eternity--that is, in a sphere of being to which past, present, and future can have no relation. [557](#)

354

Footnote 554: ([return](#)): Within "the εἰκότων μύθων ιδέα--the category of probability."--"Phædo."

Footnote 555: ([return](#)) "Phædo," § 50-56.

Footnote 556: [\(return\)](#) "Phædrus," § 58.

Footnote 557: [\(return\)](#) See note on p. 349.

All knowledge of truth and reality is, therefore, according to Plato, a REMINISCENCE (ἀνάμνησις)--a recovery of partially forgotten ideas which the soul possessed in another state of existence; and the *dialectic* of Plato is simply the effort, by apt *interrogation*, to lead the mind to "recollect" [558](#) the truth which has been formerly perceived by it, and is even now in the memory though not in consciousness. An illustration of this method is attempted in the "*Meno*" where Plato introduces Socrates as making an experiment on the mind of an uneducated person. Socrates puts a series of questions to a slave of Meno, and at length elicits from the youth a right enunciation of a geometrical truth. Socrates then points triumphantly to this instance, and bids Meno observe that he had not taught the youth any thing, but simply interrogated him as to his opinions, whilst the youth had recalled the knowledge previously existing in his own mind. [559](#)

Footnote 558: [\(return\)](#) "To learn is to recover our own previous knowledge, and this is properly to *recollect*."--"Phædo" § 55.

Footnote 559: [\(return\)](#) "Meno," § 16-20. "Now for a person to recover knowledge himself through himself, is not this to *recollect*."

Now whilst we readily grant that the instance given in the "*Meno*" does not sustain the inference of Plato that "the boy" had learnt these geometrical truths "in eternity," and that they had simply been brought forward into the view of his consciousness by the "questioning" of Socrates, yet it certainly does prove that *there are ideas or principles in the human reason which are not derived from without--which are anterior to all experience, and for the development of which, experience furnishes the occasion, but is not the origin and source.* By a kind of lofty inspiration, he caught sight of that most important doctrine of modern philosophy, so clearly and logically presented by Kant, *that the Reason is the source of a pure à priori knowledge--a knowledge native to, and potentially in the mind, antecedent to all experience, and which is simply brought out into the field of consciousness by experience conditions.* Around this greatest of all metaphysical truths Plato threw a gorgeous mythic dress, and presented it under the most picturesque imagery. [560](#) But, when divested of the rich coloring which the glowing imagination of Plato threw over it, it is but a vivid presentation of the cardinal truth that *there are ideas in the mind which have not been derived from without,* and which, therefore, the mind brought with it into the present sphere of being. The validity and value of this fundamental doctrine, even as presented by Plato, is unaffected by any speculations in which he may have indulged, as to the pre-existence of the soul. He simply regarded this doctrine of pre-existence as highly probable--a plausible explanation of the facts. That there are ideas, innate and connatural to the human mind, he clung to as the most vital, most precious, most certain of all truths; and to lead man to the recognitions of these ideas, to bring them within the field of consciousness, was, in his judgment, the great business of philosophy.

And this was the grand aim of his *Dialectic*--to elicit, to bring to light the truths which are already in the mind--"α μαίεσις" a kind of intellectual midwifery [561](#)--a delivering of the mind of the ideas with which it was pregnant.

Footnote 560: [\(return\)](#) As in the "Phædo," §§ 48-57; "Phædrus," §§ 52-64; "Republic," bk. x.

Footnote 561: [\(return\)](#) "Theætetus," §§ 17-20.

It is thus, at first sight, obvious that it was a higher and more comprehensive science than the art of deduction. For it was directed to the discovery and establishment of First Principles. Its sole object was the discovery of truth. His dialectic was an *analytical* and *inductive method*. "In Dialectic Science," says *Alcinous*, "there is a dividing and a defining, and an analyzing, and, moreover, that which is inductive and syllogistic." [562](#) Even *Bacon*, who is usually styled "the Father of the Inductive method," and who, too often, speaks disparagingly of Plato, is constrained to admit that he followed the inductive method. "An induction such as will be of advantage for the invention and demonstration of Arts and Sciences must distinguish the essential nature of things (naturam) by proper rejections and exclusions, and then after as many of these negatives as are sufficient, by comprising, above all (super), the positives. Up to this time this had not been done, nor even attempted, *except by Plato alone, who, in order to attain his definitions and ideas, has used, to a certain extent, the method of Induction.*" [563](#)

Footnote 562: [\(return\)](#) "Introduction to the Doctrines of Plato," vol. vi. p. 249. "The Platonic Method was the method of induction."--Cousin's "History of Philosophy," vol. i. p. 307.

Footnote 563: [\(return\)](#) "Novum Organum," vol. i. p. 105.

The process of investigation adopted by Plato thus corresponds with the inductive method of modern times, with this simple difference, that Bacon conducted science into the world of *matter*, whilst Plato directed it to the world of *mind*. The dialectic of Plato aimed at the discovery of the "laws of thought;" the modern inductive philosophy aims at the discovery of the "laws of nature." The latter concerns itself chiefly with the inquiry after the "causes" of material phenomena; the former concerned itself with the inquiry after the "first principles" of all knowledge and of all existence. Both processes are, therefore, carried on by *interrogation*. The analysis which seeks for a law of nature proceeds by the interrogation of nature. The analysis of Plato proceeds by the

interrogation of mind, in order to discover the fundamental *ideas* which lie at the basis of all cognition, which determine all our processes of thought, and which, in their final analysis, reveal the REAL BEING, which is the ground and explanation of all existence.

Now the fact that such an inquiry has originated in the human mind, and that it can not rest satisfied without some solution, is conclusive evidence that the mind has an instinctive belief, a proleptic anticipation, that such knowledge can be attained. There must unquestionably be some mental initiative which is the *motive* and *guide* to all philosophical inquiry. We must have some well-grounded conviction, some *à priori* belief, some pre-cognition "ad intentionem ejus quod quæritur," [564](#) which determines the direction of our thinking. The mind does not go to work aimlessly; it asks a specific question; it demands the "*whence*" and the "*why*" of that which is. Neither does it go to work unfurnished with any guiding principles. That which impels the mind to a determinate act of thinking is the possession of a *knowledge* which is different from, and independent of, the process of thinking itself. "A rational anticipation is, then, the ground of the *prudens quæstio* --"the forethought query, which, in fact, is the prior half of the knowledge sought." [565](#) If the mind inquire after "laws," and "causes," and "reasons," and "grounds,"--the first principles of all knowledge and of all existence,--"it must have the *à priori* ideas of "law," and "cause," and "reason," and "being *in se*" which, though dimly revealed to the mind previous to the discipline of reflection, are yet unconsciously governing its spontaneous modes of thought. The whole process of induction has, then, some rational ground to proceed upon--some principles deeper than science, and more certain than demonstration, which reason contains within itself, and which induction "draws out" into clearer light.

Footnote 564: [\(return\)](#) Bacon.

Footnote 565: [\(return\)](#) Coleridge, vol. ii. p. 413.

Now this mental initiative of every process of induction is the intuitive and necessary conviction *that there must be a sufficient reason why every thing exists, and why it is as it is, and not otherwise;* [566](#) or in other words, if any thing begins to be, some thing else must be supposed [567](#) as the ground, and reason, and cause, and law of its existence. This "*law of sufficient (or determinant) reason*" [568](#) is the fundamental principle of all metaphysical inquiry. It is contained, at least in a negative form, in that famous maxim of ancient philosophy, "*De nihilo nihilo*"--"Ἀδύνατον γίνεσθαι τι ἐκ μηδενὸς προϋπάρχοντος." "It is impossible for a real entity to be made or generated from nothing pre-existing;" or in other words, "nothing can be made or produced without an efficient cause." [569](#) This principle is also distinctly announced by Plato: "Whatever is generated, is necessarily generated from a certain αἰτίαν"--*ground, reason, or cause*; "for it is wholly impossible that any thing should be generated without a cause." [570](#)

Footnote 566: [\(return\)](#) "Phædo," § 103.

Footnote 567: [\(return\)](#) *Suppono*, to place under as a support, to take as a ground.

Footnote 568: [\(return\)](#) This generic principle, viewed under different relations, gives--

1st. *The principle of Substance*--every quality supposes a subject or real being.

2d. *The principle of Causality*--every thing which begins to be must have a cause.

3d. *The principle of Law*--every phenomenon must obey some uniform law.

4th. *The principle of Final Cause*--every means supposes an end, every existence has a purpose or reason why.

5th. *The principle of Unity*--all plurality supposes a unity as its basis and ground.

Footnote 569: [\(return\)](#) Cudworth's "Intellectual System," vol. ii. p. 161.

Footnote 570: [\(return\)](#) "Timæus," ch. ix.

The first business of Plato's dialectic is to demonstrate that the ground and reason of all existence can not be found in the mere objects of sense, nor in any opinions or judgments founded upon sensation. Principles are only so far "first principles" as they are permanent and unchangeable, depending on neither time, nor place, nor circumstances. But the objects of sense are in ceaseless flux and change; they are "*always becoming*;" they can not be said to have any "*real being*." They are not to-day what they were yesterday, and they will never again be what they are now; consequently all opinions founded on mere phenomena are equally fluctuating and uncertain. Setting out, therefore, from the assumption of the fallaciousness of "*opinion*" it examined the various hypotheses which had been bequeathed by previous schools of philosophy, or were now offered by contemporaneous speculators, and showed they were utterly inadequate to the solution of the problem. This scrutiny consisted in searching for the ground of "contradiction" [571](#) with regard to each opinion founded on sensation, and showing that opposite views were equally tenable. It inquired on what ground these opinions were maintained, and what consequences flowed therefrom, and it showed that the grounds upon which "opinion" was founded, and the conclusions which were drawn from it, were contradictory, and consequently untrue. [572](#) "They," the Dialecticians, "examined the opinions of men as if they were error; and bringing them together by a reasoning process to the same point, they placed them by the side of each other: and by so placing, they showed that *the opinions are at one and the same time*

contrary to themselves, about the same things, with reference to the same circumstances, and according to the same premises." [573](#) And inasmuch as the same attribute can not, at the same time, be affirmed and denied of the same subject, [574](#) therefore a thing can not be at once "changeable" and "unchangeable," "movable" and "immovable," "generated" and "eternal." [575](#) The objects of sense, however generalized and classified, can only give the contingent, the relative, and the finite; therefore the permanent ground and sufficient reason of all phenomenal existence can not be found in opinions and judgments founded upon sensation.

Footnote 571: [\(return\)](#) "The Dialectician is one who syllogistically infers the contradictions implied in popular opinions."--Aristotle, "Sophist," §§ 1, 2.

Footnote 572: [\(return\)](#) "Republic," bk. vi. ch. xiii.

Footnote 573: [\(return\)](#) "Sophist," § 33; "Republic," bk. iv. ch. xii.

Footnote 574: [\(return\)](#) See the "Phædo," § 119, and "Republic," bk. iv. ch. xiii., where the Law of Non-contradiction is announced.

Footnote 575: [\(return\)](#) "Parmenides," § 3.

The dialectic process thus consisted almost entirely of *refutation*, [576](#) or what both he and Aristotle denominated *elenchus* (ἔλεγχος)--a process of reasoning by which the contradictory of a given proposition is inferred. "When refutation had done its utmost, and all the points of difficulty and objection had been fully brought out, the dialectic method had accomplished its purpose; and the affirmation which remained, after this discussion, might be regarded as setting forth the truth of the question under consideration;" [577](#) or in other words, *when a system of error is destroyed by refutation, the contradictory opposite principle, with its logical developments, must be accepted as an established truth.*

Footnote 576: [\(return\)](#) Confutation is the greatest and chiefest of purification.--"Sophist," § 34.

Footnote 577: [\(return\)](#) Article "Plato," Encyclopædia Britannica.

By the application of this method, Plato had not only exposed the insufficiency and self-contradiction of all results obtained by a mere *à posteriori* generalization of the simple facts of experience, but he demonstrated, as a consequence, that we are in possession of some elements of knowledge which have not been derived from sensation; that there are, in all minds, certain notions, principles, or ideas, which have been furnished by a higher faculty than sense; and that these notions, principles, or ideas, transcend the limits of experience, and reveal the knowledge of *real being*--τὸ ὄντως ὄν--*Being in se.*

To determine what these principles or ideas are, Plato now addresses himself to the *analysis of thought*. "It is the glory of Plato to have borne the light of analysis into the most obscure and inmost region; he searched out what, in this totality which forms consciousness, is the province of reason; what comes from it, and not from the imagination and the senses--from within, and not from without." [578](#) Now to analyze is to decompose, that is, to divide, and to define, in order to see better that which really is. The chief logical instruments of the dialectic method are, therefore, *Division* and *Definition*. "The being able to *divide* according to genera, and not to consider the same species as different, nor a different as the same," [579](#) and "to see under one aspect, and bring together under one general idea, many things scattered in various places, that, by *defining* each, a person may make it clear what the subject is," is, according to Plato, "dialectical." [580](#)

Footnote 578: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 328.

Footnote 579: [\(return\)](#) "Sophist," § 83.

Footnote 280: [\(return\)](#) "Phædrus," §§ 109, 111.

We have already seen that, in his first efforts at applying reflection to the concrete phenomena of consciousness, Plato had recognized two distinct classes of cognitions, marked by characteristics essentially opposite;--one of "*sensible*" objects having a definite outline, limit, and figure, and capable of being imaged and represented to the mind in a determinate form--the other of "*intelligible*" objects, which can not be outlined or represented in the memory or the imagination by any figures or images, and are, therefore, the objects of purely rational conception. He found, also, that we arrive at one class of cognitions "*mediately*" through images generated in the vital organism, or by some testimony, definition, or explication of others; whilst we arrive at the other class "*immediately*" by simple intuition, or rational apperception. The mind stands face to face with the object, and gazes directly upon it. The reality of that object is revealed in its own light, and we find it impossible to refuse our assent--that is, it is *self-evident*. One class consisted of *contingent* ideas--that is, their objects are conceived as existing, with the possibility, without any contradiction, of conceiving of their non-existence; the other consisted of *necessary* ideas--their objects are conceived as existing with the absolute impossibility of conceiving of their non-existence. Thus we can conceive of this book, this table, this earth, as not existing, but we can not conceive the non-existence of space. We can conceive of succession in time as not existing, but we can not, in thought, annihilate duration. We can imagine this or that particular thing not to have been, but we can not conceive of the extinction of Being in itself. He further observed, that one class of our cognitions are *conditional* ideas; the existence of their objects is conceived only

on the supposition of some antecedent existence, as for example, the idea of qualities, phenomena, events; whilst the other class of cognitions are *unconditional* and *absolute*--we can conceive of their objects as existing independently and unconditionally--existing whether any thing else does or does not exist, as space, duration, the infinite, Being *in se*. And, finally, whilst some ideas appear in us as *particular* and *individual*, determined and modified by our own personality and liberty, there are others which are, in the fullest sense, *universal*. They are not the creations of our own minds, and they can not be changed by our own volitions. They depend upon neither times, nor places, nor circumstances; they are common to all minds, in all times, and in all places. These ideas are the witnesses in our inmost being that there is something beyond us, and above us; and beyond and above all the contingent and fugitive phenomena around us. Beneath all changes there is a *permanent* being. Beyond all finite and conditional existence there is something *unconditional* and *absolute*. Having determined that there are truths which are independent of our own minds--truths which are not individual, but universal--truths which would be truths even if our minds did not perceive them, we are led onward to a *super-sensual* and super-natural ground, on which they rest.

To reach this objective reality on which the ideas of reason repose, is the grand effort of Plato's dialectic. He seeks, by a rigid analysis, clearly to *separate*, and accurately to *define* the *à priori* conceptions of reason. And it was only when he had eliminated every element which is particular, contingent, and relative, and had defined the results in precise and accurate language, that he regarded the process as complete. The ideas which are self-evident, universal, and necessary, were then clearly disengaged, and raised to their pure and absolute form. "You call the man dialectical who requires a reason of the essence or being of each thing. As the dialectical man can define the essence of every thing, so can he of the good. He can *define* the idea of the good, *separating* it from all others--follow it through all windings, as in a battle, resolved to mark it, not according to opinion, but according to science." [581](#)

Footnote 581: [\(return\)](#) "Republic," bk. vii. ch. xiv.

Abstraction is thus the process, the instrument of the Platonic dialectic. It is important, however, that we should distinguish between the method of *comparative* abstraction, as employed in physical inquiry, and that *immediate* abstraction, which is the special instrument of philosophy. The former proceeds by comparison and generalization, the latter by simple separation. The one yields a contingent general principle as the result of the comparison of a number of individual cases, the other gives an universal and necessary principle by the analysis of a single concrete fact. As an illustration we may instance "the principle of causality." To enable us to affirm "that every event must have a cause," we do not need to compare and generalize a great number of events. "The principle which compels us to pronounce the judgment is already complete in the first as in the last event; it can change in regard to its object, it can not change in itself; it neither increases nor decreases with the greater or less number of applications." [582](#) In the presence of a single event, the universality and necessity of this principle of causality is recognized with just as much clearness and certainty as in the presence of a million events, however carefully generalized.

Footnote 582: [\(return\)](#) Cousin's "The True, the Beautiful, and the Good," pp. 57, 58.

Abstraction, then, it will be seen, creates nothing; neither does it add any new element to the store of actual cognitions already possessed by all human minds. It simply brings forward into a clearer and more definite recognition, that which necessarily belongs to the mind as part of its latent furniture, and which, as a law of thought, has always unconsciously governed all its spontaneous movements. As a process of rational inquiry, it was needful to bring the mind into intelligible and conscious communion with the world of *Ideas*. These ideas are partially revealed in the sensible world, all things being formed, as Plato believed, according to ideas as models and exemplars, of which sensible objects are the copies. They are more fully manifested in the constitution of the human mind which, by virtue of its kindred nature with the original essence or being, must know them intuitively and immediately. And they are brought out fully by the dialectic process, which disengages them from all that is individual and phenomenal, and sets them forth in their pure and absolute form.

But whilst Plato has certainly exhibited the true method of investigation by which the ideas of reason are to be separated from all concrete phenomena and set clearly before the mind, he has not attempted a complete enumeration of the ideas of reason; indeed, such an enumeration is still the grand desideratum of philosophy. We can not fail, however, in the careful study of his writings, to recognize the grand Triad of Absolute Ideas--ideas which Cousin, after Plato, has so fully exhibited, *viz.*, the *True*, the *Beautiful*, and the *Good*.

PLATONIC SCHEME OF IDEAS

I. *The idea of ABSOLUTE TRUTH or REALITY* (τὸ ἀληθές--τὸ ὄν)--the ground and efficient cause of all existence, and by participating in which all phenomenal existence has only so far a reality, sensible things being merely shadows and resemblances of ideas. This idea is developed in the human intelligence in its relation with the phenomenal world; as,

1. *The idea of SUBSTANCE* (οὐσία)--the ground of all phenomena, "the being or essence of all things," the permanent reality.--"Timæus," ch. ix. and xii.; "Republic," bk. vii. ch. xiv.;

"Phædo," §§ 63-67, 73.

2. *The idea of CAUSE* (αἰτία)--the power or efficiency by which things that "become," or begin to be, are generated or produced.--"Timæus," ch. ix.; "Sophist," § 109; "Philebus," §§ 45, 46.

3. *The idea of IDENTITY* (αὐτὸ τὸ ἴσον)--that which "does not change," "is always the same, simple and uniform, incomposite and indissoluble,"--that which constitutes personality or self-hood.--"Phædo," §§ 61-75; "Timæus," ch. ix.; "Republic," bk. ii. ch. xix. and xx.

365

4. *The idea of UNITY* (τὸ ἓν)--one *mind* or intelligence pervading the universe, the comprehensive conscious *thought* or *plan* which binds all parts of the universe in one great whole (τὸ πᾶν)--the principle of *order*.--"Timæus," ch. xi. and xv.; "Republic," bk. vi. ch. xiii.; "Philebus," §§ 50-51.

5. *The idea of the INFINITE* (τὸ ἄπειρον)--that which is unlimited and unconditioned, "has no parts, bounds, no beginning, nor middle, nor end."--"Parmenides," §§ 22, 23.

II. *The idea of ABSOLUTE BEAUTY* (τὸ καλόν)--the formal cause of the universe, and by participation in which all created things have only so far a real beauty.--"Timæus," ch. xi, "Greater Hippias," §§ 17, 18; "Republic," bk. v. ch. 22.

This idea is developed in the human intelligence in its relation to the organic world; as,

1. *The Idea of PROPORTION* or *SYMMETRY* (συμμετρία)--the proper relation of parts to an organic whole resulting in a harmony (κόσμος), and which relation admits of mathematical expression.--"Timæus," ch. lxix.; "Philebus," § 155 ("Timæus," ch. xi. and xii., where the relation of numerical proportions to material elements is expounded).

2. *The idea of DETERMINATE FORM* (παράδειγμα ἀρχέτυπος)--the eternal models or archetypes according to which all things are framed, and which admit of geometrical representation.--"Timæus," ch. ix.; "Phædo," § 112 ("Timæus," ch. xxviii.-xxxi., where the relation of geometrical forms to material elements is exhibited).

3. *The idea of RHYTHM* (ῥυθμός)--measured movement in time and space, resulting in melody and grace.--"Republic," bk. iii. ch. xi. and xii.; "Philebus," § 21.

4. *The idea of FITNESS* or *ADAPTATION* (χρήσιον)--effectiveness to some purpose or end.--"Greater Hippias," § 35.

5. *The idea of PERFECTION* (τελειότης)--that which is complete, "a structure which is whole and finished--of whole and perfect parts."--"Timæus," ch. xi., xii., and xliii.

III. *The idea of ABSOLUTE GOOD* (τὸ ἀγαθόν)--the final *cause* or *reason* of all existence, the sun of the invisible world, that pours upon all things the revealing light of truth.

366

The first Good [583](#) (*summum bonum*) is God the highest, and Mind or Intelligence (νοῦς), which renders man capable of knowing and resembling God. The second flows from the first, and are virtues of mind. They are good by a participation of the chief good, and constitute in man a likeness or *resemblance* to God.--"Phædo," §§110-114; "Laws," bk. i. ch. vi., bk. iv. ch. viii.; "Theætetus," §§ 84, 85; "Republic," bk. vi. ch. xix., bk. vii. ch. iii., bk. x. ch. xii. [584](#)

Footnote 583: [\(return\)](#) "Let us declare, then, on what account the framing Artificer settled the formation of the universe. He was GOOD;" and being good, "he desired that all things should as much as possible resemble himself."--"Timæus," ch. x.

Footnote 584: [\(return\)](#) "At the utmost bounds of the intellectual world is the *idea of the Good*, perceived with difficulty, but which, once seen, makes itself known as the cause of all that is beautiful and good; which in the visible world produces light, and the orb that gives it; and which in the invisible world directly produces Truth and Intelligence."--"Republic," bk. vii. ch. iii.

This idea is developed in the human intelligence in its relation to the world of moral order; as,

1. *The idea of WISDOM* or *PRUDENCE* (φρόνησις)--thoughtfulness, rightness of intention, following the guidance of reason, the right direction of the energy or will.--"Republic," bk. iv. ch. vii., bk. vi. ch. ii.

2. *The idea of COURAGE* or *FORTITUDE* (ἀνδρία)--zeal, energy, firmness in the maintenance of honor and right, virtuous indignation against wrong.--"Republic," bk. iv. ch. viii.; "Laches;" "Meno," § 24.

3. *The idea of SELF-CONTROL* or *TEMPERANCE* (σωφροσύνη)--sound-mindedness, moderation, dignity.--"Republic," bk. iv. ch. ix.; "Meno," § 24; "Phædo," § 35.

4. *The idea of JUSTICE* (δικαιοσύνη)--the harmony or perfect proportional action of all the powers of the soul.--"Republic," bk. i. ch. vi., bk. iv. ch. x.-xii., bk. vi. ch. ii. and xvi.; "Philebus," § 155; "Phædo," § 54; "Theætetus," §§ 84, 85.

Plato's idea of Justice comprehends--

- (1) EQUITY (ἰσότης)--the rendering to every man his due.--"Republic," bk. i. ch. vi.
- (2.) VERACITY (ἀλήθεια)--the utterance of what is true.--"Republic," bk. i. ch. v., bk. ii. ch. xx., bk. vi. ch. ii.
- (3.) FAITHFULNESS (πιστότης)--the strict performance of a trust.--"Republic," bk. i. ch. v., bk. vi. ch. ii.
- (4.) USEFULNESS (ὠφέλιμον)--the answering of some valuable end.--"Republic," bk. ii. ch. xviii., bk. iv. ch. xviii.; "Meno," § 22.
- (5.) BENEVOLENCE (εὐνοία)--seeking the well-being of others.--"Republic," bk. i. ch. xvii., bk. ii. ch. xviii.
- (6.) HOLINESS (ὁσιότης)--purity of mind, piety.--"Protagoras," §§ 52-54; "Phædo," § 32; "Theætetus," § 84.

The final effort of Plato's Dialectic was to ascend from these ideas of Absolute Truth, and Absolute Beauty, and Absolute Goodness to the *Absolute Being*, in whom they are all united, and from whom they all proceed. "He who possesses the true love of science is naturally carried in his aspirations to the *real Being*; and his love, so far from suffering itself to be retarded by the multitude of things whose reality is only apparent, knows no repose until it have arrived at union with the *essence* of each object, by the part of the soul which is akin to the permanent and essential; so that this divine conjunction having produced intelligence and truth, the knowledge of *being* is won." [585](#)

Footnote 585: [\(return\)](#) "Republic," bk. vi. ch. v.

To the mind of Plato, there was in every thing, even the smallest and most insignificant of sensible objects, a *reality* just in so far as it participates in some archetypal form or idea. These archetypal forms or ideas are the "*thoughts of God*" [586](#)--they are the plan according to which he framed the universe. "The Creator and Father of the universe looked to an *eternal model*.... Being thus generated, the universe is framed according to principles that can be comprehended by reason and reflection." [587](#) Plato, also, regarded all individual conceptions of the mind as hypothetical notions which have in them an *à priori* element--an idea which is unchangeable, universal, and necessary. These unchangeable, universal, and necessary ideas are copies of the Divine Ideas, which are, for man, the primordial laws of all cognition, and all reasoning. They are possessed by the soul "in virtue of its kindred nature to that which is permanent, unchangeable, and eternal." He also believed that every archetypal form, and every *à priori* idea, has its ground and root in a higher idea, which is *unhypothetical* and *absolute*--an idea which needs no other supposition for its explanation, and which is, itself, needful to the explanation of all existence--even the idea of an *absolute* and *perfect Being*, in whose mind the ideas of absolute truth, and beauty, and goodness inhere, and in whose eternity they can only be regarded as eternal. [588](#) Thus do the "ideas of reason" not only cast a bridge across the abyss that separates the sensible and the ideal world, but they also carry us beyond the limits of our personal consciousness, and discover to us a realm of real Being, which is the foundation, and cause, and explanation of the phenomenal world that appears around us and within us.

Footnote 586: [\(return\)](#) Alcinous, "Doctrines of Plato," p. 262.

Footnote 587: [\(return\)](#) "Timæus," ch. ix.

Footnote 588: [\(return\)](#) Maurice's "Ancient Philosophy," p. 149.

This passage from psychology to ontology is not achieved *per saltum*, or effected by any arbitrary or unwarrantable assumption. There are principles revealed in the centre of our consciousness, whose regular development carry us beyond the limits of consciousness, and attain to the knowledge of actual being. The absolute principles of *causality* and *substance*, of *intentionality* and *unity*, unquestionably give us the absolute Being. Indeed the absolute truth *that every idea supposes a being in which it resides*, and which is but another form of the law or principle of substance, viz., *that every quality supposes a substance or being in which it inheres*, is adequate to carry us from Idea to Being. "There is not a single cognition which does not suggest to us the notion of existence, and there is not an unconditional and absolute truth which does not necessarily imply an absolute and unconditional Being." [589](#)

Footnote 589: [\(return\)](#) Cousin's "Elements of Psychology," p. 506.

This, then, is the dialectic of Plato. Instead of losing himself amid the endless variety of particular phenomena, he would search for principles and laws, and from thence ascend to the great Legislator, the *First Principle of all Principles*. Instead of stopping at the relations of sensible objects to the general ideas with which they are commingled, he will pass to their *eternal Paradigms*--from the just thing to the idea of absolute justice, from the particular good to the absolute good, from beautiful things to the absolute beauty, and thence to the ultimate reality--*the absolute Being*. By the realization of the lower idea, embodied in the forms of the visible universe and in the necessary laws of thought, he sought to rise to the higher idea, in its pure and abstract form--the *Supreme Idea*, containing in itself all other ideas--the *One Intelligence* which unites the universe in a harmonious whole. "The Dialectic faculty proceeds from hypothesis

to an unhypothetical principle.... It uses hypotheses as steps, and starting-points, in order to proceed from thence to the *absolute*. The Intuitive Reason takes hold of the First Principle of the Universe, and avails itself of all the connections and relations of that principle. It ascends from idea to idea, until it has reached the Supreme Idea"--the *Absolute Good*--that is, *God*. [590](#)

Footnote 590: [\(return\)](#) "Republic," bk. vi. ch. xx. and xxi.

We are thus brought, in the course of our examination of the Platonic method, to the *results* obtained by this method--or, in other words, to

III. THE PLATONIC ONTOLOGY.

The grand object of all philosophic inquiry in ancient Greece was to attain to the knowledge of real Being--that Being which is permanent, unchangeable, and eternal. It had proceeded on the intuitive conviction, that beneath all the endless diversity of the universe there must be a principle of *unity*--below all fleeting appearances there must be a permanent *substance*--beyond all this everlasting flow and change, this beginning and end of finite existence, there must be an eternal Being, which is the *cause*, and which contains, in itself, the *reason* of the order, and harmony, and beauty, and excellency which pervades the universe. And it had perpetually asked what is this permanent, unchangeable, and eternal substance or being?

370

Plato had assiduously labored at the solution of this problem. The object of his dialectic was "to lead upward the soul to the knowledge of real being," [591](#) and the conclusions to which he attained may be summed up as follows:

1st. *Beneath all SENSIBLE phenomena there is an unchangeable subject-matter, the mysterious substratum of the world of sense, which he calls the receptacle (ἰποδοχή) the nurse (τιθήνη) of all that is produced.* [592](#)

It is this "substratum or physical groundwork" which gives a reality and definiteness to the evanescent phantoms of sense, for, in their ceaseless change, *they* can not justify any title whatever. It alone can be styled "*this*" or "*that*" (τόδε or τοῦτο); they rise no higher than "*of such kind*" or "of what kind or quality" (τοιοῦτον or ὁποιοῦν τι). [593](#) It is not earth, or air, or fire, or water, but "an invisible *species* and formless universal receiver, which, in the most obscure way, receives the immanence of the intelligible." [594](#) And in relation to the other two principles (*i.e.*, ideas and objects of sense), "it is *the mother*" to the father and the offspring. [595](#) But perhaps the most remarkable passage is that in which he seems to identify it with *pure space*, which, "itself imperishable, furnishes a *seat* (ἔδραν) to all that is produced, not apprehensible by direct perception, but caught by a certain spurious reasoning, scarcely admissible, but which we see as in a dream; gaining it by that judgment which pronounces it necessary that all which is, be *somewhere*, and occupy a *certain space*." [596](#) This, it will be seen, approaches the Cartesian doctrine, which resolves matter into simple extension. [597](#)

Footnote 596: [\(return\)](#) *Ibid.*, ch. xxvi.

Footnote 597: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 171.

It should, however, be distinctly noted that Plato does not use the word ὕλη--matter. This term is first employed by Aristotle to express "the substance which is the subject of all changes." [598](#) The subject or substratum of which Plato speaks, would seem to be rather a logical than a material entity. It is the *condition or supposition* necessary for the production of a world of phenomena. It is thus the *transition-element* between the real and the apparent, the eternal and the contingent; and, lying thus on the border of both territories, we must not be surprised that it can hardly be characterized by any definite attribute. [599](#) Still, this unknown recipient of forms or ideas has a *reality*; it has "an abiding nature," "a constancy of existence;" and we are forbidden to call it by any name denoting quality, but permitted to style it "*this*" and "*that*" (τόδε καὶ τοῦτο). [600](#) Beneath the perpetual changes of sensible phenomena there is, then, an unchangeable subject, which yet is neither the Deity, nor ideas, nor the soul of man, which exists as the means and occasion of the manifestation of Divine Intelligence in the organization of the world. [601](#)

Footnote 600: [\(return\)](#) "Timæus," ch. xxiii.

Footnote 601: [\(return\)](#) *Ibid.*, ch. xiii

372 There has been much discussion as to whether Plato held that this "*Receptacle*" and "*Nurse*" of forms and ideas was eternal, or generated in time. Perhaps no one has more carefully studied the writings of Plato than William Archer Butler, and his conclusions in regard to this subject are presented in the following words: "As, on the one hand, he maintained a strict system of dualism, and avoided, without a single deviation, that seduction of pantheism to which so many abstract speculators of his own school have fallen victims; so, on the other hand, it appears to me that he did not scruple to place this principle, the opposite of the Divine intelligence, in a sphere independent of temporal origination.... But we can scarcely enter into his views, unless we ascertain his notions of the nature of *Time* itself. This was considered to have been created with the rest of the sensible world, to finish with it, if it ever finished--to be altogether related to this phenomenal scene. ⁶⁰² "The generating Father determined to create a moving image of eternity (αἰώνος); and in disposing the heavens, he framed of this eternity, reposing in its own unchangeable unity, an eternal *image*, moving according to numerical succession, which he called *Time*. With the world arose days, nights, months, years, which all had no previous existence. The past and future are but forms of time, which we most erroneously transfer to the eternal substance (ἀίδιον οὐσίαν); we say it was, and is, and will be, whereas we can only fitly say *it is*. Past and future are appropriate to the successive nature of generated beings, for they bespeak motion; but the Being eternally and immovably the same is subject neither to youth nor age, nor to any accident of time; it neither was, nor hath been, nor will be, which are the attributes of fleeting sense--the circumstances of time, imitating eternity in the shape of number and motion. Nor can any thing be more inaccurate than to apply the term *real being* to past, or present, or future, or even to non-existence. Of this, however, we can not now speak fully. *Time*, then, was formed with the heavens, that, together created, they may together end, *if indeed an end be in the purpose of the Creator*; and it is designed as closely as possible to resemble the eternal nature, its exemplar. The model exists through all eternity; the world has been, is, and will be through all *time*." ⁶⁰³ In this ineffable eternity Plato places the Supreme Being, and the archetypal ideas of which the sensible world of time partakes. Whether he also includes under the same mode of existence the *subject-matter* of the sensible world, it is not easy to pronounce; and it appears to me evident that he did not himself undertake to speak with assurance on this obscure problem." ⁶⁰⁴ The creation of matter "out of nothing" is an idea which, in all probability, did not occur to the mind of Plato. But that he regarded it as, in some sense, a *dependent* existence--as existing, like time, by "the purpose or will of the Creator"--perhaps as an eternal "generation" from the "eternal substance," is also highly probable; for in the last analysis he evidently desires to embrace all things in some ultimate *unity*--a tendency which it seems impossible for human reason to avoid.

373 2d. *Beneath all mental phenomena there is a permanent subject or substratum which he designates THE IDENTICAL (τὸ αὐτό)--the rational element of the soul--"the principle of self-activity" or self-determination.* ⁶⁰⁵

There are three principles into which Plato analyzes the soul--the principle of the *Identical*, the *Diverse*, and the *Intermediate Essence*. ⁶⁰⁶ The first is indivisible and eternal, always existing in *sameness*, the very substance of *Intelligence* itself, and of the same nature with the Divine. ⁶⁰⁷ The second is divisible and corporeal, answering to our notion of the passive *sensibilities*, and placing the soul in relation with the visible world. The third is an intermediate essence, partaking of the natures of both, and constituting a medium between the eternal and the mutable--the conscious *energy* of the soul developed in the contingent world of time. Thus the soul is, on one side, linked to the unchangeable and the eternal, being formed of that ineffable element which constitutes the *real* or *immutable Being*, and on the other side, linked to the sensible and the contingent, being formed of that element which is purely *relative* and *contingent*. This last element of the soul is regarded by Plato as "mortal" and "corruptible," the former element as "immortal" and "indestructible," having its foundations laid in eternity.

Footnote 605: [\(return\)](#) "Laws," bk. x. ch. vi. and vii.; "Phædrus," § 51; "ἀρχὴ κινήσεως."

Footnote 606: [\(return\)](#) "Timæus," ch. xii.; ταῦτον, θάτερον, and οὐσία or τὸ συμμισγόμενον.

Footnote 607: [\(return\)](#) "Laws," bk. v. ch. i.

374 This doctrine of the eternity of the free and rational element of the soul must, of course, appear strange and even repulsive to those who are unacquainted with the Platonic notion of eternity as a fixed state out of time, which has no past, present, or future, and is simply that which "always *is*"--an everlasting *now*. The soul, in its elements of rationality and freedom, has existed anterior to time, because it now exists in eternity. ⁶⁰⁸ In its actual manifestations and personal history it is to be contemplated as a "generated being," having a commencement in time.

Now, that the human soul, like the uncreated Deity, has always had a distinct, conscious, personal, independent being, does not appear to be the doctrine of Plato. He teaches, most distinctly, that the "divine," the immortal part, was created, or rather "generated," in eternity. "The Deity himself *formed the divine*, and he delivered over to his celestial offspring [the

subordinate and generated gods] the task of *forming the mortal*. These subordinate deities, copying the example of their parent, and receiving from his hands the *immortal principle* of the human soul, fashioned subsequently to this the mortal body, which they consigned to the soul as a vehicle, and in which they placed another kind of soul, mortal, the seat of violent and fatal affections." [609](#) He also regarded the soul as having a derived and dependent existence. He draws a marked distinction between the divine and human forms of the "self-moving principle," and makes its continuance dependent upon the will and wisdom of the Almighty Disposer and Parent, of whom it is "the first-born offspring." [610](#)

Footnote 608: [\(return\)](#) See *ante*, note 4, p. 349, as to the Platonic notions of "Time" and "Eternity."

Footnote 609: [\(return\)](#) "Timaeus," ch. xlv.

Footnote 610: [\(return\)](#) See the elaborate exposition in "Laws," bk. x. ch. xii. and xiii.

375 That portion of the soul which Plato regarded as "immortal" and "to be entitled divine," is thus the "*offspring of God*"--a ray of the Divinity "generated" by, or emanating from, the Deity. He seems to have conceived it as co-eternal with its ideal objects, in some mysterious ultimate *unity*. "The true foundation of the Platonic theory of the constitution of the soul is this fundamental principle of his philosophy--the *oneness of truth and knowledge*." [611](#) This led him naturally to derive the *rational* element of the soul (that element that *knows*), that possesses the power of νόησις from the *real* element in things (the element that *is*)--the νοούμενον; and in the original, the final, and, though imperfectly, the present state of that rational element, he, doubtless, conceived it united with its object in an eternal conjunction, or even identity. But though intelligence and its correlative intelligibles were and are thus combined, the soul is *more* than pure intelligence; it possesses an element of personality and consciousness distinct to each individual, of which we have no reason to suppose, from any thing his writings contain, Plato ever meant to deprive it." [612](#) On the contrary, he not only regarded it as having now, under temporal conditions, a distinct personal existence, but he also claimed for it a conscious, personal existence after death. He is most earnest, and unequivocal, and consistent in his assertion of the doctrine of the immortality of the soul. The arguments which human reason can supply are exhibited with peculiar force and beauty in the "Phædo," the "Phædrus," and the tenth book of the "Republic." The most important of these arguments may be presented in a few words.

Footnote 611: [\(return\)](#) See Grant's "Aristotle," vol. i. pp. 150, 151.

Footnote 612: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 209, note.

1. *The soul is immortal, because it is incorporeal.* There are two kinds of existences, one compounded, the other simple; the former subject to change, the latter unchangeable; one perceptible to sense, the other comprehended by mind alone. The one is visible, the other is invisible. When the soul employs the bodily senses, it wanders and is confused; but when it abstracts itself from the body, it attains to knowledge which is stable, unchangeable, and immortal. The soul, therefore, being uncompounded, incorporeal, invisible, must be indissoluble--that is to say, immortal. [613](#)

Footnote 613: [\(return\)](#) "Phædo," §§ 61-75.

2. *The soul is immortal, because it has an independent power of self-motion*--that is, it has self-activity and self-determination. No arrangement of matter, no configuration of body, can be conceived as the originator of free and voluntary movement.

