Do you remember that Number Seven said he never wrote a line of "poetry" in his life, except once when he was suffering from temporary weakness of body and mind? That is because he is a poet. If he had not been one, he would very certainly have taken to tinkling rhymes. What should you think of the probable musical genius of a young man who was particularly fond of jingling a set of sleigh-bells? Should you expect him to turn out a Mozart or a Beethoven? Now, I think I recognize the poetical instinct in Number Seven, however imperfect may be its expression, and however he may be run away with at times by fantastic notions that come into his head. If fate had allotted him a helpful companion in the shape of a loving and intelligent wife, he might have been half cured of his eccentricities, and we should not have had to say, in speaking of him, "Poor fellow!" But since this cannot be, I am pleased that he should have been so kindly treated on the occasion of the reading of his paper. If he saw Number Five's tear, he will certainly fall in love with her. No matter if he does Number Five is a kind of Circe who does not turn the victims of her enchantment into swine, but into lambs. I want to see Number Seven one of her little flock. I say "little." I suspect it is larger than most of us know. Anyhow, she can spare him sympathy and kindness and encouragement enough to keep him contented with himself and with her, and never miss the pulses of her loving life she lends him. It seems to be the errand of some women to give many people as much happiness as they have any right to in this world. If they concentrated their affection on one, they would give him more than any mortal could claim as his share. I saw Number Five watering her flowers, the other day. The watering-pot had one of those perforated heads, through which the water runs in many small streams. Every plant got its share: the proudest lily bent beneath the gentle shower; the lowliest daisy held its little face up for baptism. All were refreshed, none was flooded. Presently she took the perforated head, or "rose," from the neck of the watering-pot, and the full stream poured out in a round, solid column. It was almost too much for the poor geranium on which it fell, and it looked at one minute as if the roots would be laid bare, and perhaps the whole plant be washed out of the soil in which it was planted. What if Number Five should take off the "rose" that sprinkles her affections on so many, and pour them all on one? Can that ever be? If it can, life is worth living for him on whom her love may be lavished.

One of my neighbors, a thorough American, is much concerned about the growth of what he calls the "hard-handed aristocracy." He tells the following story:—

"I was putting up a fence about my yard, and employed a man of whom I knew something,—that he was industrious, temperate, and that he had a wife and children to support,—a worthy man, a native New Englander. I engaged him, I say, to dig some post-holes. My employee bought a new spade and scoop on purpose, and came to my place at the appointed time, and began digging. While he was at work, two men came over from a drinking-saloon, to which my residence is nearer than I could desire. One of them I had known as Mike Fagan, the other as Hans Schleimer. They looked at Hiram, my New Hampshire man, in a contemptuous and threatening way for a minute or so, when Fagan addressed him:

"'And how much does the man pay yez by the hour?'

"'The gentleman does n't pay me by the hour,' said Hiram.

"'How mosh does he bay you by der veeks?'

"'I don' know as that's any of your business,' answered Hiram.

"Faith, we'll make it our business," said Mike Fagan. "We're Knights of Labor, we'd have yez to know, and ye can't make yer bargains jist as ye loikes. We manes to know how many hours ye worrks, and how much ye gets for it."

"Knights of Labor!" said I. "Why, that is a kind of title of nobility, is n't it? I thought the laws of our country did n't allow titles of that kind. But if you have a right to be called knights, I suppose I ought to address you as such. Sir Michael, I congratulate you on the dignity you have attained. I hope Lady Fagan is getting on well with my shirts. Sir Hans, I pay my respects to your title. I trust that Lady Schleichner has got through that little difficulty between her ladyship and yourself in which the police court thought it necessary to intervene."

"The two men looked at me. I weigh about a hundred and eighty pounds, and am well put together. Hiram was noted in his village as a 'rahstler.' But my face is rather pallid and peaked, and Hiram had something of the greenhorn look. The two men, who had been drinking, hardly knew what ground to take. They rather liked the sound of Sir Michael and, Sir Hans. They did not know very well what to make of their wives as 'ladies.' They looked doubtful whether to take what had been said as a *casus belli* or not, but they wanted a pretext of some kind or other. Presently one of them saw a label on the scoop, or longhandled, spoon-like shovel, with which Hiram had been working.

"Arrah, be jabers!" exclaimed Mike Fagan, "but has n't he been a-tradin' wid Brown, the hardware fellah, that we boycotted! Grab it, Hans, and we'll carry it off and show it to the brotherhood."

"The men made a move toward the implement.

"You let that are scoop-shovel alone," said Hiram.

"I stepped to his side. The Knights were combative, as their noble predecessors with the same title always were, and it was necessary to come to a *voie de fait*. My straight blow from the shoulder did for Sir Michael. Hiram treated Sir Hans to what is technically known as a cross-buttock.

"Naow, Dutchman," said Hiram, "if you don't want to be planted in that are post-hole, y'd better take y'rself out o' this here piece of private property. "Dangerous passin," as the sign-posts say, abaout these times."

"Sir Michael went down half stunned by my expressive gesture; Sir Hans did not know whether his hip was out of joint or he had got a bad sprain; but they were both out of condition for further hostilities. Perhaps it was hardly fair to take advantage of their misfortunes to inflict a discourse upon them, but they had brought it on themselves, and we each of us gave them a piece of our mind.

"I tell you what it is," said Hiram, "I'm a free and independent American citizen, and I an't a-gon' to hev no man tyrannize over me, if he doos call himself by one o' them noblemen's titles. Ef I can't work jes' as I choose, fur folks that wants me to work fur 'em and that I want to work fur, I might jes' as well go to Sibery and done with it. My gran'f'ther fit in Bunker Hill battle. I guess if our folks in them days did n't care no great about Lord Percy and Sir William Haowe, we an't a-gon' to be scart by Sir Michael Fagan and Sir Hans What 's-his-name, nor no other fellahs that undertakes to be noblemen, and tells us common folks what we shall dew an' what we sha'n't. No, sir!"

"I took the opportunity to explain to Sir Michael and Sir Hans what it was our fathers fought for, and what is the meaning of liberty. If these noblemen did not like the country, they could go elsewhere. If they did n't like the laws, they had the ballot-box, and could choose new legislators. But as long as the laws existed they must obey them. I could not admit that, because they called themselves by the titles the Old World nobility thought so much of, they had a right to interfere in the agreements I entered into with my neighbor. I told Sir Michael that if he would go home and help Lady Fagan to saw and split the wood for her fire, he would be better employed than in meddling with my domestic arrangements. I advised Sir Hans to ask Lady Schleichner for her bottle of spirits to use as an embrocation for his lame hip. And so my two visitors with the aristocratic titles staggered off, and left us plain, untitled citizens, Hiram and myself, to set our posts, and consider the question whether we lived in a free country or under the authority of a self-constituted order of quasi-nobility."

It is a very curious fact that, with all our boasted "free and equal" superiority over the communities of the Old World, our people have the most enormous appetite for Old World titles of distinction. Sir Michael and Sir Hans belong to one of the most extended of the aristocratic orders. But we have also "Knights and Ladies of Honor," and, what is still grander, "Royal Conclave of Knights and Ladies," "Royal Arcanum," and "Royal Society of Good Fellows," "Supreme Council," "Imperial Court," "Grand Protector," and "Grand Dictator," and so on. Nothing less than "Grand" and "Supreme" is good enough for the dignitaries of our associations of citizens. Where does all this ambition for names without realities come from? Because a Knight of the Garter wears a golden star, why does the worthy cordwainer, who mends the shoes of his fellow-citizens, want to wear a tin star, and take a name that had a meaning as used by the representatives of ancient families, or the men who had made themselves illustrious by their achievements?

It appears to be a peculiarly American weakness. The French republicans of the earlier period thought the term citizen was good enough for anybody. At a later period, "Roi Citoyen"—the citizen king was a common title given to Louis Philippe. But nothing is too grand for the American, in the way of titles. The proudest of them all signify absolutely nothing. They do not stand for ability, for public service, for social importance, for large possessions; but, on the contrary, are oftenest found in connection with personalities to which they are supremely inapplicable. We can hardly afford to quarrel with a national habit which, if lightly handled, may involve us in serious domestic difficulties. The "Right Worshipful" functionary whose equipage stops at my back gate, and whose services are indispensable to the health and comfort of my household, is a dignitary whom I must not offend. I must speak with proper deference to the lady who is scrubbing my floors, when I remember that her husband, who saws my wood, carries a string of high-sounding titles which would satisfy a Spanish nobleman.

After all, every people must have its own forms of ostentation, pretence, and vulgarity. The ancient Romans had theirs, the English and the French have theirs as well,—why should not we Americans have ours? Educated and refined persons must recognize frequent internal conflicts between the "Homo sum" of Terence and the "Odi profanum vulgus" of Horace. The nobler sentiment should be that of every true American, and it is in that direction that our best civilization is constantly tending.

We were waited on by a new girl, the other evening. Our pretty maiden had left us for a visit to some relative,—so the Mistress said. I do sincerely hope she will soon come back, for we all like to see her flitting round the table.

I don't know what to make of it. I had it all laid out in my mind. With such a company there must be a love-story. Perhaps there will be, but there may be new combinations of the elements which are to make it up, and here is a bud among the full-blown flowers to which I must devote a little space.

Delilah.

I must call her by the name we gave her after she had trimmed the Samson locks of our Professor. Delilah is a puzzle to most of us. A pretty creature, dangerously pretty to be in a station not guarded by all the protective arrangements which surround the maidens of a higher social order. It takes a strong cage to keep in a tiger or a grizzly bear, but what iron bars, what barbed wires, can keep out the smooth and subtle enemy that finds out the cage where beauty is imprisoned? Our young Doctor is evidently attracted by the charming maiden who serves him and us so modestly and so gracefully. Fortunately, the Mistress never loses sight of her. If she were her own daughter, she could not be more watchful of all her movements. And yet I do not believe that Delilah needs all this overlooking. If I am not mistaken, she knows how to take care of herself, and could be trusted anywhere, in any company, without a duenna. She has a history,—I feel sure of it. She has been trained and taught as young persons of higher position in life are brought up, and does not belong in the humble station in which we find her. But inasmuch as the Mistress says nothing about her antecedents, we do not like to be too inquisitive. The two Annexes are, it is plain, very curious about her. I cannot wonder. They are both good-looking girls, but Delilah is prettier than either of them. My sight is not so good as it was, but I can see the way in which the eyes of the young people follow each other about plainly enough to set me thinking as to what is going on in the thinking marrow behind them. The young Doctor's follow Delilah as she glides round the table,—they look into hers whenever they get a chance; but the girl's never betray any consciousness of it, so far as I can see. There is no mistaking the interest with which the two, Annexes watch all this. Why shouldn't they, I should like to know? The Doctor is a bright young fellow, and wants nothing but a bald spot and a wife to find himself in a comfortable family practice. One of the Annexes, as I have said, has had thoughts of becoming a doctress. I don't think the Doctor would want his wife to practise medicine, for reasons which I will not stop to mention. Such a partnership sometimes works wonderfully well, as in one well-known instance where husband and wife are both eminent in the profession; but our young Doctor has said to me that he had rather see his wife,—if he ever should have one,—at the piano than at the dissecting-table. Of course the Annexes know nothing about this, and they may think, as he professed himself willing to lecture on medicine to women, he might like to take one of his pupils as a helpmeet.

If it were not for our Delilah's humble position, I don't see why she would not be a good match for any young man. But then it is so hard to take a young woman from so very lowly a condition as that of a "waitress" that it would require a deal of courage to venture on such a step. If we could only find out that she is a princess in disguise, so to speak,—that is, a young person of presentable connections as well as pleasing looks and manners; that she has had an education of some kind, as we suspected when she blushed on hearing herself spoken of as a "gentille petite," why, then everything would be all right, the young Doctor would have plain sailing,—that is, if he is in love with her, and if she fancies him,—and I should find my love-story,—the one I expected, but not between the parties I had thought would be mating with each other.

Dear little Delilah! Lily of the valley, growing in the shade now,—perhaps better there until her petals drop; and yet if she is all I often fancy she is, how her youthful presence would illuminate and sweeten a household! There is not one of us who does not feel interested in her,—not one of us who would not be delighted at some Cinderella transformation which would show her in the setting Nature meant for her favorite.

The fancy of Number Seven about the witches' broomsticks suggested to one of us the following poem:

*THE BROOMSTICK TRAIN;
OR, THE RETURN OF THE WITCHES.*

*Lookout! Look out, boys! Clear the track!
The witches are here! They've all come back!
They hanged them high,—No use! No use!
What cares a witch for a hangman's noose?
They buried them deep, but they would n't lie, still,
For cats and witches are hard to kill;
They swore they shouldn't and wouldn't die,
Books said they did, but they lie! they lie!*

*—A couple of hundred years, or so,
They had knocked about in the world below,
When an Essex Deacon dropped in to call,
And a homesick feeling seized them all;
For he came from a place they knew full well,
And many a tale he had to tell.
They long to visit the haunts of men,
To see the old dwellings they knew again,
And ride on their broomsticks all around
Their wide domain of unhallowed ground.*

*In Essex county there's many a roof
Well known to him of the cloven hoof;
The small square windows are full in view
Which the midnight hags went sailing through,
On their well-trained broomsticks mounted high,
Seen like shadows against the sky;
Crossing the track of owls and bats,
Hugging before them their coal-black cats.*

*Well did they know, those gray old wives,
The sights we see in our daily drives*

Shimmer of lake and shine of sea,
Brown's bare hill with its lonely tree,
(It wasn't then as we see it now,
With one scant scalp-lock to shade its brow;) *Dusky nooks in the Essex woods,
Dark, dim, Dante-like solitudes,
Where the tree-toad watches the sinuous snake
Glide through his forests of fern and brake;
Ipswich River; its old stone bridge;
Far off Andover's Indian Ridge,
And many a scene where history tells
Some shadow of bygone terror dwells,
Of "Norman's Woe" with its tale of dread,
Of the Screeching Woman of Marblehead,
(The fearful story that turns men pale
Don't bid me tell it,—my speech would fail.)*

*Who would not, will not, if he can,
Bathe in the breezes of fair Cape Ann,
Rest in the bowers her bays enfold,
Loved by the sachems and squaws of old?
Home where the white magnolias bloom,
Sweet with the bayberry's chaste perfume,
Hugged by the woods and kissed by the seal
Where is the Eden like to thee?*

*For that "couple of hundred years, or so,"
There had been no peace in the world below;
The witches still grumbling, "It is n't fair;
Come, give us a taste of the upper air!
We've had enough of your sulphur springs,
And the evil odor that round them clings;
We long for a drink that is cool and nice,
Great buckets of water with Wenham ice;
We've served you well up-stairs, you know;
You're a good old-fellow—come, let us go!"*

*I don't feel sure of his being good,
But he happened to be in a pleasant mood,
As fiends with their skins full sometimes are,
(He'd been drinking with "roughs" at a Boston bar.)
So what does he do but up and shout
To a graybeard turnkey, "Let 'em out!"*

*To mind his orders was all he knew;
The gates swung open, and out they flew.
"Where are our broomsticks?" the beldams cried.
"Here are your broomsticks," an imp replied.
"They've been in—the place you know—so long
They smell of brimstone uncommon strong;
But they've gained by being left alone,
Just look, and you'll see how tall they've grown."
—And where is my cat? "a vixen squalled.
Yes, where are our cats?" the witches bawled,
And began to call them all by name:
As fast as they called the cats, they came
There was bob-tailed Tommy and long-tailed Tim,
And wall-eyed Jacky and green-eyed Jim,
And splay-foot Benny and slim-legged Beau,
And Skinny and Squally, and Jerry and Joe,*

*And many another that came at call,
It would take too long to count them all.
All black,—one could hardly tell which was which,
But every cat knew his own old witch;
And she knew hers as hers knew her,
Ah, did n't they curl their tails and purr!*

*No sooner the withered hags were free
Than out they swarmed for a midnight spree;
I could n't tell all they did in rhymes,
But the Essex people had dreadful times.
The Swampscott fishermen still relate
How a strange sea-monster stole their bait;
How their nets were tangled in loops and knots,
And they found dead crabs in their lobster-pots.
Poor Danvers grieved for her blasted crops,
And Wilmington mourned over mildewed hops.
A blight played havoc with Beverly beans,
It was all the work of those hateful queans!
A dreadful panic began at "Pride's,"
Where the witches stopped in their midnight rides,
And there rose strange rumors and vague alarms
'Mid the peaceful dwellers at Beverly Farms.*

*Now when the Boss of the Beldams found
That without his leave they were ramping round,
He called,—they could hear him twenty miles,
From Chelsea beach to the Misery Isles;
The deafest old granny knew his tone
Without the trick of the telephone.
"Come here, you witches! Come here!" says he,
—"At your games of old, without asking me
I'll give you a little job to do
That will keep you stirring, you godless crew!"*

*They came, of course, at their master's call,
The witches, the broomsticks, the cats, and all;
He led the hags to a railway train
The horses were trying to drag in vain.
"Now, then," says he, "you've had your fun,
And here are the cars you've got to run.*

*"The driver may just unhitch his team,
We don't want horses, we don't want steam;
You may keep your old black cats to hug,
But the loaded train you've got to lug."*

*Since then on many a car you'll see
A broomstick plain as plain can be;
On every stick there's a witch astride,
The string you see to her leg is tied.
She will do a mischief if she can,
But the string is held by a careful man,
And whenever the evil-minded witch
Would cut come caper, he gives a twitch.
As for the hag, you can't see her,
But hark! you can hear her black cat's purr,
And now and then, as a car goes by,
You may catch a gleam from her wicked eye.*

*Often you've looked on a rushing train,
But just what moved it was not so plain.
It couldn't be those wires above,
For they could neither pull nor shove;
Where was the motor that made it go
You couldn't guess, but now you know.*

*Remember my rhymes when you ride again
On the rattling rail by the broomstick train!*

X

In my last report of our talks over the teacups I had something to say of the fondness of our people for titles. Where did the anti-republican, anti-democratic passion for swelling names come from, and how long has it been naturalized among us?

A striking instance of it occurred at about the end of the last century. It was at that time there appeared among us one of the most original and singular personages to whom America has given birth. Many of our company,—many of my readers,—all well acquainted with his name, and not wholly ignorant of his history. They will not object to my giving some particulars relating to him, which, if not new to them, will be new to others into whose hands these pages may fall.

Timothy Dexter, the first claimant of a title of nobility among the people of the United States of America, was born in the town of Malden, near Boston. He served an apprenticeship as a leather-dresser, saved some money, got some more with his wife, began trading and speculating, and became at last rich, for those days. His most famous business enterprise was that of sending an invoice of warming-pans to the West Indies. A few tons of ice would have seemed to promise a better return; but in point of fact, he tells us, the warming-pans were found useful in the manufacture of sugar, and brought him in a handsome profit. His ambition rose with his fortune. He purchased a large and stately house in Newburyport, and proceeded to embellish and furnish it according to the dictates of his taste and fancy. In the grounds about his house, he caused to be erected between forty and fifty wooden statues of great men and allegorical figures, together with four lions and one lamb. Among these images were two statues of Dexter himself, one of which held a label with a characteristic inscription. His house was ornamented with minarets, adorned with golden balls, and surmounted by a large gilt eagle. He equipped it with costly furniture, with paintings, and a library. He went so far as to procure the services of a poet laureate, whose business it seems to have been to sing his praises. Surrounded with splendors like these, the plain title of "Mr." Dexter would have been infinitely too mean and common. He therefore boldly took the step of self-ennobling, and gave himself forth—as he said, obeying "the voice of the people at large"—as "Lord Timothy Dexter," by which appellation he has ever since been known to the American public.

If to be the pioneer in the introduction of Old World titles into republican America can confer a claim to be remembered by posterity, Lord Timothy Dexter has a right to historic immortality. If the true American spirit shows itself most clearly in boundless self-assertion, Timothy Dexter is the great original American egotist. If to throw off the shackles of Old World pedantry, and defy the paltry rules and examples of grammarians and rhetoricians, is the special province and the chartered privilege of the American writer, Timothy Dexter is the founder of a new school, which tramples under foot the conventionalities that hampered and subjugated the faculties of the poets, the dramatists, the historians, essayists, story-tellers, orators, of the worn-out races which have preceded the great American people.

The material traces of the first American nobleman's existence have nearly disappeared. The house is still standing, but the statues, the minarets, the arches, and the memory of the great Lord Timothy Dexter live chiefly in tradition, and in the work which he bequeathed to posterity, and of which I shall say a few words. It is unquestionably a thoroughly original production, and I fear that some readers may think I am trifling with them when I am quoting it literally. I am going to make a strong claim for Lord Timothy as against other

candidates for a certain elevated position.

Thomas Jefferson is commonly recognized as the first to proclaim before the world the political independence of America. It is not so generally agreed upon as to who was the first to announce the literary emancipation of our country.

One of Mr. Emerson's biographers has claimed that his Phi Beta Kappa Oration was our Declaration of Literary Independence. But Mr. Emerson did not cut himself loose from all the traditions of Old World scholarship. He spelled his words correctly, he constructed his sentences grammatically. He adhered to the slavish rules of propriety, and observed the reticences which a traditional delicacy has considered inviolable in decent society, European and Oriental alike. When he wrote poetry, he commonly selected subjects which seemed adapted to poetical treatment,—apparently thinking that all things were not equally calculated to inspire the true poet's genius. Once, indeed, he ventured to refer to "the meal in the firkin, the milk in the pan," but he chiefly restricted himself to subjects such as a fastidious conventionalism would approve as having a certain fitness for poetical treatment. He was not always so careful as he might have been in the rhythm and rhyme of his verse, but in the main he recognized the old established laws which have been accepted as regulating both. In short, with all his originality, he worked in Old World harness, and cannot be considered as the creator of a truly American, self-governed, self-centred, absolutely independent style of thinking and writing, knowing no law but its own sovereign will and pleasure.

A stronger claim might be urged for Mr. Whitman. He takes into his hospitable vocabulary words which no English dictionary recognizes as belonging to the language,—words which will be looked for in vain outside of his own pages. He accepts as poetical subjects all things alike, common and unclean, without discrimination, miscellaneous as the contents of the great sheet which Peter saw let down from heaven. He carries the principle of republicanism through the whole world of created objects. He will "thread a thread through [his] poems," he tells us, "that no one thing in the universe is inferior to another thing." No man has ever asserted the surpassing dignity and importance of the American citizen so boldly and freely as Mr. Whitman. He calls himself "teacher of the unquenchable creed, namely, egotism." He begins one of his chants, "I celebrate myself," but he takes us all in as partners in his self-glorification. He believes in America as the new Eden.

"A world primal again,—vistas of glory incessant and branching, A new race dominating previous ones and grander far, New politics—new literature and religions—new inventions and arts."

Of the new literature he himself has furnished specimens which certainly have all the originality he can claim for them. So far as egotism is concerned, he was clearly anticipated by the titled personage to whom I have referred, who says of himself, "I am the first in the East, the first in the West, and the greatest philosopher in the Western world." But while Mr. Whitman divests himself of a part of his baptismal name, the distinguished New Englander thus announces his proud position: "I'me the first Lord in the yonited States of A mercary Now of Newburyport. it is the voice of the peopel and I cant Help it." This extract is from his famous little book called "A Pickle for the Knowing Ones." As an inventor of a new American style he goes far beyond Mr. Whitman, who, to be sure, cares little for the dictionary, and makes his own rules of rhythm, so far as there is any rhythm in his sentences. But Lord Timothy spells to suit himself, and in place of employing punctuation as it is commonly used, prints a separate page of periods, colons, semicolons, commas, notes of interrogation and of admiration, with which the reader is requested to "peper and soolt" the book as he pleases.

I am afraid that Mr. Emerson and Mr. Whitman must yield the claim of declaring American literary independence to Lord Timothy Dexter, who not only taught his countrymen that they need not go to the Heralds' College to authenticate their titles of nobility, but also that they were at perfect liberty to spell just as they liked, and to write without troubling themselves about stops of any kind. In writing what I suppose he intended for poetry, he did not even take the pains to break up his lines into lengths to make them look like verse, as may be seen by the following specimen:

WONDER OF WONDERS!

How great the soul is! Do not you all wonder and admire to see and behold and hear? Can you all believe half the truth, and admire to hear the wonders how great the soul is—only behold—past finding out! Only see how large the soul is! that if a man is drowned in the sea what a great bubble comes up out of the top of the water... The bubble is the soul.

I confess that I am not in sympathy with some of the movements that accompany the manifestations of American social and literary independence. I do not like the assumption of titles of Lords and Knights by plain citizens of a country which prides itself on recognizing simple manhood and womanhood as sufficiently entitled to respect without these unnecessary additions. I do not like any better the familiar, and as it seems to me rude, way of speaking of our fellow-citizens who are entitled to the common courtesies of civilized society. I never thought it dignified or even proper for a President of the United States to call himself, or to be called by others, "Frank" Pierce. In the first place I had to look in a biographical dictionary to find out whether his baptismal name was Franklin, or Francis, or simply Frank, for I think children are sometimes christened with this abbreviated name. But it is too much in the style of Cowper's unpleasant acquaintance:

*"The man who hails you Tom or Jack,
And proves by thumping on your back
How he esteems your merit."*

I should not like to hear our past chief magistrates spoken of as Jack Adams or Jim Madison, and it would have been only as a political partisan that I should have reconciled myself to "Tom" Jefferson. So, in spite of "Ben" Jonson, "Tom" Moore, and "Jack" Sheppard, I prefer to speak of a fellow-citizen already venerable by his years, entitled to respect by useful services to his country, and recognized by many as the prophet of a new poetical dispensation, with the customary title of adults rather than by the free and easy school-boy abbreviation with which he introduced himself many years ago to the public. As for his rhapsodies, Number Seven, our "cracked Teacup," says they sound to him like "fugues played on a big organ which has been struck by lightning." So far as concerns literary independence, if we understand by that term the getting rid

of our subjection to British criticism, such as it was in the days when the question was asked, "Who reads an American book?" we may consider it pretty well established. If it means dispensing with punctuation, coining words at will, self-revelation unrestrained by a sense of what is decorous, declamations in which everything is glorified without being idealized, "poetry" in which the reader must make the rhythms which the poet has not made for him, then I think we had better continue literary colonists. I shrink from a lawless independence to which all the virile energy and trampling audacity of Mr. Whitman fail to reconcile me. But there is room for everybody and everything in our huge hemisphere. Young America is like a three-year-old colt with his saddle and bridle just taken off. The first thing he wants to do is to roll. He is a droll object, sprawling in the grass with his four hoofs in the air; but he likes it, and it won't harm us. So let him roll,—let him roll.

Of all The Teacups around our table, Number Five is the one who is the object of the greatest interest. Everybody wants to be her friend, and she has room enough in her hospitable nature to find a place for every one who is worthy of the privilege. The difficulty is that it is so hard to be her friend without becoming her lover. I have said before that she turns the subjects of her Circe-like enchantment, not into swine, but into lambs. The Professor and I move round among her lambs, the docile and amiable flock that come and go at her bidding, that follow her footsteps, and are content to live in the sunshine of her smile and within reach of the music of her voice. I like to get her away from their amiable bleatings; I love to talk with her about life, of which she has seen a great deal, for she knows what it is to be an idol in society and the centre of her social circle. It might be a question whether women or men most admire and love her. With her own sex she is always helpful, sympathizing, tender, charitable, sharing their griefs as well as taking part in their pleasures. With men it has seemed to make little difference whether they were young or old: all have found her the same sweet, generous, unaffected companion; fresh enough in feeling for the youngest, deep enough in the wisdom of the heart for the oldest. She does not pretend to be youthful, nor does she trouble herself that she has seen the roses of more Junes than many of—the younger women who gather round her. She has not had to say,

*Comme je regrette
Mon bras si dodu,*

for her arm has never lost its roundness, and her face is one of those that cannot be cheated of their charm even if they live long enough to look upon the grown up grandchildren of their coevals.

It is a wonder how Number Five can find the time to be so much to so many friends of both sexes, in spite of the fact that she is one of the most insatiable of readers. She not only reads, but she remembers; she not only remembers, but she records, for her own use and pleasure, and for the delight and profit of those who are privileged to look over her note-books. Number Five, as I think I have said before, has not the ambition to figure as an authoress. That she could write most agreeably is certain. I have seen letters of hers to friends which prove that clearly enough. Whether she would find prose or verse the most natural mode of expression I cannot say, but I know she is passionately fond of poetry, and I should not be surprised if, laid away among the pressed pansies and roses of past summers, there were poems, songs, perhaps, of her own, which she sings to herself with her fingers touching the piano; for to that she tells her secrets in tones sweet as the ring-dove's call to her mate.

I am afraid it may be suggested that I am drawing Number Five's portrait too nearly after some model who is unconsciously sitting for it; but have n't I told you that you must not look for flesh and blood personalities behind or beneath my Teacups? I am not going to make these so lifelike that you will be saying, This is Mr. or Miss, or Mrs. So-and-So. My readers must remember that there are very many pretty, sweet, amiable girls and women sitting at their pianos, and finding chords to the music of their heart-strings. If I have pictured Number Five as one of her lambs might do it, I have succeeded in what I wanted to accomplish. Why don't I describe her person? If I do, some gossip or other will be sure to say, "Oh, he means her, of course," and find a name to match the pronoun.

It is strange to see how we are all coming to depend upon the friendly aid of Number Five in our various perplexities. The Counsellor asked her opinion in one of those cases where a divorce was too probable, but a reconciliation was possible. It takes a woman to sound a woman's heart, and she found there was still love enough under the ruffled waters to warrant the hope of peace and tranquillity. The young Doctor went to her for counsel in the case of a hysteric girl possessed with the idea that she was a born poetess, and covering whole pages of foolscap with senseless outbursts, which she wrote in paroxysms of wild excitement, and read with a rapture of self-admiration which there was nothing in her verses to justify or account for. How sweetly Number Five dealt with that poor deluded sister in her talk with the Doctor! "Yes," she said to him, "nothing can be fuller of vanity, self-worship, and self-deception. But we must be very gentle with her. I knew a young girl tormented with aspirations, and possessed by a belief that she was meant for a higher place than that which fate had assigned her, who needed wholesome advice, just as this poor young thing does. She did not ask for it, and it was not offered. Alas, alas! 'no man cared for her soul,'—no man nor woman either. She was in her early teens, and the thought of her earthly future, as it stretched out before her, was more than she could bear, and she sought the presence of her Maker to ask the meaning of her abortive existence.—We will talk it over. I will help you take care of this child."

The Doctor was thankful to have her assistance in a case with which he would have found it difficult to deal if he had been left to, his unaided judgment, and between them the young girl was safely piloted through the perilous straits in which she came near shipwreck.

I know that it is commonly said of her that every male friend of hers must become her lover unless he is already lassoed by another. Il fait passer par l'a. The young Doctor is, I think, safe, for I am convinced that he is bewitched with Delilah. Since she has left us, he has seemed rather dejected; I feel sure that he misses her. We all do, but he more seriously than the rest of us. I have said that I cannot tell whether the Counsellor is to be counted as one of Number Five's lambs or not, but he evidently admires her, and if he is not fascinated, looks as if he were very near that condition.

It was a more delicate matter about which the Tutor talked with her. Something which she had pleasantly said to him about the two Annexes led him to ask her, more or less seriously, it may be remembered, about the fitness of either of them to be the wife of a young man in his position. She talked so sensibly, as it seemed

to him, about it that he continued the conversation, and, shy as he was, became quite easy and confidential in her company. The Tutor is not only a poet, but is a great reader of the poetry of many languages. It so happened that Number Five was puzzled, one day, in reading a sonnet of Petrarch, and had recourse to the Tutor to explain the difficult passage. She found him so thoroughly instructed, so clear, so much interested, so ready to impart knowledge, and so happy in his way of doing it, that she asked him if he would not allow her the privilege of reading an Italian author under his guidance, now and then.

The Tutor found Number Five an apt scholar, and something more than that; for while, as a linguist, he was, of course, her master, her intelligent comments brought out the beauties of an author in a way to make the text seem like a different version. They did not always confine themselves to the book they were reading. Number Five showed some curiosity about the Tutor's relations with the two Annexes. She suggested whether it would not be well to ask one or both of them in to take part in their readings. The Tutor blushed and hesitated. "Perhaps you would like to ask one of them," said Number Five. "Which one shall it be?" "It makes no difference to me which," he answered, "but I do not see that we need either." Number Five did not press the matter further. So the young Tutor and Number Five read together pretty regularly, and came to depend upon their meeting over a book as one of their stated seasons of enjoyment. He is so many years younger than she is that I do not suppose he will have to pass *par la*, as most of her male friends have done. I tell her sometimes that she reminds me of my Alma Mater, always young, always fresh in her attractions, with her scholars all round her, many of them graduates, or to graduate sooner or later.

What do I mean by graduates? Why, that they have made love to her, and would be entitled to her diploma, if she gave a parchment to each one of them who had had the courage to face the inevitable. About the Counsellor I am, as I have said, in doubt. Who wrote that "I Like You and I Love You," which we found in the sugar-bowl the other day? Was it a graduate who had felt the "icy dagger," or only a candidate for graduation who was afraid of it? So completely does she subjugate those who come under her influence that I believe she looks upon it as a matter of course that the fateful question will certainly come, often after a brief acquaintance. She confessed as much to me, who am in her confidence, and not a candidate for graduation from her academy. Her graduates—her lambs I called them—are commonly faithful to her, and though now and then one may have gone off and sulked in solitude, most of them feel kindly to her, and to those who have shared the common fate of her suitors. I do really believe that some of them would be glad to see her captured by any one, if such there can be, who is worthy of her. She is the best of friends, they say, but can she love anybody, as so many other women do, or seem to? Why shouldn't our Musician, who is evidently fond of her company, and sings and plays duets with her, steal her heart as Piozzi stole that of the pretty and bright Mrs. Thrale, as so many music-teachers have run away with their pupils' hearts? At present she seems to be getting along very placidly and contentedly with her young friend the Tutor. There is something quite charming in their relations with each other. He knows many things she does not, for he is reckoned one of the most learned in his literary specialty of all the young men of his time; and it can be a question of only a few years when some first-class professorship will be offered him. She, on the other hand, has so much more experience, so much more practical wisdom, than he has that he consults her on many every-day questions, as he did, or made believe do, about that of making love to one of the two Annexes. I had thought, when we first sat round the tea-table, that she was good for the bit of romance I wanted; but since she has undertaken to be a kind of half-maternal friend to the young Tutor, I am afraid I shall have to give her up as the heroine of a romantic episode. It would be a pity if there were nothing to commend these papers to those who take up this periodical but essays, more or less significant, on subjects more or less interesting to the jaded and impatient readers of the numberless stories and entertaining articles which crowd the magazines of this prolific period. A whole year of a tea-table as large as ours without a single love passage in it would be discreditable to the company. We must find one, or make one, before the tea-things are taken away and the table is no longer spread.

The Dictator turns preacher.

We have so many light and playful talks over the teacups that some readers may be surprised to find us taking up the most serious and solemn subject which can occupy a human intelligence. The sudden appearance among our New England Protestants of the doctrine of purgatory as a possibility, or even probability, has startled the descendants of the Puritans. It has naturally led to a reconsideration of the doctrine of eternal punishment. It is on that subject that Number Five and I have talked together. I love to listen to her, for she talks from the promptings of a true woman's heart. I love to talk to her, for I learn my own thoughts better in that way than in any other "L'appetit vient en mangeant," the French saying has it. "L'esprit vient en causant;" that is, if one can find the right persons to talk with.

The subject which has specially interested Number Five and myself, of late, was suggested to me in the following way.

Some two years ago I received a letter from a clergyman who bears by inheritance one of the most distinguished names which has done honor to the American "Orthodox" pulpit. This letter requested of me "a contribution to a proposed work which was to present in their own language the views of 'many men of many minds' on the subject of future punishment. It was in my mind to let the public hear not only from professional theologians, but from other professions, as from jurists on the alleged but disputed value of the hangman's whip overhanging the witness-box, and from physicians on the working of beliefs about the future life in the minds of the dangerously sick. And I could not help thinking what a good thing it would be to draw out the present writer upon his favorite borderland between the spiritual and the material." The communication came to me, as the writer reminds me in a recent letter, at a "painfully inopportune time," and though it was courteously answered, was not made the subject of a special reply.

This request confers upon me a certain right to express my opinion on this weighty subject without fear and without reproach even from those who might be ready to take offence at one of the laity for meddling with pulpit questions. It shows also that this is not a dead issue in our community, as some of the younger generation seem to think. There are some, there may be many, who would like to hear what impressions one has received on the subject referred to, after a long life in which he has heard and read a great deal about the

matter. There is a certain gravity in the position of one who is, in the order of nature very near the undiscovered country. A man who has passed his eighth decade feels as if he were already in the antechamber of the apartments which he may be called to occupy in the house of many mansions. His convictions regarding the future of our race are likely to be serious, and his expressions not lightly uttered. The question my correspondent suggests is a tremendous one. No other interest compares for one moment with that belonging to it. It is not only ourselves that it concerns, but all whom we love or ever have loved, all our human brotherhood, as well as our whole idea of the Being who made us and the relation in which He stands to his creatures. In attempting to answer my correspondent's question, I shall no doubt repeat many things I have said before in different forms, on different occasions. This is no more than every clergyman does habitually, and it would be hard if I could not have the same license which the professional preacher enjoys so fully.

Number Five and I have occasionally talked on religious questions, and discovered many points of agreement in our views. Both of us grew up under the old "Orthodox" or Calvinistic system of belief. Both of us accepted it in our early years as a part of our education. Our experience is a common one. William Cullen Bryant says of himself, "The Calvinistic system of divinity I adopted of course, as I heard nothing else taught from the pulpit, and supposed it to be the accepted belief of the religious world." But it was not the "five points" which remained in the young poet's memory and shaped his higher life. It was the influence of his mother that left its permanent impression after the questions and answers of the Assembly's Catechism had faded out, or remained in memory only as fossil survivors of an extinct or fast-disappearing theological formation. The important point for him, as for so many other children of Puritan descent, was not his father's creed, but his mother's character, precepts, and example. "She was a person," he says, "of excellent practical sense, of a quick and sensitive moral judgment, and had no patience with any form of deceit or duplicity. Her prompt condemnation of injustice, even in those instances in which it is tolerated by the world, made a strong impression upon me in early life; and if, in the discussion of public questions, I have in my riper age endeavored to keep in view the great rule of right without much regard to persons, it has been owing in a great degree to the force of her example, which taught me never to countenance a wrong because others did."

I have quoted this passage because it was an experience not wholly unlike my own, and in certain respects like that of Number Five. To grow up in a narrow creed and to grow out of it is a tremendous trial of one's nature. There is always a bond of fellowship between those who have been through such an ordeal.

The experiences we have had in common naturally lead us to talk over the theological questions which at this time are constantly presenting themselves to the public, not only in the books and papers expressly devoted to that class of subjects, but in many of the newspapers and popular periodicals, from the weeklies to the quarterlies. The pulpit used to lay down the law to the pews; at the present time, it is of more consequence what the pews think than what the minister does, for the obvious reason that the pews can change their minister, and often do, whereas the minister cannot change the pews, or can do so only to a very limited extent. The preacher's garment is cut according to the pattern of that of the hearers, for the most part. Thirty years ago, when I was writing on theological subjects, I came in for a very pretty share of abuse, such as it was the fashion of that day, at least in certain quarters, to bestow upon those who were outside of the high-walled enclosures in which many persons; not naturally unamiable or exclusive, found themselves imprisoned. Since that time what changes have taken place! Who will believe that a well-behaved and reputable citizen could have been denounced as a "moral parricide," because he attacked some of the doctrines in which he was supposed to have been brought up? A single thought should have prevented the masked theologian who abused his incognito from using such libellous language.

Much, and in many families most, of the religious teaching of children is committed to the mother. The experience of William Cullen Bryant, which I have related in his own words, is that of many New England children. Now, the sternest dogmas that ever came from a soul cramped or palsied by an obsolete creed become wonderfully softened in passing between the lips of a mother. The cruel doctrine at which all but case-hardened "professionals" shudder cones out, as she teaches and illustrates it, as unlike its original as the milk which a peasant mother gives her babe is unlike the coarse food which furnishes her nourishment. The virus of a cursing creed is rendered comparatively harmless by the time it reaches the young sinner in the nursery. Its effects fall as far short of what might have been expected from its virulence as the pearly vaccine vesicle falls short of the terrors of the confluent small-pox. Controversialists should therefore be careful (for their own sakes, for they hurt nobody so much as themselves) how they use such terms as "parricide" as characterizing those who do not agree in all points with the fathers whom or whose memory they honor and venerate. They might with as much propriety call them matricides, if they did not agree with the milder teachings of their mothers. I can imagine Jonathan Edwards in the nursery with his three-year-old child upon his knee. The child looks up to his face and says to him,—“Papa, nurse tells me that you say God hates me worse than He hates one of those horrid ugly snakes that crawl all round. Does God hate me so?”

“Alas! my child, it is but too true. So long as you are out of Christ you are as a viper, and worse than a viper, in his sight.”

By and by, Mrs. Edwards, one of the loveliest of women and sweetest of mothers, comes into the nursery. The child is crying.

“What is the matter, my darling?”

“Papa has been telling me that God hates me worse than a snake.”

Poor, gentle, poetical, sensitive, spiritual, almost celestial Mrs. Jonathan Edwards! On the one hand the terrible sentence conceived, written down, given to the press, by the child's father; on the other side the trusting child looking up at her, and all the mother pleading in her heart against the frightful dogma of her revered husband. Do you suppose she left that poison to rankle in the tender soul of her darling? Would it have been moral parricide for a son of the great divine to have repudiated the doctrine which degraded his blameless infancy to the condition and below the condition of the reptile? Was it parricide in the second or third degree when his descendant struck out that venomous sentence from the page in which it stood as a monument to what depth Christian heathenism could sink under the teaching of the great master of logic and

spiritual inhumanity? It is too late to be angry about the abuse a well-meaning writer received thirty years ago. The whole atmosphere has changed since then. It is mere childishness to expect men to believe as their fathers did; that is, if they have any minds of their own. The world is a whole generation older and wiser than when the father was of his son's age.

So far as I have observed persons nearing the end of life, the Roman Catholics understand the business of dying better than Protestants. They have an expert by them, armed with spiritual specifics, in which they both, patient and priestly ministrant, place implicit trust. Confession, the Eucharist, Extreme Unction,—these all inspire a confidence which without this symbolism is too apt to be wanting in over-sensitive natures. They have been peopled in earlier years with ghastly spectres of avenging fiends, moving in a sleepless world of devouring flames and smothering exhalations; where nothing lives but the sinner, the fiends, and the reptiles who help to make life an unending torture. It is no wonder that these images sometimes return to the enfeebled intelligence. To exorcise them, the old Church of Christendom has her mystic formulae, of which no rationalistic prescription can take the place. If Cowper had been a good Roman Catholic, instead of having his conscience handled by a Protestant like John Newton, he would not have died despairing, looking upon himself as a castaway. I have seen a good many Roman Catholics on their dying beds, and it always appeared to me that they accepted the inevitable with a composure which showed that their belief, whether or not the best to live by, was a better one to die by than most of the harder creeds which have replaced it.

In the more intelligent circles of American society one may question anything and everything, if he will only do it civilly. We may talk about eschatology, the science of last things,—or, if you will, the natural history of the undiscovered country, without offence before anybody except young children and very old women of both sexes. In our New England the great Andover discussion and the heretical missionary question have benumbed all sensibility on this subject as entirely, as completely, as the new local anaesthetic, cocaine, deadens the sensibility of the part to which it is applied, so that the eye may have its mote or beam plucked out without feeling it,—as the novels of Zola and Maupassant have hardened the delicate nerve-centres of the women who have fed their imaginations on the food they have furnished.

The generally professed belief of the Protestant world as embodied in their published creeds is that the great mass of mankind are destined to an eternity of suffering. That this eternity is to be one of bodily pain—of “torment”—is the literal teaching of Scripture, which has been literally interpreted by the theologians, the poets, and the artists of many long ages which followed the acceptance of the recorded legends of the church as infallible. The doctrine has always been recognized, as it is now, as a very terrible one. It has found a support in the story of the fall of man, and the view taken of the relation of man to his Maker since that event. The hatred of God to mankind in virtue of their “first disobedience” and inherited depravity is at the bottom of it. The extent to which that idea was carried is well shown in the expressions I have borrowed from Jonathan Edwards. According to his teaching,—and he was a reasoner who knew what he was talking about, what was involved in the premises of the faith he accepted,—man inherits the curse of God as his principal birthright.

What shall we say to the doctrine of the fall of man as the ground of inflicting endless misery on the human race? A man to be punished for what he could not help! He was expected to be called to account for Adam's sin. It is singular to notice that the reasoning of the wolf with the lamb should be transferred to the dealings of the Creator with his creatures. “You stirred the brook up and made my drinking-place muddy.” “But, please your wolfship, I couldn't do that, for I stirred the water far down the stream,—below your drinking-place.” “Well, anyhow, your father troubled it a year or two ago, and that is the same thing.” So the wolf falls upon the lamb and makes a meal of him. That is wolf logic,—and theological reasoning.

How shall we characterize the doctrine of endless torture as the destiny of most of those who have lived, and are living, on this planet? I prefer to let another writer speak of it. Mr. John Morley uses the following words: “The horrors of what is perhaps the most frightful idea that has ever corroded human character,—the idea of eternal punishment.” Sismondi, the great historian, heard a sermon on eternal punishment, and vowed never again to enter another church holding the same creed. Romanism he considered a religion of mercy and peace by the side of what the English call the Reformation.—I mention these protests because I happen to find them among my notes, but it would be easy to accumulate examples of the same kind. When Cowper, at about the end of the last century, said satirically of the minister he was attacking,

“He never mentioned hell to ears polite,”

he was giving unconscious evidence that the sense of the barbarism of the idea was finding its way into the pulpit. When Burns, in the midst of the sulphurous orthodoxy of Scotland, dared to say,

*“The fear o' hell 's a hangman's whip
To haud the wretch in order,”*

he was only appealing to the common sense and common humanity of his fellow-countrymen.

All the reasoning in the world, all the proof-texts in old manuscripts, cannot reconcile this supposition of a world of sleepless and endless torment with the declaration that “God is love.”

Where did this “frightful idea” come from? We are surprised, as we grow older, to find that the legendary hell of the church is nothing more nor less than the Tartarus of the old heathen world. It has every mark of coming from the cruel heart of a barbarous despot. Some malignant and vindictive Sheik, some brutal Mezentius, must have sat for many pictures of the Divinity. It was not enough to kill his captive enemy, after torturing him as much as ingenuity could contrive to do it. He escaped at last by death, but his conqueror could not give him up so easily, and so his vengeance followed him into the unseen and unknown world. How the doctrine got in among the legends of the church we are no more bound to show than we are to account for the intercalation of the “three witnesses” text, or the false insertion, or false omission, whichever it may be, of the last twelve verses of the Gospel of St Mark. We do not hang our grandmothers now, as our ancestors did theirs, on the strength of the positive command, “Thou shalt not suffer a witch to live.”

The simple truth is that civilization has outgrown witchcraft, and is outgrowing the Christian Tartarus. The pulpit no longer troubles itself about witches and their evil doings. All the legends in the world could not arrest the decay of that superstition and all the edicts that grew out of it. All the stories that can be found in old manuscripts will never prevent the going out of the fires of the legendary Inferno. It is not much talked about nowadays to ears polite or impolite. Humanity is shocked and repelled by it. The heart of woman is in unconquerable rebellion against it. The more humane sects tear it from their "Bodies of Divinity" as if it were the flaming shirt of Nessus. A few doctrines with which it was bound up have dropped or are dropping away from it: the primal curse; consequential damages to give infinite extension to every transgression of the law of God; inverting the natural order of relative obligations; stretching the smallest of finite offenses to the proportions of the infinite; making the babe in arms the responsible being, and not the parent who gave it birth and determined its conditions of existence.

After a doctrine like "the hangman's whip" has served its purpose,—if it ever had any useful purpose,—after a doctrine like that of witchcraft has hanged old women enough, civilization contrives to get rid of it. When we say that civilization crowds out the old superstitious legends, we recognize two chief causes. The first is the naked individual protest; the voice of the inspiration which giveth man understanding. This shows itself conspicuously in the modern poets. Burns in Scotland, Bryant, Longfellow, Whittier, in America, preached a new gospel to the successors of men like Thomas Boston and Jonathan Edwards. In due season, the growth of knowledge, chiefly under the form of that part of knowledge called science, so changes the views of the universe that many of its long-unchallenged legends become no more than nursery tales. The text-books of astronomy and geology work their way in between the questions and answers of the time-honored catechisms. The doctrine of evolution, so far as it is accepted, changes the whole relations of man to the creative power. It substitutes infinite hope in the place of infinite despair for the vast majority of mankind. Instead of a shipwreck, from which a few cabin passengers and others are to be saved in the long-boat, it gives mankind a vessel built to endure the tempests, and at last to reach a port where at the worst the passengers can find rest, and where they may hope for a home better than any which they ever had in their old country. It is all very well to say that men and women had their choice whether they would reach the safe harbor or not.

*"Go to it grandam, child;
Give grandam kingdom, and it grandam will
Give it a plum, a cherry and a fig."*

We know what the child will take. So which course we shall take depends very much on the way the choice is presented to us, and on what the chooser is by nature. What he is by nature is not determined by himself, but by his parentage. "They know not what they do." In one sense this is true of every human being. The agent does not know, never can know, what makes him that which he is. What we most want to ask of our Maker is an unfolding of the divine purpose in putting human beings into conditions in which such numbers of them would be sure to go wrong. We want an advocate of helpless humanity whose task it shall be, in the words of Milton,

"To justify the ways of God to man."

We have heard Milton's argument, but for the realization of his vision of the time

*"When Hell itself shall pass away,
And leave her dolorous mansions to the peering day,"*

our suffering race must wait in patience.

The greater part of the discourse the reader has had before him was delivered over the teacups one Sunday afternoon. The Mistress looked rather grave, as if doubtful whether she ought not to signify her disapprobation of what seemed to her dangerous doctrine.

However, as she knew that I was a good church-goer and was on the best terms with her minister, she said nothing to show that she had taken the alarm. Number Five listened approvingly. We had talked the question over well, and were perfectly agreed on the main point. How could it be otherwise? Do you suppose that any intellectual, spiritual woman, with a heart under her bodice, can for a moment seriously believe that the greater number of the high-minded men, the noble and lovely women, the ingenious and affectionate children, whom she knows and honors or loves, are to be handed over to the experts in a great torture-chamber, in company with the vilest creatures that have once worn human shape?

"If there is such a world as used to be talked about from the pulpit, you may depend upon it," she said to me once, "there will soon be organized a Humane Society in heaven, and a mission established among 'the spirits in prison.'"

Number Five is a regular church-goer, as I am. I do not believe either of us would darken the doors of a church if we were likely to hear any of the "old-fashioned" sermons, such as I used to listen to in former years from a noted clergyman, whose specialty was the doctrine of eternal punishment. But you may go to the churches of almost any of our Protestant denominations, and hear sermons by which you can profit, because the ministers are generally good men, whose moral and spiritual natures are above the average, and who know that the harsh preaching of two or three generations ago would offend and alienate a large part of their audience. So neither Number Five nor I are hypocrites in attending church or "going to meeting." I am afraid it does not make a great deal of difference to either of us what may be the established creed of the worshipping assembly. That is a matter of great interest, perhaps of great importance, to them, but of much less, comparatively, to us. Companionship in worship, and sitting quiet for an hour while a trained speaker, presumably somewhat better than we are, stirs up our spiritual nature,—these are reasons enough to Number Five, as to me, for regular attendance on divine worship.

Number Seven is of a different way of thinking and feeling. He insists upon it that the churches keep in

their confessions of faith statements which they do not believe, and that it is notorious that they are afraid to meddle with them. The Anglo-American church has dropped the Athanasian Creed from its service; the English mother church is afraid to. There are plenty of Universalists, Number Seven says, in the Episcopalian and other Protestant churches, but they do not avow their belief in any frank and candid fashion. The churches know very well, he maintains, that the fear of everlasting punishment more than any or all other motives is the source of their power and the support of their organizations. Not only are the fears of mankind the whip to scourge and the bridle to restrain them, but they are the basis of an almost incalculable material interest. "Talk about giving up the doctrine of endless punishment by fire!" exclaimed Number Seven; "there is more capital embarked in the subterranean fire-chambers than in all the iron-furnaces on the face of the earth. To think what an army of clerical beggars would be turned loose on the world, if once those raging flames were allowed to go out or to calm down! Who can wonder that the old conservatives draw back startled and almost frightened at the thought that there may be a possible escape for some victims whom the Devil was thought to have secured? How many more generations will pass before Milton's alarming prophecy will find itself realized in the belief of civilized mankind?"

Remember that Number Seven is called a "crank" by many persons, and take his remarks for just what they are worth, and no more.

Out of the preceding conversation must have originated the following poem, which was found in the common receptacle of these versified contributions:

TARTARUS.

*While in my simple gospel creed
That "God is Love" so plain I read,
Shall dreams of heathen birth affright
My pathway through the coming night?
Ah, Lord of life, though spectres pale
Fill with their threats the shadowy vale,
With Thee my faltering steps to aid,
How can I dare to be afraid?*

*Shall mouldering page or fading scroll
Outface the charter of the soul?
Shall priesthood's palsied arm protect
The wrong our human hearts reject,
And smite the lips whose shuddering cry
Proclaims a cruel creed a lie?
The wizard's rope we disallow
Was justice once,—is murder now!*

*Is there a world of blank despair,
And dwells the Omnipresent there?
Does He behold with smile serene
The shows of that unending scene,
Where sleepless, hopeless anguish lies,
And, ever dying, never dies?*

*Say, does He hear the sufferer's groan,
And is that child of wrath his own?
O mortal, wavering in thy trust,
Lift thy pale forehead from the dust
The mists that cloud thy darkened eyes
Fade ere they reach the o'erarching skies!
When the blind heralds of despair
Would bid thee doubt a Father's care,
Look up from earth, and read above
On heaven's blue tablet, GOD IS LOVE!*

XI

The tea is sweetened.

We have been going on very pleasantly of late, each of us pretty well occupied with his or her special business. The Counsellor has been pleading in a great case, and several of The Teacups were in the courtroom. I thought, but I will not be certain, that some of his arguments were addressed to Number Five rather than to the jury,—the more eloquent passages especially.

Our young Doctor seems to me to be gradually getting known in the neighborhood and beyond it. A member of one of the more influential families, whose regular physician has gone to Europe, has sent for him to come and see her, and as the patient is a nervous lady, who has nothing in particular the matter with her, he is probably in for a good many visits and a long bill by and by. He has even had a call at a distance of some miles from home,—at least he has had to hire a conveyance frequently of late, for he has not yet set up his own horse and chaise. We do not like to ask him about who his patient may be, but he or she is probably a person of some consequence, as he is absent several hours on these out-of-town visits. He may get a good practice before his bald spot makes its appearance, for I have looked for it many times without as yet seeing a sign of it. I am sure he must feel encouraged, for he has been very bright and cheerful of late; and if he sometimes looks at our new handmaid as if he wished she were Delilah, I do not think he is breaking his heart about her absence. Perhaps he finds consolation in the company of the two Annexes, or one of them,—but which, I cannot make out. He is in consultations occasionally with Number Five, too, but whether professionally or not I have no means of knowing. I cannot for the life of me see what Number Five wants of a

doctor for herself, so perhaps it is another difficult case in which her womanly sagacity is called upon to help him.

In the mean time she and the Tutor continue their readings. In fact, it seems as if these readings were growing more frequent, and lasted longer than they did at first. There is a little arbor in the grounds connected with our place of meeting, and sometimes they have gone there for their readings. Some of The Teacups have listened outside once in a while, for the Tutor reads well, and his clear voice must be heard in the more emphatic passages, whether one is expressly listening or not. But besides the reading there is now and then some talking, and persons talking in an arbor do not always remember that latticework, no matter how closely the vines cover it, is not impenetrable to the sound of the human voice. There was a listener one day,—it was not one of The Teacups, I am happy to say,—who heard and reported some fragments of a conversation which reached his ear. Nothing but the profound intimacy which exists between myself and the individual reader whose eyes are on this page would induce me to reveal what I was told of this conversation. The first words seem to have been in reply to some question.

“Why, my dear friend, how can you think of such a thing? Do you know—I am—old enough to be your—[I think she must have been on the point of saying mother, but that was more than any woman could be expected to say]—old enough to be your aunt?”

“To be sure you are,” answered the Tutor, “and what of it? I have two aunts, both younger than I am. Your years may be more than mine, but your life is fuller of youthful vitality than mine is. I never feel so young as when I have been with you. I don't believe in settling affinities by the almanac. You know what I have told you more than once; you have n't 'bared the ice-cold dagger's edge' upon me yet; may I not cherish the”....

What a pity that the listener did not hear the rest of the sentence and the reply to it, if there was one! The readings went on the same as before, but I thought that Number Five was rather more silent and more pensive than she had been.

I was much pleased when the American Annex came to me one day and told me that she and the English Annex were meditating an expedition, in which they wanted the other Teacups to join. About a dozen miles from us is an educational institution of the higher grade, where a large number of young ladies are trained in literature, art, and science, very much as their brothers are trained in the colleges. Our two young ladies have already been through courses of this kind in different schools, and are now busy with those more advanced studies which are ventured upon by only a limited number of “graduates.” They have heard a good deal about this institution, but have never visited it.

Every year, as the successive classes finish their course, there is a grand reunion of the former students, with an “exhibition,” as it is called, in which the graduates of the year have an opportunity of showing their proficiency in the various branches taught. On that occasion prizes are awarded for excellence in different departments. It would be hard to find a more interesting ceremony. These girls, now recognized as young ladies, are going forth as missionaries of civilization among our busy people. They are many of them to be teachers, and those who have seen what opportunities they have to learn will understand their fitness for that exalted office. Many are to be the wives and mothers of the generation next coming upon the stage. Young and beautiful, “youth is always beautiful,” said old Samuel Rogers,—their countenances radiant with developed intelligence, their complexions, their figures, their movements, all showing that they have had plenty of outdoor as well as indoor exercise, and have lived well in all respects, one would like to read on the wall of the hall where they are assembled,—

*Siste, viator!
Si uxorem requiris, circumspice!*

This proposed expedition was a great event in our comparatively quiet circle. The Mistress, who was interested in the school, undertook to be the matron of the party. The young Doctor, who knew the roads better than any of us, was to be our pilot. He arranged it so that he should have the two Annexes under his more immediate charge. We were all on the lookout to see which of the two was to be the favored one, for it was pretty well settled among The Teacups that a wife he must have, whether the bald spot came or not; he was getting into business, and he could not achieve a complete success as a bachelor.

Number Five and the Tutor seemed to come together as a matter of course. I confess that I could not help regretting that our pretty Delilah was not to be one of the party. She always looked so young, so fresh,—she would have enjoyed the excursion so much, that if she had been still with us I would have told the Mistress that she must put on her best dress; and if she had n't one nice enough, I would give her one myself. I thought, too, that our young Doctor would have liked to have her with us; but he appeared to be getting along very well with the Annexes, one of whom it seems likely that he will annex to himself and his fortunes, if she fancies him, which is not improbable.

The organizing of this expedition was naturally a cause of great excitement among The Teacups. The party had to be arranged in such a way as to suit all concerned, which was a delicate matter. It was finally managed in this way: The Mistress was to go with a bodyguard, consisting of myself, the Professor, and Number Seven, who was good company, with all his oddities. The young Doctor was to take the two Annexes in a wagon, and the Tutor was to drive Number Five in a good old-fashioned chaise drawn by a well-conducted family horse. As for the Musician, he had gone over early, by special invitation, to take a part in certain musical exercises which were to have a place in the exhibition. This arrangement appeared to be in every respect satisfactory. The Doctor was in high spirits, apparently delighted, and devoting himself with great gallantry to his two fair companions. The only question which intruded itself was, whether he might not have preferred the company of one to that of two. But both looked very attractive in their best dresses: the English Annex, the rosier and heartier of the two; the American girl, more delicate in features, more mobile and excitable, but suggesting the thought that she would tire out before the other. Which of these did he most favor? It was hard to say. He seemed to look most at the English girl, and yet he talked more with the American girl. In short, he behaved particularly well, and neither of the young ladies could complain that she was not attended to. As to the Tutor and Number Five, their going together caused no special comment. Their intimacy was accepted as an established fact, and nothing but the difference in their ages prevented the

conclusion that it was love, and not mere friendship, which brought them together. There was, no doubt, a strong feeling among many people that Number Five's affections were a kind of Gibraltar or Ehrenbreitstein, say rather a high table-land in the region of perpetual, unmelting snow. It was hard for these people to believe that any man of mortal mould could find a foothold in that impregnable fortress,—could climb to that height and find the flower of love among its glaciers. The Tutor and Number Five were both quiet, thoughtful: he, evidently captivated; she, what was the meaning of her manner to him? Say that she seemed fond of him, as she might be were he her nephew,—one for whom she had a special liking. If she had a warmer feeling than this, she could hardly know how to manage it; for she was so used to having love made to her without returning it that she would naturally be awkward in dealing with the new experience.

The Doctor drove a lively five-year-old horse, and took the lead. The Tutor followed with a quiet, steady-going nag; if he had driven the five-year-old, I would not have answered for the necks of the pair in the chaise, for he was too much taken up with the subject they were talking of, to be very careful about his driving. The Mistress and her escort brought up the rear,—I holding the reins, the Professor at my side, and Number Seven sitting with the Mistress.

We arrived at the institution a little later than we had expected to, and the students were flocking into the hall, where the Commencement exercises were to take place, and the medal-scholars were to receive the tokens of their excellence in the various departments. From our seats we could see the greater part of the assembly,—not quite all, however of the pupils. A pleasing sight it was to look upon, this array of young ladies dressed in white, with their class badges, and with the ribbon of the shade of blue affected by the scholars of the institution. If Solomon in all his glory was not to be compared to a lily, a whole bed of lilies could not be compared to this garden-bed of youthful womanhood.

The performances were very much the same as most of us have seen at the academies and collegiate schools. Some of the graduating class read their "compositions," one of which was a poem,—an echo of the prevailing American echoes, of course, but prettily worded and intelligently read. Then there was a song sung by a choir of the pupils, led by their instructor, who was assisted by the Musician whom we count among The Teacups.—There was something in one of the voices that reminded me of one I had heard before. Where could it have been? I am sure I cannot remember. There are some good voices in our village choir, but none so pure and bird-like as this. A sudden thought came into my head, but I kept it to myself. I heard a tremulous catching of the breath, something like a sob, close by me. It was the Mistress,—she was crying. What was she crying for? It was impressive, certainly, to listen to these young voices, many of them blending for the last time,—for the scholars were soon to be scattered all over the country, and some of them beyond its boundaries,—but why the Mistress was so carried away, I did not know. She must be more impressible than most of us; yet I thought Number Five also looked as if she were having a struggle with herself to keep down some rebellious signs of emotion.

The exercises went on very pleasingly until they came to the awarding of the gold medal of the year and the valedictory, which was to be delivered by the young lady to whom it was to be presented. The name was called; it was one not unfamiliar to our ears, and the bearer of it—the Delilah of our tea-table, Avis as she was known in the school and elsewhere—rose in her place and came forward, so that for the first time on that day, we looked upon her. It was a sensation for The Teacups. Our modest, quiet waiting-girl was the best scholar of her year. We had talked French before her, and we learned that she was the best French scholar the teacher had ever had in the school. We had never thought of her except as a pleasing and well-trained handmaiden, and here she was an accomplished young lady.

Avis went through her part very naturally and gracefully, and when it was finished, and she stood before us with the medal glittering on her breast, we did not know whether to smile or to cry,—some of us did one, and some the other.—We all had an opportunity to see her and congratulate her before we left the institution. The mystery of her six weeks' serving at our table was easily solved. She had been studying too hard and too long, and required some change of scene and occupation. She had a fancy for trying to see if she could support herself as so many young women are obliged to, and found a place with us, the Mistress only knowing her secret.

"She is to be our young Doctor's wife!" the Mistress whispered to me, and did some more crying, not for grief, certainly.

Whether our young Doctor's long visits to a neighboring town had anything to do with the fact that Avis was at that institution, whether she was the patient he visited or not, may be left in doubt. At all events, he had always driven off in the direction which would carry him to the place where she was at school.

I have attended a large number of celebrations, commencements, banquets, soirees, and so forth, and done my best to help on a good many of them. In fact, I have become rather too well known in connection with "occasions," and it has cost me no little trouble. I believe there is no kind of occurrence for which I have not been requested to contribute something in prose or verse. It is sometimes very hard to say no to the requests. If one is in the right mood when he or she writes an occasional poem, it seems as if nothing could have been easier. "Why, that piece run off jest like ile. I don't bullieve," the unlettered applicant says to himself, "I don't bullieve it took him ten minutes to write them verses." The good people have no suspicion of how much a single line, a single expression, may cost its author. The wits used to say that Ropers,—the poet once before referred to, old Samuel Ropers, author of the Pleasures of Memory and giver of famous breakfasts,—was accustomed to have straw laid before the house whenever he had just given birth to a couplet. It is not quite so bad as that with most of us who are called upon to furnish a poem, a song, a hymn, an ode for some grand meeting, but it is safe to say that many a trifling performance has had more good honest work put into it than the minister's sermon of that week had cost him. If a vessel glides off the ways smoothly and easily at her launching, it does not mean that no great pains have been taken to secure the result. Because a poem is an "occasional" one, it does not follow that it has not taken as much time and skill as if it had been written without immediate, accidental, temporary motive. Pindar's great odes were occasional poems, just as much as our Commencement and Phi Beta Kappa poems are, and yet they have come down among the most precious bequests of antiquity to modern times.

The mystery of the young Doctor's long visits to the neighboring town was satisfactorily explained by what

we saw and heard of his relations with our charming "Delilah,"—for Delilah we could hardly help calling her. Our little handmaid, the Cinderella of the teacups, now the princess, or, what was better, the pride of the school to which she had belonged, fit for any position to which she might be called, was to be the wife of our young Doctor. It would not have been the right thing to proclaim the fact while she was a pupil, but now that she had finished her course of instruction there was no need of making a secret of the engagement.

So we have got our romance, our love-story out of our Teacups, as I hoped and expected that we should, but not exactly in the quarter where it might have been looked for.

What did our two Annexes say to this unexpected turn of events? They were good-hearted girls as ever lived, but they were human, like the rest of us, and women, like some of the rest of us. They behaved perfectly. They congratulated the Doctor, and hoped he would bring the young lady to the tea-table where she had played her part so becomingly. It is safe to say that each of the Annexes would have liked to be asked the lover's last question by the very nice young man who had been a pleasant companion at the table and elsewhere to each of them. That same question is the highest compliment a man can pay a woman, and a woman does not mind having a dozen or more such compliments to string on the rosary of her remembrances. Whether either of them was glad, on the whole, that he had not offered himself to the other in preference to herself would be a mean, shabby question, and I think altogether too well of you who are reading this paper to suppose that you would entertain the idea of asking it.

It was a very pleasant occasion when the Doctor brought Avis over to sit with us at the table where she used to stand and wait upon us. We wondered how we could for a moment have questioned that she was one to be waited upon, and not made for the humble office which nevertheless she performed so cheerfully and so well.

Commencements and other Celebrations, American and English.

The social habits of our people have undergone an immense change within the past half century, largely in consequence of the vast development of the means of intercourse between different neighborhoods.

Commencements, college gatherings of all kinds, church assemblages, school anniversaries, town centennials,—all possible occasions for getting crowds together are made the most of. "T is sixty years since,"—and a good many years over,—the time to which my memory extends. The great days of the year were, Election,—General Election on Wednesday, and Artillery Election on the Monday following, at which time lilacs were in bloom and 'lection buns were in order; Fourth of July, when strawberries were just going out; and Commencement, a grand time of feasting, fiddling, dancing, jollity, not to mention drunkenness and fighting, on the classic green of Cambridge. This was the season of melons and peaches. That is the way our boyhood chronicles events. It was odd that the literary festival should be turned into a Donnybrook fair, but so it was when I was a boy, and the tents and the shows and the crowds on the Common were to the promiscuous many the essential parts of the great occasion. They had been so for generations, and it was only gradually that the Cambridge Saturnalia were replaced by the decencies and solemnities of the present sober anniversary.

Nowadays our celebrations smack of the Sunday-school more than of the dancing-hall. The aroma of the punch-bowl has given way to the milder flavor of lemonade and the cooling virtues of ice-cream. A strawberry festival is about as far as the dissipation of our social gatherings ventures. There was much that was objectionable in those swearing, drinking, fighting times, but they had a certain excitement for us boys of the years when the century was in its teens, which comes back to us not without its fascinations. The days of total abstinence are a great improvement over those of unlicensed license, but there was a picturesque element about the rowdiness of our old Commencement days, which had a charm for the eye of boyhood. My dear old friend,—book-friend, I mean,—whom I always called Daddy Gilpin (as I find Fitzgerald called Wordsworth, Daddy Wordsworth),—my old friend Gilpin, I say, considered the donkey more picturesque in a landscape than the horse. So a village fete as depicted by Teniers is more picturesque than a teetotal picnic or a Sabbath-school strawberry festival. Let us be thankful that the vicious picturesque is only a remembrance, and the virtuous commonplace a reality of to-day.

What put all this into my head is something which the English Annex has been showing me. Most of my readers are somewhat acquainted with our own church and village celebrations. They know how they are organized; the women always being the chief motors, and the machinery very much the same in one case as in another. Perhaps they would like to hear how such things are managed in England; and that is just what they may learn from the pamphlet which was shown me by the English Annex, and of which I will give them a brief account.

Some of us remember the Rev. Mr. Haweis, his lectures and his violin, which interested and amused us here in Boston a few years ago. Now Mr. Haweis, assisted by his intelligent and spirited wife, has charge of the parish of St. James, Westmoreland Street, Marylebone, London. On entering upon the twenty-fifth year of his incumbency in Marylebone, and the twenty-eighth of his ministry in the diocese of London, it was thought a good idea to have an "Evening Conversazione and Fete." We can imagine just how such a meeting would be organized in one of our towns. Ministers, deacons, perhaps a member of Congress, possibly a Senator, and even, conceivably, his Excellency the Governor, and a long list of ladies lend their names to give lustre to the occasion. It is all very pleasant, unpretending, unceremonious, cheerful, well ordered, commendable, but not imposing.

Now look at our Marylebone parish celebration, and hold your breath while the procession of great names passes before you. You learn at the outset that it is held UNDER ROYAL PATRONAGE, and read the names of two royal highnesses, one highness, a prince, and a princess. Then comes a list before which if you do not turn pale, you must certainly be in the habit of rousing: three earls, seven lords, three bishops, two generals (one of them Lord Wolseley), one admiral, four baronets, nine knights, a crowd of right honorable and honorable ladies (many of them peeresses), and a mob of other personages, among whom I find Mr. Howells, Bret Harte, and myself.

Perhaps we are disposed to smile at seeing so much made of titles; but after what we have learned of Lord Timothy Dexter and the high-sounding names appropriated by many of our own compatriots, who have no

more claim to them than we plain Mistresses and Misses, we may feel to them something as our late friend Mr. Appleton felt to the real green turtle soup set before him, when he said that it was almost as good as mock.

The entertainment on this occasion was of the most varied character. The programme makes the following announcement:

Friday, 4 July, 18-.

*At 8 P. M. the Doors will Open.
Mr. Haweis will receive his Friends.
The Royal Handbell Ringers will Ring.
The Fish-pond will be Fished.
The Stalls will be Visited.
The Phonograph will Utter.*

Refreshments will be called for, and they will come,—Tea, Coffee, and Cooling Drinks. Spirits will not be called for, from the Vasty Deep or anywhere else,—nor would they come if they were.

At 9.30 Mrs. Haweis will join the assembly.

I am particularly delighted with this last feature in the preliminary announcement. It is a proof of the high regard in which the estimable and gifted lady who shares her husband's labors is held by the people of their congregation, and the friends who share in their feelings. It is such a master stroke of policy, too, to keep back the principal attraction until the guests must have grown eager for her appearance: I can well imagine how great a saving it must have been to the good lady's nerves, which were probably pretty well tried already by the fatigues and responsibilities of the busy evening. I have a right to say this, for I myself had the honor of attending a meeting at Mr. Haweis's house, where I was a principal guest, as I suppose, from the fact of the great number of persons who were presented to me. The minister must be very popular, for the meeting was a regular jam,—not quite so tremendous as that greater one, where but for the aid of Mr. Smalley, who kept open a breathing-space round us, my companion and myself thought we should have been asphyxiated.

The company was interested, as some of my readers maybe, to know what were the attractions offered to the visitors besides that of meeting the courteous entertainers and their distinguished guests. I cannot give these at length, for each part of the show is introduced in the programme with apt quotations and pleasantries, which enlivened the catalogue. There were eleven stalls, "conducted on the cooperative principle of division of profits and interest; they retain the profits, and you take a good deal of interest, we hope, in their success."

Stall No. 1. Edisoniana, or the Phonograph. Alluded to by the Roman Poet as *Vox, et praeterea nihil*.

Stall No. 2. Money-changing.

Stall No. 3. Programmes and General Enquiries.

Stall No. 4. Roses.

A rose by any other name, etc. Get one. You can't expect to smell one without buying it, but you may buy one without smelling it.

Stall No. 5. Lasenby Liberty Stall. (I cannot explain this. Probably articles from Liberty's famous establishment.)

Stall No. 6. Historical Costumes and Ceramics.

Stall No. 7. The Fish-pond.

Stall No. 8. Varieties.

Stall No. 9. Bookstall. (Books) "highly recommended for insomnia; friends we never speak to, and always cut if we want to know them well."

Stall No. 10. Icelandic.

Stall No. 11. Call Office. "Mrs. Magnusson, who is devoted to the North Pole and all its works, will thaw your sympathies, enlighten your minds," etc., etc.

All you buy may be left at the stalls, ticketed. A duplicate ticket will be handed to you on leaving. Present your duplicate at the Call Office.

At 9.45, First Concert.

At 10.45, An Address of Welcome by Rev. H. R. Haweis.

At 11 P. M., Bird-warbling Interlude by Miss Mabel Stephenson, U. S. A.

At 11.20, Second Concert.

NOTICE!

Three Great Pictures.

LORD TENNYSON. G. F. Watts, R. A. JOHN STUART MILL G. F. Watts, R. A. JOSEPH GARIBALDI Sig. Rondi.

NOTICE!

A Famous Violin.

A world-famed Stradivarius Violin, for which Mr. Hill, of Bond Street, gave L 1000, etc., etc.

REFRESHMENTS.

Tickets for Tea, Coffee, Sandwiches, Iced Drinks, or Ices, Sixpence each, etc., etc.

I hope my American reader is pleased and interested by this glimpse of the way in which they do these things in London.

There is something very pleasant about all this, but what specially strikes me is a curious flavor of city provincialism. There are little centres in the heart of great cities, just as there are small fresh-water ponds in great islands with the salt sea roaring all round them, and bays and creeks penetrating them as briny as the

ocean itself. Irving has given a charming picture of such a quasi-provincial centre in one of his papers in the Sketch-Book,—the one with the title "Little Britain." London is a nation of itself, and contains provinces, districts, foreign communities, villages, parishes,—innumerable lesser centres, with their own distinguishing characteristics, habits, pursuits, languages, social laws, as much isolated from each other as if "mountains interposed" made the separation between them. One of these lesser centres is that over which my friend Mr. Haweis presides as spiritual director. Chelsea has been made famous as the home of many authors and artists,—above all, as the residence of Carlyle during the greater part of his life. Its population, like that of most respectable suburbs, must belong mainly to the kind of citizens which resembles in many ways the better class,—as we sometimes dare to call it,—of one of our thriving New England towns. How many John Gilpins there must be in this population,—citizens of "famous London town," but living with the simplicity of the inhabitants of our inland villages! In the mighty metropolis where the wealth of the world displays itself they practise their snug economies, enjoy their simple pleasures, and look upon ice-cream as a luxury, just as if they were living on the banks of the Connecticut or the Housatonic, in regions where the summer locusts of the great cities have not yet settled on the verdure of the native inhabitants. It is delightful to realize the fact that while the West End of London is flaunting its splendors and the East End in struggling with its miseries, these great middle-class communities are living as comfortable, unpretending lives as if they were in one of our thriving townships in the huckleberry-districts. Human beings are wonderfully alike when they are placed in similar conditions.

We were sitting together in a very quiet way over our teacups. The young Doctor, who was in the best of spirits, had been laughing and chatting with the two Annexes. The Tutor, who always sits next to Number Five of late, had been conversing with her in rather low tones. The rest of us had been soberly sipping our tea, and when the Doctor and the Annexes stopped talking there was one of those dead silences which are sometimes so hard to break in upon, and so awkward while they last. All at once Number Seven exploded in a loud laugh, which startled everybody at the table.

What is it that sets you laughing so? said I.

"I was thinking," Number Seven replied, "of what you said the other day of poetry being only the ashes of emotion. I believe that some people are disposed to dispute the proposition. I have been putting your doctrine to the test. In doing it I made some rhymes,—the first and only ones I ever made. I will suppose a case of very exciting emotion, and see whether it would probably take the form of poetry or prose. You are suddenly informed that your house is on fire, and have to scramble out of it, without stopping to tie your neck-cloth neatly or to put a flower in your buttonhole. Do you think a poet turning out in his night-dress, and looking on while the flames were swallowing his home and all its contents, would express himself in this style?"

*"My house is on fire!
Bring me my lyre!
Like the flames that rise heavenward my song shall aspire!"*

"He would n't do any such thing, and you know he wouldn't. He would yell Fire! Fire! with all his might. Not much rhyming for him just yet! Wait until the fire is put out, and he has had time to look at the charred timbers and the ashes of his home, and in the course of a week he may possibly spin a few rhymes about it. Or suppose he was making an offer of his hand and heart, do you think he would declaim a versified proposal to his Amanda, or perhaps write an impromptu on the back of his hat while he knelt before her?"

*"My beloved, to you
I will always be true.
Oh, pray make me happy, my love, do! do! do!"*

"What would Amanda think of a suitor who courted her with a rhyming dictionary in his pocket to help him make love?"

You are right, said I,—there's nothing in the world like rhymes to cool off a man's passion. You look at a blacksmith working on a bit of iron or steel. Bright enough it looked while it was on the hearth, in the midst of the sea-coal, the great bellows blowing away, and the rod or the horse-shoe as red or as white as the burning coals. How it fizzles as it goes into the trough of water, and how suddenly all the glow is gone! It looks black and cold enough now. Just so with your passionate incandescence. It is all well while it burns and scintillates in your emotional centres, without articulate and connected expression; but the minute you plunge it into the rhyme-trough it cools down, and becomes as dead and dull as the cold horse-shoe. It is true that if you lay it cold on the anvil and hammer away on it for a while it warms up somewhat. Just so with the rhyming fellow,—he pounds away on his verses and they warm up a little. But don't let him think that this afterglow of composition is the same thing as the original passion. That found expression in a few oh, oh's, eh, eh's, helas, helas's, and when the passion had burned itself out you got the rhymed verses, which, as I have said, are its ashes.

I thanked Number Seven for his poetical illustration of my thesis. There is great good to be got out of a squinting brain, if one only knows how to profit by it. We see only one side of the moon, you know, but a fellow with a squinting brain seems now and then to get a peep at the other side. I speak metaphorically. He takes new and startling views of things we have always looked at in one particular aspect. There is a rule invariably to be observed with one of this class of intelligences: Never contradict a man with a squinting brain. I say a man, because I do not think that squinting brains are nearly so common in women as they are in men. The "eccentrics" are, I think, for the most part of the male sex.

That leads me to say that persons with a strong instinctive tendency to contradiction are apt to become unprofitable companions. Our thoughts are plants that never flourish in inhospitable soils or chilling atmospheres. They are all started under glass, so to speak; that is, sheltered and fostered in our own warm and sunny consciousness. They must expect some rough treatment when we lift the sash from the frame and let the outside elements in upon them. They can bear the rain and the breezes, and be all the better for them; but perpetual contradiction is a pelting hailstorm, which spoils their growth and tends to kill them out altogether.

Now stop and consider a moment. Are not almost all brains a little wanting in bilateral symmetry? Do you

not find in persons whom you love, whom you esteem, and even admire, some marks of obliquity in mental vision? Are there not some subjects in looking at which it seems to you impossible that they should ever see straight? Are there not moods in which it seems to you that they are disposed to see all things out of plumb and in false relations with each other? If you answer these questions in the affirmative, then you will be glad of a hint as to the method of dealing with your friends who have a touch of cerebral strabismus, or are liable to occasional paroxysms of perversity. Let them have their head. Get them talking on subjects that interest them. As a rule, nothing is more likely to serve this purpose than letting them talk about themselves; if authors, about their writings; if artists, about their pictures or statues; and generally on whatever they have most pride in and think most of their own relations with.

Perhaps you will not at first sight agree with me in thinking that slight mental obliquity is as common as I suppose. An analogy may have some influence on your belief in this matter. Will you take the trouble to ask your tailor how many persons have their two shoulders of the same height? I think he will tell you that the majority of his customers show a distinct difference of height on the two sides. Will you ask a portrait-painter how many of those who sit to him have both sides of their faces exactly alike? I believe he will tell you that one side is always a little better than the other. What will your hatter say about the two sides of the head? Do you see equally well with both eyes, and hear equally well with both ears? Few persons past middle age will pretend that they do. Why should the two halves of a brain not show a natural difference, leading to confusion of thought, and very possibly to that instinct of contradiction of which I was speaking? A great deal of time is lost in profitless conversation, and a good deal of ill temper frequently caused, by not considering these organic and practically insuperable conditions. In dealing with them, acquiescence is the best of palliations and silence the sovereign specific.

I have been the reporter, as you have seen, of my own conversation and that of the other Teacups. I have told some of the circumstances of their personal history, and interested, as I hope, here and there a reader in the fate of different members of our company. Here are our pretty Delilah and our Doctor provided for. We may take it for granted that it will not be very long that the young couple will have to wait; for, as I have told you all, the Doctor is certainly getting into business, and bids fair to have a thriving practice before he saddles his nose with an eyeglass and begins to think of a pair of spectacles. So that part of our little domestic drama is over, and we can only wish the pair that is to be all manner of blessings consistent with a reasonable amount of health in the community on whose ailments must depend their prosperity.

All our thoughts are now concentrated on the relation existing between Number Five and the Tutor. That there is some profound instinctive impulse which is drawing them closer together no one who watches them can for a moment doubt. There are two principles of attraction which bring different natures together: that in which the two natures closely resemble each other, and that in which one is complementary of the other. In the first case, they coalesce, as do two drops of water or of mercury, and become intimately blended as soon as they touch; in the other, they rush together as an acid and an alkali unite, predestined from eternity to find all they most needed in each other. What is the condition of things in the growing intimacy of Number Five and the Tutor? He is many years her junior, as we know. Both of them look that fact squarely in the face. The presumption is against the union of two persons under these circumstances. Presumptions are strong obstacles against any result we wish to attain, but half our work in life is to overcome them. A great many results look in the distance like six-foot walls, and when we get nearer prove to be only five-foot hurdles, to be leaped over or knocked down. Twenty years from now she may be a vigorous and active old woman, and he a middle-aged, half-worn-out invalid, like so many overworked scholars. Everything depends on the number of drops of the elixir vitae which Nature mingled in the nourishment she administered to the embryo before it tasted its mother's milk. Think of Cleopatra, the bewitching old mischief-maker; think of Ninon de L'Enclos, whose own son fell desperately in love with her, not knowing the relation in which she stood to him; think of Dr. Johnson's friend, Mrs. Thrale, afterward Mrs. Piozzi, who at the age of eighty was full enough of life to be making love ardently and persistently to Conway, the handsome young actor. I can readily believe that Number Five will outlive the Tutor, even if he is fortunate enough rather in winning his way into the fortress through gates that open to him of their own accord. If he fails in his siege, I do really believe he will die early; not of a broken heart, exactly, but of a heart starved, with the food it was craving close to it, but unattainable. I have, therefore, a deep interest in knowing how Number Five and the Tutor are getting along together. Is there any danger of one or the other growing tired of the intimacy, and becoming willing to get rid of it, like a garment which has shrunk and grown too tight? Is it likely that some other attraction may come into disturb the existing relation? The problem is to my mind not only interesting, but exceptionally curious. You remember the story of Cymon and Iphigenia as Dryden tells it. The poor youth has the capacity of loving, but it lies hidden in his undeveloped nature. All at once he comes upon the sleeping beauty, and is awakened by her charms to a hitherto unfelt consciousness. With the advent of the new passion all his dormant faculties start into life, and the seeming simpleton becomes the bright and intelligent lover. The case of Number Five is as different from that of Cymon as it could well be. All her faculties are wide awake, but one emotional side of her nature has never been called into active exercise. Why has she never been in love with any one of her suitors? Because she liked too many of them. Do you happen to remember a poem printed among these papers, entitled "I Like You and I Love You"?

No one of the poems which have been placed in the urn,—that is, in the silver sugar-bowl,—has had any name attached to it; but you could guess pretty nearly who was the author of some of them, certainly of the one just, referred to. Number Five was attracted to the Tutor from the first time he spoke to her. She dreamed about him that night, and nothing idealizes and renders fascinating one in whom we have already an interest like dreaming of him or of her. Many a calm suitor has been made passionate by a dream; many a passionate lover has been made wild and half beside himself by a dream; and now and then an infatuated but hapless lover, waking from a dream of bliss to a cold reality of wretchedness, has helped himself to eternity before he was summoned to the table.

Since Number Five had dreamed about the Tutor, he had been more in her waking thoughts than she was willing to acknowledge. These thoughts were vague, it is true,—emotions, perhaps, rather than worded trains of ideas; but she was conscious of a pleasing excitement as his name or his image floated across her consciousness; she sometimes sighed as she looked over the last passage they had read from the same book,

and sometimes when they were together they were silent too long,—too long! What were they thinking of?

And so it was all as plain sailing for Number Five and the young Tutor as it had been for Delilah and the young Doctor, was it? Do you think so? Then you do not understand Number Five. Many a woman has as many atmospheric rings about her as the planet Saturn. Three are easily to be recognized. First, there is the wide ring of attraction which draws into itself all that once cross its outer border. These revolve about her without ever coming any nearer. Next is the inner ring of attraction. Those who come within its irresistible influence are drawn so close that it seems as if they must become one with her sooner or later. But within this ring is another,—an atmospheric girdle, one of repulsion, which love, no matter how enterprising, no matter how prevailing or how insinuating, has never passed, and, if we judge of what is to be by what has been, never will. Perhaps Nature loved Number Five so well that she grudged her to any mortal man, and gave her this inner girdle of repulsion to guard her from all who would know her too nearly and love her too well. Sometimes two vessels at sea keep each other company for a long distance, it may be daring a whole voyage. Very pleasant it is to each to have a companion to exchange signals with from time to time; to come near enough, when the winds are light, to hold converse in ordinary tones from deck to deck; to know that, in case of need, there's help at hand. It is good for them to be near each other, but not good to be too near. Woe is to them if they touch! The wreck of one or both is likely to be the consequence. And so two well-equipped and heavily freighted natures may be the best of companions to each other, and yet must never attempt to come into closer union. Is this the condition of affairs between Number Five and the Tutor? I hope not, for I want them to be joined together in that dearest of intimacies, which, if founded in true affinity, is the nearest approach to happiness to be looked for in our mortal, experience. We must wait. The Teacups will meet once more before the circle is broken, and we may, perhaps, find the solution of the question we have raised.

In the mean time, our young Doctor is playing truant oftener than ever. He has brought Avis,—if we must call her so, and not Delilah,—several times to take tea with us. It means something, in these days, to graduate from one of our first-class academies or collegiate schools. I shall never forget my first visit to one of these institutions. How much its pupils know, I said, which I was never taught, and have never learned! I was fairly frightened to see what a teaching apparatus was provided for them. I should think the first thing to be done with most of the husbands, they are likely to get would be to put them through a course of instruction. The young wives must find their lords woefully ignorant, in a large proportion of cases. When the wife has educated the husband to such a point that she can invite him to work out a problem in the higher mathematics or to perform a difficult chemical analysis with her as his collaborator, as less instructed dames ask their husbands to play a game of checkers or backgammon, they can have delightful and instructive evenings together. I hope our young Doctor will take kindly to his wife's (that is to be) teachings.

When the following verses were taken out of the urn, the Mistress asked me to hand the manuscript to the young Doctor to read. I noticed that he did not keep his eyes very closely fixed on the paper. It seemed as if he could have recited the lines without referring to the manuscript at all.

AT THE TURN OF THE ROAD.

*The glory has passed from the goldenrod's plume,
The purple-hued asters still linger in bloom;
The birch is bright yellow, the sumachs are red,
The maples like torches aflame overhead.*

*But what if the joy of the summer is past,
And winter's wild herald is blowing his blast?
For me dull November is sweeter than May,
For my love is its sunshine,—she meets me to-day!*

*Will she come? Will the ring-dove return to her nest?
Will the needle swing back from the east or the west?
At the stroke of the hour she will be at her gate;
A friend may prove laggard,—love never comes late.*

*Do I see her afar in the distance? Not yet.
Too early! Too early! She could not forget!
When I cross the old bridge where the brook overflowed,
She will flash full in sight at the turn of the road.*

*I pass the low wall where the ivy entwines;
I tread the brown pathway that leads through the pines;
I haste by the boulder that lies in the field,
Where her promise at parting was lovingly sealed.*

*Will she come by the hillside or round through the wood?
Will she wear her brown dress or her mantle and hood?
The minute draws near,—but her watch may go wrong;
My heart will be asking, What keeps her so long?*

*Why doubt for a moment? More shame if I do!
Why question? Why tremble? Are angels more true?
She would come to the lover who calls her his own
Though she trod in the track of a whirling cyclone!*

*—I crossed the old bridge ere the minute had passed.
I looked: lo! my Love stood before me at last.
Her eyes, how they sparkled, her cheeks, how they glowed,
As we met, face to face, at the turn of the road!*

XII

There was a great tinkling of teaspoons the other evening, when I took my seat at the table, where all The Teacups were gathered before my entrance. The whole company arose, and the Mistress, speaking for them, expressed the usual sentiment appropriate to such occasions. "Many happy returns" is the customary formula. No matter if the object of this kind wish is a centenarian, it is quite safe to assume that he is ready and very willing to accept as many more years as the disposing powers may see fit to allow him.

The meaning of it all was that this was my birthday. My friends, near and distant, had seen fit to remember it, and to let me know in various pleasant ways that they had not forgotten it. The tables were adorned with flowers. Gifts of pretty and pleasing objects were displayed on a side table. A great green wreath, which must have cost the parent oak a large fraction of its foliage, was an object of special admiration. Baskets of flowers which had half unpeopled greenhouses, large bouquets of roses, fragrant bunches of pinks, and many beautiful blossoms I am not botanist enough to name had been coming in upon me all day long. Many of these offerings were brought by the givers in person; many came with notes as fragrant with good wishes as the flowers they accompanied with their natural perfumes.

How old was I, The Dictator, once known by another equally audacious title,—I, the recipient of all these favors and honors? I had cleared the eight-barred gate, which few come in sight of, and fewer, far fewer, go over, a year before. I was a trespasser on the domain belonging to another generation. The children of my coevals were fast getting gray and bald, and their children beginning to look upon the world as belonging to them, and not to their sires and grandsires. After that leap over the tall barrier, it looks like a kind of impropriety to keep on as if one were still of a reasonable age. Sometimes it seems to me almost of the nature of a misdemeanor to be wandering about in the preserve which the fleshless gamekeeper guards so jealously. But, on the other hand, I remember that men of science have maintained that the natural life of man is nearer fivescore than threescore years and ten. I always think of a familiar experience which I bring from the French cafes, well known to me in my early manhood. One of the illustrated papers of my Parisian days tells it pleasantly enough.

A guest of the establishment is sitting at his little table. He has just had his coffee, and the waiter is serving him with his *petit verre*. Most of my readers know very well what a *petit verre* is, but there may be here and there a virtuous abstainer from alcoholic fluids, living among the bayberries and the sweet ferns, who is not aware that the words, as commonly used, signify a small glass—a very small glass—of spirit, commonly brandy, taken as a *chasse-cafe*, or coffee-chaser. This drinking of brandy, "neat," I may remark by the way, is not quite so bad as it looks. Whiskey or rum taken unmixed from a tumbler is a knock-down blow to temperance, but the little thimbleful of brandy, or *Chartreuse*, or *Maraschino*, is only, as it were, tweaking the nose of teetotalism.

Well,—to go back behind our brackets,—the guest is calling to the waiter, "*Garçon! et le bain de pieds!*" Waiter! and the foot-bath!—The little glass stands in a small tin saucer or shallow dish, and the custom is to more than fill the glass, so that some extra brandy rung over into this tin saucer or cup-plate, to the manifest gain of the consumer.

Life is a *petit verre* of a very peculiar kind of spirit. At seventy years it used to be said that the little glass was full. We should be more apt to put it at eighty in our day, while Gladstone and Tennyson and our own Whittier are breathing, moving, thinking, writing, speaking, in the green preserve belonging to their children and grandchildren, and Bancroft is keeping watch of the gamekeeper in the distance. But, returning resolutely to the *petit verre*, I am willing to concede that all after fourscore is the *bain de pieds*,—the slopping over, so to speak, of the full measure of life. I remember that one who was very near and dear to me, and who lived to a great age, so that the ten-barred gate of the century did not look very far off, would sometimes apologize in a very sweet, natural way for lingering so long to be a care and perhaps a burden to her children, themselves getting well into years. It is not hard to understand the feeling, never less called for than it was in the case of that beloved nonagenarian. I have known few persons, young or old, more sincerely and justly regretted than the gentle lady whose memory comes up before me as I write.

Oh, if we could all go out of flower as gracefully, as pleasingly, as we come into blossom! I always think of the morning-glory as the loveliest example of a graceful yielding to the inevitable. It is beautiful before its twisted corolla opens; it is comely as it folds its petals inward, when its brief hours of perfection are over. Women find it easier than men to grow old in a becoming way. A very old lady who has kept something, it may be a great deal, of her youthful feelings, who is daintily cared for, who is grateful for the attentions bestowed upon her, and enters into the spirit of the young lives that surround her, is as precious to those who love her as a gem in an antique setting, the fashion of which has long gone by, but which leaves the jewel the color and brightness which are its inalienable qualities. With old men it is too often different. They do not belong so much indoors as women do. They have no pretty little manual occupations. The old lady knits or stitches so long as her eyes and fingers will let her. The old man smokes his pipe, but does not know what to do with his fingers, unless he plays upon some instrument, or has a mechanical turn which finds business for them.

But the old writer, I said to The Teacups, as I say to you, my readers, labors under one special difficulty, which I am thinking of and exemplifying at this moment. He is constantly tending to reflect upon and discourse about his own particular stage of life. He feels that he must apologize for his intrusion upon the time and thoughts of a generation which he naturally supposes must be tired of him, if they ever had any considerable regard for him. Now, if the world of readers hates anything it sees in print, it is apology. If what one has to say is worth saying, he need not beg pardon for saying it. If it is not worth saying I will not finish the sentence. But it is so hard to resist the temptation, notwithstanding that the terrible line beginning "Superfluous lags the veteran" is always repeating itself in his dull ear!

What kind of audience or reading parish is a man who secured his constituency in middle life, or before that period, to expect when he has reached the age of threescore and twenty? His coevals have dropped away by scores and tens, and he sees only a few units scattered about here and there, like the few beads above the

water after a ship has gone to pieces. Does he write and publish for those of his own time of life? He need not print a large edition. Does he hope to secure a hearing from those who have come into the reading world since his coevals? They have found fresher fields and greener pastures. Their interests are in the out-door, active world. Some of them are circumnavigating the planet while he is hitching his rocking chair about his hearth-rug. Some are gazing upon the pyramids while he is staring at his andirons. Some are settling the tariff and fixing the laws of suffrage and taxation while he is dozing over the weather bulletin, and going to sleep over the obituaries in his morning or evening paper.

Nature is wiser than we give her credit for being; never wiser than in her dealings with the old. She has no idea of mortifying them by sudden and wholly unexpected failure of the chief servants of consciousness. The sight, for instance, begins to lose something of its perfection long before its deficiency calls the owner's special attention to it. Very probably, the first hint we have of the change is that a friend makes the pleasing remark that we are "playing the trombone," as he calls it; that is, moving a book we are holding backward and forward, to get the right focal distance. Or it may be we find fault with the lamp or the gas-burner for not giving so much light as it used to. At last, somewhere between forty and fifty, we begin to dangle a jaunty pair of eye-glasses, half plaything and half necessity. In due time a pair of sober, business-like spectacles bestrides the nose. Old age leaps upon it as his saddle, and rides triumphant, unchallenged, until the darkness comes which no glasses can penetrate. Nature is pitiless in carrying out the universal sentence, but very pitiful in her mode of dealing with the condemned on his way to the final scene. The man who is to be hanged always has a good breakfast provided for him.

Do not think that the old look upon themselves as the helpless, hopeless, forlorn creatures which they seem to young people. Do these young folks suppose that all vanity dies out of the natures of old men and old women? A dentist of olden time told me that a good-looking young man once said to him, "Keep that incisor presentable, if you can, till I am fifty, and then I sha'n't care how I look." I venture to say that that gentleman was as particular about his personal appearance and as proud of his good looks at fifty, and many years after fifty, as he was in the twenties, when he made that speech to the dentist.

My dear friends around the teacups, and at that wider board where I am now entertaining, or trying to entertain, my company, is it not as plain to you as it is to me that I had better leave such tasks as that which I am just finishing to those who live in a more interesting period of life than one which, in the order of nature, is next door to decrepitude? Ought I not to regret having undertaken to report the doings and sayings of the members of the circle which you have known as The Teacups?

Dear, faithful reader, whose patient eyes have followed my reports through these long months, you and I are about parting company. Perhaps you are one of those who have known me under another name, in those far-off days separated from these by the red sea of the great national conflict. When you first heard the tinkle of the teaspoons, as the table was being made ready for its guests, you trembled for me, in the kindness of your hearts. I do not wonder that you did,—I trembled for myself. But I remembered the story of Sir Cloudesley Shovel, who was seen all of a tremor just as he was going into action. "How is this?" said a brother officer to him. "Surely you are not afraid?" "No," he answered, "but my flesh trembles at the thought of the dangers into which my intrepid spirit will carry me." I knew the risk of undertaking to carry through a series of connected papers. And yet I thought it was better to run that risk, more manly, more sensible, than to give way to the fears which made my flesh tremble as did Sir Cloudesley Shovel's. For myself the labor has been a distraction, and one which came at a time when it was needed. Sometimes, as in one of those poems recently published,—the reader will easily guess which,—the youthful spirit has come over me with such a rush that it made me feel just as I did when I wrote the history of the "One-hoss Shay" thirty years ago. To repeat one of my comparisons, it was as if an early fruit had ripened on a graft upon an old, steady-going tree, to the astonishment of all its later-maturing products. I should hardly dare to say so much as this if I had not heard a similar opinion expressed by others.

Once committed to my undertaking, there was no turning back. It is true that I had said I might stop at any moment, but after one or two numbers it seemed as if there were an informal pledge to carry the series on, as in former cases, until I had completed my dozen instalments.

Writers and speakers have their idiosyncrasies, their habits, their tricks, if you had rather call them so, as to their ways of writing and speaking. There is a very old and familiar story, accompanied by a feeble jest, which most of my readers may probably enough have met with in Joe Miller or elsewhere. It is that of a lawyer who could never make an argument without having a piece of thread to work upon with his fingers while he was pleading. Some one stole it from him one day, and he could not get on at all with his speech,—he had lost the thread of his discourse, as the story had it. Now this is what I myself once saw. It was at a meeting where certain grave matters were debated in an assembly of professional men. A speaker, whom I never heard before or since, got up and made a long and forcible argument. I do not think he was a lawyer, but he spoke as if he had been trained to talk to juries. He held a long string in one hand, which he drew through the other band incessantly, as he spoke, just as a shoe maker performs the motion of waxing his thread. He appeared to be dependent on this motion. The physiological significance of the fact I suppose to be that the flow of what we call the nervous current from the thinking centre to the organs of speech was rendered freer and easier by the establishment of a simultaneous collateral nervous current to the set of muscles concerned in the action I have described.

I do not use a string to help me write or speak, but I must have its equivalent. I must have my paper and pen or pencil before me to set my thoughts flowing in such form that they can be written continuously. There have been lawyers who could think out their whole argument in connected order without a single note. There are authors,—and I think there are many,—who can compose and finish off a poem or a story without writing a word of it until, when the proper time comes, they copy what they carry in their heads. I have been told that Sir Edwin Arnold thought out his beautiful "Light of Asia" in this way.

I find the great charm of writing consists in its surprises. When one is in the receptive attitude of mind, the thoughts which are sprung upon him, the images which flash through his—consciousness, are a delight and an excitement. I am impatient of every hindrance in setting down my thoughts,—of a pen that will not write, of ink that will not flow, of paper that will not receive the ink. And here let me pay the tribute which I owe to

one of the humblest but most serviceable of my assistants, especially in poetical composition. Nothing seems more prosaic than the stylographic pen. It deprives the handwriting of its beauty, and to some extent of its individual character. The brutal communism of the letters it forms covers the page it fills with the most uniformly uninteresting characters. But, abuse it as much as you choose, there is nothing like it for the poet, for the imaginative writer. Many a fine flow of thought has been checked, perhaps arrested, by the ill behavior of a goose-quill. Many an idea has escaped while the author was dipping his pen in the inkstand. But with the stylographic pen, in the hands of one who knows how to care for it and how to use it, unbroken rhythms and harmonious cadences are the natural products of the unimpeded flow of the fluid which is the vehicle of the author's thoughts and fancies. So much for my debt of gratitude to the humble stylographic pen. It does not furnish the proper medium for the correspondence of intimates, who wish to see as much of their friends' personality as their handwriting can hold,—still less for the impassioned interchange of sentiments between lovers; but in writing for the press its use is open to no objection. Its movement over the paper is like the flight of a swallow, while the quill pen and the steel pen and the gold pen are all taking short, laborious journeys, and stopping to drink every few minutes.

A chief pleasure which the author of novels and stories experiences is that of becoming acquainted with the characters he draws. It is perfectly true that his characters must, in the nature of things, have more or less of himself in their composition. If I should seek an exemplification of this in the person of any of my Teacups, I should find it most readily in the one whom I have called Number Seven, the one with the squinting brain. I think that not only I, the writer, but many of my readers, recognize in our own mental constitution an occasional obliquity of perception, not always detected at the time, but plain enough when looked back upon. What extravagant fancies you and I have seriously entertained at one time or another! What superstitious notions have got into our heads and taken possession of its empty chambers,—or, in the language of science, seized on the groups of nerve-cells in some of the idle cerebral convolutions!

The writer, I say, becomes acquainted with his characters as he goes on. They are at first mere embryos, outlines of distinct personalities. By and by, if they have any organic cohesion, they begin to assert themselves. They can say and do such and such things; such and such other things they cannot and must not say or do. The story-writer's and play-writer's danger is that they will get their characters mixed, and make A say what B ought to have said. The stronger his imaginative faculty, the less liable will the writer be to this fault; but not even Shakespeare's power of throwing himself into his characters prevents many of his different personages from talking philosophy in the same strain and in a style common to them all.

You will often observe that authors fall in love with the imaginary persons they describe, and that they bestow affectionate epithets upon them which it may happen the reader does not consider in any way called for. This is a pleasure to which they have a right. Every author of a story is surrounded by a little family of ideal children, as dear to him, it may be, as are flesh-and-blood children to their parents. You may forget all about the circle of Teacups to which I have introduced you,—on the supposition that you have followed me with some degree of interest; but do you suppose that Number Five does not continue as a presence with me, and that my pretty Delilah has left me forever because she is going to be married?

No, my dear friend, our circle will break apart, and its different members will soon be to you as if they had never been. But do you think that I can forget them? Do you suppose that I shall cease to follow the love (or the loves; which do you think is the true word, the singular or the plural?) of Number Five and the young Tutor who is so constantly found in her company? Do you suppose that I do not continue my relations with the "Cracked Teacup,"—the poor old fellow with whom I have so much in common, whose counterpart, perhaps, you may find in your own complex personality?

I take from the top shelf of the hospital department of my library—the section devoted to literary cripples, imbeciles, failures, foolish rhymesters, and silly eccentrics—one of the least conspicuous and most hopelessly feeble of the weak-minded population of that intellectual almshouse. I open it and look through its pages. It is a story. I have looked into it once before,—on its first reception as a gift from the author. I try to recall some of the names I see there: they mean nothing to me, but I venture to say the author cherishes them all, and cries over them as he did when he was writing their history. I put the book back among its dusty companions, and, sitting down in my reflective rocking-chair, think how others must forget, and how I shall remember, the company that gathered about this table.

Shall I ever meet any one of them again, in these pages or in any other? Will the cracked Teacup hold together, or will he go to pieces, and find himself in that retreat where the owner of the terrible clock which drove him crazy is walking under the shelter of the high walls? Has the young Doctor's crown yet received the seal which is Nature's warrant of wisdom and proof of professional competency? And Number Five and her young friend the Tutor,—have they kept on in their dangerous intimacy? Did they get through the tutto tremante passage, reading from the same old large edition of Dante which the Tutor recommended as the best, and in reading from which their heads were necessarily brought perilously near to each other?

It would be very pleasant if I could, consistently with the present state of affairs, bring these two young people together. I say two young people, for the one who counts most years seems to me to be really the younger of the pair. That Number Five foresaw from the first that any tenderer feeling than that of friendship would intrude itself between them I do not believe. As for the Tutor, he soon found where he was drifting. It was his first experience in matters concerning the heart, and absorbed his whole nature as a thing of course. Did he tell her he loved her? Perhaps he did, fifty times; perhaps he never had the courage to say so outright. But sometimes they looked each other straight in the eyes, and strange messages seemed to pass from one consciousness to the other. Will the Tutor ask Number Five to be his wife; and if he does, will she yield to the dictates of nature, and lower the flag of that fortress so long thought impregnable? Will he go on writing such poems to her as "The Rose and the Fern" or "I Like You and I Love You," and be content with the pursuit of that which he never can attain? That is all very well, on the "Grecian Urn" of Keats,—beautiful, but not love such as mortals demand. Still, that may be all, for aught that we have yet seen.

*"Fair youth, beneath the trees, thou canst not leave
Thy song, nor ever can those trees be bare;
Bold lover, never, never, canst thou kiss,*

*Though winning near the goal,—yet do not grieve;
She cannot fade, though thou hast not thy bliss,
Forever wilt thou love, and she be fair!*

.....
*"More happy love! more happy, happy love!
Forever warm, and still to be enjoyed,
Forever panting and forever young!"*

And so, good-bye, young people, whom we part with here. Shadows you have been and are to my readers; very real you have been and are to me,—as real as the memories of many friends whom I shall see no more.

As I am not in the habit of indulging in late suppers, the reader need not think that I shall spread another board and invite him to listen to the conversations which take place around it. If, from time to time, he finds a slight refection awaiting him on the sideboard, I hope he may welcome it as pleasantly as he has accepted what I have offered him from the board now just being cleared.

.....
It is a good rule for the actor who manages the popular street drama of Punch not to let the audience or spectators see his legs. It is very hard for the writer of papers like these, which are now coming to their conclusion, to keep his personality from showing itself too conspicuously through the thin disguises of his various characters. As the show is now over, as the curtain has fallen, I appear before it in my proper person, to address a few words to the friends who have assisted, as the French say, by their presence, and as we use the word, by the kind way in which they have received my attempts at their entertainment.

This series of papers is the fourth of its kind which I have offered to my readers. I may be allowed to look back upon the succession of serial articles which was commenced more than thirty years ago, in 1857. "The Autocrat of the Breakfast-Table" was the first of the series. It was begun without the least idea what was to be its course and its outcome. Its characters shaped themselves gradually as the manuscript grew under my hand. I jotted down on the sheet of blotting paper before me the thoughts and fancies which came into my head. A very odd-looking object was this page of memoranda. Many of the hints were worked up into formal shape, many were rejected. Sometimes I recorded a story, a jest, or a pun for consideration, and made use of it or let it alone as my second thought decided. I remember a curious coincidence, which, if I have ever told in print,—I am not sure whether I have or not,—I will tell over again. I mention it, not for the pun, which I rejected as not very edifying and perhaps not new, though I did not recollect having seen it.

Mulier, Latin for woman; why apply that name to one of the gentle but occasionally obstinate sex? The answer was that a woman is (sometimes) more mulish than a mule. Please observe that I did not like the poor pun very well, and thought it rather rude and inelegant. So I left it on the blotter, where it was standing when one of the next numbers of "Punch" came out and contained that very same pun, which must have been hit upon by some English contributor at just about the same time I fell upon it on this side of the Atlantic. This fact may be added to the chapter of coincidences which belongs to the first number of this series of papers.

The "Autocrat" had the attraction of novelty, which of course was wanting in the succeeding papers of similar character. The criticisms upon the successive numbers as they came out were various, but generally encouraging. Some were more than encouraging; very high-colored in their phrases of commendation. When the papers were brought together in a volume their success was beyond my expectations. Up to the present time the "Autocrat" has maintained its position. An immortality of a whole generation is more than most writers are entitled to expect. I venture to think, from the letters I receive from the children and grandchildren of my first set of readers, that for some little time longer, at least, it will continue to be read, and even to be a favorite with some of its readers. Non omnis moriar is a pleasant thought to one who has loved his poor little planet, and will, I trust, retain kindly recollections of it through whatever wilderness of worlds he may be called to wander in his future pilgrimages. I say "poor little planet." Ever since I had a ten cent look at the transit of Venus, a few years ago, through the telescope in the Mall, the earth has been wholly different to me from what it used to be. I knew from books what a speck it is in the universe, but nothing ever brought the fact home like the sight of the sister planet sailing across the sun's disk, about large enough for a buckshot, not large enough for a full-sized bullet. Yes, I love the little globule where I have spent more than fourscore years, and I like to think that some of my thoughts and some of my emotions may live themselves over again when I am sleeping. I cannot thank all the kind readers of the "Autocrat" who are constantly sending me their acknowledgments. If they see this printed page, let them be assured that a writer is always rendered happier by being told that he has made a fellow-being wiser or better, or even contributed to his harmless entertainment. This a correspondent may take for granted, even if his letter of grateful recognition receives no reply. It becomes more and more difficult for me to keep up with my correspondents, and I must soon give it up as impossible.

"The Professor at the Breakfast Table" followed immediately on the heels of the "Autocrat." The Professor was the alter ego of the first personage. In the earlier series he had played a secondary part, and in this second series no great effort was made to create a character wholly unlike the first. The Professor was more outspoken, however, on religious subjects, and brought down a good deal of hard language on himself and the author to whom he owed his existence. I suppose he may have used some irritating expressions, unconsciously, but not unconscientiously, I am sure. There is nothing harder to forgive than the sting of an epigram. Some of the old doctors, I fear, never pardoned me for saying that if a ship, loaded with an assorted cargo of the drugs which used to be considered the natural food of sick people, went to the bottom of the sea, it would be "all the better for mankind and all the worse for the fishes." If I had not put that snapper on the end of my whip-lash, I might have got off without the ill temper which my antithesis provoked. Thirty years set that all right, and the same thirty years have so changed the theological atmosphere that such abusive words as "heretic" and "infidel," applied to persons who differ from the old standards of faith, are chiefly interesting as a test of breeding, being seldom used by any people above the social half-caste line. I am speaking of Protestants; how it may be among Roman Catholics I do not know, but I suspect that with them

also it is a good deal a matter of breeding. There were not wanting some who liked the Professor better than the Autocrat. I confess that I prefer my champagne in its first burst of gaseous enthusiasm; but if my guest likes it better after it has stood awhile, I am pleased to accommodate him. The first of my series came from my mind almost with an explosion, like the champagne cork; it startled me a little to see what I had written, and to hear what people said about it. After that first explosion the flow was more sober, and I looked upon the product of my wine-press more coolly. Continuations almost always sag a little. I will not say that of my own second effort, but if others said it, I should not be disposed to wonder at or to dispute them.

"The Poet at the Breakfast Table" came some years later. This series of papers was not so much a continuation as a resurrection. It was a doubly hazardous attempt, made without any extravagant expectations, and was received as well as I had any right to anticipate. It differed from the other two series in containing a poem of considerable length, published in successive portions. This poem holds a good deal of self-communing, and gave me the opportunity of expressing some thoughts and feelings not to be found elsewhere in my writings. I had occasion to read the whole volume, not long since, in preparation for a new edition, and was rather more pleased with it than I had expected to be. An old author is constantly rediscovering himself in the more or less fossilized productions of his earlier years. It is a long time since I have read the "Autocrat," but I take it up now and then and read in it for a few minutes, not always without some degree of edification.

These three series of papers, "Autocrat," "Professor," "Poet," are all studies of life from somewhat different points of view. They are largely made up of sober reflections, and appeared to me to require some lively human interest to save them from wearisome didactic dulness. What could be more natural than that love should find its way among the young people who helped to make up the circle gathered around the table? Nothing is older than the story of young love. Nothing is newer than that same old story. A bit of gilding here and there has a wonderful effect in enlivening a landscape or an apartment. Napoleon consoled the Parisians in their year of defeat by gilding the dome of the Invalides. Boston has glorified her State House and herself at the expense of a few sheets of gold leaf laid on the dome, which shines like a sun in the eyes of her citizens, and like a star in those of the approaching traveller. I think the gilding of a love-story helped all three of these earlier papers. The same need I felt in the series of papers just closed. The slight incident of Delilah's appearance and disappearance served my purpose to some extent. But what should I do with Number Five? The reader must follow out her career for himself. For myself, I think that she and the Tutor have both utterly forgotten the difference of their years in the fascination of intimate intercourse. I do not believe that a nature so large, so rich in affection, as Number Five's is going to fall defeated of its best inheritance of life, like a vine which finds no support for its tendrils to twine around, and so creeps along the ground from which nature meant that love should lift it. I feel as if I ought to follow these two personages of my sermonizing story until they come together or separate, to fade, to wither,—perhaps to die, at last, of something like what the doctors call heart-failure, but which might more truly be called heart-starvation. When I say die, I do not mean necessarily the death that goes into the obituary column. It may come to that, in one or both; but I think that, if they are never united, Number Five will outlive the Tutor, who will fall into melancholy ways, and pine and waste, while she lives along, feeling all the time that she has cheated herself of happiness. I hope that is not going to be their fortune, or misfortune. *Vieille fille fait jeune mariee*. What a youthful bride Number Five would be, if she could only make up her mind to matrimony! In the mean time she must be left with her lambs all around her. May heaven temper the winds to them, for they have been shorn very close, every one of them, of their golden fleece of aspirations and anticipations.

I must avail myself of this opportunity to say a few words to my distant friends who take interest enough in my writings, early or recent, to wish to enter into communication with me by letter, or to keep up a communication already begun. I have given notice in print that the letters, books, and manuscripts which I receive by mail are so numerous that if I undertook to read and answer them all I should have little time for anything else. I have for some years depended on the assistance of a secretary, but our joint efforts have proved unable, of late, to keep down the accumulations which come in with every mail. So many of the letters I receive are of a pleasant character that it is hard to let them go unacknowledged. The extreme friendliness which pervades many of them gives them a value which I rate very highly. When large numbers of strangers insist on claiming one as a friend, on the strength of what he has written, it tends to make him think of himself somewhat indulgently. It is the most natural thing in the world to want to give expression to the feeling the loving messages from far-off unknown friends must excite. Many a day has had its best working hours broken into, spoiled for all literary work, by the labor of answering correspondents whose good opinion it is gratifying to have called forth, but who were unconsciously laying a new burden on shoulders already aching. I know too well that what I say will not reach the eyes of many who might possibly take a hint from it. Still I must keep repeating it before breaking off suddenly and leaving whole piles of letters unanswered. I have been very heavily handicapped for many years. It is partly my own fault. From what my correspondents tell me, I must infer that I have established a dangerous reputation for willingness to answer all sorts of letters. They come with such insinuating humility,—they cannot bear to intrude upon my time, they know that I have a great many calls upon it,—and incontinently proceed to lay their additional weight on the load which is breaking my back.

The hypocrisy of kind-hearted people is one of the most painful exhibitions of human weakness. It has occurred to me that it might be profitable to reproduce some of my unwritten answers to correspondents. If those which were actually written and sent were to be printed in parallel columns with those mentally formed but not written out responses and comments, the reader would get some idea of the internal conflicts an honest and not unamiable person has to go through, when he finds himself driven to the wall by a correspondence which is draining his vocabulary to find expressions that sound as agreeably, and signify as little, as the phrases used by a diplomatist in closing an official communication.

No. 1. Want my autograph, do you? And don't know how to spell my name. An a for an e in my middle name. Leave out the l in my last name. Do you know how people hate to have their names misspelled? What do you suppose are the sentiments entertained by the Thompsons with a p towards those who address them in writing as Thomson?

No. 2. Think the lines you mention are by far the best I ever wrote, hey? Well, I didn't write those lines. What is more, I think they are as detestable a string of rhymes as I could wish my worst enemy had written. A very pleasant frame of mind I am in for writing a letter, after reading yours!

No. 3. I am glad to hear that my namesake, whom I never saw and never expect to see, has cut another tooth; but why write four pages on the strength of that domestic occurrence?

No. 4. You wish to correct an error in my Broomstick poem, do you? You give me to understand that Wilmington is not in Essex County, but in Middlesex. Very well; but are they separated by running water? Because if they are not, what could hinder a witch from crossing the line that separates Wilmington from Andover, I should like to know? I never meant to imply that the witches made no excursions beyond the district which was more especially their seat of operations.

As I come towards the end of this task which I had set myself, I wish, of course, that I could have performed it more to my own satisfaction and that of my readers. This is a feeling which almost every one must have at the conclusion of any work he has undertaken. A common and very simple reason for this disappointment is that most of us overrate our capacity. We expect more of ourselves than we have any right to, in virtue of our endowments. The figurative descriptions of the last Grand Assize must no more be taken literally than the golden crowns, which we do not expect or want to wear on our heads, or the golden harps, which we do not want or expect to hold in our hands. Is it not too true that many religious sectaries think of the last tribunal complacently, as the scene in which they are to have the satisfaction of saying to the believers of a creed different from their own, "I told you so"? Are not others oppressed with the thought of the great returns which will be expected of them as the product of their great gifts, the very limited amount of which they do not suspect, and will be very glad to learn, even at the expense of their self-love, when they are called to their account? If the ways of the Supreme Being are ever really to be "justified to men," to use Milton's expression, every human being may expect an exhaustive explanation of himself. No man is capable of being his own counsel, and I cannot help hoping that the ablest of the archangels will be retained for the defence of the worst of sinners. He himself is unconscious of the agencies which made him what he is. Self-determining he may be, if you will, but who determines the self which is the proximate source of the determination? Why was the A self like his good uncle in bodily aspect and mental and moral qualities, and the B self like the bad uncle in look and character? Has not a man a right to ask this question in the here or in the hereafter,—in this world or in any world in which he may find himself? If the All-wise wishes to satisfy his reasonable and reasoning creatures, it will not be by a display of elemental convulsions, but by the still small voice, which treats with him as a dependent entitled to know the meaning of his existence, and if there was anything wrong in his adjustment to the moral and spiritual conditions of the world around him to have full allowance made for it. No melodramatic display of warring elements, such as the white-robed Second Adventist imagines, can meet the need of the human heart. The thunders and lightnings of Sinai terrified and impressed the more timid souls of the idolatrous and rebellious caravan which the great leader was conducting, but a far nobler manifestation of divinity was that when "the Lord spake unto Moses face to face, as a man speaketh unto his friend."

I find the burden and restrictions of rhyme more and more troublesome as I grow older. There are times when it seems natural enough to employ that form of expression, but it is only occasionally; and the use of it as the vehicle of the commonplace is so prevalent that one is not much tempted to select it as the medium for his thoughts and emotions. The art of rhyming has almost become a part of a high-school education, and its practice is far from being an evidence of intellectual distinction. Mediocrity is as much forbidden to the poet in our days as it was in those of Horace, and the immense majority of the verses written are stamped with hopeless mediocrity.

When one of the ancient poets found he was trying to grind out verses which came unwillingly, he said he was writing—

INVITA MINERVA.

*Vex not the Muse with idle prayers,
—She will not hear thy call;
She steals upon thee unawares,
Or seeks thee not at all.*

*Soft as the moonbeams when they sought
Endymion's fragrant bower,
She parts the whispering leaves of thought
To show her full-blown flower.*

*For thee her wooing hour has passed,
The singing birds have flown,
And winter comes with icy blast
To chill thy buds unblown.*

*Yet, though the woods no longer thrill
As once their arches rung,
Sweet echoes hover round thee still
Of songs thy summer sung.*

*Live in thy past; await no more
The rush of heaven-sent wings;
Earth still has music left in store
While Memory sighs and sings.*

I hope my special Minerva may not always be unwilling, but she must not be called upon as she has been in times past. Now that the teacups have left the table, an occasional evening call is all that my readers must look for. Thanking them for their kind companionship, and hoping that I may yet meet them in the now and then in the future, I bid them goodbye for the immediate present, then in the future, I bid them goodbye for the immediate present.

PREFACE.

This tale was published in successive parts in the "Atlantic Monthly," under the name of "The Professor's Story," the first number having appeared in the third week of December, 1859. The critic who is curious in coincidences must refer to the Magazine for the date of publication of the chapter he is examining.

In calling this narrative a "romance," the Author wishes to make sure of being indulged in the common privileges of the poetic license. Through all the disguise of fiction a grave scientific doctrine may be detected lying beneath some of the delineations of character. He has used this doctrine as a part of the machinery of his story without pledging his absolute belief in it to the extent to which it is asserted or implied. It was adopted as a convenient medium of truth rather than as an accepted scientific conclusion. The reader must judge for himself what is the value of various stories cited from old authors. He must decide how much of what has been told he can accept either as having actually happened, or as possible and more or less probable. The Author must be permitted, however, to say here, in his personal character, and as responsible to the students of the human mind and body, that since this story has been in progress he has received the most startling confirmation of the possibility of the existence of a character like that which he had drawn as a purely imaginary conception in Elsie Venner.

BOSTON, January, 1861.

A SECOND PREFACE.

This is the story which a dear old lady, my very good friend, spoke of as "a medicated novel," and quite properly refused to read. I was always pleased with her discriminating criticism. It is a medicated novel, and if she wished to read for mere amusement and helpful recreation there was no need of troubling herself with a story written with a different end in view.

This story has called forth so many curious inquiries that it seems worth while to answer the more important questions which have occurred to its readers.

In the first place, it is not based on any well-ascertained physiological fact. There are old fables about patients who have barked like dogs or crowed like cocks, after being bitten or wounded by those animals. There is nothing impossible in the idea that Romulus and Remus may have imbibed wolfish traits of character from the wet nurse the legend assigned them, but the legend is not sound history, and the supposition is nothing more than a speculative fancy. Still, there is a limbo of curious evidence bearing on the subject of pre-natal influences sufficient to form the starting-point of an imaginative composition.

The real aim, of the story was to test the doctrine of "original sin" and human responsibility for the disordered volition coming under that technical denomination. Was Elsie Venner, poisoned by the venom of a crotalus before she was born, morally responsible for the "volitional" aberrations, which translated into acts become what is known as sin, and, it may be, what is punished as crime? If, on presentation of the evidence, she becomes by the verdict of the human conscience a proper object of divine pity and not of divine wrath, as a subject of moral poisoning, wherein lies the difference between her position at the bar of judgment, human or divine, and that of the unfortunate victim who received a moral poison from a remote ancestor before he drew his first breath?

It might be supposed that the character of Elsie Venner was suggested by some of the fabulous personages

of classical or mediaeval story. I remember that a French critic spoke of her as *cette pauvre Melusine*. I ought to have been ashamed, perhaps, but I had, not the slightest idea who Melusina was until I hunted up the story, and found that she was a fairy, who for some offence was changed every Saturday to a serpent from her waist downward. I was of course familiar with Keats's *Lamia*, another imaginary being, the subject of magical transformation into a serpent. My story was well advanced before Hawthorne's wonderful "*Marble Faun*," which might be thought to have furnished me with the hint of a mixed nature,—human, with an alien element,—was published or known to me. So that my poor heroine found her origin, not in fable or romance, but in a physiological conception fertilized by a theological dogma.

I had the dissatisfaction of enjoying from a quiet corner a well-meant effort to dramatize "*Elsie Venner*." Unfortunately, a physiological romance, as I knew beforehand, is hardly adapted for the melodramatic efforts of stage representation. I can therefore say, with perfect truth, that I was not disappointed. It is to the mind, and not to the senses, that such a story must appeal, and all attempts to render the character and events objective on the stage, or to make them real by artistic illustrations, are almost of necessity failures. The story has won the attention and enjoyed the favor of a limited class of readers, and if it still continues to interest others of the same tastes and habits of thought I can ask nothing more of it.

January 23, 1883.

PREFACE TO THE NEW EDITION.

I have nothing of importance to add to the two preceding Prefaces. The continued call for this story, which was not written for popularity, but with a very serious purpose, has somewhat surprised and, I need not add, gratified me. I can only restate the motive idea of the tale in a little different language. Believing, as I do, that our prevailing theologies are founded upon an utterly false view of the relation of man to his Creator, I attempted to illustrate the doctrine of inherited moral responsibility for other people's misbehavior. I tried to make out a case for my poor Elsie, whom the most hardened theologian would find it hard to blame for her inherited ophidian tastes and tendencies. How, then, is he to blame mankind for inheriting "sinfulness" from their first parents? May not the serpent have bitten Eve before the birth of Cain, her first-born? That would have made an excuse for Cain's children, as Elsie's ante-natal misfortune made an excuse for her. But what difference does it make in the child's responsibility whether his inherited tendencies come from a snake-bite or some other source which he knew nothing about and could not have prevented from acting? All this is plain enough, and the only use of the story is to bring the dogma of inherited guilt and its consequences into a clearer point of view.

But, after all, the tale must have proved readable as a story to account for the large number of editions which it has reached.

Some readers have been curious about the locality the writer was thought to have in view. No particular place was intended. Some of the characters may have been thought to have been drawn from life; but the personages mentioned are mostly composites, like Mr. Galton's compound photographic likenesses, and are not calculated to provoke scandal or suits for libel.

O. W. H.

BEVERLY FARMS, MASS., August 3, 1891.

ELSIE VENNER.

CHAPTER I. THE BRAHMIN CASTE OF NEW ENGLAND.

There is nothing in New England corresponding at all to the feudal aristocracies of the Old World. Whether it be owing to the stock from which we were derived, or to the practical working of our institutions, or to the abrogation of the technical "law of honor," which draws a sharp line between the personally responsible class of "gentlemen" and the unnamed multitude of those who are not expected to risk their lives for an abstraction,—whatever be the cause, we have no such aristocracy here as that which grew up out of the military systems of the Middle Ages.

What we mean by "aristocracy" is merely the richer part of the community, that live in the tallest houses, drive real carriages, (not "kerridges,") kidglove their hands, and French-bonnet their ladies' heads, give parties where the persons who call them by the above title are not invited, and have a provokingly easy way

of dressing, walking, talking, and nodding to people, as if they felt entirely at home, and would not be embarrassed in the least, if they met the Governor, or even the President of the United States, face to face. Some of these great folks are really well-bred, some of them are only purse-proud and assuming,—but they form a class, and are named as above in the common speech.

It is in the nature of large fortunes to diminish rapidly, when subdivided and distributed. A million is the unit of wealth, now and here in America. It splits into four handsome properties; each of these into four good inheritances; these, again, into scanty competences for four ancient maidens,—with whom it is best the family should die out, unless it can begin again as its great-grandfather did. Now a million is a kind of golden cheese, which represents in a compendious form the summer's growth of a fat meadow of craft or commerce; and as this kind of meadow rarely bears more than one crop, it is pretty certain that sons and grandsons will not get another golden cheese out of it, whether they milk the same cows or turn in new ones. In other words, the millionocracy, considered in a large way, is not at all an affair of persons and families, but a perpetual fact of money with a variable human element, which a philosopher might leave out of consideration without falling into serious error. Of course, this trivial and, fugitive fact of personal wealth does not create a permanent class, unless some special means are taken to arrest the process of disintegration in the third generation. This is so rarely done, at least successfully, that one need not live a very long life to see most of the rich families he knew in childhood more or less reduced, and the millions shifted into the hands of the country-boys who were sweeping stores and carrying parcels when the now decayed gentry were driving their chariots, eating their venison over silver chafing-dishes, drinking Madeira chilled in embossed coolers, wearing their hair in powder, and casing their legs in long boots with silken tassels.

There is, however, in New England, an aristocracy, if you choose to call it so, which has a far greater character of permanence. It has grown to be a caste,—not in any odious sense;—but, by the repetition of the same influences, generation after generation, it has acquired a distinct organization and physiognomy, which not to recognize is mere stupidity, and not to be willing to describe would show a distrust of the good-nature and intelligence of our readers, who like to have us see all we can and tell all we see.

If you will look carefully at any class of students in one of our colleges, you will have no difficulty in selecting specimens of two different aspects of youthful manhood. Of course I shall choose extreme cases to illustrate the contrast between them. In the first, the figure is perhaps robust, but often otherwise,—inelegant, partly from careless attitudes, partly from ill-dressing,—the face is uncouth in feature, or at least common,—the mouth coarse and unformed,—the eye unsympathetic, even if bright,—the movements of the face are clumsy, like those of the limbs,—the voice is unmusical,—and the enunciation as if the words were coarse castings, instead of fine carvings. The youth of the other aspect is commonly slender, his face is smooth, and apt to be pallid,—his features are regular and of a certain delicacy,—his eye is bright and quick,—his lips play over the thought he utters as a pianist's fingers dance over their music, and his whole air, though it may be timid, and even awkward, has nothing clownish. If you are a teacher, you know what to expect from each of these young men. With equal willingness, the first will be slow at learning; the second will take to his books as a pointer or a setter to his field-work.

The first youth is the common country-boy, whose race has been bred to bodily labor. Nature has adapted the family organization to the kind of life it has lived. The hands and feet by constant use have got more than their share of development,—the organs of thought and expression less than their share. The finer instincts are latent and must be developed. A youth of this kind is raw material in its first stage of elaboration. You must not expect too much of any such. Many of them have force of will and character, and become distinguished in practical life; but very few of them ever become great scholars. A scholar is, in a large proportion of cases, the son of scholars or scholarly persons.

That is exactly what the other young man is. He comes of the Brahmin caste of New England. This is the harmless, inoffensive, untitled aristocracy referred to, and which many readers will at once acknowledge. There are races of scholars among us, in which aptitude for learning, and all these marks of it I have spoken of, are congenital and hereditary. Their names are always on some college catalogue or other. They break out every generation or two in some learned labor which calls them up after they seem to have died out. At last some newer name takes their place, it maybe,—but you inquire a little and you find it is the blood of the Edwardses or the Chauncys or the Ellerys or some of the old historic scholars, disguised under the altered name of a female descendant.

There probably is not an experienced instructor anywhere in our Northern States who will not recognize at once the truth of this general distinction. But the reader who has never been a teacher will very probably object, that some of our most illustrious public men have come direct from the homespun-clad class of the people,—and he may, perhaps, even find a noted scholar or two whose parents were masters of the English alphabet, but of no other.

It is not fair to pit a few chosen families against the great multitude of those who are continually working their way up into the intellectual classes. The results which are habitually reached by hereditary training are occasionally brought about without it. There are natural filters as well as artificial ones; and though the great rivers are commonly more or less turbid, if you will look long enough, you may find a spring that sparkles as no water does which drips through your apparatus of sands and sponges. So there are families which refine themselves into intellectual aptitude without having had much opportunity for intellectual acquirements. A series of felicitous crosses develops an improved strain of blood, and reaches its maximum perfection at last in the large uncombed youth who goes to college and startles the hereditary class-leaders by striding past them all. That is Nature's republicanism; thank God for it, but do not let it make you illogical. The race of the hereditary scholar has exchanged a certain portion of its animal vigor for its new instincts, and it is hard to lead men without a good deal of animal vigor. The scholar who comes by Nature's special grace from an unworn stock of broad-chested sires and deep-bosomed mothers must always overmatch an equal intelligence with a compromised and lowered vitality. A man's breathing and digestive apparatus (one is tempted to add muscular) are just as important to him on the floor of the Senate as his thinking organs. You broke down in your great speech, did you? Yes, your grandfather had an attack of dyspepsia in '82, after working too hard on his famous Election Sermon. All this does not touch the main fact: our scholars come chiefly from a

privileged order, just as our best fruits come from well-known grafts, though now and then a seedling apple, like the Northern Spy, or a seedling pear, like the Seckel, springs from a nameless ancestry and grows to be the pride of all the gardens in the land.

Let me introduce you to a young man who belongs to the Brahmin caste of New England.

CHAPTER II. THE STUDENT AND HIS CERTIFICATE.

Bernard C. Langdon, a young man attending Medical Lectures at the school connected with one of our principal colleges, remained after the Lecture one day and wished to speak with the Professor. He was a student of mark,—first favorite of his year, as they say of the Derby colts. There are in every class half a dozen bright faces to which the teacher naturally, directs his discourse, and by the intermediation of whose attention he seems to hold that of the mass of listeners. Among these some one is pretty sure to take the lead, by virtue of a personal magnetism, or some peculiarity of expression, which places the face in quick sympathetic relations with the lecturer. This was a young man with such a face; and I found,—for you have guessed that I was the “Professor” above-mentioned,—that, when there was anything difficult to be explained, or when I was bringing out some favorite illustration of a nice point, (as, for instance; when I compared the cell-growth, by which Nature builds up a plant or an animal, to the glassblower's similar mode of beginning,—always with a hollow sphere, or vesicle, whatever he is going to make,) I naturally looked in his face and gauged my success by its expression.

It was a handsome face,—a little too pale, perhaps, and would have borne something more of fulness without becoming heavy. I put the organization to which it belongs in Section B of Class 1 of my Anglo-American Anthropology (unpublished). The jaw in this section is but slightly narrowed,—just enough to make the width of the forehead tell more decidedly. The moustache often grows vigorously, but the whiskers are thin. The skin is like that of Jacob, rather than like Esau's. One string of the animal nature has been taken away, but this gives only a greater predominance to the intellectual chords. To see just how the vital energy has been toned down, you must contrast one of this section with a specimen of Section A of the same class,—say, for instance, one of the old-fashioned, full-whiskered, red-faced, roaring, big Commodores of the last generation, whom you remember, at least by their portraits, in ruffled shirts, looking as hearty as butchers and as plucky as bull-terriers, with their hair combed straight up from their foreheads, which were not commonly very high or broad. The special form of physical life I have been describing gives you a right to expect more delicate perceptions and a more reflective, nature than you commonly find in shaggy-throated men, clad in heavy suits of muscles.

The student lingered in the lecture-room, looking all the time as if he wanted to say something in private, and waiting for two or three others, who were still hanging about, to be gone.

Something is wrong!—I said to myself, when I noticed his expression.—Well, Mr. Langdon,—I said to him, when we were alone,—can I do anything for you to-day?

You can, Sir,—he said.—I am going to leave the class, for the present, and keep school.

Why, that 's a pity, and you so near graduating! You'd better stay and finish this course and take your degree in the spring, rather than break up your whole plan of study.

I can't help myself, Sir,—the young man answered.—There 's trouble at home, and they cannot keep me here as they have done. So I must look out for myself for a while. It's what I've done before, and am ready to do again. I came to ask you for a certificate of my fitness to teach a common school, or a high school, if you think I am up to that. Are you willing to give it to me?

Willing? Yes, to be sure,—but I don't want you to go. Stay; we'll make it easy for you. There's a fund will do something for you, perhaps. Then you can take both the annual prizes, if you like,—and claim them in money, if you want that more than medals.

I have thought it all over,—he answered,—and have pretty much made up my mind to go.

A perfectly gentlemanly young man, of courteous address and mild utterance, but means at least as much as he says. There are some people whose rhetoric consists of a slight habitual under-statement. I often tell Mrs. Professor that one of her “I think it's so” is worth the Bible-oath of all the rest of the household that they “know it's so.” When you find a person a little better than his word, a little more liberal than his promise, a little more than borne out in his statement by his facts, a little larger in deed than in speech, you recognize a kind of eloquence in that person's utterance not laid down in Blair or Campbell.

This was a proud fellow, self-trusting, sensitive, with family-recollections that made him unwilling to accept the kind of aid which many students would have thankfully welcomed. I knew him too well to urge him, after the few words which implied that he was determined to go. Besides, I have great confidence in young men who believe in themselves, and are accustomed to rely on their own resources from an early period. When a resolute young fellow steps up to the great bully, the World, and takes him boldly by the beard, he is often surprised to find it come off in his hand, and that it was only tied on to scare away timid adventurers. I have seen young men more than once, who came to a great city without a single friend, support themselves and pay for their education, lay up money in a few years, grow rich enough to travel, and establish themselves in life, without ever asking a dollar of any person which they had not earned. But these are exceptional cases. There are horse-tamers, born so,—as we all know; there are woman-tamers, who bewitch the sex as the pied piper bedeviled the children of Hamelin; and there are world-tamers, who can make any community, even a Yankee one, get down and let them jump on its back as easily as Mr. Rarey saddled Cruiser.

Whether Langdon was of this sort or not I could not say positively; but he had spirit, and, as I have said, a

family-pride which would not let him be dependent. The New England Brahmin caste often gets blended with connections of political influence or commercial distinction. It is a charming thing for the scholar, when his fortune carries him in this way into some of the "old families" who have fine old houses, and city-lots that have risen in the market, and names written in all the stock-books of all the dividend-paying companies. His narrow study expands into a stately library, his books are counted by thousands instead of hundreds, and his favorites are dressed in gilded calf in place of plebeian sheepskin or its pauper substitutes of cloth and paper.

The Reverend Jedediah Langdon, grandfather of our young gentleman, had made an advantageous alliance of this kind. Miss Dorothea Wentworth had read one of his sermons which had been printed "by request," and became deeply interested in the young author, whom she had never seen. Out of this circumstance grew a correspondence, an interview, a declaration, a matrimonial alliance, and a family of half a dozen children. Wentworth Langdon, Esquire, was the oldest of these, and lived in the old family-mansion. Unfortunately, that principle of the diminution of estates by division, to which I have referred, rendered it somewhat difficult to maintain the establishment upon the fractional income which the proprietor received from his share of the property. Wentworth Langdon, Esq., represented a certain intermediate condition of life not at all infrequent in our old families. He was the connecting link between the generation which lived in ease, and even a kind of state, upon its own resources, and the new brood, which must live mainly by its wits or industry, and make itself rich, or shabbily subside into that lower stratum known to social geologists by a deposit of Kidderminster carpets and the peculiar aspect of the fossils constituting the family furniture and wardrobe. This slack-water period of a race, which comes before the rapid ebb of its prosperity, is familiar to all who live in cities. There are no more quiet, inoffensive people than these children of rich families, just above the necessity of active employment, yet not in a condition to place their own children advantageously, if they happen to have families. Many of them are content to live unmarried. Some mend their broken fortunes by prudent alliances, and some leave a numerous progeny to pass into the obscurity from which their ancestors emerged; so that you may see on handcars and cobblers' stalls names which, a few generations back, were upon parchments with broad seals, and tombstones with armorial bearings.

In a large city, this class of citizens is familiar to us in the streets. They are very courteous in their salutations; they have time enough to bow and take their hats off,—which, of course, no businessman can afford to do. Their beavers are smoothly brushed, and their boots well polished; all their appointments are tidy; they look the respectable walking gentleman to perfection. They are prone to habits,—they frequent reading-rooms,—insurance-offices,—they walk the same streets at the same hours,—so that one becomes familiar with their faces and persons, as a part of the street-furniture.

There is one curious circumstance, that all city-people must have noticed, which is often illustrated in our experience of the slack-water gentry. We shall know a certain person by his looks, familiarly, for years, but never have learned his name. About this person we shall have accumulated no little circumstantial knowledge;—thus, his face, figure, gait, his mode of dressing, of saluting, perhaps even of speaking, may be familiar to us; yet who he is we know not. In another department of our consciousness, there is a very familiar name, which we have never found the person to match. We have heard it so often, that it has idealized itself, and become one of that multitude of permanent shapes which walk the chambers of the brain in velvet slippers in the company of Falstaff and Hamlet and General Washington and Mr. Pickwick. Sometimes the person dies, but the name lives on indefinitely. But now and then it happens, perhaps after years of this independent existence of the name and its shadowy image in the brain, on the one part, and the person and all its real attributes, as we see them daily, on the other, that some accident reveals their relation, and we find the name we have carried so long in our memory belongs to the person we have known so long as a fellow-citizen. Now the slack-water gentry are among the persons most likely to be the subjects of this curious divorce of title and reality,—for the reason, that, playing no important part in the community, there is nothing to tie the floating name to the actual individual, as is the case with the men who belong in any way to the public, while yet their names have a certain historical currency, and we cannot help meeting them, either in their haunts, or going to and from them.

To this class belonged Wentworth Langdon, Esq. He had been "dead-headed" into the world some fifty years ago, and had sat with his hands in his pockets staring at the show ever since. I shall not tell you, for reasons before hinted, the whole name of the place in which he lived. I will only point you in the right direction, by saying that there are three towns lying in a line with each other, as you go "down East," each of them with a Port in its name, and each of them having a peculiar interest which gives it individuality, in addition to the Oriental character they have in common. I need not tell you that these towns are Newburyport, Portsmouth, and Portland. The Oriental character they have in common consists in their large, square, palatial mansions, with sunny gardens round them. The two first have seen better days. They are in perfect harmony with the condition of weakened, but not impoverished, gentility. Each of them is a "paradise of demi-fortunes." Each of them is of that intermediate size between a village and a city which any place has outgrown when the presence of a well-dressed stranger walking up and down the main street ceases to be a matter of public curiosity and private speculation, as frequently happens, during the busier months of the year, in considerable commercial centres like Salem. They both have grand old recollections to fall back upon,—times when they looked forward to commercial greatness, and when the portly gentlemen in cocked hats, who built their now decaying wharves and sent out their ships all over the world, dreamed that their fast-growing port was to be the Tyre or the Carthage of the rich British Colony. Great houses, like that once lived in by Lord Timothy Dexter, in Newburyport, remain as evidence of the fortunes amassed in these places of old. Other mansions—like the Rockingham House in Portsmouth (look at the white horse's tail before you mount the broad staircase)—show that there was not only wealth, but style and state, in these quiet old towns during the last century. It is not with any thought of pity or depreciation that we speak of them as in a certain sense decayed towns; they did not fulfil their early promise of expansion, but they remain incomparably the most interesting places of their size in any of the three northernmost New England States. They have even now prosperity enough to keep them in good condition, and offer the most attractive residences for quiet families, which, if they had been English, would have lived in a palazzo at Genoa or Pisa, or some other Continental Newburyport or Portsmouth.

As for the last of the three Ports, or Portland, it is getting too prosperous to be as attractive as its less

northerly neighbors. Meant for a fine old town, to ripen like a Cheshire cheese within its walls of ancient rind, burrowed by crooked alleys and mottled with venerable mould, it seems likely to sacrifice its mellow future to a vulgar material prosperity. Still it remains invested with many of its old charms, as yet, and will forfeit its place among this admirable trio only when it gets a hotel with unequivocal marks of having been built and organized in the present century.

—It was one of the old square palaces of the North, in which Bernard Langdon, the son of Wentworth, was born. If he had had the luck to be an only child, he might have lived as his father had done, letting his meagre competence smoulder on almost without consuming, like the fuel in an air-tight stove. But after Master Bernard came Miss Dorothea Elizabeth Wentworth Langdon, and then Master William Pepperell Langdon, and others, equally well named,—a string of them, looking, when they stood in a row in prayer-time, as if they would fit a set of Pandean pipes, of from three feet upward in dimensions. The door of the air-tight stove has to be opened, under such circumstances, you may well suppose! So it happened that our young man had been obliged, from an early period, to do something to support himself, and found himself stopped short in his studies by the inability of the good people at home to furnish him the present means of support as a student.

You will understand now why the young man wanted me to give him a certificate of his fitness to teach, and why I did not choose to urge him to accept the aid which a meek country-boy from a family without ante-Revolutionary recollections would have thankfully received. Go he must,—that was plain enough. He would not be content otherwise. He was not, however, to give up his studies; and as it is customary to allow half-time to students engaged in school-keeping,—that is, to count a year, so employed, if the student also keep on with his professional studies, as equal to six months of the three years he is expected to be under an instructor before applying for his degree,—he would not necessarily lose more than a few months of time. He had a small library of professional books, which he could take with him.

So he left my teaching and that of my estimable colleagues, carrying with him my certificate, that Mr. Bernard C. Langdon was a young gentleman of excellent moral character, of high intelligence and good education, and that his services would be of great value in any school, academy, or other institution, where young persons of-either sex were to be instructed.

I confess, that expression, “either sex,” ran a little thick, as I may say, from my pen. For, although the young man bore a very fair character, and there was no special cause for doubting his discretion, I considered him altogether too good-looking, in the first place, to be let loose in a roomful of young girls. I didn't want him to fall in love just then—and if half a dozen girls fell in love with him, as they most assuredly would, if brought into too near relations with him, why, there was no telling what gratitude and natural sensibility might bring about.

Certificates are, for the most part, like ostrich-eggs; the giver never knows what is hatched out of them. But once in a thousand times they act as curses are said to,—come home to roost. Give them often enough, until it gets to be a mechanical business, and, some day or other, you will get caught warranting somebody's ice not to melt in any climate, or somebody's razors to be safe in the hands of the youngest children.

I had an uneasy feeling, after giving this certificate. It might be all right enough; but if it happened to end badly, I should always reproach myself. There was a chance, certainly, that it would lead him or others into danger or wretchedness. Any one who looked at this young man could not fail to see that he was capable of fascinating and being fascinated. Those large, dark eyes of his would sink into the white soul of a young girl as the black cloth sunk into the snow in Franklin's famous experiment. Or, on the other hand, if the rays of a passionate nature should ever be concentrated on them, they would be absorbed into the very depths of his nature, and then his blood would turn to flame and burn his life out of him, until his cheeks grew as white as the ashes that cover a burning coal.

I wish I had not said either sex in my certificate. An academy for young gentlemen, now; that sounds cool and unimaginative. A boys' school, that would be a very good place for him;—some of them are pretty rough, but there is nerve enough in that old Wentworth strain of blood; he can give any country fellow, of the common stock, twenty pounds, and hit him out of time in ten minutes. But to send such a young fellow as that out a girl's-nesting! to give this falcon a free pass into all the dove-cotes! I was a fool,—that's all.

I brooded over the mischief which might come out of these two words until it seemed to me that they were charged with destiny. I could hardly sleep for thinking what a train I might have been laying, which might take a spark any day, and blow up nobody knows whose peace or prospects. What I dreaded most was one of those miserable matrimonial misalliances where a young fellow who does not know himself as yet flings his magnificent future into the checked apron-lap of some fresh-faced, half-bred country-girl, no more fit to be mated with him than her father's horse to go in double harness with Flora Temple. To think of the eagle's wings, being clipped so that he shall never lift himself over the farm-yard fence! Such things happen, and always must,—because, as one of us said awhile ago, a man always loves, a woman, and a woman a man, unless some good reason exists to the contrary. You think yourself a very fastidious young man, my friend; but there are probably at least five-thousand young women in these United States, any one of whom you would certainly marry, if you were thrown much into her company, and nobody more attractive were near, and she had no objection. And you, my dear young lady, justly pride yourself on your discerning delicacy; but if I should say that there are twenty thousand young men, any one of whom, if he offered his hand and heart under favorable circumstances, you would

“First endure, then pity, then embrace,”

I should be much more imprudent than I mean to be, and you would, no doubt, throw down a story in which I hope to interest you.

I had settled it in my mind that this young fellow had a career marked out for him. He should begin in the natural way, by taking care of poor patients in one of the public charities, and work his way up to a better kind of practice,—better, that is, in the vulgar, worldly sense. The great and good Boerhaave used to say, as I remember very well, that the poor were his best patients; for God was their paymaster. But everybody is not as patient as Boerhaave, nor as deserving; so that the rich, though not, perhaps, the best patients, are good

enough for common practitioners. I suppose Boerhaave put up with them when he could not get poor ones, as he left his daughter two millions of florins when he died.

Now if this young man once got into the wide streets, he would sweep them clear of his rivals of the same standing; and as I was getting indifferent to business, and old Dr. Kilham was growing careless, and had once or twice prescribed morphine when he meant quinine, there would soon be an opening into the Doctor's Paradise,—the streets with only one side to them. Then I would have him strike a bold stroke,—set up a nice little coach, and be driven round like a first-class London doctor, instead of coasting about in a shabby one-horse concern and casting anchor opposite his patients' doors like a Cape Ann fishing-smack. By the time he was thirty, he would have knocked the social pawns out of his way, and be ready to challenge a wife from the row of great pieces in the background. I would not have a man marry above his level, so as to become the appendage of a powerful family-connection; but I would not have him marry until he knew his level,—that is, again, looking at the matter in a purely worldly point of view, and not taking the sentiments at all into consideration. But remember, that a young man, using large endowments wisely and fortunately, may put himself on a level with the highest in the land in ten brilliant years of spirited, unflagging labor. And to stand at the very top of your calling in a great city is something in itself,—that is, if you like money, and influence, and a seat on the platform at public lectures, and gratuitous tickets to all sorts of places where you don't want to go, and, what is a good deal better than any of these things, a sense of power, limited, it may be, but absolute in its range, so that all the Caesars and Napoleons would have to stand aside, if they came between you and the exercise of your special vocation.

That is what I thought this young fellow might have come to; and now I have let him go off into the country with my certificate, that he is fit to teach in a school for either sex! Ten to one he will run like a moth into a candle, right into one of those girls'-nests, and get tangled up in some sentimental folly or other, and there will be the end of him. Oh, yes! country doctor,—half a dollar a visit,—drive, drive, drive all day,—get up at night and harness your own horse,—drive again ten miles in a snow-storm, shake powders out of two phials, (pulv. glycyrrhiz., pulv. gum. acac. as partes equates,)—drive back again, if you don't happen to get stuck in a drift, no home, no peace, no continuous meals, no unbroken sleep, no Sunday, no holiday, no social intercourse, but one eternal jog, jog, jog, in a sulky, until you feel like the mummy of an Indian who had been buried in the sitting posture, and was dug up a hundred years afterwards! Why did n't I warn him about love and all that nonsense? Why didn't I tell him he had nothing to do with it, yet awhile? Why did n't I hold up to him those awful examples I could have cited, where poor young fellows who could just keep themselves afloat have hung a matrimonial millstone round their necks, taking it for a life-preserver? All this of two words in a certificate!

CHAPTER III. MR. BERNARD TRIES HIS HAND.

Whether the Student advertised for a school, or whether he fell in with the advertisement of a school-committee, is not certain. At any rate, it was not long before he found himself the head of a large district, or, as it was called by the inhabitants, "deestric" school, in the flourishing inland village of Pequawkett, or, as it is commonly spelt, Pigwacket Centre. The natives of this place would be surprised, if they should hear that any of the readers of a work published in Boston were unacquainted with so remarkable a locality. As, however, some copies of it may be read at a distance from this distinguished metropolis, it may be well to give a few particulars respecting the place, taken from the Universal Gazetteer.

"PIGWACKET, sometimes spelt Pequawkett. A post-village and township in ——— Co., State of ———, situated in a fine agricultural region, 2 thriving villages, Pigwacket Centre and Smithville, 3 churches, several school houses, and many handsome private residences. Mink River runs through the town, navigable for small boats after heavy rains. Muddy Pond at N. E. section, well stocked with horn pouts, eels, and shiners. Products, beef, pork, butter, cheese. Manufactures, shoe-pegs, clothes-pins, and tin-ware. Pop. 1373."

The reader may think there is nothing very remarkable implied in this description. If, however he had read the town-history, by the Rev. Jabez Grubb, he would have learned, that, like the celebrated Little Pedlington, it was distinguished by many very remarkable advantages. Thus:

"The situation of Pigwacket is eminently beautiful, looking down the lovely valley of Mink River, a tributary of the Musquash. The air is salubrious, and many of the inhabitants have attained great age, several having passed the allotted period of 'three-score years and ten' before succumbing to any of the various 'ills that flesh is heir to.' Widow Comfort Leevins died in 1836 AEt. LXXXVII. years. Venus, an African, died in 1841, supposed to be C. years old. The people are distinguished for intelligence, as has been frequently remarked by eminent lyceum-lecturers, who have invariably spoken in the highest terms of a Pigwacket audience. There is a public library, containing nearly a hundred volumes, free to all subscribers. The preached word is well attended, there is a flourishing temperance society, and the schools are excellent. It is a residence admirably adapted to refined families who relish the beauties of Nature and the charms of society. The Honorable John Smith, formerly a member of the State Senate, was a native of this town."

That is the way they all talk. After all, it is probably pretty much like other inland New England towns in point of "salubrity,"—that is, gives people their choice of dysentery or fever every autumn, with a season-ticket for consumption, good all the year round. And so of the other pretences. "Pigwacket audience," forsooth! Was there ever an audience anywhere, though there wasn't a pair of eyes in it brighter than pickled oysters, that did n't think it was "distinguished for intelligence"?—"The preached word"! That means the Rev. Jabez Grubb's sermons. "Temperance society"! "Excellent schools"! Ah, that is just what we were talking about.

The truth was, that District No. 1, Pigwacket Centre, had had a good deal of trouble of late with its schoolmasters. The committee had done their best, but there were a number of well-grown and pretty rough young fellows who had got the upper-hand of the masters, and meant to keep it. Two dynasties had fallen before the uprising of this fierce democracy. This was a thing that used to be not very uncommon; but in so "intelligent" a community as that of Pigwacket Centre, in an era of public libraries and lyceum-lectures, it was portentous and alarming.

The rebellion began under the ferule of Master Weeks, a slender youth from a country college, underfed, thin-blooded, sloping-shouldered, knock-kneed, straight-haired, weak-bearded, pale-eyed, wide-pupilled, half-colored; a common type enough in in-door races, not rich enough to pick and choose in their alliances. Nature kills off a good many of this sort in the first teething-time, a few in later childhood, a good many again in early adolescence; but every now and then one runs the gauntlet of her various diseases, or rather forms of one disease, and grows up, as Master Weeks had done.

It was a very foolish thing for him to try to inflict personal punishment on such a lusty young fellow as Abner Briggs, Junior, one of the "hardest customers" in the way of a rough-and-tumble fight that there were anywhere round. No doubt he had been insolent, but it would have been better to overlook it. It pains me to report the events which took place when the master made his rash attempt to maintain his authority. Abner Briggs, Junior, was a great, hulking fellow, who had been bred to butchering, but urged by his parents to attend school, in order to learn the elegant accomplishments of reading and writing, in which he was sadly deficient. He was in the habit of talking and laughing pretty loud in school-hours, of throwing wads of paper reduced to a pulp by a natural and easy process, of occasional insolence and general negligence. One of the soft, but unpleasant missiles just alluded to flew by the master's head one morning, and flattened itself against the wall, where it adhered in the form of a convex mass in alto rilievo. The master looked round and saw the young butcher's arm in an attitude which pointed to it unequivocally as the source from which the projectile had taken its flight.

Master Weeks turned pale. He must "lick" Abner Briggs, Junior, or abdicate. So he determined to lick Abner Briggs, Junior.

"Come here, Sir!" he said; "you have insulted me and outraged the decency of the schoolroom often enough! Hold out your hand!"

The young fellow grinned and held it out. The master struck at it with his black ruler, with a will in the blow and a snapping of the eyes, as much as to say that he meant to make him smart this time. The young fellow pulled his hand back as the ruler came down, and the master hit himself a vicious blow with it on the right knee. There are things no man can stand. The master caught the refractory youth by the collar and began shaking him, or rather shaking himself against him.

"Le' go o' that are coat, naow," said the fellow, "or I 'll make ye! 'T 'll take tew on yet' handle me, I tell ye, 'n' then ye caant dew it!"—and the young pupil returned the master's attention by catching hold of his collar.

When it comes to that, the best man, not exactly in the moral sense, but rather in the material, and more especially the muscular point of view, is very apt to have the best of it, irrespectively of the merits of the case. So it happened now. The unfortunate schoolmaster found himself taking the measure of the sanded floor, amidst the general uproar of the school. From that moment his ferule was broken, and the school-committee very soon had a vacancy to fill.

Master Pigeon, the successor of Master Weeks, was of better stature, but loosely put together, and slender-limbed. A dreadfully nervous kind of man he was, walked on tiptoe, started at sudden noises, was distressed when he heard a whisper, had a quick, suspicious look, and was always saying, "Hush?" and putting his hands to his ears. The boys were not long in finding out this nervous weakness, of course. In less than a week a regular system of torments was inaugurated, full of the most diabolical malice and ingenuity. The exercises of the conspirators varied from day to day, but consisted mainly of foot-scraping, solos on the slate-pencil, (making it screech on the slate,) falling of heavy books, attacks of coughing, banging of desk-lids, boot-creaking, with sounds as of drawing a cork from time to time, followed by suppressed chuckles.

Master Pigeon grew worse and worse under these inflictions. The rascally boys always had an excuse for any one trick they were caught at. "Could n' help coughin', Sir." "Slipped out o' m' han', Sir." "Did n' go to, Sir." "Did n' dew't o' purpose, Sir." And so on,—always the best of reasons for the most outrageous of behavior. The master weighed himself at the grocer's on a platform balance, some ten days after he began keeping the school. At the end of a week he weighed himself again. He had lost two pounds. At the end of another week he had lost five. He made a little calculation, based on these data, from which he learned that in a certain number of months, going on at this rate, he should come to weigh precisely nothing at all; and as this was a sum in subtraction he did not care to work out in practice, Master Pigeon took to himself wings and left the school-committee in possession of a letter of resignation and a vacant place to fill once more.

This was the school to which Mr. Bernard Langdon found himself appointed as master. He accepted the place conditionally, with the understanding that he should leave it at the end of a month, if he were tired of it.

The advent of Master Langdon to Pigwacket Centre created a much more lively sensation than had attended that of either of his predecessors. Looks go a good way all the world over, and though there were several good-looking people in the place, and Major Bush was what the natives of the town called a "hahnsome mahn," that is, big, fat, and red, yet the sight of a really elegant young fellow, with the natural air which grows up with carefully-bred young persons, was a novelty. The Brahmin blood which came from his grandfather as well as from his mother, a direct descendant of the old Flynt family, well known by the famous tutor, Henry Flynt, (see Cat. Harv. Anno 1693,) had been enlivened and enriched by that of the Wentworths, which had had a good deal of ripe old Madeira and other generous elements mingled with it, so that it ran to gout sometimes in the old folks and to high spirit, warm complexion, and curly hair in some of the younger ones. The soft curling hair Mr. Bernard had inherited,—something, perhaps, of the high spirit; but that we shall have a chance of finding out by and by. But the long sermons and the frugal board of his Brahmin ancestry, with his own habits of study, had told upon his color, which was subdued to something more of delicacy than one would care to see in a young fellow with rough work before him. This, however, made him

look more interesting, or, as the young ladies at Major Bush's said, "interestin'."

When Mr. Bernard showed himself at meeting, on the first Sunday after his arrival, it may be supposed that a good many eyes were turned upon the young schoolmaster. There was something heroic in his coming forward so readily to take a place which called for a strong hand, and a prompt, steady will to guide it. In fact, his position was that of a military chieftain on the eve of a battle. Everybody knew everything in Pigwacket Centre; and it was an understood thing that the young rebels meant to put down the new master, if they could. It was natural that the two prettiest girls in the village, called in the local dialect, as nearly as our limited alphabet will represent it, Alminy Cutterr, and Arvilly Braowne, should feel and express an interest in the good-looking stranger, and that, when their flattering comments were repeated in the hearing of their indigenous admirers, among whom were some of the older "boys" of the school, it should not add to the amiable dispositions of the turbulent youth.

Monday came, and the new schoolmaster was in his chair at the upper end of the schoolhouse, on the raised platform. The rustics looked at his handsome face, thoughtful, peaceful, pleasant, cheerful, but sharply cut round the lips and proudly lighted about the eyes. The ringleader of the mischief-makers, the young butcher who has before figured in this narrative, looked at him stealthily, whenever he got a chance to study him unobserved; for the truth was, he felt uncomfortable, whenever he found the large, dark eyes fixed on his own little, sharp, deep-set, gray ones. But he managed to study him pretty well,—first his face, then his neck and shoulders, the set of his arms, the narrowing at the loins, the make of his legs, and the way he moved. In short, he examined him as he would have examined a steer, to see what he could do and how he would cut up. If he could only have gone to him and felt of his muscles, he would have been entirely satisfied. He was not a very wise youth, but he did know well enough, that, though big arms and legs are very good things, there is something besides size that goes to make a man; and he had heard stories of a fighting-man, called "The Spider," from his attenuated proportions, who was yet a terrible hitter in the ring, and had whipped many a big-limbed fellow, in and out of the roped arena.

Nothing could be smoother than the way in which everything went on for the first day or two. The new master was so kind and courteous, he seemed to take everything in such a natural, easy way, that there was no chance to pick a quarrel with him. He in the mean time thought it best to watch the boys and young men for a day or two with as little show of authority as possible. It was easy enough to see that he would have occasion for it before long.

The schoolhouse was a grim, old, red, one-story building, perched on a bare rock at the top of a hill,—partly because this was a conspicuous site for the temple of learning, and partly because land is cheap where there is no chance even for rye or buckwheat, and the very sheep find nothing to nibble. About the little porch were carved initials and dates, at various heights, from the stature of nine to that of eighteen. Inside were old unpainted desks,—unpainted, but browned with the umber of human contact,—and hacked by innumerable jack-knives. It was long since the walls had been whitewashed, as might be conjectured by the various traces left upon them, wherever idle hands or sleepy heads could reach them. A curious appearance was noticeable on various higher parts of the wall: namely, a wart-like eruption, as one would be tempted to call it, being in reality a crop of the soft missiles before mentioned, which, adhering in considerable numbers, and hardening after the usual fashion of papier-mache, formed at last permanent ornaments of the edifice.

The young master's quick eye soon noticed that a particular part of the wall was most favored with these ornamental appendages. Their position pointed sufficiently clearly to the part of the room they came from. In fact, there was a nest of young mutineers just there, which must be broken up by a coup d'etat. This was easily effected by redistributing the seats and arranging the scholars according to classes, so that a mischievous fellow, charged full of the rebellious imponderable, should find himself between two non-conductors, in the shape of small boys of studious habits. It was managed quietly enough, in such a plausible sort of way that its motive was not thought of. But its effects were soon felt; and then began a system of correspondence by signs, and the throwing of little scrawls done up in pellets, and announced by preliminary a'h'ms! to call the attention of the distant youth addressed. Some of these were incendiary documents, devoting the schoolmaster to the lower divinities, as "a stuck-up dandy," as "a purse-proud aristocrat," as "a sight too big for his, etc.," and holding him up in a variety of equally forcible phrases to the indignation of the youthful community of School District No. 1, Pigwacket Centre.

Presently the draughtsman of the school set a caricature in circulation, labelled, to prevent mistakes, with the schoolmaster's name. An immense bell-crowned hat, and a long, pointed, swallow-tailed coat showed that the artist had in his mind the conventional dandy, as shown in prints of thirty or forty years ago, rather than any actual human aspect of the time. But it was passed round among the boys and made its laugh, helping of course to undermine the master's authority, as "Punch" or the "Charivari" takes the dignity out of an obnoxious minister. One morning, on going to the schoolroom, Master Langdon found an enlarged copy of this sketch, with its label, pinned on the door. He took it down, smiled a little, put it into his pocket, and entered the schoolroom. An insidious silence prevailed, which looked as if some plot were brewing. The boys were ripe for mischief, but afraid. They had really no fault to find with the master, except that he was dressed like a gentleman, which a certain class of fellows always consider a personal insult to themselves. But the older ones were evidently plotting, and more than once the warning a'h'm! was heard, and a dirty little scrap of paper rolled into a wad shot from one seat to another. One of these happened to strike the stove-funnel, and lodged on the master's desk. He was cool enough not to seem to notice it. He secured it, however, and found an opportunity to look at it, without being observed by the boys. It required no immediate notice.

He who should have enjoyed the privilege of looking upon Mr. Bernard Langdon the next morning, when his toilet was about half finished, would have had a very pleasant gratuitous exhibition. First he buckled the strap of his trousers pretty tightly. Then he took up a pair of heavy dumb-bells, and swung them for a few minutes; then two great "Indian clubs," with which he enacted all sorts of impossible-looking feats. His limbs were not very large, nor his shoulders remarkably broad; but if you knew as much of the muscles as all persons who look at statues and pictures with a critical eye ought to have learned,—if you knew the trapezius, lying diamond-shaped over the back and shoulders like a monk's cowl,—or the deltoid, which caps the shoulder like an epaulette,—or the triceps, which furnishes the calf of the upper arm,—or the hard-knotted

biceps,—any of the great sculptural landmarks, in fact,—you would have said there was a pretty show of them, beneath the white satiny skin of Mr. Bernard Langdon. And if you had seen him, when he had laid down the Indian clubs, catch hold of a leather strap that hung from the beam of the old-fashioned ceiling,—and lift and lower himself over and over again by his left hand alone, you might have thought it a very simple and easy thing to do, until you tried to do it yourself. Mr. Bernard looked at himself with the eye of an expert. "Pretty well!" he said;—"not so much fallen off as I expected." Then he set up his bolster in a very knowing sort of way, and delivered two or three blows straight as rulers and swift as winks. "That will do," he said. Then, as if determined to make a certainty of his condition, he took a dynamometer from one of the drawers in his old veneered bureau. First he squeezed it with his two hands. Then he placed it on the floor and lifted, steadily, strongly. The springs creaked and cracked; the index swept with a great stride far up into the high figures of the scale; it was a good lift. He was satisfied. He sat down on the edge of his bed and looked at his cleanly-shaped arms. "If I strike one of those boobies, I am afraid I shall spoil him," he said. Yet this young man, when weighed with his class at the college, could barely turn one hundred and forty-two pounds in the scale,—not a heavy weight, surely; but some of the middle weights, as the present English champion, for instance, seem to be of a far finer quality of muscle than the bulkier fellows.

The master took his breakfast with a good appetite that morning, but was perhaps rather more quiet than usual. After breakfast he went up-stairs and put, on a light loose frock, instead of that which he commonly wore, which was a close-fitting and rather stylish one. On his way to school he met Alminy Cutterr, who happened to be walking in the other direction. "Good-morning, Miss Cutter," he said; for she and another young lady had been introduced to him, on a former occasion, in the usual phrase of polite society in presenting ladies to gentlemen,—“Mr. Langdon, let me make y' acquainted with Miss Cutterr;—let me make y' acquainted with Miss Braowne.” So he said, “Good-morning”; to which she replied, “Good-mornin', Mr. Langdon. Haow's your haalth?” The answer to this question ought naturally to have been the end of the talk; but Alminy Cutterr lingered and looked as if she had something more on her mind.

A young fellow does not require a great experience to read a simple country-girl's face as if it were a sign-board. Alminy was a good soul, with red cheeks and bright eyes, kind-hearted as she could be, and it was out of the question for her to hide her thoughts or feelings like a fine lady. Her bright eyes were moist and her red cheeks paler than their wont, as she said, with her lips quivering, “Oh, Mr. Langdon, them boys 'll be the death of ye, if ye don't take caar!”

“Why, what's the matter, my dear?” said Mr. Bernard.—Don't think there was anything very odd in that “my dear,” at the second interview with a village belle;—some of these woman-tamers call a girl “My dear,” after five minutes' acquaintance, and it sounds all right as they say it. But you had better not try it at a venture.

It sounded all right to Alminy, as Mr. Bernard said it.—“I 'll tell ye what's the mahtterr,” she said, in a frightened voice. “Ahbner 's go'n' to car' his dog, 'n' he'll set him on ye'z sure 'z y' 'r alive. 'T's the same cretur that haaf eat up Eben Squires's little Jo, a year come nex' Faast day.”

Now this last statement was undoubtedly overcolored; as little Jo Squires was running about the village,—with an ugly scar on his arm, it is true, where the beast had caught him with his teeth, on the occasion of the child's taking liberties with him, as he had been accustomed to do with a good-tempered Newfoundland dog, who seemed to like being pulled and hauled round by children. After this the creature was commonly muzzled, and, as he was fed on raw meat chiefly, was always ready for a fight, which he was occasionally indulged in, when anything stout enough to match him could be found in any of the neighboring villages.

Tiger, or, more briefly, Tige, the property of Abner Briggs, Junior, belonged to a species not distinctly named in scientific books, but well known to our country-folks under the name “Yallah dog.” They do not use this expression as they would say black dog or white dog, but with almost as definite a meaning as when they speak of a terrier or a spaniel. A “yallah dog” is a large canine brute, of a dingy old-flannel color, of no particular breed except his own, who hangs round a tavern or a butcher's shop, or trots alongside of a team, looking as if he were disgusted with the world, and the world with him. Our inland population, while they tolerate him, speak of him with contempt. Old _____, of Meredith Bridge, used to twit the sun for not shining on cloudy days, swearing, that, if he hung up his “yallah dog,” he would make a better show of daylight. A country fellow, abusing a horse of his neighbor's, vowed, that, “if he had such a hoss, he'd swap him for a `yallah dog,'—and then shoot the dog.”

Tige was an ill-conditioned brute by nature, and art had not improved him by cropping his ears and tail and investing him with a spiked collar. He bore on his person, also, various not ornamental scars, marks of old battles; for Tige had fight in him, as was said before, and as might be guessed by a certain bluntness about the muzzle, with a projection of the lower jaw, which looked as if there might be a bull-dog stripe among the numerous bar-sinisters of his lineage.

It was hardly fair, however, to leave Alminy Cutterr waiting while this piece of natural history was telling.—As she spoke of little Jo, who had been “haaf eat up” by Tige, she could not contain her sympathies, and began to cry.

“Why, my dear little soul,” said Mr. Bernard, “what are you worried about? I used to play with a bear when I was a boy; and the bear used to hug me, and I used to kiss him,—so!”

It was too bad of Mr. Bernard, only the second time he had seen Alminy; but her kind feelings had touched him, and that seemed the most natural way of expressing his gratitude. Ahminy looked round to see if anybody was near; she saw nobody, so of course it would do no good to “holler.” She saw nobody; but a stout young fellow, leading a yellow dog, muzzled, saw her through a crack in a picket fence, not a great way off the road. Many a year he had been “hangin' 'raoun'” Alminy, and never did he see any encouraging look, or hear any “Behave, naow!” or “Come, naow, a'n't ye 'shamed?” or other forbidding phrase of acquiescence, such as village belles under stand as well as ever did the nymph who fled to the willows in the eclogue we all remember.

No wonder he was furious, when he saw the school master, who had never seen the girl until within a week, touching with his lips those rosy cheeks which he had never dared to approach. But that was all; it was a sudden impulse; and the master turned away from the young girl, laughing, and telling her not to fret herself

about him,—he would take care of himself.

So Master Langdon walked on toward his school-house, not displeased, perhaps, with his little adventure, nor immensely elated by it; for he was one of the natural class of the sex-subduers, and had had many a smile without asking, which had been denied to the feeble youth who try to win favor by pleading their passion in rhyme, and even to the more formidable approaches of young officers in volunteer companies, considered by many to be quite irresistible to the fair who have once beheld them from their windows in the epaulettes and plumes and sashes of the "Pigwacket Invincibles," or the "Hackmatack Rangers."

Master Langdon took his seat and began the exercises of his school. The smaller boys recited their lessons well enough, but some of the larger ones were negligent and surly. He noticed one or two of them looking toward the door, as if expecting somebody or something in that direction. At half past nine o'clock, Abner Briggs, Junior, who had not yet shown himself, made his appearance. He was followed by his "yallah dog," without his muzzle, who squatted down very grimly near the door, and gave a wolfish look round the room, as if he were considering which was the plumpest boy to begin with. The young butcher, meanwhile, went to his seat, looking somewhat flushed, except round the lips, which were hardly as red as common, and set pretty sharply.

"Put out that dog, Abner Briggs!"—The master spoke as the captain speaks to the helmsman, when there are rocks foaming at the lips, right under his lee.

Abner Briggs answered as the helmsman answers, when he knows he has a mutinous crew round him that mean to run the ship on the reef, and is one of the mutineers himself. "Put him aout y'rself, 'f ye a'n't afeard on him!"

The master stepped into the aisle: The great cur showed his teeth,—and the devilish instincts of his old wolf-ancestry looked out of his eyes, and flashed from his sharp tusks, and yawned in his wide mouth and deep red gullet.

The movements of animals are so much quicker than those of human beings commonly are, that they avoid blows as easily as one of us steps out of the way of an ox-cart. It must be a very stupid dog that lets himself be run over by a fast driver in his gig; he can jump out of the wheel's way after the tire has already touched him. So, while one is lifting a stick to strike or drawing back his foot to kick, the beast makes his spring, and the blow or the kick comes too late.

It was not so this time. The master was a fencer, and something of a boxer; he had played at singlestick, and was used to watching an adversary's eye and coming down on him without any of those premonitory symptoms by which unpractised persons show long beforehand what mischief they meditate.

"Out with you!" he said, fiercely,—and explained what he meant by a sudden flash of his foot that clashed the yellow dog's white teeth together like the springing of a bear-trap. The cur knew he had found his master at the first word and glance, as low animals on four legs, or a smaller number, always do; and the blow took him so by surprise, that it curled him up in an instant, and he went bundling out of the open schoolhouse-door with a most pitiable yelp, and his stump of a tail shut down as close as his owner ever shut the short, stubbed blade of his jack-knife.

It was time for the other cur to find who his master.

"Follow your dog, Abner Briggs!" said Master Langdon.

The stout butcher-youth looked round, but the rebels were all cowed and sat still.

"I'll go when I'm ready," he said,—"'n' I guess I won't go afore I'm ready."

"You're ready now," said Master Langdon, turning up his cuffs so that the little boys noticed the yellow gleam of a pair of gold sleeve-buttons, once worn by Colonel Percy Wentworth, famous in the Old French War.

Abner Briggs, Junior, did not apparently think he was ready, at any rate; for he rose up in his place, and stood with clenched fists, defiant, as the master strode towards him. The master knew the fellow was really frightened, for all his looks, and that he must have no time to rally. So he caught him suddenly by the collar, and, with one great pull, had him out over his desk and on the open floor. He gave him a sharp fling backwards and stood looking at him.

The rough-and-tumble fighters all clinch, as everybody knows; and Abner Briggs, Junior, was one of that kind. He remembered how he had floored Master Weeks, and he had just "spunk" enough left in him to try to repeat his former successful experiment an the new master. He sprang at him, open-handed, to clutch him. So the master had to strike,—once, but very hard, and just in the place to tell. No doubt, the authority that doth hedge a schoolmaster added to the effect of the blow; but the blow was itself a neat one, and did not require to be repeated.

"Now go home," said the master, "and don't let me see you or your dog here again." And he turned his cuffs down over the gold sleeve-buttons.

This finished the great Pigwacket Centre School rebellion. What could be done with a master who was so pleasant as long as the boys behaved decently, and such a terrible fellow when he got "riled," as they called it? In a week's time everything was reduced to order, and the school-committee were delighted. The master, however, had received a proposition so much more agreeable and advantageous, that he informed the committee he should leave at the end of his month, having in his eye a sensible and energetic young college-graduate who would be willing and fully competent to take his place.

So, at the expiration of the appointed time, Bernard Langdon, late master of the School District No. 1, Pigwacket Centre, took his departure from that place for another locality, whither we shall follow him, carrying with him the regrets of the committee, of most of the scholars, and of several young ladies; also two locks of hair, sent unbeknown to payrents, one dark and one warmish auburn, inscribed with the respective initials of Alminy Cutterr and Arvilly Braowne.

CHAPTER IV. THE MOTH FLIES INTO THE CANDLE.

The invitation which Mr. Bernard Langdon had accepted came from the Board of Trustees of the "Apollinean Female Institute," a school for the education of young ladies, situated in the flourishing town of Rockland. This was an establishment on a considerable scale, in which a hundred scholars or thereabouts were taught the ordinary English branches, several of the modern languages, something of Latin, if desired, with a little natural philosophy, metaphysics, and rhetoric, to finish off with in the last year, and music at any time when they would pay for it. At the close of their career in the Institute, they were submitted to a grand public examination, and received diplomas tied in blue ribbons, which proclaimed them with a great flourish of capitals to be graduates of the Apollinean Female Institute.

Rockland was a town of no inconsiderable pretensions. It was ennobled by lying at the foot of a mountain,—called by the working-folks of the place "the Maounting,"—which sufficiently showed that it was the principal high land of the district in which it was situated. It lay to the south of this, and basked in the sunshine as Italy stretches herself before the Alps. To pass from the town of Tamarack on the north of the mountain to Rockland on the south was like crossing from Coire to Chiavenna.

There is nothing gives glory and grandeur and romance and mystery to a place like the impending presence of a high mountain. Our beautiful Northampton with its fair meadows and noble stream is lovely enough, but owes its surpassing attraction to those twin summits which brood over it like living presences, looking down into its streets as if they were its tutelary divinities, dressing and undressing their green shrines, robing themselves in jubilant sunshine or in sorrowing clouds, and doing penance in the snowy shroud of winter, as if they had living hearts under their rocky ribs and changed their mood like the children of the soil at their feet, who grow up under their almost parental smiles and frowns. Happy is the child whose first dreams of heaven are blended with the evening glories of Mount Holyoke, when the sun is firing its treetops, and gilding the white walls that mark its one human dwelling! If the other and the wilder of the two summits has a scowl of terror in its overhanging brows, yet is it a pleasing fear to look upon its savage solitudes through the barred nursery-windows in the heart of the sweet, companionable village.—And how the mountains love their children! The sea is of a facile virtue, and will run to kiss the first comer in any port he visits; but the chaste mountains sit apart, and show their faces only in the midst of their own families.

The Mountain which kept watch to the north of Rockland lay waste and almost inviolate through much of its domain. The catamount still glared from the branches of its old hemlocks on the lesser beasts that strayed beneath him. It was not long since a wolf had wandered down, famished in the winter's dearth, and left a few bones and some tufts of wool of what had been a lamb in the morning. Nay, there were broad-footed tracks in the snow only two years previously, which could not be mistaken;—the black bear alone could have set that plantigrade seal, and little children must come home early from school and play, for he is an indiscriminate feeder when he is hungry, and a little child would not come amiss when other game was wanting.

But these occasional visitors may have been mere wanderers, which, straying along in the woods by day, and perhaps stalking through the streets of still villages by night, had worked their way along down from the ragged mountain-spurs of higher latitudes. The one feature of The Mountain that shed the brownest horror on its woods was the existence of the terrible region known as Rattlesnake Ledge, and still tenanted by those damnable reptiles, which distil a fiercer venom under our cold northern sky than the cobra himself in the land of tropical spices and poisons.

From the earliest settlement of the place, this fact had been, next to the Indians, the reigning nightmare of the inhabitants. It was easy enough, after a time, to drive away the savages; for "a screeching Indian Divell," as our fathers called him, could not crawl into the crack of a rock to escape from his pursuers. But the venomous population of Rattlesnake Ledge had a Gibraltar for their fortress that might have defied the siege-train dragged to the walls of Sebastopol. In its deep embrasures and its impregnable easemates they reared their families, they met in love or wrath, they twined together in family knots, they hissed defiance in hostile clans, they fed, slept, hibernated, and in due time died in peace. Many a foray had the towns-people made, and many a stuffed skin was shown as a trophy,—nay, there were families where the children's first toy was made from the warning appendage that once vibrated to the wrath of one of these "cruel serpents." Sometimes one of them, coaxed out by a warm sun, would writhe himself down the hillside into the roads, up the walks that led to houses,—worse than this, into the long grass, where the barefooted mowers would soon pass with their swinging scythes,—more rarely into houses, and on one memorable occasion, early in the last century, into the meeting-house, where he took a position on the pulpit-stairs,—as is narrated in the "Account of Some Remarkable Providences," etc., where it is suggested that a strong tendency of the Rev. Didymus Bean, the Minister at that time, towards the Arminian Heresy may have had something to do with it, and that the Serpent supposed to have been killed on the Pulpit-Stairs was a false show of the Daemon's Contrivance, he having come in to listen to a Discourse which was a sweet Savour in his Nostrils, and, of course, not being capable of being killed Himself. Others said, however, that, though there was good Reason to think it was a Damon, yet he did come with Intent to bite the Heel of that faithful Servant,—etc.

One Gilson is said to have died of the bite of a rattlesnake in this town early in the present century. After this there was a great snake-hunt, in which very many of these venomous beasts were killed,—one in particular, said to have been as big round as a stout man's arm, and to have had no less than forty joints to his rattle,—indicating, according to some, that he had lived forty years, but, if we might put any faith in the Indian tradition, that he had killed forty human beings,—an idle fancy, clearly. This hunt, however, had no permanent effect in keeping down the serpent population. Viviparous, creatures are a kind of specie-paying lot, but oviparous ones only give their notes, as it were, for a future brood,—an egg being, so to speak, a promise to pay a young one by and by, if nothing happen. Now the domestic habits of the rattlesnake are not studied very closely, for obvious reasons; but it is, no doubt, to all intents and purposes oviparous. Consequently it has large families, and is not easy to kill out.

In the year 184-, a melancholy proof was afforded to the inhabitants of Rockland, that the brood which infested The Mountain was not extirpated. A very interesting young married woman, detained at home at the time by the state of her health, was bitten in the entry of her own house by a rattlesnake which had found its way down from The Mountain. Owing to the almost instant employment of powerful remedies, the bite did not prove immediately fatal; but she died within a few months of the time when she was bitten.

All this seemed to throw a lurid kind of shadow over The Mountain. Yet, as many years passed without any accident, people grew comparatively careless, and it might rather be said to add a fearful kind of interest to the romantic hillside, that the banded reptiles, which had been the terror of the red men for nobody knows how many thousand years, were there still, with the same poison-bags and spring-teeth at the white men's service, if they meddled with them.

The other natural features of Rockland were such as many of our pleasant country-towns can boast of. A brook came tumbling down the mountain-side and skirted the most thickly settled portion of the village. In the parts of its course where it ran through the woods, the water looked almost as brown as coffee flowing from its urn,—to say like smoky quartz would perhaps give a better idea,—but in the open plain it sparkled over the pebbles white as a queen's diamonds. There were huckleberry-pastures on the lower flanks of The Mountain, with plenty of the sweet-scented bayberry mingled with the other bushes. In other fields grew great store of high-bush blackberries. Along the roadside were bayberry-bushes, hung all over with bright red coral pendants in autumn and far into the winter. Then there were swamps set thick with dingy alders, where the three-leaved arum and the skunk's-cabbage grew broad and succulent, shelving down into black boggy pools here and there at the edge of which the green frog, stupidest of his tribe, sat waiting to be victimized by boy or snapping-turtle long after the shy and agile leopard-frog had taken the six-foot spring that plumped him into the middle of the pool. And on the neighboring banks the maiden-hair spread its flat disk of embroidered fronds on the wire-like stem that glistened polished and brown as the darkest tortoise-shell, and pale violets, cheated by the cold skies of their hues and perfume, sunned themselves like white-cheeked invalids. Over these rose the old forest-trees,—the maple, scarred with the wounds which had drained away its sweet life-blood,—the beech, its smooth gray bark mottled so as to look like the body of one of those great snakes of old that used to frighten armies, always the mark of lovers' knives, as in the days of Musidora and her swain,—the yellow birch, rough as the breast of Silenus in old marbles,—the wild cherry, its little bitter fruit lying unheeded at its foot,—and, soaring over all, the huge, coarse-barked, splintery-limbed, dark-mantled hemlock, in the depth of whose aerial solitudes the crow brooded on her nest unscared, and the gray squirrel lived unharmed till his incisors grew to look like ram's-horns.

Rockland would have been but half a town without its pond; Guinnepeg Pond was the name of it, but the young ladies of the Apollinean Institute were very anxious that it should be called Crystalline Lake. It was here that the young folks used to sail in summer and skate in winter; here, too, those queer, old, rum-scented good-for-nothing, lazy, story-telling, half-vagabonds, who sawed a little wood or dug a few potatoes now and then under the pretence of working for their living, used to go and fish through the ice for pickerel every winter. And here those three young people were drowned, a few summers ago, by the upsetting of a sail-boat in a sudden flaw of wind. There is not one of these smiling ponds which has not devoured more youths and maidens than any of those monsters the ancients used to tell such lies about. But it was a pretty pond, and never looked more innocent—so the native "bard" of Rockland said in his elegy—than on the morning when they found Sarah Jane and Ellen Maria floating among the lily-pads.

The Apollinean Institute, or Institoot, as it was more commonly called, was, in the language of its Prospectus, a "first-class Educational Establishment." It employed a considerable corps of instructors to rough out and finish the hundred young lady scholars it sheltered beneath its roof. First, Mr. and Mrs. Peckham, the Principal and the Matron of the school. Silas Peckham was a thorough Yankee, born on a windy part of the coast, and reared chiefly on salt-fish. Everybody knows the type of Yankee produced by this climate and diet: thin, as if he had been split and dried; with an ashen kind of complexion, like the tint of the food he is made of; and about as sharp, tough, juiceless, and biting to deal with as the other is to the taste. Silas Peckham kept a young ladies' school exactly as he would have kept a hundred head of cattle,—for the simple, unadorned purpose of making just as much money in just as few years as could be safely done. Mr. Peckham gave very little personal attention to the department of instruction, but was always busy with contracts for flour and potatoes, beef and pork, and other nutritive staples, the amount of which required for such an establishment was enough to frighten a quartermaster. Mrs. Peckham was from the West, raised on Indian corn and pork, which give a fuller outline and a more humid temperament, but may perhaps be thought to render people a little coarse-fibred. Her specialty was to look after the feathering, cackling, roosting, rising, and general behavior of these hundred chicks. An honest, ignorant woman, she could not have passed an examination in the youngest class. So this distinguished institution was under the charge of a commissary and a housekeeper, and its real business was making money by taking young girls in as boarders.

Connected with this, however, was the incidental fact, which the public took for the principal one, namely, the business of instruction. Mr. Peckham knew well enough that it was just as well to have good instructors as bad ones, so far as cost was concerned, and a great deal better for the reputation of his feeding-establishment. He tried to get the best he could without paying too much, and, having got them, to screw all the work out of them that could possibly be extracted.

There was a master for the English branches, with a young lady assistant. There was another young lady who taught French, of the ahvaung and baundahng style, which does not exactly smack of the asphalt of the Boulevards. There was also a German teacher of music, who sometimes helped in French of the ahfaung and bauntaung style,—so that, between the two, the young ladies could hardly have been mistaken for Parisians, by a Committee of the French Academy. The German teacher also taught a Latin class after his fashion,—benna, a ben, gahboot, ahead, and so forth.

The master for the English branches had lately left the school for private reasons, which need not be here mentioned,—but he had gone, at any rate, and it was his place which had been offered to Mr. Bernard Langdon. The offer came just in season,—as, for various causes, he was willing to leave the place where he had begun his new experience.

It was on a fine morning that Mr. Bernard, ushered in by Mr. Peckham, made his appearance in the great schoolroom of the Apollinean Institute. A general rustle ran all round the seats when the handsome young man was introduced. The principal carried him to the desk of the young lady English assistant, Miss Darley by name, and introduced him to her.

There was not a great deal of study done that day. The young lady assistant had to point out to the new master the whole routine in which the classes were engaged when their late teacher left, and which had gone on as well as it could since. Then Master Langdon had a great many questions to ask, some relating to his new duties, and some, perhaps, implying a degree of curiosity not very unnatural under the circumstances. The truth is, the general effect of the schoolroom, with its scores of young girls, all their eyes naturally centring on him with fixed or furtive glances, was enough to bewilder and confuse a young man like Master Langdon, though he was not destitute of self-possession, as we have already seen.

You cannot get together a hundred girls, taking them as they come, from the comfortable and affluent classes, probably anywhere, certainly not in New England, without seeing a good deal of beauty. In fact, we very commonly mean by beauty the way young girls look when there is nothing to hinder their looking as Nature meant them to. And the great schoolroom of the Apollinean Institute did really make so pretty a show on the morning when Master Langdon entered it, that he might be pardoned for asking Miss Darley more questions about his scholars than about their lessons.

There were girls of all ages: little creatures, some pallid and delicate-looking, the offspring of invalid parents,—much given to books, not much to mischief, commonly spoken of as particularly good children, and contrasted with another sort, girls of more vigorous organization, who were disposed to laughing and play, and required a strong hand to manage them; then young growing misses of every shade of Saxon complexion, and here and there one of more Southern hue: blondes, some of them so translucent-looking that it seemed as if you could see the souls in their bodies, like bubbles in glass, if souls were objects of sight; brunettes, some with rose-red colors, and some with that swarthy hue which often carries with it a heavily-shaded lip, and which, with pure outlines and outspoken reliefs, gives us some of our handsomest women,—the women whom ornaments of plain gold adorn more than any other parures; and again, but only here and there, one with dark hair and gray or blue eyes, a Celtic type, perhaps, but found in our native stock occasionally; rarest of all, a light-haired girl with dark eyes, hazel, brown, or of the color of that mountain-brook spoken of in this chapter, where it ran through shadowy woodlands. With these were to be seen at intervals some of maturer years, full-blown flowers among the opening buds, with that conscious look upon their faces which so many women wear during the period when they never meet a single man without having his monosyllable ready for him,—tied as they are, poor things! on the rock of expectation, each of them an Andromeda waiting for her Perseus.

“Who is that girl in ringlets,—the fourth in the third row on the right?” said Master Langdon.

“Charlotte Ann Wood,” said Miss Darley; “writes very pretty poems.”

“Oh!—And the pink one, three seats from her? Looks bright; anything in her?”

“Emma Dean,—day-scholar,—Squire Dean's daughter,—nice girl,—second medal last year.”

The master asked these two questions in a careless kind of way, and did not seem to pay any too much attention to the answers.

“And who and what is that,” he said,—“sitting a little apart there,—that strange, wild-looking girl?”

This time he put the real question he wanted answered;—the other two were asked at random, as masks for the third.

The lady-teacher's face changed;—one would have said she was frightened or troubled. She looked at the girl doubtfully, as if she might hear the master's question and its answer. But the girl did not look up;—she was winding a gold chain about her wrist, and then uncoiling it, as if in a kind of reverie.

Miss Darley drew close to the master and placed her hand so as to hide her lips. “Don't look at her as if we were talking about her,” she whispered softly; “that is Elsie Venner.”

CHAPTER V. AN OLD-FASHIONED DESCRIPTIVE CHAPTER.

It was a comfort to get to a place with something like society, with residences which had pretensions to elegance, with people of some breeding, with a newspaper, and “stores” to advertise in it, and with two or three churches to keep each other alive by wholesome agitation. Rockland was such a place.

Some of the natural features of the town have been described already. The Mountain, of course, was what gave it its character, and redeemed it from wearing the commonplace expression which belongs to ordinary country-villages. Beautiful, wild, invested with the mystery which belongs to untrodden spaces, and with enough of terror to give it dignity, it had yet closer relations with the town over which it brooded than the passing stranger knew of. Thus, it made a local climate by cutting off the northern winds and holding the sun's heat like a garden-wall. Peachtrees, which, on the northern side of the mountain, hardly ever came to fruit, ripened abundant crops in Rockland.

But there was still another relation between the mountain and the town at its foot, which strangers were not likely to hear alluded to, and which was oftener thought of than spoken of by its inhabitants. Those high-impending forests,—“hangers,” as White of Selborne would have called them,—sloping far upward and backward into the distance, had always an air of menace blended with their wild beauty. It seemed as if some heaven-scaling Titan had thrown his shaggy robe over the bare, precipitous flanks of the rocky summit, and it might at any moment slide like a garment flung carelessly on the nearest chance-support, and, so sliding,

crush the village out of being, as the Rossberg when it tumbled over on the valley of Goldau.

Persons have been known to remove from the place, after a short residence in it, because they were haunted day and night by the thought of this awful green wall, piled up into the air over their heads. They would lie awake of nights, thinking they heard the muffled snapping of roots, as if a thousand acres of the mountain-side were tugging to break away, like the snow from a house-roof, and a hundred thousand trees were clinging with all their fibres to hold back the soil just ready to peel away and crash down with all its rocks and forest-growths. And yet, by one of those strange contradictions we are constantly finding in human nature, there were natives of the town who would come back thirty or forty years after leaving it, just to nestle under this same threatening mountainside, as old men sun themselves against southward-facing walls. The old dreams and legends of danger added to the attraction. If the mountain should ever slide, they had a kind of feeling as if they ought to be there. It was a fascination like that which the rattlesnake is said to exert.

