But the party had meantime got into operation, and the formality was broken up when the boys and girls had ventured out of the parlor into the more comfortable living-room, with its easy-chairs and everyday things, and even gone so far as to penetrate the kitchen in their frolic. As soon as they forgot they were a party, they began to enjoy themselves.

But the real pleasure only began with the games. The party was nothing without the games, and, indeed, it was made for the games. Very likely it was one of the timid girls who proposed to play something, and when the ice was once broken, the whole company went into the business enthusiastically. There was no dancing. We should hope not. Not in the deacon's house; not with the deacon's daughters, nor anywhere in this good Puritanic society. Dancing was a sin in itself, and no one could tell what it would lead to. But there was no reason why the boys and girls shouldn't come together and kiss each other during a whole evening occasionally. Kissing was a sign of peace, and was not at all like taking hold of hands and skipping about to the scraping of a wicked fiddle.

In the games there was a great deal of clasping hands, of going round in a circle, of passing under each other's elevated arms, of singing about my true love, and the end was kisses distributed with more or less partiality, according to the rules of the play; but, thank Heaven, there was no fiddler. John liked it all, and was quite brave about paying all the forfeits imposed on him, even to the kissing all the girls in the room; but he thought he could have amended that by kissing a few of them a good many times instead of kissing them all once.

But John was destined to have a damper put upon his enjoyment. They were playing a most fascinating game, in which they all stand in a circle and sing a philandering song, except one who is in the center of the ring, and holds a cushion. At a certain word in the song, the one in the center throws the cushion at the feet

of some one in the ring, indicating thereby the choice of a "mate" and then the two sweetly kneel upon the cushion, like two meek angels, and—and so forth. Then the chosen one takes the cushion and the delightful play goes on. It is very easy, as it will be seen, to learn how to play it. Cynthia was holding the cushion, and at the fatal word she threw it down, not before John, but in front of Ephraim Leggett. And they two kneeled, and so forth. John was astounded. He had never conceived of such perfidy in the female heart. He felt like wiping Ephraim off the face of the earth, only Ephraim was older and bigger than he. When it came his turn at length,—thanks to a plain little girl for whose admiration he did n't care a straw,—he threw the cushion down before Melinda Mayhew with all the devotion he could muster, and a dagger look at Cynthia. And Cynthia's perfidious smile only enraged him the more. John felt wronged, and worked himself up to pass a wretched evening.

When supper came, he never went near Cynthia, and busied himself in carrying different kinds of pie and cake, and red apples and cider, to the girls he liked the least. He shunned Cynthia, and when he was accidentally near her, and she asked him if he would get her a glass of cider, he rudely told her—like a goose as he was—that she had better ask Ephraim. That seemed to him very smart; but he got more and more miserable, and began to feel that he was making himself ridiculous.

Girls have a great deal more good sense in such matters than boys. Cynthia went to John, at length, and asked him simply what the matter was. John blushed, and said that nothing was the matter. Cynthia said that it wouldn't do for two people always to be together at a party; and so they made up, and John obtained permission to "see" Cynthia home.

It was after half-past nine when the great festivities at the Deacon's broke up, and John walked home with Cynthia over the shining crust and under the stars. It was mostly a silent walk, for this was also an occasion when it is difficult to find anything fit to say. And John was thinking all the way how he should bid Cynthia good-night; whether it would do and whether it wouldn't do, this not being a game, and no forfeits attaching to it. When they reached the gate, there was an awkward little pause. John said the stars were uncommonly bright. Cynthia did not deny it, but waited a minute and then turned abruptly away, with "Good-night, John!"

"Good-night, Cynthia!"

And the party was over, and Cynthia was gone, and John went home in a kind of dissatisfaction with himself.

It was long before he could go to sleep for thinking of the new world opened to him, and imagining how he would act under a hundred different circumstances, and what he would say, and what Cynthia would say; but a dream at length came, and led him away to a great city and a brilliant house; and while he was there, he heard a loud rapping on the under floor, and saw that it was daylight.

XIV. THE SUGAR CAMP

I think there is no part of farming the boy enjoys more than the making of maple sugar; it is better than "blackberrying," and nearly as good as fishing. And one reason he likes this work is, that somebody else does the most of it. It is a sort of work in which he can appear to be very active, and yet not do much.

And it exactly suits the temperament of a real boy to be very busy about nothing. If the power, for instance, that is expended in play by a boy between the ages of eight and fourteen could be applied to some industry, we should see wonderful results. But a boy is like a galvanic battery that is not in connection with anything; he generates electricity and plays it off into the air with the most reckless prodigality. And I, for one, would n't have it otherwise. It is as much a boy's business to play off his energies into space as it is for a flower to blow, or a catbird to sing snatches of the tunes of all the other birds.

In my day maple-sugar-making used to be something between picnicking and being shipwrecked on a fertile island, where one should save from the wreck tubs and augers, and great kettles and pork, and hen's eggs and rye-and-indian bread, and begin at once to lead the sweetest life in the world. I am told that it is something different nowadays, and that there is more desire to save the sap, and make good, pure sugar, and sell it for a large price, than there used to be, and that the old fun and picturesqueness of the business are pretty much gone. I am told that it is the custom to carefully collect the sap and bring it to the house, where

there are built brick arches, over which it is evaporated in shallow pans, and that pains is taken to keep the leaves, sticks, and ashes and coals out of it, and that the sugar is clarified; and that, in short, it is a money-making business, in which there is very little fun, and that the boy is not allowed to dip his paddle into the kettle of boiling sugar and lick off the delicious sirup. The prohibition may improve the sugar, but it is cruel to the boy.

As I remember the New England boy (and I am very intimate with one), he used to be on the qui vive in the spring for the sap to begin running. I think he discovered it as soon as anybody. Perhaps he knew it by a feeling of something starting in his own veins,—a sort of spring stir in his legs and arms, which tempted him to stand on his head, or throw a handspring, if he could find a spot of ground from which the snow had melted. The sap stirs early in the legs of a country-boy, and shows itself in uneasiness in the toes, which get tired of boots, and want to come out and touch the soil just as soon as the sun has warmed it a little. The country-boy goes barefoot just as naturally as the trees burst their buds, which were packed and varnished over in the fall to keep the water and the frost out. Perhaps the boy has been out digging into the maple-trees with his jack-knife; at any rate, he is pretty sure to announce the discovery as he comes running into the house in a great state of excitement—as if he had heard a hen cackle in the barn—with “Sap's runnin'!”

And then, indeed, the stir and excitement begin. The sap-buckets, which have been stored in the garret over the wood-house, and which the boy has occasionally climbed up to look at with another boy, for they are full of sweet suggestions of the annual spring frolic,—the sap-buckets are brought down and set out on the south side of the house and scalded. The snow is still a foot or two deep in the woods, and the ox-sled is got out to make a road to the sugar camp, and the campaign begins. The boy is everywhere present, superintending everything, asking questions, and filled with a desire to help the excitement.

It is a great day when the cart is loaded with the buckets and the procession starts into the woods. The sun shines almost unobstructedly into the forest, for there are only naked branches to bar it; the snow is soft and beginning to sink down, leaving the young bushes spindling up everywhere; the snowbirds are twittering about, and the noise of shouting and of the blows of the axe echoes far and wide. This is spring, and the boy can scarcely contain his delight that his out-door life is about to begin again.

In the first place, the men go about and tap the trees, drive in the spouts, and hang the buckets under. The boy watches all these operations with the greatest interest. He wishes that sometime, when a hole is bored in a tree, the sap would spout out in a stream as it does when a cider-barrel is tapped; but it never does, it only drops, sometimes almost in a stream, but on the whole slowly, and the boy learns that the sweet things of the world have to be patiently waited for, and do not usually come otherwise than drop by drop.

Then the camp is to be cleared of snow. The shanty is re-covered with boughs. In front of it two enormous logs are rolled nearly together, and a fire is built between them. Forked sticks are set at each end, and a long pole is laid on them, and on this are hung the great caldron kettles. The huge hogsheads are turned right side up, and cleaned out to receive the sap that is gathered. And now, if there is a good “sap run,” the establishment is under full headway.

A YOUNG SUGAR-MAKER

The great fire that is kindled up is never let out, night or day, as long as the season lasts. Somebody is always cutting wood to feed it; somebody is busy most of the time gathering in the sap; somebody is required to watch the kettles that they do not boil over, and to fill them. It is not the boy, however; he is too busy with things in general to be of any use in details. He has his own little sap-yoke and small pails, with which he gathers the sweet liquid. He has a little boiling-place of his own, with small logs and a tiny kettle. In the great kettles the boiling goes on slowly, and the liquid, as it thickens, is dipped from one to another, until in the end kettle it is reduced to sirup, and is taken out to cool and settle, until enough is made to "sugar off." To "sugar off" is to boil the sirup until it is thick enough to crystallize into sugar. This is the grand event, and is done only once in two or three days.

But the boy's desire is to "sugar off" perpetually. He boils his kettle down as rapidly as possible; he is not particular about chips, scum, or ashes; he is apt to burn his sugar; but if he can get enough to make a little wax on the snow, or to scrape from the bottom of the kettle with his wooden paddle, he is happy. A good deal is wasted on his hands, and the outside of his face, and on his clothes, but he does not care; he is not stingy.

To watch the operations of the big fire gives him constant pleasure. Sometimes he is left to watch the boiling kettles, with a piece of pork tied on the end of a stick, which he dips into the boiling mass when it threatens to go over. He is constantly tasting of it, however, to see if it is not almost sirup. He has a long round stick, whittled smooth at one end, which he uses for this purpose, at the constant risk of burning his tongue. The smoke blows in his face; he is grimy with ashes; he is altogether such a mass of dirt, stickiness, and sweetness, that his own mother would n't know him.

WATCHING THE KETTLES

He likes to boil eggs in the hot sap with the hired man; he likes to roast potatoes in the ashes, and he would live in the camp day and night if he were permitted. Some of the hired men sleep in the bough shanty and keep the fire blazing all night. To sleep there with them, and awake in the night and hear the wind in the trees, and see the sparks fly up to the sky, is a perfect realization of all the stories of adventures he has ever read. He tells the other boys afterwards that he heard something in the night that sounded very much like a bear. The hired man says that he was very much scared by the hooting of an owl.

The great occasions for the boy, though, are the times of "sugaring-off." Sometimes this used to be done in the evening, and it was made the excuse for a frolic in the camp. The neighbors were invited; sometimes even the pretty girls from the village, who filled all the woods with their sweet voices and merry laughter and little affectations of fright. The white snow still lies on all the ground except the warm spot about the camp. The tree branches all show distinctly in the light of the fire, which sends its ruddy glare far into the darkness, and lights up the bough shanty, the hogsheads, the buckets on the trees, and the group about the boiling kettles, until the scene is like something taken out of a fairy play. If Rembrandt could have seen a sugar party in a New England wood, he would have made out of its strong contrasts of light and shade one of the finest pictures in the world. But Rembrandt was not born in Massachusetts; people hardly ever do know where to be born until it is too late. Being born in the right place is a thing that has been very much neglected.