376 Now that which can not move itself, but derives its motion from something else, may cease to move, and perish. "But that which is self-moved, never ceases to be active, and is also the cause of motion to all other things that are moved." And "whatever is continually active is immortal." This "self-activity is," says Plato, "the very essence and true notion of the soul." [614](#) Being thus essentially *causative*, it therefore partakes of the nature of a "principle," and it is the nature of a principle to exclude its *contrary*. That which is essentially self-active can never cease to be active; that which is the cause of motion and of change, can not be extinguished by the change called death. [615](#)

3. *The soul is immortal, because it possesses universal, necessary, and absolute ideas*, which transcend all material conditions, and bespeak an origin immeasurably above the body. No modifications of matter, however refined, however elaborated, can give the Absolute, the Necessary, the Eternal. But the soul has the ideas of absolute beauty, goodness, perfection, identity, and duration, and it possesses these ideas in virtue of its having a nature which is one, simple, identical, and in some sense, eternal. [616](#) If the soul can conceive an immortality, it can not be less than immortal. If, by its very nature, "it has hopes that will not be bounded by the grave, and desires and longings that grasp eternity," its nature and its destiny must correspond.

In the concluding sections of the "Phædo" he urges the doctrine with earnestness and feeling as the grand motive to a virtuous life, for "the reward is noble and the hope is great." [617](#) And in the "Laws" he insists upon the doctrine of a future state, in which men are to be rewarded or punished as the most conclusive evidence that we are under the moral government of God. [618](#)

Footnote 614: [\(return\)](#) "Phædrus," §§ 51-53.

Footnote 615: [\(return\)](#) "Phædo," §§ 112-128.

Footnote 616: [\(return\)](#) Ibid., §§ 48-57, 110-115.

Footnote 617: [\(return\)](#) Ibid., §§ 129-145.

Footnote 618: [\(return\)](#) The doctrine of Metempsychosis, or transmigration of souls, can scarcely be regarded as part of the philosophic system of Plato. He seems to have accepted it as a venerable tradition, coming within the range of probability, rather than as a philosophic truth, and it is always presented by him in a highly mythical dress. Now of these mythical representations he remarks in the "Phædo" (§ 145) that "no man in his senses would dream of insisting *that they correspond to the reality*, but that, the soul having been shown to be immortal, this, or something like this, is true of individual souls or their habitations." If, as in the opinions of the ablest critics, "the Laws" is to be placed amongst the last and maturest of Plato's writings, the evidence is conclusive that whatever may have been his earlier opinions, he did not entertain the doctrine of "Metempsychosis" in his riper years. But when, on the one hand, the soul shall remain having an intercourse with divine virtue, it becomes divine pre-eminently; and pre-eminently, after having been conveyed to a *place* entirely holy, it is changed for the better; but when it acts in a contrary manner, it has, under contrary circumstances, placed its existence in some *unholy spot*.

This is the judgment of the gods, who hold Olympus.

"O thou young man," [know] "that the person who has become more wicked, *departs to the more wicked souls*; but he who has become better, to the better both in life and in all deaths, to do and suffer what is fitting for the like."--"Laws," bk. x. ch. xii. and xiii.

377

4. *Beyond all finite existences and secondary causes, all laws, ideas, and principles, there is an INTELLIGENCE or MIND, the First Principle of all Principles, the Supreme Idea on which all other ideas are grounded; the Monarch and Lawgiver of the universe, the ultimate Substance from which all other things derive their being and essence, the First and efficient Cause of all the order, and harmony, and beauty, and excellency, and goodness, which pervades the universe, who is called by way of pre-eminence and excellence the Supreme Good, THE GOD (ὁ θεός), "the God over all," (ὁ ἐνὶ πᾶσι θεός).*

This SUPREME MIND, [619](#) Plato taught, is incorporeal, [620](#) unchangeable, [621](#) infinite, [622](#) absolutely perfect, [623](#) essentially good, [624](#) unoriginated, [625](#) and eternal. [626](#) He is "the Father, and Architect, and Maker of the Universe," [627](#) "the efficient Cause of all things." [628](#) "the Monarch and Ruler of the world," [629](#) "the sovereign Mind that orders all things, and pervades all things," [630](#) "the sole Principle of all things," [631](#) and "the Measure of all things," [632](#) He is "the Beginning of all truth," [633](#) "the Fountain of all law and justice," [634](#) "the Source of all order and beauty," [635](#) "the Cause of all good;" [636](#) in short, "he is the Beginning, the Middle, and End of all things." [637](#)

Beyond the sensible world, Plato conceived another world of intelligibles or *ideas*. These ideas are not, however, distinct and independent existences. "What general notions are to our own

minds, ideas are to the Supreme Reason (νοῦς βασιλεύς); they are the *eternal thoughts* of the Divine Intellect." [638](#) Ideas are not substances, they are qualities, and there must, therefore, be some ultimate substance or being to whom, as attributes, they belong. "It must not be believed, as has been taught, that Plato gave to ideas a substantial existence. When they are not objects of pure conception for human reason, they are attributes of the Divine Reason. It is there they substantially exist." [639](#) These eternal laws and reasons of things indicate to us the character of that Supreme Essence of essences, the Being of beings. He is not the simple aggregate of all laws, but he is the Author, and Sustainer, and Substance of all laws. At the utmost summit of the intellectual world of Ideas blazes, with an eternal splendor, the idea of the *Supreme Good* from which all others emanate. [640](#) This Supreme Good is "far beyond all existence in dignity and power, and it is that from which all things else derive their being and essence." [641](#) The Supreme Good is not the truth, nor the intelligence; "it is the Father of it." In the same manner as the sun, which is the visible image of the good, reigns over the world, in that it illumines and vivifies it; so the Supreme Good, of which the sun is only the work, reigns over the intelligible world, in that it gives birth to it by virtue of its inexhaustible fruitfulness. [642](#) *The Supreme Good is GOD himself*, and he is designated "the good" because this term seems most fittingly to express his essential character and essence. [643](#) It is towards this superlative perfection that the reason lifts itself; it is towards this infinite beauty the heart aspires. "Marvellous Beauty!" exclaims Plato; "eternal, uncreated, imperishable beauty, free from increase and diminution... beauty which has nothing sensible, nothing corporeal, as hands or face: which does not reside in any being different from itself, in the earth, or the heavens, or in any other thing, but which exists *eternally and absolutely in itself, and by itself*; beauty of which every other beauty partakes, without their birth or destruction bringing to it the least increase or diminution." [644](#) The absolute being--God, is the last reason, the ultimate foundation, the complete ideal of all beauty. God is, *par excellent*, the Beautiful.

God is therefore, with Plato, *the First Principle of all Principles*; the Divine energy or power is the *efficient cause*, the Divine beauty the *formal cause*, and the Divine goodness the *final cause* of all existence.

The eternal unity of the principles of Order, Goodness, and Truth, in an ultimate reality--the ETERNAL MIND, is thus the fundamental principle which pervades the whole of the Platonic philosophy. And now, having attained this sublime elevation, he looks down from thence upon the *sensible, the phenomenal world*, and upon *the temporal life of man*; and in the light of this great principle he attempts to explain their meaning and purpose. The results he attained in the former case constitute the Platonic *Physics*, in the latter, the Platonic *Ethics*.

I. PLATONIC PHYSICS.

Firmly believing in the absolute excellence of the Deity, and regarding the Divine Goodness as the Final Cause of the universe, he pronounces the physical world to be an *image* of the perfection of God. Anaxagoras, no doubt, prepared the way for this theory. Every one who has read the "Phædo," will remember the remarkable passage in which Socrates gives utterance to the disappointment which he had experienced when expecting from physical science an explanation of the universe. "When I was young," he said--"it is not to be told how eager I was about physical inquiries, and curious to know *how the universe came to be as it is*; and when I heard that Anaxagoras was teaching that all was arranged by *mind*, I was delighted with the prospect of hearing such a doctrine unfolded; I thought to myself, if he teaches that mind made every thing to be as it is, he will explain *how it is BEST for it to be*, and show that so it is." But Anaxagoras, it appears, lost sight of this principle, and descended to the explanation of the universe by material causes. "Great was my hope," says Socrates, "and equally great my disappointment." [645](#)

Footnote 645: [\(return\)](#) "Phædo," §§ 105, 106.

Plato accepted this suggestion of Anaxagoras with all his peculiar earnestness, and devoted himself to its fuller development. It were a vain and profitless theory, which, whilst it assumed

the existence of a Supreme Mind, did not represent that mind as operating in the universe by *design*, and as exhibiting his intelligence, and justice, and goodness, as well as his power, in every thing. If it be granted that there is a Supreme Mind, then, argued Plato, he must be regarded as "the measure of all things," and all things must have been framed according to a plan or "model" which that mind supplied. Intelligence must be regarded as having a *purpose*, and as working towards an *end*, for it is this alone which distinguishes reason from unreason, and mind from mere unintelligent force. The only proper model which could be presented to the Supreme Intelligence is "the eternal and unchangeable model" [646](#) which his own perfection supplies, "for he is the most excellent of causes." [647](#) Thus God is not simply the maker of the universe, but the model of the universe, because he designed that it should be an IMAGE, in the sphere of sense, of his own perfections--a revelation of his eternal beauty, and wisdom, and goodness, and truth. "God was *good*, and being good, he desired that the universe should, as far as possible, *resemble* himself.... Desiring that all things should be *good*, and, as far as might be, nothing evil, he took the fluctuating mass of things visible, which had been in orderless confusion, and reduced it to *order*, considering this to be the *better* state. Now it was and is utterly impossible for the supremely good to form any thing except that which is *most excellent* (κάλλιστον--most fair, most beautiful)." [648](#) The object at which the supreme mind aimed being that which is "*best*," we must, in tracing his operations in the universe, always look for "*the best*" in every thing. [649](#) Starting out thus, upon the assumption that the goodness of God is the final cause of the universe, Plato evolved a system of *optimism*.

The physical system of Plato being thus intended to illustrate a principle of optimism, the following results may be expected:

1. That it will mainly concern itself with *final causes*. The universe being regarded chiefly, as indeed it is, an indication of the Divine Intelligence--every phenomenon will be contemplated in that light. Nature is the volume in which the Deity reveals his own perfections; it is therefore to be studied solely with this motive, that we may learn from thence the perfection of God. The *Timæus* is a series of ingenious hypotheses designed to deepen and vivify our sense of the harmony, and symmetry, and beauty of the universe, and, as a consequence, of the wisdom, and excellence, and goodness, of its Author. [650](#)

Footnote 646: [\(return\)](#) "Timæus," ch. ix.

Footnote 647: [\(return\)](#) Ibid.

Footnote 648: [\(return\)](#) Ibid., ch. x.

Footnote 649: [\(return\)](#) Ibid., ch. xix.

Footnote 650: [\(return\)](#) "Being is related to Becoming (the Absolute to the Contingent) as Truth is to Belief; consequently we must not marvel should we find it impossible to arrive at any certain and conclusive results in our speculations upon the creation of the visible universe and its authors; it should be enough for us if the account we have to give be as probable as any other, remembering that we are but men, and therefore bound to acquiesce in merely probable results, without looking for a higher degree of certainty than the subject admits of"--"Timæus," ch. ix.

Whatever physical truths were within the author's reach, took their place in the general array: the vacancies were filled up with the best suppositions admitted by the limited science of the time. [651](#) And it is worthy of remark that, whilst proceeding by this "high *à priori* road," he made some startling guesses at the truth, and anticipated some of the discoveries of the modern inductive method, which proceeds simply by the observation, comparison, and generalization of facts. Of these prophetic anticipations we may instance that of the definite proportions of chemistry, [652](#) the geometrical forms of crystallography, [653](#) the doctrine of complementary colors, [654](#) and that grand principle that all the highest laws of nature assume the form of a precise quantitative statement. [655](#)

2. It may be expected that a system of physics raised on optimistic principles will be *mathematical* rather than experimental. "Intended to embody conceptions of proportion and harmony, it will have recourse to that department of science which deals with the proportions in space and number. Such applications of mathematical truths, not being raised on ascertained facts, can only accidentally represent the real laws of the physical system; they will, however, vivify the student's apprehension of harmony in the same manner as a happy parable, though not founded in real history, will enliven his perceptions of moral truth." [656](#)

Footnote 651: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 157.

Footnote 652: [\(return\)](#) "Timæus," ch. xxxi.

Footnote 653: [\(return\)](#) Ibid., ch. xxvii.

Footnote 654: [\(return\)](#) Ibid., ch. xlii.

Footnote 655: [\(return\)](#) "It is Plato's merit to have discovered that the laws of the physical universe are resolvable into numerical relations, and therefore capable of being represented by mathematical formulæ."--Butler's "Lectures on Ancient Philosophy," vol. ii. p. 163.

3. Another peculiarity of such a system will be an impatience of every merely *mechanical* theory of the operations of nature.

383

"The psychology of Plato led him to recognize mind wherever there was motion, and hence not only to require a Deity as first mover of the universe, but also to conceive the propriety of separate and subordinate agents attached to each of its parts, as principles of motion, no less than intelligent directors. These agents were entitled '*gods*' by an easy figure, discernible even in the sacred language, [657](#) and which served, besides, to accommodate philosophical hypotheses to the popular religion. Plato, however, carefully distinguished between the sole, Eternal Author of the Universe, on the one hand, and that 'soul,' vital and intelligent, which he attaches to the world, as well as the spheral intelligences, on the other. These 'subordinate deities,' though intrusted with a sort of deputed creation, were still only the deputies of the Supreme Framer and Director of all." [658](#) The "gods" of the Platonic system are "subordinate divinities," "generated gods," brought into existence by the will and wisdom of the Eternal Father and Maker of the universe. [659](#) Even Jupiter, the governing divinity of the popular mythology, is a descendant from powers which are included in the creation. [660](#) The offices they fulfill, and the relations they sustain to the Supreme Being, correspond to those of the "angels" of Christian theology. They are the ministers of his providential government of the world. [661](#)

The application of this fundamental conception of the Platonic system--*the eternal unity of the principles of Order, Goodness, and Truth in an ultimate reality, the Eternal Mind*--to the elucidation of the *temporal life* of man, yields, as a result--

II. THE PLATONIC ETHICS.

384 Believing firmly that there are unchangeable, necessary, and absolute principles, which are the perfections of the Eternal Mind, Plato must, of course, have been a believer in an *immutable morality*. He held that there is a rightness, a justice, an equity, not arbitrarily constituted by the Divine will or legislation, but founded in the nature of God, and therefore eternal. The independence of the principles of morality upon the mere will of the Supreme Governor is proclaimed in all his writings. [662](#) The Divine will is the fountain of efficiency, the Divine reason, the fountain of law. God is no more the creator of *virtue* than he is the creator of *truth*.

And inasmuch as man is a partaker of the Divine essence, and as the ideas which dwell in the human reason are "copies" of those which dwell in the Divine reason, man may rise to the apprehension and recognition of the immutable and eternal principles of righteousness, and "by communion with that which is Divine, and subject to the law of order, may become himself a subject of order, and divine, so far as it is possible for man." [663](#)

Footnote 662: [\(return\)](#) In "Euthyphron" especially.

Footnote 663: [\(return\)](#) "Republic," bk. vi. ch. xiii.

The attainment of this consummation is the grand purpose of the Platonic philosophy. Its ultimate object is "*the purification of the soul*," and its pervading spirit is the aspiration after perfection. The whole system of Plato has therefore an eminently *ethical* character. It is a speculative philosophy directed to a practical purpose.

385 Philosophy is the *love of wisdom*. Now wisdom (σοφία) is expressly declared by Plato to belong alone to the Supreme Divinity, [664](#) who alone can contemplate reality in a direct and immediate manner, and in whom, as Plato seems often to intimate, knowledge and being coincide. Philosophy is the aspiration of the soul after this wisdom, this perfect and immutable truth, and in its realization it is a union with the Perfect Wisdom through the medium of a divine affection, the *love* of which Plato so often speaks. The eternal and unchangeable Essence which is the proper object of philosophy is also endowed with *moral* attributes. He is not only "the Being," but "the Good" (τὸ ἀγαθόν), and all in the system of the universe which can be the object of rational contemplation, is an emanation from that goodness. The love of truth is therefore the love of God, and the love of Good is the love of truth. Philosophy and morality are thus coincident. Philosophy is the love of Perfect Wisdom; Perfect Wisdom and Perfect Goodness are identical; the Perfect Good is God; philosophy is the "*Love of God*." [665](#) Ethically viewed, it is this one motive of *love* for the Supreme Wisdom and Goodness, predominating over and purifying and assimilating every desire of the soul, and governing every movement of the man, raising man to a participation of and communion with Divinity, and restoring him to "the *likeness* of God." "This flight," says Plato, "consists in resembling God (ὁμοίωσις Θεῷ), and this resemblance is the becoming just and holy

with wisdom." [666](#) "This assimilation to God is the enfranchisement of the divine element of the soul. To approach to God as the substance of truth is *Science*; as the substance of goodness in truth is *Wisdom*, and as the substance of Beauty in goodness and truth is *Love*." [667](#)

The two great principles which can be clearly traced as pervading the ethical system of Plato are-

1. *That no man is willingly evil.* [668](#)
2. *That every man is endowed with the power of producing changes in his moral character* [669](#)

Footnote 664: [\(return\)](#) "Phædrus," § 145.

Footnote 665: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 61.

Footnote 666: [\(return\)](#) "Theætetus," § 84.

Footnote 667: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 277.

Footnote 668: [\(return\)](#) "Timæsus," ch. xlvi.

Footnote 669: [\(return\)](#) "Laws," bk. v. ch. i., bk. ix. ch. vi., bk. x. ch. xii.

The first of these principles is the counterpart ethical expression of his theory of *immutable Being*. The second is the counterpart of his theory of phenomenal change, or *mere Becoming*.

386 The soul of man is framed after the pattern of the immutable ideas of the *just*, and the *true*, and the *good*, which dwell in the Eternal Mind--that is, it is made in the image of God. The soul in its ultimate essence is formed of "the immutable" and "the permanent." The presence of the ideas of the just, and the true, and the good in the reason of man, constitute him a moral nature; and it is impossible that he can cease to be a moral being, for these ideas, having a permanent and immutable being, can not be changed. All the passions and affections of the soul are merely phenomenal. They belong to the mortal, the transitory life of man; they are in endless flow and change, and they have no permanent reality. As phenomena, they must, however, have some ground; and Plato found that ground in the mysterious, instinctive longing for the *good* and the *true* which dwells in the very essence of the soul. These are the realities after which it strives, even when pursuing pleasure, and honor, and wealth, and fame. All the restlessness of human life is prompted by a longing for the *good*. But man does not clearly perceive what the *good* really is. The rational element of the soul has become clouded by passion and ignorance, and suffered an eclipse of its powers. Still, man longs for the good, and bears witness, by his restlessness and disquietude, that he instinctively desires it, and that he can find no rest and no satisfaction in any thing apart from the knowledge and the participation of the Supreme, the Absolute Good.

This, then, is the meaning of the oft-repeated assertion of Plato "*that no man is willingly evil*;" viz., that no man deliberately chooses evil as evil. And Plato is, at the same time, careful to guard the doctrine from misconception. He readily grants that acts of wrong are distinguished as voluntary and involuntary, without which there could be neither merit nor demerit, reward nor punishment. [670](#) But still he insists that no man chooses evil in and by itself. He may choose it voluntarily as a means, but he does not choose it as an end. Every volition, by its essential nature, pursues, at least, an *apparent* good; because the end of volition is not the immediate act, but the object for the sake of which the act is undertaken. [671](#)

Footnote 670: [\(return\)](#) "Laws," bk. ix. ch. vi.

Footnote 671: [\(return\)](#) "Gorgias," §§ 52, 53.

387 How is it, then, it may be asked, that men become evil? The answer of Plato is, that the soul has in it a principle of change, in the power of regulating the desires--in indulging them to excess, or moderating them according to the demands of reason. The circumstances in which the soul is placed, as connected with the sensible world by means of the body, present an occasion for the exercise of that power, the end of this temporal connection being to establish a state of moral discipline and probation. The humors and distempers of the body likewise deprave, disorder, and discompose the soul. [672](#) "Pleasures and pains are unduly magnified; the democracy of the passions prevails; and the ascendancy of reason is cast down." Bad forms of civil government corrupt social manners, evil education effects the ruin of the soul. Thus the soul is changed--is fallen from what it was when first it came from the Creator's hand. But the eternal Ideas are not utterly effaced, the image of God is not entirely lost. The soul may yet be restored by remedial measures. It may be purified by knowledge, by truth, by expiations, by sufferings, and by prayers. The utmost, however, that man can hope to do in this life is insufficient to fully restore the image of God, and death must complete the final emancipation of the rational element from the bondage of the flesh. Life is thus a discipline and a preparation for another state of being, and death the final entrance there. [673](#)

Footnote 672: [\(return\)](#) "Gorgias," §§ 74-76.

Footnote 673: [\(return\)](#) "Phædo," §§ 130, 131.

Independent of all other considerations, virtue is, therefore, to be pursued as the true good of the

soul. Wisdom, Fortitude, Temperance, Justice, the four cardinal virtues of the Platonic system, are to be cultivated as the means of securing the purification and perfection of the inner man. And the ordinary pleasures, "the lesser goods" of life, are only to be so far pursued as they are subservient to, and compatible with, the higher and holier duty of striving after "the resemblance to God."

388

CHAPTER XII.

THE PHILOSOPHERS OF ATHENS (*continued*).

THE SOCRATIC SCHOOL (*continued*).

ARISTOTLE.

Aristotle was born at Stagira, a Greek colony of Thrace, B.C. 384. His father, Nicomachus, was a physician in the Court of Amyntas II., King of Macedonia, and is reported to have written several works on Medicine and Natural History. From his father, Aristotle seems to have inherited a love for the natural sciences, which was fostered by the circumstances which surrounded him in early life, and which exerted a determining influence upon the studies of his riper years.

Impelled by an insatiate desire for knowledge, he, at seventeen years of age, repaired to Athens, the city of Plato and the university of the world. Plato was then absent in Sicily; on his return Aristotle entered his school, became an ardent student of philosophy, and remained until the death of Plato, B.C. 348. He therefore listened to the instructions of Plato for twenty years.

The mental characteristics of the pupil and the teacher were strikingly dissimilar. Plato was poetic, ideal, and in some degree mystical. Aristotle was prosaic, systematic, and practical. Plato was intuitive and synthetical. Aristotle was logical and analytical. It was therefore but natural that, to the mind of Aristotle, there should appear something confused, irregular, and incomplete in the discourses of his master. There was a strange commingling of questions concerning the grounds of morality, and statements concerning the nature of science; of inquiries concerning "real being," and speculations on the ordering of a model Republic, in the same discourse. Ethics, politics, ontology, and theology, are all comprised in his Dialectic, which is, in fact, the one grand "science of the idea of the good." Now to the mind of Aristotle it seemed better, and much more systematic, that these questions should be separated, and referred to particular heads; and, above all, that they should be thoroughly discussed in an exact and settled terminology. To arrange and classify all the objects of knowledge, to discuss them systematically and, as far as possible, exhaustively, was evidently the ambition, perhaps also the special function, of Aristotle. He would survey the entire field of human knowledge; he would study nature as well as humanity, matter as well as mind, language as well as thought; he would define the proper limits of each department of study, and present a regular statement of the facts and principles of each science. And, in fact, he was the first who really separated the different sciences and erected them into distinct systems, each resting upon its own proper principles. He distributed philosophy into three branches:--(i.) *Theoretic*; (ii.) *Efficient*; (iii.) *Practical*. The Theoretic he divided into--1. *Physics*; 2. *Mathematics*; 3. *Theology*, or the Prime Philosophy--the science known in modern times as Metaphysics. The Efficient embraces what we now term the arts,--1. *Logic*; 2. *Rhetoric*; 3. *Poetics*. The Practical comprises--1. *Ethics*; 2. *Politics*. On all these subjects he wrote separate treatises. Thus, whilst Plato is the genius of abstraction, Aristotle is eminently the genius of classification.

389

Such being the mental characteristics of the two men--their type of mind so opposite--we are prepared to expect that, in pursuing his inquiries, Aristotle would develop a different *Organon* from that of Plato, and that the teachings of Aristotle will give a new direction to philosophic thought.

ARISTOTELIAN ORGANON.

Plato made use of psychological and logical analysis in order to draw from the depth of consciousness certain fundamental ideas which are inherent in the mind--born with it, and not derived from sense or experience. These ideas he designates "the intelligible species" (τὰ νοούμενα γένη) as opposed to "the visible species"--the objects of sense. Such ideas or principles being found, he uses them as "starting-points" from which he may pass beyond the sensible world and ascend to "the absolute," that is, to God. ⁶⁷⁴ Having thus, by immediate abstraction, attained to universal and necessary ideas, he descends to the outer world, and attempts by these ideas to construct an intellectual theory of the universe. ⁶⁷⁵

390

Aristotle will reverse this process. He will commence with *sensation*, and proceed, by induction, from the known to the unknown.

The repetition of sensations produces *recollection*, recollection *experience*, and experience produces *science*. ⁶⁷⁶ "Science and art result unto men by means of experience...." "Art comes into being when, from a number of experiences, one universal opinion is evolved, which will

embrace all similar cases. For example, if you know that a certain remedy has cured Callias of a certain disease, and that the same remedy has produced the same effect on Socrates and on several other persons, that is *Experience*; but to know that a certain remedy will cure all persons attacked with that disease, is *Art*. Experience is a knowledge of individual things (τῶν καθέκαστα); art is that of universals (τῶν καθόλου)." [677](#)

Footnote 674: [\(return\)](#) "Republic," bk. vi. ch. xx.

Footnote 675: [\(return\)](#) "Timæus," ch. ix.

Footnote 676: [\(return\)](#) "Metaphysics," bk. i. ch. i.

Footnote 677: [\(return\)](#) Ibid.

Disregarding the Platonic notion of the unity of all Being in the absolute idea, he fixed his immediate attention on the manifoldness of the phenomenal, and by a classification of all the objects of experience he sought to attain to "general notions." Concentrating all his attention on the individual, the contingent, the particular, he ascends, by induction, from the particular to the *general*; and then, by a strange paralogism, "the *universal*" is confounded with "the *general*" or, by a species of logical sleight-of-hand, the general is transmuted into the universal. Thus "induction is the pathway from particulars to universals." [678](#) But how universal and necessary principles can be obtained by a generalization of limited experiences is not explained by Aristotle. The experiences of a lifetime, the experiences of the whole race, are finite and limited, and a generalization of these can only give the finite, the limited, and at most, the general, but not the universal.

Footnote 678: [\(return\)](#) "Topics," bk. i. ch. xii.; "Ethics," bk. vi. ch. iii.

Aristotle admits, however, that there are ideas or principles in the mind which can not be explained by experience, and we are therefore entitled to an answer to the question--how are these obtained? "Sensible experience gives us what is *here, there, now*, in such and such a manner, but it is impossible for it to give what is *everywhere* and *at all times*." [680](#) He tells us further, that "science is a conception of the mind engaged in universals, and in those things which exist of necessity, and since there are *principles of things demonstrable and of every science* (for science is joined with reason), it will be neither science, nor art, nor prudence, which discovers the principles of science;... it must therefore be (νοῦς) pure intellect," or the intuitive reason. [681](#) He also characterizes these principles as *self-evident*. "First truths are those which obtain belief, not through others, but through themselves, as there is no necessity to investigate the '*why*' in scientific principles, but each principle ought to be credible by itself." [682](#) They are also *necessary* and *eternal*. "Demonstrative science is from necessary principles, and those which are *per se* inherent, are necessarily so in things." [683](#) "We have all a conception of that which can not subsist otherwise than it does.... The object of science has a necessary existence, therefore it is *eternal*. For those things which exist in themselves, by necessity, are all eternal." [684](#) But whilst Aristotle admits that there are "immutable and first principles," [685](#) which are not derived from sense and experience--"principles which are the foundation of all science and demonstration, but which are themselves indemonstrable," [686](#) because self-evident, necessary, and eternal; yet he furnishes no proper account of their genesis and development in the human mind, neither does he attempt their enumeration. At one time he makes the intellect itself their source, at another he derives them from sense, experience, and induction. This is the defect, if not the inconsistency, of his method. [687](#)

Footnote 680: [\(return\)](#) "Post. Analytic," bk. i. ch. xxxi.

Footnote 681: [\(return\)](#) "Ethics," bk. vi. ch. vi.

Footnote 682: [\(return\)](#) "Topics," bk. i. ch. i.

Footnote 683: [\(return\)](#) "Post. Analytic," bk. i. ch. vi.

Footnote 684: [\(return\)](#) "Ethics," bk. vi. ch. iii.

Footnote 685: [\(return\)](#) Ibid., bk. vi. ch. xi.

Footnote 686: [\(return\)](#) "Post. Analytic," bk. i. ch. iii.

Footnote 687: [\(return\)](#) Hamilton attempts the following mode of reconciling the contradictory positions of Aristotle:

"On the supposition of the mind virtually containing, antecedent to all experience, certain universal principles of knowledge, in the form of certain necessities of thinking; still it is only by repeated and comparative experiments that we compass the certainty; on the one hand, that such and such cognitions can not but be thought as necessary, native generalities; and, on the other, that such and such cognitions may or may not be thought, and are, therefore, as contingent, factitious generalizations. To this process of experiment, analysis, and classification, through which we attain to a scientific knowledge of principles, it might be shown that Aristotle, not improperly, applies the term *Induction*."--"Philosophy," p. 88.

The human mind, he tells us, has two kinds of intelligence--the *passive* intelligence (νοῦς παθητικός), which is the receptacle of forms (δεκτικὸν τοῦ εἶδους); and the *active* intelligence

(νοῦς ποιητικός), which impresses the seal of thought upon the data furnished by experience, and combines them into the unity of a single judgment, thus attaining "general notions." [688](#) The passive intelligence (the "external perception" of modern psychology) perceives the individual forms which appear in the external world, and the active intelligence (the intellect proper) classifies and generalizes according to fixed laws or principles inherent in itself; but of these fixed laws--πρῶτα νοήματα--first thoughts, or *à priori* ideas, he offers no proper account; they are, at most, purely subjective. This, it would seem, was, in effect, a return to the doctrine of Protagoras and his school, "that man--the individual--is the measure of all things." The aspects under which objects present themselves in consciousness, constitute our only ground of knowledge; we have no direct, intuitive knowledge of Being *in se*. The noetic faculty is simply a *regulative* faculty; it furnishes the laws under which we compare and judge, but it does not supply any original elements of knowledge. Individual things are the only real entities, [689](#) and "universals" have no separate existence apart from individuals in which they inhere as attributes or properties. They are consequently pure mental conceptions, which are fixed and recalled by general names. He thus substitutes a species of conceptual-nominalism in place of the realism of Plato. It is true that "real being" (τὸ ὄν) is with Aristotle a subject of metaphysical inquiry, but the proper, if not the only subsistence, or οὐαία, is the form or abstract nature of things. "The essence or very nature of a thing is inherent in the *form* and *energy*" [690](#) The science of Metaphysics is strictly conversant about these abstract intellectual forms just as Natural Philosophy is conversant about external objects, of which the senses give us information. Our knowledge of these intellectual forms is, however, founded upon "beliefs" rather than upon immediate intuition, and the objective certainty of science, upon the subjective necessity of believing, and not upon direct apperception.

Footnote 688: [\(return\)](#) "On the Soul," ch. vi.; "Ethics," bk. vi. ch. i.

Footnote 689: [\(return\)](#) "Metaphysics," bk. vi. ch. xiii.

Footnote 690: [\(return\)](#) Ibid., bk. vii. ch. iii.

The points of contrast between the two methods may now be presented in a few sentences. Plato held that all our cognitions are reducible to two elements--one derived from *sense*, the other from *pure reason*; one element particular, contingent, and relative, the other universal, necessary, and absolute. By an act of *immediate abstraction* Plato will eliminate the particular, contingent, and relative phenomena, and disengage the universal, necessary, and absolute *ideas* which underlie and determine all phenomena. These ideas are the thoughts of the Divine Mind, according to which all particular and individual existences are generated, and, as divine thoughts, they are real and permanent existences. Thus by a process of immediate abstraction, he will rise from particular and contingent phenomena to universal and necessary principles, and from these to the First Principle of all principles, the First Cause of all causes--that is, to *God*.

Aristotle, on the contrary, held that all of our knowledge begins with "the singular," that is, with the particular and the relative, and is derived from sensation and experience. The "sensible object," taken as it is without any sifting and probing, is the basis of science, and reason is simply the architect constructing science according to certain "forms" or laws inherent in mind. The object, then, of metaphysical science is to investigate those "universal notions" under which the mind conceives of and represents to itself external objects, and speculates concerning them. Aristotle, therefore, agrees with Plato in teaching "that science can only be a science of universals," [691](#) and "that sensation alone can not furnish us with scientific knowledge." [692](#) How, then, does he propose to attain the knowledge of universal principles? How will he perform that feat which he calls "passing from the known to the unknown?" The answer is, by *comparative abstraction*. The universal being constituted by a relation of the object to the thinking subject, that is, by a property recognized by the intelligence alone, in virtue of which it can be retained as an object of thought, and compared with other objects, he proposes to *compare, analyze, define,* and *classify* the primary cognitions, and thus evoke into energy, and clearly present those principles or forms of the intelligence which he denominate "universals." As yet, however, he has only attained to "general notions," which are purely subjective, that is, to logical definitions, and these logical definitions are subsequently elevated to the dignity of "universal principles and causes" by a species of philosophic legerdemain. Philosophy is thus stripped of its metaphysical character, and assumes a strictly *logical* aspect. The key of the Aristotelian method is therefore the

Footnote 691: [\(return\)](#) "Ethics," bk. vi. ch. vi.

Footnote 692: [\(return\)](#) "Post. Analytic," bk. i. ch. xxxi.

ARISTOTELIAN LOGIC.

Pure Logic is the science of the formal laws of thought. Its office is to ascertain the rules or conditions under which the mind, by its own constitution, reasons and discourses. The office of Applied Logic--of logic as an art--is "to form and judge of conclusions, and, through conclusions, to establish proof. The conclusions, however, arise from propositions, and the propositions from conceptions." It is chiefly under the latter aspect that logic is treated by Aristotle. According to this natural point of view he has divided the contents of the logical and dialectic teaching in the different treatises of the *Organon*.

The first treatise is the "*Categories*" or "Predicaments"--a work which treats of the universal determinations of Being. It is a classification of all our mental conceptions. As a matter of fact, the mind forms notions or conceptions about those natures and essences of things which present an outward image to the senses, or those, equally real, which utter themselves to the mind. These may be defined and classified; there may be general conceptions to which all particular conceptions are referable. This classification has been attempted by Aristotle, and as the result we have the ten "Categories" of *Substance, Quantity, Quality, Relation, Time, Place, Position, Possession, Action, Passion*. He does not pretend that this classification is complete, but he held these "Predicaments" to be the most universal expressions for the various relations of things, under some one of which every thing might be reduced.

The second treatise, "*On Interpretation*," investigates language as the expression of thought; and inasmuch as a true or false thought must be expressed by the union or separation of a subject and a predicate, he deems it necessary to discuss the parts of speech--the general term and the verb--and the modes of affirmation and denial. In this treatise he develops the nature and limitations of propositions, the meaning of contraries and contradictions, and the force of affirmations and denials in *possible, contingent, and necessary* matter.

The third are the "*Analytics*," which show how conclusions are to be referred back to their principles, and arranged in the order of their precedence.

396

The First or Prior Analytic presents the universal doctrine of the Syllogism, its principles and forms, and teaches how must reason, if we would not violate the laws of our own mind. The theory of reasoning, generally, with a view to accurate demonstration, depends upon the construction of a perfect syllogism, which is defined as "a discourse in which, certain things being laid down, something else different from the premises necessarily results, in consequence of their existence." [693](#) Conclusions are, according to their own contents and end, either *Apodeictic*, which deal with necessary and demonstrable matter, or *Dialectic*, which deal with probable matter, or *Sophistical*, which are imperfect in matter or form, and announced, deceptively, as correct conclusions, when they are not. The doctrine of Apodeictic conclusions is given in the "*Posterior Analytic*," that of Dialectic conclusions in the "*Topics*," and that of the Sophistical in the "*Sophistical Elenchi*."

Now, if Logic is of any value as an instrument for the discovery of truth, the attainment of certitude, it must teach us not only how to deduce conclusions from premises, but it must certify to us the validity of the principles from whence we reason and this is attempted by Aristotle in the Posterior Analytic. This treatise opens with the following statement: All doctrine, and all intellectual discipline, arises from a prior or pre-existent knowledge. This is evident, if we survey them all; for both mathematical sciences, and also each of the arts, are obtained in this manner. The same holds true in the case of reasonings, whether through [deductive] *Syllogism* or through *Induction*, for both accomplish the instruction they afford from information previously known--the former (syllogistic reasoning) receiving it, as it were, from the traditions of the intelligent, the latter (inductive reasoning) manifesting the universal through the light of the singular. [694](#) Induction and Syllogism are thus the grand instruments of logic. [695](#)

Footnote 693: [\(return\)](#) "Prior Analytic," bk. i. ch. i.; "Topics," bk. i. ch. i.

Footnote 694: [\(return\)](#) "Post. Analytic," bk. i. ch. i.

Footnote 695: [\(return\)](#) "We believe all things through syllogism, or from induction."--"Prior Analytic," bk. ii. ch. xxiii.

397

Both these processes are based upon an *anterior* knowledge. Demonstrative science must be from things true, first, immediate, more known than, prior to, and the causes of, the conclusion, for thus there will be the appropriate first principles of whatever is demonstrated. [696](#) The first principles of demonstration, the material of thought, must, consequently, be supplied by some power or faculty of the mind other than that which is engaged in generalization and deductive reasoning. Whence, then, is this "anterior knowledge" derived, and what tests or criteria have we of its validity?

1. In regard to deductive or syllogistic reasoning, the views of Aristotle are very distinctly expressed.

Syllogistic reasoning "proceeds from generals to particulars." [697](#) The general must therefore be supplied as the foundation of the deductive reasoning. Whence, then, is this knowledge of "the general" derived? The answer of Aristotle is that the universal major proposition, out of which the conclusion of the syllogism is drawn, *is itself necessarily the conclusion of a previous induction, and mediately or immediately an inference*--a collection from individual objects of sensation or of self-consciousness. "Now," says he, "demonstration is from universals, but induction from particulars. It is impossible, however, to investigate universals except through induction, since things which are said to be from abstraction will be known only by induction." [698](#) It is thus clear that Aristotle makes *deduction necessarily dependent upon induction*. He maintains that the highest or most universal principles which constitute the primary and immediate propositions of the former are furnished by the latter.

Footnote 696: [\(return\)](#) "Post. Analytic," bk. i. ch. ii.

Footnote 697: [\(return\)](#) Ibid., bk. i. ch. xviii.; "Ethics," bk. vi. ch. iii.

Footnote 698: [\(return\)](#) "Post. Analytic," bk. i. ch. xviii.

2. General principles being thus furnished by induction, we may now inquire whence, according to Aristotle, are the materials for induction derived? What is the character of that "anterior knowledge" which is the basis of the inductive process?

398

Induction, says Aristotle, is "the progression from singulars to universals." [699](#) It is an illation of the universal from the singular as legitimated by the laws of thought. All knowledge, therefore, begins with singulars--that is, with individual objects. And inasmuch as all knowledge begins with "individual objects," and as the individual is constantly regarded by Aristotle as the "object of sense," it is claimed that his doctrine is that all knowledge is derived from *sensation*, and that science and art result to man (*solely*) by means of *experience*. He is thus placed at the head of the empirical school of philosophy, as Plato is placed at the head of the ideal school.

Footnote 699: [\(return\)](#) "Post. Analytic," bk. i. ch. xviii.

This classification, however, is based upon a very superficial acquaintance with the philosophy of Aristotle as a whole. The practice, so commonly resorted to, of determining the character of the Aristotelian philosophy by the light of one or two passages quoted from his "Metaphysics," is unjust both to Aristotle and to the history of philosophic thought. We can not expect to attain a correct understanding of the views of Aristotle concerning the sources and grounds of all knowledge without some attention to his psychology. A careful study of his writings will show that the terms "sensation" (αἰσθησις) and "experience" (ἐμπειρία) are employed in a much more comprehensive sense than is usual in modern philosophic writings.