This comparison naturally suggests the recollection of that other source of danger which was an element in the every-day life of the Rockland people. The folks in some of the neighboring towns had a joke against them, that a Rocklander could n't hear a beanpod rattle without saying, "The Lord have mercy on us!" It is very true, that many a nervous old lady has had a terrible start, caused by some mischievous young rogue's giving a sudden shake to one of these noisy vegetable products in her immediate vicinity. Yet, strangely enough, many persons missed the excitement of the possibility of a fatal bite in other regions, where there were nothing but black and green and striped snakes, mean ophidians, having the spite of the nobler serpent without his venom,—poor crawling creatures, whom Nature would not trust with a poison-bag. Many natives of Rockland did unquestionably experience a certain gratification in this infinitesimal sense of danger. It was noted that the old people retained their hearing longer than in other places. Some said it was the softened climate, but others believed it was owing to the habit of keeping their ears open whenever they were walking through the grass or in the woods. At any rate, a slight sense of danger is often an agreeable stimulus. People sip their creme de noyau with a peculiar tremulous pleasure, because there is a bare possibility that it may contain prussic acid enough to knock them over; in which case they will lie as dead as if a thunder-cloud had emptied itself into the earth through their brain and marrow.

But Rockland had other features which helped to give it a special character. First of all, there was one grand street which was its chief glory. Elm Street it was called, naturally enough, for its elms made a long, pointed-arched gallery of it through most of its extent. No natural Gothic arch compares, for a moment, with that formed by two American elms, where their lofty jets of foliage shoot across each other's ascending curves, to intermingle their showery flakes of green. When one looks through a long double row of these, as in that lovely avenue which the poets of Yale remember so well,

*"Oh, could the vista of my life but now as bright appear
As when I first through Temple Street looked down thine espalier!"*

he beholds a temple not built with hands, fairer than any minster, with all its clustered stems and flowering capitals, that ever grew in stone.

Nobody knows New England who is not on terms of intimacy with one of its elms. The elm comes nearer to having a soul than any other vegetable creature among us. It loves man as man loves it. It is modest and patient. It has a small flake of a seed which blows in everywhere and makes arrangements for coming up by and by. So, in spring, one finds a crop of baby-elms among his carrots and parsnips, very weak and small compared to those succulent vegetables. The baby-elms die, most of them, slain, unrecognized or unheeded, by hand or hoe, as meekly as Herod's innocents. One of them gets overlooked, perhaps, until it has established a kind of right to stay. Three generations of carrot and parsnip consumers have passed away, yourself among them, and now let your great-grandson look for the baby-elm. Twenty-two feet of clean girth, three hundred and sixty feet in the line that bounds its leafy circle, it covers the boy with such a canopy as neither glossy-leafed oak nor insect-haunted linden ever lifted into the summer skies.

Elm Street was the pride of Rockland, but not only on account of its Gothic-arched vista. In this street were most of the great houses, or "mansion-houses," as it was usual to call them. Along this street, also, the more nicely kept and neatly painted dwellings were chiefly congregated. It was the correct thing for a Rockland dignitary to have a house in Elm Street. A New England "mansion-house" is naturally square, with dormer windows projecting from the roof, which has a balustrade with turned posts round it. It shows a good breadth of front-yard before its door, as its owner shows a respectable expanse of a clean shirt-front. It has a lateral margin beyond its stables and offices, as its master wears his white wrist bands showing beyond his coat-cuffs. It may not have what can properly be called grounds, but it must have elbow-room, at any rate. Without it, it is like a man who is always tight-buttoned for want of any linen to show. The mansion-house which has had to "button itself up tight in fences, for want of green or gravel margin," will be advertising for boarders presently. The old English pattern of the New England mansion-house, only on a somewhat grander scale, is Sir Thomas Abney's place, where dear, good Dr. Watts said prayers for the family, and wrote those blessed hymns of his that sing us into consciousness in our cradles, and come back to us in sweet, single verses, between the moments of wandering and of stupor, when we lie dying, and sound over us when we can no longer hear them, bringing grateful tears to the hot, aching eyes beneath the thick, black veils, and carrying the holy calm with them which filled the good man's heart, as he prayed and sung under the shelter of the old English mansion-house. Next to the mansion-houses, came the two-story trim, white-painted, "genteel" houses, which, being more gossipy and less nicely bred, crowded close up to the street, instead of standing back from it with arms akimbo, like the mansion-houses. Their little front-yards were very commonly full of lilac and syringa and other bushes, which were allowed to smother the lower story almost to the exclusion of light and airy so that, what with small windows and small windowpanes, and the darkness made by these choking growths of shrubbery, the front parlors of some of these houses were the most tomb-like, melancholy places that could be found anywhere among the abodes of the living. Their garnishing was apt to assist this impression. Large-patterned carpets, which always look discontented in little rooms, haircloth furniture, black and shiny as beetles' wing cases, and centre-tables, with a sullen oil-lamp of the kind called astral by our imaginative ancestors, in the centre,—these things were inevitable. In set piles round the lamp was

ranged the current literature of the day, in the form of Temperance Documents, unbound numbers of one of the Unknown Public's Magazines with worn-out steel engravings and high-colored fashion-plates, the Poems of a distinguished British author whom it is unnecessary to mention, a volume of sermons, or a novel or two, or both, according to the tastes of the family, and the Good Book, which is always itself in the cheapest and commonest company. The father of the family with his hand in the breast of his coat, the mother of the same in a wide-bordered cap, sometimes a print of the Last Supper, by no means Morghen's, or the Father of his Country, or the old General, or the Defender of the Constitution, or an unknown clergyman with an open book before him,—these were the usual ornaments of the walls, the first two a matter of rigor, the others according to politics and other tendencies.

This intermediate class of houses, wherever one finds them in New England towns, are very apt to be cheerless and unsatisfactory. They have neither the luxury of the mansion-house nor the comfort of the farm-house. They are rarely kept at an agreeable temperature. The mansion-house has large fireplaces and generous chimneys, and is open to the sunshine. The farm-house makes no pretensions, but it has a good warm kitchen, at any rate, and one can be comfortable there with the rest of the family, without fear and without reproach. These lesser country-houses of genteel aspirations are much given to patent subterfuges of one kind and another to get heat without combustion. The chilly parlor and the slippery hair-cloth seat take the life out of the warmest welcome. If one would make these places wholesome, happy, and cheerful, the first precept would be,—The dearest fuel, plenty of it, and let half the heat go up the chimney. If you can't afford this, don't try to live in a "genteel" fashion, but stick to the ways of the honest farm-house.

There were a good many comfortable farm-houses scattered about Rockland. The best of them were something of the following pattern, which is too often superseded of late by a more pretentious, but infinitely less pleasing kind of rustic architecture. A little back from the road, seated directly on the green sod, rose a plain wooden building, two stories in front, with a long roof sloping backwards to within a few feet of the ground. This, like the "mansion-house," is copied from an old English pattern. Cottages of this model may be seen in Lancashire, for instance, always with the same honest, homely look, as if their roofs acknowledged their relationship to the soil out of which they sprung. The walls were unpainted, but turned by the slow action of sun and air and rain to a quiet dove or slate color. An old broken millstone at the door,—a well-sweep pointing like a finger to the heavens, which the shining round of water beneath looked up at like a dark unsleeping eye,—a single large elm a little at one side,—a barn twice as big as the house,—a cattle-yard, with

"The white horns tossing above the wall,"—

some fields, in pasture or in crops, with low stone walls round them,—a row of beehives,—a garden-patch, with roots, and currant-bushes, and many-hued hollyhocks, and swollen-stemmed, globe-headed, seedling onions, and marigolds and flower-de-luces, and lady's-delights, and peonies, crowding in together, with southernwood in the borders, and woodbine and hops and morning-glories climbing as they got a chance,—these were the features by which the Rockland-born children remembered the farm-house, when they had grown to be men. Such are the recollections that come over poor sailor-boys crawling out on reeling yards to reef topsails as their vessels stagger round the stormy Cape; and such are the flitting images that make the eyes of old country-born merchants look dim and dreamy, as they sit in their city palaces, warm with the after-dinner flush of the red wave out of which Memory arises, as Aphrodite arose from the green waves of the ocean.

Two meeting-houses stood on two eminences, facing each other, and looking like a couple of fighting-cocks with their necks straight up in the air,—as if they would flap their roofs, the next thing, and crow out of their upstretched steeples, and peck at each other's glass eyes with their sharp-pointed weathercocks.

The first was a good pattern of the real old-fashioned New England meeting-house. It was a large barn with windows, fronted by a square tower crowned with a kind of wooden bell inverted and raised on legs, out of which rose a slender spire with the sharp-billed weathercock at its summit. Inside, tall, square pews with flapping seats, and a gallery running round three sides of the building. On the fourth side the pulpit, with a huge, dusty sounding-board hanging over it. Here preached the Reverend Pierrepont Honeywood, D. D., successor, after a number of generations, to the office and the parsonage of the Reverend Didymus Bean, before mentioned, but not suspected of any of his alleged heresies. He held to the old faith of the Puritans, and occasionally delivered a discourse which was considered by the hard-headed theologians of his parish to have settled the whole matter fully and finally, so that now there was a good logical basis laid down for the Millennium, which might begin at once upon the platform of his demonstrations. Yet the Reverend Dr. Honeywood was fonder of preaching plain, practical sermons about the duties of life, and showing his Christianity in abundant good works among his people. It was noticed by some few of his flock, not without comment, that the great majority of his texts came from the Gospels, and this more and more as he became interested in various benevolent enterprises which brought him into relations with-ministers and kindhearted laymen of other denominations. He was in fact a man of a very warm, open, and exceedingly human disposition, and, although bred by a clerical father, whose motto was "Sit anima mea cum Puritanis," he exercised his human faculties in the harness of his ancient faith with such freedom that the straps of it got so loose they did not interfere greatly with the circulation of the warm blood through his system. Once in a while he seemed to think it necessary to come out with a grand doctrinal sermon, and then he would lapse away for a while into preaching on men's duties to each other and to society, and hit hard, perhaps, at some of the actual vices of the time and place, and insist with such tenderness and eloquence on the great depth and breadth of true Christian love and charity, that his oldest deacon shook his head, and wished he had shown as much interest when he was preaching, three Sabbaths back, on Predestination, or in his discourse against the Sabellians. But he was sound in the faith; no doubt of that. Did he not preside at the council held in the town of Tamarack, on the other side of the mountain, which expelled its clergyman for maintaining heretical doctrines? As presiding officer, he did not vote, of course, but there was no doubt that he was all right; he had some of the Edwards blood in him, and that couldn't very well let him go wrong.

The meeting-house on the other and opposite summit was of a more modern style, considered by many a

great improvement on the old New England model, so that it is not uncommon for a country parish to pull down its old meeting-house, which has been preached in for a hundred years or so, and put up one of these more elegant edifices. The new building was in what may be called the florid shingle-Gothic manner. Its pinnacles and crockets and other ornaments were, like the body of the building, all of pine wood,—an admirable material, as it is very soft and easily worked, and can be painted of any color desired. Inside, the walls were stuccoed in imitation of stone,—first a dark brown square, then two light brown squares, then another dark brown square, and so on, to represent the accidental differences of shade always noticeable in the real stones of which walls are built. To be sure, the architect could not help getting his party-colored squares in almost as regular rhythmical order as those of a chess-board; but nobody can avoid doing things in a systematic and serial way; indeed, people who wish to plant trees in natural chimps know very well that they cannot keep from making regular lines and symmetrical figures, unless by some trick or other, as that one of throwing a peck of potatoes up into the air and sticking in a tree wherever a potato happens to fall. The pews of this meeting-house were the usual oblong ones, where people sit close together, with a ledge before them to support their hymn-books, liable only to occasional contact with the back of the next pew's heads or bonnets, and a place running under the seat of that pew where hats could be deposited,—always at the risk of the owner, in case of injury by boots or crickets.

In this meeting-house preached the Reverend Chauncy Fairweather, a divine of the "Liberal" school, as it is commonly called, bred at that famous college which used to be thought, twenty or thirty years ago, to have the monopoly of training young men in the milder forms of heresy. His ministrations were attended with decency, but not followed with enthusiasm. "The beauty of virtue" got to be an old story at last. "The moral dignity of human nature" ceased to excite a thrill of satisfaction, after some hundred repetitions. It grew to be a dull business, this preaching against stealing and intemperance, while he knew very well that the thieves were prowling round orchards and empty houses, instead of being there to hear the sermon, and that the drunkards, being rarely church-goers, get little good by the statistics and eloquent appeals of the preacher. Every now and then, however, the Reverend Mr. Fairweather let off a polemic discourse against his neighbor opposite, which waked his people up a little; but it was a languid congregation, at best,—very apt to stay away from meeting in the afternoon, and not at all given to extra evening services. The minister, unlike his rival of the other side of the way, was a down-hearted and timid kind of man. He went on preaching as he had been taught to preach, but he had misgivings at times. There was a little Roman Catholic church at the foot of the hill where his own was placed, which he always had to pass on Sundays. He could never look on the thronging multitudes that crowded its pews and aisles or knelt bare-headed on its steps, without a longing to get in among them and go down on his knees and enjoy that luxury of devotional contact which makes a worshipping throng as different from the same numbers praying apart as a bed of coals is from a trail of scattered cinders.

"Oh, if I could but huddle in with those poor laborers and working-women!" he would say to himself. "If I could but breathe that atmosphere, stifling though it be, yet made holy by ancient litanies, and cloudy with the smoke of hallowed incense, for one hour, instead of droning over these moral precepts to my half-sleeping congregation!" The intellectual isolation of his sect preyed upon him; for, of all terrible things to natures like his, the most terrible is to belong to a minority. No person that looked at his thin and sallow cheek, his sunken and sad eye, his tremulous lip, his contracted forehead, or who heard his querulous, though not unmusical voice, could fail to see that his life was an uneasy one, that he was engaged in some inward conflict. His dark, melancholic aspect contrasted with his seemingly cheerful creed, and was all the more striking, as the worthy Dr. Honeywood, professing a belief which made him a passenger on board a shipwrecked planet, was yet a most good-humored and companionable gentleman, whose laugh on week-days did one as much good to listen to as the best sermon he ever delivered on a Sunday.

A mile or two from the centre of Rockland was a pretty little Episcopal church, with a roof like a wedge of cheese, a square tower, a stained window, and a trained rector, who read the service with such ventral depth of utterance and rreduplication of the rresonant letter, that his own mother would not have known him for her son, if the good woman had not ironed his surplice and put it on with her own hands.

There were two public-houses in the place: one dignified with the name of the Mountain House, somewhat frequented by city people in the summer months, large-fronted, three-storied, balconied, boasting a distinct ladies'-drawing-room, and spreading a table d'hote of some pretensions; the other, "Pollard's Tahvern," in the common speech,—a two-story building, with a bar-room, once famous, where there was a great smell of hay and boots and pipes and all other bucolic-flavored elements,—where games of checkers were played on the back of the bellows with red and white kernels of corn, or with beans and coffee, where a man slept in a box-settle at night, to wake up early passengers,—where teamsters came in, with wooden-handled whips and coarse frocks, reinforcing the bucolic flavor of the atmosphere, and middle-aged male gossips, sometimes including the squire of the neighboring law-office, gathered to exchange a question or two about the news, and then fall into that solemn state of suspended animation which the temperance bar-rooms of modern days produce in human beings, as the Grotta del Cane does in dogs in the well-known experiments related by travellers. This bar-room used to be famous for drinking and storytelling, and sometimes fighting, in old times. That was when there were rows of decanters on the shelf behind the bar, and a hissing vessel of hot water ready, to make punch, and three or four loggerheads (long irons clubbed at the end) were always lying in the fire in the cold season, waiting to be plunged into sputtering and foaming mugs of flip,—a goodly compound; speaking according to the flesh, made with beer and sugar, and a certain suspicion of strong waters, over which a little nutmeg being grated, and in it the hot iron being then allowed to sizzle, there results a peculiar singed aroma, which the wise regard as a warning to remove themselves at once out of the reach of temptation.

But the bar of Pollard's Tahvern no longer presented its old attractions, and the loggerheads had long disappeared from the fire. In place of the decanters, were boxes containing "lozengers," as they were commonly called, sticks of candy in jars, cigars in tumblers, a few lemons, grown hard-skinned and marvellously shrunken by long exposure, but still feebly suggestive of possible lemonade,—the whole ornamented by festoons of yellow and blue cut flypaper. On the front shelf of the bar stood a large German-silver pitcher of water, and scattered about were ill-conditioned lamps, with wicks that always wanted

picking, which burned red and smoked a good deal, and were apt to go out without any obvious cause, leaving strong reminiscences of the whale-fishery in the circumambient air.

The common schoolhouses of Rockland were dwarfed by the grandeur of the Apollinean Institute. The master passed one of them, in a walk he was taking, soon after his arrival at Rockland. He looked in at the rows of desks, and recalled his late experiences. He could not help laughing, as he thought how neatly he had knocked the young butcher off his pins.

"A little science is a dangerous thing, 'as well as a little 'learning,'" he said to himself; "only it's dangerous to the fellow you' try it on." And he cut him a good stick, and began climbing the side of The Mountain to get a look at that famous Rattlesnake Ledge.

CHAPTER VI. THE SUNBEAM AND THE SHADOW.

The virtue of the world is not mainly in its leaders. In the midst of the multitude which follows there is often something better than in the one that goes before. Old generals wanted to take Toulon, but one of their young colonels showed them how. The junior counsel has been known not unfrequently to make a better argument than his senior fellow,—if, indeed, he did not make both their arguments. Good ministers will tell you they have parishioners who beat them in the practice of the virtues. A great establishment, got up on commercial principles, like the Apollinean Institute, might yet be well carried on, if it happened to get good teachers. And when Master Langdon came to see its management, he recognized that there must be fidelity and intelligence somewhere among the instructors. It was only necessary to look for a moment at the fair, open forehead, the still, tranquil eye of gentle, habitual authority, the sweet gravity that lay upon the lips, to hear the clear answers to the pupils' questions, to notice how every request had the force without the form of a command, and the young man could not doubt that the good genius of the school stood before him in the person of Helen barley.

It was the old story. A poor country-clergyman dies, and leaves a widow and a daughter. In Old England the daughter would have eaten the bitter bread of a governess in some rich family. In New England she must keep a school. So, rising from one sphere to another, she at length finds herself the prima donna in the department of instruction in Mr. Silas Peckham's educational establishment.

What a miserable thing it is to be poor. She was dependent, frail, sensitive, conscientious. She was in the power of a hard, grasping, thin-blooded, tough-fibred, trading educator, who neither knew nor cared for a tender woman's sensibilities, but who paid her and meant to have his money's worth out of her brains, and as much more than his money's worth as he could get. She was consequently, in plain English, overworked, and an overworked woman is always a sad sight,—sadder a great deal than an overworked man, because she is so much more fertile in capacities of suffering than a man. She has so many varieties of headache,—sometimes as if Jael were driving the nail that killed Sisera into her temples,—sometimes letting her work with half her brain while the other half throbs as if it would go to pieces,—sometimes tightening round the brows as if her cap-band were a ring of iron,—and then her neuralgias, and her backaches, and her fits of depression, in which she thinks she is nothing and less than nothing, and those paroxysms which men speak slightly of as hysterical,—convulsions, that is all, only not commonly fatal ones,—so many trials which belong to her fine and mobile structure,—that she is always entitled to pity, when she is placed in conditions which develop her nervous tendencies.

The poor young lady's work had, of course, been doubled since the departure of Master Langdon's predecessor. Nobody knows what the weariness of instruction is, as soon as the teacher's faculties begin to be overtaken, but those who have tried it. The relays of fresh pupils, each new set with its exhausting powers in full action, coming one after another, take out all the reserved forces and faculties of resistance from the subject of their draining process.

The day's work was over, and it was late in the evening, when she sat down, tired and faint, with a great bundle of girls' themes or compositions to read over before she could rest her weary head on the pillow of her narrow trundle-bed, and forget for a while the treadmill stair of labor she was daily climbing.

How she dreaded this most forlorn of all a teacher's tasks! She was conscientious in her duties, and would insist on reading every sentence,—there was no saying where she might find faults of grammar or bad spelling. There might have been twenty or thirty of these themes in the bundle before her. Of course she knew pretty well the leading sentiments they could contain: that beauty was subject to the accidents of time; that wealth was inconstant, and existence uncertain; that virtue was its own reward; that youth exhaled, like the dewdrop from the flower, ere the sun had reached its meridian; that life was o'ershadowed with trials; that the lessons of virtue instilled by our beloved teachers were to be our guides through all our future career. The imagery employed consisted principally of roses, lilies, birds, clouds, and brooks, with the celebrated comparison of wayward genius to meteor. Who does not know the small, slanted, Italian hand of these girls'-compositions, their stringing together of the good old traditional copy-book phrases; their occasional gushes of sentiment, their profound estimates of the world, sounding to the old folks that read them as the experience of a bantam pullet's last-hatched young one with the chips of its shell on its head would sound to a Mother Cary's chicken, who knew the great ocean with all its typhoons and tornadoes? Yet every now and then one is liable to be surprised with strange clairvoyant flashes, that can hardly be explained, except by the mysterious inspiration which every now and then seizes a young girl and exalts her intelligence, just as hysteria in other instances exalts the sensibility,—a little something of that which made Joan of Arc, and the Burney girl who prophesied "Evelina," and the Davidson sisters. In the midst of these commonplace exercises which Miss Darley read over so carefully were two or three that had something of

individual flavor about them, and here and there there was an image or an epithet which showed the footprint of a passionate nature, as a fallen scarlet feather marks the path the wild flamingo has trodden.

The young lady-teacher read them with a certain indifference of manner, as one reads proofs—noting defects of detail, but not commonly arrested by the matters treated of. Even Miss Charlotte Ann Wood's poem, beginning—

"How sweet at evening's balmy hour,"

did not excite her. She marked the inevitable false rhyme of Cockney and Yankee beginners, morn and dawn, and tossed the verses on the pile of papers she had finished. She was looking over some of the last of them in a rather listless way,—for the poor thing was getting sleepy in spite of herself,—when she came to one which seemed to rouse her attention, and lifted her drooping lids. She looked at it a moment before she would touch it. Then she took hold of it by one corner and slid it off from the rest. One would have said she was afraid of it, or had some undefined antipathy which made it hateful to her. Such odd fancies are common enough in young persons in her nervous state. Many of these young people will jump up twenty times a day and run to dabble the tips of their fingers in water, after touching the most inoffensive objects.

This composition was written in a singular, sharp-pointed, long, slender hand, on a kind of wavy, ribbed paper. There was something strangely suggestive about the look of it, but exactly of what, Miss Darley either could not or did not try to think. The subject of the paper was *The Mountain*,—the composition being a sort of descriptive rhapsody. It showed a startling familiarity with some of the savage scenery of the region. One would have said that the writer must have threaded its wildest solitudes by the light of the moon and stars as well as by day. As the teacher read on, her color changed, and a kind of tremulous agitation came over her. There were hints in this strange paper she did not know what to make of. There was something in its descriptions and imagery that recalled,—Miss Darley could not say what,—but it made her frightfully nervous. Still she could not help reading, till she came to one passage which so agitated her, that the tired and over-wearied girl's self-control left her entirely. She sobbed once or twice, then laughed convulsively; and flung herself on the bed, where she worked out a set hysteric spasm as she best might, without anybody to rub her hands and see that she did not hurt herself.

By and by she got quiet, rose and went to her bookcase, took down a volume of Coleridge, and read a short time, and so to bed, to sleep and wake from time to time with a sudden start out of uneasy dreams.

Perhaps it is of no great consequence what it was in the composition which set her off into this nervous paroxysm. She was in such a state that almost any slight agitation would have brought on the attack, and it was the accident of her transient excitability, very probably, which made a trifling cause the seeming occasion of so much disturbance. The theme was signed, in the same peculiar, sharp, slender hand, E. Venner, and was, of course, written by that wild-looking girl who had excited the master's curiosity and prompted his question, as before mentioned. The next morning the lady-teacher looked pale and wearied, naturally enough, but she was in her place at the usual hour, and Master Langdon in his own.

The girls had not yet entered the school room.

"You have been ill, I am afraid," said Mr. Bernard.

"I was not well yesterday," she, answered. "I had a worry and a kind of fright. It is so dreadful to have the charge of all these young souls and bodies. Every young girl ought to walk locked close, arm in arm, between two guardian angels. Sometimes I faint almost with the thought of all that I ought to do, and of my own weakness and wants.—Tell me, are there not natures born so out of parallel with the lines of natural law that nothing short of a miracle can bring them right?"

Mr. Bernard had speculated somewhat, as all thoughtful persons of his profession are forced to do, on the innate organic tendencies with which individuals, families, and races are born. He replied, therefore, with a smile, as one to whom the question suggested a very familiar class of facts.

"Why, of course. Each of us is only the footing-up of a double column of figures that goes back to the first pair. Every unit tells,—and some of them are plus, and some minus. If the columns don't add up right, it is commonly because we can't make out all the figures. I don't mean to say that something may not be added by Nature to make up for losses and keep the race to its average, but we are mainly nothing but the answer to a long sum in addition and subtraction. No doubt there are people born with impulses at every possible angle to the parallels of Nature, as you call them. If they happen to cut these at right angles, of course they are beyond the reach of common influences. Slight obliquities are what we have most to do with in education. Penitentiaries and insane asylums take care of most of the right-angle cases.—I am afraid I have put it too much like a professor, and I am only a student, you know. Pray, what set you to asking me this? Any strange cases among the scholars?"

The meek teacher's blue eyes met the luminous glance that came with the question. She, too, was of gentle blood,—not meaning by that that she was of any noted lineage, but that she came of a cultivated stock, never rich, but long trained to intellectual callings. A thousand decencies, amenities, reticences, graces, which no one thinks of until he misses them, are the traditional right of those who spring from such families. And when two persons of this exceptional breeding meet in the midst of the common multitude, they seek each other's company at once by the natural law of elective affinity. It is wonderful how men and women know their peers. If two stranger queens, sole survivors of two shipwrecked vessels, were cast, half-naked, on a rock together, each would at once address the other as "Our Royal Sister."

Helen Darley looked into the dark eyes of Bernard Langdon glittering with the light which flashed from them with his question. Not as those foolish, innocent country-girls of the small village did she look into them, to be fascinated and bewildered, but to sound them with a calm, steadfast purpose. "A gentleman," she said to herself, as she read his expression and his features with a woman's rapid, but exhausting glance. "A lady," he said to himself, as he met her questioning look,—so brief, so quiet, yet so assured, as of one whom necessity had taught to read faces quickly without offence, as children read the faces of parents, as wives read the faces of hard-souled husbands. All this was but a few seconds' work, and yet the main point was

settled. If there had been any vulgar curiosity or coarseness of any kind lurking in his expression, she would have detected it. If she had not lifted her eyes to his face so softly and kept them there so calmly and withdrawn them so quietly, he would not have said to himself, "She is a LADY," for that word meant a good deal to the descendant of the courtly Wentworths and the scholarly Langdons.

"There are strange people everywhere, Mr. Langdon," she said, "and I don't think our schoolroom is an exception. I am glad you believe in the force of transmitted tendencies. It would break my heart, if I did not think that there are faults beyond the reach of everything but God's special grace. I should die, if I thought that my negligence or incapacity was alone responsible for the errors and sins of those I have charge of. Yet there are mysteries I do not know how to account for." She looked all round the schoolroom, and then said, in a whisper, "Mr. Langdon, we had a girl that stole, in the school, not long ago. Worse than that, we had a girl who tried to set us on fire. Children of good people, both of them. And we have a girl now that frightens me so"—

The door opened, and three misses came in to take their seats: three types, as it happened, of certain classes, into which it would not have been difficult to distribute the greater number of the girls in the school.—Hannah Martin. Fourteen years and three months old. Short-necked, thick-waisted, round-cheeked, smooth, vacant forehead, large, dull eyes. Looks good-natured, with little other expression. Three buns in her bag, and a large apple. Has a habit of attacking her provisions in school-hours.—Rosa Milburn. Sixteen. Brunette, with a rare-ripe flush in her cheeks. Color comes and goes easily. Eyes wandering, apt to be downcast. Moody at times. Said to be passionate, if irritated. Finished in high relief. Carries shoulders well back and walks well, as if proud of her woman's life, with a slight rocking movement, being one of the wide-flanged pattern, but seems restless,—a hard girl to look after. Has a romance in her pocket, which she means to read in school-time.—Charlotte Ann Wood. Fifteen. The poetess before mentioned. Long, light ringlets, pallid complexion, blue eyes. Delicate child, half unfolded. Gentle, but languid and despondent. Does not go much with the other girls, but reads a good deal, especially poetry, underscoring favorite passages. Writes a great many verses, very fast, not very correctly; full of the usual human sentiments, expressed in the accustomed phrases. Under-vitalized. Sensibilities not covered with their normal integuments. A negative condition, often confounded with genius, and sometimes running into it. Young people who fall out of line through weakness of the active faculties are often confounded with those who step out of it through strength of the intellectual ones.

The girls kept coming in, one after another, or in pairs or groups, until the schoolroom was nearly full. Then there was a little pause, and a light step was heard in the passage. The lady-teacher's eyes turned to the door, and the master's followed them in the same direction.

A girl of about seventeen entered. She was tall and slender, but rounded, with a peculiar undulation of movement, such as one sometimes sees in perfectly untutored country-girls, whom Nature, the queen of graces, has taken in hand, but more commonly in connection with the very highest breeding of the most thoroughly trained society. She was a splendid scowling beauty, black-browed, with a flash of white teeth which was always like a surprise when her lips parted. She wore a checkered dress, of a curious pattern, and a camel's-hair scarf twisted a little fantastically about her. She went to her seat, which she had moved a short distance apart from the rest, and, sitting down, began playing listlessly with her gold chain, as was a common habit with her, coiling it and uncoiling it about her slender wrist, and braiding it in with her long, delicate fingers. Presently she looked up. Black, piercing eyes, not large,—a low forehead, as low as that of Clytie in the Townley bust,—black hair, twisted in heavy braids,—a face that one could not help looking at for its beauty, yet that one wanted to look away from for something in its expression, and could not for those diamond eyes. They were fixed on the lady-teacher now. The latter turned her own away, and let them wander over the other scholars. But they could not help coming back again for a single glance at the wild beauty. The diamond eyes were on her still. She turned the leaves of several of her books, as if in search of some passage, and, when she thought she had waited long enough to be safe, once more stole a quick look at the dark girl. The diamond eyes were still upon her. She put her kerchief to her forehead, which had grown slightly moist; she sighed once, almost shivered, for she felt cold; then, following some ill-defined impulse, which she could not resist, she left her place and went to the young girl's desk.

"What do you want of me, Elsie Venner?" It was a strange question to put, for the girl had not signified that she wished the teacher to come to her.

"Nothing," she said. "I thought I could make you come." The girl spoke in a low tone, a kind of half-whisper. She did not lisp, yet her articulation of one or two consonants was not absolutely perfect.

"Where did you get that flower, Elsie?" said Miss Darley. It was a rare alpine flower, which was found only in one spot among the rocks of The Mountain.

"Where it grew," said Elsie Venner. "Take it." The teacher could not refuse her. The girl's finger tips touched hers as she took it. How cold they were for a girl of such an organization!

The teacher went back to her seat. She made an excuse for quitting the schoolroom soon afterwards. The first thing she did was to fling the flower into her fireplace and rake the ashes over it. The second was to wash the tips of her fingers, as if she had been another Lady Macbeth. A poor, over-tasked, nervous creature,—we must not think too much of her fancies.

After school was done, she finished the talk with the master which had been so suddenly interrupted. There were things spoken of which may prove interesting by and by, but there are other matters we must first attend to.

CHAPTER VII. THE EVENT OF THE SEASON.

"Mr. and Mrs. Colonel Sprowle's compliments to Mr. Langdon and requests the pleasure of his company at a social entertainment on Wednesday evening next.

"Elm St. Monday."

On paper of a pinkish color and musky smell, with a large "S" at the top, and an embossed border. Envelop adherent, not sealed. Addressed

LANGDON ESQ.
Present.

Brought by H. Frederic Sprowle, youngest son of the Colonel,—the H. of course standing for the paternal Hezekiah, put in to please the father, and reduced to its initial to please the mother, she having a marked preference for Frederic. Boy directed to wait for an answer.

"Mr. Langdon has the pleasure of accepting Mr. and Mrs. Colonel Sprowle's polite invitation for Wednesday evening."

On plain paper, sealed with an initial.

In walking along the main street, Mr. Bernard had noticed a large house of some pretensions to architectural display, namely, unnecessarily projecting eaves, giving it a mushroomy aspect, wooden mouldings at various available points, and a grandiose arched portico. It looked a little swaggering by the side of one or two of the mansion-houses that were not far from it, was painted too bright for Mr. Bernard's taste, had rather too fanciful a fence before it, and had some fruit-trees planted in the front-yard, which to this fastidious young gentleman implied a defective sense of the fitness of things, not promising in people who lived in so large a house, with a mushroom roof and a triumphal arch for its entrance.

This place was known as "Colonel Sprowle's villa," (genteel friends,)—as "the elegant residence of our distinguished fellow-citizen, Colonel Sprowle," (Rockland Weekly Universe,)—as "the neew haouse," (old settlers,)—as "Spraowle's Folly," (disaffected and possibly envious neighbors,)—and in common discourse, as "the Colonel's."

Hezekiah Sprowle, Esquire, Colonel Sprowle of the Commonwealth's Militia, was a retired "merchant." An India merchant he might, perhaps, have been properly called; for he used to deal in West India goods, such as coffee, sugar, and molasses, not to speak of rum,—also in tea, salt fish, butter and cheese, oil and candles, dried fruit, agricultural "p'doose" generally, industrial products, such as boots and shoes, and various kinds of iron and wooden ware, and at one end of the establishment in calicoes and other stuffs,—to say nothing of miscellaneous objects of the most varied nature, from sticks of candy, which tempted in the smaller youth with coppers in their fists, up to ornamental articles of apparel, pocket-books, breast-pins, gilt-edged Bibles, stationery, in short, everything which was like to prove seductive to the rural population. The Colonel had made money in trade, and also by matrimony. He had married Sarah, daughter and heiress of the late Tekel Jordan, Esq., an old miser, who gave the town-clock, which carries his name to posterity in large gilt letters as a generous benefactor of his native place. In due time the Colonel reaped the reward of well-placed affections. When his wife's inheritance fell in, he thought he had money enough to give up trade, and therefore sold out his "store," called in some dialects of the English language shop, and his business.

Life became pretty hard work to him, of course, as soon as he had nothing particular to do. Country people with money enough not to have to work are in much more danger than city people in the same condition. They get a specific look and character, which are the same in all the villages where one studies them. They very commonly fall into a routine, the basis of which is going to some lounging-place or other, a bar-room, a reading-room, or something of the kind. They grow slovenly in dress, and wear the same hat forever. They have a feeble curiosity for news perhaps, which they take daily as a man takes his bitters, and then fall silent and think they are thinking. But the mind goes out under this regimen, like a fire without a draught; and it is not very strange, if the instinct of mental self-preservation drives them to brandy-and-water, which makes the hoarse whisper of memory musical for a few brief moments, and puts a weak leer of promise on the features of the hollow-eyed future. The Colonel was kept pretty well in hand as yet by his wife, and though it had happened to him once or twice to come home rather late at night with a curious tendency to say the same thing twice and even three times over, it had always been in very cold weather,—and everybody knows that no one is safe to drink a couple of glasses of wine in a warm room and go suddenly out into the cold air.

Miss Matilda Sprowle, sole daughter of the house, had reached the age at which young ladies are supposed in technical language to have come out, and thereafter are considered to be in company.

"There's one piece o' goods," said the Colonel to his wife, "that we ha'n't disposed of, nor got a customer for yet. That 's Matildy. I don't mean to set HER up at vaandoo. I guess she can have her pick of a dozen."

"She 's never seen anybody yet," said Mrs. Sprowle, who had had a certain project for some time, but had kept quiet about it. "Let's have a party, and give her a chance to show herself and see some of the young folks."

The Colonel was not very clear-headed, and he thought, naturally enough, that the party was his own suggestion, because his remark led to the first starting of the idea. He entered into the plan, therefore, with a feeling of pride as well as pleasure, and the great project was resolved upon in a family council without a dissentient voice. This was the party, then, to which Mr. Bernard was going. The town had been full of it for a week. "Everybody was asked." So everybody said that was invited. But how in respect of those who were not asked? If it had been one of the old mansion-houses that was giving a party, the boundary between the favored and the slighted families would have been known pretty well beforehand, and there would have been no great amount of grumbling. But the Colonel, for all his title, had a forest of poor relations and a brushwood swamp of shabby friends, for he had scrambled up to fortune, and now the time was come when he must define his new social position.

This is always an awkward business in town or country. An exclusive alliance between two powers is often the same thing as a declaration of war against a third. Rockland was soon split into a triumphant minority, invited to Mrs. Sprowle's party, and a great majority, uninvited, of which the fraction just on the border line

between recognized "gentility" and the level of the ungloved masses was in an active state of excitement and indignation.

"Who is she, I should like to know?" said Mrs. Saymore, the tailor's wife. "There was plenty of folks in Rockland as good as ever Sally Jordan was, if she had managed to pick up a merchant. Other folks could have married merchants, if their families was n't as wealthy as them old skinflints that willed her their money," etc., etc. Mrs. Saymore expressed the feeling of many beside herself. She had, however, a special right to be proud of the name she bore. Her husband was own cousin to the Saymores of Freestone Avenue (who write the name Seymour, and claim to be of the Duke of Somerset's family, showing a clear descent from the Protector to Edward Seymour, (1630.)—then a jump that would break a herald's neck to one Seth Saymore, (1783.)—from whom to the head of the present family the line is clear again). Mrs. Saymore, the tailor's wife, was not invited, because her husband mended clothes. If he had confined himself strictly to making them, it would have put a different face upon the matter.

The landlord of the Mountain House and his lady were invited to Mrs. Sprowle's party. Not so the landlord of Pollard's Tahvern and his lady. Whereupon the latter vowed that they would have a party at their house too, and made arrangements for a dance of twenty or thirty couples, to be followed by an entertainment. Tickets to this "Social Ball" were soon circulated, and, being accessible to all at a moderate price, admission to the "Elegant Supper" included, this second festival promised to be as merry, if not as select, as the great party.

Wednesday came. Such doings had never been heard of in Rockland as went on that day at the "villa." The carpet had been taken up in the long room, so that the young folks might have a dance. Miss Matilda's piano had been moved in, and two fiddlers and a clarionet-player engaged to make music. All kinds of lamps had been put in requisition, and even colored wax-candles figured on the mantel-pieces. The costumes of the family had been tried on the day before: the Colonel's black suit fitted exceedingly well; his lady's velvet dress displayed her contours to advantage; Miss Matilda's flowered silk was considered superb; the eldest son of the family, Mr. T. Jordan Sprowle, called affectionately and elegantly "Geordie," voted himself "stunnin'"; and even the small youth who had borne Mr. Bernard's invitation was effective in a new jacket and trousers, buttony in front, and baggy in the reverse aspect, as is wont to be the case with the home-made garments of inland youngsters.

Great preparations had been made for the refecation which was to be part of the entertainment. There was much cELSIElinking of borrowed spoons, which were to be carefully counted, and much clicking of borrowed china, which was to be tenderly handled, for nobody in the country keeps those vast closets full of such things which one may see in rich city-houses. Not a great deal could be done in the way of flowers, for there were no greenhouses, and few plants were out as yet; but there were paper ornaments for the candlesticks, and colored mats for the lamps, and all the tassels of the curtains and bells were taken out of those brown linen bags, in which, for reasons hitherto undiscovered, they are habitually concealed in some households. In the remoter apartments every imaginable operation was going on at once,—roasting, boiling, baking, beating, rolling, pounding in mortars, frying, freezing; for there was to be ice-cream to-night of domestic manufacture;—and in the midst of all these labors, Mrs. Sprowle and Miss Matilda were moving about, directing and helping as they best might, all day long. When the evening came, it might be feared they would not be in just the state of mind and body to entertain company.

—One would like to give a party now and then, if one could be a billionaire.—"Antoine, I am going to have twenty people to dine to-day." "Biens, Madame." Not a word or thought more about it, but get home in season to dress, and come down to your own table, one of your own guests.—"Giuseppe, we are to have a party a week from to-night,—five hundred invitations—there is the list." The day comes. "Madam, do you remember you have your party tonight?" "Why, so I have! Everything right? supper and all?" "All as it should be, Madam."

"Send up Victorine." "Victorine, full toilet for this evening,—pink, diamonds, and emeralds. Coiffeur at seven. Allez."—Billionism, or even millionism, must be a blessed kind of state, with health and clear conscience and youth and good looks,—but most blessed is this, that it takes off all the mean cares which give people the three wrinkles between the eyebrows, and leaves them free to have a good time and make others have a good time, all the way along from the charity that tips up unexpected loads of wood before widows' houses, and leaves foundling turkeys upon poor men's door-steps, and sets lean clergymen crying at the sight of anonymous fifty-dollar bills, to the taste which orders a perfect banquet in such sweet accord with every sense that everybody's nature flowers out full—blown in its golden—glowing, fragrant atmosphere.

—A great party given by the smaller gentry of the interior is a kind of solemnity, so to speak. It involves so much labor and anxiety,—its spasmodic splendors are so violently contrasted with the homeliness of everyday family-life,—it is such a formidable matter to break in the raw subordinates to the manege of the cloak-room and the table,—there is such a terrible uncertainty in the results of unfamiliar culinary operations,—so many feuds are involved in drawing that fatal line which divides the invited from the uninvited fraction of the local universe,—that, if the notes requested the pleasure of the guests' company on "this solemn occasion," they would pretty nearly express the true state of things.

The Colonel himself had been pressed into the service. He had pounded something in the great mortar. He had agitated a quantity of sweetened and thickened milk in what was called a cream-freezer. At eleven o'clock, A. M., he retired for a space. On returning, his color was noted to be somewhat heightened, and he showed a disposition to be jocular with the female help,—which tendency, displaying itself in livelier demonstrations than were approved at head-quarters, led to his being detailed to out-of-door duties, such as raking gravel, arranging places for horses to be hitched to, and assisting in the construction of an arch of wintergreen at the porch of the mansion.

A whiff from Mr. Geordie's cigar refreshed the toiling females from time to time; for the windows had to be opened occasionally, while all these operations were going on, and the youth amused himself with inspecting the interior, encouraging the operatives now and then in the phrases commonly employed by genteel young men,—for he had perused an odd volume of "Verdant Green," and was acquainted with a Sophomore from one of the fresh-water colleges. "Go it on the feed!" exclaimed this spirited young man. "Nothin' like a good

spread. Grub enough and good liquor, that's the ticket. Guv'nor'll do the heavy polite, and let me alone for polishin' off the young charmers." And Mr. Geordie looked expressively at a handmaid who was rolling gingerbread, as if he were rehearsing for "Don Giovanni."

Evening came at last, and the ladies were forced to leave the scene of their labors to array themselves for the coming festivities. The tables had been set in a back room, the meats were ready, the pickles were displayed, the cake was baked, the blanc-mange had stiffened, and the ice-cream had frozen.

At half past seven o'clock, the Colonel, in costume, came into the front parlor, and proceeded to light the lamps. Some were good-humored enough and took the hint of a lighted match at once. Others were as vicious as they could be,—would not light on any terms, any more than if they were filled with water, or lighted and smoked one side of the chimney, or spattered a few sparks and sulked themselves out, or kept up a faint show of burning, so that their ground glasses looked as feebly phosphorescent as so many invalid fireflies. With much coaxing and screwing and pricking, a tolerable illumination was at last achieved. At eight there was a grand rustling of silks, and Mrs. and Miss Sprowle descended from their respective bowers or boudoirs. Of course they were pretty well tired by this time, and very glad to sit down,—having the prospect before them of being obliged to stand for hours. The Colonel walked about the parlor, inspecting his regiment of lamps. By and by Mr. Geordie entered.

"Mph! mph!" he sniffed, as he came in. "You smell of lamp-smoke here."

That always galls people,—to have a new-comer accuse them of smoke or close air, which they have got used to and do not perceive. The Colonel raged at the thought of his lamps' smoking, and tongued a few anathemas inside of his shut teeth, but turned down two or three wicks that burned higher than the rest.

Master H. Frederic next made his appearance, with questionable marks upon his fingers and countenance. Had been tampering with something brown and sticky. His elder brother grew playful, and caught him by the baggy reverse of his more essential garment.

"Hush!" said Mrs. Sprowle,— "there 's the bell!"

Everybody took position at once, and began to look very smiling and altogether at ease.—False alarm. Only a parcel of spoons,— "loaned," as the inland folks say when they mean lent, by a neighbor.

"Better late than never!" said the Colonel, "let me heft them spoons."

Mrs. Sprowle came down into her chair again as if all her bones had been bewitched out of her.

"I'm pretty nigh beat out a'ready," said she, "before any of the folks has come."

They sat silent awhile, waiting for the first arrival. How nervous they got! and how their senses were sharpened!

"Hark!" said Miss Matilda,— "what 's that rumblin'?"

It was a cart going over a bridge more than a mile off, which at any other time they would not have heard. After this there was a lull, and poor Mrs. Sprowle's head nodded once or twice. Presently a crackling and grinding of gravel;—how much that means, when we are waiting for those whom we long or dread to see! Then a change in the tone of the gravel-crackling.

"Yes, they have turned in at our gate. They're comin'! Mother! mother!"

Everybody in position, smiling and at ease. Bell rings. Enter the first set of visitors. The Event of the Season has begun.

"Law! it's nothin' but the Cranes' folks! I do believe Mahala 's come in that old green de-laine she wore at the Surprise Party!"

Miss Matilda had peeped through a crack of the door and made this observation and the remark founded thereon. Continuing her attitude of attention, she overheard Mrs. Crane and her two daughters conversing in the attiring-room, up one flight.

"How fine everything is in the great house!" said Mrs. Crane,— "jest look at the picters!"

"Matildy Sprowle's drawin's," said Ada Azuba, the eldest daughter.

"I should think so," said Mahala Crane, her younger sister,—a wide-awake girl, who had n't been to school for nothing, and performed a little on the lead pencil herself. "I should like to know whether that's a hay-cock or a mountain!"

Miss Matilda winced; for this must refer to her favorite monochrome, executed by laying on heavy shadows and stumping them down into mellow harmony,—the style of drawing which is taught in six lessons, and the kind of specimen which is executed in something less than one hour. Parents and other very near relatives are sometimes gratified with these productions, and cause them to be framed and hung up, as in the present instance.

"I guess we won't go down jest yet," said Mrs. Crane, "as folks don't seem to have come."

So she began a systematic inspection of the dressing-room and its conveniences.

"Mahogany four-poster;—come from the Jordans', I cal'la,te. Marseilles quilt. Ruffles all round the pillar. Chintz curtings,—jest put up,—o' purpose for the party, I'll lay ye a dollar.—What a nice washbowl!" (Taps it with a white knuckle belonging to a red finger.) "Stone chaney.—Here's a bran'-new brush and comb,—and here's a scent-bottle. Come here, girls, and fix yourselves in the glass, and scent your pocket-handkerchers."

And Mrs. Crane bedewed her own kerchief with some of the eau de Cologne of native manufacture,—said on its label to be much superior to the German article.

It was a relief to Mrs. and the Miss Cranes when the bell rang and the next guests were admitted. Deacon and Mrs. Soper,—Deacon Soper of the Rev. Mr. Fairweather's church, and his lady. Mrs. Deacon Soper was directed, of course, to the ladies' dressing-room, and her husband to the other apartment, where gentlemen were to leave their outside coats and hats. Then came Mr. and Mrs. Briggs, and then the three Miss Spinneys, then Silas Peckham, Head of the Apollinean Institute, and Mrs. Peckham, and more after them, until at last the ladies' dressing-room got so full that one might have thought it was a trap none of them could get out of. In truth, they all felt a little awkwardly. Nobody wanted to be first to venture down-stairs. At last Mr. Silas

Peckham thought it was time to make a move for the parlor, and for this purpose presented himself at the door of the ladies' dressing-room.

"Lorindy, my dear!" he exclaimed to Mrs. Peckham,—“I think there can be no impropriety in our joining the family down-stairs.”

Mrs. Peckham laid her large, flaccid arm in the sharp angle made by the black sleeve which held the bony limb her husband offered, and the two took the stair and struck out for the parlor. The ice was broken, and the dressing-room began to empty itself into the spacious, lighted apartments below.

Mr. Silas Peckham slid into the room with Mrs. Peckham alongside, like a shad conveying a jelly-fish.

"Good-evenin', Mrs. Sprowle! I hope I see you well this evenin'. How 's your haalth, Colonel Sprowle?"

"Very well, much obleeged to you. Hope you and your good lady are well. Much pleased to see you. Hope you'll enjoy yourselves. We've laid out to have everything in good shape,—spared no trouble nor ex"—

"pence,"—said Silas Peckham.

Mrs. Colonel Sprowle, who, you remember, was a Jordan, had nipped the Colonel's statement in the middle of the word Mr. Peckham finished, with a look that jerked him like one of those sharp twitches women keep giving a horse when they get a chance to drive one.

Mr. and Mrs. Crane, Miss Ada Azuba, and Miss Mahala Crane made their entrance. There had been a discussion about the necessity and propriety of inviting this family, the head of which kept a small shop for hats and boots and shoes. The Colonel's casting vote had carried it in the affirmative.—How terribly the poor old green de-laine did cut up in the blaze of so many lamps and candles.

—Deluded little wretch, male or female, in town or country, going to your first great party, how little you know the nature of the ceremony in which you are to bear the part of victim! What! are not these garlands and gauzy mists and many-colored streamers which adorn you, is not this music which welcomes you, this radiance that glows about you, meant solely for your enjoyment, young miss of seventeen or eighteen summers, now for the first time swimming into the frothy, chatoyant, sparkling, undulating sea of laces and silks and satins, and white-armed, flower-crowned maidens struggling in their waves beneath the lustres that make the false summer of the drawing-room?

Stop at the threshold! This is a hall of judgment you are entering; the court is in session; and if you move five steps forward, you will be at its bar.

There was a tribunal once in France, as you may remember, called the *Chambre Ardente*, the Burning Chamber. It was hung all round with lamps, and hence its name. The burning chamber for the trial of young maidens is the blazing ball-room. What have they full-dressed you, or rather half-dressed you for, do you think? To make you look pretty, of course! Why have they hung a chandelier above you, flickering all over with flames, so that it searches you like the noonday sun, and your deepest dimple cannot hold a shadow? To give brilliancy to the gay scene, no doubt!—No, my dear! Society is inspecting you, and it finds undisguised surfaces and strong lights a convenience in the process. The dance answers the purpose of the revolving pedestal upon which the "White Captive" turns, to show us the soft, kneaded marble, which looks as if it had never been hard, in all its manifold aspects of living loveliness. No mercy for you, my love! Justice, strict justice, you shall certainly have,—neither more nor less. For, look you, there are dozens, scores, hundreds, with whom you must be weighed in the balance; and you have got to learn that the "struggle for life" Mr. Charles Darwin talks about reaches to vertebrates clad in crinoline, as well as to mollusks in shells, or articulates in jointed scales, or anything that fights for breathing-room and food and love in any coat of fur or feather! Happy they who can flash defiance from bright eyes and snowy shoulders back into the pendants of the insolent lustres!

—Miss Mahala Crane did not have these reflections; and no young girl ever did, or ever will, thank Heaven! Her keen eyes sparkled under her plainly parted hair and the green de-laine moulded itself in those unmistakable lines of natural symmetry in which Nature indulges a small shopkeeper's daughter occasionally as well as a wholesale dealer's young ladies. She would have liked a new dress as much as any other girl, but she meant to go and have a good time at any rate.

The guests were now arriving in the drawing-room pretty fast, and the Colonel's hand began to burn a good deal with the sharp squeezes which many of the visitors gave it. Conversation, which had begun like a summer-shower, in scattering drops, was fast becoming continuous, and occasionally rising into gusty swells, with now and then a broad-chested laugh from some Captain or Major or other military personage,—for it may be noted that all large and loud men in the unpaved districts bear military titles.

Deacon Soper came up presently, and entered into conversation with Colonel Sprowle.

"I hope to see our pastor present this evenin'," said the Deacon.

"I don't feel quite sure," the Colonel answered. "His dyspepsy has been bad on him lately. He wrote to say, that, Providence permittin', it would be agreeable to him to take a part in the exercises of the evenin'; but I mistrusted he did n't mean to come. To tell the truth, Deacon Soper, I rather guess he don't like the idee of dancin', and some of the other little arrangements."

"Well," said the Deacon, "I know there's some condemns dancin'. I've heerd a good deal of talk about it among the folks round. Some have it that it never brings a blessin' on a house to have dancin' in it. Judge Tileston died, you remember, within a month after he had his great ball, twelve year ago, and some thought it was in the natur' of a judgment. I don't believe in any of them notions. If a man happened to be struck dead the night after he'd been givin' a ball," (the Colonel loosened his black stock a little, and winked and swallowed two or three times,) "I should n't call it a judgment,—I should call it a coincidence. But I 'm a little afraid our pastor won't come. Somethin' or other's the matter with Mr. Fairweather. I should sooner expect to see the old Doctor come over out of the Orthodox parsonage-house."

"I've asked him," said the Colonel.

"Well?" said Deacon Soper.

"He said he should like to come, but he did n't know what his people would say. For his part, he loved to see

young folks havin' their sports together, and very often felt as if he should like to be one of 'em himself. 'But,' says I, 'Doctor, I don't say there won't be a little dancin'.' 'Don't!' says he, 'for I want Letty to go,' (she's his granddaughter that's been stayin' with him,) 'and Letty 's mighty fond of dancin'. You know,' says the Doctor, 'it is n't my business to settle whether other people's children should dance or not.' And the Doctor looked as if he should like to rigadon and sashy across as well as the young one he was talkin' about. He 's got blood in him, the old Doctor has. I wish our little man and him would swop pulpits."

Deacon Soper started and looked up into the Colonel's face, as if to see whether he was in earnest.

Mr. Silas Peckham and his lady joined the group.

"Is this to be a Temperance Celebration, Mrs. Sprowle?" asked Mr. Silas Peckham.

Mrs. Sprowle replied, "that there would be lemonade and srub for those that preferred such drinks, but that the Colonel had given folks to understand that he did n't mean to set in judgment on the marriage in Canaan, and that those that didn't like srub and such things would find somethin' that would suit them better."

Deacon Soper's countenance assumed a certain air of restrained cheerfulness. The conversation rose into one of its gusty paroxysms just then. Master H. Frederic got behind a door and began performing the experiment of stopping and unstopping his ears in rapid alternation, greatly rejoicing in the singular effect of mixed conversation chopped very small, like the contents of a mince-pie, or meat-pie, as it is more forcibly called in the deep-rutted villages lying along the unsalted streams. All at once it grew silent just round the door, where it had been loudest,—and the silence spread itself like a stain, till it hushed everything but a few corner-duets. A dark, sad-looking, middle-aged gentleman entered the parlor, with a young lady on his arm,—his daughter, as it seemed, for she was not wholly unlike him in feature, and of the same dark complexion.

"Dudley Venner," exclaimed a dozen people, in startled, but half-suppressed tones.

"What can have brought Dudley out to-night?" said Jefferson Buck, a young fellow, who had been interrupted in one of the corner-duets which he was executing in concert with Miss Susy Pettingill.

"How do I know, Jeff?" was Miss Susy's answer. Then, after a pause,—“Elsie made him come, I guess. Go ask Dr. Kittredge; he knows all about 'em both, they say."

Dr. Kittredge, the leading physician of Rockland, was a shrewd old man, who looked pretty keenly into his patients through his spectacles, and pretty widely at men, women, and things in general over them. Sixty-three years old,—just the year of the grand climacteric. A bald crown, as every doctor should have. A consulting practitioner's mouth; that is, movable round the corners while the case is under examination, but both corners well drawn down and kept so when the final opinion is made up. In fact, the Doctor was often sent for to act as "caounsel," all over the county, and beyond it. He kept three or four horses, sometimes riding in the saddle, commonly driving in a sulky, pretty fast, and looking straight before him, so that people got out of the way of bowing to him as he passed on the road. There was some talk about his not being so long-sighted as other folks, but his old patients laughed and looked knowing when this was spoken of.

The Doctor knew a good many things besides how to drop tinctures and shake out powders. Thus, he knew a horse, and, what is harder to understand, a horse-dealer, and was a match for him. He knew what a nervous woman is, and how to manage her. He could tell at a glance when she is in that condition of unstable equilibrium in which a rough word is like a blow to her, and the touch of unmagnetized fingers reverses all her nervous currents. It is not everybody that enters into the soul of Mozart's or Beethoven's harmonies; and there are vital symphonies in B flat, and other low, sad keys, which a doctor may know as little of as a hurdy-gurdy player of the essence of those divine musical mysteries. The Doctor knew the difference between what men say and what they mean as well as most people. When he was listening to common talk, he was in the habit of looking over his spectacles; if he lifted his head so as to look through them at the person talking, he was busier with that person's thoughts than with his words.

Jefferson Buck was not bold enough to confront the Doctor with Miss Susy's question, for he did not look as if he were in the mood to answer queries put by curious young people. His eyes were fixed steadily on the dark girl, every movement of whom he seemed to follow.

She was, indeed, an apparition of wild beauty, so unlike the girls about her that it seemed nothing more than natural, that, when she moved, the groups should part to let her pass through them, and that she should carry the centre of all looks and thoughts with her. She was dressed to please her own fancy, evidently, with small regard to the modes declared correct by the Rockland milliners and mantua-makers. Her heavy black hair lay in a braided coil, with a long gold pin shat through it like a javelin. Round her neck was a golden torque, a round, cord-like chain, such as the Gaols used to wear; the "Dying Gladiator" has it. Her dress was a grayish watered silk; her collar was pinned with a flashing diamond brooch, the stones looking as fresh as morning dew-drops, but the silver setting of the past generation; her arms were bare, round, but slender rather than large, in keeping with her lithe round figure. On her wrists she wore bracelets: one was a circlet of enamelled scales; the other looked as if it might have been Cleopatra's asp, with its body turned to gold and its eyes to emeralds.

Her father—for Dudley Venner was her father—looked like a man of culture and breeding, but melancholy and with a distracted air, as one whose life had met some fatal cross or blight. He saluted hardly anybody except his entertainers and the Doctor. One would have said, to look at him, that he was not at the party by choice; and it was natural enough to think, with Susy Pettingill, that it must have been a freak of the dark girl's which brought him there, for he had the air of a shy and sad-hearted recluse.

It was hard to say what could have brought Elsie Venner to the party. Hardly anybody seemed to know her, and she seemed not at all disposed to make acquaintances. Here and there was one of the older girls from the Institute, but she appeared to have nothing in common with them. Even in the schoolroom, it may be remembered, she sat apart by her own choice, and now in the midst of the crowd she made a circle of isolation round herself. Drawing her arm out of her father's, she stood against the wall, and looked, with a strange, cold glitter in her eyes, at the crowd which moved and babbled before her.

The old Doctor came up to her by and by.

"Well, Elsie, I am quite surprised to find you here. Do tell me how you happened to do such a good-natured thing as to let us see you at such a great party."

"It's been dull at the mansion-house," she said, "and I wanted to get out of it. It's too lonely there,—there's nobody to hate since Dick's gone."

The Doctor laughed good-naturedly, as if this were an amusing bit of pleasantries,—but he lifted his head and dropped his eyes a little, so as to see her through his spectacles. She narrowed her lids slightly, as one often sees a sleepy cat narrow hers,—somewhat as you may remember our famous Margaret used to, if you remember her at all,—so that her eyes looked very small, but bright as the diamonds on her breast. The old Doctor felt very oddly as she looked at him; he did not like the feeling, so he dropped his head and lifted his eyes and looked at her over his spectacles again.

"And how have you all been at the mansion house?" said the Doctor.

"Oh, well enough. But Dick's gone, and there's nobody left but Dudley and I and the people. I'm tired of it. What kills anybody quickest, Doctor?" Then, in a whisper, "I ran away again the other day, you know."

"Where did you go?" The Doctor spoke in a low, serious tone.

"Oh, to the old place. Here, I brought this for you."

The Doctor started as she handed him a flower of the *Atragene Americana*, for he knew that there was only one spot where it grew, and that not one where any rash foot, least of all a thin-shod woman's foot, should venture.

"How long were you gone?" said the Doctor.

"Only one night. You should have heard the horns blowing and the guns firing. Dudley was frightened out of his wits. Old Sophy told him she'd had a dream, and that I should be found in Dead-Man's Hollow, with a great rock lying on me. They hunted all over it, but they did n't find me,—I was farther up."

Doctor Kittredge looked cloudy and worried while she was speaking, but forced a pleasant professional smile, as he said cheerily, and as if wishing to change the subject,

"Have a good dance this evening, Elsie. The fiddlers are tuning up. Where 's the young master? has he come yet? or is he going to be late, with the other great folks?"

The girl turned away without answering, and looked toward the door.

The "great folks," meaning the mansion-house gentry, were just beginning to come; Dudley Venner and his daughter had been the first of them. Judge Thornton, white-headed, fresh-faced, as good at sixty as he was at forty, with a youngish second wife, and one noble daughter, Arabella, who, they said, knew as much law as her father, a stately, Portia like girl, fit for a premier's wife, not like to find her match even in the great cities she sometimes visited; the Trecothicks, the family of a merchant, (in the larger sense,) who, having made himself rich enough by the time he had reached middle life, threw down his ledger as Sylla did his dagger, and retired to make a little paradise around him in one of the stateliest residences of the town, a family inheritance; the Vaughans, an old Rockland race, descended from its first settlers, Toryish in tendency in Revolutionary times, and barely escaping confiscation or worse; the Dunhams, a new family, dating its gentility only as far back as the Honorable Washington Dunham, M. C., but turning out a clever boy or two that went to college; and some showy girls with white necks and fat arms who had picked up professional husbands: these were the principal mansion-house people. All of them had made it a point to come; and as each of them entered, it seemed to Colonel and Mrs. Sprowle that the lamps burned up with a more cheerful light, and that the fiddles which sounded from the uncarpeted room were all half a tone higher and half a beat quicker.

Mr. Bernard came in later than any of them; he had been busy with his new duties. He looked well and that is saying a good deal; for nothing but a gentleman is endurable in full dress. Hair that masses well, a head set on with an air, a neckerchief tied cleverly by an easy, practised hand, close-fitting gloves, feet well shaped and well covered,—these advantages can make us forgive the odious sable broadcloth suit, which appears to have been adopted by society on the same principle that condemned all the Venetian gondolas to perpetual and uniform blackness. Mr. Bernard, introduced by Mr. Geordie, made his bow to the Colonel and his lady and to Miss Matilda, from whom he got a particularly gracious curtsy, and then began looking about him for acquaintances. He found two or three faces he knew,—many more strangers. There was Silas Peckham,—there was no mistaking him; there was the inelastic amplitude of Mrs. Peckham; few of the Apollinean girls, of course, they not being recognized members of society,—but there is one with the flame in her cheeks and the fire in her eyes, the girl of vigorous tints and emphatic outlines, whom we saw entering the schoolroom the other day. Old Judge Thornton has his eyes on her, and the Colonel steals a look every now and then at the red brooch which lifts itself so superbly into the light, as if he thought it a wonderfully becoming ornament. Mr. Bernard himself was not displeased with the general effect of the rich-blooded schoolgirl, as she stood under the bright lamps, fanning herself in the warm, languid air, fixed in a kind of passionate surprise at the new life which seemed to be flowering out in her consciousness. Perhaps he looked at her somewhat steadily, as some others had done; at any rate, she seemed to feel that she was looked at, as people often do, and, turning her eyes suddenly on him, caught his own on her face, gave him a half-bashful smile, and threw in a blush involuntarily which made it more charming.

"What can I do better," he said to himself, "than have a dance with Rosa Milburn?" So he carried his handsome pupil into the next room and took his place with her in a cotillon. Whether the breath of the Goddess of Love could intoxicate like the cup of Circe,—whether a woman is ever phosphorescent with the luminous vapor of life that she exhales,—these and other questions which relate to occult influences exercised by certain women we will not now discuss. It is enough that Mr. Bernard was sensible of a strange fascination, not wholly new to him, nor unprecedented in the history of human experience, but always a revelation when it comes over us for the first or the hundredth time, so pale is the most recent memory by the side of the passing moment with the flush of any new-born passion on its cheek. Remember that Nature makes every man love all women, and trusts the trivial matter of special choice to the commonest accident.

If Mr. Bernard had had nothing to distract his attention, he might have thought too much about his

handsome partner, and then gone home and dreamed about her, which is always dangerous, and waked up thinking of her still, and then begun to be deeply interested in her studies, and so on, through the whole syllogism which ends in Nature's supreme quod erat demonstrandum. What was there to distract him or disturb him? He did not know,—but there was something. This sumptuous creature, this Eve just within the gate of an untried Paradise, untutored in the ways of the world, but on tiptoe to reach the fruit of the tree of knowledge,—alive to the moist vitality of that warm atmosphere palpitating with voices and music, as the flower of some dioecious plant which has grown in a lone corner and suddenly unfolding its corolla on some hot-breathing June evening, feels that the air is perfumed with strange odors and loaded with golden dust wafted from those other blossoms with which its double life is shared,—this almost over-womanized woman might well have bewitched him, but that he had a vague sense of a counter-charm. It was, perhaps, only the same consciousness that some one was looking at him which he himself had just given occasion to in his partner. Presently, in one of the turns of the dance, he felt his eyes drawn to a figure he had not distinctly recognized, though he had dimly felt its presence, and saw that Elsie Venner was looking at him as if she saw nothing else but him. He was not a nervous person, like the poor lady-teacher, yet the glitter of the diamond eyes affected him strangely. It seemed to disenchant the air, so full a moment before of strange attractions. He became silent, and dreamy, as it were. The round-limbed beauty at his side crushed her gauzy draperies against him, as they trod the figure of the dance together, but it was no more to him than if an old nurse had laid her hand on his sleeve. The young girl chafed at his seeming neglect, and her imperious blood mounted into her cheeks; but he appeared unconscious of it.

"There is one of our young ladies I must speak to," he said,—and was just leaving his partner's side.

"Four hands all round?" shouted the first violin,—and Mr. Bernard found himself seized and whirled in a circle out of which he could not escape, and then forced to "cross over," and then to "dozy do," as the maestro had it,—and when, on getting back to his place, he looked for Elsie Venner, she was gone.

The dancing went on briskly. Some of the old folks looked on, others conversed in groups and pairs, and so the evening wore along, until a little after ten o'clock. About this time there was noticed an increased bustle in the passages, with a considerable opening and shutting of doors. Presently it began to be whispered about that they were going to have supper. Many, who had never been to any large party before, held their breath for a moment at this announcement. It was rather with a tremulous interest than with open hilarity that the rumor was generally received.

One point the Colonel had entirely forgotten to settle. It was a point involving not merely propriety, but perhaps principle also, or at least the good report of the house,—and he had never thought to arrange it. He took Judge Thornton aside and whispered the important question to him,—in his distress of mind, mistaking pockets and taking out his bandanna instead of his white handkerchief to wipe his forehead.

"Judge," he said, "do you think, that, before we commence refreshing ourselves at the tables, it would be the proper thing to—crave a—to request Deacon Soper or some other elderly person—to ask a blessing?"

The Judge looked as grave as if he were about giving the opinion of the Court in the great India-rubber case.

"On the whole," he answered, after a pause, "I should think it might, perhaps, be dispensed with on this occasion. Young folks are noisy, and it is awkward to have talking and laughing going on while blessing is being asked. Unless a clergyman is present and makes a point of it, I think it will hardly be expected."

The Colonel was infinitely relieved. "Judge, will you take Mrs. Sprowle in to supper?" And the Colonel returned the compliment by offering his arm to Mrs. Judge Thornton.

The door of the supper-room was now open, and the company, following the lead of the host and hostess, began to stream into it, until it was pretty well filled.

There was an awful kind of pause. Many were beginning to drop their heads and shut their eyes, in anticipation of the usual petition before a meal; some expected the music to strike up,—others, that an oration would now be delivered by the Colonel.

"Make yourselves at home, ladies and gentlemen," said the Colonel; "good things were made to eat, and you're welcome to all you see before you."

So saying he attacked a huge turkey which stood at the head of the table; and his example being followed first by the bold, then by the doubtful, and lastly by the timid, the clatter soon made the circuit of the tables. Some were shocked, however, as the Colonel had feared they would be, at the want of the customary invocation. Widow Leech, a kind of relation, who had to be invited, and who came with her old, back-country-looking string of gold beads round her neck, seemed to feel very serious about it.

"If she'd ha' known that folks would begrutch cravin' a blessin' over sech a heap o' provisions, she'd rather ha' staid t' home. It was a bad sign, when folks was n't grateful for the baouties of Providence."

The elder Miss Spinney, to whom she made this remark, assented to it, at the same time ogling a piece of frosted cake, which she presently appropriated with great refinement of manner,—taking it between her thumb and forefinger, keeping the others well spread and the little finger in extreme divergence, with a graceful undulation of the neck, and a queer little sound in her throat, as of an M that wanted to get out and perished in the attempt.

The tables now presented an animated spectacle. Young fellows of the more dashing sort, with high stand-up collars and voluminous bows to their neckerchiefs, distinguished themselves by cutting up fowls and offering portions thereof to the buxom girls these knowing ones had commonly selected.

"A bit of the wing, Roxy, or of the—under limb?"

The first laugh broke out at this, but it was premature, a sporadic laugh, as Dr. Kittredge would have said, which did not become epidemic. People were very solemn as yet, many of them being new to such splendid scenes, and crushed, as it were, in the presence of so much crockery and so many silver spoons, and such a variety of unusual viands and beverages. When the laugh rose around Roxy and her saucy beau, several looked in that direction with an anxious expression, as if something had happened, a lady fainted, for instance, or a couple of lively fellows come to high words.

"Young folks will be young folks," said Deacon Soper. "No harm done. Least said soonest mended."

"Have some of these shell-oysters?" said the Colonel to Mrs. Trecothick.

A delicate emphasis on the word shell implied that the Colonel knew what was what. To the New England inland native, beyond the reach of the east winds, the oyster unconditioned, the oyster absolute, without a qualifying adjective, is the pickled oyster. Mrs. Trecothick, who knew very well that an oyster long out of his shell (as is apt to be the case with the rural bivalve) gets homesick and loses his sprightliness, replied, with the pleasantest smile in the world, that the chicken she had been helped to was too delicate to be given up even for the greater rarity. But the word "shell-oysters" had been overheard; and there was a perceptible crowding movement towards their newly discovered habitat, a large soup-tureen.

Silas Peckham had meantime fallen upon another locality of these recent mollusks. He said nothing, but helped himself freely, and made a sign to Mrs. Peckham.

"Lorindy," he whispered, "shell-oysters"

And ladled them out to her largely, without betraying any emotion, just as if they had been the natural inland or pickled article.

After the more solid portion of the banquet had been duly honored, the cakes and sweet preparations of various kinds began to get their share of attention. There were great cakes and little cakes, cakes with raisins in them, cakes with currants, and cakes without either; there were brown cakes and yellow cakes, frosted cakes, glazed cakes, hearts and rounds, and jumbles, which playful youth slip over the forefinger before spoiling their annular outline. There were mounds of blo'monje, of the arrowroot variety,—that being undistinguishable from such as is made with Russia isinglass. There were jellies, which had been shaking, all the time the young folks were dancing in the next room, as if they were balancing to partners. There were built-up fabrics, called Charlottes, caky externally, pulpy within; there were also marangs, and likewise custards,—some of the indolent-fluid sort, others firm, in which every stroke of the teaspoon left a smooth, conchoidal surface like the fracture of chalcedony, with here and there a little eye like what one sees in cheeses. Nor was that most wonderful object of domestic art called trifle wanting, with its charming confusion of cream and cake and almonds and jam and jelly and wine and cinnamon and froth; nor yet the marvellous floating-island,—name suggestive of all that is romantic in the imaginations of youthful palates.

"It must have cost you a sight of work, to say nothin' of money, to get all this beautiful confectionery made for the party," said Mrs. Crane to Mrs. Sprowle.

"Well, it cost some consid'able labor, no doubt," said Mrs. Sprowle. "Matilda and our girls and I made 'most all the cake with our own hands, and we all feel some tired; but if folks get what suits 'em, we don't begrudge the time nor the work. But I do feel thirsty," said the poor lady, "and I think a glass of srub would do my throat good; it's dreadful dry. Mr. Peckham, would you be so polite as to pass me a glass of srub?"

Silas Peckham bowed with great alacrity, and took from the table a small glass cup, containing a fluid reddish in hue and subacid in taste. This was srub, a beverage in local repute, of questionable nature, but suspected of owing its tint and sharpness to some kind of syrup derived from the maroon-colored fruit of the sumac. There were similar small cups on the table filled with lemonade, and here and there a decanter of Madeira wine, of the Marsala kind, which some prefer to, and many more cannot distinguish from, that which comes from the Atlantic island.

"Take a glass of wine, Judge," said, the Colonel; "here is an article that I rather think 'll suit you."

The Judge knew something of wines, and could tell all the famous old Madeiras from each other, "Eclipse," "Juno," the almost fabulously scarce and precious "White-top," and the rest. He struck the nativity of the Mediterranean Madeira before it had fairly moistened his lip.

"A sound wine, Colonel, and I should think of a genuine vintage. Your very good health."

"Deacon Soper," said the Colonel, "here is some Madary Judge Thornton recommends. Let me fill you a glass of it."

The Deacon's eyes glistened. He was one of those consistent Christians who stick firmly by the first miracle and Paul's advice to Timothy.

"A little good wine won't hurt anybody," said the Deacon. "Plenty,—plenty,—plenty. There!" He had not withdrawn his glass, while the Colonel was pouring, for fear it should spill, and now it was running over.

—It is very odd how all a man's philosophy and theology are at the mercy of a few drops of a fluid which the chemists say consists of nothing but C4, O2, H6. The Deacon's theology fell off several points towards latitudinarianism in the course of the next ten minutes. He had a deep inward sense that everything was as it should be, human nature included. The little accidents of humanity, known collectively to moralists as sin, looked very venial to his growing sense of universal brotherhood and benevolence.

"It will all come right," the Deacon said to himself,— "I feel a joyful conviction that everything is for the best. I am favored with a blessed peace of mind, and a very precious season of good feelin' toward my fellow-creturs."

A lusty young fellow happened to make a quick step backward just at that instant, and put his heel, with his weight on top of it, upon the Deacon's toes.

"Aigh! What the d' d' didos are y' abaout with them great huffs o' yourn?" said the Deacon, with an expression upon his features not exactly that of peace and good-will to men. The lusty young fellow apologized; but the Deacon's face did not come right, and his theology backed round several points in the direction of total depravity.

Some of the dashing young men in stand-up collars and extensive neckties, encouraged by Mr. Geordie, made quite free with the "Ma,dary," and even induced some of the more stylish girls—not of the mansion-house set, but of the tip-top two-story families—to taste a little. Most of these young ladies made faces at it, and declared it was "perfectly horrid," with that aspect of veracity peculiar to their age and sex.

About this time a movement was made on the part of some of the mansion-house people to leave the supper-table. Miss Jane Trecothick had quietly hinted to her mother that she had had enough of it. Miss

Arabella Thornton had whispered to her father that he had better adjourn this court to the next room. There were signs of migration,—a loosening of people in their places,—a looking about for arms to hitch on to.

“Stop!” said the Colonel. “There's something coming yet.—Ice-cream!”

The great folks saw that the play was not over yet, and that it was only polite to stay and see it out. The word “ice-cream” was no sooner whispered than it passed from one to another all down the tables. The effect was what might have been anticipated. Many of the guests had never seen this celebrated product of human skill, and to all the two-story population of Rockland it was the last expression of the art of pleasing and astonishing the human palate. Its appearance had been deferred for several reasons: first, because everybody would have attacked it, if it had come in with the other luxuries; secondly, because undue apprehensions were entertained (owing to want of experience) of its tendency to deliquesce and resolve itself with alarming rapidity into puddles of creamy fluid; and, thirdly, because the surprise would make a grand climax to finish off the banquet.

There is something so audacious in the conception of ice-cream, that it is not strange that a population undebauched by the luxury of great cities looks upon it with a kind of awe and speaks of it with a certain emotion. This defiance of the seasons, forcing Nature to do her work of congelation in the face of her sultriest noon, might well inspire a timid mind with fear lest human art were revolting against the Higher Powers, and raise the same scruples which resisted the use of ether and chloroform in certain contingencies. Whatever may be the cause, it is well known that the announcement at any private rural entertainment that there is to be ice-cream produces an immediate and profound impression. It may be remarked, as aiding this impression, that exaggerated ideas are entertained as to the dangerous effects this congealed food may produce on persons not in the most robust health.

There was silence as the pyramids of ice were placed on the table, everybody looking on in admiration. The Colonel took a knife and assailed the one at the head of the table. When he tried to cut off a slice, it didn't seem to understand it, however, and only tipped, as if it wanted to upset. The Colonel attacked it on the other side, and it tipped just as badly the other way. It was awkward for the Colonel. “Permit me,” said the Judge,—and he took the knife and struck a sharp slanting stroke which sliced off a piece just of the right size, and offered it to Mrs. Spowle. This act of dexterity was much admired by the company.

The tables were all alive again.

“Lorindy, here's a plate of ice-cream,” said Silas Peckham.

“Come, Mahaly,” said a fresh-looking young-fellow with a saucerful in each hand, “here's your ice-cream;—let's go in the corner and have a celebration, us two.” And the old green de-lame, with the young curves under it to make it sit well, moved off as pleased apparently as if it had been silk velvet with thousand-dollar laces over it.

“Oh, now, Miss Green! do you think it's safe to put that cold stuff into your stomick?” said the Widow Leech to a young married lady, who, finding the air rather warm, thought a little ice would cool her down very nicely. “It's jest like eatin' snowballs. You don't look very rugged; and I should be dreadful afeard, if I was you.”

“Carrie,” said old Dr. Kittredge, who had overheard this,—“how well you're looking this evening! But you must be tired and heated;—sit down here, and let me give you a good slice of ice-cream. How you young folks do grow up, to be sure! I don't feel quite certain whether it's you or your older sister, but I know it 's somebody I call Carrie, and that I 've known ever since.”

A sound something between a howl and an oath startled the company and broke off the Doctor's sentence. Everybody's eyes turned in the direction from which it came. A group instantly gathered round the person who had uttered it, who was no other than Deacon Soper.

“He's chokin'! he's chokin'!” was the first exclamation,—“slap him on the back!”

Several heavy fists beat such a tattoo on his spine that the Deacon felt as if at least one of his vertebrae would come up.

“He's black in the face,” said Widow Leech, “he 's swallered somethin' the wrong way. Where's the Doctor?—let the Doctor get to him, can't ye?”

“If you will move, my good lady, perhaps I can,” said Doctor Kittredge, in a calm tone of voice. “He's not choking, my friends,” the Doctor added immediately, when he got sight of him.

“It 's apoplexy,—I told you so,—don't you see how red he is in the face?” said old Mrs. Peake, a famous woman for “nussin” sick folks, —determined to be a little ahead of the Doctor.

“It's not apoplexy,” said Dr. Kittredge.

“What is it, Doctor? what is it? Will he die? Is he dead?—Here's his poor wife, the Widow Soper that is to be, if she a'n't a'ready.”

“Do be quiet, my good woman,” said Dr. Kittredge.—“Nothing serious, I think, Mrs. Soper. Deacon!”

The sudden attack of Deacon Soper had begun with the extraordinary sound mentioned above. His features had immediately assumed an expression of intense pain, his eyes staring wildly, and, clapping his hands to his face, he had rocked his head backward and forward in speechless agony.

At the Doctor's sharp appeal the Deacon lifted his head.

“It's all right,” said the Doctor, as soon as he saw his face. “The Deacon had a smart attack of neuralgic pain. That 's all. Very severe, but not at all dangerous.”

The Doctor kept his countenance, but his diaphragm was shaking the change in iris waistcoat-pockets with subterranean laughter. He had looked through his spectacles and seen at once what had happened. The Deacon, not being in the habit of taking his nourishment in the congealed state, had treated the ice-cream as a pudding of a rare species, and, to make sure of doing himself justice in its distribution, had taken a large mouthful of it without the least precaution. The consequence was a sensation as if a dentist were killing the nerves of twenty-five teeth at once with hot irons, or cold ones, which would hurt rather worse.

The Deacon swallowed something with a spasmodic effort, and recovered pretty soon and received the

congratulations of his friends. There were different versions of the expressions he had used at the onset of his complaint,—some of the reported exclamations involving a breach of propriety, to say the least,—but it was agreed that a man in an attack of neuralgia wasn't to be judged of by the rules that applied to other folks.

The company soon after this retired from the supper-room. The mansion-house gentry took their leave, and the two-story people soon followed. Mr. Bernard had stayed an hour or two, and left soon after he found that Elsie Venner and her father had disappeared. As he passed by the dormitory of the Institute, he saw a light glimmering from one of its upper rooms, where the lady-teacher was still waking. His heart ached, when he remembered, that, through all these hours of gayety, or what was meant for it, the patient girl had been at work in her little chamber; and he looked up at the silent stars, as if to see that they were watching over her. The planet Mars was burning like a red coal; the northern constellation was slanting downward about its central point of flame; and while he looked, a falling star slid from the zenith and was lost.

He reached his chamber and was soon dreaming over the Event of the Season.

CHAPTER VIII. THE MORNING AFTER.

Colonel Sprowle's family arose late the next morning. The fatigues and excitements of the evening and the preparation for it were followed by a natural collapse, of which somnolence was a leading symptom. The sun shone into the window at a pretty well opened angle when the Colonel first found himself sufficiently awake to address his yet slumbering spouse.

"Sally!" said the Colonel, in a voice that was a little husky,—for he had finished off the evening with an extra glass or two of "Madary," and had a somewhat rusty and headachy sense of renewed existence, on greeting the rather advanced dawn,—“Sally!”

"Take care o' them custard-cups! There they go!"

Poor Mrs. Sprowle was fighting the party over in her dream; and as the visionary custard-cups crashed down through one lobe of her brain into another, she gave a start as if an inch of lightning from a quart Leyden jar had jumped into one of her knuckles with its sudden and lively poonk!

"Sally!" said the Colonel,—“wake up, wake up. What 'r' y' dreamin' about?”

Mrs. Sprowle raised herself, by a sort of spasm, *sur son seant*, as they say in France,—up on end, as we have it in New England. She looked first to the left, then to the right, then straight before her, apparently without seeing anything, and at last slowly settled down, with her two eyes, blank of any particular meaning, directed upon the Colonel.

"What time is 't?" she said.

"Ten o'clock. What y' been dreamin' about? Y' giv a jump like a hopper-grass. Wake up, wake UP! Th' party 's over, and y' been asleep all the mornin'. The party's over, I tell ye! Wake up!"

"Over!" said Mrs. Sprowle, who began to define her position at last,—“over! I should think 't was time 't was over! It's lasted a hundud year. I've been workin' for that party longer 'n Methuselah's lifetime, sence I been asleep. The pies would n' bake, and the blo'monje would n' set, and the ice-cream would n' freeze, and all the folks kep' comin' 'n' comin' 'n' comin',—everybody I ever knew in all my life,—some of 'em 's been dead this twenty year 'n' more,—'n' nothin' for 'em to eat nor drink. The fire would n' burn to cook anything, all we could do. We blowed with the belluses, 'n' we stuffed in paper 'n' pitch-pine kindlin's, but nothin' could make that fire burn; 'n' all the time the folks kep' comin', as if they'd never stop,—'n' nothin' for 'em but empty dishes, 'n' all the borrowed chaney slippin' round on the waiters 'n' chippin' 'n' crackin',—I would n' go through what I been through t'-night for all th' money in th' Bank,—I do believe it's harder t' have a party than t'—

Mrs. Sprowle stated the case strongly.

The Colonel said he did n't know how that might be. She was a better judge than he was. It was bother enough, anyhow, and he was glad that it was over. After this, the worthy pair commenced preparations for rejoining the waking world, and in due time proceeded downstairs.

Everybody was late that morning, and nothing had got put to rights. The house looked as if a small army had been quartered in it over night. The tables were of course in huge disorder, after the protracted assault they had undergone. There had been a great battle evidently, and it had gone against the provisions. Some points had been stormed, and all their defences annihilated, but here and there were centres of resistance which had held out against all attacks,—large rounds of beef, and solid loaves of cake, against which the inexperienced had wasted their energies in the enthusiasm of youth or uninformed maturity, while the longer-headed guests were making discoveries of “shell-oysters” and “patridges” and similar delicacies.

The breakfast was naturally of a somewhat fragmentary character. A chicken that had lost his legs in the service of the preceding campaign was once more put on duty. A great ham stuck with cloves, as Saint Sebastian was with arrows, was again offered for martyrdom. It would have been a pleasant sight for a medical man of a speculative turn to have seen the prospect before the Colonel's family of the next week's breakfasts, dinners, and suppers. The trail that one of these great rural parties leaves after it is one of its most formidable considerations. Every door-handle in the house is suggestive of sweetmeats for the next week, at least. The most unnatural articles of diet displace the frugal but nutritious food of unconvulsed periods of existence. If there is a walking infant about the house, it will certainly have a more or less fatal fit from overmuch of some indigestible delicacy. Before the week is out, everybody will be tired to death of sugary forms of nourishment and long to see the last of the remnants of the festival.

The family had not yet arrived at this condition. On the contrary, the first inspection of the tables suggested the prospect of days of unstinted luxury; and the younger portion of the household, especially, were in a state

of great excitement as the account of stock was taken with reference to future internal investments. Some curious facts came to light during these researches.

"Where's all the oranges gone to?" said Mrs. Sprowle. "I expected there'd be ever so many of 'em left. I did n't see many of the folks eatin' oranges. Where's the skins of 'em? There ought to be six dozen orange-skins round on the plates, and there a'n't one dozen. And all the small cakes, too, and all the sugar things that was stuck on the big cakes. Has anybody counted the spoons? Some of 'em got swallowed, perhaps. I hope they was plated ones, if they did!"

The failure of the morning's orange-crop and the deficit in other expected residual delicacies were not very difficult to account for. In many of the two-story Rockland families, and in those favored households of the neighboring villages whose members had been invited to the great party, there was a very general excitement among the younger people on the morning after the great event. "Did y' bring home somethin' from the party? What is it? What is it? Is it frut-cake? Is it nuts and oranges and apples? Give me some! Give me some!" Such a concert of treble voices uttering accents like these had not been heard since the great Temperance Festival with the celebrated "colation" in the open air under the trees of the Parnassian Grove,—as the place was christened by the young ladies of the Institute. The cry of the children was not in vain. From the pockets of demure fathers, from the bags of sharp-eyed spinsters, from the folded handkerchiefs of light-fingered sisters, from the tall hats of sly-winking brothers, there was a resurrection of the missing oranges and cakes and sugar-things in many a rejoicing family-circle, enough to astonish the most hardened "caterer" that ever contracted to feed a thousand people under canvas.

The tender recollections of those dear little ones whom extreme youth or other pressing considerations detain from scenes of festivity—a trait of affection by no means uncommon among our thoughtful people—dignifies those social meetings where it is manifested, and sheds a ray of sunshine on our common nature. It is "an oasis in the desert,"—to use the striking expression of the last year's "Valedictorian" of the Apollinean Institute. In the midst of so much that is purely selfish, it is delightful to meet such disinterested care for others. When a large family of children are expecting a parent's return from an entertainment, it will often require great exertions on his part to freight himself so as to meet their reasonable expectations. A few rules are worth remembering by all who attend anniversary dinners in Faneuil Hall or elsewhere. Thus: Lobsters' claws are always acceptable to children of all ages. Oranges and apples are to be taken one at a time, until the coat-pockets begin to become inconveniently heavy. Cakes are injured by sitting upon them; it is, therefore, well to carry a stout tin box of a size to hold as many pieces as there are children in the domestic circle. A very pleasant amusement, at the close of one of these banquets, is grabbing for the flowers with which the table is embellished. These will please the ladies at home very greatly, and, if the children are at the same time abundantly supplied with fruits, nuts, cakes, and any little ornamental articles of confectionery which are of a nature to be unostentatiously removed, the kind-hearted parent will make a whole household happy, without any additional expense beyond the outlay for his ticket.

There were fragmentary delicacies enough left, of one kind and another, at any rate, to make all the Colonel's family uncomfortable for the next week. It bid fair to take as long to get rid of the remains of the great party as it had taken to make ready for it.

In the mean time Mr. Bernard had been dreaming, as young men dream, of gliding shapes with bright eyes and burning cheeks, strangely blended with red planets and hissing meteors, and, shining over all, the white, un-wandering star of the North, girt with its tethered constellations.

After breakfast he walked into the parlor, where he found Miss Darley. She was alone, and, holding a school-book in her hand, was at work with one of the morning's lessons. She hardly noticed him as he entered, being very busy with her book,—and he paused a moment before speaking, and looked at her with a kind of reverence. It would not have been strictly true to call her beautiful. For years,—since her earliest womanhood,—those slender hands had taken the bread which repaid the toil of heart and brain from the coarse palms which offered it in the world's rude market. It was not for herself alone that she had bartered away the life of her youth, that she had breathed the hot air of schoolrooms, that she had forced her intelligence to posture before her will, as the exigencies of her place required,—waking to mental labor,—sleeping to dream of problems,—rolling up the stone of education for an endless twelvemonth's term, to find it at the bottom of the hill again when another year called her to its renewed duties, schooling her temper in unending inward and outward conflicts, until neither dulness nor obstinacy nor ingratitude nor insolence could reach her serene self-possession. Not for herself alone. Poorly as her prodigal labors were repaid in proportion to the waste of life they cost, her value was too well established to leave her without what, under other circumstances, would have been a more than sufficient compensation. But there were others who looked to her in their need, and so the modest fountain which might have been filled to its brim was continually drained through silent-flowing, hidden sluices.

Out of such a life, inherited from a race which had lived in conditions not unlike her own, beauty, in the common sense of the term, could hardly find leisure to develop and shape itself. For it must be remembered, that symmetry and elegance of features and figure, like perfectly formed crystals in the mineral world, are reached only by insuring a certain necessary repose to individuals and to generations. Human beauty is an agricultural product in the country, growing up in men and women as in corn and cattle, where the soil is good. It is a luxury almost monopolized by the rich in cities, bred under glass like their forced pine-apples and peaches. Both in city and country, the evolution of the physical harmonies which make music to our eyes requires a combination of favorable circumstances, of which alternations of unburdened tranquillity with intervals of varied excitement of mind and body are among the most important. Where sufficient excitement is wanting, as often happens in the country, the features, however rich in red and white, get heavy, and the movements sluggish; where excitement is furnished in excess, as is frequently the case in cities, the contours and colors are impoverished, and the nerves begin to make their existence known to the consciousness, as the face very soon informs us.

Helen Darley could not, in the nature of things, have possessed the kind of beauty which pleases the common taste. Her eye was calm, sad-looking, her features very still, except when her pleasant smile changed them for a moment, all her outlines were delicate, her voice was very gentle, but somewhat subdued

by years of thoughtful labor, and on her smooth forehead one little hinted line whispered already that Care was beginning to mark the trace which Time sooner or later would make a furrow. She could not be a beauty; if she had been, it would have been much harder for many persons to be interested in her. For, although in the abstract we all love beauty, and although, if we were sent naked souls into some ultramundane warehouse of soulless bodies and told to select one to our liking, we should each choose a handsome one, and never think of the consequences,—it is quite certain that beauty carries an atmosphere of repulsion as well as of attraction with it, alike in both sexes. We may be well assured that there are many persons who no more think of specializing their love of the other sex upon one endowed with signal beauty, than they think of wanting great diamonds or thousand-dollar horses. No man or woman can appropriate beauty without paying for it,—in endowments, in fortune, in position, in self-surrender, or other valuable stock; and there are a great many who are too poor, too ordinary, too humble, too busy, too proud, to pay any of these prices for it. So the unbeautiful get many more lovers than the beauties; only, as there are more of them, their lovers are spread thinner and do not make so much show.

The young master stood looking at Helen Darley with a kind of tender admiration. She was such a picture of the martyr by the slow social combusive process, that it almost seemed to him he could see a pale lambent nimbus round her head.

"I did not see you at the great party last evening," he said, presently.

She looked up and answered, "No. I have not much taste for such large companies. Besides, I do not feel as if my time belonged to me after it has been paid for. There is always something to do, some lesson or exercise,—and it so happened, I was very busy last night with the new problems in geometry. I hope you had a good time."

"Very. Two or three of our girls were there. Rosa Milburn. What a beauty she is! I wonder what she feeds on! Wine and musk and chloroform and coals of fire, I believe; I didn't think there was such color and flavor in a woman outside the tropics."

Miss Darley smiled rather faintly; the imagery was not just to her taste: femineity often finds it very hard to accept the fact of muliebrity.

"Was"—?

She stopped short; but her question had asked itself.

"Elsie there? She was, for an hour or so. She looked frightfully handsome. I meant to have spoken to her, but she slipped away before I knew it."

"I thought she meant to go to the party," said Miss Darley. "Did she look at you?"

"She did. Why?"

"And you did not speak to her?"

"No. I should have spoken to her, but she was gone when I looked for her. A strange creature! Is n't there an odd sort of fascination about her? You have not explained all the mystery about the girl. What does she come to this school for? She seems to do pretty much as she likes about studying."

Miss Darley answered in very low tones. "It was a fancy of hers to come, and they let her have her way. I don't know what there is about her, except that she seems to take my life out of me when she looks at me. I don't like to ask other people about our girls. She says very little to anybody, and studies, or makes believe to study, almost what she likes. I don't know what she is," (Miss Darley laid her hand, trembling, on the young master's sleeve,) "but I can tell when she is in the room without seeing or hearing her. Oh, Mr. Langdon, I am weak and nervous, and no doubt foolish,—but—if there were women now, as in the days of our Saviour, possessed of devils, I should think there was something not human looking out of Elsie Venner's eyes!"

The poor girl's breast rose and fell tumultuously as she spoke, and her voice labored, as if some obstruction were rising in her throat.

A scene might possibly have come of it, but the door opened. Mr. Silas Peckham. Miss Darley got away as soon as she well could.

"Why did not Miss Darley go to the party last evening?" said Mr. Bernard.

"Well, the fact is," answered Mr. Silas Peckham, "Miss Darley, she's pooty much took up with the school. She's an industris young woman,—yis, she is industris,—but perhaps she a'n't quite so spry a worker as some. Maybe, considerin' she's paid for her time, she is n't fur out o' the way in occoopin' herself evenin's,—that—is, if so be she a'n't smart enough to finish up all her work in the daytime. Edoocation is the great business of the Institoot. Amosements are objec's of a secondary natur', accordin' to my v'oo." [The unspellable pronunciation of this word is the touchstone of New England Brahminism.]

Mr. Bernard drew a deep breath, his thin nostrils dilating, as if the air did not rush in fast enough to cool his blood, while Silas Peckham was speaking. The Head of the Apollinean Institute delivered himself of these judicious sentiments in that peculiar acid, penetrating tone, thickened with a nasal twang, which not rarely becomes hereditary after three or four generations raised upon east winds, salt fish, and large, white-bellied, pickled cucumbers. He spoke deliberately, as if weighing his words well, so that, during his few remarks, Mr. Bernard had time for a mental accompaniment with variations, accented by certain bodily changes, which escaped Mr. Peckham's observation. First there was a feeling of disgust and shame at hearing Helen Darley spoken of like a dumb working animal. That sent the blood up into his cheeks. Then the slur upon her probable want of force—her incapacity, who made the character of the school and left this man to pocket its profits—sent a thrill of the old Wentworth fire through him, so that his muscles hardened, his hands closed, and he took the measure of Mr. Silas Peckham, to see if his head would strike the wall in case he went over backwards all of a sudden. This would not do, of course, and so the thrill passed off and the muscles softened again. Then came that state of tenderness in the heart, overlying wrath in the stomach, in which the eyes grow moist like a woman's, and there is also a great boiling-up of objectionable terms out of the deep-water vocabulary, so that Prudence and Propriety and all the other pious P's have to jump upon the lid of speech to keep them from boiling over into fierce articulation. All this was internal, chiefly, and of course not recognized by Mr. Silas Peckham. The idea, that any full-grown, sensible man should have any other notion

than that of getting the most work for the least money out of his assistants, had never suggested itself to him.

Mr. Bernard had gone through this paroxysm, and cooled down, in the period while Mr. Peckham was uttering these words in his thin, shallow whine, twanging up into the frontal sinuses. What was the use of losing his temper and throwing away his place, and so, among the consequences which would necessarily follow, leaving the poor lady-teacher without a friend to stand by her ready to lay his hand on the grand-inquisitor before the windlass of his rack had taken one turn too many?

"No doubt, Mr. Peckham," he said, in a grave, calm voice, "there is a great deal of work to be done in the school; but perhaps we can distribute the duties a little more evenly after a time. I shall look over the girls' themes myself, after this week. Perhaps there will be some other parts of her labor that I can take on myself. We can arrange a new programme of studies and recitations."

"We can do that," said Mr. Silas Peckham. "But I don't propose mater'ly alterin' Miss Darley's dooties. I don't think she works to hurt herself. Some of the Trustees have proposed interdoosin' new branches of study, and I expect you will be pooty much occoopied with the dooties that belong to your place. On the Sahbath you will be able to attend divine service three times, which is expected of our teachers. I shall continoo myself to give Sahbath Scriptur' readin's to the young ladies. That is a solemn dooty I can't make up my mind to commit to other people. My teachers enjoy the Lord's day as a day of rest. In it they do no manner of work, except in cases of necessity or mercy, such as fillin' out diplomas, or when we git crowded jest at the end of a term, or when there is an extry number of p'oopils, or other Providential call to dispense with the ordinance."

Mr. Bernard had a fine glow in his cheeks by this time,—doubtless kindled by the thought of the kind consideration Mr. Peckham showed for his subordinates in allowing them the between meeting-time on Sundays except for some special reason. But the morning was wearing away; so he went to the schoolroom, taking leave very properly of his respected principal, who soon took his hat and departed.

Mr. Peckham visited certain "stores" or shops, where he made inquiries after various articles in the provision-line, and effected a purchase or two. Two or three barrels of potatoes, which had sprouted in a promising way, he secured at a bargain. A side of feminine beef was also obtained at a low figure. He was entirely satisfied with a couple of barrels of flour, which, being invoiced "slightly damaged," were to be had at a reasonable price.

After this, Silas Peckham felt in good spirits. He had done a pretty stroke of business. It came into his head whether he might not follow it up with a still more brilliant speculation. So he turned his steps in the direction of Colonel Sprowle's.

It was now eleven o'clock, and the battle-field of last evening was as we left it. Mr. Peckham's visit was unexpected, perhaps not very well timed, but the Colonel received him civilly.

"Beautifully lighted,—these rooms last night!" said Mr. Peckham. "Winter-strained?"

The Colonel nodded.

"How much do you pay for your winter-strained?"

The Colonel told him the price.

"Very hahnsome supper,—very hahnsome. Nothin' ever seen like it in Rockland. Must have been a great heap of things leftover."

The compliment was not ungrateful, and the Colonel acknowledged it by smiling and saying, "I should think the' was a trifle? Come and look."

When Silas Peckham saw how many delicacies had survived the evening's conflict, his commercial spirit rose at once to the point of a proposal.

"Colonel Sprowle," said he, "there's 'meat and cakes and pies and pickles enough on that table to spread a hahnsome colation. If you'd like to trade reasonable, I think perhaps I should be willin' to take 'em off your hands. There's been a talk about our havin' a celebration in the Parnassian Grove, and I think I could work in what your folks don't want and make myself whole by chargin' a small sum for tickets. Broken meats, of course, a'n't of the same valoo as fresh provisions; so I think you might be willin' to trade reasonable."

Mr. Peckham paused and rested on his proposal. It would not, perhaps, have been very extraordinary, if Colonel Sprowle had entertained the proposition. There is no telling beforehand how such things will strike people. It didn't happen to strike the Colonel favorably. He had a little red-blooded manhood in him.

"Sell you them things to make a colation out of?" the Colonel replied. "Walk up to that table, Mr. Peckham, and help yourself! Fill your pockets; Mr. Peckham! Fetch a basket, and our hired folks shall fill it full for ye! Send a cart, if y' like, 'n' carry off them leavin's to make a celebration for your pupils with! Only let me tell ye this:—as sure 's my name's Hezekiah Spraowle, you 'll be known through the taown 'n' through the caounty, from that day forrard, as the Principal of the Broken-Victuals Institoot!"

Even provincial human-nature sometimes has a touch of sublimity about it. Mr. Silas Peckham had gone a little deeper than he meant, and come upon the "hard pan," as the well-diggers call it, of the Colonel's character, before he thought of it. A militia-colonel standing on his sentiments is not to be despised. That was shown pretty well in New England two or three generations ago. There were a good many plain officers that talked about their "rigiment" and their "caounty" who knew very well how to say "Make ready!" "Take aim!" "Fire!"—in the face of a line of grenadiers with bullets in their guns and bayonets on them. And though a rustic uniform is not always unexceptionable in its cut and trimmings, yet there was many an ill-made coat in those old times that was good enough to be shown to the enemy's front rank too often to be left on the field with a round hole in its left lapel that matched another going right through the brave heart of the plain country captain or major or colonel who was buried in it under the crimson turf.

Mr. Silas Peckham said little or nothing. His sensibilities were not acute, but he perceived that he had made a miscalculation. He hoped that there was no offence,—thought it might have been mutooally agreeable, concludod he would give up the idee of a colation, and backed himself out as if unwilling to expose the less guarded aspect of his person to the risk of accelerating impulses.

The Colonel shut the door,—cast his eye on the toe of his right boot, as if it had had a strong temptation,—looked at his watch, then round the room, and, going to a cupboard, swallowed a glass of deep-red brandy and water to compose his feelings.

CHAPTER IX. THE DOCTOR ORDERS THE BEST SULKY. (With a Digression on “Hired Help.”)

“ABEL! Slip Cassia into the new sulky, and fetch her round.”

Abel was Dr. Kittredge's hired man. He was born in New Hampshire, a queer sort of State, with fat streaks of soil and population where they breed giants in mind and body, and lean streaks which export imperfectly nourished young men with promising but neglected appetites, who may be found in great numbers in all the large towns, or could be until of late years, when they have been half driven out of their favorite basement-stories by foreigners, and half coaxed away from them by California. New Hampshire is in more than one sense the Switzerland of New England. The “Granite State” being naturally enough deficient in pudding-stone, its children are apt to wander southward in search of that deposit,—in the unpetrified condition.

Abel Stebbins was a good specimen of that extraordinary hybrid or mule between democracy and chrysocracy, a native-born New-England serving-man. The Old World has nothing at all like him. He is at once an emperor and a subordinate. In one hand he holds one five-millionth part (be the same more or less) of the power that sways the destinies of the Great Republic. His other hand is in your boot, which he is about to polish. It is impossible to turn a fellow citizen whose vote may make his master—say, rather, employer—Governor or President, or who may be one or both himself, into a flunky. That article must be imported ready-made from other centres of civilization. When a New Englander has lost his self-respect as a citizen and as a man, he is demoralized, and cannot be trusted with the money to pay for a dinner.

It may be supposed, therefore, that this fractional emperor, this continent-shaper, finds his position awkward when he goes into service, and that his employer is apt to find it still more embarrassing. It is always under protest that the hired man does his duty. Every act of service is subject to the drawback, “I am as good as you are.” This is so common, at least, as almost to be the rule, and partly accounts for the rapid disappearance of the indigenous “domestic” from the basements above mentioned. Paleontologists will by and by be examining the floors of our kitchens for tracks of the extinct native species of serving-man. The female of the same race is fast dying out; indeed, the time is not far distant when all the varieties of young woman will have vanished from New England, as the dodo has perished in the Mauritius. The young lady is all that we shall have left, and the mop and duster of the last Ahnira or Loizy will be stared at by generations of Bridgets and Noras as that famous head and foot of the lost bird are stared at in the Ashmolean Museum.

Abel Stebbins, the Doctor's man, took the true American view of his difficult position. He sold his time to the Doctor, and, having sold it, he took care to fulfil his half of the bargain. The Doctor, on his part, treated him, not like a gentleman, because one does not order a gentleman to bring up his horse or run his errands, but he treated him like a man. Every order was given in courteous terms. His reasonable privileges were respected as much as if they had been guaranteed under hand and seal. The Doctor lent him books from his own library, and gave him all friendly counsel, as if he were a son or a younger brother.

Abel had Revolutionary blood in his veins, and though he saw fit to “hire out,” he could never stand the word “servant,” or consider himself the inferior one of the two high contracting parties. When he came to live with the Doctor, he made up his mind he would dismiss the old gentleman, if he did not behave according to his notions of propriety. But he soon found that the Doctor was one of the right sort, and so determined to keep him. The Doctor soon found, on his side, that he had a trustworthy, intelligent fellow, who would be invaluable to him, if he only let him have his own way of doing what was to be done.

The Doctor's hired man had not the manners of a French valet. He was grave and taciturn for the most part, he never bowed and rarely smiled, but was always at work in the daytime, and always reading in the evening. He was hostler, and did all the housework that a man could properly do, would go to the door or “tend table,” bought the provisions for the family,—in short, did almost everything for them but get their clothing. There was no office in a perfectly appointed household, from that of steward down to that of stable-boy, which he did not cheerfully assume. His round of work not consuming all his energies, he must needs cultivate the Doctor's garden, which he kept in one perpetual bloom, from the blowing of the first crocus to the fading of the last dahlia.

This garden was Abel's poem. Its half-dozen beds were so many cantos. Nature crowded them for him with imagery such as no Laureate could copy in the cold mosaic of language. The rhythm of alternating dawn and sunset, the strophe and antistrophe still perceptible through all the sudden shifts of our dithyrambic seasons and echoed in corresponding floral harmonies, made melody in the soul of Abel, the plain serving-man. It softened his whole otherwise rigid aspect. He worshipped God according to the strict way of his fathers; but a florist's Puritanism is always colored by the petals of his flowers,—and Nature never shows him a black corolla.

He may or may not figure again in this narrative; but as there must be some who confound the New England hired man, native-born, with the servant of foreign birth, and as there is the difference of two continents and two civilizations between them, it did not seem fair to let Abel bring round the Doctor's mare and sulky without touching his features in half-shadow into our background.

The Doctor's mare, Cassia, was so called by her master from her cinnamon color, cassia being one of the professional names for that spice or drug. She was of the shade we call sorrel, or, as an Englishman would perhaps say, chestnut,—a genuine "Morgan" mare, with a low forehead, as is common in this breed, but with strong quarters and flat hocks, well ribbed up, with a good eye and a pair of lively ears,—a first-rate doctor's beast, would stand until her harness dropped off her back at the door of a tedious case, and trot over hill and dale thirty miles in three hours, if there was a child in the next county with a bean in its windpipe and the Doctor gave her a hint of the fact. Cassia was not large, but she had a good deal of action, and was the Doctor's show-horse. There were two other animals in his stable: Quassia or Quashy, the black horse, and Caustic, the old bay, with whom he jogged round the village.

"A long ride to-day?" said Abel, as he brought up the equipage.

"Just out of the village,—that 's all.—There 's a kink in her mane,—pull it out, will you?"

"Goin' to visit some of the great folks," Abel said to himself. "Wonder who it is."—Then to the Doctor,—"Anybody get sick at Sprowles's? They say Deacon Soper had a fit, after eatin' some o' their frozen victuals."

The Doctor smiled. He guessed the Deacon would do well enough. He was only going to ride over to the Dudley mansion-house.

CHAPTER X. THE DOCTOR CALLS ON ELSIE VENNER.

If that primitive physician, Chiron, M. D., appears as a Centaur, as we look at him through the lapse of thirty centuries, the modern country-doctor, if he could be seen about thirty miles off, could not be distinguished from a wheel-animalcule. He inhabits a wheel-carriage. He thinks of stationary dwellings as Long Tom Coffin did of land in general; a house may be well enough for incidental purposes, but for a "stiddy" residence give him a "kerridge." If he is classified in the Linnaean scale, he must be set down thus: Genus Homo; Species Rotifer infusorius, the wheel-animal of infusions.

The Dudley mansion was not a mile from the Doctor's; but it never occurred to him to think of walking to see any of his patients' families, if he had any professional object in his visit. Whenever the narrow sulky turned in at a gate, the rustic who was digging potatoes, or hoeing corn, or swishing through the grass with his scythe, in wave-like crescents, or stepping short behind a loaded wheelbarrow, or trudging lazily by the side of the swinging, loose-throated, short-legged oxen, rocking along the road as if they had just been landed after a three-months' voyage, the toiling native, whatever he was doing, stopped and looked up at the house the Doctor was visiting.

"Somebody sick over there t' Haynes's. Guess th' old man's ailin' ag'in. Winder's half-way open in the chamber,—should n' wonder 'f he was dead and laid aout. Docterin' a'n't no use, when y' see th' winders open like that. Wahl, money a'n't much to speak of to th' old man naow! He don' want but tew cents,—'n' old Widah Peake, she knows what he wants them for!"

Or again,—

"Measles raound pooty thick. Briggs's folks buried two children with 'em lass' week. Th' of Doctor, he'd h' ker'd 'em through. Struck in 'n' p'dooiced mo't'f'cation,—so they say."

This is only meant as a sample of the kind of way they used to think or talk, when the narrow sulky turned in at the gate of some house where there was a visit to be made.

Oh, that narrow sulky! What hopes, what fears, what comfort, what anguish, what despair, in the roll of its coming or its parting wheels! In the spring, when the old people get the coughs which give them a few shakes and their lives drop in pieces like the ashes of a burned thread which have kept the threadlike shape until they were stirred,—in the hot summer noons, when the strong man comes in from the fields, like the son of the Shunamite, crying, "My head, my head,"—in the dying autumn days, when youth and maiden lie fever-stricken in many a household, still-faced, dull-eyed, dark-flushed, dry-lipped, low-muttering in their daylight dreams, their fingers moving singly like those of slumbering harpers,—in the dead winter, when the white plague of the North has caged its wasted victims, shuddering as they think of the frozen soil which must be quarried like rock to receive them, if their perpetual convalescence should happen to be interfered with by any untoward accident,—at every season, the narrow sulky rolled round freighted with unmeasured burdens of joy and woe.

The Doctor drove along the southern foot of The Mountain. The "Dudley Mansion" was near the eastern edge of this declivity, where it rose steepest, with baldest cliffs and densest patches of overhanging wood. It seemed almost too steep to climb, but a practised eye could see from a distance the zigzag lines of the sheep-paths which scaled it like miniature Alpine roads. A few hundred feet up The Mountain's side was a dark deep dell, unwooded, save for a few spindling, crazy-looking hackmatacks or native larches, with pallid green tufts sticking out fantastically all over them. It shelved so deeply, that, while the hemlock-tassels were swinging on the trees around its border, all would be still at its springy bottom, save that perhaps a single fern would wave slowly backward and forward like a sabre with a twist as of a feathered oar,—and this when not a breath could be felt, and every other stem and blade were motionless. There was an old story of one having perished here in the winter of '86, and his body having been found in the spring,—whence its common name of "Dead-Man's Hollow." Higher up there were huge cliffs with chasms, and, it was thought, concealed caves, where in old times they said that Tories lay hid,—some hinted not without occasional aid and comfort from the Dudleys then living in the mansion-house. Still higher and farther west lay the accursed ledge,—shunned by all, unless it were now and then a daring youth, or a wandering naturalist who ventured to its edge in the hope of securing some infantile *Crotalus durissus*, who had not yet cut his poison teeth.

Long, long ago, in old Colonial times, the Honorable Thomas Dudley, Esquire, a man of note and name and great resources, allied by descent to the family of "Tom Dudley," as the early Governor is sometimes irreverently called by our most venerable, but still youthful antiquary,—and to the other public Dudleys, of course,—of all of whom he made small account, as being himself an English gentleman, with little taste for the splendors of provincial office, early in the last century, Thomas Dudley had built this mansion. For several generations it had been dwelt in by descendants of the same name, but soon after the Revolution it passed by marriage into the hands of the Venners, by whom it had ever since been held and tenanted.

As the doctor turned an angle in the road, all at once the stately old house rose before him. It was a skilfully managed effect, as it well might be, for it was no vulgar English architect who had planned the mansion and arranged its position and approach. The old house rose before the Doctor, crowning a terraced garden, flanked at the left by an avenue of tall elms. The flower-beds were edged with box, which diffused around it that dreamy balsamic odor, full of ante-natal reminiscences of a lost Paradise, dimly fragrant as might be the bdellium of ancient Havilah, the land compassed by the river Pison that went out of Eden. The garden was somewhat neglected, but not in disgrace,—and in the time of tulips and hyacinths, of roses, of "snowballs," of honeysuckles, of lilacs, of syringas, it was rich with blossoms.

From the front-windows of the mansion the eye reached a far blue mountain-summit,—no rounded heap, such as often shuts in a village-landscape, but a sharp peak, clean-angled as Ascutney from the Dartmouth green. A wide gap through miles of woods had opened this distant view, and showed more, perhaps, than all the labors of the architect and the landscape-gardener the large style of the early Dudleys.

The great stone-chimney of the mansion-house was the centre from which all the artificial features of the scene appeared to flow. The roofs, the gables, the dormer-windows, the porches, the clustered offices in the rear, all seemed to crowd about the great chimney. To this central pillar the paths all converged. The single poplar behind the house,—Nature is jealous of proud chimneys, and always loves to put a poplar near one, so that it may fling a leaf or two down its black throat every autumn,—the one tall poplar behind the house seemed to nod and whisper to the grave square column, the elms to sway their branches towards it. And when the blue smoke rose from its summit, it seemed to be wafted away to join the azure haze which hung around the peak in the far distance, so that both should bathe in a common atmosphere.

Behind the house were clumps of lilacs with a century's growth upon them, and looking more like trees than like shrubs. Shaded by a group of these was the ancient well, of huge circuit, and with a low arch opening out of its wall about ten feet below the surface,—whether the door of a crypt for the concealment of treasure, or of a subterranean passage, or merely of a vault for keeping provisions cool in hot weather, opinions differed.

On looking at the house, it was plain that it was built with Old-World notions of strength and durability, and, so far as might be, with Old-World materials. The hinges of the doors stretched out like arms, instead of like hands, as we make them. The bolts were massive enough for a donjon-keep. The small window-panes were actually inclosed in the wood of the sashes instead of being stuck to them with putty, as in our modern windows. The broad staircase was of easy ascent, and was guarded by quaintly turned and twisted balusters. The ceilings of the two rooms of state were moulded with medallion-portraits and rustic figures, such as may have been seen by many readers in the famous old Philipse house,—Washington's head-quarters,—in the town of Yorkers. The fire-places, worthy of the wide-throated central chimney, were bordered by pictured tiles, some of them with Scripture stories, some with Watteau-like figures,—tall damsels in slim waists and with spread enough of skirt for a modern ballroom, with bowing, reclining, or musical swains of what everybody calls the "conventional" sort,—that is, the swain adapted to genteel society rather than to a literal sheep-compelling existence.

The house was furnished, soon after it was completed, with many heavy articles made in London from a rare wood just then come into fashion, not so rare now, and commonly known as mahogany. Time had turned it very dark, and the stately bedsteads and tall cabinets and claw-footed chairs and tables were in keeping with the sober dignity of the ancient mansion. The old "hangings" were yet preserved in the chambers, faded, but still showing their rich patterns,—properly entitled to their name, for they were literally hung upon flat wooden frames like trellis-work, which again were secured to the naked partitions.

There were portraits of different date on the walls of the various apartments, old painted coats-of-arms, bevel-edged mirrors, and in one sleeping-room a glass case of wax-work flowers and spangly symbols, with a legend signifying that E. M. (supposed to be Elizabeth Mascarene) wished not to be "forgot".

*"When I am dead and lay'd in dust
And all my bones are"—*

Poor E. M.! Poor everybody that sighs for earthly remembrance in a planet with a core of fire and a crust of fossils!

Such was the Dudley mansion-house,—for it kept its ancient name in spite of the change in the line of descent. Its spacious apartments looked dreary and desolate; for here Dudley Venner and his daughter dwelt by themselves, with such servants only as their quiet mode of life required. He almost lived in his library, the western room on the ground-floor. Its window looked upon a small plat of green, in the midst of which was a single grave marked by a plain marble slab. Except this room, and the chamber where he slept, and the servants' wing, the rest of the house was all Elsie's. She was always a restless, wandering child from her early years, and would have her little bed moved from one chamber to another,—flitting round as the fancy took her. Sometimes she would drag a mat and a pillow into one of the great empty rooms, and, wrapping herself in a shawl, coil up and go to sleep in a corner. Nothing frightened her; the "haunted" chamber, with the torn hangings that flapped like wings when there was air stirring, was one of her favorite retreats. She had been a very hard creature to manage. Her father could influence, but not govern her. Old Sophy, born of a slave mother in the house, could do more with her than anybody, knowing her by long instinctive study. The other servants were afraid of her. Her father had sent for governesses, but none of them ever stayed long. She made them nervous; one of them had a strange fit of sickness; not one of them ever came back to the house to see her. A young Spanish woman who taught her dancing succeeded best with her, for she had a

passion for that exercise, and had mastered some of the most difficult dances. Long before this period, she had manifested some most extraordinary singularities of taste or instinct. The extreme sensitiveness of her father on this point prevented any allusion to them; but there were stories floating round, some of them even getting into the papers,—without her name, of course,—which were of a kind to excite intense curiosity, if not more anxious feelings. This thing was certain, that at the age of twelve she was missed one night, and was found sleeping in the open air under a tree, like a wild creature. Very often she would wander off by day, always without a companion, bringing home with her a nest, a flower, or even a more questionable trophy of her ramble, such as showed that there was no place where she was afraid to venture. Once in a while she had stayed out over night, in which case the alarm was spread, and men went in search of her, but never successfully,—so—that some said she hid herself in trees, and others that she had found one of the old Tory caves.

Some, of course, said she was a crazy girl, and ought to be sent to an Asylum. But old Dr. Kittredge had shaken his head, and told them to bear with her, and let her have her way as much as they could, but watch her, as far as possible, without making her suspicious of them. He visited her now and then, under the pretext of seeing her father on business, or of only making a friendly call.

The Doctor fastened his horse outside the gate, and walked up the garden-alley. He stopped suddenly with a start. A strange sound had jarred upon his ear. It was a sharp prolonged rattle, continuous, but rising and falling as if in rhythmical cadence. He moved softly towards the open window from which the sound seemed to proceed.

Elsie was alone in the room, dancing one of those wild Moorish fandangos, such as a matador hot from the Plaza de Toros of Seville or Madrid might love to lie and gaze at. She was a figure to look upon in silence. The dancing frenzy must have seized upon her while she was dressing; for she was in her bodice, bare-armed, her hair floating unbound far below the waist of her barred or banded skirt. She had caught up her castanets, and rattled them as she danced with a kind of passionate fierceness, her lithe body undulating with flexuous grace, her diamond eyes glittering, her round arms wreathing and unwinding, alive and vibrant to the tips of the slender fingers. Some passion seemed to exhaust itself in this dancing paroxysm; for all at once she reeled from the middle of the floor, and flung herself, as it were in a careless coil, upon a great tiger's-skin which was spread out in one corner of the apartment.

The old Doctor stood motionless, looking at her as she lay panting on the tawny, black-lined robe of the dead monster which stretched out beneath her, its rude flattened outline recalling the Terror of the Jungle as he crouched for his fatal spring. In a few moments her head drooped upon her arm, and her glittering eyes closed,—she was sleeping. He stood looking at her still, steadily, thoughtfully, tenderly. Presently he lifted his hand to his forehead, as if recalling some fading remembrance of other years.

“Poor Catalina!”

This was all he said. He shook his head,—implying that his visit would be in vain to-day,—returned to his sulky, and rode away, as if in a dream.

CHAPTER XI. COUSIN RICHARD'S VISIT.

The Doctor was roused from his reverie by the clatter of approaching hoofs. He looked forward and saw a young fellow galloping rapidly towards him.

A common New-England rider with his toes turned out, his elbows jerking and the daylight showing under him at every step, striding a cantering beast of the plebeian breed, thick at every point where he should be thin, and thin at every point where he should be thick, is not one of those noble objects that bewitch the world. The best horsemen outside of the cities are the unshod countryboys, who ride “bareback,” with only a halter round the horse's neck, digging their brown heels into his ribs, and slanting over backwards, but sticking on like leeches, and taking the hardest trot as if they loved it.—This was a different sight on which the Doctor was looking. The streaming mane and tail of the unshorn, savage-looking, black horse, the dashing grace with which the young fellow in the shadowy sombrero, and armed with the huge spurs, sat in his high-peaked saddle, could belong only to the mustang of the Pampas and his master. This bold rider was a young man whose sudden apparition in the quiet inland town had reminded some of the good people of a bright, curly-haired boy they had known some eight or ten years before as little Dick Venner.

This boy had passed several of his early years at the Dudley mansion, the playmate of Elsie, being her cousin, two or three years older than herself, the son of Captain Richard Venner, a South American trader, who, as he changed his residence often, was glad to leave the boy in his brother's charge. The Captain's wife, this boy's mother, was a lady of Buenos Ayres, of Spanish descent, and had died while the child was in his cradle. These two motherless children were as strange a pair as one roof could well cover. Both handsome, wild, impetuous, unmanageable, they played and fought together like two young leopards, beautiful, but dangerous, their lawless instincts showing through all their graceful movements.

The boy was little else than a young Gaucho when he first came to Rockland; for he had learned to ride almost as soon as to walk, and could jump on his pony and trip up a runaway pig with the bolas or noose him with his miniature lasso at an age when some city-children would hardly be trusted out of sight of a nursery-maid. It makes men imperious to sit a horse; no man governs his fellows so well as from this living throne. And so, from Marcus Aurelius in Roman bronze, down to the “man on horseback” in General Cushing's prophetic speech, the saddle has always been the true seat of empire. The absolute tyranny of the human will over a noble and powerful beast develops the instinct of personal prevalence and dominion; so that horse-subduer and hero were almost synonymous in simpler times, and are closely related still. An ancestry of wild riders naturally enough bequeaths also those other tendencies which we see in the Tartars, the Cossacks, and

our own Indian Centaurs, and as well, perhaps, in the old-fashioned fox-hunting squire as in any of these. Sharp alternations of violent action and self-indulgent repose; a hard run, and a long revel after it; this is what over-much horse tends to animalize a man into. Such antecedents may have helped to make little Dick Venner a self-willed, capricious boy, and a rough playmate for Elsie.

Elsie was the wilder of the two. Old Sophy, who used to watch them with those quick, animal-looking eyes of hers,—she was said to be the granddaughter of a cannibal chief, and inherited the keen senses belonging to all creatures which are hunted as game, Old Sophy, who watched them in their play and their quarrels, always seemed to be more afraid for the boy than the girl. “Masse Dick! Masse Dick! don’ you be too rough wi’ dat gal! She scratch you las’ week, ‘n’ some day she bite you; ‘n’ if she bite you, Masse Dick!” Old Sophy nodded her head ominously, as if she could say a great deal more; while, in grateful acknowledgment of her caution, Master Dick put his two little fingers in the angles of his mouth, and his forefingers on his lower eyelids, drawing upon these features until his expression reminded her of something she vaguely recollected in her infancy,—the face of a favorite deity executed in wood by an African artist for her grandfather, brought over by her mother, and burned when she became a Christian.

These two wild children had much in common. They loved to ramble together, to build huts, to climb trees for nests, to ride the colts, to dance, to race, and to play at boys’ rude games as if both were boys. But wherever two natures have a great deal in common, the conditions of a first-rate quarrel are furnished ready-made. Relations are very apt to hate each other just because they are too much alike. It is so frightful to be in an atmosphere of family idiosyncrasies; to see all the hereditary uncomeliness or infirmity of body, all the defects of speech, all the failings of temper, intensified by concentration, so that every fault of our own finds itself multiplied by reflections, like our images in a saloon lined with mirrors! Nature knows what she is about. The centrifugal principle which grows out of the antipathy of like to like is only the repetition in character of the arrangement we see expressed materially in certain seed-capsules, which burst and throw the seed to all points of the compass. A house is a large pod with a human germ or two in each of its cells or chambers; it opens by dehiscence of the front-door by and by, and projects one of its germs to Kansas, another to San Francisco, another to Chicago, and so on; and this that Smith may not be Smithed to death and Brown may not be Brownd into a mad-house, but mix in with the world again and struggle back to average humanity.

Elsie’s father, whose fault was to indulge her in everything, found that it would never do to let these children grow up together. They would either love each other as they got older, and pair like wild creatures, or take some fierce antipathy, which might end nobody could tell where. It was not safe to try. The boy must be sent away. A sharper quarrel than common decided this point. Master Dick forgot Old Sophy’s caution, and vexed the girl into a paroxysm of wrath, in which she sprang at him and bit his arm. Perhaps they made too much of it; for they sent for the old Doctor, who came at once when he heard what had happened. He had a good deal to say about the danger there was from the teeth of animals or human beings when enraged; and as he emphasized his remarks by the application of a pencil of lunar caustic to each of the marks left by the sharp white teeth, they were like to be remembered by at least one of his hearers.

So Master Dick went off on his travels, which led him into strange places and stranger company. Elsie was half pleased and half sorry to have him go; the children had a kind of mingled liking and hate for each other, just such as is very common among relations. Whether the girl had most satisfaction in the plays they shared, or in teasing him, or taking her small revenge upon him for teasing her, it would have been hard to say. At any rate, she was lonely without him. She had more fondness for the old black woman than anybody; but Sophy could not follow her far beyond her own old rocking-chair. As for her father, she had made him afraid of her, not for his sake, but for her own. Sometimes she would seem to be fond of him, and the parent’s heart would yearn within him as she twined her supple arms about him; and then some look she gave him, some half-articulated expression, would turn his cheek pale and almost make him shiver, and he would say kindly, “Now go, Elsie, dear,” and smile upon her as she went, and close and lock the door softly after her. Then his forehead would knot and furrow itself, and the drops of anguish stand thick upon it. He would go to the western window of his study and look at the solitary mound with the marble slab for its head-stone. After his grief had had its way, he would kneel down and pray for his child as one who has no hope save in that special grace which can bring the most rebellious spirit into sweet subjection. All this might seem like weakness in a parent having the charge of one sole daughter of his house and heart; but he had tried authority and tenderness by turns so long without any good effect, that he had become sore perplexed, and, surrounding her with cautious watchfulness as he best might, left her in the main to her own guidance and the merciful influences which Heaven might send down to direct her footsteps.

Meantime the boy grew up to youth and early manhood through a strange succession of adventures. He had been at school at Buenos Ayres,—had quarrelled with his mother’s relatives,—had run off to the Pampas, and lived with the Gauchos;—had made friends with the Indians, and ridden with them, it was rumored, in some of their savage forays,—had returned and made up his quarrel,—had got money by inheritance or otherwise,—had troubled the peace of certain magistrates,—had found it convenient to leave the City of Wholesome Breezes for a time, and had galloped off on a fast horse of his, (so it was said,) with some officers riding after him, who took good care (but this was only the popular story) not to catch him. A few days after this he was taking his ice on the Alameda of Mendoza, and a week or two later sailed from Valparaiso for New York, carrying with him the horse with which he had scampered over the Plains, a trunk or two with his newly purchased outfit of, clothing and other conveniences, and a belt heavy with gold and with a few Brazilian diamonds sewed in it, enough in value to serve him for a long journey.

Dick Venner had seen life enough to wear out the earlier sensibilities of adolescence. He was tired of worshipping or tyrannizing over the bistred or umbered beauties of mingled blood among whom he had been living. Even that piquant exhibition which the Rio de Mendoza presents to the amateur of breathing sculpture failed to interest him. He was thinking of a far-off village on the other side of the equator, and of the wild girl with whom he used to play and quarrel, a creature of a different race from these degenerate mongrels.

“A game little devil she was, sure enough!”—And as Dick spoke, he bared his wrist to look for the marks she had left on it: two small white scars, where the two small sharp upper teeth had struck when she flashed at

him with her eyes sparkling as bright as those glittering stones sewed up in the belt he wore. "That's a filly worth noosing!" said Dick to himself, as he looked in admiration at the sign of her spirit and passion. "I wonder if she will bite at eighteen as she did at eight! She shall have a chance to try, at any rate!"

Such was the self-sacrificing disposition with which Richard Venner, Esq., a passenger by the Condor from Valparaiso, set foot upon his native shore, and turned his face in the direction of Rockland, The Mountain, and the mansion-house. He had heard something, from time to time, of his New-England relatives, and knew that they were living together as he left them. And so he heralded himself to "My dear Uncle" by a letter signed "Your loving nephew, Richard Venner," in which letter he told a very frank story of travel and mercantile adventure, expressed much gratitude for the excellent counsel and example which had helped to form his character and preserve him in the midst of temptation, inquired affectionately after his uncle's health, was much interested to know whether his lively cousin who used to be his playmate had grown up as handsome as she promised to be, and announced his intention of paying his respects to them both at Rockland. Not long after this came the trunks marked R. V. which he had sent before him, forerunners of his advent: he was not going to wait for a reply or an invitation.

What a sound that is,—the banging down of the preliminary trunk, without its claimant to give it the life which is borrowed by all personal appendages, so long as the owner's hand or eye is on them! If it announce the coming of one loved and longed for, how we delight to look at it, to sit down on it, to caress it in our fancies, as a lone exile walking out on a windy pier yearns towards the merchantman lying alongside, with the colors of his own native land at her peak, and the name of the port he sailed from long ago upon her stern! But if it tell the near approach of the undesired, inevitable guest, what sound short of the muffled noises made by the undertakers as they turn the corners in the dim-lighted house, with low shuffle of feet and whispered cautions, carries such a sense of knocking-kneed collapse with it as the thumping down in the front entry of the heavy portmanteau, rammed with the changes of uncounted coming weeks?

Whether the R. V. portmanteaus brought one or the other of these emotions to the tenants of the Dudley mansion, it might not be easy to settle. Elsie professed to be pleased with the thought of having an adventurous young stranger, with stories to tell, an inmate of their quiet, not to say dull, family. Under almost any other circumstances, her father would have been unwilling to take a young fellow of whom he knew so little under his roof; but this was his nephew, and anything that seemed like to amuse or please Elsie was agreeable to him. He had grown almost desperate, and felt as if any change in the current of her life and feelings might save her from some strange paroxysm of dangerous mental exaltation or sullen perversion of disposition, from which some fearful calamity might come to herself or others.

Dick had been several weeks at the Dudley mansion. A few days before, he had made a sudden dash for the nearest large city,—and when the Doctor met him, he was just returning from his visit.

It had been a curious meeting between the two young persons, who had parted so young and after such strange relations with each other. When Dick first presented himself at the mansion, not one in the house would have known him for the boy who had left them all so suddenly years ago. He was so dark, partly from his descent, partly from long habits of exposure, that Elsie looked almost fair beside him. He had something of the family beauty which belonged to his cousin, but his eye had a fierce passion in it, very unlike the cold glitter of Elsie's. Like many people of strong and imperious temper, he was soft-voiced and very gentle in his address, when he had no special reason for being otherwise. He soon found reasons enough to be as amiable as he could force himself to be with his uncle and his cousin. Elsie was to his fancy. She had a strange attraction for him, quite unlike anything he had ever known in other women. There was something, too, in early associations: when those who parted as children meet as man and woman, there is always a renewal of that early experience which followed the taste of the forbidden fruit,—a natural blush of consciousness, not without its charm.

Nothing could be more becoming than the behavior of "Richard Venner, Esquire, the guest of Dudley Venner, Esquire, at his noble mansion," as he was announced in the Court column of the "Rockland Weekly Universe." He was pleased to find himself treated with kindness and attention as a relative. He made himself very agreeable by abundant details concerning the religious, political, social, commercial, and educational progress of the South American cities and states. He was himself much interested in everything that was going on about the Dudley mansion, walked all over it, noticed its valuable wood-lots with special approbation, was delighted with the grand old house and its furniture, and would not be easy until he had seen all the family silver and heard its history. In return, he had much to tell of his father, now dead,—the only one of the Venners, beside themselves, in whose fate his uncle was interested. With Elsie, he was subdued and almost tender in his manner; with the few visitors whom they saw, shy and silent,—perhaps a little watchful, if any young man happened to be among them.

Young fellows placed on their good behavior are apt to get restless and nervous, all ready to fly off into some mischief or other. Dick Venner had his half-tamed horse with him to work off his suppressed life with. When the savage passion of his young blood came over him, he would fetch out the mustang, screaming and kicking as these amiable beasts are wont to do, strap the Spanish saddle tight to his back, vault into it, and, after getting away from the village, strike the long spurs into his sides and whirl away in a wild gallop, until the black horse was flecked with white foam, and the cruel steel points were red with his blood. When horse and rider were alike fired, he would fling the bridle on his neck and saunter homeward, always contriving to get to the stable in a quiet way, and coming into the house as calm as a bishop after a sober trot on his steady-going cob.

After a few weeks of this kind of life, he began to want some more fierce excitement. He had tried making downright love to Elsie, with no great success as yet, in his own opinion. The girl was capricious in her treatment of him, sometimes scowling and repellent, sometimes familiar, very often, as she used to be of old, teasing and malicious. All this, perhaps, made her more interesting to a young man who was tired of easy conquests. There was a strange fascination in her eyes, too, which at times was quite irresistible, so that he would feel himself drawn to her by a power which seemed to take away his will for the moment. It may have been nothing but the common charm of bright eyes; but he had never before experienced the same kind of attraction.

Perhaps she was not so very different from what she had been as a child, after all. At any rate, so it seemed to Dick Venner, who, as was said before, had tried making love to her. They were sitting alone in the study one day; Elsie had round her neck that somewhat peculiar ornament, the golden torque, which she had worn to the great party. Youth is adventurous and very curious about necklaces, brooches, chains, and other such adornments, so long as they are worn by young persons of the female sex. Dick was seized with a great passion for examining this curious chain, and, after some preliminary questions, was rash enough to lean towards her and put out his hand toward the neck that lay in the golden coil.

She threw her head back, her eyes narrowing and her forehead drawing down so that Dick thought her head actually flattened itself. He started involuntarily; for she looked so like the little girl who had struck him with those sharp flashing teeth, that the whole scene came back, and he felt the stroke again as if it had just been given, and the two white scars began to sting as they did after the old Doctor had burned them with that stick of gray caustic, which looked so like a slate pencil, and felt so much like the end of a red-hot poker.

It took something more than a gallop to set him right after this. The next day he mentioned having received a letter from a mercantile agent with whom he had dealings. What his business was is, perhaps, none of our business. At any rate, it required him to go at once to the city where his correspondent resided.

Independently of this "business" which called him, there may have been other motives, such as have been hinted at. People who have been living for a long time in dreary country-places, without any emotion beyond such as are occasioned by a trivial pleasure or annoyance, often get crazy at last for a vital paroxysm of some kind or other. In this state they rush to the great cities for a plunge into their turbid life-baths, with a frantic thirst for every exciting pleasure, which makes them the willing and easy victims of all those who sell the Devil's wares on commission. The less intelligent and instructed class of unfortunates, who venture with their ignorance and their instincts into what is sometimes called the "life" of great cities, are put through a rapid course of instruction which entitles them very commonly to a diploma from the police court. But they only illustrate the working of the same tendency in mankind at large which has been occasionally noticed in the sons of ministers and other eminently worthy people, by many ascribed to that intense congenital hatred for goodness which distinguishes human nature from that of the brute, but perhaps as readily accounted for by considering it as the yawning and stretching of a young soul cramped too long in one moral posture.

Richard Venner was a young man of remarkable experience for his years. He ran less risk, therefore, in exposing himself to the temptations and dangers of a great city than many older men, who, seeking the livelier scenes of excitement to be found in large towns as a relaxation after the monotonous routine of family life, are too often taken advantage of and made the victims of their sentiments or their generous confidence in their fellow-creatures. Such was not his destiny. There was something about him which looked as if he would not take bullying kindly. He had also the advantage of being acquainted with most of those ingenious devices by which the proverbial inconstancy of fortune is steadied to something more nearly approaching fixed laws, and the dangerous risks which have so often led young men to ruin and suicide are practically reduced to somewhat less than nothing. So that Mr. Richard Venner worked off his nervous energies without any troublesome adventure, and was ready to return to Rockland in less than a week, without having lightened the money-belt he wore round his body, or tarnished the long glittering knife he carried in his boot.

Dick had sent his trunk to the nearest town through which the railroad leading to the city passed. He rode off on his black horse and left him at the place where he took the cars. On arriving at the city station, he took a coach and drove to one of the great hotels. Thither drove also a sagacious-looking, middle-aged man, who entered his name as "W. Thompson" in the book at the office immediately after that of "R. Venner." Mr. "Thompson" kept a carelessly observant eye upon Mr. Venner during his stay at the hotel, and followed him to the cars when he left, looking over his shoulder when he bought his ticket at the station, and seeing him fairly off without obtruding himself in any offensive way upon his attention. Mr. Thompson, known in other quarters as Detective Policeman Terry, got very little by his trouble. Richard Venner did not turn out to be the wife-poisoner, the defaulting cashier, the river-pirate, or the great counterfeiter. He paid his hotel-bill as a gentleman should always do, if he has the money and can spare it. The detective had probably overrated his own sagacity when he ventured to suspect Mr. Venner. He reported to his chief that there was a knowing-looking fellow he had been round after, but he rather guessed he was nothing more than "one o' them Southern sportsmen."

The poor fellows at the stable where Dick had left his horse had had trouble enough with him. One of the ostlers was limping about with a lame leg, and another had lost a mouthful of his coat, which came very near carrying a piece of his shoulder with it. When Mr. Venner came back for his beast, he was as wild as if he had just been lassoed, screaming, kicking, rolling over to get rid of his saddle, and when his rider was at last mounted, jumping about in a way to dislodge any common horseman. To all this Dick replied by sticking his long spurs deeper and deeper into his flanks, until the creature found he was mastered, and dashed off as if all the thistles of the Pampas were pricking him.

"One more gallop, Juan?" This was in the last mile of the road before he came to the town which brought him in sight of the mansion-house. It was in this last gallop that the fiery mustang and his rider flashed by the old Doctor. Cassia pointed her sharp ears and shied to let them pass. The Doctor turned and looked through the little round glass in the back of his sulky.

"Dick Turpin, there, will find more than his match!" said the Doctor.

CHAPTER XII. THE APOLLINEAN INSTITUTE. (With Extracts from the "Report of the committee.")

The readers of this narrative will hardly expect any elaborate details of the educational management of the Apollinean Institute. They cannot be supposed to take the same interest in its affairs as was shown by the Annual Committees who reported upon its condition and prospects. As these Committees were, however, an important part of the mechanism of the establishment, some general account of their organization and a few extracts from the Report of the one last appointed may not be out of place.

Whether Mr. Silas Peckham had some contrivance for packing his Committees, whether they happened always to be made up of optimists by nature, whether they were cajoled into good-humor by polite attentions, or whether they were always really delighted with the wonderful acquirements of the pupils and the admirable order of the school, it is certain that their Annual Reports were couched in language which might warm the heart of the most cold-blooded and calculating father that ever had a family of daughters to educate. In fact, these Annual Reports were considered by Mr. Peckham as his most effective advertisements.

The first thing, therefore, was to see that the Committee was made up of persons known to the public.

Some worn-out politician, in that leisurely and amiable transition-state which comes between official extinction and the paralysis which will finish him as soon as his brain gets a little softer, made an admirable Chairman for Mr. Peckham, when he had the luck to pick up such an article. Old reputations, like old fashions, are more prized in the grassy than in the stony districts. An effete celebrity, who would never be heard of again in the great places until the funeral sermon waked up his memory for one parting spasm, finds himself in full flavor of renown a little farther back from the changing winds of the sea-coast. If such a public character was not to be had, so that there was no chance of heading the Report with the name of the Honorable Mr. Somebody, the next best thing was to get the Reverend Dr. Somebody to take that conspicuous position. Then would follow two or three local worthies with Esquire after their names. If any stray literary personage from one of the great cities happened to be within reach, he was pounced upon by Mr. Silas Peckham. It was a hard case for the poor man, who had travelled a hundred miles or two to the outside suburbs after peace and unwatered milk, to be pumped for a speech in this unexpected way. It was harder still, if he had been induced to venture a few tremulous remarks, to be obliged to write them out for the "Rockland Weekly Universe," with the chance of seeing them used as an advertising certificate as long as he lived, if he lived as long as the late Dr. Waterhouse did after giving his certificate in favor of Whitwell's celebrated Cephalic Snuff.

The Report of the last Committee had been signed by the Honorable, _____ late _____ of _____, as Chairman. (It is with reluctance that the name and titles are left in blank; but our public characters are so familiarly known to the whole community that this reserve becomes necessary.) The other members of the Committee were the Reverend Mr. Butters, of a neighboring town, who was to make the prayer before the Exercises of the Exhibition, and two or three notabilities of Rockland, with geononic eyes, and glabrous, bumpless foreheads. A few extracts from the Report are subjoined:

"The Committee have great pleasure in recording their unanimous opinion, that the Institution was never in so flourishing a condition....

"The health of the pupils is excellent; the admirable quality of food supplied shows itself in their appearance; their blooming aspect excited the admiration of the Committee, and bears testimony to the assiduity of the excellent Matron.

".... moral and religious condition most encouraging, which they cannot but attribute to the personal efforts and instruction of the faithful Principal, who considers religious instruction a solemn duty which he cannot commit to other people.

".... great progress in their studies, under the intelligent superintendence of the accomplished Principal, assisted by Mr. Badger, [Mr. Langdon's predecessor,] Miss Darley, the lady who superintends the English branches, Miss Crabs, her assistant and teacher of Modern Languages, and Mr. Schneider, teacher of French, German, Latin, and Music....

"Education is the great business of the Institute. Amusements are objects of a secondary nature; but these are by no means neglected....

".... English compositions of great originality and beauty, creditable alike to the head and heart of their accomplished authors.... several poems of a very high order of merit, which would do honor to the literature of any age or country.... life-like drawings, showing great proficiency.... Many converse fluently in various modern languages.... perform the most difficult airs with the skill of professional musicians....

".... advantages unsurpassed, if equalled by those of any Institution in the country, and reflecting the highest honor on the distinguished Head of the Establishment, SILAS PECKHAM, Esquire, and his admirable Lady, the MATRON, with their worthy assistants...."

The perusal of this Report did Mr. Bernard more good than a week's vacation would have done: It gave him such a laugh as he had not had for a month. The way in which Silas Peckham had made his Committee say what he wanted them to—for he recognized a number of expressions in the Report as coming directly from the lips of his principal, and could not help thinking how cleverly he had forced his phrases, as jugglers do the particular card they wish their dupe to take—struck him as particularly neat and pleasing.

He had passed through the sympathetic and emotional stages in his new experience, and had arrived at the philosophical and practical state, which takes things coolly, and goes to work to set them right. He had breadth enough of view to see that there was nothing so very exceptional in this educational trader's dealings with his subordinates, but he had also manly feeling enough to attack the particular individual instance of wrong before him. There are plenty of dealer's in morals, as in ordinary traffic, who confine themselves to wholesale business. They leave the small necessity of their next-door neighbor to the retailers, who are poorer in statistics and general facts, but richer in the every-day charities. Mr. Bernard felt, at first, as one does who sees a gray rat steal out of a drain and begin gnawing at the bark of some tree loaded with fruit or blossoms, which he will soon girdle, if he is let alone. The first impulse is to murder him with the nearest ragged stone. Then one remembers that he is a rodent, acting after the law of his kind, and cools down and is contented to drive him off and guard the tree against his teeth for the future. As soon as this is done, one can watch his attempts at mischief with a certain amusement.

This was the kind of process Mr. Bernard had gone through. First, the indignant surprise of a generous nature, when it comes unexpectedly into relations with a mean one. Then the impulse of extermination,—a divine instinct, intended to keep down vermin of all classes to their working averages in the economy of Nature. Then a return of cheerful tolerance,—a feeling, that, if the Deity could bear with rats and sharpers, he could; with a confident trust, that, in the long run, terriers and honest men would have the upperhand, and a grateful consciousness that he had been sent just at the right time to come between a patient victim and the master who held her in peonage.

Having once made up his mind what to do, Mr. Bernard was as good-natured and hopeful as ever. He had the great advantage, from his professional training, of knowing how to recognize and deal with the nervous disturbances to which overtasked women are so liable. He saw well enough that Helen Darley would certainly kill herself or lose her wits, if he could not lighten her labors and lift off a large part of her weight of cares. The worst of it was, that she was one of those women who naturally overwork themselves, like those horses who will go at the top of their pace until they drop. Such women are dreadfully unmanageable. It is as hard reasoning with them as it would have been reasoning with Io, when she was flying over land and sea, driven by the sting of the never-sleeping gadfly.

This was a delicate, interesting game that he played. Under one innocent pretext or another, he invaded this or that special province she had made her own. He would collect the themes and have them all read and marked, answer all the puzzling questions in mathematics, make the other teachers come to him for directions, and in this way gradually took upon himself not only all the general superintendence that belonged to his office, but stole away so many of the special duties which might fairly have belonged to his assistant, that, before she knew it, she was looking better and feeling more cheerful than for many and many a month before.

When the nervous energy is depressed by any bodily cause, or exhausted by overworking, there follow effects which have often been misinterpreted by moralists, and especially by theologians. The conscience itself becomes neuralgic, sometimes actually inflamed, so that the least touch is agony. Of all liars and false accusers, a sick conscience is the most inventive and indefatigable. The devoted daughter, wife, mother, whose life has been given to unselfish labors, who has filled a place which it seems to others only an angel would make good, reproaches herself with incompetence and neglect of duty. The humble Christian, who has been a model to others, calls himself a worm of the dust on one page of his diary, and arraigns himself on the next for coming short of the perfection of an archangel.

Conscience itself requires a conscience, or nothing can be more unscrupulous. It told Saul that he did well in persecuting the Christians. It has goaded countless multitudes of various creeds to endless forms of self-torture. The cities of India are full of cripples it has made. The hill-sides of Syria are riddled with holes, where miserable hermits, whose lives it had palsied, lived and died like the vermin they harbored. Our libraries are crammed with books written by spiritual hypochondriacs, who inspected all their moral secretions a dozen times a day. They are full of interest, but they should be transferred from the shelf of the theologian to that of the medical man who makes a study of insanity.

This was the state into which too much work and too much responsibility were bringing Helen Darley, when the new master came and lifted so much of the burden that was crushing her as must be removed before she could have a chance to recover her natural elasticity and buoyancy. Many of the noblest women, suffering like her, but less fortunate in being relieved at the right moment, die worried out of life by the perpetual teasing of this inflamed, neuralgic conscience. So subtle is the line which separates the true and almost angelic sensibility of a healthy, but exalted nature, from the soreness of a soul which is sympathizing with a morbid state of the body that it is no wonder they are often confounded. And thus many good women are suffered to perish by that form of spontaneous combustion in which the victim goes on toiling day and night with the hidden fire consuming her, until all at once her cheek whitens, and, as we look upon her, she drops away, a heap of ashes. The more they overwork themselves, the more exacting becomes the sense of duty,—as the draught of the locomotive's furnace blows stronger and makes the fire burn more fiercely, the faster it spins along the track.

It is not very likely, as was said at the beginning of this chapter, that we shall trouble ourselves a great deal about the internal affairs of the Apollinean Institute. These schools are, in the nature of things, not so very unlike each other as to require a minute description for each particular one among them. They have all very much the same general features, pleasing and displeasing. All feeding-establishments have something odious about them,—from the wretched country-houses where paupers are farmed out to the lowest bidder, up to the commons-tables at colleges and even the fashionable boarding-house. A person's appetite should be at war with no other purse than his own. Young people, especially, who have a bone-factory at work in them, and have to feed the living looms of innumerable growing tissues, should be provided for, if possible, by those who love them like their own flesh and blood. Elsewhere their appetites will be sure to make them enemies, or, what are almost as bad, friends whose interests are at variance with the claims of their exacting necessities and demands.

Besides, all commercial transactions in regard to the most sacred interests of life are hateful even to those who profit by them. The clergyman, the physician, the teacher, must be paid; but each of them, if his duty be performed in the true spirit, can hardly help a shiver of disgust when money is counted out to him for administering the consolations of religion, for saving some precious life, for sowing the seeds of Christian civilization in young ingenuous souls.

And yet all these schools, with their provincial French and their mechanical accomplishments, with their cheap parade of diplomas and commencements and other public honors, have an ever fresh interest to all who see the task they are performing in our new social order. These girls are not being educated for governesses, or to be exported, with other manufactured articles, to colonies where there happens to be a surplus of males. Most of them will be wives, and every American-born husband is a possible President of these United States. Any one of these girls may be a four-years' queen. There is no sphere of human activity so exalted that she may not be called upon to fill it.

But there is another consideration of far higher interest. The education of our community to all that is

beautiful is flowing in mainly through its women, and that to a considerable extent by the aid of these large establishments, the least perfect of which do something to stimulate the higher tastes and partially instruct them. Sometimes there is, perhaps, reason to fear that girls will be too highly educated for their own happiness, if they are lifted by their culture out of the range of the practical and every-day working youth by whom they are surrounded. But this is a risk we must take. Our young men come into active life so early, that, if our girls were not educated to something beyond mere practical duties, our material prosperity would outstrip our culture; as it often does in large places where money is made too rapidly. This is the meaning, therefore, of that somewhat ambitious programme common to most of these large institutions, at which we sometimes smile, perhaps unwisely or uncharitably.

We shall take it for granted that the routine of instruction went on at the Apollinean Institute much as it does in other schools of the same class. People, young or old, are wonderfully different, if we contrast extremes in pairs. They approach much nearer, if we take them in groups of twenty. Take two separate hundreds as they come, without choosing, and you get the gamut of human character in both so completely that you can strike many chords in each which shall be in perfect unison with corresponding ones in the other. If we go a step farther, and compare the population of two villages of the same race and region, there is such a regularly graduated distribution and parallelism of character, that it seems as if Nature must turn out human beings in sets like chessmen.

It must be confessed that the position in which Mr. Bernard now found himself had a pleasing danger about it which might well justify all the fears entertained on his account by more experienced friends, when they learned that he was engaged in a Young Ladies' Seminary. The school never went on more smoothly than during the first period of his administration, after he had arranged its duties, and taken his share, and even more than his share, upon himself. But human nature does not wait for the diploma of the Apollinean Institute to claim the exercise of it, instincts and faculties. These young girls saw but little of the youth of the neighborhood. The mansion-house young men were off at college or in the cities, or making love to each other's sisters, or at any rate unavailable for some reason or other. There were a few "clerks,"—that is, young men who attended shops, commonly called "stores,"—who were fond of walking by the Institute, when they were off duty, for the sake of exchanging a word or a glance with any one of the young ladies they might happen to know, if any such were stirring abroad: crude young men, mostly, with a great many "Sirs" and "Ma'ams" in their speech, and with that style of address sometimes acquired in the retail business, as if the salesman were recommending himself to a customer, "First-rate family article, Ma'am; warranted to wear a lifetime; just one yard and three quarters in this pattern, Ma'am; sha'n't I have the pleasure?" and so forth. If there had been ever so many of them, and if they had been ever so fascinating, the quarantine of the Institute was too rigorous to allow any romantic infection to be introduced from without.

Anybody might see what would happen, with a good-looking, well-dressed, well-bred young man, who had the authority of a master, it is true, but the manners of a friend and equal, moving about among these young girls day after day, his eyes meeting theirs, his breath mingling with theirs, his voice growing familiar to them, never in any harsh tones, often soothing, encouraging, always sympathetic, with its male depth and breadth of sound among the chorus of trebles, as if it were a river in which a hundred of these little piping streamlets might lose themselves; anybody might see what would happen. Young girls wrote home to their parents that they enjoyed themselves much, this term, at the Institute, and thought they were making rapid progress in their studies. There was a great enthusiasm for the young master's reading-classes in English poetry. Some of the poor little things began to adorn themselves with an extra ribbon, or a bit of such jewelry as they had before kept for great occasions. Dear souls! they only half knew what they were doing it for. Does the bird know why its feathers grow more brilliant and its voice becomes musical in the pairing season?

And so, in the midst of this quiet inland town, where a mere accident had placed Mr. Bernard Langdon, there was a concentration of explosive materials which might at any time change its Arcadian and academic repose into a scene of dangerous commotion. What said Helen Darley, when she saw with her woman's glance that more than one girl, when she should be looking at her book, was looking over it toward the master's desk? Was her own heart warmed by any livelier feeling than gratitude, as its life began to flow with fuller pulses, and the morning sky again looked bright and the flowers recovered their lost fragrance? Was there any strange, mysterious affinity between the master and the dark girl who sat by herself? Could she call him at will by looking at him? Could it be that—? It made her shiver to think of it.—And who was that strange horseman who passed Mr. Bernard at dusk the other evening, looking so like Mephistopheles galloping hard to be in season at the witches' Sabbath-gathering? That must be the cousin of Elsie's who wants to marry her, they say. A dangerous-looking fellow for a rival, if one took a fancy to the dark girl! And who is she, and what?—by what demon is she haunted, by what taint is she blighted, by what curse is she followed, by what destiny is she marked, that her strange beauty has such a terror in it, and that hardly one shall dare to love her, and her eye glitters always, but warms for none?

Some of these questions are ours. Some were Helen Darley's. Some of them mingled with the dreams of Bernard Langdon, as he slept the night after meeting the strange horseman. In the morning he happened to be a little late in entering the schoolroom. There was something between the leaves of the Virgil which lay upon his desk. He opened it and saw a freshly gathered mountain-flower. He looked at Elsie, instinctively, involuntarily. She had another such flower on her breast.

A young girl's graceful compliment,—that is all,—no doubt,—no doubt. It was odd that the flower should have happened to be laid between the leaves of the Fourth Book of the "AENEID," and at this line,

"Incipit effari, mediaque in voce resistit."

A remembrance of an ancient superstition flashed through the master's mind, and he determined to try the Sortes Virgilianae. He shut the volume, and opened it again at a venture.—The story of Laocoon!

He read with a strange feeling of unwilling fascination, from "Horresco referees" to "Bis medium amplexi," and flung the book from him, as if its leaves had been steeped in the subtle poisons that princes die of.

CHAPTER XIII. CURIOSITY.

People will talk. 'Ciascun lo dice' is a tune that is played oftener than the national air of this country or any other.

"That 's what they say. Means to marry her, if she is his cousin. Got money himself,—that 's the story,—but wants to come and live in the old place, and get the Dudley property by and by." "Mother's folks was wealthy."—"Twenty-three to twenty-five year old."—"He a'n't more 'n twenty, or twenty-one at the outside."—"Looks as if he knew too much to be only twenty year old."—"Guess he's been through the mill,—don't look so green, anyhow, hey? Did y' ever mind that cut over his left eyebrow?"

So they gossiped in Rockland. The young fellows could make nothing of Dick Venner. He was shy and proud with the few who made advances to him. The young ladies called him handsome and romantic, but he looked at them like a many-tailed pacha who was in the habit of, ordering his wives by the dozen.

"What do you think of the young man over there at the Venners'?" said Miss Arabella Thornton to her father.

"Handsome," said the Judge, "but dangerous-looking. His face is indictable at common law. Do you know, my dear, I think there is a blank at the Sheriff's office, with a place for his name in it?"

The Judge paused and looked grave, as if he had just listened to the verdict of the jury and was going to pronounce sentence.

"Have you heard anything against him?" said the Judge's daughter.

"Nothing. But I don't like these mixed bloods and half-told stories. Besides, I have seen a good many desperate fellows at the bar, and I have a fancy they all have a look belonging to them. The worst one I ever sentenced looked a good deal like this fellow. A wicked mouth. All our other features are made for us; but a man makes his own mouth."

"Who was the person you sentenced?"

"He was a young fellow that undertook to garrote a man who had won his money at cards. The same slender shape, the same cunning, fierce look, smoothed over with a plausible air. Depend upon it, there is an expression in all the sort of people who live by their wits when they can, and by worse weapons when their wits fail them, that we old law-doctors know just as well as the medical counsellors know the marks of disease in a man's face. Dr. Kittredge looks at a man and says he is going to die; I look at another man and say he is going to be hanged, if nothing happens. I don't say so of this one, but I don't like his looks. I wonder Dudley Venner takes to him so kindly."

"It's all for Elsie's sake," said Miss Thornton. "I feel quite sure of that. He never does anything that is not meant for her in some way. I suppose it amuses her to have her cousin about the house. She rides a good deal since he has been here. Have you seen them galloping about together? He looks like my idea of a Spanish bandit on that wild horse of his."

"Possibly he has been one,—or is one," said the Judge,—smiling as men smile whose lips have often been freighted with the life and death of their fellow-creatures. "I met them riding the other day. Perhaps Dudley is right, if it pleases her to have a companion. What will happen, though, if he makes love to her? Will Elsie be easily taken with such a fellow? You young folks are supposed to know more about these matters than we middle-aged people."

"Nobody can tell. Elsie is not like anybody else. The girls who have seen most of her think she hates men, all but 'Dudley,' as she calls her father. Some of them doubt whether she loves him. They doubt whether she can love anything human, except perhaps the old black woman who has taken care of her since she was a baby. The village people have the strangest stories about her; you know what they call her?"

She whispered three words in her father's ear. The Judge changed color as she spoke, sighed deeply, and was silent as if lost in thought for a moment.

"I remember her mother," he said, "so well! A sweeter creature never lived. Elsie has something of her in her look, but those are not her mother's eyes. They were dark, but soft, as in all I ever saw of her race. Her father's are dark too, but mild, and even tender, I should say. I don't know what there is about Elsie's,—but do you know, my dear, I find myself curiously influenced by them? I have had to face a good many sharp eyes and hard ones,—murderers' eyes and pirates',—men who had to be watched in the bar, where they stood on trial, for fear they should spring on the prosecuting officers like tigers,—but I never saw such eyes as Elsie's; and yet they have a kind of drawing virtue or power about them,—I don't know what else to call it: have you never observed this?"

His daughter smiled in her turn.

"Never observed it? Why, of course, nobody could be with Elsie Venner and not observe it. There are a good many other strange things about her: did you ever notice how she dresses?"

"Why, handsomely enough, I should think," the Judge answered. "I suppose she dresses as she likes, and sends to the city for what she wants. What do you mean in particular? We men notice effects in dress, but not much in detail."

"You never noticed the colors and patterns of her dresses? You never remarked anything curious about her ornaments? Well! I don't believe you men know, half the time, whether a lady wears a nine-penny collar or a thread-lace cape worth a thousand dollars. I don't believe you know a silk dress from a bombazine one. I don't believe you can tell whether a woman is in black or in colors, unless you happen to know she is a widow. Elsie Venner has a strange taste in dress, let me tell you. She sends for the oddest patterns of stuffs, and picks out the most curious things at the jeweller's, whenever she goes to town with her father. They say the old Doctor tells him to let her have her way about such matters. Afraid of her mind, if she is contradicted, I suppose.

You've heard about her going to school at that place,—the 'Institoot,' as those people call it? They say she's bright enough in her way,—has studied at home, you know, with her father a good deal, knows some modern languages and Latin, I believe: at any rate, she would have it so,—she must go to the 'Institoot.' They have a very good female teacher there, I hear; and the new master, that young Mr. Langdon, looks and talks like a well-educated young man. I wonder what they 'll make of Elsie, between them!"

So they talked at the Judge's, in the calm, judicial-looking mansion-house, in the grave, still library, with the troops of wan-hued law-books staring blindly out of their titles at them as they talked, like the ghosts of dead attorneys fixed motionless and speechless, each with a thin, golden film over his unwinking eyes.

In the mean time, everything went on quietly enough after Cousin Richard's return. A man of sense,—that is, a man who knows perfectly well that a cool head is worth a dozen warm hearts in carrying the fortress of a woman's affections, (not yours, "Astarte," nor yours, "Viola,")—who knows that men are rejected by women every day because they, the men, love them, and are accepted every day because they do not, and therefore can study the arts of pleasing,—a man of sense, when he finds he has established his second parallel too soon, retires quietly to his first, and begins working on his covered ways again. The whole art of love may be read in any Encyclopaedia under the title Fortification, where the terms just used are explained. After the little adventure of the necklace, Dick retreated at once to his first parallel. Elsie loved riding,—and would go off with him on a gallop now and then. He was a master of all those strange Indian horseback-feats which shame the tricks of the circus-riders, and used to astonish and almost amuse her sometimes by disappearing from his saddle, like a phantom horseman lying flat against the side of the bounding creature that bore him, as if he were a hunting leopard with his claws in the horse's flank and flattening himself out against his heaving ribs. Elsie knew a little Spanish too, which she had learned from the young person who had taught her dancing, and Dick enlarged her vocabulary with a few soft phrases, and would sing her a song sometimes, touching the air upon an ancient-looking guitar they had found with the ghostly things in the garret,—a quaint old instrument, marked E. M. on the back, and supposed to have belonged to a certain Elizabeth Mascarene, before mentioned in connection with a work of art,—a fair, dowerless lady, who smiled and sung and faded away, unwedded, a hundred years ago, as dowerless ladies, not a few, are smiling and singing and fading now,—God grant each of them His love,—and one human heart as its interpreter!

As for school, Elsie went or stayed away as she liked. Sometimes, when they thought she was at her desk in the great schoolroom, she would be on The Mountain,—alone always. Dick wanted to go with her, but she would never let him. Once, when she had followed the zigzag path a little way up, she looked back and caught a glimpse of him following her. She turned and passed him without a word, but giving him a look which seemed to make the scars on his wrist tingle, went to her room, where she locked herself up, and did not come out again till evening, Old Sophy having brought her food, and set it down, not speaking, but looking into her eyes inquiringly, like a dumb beast trying to feel out his master's will in his face. The evening was clear and the moon shining. As Dick sat at his chamber-window, looking at the mountain-side, he saw a gray-dressed figure flit between the trees and steal along the narrow path which led upward. Elsie's pillow was unpressed that night, but she had not been missed by the household,—for Dick knew enough to keep his own counsel. The next morning she avoided him and went off early to school. It was the same morning that the young master found the flower between the leaves of his Virgil.

The girl got over her angry fit, and was pleasant enough with her cousin for a few days after this; but she shunned rather than sought him. She had taken a new interest in her books, and especially in certain poetical readings which the master conducted with the elder scholars. This gave Master Langdon a good chance to study her ways when her eye was on her book, to notice the inflections of her voice, to watch for any expression of her sentiments; for, to tell the truth, he had a kind of fear that the girl had taken a fancy to him, and, though she interested him, he did not wish to study her heart from the inside.

The more he saw her, the more the sadness of her beauty wrought upon him. She looked as if she might hate, but could not love. She hardly smiled at anything, spoke rarely, but seemed to feel that her natural power of expression lay all in her bright eyes, the force of which so many had felt, but none perhaps had tried to explain to themselves. A person accustomed to watch the faces of those who were ailing in body or mind, and to search in every line and tint for some underlying source of disorder, could hardly help analyzing the impression such a face produced upon him. The light of those beautiful eyes was like the lustre of ice; in all her features there was nothing of that human warmth which shows that sympathy has reached the soul beneath the mask of flesh it wears. The look was that of remoteness, of utter isolation. There was in its stony apathy, it seemed to him, the pathos which we find in the blind who show no film or speck over the organs of sight; for Nature had meant her to be lovely, and left out nothing but love. And yet the master could not help feeling that some instinct was working in this girl which was in some way leading her to seek his presence. She did not lift her glittering eyes upon him as at first. It seemed strange that she did not, for they were surely her natural weapons of conquest. Her color did not come and go like that of young girls under excitement. She had a clear brunette complexion, a little sun-touched, it may be,—for the master noticed once, when her necklace was slightly displaced, that a faint ring or band of a little lighter shade than the rest of the surface encircled her neck. What was the slight peculiarity of her enunciation, when she read? Not a lisp, certainly, but the least possible imperfection in articulating some of the lingual sounds,—just enough to be noticed at first, and quite forgotten after being a few times heard.

Not a word about the flower on either side. It was not uncommon for the schoolgirls to leave a rose or pink or wild flower on the teacher's desk. Finding it in the Virgil was nothing, after all; it was a little delicate flower, which looked as if it were made to press, and it was probably shut in by accident at the particular place where he found it. He took it into his head to examine it in a botanical point of view. He found it was not common,—that it grew only in certain localities,—and that one of these was among the rocks of the eastern spur of The Mountain.

It happened to come into his head how the Swiss youth climb the sides of the Alps to find the flower called the Edelweiss for the maidens whom they wish to please. It is a pretty fancy, that of scaling some dangerous height before the dawn, so as to gather the flower in its freshness, that the favored maiden may wear it to church on Sunday morning, a proof at once of her lover's devotion and his courage. Mr. Bernard determined

to explore the region where this flower was said to grow, that he might see where the wild girl sought the blossoms of which Nature was so jealous.

It was on a warm, fair Saturday afternoon that he undertook his land-voyage of discovery. He had more curiosity, it may be, than he would have owned; for he had heard of the girl's wandering habits, and the guesses about her sylvan haunts, and was thinking what the chances were that he should meet her in some strange place, or come upon traces of her which would tell secrets she would not care to have known.

The woods are all alive to one who walks through them with his mind in an excited state, and his eyes and ears wide open. The trees are always talking, not merely whispering with their leaves, (for every tree talks to itself in that way, even when it stands alone in the middle of a pasture,) but grating their boughs against each other, as old horn-handed farmers press their dry, rustling palms together, dropping a nut or a leaf or a twig, clicking to the tap of a woodpecker, or rustling as a squirrel flashes along a branch. It was now the season of singing-birds, and the woods were haunted with mysterious, tender music. The voices of the birds which love the deeper shades of the forest are sadder than those of the open fields: these are the nuns who have taken the veil, the hermits that have hidden themselves away from the world and tell their griefs to the infinite listening Silences of the wilderness,—for the one deep inner silence that Nature breaks with her fitful superficial sounds becomes multiplied as the image of a star in ruffled waters. Strange! The woods at first convey the impression of profound repose, and yet, if you watch their ways with open ear, you find the life which is in them is restless and nervous as that of a woman: the little twigs are crossing and twining and separating like slender fingers that cannot be still; the stray leaf is to be flattened into its place like a truant curl; the limbs sway and twist, impatient of their constrained attitude; and the rounded masses of foliage swell upward and subside from time to time with long soft sighs, and, it may be, the falling of a few rain-drops which had lain hidden among the deeper shadows. I pray you, notice, in the sweet summer days which will soon see you among the mountains, this inward tranquillity that belongs to the heart of the woodland, with this nervousness, for I do not know what else to call it, of outer movement. One would say, that Nature, like untrained persons, could not sit still without nestling about or doing something with her limbs or features, and that high breeding was only to be looked for in trim gardens, where the soul of the trees is ill at ease perhaps, but their manners are unexceptionable, and a rustling branch or leaf falling out of season is an indecorum. The real forest is hardly still except in the Indian summer; then there is death in the house, and they are waiting for the sharp shrunken months to come with white raiment for the summer's burial.

There were many hemlocks in this neighborhood, the grandest and most solemn of all the forest-trees in the mountain regions. Up to a certain period of growth they are eminently beautiful, their boughs disposed in the most graceful pagoda-like series of close terraces, thick and dark with green crystalline leaflets. In spring the tender shoots come out of a paler green, finger-like, as if they were pointing to the violets at their feet. But when the trees have grown old, and their rough boles measure a yard and more through their diameter, they are no longer beautiful, but they have a sad solemnity all their own, too full of meaning to require the heart's comment to be framed in words. Below, all their earthward-looking branches are sapless and shattered, splintered by the weight of many winters' snows; above, they are still green and full of life, but their summits overtop all the deciduous trees around them, and in their companionship with heaven they are alone. On these the lightning loves to fall. One such Mr. Bernard saw,—or rather, what had been one such; for the bolt had torn the tree like an explosion from within, and the ground was strewed all around the broken stump with flakes of rough bark and strips and chips of shivered wood, into which the old tree had been rent by the bursting rocket from the thunder-cloud.

—The master had struck up The Mountain obliquely from the western side of the Dudley mansion-house. In this way he ascended until he reached a point many hundred feet above the level of the plain, and commanding all the country beneath and around. Almost at his feet he saw the mansion-house, the chimney standing out of the middle of the roof, or rather, like a black square hole in it,—the trees almost directly over their stems, the fences as lines, the whole nearly as an architect would draw a ground-plan of the house and the inclosures round it. It frightened him to see how the huge masses of rock and old forest-growths hung over the home below. As he descended a little and drew near the ledge of evil name, he was struck with the appearance of a long narrow fissure that ran parallel with it and above it for many rods, not seemingly of very old standing,—for there were many fibres of roots which had evidently been snapped asunder when the rent took place, and some of which were still succulent in both separated portions.

Mr. Bernard had made up his mind, when he set forth, not to come back before he had examined the dreaded ledge. He had half persuaded himself that it was scientific curiosity. He wished to examine the rocks, to see what flowers grew there, and perhaps to pick up an adventure in the zoological line; for he had on a pair of high, stout boots, and he carried a stick in his hand, which was forked at one extremity, so as to be very convenient to hold down a crotalus with, if he should happen to encounter one. He knew the aspect of the ledge from a distance; for its bald and leprous-looking declivities stood out in their nakedness from the wooded sides of The Mountain, when this was viewed from certain points of the village. But the nearer aspect of the blasted region had something frightful in it. The cliffs were water-worn, as if they had been gnawed for thousands of years by hungry waves. In some places they overhung their base so as to look like leaning towers which might topple over at any minute. In other parts they were scooped into niches or caverns. Here and there they were cracked in deep fissures, some of them of such width that one might enter them, if he cared to run the risk of meeting the regular tenants, who might treat him as an intruder.

Parts of the ledge were cloven perpendicularly, with nothing but cracks or slightly projecting edges in which or on which a foot could find hold. High up on one of these precipitous walls of rock he saw some tufts of flowers, and knew them at once for the same that he had found between the leaves of his Virgil. Not there, surely! No woman would have clung against that steep, rough parapet to gather an idle blossom. And yet the master looked round everywhere, and even up the side of that rock, to see if there were no signs of a woman's footstep. He peered about curiously, as if his eye might fall on some of those fragments of dress which women leave after them, whenever they run against each other or against anything else,—in crowded ballrooms, in the brushwood after picnics, on the fences after rambles, scattered round over every place which has witnessed an act of violence, where rude hands have been laid upon them. Nothing—Stop, though,

one moment. That stone is smooth and polished, as if it had been somewhat worn by the pressure of human feet. There is one twig broken among the stems of that clump of shrubs. He put his foot upon the stone and took hold of the close-clinging shrub. In this way he turned a sharp angle of the rock and found himself on a natural platform, which lay in front of one of the wider fissures,—whether the mouth of a cavern or not he could not yet tell. A flat stone made an easy seat, upon which he sat down, as he was very glad to do, and looked mechanically about him. A small fragment splintered from the rock was at his feet. He took it and threw it down the declivity a little below where he sat. He looked about for a stem or a straw of some kind to bite upon,—a country-instinct,—relic, no doubt, of the old vegetable-feeding habits of Eden. Is that a stem or a straw? He picked it up. It was a hair-pin.

To say that Mr. Langdon had a strange sort of thrill shoot through him at the sight of this harmless little implement would be a statement not at variance with the fact of the case. That smooth stone had been often trodden, and by what foot he could not doubt. He rose up from his seat to look round for other signs of a woman's visits. What if there is a cavern here, where she has a retreat, fitted up, perhaps, as anchorites fitted their cells,—nay, it may be, carpeted and mirrored, and with one of those tiger-skins for a couch, such as they, say the girl loves to lie on? Let us look, at any rate.

Mr. Bernard walked to the mouth of the cavern or fissure and looked into it. His look was met by the glitter of two diamond eyes, small, sharp, cold, shining out of the darkness, but gliding with a smooth, steady motion towards the light, and himself. He stood fixed, struck dumb, staring back into them with dilating pupils and sudden numbness of fear that cannot move, as in the terror of dreams. The two sparks of light came forward until they grew to circles of flame, and all at once lifted themselves up as if in angry surprise. Then for the first time thrilled in Mr. Bernard's ears the dreadful sound that nothing which breathes, be it man or brute, can hear unmoved,—the long, loud, stinging whirr, as the huge, thick bodied reptile shook his many-jointed rattle and adjusted his loops for the fatal stroke. His eyes were drawn as with magnets toward the circles of flame. His ears rung as in the overture to the swooning dream of chloroform. Nature was before man with her anaesthetics: the cat's first shake stupefies the mouse; the lion's first shake deadens the man's fear and feeling; and the crotalus paralyzes before he strikes. He waited as in a trance,—waited as one that longs to have the blow fall, and all over, as the man who shall be in two pieces in a second waits for the axe to drop. But while he looked straight into the flaming eyes, it seemed to him that they were losing their light and terror, that they were growing tame and dull; the charm was dissolving, the numbness was passing away, he could move once more. He heard a light breathing close to his ear, and, half turning, saw the face of Elsie Venner, looking motionless into the reptile's eyes, which had shrunk and faded under the stronger enchantment of her own.

CHAPTER XIV. FAMILY SECRETS.

It was commonly understood in the town of Rockland that Dudley Venner had had a great deal of trouble with that daughter of his, so handsome, yet so peculiar, about whom there were so many strange stories. There was no end to the tales which were told of her extraordinary doings. Yet her name was never coupled with that of any youth or man, until this cousin had provoked remark by his visit; and even then it was oftener in the shape of wondering conjectures whether he would dare to make love to her, than in any pretended knowledge of their relations to each other, that the public tongue exercised its village-prerogative of tattle.

The more common version of the trouble at the mansion-house was this: Elsie was not exactly in her right mind. Her temper was singular, her tastes were anomalous, her habits were lawless, her antipathies were many and intense, and she was liable to explosions of ungovernable anger. Some said that was not the worst of it. At nearly fifteen years old, when she was growing fast, and in an irritable state of mind and body, she had had a governess placed over her for whom she had conceived an aversion. It was whispered among a few who knew more of the family secrets than others, that, worried and exasperated by the presence and jealous oversight of this person, Elsie had attempted to get finally rid of her by unlawful means, such as young girls have been known to employ in their straits, and to which the sex at all ages has a certain instinctive tendency, in preference to more palpable instruments for the righting of its wrongs. At any rate, this governess had been taken suddenly ill, and the Doctor had been sent for at midnight. Old Sophy had taken her master into a room apart, and said a few words to him which turned him as white as a sheet. As soon as he recovered himself, he sent Sophy out, called in the old Doctor, and gave him some few hints, on which he acted at once, and had the satisfaction of seeing his patient out of danger before he left in the morning. It is proper to say, that, during the following days, the most thorough search was made in every nook and cranny of those parts of the house which Elsie chiefly haunted, but nothing was found which might be accused of having been the intentional cause of the probably accidental sudden illness of the governess. From this time forward her father was never easy. Should he keep her apart, or shut her up, for fear of risk to others, and so lose every chance of restoring her mind to its healthy tone by kindly influences and intercourse with wholesome natures? There was no proof, only presumption, as to the agency of Elsie in the matter referred to. But the doubt was worse, perhaps, than certainty would have been,—for then he would have known what to do.

He took the old Doctor as his adviser. The shrewd old man listened to the father's story, his explanations of possibilities, of probabilities, of dangers, of hopes. When he had got through, the Doctor looked him in the face steadily, as if he were saying, Is that all?

The father's eyes fell. This was not all. There was something at the bottom of his soul which he could not bear to speak of,—nay, which, as often as it reared itself through the dark waves of unworded consciousness into the breathing air of thought, he trod down as the ruined angels tread down a lost soul, trying to come up out of the seething sea of torture. Only this one daughter! No! God never would have ordained such a thing.

There was nothing ever heard of like it; it could not be; she was ill,—she would outgrow all these singularities; he had had an aunt who was peculiar; he had heard that hysteric girls showed the strangest forms of moral obliquity for a time, but came right at last. She would change all at once, when her health got more firmly settled in the course of her growth. Are there not rough buds that open into sweet flowers? Are there not fruits, which, while unripe, are not to be tasted or endured, which mature into the richest taste and fragrance? In God's good time she would come to her true nature; her eyes would lose that frightful, cold glitter; her lips would not feel so cold when she pressed them against his cheek; and that faint birth-mark, her mother swooned when she first saw, would fade wholly out,—it was less marked, surely, now than it used to be!

So Dudley Venner felt, and would have thought, if he had let his thoughts breathe the air of his soul. But the Doctor read through words and thoughts and all into the father's consciousness. There are states of mind which may be shared by two persons in presence of each other, which remain not only unworded, but unthoughted, if such a word may be coined for our special need. Such a mutually interpenetrative consciousness there was between the father and the old physician. By a common impulse, both of them rose in a mechanical way and went to the western window, where each started, as he saw the other's look directed towards the white stone which stood in the midst of the small plot of green turf.

The Doctor had, for a moment, forgotten himself but he looked up at the clouds, which were angry, and said, as if speaking of the weather, "It is dark now, but we hope it will clear up by and by. There are a great many more clouds than rains, and more rains than strokes of lightning, and more strokes of lightning than there are people killed. We must let this girl of ours have her way, as far as it is safe. Send away this woman she hates, quietly. Get her a foreigner for a governess, if you can,—one that can dance and sing and will teach her. In the house old Sophy will watch her best. Out of it you must trust her, I am afraid,—for she will not be followed round, and she is in less danger than you think. If she wanders at night, find her, if you can; the woods are not absolutely safe. If she will be friendly with any young people, have them to see her,—young men especially. She will not love any one easily, perhaps not at all; yet love would be more like to bring her right than anything else. If any young person seems in danger of falling in love with her, send him to me for counsel."

Dry, hard advice, but given from a kind hewn, with a moist eye, and in tones which tried to be cheerful and were full of sympathy. This advice was the key to the more than indulgent treatment which, as we have seen, the girl had received from her father and all about her. The old Doctor often came in, in the kindest, most natural sort of way, got into pleasant relations with Elsie by always treating her in the same easy manner as at the great party, encouraging all her harmless fancies, and rarely reminding her that he was a professional adviser, except when she came out of her own accord, as in the talk they had at the party, telling him of some wild trick she had been playing.

"Let her go to the girls' school, by all means," said the Doctor, when she had begun to talk about it. "Possibly she may take to some of the girls or of the teachers. Anything to interest her. Friendship, love, religion, whatever will set her nature at work. We must have headway on, or there will be no piloting her. Action first of all, and then we will see what to do with it."

So, when Cousin Richard came along, the Doctor, though he did not like his looks any too well, told her father to encourage his staying for a time. If she liked him, it was good; if she only tolerated him, it was better than nothing.

"You know something about that nephew of yours, during these last years, I suppose?" the Doctor said. "Looks as if he had seen life. Has a scar that was made by a sword-cut, and a white spot on the side of his neck that looks like a bullet-mark. I think he has been what folks call a 'hard customer.'"

Dudley Venner owned that he had heard little or nothing of him of late years. He had invited himself, and of course it would not be decent not to receive him as a relative. He thought Elsie rather liked having him about the house for a while. She was very capricious,—acted as if she fancied him one day and disliked him the next. He did not know,—but sometimes thought that this nephew of his might take a serious liking to Elsie. What should he do about it, if it turned out so?

The Doctor lifted his eyebrows a little. He thought there was no fear. Elsie was naturally what they call a man-hater, and there was very little danger of any sudden passion springing up between two such young persons. Let him stay awhile; it gives her something to think about. So he stayed awhile, as we have seen.

The more Mr. Richard became acquainted with the family,—that is, with the two persons of whom it consisted,—the more favorably the idea of a permanent residence in the mansion-house seemed to impress him. The estate was large,—hundreds of acres, with woodlands and meadows of great value. The father and daughter had been living quietly, and there could not be a doubt that the property which came through the Dudleys must have largely increased of late years. It was evident enough that they had an abundant income, from the way in which Elsie's caprices were indulged. She had horses and carriages to suit herself; she sent to the great city for everything she wanted in the way of dress. Even her diamonds—and the young man knew something about these gems—must be of considerable value; and yet she wore them carelessly, as it pleased her fancy. She had precious old laces, too, almost worth their weight in diamonds; laces which had been snatched from altars in ancient Spanish cathedrals during the wars, and which it would not be safe to leave a duchess alone with for ten minutes. The old house was fat with the deposits of rich generations which had gone before. The famous "golden" fire-set was a purchase of one of the family who had been in France during the Revolution, and must have come from a princely palace, if not from one of the royal residences. As for silver, the iron closet which had been made in the dining-room wall was running over with it: tea-kettles, coffee-pots, heavy-lidded tankards, chafing-dishes, punch-bowls, all that all the Dudleys had ever used, from the caudle-cup which used to be handed round the young mother's chamber, and the porringer from which children scooped their bread-and-milk with spoons as solid as ingots, to that ominous vessel, on the upper shelf, far back in the dark, with a spout like a slender italic S, out of which the sick and dying, all along the last century, and since, had taken the last drops that passed their lips. Without being much of a scholar, Dick could see well enough, too, that the books in the library had been ordered from the great London houses, whose imprint they bore, by persons who knew what was best and meant to have it. A man does not require

much learning to feel pretty sure, when he takes one of those solid, smooth, velvet-leaved quartos, say a Baskerville Addison, for instance, bound in red morocco, with a margin of gold as rich as the embroidery of a prince's collar, as Vandyck drew it,—he need not know much to feel pretty sure that a score or two of shelves full of such books mean that it took a long purse, as well as a literary taste, to bring them together.

To all these attractions the mind of this thoughtful young gentleman may be said to have been fully open. He did not disguise from himself, however, that there were a number of drawbacks in the way of his becoming established as the heir of the Dudley mansion-house and fortune. In the first place, Cousin Elsie was, unquestionably, very piquant, very handsome, game as a hawk, and hard to please, which made her worth trying for. But then there was something about Cousin Elsie,—(the small, white scars began stinging, as he said this to himself, and he pushed his sleeve up to look at them)—there was something about Cousin Elsie he couldn't make out. What was the matter with her eyes, that they sucked your life out of you in that strange way? What did she always wear a necklace for? Had she some such love-token on her neck as the old Don's revolver had left on his? How safe would anybody feel to live with her? Besides, her father would last forever, if he was left to himself. And he may take it into his head to marry again. That would be pleasant!

So talked Cousin Richard to himself, in the calm of the night and in the tranquillity of his own soul. There was much to be said on both sides. It was a balance to be struck after the two columns were added up. He struck the balance, and came to the conclusion that he would fall in love with Elsie Venner.

The intelligent reader will not confound this matured and serious intention of falling in love with the young lady with that mere impulse of the moment before mentioned as an instance of making love. On the contrary, the moment Mr. Richard had made up his mind that he should fall in love with Elsie, he began to be more reserved with her, and to try to make friends in other quarters. Sensible men, you know, care very little what a girl's present fancy is. The question is: Who manages her, and how can you get at that person or those persons? Her foolish little sentiments are all very well in their way; but business is business, and we can't stop for such trifles. The old political wire-pullers never go near the man they want to gain, if they can help it; they find out who his intimates and managers are, and work through them. Always handle any positively electrical body, whether it is charged with passion or power, with some non-conductor between you and it, not with your naked hands. —The above were some of the young gentleman's working axioms; and he proceeded to act in accordance with them.

He began by paying his court more assiduously to his uncle. It was not very hard to ingratiate himself in that quarter; for his manners were insinuating, and his precocious experience of life made him entertaining. The old neglected billiard-room was soon put in order, and Dick, who was a magnificent player, had a series of games with his uncle, in which, singularly enough, he was beaten, though his antagonist had been out of play for years. He evinced a profound interest in the family history, insisted on having the details of its early alliances, and professed a great pride in it, which he had inherited from his father, who, though he had allied himself with the daughter of an alien race, had yet chosen one with the real azure blood in her veins, as proud as if she had Castile and Aragon for her dower and the Cid for her grand-papa. He also asked a great deal of advice, such as inexperienced young persons are in need of, and listened to it with due reverence.

It is not very strange that uncle Dudley took a kinder view of his nephew than the Judge, who thought he could read a questionable history in his face,—or the old Doctor, who knew men's temperaments and organizations pretty well, and had his prejudices about races, and could tell an old sword-cut and a ballet-mark in two seconds from a scar got by falling against the fender, or a mark left by king's evil. He could not be expected to share our own prejudices; for he had heard nothing of the wild youth's adventures, or his scamper over the Pampas at short notice. So, then, "Richard Venner, Esquire, guest of Dudley Venner, Esquire, at his elegant mansion," prolonged his visit until his presence became something like a matter of habit, and the neighbors began to think that the fine old house would be illuminated before long for a grand marriage.

He had done pretty well with the father: the next thing was to gain over the nurse. Old Sophy was as cunning as a red fox or a gray woodchuck. She had nothing in the world to do but to watch Elsie; she had nothing to care for but this girl and her father. She had never liked Dick too well; for he used to make faces at her and tease her when he was a boy, and now he was a man there was something about him—she could not tell what—that made her suspicious of him. It was no small matter to get her over to his side.

The jet-black Africans know that gold never looks so well as on the foil of their dark skins. Dick found in his trunk a string of gold beads, such as are manufactured in some of our cities, which he had brought from the gold region of Chili,—so he said,—for the express purpose of giving them to old Sophy. These Africans, too, have a perfect passion for gay-colored clothing; being condemned by Nature, as it were, to a perpetual mourning-suit, they love to enliven it with all sorts of variegated stuffs of sprightly patterns, aflame with red and yellow. The considerate young man had remembered this, too, and brought home for Sophy some handkerchiefs of rainbow hues, which had been strangely overlooked till now, at the bottom of one of his trunks. Old Sophy took his gifts, but kept her black eyes open and watched every movement of the young people all the more closely. It was through her that the father had always known most of the actions and tendencies of his daughter.

In the mean time the strange adventure on The Mountain had brought the young master into new relations with Elsie. She had led him out of, danger; perhaps saved him from death by the strange power she exerted. He was grateful, and yet shuddered at the recollection of the whole scene. In his dreams he was pursued by the glare of cold glittering eyes, whether they were in the head of a woman or of a reptile he could not always tell, the images had so run together. But he could not help seeing that the eyes of the young girl had been often, very often, turned upon him when he had been looking away, and fell as his own glance met them. Helen Darley told him very plainly that this girl was thinking about him more than about her book. Dick Venner found she was getting more constant in her attendance at school. He learned, on inquiry, that there was a new master, a handsome young man. The handsome young man would not have liked the look that, came over Dick's face when he heard this fact mentioned.

In short, everything was getting tangled up together, and there would be no chance of disentangling the threads in this chapter.

CHAPTER XV. PHYSIOLOGICAL.

If Master Bernard felt a natural gratitude to his young pupil for saving him from an imminent peril, he was in a state of infinite perplexity to know why he should have needed such aid. He, an active, muscular, courageous, adventurous young fellow, with—a stick in his hand, ready to hold down the Old Serpent himself, if he had come in his way, to stand still, staring into those two eyes, until they came up close to him, and the strange, terrible sound seemed to freeze him stiff where he stood,—what was the meaning of it? Again, what was the influence this girl had seemingly exerted, under which the venomous creature had collapsed in such a sudden way? Whether he had been awake or dreaming he did not feel quite sure. He knew he had gone up The Mountain, at any rate; he knew he had come down The Mountain with the girl walking just before him;—there was no forgetting her figure, as she walked on in silence, her braided locks falling a little, for want of the lost hairpin, perhaps, and looking like a wreathing coil of—Shame on such fancies!—to wrong that supreme crowning gift of abounding Nature, a rush of shining black hair, which, shaken loose, would cloud her all round, like Godiva, from brow to instep! He was sure he had sat down before the fissure or cave. He was sure that he was led softly away from the place, and that it was Elsie who had led him. There was the hair-pin to show that so far it was not a dream. But between these recollections came a strange confusion; and the more the master thought, the more he was perplexed to know whether she had waked him, sleeping, as he sat on the stone, from some frightful dream, such as may come in a very brief slumber, or whether she had bewitched him into a trance with those strange eyes of hers, or whether it was all true, and he must solve its problem as he best might.

There was another recollection connected with this mountain adventure. As they approached the mansion-house, they met a young man, whom Mr. Bernard remembered having seen once at least before, and whom he had heard of as a cousin of the young girl. As Cousin Richard Venner, the person in question, passed them, he took the measure, so to speak, of Mr. Bernard, with a look so piercing, so exhausting, so practised, so profoundly suspicious, that the young master felt in an instant that he had an enemy in this handsome youth,—an enemy, too, who was like to be subtle and dangerous.

Mr. Bernard had made up his mind, that, come what might, enemy or no enemy, live or die, he would solve the mystery of Elsie Venner, sooner or later. He was not a man to be frightened out of his resolution by a scowl, or a stiletto, or any unknown means of mischief, of which a whole armory was hinted at in that passing look Dick Venner had given him. Indeed, like most adventurous young persons, he found a kind of charm in feeling that there might be some dangers in the way of his investigations. Some rumors which had reached him about the supposed suitor of Elsie Venner, who was thought to be a desperate kind of fellow, and whom some believed to be an unscrupulous adventurer, added a curious, romantic kind of interest to the course of physiological and psychological inquiries he was about instituting.

The afternoon on The Mountain was still upper-most in his mind. Of course he knew the common stories—about fascination. He had once been himself an eyewitness of the charming of a small bird by one of our common harmless serpents. Whether a human being could be reached by this subtle agency, he had been skeptical, notwithstanding the mysterious relation generally felt to exist between man and this creature, “cursed above all cattle and above every beast of the field,”—a relation which some interpret as the fruit of the curse, and others hold to be so instinctive that this animal has been for that reason adopted as the natural symbol of evil. There was another solution, however, supplied him by his professional reading. The curious work of Mr. Braid of Manchester had made him familiar with the phenomena of a state allied to that produced by animal magnetism, and called by that writer by the name of hypnotism. He found, by referring to his note-book, the statement was, that, by fixing the eyes on a bright object so placed as to produce a strain upon the eyes and eyelids, and to maintain a steady fixed stare, there comes on in a few seconds a very singular condition, characterized by muscular rigidity and inability to move, with a strange exaltation of most of the senses, and generally a closure of the eyelids,—this condition being followed by torpor.

Now this statement of Mr. Braid's, well known to the scientific world, and the truth of which had been confirmed by Mr. Bernard in certain experiments he had instituted, as it has been by many other experimenters, went far to explain the strange impressions, of which, waking or dreaming, he had certainly been the subject. His nervous system had been in a high state of exaltation at the time. He remembered how the little noises that made rings of sound in the silence of the woods, like pebbles dropped in still waters, had reached his inner consciousness. He remembered that singular sensation in the roots of the hair, when he came on the traces of the girl's presence, reminding him of a line in a certain poem which he had read lately with a new and peculiar interest. He even recalled a curious evidence of exalted sensibility and irritability, in the twitching of the minute muscles of the internal ear at every unexpected sound, producing an odd little snap in the middle of the head, which proved to him that he was getting very nervous.

The next thing was to find out whether it were possible that the venomous creature's eyes should have served the purpose of Mr. Braid's “bright object” held very close to the person experimented on, or whether they had any special power which could be made the subject of exact observation.

For this purpose Mr. Bernard considered it necessary to get a live crotalus or two into his possession, if this were possible. On inquiry, he found that there was a certain family living far up the mountainside, not a mile from the ledge, the members of which were said to have taken these creatures occasionally, and not to be in any danger, or at least in any fear, of being injured by them. He applied to these people, and offered a reward sufficient to set them at work to capture some of these animals, if such a thing were possible.

A few days after this, a dark, gypsy-looking woman presented herself at his door. She held up her apron as if it contained something precious in the bag she made with it.

“Y' wanted some rattlers,” said the woman. “Here they be.”

She opened her apron and showed a coil of rattlesnakes lying very peaceably in its fold. They lifted their heads up, as if they wanted to see what was going on, but showed no sign of anger.

"Are you crazy?" said Mr. Bernard. "You're dead in an hour, if one of those creatures strikes you!"

He drew back a little, as he spoke; it might be simple disgust; it might be fear; it might be what we call antipathy, which is different from either, and which will sometimes show itself in paleness, and even faintness, produced by objects perfectly harmless and not in themselves offensive to any sense.

"Lord bless you," said the woman, "rattlers never touches our folks. I'd jest 'z lieves handle them creaturs as so many striped snakes."

So saying, she put their heads down with her hand, and packed them together in her apron as if they had been bits of cart-rope.

Mr. Bernard had never heard of the power, or, at least, the belief in the possession of a power by certain persons, which enables them to handle these frightful reptiles with perfect impunity. The fact, however, is well known to others, and more especially to a very distinguished Professor in one of the leading institutions of the great city of the land, whose experiences in the neighborhood of Graylock, as he will doubtless inform the curious, were very much like those of the young master.

Mr. Bernard had a wired cage ready for his formidable captives, and studied their habits and expression with a strange sort of interest. What did the Creator mean to signify, when he made such shapes of horror, and, as if he had doubly cursed this envenomed wretch, had set a mark upon him and sent him forth the Cain of the brotherhood of serpents? It was a very curious fact that the first train of thoughts Mr. Bernard's small menagerie suggested to him was the grave, though somewhat worn, subject of the origin of evil. There is now to be seen in a tall glass jar, in the Museum of Comparative Anatomy at Cantabridge in the territory of the Massachusetts, a huge crotalus, of a species which grows to more frightful dimensions than our own, under the hotter skies of South America. Look at it, ye who would know what is the tolerance, the freedom from prejudice, which can suffer such an incarnation of all that is devilish to lie unharmed in the cradle of Nature! Learn, too, that there are many things in this world which we are warned to shun, and are even suffered to slay, if need be, but which we must not hate, unless we would hate what God loves and cares for.