At these sugar parties every one was expected to eat as much sugar as possible; and those who are practiced in it can eat a great deal. It is a peculiarity about eating warm maple sugar, that though you may eat so much of it one day as to be sick and loathe the thought of it, you will want it the next day more than ever. At the "sugaring-off" they used to pour the hot sugar upon the snow, where it congealed, without crystallizing, into a sort of wax, which I do suppose is the most delicious substance that was ever invented. And it takes a great while to eat it. If one should close his teeth firmly on a ball of it, he would be unable to open his mouth until it dissolved. The sensation while it is melting is very pleasant, but one cannot converse.

The boy used to make a big lump of it and give it to the dog, who seized it with great avidity, and closed his jaws on it, as dogs will on anything. It was funny the next moment to see the expression of perfect surprise on the dog's face when he found that he could not open his jaws. He shook his head; he sat down in despair; he ran round in a circle; he dashed into the woods and back again. He did everything except climb a tree, and howl. It would have been such a relief to him if he could have howled. But that was the one thing he could not do.

XV. THE HEART OF NEW ENGLAND

It is a wonder that every New England boy does not turn out a poet, or a missionary, or a peddler. Most of them used to. There is everything in the heart of the New England hills to feed the imagination of the boy, and excite his longing for strange countries. I scarcely know what the subtle influence is that forms him and attracts him in the most fascinating and aromatic of all lands, and yet urges him away from all the sweet delights of his home to become a roamer in literature and in the world, a poet and a wanderer. There is something in the soil and the pure air, I suspect, that promises more romance than is forthcoming, that excites the imagination without satisfying it, and begets the desire of adventure. And the prosaic life of the sweet home does not at all correspond to the boy's dreams of the world. In the good old days, I am told, the boys on the coast ran away and became sailors; the countryboys waited till they grew big enough to be missionaries, and then they sailed away, and met the coast boys in foreign ports. John used to spend hours in the top of a slender hickory-tree that a little detached itself from the forest which crowned the brow of the steep and lofty pasture behind his house. He was sent to make war on the bushes that constantly encroached upon the pastureland; but John had no hostility to any growing thing, and a very little bushwhacking satisfied him. When he had grubbed up a few laurels and young tree-sprouts, he was wont to retire into his favorite post of observation and meditation. Perhaps he fancied that the wide-swaying stem to which he clung was the mast of a ship; that the tossing forest behind him was the heaving waves of the sea; and that the wind which moaned over the woods and murmured in the leaves, and now and then sent him a wide circuit in the air, as if he had been a blackbird on the tip-top of a spruce, was an ocean gale. What life, and action, and heroism there was to him in the multitudinous roar of the forest, and what an eternity of existence in the monologue of the river, which brawled far, far below him over its wide stony bed! How the river sparkled and danced and

went on, now in a smooth amber current, now fretted by the pebbles, but always with that continuous busy song! John never knew that noise to cease, and he doubted not, if he stayed here a thousand years, that same loud murmur would fill the air.

On it went, under the wide spans of the old wooden, covered bridge, swirling around the great rocks on which the piers stood, spreading away below in shallows, and taking the shadows of a row of maples that lined the green shore. Save this roar, no sound reached him, except now and then the rumble of a wagon on the bridge, or the muffled far-off voices of some chance passers on the road. Seen from this high perch, the familiar village, sending its brown roofs and white spires up through the green foliage, had a strange aspect, and was like some town in a book, say a village nestled in the Swiss mountains, or something in Bohemia. And there, beyond the purple hills of Bozrah, and not so far as the stony pastures of Zoah, whither John had helped drive the colts and young stock in the spring, might be, perhaps, Jerusalem itself. John had himself once been to the land of Canaan with his grandfather, when he was a very small boy; and he had once seen an actual, no-mistake Jew, a mysterious person, with uncut beard and long hair, who sold scythe-snaths in that region, and about whom there was a rumor that he was once caught and shaved by the indignant farmers, who apprehended in his long locks a contempt of the Christian religion.

Oh, the world had vast possibilities for John. Away to the south, up a vast basin of forest, there was a notch in the horizon and an opening in the line of woods, where the road ran. Through this opening John imagined an army might appear, perhaps British, perhaps Turks, and banners of red and of yellow advance, and a cannon wheel about and point its long nose, and open on the valley. He fancied the army, after this salute, winding down the mountain road, deploying in the meadows, and giving the valley to pillage and to flame. In which event his position would be an excellent one for observation and for safety. While he was in the height of this engagement, perhaps the horn would be blown from the back porch, reminding him that it was time to quit cutting brush and go for the cows. As if there were no better use for a warrior and a poet in New England than to send him for the cows!

John knew a boy—a bad enough boy I daresay—who afterwards became a general in the war, and went to Congress, and got to be a real governor, who also used to be sent to cut brush in the back pastures, and hated it in his very soul; and by his wrong conduct forecast what kind of a man he would be. This boy, as soon as he had cut about one brush, would seek for one of several holes in the ground (and he was familiar with several), in which lived a white-and-black animal that must always be nameless in a book, but an animal quite capable of the most pungent defense of himself. This young aspirant to Congress would cut a long stick, with a little crotch in the end of it, and run it into the hole; and when the crotch was punched into the fur and skin of the animal, he would twist the stick round till it got a good grip on the skin, and then he would pull the beast out; and when he got the white-and-black just out of the hole so that his dog could seize him, the boy would take to his heels, and leave the two to fight it out, content to scent the battle afar off. And this boy, who was in training for public life, would do this sort of thing all the afternoon, and when the sun told him that he had spent long enough time cutting brush, he would industriously go home as innocent as anybody. There are few such boys as this nowadays; and that is the reason why the New England pastures are so much overgrown with brush.

John himself preferred to hunt the pugnacious woodchuck. He bore a special grudge against this clover-eater, beyond the usual hostility that boys feel for any wild animal. One day on his way to school a woodchuck crossed the road before him, and John gave chase. The woodchuck scrambled into an orchard and climbed a small apple-tree. John thought this a most cowardly and unfair retreat, and stood under the tree and taunted the animal and stoned it. Thereupon the woodchuck dropped down on John and seized him by the leg of his trousers. John was both enraged and scared by this dastardly attack; the teeth of the enemy went through the cloth and met; and there he hung. John then made a pivot of one leg and whirled himself around, swinging the woodchuck in the air, until he shook him off; but in his departure the woodchuck carried away a large piece of John's summer trousers-leg. The boy never forgot it. And whenever he had a holiday, he used to expend an amount of labor and ingenuity in the pursuit of woodchucks that would have made his for tune in any useful pursuit. There was a hill pasture, down on one side of which ran a small brook, and this pasture was full of woodchuck-holes. It required the assistance of several boys to capture a woodchuck. It was first necessary by patient watching to ascertain that the woodchuck was at home. When one was seen to enter his burrow, then all the entries to it except one—there are usually three—were plugged up with stones. A boy and a dog were then left to watch the open hole, while John and his comrades went to the brook and began to dig a canal, to turn the water into the residence of the woodchuck. This was often a difficult feat of engineering, and a long job. Often it took more than half a day of hard labor with shovel and hoe to dig the canal. But when the canal was finished and the water began to pour into the hole, the excitement began. How

long would it take to fill the hole and drown out the woodchuck? Sometimes it seemed as if the hole was a bottomless pit. But sooner or later the water would rise in it, and then there was sure to be seen the nose of the woodchuck, keeping itself on a level with the rising flood. It was piteous to see the anxious look of the hunted, half-drowned creature as—it came to the surface and caught sight of the dog. There the dog stood, at the mouth of the hole, quivering with excitement from his nose to the tip of his tail, and behind him were the cruel boys dancing with joy and setting the dog on. The poor creature would disappear in the water in terror; but he must breathe, and out would come his nose again, nearer the dog each time. At last the water ran out of the hole as well as in, and the soaked beast came with it, and made a desperate rush. But in a trice the dog had him, and the boys stood off in a circle, with stones in their hands, to see what they called "fair play." They maintained perfect "neutrality" so long as the dog was getting the best of the woodchuck; but if the latter was likely to escape, they "interfered" in the interest of peace and the "balance of power," and killed the woodchuck. This is a boy's notion of justice; of course, he'd no business to be a woodchuck,—an—unspeakable woodchuck.

I used the word "aromatic" in relation to the New England soil. John knew very well all its sweet, aromatic, pungent, and medicinal products, and liked to search for the scented herbs and the wild fruits and exquisite flowers; but he did not then know, and few do know, that there is no part of the globe where the subtle chemistry of the earth produces more that is agreeable to the senses than a New England hill-pasture and the green meadow at its foot. The poets have succeeded in turning our attention from it to the comparatively barren Orient as the land of sweet-smelling spices and odorous gums. And it is indeed a constant surprise that this poor and stony soil elaborates and grows so many delicate and aromatic products.

TREEING A WOODCHUCK

John, it is true, did not care much for anything that did not appeal to his taste and smell and delight in brilliant color; and he trod down the exquisite ferns and the wonderful mosses—without compunction. But he gathered from the crevices of the rocks the columbine and the eglantine and the blue harebell; he picked the high-flavored alpine strawberry, the blueberry, the boxberry, wild currants and gooseberries, and fox-grapes; he brought home armfuls of the pink-and-white laurel and the wild honeysuckle; he dug the roots of the fragrant sassafras and of the sweet-flag; he ate the tender leaves of the wintergreen and its red berries; he gathered the peppermint and the spearmint; he gnawed the twigs of the black birch; there was a stout fern which he called "brake," which he pulled up, and found that the soft end "tasted good;" he dug the amber gum from the spruce-tree, and liked to smell, though he could not chew, the gum of the wild cherry; it was his melancholy duty to bring home such medicinal herbs for the garret as the gold-thread, the tansy, and the loathsome "boneset;" and he laid in for the winter, like a squirrel, stores of beechnuts, hazel-nuts, hickory-nuts, chestnuts, and butternuts. But that which lives most vividly in his memory and most strongly draws him back to the New England hills is the aromatic sweet-fern; he likes to eat its spicy seeds, and to crush in his

hands its fragrant leaves; their odor is the unique essence of New England.

XVI. JOHN'S REVIVAL.

The New England country-boy of the last generation never heard of Christmas. There was no such day in his calendar. If John ever came across it in his reading, he attached no meaning to the word.

If his curiosity had been aroused, and he had asked his elders about it, he might have got the dim impression that it was a kind of Popish holiday, the celebration of which was about as wicked as "card-playing," or being a "Democrat." John knew a couple of desperately bad boys who were reported to play "seven-up" in a barn, on the haymow, and the enormity of this practice made him shudder. He had once seen a pack of greasy "playing-cards," and it seemed to him to contain the quintessence of sin. If he had desired to defy all Divine law and outrage all human society, he felt that he could do it by shuffling them. And he was quite right. The two bad boys enjoyed in stealth their scandalous pastime, because they knew it was the most wicked thing they could do. If it had been as sinless as playing marbles, they would n't have cared for it. John sometimes drove past a brown, tumble-down farmhouse, whose shiftless inhabitants, it was said, were card-playing people; and it is impossible to describe how wicked that house appeared to John. He almost expected to see its shingles stand on end. In the old New England one could not in any other way so express his contempt of all holy and orderly life as by playing cards for amusement.