"Sensation," in its lowest form, is defined by Aristotle as "an excitation of the soul through the body," [700](#) and, in its higher form, as the excitation of the soul by any object of knowledge. In this latter form it is used by him as synonymous with "intuition," and embraces all immediate intuitive perceptions, whether of sense, consciousness, or reason. "The universe is derived from particulars, therefore we ought to have a sensible perception (αἰσθησις) of these; and this is intellect (νοῦς)." [701](#) Intelligence proper, the faculty of first principles, is, in certain respects, a sense, because it is the source of a class of truths which, like the perceptions of the senses, are immediately revealed as facts to be received upon their own evidence. It thus answers to the "sensus communis" of Cicero, and the "Common Sense" of the Scottish school. Under this aspect, "Sense is equal to or has the force of Science." [702](#) The term "Experience" is also used to denote, not merely the perception and remembrance of the impressions which external objects make upon the mind, but as co-extensive with the whole contents of consciousness--all that the mind *does* of its own native energy, as well as all that it *suffers* from without. It is evidently used in the Posterior Analytic (bk. ii. ch. xix.) to describe the whole process by which the knowledge of universals is obtained. "From experience, or from every universal remaining in the soul, the principles of art and science arise." The office of experience is "to furnish the principles of every science" [703](#)--that is, to evoke them into energy in the mind. 'Experience thus seems to be a thing almost similar to science and art. [704](#) In the most general sense, "sensation" would thus appear to be the immediate perception or intuition of facts and principles, and "experience" the operation of the mind upon these facts and principles, elaborating them into scientific form according to its own inherent laws. The "experience" of Aristotle is analogous to the "reflection" of Locke.

399

Footnote 700: [\(return\)](#) "De Somn.," bk. i.

Footnote 701: [\(return\)](#) "Ethics," bk. vi. ch. xi.; see also ch. vi.

Footnote 702: [\(return\)](#) "De Cen. Anim."

Footnote 703: [\(return\)](#) : "Prior Analytic," bk. i. ch. xix.

Footnote 704: [\(return\)](#) "Metaphysics," bk. i. ch. i.

So much being premised, we proceed to remark that there is a distinction perpetually recurring in the writings of Aristotle between the elements or first principles of knowledge which are "clearest in their own nature" and those which "are clearest to our perception." [705](#) The causes or principles of knowledge "are *prior* and *more known* to us in two ways, for what is prior in nature is not the same as that which is prior to us, nor that which is more known (simply in itself) the same as that which is more known to us. Now I call things prior and more known to us, those which are *nearer to sense*; and things prior and more known simply in themselves, those which are *remote from sense*; and those things are most remote which are especially *universal*, and those nearest which are *singular*; and these are mutually opposed." [706](#) Here we have a distribution of the first or prior elements of knowledge into two fundamentally opposite classes.

400

(i.) *The immediate or intuitive perceptions of sense,*

(ii.) *The immediate or intuitive apperceptions of pure reason,*

Footnote 705: [\(return\)](#) "Ethics," bk. i. ch. iv.; "Metaphysics," bk. ii. ch. i.; "Rhetoric," bk. i. ch. ii.; "Prior Analytic," bk. ii. ch. xxiii.

Footnote 706: [\(return\)](#) "Post. Analytic," bk. i. ch. ii.

The objects of sense-perception are external, individual, "nearest to sense," and occasionally or contingently present to sense. The objects of the intellect are inward, universal, and the essential property of the soul. They are "remote from sense," "prior by nature;" they are "forms" essentially inherent in the soul previous to experience; and it is the office of experience to bring them forward into the light of consciousness, or, in the language of Aristotle, "to evoke them from potentiality into actuality." And further, from the "prior" and immediate intuitions of sense and intellect, all our secondary, our scientific and practical knowledge is drawn by logical processes.

The Aristotelian distribution of the intellectual faculties corresponds fully to this division of the objects of knowledge. The human intellect is divided by Aristotle into,

1. The Passive or Receptive Intellect (νοῦς παθητικός).--Its office is the reception of sensible impressions or images (Φαντάσματα) and their retention in the mind (μνήμη). These sensible forms or images are essentially immaterial. "Each sensorium (αἰσθητήρων) is receptive of the sensible quality *without the matter*, and hence when the sensibles themselves are absent, sensations and φανταστικός remain." [707](#)

Footnote 707: [\(return\)](#) "De Anima," bk. iii. ch. ii.

2. The Active or Creative Intellect (νοῦς ποιητικός).--This is the power or faculty which, by its own inherent power, impresses "form" upon the material of thought supplied by sense-perception, exactly as the First Cause combines it, in the universe, with the recipient matter.

401

"It is necessary," says Aristotle, "that these two modes should be opposed to each other, as matter is opposed to form, and to all that gives form. The receptive reason, which is as matter, becomes all things by receiving their forms. The creative reason gives existence to all things, as light calls color into being. The creative reason transcends the body, being capable of separation from it, and from all things; it is an everlasting existence, incapable of being mingled with matter, or affected by it; prior, and subsequent to the individual mind. The receptive reason is necessary to individual thought, but it is perishable, and by its decay all memory, and therefore individuality, is lost to the higher and immortal reason." [708](#)

This "Active or Creative Intellect" is again further subdivided, by Aristotle--

1. The *Scientific* (ἐπιστημονικόν) part--the "virtue," faculty, or "habit of principles." He also designates it as the "place of principles," and further defines it as the power "which apprehends those existences whose principles can not be otherwise than they are"--that is, self-evident, immutable, and necessary truths [709](#)--the *intuitive reason*.

2. The *Reasoning* (λογιστικόν) part--the power by which we draw conclusions from premises, and "contemplate contingent matter" [710](#)--the *discursive reason*.

The correlatives *noetic* and *dianoetic*, says Hamilton, would afford the best philosophic designation of these two faculties; the knowledge attained by the former is an "intuitive principle"--a truth at first hand; that obtained by the latter is a "demonstrative proposition"--a truth at second hand.

The preceding notices of the psychology of Aristotle will aid us materially in interpreting his remarks "*Upon the Method and Habits necessary to the ascertainment of Principles*." [711](#)

402

"That it is impossible to have scientific knowledge through demonstration without a knowledge of first immediate principles, has been elucidated before." This being established, he proceeds to explain how that "knowledge of first, immediate principles" is developed in the mind.

1. The knowledge of first principles is attained by the *intuition of sense*--the immediate perception of external objects, as the *exciting* or *occasional cause* of their development in the mind.

"Now there appears inherent in all animals an innate power called *sensible perception* (αἰσθησις); but sense being inherent, in some animals a permanency of the sensible object is engendered, but in others it is not engendered. Those, therefore, wherein the sensible object does not remain have no knowledge without sensible perception, but others, when they perceive, retain one certain thing in the soul, ... with some, *reason* is produced from the permanency (of the sensible impression), [as in man], but in others it is not [as in the brute]. From sense, therefore, as we say, memory is produced, and from the repeated remembrance of the same thing we get experience.... From experience, or *from every universal remaining in the soul*--the one besides the many which in all of them is *one* and the *same*--the principles of art and science arise. If experience is conversant with generation, the principles of art; if with being, the principles of science.... Let us again explain: When one thing without difference abides, there is then the first

universal (notion) [developed] in the soul; for the singular indeed is perceived by sense, *but sense is [also] of the universal*--that is, the universal is immanent in the sensible object as a property giving it "form." "It is manifest, then, that primary things become necessarily known by induction, for thus sensible perception produces [develops or evokes] the *universal*." 2. The knowledge of first principles is attained by the *intuition of pure intellect* (νοῦς)--that is, "*intellect itself is the principle of science*" or, in other words, intellect is the *efficient, essential cause* of the knowledge of first principles.

403

"Of those habits which are about intellect by which we ascertain truth, *some 712 are always true*, but others 713 admit the false, as opinion and reasoning. But science and (pure) intellect are always true, and no other kind of knowledge, except intellect [intellectual intuition], is more accurate than science. And since the principles of demonstration are more known, and all science is connected with reason, there could not be a science of principles. But since nothing can be more true than science, except intellect, intellect will belong to principles. From these [considerations] it is evident that, as demonstration is not the principle of demonstration, so neither is science the principle of science. If, then, we have no other true genus (of habit) besides science, *intellect will be the principle of science*; it will also be the principle (or cause of the knowledge) of the principle."

Footnote 712: [\(return\)](#) The "noetic."

Footnote 713: [\(return\)](#) The "dianætic."

The doctrine of Aristotle regarding "first principles" may perhaps be summed up as follows: All demonstrative science is based upon *universals* "prior in nature"--that is, upon *à priori*, self-evident, necessary, and immutable principles. Our knowledge of these "first and immediate principles" is dependent primarily on *intellect* (νοῦς) or intuitive reason, and secondarily on sense, experience, and induction. Prior to experience, the intellect contains these principles in itself potentially, as "forms," "laws," "habitudes," or "predicaments" of thought; but they can not be "evoked into energy," can not be revealed in consciousness, except on condition of experience, and they can only be scientifically developed by logical abstraction and definition. The ultimate ground of all truth and certainty is thus a mode of our own mind, a subjective necessity of thinking, and truth is not in things, but in our own minds. 714 "Ultimate knowledge, as well as primary knowledge, the most perfect knowledge which the philosopher can attain, as well as the point from which he starts, is still a proposition. All knowledge seems to be included under two forms--knowledge *that* it is so; knowledge *why* it is so. Neither of these can, of course, include the knowledge at which Plato is aiming--knowledge which is correlated with Being--a knowledge, not *about* things or persons, but *of* them." 715

404

ARISTOTELIAN THEOLOGY

Theoretical philosophy, "the science which has truth for its end," is divided by Aristotle into Physics, Mathematics, and Theology, or the First Philosophy, now commonly known as "Metaphysics," because it is beyond or above physics, and is concerned with the primitive ground and cause of all things. 716

In the former two we have now no immediate interest, but with Theology, as "the science of the Divine," 717 the *First Moving Cause*, which is the source of all other causes, and the original ground of all other things, we are specially concerned, inasmuch as our object is to determine, if possible, whether Greek philosophy exerted any influence upon Christian thought, and has bequeathed any valuable results to the Theology of modern times.

"The Metaphysics" of Aristotle opens by an enumeration of "the principles or causes" 718 into which all existences can be resolved by philosophical analysis. This enumeration is at present to be regarded as provisional, and in part hypothetical--a verbal generalization of the different principles which seem to be demanded to explain the existence of a thing, or constitute it what it is. These he sets down as--

Footnote 716: [\(return\)](#) "Physics are concerned with things which have a principle of motion in themselves; mathematics speculate on permanent, but not transcendental and self-existent things; and there is another science separate from these two, which treats of that which is immutable and transcendental, if indeed there exists such a substance, as we shall endeavor to show that there does. This transcendental and permanent substance, if it exist at all, must surely be the sphere of the *divine*--it must be the first and highest principle. Hence it follows that there are three kinds of speculative science--Physics, Mathematics, and Theology."--"Metaphysics," bk. x. ch. vii.

Footnote 717: [\(return\)](#) "Metaphysics," bk. i. ch. ii.

Footnote 718: [\(return\)](#) Αἴτιον--cause--is here used by Aristotle in the sense of "account of" or "reason why."

1. The Material Cause (τὴν ὕλην καὶ τὸ ὑποκείμενον)--the matter and subject--that *out of* which a

given thing has been originated. "From the analogy which this principle has to wood or stone, or any actual matter out of which a work of nature or of art is produced, the name 'material' is assigned to this class." It does not always necessarily mean "matter" in the now common use of the term, but "antecedents--that is, principles whose inherence and priority is implied in any existing thing, as, for example, the premises of a syllogism, which are the material cause of the conclusion." [719](#) With Aristotle there is, therefore, "matter as an object of sense," and "matter as an object of thought."

2. The Formal Cause (τὴν οὐσίαν καὶ τὸ τι εἶναι)--the being or abstract essence of a thing--that primary nature on which all its properties depend. To this Aristotle gave the name of εἶδος--the form or exemplar *according to* which a thing is produced.

3. The Moving or Efficient Cause (ὁθεν ἢ ἄρχη τῆς κινήσεως)--the origin and principle of motion--that *by which* a thing is produced.

4. The Final Cause (τὸ οὗ ἕνεκεν καὶ τὸ ἀγαθόν)--the good end answered by the existence of any thing--that for the sake of which any thing is produced--the ἕνεκα τοῦ, or reason for it. [720](#) Thus, for instance, in a house, the wood out of which it is produced is the matter (ὕλη), the idea or conception according to which it is produced is *the form* (εἶδος ἢ μορφή), the builder who erects the house is the *efficient* cause, and the reason for its production, or the end of its existence is the *final* cause.

Footnote 719: [\(return\)](#) Encyclopædia Britannica, article "Aristotle;" "Post. Analytic," bk. ii. ch. xi.

Footnote 720: [\(return\)](#) "Metaphysics," bk. i. ch. iii.

Causes are, therefore, the elements into which the mind resolves its first rough conception of an object. That object is what it is, by reason of the matter out of which it sprang, the moving cause which gave it birth, the idea or form which it realizes, and the end or object which it attains. The knowledge of a thing implies knowing it from these four points of view--that is, knowing its four causes or principles.

These four determinations of being are, on a further and closer analysis, resolved into the fundamental antithesis of MATTER and FORM.

"All things that are produced," says Aristotle, [721](#) "are produced from something (that is, from *matter*), by something (that is, *form*), and become something (the totality--τὸ σύνολον);" as, for example, a statue, a plant, a man. To every subject there belongs, therefore, first, *matter* (ὕλη); secondly, *form* (μορφή). The synthesis of these two produces and constitutes *substance*, or οὐσία. Matter and form are thus the two grand causes or principles whence proceed all things. The formative cause is, at the same time, the moving cause and the final cause; for it is evidently the element of determination which impresses movement upon matter whilst determining it; and it is also the end of being, since being only really exists when it has passed from an indeterminate to a determinate state.

Footnote 721: [\(return\)](#) "Metaphysics," bk. vi. ch. vii.

In proof that the εἶδος or form is an *efficient* principle operating in every object, which makes it, to our conception, what it is, Aristotle brings forward the subject of generation or production. [722](#) There are three modes of production--natural, artificial, and automatic. In natural production we discern at once a matter; indeed Nature, in the largest sense, may be defined as "that out of which things are produced." Now the result formed out of this matter or nature is a given substance--a vegetable, a beast, or a man. But what is the *producing* cause in each case? Clearly something akin to the result. A man generates a man, a plant produces another plant like to itself. There is, therefore, implied in the resulting thing a *productive force* distinct from matter, upon which it works. And this is the εἶδος, or form. Let us now consider artificial production. Here again the form is the producing power. And this is in the soul. The art of the physician is the εἶδος, which produces actual health; the plan of the architect is the conception, which produces an actual house. Here, however, a distinction arises. In these artificial productions there is supposed a νόησις and a ποίησις. The νόησις is the previous conception which the architect forms in his own mind; the ποίησις is the actual creation of the house out of the given matter. In this case the conception is the moving cause of the production. The form of the statue in the mind of the artist is the motive or cause of the movement by which the statue is produced; and health must be in the thought of the physician before it can become the moving cause of the healing art. Moreover, that which is true of artificial production or change is also true of spontaneous production. For example, a cure may take place by the application of warmth, and this result is accomplished by means of friction. This warmth in the body is either itself a portion of health, or something is consequent upon it which is like itself, which is a portion of health. Evidently this implies the previous presence either of nature or of an artificer. It is also clearly evident that this kind of generating influence (the automatic) should combine with another. There must be a productive power, and there must be something out of which it is produced. In this case, then, there will be a ὕλη and an εἶδος. [723](#)

Footnote 722: [\(return\)](#) Ibid.

From the above it appears that the *efficient* cause is regarded by Aristotle as identical with the *formal* cause. So also the *final* cause--the end for the sake of which any thing exists--can hardly be separated from the perfection of that thing, that is, from its conception or form. The desire for the end gives the first impulse of motion; thus the final cause of any thing becomes identical with the good of that thing. "The moving cause of the house is the builder, but the moving cause of the builder is the end to be attained--that is, the house." From such examples as these it would seem that the determinations of form and end are considered by Aristotle as one, in so far as both are merged in the conception of *actuality*; for he regarded the end of every thing to be its completed being--the perfect realization of its idea or form. The only fundamental determinations, therefore, which can not be wholly resolved into each other are *matter and form*. [724](#)

Footnote 724: [return](#) Schwegler's "History of Philosophy," pp. 120, 123.

408

The opposition of matter and form, with Aristotle, corresponds to the opposition between the element of *generality* and the element of *particularity*. Matter is indeterminate; form is determinate. Matter, abstracted from form, in thought, is entirely without predicate and distinction; form is that which enters into the definition of every subject, and without which it could not be defined. Matter is capable of the widest diversity of forms, but is itself without form. Pure form is, in fact, that which is without matter, or, in other words, it is the pure conception of being. Matter is the necessary condition of the existence of a thing; form is the essence of each thing, that in virtue of which substance is possible, and without which it is inconceivable. On the one side is passivity, possibility of existence, capacity of action; on the other side is activity, actuality, thought. The unity of these two in the realm of determined being constitutes every individual substance. The relation of matter and form, logically apprehended, is thus the relation of POTENTIALITY and ACTUALITY.

This is a further and indeed a most important step in the Aristotelian theology. Matter, as we have seen, after all, amounts to merely capacity for action, and if we can not discover some productive power to develop potentiality into actuality, we look in vain for some explanation of the phenomena around us. The discovery, however, of energy (*ἐνέργεια*), as a principle of this description, is precisely what we wanted, and a momentary glance at the actual phenomena will show its perfect identity with the *εἶδος*, or form. [725](#) "For instance, what is a calm? It is evenness in the surface of the sea. Here the sea is the subject, that is, the matter in *capacity*, but the evenness is the *energy* or actuality;... energy is thus as form." [726](#) The form (or idea) is thus an energy or actuality (*ἐνέργεια*); the

409

matter is a capacity or potentiality (*δύναμις*), requiring the co-operation of the energy to produce a result. These terms, which are first employed by Aristotle in their philosophical signification, are characteristic of his whole system. It is, therefore, important we should grasp their precise philosophical import; and this can only be done by considering them in the strictest relation to each other. It is in this relation they are defined by Aristotle. "Now *ἐνέργεια* is the existence of a thing not in the sense of its potentially existing. The term *potentially* we use, for instance, of the statue in the block, and of the half in the whole (since it may be subtracted), and of a person knowing a thing, even when he is not thinking of it, but might be so; whereas *ἐνέργεια* is the opposite. By applying the various instances our meaning will be plain, and one must not seek a definition in each case, but rather grasp the conception of the analogy as a whole--that it is as that which builds to that which has a capacity for building; as the waking to the sleeping; as that which sees to that which has sight, but whose eyes are closed; as the definite form to the shapeless matter; as the complete to the unaccomplished. In this contrast, let the *ἐνέργεια* be set off as forming the one side, and on the other let the potential stand. Things are said to be in *ἐνέργεια* not always in like manner (except so far as there is an analogy, that as this thing is in this, and related to this, so is that in that, or related to that); for sometimes it implies *motion* as opposed to the *capacity of motion*, and sometimes *complete existence* opposed to *undeveloped matter*". [727](#) As the term *δύναμις* has the double meaning of "*possibility of existence*" as well as "*capacity of action*" so there is the double contrast of "*action*" as opposed to the capacity of action; and "*actual existence*" opposed to possible existence or potentiality. To express accurately this latter antithesis, Aristotle introduced the term *ἐντελέχεια* [728](#)--entelechy, of which the most natural account is that it is a compound of *ἐν τέλει ἔχειν*--"being in a state of perfection." [729](#) This term, however, rarely occurs in the "Metaphysics," whilst *ἐνέργεια* is everywhere employed, not only to express activity as opposed to passivity, but complete existence as opposed to undeveloped matter.

410

Footnote 725: [return](#) "That which Aristotle calls 'form' is not to be confounded with what we may perhaps call shape [or figure]; a hand severed from the arm, for instance, has still the outward shape of a hand, but, according to Aristotelian apprehension, it is only a hand now as to matter, and not as to form; an actual hand, a hand as to form, is only that which can do the proper work of a hand."--Schwegler's "History of Philosophy," p. 122.

Footnote 726: [return](#) "Metaphysics," bk. vii. ch. ii.

Footnote 727: [return](#) "Metaphysics," bk. viii. ch. vi.

Footnote 728: [return](#) "Entelechy indicates the perfected act, the completely actual."--Schw.

Footnote 729: [return](#) Grant's Aristotle's "Ethics," vol. i. p. 184.

"In Physics δύναμις answers to the necessary conditions for the existence of any thing before that thing exists. It thus corresponds to ὕλη, both to the πρώτη ὕλη--the first matter, or matter devoid of all qualities, which is capable of becoming any definite substance, as, for example, marble; and also to the ἐσχάτη ὕλη--or matter capable of receiving form, as marble the form of the statue." Marble then exists potentially in the simple elements before it is marble. The statue exists potentially in the marble before it is carved. All objects of thought exist, either purely in potentiality, or purely in actuality, or both in potentiality and in actuality. This division makes an entire chain of all existence. At the one end is matter, the πρώτη ὕλη which has a merely potential existence, which is necessary as a condition, but which having no form and no qualities, is totally incapable of being realized by the mind. At the other end of the chain is pure form, which is not at all matter, the absolute and the unconditioned, the eternal substance and energy without matter (οὐσία ἀίδιος καὶ ἐνέργεια ἄνευ δυνάμεως), who can not be thought as non-existing--the self-existent God. Between these two extremes is the whole row of creatures, which out of potentiality evermore spring into actual being. [730](#)

Footnote 730: [\(return\)](#) Id., ib., vol. i. p. 185.

The relation of actuality to potentiality is the subject of an extended and elaborate discussion in book viii., the general results of which may be summed up in the following propositions:

411 1. *The relation of Actuality to Potentiality is as the Perfect to the Imperfect.*--The progress from potentiality to actuality is motion or production (κίνησις or γένεσις). But this motion is transitional, and in itself imperfect--it tends towards an end, but does not include the end in itself. But actuality, if it implies motion, has an end in itself and for itself; it is a motion desirable for its own sake. [731](#) The relation of the potential to the actual Aristotle exhibits by the relation of the unfinished to the finished work, of the unemployed builder to the one at work upon his building, of the seed-corn to the tree, of the man who has the capacity to think, to the man actually engaged in thought. [732](#) Potentially the seed-corn is the tree, but the grown-up tree is the actuality; the potential philosopher is he who is not at this moment in a philosophic condition; indeed, every thing is potential which possesses a principle of development, or of change. Actuality or entelechy, on the other hand, indicates the *perfect act*, the end gained, the completed actual; that activity in which the act and the completeness of the act fall together--as, for example, to see, to think, where the acting and the completed act are one and the same.

2. *The Relation of Actuality to Potentiality is a causal Relation.*--A thing which is endowed with a simple capacity of being may nevertheless not actually exist, and a thing may have a capacity of being and really exist. Since this is the case, there must ensue between non-being and real being some such principle as *energy*, in order to account for the transition or change. [733](#) Energy has here some analogy to motion, though it must not be confounded with motion. Now you can not predicate either motion or energy of things which are not. The moment energy is added to them they are. This transition from potentiality to actuality must be through the medium of such principles as propension or *free will*, because propension or free will possess in themselves the power of originating motion in other things. [734](#)

Footnote 731: [\(return\)](#) "Metaphysics," bk. viii. ch. vi.

Footnote 732: [\(return\)](#) Ibid., bk. viii. ch. vi.

Footnote 733: [\(return\)](#) Ibid., bk. viii. ch. iii.

Footnote 734: [\(return\)](#) Ibid., bk. viii. ch. v.

412 3. *The Relation of Actuality and Potentiality is a Relation of Priority.*--Actuality, says Aristotle, is prior to potentiality in the order of reason, in the order of substance, and also (though not invariably) in the order of time. The first of all capacities is a capacity of energizing or assuming a state of activity; for example, a man who has the capacity of building is one who is skilled in building, and thus able to use his energy in the art of building. [735](#) The primary energizing power must precede that which receives the impression of it, Form being older than Matter. But if you take the case of any particular person or thing, we say that its capacity of being that particular person or thing precedes its being so actually. Yet, though this is the case in each particular thing, there is always a foregone energy presumed in some other thing (as a prior seed, plant, man) to which it owes its existence. One pregnant thought presents itself in the course of the discussion which has a direct bearing upon our subject. Δύναμις has been previously defined as "a principle of motion or change in another thing in so far forth as it is another thing" [736](#)--that is, it is fitted by nature to have motion imparted to it, and to communicate motion to something else. But this motion wants a resting-place. There can be no infinite regression of causes. There is some primary δύναμις presupposed in all others, which is the beginning of change. This is Φύσις, or nature. But the first and original cause of all motion and change still precedes and surpasses nature. The final cause of all potentiality is energy or *actuality*. The one proposed is prior to the means through which the end is accomplished. A process of actualization, a tendency towards completeness or perfection (τέλος) presupposes an absolute actuality which is at once its beginning and end. "One energy is invariably antecedent to another in time, up to that which is primarily and eternally the Moving Cause." [737](#)

Footnote 735: [\(return\)](#) "Metaphysics," bk. viii. ch. viii.

Footnote 736: [\(return\)](#) Ibid., bk. iv. ch. xii.

Footnote 737: [\(return\)](#) Ibid., bk. viii. ch. viii.

And now having laid down these fundamental principles of metaphysical science, as preparatory to Theology, Aristotle proceeds to establish the conception of the Absolute or Divine Spirit *as the eternal, immutable Substance, the immaterial Energy, the unchangeable Form of Forms, the first moving Cause.*

4713

I. *The Ontological Form of Proof.*--It is necessary to conceive an eternal and immutable substance--an actuality which is absolute and prior, both logically and chronologically, to all potentiality; for that which is potential is simply contingent, it may just as easily not be as be; that which exists only in capacity is temporal and corruptible, and may cease to be. Matter we know subsists merely in capacity and passivity, and without the operation of Energy, (ἐνέργεια), or the formative cause, would be to us as non-entity. The phenomena of the world exhibits to us the presence of Energy, and energy presupposes the existence of an eternal substance. Furthermore, matter and potentiality are convertible terms, therefore the primal Energy or Actuality must be *immaterial.* [738](#)

2. *The Cosmological Form of Proof.*--It is impossible that there should be *motion*, genesis, or a chain of causes, except on the assumption of a first Moving Cause, since that which exists only in capacity can not, of itself energize, and consequently without a principle of motion which is essentially active, we have only a principle of immobility. The principle "ex nihilo nihil" forbids us to assume that motion can arise out of immobility, being out of non-being. "How can matter be put in motion if nothing that subsists in energy exist, and is its cause?" All becoming, therefore, necessarily supposes that which has not become, that which is eternally self-active as the principle and cause of all motion. There is no refuge from the notion that all things are "born of night and nothingness" except in this belief. [739](#)

Footnote 738: [\(return\)](#) "Metaphysics," bk. xi. ch. vi.

Footnote 739: [\(return\)](#) Ibid., bk. xi. ch. vii., viii.

The existence of an eternal principle subsisting in energy is also demanded to explain the *order* of the world. "For how, let me ask, will there prevail *order* on the supposition that there is no subsistence of that which is eternal, and which involves a separable existence, and is permanent." [740](#) "All things in nature are constituted in the best possible manner." [741](#) All things strive after "the good." "The appearance of ends and means in nature is a proof of design." [742](#) Now an end or final cause presupposes intelligence,--implies a *mind* to see and desire it. That which is "fair," "beautiful," "good," an "object of desire," can only be perceived by Mind. The "final cause" must therefore subsist in that which is prior and immovable and eternal; and *Mind* is "that substance which subsists absolutely, and according to energy." [743](#) "The First Mover of all things, moves all things without being moved, being an eternal substance and energy; and he moves all things as the object of reason and of desire, or love." [744](#)

414

Footnote 740: [\(return\)](#) Ibid., bk. x. ch. ii.

Footnote 741: [\(return\)](#) "Ethics," bk. i. ch. ix.

Footnote 742: [\(return\)](#) "Nat. Ausc.," bk. ii. ch. viii.

Footnote 743: [\(return\)](#) : "Metaphysics," bk. xi. ch. vii.

Footnote 744: [\(return\)](#) Ibid.

3. *The Moral Form of Proof.*--So far as the relation of potentiality and actuality is identical with the relation of matter and form, the argument for the existence of God may be thus presented: The conception of an absolute matter without form, involves the supposition of an absolute form without matter. And since the conception of form resolves itself into *motion, conception, purpose* or *end*, so the Eternal One is the absolute principle of motion (the πρῶτον κινουόν), the absolute conception or pure intelligence (the pure τί ἦν εἶναι), and the absolute ground, reason, or end of all being. All the other predicates of the First Cause follow from the above principles with logical necessity.

(i.) *He is, of course, pure intellect*, because he is absolutely immaterial and free from nature. He is active intelligence, because his essence is pure actuality. He is self-contemplating and self-conscious intelligence, because the divine thought can not attain its actuality in any thing extrinsic; it would depend on something else than self--some potential existence for its actualization. Hence the famous definition of the absolute as "the thought of thought" (νόησις νοήσεως). [745](#) "And therefore the first and actual perception by mind of Mind itself, doth subsist in this way throughout all eternity." [746](#)

Footnote 745: [\(return\)](#) Schwegler's "History of Philosophy," p. 125.

Footnote 746: [\(return\)](#) "Metaphysics," bk. xi. ch. ix.

(ii.) *He is also essential life.* "The principle of life is inherent in the Deity, for the energy or active exercise of mind constitutes life, and God constitutes this energy; and essential energy belongs to

415

God as his best and everlasting life. Now our statement is this--that the Deity is a living being that is everlasting and most excellent in nature, so that with the Deity life and duration are uninterrupted and eternal; for this constitutes the essence of God." [747](#)

(iii.) *Unity belongs to him*, since multiplicity implies matter; and the highest idea or form of the world must be absolutely immaterial. [748](#) The Divine nature is "devoid of parts and indivisible, for magnitude can not in any way involve this Divine nature; for God imparts motion through infinite duration, and nothing finite--as magnitude is--can be possessed of an infinite capacity." [749](#)

(iv.) *He is immovable and ever abideth the same*; since otherwise he could not be the absolute mover, and the cause of all becoming, if he were subject to change. [750](#) God is impassive and unalterable (ἀπαθής καὶ ἀναλλοίωτος); for all such notions as are involved in passion or alteration are outside the sphere of the Divine existence. [751](#)

Footnote 747: [\(return\)](#) "Metaphysics," bk. xi. ch. vii.

Footnote 748: [\(return\)](#) Ibid.

Footnote 749: [\(return\)](#) Ibid.

Footnote 750: [\(return\)](#) Ibid., bk. xi. ch. viii.

Footnote 751: [\(return\)](#) Ibid., bk. xi. ch. vii.

(v.) *He is the ever-blessed God*--"The life of God is of a kind with those highest moods which, with us, last a brief space, it being impossible they should be permanent; whereas, with Him they are permanent, since His ever-present consciousness is pleasure itself. And it is because they are vivid states of consciousness, that waking, and perception, and thought, are the sweetest of all things. Now essential perception is the perception of that which is most excellent,... and the mind perceives itself by participating of its own object of perception; but it is a sort of coalescence of both that, in the Divine Mind, creates a regular identity between the two, so that with God both (the thinker and the thought, the subject and object) are the same. In possession of this prerogative, He subsists in the exercise of energy; and the contemplation of his own perfections is what, to God, must be most agreeable and excellent. This condition of existence, after so excellent a manner, is what is "so astonishing to us when we examine God's nature, and the more we do so the more wonderful that nature appears to us. The mood of the Divine existence is essential energy, and, as such, it is a life that is most excellent, blessed, and everlasting." [752](#)

Footnote 752: [\(return\)](#) "Metaphysics," bk. xi. ch. vii.

The theology of Aristotle may be summed up in the following sentences selected from book xi. of his "Metaphysics:"

"This motionless cause of motion is a necessary being; and, by virtue of such necessity, is the all-perfect being. This all-pervading principle penetrates heaven and all nature. It eternally possesses perfect happiness; and its happiness is in action. This primal mover is immaterial; for its essence is in energy. It is pure thought--thought thinking itself--the thought of thought. The activity of pure intelligence--such is the perfect, eternal life of God. This primal cause of change, this absolute perfection, moves the world by the universal desire for the absolute good, by the attraction exercised upon it by the Eternal Mind--the serene energy of Divine Intelligence."

It can not be denied that, so far as it goes, this conception of the Deity is admirable, worthy, and just. Viewed from a Christian stand-point, we at once concede that it is essentially defective. There is no clear and distinct recognition of God as Creator and Governor of the universe; he is chiefly regarded as the Life of the universe--the Intellect, the Energy--that which gives excellence, and perfection, and gladness to the whole system of things. The Theology of Aristotle is, in fact, metaphysical rather than practical. He does not contemplate the Deity as a moral Governor. Whilst Plato speaks of "being made like God through becoming just and holy," Aristotle asserts that "all moral virtues are totally unworthy of being ascribed to God." [753](#) He is not the God of providence. He dwells alone, supremely indifferent to human cares, and interests, and sorrows. He takes no cognizance of individual men, and holds no intercourse with man. The God of Aristotle is not a being that meets and satisfies the wants of the human heart, however well it may meet the demands of the reason.

Footnote 753: [\(return\)](#) "Ethics," bk. x. ch. viii.

Morality has no basis in the Divine nature, no eternal type in the perfections and government of God, and no supports and aids from above. The theology of Aristotle foreshadows the character of the

ARISTOTELIAN ETHICS.

We do not find in Aristotle any distinct recognition of an eternal and immutable morality, an absolute right, which has its foundation in the nature of God. Plato had taught that there was "an absolute Good, above and beyond all existence in dignity and power;" which is, in fact, "the cause of all existence and all knowledge," and which is God; that all other things are good in proportion as they "partake of this absolute Good;" and that all men are so far good as they "resemble God."

But with this position Aristotle joins issue. After stating the doctrine of Plato in the following words--"Some have thought that, besides all these manifold goods upon earth, there is some *absolute good*, which is the cause to all these of their being good"--he proceeds to criticise that idea, and concludes his argument by saying--"we must dismiss the idea at present, for if there is any one good, universal and generic, or transcendental and absolute, it obviously can never be realized nor possessed by man; whereas something of this latter kind is what we are inquiring after." He follows up these remarks by saying that "Perhaps the knowledge of the idea may be regarded by some as useful, as a pattern (παράδειγμα) by which to judge of relative good." Against this he argues that "There is no trace of the arts making use of any such conception; the cobbler, the carpenter, the physician, and the general, all pursue their vocations without respect to the *absolute good*, nor is it easy to see how they would be benefited by apprehending it."⁷⁵⁴ The good after which Aristotle would inquire is, therefore, a *relative good*, since the knowledge of the absolute good can not possibly be realized.

Footnote 754: [\(return\)](#) "Ethics," bk. i. ch. vi.

418

Instead, therefore, of seeking to attain to "a transcendental and absolute good"--a fundamental idea of right, which may be useful as a paradigm by which we may judge of relative good, he addresses himself solely to the question, "what is good for man"--what is the good attainable in action? And having identified the Chief Good with the final and perfect end of all action, the great question of the *Ethics* is, "*What is the end of human action?*" (τί ἐστί τὸ τῶν πρακτῶν τέλος).⁷⁵⁵

Footnote 755: [\(return\)](#) "Ethics," bk. i. ch. xiii.

Now an end or final cause implies an intelligence--implies a mind to perceive and desire it. This is distinctly recognized by Aristotle. The question, therefore, naturally arises--is that end fixed for man by a higher intelligence, and does it exist for man both as an idea and as an ideal? Can man, first, intellectually apprehend the idea, and then consciously strive after its realization? Is it the duty of man to aim at fulfilling the purposes of his Creator? To this it may be answered that Aristotle is not at all explicit as to God's moral government of the world. "Moral government," in the now common acceptation of the term, has no place in the system of Aristotle, and the idea of "duty" is scarcely recognized. He considers "the good" chiefly in relation to the constitution and natural condition of man. "*It is*" says he, "*the end towards which nature tends.*" As physical things strive unconsciously after the end of their existence, so man strives after the good attainable in life. Socrates had identified virtue and knowledge, he had taught that "virtue is a Science." Aristotle contended that virtue is an art, like music and architecture, which must be attained by exercise. It is not purely intellectual, it is the bloom of the physical, which has become ethical. As the flower of the field, obeying the laws of its organization, springs up, blooms, and attains its own peculiar perfection, so there is an instinctive desire (ὄρεξις) in the soul which at first unconsciously yearns after the good, and subsequently the good is sought with full moral intent and insight. Aristotle assumes that the desires or instincts of man are so framed as to imply the existence of this end (τέλος).⁷⁵⁶ And he asserts that man can only realize it in the sphere of his own proper functions, and in accordance with the laws of his own proper nature and its harmonious development.⁷⁵⁷ It is not, then, through instruction, or through the perfection of knowledge, that man is to attain the good, but through exercise and habit (ἔθος). By practice of moral acts we become virtuous, just as by practice of building and of music, we become architects and musicians; for the habit, which is the ground of moral character, is only a fruit of oft-repeated moral acts. Hence it is by these three things--nature, habit, reason--that men become good.

419

Footnote 756: [\(return\)](#) Ibid, bk. i. ch. ii.

Footnote 757: [\(return\)](#) "Ethics," bk. i. ch. vii.

Aristotle's question, therefore, is, "*What is the chief good for man as man?*" not what is his chief good as a spiritual and an immortal being? or what is his chief good as a being related to and dependent upon God? And the conclusion at which he arrives is, that it is *the absolute satisfaction of our whole nature*--that which men are agreed in calling *happiness*. This happiness, however, is not mere sensual pleasure. The brute shares this in common with man, therefore it can not constitute the happiness of man. Human happiness must express the completeness of rational existence. And inasmuch as intelligence is essential activity, as the soul is the *entelechy* of the body, therefore the happiness of man can not consist in a mere passive condition. It must, therefore, consist in *perfect activity* in well-doing, and especially in contemplative thought,⁷⁵⁸ or as Aristotle defines it--"*It is a perfect practical activity in a perfect life.*"⁷⁵⁹ His conception of the chief good has thus two sides, one internal, that which exists in and for the consciousness--a "complete and perfect life," the other external and practical. The latter, however, is a means to the former. That complete and perfect life is the complete satisfaction and perfection of our rational nature. It is a state of peace which is the crown of exertion. It is the realization of the divine in man, and constitutes the absolute and all-sufficient happiness.⁷⁶⁰ A good action is thus an End-in-itself (τέλειον τέλος) inasmuch as it secures the *perfection* of our nature; it is that for the sake of which our moral faculties before existed, hence bringing an inward pleasure and satisfaction with it; something in which the mind can rest and fully acquiesce; something which can be pronounced beautiful, fitting, honorable, and perfect.

420

Footnote 758: [\(return\)](#) "If it be true to say that happiness consists in doing well, a life of action

must be best both for the state and the individual. But we need not, as some do, suppose that a life of action implies relation to others, or that those only are active thoughts which are concerned with the results of action; but far rather we must consider those speculations and thoughts to be so which have their *end in themselves*, and which are for their own sake."-- "Politics," bk. vii. ch. iii.

Footnote 759: [\(return\)](#) "Ethics," bk. i. ch. x.

Footnote 760: [\(return\)](#) "Ethics," bk. x. ch. viii.

From what has been already stated, it will be seen that the Aristotelian conception of *Virtue* is not conformity to an absolute and immutable standard of right. It is defined by him as *the observation of the right mean (μεσότης) in action*--that is, the right mean relatively to ourselves. "Virtue is a habit deliberately choosing, existing as a mean (μέσον) which refers to us, and is defined by reason, and as a prudent man would define it; and it is a mean between two evils, the one consisting in excess, the other in defect; and further, it is a mean, in that one of these falls short of, and the other exceeds, what is right both in passions and actions; and that virtue both finds and chooses the mean." [761](#) The perfection of an action thus consists in its containing the right degree--the true mean between too much, and too little. The law of the μεσότης is illustrated by the following examples: Man has a fixed relation to pleasure and pain. In relation to pain, the true mean is found in neither fearing it nor courting it, and this is *fortitude*. In relation to pleasure, the true mean stands between greediness and indifference; this is *temperance*. The true mean between prodigality and narrowness is *liberality*; between simplicity and cunning is *prudence*; between suffering wrong and doing wrong is *justice*. Extending this law to certain qualifications of temper, speech, and manners, you have the portrait of a graceful Grecian gentleman. Virtue is thus *proportion, grace, harmony, beauty in action*.

Footnote 761: [\(return\)](#) Ibid, bk. ii. ch. vi.