Whatever fascination the creature might exercise in his native haunts, Mr. Bernard found himself not in the least nervous or affected in any way while looking at his caged reptiles. When their cage was shaken, they would lift their heads and spring their rattles; but the sound was by no means so formidable to listen to as when it reverberated among the chasms of the echoing rocks. The expression of the creatures was watchful, still, grave, passionless, fate-like, suggesting a cold malignity which seemed to be waiting for its opportunity. Their awful, deep-cut mouths were sternly closed over the long hollow fangs which rested their roots against the swollen poison-gland, where the venom had been hoarding up ever since the last stroke had emptied it. They never winked, for ophidians have no movable eyelids, but kept up that awful fixed stare which made the two unwinking gladiators the survivors of twenty pairs matched by one of the Roman Emperors, as Pliny tells us, in his "Natural History." Their eyes did not flash, but shone with a cold still light. They were of a pale-golden or straw color, horrible to look into, with their stony calmness, their pitiless indifference, hardly enlivened by the almost imperceptible vertical slit of the pupil, through which Death seemed to be looking out like the archer behind the long narrow loop-hole in a blank turret-wall. On the whole, the caged reptiles, horrid as they were, hardly matched his recollections of what he had seen or dreamed he save at the cavern. These looked dangerous enough, but yet quiet. A treacherous stillness, however,—as the unfortunate New York physician found, when he put his foot out to wake up the torpid creature, and instantly the fang flashed through his boot, carrying the poison into his blood, and death with it.

Mr. Bernard kept these strange creatures, and watched all their habits with a natural curiosity. In any collection of animals the venomous beasts are looked at with the greatest interest, just as the greatest villains are most run after by the unknown public. Nobody troubles himself for a common striped snake or a petty thief, but a cobra or a wife-killer is a centre of attraction to all eyes. These captives did very little to earn their living, but, on the other hand, their living was not expensive, their diet being nothing but air, au naturel. Months and months these creatures will live and seem to thrive well enough, as any showman who has then in his menagerie will testify, though they never touch anything to eat or drink.

In the mean time Mr. Bernard had become very curious about a class of subjects not treated of in any detail in those text-books accessible in most country-towns, to the exclusion of the more special treatises, and especially of the rare and ancient works found on the shelves of the larger city-libraries. He was on a visit to old Dr. Kittredge one day, having been asked by him to call in for a few moments as soon as convenient. The Doctor smiled good-humoredly when he asked him if he had an extensive collection of medical works.

"Why, no," said the old Doctor, "I haven't got a great many printed books; and what I have I don't read quite as often as I might, I'm afraid. I read and studied in the time of it, when I was in the midst of the young men who were all at work with their books; but it's a mighty hard matter, when you go off alone into the country, to keep up with all that's going on in the Societies and the Colleges. I'll tell you, though, Mr. Langdon, when a man that's once started right lives among sick folks for five-and-thirty years, as I've done, if he has n't got a library of five-and-thirty volumes bound up in his head at the end of that time, he'd better stop driving round and sell his horse and sulky. I know the bigger part of the families within a dozen miles' ride. I know the families that have a way of living through everything, and I know the other set that have the trick of dying without any kind of reason for it. I know the years when the fevers and dysenteries are in earnest, and when they're only making believe. I know the folks that think they're dying as soon as they're sick, and the folks that never find out they 're sick till they're dead. I don't want to undervalue your science, Mr. Langdon. There are things I never learned, because they came in after my day, and I am very glad to send my patients to those that do know them, when I am at fault; but I know these people about here, fathers and mothers, and children and grandchildren, so as all the science in the world can't know them, without it takes time about it, and sees them grow up and grow old, and how the wear and tear of life comes to them. You can't tell a horse by driving him once, Mr. Langdon, nor a patient by talking half an hour with him."

"Do you know much about the Venner family?" said Mr. Bernard, in a natural way enough, the Doctor's talk

having suggested the question.

The Doctor lifted his head with his accustomed movement, so as to command the young man through his spectacles.

"I know all the families of this place and its neighborhood," he answered.

"We have the young lady studying with us at the Institute," said Mr. Bernard.

"I know it," the Doctor answered. "Is she a good scholar?"

All this time the Doctor's eyes were fixed steadily on Mr. Bernard, looking through the glasses.

"She is a good scholar enough, but I don't know what to make of her. Sometimes I think she is a little out of her head. Her father, I believe, is sensible enough;—what sort of a woman was her mother, Doctor?—I suppose, of course, you remember all about her?"

"Yes, I knew her mother. She was a very lovely young woman."—The Doctor put his hand to his forehead and drew a long breath.—"What is there you notice out of the way about Elsie Venner?"

"A good many things," the master answered. "She shuns all the other girls. She is getting a strange influence over my fellow-teacher, a young lady,—you know Miss Helen Darley, perhaps? I am afraid this girl will kill her. I never saw or heard of anything like it, in prose at least;—do you remember much of Coleridge's Poems, Doctor?"

The good old Doctor had to plead a negative.

"Well, no matter. Elsie would have been burned for a witch in old times. I have seen the girl look at Miss Darley when she had not the least idea of it, and all at once I would see her grow pale and moist, and sigh, and move round uneasily, and turn towards Elsie, and perhaps get up and go to her, or else have slight spasmodic movements that looked like hysterics;—do you believe in the evil eye, Doctor?"

"Mr. Langdon," the Doctor said, solemnly, "there are strange things about Elsie Venner,—very strange things. This was what I wanted to speak to you about. Let me advise you all to be very patient with the girl, but also very careful. Her love is not to be desired, and"—he spoke in a lower tone—"her hate is to be dreaded. Do you think she has any special fancy for anybody else in the school besides Miss Darley?"

Mr. Bernard could not stand the old Doctor's spectacled eyes without betraying a little of the feeling natural to a young man to whom a home question involving a possible sentiment is put suddenly.

"I have suspected," he said,—"I have had a kind of feeling—that she—Well, come, Doctor,—I don't know that there 's any use in disguising the matter,—I have thought Elsie Venner had rather a fancy for somebody else,—I mean myself."

There was something so becoming in the blush with which the young man made this confession, and so manly, too, in the tone with which he spoke, so remote from any shallow vanity, such as young men who are incapable of love are apt to feel, when some loose tendril of a woman's fancy which a chance wind has blown against them twines about them for the want of anything better, that the old Doctor looked at him admiringly, and could not help thinking that it was no wonder any young girl should be pleased with him.

"You are a man of nerve, Mr. Langdon?" said the Doctor.

"I thought so till very lately," he replied. "I am not easily frightened, but I don't know but I might be bewitched or magnetized, or whatever it is when one is tied up and cannot move. I think I can find nerve enough, however, if there is any special use you want to put it to."

"Let me ask you one more question, Mr. Langdon. Do you find yourself disposed to take a special interest in Elsie,—to fall in love with her, in a word? Pardon me, for I do not ask from curiosity, but a much more serious motive."

"Elsie interests me," said the young man, "interests me strangely. She has a wild flavor in her character which is wholly different from that of any human creature I ever saw. She has marks of genius, poetic or dramatic,—I hardly know which. She read a passage from Keats's 'Lamia' the other day, in the schoolroom, in such a way that I declare to you I thought some of the girls would faint or go into fits. Miss Darley got up and left the room, trembling all over. Then, I pity her, she is so lonely. The girls are afraid of her, and she seems to have either a dislike or a fear of them. They have all sorts of painful stories about her. They give her a name which no human creature ought to bear. They say she hides a mark on her neck by always wearing a necklace. She is very graceful, you know, and they will have it that she can twist herself into all sorts of shapes, or tie herself in a knot, if she wants to. There is not one of them that will look her in the eyes. I pity the poor girl; but, Doctor, I do not love her. I would risk my life for her, if it would do her any good, but it would be in cold blood. If her hand touches mine, it is not a thrill of passion I feel running through me, but a very different emotion. Oh, Doctor! there must be something in that creature's blood which has killed the humanity in her. God only knows the cause that has blighted such a soul in so beautiful a body! No, Doctor, I do not love the girl."

"Mr. Langdon," said the Doctor, "you are young, and I am old. Let me talk to you with an old man's privilege, as an adviser. You have come to this country-town without suspicion, and you are moving in the midst of perils. There are things which I must not tell you now; but I may warn you. Keep your eyes open and your heart shut. If, through pitying that girl, you ever come to love her, you are lost. If you deal carelessly with her, beware! This is not all. There are other eyes on you beside Elsie Venner's. Do you go armed?"

"I do!" said Mr. Bernard,—and he "put his hands up" in the shape of fists, in such a way as to show that he was master of the natural weapons at any rate.

The Doctor could not help smiling. But his face fell in an instant.

"You may want something more than those tools to work with. Come with me into my sanctum."

The Doctor led Mr. Bernard into a small room opening out of the study. It was a place such as anybody but a medical man would shiver to enter. There was the usual tall box with its bleached, rattling tenant; there were jars in rows where "interesting cases" outlived the grief of widows and heirs in alcoholic immortality,—for your "preparation-jar" is the true "monumentum aere perennius;" there were various semi-possibilities of minute dimensions and unpromising developments; there were shining instruments of evil aspect, and grim

plates on the walls, and on one shelf by itself, accursed and apart, coiled in a long cylinder of spirit, a huge crotalus, rough-scaled, flatheaded, variegated with dull bands, one of which partially encircled the neck like a collar,—an awful wretch to look upon, with murder written all over him in horrid hieroglyphics. Mr. Bernard's look was riveted on this creature,—not fascinated certainly, for its eyes looked like white beads, being clouded by the action of the spirits in which it had been long kept,—but fixed by some indefinite sense of the renewal of a previous impression;—everybody knows the feeling, with its suggestion of some past state of existence. There was a scrap of paper on the jar, with something written on it. He was reaching up to read it when the Doctor touched him lightly.

“Look here, Mr. Langdon!” he said, with a certain vivacity of manner, as if wishing to call away his attention,—“this is my armory.”

The Doctor threw open the door of a small cabinet, where were disposed in artistic patterns various weapons of offence and defence,—for he was a virtuoso in his way, and by the side of the implements of the art of healing had pleased himself with displaying a collection of those other instruments, the use of which renders the first necessary.

“See which of these weapons you would like best to carry about you,” said the Doctor.

Mr. Bernard laughed, and looked at the Doctor as if he half doubted whether he was in earnest.

“This looks dangerous enough,” he said,—“for the man who carries it, at least.”

He took down one of the prohibited Spanish daggers or knives which a traveller may, occasionally get hold of and smuggle out of the country. The blade was broad, trowel-like, but the point drawn out several inches, so as to look like a skewer.

“This must be a jealous bull-fighter's weapon,” he said, and put it back in its place.

Then he took down an ancient-looking broad-bladed dagger, with a complex aspect about it, as if it had some kind of mechanism connected with it.

“Take care!” said the Doctor; “there is a trick to that dagger.”

He took it and touched a spring. The dagger split suddenly into three blades, as when one separates the forefinger and the ring-finger from the middle one. The outside blades were sharp on their outer edge. The stab was to be made with the dagger shut, then the spring touched and the split blades withdrawn.

Mr. Bernard replaced it, saying, that it would have served for sidearm to old Suwarrow, who told his men to work their bayonets back and forward when they pinned a Turk, but to wriggle them about in the wound when they stabbed a Frenchman.

“Here,” said the Doctor, “this is the thing you want.”

He took down a much more modern and familiar implement,—a small, beautifully finished revolver.

“I want you to carry this,” he said; “and more than that, I want you to practise with it often, as for amusement, but so that it maybe seen and understood that you are apt to have a pistol about you. Pistol-shooting is pleasant sport enough, and there is no reason why you should not practise it like other young fellows. And now,” the Doctor said, “I have one other, weapon to give you.”

He took a small piece of parchment and shook a white powder into it from one of his medicine-jars. The jar was marked with the name of a mineral salt, of a nature to have been serviceable in case of sudden illness in the time of the Borgias. The Doctor folded the parchment carefully, and marked the Latin name of the powder upon it.

“Here,” he said, handing it to Mr. Bernard, “you see what it is, and you know what service it can render. Keep these two protectors about your person day and night; they will not harm you, and you may want one or the other or both before you think of it.”

Mr. Bernard thought it was very odd, and not very old-gentlemanlike, to be fitting him out for treason, stratagem, and spoils, in this way. There was no harm, however, in carrying a doctor's powder in his pocket, or in amusing himself with shooting at a mark, as he had often done before. If the old gentleman had these fancies, it was as well to humor him.

So he thanked old Doctor Kittredge, and shook his hand warmly as he left him.

“The fellow's hand did not tremble, nor his color change,” the Doctor said, as he watched him walking away. “He is one of the right sort.”

CHAPTER XVI. EPISTOLARY.

Mr. Langdon to the Professor.

MY DEAR PROFESSOR, You were kind enough to promise me that you would assist me in any professional or scientific investigations in which I might become engaged. I have of late become deeply interested in a class of subjects which present peculiar difficulty, and I must exercise the privilege of questioning you on some points upon which I desire information I cannot otherwise obtain. I would not trouble you, if I could find any person or books competent to enlighten me on some of these singular matters which have so excited me. The leading doctor here is a shrewd, sensible man, but not versed in the curiosities of medical literature.

I proceed, with your leave, to ask a considerable number of questions,—hoping to get answers to some of them, at least.

Is there any evidence that human beings can be infected or wrought upon by poisons, or otherwise, so that they shall manifest any of the peculiarities belonging to beings of a lower nature? Can such peculiarities—be transmitted by inheritance? Is there anything to countenance the stories, long and widely current, about the

"evil eye"? or is it a mere fancy that such a power belongs to any human being? Have you any personal experience as to the power of fascination said to be exercised by certain animals? What can you make of those circumstantial statements we have seen in the papers, of children forming mysterious friendships with ophidians of different species, sharing their food with them, and seeming to be under some subtle influence exercised by those creatures? Have you read, critically, Coleridge's poem of "Christabel," and Keats's "Lamia"?—If so, can you understand them, or find any physiological foundation for the story of either?

There is another set of questions of a different nature I should like to ask, but it is hardly fair to put so many on a single sheet. There is one, however, you must answer. Do you think there may be predispositions, inherited or ingrafted, but at any rate constitutional, which shall take out certain apparently voluntary determinations from the control of the will, and leave them as free from moral responsibility as the instincts of the lower animals? Do you not think there may be a crime which is not a sin?

Pardon me, my dear Sir, for troubling you with such a list of notes of interrogation. There are some very strange things going on here in this place, country-town as it is. Country-life is apt to be dull; but when it once gets going, it beats the city hollow, because it gives its whole mind to what it is about. These rural sinners make terrible work with the middle of the Decalogue, when they get started. However, I hope I shall live through my year's school-keeping without catastrophes, though there are queer doings about me which puzzle me and might scare some people. If anything should happen, you will be one of the first to hear of it, no doubt. But I trust not to help out the editors of the "Rockland Weekly Universe" with an obituary of the late lamented, who signed himself in life—

Your friend and pupil, BERNARD C. LANGDON.

The Professor to Mr. Langdon.

MY DEAR MR. LANGDON, I do not wonder that you find no answer from your country friends to the curious questions you put. They belong to that middle region between science and poetry which sensible men, as they are called, are very shy of meddling with. Some people think that truth and gold are always to be washed for; but the wiser sort are of opinion, that, unless there are so many grains to the peck of sand or nonsense respectively, it does not pay to wash for either, so long as one can find anything else to do. I don't doubt there is some truth in the phenomena of animal magnetism, for instance; but when you ask me to cradle for it, I tell you that the hysteric girls cheat so, and the professionals are such a set of pickpockets, that I can do something better than hunt for the grains of truth among their tricks and lies. Do you remember what I used to say in my lectures?—or were you asleep just then, or cutting your initials on the rail? (You see I can ask questions, my young friend.) Leverage is everything,—was what I used to say;—don't begin to pry till you have got the long arm on your side.

To please you, and satisfy your doubts as far as possible, I have looked into the old books,—into Schenckius and Turner and Kenelm. Digby and the rest, where I have found plenty of curious stories which you must take for what they are worth.

Your first question I can answer in the affirmative upon pretty good authority. Mizaldus tells, in his "Memorabilia," the well-known story of the girl fed on poisons, who was sent by the king of the Indies to Alexander the Great. "When Aristotle saw her eyes sparkling and snapping like those of serpents, he said, 'Look out for yourself, Alexander! this is a dangerous companion for you!'"—and sure enough, the young lady proved to be a very unsafe person to her friends. Cardanus gets a story from Avicenna, of a certain man bit by a serpent, who recovered of his bite, the snake dying therefrom. This man afterwards had a daughter whom venomous serpents could not harm, though she had a fatal power over them.

I suppose you may remember the statements of old authors about Zycanthropy, the disease in which men took on the nature and aspect of wolves. Actius and Paulus, both men of authority, describe it. Altomaris gives a horrid case; and Fincelius mentions one occurring as late as 1541, the subject of which was captured, still insisting that he was a wolf, only that the hair of his hide was turned in! Versipelles, it may be remembered, was the Latin name for these "were-wolves."

As for the cases where rabid persons have barked and bit like dogs, there are plenty of such on record.

More singular, or at least more rare, is the account given by Andreas Baccius, of a man who was struck in the hand by a cock, with his beak, and who died on the third day thereafter, looking for all the world like a fighting-cock, to the great horror of the spectators.

As to impressions transmitted at a very early period of existence, every one knows the story of King James's fear of a naked sword, and the way it is accounted for. Sir Kenelm Digby says,—"I remember when he dubbed me Knight, in the ceremony of putting the point of a naked sword upon my shoulder, he could not endure to look upon it, but turned his face another way, insomuch, that, in lieu of touching my shoulder, he had almost thrust the point into my eyes, had not the Duke of Buckingham guided his hand aright." It is he, too, who tells the story of the mulberry mark upon the neck of a certain lady of high condition, which "every year, to mulberry season, did swell, grow big, and itch." And Gaffarel mentions the case of a girl born with the figure of a fish on one of her limbs, of which the wonder was, that, when the girl did eat fish, this mark put her to sensible pain. But there is no end to cases of this kind, and I could give some of recent date, if necessary, lending a certain plausibility at least to the doctrine of transmitted impressions.

I never saw a distinct case of evil eye, though I have seen eyes so bad that they might produce strange effects on very sensitive natures. But the belief in it under various names, fascination, jettatura, etc., is so permanent and universal, from Egypt to Italy, and from the days of Solomon to those of Ferdinand of Naples, that there must be some peculiarity, to say the least, on which the opinion is based. There is very strong evidence that some such power is exercised by certain of the lower animals. Thus, it is stated on good authority that "almost every animal becomes panic-struck at the sight of the rattlesnake, and seems at once deprived of the power of motion, or the exercise of its usual instinct of self-preservation." Other serpents seem to share this power of fascination, as the Cobra and the *Bucephalus Capensis*.

Some think that it is nothing but fright; others attribute it to the

as Churchill said, speaking of Garrick.

You ask me about those mysterious and frightful intimacies between children and serpents, of which so many instances have been recorded. I am sure I cannot tell what to make of them. I have seen several such accounts in recent papers, but here is one published in the seventeenth century, which is as striking as any of the more modern ones:

“Mr. Herbert Tones of Monmouth, when he was a little Boy, was used to eat his Milk in a Garden in the Morning, and was no sooner there, but a large Snake always came, and eat out of the Dish with him, and did so for a considerable time, till one Morning, he striking the Snake on the Head, it hissed at him. Upon which he told his Mother that the Baby (for so he call'd it) cry'd Hiss at him. His Mother had it kill'd, which occasioned him a great Fit of Sickness, and 'twas thought would have dy'd, but did recover.”

There was likewise one “William Writtle, condemned at Maidston Assizes for a double murder, told a Minister that was with him after he was condemned, that his mother told him, that when he was a Child, there crept always to him a Snake, wherever she laid him. Sometimes she would convey him up Stairs, and leave him never so little, she should be sure to find a Snake in the Cradle with him, but never perceived it did him any harm.”

One of the most striking alleged facts connected with the mysterious relation existing between the serpent and-the human species is the influence which the poison of the *Crotulus*, taken internally, seemed to produce over the moral faculties, in the experiments instituted by Dr. Hering at Surinam. There is something frightful in the disposition of certain ophidians, as the whipsnake, which darts at the eyes of cattle without any apparent provocation or other motive. It is natural enough that the evil principle should have been represented in the form of a serpent, but it is strange to think of introducing it into a human being like cow-pox by vaccination.

You know all about the *Psylli*, or ancient serpent tamers, I suppose. Savary gives an account of the modern serpent-tamers in his “Letters on Egypt.” These modern jugglers are in the habit of making the venomous *Naja* counterfeit death, lying out straight and stiff, changing it into a rod, as the ancient magicians did with their serpents, (probably the same animal,) in the time of Moses.

I am afraid I cannot throw much light on “Christabel” or “Lamia” by any criticism I can offer. Geraldine, in the former, seems to be simply a malignant witch-woman with the evil eye, but with no absolute ophidian relationship. Lamia is a serpent transformed by magic into a woman. The idea of both is mythological, and not in any sense physiological. Some women unquestionably suggest the image of serpents; men rarely or never. I have been struck, like many others, with the ophidian head and eye of the famous Rachel.

Your question about inherited predispositions, as limiting the sphere of the will, and, consequently, of moral accountability, opens a very wide range of speculation. I can give you only a brief abstract of my own opinions on this delicate and difficult subject. Crime and sin, being the preserves of two great organized interests, have been guarded against all reforming poachers with as great jealousy as the Royal Forests. It is so easy to hang a troublesome fellow! It is so much simpler to consign a soul to perdition, or say masses, for money, to save it, than to take the blame on ourselves for letting it grow up in neglect and run to ruin for want of humanizing influences! They hung poor, crazy Bellingham for shooting Mr. Perceval. The ordinary of Newgate preached to women who were to swing at Tyburn for a petty theft as if they were worse than other people,—just as though he would not have been a pickpocket or shoplifter, himself, if he had been born in a den of thieves and bred up to steal or starve! The English law never began to get hold of the idea that a crime was not necessarily a sin, till Hadfield, who thought he was the Saviour of mankind, was tried for shooting at George the Third;—lucky for him that he did not hit his Majesty!

It is very singular that we recognize all the bodily defects that unfit a man for military service, and all the intellectual ones that limit his range of thought, but always talk at him as if all his moral powers were perfect. I suppose we must punish evil-doers as we extirpate vermin; but I don't know that we have any more right to judge them than we have to judge rats and mice, which are just as good as cats and weasels, though we think it necessary to treat them as criminals.

The limitations of human responsibility have never been properly studied, unless it be by the phrenologists. You know from my lectures that I consider phrenology, as taught, a pseudo-science, and not a branch of positive knowledge; but, for all that, we owe it an immense debt. It has melted the world's conscience in its crucible, and cast it in a new mould, with features less like those of Moloch and more like those of humanity. If it has failed to demonstrate its system of special correspondences, it has proved that there are fixed relations between organization and mind and character. It has brought out that great doctrine of moral insanity, which has done more to make men charitable and soften legal and theological barbarism than any one doctrine that I can think of since the message of peace and good-will to men.

Automatic action in the moral world; the reflex movement which seems to be self-determination, and has been hanged and howled at as such (metaphorically) for nobody knows how many centuries: until somebody shall study this as Marshall Hall has studied reflex nervous action in the bodily system, I would not give much for men's judgments of each others' characters. Shut up the robber and the defaulter, we must. But what if your oldest boy had been stolen from his cradle and bred in a North-Street cellar? What if you are drinking a little too much wine and smoking a little too much tobacco, and your son takes after you, and so your poor grandson's brain being a little injured in physical texture, he loses the fine moral sense on which you pride yourself, and doesn't see the difference between signing another man's name to a draft and his own?

I suppose the study of automatic action in the moral world (you see what I mean through the apparent contradiction of terms) may be a dangerous one in the view of many people. It is liable to abuse, no doubt. People are always glad to, get hold of anything which limits their responsibility. But remember that our moral estimates come down to us from ancestors who hanged children for stealing forty shillings' worth, and sent their souls to perdition for the sin of being born,—who punished the unfortunate families of suicides, and in their eagerness for justice executed one innocent person every three years, on the average, as Sir James Mackintosh tells us.

I do not know in what shape the practical question may present itself to you; but I will tell you my rule in

life, and I think you will find it a good one. Treat bad men exactly as if they were insane. They are in-sane, out of health, morally. Reason, which is food to sound minds, is not tolerated, still less assimilated, unless administered with the greatest caution; perhaps, not at all. Avoid collision with them, so far as you honorably can; keep your temper, if you can,—for one angry man is as good as another; restrain them from violence, promptly, completely, and with the least possible injury, just as in the case of maniacs,—and when you have got rid of them, or got them tied hand and foot so that they can do no mischief, sit down and contemplate them charitably, remembering that nine tenths of their' perversity comes from outside influences, drunken ancestors, abuse in childhood, bad company, from which you have happily been preserved, and for some of which you, as a member of society, may be fractionally responsible. I think also that there are special influences which work in the brood lake ferments, and I have a suspicion that some of those curious old stories I cited may have more recent parallels. Have you ever met with any cases which admitted of a solution like that which I have mentioned?

Yours very truly, _____

Bernard Langdon to Philip Staples.
MY DEAR PHILIP,—

I have been for some months established in this place, turning the main crank of the machinery for the manufactory of accomplishments superintended by, or rather worked to the profit of, a certain Mr. Silas Peckham. He is a poor wretch, with a little thin fishy blood in his body, lean and flat, long-armed and large-handed, thick-jointed and thin-muscled,—you know those unwholesome, weak-eyed, half-fed creatures, that look not fit to be round among live folks, and yet not quite dead enough to bury. If you ever hear of my being in court to answer to a charge of assault and battery, you may guess that I have been giving him a thrashing to settle off old scores; for he is a tyrant, and has come pretty near killing his principal lady-assistant with overworking her and keeping her out of all decent privileges.

Helen Darley is this lady's name,—twenty two or three years old, I should think,—a very sweet, pale woman,—daughter of the usual country-clergyman,—thrown on her own resources from an early age, and the rest: a common story, but an uncommon person,—very. All conscience and sensibility, I should say,—a cruel worker,—no kind of regard for herself, seems as fragile and supple as a young willow-shoot, but try her and you find she has the spring in her of a steel cross-bow. I am glad I happened to come to this place, if it were only for her sake. I have saved that girl's life; I am as sure of it as if I had pulled her out of the fire or water.

Of course I'm in love with her, you say,—we always love those whom we have benefited; "saved her life,—her love was the reward of his devotion," etc., etc., as in a regular set novel. In love, Philip? Well, about that,—I love Helen Darley—very much: there is hardly anybody I love so well. What a noble creature she is! One of those that just go right on, do their own work and everybody else's, killing themselves inch by inch without ever thinking about it,—singing and dancing at their toil when they begin, worn and saddened after a while, but pressing steadily on, tottering by and by, and catching at the rail by the way-side to help them lift one foot before the other, and at last falling, face down, arms stretched forward.

Philip, my boy, do you know I am the sort of man that locks his door sometimes and cries his heart out of his eyes,—that can sob like a woman and not be ashamed of it? I come of fighting-blood on one side, you know; I think I could be savage on occasion. But I am tender,—more and more tender as I come into my fullness of manhood. I don't like to strike a man, (laugh, if you like,—I know I hit hard when I do strike.)—but what I can't stand is the sight of these poor, patient, toiling women, who never find out in this life how good they are, and never know what it is to be told they are angels while they still wear the pleasing incumbrances of humanity. I don't know what to make of these cases. To think that a woman is never to be a woman again, whatever she may come to as an unsexed angel,—and that she should die unloved! Why does not somebody come and carry off this noble woman, waiting here all ready to make a man happy? Philip, do you know the pathos there is in the eyes of unsought women, oppressed with the burden of an inner life unshared? I can see into them now as I could not in those 'earlier days. I sometimes think their pupils dilate on purpose to let my consciousness glide through them; indeed, I dread them, I come so close to the nerve of the soul itself in these momentary intimacies. You used to tell me I was a Turk,—that my heart was full of pigeon-holes, with accommodations inside for a whole flock of doves. I don't know but I am still as Youngish as ever in my ways,—Brigham-Youngish, I mean; at any rate, T. always want to give a little love to all the poor things that cannot have a whole man to themselves. If they would only be contented with a little!

Here now are two girls in this school where I am teaching. One of them, Rosa M., is not more than sixteen years old, I think they say; but Nature has forced her into a tropical luxuriance of beauty, as if it were July with her, instead of May. I suppose it is all natural enough that this girl should like a young man's attention, even if he were a grave schoolmaster; but the eloquence of this young thing's look is unmistakable,—and yet she does not know the language it is talking,—they none of them do; and there is where a good many poor creatures of our good-for-nothing sex are mistaken. There is no danger of my being rash, but I think this girl will cost somebody his life yet. She is one of those women men make a quarrel about and fight to the death for,—the old feral instinct, you know.

Pray, don't think I am lost in conceit, but there is another girl here who I begin to think looks with a certain kindness on me. Her name is Elsie V., and she is the only daughter and heiress of an old family in this place. She is a portentous and almost fearful creature. If I should tell you all I know and half of what I fancy about her, you would tell me to get my life insured at once. Yet she is the most painfully interesting being,—so handsome! so lonely!—for she has no friends among the girls, and sits apart from them,—with black hair like the flow of a mountain-brook after a thaw, with a low-browed, scowling beauty of face, and such eyes as were never seen before, I really believe, in any human creature.

Philip, I don't know what to say about this Elsie. There is something about her I have not fathomed. I have conjectures which I could not utter to any living soul. I dare not even hint the possibilities which have suggested themselves to me. This I will say, that I do take the most intense interest in this young person, an interest much more like pity than love in its common sense. If what I guess at is true, of all the tragedies of existence I ever knew this is the saddest, and yet so full of meaning! Do not ask me any questions,—I have

said more than I meant to already; but I am involved in strange doubts and perplexities,—in dangers too, very possibly,—and it is a relief just to speak ever so guardedly of them to an early and faithful friend.

Yours ever, BERNARD.

P. S. I remember you had a copy of Fortunius Licetus' "De Monstris" among your old books. Can't you lend it to me for a while? I am curious, and it will amuse me.

CHAPTER XVII. OLD SOPHY CALLS ON THE REVEREND DOCTOR.

The two meeting-houses which faced each other like a pair of fighting-cocks had not flapped their wings or crowed at each other for a considerable time. The Reverend Mr. Fairweather had been dyspeptic and low-spirited of late, and was too languid for controversy. The Reverend Doctor Honeywood had been very busy with his benevolent associations, and had discoursed chiefly on practical matters, to the neglect of special doctrinal subjects. His senior deacon ventured to say to him that some of his people required to be reminded of the great fundamental doctrine of the worthlessness of all human efforts and motives. Some of them were altogether too much pleased with the success of the Temperance Society and the Association for the Relief of the Poor. There was a pestilent heresy about, concerning the satisfaction to be derived from a good conscience, as if, anybody ever did anything which was not to be hated, loathed, despised, and condemned.

The old minister listened gravely, with an inward smile, and told his deacon that he would attend to his suggestion. After the deacon had gone, he tumbled over his manuscripts, until at length he came upon his first-rate old sermon on "Human Nature." He had read a great deal of hard theology, and had at last reached that curious state which is so common in good ministers,—that, namely, in which they contrive to switch off their logical faculties on the narrow sidetrack of their technical dogmas, while the great freight-train of their substantial human qualities keeps in the main highway of common-sense, in which kindly souls are always found by all who approach them by their human side.

The Doctor read his sermon with a pleasant, paternal interest: it was well argued from his premises. Here and there he dashed his pen through a harsh expression. Now and then he added an explanation or qualified abroad statement. But his mind was on the logical side-track, and he followed the chain of reasoning without fairly perceiving where it would lead him, if he carried it into real life.

He was just touching up the final proposition, when his granddaughter, Letty, once before referred to, came into the room with her smiling face and lively movement. Miss Letty or Letitia Forrester was a city-bred girl of some fifteen or sixteen years old, who was passing the summer with her grandfather for the sake of country air and quiet. It was a sensible arrangement; for, having the promise of figuring as a belle by and by, and being a little given to dancing, and having a voice which drew a pretty dense circle around the piano when she sat down to play and sing, it was hard to keep her from being carried into society before her time, by the mere force of mutual attraction. Fortunately, she had some quiet as well as some social tastes, and was willing enough to pass two or three of the summer months in the country, where she was much better bestowed than she would have been at one of those watering-places where so many half-formed girls get prematurely hardened in the vice of self-consciousness.

Miss Letty was altogether too wholesome, hearty, and high-strung a young girl to be a model, according to the flat-chested and cachectic pattern which is the classical type of certain excellent young females, often the subjects of biographical memoirs. But the old minister was proud of his granddaughter for all that. She was so full of life, so graceful, so generous, so vivacious, so ready always to do all she could for him and for everybody, so perfectly frank in her avowed delight in the pleasures which this miserable world offered her in the shape of natural beauty, of poetry, of music, of companionship, of books, of cheerful cooperation in the tasks of those about her, that the Reverend Doctor could not find it in his heart to condemn her because she was deficient in those particular graces and that signal other-worldliness he had sometimes noticed in feeble young persons suffering from various chronic diseases which impaired their vivacity and removed them from the range of temptation.

When Letty, therefore, came bounding into the old minister's study, he glanced up from his manuscript, and, as his eye fell upon her, it flashed across him that there was nothing so very monstrous and unnatural about the specimen of congenital perversion he was looking at, with his features opening into their pleasantest sunshine. Technically, according to the fifth proposition of the sermon on Human Nature, very bad, no doubt. Practically, according to the fact before him, a very pretty piece of the Creator's handiwork, body and soul. Was it not a conceivable thing that the divine grace might show itself in different forms in a fresh young girl like Letitia, and in that poor thing he had visited yesterday, half-grown, half-colored, in bed for the last year with hip-disease?

Was it to be supposed that this healthy young girl, with life throbbing all over her, could, without a miracle, be good according to the invalid pattern and formula?

And yet there were mysteries in human nature which pointed to some tremendous perversion of its tendencies,—to some profound, radical vice of moral constitution, native or transmitted, as you will have it, but positive, at any rate, as the leprosy, breaking out in the blood of races, guard them ever so carefully. Did he not know the case of a young lady in Rockland, daughter of one of the first families in the place, a very beautiful and noble creature to look at, for whose bringing up nothing had been spared,—a girl who had had governesses to teach her at the house, who had been indulged almost too kindly,—a girl whose father had given himself, up to her, he being himself a pure and high-souled man?—and yet this girl was accused in whispers of having been on the very verge of committing a fatal crime; she was an object of fear to all who knew the dark hints which had been let fall about her, and there were some that believed—Why, what was

this but an instance of the total obliquity and degeneration of the moral principle? and to what could it be owing, but to an innate organic tendency?

"Busy, grandpapa?" said Letty, and without waiting for an answer kissed his cheek with a pair of lips made on purpose for that little function,—fine, but richly turned out, the corners tucked in with a finish of pretty dimples, the rose-bud lips of girlhood's June.

The old gentleman looked at his granddaughter. Nature swelled up from his heart in a wave that sent a glow to his cheek and a sparkle to his eye. But it is very hard to be interrupted just as we are winding up a string of propositions with the grand conclusion which is the statement in brief of all that has gone before: our own starting-point, into which we have been trying to back our reader or listener as one backs a horse into the shafts.

"Video meliora, proboque,—I see the better, and approve it; deteriora sequor, I follow after the worse; 't is that natural dislike to what is good, pure, holy, and true, that inrooted selfishness, totally insensible to the claims of"—

Here the worthy man was interrupted by Miss Letty.

"Do come, if you can, grandpapa," said the young girl; "here is a poor old black woman wants to see you so much!"

The good minister was as kind-hearted as if he had never groped in the dust and ashes of those cruel old abstractions which have killed out so much of the world's life and happiness. "With the heart man believeth unto righteousness;" a man's love is the measure of his fitness for good or bad company here or elsewhere. Men are tattooed with their special beliefs like so many South-Sea Islanders; but a real human heart, with Divine love in it, beats with the same glow under all, the patterns of all earth's thousand tribes!

The Doctor sighed, and folded the sermon, and laid the Quarto Cruden on it. He rose from his desk, and, looking once more at the young girl's face, forgot his logical conclusions, and said to himself that she was a little angel,—which was in violent contradiction to the leading doctrine of his sermon on Human Nature. And so he followed her out of the study into the wide entry of the old-fashioned country-house.

An old black woman sat on the plain oaken settle which humble visitors waiting to see the minister were wont to occupy. She was old, but how old it would be very hard to guess. She might be seventy. She might be ninety. One could not swear she was not a hundred. Black women remain at a stationary age (to the eyes of white people, at least) for thirty years. They do not appear to change during this period any more than so many Trenton trilobites. Bent up, wrinkled, yellow-eyed, with long upper-lip, projecting jaws, retreating chin, still meek features, long arms, large flat hands with uncolored palms and slightly webbed fingers, it was impossible not to see in this old creature a hint of the gradations by which life climbs up through the lower natures to the highest human developments. We cannot tell such old women's ages because we do not understand the physiognomy of a race so unlike our own. No doubt they see a great deal in each other's faces that we cannot,—changes of color and expression as real as our own, blushes and sudden betrayals of feeling,—just as these two canaries know what their single notes and short sentences and full song with this or that variation mean, though it is a mystery to us unplumed mortals.

This particular old black woman was a striking specimen of her class. Old as she looked, her eye was bright and knowing. She wore a red-and-yellow turban, which set off her complexion well, and hoops of gold in her ears, and beads of gold about her neck, and an old funeral ring upon her finger. She had that touching stillness about her which belongs to animals that wait to be spoken to and then look up with a kind of sad humility.

"Why, Sophy!" said the good minister, "is this you?"

She looked up with the still expression on her face. "It's ol' Sophy," she said.

"Why," said the Doctor, "I did not believe you could walk so far as this to save the Union. Bring Sophy a glass of wine, Letty. Wine's good for old folks like Sophy and me, after walking a good way, or preaching a good while."

The young girl stepped into the back-parlor, where she found the great pewter flagon in which the wine that was left after each communion-service was brought to the minister's house. With much toil she managed to tip it so as to get a couple of glasses filled. The minister tasted his, and made old Sophy finish hers.

"I wan' to see you 'n' talk wi' you all alone," she said presently.

The minister got up and led the way towards his study. "To be sure," he said; he had only waited for her to rest a moment before he asked her into the library. The young girl took her gently by the arm, and helped her feeble steps along the passage. When they reached the study, she smoothed the cushion of a rocking-chair, and made the old woman sit down in it. Then she tripped lightly away, and left her alone with the minister.

Old Sophy was a member of the Reverend Doctor Honeywood's church. She had been put through the necessary confessions in a tolerably satisfactory manner. To be sure, as her grandfather had been a cannibal chief, according to the common story, and, at any rate, a terrible wild savage, and as her mother retained to the last some of the prejudices of her early education, there was a heathen flavor in her Christianity which had often scandalized the elder of the minister's two deacons. But, the good minister had smoothed matters over: had explained that allowances were to be made for those who had been long sitting without the gate of Zion,—that, no doubt, a part of the curse which descended to the children of Ham consisted in "having the understanding darkened," as well as the skin,—and so had brought his suspicious senior deacon to tolerate old Sophy as one of the communion of fellow-sinners.

—Poor things! How little we know the simple notions with which these rudiments of souls are nourished by the Divine Goodness! Did not Mrs. Professor come home this very blessed morning with a story of one of her old black women?

"And how do you feel to-day, Mrs. Robinson?"

"Oh, my dear, I have this singing in my head all the time." (What doctors call tinnitus aurium.)

"She 's got a cold in the head," said old Mrs. Rider.

"Oh, no, my dear! Whatever I'm thinking about, it's all this singing, this music. When I'm thinking of the dear Redeemer, it all turns into this singing and music. When the clark came to see me, I asked him if he couldn't cure me, and he said, No,—it was the Holy Spirit in me, singing to me; and all the time I hear this beautiful music, and it's the Holy Spirit a-singing to me."

The good man waited for Sophy to speak; but she did not open her lips as yet.

"I hope you are not troubled in mind or body," he said to her at length, finding she did not speak.

The poor old woman took out a white handkerchief, and lifted it—to her black face. She could not say a word for her tears and sobs.

The minister would have consoled her; he was used to tears, and could in most cases withstand their contagion manfully; but something choked his voice suddenly, and when he called upon it, he got no answer, but a tremulous movement of the muscles, which was worse than silence.

At last she spoke.

"Oh, no, no, no! It's my poor girl, my darling, my beauty, my baby, that 's grown up to be a woman; she will come to a bad end; she will do something that will make them kill her or shut her up all her life. Or, Doctor, Doctor, save her, pray for her! It a'n't her fault. It a'n't her fault. If they knew all that I know, they would n' blame that poor child. I must tell you, Doctor: if I should die, perhaps nobody else would tell you. Massa Venner can't talk about it. Doctor Kittredge won't talk about it. Nobody but old Sophy to tell you, Doctor; and old Sophy can't die without telling you."

The kind minister soothed the poor old soul with those gentle, quieting tones which had carried peace and comfort to so many chambers of sickness and sorrow, to so many hearts overburdened by the trials laid upon them.

Old Sophy became quiet in a few minutes, and proceeded to tell her story. She told it in the low half-whisper which is the natural voice of lips oppressed with grief and fears; with quick glances around the apartment from time to time, as if she dreaded lest the dim portraits on the walls and the dark folios on the shelves might overhear her words.

It was not one of those conversations which a third person can report minutely, unless by that miracle of clairvoyance known to the readers of stories made out of authors' brains. Yet its main character can be imparted in a much briefer space than the old black woman took to give all its details.

She went far back to the time when Dudley Venner was born,—she being then a middle-aged woman. The heir and hope of a family which had been narrowing down as if doomed to extinction, he had been surrounded with every care and trained by the best education he could have in New England. He had left college, and was studying the profession which gentlemen of leisure most affect, when he fell in love with a young girl left in the world almost alone, as he was. The old woman told the story of his young love and his joyous bridal with a tenderness which had something more, even, than her family sympathies to account for it. Had she not hanging over her bed a paper-cutting of a profile,—jet black, but not blacker than the face it represented—of one who would have been her own husband in the small years of this century, if the vessel in which he went to sea, like Jamie in the ballad, had not sailed away and never come back to land? Had she not her bits of furniture stowed away which had been got ready for her own wedding,—two rocking-chairs, one worn with long use, one kept for him so long that it had grown a superstition with her never to sit in it,—and might he not come back yet, after all? Had she not her chest of linen ready for her humble house-keeping with store of serviceable huckaback and piles of neatly folded kerchiefs, wherefrom this one that showed so white against her black face was taken, for that she knew her eyes would betray her in "the presence"?

All the first part of the story the old woman told tenderly, and yet dwelling upon every incident with a loving pleasure. How happy this young couple had been, what plans and projects of improvement they had formed, how they lived in each other, always together, so young and fresh and beautiful as she remembered them in that one early summer when they walked arm in arm through the wilderness of roses that ran riot in the garden,—she told of this as loath to leave it and come to the woe that lay beneath.

She told the whole story;—shall I repeat it? Not now. If, in the course of relating the incidents I have undertaken to report, it tells itself, perhaps this will be better than to run the risk of producing a painful impression on some of those susceptible readers whom it would be ill-advised to disturb or excite, when they rather require to be amused and soothed. In our pictures of life, we must show the flowering-out of terrible growths which have their roots deep, deep underground. Just how far we shall lay bare the unseemly roots themselves is a matter of discretion and taste, and which none of us are infallible.

The old woman told the whole story of Elsie, of her birth, of her peculiarities of person and disposition, of the passionate fears and hopes with which her father had watched the course of her development. She recounted all her strange ways, from the hour when she first tried to crawl across the carpet, and her father's look as she worked her way towards him. With the memory of Juliet's nurse she told the story of her teething, and how, the woman to whose breast she had clung dying suddenly about that time, they had to struggle hard with the child before she would learn the accomplishment of feeding with a spoon. And so of her fierce plays and fiercer disputes with that boy who had been her companion, and the whole scene of the quarrel when she struck him with those sharp white teeth, frightening her, old Sophy, almost to death; for, as she said, the boy would have died, if it hadn't been for the old Doctor's galloping over as fast as he could gallop and burning the places right out of his arm. Then came the story of that other incident, sufficiently alluded to already, which had produced such an ecstasy of fright and left such a nightmare of apprehension in the household. And so the old woman came down to this present time. That boy she never loved nor trusted was grown to a dark, dangerous-looking man, and he was under their roof. He wanted to marry our poor Elsie, and Elsie hated him, and sometimes she would look at him over her shoulder just as she used to look at that woman she hated; and she, old Sophy, couldn't sleep for thinking she should hear a scream from the white chamber some night and find him in spasms such as that woman came so near dying with. And then there was something about Elsie she did not know what to make of: she would sit and hang her head sometimes, and look as if she were dreaming; and she brought home books they said a young gentleman up at the great school lent her; and once she heard her whisper in her sleep, and she talked as young girls do to themselves when they're

thinking about somebody they have a liking for and think nobody knows it.

She finished her long story at last. The minister had listened to it in perfect silence. He sat still even when she had done speaking,—still, and lost in thought. It was a very awkward matter for him to have a hand in. Old Sophy was his parishioner, but the Venners had a pew in the Reverend Mr. Fairweather's meeting-house. It would seem that he, Mr. Fairweather, was the natural adviser of the parties most interested. Had he sense and spirit enough to deal with such people? Was there enough capital of humanity in his somewhat limited nature to furnish sympathy and unshrinking service for his friends in an emergency? or was he too busy with his own attacks of spiritual neuralgia, and too much occupied with taking account of stock of his own thin-blooded offences, to forget himself and his personal interests on the small scale and the large, and run a risk of his life, if need were, at any rate give himself up without reserve to the dangerous task of guiding and counselling these distressed and imperilled fellow-creatures?

The good minister thought the best thing to do would be to call and talk over some of these matters with Brother Fairweather,—for so he would call him at times, especially if his senior deacon were not within earshot. Having settled this point, he comforted Sophy with a few words of counsel and a promise of coming to see her very soon. He then called his man to put the old white horse into the chaise and drive Sophy back to the mansion-house.

When the Doctor sat down to his sermon again, it looked very differently from the way it had looked at the moment he left it. When he came to think of it, he did not feel quite so sure practically about that matter of the utter natural selfishness of everybody. There was Letty, now, seemed to take a very unselfish interest in that old black woman, and indeed in poor people generally; perhaps it would not be too much to say that she was always thinking of other people. He thought he had seen other young persons naturally unselfish, thoughtful for others; it seemed to be a family trait in some he had known.

But most of all he was exercised about this poor girl whose story Sophy had been telling. If what the old woman believed was true,—and it had too much semblance of probability,—what became of his theory of ingrained moral obliquity applied to such a case? If by the visitation of God a person receives any injury which impairs the intellect or the moral perceptions, is it not monstrous to judge such a person by our common working standards of right and wrong? Certainly, everybody will answer, in cases where there is a palpable organic change brought about, as when a blow on the head produces insanity. Fools! How long will it be before we shall learn that for every wound which betrays itself to the sight by a scar, there are a thousand unseen mutilations that cripple, each of them, some one or more of our highest faculties? If what Sophy told and believed was the real truth, what prayers could be agonizing enough, what tenderness could be deep enough, for this poor, lost, blighted, hapless, blameless child of misfortune, struck by such a doom as perhaps no living creature in all the sisterhood of humanity shared with her?

The minister thought these matters over until his mind was bewildered with doubts and tossed to and fro on that stormy deep of thought heaving forever beneath the conflict of windy dogmas. He laid by his old sermon. He put back a pile of old commentators with their eyes and mouths and hearts full of the dust of the schools. Then he opened the book of Genesis at the eighteenth chapter and read that remarkable argument of Abraham's with his Maker in which he boldly appeals to first principles. He took as his text, "Shall not the Judge of all the earth do right?" and began to write his sermon, afterwards so famous, "On the Obligations of an Infinite Creator to a Finite Creature."

It astonished the good people, who had been accustomed so long to repeat mechanically their Oriental hyperboles of self-abasement, to hear their worthy minister maintaining that the dignified attitude of the old Patriarch, insisting on what was reasonable and fair with reference to his fellow-creatures, was really much more respectful to his Maker, and a great deal manlier and more to his credit, than if he had yielded the whole matter, and pretended that men had not rights as well as duties. The same logic which had carried him to certain conclusions with reference to human nature, this same irresistible logic carried him straight on from his text until he arrived at those other results, which not only astonished his people, as was said, but surprised himself. He went so far in defence of the rights of man, that he put his foot into several heresies, for which men had been burned so often, it was time, if ever it could be, to acknowledge the demonstration of the argumentum ad ignem. He did not believe in the responsibility of idiots. He did not believe a new-born infant was morally answerable for other people's acts. He thought a man with a crooked spine would never be called to account for not walking erect. He thought if the crook was in his brain, instead of his back, he could not fairly be blamed for any consequence of this natural defect, whatever lawyers or divines might call it. He argued, that, if a person inherited a perfect mind, body, and disposition, and had perfect teaching from infancy, that person could do nothing more than keep the moral law perfectly. But supposing that the Creator allows a person to be born with an hereditary or ingrafted organic tendency, and then puts this person into the hands of teachers incompetent or positively bad, is not what is called sin or transgression of the law necessarily involved in the premises? Is not a Creator bound to guard his children against the ruin which inherited ignorance might entail on them? Would it be fair for a parent to put into a child's hands the title-deeds to all its future possessions, and a bunch of matches? And are not men children, nay, babes, in the eye of Omniscience?—The minister grew bold in his questions. Had not he as good right to ask questions as Abraham?

This was the dangerous vein of speculation in which the Reverend Doctor Honeywood found himself involved, as a consequence of the suggestions forced upon him by old Sophy's communication. The truth was, the good man had got so humanized by mixing up with other people in various benevolent schemes, that, the very moment he could escape from his old scholastic abstractions, he took the side of humanity instinctively, just as the Father of the Faithful did,—all honor be to the noble old Patriarch for insisting on the worth of an honest man, and making the best terms he could for a very ill-conditioned metropolis, which might possibly, however, have contained ten righteous people, for whose sake it should be spared!

The consequence of all this was, that he was in a singular and seemingly self-contradictory state of mind when he took his hat and cane and went forth to call on his heretical brother. The old minister took it for granted that the Reverend Mr. Fairweather knew the private history of his parishioner's family. He did not reflect that there are griefs men never put into words,—that there are fears which must not be spoken,—

intimate matters of consciousness which must be carried, as bullets which have been driven deep into the living tissues are sometimes carried, for a whole lifetime,—encysted griefs, if we may borrow the surgeon's term, never to be reached, never to be seen, never to be thrown out, but to go into the dust with the frame that bore them about with it, during long years of anguish, known only to the sufferer and his Maker. Dudley Venner had talked with his minister about this child of his. But he had talked cautiously, feeling his way for sympathy, looking out for those indications of tact and judgment which would warrant him in some partial communication, at least, of the origin of his doubts and fears, and never finding them.

There was something about the Reverend Mr. Fairweather which repressed all attempts at confidential intercourse. What this something was, Dudley Venner could hardly say; but he felt it distinctly, and it sealed his lips. He never got beyond certain generalities connected with education and religious instruction. The minister could not help discovering, however, that there were difficulties connected with this girl's management, and he heard enough outside of the family to convince him that she had manifested tendencies, from an early age, at variance with the theoretical opinions he was in the habit of preaching, and in a dim way of holding for truth, as to the natural dispositions of the human being.

About this terrible fact of congenital obliquity his new beliefs began to cluster as a centre, and to take form as a crystal around its nucleus. Still, he might perhaps have struggled against them, had it not been for the little Roman Catholic chapel he passed every Sunday, on his way to the meeting-house. Such a crowd of worshippers, swarming into the pews like bees, filling all the aisles, running over at the door like berries heaped too full in the measure,—some kneeling on the steps, some standing on the sidewalk, hats off, heads down, lips moving, some looking on devoutly from the other side of the street! Oh, could he have followed his own Bridget, maid of all work, into the heart of that steaming throng, and bowed his head while the priests intoned their Latin prayers! could he have snuffed up the cloud of frankincense, and felt that he was in the great ark which holds the better half of the Christian world, while all around it are wretched creatures, some struggling against the waves in leaky boats, and some on ill-connected rafts, and some with their heads just above water, thinking to ride out the flood which is to sweep the earth clean of sinners, upon their own private, individual life-preservers!

Such was the present state of mind of the Reverend Chauncy Fairweather, when his clerical brother called upon him to talk over the questions to which old Sophy had called his attention.

CHAPTER XVIII. THE REVEREND DOCTOR CALLS ON BROTHER FAIRWEATHER.

For the last few months, while all these various matters were going on in Rockland, the Reverend Chauncy Fairweather had been busy with the records of ancient councils and the writings of the early fathers. The more he read, the more discontented he became with the platform upon which he and his people were standing. They and he were clearly in a minority, and his deep inward longing to be with the majority was growing into an engrossing passion. He yearned especially towards the good old unquestioning, authoritative Mother Church, with her articles of faith which took away the necessity for private judgment, with her traditional forms and ceremonies, and her whole apparatus of stimulants and anodynes.

About this time he procured a breviary and kept it in his desk under the loose papers. He sent to a Catholic bookstore and obtained a small crucifix suspended from a string of beads. He ordered his new coat to be cut very narrow in the collar and to be made single-breasted. He began an informal series of religious conversations with Miss O'Brien, the young person of Irish extraction already referred to as Bridget, maid of all work. These not proving very satisfactory, he managed to fall in with Father McShane, the Catholic priest of the Rockland church.

Father McShane encouraged his nibble very scientifically. It would be such a fine thing to bring over one of those Protestant heretics, and a "liberal" one too!—not that there was any real difference between them, but it sounded better, to say that one of these rationalizing free-and-equal religionists had been made a convert than any of those half-way Protestants who were the slaves of catechisms instead of councils, and of commentators instead of popes. The subtle priest played his disciple with his finest tackle. It was hardly necessary: when anything or anybody wishes to be caught, a bare hook and a coarse line are all that is needed.

If a man has a genuine, sincere, hearty wish to get rid of his liberty, if he is really bent upon becoming a slave, nothing can stop him. And the temptation is to some natures a very great one. Liberty is often a heavy burden on a man. It involves that necessity for perpetual choice which is the kind of labor men have always dreaded. In common life we shirk it by forming habits, which take the place of self-determination. In politics party-organization saves us the pains of much thinking before deciding how to cast our vote. In religious matters there are great multitudes watching us perpetually, each propagandist ready with his bundle of finalities, which having accepted we may be at peace. The more absolute the submission demanded, the stronger the temptation becomes to those who have been long tossed among doubts and conflicts.

So it is that in all the quiet bays which indent the shores of the great ocean of thought, at every sinking wharf, we see moored the hulks and the razees of enslaved or half-enslaved intelligences. They rock peacefully as children in their cradles on the subdued swell which comes feebly in over the bar at the harbor's mouth, slowly crusting with barnacles, pulling at their iron cables as if they really wanted to be free; but better contented to remain bound as they are. For these no more the round unwallied horizon of the open sea, the joyous breeze aloft, the furrow, the foam, the sparkle, that track the rushing keel! They have escaped the dangers of the wave, and lie still henceforth, evermore. Happiest of souls, if lethargy is bliss, and palsy the chief beatitude!

America owes its political freedom to religious Protestantism. But political freedom is reacting on religious prescription with still mightier force. We wonder, therefore, when we find a soul which was born to a full sense of individual liberty, an unchallenged right of self-determination on every new alleged truth offered to its intelligence, voluntarily surrendering any portion of its liberty to a spiritual dictatorship which always proves to rest, in the last analysis, on a majority vote, nothing more nor less, commonly an old one, passed in those barbarous times when men cursed and murdered each other for differences of opinion, and of course were not in a condition to settle the beliefs of a comparatively civilized community.

In our disgust, we are liable to be intolerant. We forget that weakness is not in itself a sin. We forget that even cowardice may call for our most lenient judgment, if it spring from innate infirmity. Who of us does not look with great tenderness on the young chieftain in the "Fair Maid of Perth," when he confesses his want of courage? All of us love companionship and sympathy; some of us may love them too much. All of us are more or less imaginative in our theology.

Some of us may find the aid of material symbols a comfort, if not a necessity. The boldest thinker may have his moments of languor and discouragement, when he feels as if he could willingly exchange faiths with the old beldame crossing herself at the cathedral-door,—nay, that, if he could drop all coherent thought, and lie in the flowery meadow with the brown-eyed solemnly unthinking cattle, looking up to the sky, and all their simple consciousness staining itself blue, then down to the grass, and life turning to a mere greenness, blended with confused scents of herbs,—no individual mind-movement such as men are teased with, but the great calm cattle-sense of all time and all places that know the milky smell of herds,—if he could be like these, he would be content to be driven home by the cow-boy, and share the grassy banquet of the king of ancient Babylon. Let us be very generous, then, in our judgment of those who leave the front ranks of thought for the company of the meek non-combatants who follow with the baggage and provisions. Age, illness, too much wear and tear, a half-formed paralysis, may bring any of us to this pass. But while we can think and maintain the rights of our own individuality against every human combination, let us not forget to caution all who are disposed to waver that there is a cowardice which is criminal, and a longing for rest which it is baseness to indulge. God help him, over whose dead soul in his living body must be uttered the sad supplication, *Requiescat in pace!*

A knock at the Reverend Mr. Fairweather's study door called his eyes from the book on which they were intent. He looked up, as if expecting a welcome guest.

The Reverend Pierrepont Honeywood, D. D., entered the study of the Reverend Chauncy Fairweather. He was not the expected guest. Mr. Fairweather slipped the book he was reading into a half-open drawer, and pushed in the drawer. He slid something which rattled under a paper lying on the table. He rose with a slight change of color, and welcomed, a little awkwardly, his unusual visitor.

"Good-evening, Brother Fairweather!" said the Reverend Doctor, in a very cordial, good-humored way. "I hope I am not spoiling one of those eloquent sermons I never have a chance to hear."

"Not at all, not at all," the younger clergyman answered, in a languid tone, with a kind of habitual half-querulousness which belonged to it,—the vocal expression which we meet with now and then, and which says as plainly as so many words could say it, "I am a suffering individual. I am persistently undervalued, wronged, and imposed upon by mankind and the powers of the universe generally. But I endure all. I endure you. Speak. I listen. It is a burden to me, but I even approve. I sacrifice myself. Behold this movement of my lips! It is a smile."

The Reverend Doctor knew this forlorn way of Mr. Fairweather's, and was not troubled by it. He proceeded to relate the circumstances of his visit from the old black woman, and the fear she was in about the young girl, who being a parishioner of Mr. Fairweather's, he had thought it best to come over and speak to him about old Sophy's fears and fancies.

In telling the old woman's story, he alluded only vaguely to those peculiar circumstances to which she had attributed so much importance, taking it for granted that the other minister must be familiar with the whole series of incidents she had related. The old minister was mistaken, as we have before seen. Mr. Fairweather had been settled in the place only about ten years, and, if he had heard a strange hint now and then about Elsie, had never considered it as anything more than idle and ignorant, if not malicious, village-gossip. All that he fully understood was that this had been a perverse and unmanageable child, and that the extraordinary care which had been bestowed on her had been so far thrown away that she was a dangerous, self-willed girl, whom all feared and almost all shunned, as if she carried with her some malignant influence.

He replied, therefore, after hearing the story, that Elsie had always given trouble. There seemed to be a kind of natural obliquity about her. Perfectly unaccountable. A very dark case. Never amenable to good influences. Had sent her good books from the Sunday-school library. Remembered that she tore out the frontispiece of one of them, and kept it, and flung the book out of the window. It was a picture of Eve's temptation; and he recollected her saying that Eve was a good woman,—and she'd have done just so, if she'd been there. A very sad child, very sad; bad from infancy. He had talked himself bold, and said all at once, "Doctor, do you know I am almost ready to accept your doctrine of the congenital sinfulness of human nature? I am afraid that is the only thing which goes to the bottom of the difficulty."

The old minister's face did not open so approvingly as Mr. Fairweather had expected.

"Why, yes,—well,—many find comfort in it,—I believe;—there is much to be said,—there are many bad people,—and bad children,—I can't be so sure about bad babies,—though they cry very malignantly at times,—especially if they have the stomach-ache. But I really don't know how to condemn this poor Elsie; she may have impulses that act in her like instincts in the lower animals, and so not come under the bearing of our ordinary rules of judgment."

"But this depraved tendency, Doctor,—this unaccountable perverseness. My dear Sir, I am afraid your school is in the right about human nature. Oh, those words of the Psalmist, 'shapen in iniquity,' and the rest! What are we to do with them,—we who teach that the soul of a child is an unstained white tablet?"

"King David was very subject to fits of humility, and much given to self-reproaches," said the Doctor, in a rather dry way. "We owe you and your friends a good deal for calling attention to the natural graces, which,

after all, may, perhaps, be considered as another form of manifestation of the divine influence. Some of our writers have pressed rather too hard on the tendencies of the human soul toward evil as such. It maybe questioned whether these views have not interfered with the sound training of certain young persons, sons of clergymen and others. I am nearer of your mind about the possibility of educating children so that they shall become good Christians without any violent transition. That is what I should hope for from bringing them up 'in the nurture and admonition of the Lord.'"

The younger minister looked puzzled, but presently answered, "Possibly we may have called attention to some neglected truths; but, after all, I fear we must go to the old school, if we want to get at the root of the matter. I know there is an outward amiability about many young persons, some young girls especially, that seems like genuine goodness; but I have been disposed of late to lean toward your view, that these human affections, as we see them in our children,—ours, I say, though I have not the fearful responsibility of training any of my own,—are only a kind of disguised and sinful selfishness."

The old minister groaned in spirit. His heart had been softened by the sweet influences of children and grandchildren. He thought of a half-sized grave in the burial-ground, and the fine, brave, noble-hearted boy he laid in it thirty years before,—the sweet, cheerful child who had made his home all sunshine until the day when he was brought into it, his long curls dripping, his fresh lips purpled in death,—foolish dear little blessed creature to throw himself into the deep water to save the drowning boy, who clung about him and carried him under! Disguised selfishness! And his granddaughter too, whose disguised selfishness was the light of his household!

"Don't call it my view!" he said. "Abstractly, perhaps, all natures may be considered vitiated; but practically, as I see it in life, the divine grace keeps pace with the perverted instincts from infancy in many natures. Besides, this perversion itself may often be disease, bad habits transmitted, like drunkenness, or some hereditary misfortune, as with this Elsie we were talking about."

The younger minister was completely mystified. At every step he made towards the Doctor's recognized theological position, the Doctor took just one step towards his. They would cross each other soon at this rate, and might as well exchange pulpits,—as Colonel Sprowle once wished they would, it may be remembered.

The Doctor, though a much clearer-headed man, was almost equally puzzled. He turned the conversation again upon Elsie, and endeavored to make her minister feel the importance of bringing every friendly influence to bear upon her at this critical period of her life. His sympathies did not seem so lively as the Doctor could have wished. Perhaps he had vastly more important objects of solicitude in his own spiritual interests.

A knock at the door interrupted them. The Reverend Mr. Fairweather rose and went towards it. As he passed the table, his coat caught something, which came rattling to the floor. It was a crucifix with a string of beads attached. As he opened the door, the Milesian features of Father McShane presented themselves, and from their centre proceeded the clerical benediction in Irish-sounding Latin, *Pax vobiscum!*

The Reverend Doctor Honeywood rose and left the priest and his disciple together.

CHAPTER XIX. THE SPIDER ON HIS THREAD.

There was nobody, then, to counsel poor Elsie, except her father, who had learned to let her have her own way so as not to disturb such relations as they had together, and the old black woman, who had a real, though limited influence over the girl. Perhaps she did not need counsel. To look upon her, one might well suppose that she was competent to defend herself against any enemy she was like to have. That glittering, piercing eye was not to be softened by a few smooth words spoken in low tones, charged with the common sentiments which win their way to maidens' hearts. That round, lithe, sinuous figure was as full of dangerous life as ever lay under the slender flanks and clean-shaped limbs of a panther.

There were particular times when Elsie was in such a mood that it must have been a bold person who would have intruded upon her with reproof or counsel. "This is one of her days," old Sophy would say quietly to her father, and he would, as far as possible, leave her to herself. These days were more frequent, as old Sophy's keen, concentrated watchfulness had taught her, at certain periods of the year. It was in the heats of summer that they were most common and most strongly characterized. In winter, on the other hand, she was less excitable, and even at times heavy and as if chilled and dulled in her sensibilities. It was a strange, paroxysmal kind of life that belonged to her. It seemed to come and go with the sunlight. All winter long she would be comparatively quiet, easy to manage, listless, slow in her motions; her eye would lose something of its strange lustre; and the old nurse would feel so little anxiety, that her whole expression and aspect would show the change, and people would say to her, "Why, Sophy, how young you're looking!"

As the spring came on, Elsie would leave the fireside, have her tiger-skin spread in the empty southern chamber next the wall, and lie there basking for whole hours in the sunshine. As the season warmed, the light would kindle afresh in her eyes, and the old woman's sleep would grow restless again,—for she knew, that, so long as the glitter was fierce in the girl's eyes, there was no trusting her impulses or movements.

At last, when the veins of the summer were hot and swollen, and the juices of all the poison-plants and the blood of all the creatures that feed upon them had grown thick and strong,—about the time when the second mowing was in hand, and the brown, wet-faced men were following up the scythes as they chased the falling waves of grass, (falling as the waves fall on sickle-curved beaches; the foam-flowers dropping as the grass-flowers drop,—with sharp semivowel consonantal sounds,—*frsh*,—for that is the way the sea talks, and leaves all pure vowel-sounds for the winds to breathe over it, and all mutes to the unyielding earth,)—about this time of over-ripe midsummer, the life of Elsie seemed fullest of its malign and restless instincts. This was the period of the year when the Rockland people were most cautious of wandering in the leafier coverts which

skirted the base of The Mountain, and the farmers liked to wear thick, long boots, whenever they went into the bushes. But Elsie was never so much given to roaming over The Mountain as at this season; and as she had grown more absolute and uncontrollable, she was as like to take the night as the day for her rambles.

At this season, too, all her peculiar tastes in dress and ornament came out in a more striking way than at other times. She was never so superb as then, and never so threatening in her scowling beauty. The barred skirts she always fancied showed sharply beneath her diaphanous muslins; the diamonds often glittered on her breast as if for her own pleasure rather than to dazzle others; the asp-like bracelet hardly left her arm. She was never seen without some necklace,—either the golden cord she wore at the great party, or a chain of mosaics, or simply a ring of golden scales. Some said that Elsie always slept in a necklace, and that when she died she was to be buried in one. It was a fancy of hers,—but many thought there was a reason for it.

Nobody watched Elsie with a more searching eye than her cousin, Dick Venner. He had kept more out of her way of late, it is true, but there was not a movement she made which he did not carefully observe just so far as he could without exciting her suspicion. It was plain enough to him that the road to fortune was before him, and that the first thing was to marry Elsie. What course he should take with her, or with others interested, after marrying her, need not be decided in a hurry.

He had now done all he could expect to do at present in the way of conciliating the other members of the household. The girl's father tolerated him, if he did not even like him. Whether he suspected his project or not Dick did not feel sure; but it was something to have got a foothold in the house, and to have overcome any prepossession against him which his uncle might have entertained. To be a good listener and a bad billiard-player was not a very great sacrifice to effect this object. Then old Sophy could hardly help feeling well-disposed towards him, after the gifts he had bestowed on her and the court he had paid her. These were the only persons on the place of much importance to gain over. The people employed about the house and farm-lands had little to do with Elsie, except to obey her without questioning her commands.

Mr. Richard began to think of reopening his second parallel. But he had lost something of the coolness with which he had begun his system of operations. The more he had reflected upon the matter, the more he had convinced himself that this was his one great chance in life. If he suffered this girl to escape him, such an opportunity could hardly, in the nature of things, present itself a second time. Only one life between Elsie and her fortune,—and lives are so uncertain! The girl might not suit him as a wife. Possibly. Time enough to find out after he had got her. In short, he must have the property, and Elsie Venner, as she was to go with it,—and then, if he found it convenient and agreeable to, lead a virtuous life, he would settle down and raise children and vegetables; but if he found it inconvenient and disagreeable, so much the worse for those who made it so. Like many other persons, he was not principled against virtue, provided virtue were a better investment than its opposite; but he knew that there might be contingencies in which the property would be better without its incumbrances, and he contemplated this conceivable problem in the light of all its possible solutions.

One thing Mr. Richard could not conceal from himself: Elsie had some new cause of indifference, at least, if not of aversion to him. With the acuteness which persons who make a sole business of their own interest gain by practice, so that fortune-hunters are often shrewd where real lovers are terribly simple, he fixed at once on the young man up at the school where the girl had been going of late, as probably at the bottom of it.

"Cousin Elsie in love!" so he communed with himself upon his lonely pillow. "In love with a Yankee schoolmaster! What else can it be? Let him look out for himself! He'll stand but a bad chance between us. What makes you think she's in love with him? Met her walking with him. Don't like her looks and ways;—she's thinking about something, anyhow. Where does she get those books she is reading so often? Not out of our library, that 's certain. If I could have ten minutes' peep into her chamber now, I would find out where she got them, and what mischief she was up to."

At that instant, as if some tributary demon had heard his wish, a shape which could be none but Elsie's flitted through a gleam of moonlight into the shadow of the trees. She was setting out on one of her midnight rambles.

Dick felt his heart stir in its place, and presently his cheeks flushed with the old longing for an adventure. It was not much to invade a young girl's deserted chamber, but it would amuse a wakeful hour, and tell him some little matters he wanted to know. The chamber he slept in was over the room which Elsie chiefly occupied at this season. There was no great risk of his being seen or heard, if he ventured down-stairs to her apartment.

Mr. Richard Venner, in the pursuit of his interesting project, arose and lighted a lamp. He wrapped himself in a dressing-gown and thrust his feet into a pair of cloth slippers. He stole carefully down the stair, and arrived safely at the door of Elsie's room.

The young lady had taken the natural precaution to leave it fastened, carrying the key with her, no doubt,—unless; indeed, she had got out by the window, which was not far from the ground. Dick could get in at this window easily enough, but he did not like the idea of leaving his footprints in the flower-bed just under it. He returned to his own chamber, and held a council of war with himself.

He put his head out of his own window and looked at that beneath. It was open. He then went to one of his trunks, which he unlocked, and began carefully removing its contents. What these were we need not stop to mention,—only remarking that there were dresses of various patterns, which might afford an agreeable series of changes, and in certain contingencies prove eminently useful. After removing a few of these, he thrust his hand to the very bottom of the remaining pile and drew out a coiled strip of leather many yards in length, ending in a noose,—a tough, well-seasoned lasso, looking as if it had seen service and was none the worse for it. He uncoiled a few yards of this and fastened it to the knob of a door. Then he threw the loose end out of the window so that it should hang by the open casement of Elsie's room. By this he let himself down opposite her window, and with a slight effort swung himself inside the room. He lighted a match, found a candle, and, having lighted that, looked curiously about him, as Clodius might have done when he smuggled himself in among the Vestals.

Elsie's room was almost as peculiar as her dress and ornaments. It was a kind of museum of objects, such as the woods are full of to those who have eyes to see them, but many of them such as only few could hope to

reach, even if they knew where to look for them. Crows' nests, which are never found but in the tall trees, commonly enough in the forks of ancient hemlocks, eggs of rare birds, which must have taken a quick eye and a hard climb to find and get hold of, mosses and ferns of unusual aspect, and quaint monstrosities of vegetable growth, such as Nature delights in, showed that Elsie had her tastes and fancies like any naturalist or poet.

Nature, when left to her own freaks in the forest, is grotesque and fanciful to the verge of license, and beyond it. The foliage of trees does not always require clipping to make it look like an image of life. From those windows at Canoe Meadow, among the mountains, we could see all summer long a lion rampant, a Shanghai chicken, and General Jackson on horseback, done by Nature in green leaves, each with a single tree. But to Nature's tricks with boughs and roots and smaller vegetable growths there is no end. Her fancy is infinite, and her humor not always refined. There is a perpetual reminiscence of animal life in her rude caricatures, which sometimes actually reach the point of imitating the complete human figure, as in that extraordinary specimen which nobody will believe to be genuine, except the men of science, and of which the discreet reader may have a glimpse by application in the proper quarter.

Elsie had gathered so many of these sculpture-like monstrosities, that one might have thought she had robbed old Sophy's grandfather of his fetishes. They helped to give her room a kind of enchanted look, as if a witch had her home in it. Over the fireplace was a long, staff-like branch, strangled in the spiral coils of one of those vines which strain the smaller trees in their clinging embraces, sinking into the bark until the parasite becomes almost identified with its support. With these sylvan curiosities were blended objects of art, some of them not less singular, but others showing a love for the beautiful in form and color, such as a girl of fine organization and nice culture might naturally be expected to feel and to indulge, in adorning her apartment.

All these objects, pictures, bronzes, vases, and the rest, did not detain Mr. Richard Venner very long, whatever may have been his sensibilities to art. He was more curious about books and papers. A copy of Keats lay on the table. He opened it and read the name of Bernard C. Langdon on the blank leaf. An envelope was on the table with Elsie's name written in a similar hand; but the envelope was empty, and he could not find the note it contained. Her desk was locked, and it would not be safe to tamper with it. He had seen enough; the girl received books and notes from this fellow up at the school, this usher, this Yankee quill-driver;—he was aspiring to become the lord of the Dudley domain, then, was he?

Elsie had been reasonably careful. She had locked up her papers, whatever they might be. There was little else that promised to reward his curiosity, but he cast his eye on everything. There was a clasp-Bible among her books. Dick wondered if she ever unclasped it. There was a book of hymns; it had her name in it, and looked as if it might have been often read;—what the diablo had Elsie to do with hymns?

Mr. Richard Venner was in an observing and analytical state of mind, it will be noticed, or he might perhaps have been touched with the innocent betrayals of the poor girl's chamber. Had she, after all, some human tenderness in her heart? That was not the way he put the question,—but whether she would take seriously to this schoolmaster, and if she did, what would be the neatest and surest and quickest way of putting a stop to all that nonsense. All this, however, he could think over more safely in his own quarters. So he stole softly to the window, and, catching the end of the leathern thong, regained his own chamber and drew in the lasso.

It needs only a little jealousy to set a man on who is doubtful in love or wooing, or to make him take hold of his courting in earnest. As soon as Dick had satisfied himself that the young schoolmaster was his rival in Elsie's good graces, his whole thoughts concentrated themselves more than ever on accomplishing his great design of securing her for himself. There was no time to be lost. He must come into closer relations with her, so as to withdraw her thoughts from this fellow, and to find out more exactly what was the state of her affections, if she had any. So he began to court her company again, to propose riding with her, to sing to her, to join her whenever she was strolling about the grounds, to make himself agreeable, according to the ordinary understanding of that phrase, in every way which seemed to promise a chance for succeeding in that amiable effort.

The girl treated him more capriciously than ever. She would be sullen and silent, or she would draw back fiercely at some harmless word or gesture, or she would look at him with her eyes narrowed in such a strange way and with such a wicked light in them that Dick swore to himself they were too much for him, and would leave her for the moment. Yet she tolerated him, almost as a matter of necessity, and sometimes seemed to take a kind of pleasure in trying her power upon him. This he soon found out, and humored her in the fancy that she could exercise a kind of fascination over him, though there were times in which he actually felt an influence he could not understand, an effect of some peculiar expression about her, perhaps, but still centring in those diamond eyes of hers which it made one feel so curiously to look into.

Whether Elsie saw into his object or not was more than he could tell. His idea was, after having conciliated the good-will of all about her as far as possible, to make himself first a habit and then a necessity with the girl,—not to spring any trap of a declaration upon her until tolerance had grown into such a degree of inclination as her nature was like to admit. He had succeeded in the first part of his plan. He was at liberty to prolong his visit at his own pleasure. This was not strange; these three persons, Dudley Venner, his daughter, and his nephew, represented all that remained of an old and honorable family. Had Elsie been like other girls, her father might have been less willing to entertain a young fellow like Dick as an inmate; but he had long outgrown all the slighter apprehensions which he might have had in common with all parents, and followed rather than led the imperious instincts of his daughter. It was not a question of sentiment, but of life and death, or more than that,—some dark ending, perhaps, which would close the history of his race with disaster and evil report upon the lips of all coming generations.

As to the thought of his nephew's making love to his daughter, it had almost passed from his mind. He had been so long in the habit of looking at Elsie as outside of all common influences and exceptional in the law of her nature, that it was difficult for him to think of her as a girl to be fallen in love with. Many persons are surprised, when others court their female relatives; they know them as good young or old women enough,—aunts, sisters, nieces, daughters, whatever they may be,—but never think of anybody's falling in love with them, any more than of their being struck by lightning. But in this case there were special reasons, in

addition to the common family delusion,—reasons which seemed to make it impossible that she should attract a suitor. Who would dare to marry Elsie? No, let her have the pleasure, if it was one, at any rate the wholesome excitement, of companionship; it might save her from lapsing into melancholy or a worse form of madness. Dudley Venner had a kind of superstition, too, that, if Elsie could only outlive three septenaries, twenty-one years, so that, according to the prevalent idea, her whole frame would have been thrice made over, counting from her birth, she would revert to the natural standard of health of mind and feelings from which she had been so long perverted. The thought of any other motive than love being sufficient to induce Richard to become her suitor had not occurred to him. He had married early, at that happy period when interested motives are least apt to influence the choice; and his single idea of marriage was, that it was the union of persons naturally drawn towards each other by some mutual attraction. Very simple, perhaps; but he had lived lonely for many years since his wife's death, and judged the hearts of others, most of all of his brother's son, by his own. He had often thought whether, in case of Elsie's dying or being necessarily doomed to seclusion, he might not adopt this nephew and make him his heir; but it had not occurred to him that Richard might wish to become his son-in-law for the sake of his property.

It is very easy to criticise other people's modes of dealing with their children. Outside observers see results; parents see processes. They notice the trivial movements and accents which betray the blood of this or that ancestor; they can detect the irrepressible movement of hereditary impulse in looks and acts which mean nothing to the common observer. To be a parent is almost to be a fatalist. This boy sits with legs crossed, just as his uncle used to whom he never saw; his grandfathers both died before he was born, but he has the movement of the eyebrows which we remember in one of them, and the gusty temper of three different generations, can tell pretty nearly the range of possibilities and the limitations of a child, actual or potential, of a given stock,—errors excepted always, because children of the same stock are not bred just alike, because the traits of some less known ancestor are liable to break out at any time, and because each human being has, after all, a small fraction of individuality about him which gives him a flavor, so that he is distinguishable from others by his friends or in a court of justice, and which occasionally makes a genius or a saint or a criminal of him. It is well that young persons cannot read these fatal oracles of Nature. Blind impulse is her highest wisdom, after all. We make our great jump, and then she takes the bandage off our eyes. That is the way the broad sea-level of average is maintained, and the physiological democracy is enabled to fight against the principle of selection which would disinherit all the weaker children. The magnificent constituency of mediocrities of which the world is made up,—the people without biographies, whose lives have made a clear solution in the fluid menstuum of time, instead of being precipitated in the opaque sediment of history—

But this is a narrative, and not a disquisition.

CHAPTER XX. FROM WITHOUT AND FROM WITHIN.

There were not wanting people who accused Dudley VENNERS of weakness and bad judgment in his treatment of his daughter. Some were of opinion that the great mistake was in not "breaking her will" when she was a little child. There was nothing the matter with her, they said, but that she had been spoiled by indulgence. If they had had the charge of her, they'd have brought her down. She'd got the upperhand of her father now; but if he'd only taken hold of her in season! There are people who think that everything may be done, if the doer, be he educator or physician, be only called "in season." No doubt,—but in season would often be a hundred or two years before the child was born; and people never send so early as that.

The father of Elsie Venner knew his duties and his difficulties too well to trouble himself about anything others might think or say. So soon as he found that he could not govern his child, he gave his life up to following her and protecting her as far as he could. It was a stern and terrible trial for a man of acute sensibility, and not without force of intellect and will, and the manly ambition for himself and his family-name which belonged to his endowments and his position. Passive endurance is the hardest trial to persons of such a nature.

What made it still more a long martyrdom was the necessity for bearing his cross in utter loneliness. He could not tell his griefs. He could not talk of them even with those who knew their secret spring. His minister had the unsympathetic nature which is common in the meaner sort of devotees,—persons who mistake spiritual selfishness for sanctity, and grab at the infinite prize of the great Future and Elsewhere with the egotism they excommunicate in its hardly more odious forms of avarice and self-indulgence. How could he speak with the old physician and the old black woman about a sorrow and a terror which but to name was to strike dumb the lips of Consolation?

In the dawn of his manhood he had found that second consciousness for which young men and young women go about looking into each other's faces, with their sweet, artless aim playing in every feature, and making them beautiful to each other, as to all of us. He had found his other self early, before he had grown weary in the search and wasted his freshness in vain longings: the lot of many, perhaps we may say of most, who infringe the patent of our social order by intruding themselves into a life already upon half allowance of the necessary luxuries of existence. The life he had led for a brief space was not only beautiful in outward circumstance, as old Sophy had described it to the Reverend Doctor. It was that delicious process of the tuning of two souls to each other, string by string, not without little half-pleasing discords now and then when some chord in one or the other proves to be overstrained or over-lax, but always approaching nearer and nearer to harmony, until they become at last as two instruments with a single voice. Something more than a year of this blissful doubled consciousness had passed over him when he found himself once more alone,—alone, save for the little diamond-eyed child lying in the old black woman's arms, with the coral necklace round—her throat and the rattle in her hand.

He would not die by his own act. It was not the way in his family. There may have been other, perhaps better reasons, but this was enough; he did not come of suicidal stock. He must live for this child's sake, at any rate; and yet,—oh, yet, who could tell with what thoughts he looked upon her? Sometimes her little features would look placid, and something like a smile would steal over them; then all his tender feelings would rush up, into his eyes, and he would put his arms out to take her from the old woman,—but all at once her eyes would narrow and she would throw her head back, and a shudder would seize him as he stooped over his child,—he could not look upon her,—he could not touch his lips to her cheek; nay, there would sometimes come into his soul such frightful suggestions that he would hurry from the room lest the hinted thought should become a momentary madness and he should lift his hand against the hapless infant which owed him life.

In those miserable days he used to wander all over The Mountain in his restless endeavor to seek some relief for inward suffering in outward action. He had no thought of throwing himself from the summit of any of the broken cliffs, but he clambered over them recklessly, as having no particular care for his life. Sometimes he would go into the accursed district where the venomous reptiles were always to be dreaded, and court their worst haunts, and kill all he could come near with a kind of blind fury which was strange in a person of his gentle nature.

One overhanging cliff was a favorite haunt of his. It frowned upon his home beneath in a very menacing way; he noticed slight seams and fissures that looked ominous;—what would happen, if it broke off some time or other and came crashing down on the fields and roofs below? He thought of such a possible catastrophe with a singular indifference, in fact with a feeling almost like pleasure. It would be such a swift and thorough solution of this great problem of life he was working out in ever-recurring daily anguish! The remote possibility of such a catastrophe had frightened some timid dwellers beneath The Mountain to other places of residence; here the danger was most imminent, and yet he loved to dwell upon the chances of its occurrence. Danger is often the best counterirritant in cases of mental suffering; he found a solace in careless exposure of his life, and learned to endure the trials of each day better by dwelling in imagination on the possibility that it might be the last for him and the home that was his.

Time, the great consoler, helped these influences, and he gradually fell into more easy and less dangerous habits of life. He ceased from his more perilous rambles. He thought less of the danger from the great overhanging rocks and forests; they had hung there for centuries; it was not very likely they would crash or slide in his time. He became accustomed to all Elsie's strange looks and ways. Old Sophy dressed her with ruffles round her neck, and hunted up the red coral branch with silver bells which the little toothless Dudleys had bitten upon for a hundred years. By an infinite effort, her father forced himself to become the companion of this child, for whom he had such a mingled feeling, but whose presence was always a trial to him, and often a terror.

At a cost which no human being could estimate, he had done his duty, and in some degree reaped his reward. Elsie grew up with a kind of filial feeling for him, such as her nature was capable of. She never would obey him; that was not to be looked for. Commands, threats, punishments, were out of the question with her; the mere physical effects of crossing her will betrayed themselves in such changes of expression and manner that it would have been senseless to attempt to govern her in any such way. Leaving her mainly to herself, she could be to some extent indirectly influenced,—not otherwise. She called her father "Dudley," as if he had been her brother. She ordered everybody and would be ordered by none.

Who could know all these things, except the few people of the household? What wonder, therefore, that ignorant and shallow persons laid the blame on her father of those peculiarities which were freely talked about,—of those darker tendencies which were hinted of in whispers? To all this talk, so far as it reached him, he was supremely indifferent, not only with the indifference which all gentlemen feel to the gossip of their inferiors, but with a charitable calmness which did not wonder or blame. He knew that his position was not simply a difficult, but an impossible one, and schooled himself to bear his destiny as well as he might, and report himself only at Headquarters.

He had grown gentle under this discipline. His hair was just beginning to be touched with silver, and his expression was that of habitual sadness and anxiety. He had no counsellor, as we have seen, to turn to, who did not know either too much or too little. He had no heart to rest upon and into which he might unburden himself of the secrets and the sorrows that were aching in his own breast. Yet he had not allowed himself to run to waste in the long time since he was left alone to his trials and fears. He had resisted the seductions which always beset solitary men with restless brains overwrought by depressing agencies. He disguised no misery to himself with the lying delusion of wine. He sought no sleep from narcotics, though he lay with throbbing, wide-open eyes through all the weary hours of the night.

It was understood between Dudley Venner and old Doctor Kittredge that Elsie was a subject of occasional medical observation, on account of certain mental peculiarities which might end in a permanent affection of her reason. Beyond this nothing was said, whatever may have been in the mind of either. But Dudley Venner had studied Elsie's case in the light of all the books he could find which might do anything towards explaining it. As in all cases where men meddle with medical science for a special purpose, having no previous acquaintance with it, his imagination found what it wanted in the books he read, and adjusted it to the facts before him. So it was he came to cherish those two fancies before alluded to that the ominous birthmark she had carried from infancy might fade and become obliterated, and that the age of complete maturity might be signalized by an entire change in her physical and mental state. He held these vague hopes as all of us nurse our only half-believed illusions. Not for the world would he have questioned his sagacious old medical friend as to the probability or possibility of their being true. We are very shy of asking questions of those who know enough to destroy with one word the hopes we live on.

In this life of comparative seclusion to which the father had doomed himself for the sake of his child, he had found time for large and varied reading. The learned Judge Thornton confessed himself surprised at the extent of Dudley Venner's information. Doctor Kittredge found that he was in advance of him in the knowledge of recent physiological discoveries. He had taken pains to become acquainted with agricultural chemistry; and the neighboring farmers owed him some useful hints about the management of their land. He

renewed his old acquaintance with the classic authors. He loved to warm his pulses with Homer and calm them down with Horace. He received all manner of new books and periodicals, and gradually gained an interest in the events of the passing time. Yet he remained almost a hermit, not absolutely refusing to see his neighbors, nor even churlish towards them, but on the other hand not cultivating any intimate relations with them.

He had retired from the world a young man, little more than a youth, indeed, with sentiments and aspirations all of them suddenly extinguished. The first had bequeathed him a single huge sorrow, the second a single trying duty. In due time the anguish had lost something of its poignancy, the light of earlier and happier memories had begun to struggle with and to soften its thick darkness, and even that duty which he had confronted with such an effort had become an endurable habit.

At a period of life when many have been living on the capital of their acquired knowledge and their youthful stock of sensibilities until their intellects are really shallower and their hearts emptier than they were at twenty, Dudley Venner was stronger in thought and tenderer in soul than in the first freshness of his youth, when he counted but half his present years. He had entered that period which marks the decline of men who have ceased growing in knowledge and strength: from forty to fifty a man must move upward, or the natural falling off in the vigor of life will carry him rapidly downward. At this time his inward nature was richer and deeper than in any earlier period of his life. If he could only be summoned to action, he was capable of noble service. If his sympathies could only find an outlet, he was never so capable of love as now; for his natural affections had been gathering in the course of all these years, and the traces of that ineffaceable calamity of his life were softened and partially hidden by new growths of thought and feeling, as the wreck left by a mountain slide is covered over by the gentle intrusion of the soft-stemmed herbs which will prepare it for the stronger vegetation that will bring it once more into harmony with the peaceful slopes around it.

Perhaps Dudley Venner had not gained so much in worldly wisdom as if he had been more in society and less in his study. The indulgence with which he treated his nephew was, no doubt, imprudent. A man more in the habit of dealing with men would have been more guarded with a person with Dick's questionable story and unquestionable physiognomy. But he was singularly unsuspecting, and his natural kindness was an additional motive to the wish for introducing some variety into the routine of Elsie's life.

If Dudley Venner did not know just what he wanted at this period of his life, there were a great many people in the town of Rockland who thought they did know. He had been a widower long enough, "—nigh twenty year, wa'n't it? He'd been aout to Spraowles's party,—there wa'n't anything to hender him why he shouldn't stir raound l'k other folks. What was the reason he did n't go abaout to taown-meetin's 'n' Sahbath-meetin's, 'n' lyceums, 'n' school 'xaminations, 'n' s'prise-parties, 'n' funerals,—and other entertainments where the still-faced two-story folks were in the habit of looking round to see if any of the mansion-house gentry were present?—Fac' was, he was livin' too lonesome daown there at the mansion-haouse. Why shouldn't he make up to the Jedge's daughter? She was genteel enough for him, and—let's see, haow old was she? Seven-'n'itwenty,—no, six-'n'-twenty,—born the same year we buried our little Anny Marl".

There was no possible objection to this arrangement, if the parties interested had seen fit to make it or even to think of it. But "Portia," as some of the mansion-house people called her, did not happen to awaken the elective affinities of the lonely widower. He met her once in a while, and said to himself that she was a good specimen of the grand style of woman; and then the image came back to him of a woman not quite so large, not quite so imperial in her port, not quite so incisive in her speech, not quite so judicial in her opinions, but with two or three more joints in her frame, and two or three soft inflections in her voice, which for some absurd reason or other drew him to her side and so bewitched him that he told her half his secrets and looked into her eyes all that he could not tell, in less time than it would have takes him to discuss the champion paper of the last Quarterly with the admirable "Portia." Heu, quanto minus! How much more was that lost image to him than all it left on earth!

The study of love is very much like that of meteorology. We know that just about so much rain will fall in a season; but on what particular day it will shower is more than we can tell. We know that just about so much love will be made every year in a given population; but who will rain his young affections upon the heart of whom is not known except to the astrologers and fortune-tellers. And why rain falls as it does and why love is made just as it is are equally puzzling questions.

The woman a man loves is always his own daughter, far more his daughter than the female children born to him by the common law of life. It is not the outside woman, who takes his name, that he loves: before her image has reached the centre of his consciousness, it has passed through fifty many-layered nerve-strainers, been churned over by ten thousand pulse-beats, and reacted upon by millions of lateral impulses which bandy it about through the mental spaces as a reflection is sent back and forward in a saloon lined with mirrors. With this altered image of the woman before him, his preexisting ideal becomes blended. The object of his love is in part the offspring of her legal parents, but more of her lover's brain. The difference between the real and the ideal objects of love must not exceed a fixed maximum. The heart's vision cannot unite them stereoscopically into a single image, if the divergence passes certain limits. A formidable analogy, much in the nature of a proof, with very serious consequences, which moralists and match-makers would do well to remember! Double vision with the eyes of the heart is a dangerous physiological state, and may lead to missteps and serious falls.

Whether Dudley Venner would ever find a breathing image near enough to his ideal one, to fill the desolate chamber of his heart, or not, was very doubtful. Some gracious and gentle woman, whose influence would steal upon him as the first low words of prayer after that interval of silent mental supplication known to one of our simpler forms of public worship, gliding into his consciousness without hurting its old griefs, herself knowing the chastening of sorrow, and subdued into sweet acquiescence with the Divine will,—some such woman as this, if Heaven should send him such, might call him back to the world of happiness, from which he seemed forever exiled. He could never again be the young lover who walked through the garden-alleys all red with roses in the old dead and buried June of long ago. He could never forget the bride of his youth, whose image, growing phantomlike with the lapse of years, hovered over him like a dream while waking and like a reality in dreams. But if it might be in God's good providence that this desolate life should come under the

influence of human affections once more, what an ecstasy of renewed existence was in store for him! His life had not all been buried under that narrow ridge of turf with the white stone at its head. It seemed so for a while; but it was not and could not and ought not to be so. His first passion had been a true and pure one; there was no spot or stain upon it. With all his grief there blended no cruel recollection of any word or look he would have wished to forget. All those little differences, such as young married people with any individual flavor in their characters must have, if they are tolerably mated, had only added to the music of existence, as the lesser discords admitted into some perfect symphony, fitly resolved, add richness and strength to the whole harmonious movement. It was a deep wound that Fate had inflicted on him; nay, it seemed like a mortal one; but the weapon was clean, and its edge was smooth. Such wounds must heal with time in healthy natures, whatever a false sentiment may say, by the wise and beneficent law of our being. The recollection of a deep and true affection is rather a divine nourishment for a life to grow strong upon than a poison to destroy it.

Dudley Venner's habitual sadness could not be laid wholly to his early bereavement. It was partly the result of the long struggle between natural affection and duty, on one side, and the involuntary tendencies these had to overcome, on the other,—between hope and fear, so long in conflict that despair itself would have been like an anodyne, and he would have slept upon some final catastrophe with the heavy sleep of a bankrupt after his failure is proclaimed. Alas! some new affection might perhaps rekindle the fires of youth in his heart; but what power could calm that haggard terror of the parent which rose with every morning's sun and watched with every evening star,—what power save alone that of him who comes bearing the inverted torch, and leaving after him only the ashes printed with his footsteps?

CHAPTER XXI. THE WIDOW ROWENS GIVES A TEA-PARTY.

There was a good deal of interest felt, as has been said, in the lonely condition of Dudley Venner in that fine mansion-house of his, and with that strange daughter, who would never be married, as many people thought, in spite of all the stories. The feelings expressed by the good folks who dated from the time when they "buried aour little Anny Mari'," and others of that homespun stripe, were founded in reason, after all. And so it was natural enough that they should be shared by various ladies, who, having conjugated the verb to live as far as the preterpluperfect tense, were ready to change one of its vowels and begin with it in the present indicative. Unfortunately, there was very little chance of showing sympathy in its active form for a gentleman who kept himself so much out of the way as the master of the Dudley Mansion.

Various attempts had been made, from time to time, of late years, to get him out of his study, which had, for the most part, proved failures. It was a surprise, therefore, when he was seen at the Great Party at the Colonel's. But it was an encouragement to try him again, and the consequence had been that he had received a number of notes inviting him to various smaller entertainments, which, as neither he nor Elsie had any fancy for them, he had politely declined.

Such was the state of things when he received an invitation to take tea sociably, with a few friends, at Hyacinth Cottage, the residence of the Widow Rowens, relict of the late Beeri Rowens, Esquire, better known as Major Rowens. Major Rowens was at the time of his decease a promising officer in the militia, in the direct line of promotion, as his waistband was getting tighter every year; and, as all the world knows, the militia-officer who splits off most buttons and fills the largest sword-belt stands the best chance of rising, or, perhaps we might say, spreading, to be General.

Major Rowens united in his person certain other traits which help a man to eminence in the branch of public service referred to. He ran to high colors, to wide whiskers, to open pores; he had the saddle-leather skin common in Englishmen, rarer in Americans,—never found in the Brahmin caste, oftener in the military and the commodores: observing people know what is meant; blow the seed-arrows from the white-kid-looking button which holds them on a dandelion-stalk, and the pricked-pincushion surface shows you what to look for. He had the loud gruff voice which implies the right to command. He had the thick hand, stubbed fingers, with bristled pads between their joints, square, broad thumb-nails, and sturdy limbs, which mark a constitution made to use in rough out-door work. He had the never-failing predilection for showy switch-tailed horses that step high, and sidle about, and act as if they were going to do something fearful the next minute, in the face of awed and admiring multitudes gathered at mighty musters or imposing cattle-shows. He had no objection, either, to holding the reins in a wagon behind another kind of horse,—a slouching, listless beast, with a strong slant to his shoulder; and a notable depth to his quarter and an emphatic angle at the hock, who commonly walked or lounged along in a lazy trot of five or six miles an hour; but, if a lively colt happened to come rattling up alongside, or a brandy-faced old horse-jockey took the road to show off a fast nag, and threw his dust into the Major's face, would pick his legs up all at once, and straighten his body out, and swing off into a three-minute gait, in a way that "Old Blue" himself need not have been ashamed of.

For some reason which must be left to the next generation of professors to find out, the men who are knowing in horse-flesh have an eye also for, let a long dash separate the brute creation from the angelic being now to be named,—for lovely woman. Of this fact there can be no possible doubt; and therefore you shall notice, that, if a fast horse trots before two, one of the twain is apt to be a pretty bit of muliebrity, with shapes to her, and eyes flying about in all directions.

Major Rowens, at that time Lieutenant of the Rockland Fusileers, had driven and "traded" horses not a few before he turned his acquired skill as a judge of physical advantages in another direction. He knew a neat, snug hoof, a delicate pastern, a broad haunch, a deep chest, a close ribbed-up barrel, as well as any other man in the town. He was not to be taken in by your thick-jointed, heavy-headed cattle, without any go to them, that suit a country-parson, nor yet by the "gaanted-up," long-legged animals, with all their constitutions

bred out of them, such as rich greenhorns buy and cover up with their plated trappings.

Whether his equine experience was of any use to him in the selection of the mate with whom he was to go in double harness so long as they both should live, we need not stop to question. At any rate, nobody could find fault with the points of Miss Marilla Van Deusen, to whom he offered the privilege of becoming Mrs. Rowens. The Van must have been crossed out of her blood, for she was an out-and-out brunette, with hair and eyes black enough for a Mohawk's daughter. A fine style of woman, with very striking tints and outlines,—an excellent match for the Lieutenant, except for one thing. She was marked by Nature for a widow. She was evidently got up for mourning, and never looked so well as in deep black, with jet ornaments.

The man who should dare to marry her would doom himself; for how could she become the widow she was bound to be, unless he could retire and give her a chance? The Lieutenant lived, however, as we have seen, to become Captain and then Major, with prospects of further advancement. But Mrs. Rowens often said she should never look well in colors. At last her destiny fulfilled itself, and the justice of Nature was vindicated. Major Rowens got overheated galloping about the field on the day of the Great Muster, and had a rush of blood to the head, according to the common report,—at any rate, something which stopped him short in his career of expansion and promotion, and established Mrs. Rowens in her normal condition of widowhood.

The Widow Rowens was now in the full bloom of ornamental sorrow. A very shallow crape bonnet, frilled and froth-like, allowed the parted raven hair to show its glossy smoothness. A jet pin heaved upon her bosom with every sigh of memory, or emotion of unknown origin. Jet bracelets shone with every movement of her slender hands, cased in close-fitting black gloves. Her sable dress was ridged with manifold flounces, from beneath which a small foot showed itself from time to time, clad in the same hue of mourning. Everything about her was dark, except the whites of her eyes and the enamel of her teeth. The effect was complete. Gray's *Elegy* was not a more perfect composition.

Much as the Widow was pleased with the costume belonging to her condition, she did not disguise from herself that under certain circumstances she might be willing to change her name again. Thus, for instance, if a gentleman not too far gone in maturity, of dignified exterior, with an ample fortune, and of unexceptionable character, should happen to set his heart upon her, and the only way to make him happy was to give up her weeds and go into those unbecoming colors again for his sake,—why, she felt that it was in her nature to make the sacrifice. By a singular coincidence it happened that a gentleman was now living in Rockland who united in himself all these advantages. Who he was, the sagacious reader may very probably have divined. Just to see how it looked, one day, having bolted her door, and drawn the curtains close, and glanced under the sofa, and listened at the keyhole to be sure there was nobody in the entry,—just to see how it looked, she had taken out an envelope and written on the back of it Mrs. Manilla Venner. It made her head swim and her knees tremble. What if she should faint, or die, or have a stroke of palsy, and they should break into the room and find that name written! How she caught it up and tore it into little shreds, and then could not be easy until she had burned the small heap of pieces—

But these are things which every honorable reader will consider imparted in strict confidence.

The Widow Rowens, though not of the mansion house set, was among the most genteel of the two-story circle, and was in the habit of visiting some of the great people. In one of these visits she met a dashing young fellow with an olive complexion at the house of a professional gentleman who had married one of the white necks and pairs of fat arms from a distinguished family before referred to. The professional gentleman himself was out, but the lady introduced the olive-complexioned young man as Mr. Richard Venner.

The Widow was particularly pleased with this accidental meeting. Had heard Mr. Venner's name frequently mentioned. Hoped his uncle was well, and his charming cousin,—was she as original as ever? Had often admired that charming creature he rode: we had had some fine horses. Had never got over her taste for riding, but could find nobody that liked a good long gallop since—well—she could n't help wishing she was alongside of him, the other day, when she saw him dashing by, just at twilight.

The Widow paused; lifted a flimsy handkerchief with a very deep black border so as to play the jet bracelet; pushed the tip of her slender foot beyond the lowest of her black flounces; looked up; looked down; looked at Mr. Richard, the very picture of artless simplicity,—as represented in well-played genteel comedy.

"A good bit of stuff," Dick said to himself, "and something of it left yet; caramba!" The Major had not studied points for nothing, and the Widow was one of the right sort. The young man had been a little restless of late, and was willing to vary his routine by picking up an acquaintance here and there. So he took the Widow's hint. He should like to have a scamper of half a dozen miles with her some fine morning.

The Widow was infinitely obliged; was not sure that she could find any horse in the village to suit her; but it was so kind in him! Would he not call at Hyacinth Cottage, and let her thank him again there?

Thus began an acquaintance which the Widow made the most of, and on the strength of which she determined to give a tea-party and invite a number of persons of whom we know something already. She took a half-sheet of note-paper and made out her list as carefully as a country "merchant's clerk" adds up two and threepence (New-England nomenclature) and twelve and a half cents, figure by figure, and fraction by fraction, before he can be sure they will make half a dollar, without cheating somebody. After much consideration the list reduced itself to the following names: Mr. Richard Venner and Mrs. Blanche Creamer, the lady at whose house she had met him,—mansion-house breed,—but will come,—soft on Dick; Dudley Venner,—take care of him herself; Elsie,—Dick will see to her,—won't it fidget the Creamer woman to see him round her? the old Doctor,—he 's always handy; and there's that young master there, up at the school,—know him well enough to ask him,—oh, yes, he'll come. One, two, three, four, five, six,—seven; not room enough, without the leaf in the table; one place empty, if the leaf's in. Let's see,—Helen Darley,—she 'll do well enough to fill it up,—why, yes, just the thing,—light brown hair, blue eyes,—won't my pattern show off well against her? Put her down,—she 's worth her tea and toast ten times over,—nobody knows what a "thunder-and-lightning woman," as poor Major used to have it, is, till she gets alongside of one of those old-maidish girls, with hair the color of brown sugar, and eyes like the blue of a teacup.

The Widow smiled with a feeling of triumph at having overcome her difficulties and arranged her party,—arose and stood before her glass, three-quarters front, one-quarter profile, so as to show the whites of the

eyes and the down of the upper lip. "Splendid!" said the Widow—and to tell the truth, she was not far out of the way, and with Helen Darley as a foil anybody would know she must be foudroyant and pyramidal,—if these French adjectives may be naturalized for this one particular exigency.

So the Widow sent out her notes. The black grief which had filled her heart and had overflowed in surges of crape around her person had left a deposit half an inch wide at the margin of her note-paper. Her seal was a small youth with an inverted torch, the same on which Mrs. Blanche Creamer made her spiteful remark, that she expected to see that boy of the Widow's standing on his head yet; meaning, as Dick supposed, that she would get the torch right-side up as soon as she had a chance. That was after Dick had made the Widow's acquaintance, and Mrs. Creamer had got it into her foolish head that she would marry that young fellow, if she could catch him. How could he ever come to fancy such a quadron-looking thing as that, she should like to know?

It is easy enough to ask seven people to a party; but whether they will come or not is an open question, as it was in the case of the spirits of the vasty deep. If the note issues from a three-story mansion-house, and goes to two-story acquaintances, they will all be in an excellent state of health, and have much pleasure in accepting this very polite invitation. If the note is from the lady of a two-story family to three-story ones, the former highly respectable person will very probably find that an endemic complaint is prevalent, not represented in the weekly bills of mortality, which occasions numerous regrets in the bosoms of eminently desirable parties that they cannot have the pleasure of and-so-forthing.

In this case there was room for doubt,—mainly as to whether Elsie would take a fancy to come or not. If she should come, her father would certainly be with her. Dick had promised, and thought he could bring Elsie. Of course the young schoolmaster will come, and that poor tired-out looking Helen, if only to get out of sight of those horrid Peckham wretches. They don't get such invitations every day. The others she felt sure of,—all but the old Doctor,—he might have some horrid patient or other to visit; tell him Elsie Venner's going to be there,—he always likes to have an eye on her, they say,—oh, he'd come fast enough, without any more coaxing.

She wanted the Doctor, particularly. It was odd, but she was afraid of Elsie. She felt as if she should be safe enough, if the old Doctor were there to see to the girl; and then she should have leisure to devote herself more freely to the young lady's father, for whom all her sympathies were in a state of lively excitement.

It was a long time since the Widow had seen so many persons round her table as she had now invited. Better have the plates set and see how they will fill it up with the leaf in.—A little too scattering with only eight plates set: if she could find two more people, now, that would bring the chairs a little closer,—snug, you know,—which makes the company sociable. The Widow thought over her acquaintances. Why how stupid! there was her good minister, the same who had married her, and might—might—bury her for aught she knew, and his granddaughter staying with him,—nice little girl, pretty, and not old enough to be dangerous;—for the Widow had no notion of making a tea-party and asking people to it that would be like to stand between her and any little project she might happen to have on anybody's heart,—not she! It was all right now; Blanche was married and so forth; Letty was a child; Elsie was his daughter; Helen Darley was a nice, worthy drudge,—poor thing!—faded, faded,—colors wouldn't wash, just what she wanted to show off against. Now, if the Dudley mansion-house people would only come,—that was the great point.

"Here's a note for us, Elsie," said her father, as they sat round the breakfast-table. "Mrs. Rowens wants us all to come to tea."

It was one of "Elsie's days," as old Sophy called them. The light in her eyes was still, but very bright. She looked up so full of perverse and wilful impulses, that Dick knew he could make her go with him and her father. He had his own motives for bringing her to this determination,—and his own way of setting about it.

"I don't want to go," he said. "What do you say, uncle?"

"To tell the truth, Richard, I don't much fancy the Major's widow. I don't like to see her weeds flowering out quite so strong. I suppose you don't care about going, Elsie?"

Elsie looked up in her father's face with an expression which he knew but too well. She was just in the state which the plain sort of people call "contrary," when they have to deal with it in animals. She would insist on going to that tea-party; he knew it just as well before she spoke as after she had spoken. If Dick had said he wanted to go and her father had seconded his wishes, she would have insisted on staying at home. It was no great matter, her father said to himself, after all; very likely it would amuse her; the Widow was a lively woman enough,—perhaps a little *comme il ne faut pas* socially, compared with the Thorntons and some other families; but what did he care for these petty village distinctions?

Elsie spoke.

"I mean to go. You must go with me, Dudley. You may do as you like, Dick."

That settled the Dudley-mansion business, of course. They all three accepted, as fortunately did all the others who had been invited.

Hyacinth Cottage was a pretty place enough, a little too much choked round with bushes, and too much overrun with climbing-roses, which, in the season of slugs and rose-bugs, were apt to show so brown about the leaves and so coleopterous about the flowers, that it might be questioned whether their buds and blossoms made up for these unpleasant animal combinations,—especially as the smell of whale-oil soap was very commonly in the ascendant over that of the roses. It had its patch of grass called "the lawn," and its glazed closet known as "the conservatory," according to that system of harmless fictions characteristic of the rural imagination and shown in the names applied to many familiar objects. The interior of the cottage was more tasteful and ambitious than that of the ordinary two-story dwellings. In place of the prevailing hair-cloth covered furniture, the visitor had the satisfaction of seating himself upon a chair covered with some of the Widow's embroidery, or a sofa luxurious with soft caressing plush. The sporting tastes of the late Major showed in various prints on the wall: Herring's "Plenipotentiary," the "red bullock" of the '34 Derby; "Cadland" and "The Colonel;" "Crucifix;" "West-Australian," fastest of modern racers; and among native celebrities, ugly, game old "Boston," with his straight neck and ragged hips; and gray "Lady Suffolk," queen, in her day, not of the turf but of the track, "extending" herself till she measured a rod, more or less, skimming

along within a yard of the ground, her legs opening and shutting under her with a snap, like the four blades of a compound jack-knife.

These pictures were much more refreshing than those dreary fancy death-bed scenes, common in two-story country-houses, in which Washington and other distinguished personages are represented as obligingly devoting their last moments to taking a prominent part in a tableau, in which weeping relatives, attached servants, professional assistants, and celebrated personages who might by a stretch of imagination be supposed present, are grouped in the most approved style of arrangement about the chief actor's pillow.

A single glazed bookcase held the family library, which was hidden from vulgar eyes by green silk curtains behind the glass. It would have been instructive to get a look at it, as it always is to peep into one's neighbor's book-shelves. From other sources and opportunities a partial idea of it has been obtained. The Widow had inherited some books from her mother, who was something of a reader: Young's "Night-Thoughts;" "The Preceptor;" "The Task, a Poem," by William Cowper; Hervey's "Meditations;" "Alonzo and Melissa;" "Buccaneers of America;" "The Triumphs of Temper;" "La Belle Assemblee;" Thomson's "Seasons;" and a few others. The Major had brought in "Tom Jones" and "Peregrine Pickle;" various works by Mr. Pierce Egan; "Boxiana," "The Racing Calendar;" and a "Book of Lively Songs and Jests." The Widow had added the Poems of Lord Byron and T. Moore; "Eugene Aram;" "The Tower of London," by Harrison Ainsworth; some of Scott's Novels; "The Pickwick Papers;" a volume of Plays, by W. Shakespeare; "Proverbial Philosophy;" "Pilgrim's Progress;" "The Whole Duty of Man" (a present when she was married); with two celebrated religious works, one by William Law and the other by Philip Doddridge, which were sent her after her husband's death, and which she had tried to read, but found that they did not agree with her. Of course the bookcase held a few school manuals and compendiums, and one of Mr. Webster's Dictionaries. But the gilt-edged Bible always lay on the centre-table, next to the magazine with the fashion-plates and the scrap-book with pictures from old annuals and illustrated papers.

The reader need not apprehend the recital, at full length, of such formidable preparations for the Widow's tea-party as were required in the case of Colonel Sprowle's Social Entertainment. A tea-party, even in the country, is a comparatively simple and economical piece of business. As soon as the Widow found that all her company were coming, she set to work, with the aid of her "smart" maid-servant and a daughter of her own, who was beginning to stretch and spread at a fearful rate, but whom she treated as a small child, to make the necessary preparations. The silver had to be rubbed; also the grand plated urn,—her mother's before hers,—style of the Empire,—looking as if it might have been made to hold the Major's ashes. Then came the making and baking of cake and gingerbread, the smell whereof reached even as far as the sidewalk in front of the cottage, so that small boys returning from school snuffed it in the breeze, and discoursed with each other on its suggestions; so that the Widow Leech, who happened to pass, remembered she had n't called on Marilly Raowens for a considerable spell, and turned in at the gate and rang three times with long intervals,—but all in vain, the inside Widow having "spotted" the outside one through the blinds, and whispered to her aides-de-camp to let the old thing ring away till she pulled the bell out by the roots, but not to stir to open the door.

Widow Rowens was what they called a real smart, capable woman, not very great on books, perhaps, but knew what was what and who was who as well as another,—knew how to make the little cottage look pretty, how to set out a tea-table, and, what a good many women never can find out, knew her own style and "got herself up tip-top," as our young friend Master Geordie, Colonel Sprowle's heir-apparent, remarked to his friend from one of the fresh-water colleges. Flowers were abundant now, and she had dressed her rooms tastefully with them. The centre-table had two or three gilt-edged books lying carelessly about on it, and some prints and a stereoscope with stereographs to match, chiefly groups of picnics, weddings, etc., in which the same somewhat fatigued looking ladies of fashion and brides received the attentions of the same unpleasant-looking young men, easily identified under their different disguises, consisting of fashionable raiment such as gentlemen are supposed to wear habitually. With these, however, were some pretty English scenes,—pretty except for the old fellow with the hanging under-lip who infests every one of that interesting series; and a statue or two, especially that famous one commonly called the Lahcoon, so as to rhyme with moon and spoon, and representing an old man with his two sons in the embraces of two monstrous serpents.

There is no denying that it was a very dashing achievement of the Widow's to bring together so considerable a number of desirable guests. She felt proud of her feat; but as to the triumph of getting Dudley Venner to come out for a visit to Hyacinth Cottage, she was surprised and almost frightened at her own success. So much might depend on the impressions of that evening!

The next thing was to be sure that everybody should be in the right place at the tea-table, and this the Widow thought she could manage by a few words to the older guests and a little shuffling about and shifting when they got to the table. To settle everything the Widow made out a diagram, which the reader should have a chance of inspecting in an authentic copy, if these pages were allowed under any circumstances to be the vehicle of illustrations. If, however, he or she really wishes to see the way the pieces stood as they were placed at the beginning of the game, (the Widow's gambit,) he or she had better at once take a sheet of paper, draw an oval, and arrange the characters according to the following schedule.

At the head of the table, the Hostess, Widow Marilla Rowens. Opposite her, at the other end, Rev. Dr. Honeywood. At the right of the Hostess, Dudley Venner, next him Helen Darley, next her Dr. Kittredge, next him Mrs. Blanche Creamer, then the Reverend Doctor. At the left of the Hostess, Bernard Langdon, next him Letty Forrester, next Letty Mr. Richard Venner, next him Elsie, and so to the Reverend Doctor again.

The company came together a little before the early hour at which it was customary to take tea in Rockland. The Widow knew everybody, of course: who was there in Rockland she did not know? But some of them had to be introduced: Mr. Richard Venner to Mr. Bernard, Mr. Bernard to Miss Letty, Dudley Venner to Miss Helen Darley, and so on. The two young men looked each other straight in the eyes, both full of youthful life, but one of frank and fearless aspect, the other with a dangerous feline beauty alien to the New England half of his blood.

The guests talked, turned over the prints, looked at the flowers, opened the "Proverbial Philosophy" with gilt edges, and the volume of Plays by W. Shakespeare, examined the horse-pictures on the walls, and so passed away the time until tea was announced, when they paired off for the room where it was in readiness.

The Widow had managed it well; everything was just as she wanted it. Dudley Venner was between herself and the poor tired-looking schoolmistress with her faded colors. Blanche Creamer, a lax, tumble-to-pieces, Greuze-ish looking blonde, whom the Widow hated because the men took to her, was purgatoried between the two old Doctors, and could see all the looks that passed between Dick Venner and his cousin. The young schoolmaster could talk to Miss Letty: it was his business to know how to talk to schoolgirls. Dick would amuse himself with his cousin Elsie. The old Doctors only wanted to be well fed and they would do well enough.

It would be very pleasant to describe the tea-table; but in reality, it did not pretend to offer a plethoric banquet to the guests. The Widow had not visited the mansion-houses for nothing, and she had learned there that an overloaded tea-table may do well enough for farm-hands when they come in at evening from their work and sit down unwashed in their shirtsleeves, but that for decently bred people such an insult to the memory of a dinner not yet half-assimilated is wholly inadmissible. Everything was delicate, and almost everything of fair complexion: white bread and biscuits, frosted and sponge cake, cream, honey, straw-colored butter; only a shadow here and there, where the fire had crisped and browned the surfaces of a stack of dry toast, or where a preserve had brought away some of the red sunshine of the last year's summer. The Widow shall have the credit of her well-ordered tea-table, also of her bountiful cream-pitchers; for it is well known that city-people find cream a very scarce luxury in a good many country-houses of more pretensions than Hyacinth Cottage. There are no better maids for ladies who give tea-parties than these:

Cream is thicker than water. Large heart never loved little cream pot.

There is a common feeling in genteel families that the third meal of the day is not so essential a part of the daily bread as to require any especial acknowledgment to the Providence which bestows it. Very devout people, who would never sit down to a breakfast or a dinner without the grace before meat which honors the Giver of it, feel as if they thanked Heaven enough for their tea and toast by partaking of them cheerfully without audible petition or ascription. But the Widow was not exactly mansion-house-bred, and so thought it necessary to give the Reverend Doctor a peculiar look which he understood at once as inviting his professional services. He, therefore, uttered a few simple words of gratitude, very quietly,—much to the satisfaction of some of the guests, who had expected one of those elaborate effusions, with rolling up of the eyes and rhetorical accents, so frequent with eloquent divines when they address their Maker in genteel company.

Everybody began talking with the person sitting next at hand. Mr. Bernard naturally enough turned his attention first to the Widow; but somehow or other the right side of the Widow seemed to be more wide awake than the left side, next him, and he resigned her to the courtesies of Mr. Dudley Venner, directing himself, not very unwillingly, to the young girl next him on the other side. Miss Letty Forrester, the granddaughter of the Reverend Doctor, was city-bred, as anybody might see, and city-dressed, as any woman would know at sight; a man might only feel the general effect of clear, well-matched colors, of harmonious proportions, of the cut which makes everything cling like a bather's sleeve where a natural outline is to be kept, and ruffle itself up like the hackle of a pitted fighting-cock where art has a right to luxuriate in silken exuberance. How this citybred and city-dressed girl came to be in Rockland Mr. Bernard did not know, but he knew at any rate that she was his next neighbor and entitled to his courtesies. She was handsome, too, when he came to look, very handsome when he came to look again,—endowed with that city beauty which is like the beauty of wall-fruit, something finer in certain respects than can be reared off the pavement.

The miserable routinists who keep repeating invidiously Cowper's

"God made the country and man made the town,"

as if the town were a place to kill out the race in, do not know what they are talking about. Where could they raise such Saint-Michael pears, such Saint-Germains, such Brown-Beurres, as we had until within a few years growing within the walls of our old city-gardens? Is the dark and damp cavern where a ragged beggar hides himself better than a town-mansion which fronts the sunshine and backs on its own cool shadow, with gas and water and all appliances to suit all needs? God made the cavern and man made the house! What then?

There is no doubt that the pavement keeps a deal of mischief from coming up out of the earth, and, with a dash off of it in summer, just to cool the soles of the feet when it gets too hot, is the best place for many constitutions, as some few practical people have already discovered. And just so these beauties that grow and ripen against the city-walls, these young fellows with cheeks like peaches and young girls with cheeks like nectarines, show that the most perfect forms of artificial life can do as much for the human product as garden-culture for strawberries and blackberries.

If Mr. Bernard had philosophized or prosed in this way, with so pretty, nay, so lovely a neighbor as Miss Letty Forrester waiting for him to speak to her, he would have to be dropped from this narrative as a person unworthy of his good-fortune, and not deserving the kind reader's further notice. On the contrary, he no sooner set his eyes fairly on her than he said to himself that she was charming, and that he wished she were one of his scholars at the Institute. So he began talking with her in an easy way; for he knew something of young girls by this time, and, of course, could adapt himself to a young lady who looked as if she might be not more than fifteen or sixteen years old, and therefore could hardly be a match in intellectual resources for the seventeen and eighteen year-old first-class scholars of the Apollinean Institute. But city-wall-fruit ripens early, and he soon found that this girl's training had so sharpened her wits and stored her memory, that he need not be at the trouble to stoop painfully in order to come down to her level.

The beauty of good-breeding is that it adjusts itself to all relations without effort, true to itself always however the manners of those around it may change. Self-respect and respect for others,—the sensitive consciousness poises itself in these as the compass in the ship's binnacle balances itself and maintains its true level within the two concentric rings which suspend it on their pivots. This thorough-bred school-girl quite enchanted Mr. Bernard. He could not understand where she got her style, her way of dress, her enunciation, her easy manners. The minister was a most worthy gentleman, but this was not the Rockland

native-born manner; some new element had come in between the good, plain, worthy man and this young girl, fit to be a Crown Prince's partner where there were a thousand to choose from.

He looked across to Helen Darley, for he knew she would understand the glance of admiration with which he called her attention to the young beauty at his side; and Helen knew what a young girl could be, as compared with what too many a one is, as well as anybody.

This poor, dear Helen of ours! How admirable the contrast between her and the Widow on the other side of Dudley Venner! But, what was very odd, that gentleman apparently thought the contrast was to the advantage of this poor, dear Helen. At any rate, instead of devoting himself solely to the Widow, he happened to be just at that moment talking in a very interested and, apparently, not uninteresting way to his right-hand neighbor, who, on her part, never looked more charmingly,—as Mr. Bernard could not help saying to himself,—but, to be sure, he had just been looking at the young girl next him, so that his eyes were brimful of beauty, and may have spilled some of it on the first comer: for you know M. Becquerel has been showing us lately how everything is phosphorescent; that it soaks itself with light in an instant's exposure, so that it is wet with liquid sunbeams, or, if you will, tremulous with luminous vibrations, when first plunged into the negative bath of darkness, and betrays itself by the light which escapes from its surface.

Whatever were the reason, this poor, dear Helen never looked so sweetly. Her plainly parted brown hair, her meek, blue eyes, her cheek just a little tinged with color, the almost sad simplicity of her dress, and that look he knew so well,—so full of cheerful patience, so sincere, that he had trusted her from the first moment as the believers of the larger half of Christendom trust the Blessed Virgin,—Mr. Bernard took this all in at a glance, and felt as pleased as if it had been his own sister Dorothea Elizabeth that he was looking at. As for Dudley Venner, Mr. Bernard could not help being struck by the animated expression of his countenance. It certainly showed great kindness, on his part, to pay so much attention to this quiet girl, when he had the thunder-and-lightning Widow on the other side of him.

Mrs. Marilla Rowens did not know what to make of it. She had made her tea-party expressly for Mr. Dudley Venner. She had placed him just as she wanted, between herself and a meek, delicate woman who dressed in gray, wore a plain breastpin with hair in it, who taught a pack of girls up there at the school, and looked as if she were born for a teacher,—the very best foil that she could have chosen; and here was this man, polite enough to herself, to be sure, but turning round to that very undistinguished young person as if he rather preferred her conversation of the two!

The truth was that Dudley Venner and Helen Darley met as two travellers might meet in the desert, wearied, both of them, with their long journey, one having food, but no water, the other water, but no food. Each saw that the other had been in long conflict with some trial; for their voices were low and tender, as patiently borne sorrow and humbly uttered prayers make every human voice. Through these tones, more than by what they said, they came into natural sympathetic relations with each other. Nothing could be more unstudied. As for Dudley Venner, no beauty in all the world could have so soothed and magnetized him as the very repose and subdued gentleness which the Widow had thought would make the best possible background for her own more salient and effective attractions. No doubt, Helen, on her side, was almost too readily pleased with the confidence this new acquaintance she was making seemed to show her from the very first. She knew so few men of any condition! Mr. Silas Peckham: he was her employer, and she ought to think of him as well as she could; but every time she thought of him it was with a shiver of disgust. Mr. Bernard Langdon: a noble young man, a true friend, like a brother to her,—God bless him, and send him some young heart as fresh as his own! But this gentleman produced a new impression upon her, quite different from any to which she was accustomed. His rich, low tones had the strangest significance to her; she felt sure he must have lived through long experiences, sorrowful like her own. Elsie's father! She looked into his dark eyes, as she listened to him, to see if they had any glimmer of that peculiar light, diamond-bright, but cold and still, which she knew so well in Elsie's. Anything but that! Never was there more tenderness, it seemed to her, than in the whole look and expression of Elsie's father. She must have been a great trial to him; yet his face was that of one who had been saddened, not soured, by his discipline. Knowing what Elsie must be to him, how hard she must make any parent's life, Helen could not but be struck with the interest Mr. Dudley Venner showed in her as his daughter's instructress. He was too kind to her; again and again she meekly turned from him, so as to leave him free to talk to the showy lady at his other side, who was looking all the while

*"like the night
Of cloudless realms and starry skies;"*

but still Mr. Dudley Venner, after a few courteous words, came back to the blue eyes and brown hair; still he kept his look fixed upon her, and his tones grew sweeter and lower as he became more interested in talk, until this poor, dear Helen, what with surprise, and the bashfulness natural to one who had seen little of the gay world, and the stirring of deep, confused sympathies with this suffering father, whose heart seemed so full of kindness, felt her cheeks glowing with unwonted flame, and betrayed the pleasing trouble of her situation by looking so sweetly as to arrest Mr. Bernard's eye for a moment, when he looked away from the young beauty sitting next him.

Elsie meantime had been silent, with that singular, still, watchful look which those who knew her well had learned to fear. Her head just a little inclined on one side, perfectly motionless for whole minutes, her eyes seeming to, grow small and bright, as always when she was under her evil influence, she was looking obliquely at the young girl on the other side of her cousin Dick and next to Bernard Langdon. As for Dick himself, she seemed to be paying very little attention to him. Sometimes her eyes would wander off to Mr. Bernard, and their expression, as old Dr. Kittredge, who watched her for a while pretty keenly, noticed, would change perceptibly. One would have said that she looked with a kind of dull hatred at the girl, but with a half-relenting reproachful anger at Mr. Bernard.

Miss Letty Forrester, at whom Elsie had been looking from time to time in this fixed way, was conscious meanwhile of some unusual influence. First it was a feeling of constraint,—then, as it were, a diminished power over the muscles, as if an invisible elastic cobweb were spinning round her,—then a tendency to turn

away from Mr. Bernard, who was making himself very agreeable, and look straight into those eyes which would not leave her, and which seemed to be drawing her towards them, while at the same time they chilled the blood in all her veins.

Mr. Bernard saw this influence coming over her. All at once he noticed that she sighed, and that some little points of moisture began to glisten on her forehead. But she did not grow pale perceptibly; she had no involuntary or hysteric movements; she still listened to him and smiled naturally enough. Perhaps she was only nervous at being stared at. At any rate, she was coming under some unpleasant influence or other, and Mr. Bernard had seen enough of the strange impression Elsie sometimes produced to wish this young girl to be relieved from it, whatever it was. He turned toward Elsie and looked at her in such a way as to draw her eyes upon him. Then he looked steadily and calmly into them. It was a great effort, for some perfectly inexplicable reason. At one instant he thought he could not sit where he was; he must go and speak to Elsie. Then he wanted to take his eyes away from hers; there was something intolerable in the light that came from them. But he was determined to look her down, and he believed he could do it, for he had seen her countenance change more than once when he had caught her gaze steadily fixed on him. All this took not minutes, but seconds. Presently she changed color slightly,—lifted her head, which was inclined a little to one side,—shut and opened her eyes two or three times, as if they had been pained or wearied,—and turned away baffled, and shamed, as it would seem, and shorn for the time of her singular and formidable or at least evil-natured power of swaying the impulses of those around her.

It takes too long to describe these scenes where a good deal of life is concentrated into a few silent seconds. Mr. Richard Venner had sat quietly through it all, although this short pantomime had taken place literally before his face. He saw what was going on well enough, and understood it all perfectly well. Of course the schoolmaster had been trying to make Elsie jealous, and had succeeded. The little schoolgirl was a decoy-duck,—that was all. Estates like the Dudley property were not to be had every day, and no doubt the Yankee usher was willing to take some pains to make sure of Elsie. Does n't Elsie look savage? Dick involuntarily moved his chair a little away from her, and thought he felt a pricking in the small white scars on his wrist. A dare-devil fellow, but somehow or other this girl had taken strange hold of his imagination, and he often swore to himself, that, when he married her, he would carry a loaded revolver with him to his bridal chamber.

Mrs. Blanche Creamer raged inwardly at first to find herself between the two old gentlemen of the party. It very soon gave her great comfort, however, to see that Marilla, Rowens had just missed it in her calculations, and she chuckled immensely to find Dudley Venner devoting himself chiefly to Helen Darley. If the Rowens woman should hook Dudley, she felt as if she should gnaw all her nails off for spite. To think of seeing her barouching about Rockland behind a pair of long-tailed bays and a coachman with a band on his hat, while she, Blanche Creamer, was driving herself about in a one-horse "carriage"! Recovering her spirits by degrees, she began playing her surfaces off at the two old Doctors, just by way of practice. First she heaved up a glaring white shoulder, the right one, so that the Reverend Doctor should be stunned by it, if such a thing might be. The Reverend Doctor was human, as the Apostle was not ashamed to confess himself. Half-devoutly and half-mischievously he repeated inwardly, "Resist the Devil and he will flee from you." As the Reverend Doctor did not show any lively susceptibility, she thought she would try the left shoulder on old Dr. Kittredge. That worthy and experienced student of science was not at all displeased with the manoeuvre, and lifted his head so as to command the exhibition through his glasses. "Blanche is good for half a dozen years or so, if she is careful," the Doctor said to himself, "and then she must take to her prayer-book." After this spasmodic failure of Mrs. Blanche Creamer's to stir up the old Doctors, she returned again to the pleasing task of watching the Widow in her evident discomfiture. But dark as the Widow looked in her half-concealed pet, she was but as a pale shadow, compared to Elsie in her silent concentration of shame and anger.

"Well, there is one good thing," said Mrs. Blanche Creamer; "Dick doesn't get much out of that cousin of his this evening! Does n't he look handsome, though?"

So Mrs. Blanche, being now a good deal taken up with her observations of those friends of hers and ours, began to be rather careless of her two old Doctors, who naturally enough fell into conversation with each other across the white surfaces of that lady, perhaps not very politely, but, under the circumstances, almost as a matter of necessity.

When a minister and a doctor get talking together, they always have a great deal to say; and so it happened that the company left the table just as the two Doctors were beginning to get at each other's ideas about various interesting matters. If we follow them into the other parlor, we can, perhaps, pick up something of their conversation.

CHAPTER XXII. WHY DOCTORS DIFFER.

The company rearranged itself with some changes after leaving the tea-table. Dudley Venner was very polite to the Widow; but that lady having been called off for a few moments for some domestic arrangement, he slid back to the side of Helen Darley, his daughter's faithful teacher. Elsie had got away by herself, and was taken up in studying the stereoscopic Laocoon. Dick, being thus set free, had been seized upon by Mrs. Blanche Creamer, who had diffused herself over three-quarters of a sofa and beckoned him to the remaining fourth. Mr. Bernard and Miss Letty were having a snug fete-a-fete in the recess of a bay-window. The two Doctors had taken two arm-chairs and sat squared off against each other. Their conversation is perhaps as well worth reporting as that of the rest of the company, and, as it was carried on in a louder tone, was of course more easy to gather and put on record.

It was a curious sight enough to see those two representatives of two great professions brought face to face to talk over the subjects they had been looking at all their lives from such different points of view. Both were

old; old enough to have been moulded by their habits of thought and life; old enough to have all their beliefs "fretted in," as vintners say,—thoroughly worked up with their characters. Each of them looked his calling. The Reverend Doctor had lived a good deal among books in his study; the Doctor, as we will call the medical gentleman, had been riding about the country for between thirty and forty years. His face looked tough and weather-worn; while the Reverend Doctor's, hearty as it appeared, was of finer texture. The Doctor's was the graver of the two; there was something of grimness about it, partly owing to the northeasters he had faced for so many years, partly to long companionship with that stern personage who never deals in sentiment or pleasantry. His speech was apt to be brief and peremptory; it was a way he had got by ordering patients; but he could discourse somewhat, on occasion, as the reader may find out. The Reverend Doctor had an open, smiling expression, a cheery voice, a hearty laugh, and a cordial way with him which some thought too lively for his cloth, but which children, who are good judges of such matters, delighted in, so that he was the favorite of all the little rogues about town. But he had the clerical art of sobering down in a moment, when asked to say grace while somebody was in the middle of some particularly funny story; and though his voice was so cheery in common talk, in the pulpit, like almost all preachers, he had a wholly different and peculiar way of speaking, supposed to be more acceptable to the Creator than the natural manner. In point of fact, most of our anti-papal and anti-prelatical clergymen do really intone their prayers, without suspecting in the least that they have fallen into such a Romish practice.

This is the way the conversation between the Doctor of Divinity and the Doctor of Medicine was going on at the point where these notes take it up.

"Obi tres medici, duo athei, you know, Doctor. Your profession has always had the credit of being lax in doctrine,—though pretty stringent in practice, ha! ha!"

"Some priest said that," the Doctor answered, dryly. "They always talked Latin when they had a bigger lie than common to get rid of."

"Good!" said the Reverend Doctor; "I'm afraid they would lie a little sometimes. But isn't there some truth in it, Doctor? Don't you think your profession is apt to see 'Nature' in the place of the God of Nature,—to lose sight of the great First Cause in their daily study of secondary causes?"

"I've thought about that," the Doctor answered, "and I've talked about it and read about it, and I've come to the conclusion that nobody believes in God and trusts in God quite so much as the doctors; only it is n't just the sort of Deity that some of your profession have wanted them to take up with. There was a student of mine wrote a dissertation on the Natural Theology of Health and Disease, and took that old lying proverb for his motto. He knew a good deal more about books than ever I did, and had studied in other countries. I'll tell you what he said about it. He said the old Heathen Doctor, Galen, praised God for his handiwork in the human body, just as if he had been a Christian, or the Psalmist himself. He said they had this sentence set up in large letters in the great lecture-room in Paris where he attended: I dressed his wound and God healed him. That was an old surgeon's saying. And he gave a long list of doctors who were not only Christians, but famous ones. I grant you, though, ministers and doctors are very apt to see differently in spiritual matters."

"That's it," said the Reverend Doctor; "you are apt to see 'Nature' where we see God, and appeal to 'Science' where we are contented with Revelation."

"We don't separate God and Nature, perhaps, as you do," the Doctor answered. "When we say that God is omnipresent and omnipotent and omniscient, we are a little more apt to mean it than your folks are. We think, when a wound heals, that God's presence and power and knowledge are there, healing it, just as that old surgeon did. We think a good many theologians, working among their books, don't see the facts of the world they live in. When we tell 'em of these facts, they are apt to call us materialists and atheists and infidels, and all that. We can't help seeing the facts, and we don't think it's wicked to mention 'em."

"Do tell me," the Reverend Doctor said, "some of these facts we are in the habit of overlooking, and which your profession thinks it can see and understand."

"That's very easy," the Doctor replied. "For instance: you don't understand or don't allow for idiosyncrasies as we learn to. We know that food and physic act differently with different people; but you think the same kind of truth is going to suit, or ought to suit, all minds. We don't fight with a patient because he can't take magnesia or opium; but you are all the time quarrelling over your beliefs, as if belief did not depend very much on race and constitution, to say nothing of early training."

"Do you mean to say that every man is not absolutely free to choose his beliefs?"

"The men you write about in your studies are, but not the men we see in the real world. There is some apparently congenital defect in the Indians, for instance, that keeps them from choosing civilization and Christianity. So with the Gypsies, very likely. Everybody knows that Catholicism or Protestantism is a good deal a matter of race. Constitution has more to do with belief than people think for. I went to a Universalist church, when I was in the city one day, to hear a famous man whom all the world knows, and I never saw such pews-full of broad shoulders and florid faces, and substantial, wholesome-looking persons, male and female, in all my life. Why, it was astonishing. Either their creed made them healthy, or they chose it because they were healthy. Your folks have never got the hang of human nature."

"I am afraid this would be considered a degrading and dangerous view of human beliefs and responsibility for them," the Reverend Doctor replied. "Prove to a man that his will is governed by something outside of himself, and you have lost all hold on his moral and religious nature. There is nothing bad men want to believe so much as that they are governed by necessity. Now that which is at once degrading and dangerous cannot be true."

"No doubt," the Doctor replied, "all large views of mankind limit our estimate of the absolute freedom of the will. But I don't think it degrades or endangers us, for this reason, that, while it makes us charitable to the rest of mankind, our own sense of freedom, whatever it is, is never affected by argument. Conscience won't be reasoned with. We feel that we can practically do this of that, and if we choose the wrong, we know we are responsible; but observation teaches us that this or that other race or individual has not the same practical freedom of choice. I don't see how we can avoid this conclusion in the instance of the American Indians. The science of Ethnology has upset a good many theoretical notions about human nature."

"Science!" said the Reverend Doctor, "science! that was a word the Apostle Paul did not seem to think much of, if we may judge by the Epistle to Timothy: 'Oppositions of science falsely so called.' I own that I am jealous of that word and the pretensions that go with it. Science has seemed to me to be very often only the handmaid of skepticism."

"Doctor!" the physician said, emphatically, "science is knowledge. Nothing that is not known properly belongs to science. Whenever knowledge obliges us to doubt, we are always safe in doubting. Astronomers foretell eclipses, say how long comets are to stay with us, point out where a new planet is to be found. We see they know what they assert, and the poor old Roman Catholic Church has at last to knock under. So Geology proves a certain succession of events, and the best Christian in the world must make the earth's history square with it. Besides, I don't think you remember what great revelations of himself the Creator has made in the minds of the men who have built up science. You seem to me to hold his human masterpieces very cheap. Don't you think the 'inspiration of the Almighty' gave Newton and Cuvier 'understanding'?"

The Reverend Doctor was not arguing for victory. In fact, what he wanted was to call out the opinions of the old physician by a show of opposition, being already predisposed to agree with many of them. He was rather trying the common arguments, as one tries tricks of fence merely to learn the way of parrying. But just here he saw a tempting opening, and could not resist giving a home-thrust.

"Yes; but you surely would not consider it inspiration of the same kind as that of the writers of the Old Testament?"

That cornered the Doctor, and he paused a moment before he replied. Then he raised his head, so as to command the Reverend Doctor's face through his spectacles, and said,

"I did not say that. You are clear, I suppose, that the Omniscient spoke through Solomon, but that Shakespeare wrote without his help?"

The Reverend Doctor looked very grave. It was a bold, blunt way of putting the question. He turned it aside with the remark, that Shakespeare seemed to him at times to come as near inspiration as any human being not included among the sacred writers.

"Doctor," the physician began, as from a sudden suggestion, "you won't quarrel with me, if I tell you some of my real thoughts, will you?"

"Say on, my dear Sir, say on," the minister answered, with his most genial smile; "your real thoughts are just what I want to get at. A man's real thoughts are a great rarity. If I don't agree with you, I shall like to hear you."

The Doctor began; and in order to give his thoughts more connectedly, we will omit the conversational breaks, the questions and comments of the clergyman, and all accidental interruptions.

"When the old ecclesiastics said that where there were three doctors there were two atheists, they lied, of course. They called everybody who differed from them atheists, until they found out that not believing in God was n't nearly so ugly a crime as not believing in some particular dogma; then they called them heretics, until so many good people had been burned under that name that it began to smell too strong of roasting flesh,—and after that infidels, which properly means people without faith, of whom there are not a great many in any place or time. But then, of course, there was some reason why doctors shouldn't think about religion exactly as ministers did, or they never would have made that proverb. It 's very likely that something of the same kind is true now; whether it is so or not, I am going to tell you the reasons why it would not be strange, if doctors should take rather different views from clergymen about some matters of belief. I don't, of course, mean all doctors nor all clergymen. Some doctors go as far as any old New England divine, and some clergymen agree very well with the doctors that think least according to rule.

"To begin with their ideas of the Creator himself. They always see him trying to help his creatures out of their troubles. A man no sooner gets a cut, than the Great Physician, whose agency we often call Nature, goes to work, first to stop the blood, and then to heal the wound, and then to make the scar as small as possible. If a man's pain exceeds a certain amount, he faints, and so gets relief. If it lasts too long, habit comes in to make it tolerable. If it is altogether too bad, he dies. That is the best thing to be done under the circumstances. So you see, the doctor is constantly in presence of a benevolent agency working against a settled order of things, of which pain and disease are the accidents, so to speak. Well, no doubt they find it harder than clergymen to believe that there can be any world or state from which this benevolent agency is wholly excluded. This may be very wrong; but it is not unnatural.

"They can hardly conceive of a permanent state of being in which cuts would never try to heal, nor habit render suffering endurable. This is one effect of their training.

"Then, again, their attention is very much called to human limitations. Ministers work out the machinery of responsibility in an abstract kind of way; they have a sort of algebra of human nature, in which friction and strength (or weakness) of material are left out. You see, a doctor is in the way of studying children from the moment of birth upwards. For the first year or so he sees that they are just as much pupils of their Maker as the young of any other animals. Well, their Maker trains them to pure selfishness. Why? In order that they may be sure to take care of themselves. So you see, when a child comes to be, we will say a year and a day old, and makes his first choice between right and wrong, he is at a disadvantage; for he, has that *vis a tergo*, as we doctors call it, that force from behind, of a whole year's life of selfishness, for which he is no more to blame than a calf is to blame for having lived in the same way, purely to gratify his natural appetites. Then we see that baby grow up to a child, and, if he is fat and stout and red and lively, we expect to find him troublesome and noisy, and, perhaps, sometimes disobedient more or less; that's the way each new generation breaks its egg-shell; but if he is very weak and thin, and is one of the kind that may be expected to die early, he will very likely sit in the house all day and read good books about other little sharp-faced children just like himself, who died early, having always been perfectly indifferent to all the out-door amusements of the wicked little red-cheeked children.

"Some of the little folks we watch grow up to be young women, and occasionally one of them gets nervous, what we call hysterical, and then that girl will begin to play all sorts of pranks,—to lie and cheat, perhaps, in the most unaccountable way, so that she might seem to a minister a good example of total depravity. We

don't see her in that light. We give her iron and valerian, and get her on horseback, if we can, and so expect to make her will come all right again. By and by we are called in to see an old baby, threescore years and ten or more old. We find this old baby has never got rid of that first year's teaching which led him to fill his stomach with all he could pump into it, and his hands with everything he could grab. People call him a miser. We are sorry for him; but we can't help remembering his first year's training, and the natural effect of money on the great majority of those that have it. So while the ministers say he 'shall hardly enter into the kingdom of heaven,' we like to remind them that 'with God all things are possible.'

"Once more, we see all kinds of monomania and insanity. We learn from them to recognize all sorts of queer tendencies in minds supposed to be sane, so that we have nothing but compassion for a large class of persons condemned as sinners by theologians, but considered by us as invalids. We have constant reasons for noticing the transmission of qualities from parents to offspring, and we find it hard to hold a child accountable in any moral point of view for inherited bad temper or tendency to drunkenness,—as hard as we should to blame him for inheriting gout or asthma. I suppose we are more lenient with human nature than theologians generally are. We know that the spirits of men and their views of the present and the future go up and down with the barometer, and that a permanent depression of one inch in the mercurial column would affect the whole theology of Christendom.

"Ministers talk about the human will as if it stood on a high look-out, with plenty of light, and elbowroom reaching to the horizon. Doctors are constantly noticing how it is tied up and darkened by inferior organization, by disease, and all sorts of crowding interferences, until they get to look upon Hottentots and Indians—and a good many of their own race as a kind of self-conscious blood-clocks with very limited power of self-determination. That's the tendency, I say, of a doctor's experience. But the people to whom they address their statements of the results of their observation belong to the thinking class of the highest races, and they are conscious of a great deal of liberty of will. So in the face of the fact that civilization with all it offers has proved a dead failure with the aboriginal races of this country,—on the whole, I say, a dead failure,—they talk as if they knew from their own will all about that of a Digger Indian! We are more apt to go by observation of the facts in the case. We are constantly seeing weakness where you see depravity. I don't say we're right; I only tell what you must often find to be the fact, right or wrong, in talking with doctors. You see, too, our notions of bodily and moral disease, or sin, are apt to go together. We used to be as hard on sickness as you were on sin. We know better now. We don't look at sickness as we used to, and try to poison it with everything that is offensive, burnt toads and earth-worms and viper-broth, and worse things than these. We know that disease has something back of it which the body isn't to blame for, at least in most cases, and which very often it is trying to get rid of. Just so with sin. I will agree to take a hundred new-born babes of a certain stock and return seventy-five of them in a dozen years true and honest, if not 'pious' children. And I will take another hundred, of a different stock, and put them in the hands of certain Ann-Street or Five-Points teachers, and seventy-five of them will be thieves and liars at the end of the same dozen years. I have heard of an old character, Colonel Jaques, I believe it was, a famous cattle-breeder, who used to say he could breed to pretty much any pattern he wanted to. Well, we doctors see so much of families, how the tricks of the blood keep breaking out, just as much in character as they do in looks, that we can't help feeling as if a great many people hadn't a fair chance to be what is called 'good,' and that there isn't a text in the Bible better worth keeping always in mind than that one, 'Judge not, that ye be not judged.'

"As for our getting any quarter at the hands of theologians, we don't expect it, and have no right to. You don't give each other any quarter. I have had two religious books sent me by friends within a week or two. One is Mr. Brownson's; he is as fair and square as Euclid; a real honest, strong thinker, and one that knows what he is talking about,—for he has tried all sorts of religions, pretty much. He tells us that the Roman Catholic Church is the one 'through which alone we can hope for heaven.' The other is by a worthy Episcopal rector, who appears to write as if he were in earnest, and he calls the Papacy the 'Devil's Masterpiece,' and talks about the 'Satanic scheme' of that very Church 'through which alone,' as Mr. Brownson tells us, 'we can hope for heaven.'

"What's the use in our caring about hard words after this,—'atheists,' heretics, infidels, and the like? They're, after all, only the cinders picked up out of those heaps of ashes round the stumps of the old stakes where they used to burn men, women, and children for not thinking just like other folks. They'll 'crock' your fingers, but they can't burn us.

"Doctors are the best-natured people in the world, except when they get fighting with each other. And they have some advantages over you. You inherit your notions from a set of priests that had no wives and no children, or none to speak of, and so let their humanity die out of them. It did n't seem much to them to condemn a few thousand millions of people to purgatory or worse for a mistake of judgment. They didn't know what it was to have a child look up in their faces and say 'Father!' It will take you a hundred or two more years to get decently humanized, after so many centuries of de-humanizing celibacy.

"Besides, though our libraries are, perhaps, not commonly quite so big as yours, God opens one book to physicians that a good many of you don't know much about,—the Book of Life. That is none of your dusty folios with black letters between pasteboard and leather, but it is printed in bright red type, and the binding of it is warm and tender to every touch. They reverence that book as one of the Almighty's infallible revelations. They will insist on reading you lessons out of it, whether you call them names or not. These will always be lessons of charity. No doubt, nothing can be more provoking to listen to. But do beg your folks to remember that the Smithfield fires are all out, and that the cinders are very dirty and not in the least dangerous. They'd a great deal better be civil, and not be throwing old proverbs in the doctors' faces, when they say that the man of the old monkish notions is one thing and the man they watch from his cradle to his coffin is something very different."

It has cost a good deal of trouble to work the Doctor's talk up into this formal shape. Some of his sentences have been rounded off for him, and the whole brought into a more rhetorical form than it could have pretended to, if taken as it fell from his lips. But the exact course of his remarks has been followed, and as far as possible his expressions have been retained. Though given in the form of a discourse, it must be remembered that this was a conversation, much more fragmentary and colloquial than it seems as just read.

The Reverend Doctor was very far from taking offence at the old physician's freedom of speech. He knew him to be honest, kind, charitable, self-denying, wherever any sorrow was to be alleviated, always reverential, with a cheerful trust in the great Father of all mankind. To be sure, his senior deacon, old Deacon Shearer,—who seemed to have got his Scripture-teachings out of the "Vinegar Bible," (the one where Vineyard is misprinted Vinegar; which a good many people seem to have adopted as the true reading,)—his senior deacon had called Dr. Kittredge an "infidel." But the Reverend Doctor could not help feeling, that, unless the text, "By their fruits ye shall know them," were an interpolation, the Doctor was the better Christian of the two. Whatever his senior deacon might think about it, he said to himself that he shouldn't be surprised if he met the Doctor in heaven yet, inquiring anxiously after old Deacon Shearer.

He was on the point of expressing himself very frankly to the Doctor, with that benevolent smile on his face which had sometimes come near giving offence to the readers of the "Vinegar" edition, but he saw that the physician's attention had been arrested by Elsie. He looked in the same direction himself, and could not help being struck by her attitude and expression. There was something singularly graceful in the curves of her neck and the rest of her figure, but she was so perfectly still that it seemed as if she were hardly breathing. Her eyes were fixed on the young girl with whom Mr. Bernard was talking. He had often noticed their brilliancy, but now it seemed to him that they appeared dull, and the look on her features was as of some passion which had missed its stroke. Mr. Bernard's companion seemed unconscious that she was the object of this attention, and was listening to the young master as if he had succeeded in making himself very agreeable.

Of course Dick Venner had not mistaken the game that was going on. The schoolmaster meant to make Elsie jealous,—and he had done it. That 's it: get her savage first, and then come wheedling round her,—a sure trick, if he isn't headed off somehow. But Dick saw well enough that he had better let Elsie alone just now, and thought the best way of killing the evening would be to amuse himself in a little lively talk with Mrs. Blanche Creamer, and incidentally to show Elsie that he could make himself acceptable to other women, if not to herself.

The Doctor presently went up to Elsie, determined to engage her in conversation and get her out of her thoughts, which he saw, by her look, were dangerous. Her father had been on the point of leaving Helen Darley to go to her, but felt easy enough when he saw the old Doctor at her side, and so went on talking. The Reverend Doctor, being now left alone, engaged the Widow Rowens, who put the best face on her vexation she could, but was devoting herself to all the underground deities for having been such a fool as to ask that pale-faced thing from the Institute to fill up her party.

There is no space left to report the rest of the conversation. If there was anything of any significance in it, it will turn up by and by, no doubt. At ten o'clock the Reverend Doctor called Miss Letty, who had no idea it was so late; Mr. Bernard gave his arm to Helen; Mr. Richard saw to Mrs. Blanche Creamer; the Doctor gave Elsie a cautioning look, and went off alone, thoughtful; Dudley Venner and his daughter got into their carriage and were whirled away. The Widow's gambit was played, and she had not won the game.

CHAPTER XXIII. THE WILD HUNTSMAN.

The young master had not forgotten the old Doctor's cautions. Without attributing any great importance to the warning he had given him, Mr. Bernard had so far complied with his advice that he was becoming a pretty good shot with the pistol. It was an amusement as good as many others to practise, and he had taken a fancy to it after the first few days.

The popping of a pistol at odd hours in the backyard of the Institute was a phenomenon more than sufficiently remarkable to be talked about in Rockland. The viscous intelligence of a country-village is not easily stirred by the winds which ripple the fluent thought of great cities, but it holds every straw and entangles every insect that lights upon it. It soon became rumored in the town that the young master was a wonderful shot with the pistol. Some said he could hit a fo'pence-ha'penny at three rods; some, that he had shot a swallow, flying, with a single ball; some, that he snuffed a candle five times out of six at ten paces, and that he could hit any button in a man's coat he wanted to. In other words, as in all such cases, all the common feats were ascribed to him, as the current jokes of the day are laid at the door of any noted wit, however innocent he may be of them.

In the natural course of things, Mr. Richard Venner, who had by this time made some acquaintances, as we have seen, among that class of the population least likely to allow a live cinder of gossip to go out for want of air, had heard incidentally that the master up there at the Institute was all the time practising with a pistol, that they say he can snuff a candle at ten rods, (that was Mrs. Blanche Creamer's version,) and that he could hit anybody he wanted to right in the eye, as far as he could see the white of it.

Dick did not like the sound of all this any too well. Without believing more than half of it, there was enough to make the Yankee schoolmaster too unsafe to be trifled with. However, shooting at a mark was pleasant work enough; he had no particular objection to it himself. Only he did not care so much for those little popgun affairs that a man carries in his pocket, and with which you could n't shoot a fellow,—a robber, say,—without getting the muzzle under his nose. Pistols for boys; long-range rifles for men. There was such a gun lying in a closet with the fowling-pieces. He would go out into the fields and see what he could do as a marksman.

The nature of the mark which Dick chose for experimenting upon was singular. He had found some panes of glass which had been removed from an old sash, and he placed these successively before his target, arranging them at different angles. He found that a bullet would go through the glass without glancing or having its force materially abated. It was an interesting fact in physics, and might prove of some practical significance hereafter. Nobody knows what may turn up to render these out-of-the-way facts useful. All this

was done in a quiet way in one of the bare spots high up the side of The Mountain. He was very thoughtful in taking the precaution to get so far away; rifle-bullets are apt to glance and come whizzing about people's ears, if they are fired in the neighborhood of houses. Dick satisfied himself that he could be tolerably sure of hitting a pane of glass at a distance of thirty rods, more or less, and that, if there happened to be anything behind it, the glass would not materially alter the force or direction of the bullet.

About this time it occurred to him also that there was an old accomplishment of his which he would be in danger of losing for want of practice, if he did not take some opportunity to try his hand and regain its cunning, if it had begun to be diminished by disuse. For his first trial, he chose an evening when the moon was shining, and after the hour when the Rockland people were like to be stirring abroad. He was so far established now that he could do much as he pleased without exciting remark.

The prairie horse he rode, the mustang of the Pampas, wild as he was, had been trained to take part in at least one exercise. This was the accomplishment in which Mr. Richard now proposed to try himself. For this purpose he sought the implement of which, as it may be remembered, he had once made an incidental use,—the lasso, or long strip of hide with a slip-noose at the end of it. He had been accustomed to playing with such a thong from his boyhood, and had become expert in its use in capturing wild cattle in the course of his adventures. Unfortunately, there were no wild bulls likely to be met with in the neighborhood, to become the subjects of his skill. A stray cow in the road, an ox or a horse in a pasture, must serve his turn,—dull beasts, but moving marks to aim at, at any rate.

Never, since he had galloped in the chase over the Pampas, had Dick Venner felt such a sense of life and power as when he struck the long spurs into his wild horse's flanks, and dashed along the road with the lasso lying like a coiled snake at the saddle-bow. In skilful hands, the silent, bloodless noose, flying like an arrow, but not like that leaving a wound behind it,—sudden as a pistol-shot, but without the telltale explosion,—is one of the most fearful and mysterious weapons that arm the hand of man. The old Romans knew how formidable, even in contest with a gladiator equipped with sword, helmet, and shield, was the almost naked retiarius, with his net in one hand and his three-pronged javelin in the other. Once get a net over a man's head, or a cord round his neck, or, what is more frequently done nowadays, bonnet him by knocking his hat down over his eyes, and he is at the mercy of his opponent. Our soldiers who served against the Mexicans found this out too well. Many a poor fellow has been lassoed by the fierce riders from the plains, and fallen an easy victim to the captor who had snared him in the fatal noose.

But, imposing as the sight of the wild huntsmen of the Pampas might have been, Dick could not help laughing at the mock sublimity of his situation, as he tried his first experiment on an unhappy milky mother who had strayed from her herd and was wandering disconsolately along the road, laying the dust, as slue went, with thready streams from her swollen, swinging udders. "Here goes the Don at the windmill!" said Dick, and tilted full speed at her, whirling the lasso round his head as he rode. The creature swerved to one side of the way, as the wild horse and his rider came rushing down upon her, and presently turned and ran, as only cows and it would n't be safe to say it—can run. Just before he passed,—at twenty or thirty feet from her,—the lasso shot from his hand, uncoiling as it flew, and in an instant its loop was round her horns. "Well cast!" said Dick, as he galloped up to her side and dexterously disengaged the lasso. "Now for a horse on the run!"

He had the good luck to find one, presently, grazing in a pasture at the road-side. Taking down the rails of the fence at one point, he drove the horse into the road and gave chase. It was a lively young animal enough, and was easily roused to a pretty fast pace. As his gallop grew more and more rapid, Dick gave the reins to the mustang, until the two horses stretched themselves out in their longest strides. If the first feat looked like play, the one he was now to attempt had a good deal the appearance of real work. He touched the mustang with the spur, and in a few fierce leaps found himself nearly abreast of the frightened animal he was chasing. Once more he whirled the lasso round and round over his head, and then shot it forth, as the rattlesnake shoots his head from the loops against which it rests. The noose was round the horse's neck, and in another instant was tightened so as almost to stop his breath. The prairie horse knew the trick of the cord, and leaned away from the captive, so as to keep the thong tensely stretched between his neck and the peak of the saddle to which it was fastened. Struggling was of no use with a halter round his windpipe, and he very soon began to tremble and stagger,—blind, no doubt, and with a roaring in his ears as of a thousand battle-trumpets,—at any rate, subdued and helpless. That was enough. Dick loosened his lasso, wound it up again, laid it like a pet snake in a coil at his saddle-bow, turned his horse, and rode slowly along towards the mansion-house.

The place had never looked more stately and beautiful to him than as he now saw it in the moonlight. The undulations of the land,—the grand mountain screen which sheltered the mansion from the northern blasts, rising with all its hanging forests and parapets of naked rock high towards the heavens,—the ancient mansion, with its square chimneys, and bodyguard of old trees, and cincture of low walls with marble-pillared gateways,—the fields, with their various coverings,—the beds of flowers,—the plots of turf, one with a gray column in its centre bearing a sundial on which the rays of the moon were idly shining, another with a white stone and a narrow ridge of turf,—over all these objects, harmonized with all their infinite details into one fair whole by the moonlight, the prospective heir, as he deemed himself, looked with admiring eyes.

But while he looked, the thought rose up in his mind like waters from a poisoned fountain, that there was a deep plot laid to cheat him of the inheritance which by a double claim he meant to call his own. Every day this ice-cold beauty, this dangerous, handsome cousin of his, went up to that place,—that usher's girl-trap. Everyday,—regularly now,—it used to be different. Did she go only to get out of his, her cousin's, reach? Was she not rather becoming more and more involved in the toils of this plotting Yankee?

If Mr. Bernard had shown himself at that moment a few rods in advance, the chances are that in less than one minute he would have found himself with a noose round his neck, at the heels of a mounted horseman. Providence spared him for the present. Mr. Richard rode his horse quietly round to the stable, put him up, and proceeded towards the house. He got to his bed without disturbing the family, but could not sleep. The idea had fully taken possession of his mind that a deep intrigue was going on which would end by bringing Elsie and the schoolmaster into relations fatal to all his own hopes. With that ingenuity which always accompanies jealousy, he tortured every circumstance of the last few weeks so as to make it square with this

belief. From this vein of thought he naturally passed to a consideration of every possible method by which the issue he feared might be avoided.

Mr. Richard talked very plain language with himself in all these inward colloquies. Supposing it came to the worst, what could be done then? First, an accident might happen to the schoolmaster which should put a complete and final check upon his projects and contrivances. The particular accident which might interrupt his career must, evidently, be determined by circumstances; but it must be of a nature to explain itself without the necessity of any particular person's becoming involved in the matter. It would be unpleasant to go into particulars; but everybody knows well enough that men sometimes get in the way of a stray bullet, and that young persons occasionally do violence to themselves in various modes,—by firearms, suspension, and other means,—in consequence of disappointment in love, perhaps, oftener than from other motives. There was still another kind of accident which might serve his purpose. If anything should happen to Elsie, it would be the most natural thing in the world that his uncle should adopt him, his nephew and only near relation, as his heir. Unless, indeed, uncle Dudley should take it into his head to marry again. In that case, where would he, Dick, be? This was the most detestable complication which he could conceive of. And yet he had noticed—he could not help noticing—that his uncle had been very attentive to, and, as it seemed, very much pleased with, that young woman from the school. What did that mean? Was it possible that he was going to take a fancy to her?

It made him wild to think of all the several contingencies which might defraud him of that good-fortune which seemed but just now within his grasp. He glared in the darkness at imaginary faces: sometimes at that of the handsome, treacherous schoolmaster; sometimes at that of the meek-looking, but no doubt, scheming, lady-teacher; sometimes at that of the dark girl whom he was ready to make his wife; sometimes at that of his much respected uncle, who, of course, could not be allowed to peril the fortunes of his relatives by forming a new connection. It was a frightful perplexity in which he found himself, because there was no one single life an accident to which would be sufficient to insure the fitting and natural course of descent to the great Dudley property. If it had been a simple question of helping forward a casualty to any one person, there was nothing in Dick's habits of thought and living to make that a serious difficulty. He had been so much with lawless people, that a life between his wish and his object seemed only as an obstacle to be removed, provided the object were worth the risk and trouble. But if there were two or three lives in the way, manifestly that altered the case.

His Southern blood was getting impatient. There was enough of the New-Englander about him to make him calculate his chances before he struck; but his plans were liable to be defeated at any moment by a passionate impulse such as the dark-hued races of Southern Europe and their descendants are liable to. He lay in his bed, sometimes arranging plans to meet the various difficulties already mentioned, sometimes getting into a paroxysm of blind rage in the perplexity of considering what object he should select as the one most clearly in his way. On the whole, there could be no doubt where the most threatening of all his embarrassments lay. It was in the probable growing relation between Elsie and the schoolmaster. If it should prove, as it seemed likely, that there was springing up a serious attachment tending to a union between them, he knew what he should do, if he was not quite so sure how he should do it.

There was one thing at least which might favor his projects, and which, at any rate, would serve to amuse him. He could, by a little quiet observation, find out what were the schoolmaster's habits of life: whether he had any routine which could be calculated upon; and under what circumstances a strictly private interview of a few minutes with him might be reckoned on, in case it should be desirable. He could also very probably learn some facts about Elsie, whether the young man was in the habit of attending her on her way home from school; whether she stayed about the schoolroom after the other girls had gone; and any incidental matters of interest which might present themselves.

He was getting more and more restless for want of some excitement. A mad gallop, a visit to Mrs. Blanche Creamer, who had taken such a fancy to him, or a chat with the Widow Rowens, who was very lively in her talk, for all her sombre colors, and reminded him a good deal of some of his earlier friends, the *senoritas*,—all these were distractions, to be sure, but not enough to keep his fiery spirit from fretting itself in longings for more dangerous excitements. The thought of getting a knowledge of all Mr. Bernard's ways, so that he would be in his power at any moment, was a happy one.

For some days after this he followed Elsie at a long distance behind, to watch her until she got to the schoolhouse. One day he saw Mr. Bernard join her: a mere accident, very probably, for it was only once this happened. She came on her homeward way alone,—quite apart from the groups of girls who strolled out of the schoolhouse yard in company. Sometimes she was behind them all,—which was suggestive. Could she have stayed to meet the schoolmaster?

If he could have smuggled himself into the school, he would have liked to watch her there, and see if there was not some understanding between her and the master which betrayed itself by look or word. But this was beyond the limits of his audacity, and he had to content himself with such cautious observations as could be made at a distance. With the aid of a pocket-glass he could make out persons without the risk of being observed himself.

Mr. Silos Peckham's corps of instructors was not expected to be off duty or to stand at ease for any considerable length of time. Sometimes Mr. Bernard, who had more freedom than the rest, would go out for a ramble in the daytime, but more frequently it would be in the evening, after the hour of "retiring," as bedtime was elegantly termed by the young ladies of the Apollinean Institute. He would then not unfrequently walk out alone in the common roads, or climb up the sides of The Mountain, which seemed to be one of his favorite resorts. Here, of course, it was impossible to follow him with the eye at a distance. Dick had a hideous, gnawing suspicion that somewhere in these deep shades the schoolmaster might meet Elsie, whose evening wanderings he knew so well. But of this he was not able to assure himself. Secrecy was necessary to his present plans, and he could not compromise himself by over-eager curiosity. One thing he learned with certainty. The master returned, after his walk one evening, and entered the building where his room was situated. Presently a light betrayed the window of his apartment. From a wooded bank, some thirty or forty rods from this building, Dick Venner could see the interior of the chamber, and watch the master as he sat at

his desk, the light falling strongly upon his face, intent upon the book or manuscript before him. Dick contemplated him very long in this attitude. The sense of watching his every motion, himself meanwhile utterly unseen, was delicious. How little the master was thinking what eyes were on him!

Well,—there were two things quite certain. One was, that, if he chose, he could meet the schoolmaster alone, either in the road or in a more solitary place, if he preferred to watch his chance for an evening or two. The other was, that he commanded his position, as he sat at his desk in the evening, in such a way that there would be very little difficulty,—so far as that went; of course, however, silence is always preferable to noise, and there is a great difference in the marks left by different casualties. Very likely nothing would come of all this espionage; but, at any rate, the first thing to be done with a man you want to have in your power is to learn his habits.

Since the tea-party at the Widow Rowens's, Elsie had been more fitful and moody than ever. Dick understood all this well enough, you know. It was the working of her jealousy against that young schoolgirl to whom the master had devoted himself for the sake of piquing the heiress of the Dudley mansion. Was it possible, in any way, to exasperate her irritable nature against him, and in this way to render her more accessible to his own advances? It was difficult to influence her at all. She endured his company without seeming to enjoy it. She watched him with that strange look of hers, sometimes as if she were on her guard against him, sometimes as if she would like to strike at him as in that fit of childish passion. She ordered him about with a haughty indifference which reminded him of his own way with the dark-eyed women whom he had known so well of old. All this added a secret pleasure to the other motives he had for worrying her with jealous suspicions. He knew she brooded silently on any grief that poisoned her comfort,—that she fed on it, as it were, until it ran with every drop of blood in her veins,—and that, except in some paroxysm of rage, of which he himself was not likely the second time to be the object, or in some deadly vengeance wrought secretly, against which he would keep a sharp lookout, so far as he was concerned, she had no outlet for her dangerous, smouldering passions.

Beware of the woman who cannot find free utterance for all her stormy inner life either in words or song! So long as a woman can talk, there is nothing she cannot bear. If she cannot have a companion to listen to her woes, and has no musical utterance, vocal or instrumental,—then, if she is of the real woman sort, and has a few heartfuls of wild blood in her, and you have done her a wrong,—double-bolt the door which she may enter on noiseless slipper at midnight,—look twice before you taste of any cup whose draught the shadow of her hand may have darkened!

But let her talk, and, above all, cry, or, if she is one of the coarser-grained tribe, give her the run of all the red-hot expletives in the language, and let her blister her lips with them until she is tired, she will sleep like a lamb after it, and you may take a cup of coffee from her without stirring it up to look for its sediment.

So, if she can sing, or play on any musical instrument, all her wickedness will run off through her throat or the tips of her fingers. How many tragedies find their peaceful catastrophe in fierce roudades and strenuous bravuras! How many murders are executed in double-quick time upon the keys which stab the air with their dagger-strokes of sound! What would our civilization be without the piano? Are not Erard and Broadwood and Chickering the true humanizers of our time? Therefore do I love to hear the all-pervading tum tum jarring the walls of little parlors in houses with double door-plates on their portals, looking out on streets and courts which to know is to be unknown, and where to exist is not to live, according to any true definition of living. Therefore complain I not of modern degeneracy, when, even from the open window of the small unlovely farmhouse, tenanted by the hard-handed man of bovine flavors and the flat-patterned woman of broken-down countenance, issue the same familiar sounds. For who knows that Almira, but for these keys, which throb away her wild impulses in harmless discords would not have been floating, dead, in the brown stream which slides through the meadows by her father's door,—or living, with that other current which runs beneath the gas-lights over the slimy pavement, choking with wretched weeds that were once in spotless flower?

Poor Elsie! She never sang nor played. She never shaped her inner life in words: such utterance was as much denied to her nature as common articulate speech to the deaf mute. Her only language must be in action. Watch her well by day and by night, old Sophy! watch her well! or the long line of her honored name may close in shame, and the stately mansion of the Dudleys remain a hissing and a reproach till its roof is buried in its cellar!

CHAPTER XXIV. ON HIS TRACKS.

"Able!" said the old Doctor, one morning, "after you've harnessed Caustic, come into the study a few minutes, will you?"

Abel nodded. He was a man of few words, and he knew that the "will you" did not require an answer, being the true New-England way of rounding the corners of an employer's order,—a tribute to the personal independence of an American citizen.

The hired man came into the study in the course of a few minutes. His face was perfectly still, and he waited to be spoken to; but the Doctor's eye detected a certain meaning in his expression, which looked as if he had something to communicate.

"Well?" said the Doctor.

"He's up to mischief o' some kind, I guess," said Abel. "I jest happened daown by the mansion-haouse last night, 'n' he come aout o' the gate on that queer-lookin' creator' o' his. I watched him, 'n' he rid, very slow, all raoun' by the Institoot, 'n' acted as ef he was spyin' abaout. He looks to me like a man that's calc'latin' to do some kind of ill-turn to somebody. I should n't like to have him raoun' me, 'f there wa'n't a pitchfork or an eel-spear or some sech weep'n within reach. He may be all right; but I don't like his looks, 'n' I don't see what

he's lurkin' raoun' the Institoot for, after folks is abed."

"Have you watched him pretty close for the last few days?" said the Doctor.

"W'll, yes,—I've had my eye on him consid'ble o' the time. I haf to be pooty shy abaout it, or he'll find aout th't I'm on his tracks. I don' want him to get a spite ag'inst me, 'f I c'n help it; he looks to me like one o' them kind that kerries what they call slung-shot, 'n' hits ye on the side o' th' head with 'em so suddin y' never know what hurts ye."

"Why," said the Doctor, sharply,—“have you ever seen him with any such weapon about him?”

"W'll, no,—I caan't say that I hev," Abel answered. "On'y he looks kin' o' dangerous. Maybe he's all jest 'z he ought to be,—I caan't say that he a'n't,—but he's aout late nights, 'n' lurkin' raonn' jest 'z ef he was spyin' somebody, 'n' somehaow I caan't help mistrustin' them Portagee-lookin' fellahs. I caan't keep the run o' this chap all the time; but I've a notion that old black woman daown 't the mansion-haouse knows 'z much about him 'z anybody."

The Doctor paused a moment, after hearing this report from his private detective, and then got into his chaise, and turned Caustic's head in the direction of the Dudley mansion. He had been suspicious of Dick from the first. He did not like his mixed blood, nor his looks, nor his ways. He had formed a conjecture about his projects early. He had made a shrewd guess as to the probable jealousy Dick would feel of the schoolmaster, had found out something of his movements, and had cautioned Mr. Bernard,—as we have seen. He felt an interest in the young man,—a student of his own profession, an intelligent and ingenuously unsuspecting young fellow, who had been thrown by accident into the companionship or the neighborhood of two persons, one of whom he knew to be dangerous, and the other he believed instinctively might be capable of crime.

The Doctor rode down to the Dudley mansion solely for the sake of seeing old Sophy. He was lucky enough to find her alone in her kitchen. He began taking with her as a physician; he wanted to know how her rheumatism had been. The shrewd old woman saw through all that with her little beady black eyes. It was something quite different he had come for, and old Sophy answered very briefly for her aches and ails.

"Old folks' bones a'n't like young folks'," she said. "It's the Lord's doin's, 'n' 't a'n't much matter. I sha'n' be long roan' this kitchen. It's the young Missis, Doctor,—it 's our Elsie,—it 's the baby, as we use' t' call her,—don' you remember, Doctor? Seventeen year ago, 'n' her poor mother cryin' for her,—'Where is she? where is she? Let me see her! —'n' how I run up-stairs,—I could run then,—'n' got the coral necklace 'n' put it round her little neck, 'n' then showed her to her mother,—'n' how her mother looked at her, 'n' looked, 'n' then put out her poor thin fingers 'n' lifted the necklace,—'n' fell right back on her piller, as white as though she was laid out to bury?"

The Doctor answered her by silence and a look of grave assent. He had never chosen to let old Sophy dwell upon these matters, for obvious reasons. The girl must not grow up haunted by perpetual fears and prophecies, if it were possible to prevent it.

"Well, how has Elsie seemed of late?" he said, after this brief pause.

The old woman shook her head. Then she looked up at the Doctor so steadily and searchingly that the diamond eyes of Elsie herself could hardly have pierced more deeply.

The Doctor raised his head, by his habitual movement, and met the old woman's look with his own calm and scrutinizing gaze, sharpened by the glasses through which he now saw her.

Sophy spoke presently in an awed tone, as if telling a vision.

"We shall be havin' trouble before long. The' 's somethin' comin' from the Lord. I've had dreams, Doctor. It's many a year I've been a-dreamin', but now they're comin' over 'n' over the same thing. Three times I've dreamed one thing, Doctor,—one thing!"

"And what was that?" the Doctor said, with that shade of curiosity in his tone which a metaphysician would probably say is an index of a certain tendency to belief in the superstition to which the question refers.

"I ca'n' jestly tell y' what it was, Doctor," the old woman answered, as if bewildered and trying to clear up her recollections; "but it was somethin' fearful, with a great noise 'n' a great cryin' o' people,—like the Las' Day, Doctor! The Lord have mercy on my poor chil', 'n' take care of her, if anything happens! But I's feared she'll never live to see the Las' Day, 'f 't don' come pooty quick."

Poor Sophy, only the third generation from cannibalism, was, not unnaturally, somewhat confused in her theological notions. Some of the Second-Advent preachers had been about, and circulated their predictions among the kitchen—population of Rockland. This was the way in which it happened that she mingled her fears in such a strange manner with their doctrines.

The Doctor answered solemnly, that of the day and hour we knew not, but it became us to be always ready.—“Is there anything going on in the household different from common?”

Old Sophy's wrinkled face looked as full of life and intelligence, when she turned it full upon the Doctor, as if she had slipped off her infirmities and years like an outer garment. All those fine instincts of observation which came straight to her from her savage grandfather looked out of her little eyes. She had a kind of faith that the Doctor was a mighty conjurer, who, if he would, could bewitch any of them. She had relieved her feelings by her long talk with the minister, but the Doctor was the immediate adviser of the family, and had watched them through all their troubles. Perhaps he could tell them what to do. She had but one real object of affection in the world,—this child that she had tended from infancy to womanhood. Troubles were gathering thick round her; how soon they would break upon her, and blight or destroy her, no one could tell; but there was nothing in all the catalogue of terrors which might not come upon the household at any moment. Her own wits had sharpened themselves in keeping watch by day and night, and her face had forgotten its age in the excitement which gave life to its features.

"Doctor," old Sophy said, "there's strange things goin' on here by night and by day. I don' like that man,—that Dick,—I never liked him. He giv' me some o' these things I' got on; I take 'em 'cos I know it make him mad, if I no take 'em; I wear 'em, so that he need n' feel as if I did n' like him; but, Doctor, I hate him,—jes' as much as a member of the church has the Lord's leave to hate anybody."

Her eyes sparkled with the old savage light, as if her ill-will to Mr. Richard Venner might perhaps go a little farther than the Christian limit she had assigned. But remember that her grandfather was in the habit of inviting his friends to dine with him upon the last enemy he had bagged, and that her grandmother's teeth were filed down to points, so that they were as sharp as a shark's.

"What is that you have seen about Mr. Richard Venner that gives you such a spite against him, Sophy?" asked the Doctor.

"What I' seen 'bout Dick Venner?" she replied, fiercely. "I'll tell y' what I' seen. Dick wan's to marry our Elsie,—that 's what he wan's; 'n' he don' love her, Doctor,—he hates her, Doctor, as bad as I hate him! He wan's to marry our Elsie, In' live here in the big house, 'n' have nothin' to do but jes' lay still 'n' watch Massa Venner 'n' see how long 't Ill take him to die, 'n' 'f he don' die fas' 'puff, help him some way t' die fasser!—Come close up t' me, Doctor! I wan' t' tell you somethin' I tol' th' minister t' other day. Th' minister, he come down 'n' prayed 'n' talked good,—he's a good man, that Doctor Honeywood, 'n' I tol' him all 'bout our Elsie, but he did n' tell nobody what to do to stop all what I' been dreamin' about happenin'. Come close up to me, Doctor!"

The Doctor drew his chair close up to that of the old woman.

"Doctor, nobody mus'n' never marry our Elsie 's longs she lives! Nobody mus' n' never live with Elsie but ol Sophy; 'n' ol Sophy won't never die 's long 's Elsie 's alive to be took care of. But I's feared, Doctor, I's greatly feared Elsie wan' to marry somebody. The' 's a young gen'l'm'n up at that school where she go,—so some of 'em tells me, 'n' she loves t' see him 'n' talk wi' him, 'n' she talks about him when she 's asleep sometimes. She mus' n' never marry nobody, Doctor! If she do, he die, certain!"

"If she has a fancy for the young man up at the school there," the Doctor said, "I shouldn't think there would be much danger from Dick."

"Doctor, nobody know nothin' 'bout Elsie but of Sophy. She no like any other creator' th't ever drawed the bref o' life. If she ca'n' marry one man 'cos she love him, she marry another man 'cos she hate him."

"Marry a man because she hates him, Sophy? No woman ever did such a thing as that, or ever will do it."

"Who tol' you Elsie was a woman, Doctor?" said old Sophy, with a flash of strange intelligence in her eyes.

The Doctor's face showed that he was startled. The old woman could not know much about Elsie that he did not know; but what strange superstition had got into her head, he was puzzled to guess. He had better follow Sophy's lead and find out what she meant.

"I should call Elsie a woman, and a very handsome one," he said. "You don't mean that she has any mark about her, except—you know—under the necklace?"

The old woman resented the thought of any deformity about her darling.

"I did n' say she had nothin'—but jes' that—you know. My beauty have anything ugly? She's the beautifulest-shaped lady that ever had a shinin' silk gown drawed over her shoulders. On'y she a'n't like no other woman in none of her ways. She don't cry 'n' laugh like other women. An' she ha'n' got the same kind o' feelin's as other women.—Do you know that young gen'l'm'n up at the school, Doctor?"

"Yes, Sophy, I've met him sometimes. He's a very nice sort of young man, handsome, too, and I don't much wonder Elsie takes to him. Tell me, Sophy, what do you think would happen, if he should chance to fall in love with Elsie, and she with him, and he should marry her?"

"Put your ear close to my lips, Doctor, dear!" She whispered a little to the Doctor, then added aloud, "He die,—that's all."

"But surely, Sophy, you a'n't afraid to have Dick marry her, if she would have him for any reason, are you? He can take care of himself, if anybody can."

"Doctor!" Sophy answered, "nobody can take care of hissself that live wi' Elsie! Nobody never in all this worl' mus' live wi' Elsie but of Sophy, I tell you. You don' think I care for Dick? What do I care, if Dick Venner die? He wan's to marry our Elsie so 's to live in the big house 'n' get all the money 'n' all the silver things 'n' all the chists full o' linen 'n' beautiful clothes. That's what Dick wan's. An' he hates Elsie 'cos she don' like him. But if he marry Elsie, she 'll make him die some wrong way or other, 'n' they'll take her 'n' hang her, or he'll get mad with her 'n' choke her.—Oh, I know his chokin' tricks!—he don' leave his keys roun' for nothin'!"

"What's that you say, Sophy? Tell me what you mean by all that."

So poor Sophy had to explain certain facts not in all respects to her credit. She had taken the opportunity of his absence to look about his chamber, and, having found a key in one of his drawers, had applied it to a trunk, and, finding that it opened the trunk, had made a kind of inspection for contraband articles, and, seeing the end of a leather thong, had followed it up until she saw that it finished with a noose, which, from certain appearances, she inferred to have seen service of at least doubtful nature. An unauthorized search; but old Sophy considered that a game of life and death was going on in the household, and that she was bound to look out for her darling.

The Doctor paused a moment to think over this odd piece of information. Without sharing Sophy's belief as to the kind of use this mischievous-looking piece of property had been put to, it was certainly very odd that Dick should have such a thing at the bottom of his trunk. The Doctor remembered reading or hearing something about the lasso and the lariat and the bolas, and had an indistinct idea that they had been sometimes used as weapons of warfare or private revenge; but they were essentially a huntsman's implements, after all, and it was not very strange that this young man had brought one of them with him. Not strange, perhaps, but worth noting.

"Do you really think Dick means mischief to anybody, that he has such dangerous-looking things?" the Doctor said, presently.

"I tell you, Doctor. Dick means to have Elsie. If he ca'n' get her, he never let nobody else have her! Oh, Dick 's a dark man, Doctor! I know him! I 'member him when he was little boy,—he always cunin'. I think he mean mischief to somebody. He come home late nights,—come in softly,—oh, I hear him! I lay awake, 'n' got sharp ears,—I hear the cats walkin' over the roofs,—'n' I hear Dick Venner, when he comes up in his stockin'-feet as

still as a cat. I think he mean' mischief to somebody. I no like his looks these las' days.—Is that a very pooty gen'l'm'n up at the schoolhouse, Doctor?"

"I told you he was good-looking. What if he is?"

"I should like to see him, Doctor,—I should like to see the pooty gen'l'm'n that my poor Elsie loves. She mus 'n' never marry nobody, —but, oh, Doctor, I should like to see him, 'n' jes' think a little how it would ha' been, if the Lord had n' been so hard on Elsie."

She wept and wrung her hands. The kind Doctor was touched, and left her a moment to her thoughts.

"And how does Mr. Dudley Venner take all this?" he said, by way of changing the subject a little.

"Oh, Massa Venner, he good man, but he don' know nothin' 'bout Elsie, as of Sophy do. I keep close by her; I help her when she go to bed, 'n' set by her sometime when she—'sleep; I come to her in th' mornin' 'n' help her put on her things."—Then, in a whisper;—"Doctor, Elsie lets of Sophy take off that necklace for her. What you think she do, 'f anybody else tech it?"

"I don't know, I'm sure, Sophy,—strike the person, perhaps."

"Oh, yes, strike 'em! but not with her han's, Doctor!"—The old woman's significant pantomime must be guessed at.

"But you haven't told me, Sophy, what Mr. Dudley Venner thinks of his nephew, nor whether he has any notion that Dick wants to marry Elsie."

"I tell you. Massa Venner, he good man, but he no see nothin' 'bout what goes on here in the house. He sort o' broken-hearted, you know,—sort o' giv up,—don' know what to do wi' Elsie, 'xcep' say 'Yes, yes.' Dick always look smilin' 'n' behave well before him. One time I thought Massa Venner b'lieve Dick was goin' to take to Elsie; but now he don' seem to take much notice,—he kin' o' stupid-' like 'bout sech things. It's trouble, Doctor; 'cos Massa Venner bright man naterally,—'n' he's got a great heap o' books. I don' think Massa Venner never been jes' heself sence Elsie 's born. He done all he know how,—but, Doctor, that wa'n' a great deal. You men-folks don' know nothin' 'bout these young gals; 'n' 'f you knowed all the young gals that ever lived, y' would n' know nothin' 'bout our Elsie."

"No,—but, Sophy, what I want to know is, whether you think Mr. Venner has any kind of suspicion about his nephew,—whether he has any notion that he's a dangerous sort of fellow,—or whether he feels safe to have him about, or has even taken a sort of fancy to him."

"Lar' bless you, Doctor, Massa Venner no more idee 'f any mischief 'bout Dick than he has 'bout you or me. Y' see, he very fond o' the Cap'n,—that Dick's father,—'n' he live so long alone here, 'long wi' us, that he kin' o' like to see mos' anybody 't 's got any o' th' of family-blood in 'em. He ha'n't got no more suspicions 'n a baby,—y' never see sech a man 'n y'r life. I kin' o' think he don' care for nothin' in this world 'xcep' jes' t' do what Elsie wan's him to. The fus' year after young Madam die he do nothin' but jes' set at the window 'n' look out at her grave, 'n' then come up 'n' look at the baby's neck 'n' say, 'It's fadin', Sophy, a'n't it?' 'n' then go down in the study 'n' walk 'n' walk, 'n' them kneel down 'n' pray. Doctor, there was two places in the old carpet that was all threadbare, where his knees had worn 'em. An' sometimes, you remember 'bout all that,—he'd go off up into The Mountain, 'n' be gone all day, 'n' kill all the Ugly Things he could find up there.—Oh, Doctor, I don' like to think o' them days!—An' by 'n' by he grew kin' o' still, 'n' begun to read a little, 'n' 't las' he got 's quiet's a lamb, 'n' that's the way he is now. I think he's got religion, Doctor; but he a'n't so bright about what's goin' on, 'n' I don' believe he never suspec' nothin' till somethin' happens; for the 's somethin' goin' to happen, Doctor, if the Las' Day does n' come to stop it; 'n' you mus' tell us what to do, 'n' save my poor Elsie, my baby that the Lord has n' took care of like all his other childer."

The Doctor assured the old woman that he was thinking a great deal about them all, and that there were other eyes on Dick besides her own. Let her watch him closely about the house, and he would keep a look-out elsewhere. If there was anything new, she must let him know at once. Send up one of the menservants, and he would come down at a moment's warning.

There was really nothing definite against this young man; but the Doctor was sure that he was meditating some evil design or other. He rode straight up to the Institute. There he saw Mr. Bernard, and had a brief conversation with him, principally on matters relating to his personal interests.

That evening, for some unknown reason, Mr. Bernard changed the place of his desk and drew down the shades of his windows. Late that night Mr. Richard Venner drew the charge of a rifle, and put the gun back among the fowling-pieces, swearing that a leather halter was worth a dozen of it.

CHAPTER XXV. THE PERILOUS HOUR.

Up to this time Dick Venner had not decided on the particular mode and the precise period of relieving himself from the unwarrantable interference which threatened to defeat his plans. The luxury of feeling that he had his man in his power was its own reward. One who watches in the dark, outside, while his enemy, in utter unconsciousness, is illuminating his apartment and himself so that every movement of his head and every button on his coat can be seen and counted, experiences a peculiar kind of pleasure, if he holds a loaded rifle in his hand, which he naturally hates to bring to its climax by testing his skill as a marksman upon the object of his attention.

Besides, Dick had two sides in his nature, almost as distinct as we sometimes observe in those persons who are the subjects of the condition known as double consciousness. On his New England side he was cunning and calculating, always cautious, measuring his distance before he risked his stroke, as nicely as if he were throwing his lasso. But he was liable to intercurrent fits of jealousy and rage, such as the light-hued races are hardly capable of conceiving, blinding paroxysms of passion, which for the time overmastered him, and

which, if they found no ready outlet, transformed themselves into the more dangerous forces that worked through the instrumentality of his cool craftiness.

He had failed as yet in getting any positive evidence that there was any relation between Elsie and the schoolmaster other than such as might exist unsuspected and unblamed between a teacher and his pupil. A book, or a note, even, did not prove the existence of any sentiment. At one time he would be devoured by suspicions, at another he would try to laugh himself out of them. And in the mean while he followed Elsie's tastes as closely as he could, determined to make some impression upon her,—to become a habit, a convenience, a necessity,—whatever might aid him in the attainment of the one end which was now the aim of his life.

It was to humor one of her tastes already known to the reader, that he said to her one morning,—“Come, Elsie, take your castanets, and let us have a dance.”

He had struck the right vein in the girl's fancy, for she was in the mood for this exercise, and very willingly led the way into one of the more empty apartments. What there was in this particular kind of dance which excited her it might not be easy to guess; but those who looked in with the old Doctor, on a former occasion, and saw her, will remember that she was strangely carried away by it, and became almost fearful in the vehemence of her passion. The sound of the castanets seemed to make her alive all over. Dick knew well enough what the exhibition would be, and was almost afraid of her at these moments; for it was like the dancing mania of Eastern devotees, more than the ordinary light amusement of joyous youth,—a convulsion of the body and the mind, rather than a series of voluntary modulated motions.

Elsie rattled out the triple measure of a saraband. Her eyes began to glitter more brilliantly, and her shape to undulate in freer curves. Presently she noticed that Dick's look was fixed upon her necklace. His face betrayed his curiosity; he was intent on solving the question, why she always wore something about her neck. The chain of mosaics she had on at that moment displaced itself at every step, and he was peering with malignant, searching eagerness to see if an unsunned ring of fairer hue than the rest of the surface, or any less easily explained peculiarity, were hidden by her ornaments.

She stopped suddenly, caught the chain of mosaics and settled it hastily in its place, flung down her castanets, drew herself back, and stood looking at him, with her head a little on one side, and her eyes narrowing in the way he had known so long and well.

“What is the matter, Cousin Elsie? What do you stop for?” he said.

Elsie did not answer, but kept her eyes on him, full of malicious light. The jealousy which lay covered up under his surface-thoughts took this opportunity to break out.

“You would n't act so, if you were dancing with Mr. Langdon,—would you, Elsie?” he asked.

It was with some effort that he looked steadily at her to see the effect of his question.

Elsie colored,—not much, but still perceptibly. Dick could not remember that he had ever seen her show this mark of emotion before, in all his experience of her fitful changes of mood. It had a singular depth of significance, therefore, for him; he knew how hardly her color came. Blushing means nothing, in some persons; in others, it betrays a profound inward agitation,—a perturbation of the feelings far more trying than the passions which with many easily moved persons break forth in tears. All who have observed much are aware that some men, who have seen a good deal of life in its less chastened aspects and are anything but modest, will blush often and easily, while there are delicate and sensitive women who can faint, or go into fits, if necessary, but are very rarely seen to betray their feelings in their cheeks, even when their expression shows that their inmost soul is blushing scarlet. Presently she answered, abruptly and scornfully, “Mr. Langdon is a gentleman, and would not vex me as you do.”

“A gentleman!” Dick answered, with the most insulting accent,—“a gentleman! Come, Elsie, you 've got the Dudley blood in your veins, and it does n't do for you to call this poor, sneaking schoolmaster a gentleman!”

He stopped short. Elsie's bosom was heaving, the faint flush on her cheek was becoming a vivid glow. Whether it were shame or wrath, he saw that he had reached some deep-lying centre of emotion. There was no longer any doubt in his mind. With another girl these signs of confusion might mean little or nothing; with her they were decisive and final. Elsie Venner loved Bernard Langdon.

The sudden conviction, absolute, overwhelming, which rushed upon him, had well-nigh led to an explosion of wrath, and perhaps some terrible scene which might have fulfilled some of old Sophy's predictions. This, however, would never do. Dick's face whitened with his thoughts, but he kept still until he could speak calmly.

“I've nothing against the young fellow,” he said; “only I don't think there's anything quite good enough to keep the company of people that have the Dudley blood in them. You a'n't as proud as I am. I can't quite make up my mind to call a schoolmaster a gentleman, though this one may be well enough. I 've nothing against him, at any rate.”

Elsie made no answer, but glided out of the room and slid away to her own apartment. She bolted the door and drew her curtains close. Then she threw herself on the floor, and fell into a dull, slow ache of passion, without tears, without words, almost without thoughts. So she remained, perhaps, for a half-hour, at the end of which time it seemed that her passion had become a sullen purpose. She arose, and, looking cautiously round, went to the hearth, which was ornamented with curious old Dutch tiles, with pictures of Scripture subjects. One of these represented the lifting of the brazen serpent. She took a hair-pin from one of her braids, and, insinuating its points under the edge of the tile, raised it from its place. A small leaden box lay under the tile, which she opened, and, taking from it a little white powder, which she folded in a scrap of paper, replaced the box and the tile over it.

Whether Dick had by any means got a knowledge of this proceeding, or whether he only suspected some unmentionable design on her part, there is no sufficient means of determining. At any rate, when they met, an hour or two after these occurrences, he could not help noticing how easily she seemed to have got over her excitement. She was very pleasant with him,—too pleasant, Dick thought. It was not Elsie's way to come out of a fit of anger so easily as that. She had contrived some way of letting off her spite; that was certain.

Dick was pretty cunning, as old Sophy had said, and, whether or not he had any means of knowing Elsie's private intentions, watched her closely, and was on his guard against accidents.

For the first time, he took certain precautions with reference to his diet, such as were quite alien to his common habits. On coming to the dinner-table, that day, he complained of headache, took but little food, and refused the cup of coffee which Elsie offered him, saying that it did not agree with him when he had these attacks.

Here was a new complication. Obviously enough, he could not live in this way, suspecting everything but plain bread and water, and hardly feeling safe in meddling with them. Not only had this school-keeping wretch come between him and the scheme by which he was to secure his future fortune, but his image had so infected his cousin's mind that she was ready to try on him some of those tricks which, as he had heard hinted in the village, she had once before put in practice upon a person who had become odious to her.

Something must be done, and at once, to meet the double necessities of this case. Every day, while the young girl was in these relations with the young man, was only making matters worse. They could exchange words and looks, they could arrange private interviews, they would be stooping together over the same book, her hair touching his cheek, her breath mingling with his, all the magnetic attractions drawing them together with strange, invisible effluences. As her passion for the schoolmaster increased, her dislike to him, her cousin, would grow with it, and all his dangers would be multiplied. It was a fearful point he had, reached. He was tempted at one moment to give up all his plans and to disappear suddenly from the place, leaving with the schoolmaster, who had come between him and his object, an anonymous token of his personal sentiments which would be remembered a good while in the history of the town of Rockland. This was but a momentary thought; the great Dudley property could not be given up in that way.

Something must happen at once to break up all this order of things. He could think of but one Providential event adequate to the emergency,—an event foreshadowed by various recent circumstances, but hitherto floating in his mind only as a possibility. Its occurrence would at once change the course of Elsie's feelings, providing her with something to think of besides mischief, and remove the accursed obstacle which was thwarting all his own projects. Every possible motive, then,—his interest, his jealousy, his longing for revenge, and now his fears for his own safety,—urged him to regard the happening of a certain casualty as a matter of simple necessity. This was the self-destruction of Mr. Bernard Langdon.