There was no element of Christmas in John's life, any more than there was of Easter; and probably nobody about him could have explained Easter; and he escaped all the demoralization attending Christmas gifts. Indeed, he never had any presents of any kind, either on his birthday or any other day. He expected nothing that he did not earn, or make in the way of "trade" with another boy. He was taught to work for what he received. He even earned, as I said, the extra holidays of the day after the Fourth and the day after Thanksgiving. Of the free grace and gifts of Christmas he had no conception. The single and melancholy association he had with it was the quaking hymn which his grandfather used to sing in a cracked and quavering voice:

*"While shepherds watched their flocks by night,
All seated on the ground."*

LOOKING FOR FROGS

The "glory" that "shone around" at the end of it—the doleful voice always repeating, "and glory shone around"—made John as miserable as "Hark! from the tombs." It was all one dreary expectation of something uncomfortable. It was, in short, "religion." You'd got to have it some time; that John believed. But it lay in his unthinking mind to put off the "Hark! from the tombs" enjoyment as long as possible. He experienced a kind of delightful wickedness in indulging his dislike of hymns and of Sunday.

John was not a model boy, but I cannot exactly define in what his wickedness consisted. He had no inclination to steal, nor much to lie; and he despised "meanness" and stinginess, and had a chivalrous feeling toward little girls. Probably it never occurred to him that there was any virtue in not stealing and lying, for honesty and veracity were in the atmosphere about him. He hated work, and he "got mad" easily; but he did work, and he was always ashamed when he was over his fit of passion. In short, you couldn't find a much better wicked boy than John.

When the "revival" came, therefore, one summer, John was in a quandary. Sunday meeting and Sunday-school he did n't mind; they were a part of regular life, and only temporarily interrupted a boy's pleasures. But when there began to be evening meetings at the different houses, a new element came into affairs. There was a kind of solemnity over the community, and a seriousness in all faces. At first these twilight assemblies offered a little relief to the monotony of farm life; and John liked to meet the boys and girls, and to watch the older people coming in, dressed in their second best. I think John's imagination was worked upon by the sweet and mournful hymns that were discordantly sung in the stiff old parlors. There was a suggestion of Sunday, and sanctity too, in the odor of caraway-seed that pervaded the room. The windows were wide open also, and the scent of June roses came in, with all the languishing sounds of a summer night. All the little boys had a scared look, but the little girls were never so pretty and demure as in this their susceptible seriousness. If John saw a boy who did not come to the evening meeting, but was wandering off with his sling down the meadow, looking for frogs, maybe, that boy seemed to him a monster of wickedness.

After a time, as the meetings continued, John fell also under the general impression of fright and seriousness. All the talk was of "getting religion," and he heard over and over again that the probability was if he did not get it now, he never would. The chance did not come often, and if this offer was not improved, John would be given over to hardness of heart. His obstinacy would show that he was not one of the elect. John fancied that he could feel his heart hardening, and he began to look with a wistful anxiety into the faces of the Christians to see what were the visible signs of being one of the elect. John put on a good deal of a manner that he "did n't care," and he never admitted his disquiet by asking any questions or standing up in meeting to be prayed for. But he did care. He heard all the time that all he had to do was to repent and believe. But there was nothing that he doubted, and he was perfectly willing to repent if he could think of anything to repent of.

It was essential he learned, that he should have a "conviction of sin." This he earnestly tried to have. Other people, no better than he, had it, and he wondered why he could n't have it. Boys and girls whom he knew were "under conviction," and John began to feel not only panicky, but lonesome. Cynthia Rudd had been anxious for days and days, and not able to sleep at night, but now she had given herself up and found peace. There was a kind of radiance in her face that struck John with awe, and he felt that now there was a great gulf between him and Cynthia. Everybody was going away from him, and his heart was getting harder than ever. He could n't feel wicked, all he could do. And there was Ed Bates his intimate friend, though older than he, a "whaling," noisy kind of boy, who was under conviction and sure he was going to be lost.

How John envied him! And pretty soon Ed "experienced religion." John anxiously watched the change in Ed's face when he became one of the elect. And a change there was. And John wondered about another thing. Ed Bates used to go trout-fishing, with a tremendously long pole, in a meadow brook near the river; and when the trout didn't bite right off, Ed would—get mad, and as soon as one took hold he would give an awful jerk, sending the fish more than three hundred feet into the air and landing it in the bushes the other side of the meadow, crying out, "Gul darn ye, I'll learn ye." And John wondered if Ed would take the little trout out any more gently now.

John felt more and more lonesome as one after another of his playmates came out and made a profession. Cynthia (she too was older than John) sat on Sunday in the singers' seat; her voice, which was going to be a contralto, had a wonderful pathos in it for him, and he heard it with a heartache. "There she is," thought John, "singing away like an angel in heaven, and I am left out." During all his after life a contralto voice was to John one of his most bitter and heart-wringing pleasures. It suggested the immaculate scornful, the melancholy unattainable.

If ever a boy honestly tried to work himself into a conviction of sin, John tried. And what made him

miserable was, that he couldn't feel miserable when everybody else was miserable. He even began to pretend to be so. He put on a serious and anxious look like the others. He pretended he did n't care for play; he refrained from chasing chipmunks and snaring suckers; the songs of birds and the bright vivacity of the summer—time that used to make him turn hand-springs smote him as a discordant levity. He was not a hypocrite at all, and he was getting to be alarmed that he was not alarmed at himself. Every day and night he heard that the spirit of the Lord would probably soon quit striving with him, and leave him out. The phrase was that he would “grieve away the Holy Spirit.” John wondered if he was not doing it. He did everything to put himself in the way of conviction, was constant at the evening meetings, wore a grave face, refrained from play, and tried to feel anxious. At length he concluded that he must do something.

One night as he walked home from a solemn meeting, at which several of his little playmates had “come forward,” he felt that he could force the crisis. He was alone on the sandy road; it was an enchanting summer night; the stars danced overhead, and by his side the broad and shallow river ran over its stony bed with a loud but soothing murmur that filled all the air with entreaty. John did not then know that it sang, “But I go on forever,” yet there was in it for him something of the solemn flow of the eternal world. When he came in sight of the house, he knelt down in the dust by a pile of rails and prayed. He prayed that he might feel bad, and be distressed about himself. As he prayed he heard distinctly, and yet not as a disturbance, the multitudinous croaking of the frogs by the meadow spring. It was not discordant with his thoughts; it had in it a melancholy pathos, as if it were a kind of call to the unconverted. What is there in this sound that suggests the tenderness of spring, the despair of a summer night, the desolateness of young love? Years after it happened to John to be at twilight at a railway station on the edge of the Ravenna marshes. A little way over the purple plain he saw the darkening towers and heard “the sweet bells of Imola.” The Holy Pontiff Pius IX. was born at Imola, and passed his boyhood in that serene and moist region. As the train waited, John heard from miles of marshes round about the evening song of millions of frogs, louder and more melancholy and entreating than the vesper call of the bells. And instantly his mind went back for the association of sound is as subtle as that of odor—to the prayer, years ago, by the roadside and the plaintive appeal of the unheeded frogs, and he wondered if the little Pope had not heard the like importunity, and perhaps, when he thought of himself as a little Pope, associated his conversion with this plaintive sound.

John prayed, but without feeling any worse, and then went desperately into the house, and told the family that he was in an anxious state of mind. This was joyful news to the sweet and pious household, and the little boy was urged to feel that he was a sinner, to repent, and to become that night a Christian; he was prayed over, and told to read the Bible, and put to bed with the injunction to repeat all the texts of Scripture and hymns he could think of. John did this, and said over and over the few texts he was master of, and tossed about in a real discontent now, for he had a dim notion that he was playing the hypocrite a little. But he was sincere enough in wanting to feel, as the other boys and girls felt, that he was a wicked sinner. He tried to think of his evil deeds; and one occurred to him; indeed, it often came to his mind. It was a lie; a deliberate, awful lie, that never injured anybody but himself John knew he was not wicked enough to tell a lie to injure anybody else.

This was the lie. One afternoon at school, just before John's class was to recite in geography, his pretty cousin, a young lady he held in great love and respect, came in to visit the school. John was a favorite with her, and she had come to hear him recite. As it happened, John felt shaky in the geographical lesson of that day, and he feared to be humiliated in the presence of his cousin; he felt embarrassed to that degree that he could n't have “bounded” Massachusetts. So he stood up and raised his hand, and said to the schoolma'am, “Please, ma'am, I 've got the stomach-ache; may I go home?” And John's character for truthfulness was so high (and even this was ever a reproach to him), that his word was instantly believed, and he was dismissed without any medical examination. For a moment John was delighted to get out of school so early; but soon his guilt took all the light out of the summer sky and the pleasantness out of nature. He had to walk slowly, without a single hop or jump, as became a diseased boy.

FORCED TO GO TO BED

The sight of a woodchuck at a distance from his well-known hole tempted John, but he restrained himself, lest somebody should see him, and know that chasing a woodchuck was inconsistent with the stomach-ache. He was acting a miserable part, but it had to be gone through with. He went home and told his mother the reason he had left school, but he added that he felt "some" better now. The "some" did n't save him. Genuine sympathy was lavished on him. He had to swallow a stiff dose of nasty "picra,"—the horror of all childhood, and he was put in bed immediately. The world never looked so pleasant to John, but to bed he was forced to go. He was excused from all chores; he was not even to go after the cows. John said he thought he ought to go after the cows,—much as he hated the business usually, he would now willingly have wandered over the world after cows,—and for this heroic offer, in the condition he was, he got credit for a desire to do his duty; and this unjust confidence in him added to his torture. And he had intended to set his hooks that night for eels. His cousin came home, and sat by his bedside and condoled with him; his schoolma'am had sent word how sorry she was for him, John was Such a good boy. All this was dreadful.

He groaned in agony. Besides, he was not to have any supper; it would be very dangerous to eat a morsel. The prospect was appalling. Never was there such a long twilight; never before did he hear so many sounds outdoors that he wanted to investigate. Being ill without any illness was a horrible condition. And he began to have real stomach-ache now; and it ached because it was empty. John was hungry enough to have eaten the New England Primer. But by and by sleep came, and John forgot his woes in dreaming that he knew where Madagascar was just as easy as anything.

It was this lie that came back to John the night he was trying to be affected by the revival. And he was very much ashamed of it, and believed he would never tell another. But then he fell thinking whether, with the "picra," and the going to bed in the afternoon, and the loss of his supper, he had not been sufficiently paid for it. And in this unhopeful frame of mind he dropped off in sleep.