421

It will at once be seen that this classification has no stable foundation. It furnishes no ultimate standard of right. The *mean* is a wavering line. It differs under different circumstances and relations, and in different times and places. That mean which is sufficient for one individual is insufficient for another. The virtue of a man, of a slave, and of a child, is respectively different. There are as many virtues as there are circumstances in life; and as men are ever entering into new relations, in which it is difficult to determine the correct method of action, the separate virtues can not be limited to any definite number.

Imperfect as the ethical system of Aristotle may appear to us who live in Christian times, it must be admitted that his writings abound with just and pure sentiments. His science of Ethics is a *discipline of human character in order to human happiness*. And whilst it must be admitted that it is directed solely to the improvement of man in the present life, he aims to build that improvement on pure and noble principles, and seeks to elevate man to the highest perfection of which he could conceive. "And no greater praise can be given to a work of heathen morality than to say, as may be said of the ethical writings of Aristotle, that they contain nothing which a Christian may dispense with, no precept of life which is not an element of Christian character; and that they only fail in elevating the heart and the mind to objects which it needed Divine Wisdom to reveal." 422

CHAPTER XIII.

THE PHILOSOPHERS OF ATHENS (*continued*)

POST-SOCRATIC SCHOOL.

EPICURUS AND ZENO.

Philosophy, after the time of Aristotle, takes a new direction. In the pre-Socratic schools, we have seen it was mainly a philosophy of nature; in the Socratic school it was characterized as a philosophy of mind; and now in the post-Socratic schools it becomes a philosophy of life--a moral philosophy. Instead of aiming at the knowledge of real Being--of the permanent, unchangeable, eternal principles which underlie all phenomena, it was now content to aim, chiefly, at individual happiness. The primary question now discussed, as of the most vital importance, is, What is the ultimate standard by which, amid all the diversities of human conduct and opinion, we may determine what is right and good in individual and social life?

This remarkable change in the course of philosophic inquiry was mainly due--

1st. *To the altered circumstances of the times*. An age of civil disturbance and political intrigue succeeded the Alexandrian period. The different states of Greece lost their independence, and became gradually subject to a foreign yoke. Handed over from one domination to another, in the struggles of Alexander's lieutenants, they endeavored to reconquer their independence by forming themselves into confederations, but were powerless to unite in the defense of a common

cause. The Achæan and Etolian leagues were weakened by internal discords; and it was in vain that Sparta tried to recover her ancient liberties.

423

Divided amongst themselves, the smaller states invoked the aid of dangerous allies--at one time appealing to Macedon, at another to Egypt. In this way they prepared for the total ruin of Greek liberty, which was destined to be extinguished by Rome. [763](#)

Footnote 763: ([return](#)) Pressensé, "Religions before Christ," pp. 136-140.

During this period of hopeless turmoil and social disorder, all lofty pursuits and all great principles were lost sight of and abandoned. The philosophic movement followed the downward course of society, and men became chiefly concerned for their personal interest and safety. The wars of the Succession almost obliterated the idea of society, and philosophy was mainly directed to the securing of personal happiness; it became, in fact, "the art of making one's self happy." The sad reverses to which the Grecian mind had been subjected produced a feeling of exhaustion and indifference, which soon reflected itself in the philosophy of the age.

2d. In connection with the altered circumstances of the age, we must also take account of *the apparent failure of the Socratic method to solve the problem of Being*.

The teaching of Aristotle had fostered the suspicion that the dialectic method was a failure, and thus prepared the way for a return to sensualism. He had taught that individuals alone have a real existence, and that the "essence" of things is not to be sought in the elements of unity and generality, or in the *idea*, as Plato taught, but in the elements of diversity and speciality. And furthermore, in opposition to Plato, he had taught his disciples to attach themselves to sensation, as the source of all knowledge. As the direct consequence of this teaching, we find his immediate successors, Dicaearchus and Straton, deliberately setting aside "the god of philosophy," affirming "that a *divinity* was unnecessary to the explanation of the existence and order of the universe." Stimulated by the social degeneracy of the times, the characteristic skepticism of the Greek intellect bursts forth anew. As the skepticism of the Sophists marked the close of the first period of philosophy, so the skepticism of Pyrrhonism marked the close of the second. The new skepticism arrayed Aristotle against Plato as the earlier skeptics arrayed atomism against the doctrine of the Eleatics. They naturally said: "We have been seeking a long time; what have we gained? Have we obtained any thing certain and determinate? Plato says we have. But Aristotle and Plato do not agree. May not our opinion be as good as theirs? What a diversity of opinions have been presented during the past three hundred years! One may be as good as another, or they may be all alike untrue!" Timon and Pyrrhon declared that, of each thing, it might be said to be, and not to be; and that, consequently, we should cease tormenting ourselves, and seek to obtain an *absolute calm*, which they dignified with the name of *ataraxie*. Beholding the overthrow and disgrace of their country, surrounded by examples of pusillanimity and corruption, and infected with the spirit of the times themselves, they wrote this maxim: "Nothing is infamous; nothing is in itself just; laws and customs alone constitute what is justice and what is iniquity." Having reached this extreme, nothing can be too absurd, and they cap the climax by saying, "We assert nothing; no, not even that we assert nothing!"

424

And yet there must some function, undoubtedly, remain for the "wise man" (σοφός).

Reason was given for some purpose. Philosophy must have some end. And inasmuch as it is not to determine speculative questions, it must be to determine practical questions. May it not teach men to *act* rather than to *think*? The philosopher, the schools, the disciples, survive the darkening flood of skepticism.

Three centuries before Christ, the Peripatetic and Platonic schools are succeeded by two other schools, which inherit their importance, and which, in other forms, and by an under-current, perpetuate the disputes of the Peripatetics and Platonists, namely, the Epicureans and Stoics. With Aristotle and Plato, philosophy embraced in its circle nature, humanity, and God; but now, in the systems of Epicurus and Zeno, moral philosophy is placed in the foreground, and assumes the chief, the overshadowing pre-eminence. The conduct of life--morality--is now the grand subject of inquiry, and the great theme of discourse.

425

In dealing with *morals* two opposite methods of inquiry were possible:

1. *To judge of the quality of actions by their RESULTS.*
2. *To search for the quality of actions in the actions them selves.*

Utility, which in its last analysis is *Pleasure*, is the test of right, in the first method; an assumed or discovered *Law of Nature*, in the second. If the world were perfect, and the balance of the human faculties undisturbed, it is evident that both systems would give identical results. As it is, there is a tendency to error on each side, which is fully developed in the rival schools of the Epicureans and Stoics, who practically divided the suffrages of the mass of educated men until the coming of Christ.

EPICUREANS.

Epicurus was born B.C. 342, and died B.C. 270. He purchased a Garden within the city, and commenced, at thirty-six years of age, to teach philosophy. The Platonists had their academic

Grove: the Aristotelians walked in the Lyceum: the Stoics occupied the Porch: the Epicureans had their Garden, where they lived a tranquil life, and seem to have had a community of goods.

There is not one of all the various founders of the ancient philosophical schools whose memory was cherished with so much veneration by his disciples as that of Epicurus. For several centuries after his death, his portrait was treated by them with all the honors of a sacred relic: it was carried about with them in their journeys, it was hung up in their schools, it was preserved with reverence in their private chambers; his birthday was celebrated with sacrifices and other religious observances, and a special festival in his honor was held every month.

426

So much honor having been paid to the memory of Epicurus, we naturally expect that his works would have been preserved with religious care. He was one of the most prolific of the ancient Greek writers. Diogenes calls him "a most voluminous writer," and estimates the number of works composed by him at no less than three hundred, the principal of which he enumerates. [764](#) But out of all this prodigious collection, not a single book has reached us in a complete, or at least an independent form. Three letters, which contain some outlines of his philosophy, are preserved by Diogenes, who has also embodied his "Fundamental Maxims"--forty-four propositions, containing a summary of his ethical system. These, with part of his work "On Nature," found during the last century among the Greek MSS. recovered at Herculaneum, constitute all that has survived the general wreck.

Footnote 764: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xvi., xvii.

We are thus left to depend mainly on his disciples and successors for any general account of his system. And of the earliest and most immediate of these the writings have perished. [765](#) Our sole original authority is Diogenes Laertius, who was unquestionably an Epicurean. The sketch of Epicurus which is given in his "Lives" is evidently a "labor of love." Among all the systems of ancient philosophy described by him, there is none of whose general character he has given so skillful and so elaborate an analysis. And even as regards the particulars of the system, nothing could be more complete than Laertius's account of his physical speculations. Additional light is also furnished by the philosophic poem of Lucretius "On the Nature of Things," which was written to advocate the physical theory of Epicurus. These are the chief sources of our information.

427

Footnote 765: [\(return\)](#) Some fragments of the writings of Metrodorus, Phædrus, Polystratus, and Philodemus, have been found among the Herculanean Papyri, and published in Europe, which are said to throw some additional light on the doctrines of Epicurus. See article on "Herculanean Papyri," in Edinburgh Review, October, 1862.

It is said of Epicurus that he loved to hearken to the stories of the indifference and apathy of Pyrrhon, and that, in these qualities, he aspired to imitate him. But Epicurus was not, like Pyrrhon, a skeptic; on the contrary, he was the most imperious dogmatist. No man ever showed so little respect for the opinions of his predecessors, or so much confidence in his own. He was fond of boasting that he had made his own philosophy--*he* was a "self-taught" man! Now "Epicurus might be perfectly honest in saying he had read very little, and had worked out the conclusions in his own mind, but he was a copyist, nevertheless; few men more entirely so." [766](#) His psychology was certainly borrowed from the Ionian school. From thence he had derived his fundamental maxim, that "sensation is the source of all knowledge, and the standard of all truth." His physics were copied from Democritus. With both, "atoms are the first principle of all things." And in Ethics he had learned from Aristotle, that if an absolute good is not the end of a practical life, *happiness* must be its end. [767](#) All that is fundamental in the system of Epicurus was borrowed from his predecessors, and there is little that can be called new in his teaching.

Footnote 766: [\(return\)](#) Maurice's "Ancient Philosophy," p. 236.

Footnote 767: [\(return\)](#) "Ethics," bk. i. ch. vi.

The grand object of philosophy, according to Epicurus, *is the attainment of a happy life*. "Philosophy," says he, "is the power by which reason conducts men to happiness." Truth is a merely relative thing, a variable quantity; and therefore the pursuit of truth for its own sake is superfluous and useless. There is no such thing as absolute, unchangeable right: no action is intrinsically right or wrong. "We choose the virtues, not on their own account, but for the sake of pleasure, just as we seek the skill of the physician for the sake of health." [768](#) That which is nominally right in morals, that which is relatively good in human conduct, is, therefore, to be determined by the effects upon ourselves; that which is agreeable--pleasurable, is right; that which is disagreeable--painful, is wrong. "The virtues are connate with living pleasantly." [769](#) Pleasure (ἡδονή), then, is the great end to be sought in human action. "Pleasure is the chief good, the beginning and end of living happily." [770](#)

428

Footnote 768: [\(return\)](#) "Fundamental Maxims," preserved in Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxx.

Footnote 769: [\(return\)](#) "Epicurus to Menæceus," in Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxvii.

Footnote 770: [\(return\)](#) Id., ib.

The proof which Epicurus offers in support of his doctrine, "that pleasure is the chief good," is

truly characteristic. "All animals from the moment of their birth are delighted with pleasure and offended with pain, by their natural instincts, and without the employment of reason. Therefore we, also, of our own inclination, flee from pain." ⁷⁷¹ "All men like pleasure and dislike pain; they naturally shun the latter and pursue the former." "If happiness is present, we have every thing, and when it is absent, we do every thing with a view to possess it." ⁷⁷² Virtue thus consists in man's doing deliberately what the animals do instinctively--that is, choose pleasure and avoid pain.

Footnote 771: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxix.

Footnote 772: [\(return\)](#) Id., ib., bk. x. ch. xxvii.

"Every kind of pleasure" is, in the estimation of Epicurus, "alike good," and alike proper. "If those things which make the pleasures of debauched men put an end to the fears of the mind, and to those which arise about the heavenly bodies [supernatural powers], and death and pain,... we should have no pretense for blaming those who wholly devote themselves to pleasure, and who never feel any pain, or grief (which is the chief evil) from any quarter." ⁷⁷³ Whilst, however, all pleasures of the body, as well as the mind, are equal in dignity, and alike good, they differ in intensity, in duration, and, especially, in their consequences. He therefore divides pleasure into two classes; and in this, as Cousin remarks, is found the only element of originality in his philosophy. These two kinds of pleasure are:

429

1. *The pleasure of movement, excitement, energy* (ἡδονὴ ἐν κινήσει). ⁷⁷⁴ This is the most lively pleasure; it supposes the greatest development of physical and mental power. "Joy and cheerfulness are beheld in motion and energy." But it is not the most enduring pleasure, and it is not the most perfect. It is accompanied by uneasiness; it "brings with it many perturbations," and it yields some bitter fruits.

Footnote 773: [\(return\)](#) "Fundamental Maxims," No. 9, in Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxxi.

Footnote 774: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxviii.

2. *The second kind of pleasure is the pleasure of repose, tranquillity, impassibility* (ἡδονὴ καταστηματακῆ). This is a state, a "condition," rather than a motion. It is "the freedom of the body from pain, and the soul from confusion." ⁷⁷⁵ This is perfect and unmixed happiness--the happiness of God; and he who attains it "will be like a god among men." "The storm of the soul is at an end, and body and soul are perfected."

Now, whilst "no pleasure is intrinsically bad," ⁷⁷⁶ prudence (φρόνησις), or practical wisdom, would teach us to choose the highest and most perfect happiness. Morality is therefore the application of reason to the conduct of life, and virtue is wisdom. The office of reason is to "determine our choices"--to take account of the duration of pleasures, to estimate their consequences, and to regard the happiness of a whole lifetime, and not the enjoyment of a single hour. Without wisdom men will choose the momentary excitements of passion, and follow after agitating pleasures, which are succeeded by pain; they will consequently lose "tranquillity of mind." "It is not possible," says Epicurus, "to live pleasantly without living prudently and honorably and justly." ⁷⁷⁷ The difference, then, between the philosopher and the ordinary man is this--that while both seek pleasure, the former knows how to forego certain indulgences which cause pain and vexation hereafter, whereas the ordinary man seeks only immediate enjoyment. Epicurus does not dispense with virtue, but he simply employs it as a means to an end, namely, the securing of happiness. ⁷⁷⁸

Footnote 775: [\(return\)](#) Id., ib.

Footnote 776: [\(return\)](#) "Fundamental Maxims," No. 7.

Footnote 777: [\(return\)](#) Ibid., No. 5.

Footnote 778: [\(return\)](#) Pressensé, "Religions before Christ," p. 141.

430

Social morality is, like private morality, founded upon *utility*. As nothing is intrinsically right or wrong in private life, so nothing is intrinsically just or unjust in social life. "Justice has no independent existence: it results from mutual contracts, and establishes itself wherever there is a mutual engagement to guard against doing or sustaining any injury. Injustice is not intrinsically bad; it has this character only because there is joined with it the fear of not escaping those who are appointed to punish actions marked with this character." ⁷⁷⁹ Society is thus a contract--an agreement to promote each other's happiness. And inasmuch as the happiness of the individual depends in a great degree upon the general happiness, the essence of his ethical system, in its political aspects, is contained in inculcating "the greatest happiness of the greatest number."

If you ask Epicurus what a man shall do when it is clearly his immediate interest to violate the social contract, he would answer, that if your general interest is secured by always observing it, you must make momentary sacrifices for the sake of future good. But "when, in consequence of new circumstances, a thing which has been pronounced just does not any longer appear to agree with utility, the thing which was just... ceases to be just the moment it ceases to be useful." ⁷⁸⁰

So that self-interest is still the basis of all virtue. And if, by the performance of duty, you are exposed to great suffering, and especially to death, you are perfectly justified in the violation of any and all contracts. Such is the social morality of Epicurus.

With coarse and energetic minds the doctrine of Epicurus would inevitably lead to the grossest sensuality and crime; with men whose temperament was more apathetic, or whose tastes were more pure, it would develop a refined selfishness-- a perfect egoism, which Epicurus has adorned with the name "tranquillity of mind--impassibility," (ἀταραξία). [781](#)

Footnote 779: [\(return\)](#) "Fundamental Maxims," Nos. 35, 36.

Footnote 780: [\(return\)](#) *Ibid.*, No. 41.

Footnote 781: [\(return\)](#) It is scarcely necessary to discuss the question whether, by making pleasure the standard of right, Epicurus intended to encourage what is usually called sensuality. He earnestly protested against any such unfavorable interpretation of his doctrine:-- "When we say that pleasure is a chief good, we are not speaking of the pleasures of the debauched man, or those which lie in sensual enjoyment, as some think who are ignorant, and who do not entertain our opinions, or else interpret them perversely; but we mean the freedom of the body from pain, and the soul from confusion" ("Epicurus to Menæceus," in Diogenes Laertius, "Lives," bk. x. ch. xxvii.). The most obvious tendency of this doctrine is to extreme selfishness, rather than extreme sensuality--a selfishness which prefers one's own comfort and ease to every other consideration.

As to the personal character of Epicurus, opinions have been divided both in ancient and modern times. By some the garden has been called a "sty." Epicurus has been branded as a libertine, and the name "Epicurean" has, in almost all languages, become the synonym of sensualism. Diogenes Laertius repels all the imputations which are cast upon the moral character of his favorite author, and ascribes them to the malignity and falsehood of the Stoics. "The most modern criticism seems rather inclined to revert to the vulgar opinion respecting him, rejecting, certainly with good reason, the fanatical panegyrics of some French and English writers of the last century. Upon the whole, we are inclined to believe that Epicurus was an apathetic, decorous, formal man, who was able, without much difficulty, to cultivate a measured and even habit of mind, who may have occasionally indulged in sensual gratifications to prove that he thought them lawful, but who generally preferred, as a matter of taste, the exercises of the intellect to the more violent forms of self-indulgence. And this life, it seems to us, would be most consistent with his opinions. To avoid commotion, to make the stream of life flow on as easily as possible, was clearly the aim of his philosophy."-- Maurice's "Ancient Philosophy," p. 236.

431

To secure this highest kind of happiness--this pure impassivity, it was necessary to get rid of all superstitious fears of death, of supernatural beings, and of a future retribution. [782](#) The chief causes of man's misery are his illusions, his superstitions, and his prejudices. "That which principally contributes to trouble the spirit of men, is the persuasion which they cherish that the stars are beings imperishable and happy (*i.e.*, that they are gods), and that then our thoughts and actions are contrary to the will of those superior beings; they also, being deluded by these fables, apprehend an eternity of evils, they fear the insensibility of death, as though that could affect them...." "The real freedom from this kind of trouble consists in being emancipated from all these things." [783](#) And this emancipation is to be secured by the study of philosophy-- that is, of that philosophy which explains every thing on natural or physical principles, and excludes all supernatural powers.

432

Footnote 782: [\(return\)](#) Lucretius, "On the Nature of Things," bk. i. 1. 100-118.

Footnote 783: [\(return\)](#) Epicurus to Herodotus, in Diogenes Laertius, "Lives of the Philosophers," p. 453 (Bohn's edition).

That ignorance which occasions man's misery is two-fold, (i.) *Ignorance of the external world, which leads to superstition.* All unexplained phenomena are ascribed to unseen, supernatural powers; often to malignant powers, which take pleasure in tormenting man; sometimes to a Supreme and Righteous Power, which rewards and punishes men for their good or evil conduct. Hence a knowledge of Physics, particularly the physics which Democritus taught, was needful to deliver men from false hopes and false fears. [784](#) (ii.) *Ignorance of the nature of man, of his faculties, powers, and the sources and limits of his knowledge,* from whence arise illusions, prejudices, and errors. Hence the need of Psychology to ascertain the real grounds of human knowledge, to explain the origin of man's illusions, to exhibit the groundlessness of his fears, and lead him to a just conception of the nature and end of his existence.

Footnote 784: [\(return\)](#) "The study of physics contributes more than any thing else to the tranquillity and happiness of life."--Diogenes Laertius, "Lives," bk. x. ch. xxiv. "For thus it is that *fear* restrains all men, because they observe many things effected on the earth and in heaven, of which effects they can by no means see the causes, and therefore think that they are wrought by a *divine* power. For which reasons, when we have clearly seen that *nothing can be produced from nothing*, we shall have a more accurate perception of that of which we are in search, and shall understand whence each individual thing is generated, and how all things are done without the agency of the gods."--Lucretius, "On the Nature of Things," bk. i. 1. 145-150.

Physics and Psychology are thus the only studies which Epicurus would tolerate as "conducive to the happiness of man." The pursuit of truth for its own sake was useless. Dialectics, which distinguish the true from the false, the good from the bad, on *à priori* grounds, must be banished

as an unnecessary toil, which yields no enjoyment. Theology must be cancelled entirely, because it fosters superstitious fears. The idea of God's taking knowledge of, disapproving, condemning, punishing the evil conduct of men, is an unpleasant thought. Physics and Psychology are the most useful, because the most "agreeable," the most "comfortable" sciences.

433

EPICUREAN PHYSICS.

In his physical theories Epicurus followed Leucippus and Democritus. He expounds these theories in his letters to Herodotus and Pythocles, which are preserved in Diogenes Laertius. [785](#) We shall be guided mainly by his own statements, and when his meaning is obscure, or his exposition is incomplete, we shall avail ourselves of the more elaborate statements of Lucretius, [786](#) who is uniformly faithful to the doctrine of Epicurus, and universally regarded as its best expounder.

The fundamental principle of his philosophy is the ancient maxim--"*de nihilo nihil, in nihilum nil posse reverti*;" but instead of employing this maxim in the sense in which it is used by Parmenides, Anaxagoras, Empedocles, and others, to prove there must be something self-existent and eternal, or in other words, "that nothing which once was not can ever of itself come into being," he uses it to disprove a divine creation, and even presents the maxim in an altered form--viz., "nothing is ever *divinely* generated from nothing;" [787](#) and he thence concludes that the world was by no means made for us by *divine* power. [788](#) Nature is eternal. "The universal whole always was such as it now is, and always will be such." "The universe also is infinite, for that which is finite has a limit, but the universe has no limit." [789](#)

Footnote 785: [\(return\)](#) "Lives of the Philosophers," bk. x.

Footnote 786: [\(return\)](#) "De Natura Rerum."

Footnote 787: [\(return\)](#) Lucretius, "On the Nature of Things," bk. i.

Footnote 788: [\(return\)](#) Ibid.

Footnote 789: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxiv.

The two great principles of nature are a *vacuum*, and a *plenum*. The plenum is *body*, or tangible nature; the vacuum is *space*, or intangible nature. "We know by the evidences of the senses (which are our only rule of reasoning) that *bodies* have a real existence, and we infer from the evidence of the senses that the vacuum has a real existence; for if space have no real existence, there would be nothing in which bodies can move, as we see they really do move. Let us add to this reflection that one can not conceive, either in virtue of perception, or of any analogy founded on perception, any general quality peculiar to all beings, which is not either an attribute, or an accident, of the body or of the vacuum." [790](#)

434

Of bodies some are "combinations"--concrete bodies--and some are primordial "elements," out of which combinations are formed. These primordial elements, out of which the universe is generated, are "*atoms*" (ἄτομοι). These atoms are "the first principles" and "seeds" of all things. [791](#) They are "*infinite* in number," and, as their name implies, they are "*infrangible*" "*unchangeable*" and "*indestructible*." [792](#) Matter is, therefore, not infinitely divisible; there must be a point at which division ends. [793](#)

The only qualities of atoms are *form*, *magnitude*, and *density*. All the other sensible qualities of matter--the secondary qualities-- as color, odor, sweetness, bitterness, etc.--are necessarily inherent in form. All secondary qualities are changeable, but the primary atoms are unchangeable; "for in the dissolution of combined bodies there must be something *solid* and *indestructible*, of such a kind that it will not change, either into what does not exist, or out of what does not exist, but the change results from a simple displacement of parts, which is the most usual case, or from an addition or subtraction of particles." [794](#)

Footnote 790: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxiv.

Footnote 791: [\(return\)](#) Id., ib., bk. x. ch. xxv.

Footnote 792: [\(return\)](#) Id., ib., bk. x. ch. xxiv.

Footnote 793: [\(return\)](#) Id., ib.; Lucretius, "On the Nature of Things," bk. i. l. 616-620.

Footnote 794: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxiv.

The atoms are not all of one *form*, but of different forms suited to the production of different substances by combination; some are square, some triangular, some smooth and spherical, some are hooked with points. They are also diversified in *magnitude* and *density*. The number of original forms is "incalculably varied," but not infinite. "Every variety of forms contains an infinitude of atoms, but there is not, for that reason, an infinitude of forms; it is only the number of them which is beyond computation." [795](#) To assert that atoms are of every kind of form, magnitude, and density, would be "to contradict the phenomena; "for experience teaches us that objects have a finite magnitude, and form necessarily supposes limitation.

435

Footnote 795: [\(return\)](#) Id., ib.

A variety of these primordial forms enter into the composition of all sensible objects, because sensible objects possess different qualities, and these diversified qualities can only result from the combination of different original forms. "The earth has, in itself, primary atoms from which springs, rolling forth cool *water*; incessantly recruit the immense sea; it has also atoms from which *fire* arises.... Moreover, the earth contains atoms from which it can raise up rich *corn* and cheerful *groves* for the tribes of men...." So that "no object in nature is constituted of one kind of elements, and whatever possesses in itself must numerous powers and energies, thus demonstrates that it contains more numerous kinds of primary particles," [796](#) or primordial "seeds of things."

"The atoms are in a continual state of *motion*" and "have moved with *equal rapidity* from all eternity, since it is evident the vacuum can offer no resistance to the heaviest, any more than the lightest." The primary and original movement of all atoms is *in straight lines, by virtue of their own weight*. The vacuum separates all atoms one from another, at greater or less distances, and they preserve their own peculiar motion in the densest substances. [797](#)

Footnote 796: [\(return\)](#) Lucretius, "On the Nature of Things," bk. i. l. 582-600.

Footnote 797: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxiv.; Lucretius, "On the Nature of Things," bk. i. l. 80-92.

436 And now the grand crucial question arises--*How do atoms combine so as to form concrete bodies?* If they move in straight lines, and with equal rapidity from all eternity, then they can never unite so as to form concrete substances. They can only coalesce by deviating from a straight line. [798](#) How are they made to deviate from a straight line? This deviation must be introduced *arbitrarily*, or by some *external cause*. And inasmuch as Epicurus admits of no causes "but space and matter," and rejects all divine or supernatural interposition, the *new* movement must be purely arbitrary. They deviate *spontaneously*, and of their own accord. "The system of nature immediately appears *as a free agent*, released from tyrant masters, to do every thing of itself spontaneously, without the help of the gods." [799](#) The manner in which Lucretius proves this doctrine is a good example of the *petitio principii*. He assumes, in opposition to the whole spirit and tendency of the Epicurean philosophy, that man has "a free will," and then argues that if man who is nothing but an aggregation of atoms, can "turn aside and alter his own movements," the primary elements, of which his soul is composed, must have some original spontaneity. "If all motion is connected and dependent, and a new movement perpetually arises from a former one in a certain order, and if the primary elements do not produce any commencement of motion by deviating from the straight line to break the laws of fate, so that cause may not follow cause in infinite succession, *whence comes this freedom of will* to all animals in the world? whence, I say, is this liberty of action wrested from the fates, by means of which we go wheresoever inclination leads each of us? whence is it that we ourselves turn aside, and alter our motions, not at any fixed time, nor in any fixed part of space, but just as our own minds prompt?... Wherefore we must necessarily confess that the same is the case with the seeds of matter, and there is some other cause besides strokes and weight [resistance and density] from which this power [of free movement] is innate in them, since we see that *nothing is produced from nothing*." [800](#) Besides form, extension, and density, Epicurus has found another inherent or essential quality of matter or atoms, namely, "*spontaneous*" *motion*.

Footnote 798: [\(return\)](#) "At some time, though at no fixed and determinate time, and at some point, though at no fixed and determinate point, they turn aside from the right line, but only so far as you can call the least possible deviation."-- Lucretius, "On the Nature of Things," bk. ii. l. 216-222.

Footnote 799: [\(return\)](#) Lucretius, "On the Nature of Things" bk. ii. l. 1092-1096.

Footnote 800: [\(return\)](#) Id., ib., bk. ii. l. 250-290.

437 By a slight "voluntary" deflection from the straight line, atoms are now brought into contact with each other; "they strike against each other, and by the percussion new movements and new complications arise"--"movements from high to low, from low to high, and horizontal movements to and fro, in virtue of this reciprocal percussion." The atoms "jostling about, *of their own accord*, in infinite modes, were often brought together confusedly, irregularly, and to no purpose, but at length they *successfully coalesced*; at least, such of them as were thrown together suddenly became, in succession, the beginnings of great things--as earth, and air, and sea, and heaven." [801](#)

Footnote 801: [\(return\)](#) Lucretius, "On the Nature of Things," bk. ii. l. 1051-1065.

And now Lucretius shall describe the formation of the different parts of the world according to the cosmogony of Epicurus. We quote from Good's translation:

But from this boundless mass of matter first
How heaven, and earth, and ocean, sun, and moon,
Rose in nice order, now the muse shall tell.
For never, doubtless, from result of thought,
Or mutual compact, could primordial seeds
First harmonize, or move with powers precise.
But countless crowds in countless manners urged,

From time eternal, by intrinsic weight
And ceaseless repercussion, to combine
In all the possibilities of forms,
Of actions, and connections, and exert
In every change some effort to create--
Reared the rude frame at length, abruptly reared,
Which, when once gendered, must the basis prove
Of things sublime; and whence eventual rose
Heaven, earth, and ocean, and the tribes of sense.

Yet now nor sun on fiery wheel was seen
Riding sublime, nor stars adorned the pole,
Nor heaven, nor earth, nor air, nor ocean lived,
Nor aught of prospect mortal sight surveyed;
But one vast chaos, boisterous and confused.
Yet order hence began; congenial parts
Parts joined congenial; and the rising world
Gradual evolved: its mighty members each
From each divided, and matured complete
From seeds appropriate; whose wild discordderst,
Reared by their strange diversities of form,
With ruthless war so broke their proper paths,
Their motions, intervals, conjunctions, weights,
And repercussions, nought of genial act
Till now could follow, nor the seeds themselves
E'en though conjoined in mutual bonds, co
Thus air, secreted, rose o'er laboring earth;
Secreted ocean flowed; and the pure fire,
Secreted too, toward ether sprang sublime.

But first the seeds terrene, since ponderous most
And most perplexed, in close embraces clung,
And towards the centre conglobating sunk.
And as the bond grew firmer, ampler forth
Pressed they the fluid essences that reared
Sun, moon, and stars, and main, and heaven's high wall.
For those of atoms lighter far consist,
Subtiler, and more rotund than those of earth.
Whence, from the pores terrene, with foremost haste
Rushed the bright ether, towering high, and swift
Streams of fire attracting as it flowed.

Then mounted, next, the base of sun and moon,
'Twixt earth and ether, in the midway air
Rolling their orbs; for into neither these
Could blend harmonious, since too light with earth
To sink deprest, while yet too ponderous far
To fly with ether toward the realms extreme:
So 'twixt the two they hovered; *vital* there
Moving forever, parts of the vast whole;
As move forever in the frame of man
Some active organs, while some oft repose. [802](#)

Footnote 802: ([return](#)) Lucretius, "On the Nature of Things," b. v. l. 431-498

After explaining the origin and causes of the varied celestial phenomena, he proceeds to give an account of the production of plants, animals, and man:

Once more return we to the world's pure prime,
Her fields yet liquid, and the tribes survey
First she put forth, and trusted to the winds.

And first the race she reared of verdant herbs,
Glistening o'er every hill; the fields at large
Shone with the verdant tincture, and the trees
Felt the deep impulse, and with outstretched arms
Broke from their bonds rejoicing. As the down
Shoots from the winged nations, or from beasts
Bristles or hair, so poured the new-born earth
Plants, fruits, and herbage. Then, in order next,
Raised she the sentient tribes, in various modes,
By various powers distinguished: for not heaven
Down dropped them, nor from ocean's briny waves
Sprang they, terrestrial sole; whence, justly *Earth*
Claims the dear name of mother, since alone

Flowed from herself whate'er the sight surveys.

E'en now oft rears she many a sentient tribe
By showers and sunshine ushered into day. [803](#)
Whence less stupendous tribes should then have risen
More, and of ampler make, herself new-formed,
In flower of youth, and *Ether* all mature. [804](#)

Of these birds first, of wing and plume diverse,
Broke their light shells in spring-time: as in spring
Still breaks the grasshopper his curious web,
And seeks, spontaneous, foods and vital air.

Then rushed the ranks of mortals; for the soil,
Exuberant then, with warmth and moisture teemed.
So, o'er each scene appropriate, myriad wombs
Shot, and expanded, to the genial sward
By fibres fixt; and as, in ripened hour,
Their liquid orbs the daring foetus broke
Of breath impatient, nature here transformed
Th' assenting earth, and taught her opening veins
With juice to flow lacteal; as the fair
Now with sweet milk o'erflows, whose raptured breast
First hails the stranger-babe, since all absorbed
Of nurture, to the genial tide converts.
Earth fed the nursling, the warm ether clothed,
And the soft downy grass his couch compressed. [805](#)

Footnote 803: [\(return\)](#) The doctrine of "spontaneous generations" is still more explicitly announced in book ii. "Manifest appearances compel us to believe that animals, though possessed of sense, are generated from senseless atoms. For you may observe living worms proceed from foul dung, when the earth, moistened with immoderate showers, has contracted a kind of putrescence; and you may see all other things change themselves, similarly, into other things."--Lucretius, "On the Nature of Things," bk. i. l. 867-880.

Footnote 804: [\(return\)](#) Ether is the father, earth the mother of all organized being.--Id., ib., bk. i. l. 250-255.

Footnote 805: [\(return\)](#) Id., ib., bk. v. l. 795-836.

A state of pure savagism, or rather of mere animalism, was the primitive condition of man. He wandered naked in the woods, feeding on acorns and wild fruits, and quenched his thirst at the "echoing waterfalls," in company with the wild beast.

Through the remaining part of book v. Lucretius describes how speech was invented; how society originated, and governments were instituted; how civilization commenced; and how religion arose out of ignorance of natural causes; how the arts of life were discovered, and how science sprang up. And all this, as he is careful to tell us, without any divine instruction, or any assistance from the gods.

Such are the physical theories of the Epicureans. The primordial elements of matter are infinite, eternal, and self-moved. After ages upon ages of chaotic strife, the universe at length arose out of an *infinite* number of atoms, and a *finite* number of forms, by a fortuitous combination. Plants, animals, and man were spontaneously generated from ether and earth. Languages, society, governments, arts were gradually developed. And all was achieved simply by blind, unconscious nature-forces, without any designing, presiding, and governing Intelligence--that is, without a God.

The evil genius which presided over the method of Epicurus, and perverted all his processes of thought, is clearly apparent. The end of his philosophy was not the discovery of truth. He does not commence his inquiry into the principles or causes which are adequate to the explanation of the universe, with an unprejudiced mind. He everywhere develops a malignant hostility to religion, and the avowed object of his physical theories is to rid the human mind of all fear of supernatural powers--that is, of all fear of God. [806](#) "The phenomena which men observe to occur in the earth and the heavens, when, as often happens, they are perplexed with fearful thoughts, overawe their minds with a dread of the gods, and humble and depress them to the earth. For ignorance of natural causes obliges them to refer all things to the power of the divinities, and to resign the dominion of the world to them; because of those effects they can by no means see the origin, and accordingly suppose that they are produced by divine influence." [807](#)

Footnote 806: [\(return\)](#) "Let us trample religion underfoot, that the victory gained over it may place us on an equality with heaven" (book i.). See Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxiv. pp. 453,454 (Bohn's edition); Lucretius, "On the Nature of Things," bk. i. l. 54-120.

Footnote 807: [\(return\)](#) Lucretius, "On the Nature of Things," bk. vi. l. 51-60.

To "expel these fancies from the mind" as "inconsistent with its tranquillity and opposed to human happiness," is the end, and, as Lucretius believes, the glory of the Epicurean philosophy. To accomplish this, God must be placed at an infinite distance from the universe, and must be represented as indifferent to every thing that transpires within it. We "must beware of making the Deity interpose here, for that Being we ought to suppose *exempt from all occupation*, and perfectly happy," [808](#)--that is, absolutely impassible. God did not make the world, and he does not govern the world. There is no evidence of design or intelligence in its structure, and "such is the faultiness with which it stands affected, that it can not be the work of a Divine power." [809](#)

Epicurus is, then, an unmistakable Atheist. He did not admit a God in any rational sense. True, he *professed* to believe in gods, but evidently in a very equivocal manner, and solely to escape the popular condemnation. "They are not pure spirits, for there is no spirit in the atomic theory; they are not bodies, for where are the bodies that we may call gods? In this embarrassment, Epicurus, compelled to acknowledge that the human race believes in the existence of gods, addresses himself to an old theory of Democritus--that is, he appeals to dreams. As in dreams there are images that act upon and determine in us agreeable or painful sensations, without proceeding from exterior bodies, so the gods are images similar to those of dreams, but greater, having the human form; images which are not precisely bodies, and yet not deprived of materiality which are whatever you please, but which, in short, must be admitted, since the human race believes in gods, and since the universality of the religious sentiment is a fact which demands a cause." [810](#)

Footnote 808: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. x. ch. xxv.; Lucretius, "On the Nature of Things," bk. i. l. 55-60.

Footnote 809: [\(return\)](#) Lucretius, "On the Nature of Things," bk. v. l. 195-200.

Footnote 810: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 431.

It is needless to offer any criticism on the reasoning of Epicurus. One fact will have obviously presented itself to the mind of the reflecting reader. He starts with atoms having form, magnitude, and density, and essays to construct a universe; but he is obliged to be continually introducing, in addition, a "*nameless something*" which "remains in secret," to help him out in the explanation of the phenomena. [811](#) He makes life to arise out of dead matter, sense out of senseless atoms, consciousness out of unconsciousness, reason out of unreason, without an adequate cause, and thus violates the fundamental principle from which he starts, "*that nothing can arise from nothing.*"

Footnote 811: [\(return\)](#) As, e.g., Lucretius, "On the Nature of Things," bk. iii. l. 260-290.

EPICUREAN PSYCHOLOGY.

In the system of Epicurus, the soul is regarded as corporeal or material, like the body; they form, together, one nature or substance. The soul is composed of atoms exceedingly diminutive, smooth, and round, and connected with or diffused through the veins, viscera, and nerves. The substance of the soul is not to be regarded as simple and uncompounded; its constituent parts are *aura*, heat, and air. These are not sufficient, however, even in the judgment of Epicurus, to account for *sensation*; they are not adequate to generate sensible motives such as revolve any thoughts in the mind. "A certain fourth nature, or substance, must, therefore, necessarily be added to these, *that is wholly without a name*; it is a substance, however, than which nothing exists more active or more subtle, nor is any thing more essentially composed of small and smooth elementary particles; and it is this substance which first distributes sensible motions through the members." [812](#)

Footnote 812: [\(return\)](#) Id., ib., bk. iii. l. 237-250.

Epicurus is at great pains to prove that the soul is material; and it can not be denied that he marshals his arguments with great skill. Modern materialism may have added additional illustrations, but it has contributed no new lines of proof. The weapons are borrowed from the old arsenal, and they are not wielded with any greater skill than they were by Epicurus himself, I. The soul and the body act and react upon each other; and mutual reaction can only take place between substances of similar nature. "Such effects can only be produced by *touch*, and touch can not take place without *body*." [813](#) 2. The mind is produced together with the body, it grows up along with it, and waxes old at the same time with it. [814](#) 3. The mind is diseased along with the body, "it loses its faculties by material causes, as intoxication, or by severe blows; and is sometimes, by a heavy lethargy, borne down into a deep eternal sleep." [815](#) 4. The mind, like the body, is healed by medicines, which proves that it exists only as a mortal substance. [816](#) 5. The mind does not always, and at the same time, continue *entire* and *unimpaired*, some faculties decay before the others, "the substance of the soul is therefore divided." On all these grounds the soul must be deemed mortal; it is dissolved along with the body, and has no conscious existence after death.

Footnote 813: [\(return\)](#) Lucretius, "On the Nature of Things," bk. iii. l. 138-168.

Footnote 814: [\(return\)](#) : Id., ib., bk. iii. l. 444-460.

Footnote 815: [\(return\)](#) Id., ib., bk. iii. l. 438-490.