Such an event, though it might be surprising to many people, would not be incredible, nor without many parallel cases. He was poor, a miserable fag, under the control of that mean wretch up there at the school, who looked as if he had sour buttermilk in his veins instead of blood. He was in love with a girl above his station, rich, and of old family, but strange in all her ways, and it was conceivable that he should become suddenly jealous of her. Or she might have frightened him with some display of her peculiarities which had filled him with a sudden repugnance in the place of love. Any of these things were credible, and would make a probable story enough,—so thought Dick over to himself with the New-England half of his mind.

Unfortunately, men will not always take themselves out of the way when, so far as their neighbors are concerned, it would be altogether the most appropriate and graceful and acceptable service they could render. There was at this particular moment no special reason for believing that the schoolmaster meditated any violence to his own person. On the contrary, there was good evidence that he was taking some care of himself. He was looking well and in good spirits, and in the habit of amusing himself and exercising, as if to keep up his standard of health, especially of taking certain evening-walks, before referred to, at an hour when most of the Rockland people had "retired," or, in vulgar language, "gone to bed."

Dick Venner settled it, however, in his own mind, that Mr. Bernard Langdon must lay violent hands upon himself. He even went so far as to determine the precise hour, and the method in which the "rash act," as it would undoubtedly be called in the next issue of "The Rockland Weekly Universe," should be committed. Time,—this evening. Method, asphyxia, by suspension. It was, unquestionably, taking a great liberty with a man to decide that he should become *felo de se* without his own consent. Such, however, was the decision of Mr. Richard Venner with regard to Mr. Bernard Langdon.

If everything went right, then, there would be a coroner's inquest to-morrow upon what remained of that gentleman, found suspended to the branch of a tree somewhere within a mile of the Apollinean Institute. The "Weekly Universe" would have a startling paragraph announcing a "SAD EVENT!!!" which had "thrown the town into an intense state of excitement. Mr. Barnard Langden, a well-known teacher at the Appolinian Institute, was found, etc., etc. The vital spark was extinct. The motive to the rash act can only be conjectured, but is supposed to be disappointed affection. The name of an accomplished young lady of the highest respectability and great beauty is mentioned in connection with this melancholy occurrence."

Dick Venner was at the tea-table that evening, as usual.—No, he would take green tea, if she pleased,—the same that her father drank. It would suit his headache better.—Nothing,—he was much obliged to her. He would help himself,—which he did in a little different way from common, naturally enough, on account of his headache. He noticed that Elsie seemed a little nervous while she was rinsing some of the teacups before their removal.

"There's something going on in that witch's head," he said to himself. "I know her,—she 'd be savage now, if she had n't got some trick in hand. Let 's see how she looks to-morrow!"

Dick announced that he should go to bed early that evening, on account of this confounded headache which had been troubling him so much. In fact, he went up early, and locked his door after him, with as much noise as he could make. He then changed some part of his dress, so that it should be dark throughout, slipped off his boots, drew the lasso out from the bottom of the contents of his trunk, and, carrying that and his boots in his hand, opened his door softly, locked it after him, and stole down the back-stairs, so as to get out of the house unnoticed. He went straight to the stable and saddled the mustang. He took a rope from the stable with him, mounted his horse, and set forth in the direction of the Institute.

Mr. Bernard, as we have seen, had not been very profoundly impressed by the old Doctor's cautions,—enough, however, to follow out some of his hints which were not troublesome to attend to. He laughed at the idea of carrying a loaded pistol about with him; but still it seemed only fair, as the old Doctor thought so

much of the matter, to humor him about it. As for not going about when and where he liked, for fear he might have some lurking enemy, that was a thing not to be listened to nor thought of. There was nothing to be ashamed of or troubled about in any of his relations with the school-girls. Elsie, no doubt, showed a kind of attraction towards him, as did perhaps some others; but he had been perfectly discreet, and no father or brother or lover had any just cause of quarrel with him. To be sure, that dark young man at the Dudley mansion-house looked as if he were his enemy, when he had met him; but certainly there was nothing in their relations to each other, or in his own to Elsie, that would be like to stir such malice in his mind as would lead him to play any of his wild Southern tricks at his, Mr. Bernard's, expense. Yet he had a vague feeling that this young man was dangerous, and he had been given to understand that one of the risks he ran was from that quarter.

On this particular evening, he had a strange, unusual sense of some impending peril. His recent interview with the Doctor, certain remarks which had been dropped in his hearing, but above all an unaccountable impression upon his spirits, all combined to fill his mind with a foreboding conviction that he was very near some overshadowing danger. It was as the chill of the ice-mountain toward which the ship is steering under full sail. He felt a strong impulse to see Helen Darley and talk with her. She was in the common parlor, and, fortunately, alone.

"Helen," he said,—for they were almost like brother and sister now,—“I have been thinking what you would do, if I should have to leave the school at short notice, or be taken away suddenly by any accident.”

“Do?” she said, her cheek growing paler than its natural delicate hue,—“why, I do not know how I could possibly consent to live here, if you left us. Since you came, my life has been almost easy; before, it was getting intolerable. You must not talk about going, my dear friend; you have spoiled me for my place. Who is there here that I can have any true society with, but you? You would not leave us for another school, would you?”

“No, no, my dear Helen,” Mr. Bernard said, “if it depends on myself, I shall stay out my full time, and enjoy your company and friendship. But everything is uncertain in this world. I have been thinking that I might be wanted elsewhere, and called when I did not think of it;—it was a fancy, perhaps,—but I can't keep it out of my mind this evening. If any of my fancies should come true, Helen, there are two or three messages I want to leave with you. I have marked a book or two with a cross in pencil on the fly-leaf;—these are for you. There is a little hymn-book I should like to have you give to Elsie from me;—it may be a kind of comfort to the poor girl.”

Helen's eyes glistened as she interrupted him,—

“What do you mean? You must not talk so, Mr. Langdon. Why, you never looked better in your life. Tell me now, you are not in earnest, are you, but only trying a little sentiment on me?”

Mr. Bernard smiled, but rather sadly.

“About half in earnest,” he said. “I have had some fancies in my head,—superstitions, I suppose,—at any rate, it does no harm to tell you what I should like to have done, if anything should happen,—very likely nothing ever will. Send the rest of the books home, if you please, and write a letter to my mother. And, Helen, you will find one small volume in my desk enveloped and directed, you will see to whom;—give this with your own hands; it is a keepsake.”

The tears gathered in her eyes; she could not speak at first. Presently, “Why, Bernard, my dear friend, my brother, it cannot be that you are in danger? Tell me what it is, and, if I can share it with you, or counsel you in any way, it will only be paying back the great debt I owe you. No, no,—it can't be true,—you are tired and worried, and your spirits have got depressed. I know what that is;—I was sure, one winter, that I should die before spring; but I lived to see the dandelions and buttercups go to seed. Come, tell me it was nothing but your imagination.”

She felt a tear upon her cheek, but would not turn her face away from him; it was the tear of a sister.

“I am really in earnest, Helen,” he said. “I don't know that there is the least reason in the world for these fancies. If they all go off and nothing comes of them, you may laugh at me, if you like. But if there should be any occasion, remember my requests. You don't believe in presentiments, do you?”

“Oh, don't ask-me, I beg you,” Helen answered. “I have had a good many frights for every one real misfortune I have suffered. Sometimes I have thought I was warned beforehand of coming trouble, just as many people are of changes in the weather, by some unaccountable feeling,—but not often, and I don't like to talk about such things. I wouldn't think about these fancies of yours. I don't believe you have exercised enough;—don't you think it's confinement in the school has made you nervous?”

“Perhaps it has; but it happens that I have thought more of exercise lately, and have taken regular evening walks, besides playing my old gymnastic tricks every day.”

They talked on many subjects, but through all he said Helen perceived a pervading tone of sadness, and an expression as of a dreamy foreboding of unknown evil. They parted at the usual hour, and went to their several rooms. The sadness of Mr. Bernard had sunk into the heart of Helen, and she mingled many tears with her prayers that evening, earnestly entreating that he might be comforted in his days of trial and protected in his hour of danger.

Mr. Bernard stayed in his room a short time before setting out for his evening walk. His eye fell upon the Bible his mother had given him when he left home, and he opened it in the New Testament at a venture. It happened that the first words he read were these,—“Lest, coming suddenly, he find you sleeping.” In the state of mind in which he was at the moment, the text startled him. It was like a supernatural warning. He was not going to expose himself to any particular danger this evening; a walk in a quiet village was as free from risk as Helen Darley or his own mother could ask; yet he had an unaccountable feeling of apprehension, without any definite object. At this moment he remembered the old Doctor's counsel, which he had sometimes neglected, and, blushing at the feeling which led him to do it, he took the pistol his suspicious old friend had forced upon him, which he had put away loaded, and, thrusting it into his pocket, set out upon his walk.

The moon was shining at intervals, for the night was partially clouded. There seemed to be nobody stirring, though his attention was unusually awake, and he could hear the whirr of the bats overhead, and the pulsating croak of the frogs in the distant pools and marshes. Presently he detected the sound of hoofs at some distance, and, looking forward, saw a horseman coming in his direction. The moon was under a cloud at the moment, and he could only observe that the horse and his rider looked like a single dark object, and that they were moving along at an easy pace. Mr. Bernard was really ashamed of himself, when he found his hand on the butt of his pistol. When the horseman was within a hundred and fifty yards of him, the moon shone out suddenly and revealed each of them to the other. The rider paused for a moment, as if carefully surveying the pedestrian, then suddenly put his horse to the full gallop, and dashed towards him, rising at the same instant in his stirrups and swinging something round his head, what, Mr. Bernard could not make out. It was a strange manoeuvre,—so strange and threatening in aspect that the young man forgot his nervousness in an instant, cocked his pistol, and waited to see what mischief all this meant. He did not wait long. As the rider came rushing towards him, he made a rapid motion and something leaped five-and-twenty feet through the air, in Mr. Bernard's direction. In an instant he felt a ring, as of a rope or thong, settle upon his shoulders. There was no time to think, he would be lost in another second. He raised his pistol and fired,—not at the rider, but at the horse. His aim was true; the mustang gave one bound and fell lifeless, shot through the head. The lasso was fastened to his saddle, and his last bound threw Mr. Bernard violently to the earth, where he lay motionless, as if stunned.

In the mean time, Dick Venner, who had been dashed down with his horse, was trying to extricate himself, —one of his legs being held fast under the animal, the long spur on his boot having caught in the saddle-cloth. He found, however, that he could do nothing with his right arm, his shoulder having been in some way injured in his fall. But his Southern blood was up, and, as he saw Mr. Bernard move as if he were coming to his senses, he struggled violently to free himself.

"I 'll have the dog, yet," he said,—“only let me get at him with the knife!”

He had just succeeded in extricating his imprisoned leg, and was ready to spring to his feet, when he was caught firmly by the throat, and looking up, saw a clumsy barbed weapon, commonly known as a hay fork, within an inch of his breast.

“Hold on there! What 'n thunder 'r' y' abaout, y' darned Portagee?” said a voice, with a decided nasal tone in it, but sharp and resolute.

Dick looked from the weapon to the person who held it, and saw a sturdy, plain man standing over him, with his teeth clinched, and his aspect that of one all ready for mischief.

“Lay still, naow!” said Abel Stebbins, the Doctor's man; “‘f y' don't, I'll stick ye, 'z sure 'z y' 'r' alive! I been arfter ye f'r a week, 'n' I got y' naow! I knowed I'd ketch ye at some darned trick or 'nother 'fore I'd done 'ith ye!”

Dick lay perfectly still, feeling that he was crippled and helpless, thinking all the time with the Yankee half of his mind what to do about it. He saw Mr. Bernard lift his head and look around him. He would get his senses again in a few minutes, very probably, and then he, Mr. Richard Venner, would be done for.

“Let me up! let me up!” he cried, in a low, hurried voice,—“I 'll give you a hundred dollars in gold to let me go. The man a'n't hurt,—don't you see him stirring? He'll come to himself in two minutes. Let me up! I'll give you a hundred and fifty dollars in gold, now, here on the spot,—and the watch out of my pocket; take it yourself, with your own hands!”

“I'll see y' darned fust! Ketch me lett'n' go!” was Abel's emphatic answer. “Yeou lay still, 'n' wait t'll that man comes tew.”

He kept the hay-fork ready for action at the slightest sign of resistance.

Mr. Bernard, in the mean time, had been getting, first his senses, and then some few of his scattered wits, a little together.

“What is it?”—he said. “Who'shurt? What's happened?”

“Come along here 'z quick 'z y' ken,” Abel answered, “‘n' haalp me fix this fellah. Y' been hurt, y'rself, 'n' the 's murder come pooty nigh happenin'.”

Mr. Bernard heard the answer, but presently stared about and asked again, “Who's hurt? What's happened?”

“Y' 'r' hurt, y'rself, I tell ye,” said Abel; “‘n' the 's been a murder, pooty nigh.”

Mr. Bernard felt something about his neck, and, putting his hands up, found the loop of the lasso, which he loosened, but did not think to slip over his head, in the confusion of his perceptions and thoughts. It was a wonder that it had not choked him, but he had fallen forward so as to slacken it.

By this time he was getting some notion of what he was about, and presently began looking round for his pistol, which had fallen. He found it lying near him, cocked it mechanically, and walked, somewhat unsteadily, towards the two men, who were keeping their position as still as if they were performing in a tableau.

“Quick, naow!” said Abel, who had heard the click of cocking the pistol, and saw that he held it in his hand, as he came towards him. “Gi' me that pistil, and yeou fetch that 'ere rope layin' there. I 'll have this here fellah fixed 'n less 'n two minutes.”

Mr. Bernard did as Abel said,—stupidly and mechanically, for he was but half right as yet. Abel pointed the pistol at Dick's head.

“Naow hold up y'r hands, yeou fellah,” he said, “‘n' keep 'em up, while this man puts the rope mound y'r wrists.”

Dick felt himself helpless, and, rather than have his disabled arm roughly dealt with, held up his hands. Mr. Bernard did as Abel said; he was in a purely passive state, and obeyed orders like a child. Abel then secured the rope in a most thorough and satisfactory complication of twists and knots.

“Naow get up, will ye?” he said; and the unfortunate Dick rose to his feet.

"Who's hurt? What's happened?" asked poor Mr. Bernard again, his memory having been completely jarred out of him for the time.

"Come, look here naow, yeou, don' Stan' askin' questions over 'n' over;—t' beats all! ha'n't I tol' y' a dozen times?"

As Abel spoke, he turned and looked at Mr. Bernard.

"Hullo! What 'n' thunder's that 'ere raoun' y'r neck? Ketched ye 'ith a slippernoose, hey? Wal, if that a'n't the craowner! Hol' on a minute, Cap'n, 'n' I'll show ye what that 'ere halter's good for."

Abel slipped the noose over Mr. Bernard's head, and put it round the neck of the miserable Dick Venner, who made no sign of resistance,—whether on account of the pain he was in, or from mere helplessness, or because he was waiting for some unguarded moment to escape,—since resistance seemed of no use.

"I 'm go'n' to kerry y' home," said Abel; "'T' th' ol' Doctor, he's got a gre't cur'osity t' see ye. Jes' step along naow,—off that way, will ye?—'n' I'll hol' on t' th' bridle, f' fear y' sh'd run away."

He took hold of the leather thong, but found that it was fastened at the other end to the saddle. This was too much for Abel.

"Wal, naow, yeou be a pooty chap to hev raound! A fellah's neck in a slippernoose at one eend of a halter, 'n' a hors on th' full spring at t' other eend!"

He looked at him from' head to foot as a naturalist inspects a new specimen. His clothes had suffered in his fall, especially on the leg which had been caught under the horse.

"Hullo! look o' there, naow! What's that 'ere stickin' aout o' y'r boot?"

It was nothing but the handle of an ugly knife, which Abel instantly relieved him of.

The party now took up the line of march for old Doctor Kittredge's house, Abel carrying the pistol and knife, and Mr. Bernard walking in silence, still half-stunned, holding the hay-fork, which Abel had thrust into his hand. It was all a dream to him as yet. He remembered the horseman riding at him, and his firing the pistol; but whether he was alive, and these walls around him belonged to the village of Rockland, or whether he had passed the dark river, and was in a suburb of the New Jerusalem, he could not as yet have told.

They were in the street where the Doctor's house was situated.

"I guess I'll fire off one o' these here berrils," said Abel.

He fired.

Presently there was a noise of opening windows, and the nocturnal head-dresses of Rockland flowered out of them like so many developments of the Nightblooming Cereus. White cotton caps and red bandanna handkerchiefs were the prevailing forms of efflorescence. The main point was that the village was waked up. The old Doctor always waked easily, from long habit, and was the first among those who looked out to see what had happened.

"Why, Abel!" he called out, "what have you got there? and what 's all this noise about?"

"We've ketched the Portagee!" Abel answered, as laconically as the hero of Lake Erie, in his famous dispatch. "Go in there, you fellah!"

The prisoner was marched into the house, and the Doctor, who had bewitched his clothes upon him in a way that would have been miraculous in anybody but a physician, was down in presentable form as soon as if it had been a child in a fit that he was sent for.

"Richard Venner!" the Doctor exclaimed. "What is the meaning of all this? Mr. Langdon, has anything happened to you?"

Mr. Bernard put his hand to his head.

"My mind is confused," he said. "I've had a fall.—Oh, yes!—wait a minute and it will all come back to me."

"Sit down, sit down," the Doctor said. "Abel will tell me about it. Slight concussion of the brain. Can't remember very well for an hour or two,—will come right by to-morrow."

"Been stunded," Abel said. "He can't tell nothin'."

Abel then proceeded to give a Napoleonic bulletin of the recent combat of cavalry and infantry and its results,—none slain, one captured.

The Doctor looked at the prisoner through his spectacles.

"What 's the matter with your shoulder, Venner?"

Dick answered sullenly, that he didn't know, fell on it when his horse came down. The Doctor examined it as carefully as he could through his clothes.

"Out of joint. Untie his hands, Abel"

By this time a small alarm had spread among the neighbors, and there was a circle around Dick, who glared about on the assembled honest people like a hawk with a broken wing.

When the Doctor said, "Untie his hands," the circle widened perceptibly.

"Isn't it a leetle rash to give him the use of his hands? I see there's females and children standin' near."

This was the remark of our old friend, Deacon Soper, who retired from the front row, as he spoke, behind a respectable-looking, but somewhat hastily dressed person of the defenceless sex, the female help of a neighboring household, accompanied by a boy, whose unsmoothed shock of hair looked like a last year's crow's-nest.

But Abel untied his hands, in spite of the Deacon's considerate remonstrance.

"Now," said the Doctor, "the first thing is to put the joint back."

"Stop," said Deacon Soper,—"stop a minute. Don't you think it will be safer—for the women-folks—jest to wait till mornin', afore you put that j'int into the socket?"

Colonel Sprowle, who had been called by a special messenger, spoke up at this moment.

"Let the women-folks and the deacons go home, if they're scared, and put the fellah's j'int in as quick as you

like. I 'll resk him, j'int in or out."

"I want one of you to go straight down to Dudley Venner's with a message," the Doctor said. "I will have the young man's shoulder in quick enough."

"Don't send that message!" said Dick, in a hoarse voice;—"do what you like with my arm, but don't send that message! Let me go,—I can walk, and I'll be off from this place. There's nobody hurt but myself. Damn the shoulder!—let me go! You shall never hear of me again!"

Mr. Bernard came forward.

"My friends," he said, "I am not injured,—seriously, at least. Nobody need complain against this man, if I don't. The Doctor will treat him like a human being, at any rate; and then, if he will go, let him. There are too many witnesses against him here for him to want to stay."

The Doctor, in the mean time, without saying a word to all this, had got a towel round the shoulder and chest and another round the arm, and had the bone replaced in a very few minutes.

"Abel, put Cassia into the new chaise," he said, quietly. "My friends and neighbors, leave this young man to me."

"Colonel Sprowle, you're a justice of the peace," said Deacon Soper, "and you know what the law says in cases like this. It a'n't so clear that it won't have to come afore the Grand Jury, whether we will or no."

"I guess we'll set that j'int to-morrow mornin'," said Colonel Sprowle,—which made a laugh at the Deacon's expense, and virtually settled the question.

"Now trust this young man in my care," said the old Doctor, "and go home and finish your naps. I knew him when he was a boy and I'll answer for it, he won't trouble you any more. The Dudley blood makes folks proud, I can tell you, whatever else they are."

The good people so respected and believed in the Doctor that they left the prisoner with him.

Presently, Cassia, the fast Morgan mare, came up to the front-door, with the wheels of the new, light chaise flashing behind her in the moonlight. The Doctor drove Dick forty miles at a stretch that night, out of the limits of the State.

"Do you want money?" he said, before he left him.

Dick told him the secret of his golden belt.

"Where shall I send your trunk after you from your uncle's?"

Dick gave him a direction to a seaport town to which he himself was going, to take passage for a port in South America.

"Good-bye, Richard," said the Doctor. "Try to learn something from to-night's lesson."

The Southern impulses in Dick's wild blood overcame him, and he kissed the old Doctor on both cheeks, crying as only the children of the sun can cry, after the first hours in the dewy morning of life. So Dick Venner disappears from this story. An hour after dawn, Cassia pointed her fine ears homeward, and struck into her square, honest trot, as if she had not been doing anything more than her duty during her four hours' stretch of the last night.

Abel was not in the habit of questioning the Doctor's decisions.

"It's all right," he said to Mr. Bernard. "The fellah 's Squire Venner's relation, anyhaow. Don't you want to wait here, jest a little while, till I come back? The's a consid'able nice saddle 'n' bridle on a dead boss that's layin' daown there in the road 'n' I guess the' a'n't no use in lettin' on 'em spite,—so I'll jest step aout 'n' fetch 'em along. I kind o' calc'late 't won't pay to take the cretur's shoes 'n' hide off to-night,—'n' the' won't be much iron on that hose's huffs an haour after daylight, I'll bate ye a quarter."

"I'll walk along with you," said Mr. Bernard; "I feel as if I could get along well enough now."

So they set off together. There was a little crowd round the dead mustang already, principally consisting of neighbors who had adjourned from the Doctor's house to see the scene of the late adventure. In addition to these, however, the assembly was honored by the presence of Mr. Principal Silas Peckham, who had been called from his slumbers by a message that Master Langdon was shot through the head by a highway-robber, but had learned a true version of the story by this time. His voice was at that moment heard above the rest,—sharp, but thin, like bad cider-vinegar.

"I take charge of that property, I say. Master Langdon 's actin' under my orders, and I claim that hoss and all that's on him. Hiram! jest slip off that saddle and bridle, and carry 'em up to the Institoot, and bring down a pair of pinchers and a file,—and—stop—fetch a pair of shears, too; there's hosshair enough in that mane and tail to stuff a bolster with."

"You let that hoss alone!" spoke up Colonel Sprowle. "When a fellah goes out huntin' and shoots a squirrel, do you think he's go'n' to let another fellah pick him up and kerry him off? Not if he's got a double-berril gun, and t'other berril ha'n't been fired off yet! I should like to see the mahn that'll take off that seddle 'n' bridle, excep' the one th't hez a fair right to the whole concern!"

Hiram was from one of the lean streaks in New Hampshire, and, not being overfed in Mr. Silas Peckham's kitchen, was somewhat wanting in stamina, as well as in stomach, for so doubtful an enterprise, as undertaking to carry out his employer's orders in the face of the Colonel's defiance.

Just then Mr. Bernard and Abel came up together. "Here they be," said the Colonel. "Stan' beck, gentlemen!"

Mr. Bernard, who was pale and still a little confused, but gradually becoming more like himself, stood and looked in silence for a moment.

All his thoughts seemed to be clearing themselves in this interval. He took in the whole series of incidents: his own frightful risk; the strange, instinctive, nay, Providential impulse, which had led him so suddenly to do the one only thing which could possibly have saved him; the sudden appearance of the Doctor's man, but for which he might yet have been lost; and the discomfiture and capture of his dangerous enemy.

It was all past now, and a feeling of pity rose in Mr. Bernard's heart.

"He loved that horse, no doubt," he said,—“and no wonder. A beautiful, wild—looking creature! Take off those things that are on him, Abel, and have them carried to Mr. Dudley Venner's. If he does not want them, you may keep them yourself, for all that I have to say. One thing more. I hope nobody will lift his hand against this noble creature to mutilate him in any way. After you have taken off the saddle and bridle, Abel, bury him just as he is. Under that old beech-tree will be a good place. You'll see to it,—won't you, Abel?”

Abel nodded assent, and Mr. Bernard returned to the Institute, threw himself in his clothes on the bed, and slept like one who is heavy with wine.

Following Mr. Bernard's wishes, Abel at once took off the high-peaked saddle and the richly ornamented bridle from the mustang. Then, with the aid of two or three others, he removed him to the place indicated. Spades and shovels were soon procured, and before the moon had set, the wild horse of the Pampas was at rest under the turf at the wayside, in the far village among the hills of New England.

CHAPTER XXVI. THE NEWS REACHES THE DUDLEY MANSION.

Early the next morning Abel Stebbins made his appearance at Dudley Venner's, and requested to see the maan o' the haouse abaout somethin' o' consequence. Mr. Venner sent word that the messenger should wait below, and presently appeared in the study, where Abel was making himself at home, as is the wont of the republican citizen, when he hides the purple of empire beneath the apron of domestic service.

"Good mornin', Squire!" said Abel, as Mr. Venner entered. "My name's Stebbins, 'n' I'm stoppin' fr a spell 'ith of Doctor Kittredge."

"Well, Stebbins," said Mr. Dudley Venner, "have you brought any special message from the Doctor?"

"Y' ha'n't heerd nothin' abaout it, Squire, d' ye mean t' say?" said Abel,—beginning to suspect that he was the first to bring the news of last evening's events.

"About what?" asked Mr. Venner, with some interest.

"Dew tell, naow! Waal, that beats all! Why, that 'ere Portagee relation o' yourn 'z been tryin' t' ketch a fellah 'n a slippernoose, 'n' got ketched himself,—that's all. Y' ha'n't heerd noth'n' abaout it?"

"Sit down," said Mr. Dudley Venner, calmly, "and tell me all you have to say."

So Abel sat down and gave him an account of the events of the last evening. It was a strange and terrible surprise to Dudley Venner to find that his nephew, who had been an inmate of his house and the companion of his daughter, was to all intents and purposes guilty of the gravest of crimes. But the first shock was no sooner over than he began to think what effect the news would have on Elsie. He imagined that there was a kind of friendly feeling between them, and he feared some crisis would be provoked in his daughter's mental condition by the discovery. He would wait, however, until she came from her chamber, before disturbing her with the evil tidings.

Abel did not forget his message with reference to the equipments of the dead mustang.

"The' was some things on the hoss, Squire, that the man he ketched said he did n' care no gre't abaout; but perhaps you'd like to have 'em fetched to the mansion-haouse. Ef y' did n' care abaout 'em, though, I should n' min' keepin' on 'em; they might come handy some time or 'nother; they say, holt on t' anything for ten year 'n there 'll be some kin' o' use for 't."

"Keep everything," said Dudley Venner. "I don't want to see anything belonging to that young man."

So Abel nodded to Mr. Venner, and left the study to find some of the men about the stable to tell and talk over with them the events of the last evening. He presently came upon Elbridge, chief of the equine department, and driver of the family-coach.

"Good mornin', Abe," said Elbridge. "What's fetched y' daown here so all-fired airly?"

"You're a darned pooty lot daown here, you be!"

Abel answered. "Better keep your Portagees t' home nex' time, ketchin' folks 'ith slippernooses raoun' their necks, 'n' kerryin' knives 'n their boots!"

"What 'r' you jawin' abaout?" Elbridge said, looking up to see if he was in earnest, and what he meant.

"Jawin' abaout? You'll find aout'z soon 'z y' go into that 'ere stable o' yourn! Y' won't curry that 'ere long-tailed black hoss no more; 'n' y' won't set y'r eyes on the fellah that rid him, ag'in, in a hurry!"

Elbridge walked straight to the stable, without saying a word, found the door unlocked, and went in.

"Th' critter's gone, sure enough!" he said. "Glad on 't! The darndest, kickin'est, bitin'est beast th't ever I see, 'r ever wan' t' see ag'in! Good reddance! Don' wan' no snappin'-turkles in my stable! Whar's the man gone th't brought the critter?"

"Whar he's gone? Guess y' better go 'n ask my ol man; he kerried him off lass' night; 'n' when he comes back, mebbe he 'll tell ye whar he's gone tew!"

By this time Elbridge had found out that Abel was in earnest, and had something to tell. He looked at the litter in the mustang's stall, then at the crib.

"Ha'n't eat b't haalf his feed. Ha'n't been daown on his straw. Must ha' been took aout somewhere abaout ten 'r 'levee o'clock. I know that 'ere critter's ways. The fellah's had him aout nights afore; b't I never thought nothin' o' no mischief. He 's a kin' o' haalf Injin. What is 't the chap's been a-doin' on? Tell 's all abaout it."

Abel sat down on a meal-chest, picked up a straw and put it into his mouth. Elbridge sat down at the other end, pulled out his jack-knife, opened the penknife-blade, and began sticking it into the lid of the meal-chest. The Doctor's man had a story to tell, and he meant to get all the enjoyment out of it. So he told it with every

luxury of circumstance. Mr. Venner's man heard it all with open mouth. No listener in the gardens of Stamboul could have found more rapture in a tale heard amidst the perfume of roses and the voices of birds and tinkling of fountains than Elbridge in following Abel's narrative, as they sat there in the aromatic ammoniacal atmosphere of the stable, the grinding of the horses' jaws keeping evenly on through it all, with now and then the interruption of a stamping hoof, and at intervals a ringing crow from the barn-yard.

Elbridge stopped a minute to think, after Abel had finished.

"Who's took care o' them things that was on the hoss?" he said, gravely.

"Waal, Langden, he seemed to kin 'o' think I'd ought to have 'em,—'n' the Squire; he did n' seem to have no 'bjection; 'n' so,—waal, I calc'late I sh'll jes' holt on to 'em myself; they a'n't good f' r much, but they're cur'ous t' keep t' look at."

Mr. Venner's man did not appear much gratified by this arrangement, especially as he had a shrewd suspicion that some of the ornaments of the bridle were of precious metal, having made occasional examinations of them with the edge of a file. But he did not see exactly what to do about it, except to get them from Abel in the way of bargain.

"Waal, no,—they a'n't good for much 'xcep' to look at. 'F y' ever rid on that seddle once, y' would n' try it ag'in, very sry,—not 'f y' c'd haalp y'rsaalf.

"I tried it,—darned 'f I sot daown f'r th' nex' week,—eat all my victuals stan'in'. I sh'd like t' hev them things wal enough to heng up 'n the stable; 'f y' want t' trade some day, fetch 'em along daown."

Abel rather expected that Elbridge would have laid claim to the saddle and bridle on the strength of some promise or other presumptive title, and thought himself lucky to get off with only offering to think about tradin'.

When Elbridge returned to the house, he found the family in a state of great excitement. Mr. Venner had told Old Sophy, and she had informed the other servants. Everybody knew what had happened, excepting Elsie. Her father had charged them all to say nothing about it to her; he would tell her, when she came down.

He heard her step at last,—alight, gliding step,—so light that her coming was often unheard, except by those who perceived the faint rustle that went with it. She was paler than common this morning, as she came into her father's study.

After a few words of salutation, he said quietly, "Elsie, my dear, your cousin Richard has left us."

She grew still paler, as she asked,

"Is he dead?"

Dudley Venner started to see the expression with which Elsie put this question.

"He is living,—but dead to us from this day forward," said her father.

He proceeded to tell her, in a general way, the story he had just heard from Abel. There could be no doubting it;—he remembered him as the Doctor's man; and as Abel had seen all with his own eyes, as Dick's chamber, when unlocked with a spare key, was found empty, and his bed had not been slept in, he accepted the whole account as true.

When he told of Dick's attempt on the young schoolmaster, ("You know Mr. Langdon very well, Elsie,—a perfectly inoffensive young man, as I understand,") Elsie turned her face away and slid along by the wall to the window which looked out on the little grass-plot with the white stone standing in it. Her father could not see her face, but he knew by her movements that her dangerous mood was on her. When she heard the sequel of the story, the discomfiture and capture of Dick, she turned round for an instant, with a look of contempt and of something like triumph upon her face. Her father saw that her cousin had become odious to her: He knew well, by every change of her countenance, by her movements, by every varying curve of her graceful figure, the transitions from passion to repose, from fierce excitement to the dull languor which often succeeded her threatening paroxysms.

She remained looking out at the window. A group of white fan-tailed pigeons had lighted on the green plot before it and clustered about one of their companions who lay on his back, fluttering in a strange way, with outspread wings and twitching feet. Elsie uttered a faint cry; these were her special favorites and often fed from her hand. She threw open the long window, sprang out, caught up the white fantail, and held it to her bosom. The bird stretched himself out, and then lay still, with open eyes, lifeless. She looked at him a moment, and, sliding in through the open window and through the study, sought her own apartment, where she locked herself in, and began to sob and moan like those that weep. But the gracious solace of tears seemed to be denied her, and her grief, like her anger, was a dull ache, longing, like that, to finish itself with a fierce paroxysm, but wanting its natural outlet.

This seemingly trifling incident of the death of her favorite appeared to change all the current of her thought. Whether it were the sight of the dying bird, or the thought that her own agency might have been concerned in it, or some deeper grief, which took this occasion to declare itself,—some dark remorse or hopeless longing,—whatever it might be, there was an unwonted tumult in her soul. To whom should she go in her vague misery? Only to Him who knows all His creatures' sorrows, and listens to the faintest human cry. She knelt, as she had been taught to kneel from her childhood, and tried to pray. But her thoughts refused to flow in the language of supplication. She could not plead for herself as other women plead in their hours of anguish. She rose like one who should stoop to drink, and find dust in the place of water. Partly from restlessness, partly from an attraction she hardly avowed to herself, she followed her usual habit and strolled listlessly along to the school.

Of course everybody at the Institute was full of the terrible adventure of the preceding evening. Mr. Bernard felt poorly enough; but he had made it a point to show himself the next morning, as if nothing had happened. Helen Darley knew nothing of it all until she had risen, when the gossipy matron of the establishment made her acquainted with all its details, embellished with such additional ornamental appendages as it had caught up in transmission from lip to lip. She did not love to betray her sensibilities, but she was pale and tremulous and very nearly tearful when Mr. Bernard entered the sitting-room, showing on his features traces of the violent shock he had received and the heavy slumber from which he had risen with

throbbing brows. What the poor girl's impulse was, on seeing him, we need not inquire too curiously. If he had been her own brother, she would have kissed him and cried on his neck; but something held her back. There is no galvanism in kiss-your-brother; it is copper against copper: but alien bloods develop strange currents, when they flow close to each other, with only the films that cover lip and cheek between them. Mr. Bernard, as some of us may remember, violated the proprieties and laid himself open to reproach by his enterprise with a bouncing village-girl, to whose rosy cheek an honest smack was not probably an absolute novelty. He made it all up by his discretion and good behavior now. He saw by Helen's moist eye and trembling lip that her woman's heart was off its guard, and he knew, by the infallible instinct of sex, that he should be forgiven, if he thanked her for her sisterly sympathies in the most natural way,—expressive, and at the same time economical of breath and utterance. He would not give a false look to their friendship by any such demonstration. Helen was a little older than himself, but the aureole of young womanhood had not yet begun to fade from around her. She was surrounded by that enchanted atmosphere into which the girl walks with dreamy eyes, and out of which the woman passes with a story written on her forehead. Some people think very little of these refinements; they have not studied magnetism and the law of the square of the distance.

So Mr. Bernard thanked Helen for her interest without the aid of the twenty-seventh letter of the alphabet,—the love labial,—the limping consonant which it takes two to speak plain. Indeed, he scarcely let her say a word, at first; for he saw that it was hard for her to conceal her emotion. No wonder; he had come within a hair's-breadth of losing his life, and he had been a very kind friend and a very dear companion to her.

There were some curious spiritual experiences connected with his last evening's adventure which were working very strongly in his mind. It was borne in upon him irresistibly that he had been dead since he had seen Helen,—as dead as the son of the Widow of Nain before the bier was touched and he sat up and began to speak. There was an interval between two conscious moments which appeared to him like a temporary annihilation, and the thoughts it suggested were worrying him with strange perplexities.

He remembered seeing the dark figure on horseback rise in the saddle and something leap from its hand. He remembered the thrill he felt as the coil settled on his shoulders, and the sudden impulse which led him to fire as he did. With the report of the pistol all became blank, until he found himself in a strange, bewildered state, groping about for the weapon, which he had a vague consciousness of having dropped. But, according to Abel's account, there must have been an interval of some minutes between these recollections, and he could not help asking, Where was the mind, the soul, the thinking principle, all this time?

A man is stunned by a blow with a stick on the head. He becomes unconscious. Another man gets a harder blow on the head from a bigger stick, and it kills him. Does he become unconscious, too? If so, when does he come to his consciousness? The man who has had a slight or moderate blow comes to himself when the immediate shock passes off and the organs begin to work again, or when a bit of the skull is pried up, if that happens to be broken. Suppose the blow is hard enough to spoil the brain and stop the play of the organs, what happens then?

A British captain was struck by a cannon-ball on the head, just as he was giving an order, at the Battle of the Nile. Fifteen months afterwards he was trephined at Greenwich Hospital, having been insensible all that time. Immediately after the operation his consciousness returned, and he at once began carrying out the order he was giving when the shot struck him. Suppose he had never been trephined, when would his consciousness have returned? When his breath ceased and his heart stopped beating?

When Mr. Bernard said to Helen, "I have been dead since I saw you," it startled her not a little; for his expression was that of perfect good faith, and she feared that his mind was disordered. When he explained, not as has been done just now, at length, but in a hurried, imperfect way, the meaning of his strange assertion, and the fearful Sadduceeisms which it had suggested to his mind, she looked troubled at first, and then thoughtful. She did not feel able to answer all the difficulties he raised, but she met them with that faith which is the strength as well as the weakness of women,—which makes them weak in the hands of man, but strong in the presence of the Unseen.

"It is a strange experience," she said; "but I once had something like it. I fainted, and lost some five or ten minutes out of my life, as much as if I had been dead. But when I came to myself, I was the same person every way, in my recollections and character. So I suppose that loss of consciousness is not death. And if I was born out of unconsciousness into infancy with many family-traits of mind and body, I can believe, from my own reason, even without help from Revelation, that I shall be born again out of the unconsciousness of death with my individual traits of mind and body. If death is, as it should seem to be, a loss of consciousness, that does not shake my faith; for I have been put into a body once already to fit me for living here, and I hope to be in some way fitted after this life to enjoy a better one. But it is all trust in God and in his Word. These are enough for me; I hope they are for you."

Helen was a minister's daughter, and familiar from her childhood with this class of questions, especially with all the doubts and perplexities which are sure to assail every thinking child bred in any inorganic or not thoroughly vitalized faith,—as is too often the case with the children of professional theologians. The kind of discipline they are subjected to is like that of the Flat-Head Indian papposes. At five or ten or fifteen years old they put their hands up to their foreheads and ask, What are they strapping down my brains in this way for? So they tear off the sacred bandages of the great Flat-Head tribe, and there follows a mighty rush of blood to the long-compressed region. This accounts, in the most lucid manner, for those sudden freaks with which certain children of this class astonish their worthy parents at the period of life when they are growing fast, and, the frontal pressure beginning to be felt as something intolerable, they tear off the holy compresses.

The hour for school came, and they went to the great hall for study. It would not have occurred to Mr. Silas Peckham to ask his assistant whether he felt well enough to attend to his duties; and Mr. Bernard chose to be at his post. A little headache and confusion were all that remained of his symptoms.

Later, in the course of the forenoon, Elsie Venner came and took her place. The girls all stared at her—naturally enough; for it was hardly to have been expected that she would show herself, after such an event in

the household to which she belonged. Her expression was somewhat peculiar, and, of course, was attributed to the shock her feelings had undergone on hearing of the crime attempted by her cousin and daily companion. When she was looking on her book, or on any indifferent object, her countenance betrayed some inward disturbance, which knitted her dark brows, and seemed to throw a deeper shadow over her features. But, from time to time, she would lift her eyes toward Mr. Bernard, and let them rest upon him, without a thought, seemingly, that she herself was the subject of observation or remark. Then they seemed to lose their cold glitter, and soften into a strange, dreamy tenderness. The deep instincts of womanhood were striving to grope their way to the surface of her being through all the alien influences which overlaid them. She could be secret and cunning in working out any of her dangerous impulses, but she did not know how to mask the unwonted feeling which fixed her eyes and her thoughts upon the only person who had ever reached the spring of her hidden sympathies.

The girls all looked at Elsie, whenever they could steal a glance unperceived, and many of them were struck with this singular expression her features wore. They had long whispered it around among each other that she had a liking for the master; but there were too many of them of whom something like this could be said, to make it very remarkable. Now, however, when so many little hearts were fluttering at the thought of the peril through which the handsome young master had so recently passed, they were more alive than ever to the supposed relation between him and the dark school-girl. Some had supposed there was a mutual attachment between them; there was a story that they were secretly betrothed, in accordance with the rumor which had been current in the village. At any rate, some conflict was going on in that still, remote, clouded soul, and all the girls who looked upon her face were impressed and awed as they had never been before by the shadows that passed over it.

One of these girls was more strongly arrested by Elsie's look than the others. This was a delicate, pallid creature, with a high forehead, and wide-open pupils, which looked as if they could take in all the shapes that flit in what, to common eyes, is darkness,—a girl said to be clairvoyant under certain influences. In the recess, as it was called, or interval of suspended studies in the middle of the forenoon, this girl carried her autograph-book,—for she had one of those indispensable appendages of the boarding-school miss of every degree,—and asked Elsie to write her name in it. She had an irresistible feeling, that, sooner or later, and perhaps very soon, there would attach an unusual interest to this autograph. Elsie took the pen and wrote, in her sharp Italian hand,

Elsie Venner, Infelix.

It was a remembrance, doubtless, of the forlorn queen of the "Æneid"; but its coming to her thought in this way confirmed the sensitive school-girl in her fears for Elsie, and she let fall a tear upon the page before she closed it.

Of course, the keen and practised observation of Helen Darley could not fail to notice the change of Elsie's manner and expression. She had long seen that she was attracted to the young master, and had thought, as the old Doctor did, that any impression which acted upon her affections might be the means of awakening a new life in her singularly isolated nature. Now, however, the concentration of the poor girl's thoughts upon the one object which had had power to reach her deeper sensibilities was so painfully revealed in her features, that Helen began to fear once more, lest Mr. Bernard, in escaping the treacherous violence of an assassin, had been left to the equally dangerous consequences of a violent, engrossing passion in the breast of a young creature whose love it would be ruin to admit and might be deadly to reject. She knew her own heart too well to fear that any jealousy might mingle with her new apprehensions. It was understood between Bernard and Helen that they were too good friends to tamper with the silences and edging proximities of lovemaking. She knew, too, the simply human, not masculine, interest which Mr. Bernard took in Elsie; he had been frank with Helen, and more than satisfied her that with all the pity and sympathy which overflowed his soul, when he thought of the stricken girl, there mingled not one drop of such love as a youth may feel for a maiden.

It may help the reader to gain some understanding of the anomalous nature of Elsie Venner, if we look with Helen into Mr. Bernard's opinions and feelings with reference to her, as they had shaped themselves in his consciousness at the period of which we are speaking.

At first he had been impressed by her wild beauty, and the contrast of all her looks and ways with those of the girls around her. Presently a sense of some ill-defined personal element, which half-attracted and half-repelled those who looked upon her, and especially those on whom she looked, began to make itself obvious to him, as he soon found it was painfully sensible to his more susceptible companion, the lady-teacher. It was not merely in the cold light of her diamond eyes, but in all her movements, in her graceful postures as she sat, in her costume, and, he sometimes thought, even in her speech, that this obscure and exceptional character betrayed itself. When Helen had said, that, if they were living in times when human beings were subject to possession, she should have thought there was something not human about Elsie, it struck an unsuspected vein of thought in his own mind, which he hated to put in words, but which was continually trying to articulate itself among the dumb thoughts which lie under the perpetual stream of mental whispers.

Mr. Bernard's professional training had made him slow to accept marvellous stories and many forms of superstition. Yet, as a man of science, he well knew that just on the verge of the demonstrable facts of physics and physiology there is a nebulous border-land which what is called "common sense" perhaps does wisely not to enter, but which uncommon sense, or the fine apprehension of privileged intelligences, may cautiously explore, and in so doing find itself behind the scenes which make up for the gazing world the show which is called Nature.

It was with something of this finer perception, perhaps with some degree of imaginative exaltation, that he set himself to solving the problem of Elsie's influence to attract and repel those around her. His letter already submitted to the reader hints in what direction his thoughts were disposed to turn. Here was a magnificent organization, superb in vigorous womanhood, with a beauty such as never comes but after generations of culture; yet through all this rich nature there ran some alien current of influence, sinuous and dark, as when a clouded streak seams the white marble of a perfect statue.

It would be needless to repeat the particular suggestions which had come into his mind, as they must probably have come into that of the reader who has noted the singularities of Elsie's tastes and personal traits. The images which certain poets had dreamed of seemed to have become a reality before his own eyes. Then came that unexplained adventure of The Mountain,—almost like a dream in recollection, yet assuredly real in some of its main incidents,—with all that it revealed or hinted. This girl did not fear to visit the dreaded region, where danger lurked in every nook and beneath every tuft of leaves. Did the tenants of the fatal ledge recognize some mysterious affinity which made them tributary to the cold glitter of her diamond eyes? Was she from her birth one of those frightful children, such as he had read about, and the Professor had told him of, who form unnatural friendships with cold, writhing ophidians? There was no need of so unwelcome a thought as this; she had drawn him away from the dark opening in the rock at the moment when he seemed to be threatened by one of its malignant denizens; that was all he could be sure of; the counter-fascination might have been a dream, a fancy, a coincidence. All wonderful things soon grow doubtful in our own minds, as do even common events, if great interests prove suddenly to attach to their truth or falsehood.

—I, who am telling of these occurrences, saw a friend in the great city, on the morning of a most memorable disaster, hours after the time when the train which carried its victims to their doom had left. I talked with him, and was for some minutes, at least, in his company. When I reached home, I found that the story had gone before that he was among the lost, and I alone could contradict it to his weeping friends and relatives. I did contradict it; but, alas! I began soon to doubt myself, penetrated by the contagion of their solicitude; my recollection began to question itself; the order of events became dislocated; and when I heard that he had reached home in safety, the relief was almost as great to me as to those who had expected to see their own brother's face no more.

Mr. Bernard was disposed, then, not to accept the thought of any odious personal relationship of the kind which had suggested itself to him when he wrote the letter referred to. That the girl had something of the feral nature, her wild, lawless rambles in forbidden and blasted regions of The Mountain at all hours, her familiarity with the lonely haunts where any other human foot was so rarely seen, proved clearly enough. But the more he thought of all her strange instincts and modes of being, the more he became convinced that whatever alien impulse swayed her will and modulated or diverted or displaced her affections came from some impression that reached far back into the past, before the days when the faithful Old Sophy had rocked her in the cradle. He believed that she had brought her ruling tendency, whatever it was, into the world with her.

When the school was over and the girls had all gone, Helen lingered in the schoolroom to speak with Mr. Bernard.

“Did you remark Elsie's ways this forenoon?” she said.

“No, not particularly; I have not noticed anything as sharply as I commonly do; my head has been a little queer, and I have been thinking over what we were talking about, and how near I came to solving the great problem which every day makes clear to such multitudes of people. What about Elsie?”

“Bernard, her liking for you is growing into a passion. I have studied girls for a long while, and I know the difference between their passing fancies and their real emotions. I told you, you remember, that Rosa would have to leave us; we barely missed a scene, I think, if not a whole tragedy, by her going at the right moment. But Elsie is infinitely more dangerous to herself and others. Women's love is fierce enough, if it once gets the mastery of them, always; but this poor girl does not know what to do with a passion.”

Mr. Bernard had never told Helen the story of the flower in his Virgil, or that other adventure—which he would have felt awkwardly to refer to; but it had been perfectly understood between them that Elsie showed in her own singular way a well-marked partiality for the young master.

“Why don't they take her away from the school, if she is in such a strange, excitable state?” said Mr. Bernard.

“I believe they are afraid of her,” Helen answered. “It is just one of those cases that are ten thousand thousand times worse than insanity. I don't think from what I hear, that her father has ever given up hoping that she will outgrow her peculiarities. Oh, these peculiar children for whom parents go on hoping every morning and despairing every night! If I could tell you half that mothers have told me, you would feel that the worst of all diseases of the moral sense and the will are those which all the Bedlams turn away from their doors as not being cases of insanity!”

“Do you think her father has treated her judiciously?” said Mr. Bernard.

“I think,” said Helen, with a little hesitation, which Mr. Bernard did not happen to notice,—“I think he has been very kind and indulgent, and I do not know that he could have treated her otherwise with a better chance of success.”

“He must of course be fond of her,” Mr. Bernard said; “there is nothing else in the world for him to love.”

Helen dropped a book she held in her hand, and, stooping to pick it up, the blood rushed into her cheeks.

“It is getting late,” she said; “you must not stay any longer in this close schoolroom. Pray, go and get a little fresh air before dinner-time.”

CHAPTER XXVII. A SOUL IN DISTRESS.

The events told in the last two chapters had taken place toward the close of the week. On Saturday evening the Reverend Chauncy Fairweather received a note which was left at his door by an unknown person who departed without saying a word. Its words were these: “One who is in distress of mind requests the prayers of

this congregation that God would be pleased to look in mercy upon the soul that he has afflicted."

There was nothing to show from whom the note came, or the sex or age or special source of spiritual discomfort or anxiety of the writer. The handwriting was delicate and might well be a woman's. The clergyman was not aware of any particular affliction among his parishioners which was likely to be made the subject of a request of this kind. Surely neither of the Venners would advertise the attempted crime of their relative in this way. But who else was there? The more he thought about it, the more it puzzled him, and as he did not like to pray in the dark, without knowing for whom he was praying, he could think of nothing better than to step into old Doctor Kittredge's and see what he had to say about it.

The old Doctor was sitting alone in his study when the Reverend Mr. Fairweather was ushered in. He received his visitor very pleasantly, expecting, as a matter of course, that he would begin with some new grievance, dyspeptic, neuralgic, bronchitic, or other. The minister, however, began with questioning the old Doctor about the sequel of the other night's adventure; for he was already getting a little Jesuitical, and kept back the object of his visit until it should come up as if accidentally in the course of conversation.

"It was a pretty bold thing to go off alone with that reprobate, as you did," said the minister.

"I don't know what there was bold about it," the Doctor answered. "All he wanted was to get away. He was not quite a reprobate, you see; he didn't like the thought of disgracing his family or facing his uncle. I think he was ashamed to see his cousin, too, after what he had done."

"Did he talk with you on the way?"

"Not much. For half an hour or so he did n't speak a word. Then he asked where I was driving him. I told him, and he seemed to be surprised into a sort of grateful feeling. Bad enough, no doubt, but might be worse. Has some humanity left in him yet. Let him go. God can judge him,—I can't."

"You are too charitable, Doctor," the minister said. "I condemn him just as if he had carried out his project, which, they say, was to make it appear as if the schoolmaster had committed suicide. That's what people think the rope found by him was for. He has saved his neck,—but his soul is a lost one, I am afraid, beyond question."

"I can't judge men's souls," the Doctor said. "I can judge their acts, and hold them responsible for those,—but I don't know much about their souls. If you or I had found our soul in a half-breed body; and been turned loose to run among the Indians, we might have been playing just such tricks as this fellow has been trying. What if you or I had inherited all the tendencies that were born with his cousin Elsie?"

"Oh, that reminds me,"—the minister said, in a sudden way,— "I have received a note, which I am requested to read from the pulpit tomorrow. I wish you would just have the kindness to look at it and see where you think it came from."

The Doctor examined it carefully. It was a woman's or girl's note, he thought. Might come from one of the school-girls who was anxious about her spiritual condition. Handwriting was disguised; looked a little like Elsie Venner's, but not characteristic enough to make it certain. It would be a new thing, if she had asked public prayers for herself, and a very favorable indication of a change in her singular moral nature. It was just possible Elsie might have sent that note. Nobody could foretell her actions. It would be well to see the girl and find out whether any unusual impression had been produced on her mind by the recent occurrence or by any other cause.

The Reverend Mr. Fairweather folded the note and put it into his pocket.

"I have been a good deal exercised in mind lately, myself," he said.

The old Doctor looked at him through his spectacles, and said, in his usual professional tone,

"Put out your tongue."

The minister obeyed him in that feeble way common with persons of weak character,—for people differ as much in their mode of performing this trifling act as Gideon's soldiers in their way of drinking at the brook. The Doctor took his hand and placed a finger mechanically on his wrist.

"It is more spiritual, I think, than bodily," said the Reverend Mr. Fairweather.

"Is your appetite as good as usual?" the Doctor asked.

"Pretty good," the minister answered; "but my sleep, my sleep, Doctor,—I am greatly troubled at night with lying awake and thinking of my future, I am not at ease in mind."

He looked round at all the doors, to be sure they were shut, and moved his chair up close to the Doctor's.

"You do not know the mental trials I have been going through for the last few months."

"I think I do," the old Doctor said. "You want to get out of the new church into the old one, don't you?"

The minister blushed deeply; he thought he had been going on in a very quiet way, and that nobody suspected his secret. As the old Doctor was his counsellor in sickness, and almost everybody's confidant in trouble, he had intended to impart cautiously to him some hints of the change of sentiments through which he had been passing. He was too late with his information, it appeared, and there was nothing to be done but to throw himself on the Doctor's good sense and kindness, which everybody knew, and get what hints he could from him as to the practical course he should pursue. He began, after an awkward pause,

"You would not have me stay in a communion which I feel to be alien to the true church, would you?"

"Have you stay, my friend?" said the Doctor, with a pleasant, friendly look,— "have you stay? Not a month, nor a week, nor a day, if I could help it. You have got into the wrong pulpit, and I have known it from the first. The sooner you go where you belong, the better. And I'm very glad you don't mean to stop half-way. Don't you know you've always come to me when you've been dyspeptic or sick anyhow, and wanted to put yourself wholly into my hands, so that I might order you like a child just what to do and what to take? That 's exactly what you want in religion. I don't blame you for it. You never liked to take the responsibility of your own body; I don't see why you should want to have the charge of your own soul. But I'm glad you're going to the Old Mother of all. You wouldn't have been contented short of that."

The Reverend Mr. Fairweather breathed with more freedom. The Doctor saw into his soul through those

awful spectacles of his,—into it and beyond it, as one sees through a thin fog. But it was with a real human kindness, after all. He felt like a child before a strong man; but the strong man looked on him with a father's indulgence. Many and many a time, when he had come desponding and bemoaning himself on account of some contemptible bodily infirmity, the old Doctor had looked at him through his spectacles, listened patiently while he told his ailments, and then, in his large parental way, given him a few words of wholesome advice, and cheered him up so that he went off with a light heart, thinking that the heaven he was so much afraid of was not so very near, after all. It was the same thing now. He felt, as feeble natures always do in the presence of strong ones, overmastered, circumscribed, shut in, humbled; but yet it seemed as if the old Doctor did not despise him any more for what he considered weakness of mind than he used to despise him when he complained of his nerves or his digestion.

Men who see into their neighbors are very apt to be contemptuous; but men who see through them find something lying behind every human soul which it is not for them to sit in judgment on, or to attempt to sneer out of the order of God's manifold universe.

Little as the Doctor had said out of which comfort could be extracted, his genial manner had something grateful in it. A film of gratitude came over the poor man's cloudy, uncertain eye, and a look of tremulous relief and satisfaction played about his weak mouth. He was gravitating to the majority, where he hoped to find "rest"; but he was dreadfully sensitive to the opinions of the minority he was on the point of leaving.

The old Doctor saw plainly enough what was going on in his mind.

"I sha'n't quarrel with you," he said,—“you know that very well; but you mustn't quarrel with me, if I talk honestly with you; it isn't everybody that will take the trouble. You flatter yourself that you will make a good many enemies by leaving your old communion. Not so many as you think. This is the way the common sort of people will talk:—‘You have got your ticket to the feast of life, as much as any other man that ever lived. Protestantism says,—‘Help yourself; here's a clean plate, and a knife and fork of your own, and plenty of fresh dishes to choose from.’ The Old Mother says,—‘Give me your ticket, my dear, and I'll feed you with my gold spoon off these beautiful old wooden trenchers. Such nice bits as those good old gentlemen have left for you!’ There is no quarrelling with a man who prefers broken victuals. That's what the rougher sort will say; and then, where one scolds, ten will laugh. But, mind you, I don't either scold or laugh. I don't feel sure that you could very well have helped doing what you will soon do. You know you were never easy without some medicine to take when you felt ill in body. I'm afraid I've given you trashy stuff sometimes, just to keep you quiet. Now, let me tell you, there is just the same difference in spiritual patients that there is in bodily ones. One set believes in wholesome ways of living, and another must have a great list of specifics for all the soul's complaints. You belong with the last, and got accidentally shuffled in with the others.”

The minister smiled faintly, but did not reply. Of course, he considered that way of talking as the result of the Doctor's professional training. It would not have been worth while to take offence at his plain speech, if he had been so disposed; for he might wish to consult him the next day as to “what he should take” for his dyspepsia or his neuralgia.

He left the Doctor with a hollow feeling at the bottom of his soul, as if a good piece of his manhood had been scooped out of him. His hollow aching did not explain itself in words, but it grumbled and worried down among the unshaped thoughts which lie beneath them. He knew that he had been trying to reason himself out of his birthright of reason. He knew that the inspiration which gave him understanding was losing its throne in his intelligence, and the almighty Majority-Vote was proclaiming itself in its stead. He knew that the great primal truths, which each successive revelation only confirmed, were fast becoming hidden beneath the mechanical forms of thought, which, as with all new converts, engrossed so large a share of his attention. The “peace,” the “rest,” which he had purchased were dearly bought to one who had been trained to the arms of thought, and whose noble privilege it might have been to live in perpetual warfare for the advancing truth which the next generation will claim as the legacy of the present.

The Reverend Mr. Fairweather was getting careless about his sermons. He must wait the fitting moment to declare himself; and in the mean time he was preaching to heretics. It did not matter much what he preached, under such circumstances. He pulled out two old yellow sermons from a heap of such, and began looking over that for the forenoon. Naturally enough, he fell asleep over it, and, sleeping, he began to dream.

He dreamed that he was under the high arches of an old cathedral, amidst a throng of worshippers. The light streamed in through vast windows, dark with the purple robes of royal saints, or blazing with yellow glories around the heads of earthly martyrs and heavenly messengers. The billows of the great organ roared among the clustered columns, as the sea breaks amidst the basaltic pillars which crowd the stormy cavern of the Hebrides. The voice of the alternate choirs of singing boys swung back and forward, as the silver censer swung in the hands of the white-robed children. The sweet cloud of incense rose in soft, fleecy mists, full of penetrating suggestions of the East and its perfumed altars. The knees of twenty generations had worn the pavement; their feet had hollowed the steps; their shoulders had smoothed the columns. Dead bishops and abbots lay under the marble of the floor in their crumbled vestments; dead warriors, in rusted armor, were stretched beneath their sculptured effigies. And all at once all the buried multitudes who had ever worshipped there came thronging in through the aisles. They choked every space, they swarmed into all the chapels, they hung in clusters over the parapets of the galleries, they clung to the images in every niche, and still the vast throng kept flowing and flowing in, until the living were lost in the rush of the returning dead who had reclaimed their own. Then, as his dream became more fantastic, the huge cathedral itself seemed to change into the wreck of some mighty antediluvian vertebrate; its flying-buttresses arched round like ribs, its piers shaped themselves into limbs, and the sound of the organ-blast changed to the wind whistling through its thousand-jointed skeleton.

And presently the sound lulled, and softened and softened, until it was as the murmur of a distant swarm of bees. A procession of monks wound along through an old street, chanting, as they walked. In his dream he glided in among them and bore his part in the burden of their song. He entered with the long train under a low arch, and presently he was kneeling in a narrow cell before an image of the Blessed Maiden holding the Divine Child in her arms, and his lips seemed to whisper,

He turned to the crucifix, and, prostrating himself before the spare, agonizing shape of the Holy Sufferer, fell into a long passion of tears and broken prayers. He rose and flung himself, worn-out, upon his hard pallet, and, seeming to slumber, dreamed again within his dream. Once more in the vast cathedral, with throngs of the living choking its aisles, amidst jubilant peals from the cavernous depths of the great organ, and choral melodies ringing from the fluty throats of the singing boys. A day of great rejoicings,—for a prelate was to be consecrated, and the bones of the mighty skeleton-minster were shaking with anthems, as if there were life of its own within its buttressed ribs. He looked down at his feet; the folds of the sacred robe were flowing about them: he put his hand to his head; it was crowned with the holy mitre. A long sigh, as of perfect content in the consummation of all his earthly hopes, breathed through the dreamer's lips, and shaped itself, as it escaped, into the blissful murmur,

Ego sum Episcopus!

One grinning gargoye looked in from beneath the roof through an opening in a stained window. It was the face of a mocking fiend, such as the old builders loved to place under the eaves to spout the rain through their open mouths. It looked at him, as he sat in his mitred chair, with its hideous grin growing broader and broader, until it laughed out aloud, such a hard, stony, mocking laugh, that he awoke out of his second dream through his first into his common consciousness, and shivered, as he turned to the two yellow sermons which he was to pick over and weed of the little thought they might contain, for the next day's service.

The Reverend Chauncy Fairweather was too much taken up with his own bodily and spiritual condition to be deeply mindful of others. He carried the note requesting the prayers of the congregation in his pocket all day; and the soul in distress, which a single tender petition might have soothed, and perhaps have saved from despair or fatal error, found no voice in the temple to plead for it before the Throne of Mercy!

CHAPTER XXVIII. THE SECRET IS WHISPERED.

The Reverend Chauncy Fairweather's congregation was not large, but select. The lines of social cleavage run through religious creeds as if they were of a piece with position and fortune. It is expected of persons of a certain breeding, in some parts of New England, that they shall be either Episcopalians or Unitarians. The mansion-house gentry of Rockland were pretty fairly divided between the little chapel, with the stained window and the trained rector, and the meeting-house where the Reverend Mr. Fairweather officiated.

It was in the latter that Dudley Venner worshipped, when he attended service anywhere,—which depended very much on the caprice of Elsie. He saw plainly enough that a generous and liberally cultivated nature might find a refuge and congenial souls in either of these two persuasions, but he objected to some points of the formal creed of the older church, and especially to the mechanism which renders it hard to get free from its outworn and offensive formulæ,—remembering how Archbishop Tillotson wished in vain that it could be “well rid of” the Athanasian Creed. This, and the fact that the meeting-house was nearer than the chapel, determined him, when the new rector, who was not quite up to his mark in education, was appointed, to take a pew in the “liberal” worshippers' edifice.

Elsie was very uncertain in her feeling about going to church. In summer, she loved rather to stroll over The Mountain, on Sundays. There was even a story, that she had one of the caves before mentioned fitted up as an oratory, and that she had her own wild way of worshipping the God whom she sought in the dark chasms of the dreaded cliffs. Mere fables, doubtless; but they showed the common belief, that Elsie, with all her strange and dangerous elements of character, had yet strong religious feeling mingled with them. The hymn-book which Dick had found, in his midnight invasion of her chamber, opened to favorite hymns, especially some of the Methodist and Quietist character. Many had noticed, that certain tunes, as sung by the choir, seemed to impress her deeply; and some said, that at such times her whole expression would change, and her stormy look would soften so as to remind them of her poor, sweet mother.

On the Sunday morning after the talk recorded in the last chapter, Elsie made herself ready to go to meeting. She was dressed much as usual, excepting that she wore a thick veil, turned aside, but ready to conceal her features. It was natural enough that she should not wish to be looked in the face by curious persons who would be staring to see what effect the occurrence of the past week had had on her spirits. Her father attended her willingly; and they took their seats in the pew, somewhat to the surprise of many, who had hardly expected to see them, after so humiliating a family development as the attempted crime of their kinsman had just been furnishing for the astonishment of the public.

The Reverend Mr. Fairweather was now in his coldest mood. He had passed through the period of feverish excitement which marks a change of religious opinion. At first, when he had begun to doubt his own theological positions, he had defended them against himself with more ingenuity and interest, perhaps, than he could have done against another; because men rarely take the trouble to understand anybody's difficulties in a question but their own. After this, as he began to draw off from different points of his old belief, the cautious disentangling of himself from one mesh after another gave sharpness to his intellect, and the tremulous eagerness with which he seized upon the doctrine which, piece by piece, under various pretexts and with various disguises, he was appropriating, gave interest and something like passion to his words. But when he had gradually accustomed his people to his new phraseology, and was really adjusting his sermons and his service to disguise his thoughts, he lost at once all his intellectual acuteness and all his spiritual fervor.

Elsie sat quietly through the first part of the service, which was conducted in the cold, mechanical way to

be expected. Her face was hidden by her veil; but her father knew her state of feeling, as well by her movements and attitudes as by the expression of her features. The hymn had been sung, the short prayer offered, the Bible read, and the long prayer was about to begin. This was the time at which the "notes" of any who were in affliction from loss of friends, the sick who were doubtful of recovery, those who had cause to be grateful for preservation of life or other signal blessing, were wont to be read.

Just then it was that Dudley Venner noticed that his daughter was trembling,—a thing so rare, so unaccountable, indeed, under the circumstances, that he watched her closely, and began to fear that some nervous paroxysm, or other malady, might have just begun to show itself in this way upon her.

The minister had in his pocket two notes. One, in the handwriting of Deacon Soper, was from a member of this congregation, returning thanks for his preservation through a season of great peril, supposed to be the exposure which he had shared with others, when standing in the circle around Dick Venner. The other was the anonymous one, in a female hand, which he had received the evening before. He forgot them both. His thoughts were altogether too much taken up with more important matters. He prayed through all the frozen petitions of his expurgated form of supplication, and not a single heart was soothed or lifted, or reminded that its sorrows were struggling their way up to heaven, borne on the breath from a human soul that was warm with love.

The people sat down as if relieved when the dreary prayer was finished. Elsie alone remained standing until her father touched her. Then she sat down, lifted her veil, and looked at him with a blank, sad look, as if she had suffered some pain or wrong, but could not give any name or expression to her vague trouble. She did not tremble any longer, but remained ominously still, as if she had been frozen where she sat.

—Can a man love his own soul too well? Who, on the whole, constitute the nobler class of human beings? those who have lived mainly to make sure of their own personal welfare in another and future condition of existence, or they who have worked with all their might for their race, for their country, for the advancement of the kingdom of God, and left all personal arrangements concerning themselves to the sole charge of Him who made them and is responsible to himself for their safe-keeping? Is an anchorite who has worn the stone floor of his cell into basins with his knees bent in prayer, more acceptable than the soldier who gives his life for the maintenance of any sacred right or truth, without thinking what will specially become of him in a world where there are two or three million colonists a month, from this one planet, to be cared for? These are grave questions, which must suggest themselves to those who know that there are many profoundly selfish persons who are sincerely devout and perpetually occupied with their own future, while there are others who are perfectly ready to sacrifice themselves for any worthy object in this world, but are really too little occupied with their exclusive personality to think so much as many do about what is to become of them in another.

The Reverend Chauncy Fairweather did not, most certainly, belong to this latter class. There are several kinds of believers, whose history we find among the early converts to Christianity.

There was the magistrate, whose social position was such that he preferred a private interview in the evening with the Teacher to following him—with the street-crowd. He had seen extraordinary facts which had satisfied him that the young Galilean had a divine commission. But still he cross-questioned the Teacher himself. He was not ready to accept statements without explanation. That was the right kind of man. See how he stood up for the legal rights of his Master, when the people were for laying hands on him!

And again, there was the government official, intrusted with public money, which, in those days, implied that he was supposed to be honest. A single look of that heavenly countenance, and two words of gentle command, were enough for him. Neither of these men, the early disciple, nor the evangelist, seems to have been thinking primarily about his own personal safety.

But now look at the poor, miserable turnkey, whose occupation shows what he was like to be, and who had just been thrusting two respectable strangers, taken from the hands of a mob, covered with stripes and stripped of clothing, into the inner prison, and making their feet fast in the stocks. His thought, in the moment of terror, is for himself: first, suicide; then, what he shall do,—not to save his household,—not to fulfil his duty to his office,—not to repair the outrage he has been committing,—but to secure his own personal safety. Truly, character shows itself as much in a man's way of becoming a Christian as in any other!

—Elsie sat, statue-like, through the sermon. It would not be fair to the reader to give an abstract of that. When a man who has been bred to free thought and free speech suddenly finds himself stepping about, like a dancer amidst his eggs, among the old addled majority-votes which he must not tread upon, he is a spectacle for men and angels. Submission to intellectual precedent and authority does very well for those who have been bred to it; we know that the underground courses of their minds are laid in the Roman cement of tradition, and that stately and splendid structures may be reared on such a foundation. But to see one laying a platform over heretical quicksands, thirty or forty or fifty years deep, and then beginning to build upon it, is a sorry sight. A new convert from the reformed to the ancient faith may be very strong in the arms, but he will always have weak legs and shaky knees. He may use his hands well, and hit hard with his fists, but he will never stand on his legs in the way the man does who inherits his belief.

The services were over at last, and Dudley Venner and his daughter walked home together in silence. He always respected her moods, and saw clearly enough that some inward trouble was weighing upon her. There was nothing to be said in such cases, for Elsie could never talk of her griefs. An hour, or a day, or a week of brooding, with perhaps a sudden flash of violence: this was the way in which the impressions which make other women weep, and tell their griefs by word or letter, showed their effects in her mind and acts.

She wandered off up into the remoter parts of The Mountain, that day, after their return. No one saw just where she went,—indeed, no one knew its forest-recesses and rocky fastnesses as she did. She was gone until late at night; and when Old Sophy, who had watched for her, bound up her long hair for her sleep, it was damp with the cold dews.

The old black woman looked at her without speaking, but questioning her with every feature as to the sorrow that was weighing on her.

Suddenly she turned to Old Sophy.

"You want to know what there is troubling me;" she said. "Nobody loves me. I cannot love anybody. What is love, Sophy?"

"It's what poor Ol' Sophy's got for her Elsie," the old woman answered. "Tell me, darlin',—don' you love somebody?—don' you love? you know,—oh, tell me, darlin', don' you love to see the gen'l'man that keeps up at the school where you go? They say he's the pootiest gen'l'man that was ever in the town here. Don' be 'fraid of poor Ol' Sophy, darlin',—she loved a man once,—see here! Oh, I've showed you this often enough!"

She took from her pocket a half of one of the old Spanish silver coins, such as were current in the earlier part of this century. The other half of it had been lying in the deep sea-sand for more than fifty years.

Elsie looked her in the face, but did not answer in words. What strange intelligence was that which passed between them through the diamond eyes and the little beady black ones?—what subtle intercommunication, penetrating so much deeper than articulate speech? This was the nearest approach to sympathetic relations that Elsie ever had: a kind of dumb intercourse of feeling, such as one sees in the eyes of brute mothers looking on their young. But, subtle as it was, it was narrow and individual; whereas an emotion which can shape itself in language opens the gate for itself into the great community of human affections; for every word we speak is the medal of a dead thought or feeling, struck in the die of some human experience, worn smooth by innumerable contacts, and always transferred warm from one to another. By words we share the common consciousness of the race, which has shaped itself in these symbols. By music we reach those special states of consciousness which, being without form, cannot be shaped with the mosaics of the vocabulary. The language of the eyes runs deeper into the personal nature, but it is purely individual, and perishes in the expression.

If we consider them all as growing out of the consciousness as their root, language is the leaf, music is the flower; but when the eyes meet and search each other, it is the uncovering of the blanched stem through which the whole life runs, but which has never taken color or form from the sunlight.

For three days Elsie did not return to the school. Much of the time she was among the woods and rocks. The season was now beginning to wane, and the forest to put on its autumnal glory. The dreamy haze was beginning to soften the landscape, and the most delicious days of the year were lending their attraction to the scenery of The Mountain. It was not very singular that Elsie should be lingering in her old haunts, from which the change of season must soon drive her. But Old Sophy saw clearly enough that some internal conflict was going on, and knew very well that it must have its own way and work itself out as it best could. As much as looks could tell Elsie had told her. She had said in words, to be sure, that she could not love. Something warped and thwarted the emotion which would have been love in another, no doubt; but that such an emotion was striving with her against all malign influences which interfered with it the old woman had a perfect certainty in her own mind.

Everybody who has observed the working of emotions in persons of various temperaments knows well enough that they have periods of incubation, which differ with the individual, and with the particular cause and degree of excitement, yet evidently go through a strictly self-limited series of evolutions, at the end of which, their result—an act of violence, a paroxysm of tears, a gradual subsidence into repose, or whatever it may be—declares itself, like the last stage of an attack of fever and ague. No one can observe children without noticing that there is a personal equation, to use the astronomer's language, in their tempers, so that one sulks an hour over an offence which makes another a fury for five minutes, and leaves him or her an angel when it is over.

At the end of three days, Elsie braided her long, glossy, black hair, and shot a golden arrow through it. She dressed herself with more than usual care, and came down in the morning superb in her stormy beauty. The brooding paroxysm was over, or at least her passion had changed its phase. Her father saw it with great relief; he had always many fears for her in her hours and days of gloom, but, for reasons before assigned, had felt that she must be trusted to herself, without appealing to actual restraint, or any other supervision than such as Old Sophy could exercise without offence.

She went off at the accustomed hour to the school. All the girls had their eyes on her. None so keen as these young misses to know an inward movement by an outward sign of adornment: if they have not as many signals as the ships that sail the great seas, there is not an end of ribbon or a turn of a ringlet which is not a hieroglyphic with a hidden meaning to these little cruisers over the ocean of sentiment.

The girls all looked at Elsie with a new thought; for she was more sumptuously arrayed than perhaps ever before at the school; and they said to themselves that she had come meaning to draw the young master's eyes upon her. That was it; what else could it be? The beautiful cold girl with the diamond eyes meant to dazzle the handsome young gentleman. He would be afraid to love her; it couldn't be true, that which some people had said in the village; she was n't the kind of young lady to make Mr. Langdon happy. Those dark people are never safe: so one of the young blondes said to herself. Elsie was not literary enough for such a scholar: so thought Miss Charlotte Ann Wood, the young poetess. She couldn't have a good temper, with those scowling eyebrows: this was the opinion of several broad-faced, smiling girls, who thought, each in her own snug little mental sanctum, that, if, etc., etc., she could make him so happy!

Elsie had none of the still, wicked light in her eyes, that morning. She looked gentle, but dreamy; played with her books; did not trouble herself with any of the exercises,—which in itself was not very remarkable, as she was always allowed, under some pretext or other, to have her own way.

The school-hours were over at length. The girls went out, but she lingered to the last. She then came up to Mr. Bernard, with a book in her hand, as if to ask a question.

"Will you walk towards my home with me today?" she said, in a very low voice, little more than a whisper.

Mr. Bernard was startled by the request, put in such a way. He had a presentiment of some painful scene or other. But there was nothing to be done but to assure her that it would give him great pleasure.

So they walked along together on their way toward the Dudley mansion.

"I have no friend," Elsie said, all at once. "Nothing loves me but one old woman. I cannot love anybody. They tell me there is something in my eyes that draws people to me and makes them faint: Look into them,

will you?"

She turned her face toward him. It was very pale, and the diamond eyes were glittering with a film, such as beneath other lids would have rounded into a tear.

"Beautiful eyes, Elsie," he said,—“sometimes very piercing,—but soft now, and looking as if there were something beneath them that friendship might draw out. I am your friend, Elsie. Tell me what I can do to render your life happier.”

“Love me!” said Elsie Venner.

What shall a man do, when a woman makes such a demand, involving such an avowal? It was the tenderest, cruellest, humblest moment of Mr. Bernard's life. He turned pale, he trembled almost, as if he had been a woman listening to her lover's declaration.

“Elsie,” he said, presently, “I so long to be of some use to you, to have your confidence and sympathy, that I must not let you say or do anything to put us in false relations. I do love you, Elsie, as a suffering sister with sorrows of her own,—as one whom I would save at the risk of my happiness and life,—as one who needs a true friend more than—any of all the young girls I have known. More than this you would not ask me to say. You have been through excitement and trouble lately, and it has made you feel such a need more than ever. Give me your hand, dear Elsie, and trust me that I will be as true a friend to you as if we were children of the same mother.”

Elsie gave him her hand mechanically. It seemed to him that a cold aura shot from it along his arm and chilled the blood running through his heart. He pressed it gently, looked at her with a face full of grave kindness and sad interest, then softly relinquished it.

It was all over with poor Elsie. They walked almost in silence the rest of the way. Mr. Bernard left her at the gate of the mansion-house, and returned with sad forebodings. Elsie went at once to her own room, and did not come from it at the usual hours. At last Old Sophy began to be alarmed about her, went to her apartment, and, finding the door unlocked, entered cautiously. She found Elsie lying on her bed, her brows strongly contracted, her eyes dull, her whole look that of great suffering. Her first thought was that she had been doing herself a harm by some deadly means or other. But Elsie, saw her fear, and reassured her.

“No,” she said, “there is nothing wrong, such as you are thinking of; I am not dying. You may send for the Doctor; perhaps he can take the pain from my head. That is all I want him to do. There is no use in the pain, that I know of; if he can stop it, let him.”

So they sent for the old Doctor. It was not long before the solid trot of Caustic, the old bay horse, and the crashing of the gravel under the wheels, gave notice that the physician was driving up the avenue.

The old Doctor was a model for visiting practitioners. He always came into the sick-room with a quiet, cheerful look, as if he had a consciousness that he was bringing some sure relief with him. The way a patient snatches his first look at his doctor's face, to see whether he is doomed, whether he is reprieved, whether he is unconditionally pardoned, has really something terrible about it. It is only to be met by an imperturbable mask of serenity, proof against anything and everything in a patient's aspect. The physician whose face reflects his patient's condition like a mirror may do well enough to examine people for a life-insurance office, but does not belong to the sickroom. The old Doctor did not keep people waiting in dread suspense, while he stayed talking about the case,—the patient all the time thinking that he and the friends are discussing some alarming symptom or formidable operation which he himself is by-and-by—to hear of.

He was in Elsie's room almost before she knew he was in the house. He came to her bedside in such a natural, quiet way, that it seemed as if he were only a friend who had dropped in for a moment to say a pleasant word. Yet he was very uneasy about Elsie until he had seen her; he never knew what might happen to her or those about her, and came prepared for the worst.

“Sick, my child?” he said, in a very soft, low voice.

Elsie nodded, without speaking.

The Doctor took her hand,—whether with professional views, or only in a friendly way, it would have been hard to tell. So he sat a few minutes, looking at her all the time with a kind of fatherly interest, but with it all noting how she lay, how she breathed, her color, her expression, all that teaches the practised eye so much without a single question being asked. He saw she was in suffering, and said presently,

“You have pain somewhere; where is it?”

She put her hand to her head.

As she was not disposed to talk, he watched her for a while, questioned Old Sophy shrewdly a few minutes, and so made up his mind as to the probable cause of disturbance and the proper remedies to be used.

Some very silly people thought the old Doctor did not believe in medicine, because he gave less than certain poor half-taught creatures in the smaller neighboring towns, who took advantage of people's sickness to disgust and disturb them with all manner of ill-smelling and ill-behaving drugs. In truth, he hated to give anything noxious or loathsome to those who were uncomfortable enough already, unless he was very sure it would do good,—in which case, he never played with drugs, but gave good, honest, efficient doses. Sometimes he lost a family of the more boorish sort, because they did not think they got their money's worth out of him, unless they had something more than a taste of everything he carried in his saddlebags.

He ordered some remedies which he thought would relieve Elsie, and left her, saying he would call the next day, hoping to find her better. But the next day came, and the next, and still Elsie was on her bed, feverish, restless, wakeful, silent. At night she tossed about and wandered, and it became at length apparent that there was a settled attack, something like what they called, formerly, a “nervous fever.”

On the fourth day she was more restless than common. One of the women of the house came in to help to take care of her; but she showed an aversion to her presence.

“Send me Helen Darley,” she said, at last.

The old Doctor told them, that, if possible, they must indulge this fancy of hers. The caprices of sick people were never to be despised, least of all of such persons as Elsie, when rendered irritable and exacting by pain

and weakness.

So a message was sent to Mr. Silas Peckham at the Apollinean Institute, to know if he could not spare Miss Helen Darley for a few days, if required, to give her attention to a young lady who attended his school and who was now lying ill,—no other person than the daughter of Dudley Venner.

A mean man never agrees to anything without deliberately turning it over, so that he may see its dirty side, and, if he can, sweating the coin he pays for it. If an archangel should offer to save his soul for sixpence, he would try to find a sixpence with a hole in it. A gentleman says yes to a great many things without stopping to think: a shabby fellow is known by his caution in answering questions, for fear of, compromising his pocket or himself.

Mr. Silas Peckham looked very grave at the request. The dooties of Miss Darley at the Institoot were important, very important. He paid her large sums of money for her time,—more than she could expect to get in any other institootion for the edoocation of female youth. A deduction from her selary would be necessary, in case she should retire from the sphere of her dooties for a season. He should be put to extry expense, and have to perform additional labors himself. He would consider of the matter. If any arrangement could be made, he would send word to Squire Venner's folks.

"Miss Darley," said Silas Peckham, "the 's a message from Squire Venner's that his daughter wants you down at the mansion-house to see her. She's got a fever, so they inform me. If it's any kind of ketchin' fever, of course you won't think of goin' near the mansion-house. If Doctor Kittredge says it's safe, perfec'ly safe, I can't object to your goin', on sech conditions as seem to be fair to all' concerned. You will give up your pay for the whole time you are absent,—portions of days to be caounted as whole days. You will be charged with board the same as if you eat your victuals with the household. The victuals are of no use after they're cooked but to be eat, and your bein' away is no savin' to our folks. I shall charge you a reasonable compensation for the demage to the school by the absence of a teacher. If Miss Crabs undertakes any dooties belongin' to your department of instruction, she will look to you for sech pecooniary considerations as you may agree upon between you. On these conditions I am willin' to give my consent to your temporary absence from the post of dooty. I will step down to Doctor Kittredge's myself, and make inquiries as to the natur' of the complaint."

Mr. Peckham took up a rusty and very narrow-brimmed hat, which he cocked upon one side of his head, with an air peculiar to the rural gentry. It was the hour when the Doctor expected to be in his office, unless he had some special call which kept him from home.

He found the Reverend Chauncy Fairweather just taking leave of the Doctor. His hand was on the pit of his stomach, and his countenance was expressive of inward uneasiness.

"Shake it before using," said the Doctor; "and the sooner you make up your mind to speak right out, the better it will be for your digestion."

"Oh, Mr. Peckham! Walk in, Mr. Peckham! Nobody sick up at the school, I hope?"

"The haalth of the school is fust-rate," replied Mr. Peckham. "The sitioation is uncommonly favorable to saloobrity." (These last words were from the Annual Report of the past year.) "Providence has spared our female youth in a remarkable measure. I've come with reference to another consideration. Dr. Kittredge, is there any ketchin' complaint goin' about in the village?"

"Well, yes," said the Doctor, "I should say there was something of that sort. Measles. Mumps. And Sin,—that's always catching."

The old Doctor's eye twinkled; once in a while he had his little touch of humor.

Silas Peckham slanted his eye up suspiciously at the Doctor, as if he was getting some kind of advantage over him. That is the way people of his constitution are apt to take a bit of pleasantry.

"I don't mean sech things, Doctor; I mean fevers. Is there any ketchin' fevers—bilious, or nervous, or typus, or whatever you call 'em—now goin' round this village? That's what I want to ascertain, if there's no impropiety."

The old Doctor looked at Silas through his spectacles.

"Hard and sour as a green cider-apple," he thought to himself. "No,,"; he said,—“I don't know any such cases."

"What's the matter with Elsie Venner?" asked Silas, sharply, as if he expected to have him this time.

"A mild feverish attack, I should call it in anybody else; but she has a peculiar constitution, and I never feel so safe about her as I should about most people."

"Anything ketchin' about it?" Silas asked, cunningly.

"No, indeed!" said the Doctor,—“catching? no,—what put that into your head, Mr. Peckham?"

"Well, Doctor," the conscientious Principal answered, "I naterally feel a graat responsibility, a very graaat responsibility, for the noomerous and lovely young ladies committed to my charge. It has been a question, whether one of my assistants should go, accordin' to request, to stop with Miss Venner for a season. Nothin' restrains my givin' my full and free consent to her goin' but the fear lest contagious maladies should be introduced among those lovely female youth. I shall abide by your opinion,—I understan' you to say distinc'ly, her complaint is not ketchin'?—and urge upon Miss Darley to fulfil her dooties to a sufferin' fellow-creature at any cost to myself and my establishment. We shall miss her very much; but it is a good cause, and she shall go,—and I shall trust that Providence will enable us to spare her without permanent damage to the interests of the Institootion."

Saying this, the excellent Principal departed, with his rusty narrow-brimmed hat leaning over, as if it had a six-knot breeze abeam, and its gunwale (so to speak) was dipping into his coat-collar. He announced the result of his inquiries to Helen, who had received a brief note in the mean time from a poor relation of Elsie's mother, then at the mansion-house, informing her of the critical situation of Elsie and of her urgent desire that Helen should be with her. She could not hesitate. She blushed as she thought of the comments that might be made; but what were such considerations in a matter of life and death? She could not stop to make terms with Silas Peckham. She must go. He might fleece her, if he would; she would not complain,—not even

to Bernard, who, she knew, would bring the Principal to terms, if she gave the least hint of his intended extortions.

So Helen made up her bundle of clothes to be sent after her, took a book or two with her to help her pass the time, and departed for the Dudley mansion. It was with a great inward effort that she undertook the sisterly task which was thus forced upon her. She had a kind of terror of Elsie; and the thought of having charge of her, of being alone with her, of coming under the full influence of those diamond eyes,—if, indeed, their light were not dimmed by suffering and weariness,—was one she shrank from. But what could she do? It might be a turning-point in the life of the poor girl; and she must overcome all her fears, all her repugnance, and go to her rescue.

"Is Helen come?" said Elsie, when she heard, with her fine sense quickened by the irritability of sickness, a light footfall on the stair, with a cadence unlike that of any inmate of the house.

"It's a strange woman's step," said Old Sophy, who, with her exclusive love for Elsie, was naturally disposed to jealousy of a new-comer. "Let Ol' Sophy set at 'th' foot o' th' bed, if th' young missis sets by th' pillar,—won' y', darlin'? The' 's nobody that's white can love y' as th' of black woman does;—don' sen' her away, now, there 's a dear soul!"

Elsie motioned her to sit in the place she had pointed to, and Helen at that moment entered the room. Dudley Venner followed her.

"She is your patient," he said, "except while the Doctor is here. She has been longing to have you with her, and we shall expect you to make her well in a few days."

So Helen Darley found herself established in the most unexpected manner as an inmate of the Dudley mansion. She sat with Elsie most of the time, by day and by night, soothing her, and trying to enter into her confidence and affections, if it should prove that this strange creature was really capable of truly sympathetic emotions.

What was this unexplained something which came between her soul and that of every other human being with whom she was in relations? Helen perceived, or rather felt, that she had, folded up in the depths of her being, a true womanly nature. Through the cloud that darkened her aspect, now and then a ray would steal forth, which, like the smile of stern and solemn people, was all the more impressive from its contrast with the expression she wore habitually. It might well be that pain and fatigue had changed her aspect; but, at any rate, Helen looked into her eyes without that nervous agitation which their cold glitter had produced on her when they were full of their natural light. She felt sure that her mother must have been a lovely, gentle woman. There were gleams of a beautiful nature shining through some ill-defined medium which disturbed and made them flicker and waver, as distant images do when seen through the rippling upward currents of heated air. She loved, in her own way, the old black woman, and seemed to keep up a kind of silent communication with her, as if they did not require the use of speech. She appeared to be tranquillized by the presence of Helen, and loved to have her seated at the bedside. Yet something, whatever it was, prevented her from opening her heart to her kind companion; and even now there were times when she would lie looking at her, with such a still, watchful, almost dangerous expression, that Helen would sigh, and change her place, as persons do whose breath some cunning orator had been sucking out of them with his spongy eloquence, so that, when he stops, they must get some air and stir about, or they feel as if they should be half smothered and palsied.

It was too much to keep guessing what was the meaning of all this. Helen determined to ask Old Sophy some questions which might probably throw light upon her doubts. She took the opportunity one evening when Elsie was lying asleep and they were both sitting at some distance from her bed.

"Tell me, Sophy," she said, "was Elsie always as shy as she seems to be now, in talking with those to whom she is friendly?"

"Always jes' so, Miss Darlin', ever sense she was little chil'. When she was five, six year old, she lisp some,—call me Thophy; that make her kin' o' 'shamed, perhaps: after she grow up, she never lisp, but she kin' o' got the way o' not talkin' much. Fac' is, she don' like talkin' as common gals do, 'xcep' jes' once in a while wi' some partic'lar folks,—'n' then not much."

"How old is Elsie?"

"Eighteen year this las' September."

"How long ago did her mother die?" Helen asked, with a little trembling in her voice.

"Eighteen year ago this October," said Old Sophy.

Helen was silent for a moment. Then she whispered, almost inaudibly,—for her voice appeared to fail her,

"What did her mother die of, Sophy?"

The old woman's small eyes dilated until a ring of white showed round their beady centres. She caught Helen by the hand and clung to it, as if in fear. She looked round at Elsie, who lay sleeping, as of she might be listening. Then she drew Helen towards her and led her softly out of the room.

"'Sh!—'sh!" she said, as soon as they were outside the door. "Don' never speak in this house 'bout what Elsie's mother died of!" she said. "Nobody never says nothin' 'bout it. Oh, God has made Ugly Things wi' death in their mouths, Miss Darlin', an' He knows what they're for; but my poor Elsie!—to have her blood changed in her before—It was in July Mistress got her death, but she liv' till three week after my poor Elsie was born."

She could speak no more. She had said enough. Helen remembered the stories she had heard on coming to the village, and among them one referred to in an early chapter of this narrative. All the unaccountable looks and tastes and ways of Elsie came back to her in the light of an ante-natal impression which had mingled an alien element in her nature. She knew the secret of the fascination which looked out of her cold, glittering eyes. She knew the significance of the strange repulsion which she felt in her own intimate consciousness underlying the inexplicable attraction which drew her towards the young girl in spite of this repugnance. She began to look with new feelings on the contradictions in her moral nature,—the longing for sympathy, as shown by her wishing for Helen's company, and the impossibility of passing beyond the cold circle of isolation

within which she had her being. The fearful truth of that instinctive feeling of hers, that there was something not human looking out of Elsie's eyes, came upon her with a sudden flash of penetrating conviction. There were two warring principles in that superb organization and proud soul. One made her a woman, with all a woman's powers and longings. The other chilled all the currents of outlet for her emotions. It made her tearless and mute, when another woman would have wept and pleaded. And it infused into her soul something—it was cruel now to call it malice—which was still and watchful and dangerous, which waited its opportunity, and then shot like an arrow from its bow out of the coil of brooding premeditation. Even those who had never seen the white scars on Dick Venner's wrist, or heard the half-told story of her supposed attempt to do a graver mischief, knew well enough by looking at her that she was one of the creatures not to be tampered with,—silent in anger and swift in vengeance.

Helen could not return to the bedside at once after this communication. It was with altered eyes that she must look on the poor girl, the victim of such an unheard-of fatality. All was explained to her now. But it opened such depths of solemn thought in her awakened consciousness, that it seemed as if the whole mystery of human life were coming up again before her for trial and judgment. "Oh," she thought, "if, while the will lies sealed in its fountain, it may be poisoned at its very source, so that it shall flow dark and deadly through its whole course, who are we that we should judge our fellow-creatures by ourselves?" Then came the terrible question, how far the elements themselves are capable of perverting the moral nature: if valor, and justice, and truth, the strength of man and the virtue of woman, may not be poisoned out of a race by the food of the Australian in his forest, by the foul air and darkness of the Christians cooped up in the "tenement-houses" close by those who live in the palaces of the great cities?

She walked out into the garden, lost in thought upon these dark and deep matters. Presently she heard a step behind her, and Elsie's father came up and joined her. Since his introduction to Helen at the distinguished tea-party given by the Widow Rowens, and before her coming to sit with Elsie, Mr. Dudley Venner had in the most accidental way in the world met her on several occasions: once after church, when she happened to be caught in a slight shower and he insisted on holding his umbrella over her on her way home;—once at a small party at one of the mansion-houses, where the quick-eyed lady of the house had a wonderful knack of bringing people together who liked to see each other;—perhaps at other times and places; but of this there is no certain evidence.

They naturally spoke of Elsie, her illness, and the aspect it had taken. But Helen noticed in all that Dudley Venner said about his daughter a morbid sensitiveness, as it seemed to her, an aversion to saying much about her physical condition or her peculiarities,—a wish to feel and speak as a parent should, and yet a shrinking, as if there were something about Elsie which he could not bear to dwell upon. She thought she saw through all this, and she could interpret it all charitably. There were circumstances about his daughter which recalled the great sorrow of his life; it was not strange that this perpetual reminder should in some degree have modified his feelings as a father. But what a life he must have been leading for so many years, with this perpetual source of distress which he could not name! Helen knew well enough, now, the meaning of the sadness which had left such traces in his features and tones, and it made her feel very kindly and compassionate towards him.

So they walked over the crackling leaves in the garden, between the lines of box breathing its fragrance of eternity;—for this is one of the odors which carry us out of time into the abysses of the unbeginning past; if we ever lived on another ball of stone than this, it must be that there was box growing on it. So they walked, finding their way softly to each other's sorrows and sympathies, each matching some counterpart to the other's experience of life, and startled to see how the different, yet parallel, lessons they had been taught by suffering had led them step by step to the same serene acquiescence in the orderings of that Supreme Wisdom which they both devoutly recognized.

Old Sophy was at the window and saw them walking up and down the garden-alleys. She watched them as her grandfather the savage watched the figures that moved among the trees when a hostile tribe was lurking about his mountain.

"There'll be a weddin' in the ol' house," she said, "before there's roses on them bushes ag'in. But it won' be my poor Elsie's weddin', 'n' ol' Sophy won' be there."

When Helen prayed in the silence of her soul that evening, it was not that Elsie's life might be spared. She dared not ask that as a favor of Heaven. What could life be to her but a perpetual anguish, and to those about her but an ever-present terror? Might she but be so influenced by divine grace, that what in her was most truly human, most purely woman-like, should overcome the dark, cold, unmentionable instinct which had pervaded her being like a subtle poison that was all she could ask, and the rest she left to a higher wisdom and tenderer love than her own.

CHAPTER XXIX. THE WHITE ASH.

When Helen returned to Elsie's bedside, it was with a new and still deeper feeling of sympathy, such as the story told by Old Sophy might well awaken. She understood, as never before, the singular fascination and as singular repulsion which she had long felt in Elsie's presence. It had not been without a great effort that she had forced herself to become the almost constant attendant of the sick girl; and now she was learning, but not for the first time, the blessed truth which so many good women have found out for themselves, that the hardest duty bravely performed soon becomes a habit, and tends in due time to transform itself into a pleasure.

The old Doctor was beginning to look graver, in spite of himself. The fever, if such it was, went gently forward, wasting the young girl's powers of resistance from day to day; yet she showed no disposition to take nourishment, and seemed literally to be living on air. It was remarkable that with all this her look was almost

natural, and her features were hardly sharpened so as to suggest that her life was burning away. He did not like this, nor various other unobtrusive signs of danger which his practised eye detected. A very small matter might turn the balance which held life and death poised against each other. He surrounded her with precautions, that Nature might have every opportunity of cunningly shifting the weights from the scale of death to the scale of life, as she will often do if not rudely disturbed or interfered with.

Little tokens of good-will and kind remembrance were constantly coming to her from the girls in the school and the good people in the village. Some of the mansion-house people obtained rare flowers which they sent her, and her table was covered with fruits which tempted her in vain. Several of the school-girls wished to make her a basket of their own handiwork, and, filling it with autumnal flowers, to send it as a joint offering. Mr. Bernard found out their project accidentally, and, wishing to have his share in it, brought home from one of his long walks some boughs full of variously tinted leaves, such as were still clinging to the stricken trees. With these he brought also some of the already fallen leaflets of the white ash, remarkable for their rich olive-purple color, forming a beautiful contrast with some of the lighter-hued leaves. It so happened that this particular tree, the white ash, did not grow upon The Mountain, and the leaflets were more welcome for their comparative rarity. So the girls made their basket, and the floor of it they covered with the rich olive-purple leaflets. Such late flowers as they could lay their hands upon served to fill it, and with many kindly messages they sent it to Miss Elsie Venner at the Dudley mansion-house.

Elsie was sitting up in her bed when it came, languid, but tranquil, and Helen was by her, as usual, holding her hand, which was strangely cold, Helen thought, for one who was said to have some kind of fever. The school-girls' basket was brought in with its messages of love and hopes for speedy recovery. Old Sophy was delighted to see that it pleased Elsie, and laid it on the bed before her. Elsie began looking at the flowers, and taking them from the basket, that she might see the leaves. All at once she appeared to be agitated; she looked at the basket, then around, as if there were some fearful presence about her which she was searching for with her eager glances. She took out the flowers, one by one, her breathing growing hurried, her eyes staring, her hands trembling,—till, as she came near the bottom of the basket, she flung out all the rest with a hasty movement, looked upon the olive-purple leaflets as if paralyzed for a moment, shrunk up, as it were, into herself in a curdling terror, dashed the basket from her, and fell back senseless, with a faint cry which chilled the blood of the startled listeners at her bedside.

"Take it away!—take it away!—quick!" said Old Sophy, as she hastened to her mistress's pillow. "It 's the leaves of the tree that was always death to her,—take it away! She can't live wi' it in the room!"

The poor old woman began chafing Elsie's hands, and Helen to try to rouse her with hartshorn, while a third frightened attendant gathered up the flowers and the basket and carried them out of the apartment. She came to herself after a time, but exhausted and then wandering. In her delirium she talked constantly as if she were in a cave, with such exactness of circumstance that Helen could not doubt at all that she had some such retreat among the rocks of The Mountain, probably fitted up in her own fantastic way, where she sometimes hid herself from all human eyes, and of the entrance to which she alone possessed the secret.

All this passed away, and left her, of course, weaker than before. But this was not the only influence the unexplained paroxysm had left behind it. From this time forward there was a change in her whole expression and her manner. The shadows ceased flitting over her features, and the old woman, who watched her from day to day and from hour to hour as a mother watches her child, saw the likeness she bore to her mother coming forth more and more, as the cold glitter died out of the diamond eyes, and the stormy scowl disappeared from the dark brows and low forehead.

With all the kindness and indulgence her father had bestowed upon her, Elsie had never felt that he loved her. The reader knows well enough what fatal recollections and associations had frozen up the springs of natural affection in his breast. There was nothing in the world he would not do for Elsie. He had sacrificed his whole life to her. His very seeming carelessness about restraining her was all calculated; he knew that restraint would produce nothing but utter alienation. Just so far as she allowed him, he shared her studies, her few pleasures, her thoughts; but she was essentially solitary and uncommunicative. No person, as was said long ago, could judge him, because his task was not merely difficult, but simply impracticable to human powers. A nature like Elsie's had necessarily to be studied by itself, and to be followed in its laws where it could not be led.

Every day, at different hours, during the whole of his daughter's illness, Dudley Venner had sat by her, doing all he could to soothe and please her. Always the same thin film of some emotional non-conductor between them; always that kind of habitual regard and family-interest, mingled with the deepest pity on one side and a sort of respect on the other, which never warmed into outward evidences of affection.

It was after this occasion, when she had been so profoundly agitated by a seemingly insignificant cause, that her father and Old Sophy were sitting, one at one side of her bed and one at the other. She had fallen into a light slumber. As they were looking at her, the same thought came into both their minds at the same moment. Old Sophy spoke for both, as she said, in a low voice,

"It 's her mother's look,—it 's her mother's own face right over again,—she never look' so before, the Lord's hand is on her! His will be done!"

When Elsie woke and lifted her languid eyes upon her father's face, she saw in it a tenderness, a depth of affection, such as she remembered at rare moments of her childhood, when she had won him to her by some unusual gleam of sunshine in her fitful temper.

"Elsie, dear," he said, "we were thinking how much your expression was sometimes like that of your sweet mother. If you could but have seen her, so as to remember her!"

The tender look and tone, the yearning of the daughter's heart for the mother she had never seen, save only with the unfixed, undistinguishing eyes of earliest infancy, perhaps the under-thought that she might soon rejoin her in another state of being,—all came upon her with a sudden overflow of feeling which broke through all the barriers between her heart and her eyes, and Elsie wept. It seemed to her father as if the malign influence—evil spirit it might almost be called—which had pervaded her being, had at last been driven forth or exorcised, and that these tears were at once the sign and the pledge of her redeemed nature. But

now she was to be soothed, and not excited. After her tears she slept again, and the look her face wore was peaceful as never before.

Old Sophy met the Doctor at the door and told him all the circumstances connected with the extraordinary attack from which Elsie had suffered. It was the purple leaves, she said. She remembered that Dick once brought home a branch of a tree with some of the same leaves on it, and Elsie screamed and almost fainted then. She, Sophy, had asked her, after she had got quiet, what it was in the leaves that made her feel so bad. Elsie could n't tell her,—did n't like to speak about it,—shuddered whenever Sophy mentioned it.

This did not sound so strangely to the old Doctor as it does to some who listen to his narrative. He had known some curious examples of antipathies, and remembered reading of others still more singular. He had known those who could not bear the presence of a cat, and recollected the story, often told, of a person's hiding one in a chest when one of these sensitive individuals came into the room, so as not to disturb him; but he presently began to sweat and turn pale, and cried out that there must be a cat hid somewhere. He knew people who were poisoned by strawberries, by honey, by different meats, many who could not endure cheese,—some who could not bear the smell of roses. If he had known all the stories in the old books, he would have found that some have swooned and become as dead men at the smell of a rose,—that a stout soldier has been known to turn and run at the sight or smell of rue,—that cassia and even olive-oil have produced deadly faintings in certain individuals,—in short, that almost everything has seemed to be a poison to somebody.

"Bring me that basket, Sophy," said the old Doctor, "if you can find it."

Sophy brought it to him,—for he had not yet entered Elsie's apartment.

"These purple leaves are from the white ash," he said. "You don't know the notion that people commonly have about that tree, Sophy?"

"I know they say the Ugly Things never go where the white ash grows," Sophy answered. "Oh, Doctor dear, what I'm thinkin' of a'n't true, is it?"

The Doctor smiled sadly, but did not answer. He went directly to Elsie's room. Nobody would have known by his manner that he saw any special change in his patient. He spoke with her as usual, made some slight alteration in his prescriptions, and left the room with a kind, cheerful look. He met her father on the stairs.

"Is it as I thought?" said Dudley Venner.

"There is everything to fear," the Doctor said, "and not much, I am afraid, to hope. Does not her face recall to you one that you remember, as never before?"

"Yes," her father answered,—“oh, yes! What is the meaning of this change which has come over her features, and her voice, her temper, her whole being? Tell me, oh, tell me, what is it? Can it be that the curse is passing away, and my daughter is to be restored to me,—such as her mother would have had her,—such as her mother was?"

"Walk out with me into the garden," the Doctor said, "and I will tell you all I know and all I think about this great mystery of Elsie's life."

They walked out together, and the Doctor began: "She has lived a double being, as it were,—the consequence of the blight which fell upon her in the dim period before consciousness. You can see what she might have been but for this. You know that for these eighteen years her whole existence has taken its character from that influence which we need not name. But you will remember that few of the lower forms of life last as human beings do; and thus it might have been hoped and trusted with some show of reason, as I have always suspected you hoped and trusted, perhaps more confidently than myself, that the lower nature which had become engrafted on the higher would die out and leave the real woman's life she inherited to outlive this accidental principle which had so poisoned her childhood and youth. I believe it is so dying out; but I am afraid,—yes, I must say it, I fear it has involved the centres of life in its own decay. There is hardly any pulse at Elsie's wrist; no stimulants seem to rouse her; and it looks as if life were slowly retreating inwards, so that by-and-by she will sleep as those who lie down in the cold and never wake."

Strange as it may seem, her father heard all this not without deep sorrow, and such marks of it as his thoughtful and tranquil nature, long schooled by suffering, claimed or permitted, but with a resignation itself the measure of his past trials. Dear as his daughter might become to him, all he dared to ask of Heaven was that she might be restored to that truer self which lay beneath her false and adventitious being. If he could once see that the icy lustre in her eyes had become a soft, calm light,—that her soul was at peace with all about her and with Him; above,—this crumb from the children's table was enough for him, as it was for the Syro-Phoenician woman who asked that the dark spirit might go out from her daughter.

There was little change the next day, until all at once she said in a clear voice that she should like to see her master at the school, Mr. Langdon. He came accordingly, and took the place of Helen at her bedside. It seemed as if Elsie had forgotten the last scene with him. Might it be that pride had come in, and she had sent for him only to show how superior she had grown to the weakness which had betrayed her into that extraordinary request, so contrary to the instincts and usages of her sex? Or was it that the singular change which had come over her had involved her passionate fancy for him and swept it away with her other habits of thought and feeling? Or could it be that she felt that all earthly interests were becoming of little account to her, and wished to place herself right with one to whom she had displayed a wayward movement of her unbalanced imagination? She welcomed Mr. Bernard as quietly as she had received Helen Darley. He colored at the recollection of that last scene, when he came into her presence; but she smiled with perfect tranquillity. She did not speak to him of any apprehension; but he saw that she looked upon herself as doomed. So friendly, yet so calm did she seem through all their interview, that Mr. Bernard could only look back upon her manifestation of feeling towards him on their walk from the school as a vagary of a mind laboring under some unnatural excitement, and wholly at variance with the true character of Elsie Venner as he saw her before him in her subdued, yet singular beauty. He looked with almost scientific closeness of observation into the diamond eyes; but that peculiar light which he knew so well was not there. She was the same in one sense as on that first day when he had seen her coiling and uncoiling her golden chain; yet how different in every aspect which revealed her state of mind and emotion! Something of tenderness there was, perhaps, in her tone towards him; she would not have sent for him, had she not felt more than an ordinary

interest in him. But through the whole of his visit she never lost her gracious self-possession. The Dudley race might well be proud of the last of its daughters, as she lay dying, but unconquered by the feeling of the present or the fear of the future.

As for Mr. Bernard, he found it very hard to look upon her, and listen to her unmoved. There was nothing that reminded him of the stormy—browed, almost savage girl he remembered in her fierce loveliness,—nothing of all her singularities of air and of costume. Nothing? Yes, one thing. Weak and suffering as she was, she had never parted with one particular ornament, such as a sick person would naturally, as it might be supposed, get rid of at once. The golden cord which she wore round her neck at the great party was still there. A bracelet was lying by her pillow; she had unclasped it from her wrist.

Before Mr. Bernard left her, she said,

“I shall never see you again. Some time or other, perhaps, you will mention my name to one whom you love. Give her this from your scholar and friend Elsie.”

He took the bracelet, raised her hand to his lips, then turned his face away; in that moment he was the weaker of the two.

“Good-bye,” she said; “thank you for coming.”

His voice died away in his throat, as he tried to answer her. She followed him with her eyes as he passed from her sight through the door, and when it closed after him sobbed tremulously once or twice, but stilled herself, and met Helen, as she entered, with a composed countenance.

“I have had a very pleasant visit from Mr. Langdon,” Elsie said. “Sit by me, Helen, awhile without speaking; I should like to sleep, if I can,—and to dream.”

CHAPTER XXX. THE GOLDEN CORD IS LOOSED.

The Reverend Chauncy Fairweather, hearing that his parishioner's daughter, Elsie, was very ill, could do nothing less than come to the mansion-house and tender such consolations as he was master of. It was rather remarkable that the old Doctor did not exactly approve of his visit. He thought that company of every sort might be injurious in her weak state. He was of opinion that Mr. Fairweather, though greatly interested in religious matters, was not the most sympathetic person that could be found; in fact, the old Doctor thought he was too much taken up with his own interests for eternity to give himself quite 'so heartily to the need of other people as some persons got up on a rather more generous scale (our good neighbor Dr. Honeywood, for instance) could do. However, all these things had better be arranged to suit her wants; if she would like to talk with a clergyman, she had a great deal better see one as often as she liked, and run the risk of the excitement, than have a hidden wish for such a visit and perhaps find herself too weak to see him by-and-by.

The old Doctor knew by sad experience that dreadful mistake against which all medical practitioners should be warned. His experience may well be a guide for others. Do not overlook the desire for spiritual advice and consolation which patients sometimes feel, and, with the frightful mauvaise honte peculiar to Protestantism, alone among all human beliefs, are ashamed to tell. As a part of medical treatment, it is the physician's business to detect the hidden longing for the food of the soul, as much as for any form of bodily nourishment. Especially in the higher walks of society, where this unutterably miserable false shame of Protestantism acts in proportion to the general acuteness of the cultivated sensibilities, let no unwillingness to suggest the sick person's real need suffer him to languish between his want and his morbid sensitiveness. What an infinite advantage the Mussulmans and the Catholics have over many of our more exclusively spiritual sects in the way they keep their religion always by them and never blush for it! And besides this spiritual longing, we should never forget that

“On some fond breast the parting soul relies,”

and the minister of religion, in addition to the sympathetic nature which we have a right to demand in him, has trained himself to the art of entering into the feelings of others.

The reader must pardon this digression, which introduces the visit of the Reverend Chauncy Fairweather to Elsie Venner. It was mentioned to her that he would like to call and see how she was, and she consented,—not with much apparent interest, for she had reasons of her own for not feeling any very deep conviction of his sympathy for persons in sorrow. But he came, and worked the conversation round to religion, and confused her with his hybrid notions, half made up of what he had been believing and teaching all his life, and half of the new doctrines which he had venerated upon the surface of his old belief. He got so far as to make a prayer with her,—a cool, well-guarded prayer, which compromised his faith as little as possible, and which, if devotion were a game played against Providence, might have been considered a cautious and sagacious move.

When he had gone, Elsie called Old Sophy to her.

“Sophy,” she said, “don't let them send that cold hearted man to me any more. If your old minister comes—to see you, I should like to hear him talk. He looks as if he cared for everybody, and would care for me. And, Sophy, if I should die one of these days, I should like to have that old minister come and say whatever is to be said over me. It would comfort Dudley more, I know, than to have that hard man here, when you're in trouble, for some of you will be sorry when I'm gone,—won't you, Sophy?”

The poor old black woman could not stand this question. The cold minister had frozen Elsie until she felt as if nobody cared for her or would regret her,—and her question had betrayed this momentary feeling.

"Don' talk so! don' talk so, darlin'!" she cried, passionately. "When you go, Ol' Sophy'll go; 'n' where you go, Ol' Sophy'll go: 'n' we'll both go t' th' place where th' Lord takes care of all his children, whether their faces are white or black. Oh, darlin', darlin'! if th' Lord should let me die firs', you shall fin' all ready for you when you come after me. On'y don' go 'n' leave poor Ol' Sophy all 'lone in th' world!"

Helen came in at this moment and quieted the old woman with a look. Such scenes were just what were most dangerous, in the state in which Elsie was lying: but that is one of the ways in which an affectionate friend sometimes unconsciously wears out the life which a hired nurse, thinking of nothing but her regular duties and her wages, would have spared from all emotional fatigue.

The change which had come over Elsie's disposition was itself the cause of new excitements. How was it possible that her father could keep away from her, now that she was coming back to the nature and the very look of her mother, the bride of his youth? How was it possible to refuse her, when she said to Old Sophy, that she should like to have her minister come in and sit by her, even though his presence might perhaps prove a new source of excitement?

But the Reverend Doctor did come and sit by her, and spoke such soothing words to her, words of such peace and consolation, that from that hour she was tranquil as never before. All true hearts are alike in the hour of need; the Catholic has a reserved fund of faith for his fellow-creature's trying moment, and the Calvinist reveals those springs of human brotherhood and charity in his soul which are only covered over by the iron tables inscribed with the harder dogmas of his creed. It was enough that the Reverend Doctor knew all Elsie's history. He could not judge her by any formula, like those which have been moulded by past ages out of their ignorance. He did not talk with her as if she were an outside sinner worse than himself. He found a bruised and languishing soul, and bound up its wounds. A blessed office,—one which is confined to no sect or creed, but which good men in all times, under various names and with varying ministries, to suit the need of each age, of each race, of each individual soul, have come forward to discharge for their suffering fellow-creatures.

After this there was little change in Elsie, except that her heart beat more feebly every day,—so that the old Doctor himself, with all his experience, could see nothing to account for the gradual failing of the powers of life, and yet could find no remedy which seemed to arrest its progress in the smallest degree.

"Be very careful," he said, "that she is not allowed to make any muscular exertion. Any such effort, when a person is so enfeebled, may stop the heart in a moment; and if it stops, it will never move again."

Helen enforced this rule with the greatest care. Elsie was hardly allowed to move her hand or to speak above a whisper. It seemed to be mainly the question now, whether this trembling flame of life would be blown out by some light breath of air, or whether it could be so nursed and sheltered by the hollow of these watchful hands that it would have a chance to kindle to its natural brightness.

—Her father came in to sit with her in the evening. He had never talked so freely with her as during the hour he had passed at her bedside, telling her little circumstances of her mother's life, living over with her all that was pleasant in the past, and trying to encourage her with some cheerful gleams of hope for the future. A faint smile played over her face, but she did not answer his encouraging suggestions. The hour came for him to leave her with those who watched by her.

"Good-night, my dear child," he said, and stooping down, kissed her cheek.

Elsie rose by a sudden effort, threw her arms round his neck, kissed him, and said, "Good-night, my dear father!"

The suddenness of her movement had taken him by surprise, or he would have checked so dangerous an effort. It was too late now. Her arms slid away from him like lifeless weights,—her head fell back upon her pillow,—along sigh breathed through her lips.

"She is faint," said Helen, doubtfully; "bring me the hartshorn, Sophy."

The old woman had started from her place, and was now leaning over her, looking in her face, and listening for the sound of her breathing.

"She 's dead! Elsie 's dead! My darlin 's dead!" she cried aloud, filling the room with her utterance of anguish.

Dudley Venner drew her away and silenced her with a voice of authority, while Helen and an assistant plied their restoratives. It was all in vain.

The solemn tidings passed from the chamber of death through the family. The daughter, the hope of that old and honored house, was dead in the freshness of her youth, and the home of its solitary representative was hereafter doubly desolate.

A messenger rode hastily out of the avenue. A little after this the people of the village and the outlying farm-houses were startled by the sound of a bell.

One,—two,—three,—four,

They stopped in every house, as far as the wavering vibrations reached, and listened—

five,—six,—seven,—

It was not the little child which had been lying so long at the point of death; that could not be more than three or four years old—

eight,—nine,—ten,—and so on to fifteen, sixteen,—seventeen,—eighteen—

The pulsations seemed to keep on,—but it was the brain, and not the bell, that was throbbing now.

"Elsie 's dead!" was the exclamation at a hundred firesides.

"Eighteen year old," said old Widow Peake, rising from her chair. "Eighteen year ago I laid two gold eagles on her mother's eyes,—he wouldn't have anything but gold touch her eyelids,—and now Elsie's to be straightened,—the Lord have mercy on her poor sinful soul!"

Dudley Venner prayed that night that he might be forgiven, if he had failed in any act of duty or kindness to this unfortunate child of his, now freed from all the woes born with her and so long poisoning her soul. He

thanked God for the brief interval of peace which had been granted her, for the sweet communion they had enjoyed in these last days, and for the hope of meeting her with that other lost friend in a better world.

Helen mingled a few broken thanks and petitions with her tears: thanks that she had been permitted to share the last days and hours of this poor sister in sorrow; petitions that the grief of bereavement might be lightened to the lonely parent and the faithful old servant.

Old Sophy said almost nothing, but sat day and night by her dead darling. But sometimes her anguish would find an outlet in strange sounds, something between a cry and a musical note,—such as noise had ever heard her utter before. These were old remembrances surging up from her childish days, coming through her mother from the cannibal chief, her grandfather,—death-wails, such as they sing in the mountains of Western Africa, when they see the fires on distant hill-sides and know that their own wives and children are undergoing the fate of captives.

The time came when Elsie was to be laid by her mother in the small square marked by the white stone.

It was not unwillingly that the Reverend Chauncy Fairweather had relinquished the duty of conducting the service to the Reverend Doctor Honeywood, in accordance with Elsie's request. He could not, by any reasoning, reconcile his present way of thinking with a hope for the future of his unfortunate parishioner. Any good old Roman Catholic priest, born and bred to his faith and his business, would have found a loophole into some kind of heaven for her, by virtue of his doctrine of "invincible ignorance," or other special proviso; but a recent convert cannot enter into the working conditions of his new creed. Beliefs must be lived in for a good while, before they accommodate themselves to the soul's wants, and wear loose enough to be comfortable.

The Reverend Doctor had no such scruples. Like thousands of those who are classed nominally with the despairing believers, he had never prayed over a departed brother or sister without feeling and expressing a guarded hope that there was mercy in store for the poor sinner, whom parents, wives, children, brothers and sisters could not bear to give up to utter ruin without a word,—and would not, as he knew full well, in virtue of that human love and sympathy which nothing can ever extinguish. And in this poor Elsie's history he could read nothing which the tears of the recording angel might not wash away. As the good physician of the place knew the diseases that assailed the bodies of men and women, so he had learned the mysteries of the sickness of the soul.

So many wished to look upon Elsie's face once more, that her father would not deny them; nay, he was pleased that those who remembered her living should see her in the still beauty of death. Helen and those with her arrayed her for this farewell-view. All was ready for the sad or curious eyes which were to look upon her. There 'was no painful change to be concealed by any artifice. Even her round neck was left uncovered, that she might be more like one who slept. Only the golden cord was left in its place: some searching eye might detect a trace of that birthmark which it was whispered she had always worn a necklace to conceal.

At the last moment, when all the preparations were completed, Old Sophy stooped over her, and, with trembling hand, loosed the golden cord. She looked intently; for some little space: there was no shade nor blemish where the ring of gold had encircled her throat. She took it gently away and laid it in the casket which held her ornaments.

"The Lord be praised!" the old woman cried, aloud. "He has taken away the mark that was on her; she's fit to meet his holy angels now!"

So Elsie lay for hours in the great room, in a kind of state, with flowers all about her,—her black hair braided as in life,—her brows smooth, as if they had never known the scowl of passion,—and on her lips the faint smile with which she had uttered her last "Good—night." The young girls from the school looked at her, one after another, and passed on, sobbing, carrying in their hearts the picture that would be with them all their days. The great people of the place were all there with their silent sympathy. The lesser kind of gentry, and many of the plainer folk of the village, half-pleased to find themselves passing beneath the stately portico of the ancient mansion-house, crowded in, until the ample rooms were overflowing. All the friends whose acquaintance we have made were there, and many from remoter villages and towns.

There was a deep silence at last. The hour had come for the parting words to be spoken over the dead. The good old minister's voice rose out of the stillness, subdued and tremulous at first, but growing firmer and clearer as he went on, until it reached the ears of the visitors who were in the far, desolate chambers, looking at the pictured hangings and the old dusty portraits. He did not tell her story in his prayer. He only spoke of our dear departed sister as one of many whom Providence in its wisdom has seen fit to bring under bondage from their cradles. It was not for us to judge them by any standard of our own. He who made the heart alone knew the infirmities it inherited or acquired. For all that our dear sister had presented that was interesting and attractive in her character we were to be grateful; for whatever was dark or inexplicable we must trust that the deep shadow which rested on the twilight dawn of her being might render a reason before the bar of Omniscience; for the grace which had lightened her last days we should pour out our hearts in thankful acknowledgment. From the life and the death of this our dear sister we should learn a lesson of patience with our fellow-creatures in their inborn peculiarities, of charity in judging what seem to us wilful faults of character, of hope and trust, that, by sickness or affliction, or such inevitable discipline as life must always bring with it, if by no gentler means, the soul which had been left by Nature to wander into the path of error and of suffering might be reclaimed and restored to its true aim, and so led on by divine grace to its eternal welfare. He closed his prayer by commending each member of the afflicted family to the divine blessing.

Then all at once rose the clear sound of the girls' voices, in the sweet, sad melody of a funeral hymn,—one of those which Elsie had marked, as if prophetically, among her own favorites.

And so they laid her in the earth, and showered down flowers upon her, and filled her grave, and covered it with green sods. By the side of it was another oblong ridge, with a white stone standing at its head. Mr. Bernard looked upon it, as he came close to the place where Elsie was laid, and read the inscription,

A gentle rain fell on the turf after it was laid. This was the beginning of a long and dreary autumnal storm, a deferred "equinoctial," as many considered it. The mountain streams were all swollen and turbulent, and the steep declivities were furrowed in every direction by new channels. It made the house seem doubly desolate to hear the wind howling and the rain beating upon the roofs. The poor relation who was staying at the house would insist on Helen's remaining a few days: Old Sophy was in such a condition, that it kept her in continual anxiety, and there were many cares which Helen could take off from her.

The old black woman's life was buried in her darling's grave. She did nothing but moan and lament for her. At night she was restless, and would get up and wander to Elsie's apartment and look for her and call her by name. At other times she would lie awake and listen to the wind and the rain,—sometimes with such a wild look upon her face, and with such sudden starts and exclamations, that it seemed as if she heard spirit-voices and were answering the whispers of unseen visitants. With all this were mingled hints of her old superstition,—forebodings of something fearful about to happen,—perhaps the great final catastrophe of all things, according to the prediction current in the kitchens of Rockland.

"Hark!" Old Sophy would say,—“don' you hear th' crackin' 'n' th' snappin' up in Th' Mountain, 'n' th' rollin' o' th' big stones? The' 's somethin' stirrin' among th' rocks; I hear th' soun' of it in th' night, when th' wind has stopped blowin'. Oh, stay by me a little while, Miss Darlin'! stay by me! for it's th' Las' Day, maybe, that's close on us, 'n' I feel as if I could n' meet th' Lord all alone!”

It was curious,—but Helen did certainly recognize sounds, during the lull of the storm, which were not of falling rain or running streams,—short snapping sounds, as of tense cords breaking,—long uneven sounds, as of masses rolling down steep declivities. But the morning came as usual; and as the others said nothing of these singular noises, Helen did not think it necessary to speak of them. All day long she and the humble relative of Elsie's mother, who had appeared as poor relations are wont to in the great prizes of life, were busy in arranging the disordered house, and looking over the various objects which Elsie's singular tastes had brought together, to dispose of them as her father might direct. They all met together at the usual hour for tea. One of the servants came in, looking very blank, and said to the poor relation,

“The well is gone dry; we have nothing but rainwater.”

Dudley Venner's countenance changed; he sprang to, his feet and went to—assure himself of the fact, and, if he could, of the reason of it. For a well to dry up during such a rain-storm was extraordinary,—it was ominous.

He came back, looking very anxious.

“Did any of you notice any remarkable sounds last night,” he said,—“or this morning? Hark! do you hear anything now?”

They listened in perfect silence for a few moments. Then there came a short cracking sound, and two or three snaps, as of parting cords.

Dudley Venner called all his household together.

“We are in danger here, as I think, to-night,” he said,—“not very great danger, perhaps, but it is a risk I do not wish you to run. These heavy rains have loosed some of the rocks above, and they may come down and endanger the house. Harness the horses, Elbridge, and take all the family away. Miss Darley will go to the Institute; the others will pass the night at the Mountain House. I shall stay here, myself: it is not at all likely that anything will come of these warnings; but if there should, I choose to be there and take my chance.”

It needs little, generally, to frighten servants, and they were all ready enough to go. The poor relation was one of the timid sort, and was terribly uneasy to be got out of the house. This left no alternative, of course, for Helen, but to go also. They all urged upon Dudley Venner to go with them: if there was danger, why should he remain to risk it, when he sent away the others?

Old Sophy said nothing until the time came for her to go with the second of Elbridge's carriage-loads.

“Come, Sophy,” said Dudley Venner, “get your things and go. They will take good care of you at the Mountain House; and when we have made sure that there is no real danger, you shall come back at once.”

“No, Masse!” Sophy answered. “I've seen Elsie into th' ground, 'n' I a'n't goin' away to come back 'n' fin' Masse Venner buried under th' rocks. My darlin' 's gone; 'n' now, if Masse goes, 'n' th' of place goes, it's time for Ol' Sophy to go, too. No, Masse Venner, we'll both stay in th' of mansion 'n' wait for th' Lord!”

Nothing could change the old woman's determination; and her master, who only feared, but did not really expect the long-deferred catastrophe, was obliged to consent to her staying. The sudden drying of the well at such a time was the most alarming sign; for he remembered that the same thing had been observed just before great mountain-slides. This long rain, too, was just the kind of cause which was likely to loosen the strata of rock piled up in the ledges; if the dreaded event should ever come to pass, it would be at such a time.

He paced his chamber uneasily until long past midnight. If the morning came without accident, he meant to have a careful examination made of all the rents and fissures above, of their direction and extent, and especially whether, in case of a mountain-slide, the huge masses would be like to reach so far to the east and so low down the declivity as the mansion.

At two o'clock in the morning he was dozing in his chair. Old Sophy had lain down on her bed, and was muttering in troubled dreams.

All at once a loud crash seemed to rend the very heavens above them: a crack as of the thunder that follows close upon the bolt,—a rending and crashing as of a forest snapped through all its stems, torn, twisted, splintered, dragged with all its ragged boughs into one chaotic ruin. The ground trembled under them as in an earthquake; the old mansion shuddered so that all its windows chattered in their casements; the great chimney shook off its heavy cap-stones, which came down on the roof with resounding concussions; and the

echoes of The Mountain roared and bellowed in long reduplication, as if its whole foundations were rent, and this were the terrible voice of its dissolution.

Dudley Venner rose from his chair, folded his arms, and awaited his fate. There was no knowing where to look for safety; and he remembered too well the story of the family that was lost by rushing out of the house, and so hurrying into the very jaws of death.

He had stood thus but for a moment, when he heard the voice of Old Sophy in a wild cry of terror:

"It's th' Las' Day! It's th' Las' Day! The Lord is comin' to take us all!"

"Sophy!" he called; but she did not hear him or heed him, and rushed out of the house.

The worst danger was over. If they were to be destroyed, it would necessarily be in a few seconds from the first thrill of the terrible convulsion. He waited in awful suspense, but calm. Not more than one or two minutes could have passed before the frightful tumult and all its sounding echoes had ceased. He called Old Sophy; but she did not answer. He went to the western window and looked forth into the darkness. He could not distinguish the outlines of the landscape, but the white stone was clearly visible, and by its side the new-made mound. Nay, what was that which obscured its outline, in shape like a human figure? He flung open the window and sprang through. It was all that there was left of poor Old Sophy, stretched out lifeless, upon her darling's grave.

He had scarcely composed her limbs and drawn the sheet over her, when the neighbors began to arrive from all directions. Each was expecting to hear of houses overwhelmed and families destroyed; but each came with the story that his own household was safe. It was not until the morning dawned that the true nature and extent of the sudden movement was ascertained. A great seam had opened above the long cliff, and the terrible Rattlesnake Ledge, with all its envenomed reptiles, its dark fissures and black caverns, was buried forever beneath a mighty incumbent mass of ruin.

CHAPTER XXXI. MR. SILAS PECKHAM RENDERS HIS ACCOUNT.

The morning rose clear and bright. The long storm was over, and the calm autumnal sunshine was now to return, with all its infinite repose and sweetness. With the earliest dawn exploring parties were out in every direction along the southern slope of The Mountain, tracing the ravages of the great slide and the track it had followed. It proved to be not so much a slide as the breaking off and falling of a vast line of cliff, including the dreaded Ledge. It had folded over like the leaves of a half-opened book when they close, crushing the trees below, piling its ruins in a glaciis at the foot of what had been the overhanging wall of the cliff, and filling up that deep cavity above the mansion-house which bore the ill-omened name of Dead Man's Hollow. This it was which had saved the Dudley mansion. The falling masses, or huge fragments breaking off from them, would have swept the house and all around it to destruction but for this deep shelving dell, into which the stream of ruin was happily directed. It was, indeed, one of Nature's conservative revolutions; for the fallen masses made a kind of shelf, which interposed a level break between the inclined planes above and below it, so that the nightmare-fancies of the dwellers in the Dudley mansion, and in many other residences under the shadow of The Mountain, need not keep them lying awake hereafter to listen for the snapping of roots and the splitting of the rocks above them.

Twenty-four hours after the falling of the cliff, it seemed as if it had happened ages ago. The new fact had fitted itself in with all the old predictions, forebodings, fears, and acquired the solidarity belonging to all events which have slipped out of the fingers of Time and dissolved in the antecedent eternity.

Old Sophy was lying dead in the Dudley mansion. If there were tears shed for her, they could not be bitter ones; for she had lived out her full measure of days, and gone—who could help fondly believing it?—to rejoin her beloved mistress. They made a place for her at the foot of the two mounds. It was thus she would have chosen to sleep, and not to have wronged her humble devotion in life by asking to lie at the side of those whom she had served so long and faithfully. There were very few present at the simple ceremony. Helen Darley was one of these few. The old black woman had been her companion in all the kind offices of which she had been the ministering angel to Elsie.

After it was all over, Helen was leaving with the rest, when Dudley Venner begged her to stay a little, and he would send her back: it was a long walk; besides, he wished to say some things to her, which he had not had the opportunity of speaking. Of course Helen could not refuse him; there must be many thoughts coming into his mind which he would wish to share with her who had known his daughter so long and been with her in her last days.

She returned into the great parlor with the wrought cornices and the medallion-portraits on the ceiling.

"I am now alone in the world," Dudley Venner said.

Helen must have known that before he spoke. But the tone in which he said it had so much meaning, that she could not find a word to answer him with. They sat in silence, which the old tall clock counted out in long seconds; but it was silence which meant more than any words they had ever spoken.

"Alone in the world. Helen, the freshness of my life is gone, and there is little left of the few graces which in my younger days might have fitted me to win the love of women. Listen to me,—kindly, if you can; forgive me, at least. Half my life has been passed in constant fear and anguish, without any near friend to share my trials. My task is done now; my fears have ceased to prey upon me; the sharpness of early sorrows has yielded something of its edge to time. You have bound me to you by gratitude in the tender care you have taken of my poor child. More than this. I must tell you all now, out of the depth of this trouble through which I am passing. I have loved you from the moment we first met; and if my life has anything left worth accepting, it is

yours. Will you take the offered gift?"

Helen looked in his face, surprised, bewildered.

"This is not for me,—not for me," she said. "I am but a poor faded flower, not worth the gathering, of such a one as you. No, no,—I have been bred to humble toil all my days, and I could not be to you what you ought to ask. I am accustomed to a kind of loneliness and self-dependence. I have seen nothing, almost, of the world, such as you were born to move in. Leave me to my obscure place and duties; I shall at least have peace;—and you—you will surely find in due time some one better fitted by Nature and training to make you happy."

"No, Miss Darley!" Dudley Venner said, almost sternly. "You must not speak to a man, who has lived through my experiences, of looking about for a new choice after his heart has once chosen. Say that you can never love me; say that I have lived too long to share your young life; say that sorrow has left nothing in me for Love to find his pleasure in; but do not mock me with the hope of a new affection for some unknown object. The first look of yours brought me to your side. The first tone of your voice sunk into my heart. From this moment my life must wither out or bloom anew. My home is desolate. Come under my roof and make it bright once more,—share my life with me,—or I shall give the halls of the old mansion to the bats and the owls, and wander forth alone without a hope or a friend!"

To find herself with a man's future at the disposal of a single word of hers!—a man like this, too, with a fascination for her against which she had tried to shut her heart, feeling that he lived in another sphere than hers, working as she was for her bread a poor operative in the factory of a hard master and jealous overseer, the salaried drudge of Mr. Silas Peckham! Why, she had thought he was grateful to her as a friend of his daughter; she had even pleased herself with the feeling that he liked her, in her humble place, as a woman of some cultivation and many sympathetic points of relation with himself; but that he loved her,—that this deep, fine nature, in a man so far removed from her in outward circumstance, should have found its counterpart in one whom life had treated so coldly as herself,—that Dudley Venner should stake his happiness on a breath of hers,—poor Helen Darley's,—it was all a surprise, a confusion, a kind of fear not wholly fearful. Ah, me! women know what it is, that mist over the eyes, that trembling in the limbs, that faltering of the voice, that sweet, shame-faced, unspoken confession of weakness which does not wish to be strong, that sudden overflow in the soul where thoughts loose their hold on each other and swim single and helpless in the flood of emotion,—women know what it is!

No doubt she was a little frightened and a good deal bewildered, and that her sympathies were warmly excited for a friend to whom she had been brought so near, and whose loneliness she saw and pitied. She lost that calm self-possession she had hoped to maintain.

"If I thought that I could make you happy,—if I should speak from my heart, and not my reason,—I am but a weak woman,—yet if I can be to you—What can I say?"

What more could this poor, dear Helen say?

"Elbridge, harness the horses and take Miss Darley back to the school."

What conversation had taken place since Helen's rhetorical failure is not recorded in the minutes from which this narrative is constructed. But when the man who had been summoned had gone to get the carriage ready, Helen resumed something she had been speaking of.

"Not for the world. Everything must go on just as it has gone on, for the present. There are proprieties to be consulted. I cannot be hard with you, that out of your very affliction has sprung this—this well—you must name it for me,—but the world will never listen to explanations. I am to be Helen Darley, lady assistant in Mr. Silas Peckham's school, as long as I see fit to hold my office. And I mean to attend to my scholars just as before; so that I shall have very little time for visiting or seeing company. I believe, though, you are one of the Trustees and a Member of the Examining Committee; so that, if you should happen to visit the school, I shall try to be civil to you."

Every lady sees, of course, that Helen was quite right; but perhaps here and there one will think that Dudley Venner was all wrong,—that he was too hasty,—that he should have been too full of his recent grief for such a confession as he has just made, and the passion from which it sprung. Perhaps they do not understand the sudden recoil of a strong nature long compressed. Perhaps they have not studied the mystery of allotropism in the emotions of the human heart. Go to the nearest chemist and ask him to show you some of the dark-red phosphorus which will not burn without fierce heating, but at 500 deg. Fahrenheit, changes back again to the inflammable substance we know so well. Grief seems more like ashes than like fire; but as grief has been love once, so it may become love again. This is emotional allotropism.

Helen rode back to the Institute and inquired for Mr. Peckham. She had not seen him during the brief interval between her departure from the mansion-house and her return to Old Sophy's funeral. There were various questions about the school she wished to ask.

"Oh, how's your haalth, Miss Darley?" Silas began. "We've missed you consid'able. Glad to see you back at the post of dooty. Hope the Squire treated you hahnsomely,—liberal pecooniary compensation,—hey? A'n't much of a loser, I guess, by acceptin' his propositions?"

Helen blushed at this last question, as if Silas had meant something by it beyond asking what money she had received; but his own double-meaning expression and her blush were too nice points for him to have taken cognizance of. He was engaged in a mental calculation as to the amount of the deduction he should make under the head of "damage to the institootion,"—this depending somewhat on that of the "pecooniary compensation" she might have received for her services as the friend of Elsie Venner.

So Helen slid back at once into her routine, the same faithful, patient creature she had always been. But what was this new light which seemed to have kindled in her eyes? What was this look of peace, which nothing could disturb, which smiled serenely through all the little meannesses with which the daily life of the educational factory surrounded her, which not only made her seem resigned, but overflowed all her features with a thoughtful, subdued happiness? Mr. Bernard did not know,—perhaps he did not guess. The inmates of the Dudley mansion were not scandalized by any mysterious visits of a veiled or unveiled lady. The vibrating tongues of the "female youth" of the Institute were not set in motion by the standing of an equipage at the

gate, waiting for their lady-teacher. The servants at the mansion did not convey numerous letters with superscriptions in a bold, manly hand, sealed with the arms of a well-known house, and directed to Miss Helen Darley; nor, on the other hand, did Hiram, the man from the lean streak in New Hampshire, carry sweet-smelling, rose-hued, many-layered, criss-crossed, fine-stitch-lettered packages of note-paper directed to Dudley Venner, Esq., and all too scanty to hold that incredible expansion of the famous three words which a woman was born to say,—that perpetual miracle which astonishes all the go-betweens who wear their shoes out in carrying a woman's infinite variations on the theme—

"I love you."

But the reader must remember that there are walks in country-towns where people are liable to meet by accident, and that the hollow of an old tree has served the purpose of a post-office sometimes; so that he has her choice (to divide the pronouns impartially) of various hypotheses to account for the new glory of happiness which seemed to have irradiated our poor Helen's features, as if her dreary life were awakening in the dawn of a blessed future.

With all the alleviations which have been hinted at, Mr. Dudley Venner thought that the days and the weeks had never moved so slowly as through the last period of the autumn that was passing. Elsie had been a perpetual source of anxiety to him, but still she had been a companion. He could not mourn for her; for he felt that she was safer with her mother, in that world where there are no more sorrows and dangers, than she could have been with him. But as he sat at his window and looked at the three mounds, the loneliness of the great house made it seem more like the sepulchre than these narrow dwellings where his beloved and her daughter lay close to each other, side by side,—Catalina, the bride of his youth, and Elsie, the child whom he had nurtured, with poor Old Sophy, who had followed them like a black shadow, at their feet, under the same soft turf, sprinkled with the brown autumnal leaves. It was not good for him to be thus alone. How should he ever live through the long months of November and December?

The months of November and December did, in some way or other, get rid of themselves at last, bringing with them the usual events of village-life and a few unusual ones. Some of the geologists had been up to look at the great slide, of which they gave those prolix accounts which everybody remembers who read the scientific journals of the time. The engineers reported that there was little probability of any further convulsion along the line of rocks which overhung the more thickly settled part of the town. The naturalists drew up a paper on the "Probable Extinction of the *Crotalus Durissus* in the Township of Rockland." The engagement of the Widow Rowens to a Little Millionville merchant was announced,—"Sudding 'n' onexpected," Widow Leech said,—"waalthy, or she wouldn't ha' looked at him,—fifty year old, if he is a day, 'n' hu'n't got a white hair in his head." The Reverend Chauncy Fairweather had publicly announced that he was going to join the Roman Catholic communion,—not so much to the surprise or consternation of the religious world as he had supposed. Several old ladies forthwith proclaimed their intention of following him; but, as one or two of them were deaf, and another had been threatened with an attack of that mild, but obstinate complaint, dementia senilis, many thought it was not so much the force of his arguments as a kind of tendency to jump as the bellwether jumps, well known in flocks not included in the Christian fold. His bereaved congregation immediately began pulling candidates on and off, like new boots, on trial. Some pinched in tender places; some were too loose; some were too square-toed; some were too coarse, and did n't please; some were too thin, and would n't last;—in short, they could n't possibly find a fit. At last, people began to drop in to hear old Doctor Honeywood. They were quite surprised to find what a human old gentleman he was, and went back and told the others, that, instead of being a case of confluent sectarianism, as they supposed, the good old minister had been so well vaccinated with charitable virus that he was now a true, open-souled Christian of the mildest type. The end of all which was, that the liberal people went over to the old minister almost in a body, just at the time that Deacon Shearer and the "Vinegar-Bible" party split off, and that not long afterwards they sold their own meeting-house to the malecontents, so that Deacon Soper used often to remind Colonel Sprowle of his wish that "our little man and him [the Reverend Doctor] would swop pulpits," and tell him it had "pooty nigh come trew."—But this is anticipating the course of events, which were much longer in coming about; for we have but just got through that terrible long month, as Mr. Dudley Venner found it, of December.

On the first of January, Mr. Silas Peckham was in the habit of settling his quarterly accounts, and making such new arrangements as his convenience or interest dictated. New Year was a holiday at the Institute. No doubt this accounted for Helen's being dressed so charmingly,—always, to be sure in, her own simple way, but yet with such a true lady's air, that she looked fit to be the mistress of any mansion in the land.

She was in the parlor alone, a little before noon, when Mr. Peckham came in.

"I'm ready to settle my accaount with you now, Miss Darley," said Silas.

"As you please, Mr. Peckham," Helen answered, very graciously.

"Before payin' you your selary," the Principal continued, "I wish to come to an understandin' as to the futur'. I consider that I've been payin' high, very high, for the work you do. Women's wages can't be expected to do more than feed and clothe 'em, as a general thing, with a little savin', in case of sickness, and to bury 'em, if they break daown, as all of 'em are liable to do at any time. If I a'n't misinformed, you not only support yourself out of my establishment, but likewise relatives of yours, who I don't know that I'm called upon to feed and clothe. There is a young woman, not burdened with destitute relatives, has signified that she would be glad to take your dooties for less pecooniary compensation, by a consid'able amaount, than you now receive. I shall be willin', however, to retain your services at sech redooced rate as we shall fix upon,—provided sech redooced rate be as low or lower than the same services can be obtained elsewhere."

"As you please, Mr. Peckham," Helen answered, with a smile so sweet that the Principal (who of course had trumped up this opposition-teacher for the occasion) said to himself she would stand being cut down a quarter, perhaps a half, of her salary.

"Here is your accaount, Miss Darley, and the balance doo you," said Silas Peckham, handing her a paper and a small roll of infectious-flavored bills wrapping six poisonous coppers of the old coinage.

She took the paper and began looking at it. She could not quite make up her mind to touch the feverish bills with the cankering coppers in them, and left them airing themselves on the table.

The document she held ran as follows:

Silas Peckham, Esq., Principal of the Apollinean Institute, In Account with Helen Darley, Assist. Teacher.

<i>Dr.</i>	<i>Cr.</i>
<i>To salary for quarter ending Jan 1st @ \$75 per quarter..... \$75.00</i>	<i>By Deduction for absence 1 week 3 days..... \$10.00</i>
	<i>"Board, lodging, etc for 10 days @ 75 cts per day.. 7.50</i>
	<i>"Damage to Institution by absence of teacher from duties, say..... 25.00</i>
	<i>"Stationary furnished..... 43</i>
	<i>"Postage-stamp..... 01</i>
	<i>"Balance due Helen Darley. 32.06</i>
<hr/> \$75.00	<hr/> \$75.00

ROCKLAND, Jan. 1st, 1859.

Now Helen had her own private reasons for wishing to receive the small sum which was due her at this time without any unfair deduction,—reasons which we need not inquire into too particularly, as we may be very sure that they were right and womanly. So, when she looked over this account of Mr. Silas Peckham's, and saw that he had contrived to pare down her salary to something less than half its stipulated amount, the look which her countenance wore was as near to that of righteous indignation as her gentle features and soft blue eyes would admit of its being.

"Why, Mr. Peckham," she said, "do you mean this? If I am of so much value to you that you must take off twenty-five dollars for ten days' absence, how is it that my salary is to be cut down to less than seventy-five dollars a quarter, if I remain here?"

"I gave you fair notice," said Silas. "I have a minute of it I took down immed'ately after the intervoo."

He lugged out his large pocket-book with the strap going all round it, and took from it a slip of paper which confirmed his statement.

"Besides," he added, slyly, "I presoom you have received a liberal pecooniary compensation from Squire Venner for nussin' his daughter."

Helen was looking over the bill while he was speaking.

"Board and lodging for ten days, Mr. Peckham,—whose board and lodging, pray?"

The door opened before Silas Peckham could answer, and Mr. Bernard walked into the parlor. Helen was holding the bill in her hand, looking as any woman ought to look who has been at once wronged and insulted.

"The last turn of the thumbscrew!" said Mr. Bernard to himself.

"What is it, Helen? You look troubled."

She handed him the account.

He looked at the footing of it. Then he looked at the items. Then he looked at Silas Peckham.

At this moment Silas was sublime. He was so transcendently unconscious of the emotions going on in Mr. Bernard's mind at the moment, that he had only a single thought.

"The accaount's correc'ly cast, I presoom;—if the 's any mistake of figgers or addin' 'em up, it'll be made all right. Everything's accordin' to agreement. The minute written immed'ately after the intervoo is here in my possession."

Mr. Bernard looked at Helen. Just what would have happened to Silas Peckham, as he stood then and there, but for the interposition of a merciful Providence, nobody knows or ever will know; for at that moment steps were heard upon the stairs, and Hiram threw open the parlor-door for Mr. Dudley Venner to enter.

He saluted them all gracefully with the good-wishes of the season, and each of them returned his compliment,—Helen blushing fearfully, of course, but not particularly noticed in her embarrassment by more than one.

Silas Peckham reckoned with perfect confidence on his Trustees, who had always said what he told them to, and done what he wanted. It was a good chance now to show off his power, and, by letting his instructors know the unstable tenure of their offices, make it easier to settle his accounts and arrange his salaries. There was nothing very strange in Mr. Venner's calling; he was one of the Trustees, and this was New Year's Day. But he had called just at the lucky moment for Mr. Peckham's object.

"I have thought some of makin' changes in the department of instruction," he began. "Several accomplished teachers have applied to me, who would be glad of sitooations. I understand that there never have been so many fust-rate teachers, male and female, out of employment as doorin' the present season. If I can make sahtisfahctory arrangements with my present corpse of teachers, I shall be glad to do so; otherwise I shell, with the permission of the Trustees, make sech noo arrangements as circumstahnces compel."

"You may make arrangements for a new assistant in my department, Mr. Peckham," said Mr. Bernard, "at once,—this day,—this hour. I am not safe to be trusted with your person five minutes out of this lady's presence,—of whom I beg pardon for this strong language. Mr. Venner, I must beg you, as one of the Trustees of this Institution, to look at the manner in which its Principal has attempted to swindle this faithful teacher whose toils and sacrifices and self-devotion to the school have made it all that it is, in spite of this miserable trader's incompetence. Will you look at the paper I hold?"

Dudley Venner took the account and read it through, without changing a feature. Then he turned to Silas Peckham.

"You may make arrangements for a new assistant in the branches this lady has taught. Miss Helen Darley is to be my wife. I had hoped to have announced this news in a less abrupt and ungraceful manner. But I came to tell you with my own lips what you would have learned before evening from my friends in the village."

Mr. Bernard went to Helen, who stood silent, with downcast eyes, and took her hand warmly, hoping she might find all the happiness she deserved. Then he turned to Dudley Venner, and said, "She is a queen, but has never found it out. The world has nothing nobler than this dear woman, whom you have discovered in the disguise of a teacher. God bless her and you!"

Dudley Venner returned his friendly grasp, without answering a word in articulate speech.

Silas remained dumb and aghast for a brief space. Coming to himself a little, he thought there might have been some mistake about the items,—would like to have Miss barley's bill returned,—would make it all right,—had no idea that Squire Venner had a special int'rest in Miss barley,—was sorry he had given offence,—if he might take that bill and look it over—

"No. Mr. Peckham," said Mr. Dudley Venner, "there will be a full meeting of the Board next week, and the bill, and such evidence with reference to the management of the Institution and the treatment of its instructors as Mr. Langdon sees fit to bring forward will be laid before them."

Miss Helen Darley became that very day the guest of Miss Arabella Thornton, the Judge's daughter. Mr. Bernard made his appearance a week or two later at the Lectures, where the Professor first introduced him to the reader.

He stayed after the class had left the room.

"Ah, Mr. Langdon! how do you do? Very glad to see you back again. How have you been since our correspondence on Fascination and other curious scientific questions?"

It was the Professor who spoke,—whom the reader will recognize as myself, the teller of this story.

"I have been well," Mr. Bernard answered, with a serious look which invited a further question.

"I hope you have had none of those painful or dangerous experiences you seemed to be thinking of when you wrote; at any rate, you have escaped having your obituary written."

"I have seen some things worth remembering. Shall I call on you this evening and tell you about them?"

"I shall be most happy to see you."

This was the way in which I, the Professor, became acquainted with some of the leading events of this story. They interested me sufficiently to lead me to avail myself of all those other extraordinary methods of obtaining information well known to writers of narrative.

Mr. Langdon seemed to me to have gained in seriousness and strength of character by his late experiences. He threw his whole energies into his studies with an effect which distanced all his previous efforts. Remembering my former hint, he employed his spare hours in writing for the annual prizes, both of which he took by a unanimous vote of the judges. Those who heard him read his Thesis at the Medical Commencement will not soon forget the impression made by his fine personal appearance and manners, nor the universal interest excited in the audience, as he read, with his beautiful enunciation, that striking paper entitled "Unresolved Nebulae in Vital Science." It was a general remark of the Faculty,—and old Doctor Kittredge, who had come down on purpose to hear Mr. Langdon, heartily agreed to it,—that there had never been a diploma filled up, since the institution which conferred upon him the degree of Doctor Medicdnce was founded, which carried with it more of promise to the profession than that which bore the name of

BERNARDUS CARYL LANGDON

CHAPTER XXXII. CONCLUSION.

Mr. Bernard Langdon had no sooner taken his degree, than, in accordance with the advice of one of his teachers whom he frequently consulted, he took an office in the heart of the city where he had studied. He had thought of beginning in a suburb or some remoter district of the city proper.

"No," said his teacher,—to wit, myself,—“don't do any such thing. You are made for the best kind of practice; don't hamper yourself with an outside constituency, such as belongs to a practitioner of the second class. When a fellow like you chooses his beat, he must look ahead a little. Take care of all the poor that apply to you, but leave the half-pay classes to a different style of doctor,—the people who spend one half their time in taking care of their patients, and the other half in squeezing out their money. Go for the swell-fronts and south-exposure houses; the folks inside are just as good as other people, and the pleasantest, on the whole, to take care of. They must have somebody, and they like a gentleman best. Don't throw yourself away. You have a good presence and pleasing manners. You wear white linen by inherited instinct. You can pronounce the word view. You have all the elements of success; go and take it. Be polite and generous, but don't undervalue yourself. You will be useful, at any rate; you may just as well be happy, while you are about it. The highest social class furnishes incomparably the best patients, taking them by and large. Besides, when they won't get well and bore you to death, you can send 'em off to travel. Mind me now, and take the tops of your sparrowgrass. Somebody must have 'em,—why shouldn't you? If you don't take your chance, you'll get the butt-ends as a matter of course.”

Mr. Bernard talked like a young man full of noble sentiments. He wanted to be useful to his fellow-beings. Their social differences were nothing to him. He would never court the rich,—he would go where he was called. He would rather save the life of a poor mother of a family than that of half a dozen old gouty

millionaires whose heirs had been yawning and stretching these ten years to get rid of them.

"Generous emotions!" I exclaimed. "Cherish 'em; cling to 'em till you are fifty, till you are seventy, till you are ninety! But do as I tell you,—strike for the best circle of practice, and you 'll be sure to get it!"

Mr. Langdon did as I told him,—took a genteel office, furnished it neatly, dressed with a certain elegance, soon made a pleasant circle of acquaintances, and began to work his way into the right kind of business. I missed him, however, for some days, not long after he had opened his office. On his return, he told me he had been up at Rockland, by special invitation, to attend the wedding of Mr. Dudley Venner and Miss Helen Darley. He gave me a full account of the ceremony, which I regret that I cannot relate in full. "Helen looked like an angel,"—that, I am sure, was one of his expressions. As for her dress, I should like to give the details, but am afraid of committing blunders, as men always do, when they undertake to describe such matters. White dress, anyhow,—that I am sure of,—with orange-flowers, and the most wonderful lace veil that was ever seen or heard of. The Reverend Doctor Honeywood performed the ceremony, of course. The good people seemed to have forgotten they ever had had any other minister, except Deacon Shearer and his set of malcontents, who were doing a dull business in the meeting-house lately occupied by the Reverend Mr. Fairweather.

"Who was at the wedding?"

"Everybody, pretty much. They wanted to keep it quiet, but it was of no use. Married at church. Front pews, old Dr. Kittredge and all the mansionhouse people and distinguished strangers,—Colonel Sprowle and family, including Matilda's young gentleman, a graduate of one of the fresh-water colleges,—Mrs. Pickins (late Widow Rowens) and husband,—Deacon Soper and numerous parishioners. A little nearer the door, Abel, the Doctor's man, and Elbridge, who drove them to church in the family-coach. Father Fairweather, as they all call him now, came in late with Father McShane."

"And Silas Peckham?"

"Oh, Silas had left The School and Rockland. Cut up altogether too badly in the examination instituted by the Trustees. Had removed over to Tamarack, and thought of renting a large house and 'farming' the town-poor."

Some time after this, as I was walking with a young friend along by the swell-fronts and south-exposures, whom should I see but Mr. Bernard Langdon, looking remarkably happy, and keeping step by the side of a very handsome and singularly well-dressed young lady? He bowed and lifted his hat as we passed.

"Who is that pretty girl my young doctor has got there?" I said to my companion.

"Who is that?" he answered. "You don't know? Why, that is neither more nor less than Miss Letitia Forrester, daughter of—of—why, the great banking firm, you know, Bilyuns Brothers & Forrester. Got acquainted with her in the country, they say. There 's a story that they're engaged, or like to be, if the firm consents."

"Oh" I said.

I did not like the look of it in the least. Too young,—too young. Has not taken any position yet. No right to ask for the hand of Bilyuns Brothers & Co.'s daughter. Besides, it will spoil him for practice, if he marries a rich girl before he has formed habits of work.

I looked in at his office the other day. A box of white kids was lying open on the table. A three-cornered note, directed in a very delicate lady's-hand, was distinguishable among a heap of papers. I was just going to call him to account for his proceedings, when he pushed the three-cornered note aside and took up a letter with a great corporation-seal upon it. He had received the offer of a professor's chair in an ancient and distinguished institution.

"Pretty well for three-and-twenty, my boy," I said. "I suppose you'll think you must be married one of these days, if you accept this office."

Mr. Langdon blushed.—There had been stories about him, he knew. His name had been mentioned in connection with that of a very charming young lady. The current reports were not true. He had met this young lady, and been much pleased with her, in the country, at the house of her grandfather, the Reverend Doctor Honeywood,—you remember Miss Letitia Forrester, whom I have mentioned repeatedly? On coming to town, he found his country-acquaintance in a social position which seemed to discourage his continued intimacy. He had discovered, however; that he was a not unwelcome visitor, and had kept up friendly relations with her. But there was no truth in the current reports,—none at all.'

Some months had passed, after this visit, when I happened one evening to stroll into a box in one of the principal theatres of the city. A small party sat on the seats before me: a middle-aged gentleman and his lady, in front, and directly behind them my young doctor and the same very handsome young lady I had seen him walking with on the sidewalk before the swell-fronts and south-exposures. As Professor Langdon seemed to be very much taken up with his companion, and both of them looked as if they were enjoying themselves, I determined not to make my presence known to my young friend, and to withdraw quietly after feasting my eyes with the sight of them for a few minutes.

"It looks as if something might come of it," I said to myself. At that moment the young lady lifted her arm accidentally in such a way that the light fell upon the clasp of a chain which encircled her wrist. My eyes filled with tears as I read upon the clasp, in sharp-cut Italic letters, E. V. They were tears at once of sad remembrance and of joyous anticipation; for the ornament on which I looked was the double pledge of a dead sorrow and a living affection. It was the golden bracelet,—the parting-gift of Elsie Venner, the golden bracelet,—the parting-gift of Elsie Venner.

CHAPTER XXXVI. CONCLUSION.

TO MY READERS.

"A new Preface" is, I find, promised with my story. If there are any among my readers who loved Aesop's Fables chiefly on account of the Moral appended, they will perhaps be pleased to turn backward and learn what I have to say here.

This tale forms a natural sequence to a former one, which some may remember, entitled "Elsie Venner." Like that,—it is intended for two classes of readers, of which the smaller one includes the readers of the "Morals" in Aesop and of this Preface.

The first of the two stories based itself upon an experiment which some thought cruel, even on paper. It imagined an alien element introduced into the blood of a human being before that being saw the light. It showed a human nature developing itself in conflict with the ophidian characteristics and instincts impressed upon it during the pre-natal period. Whether anything like this ever happened, or was possible, mattered little: it enabled me, at any rate, to suggest the limitations of human responsibility in a simple and effective way.

The story which follows comes more nearly within the range of common experience. The successive development of inherited bodily aspects and habitudes is well known to all who have lived long enough to see families grow up under their own eyes. The same thing happens, but less obviously to common observation, in the mental and moral nature. There is something frightful in the way in which not only characteristic qualities, but particular manifestations of them, are repeated from generation to generation. Jonathan Edwards the younger tells the story of a brutal wretch in New Haven who was abusing his father, when the old man cried out, "Don't drag me any further, for I did n't drag my father beyond this tree." [The original version of this often-repeated story may be found in Aristotle's Ethics, Book 7th, Chapter 7th.] I have attempted to show the successive evolution of some inherited qualities in the character of Myrtle Hazard, not so obtrusively as to disturb the narrative, but plainly enough to be kept in sight by the small class of preface-readers.

If I called these two stories Studies of the Reflex Function in its higher sphere, I should frighten away all but the professors and the learned ladies. If I should proclaim that they were protests against the scholastic tendency to shift the total responsibility of all human action from the Infinite to the finite, I might alarm the jealousy of the cabinet-keepers of our doctrinal museums. By saying nothing about it, the large majority of those whom my book reaches, not being preface-readers, will never suspect anything to harm them beyond the simple facts of the narrative.

Should any professional alarmist choose to confound the doctrine of limited responsibility with that which denies the existence of any self-determining power, he may be presumed to belong to the class of intellectual half-breeds, of which we have many representatives in our new country, wearing the garb of civilization, and even the gown of scholarship. If we cannot follow the automatic machinery of nature into the mental and moral world, where it plays its part as much as in the bodily functions, without being accused of laying "all that we are evil in to a divine thrusting on," we had better return at once to our old demonology, and reinstate the Leader of the Lower House in his time-honored prerogatives.

As fiction sometimes seems stranger than truth, a few words may be needed here to make some of my characters and statements appear probable. The long-pending question involving a property which had become in the mean time of immense value finds its parallel in the great De Haro land-case, decided in the Supreme Court while this story was in progress (May 14th, 1867). The experiment of breaking the child's will by imprisonment and fasting is borrowed from a famous incident, happening long before the case lately

before one of the courts of a neighboring Commonwealth, where a little girl was beaten to death because she would not say her prayers. The mental state involving utter confusion of different generations in a person yet capable of forming a correct judgment on other matters, is almost a direct transcript from nature. I should not have ventured to repeat the questions of the daughters of the millionaires to Myrtle Hazard about her family conditions, and their comments, had not a lady of fortune and position mentioned to me a similar circumstance in the school history of one of her own children. Perhaps I should have hesitated in reproducing Myrtle Hazard's "Vision," but for a singular experience of his own related to me by the late Mr. Forceythe Willson.

Gifted Hopkins (under various aliases) has been a frequent correspondent of mine. I have also received a good many communications, signed with various names, which must have been from near female relatives of that young gentleman. I once sent a kind of encyclical letter to the whole family connection; but as the delusion under which they labor is still common, and often leads to the wasting of time, the contempt of honest study or humble labor, and the misapplication of intelligence not so far below mediocrity as to be incapable of affording a respectable return when employed in the proper direction, I thought this picture from life might also be of service. When I say that no genuine young poet will apply it to himself, I think I have so far removed the sting that few or none will complain of being wounded.

It is lamentable to be forced to add that the Reverend Joseph Bellamy Stoker is only a softened copy of too many originals to whom, as a regular attendant upon divine worship from my childhood to the present time, I have respectfully listened, while they dealt with me and mine and the bulk of their fellow-creatures after the manner of their sect. If, in the interval between his first showing himself in my story and its publication in a separate volume, anything had occurred to make me question the justice or expediency of drawing and exhibiting such a portrait, I should have reconsidered it, with the view of retouching its sharper features. But its essential truthfulness has been illustrated every month or two, since my story has been in the course of publication, by a fresh example from real life, stamped in darker colors than any with which I should have thought of staining my pages.

There are a great many good clergymen to one bad one, but a writer finds it hard to keep to the true proportion of good and bad persons in telling a story. The three or four good ministers I have introduced in this narrative must stand for many whom I have known and loved, and some of whom I count to-day among my most valued friends. I hope the best and wisest of them will like this story and approve it. If they cannot all do this, I know they will recognize it as having been written with a right and honest purpose.

BOSTON, 1867.

PREFACE TO THE NEW EDITION.

It is a quarter of a century since the foregoing Preface was written, and that is long enough to allow a story to be forgotten by the public, and very possibly by the writer of it also. I will not pretend that I have forgotten all about "The Guardian Angel," but it is long since I have read it, and many of its characters and incidents are far from being distinct in my memory. There are, however, a few points which hold their place among my recollections. The revolt of Myrtle Hazard from the tyranny of that dogmatic dynasty now breaking up in all directions has found new illustrations since this tale was written. I need only refer to two instances of many. The first is from real life. Mr. Robert C. Adams's work, "Travels in Faith from Tradition to Reason," is the outcome of the teachings of one of the most intransigent of our New England Calvinists, the late Reverend Nehemiah Adams. For an example in fiction,—fiction which bears all the marks of being copied from real life,—I will refer to "The Story of an African Farm." The boy's honest, but terrible outburst, "I hate God," was, I doubt not, more acceptable in the view of his Maker than the lying praise of many a hypocrite who, having enthroned a demon as Lord of the Universe, thinks to conciliate his favor by using the phrases which the slaves of Eastern despots are in the habit of addressing to their masters. I have had many private letters showing the same revolt of reasoning natures against doctrines which shock the more highly civilized part of mankind in this nineteenth century and are leading to those dissensions which have long shown as cracks, and are fast becoming lines of cleavage in some of the largest communions of Protestantism.

The principle of heredity has been largely studied since this story was written. This tale, like "Elsie Venner," depends for its deeper significance on the ante-natal history of its subject. But the story was meant to be readable for those who did not care for its underlying philosophy. If it fails to interest the reader who ventures upon it, it may find a place on an unfrequented bookshelf in common with other "medicated novels."

Perhaps I have been too hard with Gifted Hopkins and the tribe of rhymesters to which he belongs. I ought not to forget that I too introduced myself to the reading world in a thin volume of verses; many of which had better not have been written, and would not be reprinted now, but for the fact that they have established a right to a place among my poems in virtue of long occupancy. Besides, although the writing of verses is often a mark of mental weakness, I cannot forget that Joseph Story and George Bancroft each published his little book, of rhymes, and that John Quincy Adams has left many poems on record, the writing of which did not interfere with the vast and important labors of his illustrious career.

BEVERLY FARMS, MASS., August 7, 1891. O. W. H.

THE GUARDIAN ANGEL

CHAPTER I. AN ADVERTISEMENT.

On Saturday, the 18th day of June, 1859, the "State Banner and Delphian Oracle," published weekly at Oxbow Village, one of the principal centres in a thriving river-town of New England, contained an advertisement which involved the story of a young life, and stained the emotions of a small community. Such faces of dismay, such shaking of heads, such gatherings at corners, such halts of complaining, rheumatic wagons, and dried-up, chirruping chaises, for colloquy of their still-faced tenants, had not been known since the rainy November Friday, when old Malachi Withers was found hanging in his garret up there at the lonely house behind the poplars.

The number of the "Banner and Oracle" which contained this advertisement was a fair specimen enough of the kind of newspaper to which it belonged. Some extracts from a stray copy of the issue of the date referred to will show the reader what kind of entertainment the paper was accustomed to furnish its patrons, and also serve some incidental purposes of the writer in bringing into notice a few personages who are to figure in this narrative.

The copy in question was addressed to one of its regular subscribers,—“B. Gridley, Esq.” The sarcastic annotations at various points, enclosed in brackets and italicised that they may be distinguished from any other comments, were taken from the pencilled remarks of that gentleman, intended for the improvement of a member of the family in which he resided, and are by no means to be attributed to the harmless pen which reproduces them.

Byles Gridley, A. M., as he would have been styled by persons acquainted with scholarly dignities, was a bachelor, who had been a schoolmaster, a college tutor, and afterwards for many years professor,—a man of learning, of habits, of whims and crotchets, such as are hardly to be found, except in old, unmarried students,—the double flowers of college culture, their stamina all turned to petals, their stock in the life of the race all funded in the individual. Being a man of letters, Byles Gridley naturally rather undervalued the literary acquirements of the good people of the rural district where he resided, and, having known much of college and something of city life, was apt to smile at the importance they attached to their little local concerns. He was, of course, quite as much an object of rough satire to the natural observers and humorists, who are never wanting in a New England village,—perhaps not in any village where a score or two of families are brought together,—enough of them, at any rate, to furnish the ordinary characters of a real-life stock company.

The old Master of Arts was a permanent boarder in the house of a very worthy woman, relict of the late Ammi Hopkins, by courtesy Esquire, whose handsome monument—in a finished and carefully colored lithograph, representing a finely shaped urn under a very nicely groomed willow—hung in her small, well-darkened, and, as it were, monumental parlor. Her household consisted of herself, her son, nineteen years of age, of whom more hereafter, and of two small children, twins, left upon her doorstep when little more than mere marsupial possibilities, taken in for the night, kept for a week, and always thereafter cherished by the good soul as her own; also of Miss Susan Posey, aged eighteen, at school at the "Academy" in another part of the same town, a distant relative, boarding with her.

What the old scholar took the village paper for it would be hard to guess, unless for a reason like that which carried him very regularly to hear the preaching of the Rev. Joseph Bellamy Stoker, colleague of the old minister of the village parish; namely, because he did not believe a word of his favorite doctrines, and liked to go there so as to growl to himself through the sermon, and go home scolding all the way about it.

The leading article of the "Banner and Oracle" for June 18th must have been of superior excellence, for, as Mr. Gridley remarked, several of the "metropolitan" journals of the date of June 15th and thereabout had evidently conversed with the writer and borrowed some of his ideas before he gave them to the public. The Foreign News by the Europa at Halifax, 15th, was spread out in the amplest dimensions the type of the office could supply. More battles! The Allies victorious! The King and General Cialdini beat the Austrians at Palestro! 400 Austrians drowned in a canal! Anti-French feeling in Germany! Allgermine Zeiturg talks of conquest of Allsatia and Loraine and the occupation of Paris! [Vicious digs with a pencil through the above proper names.] Race for the Derby won by Sir Joseph Hawley's Musjid! [That's what England cares for! Hooray for the Darby! Italy be deeded!] Visit of Prince Alfred to the Holy Land. Letter from our own Correspondent. [Oh! Oh! A West Minkville?] Cotton advanced. Breadstuffs declining.—Deacon Rumrill's barn burned down on Saturday night. A pig missing; supposed to have "fallen a prey to the devouring element." [Got roasted.] A yellow mineral had been discovered on the Doolittle farm, which, by the report of those who had seen it, bore a strong resemblance to California gold ore. Much excitement in the neighborhood in consequence [Idiots! Iron pyrites!] A hen at Four Corners had just laid an egg measuring 7 by 8 inches. Fetch on your biddies! [Editorial wit!] A man had shot an eagle measuring six feet and a half from tip to tip of his wings.—Crops suffering for want of rain [Always just so. "Dry times, Father Noah!"] The editors had received a liberal portion of cake from the happy couple whose matrimonial union was recorded in the column dedicated to Hymen. Also a superior article of [article of! bah!] steel pen from the enterprising merchant [shopkeeper] whose advertisement was to be found on the third page of this paper.—An interesting Surprise Party [cheap theatricals] had transpired [bah!] on Thursday evening last at the house of the Rev. Mr. Stoker. The parishioners had donated [donated! GIVE is a good word enough for the Lord's Prayer. DONATE our daily bread!] a bag of meal, a bushel of beans, a keg of pickles, and a quintal of salt-fish. The worthy pastor was much affected, etc., etc. [Of course. Call'em. SENSATION parties and done with it!] The Rev. Dr. Pemberton and the venerable Dr. Hurlbut honored the occasion with their presence.—We learn that the Rev.

Ambrose Eveleth, rector of St. Bartholomew's Chapel, has returned from his journey, and will officiate tomorrow.

Then came strings of advertisements, with a luxuriant vegetation of capitals and notes of admiration. More of those PRIME GOODS! Full Assortments of every Article in our line! [Except the one thing you want!] Auction Sale. Old furniture, feather-beds, bed-spreads [spreads! ugh!], setts [setts!] crockery-ware, odd vols., ullage bbls. of this and that, with other household goods, etc., etc., etc.—the etceteras meaning all sorts of insane movables, such as come out of their bedlam-holes when an antiquated domestic establishment disintegrates itself at a country “vadoo.”—Several announcements of “Feed,” whatever that may be,—not restaurant dinners, anyhow,—also of “Shorts,”—terms mysterious to city ears as jute and cudbear and gunnybags to such as drive oxen in the remote interior districts.—Then the marriage column above alluded to, by the fortunate recipients of the cake. Right opposite, as if for matrimonial ground-bait, a Notice that Whereas my wife, Lucretia Babb, has left my bed and board, I will not be responsible, etc., etc., from this date.—Jacob Penhallow (of the late firm Wibird and Penhallow) had taken Mr. William Murray Bradshaw into partnership, and the business of the office would be carried on as usual under the title Penhallow and Bradshaw, Attorneys at Law. Then came the standing professional card of Dr. Lemuel Hurlbut and Dr. Fordyce Hurlbut, the medical patriarch of the town and his son. Following this, hideous quack advertisements, some of them with the certificates of Honorables, Esquires, and Clergymen.—Then a cow, strayed or stolen from the subscriber.—Then the advertisement referred to in our first paragraph:

MYRTLE HAZARD has been missing from her home in this place since Thursday morning, June 16th. She is fifteen years old, tall and womanly for her age, has dark hair and eyes, fresh complexion, regular features, pleasant smile and voice, but shy with strangers. Her common dress was a black and white gingham check, straw hat, trimmed with green ribbon. It is feared she may have come to harm in some way, or be wandering at large in a state of temporary mental alienation. Any information relating to the missing child will be gratefully received and properly rewarded by her afflicted aunt,

MISS SILENCE WITHERS, Residing at the Withers Homestead, otherwise known as “The Poplars,” in this village.

CHAPTER II. GREAT EXCITEMENT

The publication of the advertisement in the paper brought the village fever of the last two days to its height. Myrtle Hazard's disappearance had been pretty well talked round through the immediate neighborhood, but now that forty-eight hours of search and inquiry had not found her, and the alarm was so great that the young girl's friends were willing to advertise her in a public journal, it was clear that the gravest apprehensions were felt and justified. The paper carried the tidings to many who had not heard it. Some of the farmers who had been busy all the week with their fields came into the village in their wagons on Saturday, and there first learned the news, and saw the paper, and the placards which were posted up, and listened, open-mouthed, to the whole story.

Saturday was therefore a day of much agitation in Oxbow Village, and some stir in the neighboring settlements. Of course there was a great variety of comment, its character depending very much on the sense, knowledge, and disposition of the citizens, gossips, and young people who talked over the painful and mysterious occurrence.

The Withers Homestead was naturally the chief centre of interest. Nurse Byloe, an ancient and voluminous woman, who had known the girl when she was a little bright-eyed child, handed over “the baby” she was holding to another attendant, and got on her things to go straight up to The Poplars. She had been holding “the baby” these forty years and more, but somehow it never got to be more than a month or six weeks old. She reached The Poplars after much toil and travail. Mistress Fagan, Irish, house-servant, opened the door, at which Nurse Byloe knocked softly, as she was in the habit of doing at the doors of those who sent for her.

“Have you heerd anything yet, Kitty Fagan?” asked Nurse Byloe.

“Niver a blissed word,” said she. “Miss Withers is upstairs with Miss Bathsheby, a cryin' and a lamentin'. Miss Badlam's in the parlor. The men has been draggin' the pond. They have n't found not one thing, but only jest two, and that was the old coffeepot and the gray cat,—it's them nigger boys hanged her with a string they tied round her neck and then drowned her.” [P. Fagan, Jr., Aet. 14, had a snarl of similar string in his pocket.]

Mistress Fagan opened the door of the best parlor. A woman was sitting there alone, rocking back and forward, and fanning herself with the blackest of black fans.

“Nuss Byloe, is that you? Well, to be sure, I'm glad to see you, though we 're all in trouble. Set right down, Nuss, do. Oh, it's dreadful times!”

A handkerchief which was in readiness for any emotional overflow was here called on for its function.

Nurse Byloe let herself drop into a flaccid squab chair with one of those soft cushions, filled with slippery feathers, which feel so fearfully like a very young infant, or a nest of little kittens, as they flatten under the subsiding person.

The woman in the rocking-chair was Miss Cynthia Badlam, second-cousin of Miss Silence Withers, with whom she had been living as a companion at intervals for some years. She appeared to be thirty-five years old, more or less, and looked not badly for that stage of youth, though of course she might have been handsomer at twenty, as is often the case with women. She wore a not unbecoming cap; frequent headaches had thinned her locks somewhat of late years. Features a little too sharp, a keen, gray eye, a quick and restless glance, which rather avoided being met, gave the impression that she was a wide-awake, cautious, suspicious, and, very possibly, crafty person.

"I could n't help comin'," said Nurse Byloe, "we do so love our babies,—how can we help it, Miss Badlam?"

The spinster colored up at the nurse's odd way of using the possessive pronoun, and dropped her eyes, as was natural on hearing such a speech.

"I never tended children as you have, Nuss," she said. "But I 've known Myrtle Hazard ever since she was three years old, and to think she should have come to such an end,—'The heart is deceitful above all things and desperately wicked,'—and she wept.

"Why, Cynthy Badlam, what do y' mean?" said Nurse Byloe. "Y' don't think anything dreadful has come o' that child's wild nater, do ye?"

"Child!" said Cynthia Badlam,—“child enough to wear this very gown I have got on and not find it too big for her neither.” [It would have pinched Myrtle here and there pretty shrewdly.]

The two women looked each other in the eyes with subtle interchange of intelligence, such as belongs to their sex in virtue of its specialty. Talk without words is half their conversation, just as it is all the conversation of the lower animals. Only the dull senses of men are dead to it as to the music of the spheres.

Their minds travelled along, as if they had been yoked together, through whole fields of suggestive speculation, until the dumb growths of thought ripened in both their souls into articulate speech, consentingly, as the movement comes after the long stillness of a Quaker meeting.

Their lips opened at the same moment. "You don't mean"—began Nurse Byloe, but stopped as she heard Miss Badlam also speaking.

"They need n't drag the pond," she said. "They need n't go beating the woods as if they were hunting a patridge,—though for that matter Myrtle Hazard was always more like a patridge than she was like a pullet. Nothing ever took hold of that girl,—not catechising, nor advising, nor punishing. It's that dreadful will of hers never was broke. I've always been afraid that she would turn out a child of wrath. Did y' ever watch her at meetin' playing with posies and looking round all the time of the long prayer? That's what I've seen her do many and many a time. I'm afraid—Oh dear! Miss Byloe, I'm afraid to say—what I'm afraid of. Men are so wicked, and young girls are full of deceit and so ready to listen to all sorts of artful creturs that take advantage of their ignorance and tender years." She wept once more, this time with sobs that seemed irrepressible.

"Dear suz!" said the nurse, "I won't believe no sech thing as wickedness about Myrtle Hazard. You mean she's gone an' run off with some good-for-nothin' man or other? If that ain't what y' mean, what do y' mean? It can't be so, Miss Badlam: she's one o' my babies. At any rate, I handled her when she fust come to this village,—and none o' my babies never did sech a thing. Fifteen year old, and be bringin' a whole family into disgrace! If she was thirty year old, or five-an'-thirty or more, and never'd had a chance to be married, and if one o' them artful creturs you was talkin' of got hold of her, then, to be sure,—why, dear me!—law! I never thought, Miss Badlam!—but then of course you could have had your pickin' and choosin' in the time of it; and I don't mean to say it's too late now if you felt called that way, for you're better lookin' now than some that's younger, and there's no accountin' for tastes."

A sort of hysteric twitching that went through the frame of Cynthia Badlam dimly suggested to the old nurse that she was not making her slightly indiscreet personality much better by her explanations. She stopped short, and surveyed the not uncomely person of the maiden lady sitting before her with her handkerchief pressed to her eyes, and one hand clenching the arm of the reeking-chair, as if some spasm had clamped it there. The nurse looked at her with a certain growing interest she had never felt before. It was the first time for some years that she had had such a chance, partly because Miss Cynthia had often been away for long periods,—partly because she herself had been busy professionally. There was no occasion for her services, of course, in the family at The Poplars; and she was always following round from place to place after that everlasting migratory six-weeks or less old baby.

There was not a more knowing pair of eyes, in their way, in a circle of fifty miles, than those kindly tranquil orbs that Nurse Byloe fixed on Cynthia Badlam. The silver threads in the side fold of hair, the delicate lines at the corner of the eye, the slight drawing down at the angle of the mouth,—almost imperceptible, but the nurse dwelt upon it,—a certain moulding of the features as of an artist's clay model worked by delicate touches with the fingers, showing that time or pain or grief had had a hand in shaping them, the contours, the adjustment of every fold of the dress, the attitude, the very way of breathing, were all passed through the searching inspection of the ancient expert, trained to know all the changes wrought by time and circumstance. It took not so long as it takes to describe it, but it was an analysis of imponderables, equal to any of Bunsen's with the spectroscope.

Miss Badlam removed her handkerchief and looked in a furtive, questioning way, in her turn, upon the nurse.

"It's dreadful close here,—I'm 'most smothered," Nurse Byloe said; and, putting her hand to her throat, unclasped the catch of the necklace of gold beads she had worn since she was a baby,—a bead having been added from time to time as she thickened. It lay in a deep groove of her large neck, and had not troubled her in breathing before, since the day when her husband was run over by an ox-team.

At this moment Miss Silence Withers entered, followed by Bathsheba Stoker, daughter of Rev. Joseph Bellamy Stoker.

She was the friend of Myrtle, and had come to comfort Miss Silence, and consult with her as to what further search they should institute. The two, Myrtle's aunt and her friend, were as unlike as they could well be. Silence Withers was something more than forty years old, a shadowy, pinched, sallow, dispirited, bloodless woman, with the habitual look of the people in the funeral carriage which follows next to the hearse, and the tone in speaking that may be noticed in a household where one of its members is lying white and still in a cool, darkened chamber overhead. Bathsheba Stoker was not called handsome; but she had her mother's youthful smile, which was so fresh and full of sweetness that she seemed like a beauty while she was speaking or listening; and she could never be plain so long as any expression gave life to her features. In perfect repose, her face, a little prematurely touched by sad experiences,—for she was but seventeen years

old,—had the character and decision stamped in its outlines which any young man who wanted a companion to warn, to comfort, and command him, might have depended on as warranting the courage, the sympathy, and the sense demanded for such a responsibility. She had been trying her powers of consolation on Miss Silence. It was a sudden freak of Myrtle's. She had gone off on some foolish but innocent excursion. Besides, she was a girl that would take care of herself; for she was afraid of nothing, and nimbler than any boy of her age, and almost as strong as any. As for thinking any bad thoughts about her, that was a shame; she cared for none of the young fellows that were round her. Cyprian Eveleth was the one she thought most of; but Cyprian was as true as his sister Olive, and who else was there?

To all this Miss Silence answered only by sighing and moaning, For two whole days she had been kept in constant fear and worry, afraid every minute of some tragical message, perplexed by the conflicting advice of all manner of officious friends, sleepless of course through the two nights, and now utterly broken down and collapsed.

Bathsheba had said all she could in the way of consolation, and hastened back to her mother's bedside, which she hardly left, except for the briefest of visits.

"It's a great trial, Miss Withers, that's laid on you," said Nurse Byloe.

"If I only knew that she was dead, and had died in the Lord," Miss Silence answered,—“if I only knew that but if she is living in sin, or dead in wrong—doing, what is to become of me?—Oh, what is to become of me when 'He maketh inquisition far blood'?”

"Cousin Silence," said Miss Cynthia, "it is n't your fault, if that young girl has taken to evil ways. If going to meeting three times every Sabbath day, and knowing the catechism by heart, and reading of good books, and the best of daily advice, and all needful discipline, could have corrected her sinful nature, she would never have run away from a home where she enjoyed all these privileges. It's that Indian blood, Cousin Silence. It's a great mercy you and I have n't got any of it in our veins! What can you expect of children that come from heathens and savages? You can't lay it to yourself, Cousin Silence, if Myrtle Hazard goes wrong"—

"The Lord will lay it to me,—the Lord will lay it to me," she moaned. "Did n't he say to Cain, 'Where is Abel, thy brother?'"

Nurse Byloe was getting very red in the face. She had had about enough of this talk between the two women. "I hope the Lard 'll take care of Myrtle Hazard fust, if she's in trouble, 'n' wants help," she said; "'n' then look out for them that comes next. Y' 're too suspicious, Miss Badlam; y' 're too easy to believe stories. Myrtle Hazard was as pretty a child and as good a child as ever I see, if you did n't rile her; 'n' d' d y' ever see one o' them hearty lively children, that had n't a sperrit of its own? For my part, I'd rather handle one of 'em than a dozen o' them little waxy, weak-eyed, slim-necked creturs that always do what they tell 'em to, and die afore they're a dozen year old; and never was the time when I've seen Myrtle Hazard, sence she was my baby, but what it's always been, 'Good mornin', Miss Byloe,' and 'How do you do, Miss Byloe? I'm so glad to see you.' The handsomest young woman, too, as all the old folks will agree in tellin' you, s'ence the time o' Judith Pride that was,—the Pride of the County they used to call her, for her beauty. Her great-grandma, y' know, Miss Cynthy, married old King David Withers. What I want to know is, whether anything has been heerd, and jest what's been done about findin' the poor thing. How d' ye know she has n't fell into the river? Have they fired cannon? They say that busts the gall of drowned folks, and makes the corpse rise. Have they looked in the woods everywhere? Don't believe no wrong of nobody, not till y' must,—least of all of them that come o' the same folks, partly, and has lived with yo all their days. I tell y', Myrtle Hazard's jest as innocent of all what y' 've been thinkin' about,—bless the poor child; she's got a soul that's as clean and sweet-well, as a pond-lily when it fust opens of a mornin', without a speck on it no more than on the fust pond-lily God Almighty ever made!"

That gave a turn to the two women's thoughts, and their handkerchiefs went up to their faces. Nurse Byloe turned her eyes quickly on Cynthia Badlam, and repeated her close inspection of every outline and every light and shadow in her figure. She did not announce any opinion as to the age or good looks or general aspect or special points of Miss Cynthia; but she made a sound which the books write humph! but which real folks make with closed lips, thus: m'!—a sort of half-suppressed labio-palato-nasal utterance, implying that there is a good deal which might be said, and all the vocal organs want to have a chance at it, if there is to be any talking.

Friends and neighbors were coming in and out; and the next person that came was the old minister, of whom, and of his colleague, the Rev. Joseph Bellamy Stoker, some account may here be introduced.

The Rev. Eliphalet Pemberton Father Pemberton as brother ministers called him, Priest Pemberton as he was commonly styled by the country people—would have seemed very old, if the medical patriarch of the village had not been so much older. A man over ninety is a great comfort to all his elderly neighbors: he is a picket-guard at the extreme outpost; and the young folks of sixty and seventy feel that the enemy must get by him before he can come near their camp. Dr. Hurlbut, at ninety-two, made Priest Pemberton seem comparatively little advanced; but the college catalogue showed that he must be seventy-five years old, if, as we may suppose, he was twenty at the time of his graduation.

He was a man of noble presence always, and now, in the grandeur of his flowing silver hair and with the gray shaggy brows overhanging his serene and solemn eyes, with the slow gravity of motion and the measured dignity of speech which gave him the air of an old pontiff, he was an imposing personage to look upon, and could be awful, if the occasion demanded it. His creed was of the sternest: he was looked up to as a bulwark against all the laxities which threatened New England theology. But it was a creed rather of the study and of the pulpit than of every-day application among his neighbors. He dealt too much in the lofty abstractions which had always such fascinations for the higher class of New England divines, to busy himself as much as he might have done with the spiritual condition of individuals. He had also a good deal in him of what he used to call the Old Man, which, as he confessed, he had never succeeded in putting off,—meaning thereby certain qualities belonging to humanity, as much as the natural gifts of the dumb creatures belong to them, and tending to make a man beloved by his weak and erring fellow-mortals.

In the olden time he would have lived and died king of his parish, monarch, by Divine right, as the noblest,

grandest, wisest of all that made up the little nation within hearing of his meeting-house bell. But Young Calvinism has less reverence and more love of novelty than its forefathers. It wants change, and it loves young blood. Polyandry is getting to be the normal condition of the Church; and about the time a man is becoming a little overripe for the livelier human sentiments, he may be pretty sure the women are looking round to find him a colleague. In this way it was that the Rev. Joseph Bellamy Stoker became the colleague of the Rev. Eliphalet Pemberton.

If one could have dived deep below all the Christian graces—the charity, the sweetness of disposition, the humility—of Father Pemberton, he would have found a small remnant of the “Old Man,” as the good clergyman would have called it, which was never in harmony with the Rev. Mr. Stoker. The younger divine felt his importance, and made his venerable colleague feel that he felt it. Father Pemberton had a fair chance at rainy Sundays and hot summer-afternoon services; but the junior pushed him aside without ceremony whenever he thought there was like to be a good show in the pews. As for those courtesies which the old need, to soften the sense of declining faculties and failing attractions, the younger pastor bestowed them in public, but was negligent of them, to say the least, when not on exhibition.

Good old Father Pemberton could not love this man, but he would not hate him, and he never complained to him or of him. It would have been of no use if he had: the women of the parish had taken up the Rev. Mr. Stoker; and when the women run after a minister or a doctor, what do the men signify?

Why the women ran after him, some thought it was not hard to guess. He was not ill-looking, according to the village standard, parted his hair smoothly, tied his white cravat carefully, was fluent, plausible, had a gift in prayer, was considered eloquent, was fond of listening to their spiritual experiences, and had a sickly wife. This is what Byles Gridley said; but he was apt to be caustic at times.

Father Pemberton visited his people but rarely. Like Jonathan Edwards, like David Osgood, he felt his call to be to study-work, and was impatient of the egotisms and spiritual megrims, in listening to which, especially from the younger females of his flock, his colleague had won the hearts of so many of his parishioners. His presence had a wonderful effect in restoring the despondent Miss Silence to her equanimity; for not all the hard divinity he had preached for half a century had spoiled his kindly nature; and not the gentle Melanchthon himself, ready to welcome death as a refuge from the rage and bitterness of theologians, was more in contrast with the disputants with whom he mingled, than the old minister, in the hour of trial, with the stern dogmatist in his study, forging thunderbolts to smite down sinners.

It was well that there were no tithing-men about on that next day, Sunday; for it shone no Sabbath day for the young men within half a dozen miles of the village. They were out on Bear Hill the whole day, beating up the bushes as if for game, scaring old crows out of their ragged nests, and in one dark glen startling a fierce-eyed, growling, bobtailed catamount, who sat spitting and looking all ready to spring at them, on the tall tree where he clung with his claws unsheathed, until a young fellow came up with a gun and shot him dead. They went through and through the swamp at Musquash Hollow; but found nothing better than a wicked old snapping-turtle, evil to behold, with his snaky head and alligator tail, but worse to meddle with, if his horny jaws were near enough to spring their man-trap on the curious experimenter. At Wood-End there were some Indians, ill-conditioned savages in a dirty tent, making baskets, the miracle of which was that they were so clean. They had seen a young lady answering the description, about a week ago. She had bought a basket. Asked them if they had a canoe they wanted to sell.—Eyes like hers (pointing to a squaw with a man's hat on).

At Pocasset the young men explored all the thick woods,—some who ought to have known better taking their guns, which made a talk, as one might well suppose it would. Hunting on a Sabbath day! They did n't mean to shoot Myrtle Hazard, did they? it was keenly asked. A good many said it was all nonsense, and a mere excuse to get away from meeting and have a sort of frolic on pretence that it was a work of necessity and mercy, one or both.

While they were scattering themselves about in this way, some in earnest, some rejoicing in the unwonted license, lifting off for a little while that enormous Sabbath-day pressure which weighs like forty atmospheres on every true-born Puritan, two young men had been since Friday in search of the lost girl, each following a clue of his own, and determined to find her if she was among the living.

Cyprian Eveleth made for the village of Mapleton, where his sister Olive was staying, trusting that, with her aid, he might get a clue to the mystery of Myrtle's disappearance.

William Murray Bradshaw struck for a railroad train going to the great seaport, at a station where it stops for wood and water.

In the mean time, a third young man, Gifted Hopkins by name, son of the good woman already mentioned, sat down, with tears in his eyes, and wrote those touching stanzas, “The Lost Myrtle,” which were printed in the next “Banner and Oracle,” and much admired by many who read them.

CHAPTER III. ANTECEDENTS.

The Withers Homestead was the oldest mansion in town. It was built on the east bank of the river, a little above the curve which gave the name to Oxbow Village. It stood on an elevation, its west gable close to the river's edge, an old orchard and a small pond at the foot of the slope behind it, woods at the east, open to the south, with a great row of Lombardy poplars standing guard in front of the house. The Hon. Selah Withers, Esq., a descendant of one of the first colonists, built it for his own residence, in the early part of the last century. Deeply impressed with his importance in the order of things, he had chosen to place it a little removed from the cluster of smaller dwellings about the Oxbow; and with some vague fancy in his mind of the castles that overlook the Rhine and the Danube, he had selected this eminence on which to place his substantial gambrel roofed dwelling-house. Long afterwards a bay-window, almost a little room of itself, had

been thrown out of the second story on the west side, so that it looked directly down on the river running beneath it. The chamber, thus half suspended in the air, had been for years the special apartment of Myrtle Hazard; and as the boys paddling about on the river would often catch glimpses, through the window, of the little girl dressed in the scarlet jacket she fancied in those days, one of them, Cyprian Eveleth had given it a name which became current among the young people, and indeed furnished to Gifted Hopkins the subject of one of his earliest poems, to wit, "The Fire-hang-bird's Nest."

If we would know anything about the persons now living at the Withers Homestead, or The Poplars, as it was more commonly called of late years, we must take a brief inventory of some of their vital antecedents. It is by no means certain that our individual personality is the single inhabitant of these our corporeal frames. Nay, there is recorded an experience of one of the living persons mentioned in this narrative,—to be given in full in its proper place, which, so far as it is received in evidence, tends to show that some, at least, who have long been dead, may enjoy a kind of secondary and imperfect, yet self-conscious life, in these bodily tenements which we are in the habit of considering exclusively our own. There are many circumstances, familiar to common observers, which favor this belief to a certain extent. Thus, at one moment we detect the look, at another the tone of voice, at another some characteristic movement of this or that ancestor, in our relations or others. There are times when our friends do not act like themselves, but apparently in obedience to some other law than that of their own proper nature. We all do things both awake and asleep which surprise us. Perhaps we have cotenants in this house we live in. No less than eight distinct personalities are said to have coexisted in a single female mentioned by an ancient physician of unimpeachable authority. In this light we may perhaps see the meaning of a sentence, from a work which will be repeatedly referred to in this narrative, viz.: "This body in which we journey across the isthmus between the two oceans is not a private carriage, but an omnibus."

The ancestry of the Withers family had counted a martyr to their faith before they were known as Puritans. The record was obscure in some points; but the portrait, marked "Ann Holyoake, burned by ye bloody Papists, ano 15.." (figures illegible), was still hanging against the panel over the fireplace in the west parlor at The Poplars. The following words were yet legible on the canvas: "Thou hast made a covenant O Lord with mee and my Children forever."

The story had come down, that Ann Holyoake spoke these words in a prayer she offered up at the stake, after the fagots were kindled. There had always been a secret feeling in the family, that none of her descendants could finally fall from grace, in virtue of this solemn "covenant."

There had been also a legend in the family, that the martyred woman's spirit exercised a kind of supervision over her descendants; that she either manifested herself to them, or in some way impressed them, from time to time; as in the case of the first pilgrim before he cast his lot with the emigrants,—of one Mrs. Winslow, a descendant in the third generation, when the Indians were about to attack the settlement where she lived,—and of another, just before he was killed at Quebec.

There was a remarkable resemblance between the features of Ann Holyoake, as shown in the portrait, and the miniature likeness of Myrtle's mother. Myrtle adopted the nearly obsolete superstition more readily on this account, and loved to cherish the fancy that the guardian spirit which had watched over her ancestors was often near her, and would be with her in her time of need.

The wife of Selah Withers was accused of sorcery in the evil days of that delusion. A careless expression in one of her letters, that "ye Parson was as lyke to bee in league with ye Divell as anie of em," had got abroad, and given great offence to godly people. There was no doubt that some odd "manifestations," as they would be called nowadays, had taken place in the household when she was a girl, and that she presented many of the conditions belonging to what are at the present day called mediums.

Major Gideon Withers, her son, was of the very common type of hearty, loud, portly men, who like to show themselves at militia trainings, and to hear themselves shout orders at musters, or declaim patriotic sentiments at town-meetings and in the General Court. He loved to wear a crimson sash and a military cap with a large red feather, in which the village folk used to say he looked as "hahnsome as a piny,"—meaning a favorite flower of his, which is better spelt peony, and to which it was not unnatural that his admirers should compare him.