And the truth must be told, that in the morning John was no nearer to realizing the terrors he desired to feel. But he was a conscientious boy, and would do nothing to interfere with the influences of the season. He not only put himself away from them all, but he refrained from doing almost everything that he wanted to do. There came at that time a newspaper, a secular newspaper, which had in it a long account of the Long Island races, in which the famous horse "Lexington" was a runner. John was fond of horses, he knew about Lexington, and he had looked forward to the result of this race with keen interest. But to read the account of it how he felt might destroy his seriousness of mind, and in all reverence and simplicity he felt it—be a means of "grieving away the Holy Spirit." He therefore hid away the paper in a table-drawer, intending to read it when the revival should be over. Weeks after, when he looked for the newspaper, it was not to be found, and John never knew what "time" Lexington made nor anything about the race. This was to him a serious loss, but

by no means so deep as another feeling that remained with him; for when his little world returned to its ordinary course, and long after, John had an uneasy apprehension of his own separateness from other people, in his insensibility to the revival. Perhaps the experience was a damage to him; and it is a pity that there was no one to explain that religion for a little fellow like him is not a "scheme."

XVII. WAR

Every boy who is good for anything is a natural savage. The scientists who want to study the primitive man, and have so much difficulty in finding one anywhere in this sophisticated age, couldn't do better than to devote their attention to the common country-boy. He has the primal, vigorous instincts and impulses of the African savage, without any of the vices inherited from a civilization long ago decayed or developed in an unrestrained barbaric society. You want to catch your boy young, and study him before he has either virtues or vices, in order to understand the primitive man.

Every New England boy desires (or did desire a generation ago, before children were born sophisticated, with a large library, and with the word "culture" written on their brows) to live by hunting, fishing, and war. The military instinct, which is the special mark of barbarism, is strong in him. It arises not alone from his love of fighting, for the boy is naturally as cowardly as the savage, but from his fondness for display,—the same that a corporal or a general feels in decking himself in tinsel and tawdry colors and strutting about in view of the female sex. Half the pleasure in going out to murder another man with a gun would be wanting if one did not wear feathers and gold-lace and stripes on his pantaloons. The law also takes this view of it, and will not permit men to shoot each other in plain clothes. And the world also makes some curious distinctions in the art of killing. To kill people with arrows is barbarous; to kill them with smooth-bores and flintlock muskets is semi-civilized; to kill them with breech-loading rifles is civilized. That nation is the most civilized which has the appliances to kill the most of another nation in the shortest time. This is the result of six thousand years of constant civilization. By and by, when the nations cease to be boys, perhaps they will not want to kill each other at all. Some people think the world is very old; but here is an evidence that it is very young, and, in fact, has scarcely yet begun to be a world. When the volcanoes have done spouting, and the earthquakes are quaked out, and you can tell what land is going to be solid and keep its level twenty-four hours, and the swamps are filled up, and the deltas of the great rivers, like the Mississippi and the Nile, become terra firma, and men stop killing their fellows in order to get their land and other property, then perhaps there will be a world that an angel would n't weep over. Now one half the world are employed in getting ready to kill the other half, some of them by marching about in uniform, and the others by hard work to earn money to pay taxes to buy uniforms and guns.

John was not naturally very cruel, and it was probably the love of display quite as much as of fighting that led him into a military life; for he, in common with all his comrades, had other traits of the savage. One of them was the same passion for ornament that induces the African to wear anklets and bracelets of hide and of metal, and to decorate himself with tufts of hair, and to tattoo his body. In John's day there was a rage at school among the boys for wearing bracelets woven of the hair of the little girls. Some of them were wonderful specimens of braiding and twist. These were not captured in war, but were sentimental tokens of friendship given by the young maidens themselves. John's own hair was kept so short (as became a warrior) that you couldn't have made a bracelet out of it, or anything except a paintbrush; but the little girls were not under military law, and they willingly sacrificed their tresses to decorate the soldiers they esteemed. As the Indian is honored in proportion to the scalps he can display, at John's school the boy was held in highest respect who could show the most hair trophies on his wrist. John himself had a variety that would have pleased a Mohawk, fine and coarse and of all colors. There were the flaxen, the faded straw, the glossy black, the lustrous brown, the dirty yellow, the undecided auburn, and the fiery red. Perhaps his pulse beat more quickly under the red hair of Cynthia Rudd than on account of all the other wristlets put together; it was a sort of gold-trie-d-in-the-fire-color to John, and burned there with a steady flame. Now that Cynthia had become a Christian, this band of hair seemed a more sacred if less glowing possession (for all detached hair will fade in time), and if he had known anything about saints, he would have imagined that it was a part of the aureole that always goes with a saint. But I am bound to say that while John had a tender feeling for this red string, his sentiment was not that of the man who becomes entangled in the meshes of a woman's hair; and he valued rather the number than the quality of these elastic wristlets.

John burned with as real a military ardor as ever inflamed the breast of any slaughterer of his fellows. He liked to read of war, of encounters with the Indians, of any kind of wholesale killing in glittering uniform, to the noise of the terribly exciting fife and drum, which maddened the combatants and drowned the cries of the wounded. In his future he saw himself a soldier with plume and sword and snug-fitting, decorated clothes,—very different from his somewhat roomy trousers and country-cut roundabout, made by Aunt Ellis, the village tailoress, who cut out clothes, not according to the shape of the boy, but to what he was expected to grow to,—going where glory awaited him. In his observation of pictures, it was the common soldier who was always falling and dying, while the officer stood unharmed in the storm of bullets and waved his sword in a heroic attitude. John determined to be an officer.

It is needless to say that he was an ardent member of the military company of his village. He had risen from the grade of corporal to that of first lieutenant; the captain was a boy whose father was captain of the grown militia company, and consequently had inherited military aptness and knowledge. The old captain was a flaming son of Mars, whose nose militia, war, general training, and New England rum had painted with the color of glory and disaster. He was one of the gallant old soldiers of the peaceful days of our country, splendid in uniform, a martinet in drill, terrible in oaths, a glorious object when he marched at the head of his company of flintlock muskets, with the American banner full high advanced, and the clamorous drum defying the world. In this he fulfilled his duties of citizen, faithfully teaching his uniformed companions how to march

by the left leg, and to get reeling drunk by sundown; otherwise he did n't amount to much in the community; his house was unpainted, his fences were tumbled down, his farm was a waste, his wife wore an old gown to meeting, to which the captain never went; but he was a good trout-fisher, and there was no man in town who spent more time at the country store and made more shrewd observations upon the affairs of his neighbors. Although he had never been in an asylum any more than he had been in war, he was almost as perfect a drunkard as he was soldier. He hated the British, whom he had never seen, as much as he loved rum, from which he was never separated.

The company which his son commanded, wearing his father's belt and sword, was about as effective as the old company, and more orderly. It contained from thirty to fifty boys, according to the pressure of "chores" at home, and it had its great days of parade and its autumn maneuvers, like the general training. It was an artillery company, which gave every boy a chance to wear a sword, and it possessed a small mounted cannon, which was dragged about and limbered and unlimbered and fired, to the imminent danger of everybody, especially of the company. In point of marching, with all the legs going together, and twisting itself up and untwisting breaking into single-file (for Indian fighting), and forming platoons, turning a sharp corner, and getting out of the way of a wagon, circling the town pump, frightening horses, stopping short in front of the tavern, with ranks dressed and eyes right and left, it was the equal of any military organization I ever saw. It could train better than the big company, and I think it did more good in keeping alive the spirit of patriotism and desire to fight. Its discipline was strict. If a boy left the ranks to jab a spectator, or make faces at a window, or "go for" a striped snake, he was "hollered" at no end.

It was altogether a very serious business; there was no levity about the hot and hard marching, and as boys have no humor, nothing ludicrous occurred. John was very proud of his office, and of his ability to keep the rear ranks closed up and ready to execute any maneuver when the captain "hollered," which he did continually. He carried a real sword, which his grandfather had worn in many a militia campaign on the village green, the rust upon which John fancied was Indian blood; he had various red and yellow insignia of military rank sewed upon different parts of his clothes, and though his cocked hat was of pasteboard, it was decorated with gilding and bright rosettes, and floated a red feather that made his heart beat with martial fury whenever he looked at it. The effect of this uniform upon the girls was not a matter of conjecture. I think they really cared nothing about it, but they pretended to think it fine, and they fed the poor boy's vanity, the weakness by which women govern the world.

The exalted happiness of John in this military service I daresay was never equaled in any subsequent occupation. The display of the company in the village filled him with the loftiest heroism. There was nothing wanting but an enemy to fight, but this could only be had by half the company staining themselves with elderberry juice and going into the woods as Indians, to fight the artillery from behind trees with bows and arrows, or to ambush it and tomahawk the gunners. This, however, was made to seem very like real war. Traditions of Indian cruelty were still fresh in western Massachusetts. Behind John's house in the orchard were some old slate tombstones, sunken and leaning, which recorded the names of Captain Moses Rice and Phineas Arms, who had been killed by Indians in the last century while at work in the meadow by the river, and who slept there in the hope of the glorious resurrection. Phineas Arms martial name—was long since dust, and even the mortal part of the great Captain Moses Rice had been absorbed in the soil and passed perhaps with the sap up into the old but still blooming apple-trees. It was a quiet place where they lay, but they might have heard—if hear they could—the loud, continuous roar of the Deerfield, and the stirring of the long grass on that sunny slope. There was a tradition that years ago an Indian, probably the last of his race, had been seen moving along the crest of the mountain, and gazing down into the lovely valley which had been the favorite home of his tribe, upon the fields where he grew his corn, and the sparkling stream whence he drew his fish. John used to fancy at times, as he sat there, that he could see that red specter gliding among the trees on the hill; and if the tombstone suggested to him the trump of judgment, he could not separate it from the war-whoop that had been the last sound in the ear of Phineas Arms. The Indian always preceded murder by the war-whoop; and this was an advantage that the artillery had in the fight with the elderberry Indians. It was warned in time. If there was no war-whoop, the killing did n't count; the artillery man got up and killed the Indian. The Indian usually had the worst of it; he not only got killed by the regulars, but he got whipped by the home guard at night for staining himself and his clothes with the elderberry.

But once a year the company had a superlative parade. This was when the military company from the north part of the town joined the villagers in a general muster. This was an infantry company, and not to be compared with that of the village in point of evolutions. There was a great and natural hatred between the north town boys and the center. I don't know why, but no contiguous African tribes could be more hostile. It was all right for one of either section to "lick" the other if he could, or for half a dozen to "lick" one of the enemy if they caught him alone. The notion of honor, as of mercy, comes into the boy only when he is pretty well grown; to some neither ever comes. And yet there was an artificial military courtesy (something like that existing in the feudal age, no doubt) which put the meeting of these two rival and mutually detested companies on a high plane of behavior. It was beautiful to see the seriousness of this lofty and studied condescension on both sides. For the time everything was under martial law. The village company being the senior, its captain commanded the united battalion in the march, and this put John temporarily into the position of captain, with the right to march at the head and "holler;" a responsibility which realized all his hopes of glory. I suppose there has yet been discovered by man no gratification like that of marching at the head of a column in uniform on parade, unless, perhaps, it is marching at their head when they are leaving a field of battle. John experienced all the thrill of this conspicuous authority, and I daresay that nothing in his later life has so exalted him in his own esteem; certainly nothing has since happened that was so important as the events of that parade day seemed. He satiated himself with all the delights of war.