Such being the nature of the soul, inasmuch as it is material, all its knowledge must be derived from sensation. The famous doctrine of perception, as taught by Epicurus, is grounded upon this pre-supposition that the soul is corporeal. "The εἰδωλα ἀπόρροισι--*imagines, simulacra rerum, etc.*, are, like pellicles, continually flying off from objects; and these material 'likenesses,' diffusing themselves everywhere in the air, are propelled to the perceptive organs." These images of things coming in contact with the senses produce *sensation* (αἴσθησις). A sensation may be considered either as regards its object, or as regards him who experiences it. As regards him who experiences it, it is simply a passive affection, an agreeable or disagreeable feeling, passion, or sentiment (τὸ πάθος). But along with sensation there is inseparably associated some knowledge of the object which excites sensation; and it is for this reason that Epicurus marked the intimate relation of these two phenomena by giving them analogous names. Because the second phenomenon is joined to the first, he calls it ἐπαίσθησις-- *perception*. It is sensation viewed especially in regard to its object--*representative sensation*, or the "sensible idea" of modern philosophy. It is from perception that we draw our general ideas by a kind of prolepsis (πρόληψις) an anticipation or laying hold by reason of that which is implied in sensation. Now all sensations are alike true in so far as they are sensations, and error arises from false reasoning about the testimony of sense. All knowledge is purely relative and contingent, and there is no such thing as necessary and absolute truth.

The system of Epicurus is thus a system of pure materialism, but not a system of materialism drawn, as a logical consequence, from a careful and unprejudiced study of the whole phenomena of mind. His openly avowed design is to deliver men from the fear of death, and rid them of all apprehension of a future retribution. "Did men but know that there was a fixed limit to their woes, they would be able, in some measure, to defy the religious fictions and menaces of the poets; but now, since we must fear eternal punishment at death, there is no mode, no means of resisting them." [817](#)] To emancipate men from "these terrors of the mind," they must be taught "that the soul is mortal, and dissolves with the body"--that "death is nothing to us, for that which is dissolved is devoid of sensation, and that which is devoid of sensation is nothing to us." [818](#) Starting with the fixed determination to prove that

"Death is nothing, and naught after death,"

he will not permit any mental phenomena to suggest to him the idea of an incorporeal spiritual substance. Matter, under any form known to Epicurus, is confessedly insufficient to explain sensation and thought; a "nameless something" must be *supposed*. But may not "that principle which *lies entirely hid, and remains in secret*" [819](#)--and about which even Epicurus does not know any thing--be a spiritual, an *immaterial* principle? For aught that he knows it may as properly be called "*spiri*" as matter. May not *sensation* and *cognition* be the result of the union of matter and spirit; and if so, may not their mutual affections, their common sympathies, be the necessary conditions of sensation and cognition in the present life? A reciprocal relation between body and mind appears in all mental phenomena. A certain proportion in this relation is called mental health. A deviation from it is termed disease. This proportion is by no means an equilibrium, but the perfect adaptation of the body, without injury to its integrity, to the purposes of the mind. And if this be so, all the arguments of materialism fall to the ground.

Footnote 819: [\(return\)](#) Lucretius, "On the Nature of Things," bk. iii. l. 275-280.

The concluding portion of the third book, in which Lucretius discourses on *death*, is a mournful picture of the condition of the heathen mind before Christianity "brought life and immortality fully to light." It comes to us, like a voice from the grave of two thousand years, to prove they were "without hope." To be delivered from the fear of future retribution, they would sacrifice the hope of an immortal life. To extinguish guilt they would annihilate the soul. The only way in which Lucretius can console man in prospect of death is, by reminding him that he will *escape the ills of life*.

"But thy dear home shall never greet thee more!
 No more the best of wives!--thy babes beloved,
 Whose haste half-met thee, emulous to snatch
 The dulcet kiss that roused thy secret soul,
 Again shall never hasten!--nor thine arm,
 With deeds heroic, guard thy country's weal!--
 Oh mournful, mournful fate!' thy friends exclaim!
 'One envious hour of these invaluable joys
 Robs thee forever!--But they add not here,
 'It robs thee, too, of all desire of joy'--
 A truth, once uttered, that the mind would free
 From every dread and trouble. 'Thou art safe
 The sleep of death protects thee, *and secures
 From all the unnumbered woes of mortal life!*

While we, alas! the sacred urn around
That holds thine ashes, shall insatiate weep,
Nor time destroy the eternal grief we feel!
What, then, has death, if death be mere repose,
And quiet only in a peaceful grave,--
What has it thus to mar this life of man?" [820](#)

Footnote 820: [\(return\)](#) Lucretius, "On the Nature of Things," bk. iii. l. 906-926.

This is all the comfort that Epicureanism can offer; and if "the wretch still laments the approach of death," she addresses him "with voice severe"--

"Vile coward! dry thine eyes--
Hence with thy snivelling sorrows, and depart!"

It is evident that such a system of philosophy outrages the purest and noblest sentiments of humanity, and, in fact, condemns itself. It was born of selfishness and social degeneracy, and could perpetuate itself only in an age of corruption, because it inculcated the lawfulness of sensuality and the impunity of injustice. Its existence at this precise period in Grecian history forcibly illustrates the truth, that Atheism is a disease of the heart rather than the head. It seeks to set man free to follow his own inclinations, by ridding him of all faith in a Divinity and in an immortal life, and thus exonerating him from all accountability and all future retribution. But it failed to perceive that, in the most effectual manner, it annihilated all real liberty, all true nobleness, and made of man an abject slave.

STOICISM.

The Stoical school was founded by Zeno of Citium, who flourished B.C. 290. He taught in the Stoa Poecile, or Painted Porch; and his disciples thence derived the name of Stoics. Zeno was succeeded by Cleanthes (B.C. 260); and Cleanthes by Chrysippus (B.C. 240), whose vigorous intellect gave unity and completeness to the Stoical philosophy. He is reported to have said to Cleanthes,--"Give me your doctrines, and I will find the demonstrations." [821](#)

Footnote 821: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. vii.

None of the writings of the early Stoics, save a "Hymn to Jupiter," by Cleanthes, have survived. We are chiefly indebted to Diogenes Laertius [822](#) and Cicero [823](#) for an insight into their system. The Hymn of Cleanthes sheds some light on their Theology, and their moral principles are exhibited in "The Fragments" of Epictetus, and "The Life and Meditations" of Marcus Aurelius.

Footnote 822: [\(return\)](#) "Lives of the Philosophers," bk. vii.

Footnote 823: [\(return\)](#) "De Fm.," and "De Natura Deorum."

The philosophy of the Stoics, like that of the Epicureans, was mainly a philosophy of life--that is, a *moral* philosophy. The manner in which they approached the study of morals, and the principles upon which they grounded morality, were, however, essentially different.

The grand object of Epicurus was to make the current of life flow on as comfortably as possible, without any distracting thoughts of the past or any disturbing visions of the future. He therefore starts with this fundamental principle, that the true philosophy of life is to enjoy one's self--the aim of existence is to be happy. Whatever in a man's beliefs or conduct tends to secure happiness is *right*; whatever awakens uneasiness, apprehension, or fear, is *wrong*. And inasmuch as the idea of a Divine Creator and Governor of the universe, and the belief in a future life and retribution, are uncomfortable thoughts, exciting superstitious fears, they ought to be rejected. The Physics and the Psychology of Epicurus are thus the natural outgrowth of his Morality.

Zeno was evidently a more earnest, serious, and thoughtful man. He cherished a nobler ideal of life than to suppose "man must do voluntarily, what the brute does instinctively-- eschew pain, and seek pleasure." He therefore seeks to ascertain whether there be not some "principle of nature," or some law of nature, which determines what is right in human action --whether there be not some light under which, on contemplating an action, we may at once pronounce upon its intrinsic *rightness*, or otherwise. This he believes he has found in the *universal reason* which fashioned, and permeates, and vivifies the universe, and is the light and life of the human soul. The chief good is, confessedly, to live according to nature; which is to live according to virtue, for nature leads us to that point.... For our individual natures are all part of the universal nature; on which account, the chief good is to live in a manner corresponding to one's own nature, and to universal nature; doing none of those things which the common law of mankind (the universal conscience of our race) forbids. *That common law is identical with RIGHT REASON which pervades every thing, being the same with Jupiter (Ζεύς), who is the regulator and chief manager of all existing things.* [824](#) The foundation of the ethical system of the Stoics is thus laid in their philosophy of nature --their Physiology and Psychology. If, therefore, we would apprehend the logical connection and unity of Stoicism, we must follow their order of thought--that is, we must commence with their

Footnote 824: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. liii.

PHYSIOLOGY.

Diogenes Laertius tells us that the Stoics held "that there are two general principles in the universe--the *passive* principle (τὸ πάσχον), which is matter, an existence without any distinctive quality, and the *active* principle (τὸ ποιῶν), which is the reason existing in the passive, that is to say, God. For that He, being eternal, and existing throughout all matter, makes every thing." [825](#) This Divine Reason, acting upon matter, originates the necessary and unchangeable laws which govern matter--laws which the Stoics called λόγοι σπερματικοί-- generating reasons or causes of things. The laws of the world are, like eternal reason, necessary and immutable; hence the εἰμαρμένη--the *Destiny* of the Stoics, which is also one of the names of the Deity. [826](#) But by *Destiny* the Stoics could not understand a blind unconscious necessity; it is rather the highest reason in the universe. "Destiny (εἰμαρμένη) is a connected (εἰρομένη) cause of things, or the reason according to which the world is regulated." [827](#)

Footnote 825: [\(return\)](#) Id., ib., bk. vii. ch. lxxviii.

Footnote 826: [\(return\)](#) "They teach that God is unity, and that he is called Mind, and *Fate*, and Jupiter."--Id., ib., bk. vii. ch. lxxviii.

Footnote 827: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. lxxiv.

These two principles are not, however, regarded by the Stoics as having a distinct, separate, and independent existence. One is substance (οὐσία); the other is quality (ποιός). The primordial matter is the passive ground of all existence--the original substratum for the Divine activity. The Divine Reason is the active or formative energy which dwells within, and is essentially united to, the primary substance. The Stoics, therefore, regarded all existence as reducible, in its last analysis, to *one substance*, which on the side of its passivity and capacity of change, they called *hyle* (ὑλη); [828](#) and on the side of its changeless energy and immutable order, they called God. The corporeal world--physical nature--is "a peculiar manifestation" of God, generated from his own substance, and, after certain periods, absorbed in himself. Thus God, considered in the evolution of His power, is nature. And nature, as attached to its immanent principle, is called God. [829](#) The fundamental doctrine of the Stoics was a spiritual, ideal, intellectual pantheism, of which the proper formula is, *All things are God, but God is not all things*.

Footnote 828: [\(return\)](#) Or "matter." A good deal of misapprehension has arisen from confounding the intellectual ὑλη of Aristotle and the Stoics with the gross physical "matter" of the modern physicist. By "matter" we now understand that which is corporeal, tangible, sensible; whereas by ὑλη, Aristotle and the Stoics (who borrowed the term from him) understood that which is incorporeal, intangible, and inapprehensible to sense--an "unknown something" which must necessarily be *supposed* as the condition of the existence of things. The *formal* cause of Aristotle is "the substance and essence"-- the primary nature of things, on which all their properties depend. The *material* cause is "the matter or subject" through which the primary nature manifests itself. Unfortunately the term "material" misleads the modern thinker. He is in danger of supposing the *hyle* of Aristotle to be something sensible and physical, whereas it is an intellectual principle whose inherence is implied in any physical thing. It is something distinct from *body*, and has none of those properties we are now accustomed to ascribe to matter. Body, corporeity, is the result of the union of "hyle" and "form." Stobaeus thus expounds the doctrine of Aristotle: Form alone, separate from matter (ὑλη) is *incorporeal*; so matter alone, separated from form, is not *body*. But there is need of the joint concurrence of both these--matter and form--to make the substance of body. Every individual substance is thus a totality of matter and form--a σύνολον.

The Stoics taught that God is *oneliness* (Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. lxxviii.); that he is *eternal* and *immortal* (bk. vii. ch. lxxii.); he could not, therefore, be corporeal, for "body *infinite, divisible, and perishable*" (bk. vii. ch. lxxvii.). "All the parts of the world are perishable, for they change one into another; therefore the world is perishable" (bk. vii. ch. lxx.). The Deity is not, therefore, absolutely identified with the world by the Stoics. He permeates all things, creates and dissolves all things, and is, therefore, *more* than all things. The world is finite; God is infinite.

Footnote 829: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. lxx.

Schwegler affirms that, in physics, the Stoics, for the most part, followed Heraclitus, and especially "carried out the proposition that nothing incorporeal exists; every thing is essentially *corporeal*." The pantheism of Zeno is therefore "*materialistic*." [830](#) This is not a just representation of the views of the early Stoics, and can not be sustained by a fair interpretation of their teaching. They say that principles and elements differ from each other. Principles have no generation or beginning, and will have no end; but elements may be destroyed. Also, that elements have bodies, and have forms, *but principles have no bodies, and no forms*. [831](#) Principles are, therefore, *incorporeal*. Furthermore, Cicero tells us that they taught that the universal harmony of the world resulted from all things being "contained by one *Divine SPIRIT*;" [832](#) and also, that reason in man is "nothing else but part of the *Divine SPIRIT* merged into a human body." [833](#) It thus seems evident that the Stoics made a distinction between corruptible *elements* (fire, air, earth, water) and incorruptible *principles*, by which and out of which elements were generated, and also between corporeal and incorporeal substances.

Footnote 830: [\(return\)](#) Schwegler's "History of Philosophy," p. 140.

Footnote 832: [\(return\)](#) "De Natura Deorum," bk. ii. ch. xiii.

Footnote 833: [\(return\)](#) Ibid, bk. ii. ch. xxxi.

451 On a careful collation of the fragmentary remains of the early Stoics, we fancy we catch glimpses of the theory held by some modern pantheists, that the material elements, "having body and form," are a vital transformation of the Divine substance; and that the forces of nature--"the generating causes or reasons of things" (λόγοι σπερματικοί)--are a conscious transmutation of the Divine energy. This theory is more than hinted in the following passages, which we slightly transpose from the order in which they stand in Diogenes Laertius, without altering their meaning. "They teach that the Deity was in the beginning by *himself*".... that "first of all, he made the four elements, fire, water, air, and earth." "The fire is the highest, and that is called æther, in which, first of all, the sphere was generated in which the fixed stars are set...; after that the air; then the water; and the sediment, as it were, of all, is the earth, which is placed in the centre of the rest." "He turned into water the whole substance which pervaded the air; and as the seed is contained in the product, so, too, He, being the seminal principle of the world, remained still in moisture, making matter fit to be employed by himself in the production of things which were to come after." [834](#) The Deity thus draws the universe out of himself, transmuting the divine substance into body and form. "God is a being of a certain quality, having for his peculiar manifestation universal substance. He is a being imperishable, and who never had any generation, being the maker of the arrangement and order that we see; and who at certain periods of time *absorbs all substance in himself and then reproduces it from himself.*" [835](#) And now, in the last analysis, it would seem as though every thing is resolved into *force*. God and the world are *power, and its manifestation*, and these are ultimately one. "This identification of God and the world, according to which the Stoics regarded the whole formation of the universe as but a period in the development of God, renders their remaining doctrine concerning the world very simple. Every thing in the world seemed to be permeated by the Divine life, and was regarded as the flowing out of this most perfect life through certain channels, until it returns, in a necessary circle, back to itself." [836](#)

Footnote 834: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. lxviii., lxix.

Footnote 835: [\(return\)](#) Id., ib., bk. vii. ch. lxx.

Footnote 836: [\(return\)](#) Schwegler's "History of Philosophy," p. 141.

The God of the Stoics is not, however, a mere principle of life vitalizing nature, but an *intelligent* principle directing nature; and, above all, a *moral* principle, governing the human race. "God is a living being, immortal, rational, perfect, and intellectual in his happiness, unsusceptible of any kind of evil; having a foreknowledge of the world, and of all that is in the world." [837](#) He is also the gracious Providence which cares for the individual as well as for the whole; and he is the author of that natural law which commands the good and prohibits the bad. "He made men to this end that they might be happy; as becomes his fatherly care of us, he placed our good and evil in those things which are in our own power." [838](#) The Providence and Fatherhood of God are strikingly presented in the "Hymn of Cleanthes" to Jupiter--

Footnote 837: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. lxxii.

Footnote 838: [\(return\)](#) Marcus Aurelius, bk. iii. ch. xxiv.

Most glorious of the immortal Powers above!
O thou of many names! mysterious Jove:
For evermore almighty! Nature's source!
Thou governest all things in their order'd course!
All hail to thee! since, innocent of blame,
E'en mortal creatures may address thy name;
For all that breathe, and creep the lowly earth,
Echo thy being with reflected birth--
Thee will I sing, thy strength for aye resound:
The universe, that rolls this globe around,
Moves wheresoe'er thy plastic influence guides,
And, ductile, owns the god whose arm presides.
The lightnings are thy ministers of ire;
The double-forked and ever-living fire;
In thy unconquerable hands they glow,
And at the flash all nature quakes below.
Thus, thunder-armed, thou dost creation draw
To one immense, inevitable law:
And, with the various mass of breathing souls,
Thy power is mingled, and thy spirit rolls.
Dread genius of creation! all things bow
To thee: the universal monarch thou!
Nor aught is done without thy wise control,
On earth, or sea, or round the ethereal pole,
Save when the wicked, in their frenzy blind,

Act o'er the follies of a senseless mind,
 Thou curb'st th' excess; confusion, to thy sight,
 Moves regular; th' unlovely scene is bright.
 Thy hand, educing good from evil, brings
 To one apt harmony the strife of things.
 One ever-during law still binds the whole,
 Though shunned, resisted, by the sinner's soul.
 Wretches! while still they course the glittering prize
 The law of God eludes their ears and eyes.
 Life, then, were virtue, did they thus obey;
 But wide from life's chief good they headlong stray.
 Now glory's arduous toils the breast inflame;
 Now avarice thirsts, insensible of shame;
 Now sloth unnerves them in voluptuous ease,
 And the sweet pleasures of the body please.
 With eager haste they rush the gulf within,
 And their whole souls are centred in their sin.
 But, oh, great Jove! by whom all good is given!
 Dweller with lightnings and the clouds of heaven!
 Save from their dreadful error lost mankind!
 Father! disperse these shadows of the mind!
 Give them thy pure and righteous law to know;
 Wherewith thy justice governs all below.
 Thus honored by the knowledge of thy way,
 Shall men that honor to thyself repay;
 And bid thy mighty works in praises ring,
 As well befits a mortal's lips to sing:
 More blest, nor men, nor heavenly powers can be,
 Than when their songs are of thy law and thee. [839](#)

Footnote 839: [\(return\)](#) Sir C. A. Elton's version, published in "Specimens of Ancient Poets," edited by William Peters, A. M., Christ Church, Oxford.

PSYCHOLOGY.

As in the world there are two principles, the passive and the active, so in the understanding there are two elements: a passive element--*sensation*, and an active element--*reason*.

All knowledge commences with the phenomena of sensation (αἴσθησις). This produces in the soul an image (φαντασία), which corresponds to the exterior object, and which Chrysippus regarded as a modification of the mind (ἀλλοίωσις). [840](#)

454

Associate with sensibility is thought--the faculty of general ideas--the ὀρθὸς λόγος, or right reason, as the supreme power and the guiding light of humanity. This active principle is of divine origin, "a part or shred of the Divinity."

Footnote 840: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. xxxiv.

This "right reason," or "common reason," is the source and criterion of all truth; "for our individual natures are all parts of the universal nature," and, therefore, all the dictates of "common reason" are "identical with that right reason which pervades every thing, being the same with Jupiter, who is the regulator and chief manager of all things."

The fundamental canon of the logic of the Stoics, therefore, was that "what appears to all, that is to be believed, for it is apprehended by the reason, which is common and Divine."

It is needless to remark that the Stoics were compelled by their physiological theory to deny the proper immortality of the soul. Some of them seem to have supposed that it might, for a season, survive the death of the body, but its ultimate destination was absorption into the Divine essence. It must return to its original source.

ETHICS.

If reason be the great organizing and controlling law of the universe, then, to live conformable to reason is the great practical law of life. Accordingly, the fundamental ethical maxim of the Stoics is, "Live conformably with nature--that is, with reason, or the will of the universal governor and manager of all things." [841](#) Thus the chief good (εὐδαιμονία) is the conformity of man's actions to reason--that is, to the will of God, "for nothing is well done without a reference to God." [842](#)

Footnote 841: [\(return\)](#) Diogenes Laertius, "Lives of the Philosophers," bk. vii. ch. liii.

Footnote 842: [\(return\)](#) Marcus Aurelius, bk. iii. § II.

It is obvious that this doctrine must lead to a social morality and a jurisprudence the very opposite of the Epicurean. If we must do that which is good--that is, that which is reasonable, regardless of all consequences, then it is not for the pleasurable or useful results which flow from it that justice should be practised, but because of its intrinsic excellence. Justice is constituted

455

good, not by the law of man, but by the law of God. The highest pleasure is to do right; "this very thing is the virtue of the happy man, and the perfect happiness of life, when every thing is done according to a harmony of the genius of each individual to the will of the Universal Governor and Manager of all things." ⁸⁴³ Every thing which interferes with a purely rational existence is to be eschewed; the pleasures and pains of the body are to be despised. To triumph over emotion, over suffering, over passion; to give the fullest ascendancy to reason; to attain courage, moral energy, magnanimity, constancy, was to realize true manhood, nay, "to be godlike; for they have something in them which is, as it were, a god" ⁸⁴⁴

The sublime heroism of the Stoic school is well expressed in the manly precept, "Ἀνεχοῦ"--*sustine*--endure. "Endure the sorrows engendered by the bitter struggle between the passions support all the evils which fortune shall send thee--calumny, betrayal, poverty, exile, irons, death itself." In Epictetus and Marcus Aurelius this spirit seems to rise almost to the grandeur of Christian resignation. "Dare to lift up thine eyes to God and say, 'Use me hereafter to whatsoever thou pleasest. I agree, and am of the same mind with thee, indifferent to all things. Lead me whither thou pleasest. Let me act what part thou wilt, either of a public or a private person, of a rich man or a beggar.'" ⁸⁴⁵ "Show those qualities," says Marcus Aurelius, "which God hath put in thy power--sincerity, gravity, endurance of labor, aversion to pleasure, contentment with thy portion and with few things, benevolence, frankness, no love of superfluity, freedom from trifling, magnanimity." ⁸⁴⁶

Footnote 846: [\(return\)](#) "I read to-day part of the 'Meditations of Marcus Antonius' [Aurelius]. What a strange emperor! And what a strange heathen! Giving thanks to God for all the good things he enjoyed! In particular for his good inspirations, and for twice revealing to him, in dreams, things wherby he was cured of (otherwise) incurable distempers. I make no doubt but this is one of the 'many' who shall come from the east and the west, and sit down with Abraham, Isaac, and Jacob," while the 'children of the kingdom'-- nominal Christians--are 'shut out.'"-- Wesley's "Journal," vol. i, p. 353.

456

Amid the fearful moral degeneracy of imperial Rome, Stoicism became the refuge of all noble spirits. But, in spite of its severity, and its apparent triumph over the feelings, it brought no real freedom and peace. "Stoical morality, strictly speaking, is, at bottom, only a slavish morality, excellent in Epictetus; admirable still, but useless to the world, in Marcus Aurelius." Pride takes the place of real disinterestedness. It stands alone in haughty grandeur and solitary isolation, tainted with an incurable egoism. Disheartened by its metaphysical impotence, which robs God of all personality, and man of all hope of immortality; defeated in its struggle to obtain purity of soul, it sinks into despair, and often terminates, as in the case of its two first leaders, Zeno and Cleanthes, and the two Romans, Cato and Seneca, in self-murder. "Thus philosophy is only an apprenticeship of death, and not of life; it tends to death by its image, *apathy* and *ataraxy*." ⁸⁴⁷

457

CHAPTER XIV.

THE PROPÆDEUTIC OFFICE OF GREEK PHILOSOPHY.

"Philosophy, before the coming of the Lord, was necessary to the Greeks for righteousness, and it now proved useful for godliness, being in some part a preliminary discipline (προπαιδεία τις οὖσα) for those who reap the fruits of faith through demonstration. Perhaps we may say it was given to the Greeks with this special object; for philosophy was to the Greeks what the Law was to the Jews, 'a schoolmaster to bring them to Christ.'" --CLEMENS ALEXANDRINUS.

Philosophy, says Cousin, is the effort of *reflection*--the attempt of the human mind to develop in systematic and logical form that which has dimly revealed itself in the spontaneous thought of ages, and to account to itself in some manner for its native and instinctive beliefs. We may further add, it is the effort of the human mind to attain to truth and certitude on purely rational grounds, uncontrolled by traditional authorities. The sublime era of Greek philosophy was, in fact, an independent effort of human reason to solve the great problems of existence, of knowledge, and of duty. It was an attempt to explain the phenomenal history of the universe, to interpret the fundamental ideas and laws of human reason, to comprehend the utterances of conscience, and to ascertain what Ultimate and Supreme Reality underlies the world of phenomena, of thought, and of moral feeling. ⁸⁴⁸ And it is this which, for us, constitutes its especial value; that it was, as far as possible, a result of simple reason; or, if at any time Faith asserted its authority, the distinction is clearly marked: If this inquiry was fully, and honestly, and logically conducted, we are entitled to presume that the results attain by this effort of speculative thought must harmonize with the positive utterances of the Divine Logos--the Eternal Reason, whose revelations are embalmed and transmitted to us in the Word of God. If the great truth that man is "the *offspring of God*" and as such "the *image and glory of God*" which is asserted, alike,

458

by Paul and the poet-philosophers of Tarsus and Mysia, be admitted, then we may expect that the reason of man shall have some correlation with the Divine reason. The mind of man is the *chef-d'œuvre* of Divine art. It is fashioned after the model which the Divine nature supplies. "Let us make man in our image after our likeness." That image consists in *ἐπίγνωσις--knowledge*; *δικαιοσύνη--justice*; and *οσιότης--benevolence*. It is not merely the *capacity* to know, to be just, and to be beneficent; it is *actual* knowledge, justice, and benevolence. It supposes, first, that the fundamental ideas of the true, the just, and the good, are connate to the human mind; second, that the native determination of the mind is towards the realization of these ideas in every mental state and every form of human activity; third, that there is a constitutional sympathy of reason with the ideas of truth, and righteousness, and goodness, as they dwell in the reason of God. And though man be now fallen, there is still within his heart some vestige of his primal nature. There is still a sense of the divine, a religious aptitude, "a feeling after God," and some longing to return to Him. There are still ideas in the reason, which, in their natural and logical development compel him to recognize a God. There is within his conscience a sense of duty, of obligation, and accountability to a Superior Power--"a law of the mind," thought opposed and antagonized by depraved passions and appetites--"the law in the members." There is yet a natural, constitutional sympathy of reason with the law of God--"it delights in that law," and consents "that it is good," but it is overborne and obstructed by passion. Man, even as unregenerate, "wills to do that which is good," but "how to perform that which is good he finds not," and in the agony of his soul he exclaims, "Oh, wretched man that I am, who shall deliver me!" [849](#)

459

Footnote 848: [\(return\)](#) Plato sought also to attain to the Ultimate Reality underlying all æsthetic feeling--the Supreme Beauty as well as the Supreme Good.

Footnote 849: [\(return\)](#) Romans, ch. vii.

The Author of nature is also the Author of revelation. The Eternal Father of the Eternal Son, who is the grand medium of all God's direct communications to our race--the revealer of God, is also "the Father of the spirits of all flesh." That divine inbreathing which first constituted man "a living soul" --that "inspiration of the Almighty which giveth man understanding," and still "teacheth him knowledge," proceeds from the same Spirit as that which inspires the prophets and seers of the Old Testament Church, and the Apostles and teachers of the new. That "true light which lighteth every man that cometh into the world" shone on the mind of Anaxagoras, and Socrates, and Plato, as well as on the mind of Abraham and Rahab, Cornelius and the Syro-Phoenician woman, and, in a higher form, and with a clearer and richer effulgence, on the mind of Moses, Isaiah, Paul and John. It is not to be wondered at, then, if, in the teaching of Socrates and Plato, we should find a striking *harmony* of sentiment, and even form of expression, with some parts of the Christian revelation. No short-sighted jealousy ought to impugn the honesty of our judgment, if, in the speculations of Plato, we catch glimpses of a world of ideas not unlike that which Christianity discloses, and hear words not unfamiliar to those who spake as they were moved by the Holy Ghost.

If, then, there exists some correlation between Divine and human reason, and if the light which illuminates all minds in Christian and in heathen lands is the *same* "true light," though differing in degrees of brightness, it is most natural and reasonable to expect some connection and some correspondence between the discoveries of philosophy and the revelations of the Sacred Oracles.

Although Christianity is confessedly something which is above reason and nature--something communicated from above, and therefore in the fullest sense supernatural and superhuman, yet it must stand in *relation* to reason and nature, and to their historic development; otherwise it could not operate on man at all. "We have no knowledge of a dynamic influence, spiritual or natural, without a dynamic reaction." Matter can only be moved by forces, and according to laws, as it has properties which correlate it with these forces and laws. And mind can not be determined from without to any specific form of cognition, unless it have powers of apprehension and conception which are governed by uniform laws. If man is to be instructed by a verbal revelation, he must, at least, be capacitated for the reception of divine communication--must have a power of forming supersensuous conceptions, and there must be some original community of thought and idea between the mind that teaches and the mind that is taught. A revelation from an invisible God--a being "whom no man has ever seen or ever can see" with the eye of sense--would have no affinity for, and no power to affect and enlighten, a being who had no presentiment of an invisible Power to which he is in some way related. A revealed law promulgated from an unseen and utterly unknown Power would have no constraining authority, if man had no idea of right, no sense of duty, no feeling of obligation to a Supreme Being. If, therefore, religious instruction be not already preceded by an innate consciousness of God, and of obligation to God, as an operative predisposition, there would be nothing for revelation to act upon. Some relation between the reason which planned the universe, and which has expressed its thoughts in the numerical relations and archetypal forms which are displayed therein, and the reason of man, with its ideas of form and number, proportion and harmony, is necessarily supposed in the statement of Paul that "the invisible things of God from the creation are seen." Nature to us could be no symbol of the Divine Thought, if there were no correlation between the reason of man and the reason of God. All revelation, indeed, supposes some community of nature, some affinities of thought, some correlation of ideas, between the mind communicating spiritual knowledge, and the mind to which the communication is made. In approaching man, it must traverse ground already occupied by man; it must employ phrases already employed, and assume forms of thought already familiar to man. It must address itself to some ideas, sentiments, and feelings already possessed by man. If religion is the great end and destination of man, then the

460

461

nature of man must be constituted for religion. Now religion, in its inmost nature, is a communion, a fellowship with God. But no creature can be brought into this communion "save one that is constitutionally related to God in terms that admit of correspondence." There must be intelligence offered to his intelligence, sentiment to his sentiment, reason to his reason, thought to his thought. There must be implanted in the human mind some fundamental ideas and determinations grounded upon this fact, that the real end and destination of man is for religion, so that when that higher sphere of life and action is presented to man, by an outward verbal revelation, there shall be a recognized harmony between the inner idea and determination, and the outer revelation. We can not doubt that such a relation between human nature and reason, and Christianity, exists. We see evidences of this in the perpetual strivings of humanity to attain to some fuller and clearer apprehension of that Supreme Power which is consciously near to human thought, and in the historic development of humanity towards those higher forms of thought and existence which demand a revelation in order to their completion. This original capacity, and this historical development, have unquestionably prepared the way for the reception of Christianity.

462 Christianity, then, must have some connection with the reason of man, and it must also have some relation to the progressive developments of human thought in the ages which preceded the advent of Christ. Christianity did not break suddenly upon the world as a new commencement altogether unconnected with the past, and wanting in all points of sympathy and contact with the then present. It proceeded along lines of thought which had been laid through ages of preparation; it clothed itself in forms of speech which had been moulded by centuries of education, and it appropriated to itself a moral and intellectual culture which had been effected by long periods of severest discipline. It was, in fact, the consummation of the whole moral and religious history of the world.

463 A revelation of new truths, presented in entirely new forms of thought and speech, would have defeated its own ends, and, practically, would have been no revelation at all. The divine light, in passing through such a medium, would have been darkened and obscured. The lens through which the heavenly rays are to be transmitted must first be prepared and polished. The intellectual eye itself must be gradually accustomed to the light. Hence it is that all revelation has been *progressive*, commencing, in the infancy of our race, with images and symbols addressed to sense, and advancing, with the education of the race, to abstract conceptions and spiritual ideas. The first communications to the patriarchs were always accompanied by some external, sensible appearance; they were often made through some preternatural personage in human form. Subsequently, as human thought becomes assimilated to the Divine idea, God uses man as his organ, and communicates divine knowledge as an internal and spiritual gift. The theistic conception of the earliest times was therefore more or less anthropomorphic, in the prophetic age it was unquestionably more spiritual. The education of Hebraic, Mosaic, and prophetic ages had gradually developed a purer theism, and prepared the Jewish mind for that sublime announcement of our Lord's--"God is a spirit, and they that worship him must worship in spirit." For ages the Jews had worshipped in Samaria and Jerusalem, and the inevitable tendency of thought was to localize the divine presence; but the gradual withdrawal from these localities of all visible tokens of Jehovah's presence, prepared the way for the Saviour's explicit declaration that "neither in this mountain of Samaria, nor yet at Jerusalem, shall men worship the Father," to the exclusion of any other spot on earth; the real temple of the living God is now the heart of man. The *Holiness* of God was an idea too lofty for human thought to grasp at once. The light of God's ineffable purity was too bright and dazzling to burst at once on human eyes. Therefore it was gradually displayed. The election of a chosen seed in Abraham's race to a nearer approach to God than the rest of pagan humanity; the announcement of the Decalogue at Sinai amidst awe-inspiring wonders; the separation of a single tribe to the priestly office, who were dedicated to, and purified in an especial manner for the service of the tabernacle; the sanctification of the High-priest by sacrifice and lustration before he dared to enter "the holiest place"--the presence-chamber of Jehovah: and then the direct and explicit teaching of the prophets--were all advancing steps by which the Jewish mind was lifted up to the clearer apprehension of the holiness of God, the impurity of man, the distance of man from God, and the need of Mediation.

464 The ideas of *Redemption* and *Salvation*--of atonement, expiation, pardon, adoption, and regeneration--are unique and *sui-generis*. Before these conceptions could be presented in the fullness and maturity of the Christian system, there was needed the culture and education of the ages of Mosaic ritualism, with its sacrificial system, its rights of purification, its priestly absolution, and its family of God. [850](#) Redemption itself, as an economy, is a development, and has consequently, a history--a history which had its commencement in the first Eden, and which shall have its consummation in the second Eden of a regenerated world. It was germinally infolded in the first promise, gradually unfolded in successive types and prophecies, more fully developed in the life, and sayings, and sufferings of the Son of God, and its ripened fruit is presented to the eye of faith in the closing scenic representations of the grand Apocalypse of John. "Judaism was not given as a perfect religion. Whatever may have been its superiority over surrounding forms of worship, it was, notwithstanding, a provisional form only. The consciousness that it was a preparatory, and not a definite dispensation, is evident throughout. It points to an end beyond itself, suggests a grander thought than any in itself; its glory precisely consists in its constant looking forward to a glorious future destined to surpass it." [851](#)

Thus the determinations which, through Redemption, fall to the lot of history, as Nietzsche justly remarks, obey the emancipating law of *gradual progress*. [852](#) Christianity was preceded by ages of preparation, in which we have a gradual development of religious phrases and ideas, of forms of social life and intellectual culture, and of national and political institutions most favorable to its advent and its promulgation; and "in the fullness of time"--the maturity and fitness of the age--"God sent his own Son into the world."

Footnote 852: [\(return\)](#) "System of Doctrine," p. 73.

465 This work of preparation was not confined alone to Judaism. The divine plan of redemption comprehended all the race; its provisions are made in view of the wants of all the race; and we must therefore believe that the entire history of the race, previous to the coming of the Redeemer, was under a divine supervision, and directed towards the grand centre of our world's history. Greek philosophy and Grecian civilization must therefore have a place in the divine plan of history, and they must stand in an important relation to Christianity. He who "determined the time of each nation's existence, and fixed the geographical boundaries of their habitation in order that they may seek the Lord," can not have been unmindful of the Greek nation, and of its grandest age of philosophy. "The Father of the spirits of all flesh" could not be unconcerned in the moral and spiritual welfare of any of his children. He was as deeply interested in the Athenian as in the Hebrew. He is the God of the Gentile as well as the Jew. His tender mercies are over all his works. If the Hebrew race was selected to be the agent of his providence in one special field, and if the Jewish theocracy was one grand instrument of preparatory discipline, it was simply because, through these, God designed to bless all the nations of the earth. And surely no one will presume to say that a civilization and an intellectual culture which was second only to the Hebrew, and, in some of its aspects, even in advance of the Hebrew, was not determined and supervised by Divine Providence, and made subservient to the education and development of the whole race. The grand results of Hebrew civilization were appropriated and assimilated by Christianity, and remain to this day. And no one can deny that the same is true of Greek civilization. Through a kind of historic preparation the heathen world was made ready for Christ, as a soil is prepared to receive the seed, and some precious fruits of knowledge, of truth, and of righteousness, even, were largely matured, which have been reaped, and appropriated, and vitalized by the heaven-descended life of Christianity.

466 The chief points of excellence in the civilization of the Greeks are strikingly obvious, and may be readily presented. High perfection of the intellect and the imagination displaying itself in the various forms of art, poetry, literature, and philosophy. A wonderful freedom and activity of body and of mind, developed in trade, and colonization, in military achievement, and in subtle dialectics. A striking love of the beautiful, revealing itself in their sculpture and architecture, in the free music of prosaic numbers, and the graceful movement and measure of their poetry. A quickness of perception, a dignity of demeanor, a refinement of taste, a delicacy of moral sense, and a high degree of reverence for the divine in nature and humanity. And, in general, a ripe and all-pervading culture, which has made Athens a synonym for all that is greatest and best in the genius of man; so that literature, in its most flourishing periods has rekindled its torch at her altars, and art has looked back to the age of Pericles for her purest models. [853](#) All these enter into the very idea of Greek civilization. We can not resist the conviction that, by a Divine Providence, it was made subservient to the purpose of Redemption; it prepared the way for, and contributed to, the spread of the Gospel.

Footnote 853: [\(return\)](#) In Lord Brougham's celebrated letter to the father of the historian Macaulay in regard to the education of the latter, we read: "If he would be a great orator, he must go at once to the fountain-head, and be familiar with every one of the great orations of Demosthenes.... I know from experience that nothing is half so successful in these times (bad though they be) as what has been formed on the Greek models. I use poor illustrations in giving my own experience, but I do assure you that both in courts and Parliament, and even to mobs, I have never made so much play (to use a very modern phrase) as when I was almost translating from the Greek. I composed the peroration of my speech for the Queen, in the Lords, after reading and repeating Demosthenes for three or four weeks."

467 Its subserviency to this grand purpose is seen in the Greek tendency to trade and colonization. Their mental activity was accompanied by great physical freedom of movement. They displayed an inherent disposition to extensive emigration. "Without aiming at universal conquest, they developed (if we may use the word) a remarkable catholicity of character, and a singular power of adaptation to those whom they called Barbarians. In this respect they were strongly contrasted with the Egyptians, whose immemorial civilization was confined to the long valley which extended from the cataracts to the mouth of the Nile. The Hellenic tribes, on the other hand, though they despised the foreigners, were never unwilling to visit them and to cultivate their acquaintance. At the earliest period at which history enables us to discover them, we see them moving about in their ships on the shores and among the islands of their native seas; and, three or four centuries before the Christian era, Asia Minor, beyond which the Persians had not been permitted to advance, was bordered by a fringe of Greek colonies; and lower Italy, when the Roman Republic was just becoming conscious of its strength, had received the name of Greece itself. To all these places they carried their arts and literature, their philosophy, their mythology, and their amusements.... They were gradually taking the place of the Phœnicians in the empire of the Mediterranean. They were, indeed, less exclusively mercantile than those old discoverers.

Their voyages were not so long. But their influence on general civilization was greater and more permanent. The earliest ideas of scientific navigation and geography are due to the Greeks. The later Greek travellers, Pausanias and Strabo, are our best sources of information on the topography of St. Paul's journeys.