If he had married a wife like himself, there might probably enough have sprung from the alliance a family of moon-faced children, who would have dropped into their places like posts into their holes, asking no questions of life, contented, like so many other honest folks, with the part of supernumeraries in the drama of being, their wardrobe of flesh and bones being furnished them gratis, and nothing to do but to walk across the stage wearing it. But Major Gideon Withers, for some reason or other, married a slender, sensitive, nervous, romantic woman, which accounted for the fact that his son David, "King David," as he was called in his time, had a very different set of tastes from his father, showing a turn for literature and sentiment in his youth, reading Young's "Night Thoughts," and Thomson's "Seasons," and sometimes in those early days writing verses himself to Celia or to Chloe, which sounded just as fine to him as Effie and Minnie sound to young people now, as Musidora, as Saccharissa, as Lesbia, as Helena, as Adah and Zillah, have all sounded to young people in their time,—ashes of roses as they are to us now, and as our endearing Scotch diminutives will be to others by and by.

King David Withers, who got his royal prefix partly because he was rich, and partly because he wrote hymns occasionally, when he grew too old to write love-poems, married the famous beauty before mentioned, Miss Judith Pride, and the race came up again in vigor. Their son, Jeremy, took for his first wife a delicate, melancholic girl, who matured into a sad-eyed woman, and bore him two children, Malachi and Silence.

When she died, he mourned for her bitterly almost a year, and then put on a ruffled shirt and went across the river to tell his grief to Miss Virginia Wild, there residing. This lady was said to have a few drops of genuine aboriginal blood in her veins; and it is certain that her cheek had a little of the russet tinge which a Seckel pear shows on its warmest cheek when it blushes.—Love shuts itself up in sympathy like a knife-blade in its handle, and opens as easily. All the rest followed in due order according to Nature's kindly programme.

Captain Charles Hazard, of the ship Orient Pearl, fell desperately in love with the daughter of this second

wife, married her, and carried her to India, where their first and only child was born, and received the name of Myrtle, as fitting her cradle in the tropics. So her earliest impressions,—it would not be exact to call them recollections,—besides the smiles of her father and mother, were of dusky faces, of loose white raiment, of waving fans, of breezes perfumed with the sweet exhalations of sandal-wood, of gorgeous flowers and glowing fruit, of shady verandas, of gliding palanquins, and all the languid luxury of the South. The pestilence which has its natural home in India, but has journeyed so far from its birth place in these later years, took her father and mother away, suddenly, in the very freshness of their early maturity. A relation of Myrtle's father, wife of another captain, was returning to America on a visit, and the child was sent back, under her care, while still a mere infant, to her relatives at the old homestead. During the long voyage, the strange mystery of the ocean was wrought into her consciousness so deeply, that it seemed to have become a part of her being. The waves rocked her, as if the sea had been her mother; and, looking over the vessel's side from the arms that held her with tender care, she used to watch the play of the waters, until the rhythm of their movement became a part of her, almost as much as her own pulse and breath.

The instincts and qualities belonging to the ancestral traits which predominated in the conflict of mingled lives lay in this child in embryo, waiting to come to maturity. It was as when several grafts, bearing fruit that ripens at different times, are growing upon the same stock. Her earlier impulses may have been derived directly from her father and mother, but all the ancestors who have been mentioned, and more or less obscurely many others, came uppermost in their time, before the absolute and total result of their several forces had found its equilibrium in the character by which she was to be known as an individual. These inherited impulses were therefore many, conflicting, some of them dangerous. The World, the Flesh, and the Devil held mortgages on her life before its deed was put in her hands; but sweet and gracious influences were also born with her; and the battle of life was to be fought between them, God helping her in her need, and her own free choice siding with one or the other. The formal statement of this succession of ripening characteristics need not be repeated, but the fact must be borne in mind.

This was the child who was delivered into the hands of Miss Silence Withers, her mother's half—sister, keeping house with her brother Malachi, a bachelor, already called Old Malachi, though hardly entitled by his years to such a venerable prefix. Both these persons had inherited the predominant traits of their sad-eyed mother. Malachi, the chief heir of the family property, was rich, but felt very poor. He owned this fine old estate of some hundreds of acres. He had moneys in the bank, shares in various companies, wood-lots in the town; and a large tract of Western land, the subject of a lawsuit which seemed as if it would never be settled, and kept him always uneasy.

Some said he hoarded gold somewhere about the old house, but nobody knew this for a certainty. In spite of his abundant means, he talked much of poverty, and kept the household on the narrowest footing of economy. One Irishwoman, with a little aid from her husband now and then, did all their work; and the only company they saw was Miss Cynthia Badlam, who, as a relative, claimed a home with them whenever she was so disposed.

The "littl Indian," as Malachi called her, was an awkward accession to the family. Silence Withers knew no more about children and their ways and wants than if she had been a female ostrich. Thus it was that she found it necessary to send for a woman well known in the place as the first friend whose acquaintance many of the little people of the town had made in this vale of tears.

Thirty years of practice had taught Nurse Byloe the art of handling the young of her species with the soft firmness which one may notice in cats with their kittens,—more grandly in a tawny lioness mouthing her cubs. Myrtle did not know she was held; she only felt she was lifted, and borne up, as a cherub may feel upon a white-woolly cloud, and smiled accordingly at the nurse, as if quite at home in her arms.

"As fine a child as ever breathed the breath of life. But where did them black eyes come from? Born in Injy, —that 's it, ain't it? No, it's her poor mother's eyes to be sure. Does n't it seem as if there was a kind of Injin look to 'em? She'll be a lively one to manage, if I know anything about childun. See her clinchin' them little fists!"

This was when Miss Silence came near her and brought her rather severe countenance close to the child for inspection of its features. The ungracious aspect of the woman and the defiant attitude of the child prefigured in one brief instant the history of many long coming years.

It was not a great while before the two parties in that wearing conflict of alien lives, which is often called education, began to measure their strength against each other. The child was bright, observing, of restless activity, inquisitively curious, very hard to frighten, and with a will which seemed made for mastery, not submission.

The stern spinster to whose care this vigorous life was committed was disposed to discharge her duty to the girl faithfully and conscientiously; but there were two points in her character and belief which had a most important bearing on the manner in which she carried out her laudable intentions. First, she was one of that class of human beings whose one single engrossing thought is their own welfare,—in the next world, it is true, but still their own personal welfare. The Roman Church recognizes this class, and provides every form of specific to meet their spiritual condition. But in so far as Protestantism has thrown out works as a means of insuring future safety, these unfortunates are as badly off as nervous patients who have no drops, pills, potions, no doctors' rules, to follow. Only tell a poor creature what to do, and he or she will do it, and be made easy, were it a pilgrimage of a thousand miles, with shoes full of split peas instead of boiled ones; but if once assured that doing does no good, the drooping Little-faiths are left at leisure to worry about their souls, as the other class of weaklings worry about their bodies. The effect on character does not seem to be very different in the two classes. Metaphysicians may discuss the nature of selfishness at their leisure; if to have all her thoughts centring on the one point of her own well-being by and by was selfishness, then Silence Withers was supremely selfish; and if we are offended with that form of egotism, it is no more than ten of the twelve Apostles were, as the reader may see by turning to the Gospel of St. Matthew, the twentieth chapter and the twenty-fourth verse.

The next practical difficulty was, that she attempted to carry out a theory which, whatever might be its

success in other cases, did not work kindly in the case of Myrtle Hazard, but, on the contrary, developed a mighty spirit of antagonism in her nature, which threatened to end in utter lawlessness. Miss Silence started from the approved doctrine, that all children are radically and utterly wrong in all their motives, feelings, thoughts, and deeds, so long as they remain subject to their natural instincts. It was by the eradication, and not the education, of these instincts, that the character of the human being she was moulding was to be determined. The first great preliminary process, so soon as the child manifested any evidence of intelligent and persistent self-determination, was to break her will.

There is no doubt that this was a legitimate conclusion from the teaching of Priest Pemberton, but it required a colder and harder nature than his own to carry out many of his dogmas to their practical application. He wrought in the pure mathematics, so to speak, of theology, and left the working rules to the good sense and good feeling of his people.

Miss Silence had been waiting for her opportunity to apply the great doctrine, and it came at last in a very trivial way.

"Myrtle does n't want brown bread. Myrtle won't have brown bread. Myrtle will have white bread."

"Myrtle is a wicked child. She will have what Aunt Silence says she shall have. She won't have anything but brown bread."

Thereupon the bright red lip protruded, the hot blood mounted to her face, the child untied her little "tire," got down from the table, took up her one forlorn, featureless doll, and went to bed without her supper. The next morning the worthy woman thought that hunger and reflection would have subdued the rebellious spirit. So there stood yesterday's untouched supper waiting for her breakfast. She would not taste it, and it became necessary to enforce that extreme penalty of the law which had been threatened, but never yet put in execution. Miss Silence, in obedience to what she felt to be a painful duty, without any passion, but filled with high, inexorable purpose, carried the child up to the garret, and, fastening her so that she could not wander about and hurt herself, left her to her repentant thoughts, awaiting the moment when a plaintive entreaty for liberty and food should announce that the evil nature had yielded and the obdurate will was broken.

The garret was an awful place. All the skeleton-like ribs of the roof showed in the dim light, naked overhead, and the only floor to be trusted consisted of the few boards which bridged the lath and plaster. A great, mysterious brick tower climbed up through it,—it was the chimney, but it looked like a horrible cell to put criminals into. The whole place was festooned with cobwebs,—not light films, such as the housewife's broom sweeps away before they have become a permanent residence, but vast gray draperies, loaded with dust, sprinkled with yellow powder from the beams where the worms were gnawing day and night, the home of old, hairy spiders who had, lived there since they were eggs and would leave it for unborn spiders who would grow old and huge like themselves in it, long after the human tenants had left the mansion for a narrower home. Here this little criminal was imprisoned, six, twelve,—tell it not to mothers,—eighteen dreadful hours, hungry until she was ready to gnaw her hands, a prey to all childish imaginations; and here at her stern guardian's last visit she sat, pallid, chilled, almost fainting, but sullen and unsubdued. The Irishwoman, poor stupid Kitty Fagan, who had no theory of human nature, saw her over the lean shoulders of the spinster, and, forgetting all differences of condition and questions of authority, rushed to her with a cry of maternal tenderness, and, with a tempest of passionate tears and kisses, bore her off to her own humble realm, where the little victorious martyr was fed from the best stores of the house, until there was as much danger from repletion as there had been from famine. How the experiment might have ended but for this empirical and most unphilosophical interference, there is no saying; but it settled the point that the rebellious nature was not to be subjugated in a brief conflict.

The untamed disposition manifested itself in greater enormities as she grew older. At the age of four years she was detected in making a cat's-cradle at meeting, during sermon-time, and, on being reprimanded for so doing, laughed out loud, so as to be heard by Father Pemberton, who thereupon bent his threatening, shaggy brows upon the child, and, to his shame be it spoken, had such a sudden uprising of weak, foolish, grandfatherly feelings, that a mist came over his eyes, and he left out his "ninthly" altogether, thereby spoiling the logical sequence of propositions which had kept his large forehead knotty for a week.

At eight years old she fell in love with the high-colored picture of Major Gideon Withers in the crimson sash and the red feather of his exalted military office. It was then for the first time that her aunt Silence remarked a shade of resemblance between the child and the portrait. She had always, up to this time, been dressed in sad colors, as was fitting, doubtless, for a forlorn orphan; but happening one day to see a small negro girl peacocking round in a flaming scarlet petticoat, she struck for bright colors in her own apparel, and carried her point at last. It was as if a ground-sparrow had changed her gray feathers for the burning plumage of some tropical wanderer; and it was natural enough that Cyprian Eveleth should have called her the fire-hang-bird, and her little chamber the fire-hang-bird's nest,—using the country boy's synonyme for the Baltimore oriole.

At ten years old she had one of those great experiences which give new meaning to the life of a child.

Her uncle Malachi had seemed to have a strong liking for her at one time, but of late years his delusions had gained upon him, and under their influence he seemed to regard her as an encumbrance and an extravagance. He was growing more and more solitary in his habits, more and more negligent of his appearance. He was up late at night, wandering about the house from the cellar to the garret, so that, his light being seen flitting from window to window, the story got about that the old house was haunted.

One dreary, rainy Friday in November, Myrtle was left alone in the house. Her uncle had been gone since the day before. The two women were both away at the village. At such times the child took a strange delight in exploring all the hiding-places of the old mansion. She had the mysterious dwelling-place of so many of the dead and the living all to herself. What a fearful kind of pleasure in its silence and loneliness! The old clock that Marmaduke Storr made in London more than a hundred years ago was clicking the steady pulse-beats of its second century. The featured moon on its dial had lifted one eye, as if to watch the child, as it had watched so many generations of children, while the swinging pendulum ticked them along into youth, maturity, gray hairs, deathbeds,—ticking through the prayer at the funeral, ticking without grief through all the still or noisy

woe of mourning,—ticking without joy when the smiles and gayety of comforted heirs had come back again. She looked at herself in the tall, bevelled mirror in the best chamber. She pulled aside the curtains of the stately bedstead whereon the heads of the house had slept until they died and were stretched out upon it, and the sheet shaped itself to them in vague, awful breadth of outline, like a block of monumental marble the sculptor leaves just hinted by the chisel.

She groped her way up to the dim garret, the scene of her memorable punishment. A rusty hook projected from one of the joists a little higher than a man's head. Something was hanging from it,—an old garment, was it? She went bravely up and touched—a cold hand. She did what most children of that age would do,—uttered a cry and ran downstairs with all her might. She rushed out of the door and called to the man Patrick, who was doing some work about the place. What could be done was done, but it was too late.

Uncle Malachi had made away with himself. That was plain on the face of thing. In due time the coroner's verdict settled it. It was not so strange as it seemed; but it made a great talk in the village and all the country round about. Everybody knew he had money enough, and yet he had hanged himself for fear of starving to death.

For all that, he was found to have left a will, dated some years before, leaving his property to his sister Silence, with the exception of a certain moderate legacy to be paid in money to Myrtle Hazard when she should arrive at the age of twenty years.

The household seemed more chilly than ever after this tragical event. Its depressing influence followed the child to school, where she learned the common branches of knowledge. It followed her to the Sabbath-day catechisings, where she repeated the answers about the federal headship of Adam, and her consequent personal responsibilities, and other technicalities which are hardly milk for babes, perhaps as well as other children, but without any very profound remorse for what she could not help, so far as she understood the matter, any more than her sex or stature, and with no very clear comprehension of the phrases which the New England followers of the Westminster divines made a part of the elementary instruction of young people.

At twelve years old she had grown tall and womanly enough to attract the eyes of the youth and older boys, several of whom made advances towards her acquaintance. But the dreary discipline of the household had sunk into her soul, and she had been shaping an internal life for herself, which it was hard for friendship to penetrate. Bathsheba Stoker was chained to the bedside of an invalid mother. Olive Eveleth, a kind, true-hearted girl, belonged to another religious communion; and this tended to render their meetings less frequent, though Olive was still her nearest friend. Cyprian was himself a little shy, and rather held to Myrtle through his sister than by any true intimacy directly with herself. Of the other young men of the village Gifted Hopkins was perhaps the most fervent of her admirers, as he had repeatedly shown by effusions in verse, of which, under the thinnest of disguises, she was the object.

William Murray Bradshaw, ten years older than herself, a young man of striking aspect and claims to exceptional ability, had kept his eye on her of late; but it was generally supposed that he would find a wife in the city, where he was in the habit of going to visit a fashionable relative, Mrs. Clymer Ketchum, of 24 Carat Place. She, at any rate, understood very well that he meant, to use his own phrase, "to go in for a corner lot,"—understanding thereby a young lady with possessions and without encumbrances. If the old man had only given his money to Myrtle, William Murray Bradshaw would have made sure of her; but she was not likely ever to get much of it. Miss Silence Withers, it was understood, would probably leave her money as the Rev. Mr. Stoker, her spiritual director, should indicate, and it seemed likely that most of it would go to a rising educational institution where certain given doctrines were to be taught through all time, whether disproved or not, and whether those who taught them believed them or not, provided only they would say they believed them.

Nobody had promised to say masses for her soul if she made this disposition of her property, or pledged the word of the Church that she should have plenary absolution. But she felt that she would be making friends in Influential Quarters by thus laying up her treasure, and that she would be safe if she had the good-will of the ministers of her sect.

Myrtle Hazard had nearly reached the age of fourteen, and, though not like to inherit much of the family property, was fast growing into a large dower of hereditary beauty. Always handsome, her features shaped themselves in a finer symmetry, her color grew richer, her figure promised a perfect womanly development, and her movements had the grace which high-breeding gives the daughter of a queen, and which Nature now and then teaches the humblest of village maidens. She could not long escape the notice of the lovers and flatterers of beauty, and the time of danger was drawing near.

At this period of her life she made two discoveries which changed the whole course of her thoughts, and opened for her a new world of ideas and possibilities.

Ever since the dreadful event of November, 1854, the garret had been a fearful place to think of, and still more to visit. The stories that the house was haunted gained in frequency of repetition and detail of circumstance. But Myrtle was bold and inquisitive, and explored its recesses at such times as she could creep among them undisturbed. Hid away close under the eaves she found an old trunk covered with dust and cobwebs. The mice had gnawed through its leather hinges, and, as it had been hastily stuffed full, the cover had risen, and two or three volumes had fallen to the floor. This trunk held the papers and books which her great-grandmother, the famous beauty, had left behind her, records of the romantic days when she was the belle of the county,—storybooks, memoirs, novels, and poems, and not a few love-letters,—a strange collection, which, as so often happens with such deposits in old families, nobody had cared to meddle with, and nobody had been willing to destroy, until at last they had passed out of mind, and waited for a new generation to bring them into light again.

The other discovery was of a small hoard of coin. Under one of the boards which formed the imperfect flooring of the garret was hidden an old leather mitten. Instead of a hand, it had a fat fist of silver dollars, and a thumb of gold half-eagles.

Thus knowledge and power found their way to the simple and secluded maiden. The books were hers to read as much as any other's; the gold and silver were only a part of that small provision which would be hers

by and by, and if she borrowed it, it was borrowing of herself. The tree of the knowledge of good and evil had shaken its fruit into her lap, and, without any serpent to tempt her, she took thereof and did eat.

CHAPTER IV. BYLES GRIDLEY, A. M.

The old Master of Arts was as notable a man in his outside presentment as one will find among five hundred college alumni as they file in procession. His strong, squared features, his formidable scowl, his solid-looking head, his iron-gray hair, his positive and as it were categorical stride, his slow, precise way of putting a statement, the strange union of trampling radicalism in some directions and high-stepping conservatism in others, which made it impossible to calculate on his unexpressed opinions, his testy ways and his generous impulses, his hard judgments and kindly actions, were characteristics that gave him a very decided individuality.

He had all the aspects of a man of books. His study, which was the best room in Mrs. Hopkins's house, was filled with a miscellaneous-looking collection of volumes, which his curious literary taste had got together from the shelves of all the libraries that had been broken up during his long life as a scholar. Classics, theology, especially of the controversial sort, statistics, politics, law, medicine, science, occult and overt, general literature,—almost every branch of knowledge was represented. His learning was very various, and of course mixed up, useful and useless, new and ancient, dogmatic and rational,—like his library, in short; for a library gathered like his is a looking-glass in which the owner's mind is reflected.

The common people about the village did not know what to make of such a phenomenon. He did not preach, marry, christen, or bury, like the ministers, nor jog around with medicines for sick folks, nor carry cases into court for quarrelsome neighbors. What was he good for? Not a great deal, some of the wiseacres thought,—had “all sorts of sense but common sense,”—“smart mahn, but not prahctical.” There were others who read him more shrewdly. He knowed more, they said, than all the ministers put together, and if he'd stan' for Ripresentative they 'd like to vote for him,—they hed n't hed a smart mahn in the Ginerall Court sence Squire Wibird was thar.

They may have overdone the matter in comparing his knowledge with that of all the ministers together, for Priest Pemberton was a real scholar in his special line of study,—as all D. D.'s are supposed to be, or they would not have been honored with that distinguished title. But Mr. Byles Gridley not only had more learning than the deep-sea line of the bucolic intelligence could fathom; he had more wisdom also than they gave him credit for, even those among them who thought most of his abilities.

In his capacity of schoolmaster he had sharpened his wits against those of the lively city boys he had in charge, and made such a reputation as “Master” Gridley, that he kept that title even after he had become a college tutor and professor. As a tutor he had to deal with many of these same boys, and others like them, in the still more vivacious period of their early college life. He got rid of his police duties when he became a professor, but he still studied the pupils as carefully as he used once to watch them, and learned to read character with a skill which might have fitted him for governing men instead of adolescents. But he loved quiet and he dreaded mingling with the brawlers of the market-place, whose stock in trade is a voice and a vocabulary. So it was that he had passed his life in the patient mechanical labor of instruction, leaving too many of his instincts and faculties in abeyance.

The alluvium of all this experience bore a nearer resemblance to worldly wisdom than might have been conjectured; much nearer, indeed, than it does in many old instructors, whose eyes get fish-like as their blood grows cold, and who are not fit to be trusted with anything more practical than a gerund or a cosine. Master Gridley not only knew a good deal of human nature, but he knew how to keep his knowledge to himself upon occasion. He understood singularly well the ways and tendencies of young people. He was shrewd in the detection of trickery, and very confident in those who had once passed the ordeal of his well-schooled observing powers. He had no particular tendency to meddle with the personal relations of those about him; but if they were forced upon him in any way, he was like to see into them at least as quickly as any of his neighbors who thought themselves most endowed with practical skill.

In leaving the duties of his office he considered himself, as he said a little despondently, like an old horse unharnessed and turned out to pasture. He felt that he had separated himself from human interests, and was henceforth to live in his books with the dead, until he should be numbered with them himself. He had chosen this quiet village as a place where he might pass his days undisturbed, and find a peaceful resting-place in its churchyard, where the gravel was dry, and the sun lay warm, and the glowing woods of autumn would spread their many-colored counterpane over the bed where he would be taking his rest. It sometimes came over him painfully that he was never more to be of any importance to his fellow-creatures. There was nobody living to whom he was connected by any very near ties. He felt kindly enough to the good woman in whose house he lived; he sometimes gave a few words of counsel to her son; he was not unamiable with the few people he met; he bowed with great consideration to the Rev. Dr. Pemberton; and he studied with no small interest the physiognomy of the Rev. Joseph Bellamy Stoker, to whose sermons he listened, with a black scowl now and then, and a nostril dilating with ominous intensity of meaning. But he said sadly to himself, that his life had been a failure,—that he had nothing to show for it, and his one talent was ready in its napkin to give back to his Lord.

He owed something of this sadness, perhaps, to a cause which many would hold of small significance. Though he had mourned for no lost love, at least so far as was known, though he had never suffered the pang of parting with a child, though he seemed isolated from those joys and griefs which come with the ties of family, he too had his private urn filled with the ashes of extinguished hopes. He was the father of a dead book.

Why “Thoughts on the Universe, by Byles Gridley, A. M.,” had not met with an eager welcome and a

permanent demand from the discriminating public, it would take us too long to inquire in detail. Indeed; he himself was never able to account satisfactorily for the state of things which his bookseller's account made evident to him. He had read and re-read his work; and the more familiar he became with it, the less was he able to understand the singular want of popular appreciation of what he could not help recognizing as its excellences. He had a special copy of his work, printed on large paper and sumptuously bound. He loved to read in this, as people read over the letters of friends who have long been dead; and it might have awakened a feeling of something far removed from the ludicrous, if his comments on his own production could have been heard. "That's a thought, now, for you!—See Mr. Thomas Babington Macaulay's Essay printed six years after this book." "A felicitous image! and so everybody would have said if only Mr. Thomas Carlyle had hit upon it." "If this is not genuine pathos, where will you find it, I should like to know? And nobody to open the book where it stands written but one poor old man—in this generation, at least—in this generation!" It may be doubted whether he would ever have loved his book with such jealous fondness if it had gone through a dozen editions, and everybody was quoting it to his face. But now it lived only for him; and to him it was wife and child, parent, friend, all in one, as Hector was all in all to his spouse. He never tired of it, and in his more sanguine moods he looked forward to the time when the world would acknowledge its merits, and his genius would find full recognition. Perhaps he was right: more than one book which seemed dead and was dead for contemporary readers has had a resurrection when the rivals who triumphed over it lived only in the tombstone memory of antiquaries. Comfort for some of us, dear fellow-writer.

It followed from the way in which he lived that he must have some means of support upon which he could depend. He was economical, if not over frugal in some of his habits; but he bought books, and took newspapers and reviews, and had money when money was needed; the fact being, though it was not generally known, that a distant relative had not long before died, leaving him a very comfortable property.

His money matters had led him to have occasional dealings with the late legal firm of Wibird and Penhallow, which had naturally passed into the hands of the new partnership, Penhallow and Bradshaw. He had entire confidence in the senior partner, but not so much in the young man who had been recently associated in the business.

Mr. William Murray Bradshaw, commonly called by his last two names, was the son of a lawyer of some note for his acuteness, who marked out his calling for him in having him named after the great Lord Mansfield. Murray Bradshaw was about twenty-five years old, by common consent good-looking, with a finely formed head, a searching eye, and a sharp-cut mouth, which smiled at his bidding without the slightest reference to the real condition of his feeling at the moment. This was a great convenience; for it gave him an appearance of good-nature at the small expense of a slight muscular movement which was as easy as winking, and deceived everybody but those who had studied him long and carefully enough to find that this play of his features was what a watch maker would call a detached movement.

He had been a good scholar in college, not so much by hard study as by skilful veneering, and had taken great pains to stand well with the Faculty, at least one of whom, Byles Gridley, A. M., had watched him with no little interest as a man with a promising future, provided he were not so astute as to outwit and overreach himself in his excess of contrivance. His classmates could not help liking him; as to loving him, none of them would have thought of that. He was so shrewd, so keen, so full of practical sense, and so good-humored as long as things went on to his liking, that few could resist his fascination. He had a way of talking with people about what they were interested in, as if it were the one matter in the world nearest to his heart. But he was commonly trying to find out something, or to produce some impression, as a juggler is working at his miracle while he keeps people's attention by his voluble discourse and make-believe movements. In his lightest talk he was almost always edging towards a practical object, and it was an interesting and instructive amusement to watch for the moment at which he would ship the belt of his colloquial machinery on to the tight pulley. It was done so easily and naturally that there was hardly a sign of it. Master Gridley could usually detect the shifting action, but the young man's features and voice never betrayed him.

He was a favorite with the other sex, who love poetry and romance, as he well knew, for which reason he often used the phrases of both, and in such a way as to answer his purpose with most of those whom he wished to please. He had one great advantage in the sweepstakes of life: he was not handicapped with any burdensome ideals. He took everything at its marked value. He accepted the standard of the street as a final fact for to-day, like the broker's list of prices.

His whole plan of life was laid out. He knew that law was the best introduction to political life, and he meant to use it for this end. He chose to begin his career in the country, so as to feel his way more surely and gradually to its ultimate aim; but he had no intention of burning his shining talents in a grazing district, however tall its grass might grow. His business was not with these stiff-jointed, slow-witted graziers, but with the supple, dangerous, far-seeing men who sit scheming by the gas-light in the great cities, after all the lamps and candles are out from the Merrimac to the Housatonic. Every strong and every weak point of those who might probably be his rivals were laid down on his charts, as winds and currents and rocks are marked on those of a navigator. All the young girls in the country, and not a few in the city, with which, as mentioned, he had frequent relations, were on his list of possible availabilities in the matrimonial line of speculation, provided always that their position and prospects were such as would make them proper matches for so considerable a person as the future Hon. William Murray Bradshaw.

Master Gridley had made a careful study of his old pupil since they had resided in the same village. The old professor could not help admiring him, notwithstanding certain suspicious elements in his character; for after muddy village talk, a clear stream of intelligent conversation was a great luxury to the hard-headed scholar. The more he saw of him, the more he learned to watch his movements, and to be on his guard in talking with him. The old man could be crafty, with all his simplicity, and he had found out that under his good-natured manner there often lurked some design more or less worth noting, and which might involve other interests deserving protection.

For some reason or other the old Master of Arts had of late experienced a certain degree of relenting with regard to himself, probably brought about by the expressions of gratitude from worthy Mrs. Hopkins for acts of kindness to which he himself attached no great value. He had been kind to her son Gifted; he had been

fatherly with Susan Posey, her relative and boarder; and he had shown himself singularly and unexpectedly amiable with the little twins who had been adopted by the good woman into her household. In fact, ever since these little creatures had begun to toddle about and explode their first consonants, he had looked through his great round spectacles upon them with a decided interest; and from that time it seemed as if some of the human and social sentiments which had never leafed or flowered in him, for want of their natural sunshine, had begun growing up from roots which had never lost their life. His liking for the twins may have been an illustration of that singular law which old Dr. Hurlbut used to lay down, namely, that at a certain period of life, say from fifty to sixty and upward, the grand-paternal instinct awakens in bachelors, the rhythms of Nature reaching them in spite of her defeated intentions; so that when men marry late they love their autumn child with a twofold affection,—father's and grandfather's both in one.

However this may be, there is no doubt that Mr. Byles Gridley was beginning to take a part in his neighbors' welfare and misfortunes, such as could hardly have been expected of a man so long lost in his books and his scholastic duties. And among others, Myrtle Hazard had come in for a share of his interest. He had met her now and then in her walks to and from school and meeting, and had been taken with her beauty and her apparent unconsciousness of it, which he attributed to the forlorn kind of household in which she had grown up. He had got so far as to talk with her now and then, and found himself puzzled, as well he might be, in talking with a girl who had been growing into her early maturity in antagonism with every influence that surrounded her.

"Love will reach her by and by," he said, "in spite of the dragons up at the den yonder.

*"Centum fronte oculos, centum cervice gerebat
Argus, et hos unus saepe fefellit amor."*

But there was something about Myrtle,—he hardly knew whether to call it dignity, or pride, or reserve, or the mere habit of holding back brought about by the system of repression under which she had been educated,—which kept even the old Master of Arts at his distance. Yet he was strongly drawn to her, and had a sort of presentiment that he might be able to help her some day, and that very probably she would want his help; for she was alone in the world, except for the dragons, and sure to be assailed by foes from without and from within.

He noticed that her name was apt to come up in his conversations with Murray Bradshaw; and, as he himself never introduced it, of course the young man must have forced it, as conjurers force a card, and with some special object. This set him thinking hard; and, as a result of it, he determined the next time Mr. Bradshaw brought her name up to set him talking.

So he talked, not suspecting how carefully the old man listened.

"It was a demonish hard case," he said, "that old Malachi had left his money as he did. Myrtle Hazard was going to be the handsomest girl about, when she came to her beauty, and she was coming to it mighty fast. If they could only break that will, but it was no use trying. The doctors said he was of sound mind for at least two years after making it. If Silence Withers got the land claim, there'd be a pile, sure enough. Myrtle Hazard ought to have it. If the girl had only inherited that property—whew? She'd have been a match for any fellow. That old Silence Withers would do just as her minister told her,—even chance whether she gives it to the Parson-factory, or marries Bellamy Stoker, and gives it to him after his wife's dead. He'd take it if he had to take her with it. Earn his money, hey, Master Gridley?"

"Why, you don't seem to think very well of the Rev. Joseph Bellamy Stoker?" said Mr. Gridley, smiling.

"Think well of him? Too fond of using the Devil's pitchfork for my fancy! Forks over pretty much all the world but himself and his lot into—the bad place, you know; and toasts his own cheese with it with very much the same kind of comfort that other folks seem to take in that business. Besides, he has a weakness for pretty saints—and sinners. That's an odd name he has. More belle amie than Joseph about him, I rather guess!"

The old professor smiled again. "So you don't think he believes all the mediaeval doctrines he is in the habit of preaching, Mr. Bradshaw?"

"No, sir; I think he belongs to the class I have seen described somewhere. 'There are those who hold the opinion that truth is only safe when diluted,—about one fifth to four fifths lies,—as the oxygen of the air is with its nitrogen. Else it would burn us all up.'"

Byles Gridley colored and started a little. This was one of his own sayings in "Thoughts on the Universe." But the young man quoted it without seeming to suspect its authorship.

"Where did you pick up that saying, Mr. Bradshaw?"

"I don't remember. Some paper, I rather think. It's one of those good things that get about without anybody's knowing who says 'em. Sounds like Coleridge."

"That's what I call a compliment worth having," said Byles Gridley to himself, when he got home. "Let me look at that passage."

He took down "Thoughts on the Universe," and got so much interested, reading on page after page, that he did not hear the little tea-bell, and Susan Posey volunteered to run up to his study and call him down to tea.

CHAPTER V. THE TWINS.

Miss Suzan Posey knocked timidly at his door and informed him that tea was waiting. He rather liked Susan Posey. She was a pretty creature, slight, blonde, a little too light, a village beauty of the second or third grade, effective at picnics and by moonlight,—the kind of girl that very young men are apt to remember as their first love. She had a taste for poetry, and an admiration of poets; but, what was better, she was modest

and simple, and a perfect sister and mother and grandmother to the two little forlorn twins who had been stranded on the Widow Hopkins's doorstep.

These little twins, a boy and girl, were now between two and three years old. A few words will make us acquainted with them. Nothing had ever been known of their origin. The sharp eyes of all the spinsters had been through every household in the village and neighborhood, and not a suspicion fixed itself on any one. It was a dark night when they were left; and it was probable that they had been brought from another town, as the sound of wheels had been heard close to the door where they were found, had stopped for a moment, then been heard again, and lost in the distance.

How the good woman of the house took them in and kept them has been briefly mentioned. At first nobody thought they would live a day, such little absurd attempts at humanity did they seem. But the young doctor came and the old doctor came, and the infants were laid in cotton-wool, and the room heated up to keep them warm, and baby-teaspoonfuls of milk given them, and after being kept alive in this way, like the young of opossums and kangaroos, they came to a conclusion about which they did not seem to have made up their thinking-pulps for some weeks, namely, to go on trying to cross the sea of life by tugging at the four-and-twenty oars which must be pulled day and night until the unknown shore is reached, and the oars lie at rest under the folded hands.

As it was not very likely that the parents who left their offspring round on doorsteps were of saintly life, they were not presented for baptism like the children of church-members. Still, they must have names to be known by, and Mrs. Hopkins was much exercised in the matter. Like many New England parents, she had a decided taste for names that were significant and sonorous. That which she had chosen for her oldest child, the young poet, was either a remarkable prophecy, or it had brought with it the endowments it promised. She had lost, or, in her own more pictorial language, she had buried, a daughter to whom she had given the names, at once of cheerful omen and melodious effect, Wealthy Amadora.

As for them poor little creturs, she said, she believed they was rained down out o' the skies, jest as they say toads and tadpoles come. She meant to be a mother to 'em for all that, and give 'em jest as good names as if they was the governor's children, or the minister's. If Mr. Gridley would be so good as to find her some kind of a real handsome Chris'n name for 'em, she'd provide 'em with the other one. Hopkinses they shall be bred and taught, and Hopkinses they shall be called. Ef their father and mother was ashamed to own 'em, she was n't. Couldn't Mr. Gridley pick out some pooty sounding names from some of them great books of his. It's jest as well to have 'em pooty as long as they don't cost any more than if they was Tom and Sally.

A grim smile passed over the rugged features of Byles Gridley. "Nothing is easier than that, Mrs. Hopkins," he said. "I will give you two very pretty names that I think will please you and other folks. They're new names, too. If they shouldn't like to keep them, they can change them before they're christened, if they ever are. Isosceles will be just the name for the boy, and I'm sure you won't find a prettier name for the girl in a hurry than Helminthia."

Mrs. Hopkins was delighted with the dignity and novelty of these two names, which were forthwith adopted. As they were rather long for common use in the family, they were shortened into the easier forms of Sossy and Minthy, under which designation the babes began very soon to thrive mightily, turning bread and milk into the substance of little sinners at a great rate, and growing as if they were put out at compound interest.

This short episode shows us the family conditions surrounding Byles Gridley, who, as we were saying, had just been called down to tea by Miss Susan Posey.

"I am coming, my dear," he said,—which expression quite touched Miss Susan, who did not know that it was a kind of transferred caress from the delicious page he was reading. It was not the living child that was kissed, but the dead one lying under the snow, if we may make a trivial use of a very sweet and tender thought we all remember.

Not long after this, happening to call in at the lawyer's office, his eye was caught by the corner of a book lying covered up by a pile of papers. Somehow or other it seemed to look very natural to him. Could that be a copy of "Thoughts on the Universe"? He watched his opportunity, and got a hurried sight of the volume. His own treatise, sure enough! Leaves Uncut. Opened of itself to the one hundred and twentieth page. The axiom Murray Bradshaw had quoted—he did not remember from what,—“sounded like Coleridge”—was staring him in the face from that very page. When he remembered how he had pleased himself with that compliment the other day, he blushed like a school-girl; and then, thinking out the whole trick,—to hunt up his forgotten book, pick out a phrase or two from it, and play on his weakness with it, to win his good opinion,—for what purpose he did not know, but doubtless to use him in some way,—he grinned with a contempt about equally divided between himself and the young schemer.

"Ah ha!" he muttered scornfully. "Sounds like Coleridge, hey? Niccolo Macchiavelli Bradshaw!"

From this day forward he looked on all the young lawyer's doings with even more suspicion than before. Yet he would not forego his company and conversation; for he was very agreeable and amusing to study; and this trick he had played him was, after all, only a diplomatist's way of flattering his brother plenipotentiary. Who could say? Some time or other he might cajole England or France or Russia into a treaty with just such a trick. Shallower men than he had gone out as ministers of the great Republic. At any rate, the fellow was worth watching.

CHAPTER VI. THE USE OF SPECTACLES.

The old Master of Arts had a great reputation in the house where he lived for knowing everything that was going on. He rather enjoyed it; and sometimes amused himself with surprising his simple-hearted landlady

and her boarders with the unaccountable results of his sagacity. One thing was quite beyond her comprehension. She was perfectly sure that Mr. Gridley could see out of the back of his head, just as other people see with their natural organs. Time and again he had told her what she was doing when his back was turned to her, just as if he had been sitting squarely in front of her. Some laughed at this foolish notion; but others, who knew more of the nebulous sciences, told her it was like's not jes' so. Folks had read letters laid ag'in' the pits o' their stomachs, 'n' why should n't they see out o' the backs o' their heads?

Now there was a certain fact at the bottom of this belief of Mrs. Hopkins; and as it would be a very small thing to make a mystery of so simple a matter, the reader shall have the whole benefit of knowing all there is in it,—not quite yet, however, of knowing all that came of it. It was not the mirror trick, of course, which Mrs. Felix Lorraine and other dangerous historical personages have so long made use of. It was nothing but this: Mr. Byles Gridley wore a pair of formidable spectacles with large round glasses. He had often noticed the reflection of objects behind him when they caught their images at certain angles, and had got the habit of very often looking at the reflecting surface of one or the other of the glasses, when he seemed to be looking through them. It put a singular power into his possession, which might possibly hereafter lead to something more significant than the mystification of the Widow Hopkins.

A short time before Myrtle Hazard's disappearance, Mr. Byles Gridley had occasion to call again at the office of Penhallow and Bradshaw on some small matter of business of his own. There were papers to look over, and he put on his great round-glassed spectacles. He and Mr. Penhallow sat down at the table, and Mr. Bradshaw was at a desk behind them. After sitting for a while, Mr. Penhallow seemed to remember something he had meant to attend to, for he said all at once: "Excuse me, Mr. Gridley. Mr. Bradshaw, if you are not busy, I wish you would look over this bundle of papers. They look like old receipted bills and memoranda of no particular use; but they came from the garret of the Withers place, and might possibly have something that would be of value. Look them over, will you, and see whether there is anything there worth saving."

The young man took the papers, and Mr. Penhallow sat down again at the table with Mr. Byles Gridley.

This last-named gentleman felt just then a strong impulse to observe the operations of Murray Bradshaw. He could not have given any very good reason for it, any more than any of us can for half of what we do.

"I should like to examine that conveyance we were speaking of once more," said he. "Please to look at this one in the mean time, will you, Mr. Penhallow?"

Master Gridley held the document up before him. He did not seem to find it quite legible, and adjusted his spectacles carefully, until they were just as he wanted them. When he had got them to suit himself, sitting there with his back to Murray Bradshaw, he could see him and all his movements, the desk at which he was standing, and the books in the shelves before him,—all this time appearing as if he were intent upon his own reading.

The young man began in a rather indifferent way to look over the papers. He loosened the band round them, and took them up one by one, gave a careless glance at them, and laid them together to tie up again when he had gone through them. Master Gridley saw all this process, thinking what a fool he was all the time to be watching such a simple proceeding. Presently he noticed a more sudden movement: the young man had found something which arrested his attention, and turned his head to see if he was observed. The senior partner and his client were both apparently deep in their own affairs. In his hand Mr. Bradshaw held a paper folded like the others, the back of which he read, holding it in such a way that Master Gridley saw very distinctly three large spots of ink upon it, and noticed their position. Murray Bradshaw took another hurried glance at the two gentlemen, and then quickly opened the paper. He ran it over with a flash of his eye, folded it again, and laid it by itself. With another quick turn of his head, as if to see whether he were observed or like to be, he reached his hand out and took a volume down from the shelves. In this volume he shut the document, whatever it was, which he had just taken out of the bundle, and placed the book in a very silent and as it were stealthy way back in its place. He then gave a look at each of the other papers, and said to his partner: "Old bills, old leases, and insurance policies that have run out. Malachi seems to have kept every scrap of paper that had a signature to it."

"That 's the way with the old misers, always," said Mr. Penhallow.

Byles Gridley had got through reading the document he held,—or pretending to read it. He took off his spectacles.

"We all grow timid and cautious as we get old, Mr. Penhallow." Then turning round to the young man, he slowly repeated the lines,

*"Multa senem circumveniunt incommoda, vel quod
Quaerit et inventis miser abstinet, ac timet uti;
Vel quod res omnes timide, gelideque ministrat"*

"You remember the passage, Mr. Bradshaw?"

While he was reciting these words from Horace, which he spoke slowly as if he relished every syllable, he kept his eyes on the young man steadily, but with out betraying any suspicion. His old habits as a teacher made that easy.

Murray Bradshaw's face was calm as usual, but there was a flush on his cheek, and Master Gridley saw the slight but unequivocal signs of excitement.

"Something is going on inside there," the old man said to himself. He waited patiently, on the pretext of business, until Mr. Bradshaw got up and left the office. As soon as he and the senior partner were alone, Master Gridley took a lazy look at some of the books in his library. There stood in the book-shelves a copy of the Corpus Juris Civilis,—the fine Elzevir edition of 1664. It was bound in parchment, and thus readily distinguishable at a glance from all the books round it. Now Mr. Penhallow was not much of a Latin scholar, and knew and cared very little about the civil law. He had fallen in with this book at an auction, and bought it to place in his shelves with the other "properties" of the office, because it would look respectable. Anything shut up in one of those two octavos might stay there a lifetime without Mr. Penhallow's disturbing it; that

Master Gridley knew, and of course the young man knew it too.

We often move to the objects of supreme curiosity or desire, not in the lines of castle or bishop on the chess-board, but with the knight's zigzag, at first in the wrong direction, making believe to ourselves we are not after the thing coveted. Put a lump of sugar in a canary-bird's cage, and the small creature will illustrate the instinct for the benefit of inquirers or sceptics. Byles Gridley went to the other side of the room and took a volume of Reports from the shelves. He put it back and took a copy of "Fearne on Contingent Remainders," and looked at that for a moment in an idling way, as if from a sense of having nothing to do. Then he drew the back of his forefinger along the books on the shelf, as if nothing interested him in them, and strolled to the shelf in front of the desk at which Murray Bradshaw had stood. He took down the second volume of the Corpus Juris Civilis, turned the leaves over mechanically, as if in search of some title, and replaced it.

He looked round for a moment. Mr. Penhallow was writing hard at his table, not thinking of him, it was plain enough. He laid his hand on the FIRST volume of the Corpus Juris Civilis. There was a document shut up in it. His hand was on the book, whether taking it out or putting it back was not evident, when the door opened and Mr. William Murray Bradshaw entered.

"Ah, Mr. Gridley," he said, "you are not studying the civil law, are you?" He strode towards him as he spoke, his face white, his eyes fixed fiercely on him.

"It always interests me, Mr. Bradshaw," he answered, "and this is a fine edition of it. One may find a great many valuable things in the Corpus Juris Civilis."

He looked impenetrable, and whether or not he had seen more than Mr. Bradshaw wished him to see, that gentleman could not tell. But there stood the two books in their place, and when, after Master Gridley had gone, he looked in the first volume, there was the document he had shut up in it.

CHAPTER VII. MYRTLE'S LETTER—THE YOUNG MEN'S PURSUIT.

"You know all about it, Olive?" Cyprian Eveleth said to his sister, after a brief word of greeting.

"Know of what, Cyprian?"

"Why, sister, don't you know that Myrtle Hazard is missing,—gone!—gone nobody knows where, and that we are looking in all directions to find her?"

Olive turned very pale and was silent for a moment. At the end of that moment the story seemed almost old to her. It was a natural ending of the prison-life which had been round Myrtle since her earliest years. When she got large and strong enough, she broke out of jail,—that was all. The nursery-bar is always climbed sooner or later, whether it is a wooden or an iron one. Olive felt as if she had dimly foreseen just such a finishing to the tragedy of the poor girl's home bringing-up. Why could not she have done something to prevent it? Well,—what shall we do now, and as it is?—that is the question.

"Has she left no letter,—no explanation of her leaving in this way?"

"Not a word, so far as anybody in the village knows."

"Come over to the post-office with me; perhaps we may find a letter. I think we shall."

Olive's sagacity and knowledge of her friend's character had not misled her. She found a letter from Myrtle to herself, which she opened and read as here follows:

MY DEAREST OLIVE:—Think no evil of me for what I have done. The fire-hang-bird's nest, as Cyprian called it, is empty, and the poor bird is flown.

I can live as I have lived no longer. This place is chilling all the life out of me, and I must find another home. It is far, far away, and you will not hear from me again until I am there. Then I will write to you.

You know where I was born,—under a hot sun and in the midst of strange, lovely scenes that I seem still to remember. I must visit them again: my heart always yearns for them. And I must cross the sea to get there,—the beautiful great sea that I have always longed for and that my river has been whispering about to me ever so many years. My life is pinched and starved here. I feel as old as aunt Silence, and I am only fifteen,—a child she has called me within a few days. If this is to be a child, what is it to be a woman?

I love you dearly,—and your brother is almost to me as if he were mine. I love our sweet, patient Bathsheba,—yes, and the old man that has spoken so kindly with me, good Master Gridley; I hate to give you pain,—to leave you all,—but my way of life is killing me, and I am too young to die. I cannot take the comfort with you, my dear friends, that I would; for it seems as if I carried a lump of ice in my heart, and all the warmth I find in you cannot thaw it out.

I have had a strange warning to leave this place, Olive. Do you remember how the angel of the Lord appeared to Joseph and told him to flee into Egypt? I have had a dream like that, Olive. There is an old belief in our family that the spirit of one who died many generations ago watches over some of her descendants. They say it led our first ancestor to come over here when it was a wilderness. I believe it has appeared to others of the family in times of trouble. I have had a strange dream at any rate, and the one I saw, or thought I saw, told me to leave this place. Perhaps I should have stayed if it had not been for that, but it seemed like an angel's warning.

Nobody will know how I have gone, or which way I have taken. On Monday, you may show this letter to my friends, not before. I do not think they will be in danger of breaking their hearts for me at our house. Aunt Silence cares for nothing but her own soul, and the other woman hates me, I always thought. Kitty Fagan will cry hard. Tell her perhaps I shall come back by and by. There is a little box in my room, with some keepsakes marked,—one is for poor Kitty. You can give them to the right ones. Yours is with them.

Good-by, dearest. Keep my secret, as I told you, till Monday. And if you never see me again, remember how much I loved you. Never think hardly of me, for you have grown up in a happy home, and do not know how much misery can be crowded into fifteen years of a young girl's life. God be with you!

MYRTLE HAZARD.

Olive could not restrain her tears, as she handed the letter to Cyprian. "Her secret is as safe with you as with me," she said. "But this is madness, Cyprian, and we must keep her from doing herself a wrong.

"What she means to do, is to get to Boston, in some way or other, and sail for India. It is strange that they have not tracked her. There is no time to be lost. She shall not go out into the world in this way, child that she is. No; she shall come back, and make her home with us, if she cannot be happy with these people. Ours is a happy and a cheerful home, and she shall be to me as a younger sister, and your sister too, Cyprian. But you must see her; you must leave this very hour; and you may find her. Go to your cousin Edward, in Boston, at once; tell him your errand, and get him to help you find our poor dear sister. Then give her the note I will write, and say I know your heart, Cyprian, and I can trust that to tell you what to say."

In a very short time Cyprian Eveleth was on his way to Boston. But another, keener even in pursuit than he, was there before him.

Ever since the day when Master Gridley had made that over-curious observation of the young lawyer's proceedings at the office, Murray Bradshaw had shown a far livelier interest than before in the conditions and feelings of Myrtle Hazard. He had called frequently at The Poplars to talk over business matters, which seemed of late to require a deal of talking. He had been very deferential to Miss Silence, and had wound himself into the confidence of Miss Badlam. He found it harder to establish any very near relations with Myrtle, who had never seemed to care much for any young man but Cyprian Eveleth, and to care for him quite as much as Olive's brother as for any personal reason. But he carefully studied Myrtle's tastes and ways of thinking and of life, so that, by and by, when she should look upon herself as a young woman, and not as a girl, he would have a great advantage in making her more intimate acquaintance.

Thus, she corresponded with a friend of her mother's in India. She talked at times as if it were her ideal home, and showed many tastes which might well be vestiges of early Oriental impressions. She made herself a rude hammock,—such as are often used in hot climates,—and swung it between two elms. Here she would lie in the hot summer days, and fan herself with the sandal-wood fan her friend in India had sent her,—the perfume of which, the women said, seemed to throw her into day-dreams, which were almost like trances.

These circumstances gave a general direction to his ideas, which were presently fixed more exactly by two circumstances which he learned for himself and kept to himself; for he had no idea of making a hue and cry, and yet he did not mean that Myrtle Hazard should get away if he could help it.

The first fact was this. He found among the copies of the city newspaper they took at The Poplars a recent number from which a square had been cut out. He procured another copy of this paper of the same date, and found that the piece cut out was an advertisement to the effect that the A 1 Ship Swordfish, Captain Hawkins, was to sail from Boston for Calcutta, on the 20th of June.

The second fact was the following. On the window-sill of her little hanging chamber, which the women allowed him to inspect, he found some threads of long, black, glossy hair caught by a splinter in the wood. They were Myrtle's of course. A simpleton might have constructed a tragedy out of this trivial circumstance,—how she had cast herself from the window into the waters beneath it,—how she had been thrust out after a struggle, of which this shred from her tresses was the dreadful witness,—and so on. Murray Bradshaw did not stop to guess and wonder. He said nothing about it, but wound the shining threads on his finger, and, as soon as he got home, examined them with a magnifier. They had been cut off smoothly, as with a pair of scissors. This was part of a mass of hair, then, which had been shorn and thrown from the window. Nobody would do that but she herself. What would she do it for? To disguise her sex, of course. The other inferences were plain enough.

The wily young man put all these facts and hints together, and concluded that he would let the rustics drag the ponds and the river, and scour the woods and swamps, while he himself went to the seaport town from which she would without doubt sail if she had formed the project he thought on the whole most probable.

Thus it was that we found him hurrying to the nearest station to catch the train to Boston, while they were all looking for traces of the missing girl nearer home. In the cars he made the most suggestive inquiries he could frame, to stir up the gentlemanly conductor's memory. Had any young fellow been on the train within a day or two, who had attracted his notice? Smooth, handsome face, black eyes, short black hair, new clothes, not fitting very well, looked away when he paid his fare, had a soft voice like a woman's,—had he seen anybody answering to some such description as this? The gentlemanly conductor had not noticed,—was always taking up and setting down way-passengers,—might have had such a young man aboard,—there was two or three students one day in the car singing college songs,—he did n't care how folks looked if they had their tickets ready,—and minded their own business,—and, so saying, he poked a young man upon whose shoulder a ringleted head was reclining with that delightful abandon which the railroad train seems to provoke in lovely woman,—"Fare!"

It is a fine thing to be set down in a great, overcrowded hotel, where they do not know you, looking dusty, and for the moment shabby, with nothing but a carpet-bag in your hand, feeling tired, and anything but clean, and hungry, and worried, and every way miserable and mean, and to undergo the appraising process of the gentleman in the office, who, while he shoves the book round to you for your name, is making a hasty calculation as to how high up he can venture to doom you. But Murray Bradshaw's plain dress and carpet-bag were more than made up for by the air and tone which imply the habit of being attended to. The clerk saw that in a glance, and, as he looked at the name and address in the book, spoke sharply in the explosive dialect of his tribe,—

"Jun! ta'tha'genlm'n'scarpetbag'n'showhimupt'thirtyone!"

When Cyprian Eveleth reached the same hotel late at night, he appeared in his best clothes and with a new valise; but his amiable countenance and gentle voice and modest manner sent him up two stories higher, where he found himself in a room not much better than a garret, feeling lonely enough, for he did not know

he had an acquaintance in the same house. The two young men were in and out so irregularly that it was not very strange that they did not happen to meet each other.

The young lawyer was far more likely to find Myrtle if she were in the city than the other, even with the help of his cousin Edward. He was not only older, but sharper, better acquainted with the city and its ways, and, whatever might be the strength of Cyprian's motives, his own were of such intensity that he thought of nothing else by day, and dreamed of nothing else by night. He went to work, therefore, in the most systematic manner. He first visited the ship *Swordfish*, lying at her wharf, saw her captain, and satisfied himself that as yet nobody at all corresponding to the description of Myrtle Hazard had been seen by any person on board. He visited all the wharves, inquiring on every vessel where it seemed possible she might have been looking about. Hotels, thoroughfares, every place where he might hear of her or meet her, were all searched. He took some of the police into his confidence, and had half a dozen pairs of eyes besides his own opened pretty widely, to discover the lost girl.

On Sunday, the 19th, he got the first hint which encouraged him to think he was on the trail of his fugitive. He had gone down again to the wharf where the *Swordfish*, advertised to sail the next day, was lying. The captain was not on board, but one of the mates was there, and he addressed his questions to him, not with any great hope of hearing anything important, but determined to lose no chance, however small. He was startled with a piece of information which gave him such an exquisite pang of delight that he could hardly keep the usual quiet of his demeanor. A youth corresponding to his description of Myrtle Hazard in her probable disguise had been that morning on board the *Swordfish*, making many inquiries as to the hour at which she was to sail, and who were to be the passengers, and remained some time on board, going all over the vessel, examining her cabin accommodations, and saying he should return to-morrow before she sailed,—doubtless intending to take passage in her, as there was plenty of room on board. There could be little question, from the description, who this young person was. It was a rather delicate-looking, dark-haired youth, smooth-faced, somewhat shy and bashful in his ways, and evidently excited and nervous. He had apparently been to look about him, and would come back at the last moment, just as the vessel was ready to sail, and in an hour or two be beyond the reach of inquiry.

Murray Bradshaw returned to his hotel, and, going to his chamber, summoned all his faculties in state council to determine what course he should follow, now that he had the object of his search certainly within reaching distance. There was no danger now of her eluding him; but the grave question arose, what was he to do when he stood face to face with her. She must not go,—that was fixed. If she once got off in that ship, she might be safe enough; but what would become of certain projects in which he was interested,—that was the question. But again, she was no child, to be turned away from her adventure by cajolery, or by any such threats as common truants would find sufficient to scare them back to their duty. He could tell the facts of her disguise and the manner of her leaving home to the captain of the vessel, and induce him to send her ashore as a stray girl, to be returned to her relatives. But this would only make her furious with him; and he must not alienate her from himself, at any rate. He might plead with her in the name of duty, for the sake of her friends, for the good name of the family. She had thought all these things over before she ran away. What if he should address her as a lover, throw himself at her feet, implore her to pity him and give up her rash scheme, and, if things came to the very worst, offer to follow her wherever she went, if she would accept him in the only relation that would render it possible. Fifteen years old,—he nearly ten years older,—but such things had happened before, and this was no time to stand on trifles.

He worked out the hypothesis of the matrimonial offer as he would have reasoned out the probabilities in a law case he was undertaking.

1. He would rather risk that than lose all hold upon her. The girl was handsome enough for his ambitious future, wherever it might carry him. She came of an honorable family, and had the great advantage of being free from a tribe of disagreeable relatives, which is such a drawback on many otherwise eligible parties. To these considerations were to be joined other circumstances which we need not here mention, of a nature to add greatly to their force, and which would go far of themselves to determine his action.

2. How was it likely she would look on such an extraordinary proposition? At first, no doubt, as Lady Anne looked upon the advances of Richard. She would be startled, perhaps shocked. What then? She could not help feeling flattered at such an offer from him,—him, William Murray Bradshaw, the rising young man of his county, at her feet, his eyes melting with the love he would throw into them, his tones subdued to their most sympathetic quality, and all those phrases on his lips which every day beguile women older and more discreet than this romantic, long-imprisoned girl, whose rash and adventurous enterprise was an assertion of her womanhood and her right to dispose of herself as she chose. He had not lived to be twenty-five years old without knowing his power with women. He believed in himself so thoroughly, that his very confidence was a strong promise of success.

3. In case all his entreaties, arguments, and offers made no impression, should he make use of that supreme resource, not to be employed save in extreme need, but which was of a nature, in his opinion, to shake a resolution stronger than this young girl was like to oppose to it? That would be like Christian's coming to his weapon called All-prayer, he said to himself, with a smile that his early readings of Bunyan should have furnished him an image for so different an occasion. The question was one he could not settle till the time came,—he must leave it to the instinct of the moment.

The next morning found him early waking after a night of feverish dreams. He dressed himself with more than usual care, and walked down to the wharf where the *Swordfish* was moored. The ship had left the wharf, and was lying out in the stream: A small boat had just reached her, and a slender youth, as he appeared at that distance, climbed, not over-adroitly, up the vessel's side.

Murray Bradshaw called to a boatman near by and ordered the man to row him over as fast as he could to the vessel lying in the stream. He had no sooner reached the deck of the *Swordfish* than he asked for the young person who had just been put on board.

"He is in the cabin, sir, just gone down with the captain," was the reply.

His heart beat, in spite of his cool temperament, as he went down the steps leading to the cabin. The young

person was talking earnestly with the captain, and, on his turning round, Mr. William Murray Bradshaw had the pleasure of recognizing his young friend, Mr. Cyprian Eveleth.

CHAPTER VIII. DOWN THE RIVER.

Look at the flower of a morning-glory the evening before the dawn which is to see it unfold. The delicate petals are twisted into a spiral, which at the appointed hour, when the sunlight touches the hidden springs of its life, will uncoil itself and let the day into the chamber of its virgin heart. But the spiral must unwind by its own law, and the hand that shall try to hasten the process will only spoil the blossom which would have expanded in symmetrical beauty under the rosy fingers of morning.

We may take a hint from Nature's handling of the flower in dealing with young souls, and especially with the souls of young girls, which, from their organization and conditions, require more careful treatment than those of their tougher-fibred brothers. Many parents reproach themselves for not having enforced their own convictions on their children in the face of every inborn antagonism they encountered. Let them not be too severe in their self-condemnation. A want of judgment in this matter has sent many a young person to Bedlam, whose nature would have opened kindly enough if it had only been trusted to the sweet influences of morning sunshine. In such cases it may be that the state we call insanity is not always an unalloyed evil. It may take the place of something worse, the wretchedness of a mind not yet dethroned, but subject to the perpetual interferences of another mind governed by laws alien and hostile to its own. Insanity may perhaps be the only palliative left to Nature in this extremity. But before she comes to that, she has many expedients. The mind does not know what diet it can feed on until it has been brought to the starvation point. Its experience is like that of those who have been long drifting about on rafts or in long-boats. There is nothing out of which it will not contrive to get some sustenance. A person of note, long held captive for a political offence, is said to have owed the preservation of his reason to a pin, out of which he contrived to get exercise and excitement by throwing it down carelessly on the dark floor of his dungeon, and then hunting for it in a series of systematic explorations until he had found it.

Perhaps the most natural thing Myrtle Hazard could have done would have been to go crazy, and be sent to the nearest asylum, if Providence, which in its wisdom makes use of the most unexpected agencies, had not made a special provision for her mental welfare. She was in that arid household as the prophet in the land where there was no dew nor rain for these long years. But as he had the brook Cherith, and the bread and flesh in the morning and the bread and flesh in the evening which the ravens brought him, so she had the river and her secret store of books.

The river was light and life and music and companionship to her. She learned to row herself about upon it, to swim boldly in it, for it had sheltered nooks but a little way above The Poplars. But there was more than that in it,—it was infinitely sympathetic. A river is strangely like a human soul. It has its dark and bright days, its troubles from within, and its disturbances from without. It often runs over ragged rocks with a smooth surface, and is vexed with ripples as it slides over sands that are level as a floor. It betrays its various moods by aspects which are the commonplaces of poetry, as smiles and dimples and wrinkles and frowns. Its face is full of winking eyes, when the scattering rain-drops first fall upon it, and it scowls back at the storm-cloud, as with knitted brows, when the winds are let loose. It talks, too, in its own simple dialect, murmuring, as it were, with busy lips all the way to the ocean, as children seeking the mother's breast and impatient of delay. Prisoners who know what a flower or an insect has been to them in their solitary cell, invalids who have employed their vacant minds in studying the patterns of paper-hangings on the walls of their sick-chambers, can tell what the river was to the lonely, imaginative creature who used to sit looking into its depths, hour after hour, from the airy height of the Fire-hang-bird's Nest.

Of late a thought had mingled with her fancies which had given to the river the aspect of something more than a friend and a companion. It appeared all at once as a Deliverer. Did not its waters lead, after long wanderings, to the great highway of the world, and open to her the gates of those cities from which she could take her departure unchallenged towards the lands of the morning or of the sunset? Often, after a freshet, she had seen a child's miniature boat floating down on its side past her window, and traced it in imagination back to some crystal brook flowing by the door of a cottage far up a blue mountain in the distance. So she now began to follow down the stream the airy shallop that held her bright fancies. These dreams of hers were colored by the rainbows of an enchanted fountain,—the books of adventure, the romances, the stories which fortune had placed in her hands,—the same over which the heart of the Pride of the County had throbbled in the last century, and on the pages of some of which the traces of her tears might still be seen.

The literature which was furnished for Myrtle's improvement was chiefly of a religious character, and, however interesting and valuable to those to whom it was adapted, had not been chosen with any wise regard to its fitness for her special conditions. Of what use was it to offer books like the "Saint's Rest" to a child whose idea of happiness was in perpetual activity? She read "Pilgrim's Progress," it is true, with great delight. She liked the idea of travelling with a pack on one's back, the odd shows at the House of the interpreter, the fighting, the adventures, the pleasing young ladies at the palace the name of which was Beautiful, and their very interesting museum of curiosities. As for the allegorical meaning, it went through her consciousness like a peck of wheat through a bushel measure with the bottom out, without touching.

But the very first book she got hold of out of the hidden treasury threw the "Pilgrim's Progress" quite into the shade. It was the story of a youth who ran away and lived on an island,—one Crusoe,—a homely narrative, but evidently true, though full of remarkable adventures. There too was the history, coming much nearer home, of Deborah Sampson, the young woman who served as a soldier in the Revolutionary War, with a portrait of her in man's attire, looking intrepid rather than lovely. A virtuous young female she was, and married well, as she deserved to, and raised a family with as good a name as wife and mother as the best of

them. But perhaps not one of these books and stories took such hold of her imagination as the tale of Rasselas, which most young persons find less entertaining than the "Vicar of Wakefield," with which it is nowadays so commonly bound up. It was the prince's discontent in the Happy Valley, the iron gate opening to the sound of music, and closing forever on those it admitted, the rocky boundaries of the imprisoning valley, the visions of the world beyond, the projects of escape, and the long toil which ended in their accomplishment, which haunted her sleeping and waking. She too was a prisoner, but it was not in the Happy Valley. Of the romances and the love-letters we must take it for granted that she selected wisely, and read discreetly; at least we know nothing to the contrary.

There were mysterious reminiscences and hints of her past coming over her constantly. It was in the course of the long, weary spring before her disappearance, that a dangerous chord was struck which added to her growing restlessness. In an old closet were some seashells and coral-fans, and dried star-fishes and sea-horses, and a natural mummy of a rough-skinned dogfish. She had not thought of them for years, but now she felt impelled to look after them. The dim sea odors which still clung to them penetrated to the very inmost haunts of memory, and called up that longing for the ocean breeze which those who have once breathed and salted their blood with it never get over, and which makes the sweetest inland airs seem to them at last tame and tasteless. She held a tigershell to her ear, and listened to that low, sleepy murmur, whether in the sense or in the soul we hardly know, like that which had so often been her lullaby,—a memory of the sea, as Landor and Wordsworth have sung.

"You are getting to look like your father," Aunt Silence said one day; "I never saw it before. I always thought you took after old Major Gideon Withers. Well, I hope you won't come to an early grave like poor Charles,—or at any rate, that you may be prepared."

It did not seem very likely that the girl was going out of the world at present, but she looked Miss Silence in the face very seriously, and said, "Why not an early grave, Aunt, if this world is such a bad place as you say it is?"

"I'm afraid you are not fit for a better."

She wondered if Silence Withers and Cynthia Badlam were just ripe for heaven.

For some months Miss Cynthia Badlam, who, as was said, had been an habitual visitor at The Poplars, had lived there as a permanent resident. Between her and Silence Withers, Myrtle Hazard found no rest for her soul. Each of them was for untwisting the morning-glory without waiting for the sunshine to do it. Each had her own wrenches and pincers to use for that purpose. All this promised little for the nurture and admonition of the young girl, who, if her will could not be broken by imprisonment and starvation at three years old, was not likely to be over-tractable to any but gentle and reasonable treatment at fifteen.

Aunt Silence's engine was responsibility,—her own responsibility, and the dreadful consequences which would follow to her, Silence, if Myrtle should in any way go wrong. Ever since her failure in that moral coup d'etat by which the sinful dynasty of the natural self-determining power was to be dethroned, her attempts in the way of education had been a series of feeble efforts followed by plaintive wails over their utter want of success. The face she turned upon the young girl in her solemn expostulations looked as if it were inscribed with the epitaphs of hope and virtue. Her utterances were pitched in such a forlorn tone, that the little bird in his cage, who always began twittering at the sound of Myrtle's voice, would stop in his song, and cock his head with a look of inquiry full of pathos, as if he wanted to know what was the matter, and whether he could do anything to help.

The specialty of Cynthia Badlam was to point out all the dangerous and unpardonable transgressions into which young people generally, and this young person in particular, were likely to run, to hold up examples of those who had fallen into evil ways and come to an evil end, to present the most exalted standard of ascetic virtue to the lively girl's apprehension, leading her naturally to the conclusion that a bright example of excellence stood before her in the irreproachable relative who addressed her. Especially with regard to the allurements which the world offers to the young and inexperienced female, Miss Cynthia Badlam was severe and eloquent. Sometimes poor Myrtle would stare, not seeing the meaning of her wise caution, sometimes look at Miss Cynthia with a feeling that there was something about her that was false and forced, that she had nothing in common with young people, that she had no pity for them, only hatred of their sins, whatever these might be,—a hatred which seemed to extend to those sources of frequent temptation, youth and beauty, as if they were in themselves objectionable.

Both the lone women at The Poplars were gifted with a thin vein of music. They gave it expression in psalmody, of course, in which Myrtle, who was a natural singer, was expected to bear her part. This would have been pleasantry if the airs most frequently selected had been cheerful or soothing, and if the favorite hymns had been of a sort to inspire a love for what was lovely in this life, and to give some faint foretaste of the harmonies of a better world to come. But there is a fondness for minor keys and wailing cadences common to the monotonous chants of cannibals and savages generally, to such war-songs as the wild, implacable "Marseillaise," and to the favorite tunes of low-spirited Christian pessimists. That mournful "China," which one of our most agreeable story-tellers has justly singled out as the cry of despair itself, was often sung at The Poplars, sending such a sense of utter misery through the house, that poor Kitty Fagan would cross herself, and wring her hands, and think of funerals, and wonder who was going to die,—for she fancied she heard the Banshee's warning in those most dismal ululations.

On the first Saturday of June, a fortnight before her disappearance, Myrtle strolled off by the river shore, along its lonely banks, and came home with her hands full of leaves and blossoms. Silence Withers looked at them as if they were a kind of melancholy manifestation of frivolity on the part of the wicked old earth. Not that she did not inhale their faint fragrance with a certain pleasure, and feel their beauty as none whose souls are not wholly shriveled and hardened can help doing, but the world was, in her estimate, a vale of tears, and it was only by a momentary forgetfulness that she could be moved to smile at anything.

Miss Cynthia, a sharper-edged woman, had formed the habit of crushing everything for its moral, until it lost its sweetness and grew almost odious, as flower-de-luces do when handled roughly. "There's a worm in that leaf, Myrtle. He has rolled it all round him, and hidden himself from sight; but there is a horrid worm in

it, for all it is so young and fresh. There is a worm in every young soul, Myrtle."

"But there is not a worm in every leaf, Miss Cynthia. Look," she said, "all these are open, and you can see all over and under them, and there is nothing there. Are there never any worms in the leaves after they get old and yellow, Miss Cynthia?"

That was a pretty fair hit for a simple creature of fifteen, but perhaps she was not so absolutely simple as one might have thought.

It was on the evening of this same day that they were sitting together. The sweet season was opening, and it seemed as if the whispering of the leaves, the voices of the birds, the softness of the air, the young life stirring in everything, called on all creatures to join the universal chorus of praise that was going up around them.

"What shall we sing this evening?" said Miss Silence.

"Give me one of the books, if you please, Cousin Silence," said Miss Cynthia. "It is Saturday evening. Holy time has begun. Let us prepare our minds for the solemnities of the Sabbath."

She took the book, one well known to the schools and churches of this nineteenth century.

"Book Second. Hymn 44. Long metre. I guess 'Putney' will be as good a tune as any to sing it to."

The trio began,—

"With holy fear, and humble song,"

and got through the first verse together pretty well. Then came the second verse:

*"Far in the deep where darkness dwells,
The land of horror and despair,
Justice has built a dismal hell,
And laid her stores of vengeance there."*

Myrtle's voice trembled a little in singing this verse, and she hardly kept up her part with proper spirit.

"Sing out, Myrtle," said Miss Cynthia, and she struck up the third verse:

*"Eternal plagues and heavy chains,
Tormenting racks and fiery coals,
And darts t' inflict immortal pains,
Dyed in the blood of damned souls."*

This last verse was a duet, and not a trio. Myrtle closed her lips while it was singing, and when it was done threw down the book with a look of anger and disgust. The hunted soul was at bay.

"I won't sing such words," she said, "and I won't stay here to hear them sung. The boys in the streets say just such words as that, and I am not going to sing them. You can't scare me into being good with your cruel hymn-book!"

She could not swear: she was not a boy. She would not cry: she felt proud, obdurate, scornful, outraged. All these images, borrowed from the holy Inquisition, were meant to frighten her—and had simply irritated her. The blow of a weapon that glances off, stinging, but not penetrating, only enrages. It was a moment of fearful danger to her character, to her life itself.

Without heeding the cries of the two women, she sprang up-stairs to her hanging chamber. She threw open the window and looked down into the stream. For one moment her head swam with the sudden, overwhelming, almost maddening thought that came over her,—the impulse to fling herself headlong into those running waters and dare the worst these dreadful women had threatened her with. Something she often thought afterwards it was an invisible hand held her back during that brief moment, and the paroxysm—just such a paroxysm as throws many a young girl into the Thames or the Seine—passed away. She remained looking, in a misty dream, into the water far below. Its murmur recalled the whisper of the ocean waves. And through the depths it seemed as if she saw into that strange, half-remembered world of palm-trees and white robes and dusky faces, and amidst them, looking upon her with ineffable love and tenderness, until all else faded from her sight, the face of a fair woman,—was it hers, so long, long dead, or that dear young mother's who was to her less a recollection than a dream?

Could it have been this vision that soothed her, so that she unclasped her hands and lifted her bowed head as if she had heard a voice whispering to her from that unknown world where she felt there was a spirit watching over her? At any rate, her face was never more serene than when she went to meeting with the two maiden ladies on the following day, Sunday, and heard the Rev. Mr. Stoker preach a sermon from Luke vii. 48, which made both the women shed tears, but especially so excited Miss Cynthia that she was in a kind of half-hysterical condition all the rest of the day.

After that Myrtle was quieter and more docile than ever before. Could it be, Miss Silence thought, that the Rev. Mr. Stoker's sermon had touched her hard heart? However that was, she did not once wear the stormy look with which she had often met the complaining remonstrances Miss Silence constantly directed against all the spontaneous movements of the youthful and naturally vivacious subject of her discipline.

June is an uncertain month, as everybody knows, and there were frosts in many parts of New England in the June of 1859. But there were also beautiful days and nights, and the sun was warm enough to be fast ripening the strawberries,—also certain plants which had been in flower some little time. Some preparations had been going on in a quiet way, so that at the right moment a decisive movement could be made. Myrtle knew how to use her needle, and always had a dexterous way of shaping any article of dress or ornament,—a natural gift not very rare, but sometimes very needful, as it was now.

On the morning of the 15th of June she was wandering by the shores of the river, some distance above The Poplars, when a boat came drifting along by her, evidently broken loose from its fastenings farther up the stream. It was common for such waifs to show themselves after heavy rains had swollen the river. They might

have run the gauntlet of nobody could tell how many farms, and perhaps passed by half a dozen towns and villages in the night, so that, if of common, cheap make, they were retained without scruple, by any who might find them, until the owner called for them, if he cared to take the trouble.

Myrtle took a knife from her pocket, cut down a long, slender sapling, and coaxed the boat to the side of the bank. A pair of old oars lay in the bottom of the boat; she took one of these and paddled it into a little cove, where it could lie hid among the thick alders. Then she went home and busied herself about various little matters more interesting to her than to us.

She was never more amiable and gracious than on this day. But she looked often at the clock, as they remembered afterwards, and studied over a copy of the Farmer's Almanac which was lying in the kitchen, with a somewhat singular interest. The days were nearly at their longest, the weather was mild, the night promised to be clear and bright.

The household was, to all appearance, asleep at the usual early hour. When all seemed quiet, Myrtle lighted her lamp, stood before her mirror, and untied the string that bound her long and beautiful dark hair, which fell in its abundance over her shoulders and below her girdle.

She lifted its heavy masses with one hand, and severed it with a strong pair of scissors, with remorseless exaction of every wandering curl, until she stood so changed by the loss of that outward glory of her womanhood, that she felt as if she had lost herself and found a brother she had never seen before.

"Good-by, Myrtle!" she said, and, opening her window very gently, she flung the shining tresses upon the running water, and watched them for a few moments as they floated down the stream. Then she dressed herself in the character of her imaginary brother, took up the carpet-bag in which she had placed what she chose to carry with her, stole softly down-stairs, and let herself out of a window on the lower floor, shutting it very carefully so as to be sure that nobody should be disturbed.

She glided along, looking all about her, fearing she might be seen by some curious wanderer, and reached the cove where the boat she had concealed was lying. She got into it, and, taking the rude oars, pulled herself into the middle of the swollen stream. Her heart beat so that it seemed to her as if she could hear it between the strokes of the oar. The lights were not all out in the village, and she trembled lest she should see the figure of some watcher looking from the windows in sight of which she would have to pass, and that a glimpse of this boat stealing along at so late an hour might give the clue to the secret of her disappearance, with which the whole region was to be busied in the course of the next day.

Presently she came abreast of The Poplars. The house lay so still, so peaceful,—it would wake to such dismay! The boat slid along beneath her own overhanging chamber.

"No song to-morrow from the Fire-hang-bird's Nest!" she said. So she floated by the slumbering village, the flow of the river carrying her steadily on, and the careful strokes of the oars adding swiftness to her flight.

At last she came to the "Broad Meadows," and knew that she was alone, and felt confident that she had got away unseen. There was nothing, absolutely nothing, to point out which way she had gone. Her boat came from nobody knew where, her disguise had been got together at different times in such a manner as to lead to no suspicion, and not a human being ever had the slightest hint that she had planned and meant to carry out the enterprise which she had now so fortunately begun.

Not till the last straggling house had been long past, not till the meadows were stretched out behind her as well as before her, spreading far off into the distance on each side, did she give way to the sense of wild exultation which was coming fast over her. But then, at last, she drew a long, long breath, and, standing up in the boat, looked all around her. The stars were shining over her head and deep down beneath her. The cool wind came fresh upon her cheek over the long grassy reaches. No living thing moved in all the wide level circle which lay about her. She had passed the Red Sea, and was alone in the Desert.

She threw down her oars, lifted her hands like a priestess, and her strong, sweet voice burst into song,—the song of the Jewish maiden when she went out before the chorus of, women and sang that grand solo, which we all remember in its ancient words, and in their modern paraphrase,

*"Sound the loud timbrel o'er Egypt's dark sea!
Jehovah hath triumphed, his people are free!"*

The poor child's repertory was limited to songs of the religious sort mainly, but there was a choice among these. Her aunt's favorites, beside "China," already mentioned, were "Bangor," which the worthy old New England clergyman so admired that he actually had the down-east city called after it, and "Windsor," and "Funeral Hymn." But Myrtle was in no mood for these. She let off her ecstasy in "Balerna," and "Arlington," and "Silver Street," and at last in that most riotous of devotional hymns, which sounds as if it had been composed by a saint who had a cellar under his chapel,—"Jordan." So she let her wild spirits run loose; and then a tenderer feeling stole over her, and she sang herself into a more tranquil mood with the gentle music of "Dundee." And again she pulled quietly and steadily at her oars, until she reached the wooded region through which the river winds after leaving the "Broad Meadows."

The tumult in her blood was calmed, yet every sense and faculty was awake to the manifold delicious, mysterious impressions of that wonderful June night. The stars were shining between the tall trees, as if all the jewels of heaven had been set in one belt of midnight sky. The voices of the wind, as they sighed through the pines, seemed like the breath of a sleeping child, and then, as they lisped from the soft, tender leaves of beeches and maples, like the half-articulate whisper of the mother hushing all the intrusive sounds that might awaken it. Then came the pulsating monotone of the frogs from a far-off pool, the harsh cry of an owl from an old tree that overhung it, the splash of a mink or musquash, and nearer by, the light step of a woodchuck, as he cantered off in his quiet way to his hole in the nearest bank. The laurels were just coming into bloom,—the yellow lilies, earlier than their fairer sisters, pushing their golden cups through the water, not content, like those, to float on the surface of the stream that fed them, emblems of showy wealth, and, like that, drawing all manner of insects to feed upon them. The miniature forests of ferns came down to the edge of the stream, their tall, bending plumes swaying in the night breeze. Sweet odors from oozing pines, from dewy flowers,

from spicy leaves, stole out of the tangled thickets, and made the whole scene more dream-like with their faint, mingled suggestions.

By and by the banks of the river grew lower and marshy, and in place of the larger forest-trees which had covered them stood slender tamaracks, sickly, mossy, looking as if they had been moon-struck and were out of their wits, their tufts of leaves staring off every way from their spindling branches. The winds came cool and damp out of the hiding-places among their dark recesses. The country people about here called this region the "Witches' Hollow," and had many stories about the strange things that happened there. The Indians used to hold their "powwows," or magical incantations, upon a broad mound which rose out of the common level, and where some old hemlocks and beeches formed a dark grove, which served them as a temple for their demon-worship. There were many legends of more recent date connected with this spot, some of them hard to account for, and no superstitious or highly imaginative person would have cared to pass through it alone in the dead of the night, as this young girl was doing.

She knew nothing of all these fables and fancies. Her own singular experiences in this enchanted region were certainly not suggested by anything she had heard, and may be considered psychologically curious by those who would not think of attributing any mystical meaning to them. We are at liberty to report many things without attempting to explain them, or committing ourselves to anything beyond the fact that so they were told us. The reader will find Myrtle's "Vision," as written out at a later period from her recollections, at the end of this chapter.

The night was passing, and she meant to be as far away as possible from the village she had left, before morning. But the boat, like all craft on country rivers, was leaky, and she had to work until tired, bailing it out, before she was ready for another long effort. The old tin measure, which was all she had to bail with, leaked as badly as the boat, and her task was a tedious one. At last she got it in good trim, and sat down to her oars with the determination to pull steadily as long as her strength would hold out.

Hour after hour she kept at her work, sweeping round the long bends where the river was hollowing out one bank and building new shore on the opposite one, so as gradually to shift its channel; by clipper-shaped islands, sharp at the bows looking up stream, sharp too at the stern, looking down,—their shape solving the navigator's problem of least resistance, as a certain young artist had pointed out; by slumbering villages; by outlying farm-houses; between cornfields where the young plants were springing up in little thready fountains; in the midst of stumps where the forest had just been felled; through patches, where the fire of the last great autumnal drought had turned all the green beauty of the woods into brown desolation; and again amidst broad expanses of open meadow stretching as far as the eye could reach in the uncertain light. A faint yellow tinge was beginning to stain the eastern horizon. Her boat was floating quietly along, for she had at last taken in her oars, and she was now almost tired out with toil and excitement. She rested her head upon her hands, and felt her eyelids closing in spite of herself. And now there stole upon her ear a low, gentle, distant murmur, so soft that it seemed almost to mingle with the sound of her own breathing, but so steady, so uniform, that it soothed her to sleep, as if it were the old cradle-song the ocean used to sing to her, or the lullaby of her fair young mother.

So she glided along, slowly, slowly, down the course of the winding river, and the flushing dawn kindled around her as she slumbered, and the low, gentle murmur grew louder and louder, but still she slept, dreaming of the murmuring ocean.

APPENDIX TO CHAPTER VIII. MYRTLE HAZARD'S STATEMENT.

"A Vision seen by me, Myrtle Hazard, aged fifteen, on the night of June 15, 1859. Written out at the request of a friend from my recollections.

"The place where I saw these sights is called, as I have been told since, Witches' Hollow. I had never been there before, and did not know that it was called so, or anything about it.

"The first strange thing that I noticed was on coming near a kind of hill or mound that rose out of the low meadows. I saw a burning cross lying on the slope of that mound. It burned with a pale greenish light, and did not waste, though I watched it for a long time, as the boat I was in moved slowly with the current and I had stopped rowing.

"I know that my eyes were open, and I was awake while I was looking at this cross. I think my eyes were open when I saw these other appearances, but I felt just as if I were dreaming while awake.

"I heard a faint rustling sound, and on looking up I saw many figures moving around me, and I seemed to see myself among them as if I were outside of myself.

"The figures did not walk, but slid or glided with an even movement, as if without any effort. They made many gestures, and seemed to speak, but I cannot tell whether I heard what they said, or knew its meaning in some other way.

"I knew the faces of some of these figures. They were the same I have seen in portraits, as long as I can remember, at the old house where I was brought up, called The Poplars. I saw my father and my mother as they look in the two small pictures; also my grandmother, and her father and mother and grandfather, and one other person, who lived a great while ago. All of these have been long dead, and the longer they had been dead the less like substance they looked and the more like shadows, so that the oldest was like one's breath of a frosty morning, but shaped like the living figure.

"There was no motion of their breasts, and their lips seemed to be moving as if they were saying, Breath! Breath! Breath! I thought they wanted to breathe the air of this world again in my shape, which I seemed to

see as it were empty of myself and of these other selves, like a sponge that has water pressed out of it.

"Presently it seemed to me that I returned to myself, and then those others became part of me by being taken up, one by one, and so lost in my own life.

"My father and mother came up, hand in hand, looking more real than any of the rest. Their figures vanished, and they seemed to have become a part of me; for I felt all at once the longing to live over the life they had led, on the sea and in strange countries.

"Another figure was just like the one we called the Major, who was a very strong, hearty-looking man, and who is said to have drank hard sometimes, though there is nothing about it on his tombstone, which I used to read in the graveyard. It seemed to me that there was something about his life that I did not want to make a part of mine, but that there was some right he had in me through my being of his blood, and so his health and his strength went all through me, and I was always to have what was left of his life in that shadow-like shape, forming a portion of mine.

"So in the same way with the shape answering to the portrait of that famous beauty who was the wife of my great-grandfather, and used to be called the Pride of the County.

"And so too with another figure which had the face of that portrait marked on the back, Ruth Bradford, who married one of my ancestors, and was before the court, as I have heard, in the time of the witchcraft trials.

"There was with the rest a dark, wild-looking woman, with a head-dress of feathers. She kept as it were in shadow, but I saw something of my own features in her face.

"It was on my mind very strongly that the shape of that woman of our blood who was burned long ago by the Papists came very close to me, and was in some way made one with mine, and that I feel her presence with me since, as if she lived again in me; but not always,—only at times,—and then I feel borne up as if I could do anything in the world. I had a feeling as if she were my guardian and protector.

"It seems to me that these, and more, whom I have not mentioned, do really live over some part of their past lives in my life. I do not understand it all, and perhaps it can be accounted for in some way I have not thought of. I write it down as nearly as I can give it from memory, by request, and if it is printed at this time had rather have all the real names withheld.

"MYRTLE HAZARD." NOTE BY THE FRIEND.

"This statement must be accounted for in some way, or pass into the category of the supernatural. Probably it was one of those intuitions, with objective projection, which sometimes come to imaginative young persons, especially girls, in certain exalted nervous conditions. The study of the portraits, with the knowledge of some parts of the history of the persons they represented, and the consciousness of instincts inherited in all probability from these same ancestors, formed the basis of Myrtle's 'Vision.' The lives of our progenitors are, as we know, reproduced in different proportions in ourselves. Whether they as individuals have any consciousness of it, is another matter. It is possible that they do get a second as it were fractional life in us. It might seem that many of those whose blood flows in our veins struggle for the mastery, and by and by one or more get the predominance, so that we grow to be like father, or mother, or remoter ancestor, or two or more are blended in us, not to the exclusion, however, it must be understood, of a special personality of our own, about which these others are grouped. Independently of any possible scientific value, this 'Vision' serves to illustrate the above-mentioned fact of common experience, which is not sufficiently weighed by most moralists.

"How much it may be granted to certain young persons to see, not in virtue of their intellectual gifts, but through those direct channels which worldly wisdom may possibly close to the luminous influx, each reader must determine for himself by his own standards of faith and evidence.

"One statement of the narrative admits of a simple natural explanation, which does not allow the lovers of the marvellous to class it with the quasi-miraculous appearance seen by Colonel Gardiner, and given in full by Dr. Doddridge in his Life of that remarkable Christian soldier. Decaying wood is often phosphorescent, as many readers must have seen for themselves. The country people are familiar with the sight of it in wild timber-land, and have given it the name of 'Fox-fire.' Two trunks of trees in this state, lying across each other, will account for the fact observed, and vindicate the truth of the young girl's story without requiring us to suppose any exceptional occurrence outside of natural laws."

CHAPTER IX. MR. CLEMENT LINDSAY RECEIVES A LETTER, AND BEGINS HIS ANSWER.

It was already morning when a young man living in the town of Alderbank, after lying awake for an hour thinking the unutterable thoughts that nineteen years of life bring to the sleeping and waking dreams of young people, rose from his bed, and, half dressing himself, sat down at his desk, from which he took a letter, which he opened and read. It was written in a delicate, though hardly formed female hand, and crossed like a checker-board, as is usual with these redundant manuscripts. The letter was as follows:

OXBOW VILLAGE, June 13, 1859.

MY DEAREST CLEMENT,—You was so good to write me such a sweet little bit of a letter,—only, dear, you never seem to be in quite so good spirits as you used to be. I wish your Susie was with you to cheer you up; but no, she must be patient, and you must be patient too, for you are so ambitious! I have heard you say so many times that nobody could be a great artist without passing years and years at work, and growing pale and lean with thinking so hard. You won't grow pale and lean, I hope; for I do so love to see that pretty color

in your cheeks you have always had ever since I have known you; and besides, I do not believe you will have to work so very hard to do something great,—you have so much genius, and people of genius do such beautiful things with so little trouble. You remember those beautiful lines out of our newspaper I sent you? Well, Mr. Hopkins told me he wrote those lines in one evening without stopping! I wish you could see Mr. Hopkins,—he is a very talented person. I cut out this little piece about him from the paper on purpose to show you,—for genius loves genius,—and you would like to hear him read his own poetry,—he reads it beautifully. Please send this piece from the paper back, as I want to put it in my scrapbook, under his autograph:—

“Our young townsman, Mr. Gifted Hopkins, has proved himself worthy of the name he bears. His poetical effusions are equally creditable to his head and his heart, displaying the highest order of genius and powers of imagination and fancy hardly second to any writer of the age. He is destined to make a great sensation in the world of letters.”

Mrs. Hopkins is the same good soul she always was. She is very proud of her son, as is natural, and keeps a copy of everything he writes. I believe she cries over them every time she reads them. You don't know how I take to little Sossy and Minthy, those two twins I have written to you about before. Poor little creatures,—what a cruel thing it was in their father and mother not to take care of them! What do you think? Old bachelor Gridley lets them come up into his room, and builds forts and castles for them with his big books! “The world's coming to an end,” Mrs. Hopkins said the first time he did so. He looks so savage with that scowl of his, and talks so gruff when he is scolding at things in general, that nobody would have believed he would have let such little things come anywhere near him. But he seems to be growing kind to all of us and everybody. I saw him talking to the Fire-hang-bird the other day. You know who the Fire-hang-bird is, don't you? Myrtle Hazard her name is. I wish you could see her. I don't know as I do, though. You would want to make a statue of her, or a painting, I know. She is so handsome that all the young men stand round to see her come out of meeting. Some say that Lawyer Bradshaw is after her; but my! he is ten years older than she is. She is nothing but a girl, though she looks as if she was eighteen. She lives up at a place called The Poplars, with an old woman that is her aunt or something, and nobody seems to be much acquainted with her except Olive Eveleth, who is the minister's daughter at Saint Bartholomew's Church. She never has beaux round her, as some young girls do—they say that she is not happy with her aunt and another woman that stays with her, and that is the reason she keeps so much to herself. The minister came to see me the other day,—Mr. Stoker his name is. I was all alone, and it frightened me, for he looks, oh, so solemn on Sundays! But he called me “My dear,” and did n't say anything horrid, you know, about my being such a dreadful, dreadful sinner, as I have heard of his saying to some people,—but he looked very kindly at me, and took my hand, and laid his hand on my shoulder like a brother, and hoped I would come and see him in his study. I suppose I must go, but I don't want to. I don't seem to like him exactly.

I hope you love me as well as ever you did. I can't help feeling sometimes as if you was growing away from me,—you know what I mean,—getting to be too great a person for such a small person as I am.

I know I can't always understand you when you talk about art, and that you know a great deal too much for such a simple girl as I am. Oh, if I thought I could never make you happy!... There, now! I am almost ashamed to send this paper so spotted. Gifted Hopkins wrote some beautiful verses one day on “A Maiden Weeping.” He compared the tears falling from her eyes to the drops of dew which one often sees upon the flowers in the morning. Is n't it a pretty thought?

I wish I loved art as well as I do poetry; but I am afraid I have not so much taste as some girls have. You remember how I liked that picture in the illustrated magazine, and you said it was horrid. I have been afraid since to like almost anything, for fear you should tell me some time or other it was horrid. Don't you think I shall ever learn to know what is nice from what is n't?

Oh, dear Clement, I wish you would do one thing to please me. Don't say no, for you can do everything you try to,—I am sure you can. I want you to write me some poetry,—just three or four little verses TO SUZIE. Oh, I should feel so proud to have some lines written all on purpose for me. Mr. Hopkins wrote some the other day, and printed them in the paper, “To M—e.” I believe he meant them for Myrtle,—the first and last letter of her name, you see, “M” and “e.”

Your letter was a dear one, only so short! I wish you would tell me all about what you are doing at Alderbank. Have you made that model of Innocence that is to have my forehead, and hair parted like mine! Make it pretty, do, that is a darling.

Now don't make a face at my letter. It is n't a very good one, I know; but your poor little Susie does the best she can, and she loves you so much!

Now do be nice and write me one little bit of a mite of a poem,—it will make me just as happy!

I am very well, and as happy as I can be when you are away.

Your affectionate SUSIE.

(Directed to Mr. Clement Lindsay, Alderbank.)

The envelope of this letter was unbroken, as was before said, when the young man took it from his desk. He did not tear it with the hot impatience of some lovers, but cut it open neatly, slowly, one would say sadly. He read it with an air of singular effort, and yet with a certain tenderness. When he had finished it, the drops were thick on his forehead; he groaned and put his hands to his face, which was burning red.

This was what the impulse of boyhood, years ago, had brought him to! He was a stately youth, of noble bearing, of high purpose, of fastidious taste; and, if his broad forehead, his clear, large blue eyes, his commanding features, his lips, firm, yet plastic to every change of thought and feeling, were not an empty mask, might not improbably claim that Promethean quality of which the girl's letter had spoken,—the strange, divine, dread gift of genius.

This poor, simple, innocent, trusting creature, so utterly incapable of coming into any true relation with his aspiring mind, his large and strong emotions,—this mere child, all simplicity and goodness, but trivial and shallow as the little babbling brooklet that ran by his window to the river, to lose its insignificant being in the swift torrent he heard rushing over the rocks,—this pretty idol for a weak and kindly and easily satisfied

worshipper, was to be enthroned as the queen of his affections, to be adopted as the companion of his labors! The boy, led by the commonest instinct, the mere attraction of biped to its female, which accident had favored, had thrown away the dearest possession of manhood,—liberty,—and this bauble was to be his lifelong reward! And yet not a bauble either, for a pleasing person and a gentle and sweet nature, which had once made her seem to him the very paragon of loveliness, were still hers. Alas! her simple words were true, —he had grown away from her. Her only fault was that she had not grown with him, and surely he could not reproach her with that.

“No,” he said to himself, “I will never leave her so long as her heart clings to me. I have been rash, but she shall not pay the forfeit. And if I may think of myself, my life need not be wretched because she cannot share all my being with me. The common human qualities are more than all exceptional gifts. She has a woman's heart; and what talent of mine is to be named by the love a true woman can offer in exchange for these divided and cold affections? If it had pleased God to mate me with one more equal in other ways, who could share my thoughts, who could kindle my inspiration, who had wings to rise into the air with me as well as feet to creep by my side upon the earth,—what cannot such a woman do for a man!

“What! cast away the flower I took in the bud because it does not show as I hoped it would when it opened? I will stand by my word; I will be all as a man that I promised as a boy. Thank God, she is true and pure and sweet. My nest will be a peaceful one; but I must take wing alone,—alone.”

He drew one long sigh, and the cloud passed from his countenance. He must answer that letter now, at once. There were reasons, he thought, which made it important. And so, with the cheerfulness which it was kind and becoming to show, so far as possible, and yet with a little excitement on one particular point, which was the cause of his writing so promptly, he began his answer.

ALDERBANK, Thursday morning, June 16, 1859.

MY DEAR SUSIE,—I have just been reading your pleasant letter; and if I do not send you the poem you ask for so eloquently, I will give you a little bit of advice, which will do just as well,—won't it, my dear? I was interested in your account of various things going on at Oxbow Village. I am very glad you find young Mr. Hopkins so agreeable a friend. His poetry is better than some which I see printed in the village papers, and seems generally unexceptionable in its subjects and tone. I do not believe he is a dangerous companion, though the habit of writing verse does not always improve the character. I think I have seen it make more than one of my acquaintances idle, conceited, sentimental, and frivolous,—perhaps it found them so already. Don't make too much of his talent, and particularly don't let him think that because he can write verses he has nothing else to do in this world. That is for his benefit, dear, and you must skilfully apply it.

Now about yourself. My dear Susie, there was something in your letter that did not please me. You speak of a visit from the Rev. Mr. Stoker, and of his kind, brotherly treatment, his cordiality of behavior, and his asking you to visit him in his study. I am very glad to hear you say that you “don't seem to like him.” He is very familiar, it seems to me, for so new an acquaintance. What business had he to be laying his hand on your shoulder? I should like to see him try these free-and-easy ways in my presence! He would not have taken that liberty, my dear! No, he was alone with you, and thought it safe to be disrespectfully familiar. I want you to maintain your dignity always with such persons, and I beg you not to go to the study of this clergyman, unless some older friend goes with you on every occasion, and sits through the visit. I must speak plainly to you, my dear, as I have a right to. If the minister has anything of importance to say, let it come through the lips of some mature person. It may lose something of the fervor with which it would have been delivered at first hand, but the great rules of Christian life are not so dependent on the particular individual who speaks them, that you must go to this or that young man to find out what they are. If to any man, I should prefer the old gentleman whom you have mentioned in your letters, Father Pemberton. You understand me, my dear girl, and the subject is not grateful. You know how truly I am interested in all that relates to you,—that I regard you with an affection which—

HELP! HELP! HELP!

A cry as of a young person's voice was heard faintly, coming from the direction of the river. Something in the tone of it struck to his heart, and he sprang as if he had been stabbed. He flung open his chamber window and leaped from it to the ground. He ran straight to the bank of the river by the side of which the village of Alderbank was built, a little farther down the stream than the house in which he was living.

Everybody that travels in that region knows the beautiful falls which break the course of the river just above the village; narrow and swift, and surrounded by rocks of such picturesque forms that they are sought and admired by tourists. The stream was now swollen, and rushed in a deep and rapid current over the ledges, through the rocky straits, plunging at last in tumult and foam, with loud, continuous roar, into the depths below the cliff from which it tumbled.

A short distance above the fall there projected from the water a rock which had, by parsimonious saving during a long course of years, hoarded a little soil, out of which a small tuft of bushes struggled to support a decent vegetable existence. The high waters had nearly submerged it, but a few slender twigs were seen above their surface.

A skiff was lying close to this rock, between it and the brink of the fall, which was but a few rods farther down. In the skiff was a youth of fourteen or fifteen years, holding by the slender twigs, the boat dragging at them all the time, and threatening to tear them away and go over the fall. It was not likely that the boy would come to shore alive if it did. There were stories, it is true, that the Indians used to shoot the fall in their canoes with safety; but everybody knew that at least three persons had been lost by going over it since the town was settled; and more than one dead body had been found floating far down the river, with bruises and fractured bones, as if it had taken the same fatal plunge.

There was no time to lose. Clement ran a little way up the river-bank, flung off his shoes, and sprang from the bank as far as he could leap into the water. The current swept him toward the fall, but he worked nearer and nearer the middle of the stream. He was making for the rock, thinking he could plant his feet upon it and at the worst hold the boat until he could summon other help by shouting. He had barely got his feet upon the

rock, when the twigs by which the boy was holding gave way. He seized the boat, but it dragged him from his uncertain footing, and with a desperate effort he clambered over its side and found himself its second doomed passenger.

There was but an instant for thought.

"Sit still," he said, "and, just as we go over, put your arms round me under mine, and don't let go for your life!"

He caught up the single oar, and with a few sharp paddle-strokes brought the skiff into the blackest centre of the current, where it was deepest, and would plunge them into the deepest pool.

"Hold your breath! God save us! Now!"

They rose, as if with one will, and stood for an instant, the arms of the younger closely embracing the other as he had directed.

A sliding away from beneath them of the floor on which they stood, as the drop fails under the feet of a felon. A great rush of air, and a mighty, awful, stunning roar,—an involuntary gasp, a choking flood of water that came bellowing after them, and hammered them down into the black depths so far that the young man, though used to diving and swimming long distances underwater, had well-nigh yielded to the fearful need of air, and sucked in his death in so doing.

The boat came up to the surface, broken in twain, splintered, a load of firewood for those who raked the river lower down. It had turned crosswise, and struck the rocks. A cap rose to the surface, such a one as boys wear,—the same that boy had on. And then—after how many seconds by the watch cannot be known, but after a time long enough, as the young man remembered it, to live his whole life over in memory—Clement Lindsay felt the blessed air against his face, and, taking a great breath, came to his full consciousness. The arms of the boy were still locked around him as in the embrace of death. A few strokes brought him to the shore, dragging his senseless burden with him.

He unclasped the arms that held him so closely encircled, and laid the slender form of the youth he had almost died to save gently upon the grass. It was as if dead. He loosed the ribbon that was round the neck, he tore open the checked shirt—

The story of Myrtle Hazard's sex was told; but she was deaf to his cry of surprise, and no blush came to her cold cheek. Not too late, perhaps, to save her,—not too late to try to save her, at least!

He placed his lips to hers, and filled her breast with the air from his own panting chest. Again and again he renewed these efforts, hoping, doubting, despairing,—once more hoping, and at last, when he had almost ceased to hope, she gasped, she breathed, she moaned, and rolled her eyes wildly round her, she was born again into this mortal life.

He caught her up in his arms, bore her to the house, laid her on a sofa, and, having spent his strength in this last effort, reeled and fell, and lay as one over whom have just been whispered the words,

"He is gone."

CHAPTER X. MR. CLEMENT LINDSAY FINISHES HIS LETTER—WHAT CAME OF IT.

The first thing Clement Lindsay did, when he was fairly himself again, was to finish his letter to Susan Posey. He took it up where it left off, "with an affection which—" and drew a long dash, as above. It was with great effort he wrote the lines which follow, for he had got an ugly blow on the forehead, and his eyes were "in mourning," as the gentlemen of the ring say, with unbecoming levity.

"An adventure! Just as I was writing these last words, I heard the cry of a young person, as it sounded, for help. I ran to the river and jumped in, and had the pleasure of saving a life. I got some bruises which have laid me up for a day or two; but I am getting over them very well now, and you need not worry about me at all. I will write again soon; so pray do not fret yourself, for I have had no hurt that will trouble me for any time."

Of course, poor Susan Posey burst out crying, and cried as if her heart would break. Oh dear! Oh dear! what should she do! He was almost killed, she knew he was, or he had broken some of his bones. Oh dear! Oh dear! She would go and see him, there!—she must and would. He would die, she knew he would,—and so on.

It was a singular testimony to the evident presence of a human element in Mr. Bytes Gridley that the poor girl, on her extreme trouble, should think of him as a counsellor. But the wonderful relenting kind of look on his grave features as he watched the little twins tumbling about his great books, and certain marks of real sympathy he had sometimes shown for her in her lesser woes, encouraged her, and she went straight to his study, letter in hand. She gave a timid knock at the door of that awful sanctuary.

"Come in, Susan Posey," was its answer, in a pleasant tone. The old master knew her light step and the maidenly touch of her small hand on the panel.

What a sight! 'there were Sossy and Minthy intrenched in a Sebastopol which must have cost a good half-hour's engineering, and the terrible Bytes Gridley besieging the fortress with hostile manifestations of the most singular character. He was actually discharging a large sugar-plum at the postern gate, which having been left unclosed, the missile would certainly have reached one of the garrison, when he paused as the door opened, and the great round spectacles and four wide, staring infants' eyes were levelled at Miss Susan Posey.

She almost forgot her errand, grave as it was, in astonishment at this manifestation. The old man had emptied his shelves of half their folios to build up the fort, in the midst of which he had seated the two

delighted and uproarious babes. There was his Cave's "Historia Literaria," and Sir Walter Raleigh's "History of the World," and a whole array of Christian Fathers, and Plato, and Aristotle, and Stanley's book of Philosophers, with Effigies, and the Junta Galen, and the Hippocrates of Foesus, and Walton's Polyglot, supported by Father Sanchez on one side and Fox's "Acts and Monuments" on the other,—an odd collection, as folios from lower shelves are apt to be.

The besieger discharged his sugar-plum, which was so well aimed that it fell directly into the lap of Minthy, who acted with it as if the garrison had been on short rations for some time.

He saw at once, on looking up, that there was trouble. "What now, Susan Posey, my dear?"

"O Mr. Gridley, I am in such trouble! What shall I do? What shall I do?"

She turned back the name and the bottom of the letter in such a way that Mr. Gridley could read nothing but the few lines relating their adventure.

"So Mr. Clement Lindsay has been saving a life, has he, and got some hard knocks doing it, hey, Susan Posey? Well, well, Clement Lindsay is a brave fellow, and there is no need of hiding his name, my child. Let me take the letter again a moment, Susan Posey. What is the date of it? June 16th. Yes,—yes,—yes!"

He read the paragraph over again, and the signature too, if he wanted to; for poor Susan had found that her secret was hardly opaque to those round spectacles and the eyes behind them, and, with a not unbecoming blush, opened the fold of the letter before she handed it back.

"No, no, Susan Posey. He will come all right. His writing is steady, and if he had broken any bones he would have mentioned it. It's a thing his wife will be proud of, if he is ever married, Susan Posey," (blushes,) "and his children too," (more blushes running up to her back hair,) "and there 's nothing to be worried about. But I'll tell you what, my dear, I've got a little business that calls me down the river tomorrow, and I shouldn't mind stopping an hour at Alderbank and seeing how our young friend Clement Lindsay is; and then, if he was going to have a long time of it, why we could manage it somehow that any friend who had any special interest in him could visit him, just to while away the tiresomeness of being sick. That's it, exactly. I'll stop at Alderbank, Susan Posey. Just clear up these two children for me, will you, my dear? Isosceles, come now,—that 's a good child. Helminthia, carry these sugar-plums down—stairs for me, and take good care of them, mind!"

It was a case of gross bribery and corruption, for the fortress was immediately, evacuated on the receipt of a large paper of red and white comfits, and the garrison marched down—stairs much like conquerors, under the lead of the young lady, who was greatly eased in mind by the kind words and the promise of Mr. Byles Gridley.

But he, in the mean time, was busy with thoughts she did not suspect. "A young person," he said to himself,—*"why a young person? Why not say a boy, if it was a boy? What if this should be our handsome truant?—June 16th, Thursday morning!"*—About time to get to Alderbank by the river, I should think. None of the boats missing? What then? She may have made a raft, or picked up some stray skiff. Who knows? And then got shipwrecked, very likely. There are rapids and falls farther along the river. It will do no harm to go down there and look about, at any rate."

On Saturday morning, therefore, Mr. Byles Gridley set forth to procure a conveyance to make a visit, as he said, down the river, and perhaps be gone a day or two. He went to a stable in the village, and asked if they could let him have a horse.

The man looked at him with that air of native superiority which the companionship of the generous steed confers on all his associates, down to the lightest weight among the jockeys.

"Wal, I hain't got nothin' in the shape of a h'oss, Mr. Gridley. I've got a mare I s'pose I could let y' have."

"Oh, very well," said the old master, with a twinkle in his eye as sly as the other's wink,—he had parried a few jokes in his time,—*"they charge half-price for mares always, I believe."*

That was a new view of the subject. It rather took the wind out of the stable-keeper, and set a most ammoniacal fellow, who stood playing with a currycomb, grinning at his expense. But he rallied presently.

"Wal, I b'lieve they do for some mares, when they let 'em to some folks; but this here ain't one o' them mares, and you ain't one o' them folks. All my cattle's out but this critter, 'n' I don't jestly want to have nobody drive her that ain't pretty car'ful,—she's faast, I tell ye,—don't want no whip.—How fur d' d y' want t' go?"

Mr. Gridley was quite serious now, and let the man know that he wanted the mare and a light covered wagon, at once, to be gone for one or two days, and would waive the question of sex in the matter of payment.

Alderbank was about twenty miles down the river by the road. On arriving there, he inquired for the house where a Mr. Lindsay lived. There was only one Lindsay family in town,—he must mean Dr. William Lindsay. His house was up there a little way above the village, lying a few rods back from the river.

He found the house without difficulty, and knocked at the door. A motherly-looking woman opened it immediately, and held her hand up as if to ask him to speak and move softly.

"Does Mr. Clement Lindsay live here?"

"He is staying here for the present. He is a nephew of ours. He is in his bed from an injury."

"Nothing very serious, I hope?"

"A bruise on his head,—not very bad, but the doctor was afraid of erysipelas. Seems to be doing well enough now."

"Is there a young person here, a stranger?"

"There is such a young person here. Do you come with any authority to make inquiries?"

"I do. A young friend of mine is missing, and I thought it possible I might learn something here about it. Can I see this young person?"

The matron came nearer to Byles Gridley, and said: "This person is a young woman disguised as a boy. She

was rescued by my nephew at the risk of his life, and she has been delirious ever since she has recovered her consciousness. She was almost too far gone to be resuscitated, but Clement put his mouth to hers and kept her breathing until her own breath returned and she gradually came to."

"Is she violent in her delirium?"

"Not now. No; she is quiet enough, but wandering,—wants to know where she is, and whose the strange faces are,—mine and my husband's,—that 's Dr. Lindsay,—and one of my daughters, who has watched with her."

"If that is so, I think I had better see her. If she is the person I suspect her to be, she will know me; and a familiar face may bring back her recollections and put a stop to her wanderings. If she does not know me, I will not stay talking with her. I think she will, if she is the one I am seeking after. There is no harm in trying."

Mrs. Lindsay took a good long look at the old man. There was no mistaking his grave, honest, sturdy, wrinkled, scholarly face. His voice was assured and sincere in its tones. His decent black coat was just what a scholar's should be,—old, not untidy, a little shiny at the elbows with much leaning on his study-table, but neatly bound at the cuffs, where worthy Mrs. Hopkins had detected signs of fatigue and come to the rescue. His very hat looked honest as it lay on the table. It had moulded itself to a broad, noble head, that held nothing but what was true and fair, with a few harmless crotchets just to fill in with, and it seemed to know it.

The good woman gave him her confidence at once. "Is the person you are seeking a niece or other relative of yours?"

(Why did not she ask if the girl was his daughter? What is that look of paternity and of maternity which observing and experienced mothers and old nurses know so well in men and in women?)

"No, she is not a relative. But I am acting for those who are."

"Wait a moment and I will go and see that the room is all right."

She returned presently. "Follow me softly, if you please. She is asleep,—so beautiful,—so innocent!"

Byles Gridley, Master of Arts, retired professor, more than sixty years old, childless, loveless, stranded in a lonely study strewn with wrecks of the world's thought, his work in life finished, his one literary venture gone down with all it held, with nobody to care for him but accidental acquaintances, moved gently to the side of the bed and looked upon the pallid, still features of Myrtle Hazard. He strove hard against a strange feeling that was taking hold of him, that was making his face act rebelliously, and troubling his eyes with sudden films. He made a brief stand against this invasion. "A weakness,—a weakness!" he said to himself. "What does all this mean? Never such a thing for these twenty years! Poor child! poor child!—Excuse me, madam," he said, after a little interval, but for what offence he did not mention. A great deal might be forgiven, even to a man as old as Byles Gridley, looking upon such a face,—so lovely, yet so marked with the traces of recent suffering, and even now showing by its changes that she was struggling in some fearful dream. Her forehead contracted, she started with a slight convulsive movement, and then her lips parted, and the cry escaped from them,—how heart-breaking when there is none to answer it,—"Mother!"

Gone back again through all the weary, chilling years of her girlhood to that hardly remembered morning of her life when the cry she uttered was answered by the light of loving eyes, the kiss of clinging lips, the embrace of caressing arms!

"It is better to wake her," Mrs. Lindsay said; "she is having a troubled dream. Wake up, my child, here is a friend waiting to see you."

She laid her hand very gently on Myrtle's forehead. Myrtle opened her eyes, but they were vacant as yet.

"Are we dead?" she said. "Where am I? This is n't heaven—there are no angels—Oh, no, no, no! don't send me to the other place—fifteen years,—only fifteen years old—no father, no mother—nobody loved me. Was it wicked in me to live?" Her whole theological training was condensed in that last brief question.

The old man took her hand and looked her in the face, with a wonderful tenderness in his squared features. "Wicked to live, my dear? No indeed! Here! look at me, my child; don't you know your old friend Byles Gridley?"

She was awake now. The sight of a familiar countenance brought back a natural train of thought. But her recollection passed over everything that had happened since Thursday morning.

"Where is the boat I was in?" she said. "I have just been in the water, and I was dreaming that I was drowned. Oh! Mr. Gridley, is that you? Did you pull me out of the water?"

"No, my dear, but you are out of it, and safe and sound: that is the main point. How do you feel now you are awake?"

She yawned, and stretched her arms and looked round, but did not answer at first. This was all natural, and a sign that she was coming right. She looked down at her dress. It was not inappropriate to her sex, being a loose gown that belonged to one of the girls in the house.

"I feel pretty well," she answered, "but a little confused. My boat will be gone, if you don't run and stop it now. How did you get me into dry clothes so quick?"

Master Byles Gridley found himself suddenly possessed by a large and luminous idea of the state of things, and made up his mind in a moment as to what he must do. There was no time to be lost. Every day, every hour, of Myrtle's absence was not only a source of anxiety and a cause of useless searching but it gave room for inventive fancies to imagine evil. It was better to run some risk of injury to health, than to have her absence prolonged another day.

"Has this adventure been told about in the village, Mrs. Lindsay?"

"No, we thought it best to wait until she could tell her own story, expecting her return to consciousness every hour, and thinking there might be some reason for her disguise which it would be kinder to keep quiet about."

"You know nothing about her, then?"

"Not a word. It was a great question whether to tell the story and make inquiries; but she was safe, and

could hardly bear disturbance, and, my dear sir, it seemed too probable that there was some sad story behind this escape in disguise, and that the poor child might need shelter and retirement. We meant to do as well as we could for her."

"All right, Mrs. Lindsay. You do not know who she is, then?"

"No, sir, and perhaps it is as well that I should not know. Then I shall not have to answer any questions about it."

"Very good, madam,—just as it should be. And your family, are they as discreet as yourself?"

"Not one word of the whole story has been or will be told by any one of us. That was agreed upon among us."

"Now then, madam. My name, as you heard me say, is Byles Gridley. Your husband will know it, perhaps; at any rate I will wait until he comes back. This child is of good family and of good name. I know her well, and mean, with your kind help, to save her from the consequences which her foolish adventure might have brought upon her. Before the bells ring for meeting to-morrow morning this girl must be in her bed at her home, at Oxbow Village, and we must keep her story to ourselves as far as may be. It will all blow over, if we do. The gossips will only know that she was upset in the river and cared for by some good people,—good people and sensible people too, Mrs. Lindsay. And now I want to see the young man that rescued my friend here,—Clement Lindsay, I have heard his name before."

Clement was not a beauty for the moment, but Master Gridley saw well enough that he was a young man of the right kind. He knew them at sight, fellows with lime enough in their bones and iron enough in their blood to begin with,—shapely, large-nerved, firm-fibred and fine-fibred, with well-spread bases to their heads for the ground-floor of the faculties, and well-vaulted arches for the upper range of apprehensions and combinations. "Plenty of basements," he used to say, "without attics and skylights. Plenty of skylights without rooms enough and space enough below." But here was "a three-story brain," he said to himself as he looked at it, and this was the youth who was to find his complement in our pretty little Susan Posey! His judgment may seem to have been hasty, but he took the measure of young men of twenty at sight from long and sagacious observation, as Nurse Byloe knew the "heft" of a baby the moment she fixed her old eyes on it.

Clement was well acquainted with Byles Gridley, though he had never seen him, for Susan's letters had had a good deal to say about him of late. It was agreed between them that the story should be kept as quiet as possible, and that the young girl should not know the name of her deliverer,—it might save awkward complications. It was not likely that she would be disposed to talk of her adventure, which had ended so disastrously, and thus the whole story would soon die out.

The effect of the violent shock she had experienced was to change the whole nature of Myrtle for the time. Her mind was unsettled: she could hardly recall anything except the plunge over the fall. She was perfectly docile and plastic,—was ready to go anywhere Mr. Gridley wanted her to go, without any sign of reluctance. And so it was agreed that he should carry her back in his covered wagon that very night. All possible arrangements were made to render her journey comfortable. The fast mare had to trot very gently, and the old master would stop and adjust the pillows from time to time, and administer the restoratives which the physician had got ready, all as naturally and easily as if he had been bred a nurse, vastly to his own surprise, and with not a little gain to his self-appreciation. He was a serviceable kind of body on occasion, after all, was he not, hey, Mr. Byles Gridley? he said to himself.

At half past four o'clock on Sunday morning the shepherd brought the stray lamb into the paved yard at The Poplars, and roused the slumbering household to receive back the wanderer.

It was the Irishwoman, Kitty Fagan, huddled together in such amorphous guise, that she looked as if she had been fitted in a tempest of petticoats and a whirlwind of old shawls, who presented herself at the door.

But there was a very warm heart somewhere in that queer-looking bundle of clothes, and it was not one of those that can throb or break in silence. When she saw the long covered wagon, and the grave face of the old master, she thought it was all over with the poor girl she loved, and that this was the undertaker's wagon bringing back only what had once been Myrtle Hazard. She screamed aloud,—so wildly that Myrtle lifted her head from the pillow against which she had rested it, and started forward.

The Irishwoman looked at her for a moment to assure herself that it was the girl she loved, and not her ghost. Then it all came over her,—she had been stolen by thieves, who had carried her off by night, and been rescued by the brave old man who had brought her back. What crying and kisses and prayers and blessings were poured forth, in a confusion of which her bodily costume was a fitting type, those who know the vocabulary and the enthusiasm of her eloquent race may imagine better than we could describe it.

The welcome of the two other women was far less demonstrative. There were awful questions to be answered before the kind of reception she was to have could be settled. What they were, it is needless to suggest; but while Miss Silence was weeping, first with joy that her "responsibility" was removed, then with a fair share of pity and kindness, and other lukewarm emotions,—while Miss Badlam waited for an explanation before giving way to her feelings,—Mr. Gridley put the essential facts before them in a few words. She had gone down the river some miles in her boat, which was upset by a rush of the current, and she had come very near being drowned. She was got out, however, by a person living near by, and cared for by some kind women in a house near the river, where he had been fortunate enough to discover her.—Who cut her hair off? Perhaps those good people,—she had been out of her head. She was alive and unharmed, at any rate, wanting only a few days' rest. They might be very thankful to get her back, and leave her to tell the rest of her story when she had got her strength and memory, for she was not quite herself yet, and might not be for some days.

And so there she was at last laid in her own bed, listening again to the ripple of the waters beneath her, Miss Silence sitting on one side looking as sympathetic as her insufficient nature allowed her to look; the Irishwoman uncertain between delight at Myrtle's return and sorrow for her condition; and Miss Cynthia Badlam occupying herself about house-matters, not unwilling to avoid the necessity of displaying her conflicting emotions.

Before he left the house, Mr. Gridley repeated the statement in the most precise manner,—some miles down the river—upset and nearly drowned—rescued almost dead—brought to and cared for by kind women in the house where he, Byles Gridley, found her. These were the facts, and nothing more than this was to be told at present. They had better be made known at once, and the shortest and best way would be to have it announced by the minister at meeting that forenoon. With their permission, he would himself write the note for Mr. Stoker to read, and tell the other ministers that they might announce it to their people.

The bells rang for meeting, but the little household at The Poplars did not add to the congregation that day. In the mean time Kitty Fagan had gone down with Mr. Byles Gridley's note, to carry it to the Rev. Mr. Stoker. But, on her way, she stopped at the house of one Mrs. Finnegan, a particular friend of hers; and the great event of the morning furnishing matter for large discourse, and various social allurements adding to the fascination of having a story to tell, Kitty Fagan forgot her note until meeting had begun and the minister had read the text of his sermon. "Bless my soul! and sure I 've forgot ahl about the letter!" she cried all at once, and away she tramped for the meeting-house. The sexton took the note, which was folded, and said he would hand it up to the pulpit after the sermon,—it would not do to interrupt the preacher.

The Rev. Mr. Stoker had, as was said, a somewhat remarkable gift in prayer,—an endowment by no means confined to profoundly spiritual persons,—in fact, not rarely owing much of its force to a strong animal nature underlying the higher attributes. The sweet singer of Israel would never have written such petitions and such hymns if his manhood had been less complete; the flavor of remembered frailties could not help giving a character to his most devout exercises, or they would not have come quite home to our common humanity. But there is no gift more dangerous to the humility and sincerity of a minister. While his spirit ought to be on its knees before the throne of grace, it is too apt to be on tiptoe, following with admiring look the flight of its own rhetoric. The essentially intellectual character of an extemporaneous composition spoken to the Creator with the consciousness that many of his creatures are listening to criticise or to admire, is the great argument for set forms of prayer.

The congregation on this particular Sunday was made up chiefly of women and old men. The young men were hunting after Myrtle Hazard. Mr. Byles Gridley was in his place, wondering why the minister did not read his notice before the prayer. This prayer, was never reported, as is the questionable custom with regard to some of these performances, but it was wrought up with a good deal of rasping force and broad pathos. When he came to pray for "our youthful sister, missing from her pious home, perhaps nevermore to return to her afflicted relatives," and the women and old men began crying, Byles Gridley was on the very point of getting up and cutting short the whole matter by stating the simple fact that she had got back, all right, and suggesting that he had better pray for some of the older and tougher sinners before him. But on the whole it would be more decorous to wait, and perhaps he was willing to hear what the object of his favorite antipathy had to say about it. So he waited through the prayer. He waited through the hymn, "Life is the time"—He waited to hear the sermon.

The minister gave out his text from the Book of Esther, second chapter, seventh verse: "For she had neither father nor mother, and the maid was fair and beautiful." It was to be expected that the reverend gentleman, who loved to produce a sensation, would avail himself of the excitable state of his audience to sweep the keyboard of their emotions, while, as we may, say, all the stops were drawn out. His sermon was from notes; for, though absolutely extemporaneous composition may be acceptable to one's Maker, it is not considered quite the thing in speaking to one's fellow-mortals. He discoursed for a time on the loss of parents, and on the dangers to which the unfortunate orphan is exposed. Then he spoke of the peculiar risks of the tender female child, left without its natural guardians. Warming with his subject, he dilated with wonderful unction on the temptations springing from personal attractions. He pictured the "fair and beautiful" women of Holy Writ, lingering over their names with lover-like devotion. He brought Esther before his audience, bathed and perfumed for the royal presence of Ahasuerus. He showed them the sweet young Ruth, lying down in her innocence at the feet of the lord of the manor. He dwelt with special luxury on the charms which seduced the royal psalmist,—the soldier's wife for whom he broke the commands of the decalogue, and the maiden for whose attentions, in his cooler years, he violated the dictates of prudence and propriety. All this time Byles Gridley had his stern eyes on him. And while he kindled into passionate eloquence on these inspiring themes, poor Bathsheba, whom her mother had sent to church that she might get a little respite from her home duties, felt her blood growing cold in her veins, as the pallid image of the invalid wife, lying on her bed of suffering, rose in the midst of the glowing pictures which borrowed such warmth from her husband's imagination.

The sermon, with its hinted application to the event of the past week, was over at last. The shoulders of the nervous women were twitching with sobs. The old men were crying in their vacant way. But all the while the face of Byles Gridley, firm as a rock in the midst of this lachrymal inundation, was kept steadily on the preacher, who had often felt the look that came through the two round glasses searching into the very marrow of his bones.

As the sermon was finished, the sexton marched up through the broad aisle and handed the note over the door of the pulpit to the clergyman, who was wiping his face after the exertion of delivering his discourse. Mr. Stoker looked at it, started, changed color,—his vision of "The Dangers of Beauty, a Sermon printed by Request," had vanished,—and passed the note to Father Pemberton, who sat by him in the pulpit. With much pains he deciphered its contents, for his eyes were dim with years, and, having read it, bowed his head upon his hands in silent thanksgiving. Then he rose in the beauty of his tranquil and noble old age, so touched with the message he had to proclaim to his people, that the three deep furrows on his forehead, which some said he owed to the three dogmas of original sin, predestination, and endless torment, seemed smoothed for the moment, and his face was as that of an angel while he spoke.

"Sisters and Brethren,—Rejoice with us, for we have found our lamb which had strayed from the fold. This our daughter was dead and is alive again; she was lost and is found. Myrtle Hazard, rescued from great peril of the waters, and cared for by good Samaritans, is now in her home. Thou, O Lord, who didst let the water-flood overflow her, didst not let the deep swallow her up, nor the pit shut its mouth upon her. Let us return our thanks to the God of Abraham, the God of Isaac, the God of Jacob, who is our God and Father, and who

hath wrought this great deliverance."

After his prayer, which it tried him sorely to utter in unbroken tones, he gave out the hymn,

*"Lord, thou hast heard thy servant cry,
And rescued from the grave;"*

but it was hardly begun when the leading female voice trembled and stopped,—and another,—and then a third,—and Father Pemberton, seeing that they were all overcome, arose and stretched out his arms, and breathed over them his holy benediction.

The village was soon alive with the news. The sexton forgot the solemnity of the Sabbath, and the bell acted as if it was crazy, tumbling heels over head at such a rate, and with such a clamor, that a good many thought there was a fire, and, rushing out from every quarter, instantly caught the great news with which the air was ablaze.

A few of the young men who had come back went even further in their demonstrations. They got a small cannon in readiness, and without waiting for the going down of the sun, began firing rapidly, upon which the Rev. Mr. Stoker sallied forth to put a stop to this violation of the Sabbath. But in the mean time it was heard on all the hills, far and near. Some said they were firing in the hope of raising the corpse; but many who heard the bells ringing their crazy peals guessed what had happened. Before night the parties were all in, one detachment bearing the body of the bob-tailed catamount swung over a pole, like the mighty cluster of grapes from Eshcol, and another conveying with wise precaution that monstrous snapping-turtle which those of our friends who wish to see will find among the specimens marked Chelydra, Serpentine in the great collection at Cantabridge.

CHAPTER XI. VEXED WITH A DEVIL.

It was necessary at once to summon a physician to advise as to the treatment of Myrtle, who had received a shock, bodily and mental, not lightly to be got rid of, and very probably to be followed by serious and varied disturbances. Her very tranquillity was suspicious, for there must be something of exhaustion in it, and the reaction must come sooner or later.

Old Dr. Lemuel Hurlbut, at the age of ninety-two, very deaf, very nearly blind, very feeble, liable to odd lapses of memory, was yet a wise counsellor in doubtful and difficult cases, and on rare occasions was still called upon to exercise his ancient skill. Here was a case in which a few words from him might soothe the patient and give confidence to all who were interested in her. Miss Silence Withers went herself to see him.

"Miss Withers, father, wants to talk with you about her niece, Miss Hazard," said Dr. Fordyce Hurlbut.

"Miss Withers, Miss Withers?—Oh, Silence Withers,—lives up at The Poplars. How's the Deacon, Miss Withers?" [Ob. 1810.]

"My grandfather is not living, Dr. Hurlbut," she screamed into his ear.

"Dead, is he? Well, it isn't long since he was with us; and they come and go,—they come and go. I remember his father, Major Gideon Withers. He had a great red feather on training-days,—that was what made me remember him. Who did you say was sick and wanted to see me, Fordyce?"

"Myrtle Hazard, father,—she has had a narrow escape from drowning, and it has left her in a rather nervous state. They would like to have you go up to The Poplars and take a look at her. You remember Myrtle Hazard? She is the great-granddaughter of your old friend the Deacon."

He had to wait a minute before his thoughts would come to order; with a little time, the proper answer would be evolved by the slow automatic movement of the rusted mental machinery.

After the silent moment: "Myrtle Hazard, Myrtle Hazard,—yes, yes, to be sure! The old Withers stock,—good constitutions,—a little apt to be nervous, one or two of 'em. I've given 'em a good deal of valerian and assafoetida,—not quite so much since the new blood came in. There is n't the change in folks people think,—same thing over and over again. I've seen six fingers on a child that had a six-fingered great-uncle, and I've seen that child's grandchild born with six fingers. Does this girl like to have her own way pretty well, like the rest of the family?"

"A little too well, I suspect, father. You will remember all about her when you come to see her and talk with her. She would like to talk with you, and her aunt wants to see you too; they think there's nobody like the 'old Doctor'."

He was not too old to be pleased with this preference, and said he was willing to go when they were ready. With no small labor of preparation he was at last got to the house, and crept with his son's aid up to the little room over the water, where his patient was still lying.

There was a little too much color in Myrtle's cheeks and a glistening lustre in her eyes that told of unnatural excitement. It gave a strange brilliancy to her beauty, and might have deceived an unpractised observer. The old man looked at her long and curiously, his imperfect sight excusing the closeness of his scrutiny.

He laid his trembling hand upon her forehead, and then felt her pulse with his shriveled fingers. He asked her various questions about herself, which she answered with a tone not quite so calm as natural, but willingly and intelligently. They thought she seemed to the old Doctor to be doing very well, for he spoke cheerfully to her, and treated her in such a way that neither she nor any of those around her could be alarmed. The younger physician was disposed to think she was only suffering from temporary excitement, and that it would soon pass off.

They left the room to talk it over.

"It does not amount to much, I suppose, father," said Dr. Fordyce Hurlbut. "You made the pulse about ninety,—a little hard,—did n't you; as I did? Rest, and low diet for a day or two, and all will be right, won't it?"

Was it the feeling of sympathy, or was it the pride of superior sagacity, that changed the look of the old man's wrinkled features? "Not so fast,—not so fast, Fordyce," he said. "I've seen that look on another face of the same blood,—it 's a great many years ago, and she was dead before you were born, my boy,—but I've seen that look, and it meant trouble then, and I'm afraid it means trouble now. I see some danger of a brain fever. And if she doesn't have that, then look out for some hysteric fits that will make mischief. Take that handkerchief off of her head, and cut her hair close, and keep her temples cool, and put some drawing plasters to the soles of her feet, and give her some of my pilulae compositae, and follow them with some doses of sal polychrest. I've been through it all before—in that same house. Live folks are only dead folks warmed over. I can see 'em all in that girl's face, Handsome Judith, to begin with. And that queer woman, the Deacon's mother,—there 's where she gets that hysteric look. Yes, and the black-eyed woman with the Indian blood in her,—look out for that,—look out for that. And—and—my son, do you remember Major Gideon Withers?" [Ob. 1780.]

"Why no, father, I can't say that I remember the Major; but I know the picture very well. Does she remind you of him?"

He paused again, until the thoughts came slowly straggling, up to the point where the question left him. He shook his head solemnly, and turned his dim eyes on his son's face.

"Four generations—four generations; man and wife,—yes, five generations, for old Selah Withers took me in his arms when I was a child, and called me 'little gal,' for I was in girl's clothes,—five generations before this Hazard child I 've looked on with these old eyes. And it seems to me that I can see something of almost every one of 'em in this child's face, it's the forehead of this one, and it's the eyes of that one, and it's that other's mouth, and the look that I remember in another, and when she speaks, why, I've heard that same voice before—yes, yes as long ago as when I was first married; for I remember Rachel used to think I praised Handsome Judith's voice more than it deserved,—and her face too, for that matter. You remember Rachel, my first wife,—don't you, Fordyce?"

"No, father, I don't remember her, but I know her portrait." (As he was the son of the old Doctor's second wife, he could hardly be expected to remember her predecessor.)

The old Doctor's sagacity was not in fault about the somewhat threatening aspect of Myrtle's condition. His directions were followed implicitly; for with the exception of the fact of sluggishness rather than loss of memory, and of that confusion of dates which in slighter degrees is often felt as early as middle-life, and increases in most persons from year to year, his mind was still penetrating, and his advice almost as trustworthy, as in his best days.

It was very fortunate that the old Doctor ordered Myrtle's hair to be cut, and Miss Silence took the scissors and trimmed it at once. So, whenever she got well and was seen about, there would be no mystery about the loss of her locks,—the Doctor had been afraid of brain fever, and ordered them to cut her hair.

Many things are uncertain in this world, and among them the effect of a large proportion of the remedies prescribed by physicians. Whether it was by the use of the means ordered by the old Doctor, or by the efforts of nature, or by both together, at any rate the first danger was averted, and the immediate risk from brain fever soon passed over. But the impression upon her mind and body had been too profound to be dissipated by a few days' rest. The hysteric stage which the wise old man had apprehended began to manifest itself by its usual signs, if anything can be called usual in a condition the natural order of which is disorder and anomaly.

And now the reader, if such there be, who believes in the absolute independence and self-determination of the will, and the consequent total responsibility of every human being for every irregular nervous action and ill-governed muscular contraction, may as well lay down this narrative, or he may lose all faith in poor Myrtle Hazard, and all patience with the writer who tells her story.

The mental excitement so long sustained, followed by a violent shock to the system, coming just at the period of rapid development, gave rise to that morbid condition, accompanied with a series of mental and moral perversions, which in ignorant ages and communities is attributed to the influence of evil spirits, but for the better-instructed is the malady which they call hysteria. Few households have ripened a growth of womanhood without witnessing some of its manifestations, and its phenomena are largely traded in by scientific pretenders and religious fanatics. Into this cloud, with all its risks and all its humiliations, Myrtle Hazard is about to enter. Will she pass through it unharmed, or wander from her path, and fall over one of those fearful precipices which lie before her?

After the ancient physician had settled the general plan of treatment, its details and practical application were left to the care of his son. Dr. Fordyce Hurlbut was a widower, not yet forty years old, a man of a fine masculine aspect and a vigorous nature. He was a favorite with his female patients,—perhaps many of them would have said because he was good-looking and pleasant in his manners, but some thought in virtue of a special magnetic power to which certain temperaments were impressible, though there was no explaining it. But he himself never claimed any such personal gift, and never attempted any of the exploits which some thought were in his power if he chose to exercise his faculty in that direction. This girl was, as it were, a child to him, for he had seen her grow up from infancy, and had often held her on his knee in her early years. The first thing he did was to get her a nurse, for he saw that neither of the two women about her exercised a quieting influence upon her nerves. So he got her old friend, Nurse Byloe, to come and take care of her.

The old nurse looked calm enough at one or two of his first visits, but the next morning her face showed that something had been going wrong. "Well, what has been the trouble, Nurse?" the Doctor said, as soon as he could get her out of the room.

"She's been attackted, Doctor, sence you been here, dreadful. It's them high stirricks, Doctor, 'n' I never see 'em higher, nor more of 'em. Laughin' as ef she would bust. Cryin' as ef she'd lost all her friends, 'n' was a follerin' their corpse to their graves. And spassums,—sech spassums! And ketchin' at her throat, 'n' sayin'

there was a great ball a risin' into it from her stommick. One time she had a kind o' lockjaw like. And one time she stretched herself out 'n' laid jest as stiff as ef she was dead. And she says now that her head feels as ef a nail had been driv' into it,—into the left temple, she says, and that's what makes her look so distressed now."

The Doctor came once more to her bedside. He saw that her forehead was contracted, and that she was evidently suffering from severe pain somewhere.

"Where is your uneasiness, Myrtle?" he asked.

She moved her hand very slowly, and pressed it on her left temple. He laid his hand upon the same spot, kept it there a moment, and then removed it. She took it gently with her own, and placed it on her temple again. As he sat watching her, he saw that her features were growing easier, and in a short time her deep, even breathing showed that she was asleep.

"It beats all," the old nurse said. "Why, she's been a complainin' ever sence daylight, and she hain't slep' not a wink afore, sence twelve o'clock las' night! It's jes' like them magnetizers,—I never heerd you was one o' them kind, Dr. Hurlbut."

"I can't say how it is, Nurse,—I have heard people say my hand was magnetic, but I never thought of its quieting her so quickly. No sleep since twelve o'clock last night, you say?"

"Not a wink, 'n' actin' as ef she was possessed a good deal o' the time. You read your Bible, Doctor, don't you? You're pious? Do you remember about that woman in Scriptur' out of whom the Lord cast seven devils? Well, I should ha' thought there was seventy devils in that gal last night, from the way she carr'd on. And now she lays there jest as peaceful as a new-born babe,—that is, accordin' to the sayin' about 'em; for as to peaceful new-born babes, I never see one that come t' anything, that did n't screech as ef the haouse was afire 'n' it wanted to call all the fire-ingines within ten mild."

The Doctor smiled, but he became thoughtful in a moment. Did he possess a hitherto unexercised personal power, which put the key of this young girl's nervous system into his hands? The remarkable tranquillizing effect of the contact of his hand with her forehead looked like an immediate physical action.

It might have been a mere coincidence, however. He would not form an opinion until his next visit.

At that next visit it did seem as if some of Nurse Byloe's seventy devils had possession of the girl. All the strange spasmodic movements, the chokings, the odd sounds, the wild talk, the laughing and crying, were in full blast. All the remedies which had been ordered seemed to have been of no avail. The Doctor could hardly refuse trying his quasi magnetic influence, and placed the tips of his fingers on her forehead. The result was the same that had followed the similar proceeding the day before,—the storm was soon calmed, and after a little time she fell into a quiet sleep, as in the first instance.

Here was an awkward affair for the physician, to be sure! He held this power in his hands, which no remedy and no other person seemed to possess. How long would he be chained to her; and she to him, and what would be the consequence of the mysterious relation which must necessarily spring up between a man like him, in the plenitude of vital force, of strongly attractive personality, and a young girl organized for victory over the calmest blood and the steadiest resistance?

Every day after this made matters worse. There was something almost partaking of the miraculous in the influence he was acquiring over her. His "Peace, be still!" was obeyed by the stormy elements of this young soul, as if it had been a supernatural command. How could he resist the dictate of humanity which called him to make his visits more frequent, that her intervals of rest might be more numerous? How could he refuse to sit at her bedside for a while in the evening, that she might be quieted, instead of beginning the night sleepless and agitated?

The Doctor was a man of refined feeling as well as of principle, and he had besides a sacred memory in the deepest heart of his affections. It was the common belief in the village that he would never marry again, but that his first and only love was buried in the grave of the wife of his youth. It did not easily occur to him to suspect himself of any weakness with regard to this patient of his, little more than a child in years. It did not at once suggest itself to him that she, in her strange, excited condition, might fasten her wandering thoughts upon him, too far removed by his age, as it seemed, to strike the fancy of a young girl under almost any conceivable conditions.

Thus it was that many of those beautiful summer evenings found him sitting by his patient, the river rippling and singing beneath them, the moon shining over them, sweet odors from the thickets on the banks of the stream stealing in on the soft air that came through the open window, and every time they were thus together, the subtle influence which bound them to each other bringing them more and more into inexplicable harmonies and almost spiritual identity.

But all this did not hinder the development of new and strange conditions in Myrtle Hazard. Her will was losing its power. "I cannot help it"—the hysteric motto—was her constant reply. It is not pleasant to confess the truth, but she was rapidly undergoing a singular change of her moral nature. She had been a truthful child. If she had kept her secret about what she had found in the garret, she thought she was exercising her rights, and she had never been obliged to tell any lies about it.

But now she seemed to have lost the healthy instincts for veracity and honesty. She feigned all sorts of odd symptoms, and showed a wonderful degree of cunning in giving an appearance of truth to them. It became next to impossible to tell what was real and what was simulated. At one time she could not be touched ever so lightly without shrinking and crying out. At another time she would squint, and again she would be half paralyzed for a time. She would pretend to fast for days, living on food she had concealed and took secretly in the night.

The nurse was getting worn out. Kitty Fagan would have had the priest come to the house and sprinkle it with holy water. The two women were beginning to get nervous themselves. The Rev. Mr. Stoker said in confidence to Miss Silence, that there was reason to fear she might have been given over for a time to the buffetings of Satan, and that perhaps his (Mr. Stoker's) personal attentions might be useful in that case. And so it appeared that the "young doctor" was the only being left with whom she had any complete relations and absolute sympathy. She had become so passive in his hands that it seemed as if her only healthy life was, as it

were, transmitted through him, and that she depended on the transfer of his nervous power, as the plant upon the light for its essential living processes.

The two young men who had met in so unexpected a manner on board the ship *Swordfish* had been reasonably discreet in relating their adventures. Myrtle Hazard may or may not have had the plan they attributed to her; however that was, they had looked rather foolish when they met, and had not thought it worth while to be very communicative about the matter when they returned. It had at least given them a chance to become a little better acquainted with each other, and it was an opportunity which the elder and more artful of the two meant to turn to advantage.

Of all Myrtle's few friends only one was in the habit of seeing her often during this period, namely, Olive Eveleth, a girl so quiet and sensible that she, if anybody, could be trusted with her. But Myrtle's whole character seemed to have changed, and Olive soon found that she was in some mystic way absorbed into another nature. Except when the physician's will was exerted upon her, she was drifting without any self-directing power, and then any one of those manifold impulses which would in some former ages have been counted as separate manifestations on the part of distinct demoniacal beings might take possession of her. Olive did little, therefore, but visit Myrtle from time to time to learn if any change had occurred in her condition. All this she reported to Cyprian, and all this was got out of him by Mr. William Murray Bradshaw.

That gentleman was far from being pleased with the look of things as they were represented. What if the Doctor, who was after all in the prime of life and younger-looking than some who were born half a dozen years after him, should get a hold on this young woman,—girl now, if you will, but in a very few years certain to come within possible, nay, not very improbable, matrimonial range of him? That would be pleasant, wouldn't it? It had happened sometimes, as he knew, that these magnetizing tricks had led to infatuation on the part of the subjects of the wonderful influence. So he concluded to be ill and consult the younger Dr. Hurlbut, and incidentally find out how the land lay.

The next question was, what to be ill with. Some not ungentlemanly malady, not hereditary, not incurable, not requiring any obvious change in habits of life. Dyspepsia would answer the purpose well enough: so Mr. Murray Bradshaw picked up a medical book and read ten minutes or more for that complaint. At the end of this time he was an accomplished dyspeptic; for lawyers half learn a thing quicker than the members of any other profession.

He presented himself with a somewhat forlorn countenance to Dr. Fordyce Hurlbut, as suffering from some of the less formidable symptoms of that affection. He got into a very interesting conversation with him, especially about some nervous feelings which had accompanied his attack of indigestion. Thence to nervous complaints in general. Thence to the case of the young lady at The Poplars whom he was attending. The Doctor talked with a certain reserve, as became his professional relations with his patient; but it was plain enough that, if this kind of intercourse went on much longer, it would be liable to end in some emotional explosion or other, and there was no saying how it would at last turn out.

Murray Bradshaw was afraid to meddle directly. He knew something more about the history of Myrtle's adventure than any of his neighbors, and, among other things, that it had given Mr. Byles Gridley a peculiar interest in her, of which he could take advantage. He therefore artfully hinted his fears to the old man, and left his hint to work itself out.

However suspicious Master Gridley was of him and his motives, he thought it worth while to call up at The Poplars and inquire for himself of the nurse what was this new relation growing up between the physician and his young patient.

She imparted her opinion to him in a private conversation with great freedom. "Sech doin's! sech doin's! The gal's jest as much bewitched as ever any gal was sence them that was possessed in *Scriptur*'. And every day it 's wus and wus. Ef that Doctor don't stop comin', she won't breathe without his helpin' her to before long. And, Mr. Gridley, I don't like to say so,—but I can't help thinkin' he's gettin' a little bewitched too. I don't believe he means to take no kind of advantage of her; but, Mr. Gridley, you've seen them millers fly round and round a candle, and you know how it ginerally comes out. Men is men and gals is gals. I would n't trust no man, not ef he was much under a hundred year old,—and as for a gal—!"

"Mulieri ne mortuae quidem credendum est," said Mr. Gridley. "You wouldn't trust a woman even if she was dead, hey, Nurse?"

"Not till she was buried, 'n' the grass growin' a foot high over her," said Nurse Byloe, "unless I'd know'd her sence she was a baby. I've know'd this one sence she was two or three year old; but this gal ain't Myrtle Hazard no longer,—she's bewitched into somethin' different. I'll tell ye what, Mr. Gridley; you get old Dr. Hurlbut to come and see her once a day for a week, and get the young doctor to stay away. I'll resk it. She 'll have some dreadful tantrums at fust, but she'll come to it in two or three, days."

Master Byles Gridley groaned in spirit. He had come to this village to end his days in peace, and here he was just going to make a martyr of himself for the sake of a young person to whom he was under no obligation, except that he had saved her from the consequences of her own foolish act, at the expense of a great overturn of all his domestic habits. There was no help for it. The nurse was right, and he must perform the disagreeable duty of letting the Doctor know that he was getting into a track which might very probably lead to mischief, and that he must back out as fast as he could.

At 2 P. M. Gifted Hopkins presented the following note at the Doctor's door:

"Mr. Byles Gridley would be much obliged to Dr. Fordyce Hurlbut if he would call at his study this evening."

"Odd, is n't it, father, the old man's asking me to come and see him? Those old stub-twist constitutions never want patching."

"Old man! old man! Who's that you call old,—not Byles Gridley, hey? Old! old! Sixty year, more or less! How old was Floyer when he died, Fordyce? Ninety-odd, was n't it? Had the asthma though, or he'd have lived to be as old as Dr. Holyoke,—a hundred year and over. That's old. But men live to be a good deal more than that sometimes. What does Byles Gridley want of you, did you say?"

"I'm sure I can't tell, father; I'll go and find out." So he went over to Mrs. Hopkins's in the evening, and was

shown up into the study.

Master Gridley treated the Doctor to a cup of such tea as bachelors sometimes keep hid away in mysterious caddies. He presently began asking certain questions about the grand climacteric, which eventful period of life he was fast approaching. Then he discoursed of medicine, ancient and modern, tasking the Doctor's knowledge not a little, and evincing a good deal of acquaintance with old doctrines and authors.

He had a few curious old medical books in his library, which he said he should like to show Dr. Hurlbut.

"There, now! What do you say to this copy of Joannes de Ketam, Venice, 1522? Look at these woodcuts,—the first anatomical pictures ever printed, Doctor, unless these others of Jacobus Berengarius are older! See this scene of the plague-patient, the doctor smelling at his pouncet-box, the old nurse standing square at the bedside, the young nurse with the bowl, holding back and turning her head away, and the old burial-hag behind her, shoving her forward, a very curious book, Doctor, and has the first phrenological picture in it ever made. Take a look, too, at my Vesalius,—not the Leyden edition, Doctor, but the one with the grand old original figures,—so good that they laid them to Titian. And look here, Doctor, I could n't help getting this great folio Albinus, 1747,—and the nineteenth century can't touch it, Doctor,—can't touch it for completeness and magnificence, so all the learned professors tell me! Brave old fellows, Doctor, and put their lives into their books as you gentlemen don't pretend to do nowadays. And good old fellows, Doctor,—high-minded, scrupulous, conscientious, punctilious,—remembered their duties to man and to woman, and felt all the responsibilities of their confidential relation to families. Did you ever read the oldest of medical documents,—the Oath of Hippocrates?"

The Doctor thought he had read it, but did not remember much about it.

"It 's worth reading, Doctor,—it's worth remembering; and, old as it is, it is just as good to-day as it was when it was laid down as a rule of conduct four hundred years before the Sermon on the Mount was delivered. Let me read it to you, Dr. Hurlbut."

There was something in Master Gridley's look that made the Doctor feel a little nervous; he did not know just what was coming.

Master Gridley took out his great Hippocrates, the edition of Foesius, and opened to the place. He turned so as to face the Doctor, and read the famous Oath aloud, Englishing it as he went along. When he came to these words which follow, he pronounced them very slowly and with special emphasis.

"My life shall be pure and holy."

"Into whatever house I enter, I will go for the good of the patient:

"I will abstain from inflicting any voluntary injury, and from leading away any, whether man or woman, bond or free."

The Doctor changed color as he listened, and the moisture broke out on his forehead.

Master Gridley saw it, and followed up his advantage. "Dr. Fordyce Hurlbut, are you not in danger of violating the sanctities of your honorable calling, and leading astray a young person committed to your sacred keeping?"

While saying these words, Master Gridley looked full upon him, with a face so charged with grave meaning, so impressed with the gravity of his warning accents, that the Doctor felt as if he were before some dread tribunal, and remained silent. He was a member of the Rev. Mr. Stoker's church, and the words he had just listened to were those of a sinful old heathen who had never heard a sermon in his life; but they stung him, for all that, as the parable of the prophet stung the royal transgressor.

He spoke at length, for the plain honest words had touched the right spring of consciousness at the right moment; not too early, for he now saw whither he was tending,—not too late, for he was not yet in the inner spirals of the passion which whirls men and women to their doom in ever-narrowing coils, that will not unwind at the command of God or man.

He spoke as one who is humbled by self-accusation, yet in a manly way, as became his honorable and truthful character.

"Master Gridley," he said, "I stand convicted before you. I know too well what you are thinking of. It is true, I cannot continue my attendance on Myrtle—on Miss Hazard, for you mean her—without peril to both of us. She is not herself. God forbid that I should cease to be myself! I have been thinking of a summer tour, and I will at once set out upon it, and leave this patient in my father's hands. I think he will find strength to visit her under the circumstances."

The Doctor went off the next morning without saying a word to Myrtle Hazard, and his father made the customary visit in his place.

That night the spirit tare her, as may well be supposed, and so the second night. But there was no help for it: her doctor was gone, and the old physician, with great effort, came instead, sat by her, spoke kindly to her, left wise directions to her attendants, and above all assured them that, if they would have a little patience, they would see all this storm blow over.

On the third night after his visit, the spirit rent her sore, and came out of her, or, in the phrase of to-day, she had a fierce paroxysm, after which the violence of the conflict ceased, and she might be called convalescent so far as that was concerned.

But all this series of nervous disturbances left her in a very impressible and excitable condition. This was just the state to invite the spiritual manipulations of one of those theological practitioners who consider that the treatment of all morbid states of mind short of raving madness belongs to them and not to the doctors. This same condition was equally favorable for the operations of any professional experimenter who would use the flame of religious excitement to light the torch of an earthly passion. So many fingers that begin on the black keys stray to the white ones before the tune is played out!

If Myrtle Hazard was in charge of any angelic guardian, the time was at hand when she would need all celestial influences; for the Rev. Joseph Bellamy Stoker was about to take a deep interest in her spiritual welfare.'

CHAPTER XII. SKIRMISHING.

"So the Rev. Joseph Bellamy Stoker has called upon you, Susan Posey, has he? And wants you to come and talk religion with him in his study, Susan Posey, does he? Religion is a good thing, my dear, the best thing in the world, and never better than when we are young, and no young people need it more than young girls. There are temptations to all, and to them as often as to any, Susan Posey. And temptations come to them in places where they don't look for them, and from persons they never thought of as tempters. So I am very glad to have your thoughts called to the subject of religion. 'Remember thy Creator in the days of thy youth.'

"But Susan Posey, my dear, I think you had better not break in upon the pious meditations of the Rev. Joseph Bellamy Stoker in his private study. A monk's cell and a minister's library are hardly the places for young ladies. They distract the attention of these good men from their devotions and their sermons. If you think you must go, you had better take Mrs. Hopkins with you. She likes religious conversation, and it will do her good too, and save a great deal of time for the minister, conversing with two at once. She is of discreet age, and will tell you when it is time to come away,—you might stay too long, you know. I've known young persons stay a good deal too long at these interviews,—a great deal too long, Susan Posey!"

Such was the fatherly counsel of Master Byles Gridley.

Susan was not very quick of apprehension, but she could not help seeing the justice of Master Gridley's remark, that for a young person to go and break in on the hours that a minister requires for his studies, without being accompanied by a mature friend who would remind her when it was time to go, would be taking an unfair advantage of his kindness in asking her to call upon him. She promised, therefore, that she would never go without having Mrs. Hopkins as her companion, and with this assurance her old friend rested satisfied.

It is altogether likely that he had some deeper reason for his advice than those with which he satisfied the simple nature of Susan Posey. Of that it will be easier to judge after a glance at the conditions and character of the minister and his household.

The Rev. Mr. Stoker had, in addition to the personal advantages already alluded to, some other qualities which might prove attractive to many women. He had, in particular, that art of sliding into easy intimacy with them which implies some knowledge of the female nature, and, above all, confidence in one's powers. There was little doubt, the gossips maintained, that many of the younger women of his parish would have been willing, in certain contingencies, to lift for him that other end of his yoke under which poor Mrs. Stoker was fainting, unequal to the burden.

That lady must have been some years older than her husband,—how many we need not inquire too curiously,—but in vitality she had long passed the prime in which he was still flourishing. She had borne him five children, and cried her eyes hollow over the graves of three of them. Household cares had dragged upon her; the routine of village life wearied her; the parishioners expected too much of her as the minister's wife; she had wanted more fresh air and more cheerful companionship; and her thoughts had fed too much on death and sin,—good bitter tonics to increase the appetite for virtue, but not good as food and drink for the spirit.

But there was another grief which lay hidden far beneath these obvious depressing influences. She felt that she was no longer to her husband what she had been to him, and felt it with something of self-reproach,—which was a wrong to herself, for she had been a true and tender wife. Deeper than all the rest was still another feeling, which had hardly risen into the region of inwardly articulated thought, but lay unshaped beneath all the syllabled trains of sleeping or waking consciousness.

The minister was often consulted by his parishioners upon spiritual matters, and was in the habit of receiving in his study visitors who came with such intent. Sometimes it was old weak-eyed Deacon Rumrill, in great iron-bowed spectacles, with hanging nether lip and tremulous voice, who had got his brain onto a muddle about the beast with two horns, or the woman that fled into the wilderness, or other points not settled to his mind in Scott's Commentary. The minister was always very busy at such times, and made short work of his deacon's doubts. Or it might be that an ancient woman, a mother or a grandmother in Israel, came with her questions and her perplexities to her pastor; and it was pretty certain that just at that moment he was very deep in his next sermon, or had a pressing visit to make.

But it would also happen occasionally that one of the tenderer ewe-lambs of the flock needed comfort from the presence of the shepherd. Poor Mrs. Stoker noticed, or thought she noticed, that the good man had more leisure for the youthful and blooming sister than for the more discreet and venerable matron or spinster. The sitting was apt to be longer; and the worthy pastor would often linger awhile about the door, to speed the parting guest, perhaps, but a little too much after the fashion of young people who are not displeased with each other, and who often find it as hard to cross a threshold single as a witch finds it to get over a running stream. More than once, the pallid, faded wife had made an errand to the study, and, after a keen look at the bright young cheeks, flushed with the excitement of intimate spiritual communion, had gone back to her chamber with her hand pressed against her heart, and the bitterness of death in her soul.

The end of all these bodily and mental trials was, that the minister's wife had fallen into a state of habitual invalidism, such as only women, who feel all the nerves which in men are as insensible as telegraph-wires, can experience.

The doctor did not know what to make of her case,—whether she would live or die,—whether she would languish for years, or, all at once, roused by some strong impression, or in obedience to some unexplained movement of the vital forces, take up her bed and walk. For her bed had become her home, where she lived as if it belonged to her organism. There she lay, a not unpleasing invalid to contemplate, always looking

resigned, patient, serene, except when the one deeper grief was stirred, always arrayed with simple neatness, and surrounded with little tokens that showed the constant presence with her of tasteful and thoughtful affection. She did not know, nobody could know, how steadily, how silently all this artificial life was draining the veins and blanching the cheek of her daughter Bathsheba, one of the everyday, air-breathing angels without nimbus or aureole who belong to every story which lets us into a few households, as much as the stars and the flowers belong to everybody's verses.

Bathsheba's devotion to her mother brought its own reward, but it was not in the shape of outward commendation. Some of the more censorious members of her father's congregation were severe in their remarks upon her absorption in the supreme object of her care. It seems that this had prevented her from attending to other duties which they considered more imperative. They did not see why she shouldn't keep a Sabbath-school as well as the rest, and as to her not coming to meetin' three times on Sabbath day like other folks, they couldn't account for it, except because she calculated that she could get along without the means of grace, bein' a minister's daughter. Some went so far as to doubt if she had ever experienced religion, for all she was a professor. There was a good many indulged a false hope. To this, others objected her life of utter self-denial and entire surrender to her duties towards her mother as some evidence of Christian character. But old Deacon Rumrill put down that heresy by showing conclusively from Scott's Commentary on Romans xi. 1-6, that this was altogether against her chance of being called, and that the better her disposition to perform good works, the more unlikely she was to be the subject of saving grace. Some of these severe critics were good people enough themselves, but they loved active work and stirring companionship, and would have found their real cross if they had been called to sit at an invalid's bedside.

As for the Rev. Mr. Stoker, his duties did not allow him to give so much time to his suffering wife as his feelings would undoubtedly have prompted. He therefore relinquished the care of her (with great reluctance we may naturally suppose) to Bathsheba, who had inherited not only her mother's youthful smile, but that self-forgetfulness which, born with some of God's creatures, is, if not "grace," at least a manifestation of native depravity which might well be mistaken for it.

The intimacy of mother and daughter was complete, except on a single point. There was one subject on which no word ever passed between them. The excuse of duties to others was by a tacit understanding a mantle to cover all short-comings in the way of attention from the husband and father, and no word ever passed between them implying a suspicion of the loyalty of his affections. Bathsheba came at last so to fill with her tenderness the space left empty in the neglected heart, that her mother only spoke her habitual feeling when she said, "I should think you were in love with me, my darling, if you were not my daughter."

This was a dangerous state of things for the minister. Strange suggestions and unsafe speculations began to mingle with his dreams and reveries. The thought once admitted that another's life is becoming superfluous and a burden, feeds like a ravenous vulture on the soul. Woe to the man or woman whose days are passed in watching the hour-glass through which the sands run too slowly for longings that are like a skulking procession of bloodless murders! Without affirming such horrors of the Rev. Mr. Stoker, it would not be libellous to say that his fancy was tampering with future possibilities, as it constantly happens with those who are getting themselves into training for some act of folly, or some crime, it may be, which will in its own time evolve itself as an idea in the consciousness, and by and by ripen into fact.

It must not be taken for granted that he was actually on the road to some fearful deed, or that he was an utterly lost soul. He was ready to yield to temptation if it came in his way; he would even court it, but he did not shape out any plan very definitely in his mind, as a more desperate sinner would have done. He liked the pleasurable excitement of emotional relations with his pretty lambs, and enjoyed it under the name of religious communion. There is a border land where one can stand on the territory of legitimate instincts and affections, and yet be so near, the pleasant garden of the Adversary, that his dangerous fruits and flowers are within easy reach. Once tasted, the next step is like to be the scaling of the wall. The Rev. Mr. Stoker was very fond of this border land. His imagination was wandering over it too often when his pen was travelling almost of itself along the weary parallels of the page before him. All at once a blinding flash would come over him the lines of his sermon would run together, the fresh manuscript would shrivel like a dead leaf, and the rows of hard-hearted theology on the shelves before him, and the broken-backed Concordance, and the Holy Book itself, would fade away as he gave himself up to the enchantment of his delirious dream.

The reader will probably consider it a discreet arrangement that pretty Susan Posey should seek her pastor in grave company. Mrs. Hopkins willingly consented to the arrangement which had been proposed, and agreed to go with the young lady on her visit to the Rev. Mr. Stoker's study. They were both arrayed in their field-day splendors on this occasion. Susan was lovely in her light curls and blue ribbons, and the becoming dress which could not help betraying the modestly emphasized crescendos and gently graded diminuendos of her figure. She was as round as if she had been turned in a lathe, and as delicately finished as if she had been modelled for a Flora. She had naturally an airy toss of the head and a springy movement of the joints, such as some girls study in the glass (and make dreadful work of it), so that she danced all over without knowing it, like a little lively boboANGELlink on a bulrush. In short, she looked fit to spoil a homily for Saint Anthony himself.

Mrs. Hopkins was not less perfect in her somewhat different style. She might be called impressive and imposing in her grand-costume, which she wore for this visit. It was a black silk dress, with a crape shawl, a firmly defensive bonnet, and an alpaca umbrella with a stern-looking and decided knob presiding as its handle. The dried-leaf rustle of her silk dress was suggestive of the ripe autumn of life, bringing with it those golden fruits of wisdom and experience which the grave teachers of mankind so justly prefer to the idle blossoms of adolescence.

It is needless to say that the visit was conducted with the most perfect propriety in all respects. Mrs. Hopkins was disposed to take upon herself a large share of the conversation. The minister, on the other hand, would have devoted himself more particularly to Miss Susan, but, with a very natural make-believe obtuseness, the good woman drew his fire so constantly that few of his remarks, and hardly any of his insinuating looks, reached the tender object at which they were aimed. It is probable that his features or tones betrayed some impatience at having thus been foiled of his purpose, for Mrs. Hopkins thought he

looked all the time as if he wanted to get rid of her. The three parted, therefore, not in the best humor all round. Mrs. Hopkins declared she'd see the minister in Jericho before she'd fix herself up as if she was goin' to a weddin' to go and see him again. Why, he did n't make any more of her than if she'd been a tabby-cat. She believed some of these ministers thought women's souls dried up like peas in a pod by the time they was forty year old; anyhow, they did n't seem to care any great about 'em, except while they was green and tender. It was all Miss Se-usan, Miss Se-usan, Miss Se-usan, my dear! but as for her, she might jest as well have gone with her apron on, for any notice he took of her. She did n't care, she was n't goin' to be left out when there was talkin' goin' on, anyhow.

Susan Posey, on her part, said she did n't like him a bit. He looked so sweet at her, and held his head on one side,—law! just as if he had been a young beau! And,—don't tell,—but he whispered that he wished the next time I came I wouldn't bring that Hopkins woman!

It would not be fair to repeat what the minister said to himself; but we may own as much as this, that, if worthy Mrs. Hopkins had heard it, she would have treated him to a string of adjectives which would have greatly enlarged his conceptions of the female vocabulary.

CHAPTER XIII. BATTLE.

In tracing the history of a human soul through its commonplace nervous perturbations, still more through its spiritual humiliations, there is danger that we shall feel a certain contempt for the subject of such weakness. It is easy to laugh at the erring impulses of a young girl; but you who remember when _____, only fifteen years old, untouched by passion, unsullied in name, was found in the shallow brook where she had sternly and surely sought her death,—(too true! too true!—*ejus animae Jesu miserere!*—but a generation has passed since then,)—will not smile so scornfully.

Myrtle Hazard no longer required the physician's visits, but her mind was very far from being poised in the just balance of its faculties. She was of a good natural constitution and a fine temperament; but she had been overwrought by all that she had passed through, and, though happening to have been born in another land, she was of American descent. Now, it has long been noticed that there is something in the influences, climatic or other, here prevailing, which predisposes to morbid religious excitement. The graver reader will not object to seeing the exact statement of a competent witness belonging to a by-gone century, confirmed as it is by all that we see about us.

"There is no Experienced Minister of the Gospel who hath not in the Cases of Tempted Souls often had this Experience, that the ill Cases of their distempered Bodies are the frequent Occasion and Original of their Temptations." "The Vitiated Humours in many Persons, yield the Steams whereinto Satan does insinuate himself, till he has gained a sort of Possession in them, or at least an Opportunity to shoot into the Mind as many Fiery Darts as may cause a sad Life unto them; yea, 't is well if Self-Murder be not the sad end into which these hurried. People are thus precipitated. New England, a country where Splenetic Maladies are prevailing and pernicious, perhaps above any other, hath afforded Numberless Instances, of even pious People, who have contracted these Melancholy Indispositions which have unhinged them from all Service or Comfort; yea, not a few Persons have been hurried thereby to lay Violent Hands upon themselves at the last. These are among the unsearchable Judgments of God!"

Such are the words of the Rev. Cotton Mather.

The minister had hardly recovered from his vexatious defeat in the skirmish where the Widow Hopkins was his principal opponent, when he received a note from Miss Silence Withers, which promised another and more important field of conflict. It contained a request that he would visit Myrtle Hazard, who seemed to be in a very excitable and impressible condition, and who might perhaps be easily brought under those influences which she had resisted from her early years, through inborn perversity of character.

When the Rev. Mr. Stoker received this note, he turned very pale,—which was a bad sign. Then he drew a long breath or two, and presently a flush tingled up to his cheek, where it remained a fixed burning glow. This may have been from the deep interest he felt in Myrtle's spiritual welfare; but he had often been sent for by aged sinners in more immediate peril, apparently, without any such disturbance of the circulation.

To know whether a minister, young or still in flower; is in safe or dangerous paths, there are two psychometers, a comparison between which will give as infallible a return as the dry and wet bulbs of the ingenious "Hygrodeik." The first is the black broadcloth forming the knees of his pantaloons; the second, the patch of carpet before his mirror. If the first is unworn and the second is frayed and threadbare, pray for him. If the first is worn and shiny, while the second keeps its pattern and texture, get him to pray for you.

The Rev. Mr. Stoker should have gone down on his knees then and there, and sought fervently for the grace which he was like to need in the dangerous path just opening before him. He did not do this; but he stood up before his looking-glass and parted his hair as carefully as if he had been separating the saints of his congregation from the sinners, to send the list to the statistical columns of a religious newspaper. He selected a professional neckcloth, as spotlessly pure as if it had been washed in innocency, and adjusted it in a tie which was like the white rose of Sharon. Myrtle Hazard was, he thought, on the whole, the handsomest girl he had ever seen; Susan Posey was to her as a buttercup from the meadow is to a tiger-lily. He, knew the nature of the nervous disturbances through which she had been passing, and that she must be in a singularly impressible condition. He felt sure that he could establish intimate spiritual relations with her by drawing out her repressed sympathies, by feeding the fires of her religious imagination, by exercising all those lesser arts of fascination which are so familiar to the Don Giovannis, and not always unknown to the San Giovannis.

As for the hard doctrines which he used to produce sensations with in the pulpit, it would have been a great pity to worry so lovely a girl, in such a nervous state, with them. He remembered a savory text about being

made all things to all men, which would bear application particularly well to the case of this young woman. He knew how to weaken his divinity, on occasion, as well as an old housewife to weaken her tea, lest it should keep people awake.

The Rev. Mr. Stoker was a man of emotions. He loved to feel his heart beat; he loved all the forms of non-alcoholic drunkenness, which are so much better than the vinous, because they taste themselves so keenly, whereas the other (according to the statement of experts who are familiar with its curious phenomena) has a certain sense of unreality connected with it. He delighted in the reflex stimulus of the excitement he produced in others by working on their feelings. A powerful preacher is open to the same sense of enjoyment—an awful, tremulous, goose-flesh sort of state, but still enjoyment—that a great tragedian feels when he curdles the blood of his audience.

Mr. Stoker was noted for the vividness of his descriptions of the future which was in store for the great bulk of his fellow-townsmen and fellow-worlds-men. He had three sermons on this subject, known to all the country round as the sweating sermon, the fainting sermon, and the convulsion-fit sermon, from the various effects said to have been produced by them when delivered before large audiences. It might be supposed that his reputation as a terrorist would have interfered with his attempts to ingratiate himself with his young favorites. But the tragedian who is fearful as Richard or as Iago finds that no hindrance to his success in the part of Romeo. Indeed, women rather take to terrible people; prize-fighters, pirates, highwaymen, rebel generals, Grand Turks, and Bluebeards generally have a fascination for the sex; your virgin has a natural instinct to saddle your lion. The fact, therefore, that the young girl had sat under his tremendous pulpings, through the sweating sermon, the fainting sermon, and the convulsion-fit sermon, did not secure her against the influence of his milder approaches.

Myrtle was naturally surprised at receiving a visit from him; but she was in just that unbalanced state in which almost any impression is welcome. He showed so much interest, first in her health, then in her thoughts and feelings, always following her lead in the conversation, that before he left her she felt as if she had made a great discovery; namely, that this man, so formidable behind the guns of his wooden bastion, was a most tenderhearted and sympathizing person when he came out of it unarmed. How delightful he was as he sat talking in the twilight in low and tender tones, with respectful pauses of listening, in which he looked as if he too had just made a discovery,—of an angel, to wit, to whom he could not help unbosoming his tenderest emotions, as to a being from another sphere!

It was a new experience to Myrtle. She was all ready for the spiritual manipulations of an expert. The excitability which had been showing itself in spasms and strange paroxysms had been transferred to those nervous centres, whatever they may be, cerebral or ganglionic, which are concerned in the emotional movements of the religious nature. It was taking her at an unfair disadvantage, no doubt. In the old communion, some priest might have wrought upon her while in this condition, and we might have had at this very moment among us another Saint Theresa or Jacqueline Pascal. She found but a dangerous substitute in the spiritual companionship of a saint like the Rev. Joseph Bellamy Stoker.

People think the confessional is unknown in our Protestant churches. It is a great mistake. The principal change is, that there is no screen between the penitent and the father confessor. The minister knew his rights, and very soon asserted them. He gave aunt Silence to understand that he could talk more at ease if he and his young disciple were left alone together. Cynthia Badlam did not like this arrangement. She was afraid to speak about it; but she glared at them aslant, with the look of a biting horse when his eyes follow one sideways until they are all white but one little vicious spark of pupil.

It was not very long before the Rev. Mr. Stoker had established pretty intimate relations with the household at The Poplars. He had reason to think, he assured Miss Silence, that Myrtle was in a state of mind which promised a complete transformation of her character. He used the phrases of his sect, of course, in talking with the elderly lady; but the language which he employed with the young girl was free from those mechanical expressions which would have been like to offend or disgust her.

As to his rougher formulae, he knew better than to apply them to a creature of her fine texture. If he had been disposed to do so, her simple questions and answers to his inquiries would have made it difficult. But it was in her bright and beautiful eyes, in her handsome features, and her winning voice, that he found his chief obstacle. How could he look upon her face in its loveliness, and talk to her as if she must be under the wrath and curse of God for the mere fact of her existence? It seemed more natural and it certainly was more entertaining, to question her in such a way as to find out what kind of theology had grown up in her mind as the result of her training in the complex scheme of his doctrinal school. And as he knew that the merest child, so soon as it begins to think at all, works out for itself something like a theory of human nature, he pretty soon began sounding Myrtle's thoughts on this matter.

What was her own idea; he would be pleased to know, about her natural condition as one born of a sinful race, and her inherited liabilities on that account?

Myrtle smiled like a little heathen, as she was, according to the standard of her earlier teachings. That kind of talk used to worry her when she was a child, sometimes. Yes, she remembered its coming back to her in a dream she had, when—when—(She did not finish her sentence.) Did he think she hated every kind of goodness and loved every kind of evil? Did he think she was hateful to the Being who made her?

The minister looked straight into the bright, brave, tender eyes, and answered, "Nothing in heaven or on earth could help loving you, Myrtle!"

Pretty well for a beginning!

Myrtle saw nothing but pious fervor in this florid sentiment. But as she was honest and clear-sighted, she could not accept a statement which seemed so plainly in contradiction with his common teachings, without bringing his flattering assertion to the test of another question.

Did he suppose, she asked, that any persons could be Christians, who could not tell the day or the year of their change from children of darkness to children of light.

The shrewd clergyman, whose creed could be lax enough on occasion, had provided himself with authorities of all kinds to meet these awkward questions in casuistical divinity. He had hunted up recipes for

spiritual neuralgia, spasms, indigestion, psora, hypochondriasis, just as doctors do for their bodily counterparts.

To be sure they could. Why, what did the great Richard Baxter say in his book on Infant Baptism? That at a meeting of many eminent Christians, some of them very famous ministers, when it was desired that every one should give an account of the time and manner of his conversion, there was but one of them all could do it. And as for himself, Mr. Baxter said, he could not remember the day or the year when he began to be sincere, as he called it. Why, did n't President Wheelock say to a young man who consulted him, that some persons might be true Christians without suspecting it?

All this was so very different from the uncompromising way in which religious doctrines used to be presented to the young girl from the pulpit, that it naturally opened her heart and warmed her affections. Remember, if she needs excuse, that the defeated instincts of a strong nature were rushing in upon her, clamorous for their rights, and that she was not yet mature enough to understand and manage them. The paths of love and religion are at the fork of a road which every maiden travels. If some young hand does not open the turnpike gate of the first, she is pretty sure to try the other, which has no toll-bar. It is also very commonly noticed that these two paths, after diverging awhile, run into each other. True love leads many wandering souls into the better way. Nor is it rare to see those who started in company for the gates of pearl seated together on the banks that border the avenue to that other portal, gathering the roses for which it is so famous.

It was with the most curious interest that the minister listened to the various heresies into which her reflections had led her. Somehow or other they did not sound so dangerous coming from her lips as when they were uttered by the coarser people of the less rigorous denominations, or preached in the sermons of heretical clergymen. He found it impossible to think of her in connection with those denunciations of sinners for which his discourses had been noted. Some of the sharp old church-members began to complain that his exhortations were losing their pungency. The truth was, he was preaching for Myrtle Hazard. He was getting bewitched and driven beside himself by the intoxication of his relations with her.

All this time she was utterly unconscious of any charm that she was exercising, or of being herself subject to any personal fascination. She loved to read the books of ecstatic contemplation which he furnished her. She loved to sing the languishing hymns which he selected for her. She loved to listen to his devotional rhapsodies, hardly knowing sometimes whether she were in the body, or out of the body, while he lifted her upon the wings of his passion-kindled rhetoric. The time came when she had learned to listen for his step, when her eyes glistened at meeting him, when the words he uttered were treasured as from something more than a common mortal, and the book he had touched was like a saintly relic. It never suggested itself to her for an instant that this was anything more than such a friendship as Mercy might have cultivated with Great-Heart. She gave her confidence simply because she was very young and innocent. The green tendrils of the growing vine must wind round something.

The seasons had been changing their scenery while the events we have told were occurring, and the loveliest days of autumn were now shining. To those who know the "Indian summer" of our Northern States, it is needless to describe the influence it exerts on the senses and the soul. The stillness of the landscape in that beautiful time is as if the planet were sleeping, like a top, before it begins to rock with the storms of autumn. All natures seem to find themselves more truly in its light; love grows more tender, religion more spiritual, memory sees farther back into the past, grief revisits its mossy marbles, the poet harvests the ripe thoughts which he will tie in sheaves of verses by his winter fireside.

The minister had got into the way of taking frequent walks with Myrtle, whose health had seemed to require the open air, and who was fast regaining her natural look. Under the canopy of the scarlet, orange, and crimson leaved maples, of the purple and violet clad oaks, of the birches in their robes of sunshine, and the beeches in their clinging drapery of sober brown, they walked together while he discoursed of the joys of heaven, the sweet communion of kindred souls, the ineffable bliss of a world where love would be immortal and beauty should never know decay. And while she listened, the strange light of the leaves irradiated the youthful figure of Myrtle, as when the stained window let in its colors on Madeline, the rose-bloom and the amethyst and the glory.

"Yes! we shall be angels together," exclaimed the Rev. Mr. Stoker. "Our souls were made for immortal union. I know it; I feel it in every throb of my heart. Even in this world you are as an angel to me, lifting me into the heaven where I shall meet you again, or it will not be heaven. Oh, if on earth our communion could have been such as it must be hereafter! O Myrtle, Myrtle!"

He stretched out his hands as if to clasp hers between them in the rapture of his devotion. Was it the light reflected from the glossy leaves of the poison sumach which overhung the path that made his cheek look so pale? Was he going to kneel to her?

Myrtle turned her dark eyes on him with a simple wonder that saw an excess of saintly ardor in these demonstrations, and drew back from it.

"I think of heaven always as the place where I shall meet my mother," she said calmly.

These words recalled the man to himself for a moment and he was silent. Presently he seated himself on a stone. His lips were tremulous as he said, in a low tone, "Sit down by me, Myrtle."

"No," she answered, with something which chilled him in her voice, "we will not stay here any longer; it is time to go home."

"Full time!" muttered Cynthia Badlam, whose watchful eyes had been upon them, peering through a screen of yellow leaves, that turned her face pale as if with deadly passion.

CHAPTER XIV. FLANK MOVEMENT.

Miss Cynthia Badlam was in the habit of occasionally visiting the Widow Hopkins. Some said but then people will talk, especially in the country, where they have not much else to do, except in haying-time. She had always known the widow, long before Mr. Gridley came there to board, or any other special event happened in her family. No matter what people said.

Miss Badlam called to see Mrs. Hopkins, then, and the two had a long talk together, of which only a portion is on record. Here are such fragments as have been preserved.

"What would I do about it? Why, I'd put a stop to such carry'n's on, mighty quick, if I had to tie the girl to the bedpost, and have a bulldog that would take the seat out of any pair of black pantaloons that come within forty rods of her,—that's what I'd do about it! He undertook to be mighty sweet with our Susan one while, but ever sence he's been talkin' religion with Myrtle Hazard he's let us alone. Do as I did when he asked our Susan to come to his study,—stick close to your girl and you 'll put a stop to all this business. He won't make love to two at once, unless they 're both pretty young, I 'll warrant. Follow her round, Miss Cynthy, and keep your eyes on her."

"I have watched her like a cat, Mrs. Hopkins, but I can't follow her everywhere,—she won't stand what Susan Posey 'll stand. There's no use our talking to her,—we 've done with that at our house. You never know what that Indian blood of hers will make her do. She's too high-strung for us to bit and bridle. I don't want to see her name in the paper again, alongside of that" (She did not finish the sentence.) "I'd rather have her fished dead out of the river, or find her where she found her uncle Malachi!"

"You don't think, Miss Cynthy, that the man means to inveigle the girl with the notion of marryin' her by and by, after poor Mrs. Stoker's dead and gone?"

"The Lord in heaven forbid!" exclaimed Miss Cynthia, throwing up her hands. "A child of fifteen years old, if she is a woman to look at!"

"It's too bad,—it's too bad to think of, Miss Cynthy; and there's that poor woman dyin' by inches, and Miss Bathsbeby settin' with her day and night, she has n't got a bit of her father in her, it's all her mother,—and that man, instead of bein' with her to comfort her as any man ought to be with his wife, in sickness and in health, that's what he promised. I 'm sure when my poor husband was sick... To think of that man goin' about to talk religion to all the prettiest girls he can find in the parish, and his wife at home like to leave him so soon,—it's a shame,—so it is, come now! Miss Cynthy, there's one of the best men and one of the learnedest men that ever lived that's a real friend of Myrtle Hazard, and a better friend to her than she knows of,—for ever sence he brought her home, he feels jest like a father to her,—and that man is Mr. Gridley, that lives in this house. It's him I 'll speak to about the minister's carry'in's on. He knows about his talking sweet to our Susan, and he'll put things to rights! He's a master hand when he does once take hold of anything, I tell you that! Jest get him to shet up them books of his, and take hold of anybody's troubles, and you'll see how he 'll straighten 'em out."

There was a pattering of little feet on the stairs, and the two small twins, "Sossy" and "Minthy," in the home dialect, came hand in hand into the room, Miss Susan leaving them at the threshold, not wishing to interrupt the two ladies, and being much interested also in listening to Mr. Gifted Hopkins, who was reading some of his last poems to her, with great delight to both of them.

The good woman rose to take them from Susan, and guide their uncertain steps. "My babies, I call 'em, Miss Cynthy. Ain't they nice children? Come to go to bed, little dears? Only a few minutes, Miss Cynthy."

She took them into the bedroom on the same floor, where they slept, and, leaving the door open, began undressing them. Cynthia turned her rocking-chair round so as to face the open door. She looked on while the little creatures were being undressed; she heard the few words they lisped as their infant prayer, she saw them laid in their beds, and heard their pretty good-night.

A lone woman to whom all the sweet cares of maternity have been denied cannot look upon a sight like this without feeling the void in her own heart where a mother's affection should have nestled. Cynthia sat perfectly still, without rocking, and watched kind Mrs. Hopkins at her quasi parental task. A tear stole down her rigid face as she saw the rounded limbs of the children bared in their white beauty, and their little heads laid on the pillow. They were sleeping quietly when Mrs. Hopkins left the room for a moment on some errand of her own. Cynthia rose softly from her chair, stole swiftly to the bedside, and printed a long, burning kiss on each of their foreheads.

When Mrs. Hopkins came back, she found the maiden lady sitting in her place just as she left her, but rocking in her chair and sobbing as one in sudden pangs of grief.

"It is a great trouble, Miss Cynthy," she said,—“a great trouble to have such a child as Myrtle to think of and to care for. If she was like our Susan Posey, now!—but we must do the best we can; and if Mr. Gridley once sets himself to it, you may depend upon it he 'll make it all come right. I wouldn't take on about it if I was you. You let me speak to our Mr. Gridley. We all have our troubles. It is n't everybody that can ride to heaven in a C-spring shay, as my poor husband used to say; and life 's a road that 's got a good many thank-you-ma'ams to go bumpin' over, says he."

Miss Badlam acquiesced in the philosophical reflections of the late Mr. Ammi Hopkins, and left it to his widow to carry out her own suggestion in reference to consulting Master Gridley. The good woman took the first opportunity she had to introduce the matter, a little diffusely, as is often the way of widows who keep boarders.

"There's something going on I don't like, Mr. Gridley. They tell me that Minister Stoker is following round after Myrtle Hazard, talking religion at her jest about the same way he'd have liked to with our Susan, I calculate. If he wants to talk religion to me or Silence Withers,—well, no, I don't feel sure about Silence,—she ain't as young as she used to be, but then ag'in she ain't so fur gone as some, and she's got money,—but if he wants to talk religion with me, he may come and welcome. But as for Myrtle Hazard, she's been sick, and it's left her a little flighty by what they say, and to have a minister round her all the time ravin' about the next world as if he had a latch-key to the front door of it, is no way to make her come to herself again. I 've seen more than one young girl sent off to the asylum by that sort of work, when, if I'd only had 'em, I'd have made 'em sweep the stairs, and mix the puddin's, and tend the babies, and milk the cow, and keep 'em too busy all

day to be thinkin' about themselves, and have 'em dress up nice evenin's and see some young folks and have a good time, and go to meetin' Sundays, and then have done with the minister, unless it was old Father Pemberton. He knows forty times as much about heaven as that Stoker man does, or ever 's like to,—why don't they run after him, I should like to know? Ministers are men, come now; and I don't want to say anything against women, Mr. Gridley, but women are women, that's the fact of it, and half of 'em are hystericky when they're young; and I've heard old Dr. Hurlbut say many a time that he had to lay in an extra stock of valerian and assafaetida whenever there was a young minister round,—for there's plenty of religious ravin', says he, that's nothin' but hysterics."

[Mr. Fronde thinks that was the trouble with Bloody Queen Mary, but the old physician did not get the idea from him.]

"Well, and what do you propose to do about the Rev. Joseph Bellamy Stoker and his young proselyte, Miss Myrtle Hazard?" said Mr. Gridley, when Mrs. Hopkins at last gave him a chance to speak.

"Mr. Gridley,"—Mrs. Hopkins looked full upon him as she spoke,—“people used to say that you was a good man and a great man and one of the learnedest men alive, but that you didn't know much nor care for much except books. I know you used to live pretty much to yourself when you first came to board in this house. But you've been very good to my son; ... and if Gifted lives till you... till you are in... your grave... he will write a poem—I know he will—that will tell your goodness to babes unborn."

[Here Master Gridley groaned, and repeated to himself silently,

*"Scindentur vestes gemmae frangentur et aurum,
Carmina quam tribuent fama perennis erit."*

All this inwardly, and without interrupting the worthy woman's talk.]

"And if ever Gifted makes a book,—don't say anything about it, Mr. Gridley, for goodness' sake, for he wouldn't have anybody know it, only I can't help thinking that some time or other he will print a book,—and if he does, I know whose name he'll put at the head of it,—'Dedicated to B. G., with the gratitude and respect—' There, now, I had n't any business to say a word about it, and it's only jest in case he does, you know. I'm sure you deserve it all. You've helped him with the best of advice. And you've been kind to me when I was in trouble. And you've been like a grandfather" [Master Gridley winced,—why could n't the woman have said father?—that grand struck his ear like a spade going into the gravel] "to those babes, poor little souls! left on my door-step like a couple of breakfast rolls,—only you know it's the baker left then. I believe in you, Mr. Gridley, as I believe in my Maker and in Father Pemberton,—but, poor man, he's old, and you won't be old these twenty years yet."

[Master Gridley shook his head as if to say that was n't so, but felt comforted and refreshed.]

"You've got to help Myrtle Hazard again. You brought her home when she come so nigh drowning. You got the old doctor to go and see her when she come so nigh being bewitched with the magnetism and nonsense, whatever they call it, and the young doctor was so nigh bein' crazy, too. I know, for Nurse Byloe told me all about it. And now Myrtle's gettin' run away with by that pesky Minister Stoker. Cynthy Badlam was here yesterday crying and sobbing as if her heart would break about it. For my part, I did n't think Cynthy cared so much for the girl as all that, but I saw her takin' on dreadfully with my own eyes. That man's like a hen-hawk among the chickens, first he picks up one, and then he picks up another. I should like to know if nobody but young folks has souls to be saved, and specially young women!"

"Tell me all you know about Myrtle Hazard and Joseph Bellamy Stoker," said Master Gridley.

Thereupon that good lady related all that Miss Badlam had imparted to her, of which the reader knows the worst, being the interview of which the keen spinster had been a witness, having followed them for the express purpose of knowing, in her own phrase, what the minister was up to.

It is not to be supposed that Myrtle had forgotten the discreet kindness of Master Gridley in bringing her back and making the best of her adventure. He, on his part, had acquired a kind of right to consider himself her adviser, and had begun to take a pleasure in the thought that he, the worn-out and useless old pedant, as he had been in the way of considering himself, might perhaps do something even more important than his previous achievement to save this young girl from the dangers that surrounded her. He loved his classics and his old books; he took an interest, too, in the newspapers and periodicals that brought the fermenting thought and the electric life of the great world into his lonely study; but these things just about him were getting strong hold on him, and most of all the fortunes of this beautiful young woman. How strange! For a whole generation he had lived in no nearer relation to his fellow-creatures than that of a half-fossilized teacher; and all at once he found himself face to face with the very most intense form of life, the counsellor of threatened innocence, the champion of imperilled loveliness. What business was it of his? growled the lower nature, of which he had said in "Thoughts on the Universe,"—"Every man leads or is led by something that goes on four legs."

Then he remembered the grand line of the African freedman, that makes all human interests everybody's business, and had a sudden sense of dilatation and evolution, as it were, in all his dimensions, as if he were a head taller, and a foot bigger round the chest, and took in an extra gallon of air at every breath. Then—you who have written a book that holds your heart-leaves between its pages will understand the movement—he took down "Thoughts on the Universe" for a refreshing draught from his own wellspring. He opened as chance ordered it, and his eyes fell on the following passage:

"The true American formula was well phrased by the late Samuel Patch, the Western Empedocles, 'Some things can be done as well as others.' A homely utterance, but it has virtue to overthrow all dynasties and hierarchies. These were all built up on the Old-World dogma that some things can NOT be done as well as others."

"There, now!" he said, talking to himself in his usual way, "is n't that good? It always seems to me that I find something to the point when I open that book. 'Some things can be done as well as others,' can they? Suppose I should try what I can do by visiting Miss Myrtle Hazard? I think I may say I am old and

incombustible enough to be trusted. She does not seem to be a safe neighbor to very inflammable bodies?"

Myrtle was sitting in the room long known as the Study, or the Library, when Master Byles Gridley called at The Poplars to see her. Miss Cynthia, who received him, led him to this apartment and left him alone with Myrtle. She welcomed him very cordially, but colored as she did so,—his visit was a surprise. She was at work on a piece of embroidery. Her first instinctive movement was to thrust it out of sight with the thought of concealment; but she checked this, and before the blush of detection had reached her cheek, the blush of ingenuous shame for her weakness had caught and passed it, and was in full possession. She sat with her worsted pattern held bravely in sight, and her cheek as bright as its liveliest crimson.

"Miss Cynthia has let me in upon you," he said, "or I should not have ventured to disturb you in this way. A work of art, is it, Miss Myrtle Hazard?"

"Only a pair of slippers, Mr. Gridley,—for my pastor."

"Oh! oh! That is well. A good old man. I have a great regard for the Rev. Eliphalet Pemberton. I wish all ministers were as good and simple and pure-hearted as the Rev. Eliphalet Pemberton. And I wish all the young people thought as much about their elders as you do, Miss Myrtle Hazard. We that are old love little acts of kindness. You gave me more pleasure than you knew of, my dear, when you worked that handsome cushion for me. The old minister will be greatly pleased,—poor old man!"

"But, Mr. Gridley, I must not let you think these are for Father Pemberton. They are for—Mr. Stoker."

"The Rev. Joseph Bellamy Stoker! He is not an old man, the Rev. Joseph Bellamy Stoker. He may perhaps be a widower before a great while.—Does he know that you are working those slippers for him?"

"Dear me! no, Mr. Gridley. I meant them for a surprise to him. He has been so kind to me, and understands me so much better than I thought anybody did. He is so different from what I thought; he makes religion so perfectly simple, it seems as if everybody would agree with him, if they could only hear him talk."

"Greatly interested in the souls of his people, is n't he?"

"Too much, almost, I am afraid. He says he has been too hard in his sermons sometimes, but it was for fear he should not impress his hearers enough."

"Don't you think he worries himself about the souls of young women rather more than for those of old ones, Myrtle?"

There was something in the tone of this question that helped its slightly sarcastic expression. Myrtle's jealousy for her minister's sincerity was roused.

"How can you ask that, Mr. Gridley? I am sure I wish you or anybody could have heard him talk as I have. There is no age in souls, he says; and I am sure that it would do anybody good to hear him, old or young."

"No age in souls,—no age in souls. Souls of forty as young as souls of fifteen; that 's it." Master Gridley did not say this loud. But he did speak as follows: "I am glad to hear what you say of the Rev. Joseph Bellamy Stoker's love of being useful to people of all ages. You have had comfort in his companionship, and there are others who might be very glad to profit by it. I know a very excellent person who has had trials, and is greatly interested in religious conversation. Do you think he would be willing to let this friend of mine share in the privileges of spiritual intercourse which you enjoy?"

There was but one answer possible. Of course he would.

"I hope it is so, my dear young lady. But listen to me one moment. I love you, my dear child, do you know, as if I were your own—grandfather." (There was moral heroism in that word.) "I love you as if you were of my own blood; and so long as you trust me, and suffer me, I mean to keep watch against all dangers that threaten you in mind, body, or estate. You may wonder at me, you may sometimes doubt me; but until you say you distrust me, when any trouble comes near you, you will find me there. Now, my dear child, you ought to know that the Rev. Joseph Bellamy Stoker has the reputation of being too fond of prosecuting religious inquiries with young and handsome women."

Myrtle's eyes fell,—a new suspicion seemed to have suggested itself.

"He wanted to get up a spiritual intimacy with our Susan Posey,—a very pretty girl, as you know."

Myrtle tossed her head almost imperceptibly, and bit her lip.

"I suppose there are a dozen young people that have been talked about with him. He preaches cruel sermons in his pulpit, cruel as death, and cold-blooded enough to freeze any mother's blood if nature did not tell her he lied, and then smooths it all over with the first good-looking young woman he can get to listen to him."

Myrtle had dropped the slipper she was working on.

"Tell me, my dear, would you be willing to give up meeting this man alone, and gratify my friend, and avoid all occasion of reproach?"

"Of course I would," said Myrtle, her eyes flashing, for her doubts, her shame, her pride, were all excited. "Who is your friend, Mr. Gridley?"

"An excellent woman,—Mrs. Hopkins. You know her, Gifted Hopkins's mother, with whom I am residing. Shall the minister be given to understand that you will see him hereafter in her company?"

Myrtle came pretty near a turn of her old nervous perturbations. "As you say," she answered. "Is there nobody that I can trust, or is everybody hunting me like a bird?" She hid her face in her hands.

"You can trust me, my dear," said Byles Gridley. "Take your needle, my child, and work at your pattern,—it will come out a rose by and by. Life is like that, Myrtle, one stitch at a time, taken patiently, and the pattern will come out all right like the embroidery. You can trust me. Good-by, my dear."

"Let her finish the slippers," the old man said to himself as he trudged home, "and make 'em big enough for Father Pemberton. He shall have his feet in 'em yet, or my name is n't Byles Gridley!"

CHAPTER XV. ARRIVAL OF REINFORCEMENTS.

Myrtle Hazard waited until the steps of Master Byles Gridley had ceased to be heard, as he walked in his emphatic way through the long entry of the old mansion. Then she went to her little chamber and sat down in a sort of reverie. She could not doubt his sincerity, and there was something in her own consciousness which responded to the suspicions he had expressed with regard to the questionable impulses of the Rev. Joseph Bellamy Stoker.

It is not in the words that others say to us, but in those other words which these make us say to ourselves, that we find our gravest lessons and our sharpest rebukes. The hint another gives us finds whole trains of thought which have been getting themselves ready to be shaped in inwardly articulated words, and only awaited the touch of a burning syllable, as the mottoes of a pyrotechnist only wait for a spark to become letters of fire.

The artist who takes your photograph must carry you with him into his "developing" room, and he will give you a more exact illustration of the truth just mentioned. There is nothing to be seen on the glass just taken from the camera. But there is a potential, though invisible, picture hid in the creamy film which covers it. Watch him as he pours a wash over it, and you will see that miracle wrought which is at once a surprise and a charm,—the sudden appearance of your own features where a moment before was a blank without a vestige of intelligence or beauty.

In some such way the grave warnings of Master Byles Gridley had called up a fully shaped, but hitherto unworded, train of thought in the consciousness of Myrtle Hazard. It was not merely their significance, it was mainly because they were spoken at the fitting time. If they had been uttered a few weeks earlier, when Myrtle was taking the first stitch on the embroidered slippers, they would have been as useless as the artist's developing solution on a plate which had never been exposed in the camera. But she had been of late in training for her lesson in ways that neither she nor anybody else dreamed of. The reader who has shrugged his (or her) shoulders over the last illustration will perhaps hear this one which follows more cheerfully. The physician in the Arabian Nights made his patient play at ball with a bat, the hollow handle of which contained drugs of marvellous efficacy. Whether it was the drugs that made the sick man get well, or the exercise, is not of so much consequence as the fact that he did at any rate get well.