It is impossible to say at what age a New England country-boy becomes conscious that his trousers-legs are too short, and is anxious about the part of his hair and the fit of his woman-made roundabout. These harrowing thoughts come to him later than to the city lad. At least, a generation ago he served a long apprenticeship with nature only for a master, absolutely unconscious of the artificialities of life.

But I do not think his early education was neglected. And yet it is easy to underestimate the influences that, unconsciously to him, were expanding his mind and nursing in him heroic purposes. There was the lovely but narrow valley, with its rapid mountain stream; there were the great hills which he climbed, only to see other hills stretching away to a broken and tempting horizon; there were the rocky pastures, and the wide sweeps of forest through which the winter tempests howled, upon which hung the haze of summer heat, over which the great shadows of summer clouds traveled; there were the clouds themselves, shouldering up above the peaks, hurrying across the narrow sky,—the clouds out of which the wind came, and the lightning and the sudden dashes of rain; and there were days when the sky was ineffably blue and distant, a fathomless vault of heaven where the hen-hawk and the eagle poised on outstretched wings and watched for their prey. Can you say how these things fed the imagination of the boy, who had few books and no contact with the great world? Do you think any city lad could have written "Thanatopsis" at eighteen?

If you had seen John, in his short and roomy trousers and ill-used straw hat, picking his barefooted way over the rocks along the river-bank of a cool morning to see if an eel had "got on," you would not have fancied that he lived in an ideal world. Nor did he consciously. So far as he knew, he had no more sentiment than a jack-knife. Although he loved Cynthia Rudd devotedly, and blushed scarlet one day when his cousin found a lock of Cynthia's flaming hair in the box where John kept his fishhooks, spruce gum, flag-root, tickets of standing at the head, gimlet, billets-doux in blue ink, a vile liquid in a bottle to make fish bite, and other precious possessions, yet Cynthia's society had no attractions for him comparable to a day's trout-fishing. She was, after all, only a single and a very undefined item in his general ideal world, and there was no harm in letting his imagination play about her illumined head. Since Cynthia had "got religion" and John had got nothing, his love was tempered with a little awe and a feeling of distance.

SLIPPERY WORK

He was not fickle, and yet I cannot say that he was not ready to construct a new romance, in which Cynthia should be eliminated. Nothing was easier. Perhaps it was a luxurious traveling carriage, drawn by two splendid horses in plated harness, driven along the sandy road. There were a gentleman and a young lad on the front seat, and on the back seat a handsome pale lady with a little girl beside her. Behind, on the rack with the trunk, was a colored boy, an imp out of a story-book. John was told that the black boy was a slave, and that the carriage was from Baltimore. Here was a chance for a romance. Slavery, beauty, wealth, haughtiness, especially on the part of the slender boy on the front seat,—here was an opening into a vast

realm. The high-stepping horses and the shining harness were enough to excite John's admiration, but these were nothing to the little girl. His eyes had never before fallen upon that kind of girl; he had hardly imagined that such a lovely creature could exist. Was it the soft and dainty toilet, was it the brown curls, or the large laughing eyes, or the delicate, finely cut features, or the charming little figure of this fairy-like person? Was this expression on her mobile face merely that of amusement at seeing a country-boy? Then John hated her. On the contrary, did she see in him what John felt himself to be? Then he would go the world over to serve her. In a moment he was self-conscious. His trousers seemed to creep higher up his legs, and he could feel his very ankles blush. He hoped that she had not seen the other side of him, for, in fact, the patches were not of the exact shade of the rest of the cloth. The vision flashed by him in a moment, but it left him with a resentful feeling. Perhaps that proud little girl would be sorry some day, when he had become a general, or written a book, or kept a store, to see him go away and marry another. He almost made up his cruel mind on the instant that he would never marry her, however bad she might feel. And yet he could n't get her out of his mind for days and days, and when her image was present, even Cynthia in the singers' seat on Sunday looked a little cheap and common.

Poor Cynthia! Long before John became a general or had his revenge on the Baltimore girl, she married a farmer and was the mother of children, red-headed; and when John saw her years after, she looked tired and discouraged, as one who has carried into womanhood none of the romance of her youth.

Fishing and dreaming, I think, were the best amusements John had. The middle pier of the long covered bridge over the river stood upon a great rock, and this rock (which was known as the swimming-rock, whence the boys on summer evenings dove into the deep pool by its side) was a favorite spot with John when he could get an hour or two from the everlasting "chores." Making his way out to it over the rocks at low water with his fish-pole, there he was content to sit and observe the world; and there he saw a great deal of life. He always expected to catch the legendary trout which weighed two pounds and was believed to inhabit that pool. He always did catch horned dace and shiners, which he despised, and sometimes he snared a monstrous sucker a foot and a half long. But in the summer the sucker is a flabby fish, and John was not thanked for bringing him home. He liked, however, to lie with his face close to the water and watch the long fishes panting in the clear depths, and occasionally he would drop a pebble near one to see how gracefully he would scud away with one wave of the tail into deeper water. Nothing fears the little brown boy. The yellow-bird slants his wings, almost touches the deep water before him, and then escapes away under the bridge to the east with a glint of sunshine on his back; the fish-hawk comes down with a swoop, dips one wing, and, his prey having darted under a stone, is away again over the still hill, high soaring on even-poised pinions, keeping an eye perhaps upon the great eagle which is sweeping the sky in widening circles.

But there is other life. A wagon rumbles over the bridge, and the farmer and his wife, jogging along, do not know that they have startled a lazy boy into a momentary fancy that a thunder-shower is coming up. John can see as he lies there on a still summer day, with the fishes and the birds for company, the road that comes down the left bank of the river,—a hot, sandy, well-traveled road, hidden from view here and there by trees and bushes. The chief point of interest, however, is an enormous sycamore-tree by the roadside and in front of John's house. The house is more than a century old, and its timbers were hewed and squared by Captain

Moses Rice (who lies in his grave on the hillside above it), in the presence of the Red Man who killed him with arrow and tomahawk some time after his house was set in order. The gigantic tree, struck with a sort of leprosy, like all its species, appears much older, and of course has its tradition. They say that it grew from a green stake which the first land-surveyor planted there for one of his points of sight. John was reminded of it years after when he sat under the shade of the decrepit lime-tree in Freiburg and was told that it was originally a twig which the breathless and bloody messenger carried in his hand when he dropped exhausted in the square with the word "Victory!" on his lips, announcing thus the result of the glorious battle of Morat, where the Swiss in 1476 defeated Charles the Bold. Under the broad but scanty shade of the great button-ball tree (as it was called) stood an old watering-trough, with its half-decayed penstock and well-worn spout pouring forever cold, sparkling water into the overflowing trough. It is fed by a spring near by, and the water is sweeter and colder than any in the known world, unless it be the well Zem-zem, as generations of people and horses which have drunk of it would testify, if they could come back. And if they could file along this road again, what a procession there would be riding down the valley!—antiquated vehicles, rusty wagons adorned with the invariable buffalo-robe even in the hottest days, lean and long-favored horses, frisky colts, drawing, generation after generation, the sober and pious saints, that passed this way to meeting and to mill.

What a refreshment is that water-spout! All day long there are pilgrims to it, and John likes nothing better than to watch them. Here comes a gray horse drawing a buggy with two men,—cattle buyers, probably. Out jumps a man, down goes the check-rein. What a good draught the nag takes! Here comes a long-stepping trotter in a sulky; man in a brown linen coat and wide-awake hat,—dissolute, horsey-looking man. They turn up, of course. Ah, there is an establishment he knows well: a sorrel horse and an old chaise. The sorrel horse scents the water afar off, and begins to turn up long before he reaches the trough, thrusting out his nose in anticipation of the coot sensation. No check to let down; he plunges his nose in nearly to his eyes in his haste to get at it. Two maiden ladies—unmistakably such, though they appear neither "anxious nor aimless"—within the scoop-top smile benevolently on the sorrel back. It is the deacon's horse, a meeting-going nag, with a sedate, leisurely jog as he goes; and these are two of the "salt of the earth,"—the brevet rank of the women who stand and wait,—going down to the village store to dicker. There come two men in a hurry, horse driven up smartly and pulled up short; but as it is rising ground, and the horse does not easily reach the water with the wagon pulling back, the nervous man in the buggy hitches forward on his seat, as if that would carry the wagon a little ahead! Next, lumber-wagon with load of boards; horse wants to turn up, and driver switches him and cries "G'lang," and the horse reluctantly goes by, turning his head wistfully towards the flowing spout. Ah, here comes an equipage strange to these parts, and John stands up to look; an elegant carriage and two horses; trunks strapped on behind; gentleman and boy on front seat and two ladies on back seat,—city people. The gentleman descends, unchecks the horses, wipes his brow, takes a drink at the spout and looks around, evidently remarking upon the lovely view, as he swings his handkerchief in an explanatory manner. Judicious travelers. John would like to know who they are. Perhaps they are from Boston, whence come all the wonderfully painted peddlers' wagons drawn by six stalwart horses, which the driver, using no rein, controls with his long whip and cheery voice. If so, great is the condescension of Boston; and John follows them with an undefined longing as they drive away toward the mountains of Zoar. Here is a footman, dusty and tired, who comes with lagging steps. He stops, removes his hat, as he should to such a tree, puts his mouth to the spout, and takes a long pull at the lively water. And then he goes on, perhaps to Zoar, perhaps to a worse place.

So they come and go all the summer afternoon; but the great event of the day is the passing down the valley of the majestic stage-coach,—the vast yellow-bodied, rattling vehicle. John can hear a mile off the shaking of chains, traces, and whiffle-trees, and the creaking of its leathern braces, as the great bulk swings along piled high with trunks. It represents to John, somehow, authority, government, the right of way; the driver is an autocrat, everybody must make way for the stage-coach. It almost satisfies the imagination, this royal vehicle; one can go in it to the confines of the world,—to Boston and to Albany.

There were other influences that I daresay contributed to the boy's education. I think his imagination was stimulated by a band of gypsies who used to come every summer and pitch a tent on a little roadside patch of green turf by the river-bank not far from his house. It was shaded by elms and butternut-trees, and a long spit of sand and pebbles ran out from it into the brawling stream. Probably they were not a very good kind of gypsy, although the story was that the men drank and beat the women. John didn't know much about drinking; his experience of it was confined to sweet cider; yet he had already set himself up as a reformer, and joined the Cold Water Band. The object of this Band was to walk in a procession under a banner that declared,

*"So here we pledge perpetual hate
To all that can intoxicate;"*

and wear a badge with this legend, and above it the device of a well-curb with a long sweep. It kept John and all the little boys and girls from being drunkards till they were ten or eleven years of age; though perhaps a few of them died meantime from eating loaf-cake and pie and drinking ice-cold water at the celebrations of the Band.