"With this view of the Hellenic character before us, we are prepared to appreciate the vast results of Alexander's conquests. He took the meshes of the net of Greek civilization which were lying in disorder on the edge of the Asiatic shore, and spread them over all the countries he traversed in his wonderful campaigns. The East and the West were suddenly brought together. Separate tribes were united under a common government. New cities were built as the centres of political life. New lines of communication were opened as the channels of commercial activity. The new culture penetrated the mountain ranges of Pisidia and Lycaonia. The Tigris and Euphrates became Greek rivers. The language of Athens was heard among the Jewish colonies of Babylonia, and a Grecian Babylon was built by the conqueror in Egypt, and called by his name.

"The empire of Alexander was divided, but the effects of his campaigns and policy did not cease. The influence of these fresh elements of social life was rather increased by being brought into independent action within the sphere of distinct kingdoms. Our attention is particularly directed to two of the monarchical lines which descended from Alexander's generals--the Ptolemies, or the Greek kings of Egypt, and the Seleucidæ, or the Greek kings of Syria. Their respective capitals, Alexandria and Antioch, became the metropolitan centres of commercial and civilized life in the East." ⁸⁵⁴ Antioch was for ages the home of science and philosophy. Here the religious opinions of the East and the West were blended and mutually modified. Here it was discovered by the heathen mind that a new religion had appeared, and a new revelation had been given. ⁸⁵⁵ In Alexandria all nations were invited to exchange their commodities and, with equal freedom, their opinions. The representatives of all religions met here. "Beside the Temple of Jupiter there rose the white marble Temple of Serapis, and close at hand stood the synagogue of the Jews." The Alexandrian library contained all the treasures of ancient culture, and even a copy of the Hebrew Scriptures.

Footnote 854: [\(return\)](#) Conybeare and Howson, "Life and Epistles of St. Paul," vol. i. pp. 8-10.

Footnote 855: [\(return\)](#) Acts, xi. 26.

The spread of the Greek *language* was one of the most important services which the cities of Antioch and Alexandria rendered to Christianity. The Greek tongue is intimately connected with the whole system of Christian doctrine.

This language, which, in symmetry of structure, in flexibility and compass of expression, in exactness and precision, in grace and elegance, exceeds every other language, became the language of theology. Next in importance to the inspiration which communicates the superhuman thought, must be the gradual development of the language in which the thought can clothe itself. That development by which the Greek language became the adequate vehicle of Divine thought, the perfect medium of the mature revelation of truth contained in the Christian Scriptures, must be regarded as the subject of a Divine providence. Christianity waited for that development, and it awaited Christianity. "The Greek tongue became to the Christian more than it had been to the Roman or the Jew. The mother-tongue of Ignatius at Antioch was that in which Philo composed his treatises at Alexandria, and which Cicero spoke at Athens. It is difficult to state in a few words the important relation which Alexandria, more especially, was destined to bear to the whole Christian Church." In that city, the Old Testament was translated into Greek; there the writings of Plato were diligently studied; there Philo, the Platonizing Jew, had sought to blend into one system the teachings of the Old Testament theology and the dialectic speculations of Plato. Numenius learns of Philo, and Plotinus of Numenius, and the ecstasy of Plotinus is the development of Philo's intuitions. A *theological language* by this means was developed, rich in the phrases of various schools, and suited to convey the spiritual revelation of Christian ideas to all the world. "It was not an accident that the New Testament was written in Greek, the language which can best express the highest thoughts and worthiest feelings of the intellect and heart, and which is adapted to be the instrument of education for all nations; nor was it an accident that the composition of these books and the promulgation of the Gospels were delayed till the instruction of our Lord, and the writings of his Apostles could be expressed in the dialect [of Athens and] of Alexandria." ⁸⁵⁶ This must be ascribed to the foreordination of Him who, in the history of nations and of civilizations, "worketh all things according to the counsel of his own will."

Footnote 856: [\(return\)](#) Conybeare and Howson, "Life and Epistles of St. Paul," vol. i. p. 10.

Now it is the doctrine of the best philologists that language is a *growth*. Gradually, and by combined efforts of successive generations, it has been brought to the perfection which we so much admire in the idioms of the Bible, the poetry of Homer, Dante, and Shakspeare, and the prose compositions of Demosthenes, Cicero, Johnson, and Macaulay. The material or root-element of language may have been the product of mental instinct, or perhaps the immediate gift of God by revelation; but the formal element must have been the creation of thought, and the result of rational combination. Language is really the incarnation of thought; consequently the growth of a language, its affluence, comprehension, and fullness must depend on the vigor and activity of thought, and the acquisition of general ideas. Language is thus the best index of intellectual progress, the best standard of the intellectual attainment of an age or nation. The language of barbaric tribes is exceedingly simple and meagre; the paucity of general terms

clearly indicating the absence of all attempts at classification and all speculative thought. Whilst the language of educated peoples is characterized by great fullness and affluence of terms, especially such as are expressive of general notions and abstract ideas. All grammar, all philology, all scientific nomenclature are thus, in fact, *psychological deposits*, which register the progressive advancement of human thought and knowledge in the world of the mind, as the geological strata bear testimony to the progressive development of the material world. "Language," says Trench, "is fossil poetry, fossil history," and, we will add, fossil philosophy. Many a single word is a concentrated poem. The record of great social and national revolutions is embalmed in a single term. [857](#) And the history of an age of philosophic thought is sometimes condensed and deposited in one imperishable word. [858](#)

Footnote 857: [\(return\)](#) See Trench "On the Study of Words," p. 20, where the word "frank" is given as an illustration.

Footnote 858: [\(return\)](#) For example, the κόσμος of the Pythagoreans, the εἰδη of the Platonists, and the ἀταραξία of the Stoics.

If, then, language is the creation of thought, the sensible vesture with which it clothes itself, and becomes, as it were, incarnate--if the perfection and efficiency of language depends on the maturity and clearness of thought, we conclude that the wonderful adequacy and fitness of the Greek language to be the vehicle of the Divine thought, the medium of the most perfect revelation of God to men, can only be explained on the assumption that the ages of philosophic thought which, in Greece, preceded the advent of Christianity, were under the immediate supervision of a providence, and, in some degree, illuminated by the Spirit of God.

Greek philosophy must therefore have fulfilled a propædeutic office for Christianity. "As it had been intrusted to the Hebrews to preserve and transmit the heaven-derived element of the Monotheistic religion, so it was ordained that, among the Greeks, all seeds of human culture should unfold themselves in beautiful harmony, and then Christianity, taking up the opposition between the divine and human, was to unite both in one, and show how it was necessary that both should co-operate to prepare for the appearance of itself and the unfolding of what it contains." [859](#) During the period of Greek philosophy which preceded the coming of Christ, human reason, unfolding itself from beneath, had aspired after that knowledge of divine things which is from above. It had felt within itself the deep-seated consciousness of God--the sporadic revelation of Him "who is not far from any one of us"--the immanent thought of that Being "in whom we live and move and are," and it had striven by analysis and definition to attain a more distinct and logical apprehension. The heart of man had been stirred with "the feeling after God"--the longing for a clearer sense of the divine, and had struggled to attain, by abstraction or by ecstasy, a more immediate communion with God. Man had been conscious of an imperative obligation to conform to the will of the great Supreme, and he sought to interpret more clearly the utterances of conscience as to what duty was. He had felt the sense of sin and guilt, and had endeavored to appease his conscience by expiatory offerings, and to deliver himself from the power of sin by intellectual culture and moral discipline. And surely no one, at all familiar with the history of that interesting epoch in the development of humanity, will have the hardihood to assert that no steps were taken in the right direction, and no progress made towards the distant goal of human desire and hope. The language, the philosophy, the ideals of moral beauty and excellence, the noble lives and nobler utterances of the men who stand forth in history as the representatives of Greek civilization, all attest that their noble aspiration and effort did not end in ignominious failure and utter defeat. It is true they fell greatly beneath the realization of even their own moral ideals, and they became painfully conscious of their moral weakness, as men do even in Christian times. They learned that, neither by intellectual abstraction, nor by ecstasy of feeling, could they lift themselves to a living, conscious fellowship with God. The sense of guilt was unrelieved by expiations, penances, and prayers. And whilst some cultivated a proud indifference, a Stoical apathy, and others sank down to Epicurean ease and pleasure, there was a noble few who longed and hoped with increasing ardor for a living Redeemer, a personal Mediator, who should "stand between God and man and lay his hand on both." Christ became in some dim consciousness "the Desire of Nations," and the Moral Law became even to the Greek as well as the Jew "a school-master to lead them to Him."

Footnote 859: [\(return\)](#) Neander's "Church History," vol. i. p. 4.

The arrival of Paul at Athens, in the close of this brilliant period of Greek philosophy, now assumes an aspect of deeper interest and profounder significance. It was a grand climacteric in the life of humanity--an epoch in the moral and religious history of the world. It marked the consummation of a periodic dispensation, and it opened a new era in that wonderful progression through which an overruling Providence is carrying the human race. As the coming of the Son of God to Judea in the ripeness of events--"the fullness of time"--was the consummation of the Jewish dispensation, and the event for which the Jewish age had been a preparatory discipline, so the coming of a Christian teacher to Athens, in the person of "the Apostle of the Gentiles," was the *terminus ad quem* towards which all the phases in the past history of philosophic thought had looked, and for which they had prepared. Christianity was brought to Athens--brought into contact with Grecian philosophy at the moment of its exhaustion--at the moment when, after ages of unwearied effort, it had become conscious of its weakness, and its comparative failure, and had abandoned many questions in despair. Greek philosophy had therefore its place in the plan of Divine Providence. It had a mission to the world; that mission was now fulfilled. If it had laid any foundation in the Athenian mind on which the Christian system could plant its higher truths--if it

473 had raised up into the clearer light of consciousness any of those *ideas* imbedded in the human reason which are germane to Christian truth--if it had revealed more fully the wants and instincts of the human heart, or if it had attained the least knowledge of eternal truth and immutable right, upon this Christianity placed its *imprimatur*. And at those points where human reason had been made conscious of its own inefficiency, and compelled to own its weakness and its failure, Christianity shed an effulgent and convincing light.

Therefore the preparatory office of Greek religion and Greek philosophy is fully recognized by Paul in his address to the Athenians. He begins by saying that the observations he had made enabled him to bear witness that the Athenians were indeed, in every respect, "a God-fearing people;"--that the God whom they knew so imperfectly as to designate Him "the Unknown," but whom "they worshipped," was the God he worshipped, and would now more fully declare to them. He assures them that their past history, and their present geographical position, had been the object of Divine foreknowledge and determination. "He hath determined beforehand the times of each nation's existence, and fixed the geographical boundaries of their habitation," all with this specific design, that they might "seek after," "feel after," and "find the Lord," who had never been far from any one of them. He admits that their poet-philosophers had risen to a lofty apprehension of "the Fatherhood of God," for they had taught that "we are all his offspring;" and he seems to have felt that in asserting the common brotherhood of our race, he would strike a chord of sympathy in the loftiest school of Gentile philosophy. He thus "recognized the Spirit of God brooding over the face of heathenism, and fructifying the spiritual element in the heart even of the natural man. He feels that in these human principles there were some faint adumbrations of the divine, and he looked for their firmer delineation to the figure of that gracious Master, higher and holier than man, whom he contemplated in his own imagination, and whom he was about to present to them." [860](#)

Footnote 860: [\(return\)](#) Merivale's "Conversion of the Roman Empire," p. 78.

474 This function of ancient philosophy is distinctly recognized by many of the greatest of the Fathers, as Justin, Clement, Origen, Augustine, and Theodoret. Justin Martyr believed that a ray of the Divine Logos shone on the mind of the heathen, and that the human soul instinctively turned towards God as the plant turns towards the sun. "Every race of men participated in the Word. And they who lived with the Word were Christians, even if they were held to be godless; as, for example, among the Greeks, Socrates and Heraclitus, and those like them." [861](#) Clement taught that "philosophy, before the coming of the Lord, was necessary to the Greeks for righteousness; and now it proved useful for godliness, being a sort of preliminary discipline for those who reap the fruits of faith through demonstration.... Perhaps we may say that it was given to the Greeks with this special object, for it brought the Greek nation to Christ as the Law brought the Hebrews." [862](#) "Philosophy was given as a peculiar testament to the Greeks, as forming the basis of the Christian philosophy." [863](#) Referring to the words of Paul, Origen says, the truths which philosophers taught were from God, for "God manifested these to them, and all things that have been nobly said." [864](#) And Augustine, whilst deprecating the extravagant claims made for the great Gentile teachers, allows "that some of them made great discoveries, so far as they received help from heaven; whilst they erred as far as they were hindered by human frailty." [865](#) They had, as he elsewhere observes, "a distant vision of the truth, and learnt, from the teaching of nature, what prophets learnt from the spirit." [866](#) In addressing the Greeks, Theodoret says, "Obey your own philosophers; let them be your initiators; for they announced beforehand our doctrines." He held that "in the depths of human nature there are characters inscribed by the hand of God." And that "if the race of Abraham received the divine law, and the gift of prophecy, the God of the universe led other nations to piety by natural revelation, and the spectacle of nature." [867](#)

475 In attempting to account for this partial harmony between Philosophy and Revelation, we find the Patristic writers adopting different theories. They are generally agreed in maintaining some original connection, but they differ as to its immediate source. Some of them maintained that the ancient philosophers derived their purest light from the fountain of Divine Revelation. The doctrines of the Old Testament Scriptures were traditionally diffused throughout the West before the rise of philosophic speculation. If the theistic conceptions of Plato are superior to those of Homer it is accounted for by his (hypothetical) tour of inquiry among the Hebrew nation, as well as his Egyptian investigations. Others maintained that the similarity of views on the character of the Supreme Being and the ultimate destination of humanity which is found in the writings of Plato and the teachings of the Bible is the consequence of *immediate* inspiration. Origen, Jerome,

Eusebius, Clement, do not hesitate to affirm that Christ himself revealed his own high prerogatives to the gifted Grecian. From this hypothesis, however, the facts of the case compel them to make some abatements. In the mid-current of this divine revelation are found many acknowledged errors, which it is impossible to ascribe to the celestial illuminator. Plato, then, was *partially* inspired, and clouded the heavenly beam with the remaining grossnesses of the natural sense. ⁸⁶⁸ Whilst a third, and more reasonable, hypothesis was maintained by others. They regarded man as "the offspring and image of the Deity," and maintained there must be a correlation of the human and divine reason, and, consequently, of all discovered truth to God. Therefore they expected to find some traces of connection and correspondence between Divine and human thought, and some kindred ideas in Philosophy and Revelation. "Ideas," says St. Augustine, "are the primordial forms, as it were, the immutable reason of things; they are not created, they are eternal, and always the same: they are contained in the Divine intelligence and without being subject to birth and death, they are *types* according to which is formed every thing that is born and dies." The copies of these archetypes are seen in nature, and are participated in by the reason of man; and there may therefore be some community of idea between man and God, and some relation between Philosophy and Christianity.

476

Footnote 868: [\(return\)](#) Butler's "Lectures on Ancient Philosophy," vol. ii. p. 41.

The various attempts which have been made to trace the elevated theism and morality of Socrates and Plato to Jewish sources have signally failed. Justin Martyr and Tertullian claim that the ancient philosophers "borrowed from the Jewish prophets." Pythagoras and Plato are supposed to have travelled in the East in quest of knowledge. ⁸⁶⁹ The latter is imagined to have had access to an existing Greek version of the Old Testament in Egypt, and a strange oversight in chronology brings him into personal intercourse with the prophet Jeremiah. A sober and enlightened criticism is compelled to pronounce all these statements as mere exaggerations of later times. ⁸⁷⁰ They are obviously mere suppositions by which over-zealous Christians sought to maintain the supremacy and authority of Scripture. The travels of Pythagoras are altogether mythical, the mere invention of Alexandrian writers, who believed that all wisdom flowed from the East. ⁸⁷¹ That Plato visited Egypt at all, rests on the single authority of Strabo, who lived at least four centuries after Plato; there is no trace in his own works of Egyptian research. His pretended travels in Phœnicia, where he gained from the Jews a knowledge of the true God, are more unreliable still. Plato lived in the fourth century before Christ (born B.C. 430), and there is no good evidence of the existence of a Greek version of the Old Testament before that of "the Seventy" (Septuagint), made by order of Ptolemy Philadelphus, B.C. 270. Jeremiah, the prophet of Israel, lived two centuries before Plato; consequently any personal intercourse between the two was simply impossible. Greek philosophy was unquestionably a development of Reason alone. ⁸⁷²

477

Some of the ablest Christian scholars and divines of modern times, as Cudworth, Neander, Trench, Pressensé, Merivale, Schaff, after the most careful and conscientious investigation, have come to this conclusion, that Greek philosophy fulfilled a preparatory mission for Christianity. The general conclusions they reached are forcibly presented in the words of Pressensé:

It would be difficult to overstate the importance of Greek philosophy when viewed as a preparation to Christianity. Disinterested pursuit of truth is always a great and noble task. The imperishable want of the human mind to go back to first principles, suffices to prove that this principle is divine. We may abuse speculation; we may turn it into one of the most powerful dissolvents of moral truths; and the defenders of positive creeds, alarmed by the attitude too often assumed by speculation in the presence of religion, have condemned it as mischievous in itself, confounding in their unjust prejudice its use and its abuse. But, for all serious thinkers, philosophy is one of the highest titles of nobility that humanity possesses: and when we consider its mission previous to Christianity, we feel convinced that it had its place in the Divine plan. It was not religion in itself that philosophy, through its noblest representatives, combated, but polytheism. It dethroned the false gods. Adopting what was best in paganism, philosophy employed it as an instrument to destroy paganism, and thus clear the way for definite religion. Above all, it effectually contributed to purify the idea of Divinity, though this purification was but an approximation. If at times it caught glimpses of the highest spiritualism, yet it was unable to protect itself against the return and reaction of Oriental dualism. In spite of this imperfection, which in its way served the cause of Christianity by demonstrating the necessity of revelation, men like Socrates and Plato fulfilled amongst their people a really sublime mission.

478

They were to the heathen world the great prophets of the human conscience, which woke up at their call. And the awakening of the moral sense was at once the glory and ruin of philosophy; for conscience, once aroused, could only be satisfied by One greater than they, and must necessarily reject all systems which proved themselves insufficient to realize the moral idea they had evoked.

"But to perish thus, and for such a cause, is a high honor to a philosophy. It was this made the philosophy of Greece, like the Hebrew laws, though in an inferior sense, a schoolmaster that led to Jesus Christ, according to the expression of Clement of Alexandria. Viewed in this light, it was a true gift of God, and had, too, the shadow of good things to come, awakening the presentiment and desire of them, though it could not communicate them. Nor can we conceive a better way to prepare for the advent of Him who was to be 'the Desire of Nations' before becoming their Saviour." [873](#)

Footnote 873: [\(return\)](#) "Religions before Christ," pp. 101, 102.

479

In previous chapters we have endeavored to sketch the history of the development of metaphysical thought, of moral feeling and idea, and of religious sentiment and want, which characterized Grecian civilization. In now offering a brief *résumé* of the history of that development, with the design of more fully exhibiting the preparatory office it fulfilled for Christianity, we shall assume that the mind of the reader has already been furnished and disciplined by preparatory principles. He can scarce have failed to recognize that this development obeyed a *general law*, however modified by exterior and geographical conditions; the same law, in fact, which governs the development of all individual finite minds, and which law may be formulated thus:--*All finite mind develops itself, first, in instinctive determinations and spontaneous faiths; then in rising doubt, and earnest questioning, and ill-directed inquiry; and, finally, in systematic philosophic thought, and rational belief.* These different stages succeed each other in the individual mind. There is, first, the simplicity and trust of childhood; secondly, the undirected and unsettled force of youth; and, thirdly, the wisdom of mature age. And these different stages have also succeeded each other in the universal mind of humanity. There has been, 1st. *The era of spontaneous beliefs*--of popular and semi-conscious theism, morality, and religion, 2d. *The transitional age*--the age of doubt, of inquiry, and of ill-directed mental effort, ending in fruitless sophism, or in skepticism. 3d. *The philosophic or conscious age*--the age of reflective consciousness, in which, by the analysis of thought, the first principles of knowledge are attained, the necessary laws of thought are discovered, and man arrives at positive convictions, and rational beliefs. In the history of Grecian civilization, the first is the Homeric age; the second is the pre-Socratic age, ending with the Sophists; and the third is the grand Socratic period. History is thus the development of the fundamental elements of humanity, according to an established law, and under conditions which are ordained and supervised by the providence of God. "The unity of civilization is in the unity of human nature; its varieties, in the variety of the elements of humanity," which elements have been successively developed in the course of history. All that is fundamental in human nature passes into the movement of civilization. "I say all that is fundamental; for it is the excellency of history to take out, and throw away all that is not necessary and essential. That which is individual shines for a day, and is extinguished forever, or stops at biography." Nothing endures, except that which is fundamental and true--that which is vital, and organizes itself, develops itself, and arrives at an historical existence. "Therefore as human nature is the matter and basis of history, history is, so to speak, the judge of human nature, and historical analysis is the counter-proof of psychological analysis." [874](#)

Footnote 874: [\(return\)](#) Cousin's "Lectures on the History of Philosophy," vol. i. p. 31.

480

Nature, individual mind, and collective humanity, all obey the law of progressive development; otherwise there could be no history, for history is only of that which has movement and progress. Now, all progress is from the indefinite to the definite, from the inorganic to the organic and vital, from the instinctive to the rational, from a dim, nebulous self-feeling to a high reflective consciousness, from sensuous images to abstract conceptions and spiritual ideas. This progressive development of nature and humanity has not been a series of creations *de novo*, without any relation, in matter or form, to that which preceded. All of the present was contained in embryonic infoldment in the past, and the past has contributed its results to the present. [875](#) The present, both in nature, and history, and civilization, is, so to speak, the aggregate and sum-total of the past. As the natural history of the earth may now be read in the successive strata and deposits which form its crust, so the history of humanity may be read in the successive deposits of thought and language, of philosophy and art, which register its gradual progression. As the paleontological remains imbedded in the rocks present a succession of organic types which gradually improve in form and function, from the first sea-weed to the palm-tree, and from the protozoa to the highest vertebrate, so the history of ancient philosophy presents a gradual progress in metaphysical, ethical, and theistic conceptions, from the unreflective consciousness of the Homeric age, to the high reflective consciousness of the Platonic period. And as all the successive forms of life in pre-Adamic ages were a preparation for and a prophecy of the coming of man, so the advancing forms of philosophic thought, during the grand ages of Grecian civilization, were a preparation and a prophecy of the coming of the Son of God.

Footnote 875: [\(return\)](#) The writer would not be understood as favoring the idea that this development is simply the result of "natural law." The connection between the past and the present is not a material, but a *mental* connection. It is the bond of Creative Thought and Will giving to organic forces a foreseen direction towards the working out of a grand plan. See Agassiz, "Contributions to Natural History," vol. i. pp. 9, 10; Duke of Argyll, "Reign of Law," ch. v.

We shall now endeavor to trace this process of gradual preparation for Christianity in the Greek mind--

(i.) *In the field of THEISTIC conceptions.*

(ii.) *In the department of ETHICAL ideas and principles.*

(iii.) *In the region of RELIGIOUS sentiment.*

In the field of theistic conception the propædeutic office of Grecian philosophy is seen--

I. *In the release of the popular mind from Polytheistic notion, and the purifying and spiritualizing of the Theistic idea.*

The idea of a Supreme Power, a living Personality, energizing in nature, and presiding over the affairs of men, is not the product of philosophy. It is the immanent, spontaneous thought of humanity. It has, therefore, existed in all ages, and revealed itself in all minds, even when it has not been presented to the understanding as a definite conception, and expressed by human language in a logical form. It is the thought which instinctively arises in the opening reason of childhood, as the dim and shadowy consciousness of a living mind behind all the movement and change of the universe. Then comes the period of doubt, of anxious questioning, and independent inquiry. The youth seeks to account to himself for this peculiar sentiment. He turns his earnest gaze towards nature, and through this living vesture of the infinite he seeks to catch some glimpses of the living Soul. In some fact appreciable to sense, in some phenomenon he can see, or hear, or touch, he would fain grasp the cause and reason of all that is. But in this field of inquiry and by this method he finds only a "receding God," who falls back as he approaches, and is ever still beyond; and he sinks down in exhaustion and feebleness, the victim of doubt, perhaps despair. Still the sentiment of the Divine remains, a living force, in the centre of his moral being. He turns his scrutinizing gaze within, and by self-reflection seeks for some rational ground for his instinctive faith. There he finds some convictions he can not doubt, some ideas he can not call in question, some thoughts he is compelled to think, some necessary and universal principles which in their natural and logical development ally him to an unseen world, and correlate and bind him fast to an invisible, but real God. The more his mind is disciplined by abstract thought, the clearer do these necessary and universal principles become, and the purer and more spiritual his ideas of God. God is now for him the First Principle of all principles, the First Truth of all truths; the Eternal Reason, the Immutable Righteousness, the Supreme Good. The normal and healthy development of reason, the maturity of thought, conduct to the recognition of the true God.

482

And so it has been in the universal consciousness of our race as revealed in history. There was first a period of spontaneous and unreflective Theism, in which man felt the consciousness of God, but could not or did not attempt a rational explanation of his instinctive faith. He saw God in clouds and heard Him in the wind. His smile nourished the corn, and cheered the vine. The lightnings were the flashes of his vengeful ire, and the thunder was his angry voice. But the unity of God was feebly grasped, the rays of the Divinity seemed divided and scattered amidst the separate manifestations of power, and wisdom, and goodness, and retribution, which nature presented. Then plastic art, to aid and impress the imagination, created its symbols of these separate powers and principles, chiefly in human form, and gods were multiplied. But all this polytheism still rested on a dim monotheistic background, and all the gods were subordinated to Zeus--"the Father of gods and men." Humanity had still the sense of the dependence of all finite being on one great fountain-head of Intelligence and Power, and all the "generated gods" were the subjects and ministers of that One Supreme. This was the childhood of humanity so vividly represented in Homeric poetry.

Then came a period of incipient reflection, and speculative thought, in which the attention of man is drawn outward to the study of nature, of which he can yet only recognize himself as an integral part. He searches for some ἀρχή--some first principle, appreciable to sense, which in its evolution shall furnish an explanation of the problem of existence. He tries the hypothesis of "water" then of "air" then of "fire" as the primal element, which either is itself, or in some way infolds within itself an informing Soul, and out of which, by vital transformation, all things else are produced. But here he failed to find an adequate explanation; his reason was not satisfied. Then he sought his first principle in "numbers" as symbols, and, in some sense, as the embodiment of the rational conceptions of order, proportion, and harmony--God is the original *μονάς*--unity--One;--or else he sought it in purely abstract "ideas" as unity, infinity, identity, and all things are the evolution of an eternal thought, one and identical, which is God. And here again he fails. Then he supposes an unlimited *μῦγμα*--a chaotic mixture of elements existing from eternity, which was separated, combined, and organized by the energy of a Supreme Mind, the *νοῦς* of Anaxagoras. But he holds not firmly to this great principle; "he recurs again to air, and ether, and water, as *causes* for the ordering of all things." ⁸⁷⁶ And after repeated attempts and failures, he is disappointed in his inquiry, and falls a prey to doubt and skepticism. This was the early youth of our humanity, the period that opens with Thales and ends with the Sophists.

483

Footnote 876: [\(return\)](#) Thus Socrates complains of Anaxagoras. See "Phædo," § 108.

The problem of existence still waits for and demands a solution. The heart of man, also, still cries out for the living God. The Socratic maxim, "know thyself," introverts the mental gaze, and self-reflection now becomes the method of philosophy. The Platonic analysis of thought reveals elements of knowledge which are not derived from the outer world. There are universal and necessary principles revealed in consciousness which, in their natural and logical development, transcend consciousness, and furnish the cognition of a world of Real Being, beyond the world of

sense. There are absolute truths which bridge the chasm between the seen and the unseen, the fleeting and the permanent, the finite and the infinite, the temporal and the eternal. There are necessary laws of thought which are also found to be laws of things, and which correlate man to a living, personal, righteous Lord and Lawgiver. From absolute ideas Plato ascends to an *absolute Being*, the author of all finite existence. From absolute truths to an *absolute Reason*, the foundation and essence of all truth. From the principle of immutable right to an *absolutely righteous Being*. From the necessary idea of the good to a being of *absolute Goodness*--that is, to *God*. This is the maturity of humanity, the ripening manhood of our race which was attained in the Socratic age.

The inevitable tendency of this effort of speculative thought, spread over ages, and of the intellectual culture which necessarily resulted, was to undermine the old polytheistic religion, and to purify and elevate the theistic conception. The school of Elea rejected the gross anthropomorphism of the Homeric theology. Xenophanes, the founder of the school, was a believer in

" *One God*, of all beings divine and human the greatest,
Neither in body alike unto mortals, neither in ideas."

And he repels with indignation the anthropomorphic representations of the Deity.

"But men foolishly think that gods are born as men are,
And have, too, a dress like their own, and their voice, and their figure:
But if oxen and lions had hands like ours, and fingers,
Then would horses like unto horses, and oxen to oxen,
Paint and fashion their god-forms, and give to them bodies
Of like shape to their own, as they themselves too are fashioned." [877](#)

Empedocles also wages uncompromising war against all representations of the Deity in human form--

"For neither with head adjusted to limbs, like the human,
Nor yet with two branches down from the shoulders outstretching,
Neither with feet, nor swift-moving limbs,....
He is, wholly and perfectly, *mind*, ineffable, holy,
With rapid and swift-glancing thought pervading the world." [878](#)

Footnote 877: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. i. pp. 431, 432.

Footnote 878: [\(return\)](#) Ibid., vol. i. pp. 495, 496.

When speaking of the mythology of the older Greeks, Socrates maintains a becoming prudence; he is evidently desirous to avoid every thing which would tend to loosen the popular reverence for divine things. [879](#) But he was opposed to all anthropomorphic conceptions of the Deity. His fundamental position was that the Deity is the Supreme Reason, which is to be honored by men as the source of all existence and the end of all human endeavor. Notwithstanding his recognition of a number of subordinate divinities, he held that the Divine is one, because Reason is one. He taught that the Supreme Being is the immaterial, infinite Governor of all; [880](#) that the world bears the stamp of his intelligence, and attests it by irrefragable evidence; [881](#) and that he is the author and vindicator of all moral laws. [882](#) So that, in reality, he did more to overthrow polytheism than any of his predecessors, and on that account was doomed to death.

Footnote 879: [\(return\)](#) Xenophon, "Memorabilia," bk. i. ch. iii. § 3.

Footnote 880: [\(return\)](#) Id., ib., bk. i. ch. iv. §§ 17, 18.

Footnote 881: [\(return\)](#) Id., ib., bk. i. ch. i. § 19.

Footnote 882: [\(return\)](#) Ritter's "History of Ancient Philosophy," vol. ii. p. 63; Butler's "Lectures on Ancient Philosophy," vol. i. p. 359.

It was, however, the matured dialectic of Plato which gave the death-blow to polytheism. "Plato, the poet-philosopher, sacrificed Homer himself to monotheism. We may measure the energy of his conviction by the greatness of the sacrifice. He could not pardon the syren whose songs had fascinated Greece, the fresh brilliant poetry that had inspired its religion. He crowned it with flowers, but banished it, because it had lowered the religious ideal of conscience." He was sensible of the beauty of the Homeric fables, but he was also keenly alive to their religious falsehood, and therefore he excluded the poets from his ideal republic. In the education of youth, he would forbid parents and teachers repeating "the stories which Hesiod and Homer and the other poets told us." And after instancing a number of these stories "which deserve the gravest condemnation," he enjoins that God must be represented as he is in reality. "God," says he, "is, beyond all else, good in reality, and therefore so to be represented;" "he can not do evil, or be the cause of evil;" "he is of simple essence, and can not change, or be the subject of change;" "there is no imperfection in the beauty or goodness of God;" "he is a God of truth, and can not lie;" "he is a being of perfect simplicity and truth in deed and word." [883](#) The reader can not fail to recognize the close resemblance between the language of Plato and the language of inspiration.

The theistic conception, in Plato, reaches the highest purity and spirituality. God is "*the Supreme Mind*," "incorporeal," "unchangeable," "infinite," "absolutely perfect," "essentially good," "unoriginated and eternal." He is "the Father and Maker of the world," "the efficient Cause of all things," "the Monarch and Ruler of the world," "the Sovereign Mind that orders all things," and "pervades all things." He is "the sole principle of all things," "the beginning of all truth," "the fountain of all law and justice," "the source of all order and beauty;" in short, He is "the beginning, middle, and end of all things." [884](#)

Footnote 883: [\(return\)](#) "Republic," bk. ii. §§ 18-21.

Footnote 884: [\(return\)](#) See *ante*, ch. xi. pp. 377, 378, where the references to Plato's writings are given.

487 Aristotle continued the work of undermining polytheism. He defines God as "the Eternal Reason"--the Supreme Mind. "He is the immovable cause of all movement in the universe, the all-perfect principle. This principle or essence pervades all things. It eternally possesses perfect happiness, and its happiness consists in energy. This primeval mover is immaterial, for its essence is energy--it is pure thought, thought thinking itself--the thought of thought." [885](#) Polytheism is thus swept away from the higher regions of the intelligence. "For several to command," says he, "is not good, there should be but one chief. A tradition, handed down from the remotest antiquity, and transmitted under the veil of fable, says that all the stars are gods, and that the Divinity embraces the whole of nature. And round this idea other mythical statements have been agglomerated, with a view to influencing the vulgar, and for political and moral expediency; as for instance, they feigned that these gods have human shape, and are like certain of the animals; and other stories of the kind are added on. Now, if any one will separate from all this the first point alone, namely, that they thought the first and deepest grounds of existence to be Divine, he may consider it a divine utterance." [886](#) The popular polytheism, then, was but a perverted fragment of a deeper and purer "Theology." This passage is a sort of obituary of polytheism. The ancient glory of paganism had passed away. Philosophy had exploded the old theology. Man had learned enough to make him renounce the ancient religion, but not enough to found a new faith that could satisfy both the intellect and the heart. "Wherefore we are not to be surprised that the grand philosophic period should be followed by one of incredulity and moral collapse, inaugurating the long and universal *decadence* which was, perhaps, as necessary to the work of preparation, as was the period of religious and philosophic development."

Footnote 885: [\(return\)](#) "Metaphysics," bk. xii.

Footnote 886: [\(return\)](#) "Metaphysics," bk. xi. ch. viii. § 19.

The preparatory office of Greek philosophy in the region of speculative thought is seen--

2. *In the development of the Theistic argument in a logical form.*--Every form of the theistic proof which is now employed by writers on natural theology to demonstrate the being of God was apprehended, and logically presented, by one or other of the ancient philosophers, excepting, perhaps, the "moral argument" drawn from the facts of conscience.

(I.) *The ÆTIOLOGICAL proof*, or the argument based upon the principle of causality, which may be presented in the following form:

All genesis or becoming supposes a permanent and uncaused Being, adequate to the production of all phenomena.

The sensible universe is a perpetual genesis, a succession of appearances: it is "always becoming, and never really is."

Therefore, it must have its cause and origin in a permanent and unoriginated Being, adequate to its production.

488 The major premise of this syllogism is a fundamental principle of reason--a self-evident truth, an axiom of common sense, and as such has been recognized from the very dawn of philosophy. Ἀδύνατον γίνεσθαι τι ἐκ μηδενὸς προϋπάρχοντος--*Ex nihilo nihil*--*Nothing which once was not, could ever of itself come into being.* Nothing can be made or produced without an efficient cause, is the oldest maxim of philosophy. It is true that this maxim was abusively employed by Democritus and Epicurus to disprove a Divine creation of any thing out of nothing, yet the great body of ancient philosophers, as Pythagoras, Xenophanes, Parmenides, Zeno, Anaxagoras, Empedocles, Plato, and Aristotle, regarded it as the announcement of an universal conviction, that nothing can be produced without an efficient cause;--order can not be generated out of chaos, life out of dead matter, consciousness out of unconsciousness, reason out of unreason. A first principle of life, of order, of reason, must have existed anterior to all manifestations of order, of life, of intelligence, in the visible universe. It was clearly in this sense that Cicero understood this great maxim of the ancient philosophers of Greece. With him "*De nihilo nihil fit*" is equivalent to "*Nihil sine causa*"--nothing exists without a cause. This is unquestionably the form in which that fundamental law of thought is stated by Plato: "Whatever is generated is necessarily generated from a certain cause, for it is wholly impossible that any thing should be generated without a cause." [887](#) And the efficient cause is defined as "a power whereby that which did not previously exist was afterwards made to be." [888](#) It is scarcely needful to remark that Aristotle,

the scholar of Plato, frequently lays it down as a postulate of reason, "that we admit nothing without a cause." [889](#) By an irresistible law of thought, "*all phenomena present themselves to us as the expression of power*, and refer us to a causal ground whence they issue."

Footnote 887: [\(return\)](#) "Timæus," ch. ix.; also "Philebus," § 45.

Footnote 888: [\(return\)](#) "Sophist," § 109.

Footnote 889: [\(return\)](#) "Post. Analytic," bk. ii. ch. xvi.; "Metaphysics," bk. i. ch. i. § 3.

489

The major premise of this syllogism is a fact of observation. To the eye of sense and sensible observation, to scientific induction even in its highest generalizations, the visible universe presents nothing but a history and aggregation of phenomena--a succession of appearances or effects having more or less resemblance. It is a ceaseless flow and change, "a generation and corruption," "a becoming, but never really *is*;" it is never in two successive moments the *same*. [890](#) All our cognitions of sameness, uniformity, causal connection, permanent Being, real Power, are purely rational conceptions *given in thought*, supplied by the spontaneous intuition of reason as the correlative prefix to the phenomena observed. [891](#)

Footnote 890: [\(return\)](#) "Timæus," ch. ix.

Footnote 891: [\(return\)](#) Ibid.

Therefore the ancient philosophers concluded justly, there must be something ἀγέννητον--something which was never generated, something αὐτοφυής and αὐθυπόστατον--self-originated and self-existing, something ταύτόν and αἰώνιον--immutable and eternal, the object of rational apperception--which is the real ground and efficient cause of all that appears.

(2.) The COSMOLOGICAL proof, or the argument based upon the principle of order, and thus presented:

Order, proportion, harmony, are the product and expression of Mind.

The created universe reveals order, proportion, and harmony.

Therefore, the created universe is the product of Mind.

The fundamental law of thought which underlies this mode of proof was clearly recognized by Pythagoras. All harmony and proportion and symmetry is the result of *unity* evolving itself in and pervading *multiplicity*. Mind or reason is unity and indivisibility; matter is diverse and multiple. Mind is the determinating principle; matter is indeterminate and indefinite. Confused matter receives form, and proportion, and order, and symmetry, by the action and interpenetration of the spiritual and indivisible element. In presence of facts of order, the human reason instinctively and necessarily affirms the presence and action of Mind.

490

"Pythagoras had long devoted his intellectual adoration to the lofty idea of Order. To his mind it seemed as the presiding genius of the serene and silent world. He had from his youth dwelt with delight upon the eternal relations of space and number, in which the very idea of proportion seems to find its first and immediate development, until at length it seemed as if the whole secret of the universe was hidden in these mysterious correspondences. The world, in all its departments, moral and material, is a living arithmetic in its development, a realized geometry in its repose; it is a '*cosmos*' (for the word is Pythagorean), the expression of harmony, the manifestation to sense of everlasting order; and the science of *numbers* is the truest representation of its eternal laws." Therefore, argued Pythagoras and the Pythagoreans, as the reason of man can perceive the relations of an eternal order in the proportions of extension and number, the laws of proportion, and symmetry, and harmony must inhere in a Divine reason, an intelligent soul, which moves and animates the universe. The harmonies of the world which address themselves to the human mind must be the product of a Divine mind. The world, in its real structure, must be the image and copy of that divine proportion which the mind of man adores. It is the sensible type of the Divinity, the outward and multiple development of the Eternal Unity, the Eternal One--that is, God.

The same argument is elaborated by Plato in his philosophy of beauty. God is with him the last reason, the ultimate foundation, the perfect ideal of all beauty--of all the order, proportion, harmony, sublimity, and excellence which reigns in the physical, the intellectual, and the moral world. He is the "Eternal Beauty, unbegotten and imperishable, exempt from all decay as well as increase--the perfect--the Divine Beauty" [892](#) which is beheld by the pure mind in the celestial world.

Footnote 892: [\(return\)](#) "Banquet," § 35.

(3.) The Teleological proof, or the argument based upon the principle of intentionality or Final Cause, and is presented in the following form:

491

The choice and adaptation of means to the accomplishment of special ends supposes an intelligent purpose, a Designing Mind.