These walks which Myrtle had taken with her reverend counsellor had given her a new taste for the open air, which was what she needed just now more than confessions of faith or spiritual paroxysms. And so it happened that, while he had been stimulating all those imaginative and emotional elements of her nature which responded to the keys he loved to play upon, the restoring influences of the sweet autumnal air, the mellow sunshine, the soothing aspects of the woods and fields and sky, had been quietly doing their work. The color was fast returning to her cheek, and the discords of her feelings and her thoughts gradually resolving themselves into the harmonious and cheerful rhythms of bodily and mental health. It needed but the timely word from the fitting lips to change the whole programme of her daily mode of being. The word had been spoken. She saw its truth; but how hard it is to tear away a cherished illusion, to cast out an unworthy intimate! How hard for any!—but for a girl so young, and who had as yet found so little to love and trust, how cruelly hard!

She sat, still and stony, like an Egyptian statue. Her eyes were fixed on a vacant chair opposite the one on which she was sitting. It was a very singular and fantastic old chair, said to have been brought over by the first emigrant of her race. The legs and arms were curiously turned in spirals, the suggestions of which were half pleasing and half repulsive. Instead of the claw-feet common in furniture of a later date, each of its legs rested on a misshapen reptile, which it seemed to flatten by its weight, as if it were squeezing the breath out of the ugly creature. Over this chair hung the portrait of her beautiful ancestress, her neck and arms, the specialty of her beauty, bare, except for a bracelet on the left wrist, and her shapely figure set off by the ample folds of a rich crimson brocade. Over Myrtle's bed hung that other portrait, which was to her almost as the pictures of the Mater Dolorosa to trustful souls of the Roman faith. She had longed for these pictures while she was in her strange hysterical condition, and they had been hung up in her chamber.

The night was far gone, as she knew by the declining of the constellations which she had seen shining brightly almost overhead in the early evening, when she awoke, and found herself still sitting in the very attitude in which she was sitting hours before. Her lamp had burned out, and the starlight but dimly illuminated her chamber. She started to find herself sitting there, chilled and stiffened by long remaining in one posture; and as her consciousness returned, a great fear seized her, and she sprang for a match. It broke with the quick movement she made to kindle it, and she snatched another as if a fiend were after her. It flashed and went out. Oh the terror, the terror! The darkness seemed alive with fearful presences. The lurid glare of her own eyeballs flashed backwards into her brain. She tried one more match; it kindled as it should, and she lighted another lamp. Her first impulse was to assure herself that nothing was changed in the familiar objects around her. She held the lamp up to the picture of Judith Pride. The beauty looked at her, it seemed as if with a kind of lofty recognition in her eyes; but there she was, as always. She turned the light upon the pale face of the martyr-portrait. It looked troubled and faded, as it seemed to Myrtle, but still it was the same face she remembered from her childhood. Then she threw the light on the old chair, and, shuddering, caught up a shawl and flung it over the spiral-wound arms and legs, and the flattened reptiles on which it stood.

In those dead hours of the night which had passed over her sitting there, still and stony, as it should seem, she had had strange visitors. Two women had been with her, as real as any that breathed the breath of life,—so it appeared to her,—yet both had long been what is called, in our poor language, dead. One came in all the glory of her ripened beauty, bare-necked, bare-armed, full dressed by nature in that splendid animal equipment which in its day had captivated the eyes of all the lusty lovers of complete muliebrity. The other,—how delicate, how translucent, how aerial she seemed! yet real and true to the lineaments of her whom the

young girl looked upon as her hereditary protector.

The beautiful woman turned, and, with a face full of loathing and scorn, pointed to one of the reptiles beneath the feet of the chair. And while Myrtle's eyes followed hers, the flattened and half-crushed creature seemed to swell and spread like his relative in the old fable, like the black dog in Faust, until he became of tenfold size, and at last of colossal proportions. And, fearful to relate, the batrachian features humanized themselves as the monster grew, and, shaping themselves more and more into a remembered similitude, Myrtle saw in them a hideous likeness of—No! no! it was too horrible, was that the face which had been so close to hers but yesterday? were those the lips, the breath from which had stirred her growing curls as he leaned over her while they read together some passionate stanza from a hymn that was as much like a love-song as it dared to be in godly company? A shadow of disgust—the natural repugnance of loveliness for deformity—ran all through her, and she shrieked, as she thought, and threw herself at the feet of that other figure. She felt herself lifted from the floor, and then a cold thin hand seemed to take hers. The warm life went out of her, and she was to herself as a dimly conscious shadow that glided with passive acquiescence wherever it was led. Presently she found herself in a half-lighted apartment, where there were books on the shelves around, and a desk with loose manuscripts lying on it, and a little mirror with a worn bit of carpet before it. And while she looked, a great serpent writhed in through the half-open door, and made the circuit of the room, laying one huge ring all round it, and then, going round again, laid another ring over the first, and so on until he was wound all round the room like the spiral of a mighty cable, leaving a hollow in the centre; and then the serpent seemed to arch his neck in the air, and bring his head close down to Myrtle's face; and the features were not those of a serpent, but of a man, and it hissed out the words she had read that very day in a little note which said, "Come to my study to-morrow, and we will read hymns together."

Again she was back in her little chamber, she did not know how, and the two women were looking into her eyes with strange meaning in their own. Something in them seemed to plead with her to yield to their influence, and her choice wavered which of them to follow, for each would have led her her own way,—whither she knew not. It was the strife of her "Vision," only in another form,—the contest of two lives her blood inherited for the mastery of her soul. The might of beauty conquered. Myrtle resigned herself to the guidance of the lovely phantom, which seemed so much fuller of the unextinguished fire of life, and so like herself as she would grow to be when noon should have ripened her into maturity.

Doors opened softly before them; they climbed stairs, and threaded corridors, and penetrated crypts, strange yet familiar to her eyes, which seemed to her as if they could see, as it were, in darkness. Then came a confused sense of eager search for something that she knew was hidden, whether in the cleft of a rock, or under the boards of a floor, or in some hiding-place among the skeleton rafters, or in a forgotten drawer, or in a heap of rubbish, she could not tell; but somewhere there was something which she was to find, and which, once found, was to be her talisman. She was in the midst of this eager search when she awoke.

The impression was left so strongly on her mind that with all her fears she could not resist the desire to make an effort to find what meaning there was in this frightfully real dream. Her courage came back as her senses assured her that all around her was natural, as when she left it. She determined to follow the lead of the strange hint her nightmare had given her.

In one of the upper chambers of the old mansion there stood a tall, upright desk of the ancient pattern, with folding doors above and large drawers below. "That desk is yours, Myrtle," her uncle Malachi had once said to her; "and there is a trick or two about it that it will pay you to study." Many a time Myrtle had puzzled herself about the mystery of the old desk. All the little drawers, of which there were a considerable number, she had pulled out, and every crevice, as she thought, she had carefully examined. She determined to make one more trial. It was the dead of the night, and this was a fearful old place to be wandering about; but she was possessed with an urgent feeling which would not let her wait until daylight.

She stole like a ghost from her chamber. She glided along the narrow entries as she had seemed to move in her dream. She opened the folding doors of the great upright desk. She had always before examined it by daylight, and though she had so often pulled all the little drawers out, she had never thoroughly explored the recesses which received them. But in her new-born passion of search, she held her light so as to illuminate all these deeper spaces. At once she thought she saw the marks of pressure with a finger. She pressed her own finger on this place, and, as it yielded with a slight click, a small mahogany pilaster sprang forward, revealing its well-kept secret that it was the mask of a tall, deep, very narrow drawer. There was something heavy in it, and, as Myrtle turned it over, a golden bracelet fell into her hand. She recognized it at once as that which had been long ago the ornament of the fair woman whose portrait hung in her chamber. She clasped it upon her wrist, and from that moment she felt as if she were the captive of the lovely phantom who had been with her in her dream.

"The old man walked last night, God save us!" said Kitty Fagan to Biddy Finnegan, the day after Myrtle's nightmare and her curious discovery.

CHAPTER XVI. VICTORY.

It seems probable enough that Myrtle's whole spiritual adventure was an unconscious dramatization of a few simple facts which her imagination tangled together into a kind of vital coherence. The philosopher who goes to the bottom of things will remark that all the elements of her fantastic melodrama had been furnished her while waking. Master Byles Gridley's penetrating and stinging caution was the text, and the grotesque carvings and the portraits furnished the "properties" with which her own mind had wrought up this scenic show.

The philosopher who goes to the bottom of things might not find it so easy to account for the change which came over Myrtle Hazard from the hour when she clasped the bracelet of Judith Pride upon her wrist. She felt

a sudden loathing of the man whom she had idealized as a saint. A young girl's caprice? Possibly. A return of the natural instincts of girlhood with returning health? Perhaps so. An impression produced by her dream? An effect of an influx from another sphere of being? The working of Master Byles Gridley's emphatic warning? The magic of her new talisman?

We may safely leave these questions for the present. As we have to tell, not what Myrtle Hazard ought to have done, and why she should have done it, but what she did do, our task is a simpler one than it would be to lay bare all the springs of her action. Until this period, she had hardly thought of herself as a born beauty. The flatteries she had received from time to time were like the chips and splinters under the green wood, when the chill women pretended to make a fire in the best parlor at The Poplars, which had a way of burning themselves out, hardly warming, much less kindling, the fore-stick and the back-log.

Myrtle had a tinge of what some call superstition, and she began to look upon her strange acquisition as a kind of amulet. Its suggestions betrayed themselves in one of her first movements. Nothing could be soberer than the cut of the dresses which the propriety of the severe household had established as the rule of her costume. But the girl was no sooner out of bed than a passion came over her to see herself in that less jealous arrangement of drapery which the Beauty of the last century had insisted on as presenting her most fittingly to the artist. She rolled up the sleeves of her dress, she turned down its prim collar and neck, and glanced from her glass to the portrait, from the portrait back to the glass. Myrtle was not blind nor dull, though young, and in many things untaught. She did not say in so many words, "I too am a beauty," but she could not help seeing that she had many of the attractions of feature and form which had made the original of the picture before her famous. The same stately carriage of the head, the same full-rounded neck, the same more than hinted outlines of figure, the same finely shaped arms and hands, and something very like the same features startled her by their identity in the permanent image of the canvas and the fleeting one of the mirror.

The world was hers then,—for she had not read romances and love-letters without finding that beauty governs it in all times and places. Who was this middle-aged minister that had been hanging round her and talking to her about heaven, when there was not a single joy of earth that she had as yet tasted? A man that had been saying all his fine things to Miss Susan Posey, too, had he, before he had bestowed his attentions on her? And to a dozen other girls, too, nobody knows who!

The revulsion was a very sadden one. Such changes of feeling are apt to be sudden in young people whose nerves have been tampered with, and Myrtle was not of a temperament or an age to act with much deliberation where a pique came in to the aid of a resolve. Master Gridley guessed sagaciously what would be the effect of his revelation, when he told her of the particular attentions the minister had paid to pretty Susan Posey and various other young women.

The Rev. Mr. Stoker had parted his hair wonderfully that morning, and made himself as captivating as his professional costume allowed. He had drawn down the shades of his windows so as to let in that subdued light which is merciful to crow's-feet and similar embellishments, and wheeled up his sofa so that two could sit at the table and read from the same book.

At eleven o'clock he was pacing the room with a certain feverish impatience, casting a glance now and then at the mirror as he passed it. At last the bell rang, and he himself went to answer it, his heart throbbing with expectation of meeting his lovely visitor.

Myrtle Hazard appeared by an envoy extraordinary, the bearer of sealed despatches. Mistress Kitty Fagan was the young lady's substitute, and she delivered into the hand of the astonished clergyman the following missive:

TO THE REV. MR. STOKER.

Reverend Sir,—I shall not come to your study this day. I do not feel that I have any more need of religious counsel at this time, and I am told by a friend that there are others who will be glad to hear you talk on this subject. I hear that Mrs. Hopkins is interested in religious subjects, and would have been glad to see you in my company. As I cannot go with her, perhaps Miss Susan Posey will take my place. I thank you for all the good things you have said to me, and that you have given me so much of your company. I hope we shall sing hymns together in heaven some time, if we are good enough, but I want to wait for that awhile, for I do not feel quite ready. I am not going to see you any more alone, reverend sir. I think this is best, and I have good advice. I want to see more of young people of my own age, and I have a friend, Mr. Gridley, who I think is older than you are, that takes an interest in me; and as you have many others that you must be interested in, he can take the place of a father better than you can do. I return to you the hymn-book, I read one of those you marked, and do not care to read any more.

Respectfully yours,

MYRTLE HAZARD.

The Rev. Mr. Stoker uttered a cry of rage as he finished this awkwardly written, but tolerably intelligible letter. What could he do about it? It would hardly do to stab Myrtle Hazard, and shoot Byles Gridley, and strangle Mrs. Hopkins, every one of which homicides he felt at the moment that he could have committed. And here he was in a frantic paroxysm, and the next day was Sunday, and his morning's discourse was unwritten. His savage mediaeval theology came to his relief, and he clutched out of a heap of yellow manuscripts his well-worn "convulsion-fit" sermon. He preached it the next day as if it did his heart good, but Myrtle Hazard did not hear it, for she had gone to St. Bartholomew's with Olive Eveleth.

CHAPTER XVII. SAINT AND SINNER

It happened a little after this time that the minister's invalid wife improved—somewhat unexpectedly in

health, and, as Bathsheba was beginning to suffer from imprisonment in her sick-chamber, the physician advised very strongly that she should vary the monotony of her life by going out of the house daily for fresh air and cheerful companionship. She was therefore frequently at the house of Olive Eveleth; and as Myrtle wanted to see young people, and had her own way now as never before, the three girls often met at the parsonage. Thus they became more and more intimate, and grew more and more into each other's affections.

These girls presented three types of spiritual character which are to be found in all our towns and villages. Olive had been carefully trained, and at the proper age confirmed. Bathsheba had been prayed for, and in due time startled and converted. Myrtle was a simple daughter of Eve, with many impulses like those of the other two girls, and some that required more watching. She was not so safe, perhaps, as either of the other girls, for this world or the next; but she was on some accounts more interesting, as being a more genuine representative of that inexperienced and too easily deluded, yet always cherished, mother of our race, whom we must after all accept as embodying the creative idea of woman, and who might have been alive and happy now (though at a great age) but for a single fatal error.

The Rev. Ambrose Eveleth, Rector of Saint Bartholomew's, Olive's father, was one of a class numerous in the Anglican Church, a cultivated man, with pure tastes, with simple habits, a good reader, a neat writer, a safe thinker, with a snug and well-fenced mental pasturage, which his sermons kept cropped moderately close without any exhausting demand upon the soil. Olive had grown insensibly into her religious maturity, as into her bodily and intellectual developments, which one might suppose was the natural order of things in a well-regulated Christian—household, where the children are brought up in the nurture and admonition of the Lord.

Bathsheba had been worried over and perplexed and depressed with vague apprehensions about her condition, conveyed in mysterious phrases and graveyard expressions of countenance, until about the age of fourteen years, when she had one of those emotional paroxysms very commonly considered in some Protestant sects as essential to the formation of religious character. It began with a shivering sense of enormous guilt, inherited and practised from her earliest infancy. Just as every breath she ever drew had been malignantly poisoning the air with carbonic acid, so her every thought and feeling had been tainting the universe with sin. This spiritual chill or rigor had in due order been followed by the fever-flush of hope, and that in its turn had ushered in the last stage, the free opening of all the spiritual pores in the peaceful relaxation of self-surrender.

Good Christians are made by many very different processes. Bathsheba had taken her religion after the fashion of her sect; but it was genuine, in spite of the cavils of the formalists, who could not understand that the spirit which kept her at her mother's bedside was the same as that which poured the tears of Mary of Magdala on the feet of her Lord, and led her forth at early dawn with the other Mary to visit his sepulchre.

Myrtle was a child of nature, and of course, according to the out-worn formulæ which still shame the distorted religion of humanity, hateful to the Father in Heaven who made her. She had grown up in antagonism with all that surrounded her. She had been talked to about her corrupt nature and her sinful heart, until the words had become an offence and an insult. Bathsheba knew her father's fondness for young company too well to suppose that his intercourse with Myrtle had gone beyond the sentimental and poetical stage, and was not displeased when she found that there was some breach between them. Myrtle herself did not profess to have passed through the technical stages of the customary spiritual paroxysm. Still, the gentle daughter of the terrible preacher loved her and judged her kindly. She was modest enough to think that perhaps the natural state of some girls might be at least as good as her own after the spiritual change of which she had been the subject. A manifest heresy, but not new, nor unamiable, nor inexplicable.

The excellent Bishop Joseph Hall, a painful preacher and solid divine of Puritan tendencies, declares that he prefers good-nature before grace in the election of a wife; because, saith he, "it will be a hard Task, where the Nature is peevish and froward, for Grace to make an entire Conquest whilst Life lasteth." An opinion apparently entertained by many modern ecclesiastics, and one which may be considered very encouraging to those young ladies of the politer circles who have a fancy for marrying bishops and other fashionable clergymen. Not of course that "grace" is so rare a gift among the young ladies of the upper social sphere; but they are in the habit of using the word with a somewhat different meaning from that which the good Bishop attached to it.

CHAPTER XVIII. VILLAGE POET.

It was impossible for Myrtle to be frequently at Olive's without often meeting Olive's brother, and her reappearance with the bloom on her cheek was a signal which her other admirers were not likely to overlook as a hint to recommence their flattering demonstrations; and so it was that she found herself all at once the centre of attraction to three young men with whom we have made some acquaintance, namely, Cyprian Eveleth, Gifted Hopkins, and Murray Bradshaw.

When the three girls were together at the house of Olive, it gave Cyprian a chance to see something of Myrtle in the most natural way. Indeed, they all became used to meeting him in a brotherly sort of relation; only, as he was not the brother of two of them, it gave him the inside track, as the sporting men say, with reference to any rivals for the good-will of either of these. Of course neither Bathsheba nor Myrtle thought of him in any other light than as Olive's brother, and would have been surprised with the manifestation on his part of any other feeling, if it existed. So he became very nearly as intimate with them as Olive was, and hardly thought of his intimacy as anything more than friendship, until one day Myrtle sang some hymns so sweetly that Cyprian dreamed about her that night; and what young person does not know that the woman or the man once idealized and glorified in the exalted state of the imagination belonging to sleep becomes dangerous to the sensibilities in the waking hours that follow? Yet something drew Cyprian to the gentler and

more subdued nature of Bathsheba, so that he often thought, like a gayer personage than himself, whose divided affections are famous in song, that he could have been blessed to share her faithful heart, if Myrtle had not bewitched him with her unconscious and innocent sorceries. As for poor, modest Bathsheba, she thought nothing of herself, but was almost as much fascinated by Myrtle as if she had been one of the sex she was born to make in love with her.

The first rival Cyprian was to encounter in his admiration of Myrtle Hazard was Mr. Gifted Hopkins. This young gentleman had the enormous advantage of that all-subduing accomplishment, the poetical endowment. No woman, it is pretty generally understood, can resist the youth or man who addresses her in verse. The thought that she is the object of a poet's love is one which fills a woman's ambition more completely than all that wealth or office or social eminence can offer. Do the young millionnaires and the members of the General Court get letters from unknown ladies, every day, asking for their autographs and photographs? Well, then!

Mr. Gifted Hopkins, being a poet, felt that it was so, to the very depth of his soul. Could he not confer that immortality so dear to the human heart? Not quite yet, perhaps,—though the "Banner and Oracle" gave him already "an elevated niche in the Temple of Fame," to quote its own words,—but in that glorious summer of his genius, of which these spring blossoms were the promise. It was a most formidable battery, then, which Cyprian's first rival opened upon the fortress of Myrtle's affections.

His second rival, Mr. William Murray Bradshaw, had made a half-playful bet with his fair relative, Mrs. Clymer Ketchum, that he would bag a girl within twelve months of date who should unite three desirable qualities, specified in the bet, in a higher degree than any one of the five who were on the matrimonial programme which she had laid out for him,—and Myrtle was the girl with whom he meant to win the bet. When a young fellow like him, cool and clever, makes up his mind to bring down his bird, it is no joke, but a very serious and a tolerably certain piece of business. Not being made a fool of by any boyish nonsense,—passion and all that,—he has a great advantage. Many a woman rejects a man because he is in love with her, and accepts another because he is not. The first is thinking too much of himself and his emotions,—the other makes a study of her and her friends, and learns what ropes to pull. But then it must be remembered that Murray Bradshaw had a poet for his rival, to say nothing of the brother of a bosom friend.

The qualities of a young poet are so exceptional, and such interesting objects of study, that a narrative like this can well afford to linger awhile in the delineation of this most envied of all the forms of genius. And by contrasting the powers and limitations of two such young persons as Gifted Hopkins and Cyprian Eveleth, we may better appreciate the nature of that divine inspiration which gives to poetry the superiority it claims over every other form of human expression.

Gifted Hopkins had shown an ear for rhythm, and for the simpler forms of music, from his earliest childhood. He began beating with his heels the accents of the psalm tunes sung at meeting at a very tender age,—a habit, indeed, of which he had afterwards to correct himself, as, though it shows a sensibility to rhythmical impulses like that which is beautifully illustrated when a circle join hands and emphasize by vigorous downward movements the leading syllables in the tune of Auld Lang Syne, yet it is apt to be too expressive when a large number of boots join in the performance. He showed a remarkable talent for playing on one of the less complex musical instruments, too limited in compass to satisfy exacting ears, but affording excellent discipline to those who wish to write in the simpler metrical forms,—the same which summons the hero from his repose and stirs his blood in battle.

By the time he was twelve years old he was struck with the pleasing resemblance of certain vocal sounds which, without being the same, yet had a curious relation which made them agree marvellously well in couples; as eyes with skies; as heart with art, also with part and smart; and so of numerous others, twenty or thirty pairs, perhaps, which number he considerably increased as he grew older, until he may have had fifty or more such pairs at his command.

The union of so extensive a catalogue of words which matched each other, and of an ear so nice that it could tell if there were nine or eleven syllables in an heroic line, instead of the legitimate ten, constituted a rare combination of talents in the opinion of those upon whose judgment he relied. He was naturally led to try his powers in the expression of some just thought or natural sentiment in the shape of verse, that wonderful medium of imparting thought and feeling to his fellow-creatures which a bountiful Providence had made his rare and inestimable endowment.

It was at about this period of his life, that is to say, when he was of the age of thirteen, or we may perhaps say fourteen years, for we do not wish to overstate his precocity, that he experienced a sensation so entirely novel, that, to the best of his belief, it was such as no other young person had ever known, at least in anything like the same degree. This extraordinary emotion was brought on by the sight of Myrtle Hazard, with whom he had never before had any near relations, as they had been at different schools, and Myrtle was too reserved to be very generally known among the young people of his age.

Then it was that he broke forth in his virgin effort, "Lines to M—e," which were published in the village paper, and were claimed by all possible girls but the right one; namely, by two Mary Annes, one Minnie, one Mehitable, and one Marthie, as she saw fit to spell the name borrowed from her who was troubled about many things.

The success of these lines, which were in that form of verse known to the hymn-books as "common metre," was such as to convince the youth that, whatever occupation he might be compelled to follow for a time to obtain a livelihood or to assist his worthy parent, his true destiny was the glorious career of a poet. It was a most pleasing circumstance, that his mother, while she fully recognized the propriety of his being diligent in the prosaic line of business to which circumstances had called him, was yet as much convinced as he himself that he was destined to achieve literary fame. She had read Watts and Select Hymns all through, she said, and she did n't see but what Gifted could make the verses come out jest as slick, and the sound of the rhymes jest as pooty, as Izik Watts or the Selectmen, whoever they was,—she was sure they couldn't be the selectmen of this town, wherever they belonged. It is pleasant to say that the young man, though favored by nature with this rarest of talents, did not forget the humbler duties that Heaven, which dresses few singing-birds in the golden plumes of fortune, had laid upon him. After having received a moderate amount of instruction at one

of the less ambitious educational institutions of the town, supplemented, it is true, by the judicious and gratuitous hints of Master Gridley, the young poet, in obedience to a feeling which did him the highest credit, relinquished, at least for the time, the Groves of Academus, and offered his youth at the shrine of Plutus, that is, left off studying and took to business. He became what they call a "clerk" in what they call a "store" up in the huckleberry districts, and kept such accounts as were required by the business of the establishment. His principal occupation was, however, to attend to the details of commerce as it was transacted over the counter. This industry enabled him, to his great praise be it spoken, to assist his excellent parent, to clothe himself in a becoming manner, so that he made a really handsome figure on Sundays and was always of presentable aspect, likewise to purchase a book now and then, and to subscribe for that leading periodical which furnishes the best models to the youth of the country in the various modes of composition.

Though Master Gridley was very kind to the young man, he was rather disposed to check the exuberance of his poetical aspirations. The truth was, that the old classical scholar did not care a great deal for modern English poetry. Give him an Ode of Horace, or a scrap from the Greek Anthology, and he would recite it with great inflation of spirits; but he did not think very much of "your Keatses, and your Tennysons, and the whole Hasheesh crazy lot," as he called the dreamily sensuous idealists who belong to the same century that brought in ether and chloroform. He rather shook his head at Gifted Hopkins for indulging so largely in metrical composition.

"Better stick to your ciphering, my young friend," he said to him, one day. "Figures of speech are all very well, in their way; but if you undertake to deal much in them, you'll figure down your prospects into a mighty small sum. There's some danger that it will take all the sense out of you, if you keep writing verses at this rate. You young scribblers think any kind of nonsense will do for the public, if it only has a string of rhymes tacked to it. Cut off the bobs of your kite, Gifted Hopkins, and see if it does n't pitch, and stagger, and come down head-foremost. Don't write any stuff with rhyming tails to it that won't make a decent show for itself after you've chopped all the rhyming tails off. That's my advice, Gifted Hopkins. Is there any book you would like to have out of my library? Have you ever read Spenser's Faery Queen?"

He had tried, the young man answered, on the recommendation of Cyprian Eveleth, but had found it rather hard reading.

Master Gridley lifted his eyebrows very slightly, remembering that some had called Spenser the poet's poet. "What a pity," he said to himself, "that this Gifted Hopkins has n't got the brains of that William Murray Bradshaw! What's the reason, I wonder, that all the little earthen pots blow their covers off and froth over in rhymes at such a great rate, while the big iron pots keep their lids on, and do all their simmering inside?"

That is the way these old pedants will talk, after all their youth and all their poetry, if they ever had any, are gone. The smiles of woman, in the mean time, encouraged the young poet to smite the lyre. Fame beckoned him upward from her temple steep. The rhymes which rose before him unbidden were as the rounds of Jacob's ladder, on which he would climb to a heaven of-glory.

Master Gridley threw cold water on the young man's too sanguine anticipations of success. "All up with the boy, if he's going to take to rhyming when he ought to be doing up papers of brown sugar and weighing out pounds of tea. Poor-house,—that 's what it'll end in. Poets, to be sure! Sausage-makers! Empty skins of old phrases,—stuff 'em with odds and ends of old thoughts that never were good for anything,—cut 'em up in lengths and sell'em to fools! "And if they ain't big fools enough to buy 'em, give'em away; and if you can't do that, pay folks to take'em. Bah! what a fine style of genius common-sense is! There's a passage in the book that would fit half these addle-headed rhymesters. What is that saying of mine about "squinting brains?"

He took down "Thoughts on the Universe," and read:—

"Of Squinting Brains.

"Where there is one man who squints with his eyes, there are a dozen who squint with their brains. It is an infirmity in one of the eyes, making the two unequal in power, that makes men squint. Just so it is an inequality in the two halves of the brain that makes some men idiots and others rascals. I knows a fellow whose right half is a genius, but his other hemisphere belongs to a fool; and I had a friend perfectly honest on one side, but who was sent to jail because the other had an inveterate tendency in the direction of picking pockets and appropriating aes alienum."

All this, talking and reading to himself in his usual fashion.

The poetical faculty which was so freely developed in Gifted Hopkins had never manifested itself in Cyprian Eveleth, whose look and voice might, to a stranger, have seemed more likely to imply an imaginative nature. Cyprian was dark, slender, sensitive, contemplative, a lover of lonely walks,—one who listened for the whispers of Nature and watched her shadows, and was alive to the symbolisms she writes over everything. But Cyprian had never shown the talent or the inclination for writing in verse.

He was on the pleasantest terms with the young poet, and being somewhat older, and having had the advantage of academic and college culture, often gave him useful hints as to the cultivation of his powers, such as genius frequently requires at the hands of humbler intelligences. Cyprian was incapable of jealousy; and although the name of Gifted Hopkins was getting to be known beyond the immediate neighborhood, and his autograph had been requested by more than one young lady living in another county, he never thought of envying the young poet's spreading popularity.

That the poet himself was flattered by these marks of public favor may be inferred from the growing confidence with which he expressed himself in his conversations with Cyprian, more especially in one which was held at the "store" where he officiated as "clerk."

"I become more and more assured, Cyprian," he said, leaning over the counter, "that I was born to be a poet. I feel it in my marrow. I must succeed. I must win the laurel of fame. I must taste the sweets of"—

"Molasses," said a bareheaded girl of ten who entered at that moment, bearing in her hand a cracked pitcher, "ma wants three gills of molasses."

Gifted Hopkins dropped his subject and took up a tin measure. He served the little maid with a benignity quite charming to witness, made an entry on a slate of .08, and resumed the conversation.

"Yes, I am sure of it, Cyprian. The very last piece I wrote was copied in two papers. It was 'Contemplations in Autumn,' and—don't think I am too vain—one young lady has told me that it reminded her of Pollok. You never wrote in verse, did you, Cyprian?"

"I never wrote at all, Gifted, except school and college exercises, and a letter now and then. Do you find it an easy and pleasant exercise to make rhymes?"

Pleasant! Poetry is to me a delight and a passion. I never know what I am going to write when I sit down. And presently the rhymes begin pounding in my brain,—it seems as if there were a hundred couples of them, paired like so many dancers,—and then these rhymes seem to take possession of me, like a surprise party, and bring in all sorts of beautiful thoughts, and I write and write, and the verses run measuring themselves out like"—

"Ribbins,—any narrer blue ribbins, Mr. Hopkins? Five eighths of a yard, if you please, Mr. Hopkins. How's your folks?" Then, in a lower tone, "Those last verses of yours in the Bannernoracle were sweet poetry."

Gifted Hopkins meted out the five eighths of blue ribbon by the aid of certain brass nails on the counter. He gave good measure, not prodigal, for he was loyal to his employer, but putting a very moderate strain on the ribbon, and letting the thumb-nail slide with a contempt of infinitesimals which betokened a large soul in its genial mood.

The young lady departed, after casting upon him one of those bewitching glances which the young poet—let us rather say the poet, without making odious distinctions—is in the confirmed habit of receiving from dear woman.

Mr. Gifted Hopkins resumed: "I do not know where this talent, as my friends call it, of mine, comes from. My father used to carry a chain for a surveyor sometimes, and there is a ten-foot pole in the house he used to measure land with. I don't see why that should make me a poet. My mother was always fond of Dr. Watts's hymns; but so are other young men's mothers, and yet they don't show poetical genius. But wherever I got it, it comes as easy to me to write in verse as to write in prose, almost. Don't you ever feel a longing to send your thoughts forth in verse, Cyprian?"

"I wish I had a greater facility of expression very often," Cyprian answered; "but when I have my best thoughts I do not find that I have words that seem fitting to clothe them. I have imagined a great many poems, Gifted, but I never wrote a rhyming verse, or verse of any kind. Did you ever hear Olive play 'Songs without Words'? If you have ever heard her, you will know what I mean by unrhymed and unversed poetry."

"I am sure I don't know what you mean, Cyprian, by poetry without rhyme or verse, any more than I should if you talked about pictures that were painted on nothing, or statues that were made out of nothing. How can you tell that anything is poetry, I should like to know, if there is neither a regular line with just so many syllables, nor a rhyme? Of course you can't. I never have any thoughts too beautiful to put in verse: nothing can be too beautiful for it."

Cyprian left the conversation at this point. It was getting more suggestive than interpenetrating, and he thought he might talk the matter over better with Olive. Just then a little boy came in, and bargained with Gifted for a Jews-harp, which, having obtained, he placed against his teeth, and began playing upon it with a pleasure almost equal to that of the young poet reciting his own verses.

"A little too much like my friend Gifted Hopkins's poetry," Cyprian said, as he left the "store." "All in one note, pretty much. Not a great many tunes, 'Hi Betty Martin,' 'Yankee Doodle,' and one or two more like them. But many people seem to like them, and I don't doubt it is as exciting to Gifted to write them as it is to a great genius to express itself in a poem."

Cyprian was, perhaps, too exacting. He loved too well the sweet intricacies of Spenser, the majestic and subtly interwoven harmonies of Milton. These made him impatient of the simpler strains of Gifted Hopkins.

Though he himself never wrote verses, he had some qualities which his friend the poet may have undervalued in comparison with the talent of modelling the symmetries of verse and adjusting the correspondences of rhyme. He had kept in a singular degree all the sensibilities of childhood, its simplicity, its reverence. It seemed as if nothing of all that he met in his daily life was common or unclean to him, for there was no mordant in his nature for what was coarse or vile, and all else he could not help idealizing into its own conception of itself, so to speak. He loved the leaf after its kind as well as the flower, and the root as well as the leaf, and did not exhaust his capacity of affection or admiration on the blossom or bud upon which his friend the poet lavished the wealth of his verse. Thus Nature took him into her confidence. She loves the men of science well, and tells them all her family secrets,—who is the father of this or that member of the group, who is brother, sister, cousin, and so on, through all the circle of relationship. But there are others to whom she tells her dreams; not what species or genus her lily belongs to, but what vague thought it has when it dresses in white, or what memory of its birthplace that is which we call its fragrance. Cyprian was one of these. Yet he was not a complete nature. He required another and a wholly different one to be the complement of his own. Olive came as near it as a sister could, but—we must borrow an old image—moonlight is no more than a cold and vacant glimmer on the sun-dial, which only answers to the great flaming orb of day. If Cyprian could but find some true, sweet-tempered, well-balanced woman, richer in feeling than in those special imaginative gifts which made the outward world at times unreal to him in the intense reality of his own inner life, how he could enrich and adorn her existence,—how she could direct and chasten and elevate the character of all his thoughts and actions!

"Bathsheba," said Olive, "it seems to me that Cyprian is getting more and more fascinated with Myrtle Hazard. He has never got over the fancy he took to her when he first saw her in her red jacket, and called her the fire-hang-bird. Wouldn't they suit each other by and by, after Myrtle has come to herself and grown into a beautiful and noble woman, as I feel sure she will in due time?"

"Myrtle is very lovely," Bathsheba answered, "but is n't she a little too—flighty—for one like your brother? Cyprian isn't more like other young men than Myrtle is like other young girls. I have thought sometimes—I wondered whether out-of-the-way people and common ones do not get along best together. Does n't Cyprian want some more every-day kind of girl to keep him straight? Myrtle is beautiful, beautiful,—fascinates everybody. Has Mr. Bradshaw been following after her lately? He is taken with her too. Didn't you ever think

she would have to give in to Murray Bradshaw at last? He looks to me like a man that would hold on desperately as a lover."

If Myrtle Hazard, instead of being a half-finished school-girl, hardly sixteen years old, had been a young woman of eighteen or nineteen, it would have been plain sailing enough for Murray Bradshaw. But he knew what a distance their ages seemed just now to put between them,—a distance which would grow practically less and less with every year, and he did not wish to risk anything so long as there was no danger of interference. He rather encouraged Gifted Hopkins to write poetry to Myrtle. "Go in, Gifted," he said, "there's no telling what may come of it," and Gifted did go in at a great rate.

Murray Bradshaw did not write poetry himself, but he read poetry with a good deal of effect, and he would sometimes take a hint from one of Gifted Hopkins's last productions to recite a passionate lyric of Byron or Moore, into which he would artfully throw so much meaning that Myrtle was almost as much puzzled, in her simplicity, to know what it meant, as she had been by the religious fervors of the Rev. Mr. Stoker.

He spoke well of Cyprian Eveleth. A good young man,—limited, but exemplary. Would succeed well as rector of a small parish. That required little talent, but a good deal of the humbler sort of virtue. As for himself, he confessed to ambition,—yes, a great deal of ambition. A failing, he supposed, but not the worst of failings. He felt the instinct to handle the larger interests of society. The village would perhaps lose sight of him for a time; but he meant to emerge sooner or later in the higher spheres of government or diplomacy. Myrtle must keep his secret. Nobody else knew it. He could not help making a confidant of her,—a thing he had never done before with any other person as to his plans in life. Perhaps she might watch his career with more interest from her acquaintance with him. He loved to think that there was one woman at least who would be pleased to hear of his success if he succeeded, as with life and health he would,—who would share his disappointment if fate should not favor him.—So he wound and wreathed himself into her thoughts.

It was not very long before Myrtle began to accept the idea that she was the one person in the world whose peculiar duty it was to sympathize with the aspiring young man whose humble beginnings she had the honor of witnessing. And it is not very far from being the solitary confidant, and the single source of inspiration, to the growth of a livelier interest, where a young man and a young woman are in question.

Myrtle was at this time her own mistress as never before. The three young men had access to her as she walked to and from meeting and in her frequent rambles, besides the opportunities Cyprian had of meeting her in his sister's company, and the convenient visits which, in connection with the great lawsuit, Murray Bradshaw could make, without question, at The Poplars.

It was not long before Cyprian perceived that he could never pass a certain boundary of intimacy with Myrtle. Very pleasant and sisterly always she was with him; but she never looked as if she might mean more than she said, and cherished a little spark of sensibility which might be fanned into the flame of love. Cyprian felt this so certainly that he was on the point of telling his grief to Bathsheba, who looked to him as if she would sympathize as heartily with him as his own sister, and whose sympathy would have a certain flavor in it,—something which one cannot find in the heart of the dearest sister that ever lived. But Bathsheba was herself sensitive, and changed color when Cyprian ventured a hint or two in the direction of his thought, so that he never got so far as to unburden his heart to her about Myrtle, whom she admired so sincerely that she could not have helped feeling a great interest in his passion towards her.

As for Gifted Hopkins, the roses that were beginning to bloom fresher and fresher every day in Myrtle's cheeks unfolded themselves more and more freely, to speak metaphorically, in his song. Every week she would receive a delicately tinted note with lines to "Myrtle awaking," or to "Myrtle retiring," (one string of verses a little too Musidora-ish, and which soon found itself in the condition of a cinder, perhaps reduced to that state by spontaneous combustion,) or to "The Flower of the Tropics," or to the "Nymph of the Riverside," or other poetical alias, such as bards affect in their sieges of the female heart.

Gifted Hopkins was of a sanguine temperament. As he read and re-read his verses it certainly seemed to him that they must reach the heart of the angelic being to whom they were addressed. That she was slow in confessing the impression they made upon her, was a favorable sign; so many girls called his poems "sweet pooty," that those charming words, though soothing, no longer stirred him deeply. Myrtle's silence showed that the impression his verses had made was deep. Time would develop her sentiments; they were both young; his position was humble as yet; but when he had become famous through the land-oh blissful thought!—the bard of Oxbow Village would bear a name that any woman would be proud to assume, and the M. H. which her delicate hands had wrought on the kerchiefs she wore would yet perhaps be read, not Myrtle Hazard, but Myrtle Hopkins.

CHAPTER XIX. SUSAN'S YOUNG MAN.

There seems no reasonable doubt that Myrtle Hazard might have made a safe thing of it with Gifted Hopkins, (if so inclined,) provided that she had only been secured against interference. But the constant habit of reading his verses to Susan Posey was not without its risk to so excitable a nature as that of the young poet. Poets were always capable of divided affections, and Cowley's "Chronicle" is a confession that would fit the whole tribe of them. It is true that Gifted had no right to regard Susan's heart as open to the wiles of any new-comer. He knew that she considered herself, and was considered by another, as pledged and plighted. Yet she was such a devoted listener, her sympathies were so easily roused, her blue eyes glistened so tenderly at the least poetical hint, such as "Never, oh never," "My aching heart," "Go, let me weep,"—any of those touching phrases out of the long catalogue which readily suggests itself, that her influence was getting to be such that Myrtle (if really anxious to secure him) might look upon it with apprehension, and the owner of Susan's heart (if of a jealous disposition) might have thought it worth while to make a visit to Oxbow Village to see after his property.

It may seem not impossible that some friend had suggested as much as this to the young lady's lover.

The caution would have been unnecessary, or at least premature. Susan was loyal as ever to her absent friend. Gifted Hopkins had never yet presumed upon the familiar relations existing between them to attempt to shake her allegiance. It is quite as likely, after all, that the young gentleman about to make his appearance in Oxbow Village visited the place of his own accord, without a hint from anybody. But the fact concerns us more than the reason of it, just now.

"Who do you think is coming, Mr. Gridley? Who do you think is coming?" said Susan Posey, her face covered with a carnation such as the first season may see in a city belle, but not the second.

"Well, Susan Posey, I suppose I must guess, though I am rather slow at that business. Perhaps the Governor. No, I don't think it can be the Governor, for you would n't look so happy if it was only his Excellency. It must be the President, Susan Posey,—President James Buchanan. Have n't I guessed right, now, tell me, my dear?"

"O Mr. Gridley, you are too bad,—what do I care for governors and presidents? I know somebody that's worth fifty million thousand presidents,—and he 's coming,—my Clement is coming," said Susan, who had by this time learned to consider the awful Byles Gridley as her next friend and faithful counsellor.

Susan could not stay long in the house after she got her note informing her that her friend was soon to be with her. Everybody told everything to Olive Eveleth, and Susan must run over to the parsonage to tell her that there was a young gentleman coming to Oxbow Village; upon which Olive asked who it was, exactly as if she did not know; whereupon Susan dropped her eyes and said, "Clement,—I mean Mr. Lindsay."

That was a fair piece of news now, and Olive had her bonnet on five minutes after Susan was gone, and was on her way to Bathsheba's,—it was too bad that the poor girl who lived so out of the world shouldn't know anything of what was going on in it. Bathsheba had been in all the morning, and the Doctor had said she must take the air every day; so Bathsheba had on her bonnet a little after Olive had gone, and walked straight up to The Poplars to tell Myrtle Hazard that a certain young gentleman, Clement Lindsay, was coming to Oxbow Village.

It was perhaps fortunate that there was no special significance to Myrtle in the name of Clement Lindsay. Since the adventure which had brought these two young persons together, and, after coming so near a disaster, had ended in a mere humiliation and disappointment, and but for Master Gridley's discreet kindness might have led to foolish scandal, Myrtle had never referred to it in any way. Nobody really knew what her plans had been except Olive and Cyprian, who had observed a very kind silence about the whole matter. The common version of the story was harmless, and near enough to the truth,—down the river,—boat upset,—pulled out,—taken care of by some women in a house farther down,—sick, brain fever,—pretty near it, anyhow,—old Dr. Hurlbut called in,—had her hair cut,—hystericky, etc., etc.

Myrtle was contented with this statement, and asked no questions, and it was a perfectly understood thing that nobody alluded to the subject in her presence. It followed from all this that the name of Clement Lindsay had no peculiar meaning for her. Nor was she like to recognize him as the youth in whose company she had gone through her mortal peril, for all her recollections were confused and dreamlike from the moment when she awoke and found herself in the foaming rapids just above the fall, until that when her senses returned, and she saw Master Byles Gridley standing over her with that look of tenderness in his square features which had lingered in her recollection, and made her feel towards him as if she were his daughter.

Now this had its advantage; for as Clement was Susan's young man, and had been so for two or three years, it would have been a great pity to have any such curious relations established between him and Myrtle Hazard as a consciousness on both sides of what had happened would naturally suggest.

"Who is this Clement Lindsay, Bathsheba?" Myrtle asked.

"Why, Myrtle, don't you remember about Susan Posey's is-to-be,—the young man that has been well, I don't know, but I suppose engaged to her ever since they were children almost?"

"Yes, yes, I remember now. Oh dear! I have forgotten so many things, I should think I had been dead and was coming back to life again. Do you know anything about him, Bathsheba? Did n't somebody say he was very handsome? I wonder if he is really in love with Susan Posey. Such a simple thing? I want to see him. I have seen so few young men."

As Myrtle said these words, she lifted the sleeve a little on her left arm, by a half-instinctive and half-voluntary movement. The glimmering gold of Judith Pride's bracelet flashed out the yellow gleam which has been the reddening of so many hands and the blackening of so, many souls since that innocent sin-breeder was first picked up in the land of Havilah. There came a sudden light into her eye, such as Bathsheba had never seen there before. It looked to her as if Myrtle were saying unconsciously to herself that she had the power of beauty, and would like to try its influence on the handsome young man whom she was soon to meet, even at the risk of unseating poor little Susan in his affections. This pained the gentle and humble-minded girl, who, without having tasted the world's pleasures, had meekly consecrated herself to the lowly duties which lay nearest to her. For Bathsheba's phrasing of life was in the monosyllables of a rigid faith. Her conceptions of the human soul were all simplicity and purity, but elementary. She could not conceive the vast license the creative energy allows itself in mingling the instincts which, after long conflict, may come into harmonious adjustment. The flash which Myrtle's eye had caught from the gleam of the golden bracelet filled Bathsheba with a sudden fear that she was like to be led away by the vanities of that world lying in wickedness of which the minister's daughter had heard so much and seen so little.

Not that Bathsheba made any fine moral speeches, to herself. She only felt a slight shock, such as a word or a look from one we love too often gives us,—such as a child's trivial gesture or movement makes a parent feel,—that impalpable something which in the slightest possible inflection of a syllable or gradation of a tone will sometimes leave a sting behind it, even in a trusting heart. This was all. But it was true that what she saw meant a great deal. It meant the dawning in Myrtle Hazard of one of her as yet un-lived secondary lives. Bathsheba's virgin perceptions had caught a faint early ray of its glimmering twilight.

She answered, after a very slight pause, which this explanation has made seem so long, that she had never

seen the young gentleman, and that she did not know about Susan's sentiments. Only, as they had kept so long to each other, she supposed there must be love between them.

Myrtle fell into a reverie, with certain tableaux glowing along its perspectives which poor little Susan Posey would have shivered to look upon, if they could have been transferred from the purple clouds of Myrtle's imagination to the pale silvery mists of Susan's pretty fancies. She sat in her day-dream long after Bathsheba had left her, her eyes fixed, not on the faded portrait of her beatified ancestress, but on that other canvas where the dead Beauty seemed to live in all the splendors of her full-blown womanhood.

The young man whose name had set her thoughts roving was handsome, as the glance at him already given might have foreshadowed. But his features had a graver impress than his age seemed to account for, and the sober tone of his letter to Susan implied that something had given him a maturity beyond his years. The story was not an uncommon one. At sixteen he had dreamed-and told his dream. At eighteen he had awoke, and found, as he believed, that a young heart had grown to his so that its life was dependent on his own. Whether it would have perished if its filaments had been gently disentangled from the object to which they had attached themselves, experienced judges of such matters may perhaps question. To justify Clement in his estimate of the danger of such an experiment, we must remember that to young people in their teens a first passion is a portentous and unprecedented phenomenon. The young man may have been mistaken in thinking that Susan would die if he left her, and may have done more than his duty in sacrificing himself; but if so, it was the mistake of a generous youth, who estimated the depth of another's feelings by his own. He measured the depth of his own rather by what he felt they might be, than by that of any abysses they had yet sounded.

Clement was called a "genius" by those who knew him, and was consequently in danger of being spoiled early. The risk is great enough anywhere, but greatest in a new country, where there is an almost universal want of fixed standards of excellence.

He was by nature an artist; a shaper with the pencil or the chisel, a planner, a contriver capable of turning his hand to almost any work of eye and hand. It would not have been strange if he thought he could do everything, having gifts which were capable of various application,—and being an American citizen. But though he was a good draughtsman, and had made some reliefs and modelled some figures, he called himself only an architect. He had given himself up to his art, not merely from a love of it and talent for it, but with a kind of heroic devotion, because he thought his country wanted a race of builders to clothe the new forms of religious, social, and national life afresh from the forest, the quarry, and the mine. Some thought he would succeed, others that he would be a brilliant failure.

"Grand notions,—grand notions," the master with whom he studied said. "Large ground plan of life,—splendid elevation. A little wild in some of his fancies, perhaps, but he's only a boy, and he's the kind of boy that sometimes grows to be a pretty big man. Wait and see,—wait and see. He works days, and we can let him dream nights. There's a good deal of him, anyhow." His fellow-students were puzzled. Those who thought of their calling as a trade, and looked forward to the time when they should be embodying the ideals of municipal authorities in brick and stone, or making contracts with wealthy citizens, doubted whether Clement would have a sharp eye enough for business. "Too many whims, you know. All sorts of queer ideas in his head,—as if a boy like him were going to make things all over again!"

No doubt there was something of youthful extravagance in his plans and expectations. But it was the untamed enthusiasm which is the source of all great thoughts and deeds,—a beautiful delirium which age commonly tames down, and for which the cold shower-bath the world furnishes gratis proves a pretty certain cure.

Creation is always preceded by chaos. The youthful architect's mind was confused by the multitude of suggestions which were crowding in upon it, and which he had not yet had time or developed mature strength sufficient to reduce to order. The young American of any freshness of intellect is stimulated to dangerous excess by the conditions of life into which he is born. There is a double proportion of oxygen in the New World air. The chemists have not found it out yet, but human brains and breathing-organs have long since made the discovery.

Clement knew that his hasty entanglement had limited his possibilities of happiness in one direction, and he felt that there was a certain grandeur in the recompense of working out his defeated instincts through the ambitious medium of his noble art. Had not Pharaohs chosen it to proclaim their longings for immortality, Caesars their passion for pomp and luxury, and priests to symbolize their conceptions of the heavenly mansions? His dreams were on a grand scale; such, after all, are the best possessions of youth. Had he but been free, or mated with a nature akin to his own, he would have felt himself as truly the heir of creation as any young man that lived. But his lot was cast, and his youth had all the serious aspect to himself of thoughtful manhood. In the region of his art alone he hoped always to find freedom and a companionship which his home life could never give him.

Clement meant to have visited his beloved before he left Alderbank, but was called unexpectedly back to the city. Happily Susan was not exacting; she looked up to him with too great a feeling of distance between them to dare to question his actions. Perhaps she found a partial consolation in the company of Mr. Gifted Hopkins, who tried his new poems on her, which was the next best thing to addressing them to her. "Would that you were with us at this delightful season," she wrote in the autumn; "but no, your Susan must not repine. Yet, in the beautiful words of our native poet,

*"Oh would, oh would that thou wast here,
For absence makes thee doubly dear;
Ah! what is life while thou 'rt away?
'T is night without the orb of day!"*

The poet referred to, it need hardly be said, was our young and promising friend G. H., as he sometimes modestly signed himself. The letter, it is unnecessary to state, was voluminous,—for a woman can tell her love, or other matter of interest, over and over again in as many forms as another poet, not G. H., found for his grief in ringing the musical changes of "In Memoriam."

The answers to Susan's letters were kind, but not very long. They convinced her that it was a simple impossibility that Clement could come to Oxbow Village, on account of the great pressure of the work he had to keep him in the city, and the plans he must finish at any rate. But at last the work was partially got rid of, and Clement was coming; yes, it was so nice, and, oh dear! should n't she be real happy to see him?

To Susan he appeared as a kind of divinity, almost too grand for human nature's daily food. Yet, if the simple-hearted girl could have told herself the whole truth in plain words, she would have confessed to certain doubts which from time to time, and oftener of late, cast a shadow on her seemingly bright future. With all the pleasure that the thought of meeting Clement gave her, she felt a little tremor, a certain degree of awe, in contemplating his visit. If she could have clothed her self-humiliation in the gold and purple of the "Portuguese Sonnets," it would have been another matter; but the trouble with the most common sources of disquiet is that they have no wardrobe of flaming phraseology to air themselves in; the inward burning goes on without the relief and gratifying display of the crater.

"A friend of mine is coming to the village," she said to Mr. Gifted Hopkins. "I want you to see him. He is a genius,—as some other young men are." (This was obviously personal, and the youthful poet blushed with ingenuous delight.) "I have known him for ever so many years. He and I are very good friends." The poet knew that this meant an exclusive relation between them; and though the fact was no surprise to him, his countenance fell a little. The truth was, that his admiration was divided between Myrtle, who seemed to him divine and adorable, but distant, and Susan, who listened to his frequent poems, whom he was in the habit of seeing in artless domestic costumes, and whose attractions had been gaining upon him of late in the enforced absence of his divinity.

He retired pensive from this interview, and, flinging himself at his desk, attempted wreaking his thoughts upon expression, to borrow the language of one of his brother bards, in a passionate lyric which he began thus—

"ANOTHER'S!

*"Another's! Oh the pang, the smart!
Fate owes to Love a deathless grudge,
—The barbed fang has rent a heart
Which—which*

"judge—judge,—no, not judge. Budge, drudge, fudge—What a disgusting language English is! Nothing fit to couple with such a word as grudge! And the gush of an impassioned moment arrested in full flow, stopped short, corked up, for want of a paltry rhyme!

"Judge,—budge,—drudge,—nudge, oh!—smudge,—misery!—fudge. In vain,—futile,—no use,—all up for to-night!"

While the poet, headed off in this way by the poverty of his native tongue, sought inspiration by retiring into the world of dreams,—went to bed, in short, his more fortunate rival was just entering the village, where he was to make his brief residence at the house of Deacon Rumrill, who, having been a loser by the devouring element, was glad to receive a stray boarder when any such were looking about for quarters.

For some reason or other he was restless that evening, and took out a volume he had brought with him to beguile the earlier hours of the night. It was too late when he arrived to disturb the quiet of Mrs. Hopkins's household, and whatever may have been Clement's impatience, he held it in check, and sat tranquilly until midnight over the pages of the book with which he had prudently provided himself.

"Hope you slept well last night," said the old Deacon, when Mr. Clement came down to breakfast the next morning.

"Very well, thank you,—that is, after I got to bed. But I sat up pretty late reading my favorite Scott. I am apt to forget how the hours pass when I have one of his books in my hand."

The worthy Deacon looked at Mr. Clement with a sudden accession of interest.

"You couldn't find better reading, young man. Scott is my favorite author. A great man. I have got his likeness in a gilt-frame hanging up in the other room. I have read him all through three times."

The young man's countenance brightened. He had not expected to find so much taste for elegant literature in an old village deacon.

"What are your favorites among his writings, Deacon? I suppose you have your particular likings, as the rest of us have."

The Deacon was flattered by the question. "Well," he answered, "I can hardly tell you. I like pretty much everything Scott ever wrote. Sometimes I think it is one thing, and sometimes another. Great on Paul's Epistles,—don't you think so?"

The honest fact was, that Clement remembered very little about "Paul's Letters to his Kinsfolk,"—a book of Sir Walter's less famous than many of his others; but he signified his polite assent to the Deacon's statement, rather wondering at his choice of a favorite, and smiling at his queer way of talking about the Letters as Epistles.

"I am afraid Scott is not so much read now-a-days as he once was, and as he ought to be," said Mr. Clement: "Such character, such nature and so much grace."

"That's it,—that's it, young man," the Deacon broke in,—"Natur' and Grace,—Natur' and Grace. Nobody ever knew better what those two words meant than Scott did, and I'm very glad to see—you've chosen such good wholesome reading. You can't set up too late, young man, to read Scott. If I had twenty children, they should all begin reading Scott as soon as they were old enough to spell sin,—and that's the first word my little ones learned, next to 'pa' and I 'ma.' Nothing like beginning the lessons of life in good season."

"What a grim old satirist!" Clement said to himself. "I wonder if the old man reads other novelists.—Do tell me, Deacon, if you have read Thackeray's last story?"

"Thackeray's story? Published by the American Tract Society?"

"Not exactly," Clement answered, smiling, and quite delighted to find such an unexpected vein of grave

pleasantry about the demure-looking church-dignitary; for the Deacon asked his question without moving a muscle, and took no cognizance whatever of the young man's tone and smile. First-class humorists are, as is well known, remarkable for the immovable solemnity of their features. Clement promised himself not a little amusement from the curiously sedate drollery of the venerable Deacon, who, it was plain from his conversation, had cultivated a literary taste which would make him a more agreeable companion than the common ecclesiastics of his grade in country villages.

After breakfast, Mr. Clement walked forth in the direction of Mrs. Hopkins's house, thinking as he went of the pleasant surprise his visit would bring to his longing and doubtless pensive Susan; for though she knew he was coming, she did not know that he was at that moment in Oxbow Village.

As he drew near the house, the first thing he saw was Susan Posey, almost running against her just as he turned a corner. She looked wonderfully lively and rosy, for the weather was getting keen and the frosts had begun to bite. A young gentleman was walking at her side, and reading to her from a paper he held in his hand. Both looked deeply interested,—so much so that Clement felt half ashamed of himself for intruding upon them so abruptly.

But lovers are lovers, and Clement could not help joining them. The first thing, of course, was the utterance of two simultaneous exclamations, "Why, Clement!" "Why, Susan!" What might have come next in the programme, but for the presence of a third party, is matter of conjecture; but what did come next was a mighty awkward look on the part of Susan Posey, and the following short speech: "Mr. Lindsay, let me introduce Mr. Hopkins, my friend, the poet I 've written to you about. He was just reading two of his poems to me. Some other time, Gifted—Mr. Hopkins."

"Oh no, Mr. Hopkins,—pray go on," said Clement. "I 'm very fond of poetry."

The poet did not require much urging, and began at once reciting over again the stanzas which were afterwards so much admired in the "Banner and Oracle,"—the first verse being, as the readers of that paper will remember,

*"She moves in splendor, like the ray
That flashes from unclouded skies,
And all the charms of night and day
Are mingled in her hair and eyes."*

Clement, who must have been in an agony of impatience to be alone with his beloved, commanded his feelings admirably. He signified his approbation of the poem by saying that the lines were smooth and the rhymes absolutely without blemish. The stanzas reminded him forcibly of one of the greatest poets of the century.

Gifted flushed hot with pleasure. He had tasted the blood of his own rhymes; and when a poet gets as far as that, it is like wringing the bag of exhilarating gas from the lips of a fellow sucking at it, to drag his piece away from him.

"Perhaps you will like these lines still better," he said; "the style is more modern:—

*"'O daughter of the spiced South,
Her bubbly grapes have spilled the wine
That staineth with its hue divine
The red flower of thy perfect mouth.'"*

And so on, through a series of stanzas like these, with the pulp of two rhymes between the upper and lower crust of two others.

Clement was cornered. It was necessary to say something for the poet's sake,—perhaps for Susan's; for she was in a certain sense responsible for the poems of a youth of genius, of whom she had spoken so often and so enthusiastically.

"Very good, Mr. Hopkins, and a form of verse little used, I should think, until of late years. You modelled this piece on the style of a famous living English poet, did you not?"

"Indeed I did not, Mr. Lindsay,—I never imitate. Originality is, if I may be allowed to say so much for myself, my peculiar forte. Why, the critics allow as much as that. See here, Mr. Lindsay."

Mr. Gifted Hopkins pulled out his pocket-book, and, taking therefrom a cutting from a newspaper,—which dropped helplessly open of itself, as if tired of the process, being very tender in the joints or creases, by reason of having been often folded and unfolded read aloud as follows:

"The bard of Oxbow Pillage—our valued correspondent who writes over the signature of G. H.—is, in our opinion, more remarkable for his originality than for any other of his numerous gifts."

Clement was apparently silenced by this, and the poet a little elated with a sense of triumph. Susan could not help sharing his feeling of satisfaction, and without meaning it in the least, nay, without knowing it, for she was as simple and pure as new milk, edged a little bit—the merest infinitesimal atom—nearer to Gifted Hopkins, who was on one side of her, while Clement walked on the other. Women love the conquering party,—it is the way of their sex. And poets, as we have seen, are well-nigh irresistible when they exert their dangerous power of fascination upon the female heart. But Clement was above jealousy; and, if he perceived anything of this movement, took no notice of it.

He saw a good deal of his pretty Susan that day. She was tender in her expressions and manners as usual, but there was a little something in her looks and language from time to time that Clement did not know exactly what to make of. She colored once or twice when the young poet's name was mentioned. She was not so full of her little plans for the future as she had sometimes been, "everything was so uncertain," she said. Clement asked himself whether she felt quite as sure that her attachment would last as she once did. But there were no reproaches, not even any explanations, which are about as bad between lovers. There was nothing but an undefined feeling on his side that she did not cling quite so closely to him, perhaps, as he had once thought, and that, if he had happened to have been drowned that day when he went down with the

beautiful young woman, it was just conceivable that Susan, who would have cried dreadfully, no doubt, would in time have listened to consolation from some other young man,—possibly from the young poet whose verses he had been admiring. Easy-crying widows take new husbands soonest; there is nothing like wet weather for transplanting, as Master Gridley used to say. Susan had a fluent natural gift for tears, as Clement well knew, after the exercise of which she used to brighten up like the rose which had been washed, just washed in a shower, mentioned by Cowper.

As for the poet, he learned more of his own sentiments during this visit of Clement's than he had ever before known. He wandered about with a dreadfully disconsolate look upon his countenance. He showed a falling-off in his appetite at tea-time, which surprised and disturbed his mother, for she had filled the house with fragrant suggestions of good things coming, in honor of Mr. Lindsay, who was to be her guest at tea. And chiefly the genteel form of doughnut called in the native dialect cymbal (Qu. Symbol? B. G.) which graced the board with its plastic forms, suggestive of the most pleasing objects,—the spiral ringlets pendent from the brow of beauty; the magic cirlet, which is the pledge of plighted affection,—the indissoluble knot, which typifies the union of hearts, which organs were also largely represented; this exceptional delicacy would at any other time have claimed his special notice. But his mother remarked that he paid little attention to these, and his, "No, I thank you," when it came to the preserved "damsels," as some call them, carried a pang with it to the maternal bosom. The most touching evidence of his unhappiness—whether intentional or the result of accident was not evident was a broken heart, which he left upon his plate, the meaning of which was as plain as anything in the language of flowers. His thoughts were gloomy during that day, running a good deal on the more picturesque and impressive methods of bidding a voluntary farewell to a world which had allured him with visions of beauty only to snatch them from his impassioned gaze. His mother saw something of this, and got from him a few disjointed words, which led her to lock up the clothes-line and hide her late husband's razors,—an affectionate, yet perhaps unnecessary precaution, for self-elimination contemplated from this point of view by those who have the natural outlet of verse to relieve them is rarely followed by a casualty. It may rather be considered as implying a more than average chance for longevity; as those who meditate an—imposing finish naturally save themselves for it, and are therefore careful of their health until the time comes, and this is apt to be indefinitely postponed so long as there is a poem to write or a proof to be corrected.

CHAPTER XX. THE SECOND MEETING.

Miss Eveleth requests the pleasure of Mr. Lindsay's company to meet a few friends on the evening of the Feast of St. Ambrose, December 7th, Wednesday.

THE PARSONAGE, December 6th.

It was the luckiest thing in the world. They always made a little festival of that evening at the Rev. Ambrose Eveleth's, in honor of his canonized namesake, and because they liked to have a good time. It came this year just at the right moment, for here was a distinguished stranger visiting in the place. Oxbow Village seemed to be running over with its one extra young man,—as may be seen sometimes in larger villages, and even in cities of moderate dimensions.

Mr. William Murray Bradshaw had called on Clement the day after his arrival. He had already met the Deacon in the street, and asked some questions about his transient boarder.

A very interesting young man, the Deacon said, much given to the reading of pious books. Up late at night after he came, reading Scott's Commentary. Appeared to be as fond of serious works as other young folks were of their novels and romances and other immoral publications. He, the Deacon, thought of having a few religious friends to meet the young gentleman, if he felt so disposed; and should like to have him, Mr. Bradshaw, come in and take a part in the exercises.—Mr. Bradshaw was unfortunately engaged. He thought the young gentleman could hardly find time for such a meeting during his brief visit.

Mr. Bradshaw expected naturally to see a youth of imperfect constitution, and cachectic or dyspeptic tendencies, who was in training to furnish one of those biographies beginning with the statement that, from his infancy, the subject of it showed no inclination for boyish amusements, and so on, until he dies out, for the simple reason that there was not enough of him to live. Very interesting, no doubt, Master Byles Gridley would have said, but had no more to do with good, hearty, sound life than the history of those very little people to be seen in museums preserved in jars of alcohol, like brandy peaches.

When Mr. Clement Lindsay presented himself, Mr. Bradshaw was a good deal surprised to see a young fellow of such a mould. He pleased himself with the idea that he knew a man of mark at sight, and he set down Clement in that category at his first glance. The young man met his penetrating and questioning look with a frank, ingenuous, open aspect, before which he felt himself disarmed, as it were, and thrown upon other means of analysis. He would try him a little in talk.

"I hope you like these people you are with. What sort of a man do you find my old friend the Deacon?"

Clement laughed. "A very queer old character. Loves his joke as well, and is as sly in making it, as if he had studied Joe Miller instead of the Catechism."

Mr. Bradshaw looked at the young man to know what he meant. Mr. Lindsay talked in a very easy way for a serious young person. He was puzzled. He did not see to the bottom of this description of the Deacon. With a lawyer's instinct, he kept his doubts to himself and tried his witness with a new question.

"Did you talk about books at all with the old man?"

"To be sure I did. Would you believe it,—that aged saint is a great novel-reader. So he tells me. What is more, he brings up his children to that sort of reading, from the time when they first begin to spell. If anybody else had told me such a story about an old country deacon, I wouldn't have believed it; but he said so himself, to me, at breakfast this morning."

Mr. Bradshaw felt as if either he or Mr. Lindsay must certainly be in the first stage of mild insanity, and he did not think that he himself could be out of his wits. He must try one more question. He had become so mystified that he forgot himself, and began putting his interrogation in legal form.

"Will you state, if you please—I beg your pardon—may I ask who is your own favorite author?"

"I think just now I like to read Scott better than almost anybody."

"Do you mean the Rev. Thomas Scott, author of the Commentary?"

Clement stared at Mr. Bradshaw, and wondered whether he was trying to make a fool of him. The young lawyer hardly looked as if he could be a fool himself.

"I mean Sir Walter Scott," he said, dryly.

"Oh!" said Mr. Bradshaw. He saw that there had been a slight misunderstanding between the young man and his worthy host, but it was none of his business, and there were other subjects of interest to talk about.

"You know one of our charming young ladies very well, I believe, Mr. Lindsay. I think you are an old acquaintance of Miss Posey, whom we all consider so pretty."

Poor Clement! The question pierced to the very marrow of his soul, but it was put with the utmost suavity and courtesy, and honeyed with a compliment to the young lady, too, so that there was no avoiding a direct and pleasant answer to it.

"Yes," he said, "I have known the young lady you speak of for a long time, and very well,—in fact, as you must have heard, we are something more than friends. My visit here is principally on her account."

"You must give the rest of us a chance to see something of you during your visit, Mr. Lindsay. I hope you are invited to Miss Eveleth's to-morrow evening?"

"Yes, I got a note this morning. Tell me, Mr. Bradshaw, who is there that I shall meet if I go? I have no doubt there are girls here in the village I should like to see, and perhaps some young fellows that I should like to talk with. You know all that's prettiest and pleasantest, of course."

"Oh, we're a little place, Mr. Lindsay. A few nice people, the rest *comme Va*, you know. High-bush blackberries and low-bush black-berries,—you understand,—just so everywhere,—high-bush here and there, low-bush plenty. You must see the two parsons' daughters,—Saint Ambrose's and Saint Joseph's,—and another girl I want particularly to introduce you to. You shall form your own opinion of her. I call her handsome and stylish, but you have got spoiled, you know. Our young poet, too, one we raised in this place, Mr. Lindsay, and a superior article of poet, as we think,—that is, some of us, for the rest of us are jealous of him, because the girls are all dying for him and want his autograph. And Cyp,—yes, you must talk to Cyp,—he has ideas. But don't forget to get hold of old Byles Master Gridley I mean—before you go. Big head. Brains enough for a cabinet minister, and fit out a college faculty with what was left over. Be sure you see old Byles. Set him talking about his book, 'Thoughts on the Universe.' Did n't sell much, but has got knowing things in it. I'll show you a copy, and then you can tell him you know it, and he will take to you. Come in and get your dinner with me to-morrow. We will dine late, as the city folks do, and after that we will go over to the Rector's. I should like to show you some of our village people."

Mr. Bradshaw liked the thought of showing the young man to some of his friends there. As Clement was already "done for," or "bowled out," as the young lawyer would have expressed the fact of his being pledged in the matrimonial direction, there was nothing to be apprehended on the score of rivalry. And although Clement was particularly good-looking, and would have been called a distinguishable youth anywhere, Mr. Bradshaw considered himself far more than his match, in all probability, in social accomplishments. He expected, therefore, a certain amount of reflex credit for bringing such a fine young fellow in his company, and a second instalment of reputation from outshining him in conversation. This was rather nice calculating, but Murray Bradshaw always calculated. With most men life is like backgammon, half skill, and half luck, but with him it was like chess. He never pushed a pawn without reckoning the cost, and when his mind was least busy it was sure to be half a dozen moves ahead of the game as it was standing.

Mr. Bradshaw gave Clement a pretty dinner enough for such a place as Oxbow Village. He offered him some good wine, and would have made him talk so as to show his lining, to use one of his own expressions, but Clement had apparently been through that trifling experience, and could not be coaxed into saying more than he meant to say. Murray Bradshaw was very curious to find out how it was that he had become the victim of such a rudimentary miss as Susan Posey. Could she be an heiress in disguise? Why no, of course not; had not he made all proper inquiries about that when Susan came to town? A small inheritance from an aunt or uncle, or some such relative, enough to make her a desirable party in the eyes of certain villagers perhaps, but nothing to allure a man like this, whose face and figure as marketable possessions were worth say a hundred thousand in the girl's own right, as Mr. Bradshaw put it roughly, with another hundred thousand if his talent is what some say, and if his connection is a desirable one, a fancy price,—anything he would fetch. Of course not. Must have got caught when he was a child. Why the diavolo didn't he break it off, then?

There was no fault to find with the modest entertainment at the Parsonage. A splendid banquet in a great house is an admirable thing, provided always its getting up did not cost the entertainer an inward conflict, nor its recollection a twinge of economical regret, nor its bills a cramp of anxiety. A simple evening party in the smallest village is just as admirable in its degree, when the parlor is cheerfully lighted, and the board prettily spread, and the guests are made to feel comfortable without being reminded that anybody is making a painful effort.

We know several of the young people who were there, and need not trouble ourselves for the others. Myrtle Hazard had promised to come. She had her own way of late as never before; in fact, the women were afraid of her. Miss Silence felt that she could not be responsible for her any longer. She had hopes for a time that Myrtle would go through the customary spiritual paroxysm under the influence of the Rev. Mr. Stoker's assiduous exhortations; but since she had broken off with him, Miss Silence had looked upon her as little better than a backslider. And now that the girl was beginning to show the tendencies which seemed to come straight down to her from the belle of the last century, (whose rich physical developments seemed to the

under-vitalized spinster as in themselves a kind of offence against propriety,) the forlorn woman folded her thin hands and looked on hopelessly, hardly venturing a remonstrance for fear of some new explosion. As for Cynthia, she was comparatively easy since she had, through Mr. Byles Gridley, upset the minister's questionable arrangement of religious intimacy. She had, in fact, in a quiet way, given Mr. Bradshaw to understand that he would probably meet Myrtle at the Parsonage if he dropped in at their small gathering. Clement walked over to Mrs. Hopkins's after his dinner with the young lawyer, and asked if Susan was ready to go with him. At the sound of his voice, Gifted Hopkins smote his forehead, and called himself, in subdued tones, a miserable being. His imagination wavered uncertain for a while between pictures of various modes of ridding himself of existence, and fearful deeds involving the life of others. He had no fell purpose of actually doing either, but there was a gloomy pleasure in contemplating them as possibilities, and in mentally sketching the "Lines written in Despair" which would be found in what was but an hour before the pocket of the youthful bard, G. H., victim of a hopeless passion. All this emotion was in the nature of a surprise to the young man. He had fully believed himself desperately in love with Myrtle Hazard; and it was not until Clement came into the family circle with the right of eminent domain over the realm of Susan's affections, that this unfortunate discovered that Susan's pretty ways and morning dress and love of poetry and liking for his company had been too much for him, and that he was henceforth to be wretched during the remainder of his natural life, except so far as he could unburden himself in song.

Mr. William Murray Bradshaw had asked the privilege of waiting upon Myrtle to the little party at the Eveleths. Myrtle was not insensible to the attractions of the young lawyer, though she had never thought of herself except as a child in her relations with any of these older persons. But she was not the same girl that she had been but a few months before. She had achieved her independence by her audacious and most dangerous enterprise. She had gone through strange nervous trials and spiritual experiences which had matured her more rapidly than years of common life would have done. She had got back her health, bringing with it a riper wealth of womanhood. She had found her destiny in the consciousness that she inherited the beauty belonging to her blood, and which, after sleeping for a generation or two as if to rest from the glare of the pageant that follows beauty through its long career of triumph, had come to the light again in her life, and was to repeat the legends of the olden time in her own history.

Myrtle's wardrobe had very little of ornament, such as the modistes of the town would have thought essential to render a young girl like her presentable. There were a few heirlooms of old date, however, which she had kept as curiosities until now, and which she looked over until she found some lace and other convertible material, with which she enlivened her costume a little for the evening. As she clasped the antique bracelet around her wrist, she felt as if it were an amulet that gave her the power of charming which had been so long obsolete in her lineage. At the bottom of her heart she cherished a secret longing to try her fascinations on the young lawyer. Who could blame her? It was not an inwardly expressed intention,—it was the simple instinctive movement to subjugate the strongest of the other sex who had come in her way, which, as already said, is as natural to a woman as it is to a man to be captivated by the loveliest of those to whom he dares to aspire.

Before William Murray Bradshaw and Myrtle Hazard had reached the Parsonage, the girl's cheeks were flushed and her dark eyes were flashing with a new excitement. The young man had not made love to her directly, but he had interested her in herself by a delicate and tender flattery of manner, and so set her fancies working that she was taken with him as never before, and wishing that the Parsonage had been a mile farther from The Poplars. It was impossible for a young girl like Myrtle to conceal the pleasure she received from listening to her seductive admirer, who was trying all his trained skill upon his artless companion. Murray Bradshaw felt sure that the game was in his hands if he played it with only common prudence. There was no need of hurrying this child,—it might startle her to make downright love abruptly; and now that he had an ally in her own household, and was to have access to her with a freedom he had never before enjoyed, there was a refined pleasure in playing his fish,—this gamest of golden-scaled creatures,—which had risen to his fly, and which he wished to hook, but not to land, until he was sure it would be worth his while.

They entered the little parlor at the Parsonage looking so beaming, that Olive and Bathsheba exchanged glances which implied so much that it would take a full page to tell it with all the potentialities involved.

"How magnificent Myrtle is this evening, Bathsheba!" said Cyprian Eveleth, pensively.

"What a handsome pair they are, Cyprian!" said Bathsheba cheerfully.

Cyprian sighed. "She always fascinates me whenever I look upon her. Is n't she the very picture of what a poet's love should be,—a poem herself,—a glorious lyric,—all light and music! See what a smile the creature has! And her voice! When did you ever hear such tones? And when was it ever so full of life before."

Bathsheba sighed. "I do not know any poets but Gifted Hopkins. Does not Myrtle look more in her place by the side of Murray Bradshaw than she would with Gifted hitched on her arm?"

Just then the poet made his appearance. He looked depressed, as if it had cost him an effort to come. He was, however, charged with a message which he must deliver to the hostess of the evening.

"They 're coming presently," he said. "That young man and Susan. Wants you to introduce him, Mr. Bradshaw."

The bell rang presently, and Murray Bradshaw slipped out into the entry to meet the two lovers.

"How are you, my fortunate friend?" he said, as he met them at the door. "Of course you're well and happy as mortal man can be in this vale of tears. Charming, ravishing, quite delicious, that way of dressing your hair, Miss Posey! Nice girls here this evening, Mr. Lindsay. Looked lovely when I came out of the parlor. Can't say how they will show after this young lady puts in an appearance." In reply to which florid speeches Susan blushed, not knowing what else to do, and Clement smiled as naturally as if he had been sitting for his photograph.

He felt, in a vague way, that he and Susan were being patronized, which is not a pleasant feeling to persons with a certain pride of character. There was no expression of contempt about Mr. Bradshaw's manner or language at which he could take offence. Only he had the air of a man who praises his neighbor without stint, with a calm consciousness that he himself is out of reach of comparison in the possessions or qualities which

he is admiring in the other. Clement was right in his obscure perception of Mr. Bradshaw's feeling while he was making his phrases. That gentleman was, in another moment, to have the tingling delight of showing the grand creature he had just begun to tame. He was going to extinguish the pallid light of Susan's prettiness in the brightness of Myrtle's beauty. He would bring this young man, neutralized and rendered entirely harmless by his irrevocable pledge to a slight girl, face to face with a masterpiece of young womanhood, and say to him, not in words, but as plainly as speech could have told him, "Behold my captive!"

It was a proud moment for Murray Bradshaw. He had seen, or thought that he had seen, the assured evidence of a speedy triumph over all the obstacles of Myrtle's youth and his own present seeming slight excess of maturity. Unless he were very greatly mistaken, he could now walk the course; the plate was his, no matter what might be the entries. And this youth, this handsome, spirited-looking, noble-aired young fellow, whose artist-eye could not miss a line of Myrtle's proud and almost defiant beauty, was to be the witness of his power, and to look in admiration upon his prize! He introduced him to the others, reserving her for the last. She was at that moment talking with the worthy Rector, and turned when Mr. Bradshaw spoke to her.

"Miss Hazard, will you allow me to present to you my friend, Mr. Clement Lindsay?"

They looked full upon each other, and spoke the common words of salutation. It was a strange meeting; but we who profess to tell the truth must tell strange things, or we shall be liars.

In poor little Susan's letter there was some allusion to a bust of Innocence which the young artist had begun, but of which he had said nothing in his answer to her. He had roughed out a block of marble for that impersonation; sculpture was a delight to him, though secondary to his main pursuit. After his memorable adventure, the image of the girl he had rescued so haunted him that the pale ideal which was to work itself out in the bust faded away in its perpetual presence, and—alas, poor Susan! in obedience to the impulse that he could not control, he left Innocence sleeping in the marble, and began modelling a figure of proud and noble and imperious beauty, to which he gave the name of Liberty.

The original which had inspired his conception was before him. These were the lips to which his own had clung when he brought her back from the land of shadows. The hyacinthine curl of her lengthening locks had added something to her beauty; but it was the same face which had haunted him. This was the form he had borne seemingly lifeless in his arms, and the bosom which heaved so visibly before him was that which his eyes they were the calm eyes of a sculptor, but of a sculptor hardly twenty years old.

Yes,—her bosom was heaving. She had an unexplained feeling of suffocation, and drew great breaths,—she could not have said why,—but she could not help it; and presently she became giddy, and had a great noise in her ears, and rolled her eyes about, and was on the point of going into an hysterical spasm. They called Dr. Hurlbut, who was making himself agreeable to Olive just then, to come and see what was the matter with Myrtle.

"A little nervous turn,—that is all," he said.

"Open the window. Loose the ribbon round her neck. Rub her hands. Sprinkle some water on her forehead.

"A few drops of cologne. Room too warm for her,—that 's all, I think."

Myrtle came to herself after a time without anything like a regular paroxysm. But she was excitable, and whatever the cause of the disturbance may have been, it seemed prudent that she should go home early; and the excellent Rector insisted on caring for her, much to the discontent of Mr. William Murray Bradshaw.

"Demonish odd," said this gentleman, "was n't it, Mr. Lindsay, that Miss Hazard should go off in that way. Did you ever see her before?"

"I—I—have seen that young lady before," Clement answered.

"Where did you meet her?" Mr. Bradshaw asked, with eager interest.

"I met her in the Valley of the Shadow of Death," Clement answered, very solemnly.—"I leave this place to-morrow morning. Have you any commands for the city?"

"Knows how to shut a fellow up pretty well for a young one, doesn't he?" Mr. Bradshaw thought to himself.

"Thank you, no," he answered, recovering himself. "Rather a melancholy place to make acquaintance in, I should think, that Valley you spoke of. I should like to know about it."

Mr. Clement had the power of looking steadily into another person's eyes in a way that was by no means encouraging to curiosity or favorable to the process of cross-examination. Mr. Bradshaw was not disposed to press his question in the face of the calm, repressive look the young man gave him.

"If he was n't bagged, I shouldn't like the shape of things any too well," he said to himself.

The conversation between Mr. Clement Lindsay and Miss Susan Posey, as they walked home together, was not very brilliant. "I am going to-morrow morning," he said, "and I must bid you good-by tonight." Perhaps it is as well to leave two lovers to themselves, under these circumstances.

Before he went he spoke to his worthy host, whose moderate demands he had to satisfy, and with whom he wished to exchange a few words.

"And by the way, Deacon, I have no use for this book, and as it is in a good type, perhaps you would like it. Your favorite, Scott, and one of his greatest works. I have another edition of it at home, and don't care for this volume."

"Thank you, thank you, Mr. Lindsay, much obliged. I shall read that copy for your sake, the best of books next to the Bible itself."

After Mr. Lindsay had gone, the Deacon looked at the back of the book. "Scott's Works, Vol. IX." He opened it at hazard, and happened to fall on a well-known page, from which he began reading aloud, slowly,

*"When Izrul, of the Lord beloved,
Out of the land of bondage came."*

The whole hymn pleased the grave Deacon. He had never seen this work of the author of the Commentary. No matter; anything that such a good man wrote must be good reading, and he would save it up for Sunday.

The consequence of this was, that, when the Rev. Mr. Stoker stopped in on his way to meeting on the "Sabbath," he turned white with horror at the spectacle of the senior Deacon of his church sitting, open-mouthed and wide-eyed, absorbed in the pages of "Ivanhoe," which he found enormously interesting; but, so far as he had yet read, not occupied with religious matters so much as he had expected.

Myrtle had no explanation to give of her nervous attack. Mr. Bradshaw called the day after the party, but did not see her. He met her walking, and thought she seemed a little more distant than common. That would never do. He called again at The Poplars a few days afterwards, and was met in the entry by Miss Cynthia, with whom he had a long conversation on matters involving Myrtle's interests and their own.

CHAPTER XXI. MADNESS?

Mr. Clement Lindsay returned to the city and his usual labors in a state of strange mental agitation. He had received an impression for which he was unprepared. He had seen for the second time a young girl whom, for the peace of his own mind, and for the happiness of others, he should never again have looked upon until Time had taught their young hearts the lesson which all hearts must learn, sooner or later.

What shall the unfortunate person do who has met with one of those disappointments, or been betrayed into one of those positions, which do violence to all the tenderest feelings, blighting the happiness of youth, and the prospects of after years?

If the person is a young man, he has various resources. He can take to the philosophic meerschaum, and nicotine himself at brief intervals into a kind of buzzing and blurry insensibility, until he begins to "color" at last like the bowl of his own pipe, and even his mind gets the tobacco flavor. Or he can have recourse to the more suggestive stimulants, which will dress his future up for him in shining possibilities that glitter like Masonic regalia, until the morning light and the waking headache reveal his illusion. Some kind of spiritual anaesthetic he must have, if he holds his grief fast tied to his heartstrings. But as grief must be fed with thought, or starve to death, it is the best plan to keep the mind so busy in other ways that it has no time to attend to the wants of that ravaging passion. To sit down and passively endure it, is apt to end in putting all the mental machinery into disorder.

Clement Lindsay had thought that his battle of life was already fought, and that he had conquered. He believed that he had subdued himself completely, and that he was ready, without betraying a shadow of disappointment, to take the insufficient nature which destiny had assigned him in his companion, and share with it all of his own larger being it was capable, not of comprehending, but of apprehending.

He had deceived himself. The battle was not fought and won. There had been a struggle, and what seemed to be a victory, but the enemy—intrenched in the very citadel of life—had rallied, and would make another desperate attempt to retrieve his defeat.

The haste with which the young man had quitted the village was only a proof that he felt his danger. He believed that, if he came into the presence of Myrtle Hazard for the third time, he should be no longer master of his feelings. Some explanation must take place between them, and how was it possible that it should be without emotion? and in what do all emotions shared by a young man with such a young girl as this tend to find their last expression?

Clement determined to stun his sensibilities by work. He would give himself no leisure to indulge in idle dreams of what might have been. His plans were never so carefully finished, and his studies were never so continuous as now. But the passion still wrought within him, and, if he drove it from his waking thoughts, haunted his sleep until he could endure it no longer, and must give it some manifestation. He had covered up the bust of Liberty so closely, that not an outline betrayed itself through the heavy folds of drapery in which it was wrapped. His thoughts recurred to his unfinished marble, as offering the one mode in which he could find a silent outlet to the feelings and thoughts which it was torture to keep imprisoned in his soul. The cold stone would tell them, but without passion; and having got the image which possessed him out of himself into a lifeless form, it seemed as if he might be delivered from a presence which, lovely as it was, stood between him and all that made him seem honorable and worthy to himself.

He uncovered the bust which he had but half shaped, and struck the first flake from the glittering marble. The toil, once begun, fascinated him strangely, and after the day's work was done, and at every interval he could snatch from his duties, he wrought at his secret task.

"Clement is graver than ever," the young men said at the office. "What's the matter, do you suppose? Turned off by the girl they say he means to marry by and by? How pale he looks too! Must have something worrying him: he used to look as fresh as a clove pink."

The master with whom he studied saw that he was losing color, and looking very much worn; and determined to find out, if he could, whether he was not overworking himself. He soon discovered that his light was seen burning late into the night, that he was neglecting his natural rest, and always busy with some unknown task, not called for in his routine of duty or legitimate study.

"Something is wearing on you, Clement," he said. "You are killing yourself with undertaking too much. Will you let me know what keeps you so busy when you ought to be asleep, or taking your ease and comfort in some way or other?"

Nobody but himself had ever seen his marble or its model. He had now almost finished it, laboring at it with such sleepless devotion, and he was willing to let his master have a sight of his first effort of the kind,—for he was not a sculptor, it must be remembered, though he had modelled in clay, not without some success, from time to time.

"Come with me," he said.

The master climbed the stairs with him up to his modest chamber. A closely shrouded bust stood on its pedestal in the light of the solitary window.

"That is my ideal personage," Clement said. "Wait one moment, and you shall see how far I have caught the character of our uncrowned queen."

The master expected, very naturally, to see the conventional young woman with classical wreath or feather headdress, whom we have placed upon our smallest coin, so that our children may all grow up loving Liberty.

As Clement withdrew the drapery that covered his work, the master stared at it in amazement. He looked at it long and earnestly, and at length turned his eyes, a little moistened by some feeling which thus betrayed itself, upon his scholar.

"This is no ideal, Clement. It is the portrait of a very young but very beautiful woman. No common feeling could have guided your hand in shaping such a portrait from memory. This must be that friend of yours of whom I have often heard as an amiable young person. Pardon me, for you know that nobody cares more for you than I do,—I hope that you are happy in all your relations with this young friend of yours. How could one be otherwise?"

It was hard to bear, very hard. He forced a smile. "You are partly right," he said. "There is a resemblance, I trust, to a living person, for I had one in my mind."

"Did n't you tell me once, Clement, that you were attempting a bust of Innocence? I do not see any block in your room but this. Is that done?"

"Done with!" Clement answered; and, as he said it, the thought stung through him that this was the very stone which was to have worn the pleasant blandness of pretty Susan's guileless countenance. How the new features had effaced the recollection of the others!

In a few days more Clement had finished his bust. His hours were again vacant to his thick-coming fancies. While he had been busy with his marble, his hands had required his attention, and he must think closely of every detail upon which he was at work. But at length his task was done, and he could contemplate what he had made of it. It was a triumph for one so little exercised in sculpture. The master had told him so, and his own eye could not deceive him. He might never succeed in any repetition of his effort, but this once he most certainly had succeeded. He could not disguise from himself the source of this extraordinary good fortune in so doubtful and difficult an attempt. Nor could he resist the desire of contemplating the portrait bust, which—it was foolish to talk about ideals—was not Liberty, but Myrtle Hazard.

It was too nearly like the story of the ancient sculptor; his own work was an over-match for its artist. Clement had made a mistake in supposing that by giving his dream a material form he should drive it from the possession of his mind. The image in which he had fixed his recollection of its original served only to keep her living presence before him. He thought of her as she clasped her arms around him, and they were swallowed up in the rushing waters, coming so near to passing into the unknown world together. He thought of her as he stretched her lifeless form upon the bank, and looked for one brief moment on her sunned loveliness,—“a sight to dream of, not to tell.” He thought of her as his last fleeting glimpse had shown her, beautiful, not with the blossomy prettiness that passes away with the spring sunshine, but with a rich vitality of which noble outlines and winning expression were only the natural accidents. And that singular impression which the sight of her had produced upon him,—how strange! How could she but have listened to him,—to him, who was, as it were, a second creator to her, for he had bought her back from the gates of the unseen realm,—if he had recalled to her the dread moments they had passed in each other's arms, with death, not love, in all their thoughts. And if then he had told her how her image had remained with him, how it had colored all his visions, and mingled with all his conceptions, would not those dark eyes have melted as they were turned upon him? Nay, how could he keep the thought away, that she would not have been insensible to his passion, if he could have suffered its flame to kindle in his heart? Did it not seem as if Death had spared them for Love, and that Love should lead them together through life's long journey to the gates of Death?

Never! never! never! Their fates were fixed. For him, poor insect as he was, a solitary flight by day, and a return at evening to his wingless mate! For her—he thought he saw her doom.

Could he give her up to the cold embraces of that passionless egotist, who, as he perceived plainly enough, was casting his shining net all around her? Clement read Murray Bradshaw correctly. He could not perhaps have spread his character out in set words, as we must do for him, for it takes a long apprenticeship to learn to describe analytically what we know as soon as we see it; but he felt in his inner consciousness all that we must tell for him. Fascinating, agreeable, artful, knowing, capable of winning a woman infinitely above himself, incapable of understanding her,—oh, if he could but touch her with the angel's spear, and bid her take her true shape before her whom he was gradually enveloping in the silken meshes of his subtle web! He would make a place for her in the world,—oh yes, doubtless. He would be proud of her in company, would dress her handsomely, and show her off in the best lights. But from the very hour that he felt his power over her firmly established, he would begin to remodel her after his own worldly pattern. He would dismantle her of her womanly ideals, and give her in their place his table of market-values. He would teach her to submit her sensibilities to her selfish interest, and her tastes to the fashion of the moment, no matter which world or half-world it came from. “As the husband is, the wife is,”—he would subdue her to what he worked in.

All this Clement saw, as in apocalyptic vision, stored up for the wife of Murray Bradshaw, if he read him rightly, as he felt sure he did, from the few times he had seen him. He would be rich by and by, very probably. He looked like one of those young men who are sharp, and hard enough to come to fortune. Then she would have to take her place in the great social exhibition where the gilded cages are daily opened that the animals may be seen, feeding on the sight of stereotyped toilets and the sound of impoverished tattle. O misery of semi-provincial fashionable life, where wealth is at its wit's end to avoid being tired of an existence which has all the labor of keeping up appearances, without the piquant profligacy which saves it at least from being utterly vapid! How many fashionable women at the end of a long season would be ready to welcome heaven itself as a relief from the desperate monotony of dressing, dawdling, and driving!

This could not go on so forever. Clement had placed a red curtain so as to throw a rose-bloom on his marble, and give it an aspect which his fancy turned to the semblance of life. He would sit and look at the

features his own hand had so faithfully wrought, until it seemed as if the lips moved, sometimes as if they were smiling, sometimes as if they were ready to speak to him. His companions began to whisper strange things of him in the studio,—that his eye was getting an unnatural light,—that he talked as if to imaginary listeners,—in short, that there was a look as if something were going wrong with his brain, which it might be feared would spoil his fine intelligence. It was the undecided battle, and the enemy, as in his noblest moments he had considered the growing passion, was getting the better of him.

He was sitting one afternoon before the fatal bust which had smiled and whispered away his peace, when the post-man brought him a letter. It was from the simple girl to whom he had given his promise. We know how she used to prattle in her harmless way about her innocent feelings, and the trifling matters that were going on in her little village world. But now she wrote in sadness. Something, she did not too clearly explain what, had grieved her, and she gave free expression to her feelings. "I have no one that loves me but you," she said; "and if you leave me I must droop and die. Are you true to me, dearest Clement,—true as when we promised each other that we would love while life lasted? Or have you forgotten one who will never cease to remember that she was once your own Susan?"

Clement dropped the letter from his hand, and sat a long hour looking at the exquisitely wrought features of her who had come between him and honor and his plighted word.

At length he arose, and, lifting the bust tenderly from its pedestal, laid it upon the cloth with which it had been covered. He wrapped it closely, fold upon fold, as the mother whom man condemns and God pities wraps the child she loves before she lifts her hand against its life. Then he took a heavy hammer and shattered his lovely idol into shapeless fragments. The strife was over.

CHAPTER XXII. A CHANGE OF PROGRAMME.

Mr. William Murray Bradshaw was in pretty intimate relations with Miss Cynthia Badlam. It was well understood between them that it might be of very great advantage to both of them if he should in due time become the accepted lover of Myrtle Hazard. So long as he could be reasonably secure against interference, he did not wish to hurry her in making her decision. Two things he did wish to be sure of, if possible, before asking her the great question;—first, that she would answer it in the affirmative; and secondly, that certain contingencies, the turning of which was not as yet absolutely capable of being predicted, should happen as he expected. Cynthia had the power of furthering his wishes in many direct and indirect ways, and he felt sure of her cooperation. She had some reason to fear his enmity if she displeased him, and he had taken good care to make her understand that her interests would be greatly promoted by the success of the plan which he had formed, and which was confided to her alone.

He kept the most careful eye on every possible source of disturbance to this quietly maturing plan. He had no objection to have Gifted Hopkins about Myrtle as much as she would endure to have him. The youthful bard entertained her very innocently with his bursts of poetry, but she was in no danger from a young person so intimately associated with the yard-stick, the blunt scissors, and the brown-paper parcel. There was Cyprian too, about whom he did not feel any very particular solicitude. Myrtle had evidently found out that she was handsome and stylish and all that, and it was not very likely she would take up with such a bashful, humble, country youth as this. He could expect nothing beyond a possible rectorate in the remote distance, with one of those little pony chapels to preach in, which, if it were set up on a stout pole, would pass for a good-sized martin-house. Cyprian might do to practise on, but there was no danger of her looking at him in a serious way. As for that youth, Clement Lindsay, if he had not taken himself off as he did, Murray Bradshaw confessed to himself that he should have felt uneasy. He was too good-looking, and too clever a young fellow to have knocking about among fragile susceptibilities. But on reflection he saw there could be no danger.

"All up with him,—poor diavolo! Can't understand it—such a little sixpenny miss—pretty enough boiled parsnip blonde, if one likes that sort of thing—pleases some of the old boys, apparently. Look out, Mr. L. remember Susanna and the Elders. Good!

"Safe enough if something new doesn't turn up. Youngish. Sixteen's a little early. Seventeen will do. Marry a girl while she's in the gristle, and you can shape her bones for her. Splendid creature without her trimmings. Wants training. Must learn to dance, and sing something besides psalm-tunes."

Mr. Bradshaw began humming the hymn, "When I can read my title clear," adding some variations of his own. "That 's the solo for my prima donna!"

In the mean time Myrtle seemed to be showing some new developments. One would have said that the instincts of the coquette, or at least of the city belle, were coming uppermost in her nature. Her little nervous attack passed away, and she gained strength and beauty every day. She was becoming conscious of her gifts of fascination, and seemed to please herself with the homage of her rustic admirers. Why was it that no one of them had the look and bearing of that young man she had seen but a moment the other evening? To think that he should have taken up with such a weakling as Susan Posey! She sighed, and not so much thought as felt how kind it would have been in Heaven to have made her such a man. But the image of the delicate blonde stood between her and all serious thought of Clement Lindsay. She saw the wedding in the distance, and very foolishly thought to herself that she could not and would not go to it.

But Clement Lindsay was gone, and she must content herself with such worshippers as the village afforded. Murray Bradshaw was surprised and confounded at the easy way in which she received his compliments, and played with his advances, after the fashion of the trained ball-room belles, who know how to be almost caressing in manner, and yet are really as far off from the deluded victim of their suavities as the topmost statue of the Milan cathedral from the peasant that kneels on its floor. He admired her all the more for this, and yet he saw that she would be a harder prize to win than he had once thought. If he made up his mind that

he would have her, he must go armed with all implements, from the red hackle to the harpoon.

The change which surprised Murray Bradshaw could not fail to be noticed by all those about her. Miss Silence had long ago come to pantomime, rolling up of eyes, claspings of hands, making of sad mouths, and the rest,—but left her to her own way, as already the property of that great firm of World & Co. which drives such sharp bargains for young souls with the better angels. Cynthia studied her for her own purposes, but had never gained her confidence. The Irish servant saw that some change had come over her, and thought of the great ladies she had sometimes looked upon in the old country. They all had a kind of superstitious feeling about Myrtle's bracelet, of which she had told them the story, but which Kitty half believed was put in the drawer by the fairies, who brought her ribbons and partridge feathers, and other slight adornments with which she contrived to set off her simple costume, so as to produce those effects which an eye for color and cunning fingers can bring out of almost nothing.

Gifted Hopkins was now in a sad, vacillating condition, between the two great attractions to which he was exposed. Myrtle looked so immensely handsome ere Sunday when he saw her going to church, not to meeting, for she would not go, except when she knew Father Pemberton was going to be the preacher, that the young poet was on the point of going down on his knees to her, and telling her that his heart was hers and hers alone. But he suddenly remembered that he had on his best trousers, and the idea of carrying the marks of his devotion in the shape of two dusty impressions on his most valued article of apparel turned the scale against the demonstration. It happened the next morning, that Susan Posey wore the most becoming ribbon she had displayed for a long time, and Gifted was so taken with her pretty looks that he might very probably have made the same speech to her that he had been on the point of making to Myrtle the day before, but that he remembered her plighted affections, and thought what he should have to say for himself when Clement Lindsay, in a frenzy of rage and jealousy, stood before him, probably armed with as many deadly instruments as a lawyer mentions by name in an indictment for murder.

Cyprian Eveleth looked very differently on the new manifestations Myrtle was making of her tastes and inclinations. He had always felt dazzled, as well as attracted, by her; but now there was something in her expression and manner which made him feel still more strongly that they were intended for different spheres of life. He could not but own that she was born for a brilliant destiny,—that no ball-room would throw a light from its chandeliers too strong for her,—that no circle would be too brilliant for her to illuminate by her presence. Love does not thrive without hope, and Cyprian was beginning to see that it was idle in him to think of folding these wide wings of Myrtle's so that they would be shut up in any cage he could ever offer her. He began to doubt whether, after all, he might not find a meeker and humbler nature better adapted to his own. And so it happened that one evening after the three girls, Olive, Myrtle, and Bathsheba, had been together at the Parsonage, and Cyprian, availing himself of a brother's privilege, had joined them, he found he had been talking most of the evening with the gentle girl whose voice had grown so soft and sweet, during her long ministry in the sick-chamber, that it seemed to him more like music than speech. It would not be fair to say that Myrtle was piqued to see that Cyprian was devoting himself to Bathsheba. Her ambition was already reaching beyond her little village circle, and she had an inward sense that Cyprian found a form of sympathy in the minister's simple-minded daughter which he could not ask from a young woman of her own aspirations.

Such was the state of affairs when Master Byles Gridley was one morning surprised by an early call from Myrtle. He had a volume of Walton's Polyglot open before him, and was reading Job in the original, when she entered.

"Why, bless me, is that my young friend Miss Myrtle Hazard?" he exclaimed. "I might call you Keren-Happuch, which is Hebrew for Child of Beauty, and not be very far out of the way, Job's youngest daughter, my dear. And what brings my young friend out in such good season this morning? Nothing going wrong up at our ancient mansion, The Poplars, I trust?"

"I want to talk with you, dear Master Gridley," she answered. She looked as if she did not know just how to begin.

"Anything that interests you, Myrtle, interests me. I think you have some project in that young head of yours, my child. Let us have it, in all its dimensions, length, breadth, and thickness. I think I can guess, Myrtle, that we have a little plan of some kind or other. We don't visit Papa Job quite so early as this without some special cause,—do we, Miss Keren-Happuch?"

"I want to go to the city—to school," Myrtle said, with the directness which belonged to her nature.

"That is precisely what I want you to do myself, Miss Myrtle Hazard. I don't like to lose you from the village, but I think we must spare you for a while."

"You're the best and dearest man that ever lived. What could have made you think of such a thing for me, Mr. Gridley?"

"Because you are ignorant, my child,—partly I want to see you fitted to take a look at the world without feeling like a little country miss. Has your aunt Silence promised to bear your expenses while you are in the city? It will cost a good deal of money."

"I have not said a word to her about it. I am sure I don't know what she would say. But I have some money, Mr. Gridley."

She showed him a purse with gold, telling him how she came by it. "There is some silver besides. Will it be enough?"

"No, no, my child, we must not meddle with that. Your aunt will let me put it in the bank for you, I think, where it will be safe. But that shall not make any difference. I have got a little money lying idle, which you may just as well have the use of as not. You can pay it back perhaps some time or other; if you did not, it would not make much difference. I am pretty much alone in the world, and except a book now and then—*Aut liberos aut libros*, as our valiant heretic has it,—you ought to know a little Latin, Myrtle, but never mind—I have not much occasion for money. You shall go to the best school that any of our cities can offer, Myrtle, and you shall stay there until we agree that you are fitted to come back to us an ornament to Oxbow Village, and to larger places than this if you are called there. We have had some talk about it, your aunt Silence and I, and it is all settled. Your aunt does not feel very rich just now, or perhaps she would do more for you. She has

many pious and poor friends, and it keeps her funds low. Never mind, my child, we will have it all arranged for you, and you shall begin the year 1860 in Madam Delacoste's institution for young ladies. Too many rich girls and fashionable ones there, I fear, but you must see some of all kinds, and there are very good instructors in the school,—I know one,—he was a college boy with me,—and you will find pleasant and good companions there, so he tells me; only don't be in a hurry to choose your friends, for the least desirable young persons are very apt to cluster about a new-comer."

Myrtle was bewildered with the suddenness of the prospect thus held out to her. It is a wonder that she did not bestow an embrace upon the worthy old master. Perhaps she had too much tact. It is a pretty way enough of telling one that he belongs to a past generation, but it does tell him that not over-pleasing fact. Like the title of Emeritus Professor, it is a tribute to be accepted, hardly to be longed for.

When the curtain rises again, it will show Miss Hazard in a new character, and surrounded by a new world.

CHAPTER XXIII. MYRTLE HAZARD AT THE CITY SCHOOL.

Mr. Bradshaw was obliged to leave town for a week or two on business connected with the great land-claim. On his return, feeling in pretty good spirits, as the prospects looked favorable, he went to make a call at The Poplars. He asked first for Miss Hazard.

"Bliss your soul, Mr. Bradshaw," answered Mistress Kitty Fagan, "she's been gahn nigh a wake. It's to the city, to the big school, they've sint her."

This announcement seemed to make a deep impression on Murray Bradshaw, for his feelings found utterance in one of the most energetic forms of language to which ears polite or impolite are accustomed. He next asked for Miss Silence, who soon presented herself. Mr. Bradshaw asked, in a rather excited way, "Is it possible, Miss Withers, that your niece has quitted you to go to a city school?"

Miss Silence answered, with her chief—mourner expression, and her death-chamber tone: "Yes, she has left us for a season. I trust it may not be her destruction. I had hoped in former years that she would become a missionary, but I have given up all expectation of that now. Two whole years, from the age of four to that of six, I had prevailed upon her to give up sugar,—the money so saved to go to a graduate of our institution—who was afterwards—he labored among the cannibal-islanders. I thought she seemed to take pleasure in this small act of self-denial, but I have since suspected that Kitty gave her secret lumps. It was by Mr. Gridley's advice that she went, and by his pecuniary assistance. What could I do? She was bent on going, and I was afraid she would have fits, or do something dreadful, if I did not let her have her way. I am afraid she will come back to us spoiled. She has seemed so fond of dress lately, and once she spoke of learning—yes, Mr. Bradshaw, of learning to—dance! I wept when I heard of it. Yes, I wept."

That was such a tremendous thing to think of, and especially to speak of in Mr. Bradshaw's presence, for the most pathetic image in the world to many women is that of themselves in tears,—that it brought a return of the same overflow, which served as a substitute for conversation until Miss Badlam entered the apartment.

Miss Cynthia followed the same general course of remark. They could not help Myrtle's going if they tried. She had always maintained that, if they had only once broke her will when she was little, they would have kept the upper hand of her; but her will never was broke. They came pretty near it once, but the child would n't give in.

Miss Cynthia went to the door with Mr. Bradshaw, and the conversation immediately became short and informal.

"Demonish pretty business! All up for a year or more,—hey?"

"Don't blame me,—I couldn't stop her."

"Give me her address,—I 'll write to her. Any young men teach in the school?"

"Can't tell you. She'll write to Olive and Bathsheba, and I'll find out all about it."

Murray Bradshaw went home and wrote a long letter to Mrs. Clymer Ketchum, of 24 Carat Place, containing many interesting remarks and inquiries, some of the latter relating to Madam Delacoste's institution for the education of young ladies.

While this was going on at Oxbow Village, Myrtle was establishing herself at the rather fashionable school to which Mr. Gridley had recommended her. Mrs. or Madam Delacoste's boarding-school had a name which on the whole it deserved pretty well. She had some very good instructors for girls who wished to get up useful knowledge in case they might marry professors or ministers. They had a chance to learn music, dancing, drawing, and the way of behaving in company. There was a chance, too, to pick up available acquaintances, for many rich people sent their daughters to the school, and it was something to have been bred in their company.

There was the usual division of the scholars into a first and second set, according to the social position, mainly depending upon the fortune, of the families to which they belonged. The wholesale dealer's daughter very naturally considered herself as belonging to a different order from the retail dealer's daughter. The keeper of a great hotel and the editor of a widely circulated newspaper were considered as ranking with the wholesale dealers, and their daughters belonged also to the untitled nobility which has the dollar for its armorial bearing. The second set had most of the good scholars, and some of the prettiest girls; but nobody knew anything about their families, who lived off the great streets and avenues, or vegetated in country towns.

Myrtle Hazard's advent made something like a sensation. They did not know exactly what to make of her.

Hazard? Hazard? No great firm of that name. No leading hotel kept by any Hazard, was there? No newspaper of note edited by anybody called Hazard, was there? Came from where? Oxbow Village. Oh, rural district. Yes.—Still they could not help owning that she was handsome, a concession which of course had to be made with reservations.

“Don't you think she's vuiry good-lookin'?” said a Boston girl to a New York girl. “I think she's real pooty.”

“I dew, indeed. I didn't think she was haaf so handsome the feeest time I saw her,” answered the New York girl.

“What a pity she had n't been bawn in Bawston!”

“Yes, and moved very young to Ne Yock!”

“And married a sarsaparilla man, and lived in Fiff Avenoo, and moved in the fust society.”

“Better dew that than be strong-mained, and dew your own cook'n, and live in your own kitch'n.”

“Don't forgit to send your card when you are Mrs. Old Dr. Jacob!”

“Indeed I shaan't. What's the name of the alley, and which bell?” The New York girl took out a memorandum-book as if to put it down.

“Had n't you better let me write it for you, dear?” said the Boston girl. “It is as well to have it legible, you know.”

“Take it,” said the New York girl. “There 's tew York shill'ns in it when I hand it to you.”

“Your whole quarter's allowance, I bullieve,—ain't it?” said the Boston girl.

“Elegant manners, correct deportment, and propriety of language will be strictly attended to in this institution. The most correct standards of pronunciation will be inculcated by precept and example. It will be the special aim of the teachers to educate their pupils out of all provincialisms, so that they may be recognized as well-bred English scholars wherever the language is spoken in its purity.”—Extract from the Prospectus of Madam Delacoste's Boarding-school.

Myrtle Hazard was a puzzle to all the girls. Striking, they all agreed, but then the criticisms began. Many of the girls chattered a little broken French, and one of them, Miss Euphrosyne De Lacy, had been half educated in Paris, so that she had all the phrases which are to social operators what his cutting instruments are to the surgeon. Her face she allowed was handsome; but her style, according to this oracle, was a little bourgeoisie, and her air not exactly *comme il faut*. More specifically, she was guilty of *contours fortement prononces*,—*corsage de paysanne*,—*quelque chose de sauvage*, etc., etc. This girl prided herself on her figure.

Miss Bella Pool, (La Belle Poule as the demi-Parisian girl had christened her,) the beauty of the school, did not think so much of Myrtle's face, but considered her figure as better than the De Lacy girl's.

The two sets, first and second, fought over her as the Greeks and Trojans over a dead hero, or the Yale College societies over a live freshman. She was nobody by her connections, it is true, so far as they could find out, but then, on the other hand, she had the walk of a queen, and she looked as if a few stylish dresses and a season or two would make her a belle of the first water. She had that air of indifference to their little looks and whispered comments which is surest to disarm all the critics of a small tattling community. On the other hand, she came to this school to learn, and not to play; and the modest and more plainly dressed girls, whose fathers did not sell by the cargo, or keep victualling establishments for some hundreds of people, considered her as rather in sympathy with them than with the daughters of the rough-and-tumble millionaires who were grappling and rolling over each other in the golden dust of the great city markets.

She did not mean to belong exclusively to either of their sets. She came with that sense of manifold deficiencies, and eager ambition to supply them, which carries any learner upward, as if on wings, over the heads of the mechanical plodders and the indifferent routinists. She learned, therefore, in a way to surprise the experienced instructors. Her somewhat rude sketching soon began to show something of the artist's touch. Her voice, which had only been taught to warble the simplest melodies, after a little training began to show its force and sweetness and flexibility in the airs that enchant drawing-room audiences. She caught with great readiness the manner of the easiest girls, unconsciously, for she inherited old social instincts which became nature with the briefest exercise. Not much license of dress was allowed in the educational establishment of Madam Delacoste, but every girl had an opportunity to show her taste within the conventional limits prescribed. And Myrtle soon began to challenge remark by a certain air she contrived to give her dresses, and the skill with which she blended their colors.

“Tell you what, girls,” said Miss Berengaria Topping, female representative of the great dynasty that ruled over the world-famous Planet Hotel, “she's got style, lots of it. I call her perfectly splendid, when she's got up in her swell clothes. That oriole's wing she wears in her bonnet makes her look gorgeous, she'll be a stunning Pocahontas for the next tableau.”

Miss Rose Bugbee, whose family opulence grew out of the only merchantable article a Hebrew is never known to seek profit from, thought she could be made presentable in the first circles if taken in hand in good season. So it came about that, before many weeks had passed over her as a scholar in the great educational establishment, she might be considered as on the whole the most popular girl in the whole bevy of them. The studious ones admired her for her facility of learning, and her extraordinary appetite for every form of instruction, and the showy girls, who were only enduring school as the purgatory that opened into the celestial world of society, recognized in her a very handsome young person, who would be like to make a sensation sooner or later.

There were, however, it must be confessed, a few who considered themselves the thickest of the cream of the school-girls, who submitted her to a more trying ordeal than any she had yet passed.

“How many horses does your papa keep?” asked Miss Florence Smythe. “We keep nine, and a pony for Edgar.”

Myrtle had to explain that she had no papa, and that they did not keep any horses. Thereupon Miss Florence Smythe lost her desire to form an acquaintance, and wrote home to her mother (who was an ex-bonnet-maker) that the school was getting common, she was afraid,—they were letting in persons one knew

nothing about.

Miss Clare Browne had a similar curiosity about the amount of plate used in the household from which Myrtle came. Her father had just bought a complete silver service. Myrtle had to own that they used a good deal of china at her own home,—old china, which had been a hundred years in the family, some of it.

“A hundred years old!” exclaimed Miss Clare Browne. “What queer-looking stuff it must be! Why, everything in our house is just as new and bright! Papaa had all our pictures painted on purpose for us. Have you got any handsome pictures in your house?”

“We have a good many portraits of members of the family,” she said, “some of them older than the china.”

“How very very odd! What do the dear old things look like?”

“One was a great beauty in her time.”

“How jolly!”

“Another was a young woman who was put to death for her religion,—burned to ashes at the stake in Queen Mary's time.”

“How very very wicked! It was n't nice a bit, was it? Ain't you telling me stories? Was that a hundred years ago?—But you 've got some new pictures and things, have n't you? Who furnished your parlors?”

“My great-grandfather, or his father, I believe.”

“Stuff and nonsense. I don't believe it. What color are your carriage-horses?”

“Our woman, Kitty Fagan, told somebody once we didn't keep any horse but a cow.”

“Not keep any horses! Do for pity's sake let me look at your feet.”

Myrtle put out as neat a little foot as a shoemaker ever fitted with a pair of number two. What she would have been tempted to do with it, if she had been a boy, we will not stop to guess. After all, the questions amused her quite as much as the answers instructed Miss Clara Browne. Of that young lady's ancestral claims to distinction there is no need of discoursing. Her “papaa” commonly said sir in talking with a gentleman, and her “mammaa” would once in a while forget, and go down the area steps instead of entering at the proper door; but they lived behind a brown stone front, which veneers everybody's antecedents with a facing of respectability.

Miss Clara Browne wrote home to her mother in the same terms as Miss Florence Smythe,—that the school was getting dreadful common, and they were letting in very queer folks.

Still another trial awaited Myrtle, and one which not one girl in a thousand would have been so unprepared to meet. She knew absolutely nothing of certain things with which the vast majority of young persons were quite familiar.

There were literary young ladies, who had read everything of Dickens and Thackeray, and something at least of Sir Walter, and occasionally, perhaps, a French novel, which they had better have let alone. One of the talking young ladies of this set began upon Myrtle one day.

“Oh, is n't 'Pickwick' nice?” she asked.

“I don't know,” Myrtle replied; “I never tasted any.”

The girl stared at her as if she were a crazy creature. “Tasted any! Why, I mean the 'Pickwick Papers,' Dickens's story. Don't you think they're nice.”

Poor Myrtle had to confess that she had never read them, and did n't know anything about them.

“What! did you never read any novels?” said the young lady.

“Oh, to be sure I have,” said Myrtle, blushing as she thought of the great trunk and its contents. “I have read 'Caleb Williams,' and 'Evelina,' and 'Tristram Shandy'” (naughty girl!), “and the 'Castle of Otranto,' and the 'Mysteries of Udolpho,' and the 'Vicar of Wakefield,' and 'Don Quixote'—”

The young lady burst out laughing. “Stop! stop! for mercy's sake,” she cried. “You must be somebody that's been dead and buried and come back to life again. Why you're Rip Van Winkle in a petticoat! You ought to powder your hair and wear patches.”

“We've got the oddest girl here,” this young lady wrote home. “She has n't read any book that is n't a thousand years old. One of the girls says she wears a trilobite for a breastpin; some horrid old stone, I believe that is, that was a bug ever so long ago. Her name, she says, is Myrtle Hazard, but I call her Rip Van Myrtle.”

Notwithstanding the quiet life which these young girls were compelled to lead, they did once in a while have their gatherings, at which a few young gentlemen were admitted. One of these took place about a month after Myrtle had joined the school. The girls were all in their best, and by and by they were to have a tableau. Myrtle came out in all her force. She dressed herself as nearly as she dared like the handsome woman of the past generation whom she resembled. The very spirit of the dead beauty seemed to animate every feature and every movement of the young girl whose position in the school was assured from that moment. She had a good solid foundation to build upon in the jealousy of two or three of the leading girls of the style of pretensions illustrated by some of their talk which has been given. There is no possible success without some opposition as a fulcrum: force is always aggressive, and crowds something or other, if it does not hit or trample on it.

The cruelest cut of all was the remark attributed to Mr. Livingston Jerkins, who was what the opposition girls just referred to called the great “swell” among the privileged young gentlemen who were present at the gathering.

“Rip Van Myrtle, you call that handsome girl, do you, Miss Clara? By Jove, she's the stylishest of the whole lot, to say nothing of being a first-class beauty. Of course you know I except one, Miss Clara. If a girl can go to sleep and wake up after twenty years looking like that, I know a good many who had better begin their nap without waiting. If I were Florence Smythe, I'd try it, and begin now,—eh, Clara?”

Miss Browne felt the praise of Myrtle to be slightly alleviated by the depreciation of Miss Smythe, who had long been a rival of her own. A little later in the evening Miss Smythe enjoyed almost precisely the same sensation, produced in a very economical way by Mr. Livingston Jenkins's repeating pretty nearly the same

sentiments to her, only with a change in the arrangement of the proper names. The two young ladies were left feeling comparatively comfortable with regard to each other, each intending to repeat Mr. Livingston Jenkins's remark about her friend to such of her other friends as enjoyed clever sayings, but not at all comfortable with reference to Myrtle Hazard, who was evidently considered by the leading "swell" of their circle as the most noticeable personage of the assembly. The individual exception in each case did very well as a matter of politeness, but they knew well enough what he meant.

It seemed to Myrtle Hazard, that evening, that she felt the bracelet on her wrist glow with a strange, unaccustomed warmth. It was as if it had just been unclasped from the arm of a young woman full of red blood and tingling all over with swift nerve-currents. Life had never looked to her as it did that evening. It was the swan's first breasting the water,—bred on the desert sand, with vague dreams of lake and river, and strange longings as the mirage came and dissolved, and at length afloat upon the sparkling wave. She felt as if she had for the first time found her destiny. It was to please, and so to command, to rule with gentle sway in virtue of the royal gift of beauty,—to enchant with the commonest exercise of speech, through the rare quality of a voice which could not help being always gracious and winning, of a manner which came to her as an inheritance of which she had just found the title. She read in the eyes of all that she was more than any other the centre of admiration. Blame her who may, the world was a very splendid vision as it opened before her eyes in its long vista of pleasures and of triumphs. How different the light of these bright saloons from the glimmer of the dim chamber at The Poplars! Silence Withers was at that very moment looking at the portraits of Anne Holyoake and of Judith Pride. "The old picture seems to me to be fading faster than ever," she was thinking. But when she held her lamp before the other, it seemed to her that the picture never was so fresh before, and that the proud smile upon its lips was more full of conscious triumph than she remembered it. A reflex, doubtless, of her own thoughts, for she believed that the martyr was weeping even in heaven over her lost descendant, and that the beauty, changed to the nature of the malignant spiritual company with which she had long consorted in the under-world, was pleasing herself with the thought that Myrtle was in due time to bring her news from the Satanic province overhead, where she herself had so long indulged in the profligacy of embonpoint and loveliness.

The evening at the school-party was to terminate with some tableaux. The girl who had suggested that Myrtle would look "stunning" or "gorgeous" or "jolly," or whatever the expression was, as Pocahontas, was not far out of the way, and it was so evident to the managing heads that she would make a fine appearance in that character, that the "Rescue of Captain John Smith" was specially got up to show her off.

Myrtle had sufficient reason to believe that there was a hint of Indian blood in her veins. It was one of those family legends which some of the members are a little proud of, and others are willing to leave uninvestigated. But with Myrtle it was a fixed belief that she felt perfectly distinct currents of her ancestral blood at intervals, and she had sometimes thought there were instincts and vague recollections which must have come from the old warriors and hunters and their dusky brides. The Indians who visited the neighborhood recognized something of their own race in her dark eyes, as the reader may remember they told the persons who were searching after her. It had almost frightened her sometimes to find how like a wild creature she felt when alone in the woods. Her senses had much of that delicacy for which the red people are noted, and she often thought she could follow the trail of an enemy, if she wished to track one through the forest, as unerringly as if she were a Pequot or a Mohegan.

It was a strange feeling that came over Myrtle, as they dressed her for the part she was to take. Had she never worn that painted robe before? Was it the first time that these strings of wampum had ever rattled upon her neck and arms? And could it be that the plume of eagle's feathers with which they crowned her dark, fast-lengthening locks had never shadowed her forehead until now? She felt herself carried back into the dim ages when the wilderness was yet untrampled save by the feet of its native lords. Think of her wild fancy as we may, she felt as if that dusky woman of her midnight vision on the river were breathing for one hour through her lips. If this belief had lasted, it is plain enough where it would have carried her. But it came into her imagination and vivifying consciousness with the putting on of her unwonted costume, and might well leave her when she put it off. It is not for us, who tell only what happened, to solve these mysteries of the seeming admission of unhoused souls into the fleshly tenements belonging to air-breathing personalities. A very little more, and from that evening forward the question would have been treated in full in all the works on medical jurisprudence published throughout the limits of Christendom. The story must be told or we should not be honest with the reader.

TABLEAU 1. Captain John Smith (Miss Euphrosyne de Lacy) was to be represented prostrate and bound, ready for execution; Powhatan (Miss Florence Smythe) sitting upon a log; savages with clubs (Misses Clara Browne, A. Van Boodle, E. Van Boodle, Heister, Booster, etc., etc.) standing around; Pocahontas holding the knife in her hand, ready to cut the cords with which Captain John Smith is bound.—Curtain.

TABLEAU 2. Captain John Smith released and kneeling before Pocahontas, whose hand is extended in the act of raising him and presenting him to her father. Savages in various attitudes of surprise. Clubs fallen from their hands. Strontian flame to be kindled.—Curtain.

This was a portion of the programme for the evening, as arranged behind the scenes. The first part went off with wonderful eclat, and at its close there were loud cries for Pocahontas. She appeared for a moment. Bouquets were flung to her; and a wreath, which one of the young ladies had expected for herself in another part, was tossed upon the stage, and laid at her feet. The curtain fell.

"Put the wreath on her for the next tableau," some of them whispered, just as the curtain was going to rise, and one of the girls hastened to place it upon her head.

The disappointed young lady could not endure it, and, in a spasm of jealous passion, sprang at Myrtle, snatched it from her head, and trampled it under her feet at the very instant the curtain was rising. With a cry which some said had the blood-chilling tone of an Indian's battle-shriek, Myrtle caught the knife up, and raised her arm against the girl who had thus rudely assailed her. The girl sank to the ground, covering her eyes in her terror. Myrtle, with her arm still lifted, and the blade glistening in her hand, stood over her, rigid as if she had been suddenly changed to stone. Many of those looking on thought all this was a part of the show, and were thrilled with the wonderful acting. Before those immediately around her had had time to

recover from the palsy of their fright Myrtle had flung the knife away from her, and was kneeling, her head bowed and her hands crossed upon her breast. The audience went into a rapture of applause as the curtain came suddenly down; but Myrtle had forgotten all but the dread peril she had just passed, and was thanking God that his angel—her own protecting spirit, as it seemed to her had stayed the arm which a passion such as her nature had never known, such as she believed was alien to her truest self, had lifted with deadliest purpose. She alone knew how extreme the danger had been. "She meant to scare her,—that 's all," they said. But Myrtle tore the eagle's feathers from her hair, and stripped off her colored beads, and threw off her painted robe. The metempsychosis was far too real for her to let her wear the semblance of the savage from whom, as she believed, had come the lawless impulse at the thought of which her soul recoiled in horror.

"Pocahontas has got a horrid headache," the managing young ladies gave it out, "and can't come to time for the last tableau." So this all passed over, not only without loss of credit to Myrtle, but with no small addition to her local fame,—for it must have been acting; "and was n't it stunning to see her with that knife, looking as if she was going to stab Bells, or to scalp her, or something?"

As Master Gridley had predicted, and as is the case commonly with new-comers at colleges and schools, Myrtle had come first in contact with those who were least agreeable to meet. The low-bred youth who amuse themselves with scurvy tricks on freshmen, and the vulgar girls who try to show off their gentility to those whom they think less important than themselves, are exceptions in every institution; but they make themselves odiously prominent before the quiet and modest young people have had time to gain the new scholar's confidence. Myrtle found friends in due time, some of them daughters of rich people, some poor girls, who came with the same sincerity of purpose as herself. But not one was her match in the facility of acquiring knowledge. Not one promised to make such a mark in society, if she found an opening into its loftier circles. She was by no means ignorant of her natural gifts, and she cultivated them with the ambition which would not let her rest.

During her stay at the great school, she made but one visit to Oxbow Village. She did not try to startle the good people with her accomplishments, but they were surprised at the change which had taken place in her. Her dress was hardly more showy, for she was but a school-girl, but it fitted her more gracefully. She had gained a softness of expression, and an ease in conversation, which produced their effect on all with whom she came in contact. Her aunt's voice lost something of its plaintiveness in talking with her. Miss Cynthia listened with involuntary interest to her stories of school and school-mates. Master Byles Gridley accepted her as the great success of his life, and determined to make her his chief heiress, if there was any occasion for so doing. Cyprian told Bathsheba that Myrtle must come to be a great lady. Gifted Hopkins confessed to Susan Posey that he was afraid of her, since she had been to the great city school. She knew too much and looked too much like a queen, for a village boy to talk with.

Mr. William Murray Bradshaw tried all his fascinations upon her, but she parried compliments so well, and put off all his nearer advances so dexterously, that he could not advance beyond the region of florid courtesy, and never got a chance, if so disposed, to risk a question which he would not ask rashly, believing that, if Myrtle once said No, there would be little chance of her ever saying Yes.

CHAPTER XXIV. MUSTERING OF FORCES.

Not long after the tableau performance had made Myrtle Hazard's name famous in the school and among the friends of the scholars, she received the very flattering attention of a call from Mrs. Clymer Ketchum, of 24 Carat Place. This was in consequence of a suggestion from Mr. Livingston Jenkins, a particular friend of the family.

"They've got a demonish splendid school-girl over there," he said to that lady, "made the stunningest looking Pocahontas at the show there the other day. Demonish plucky looking filly as ever you saw. Had a row with another girl,—gave the war-whoop, and went at her with a knife. Festive,—hey? Say she only meant to scare her,—looked as if she meant to stick her, anyhow. Splendid style. Why can't you go over to the shop and make 'em trot her out?"

The lady promised Mr. Livingston Jenkins that she certainly would, just as soon as she could find a moment's leisure,—which, as she had nothing in the world to do, was not likely to be very soon. Myrtle in the mean time was busy with her studies, little dreaming what an extraordinary honor was awaiting her.

That rare accident in the lives of people who have nothing to do, a leisure morning, did at last occur. An elegant carriage, with a coachman in a wonderful cape, seated on a box lofty as a throne, and wearing a hat-band as brilliant as a coronet, stopped at the portal of Madam Delacoste's establishment. A card was sent in bearing the open sesame of Mrs. Clymer Ketchum, the great lady of 24 Carat Place. Miss Myrtle Hazard was summoned as a matter of course, and the fashionable woman and the young girl sat half an hour together in lively conversation.

Myrtle was fascinated by her visitor, who had that flattering manner which, to those not experienced in the world's ways, seems to imply unfathomable depths of disinterested devotion. Then it was so delightful to look upon a perfectly appointed woman,—one who was as artistically composed as a poem or an opera,—in whose costume a kind of various rhythm undulated in one fluent harmony, from the spray that nodded on her bonnet to the rosette that blossomed on her sandal. As for the lady, she was captivated with Myrtle. There is nothing that your fashionable woman, who has ground and polished her own spark of life into as many and as glittering social facets as it will bear, has a greater passion for than a large rough diamond, which knows nothing of the sea of light it imprisons, and which it will be her pride to have cut into a brilliant under her own eye, and to show the world for its admiration and her own reflected glory. Mrs. Clymer Ketchum had taken the entire inventory of Myrtle's natural endowments before the interview was over. She had no marriageable children, and she was thinking what a killing bait Myrtle would be at one of her stylish parties.

She soon got another letter from Mr. William Murray Bradshaw, which explained the interest he had taken in Madam Delacoste's school,—all which she knew pretty nearly beforehand, for she had found out a good part of Myrtle's history in the half-hour they had spent in company.

"I had a particular reason for my inquiries about the school," he wrote. "There is a young girl there I take an interest in. She is handsome and interesting; and—though it is a shame to mention such a thing has possibilities in the way of fortune not to be undervalued. Why can't you make her acquaintance and be civil to her? A country girl, but fine old stock, and will make a figure some time or other, I tell you. Myrtle Hazard,—that's her name. A mere schoolgirl. Don't be malicious and badger me about her, but be polite to her. Some of these country girls have got 'blue blood' in them, let me tell you, and show it plain enough."

("In huckleberry season!") said Mrs. Clymer Ketchum, in a parenthesis,—and went on reading.

"Don't think I'm one of your love-in-a-cottage sort, to have my head turned by a village beauty. I've got a career before me, Mrs. K., and I know it. But this is one of my pets, and I want you to keep an eye on her. Perhaps when she leaves school you wouldn't mind asking her to come and stay with you a little while. Possibly I may come and see how she is getting on if you do,—won't that tempt you, Mrs. C. K.?"

Mrs. Clymer Ketchum wrote back to her relative how she had already made the young lady's acquaintance.

"Livingston Jerkins (you remember him) picked her out of the whole lot of girls as the 'prettiest filly in the stable.' That's his horrid way of talking. But your young milkmaid is really charming, and will come into form like a Derby three-year-old. There, now, I've caught that odious creature's horse-talk, myself. You're dead in love with this girl, Murray, you know you are.

"After all, I don't know but you're right. You would make a good country lawyer enough, I don't doubt. I used to think you had your ambitions, but never mind. If you choose to risk yourself on 'possibilities,' it is not my affair, and she's a beauty, there's no mistake about that.

"There are some desirable partis at the school with your dulcinea. There 's Rose Bugbee. That last name is a good one to be married from. Rose is a nice girl,—there are only two of them. The estate will cut up like one of the animals it was made out of, you know,—the sandwich-quadruped. Then there 's Berengaria. Old Topping owns the Planet Hotel among other things,—so big, they say, there's always a bell ringing from somebody's room day and night the year round. Only child—unit and six ciphers carries diamonds loose in her pocket—that's the story—good-looking—lively—a little slangy called Livingston Jerkins 'Living Jingo' to his face one day. I want you to see my lot before you do anything serious. You owe something to the family, Mr. William Murray Bradshaw! But you must suit yourself, after all: if you are contented with a humble position in life, it is nobody's business that I know of. Only I know what life is, Murray B. Getting married is jumping overboard, any way you look at it, and if you must save some woman from drowning an old maid, try to find one with a cork jacket, or she 'll carry you down with her."

Murray Bradshaw was calculating enough, but he shook his head over this letter. It was too demonish cold-blooded for him, he said to himself. (Men cannot pardon women for saying aloud what they do not hesitate to think in silence themselves.) Never mind,—he must have Mrs. Clymer Ketchum's house and influence for his own purposes. Myrtle Hazard must become her guest, and then if circumstances were favorable, he was certain obtaining her aid in his project.

The opportunity to invite Myrtle to the great mansion presented itself unexpectedly. Early in the spring of 1861 there were some cases of sickness in Madam Delacoste's establishment, which led to closing the school for a while. Mrs. Clymer Ketchum took advantage of the dispersion of the scholars to ask Myrtle to come and spend some weeks with her. There were reasons why this was more agreeable to the young girl than returning to Oxbow Village, and she very gladly accepted the invitation.

It was very remarkable that a man living as Master Byles Gridley had lived for so long a time should all at once display such liberality as he showed to a young woman who had no claim upon him, except that he had rescued her from the consequences of her own imprudence and warned her against impending dangers. Perhaps he cared more for her than if the obligation had been the other way,—students of human nature say it is commonly so. At any rate, either he had ampler resources than it was commonly supposed, or he was imprudently giving way to his generous impulses, or he thought he was making advances which would in due time be returned to him. Whatever the reason was, he furnished her with means, not only for her necessary expenses, but sufficient to afford her many of the elegances which she would be like to want in the fashionable society with which she was for a short time to mingle.

Mrs. Clymer Ketchum was so well pleased with the young lady she was entertaining, that she thought it worth while to give a party while Myrtle was staying with her. She had her jealousies and rivalries, as women of the world will, sometimes, and these may have had their share in leading her to take the trouble a large party involved. She was tired of the airs of Mrs. Pinnickle, who was of the great Apex family, and her terribly accomplished daughter Rhadamartha, and wanted to crush the young lady, and jaundice her mother, with a girl twice as brilliant and ten times handsomer. She was very willing, also, to take the nonsense out of the Capsheaf girls, who thought themselves the most stylish personages of their city world, and would bite their lips well to see themselves distanced by a country miss.

In the mean time circumstances were promising to bring into Myrtle's neighborhood several of her old friends and admirers. Mrs. Clymer Ketchum had written to Murray Bradshaw that she had asked his pretty milkmaid to come and stay awhile with her, but he had been away on business, and only arrived in the city a day or two before the party. But other young fellows had found out the attractions of the girl who was "hanging out at the Clymer Ketchum concern," and callers were plenty, reducing tete-a-tetes in a corresponding ratio. He did get one opportunity, however, and used it well. They had so many things to talk about in common, that she could not help finding him good company. She might well be pleased, for he was an adept in the curious art of being agreeable, as other people are in chess or billiards, and had made a special study of her tastes, as a physician studies a patient's constitution. What he wanted was to get her thoroughly interested in himself, and to maintain her in a receptive condition until such time as he should be ready for a final move. Any day might furnish the decisive motive; in the mean time he wished only to hold her as against all others.

It was well for her, perhaps, that others had flattered her into a certain consciousness of her own value. She felt her veins full of the same rich blood as that which had flushed the cheeks of handsome Judith in the long summer of her triumph. Whether it was vanity, or pride, or only the instinctive sense of inherited force and attraction, it was the best of defences. The golden bracelet on her wrist seemed to have brought as much protection with it as if it had been a shield over her heart.

But far away in Oxbow Village other events were in preparation. The "fugitive pieces" of Mr. Gifted Hopkins had now reached a number so considerable, that, if collected and printed in large type, with plenty of what the unpleasant printers call "fat,"—meaning thereby blank spaces,—upon a good, substantial, not to say thick paper, they might perhaps make a volume which would have substance enough to bear the title, printed lengthwise along the back, "Hopkins's Poems." Such a volume that author had in contemplation. It was to be the literary event of the year 1861.

He could not mature such a project, one which he had been for some time contemplating, without consulting Mr. Byles Gridley, who, though he had not unfrequently repressed the young poet's too ardent ambition, had yet always been kind and helpful.

Mr. Gridley was seated in his large arm-chair, indulging himself in the perusal of a page or two of his own work before repeatedly referred to. His eye was glistening, for it had just rested on the following passage:

"There is infinite pathos in unsuccessful authorship. The book that perishes unread is the deaf mute of literature. The great asylum of Oblivion is full of such, making inaudible signs to each other in leaky garrets and unattainable dusty upper shelves."

He shut the book, for the page grew a little dim as he finished this elegiac sentence, and sighed to think how much more keenly he felt its truth than when it was written,—than on that memorable morning when he saw the advertisement in all the papers, "This day published, 'Thoughts on the Universe.' By Byles Gridley, A. M."

At that moment he heard a knock at his door. He closed his eyelids forcibly for ten seconds, opened them, and said cheerfully, "Come in!"

Gifted Hopkins entered. He had a collection of manuscripts in his hands which it seemed to him would fill a vast number of pages. He did not know that manuscript is to type what fresh dandelions are to the dish of greens that comes to table, of which last Nurse Byloe, who considered them very wholesome spring grazing for her patients, used to say that they "biled down dreadful."

"I have brought the autographs of my poems, Master Gridley, to consult you about making arrangements for publication. They have been so well received by the public and the leading critics of this part of the State, that I think of having them printed in a volume. I am going to the city for that purpose. My mother has given her consent. I wish to ask you several business questions. Shall I part with the copyright for a downright sum of money, which I understand some prefer doing, or publish on shares, or take a percentage on the sales? These, I believe, are the different ways taken by authors."

Mr. Gridley was altogether too considerate to reply with the words which would most naturally have come to his lips. He waited as if he were gravely pondering the important questions just put to him, all the while looking at Gifted with a tenderness which no one who had not buried one of his soul's children could have felt for a young author trying to get clothing for his new-born intellectual offspring.

"I think," he said presently, "you had better talk with an intelligent and liberal publisher, and be guided by his advice. I can put you in correspondence with such a person, and you had better trust him than me a great deal. Why don't you send your manuscript by mail?"

"What, Mr. Gridley? Trust my poems, some of which are unpublished, to the post-office? No, sir, I could never make up my mind to such a risk. I mean to go to the city myself, and read them to some of the leading publishers. I don't want to pledge myself to any one of them. I should like to set them bidding against each other for the copyright, if I sell it at all."

Mr. Gridley gazed upon the innocent youth with a sweet wonder in his eyes that made him look like an angel, a little damaged in the features by time, but full of celestial feelings.

"It will cost you something to make this trip, Gifted. Have you the means to pay for your journey and your stay at a city hotel?"

Gifted blushed. "My mother has laid by a small sum for me," he said. "She knows some of my poems by heart, and she wants to see them all in print."

Master Gridley closed his eyes very firmly again, as if thinking, and opened them as soon as the foolish film had left them. He had read many a page of "Thoughts on the Universe" to his own old mother, long, long years ago, and she had often listened with tears of modest pride that Heaven had favored her with a son so full of genius.

"I'll tell you what, Gifted," he said. "I have been thinking for a good while that I would make a visit to the city, and if you have made up your mind to try what you can do with the publishers, I will take you with me as a companion. It will be a saving to you and your good mother, for I shall bear the expenses of the expedition."

Gifted Hopkins came very near going down on his knees. He was so overcome with gratitude that it seemed as if his very coattails wagged with his emotion.

"Take it quietly," said Master Gridley. "Don't make a fool of yourself. Tell your mother to have some clean shirts and things ready for you, and we will be off day after to-morrow morning."

Gifted hastened to impart the joyful news to his mother, and to break the fact to Susan Posey that he was about to leave them for a while, and rush into the deliriums and dangers of the great city.

Susan smiled. Gifted hardly knew whether to be pleased with her sympathy, or vexed that she did not take his leaving more to heart. The smile held out bravely for about a quarter of a minute. Then there came on a little twitching at the corners of the mouth. Then the blue eyes began to shine with a kind of veiled glimmer. Then the blood came up into her cheeks with a great rush, as if the heart had sent up a herald with a red flag from the citadel to know what was going on at the outworks. The message that went back was of discomfiture

and capitulation. Poor Susan was overcome, and gave herself up to weeping and sobbing.

The sight was too much for the young poet. In a wild burst of passion he seized her hand, and pressed it to his lips, exclaiming, "Would that you could be mine forever!" and Susan forgot all that she ought to have remembered, and, looking half reproachfully but half tenderly through her tears, said, in tones of infinite sweetness, "O Gifted!"

CHAPTER XXV. THE POET AND THE PUBLISHER.

It was settled that Master Byles Gridley and Mr. Gifted Hopkins should leave early in the morning of the day appointed, to take the nearest train to the city. Mrs. Hopkins labored hard to get them ready, so that they might make a genteel appearance among the great people whom they would meet in society. She brushed up Mr. Gridley's best black suit, and bound the cuffs of his dress-coat, which were getting a little worried. She held his honest-looking hat to the fire, and smoothed it while it was warm, until one would have thought it had just been ironed by the hatter himself. She had his boots and shoes brought into a more brilliant condition than they had ever known: if Gifted helped, it was to his credit as much as if he had shown his gratitude by polishing off a copy of verses in praise of his benefactor.

When she had got Mr. Gridley's encumbrances in readiness for the journey, she devoted herself to fitting out her son Gifted. First, she had down from the garret a capacious trunk, of solid wood, but covered with leather, and adorned with brass-headed nails, by the cunning disposition of which, also, the paternal initials stood out on the rounded lid, in the most conspicuous manner. It was his father's trunk, and the first thing that went into it, as the widow lifted the cover, and the smothering shut-up smell struck an old chord of associations, was a single tear-drop. How well she remembered the time when she first unpacked it for her young husband, and the white shirt bosoms showed their snowy plaits! O dear, dear!

But women decant their affection, sweet and sound, out of the old bottles into the new ones,—off from the lees of the past generation, clear and bright, into the clean vessels just made ready to receive it. Gifted Hopkins was his mother's idol, and no wonder. She had not only the common attachment of a parent for him, as her offspring, but she felt that her race was to be rendered illustrious by his genius, and thought proudly of the time when some future biographer would mention her own humble name, to be held in lasting remembrance as that of the mother of Hopkins.

So she took great pains to equip this brilliant but inexperienced young man with everything he could by any possibility need during his absence. The great trunk filled itself until it bulged with its contents like a boa-constrictor who has swallowed his blanket. Best clothes and common clothes, thick clothes and thin clothes, flannels and linens, socks and collars, with handkerchiefs enough to keep the pickpockets busy for a week, with a paper of gingerbread and some lozenges for gastralgia, and "hot drops," and ruled paper to write letters on, and a little Bible, and a phial with hiera picra, and another with paregoric, and another with "camphire" for sprains and bruises.

—Gifted went forth equipped for every climate from the tropic to the pole, and armed against every malady from Ague to Zoster. He carried also the paternal watch, a solid silver bull's-eye, and a large pocketbook, tied round with a long tape, and, by way of precaution, pinned into his breast-pocket. He talked about having a pistol, in case he were attacked by any of the ruffians who are so numerous in the city, but Mr. Gridley told him, No! he would certainly shoot himself, and he shouldn't think of letting him take a pistol.

They went forth, Mentor and Telemachus, at the appointed time, to dare the perils of the railroad and the snares of the city. Mrs. Hopkins was firm up to near the last moment, when a little quiver in her voice set her eyes off, and her face broke up all at once, so that she had to hide it behind her handkerchief. Susan Posey showed the truthfulness of her character in her words to Gifted at parting. "Farewell," she said, "and think of me sometimes while absent. My heart is another's, but my friendship, Gifted—my friendship—"

Both were deeply affected. He took her hand and would have raised it to his lips; but she did not forget herself, and gently withdrew it, exclaiming, "O Gifted!" this time with a tone of tender reproach which made him feel like a profligate. He tore himself away, and when at a safe distance flung her a kiss, which she rewarded with a tearful smile.

Master Byles Gridley must have had some good dividends from some of his property of late. There is no other way of accounting for the handsome style in which he did things on their arrival in the city. He went to a tailor's and ordered a new suit to be sent home as soon as possible, for he knew his wardrobe was a little rusty. He looked Gifted over from head to foot, and suggested such improvements as would recommend him to the fastidious eyes of the selecter sort of people, and put him in his own tailor's hands, at the same time saying that all bills were to be sent to him, B. Gridley, Esq., parlor No. 6, at the Planet Hotel. Thus it came to pass that in three days from their arrival they were both in an eminently presentable condition. In the mean time the prudent Mr. Gridley had been keeping the young man busy, and amusing himself by showing him such of the sights of the city and its suburbs as he thought would combine instruction with entertainment.

When they were both properly equipped and ready for the best company, Mr. Gridley said to the young poet, who had found it very hard to contain his impatience, that they would now call together on the publisher to whom he wished to introduce him, and they set out accordingly.

"My name is Gridley," he said with modest gravity, as he entered the publisher's private room. "I have a note of introduction here from one of your authors, as I think he called himself, a very popular writer for whom you publish."

The publisher rose and came forward in the most cordial and respectful manner. "Mr. Gridley? Professor Byles Gridley,—author of 'Thoughts on the Universe'?"

The brave-hearted old man colored as if he had been a young girl. His dead book rose before him like an apparition. He groped in modest confusion for an answer. "A child I buried long ago, my dear sir," he said. "Its title-page was its tombstone. I have brought this young friend with me,—this is Mr. Gifted Hopkins of Oxbow Village,—who wishes to converse with you about—"

"I have come, sir—" the young poet began, interrupting him.

"Let me look at your manuscript, if you please, Mr. Popkins," said the publisher, interrupting in his turn.

"Hopkins, if you please, sir," Gifted suggested mildly, proceeding to extract the manuscript, which had got wedged into his pocket, and seemed to be holding on with all its might. He was wondering all the time over the extraordinary clairvoyance of the publisher, who had looked through so many thick folds, broadcloth, lining, brown paper, and seen his poems lying hidden in his breast-pocket. The idea that a young person coming on such an errand should have to explain his intentions would have seemed very odd to the publisher. He knew the look which belongs to this class of enthusiasts just as a horse-dealer knows the look of a green purchaser with the equine fever raging in his veins. If a young author had come to him with a scrap of manuscript hidden in his boots, like Major Andre's papers, the publisher would have taken one glance at him and said, "Out with it!"

While he was battling for the refractory scroll with his pocket, which turned half wrong side out, and acted as things always do when people are nervous and in a hurry, the publisher directed his conversation again to Master Byles Gridley.

"A remarkable book, that of yours, Mr. Gridley, would have a great run if it were well handled. Came out twenty years too soon,—that was the trouble. One of our leading scholars was speaking of it to me the other day. 'We must have a new edition,' he said; people are just ripe for that book.' Did you ever think of that? Change the form of it a little, and give it a new title, and it will be a popular book. Five thousand or more, very likely."

Mr. Gridley felt as if he had been rapidly struck on the forehead with a dozen distinct blows from a hammer not quite big enough to stun him. He sat still without saying a word. He had forgotten for the moment all about poor Gifted Hopkins, who had got out his manuscript at last, and was calming the disturbed corners of it. Coming to himself a little, he took a large and beautiful silk handkerchief, one of his new purchases, from his pocket, and applied it to his face, for the weather seemed to have grown very warm all at once. Then he remembered the errand on which he had come, and thought of this youth, who had got to receive his first hard lesson in life, and whom he had brought to this kind man that it should be gently administered.

"You surprise me," he said,—*"you surprise me. Dead and buried. Dead and buried. I had sometimes thought that—at some future period, after I was gone, it might—but I hardly know what to say about your suggestions. But here is my young friend, Mr. Hopkins, who would like to talk with you, and I will leave him in your hands. I am at the Planet Hotel, if you should care to call upon me. Good morning. Mr. Hopkins will explain everything to you more at his ease, without me, I am confident."*

Master Gridley could not quite make up his mind to stay through the interview between the young poet and the publisher. The flush of hope was bright in Gifted's eye and cheek, and the good man knew that young hearts are apt to be over-sanguine, and that one who enters a shower-bath often feels very differently from the same person when he has pulled the string.

"I have brought you my Poems in the original autographs, sir," said Mr. Gifted Hopkins.

He laid the manuscript on the table, caressing the leaves still with one hand, as loath to let it go.

"What disposition had you thought of making of them?" the publisher asked, in a pleasant tone. He was as kind a man as lived, though he worked the chief engine in a chamber of torture.

"I wish to read you a few specimens of the poems," he said, "with reference to their proposed publication in a volume."

"By all means," said the kind publisher, who determined to be very patient with the protege of the hitherto little-known, but remarkable writer, Professor Gridley. At the same time he extended his foot in an accidental sort of way, and pressed it on the right hand knob of three which were arranged in a line beneath the table. A little bell in a distant apartment—the little bell marked C—gave one slight note; loud enough to start a small boy up, who looked at the clock, and knew that he was to go and call the publisher in just twenty-five minutes. "A, five minutes; B, ten minutes; C, twenty-five minutes";—that was the youngster's working formula. Mr. Hopkins was treated to the full allowance of time, as being introduced by Professor Gridley.

The young man laid open the manuscript so that the title-page, written out very handsomely in his own hand, should win the eye of the publisher.

*BLOSSOMS OF THE SOUL.
A WREATH OF VERSE; Original.*

BY GIFTED HOPKINS.

"a youth to Fortune and to Fame unknown."—Gray.

"Shall I read you some of the rhymed pieces first, or some of the blank-verse poems, sir?" Gifted asked.

"Read what you think is best,—a specimen of your first-class style of composition."

"I will read you the very last poem I have written," he said, and he began:

"THE TRIUMPH OF SONG.

*"I met that gold-haired maiden, all too dear;
And I to her: Lo! thou art very fair,
Fairer than all the ladies in the world
That fan the sweetened air with scented fans,
And I am scorched with exceeding love,
Yea, crisped till my bones are dry as straw.
Look not away with that high-arched brow,
But turn its whiteness that I may behold,*

*And lift thy great eyes till they blaze on mine,
And lay thy finger on thy perfect mouth,
And let thy lucent ears of careen pearl
Drink in the murmured music of my soul,
As the lush grass drinks in the globed dew;
For I have many scrolls of sweetest rhyme
I will unroll and make thee glad to hear.*

*"Then she: O shaper of the marvellous phrase
That openeth woman's heart as Both a key,
I dare not hear thee—lest the bolt should slide
That locks another's heart within my own.
Go, leave me,—and she let her eyelids fall,
And the great tears rolled from her large blue eyes.*

*"Then I: If thou not hear me, I shall die,
Yea, in my desperate mood may lift my hand
And do myself a hurt no leach can mend;
For poets ever were of dark resolve,
And swift stern deed*

*"That maiden heard no more,
But spike: Alas! my heart is very weak,
And but for—Stay! And if some dreadful morn,
After great search and shouting thorough the wold,
We found thee missing,—strangled,—drowned i' the mere,
Then should I go distraught and be clean mad!*

*"O poet, read! read all thy wondrous scrolls.
Yea, read the verse that maketh glad to hear!
Then I began and read two sweet, brief hours,
And she forgot all love save only mine!"*

"Is all this from real life?" asked the publisher.

"It—no, sir—not exactly from real life—that is, the leading female person is not wholly fictitious—and the incident is one which might have happened. Shall I read you the poems referred to in the one you have just heard, sir?"

"Allow me, one moment. Two hours' reading, I think, you said. I fear I shall hardly be able to spare quite time to hear them all. Let me ask what you intend doing with these productions, Mr.—rr Poplins."

"Hopkins, if you please, sir, not Poplins," said Gifted, plaintively. He expressed his willingness to dispose of the copyright, to publish on shares, or perhaps to receive a certain percentage on the profits.

"Suppose we take a glass of wine together, Mr.—Hopkins, before we talk business," the publisher said, opening a little cupboard and taking therefrom a decanter and two glasses. He saw the young man was looking nervous. He waited a few minutes, until the wine had comforted his epigastrium, and diffused its gentle glow through his unspoiled and consequently susceptible organisation.

"Come with me," he said.

Gifted followed him into a dingy apartment in the attic, where one sat at a great table heaped and piled with manuscripts. By him was a huge basket, ha'f full of manuscripts also. As they entered he dropped another manuscript into the basket and looked up.

"Tell me," said Gifted, "what are these papers, and who is he that looks upon them and drops them into the basket?"

"These are the manuscript poems that we receive, and the one sitting at the table is commonly spoken of among us as 'The Butcher'. The poems he drops into the basket are those rejected as of no account."

"But does he not read the poems before he rejects them?"

"He tastes them. Do you eat a cheese before you buy it?"

"And what becomes of all those that he drops into the basket?"

"If they are not claimed by their author in proper season, they go to the devil."

"What!" said Gifted, with his eyes stretched very round.

"To the paper factory, where they have a horrid machine they call the devil, that tears everything to bits,—as the critics treat our authors, sometimes, sometimes, Mr. Hopkins."

Gifted devoted a moment to silent reflection.

After this instructive sight they returned together to the publisher's private room. The wine had now warmed the youthful poet's praecordia, so that he began to feel a renewed confidence in his genius and his fortunes.

"I should like to know what that critic of yours would say to my manuscript," he said boldly.

"You can try it if you want to," the publisher replied, with an ominous dryness of manner which the sanguine youth did not perceive, or, perceiving, did not heed.

"How can we manage to get an impartial judgment?"

"Oh, I'll arrange that. He always goes to his luncheon about this time. Raw meat and vitriol punch,—that 's what the authors say. Wait till we hear him go, and then I will lay your manuscript so that he will come to it among the first after he gets back. You shall see with your own eyes what treatment it gets. I hope it may please him, but you shall see."

They went back to the publisher's private room and talked awhile. Then the little office-boy came up with some vague message about a gentleman—business—wants to see you, sir, etc., according to the established programme; all in a vacant, mechanical sort of way, as if he were a talking-machine just running down.

The publisher told the boy that he was engaged, and the gentleman must wait. Very soon they heard The

Butcher's heavy footstep as he went out to get his raw meat and vitriol punch.

"Now, then," said the publisher, and led forth the confiding literary lamb once more, to enter the fatal door of the critical shambles.

"Hand me your manuscript, if you please, Mr. Hopkins. I will lay it so that it shall be the third of these that are coming to hand. Our friend here is a pretty good judge of verse, and knows a merchantable article about as quick as any man in his line of business. If he forms a favorable opinion of your poems, we will talk over your propositions."

Gifted was conscious of a very slight tremor as he saw his precious manuscript deposited on the table, under two others, and over a pile of similar productions. Still he could not help feeling that the critic would be struck by his title. The quotation from Gray must touch his feelings. The very first piece in the collection could not fail to arrest him. He looked a little excited, but he was in good spirits.

"We will be looking about here when our friend comes back," the publisher said. "He is a very methodical person, and will sit down and go right to work just as if we were not here. We can watch him, and if he should express any particular interest in your poems, I will, if you say so, carry you up to him and reveal the fact that you are the author of the works that please him."

They waited patiently until The Butcher returned, apparently refreshed by his ferocious refection, and sat down at his table. He looked comforted, and not in ill humor. The publisher and the poet talked in low tones, as if on business of their own, and watched him as he returned to his labor.

The Butcher took the first manuscript that came to hand, read a stanza here and there, turned over the leaves, turned back and tried again,—shook his head—held it for an instant over the basket, as if doubtful,—and let it softly drop. He took up the second manuscript, opened it in several places, seemed rather pleased with what he read, and laid it aside for further examination.

He took up the third. "Blossoms of the Soul," etc. He glared at it in a dreadfully ogreish way. Both the looker-ons held their breath. Gifted Hopkins felt as if half a glass more of that warm sherry would not hurt him. There was a sinking at the pit of his stomach, as if he was in a swing, as high as he could go, close up to the swallows' nests and spiders' webs. The Butcher opened the manuscript at random, read ten seconds, and gave a short low grunt. He opened again, read ten seconds, and gave another grunt, this time a little longer and louder. He opened once more, read five seconds, and, with something that sounded like the snort of a dangerous animal, cast it impatiently into the basket, and took up the manuscript that came next in order.

Gifted Hopkins stood as if paralyzed for a moment.

"Safe, perfectly safe," the publisher said to him in a whisper. "I'll get it for you presently. Come in and take another glass of wine," he said, leading him back to his own office.

"No, I thank you," he said faintly, "I can bear it. But this is dreadful, sir. Is this the way that genius is welcomed to the world of letters?"

The publisher explained to him, in the kindest manner, that there was an enormous over-production of verse, and that it took a great part of one man's time simply to overhaul the cart-loads of it that were trying to get themselves into print with the imprimatur of his famous house. "You are young, Mr. Hopkins. I advise you not to try to force your article of poetry on the market. The B—, our friend, there, that is, knows a thing that will sell as soon as he sees it. You are in independent circumstances, perhaps? If so, you can print—at your own expense—whatever you choose. May I take the liberty to ask you—profession?"

Gifted explained that he was "clerk" in a "store," where they sold dry goods and West India goods, and goods promiscuous.

"Oh, well, then," the publisher said, "you will understand me. Do you know a good article of brown sagas when you see it?"

Gifted Hopkins rather thought he did. He knew at sight whether it was a fair, salable article or not.

"Just so. Now our friend, there, knows verses that are salable and unsalable as well as you do brown sugar.—Keep quiet now, and I will go and get your manuscript for you.

"There, Mr. Hopkins, take your poems,—they will give you a reputation in your village, I don't doubt, which, is pleasant, but it will cost you a good deal of money to print them in a volume. You are very young: you can afford to wait. Your genius is not ripe yet, I am confident, Mr. Hopkins. These verses are very well for a beginning, but a man of promise like you, Mr. Hopkins, must n't throw away his chance by premature publication! I should like to make you a present of a few of the books we publish. By and by, perhaps, we can work you into our series of poets; but the best pears ripen slowly, and so with genius.—Where shall I send the volumes?"

Gifted answered, to parlor No. 6, Planet Hotel, where he soon presented himself to Master Gridley, who could guess pretty well what was coming. But he let him tell his story.

"Shall I try the other publishers?" said the disconsolate youth.

"I would n't, my young friend, I would n't. You have seen the best one of them—all. He is right about it, quite right: you are young, and had better wait. Look here, Gifted, here is something to please you. We are going to visit the gay world together. See what has been left here this forenoon."

He showed him two elegant notes of invitation requesting the pleasure of Professor Byles Gridley's and of Mr. Gifted Hopkins's company on Thursday evening, as the guests of Mrs. Clymer Ketchum, of 24 Carat Place.

CHAPTER XXVI. MRS. CLYMER KETCHUM'S PARTY.

Myrtle Hazard had flowered out as beyond question the handsomest girl of the season. There were hints from different quarters that she might possibly be an heiress. Vague stories were about of some contingency which might possibly throw a fortune into her lap. The young men about town talked of her at the clubs in their free-and-easy way, but all agreed that she was the girl of the new crop,—“best filly this grass,” as Livingston Jenkins put it. The general understanding seemed to be that the young lawyer who had followed her to the city was going to capture her. She seemed to favor him certainly as much as anybody. But Myrtle saw many young men now, and it was not so easy as it would once have been to make out who was an especial favorite.

There had been times when Murray Bradshaw would have offered his heart and hand to Myrtle at once, if he had felt sure that she would accept him. But he preferred playing the safe game now, and only wanted to feel sure of her. He had done his best to be agreeable, and could hardly doubt that he had made an impression. He dressed well when in the city,—even elegantly,—he had many of the lesser social accomplishments, was a good dancer, and compared favorably in all such matters with the more dashing young fellows in society. He was a better talker than most of them, and he knew more about the girl he was dealing with than they could know. “You have only got to say the word, Murray,” Mrs. Clymer Ketchum said to her relative, “and you can have her. But don't be rash. I believe you can get Berengaria if you try; and there 's something better there than possibilities.” Murray Bradshaw laughed, and told Mrs. Clymer Ketchum not to worry about him; he knew what he was doing.

It so happened that Myrtle met Master Byles Gridley walking with Mr. Gifted Hopkins the day before the party. She longed to have a talk with her old friend, and was glad to have a chance of pleasing her poetical admirer. She therefore begged her hostess to invite them both to her party to please her, which she promised to do at once. Thus the two elegant notes were accounted for.

Mrs. Clymer Ketchum, though her acquaintances were chiefly in the world of fortune and of fashion, had yet a certain weakness for what she called clever people. She therefore always variegated her parties with a streak of young artists and writers, and a literary lady or two; and, if she could lay hands on a first-class celebrity, was as happy as an Amazon who had captured a Centaur.

“There's a demonish clever young fellow by the name of Lindsay,” Mr. Livingston Jenkins said to her a little before the day of the party. “Better ask him. They say he 's the rising talent in his line, architecture mainly, but has done some remarkable things in the way of sculpture. There's some story about a bust he made that was quite wonderful. I'll find his address for you.” So Mr. Clement Lindsay got his invitation, and thus Mrs. Clymer Ketchum's party promised to bring together a number of persons with whom we are acquainted, and who were acquainted with each other.

Mrs. Clymer Ketchum knew how to give a party. Let her only have carte blanche for flowers, music, and champagne, she used to tell her lord, and she would see to the rest,—lighting the rooms, tables, and toilet. He needn't be afraid: all he had to do was to keep out of the way.

Subdivision of labor is one of the triumphs of modern civilization. Labor was beautifully subdivided in this lady's household. It was old Ketchum's business to make money, and he understood it. It was Mrs. K.'s business to spend money, and she knew how to do it. The rooms blazed with light like a conflagration; the flowers burned like lamps of many-colored flame; the music throbbed into the hearts of the promenaders and tingled through all the muscles of the dancers.

Mrs. Clymer Ketchum was in her glory. Her point d'Alenyon must have spoiled ever so many French girls' eyes. Her bosom heaved beneath a kind of breastplate glittering with a heavy dew of diamonds. She glistened and sparkled with every movement, so that the admirer forgot to question too closely whether the eyes matched the brilliants, or the cheeks glowed like the roses. Not far from the great lady stood Myrtle Hazard. She was dressed as the fashion of the day demanded, but she had added certain audacious touches of her own, reminiscences of the time when the dead beauty had flourished, and which first provoked the question and then the admiration of the young people who had a natural eye for effect. Over the long white glove on her left arm was clasped a rich bracelet, of so quaint an antique pattern that nobody had seen anything like it, and as some one whispered that it was “the last thing out,” it was greatly admired by the fashion-plate multitude, as well as by the few who had a taste of their own. If the soul of Judith Pride, long divorced from its once beautifully moulded dust, ever lived in dim consciousness through any of those who inherited her blood, it was then and there that she breathed through the lips of Myrtle Hazard. The young girl almost trembled with the ecstasy of this new mode of being, soliciting every sense with light, with perfume, with melody,—all that could make her feel the wonderful complex music of a fresh life when all its chords first vibrate together in harmony. Miss Rhadamantha Pinnikle, whose mother was an Apex (of whose race it was said that they always made an obeisance when the family name was mentioned, and had all their portraits painted with halos round their heads), found herself extinguished in this new radiance. Miss Victoria Capsheaf stuck to the wall as if she had been a fresco on it. The fifty-year-old dynasties were dismayed and dismounted. Myrtle fossilized them as suddenly as if she had been a Gorgon instead of a beauty.

The guests in whom we may have some interest were in the mean time making ready for the party, which was expected to be a brilliant one; for 24 Carat Place was well known for the handsome style of its entertainments.

Clement Lindsay was a little surprised by his invitation. He had, however, been made a lion of several times of late, and was very willing to amuse himself once in a while with a peep into the great world.

It was but an empty show to him at best, for his lot was cast, and he expected to lead a quiet domestic life after his student days were over.

Master Byles Gridley had known what society was in his earlier time, and understood very well that all a gentleman of his age had to do was to dress himself in his usual plain way, only taking a little more care in his arrangements than was needed in the latitude of Oxbow Village. But Gifted must be looked after, that he should not provoke the unamiable comments of the city youth by any defect or extravagance of costume. The young gentleman had bought a light sky-blue neckerchief, and a very large breast-pin containing a gem which he was assured by the vender was a genuine stone. He considered that both these would be eminently

effective articles of dress, and Mr. Gridley had some trouble to convince him that a white tie and plain shirt-buttons would be more fitted to the occasion.

On the morning of the day of the great party Mr. William Murray Bradshaw received a brief telegram, which seemed to cause him great emotion, as he changed color, uttered a forcible exclamation, and began walking up and down his room in a very nervous kind of way. It was a foreshadowing of a certain event now pretty sure to happen. Whatever bearing this telegram may have had upon his plans, he made up his mind that he would contrive an opportunity somehow that very evening to propose himself as a suitor to Myrtle Hazard. He could not say that he felt as absolutely certain of getting the right answer as he had felt at some previous periods. Myrtle knew her price, he said to himself, a great deal better than when she was a simple country girl. The flatteries with which she had been surrounded, and the effect of all the new appliances of beauty, which had set her off so that she could not help seeing her own attractions, rendered her harder to please and to satisfy. A little experience in society teaches a young girl the arts and the phrases which all the Lotharios have in common. Murray Bradshaw was ready to land his fish now, but he was not quite sure that she was yet hooked, and he had a feeling that by this time she knew every fly in his book. However, as he had made up his mind not to wait another day, he addressed himself to the trial before him with a determination to succeed, if any means at his command would insure success. He arrayed himself with faultless elegance: nothing must be neglected on such an occasion. He went forth firm and grave as a general going into a battle where all is to be lost or won. He entered the blazing saloon with the unflinching smile upon his lips, to which he set them as he set his watch to a particular hour and minute.

The rooms were pretty well filled when he arrived and made his bow before the blazing, rustling, glistening, waving, blushing appearance under which palpitated, with the pleasing excitement of the magic scene over which its owner presided, the heart of Mrs. Clymer Ketchum. He turned to Myrtle Hazard, and if he had ever doubted which way his inclinations led him, he could doubt no longer. How much dress and how much light can a woman bear? That is the way to measure her beauty. A plain girl in a simple dress, if she has only a pleasant voice, may seem almost a beauty in the rosy twilight. The nearer she comes to being handsome, the more ornament she will bear, and the more she may defy the sunshine or the chandelier.

Murray Bradshaw was fairly dazzled with the brilliant effect of Myrtle in full dress. He did not know before what handsome arms she had,—Judith Pride's famous arms—which the high-colored young men in top-boots used to swear were the handsomest pair in New England—right over again. He did not know before with what defiant effect she would light up, standing as she did directly under a huge lustre, in full flower of flame, like a burning azalea. He was not a man who intended to let his sentiments carry him away from the serious interests of his future, yet, as he looked upon Myrtle Hazard, his heart gave one throb which made him feel in every pulse that this way a woman who in her own right, simply as a woman, could challenge the homage of the proudest young man of her time. He hardly knew till this moment how much of passion mingled with other and calmer motives of admiration. He could say I love you as truly as such a man could ever speak these words, meaning that he admired her, that he was attracted to her, that he should be proud of her as his wife, that he should value himself always as the proprietor of so rare a person, that no appendage to his existence would take so high a place in his thoughts. This implied also, what is of great consequence to a young woman's happiness in the married state, that she would be treated with uniform politeness, with satisfactory evidences of affection, and with a degree of confidence quite equal to what a reasonable woman should expect from a very superior man, her husband.

If Myrtle could have looked through the window in the breast against which only authors are privileged to flatten their features, it is for the reader to judge how far the programme would have satisfied her.

Less than this, a great deal less, does appear to satisfy many young women; and it may be that the interior just drawn, fairly judged, belongs to a model lover and husband. Whether it does or not, Myrtle did not see this picture. There was a beautifully embroidered shirt-bosom in front of that window through which we have just looked, that intercepted all sight of what was going on within. She only saw a man, young, handsome, courtly, with a winning tongue, with an ambitious spirit, whose every look and tone implied his admiration of herself, and who was associated with her past life in such a way that they alone appeared like old friends in the midst of that cold alien throng. It seemed as if he could not have chosen a more auspicious hour than this; for she never looked so captivating, and her presence must inspire his lips with the eloquence of love. And she—was not this delirious atmosphere of light and music just the influence to which he would wish to subject her before trying the last experiment of all which can stir the soul of a woman? He knew the mechanism of that impressionable state which served Coleridge so excellently well,—

*"All impulses of soul and sense
Had thrilled my guileless Genevieve
The music, and the doleful tale,
The rich and balmy eve,"—*

though he hardly expected such startling results as happened in that case,—which might be taken as an awful warning not to sing moving ballads to young ladies of susceptible feelings, unless one is prepared for very serious consequences. Without expecting that Myrtle would rush into his arms, he did think that she could not help listening to him in the intervals of the delicious music, in some recess where the roses and jasmines and heliotropes made the air heavy with sweetness, and the crimson curtains drooped in heavy folds that half hid their forms from the curious eyes all round them. Her heart would swell like Genevieve's as he told her in simple phrase that she was his life, his love, his all,—for in some two or three words like these he meant to put his appeal, and not in fine poetical phrases: that would do for Gifted Hopkins and rhyming tom-tits of that feather.

Full of his purpose, involving the plans of his whole life, implying, as he saw clearly, a brilliant future or a disastrous disappointment, with a great unexploded mine of consequences under his feet, and the spark ready to fall into it, he walked about the gilded saloon with a smile upon his lips so perfectly natural and pleasant, that one would have said he was as vacant of any aim, except a sort of superficial good-matured disposition to be amused, as the blankest-eyed simpleton who had tied himself up in a white cravat and come to bore and be bored.

Yet under this pleasant smile his mind was so busy with its thoughts that he had forgotten all about the guests from Oxbow Village who, as Myrtle had told him, were to come this evening. His eye was all at once caught by a familiar figure, and he recognized Master Byles Gridley, accompanied by Mr. Gifted Hopkins, at the door of the saloon. He stepped forward at once to meet, and to present them.

Mr. Gridley in evening costume made an eminently dignified and respectable appearance. There was an unusual look of benignity upon his firmly moulded features, and an air of ease which rather surprised Mr. Bradshaw, who did not know all the social experiences which had formed a part of the old Master's history. The greeting between them was courteous, but somewhat formal, as Mr. Bradshaw was acting as one of the masters of ceremony. He nodded to Gifted in an easy way, and led them both into the immediate Presence.

"This is my friend Professor Gridley, Mrs. Ketchum, whom I have the honor of introducing to you,—a very distinguished scholar, as I have no doubt you are well aware. And this is my friend Mr. Gifted Hopkins, a young poet of distinction, whose fame will reach you by and by, if it has not come to your ears already."

The two gentlemen went through the usual forms, the poet a little crushed by the Presence, but doing his best. While the lady was making polite speeches to them, Myrtle Hazard came forward. She was greatly delighted to meet her old friend, and even looked upon the young poet with a degree of pleasure she would hardly have expected to receive from his company. They both brought with them so many reminiscences of familiar scenes and events, that it was like going back for the moment to Oxbow Village. But Myrtle did not belong to herself that evening, and had no opportunity to enter into conversation just then with either of them. There was to be dancing by and by, and the younger people were getting impatient that it should begin. At last the music sounded the well-known summons, and the floors began to ring to the tread of the dancers. As usual on such occasions there were a large number of noncombatants, who stood as spectators around those who were engaged in the campaign of the evening. Mr. Byles Gridley looked on gravely, thinking of the minuets and the gavots of his younger days. Mr. Gifted Hopkins, who had never acquired the desirable accomplishment of dancing, gazed with dazzled and admiring eyes at the wonderful evolutions of the graceful performers. The music stirred him a good deal; he had also been introduced to one or two young persons as Mr. Hopkins, the poet, and he began to feel a kind of excitement, such as was often the prelude of a lyric burst from his pen. Others might have wealth and beauty, he thought to himself, but what were these to the gift of genius? In fifty years the wealth of these people would have passed into other hands. In fifty years all these beauties would be dead, or wrinkled and double-wrinkled great-grandmothers. And when they were all gone and forgotten, the name of Hopkins would be still fresh in the world's memory. Inspiring thought! A smile of triumph rose to his lips; he felt that the village boy who could look forward to fame as his inheritance was richer than all the millionnaires, and that the words he should set in verse would have an enduring lustre to which the whiteness of pearls was cloudy, and the sparkle of diamonds dull.

He raised his eyes, which had been cast down in reflection, to look upon these less favored children of Fortune, to whom she had given nothing but perishable inheritances. Two or three pairs of eyes, he observed, were fastened upon him. His mouth perhaps betrayed a little self-consciousness, but he tried to show his features in an aspect of dignified self-possession. There seemed to be remarks and questionings going on, which he supposed to be something like the following:—

Which is it? Which is it?—Why, that one, there,—that young fellow,—don't you see?—What young fellow are you two looking at? Who is he? What is he?—Why, that is Hopkins, the poet.—Hopkins, the poet! Let me see him! Let me see him! Hopkins? What! Gifted Hopkins? etc., etc.

Gifted Hopkins did not hear these words except in fancy, but he did unquestionably find a considerable number of eyes concentrated upon him, which he very naturally interpreted as an evidence that he had already begun to enjoy a foretaste of the fame of which he should hereafter have his full allowance. Some seemed to be glancing furtively, some appeared as if they wished to speak, and all the time the number of those looking at him seemed to be increasing. A vision came through his fancy of himself as standing on a platform, and having persons who wished to look upon him and shake hands with him presented, as he had heard was the way with great people when going about the country. But this was only a suggestion, and by no means a serious thought, for that would have implied infatuation.

Gifted Hopkins was quite right in believing that he attracted many eyes. At last those of Myrtle Hazard were called to him, and she perceived that an accident was making him unenviably conspicuous. The bow of his rather large white neck-tie had slid round and got beneath his left ear. A not very good-natured or well-bred young fellow had pointed out the subject of this slight misfortune to one or two others of not much better taste or breeding, and thus the unusual attention the youthful poet was receiving explained itself. Myrtle no sooner saw the little accident of which her rural friend was the victim than she left her place in the dance with a simple courage which did her credit.

"I want to speak to you a minute," she said. "Come into this alcove."

And the courageous young lady not only told Gifted what had happened to him, but found a pin somehow, as women always do on a pinch, and had him in presentable condition again almost before the bewildered young man knew what was the matter. On reflection it occurred to him, as it has to other provincial young persons going to great cities, that he might perhaps have been hasty in thinking himself an object of general curiosity as yet. There had hardly been time for his name to have become very widely known. Still, the feeling had been pleasant for the moment, and had given him an idea of what the rapture would be, when, wherever he went, the monster digit (to hint a classical phrase) of the collective admiring public would be lifted to point him out, and the whisper would pass from one to another, "That's him! That's Hopkins!"

Mr. Murray Bradshaw had been watching the opportunity for carrying out his intentions, with his pleasant smile covering up all that was passing in his mind, and Master Byles Gridley, looking equally unconcerned, had been watching him. The young man's time came at last. Some were at the supper-table, some were promenading, some were talking, when he managed to get Myrtle a little apart from the rest, and led her towards one of the recesses in the apartment, where two chairs were invitingly placed. Her cheeks were flushed, her eyes were sparkling,—the influences to which he had trusted had not been thrown away upon her. He had no idea of letting his purpose be seen until he was fully ready. It required all his self-mastery to

avoid betraying himself by look or tone, but he was so natural that Myrtle was thrown wholly off her guard. He meant to make her pleased with herself at the outset, and that not by point-blank flattery, of which she had had more than enough of late, but rather by suggestion and inference, so that she should find herself feeling happy without knowing how. It would be easy to glide from that to the impression she had produced upon him, and get the two feelings more or less mingled in her mind. And so the simple confession he meant to make would at length evolve itself logically, and hold by a natural connection to the first agreeable train of thought which he had called up. Not the way, certainly, that most young men would arrange their great trial scene; but Murray Bradshaw was a lawyer in love as much as in business, and considered himself as pleading a cause before a jury of Myrtle Hazard's conflicting motives. What would any lawyer do in a jury case but begin by giving the twelve honest men and true to understand, in the first place, that their intelligence and virtue were conceded by all, and that he himself had perfect confidence in them, and leave them to shape their verdict in accordance with these propositions and his own side of the case?

Myrtle had, perhaps, never so seriously inclined her ear to the honeyed accents of the young pleader. He flattered her with so much tact, that she thought she heard an unconscious echo through his lips of an admiration which he only shared with all around him. But in him he made it seem discriminating, deliberate, not blind, but very real. This it evidently was which had led him to trust her with his ambitions and his plans,—they might be delusions, but he could never keep them from her, and she was the one woman in the world to whom he thought he could safely give his confidence.

The dread moment was close at hand. Myrtle was listening with an instinctive premonition of what was coming,—ten thousand mothers and grandmothers and great-grandmothers, and so on, had passed through it all in preceding generations until time reached backwards to the sturdy savage who asked no questions of any kind, but knocked down the primeval great-grandmother of all, and carried her off to his hole in the rock, or into the tree where he had made his nest. Why should not the coming question announce itself by stirring in the pulses and thrilling in the nerves of the descendant of all these grandmothers?

She was leaning imperceptibly towards him, drawn by the mere blind elemental force, as the plummet was attracted to the side of Schehallion. Her lips were parted, and she breathed a little faster than so healthy a girl ought to breathe in a state of repose. The steady nerves of William Murray Bradshaw felt unwonted thrills and tremors tingling through them, as he came nearer and nearer the few simple words with which he was to make Myrtle Hazard the mistress of his destiny. His tones were becoming lower and more serious; there were slight breaks once or twice in the conversation; Myrtle had cast down her eyes.

"There is but one word more to add," he murmured softly, as he bent towards her—

A grave voice interrupted him. "Excuse me, Mr. Bradshaw," said Master Bytes Gridley, "I wish to present a young gentleman to my friend here. I promised to show him the most charming young person I have the honor to be acquainted with, and I must redeem my pledge. Miss Hazard, I have the pleasure of introducing to your acquaintance my distinguished young friend, Mr. Clement Lindsay."

Once more, for the third time, these two young persons stood face to face. Myrtle was no longer liable to those nervous seizures which any sudden impression was liable to produce when she was in her half-hysterical state of mind and body. She turned to the new-comer, who found himself unexpectedly submitted to a test which he would never have risked of his own will. He must go through it, cruel as it was, with the easy self-command which belongs to a gentleman in the most trying social exigencies. He addressed her, therefore, in the usual terms of courtesy, and then turned and greeted Mr. Bradshaw, whom he had never met since their coming together at Oxbow Village. Myrtle was conscious, the instant she looked upon Clement Lindsay, of the existence of some peculiar relation between them; but what, she could not tell. Whatever it was, it broke the charm which had been weaving between her and Murray Bradshaw. He was not foolish enough to make a scene. What fault could he find with Clement Lindsay, who had only done as any gentleman would do with a lady to whom he had just been introduced, addressed a few polite words to her? After saying those words, Clement had turned very courteously to him, and they had spoken with each other. But Murray Bradshaw could not help seeing that Myrtle had transferred her attention, at least for the moment, from him to the new-comer. He folded his arms and waited,—but he waited in vain. The hidden attraction which drew Clement to the young girl with whom he had passed into the Valley of the Shadow of Death overmastered all other feelings, and he gave himself up to the fascination of her presence.

The inward rage of Murray Bradshaw at being interrupted just at the moment when he was, as he thought, about to cry checkmate and finish the first great game he had ever played may well be imagined. But it could not be helped. Myrtle had exercised the customary privilege of young ladies at parties, and had turned from talking with one to talking with another,—that was all. Fortunately, for him the young man who had been introduced at such a most critical moment was not one from whom he need apprehend any serious interference. He felt grateful beyond measure to pretty Susan Posey, who, as he had good reason for believing, retained her hold upon her early lover, and was looking forward with bashful interest to the time when she should become Mrs. Lindsay. It was better to put up quietly with his disappointment; and, if he could get no favorable opportunity that evening to resume his conversation at the interesting point where he left it off, he would call the next day and bring matters to a conclusion.

He called accordingly the next morning, but was disappointed in not seeing Myrtle. She had hardly slept that night, and was suffering from a bad headache, which last reason was her excuse for not seeing company.

He called again, the following day, and learned that Miss Hazard had just left the city, and gone on a visit to Oxbow Village:

CHAPTER XXVII. MINE AND COUNTERMINE.

What the nature of the telegram was which had produced such an effect on the feelings and plans of Mr. William Murray Bradshaw nobody especially interested knew but himself. We may conjecture that it announced some fact, which had leaked out a little prematurely, relating to the issue of the great land-case in which the firm was interested. However that might be, Mr. Bradshaw no sooner heard that Myrtle had suddenly left the city for Oxbow Village,—for what reason he puzzled himself to guess,—than he determined to follow her at once, and take up the conversation he had begun at the party where it left off. And as the young poet had received his quietus for the present at the publisher's, and as Master Gridley had nothing specially to detain him, they too returned at about the same time, and so our old acquaintances were once more together within the familiar precincts where we have been accustomed to see them.

Master Gridley did not like playing the part of a spy, but it must be remembered that he was an old college officer, and had something of the detective's sagacity, and a certain cunning derived from the habit of keeping an eye on mischievous students. If any underhand contrivance was at work, involving the welfare of any one in whom he was interested, he was a dangerous person for the plotters, for he had plenty of time to attend to them, and would be apt to take a kind of pleasure in matching his wits against another crafty person's,—such a one, for instance, as Mr. Macchiavelli Bradshaw.

Perhaps he caught some words of that gentleman's conversation at the party; at any rate, he could not fail to observe his manner. When he found that the young man had followed Myrtle back to the village, he suspected something more than a coincidence. When he learned that he was assiduously visiting The Poplars, and that he was in close communication with Miss Cynthia Badlam, he felt sure that he was pressing the siege of Myrtle's heart. But that there was some difficulty in the way was equally clear to him, for he ascertained, through channels which the attentive reader will soon have means of conjecturing, that Myrtle had seen him but once in the week following his return, and that in the presence of her dragons. She had various excuses when he called,—headaches, perhaps, among the rest, as these are staple articles on such occasions. But Master Gridley knew his man too well to think that slight obstacles would prevent his going forward to effect his purpose.

"I think he will get her; if he holds on," the old man said to himself, "and he won't let go in a hurry, if there were any real love about it—but surely he is incapable of such a human weakness as the tender passion. What does all this sudden concentration upon the girl mean? He knows something about her that we don't know,—that must be it. What did he hide that paper for, a year ago and more? Could that have anything to do with his pursuit of Myrtle Hazard today?"

Master Gridley paused as he asked this question of himself, for a luminous idea had struck him. Consulting daily with Cynthia Badlam, was he? Could there be a conspiracy between these two persons to conceal some important fact, or to keep something back until it would be for their common interest to have it made known?

Now Mistress Kitty Fagan was devoted, heart and soul, to Myrtle Hazard, and ever since she had received the young girl from Mr. Gridley's hands, when he brought her back safe and sound after her memorable adventure, had considered him as Myrtle's best friend and natural protector. These simple creatures, whose thoughts are not taken up, like those of educated people, with the care of a great museum of dead phrases, are very quick to see the live facts which are going on about them. Mr. Gridley had met her, more or less accidentally, several times of late, and inquired very particularly about Myrtle, and how she got along at the house since her return, and whether she was getting over her headaches, and how they treated her in the family.

"Bliss your heart, Mr. Gridley," Kitty said to him on one of these occasions, "it's ahltogether changed intirely. Sure Miss Myrtle does jist iverythin' she likes, an' Miss Withers niver middles with her at ahl, excip' jist to roll up her eyes an' look as if she was the hid-moorner at a funeril whiniver Miss Myrtle says she wants to do this or that, or to go here or there. It's Miss Badlam that's ahlwiz after her, an' a-watchin' her,—she thinks she's cunnin'er than a cat, but there 's other folks that's got eyes an' ears as good as hers. It's that Mr. Bridshaw that's a puttin' his head together with Miss Badlam for somethin' or other, an' I don't believe there's no good in it, for what does the fox an' the cat be a whisperin' about, as if they was thaves an' incind'ries, if there ain't no mischief hatchin'?"

"Why, Kitty," he said, "what mischief do you think is going on, and who is to be harmed?"

"O Mr. Gridley," she answered, "if there ain't somebody to be chated somehow, then I don't know an honest man and woman from two rogues. An' have n't I heard Miss Myrtle's name whispered as if there was somethin' goin' on agin' her, an' they was afraid the tahk would go out through the doors, an' up through the chimbley? I don't want to tell no tales, Mr. Gridley, nor to hurt no honest body, for I'm a poor woman, Mr. Gridley, but I comes of dacent folks, an' I vallies my repitation an' character as much as if I was dressed in silks and satins instead of this mane old gown, savin' your presence, which is the best I 've got, an' niver a dollar to buy another. But if I iver I hears a word, Mr. Gridley, that manes any kind of a mischief to Miss Myrtle,—the Lard bliss her soul an' keep ahl the divils away from her!—I'll be rynnin' straight down here to tell ye ahl about it,—be right sure o' that, Mr. Gridley."

"Nothing must happen to Myrtle," he said, "that we can help. If you see anything more that looks wrong, you had better come down here at once and let me know, as you say you will. At once, you understand. And, Kitty, I am a little particular about the dress of people who come to see me, so that if you would just take the trouble to get you a tidy pattern of gingham or calico, or whatever you like of that sort for a gown, you would please me; and perhaps this little trifle will be a convenience to you when you come to pay for it."

Kitty thanked him with all the national accompaniments, and trotted off to the store, where Mr. Gifted Hopkins displayed the native amiability of his temper by fumbling down everything in the shape of ginghams and calicoes they had on the shelves, without a murmur at the taste of his customer, who found it hard to get a pattern sufficiently emphatic for her taste. She succeeded at last, and laid down a five-dollar bill as if she were as used to the pleasing figure on its face as to the sight of her own five digits.

Master Byles Gridley had struck a spade deeper than he knew into his first countermine, for Kitty had none of those delicate scruples about the means of obtaining information which might have embarrassed a diplomatist of higher degree.

CHAPTER XXVIII. MR. BRADSHAW CALLS ON MISS BADLAM

"Is Miss Hazard in, Kitty?"

"Indade she's in, Mr. Bridshaw, but she won't see nobody."

"What's the meaning of that, Kitty? Here is the third time within three days you've told me I could n't see her. She saw Mr. Gridley yesterday, I know; why won't she see me to-day?"

"Y' must ask Miss Myrtle what the rason is, it's none o' my business, Mr. Bridshaw. That's the order she give me."

"Is Miss Badlam in?"

"Indade she's in, Mr. Bridshaw, an' I 'll go cah' her."

"Bedad," said Kitty Fagan to herself, "the cat an' the fox is goin' to have another o' thim big tahks together, an' sure the old hole for the stove-pipe has niver been stopped up yet."

Mr. Bradshaw and Miss Cynthia went into the parlor together, and Mistress Kitty retired to her kitchen. There was a deep closet belonging to this apartment, separated by a partition from the parlor. There was a round hole high up in this partition through which a stove-pipe had once passed. Mistress Kitty placed a stool just under this opening, upon which, as on a pedestal, she posed herself with great precaution in the attitude of the goddess of other people's secrets, that is to say, with her head a little on one side, so as to bring her liveliest ear close to the opening. The conversation which took place in the hearing of the invisible third party began in a singularly free-and-easy manner on Mr. Bradshaw's part.

"What the d—— is the reason I can't see Myrtle, Cynthia?"

"That's more than I can tell you, Mr. Bradshaw. I can watch her goings on, but I can't account for her tantrums."

"You say she has had some of her old nervous whims,—has the doctor been to see her?"

"No indeed. She has kept to herself a good deal, but I don't think there's anything in particular the matter with her. She looks well enough, only she seems a little queer,—as girls do that have taken a fancy into their heads that they're in love, you know,—absent-minded, does n't seem to be interested in things as you would expect after being away so long."

Mr. Bradshaw looked as if this did not please him particularly. If he was the object of her thoughts she would not avoid him, surely.

"Have you kept your eye on her steadily?"

"I don't believe there is an hour we can't account for,—Kitty and I between us."

"Are you sure you can depend on Kitty?"

["Depind on Kitty, is it? Oh, an' to be sure ye can depind on Kitty to kape watch at the stove-pipe hole, an' to tell all y'r plottin's an' contrivin's to them that'll get the cheese out o' y'r mousetrap for ye before ye catch any poor cratur in it." This was the inaudible comment of the unseen third party.]

"Of course I can depend on her as far as I trust her. All she knows is that she must look out for the girl to see that she does not run away or do herself a mischief. The Biddies don't know much, but they know enough to keep a watch on the—"

"Chickens." Mr. Bradshaw playfully finished the sentence for Miss Cynthia.

["An' on the foxes, an' the cats, an' the wazels, an' the hen-hahks, an' ahl the other bastes," added the invisible witness, in unheard soliloquy.]

"I ain't sure whether she's quite as stupid as she looks," said the suspicious young lawyer. "There's a little cunning twinkle in her eye sometimes that makes me think she might be up to a trick on occasion. Does she ever listen about to hear what people are saying?"

"Don't trouble yourself about Kitty Fagan,' for pity's sake, Mr. Bradshaw. The Biddies are all alike, and they're all as stupid as owls, except when you tell 'em just what to do, and how to do it. A pack of priest-ridden fools!"

The hot Celtic blood in Kitty Fagan's heart gave a leap. The stout muscles gave an involuntary jerk. The substantial frame felt the thrill all through, and the rickety stool on which she was standing creaked sharply under its burden.

Murray Bradshaw started. He got up and opened softly all the doors leading from the room, one after another, and looked out.

"I thought I heard a noise as if somebody was moving, Cynthia. It's just as well to keep our own matters to ourselves."

"If you wait till this old house keeps still, Mr. Bradshaw, you might as well wait till the river has run by. It's as full of rats and mice as an old cheese is of mites. There's a hundred old rats in this house, and that's what you hear."

["An' one old cat; that's what I hear." Third party.]

"I told you, Cynthia, I must be off on this business to-morrow. I want to know that everything is safe before I go. And, besides, I have got something to say to you that's important, very important, mind you."

He got up once more and opened every door softly and looked out. He fixed his eye suspiciously on a large

sofa at the other side of the room, and went, looking half ashamed of his extreme precaution, and peeped under it, to see if there was any one hidden thereto listen. Then he came back and drew his chair close up to the table at which Miss Badlam had seated herself. The conversation which followed was in a low tone, and a portion of it must be given in another place in the words of the third party. The beginning of it we are able to supply in this connection.

"Look here, Cynthia; you know what I am going for. It's all right, I feel sure, for I have had private means of finding out. It's a sure thing; but I must go once more to see that the other fellows don't try any trick on us. You understand what is for my advantage is for yours, and, if I go wrong, you go overboard with me. Now I must leave the—you know—behind me. I can't leave it in the house or the office: they might burn up. I won't have it about me when I am travelling. Draw your chair a little more this way. Now listen."

["Indade I will," said the third party to herself. The reader will find out in due time whether she listened to any purpose or not.]

In the mean time Myrtle, who for some reason was rather nervous and restless, had found a pair of half-finished slippers which she had left behind her. The color came into her cheeks when she remembered the state of mind she was in when she was working on them for the Rev. Mr. Stoker. She recollected Master Gridley's mistake about their destination, and determined to follow the hint he had given. It would please him better if she sent them to good Father Pemberton, she felt sure, than if he should get them himself. So she enlarged them somewhat, (for the old man did not pinch his feet, as the younger clergyman was in the habit of doing, and was, besides, of portly dimensions, as the old orthodox three-deckers were apt to be,) and worked E. P. very handsomely into the pattern, and sent them to him with her love and respect, to his great delight; for old ministers do not have quite so many tokens of affection from fair hands as younger ones.

What made Myrtle nervous and restless? Why had she quitted the city so abruptly, and fled to her old home, leaving all the gayeties behind her which had so attracted and dazzled her?

She had not betrayed herself at the third meeting with the young man who stood in such an extraordinary relation to her,—who had actually given her life from his own breath,—as when she met him for the second time. Whether his introduction to her at the party, just at the instant when Murray Bradshaw was about to make a declaration, saved her from being in another moment the promised bride of that young gentleman, or not, we will not be so rash as to say. It looked, certainly, as if he was in a fair way to carry his point; but perhaps she would have hesitated, or shrunk back, when the great question came to stare her in the face.

She was excited, at any rate, by the conversation, so that, when Clement was presented to her, her thoughts could not at once be all called away from her other admirer, and she was saved from all danger of that sudden disturbance which had followed their second meeting. Whatever impression he made upon her developed itself gradually,—still, she felt strangely drawn towards him. It was not simply in his good looks, in his good manners, in his conversation, that she found this attraction, but there was a singular fascination which she felt might be dangerous to her peace, without explaining it to herself in words. She could hardly be in love with this young artist; she knew that his affections were plighted to another, a fact which keeps most young women from indulging unruly fancies; yet her mind was possessed by his image to such an extent that it left little room for that of Mr. William Murray Bradshaw.

Myrtle Hazard had been just ready to enter on a career of worldly vanity and ambition. It is hard to blame her, for we know how she came by the tendency. She had every quality, too, which fitted her to shine in the gay world; and the general law is, that those who have the power have the instinct to use it. We do not suppose that the bracelet on her arm was an amulet, but it was a symbol. It reminded her of her descent; it kept alive the desire to live over the joys and excitements of a bygone generation. If she had accepted Murray Bradshaw, she would have pledged herself to a worldly life. If she had refused him, it would perhaps have given her a taste of power that might have turned her into a coquette.

This new impression saved her for the time. She had come back to her nest in the village like a frightened bird; her heart was throbbing, her nerves were thrilling, her dreams were agitated; she wanted to be quiet, and could not listen to the flatteries or entreaties of her old lover.

It was a strong will and a subtle intellect that had arrayed their force and skill against the ill-defended citadel of Myrtle's heart. Murray Bradshaw was perfectly determined, and not to be kept back by any trivial hindrances, such as her present unwillingness to accept him, or even her repugnance to him, if a freak of the moment had carried her so far. It was a settled thing: Myrtle Hazard must become Mrs. Bradshaw; and nobody could deny that, if he gave her his name, they had a chance, at least, for a brilliant future.

CHAPTER XXIX. MISTRESS KITTY FAGAN CALLS ON MASTER BYLES GRIDLEY.

"I 'd like to go down to the store this mornin', Miss Withers, plase. Sure I've niver a shoe to my fut, only jist these two that I've got on, an' one other pair, and thim is so full of holes that whin I 'm standin' in 'em I'm outside of 'em intirely."

"You can go, Kitty," Miss Silence answered, funereally.

Thereupon Kitty Fagan proceeded to array herself in her most tidy apparel, including a pair of shoes not exactly answering to her description, and set out straight for the house of the Widow Hopkins. Arrived at that respectable mansion, she inquired for Mr. Gridley, and was informed that he was at home. Had a message for him,—could she see him in his study? She could if she would wait a little while. Mr. Gridley was busy just at this minute. Sit down, Kitty, and warm yourself at the cooking-stove.

Mistress Kitty accepted Mrs. Hopkins's hospitable offer, and presently began orienting herself, and getting

ready to make herself agreeable. The kindhearted Mrs. Hopkins had gathered about her several other pensioners besides the twins. These two little people, it may be here mentioned, were just taking a morning airing in charge of Susan Posey, who strolled along in company with Gifted Hopkins on his way to the store.

Mistress Kitty soon began the conversational blandishments so natural to her good-humored race. "It's a little blarney that'll jist suit th' old lady," she said to herself, as she made her first conciliatory advance.

"An' sure an' it's a beautiful kitten you've got there, Mrs. Hopkins. An' it's a splendid mouser she is, I'll be bound. Does n't she look as if she'd clans the house out o'them little bastes, bad luck to em."