The gypsy camp had a strange fascination for John, mingled of curiosity and fear. Nothing more alien could come into the New England life than this tatterdemalion band. It was hardly credible that here were actually people who lived out-doors, who slept in their covered wagon or under their tent, and cooked in the open air; it was a visible romance transferred from foreign lands and the remote times of the story-books; and John took these city thieves, who were on their annual foray into the country, trading and stealing horses and robbing hen-roosts and cornfields, for the mysterious race who for thousands of years have done these same things in all lands, by right of their pure blood and ancient lineage. John was afraid to approach the camp when any of the scowling and villainous men were lounging about, pipes in mouth; but he took more courage when only women and children were visible. The swarthy, black-haired women in dirty calico frocks were anything but attractive, but they spoke softly to the boy, and told his fortune, and wheedled him into bringing them any amount of cucumbers and green corn in the course of the season. In front of the tent were planted

in the ground three poles that met together at the top, whence depended a kettle. This was the kitchen, and it was sufficient. The fuel for the fire was the driftwood of the stream. John noted that it did not require to be sawed into stove-lengths; and, in short, that the "chores" about this establishment were reduced to the minimum. And an older person than John might envy the free life of these wanderers, who paid neither rent nor taxes, and yet enjoyed all the delights of nature. It seemed to the boy that affairs would go more smoothly in the world if everybody would live in this simple manner. Nor did he then know, or ever after find out, why it is that the world permits only wicked people to be Bohemians.

XIX. A CONTRAST TO THE NEW ENGLAND BOY

One evening at vespers in Genoa, attracted by a burst of music from the swinging curtain of the doorway, I entered a little church much frequented by the common people. An unexpected and exceedingly pretty sight rewarded me.

It was All Souls' Day. In Italy almost every day is set apart for some festival, or belongs to some saint or another, and I suppose that when leap year brings around the extra day, there is a saint ready to claim the 29th of February. Whatever the day was to the elders, the evening was devoted to the children. The first thing I noticed was, that the quaint old church was lighted up with innumerable wax tapers,—an uncommon sight, for the darkness of a Catholic church in the evening is usually relieved only by a candle here and there, and by a blazing pyramid of them on the high altar. The use of gas is held to be a vulgar thing all over Europe, and especially unfit for a church or an aristocratic palace.

THE OLD WATERING TROUGH

Then I saw that each taper belonged to a little boy or girl, and the groups of children were scattered all about the church. There was a group by every side altar and chapel, all the benches were occupied by knots of them, and there were so many circles of them seated on the pavement that I could with difficulty make my way among them. There were hundreds of children in the church, all dressed in their holiday apparel, and all intent upon the illumination, which seemed to be a private affair to each one of them.

And not much effect had their tapers upon the darkness of the vast vaults above them. The tapers were little spiral coils of wax, which the children unrolled as fast as they burned, and when they were tired of holding them, they rested them on the ground and watched the burning. I stood some time by a group of a dozen seated in a corner of the church. They had massed all the tapers in the center and formed a ring about the spectacle, sitting with their legs straight out before them and their toes turned up. The light shone full in their happy faces, and made the group, enveloped otherwise in darkness, like one of Correggio's pictures of children or angels. Correggio was a famous Italian artist of the sixteenth century, who painted cherubs like children who were just going to heaven, and children like cherubs who had just come out of it. But then, he had the Italian children for models, and they get the knack of being lovely very young. An Italian child finds it as easy to be pretty as an American child to be good.

One could not but be struck with the patience these little people exhibited in their occupation, and the enjoyment they got out of it. There was no noise; all conversed in subdued whispers and behaved in the most gentle manner to each other, especially to the smallest, and there were many of them so small that they could only toddle about by the most judicious exercise of their equilibrium. I do not say this by way of reproof to any other kind of children.

These little groups, as I have said, were scattered all about the church; and they made with their tapers little spots of light, which looked in the distance very much like Correggio's picture which is at Dresden,—the Holy Family at Night, and the light from the Divine Child blazing in the faces of all the attendants. Some of the children were infants in the nurses' arms, but no one was too small to have a taper, and to run the risk of burning its fingers.

There is nothing that a baby likes more than a lighted candle, and the church has understood this longing in human nature, and found means to gratify it by this festival of tapers.

The groups do not all remain long in place, you may imagine; there is a good deal of shifting about, and I see little stragglers wandering over the church, like fairies lighted by fireflies. Occasionally they form a little procession and march from one altar to another, their lights twinkling as they go.

But all this time there is music pouring out of the organ-loft at the end of the church, and flooding all its spaces with its volume. In front of the organ is a choir of boys, led by a round-faced and jolly monk, who rolls

about as he sings, and lets the deep bass noise rumble about a long time in his stomach before he pours it out of his mouth. I can see the faces of all of them quite well, for each singer has a candle to light his music-book.

And next to the monk stands the boy,—the handsomest boy in the whole world probably at this moment. I can see now his great, liquid, dark eyes, and his exquisite face, and the way he tossed back his long waving hair when he struck into his part. He resembled the portraits of Raphael, when that artist was a boy; only I think he looked better than Raphael, and without trying, for he seemed to be a spontaneous sort of boy. And how that boy did sing! He was the soprano of the choir, and he had a voice of heavenly sweetness. When he opened his mouth and tossed back his head, he filled the church with exquisite melody.

He sang like a lark, or like an angel. As we never heard an angel sing, that comparison is not worth much. I have seen pictures of angels singing, there is one by Jan and Hubert Van Eyck in the gallery at Berlin,—and they open their mouths like this boy, but I can't say as much for their singing. The lark, which you very likely never heard either, for larks are as scarce in America as angels,—is a bird that springs up from the meadow and begins to sing as he rises in a spiral flight, and the higher he mounts, the sweeter he sings, until you think the notes are dropping out of heaven itself, and you hear him when he is gone from sight, and you think you hear him long after all sound has ceased.

And yet this boy sang better than a lark, because he had more notes and a greater compass and more volume, although he shook out his voice in the same gleesome abundance.

I am sorry that I cannot add that this ravishingly beautiful boy was a good boy. He was probably one of the most mischievous boys that was ever in an organ-loft. All the time that he was singing the vespers he was skylarking like an imp. While he was pouring out the most divine melody, he would take the opportunity of kicking the shins of the boy next to him, and while he was waiting for his part, he would kick out behind at any one who was incautious enough to approach him. There never was such a vicious boy; he kept the whole loft in a ferment. When the monk rumbled his bass in his stomach, the boy cut up monkey-shines that set every other boy into a laugh, or he stirred up a row that set them all at fisticuffs.

And yet this boy was a great favorite. The jolly monk loved him best of all and bore with his wildest pranks. When he was wanted to sing his part and was skylarking in the rear, the fat monk took him by the ear and brought him forward; and when he gave the boy's ear a twist, the boy opened his lovely mouth and poured forth such a flood of melody as you never heard. And he did n't mind his notes; he seemed to know his notes by heart, and could sing and look off like a nightingale on a bough. He knew his power, that boy; and he stepped forward to his stand when he pleased, certain that he would be forgiven as soon as he began to sing. And such spirit and life as he threw into the performance, rollicking through the Vespers with a perfect abandon of carriage, as if he could sing himself out of his skin if he liked.

While the little angels down below were pattering about with their wax tapers, keeping the holy fire burning, suddenly the organ stopped, the monk shut his book with a bang, the boys blew out the candles, and I heard them all tumbling down-stairs in a gale of noise and laughter. The beautiful boy I saw no more.

About him plays the light of tender memory; but were he twice as lovely, I could never think of him as having either the simple manliness or the good fortune of the New England boy.

=====I=====

ON HORSEBACK

By Charles Dudley Warner

I

"The way to mount a horse"—said the Professor.

"If you have no ladder—put in the Friend of Humanity."

The Professor had ridden through the war for the Union on the right side, enjoying a much better view of it than if he had walked, and knew as much about a horse as a person ought to know for the sake of his character. The man who can recite the tales of the Canterbury Pilgrims, on horseback, giving the contemporary pronunciation, never missing an accent by reason of the trot, and at the same time with North Carolina and a strip of East Tennessee with his noble horsemanship, is a kind of Literary Centaur of whose double instruction any Friend of Humanity may be glad to avail himself.

"The way to mount a horse is to grasp the mane with the left hand holding the bridle-rein, put your left foot in the stirrup, with the right hand on the back of the saddle, and—"

Just then the horse stepped quickly around on his hind feet, and looked the Professor in the face. The Superintendents of Affairs, who occupy the flagging in front of the hotel, seated in cane-bottomed chairs tilted back, smiled. These useful persons appear to have a life-lease of this portion of the city pavement, and pretty effectually block it up nearly all day and evening. When a lady wishes to make her way through the blockade, it is the habit of these observers of life to rise and make room, touching their hats, while she picks her way through, and goes down the street with a pretty consciousness of the flutter she has caused. The war has not changed the Southern habit of sitting out-of-doors, but has added a new element of street picturesqueness in groups of colored people lounging about the corners. There appears to be more leisure than ever.

The scene of this little lesson in horsemanship was the old town of Abingdon, in southwest Virginia, on the Virginia and East Tennessee railway; a town of ancient respectability, which gave birth to the Johnstons and Floyds and other notable people; a town, that still preserves the flavor of excellent tobacco and, something of the easy-going habits of the days of slavery, and is a sort of educational center, where the young ladies of the region add the final graces of intellectual life in moral philosophy and the use of the globes to their natural gifts. The mansion of the late and left Floyd is now a seminary, and not far from it is the Stonewall Jackson Institute, in the midst of a grove of splendid oaks, whose stately boles and wide-spreading branches give a dignity to educational life. The distinction of the region is its superb oak-trees. As it was vacation in these institutions of learning, the travelers did not see any of the vines that traditionally cling to the oak.

The Professor and the Friend of Humanity were about starting on a journey, across country southward, through regions about which the people of Abingdon could give little useful information. If the travelers had known the capacities and resources of the country, they would not have started without a supply train, or the establishment of bases of provisions in advance. But, as the Professor remarked, knowledge is something that one acquires when he has no use for it. The horses were saddled; the riders were equipped with flannel shirts and leather leggings; the saddle-bags were stuffed with clean linen, and novels, and sonnets of Shakespeare, and other baggage, it would have been well if they had been stuffed with hard-tack, for in real life meat is more than raiment.

The hotel, in front of which there is cultivated so much of what the Germans call *sitzfleisch*, is a fair type of the majority of Southern hotels, and differs from the same class in the North in being left a little more to run itself. The only information we obtained about it was from its porter at the station, who replied to the question, "Is it the best?" "We warrant you perfect satisfaction in every respect." This seems to be only a formula of expression, for we found that the statement was highly colored. It was left to our imagination to conjecture how the big chambers of the old house, with their gaping fireplaces, might have looked when furnished and filled with gay company, and we got what satisfaction we could out of a bygone bustle and mint-julep hilarity. In our struggles with the porter to obtain the little items of soap, water, and towels, we were convinced that we had arrived too late, and that for perfect satisfaction we should have been here before the war. It was not always as now. In colonial days the accommodations and prices at inns were regulated by law. In the old records in the court-house we read that if we had been here in 1777, we could have had a gallon of good rum for sixteen shillings; a quart bowl of rum toddy made with loaf sugar for two shillings, or with brown sugar for one shilling and sixpence. In 1779 prices had risen. Good rum sold for four pounds a gallon. It was ordered that a warm dinner should cost twelve shillings, a cold dinner nine shillings, and a good breakfast twelve shillings. But the item that pleased us most, and made us regret our late advent, was that for two shillings we could have had a "good lodging, with clean sheets." The colonists were fastidious people.