In the universe we see such choice and adaptation of means to ends.

Therefore, the universe is the product of an intelligent, personal Cause.

This is peculiarly the Socratic proof. He recognized the necessity and the irresistibility of the conviction that the choice and adaptation of means to ends is the effect of Purpose, the expression of Will. [893](#) There is an obviousness and a directness in this mode of argument which is felt by every human mind. In the "Memorabilia" Xenophon has preserved a conversation of Socrates with Aristodemus in which he develops this proof at great length. In reading the dialogue [894](#) in which Socrates instances the adaptation of our organization to the external world, and the examples of design in the human frame, we are forcibly reminded of the chapters of Paley, Whewell, and M'Cosh. Well might Aristodemus exclaim: "The more I consider it, the more it is evident to me that man must be the masterpiece of some great Artificer, carrying along with it infinite marks of the love and favor of Him who has thus formed it." The argument from Final Causes is pursued by Plato in the "Timæus;" and in Aristotle, God is the Final Cause of all things. [895](#)

Footnote 893: [\(return\)](#) "Canst thou doubt, Aristodemus, whether a disposition of parts like this (in the human body) should be the work of chance, or of wisdom and contrivance?"--"Memorabilia," bk. i. ch. iv.

Footnote 894: [\(return\)](#) "Memorabilia," bk. i. ch. iv.

Footnote 895: [\(return\)](#) Aristotle clearly recognizes that an end or final cause implies Intelligence. "The appearance of ends and means is a proof of Design."--"Nat. Ausc.," bk. ii. ch. viii.

(4.) The Ontological or Ideological proof, or the argument grounded on necessary and absolute ideas, which may be thrown into the following syllogism:

Every attribute or quality implies a subject, and absolute modes necessarily suppose an Absolute Being. Necessary and absolute truths or ideas are revealed in human reason as absolute modes.

Therefore universal, necessary, and absolute ideas are modes of the absolute subject--that is, God, the foundation and source of all truth.

This is the Platonic proof. Plato recognized the principle of substance (οὐσία--ὑποκείμενον), and therefore he proceeds in the "Timæus" to inquire for the real ground of all existence; and in the "Republic," for the real ground of all truth and certitude.

The universe consists of two parts, permanent existences and transient phenomena--being and genesis; the one eternally constant, the other mutable and subject to change; the former apprehended by the reason, the latter perceived by sense. For each of these there must be a principle, subject, or substratum--a principle or subject-matter, which is the ground or condition of the sensible world, and a principle or substance, which is the ground and reason of the intelligible world or world of ideas. The subject-matter, or ground of the sensible world, is "the receptacle" and "nurse" of forms, an "invisible species and formless receiver (which is not earth, or air, or fire, or water) which receives the immanence of the intelligible." [896](#) The subject or ground of the intelligible world is that in which ideal forms, or eternal archetypes inhere, and which impresses form upon the transitional element, and fashions the world after its own eternal models. This eternal and immutable substance is God, who created the universe as a copy of the eternal archetypes--the everlasting thoughts which dwell in his infinite mind.

Footnote 896: [\(return\)](#) "Timæus," ch. xxiv.

These copies of the eternal archetypes or models are perceived by the reason of man in virtue of its participation in the Ultimate Reason. The reason of man is the organ of truth; by an innate and inalienable right, it grasps unseen and eternal realities. The essence of the soul is akin to that which is real, permanent, and eternal;--*It is the offspring and image of God*; therefore it has a true communion with the realities of things, by virtue of this kindred and homogeneous nature. It can, therefore, ascend from the universal and necessary ideas, which are apprehended by the reason, to the absolute and supreme Idea, which is the attribute and perfection of God. When the human mind has contemplated any object of beauty, any fact of order, proportion, harmony, and excellency, it may rise to the notion of a quality common to all objects of beauty--from a single beautiful body to two, from two to all others; from beautiful bodies to beautiful sentiments, from beautiful sentiments to beautiful thoughts, until, from thought to thought, we arrive at the highest thought, which has no other object than the perfect, absolute, *Divine Beauty*. [897](#) When a man has, from the contemplation of instances of virtue, risen to the notion of a quality common to all these instances, this quality becomes the representative of an ineffable something which, in the sphere of immutable reality, answers to the conception in his soul. "At the extreme limits of the intellectual world is the *Idea of the Good*, which is perceived with difficulty, but, in fine, can not be perceived without concluding that it is the source of all that is beautiful and good; that in the visible world it produces light, and the star whence light directly comes; that in the invisible world it directly produces truth and intelligence." [898](#) This *absolute Good is God*.

Footnote 897: [\(return\)](#) "Banquet," § 34.

Footnote 898: [\(return\)](#) "Republic," bk. vii. ch. iii.

494 The order in which these several methods of proof were developed, will at once present itself to the mind of the reader as the natural order of thought. The first and most obvious aspect which nature presents to the opening mind is that of movement and change--a succession of phenomena suggesting the idea of *power*. Secondly, a closer attention reveals a resemblance of phenomena among themselves, a uniformity of nature--an order, proportion, and harmony pervading the *cosmos*, which suggest an *identity and unity of power and of reason*, pervading and controlling all things. Thirdly, a still closer inspection of nature reveals a wonderful adaptation of means to the fulfillment of special ends, of organs designed to fulfill specific functions, suggesting the idea of *purpose, contrivance, and choice*, and indicating that the power which moves and determines the universe is a *personal, thinking, and voluntary* agent. And fourthly, a profounder study of the nature of thought, an analysis of personal consciousness, reveals that there are necessary principles, ideas, and laws, which universally govern and determine thought to definite and immovable conceptions--as, for example, the principles of causality, of substance, of identity or unity, of order, of intentionality; and that it is only under these laws that we can conceive the universe. By the law of substance we are compelled to regard these ideas, which are not only laws of thought but also of things, as inherent in a subject, or Being, who made all things, and whose ideas are reflected in the reason of man. Thus from universal and necessary ideas we rise to the *absolute Idea*, from immutable principles to a *First Principle of all principles, a First Thought* of all thoughts--that is, to *God*. This is the history of the development of thought in the individual, and in the race--*cause, order, design, idea, being, GOD*.

CHAPTER XV.

THE PROPÆDEUTIC OFFICE OF GREEK PHILOSOPHY (*continued*).

"If we regard this sublime philosophy as a preparation for Christianity instead of seeking in it a substitute for the Gospel, we shall not need to overstate its grandeur in order to estimate its real value."--Pressensé.

"Plato made me to know the true God. Jesus Christ showed me the way to Him."--St. Augustine.

The preparatory office of Grecian philosophy is also seen in *the department of morals*.

I. *In the awakening and enthronement of Conscience as a law of duty, and the elevation and purification of the Moral Idea.*

496 The same law of evolution, which we have seen governing the history of speculative thought, may also be traced as determining the progress of ethical inquiry. In this department there are successive stages marked, both in the individual and the national mind. There is, first, the simplicity and trust of childhood, submitting with unquestioning faith to prescribed and arbitrary laws; then the unsettled and ill-directed force of youth, questioning the authority of laws, and asking reasons why this or that is obligatory; then the philosophic wisdom of riper years, recognizing an inherent law of duty, which has an absolute rightness and an imperative obligation. There is first a dim and shadowy apprehension of some lines of moral distinction, and some consciousness of obligation, but these rest mainly upon an outward law--the observed practice of others, or the command of the parent as, in some sense, the command of God. Then, to attain to personal convictions, man passes through a stage of doubt; he asks for a ground of obligation, for an authority that shall approve itself to his own judgment and reason. At last he arrives at some ultimate principles of right, some immutable standard of duty; he recognizes an inward law of conscience, and it becomes to him as the voice of God. He extends his analysis to history, and he finds that the universal conscience of the race has, in all ages, uttered the same behest. Should he live in Christian times, he discovers a wondrous harmony between the voice of God within the heart, and the voice of God within the pages of inspiration. And now the convention of public opinion, and the laws of the state, are revered and upheld by him, just so far as they bear the imprimatur of reason and of conscience--that is, of God.

This history of the normal development of the individual mind has its counterpart in the history of humanity. There is (1.) *The age of popular and unconscious morality*; (2.) *The transitional, skeptical, or sophistical age*; and (3.) *The philosophic or conscious age of morality*. ⁸⁹⁹ In the "Republic" of Plato, we have these three eras represented by different persons, through the course of the dialogue. The question is started--what is Justice? and an answer is given from the stand-point of popular morality, by Polemarchus, who quotes the words of the poet Simonides,

"To give to each his due is just;" ⁹⁰⁰

that is, justice is paying your debts. This doctrine being proved inadequate, an answer is given from the Sophistical point of view by Thrasymachus, who defines justice as "the advantage of the strongest"--that is, might is right, and right is might. ⁹⁰¹ This answer being sharply refuted, the way is opened for a more philosophic account, which is gradually evolved in book iv., Glaucon and Adimantus personifying the practical understanding, which is gradually brought into harmony with philosophy, and Socrates the higher reason, as the purely philosophic conception. Justice is found to be the right proportion and harmonious development of all the elements of the soul, and the equal balance of all the interests of society, so as to secure a well-regulated and

harmonious whole.

Footnote 901: [\(return\)](#) *Ibid.*, bk. i. § 12.

497

The era of *popular and unconscious morality* is represented by the times of Homer, Hesiod, the Gnostic poets, and "the Seven Wise Men of Greece."

This was an age of instinctive action, rather than reflection--of poetry and feeling, rather than analytic thought. The rules of life were presented in maxims and proverbs, which do not rise above prudential counsels or empirical deductions. Morality was immediately associated with the religion of the state, and the will of the gods was the highest law for men. "Homer and Hesiod, and the Gnostic poets, constituted the educational course," to which may be added the saws and aphorisms of the Seven Wise Men, and we have before us the main sources of Greek views of duty. When the question was asked--"What is right?" the answer was given by a quotation from Homer, Hesiod, Simonides, and the like. The morality of Homer "is concrete, not abstract; it expresses the conception of a heroic life, rather than a philosophic theory. It is mixed up with a religion which really consists in a celebration of the beauty of nature, and in a deification of the strong and brilliant qualities of human nature. It is a morality uninfluenced by a regard for a future life. It clings with intense enjoyment and love to the present world, and the state after death looms up in the distance as a cold and repugnant shadow. And yet it would often hold death preferable to disgrace. The distinction between a noble and ignoble life is strongly marked in Homer, and yet a sense of right and wrong about particular actions seems fluctuating" and confused. [902](#) A sensuous conception of happiness is the chief good, and mere temporal advantage the principal reward of virtue. We hear nothing of the approving smile of conscience, of inward self-satisfaction, and peace, and harmony, resulting from the practice of virtue. Justice, energy, temperance, chastity, are enjoined, because they secure temporal good. And yet, with all this imperfection, the poets present "a remarkable picture of primitive simplicity, chastity, justice, and practical piety, under the three-fold influence of right moral feeling, mutual and fear

498

of the divine displeasure." [903](#)

Footnote 902: [\(return\)](#) Grant's "Aristotle's Ethics," vol. i. p. 51.

Footnote 903: [\(return\)](#) Tyler, "Theology of the Greek Poets," p. 167.

The *transitional, skeptical, or sophisticated era* begins with Protagoras. Poetry and proverbs had ceased to satisfy the reason of man. The awakening intellect had begun to call in question the old maxims and "wise saws," to dispute the arbitrary authority of the poets, and even to arraign the institutions of society. It had already begun to seek for some reasonable foundation of authority for the opinions, customs, laws, and institutions which had descended to them from the past, and to ask why men were obliged to do this or that? The question whether there is at bottom any real difference between truth and error, right and wrong, was now fairly before the human mind. The ultimate standard of all truth and all right, was now the grand object of pursuit. These inquiries were not, however, conducted by the Sophists with the best motives. They were not always prompted by an earnest desire to know the truth, and an earnest purpose to embrace and do the right. They talked and argued for mere effect--to display their dialectic subtilty, or their rhetorical power. They taught virtue for mere emolument and pay. They delighted, as Cicero tells us, to plead the opposite sides of a cause with equal effect. And they found exquisite pleasure in raising difficulties, maintaining paradoxes, and passing off mere tricks of oratory for solid proofs. This is the uniform representation of the sophisticated spirit which is given by all the best writers who lived nearest to their times, and who are, therefore, to be presumed to have known them best. Grote [904](#) has made an elaborate defense of the Sophists; he charges Plato with gross misrepresentation. His portraits of them are denounced as mere caricatures, prompted by a spirit of antagonism; all antiquity is presumed to have been misled by him. No one, however, can read Grant's "Essay on the History of Moral Philosophy in Greece" [905](#) without feeling that his vindication of Plato is complete and unanswerable: "Plato never represents the Sophists as teaching a lax morality to their disciples. He does not make sophistry to consist in holding wicked opinions; he represents them as only too orthodox in general, [906](#) but capable of giving utterance to immoral paradoxes for the sake of vanity. Sophistry rather tampers and trifles with the moral convictions than directly attacks them." The Sophists were wanting in deep conviction, in moral earnestness, in sincere love of truth, in reverence for goodness and purity, and therefore their trifling, insincere, and paradoxical teaching was unfavorable to goodness of life. The tendency of their method is forcibly depicted in the words of Plato: "There are certain dogmas relating to what is *just* and *good* in which we have been brought up from childhood--obeying and reverencing them. Other opinions recommending pleasure and license we resist, out of respect for the old hereditary maxims. Well, then, a question comes up concerning what is right? He gives some answer such as he has been taught, and straightway is refuted. He tries again, and is again refuted. And, when this has happened pretty often, he is reduced to the opinion that *nothing is either right or wrong*; and in the same way it happens about the just and the good, and all that before we have held in reverence. On this, he naturally abandons his allegiance to the old principles and takes up with those he before resisted, and so, from being a good citizen, he becomes lawless." [907](#) And, in point of fact, this was the theoretical landing-place of the Sophists. We do not say they became practically "lawless" and antinomian, but they did arrive at the

499

settled opinion that right and wrong, truth and error, are solely matter of private opinion and conventional usage. Man's own fluctuating opinion is the measure and standard of all things. [908](#) They who "make the laws, make them for their own advantage." [909](#) There is no such thing as Eternal Right. "That which *appears* just and honorable to each city is so for that city, as long as the opinion prevails." [910](#)

Footnote 910: [\(return\)](#) "Theætetus," §§ 65-75.

The age of the Sophists was a transitional period--a necessary, though, in itself considered, an unhappy stage in the progress of the human mind; but it opened the way for, *The Socratic, philosophic, or conscious age of morals*. It has been said that "before Socrates there was no morality in Greece, but only propriety of conduct." If by this is meant that prior to Socrates men simply followed the maxims of "the Theologians," [911](#) and obeyed the laws of the state, without reflection and inquiry as to the intrinsic character of the acts, and without any analysis and exact definition, so as to attain to principles of ultimate and absolute right, it must be accepted as true--there was no philosophy of morals. Socrates is therefore justly regarded as "the father of moral philosophy." Aristotle says that he confined himself chiefly to ethical inquiries. He sought a determinate conception and an exact definition of virtue. As Xenophon has said of him, "he never ceased asking, What is piety? what is impiety? what is noble? what is base? what is just? what is unjust? what is temperance? what is madness?" [912](#) And these questions were not asked in the Sophistic spirit, as a dialectic exercise, or from idle curiosity. He was a perfect contrast to the Sophists. They had slighted Truth, he made her the mistress of his soul. They had turned away from her, he longed for more perfect communion with her. They had deserted her for money and renown, he was faithful to her in poverty. [913](#) He wanted to know what piety was, that he might be pious. He desired to know what justice, temperance, nobility, courage were, that he might cultivate and practise them. He wrote no books, delivered no lectures; he instituted no school; he simply conversed in the shop, the market-place, the banquet-hall, and the prison. This philosophy was not so much a *doctrine* as a *life*. "What is remarkable in him is not the *system* but the *man*. The memory he left behind him amongst his disciples, though idealized--the affection, blended with reverence, which they never ceased to feel for his person, bear testimony to the elevation of his character and his moral purity. We recognize in him a Greek of Athens--one who had imbibed many dangerous errors, and on whom the yoke of pagan custom still weighed; but his life was nevertheless a noble life; and it is to calumny we must have recourse if we are to tarnish its beauty by odious insinuations, as Lucian did, and as has been too frequently done, after him, by unskillful defenders of Christianity, [914](#) who imagine it is the gainer by all that degrades human nature. Born in a humble position, destitute of all the temporal advantages which the Greeks so passionately loved, Socrates exerted a kingship over minds. His dominion was the more real for being less apparent.... His power consisted of three things: his devoted affection for his disciples, his disinterested love of truth, and the perfect harmony of his life and doctrine.... If he recommended temperance and sobriety, he also set the example; poorly clad, satisfied with little, he disdained all the delicacies of life. He possessed every species of courage. On the field of battle he was intrepid, and still more intrepid when he resisted the caprices of the multitude who demanded of him, when he was a senator, to commit the injustice of summoning ten generals before the tribunals. He also infringed the iniquitous orders of the thirty tyrants of Athens. The satires of Aristophanes neither moved nor irritated him. The same dauntless firmness he displayed when brought before his judges, charged with impiety. 'If it is your wish to absolve me on condition that I henceforth be silent, I reply I love and honor you, but I ought rather to obey the gods than you. Neither in the presence of judges nor of the enemy is it permitted me, or any other man, to use every sort of means to escape death. It is not death but crime that it is difficult to avoid; crime moves faster than death. So I, old and heavy as I am, have allowed myself to be overtaken by death, while my accusers, light and vigorous, have allowed themselves to be overtaken by the light-footed crime. I go, then, and suffer death; they to suffer shame and iniquity. I abide by my punishment, as they by theirs. All is according to order.' It was the same fidelity to duty that made Socrates refuse to escape from prison, in order not to violate the laws of his country, to which, even though irritated, more respect is due than to a father. 'Let us walk in the path,' he says 'that God has traced for us.' These last words show the profound religious sentiment which animated Socrates.... It is impossible not to feel that there was something divine in such a life crowned with such a death." [915](#)

Socrates laid the foundation for conscious morality by placing the ground of right and wrong in an eternal and unchangeable reason which illuminates the reason and conscience of every man. He often asserted that morality is a science which can not be taught. It depends mainly upon principles which are discovered by an inward light. Accordingly he regarded it as the main business of education to "draw out" into the light of consciousness the principles of right and justice which are infolded within the conscience of man--to deliver the mind of the secret truth which was striving towards the light of day. Therefore he called his method the "maieutic" or "obstetric" art. He felt there was something divine in all men (answering to his *τὸ δαιμόνιον* or *δαιμόνιον τι*--a divine and supernatural something--a warning "voice"--a gnomic "sign"--a "law of God written on the heart"), which by a system of skillful interrogations he sought to elicit, so that each might hear for himself the voice of God, and, hearing, might obey. Thus was he the "great prophet of the human conscience," and a messenger of God to the heathen world, to prepare the way of the Lord.

503

The morality of conscience was carried to its highest point by Plato. From the moment he became the disciple of Socrates he sympathized deeply with the spirit and the method of his master. He had the same deep seriousness of spirit, that same earnestness of purpose, that same inward reverence for justice, and purity, and goodness, which dwelt in the heart of Socrates. A naturally noble nature, he loved truth with all the glow and fervor of his young heart. He felt that if any thing gave meaning and value to life, it must be the contemplation of absolute truth, absolute beauty, and absolute Good. This absolute Good is God, who is the first principle of all ideas, the fountain of all the order and proportion and beauty of the universe, the source of all the good which exists in nature and in man. To practise goodness--to conform the character to the eternal models of order, proportion, and excellence, is to resemble God. To aspire after perfection of moral being, to secure assimilation to God (*ὁμοίωσις θεῷ*) is the noble aspiration of Plato's soul.

When we read the "Gorgias," the "Philebus," and especially the "Republic," with what noble joy are we filled on hearing the voice of conscience, like a harp swept by a seraph's hand, uttering such deep-toned melodies! How does he drown the clamors of passion, the calculations of mere expediency, the sophism of mere personal interest and utility. If he calls us to witness the triumph of the wicked in the first part of the "Republic," it is in order that we may at the end of the book see the deceitfulness of their triumph. "As to the wicked," he says, "I maintain that even if they succeed at first in concealing what they are, most of them betray themselves at the end of their career. They are covered with opprobrium, and present evils are nothing compared with those that *await them in the other life*. As to the just man, whether in sickness or in poverty, these imaginary evils will turn to his advantage in this life, *and after his death*; because the providence of the gods is necessarily attentive to the interests of him who labors to become just, and to attain, by the practice of virtue, to the most perfect resemblance to God which is possible to man." [916](#) He rises above all "greatest happiness principles," and asserts distinctly in the "Gorgias" that it is better to suffer wrong than to do wrong. [917](#) "I maintain," says he, "that what is most shameful is not to be struck unjustly on the cheek, or to be wounded in the body; but that to strike and wound me unjustly, to rob me, or reduce me to slavery--to commit, in a word, any kind of injustice towards me, or what is mine--is a thing far worse and more odious for him who commits the injustice, than for me who suffer it." [918](#) It is a great combat, he says, greater than we think, that wherein the issue is whether we shall be virtuous or wicked. Neither glory, nor riches, nor dignities, nor poetry, deserves that we should neglect justice for them. The moral idea in Plato has such intense truth and force, that it has at times a striking analogy with the language of the Holy Scriptures. [919](#)

504

Footnote 916: [\(return\)](#) "Republic," bk. x. ch. xii.

Footnote 907: [\(return\)](#) "Gorgias," §§ 59-80.

Footnote 918: [\(return\)](#) *Ibid.*, § 137.

Footnote 919: [\(return\)](#) Pressensé, "Religions before Christ," p. 129.

The obligation of moral rectitude is, by Plato, derived from the authoritative utterances of conscience as the voice of God. We must do right because reason and conscience say it is right. In the "Euthyphron" he maintains that the moral quality of actions is not dependent on the arbitrary will of a Supreme Governor;--"an act is not holy because the gods love it, but the gods love it because it is holy." The eternal law of right dwells in the Eternal Reason of God, the idea of right in all human minds is a ray of that Eternal Reason; and the requirement of the divine law that we shall do right is, and must be, in harmony with both.

The present life is regarded by Plato as a state of probation and discipline, the future life as one of reward and punishment. [920](#)

Footnote 920: [\(return\)](#) "Republic," bk. x. ch. xv., xvi.; "Laws," bk. x. ch. xiii.

Plato was thus to the heathen world "the great apostle of the moral idea;" he followed up and

505 completed the work of Socrates. "The voice of God, that still found a profound echo in man's heart, possessed in him an organ to which all Greece gave ear; and the austere revelation of conscience this time embodied in language too harmonious not to entice by the beauty of form, a nation of artists, they received it. The tables of the eternal law, carved in purest marble and marvellously sculptured, were read by them."

In Plato both the theistic conception and the moral idea seem to have touched the zenith. The philosophy of Aristotle, considered as a whole, appears on one side to have passed the line of the great Hellenic period. If it did not inaugurate, it at least prepared the way for the decline. It perfected logic, as the instrument of ratiocination, and gave it exactness and precision, Yet taken all in all, it was greatly inferior to its predecessor. From the moral point of view it is a decided retrogression. The god of Aristotle is indifferent to virtue. He is pure thought rather than moral perfection. He takes no cognizance of man. Morality has no eternal basis, no divine type, and no future reward. Therefore Aristotle's philosophy had little power over the conscience and heart.

506 During the grand Platonic period human reason made its loftiest flight, it rose aloft and soared towards heaven, but alas! its wings, like those of Icarus, melted in the sun and it fell to earth again. Instead of wax it needed the strong "eagle pinions of faith" which revelation only can supply. The decadence is strongly marked both in the Epicurean and Stoic schools. They both express the feeling of exhaustion, disappointment, and despair. The popular theology had lost its hold upon the public mind. The gods no longer visited the earth. "The mysterious voice which, according to the poetic legend related by Plutarch, was heard out at sea--'Great Pan is dead'--rose up from every heart; the voice of an incredulous age proclaimed the coming end of paganism. The oracles were dumb." There was no vision in the land. All faith in a beneficent overruling Providence was lost, and the hope of immortality was well-nigh gone. The doctrines of a resurrection and a judgment to come, were objects of derisive mockery. ⁹²¹ Philosophy directed her attention solely to the problem of individual well-being on earth; it became simply a philosophy of life, and not, as with Plato, "a preparation for death." The grosser minds sought refuge in the doctrines of Epicurus. They said, "Pleasure is the chief good, the end of life is to enjoy yourself;" to this end "dismiss the fear of gods, and, above all, the fear of death." The nobler souls found an asylum with the Stoics. They said, "Fata nos ducunt--The Fates lead us! Live conformable to reason. Endure and abstain!" Notwithstanding numerous and serious errors, the ethical system of the Stoics was wonderfully pure. This must be confessed by any one who reads the "Enchiridion" of Epictetus, and the "Meditations" of Aurelius. "The highest end of life is to contemplate truth and to obey the Eternal Reason. God is to be revered above all things, and universally submitted to. The noblest office of reason is to subjugate passion and conduct to virtue. Virtue is the supreme good, which is to be pursued for its own sake, and not from fear or hope. That is sufficient for happiness which is seated only in the mind, and therefore independent of external things. The consciousness of well-doing is reward enough without the applause of others. And no fear of loss, or pain, or even death, must be suffered to turn us aside from truth and virtue." ⁹²²

Footnote 921: [\(return\)](#) Acts xvii. 32.

Footnote 922: [\(return\)](#) Marcus Aurelius.

The preparatory office of Christianity in the field of ethics is further seen,

II. In the fact that, by an experiment conducted on the largest scale, it demonstrated the insufficiency of reason to elaborate a perfect ideal of moral excellence, and develop the moral forces necessary to secure its realization.

507 We have seen that the moral idea in Socrates, Plato, Epictetus, Marcus Aurelius, and Seneca rose to a sublime height, and that, under its influence, they developed a noble and heroic character. At the same time it must be conceded that their ethical system was marked by signal blemishes and radical defects. After all its excellence, it did not give roundness, completeness, and symmetry to moral life. The elements which really purify and ennoble man, and lend grace and beauty to life, were utterly wanting. Their systems were rather a discipline of the reason than a culture of the heart. The reason held in check the lower passions and propensities of the nature but it did not evoke the softer, gentler, purer emotions of the soul. The cardinal virtues of the ancient ethical systems are Prudence, Justice, Temperance, and Courage, all which are in the last analysis reduced to Wisdom. Humility, Meekness, Forgiveness of injuries, Love of even enemies, Universal Benevolence, Real Philanthropy, the graces which give beauty to character and bless society, are scarcely known. It is true that in Epictetus and Seneca we have some counsels to humility, to forbearance, and forgiveness; but it must be borne in mind that Christianity was now in the air, exerting an indirect influence beyond the limits of the labors of the indefatigable missionaries of the Cross. ⁹²³ By their predecessors, these qualities were disparaged rather than upheld. Resentment of injuries was applauded as a virtue, and meekness was proclaimed a defect and a weakness. They knew nothing of a forgiving spirit, and were strangers to the charity "which endureth all things, hopeth all things, and never fails." The enlarged philanthropy which overleaps the bounds of kindred and nationality, and embraces a common humanity in its compassionate regards and benevolent efforts, was unknown. Socrates, the noblest of all the Grecians, was in no sense cosmopolitan in his feeling. His whole nature and character wore a Greek impress. He could scarce be tempted to go beyond the gates of Athens, and his care was all for the Athenian people. He could not conceive an universal philanthropy. Plato, in his

508 solicitude to reduce his ideal state to a harmonious whole, answering to his idea of Justice, sacrificed the individual. He superseded private property, broke up the sacred relations of family and home, degraded woman, and tolerated slavery. Selfishness was to be overcome, and political order maintained, by a rigid communism. To harmonize individual rights and national interests, was the wisdom reserved for the fishermen of Galilee. The whole method of Plato's "Politeia," breathes the spirit of legalism in all its severity, untempered by the spirit of Love. This was the living force which was wanting to give energy to the ideals of the reason and conscience, to furnish high motive to virtue, to prompt to deeds of heroic sacrifice and suffering for the good of others; and this could not be inspired by philosophy, nor constrained by legislation. This love must descend from above. "The Platonic love" was a mere intellectual appreciation of beauty, and order, and proportion, and excellence. It was not the love of man as the offspring and image of God, as the partaker of a common nature, and the heir of a common immortality. Such love was first revealed on earth by the incarnate Son of God, and can only be attained by human hearts under the inspiration of his teaching and life, and the renewing influence of the Holy Spirit. "Love is of God, and every one that loveth is born of God and knoweth God." To "love our neighbor as ourself" is the golden precept of the Son of God, who is incarnate Love. The equality of all men as "the offspring of God" had been nominally recognized by the Stoic philosophers; its realization had been rendered possible to the popular thought by Roman conquest, law, and jurisprudence; these had prepared the way for its fullest announcement and practical recognition by the world. At this providential juncture St. Paul appears on Mars' Hill, and in the presence of the assembled philosophers proclaims, "*God hath made of one blood all nations of men.*" A lofty ideal of moral excellence had been attained by Plato--the conception of a high and inflexible morality, which contrasted most vividly with the depravity which prevailed in Athenian society. The education "of the public assemblies, the courts, the theatres, or wherever the multitude gathered" was unfavorable to virtue. And the inadequacy of all mere human teaching to resist this current of evil, and save the young men of the age from ruin, is touchingly and mournfully confessed by Plato. "There is not, there never was, there never will be a moral education possible that can countervail the education of which these are the dispensers; that is, *human* education: I except, with the proverb, that which is Divine. And, truly, any soul that in such governments escapes the common wreck, can only escape *by the special favor of heaven.*" ⁹²⁴ He affirms again and again that man can not by himself rise to purity and goodness. "Virtue is not natural to man, neither is it to be learned, but it comes to us by a divine influence. Virtue is the gift of God in those who possess it." ⁹²⁵ That "gift of God" was about to be bestowed, in all its fullness of power and blessing, "*through Jesus Christ our Lord.*"

In the department of *religious feeling* and *sentiment*, the propædeutic office of Greek philosophy is seen, in general, in the revealing of the immediate spiritual wants of the soul, and the distinct presentation of the problem which Christianity alone can solve.

I. *It awakened in man the sense of distance and estrangement from God, and the need of a Mediator--"a daysman betwixt us, that might lay his hand upon us both"* ⁹²⁶

Footnote 926: [\(return\)](#) Job ix. 33.

510 During the period of unconscious and unreflective theism, the sentiment of the Divine was one of objective nearness and personal intimacy. The gods interposed directly in the affairs of men, and held frequent and familiar intercourse with our race. They descend to the battle-field of Troy, and mingle in the bloody strife. They grace the wedding-feast by their presence, and heighten the gladness with celestial music. They visit the poor and the stranger, and sometimes clothe the old and shrivelled beggar with celestial beauty. They inspire their favorites with strength and courage, and fill their mouths with wisdom and eloquence. They manifest their presence by signs and wonders, by visions and dreams, by auguries and prophetic voices. But more frequently than all, they are seen in the ordinary phenomena of nature, the sunshine and storm, the winds and tempests, the hail and rain. The natural is, in fact, the supernatural, and all the changes of nature are the movement and action of the Divine. The feeling of dependence is immediate and universal, and worship is the natural and spontaneous act of man.

But the period of reflection is inevitable. Man turns his inquiring gaze towards nature and desires, by an imperfect effort of physical induction, to reach "the first principle and cause of things." Soon he discovers the prevalence of uniformity in nature, the actions of physical properties and agencies, and he catches some glimpses of the reign of universal law. The natural tendency of this discovery is obvious in the weakening of his sense of dependence on the immediate agency of God. The Egyptians told Herodotus that, as their fields were regularly irrigated by the waters of the Nile, they were less dependent on God than the Greeks, whose lands were watered by rains, and who must perish if Jupiter did not send them showers. ⁹²⁷ As man advances in the field of mere physical inquiry, God recedes; from the region of explained phenomena, he retires into the region of unexplained phenomena--the border-land of mystery. The gods are driven from the woods and streams, the winds and waves. Neptune does not absolutely control the seas, nor Æolus the winds. The Divine becomes, no more a physical ἀρχή--a

nature-power, but a Supreme Mind, an ineffable Spirit, an invisible God, the Supreme Essence of Essences, the Supreme Idea of Ideas (εἶδος αὐτὸ καθ' αὐτό) apprehended by human reason alone, but having an independent, eternal, substantial, personal being. Through the instrumentality of Platonism, the idea of God becomes clearer and purer. Man had learned that communion with the Divinity was something more than an apotheosis of humanity, or a pantheistic absorption. He caught glimpses of a higher and holier union. He had surrendered the ideal of a national communion with God, and of personal protection through a federal religion, and now was thrown back upon himself to find some channel of personal approach to God. But alas! he could not find it. A God so vastly elevated beyond human comprehension, who could only be apprehended by the most painful effort of abstract thought; a God so infinitely removed from man by the purity and rectitude of his character; a God who was all pure reason, seemed alien to all the yearnings and sympathies of the human heart; and such a God, dwelling in pure light, seemed inapproachable and inaccessible to man. ⁹²⁸The purifying of the religious idea had evoked a new ideal, and this ideal was painfully remote. By the energy of abstract thought man had striven to pierce the veil, and press into "the Holy of Holies," to come into the presence of God, and he had failed. And he had sought by moral discipline, by self-mortification, by inward purification, to raise himself to that lofty plane of purity, where he might catch some glimpses of the vision of a holy God, and still he failed. Nay, more, he had tried the power of prayer. Socrates, and Plato, and Cleanthes had bowed the knee and moved the lips in prayer. The emperor Aurelius, and the slave Epictetus had prayed, and prayer, no doubt, intensified their longing, and sharpened and agonized their desire, but it did not raise them to a satisfying and holy *koinonia* in the divine life. "It seems to me"--said Plato--as Homer says of Minerva, that she removed the mist from before the eyes of Diomedes,

'That he might clearly see 'twixt Gods and men.'

so must he, in the first place, remove from your soul the mist that now dwells there, and then apply those things through which you will be able to know ⁹²⁹ and rightly pray to God.

Footnote 927: [\(return\)](#) Herodotus, vol. ii. bk. ii. ch. xiii. p. 14 (Rawlinson's edition).

Footnote 928: [\(return\)](#) "To discover the Maker and Father of the universe is a hard task;.... to make him known to all is impossible."--"Timæus," ch. ix.

Footnote 929: [\(return\)](#) "Second Alcibiades," § 23.

To develop this innate desire and "feeling after God" was the grand design of providence in "fixing the times" of the Greek nation, and "the boundaries of their habitation." ⁹³⁰ Man was brought, through a period of discipline, to feel his need of a personal relation to God. He was made to long for a realizing sense of his presence--to desire above all things a Father, a Counsellor, and a Friend--a living ear into which he might groan his anguish, or hymn his joy; and a living heart that could beat towards him in compassion, and prompt immediate succor and aid. The idea of a pure Spiritual Essence without form, and without emotion, pervading all, and transcending all, is too vague and abstract to yield us comfort, and to exert over us any persuasive power. "Our moral weakness shrinks from it in trembling awe. The heart can not feed on sublimities. We can not make a home of cold magnificence; we can not take immensity by the hand." ⁹³¹ Hence the need and the desire that God shall condescendingly approach to man, and by some manifestation of himself in human form, and through the sensibilities of the human heart, commend himself to the heart of man--in other words, the need of an *Incarnation*. Thus did the education of our race, by the dispensation of philosophy, prepare the way for him who was consciously or unconsciously "*the Desire of Nations*," and the deepening earnestness and spiritual solicitude of the heathen world heralded the near approach of Him who was not only "the Hope of Israel" but "the Saviour of the world."

Footnote 930: [\(return\)](#) Acts xvii. 26, 27.

Footnote 931: [\(return\)](#) Caird.

The idea of an *Incarnation* was not unfamiliar to human thought, it was no new or strange idea to the heathen mind. The numberless metamorphoses of Grecian mythology, the incarnations of Brahm, the avatars of Vishnu, and the human form of Krishna had naturalized the thought. ⁹³² So that when the people of Lystra saw the apostles Paul and Barnabas exercising supernatural powers of healing, they said, "The gods have come down to us in the likeness of men!" and they called Barnabas Jupiter, and Paul, Mercurius. The idea in its more definite form may have been, and indeed was, communicated to the world through the agency of the dispersed Jews. So that Virgil, the Roman poet, who was contemporary with Christ, seems to re-echo the prophecy of Isaiah--

Footnote 932: [\(return\)](#) Young's "Christ of History," p. 248.

The last age decreed by the Fates is come,
And a new frame of all things does begin;
A holy progeny from heaven descends
Auspicious in his birth, which puts an end
To the iron age, and from which shall arise
A golden age, most glorious to behold.

II. *Finally, Greek philosophy prepared the way for Christianity by awakening and deepening the consciousness of guilt, and the desire for Redemption.*

The consciousness of sin, and the consequent need of expiation for sin, were gradually unfolded in the Greek mind. The idea of sin was at first revealed in a confused and indefinite feeling of some external, supernatural, and bewildering influence which man can not successfully resist; but yet so in harmony with the sinner's inclination, that he can not divest himself of all responsibility. "Homer has no word answering in comprehensiveness or depth of meaning to the word *sin*, as it is used in the Bible..... The noun *ἀμαρτία* which is appropriated to express this idea in the Greek of the New Testament, does not occur in the Homeric poems..... The word which is most frequently employed to express wrong-doing of every kind is *ἄτη*, with its corresponding verb..... The radical signification of the word seems to be a befooling--a depriving one of his senses and his reason, as by unseasonable sleep, and excess of wine, joined with the influence of evil companions, and the power of destiny, or the deity. Hence, the Greek imagination, which impersonated every great power, very naturally conceived of Ἄτη as a person, a sort of omnipresent and universal cause of folly and sin, of mischief and misery, who, though the daughter of Jupiter, yet once fooled or misled Jupiter himself, and thenceforth, cast down from heaven to earth, walks with light feet over the heads of men, and makes all things go wrong. Hence, too, when men come to their senses, and see what folly and wrong they have perpetrated, they cast the blame on Ἄτη, and so, ultimately, on Jupiter and the gods." [933](#)

Footnote 933: [\(return\)](#) Tyler, "Theology of the Greek Poets," pp. 174, 175.

514

"Oft hath this matter been by Greeks discussed,
And I their frequent censure have incurred:
Yet was not I the cause; but Jove, and Fate,
And gloomy Erinnys, who combined to throw
A strong delusion o'er my mind, that day
I robb'd Achilles of his lawful prize.
What could I do? a Goddess all o'erruled,
Daughter of Jove, dread Até, baleful power
Misleading all; with light step she moves,
Not on the earth, but o'er the heads of men.
With blighting touch, and many hath caused to err." [934](#)

And yet, though Agamemnon here attempts to shuffle off the guilt of his transgression upon Até, Jove, and Fate, yet at other times he confesses his folly and wrong, and makes no attempt to cast the responsibility on the gods. [935](#) Though misled by a "baleful power," he was not compelled. Though tempted by an evil goddess, he yet followed his own sinful passions, and therefore he owns himself responsible.

To satisfy the demands of divine justice, to show its hatred of sin, and to deter others from transgression, sin is punished. Punishment is the penalty due to sin; in the language of Homer, it is the payment of a debt incurred by sin. When the transgressor is punished he is said to "pay off," or "pay back" his crimes; in other words, to expiate or atone for them.

"If not at once,
Yet soon or late will Jove assert their claim,
And heavy penalty the perjured pay
With their own blood, their children's, and their wives'." [936](#)

At the same time the belief is expressed that the gods may be, and often are, propitiated by prayers and sacrifices, and thus the penalty is remitted.

"The Gods themselves, in virtue, honor, strength,
Excelling thee, may yet be mollified;
For they when mortals have transgressed, or fail'd
To do aright, by sacrifice and pray'r,
Libations and burnt-off'rings, may be sooth'd." [937](#)

515

Polytheism, then, as Dr. Schaff has remarked, had the voice of conscience, and a sense, however obscure, of sin. It felt the need of reconciliation with deity, and sought that reconciliation by prayer, penance, and sacrifice. [938](#)

The sense of the exceeding sinfulness of sin, and the absolute need of expiation, is determined with increasing clearness and definiteness in the tragic poets.

The first great law which the Tragedians recognize, as a law written on the heart, is "that the sinner must suffer for his sins." The connection between sin and suffering is constantly

recognized as a natural and necessary connection, like that between sowing and reaping.