Mrs. Hopkins looked benignantly upon the more than middle-aged tabby, slumbering as if she had never known an enemy, and turned smiling to Mistress Kitty. "Why, bless your heart, Kitty, our old puss would n't know a mouse by sight, if you showed her one. If I was a mouse, I'd as lieves have a nest in one of that old cat's ears as anywhere else. You couldn't find a safer place for one."

"Indade, an' to be sure she's too big an' too handsome a pussy to be after wastin' her time on them little bastes. It's that little tarrier dog of yours, Mrs. Hopkins, that will be after worryin' the mice an' the rats, an' the thaves too, I 'll warrant. Is n't he a fust-rate-lookin' watch-dog, an' a rig'ler rat-hound?"

Mrs. Hopkins looked at the little short-legged and short-winded animal of miscellaneous extraction with an expression of contempt and affection, mingled about half and half. "Worry 'em! If they wanted to sleep, I rather guess he would worry 'em! If barkin' would do their job for 'em, nary a mouse nor rat would board free gratis in my house as they do now. Noisy little good-for-nothing tike,—ain't you, Fret?"

Mistress Kitty was put back a little by two such signal failures. There was another chance, however, to make her point, which she presently availed herself of,—feeling pretty sure this time that she should effect a lodgement. Mrs. Hopkins's parrot had been observing Kitty, first with one eye and then with the other, evidently preparing to make a remark, but awkward with a stranger. "That 's a beautiful part y 've got there," Kitty said, buoyant with the certainty that she was on safe ground this time; "and tahks like a book, I 'll be bound. Poll! Poll! Poor Poll!"

She put forth her hand to caress the intelligent and affable bird, which, instead of responding as expected, "squawked," as our phonetic language has it, and, opening a beak imitated from a tooth-drawing instrument of the good old days, made a shrewd nip at Kitty's forefinger. She drew it back with a jerk.

"An' is that the way your part tahks, Mrs. Hopkins?"

"Talks, bless you, Kitty! why, that parrot hasn't said a word this ten year. He used to say Poor Poll! when we first had him, but he found it was easier to squawk, and that's all he ever does nowadays,—except bite once in a while."

"Well, an' to be sure," Kitty answered, radiant as she rose from her defeats, "if you'll kape a cat that does n't know a mouse when she sees it, an' a dog that only barks for his livin', and a part that only squawks an' bites an' niver spakes a word, ye must be the best-hearted woman that's alive, an' bliss ye, if ye was only a good Catholic, the Holy Father 'd make a saint of ye in less than no time!"

So Mistress Kitty Fagan got in her bit of Celtic flattery, in spite of her three successive discomfitures.

"You may come up now, Kitty," said Mr. Gridley over the stairs. He had just finished and sealed a letter.

"Well, Kitty, how are things going on up at The Poplars? And how does our young lady seem to be of late?"

"Whisht! whisht! your honor."

Mr. Bradshaw's lessons had not been thrown away on his attentive listener. She opened every door in the room, "by your lave," as she said. She looked all over the walls to see if there was any old stovepipe hole or other avenue to eye or ear. Then she went, in her excess of caution, to the window. She saw nothing noteworthy except Mr. Gifted Hopkins and the charge he convoyed, large and small, in the distance. The whole living fleet was stationary for the moment, he leaning on the fence with his cheek on his hand, in one of the attitudes of the late Lord Byron; she, very near him, listening, apparently, in the pose of Mignon aspirant au ciel, as rendered by Carlo Dolce Scheffer.

Kitty came back, apparently satisfied, and stood close to Mr. Gridley, who told her to sit down, which she did, first making a catch at her apron to dust the chair with, and then remembering that she had left that part of her costume at home.—Automatic movements, curious.

Mistress Kitty began telling in an undertone of the meeting between Mr. Bradshaw and Miss Badlam, and of the arrangements she made for herself as the reporter of the occasion. She then repeated to him, in her own way, that part of the conversation which has been already laid before the reader. There is no need of going over the whole of this again in Kitty's version, but we may fit what followed into the joints of what has been already told.

"He cahled her Cynthy, d' ye see, Mr. Gridley, an' tahked to her jist as asy as if they was two rogues, and she knowed it as well as he did. An' so, says he, I'm goin' away, says he, an' I'm goin' to be gahn several days, or perhaps longer, says he, an' you'd better kape it, says he."

"Keep what, Kitty? What was it he wanted her to keep?" said Mr. Gridley, who no longer doubted that he was on the trail of a plot, and meant to follow it. He was getting impatient with the "says he's" with which Kitty double-led her discourse.

"An' to be sure ain't I tellin' you, Mr. Gridley, jist as fast as my breath will let me? An' so, says he, you'd better kape it, says he, mixed up with your other paupers, says he," (Mr. Gridley started,) "an' thin we can find it in the garret, says he, whinever we want it, says he. An' if it all goes right out there, says he, it won't be lahng before we shall want to find it, says he. And I can dipind on you, says he, for we're both in the same boat, says he, an' you knows what I knows, says he, an' I knows what you knows, says be. And thin he taks a stack o' paupers out of his pocket, an' he pulls out one of 'em, an' he says to her, says he, that's the pauper, says he, an' if you die, says be, niver lose sight of that day or night, says he, for it's life an' dith to both of us, says he. An' thin he asks her if she has n't got one o' them paupers—what is 't they cahls 'em?—divilops, or some sich kind of a name—that they wraps up their letters in; an' she says no, she has n't got none that's big enough to hold it. So he says, give me a shate o' pauper, says he. An' thin he takes the pauper that she give

him, an' he folds it up like one o' them—divilops, if that's the name of 'em; and thin he pulls a stick o' salin'-wax out of his pocket, an' a stamp, an' he takes the pauper an' puts it into th' other pauper, along with the rest of the paupers, an' thin he folds th' other pauper over the paupers, and thin he lights a candle, an' he milts the salin'-wax, and he sales up the pauper that was outside th' other paupers, an' he writes on the back of the pauper, an' thin he hands it to Miss Badlam."

"Did you see the paper that he showed her before he fastened it up with the others, Kitty?"

"I did see it, indade, Mr. Gridley, and it's the truth I'm tellin' ye."

"Did you happen to notice anything about it, Kitty?"

"I did, indade, Mr. Gridley. It was a longish kind of a pauper, and there was some blotches of ink on the back of it,—an' they looked like a face without any mouth, for, says I, there's two spots for the eyes, says I, and there's a spot for the nose, says I, and there's niver a spot for the mouth, says I."

This was the substance of what Master Byles Gridley got out of Kitty Fagan. It was enough, yes, it was too much. There was some deep-laid plot between Murray Bradshaw and Cynthia Badlam, involving the interests of some of the persons connected with the late Malachi Withers; for that the paper described by Kitty was the same that he had seen the young man conceal in the *Corpus Juris Civilis*, it was impossible to doubt. If it had been a single spot on the back of it, or two, he might have doubted. But three large spots "blotches" she had called them, disposed thus *. * —would not have happened to be on two different papers, in all human probability.

After grave consultation of all his mental faculties in committee of the whole, he arrived at the following conclusion,—that Miss Cynthia Badlam was the depositary of a secret involving interests which he felt it his business to defend, and of a document which was fraudulently withheld and meant to be used for some unfair purpose. And most assuredly, Master Gridley said to himself, he held a master-key, which, just so certainly as he could make up his mind to use it, would open any secret in the keeping of Miss Cynthia Badlam.

He proceeded, therefore, without delay, to get ready for a visit to that lady at The Poplars. He meant to go thoroughly armed, for he was a very provident old gentleman. His weapons were not exactly of the kind which a housebreaker would provide himself with, but of a somewhat peculiar nature.

Weapon number one was a slip of paper with a date and a few words written upon it. "I think this will fetch the document," he said to himself, "if it comes to the worst. Not if I can help it,—not if I can help it. But if I cannot get at the heart of this thing otherwise, why, I must come to this. Poor woman!—Poor woman!"

Weapon number two was a small phial containing spirits of hartshorn, sal volatile, very strong, that would stab through the nostrils, like a stiletto, deep into the gray kernels that lie in the core of the brain. Excellent in cases of sudden syncope or fainting, such as sometimes require the opening of windows, the dashing on of cold water, the cutting of stays, perhaps, with a scene of more or less tumultuous perturbation and afflux of clamorous womanhood.

So armed, Byles Gridley, A. M., champion of unprotected innocence, grasped his ivory-handled cane and sallied forth on his way to The Poplars.

CHAPTER XXX. MASTER BYLES GRIDLEY CALLS ON MISS CYNTHIA BADLAM.

MISS Cynthia Badlam was seated in a small parlor which she was accustomed to consider her own during her long residences at The Poplars. The entry stove warmed it but imperfectly, and she looked pinched and cold, for the evenings were still pretty sharp, and the old house let in the chill blasts, as old houses are in the habit of doing. She was sitting at her table, with a little trunk open before her. She had taken some papers from it, which she was looking over, when a knock at her door announced a visitor, and Master Byles Gridley entered the parlor.

As he came into the room, she gathered the papers together and replaced them in the trunk, which she locked, throwing an unfinished piece of needle-work over it, putting the key in her pocket, and gathering herself up for company. Something of all this Master Gridley saw through his round spectacles, but seemed not to see, and took his seat like a visitor making a call of politeness.

A visitor at such an hour, of the male sex, without special provocation, without social pretext, was an event in the life of the desolate spinster. Could it be—No, it could not—and yet—and yet! Miss Cynthia threw back the rather common-looking but comfortable shawl which covered her shoulders, and showed her quite presentable figure, arrayed with a still lingering thought of that remote contingency which might yet offer itself at some unexpected moment; she adjusted the carefully plaited cap, which was not yet of the *lasciate ogni speranza* pattern, and as she obeyed these instincts of her sex, she smiled a welcome to the respectable, learned, and independent bachelor. Mr. Gridley had a frosty but kindly age before him, with a score or so of years to run, which it was after all not strange to fancy might be rendered more cheerful by the companionship of a well-conserved and amiably disposed woman, if any such should happen to fall in his way.

That smile came very near disconcerting the plot of Master Byles Gridley. He had come on an inquisitor's errand, his heart secure, as he thought, against all blandishments, his will steeled to break down all resistance. He had come armed with an instrument of torture worse than the thumb-screw, worse than the pulleys which attempt the miracle of adding a cubit to the stature, worse than the brazier of live coals brought close to the naked soles of the feet,—an instrument which, instead of trifling with the nerves, would clutch all the nerve-centres and the heart itself in its gripe, and hold them until it got its answer, if the white lips had life enough left to shape one. And here was this unfortunate maiden lady smiling at him, setting her limited attractions in their best light, pleading with him in that natural language which makes any

contumacious bachelor feel as guilty as Cain before any single woman. If Mr. Gridley had been alone, he would have taken a good sniff at his own bottle of sal volatile; for his kind heart sunk within him as he thought of the errand upon which he had come. It would not do to leave the subject of his vivisection under any illusion as to the nature of his designs.

"Good evening, Miss Badlam," he said, "I have come to visit you on a matter of business."

What was the internal panorama which had unrolled itself at the instant of his entrance, and which rolled up as suddenly at the sound of his serious voice and the look of his grave features? It cannot be reproduced, though pages were given to it; for some of the pictures were near, and some were distant; some were clearly seen, and some were only hinted; some were not recognized in the intellect at all, and yet they were implied, as it were, behind the others. Many times we have all found ourselves glad or sorry, and yet we could not tell what thought it was that reflected the sunbeam or cast the shadow. Look into Cynthia's suddenly exalted consciousness and see the picture, actual and potential, unroll itself in all its details of the natural, the ridiculous, the selfish, the pitiful, the human. Glimpses, hints, echoes, suggestions, involving tender sentiments hitherto unknown, we may suppose, to that unclaimed sister's breast,—pleasant excitement of receiving congratulations from suddenly cordial friends; the fussy delights of buying furniture and shopping for new dresses,—(it seemed as if she could hear herself saying, "Heavy silks,—best goods, if you please,")—with delectable thumping down of flat-sided pieces of calico, cambric, "rep," and other stiffs, and rhythmic evolution of measured yards, followed by sharp snip of scissors, and that cry of rending tissues dearer to woman's ear than any earthly sound until she hears the voice of her own first-born, (much of this potentially, remember,)—thoughts of a comfortable settlement, an imposing social condition, a cheerful household, and by and by an Indian summer of serene widowhood,—all these, and infinite other involved possibilities had mapped themselves in one long swift flash before Cynthia's inward eye, and all vanished as the old man spoke those few words. The look on his face, and the tone of his cold speech, had instantly swept them all away, like a tea-set sliding in a single crash from a slippery tray.

What could be the "business" on which he had come to her with that solemn face?—she asked herself, as she returned his greeting and offered him a chair. She was conscious of a slight tremor as she put this question to her own intelligence.

"Are we like to be alone and undisturbed?" Mr. Gridley asked. It was a strange question,—men do act strangely sometimes. She hardly knew whether to turn red or white.

"Yes, there is nobody like to come in at present," she answered. She did not know what to make of it. What was coming next,—a declaration, or an accusation of murder?

"My business," Mr. Gridley said, very gravely, "relates to this. I wish to inspect papers which I have reason to believe exist, and which have reference to the affairs of the late Malachi Withers. Can you help me to get sight of any of these papers not to be found at the Registry of Deeds or the Probate Office?"

"Excuse me, Mr. Gridley, but may I ask you what particular concern you have with the affairs of my relative, Cousin Malachi Withers, that's been dead and buried these half-dozen years?"

"Perhaps it would take some time to answer that question fully, Miss Badlam. Some of these affairs do concern those I am interested in, if not myself directly."

"May I ask who the person or persons may be on whose account you wish to look at papers belonging to my late relative, Malachi Withers?"

"You can ask me almost anything, Miss Badlam, but I should really be very much obliged if you would answer my question first. Can you help me to get a sight of any papers relating to the estate of Malachi Withers, not to be found at the Registry of Deeds or the Probate Office,—any of which you may happen to have any private and particular knowledge?"

"I beg your pardon, Mr. Gridley; but I don't understand why you come to me with such questions. Lawyer Penhallow is the proper person, I should think, to go to. He and his partner that was—Mr. Wibird, you know—settled the estate, and he has got the papers, I suppose, if there are any, that ain't to be found in the offices you mention."

Mr. Gridley moved his chair a little, so as to bring Miss Badlam's face a little more squarely in view.

"Does Mr. William Murray Bradshaw know anything about any papers, such as I am referring to, that may have been sent to the office?"

The lady felt a little moisture stealing through all her pores, and at the same time a certain dryness of the vocal organs, so that her answer came in a slightly altered tone which neither of them could help noticing.

"You had better ask Mr. William Murray Bradshaw yourself about that," she answered. She felt the hook now, and her spines were rising, partly with apprehension, partly with irritation.

"Has that young gentleman ever delivered into your hands any papers relating to the affairs of the late Malachi Withers, for your safe keeping?"

"What do you mean by asking me these questions, Mr. Gridley? I don't choose to be catechised about Murray Bradshaw's business. Go to him, if you please, if you want to find out about it."

"Excuse my persistence, Miss Badlam, but I must prevail upon you to answer my question. Has Mr. William Murray Bradshaw ever delivered into your hands any papers relating to the affairs of the late Malachi Withers, for your safe keeping?"

"Do you suppose I am going to answer such questions as you are putting me because you repeat them over, Mr. Gridley? Indeed I sha'n't. Ask him, if you please, whatever you wish to know about his doings."

She drew herself up and looked savagely at him. She had talked herself into her courage. There was a color in her cheeks and a sparkle in her eye; she looked dangerous as a cobra.

"Miss Cynthia Badlam," Master Gridley said, very deliberately, "I am afraid we do not entirely understand each other. You must answer my question precisely, categorically, point-blank, and on the instant. Will you do this at once, or will you compel me to show you the absolute necessity of your doing it, at the expense of pain to both of us? Six words from me will make you answer all my questions."

"You can't say six words, nor sixty, Mr. Gridley, that will make me answer one question I do not choose to. I defy you!"

"I will not say one, Miss Cynthia Badlam. There are some things one does not like to speak in words. But I will show you a scrap of paper, containing just six words and a date; not one word more nor one less. You shall read them. Then I will burn the paper in the flame of your lamp. As soon after that as you feel ready, I will ask the same question again."

Master Gridley took out from his pocket-book a scrap of paper, and handed it to Cynthia Badlam. Her hand shook as she received it, for she was frightened as well as enraged, and she saw that Mr. Gridley was in earnest and knew what he was doing.

She read the six words, he looking at her steadily all the time, and watching her as if he had just given her a drop of prussic acid.

No cry. No sound from her lips. She stared as if half stunned for one moment, then turned her head and glared at Mr. Gridley as if she would have murdered him if she dared. In another instant her face whitened, the scrap of paper fluttered to the floor, and she would have followed it but for the support of both Mr. Gridley's arms. He disengaged one of them presently, and felt in his pocket for the sal volatile. It served him excellently well, and stung her back again to her senses very quickly. All her defiant aspect had gone.

"Look!" he said, as he lighted the scrap of paper in the flame. "You understand me, and you see that I must be answered the next time I ask my question."

She opened her lips as if to speak. It was as when a bell is rung in a vacuum,—no words came from them,—only a faint gasping sound, an effort at speech. She was caught tight in the heart-screw.

"Don't hurry yourself, Miss Cynthia," he said, with a certain relenting tenderness of manner. "Here, take another sniff of the smelling-salts. Be calm, be quiet,—I am well disposed towards you,—I don't like to give you trouble. There, now, I must have the answer to that question; but take your time, take your time."

"Give me some water,—some water!" she said, in a strange hoarse whisper. There was a pitcher of water and a tumbler on an old marble sideboard near by. He filled the tumbler, and Cynthia emptied it as if she had just been taken from the rack, and could have swallowed a bucketful.

"What do you want to know?" she asked.

"I wish to know all that you can tell me about a certain paper, or certain papers, which I have reason to believe Mr. William Murray Bradshaw committed to your keeping."

"There is only one paper of any consequence. Do you want to make him kill me? or do you want to make me kill myself?"

"Neither, Miss Cynthia, neither. I wish to see that paper, but not for any bad purpose. Don't you think, on the whole, you have pretty good reason to trust me? I am a very quiet man, Miss Cynthia. Don't be afraid of me; only do what I ask,—it will be a great deal better for you in the end."

She thrust her trembling hand into her pocket, and took out the key of the little trunk. She drew the trunk towards her, put the key in the lock, and opened it. It seemed like pressing a knife into her own bosom and turning the blade. That little trunk held all the records of her life the forlorn spinster most cherished;—a few letters that came nearer to love-letters than any others she had ever received; an album, with flowers of the summers of 1840 and 1841 fading between its leaves; two papers containing locks of hair, half of a broken ring, and other insignificant mementos which had their meaning, doubtless, to her,—such a collection as is often priceless to one human heart, and passed by as worthless in the auctioneer's inventory. She took the papers out mechanically, and laid them on the table. Among them was an oblong packet, sealed with what appeared to be the office seal of Messrs. Penhallow and Bradshaw.

"Will you allow me to take that envelope containing papers, Miss Badlam?" Mr. Gridley asked, with a suavity and courtesy in his tone and manner that showed how he felt for her sex and her helpless position.

She seemed to obey his will as if she had none of her own left. She passed the envelope to him, and stared at him vacantly while he examined it. He read on the back of the package: "Withers Estate—old papers—of no importance apparently. Examine hereafter."

"May I ask when, where, and of whom you obtained these papers, Miss Badlam?"

"Have pity on me, Mr. Gridley,—have pity on me. I am a lost woman if you do not. Spare me! for God's sake, spare me! There will no wrong come of all this, if you will but wait a little while. The paper will come to light when it is wanted, and all will be right. But do not make me answer any more questions, and let me keep this paper. O Mr. Gridley! I am in the power of a dreadful man—"

"You mean Mr. William Murray Bradshaw?"

"I mean him."

"Has there not been some understanding between you that he should become the approved suitor of Miss Myrtle Hazard?"

Cynthia wrung her hands and rocked herself backward and forward in her misery, but answered not a word. What could she answer, if she had plotted with this "dreadful man" against a young and innocent girl, to deliver her over into his hands, at the risk of all her earthly hopes and happiness?

Master Gridley waited long and patiently for any answer she might have the force to make. As she made none, he took upon himself to settle the whole matter without further torture of his helpless victim.

"This package must go into the hands of the parties who had the settlement of the estate of the late Malachi Withers. Mr. Penhallow is the survivor of the two gentlemen to whom that business was intrusted. How long is Mr. William Murray Bradshaw like to be away?"

"Perhaps a few days,—perhaps weeks,—and then he will come back and kill me,—or—or—worse! Don't take that paper, Mr. Gridley,—he isn't like you! you would n't—but he would—he would send me to everlasting misery to gain his own end, or to save himself. And yet he is n't every way bad, and if he did marry Myrtle she'd think there never was such a man,—for he can talk her heart out of her, and the wicked in him lies very deep and won't ever come out, perhaps, if the world goes right with him." The last part of this sentence

showed how Cynthia talked with her own conscience; all her mental and moral machinery lay open before the calm eyes of Master Byles Gridley.

His thoughts wandered a moment from the business before him; he had just got a new study of human nature, which in spite of himself would be shaping itself into an axiom for an imagined new edition of "Thoughts on the Universe," something like this, "The greatest saint may be a sinner that never got down to 'hard pan.'" It was not the time to be framing axioms.

"Poh! poh!" he said to himself; "what are you about making phrases, when you have got a piece of work like this in hand?" Then to Cynthia, with great gentleness and kindness of manner: "Have no fear about any consequences to yourself. Mr. Penhallow must see that paper—I mean those papers. You shall not be a loser nor a sufferer if you do your duty now in these premises."

Master Gridley, treating her, as far as circumstances permitted, like a gentleman, had shown no intention of taking the papers either stealthily or violently. It must be with her consent. He had laid the package down upon the table, waiting for her to give him leave to take it. But just as he spoke these last words, Cynthia, whose eye had been glancing furtively at it while he was thinking out his axiom, and taking her bearings to it pretty carefully, stretched her hand out, and, seizing the package, thrust it into the sanctuary of her bosom.

"Mr. Penhallow must see those papers, Miss Cynthia Badlam," Mr. Gridley repeated calmly. "If he says they or any of them can be returned to your keeping, well and good. But see them he must, for they have his office seal and belong in his custody, and, as you see by the writing on the back, they have not been examined. Now there may be something among them which is of immediate importance to the relatives of the late deceased Malachi Withers, and therefore they must be forthwith submitted to the inspection of the surviving partner of the firm of Wibird and Penhallow. This I propose to do, with your consent, this evening. It is now twenty-five minutes past eight by the true time, as my watch has it. At half past eight exactly I shall have the honor of bidding you good evening, Miss Cynthia Badlam, whether you give me those papers or not. I shall go to the office of Jacob Penhallow, Esquire, and there make one of two communications to him; to wit, these papers and the facts connected therewith, or another statement, the nature of which you may perhaps conjecture."

There is no need of our speculating as to what Mr. Byles Gridley, an honorable and humane man, would have done, or what would have been the nature of that communication which he offered as an alternative to the perplexed woman. He had not at any rate miscalculated the strength of his appeal, which Cynthia interpreted as he expected. She bore the heart-screw about two minutes. Then she took the package from her bosom, and gave it with averted face to Master Byles Gridley, who, on receiving it, made her a formal but not unkindly bow, and bade her good evening.

"One would think it had been lying out in the dew," he said, as he left the house and walked towards Mr. Penhallow's residence.

CHAPTER XXXI. MASTER BYLES GRIDLEY CONSULTS WITH JACOB PENHALLOW, ESQUIRE

Lawyer Penhallow was seated in his study, his day's work over, his feet in slippers, after the comfortable but inelegant fashion which Sir Walter Scott reprobates, amusing himself with a volume of old Reports. He was a knowing man enough, a keen country lawyer but honest, and therefore less ready to suspect the honesty of others. He had a great belief in his young partner's ability, and, though he knew him to be astute, did not think him capable of roguery.

It was at his request that Mr. Bradshaw had undertaken his journey, which, as he believed,—and as Mr. Bradshaw had still stronger evidence of a strictly confidential nature which led him to feel sure,—would end in the final settlement of the great land claim in favor of their client. The case had been dragging along from year to year, like an English chancery suit; and while courts and lawyers and witnesses had been sleeping, the property had been steadily growing. A railroad had passed close to one margin of the township, some mines had been opened in the county, in which a village calling itself a city had grown big enough to have a newspaper and Fourth of July orations. It was plain that the successful issue of the long process would make the heirs of the late Malachi Withers possessors of an ample fortune, and it was also plain that the firm of Penhallow and Bradshaw were like to receive, in such case, the largest fee that had gladdened the professional existence of its members.

Mr. Penhallow had his book open before him, but his thoughts were wandering from the page. He was thinking of his absent partner, and the probable results of his expedition. What would be the consequence if all this property came into the possession of Silence Withers? Could she have any liberal intentions with reference to Myrtle Hazard, the young girl who had grown up with her, or was the common impression true, that she was bent on endowing an institution, and thus securing for herself a favorable consideration in the higher courts, where her beneficiaries would be, it might be supposed, influential advocates? He could not help thinking that Mr. Bradshaw believed that Myrtle Hazard would eventually come to a part at least of this inheritance. For the story was, that he was paying his court to the young lady whenever he got an opportunity, and that he was cultivating an intimacy with Miss Cynthia Badlam. "Bradshaw wouldn't make a move in that direction," Mr. Penhallow said to himself, "until he felt pretty sure that it was going to be a paying business. If he was only a young minister now, there'd be no difficulty about it. Let any man, young or old, in a clerical white cravat, step up to Myrtle Hazard, and ask her to be miserable in his company through this wretched life, and aunt Silence would very likely give them her blessing, and add something to it that the man in the white cravat would think worth even more than that was. But I don't know what she'll say to Bradshaw. Perhaps he 'd better have a hint to go to meeting a little more regularly. However, I suppose he

knows what he's about."

He was thinking all this over when a visitor was announced, and Mr. Byles Gridley entered the study.

"Good evening, Mr. Penhallow," Mr. Gridley said, wiping his forehead. "Quite warm, is n't it, this evening?"

"Warm!" said Mr. Penhallow, "I should think it would freeze pretty thick to-night. I should have asked you to come up to the fire and warm yourself. But take off your coat, Mr. Gridley,—very glad to see you. You don't come to the house half as often as you come to the office. Sit down, sit down."

Mr. Gridley took off his outside coat and sat down. "He does look warm, does n't he?" Mr. Penhallow thought. "Wonder what has heated up the old gentleman so. Find out quick enough, for he always goes straight to business."

"Mr. Penhallow," Mr. Gridley began at once, "I have come on a very grave matter, in which you are interested as well as myself, and I wish to lay the whole of it before you as explicitly as I can, so that we may settle this night before I go what is to be done. I am afraid the good standing of your partner, Mr. William Murray Bradshaw, is concerned in the matter. Would it be a surprise to you, if he had carried his acuteness in some particular case like the one I am to mention beyond the prescribed limits?"

The question was put so diplomatically that there was no chance for an indignant denial of the possibility of Mr. Bradshaw's being involved in any discreditable transaction.

"It is possible," he answered, "that Bradshaw's keen wits may have betrayed him into sharper practice than I should altogether approve in any business we carried on together. He is a very knowing young man, but I can't think he is foolish enough, to say nothing of his honesty, to make any false step of the kind you seem to hint. I think he might on occasion go pretty near the line, but I don't believe he would cross it."

"Permit me a few questions, Mr. Penhallow. You settled the estate of the late Malachi Withers, did you not?"

"Mr. Wibird and myself settled it together."

"Have you received any papers from any of the family since the settlement of the estate?"

"Let me see. Yes; a roll of old plans of the Withers Place, and so forth,—not of much use, but labelled and kept. An old trunk with letters and account-books, some of them in Dutch,—mere curiosities. A year ago or more, I remember that Silence sent me over some papers she had found in an odd corner,—the old man hid things like a magpie. I looked over most of them,—trumpery not worth keeping,—old leases and so forth."

"Do you recollect giving some of them to Mr. Bradshaw to look over?"

"Now I come to think of it, I believe I did; but he reported to me, if I remember right, that they amounted to nothing."

"If any of those papers were of importance, should you think your junior partner ought to keep them from your knowledge?"

"I need not answer that question, Mr. Gridley. Will you be so good as to come at once to the facts on which you found your suspicions, and which lead you to put these questions to me?"

Thereupon Mr. Gridley proceeded to state succinctly the singular behavior of Murray Bradshaw in taking one paper from a number handed to him by Mr. Penhallow, and concealing it in a volume. He related how he was just on the point of taking out the volume which contained the paper, when Mr. Bradshaw entered and disconcerted him. He had, however, noticed three spots on the paper by which he should know it anywhere. He then repeated the substance of Kitty Fagan's story, accenting the fact that she too noticed three remarkable spots on the paper which Mr. Bradshaw had pointed out to Miss Badlam as the one so important to both of them. Here he rested the case for the moment.

Mr. Penhallow looked thoughtful. There was something questionable in the aspect of this business. It did obviously suggest the idea of an underhand arrangement with Miss Cynthia, possibly involving some very grave consequences. It would have been most desirable, he said, to have ascertained what these papers, or rather this particular paper, to which so much importance was attached, amounted to. Without that knowledge there was nothing, after all, which it might not be possible to explain. He might have laid aside the spotted paper to examine for some object of mere curiosity. It was certainly odd that the one the Fagan woman had seen should present three spots so like those on the other paper, but people did sometimes throw treys at backgammon, and that which not rarely happened with two dice of six faces might happen if they had sixty or six hundred faces. On the whole, he did not see that there was any ground, so far, for anything more than a vague suspicion. He thought it not unlikely that Mr. Bradshaw was a little smitten with the young lady up at The Poplars, and that he had made some diplomatic overtures to the duenna, after the approved method of suitors. She was young for Bradshaw,—very young,—but he knew his own affairs. If he chose to make love to a child, it was natural enough that he should begin by courting her nurse.

Master Byles Gridley lost himself for half a minute in a most discreditable inward discussion as to whether Laura Penhallow was probably one or two years older than Mr. Bradshaw. That was his way, he could not help it. He could not think of anything without these mental parentheses. But he came back to business at the end of his half-minute.

"I can lay the package before you at this moment, Mr. Penhallow. I have induced that woman in whose charge it was left to intrust it to my keeping, with the express intention of showing it to you. But it is protected by a seal, as I have told you, which I should on no account presume to meddle with."

Mr. Gridley took out the package of papers.

"How damp it is!" Mr. Penhallow said; "must have been lying in some very moist neighborhood."

"Very," Mr. Gridley answered, with a peculiar expression which said, "Never mind about that."

"Did the party give you possession of these documents without making any effort to retain them?" the lawyer asked.

"Not precisely. It cost some effort to induce Miss Badlam to let them go out of her hands. I hope you think I was justified in making the effort I did, not without a considerable strain upon my feelings, as well as her own, to get hold of the papers?"

"That will depend something on what the papers prove to be, Mr. Gridley. A man takes a certain responsibility in doing just what you have done. If, for instance, it should prove that this envelope contained matters relating solely to private transactions between Mr. Bradshaw and Miss Badlam, concerning no one but themselves,—and if the words on the back of the envelope and the seal had been put there merely as a protection for a package containing private papers of a delicate but perfectly legitimate character—"

The lawyer paused, as careful experts do, after bending the bow of an hypothesis, before letting the arrow go. Mr. Gridley felt very warm indeed, uncomfortably so, and applied his handkerchief to his face. Could n't be anything in such a violent supposition as that, and yet such a crafty fellow as that Bradshaw,—what trick was he not up to? Absurd! Cynthia was not acting,—Rachel would n't be equal to such a performance!—"why then, Mr. Gridley," the lawyer continued, "I don't see but what my partner would have you at an advantage, and, if disposed to make you uncomfortable, could do so pretty effectively. But this, you understand, is only a supposed case, and not a very likely one. I don't think it would have been prudent in you to meddle with that seal. But it is a very different matter with regard to myself. It makes no difference, so far as I am concerned, where this package came from, or how it was obtained. It is just as absolutely within my control as any piece of property I call my own. I should not hesitate, if I saw fit, to break this seal at once, and proceed to the examination of any papers contained within the envelope. If I found any paper of the slightest importance relating to the estate, I should act as if it had never been out of my possession.

"Suppose, however, I chose to know what was in the package, and, having ascertained, act my judgment about returning it to the party from whom you obtained it. In such case I might see fit to restore or cause it to be restored, to the party, without any marks of violence having been used being apparent. If everything is not right, probably no questions would be asked by the party having charge of the package. If there is no underhand work going on, and the papers are what they profess to be, nobody is compromised but yourself, so far as I can see, and you are compromised at any rate, Mr. Gridley, at least in the good graces of the party from whom you obtained the documents. Tell that party that I took the package without opening it, and shall return it, very likely, without breaking the seal. Will consider of the matter, say a couple of days. Then you shall hear from me, and she shall hear from you. So. So. Yes, that's it. A nice business. A thing to sleep on. You had better leave the whole matter of dealing with the package to me. If I see fit to send it back with the seal unbroken, that is my affair. But keep perfectly quiet, if you please, Mr. Gridley, about the whole matter. Mr. Bradshaw is off, as you know, and the business on which he is gone is important,—very important. He can be depended on for that; he has acted all along as if he had a personal interest in the success of our firm beyond his legal relation to it."

Mr. Penhallow's light burned very late in the office that night, and the following one. He looked troubled and absent-minded, and when Miss Laura ventured to ask him how long Mr. Bradshaw was like to be gone, he answered her in such a way that the girl who waited at table concluded that he did n't mean to have Miss Laury keep company with Mr. Bradshaw, or he'd never have spoke so dreadful hash to her when she asked about him.

CHAPTER XXXII. SUSAN POSEY'S TRIAL.

A day or two after Myrtle Hazard returned to the village, Master Byles Gridley, accompanied by Gifted Hopkins, followed her, as has been already mentioned, to the same scene of the principal events of this narrative. The young man had been persuaded that it would be doing injustice to his talents to crowd their fruit prematurely upon the market. He carried his manuscript back with him, having relinquished the idea of publishing for the present. Master Byles Gridley, on the other hand, had in his pocket a very flattering proposal, from the same publisher to whom he had introduced the young poet, for a new and revised edition of his work, "Thoughts on the Universe," which was to be remodelled in some respects, and to have a new title not quite so formidable to the average reader.

It would be hardly fair to Susan Posey to describe with what delight and innocent enthusiasm she welcomed back Gifted Hopkins. She had been so lonely since he was away? She had read such of his poems as she possessed—duplicates of his printed ones, or autographs which he had kindly written out for her—over and over again, not without the sweet tribute of feminine sensibility, which is the most precious of all testimonials to a poet's power over the heart. True, her love belonged to another,—but then she was so used to Gifted! She did so love to hear him read his poems,—and Clement had never written that "little bit of a poem to Susie," which she had asked him for so long ago! She received him therefore with open arms,—not literally, of course, which would have been a breach of duty and propriety, but in a figurative sense, which it is hoped no reader will interpret to her discredit.

The young poet was in need of consolation. It is true that he had seen many remarkable sights during his visit to the city; that he had got "smarted up," as his mother called it, a good deal; that he had been to Mrs. Clymer Ketchum's party, where he had looked upon life in all its splendors; and that he brought back many interesting experiences, which would serve to enliven his conversation for a long time. But he had failed in the great enterprise he had undertaken. He was forced to confess to his revered parent, and his esteemed friend Susan Posey, that his genius, which was freely acknowledged, was not thought to be quite ripe as yet. He told the young lady some particulars of his visit to the publisher, how he had listened with great interest to one of his poems, "The Triumph of Song,"—how he had treated him with marked and flattering attention; but that he advised him not to risk anything prematurely, giving him the hope that by and by he would be admitted into that series of illustrious authors which it was the publisher's privilege to present to the reading public. In short, he was advised not to print. That was the net total of the matter, and it was a pang to the susceptible heart of the poet. He had hoped to have come home enriched by the sale of his copyright, and with the prospect of seeing his name before long on the back of a handsome volume.

Gifted's mother did all in her power to console him in his disappointment. There was plenty of jealous people always that wanted to keep young folks from rising in the world. Never mind, she did n't believe but what Gifted could make jest as good verses as any of them that they kept such a talk about. She had a fear that he might pine away in consequence of the mental excitement he had gone through, and solicited his appetite with her choicest appliances,—of which he partook in a measure which showed that there was no immediate cause of alarm.

But Susan Posey was more than a consoler,—she was an angel to him in this time of his disappointment. “Read me all the poems over again,” she said,—“it is almost the only pleasure I have left, to hear you read your beautiful verses.” Clement Lindsay had not written to Susan quite so often of late as at some former periods of the history of their love. Perhaps it was that which had made her look paler than usual for some little time. Something was evidently preying on her. Her only delight seemed to be in listening to Gifted as he read, sometimes with fine declamatory emphasis, sometimes in low, tremulous tones, the various poems enshrined in his manuscript. At other times she was sad, and more than once Mrs. Hopkins had seen a tear steal down her innocent cheek, when there seemed to be no special cause for grief. She ventured to speak of it to Master Byles Gridley.

“Our Susan's in trouble, Mr. Gridley, for some reason or other that's unbeknown to me, and I can't help wishing you could jest have a few words with her. You're a kind of a grandfather, you know, to all the young folks, and they'd tell you pretty much everything about themselves. I calc'late she is n't at ease in her mind about somethin' or other, and I kind o' think, Mr. Gridley, you could coax it out of her.”

“Was there ever anything like it?” said Master Byles Gridley to himself. “I shall have all the young folks in Oxbow Village to take care of at this rate. Susan Posey in trouble, too! Well, well, well, it's easier to get a birch-bark canoe off the shallows than a big ship off the rocks. Susan Posey's trouble will be come at easily enough; but Myrtle Hazard floats in deeper water. We must make Susan Posey tell her own story, or let her tell it, for it will all come out of itself.”

“I am going to dust the books in the open shelves this morning. I wonder if Miss Susan Posey would n't like to help for half an hour or so,” Master Gridley remarked at the breakfast-table.

The amiable girl's very pleasant countenance lighted up at the thought of obliging the old man who had been so kind to her and so liberal to her friend, the poet. She would be delighted to help him; she would dust them all for him, if he wanted her to. No, Master Gridley said, he always wanted to have a hand in it; and, besides, such a little body as she was could not lift those great folios out of the lower shelves without overstraining herself; she might handle the musketry and the light artillery, but he must deal with the heavy guns himself. “As low down as the octavos, Susan Posey, you shall govern; below that, the Salic law.”

Susan did not know much about the Salic law; but she knew he meant that he would dust the big books and she would attend to the little ones.

A very young and a very pretty girl is sometimes quite charming in a costume which thinks of nothing less than of being attractive. Susan appeared after breakfast in the study, her head bound with a kerchief of bright pattern, a little jacket she had outgrown buttoned, in spite of opposition, close about her up to the throat, round which a white handkerchief was loosely tied, and a pair of old gauntlets protecting her hands, so that she suggested something between a gypsy, a jaunty soubrette, and the fille du regiment.

Master Gridley took out a great volume from the lower shelf,—a folio in massive oaken covers with clasps like prison hinges, bearing the stately colophon, white on a ground of vermilion, of Nicholas Jenson and his associates. He opened the volume,—paused over its blue, and scarlet initial letter,—he turned page after page, admiring its brilliant characters, its broad, white marginal rivers, and the narrower white creek that separated the black-typed twin-columns, he turned back to the beginning and read the commendatory paragraph, “*Nam ipsorum omnia fidgent tum correctione dignissima, tum cura imprimendo splendida ac miranda,*” and began reading, “*Incipit proemium super apparatus decretalium....*” when it suddenly occurred to him that this was not exactly doing what he had undertaken to do, and he began whisking an ancient bandanna about the ears of the venerable volume. All this time Miss Susan Posey was catching the little books by the small of their backs, pulling them out, opening them, and clapping them together, 'p-'p-'p! 'p-'p-'p! and carefully caressing all their edges with a regular professional dusting-cloth, so persuasively that they yielded up every particle that a year had drifted upon them, and came forth refreshed and rejuvenated. This process went on for a while, until Susan had worked down among the octavos and Master Gridley had worked up among the quartos. He had got hold of Calmet's Dictionary, and was caught by the article Solomon, so that he forgot his occupation again. All at once it struck him that everything was very silent,—the 'p-'p-'p! of clapping the books had ceased, and the light rustle of Susan's dress was no longer heard. He looked up and saw her standing perfectly still, with a book in one hand and her duster in the other. She was lost in thought, and by the shadow on her face and the glistening of her blue eyes he knew it was her hidden sorrow that had just come back to her. Master Gridley shut up his book, leaving Solomon to his fate, like the worthy Benedictine he was reading, without discussing the question whether he was saved or not.

“Susan Posey, child, what is your trouble?”

Poor Susan was in the state of unstable equilibrium which the least touch upsets, and fell to crying. It took her some time to get down the waves of emotion so that speech would live upon them. At last it ventured out,—showing at intervals, like the boat rising on the billow, sinking into the hollow, and climbing again into notice.

“O Mr. Grid-ley—I can't—I can't—tell you or—any-body—what 's the mat-mat-matter. My heart will br-br-break.”

“No, no, no, child,” said Mr. Gridley, sympathetically stirred a little himself by the sight of Susan in tears and sobbing and catching her breath, “that mustn't be, Susan Posey. Come off the steps, Susan Posey, and stop dusting the books,—I can finish them,—and tell me all about your troubles. I will try to help you out of them, and I have begun to think I know how to help young people pretty well. I have had some experience at it.”

But Susan cried and sobbed all the more uncontrollably and convulsively. Master Gridley thought he had

better lead her at once to what he felt pretty sure was the source of her grief, and that, when she had had her cry out, she would probably make the hole in the ice he had broken big enough in a very few minutes.

"I think something has gone wrong between you and your friend, the young gentleman with whom you are in intimate relations, my child, and I think you had better talk freely with me, for I can perhaps give you a little counsel that will be of service."

Susan cried herself quiet at last. "There's nobody in the world like you, Mr. Gridley," she said, "and I've been wanting to tell you something ever so long. My friend—Mr. Clem—Clement Lindsay does n't care for me as he used to,—I know he does n't. He hasn't written to me for—I don't know but it's a month. And O Mr. Gridley! he's such a great man, and I am such a simple person,—I can't help thinking—he would be happier with somebody else than poor little Susan Posey!"

This last touch of self-pity overcame her, as it is so apt to do those who indulge in that delightful misery, and she broke up badly, as a horse-fancier would say, so that it was some little time before she recovered her conversational road-gait.

"O Mr. Gridley," she began again, at length, "if I only dared to tell him what I think,—that perhaps it would be happier for us both—if we could forget each other! Ought I not to tell him so? Don't you think he would find another to make him happy? Wouldn't he forgive me for telling him he was free? Were we not too young to know each other's hearts when we promised each other that we would love as long as we lived? Sha'n't I write him a letter this very day and tell him all? Do you think it would be wrong in me to do it? O Mr. Gridley, it makes me almost crazy to think about it. Clement must be free! I cannot, cannot hold him to a promise he does n't want to keep."

There were so many questions in this eloquent rhapsody of Susan's that they neutralized each other, as one might say, and Master Gridley had time for reflection. His thoughts went on something in this way:

"Pretty clear case! Guess Mr. Clement can make up his mind to it. Put it well, did n't she? Not a word about our little Gifted! That's the trouble. Poets! how they do bewitch these schoolgirls! And having a chance every day, too, how could you expect her to stand it?" Then aloud: "Susan Posey, you are a good, honest little girl as ever was. I think you and Clement were too hasty in coming together for life before you knew what life meant. I think if you write Clement a letter, telling him that you cannot help fearing that you two are not perfectly adapted to each other, on account of certain differences for which neither of you is responsible, and that you propose that each should release the other from the pledge given so long ago,—in that case, I say, I believe he will think no worse of you for so doing, and may perhaps agree that it is best for both of you to seek your happiness elsewhere than in each other."

The book-dusting came to as abrupt a close as the reading of Lancelot. Susan went straight to her room, dried her tears so as to write in a fair hand, but had to stop every few lines and take a turn at the "dust-layers," as Mrs. Clymer Ketchum's friend used to call the fountains of sensibility. It would seem like betraying Susan's confidence to reveal the contents of this letter, but the reader may be assured that it was simple and sincere and very sweetly written, without the slightest allusion to any other young man, whether of the poetical or cheaper human varieties.

It was not long before Susan received a reply from Clement Lindsay. It was as kind and generous and noble as she could have asked. It was affectionate, as a very amiable brother's letter might be, and candidly appreciative of the reasons Susan had assigned for her proposal. He gave her back her freedom, not that he should cease to feel an interest in her, always. He accepted his own release, not that he would ever think she could be indifferent to his future fortunes. And within a very brief period of time after sending his answer to Susan Posey, whether he wished to see her in person, or whether he had some other motive, he had packed his trunk, and made his excuses for an absence of uncertain length at the studio, and was on his way to Oxbow Village.

CHAPTER XXXIII. JUST AS YOU EXPECTED.

The spring of 1861 had now arrived,—that eventful spring which was to lift the curtain and show the first scene of the first act in the mighty drama which fixed the eyes of mankind during four bloody years. The little schemes of little people were going on in all our cities and villages without thought of the fearful convulsion which was soon coming to shatter the hopes and cloud the prospects of millions. Our little Oxbow Village, which held itself by no means the least of human centres, was the scene of its own commotions, as intense and exciting to those concerned as if the destiny of the nation had been involved in them.

Mr. Clement Lindsay appeared suddenly in that important locality, and repaired to his accustomed quarters at the house of Deacon Rumrill. That worthy person received him with a certain gravity of manner, caused by his recollections of the involuntary transgression into which Mr. Lindsay had led him by his present of "Ivanhoe."—He was, on the whole, glad to see him, for his finances were not yet wholly recovered from the injury inflicted on them by the devouring element. But he could not forget that his boarder had betrayed him into a breach of the fourth commandment, and that the strict eyes of his clergyman had detected him in the very commission of the offence. He had no sooner seen Mr. Clement comfortably installed, therefore, than he presented himself at the door of his chamber with the book, enveloped in strong paper and very securely tied round with a stout string.

"Here is your vollum, Mr. Lindsay," the Deacon said. "I understand it is not the work of that great and good mahn who I thought wrote it. I did not see anything immoral in it as fur as I read, but it belongs to what I consider a very dangerous class of publications. These novels and romances are awfully destructive to our youth. I should recommend you, as a young man of principle, to burn the vollum. At least I hope you will not leave it about anywhere unless it is carefully tied up. I have written upon the paper round it to warn off all

the young persons of my household from meddling with it."

True enough, Mr. Clement saw in strong black letters on the back of the paper wrapping his unfortunate "Ivanhoe,"—

"DANGEROUS READING FOR CHRISTIAN YOUTH.

"TOUCH NOT THE UNCLEAN THING."

"I thought you said you had Scott's picture hung up in your parlor, Deacon Rumrill," he said, a little amused with the worthy man's fear and precautions.

"It is the great Scott's likeness that I have in my parlor," he said; "I will show it to you if you will come with me."

Mr. Clement followed the Deacon into that sacred apartment.

"That is the portrait of the great Scott," he said, pointing to an engraving of a heavy-looking person whose phrenological developments were a somewhat striking contrast to those of the distinguished Sir Walter.

"I will take good care that none of your young people see this volume," Mr. Clement said; "I trust you read it yourself, however, and found something to please you in it. I am sure you are safe from being harmed by any such book. Did n't you have to finish it, Deacon, after you had once begun?"

"Well, I—I—perused a consid'able portion of the work," the Deacon answered, in a way that led Mr. Clement to think he had not stopped much short of Finis. "Anything new in the city?"

"Nothing except what you've all had,—Confederate States establishing an army and all that,—not very new either. What has been going on here lately, Deacon?"—

"Well, Mr. Lindsay, not a great deal. My new barn is pretty nigh done. I've got as fine a litter of pigs as ever you see. I don't know whether you're a judge of pigs or no. The Hazard gal's come back, spilt, pooty much, I guess. Been to one o' them fashionable schools,—I 've heerd that she 's learnt to dance. I've heerd say that that Hopkins boy's round the Posey gal, come to think, she's the one you went with some when you was here,—I 'm gettin' kind o' forgetful. Old Doctor Hurlbut's pretty low,—ninety-four year old,—born in '67,—folks ain't ginerally very spry after they're ninety, but he held out wonderful."

"How's Mr. Bradshaw?"

"Well, the young squire, he's off travellin' somewhere in the West, or to Washin'ton, or somewhere else,—I don't jestly know where. They say that he's follerin' up the courts in the business about old Malachi's estate. I don't know much about it."

The news got round Oxbow Village very speedily that Mr. Clement Lindsay, generally considered the accepted lover of Miss Susan Posey, had arrived in that place. Now it had come to be the common talk of the village that young Gifted Hopkins and Susan Posey were getting to be mighty thick with each other, and the prevailing idea was that Clement's visit had reference to that state of affairs. Some said that Susan had given her young man the mitten, meaning thereby that she had signified that his services as a suitor were dispensed with. Others thought there was only a wavering in her affection for her lover, and that he feared for her constancy, and had come to vindicate his rights.

Some of the young fellows, who were doubtless envious of Gifted's popularity with the fair sex, attempted in the most unjustifiable manner to play upon his susceptible nature. One of them informed him that he had seen that Lindsay fellah raound taown with the darndest big stick y' ever did see. Looked kind o' savage and wild like. Another one told him that perhaps he'd better keep a little shady; that are chap that had got the mittin was praowlin' abaout—with a pistil,—one o' them Darringers,—abaout as long as your thumb, an' fire a bullet as big as a p'tatah-ball,—'a fellah carries one in his breeches-pocket, an' shoots y' right through his own pahnts, withaout ever takin' on it aout of his pocket. The stable-keeper, who, it may be remembered, once exchanged a few playful words with Mr. Gridley, got a hint from some of these unfeeling young men, and offered the resources of his stable to the youth supposed to be in peril.

"I 've got a faast colt, Mr. Hopkins, that 'll put twenty mild betwixt you an' this here village, as quick as any four huffs 'll dew it in this here caounty, if you should want to get away suddin. I've heern tell there was some lookin' raound here that wouldn't be wholesome to meet,—jest say the word, Mr. Hopkins, an' I 'll have ye on that are colt's back in less than no time, an' start ye off full jump. There's a good many that's kind o' worried for fear something might happen to ye, Mr. Hopkins,—y' see fellahs don't like to have other chaps cuttin' on 'em aout with their gals."

Gifted Hopkins had become excessively nervous by this time. It is true that everything in his intimacy with Susan Posey, so far, might come under the general head of friendship; but he was conscious that something more was in both their thoughts. Susan had given him mysterious hints that her relations with Clement had undergone a change, but had never had quite courage enough, perhaps had too much delicacy, to reveal the whole truth.

Gifted was walking home, deeply immersed in thoughts excited by the hints which hail been thus wantonly thrown out to inflame his imagination, when all at once, on lifting his eyes, he saw Clement Lindsay coming straight towards him. Gifted was unarmed, except with a pair of blunt scissors, which he carried habitually in his pocket. What should he do? Should he fly? But he was never a good runner, being apt to find himself scant o' breath, like Hamlet, after violent exercise. His demeanor on the occasion did credit to his sense of his own virtuous conduct and his self-possession. He put his hand out, while yet at a considerable distance, and marched up towards Clement, smiling with all the native amiability which belonged to him.

To his infinite relief, Clement put out his hand to grasp the one offered him, and greeted the young poet in the most frank and cordial manner.

"And how is Miss Susan Posey, Mr. Hopkins?" asked Clement, in the most cheerful tone. "It is a long while since I have seen her, and you must tell her that I hope I shall not leave the village without finding time to call upon her. She and I are good friends always, Mr. Hopkins, though perhaps I shall not be quite so often at your mother's as I was during my last visit to Oxbow Village."

Gifted felt somewhat as the subject of one of those old-fashioned forms of argument, formerly much employed to convince men of error in matters of religion, must have felt when the official who superintended the stretching-machine said, "Slack up!"

He told Mr. Clement all about Susan, and was on the point of saying that if he, Mr. Clement, did not claim any engrossing interest in her, he, Gifted, was ready to offer her the devotion of a poet's heart. Mr. Clement, however, had so many other questions to ask him about everybody in the village, more particularly concerning certain young persons in whom he seemed to be specially interested, that there was no chance to work in his own revelations of sentiment.

Clement Lindsay had come to Oxbow Village with a single purpose. He could now venture to trust himself in the presence of Myrtle Hazard. He was free, and he knew nothing to show that she had lost the liberty of disposing of her heart. But after an experience such as he had gone through, he was naturally distrustful of himself, and inclined to be cautious and reserved in yielding to a new passion. Should he tell her the true relations in which they stood to each other,—that she owed her life to him, and that he had very nearly sacrificed his own in saving hers? Why not? He had a claim on her gratitude for what he had done in her behalf, and out of this gratitude there might naturally spring a warmer feeling.

No, he could not try to win her affections by showing that he had paid for them beforehand. She seemed to be utterly unconscious of the fact that it was he who had been with her in the abyss of waters. If the thought came to her of itself, and she ever asked him, it would be time enough to tell her the story. If not, the moment might arrive when he could reveal to her the truth that he was her deliverer, without accusing himself of bribing her woman's heart to reward him for his services. He would wait for that moment.

It was the most natural thing in the world that Mr. Lindsay, a young gentleman from the city, should call to see Miss Hazard, a young lady whom he had met recently at a party. To that pleasing duty he addressed himself the evening after his arrival.

"The young gentleman's goin' a courtin', I calc'late," was the remark of the Deacon's wife when she saw what a comely figure Mr. Clement showed at the tea-table.

"A very hahnsome young mahn," the Deacon replied, "and looks as if he might know consid'able. An architect, you know,—a sort of a builder. Wonder if he has n't got any good plans for a hahnsome pigsty. I suppose he 'd charge somethin' for one, but it couldn't be much, an' he could take it out in board."

"Better ask him," his wife—said; "he looks mighty pleasant; there's nothin' lost by askin', an' a good deal got sometimes, grandma used to say."

The Deacon followed her advice. Mr. Clement was perfectly good-natured about it, asked the Deacon the number of snouts in his menagerie, got an idea of the accommodations required, and sketched the plaza of a neat, and appropriate edifice for the Porcellarium, as Master Gridley afterwards pleasantly christened it, which was carried out by the carpenter, and stands to this day a monument of his obliging disposition, and a proof that there is nothing so humble that taste cannot be shown in it.

"What'll be your charge for the plan of the pigsty, Mr. Lindsay?" the Deacon inquired with an air of interest, —he might have become involved more deeply than he had intended. "How much should you call about right for the picter an' figgerin'?"

"Oh, you're quite welcome to my sketch of a plan, Deacon. I've seen much showier buildings tenanted by animals not very different from those your edifice is meant for."

Mr. Clement found the three ladies sitting together in the chill, dim parlor at The Poplars. They had one of the city papers spread out on the table, and Myrtle was reading aloud the last news from Charleston Harbor. She rose as Mr. Clement entered, and stepped forward to meet him. It was a strange impression this young man produced upon her,—not through the common channels of the intelligence, not exactly that "magnetic" influence of which she had had experience at a former time. It did not over come her as at the moment of their second meeting. But it was something she must struggle against, and she had force and pride and training enough now to maintain her usual tranquillity, in spite of a certain inward commotion which seemed to reach her breathing and her pulse by some strange, inexplicable mechanism.

Myrtle, it must be remembered, was no longer the simple country girl who had run away at fifteen, but a young lady of seventeen, who had learned all that more than a year's diligence at a great school could teach her, who had been much with girls of taste and of culture, and was familiar with the style and manners of those who came from what considered itself the supreme order in the social hierarchy. Her natural love for picturesque adornment was qualified by a knowledge of the prevailing modes not usual in so small a place as Oxbow Village. All this had not failed to produce its impression on those about her. Persons who, like Miss Silence Withers, believe, not in education, inasmuch as there is no healthy nature to be educated, but in transformation, worry about their charges up to a certain period of their lives. Then, if the transformation does not come, they seem to think their cares and duties are at an end, and, considering their theories of human destiny, usually accept the situation with wonderful complacency. This was the stage which Miss Silence Withers had reached with reference to Myrtle. It made her infinitely more agreeable, or less disagreeable, as the reader may choose one or the other statement, than when she was always fretting about her "responsibility." She even began to take an interest in some of Myrtle's worldly experiences, and something like a smile would now and then disarrange the chief-mourner stillness of her features, as Myrtle would tell some lively story she had brought away from the gay society she had frequented.

Cynthia Badlam kept her keen eyes on her like a hawk. Murray Bradshaw was away, and here was this handsome and agreeable youth coming in to poach on the preserve of which she considered herself the gamekeeper. What did it mean? She had heard the story about Susan's being off with her old love and on with a new one. Ah ha! this is the game, is it?

Clement Lindsay passed not so much a pleasant evening, as one of strange, perplexed, and mingled delight and inward conflict. He had found his marble once more turned to flesh and blood, and breathing before him. This was the woman he was born for; her form was fit to model his proudest ideal from, her eyes melted him when they rested for an instant on his face,—her voice reached the hidden sensibilities of his inmost nature; those which never betray their existence until the outward chord to which they vibrate in response sends its

message to stir them. But was she not already pledged to that other,—that cold-blooded, contriving, venal, cynical, selfish, polished, fascinating man of the world, whose artful strategy would pass with nine women out of ten for the most romantic devotion?

If he had known the impression he made, he would have felt less anxiety with reference to this particular possibility. Miss Silence expressed herself gratified with his appearance, and thought he looked like a good young man,—he reminded her of a young friend of hers who—[It was the same who had gone to one of the cannibal islands as a missionary,—and stayed there.] Myrtle was very quiet. She had nothing to say about Clement, except that she had met him at a party in the city, and found him agreeable. Miss Cynthia wrote a letter to Murray Bradshaw that very evening, telling him that he had better come back to Oxbow Village as quickly as he could, unless he wished to find his place occupied by an intruder.

In the mean time, the country was watching the garrison in Charleston Harbor. All at once the first gun of the four years' cannonade hurled its ball against the walls of Fort Sumter. There was no hamlet in the land which the reverberations of that cannon-roar did not reach. There was no valley so darkened by overshadowing hills that it did not see the American flag hauled down on the 13th of April. There was no loyal heart in the North that did not answer to the call of the country to its defenders which went forth two days later. The great tide of feeling reached the locality where the lesser events of our narrative were occurring. A meeting of the citizens was instantly called. The venerable Father Pemberton opened it with a prayer that filled every soul with courage and high resolve. The young farmers and mechanics of that whole region joined the companies to which they belonged, or organized in squads and marched at once, or got ready to march, to the scene of conflict.

The contagion of warlike patriotism reached the most peacefully inclined young persons.

"My country calls me," Gifted Hopkins said to Susan Posey, "and I am preparing to obey her summons. If I can pass the medical examination, which it is possible I may, though I fear my constitution *may* be thought too weak, and if no obstacle impedes me, I think of marching in the ranks of the Oxbow Invincibles. If I go, Susan, and I fall, will you not remember me... as one who... cherished the tenderest... sentiments... towards you... and who had looked forward to the time when... when..."

His eyes told the rest. He loved!

Susan forgot all the rules of reserve to which she had been trained. What were cold conventionalities at such a moment? "Never! never!" she said, throwing her arms about his neck and mingling her tears with his, which were flowing freely. "Your country does not need your sword... but it does need... your pen. Your poems will inspire... our soldiers... The Oxbow Invincibles will march to victory, singing your songs.... If you go... and if you... fall... O Gifted!... I... I... yes, I shall die too!"

His love was returned. He was blest!

"Susan," he said, "my own Susan, I yield to your wishes at every sacrifice. Henceforth they will be my law. Yes, I will stay and encourage my brave countrymen to go forward to the bloody field. My voice shall urge them on to the battle-ground. I will give my dearest breath to stimulate their ardor.

"O Susan! My own, own Susan!"

While these interesting events had been going on beneath the modest roof of the Widow Hopkins, affairs had been rapidly hastening to a similar conclusion under the statelier shadow of The Poplars. Clement Lindsay was so well received at his first visit that he ventured to repeat it several times, with so short intervals that it implied something more than a common interest in one of the members of the household. There was no room for doubt who this could be, and Myrtle Hazard could not help seeing that she was the object of his undisguised admiration. The belief was now general in the village that Gifted Hopkins and Susan Posey were either engaged or on the point of being so; and it was equally understood that, whatever might be the explanation, she and her former lover had parted company in an amicable manner.

Love works very strange transformations in young women. Sometimes it leads them to try every mode of adding to their attractions,—their whole thought is how to be most lovely in the eyes they would fill so as to keep out all other images. Poor darlings! We smile at their little vanities, as if they were very trivial things compared with the last Congressman's speech or the great Election Sermon; but Nature knows well what she is about. The maiden's ribbon or ruffle means a great deal more for her than the judge's wig or the priest's surplice.

It was not in this way that the gentle emotion awaking in the breast of Myrtle Hazard betrayed itself. As the thought dawned in her consciousness that she was loved, a change came over her such as the spirit that protected her, according to the harmless fancy she had inherited, might have wept for joy to behold, if tears could flow from angelic eyes. She forgot herself and her ambitions,—the thought of shining in the great world died out in the presence of new visions of a future in which she was not to be her own,—of feelings in the depth of which the shallow vanities which had drawn her young eyes to them for a while seemed less than nothing. Myrtle had not hitherto said to herself that Clement was her lover, yet her whole nature was expanding and deepening in the light of that friendship which any other eye could have known at a glance for the great passion.

Cynthia Badlam wrote a pressing letter to Murray Bradshaw. "There is no time to be lost; she is bewitched, and will be gone beyond hope if this business is not put a stop to."

Love moves in an accelerating ratio; and there comes a time when the progress of the passion escapes from all human formulae, and brings two young hearts, which had been gradually drawing nearer and nearer together, into complete union, with a suddenness that puts an infinity between the moment when all is told and that which went just before.

They were sitting together by themselves in the dimly lighted parlor. They had told each other many experiences of their past lives, very freely, as two intimate friends of different sex might do. Clement had happened to allude to Susan, speaking very kindly and tenderly of her. He hoped this youth to whom she was attached would make her life happy. "You know how simple-hearted and good she is; her image will always be a pleasant one in my memory,—second to but one other."

Myrtle ought, according to the common rules of conversation, to have asked, What other? but she did not. She may have looked as if she wanted to ask,—she may have blushed or turned pale, perhaps she could not trust her voice; but whatever the reason was, she sat still, with downcast eyes. Clement waited a reasonable time, but, finding it was of no use, began again.

“Your image is the one other,—the only one, let me say, for all else fades in its presence,—your image fills all my thought. Will you trust your life and happiness with one who can offer you so little beside his love? You know my whole heart is yours.”

Whether Myrtle said anything in reply or not, whether she acted like Coleridge's Genevieve,—that is, “fled to him and wept,” or suffered her feelings to betray themselves in some less startling confession, we will leave untold. Her answer, spoken or silent, could not have been a cruel one, for in another moment Clement was pressing his lips to hers, after the manner of accepted lovers.

“Our lips have met to-day for the second time,” he said, presently.

She looked at him in wonder. What did he mean? The second time! How assuredly he spoke! She looked him calmly in the face, and awaited his explanation.

“I have a singular story to tell you. On the morning of the 16th of June, now nearly two years ago, I was sitting in my room at Alderbank, some twenty miles down the river, when I heard a cry for help coming from the river. I ran down to the bank, and there I saw a boy in an old boat—”

When it came to the “boy” in the old boat, Myrtle's cheeks flamed so that she could not bear it, and she covered her face with both her hands. But Clement told his story calmly through to the end, sliding gently over its later incidents, for Myrtle's heart was throbbing violently, and her breath a little catching and sighing, as when she had first lived with the new life his breath had given her.

“Why did you ask me for myself, when you could have claimed me?” she said.

“I wanted a free gift, Myrtle,” Clement answered, “and I have it.”

They sat in silence, lost in the sense of that new life which had suddenly risen on their souls.

The door-bell rang sharply. Kitty Fagan answered its summons, and presently entered the parlor and announced that Mr. Bradshaw was in the library, and wished to see the ladies.

CHAPTER XXXIV. MURRAY BRADSHAW PLAYS HIS LAST CARD.

“How can I see that man this evening, Mr. Lindsay?”

“May I not be Clement, dearest? I would not see him at all, Myrtle. I don't believe you will find much pleasure in listening to his fine speeches.”

“I cannot endure it.—Kitty, tell him I am engaged, and cannot see him this evening. No, no! don't say engaged, say very much occupied.”

Kitty departed, communing with herself in this wise:—“Ockipied, is it? An' that's what ye cahl it when ye 're kapin' company with one young gintleman an' don't want another young gintleman to come in an' help the two of ye? Ye won't get y'r pigs to market to-day, Mr. Bridshaw, no, nor to-morrow, nayther, Mr. Bridshaw. It's Mrs. Lindsay that Miss Myrtle is goin' to be,—an' a big cake there'll be at the weddin' frosted all over,—won't ye be plased with a slice o' that, Mr. Bridshaw?”

With these reflections in her mind, Mistress Kitty delivered her message, not without a gleam of malicious intelligence in her look that stung Mr. Bradshaw sharply. He had noticed a hat in the entry, and a little stick by it which he remembered well as one he had seen carried by Clement Lindsay. But he was used to concealing his emotions, and he greeted the two older ladies who presently came into the library so pleasantly, that no one who had not studied his face long and carefully would have suspected the bitterness of heart that lay hidden far down beneath his deceptive smile. He told Miss Silence, with much apparent interest, the story of his journey. He gave her an account of the progress of the case in which the estate of which she inherited the principal portion was interested. He did not tell her that a final decision which would settle the right to the great claim might be expected at any moment, and he did not tell her that there was very little doubt that it would be in favor of the heirs of Malachi Withers. He was very sorry he could not see Miss Hazard that evening,—hoped he should be more fortunate to-morrow forenoon, when he intended to call again,—had a message for her from one of her former school friends, which he was anxious to give her. He exchanged certain looks and hints with Miss Cynthia, which led her to withdraw and bring down the papers he had entrusted to her. At the close of his visit, she followed him into the entry with a lamp, as was her common custom.

“What's the meaning of all this, Cynthia? Is that fellow making love to Myrtle?”

“I'm afraid so, Mr. Bradshaw. He's been here several times, and they seem to be getting intimate. I couldn't do anything to stop it.”

“Give me the papers,—quick!”

Cynthia pulled the package from her pocket. Murray Bradshaw looked sharply at it. A little crumpled,—crowded into her pocket. Seal unbroken. All safe.

“I shall come again to-morrow forenoon. Another day and it will be all up. The decision of the court will be known. It won't be my fault if one visit is not enough.—You don't suppose Myrtle is in love with this fellow?”

“She acts as—if she might be. You know he's broke with Susan Posey, and there's nothing to hinder. If you ask my opinion, I think it's your last chance: she is n't a girl to half do things, and if she has taken to this man

it will be hard to make her change her mind. But she's young, and she has had a liking for you, and if you manage it well there's no telling."

Two notes passed between Myrtle Hazard and Master Byles Gridley that evening. Mistress Kitty Fagan, who had kept her ears pretty wide open, carried them.

Murray Bradshaw went home in a very desperate state of feeling. He had laid his plans, as he thought, with perfect skill, and the certainty of their securing their end. These papers were to have been taken from the envelope, and found in the garret just at the right moment, either by Cynthia herself or one of the other members of the family, who was to be led on, as it were accidentally, to the discovery. The right moment must be close at hand. He was to offer his hand—and heart, of course—to Myrtle, and it was to be accepted. As soon as the decision of the land case was made known, or not long afterwards, there was to be a search in the garret for papers, and these were to be discovered in a certain dusty recess, where, of course, they would have been placed by Miss Cynthia.

And now the one condition which gave any value to these arrangements seemed like to fail. This obscure youth—this poor fool, who had been on the point of marrying a simpleton to whom he had made a boyish promise—was coming between him and the object of his long pursuit,—the woman who had every attraction to draw him to herself. It had been a matter of pride with Murray Bradshaw that he never lost his temper so as to interfere with the precise course of action which his cool judgment approved; but now he was almost beside himself with passion. His labors, as he believed, had secured the favorable issue of the great case so long pending. He had followed Myrtle through her whole career, if not as her avowed lover, at least as one whose friendship promised to flower in love in due season. The moment had come when the scene and the characters in this village drama were to undergo a change as sudden and as brilliant as is seen in those fairy spectacles where the dark background changes to a golden palace and the sober dresses are replaced by robes of regal splendor. The change was fast approaching; but he, the enchanter, as he had thought himself, found his wand broken, and his power given to another.

He could not sleep during that night. He paced his room, a prey to jealousy and envy and rage, which his calm temperament had kept him from feeling in their intensity up to this miserable hour. He thought of all that a maddened nature can imagine to deaden its own intolerable anguish. Of revenge. If Myrtle rejected his suit, should he take her life on the spot, that she might never be another's,—that neither man nor woman should ever triumph over him,—the proud ambitious man, defeated, humbled, scorned? No! that was a meanness of egotism which only the most vulgar souls could be capable of. Should he challenge her lover? It was not the way of the people and time, and ended in absurd complications, if anybody was foolish enough to try it. Shoot him? The idea floated through his mind, for he thought of everything; but he was a lawyer, and not a fool, and had no idea of figuring in court as a criminal. Besides, he was not a murderer,—cunning was his natural weapon, not violence. He had a certain admiration of desperate crime in others, as showing nerve and force, but he did not feel it to be his own style of doing business.

During the night he made every arrangement for leaving the village the next day, in case he failed to make any impression on Myrtle Hazard and found that his chance was gone. He wrote a letter to his partner, telling him that he had left to join one of the regiments forming in the city. He adjusted all his business matters so that his partner should find as little trouble as possible. A little before dawn he threw himself on the bed, but he could not sleep; and he rose at sunrise, and finished his preparations for his departure to the city.

The morning dragged along slowly. He could not go to the office, not wishing to meet his partner again. After breakfast he dressed himself with great care, for he meant to show himself in the best possible aspect. Just before he left the house to go to The Poplars, he took the sealed package from his trunk, broke open the envelope, took from it a single paper,—it had some spots on it which distinguished it from all the rest,—put it separately in his pocket, and then the envelope containing the other papers. The calm smile he wore on his features as he set forth cost him a greater effort than he had ever made before to put it on. He was moulding his face to the look with which he meant to present himself; and the muscles had been sternly fixed so long that it was a task to bring them to their habitual expression in company,—that of ingenuous good-nature.

He was shown into the parlor at The Poplars; and Kitty told Myrtle that he had called and inquired for her and was waiting down stairs.

"Tell him I will be down presently," she said. "And, Kitty, now mind just what I tell you. Leave your kitchen door open, so that you can hear anything fall in the parlor. If you hear a book fall,—it will be a heavy one, and will make some noise,—run straight up here to my little chamber, and hang this red scarf out of the window. The left-hand side-sash, mind, so that anybody can see it from the road. If Mr. Gridley calls, show him into the parlor, no matter who is there."

Kitty Fagan looked amazingly intelligent, and promised that she would do exactly as she was told. Myrtle followed her down stairs almost immediately, and went into the parlor, where Mr. Bradshaw was waiting.

Never in his calmest moments had he worn a more insinuating smile on his features than that with which he now greeted Myrtle. So gentle, so gracious, so full of trust, such a completely natural expression of a kind, genial character did it seem, that to any but an expert it would have appeared impossible that such an effect could be produced by the skilful balancing of half a dozen pairs of little muscles that manage the lips and the corners of the mouth. The tones of his voice were subdued into accord with the look of his features; his whole manner was fascinating, as far as any conscious effort could make it so. It was just one of those artificially pleasing effects that so often pass with such as have little experience of life for the genuine expression of character and feeling. But Myrtle had learned the look that shapes itself on the features of one who loves with a love that seeketh not its own, and she knew the difference between acting and reality. She met his insinuating approach with a courtesy so carefully ordered that it was of itself a sentence without appeal. Artful persons often interpret sincere ones by their own standard. Murray Bradshaw thought little of this somewhat formal address,—a few minutes would break this thin film to pieces. He was not only a suitor with a prize to gain, he was a colloquial artist about to employ all the resources of his specialty.

He introduced the conversation in the most natural and easy way, by giving her the message from a former school-mate to which he had referred, coloring it so delicately, as he delivered it, that it became an innocent-

looking flattery. Myrtle found herself in a rose-colored atmosphere, not from Murray Bradshaw's admiration, as it seemed, but only reflected by his mind from another source. That was one of his arts, always, if possible, to associate himself incidentally, as it appeared, and unavoidably, with an agreeable impression.

So Myrtle was betrayed into smiling and being pleased before he had said a word about himself or his affairs. Then he told her of the adventures and labors of his late expedition; of certain evidence which at the very last moment he had unearthed, and which was very probably the turning-point in the case. He could not help feeling that she must eventually reap some benefit from the good fortune with which his efforts had been attended. The thought that it might yet be so had been a great source of encouragement to him,—it would always be a great happiness to him to remember that he had done anything to make her happy.

Myrtle was very glad that he had been so far successful,—she did not know that it made much difference to her, but she was obliged to him for the desire of serving her that he had expressed.

"My services are always yours, Miss Hazard. There is no sacrifice I would not willingly make for your benefit. I have never had but one feeling toward you. You cannot be ignorant of what that feeling is."

"I know, Mr. Bradshaw, it has been one of kindness. I have to thank you for many friendly attentions, for which I hope I have never been ungrateful."

"Kindness is not all that I feel towards you, Miss Hazard. If that were all, my lips would not tremble as they do now in telling you my feelings.—I love you."

He sprang the great confession on Myrtle a little sooner than he had meant. It was so hard to go on making phrases! Myrtle changed color a little, for she was startled.

The seemingly involuntary movement she made brought her arm against a large dictionary, which lay very near the edge of the table on which it was resting. The book fell with a loud noise to the floor.

There it lay. The young man awaited her answer; he did not think of polite forms at such a moment.

"It cannot be, Mr. Bradshaw,—it must not be. I have known you long, and I am not ignorant of all your brilliant qualities, but you must not speak to me of love. Your regard,—your friendly interest, tell me that I shall always have these, but do not distress me with offering more than these."

"I do not ask you to give me your love in return; I only ask you not to bid me despair. Let me believe that the time may come when you will listen to me,—no matter how distant. You are young,—you have a tender heart,—you would not doom one who only lives for you to wretchedness,—so long that we have known each other. It cannot be that any other has come between us—"

Myrtle blushed so deeply that there was no need of his finishing his question.

"Do you mean, Myrtle Hazard, that you have cast me aside for another?—for this stranger—this artist—who was with you yesterday when I came, bringing with me the story of all I had done for you, yes, for you,—and was ignominiously refused the privilege of seeing you?" Rage and jealousy had got the better of him this time. He rose as he spoke, and looked upon her with such passion kindling in his eyes that he seemed ready for any desperate act.

"I have thanked you for any services you may have rendered me, Mr. Bradshaw," Myrtle answered, very calmly, "and I hope you will add one more to them by sparing me this rude questioning. I wished to treat you as a friend; I hope you will not render that impossible."

He had recovered himself for one more last effort. "I was impatient: overlook it, I beg you. I was thinking of all the happiness I have labored to secure for you, and of the ruin to us both it would be if you scornfully rejected the love I offer you,—if you refuse to leave me any hope for the future,—if you insist on throwing yourself away on this man, so lately pledged to another. I hold the key of all your earthly fortunes in my hand. My love for you inspired me in all that I have done, and, now that I come to lay the result of my labors at your feet, you turn from me, and offer my reward to a stranger. I do not ask you to say this day that you will be mine,—I would not force your inclinations,—but I do ask you that you will hold yourself free of all others, and listen to me as one who may yet be more than a friend. Say so much as this, Myrtle, and you shall have such a future as you never dreamed of. Fortune, position, all that this world can give, shall be yours."

"Never! never! If you could offer me the whole world, or take away from me all that the world can give, it would make no difference to me. I cannot tell what power you hold over me, whether of life and death, or of wealth and poverty; but after talking to me of love, I should not have thought you would have wronged me by suggesting any meaner motive. It is only because we have been on friendly terms so long that I have listened to you as I have done. You have said more than enough, and I beg you will allow me to put an end to this interview."

She rose to leave the room. But Murray Bradshaw had gone too far to control himself,—he listened only to the rage which blinded him.

"Not yet!" he said. "Stay one moment, and you shall know what your pride and self-will have cost you!"

Myrtle stood, arrested, whether by fear, or curiosity, or the passive subjection of her muscles to his imperious will, it would be hard to say.

Murray Bradshaw took out the spotted paper from his breast-pocket, and held it up before her. "Look here!" he exclaimed. "This would have made you rich,—it would have crowned you a queen in society,—it would have given you all, and more than all, that you ever dreamed of luxury, of splendor, of enjoyment; and I, who won it for you, would have taught you how to make life yield every bliss it had in store to your wishes. You reject my offer unconditionally?"

Myrtle expressed her negative only by a slight contemptuous movement.

Murray Bradshaw walked deliberately to the fireplace, and laid the spotted paper upon the burning coals. It writhed and curled, blackened, flamed, and in a moment was a cinder dropping into ashes. He folded his arms, and stood looking at the wreck of Myrtle's future, the work of his cruel hand. Strangely enough, Myrtle herself was fascinated, as it were, by the apparent solemnity of this mysterious sacrifice. She had kept her eyes steadily on him all the time, and was still gazing at the altar on which her happiness had been in some way offered up, when the door was opened by Kitty Fagan, and Master Byles Gridley was ushered into the

parlor.

"Too late, old man!" Murray Bradshaw exclaimed, in a hoarse and savage voice, as he passed out of the room, and strode through the entry and down the avenue. It was the last time the old gate of The Poplars was to open or close for him. The same day he left the village; and the next time his name was mentioned it was as an officer in one of the regiments just raised and about marching to the seat of war.

CHAPTER XXXV. THE SPOTTED PAPER.

What Master Gridley may have said to Myrtle Hazard that served to calm her after this exciting scene cannot now be recalled. That Murray Bradshaw thought he was inflicting a deadly injury on her was plain enough. That Master Gridley did succeed in convincing her that no great harm had probably been done her is equally certain.

Like all bachelors who have lived a lonely life, Master Byles Gridley had his habits, which nothing short of some terrestrial convulsion—or perhaps, in his case, some instinct that drove him forth to help somebody in trouble—could possibly derange. After his breakfast, he always sat and read awhile,—the paper, if a new one came to hand, or some pleasant old author,—if a little neglected by the world of readers, he felt more at ease with him, and loved him all the better.

But on the morning after his interview with Myrtle Hazard, he had received a letter which made him forget newspapers, old authors, almost everything, for the moment. It was from the publisher with whom he had had a conversation, it may be remembered, when he visited the city, and was to this effect: That Our Firm propose to print and stereotype the work originally published under the title of "Thoughts on the Universe"; said work to be remodelled according to the plan suggested by the Author, with the corrections, alterations, omissions, and additions proposed by him; said work to be published under the following title, to wit: _____; said work to be printed in 12mo, on paper of good quality, from new types, etc., etc., and for every copy thereof printed the author to receive, etc., etc.

Master Gridley sat as in a trance, reading this letter over and over, to know if it could be really so. So it really was. His book had disappeared from the market long ago, as the elm seeds that carpet the ground and never germinate disappear. At last it had got a certain value as a curiosity for book-hunters. Some one of them, keener-eyed than the rest, had seen that there was a meaning and virtue in this unsuccessful book, for which there was a new audience educated since it had tried to breathe before its time. Out of this had grown at last the publisher's proposal. It was too much: his heart swelled with joy, and his eyes filled with tears.

How could he resist the temptation? He took down his own particular copy of the book, which was yet to do him honor as its parent, and began reading. As his eye fell on one paragraph after another, he nodded approval of this sentiment or opinion, he shook his head as if questioning whether this other were not to be modified or left out, he condemned a third as being no longer true for him as when it was written, and he sanctioned a fourth with his hearty approval. The reader may like a few specimens from this early edition, now a rarity. He shall have them, with Master Gridley's verbal comments. The book, as its name implied, contained "Thoughts" rather than consecutive trains of reasoning or continuous disquisitions. What he read and remarked upon were a few of the more pointed statements which stood out in the chapters he was turning over. The worth of the book must not be judged by these almost random specimens.

"THE BEST THOUGHT, LIKE THE MOST PERFECT DIGESTION, IS DONE UNCONSCIOUSLY.—Develop that.—Ideas at compound interest in the mind.—Be aye sticking in an idea,—while you're sleeping it'll be growing. Seed of a thought to-day,—flower to-morrow—next week—ten years from now, etc.—Article by and by for the....

"THE SUPREME SELF-INDULGENCE IS TO SURRENDER THE WILL TO A SPIRITUAL DIRECTOR.—Protestantism gave up a great luxury.—Did it though?

"ASIATIC MODES OF THOUGHT AND SPEECH DO NOT EXPRESS THE 'RELATIONS IN WHICH THE AMERICAN FEELS HIMSELF TO STAND TO HIS SUPERIORS IN THIS OR ANY OTHER SPHERE OF BEING. REPUBLICANISM MUST HAVE ITS OWN RELIGIOUS PHRASEOLOGY, WHICH IS NOT THAT BORROWED FROM ORIENTAL DESPOTISMS.

"IDOLS AND DOGMAS IN PLACE OF CHARACTER; PILLS AND THEORIES IN PLACE OF WHOLESOME LIVING. SEE THE HISTORIES OF THEOLOGY AND MEDICINE PASSIM.—Hits 'em.

"'OF SUCH IS THE KINGDOM OF HEAVEN.' DO YOU MEAN TO SAY JEAN CHAUVIN, THAT 'HEAVEN LIES ABOUT US IN OUR INFANCY'?

"WHY DO YOU COMPLAIN OF YOUR ORGANIZATION? YOUR SOUL WAS IN A HURRY, AND MADE A RUSH FOR A BODY. THERE ARE PATIENT SPIRITS THAT HAVE WAITED FROM ETERNITY, AND NEVER FOUND PARENTS FIT TO BE BORN OF.—How do you know anything about all that? Dele.

"WHAT SWEET, SMOOTH VOICES THE NEGROES HAVE! A HUNDRED GENERATIONS FED ON BANANAS.—COMPARE THEM WITH OUR APPLE-EATING WHITE FOLKS!—It won't do. Bananas came from the West Indies.

"TO TELL A MAN'S TEMPERAMENT BY HIS HANDWRITING. SEE IF THE DOTS OF HIS I'S RUN AHEAD OR NOT, AND IF THEY DO, HOW FAR.—I have tried that—on myself.

"MARRYING INTO SOME FAMILIES IS THE NEXT THING TO BEING CANONIZED.—Not so true now as twenty or thirty years ago. As many bladders, but more pins.

"FISH AND DANDIES ONLY KEEP ON ICE.—Who will take? Explain in note how all warmth approaching blood heat spoils fops and flounders.

"FLYING IS A LOST ART AMONG MEN AND REPTILES. BATS FLY, AND MEN OUGHT TO. TRY A LIGHT TURBINE. RISE A MILE STRAIGHT, FALL HALF A MILE SLANTING,—RISE HALF A MILE STRAIGHT, FALL HALF A MILE SLANTING, AND SO ON. OR SLANT UP AND SLANT DOWN.—Poh! You ain't such a fool as to think that is new,—are you?

"Put in my telegraph project. Central station. Cables with insulated wires running to it from different quarters of the city. These form the centripetal system. From central station, wires to all the livery stables, messenger stands, provision shops, etc., etc. These form the centrifugal system. Any house may have a wire in the nearest cable at small cost.

"DO YOU WANT TO BE REMEMBERED AFTER THE CONTINENTS HAVE GONE UNDER, AND COME UP AGAIN, AND DRIED, AND BRED NEW RACES? HAVE YOUR NAME STAMPED ON ALL YOUR PLATES AND CUPS AND SAUCERS. NOTHING OF YOU OR YOURS WILL LAST LIKE THOSE. I NEVER SIT DOWN AT MY TABLE WITHOUT LOOKING AT THE CHINA SERVICE, AND SAYING, 'HERE ARE MY MONUMENTS. THAT BUTTER-DISH IS MY URN. THIS SOUP-PLATE IS MY MEMORIAL TABLET.' NO NEED OF A SKELETON AT MY BANQUETS! I FEED FROM MY TOMBSTONE AND READ MY EPITAPH AT THE BOTTOM OF EVERY TEACUP.—Good."

He fell into a reverie as he finished reading this last sentence. He thought of the dim and dread future,—all the changes that it would bring to him, to all the living, to the face of the globe, to the order of earthly things. He saw men of a new race, alien to all that had ever lived, excavating with strange, vast engines the old ocean-bed now become habitable land. And as the great scoops turned out the earth they had fetched up from the unexplored depths, a relic of a former simple civilization revealed the fact that here a tribe of human beings had lived and perished.—Only the coffee-cup he had in his hand half an hour ago.—Where would he be then? and Mrs. Hopkins, and Gifted, and Susan, and everybody? and President Buchanan? and the Boston State-House? and Broadway?—O Lord, Lord, Lord! And the sun perceptibly smaller, according to the astronomers, and the earth cooled down a number of degrees, and inconceivable arts practised by men of a type yet undreamed of, and all the fighting creeds merged in one great universal—

A knock at his door interrupted his reverie. Miss Susan Posey informed him that a gentleman was waiting below who wished to see him.

"Show him up to my study, Susan Posey, if you please," said Master Gridley.

Mr. Penhallow presented himself at Mr. Gridley's door with a countenance expressive of a very high state of excitement.

"You have heard the news, Mr. Gridley, I suppose?"

"What news, Mr. Penhallow?"

"First, that my partner has left very unexpectedly to enlist in a regiment just forming. Second, that the great land case is decided in favor of the heirs of the late Malachi Withers."

"Your partner must have known about it yesterday?"

"He did, even before I knew it. He thought himself possessed of a very important document, as you know, of which he has made, or means to make, some use. You are aware of the artifice I employed to prevent any possible evil consequences from any action of his. I have the genuine document, of course. I wish you to go over with me to The Poplars, and I should be glad to have good old Father Pemberton go with us; for it is a serious matter, and will be a great surprise to more than one of the family."

They walked together to the old house, where the old clergyman had lived for more than half a century. He was used to being neglected by the people who ran after his younger colleague; and the attention paid him in asking him to be present on an important occasion, as he understood this to be, pleased him greatly. He smoothed his long white locks, and called a grand-daughter to help make him look fitly for such an occasion, and, being at last got into his grandest Sunday aspect, took his faithful staff, and set out with the two gentlemen for The Poplars. On the way, Mr. Penhallow explained to him the occasion of their visit, and the general character of the facts he had to announce. He wished the venerable minister to prepare Miss Silence Withers for a revelation which would materially change her future prospects. He thought it might be well, also, if he would say a few words to Myrtle Hazard, for whom a new life, with new and untried temptations, was about to open. His business was, as a lawyer, to make known to these parties the facts just come to his own knowledge affecting their interests. He had asked Mr. Gridley to go with him, as having intimate relations with one of the parties referred to, and as having been the principal agent in securing to that party the advantages which were to accrue to her from the new turn of events. "You are a second parent to her, Mr. Gridley," he said. "Your vigilance, your shrewdness, and your-spectacles have saved her. I hope she knows the full extent of her obligations to you, and that she will always look to you for counsel in all her needs. She will want a wise friend, for she is to begin the world anew."

What had happened, when she saw the three grave gentlemen at the door early in the forenoon, Mistress Kitty Fagan could not guess. Something relating to Miss Myrtle, no doubt: she wasn't goin' to be married right off to Mr. Clement,—was she,—and no church, nor cake, nor anything? The gentlemen were shown into the parlor. "Ask Miss Withers to go into the library, Kitty," said Master Gridley. "Dr. Pemberton wishes to speak with her." The good old man was prepared for a scene with Miss Silence. He announced to her, in a kind and delicate way, that she must make up her mind to the disappointment of certain expectations which she had long entertained, and which, as her lawyer, Mr. Penhallow, had come to inform her and others, were to be finally relinquished from this hour.

To his great surprise, Miss Silence received this communication almost cheerfully. It seemed more like a relief to her than anything else. Her one dread in this world was her "responsibility"; and the thought that she might have to account for ten talents hereafter, instead of one, had often of late been a positive distress

to her. There was also in her mind a secret disgust at the thought of the hungry creatures who would swarm round her if she should ever be in a position to bestow patronage. This had grown upon her as the habits of lonely life gave her more and more of that fastidious dislike to males in general, as such, which is not rare in maidens who have seen the roses of more summers than politeness cares to mention.

Father Pemberton then asked if he could see Miss Myrtle Hazard a few moments in the library before they went into the parlor, where they were to meet Mr. Penhallow and Mr. Gridley, for the purpose of receiving the lawyer's communication.

What change was this which Myrtle had undergone since love had touched her heart, and her visions of worldly enjoyment had faded before the thought of sharing and ennobling the life of one who was worthy of her best affections,—of living for another, and of finding her own noblest self in that divine office of woman? She had laid aside the bracelet which she had so long worn as a kind of charm as well as an ornament. One would have said her features had lost something of that look of imperious beauty which had added to her resemblance to the dead woman whose glowing portrait hung upon her wall. And if it could be that, after so many generations, the blood of her who had died for her faith could show in her descendants veins, and the soul of that elect lady of her race look out from her far-removed offspring's dark eyes, such a transfusion of the martyr's life and spiritual being might well seem to manifest itself in Myrtle Hazard.

The large-hearted old man forgot his scholastic theory of human nature as he looked upon her face. He thought he saw in her the dawning of that grace which some are born with; which some, like Myrtle, only reach through many trials and dangers; which some seem to show for a while and then lose; which too many never reach while they wear the robes of earth, but which speaks of the kingdom of heaven already begun in the heart of a child of earth. He told her simply the story of the occurrences which had brought them together in the old house, with the message the lawyer was to deliver to its inmates. He wished to prepare her for what might have been too sudden a surprise.

But Myrtle was not wholly unprepared for some such revelation. There was little danger that any such announcement would throw her mind from its balance after the inward conflict through which she had been passing. For her lover had left her almost as soon as he had told her the story of his passion, and the relation in which he stood to her. He, too, had gone to answer his country's call to her children, not driven away by crime and shame and despair, but quitting all—his new-born happiness, the art in which he was an enthusiast, his prospects of success and honor—to obey the higher command of duty. War was to him, as to so many of the noble youth who went forth, only organized barbarism, hateful but for the sacred cause which alone redeemed it from the curse that blasted the first murderer. God only knew the sacrifice such young men as he made.

How brief Myrtle's dream had been! She almost doubted, at some moments, whether she would not awake from it, as from her other visions, and find it all unreal. There was no need of fearing any undue excitement of her mind after the alternations of feeling she had just experienced. Nothing seemed of much moment to her which could come from without,—her real world was within, and the light of its day and the breath of its life came from her love, made holy by the self-forgetfulness on both sides which was born with it.

Only one member of the household was in danger of finding the excitement more than she could bear. Miss Cynthia knew that all Murray Bradshaw's plans, in which he had taken care that she should have a personal interest, had utterly failed. What he had done with the means of revenge in his power,—if, indeed, they were still in his power,—she did not know. She only knew that there had been a terrible scene, and that he had gone, leaving it uncertain whether he would ever return. It was with fear and trembling that she heard the summons which went forth, that the whole family should meet in the parlor to listen to a statement from Mr. Penhallow. They all gathered as requested, and sat round the room, with the exception of Mistress Kitty Fagan, who knew her place too well to be sittin' down with the likes o' them, and stood with attentive ears in the doorway.

Mr. Penhallow then read from a printed paper the decision of the Supreme Court in the land case so long pending, where the estate of the late Malachi Withers was the claimant, against certain parties pretending to hold under an ancient grant. The decision was in favor of the estate.

"This gives a great property to the heirs," Mr. Penhallow remarked, "and the question as to who these heirs are has to be opened. For the will under which Silence Withers, sister of the deceased, has inherited is dated some years previous to the decease, and it was not very strange that a will of later date should be discovered. Such a will has been discovered. It is the instrument I have here."

Myrtle Hazard opened her eyes very widely, for the paper Mr. Penhallow held looked exactly like that which Murray Bradshaw had burned, and, what was curious, had some spots on it just like some she had noticed on that.

"This will," Mr. Penhallow said, "signed by witnesses dead or absent from this place, makes a disposition of the testator's property in some respects similar to that of the previous one, but with a single change, which proves to be of very great importance."

Mr. Penhallow proceeded to read the will. The important change in the disposition of the property was this: in case the land claim was decided in favor of the estate, then, in addition to the small provision made for Myrtle Hazard, the property so coming to the estate should all go to her. There was no question about the genuineness and the legal sufficiency of this instrument. Its date was not very long after the preceding one, at a period when, as was well known, he had almost given up the hope of gaining his case, and when the property was of little value compared to that which it had at present.

A long silence followed this reading. Then, to the surprise of all, Miss Silence Withers rose, and went to Myrtle Hazard, and wished her joy with every appearance of sincerity. She was relieved of a great responsibility. Myrtle was young and could bear it better. She hoped that her young relative would live long to enjoy the blessings Providence had bestowed upon her, and to use them for the good of the community, and especially the promotion of the education of deserving youth. If some fitting person could be found to advise Myrtle, whose affairs would require much care, it would be a great relief to her.

They all went up to Myrtle and congratulated her on her change of fortune. Even Cynthia Badlam got out a

phrase or two which passed muster in the midst of the general excitement. As for Kitty Fagan, she could not say a word, but caught Myrtle's hand and kissed it as if it belonged to her own saint; and then, suddenly applying her apron to her eyes, retreated from a scene which was too much for her, in a state of complete mental beatitude and total bodily discomfiture.

Then Silence asked the old minister to make a prayer, and he stretched his hands up to Heaven, and called down all the blessings of Providence upon all the household, and especially upon this young handmaiden, who was to be tried with prosperity, and would need all aid from above to keep her from its dangers.

Then Mr. Penhallow asked Myrtle if she had any choice as to the friend who should have charge of her affairs. Myrtle turned to Master Byles Gridley, and said, "You have been my friend and protector so far, will you continue to be so hereafter?"

Master Gridley tried very hard to begin a few words of thanks to her for her preference, but finding his voice a little uncertain, contented himself with pressing her hand and saying, "Most willingly, my dear daughter!"

CHAPTER XXXVI. CONCLUSION.

The same day the great news of Myrtle Hazard's accession to fortune came out, the secret was told that she had promised herself in marriage to Mr. Clement Lindsay. But her friends hardly knew how to congratulate her on this last event. Her lover was gone, to risk his life, not improbably to lose it, or to come home a wreck, crippled by wounds, or worn out with disease.

Some of them wondered to see her so cheerful in such a moment of trial. They could not know how the manly strength of Clement's determination had nerved her for womanly endurance. They had not learned that a great cause makes great souls, or reveals them to themselves,—a lesson taught by so many noble examples in the times that followed. Myrtle's only desire seemed to be to labor in some way to help the soldiers and their families. She appeared to have forgotten everything for this duty; she had no time for regrets, if she were disposed to indulge them, and she hardly asked a question as to the extent of the fortune which had fallen to her.

The next number of the "Banner and Oracle" contained two announcements which she read with some interest when her attention was called to them. They were as follows:

"A fair and accomplished daughter of this village comes, by the late decision of the Supreme Court, into possession of a property estimated at a million of dollars or more. It consists of a large tract of land purchased many years ago by the late Malachi Withers, now become of immense value by the growth of a city in its neighborhood, the opening of mines, etc., etc. It is rumored that the lovely and highly educated heiress has formed a connection looking towards matrimony with a certain distinguished artist."

"Our distinguished young townsman, William Murray Bradshaw, Esq., has been among the first to respond to the call of the country for champions to defend her from traitors. We understand that he has obtained a captaincy in the __th regiment, about to march to the threatened seat of war. May victory perch on his banners!"

The two lovers, parted by their own self-sacrificing choice in the very hour that promised to bring them so much happiness, labored for the common cause during all the terrible years of warfare, one in the camp and the field, the other in the not less needful work which the good women carried on at home, or wherever their services were needed. Clement—now Captain Lindsay—returned at the end of his first campaign charged with a special office. Some months later, after one of the great battles, he was sent home wounded. He wore the leaf on his shoulder which entitled him to be called Major Lindsay. He recovered from his wound only too rapidly, for Myrtle had visited him daily in the military hospital where he had resided for treatment; and it was bitter parting. The telegraph wires were thrilling almost hourly with messages of death, and the long pine boxes came by almost every train,—no need of asking what they held.

Once more he came, detailed on special duty, and this time with the eagle on his shoulder,—he was Colonel Lindsay. The lovers could not part again of their own free will. Some adventurous women had followed their husbands to the camp, and Myrtle looked as if she could play the part of the Maid of Saragossa on occasion. So Clement asked her if she would return with him as his wife; and Myrtle answered, with as much willingness to submit as a maiden might fairly show under such circumstances, that she would do his bidding. Thereupon, with the shortest possible legal notice, Father Pemberton was sent for, and the ceremony was performed in the presence of a few witnesses in the large parlor at The Poplars, which was adorned with flowers, and hung round with all the portraits of the dead members of the family, summoned as witnesses to the celebration. One witness looked on with unmoved features, yet Myrtle thought there was a more heavenly smile on her faded lips than she had ever seen before beaming from the canvas,—it was Ann Holyoake, the martyr to her faith, the guardian spirit of Myrtle's visions, who seemed to breathe a holier benediction than any words—even those of the good old Father Pemberton himself—could convey.

They went back together to the camp. From that period until the end of the war, Myrtle passed her time between the life of the tent and that of the hospital. In the offices of mercy which she performed for the sick and the wounded and the dying, the dross of her nature seemed to be burned away. The conflict of mingled lives in her blood had ceased. No lawless impulses usurped the place of that serene resolve which had grown strong by every exercise of its high prerogative. If she had been called now to die for any worthy cause, her race would have been ennobled by a second martyr, true to the blood of her who died under the cruel Queen.

Many sad sights she saw in the great hospital where she passed some months at intervals,—one never to be forgotten. An officer was brought into the ward where she was in attendance. "Shot through the lungs,—pretty nearly gone."

She went softly to his bedside. He was breathing with great difficulty; his face was almost convulsed with the effort, but she recognized him in a moment; it was Murray Bradshaw,—Captain Bradshaw, as she knew by the bars on his coat flung upon the bed where he had just been laid.

She addressed him by name, tenderly as if he had been a dear brother; she saw on his face that hers were to be the last kind words he would ever hear.

He turned his glazing eyes upon her. "Who are you?" he said in a feeble voice.

"An old friend," she answered; "you knew me as Myrtle Hazard."

He started. "You by my bedside! You caring for me!—for me, that burned the title to your fortune to ashes before your eyes! You can't forgive that,—I won't believe it! Don't you hate me, dying as I am?"

Myrtle was used to maintaining a perfect calmness of voice and countenance, and she held her feelings firmly down. "I have nothing to forgive you, Mr. Bradshaw. You may have meant to do me wrong, but Providence raised up a protector for me. The paper you burned was not the original,—it was a copy substituted for it—"

"And did the old man outwit me after all?" he cried out, rising suddenly in bed, and clasping his hands behind his head to give him a few more gasps of breath. "I knew he was cunning, but I thought I was his match. It must have been Byles Gridley,—nobody else. And so the old man beat me after all, and saved you from ruin! Thank God that it came out so! Thank God! I can die now. Give me your hand, Myrtle."

She took his hand, and held it until it gently loosed its hold, and he ceased to breathe. Myrtle's creed was a simple one, with more of trust and love in it than of systematized articles of belief. She cherished the fond hope that these last words of one who had erred so miserably were a token of some blessed change which the influences of the better world might carry onward until he should have outgrown the sins and the weaknesses of his earthly career.

Soon after this she rejoined her husband in the camp. From time to time they received stray copies of the "Banner and Oracle," which, to Myrtle especially, were full of interest, even to the last advertisement. A few paragraphs may be reproduced here which relate to persons who have figured in this narrative.

"TEMPLE OF HYMEN.

"Married, on the 6th instant, Fordyce Hurlbut, M. D., to Olive, only daughter of the Rev. Ambrose Eveleth. The editor of this paper returns his acknowledgments for a bountiful slice of the wedding-cake. May their shadows never be less!"

Not many weeks after this appeared the following:

"Died in this place, on the 28th instant, the venerable Lemuel Hurlbut, M. D., at the great age of XCVI years.

"With the ancient is wisdom, and in length of days understanding."

Myrtle recalled his kind care of her in her illness, and paid the tribute of a sigh to his memory,—there was nothing in a death like his to call for any aching regret.

The usual routine of small occurrences was duly recorded in the village paper for some weeks longer, when she was startled and shocked by receiving a number containing the following paragraph:

CALAMITOUS ACCIDENT

"It is known to our readers that the steeple of the old meeting-house was struck by lightning about a month ago. The frame of the building was a good deal jarred by the shock, but no danger was apprehended from the injury it had received. On Sunday last the congregation came together as usual. The Rev. Mr. Stoker was alone in the pulpit, the Rev. Doctor Pemberton having been detained by slight indisposition. The sermon was from the text, 'The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid.' (Isaiah xi. 6.) The pastor described the millennium as—the reign of love and peace, in eloquent and impressive language. He was in the midst of the prayer which follows the sermon, and had just put up a petition that the spirit of affection and faith and trust might grow up and prevail among the flock of which he was the shepherd, more especially those dear lambs whom he gathered with his arm, and carried in his bosom, when the old sounding-board, which had hung safely for nearly a century,—loosened, no doubt by the bolt which had fallen on the church,—broke from its fastenings, and fell with a loud crash upon the pulpit, crushing the Rev. Mr. Stoker under its ruins. The scene that followed beggars description. Cries and shrieks resounded through the house. Two or three young women fainted entirely away. Mr. Penhallow, Deacon Rumrill, Gifted Hopkins, Esq., and others, came forward immediately, and after much effort succeeded in removing the wreck of the sounding-board, and extricating their unfortunate pastor. He was not fatally injured, it is hoped; but, sad to relate, he received such a violent blow upon the spine of the back, that palsy of the lower extremities is like to ensue. He is at present lying entirely helpless. Every attention is paid to him by his affectionately devoted family."

Myrtle had hardly got over the pain which the reading of this unfortunate occurrence gave her, when her eyes were gladdened by the following pleasing piece of intelligence, contained in a subsequent number of the village paper:

IMPOSING CEREMONY.

"The Reverend Doctor Pemberton performed the impressive rite of baptism upon the first-born child of our distinguished townsman, Gifted Hopkins, Esq., the Bard of Oxbow Village, and Mrs. Susan P. Hopkins, his amiable and respected lady. The babe conducted himself with singular propriety on this occasion. He received the Christian name of Byron Tennyson Browning. May he prove worthy of his name and his parentage!"

The end of the war came at last, and found Colonel Lindsay among its unharmed survivors. He returned with Myrtle to her native village, and they established themselves, at the request of Miss Silence Withers, in the old family mansion. Miss Cynthia, to whom Myrtle made a generous allowance, had gone to live in a town

not many miles distant, where she had a kind of home on sufferance, as well as at The Poplars. This was a convenience just then, because Nurse Byloe was invited to stay with them for a month or two; and one nurse and two single women under the same roof keep each other in a stew all the time, as the old dame somewhat sharply remarked.

Master Byles Gridley had been appointed Myrtle's legal protector, and, with the assistance of Mr. Penhallow, had brought the property she inherited into a more manageable and productive form; so that, when Clement began his fine studio behind the old mansion, he felt that at least he could pursue his art, or arts, if he chose to give himself to sculpture, without that dreadful hag, Necessity, standing by him to pinch the features of all his ideals, and give them something of her own likeness.

Silence Withers was more cheerful now that she had got rid of her responsibility. She embellished her spare person a little more than in former years. These young people looked so happy! Love was not so unendurable, perhaps, after all. No woman need despair,—especially if she has a house over her, and a snug little property. A worthy man, a former missionary, of the best principles, but of a slightly jocose and good-humored habit, thought that he could piece his widowed years with the not insignificant, fraction of life left to Miss Silence, to their mutual advantage. He came to the village, therefore, where Father Pemberton was very glad to have him supply the pulpit in the place of his unfortunate disabled colleague. The courtship soon began, and was brisk enough; for the good man knew there was no time to lose at his period of life,—or hers either, for that matter. It was a rather odd specimen of love-making; for he was constantly trying to subdue his features to a gravity which they were not used to, and she was as constantly endeavoring to be as lively as possible, with the innocent desire of pleasing her light-hearted suitor.

"*Vieille fille fait jeune mariee.*" Silence was ten years younger as a bride than she had seemed as a lone woman. One would have said she had got out of the coach next to the hearse, and got into one some half a dozen behind it,—where there is often good and reasonably cheerful conversation going on about the virtues of the deceased, the probable amount of his property, or the little slips he may have committed, and where occasionally a subdued pleasantry at his expense sets the four waistcoats shaking that were lifting with sighs a half-hour ago in the house of mourning. But Miss Silence, that was, thought that two families, with all the possible complications which time might bring, would be better in separate establishments. She therefore proposed selling The Poplars to Myrtle and her husband, and removing to a house in the village, which would be large enough for them, at least for the present. So the young folks bought the old house, and paid a mighty good price for it; and enlarged it, and beautified and glorified it, and one fine morning went together down to the Widow Hopkins's, whose residence seemed in danger of being a little crowded,—for Gifted lived there with his Susan,—and what had happened might happen again,—and gave Master Byles Gridley a formal and most persuasively worded invitation to come up and make his home with them at The Poplars.

Now Master Gridley has been betrayed into palpable and undisguised weakness at least once in the presence of this assembly, who are looking upon him almost for the last time before they part from him, and see his face no more. Let us not inquire too curiously, then, how he received this kind proposition. It is enough, that, when he found that a new study had been built on purpose for him, and a sleeping-room attached to it so that he could live there without disturbing anybody if he chose, he consented to remove there for a while, and that he was there established amidst great rejoicing.

Cynthia Badlam had fallen of late into poor health. She found at last that she was going; and as she had a little property of her own,—as almost all poor relations have, only there is not enough of it,—she was much exercised in her mind as to the final arrangements to be made respecting its disposition. The Rev. Dr. Pemberton was one day surprised by a message, that she wished to have an interview with him. He rode over to the town in which she was residing, and there had a long conversation with her upon this matter. When this was settled, her mind seemed too be more at ease. She died with a comfortable assurance that she was going to a better world, and with a bitter conviction that it would be hard to find one that would offer her a worse lot than being a poor relation in this.

Her little property was left to Rev. Eliphalet Pemberton and Jacob Penhallow, Esq., to be by them employed for such charitable purposes as they should elect, educational or other. Father Pemberton preached an admirable funeral sermon, in which he praised her virtues, known to this people among whom she had long lived, and especially that crowning act by which she devoted all she had to purposes of charity-and benevolence.

The old clergyman seemed to have renewed his youth since the misfortune of his colleague had incapacitated him from labor. He generally preached in the forenoon now, and to the great acceptance of the people,—for the truth was that the honest minister who had married Miss Silence was not young enough or good-looking enough to be an object of personal attentions like the Rev. Joseph Bellamy Stoker, and the old minister appeared to great advantage contrasted with him in the pulpit. Poor Mr. Stoker was now helpless, faithfully and tenderly waited upon by his own wife, who had regained her health and strength,—in no small measure, perhaps, from the great need of sympathy and active aid which her unfortunate husband now experienced. It was an astonishment to herself when she found that she who had so long been served was able to serve another. Some who knew his errors thought his accident was a judgment; but others believed that it was only a mercy in disguise,—it snatched him roughly from his sin, but it opened his heart to gratitude towards her whom his neglect could not alienate, and through gratitude to repentance and better thoughts. Bathsheba had long ago promised herself to Cyprian Eveleth; and, as he was about to become the rector of a parish in the next town, the marriage was soon to take place.

How beautifully serene Master Byles Gridley's face was growing! Clement loved to study its grand lines, which had so much strength and fine humanity blended in them. He was so fascinated by their noble expression that he sometimes seemed to forget himself, and looked at him more like an artist taking his portrait than like an admiring friend. He maintained that Master Gridley had a bigger bump of benevolence and as large a one of cautiousness as the two people most famous for the size of these organs on the phrenological chart he showed him, and proved it, or nearly proved it, by careful measurements of his head. Master Gridley laughed, and read him a passage on the pseudo-sciences out of his book.

The disposal of Miss Cynthia's bequest was much discussed in the village. Some wished the trustees would

use it to lay the foundations of a public library. Others thought it should be applied for the relief of the families of soldiers who had fallen in the war. Still another set would take it to build a monument to the memory of those heroes. The trustees listened with the greatest candor to all these gratuitous hints. It was, however, suggested, in a well-written anonymous article which appeared in the village paper, that it was desirable to follow the general lead of the testator's apparent preference. The trustees were at liberty to do as they saw fit; but, other things being equal, same educational object should be selected.

If there were any orphan children in the place, it would seem to be very proper to devote the moderate sum bequeathed to educating them. The trustees recognized the justice of this suggestion. Why not apply it to the instruction and maintenance of those two pretty and promising children, virtually orphans, whom the charitable Mrs. Hopkins had cared for so long without any recompense, and at a cost which would soon become beyond her means? The good people of the neighborhood accepted this as the best solution of the difficulty. It was agreed upon at length by the trustees, that the Cynthia Badlam Fund for Educational Purposes should be applied for the benefit of the two foundlings, known as Isosceles and Helminthia Hopkins.

Master Bytes Gridley was greatly exercised about the two "preposterous names," as he called them, which in a moment of eccentric impulse he had given to these children of nature. He ventured to hint as much to Mrs. Hopkins. The good dame was vastly surprised. She thought they was about as pooty names as anybody had had given 'em in the village. And they was so handy, spoke short, Sossy and Minthy,—she never should know how to call 'em anything else.

"But my dear Mrs. Hopkins," Master Gridley urged, "if you knew the meaning they have to the ears of scholars, you would see that I did very wrong to apply such absurd names to my little fellow-creatures, and that I am bound to rectify my error. More than that, my dear madam, I mean to consult you as to the new names; and if we can fix upon proper and pleasing ones, it is my intention to leave a pretty legacy in my will to these interesting children."

"Mr. Gridley," said Mrs. Hopkins, "you're the best man I ever see, or ever shall see, ... except my poor dear Ammi.... I 'll do jest as you say about that, or about anything else in all this livin' world."

"Well, then, Mrs. Hopkins, what shall be the boy's name?"

"Byles Gridley Hopkins!" she answered instantly.

"Good Lord!" said Mr. Gridley, "think a minute, my dear madam. I will not say one word,—only think a minute, and mention some name that will not suggest quite so many winks and whispers."

She did think something less than a minute, and then said aloud, "Abraham Lincoln Hopkins."

"Fifteen thousand children have been so christened during the past year, on a moderate computation."

"Do think of some name yourself, Mr. Gridley; I shall like anything that you like. To think of those dear babes having a fund—if that's the right name—on purpose for 'em, and a promise of a legacy, I hope they won't get that till they're a hundred year old!"

"What if we change Isosceles to Theodore, Mrs. Hopkins? That means the gift of God, and the child has been a gift from Heaven, rather than a burden."

Mrs. Hopkins seized her apron, and held it to her eyes. She was weeping. "Theodore!" she said, "Theodore! My little brother's name, that I buried when I was only eleven year old. Drowned. The dearest little child that ever you see. I have got his little mug with Theodore on it now. Kep' o' purpose. Our little Sossy shall have it. Theodore P. Hopkins,—sha'n't it be, Mr. Gridley?"

"Well, if you say so; but why that P., Mrs. Hopkins? Theodore Parker, is it?"

"Doesn't P. stand for Pemberton, and isn't Father Pemberton the best man in the world—next to you, Mr. Gridley?"

"Well, well, Mrs. Hopkins, let it be so, if you are suited, I am. Now about Helminthia; there can't be any doubt about what we ought to call her,—surely the friend of orphans should be remembered in naming one of the objects of her charity."

"Cynthia Badlam Fund Hopkins," said the good woman triumphantly,— "is that what you mean?"

"Suppose we leave out one of the names,—four are too many. I think the general opinion will be that Hehminthia should unite the names of her two benefactresses,—Cynthia Badlam Hopkins."

"Why, law! Mr. Gridley, is n't that nice?—Minthy and Cynthy,—there ain't but one letter of difference! Poor Cynthy would be pleased if she could know that one of our babes was to be called after her. She was dreadful fond of children."

On one of the sweetest Sundays that ever made Oxbow Village lovely, the Rev. Dr. Eliphalet Pemberton was summoned to officiate at three most interesting ceremonies,—a wedding and two christenings, one of the latter a double one.

The first was celebrated at the house of the Rev. Mr. Stoker, between the Rev. Cyprian Eveleth and Bathsheba, daughter of the first-named clergyman. He could not be present on account of his great infirmity, but the door of his chamber was left open that he might hear the marriage service performed. The old, white-haired minister, assisted, as the papers said, by the bridegroom's father, conducted the ceremony according to the Episcopal form. When he came to those solemn words in which the husband promises fidelity to the wife so long as they both shall live, the nurse, who was watching, near the poor father, saw him bury his face in his pillow, and heard him murmur the words, "God be merciful to me a sinner!"

The christenings were both to take place at the same service, in the old meeting-house. Colonel Clement Lindsay and Myrtle his wife came in, and stout Nurse Byloe bore their sturdy infant in her arms. A slip of paper was handed to the Reverend Doctor on which these words were written:—"The name is Charles Hazard."

The solemn and touching rite was then performed; and Nurse Byloe disappeared with the child, its forehead glistening with the dew of its consecration.

Then, hand in hand, like the babes in the wood, marched up the broad aisle—marshalled by Mrs. Hopkins in front, and Mrs. Gifted Hopkins bringing up the rear—the two children hitherto known as Isosceles and

Helminthia. They had been well schooled, and, as the mysterious and to them incomprehensible ceremony was enacted, maintained the most stoical aspect of tranquillity. In Mrs. Hopkins's words, "They looked like picters, and behaved like angels."

That evening, Sunday evening as it was, there was a quiet meeting of some few friends at The Poplars. It was such a great occasion that the Sabbatical rules, never strict about Sunday evening,—which was, strictly speaking, secular time,—were relaxed. Father Pemberton was there, and Master Byles Gridley, of course, and the Rev. Ambrose Eveleth, with his son and his daughter-in-law, Bathsheba, and her mother, now in comfortable health, aunt Silence and her husband, Doctor Hurlbut and his wife (Olive Eveleth that was), Jacob Penhallow, Esq., Mrs. Hopkins, her son and his wife (Susan Posey that was), the senior deacon of the old church (the admirer of the great Scott), the Editor-in-chief of the "Banner and Oracle," and in the background Nurse Byloe and the privileged servant, Mistress Kitty Fagan, with a few others whose names we need not mention.

The evening was made pleasant with sacred music, and the fatigues of two long services repaired by such simple refectations as would not turn the holy day into a day of labor. A large paper copy of the new edition of Byles Gridley's remarkable work was lying on the table. He never looked so happy,—could anything fill his cup fuller? In the course of the evening Clement spoke of the many trials through which they had passed in common with vast numbers of their countrymen, and some of those peculiar dangers which Myrtle had had to encounter in the course of a life more eventful, and attended with more risks, perhaps, than most of them imagined. But Myrtle, he said, had always been specially cared for. He wished them to look upon the semblance of that protecting spirit who had been faithful to her in her gravest hours of trial and danger. If they would follow him into one of the lesser apartments up stairs they would have an opportunity to do so.

Myrtle wondered a little, but followed with the rest. They all ascended to the little projecting chamber, through the window of which her scarlet jacket caught the eyes of the boys paddling about on the river in those early days when Cyprian Eveleth gave it the name of the Fire-hang-bird's Nest.

The light fell softly but clearly on the dim and faded canvas from which looked the saintly features of the martyred woman, whose continued presence with her descendants was the old family legend. But underneath it Myrtle was surprised to see a small table with some closely covered object upon it. It was a mysterious arrangement, made without any knowledge on her part.

"Now, then, Kitty!" Mr. Lindsay said.

Kitty Fagan, who had evidently been taught her part, stepped forward, and removed the cloth which concealed the unknown object. It was a lifelike marble bust of Master Byles Gridley.

"And this is what you have been working at so long,—is it, Clement?" Myrtle said.

"Which is the image of your protector, Myrtle?", he answered, smiling.

Myrtle Hazard Lindsay walked up to the bust and kissed its marble forehead, saying, "This is the face of my Guardian Angel."

PREFACE.

"A MORTAL ANTIPATHY" was a truly hazardous experiment. A very wise and very distinguished physician who is as much at home in literature as he is in science and the practice of medicine, wrote to me in referring to this story: "I should have been afraid of my subject." He did not explain himself, but I can easily understand that he felt the improbability of the physiological or pathological occurrence on which the story is founded to be so great that the narrative could hardly be rendered plausible. I felt the difficulty for myself as well as for my readers, and it was only by recalling for our consideration a series of extraordinary but well-authenticated facts of somewhat similar character that I could hope to gain any serious attention to so strange a narrative.

I need not recur to these wonderful stories. There is, however, one, not to be found on record elsewhere, to which I would especially call the reader's attention. It is that of the middle-aged man, who assured me that he could never pass a tall hall clock without an indefinable terror. While an infant in arms the heavy weight of one of these tall clocks had fallen with a loud crash and produced an impression on his nervous system which he had never got over.

The lasting effect of a shock received by the sense of sight or that of hearing is conceivable enough.

But there is another sense, the nerves of which are in close relation with the higher organs of consciousness. The strength of the associations connected with the function of the first pair of nerves, the olfactory, is familiar to most persons in their own experience and as related by others. Now we know that every human being, as well as every other living organism, carries its own distinguishing atmosphere. If a man's friend does not know it, his dog does, and can track him anywhere by it. This personal peculiarity varies with the age and conditions of the individual. It may be agreeable or otherwise, a source of attraction or repulsion, but its influence is not less real, though far less obvious and less dominant, than in the lower animals. It was an atmospheric impression of this nature which associated itself with a terrible shock experienced by the infant which became the subject of this story. The impression could not be outgrown, but it might possibly be broken up by some sudden change in the nervous system effected by a cause as potent as the one which had produced the disordered condition.

This is the best key that I can furnish to a story which must have puzzled some, repelled others, and failed to interest many who did not suspect the true cause of the mysterious antipathy.

BEVERLY FARMS, MASS., August, 1891. O. W. H.

A MORTAL ANTIPATHY.

FIRST OPENING OF THE NEW PORTFOLIO.

INTRODUCTION.

“And why the New Portfolio, I would ask?”

Pray, do you remember, when there was an accession to the nursery in which you have a special interest, whether the new-comer was commonly spoken of as a baby? Was it not, on the contrary, invariably, under all conditions, in all companies, by the whole household, spoken of as the baby? And was the small receptacle provided for it commonly spoken of as a cradle; or was it not always called the cradle, as if there were no other in existence?

Now this New Portfolio is the cradle in which I am to rock my new-born thoughts, and from which I am to lift them carefully and show them to callers, namely, to the whole family of readers belonging to my list of intimates, and such other friends as may drop in by accident. And so it shall have the definite article, and not be lost in the mob of its fellows as a portfolio.

There are a few personal and incidental matters of which I wish to say something before reaching the contents of the Portfolio, whatever these may be. I have had other portfolios before this,—two, more especially, and the first thing I beg leave to introduce relates to these.

Do not throw this volume down, or turn to another page, when I tell you that the earliest of them, that of which I now am about to speak, was opened more than fifty years ago. This is a very dangerous confession, for fifty years make everything hopelessly old-fashioned, without giving it the charm of real antiquity. If I could say a hundred years, now, my readers would accept all I had to tell them with a curious interest; but fifty years ago,—there are too many talkative old people who know all about that time, and at best half a century is a half-baked bit of ware. A coin-fancier would say that your fifty-year-old facts have just enough of antiquity to spot them with rust, and not enough to give them—the delicate and durable patina which is time's exquisite enamel.

When the first Portfolio was opened the coin of the realm bore for its legend,—or might have borne if the more devout hero-worshippers could have had their way,—Andreas Jackson, Populi Gratia, Imp. Caesar. Aug. Div., Max., etc., etc. I never happened to see any gold or silver with that legend, but the truth is I was not very familiarly acquainted with the precious metals at that period of my career, and, there might have been a good deal of such coin in circulation without my handling it, or knowing much about it.

Permit me to indulge in a few reminiscences of that far-off time.

In those days the Athenaeum Picture Gallery was a principal centre of attraction to young Boston people and their visitors. Many of us got our first ideas of art, to say nothing of our first lessons in the comparatively innocent flirtations of our city's primitive period, in that agreeable resort of amateurs and artists.

How the pictures on those walls in Pearl Street do keep their places in the mind's gallery! Trumbull's *Sortie* of Gibraltar, with red enough in it for one of our sunset after-glows; and Neagle's full-length portrait of the blacksmith in his shirt-sleeves; and Copley's long-waistcoated gentlemen and satin-clad ladies,—they looked like gentlemen and ladies, too; and Stuart's florid merchants and high-waisted matrons; and Allston's lovely Italian scenery and dreamy, unimpassioned women, not forgetting *Florimel* in full flight on her interminable

rocking-horse,—you may still see her at the Art Museum; and the rival landscapes of Doughty and Fisher, much talked of and largely praised in those days; and the Murillo,—not from Marshal Soup's collection; and the portrait of Annibale Caracci by himself, which cost the Athenaeum a hundred dollars; and Cole's allegorical pictures, and his immense and dreary canvas, in which the prostrate shepherds and the angel in Joseph's coat of many colors look as if they must have been thrown in for nothing; and West's brawny Lear tearing his clothes to pieces. But why go on with the catalogue, when most of these pictures can be seen either at the Athenaeum building in Beacon Street or at the Art Gallery, and admired or criticised perhaps more justly, certainly not more generously, than in those earlier years when we looked at them through the jappaned fish-horns?

If one happened to pass through Atkinson Street on his way to the Athenaeum, he would notice a large, square, painted, brick house, in which lived a leading representative of old-fashioned coleopterous Calvinism, and from which emerged one of the liveliest of literary butterflies. The father was editor of the "Boston Recorder," a very respectable, but very far from amusing paper, most largely patronized by that class of the community which spoke habitually of the first day of the week as "the Sahbuth." The son was the editor of several different periodicals in succession, none of them over severe or serious, and of many pleasant books, filled with lively descriptions of society, which he studied on the outside with a quick eye for form and color, and with a certain amount of sentiment, not very deep, but real, though somewhat frothed over by his worldly experiences.

Nathaniel Parker Willis was in full bloom when I opened my first Portfolio. He had made himself known by his religious poetry, published in his father's paper, I think, and signed "Roy." He had started the "American Magazine," afterwards merged in the "New York Mirror." He had then left off writing scripture pieces, and taken to lighter forms of verse. He had just written

*"I'm twenty-two, I'm twenty-two,
They idly give me joy,
As if I should be glad to know
That I was less a boy."*

He was young, therefore, and already famous. He came very near being very handsome. He was tall; his hair, of light brown color, waved in luxuriant abundance; his cheek was as rosy as if it had been painted to show behind the footlights; he dressed with artistic elegance. He was something between a remembrance of Count D'Orsay and an anticipation of Oscar Wilde. There used to be in the gallery of the Luxembourg a picture of Hippolytus and Phxdra, in which the beautiful young man, who had kindled a passion in the heart of his wicked step-mother, always reminded me of Willis, in spite of the shortcomings of the living face as compared with the ideal. The painted youth is still blooming on the canvas, but the fresh-cheeked, jaunty young author of the year 1830 has long faded out of human sight. I took the leaves which lie before me at this moment, as I write, from his coffin, as it lay just outside the door of Saint Paul's Church, on a sad, overclouded winter's day, in the year 1867. At that earlier time, Willis was by far the most prominent young American author. Cooper, Irving, Bryant, Dana, Halleck, Drake, had all done their best work. Longfellow was not yet conspicuous. Lowell was a school-boy. Emerson was unheard of. Whittier was beginning to make his way against the writers with better educational advantages whom he was destined to outdo and to outlive. Not one of the great histories, which have done honor to our literature, had appeared. Our school-books depended, so far as American authors were concerned, on extracts from the orations and speeches of Webster and Everett; on Bryant's *Thanatopsis*, his lines *To a Waterfowl*, and the *Death of the Flowers*, Halleck's *Marco Bozzaris*, *Red Jacket*, and *Burns*; on Drake's *American Flag*, and Percival's *Coral Grove*, and his *Genius Sleeping* and *Genius Waking*,—and not getting very wide awake, either. These could be depended upon. A few other copies of verses might be found, but Dwight's "Columbia, Columbia," and Pierpont's *Airs of Palestine*, were already effaced, as many of the favorites of our own day and generation must soon be, by the great wave which the near future will pour over the sands in which they still are legible.

About this time, in the year 1832, came out a small volume entitled "Truth, a Gift for Scribblers," which made some talk for a while, and is now chiefly valuable as a kind of literary tombstone on which may be read the names of many whose renown has been buried with their bones. The "London Athenaeum" spoke of it as having been described as a "tomahawk sort of satire." As the author had been a trapper in Missouri, he was familiarly acquainted with that weapon and the warfare of its owners. Born in Boston, in 1804, the son of an army officer, educated at West Point, he came back to his native city about the year 1830. He wrote an article on Bryant's *Poems* for the "North American Review," and another on the famous Indian chief, Black Hawk. In this last-mentioned article he tells this story as the great warrior told it himself. It was an incident of a fight with the Osages.

"Standing by my father's side, I saw him kill his antagonist and tear the scalp from his head. Fired with valor and ambition, I rushed furiously upon another, smote him to the earth with my tomahawk, ran my lance through his body, took off his scalp, and returned in triumph to my father. He said nothing, but looked pleased."

This little red story describes very well Spelling's style of literary warfare. His handling of his most conspicuous victim, Willis, was very much like Black Hawk's way of dealing with the Osage. He tomahawked him in heroics, ran him through in prose, and scalped him in barbarous epigrams. Bryant and Halleck were abundantly praised; hardly any one else escaped.

If the reader wishes to see the bubbles of reputation that were floating, some of them gay with prismatic colors, half a century ago, he will find in the pages of "Truth" a long catalogue of celebrities he never heard of. I recognize only three names, of all which are mentioned in the little book, as belonging to persons still living; but as I have not read the obituaries of all the others, some of them may be still flourishing in spite of Mr. Spelling's exterminating onslaught. Time dealt as hardly with poor Spelling, who was not without talent and instruction, as he had dealt with our authors. I think he found shelter at last under a roof which held numerous inmates, some of whom had seen better and many of whom had known worse days than those which they were passing within its friendly and not exclusive precincts. Such, at least, was the story I heard

after he disappeared from general observation.

That was the day of Souvenirs, Tokens, Forget-me-nots, Bijous, and all that class of showy annuals. Short stories, slender poems, steel engravings, on a level with the common fashion-plates of advertising establishments, gilt edges, resplendent binding,—to manifestations of this sort our lighter literature had very largely run for some years. The "Scarlet Letter" was an unhinted possibility. The "Voices of the Night" had not stirred the brooding silence; the Concord seer was still in the lonely desert; most of the contributors to those yearly volumes, which took up such pretentious positions on the centre table, have shrunk into entire oblivion, or, at best, hold their place in literature by a scrap or two in some omnivorous collection.

What dreadful work Spelling made among those slight reputations, floating in swollen tenuity on the surface of the stream, and mirroring each other in reciprocal reflections! Violent, abusive as he was, unjust to any against whom he happened to have a prejudice, his castigation of the small litterateurs of that day was not harmful, but rather of use. His attack on Willis very probably did him good; he needed a little discipline, and though he got it too unsparingly, some cautions came with it which were worth the stripes he had to smart under. One noble writer Spelling treated with rudeness, probably from some accidental pique, or equally insignificant reason. I myself, one of the three survivors before referred to, escaped with a love-pat, as the youngest son of the Muse. Longfellow gets a brief nod of acknowledgment. Bailey, an American writer, "who made long since a happy snatch at fame," which must have been snatched away from him by envious time, for I cannot identify him; Thatcher, who died early, leaving one poem, The Last Request, not wholly unremembered; Miss Hannah F. Gould, a very bright and agreeable writer of light verse,—all these are commended to the keeping of that venerable public carrier, who finds his scythe and hour-glass such a load that he generally drops the burdens committed to his charge, after making a show of paying every possible attention to them so long as he is kept in sight.

It was a good time to open a portfolio. But my old one had boyhood written on every page. A single passionate outcry when the old warship I had read about in the broadsides that were a part of our kitchen literature, and in the "Naval Monument," was threatened with demolition; a few verses suggested by the sight of old Major Melville in his cocked hat and breeches, were the best scraps that came out of that first Portfolio, which was soon closed that it should not interfere with the duties of a profession authorized to claim all the time and thought which would have been otherwise expended in filling it.

During a quarter of a century the first Portfolio remained closed for the greater part of the time. Only now and then it would be taken up and opened, and something drawn from it for a special occasion, more particularly for the annual reunions of a certain class of which I was a member.

In the year 1857, towards its close, the "Atlantic Monthly," which I had the honor of naming, was started by the enterprising firm of Phillips & Sampson, under the editorship of Mr. James Russell Lowell. He thought that I might bring something out of my old Portfolio which would be not unacceptable in the new magazine. I looked at the poor old receptacle, which, partly from use and partly from neglect, had lost its freshness, and seemed hardly presentable to the new company expected to welcome the new-comer in the literary world of Boston, the least provincial of American centres of learning and letters. The gilded covering where the emblems of hope and aspiration had looked so bright had faded; not wholly, perhaps, but how was the gold become dim!—how was the most fine gold changed! Long devotion to other pursuits had left little time for literature, and the waifs and strays gathered from the old Portfolio had done little more than keep alive the memory that such a source of supply was still in existence. I looked at the old Portfolio, and said to myself, "Too late! too late. This tarnished gold will never brighten, these battered covers will stand no more wear and tear; close them, and leave them to the spider and the book-worm."

In the mean time the nebula of the first quarter of the century had condensed into the constellation of the middle of the same period. When, a little while after the establishment of the new magazine, the "Saturday Club" gathered about the long table at "Parker's," such a representation of all that was best in American literature had never been collected within so small a compass. Most of the Americans whom educated foreigners cared to see—leaving out of consideration official dignitaries, whose temporary importance makes them objects of curiosity—were seated at that board. But the club did not yet exist, and the "Atlantic Monthly" was an experiment. There had already been several monthly periodicals, more or less successful and permanent, among which "Putnam's Magazine" was conspicuous, owing its success largely to the contributions of that very accomplished and delightful writer, Mr. George William Curtis. That magazine, after a somewhat prolonged and very honorable existence, had gone where all periodicals go when they die, into the archives of the deaf, dumb, and blind recording angel whose name is Oblivion. It had so well deserved to live that its death was a surprise and a source of regret. Could another monthly take its place and keep it when that, with all its attractions and excellences, had died out, and left a blank in our periodical literature which it would be very hard to fill as well as that had filled it?

This was the experiment which the enterprising publishers ventured upon, and I, who felt myself outside of the charmed circle drawn around the scholars and poets of Cambridge and Concord, having given myself to other studies and duties, wondered somewhat when Mr. Lowell insisted upon my becoming a contributor. And so, yielding to a pressure which I could not understand, and yet found myself unable to resist, I promised to take a part in the new venture, as an occasional writer in the columns of the new magazine.

That was the way in which the second Portfolio found its way to my table, and was there opened in the autumn of the year 1857. I was already at least

'Nel mezzo del cammin di mia, vita,'

when I risked myself, with many misgivings, in little-tried paths of what looked at first like a wilderness, a selva oscura, where, if I did not meet the lion or the wolf, I should be sure to find the critic, the most dangerous of the carnivores, waiting to welcome me after his own fashion.

The second Portfolio is closed and laid away. Perhaps it was hardly worth while to provide and open a new one; but here it lies before me, and I hope I may find something between its covers which will justify me in coming once more before my old friends. But before I open it I want to claim a little further indulgence.

There is a subject of profound interest to almost every writer, I might say to almost every human being. No matter what his culture or ignorance, no matter what his pursuit, no matter what his character, the subject I refer to is one of which he rarely ceases to think, and, if opportunity is offered, to talk. On this he is eloquent, if on nothing else. The slow of speech becomes fluent; the torpid listener becomes electric with vivacity, and alive all over with interest.

The sagacious reader knows well what is coming after this prelude. He is accustomed to the phrases with which the plausible visitor, who has a subscription book in his pocket, prepares his victim for the depressing disclosure of his real errand. He is not unacquainted with the conversational amenities of the cordial and interesting stranger, who, having had the misfortune of leaving his carpet-bag in the cars, or of having his pocket picked at the station, finds himself without the means of reaching that distant home where affluence waits for him with its luxurious welcome, but to whom for the moment the loan of some five and twenty dollars would be a convenience and a favor for which his heart would ache with gratitude during the brief interval between the loan and its repayment.

I wish to say a few words in my own person relating to some passages in my own history, and more especially to some of the recent experiences through which I have been passing.

What can justify one in addressing himself to the general public as if it were his private correspondent? There are at least three sufficient reasons: first, if he has a story to tell that everybody wants to hear,—if he has been shipwrecked, or has been in a battle, or has witnessed any interesting event, and can tell anything new about it; secondly, if he can put in fitting words any common experiences not already well told, so that readers will say, “Why, yes! I have had that sensation, thought, emotion, a hundred times, but I never heard it spoken of before, and I never saw any mention of it in print;” and thirdly, anything one likes, provided he can so tell it as to make it interesting.

I have no story to tell in this Introduction which can of itself claim any general attention. My first pages relate the effect of a certain literary experience upon myself,—a series of partial metempsychoses of which I have been the subject. Next follows a brief tribute to the memory of a very dear and renowned friend from whom I have recently been parted. The rest of the Introduction will be consecrated to the memory of my birthplace.

I have just finished a Memoir, which will appear soon after this page is written, and will have been the subject of criticism long before it is in the reader's hands. The experience of thinking another man's thoughts continuously for a long time; of living one's self into another man's life for a month, or a year, or more, is a very curious one. No matter how much superior to the biographer his subject may be, the man who writes the life feels himself, in a certain sense, on the level of the person whose life he is writing. One cannot fight over the battles of Marengo or Austerlitz with Napoleon without feeling as if he himself had a fractional claim to the victory, so real seems the transfer of his personality into that of the conqueror while he reads. Still more must this identification of “subject” and “object” take place when one is writing of a person whose studies or occupations are not unlike his own.

Here are some of my metempsychoses: Ten years ago I wrote what I called A Memorial Outline of a remarkable student of nature. He was a born observer, and such are far from common. He was also a man of great enthusiasm and unwearying industry. His quick eye detected what others passed by without notice: the Indian relic, where another would see only pebbles and fragments; the rare mollusk, or reptile, which his companion would poke with his cane, never suspecting that there was a prize at the end of it. Getting his single facts together with marvellous sagacity and long-breathed patience, he arranged them, classified them, described them, studied them in their relations, and before those around him were aware of it the collector was an accomplished naturalist. When—he died his collections remained, and they still remain, as his record in the hieratic language of science. In writing this memoir the spirit of his quiet pursuits, the even temper they bred in him, gained possession of my own mind, so that I seemed to look at nature through his gold-bowed spectacles, and to move about his beautifully ordered museum as if I had myself prepared and arranged its specimens. I felt wise with his wisdom, fair-minded with his calm impartiality; it seemed as if for the time his placid, observant, inquiring, keen-sighted nature “slid into my soul,” and if I had looked at myself in the glass I should almost have expected to see the image of the Hersey professor whose life and character I was sketching.

A few years later I lived over the life of another friend in writing a Memoir of which he was the subject. I saw him, the beautiful, bright-eyed boy, with dark, waving hair; the youthful scholar, first at Harvard, then at Gottingen and Berlin, the friend and companion of Bismarck; the young author, making a dash for renown as a novelist, and showing the elements which made his failures the promise of success in a larger field of literary labor; the delving historian, burying his fresh young manhood in the dusty alcoves of silent libraries, to come forth in the face of Europe and America as one of the leading historians of the time; the diplomatist, accomplished, of captivating presence and manners, an ardent American, and in the time of trial an impassioned and eloquent advocate of the cause of freedom; reaching at last the summit of his ambition as minister at the Court of Saint James. All this I seemed to share with him as I tracked his career from his birthplace in Dorchester, and the house in Walnut Street where he passed his boyhood, to the palaces of Vienna and London. And then the cruel blow which struck him from the place he adorned; the great sorrow that darkened his later years; the invasion of illness, a threat that warned of danger, and after a period of invalidism, during a part of which I shared his most intimate daily life, the sudden, hardly unwelcome, final summons. Did not my own consciousness migrate, or seem, at least, to transfer itself into this brilliant life history, as I traced its glowing record? I, too, seemed to feel the delight of carrying with me, as if they were my own, the charms of a presence which made its own welcome everywhere. I shared his heroic toils, I partook of his literary and social triumphs, I was honored by the marks of distinction which gathered about him, I was wronged by the indignity from which he suffered, mourned with him in his sorrow, and thus, after I had been living for months with his memory, I felt as if I should carry a part of his being with me so long as my self-consciousness might remain imprisoned in the ponderable elements.

The years passed away, and the influences derived from the companionships I have spoken of had blended intimately with my own current of being. Then there came to me a new experience in my relations with an

eminent member of the medical profession, whom I met habitually for a long period, and to whose memory I consecrated a few pages as a prelude to a work of his own, written under very peculiar circumstances. He was the subject of a slow, torturing, malignant, and almost necessarily fatal disease. Knowing well that the mind would feed upon itself if it were not supplied with food from without, he determined to write a treatise on a subject which had greatly interested him, and which would oblige him to bestow much of his time and thought upon it, if indeed he could hold out to finish the work. During the period while he was engaged in writing it, his wife, who had seemed in perfect health, died suddenly of pneumonia. Physical suffering, mental distress, the prospect of death at a near, if uncertain, time always before him, it was hard to conceive a more terrible strain than that which he had to endure. When, in the hour of his greatest need, his faithful companion, the wife of many years of happy union, whose hand had smoothed his pillow, whose voice had consoled and cheered him, was torn from him after a few days of illness, I felt that my friend's trial was such that the cry of the man of many afflictions and temptations might well have escaped from his lips: "I was at ease, but he hath broken me asunder; he hath also taken me by my neck and shaken me to pieces, and set me up for his mark. His archers compass me round about, he cleaveth my reins asunder, and doth not spare; he poureth out my gall upon the ground."

I had dreaded meeting him for the first time after this crushing blow. What a lesson he gave me of patience under sufferings which the fearful description of the Eastern poet does not picture too vividly! We have been taught to admire the calm philosophy of Haller, watching his faltering pulse as he lay dying; we have heard the words of pious resignation said to have been uttered with his last breath by Addison: but here was a trial, not of hours, or days, or weeks, but of months, even years, of cruel pain, and in the midst of its thick darkness the light of love, which had burned steadily at his bedside, was suddenly extinguished.

There were times in which the thought would force itself upon my consciousness, How long is the universe to look upon this dreadful experiment of a malarious planet, with its unmeasurable freight of suffering, its poisonous atmosphere, so sweet to breathe, so sure to kill in a few scores of years at farthest, and its heart-breaking woes which make even that brief space of time an eternity? There can be but one answer that will meet this terrible question, which must arise in every thinking nature that would fain "justify the ways of God to men." So must it be until that

*"one far-off divine event
To which the whole creation moves"*

has become a reality, and the anthem in which there is no discordant note shall be joined by a voice from every life made "perfect through sufferings."

Such was the lesson into which I lived in those sad yet placid years of companionship with my suffering and sorrowing friend, in retracing which I seemed to find another existence mingled with my own.

And now for many months I have been living in daily relations of intimacy with one who seems nearer to me since he has left us than while he was here in living form and feature. I did not know how difficult a task I had undertaken in venturing upon a memoir of a man whom all, or almost all, agree upon as one of the great lights of the New World, and whom very many regard as an unpredicted Messiah. Never before was I so forcibly reminded of Carlyle's description of the work of a newspaper editor,—that threshing of straw already thrice beaten by the flails of other laborers in the same field. What could be said that had not been said of "transcendentalism" and of him who was regarded as its prophet; of the poet whom some admired without understanding, a few understood, or thought they did, without admiring, and many both understood and admired,—among these there being not a small number who went far beyond admiration, and lost themselves in devout worship? While one exalted him as "the greatest man that ever lived," another, a friend, famous in the world of letters, wrote expressly to caution me against the danger of overrating a writer whom he is content to recognize as an American Montaigne, and nothing more.

After finishing this Memoir, which has but just left my hands, I would gladly have let my brain rest for a while. The wide range of thought which belonged to the subject of the Memoir, the occasional mysticism and the frequent tendency toward it, the sweep of imagination and the sparkle of wit which kept his reader's mind on the stretch, the union of prevailing good sense with exceptional extravagances, the modest audacity of a nature that showed itself in its naked truthfulness and was not ashamed, the feeling that I was in the company of a sibylline intelligence which was discounting the promises of the remote future long before they were due,—all this made the task a grave one. But when I found myself amidst the vortices of uncounted, various, bewildering judgments, Catholic and Protestant, orthodox and liberal, scholarly from under the tree of knowledge and instinctive from over the potato-hill; the passionate enthusiasm of young adorers and the cool, if not cynical, estimate of hardened critics, all intersecting each other as they whirled, each around its own centre, I felt that it was indeed very difficult to keep the faculties clear and the judgment unbiassed.

It is a great privilege to have lived so long in the society of such a man. "He nothing common" said, "or mean." He was always the same pure and high-souled companion. After being with him virtue seemed as natural to man as its opposite did according to the old theologies. But how to let one's self down from the high level of such a character to one's own poor standard? I trust that the influence of this long intellectual and spiritual companionship never absolutely leaves one who has lived in it. It may come to him in the form of self-reproach that he falls so far short of the superior being who has been so long the object of his contemplation. But it also carries him at times into the other's personality, so that he finds himself thinking thoughts that are not his own, using phrases which he has unconsciously borrowed, writing, it may be, as nearly like his long-studied original as Julio Romano's painting was like Raphael's; and all this with the unquestioning conviction that he is talking from his own consciousness in his own natural way. So far as tones and expressions and habits which belonged to the idiosyncrasy of the original are borrowed by the student of his life, it is a misfortune for the borrower. But to share the inmost consciousness of a noble thinker, to scan one's self in the white light of a pure and radiant soul,—this is indeed the highest form of teaching and discipline.

I have written these few memoirs, and I am grateful for all that they have taught me. But let me write no

more. There are but two biographers who can tell the story of a man's or a woman's life. One is the person himself or herself; the other is the Recording Angel. The autobiographer cannot be trusted to tell the whole truth, though he may tell nothing but the truth, and the Recording Angel never lets his book go out of his own hands. As for myself, I would say to my friends, in the Oriental phrase, "Live forever!" Yes, live forever, and I, at least, shall not have to wrong your memories by my imperfect record and unsatisfying commentary.

In connection with these biographies, or memoirs, more properly, in which I have written of my departed friends, I hope my readers will indulge me in another personal reminiscence. I have just lost my dear and honored contemporary of the last century. A hundred years ago this day, December 13, 1784, died the admirable and ever to be remembered Dr. Samuel Johnson. The year 1709 was made ponderous and illustrious in English biography by his birth. My own humble advent to the world of protoplasm was in the year 1809 of the present century. Summer was just ending when those four letters, "son b." were written under the date of my birth, August 29th. Autumn had just begun when my great pre-contemporary entered this un-Christian universe and was made a member of the Christian church on the same day, for he was born and baptized on the 18th of September.

Thus there was established a close bond of relationship between the great English scholar and writer and myself. Year by year, and almost month by month, my life has kept pace in this century with his life in the last century. I had only to open my Boswell at any time, and I knew just what Johnson at my age, twenty or fifty or seventy, was thinking and doing; what were his feelings about life; what changes the years had wrought in his body, his mind, his feelings, his companionships, his reputation. It was for me a kind of unison between two instruments, both playing that old familiar air, "Life,"—one a bassoon, if you will, and the other an oaten pipe, if you care to find an image for it, but still keeping pace with each other until the players both grew old and gray. At last the thinner thread of sound is heard by itself, and its deep accompaniment rolls out its thunder no more.

I feel lonely now that my great companion and friend of so many years has left me. I felt more intimately acquainted with him than I do with many of my living friends. I can hardly remember when I did not know him. I can see him in his bushy wig, exactly like that of the Reverend Dr. Samuel Cooper (who died in December, 1783) as Copley painted him,—he hangs there on my wall, over the revolving bookcase. His ample coat, too, I see, with its broad flaps and many buttons and generous cuffs, and beneath it the long, still more copiously buttoned waistcoat, arching in front of the fine crescentic, almost semi-lunar Falstaffian prominence, involving no less than a dozen of the above-mentioned buttons, and the strong legs with their sturdy calves, fitting columns of support to the massive body and solid, capacious brain enthroned over it. I can hear him with his heavy tread as he comes in to the Club, and a gap is widened to make room for his portly figure. "A fine day," says Sir Joshua. "Sir," he answers, "it seems propitious, but the atmosphere is humid and the skies are nebulous," at which the great painter smiles, shifts his trumpet, and takes a pinch of snuff.

Dear old massive, deep-voiced dogmatist and hypochondriac of the eighteenth century, how one would like to sit at some ghastly Club, between you and the bony, "mighty-mouthed," harsh-toned termagant and dyspeptic of the nineteenth! The growl of the English mastiff and the snarl of the Scotch terrier would make a duet which would enliven the shores of Lethe. I wish I could find our "spiritualist's" paper in the Portfolio, in which the two are brought together, but I hardly know what I shall find when it is opened.

Yes, my life is a little less precious to me since I have lost that dear old friend; and when the funeral train moves to Westminster Abbey next Saturday, for I feel as if this were 1784, and not 1884,—I seem to find myself following the hearse, one of the silent mourners.

Among the events which have rendered the past year memorable to me has been the demolition of that venerable and interesting old dwelling-house, precious for its intimate association with the earliest stages of the war of the Revolution, and sacred to me as my birthplace and the home of my boyhood.

The "Old Gambrel-roofed House" exists no longer. I remember saying something, in one of a series of papers published long ago, about the experience of dying out of a house,—of leaving it forever, as the soul dies out of the body. We may die out of many houses, but the house itself can die but once; and so real is the life of a house to one who has dwelt in it, more especially the life of the house which held him in dreamy infancy, in restless boyhood, in passionate youth,—so real, I say, is its life, that it seems as if something like a soul of it must outlast its perishing frame.

The slaughter of the Old Gambrel-roofed House was, I am ready to admit, a case of justifiable domicile. Not the less was it to be deplored by all who love the memories of the past. With its destruction are obliterated some of the footprints of the heroes and martyrs who took the first steps in the long and bloody march which led us through the wilderness to the promised land of independent nationality. Personally, I have a right to mourn for it as a part of my life gone from me. My private grief for its loss would be a matter for my solitary digestion, were it not that the experience through which I have just passed is one so familiar to my fellow-countrymen that, in telling my own reflections and feelings, I am repeating those of great numbers of men and women who have had the misfortune to outlive their birthplace.

It is a great blessing to be born surrounded by a natural horizon. The Old Gambrel-roofed House could not boast an unbroken ring of natural objects encircling it. Northerly it looked upon its own outbuildings and some unpretending two-story houses which had been its neighbors for a century and more. To the south of it the square brick dormitories and the bellfied hall of the university helped to shut out the distant view. But the west windows gave a broad outlook across the common, beyond which the historical "Washington elm" and two companions in line with it, spread their leaves in summer and their networks in winter. And far away rose the hills that bounded the view, with the glimmer here and there of the white walls or the illuminated casements of some embowered, half-hidden villa. Eastwardly also, the prospect was, in my earlier remembrance, widely open, and I have frequently seen the sunlit sails gliding along as if through the level fields, for no water was visible. So there were broad expanses on two sides at least, for my imagination to wander over.

I cannot help thinking that we carry our childhood's horizon with us all our days. Among these western

wooded hills my day-dreams built their fairy palaces, and even now, as I look at them from my library window, across the estuary of the Charles, I find myself in the familiar home of my early visions. The "clouds of glory" which we trail with us in after life need not be traced to a pre-natal state. There is enough to account for them in that unconsciously remembered period of existence before we have learned the hard limitations of real life. Those earliest months in which we lived in sensations without words, and ideas not fettered in sentences, have all the freshness of proofs of an engraving "before the letter." I am very thankful that the first part of my life was not passed shut in between high walls and treading the unimpressible and unsympathetic pavement.

Our university town was very much like the real country, in those days of which I am thinking. There were plenty of huckleberries and blueberries within half a mile of the house. Blackberries ripened in the fields, acorns and shagbarks dropped from the trees, squirrels ran among the branches, and not rarely the hen-hawk might be seen circling over the barnyard. Still another rural element was not wanting, in the form of that far-diffused, infragrant effluvium, which, diluted by a good half mile of pure atmosphere, is no longer odious, nay is positively agreeable, to many who have long known it, though its source and centre has an unenviable reputation. I need not name the animal whose Parthian warfare terrifies and puts to flight the mightiest hunter that ever roused the tiger from his jungle or faced the lion of the desert. Strange as it may seem, an aerial hint of his personality in the far distance always awakens in my mind pleasant remembrances and tender reflections. A whole neighborhood rises up before me: the barn, with its haymow, where the hens laid their eggs to hatch, and we boys hid our apples to ripen, both occasionally illustrating the *sic vos non vobis*; the shed, where the annual Tragedy of the Pig was acted with a realism that made Salvini's Othello seem but a pale counterfeit; the rickety old outhouse, with the "corn-chamber" which the mice knew so well; the paved yard, with its open gutter,—these and how much else come up at the hint of my far-off friend, who is my very near enemy. Nothing is more familiar than the power of smell in reviving old memories. There was that quite different fragrance of the wood-house, the smell of fresh sawdust. It comes back to me now, and with it the hiss of the saw; the tumble of the divorced logs which God put together and man has just put asunder; the coming down of the axe and the hah! that helped it,—the straight-grained stick opening at the first appeal of the implement as if it were a pleasure, and the stick with a knot in the middle of it that mocked the blows and the hahs! until the beetle and wedge made it listen to reason,—there are just such straight-grained and just such knotty men and women. All this passes through my mind while Bidy, whose parlor-name is Angela, contents herself with exclaiming "egh!*****!"

How different distances were in those young days of which I am thinking! From the old house to the old yellow meeting-house, where the head of the family preached and the limbs of the family listened, was not much more than two or three times the width of Commonwealth Avenue. But of a hot summer's afternoon, after having already heard one sermon, which could not in the nature of things have the charm of novelty of presentation to the members of the home circle, and the theology of which was not too clear to tender apprehensions; with three hymns more or less lugubrious, rendered by a village-choir, got into voice by many preliminary snuffles and other expiratory efforts, and accompanied by the snort of a huge bassviol which wallowed through the tune like a hippopotamus, with other exercises of the customary character,—after all this in the forenoon, the afternoon walk to the meeting-house in the hot sun counted for as much, in my childish dead-reckoning, as from old Israel Porter's in Cambridge to the Exchange Coffeehouse in Boston did in after years. It takes a good while to measure the radius of the circle that is about us, for the moon seems at first as near as the watchface. Who knows but that, after a certain number of ages, the planet we live on may seem to us no bigger than our neighbor Venus appeared when she passed before the sun a few months ago, looking as if we could take her between our thumb and finger, like a bullet or a marble? And time, too; how long was it from the serious sunrise to the joyous "sun-down" of an old-fashioned, puritanical, judaical first day of the week, which a pious fraud christened "the Sabbath"? Was it a fortnight, as we now reckon duration, or only a week? Curious entities, or non-entities, space and time? When you see a metaphysician trying to wash his hands of them and get rid of these accidents, so as to lay his dry, clean palm on the absolute, does it not remind you of the hopeless task of changing the color of the blackamoor by a similar proceeding? For space is the fluid in which he is washing, and time is the soap which he is using up in the process, and he cannot get free from them until he can wash himself in a mental vacuum.

In my reference to the old house in a former paper, published years ago, I said,

"By and by the stony foot of the great University will plant itself on this whole territory, and the private recollections which clung so tenaciously to the place and its habitations will have died with those who cherished them."

What strides the great University has taken since those words were written! During all my early years our old Harvard Alma Mater sat still and lifeless as the colossi in the Egyptian desert. Then all at once, like the statue in Don Giovanni, she moved from her pedestal. The fall of that "stony foot" has effected a miracle like the harp that Orpheus played, like the teeth which Cadmus sowed. The plain where the moose and the bear were wandering while Shakespeare was writing Hamlet, where a few plain dormitories and other needed buildings were scattered about in my school-boy days, groans under the weight of the massive edifices which have sprung up all around them, crowned by the tower of that noble structure which stands in full view before me as I lift my eyes from the portfolio on the back of which I am now writing.

For I must be permitted to remind you that I have not yet opened it. I have told you that I have just finished a long memoir, and that it has cost me no little labor to overcome some of its difficulties,—if I have overcome them, which others must decide. And I feel exactly as honest Dobbin feels when his harness is slipped off after a long journey with a good deal of up-hill work. He wants to rest a little, then to feed a little; then, if you will turn him loose in the pasture, he wants to roll. I have left my starry and ethereal companionship,—not for a long time, I hope, for it has lifted me above my common self, but for a while. And now I want, so to speak, to roll in the grass and among the dandelions with the other pachyderms. So I have kept to the outside of the portfolio as yet, and am disporting myself in reminiscences, and fancies, and vagaries, and parentheses.

How well I understand the feeling which led the Pisans to load their vessels with earth from the Holy Land, and fill the area of the Campo Santo with that sacred soil! The old house stood upon about as perverse a little

patch of the planet as ever harbored a half-starved earth-worm. It was as sandy as Sahara and as thirsty as Tantalus. The rustic aid-de-camps of the household used to aver that all fertilizing matters "leached" through it. I tried to disprove their assertion by gorging it with the best of terrestrial nourishment, until I became convinced that I was feeding the tea-plants of China, and then I gave over the attempt. And yet I did love, and do love, that arid patch of ground. I wonder if a single flower could not be made to grow in a pot of earth from that Campo Santo of my childhood! One noble product of nature did not refuse to flourish there,—the tall, stately, beautiful, soft-haired, many-jointed, generous maize or Indian corn, which thrives on sand and defies the blaze of our shrivelling summer. What child but loves to wander in its forest-like depths, amidst the rustling leaves and with the lofty tassels tossing their heads high above him! There are two aspects of the cornfield which always impress my imagination: the first when it has reached its full growth, and its ordered ranks look like an army on the march with its plumed and bannered battalions; the second when, after the battle of the harvest, the girdled stacks stand on the field of slaughter like so many ragged Niobes,—say rather like the crazy widows and daughters of the dead soldiery.

Once more let us come back to the old house. It was far along in its second century when the edict went forth that it must stand no longer.

The natural death of a house is very much like that of one of its human tenants. The roof is the first part to show the distinct signs of age. Slates and tiles loosen and at last slide off, and leave bald the boards that supported them; shingles darken and decay, and soon the garret or the attic lets in the rain and the snow; by and by the beams sag, the floors warp, the walls crack, the paper peels away, the ceilings scale off and fall, the windows are crusted with clinging dust, the doors drop from their rusted hinges, the winds come in without knocking and howl their cruel death-songs through the empty rooms and passages, and at last there comes a crash, a great cloud of dust rises, and the home that had been the shelter of generation after generation finds its grave in its own cellar. Only the chimney remains as its monument. Slowly, little by little, the patient solvents that find nothing too hard for their chemistry pick out the mortar from between the bricks; at last a mighty wind roars around it and rushes against it, and the monumental relic crashes down among the wrecks it has long survived. So dies a human habitation left to natural decay, all that was seen above the surface of the soil sinking gradually below it,

*Till naught remains the saddening tale to tell
Save home's last wrecks, the cellar and the well.*

But if this sight is saddening, what is it to see a human dwelling fall by the hand of violence! The ripping off of the shelter that has kept out a thousand storms, the tearing off of the once ornamental woodwork, the wrench of the inexorable crowbar, the murderous blows of the axe, the progressive ruin, which ends by rending all the joints asunder and flinging the tenoned and mortised timbers into heaps that will be sawed and split to warm some new habitation as firewood,—what a brutal act of destruction it seems!

Why should I go over the old house again, having already described it more than ten years ago? Alas! how many remember anything they read but once, and so long ago as that? How many would find it out if one should say over in the same words that which he said in the last decade? But there is really no need of telling the story a second time, for it can be found by those who are curious enough to look it up in a volume of which it occupies the opening chapter.

In order, however, to save any inquisitive reader that trouble, let me remind him that the old house was General Ward's headquarters at the breaking out of the Revolution; that the plan for fortifying Bunker's Hill was laid, as commonly believed, in the southeast lower room, the floor of which was covered with dents, made, it was alleged, by the butts of the soldiers' muskets. In that house, too, General Warren probably passed the night before the Bunker Hill battle, and over its threshold must the stately figure of Washington have often cast its shadow.

But the house in which one drew his first breath, and where he one day came into the consciousness that he was a personality, an ego, a little universe with a sky over him all his own, with a persistent identity, with the terrible responsibility of a separate, independent, inalienable existence,—that house does not ask for any historical associations to make it the centre of the earth for him.

If there is any person in the world to be envied, it is the one who is born to an ancient estate, with a long line of family traditions and the means in his hands of shaping his mansion and his domain to his own taste, without losing sight of all the characteristic features which surrounded his earliest years. The American is, for the most part, a nomad, who pulls down his house as the Tartar pulls up his tent-poles. If I had an ideal life to plan for him it would be something like this:

His grandfather should be a wise, scholarly, large-brained, large-hearted country minister, from whom he should inherit the temperament that predisposes to cheerfulness and enjoyment, with the finer instincts which direct life to noble aims and make it rich with the gratification of pure and elevated tastes and the carrying out of plans for the good of his neighbors and his fellow-creatures. He should, if possible, have been born, at any rate have passed some of his early years, or a large part of them, under the roof of the good old minister. His father should be, we will say, a business man in one of our great cities,—a generous manipulator of millions, some of which have adhered to his private fortunes, in spite of his liberal use of his means. His heir, our ideally placed American, shall take possession of the old house, the home of his earliest memories, and preserve it sacredly, not exactly like the Santa Casa, but, as nearly as may be, just as he remembers it. He can add as many acres as he will to the narrow house-lot. He can build a grand mansion for himself, if he chooses, in the not distant neighborhood. But the old house, and all immediately round it, shall be as he recollects it when he had to stretch his little arm up to reach the door-handles. Then, having well provided for his own household, himself included, let him become the providence of the village or the town where he finds himself during at least a portion of every year. Its schools, its library, its poor,—and perhaps the new clergyman who has succeeded his grandfather's successor may be one of them,—all its interests, he shall make his own. And from this centre his beneficence shall radiate so far that all who hear of his wealth shall also hear of him as a friend to his race.

Is not this a pleasing programme? Wealth is a steep hill, which the father climbs slowly and the son often

tumbles down precipitately; but there is a table-land on a level with it, which may be found by those who do not lose their head in looking down from its sharply cloven summit.—Our dangerously rich men can make themselves hated, held as enemies of the race, or beloved and recognized as its benefactors. The clouds of discontent are threatening, but if the gold-pointed lightning-rods are rightly distributed the destructive element may be drawn off silently and harmlessly. For it cannot be repeated too often that the safety of great wealth with us lies in obedience to the new version of the Old World axiom, RICHNESS oblige.

THE NEW PORTFOLIO: FIRST OPENING.

A MORTAL ANTIPATHY.

I. GETTING READY.

It is impossible to begin a story which must of necessity tax the powers of belief of readers unacquainted with the class of facts to which its central point of interest belongs without some words in the nature of preparation. Readers of Charles Lamb remember that Sarah Battle insisted on a clean-swept hearth before sitting down to her favorite game of whist.

The narrator wishes to sweep the hearth, as it were, in these opening pages, before sitting down to tell his story. He does not intend to frighten the reader away by prolix explanation, but he does mean to warn him against hasty judgments when facts are related which are not within the range of every-day experience. Did he ever see the Siamese twins, or any pair like them? Probably not, yet he feels sure that Chang and Eng really existed; and if he has taken the trouble to inquire, he has satisfied himself that similar cases have been recorded by credible witnesses, though at long intervals and in countries far apart from each other.

This is the first sweep of the brush, to clear the hearth of the skepticism and incredulity which must be got out of the way before we can begin to tell and to listen in peace with ourselves and each other.

One more stroke of the brush is needed before the stage will be ready for the chief characters and the leading circumstances to which the reader's attention is invited. If the principal personages made their entrance at once, the reader would have to create for himself the whole scenery of their surrounding conditions. In point of fact, no matter how a story is begun, many of its readers have already shaped its chief actors out of any hint the author may have dropped, and provided from their own resources a locality and a set of outward conditions to environ these imagined personalities. These are all to be brushed away, and the actual surroundings of the subject of the narrative represented as they were, at the risk of detaining the reader a little while from the events most likely to interest him. The choicest egg that ever was laid was not so big as the nest that held it. If a story were so interesting that a maiden would rather hear it than listen to the praise of her own beauty, or a poet would rather read it than recite his own verses, still it would have to be wrapped in some tissue of circumstance, or it would lose half its effectiveness.

It may not be easy to find the exact locality referred to in this narrative by looking into the first gazetteer that is at hand. Recent experiences have shown that it is unsafe to be too exact in designating places and the people who live in them. There are, it may be added, so many advertisements disguised under the form of stories and other literary productions that one naturally desires to avoid the suspicion of being employed by the enterprising proprietors of this or that celebrated resort to use his gifts for their especial benefit. There are no doubt many persons who remember the old sign and the old tavern and its four chief personages presently to be mentioned. It is to be hoped that they will not furnish the public with a key to this narrative, and perhaps bring trouble to the writer of it, as has happened to other authors. If the real names are a little altered, it need not interfere with the important facts relating to those who bear them. It might not be safe to tell a damaging story about John or James Smythe; but if the slight change is made of spelling the name Smith, the Smythes would never think of bringing an action, as if the allusion related to any of them. The same gulf of family distinction separates the Thompsons with a p from the Thomsons without that letter.

There are few pleasanter places in the Northern States for a summer residence than that known from the first period of its settlement by the name of Arrowhead Village. The Indians had found it out, as the relics they left behind them abundantly testified. The commonest of these were those chipped stones which are the medals of barbarism, and from which the place took its name,—the heads of arrows, of various sizes, material, and patterns: some small enough for killing fish and little birds, some large enough for such game

as the moose and the bear, to say nothing of the hostile Indian and the white settler; some of flint, now and then one of white quartz, and others of variously colored jasper. The Indians must have lived here for many generations, and it must have been a kind of factory village of the stone age,—which lasted up to near the present time, if we may judge from the fact that many of these relics are met with close to the surface of the ground.

No wonder they found this a pleasant residence, for it is to-day one of the most attractive of all summer resorts; so inviting, indeed, that those who know it do not like to say too much about it, lest the swarms of tourists should make it unendurable to those who love it for itself, and not as a centre of fashionable display and extramural cockneyism.

There is the lake, in the first place,—Cedar Lake,—about five miles long, and from half a mile to a mile and a half wide, stretching from north to south. Near the northern extremity are the buildings of Stoughton University, a flourishing young college with an ambitious name, but well equipped and promising, the grounds of which reach the water. At the southern end of the lake are the edifices of the Corinna Institute, a favorite school for young ladies, where large numbers of the daughters of America are fitted, so far as education can do it, for all stations in life, from camping out with a husband at the mines in Nevada to acting the part of chief lady of the land in the White House at Washington.

Midway between the two extremities, on the eastern shore of the lake, is a valley between two hills, which come down to the very edge of the lake, leaving only room enough for a road between their base and the water. This valley, half a mile in width, has been long settled, and here for a century or more has stood the old Anchor Tavern. A famous place it was so long as its sign swung at the side of the road: famous for its landlord, portly, paternal, whose welcome to a guest that looked worthy of the attention was like that of a parent to a returning prodigal, and whose parting words were almost as good as a marriage benediction; famous for its landlady, ample in person, motherly, seeing to the whole household with her own eyes, mistress of all culinary secrets that Northern kitchens are most proud of; famous also for its ancient servant, as city people would call her,—help, as she was called in the tavern and would have called herself,—the unchanging, seemingly immortal Miranda, who cared for the guests as if she were their nursing mother, and pressed the specially favorite delicacies on their attention as a connoisseur calls the wandering eyes of an amateur to the beauties of a picture. Who that has ever been at the old Anchor Tavern forgets Miranda's

"A little of this fricassee?-it is ver-y nice;"

or

"Some of these cakes? You will find them ver-y good."

Nor would it be just to memory to forget that other notable and noted member of the household,—the unsleeping, unresting, omnipresent Pushee, ready for everybody and everything, everywhere within the limits of the establishment at all hours of the day and night. He fed, nobody could say accurately when or where. There were rumors of a "bunk," in which he lay down with his clothes on, but he seemed to be always wide awake, and at the service of as many guest, at once as if there had been half a dozen of him.

So much for old reminiscences.

The landlord of the Anchor Tavern had taken down his sign. He had had the house thoroughly renovated and furnished it anew, and kept it open in summer for a few boarders. It happened more than once that the summer boarders were so much pleased with the place that they stayed on through the autumn, and some of them through the winter. The attractions of the village were really remarkable. Boating in summer, and skating in winter; ice-boats, too, which the wild ducks could hardly keep up with; fishing, for which the lake was renowned; varied and beautiful walks through the valley and up the hillsides; houses sheltered from the north and northeasterly winds, and refreshed in the hot summer days by the breeze which came over the water,—all this made the frame for a pleasing picture of rest and happiness. But there was a great deal more than this. There was a fine library in the little village, presented and richly endowed by a wealthy native of the place. There was a small permanent population of a superior character to that of an everyday country town; there was a pretty little Episcopal church, with a good-hearted rector, broad enough for the Bishop of the diocese to be a little afraid of, and hospitable to all outsiders, of whom, in the summer season, there were always some who wanted a place of worship to keep their religion from dying out during the heathen months, while the shepherds of the flocks to which they belonged were away from their empty folds.

What most helped to keep the place alive all through the year was the frequent coming together of the members of a certain literary association. Some time before the tavern took down its sign the landlord had built a hall, where many a ball had been held, to which the young folks of all the country round had resorted. It was still sometimes used for similar occasions, but it was especially notable as being the place of meeting of the famous PANSOPHIAN SOCIETY.

This association, the name of which might be invidiously interpreted as signifying that its members knew everything, had no such pretensions, but, as its Constitution said very plainly and modestly, held itself open to accept knowledge on any and all subjects from such as had knowledge to impart. Its President was the rector of the little chapel, a man who, in spite of the Thirty-Nine Articles, could stand fire from the widest-mouthed heretical blunderbuss without flinching or losing his temper. The hall of the old Anchor Tavern was a convenient place of meeting for the students and instructors of the University and the Institute. Sometimes in boat-loads, sometimes in carriage-loads, sometimes in processions of skaters, they came to the meetings in Pansophian Hall, as it was now commonly called.

These meetings had grown to be occasions of great interest. It was customary to have papers written by members of the Society, for the most part, but now and then by friends of the members, sometimes by the students of the College or the Institute, and in rarer instances by anonymous personages, whose papers, having been looked over and discussed by the Committee appointed for that purpose, were thought worth listening to. The variety of topics considered was very great. The young ladies of the village and the Institute

had their favorite subjects, the young gentlemen a different set of topics, and the occasional outside contributors their own; so that one who happened to be admitted to a meeting never knew whether he was going to hear an account of recent arctic discoveries, or an essay on the freedom of the will, or a psychological experience, or a story, or even a poem.

Of late there had been a tendency to discuss the questions relating to the true status and the legitimate social functions of woman. The most conflicting views were held on the subject. Many of the young ladies and some of the University students were strong in defence of all the "woman's rights" doctrines. Some of these young people were extreme in their views. They had read about Semiramis and Boadicea and Queen Elizabeth, until they were ready, if they could get the chance, to vote for a woman as President of the United States or as General of the United States Army. They were even disposed to assert the physical equality of woman to man, on the strength of the rather questionable history of the Amazons, and especially of the story, believed to be authentic, of the female body-guard of the King of Dahomey,—females frightful enough to need no other weapon than their looks to scare off an army of Cossacks.

Miss Lurida Vincent, gold medallist of her year at the Corinna Institute, was the leader of these advocates of virile womanhood. It was rather singular that she should have elected to be the apostle of this extreme doctrine, for she was herself far better equipped with brain than muscles. In fact, she was a large-headed, large-eyed, long-eyelashed, slender-necked, slightly developed young woman; looking almost like a child at an age when many of the girls had reached their full stature and proportions. In her studies she was so far in advance of her different classes that there was always a wide gap between her and the second scholar. So fatal to all rivalry had she proved herself that she passed under the school name of The Terror. She learned so easily that she undervalued her own extraordinary gifts, and felt the deepest admiration for those of her friends endowed with faculties of an entirely different and almost opposite nature. After sitting at her desk until her head was hot and her feet were like ice, she would go and look at the blooming young girls exercising in the gymnasium of the school, and feel as if she would give all her knowledge, all her mathematics and strange tongues and history, all those accomplishments that made her the encyclopaedia of every class she belonged to, if she could go through the series of difficult and graceful exercises in which she saw her schoolmates delighting.

One among them, especially, was the object of her admiration, as she was of all who knew her exceptional powers in the line for which nature had specially organized her. All the physical perfections which Miss Lurida had missed had been united in Miss Euthymia Tower, whose school name was The Wonder. Though of full womanly stature, there were several taller girls of her age. While all her contours and all her movements betrayed a fine muscular development, there was no lack of proportion, and her finely shaped hands and feet showed that her organization was one of those carefully finished masterpieces of nature which sculptors are always in search of, and find it hard to detect among the imperfect products of the living laboratory.

This girl of eighteen was more famous than she cared to be for her performances in the gymnasium. She commonly contented herself with the same exercises that her companions were accustomed to. Only her dumb-bells, with which she exercised easily and gracefully, were too heavy for most of the girls to do more with than lift them from the floor. She was fond of daring feats on the trapeze, and had to be checked in her indulgence in them. The Professor of gymnastics at the University came over to the Institute now and then, and it was a source of great excitement to watch some of the athletic exercises in which the young lady showed her remarkable muscular strength and skill in managing herself in the accomplishment of feats which looked impossible at first sight. How often The Terror had thought to herself that she would gladly give up all her knowledge of Greek and the differential and integral calculus if she could only perform the least of those feats which were mere play to The Wonder! Miss Euthymia was not behind the rest in her attainments in classical or mathematical knowledge, and she was one of the very best students in the out-door branches,—botany, mineralogy, sketching from nature,—to be found among the scholars of the Institute.

There was an eight-oared boat rowed by a crew of the young ladies, of which Miss Euthymia was the captain and pulled the bow oar. Poor little Lurida could not pull an oar, but on great occasions, when there were many boats out, she was wanted as coxswain, being a mere feather-weight, and quick-witted enough to serve well in the important office where brains are more needed than muscle.

There was also an eight-oared boat belonging to the University, and rowed by a picked crew of stalwart young fellows. The bow oar and captain of the University crew was a powerful young man, who, like the captain of the girls' boat, was a noted gymnast. He had had one or two quiet trials with Miss Euthymia, in which, according to the ultras of the woman's rights party, he had not vindicated the superiority of his sex in the way which might have been expected. Indeed, it was claimed that he let a cannon-ball drop when he ought to have caught it, and it was not disputed that he had been ingloriously knocked over by a sand-bag projected by the strong arms of the young maiden. This was of course a story that was widely told and laughingly listened to, and the captain of the University crew had become a little sensitive on the subject. When there was a talk, therefore, about a race between the champion boats of the two institutions there was immense excitement in both of them, as well as among the members of the Pansophian Society and all the good people of the village.

There were many objections to be overcome. Some thought it unladylike for the young maidens to take part in a competition which must attract many lookers-on, and which it seemed to them very hoidenish to venture upon. Some said it was a shame to let a crew of girls try their strength against an equal number of powerful young men. These objections were offset by the advocates of the race by the following arguments. They maintained that it was no more hoidenish to row a boat than it was to take a part in the calisthenic exercises, and that the girls had nothing to do with the young men's boat, except to keep as much ahead of it as possible. As to strength, the woman's righters believed that, weight for weight, their crew was as strong as the other, and of course due allowance would be made for the difference of weight and all other accidental hindrances. It was time to test the boasted superiority of masculine muscle. Here was a chance. If the girls beat, the whole country would know it, and after that female suffrage would be only a question of time. Such was the conclusion, from rather insufficient premises, it must be confessed; but if nature does nothing per saltum,—by jumps,—as the old adage has it, youth is very apt to take long leaps from a fact to a possible

sequel or consequence. So it had come about that a contest between the two boat-crews was looked forward to with an interest almost equal to that with which the combat between the Horatii and Curiatii was regarded.

The terms had been at last arranged between the two crews, after cautious protocols and many diplomatic discussions. It was so novel in its character that it naturally took a good deal of time to adjust it in such a way as to be fair to both parties. The course must not be too long for the lighter and weaker crew, for the staying power of the young persons who made it up could not be safely reckoned upon. A certain advantage must be allowed them at the start, and this was a delicate matter to settle. The weather was another important consideration. June would be early enough, in all probability, and if the lake should be tolerably smooth the grand affair might come off some time in that month. Any roughness of the water would be unfavorable to the weaker crew. The rowing-course was on the eastern side of the lake, the starting-point being opposite the Anchor Tavern; from that three quarters of a mile to the south, where the turning-stake was fixed, so that the whole course of one mile and a half would bring the boats back to their starting-point.

The race was to be between the Algonquin, eight-oared boat with outriggers, rowed by young men, students of Stoughton University, and the Atalanta, also eight-oared and outrigger boat, by young ladies from the Corinna Institute. Their boat was three inches wider than the other, for various sufficient reasons, one of which was to make it a little less likely to go over and throw its crew into the water, which was a sound precaution, though all the girls could swim, and one at least, the bow oar, was a famous swimmer, who had pulled a drowning man out of the water after a hard struggle to keep him from carrying her down with him.

Though the coming trial had not been advertised in the papers, so as to draw together a rabble of betting men and ill-conditioned lookers-on, there was a considerable gathering, made up chiefly of the villagers and the students of the two institutions. Among them were a few who were disposed to add to their interest in the trial by small wagers. The bets were rather in favor of the "Quins," as the University boat was commonly called, except where the natural sympathy of the young ladies or the gallantry of some of the young men led them to risk their gloves or cigars, or whatever it might be, on the Atalantas. The elements of judgment were these: average weight of the Algonquins one hundred and sixty-five pounds; average weight of the Atalantas, one hundred and forty-eight pounds; skill in practice about equal; advantage of the narrow boat equal to three lengths; whole distance allowed the Atalantas eight lengths,—a long stretch to be made up in a mile and a half. And so both crews began practising for the grand trial.

II. THE BOAT-RACE.

The 10th of June was a delicious summer day, rather warm, but still and bright. The water was smooth, and the crews were in the best possible condition. All was expectation, and for some time nothing but expectation. No boat-race or regatta ever began at the time appointed for the start. Somebody breaks an oar, or somebody fails to appear in season, or something is the matter with a seat or an outrigger; or if there is no such excuse, the crew of one or both or all the boats to take part in the race must paddle about to get themselves ready for work, to the infinite weariness of all the spectators, who naturally ask why all this getting ready is not attended to beforehand. The Algonquins wore plain gray flannel suits and white caps. The young ladies were all in dark blue dresses, touched up with a red ribbon here and there, and wore light straw hats. The little coxswain of the Atalanta was the last to step on board. As she took her place she carefully deposited at her feet a white handkerchief wrapped about something or other, perhaps a sponge, in case the boat should take in water.

At last the Algonquin shot out from the little nook where she lay, —long, narrow, shining, swift as a pickerel when he darts from the reedy shore. It was a beautiful sight to see the eight young fellows in their close-fitting suits, their brown muscular arms bare, bending their backs for the stroke and recovering, as if they were parts of a single machine.

"The gals can't stan' it agin them fellers," said the old blacksmith from the village.

"You wait till the gals get a-goin'," said the carpenter, who had often worked in the gymnasium of the Corinna Institute, and knew something of their muscular accomplishments. "Y' ought to see 'em climb ropes, and swing dumb-bells, and pull in them rowin'-machines. Ask Jake there whether they can't row a mild in double-quick time,—he knows all about it."

Jake was by profession a fisherman, and a freshwater fisherman in a country village is inspector-general of all that goes on out-of-doors, being a lazy, wandering sort of fellow, whose study of the habits and habitats of fishes gives him a kind of shrewdness of observation, just as dealing in horses is an education of certain faculties, and breeds a race of men peculiarly cunning, suspicious, wary, and wide awake, with a rhetoric of appreciation and depreciation all its own.

Jake made his usual preliminary signal, and delivered himself to the following effect:

"Wahl, I don' know jest what to say. I've seed 'em both often enough when they was practisin', an' I tell ye the' wa'n't no slouch abaout neither on 'em. But them bats is all-fired long, 'n' eight on 'em stretched in a straight line eendways makes a consid'able piece aout 'f a mile 'n' a haaf. I'd bate on them gals if it wa'n't that them fellers is naterally longer winded, as the gals 'll find aout by the time they git raound the stake 'n' over agin the big ellow. I'll go ye a quarter on the pahnts agin the petticoats."

The fresh-water fisherman had expressed the prevailing belief that the young ladies were overmatched. Still there were not wanting those who thought the advantage allowed the "Lantas," as they called the Corinna boatcrew, was too great, and that it would be impossible for the "Quins" to make it up and go by them.

The Algonquins rowed up and down a few times before the spectators. They appeared in perfect training,

neither too fat nor too fine, mettlesome as colts, steady as draught-horses, deep-breathed as oxen, disciplined to work together as symmetrically as a single sculler pulls his pair of oars. The fisherman offered to make his quarter fifty cents. No takers.

Five minutes passed, and all eyes were strained to the south, looking for the Atalanta. A clump of trees hid the edge of the lake along which the Corinna's boat was stealing towards the starting-point. Presently the long shell swept into view, with its blooming rowers, who, with their ample dresses, seemed to fill it almost as full as Raphael fills his skiff on the edge of the Lake of Galilee. But how steadily the Atalanta came on!—no rocking, no splashing, no apparent strain; the bow oar turning to look ahead every now and then, and watching her course, which seemed to be straight as an arrow, the beat of the strokes as true and regular as the pulse of the healthiest rower among them all. And if the sight of the other boat and its crew was beautiful, how lovely was the look of this! Eight young girls,—young ladies, for those who prefer that more dignified and less attractive expression,—all in the flush of youth, all in vigorous health; every muscle taught its duty; each rower alert, not to be a tenth of a second out of time, or let her oar dally with the water so as to lose an ounce of its propelling virtue; every eye kindling with the hope of victory. Each of the boats was cheered as it came in sight, but the cheers for the Atalanta were naturally the loudest, as the gallantry of one sex and the clear, high voices of the other gave it life and vigor.

"Take your places!" shouted the umpire, five minutes before the half hour. The two boats felt their way slowly and cautiously to their positions, which had been determined by careful measurement. After a little backing and filling they got into line, at the proper distance from each other, and sat motionless, their bodies bent forward, their arms outstretched, their oars in the water, waiting for the word.

"Go!" shouted the umpire.

Away sprang the Atalanta, and far behind her leaped the Algonquin, her oars bending like so many long Indian bows as their blades flashed through the water.

"A stern chase is a long chase," especially when one craft is a great distance behind the other. It looked as if it would be impossible for the rear boat to overcome the odds against it. Of course the Algonquin kept gaining, but could it possibly gain enough? That was the question. As the boats got farther and farther away, it became more and more difficult to determine what change there was in the interval between them. But when they came to rounding the stake it was easier to guess at the amount of space which had been gained. It was clear that something like half the distance, four lengths, as nearly as could be estimated, had been made up in rowing the first three quarters of a mile. Could the Algonquins do a little better than this in the second half of the race-course, they would be sure of winning.

The boats had turned the stake, and were coming in rapidly. Every minute the University boat was getting nearer the other.

"Go it, Quins!" shouted the students.

"Pull away, Lantas!" screamed the girls, who were crowding down to the edge of the water.

Nearer,—nearer,—the rear boat is pressing the other more and more closely,—a few more strokes, and they will be even, for there is but one length between them, and thirty rods will carry them to the line. It looks desperate for the Atalantas. The bow oar of the Algonquin turns his head. He sees the little coxswain leaning forward at every stroke, as if her trivial weight were of such mighty consequence,—but a few ounces might turn the scale of victory. As he turned he got a glimpse of the stroke oar of the Atalanta. What a flash of loveliness it was! Her face was like the reddest of June roses, with the heat and the strain and the passion of expected triumph. The upper button of her close-fitting flannel suit had strangled her as her bosom heaved with exertion, and it had given way before the fierce clutch she made at it. The bow oar was a staunch and steady rower, but he was human. The blade of his oar lingered in the water; a little more and he would have caught a crab, and perhaps lost the race by his momentary bewilderment.

The boat, which seemed as if it had all the life and nervousness of a Derby three-year-old, felt the slight check, and all her men bent more vigorously to their oars. The Atalantas saw the movement, and made a spurt to keep their lead and gain upon it if they could. It was of no use. The strong arms of the young men were too much for the young maidens; only a few lengths remained to be rowed, and they would certainly pass the Atalanta before she could reach the line.

The little coxswain saw that it was all up with the girls' crew if she could not save them by some strategic device.

"Dolus an virtus quis in hoste requirat?"

she whispered to herself,—for The Terror remembered her Virgil as she did everything else she ever studied. As she stooped, she lifted the handkerchief at her feet, and took from it a flaming bouquet. "Look!" she cried, and flung it just forward of the track of the Algonquin. The captain of the University boat turned his head, and there was the lovely vision which had a moment before bewitched him. The owner of all that loveliness must, he thought, have flung the bouquet. It was a challenge: how could he be such a coward as to decline accepting it.

He was sure he could win the race now, and he would sweep past the line in triumph with the great bunch of flowers at the stem of his boat, proud as Van Tromp in the British channel with the broom at his mast-head.

He turned the boat's head a little by backing water. He came up with the floating flowers, and near enough to reach them. He stooped and snatched them up, with the loss perhaps of a second in all,—no more. He felt sure of his victory.

How can one tell the story of the finish in cold-blooded preterites? Are we not there ourselves? Are not our muscles straining with those of these sixteen young creatures, full of hot, fresh blood, their nerves all tingling like so many tight-strained harp-strings, all their life concentrating itself in this passionate moment of supreme effort? No! We are seeing, not telling about what somebody else once saw!

—The bow of the Algonquin passes the stern of the Atalanta!

—The bow of the Algonquin is on a level with the middle of the Atalanta!

—Three more lengths' rowing and the college crew will pass the girls!

—“Hurrah for the Quins!” The Algonquin ranges up alongside of the Atalanta!

“Through with her!” shouts the captain of the Algonquin.

“Now, girls!” shrieks the captain of the Atalanta.

They near the line, every rower straining desperately, almost madly.

—Crack goes the oar of the Atalanta's captain, and up flash its splintered fragments, as the stem of her boat springs past the line, eighteen inches at least ahead of the Algonquin.

Hooraw for the Lantas! Hooraw for the Girls! Hooraw for the Institoot! shout a hundred voices.

“Hurrah for woman's rights and female suffrage!” pipes the small voice of The Terror, and there is loud laughing and cheering all round.

She had not studied her classical dictionary and her mythology for nothing. “I have paid off one old score,” she said. “Set down my damask roses against the golden apples of Hippomenes!”

It was that one second lost in snatching up the bouquet which gave the race to the Atalantas.

III. THE WHITE CANOE.

While the two boats were racing, other boats with lookers-on in them were rowing or sailing in the neighborhood of the race-course. The scene on the water was a gay one, for the young people in the boats were, many of them, acquainted with each other. There was a good deal of lively talk until the race became too exciting. Then many fell silent, until, as the boats neared the line, and still more as they crossed it, the shouts burst forth which showed how a cramp of attention finds its natural relief in a fit of convulsive exclamation.

But far away, on the other side of the lake, a birchbark canoe was to be seen, in which sat a young man, who paddled it skillfully and swiftly. It was evident enough that he was watching the race intently, but the spectators could see little more than that. One of them, however, who sat upon the stand, had a powerful spy-glass, and could distinguish his motions very minutely and exactly. It was seen by this curious observer that the young man had an opera-glass with him, which he used a good deal at intervals. The spectator thought he kept it directed to the girls' boat, chiefly, if not exclusively. He thought also that the opera-glass was more particularly pointed towards the bow of the boat, and came to the natural conclusion that the bow oar, Miss Euthymia Tower, captain of the Atalantas, “The Wonder” of the Corinna Institute, was the attraction which determined the direction of the instrument.

“Who is that in the canoe over there?” asked the owner of the spy-glass.

“That's just what we should like to know,” answered the old landlord's wife. “He and his man boarded with us when they first came, but we could never find out anything about him only just his name and his ways of living. His name is Kirkwood, Maurice Kirkwood, Esq., it used to come on his letters. As for his ways of living, he was the solitariest human being that I ever came across. His man carried his meals up to him. He used to stay in his room pretty much all day, but at night he would be off, walking, or riding on horseback, or paddling about in the lake, sometimes till nigh morning. There's something very strange about that Mr. Kirkwood. But there don't seem to be any harm in him. Only nobody can guess what his business is. They got up a story about him at one time. What do you think? They said he was a counterfeiter! And so they went one night to his room, when he was out, and that man of his was away too, and they carried keys, and opened pretty much everything; and they found—well, they found just nothing at all except writings and letters,—letters from places in America and in England, and some with Italian postmarks: that was all. Since that time the sheriff and his folks have let him alone and minded their own business. He was a gentleman,—anybody ought to have known that; and anybody that knew about his nice ways of living and behaving, and knew the kind of wear he had for his underclothing, might have known it. I could have told those officers that they had better not bother him. I know the ways of real gentlemen and real ladies, and I know those fellows in store clothes that look a little too fine,—outside. Wait till washing-day comes!”

The good lady had her own standards for testing humanity, and they were not wholly unworthy of consideration; they were quite as much to be relied on as the judgments of the travelling phrenologist, who sent his accomplice on before him to study out the principal personages in the village, and in the light of these revelations interpreted the bumps, with very little regard to Gall and Spurzheim, or any other authorities.

Even with the small amount of information obtained by the search among his papers and effects, the gossips of the village had constructed several distinct histories for the mysterious stranger. He was an agent of a great publishing house; a leading contributor to several important periodicals; the author of that anonymously published novel which had made so much talk; the poet of a large clothing establishment; a spy of the Italian, some said the Russian, some said the British, Government; a proscribed refugee from some country where he had been plotting; a school-master without a school, a minister without a pulpit, an actor without an engagement; in short, there was no end to the perfectly senseless stories that were told about him, from that which made him out an escaped convict to the whispered suggestion that he was the eccentric heir to a great English title and estate.

The one unquestionable fact was that of his extraordinary seclusion. Nobody in the village, no student in the University, knew his history. No young lady in the Corinna Institute had ever had a word from him. Sometimes, as the boats of the University or the Institute were returning at dusk, their rowers would see the canoe stealing into the shadows as they drew near it. Sometimes on a moonlight night, when a party of the

young ladies were out upon the lake, they would see the white canoe gliding ghost-like in the distance. And it had happened more than once that when a boat's crew had been out with singers among them, while they were in the midst of a song, the white canoe would suddenly appear and rest upon the water,—not very near them, but within hearing distance,—and so remain until the singing was over, when it would steal away and be lost sight of in some inlet or behind some jutting rock.

Naturally enough, there was intense curiosity about this young man. The landlady had told her story, which explained nothing. There was nobody to be questioned about him except his servant, an Italian, whose name was Paolo, but who to the village was known as Mr. Paul.

Mr. Paul would have seemed the easiest person in the world to worm a secret out of. He was good-natured, child-like as a Heathen Chinese, talked freely with everybody in such English as he had at command, knew all the little people of the village, and was followed round by them partly from his personal attraction for them, and partly because he was apt to have a stick of candy or a handful of peanuts or other desirable luxury in his pocket for any of his little friends he met with. He had that wholesome, happy look, so uncommon in our arid countrymen,—a look hardly to be found except where figs and oranges ripen in the open air. A kindly climate to grow up in, a religion which takes your money and gives you a stamped ticket good at Saint Peter's box office, a roomy chest and a good pair of lungs in it, an honest digestive apparatus, a lively temperament, a cheerful acceptance of the place in life assigned to one by nature and circumstance,—these are conditions under which life may be quite comfortable to endure, and certainly is very pleasant to contemplate. All these conditions were united in Paolo. He was the easiest; pleasantest creature to talk with that one could ask for a companion. His southern vivacity, his amusing English, his simplicity and openness, made him friends everywhere.

It seemed as if it would be a very simple matter to get the history of his master out of this guileless and unsophisticated being. He had been tried by all the village experts. The rector had put a number of well-studied careless questions, which failed of their purpose. The old librarian of the town library had taken note of all the books he carried to his master, and asked about his studies and pursuits. Paolo found it hard to understand his English, apparently, and answered in the most irrelevant way. The leading gossip of the village tried her skill in pumping him for information. It was all in vain.

His master's way of life was peculiar,—in fact, eccentric. He had hired rooms in an old-fashioned three-story house. He had two rooms in the second and third stories of this old wooden building: his study in the second, his sleeping-room in the one above it. Paolo lived in the basement, where he had all the conveniences for cooking, and played the part of chef for his master and himself. This was only a part of his duty, for he was a man-of-all-work, purveyor, steward, chambermaid,—as universal in his services for one man as Pushee at the Anchor Tavern used to be for everybody.

It so happened that Paolo took a severe cold one winter's day, and had such threatening symptoms that he asked the baker, when he called, to send the village physician to see him. In the course of his visit the doctor naturally inquired about the health of Paolo's master.

"Signor Kirkwood well,—molto bene," said Paolo. "Why does he keep out of sight as he does?" asked the doctor.

"He always so," replied Paolo. "Una antipatia."

Whether Paolo was off his guard with the doctor, whether he revealed it to him as to a father confessor, or whether he thought it time that the reason of his master's seclusion should be known, the doctor did not feel sure. At any rate, Paolo was not disposed to make any further revelations. Una antipatia,—an antipathy,—that was all the doctor learned. He thought the matter over, and the more he reflected the more he was puzzled. What could an antipathy be that made a young man a recluse! Was it a dread of blue sky and open air, of the smell of flowers, or some electrical impression to which he was unnaturally sensitive?

Dr. Butts carried these questions home with him. His wife was a sensible, discreet woman, whom he could trust with many professional secrets. He told her of Paolo's revelation, and talked it over with her in the light of his experience and her own; for she had known some curious cases of constitutional likes and aversions.

Mrs. Butts buried the information in the grave of her memory, where it lay for nearly a week. At the end of that time it emerged in a confidential whisper to her favorite sister-in-law, a perfectly safe person. Twenty-four hours later the story was all over the village that Maurice Kirkwood was the subject of a strange, mysterious, unheard-of antipathy to something, nobody knew what; and the whole neighborhood naturally resolved itself into an unorganized committee of investigation.

IV. THE YOUNG SOLITARY

What is a country village without its mysterious personage? Few are now living who can remember the advent of the handsome young man who was the mystery of our great university town "sixty years since,"—long enough ago for a romance to grow out of a narrative, as *Waverley* may remind us. The writer of this narrative remembers him well, and is not sure that he has not told the strange story in some form or other to the last generation, or to the one before the last. No matter: if he has told it they have forgotten it,—that is, if they have ever read it; and whether they have or have not, the story is singular enough to justify running the risk of repetition.

This young man, with a curious name of Scandinavian origin, appeared unheralded in the town, as it was then, of Cantabridge. He wanted employment, and soon found it in the shape of manual labor, which he undertook and performed cheerfully. But his whole appearance showed plainly enough that he was bred to occupations of a very different nature, if, in deed, he had been accustomed to any kind of toil for his living. His aspect was that of one of gentle birth. His hands were not those of a laborer, and his features were

delicate and refined, as well as of remarkable beauty. Who he was, where he came from, why he had come to Cantabridge, was never clearly explained. He was alone, without friends, except among the acquaintances he had made in his new residence. If he had any correspondents, they were not known to the neighborhood where he was living. But if he had neither friends nor correspondents, there was some reason for believing that he had enemies. Strange circumstances occurred which connected themselves with him in an ominous and unaccountable way. A threatening letter was slipped under the door of a house where he was visiting. He had a sudden attack of illness, which was thought to look very much like the effect of poison. At one time he disappeared, and was found wandering, bewildered, in a town many miles from that where he was residing. When questioned how he came there; he told a coherent story that he had been got, under some pretext, or in some not incredible way, into a boat, from which, at a certain landing-place, he had escaped and fled for his life, which he believed was in danger from his kidnappers.