Abingdon, prettily situated on rolling hills, and a couple of thousand feet above the sea, with views of mountain peaks to the south, is a cheerful and not too exciting place for a brief sojourn, and hospitable and helpful to the stranger. We had dined—so much, at least, the public would expect of us—with a descendant of Pocahontas; we had assisted on Sunday morning at the dedication of a new brick Methodist church, the finest edifice in the region—a dedication that took a long time, since the bishop would not proceed with it until

money enough was raised in open meeting to pay the balance due on it: a religious act, though it did give a business aspect to the place at the time; and we had been the light spots in the evening service at the most aristocratic church of color. The irresponsibility of this amiable race was exhibited in the tardiness with which they assembled: at the appointed time nobody was there except the sexton; it was three quarters of an hour before the congregation began to saunter in, and the sermon was nearly over before the pews were at all filled. Perhaps the sermon was not new, but it was fervid, and at times the able preacher roared so that articulate sounds were lost in the general effect. It was precisely these passages of cataracts of sound and hard breathing which excited the liveliest responses,—“Yes, Lord,” and “Glory to God.” Most of these responses came from the “Amen corner.” The sermon contained the usual vivid description of the last judgment—ah, and I fancied that the congregation did not get the ordinary satisfaction out of it. Fashion had entered the fold, and the singing was mostly executed by a choir in the dusky gallery, who thinly and harshly warbled the emotional hymns. It occupied the minister a long time to give out the notices of the week, and there was not an evening or afternoon that had not its meetings, its literary or social gathering, its picnic or fair for the benefit of the church, its Dorcas society, or some occasion of religious sociability. The raising of funds appeared to be the burden on the preacher's mind. Two collections were taken up. At the first, the boxes appeared to get no supply except from the two white trash present. But the second was more successful. After the sermon was over, an elder took his place at a table within the rails, and the real business of the evening began. Somebody in the Amen corner struck up a tune that had no end, but a mighty power of setting the congregation in motion. The leader had a voice like the pleasant droning of a bag-pipe, and the faculty of emitting a continuous note like that instrument, without stopping to breathe. It went on and on like a Bach fugue, winding and whining its way, turning the corners of the lines of the catch without a break. The effect was soon visible in the emotional crowd: feet began to move in a regular cadence and voices to join in, with spurts of ejaculation; and soon, with an air of martyrdom, the members began to leave their seats and pass before the table and deposit their contributions. It was a cent contribution, and we found it very difficult, under the contagious influence of the hum from the Amen corner, not to rise and go forward and deposit a cent. If anything could extract the pennies from a reluctant worldling, it would be the buzzing of this tune. It went on and on, until the house appeared to be drained dry of its cash; and we inferred by the stopping of the melody that the preacher's salary was secure for the time being. On inquiring, we ascertained that the pecuniary flood that evening had risen to the height of a dollar and sixty cents.

All was ready for the start. It should have been early in the morning, but it was not; for Virginia is not only one of the blessed regions where one can get a late breakfast, but where it is almost impossible to get an early one. At ten A. M. the two horsemen rode away out of sight of the Abingdon spectators, down the eastern turnpike. The day was warm, but the air was full of vitality and the spirit of adventure. It was the 22d of July. The horses were not ambitious, but went on at an easy fox-trot that permits observation and encourages conversation. It had been stipulated that the horses should be good walkers, the one essential thing in a horseback journey. Few horses, even in a country where riding is general, are trained to walk fast. We hear much of horses that can walk five miles an hour, but they are as rare as white elephants. Our horses were only fair walkers. We realized how necessary this accomplishment is, for between the Tennessee line and Asheville, North Carolina, there is scarcely a mile of trotting-ground.

We soon turned southward and descended into the Holston River Valley. Beyond lay the Tennessee hills and conspicuous White-Top Mountain (5530 feet), which has a good deal of local celebrity (standing where the States of Virginia, Tennessee, and North Carolina corner), and had been pointed out to us at Abingdon. We had been urged, personally and by letter, to ascend this mountain, without fail. People recommend mountains to their friends as they do patent medicines. As we leisurely jogged along we discussed this, and endeavored to arrive at some rule of conduct for the journey. The Professor expressed at once a feeling about mountain-climbing that amounted to hostility,—he would go nowhere that he could not ride. Climbing was the most unsatisfactory use to which a mountain could be put. As to White-Top, it was a small mountain, and not worth ascending. The Friend of Humanity, who believes in mountain-climbing as a theory, and for other people, and knows the value of being able to say, without detection, that he has ascended any high mountain about which he is questioned,—since this question is the first one asked about an exploration in a new country,—saw that he should have to use a good deal of diplomacy to get the Professor over any considerable elevation on the trip. And he had to confess also that a view from a mountain is never so satisfactory as a view of a mountain, from a moderate height. The Professor, however, did not argue the matter on any such reasonable ground, but took his stand on his right as a man not to ascend a mountain. With this appeal to first principles,—a position that could not be refuted on account of its vagueness (although it might probably be demonstrated that in society man has no such right), there was no way of agreement except by a compromise. It was accordingly agreed that no mountain under six thousand feet is worth ascending; that disposed of White-Top. It was further agreed that any mountain that is over six thousand feet high is too high to ascend on foot.

With this amicable adjustment we forded the Holston, crossing it twice within a few miles. This upper branch of the Tennessee is a noble stream, broad, with a rocky bed and a swift current. Forging it is ticklish business except at comparatively low water, and as it is subject to sudden rises, there must be times when it seriously interrupts travel. This whole region, full of swift streams, is without a bridge, and, as a consequence, getting over rivers and brooks and the dangers of ferries occupy a prominent place in the thoughts of the inhabitants. The life necessarily had the “frontier” quality all through, for there can be little solid advance in civilization in the uncertainties of a bridgeless condition. An open, pleasant valley, the Holston, but cultivation is more and more negligent and houses are few and poorer as we advance.

We had left behind the hotels of “perfect satisfaction,” and expected to live on the country, trusting to the infrequent but remunerated hospitality of the widely scattered inhabitants. We were to dine at Ramsey's. Ramsey's had been recommended to us as a royal place of entertainment the best in all that region; and as the sun grew hot in the sandy valley, and the weariness of noon fell upon us, we magnified Ramsey's in our imagination,—the nobility of its situation, its cuisine, its inviting restfulness,—and half decided to pass the night there in the true abandon of plantation life. Long before we reached it, the Holston River which we followed had become the Laurel, a most lovely, rocky, winding stream, which we forded continually, for the valley became too narrow much of the way to accommodate a road and a river. Eagerly as we were looking

out for it, we passed the great Ramsey's without knowing it, for it was the first of a little settlement of two houses and a saw-mill and barn. It was a neat log house of two lower rooms and a summer kitchen, quite the best of the class that we saw, and the pleasant mistress of it made us welcome. Across the road and close, to the Laurel was the spring-house, the invariable adjunct to every well-to-do house in the region, and on the stony margin of the stream was set up the big caldron for the family washing; and here, paddling in the shallow stream, while dinner was preparing, we established an intimacy with the children and exchanged philosophical observations on life with the old negress who was dabbling the clothes. What impressed this woman was the inequality in life. She jumped to the unwarranted conclusion that the Professor and the Friend were very rich, and spoke with asperity of the difficulty she experienced in getting shoes and tobacco. It was useless to point out to her that her alfresco life was singularly blessed and free from care, and the happy lot of any one who could loiter all day by this laughing stream, undisturbed by debt or ambition. Everybody about the place was barefooted, except the mistress, including the comely daughter of eighteen, who served our dinner in the kitchen. The dinner was abundant, and though it seemed to us incongruous at the time, we were not twelve hours older when we looked back upon it with longing. On the table were hot biscuit, ham, pork, and green beans, apple-sauce, blackberry preserves, cucumbers, coffee, plenty of milk, honey, and apple and blackberry pie. Here we had our first experience, and I may say new sensation, of "honey on pie." It has a cloying sound as it is written, but the handmaiden recommended it with enthusiasm, and we evidently fell in her esteem, as persons from an uncultivated society, when we declared our inexperience of "honey on pie." "Where be you from?" It turned out to be very good, and we have tried to introduce it in families since our return, with indifferent success. There did not seem to be in this family much curiosity about the world at large, nor much stir of social life. The gayety of madame appeared to consist in an occasional visit to paw and maw and grandmaw, up the river a few miles, where she was raised.

Refreshed by the honey and fodder at Ramsey's, the pilgrims went gayly along the musical Laurel, in the slanting rays of the afternoon sun, which played upon the rapids and illumined all the woody way. Inspired by the misapprehension of the colored philosopher and the dainties of the dinner, the Professor soliloquized:

*"So am I as the rich, whose blessed key
Can bring him to his sweet up-locked treasure,
The which he will not every hour survey,
For blunting the fine point of seldom pleasure.
Therefore are feasts so solemn and so rare,
Since seldom coming, in the long year set,
Like stones of wealth they thinly placed are,
Or captain jewels in the carcanet."*

Five miles beyond Ramsey's the Tennessee line was crossed. The Laurel became more rocky, swift, full of rapids, and the valley narrowed down to the riverway, with standing room, however, for stately trees along the banks. The oaks, both black and white, were, as they had been all day, gigantic in size and splendid in foliage. There is a certain dignity in riding in such stately company, and the travelers clattered along over the stony road under the impression of possible high adventure in a new world of such freshness. Nor was beauty wanting. The rhododendrons had, perhaps, a week ago reached their climax, and now began to strew the water and the ground with their brilliant petals, dashing all the way with color; but they were still matchlessly beautiful. Great banks of pink and white covered the steep hillsides; the bending stems, ten to twenty feet high, hung their rich clusters over the river; avenues of glory opened away in the glade of the stream; and at every turn of the winding way vistas glowing with the hues of romance wrenched exclamations of delight and wonder from the Shakespearean sonneteer and his humble Friend. In the deep recesses of the forest suddenly flamed to the view, like the splashes of splendor on the somber canvas of an old Venetian, these wonders of color,—the glowing summer-heart of the woods.

It was difficult to say, meantime, whether the road was laid out in the river, or the river in the road. In the few miles to Egger's (this was the destination of our great expectations for the night) the stream was crossed twenty-seven times,—or perhaps it would be more proper to say that the road was crossed twenty-seven times. Where the road did not run in the river, its bed was washed out and as stony as the bed of the stream. This is a general and accurate description of all the roads in this region, which wind along and in the streams, through narrow valleys, shut in by low and steep hills. The country is full of springs and streams, and between Abingdon and Egger's is only one (small) bridge. In a region with scarcely any level land or intervale, farmers are at a disadvantage. All along the road we saw nothing but mean shanties, generally of logs, with now and then a decent one-story frame, and the people looked miserably poor.