A haughty spirit, blossoming, bears a crop
Of woe, and reaps a harvest of despair. [939](#)

"Lust and violence beget lust and violence, and vengeance too, at the appointed time." [940](#)
"Impiety multiplies and perpetuates itself." [941](#) "The sinner pays the debt he contracted, ends the career that he begins," [942](#) "and drinks to the dregs the cup of cursing which he himself had filled." [943](#) Conscience is the instrument in the hands of Justice and Vengeance by which the Most High inflicts punishment. The retributions of sin are "wrought out by God."

The consequences of great crimes, especially in high places, extend to every person and every thing connected with them. "The country and the country's gods are polluted." [944](#) "The army and the people share in the curse." [945](#) "The earth itself is polluted with the shedding of blood," [946](#) "and even the innocent and the virtuous who share the enterprises of the wicked may be involved in their ruin, as the pious man must sink with the ungodly when he embarks in the same ship." [947](#)

Footnote 947: [\(return\)](#) "Theb.," p. 602.

The pollution and curse of sin, when once contracted by an individual, or entailed upon a family, will rest upon them and pursue them till the polluted individual or the hated and accursed race is extinct, unless in some way the sin can be expiated, or some god interpose to arrest the penalty. The criminal must die by the hand of justice, and even in Hades vengeance will still pursue him. [948](#) Others may in time be washed away by ablutions, worn away by exile and pilgrimage, and expiated by offerings of blood. [949](#) But great crimes can not be washed away; "For what expiation is there for blood when once it has fallen on the ground." [950](#) Thus the law (*[νόμος]*)--for so it is expressly called--as from an Attic Sinai, rolls its reverberating thunders, and pronounces its curses upon sin, from act to act and from chorus to chorus of that grand trilogy--the "Agamemnon," the "Choephoroe," and the "Eumenides."

Footnote 948: [\(return\)](#) "Sup.," l. 227.

Footnote 949: [\(return\)](#) "Eum.," l. 445 seq.

Footnote 950: [\(return\)](#) "Choeph.," l. 47.

But after the law comes the gospel. First the controversy, then the reconciliation. A dim consciousness of sin and retribution as a fact, and of reconciliation as a *want*, seems to have revealed itself even in the darkest periods of history. This consciousness underlies not a few of the Greek tragedies. "The 'Prometheus Bound' was followed by the 'Prometheus Unbound,' reconciled and restored through the intervention of Jove's son. The 'Œdipus Tyrannus' of Sophocles was completed by the 'Œdipus Colonus,' where he dies in peace amid tokens of divine favor. And so the 'Agamemnon' and 'Choephoroe' reach their consummation only in the 'Eumenides,' where the Erinyes themselves are appeased, and the Furies become the gracious ones. This is not, however, without a special divine interposition, and then only after a severe struggle between the powers that cry for justice and those that plead for mercy."

The office and work which, in this trilogy, is assigned to Jove's son, Apollo, must strike every reader as at least a remarkable resemblance, if not a foreshadowing of the Christian doctrine of *reconciliation*. "This becomes yet more striking when we bring into view the relation in which this reconciling work stands to Ζεὺς Σωτήρ, Jupiter Saviour--Ζεὺς τρίτος, Jupiter the third, who, in connection with Apollo and Athena, consummates the reconciliation. Not only is Apollo a Σωτήρ, a Saviour, who, having himself been exiled from heaven among men, will pity the poor and needy; [951](#) not only does Athena sympathize with the defendant at her tribunal, and, uniting the office of advocate and judge, persuade the avenging deities to be appeased; [952](#) but Zeus is the beginning and end of the whole process. Apollo appears as the advocate of Orestes only at her bidding; [953](#) Athena inclines to the side of the accused, as the offspring of the brain of Zeus, and of like mind with him." [954](#) Orestes, after his acquittal, says that he obtained it

"By means of Pallas and of Loxias
And the third Saviour who doth all things sway." [955](#)

Platonism reveals a still closer affinity with Christianity in its doctrine of sin, and its sense of the need of salvation. Plato is sacredly jealous for the honor and purity of the divine character, and rejects with indignation every hypothesis which would make God the author of sin. "God, inasmuch as he is good, can not be the cause of all things, as the common doctrine represents him to be. On the contrary, he is the author of only a small part of human affairs; of the larger part he is not the author; for our evil things far outnumber our good things. The good things we must ascribe to God, whilst we must seek elsewhere, and not in him, the causes of evil." [956](#) The doctrine of the poets, which would in some way charge on the gods the errors of men, he sternly resists. We must express our disapprobation of Homer, or any other poet, if guilty of such foolish blunders about the gods as to tell us [957](#)

'Fast by the threshold of Jove's court are placed
Two casks, one stored with evil, one with good,'

And that he for whom the Thunderer mingles both

'He leads a life checker'd with good and ill.'

518

Nor can we let our young people know that, in the words of Æschylus--

"When to destruction God will plague a house
He plants among the members guilt and sin." [958](#)

Whatever in the writings of Homer and the tragic poets give countenance to the notion that God is, in the remotest sense the author of sin, must be expunged. Here is clearly a great advance in ethical conceptions.

The great defect in the ethical system of Plato was the identification of evil with the inferior or corporeal nature of man--"the irascible and concupiscible elements," fashioned by the junior divinities. The rational and immortal part of man's nature, which is derived immediately from God--the Supreme Good, naturally chooses the good as its supreme end and destination. Hence he adopted the Socratic maxim "that no man is willingly evil," that is, no man deliberately chooses evil as evil, but only as a *seeming* good--he does not choose evil as an end, though he may choose it voluntarily as a means. Plato manifests great solicitude to guard this maxim from misconception and abuse. Man has, in his judgment, the power to act in harmony with his higher reason, or contrary to reason; to obey the voice of conscience or the clamors of passion, and consequently he is the object of praise or blame, reward or punishment. "When a man does not consider himself, but others, as the cause of his own sins,.... and even seeks to excuse himself from blame, he dishonors and injures his own soul; so, also, when contrary to reason.... he indulges in pleasure, he dishonors it by filling it with vice and remorse." [959](#) The work and effort of life, the end of this probationary economy, is to make reason triumphant over passion, and discipline ourselves to a purer and nobler life.

Footnote 958: [\(return\)](#) "Republic," bk. ii. ch. xviii., xix.

Footnote 959: [\(return\)](#) "Laws," bk. v. ch. i.

519

The obstacles to a virtuous life are, however, confessedly numberless, and, humanly speaking, insurmountable. To raise one's self above the clamor of passion, the power of evil, the bondage of the flesh, is acknowledged, in mournful language, to be a hopeless task. A cloud of sadness shades the brow of Plato as he contemplates the fallen state of man. In the "Phædrus" he describes, in gorgeous imagery, the purity, and beauty, and felicity of the soul in its anterior and primeval state, when, charioteering through the highest arch of heaven in company with the Deity, it contemplated the divine justice and beauty; but "this happy life," says he, "we forfeited by our transgression." Allured by strange affections, our souls forgot the sacred things that we were made to contemplate and love--we *fell*. And now, in our fallen state, the soul has lost its pristine beauty and excellence. It has become more disfigured than was Glaucus, the seaman "whose primitive form was not recognizable, so disfigured had he become by his long dwelling in the sea." [960](#) To restore this lost image of the good,--to regain "this primitive form," is not the work of man, but God. Man can not save himself. "Virtue is not natural to man, neither is it to be

learned, but it comes by a divine influence. *Virtue, is the gift of God.*" [961](#) He needs a discipline, "an education which is divine." If he is saved from the common wreck, it must be "by the special favor of Heaven." [962](#) He must be delivered from sin, if ever delivered, by the interposition of God.

Footnote 960: [\(return\)](#) "Republic," bk. x. ch. xi.

Footnote 961: [\(return\)](#) "Meno."

Footnote 962: [\(return\)](#) "Republic," bk. vi. ch. vi., vii.

520 Plato was, in some way, able to discover the need of a Saviour, to desire a Saviour, but he could not predict his appearing. Hints are obscurely given of a Conqueror of sin, an Assuager of pain, an Averter of evil in this life, and of the impending retributions of the future life; but they are exceedingly indefinite and shadowy. In all instances they are rather the language of *desire*, than of hope. Platonism awakened in the heart of humanity a consciousness of sin and a profound feeling of want--the want of a Redeemer from sin, a spiritual, a divine Remedy for its moral malady--and it strove after some remedial power. But it was equally conscious of failure and defeat. It could enlighten the reason, but it could only act imperfectly on the will. Platonic was a striking counterpart to Pauline experience prior to the apostle's deliverance by the power and grace of Christ. It discovered that "the Law is holy, and the commandment is holy, and just, and good." It recognized that "it is spiritual, but man is carnal, the slave of sin." It could say, "What I do I approve not; for I do not what I would, but what I hate. But if my will [my better judgment] is against what I do, I consent unto the Law that it is good. And now it is no more I that do it, but sin, that dwelleth in me. For I know that in me, that is, in my flesh, good abideth not, for to will is present with me, but the power to do the right is absent: the good that I would, I do not; but the evil that I would not, that I do. I consent gladly to the law of God in my inner man ['the rational and immortal nature' [963](#); but I behold a law in my members ['the irascible and concupiscible nature' [964](#) warring against the law of my mind (or reason), and bringing me into captivity to the law of sin which is in my members. *Oh wretched man that I am! who shall deliver me from the body of this death?*" [965](#) Paul was able to say, "I thank God (that he hath now delivered me), through Jesus Christ our Lord!" Platonism could only desire, and hope, and wait for the coming of a Deliverer.

Footnote 963: [\(return\)](#) Plato.

Footnote 964: [\(return\)](#) Ibid.

Footnote 965: [\(return\)](#) Romans, vii.

521 This consciousness of the need of supernatural light and help, and this aspiration after a light supernatural and divine, which Plato inherited from Socrates, constrained him to regard with toleration, and even reverence, every apparent approach, every pretension, even, to a divine inspiration and guidance in the age in which he lived. "The greatest blessings which men receive come through the operation of *phrensy* (*μανία*--inspired exaltation), when phrensy is the gift of God. The prophetess of Delphi, and the priestess of Dodona, many are the benefits which in their phrensies (moments of inspiration) they have bestowed upon Greece; but in their hours of self-possession, few or none. And too long were it to speak of the Sibyl, and others, who, inspired and prophetic, have delivered utterances beneficial to the hearers. Indeed, this word phrenetic or maniac is no reproach; it is identical with mantic --prophetic. [966](#) And often when diseases and plagues have fallen upon men for the sins of their forefathers, some phrensy too has broken forth, and in prophetic strain has pointed out a remedy, *showing how the sin might be expiated, and the gods appeased* (by prayers, and purifications, and atoning rites)... So many and yet more great effects could I tell you of the phrensy which comes from the gods." [967](#) Some have discerned in all this merely the food for a feeble ridicule. They regard these sentiments as simply an evidence of the power and prevalence of superstition clouding the loftiest intellects in ancient times. By the more thoughtful and philosophic mind, however, they will be accepted as an indication of the imperishable and universal faith of humanity in a supernatural and supersensuous world, and in the possibility of some communication between heaven and earth. [968](#) And above all, it is a conclusive proof that Plato believed that the knowledge of *salvation*--of a remedy for sin, a method of expiation for sin, a means of deliverance from the power and punishment of sin, must be revealed from Heaven.

Footnote 966: [\(return\)](#) [*Μανία*], phrensy; [*μαντικός*], a prophet--one who utters oracles in a state of divine phrensy; [*μαντική*], the prophetic art.

Footnote 967: [\(return\)](#) "Phædrus," § 47-50 (Whewell's translation).

Footnote 968: [\(return\)](#) "*Vetus opinio est, jam usque ab heroicis ducta temporibus, eaque et populi Romani et omnium gentium firmata consensu, versari quandem inter homines divinationem.*"--Cicero, "De Divin.," i. I.

Paul, then, found, even in that focus of Paganism, the city of Athens, religious aspirations tending towards Jesus Christ. A true philosophic method, notwithstanding its shortcomings and imperfections, concluded by desiring and seeking "the Unknown God," by demanding him from all forms of worship, from all schools of philosophy. The great work of preparation in the heathen world consisted in the developing of the *desire* for salvation. It proved that God is the great want

of every human soul; that there is a profound affinity between conscience and the living God; and that Tertullian was right when he wrote the "Testimonium Animæ naturaliter Christianæ." [969](#) And when it was sufficiently demonstrated that "the world by philosophy knew not God (as a Redeeming God and Saviour), then it pleased God by the foolishness of preaching to save them that believe." This was all a dispensation of divine providence, which was determined by, or "in, the wisdom of God." [970](#)

The history of the religions and philosophies of human origin thus becomes to us a striking confirmation of the truth of Christianity. It shows there is a wondrous harmony between the instinctive wants and yearnings of the human heart, as well as the necessary ideas and laws of the reason, and the fundamental principles of revealed religion. There is "a law written on the heart"--written by the finger of God, which corresponds to the laws written by the same finger on "tables of stone." There are certain necessary and immutable principles and ideas infolded in the reason of man, which harmonize with the revelations of the Eternal Logos in the written word. [971](#) There are instinctive longings, mysterious yearnings of the human heart, to which that unveiling of the heart of God which is made in the teaching and life of the incarnate God most satisfyingly answers. Within the depths of the human spirit there is an "oracle" which responds to the voice of "the living oracles of God."

Footnote 969: [\(return\)](#) Pressensé, "Religions before Christ" (Introduction); Neander, "Church History," vol. i. (Introduction).

Footnote 970: [\(return\)](#) I Corinthians, i. 21.

Footnote 971: [\(return\)](#) "The surmise of Plato, that the world of appearance subsists in and by a higher world of Divine Thought, is confirmed by Christianity when it tells us of a Divine subsistence--that Eternal Word by whom and in whom all things consist."--Vaughan, "Hours with the Mystics," vol. i. p. 213.

Here, then, are two distinct and independent revelations--the unwritten revelation which God has made to all men in the constitution of the human mind, and the external written revelation which he has made in the person and teaching of his Son. And these two are perfectly harmonious. We have here two great volumes--the volume of conscience, and the volume of the New Testament. We open them, and find they announce the *same* truths--one in dim outline, the other in a full portraiture. There are the same fundamental principles underlying both revelations. They both bear the impress of *divinity*. The history of philosophy may have been marked by many errors of interpretation; so, also, has the history of dogmatic theology. Men may have often misunderstood and misinterpreted the dictates of conscience; so have theologians misunderstood and misinterpreted the dictates of revelation. The perversions of conscience and reason have been plead in defense of error and sin; and so, for ages, have the perversions of Scripture been urged in defense of slavery, oppression, falsehood, and wrong. Sometimes the misunderstood utterances of conscience, of philosophy, and of science have been arrayed against the incorrect interpretations of the Word of God. But when both are better understood, and more justly conceived, they are found in wondrous harmony. When the New Testament speaks to man of God, of duty, of immortality, and of retribution, man feels that its teachings "commend themselves to his conscience" and reason. When it speaks to him of redemption, of salvation, of eternal life and blessedness, he feels that it meets and answers all the wants and longings of his heart. Thus does Christianity throw light upon the original revelations of God in the human conscience, and answers all the yearnings of the human soul. So it is found in individual experiences, so it has been found in the history of humanity. As Leverrier and Adams were enabled to affirm, from purely mathematical reasoning, that another planet must exist beyond *Uranus* which had never yet been seen by human eyes, and then, afterwards, that affirmation was gloriously verified in the discovery of *Neptune* by the telescope of Galle; so the reasonings of ancient philosophy, based on certain necessary laws of mind, enabled man to affirm the existence of a God, of the soul, of a future retribution, and an eternal life beyond the grave; and, then, subsequently, these were brought fully into light, and verified by the Gospel.

We conclude in the words of Pressensé: "To isolate it from the past, would be to refuse to comprehend the nature of Christianity itself, and the extent of its triumphs. Although the Gospel is not, as has been affirmed, the product of anterior civilizations--a mere compound of Greek and Oriental elements--it is not the less certain that it brings to the human mind the satisfaction vainly sought by it in the East as in the West. *Omnia subito* is not its device, but that of the Gnostic heresy. Better to say, with Clement of Alexandria and Origen, that the night of paganism had its stars to light it, but that they called to the Morning-star which stood over Bethlehem."

"If we regard philosophy as a preparation for Christianity, instead of seeking in it a substitute for the Gospel, we shall not need to overstate its grandeur in order to estimate its real value."

CONTENTS.

A.

Abstraction, comparative and immediate, 187-189; 362-364.

Æschylus, his conception of the Supreme Divinity, 146; his recognition of human guilt, and need of expiation, 515-517.

Ætiological proof of the existence of God, 487-489.

Anaxagoras, an Eclectic, 311; in his physical theory an Atomist, 312; taught that the Order of the universe can only be explained by Intelligence, 312; his psychology, 313; the teacher of Socrates, 313.

Anaximander, his first principle *the infinite*, 290; his infinite a chaos of primary elements, 290.

Anaximenes, a vitalist, 286; his first principle *air*, 287.

Aristotle, his opinion of the popular polytheism of Greece, 157; his classification of causes, 280, 404, 405; his misrepresentations of Pythagoras, 299; his classification of the sciences, 389; his Organon, 389-394; his Logic, 394-403; his Theology, 404-417; his Ethics, 417-421; his Categories, 395; his logical treatises, 396; on induction and deduction, 396-398; his psychology, 398, 401; on how the knowledge of first principles is attained, 394, 402, 403; on Matter and Form, 405-408; on Potentiality and Actuality, 408-412; his proof of the Divine existence, 412-415; on the chief good of man, 419, 420; his doctrine of the Mean, 420, 421; defect of his ethical system, 505.

[Ἀρχαί], or first principles, the grand object of investigation in Greek Philosophy, 271, 274, 279, 280.

Athenians, criticism on Plutarch's sketch of their character, 45; their vivacity, 45; love of freedom, 46--and of country, 46; private life of, 47; intellectual character of, 48; inquisitive and analytic, 48; rare combinations of imagination and reasoning powers, 49; religion of, 98; the Athenians a religious people, 102; their faith in the being and providence of God, 107; their consciousness of dependence on God, 110, 116; their religious emotions, 117; their deep consciousness of sin and guilt, 122-124; their sense of the need of expiation, 124, 125; their religion exerted some wholesome moral influence, 162, 163.

Athens, topography of 27; the Agora, 28; its porticoes, 29; the Acropolis, 30; its temples, 31; the Areopagus, 33; sacred objects in, 98, 99; images of the gods, 99; localities of schools of philosophy in, 266-268.

Attica, geographical boundaries of, 26; a classic land, 34; its geographical and cosmical conditions providentially ordained for great moral ends, 34, 35; soil of, not favorable to agriculture, 40--necessitated industry and frugality, 41; the climate of, 41--its influence on the mental character of the people, 42.

B.

Bacon, his assertion that the search after final causes had misled scientific inquirers, 222.

C.

Categories of Aristotle, 395.

Causality, principle of, 189; assailed by the Materialists, 194--especially by Comte, 203-209; the intuition of *power* a fact of immediate consciousness, 204; consciousness of *effort* the type of all force, 211; Aristotle on Causality, 413; ætiological proof of existence of God, 487-489.

526

Cause, origin of the idea of, 204, 205.

Causes, Aristotle's classification of, 280, 404, 405.

Chief good of man, Aristotle on, 419, 420.

Cleanthes, his hymn to Jupiter, 452, 453.

Comte, his theory of the origin of religion, 57-65; his doctrine that all knowledge is confined to material phenomena, 203; denies all causation, both efficient and final, 203-214.

Conditioned, law of the, 227, 228; is contradictory, 250; as a ground of faith, meaningless and void, 251.

Cosmological proof of the existence of God, 489, 490.

Cousin, his theory that religion had its outbirth in the spontaneous apperceptions of reason, 78-84; criticism thereon, 84-86.

Criterion of truth, Plato's search after, 333, 334.

Cudworth, his interpretation of Grecian mythology, 139, 143.

Cuvier, on final causes, 216, 222.

D.

Darwin, his inability to explain the facts of nature without recognizing design, 221, 222.

Democritus, taught that atoms and the vacuum are the beginning of all things, 292; an absolute materialist, 293.

Dependence, consciousness of, the foundation of primary religious emotions, 110-113.

Development, law of mental, 478; three successive stages clearly marked, in the individual, 478--in the universal mind of humanity, 479, 480; (1) in the field of Theistic conceptions, 481-494; (2) in the department of morals, 495-509; (3) in the department of religious sentiment, 509-522.

Dialectic of Plato, 353-369.

Dogmatic Theologians, assert that all our knowledge of God is derived from the teaching of the Scriptures, 86,167; cast doubt upon the principle of causality, 253-255--upon the principle of the unconditioned, 255-257--upon the principle of unity, 258-261--and upon the immutable principles of morality, 261-263.

Dynamical or Vital school of ancient philosophers, 282-289.

E.

Eclecticism of Anaxagoras, 311.

Emotions, the religious, 117-122; sentiment of the Divine exists in all minds, 119-121; also instinctive yearning after the Invisible, 121, 122.

Empedocles, a believer in one Supreme God, 153.

Epicurus, his theory of the origin of religion, 56, 57; his Ethics, 427-432; his Physics, 433-438; taught that pleasure is the chief end of life, 428--that ignorance of nature is the sole cause of unhappiness, 432--that Physics and Psychology are the only studies conducive to happiness, 432--that the universe is eternal and infinite, 433--that concrete bodies are combinations of atoms, 434--that atoms have spontaneity, 436, and some degree of freedom, 436, 437; the parts of the world self-formed, 437, 438; plants, animals, and man are spontaneously generated, 438; a state of savagism the primitive condition of man, 439; his Atheism, 441; his Psychology, 442-444; the soul material and mortal, 445, 446.

Eternity, Platonic notion of, 349 (*note*), 372, 373.

Eternity of Matter, how taught by Plato, 371-373; distinctly affirmed by Epicurus, 433.

Eternity of the Soul, Plato's doctrine of, 373-375.

Ethical ideas and principles, gradual development of, 495, 496; (1) the age of popular and unconscious morals, 497, 498; (2) the transitional or sophistical age, 498-500; (3) the philosophic or conscious age, 500-506.

Ethics of Plato, 383-387, 502-505; of Aristotle, 417-421; of Epicurus, 427-432; of the Stoics, 454, 456.

Expiation for sin, the need of, 124; universally acknowledged, 124--especially in Grecian mythology, 125--and in the language of Greece and Rome, 125.

F.

Facts of the universe, classification of, 175-177.

Fathers, the early, recognized the propædeutic office of Greek philosophy, 473-475.

Feeling, theories which ground all religion on, 70-74; its inadequacy, 74-78.

527

Final Causes, impossibility of interpreting nature without recognizing, 221, 222; the assumption of final causes a means of discovery, 222, 223; Cuvier on, 216, 222; argument of Socrates from, 320-324; Plato on, 380-382; Aristotle on, 405, 413, 414; teleological proof of the existence of God, 490, 491.

Force, the idea of, rejected by Comte, 207.

Forces, all of one type, and that type mind, 211.

Freedom, human, 19; exists under limitations, 20; both admitted and denied by Comte, 208, 209; of Will, as taught by Plato, 386, 387; admitted by Epicurus, 486.

G.

Geoffrey St. Hilaire, his pretense of not ascribing any intentions to nature, 216, 217.

Geography and History, relations between, 14; opposite theories concerning, 15; theory of Buckle, 16--of Ritter, Guyot, and Coubin, 16; the relation one of adjustment and harmony, 16.

God, universality of idea of, 89; Athenians believed in one God, 107, 147, 148; idea of God a common phenomenon of human intelligence, 168, 169; the development of this idea dependent on experience conditions, 169-172; the phenomena of the universe demand a God for their explanation, 172-175: there are principles revealed in consciousness which necessitate the idea of God, 184-189; proofs of the existence of God employed by Aristotle, 412-416--by Socrates, 320-324; views of God entertained by the Stoics, 452, 453; logical proofs of the existence of God developed by Greek philosophy, 487-494; gradual development of Theistic conception, 481-487.

Gods of Grecian Mythology, how regarded by the philosophers, 151-157; views of Plato regarding them, 383.

Great men, represent the spirit of their age, 20; the creation of a providence interposing in history, 21.

Greece, its geographical relations favorable to free intercourse with the great historic nations, 35--to commerce, 36--to the diffusion of knowledge, 36--and to a high degree of civilization, 36; peculiar configuration of Greece conducive to activity and freedom, 36-38--and independence, 38; natural scenery, 43--its influence on imagination and taste, 44.

Greek Civilization, a preparation for Christianity, 465-468.

Greek Language, a providentially prepared vehicle for the perfect revelation of Christianity, 468-470.

Greek Philosophy, first a philosophy of Nature, 271, 281, 282; next a philosophy of Mind, 271, 316-318; lastly a philosophy of Life, 271, 422; prepared the way for Christianity, 457-522.

Greeks, the masses of the people believed in one Supreme God, 147, 148.

Guilt, consciousness of, a universal fact, 122, 123; recognized in Grecian mythology, 123, 124; awakened and deepened by philosophy, 513-518.

H.

Hamilton, Sir W., teaches that philosophic knowledge is the knowledge of effects as dependent on causes, 224, 225; and of qualities as inherent in substances, 225, 226; and yet asserts all human knowledge is necessarily confined to phenomena, 227; his doctrine of the relativity of all knowledge, 227, 229-236; his philosophy of the conditioned, 228; conditional limitation the law of all thought, 236-242; the Infinite a mere negation of thought, 242-246; asserts we must believe in the infinity of God, 246; takes refuge in faith, 247; faith grounded on the law of the conditioned, 243, 249--that is, on contradiction, 249, 250.

Hegel, his philosophy of religion, 65-70.

Heraclitus, his first principle *ether*, 288; change, the universal law of all existence, 288; a Materialistic Pantheist, 289.

Hesiod, on the generation of the gods, 142.

Homer, his conception of Zeus, 144, 145.

Homeric doctrine of sin, 513, 514.

Homeric theology, 143-145, 509, 510.

Humanity, fundamental ideas and laws of, 18; developed and modified by exterior conditions, 19; the most favorable conditions existed in Athens.

I.

Idealism, furnishes no adequate explanation of the common belief in an external world, 193, 199--and of a personal self, 200-202; Cosmothetic Idealism, 305; absolute Idealism, 305.

Ideas, Platonic doctrine of, 334-337; Platonic scheme of, 364-367.

Images of the gods, how regarded by Cicero, 129--by Plutarch, 129; the heathens apologized for the use of images, 159.

Immortality of the soul, taught by Socrates, 324--and by Plato, 375, 376; denied by Epicurus, 444-446.

Incarnation, the idea of, not unfamiliar to heathen thought, 512.

Induction, the psychological method of Plato, 356, 357.

Induction and Deduction, Aristotle on, 397, 398.

Infinite, the, not a mere negation of thought, 242-244; known as the necessary correlative of the finite, 245; as comprehensible in itself, as the finite is comprehensible in itself, 246; in what

sense known, 252.

Infinite Series, the phrase, when literally construed, a contradiction, 181,182.

Infinity, qualitative and quantitative, 239; qualitative infinity possessed by God alone, 184, 239.

Intentionality, principle of, 190; denied by Materialists, 194; a first law of thought, 221-223; recognized by Socrates, 320-324.

Ionian School of Philosophy, a physical and sensational school, 281; subdivided into Mechanical and Dynamical, 282, 283.

Italian School of Philosophy, an Idealist school, 281; subdivided into the Mathematical and Metaphysical, 282, 296.

J.

Jacobi, his faith-philosophy, 71.

K.

Knowledge, Hamilton's doctrine of relativity of, 229-236; opposite theories of knowledge among ancient philosophers, 330, 331; the tendency of these theories, 332; Plato's theory of, 333, 334; Plato's science of real knowledge, 337, 338.

L.

Language, inadequate to convey the idea of God, 92-94; Greek language the best medium for the Christian revelation, 468-470.

Leucippus, his first principles *atoms* and *space*, 291; a pure Materialist, 292.

Logic of Aristotle, 394-403.

Logical Treatises of Aristotle, 395, 396.

Lucretius, the expounder of the doctrines of Epicurus, 426,427; his account of the origin of worlds, 437, 438; of plants, animals, and man, 438.

M.

Mansel, bases religion on feeling of dependence, 72--and sense of obligation, 73.

Materialists deny the principle of causality, 194, 203--and of intentionality or final cause, 211-225; Anaximander, Leucippus, and Democritus belong to the materialistic school, 286-293; Epicurus a materialist, 442-446.

Mathematical Infinite, not absolute, 179, 180; capable of exact measurement, therefore limited, 180; infinite sphere, radius, line, etc., self-contradictory, 180, 181.

Matter, did Plato teach the eternity of? 371-373; the doctrine of the Stoics concerning matter, 449 (*note*).

Matter and Form, Aristotle on, 405-408.

Mean, Aristotle's doctrine of the, 420.

Mediator, consciousness of the need of a, awakened by Greek philosophy, 509-513.

Metaphysical thought, law of its development, 478-480; three different stages in the individual mind, 478, 479; and in the universal consciousness of our race, 479.

Metempsychosis regarded by Plato as a mere hypothesis, 376 (*note*).

Mill, J. S., his doctrine that all knowledge is confined to mental phenomena, 193; his definition of matter, 196; his views of personal identity, 196, 197; his theological opinions, 197.

Miracles, not designed to prove the existence of God, 95.

Moral principles, universal and immutable, which lead to the recognition of a God, 190; the Dogmatic Theologians seek to invalidate the argument therefrom, 261-263.

Mystics, base all religious knowledge on internal feeling, 70.

Mythology, philosophy of Greek, 134-139; Cudworth's interpretation of, 139-143; recognized the consciousness of guilt and need of expiation, 123-125.

N.

National Character, a complex result, 17; conjoint effect of moral and physical influences, 17;

human freedom not to be disregarded in the study of, 20; influence of geographical surroundings, 23--of climate and natural scenery, on the pursuits and mental character of nations, 23--on creative art, 24--and literature of nations, 25.

Nations, individuality of, 22; determined mainly from without, 22.

Natural Realism, 305; Anaxagoras a natural realist, 311-313.

Nature, interpreted by man according to fundamental laws of his reason, 133.

O.

Obligation, the sense of, lies at the foundation of religion, 115.

Ontological proof of the existence of God, 491-493.

Ontology, of Plato, 369-379; the subject-matter of the world of sense, 370-373; the permanent substratum of mental phenomena, 373-376; the first Principle of all principles--God, 377-379, 491-493.

Optimism of Plato, 382.

Order of the Universe, had it a beginning, or is it eternal? 178-184.

Order, principle of, pervades the universe, 220, 221; recognized by Pythagoras, 301; Cosmological proof of the existence of God, 489, 490.

P.

Parmenides, his theory of knowledge, 307-308; a spiritualistic Pantheist, 308, 309.

Paul, St., at Athens, 14; his emotion when he saw the city full of idols, 100; the subject of his discourse, 101; brought into contact with all the phases of philosophic thought, 268, 269; his arrival at Athens an epoch in the moral history of the world, 472; he recognized the preparatory office of Greek philosophy, 473.

Philosophers of Athens, 101; believed in one supreme, uncreated, eternal God, 151-157; their views of the mythological deities, 158, 159; their apologies for images and image-worship, 159, 160.

Philosophic Schools, classification of, 271-273; Pre-Socratic 280-314; Socratic, 314-421; Post-Socratic, 422-456.

Philosophy, the world-enduring monument of the glory of Athens, 265, 260; defined, 270, 271; an inquiry after first causes and principles, 271, 457; not in any proper sense a theological inquiry, 273-277, 279; the love of wisdom, 384, 385.

Philosophy in its relation to Christianity, 268-270; sympathy of Platonism, 268; antagonism of Epicureanism and Stoicism, 269; the Propædeutic office of philosophy, 457-524--recognized by St. Paul, 473--and many of the early Fathers, 473-475; philosophy undermined Polytheism, and purified the Theistic idea, 481-487; developed the Theistic argument in a logical form, 487-494; it awakened Conscience and purified the Ethical idea, 495-506; demonstrated the insufficiency of reason to elaborate a perfect ideal of moral excellence, 506-509; awakened in man the sense of distance from God, and the need of a Mediator, 509-513; deepened the consciousness of sin, and the desire for a Redeemer, 513-522; the history of philosophy a confirmation of the truth of Christianity, 522-524.

Philosophy of Religion, 53; based on the correlation between Divine and human reason, 458-462.

Plato, condemns the poets for their unworthy representations of the gods, 130-132; his views of the gods of Grecian mythology, 154-157; the sympathy of his philosophy with Christianity, 268; followed the philosophic method of Socrates, 328; his moral qualifications for the study of philosophy, 328, 329; his literary qualifications, 329, 330; his search after a criterion of truth, 333, 334; his doctrine of Ideas, 334-337; his science of real knowledge, 337, 338; his answer to the question, What is Science? 338, 339; his Psychology 339-352; his scheme of the intellectual powers, 345; on the nature of the soul, 350; his dialectic, 353-369; his grand scheme of ideas, 364-367; his Ontology, 369-379; on the creation of time, 372; did he teach that matter is eternal? 371, 372; on the eternity of the rational element of the soul, 373-375; on the immortality of the soul, 375, 376; on God as the First Principle of all principles, 377-379; his Physics, 380-383; his Ethics, 383-387, 502-505; defects of his ethical system, 518; his philosophy not derived from Jewish sources, 476; felt the need of a superhuman deliverer from sin and guilt, 519-521.

Plutarch, his sketches of Athenian character, 44; criticism on, 45; on the universality of prayer and sacrifice, 115.

Poets, the Greek, believed in the existence of one uncreated Mind, 141; their theogony was a cosmogony, 142; the theologians of Greece, 274, 275.

Polytheism, Greek, a poetico-historical religion of myth and symbol, 134; its immoralities, 160, 161; undermined by Philosophy, 484-487.

Post-Socratic Schools, classification of, 425; a philosophy of life, 422-424.

Potentiality and Actuality, Aristotle on, 408-412.

Prayer, natural to man, 115.

Preparation for Christianity, not confined to Judaism alone, 464, 465; Greek civilization also prepared the way for Christ, 465-468; Greek language a providential development as the vehicle of a more perfect revelation, 468-470; Greek philosophy fulfilled a propædeutic office, 470-472.

Pre-Socratic Schools, classification of, 280-282; 295, 296.

Principles, *universal and necessary*, how attained by the method of Plato, 361-364, 390; how, by the method of Aristotle, 390-394, 402, 403.

Psychological analysis, logical demonstration of the existence of God begins with, 170; reveals principles which in their logical development attain to the knowledge of God, 184-189.

Psychology of Heraclitus, 289; of Pythagoras, 304; of Parmenides, 307, 308; of Anaxagoras, 313; of Protagoras, 315; of Socrates, 317, 318; of Plato, 339-352; of Aristotle, 392, 398-401; of Epicurus, 442-444; of the Stoics, 453, 454.

Pythagoras, his doctrine that numbers are the first principles of things, 297; how to be interpreted, 297-304; misrepresented by Aristotle, 298-300; psychology of, 304.

R.

Reason, insufficiency of, to elaborate a perfect ideal of moral excellence, 505-509.

Redemption, desire of, awakened and defined by Greek philosophy, 513-521.

Relativity of all knowledge, Hamilton's doctrine of, 229-236.

Religion, the philosophy of, 53; defined 53, 106; universality of religious phenomena, 54; hypothesis offered in explanation of, 55; hypothesis of Epicurus and Comte, 56-65--of Hegel, 65-70--of Jacobi and Schleiermacher, 70-78--of Cousin, 78-86--of Dogmatic Theologians, 86-96--author's theory, 96, 97; religion of the Athenians, 98--its mythological and symbolic aspects, 128--exerted some wholesome influences, 161-163.

Reminiscence, Plato on, 354, 355.

Revelation, progressive, 462-464; harmony of the two revelations in the volume of conscience and the volume of the New Testament, 522-524.

S.

Sacrifice, universal prevalence of, 115, 124; prompted by the universal consciousness of guilt, 126; expiatory sacrifices grounded on a primitive revelation, 127.

Schleiermacher, his theory that all religion is grounded on the feeling of absolute dependence, 71, 72.

Science, Plato's answer to the question, What is Science? 338, 339.

Self-determination, limited by idea of duty, 113; implies accountability, 114; recognizes a Lawgiver and Judge, 115.

Socrates, his desire for truth, 316; his *dæmon*, 317 (*note*); his philosophic method, 318, 319; a believer in one Supreme God, 320; his argument for the existence of God from final causes, 320-324; his belief in immortality and a future retribution, 324, 325; his Ethics, 325; the great prophet of the human conscience, 500-502.

Socratic School, 314.

Sophists, 315, 316; their skeptical tendency, 315; their defective ethics, 498, 499.

Sophocles, believed in one Supreme God, 147.

Soul, Plato on the nature of the, 350, 373; eternity of the rational element, 373-375.

Spencer, H., carries the law of the Conditioned forward to its logical consequences, Atheism, 241, 242.

Stoical School, 446; its philosophy a moral philosophy, 447. Stoics, their Physiology, 448-453; their

Psychology, 453, 454; their Ethics, 454-456; their Theology, 452,453.

Substance, principle of, 189; Idealism seeks to undermine it, 193; Reason affirms a permanent substance as the ground of all mental phenomena, 201--and of the phenomena of the sensible world, 202, 203.

Sufficient Reason, law of, recognized by Plato, 359.

Superstition, meaning of the term as used by Paul, 103.

T.

Teleological proof of the existence of God, 490, 491.

Thales, a believer in one uncreated God, 152; his first principles, 283; he regards *water* as the material cause, 284; and God as the efficient cause, 285.

Theistic argument, in its logical form, 487-494.

Theistic conception, gradual development of, 481-484,

Theological opinions of the early periods of Greek civilization, 150, 151; 276-278.

Theology of Aristotle, 404-417; identical with *Metaphysics*, 404, 416.

Theology of the Greek poets, 143-151; proposed reform of Poetry by Plato, 131, 132.

Thinking, conditionality of, 228; in what sense to be understood, 237; thought imposes no limits upon the object of thought, 237, 238.

Thought, negative and positive, 242, 243; negative thought an impossibility, 243; all thought must be positive, 243.

Time, Platonic notion of, 371, 372.

Tragedians, the Greek, were the public religious teachers of the Athenians, 145; their theology, 146, 147; influence of the religious dramas on the Athenian mind, 161-163; guiltiness of man, and need of reconciliation confessed by, 515-517.

U.

Unconditioned, principle of, 189; assailed by Hamilton, 194.

Unity of God, 259; an affirmation of reason, 259-261; Xenophanes taught the unity of God, 307--also Parmenides, 309--and Plato, 377--and Aristotle, 415.

Unity, principle of, 189; attempt of Dogmatic Theologians to prove its insufficiency, 194, 258-261; recognized by Pythagoras, 296; his effort to reduce all the phenomena of nature to a Unity, 303, 304.

Universal and necessary Principles, classification of, 189, 190; these the foundation of our cognition of a God, 191; how attained according to Plato, 360-364; how by the method of Aristotle, 390-394, 402, 403.

Universe, the, is it finite or infinite? 178-184; Epicurus teaches that it is infinite, 433.

Unknown God, the true God, 104; God not absolutely unknown, 107-110; classification of opponents to the doctrine that God can be cognized by reason, 166-168; Idealist School of Mill, 194-203; Materialistic School of Comte, 203-223; Hamiltonian School, 224-252; School of Dogmatic Theologians, 252-263.

W.

Watson, Richard, represents the views of Dogmatic Theologians 86; asserts that all our religious knowledge is derived from oral revelation, 86-88, 167; incompleteness and inadequacy of this theory, 88-96; in vindicating for the Scriptures the honor of revealing all our knowledge of God, he casts doubt upon the principle of Causality, 253-255--on the principle of the Unconditioned, 255-257--on the principle of Unity, 258-261--and on the immutable principles of Morality, 261-263.

Wordsworth, on the Sentiment of the Divine, 118.

X.

Xenophanes, his attack on Polytheism, 130; his faith in one God, 153, 306, 307.

Z.

Zeno of Citium, the founder of the Stoical School, 446; a Spiritualistic Pantheist, 450, 451.

Zeno of Elea, maintained the doctrine of Absolute Identity, 309.

Zeus, originally the Supreme and only God of the Greeks, 143; the Homeric Zeus, the Supreme God, 144, 145.

THE END.

*** END OF THE PROJECT GUTENBERG EBOOK CHRISTIANITY AND GREEK PHILOSOPHY ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE
THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™ works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may

demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™'s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses.

Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