Whoever his enemies may have been,—if they really existed,—he did not fall a victim to their plots, so far as known to or remembered by this witness.

Various interpretations were put upon his story. Conjectures were as abundant as they were in the case of Kaspar Hauser. That he was of good family seemed probable; that he was of distinguished birth, not impossible; that he was the dangerous rival of a candidate for a greatly coveted position in one of the northern states of Europe was a favorite speculation of some of the more romantic young persons. There was no dramatic ending to this story,—at least none is remembered by the present writer.

“He left a name,” like the royal Swede, of whose lineage he may have been for aught that the village people knew, but not a name at which anybody “grew pale;” for he had swindled no one, and broken no woman's heart with false vows. Possibly some withered cheeks may flush faintly as they recall the handsome young man who came before the Cantabridge maidens fully equipped for a hero of romance when the century was in its first quarter.

The writer has been reminded of the handsome Swede by the incidents attending the advent of the unknown and interesting stranger who had made his appearance at Arrowhead Village.

It was a very insufficient and unsatisfactory reason to assign for the young man's solitary habits that he was the subject of an antipathy. For what do we understand by that word? When a young lady screams at the sight of a spider, we accept her explanation that she has a natural antipathy to the creature. When a person expresses a repugnance to some wholesome article of food, agreeable to most people, we are satisfied if he gives the same reason. And so of various odors, which are pleasing to some persons and repulsive to others. We do not pretend to go behind the fact. It is an individual, and it may be a family, peculiarity. Even between different personalities there is an instinctive elective dislike as well as an elective affinity. We are not bound to give a reason why Dr. Fell is odious to us any more than the prisoner who peremptorily challenges a juryman is bound to say why he does it; it is enough that he “does not like his looks.”

There was nothing strange, then, that Maurice Kirkwood should have his special antipathy; a great many other people have odd likes and dislikes. But it was a very curious thing that this antipathy should be alleged as the reason for his singular mode of life. All sorts of explanations were suggested, not one of them in the least satisfactory, but serving to keep the curiosity of inquirers active until they were superseded by a new theory. One story was that Maurice had a great fear of dogs. It grew at last to a connected narrative, in which a fright in childhood from a rabid mongrel was said to have given him such a sensitiveness to the near presence of dogs that he was liable to convulsions if one came close to him.

This hypothesis had some plausibility. No other creature would be so likely to trouble a person who had an antipathy to it. Dogs are very apt to make the acquaintance of strangers, in a free and easy way. They are met with everywhere,—in one's daily walk, at the thresholds of the doors one enters, in the gentleman's library, on the rug of my lady's sitting-room and on the cushion of her carriage. It is true that there are few persons who have an instinctive repugnance to this “friend of man.” But what if this so-called antipathy were only a fear, a terror, which borrowed the less unmanly name? It was a fair question, if, indeed, the curiosity of the public had a right to ask any questions at all about a harmless individual who gave no offence, and seemed entitled to the right of choosing his way of living to suit himself, without being submitted to espionage.

There was no positive evidence bearing on the point as yet. But one of the village people had a large Newfoundland dog, of a very sociable disposition, with which he determined to test the question. He watched for the time when Maurice should leave his house for the woods or the lake, and started with his dog to meet him. The animal walked up to the stranger in a very sociable fashion, and began making his acquaintance, after the usual manner of well-bred dogs; that is, with the courtesies and blandishments by which the canine Chesterfield is distinguished from the ill-conditioned cur. Maurice patted him in a friendly way, and spoke to him as one who was used to the fellowship of such companions. That idle question and foolish story were disposed of, therefore, and some other solution must be found, if possible.

A much more common antipathy is that which is entertained with regard to cats. This has never been explained. It is not mere aversion to the look of the creature, or to any sensible quality known to the common observer. The cat is pleasing in aspect, graceful in movement, nice in personal habits, and of amiable disposition. No cause of offence is obvious, and yet there are many persons who cannot abide the presence of the most innocent little kitten. They can tell, in some mysterious way, that there is a cat in the room when they can neither see nor hear the creature. Whether it is an electrical or quasi-magnetic phenomenon, or whatever it may be, of the fact of this strange influence there are too many well-authenticated instances to allow its being questioned. But suppose Maurice Kirkwood to be the subject of this antipathy in its extremest degree, it would in no manner account for the isolation to which he had condemned himself. He might shun the firesides of the old women whose tabbies were purring by their footstools, but these worthy dames do not make up the whole population.

These two antipathies having been disposed of, a new suggestion was started, and was talked over with a curious sort of half belief, very much as ghost stories are told in a circle of moderately instructed and inquiring persons. This was that Maurice was endowed with the unenviable gift of the evil eye. He was in frequent communication with Italy, as his letters showed, and had recently been residing in that country, as

was learned from Paolo. Now everybody knows that the evil eye is not rarely met with in Italy. Everybody who has ever read Mr. Story's "Roba di Roma" knows what a terrible power it is which the owner of the evil eye exercises. It can blight and destroy whatever it falls upon. No person's life or limb is safe if the jettatura, the withering glance of the deadly organ, falls upon him. It must be observed that this malign effect may follow a look from the holiest personages, that is, if we may assume that a monk is such a matter of course. Certainly we have a right to take it for granted that the late Pope, Pius Ninth, was an eminently holy man, and yet he had the name of dispensing the mystic and dreaded jettatura as well as his blessing. If Maurice Kirkwood carried that destructive influence, so that his clear blue eyes were more to be feared than the fascinations of the deadliest serpent, it could easily be understood why he kept his look away from all around him whom he feared he might harm.

No sensible person in Arrowhead Village really believed in the evil eye, but it served the purpose of a temporary hypothesis, as do many suppositions which we take as a nucleus for our observations without putting any real confidence in them. It was just suited to the romantic notions of the more flighty persons in the village, who had meddled more or less with Spiritualism, and were ready for any new fancy, if it were only wild enough.

The riddle of the young stranger's peculiarity did not seem likely to find any very speedy solution. Every new suggestion furnished talk for the gossips of the village and the babble of the many tongues in the two educational institutions. Naturally, the discussion was liveliest among the young ladies. Here is an extract from a letter of one of these young ladies, who, having received at her birth the ever-pleasing name of Mary, saw fit to have herself called Mollie in the catalogue and in her letters. The old postmaster of the town to which her letter was directed took it up to stamp, and read on the envelope the direction to "Miss Lulu Pinrow." He brought the stamp down with a vicious emphasis, coming very near blotting out the nursery name, instead of cancelling the postage-stamp. "Lulu!" he exclaimed. "I should like to know if that great strapping girl isn't out of her cradle yet! I suppose Miss Louisa will think that belongs to her, but I saw her christened and I heard the name the minister gave her, and it was n't 'Lulu,' or any such baby nonsense." And so saying, he gave it a fling to the box marked P, as if it burned his fingers. Why a grown-up young woman allowed herself to be cheapened in the way so many of them do by the use of names which become them as well as the frock of a ten-year-old schoolgirl would become a graduate of the Corinna Institute, the old postmaster could not guess. He was a queer old man.

The letter thus scornfully treated runs over with a young girl's written loquacity:

"Oh, Lulu, there is such a sensation as you never saw or heard of 'in all your born days,' as mamma used to say. He has been at the village for some time, but lately we have had—oh, the weirdest stories about him! 'The Mysterious Stranger' is the name some give him, but we girls call him the Sachem, because he paddles about in an Indian canoe. If I should tell you all the things that are said about him I should use up all my paper ten times over. He has never made a visit to the Institute, and none of the girls have ever spoken to him, but the people at the village say he is very, very handsome. We are dying to get a look at him, of course—though there is a horrid story about him—that he has the evil eye did you ever hear about the evil eye? If a person who is born with it looks at you, you die, or something happens—awful—is n't it?

"The rector says he never goes to church, but then you know a good many of the people that pass the summer at the village never do—they think their religion must have vacations—that's what I've heard they say—vacations, just like other hard work—it ought not to be hard work, I'm sure, but I suppose they feel so about it. Should you feel afraid to have him look at you? Some of the girls say they would n't have him for the whole world, but I shouldn't mind it—especially if I had on my eyeglasses. Do you suppose if there is anything in the evil eye it would go through glass? I don't believe it. Do you think blue eye-glasses would be better than common ones? Don't laugh at me—they tell such weird stories! The Terror—Lurida Vincent, you know—makes fun of all they say about it, but then she 'knows everything and doesn't believe anything,' the girls say—Well, I should be awfully scared, I know, if anybody that had the evil eye should look at me—but—oh, I don't know—but if it was a young man—and if he was very—very good-looking—I think—perhaps I would run the risk—but don't tell anybody I said any such horrid thing—and burn this letter right up—there 's a dear good girl."

It is to be hoped that no reader will doubt the genuineness of this letter. There are not quite so many "awfuls" and "awfullys" as one expects to find in young ladies' letters, but there are two "weirds," which may be considered a fair allowance. How it happened that "jolly" did not show itself can hardly be accounted for; no doubt it turns up two or three times at least in the postscript.

Here is an extract from another letter. This was from one of the students of Stoughton University to a friend whose name as it was written on the envelope was Mr. Frank Mayfield. The old postmaster who found fault with Miss "Lulu's" designation would probably have quarrelled with this address, if it had come under his eye. "Frank" is a very pretty, pleasant-sounding name, and it is not strange that many persons use it in common conversation all their days when speaking of a friend. Were they really christened by that name, any of these numerous Franks? Perhaps they were, and if so there is nothing to be said. But if not, was the baptismal name Francis or Franklin? The mind is apt to fasten in a very perverse and unpleasant way upon this question, which too often there is no possible way of settling. One might hope, if he outlived the bearer of the appellation, to get at the fact; but since even gravestones have learned to use the names belonging to childhood and infancy in their solemn record, the generation which docks its Christian names in such an un-Christian way will bequeath whole churchyards full of riddles to posterity. How it will puzzle and distress the historians and antiquarians of a coming generation to settle what was the real name of Dan and Bert and Billy, which last is legible on a white marble slab, raised in memory of a grown person, in a certain burial-ground in a town in Essex County, Massachusetts!

But in the mean time we are forgetting the letter directed to Mr. Frank Mayfield.

"DEAR FRANK,—Hooray! Hurrah! Rah!

"I have made the acquaintance of 'The Mysterious Stranger'! It happened by a queer sort of accident, which came pretty near relieving you of the duty of replying to this letter. I was out in my little boat, which carries a sail too big for her, as I know and ought to have remembered. One of those fitful flaws of wind to which the

lake is so liable struck the sail suddenly, and over went my boat. My feet got tangled in the sheet somehow, and I could not get free. I had hard work to keep my head above water, and I struggled desperately to escape from my toils; for if the boat were to go down I should be dragged down with her. I thought of a good many things in the course of some four or five minutes, I can tell you, and I got a lesson about time better than anything Kant and all the rest of them have to say of it. After I had been there about an ordinary lifetime, I saw a white canoe making toward me, and I knew that our shy young gentleman was coming to help me, and that we should become acquainted without an introduction. So it was, sure enough. He saw what the trouble was, managed to disentangle my feet without drowning me in the process or upsetting his little flimsy craft, and, as I was somewhat tired with my struggle, took me in tow and carried me to the landing where he kept his canoe. I can't say that there is anything odd about his manners or his way of talk. I judge him to be a native of one of our Northern States,—perhaps a New Englander. He has lived abroad during some parts of his life. He is not an artist, as it was at one time thought he might be. He is a good-looking fellow, well developed, manly in appearance, with nothing to excite special remark unless it be a certain look of anxiety or apprehension which comes over him from time to time. You remember our old friend Squire B., whose companion was killed by lightning when he was standing close to him. You know the look he had whenever anything like a thundercloud came up in the sky. Well, I should say there was a look like that came over this Maurice Kirkwood's face every now and then. I noticed that he looked round once or twice as if to see whether some object or other was in sight. There was a little rustling in the grass as if of footsteps, and this look came over his features. A rabbit ran by us, and I watched to see if he showed any sign of that antipathy we have heard so much of, but he seemed to be pleased watching the creature.

"If you ask me what my opinion is about this Maurice Kirkwood, I think he is eccentric in his habit of life, but not what they call a 'crank' exactly. He talked well enough about such matters as we spoke of,—the lake, the scenery in general, the climate. I asked him to come over and take a look at the college. He did n't promise, but I should not be surprised if I should get him over there some day. I asked him why he did n't go to the Pansophian meetings. He did n't give any reason, but he shook his head in a very peculiar way, as much as to say that it was impossible.

"On the whole, I think it is nothing more than the same feeling of dread of human society, or dislike for it, which under the name of religion used to drive men into caves and deserts. What a pity that Protestantism does not make special provision for all the freaks of individual character! If we had a little more faith and a few more caverns, or convenient places for making them, we should have hermits in these holes as thick as woodchucks or prairie dogs. I should like to know if you never had the feeling,

"'Oh, that the desert were my dwelling-place!'"

"I know what your answer will be, of course. You will say, 'Certainly,

"'With one fair spirit for my minister;'"

"but I mean alone,—all alone. Don't you ever feel as if you should like to have been a pillar-saint in the days when faith was as strong as lye (spelt with a y), instead of being as weak as dish-water? (Jerry is looking over my shoulder, and says this pun is too bad to send, and a disgrace to the University—but never mind.) I often feel as if I should like to roost on a pillar a hundred feet high,—yes, and have it soaped from top to bottom. Wouldn't it be fun to look down at the bores and the duns? Let us get up a pillar-roosters' association. (Jerry—still looking over says there is an absurd contradiction in the idea.)

"What a matter-of-fact idiot Jerry is!

"How do you like looking over, Mr. Inspector general?"

The reader will not get much information out of this lively young fellow's letter, but he may get a little. It is something to know that the mysterious resident of Arrowhead Village did not look nor talk like a crazy person; that he was of agreeable aspect and address, helpful when occasion offered, and had nothing about him, so far as yet appeared, to prevent his being an acceptable member of society.

Of course the people in the village could never be contented without learning everything there was to be learned about their visitor. All the city papers were examined for advertisements. If a cashier had absconded, if a broker had disappeared, if a railroad president was missing, some of the old stories would wake up and get a fresh currency, until some new circumstance gave rise to a new hypothesis. Unconscious of all these inquiries and fictions, Maurice Kirkwood lived on in his inoffensive and unexplained solitude, and seemed likely to remain an unsolved enigma. The "Sachem" of the boating girls became the "Sphinx" of the village rambles, and it was agreed on all hands that Egypt did not hold any hieroglyphics harder to make out than the meaning of this young man's odd way of living.

V. THE ENIGMA STUDIED.

It was a curious, if it was not a suspicious, circumstance that a young man, seemingly in good health, of comely aspect, looking as if made for companionship, should keep himself apart from all the world around him in a place where there was a general feeling of good neighborhood and a pleasant social atmosphere. The Public Library was a central point which brought people together. The Pansophian Society did a great deal to make them acquainted with each other for many of the meetings were open to outside visitors, and the subjects discussed in the meetings furnished the material for conversation in their intervals. A card of invitation had been sent by the Secretary to Maurice, in answer to which Paolo carried back a polite note of regret. The paper had a narrow rim of black, implying apparently some loss of relative or friend, but not any very recent and crushing bereavement. This refusal to come to the meetings of the society was only what was

expected. It was proper to ask him, but his declining the invitation showed that he did not wish for attentions or courtesies. There was nothing further to be done to bring him out of his shell, and seemingly nothing more to be learned about him at present.

In this state of things it was natural that all which had been previously gathered by the few who had seen or known anything of him should be worked over again. When there is no new ore to be dug, the old refuse heaps are looked over for what may still be found in them. The landlord of the Anchor Tavern, now the head of the boarding-house, talked about Maurice, as everybody in the village did at one time or another. He had not much to say, but he added a fact or two.

The young gentleman was good pay,—so they all said. Sometimes he paid in gold; sometimes in fresh bills, just out of the bank. He trusted his man, Mr. Paul, with the money to pay his bills. He knew something about horses; he showed that by the way he handled that colt,—the one that threw the hostler and broke his collar-bone. "Mr. Paul come down to the stable. 'Let me see that cult you all 'fraid of,' says he. 'My master, he ride any hoss,' says Paul. 'You saddle him,' says he; and so they did, and Paul, he led that colt—the kickinest and ugliest young beast you ever see in your life—up to the place where his master, as he calls him, and he lives. What does that Kirkwood do but clap on a couple of long spurs and jump on to that colt's back, and off the beast goes, tail up, heels flying, standing up on end, trying all sorts of capers, and at last going it full run for a couple of miles, till he'd got about enough of it. That colt went off as ferce as a wild-cat, and come back as quiet as a cosset lamb. A man that pays his bills reg'lar, in good money, and knows how to handle a hoss is three quarters of a gentleman, if he is n't a whole one,—and most likely he is a whole one."

So spake the patriarch of the Anchor Tavern. His wife had already given her favorable opinion of her former guest. She now added something to her description as a sequel to her husband's remarks.

"I call him," she said, "about as likely a young gentleman as ever I clapped my eyes on. He is rather slighter than I like to see a young man of his age; if he was my son, I should like to see him a little more fleshy. I don't believe he weighs more than a hundred and thirty or forty pounds. Did y' ever look at those eyes of his, M'randy? Just as blue as succory flowers. I do like those light-complected young fellows, with their fresh cheeks and their curly hair; somehow, curly hair doos set off anybody's face. He is n't any foreigner, for all that he talks Italian with that Mr. Paul that's his help. He looks just like our kind of folks, the college kind, that's brought up among books, and is handling 'em, and reading of 'em, and making of 'em, as like as not, all their lives. All that you say about his riding the mad colt is just what I should think he was up to, for he's as spry as a squirrel; you ought to see him go over that fence, as I did once. I don't believe there's any harm in that young gentleman,—I don't care what people say. I suppose he likes this place just as other people like it, and cares more for walking in the woods and paddling about in the water than he doos for company; and if he doos, whose business is it, I should like to know?"

The third of the speakers was Miranda, who had her own way of judging people.

"I never see him but two or three times," Miranda said. "I should like to have waited on him, and got a chance to look stiddy at him when he was eatin' his vittles. That 's the time to watch folks, when their jaws get a-goin' and their eyes are on what's afore 'em. Do you remember that chap the sheriff come and took away when we kep' tahvern? Eleven year ago it was, come nex' Thanksgivin' time. A mighty grand gentleman from the City he set up for. I watched him, and I watched him. Says I, I don't believe you're no gentleman, says I. He eat with his knife, and that ain't the way city folks eats. Every time I handed him anything I looked closeter and closeter. Them whiskers never grooved on them cheeks, says I to myself. Them 's paper collars, says I. That dimun in your shirt-front hain't got no life to it, says I. I don't believe it's nothin' more 'n a bit o' winderglass. So says I to Pushee, 'You jes' step out and get the sheriff to come in and take a look at that chap.' I knowed he was after a fellah. He come right in, an' he goes up to the chap. 'Why, Bill,' says he, 'I'm mighty glad to see yer. We've had the hole in the wall you got out of mended, and I want your company to come and look at the old place,' says he, and he pulls out a couple of handcuffs and has 'em on his wrists in less than no time, an' off they goes together! I know one thing about that young gentleman, anyhow,—there ain't no better judge of what's good eatin' than he is. I cooked him some maccaroni myself one day, and he sends word to me by that Mr. Paul, 'Tell Miss Miranda,' says he, I that the Pope o' Rome don't have no better cooked maccaroni than what she sent up to me yesterday,' says he. I don' know much about the Pope o' Rome except that he's a Roman Catholic, and I don' know who cooks for him, whether it's a man or a woman; but when it comes to a dish o' maccaroni, I ain't afeard of their shefs, as they call 'em,—them he-cooks that can't serve up a cold potater without callin' it by some name nobody can say after 'em. But this gentleman knows good cookin', and that's as good a sign of a gentleman as I want to tell 'em by."

VI. STILL AT FAULT.

The house in which Maurice Kirkwood had taken up his abode was not a very inviting one. It was old, and had been left in a somewhat dilapidated and disorderly condition by the tenants who had lived in the part which Maurice now occupied. They had piled their packing-boxes in the cellar, with broken chairs, broken china, and other household wrecks. A cracked mirror lay on an old straw mattress, the contents of which were airing themselves through wide rips and rents. A lame clothes-horse was saddled with an old rug fringed with a ragged border, out of which all the colors had been completely trodden. No woman would have gone into a house in such a condition. But the young man did not trouble himself much about such matters, and was satisfied when the rooms which were to be occupied by himself and his servant were made decent and tolerably comfortable. During the fine season all this was not of much consequence, and if Maurice made up his mind to stay through the winter he would have his choice among many more eligible places.

The summer vacation of the Corinna Institute had now arrived, and the young ladies had scattered to their homes. Among the graduates of the year were Miss Euthymia Tower and Miss Lurida Vincent, who had now

returned to their homes in Arrowhead Village. They were both glad to rest after the long final examinations and the exercises of the closing day, in which each of them had borne a conspicuous part. It was a pleasant life they led in the village, which was lively enough at this season. Walking, riding, driving, boating, visits to the Library, meetings of the Pansophian Society, hops, and picnics made the time pass very cheerfully, and soon showed their restoring influences. The Terror's large eyes did not wear the dull, glazed look by which they had too often betrayed the after effects of over-excitement of the strong and active brain behind them. The Wonder gained a fresher bloom, and looked full enough of life to radiate vitality into a statue of ice. They had a boat of their own, in which they passed many delightful hours on the lake, rowing, drifting, reading, telling of what had been, dreaming of what might be.

The Library was one of the chief centres of the fixed population, and visited often by strangers. The old Librarian was a peculiar character, as these officials are apt to be. They have a curious kind of knowledge, sometimes immense in its way. They know the backs of books, their title-pages, their popularity or want of it, the class of readers who call for particular works, the value of different editions, and a good deal besides. Their minds catch up hints from all manner of works on all kinds of subjects. They will give a visitor a fact and a reference which they are surprised to find they remember and which the visitor might have hunted for a year. Every good librarian, every private book-owner, who has grown into his library, finds he has a bunch of nerves going to every bookcase, a branch to every shelf, and a twig to every book. These nerves get very sensitive in old librarians, sometimes, and they do not like to have a volume meddled with any more than they would like to have their naked eyes handled. They come to feel at last that the books of a great collection are a part, not merely of their own property, though they are only the agents for their distribution, but that they are, as it were, outlying portions of their own organization. The old Librarian was getting a miserly feeling about his books, as he called them. Fortunately, he had a young lady for his assistant, who was never so happy as when she could find the work any visitor wanted and put it in his hands,—or her hands, for there were more readers among the wives and—daughters, and especially among the aunts, than there were among their male relatives. The old Librarian knew the books, but the books seemed to know the young assistant; so it looked, at least, to the impatient young people who wanted their services.

Maurice had a good many volumes of his own,—a great many, according to Paolo's account; but Paolo's ideas were limited, and a few well-filled shelves seemed a very large collection to him. His master frequently sent him to the Public Library for books, which somewhat enlarged his notions; still, the Signor was a very learned man, he was certain, and some of his white books (bound in vellum and richly gilt) were more splendid, according to Paolo, than anything in the Library.

There was no little curiosity to know what were the books that Maurice was in the habit of taking out, and the Librarian's record was carefully searched by some of the more inquisitive investigators. The list proved to be a long and varied one. It would imply a considerable knowledge of modern languages and of the classics; a liking for mathematics and physics, especially all that related to electricity and magnetism; a fancy for the occult sciences, if there is any propriety in coupling these words; and a whim for odd and obsolete literature, like the *Parthenologia* of Fortunius Licetus, the quaint treatise 'De Sternutatione,' books about alchemy, and witchcraft, apparitions, and modern works relating to Spiritualism. With these were the titles of novels and now and then of books of poems; but it may be taken for granted that his own shelves held the works he was most frequently in the habit of reading or consulting. Not much was to be made out of this beyond the fact of wide scholarship,—more or less deep it might be, but at any rate implying no small mental activity; for he appeared to read very rapidly, at any rate exchanged the books he had taken out for new ones very frequently. To judge by his reading, he was a man of letters. But so wide-reading a man of letters must have an object, a literary purpose in all probability. Why should not he be writing a novel? Not a novel of society, assuredly, for a hermit is not the person to report the talk and manners of a world which he has nothing to do with. Novelists and lawyers understand the art of "cramming" better than any other persons in the world. Why should not this young man be working up the picturesque in this romantic region to serve as a background for some story with magic, perhaps, and mysticism, and hints borrowed from science, and all sorts of out-of-the-way knowledge which his odd and miscellaneous selection of books furnished him? That might be, or possibly he was only reading for amusement. Who could say?

The funds of the Public Library of Arrowhead Village allowed the managers to purchase many books out of the common range of reading. The two learned people of the village were the rector and the doctor. These two worthies kept up the old controversy between the professions, which grows out of the fact that one studies nature from below upwards, and the other from above downwards. The rector maintained that physicians contracted a squint which turns their eyes inwardly, while the muscles which roll their eyes upward become palsied. The doctor retorted that theological students developed a third eyelid,—the nictitating membrane, which is so well known in birds, and which serves to shut out, not all light, but all the light they do not want. Their little skirmishes did not prevent their being very good friends, who had a common interest in many things and many persons. Both were on the committee which had the care of the Library and attended to the purchase of books. Each was scholar enough to know the wants of scholars, and disposed to trust the judgment of the other as to what books should be purchased. Consequently, the clergyman secured the addition to the Library of a good many old theological works which the physician would have called brimstone divinity, and held to be just the thing to kindle fires with,—good books still for those who know how to use them, oftentimes as awful examples of the extreme of disorganization the whole moral system may undergo when a barbarous belief has strangled the natural human instincts. The physician, in the mean time, acquired for the collection some of those medical works where one may find recorded various rare and almost incredible cases, which may not have their like for a whole century, and then repeat themselves, so as to give a new lease of credibility to stories which had come to be looked upon as fables.

Both the clergyman and the physician took a very natural interest in the young man who had come to reside in their neighborhood for the present, perhaps for a long period. The rector would have been glad to see him at church. He would have liked more especially to have had him hear his sermon on the Duties of Young Men to Society. The doctor, meanwhile, was meditating on the duties of society to young men, and wishing that he could gain the young man's confidence, so as to help him out of any false habit of mind or any delusion to which he might be subject, if he had the power of being useful to him.

Dr. Butts was the leading medical practitioner, not only of Arrowhead Village, but of all the surrounding region. He was an excellent specimen of the country doctor, self-reliant, self-sacrificing, working a great deal harder for his living than most of those who call themselves the laboring classes,—as if none but those whose hands were hardened by the use of farming or mechanical implements had any work to do. He had that sagacity without which learning is a mere incumbrance, and he had also a fair share of that learning without which sagacity is like a traveller with a good horse, but who cannot read the directions on the guideboards. He was not a man to be taken in by names. He well knew that oftentimes very innocent-sounding words mean very grave disorders; that all, degrees of disease and disorder are frequently confounded under the same term; that “run down” may stand for a fatigue of mind or body from which a week or a month of rest will completely restore the over-worked patient, or an advanced stage of a mortal illness; that “seedy” may signify the morning's state of feeling, after an evening's over-indulgence, which calls for a glass of soda-water and a cup of coffee, or a dangerous malady which will pack off the subject of it, at the shortest notice, to the south of France. He knew too well that what is spoken lightly of as a “nervous disturbance” may imply that the whole machinery of life is in a deranged condition, and that every individual organ would groan aloud if it had any other language than the terrible inarticulate one of pain by which to communicate with the consciousness.

When, therefore, Dr. Butts heard the word antipatia he did not smile, and say to himself that this was an idle whim, a foolish fancy, which the young man had got into his head. Neither was he satisfied to set down everything to the account of insanity, plausible as that supposition might seem. He was prepared to believe in some exceptional, perhaps anomalous, form of exaggerated sensibility, relating to what class of objects he could not at present conjecture, but which was as vital to the subject of it as the insulating arrangement to a piece of electrical machinery. With this feeling he began to look into the history of antipathies as recorded in all the books and journals on which he could lay his hands.

The holder of the Portfolio asks leave to close it for a brief interval. He wishes to say a few words to his readers, before offering them some verses which have no connection with the narrative now in progress.

If one could have before him a set of photographs taken annually, representing the same person as he or she appeared for thirty or forty or fifty years, it would be interesting to watch the gradual changes of aspect from the age of twenty, or even of thirty or forty, to that of threescore and ten. The face might be an uninteresting one; still, as sharing the inevitable changes wrought by time, it would be worth looking at as it passed through the curve of life,—the vital parabola, which betrays itself in the symbolic changes of the features. An inscription is the same thing, whether we read it on slate-stone, or granite, or marble. To watch the lights and shades, the reliefs and hollows, of a countenance through a lifetime, or a large part of it, by the aid of a continuous series of photographs would not only be curious; it would teach us much more about the laws of physiognomy than we could get from casual and unconnected observations.

The same kind of interest, without any assumption of merit to be found in them, I would claim for a series of annual poems, beginning in middle life and continued to what many of my correspondents are pleased to remind me—as if I required to have the fact brought to my knowledge—is no longer youth. Here is the latest of a series of annual poems read during the last thirty-four years. There seems to have been one interruption, but there may have been other poems not recorded or remembered. This, the latest poem of the series, was listened to by the scanty remnant of what was a large and brilliant circle of classmates and friends when the first of the long series was read before them, then in the flush of ardent manhood:—

THE OLD SONG.

*The minstrel of the classic lay
Of love and wine who sings
Still found the fingers run astray
That touched the rebel strings.*

*Of Cadmus he would fair have sung,
Of Atreus and his line;
But all the jocund echoes rung
With songs of love and wine.*

*Ah, brothers! I would fair have caught
Some fresher fancy's gleam;
My truant accents find, unsought,
The old familiar theme.*

*Love, Love! but not the sportive child
With shaft and twanging bow,
Whose random arrows drove us wild
Some threescore years ago;*

*Not Eros, with his joyous laugh,
The urchin blind and bare,
But Love, with spectacles and staff,
And scanty, silvered hair.*

*Our heads with frosted locks are white,
Our roofs are thatched with snow,
But red, in chilling winter's spite,
Our hearts and hearthstones glow.*

*Our old acquaintance, Time, drops in,
And while the running sands
Their golden thread unheeded spin,
He warms his frozen hands.*

Stay, winged hours, too swift, too sweet,

*And waft this message o'er
To all we miss, from all we meet
On life's fast-crumbling shore:*

*Say that to old affection true
We hug the narrowing chain
That binds our hearts,—alas, how few
The MORTlinks that yet remain!*

*The fatal touch awaits them all
That turns the rocks to dust;
From year to year they break and fall,
They break, but never rust.*

*Say if one note of happier strain
This worn-out harp afford,
—One throb that trembles, not in vain,
Their memory lent its chord.*

*Say that when Fancy closed her wings
And Passion quenched his fire,
Love, Love, still echoed from the strings
As from Anacreon's lyre!*

January 8, 1885.

VII. A RECORD OF ANTIPATHIES

In thinking the whole matter over, Dr. Butts felt convinced that, with care and patience and watching his opportunity, he should get at the secret, which so far had yielded nothing but a single word. It might be asked why he was so anxious to learn what, from all appearances, the young stranger was unwilling to explain. He may have been to some extent infected by the general curiosity of the persons around him, in which good Mrs. Butts shared, and which she had helped to intensify by revealing the word dropped by Paolo. But this was not really his chief motive. He could not look upon this young man, living a life of unwholesome solitude, without a natural desire to do all that his science and his knowledge of human nature could help him to do towards bringing him into healthy relations with the world about him. Still, he would not intrude upon him in any way. He would only make certain general investigations, which might prove serviceable in case circumstances should give him the right to counsel the young man as to his course of life. The first thing to be done was to study systematically the whole subject of antipathies. Then, if any further occasion offered itself, he would be ready to take advantage of it. The resources of the Public Library of the place and his own private collection were put in requisition to furnish him the singular and widely scattered facts of which he was in search.

It is not every reader who will care to follow Dr. Butts in his study of the natural history of antipathies. The stories told about them are, however, very curious; and if some of them may be questioned, there is no doubt that many of the strangest are true, and consequently take away from the improbability of others which we are disposed to doubt.

But in the first place, what do we mean by an antipathy? It is an aversion to some object, which may vary in degree from mere dislike to mortal horror. What the cause of this aversion is we cannot say. It acts sometimes through the senses, sometimes through the imagination, sometimes through an unknown channel. The relations which exist between the human being and all that surrounds him vary in consequence of some adjustment peculiar to each individual. The brute fact is expressed in the phrase "One man's meat is another man's poison."

In studying the history of antipathies the doctor began with those referable to the sense of taste, which are among the most common. In any collection of a hundred persons there will be found those who cannot make use of certain articles of food generally acceptable. This may be from the disgust they occasion or the effects they have been found to produce. Every one knows individuals who cannot venture on honey, or cheese, or veal, with impunity. Carlyle, for example, complains of having veal set before him,—a meat he could not endure. There is a whole family connection in New England, and that a very famous one, to many of whose members, in different generations, all the products of the dairy are the subjects of a congenital antipathy. Montaigne says there are persons who dread the smell of apples more than they would dread being exposed to a fire of musketry. The readers of the charming story "A Week in a French Country-House" will remember poor Monsieur Jacques's piteous cry in the night: "Ursula, art thou asleep? Oh, Ursula, thou sleepest, but I cannot close my eyes. Dearest Ursula, there is such a dreadful smell! Oh, Ursula, it is such a smell! I do so wish thou couldst smell it! Good-night, my angel!—Dearest! I have found them! They are apples!" The smell of roses, of peonies, of lilies, has been known to cause faintness. The sight of various objects has had singular effects on some persons. A boar's head was a favorite dish at the table of great people in Marshal d'Albret's time; yet he used to faint at the sight of one. It is not uncommon to meet with persons who faint at the sight of blood. One of the most inveterately pugnacious of Dr. Butts's college-mates confessed that he had this infirmity. Stranger and far more awkward than this is the case mentioned in an ancient collection, where the subject of the antipathy fainted at the sight of any object of a red color. There are sounds, also, which have strange effects on some individuals. Among the obnoxious noises are the crumpling of silk stuffs, the sound of sweeping, the croaking of frogs. The effects in different cases have been spasms, a sense of strangling, profuse sweating,—all showing a profound disturbance of the nervous system.

All these effects were produced by impressions on the organs of sense, seemingly by direct agency on

certain nerve centres. But there is another series of cases in which the imagination plays a larger part in the phenomena. Two notable examples are afforded in the lives of two very distinguished personages.

Peter the Great was frightened, when an infant, by falling from a bridge into the water. Long afterward, when he had reached manhood, this hardy and resolute man was so affected by the sound of wheels rattling over a bridge that he had to discipline himself by listening to the sound, in spite of his dread of it, in order to overcome his antipathy. The story told by Abbe Boileau of Pascal is very similar to that related of Peter. As he was driving in his coach and four over the bridge at Neuilly, his horses took fright and ran away, and the leaders broke from their harness and sprang into the river, leaving the wheel-horses and the carriage on the bridge. Ever after this fright it is said that Pascal had the terrifying sense that he was just on the edge of an abyss, ready to fall over.

What strange early impression was it which led a certain lady always to shriek aloud if she ventured to enter a church, as it is recorded? The old and simple way of accounting for it would be the scriptural one, that it was an unclean spirit who dwelt in her, and who, when she entered the holy place and brought her spiritual tenant into the presence of the sacred symbols, "cried with a loud voice, and came out of" her. A very singular case, the doctor himself had recorded, and which the reader may accept as authentic, is the following: At the head of the doctor's front stairs stood, and still stands, a tall clock, of early date and stately presence. A middle-aged visitor, noticing it as he entered the front door, remarked that he should feel a great unwillingness to pass that clock. He could not go near one of those tall timepieces without a profound agitation, which he dreaded to undergo. This very singular idiosyncrasy he attributed to a fright when he was an infant in the arms of his nurse.

She was standing near one of those tall clocks, when the cord which supported one of its heavy leaden weights broke, and the weight came crashing down to the bottom of the case. Some effect must have been produced upon the pulpy nerve centres from which they never recovered. Why should not this happen, when we know that a sudden mental shock may be the cause of insanity? The doctor remembered the verse of "The Ancient Mariner:"

*"I moved my lips; the pilot shrieked
And fell down in a fit;
The holy hermit raised his eyes
And prayed where he did sit.
I took the oars; the pilot's boy,
Who now doth crazy go,
Laughed loud and long, and all the while
His eyes went to and fro."*

This is only poetry, it is true, but the poet borrowed the description from nature, and the records of our asylums could furnish many cases where insanity was caused by a sudden fright.

More than this, hardly a year passes that we do not read of some person, a child commonly, killed outright by terror,—scared to death, literally. Sad cases they often are, in which, nothing but a surprise being intended, the shock has instantly arrested the movements on which life depends. If a mere instantaneous impression can produce effects like these, such an impression might of course be followed by consequences less fatal or formidable, but yet serious in their nature. If here and there a person is killed, as if by lightning, by a sudden startling sight or sound, there must be more numerous cases in which a terrible shock is produced by similar apparently insignificant causes,—a shock which falls short of overthrowing the reason and does not destroy life, yet leaves a lasting effect upon the subject of it.

This point, then, was settled in the mind of Dr. Butts, namely, that, as a violent emotion caused by a sudden shock can kill or craze a human being, there is no perversion of the faculties, no prejudice, no change of taste or temper, no eccentricity, no antipathy, which such a cause may not rationally account for. He would not be surprised, he said to himself, to find that some early alarm, like that which was experienced by Peter the Great or that which happened to Pascal, had broken some spring in this young man's nature, or so changed its mode of action as to account for the exceptional remoteness of his way of life. But how could any conceivable antipathy be so comprehensive as to keep a young man aloof from all the world, and make a hermit of him? He did not hate the human race; that was clear enough. He treated Paolo with great kindness, and the Italian was evidently much attached to him. He had talked naturally and pleasantly with the young man he had helped out of his dangerous situation when his boat was upset. Dr. Butts heard that he had once made a short visit to this young man, at his rooms in the University. It was not misanthropy, therefore, which kept him solitary. What could be broad enough to cover the facts of the case? Nothing that the doctor could think of, unless it were some color, the sight of which acted on him as it did on the individual before mentioned, who could not look at anything red without fainting. Suppose this were a case of the same antipathy. How very careful it would make the subject of it as to where he went and with whom he consorted! Time and patience would be pretty sure to bring out new developments, and physicians, of all men in the world, know how to wait as well as how to labor.

Such were some of the crude facts as Dr. Butts found them in books or gathered them from his own experience. He soon discovered that the story had got about the village that Maurice Kirkwood was the victim of an "antipathy," whatever that word might mean in the vocabulary of the people of the place. If he suspected the channel through which it had reached the little community, and, spreading from that centre, the country round, he did not see fit to make out of his suspicions a domestic casus belli. Paolo might have mentioned it to others as well as to himself. Maurice might have told some friend, who had divulged it. But to accuse Mrs. Butts, good Mrs. Butts, of petit treason in telling one of her husband's professional secrets was too serious a matter to be thought of. He would be a little more careful, he promised himself, the next time, at any rate; for he had to concede, in spite of every wish to be charitable in his judgment, that it was among the possibilities that the worthy lady had forgotten the rule that a doctor's patients must put their tongues out, and a doctor's wife must keep her tongue in.

VIII. THE PANSOPHIAN SOCIETY.

The Secretary of this association was getting somewhat tired of the office, and the office was getting somewhat tired of him. It occurred to the members of the Society that a little fresh blood infused into it might stir up the general vitality of the organization. The woman suffragists saw no reason why the place of Secretary need as a matter of course be filled by a person of the male sex. They agitated, they made domiciliary visits, they wrote notes to influential citizens, and finally announced as their candidate the young lady who had won and worn the school name of "The Terror," who was elected. She was just the person for the place: wide awake, with all her wits about her, full of every kind of knowledge, and, above all, strong on points of order and details of management, so that she could prompt the presiding officer, to do which is often the most essential duty of a Secretary. The President, the worthy rector, was good at plain sailing in the track of the common moralities and proprieties, but was liable to get muddled if anything came up requiring swift decision and off-hand speech. The Terror had schooled herself in the debating societies of the Institute, and would set up the President, when he was floored by an awkward question, as easily as if he were a ninepin which had been bowled over.

It has been already mentioned that the Pansophian Society received communications from time to time from writers outside of its own organization. Of late these had been becoming more frequent. Many of them were sent in anonymously, and as there were numerous visitors to the village, and two institutions not far removed from it, both full of ambitious and intelligent young persons, it was often impossible to trace the papers to their authors. The new Secretary was alive with curiosity, and as sagacious a little body as one might find if in want of a detective. She could make a pretty shrewd guess whether a paper was written by a young or old person, by one of her own sex or the other, by an experienced hand or a novice.

Among the anonymous papers she received was one which exercised her curiosity to an extraordinary degree. She felt a strong suspicion that "the Sachem," as the boat-crews used to call him, "the Recluse," "the Night-Hawk," "the Sphinx," as others named him, must be the author of it. It appeared to her the production of a young person of a reflective, poetical turn of mind. It was not a woman's way of writing; at least, so thought the Secretary. The writer had travelled much; had resided in Italy, among other places. But so had many of the summer visitors and residents of Arrowhead Village. The handwriting was not decisive; it had some points of resemblance with the pencilled orders for books which Maurice sent to the Library, but there were certain differences, intentional or accidental, which weakened this evidence. There was an undertone in the essay which was in keeping with the mode of life of the solitary stranger. It might be disappointment, melancholy, or only the dreamy sadness of a young person who sees the future he is to climb, not as a smooth ascent, but as overhanging him like a cliff, ready to crush him, with all his hopes and prospects. This interpretation may have been too imaginative, but here is the paper, and the reader can form his own opinion:

MY THREE COMPANIONS.

"I have been from my youth upwards a wanderer. I do not mean constantly flitting from one place to another, for my residence has often been fixed for considerable periods. From time to time I have put down in a notebook the impressions made upon me by the scenes through which I have passed. I have long hesitated whether to let any of my notes appear before the public. My fear has been that they were too subjective, to use the metaphysician's term,—that I have seen myself reflected in Nature, and not the true aspects of Nature as she was meant to be understood. One who should visit the Harz Mountains would see—might see, rather his own colossal image shape itself on the morning mist. But if in every mist that rises from the meadows, in every cloud that hangs upon the mountain, he always finds his own reflection, we cannot accept him as an interpreter of the landscape.

"There must be many persons present at the meetings of the Society to which this paper is offered who have had experiences like that of its author. They have visited the same localities, they have had many of the same thoughts and feelings. Many, I have no doubt. Not all,—no, not all. Others have sought the companionship of Nature; I have been driven to it. Much of my life has been passed in that communion. These pages record some of the intimacies I have formed with her under some of her various manifestations.

"I have lived on the shore of the great ocean, where its waves broke wildest and its voice rose loudest.

"I have passed whole seasons on the banks of mighty and famous rivers.

"I have dwelt on the margin of a tranquil lake, and floated through many a long, long summer day on its clear waters.

"I have learned the 'various language' of Nature, of which poetry has spoken,—at least, I have learned some words and phrases of it. I will translate some of these as I best may into common speech.

"The OCEAN says to the dweller on its shores:—

"You are neither welcome nor unwelcome. I do not trouble myself with the living tribes that come down to my waters. I have my own people, of an older race than yours, that grow to mightier dimensions than your mastodons and elephants; more numerous than all the swarms that fill the air or move over the thin crust of the earth. Who are you that build your palaces on my margin? I see your white faces as I saw the dark faces of the tribes that came before you, as I shall look upon the unknown family of mankind that will come after you. And what is your whole human family but a parenthesis in a single page of my history? The raindrops stereotyped themselves on my beaches before a living creature left his footprints there. This horseshoe-crab I fling at your feet is of older lineage than your Adam,—perhaps, indeed, you count your Adam as one of his descendants. What feeling have I for you? Not scorn, not hatred,—not love,—not loathing. No!—indifference, —blank indifference to you and your affairs that is my feeling, say rather absence of feeling, as regards you. —Oh yes, I will lap your feet, I will cool you in the hot summer days, I will bear you up in my strong arms, I will rock you on my rolling undulations, like a babe in his cradle. Am I not gentle? Am I not kind? Am I not

harmless? But hark! The wind is rising, and the wind and I are rough playmates! What do you say to my voice now? Do you see my foaming lips? Do you feel the rocks tremble as my huge billows crash against them? Is not my anger terrible as I dash your argosy, your thunder-bearing frigate, into fragments, as you would crack an eggshell?—No, not anger; deaf, blind, unheeding indifference,—that is all. Out of me all things arose; sooner or later, into me all things subside. All changes around me; I change not. I look not at you, vain man, and your frail transitory concerns, save in momentary glimpses: I look on the white face of my dead mistress, whom I follow as the bridegroom follows the bier of her who has changed her nuptial raiment for the shroud.

“Ye whose thoughts are of eternity, come dwell at my side. Continents and islands grow old, and waste and disappear. The hardest rock crumbles; vegetable and animal kingdoms come into being, wax great, decline, and perish, to give way to others, even as human dynasties and nations and races come and go. Look on me! ‘Time writes no wrinkle’ on my forehead. Listen to me! All tongues are spoken on my shores, but I have only one language: the winds taught me their vowels the crags and the sands schooled me in my rough or smooth consonants. Few words are mine but I have whispered them and sung them and shouted them to men of all tribes from the time when the first wild wanderer strayed into my awful presence. Have you a grief that gnaws at your heart-strings? Come with it to my shore, as of old the priest of far-darting Apollo carried his rage and anguish to the margin of the loud-roaring sea. There, if anywhere you will forget your private and short-lived woe, for my voice speaks to the infinite and the eternal in your consciousness.

“To him who loves the pages of human history, who listens to the voices of the world about him, who frequents the market and the thoroughfare, who lives in the study of time and its accidents rather than in the deeper emotions, in abstract speculation and spiritual contemplation, the RIVER addresses itself as his natural companion.

“Come live with me. I am active, cheerful, communicative, a natural talker and story-teller. I am not noisy, like the ocean, except occasionally when I am rudely interrupted, or when I stumble and get a fall. When I am silent you can still have pleasure in watching my changing features. My idlest babble, when I am toying with the trifles that fall in my way, if not very full of meaning, is at least musical. I am not a dangerous friend, like the ocean; no highway is absolutely safe, but my nature is harmless, and the storms that strew the beaches with wrecks cast no ruins upon my flowery borders. Abide with me, and you shall not die of thirst, like the forlorn wretches left to the mercies of the pitiless salt waves. Trust yourself to me, and I will carry you far on your journey, if we are travelling to the same point of the compass. If I sometimes run riot and overflow your meadows, I leave fertility behind me when I withdraw to my natural channel. Walk by my side toward the place of my destination. I will keep pace with you, and you shall feel my presence with you as that of a self-conscious being like yourself. You will find it hard to be miserable in my company; I drain you of ill-conditioned thoughts as I carry away the refuse of your dwelling and its grounds.”

But to him whom the ocean chills and crushes with its sullen indifference, and the river disturbs with its never-pausing and never-ending story, the silent LAKE shall be a refuge and a place of rest for his soul.

“Vex not yourself with thoughts too vast for your limited faculties,’ it says; ‘yield not yourself to the babble of the running stream. Leave the ocean, which cares nothing for you or any living thing that walks the solid earth; leave the river, too busy with its own errand, too talkative about its own affairs, and find peace with me, whose smile will cheer you, whose whisper will soothe you. Come to me when the morning sun blazes across my bosom like a golden baldrick; come to me in the still midnight, when I hold the inverted firmament like a cup brimming with jewels, nor spill one star of all the constellations that float in my ebon goblet. Do you know the charm of melancholy? Where will you find a sympathy like mine in your hours of sadness? Does the ocean share your grief? Does the river listen to your sighs? The salt wave, that called to you from under last month’s full moon, to-day is dashing on the rocks of Labrador; the stream, that ran by you pure and sparkling, has swallowed the poisonous refuse of a great city, and is creeping to its grave in the wide cemetery that buries all things in its tomb of liquid crystal. It is true that my waters exhale and are renewed from one season to another; but are your features the same, absolutely the same, from year to year? We both change, but we know each other through all changes. Am I not mirrored in those eyes of yours? And does not Nature plant me as an eye to behold her beauties while she is dressed in the glories of leaf and flower, and draw the icy lid over my shining surface when she stands naked and ashamed in the poverty of winter?”

“I have had strange experiences and sad thoughts in the course of a life not very long, but with a record which much longer lives could not match in incident. Oftentimes the temptation has come over me with dangerous urgency to try a change of existence, if such change is a part of human destiny,—to seek rest, if that is what we gain by laying down the burden of life. I have asked who would be the friend to whom I should appeal for the last service I should have need of. Ocean was there, all ready, asking no questions, answering none. What strange voyages, downward through its glaucous depths, upwards to its boiling and frothing surface, wafted by tides, driven by tempests, disparted by rude agencies; one remnant whitening on the sands of a northern beach, one perhaps built into the circle of a coral reef in the Pacific, one settling to the floor of the vast laboratory where continents are built, to emerge in far-off ages! What strange companions for my pall-bearers! Unwieldy sea-monsters, the stories of which are counted fables by the spectacled collectors who think their catalogues have exhausted nature; naked-eyed creatures, staring, glaring, nightmare-like spectres of the ghastly-green abysses; pulpy islands, with life in gelatinous immensity,—what a company of hungry heirs at every ocean funeral! No! No! Ocean claims great multitudes, but does not invite the solitary who would fain be rid of himself.

“Shall I seek a deeper slumber at the bottom of the lake I love than I have ever found when drifting idly over its surface? No, again. I do not want the sweet, clear waters to know me in the disgrace of nature, when life, the faithful body-servant, has ceased caring for me. That must not be. The mirror which has pictured me so often shall never know me as an unwelcome object.

“If I must ask the all-subduing element to be my last friend, and lead me out of my prison, it shall be the busy, whispering, not unfriendly, pleasantly companionable river.

“But Ocean and River and Lake have certain relations to the periods of human life which they who are choosing their places of abode should consider. Let the child play upon the seashore. The wide horizon gives his imagination room to grow in, untrammelled. That background of mystery, without which life is a poor

mechanical arrangement, is shaped and colored, so far as it can have outline, or any hue but shadow, on a vast canvas, the contemplation of which enlarges and enriches the sphere of consciousness. The mighty ocean is not too huge to symbolize the aspirations and ambitions of the yet untried soul of the adolescent.

"The time will come when his indefinite mental horizon has found a solid limit, which shuts his prospect in narrower bounds than he would have thought could content him in the years of undefined possibilities. Then he will find the river a more natural intimate than the ocean. It is individual, which the ocean, with all its gulfs and inlets and multitudinous shores, hardly seems to be. It does not love you very dearly, and will not miss you much when you disappear from its margin; but it means well to you, bids you good-morning with its coming waves, and good-evening with those which are leaving. It will lead your thoughts pleasantly away, upwards to its source, downwards to the stream to which it is tributary, or the wide waters in which it is to lose itself. A river, by choice, to live by in middle age.

"In hours of melancholy reflection, in those last years of life which have little left but tender memories, the still companionship of the lake, embosomed in woods, sheltered, fed by sweet mountain brooks and hidden springs, commends itself to the wearied and saddened spirit. I am not thinking of those great inland seas, which have many of the features and much of the danger that belong to the ocean, but of those 'ponds,' as our countrymen used to call them until they were rechristened by summer visitors; beautiful sheets of water from a hundred to a few thousand acres in extent, scattered like raindrops over the map of our Northern sovereignties. The loneliness of contemplative old age finds its natural home in the near neighborhood of one of these tranquil basins."

Nature does not always plant her poets where they belong, but if we look carefully their affinities betray themselves. The youth will carry his Byron to the rock which overlooks the ocean the poet loved so well. The man of maturer years will remember that the sonorous couplets of Pope which ring in his ears were written on the banks of the Thames. The old man, as he nods over the solemn verse of Wordsworth, will recognize the affinity between the singer and the calm sheet that lay before him as he wrote,—the stainless and sleepy Windermere.

"The dwellers by Cedar Lake may find it an amusement to compare their own feelings with those of one who has lived by the Atlantic and the Mediterranean, by the Nile and the Tiber, by Lake Lemana and by one of the fairest sheets of water that our own North America embosoms in its forests."

Miss Lurida Vincent, Secretary of the Pansophian Society, read this paper, and pondered long upon it. She was thinking very seriously of studying medicine, and had been for some time in frequent communication with Dr. Butts, under whose direction she had begun reading certain treatises, which added to such knowledge of the laws of life in health and in disease as she had brought with her from the Corinna Institute. Naturally enough, she carried the anonymous paper to the doctor, to get his opinion about it, and compare it with her own. They both agreed that it was probably, they would not say certainly, the work of the solitary visitor. There was room for doubt, for there were visitors who might well have travelled to all the places mentioned, and resided long enough on the shores of the waters the writer spoke of to have had all the experiences mentioned in the paper. The Terror remembered a young lady, a former schoolmate, who belonged to one of those nomadic families common in this generation, the heads of which, especially the female heads, can never be easy where they are, but keep going between America and Europe, like so many pith-balls in the electrical experiment, alternately attracted and repelled, never in contented equilibrium. Every few years they pull their families up by the roots, and by the time they have begun to take hold a little with their radicles in the spots to which they have been successively transplanted up they come again, so that they never get a tap-root anywhere. The Terror suspected the daughter of one of these families of sending certain anonymous articles of not dissimilar character to the one she had just received. But she knew the style of composition common among the young girls, and she could hardly believe that it was one of them who had sent this paper. Could a brother of this young lady have written it? Possibly; she knew nothing more than that the young lady had a brother, then a student at the University. All the chances were that Mr. Maurice Kirkwood was the author. So thought Lurida, and so thought Dr. Butts.

Whatever faults there were in this essay, it interested them both. There was nothing which gave the least reason to suspect insanity on the part of the writer, whoever he or she might be. There were references to suicide, it is true, but they were of a purely speculative nature, and did not look to any practical purpose in that direction. Besides, if the stranger were the author of the paper, he certainly would not choose a sheet of water like Cedar Lake to perform the last offices for him, in case he seriously meditated taking unceremonious leave of life and its accidents. He could find a river easily enough, to say nothing of other methods of effecting his purpose; but he had committed himself as to the impropriety of selecting a lake, so they need not be anxious about the white canoe and its occupant, as they watched it skimming the surface of the deep waters.

The holder of the Portfolio would never have ventured to come before the public if he had not counted among his resources certain papers belonging to the records of the Pansophian Society, which he can make free use of, either for the illustration of the narrative, or for a diversion during those intervals in which the flow of events is languid, or even ceases for the time to manifest any progress. The reader can hardly have failed to notice that the old Anchor Tavern had become the focal point where a good deal of mental activity converged. There were the village people, including a number of cultivated families; there were the visitors, among them many accomplished and widely travelled persons; there was the University, with its learned teachers and aspiring young men; there was the Corinna Institute, with its eager, ambitious, hungry-souled young women, crowding on, class after class coming forward on the broad stream of liberal culture, and rounding the point which, once passed, the boundless possibilities of womanhood opened before them. All this furnished material enough and to spare for the records and the archives of the society.

The new Secretary infused fresh life into the meetings. It may be remembered that the girls had said of her, when she was The Terror, that "she knew everything and didn't believe anything." That was just the kind of person for a secretary of such an association. Properly interpreted, the saying meant that she knew a great deal, and wanted to know a great deal more, and was consequently always on the lookout for information; that she believed nothing without sufficient proof that it was true, and therefore was perpetually asking for

evidence where, others took assertions on trust.

It was astonishing to see what one little creature like The Terror could accomplish in the course of a single season. She found out what each member could do and wanted to do. She wrote to the outside visitors whom she suspected of capacity, and urged them to speak at the meetings, or send written papers to be read. As an official, with the printed title at the head of her notes, PANSOPHIAN SOCIETY, she was a privileged personage. She begged the young persons who had travelled to tell something of their experiences. She had contemplated getting up a discussion on the woman's rights question, but being a wary little body, and knowing that the debate would become a dispute and divide the members into two hostile camps, she deferred this project indefinitely. It would be time enough after she had her team well in hand, she said to herself,—had felt their mouths and tried their paces. This expression, as she used it in her thoughts, seems rather foreign to her habits, but there was room in her large brain for a wide range of illustrations and an ample vocabulary. She could not do much with her own muscles, but she had known the passionate delight of being whirled furiously over the road behind four scampering horses, in a rocking stage-coach, and thought of herself in the Secretary's chair as not unlike the driver on his box. A few weeks of rest had allowed her nervous energy to store itself up, and the same powers which had distanced competition in the classes of her school had of necessity to expend themselves in vigorous action in her new office.

Her appeals had their effect. A number of papers were very soon sent in; some with names, some anonymously. She looked these papers over, and marked those which she thought would be worth reading and listening to at the meetings. One of them has just been presented to the reader. As to the authorship of the following one there were many conjectures. A well-known writer, who had spent some weeks at Arrowhead Village, was generally suspected of being its author. Some, however, questioned whether it was not the work of a new hand, who wrote, not from experience, but from his or her ideas of the condition to which a story-teller, a novelist, must in all probability be sooner or later reduced. The reader must judge for himself whether this first paper is the work of an old hand or a novice.

SOME EXPERIENCES OF A NOVELIST.

"I have written a frightful number of stories, forty or more, I think. Let me see. For twelve years two novels a year regularly: that makes twenty-four. In three different years I have written three stories annually: that makes thirty-three. In five years one a year,—thirty-eight. That is all, is n't it? Yes. Thirty-eight, not forty. I wish I could make them all into one composite story, as Mr. Galton does his faces.

"Hero—heroine—mamma—papa—uncle—sister, and so on. Love—obstacles—misery—tears—despair—glimmer of hope—unexpected solution of difficulties—happy finale.

"Landscape for background according to season. Plants of each month got up from botanical calendars.

"I should like much to see the composite novel. Why not apply Mr. Galton's process, and get thirty-eight stories all in one? All the Yankees would resolve into one Yankee, all the P—West Britons into one Patrick, etc., what a saving of time it would be!

"I got along pretty well with my first few stories. I had some characters around me which, a little disguised, answered well enough. There was the minister of the parish, and there was an old schoolmaster either of them served very satisfactorily for grandfathers and old uncles. All I had to do was to shift some of their leading peculiarities, keeping the rest. The old minister wore knee-breeches. I clapped them on to the schoolmaster. The schoolmaster carried a tall gold-headed cane. I put this in the minister's hands. So with other things,—I shifted them round, and got a set of characters who, taken together, reproduced the chief persons of the village where I lived, but did not copy any individual exactly. Thus it went on for a while; but by and by my stock company began to be rather too familiarly known, in spite of their change of costume, and at last some altogether too sagacious person published what he called a 'key' to several of my earlier stories, in which I found the names of a number of neighbors attached to aliases of my own invention. All the 'types,' as he called them, represented by these personages of my story had come to be recognized, each as standing for one and the same individual of my acquaintance. It had been of no use to change the costume. Even changing the sex did no good. I had a famous old gossip in one of my tales,—a much-babbling Widow Sertingly. 'Sho!' they all said, that 's old Deacon Spinner, the same he told about in that other story of his,—only the deacon's got on a petticoat and a mob-cap,—but it's the same old sixpence.' So I said to myself, I must have some new characters. I had no trouble with young characters; they are all pretty much alike,—dark-haired or light-haired, with the outfits belonging to their complexion, respectively. I had an old great-aunt, who was a tip-top eccentric. I had never seen anything just like her in books. So I said, I will have you, old lady, in one of my stories; and, sure enough, I fitted her out with a first-rate odd-sounding name, which I got from the directory, and sent her forth to the world, disguised, as I supposed, beyond the possibility of recognition. The book sold well, and the eccentric personage was voted a novelty. A few weeks after it was published a lawyer called upon me, as the agent of the person in the directory, whose family name I had used, as he maintained, to his and all his relatives' great damage, wrong, loss, grief, shame, and irreparable injury, for which the sum of blank thousand dollars would be a modest compensation. The story made the book sell, but not enough to pay blank thousand dollars. In the mean time a cousin of mine had sniffed out the resemblance between the character in my book and our great-aunt. We were rivals in her good graces. 'Cousin Pansie' spoke to her of my book and the trouble it was bringing on me,—she was so sorry about it! She liked my story,—only those personalities, you know. 'What personalities?' says old granny-aunt. 'Why, auntie, dear, they do say that he has brought in everybody we know,—did n't anybody tell you about—well,—I suppose you ought to know it,—did n't anybody tell you you were made fun of in that novel?' Somebody—no matter who—happened to hear all this, and told me. She said granny-aunt's withered old face had two red spots come to it, as if she had been painting her cheeks from a pink saucer. No, she said, not a pink saucer, but as if they were two coals of fire. She sent out and got the book, and made her (the somebody that I was speaking of) read it to her. When she had heard as much as she could stand,—for 'Cousin Pansie' explained passages to her,—explained, you know,—she sent for her lawyer, and that same somebody had to be a witness to a new will she had drawn up. It was not to my advantage. 'Cousin Pansie' got the corner lot where the grocery is, and pretty much everything else. The old woman left me a legacy. What do you think it was? An

old set of my own books, that looked as if it had been bought out of a bankrupt circulating library.

"After that I grew more careful. I studied my disguises much more diligently. But after all, what could I do? Here I was, writing stories for my living and my reputation. I made a pretty sum enough, and worked hard enough to earn it. No tale, no money. Then every story that went from my workshop had to come up to the standard of my reputation, and there was a set of critics,—there is a set of critics now and everywhere,—that watch as narrowly for the decline of a man's reputation as ever a village half drowned out by an inundation watched for the falling of the waters. The fame I had won, such as it was, seemed to attend me,—not going before me in the shape of a woman with a trumpet, but rather following me like one of Actaeon's hounds, his throat open, ready to pull me down and tear me. What a fierce enemy is that which bays behind us in the voice of our proudest bygone achievement!

"But, as I said above, what could I do? I must write novels, and I must have characters. 'Then why not invent them?' asks some novice. Oh, yes! Invent them! You can invent a human being that in certain aspects of humanity will answer every purpose for which your invention was intended. A basket of straw, an old coat and pair of breeches, a hat which has been soaked, sat upon, stuffed a broken window, and had a brood of chickens raised in it,—these elements, duly adjusted to each other, will represent humanity so truthfully that the crows will avoid the cornfield when your scarecrow displays his personality. Do you think you can make your heroes and heroines,—nay, even your scrappy supernumeraries,—out of refuse material, as you made your scarecrow? You can't do it. You must study living people and reproduce them. And whom do you know so well as your friends? You will show up your friends, then, one after another. When your friends give out, who is left for you? Why, nobody but your own family, of course. When you have used up your family, there is nothing left for you but to write your autobiography.

"After my experience with my grand-aunt, I became more cautious, very naturally. I kept traits of character, but I mixed ages as well as sexes. In this way I continued to use up a large amount of material, which looked as if it were as dangerous as dynamite to meddle with. Who would have expected to meet my maternal uncle in the guise of a schoolboy? Yet I managed to decant his characteristics as nicely as the old gentleman would have decanted a bottle of Juno Madeira through that long siphon which he always used when the most sacred vintages were summoned from their crypts to render an account of themselves on his hospitable board. It was a nice business, I confess, but I did it, and I drink cheerfully to that good uncle's memory in a glass of wine from his own cellar, which, with many other more important tokens of his good will, I call my own since his lamented demise.

"I succeeded so well with my uncle that I thought I would try a course of cousins. I had enough of them to furnish out a whole gallery of portraits. There was cousin 'Creeshy,' as we called her; Lucretia, more correctly. She was a cripple. Her left lower limb had had something happen to it, and she walked with a crutch. Her patience under her trial was very pathetic and picturesque, so to speak,—I mean adapted to the tender parts of a story; nothing could work up better in a melting paragraph. But I could not, of course, describe her particular infirmity; that would point her out at once. I thought of shifting the lameness to the right lower limb, but even that would be seen through. So I gave the young woman that stood for her in my story a lame elbow, and put her arm in a sling, and made her such a model of uncomplaining endurance that my grandmother cried over her as if her poor old heart would break. She cried very easily, my grandmother; in fact, she had such a gift for tears that I availed myself of it, and if you remember old Judy, in my novel 'Honi Soit' (Honey Sweet, the booksellers called it),—old Judy, the black-nurse,—that was my grandmother. She had various other peculiarities, which I brought out one by one, and saddled on to different characters. You see she was a perfect mine of singularities and idiosyncrasies. After I had used her up pretty well, I came down upon my poor relations. They were perfectly fair game; what better use could I put them to? I studied them up very carefully, and as there were a good many of them I helped myself freely. They lasted me, with occasional intermissions, I should say, three or four years. I had to be very careful with my poor relations,—they were as touchy as they could be; and as I felt bound to send a copy of my novel, whatever it might be, to each one of them,—there were as many as a dozen,—I took care to mix their characteristic features, so that, though each might suspect I meant the other, no one should think I meant him or her. I got through all my relations at last except my father and mother. I had treated my brothers and sisters pretty fairly, all except Elisha and Joanna. The truth is they both had lots of odd ways,—family traits, I suppose, but were just different enough from each other to figure separately in two different stories. These two novels made me some little trouble; for Elisha said he felt sure that I meant Joanna in one of them, and quarrelled with me about it; and Joanna vowed and declared that Elnathan, in the other, stood for brother 'Lisha, and that it was a real mean thing to make fun of folks' own flesh and blood, and treated me to one of her cries. She was n't handsome when she cried, poor, dear Joanna; in fact, that was one of the personal traits I had made use of in the story that Elisha found fault with.

"So as there was nobody left but my father and mother, you see for yourself I had no choice. There was one great advantage in dealing with them,—I knew them so thoroughly. One naturally feels a certain delicacy in handling from a purely artistic point of view persons who have been so near to him. One's mother, for instance: suppose some of her little ways were so peculiar that the accurate delineation of them would furnish amusement to great numbers of readers; it would not be without hesitation that a writer of delicate sensibility would draw her portrait, with all its whimsicalities, so plainly that it should be generally recognized. One's father is commonly of tougher fibre than one's mother, and one would not feel the same scruples, perhaps, in using him professionally as material in a novel; still, while you are employing him as bait,—you see I am honest and plain-spoken, for your characters are baits to catch readers with,—I would follow kind Izaak Walton's humane counsel about the frog you are fastening to your fish-hook: fix him artistically, as he directs, but in so doing I use him as though you loved him.'

"I have at length shown up, in one form and another, all my townsmen who have anything effective in their bodily or mental make-up, all my friends, all my relatives; that is, all my blood relatives. It has occurred to me that I might open a new field in the family connection of my father-in-law and mother-in-law. We have been thinking of paying them a visit, and I shall have an admirable opportunity of studying them and their relatives and visitors. I have long wanted a good chance for getting acquainted with the social sphere several grades

below that to which I am accustomed, and I have no doubt that I shall find matter for half a dozen new stories among those connections of mine. Besides, they live in a Western city, and one doesn't mind much how he cuts up the people of places he does n't himself live in. I suppose there is not really so much difference in people's feelings, whether they live in Bangor or Omaha, but one's nerves can't be expected to stretch across the continent. It is all a matter of greater or less distance. I read this morning that a Chinese fleet was sunk, but I did n't think half so much about it as I did about losing my sleeve button, confound it! People have accused me of want of feeling; they misunderstand the artist-nature,—that is all. I obey that implicitly; I am sorry if people don't like my descriptions, but I have done my best. I have pulled to pieces all the persons I am acquainted with, and put them together again in my characters. The quills I write with come from live geese, I would have you know. I expect to get some first-rate pluckings from those people I was speaking of, and I mean to begin my thirty-ninth novel as soon as I have got through my visit."

IX. THE SOCIETY AND ITS NEW SECRETARY.

There is no use in trying to hurry the natural course of events, in a narrative like this. June passed away, and July, and August had come, and as yet the enigma which had completely puzzled Arrowhead Village and its visitors remained unsolved. The white canoe still wandered over the lake, alone, ghostly, always avoiding the near approach of the boats which seemed to be coming in its direction. Now and then a circumstance would happen which helped to keep inquiry alive. Good horsemanship was not so common among the young men of the place and its neighborhood that Maurice's accomplishment in that way could be overlooked. If there was a wicked horse or a wild colt whose owner was afraid of him, he would be commended to Maurice's attention. Paolo would lead him to his master with all due precaution,—for he had no idea of risking his neck on the back of any ill-conditioned beast,—and Maurice would fasten on his long spurs, spring into the saddle, and very speedily teach the creature good behavior. There soon got about a story that he was what the fresh-water fisherman called "one o' them whisperers." It is a common legend enough, coming from the Old World, but known in American horse-talking circles, that some persons will whisper certain words in a horse's ear which will tame him if he is as wild and furious as ever Cruiser was. All this added to the mystery which surrounded the young man. A single improbable or absurd story amounts to very little, but when half a dozen such stories are told about the same individual or the same event, they begin to produce the effect of credible evidence. If the year had been 1692 and the place had been Salem Village, Maurice Kirkwood would have run the risk of being treated like the Reverend George Burroughs.

Miss Lurida Vincent's curiosity had been intensely excited with reference to the young man of whom so many stories were told. She had pretty nearly convinced herself that he was the author of the paper on Ocean, Lake, and River, which had been read at one of the meetings of the Pansophian Society. She was very desirous of meeting him, if it were possible. It seemed as if she might, as Secretary of the Society, request the cooperation of any of the visitors, without impropriety. So, after much deliberation, she wrote a careful note, of which the following is an exact copy. Her hand was bold, almost masculine, a curious contrast to that of Euthymia, which was delicately feminine. PANSOPHIAN SOCIETY.

ARROWHEAD VILLAGE, August 3, 18-. MAURICE KIRKWOOD, ESQ.

DEAR SIR,—You have received, I trust, a card of invitation to the meetings of our Society, but I think we have not yet had the pleasure of seeing you at any of them. We have supposed that we might be indebted to you for a paper read at the last meeting, and listened to with much interest. As it was anonymous, we do not wish to be inquisitive respecting its authorship; but we desire to say that any papers kindly sent us by the temporary residents of our village will be welcome, and if adapted to the wants of our Association will be read at one of its meetings or printed in its records, or perhaps both read and printed. May we not hope for your presence at the meeting, which is to take place next Wednesday evening? Respectfully yours,

LURIDA VINCENT, Secretary of the Pansophian Society.

To this note the Secretary received the following reply: MISS LURIDA VINCENT,

ARROWHEAD VILLAGE, August 4, 18-.

Secretary of the Pansophian Society:

DEAR MISS VINCENT,—I have received the ticket you refer to, and desire to express my acknowledgments for the polite attention. I regret that I have not been and I fear shall not be able to attend the meetings of the Society; but if any subject occurs to me on which I feel an inclination to write, it will give me pleasure to send a paper, to be disposed of as the Society may see fit.

Very respectfully yours, MAURICE KIRKWOOD.

"He says nothing about the authorship of the paper that was read the other evening," the Secretary said to herself. "No matter,—he wrote it,—there is no mistaking his handwriting. We know something about him, now, at any rate. But why doesn't he come to our meetings? What has his antipathy to do with his staying away? I must find out what his secret is, and I will. I don't believe it's harder than it was to solve that prize problem which puzzled so many teachers, or than beating Crakowitz, the great chess-player."

To this enigma, then, The Terror determined to bend all the faculties which had excited the admiration and sometimes the amazement of those who knew her in her school-days. It was a very delicate piece of business; for though Lurida was an intrepid woman's rights advocate, and believed she was entitled to do almost everything that men dared to, she knew very well there were certain limits which a young woman like herself must not pass.

In the mean time Maurice had received a visit from the young student at the University,—the same whom he had rescued from his dangerous predicament in the lake. With him had called one of the teachers,—an instructor in modern languages, a native of Italy. Maurice and the instructor exchanged a few words in

Italian. The young man spoke it with the ease which implied long familiarity with its use.

After they left, the instructor asked many curious questions about him,—who he was, how long he had been in the village, whether anything was known of his history,—all these inquiries with an eagerness which implied some special and peculiar reason for the interest they evinced.

"I feel satisfied," the instructor said, "that I have met that young man in my own country. It was a number of years ago, and of course he has altered in appearance a good deal; but there is a look about him of—what shall I call it?—apprehension,—as if he were fearing the approach of something or somebody. I think it is the way a man would look that was haunted; you know what I mean,—followed by a spirit or ghost. He does not suggest the idea of a murderer,—very far from it; but if he did, I should think he was every minute in fear of seeing the murdered man's spirit."

The student was curious, in his turn, to know all the instructor could recall. He had seen him in Rome, he thought, at the Fountain of Trevi, where so many strangers go before leaving the city. The youth was in the company of a man who looked like a priest. He could not mistake the peculiar expression of his countenance, but that was all he now remembered about his appearance. His attention had been called to this young man by seeing that some of the bystanders were pointing at him, and noticing that they were whispering with each other as if with reference to him. He should say that the youth was at that time fifteen or sixteen years old, and the time was about ten years ago.

After all, this evidence was of little or no value. Suppose the youth were Maurice; what then? We know that he had been in Italy, and had been there a good while,—or at least we infer so much from his familiarity with the language, and are confirmed in the belief by his having an Italian servant, whom he probably brought from Italy when he returned. If he wrote the paper which was read the other evening, that settles it, for the writer says he had lived by the Tiber. We must put this scrap of evidence furnished by the Professor with the other scraps; it may turn out of some consequence, sooner or later. It is like a piece of a dissected map; it means almost nothing by itself, but when we find the pieces it joins with we may discover a very important meaning in it.

In a small, concentrated community like that which centred in and immediately around Arrowhead Village, every day must have its local gossip as well as its general news. The newspaper tells the small community what is going on in the great world, and the busy tongues of male and female, especially the latter, fill in with the occurrences and comments of the ever-stirring microcosm. The fact that the Italian teacher had, or thought he had, seen Maurice ten years before was circulated and made the most of,—turned over and over like a cake, until it was thoroughly done on both sides and all through. It was a very small cake, but better than nothing. Miss Vincent heard this story, as others did, and talked about it with her friend, Miss Tower. Here was one more fact to help along.

The two young ladies who had recently graduated at the Corinna Institute remained, as they had always been, intimate friends. They were the natural complements of each other. Euthymia represented a complete, symmetrical womanhood. Her outward presence was only an index of a large, wholesome, affluent life. She could not help being courageous, with such a firm organization. She could not help being generous, cheerful, active. She had been told often enough that she was fair to look upon. She knew that she was called The Wonder by the schoolmates who were dazzled by her singular accomplishments, but she did not overvalue them. She rather tended to depreciate her own gifts, in comparison with those of her friend, Miss Lurida Vincent. The two agreed all the better for differing as they did. The octave makes a perfect chord, when shorter intervals jar more or less on the ear. Each admired the other with a heartiness which if they had been less unlike, would have been impossible.

It was a pleasant thing to observe their dependence on each other. The Terror of the schoolroom was the oracle in her relations with her friend. All the freedom of movement which The Wonder showed in her bodily exercises The Terror manifested in the world of thought. She would fling open a book, and decide in a swift glance whether it had any message for her. Her teachers had compared her way of reading to the taking of an instantaneous photograph. When she took up the first book on Physiology which Dr. Butts handed her, it seemed to him that if she only opened at any place, and gave one look, her mind drank its meaning up, as a moist sponge absorbs water. "What can I do with such a creature as this?" he said to himself. "There is only one way to deal with her, treat her as one treats a silkworm: give it its mulberry leaf, and it will spin its own cocoon. Give her the books, and she will spin her own web of knowledge."

"Do you really think of studying medicine?" said Dr. Butts to her.

"I have n't made up my mind about that," she answered, "but I want to know a little more about this terrible machinery of life and death we are all tangled in. I know something about it, but not enough. I find some very strange beliefs among the women I meet with, and I want to be able to silence them when they attempt to proselyte me to their whims and fancies. Besides, I want to know everything."

"They tell me you do, already," said Dr. Butts.

"I am the most ignorant little wretch that draws the breath of life!" exclaimed The Terror.

The doctor smiled. He knew what it meant. She had reached that stage of education in which the vast domain of the unknown opens its illimitable expanse before the eyes of the student. We never know the extent of darkness until it is partially illuminated.

"You did not leave the Institute with the reputation of being the most ignorant young lady that ever graduated there," said the doctor. "They tell me you got the highest marks of any pupil on their record since the school was founded."

"What a grand thing it was to be the biggest fish in our small aquarium, to be sure!" answered The Terror. "He was six inches long, the monster,—a little too big for bait to catch a pickerel with! What did you hand me that schoolbook for? Did you think I did n't know anything about the human body?"

"You said you were such an ignorant creature I thought I would try you with an easy book, by way of introduction."

The Terror was not confused by her apparent self-contradiction.

"I meant what I said, and I mean what I say. When I talk about my ignorance, I don't measure myself with schoolgirls, doctor. I don't measure myself with my teachers, either. You must talk to me as if I were a man, a grown man, if you mean to teach me anything. Where is your hat, doctor? Let me try it on."

The doctor handed her his wide-awake. The Terror's hair was not naturally abundant, like Euthymia's, and she kept it cut rather short. Her head used to get very hot when she studied hard. She tried to put the hat on.

"Do you see that?" she said. "I could n't wear it—it would squeeze my eyes out of my head. The books told me that women's brains were smaller than men's: perhaps they are,—most of them,—I never measured a great many. But when they try to settle what women are good for, by phrenology, I like to have them put their tape round my head. I don't believe in their nonsense, for all that. You might as well tell me that if one horse weighs more than another horse he is worth more,—a cart-horse that weighs twelve or fourteen hundred pounds better than Eclipse, that may have weighed a thousand. Give me a list of the best books you can think of, and turn me loose in your library. I can find what I want, if you have it; and what I don't find there I will get at the Public Library. I shall want to ask you a question now and then."

The doctor looked at her with a kind of admiration, but thoughtfully, as if he feared she was thinking of a task too formidable for her slight constitutional resource.

She returned, instinctively, to the apparent contradiction in her statements about herself.

"I am not a fool, if I am ignorant. Yes, doctor, I sail on a wide sea of ignorance, but I have taken soundings of some of its shallows and some of its depths. Your profession deals with the facts of life that interest me most just now, and I want to know something of it. Perhaps I may find it a calling such as would suit me."

"Do you seriously think of becoming a practitioner of medicine?" said the doctor.

"Certainly, I seriously think of it as a possibility, but I want to know something more about it first. Perhaps I sha'n't believe in medicine enough to practise it. Perhaps I sha'n't like it well enough. No matter about that. I wish to study some of your best books on some of the subjects that most interest me. I know about bones and muscles and all that, and about digestion and respiration and such things. I want to study up the nervous system, and learn all about it. I am of the nervous temperament myself, and perhaps that is the reason. I want to read about insanity and all that relates to it."

A curious expression flitted across the doctor's features as The Terror said this.

"Nervous system. Insanity. She has headaches, I know,—all those large-headed, hard-thinking girls do, as a matter of course; but what has set her off about insanity and the nervous system? I wonder if any of her more remote relatives are subject to mental disorder. Bright people very often have crazy relations. Perhaps some of her friends are in that way. I wonder whether"—the doctor did not speak any of these thoughts, and in fact hardly shaped his "whether," for The Terror interrupted his train of reflection, or rather struck into it in a way which startled him.

"Where is the first volume of this Medical Cyclopaedia?" she asked, looking at its empty place on the shelf.

"On my table," the doctor answered. "I have been consulting it."

Lurida flung it open, in her eager way, and turned the pages rapidly until she came to the one she wanted. The doctor cast his eye on the beading of the page, and saw the large letters A N T.

"I thought so," he said to himself. "We shall know everything there is in the books about antipathies now, if we never did before. She has a special object in studying the nervous system, just as I suspected. I think she does not care to mention it at this time; but if she finds out anything of interest she will tell me, if she does anybody. Perhaps she does not mean to tell anybody. It is a rather delicate business,—a young girl studying the natural history of a young man. Not quite so safe as botany or palaeontology!"

Lurida, lately The Terror, now Miss Vincent, had her own plans, and chose to keep them to herself, for the present, at least. Her hands were full enough, it might seem, without undertaking the solution of the great Arrowhead Village enigma. But she was in the most perfect training, so far as her intelligence was concerned; and the summer rest had restored her bodily vigor, so that her brain was like an overcharged battery which will find conductors somewhere to carry off its crowded energy.

At this time Arrowhead Village was enjoying the most successful season it had ever known. The Pansophian Society flourished to an extraordinary degree under the fostering care of the new Secretary. The rector was a good figure-head as President, but the Secretary was the life of the Society. Communications came in abundantly: some from the village and its neighborhood, some from the University and the Institute, some from distant and unknown sources. The new Secretary was very busy with the work of examining these papers. After a forenoon so employed, the carpet of her room looked like a barn floor after a husking-match. A glance at the manuscripts strewed about, or lying in heaps, would have frightened any young writer away from the thought of authorship as a business. If the candidate for that fearful calling had seen the process of selection and elimination, he would have felt still more desperately. A paper of twenty pages would come in, with an underscored request to please read through, carefully. That request alone is commonly sufficient to condemn any paper, and prevent its having any chance of a hearing; but the Secretary was not hardened enough yet for that kind of martial law in dealing with manuscripts. The looker-on might have seen her take up the paper, cast one flashing glance at its title, read the first sentence and the last, dip at a venture into two or three pages, and decide as swiftly as the lightning calculator would add up a column of figures what was to be its destination. If rejected, it went into the heap on the left; if approved, it was laid apart, to be submitted to the Committee for their judgment. The foolish writers who insist on one's reading through their manuscript poems and stories ought to know how fatal the request is to their prospects. It provokes the reader, to begin with. The reading of manuscript is frightful work, at the best; the reading of worthless manuscript—and most of that which one is requested to read through is worthless—would add to the terrors of Tartarus, if any infernal deity were ingenious enough to suggest it as a punishment.

If a paper was rejected by the Secretary, it did not come before the Committee, but was returned to the author, if he sent for it, which he commonly did. Its natural course was to try for admission into some one of the popular magazines: into "The Sifter," the most fastidious of them all; if that declined it, into "The Second Best;" and if that returned it, into "The Omnivorous." If it was refused admittance at the doors of all the

magazines, it might at length find shelter in the corner of a newspaper, where a good deal of very readable verse is to be met with nowadays, some of which has been, no doubt, presented to the Pansophian Society, but was not considered up to its standard.

X. A NEW ARRIVAL.

There was a recent accession to the transient population of the village which gave rise to some speculation. The new-comer was a young fellow, rather careless in his exterior, but apparently as much at home as if he owned Arrowhead Village and everything in it. He commonly had a cigar in his mouth, carried a pocket pistol, of the non-explosive sort, and a stick with a bulldog's head for its knob; wore a soft hat, a coarse check suit, a little baggy, and gaiterboots which had been half-soled,—a Bohemian-looking personage, altogether.

This individual began making explorations in every direction. He was very curious about the place and all the people in it. He was especially interested in the Pansophian Society, concerning which he made all sorts of inquiries. This led him to form a summer acquaintance with the Secretary, who was pleased to give him whatever information he asked for; being proud of the Society, as she had a right to be, and knowing more about it than anybody else.

The visitor could not have been long in the village without hearing something of Maurice Kirkwood, and the stories, true and false, connected with his name. He questioned everybody who could tell him anything about Maurice, and set down the answers in a little note-book he always had with him.

All this naturally excited the curiosity of the village about this new visitor. Among the rest, Miss Vincent, not wanting in an attribute thought to belong more especially to her sex, became somewhat interested to know more exactly who this inquiring, note-taking personage, who seemed to be everywhere and to know everybody, might himself be. Meeting him at the Public Library at a fortunate moment, when there was nobody but the old Librarian, who was hard of hearing, to interfere with their conversation, the little Secretary had a chance to try to find out something about him.

"This is a very remarkable library for a small village to possess," he remarked to Miss Lurida.

"It is, indeed," she said. "Have you found it well furnished with the books you most want?"

"Oh, yes,—books enough. I don't care so much for the books as I do for the Newspapers. I like a Review well enough,—it tells you all there is in a book; but a good abstract of the Review in a Newspaper saves a fellow the trouble of reading it."

"You find the papers you want, here, I hope," said the young lady.

"Oh, I get along pretty well. It's my off-time, and I don't do much reading or writing. Who is the city correspondent of this place?"

"I don't think we have any one who writes regularly. Now and then, there is a letter, with the gossip of the place in it, or an account of some of the doings at our Society. The city papers are always glad to get the reports of our meetings, and to know what is going on in the village."

"I suppose you write about the Society to the papers, as you are the Secretary."

This was a point-blank shot. She meant to question the young man about his business, and here she was on the witness-stand. She ducked her head, and let the question go over her.

"Oh, there are plenty of members who are willing enough to write, —especially to give an account of their own papers. I think they like to have me put in the applause, when they get any. I do that sometimes." (How much more, she did not say.)

"I have seen some very well written articles, which, from what they tell me of the Secretary, I should have thought she might have written herself."

He looked her straight in the eyes.

"I have transmitted some good papers," she said, without winking, or swallowing, or changing color, precious little color she had to change; her brain wanted all the blood it could borrow or steal, and more too. "You spoke of Newspapers," she said, without any change of tone or manner: "do you not frequently write for them yourself?"

"I should think I did," answered the young man. "I am a regular correspondent of 'The People's Perennial and Household Inquisitor.'"

"The regular correspondent from where?"

"Where! Oh, anywhere,—the place does not make much difference. I have been writing chiefly from Naples and St. Petersburg, and now and then from Constantinople."

"How long since your return to this country, may I ask?"

"My return? I have never been out of this country. I travel with a gazetteer and some guide-books. It is the cheapest way, and you can get the facts much better from them than by trusting your own observation. I have made the tour of Europe by the help of them and the newspapers. But of late I have taken to interviewing. I find that a very pleasant specialty. It is about as good sport as trout-tickling, and much the same kind of business. I should like to send the Society an account of one of my interviews. Don't you think they would like to hear it?"

"I have no doubt they would. Send it to me, and I will look it over; and if the Committee approve it, we will have it at the next meeting. You know everything has to be examined and voted on by the Committee," said the cautious Secretary.

"Very well,—I will risk it. After it is read, if it is read, please send it back to me, as I want to sell it to 'The Sifter,' or 'The Second Best,' or some of the paying magazines."

This is the paper, which was read at the next meeting of the Pansophian Society.

"I was ordered by the editor of the newspaper to which I am attached, 'The People's Perennial and Household Inquisitor,' to make a visit to a certain well-known writer, and obtain all the particulars I could concerning him and all that related to him. I have interviewed a good many politicians, who I thought rather liked the process; but I had never tried any of these literary people, and I was not quite sure how this one would feel about it. I said as much to the chief, but he pooh-poohed my scruples. 'It is n't our business whether they like it or not,' said he; 'the public wants it, and what the public wants it's bound to have, and we are bound to furnish it. Don't be afraid of your man; he 's used to it,—he's been pumped often enough to take it easy, and what you've got to do is to pump him dry. You need n't be modest,—ask him what you like; he is n't bound to answer, you know.'

"As he lived in a rather nice quarter of the town, I smarted myself up a little, put on a fresh collar and cuffs, and got a five-cent shine on my best high-lows. I said to myself, as I was walking towards the house where he lived, that I would keep very shady for a while and pass for a visitor from a distance; one of those 'admiring strangers' who call in to pay their respects, to get an autograph, and go home and say that they have met the distinguished So and So, which gives them a certain distinction in the village circle to which they belong.

"My man, the celebrated writer, received me in what was evidently his reception-room. I observed that he managed to get the light full on my face, while his own was in the shade. I had meant to have his face in the light, but he knew the localities, and had arranged things so as to give him that advantage. It was like two frigates manoeuvring,—each trying to get to windward of the other. I never take out my note-book until I and my man have got engaged in artless and earnest conversation,—always about himself and his works, of course, if he is an author.

"I began by saying that he must receive a good many callers. Those who had read his books were naturally curious to see the writer of them.

"He assented, emphatically, to this statement. He had, he said, a great many callers.

"I remarked that there was a quality in his books which made his readers feel as if they knew him personally, and caused them to cherish a certain attachment to him.

"He smiled, as if pleased. He was himself disposed to think so, he said. In fact, a great many persons, strangers writing to him, had told him so.

"My dear sir," I said, "there is nothing wonderful in the fact you mention. You reach a responsive chord in many human breasts.

'One touch of Nature makes the whole world kin.'

"Everybody feels as if he, and especially she (his eyes sparkled), were your blood relation. Do they not name their children after you very frequently?

"He blushed perceptibly. 'Sometimes,' he answered. 'I hope they will all turn out well.'

"I am afraid I am taking up too much of your time, I said.

"No, not at all,' he replied. 'Come up into my library; it is warmer and pleasanter there.'

"I felt confident that I had him by the right handle then; for an author's library, which is commonly his working-room, is, like a lady's boudoir, a sacred apartment.

"So we went upstairs, and again he got me with the daylight on my face, when I wanted it on his.

"You have a fine library, I remarked. There were books all round the room, and one of those whirligig square book-cases. I saw in front a Bible and a Concordance, Shakespeare and Mrs. Cowden Clarke's book, and other classical works and books of grave aspect. I contrived to give it a turn, and on the side next the wall I got a glimpse of Barnum's Rhyming Dictionary, and several Dictionaries of Quotations and cheap compends of knowledge. Always twirl one of those revolving book-cases when you visit a scholar's library. That is the way to find out what books he does n't want you to see, which of course are the ones you particularly wish to see.

"Some may call all this impertinent and inquisitive. What do you suppose is an interviewer's business? Did you ever see an oyster opened? Yes? Well, an interviewer's business is the same thing. His man is his oyster, which he, not with sword, but with pencil and note-book, must open. Mark how the oysterman's thin blade insinuates itself,—how gently at first, how strenuously when once fairly between the shells!

"And here, I said, you write your books,—those books which have carried your name to all parts of the world, and will convey it down to posterity! Is this the desk at which you write? And is this the pen you write with?

"It is the desk and the very pen,' he replied.

"He was pleased with my questions and my way of putting them. I took up the pen as reverentially as if it had been made of the feather which the angel I used to read about in Young's 'Night Thoughts' ought to have dropped, and did n't.

"Would you kindly write your autograph in my note-book, with that pen? I asked him. Yes, he would, with great pleasure.

"So I got out my note-book.

"It was a spick and span new one, bought on purpose for this interview. I admire your bookcases, said I. Can you tell me just how high they are?

"They are about eight feet, with the cornice.'

"I should like to have some like those, if I ever get rich enough, said I. Eight feet,—eight feet, with the cornice. I must put that down.

"So I got out my pencil.

"I sat there with my pencil and note-book in my hand, all ready, but not using them as yet.

"I have heard it said, I observed, that you began writing poems at a very early age. Is it taking too great a

liberty to ask how early you began to write in verse?

"He was getting interested, as people are apt to be when they are themselves the subjects of conversation.

"Very early,—I hardly know how early. I can say truly, as Louise Colet said,

"'Je fis mes premiers vers sans savoir les écrire.'"

"I am not a very good French scholar, said I; perhaps you will be kind enough to translate that line for me.

"Certainly. With pleasure. I made my first verses without knowing how to write them.'

"How interesting! But I never heard of Louise Colet. Who was she?"

"My man was pleased to give me a piece of literary information.

"Louise the lioness! Never heard of her? You have heard of Alphonse Karr?"

"Why,—yes,—more or less. To tell the truth, I am not very well up in French literature. What had he to do with your lioness?"

"A good deal. He satirized her, and she waited at his door with a case-knife in her hand, intending to stick him with it. By and by he came down, smoking a cigarette, and was met by this woman flourishing her case-knife. He took it from her, after getting a cut in his dressing-gown, put it in his pocket, and went on with his cigarette. He keeps it with an inscription:

*"Donne a Alphonse Karr
Par Madame Louise Colet...
Dans le dos."*

"Lively little female!"

"I could n't help thinking that I should n't have cared to interview the lively little female. He was evidently tickled with the interest I appeared to take in the story he told me. That made him feel amiably disposed toward me.

"I began with very general questions, but by degrees I got at everything about his family history and the small events of his boyhood. Some of the points touched upon were delicate, but I put a good bold face on my most audacious questions, and so I wormed out a great deal that was new concerning my subject. He had been written about considerably, and the public wouldn't have been satisfied without some new facts; and these I meant to have, and I got. No matter about many of them now, but here are some questions and answers that may be thought worth reading or listening to:

"How do you enjoy being what they call 'a celebrity,' or a celebrated man?"

"So far as one's vanity is concerned it is well enough. But self-love is a cup without any bottom, and you might pour the Great Lakes all through it, and never fill it up. It breeds an appetite for more of the same kind. It tends to make the celebrity a mere lump of egotism. It generates a craving for high-seasoned personalities which is in danger of becoming slavery, like that following the abuse of alcohol, or opium, or tobacco. Think of a man's having every day, by every post, letters that tell him he is this and that and the other, with epithets and endearments, one tenth part of which would have made him blush red hot before he began to be what you call a celebrity!"

"Are there not some special inconveniences connected with what is called celebrity?"

"I should think so! Suppose you were obliged every day of your life to stand and shake hands, as the President of the United States has to after his inauguration: how do you think your hand would feel after a few months' practice of that exercise? Suppose you had given you thirty-five millions of money a year, in hundred-dollar coupons, on condition that you cut them all off yourself in the usual manner: how do you think you should like the look of a pair of scissors at the end of a year, in which you had worked ten hours a day every day but Sunday, cutting off a hundred coupons an hour, and found you had not finished your task, after all? You have addressed me as what you are pleased to call "a literary celebrity." I won't dispute with you as to whether or not I deserve that title. I will take it for granted I am what you call me, and give you some few hints on my experience.

"You know there was formed a while ago an Association of Authors for Self-Protection. It meant well, and it was hoped that something would come of it in the way of relieving that oppressed class, but I am sorry to say that it has not effected its purpose."

"I suspected he had a hand in drawing up the Constitution and Laws of that Association. Yes, I said, an admirable Association it was, and as much needed as the one for the Prevention of Cruelty to Animals. I am sorry to hear that it has not proved effectual in putting a stop to the abuse of a deserving class of men. It ought to have done it; it was well conceived, and its public manifesto was a masterpiece. (I saw by his expression that he was its author.)

"I see I can trust you," he said. 'I will unbosom myself freely of some of the grievances attaching to the position of the individual to whom you have applied the term "Literary Celebrity."

"He is supposed to be a millionaire, in virtue of the immense sales of his books, all the money from which, it is taken for granted, goes into his pocket. Consequently, all subscription papers are handed to him for his signature, and every needy stranger who has heard his name comes to him for assistance.

"He is expected to subscribe for all periodicals, and is goaded by receiving blank formulae, which, with their promises to pay, he is expected to fill up.

"He receives two or three books daily, with requests to read and give his opinion about each of them, which opinion, if it has a word which can be used as an advertisement, he will find quoted in all the newspapers.

"He receives thick masses of manuscript, prose and verse, which he is called upon to examine and pronounce on their merits; these manuscripts having almost invariably been rejected by the editors to whom they have been sent, and having as a rule no literary value whatever.

"He is expected to sign petitions, to contribute to journals, to write for fairs, to attend celebrations, to

make after-dinner speeches, to send money for objects he does not believe in to places he never heard of.

"He is called on to keep up correspondences with unknown admirers, who begin by saying they have no claim upon his time, and then appropriate it by writing page after page, if of the male sex; and sheet after sheet, if of the other.

"If a poet, it is taken for granted that he can sit down at any moment and spin off any number of verses on any subject which may be suggested to him; such as congratulations to the writer's great-grandmother on her reaching her hundredth year, an elegy on an infant aged six weeks, an ode for the Fourth of July in a Western township not to be found in Lippincott's last edition, perhaps a valentine for some bucolic lover who believes that wooing in rhyme is the way to win the object of his affections.'

"Is n't it so? I asked the Celebrity.

"I would bet on the prose lover. She will show the verses to him, and they will both have a good laugh over them.'

"I have only reported a small part of the conversation I had with the Literary Celebrity. He was so much taken up with his pleasing self-contemplation, while I made him air his opinions and feelings and spread his characteristics as his laundress spreads and airs his linen on the clothes-line, that I don't believe it ever occurred to him that he had been in the hands of an interviewer until he found himself exposed to the wind and sunshine in full dimensions in the columns of *The People's Perennial* and *Household Inquisitor*."

After the reading of this paper, much curiosity was shown as to who the person spoken of as the "Literary Celebrity" might be. Among the various suppositions the startling idea was suggested that he was neither more nor less than the unexplained personage known in the village as Maurice Kirkwood. Why should that be his real name? Why should not he be the Celebrity, who had taken this name and fled to this retreat to escape from the persecutions of kind friends, who were pricking him and stabbing him nigh to death with their daggers of sugar candy?

The Secretary of the Pansophian Society determined to question the Interviewer the next time she met him at the Library, which happened soon after the meeting when his paper was read.

"I do not know," she said, in the course of a conversation in which she had spoken warmly of his contribution to the literary entertainment of the Society, "that you mentioned the name of the Literary Celebrity whom you interviewed so successfully."

"I did not mention him, Miss Vincent," he answered, "nor do I think it worth while to name him. He might not care to have the whole story told of how he was handled so as to make him communicative. Besides, if I did, it would bring him a new batch of sympathetic letters, regretting that he was bothered by those horrid correspondents, full of indignation at the bores who presumed to intrude upon him with their pages of trash, all the writers of which would expect answers to their letters of condolence."

The Secretary asked the Interviewer if he knew the young gentleman who called himself Maurice Kirkwood.

"What," he answered, "the man that paddles a birch canoe, and rides all the wild horses of the neighborhood? No, I don't know him, but I have met him once or twice, out walking. A mighty shy fellow, they tell me. Do you know anything particular about him?"

"Not much. None of us do, but we should like to. The story is that he has a queer antipathy to something or to somebody, nobody knows what or whom."

"To newspaper correspondents, perhaps," said the interviewer. "What made you ask me about him? You did n't think he was my 'Literary Celebrity,' did you?"

"I did not know. I thought he might be. Why don't you interview this mysterious personage? He would make a good sensation for your paper, I should think."

"Why, what is there to be interviewed in him? Is there any story of crime, or anything else to spice a column or so, or even a few paragraphs, with? If there is, I am willing to handle him professionally."

"I told you he has what they call an antipathy. I don't know how much wiser you are for that piece of information."

"An antipathy! Why, so have I an antipathy. I hate a spider, and as for a naked caterpillar,—I believe I should go into a fit if I had to touch one. I know I turn pale at the sight of some of those great green caterpillars that come down from the elm-trees in August and early autumn."

"Afraid of them?" asked the young lady.

"Afraid? What should I be afraid of? They can't bite or sting. I can't give any reason. All I know is that when I come across one of these creatures in my path I jump to one side, and cry out,—sometimes using very improper words. The fact is, they make me crazy for the moment."

"I understand what you mean," said Miss Vincent. "I used to have the same feeling about spiders, but I was ashamed of it, and kept a little menagerie of spiders until I had got over the feeling; that is, pretty much got over it, for I don't love the creatures very dearly, though I don't scream when I see one."

"What did you tell me, Miss Vincent, was this fellow's particular antipathy?"

"That is just the question. I told you that we don't know and we can't guess what it is. The people here are tired out with trying to discover some good reason for the young man's keeping out of the way of everybody, as he does. They say he is odd or crazy, and they don't seem to be able to tell which. It would make the old ladies of the village sleep a great deal sounder,—yes, and some of the young ladies, too,—if they could find out what this Mr. Kirkwood has got into his head, that he never comes near any of the people here."

"I think I can find out," said the Interviewer, whose professional ambition was beginning to be excited. "I never came across anybody yet that I could n't get something out of. I am going to stay here a week or two, and before I go I will find out the secret, if there is any, of this Mr. Maurice Kirkwood."

We must leave the Interviewer to his contrivances until they present us with some kind of result, either in the shape of success or failure.

XI. THE INTERVIEWER ATTACKS THE SPHINX.

When Miss Euthymia Tower sent her oar off in flashing splinters, as she pulled her last stroke in the boat-race, she did not know what a strain she was putting upon it. She did know that she was doing her best, but how great the force of her best was she was not aware until she saw its effects. Unconsciousness belonged to her robust nature, in all its manifestations. She did not pride herself on her knowledge, nor reproach herself for her ignorance. In every way she formed a striking contrast to her friend, Miss Vincent. Every word they spoke betrayed the difference between them: the sharp tones of Lurida's head-voice, penetrative, aggressive, sometimes irritating, revealed the corresponding traits of mental and moral character; the quiet, conversational contralto of Euthymia was the index of a nature restful and sympathetic.

The friendships of young girls prefigure the closer relations which will one day come in and dissolve their earlier intimacies. The dependence of two young friends may be mutual, but one will always lean more heavily than the other; the masculine and feminine elements will be as sure to assert themselves as if the friends were of different sexes.

On all common occasions Euthymia looked up to her friend as her superior. She fully appreciated all her varied gifts and knowledge, and deferred to her opinion in every-day matters, not exactly as an oracle, but as wiser than herself or any of her other companions. It was a different thing, however, when the graver questions of life came up. Lurida was full of suggestions, plans, projects, which were too liable to run into whims before she knew where they were tending. She would lay out her ideas before Euthymia so fluently and eloquently that she could not help believing them herself, and feeling as if her friend must accept them with an enthusiasm like her own. Then Euthymia would take them up with her sweet, deliberate accents, and bring her calmer judgment to bear on them.

Lurida was in an excited condition, in the midst of all her new interests and occupations. She was constantly on the lookout for papers to be read at the meetings of her Society,—for she made it her own in great measure, by her zeal and enthusiasm,—and in the mean time she was reading in various books which Dr. Butts selected for her, all bearing on the profession to which, at least as a possibility, she was looking forward. Privately and in a very still way, she was occupying herself with the problem of the young stranger, the subject of some delusion, or disease, or obliquity of unknown nature, to which the vague name of antipathy had been attached. Euthymia kept an eye upon her, partly in the fear that over-excitement would produce some mental injury, and partly from anxiety lest she should compromise her womanly dignity in her desire to get at the truth of a very puzzling question.

"How do you like the books I see you reading?" said Euthymia to Lurida, one day, as they met at the Library.

"Better than all the novels I ever read," she answered. "I have been reading about the nervous system, and it seems to me I have come nearer the springs of life than ever before in all my studies. I feel just as if I were a telegraph operator. I was sure that I had a battery in my head, for I know my brain works like one; but I did not know how many centres of energy there are, and how they are played upon by all sorts of influences, external and internal. Do you know, I believe I could solve the riddle of the 'Arrowhead Village Sphinx,' as the paper called him, if he would only stay here long enough?"

"What paper has had anything about it, Lurida? I have not seen or heard of its being mentioned in any of the papers."

"You know that rather queer-looking young man who has been about here for some time,—the same one who gave the account of his interview with a celebrated author? Well, he has handed me a copy of a paper in which he writes, 'The People's Perennial and Household Inquisitor.' He talks about this village in a very free and easy way. He says there is a Sphinx here, who has mystified us all."

"And you have been chatting with that fellow! Don't you know that he'll have you and all of us in his paper? Don't you know that nothing is safe where one of those fellows gets in with his note-book and pencil? Oh, Lurida, Lurida, do be careful! What with this mysterious young man and this very questionable newspaper-paragraph writer, you will be talked about, if you don't mind, before you know it. You had better let the riddle of the Sphinx alone. If you must deal with such dangerous people, the safest way is to set one of them to find out the other.—I wonder if we can't get this new man to interview the visitor you have so much curiosity about. That might be managed easily enough without your having anything to do with it. Let me alone, and I will arrange it. But mind, now, you must not meddle; if you do, you will spoil everything, and get your name in the 'Household Inquisitor' in a way you won't like."

"Don't be frightened about me, Euthymia. I don't mean to give him a chance to work me into his paper, if I can help it. But if you can get him to try his skill upon this interesting personage and his antipathy, so much the better. I am very curious about it, and therefore about him. I want to know what has produced this strange state of feeling in a young man who ought to have all the common instincts of a social being. I believe there are unexplained facts in the region of sympathies and antipathies which will repay study with a deeper insight into the mysteries of life than we have dreamed of hitherto. I often wonder whether there are not heart-waves and soul-waves as well as 'brain-waves,' which some have already recognized."

Euthymia wondered, as well she might, to hear this young woman talking the language of science like an adept. The truth is, Lurida was one of those persons who never are young, and who, by way of compensation, will never be old. They are found in both sexes. Two well-known graduates of one of our great universities are living examples of this precocious but enduring intellectual development. If the readers of this narrative cannot pick them out, they need not expect the writer of it to help them. If they guess rightly who they are, they will recognize the fact that just such exceptional individuals as the young woman we are dealing with are met with from time to time in families where intelligence has been cumulative for two or three

generations.

Euthymia was very willing that the questioning and questionable visitor should learn all that was known in the village about the nebulous individual whose misty environment all the eyes in the village were trying to penetrate, but that he should learn it from some other informant than Lurida.

The next morning, as the Interviewer took his seat on a bench outside his door, to smoke his after-breakfast cigar, a bright-looking and handsome youth, whose features recalled those of Euthymia so strikingly that one might feel pretty sure he was her brother, took a seat by his side. Presently the two were engaged in conversation. The Interviewer asked all sorts of questions about everybody in the village. When he came to inquire about Maurice, the youth showed a remarkable interest regarding him. The greatest curiosity, he said, existed with reference to this personage. Everybody was trying to find out what his story was,—for a story, and a strange one, he must surely have,—and nobody had succeeded.

The Interviewer began to be unusually attentive. The young man told him the various antipathy stories, about the evil-eye hypothesis, about his horse-taming exploits, his rescuing the student whose boat was overturned, and every occurrence he could recall which would help out the effect of his narrative.

The Interviewer was becoming excited. "Can't find out anything about him, you said, did n't you? How do you know there's anything to find? Do you want to know what I think he is? I'll tell you. I think he is an actor,—a fellow from one of the city theatres. Those fellows go off in their summer vacation, and like to puzzle the country folks. They are the very same chaps, like as not, the visitors have seen in plays at the city theatres; but of course they don't know 'em in plain clothes. Kings and Emperors look pretty shabby off the stage sometimes, I can tell you."

The young man followed the Interviewer's lead. "I shouldn't wonder if you were right," he said. "I remember seeing a young fellow in Romeo that looked a good deal like this one. But I never met the Sphinx, as they call him, face to face. He is as shy as a woodchuck. I believe there are people here that would give a hundred dollars to find out who he is, and where he came from, and what he is here for, and why he does n't act like other folks. I wonder why some of those newspaper men don't come up here and get hold of this story. It would be just the thing for a sensational writer."

To all this the Interviewer listened with true professional interest. Always on the lookout for something to make up a paragraph or a column about; driven oftentimes to the stalest of repetitions,—to the biggest pumpkin story, the tall cornstalk, the fat ox, the live frog from the human stomach story, the third set of teeth and reading without spectacles at ninety story, and the rest of the marvellous commonplaces which are kept in type with e o y or e 6 m (every other year or every six months) at the foot; always in want of a fresh incident, a new story, an undescribed character, an unexplained mystery, it is no wonder that the Interviewer fastened eagerly upon this most tempting subject for an inventive and emotional correspondent.

He had seen Paolo several times, and knew that he was Maurice's confidential servant, but had never spoken to him. So he said to himself that he must make Paolo's acquaintance, to begin with. In the summer season many kinds of small traffic were always carried on in Arrowhead Village. Among the rest, the sellers of fruits—oranges, bananas, and others, according to the seasons—did an active business. The Interviewer watched one of these fruit-sellers, and saw that his hand-cart stopped opposite the house where, as he knew, Maurice Kirkwood was living. Presently Paolo came out of the door, and began examining the contents of the hand-cart. The Interviewer saw his opportunity. Here was an introduction to the man, and the man must introduce him to the master.

He knew very well how to ingratiate himself with the man,—there was no difficulty about that. He had learned his name, and that he was an Italian whom Maurice had brought to this country with him.

"Good morning, Mr. Paul," he said. "How do you like the look of these oranges?"

"They pretty fair," said Paolo: "no so good as them las' week; no sweet as them was."

"Why, how do you know without tasting them?" said the Interviewer.

"I know by his look,—I know by his smell,—he no good yaller,—he no smell ripe,—I know orange ever since my head no bigger than he is," and Paolo laughed at his own comparison.

The Interviewer laughed louder than Paolo.

"Good!" said he,—"first-rate! Of course you know all about 'em. Why can't you pick me out a couple of what you think are the best of 'em? I shall be greatly obliged to you. I have a sick friend, and I want to get two nice sweet ones for him."

Paolo was pleased. His skill and judgment were recognized. He felt grateful to the stranger, who had given him, an opportunity of conferring a favor. He selected two, after careful examination and grave deliberation. The Interviewer had sense and tact enough not to offer him an orange, and so shift the balance of obligation.

"How is Mr. Kirkwood, to-day?" he asked.

"Signor? He very well. He always well. Why you ask? Anybody tell you he sick?"

"No, nobody said he was sick. I have n't seen him going about for a day or two, and I thought he might have something the matter with him. Is he in the house now?"

"No: he off riding. He take long, long rides, sometime gone all day. Sometime he go on lake, paddle, paddle in the morning, very, very early,—in night when the moon shine; sometime stay in house, and read, and study, and write,—he great scholar, Misser Kirkwood."

"A good many books, has n't he?"

"He got whole shelves full of books. Great books, little books, old books, new books, all sorts of books. He great scholar, I tell you."

"Has n't he some curiosities,—old figures, old jewelry, old coins, or things of that sort?"

Paolo looked at the young man cautiously, almost suspiciously. "He don't keep no jewels nor no money in his chamber. He got some old things,—old jugs, old brass figgers, old money, such as they used to have in old times: she don't pass now." Paolo's ganders were apt to be somewhat indiscriminately distributed.

A lucky thought struck the Interviewer. "I wonder if he would examine some old coins of mine?" said he, in

a modestly tentative manner.

"I think he like to see anything curious. When he come home I ask him. Who will I tell him wants to ask him about old coin?"

"Tell him a gentleman visiting Arrowhead Village would like to call and show him some old pieces of money, said to be Roman ones."

The Interviewer had just remembered that he had two or three old battered bits of copper which he had picked up at a tollman's, where they had been passed off for cents. He had bought them as curiosities. One had the name of Gallienus upon it, tolerably distinct,—a common little Roman penny; but it would serve his purpose of asking a question, as would two or three others with less legible legends. Paolo told him that if he came the next morning he would stand a fair chance of seeing Mr. Kirkwood. At any rate, he would speak to his master.

The Interviewer presented himself the next morning, after finishing his breakfast and his cigar, feeling reasonably sure of finding Mr. Kirkwood at home, as he proved to be. He had told Paolo to show the stranger up to his library,—or study, as he modestly called it.

It was a pleasant room enough, with a lookout on the lake in one direction, and the wooded hill in another. The tenant had fitted it up in scholarly fashion. The books Paolo spoke of were conspicuous, many of them, by their white vellum binding and tasteful gilding, showing that probably they had been bound in Rome, or some other Italian city. With these were older volumes in their dark original leather, and recent ones in cloth or paper. As the Interviewer ran his eye over them, he found that he could make very little out of what their backs taught him. Some of the paper-covered books, some of the cloth-covered ones, had names which he knew; but those on the backs of many of the others were strange to his eyes. The classics of Greek and Latin and Italian literature were there; and he saw enough to feel convinced that he had better not attempt to display his erudition in the company of this young scholar.

The first thing the Interviewer had to do was to account for his visiting a person who had not asked to make his acquaintance, and who was living as a recluse. He took out his battered coppers, and showed them to Maurice.

"I understood that you were very skilful in antiquities, and had a good many yourself. So I took the liberty of calling upon you, hoping that you could tell me something about some ancient coins I have had for a good while." So saying, he pointed to the copper with the name of Gallienus.

"Is this very rare and valuable? I have heard that great prices have been paid for some of these ancient coins,—ever so many guineas, sometimes. I suppose this is as much as a thousand years old."

"More than a thousand years old," said Maurice.

"And worth a great deal of money?" asked the Interviewer.

"No, not a great deal of money," answered Maurice.

"How much, should you say?" said the Interviewer.

Maurice smiled. "A little more than the value of its weight in copper,—I am afraid not much more. There are a good many of these coins of Gallienus knocking about. The peddlers and the shopkeepers take such pieces occasionally, and sell them, sometimes for five or ten cents, to young collectors. No, it is not very precious in money value, but as a relic any piece of money that was passed from hand to hand a thousand or fifteen hundred years ago is interesting. The value of such relics is a good deal a matter of imagination."

"And what do you say to these others?" asked the Interviewer. Poor old worn-out things they were, with a letter or two only, and some faint trace of a figure on one or two of them.

"Very interesting, always, if they carry your imagination back to the times when you may suppose they were current. Perhaps Horace tossed one of them to a beggar. Perhaps one of these was the coin that was brought when One said to those about Him, 'Bring me a penny, that I may see it.' But the market price is a different matter. That depends on the beauty and preservation, and above all the rarity, of the specimen. Here is a coin, now,"—he opened a small cabinet, and took one from it. "Here is a Syracusan decadrachm with the head of Persephone, which is at once rare, well preserved, and beautiful. I am afraid to tell what I paid for it."

The Interviewer was not an expert in numismatics. He cared very little more for an old coin than he did for an old button, but he had thought his purchase at the tollman's might prove a good speculation. No matter about the battered old pieces: he had found out, at any rate, that Maurice must have money and could be extravagant, or what he himself considered so; also that he was familiar with ancient coins. That would do for a beginning.

"May I ask where you picked up the coin you are showing me?" he said

"That is a question which provokes a negative answer. One does not 'pick up' first-class coins or paintings, very often, in these times. I bought this of a great dealer in Rome."

"Lived in Rome once?" said the Interviewer.

"For some years. Perhaps you have been there yourself?"

The Interviewer said he had never been there yet, but he hoped he should go there, one of these years, "suppose you studied art and antiquities while you were there?" he continued.

"Everybody who goes to Rome must learn something of art and antiquities. Before you go there I advise you to review Roman history and the classic authors. You had better make a study of ancient and modern art, and not have everything to learn while you are going about among ruins, and churches, and galleries. You know your Horace and Virgil well, I take it for granted?"

The Interviewer hesitated. The names sounded as if he had heard them. "Not so well as I mean to before going to Rome," he answered. "May I ask how long you lived in Rome?"

"Long enough to know something of what is to be seen in it. No one should go there without careful preparation beforehand. You are familiar with Vasari, of course?"

The Interviewer felt a slight moisture on his forehead. He took out his handkerchief. "It is a warm day," he said. "I have not had time to read all—the works I mean to. I have had too much writing to do, myself, to find all the time for reading and study I could have wished."

"In what literary occupation have you been engaged, if you will pardon my inquiry?" said Maurice.

"I am connected with the press. I understood that you were a man of letters, and I hoped I might have the privilege of hearing from your own lips some account of your literary experiences."

"Perhaps that might be interesting, but I think I shall reserve it for my autobiography. You said you were connected with the press. Do I understand that you are an author?"

By this time the Interviewer had come to the conclusion that it was a very warm day. He did not seem to be getting hold of his pitcher by the right handle, somehow. But he could not help answering Maurice's very simple question.

"If writing for a newspaper gives one a right to be called an author, I may call myself one. I write for the 'People's Perennial and Household Inquisitor'."

"Are you the literary critic of that well-known journal, or do you manage the political column?"

"I am a correspondent from different places and on various matters of interest."

"Places you have been to, and people you have known?"

"Well, yes,—generally, that is. Sometimes I have to compile my articles."

"Did you write the letter from Rome, published a few weeks ago?"

The Interviewer was in what he would call a tight place. However, he had found that his man was too much for him, and saw that the best thing he could do was to submit to be interviewed himself. He thought that he should be able to pick up something or other which he could work into his report of his visit.

"Well, I—prepared that article for our columns. You know one does not have to see everything he describes. You found it accurate, I hope, in its descriptions?"

"Yes, Murray is generally accurate. Sometimes he makes mistakes, but I can't say how far you have copied them. You got the Ponte Molle—the old Milvian bridge—a good deal too far down the stream, if I remember. I happened to notice that, but I did not read the article carefully. May I ask whether you propose to do me the honor of reporting this visit and the conversation we have had, for the columns of the newspaper with which you are connected?"

The Interviewer thought he saw an opening. "If you have no objections," he said, "I should like very much to ask a few questions." He was recovering his professional audacity.

"You can ask as many questions as you consider proper and discreet, —after you have answered one or two of mine: Who commissioned you to submit me to examination?"

"The curiosity of the public wishes to be gratified, and I am the humble agent of its investigations."

"What has the public to do with my private affairs?"

"I suppose it is a question of majority and minority. That settles everything in this country. You are a minority of one opposed to a large number of curious people that form a majority against you. That is the way I've heard the chief put it."

Maurice could not help smiling at the quiet assumption of the American citizen. The Interviewer smiled, too, and thought he had his man, sure, at last. Maurice calmly answered, "There is nothing left for minorities, then, but the right of rebellion. I don't care about being made the subject of an article for your paper. I am here for my pleasure, minding my own business, and content with that occupation. I rebel against your system of forced publicity. Whenever I am ready I shall tell the public all it has any right to know about me. In the mean time I shall request to be spared reading my biography while I am living. I wish you a good-morning."

The Interviewer had not taken out his note-book and pencil. In his next communication from Arrowhead Village he contented himself with a brief mention of the distinguished and accomplished gentleman now visiting the place, whose library and cabinet of coins he had had the privilege of examining, and whose courtesy was equalled only by the modesty that shunned the public notoriety which the organs of popular intelligence would otherwise confer upon him.

The Interviewer had attempted the riddle of the Sphinx, and had failed to get the first hint of its solution.

The many tongues of the village and its visitors could not remain idle. The whole subject of antipathies had been talked over, and the various cases recorded had become more or less familiar to the conversational circles which met every evening in the different centres of social life. The prevalent hypothesis for the moment was that Maurice had a congenital aversion to some color, the effects of which upon him were so painful or disagreeable that he habitually avoided exposure to it. It was known, and it has already been mentioned, that such cases were on record. There had been a great deal of discussion, of late, with reference to a fact long known to a few individuals, but only recently made a matter of careful scientific observation and brought to the notice of the public. This was the now well-known phenomenon of color-blindness. It did not seem very strange that if one person in every score or two could not tell red from green there might be other curious individual peculiarities relating to color. A case has already been referred to where the subject of observation fainted at the sight of any red object. What if this were the trouble with Maurice Kirkwood? It will be seen at once how such a congenital antipathy would tend to isolate the person who was its unfortunate victim. It was an hypothesis not difficult to test, but it was a rather delicate business to be experimenting on an inoffensive stranger. Miss Vincent was thinking it over, but said nothing, even to Euthymia, of any projects she might entertain.

XII. MISS VINCENT AS A MEDICAL STUDENT.

The young lady whom we have known as The Terror, as Lurida, as Miss Vincent, Secretary of the Pansophian Society, had been reading various works selected for her by Dr. Butts,—works chiefly relating to the nervous system and its different affections. She thought it was about time to talk over the general subject of the medical profession with her new teacher,—if such a self-directing person as Lurida could be said to recognize anybody as teacher.

She began at the beginning. "What is the first book you would put in a student's hands, doctor?" she said to him one day. They were in his study, and Lurida had just brought back a thick volume on Insanity, one of Bucknill and Puke's, which she had devoured as if it had been a pamphlet.

"Not that book, certainly," he said. "I am afraid it will put all sorts of notions into your head. Who or what set you to reading that, I should like to know?"

"I found it on one of your shelves, and as I thought I might perhaps be crazy some time or other, I felt as if I should like to know what kind of a condition insanity is. I don't believe they were ever very bright, those insane people, most of them. I hope I am not stupid enough ever to lose my wits."

"There is no telling, my dear, what may happen if you overwork that busy brain of yours. But did n't it make you nervous, reading about so many people possessed with such strange notions?"

"Nervous? Not a bit. I could n't help thinking, though, how many people I had known that had a little touch of craziness about them. Take that poor woman that says she is Her Majesty's Person,—not Her Majesty, but Her Majesty's Person,—a very important distinction, according to her: how she does remind me of more than one girl I have known! She would let her skirts down so as to make a kind of train, and pile things on her head like a sort of crown, fold her arms and throw her head back, and feel as grand as a queen. I have seen more than one girl act very much in that way. Are not most of us a little crazy, doctor,—just a little? I think so. It seems to me I never saw but one girl who was free from every hint of craziness."

"And who was that, pray?"

"Why, Euthymia,—nobody else, of course. She never loses her head,—I don't believe she would in an earthquake. Whenever we were at work with our microscopes at the Institute I always told her that her mind was the only achromatic one I ever looked into,—I did n't say looked through.—But I did n't come to talk about that. I read in one of your books that when Sydenham was asked by a student what books he should read, the great physician said, 'Read "Don Quixote."' I want you to explain that to me; and then I want you to tell me what is the first book, according to your idea, that a student ought to read."

"What do you say to my taking your question as the subject of a paper to be read before the Society? I think there may be other young ladies at the meeting, besides yourself, who are thinking of pursuing the study of medicine. At any rate, there are a good many who are interested in the subject; in fact, most people listen readily to anything doctors tell them about their calling."

"I wish you would, doctor. I want Euthymia to hear it, and I don't doubt there will be others who will be glad to hear everything you have to say about it. But oh, doctor, if you could only persuade Euthymia to become a physician! What a doctor she would make! So strong, so calm, so full of wisdom! I believe she could take the wheel of a steamboat in a storm, or the hose of a fire-engine in a conflagration, and handle it as well as the captain of the boat or of the fire-company."

"Have you ever talked with her about studying medicine?"

"Indeed I have. Oh, if she would only begin with me! What good times we would have studying together!"

"I don't doubt it. Medicine is a very pleasant study. But how do you think practice would be? How would you like being called up to ride ten miles in a midnight snow-storm, just when one of your raging headaches was racking you?"

"Oh, but we could go into partnership, and Euthymia is n't afraid of storms or anything else. If she would only study medicine with me!"

"Well, what does she say to it?"

"She does n't like the thought of it. She does n't believe in women doctors. She thinks that now and then a woman may be fitted for it by nature, but she does n't think there are many who are. She gives me a good many reasons against their practising medicine, you know what most of them are, doctor,—and ends by saying that the same woman who would be a poor sort of doctor would make a first-rate nurse; and that, she thinks, is a woman's business, if her instinct carries her to the hospital or sick-chamber. I can't argue her ideas out of her."

"Neither can I argue you out of your feeling about the matter; but I am disposed to agree with your friend, that you will often spoil a good nurse to make a poor doctor. Doctors and side-saddles don't seem to me to go together. Riding habits would be awkward things for practitioners. But come, we won't have a controversy just now. I am for giving women every chance for a good education, and if they think medicine is one of their proper callings let them try it. I think they will find that they had better at least limit themselves to certain specialties, and always have an expert of the other sex to fall back upon. The trouble is that they are so impressive and imaginative that they are at the mercy of all sorts of fancy systems. You have only to see what kinds of instruction they very commonly flock to in order to guess whether they would be likely to prove sensible practitioners. Charlatanism always hobbles on two crutches, the tattle of women, and the certificates of clergymen, and I am afraid that half the women doctors will be too much under both those influences."

Lurida believed in Dr. Butts, who, to use the common language of the village, had "carried her through" a fever, brought on by over-excitement and exhausting study. She took no offence at his reference to nursery gossip, which she had learned to hold cheap. Nobody so despises the weaknesses of women as the champion of woman's rights. She accepted the doctor's concession of a fair field and open trial of the fitness of her sex for medical practice, and did not trouble herself about his suggested limitations. As to the imaginative

tendencies of women, she knew too well the truth of the doctor's remark relating to them to wish to contradict it.

"Be sure you let me have your paper in season for the next meeting, doctor," she said; and in due season it came, and was of course approved for reading.

XIII. DR. BUTTS READS A PAPER.

"Next to the interest we take in all that relates to our immortal souls is that which we feel for our mortal bodies. I am afraid my very first statement may be open to criticism. The care of the body is the first thought with a great many,—in fact, with the larger part of the world. They send for the physician first, and not until he gives them up do they commonly call in the clergyman. Even the minister himself is not so very different from other people. We must not blame him if he is not always impatient to exchange a world of multiplied interests and ever-changing sources of excitement for that which tradition has delivered to us as one eminently deficient in the stimulus of variety. Besides, these bodily frames, even when worn and disfigured by long years of service, hang about our consciousness like old garments. They are used to us, and we are used to them. And all the accidents of our lives,—the house we dwell in, the living people round us, the landscape we look over, all, up to the sky that covers us like a bell glass,—all these are but looser outside garments which we have worn until they seem a part of us, and we do not like the thought of changing them for a new suit which we have never yet tried on. How well I remember that dear ancient lady, who lived well into the last decade of her century, as she repeated the verse which, if I had but one to choose, I would select from that string of pearls, Gray's 'Elegy'!

*"For who to dumb forgetfulness a prey
This pleasing, anxious being e'er resigned,
Left the warm precincts of the cheerful day,
Nor cast one longing, lingering look behind?"*

"Plotinus was ashamed of his body, we are told. Better so, it may be, than to live solely for it, as so many do. But it may be well doubted if there is any disciple of Plotinus in this Society. On the contrary, there are many who think a great deal of their bodies, many who have come here to regain the health they have lost in the wear and tear of city life, and very few who have not at some time or other of their lives had occasion to call in the services of a physician.

"There is, therefore, no impropriety in my offering to the members some remarks upon the peculiar difficulties which beset the medical practitioner in the discharge of his laborious and important duties.

"A young friend of mine, who has taken an interest in medical studies, happened to meet with a very familiar story about one of the greatest and most celebrated of all English physicians, Thomas Sydenham. The story is that, when a student asked him what books he should read, the great doctor told him to read 'Don Quixote.'

"This piece of advice has been used to throw contempt upon the study of books, and furnishes a convenient shield for ignorant pretenders. But Sydenham left many writings in which he has recorded his medical experience, and he surely would not have published them if he had not thought they would be better reading for the medical student than the story of Cervantes. His own works are esteemed to this day, and he certainly could not have supposed that they contained all the wisdom of all the past. No remedy is good, it was said of old, unless applied at the right time in the right way. So we may say of all anecdotes, like this which I have told you about Sydenham and the young man. It is very likely that he carried him to the bedside of some patients, and talked to him about the cases he showed him, instead of putting a Latin volume in his hand. I would as soon begin in that way as any other, with a student who had already mastered the preliminary branches,—who knew enough about the structure and functions of the body in health.

"But if you ask me what reading I would commend to the medical student of a philosophical habit of mind, you may be surprised to hear me say it would be certain passages in 'Rasselas.' They are the ones where the astronomer gives an account to Imlac of his management of the elements, the control of which, as he had persuaded himself, had been committed to him. Let me read you a few sentences from this story, which is commonly bound up with the 'Vicar of Wakefield,' like a woollen lining to a silken mantle, but is full of stately wisdom in processions of paragraphs which sound as if they ought to have a grammatical drum-major to march before their tramping platoons.

"The astronomer has taken Imlac into his confidence, and reveals to him the secret of his wonderful powers:—

"Hear, Imlac, what thou wilt not without difficulty credit. I have possessed for five years the regulation of the weather and the distribution of the seasons the sun has listened to my dictates, and passed from tropic to tropic by my direction; the clouds, at my call, have poured their waters, and the Nile has overflowed at my command; I have restrained the rage of the dog-star, and mitigated the fervors of the crab. The winds alone, of all the elemental powers, have hitherto eluded my authority, and multitudes have perished by equinoctial tempests, which I found myself unable to prohibit or restrain.'

"The reader naturally wishes to know how the astronomer, a sincere, devoted, and most benevolent man, for forty years a student of the heavens, came to the strange belief that he possessed these miraculous powers. This is his account:

"One day, as I was looking on the fields withering with heat, I felt in my mind a sudden wish that I could send rain on the southern mountains, and raise the Nile to an inundation. In the hurry of my imagination I commanded rain to fall, and by comparing the time of my command with that of the inundation I found that the clouds had listened to my lips.'

"'Might not some other cause,' said I, 'produce this concurrence? The Nile does not always rise on the same day.'

"'Do not believe,' said he, with impatience, 'that such objections could escape me: I reasoned long against my own conviction, and labored against truth with the utmost obstinacy. I sometimes suspected myself of madness, and should not have dared to impart this secret but to a man like you, capable of distinguishing the wonderful from the impossible and the incredible from the false.'

"The good old astronomer gives his parting directions to Imlac, whom he has adopted as his successor in the government of the elements and the seasons, in these impressive words:

"Do not, in the administration of the year, indulge thy pride by innovation; do not please thyself with thinking that thou canst make thyself renowned to all future ages by disordering the seasons. The memory of mischief is no desirable fame. Much less will it become thee to let kindness or interest prevail. Never rob other countries of rain to pour it on thine own. For us the Nile is sufficient.'

"Do you wonder, my friends, why I have chosen these passages, in which the delusions of an insane astronomer are related with all the pomp of the Johnsonian vocabulary, as the first lesson for the young person about to enter on the study of the science and art of healing? Listen to me while I show you the parallel of the story of the astronomer in the history of medicine.

"This history is luminous with intelligence, radiant with benevolence, but all its wisdom and all its virtue have had to struggle with the ever-rising mists of delusion. The agencies which waste and destroy the race of mankind are vast and resistless as the elemental forces of nature; nay, they are themselves elemental forces. They may be to some extent avoided, to some extent diverted from their aim, to some extent resisted. So may the changes of the seasons, from cold that freezes to heats that strike with sudden death, be guarded against. So may the tides be in some small measure restrained in their inroads. So may the storms be breasted by walls they cannot shake from their foundations. But the seasons and the tides and the tempests work their will on the great scale upon whatever stands in their way; they feed or starve the tillers of the soil; they spare or drown the dwellers by the shore; they waft the seaman to his harbor or bury him in the angry billows.

"The art of the physician can do much to remove its subjects from deadly and dangerous influences, and something to control or arrest the effects of these influences. But look at the records of the life-insurance offices, and see how uniform is the action of nature's destroying agencies. Look at the annual reports of the deaths in any of our great cities, and see how their regularity approaches the uniformity of the tides, and their variations keep pace with those of the seasons. The inundations of the Nile are not more certainly to be predicted than the vast wave of infantile disease which flows in upon all our great cities with the growing heats of July,—than the fevers and dysenteries which visit our rural districts in the months of the falling leaf.

"The physician watches these changes as the astronomer watched the rise of the great river. He longs to rescue individuals, to protect communities from the inroads of these destroying agencies. He uses all the means which experience has approved, tries every rational method which ingenuity can suggest. Some fortunate recovery leads him to believe he has hit upon a preventive or a cure for a malady which had resisted all known remedies. His rescued patient sounds his praises, and a wide circle of his patient's friends joins in a chorus of eulogies. Self-love applauds him for his sagacity. Self-interest congratulates him on his having found the road to fortune; the sense of having proved a benefactor of his race smooths the pillow on which he lays his head to dream of the brilliant future opening before him. If a single coincidence may lead a person of sanguine disposition to believe that he has mastered a disease which had baffled all who were before his time, and on which his contemporaries looked in hopeless impotence, what must be the effect of a series of such coincidences even on a mind of calmer temper! Such series of coincidences will happen, and they may well deceive the very elect. Think of Dr. Rush,—you know what a famous man he was, the very head and front of American medical science in his day, —and remember how he spoke about yellow fever, which he thought he had mastered!

"Thus the physician is entangled in the meshes of a wide conspiracy, in which he and his patient and their friends, and Nature herself, are involved. What wonder that the history of Medicine should be to so great an extent a record of self-delusion!

"If this seems a dangerous concession to the enemies of the true science and art of healing, I will remind you that it is all implied in the first aphorism of Hippocrates, the Father of Medicine. Do not draw a wrong inference from the frank statement of the difficulties which beset the medical practitioner. Think rather, if truth is so hard of attainment, how precious are the results which the consent of the wisest and most experienced among the healers of men agrees in accepting. Think what folly it is to cast them aside in favor of palpable impositions stolen from the records of forgotten charlatanism, or of fantastic speculations spun from the squinting brains of theorists as wild as the Egyptian astronomer.

"Begin your medical studies, then, by reading the fortieth and the following four chapters of 'Rasselas.' Your first lesson will teach you modesty and caution in the pursuit of the most deceptive of all practical branches of knowledge. Faith will come later, when you learn how much medical science and art have actually achieved for the relief of mankind, and how great are the promises it holds out of still larger triumphs over the enemies of human health and happiness."

After the reading of this paper there was a lively discussion, which we have no room to report here, and the Society adjourned.

XIV. MISS VINCENT'S STARTLING DISCOVERY.

The sober-minded, sensible, well-instructed Dr. Butts was not a little exercised in mind by the demands

made upon his knowledge by his young friend, and for the time being his pupil, Miss Lurida Vincent.

"I don't wonder they called her The Terror," he said to himself. "She is enough to frighten anybody. She has taken down old books from my shelves that I had almost forgotten the backs of, and as to the medical journals, I believe the girl could index them from memory. She is in pursuit of some special point of knowledge, I feel sure, and I cannot doubt what direction she is working in, but her wonderful way of dealing with books amazes me."

What marvels those "first scholars" in the classes of our great universities and colleges are, to be sure! They are not, as a rule, the most distinguished of their class in the long struggle of life. The chances are that "the field" will beat "the favorite" over the long race-course. Others will develop a longer stride and more staying power. But what fine gifts those "first scholars" have received from nature! How dull we writers, famous or obscure, are in the acquisition of knowledge as compared with them! To lead their classmates they must have quick apprehension, fine memories, thorough control of their mental faculties, strong will, power of concentration, facility of expression,—a wonderful equipment of mental faculties. I always want to take my hat off to the first scholar of his year.

Dr. Butts felt somewhat in the same way as he contemplated The Terror. She surprised him so often with her knowledge that he was ready to receive her without astonishment when she burst in upon him one day with a cry of triumph, "Eureka! Eureka!"

"And what have you found, my dear?" said the doctor.

Lurida was flushed and panting with the excitement of her new discovery.

"I do believe that I have found the secret of our strange visitor's dread of all human intercourse!"

The seasoned practitioner was not easily thrown off his balance.

"Wait a minute and get your breath," said the doctor. "Are you not a little overstating his peculiarity? It is not quite so bad as that. He keeps a man to serve him, he was civil with the people at the Old Tavern, he was affable enough, I understand, with the young fellow he pulled out of the water, or rescued somehow,—I don't believe he avoids the whole human race. He does not look as if he hated them, so far as I have remarked his expression. I passed a few words with him when his man was ailing, and found him polite enough. No, I don't believe it is much more than an extreme case of shyness, connected, perhaps, with some congenital or other personal repugnance to which has been given the name of an antipathy."

Lurida could hardly keep still while the doctor was speaking. When he finished, she began the account of her discovery:

"I do certainly believe I have found an account of his case in an Italian medical journal of about fourteen years ago. I met with a reference which led me to look over a file of the *Giornale degli Ospitali* lying among the old pamphlets in the medical section of the Library. I have made a translation of it, which you must read and then tell me if you do not agree with me in my conclusion."

"Tell me what your conclusion is, and I will read your paper and see for myself whether I think the evidence justifies the conviction you seem to have reached."

Lurida's large eyes showed their whole rounds like the two halves of a map of the world, as she said,

"I believe that Maurice Kirkwood is suffering from the effects of the bite of a TARANTULA!"

The doctor drew a long breath. He remembered in a vague sort of way the stories which used to be told of the terrible Apulian spider, but he had consigned them to the limbo of medical fable where so many fictions have clothed themselves with a local habitation and a name. He looked into the round eyes and wide pupils a little anxiously, as if he feared that she was in a state of undue excitement, but, true to his professional training, he waited for another symptom, if indeed her mind was in any measure off its balance.

"I know what you are thinking," Lurida said, "but it is not so. 'I am not mad, most noble Festus.' You shall see the evidence and judge for yourself. Read the whole case,—you can read my hand almost as if it were print, and tell me if you do not agree with me that this young man is in all probability the same person as the boy described in the Italian journal,

"One thing you might say is against the supposition. The young patient is spoken of as Signorino M—— Ch—— But you must remember that ch is pronounced hard in Italian, like k, which letter is wanting in the Italian alphabet; and it is natural enough that the initial of the second name should have got changed in the record to its Italian equivalent."

Before inviting the reader to follow the details of this extraordinary case as found in a medical journal, the narrator wishes to be indulged in a few words of explanation, in order that he may not have to apologize for allowing the introduction of a subject which may be thought to belong to the professional student rather than to the readers of this record. There is a great deal in medical books which it is very unbecoming to bring before the general public,—a great deal to repel, to disgust, to alarm, to excite unwholesome curiosity. It is not the men whose duties have made them familiar with this class of subjects who are most likely to offend by scenes and descriptions which belong to the physician's private library, and not to the shelves devoted to polite literature. Goldsmith and even Smollett, both having studied and practised medicine, could not by any possibility have outraged all the natural feelings of delicacy and decency as Swift and Zola have outraged them. But without handling doubtful subjects, there are many curious medical experiences which have interest for every one as extreme illustrations of ordinary conditions with which all are acquainted. No one can study the now familiar history of clairvoyance profitably who has not learned something of the vagaries of hysteria. No one can read understandingly the life of Cowper and that of Carlyle without having some idea of the influence of hypochondriasis and of dyspepsia upon the disposition and intellect of the subjects of these maladies. I need not apologize, therefore, for giving publicity to that part of this narrative which deals with one of the most singular maladies to be found in the records of bodily and mental infirmities.

The following is the account of the case as translated by Miss Vincent. For obvious reasons the whole name was not given in the original paper, and for similar reasons the date of the event and the birthplace of the patient are not precisely indicated here.

[*Giornale degli Ospitali*, Luglio 21, 18—.] REMARKABLE CASE OF TARANTISM.

"The great interest attaching to the very singular and exceptional instance of this rare affection induces us to give a full account of the extraordinary example of its occurrence in a patient who was the subject of a recent medical consultation in this city.

"Signorino M... Ch... is the only son of a gentleman travelling in Italy at this time. He is eleven years of age, of sanguine-nervous temperament, light hair, blue eyes, intelligent countenance, well grown, but rather slight in form, to all appearance in good health, but subject to certain peculiar and anomalous nervous symptoms, of which his father gives this history.

"Nine years ago, the father informs us, he was travelling in Italy with his wife, this child, and a nurse. They were passing a few days in a country village near the city of Bari, capital of the province of the same name in the division (compartmento) of Apulia. The child was in perfect health and had never been affected by any serious illness. On the 10th of July he was playing out in the field near the house where the family was staying when he was heard to scream suddenly and violently. The nurse rushing to him found him in great pain, saying that something had bitten him in one of his feet. A laborer, one Tommaso, ran up at the moment and perceived in the grass, near where the boy was standing, an enormous spider, which he at once recognized as a tarantula. He managed to catch the creature in a large leaf, from which he was afterwards transferred to a wide-mouthed bottle, where he lived without any food for a month or more. The creature was covered with short hairs, and had a pair of nipper-like jaws, with which he could inflict an ugly wound. His body measured about an inch in length, and from the extremity of one of the longest limbs to the other was between two and three inches. Such was the account given by the physician to whom the peasant carried the great spider.

"The boy who had been bitten continued screaming violently while his stocking was being removed and the foot examined. The place of the bite was easily found and the two marks of the claw-like jaws already showed the effects of the poison, a small livid circle extending around them, with some puffy swelling. The distinguished Dr. Amadei was immediately sent for, and applied cups over the wounds in the hope of drawing forth the poison. In vain all his skill and efforts! Soon, ataxic (irregular) nervous symptoms declared themselves, and it became plain that the system had been infected by the poison.

"The symptoms were very much like those of malignant fever, such as distress about the region of the heart, difficulty of breathing, collapse of all the vital powers, threatening immediate death. From these first symptoms the child rallied, but his entire organism had been profoundly affected by the venom circulating through it. His constitution has never thrown off the malady resulting from this toxic (poisonous) agent. The phenomena which have been observed in this young patient correspond so nearly with those enumerated in the elaborate essay of the celebrated Baglivi that one might think they had been transcribed from his pages.

"He is very fond of solitude,—of wandering about in churchyards and other lonely places. He was once found hiding in an empty tomb, which had been left open. His aversion to certain colors is remarkable. Generally speaking, he prefers bright tints to darker ones, but his likes and dislikes are capricious, and with regard to some colors his antipathy amounts to positive horror. Some shades have such an effect upon him that he cannot remain in the room with them, and if he meets any one whose dress has any of that particular color he will turn away or retreat so as to avoid passing that person. Among these, purple and dark green are the least endurable. He cannot explain the sensations which these obnoxious colors produce except by saying that it is like the deadly feeling from a blow on the epigastrium (pit of the stomach).

"About the same season of the year at which the tarantular poisoning took place he is liable to certain nervous seizures, not exactly like fainting or epilepsy, but reminding the physician of those affections. All the other symptoms are aggravated at this time.

"In other respects than those mentioned the boy is in good health. He is fond of riding, and has a pony on which he takes a great deal of exercise, which seems to do him more good than any other remedy.

"The influence of music, to which so much has been attributed by popular belief and even by the distinguished Professor to whom we shall again refer, has not as yet furnished any satisfactory results. If the graver symptoms recur while the patient is under our observation, we propose to make use of an agency discredited by modern skepticism, but deserving of a fair trial as an exceptional remedy for an exceptional disease.

"The following extracts from the work of the celebrated Italian physician of the last century are given by the writer of the paper in the *Giornale* in the original Latin, with a translation into Italian, subjoined. Here are the extracts, or rather here is a selection from them, with a translation of them into English.

"After mentioning the singular aversion to certain colors shown by the subject of Tarantism, Baglivi writes as follows: "*Et si astantes incedant vestibus eo colore difusis, qui Tarantatis ingrates est, necesse est ut ab illorum aspectu recedant; nam ad intuitum molesti coloris angore cordis, et symptomatum recrudescantia stant corripuntur.*" (G. Baglivi, *Op. Omnia*, page 614. Lugduni, 1745.)

"That is, 'if the persons about the patient wear dresses of the color which is offensive to him, he must get away from the sight of them, for on seeing the obnoxious color he is at once seized with distress in the region of the heart, and a renewal of his symptoms.'

"As to the recurrence of the malady, Baglivi says: "*Dam calor solis ardentius exurere incipit, quod contingit circa initia Julii et Augusti, Tarantati lente venientem recrudescantiam veneni percipiunt.*" (Ibid., page 619.)

"Which I render, 'When the heat of the sun begins to burn more fiercely, which happens about the beginning of July and August, the subjects of Tarantism perceive the gradually approaching recrudescence (returning symptoms) of the poisoning. Among the remedies most valued by this illustrious physician is that mentioned in the following sentence:

"*Laudo magnopere equitationes in aere rusticano factas singulis diebus, hord potissimum matutina, quibus equitationibus morbos chronicos pene incurabiles protanus eliminavi.*"

"Or in translation, 'I commend especially riding on horseback in country air, every day, by preference in the morning hours, by the aid of which horseback riding I have driven off chronic diseases which were almost incurable.'"

Miss Vincent read this paper aloud to Dr. Butts, and handed it to him to examine and consider. He listened with a grave countenance and devout attention.

As she finished reading her account, she exclaimed in the passionate tones of the deepest conviction,

"There, doctor! Have n't I found the true story of this strange visitor? Have n't I solved the riddle of the Sphinx? Who can this man be but the boy of that story? Look at the date of the journal when he was eleven years old, it would make him twenty-five now, and that is just about the age the people here think he must be of. What could account so entirely for his ways and actions as that strange poisoning which produces the state they call Tarantism? I am just as sure it must be that as I am that I am alive. Oh, doctor, doctor, I must be right,—this Signorino M ... Ch... was the boy Maurice Kirkwood, and the story accounts for everything,—his solitary habits, his dread of people,—it must be because they wear the colors he can't bear. His morning rides on horseback, his coming here just as the season was approaching which would aggravate all his symptoms, does n't all this prove that I must be right in my conjecture,—no, my conviction?"

The doctor knew too much to interrupt the young enthusiast, and so he let her run on until she ran down. He was more used to the rules of evidence than she was, and could not accept her positive conclusion so readily as she would have liked to have him. He knew that beginners are very apt to make what they think are discoveries. But he had been an angler and knew the meaning of a yielding rod and an easy-running reel. He said quietly,

"You are a most sagacious young lady, and a very pretty *prima facie* case it is that you make out. I can see no proof that Mr. Kirkwood is not the same person as the M... Ch... of the medical journal,—that is, if I accept your explanation of the difference in the initials of these two names. Even if there were a difference, that would not disprove their identity, for the initials of patients whose cases are reported by their physicians are often altered for the purpose of concealment. I do not know, however, that Mr. Kirkwood has shown any special aversion to any particular color. It might be interesting to inquire whether it is so, but it is a delicate matter. I don't exactly see whose business it is to investigate Mr. Maurice Kirkwood's idiosyncrasies and constitutional history. If he should have occasion to send for me at any time, he might tell me all about himself, in confidence, you know. These old accounts from Baglivi are curious and interesting, but I am cautious about receiving any stories a hundred years old, if they involve an improbability, as his stories about the cure of the tarantula bite by music certainly do. I am disposed to wait for future developments, bearing in mind, of course, the very singular case you have unearthed. It wouldn't be very strange if our young gentleman had to send for me before the season is over. He is out a good deal before the dew is off the grass, which is rather risky in this neighborhood as autumn comes on. I am somewhat curious, I confess, about the young man, but I do not meddle where I am not asked for or wanted, and I have found that eggs hatch just as well if you let them alone in the nest as if you take them out and shake them every day. This is a wonderfully interesting supposition of yours, and may prove to be strictly in accordance with the facts. But I do not think we have all the facts in this young man's case. If it were proved that he had an aversion to any color, it would greatly strengthen your case. His 'antipatia,' as his man called it, must be one which covers a wide ground, to account for his self-isolation,—and the color hypothesis seems as plausible as any. But, my dear Miss Vincent, I think you had better leave your singular and striking hypothesis in my keeping for a while, rather than let it get abroad in a community like this, where so many tongues are in active exercise. I will carefully study this paper, if you will leave it with me, and we will talk the whole matter over. It is a fair subject for speculation, only we must keep quiet about it."

This long speech gave Lurida's perfervid brain time to cool off a little. She left the paper with the doctor, telling him she would come for it the next day, and went off to tell the result of this visit to her bosom friend, Miss Euthymia Tower.

XV. DR. BUTTS CALLS ON EUTHYMIA.

The doctor was troubled in thinking over his interview with the young lady. She was fully possessed with the idea that she had discovered the secret which had defied the most sagacious heads of the village. It was of no use to oppose her while her mind was in an excited state. But he felt it his duty to guard her against any possible results of indiscretion into which her eagerness and her theory of the equality, almost the identity, of the sexes might betray her. Too much of the woman in a daughter of our race leads her to forget danger. Too little of the woman prompts her to defy it. Fortunately for this last class of women, they are not quite so likely to be perilously seductive as their more emphatically feminine sisters.

Dr. Butts had known Lurida and her friend from the days of their infancy. He had watched the development of Lurida's intelligence from its precocious nursery-life to the full vigor of its trained faculties. He had looked with admiration on the childish beauty of Euthymia, and had seen her grow up to womanhood, every year making her more attractive. He knew that if anything was to be done with his self-willed young scholar and friend, it would be more easily effected through the medium of Euthymia than by direct advice to the young lady herself. So the thoughtful doctor made up his mind to have a good talk with Euthymia, and put her on her guard, if Lurida showed any tendency to forget the conventionalities in her eager pursuit of knowledge.

For the doctor's horse and chaise to stop at the door of Miss Euthymia Tower's parental home was an event strange enough to set all the tongues in the village going. This was one of those families where illness was hardly looked for among the possibilities of life. There were other families where a call from the doctor was hardly more thought of than a call from the baker. But here he was a stranger, at least on his professional rounds, and when he asked for Miss Euthymia the servant, who knew his face well, stared as if he had held in his hand a warrant for her apprehension.

Euthymia did not keep the doctor waiting very long while she made ready to meet him. One look at her glass to make sure that a lock had not run astray, or a ribbon got out of place, and her toilet for a morning

call was finished. Perhaps if Mr. Maurice Kirkwood had been announced, she might have taken a second look, but with the good middle-aged, married doctor one was enough for a young lady who had the gift of making all the dresses she wore look well, and had no occasion to treat her chamber like the laboratory where an actress compounds herself.

Euthymia welcomed the doctor very heartily. She could not help suspecting his errand, and she was very glad to have a chance to talk over her friend's schemes and fancies with him.

The doctor began without any roundabout prelude.

"I want to confer with you about our friend Lurida. Does she tell you all her plans and projects?"

"Why, as to that, doctor, I can hardly say, positively, but I do not believe she keeps back anything of importance from me. I know what she has been busy with lately, and the queer idea she has got into her head. What do you think of the Tarantula business? She has shown you the paper, she has written, I suppose."

"Indeed she has. It is a very curious case she has got hold of, and I do not wonder at all that she should have felt convinced that she had come at the true solution of the village riddle. It may be that this young man is the same person as the boy mentioned in the Italian medical journal. But it is very far from clear that he is so. You know all her reasons, of course, as you have read the story. The times seem to agree well enough. It is easy to conceive that Ch might be substituted for K in the report. The singular solitary habits of this young man entirely coincide with the story. If we could only find out whether he has any of those feelings with reference to certain colors, we might guess with more chance of guessing right than we have at present. But I don't see exactly how we are going to submit him to examination on this point. If he were only a chemical compound, we could analyze him. If he were only a bird or a quadruped, we could find out his likes and dislikes. But being, as he is, a young man, with ways of his own, and a will of his own, which he may not choose to have interfered with, the problem becomes more complicated. I hear that a newspaper correspondent has visited him so as to make a report to his paper,—do you know what he found out?"

"Certainly I do, very well. My brother has heard his own story, which was this: He found out he had got hold of the wrong person to interview. The young gentleman, he says, interviewed him, so that he did not learn much about the Sphinx. But the newspaper man told Willy about the Sphinx's library and a cabinet of coins he had; and said he should make an article out of him, anyhow. I wish the man would take himself off. I am afraid Lurida's love of knowledge will get her into trouble!"

"Which of the men do you wish would take himself off?"

"I was thinking of the newspaper man."

She blushed a little as she said, "I can't help feeling a strange sort of interest about the other, Mr. Kirkwood. Do you know that I met him this morning, and had a good look at him, full in the face?"

"Well, to be sure! That was an interesting experience. And how did you like his looks?"

"I thought his face a very remarkable one. But he looked very pale as he passed me, and I noticed that he put his hand to his left side as if he had a twinge of pain, or something of that sort,—spasm or neuralgia,—I don't know what. I wondered whether he had what you call angina pectoris. It was the same kind of look and movement, I remember, as you must, too, in my uncle who died with that complaint."

The doctor was silent for a moment. Then he asked, "Were you dressed as you are now?"

"Yes, I was, except that I had a thin mantle over my shoulders. I was out early, and I have always remembered your caution."

"What color was your mantle?"

"It was black. I have been over all this with Lucinda. A black mantle on a white dress. A straw hat with an old faded ribbon. There can't be much in those colors to trouble him, I should think, for his man wears a black coat and white linen,—more or less white, as you must have noticed, and he must have seen ribbons of all colors often enough. But Lurida believes it was the ribbon, or something in the combination of colors. Her head is full of Tarantulas and Tarantism. I fear that she will never be easy until the question is settled by actual trial. And will you believe it? the girl is determined in some way to test her supposition!"

"Believe it, Euthymia? I can believe almost anything of Lurida. She is the most irrepressible creature I ever knew. You know as well as I do what a complete possession any ruling idea takes of her whole nature. I have had some fears lest her zeal might run away with her discretion. It is a great deal easier to get into a false position than to get out of it."

"I know it well enough. I want you to tell me what you think about the whole business. I don't like the look of it at all, and yet I can do nothing with the girl except let her follow her fancy, until I can show her plainly that she will get herself into trouble in some way or other. But she is ingenious,—full of all sorts of devices, innocent enough in themselves, but liable to be misconstrued. You remember how she won us the boat-race?"

"To be sure I do. It was rather sharp practice, but she felt she was paying off an old score. The classical story of Atalanta, told, like that of Eve, as illustrating the weakness of woman, provoked her to make trial of the powers of resistance in the other sex. But it was audacious. I hope her audacity will not go too far. You must watch her. Keep an eye on her correspondence."

The doctor had great confidence in the good sense of Lurida's friend. He felt sure that she would not let Lurida commit herself by writing foolish letters to the subject of her speculations, or similar indiscreet performances. The boldness of young girls, who think no evil, in opening correspondence with idealized personages is something quite astonishing to those who have had an opportunity of knowing the facts. Lurida had passed the most dangerous age, but her theory of the equality of the sexes made her indifferent to the by-laws of social usage. She required watching, and her two guardians were ready to check her, in case of need.

XVI. MISS VINCENT WRITES A LETTER.

Euthymia noticed that her friend had been very much preoccupied for two or three days. She found her more than once busy at her desk, with a manuscript before her, which she turned over and placed inside the desk, as Euthymia entered.

This desire of concealment was not what either of the friends expected to see in the other. It showed that some project was under way, which, at least in its present stage, the Machiavellian young lady did not wish to disclose. It had cost her a good deal of thought and care, apparently, for her waste-basket was full of scraps of paper, which looked as if they were the remains of a manuscript like that at which she was at work. "Copying and recopying, probably," thought Euthymia, but she was willing to wait to learn what Lurida was busy about, though she had a suspicion that it was something in which she might feel called upon to interest herself.

"Do you know what I think?" said Euthymia to the doctor, meeting him as he left his door. "I believe Lurida is writing to this man, and I don't like the thought of her doing such a thing. Of course she is not like other girls in many respects, but other people will judge her by the common rules of life."

"I am glad that you spoke of it," answered the doctor; "she would write to him just as quickly as to any woman of his age. Besides, under the cover of her office, she has got into the way of writing to anybody. I think she has already written to Mr. Kirkwood, asking him to contribute a paper for the Society. She can find a pretext easily enough if she has made up her mind to write. In fact, I doubt if she would trouble herself for any pretext at all if she decided to write. Watch her well. Don't let any letter go without seeing it, if you can help it."

Young women are much given to writing letters to persons whom they only know indirectly, for the most part through their books, and especially to romancers and poets. Nothing can be more innocent and simple-hearted than most of these letters. They are the spontaneous outflow of young hearts easily excited to gratitude for the pleasure which some story or poem has given them, and recognizing their own thoughts, their own feelings, in those expressed by the author, as if on purpose for them to read. Undoubtedly they give great relief to solitary young persons, who must have some ideal reflection of themselves, and know not where to look since Protestantism has taken away the crucifix and the Madonna. The recipient of these letters sometimes wonders, after reading through one of them, how it is that his young correspondent has managed to fill so much space with her simple message of admiration or of sympathy.

Lurida did not belong to this particular class of correspondents, but she could not resist the law of her sex, whose thoughts naturally surround themselves with superabundant drapery of language, as their persons float in a wide superfluity of woven tissues. Was she indeed writing to this unknown gentleman? Euthymia questioned her point-blank.

"Are you going to open a correspondence with Mr. Maurice Kirkwood, Lurida? You seem to be so busy writing, I can think of nothing else. Or are you going to write a novel, or a paper for the Society,—do tell me what you are so much taken up with."

"I will tell you, Euthymia, if you will promise not to find fault with me for carrying out my plan as I have made up my mind to do. You may read this letter before I seal it, and if you find anything in it you don't like you can suggest any change that you think will improve it. I hope you will see that it explains itself. I don't believe that you will find anything to frighten you in it."

This is the letter, as submitted to Miss Tower by her friend. The bold handwriting made it look like a man's letter, and gave it consequently a less dangerous expression than that which belongs to the tinted and often fragrant sheet with its delicate thready characters, which slant across the page like an April shower with a south wind chasing it.

ARROWHEAD VILLAGE, August—, 18—.

MY DEAR SIR,—You will doubtless be surprised at the sight of a letter like this from one whom you only know as the Secretary of the Pansophian Society. There is a very common feeling that it is unbecoming in one of my sex to address one of your own with whom she is unacquainted, unless she has some special claim upon his attention. I am by no means disposed to concede to the vulgar prejudice on this point. If one human being has anything to communicate to another,—anything which deserves being communicated,—I see no occasion for bringing in the question of sex. I do not think the homo sum of Terence can be claimed for the male sex as its private property on general any more than on grammatical grounds,

I have sometimes thought of devoting myself to the noble art of healing. If I did so, it would be with the fixed purpose of giving my whole powers to the service of humanity. And if I should carry out that idea, should I refuse my care and skill to a suffering fellow-mortal because that mortal happened to be a brother, and not a sister? My whole nature protests against such one-sided humanity! No! I am blind to all distinctions when my eyes are opened to any form of suffering, to any spectacle of want.

You may ask me why I address you, whom I know little or nothing of, and to whom such an advance may seem presumptuous and intrusive. It is because I was deeply impressed by the paper which I attributed to you,—that on Ocean, River, and Lake, which was read at one of our meetings. I say that I was deeply impressed, but I do not mean this as a compliment to that paper. I am not bandying compliments now, but thinking of better things than praises or phrases. I was interested in the paper, partly because I recognized some of the feelings expressed in it as my own,—partly because there was an undertone of sadness in all the voices of nature as you echoed them which made me sad to hear, and which I could not help longing to cheer and enliven. I said to myself, I should like to hold communion with the writer of that paper. I have had my lonely hours and days, as he has had. I have had some of his experiences in my intercourse with nature. And oh! if I could draw him into those better human relations which await us all, if we come with the right dispositions, I should blush if I stopped to inquire whether I violated any conventional rule or not.

You will understand me, I feel sure. You believe, do you not? in the insignificance of the barrier which divides the sisterhood from the brotherhood of mankind. You believe, do you not? that they should be

educated side by side, that they should share the same pursuits, due regard being had to the fitness of the particular individual for hard or light work, as it must always be, whether we are dealing with the "stronger" or the "weaker" sex. I mark these words because, notwithstanding their common use, they involve so much that is not true. Stronger! Yes, to lift a barrel of flour, or a barrel of cider,—though there have been women who could do that, and though when John Wesley was mobbed in Staffordshire a woman knocked down three or four men, one after another, until she was at last overpowered and nearly murdered. Talk about the weaker sex! Go and see Miss Euthymia Tower at the gymnasium! But no matter about which sex has the strongest muscles. Which has most to suffer, and which has most endurance and vitality? We go through many ordeals which you are spared, but we outlast you in mind and body. I have been led away into one of my accustomed trains of thought, but not so far away from it as you might at first suppose.

My brother! Are you not ready to recognize in me a friend, an equal, a sister, who can speak to you as if she had been reared under the same roof? And is not the sky that covers us one roof, which makes us all one family? You are lonely, you must be longing for some human fellowship. Take me into your confidence. What is there that you can tell me to which I cannot respond with sympathy? What saddest note in your spiritual dirges which will not find its chord in mine?

I long to know what influence has cast its shadow over your existence. I myself have known what it is to carry a brain that never rests in a body that is always tired. I have defied its infirmities, and forced it to do my bidding. You have no such hindrance, if we may judge by your aspect and habits. You deal with horses like a Homeric hero. No wild Indian could handle his bark canoe more dexterously or more vigorously than we have seen you handling yours. There must be some reason for your seclusion which curiosity has not reached, and into which it is not the province of curiosity to inquire. But in the irresistible desire which I have to bring you into kindly relations with those around you, I must run the risk of giving offence that I may know in what direction to look for those restorative influences which the sympathy of a friend and sister can offer to a brother in need of some kindly impulse to change the course of a life which is not, which cannot be, in accordance with his true nature.

I have thought that there may be something in the conditions with which you are here surrounded which is repugnant to your feelings,—something which can be avoided only by keeping yourself apart from the people whose acquaintance you would naturally have formed. There can hardly be anything in the place itself, or you would not have voluntarily sought it as a residence, even for a single season there might be individuals here whom you would not care to meet, there must be such, but you cannot have a personal aversion to everybody. I have heard of cases in which certain sights and sounds, which have no particular significance for most persons, produced feelings of distress or aversion that made, them unbearable to the subjects of the constitutional dislike. It has occurred to me that possibly you might have some such natural aversion to the sounds of the street, or such as are heard in most houses, especially where a piano is kept, as it is in fact in almost all of those in the village. Or it might be, I imagined, that some color in the dresses of women or the furniture of our rooms affected you unpleasantly. I know that instances of such antipathy have been recorded, and they would account for the seclusion of those who are subject to it.

If there is any removable condition which interferes with your free entrance into and enjoyment of the social life around you, tell me, I beg of you, tell me what it is, and it shall be eliminated. Think it not strange, O my brother, that I thus venture to introduce myself into the hidden chambers of your life. I will never suffer myself to be frightened from the carrying out of any thought which promises to be of use to a fellow-mortal by a fear lest it should be considered "unfeminine." I can bear to be considered unfeminine, but I cannot endure to think of myself as inhuman. Can I help you, my brother?

Believe me your most sincere well-wisher, LURIDA VINCENT.

Euthymia had carried off this letter and read it by herself. As she finished it, her feelings found expression in an old phrase of her grandmother's, which came up of itself, as such survivals of early days are apt to do, on great occasions.

"Well, I never!"

Then she loosened some button or string that was too tight, and went to the window for a breath of outdoor air. Then she began at the beginning and read the whole letter all over again.

What should she do about it? She could not let this young girl send a letter like that to a stranger of whose character little was known except by inference,—to a young man, who would consider it a most extraordinary advance on the part of the sender. She would have liked to tear it into a thousand pieces, but she had no right to treat it in that way. Lurida meant to send it the next morning, and in the mean time Euthymia had the night to think over what she should do about it.

There is nothing like the pillow for an oracle. There is no voice like that which breaks the silence—of the stagnant hours of the night with its sudden suggestions and luminous counsels. When Euthymia awoke in the morning, her course of action was as clear before her as if it had been dictated by her guardian angel. She went straight over to the home of Lurida, who was just dressed for breakfast.

She was naturally a little surprised at this early visit. She was struck with the excited look of Euthymia, being herself quite calm, and contemplating her project with entire complacency.

Euthymia began, in tones that expressed deep anxiety.

"I have read your letter, my dear, and admired its spirit and force. It is a fine letter, and does you great credit as an expression of the truest human feeling. But it must not be sent to Mr. Kirkwood. If you were sixty years old, perhaps if you were fifty, it might be admissible to send it. But if you were forty, I should question its propriety; if you were thirty, I should veto it, and you are but a little more than twenty. How do you know that this stranger will not show your letter to anybody or everybody? How do you know that he will not send it to one of the gossiping journals like the 'Household Inquisitor'? But supposing he keeps it to himself, which is more than you have a right to expect, what opinion is he likely to form of a young lady who invades his privacy with such freedom? Ten to one he will think curiosity is at the bottom of it,—and,—come, don't be angry at me for suggesting it,—may there not be a little of that same motive mingled with the others? No, don't interrupt me quite yet; you do want to know whether your hypothesis is correct. You are full of the best

and kindest feelings in the world, but your desire for knowledge is the ferment under them just now, perhaps more than you know."

Lurida's pale cheeks flushed and whitened more than once while her friend was speaking. She loved her too sincerely and respected her intelligence too much to take offence at her advice, but she could not give up her humane and sisterly intentions merely from the fear of some awkward consequences to herself. She had persuaded herself that she was playing the part of a Protestant sister of charity, and that the fact of her not wearing the costume of these ministering angels made no difference in her relations to those who needed her aid.

"I cannot see your objections in the light in which they appear to you," she said gravely. "It seems to me that I give up everything when I hesitate to help a fellow-creature because I am a woman. I am not afraid to send this letter and take all the consequences."

"Will you go with me to the doctor's, and let him read it in our presence? And will you agree to abide by his opinion, if it coincides with mine?"

Lurida winced a little at this proposal. "I don't quite like," she said, "showing this letter to—to" she hesitated, but it had to come out—"to a man, that is, to another man than the one for whom it was intended."

The neuter gender business had got a pretty damaging side-hit.

"Well, never mind about letting him read the letter. Will you go over to his house with me at noon, when he comes back after his morning visits, and have a talk over the whole matter with him? You know I have sometimes had to say must to you, Lurida, and now I say you must go to the doctor's with me and carry that letter."

There was no resisting the potent monosyllable as the sweet but firm voice delivered it. At noon the two maidens rang at the doctor's door. The servant said he had been at the house after his morning visits, but found a hasty summons to Mr. Kirkwood, who had been taken suddenly ill and wished to see him at once. Was the illness dangerous? The servant-maid did n't know, but thought it was pretty bad, for Mr. Paul came in as white as a sheet, and talked all sorts of languages which she couldn't understand, and took on as if he thought Mr. Kirkwood was going to die right off.

And so the hazardous question about sending the letter was disposed of, at least for the present.

XVII. Dr. BUTTS'S PATIENT.

The physician found Maurice just regaining his heat after a chill of a somewhat severe character. He knew too well what this meant, and the probable series of symptoms of which it was the prelude. His patient was not the only one in the neighborhood who was attacked in this way. The autumnal fevers to which our country towns are subject, in the place of those "agues," or intermittents, so largely prevalent in the South and West, were already beginning, and Maurice, who had exposed himself in the early and late hours of the dangerous season, must be expected to go through the regular stages of this always serious and not rarely fatal disease.

Paolo, his faithful servant, would fain have taken the sole charge of his master during his illness. But the doctor insisted that he must have a nurse to help him in his task, which was likely to be long and exhausting.

At the mention of the word "nurse" Paolo turned white, and exclaimed in an agitated and thoroughly frightened way,

"No! no nuss! no woman! She kill him! I stay by him day and night, but don' let no woman come near him,—if you do, he die!"

The doctor explained that he intended to send a man who was used to taking care of sick people, and with no little effort at last succeeded in convincing Paolo that, as he could not be awake day and night for a fortnight or three weeks, it was absolutely necessary to call in some assistance from without. And so Mr. Maurice Kirkwood was to play the leading part in that drama of nature's composing called a typhoid fever, with its regular bedchamber scenery, its properties of phials and pill-boxes, its little company of stock actors, its gradual evolution of a very simple plot, its familiar incidents, its emotional alternations, and its denouement, sometimes tragic, oftener happy.

It is needless to say that the sympathies of all the good people of the village, residents and strangers, were actively awakened for the young man about whom they knew so little and conjectured so much. Tokens of their kindness came to him daily: flowers from the woods and from the gardens; choice fruit grown in the open air or under glass, for there were some fine houses surrounded by well-kept grounds, and greenhouses and graperies were not unknown in the small but favored settlement.

On all these luxuries Maurice looked with dull and languid eyes. A faint smile of gratitude sometimes struggled through the stillness of his features, or a murmured word of thanks found its way through his parched lips, and he would relapse into the partial stupor or the fitful sleep in which, with intervals of slight wandering, the slow hours dragged along the sluggish days one after another. With no violent symptoms, but with steady persistency, the disease moved on in its accustomed course. It was at no time immediately threatening, but the experienced physician knew its uncertainties only too well. He had known fever patients suddenly seized with violent internal inflammation, and carried off with frightful rapidity. He remembered the case of a convalescent, a young woman who had been attacked while in apparently vigorous general health, who, on being lifted too suddenly to a sitting position, while still confined to her bed, fainted, and in a few moments ceased to breathe. It may well be supposed that he took every possible precaution to avert the accidents which tend to throw from its track a disease the regular course of which is arranged by nature as carefully as the route of a railroad from one city to another. The most natural interpretation which the common observer would put upon the manifestations of one of these autumnal maladies would be that some

noxious combustible element had found its way into the system which must be burned to ashes before the heat which pervades the whole body can subside. Sometimes the fire may smoulder and seem as if it were going out, or were quite extinguished, and again it will find some new material to seize upon, and flame up as fiercely as ever. Its coming on most frequently at the season when the brush fires which are consuming the dead branches, and withered leaves, and all the refuse of vegetation are sending up their smoke is suggestive. Sometimes it seems as if the body, relieved of its effete materials, renewed its youth after one of these quiet, expurgating, internal fractional cremations. Lean, pallid students have found themselves plump and blooming, and it has happened that one whose hair was straight as that of an Indian has been startled to behold himself in his mirror with a fringe of hyacinthine curls about his rejuvenated countenance.

There was nothing of what medical men call malignity in the case of Maurice Kirkwood. The most alarming symptom was a profound prostration, which at last reached such a point that he lay utterly helpless, as unable to move without aid as the feeblest of paralytics. In this state he lay for many days, not suffering pain, but with the sense of great weariness, and the feeling that he should never rise from his bed again. For the most part his intellect was unclouded when his attention was aroused. He spoke only in whispers, a few words at a time. The doctor felt sure, by the expression which passed over his features from time to time, that something was worrying and oppressing him; something which he wished to communicate, and had not the force, or the tenacity of purpose, to make perfectly clear. His eyes often wandered to a certain desk, and once he had found strength to lift his emaciated arm and point to it. The doctor went towards it as if to fetch it to him, but he slowly shook his head. He had not the power to say at that time what he wished. The next day he felt a little less prostrated; and succeeded in explaining to the doctor what he wanted. His words, so far as the physician could make them out, were these which follow. Dr. Butts looked upon them as possibly expressing wishes which would be his last, and noted them down carefully immediately after leaving his chamber.

"I commit the secret of my life to your charge. My whole story is told in a paper locked in that desk. The key is—put your hand under my pillow. If I die, let the story be known. It will show that I was—human—and save my memory from reproach."

He was silent for a little time. A single tear stole down his hollow cheek. The doctor turned his head away, for his own eyes were full. But he said to himself, "It is a good sign; I begin to feel strong hopes that he will recover."

Maurice spoke once more. "Doctor, I put full trust in you. You are wise and kind. Do what you will with this paper, but open it at once and read. I want you to know the story of my life before it is finished—if the end is at hand. Take it with you and read it before you sleep." He was exhausted and presently his eyes closed, but the doctor saw a tranquil look on his features which added encouragement to his hopes.

XVIII. MAURICE KIRKWOOD'S STORY OF HIS LIFE.

I am an American by birth, but a large part of my life has been passed in foreign lands. My father was a man of education, possessed of an ample fortune; my mother was considered, a very accomplished and amiable woman. I was their first and only child. She died while I was yet an infant. If I remember her at all it is as a vision, more like a glimpse of a pre-natal existence than as a part of my earthly life. At the death of my mother I was left in the charge of the old nurse who had enjoyed her perfect confidence. She was devoted to me, and I became absolutely dependent on her, who had for me all the love and all the care of a mother. I was naturally the object of the attentions and caresses of the family relatives. I have been told that I was a pleasant, smiling infant, with nothing to indicate any peculiar nervous susceptibility; not afraid of strangers, but on the contrary ready to make their acquaintance. My father was devoted to me and did all in his power to promote my health and comfort.

I was still a babe, often carried in arms, when the event happened which changed my whole future and destined me to a strange and lonely existence. I cannot relate it even now without a sense of terror. I must force myself to recall the circumstances as told me and vaguely remembered, for I am not willing that my doomed and wholly exceptional life should pass away unrecorded, unexplained, unvindicated. My nature is, I feel sure, a kind and social one, but I have lived apart, as if my heart were filled with hatred of my fellow-creatures. If there are any readers who look without pity, without sympathy, upon those who shun the fellowship of their fellow men and women, who show by their downcast or averted eyes that they dread companionship and long for solitude, I pray them, if this paper ever reaches them, to stop at this point. Follow me no further, for you will not believe my story, nor enter into the feelings which I am about to reveal. But if there are any to whom all that is human is of interest, who have felt in their own consciousness some stirrings of invincible attraction to one individual and equally invincible repugnance to another, who know by their own experience that elective affinities have as their necessary counterpart, and, as it were, their polar opposites, currents not less strong of elective repulsions, let them read with unquestioning faith the story of a blighted life I am about to relate, much of it, of course, received from the lips of others.

My cousin Laura, a girl of seventeen, lately returned from Europe, was considered eminently beautiful. It was in my second summer that she visited my father's house, where he was living with his servants and my old nurse, my mother having but recently left him a widower. Laura was full of vivacity, impulsive, quick in her movements, thoughtless occasionally, as it is not strange that a young girl of her age should be. It was a beautiful summer day when she saw me for the first time. My nurse had me in her arms, walking back and forward on a balcony with a low railing, upon which opened the windows of the second story of my father's house. While the nurse was thus carrying me, Laura came suddenly upon the balcony. She no sooner saw me than with all the delighted eagerness of her youthful nature she rushed toward me, and, catching me from the

nurse's arms, began tossing me after the fashion of young girls who have been so lately playing with dolls that they feel as if babies were very much of the same nature. The abrupt seizure frightened me; I sprang from her arms in my terror, and fell over the railing of the balcony. I should probably enough have been killed on the spot but for the fact that a low thorn-bush grew just beneath the balcony, into which I fell and thus had the violence of the shock broken. But the thorns tore my tender flesh, and I bear to this day marks of the deep wounds they inflicted.

That dreadful experience is burned deep into my memory. The sudden apparition of the girl; the sense of being torn away from the protecting arms around me; the frantic effort to escape; the shriek that accompanied my fall through what must have seemed unmeasurable space; the cruel lacerations of the piercing and rending thorns,—all these fearful impressions blended in one paralyzing terror.

When I was taken up I was thought to be dead. I was perfectly white, and the physician who first saw me said that no pulse was perceptible. But after a time consciousness returned; the wounds, though painful, were none of them dangerous, and the most alarming effects of the accident passed away. My old nurse cared for me tenderly day and night, and my father, who had been almost distracted in the first hours which followed the injury, hoped and believed that no permanent evil results would be found to result from it. My cousin Laura was of course deeply distressed to feel that her thoughtlessness had been the cause of so grave an accident. As soon as I had somewhat recovered she came to see me, very penitent, very anxious to make me forget the alarm she had caused me, with all its consequences. I was in the nursery sitting up in my bed, bandaged, but not in any pain, as it seemed, for I was quiet and to all appearance in a perfectly natural state of feeling. As Laura came near me I shrieked and instantly changed color. I put my hand upon my heart as if I had been stabbed, and fell over, unconscious. It was very much the same state as that in which I was found immediately after my fall.

The cause of this violent and appalling seizure was but too obvious. The approach of the young girl and the dread that she was about to lay her hand upon me had called up the same train of effects which the moment of terror and pain had already occasioned. The old nurse saw this in a moment. "Go! go!" she cried to Laura, "go, or the child will die!" Her command did not have to be repeated. After Laura had gone I lay senseless, white and cold as marble, for some time. The doctor soon came, and by the use of smart rubbing and stimulants the color came back slowly to my cheeks and the arrested circulation was again set in motion.

It was hard to believe that this was anything more than a temporary effect of the accident. There could be little doubt, it was thought by the doctor and by my father, that after a few days I should recover from this morbid sensibility and receive my cousin as other infants receive pleasant-looking young persons. The old nurse shook her head. "The girl will be the death of the child," she said, "if she touches him or comes near him. His heart stopped beating just as when the girl snatched him out of my arms, and he fell over the balcony railing." Once more the experiment was tried, cautiously, almost insidiously. The same alarming consequences followed. It was too evident that a chain of nervous disturbances had been set up in my system which repeated itself whenever the original impression gave the first impulse. I never saw my cousin Laura after this last trial. Its result had so distressed her that she never ventured again to show herself to me.

If the effect of the nervous shock had stopped there, it would have been a misfortune for my cousin and myself, but hardly a calamity. The world is wide, and a cousin or two more or less can hardly be considered an essential of existence. I often heard Laura's name mentioned, but never by any one who was acquainted with all the circumstances, for it was noticed that I changed color and caught at my breast as if I wanted to grasp my heart in my hand whenever that fatal name was mentioned.

Alas! this was not all. While I was suffering from the effects of my fall among the thorns I was attended by my old nurse, assisted by another old woman, by a physician, and my father, who would take his share in caring for me. It was thought best to keep me perfectly quiet, and strangers and friends were alike excluded from my nursery, with one exception, that my old grandmother came in now and then. With her it seems that I was somewhat timid and shy, following her with rather anxious eyes, as if not quite certain whether or not she was dangerous. But one day, when I was far advanced towards recovery, my father brought in a young lady, a relative of his, who had expressed a great desire to see me. She was, as I have been told, a very handsome girl, of about the same age as my cousin Laura, but bearing no personal resemblance to her in form, features, or complexion. She had no sooner entered the room than the same sudden changes which had followed my cousin's visit began to show themselves, and before she had reached my bedside I was in a state of deadly collapse, as on the occasions already mentioned.

Some time passed before any recurrence of these terrifying seizures. A little girl of five or six years old was allowed to come into the nursery one day and bring me some flowers. I took them from her hand, but turned away and shut my eyes. There was no seizure, but there was a certain dread and aversion, nothing more than a feeling which it might be hoped that time would overcome. Those around me were gradually finding out the circumstances which brought on the deadly attack to which I was subject.

The daughter of one of our near neighbors was considered the prettiest girl of the village where we were passing the summer. She was very anxious to see me, and as I was now nearly well it was determined that she should be permitted to pay me a short visit. I had always delighted in seeing her and being caressed by her. I was sleeping when she entered the nursery and came and took a seat at my side in perfect silence. Presently I became restless, and a moment later I opened my eyes and saw her stooping over me. My hand went to my left breast,—the color faded from my cheeks,—I was again the cold marble image so like death that it had well-nigh been mistaken for it.

Could it be possible that the fright which had chilled my blood had left me with an unconquerable fear of woman at the period when she is most attractive not only to adolescents, but to children of tender age, who feel the fascination of her flowing locks, her bright eyes, her blooming cheeks, and that mysterious magnetism of sex which draws all life into its warm and potently vitalized atmosphere? So it did indeed seem. The dangerous experiment could not be repeated indefinitely. It was not intentionally tried again, but accident brought about more than one renewal of it during the following years, until it became fully recognized that I was the unhappy subject of a mortal dread of woman,—not absolutely of the human female, for I had no fear of my old nurse or of my grandmother, or of any old wrinkled face, and I had become

accustomed to the occasional meeting of a little girl or two, whom I nevertheless regarded with a certain ill-defined feeling that there was danger in their presence. I was sent to a boys' school very early, and during the first ten or twelve years of my life I had rarely any occasion to be reminded of my strange idiosyncrasy.

As I grew out of boyhood into youth, a change came over the feelings which had so long held complete possession of me. This was what my father and his advisers had always anticipated, and was the ground of their confident hope in my return to natural conditions before I should have grown to mature manhood.

How shall I describe the conflicts of those dreamy, bewildering, dreadful years? Visions of loveliness haunted me sleeping and waking. Sometimes a graceful girlish figure would so draw my eyes towards it that I lost sight of all else, and was ready to forget all my fears and find myself at her side, like other youths by the side of young maidens,—happy in their cheerful companionship, while I,—I, under the curse of one blighting moment, looked on, hopeless. Sometimes the glimpse of a fair face or the tone of a sweet voice stirred within me all the instincts that make the morning of life beautiful to adolescence. I reasoned with myself:

Why should I not have outgrown that idle apprehension which had been the nightmare of my earlier years? Why should not the rising tide of life have drowned out the feeble growths that infested the shallows of childhood? How many children there are who tremble at being left alone in the dark, but who, a few years later, will smile at their foolish terrors and brave all the ghosts of a haunted chamber! Why should I any longer be the slave of a foolish fancy that has grown into a half insane habit of mind? I was familiarly acquainted with all the stories of the strange antipathies and invincible repugnances to which others, some of them famous men, had been subject. I said to myself, Why should not I overcome this dread of woman as Peter the Great fought down his dread of wheels rolling over a bridge? Was I, alone of all mankind, to be doomed to perpetual exclusion from the society which, as it seemed to me, was all that rendered existence worth the trouble and fatigue of slavery to the vulgar need of supplying the waste of the system and working at the task of respiration like the daughters of Danaus,—toiling day and night as the worn-out sailor labors at the pump of his sinking vessel?

Why did I not brave the risk of meeting squarely, and without regard to any possible danger, some one of those fair maidens whose far-off smile, whose graceful movements, at once attracted and agitated me? I can only answer this question to the satisfaction of any really inquiring reader by giving him the true interpretation of the singular phenomenon of which I was the subject. For this I shall have to refer to a paper of which I have made a copy, and which will be found included with this manuscript. It is enough to say here, without entering into the explanation of the fact, which will be found simple enough as seen by the light of modern physiological science, that the "nervous disturbance" which the presence of a woman in the flower of her age produced in my system was a sense of impending death, sudden, overwhelming, unconquerable, appalling. It was a reversed action of the nervous centres,—the opposite of that which flushes the young lover's cheek and hurries his bounding pulses as he comes into the presence of the object of his passion. No one who has ever felt the sensation can have failed to recognize it as an imperative summons, which commands instant and terrified submission.

It was at this period of my life that my father determined to try the effect of travel and residence in different localities upon my bodily and mental condition. I say bodily as well as mental, for I was too slender for my height and subject to some nervous symptoms which were a cause of anxiety. That the mind was largely concerned in these there was no doubt, but the mutual interactions of mind and body are often too complex to admit of satisfactory analysis. Each is in part cause and each also in part effect.

We passed some years in Italy, chiefly in Rome, where I was placed in a school conducted by priests, and where of course I met only those of my own sex. There I had the opportunity of seeing the influences under which certain young Catholics, destined for the priesthood, are led to separate themselves from all communion with the sex associated in their minds with the most subtle dangers to which the human soul can be exposed. I became in some degree reconciled to the thought of exclusion from the society of women by seeing around me so many who were self-devoted to celibacy. The thought sometimes occurred to me whether I should not find the best and the only natural solution of the problem of existence, as submitted to myself, in taking upon me the vows which settle the whole question and raise an impassable barrier between the devotee and the object of his dangerous attraction.

How often I talked this whole matter over with the young priest who was at once my special instructor and my favorite companion! But accustomed as I had become to the forms of the Roman Church, and impressed as I was with the purity and excellence of many of its young members with whom I was acquainted, my early training rendered it impossible for me to accept the credentials which it offered me as authoritative. My friend and instructor had to set me down as a case of "invincible ignorance." This was the loop-hole through which he crept out of the prison-house of his creed, and was enabled to look upon me without the feeling of absolute despair with which his sterner brethren would, I fear, have regarded me.

I have said that accident exposed me at times to the influence which I had such reasons for dreading. Here is one example of such an occurrence, which I relate as simply as possible, vividly as it is impressed upon my memory. A young friend whose acquaintance I had made in Rome asked me one day to come to his rooms and look at a cabinet of gems and medals which he had collected. I had been but a short time in his library when a vague sense of uneasiness came over me. My heart became restless,—I could feel it stirring irregularly, as if it were some frightened creature caged in my breast. There was nothing that I could see to account for it. A door was partly open, but not so that I could see into the next room. The feeling grew upon me of some influence which was paralyzing my circulation. I begged my friend to open a window. As he did so, the door swung in the draught, and I saw a blooming young woman,—it was my friend's sister, who had been sitting with a book in her hand, and who rose at the opening of the door. Something had warned me of the presence of a woman, that occult and potent aura of individuality, call it personal magnetism, spiritual effluence, or reduce it to a simpler expression if you will; whatever it was, it had warned me of the nearness of the dread attraction which allured at a distance and revealed itself with all the terrors of the Lorelei if approached too recklessly. A sign from her brother caused her to withdraw at once, but not before I had felt the impression which betrayed itself in my change of color, anxiety about the region of the heart, and sudden failure as if about to fall in a deadly fainting-fit.

Does all this seem strange and incredible to the reader of my manuscript? Nothing in the history of life is so strange or exceptional as it seems to those who have not made a long study of its mysteries. I have never known just such a case as my own, and yet there must have been such, and if the whole history of mankind were unfolded I cannot doubt that there have been many like it. Let my reader suspend his judgment until he has read the paper I have referred to, which was drawn up by a Committee of the Royal Academy of the Biological Sciences. In this paper the mechanism of the series of nervous derangements to which I have been subject since the fatal shock experienced in my infancy is explained in language not hard to understand. It will be seen that such a change of polarity in the nervous centres is only a permanent form and an extreme degree of an emotional disturbance, which as a temporary and comparatively unimportant personal accident is far from being uncommon,—is so frequent, in fact, that every one must have known instances of it, and not a few must have had more or less serious experiences of it in their own private history.

It must not be supposed that my imagination dealt with me as I am now dealing with the reader. I was full of strange fancies and wild superstitions. One of my Catholic friends gave me a silver medal which had been blessed by the Pope, and which I was to wear next my body. I was told that this would turn black after a time, in virtue of a power which it possessed of drawing out original sin, or certain portions of it, together with the evil and morbid tendencies which had been engrafted on the corrupt nature. I wore the medal faithfully, as directed, and watched it carefully. It became tarnished and after a time darkened, but it wrought no change in my unnatural condition.

There was an old gypsy who had the reputation of knowing more of futurity than she had any right to know. The story was that she had foretold the assassination of Count Rossi and the death of Cavour.

However that may have been, I was persuaded to let her try her black art upon my future. I shall never forget the strange, wild look of the wrinkled hag as she took my hand and studied its lines and fixed her wicked old eyes on my young countenance. After this examination she shook her head and muttered some words, which as nearly as I could get them would be in English like these:

*Fair lady cast a spell on thee,
Fair lady's hand shall set thee free.*

Strange as it may seem, these words of a withered old creature, whose palm had to be crossed with silver to bring forth her oracular response, have always clung to my memory as if they were destined to fulfilment. The extraordinary nature of the affliction to which I was subject disposed me to believe the incredible with reference to all that relates to it. I have never ceased to have the feeling that, sooner or later, I should find myself freed from the blight laid upon me in my infancy. It seems as if it would naturally come through the influence of some young and fair woman, to whom that merciful errand should be assigned by the Providence that governs our destiny. With strange hopes, with trembling fears, with mingled belief and doubt, wherever I have found myself I have sought with longing yet half-averted eyes for the "elect lady," as I have learned to call her, who was to lift the curse from my ruined life.

Three times I have been led to the hope, if not the belief, that I had found the object of my superstitious belief.—Singularly enough it was always on the water that the phantom of my hope appeared before my bewildered vision. Once it was an English girl who was a fellow passenger with me in one of my ocean voyages. I need not say that she was beautiful, for she was my dream realized. I heard her singing, I saw her walking the deck on some of the fair days when sea-sickness was forgotten. The passengers were a social company enough, but I had kept myself apart, as was my wont. At last the attraction became too strong to resist any longer. "I will venture into the charmed circle if it kills me," I said to my father. I did venture, and it did not kill me, or I should not be telling this story. But there was a repetition of the old experiences. I need not relate the series of alarming consequences of my venture. The English girl was very lovely, and I have no doubt has made some one supremely happy before this, but she was not the "elect lady" of the prophecy and of my dreams.

A second time I thought myself for a moment in the presence of the destined deliverer who was to restore me to my natural place among my fellow men and women. It was on the Tiber that I met the young maiden who drew me once more into that inner circle which surrounded young womanhood with deadly peril for me, if I dared to pass its limits. I was floating with the stream in the little boat in which I passed many long hours of reverie when I saw another small boat with a boy and a young girl in it. The boy had been rowing, and one of his oars had slipped from his grasp. He did not know how to paddle with a single oar, and was hopelessly rowing round and round, his oar all the time floating farther away from him. I could not refuse my assistance. I picked up the oar and brought my skiff alongside of the boat. When I handed the oar to the boy the young girl lifted her veil and thanked me in the exquisite music of the language which

'Sounds as if it should be writ on satin.'

She was a type of Italian beauty,—a nocturne in flesh and blood, if I may borrow a term certain artists are fond of; but it was her voice which captivated me and for a moment made me believe that I was no longer shut off from all relations with the social life of my race. An hour later I was found lying insensible on the floor of my boat, white, cold, almost pulseless. It cost much patient labor to bring me back to consciousness. Had not such extreme efforts been made, it seems probable that I should never have waked from a slumber which was hardly distinguishable from that of death.

Why should I provoke a catastrophe which appears inevitable if I invite it by exposing myself to its too well ascertained cause? The habit of these deadly seizures has become a second nature. The strongest and the ablest men have found it impossible to resist the impression produced by the most insignificant object, by the most harmless sight or sound to which they had a congenital or acquired antipathy. What prospect have I of ever being rid of this long and deep-seated infirmity? I may well ask myself these questions, but my answer is that I will never give up the hope that time will yet bring its remedy. It may be that the wild prediction which so haunts me shall find itself fulfilled. I have had of late strange premonitions, to which if I were superstitious I could not help giving heed. But I have seen too much of the faith that deals in miracles to accept the supernatural in any shape,—assuredly when it comes from an old witch-like creature who takes pay for her

revelations of the future. Be it so: though I am not superstitious, I have a right to be imaginative, and my imagination will hold to those words of the old zingara with an irresistible feeling that, sooner or later, they will prove true.

Can it be possible that her prediction is not far from its realization? I have had both waking and sleeping visions within these last months and weeks which have taken possession of me and filled my life with new thoughts, new hopes, new resolves.

Sometimes on the bosom of the lake by which I am dreaming away this season of bloom and fragrance, sometimes in the fields or woods in a distant glimpse, once in a nearer glance, which left me pale and tremulous, yet was followed by a swift reaction, so that my cheeks flushed and my pulse bounded, I have seen her who—how do I dare to tell it so that my own eyes can read it?—I cannot help believing is to be my deliverer, my saviour.

I have been warned in the most solemn and impressive language by the experts most deeply read in the laws of life and the history of its disturbing and destroying influences, that it would be at the imminent risk of my existence if I should expose myself to the repetition of my former experiences. I was reminded that unexplained sudden deaths were of constant, of daily occurrence; that any emotion is liable to arrest the movements of life: terror, joy, good news or bad news,—anything that reaches the deeper nervous centres. I had already died once, as Sir Charles Napier said of himself; yes, more than once, died and been resuscitated. The next time, I might very probably fail to get my return ticket after my visit to Hades. It was a rather grim stroke of humor, but I understood its meaning full well, and felt the force of its menace.

After all, what had I to live for if the great primal instinct which strives to make whole the half life of lonely manhood is defeated, suppressed, crushed out of existence? Why not as well die in the attempt to break up a wretched servitude to a perverted nervous movement as in any other way? I am alone in the world,—alone save for my faithful servant, through whom I seem to hold to the human race as it were by a single filament. My father, who was my instructor, my companion, my dearest and best friend through all my later youth and my earlier manhood, died three years ago and left me my own master, with the means of living as might best please my fancy. This season shall decide my fate. One more experiment, and I shall find myself restored to my place among my fellow-beings, or, as I devoutly hope, in a sphere where all our mortal infirmities are past and forgotten.

I have told the story of a blighted life without reserve, so that there shall not remain any mystery or any dark suspicion connected with my memory if I should be taken away unexpectedly. It has cost me an effort to do it, but now that my life is on record I feel more reconciled to my lot, with all its possibilities, and among these possibilities is a gleam of a better future. I have been told by my advisers, some of them wise, deeply instructed, and kind-hearted men, that such a life-destiny should be related by the subject of it for the instruction of others, and especially for the light it throws on certain peculiarities of human character often wrongly interpreted as due to moral perversion, when they are in reality the results of misdirected or reversed actions in some of the closely connected nervous centres.

For myself I can truly say that I have very little morbid sensibility left with reference to the destiny which has been allotted to me. I have passed through different stages of feeling with reference to it, as I have developed from infancy to manhood. At first it was mere blind instinct about which I had no thought, living like other infants the life of impressions without language to connect them in series. In my boyhood I began to be deeply conscious of the infirmity which separated me from those around me. In youth began that conflict of emotions and impulses with the antagonistic influence of which I have already spoken, a conflict which has never ceased, but to which I have necessarily become to a certain degree accustomed; and against the dangers of which I have learned to guard myself habitually. That is the meaning of my isolation. You, young man,—if at any time your eyes shall look upon my melancholy record,—you at least will understand me. Does not your heart throb, in the presence of budding or blooming womanhood, sometimes as if it “were ready to crack” with its own excess of strain? What if instead of throbbing it should falter, flutter, and stop as if never to beat again? You, young woman, who with ready belief and tender sympathy will look upon these pages, if they are ever spread before you, know what it is when your breast heaves with uncontrollable emotion and the grip of the bodice seems unendurable as the embrace of the iron virgin of the Inquisition. Think what it would be if the grasp were tightened so that no breath of air could enter your panting chest!

Does your heart beat in the same way, young man, when your honored friend, a venerable matron of seventy years, greets you with her kindly smile as it does in the presence of youthful loveliness? When a pretty child brings you her doll and looks into your eyes with artless grace and trustful simplicity, does your pulse quicken, do you tremble, does life palpitate through your whole being, as when the maiden of seventeen meets your enamored sight in the glow of her rosebud beauty? Wonder not, then, if the period of mystic attraction for you should be that of agitation, terror, danger, to one in whom the natural current of the instincts has had its course changed as that of a stream is changed by a convulsion of nature, so that the impression which is new life to you is death to him.