As we picked our way along up the Laurel, obliged for the most part to ride single-file, or as the Professor expressed it,

*"Let me confess that we two must be twain,
Although our undivided loves are one,"*

we gathered information about Egger's from the infrequent hovels on the road, which inflamed our imaginations. Egger was the thriving man of the region, and lived in style in a big brick house. We began to feel a doubt that Egger would take us in, and so much did his brick magnificence impress us that we regretted we had not brought apparel fit for the society we were about to enter.

It was half-past six, and we were tired and hungry, when the domain of Egger towered in sight,—a gaunt, two-story structure of raw brick, unfinished, standing in a narrow intervale. We rode up to the gate, and asked a man who sat in the front-door porch if this was Egger's, and if we could be accommodated for the night. The man, without moving, allowed that it was Egger's, and that we could probably stay there. This person, however, exhibited so much indifference to our company, he was such a hairy, unkempt man, and carried on face, hands, and clothes so much more of the soil of the region than a prudent proprietor would divert from raising corn, that we set him aside as a poor relation, and asked for Mr. Egger. But the man, still without the least hospitable stir, admitted that that was the name he went by, and at length advised us to "lite" and hitch our horses, and sit on the porch with him and enjoy the cool of the evening. The horses would

be put up by and by, and in fact things generally would come round some time. This turned out to be the easy way of the country. Mr. Egger was far from being inhospitable, but was in no hurry, and never had been in a hurry. He was not exactly a gentleman of the old school. He was better than that. He dated from the time when there were no schools at all, and he lived in that placid world which is without information and ideas. Mr. Egger showed his superiority by a total lack of curiosity about any other world.

This brick house, magnificent by comparison with other dwellings in this country, seemed to us, on nearer acquaintance, only a thin, crude shell of a house, half unfinished, with bare rooms, the plastering already discolored. In point of furnishing it had not yet reached the "God bless our Home" stage in crewel. In the narrow meadow, a strip of vivid green south of the house, ran a little stream, fed by a copious spring, and over it was built the inevitable spring-house. A post, driven into the bank by the stream, supported a tin wash-basin, and here we performed our ablutions. The traveler gets to like this freedom and primitive luxury.

The farm of Egger produces corn, wheat, grass, and sheep; it is a good enough farm, but most of it lies at an angle of thirty-five to forty degrees. The ridge back of the house, planted in corn, was as steep as the roof of his dwelling. It seemed incredible that it ever could have been plowed, but the proprietor assured us that it was plowed with mules, and I judged that the harvesting must be done by squirrels. The soil is good enough, if it would stay in place, but all the hillsides are seamed with gullies. The discolored state of the streams was accounted for as soon as we saw this cultivated land. No sooner is the land cleared of trees and broken up than it begins to wash. We saw more of this later, especially in North Carolina, where we encountered no stream of water that was not muddy, and saw no cultivated ground that was not washed. The process of denudation is going on rapidly wherever the original forests are girdled (a common way of preparing for crops), or cut away.

As the time passed and there was no sign of supper, the question became a burning one, and we went to explore the kitchen. No sign of it there. No fire in the stove, nothing cooked in the house, of course. Mrs. Egger and her comely young barefooted daughter had still the milking to attend to, and supper must wait for the other chores. It seemed easier to be Mr. Egger, in this state of existence, and sit on the front porch and meditate on the price of mules and the prospect of a crop, than to be Mrs. Egger, whose work was not limited from sun to sun; who had, in fact, a day's work to do after the men-folks had knocked off; whose chances of neighborhood gossip were scanty, whose amusements were confined to a religious meeting once a fortnight. Good, honest people these, not unduly puffed up by the brick house, grubbing away year in and year out. Yes, the young girl said, there was a neighborhood party, now and then, in the winter. What a price to pay for mere life!

Long before supper was ready, nearly nine o'clock, we had almost lost interest in it. Meantime two other guests had arrived, a couple of drovers from North Carolina, who brought into the circle—by this time a wood-fire had been kindled in the sitting-room, which contained a bed, an almanac, and some old copies of a newspaper—a rich flavor of cattle, and talk of the price of steers. As to politics, although a presidential campaign was raging, there was scarcely an echo of it here. This was Johnson County, Tennessee, a strong Republican county but dog-gone it, says Mr. Egger, it's no use to vote; our votes are overborne by the rest of the State. Yes, they'd got a Republican member of Congress,—he'd heard his name, but he'd forgotten it. The drover said he'd heard it also, but he didn't take much interest in such things, though he wasn't any Republican. Parties is pretty much all for office, both agreed. Even the Professor, who was traveling in the interest of Reform, couldn't wake up a discussion out of such a state of mind.

Alas! the supper, served in a room dimly lighted with a smoky lamp, on a long table covered with oilcloth, was not of the sort to arouse the delayed and now gone appetite of a Reformer, and yet it did not lack variety: cornpone (Indian meal stirred up with water and heated through), hot biscuit, slack-baked and livid, fried salt-pork swimming in grease, apple-butter, pickled beets, onions and cucumbers raw, coffee (so-called), buttermilk, and sweet milk when specially asked for (the correct taste, however, is for buttermilk), and pie. This was not the pie of commerce, but the pie of the country,—two thick slabs of dough, with a squeezing of apple between. The profusion of this supper staggered the novices, but the drovers attacked it as if such cooking were a common occurrence and did justice to the weary labors of Mrs. Egger.

Egger is well prepared to entertain strangers, having several rooms and several beds in each room. Upon consultation with the drovers, they said they'd just as soon occupy an apartment by themselves, and we gave up their society for the night. The beds in our chamber had each one sheet, and the room otherwise gave evidence of the modern spirit; for in one corner stood the fashionable aesthetic decoration of our Queen Anne drawing-rooms,—the spinning-wheel. Soothed by this concession to taste, we crowded in between the straw and the home-made blanket and sheet, and soon ceased to hear the barking of dogs and the horned encounters of the drovers' herd.

We parted with Mr. Egger after breakfast (which was a close copy of the supper) with more respect than regret. His total charge for the entertainment of two men and two horses—supper, lodging, and breakfast—was high or low, as the traveler chose to estimate it. It was \$1.20: that is, thirty cents for each individual, or ten cents for each meal and lodging.

Our road was a sort of by-way up Gentry Creek and over the Cut Laurel Gap to Worth's, at Creston Post Office, in North Carolina,—the next available halting place, said to be fifteen miles distant, and turning out to be twenty-two, and a rough road. There is a little settlement about Egger's, and the first half mile of our way we had the company of the schoolmistress, a modest, pleasant-spoken girl. Neither she nor any other people we encountered had any dialect or local peculiarity of speech. Indeed, those we encountered that morning had nothing in manner or accent to distinguish them. The novelists had led us to expect something different; and the modest and pretty young lady with frank and open blue eyes, who wore gloves and used the common English speech, had never figured in the fiction of the region. Cherished illusions vanish often on near approach. The day gave no peculiarity of speech to note, except the occasional use of "hit" for "it."

The road over Cut Laurel Gap was very steep and stony, the thermometer mounted up to 80 deg., and, notwithstanding the beauty of the way, the ride became tedious before we reached the summit. On the summit is the dwelling and distillery of a colonel famous in these parts. We stopped at the house for a glass of milk; the colonel was absent, and while the woman in charge went after it, we sat on the veranda and

conversed with a young lady, tall, gent, well favored, and communicative, who leaned in the doorway.

"Yes, this house stands on the line. Where you sit, you are in Tennessee; I'm in North Carolina."

"Do you live here?"

"Law, no; I'm just staying a little while at the colonel's. I live over the mountain here, three miles from Taylorsville. I thought I'd be where I could step into North Carolina easy."

"How's that?"

"Well, they wanted me to go before the grand jury and testify about some pistol-shooting down by our house, some friends of mine got into a little difficulty,—and I did n't want to. I never has no difficulty with nobody, never says nothing about nobody, has nothing against nobody, and I reckon nobody has nothing against me."

"Did you come alone?"

"Why, of course. I come across the mountain by a path through the woods. That's nothing."

A discreet, pleasant, pretty girl. This surely must be the Esmeralda who lives in these mountains, and adorns low life by her virgin purity and sentiment. As she talked on, she turned from time to time to the fireplace behind her, and discharged a dark fluid from her pretty lips, with accuracy of aim, and with a nonchalance that was not assumed, but belongs to our free-born American girls. I cannot tell why this habit of hers (which is no worse than the sister habit of "dipping") should take her out of the romantic setting that her face and figure had placed her in; but somehow we felt inclined to ride on farther for our heroine.

"And yet," said the Professor, as we left the site of the colonel's thriving distillery, and by a winding, picturesque road through a rough farming country descended into the valley,—“and yet, why fling aside so readily a character and situation so full of romance, on account of a habit of this mountain Helen, which one of our best poets has almost made poetical, in the case of the pioneer taking his westward way, with ox-goad pointing to the sky:

*"He's leaving on the pictured rock
His fresh tobacco stain."*

"To my mind the incident has Homeric elements. The Greeks would have looked at it in a large, legendary way. Here is Helen, strong and lithe of limb, ox-eyed, courageous, but woman-hearted and love-inspiring, contended for by all the braves and daring moonshiners of Cut Laurel Gap, pursued by the gallants of two States, the prize of a border warfare of bowie knives and revolvers. This Helen, magnanimous as attractive, is the witness of a pistol difficulty on her behalf, and when wanted by the areopagus, that she may neither implicate a lover nor punish an enemy (having nothing, this noble type of her sex against nobody), skips away to Mount Ida, and there, under the aegis of the flag of her country, in a Licensed Distillery, stands with one slender foot in Tennessee and the other in North Carolina..."

"Like the figure of the Republic itself, superior to state sovereignty," interposed the Friend.

"I beg your pardon," said the Professor, urging up Laura Matilda (for so he called the nervous mare, who fretted herself into a fever in the stony path), "I was quite able to get the woman out of that position without the aid of a metaphor. It is a large and Greek idea, that of standing in two mighty States, superior to the law, looking east and looking west, ready to transfer her agile body to either State on the approach of messengers of the court; and I'll be hanged if I didn't think that her nonchalant rumination of the weed, combined with her lofty moral attitude, added something to the picture."

The Friend said that he was quite willing to join in the extremest defense of the privileges of beauty,—that he even held in abeyance judgment on the practice of dipping; but when it came to chewing, gum was as far as he could go as an allowance for the fair sex.

*"When I consider everything that grows
Holds in perfection but a little moment..."*

The rest of the stanza was lost, for the Professor was splashing through the stream. No sooner had we descended than the fording of streams began again. The Friend had been obliged to stipulate that the Professor should go ahead at these crossings, to keep the impetuous nag of the latter from throwing half the contents of the stream upon his slower and uncomplaining companion.

What a lovely country, but for the heat of noon and the long wearisomeness of the way!—not that the distance was great, but miles and miles more than expected. How charming the open glades of the river, how refreshing the great forests of oak and chestnut, and what a panorama of beauty the banks of rhododendrons, now intermingled with the lighter pink and white of the laurel! In this region the rhododendron is called laurel and the laurel (the sheep-laurel of New England) is called ivy.

At Worth's, well on in the afternoon, we emerged into a wide, open farming intervale, a pleasant place of meadows and streams and decent dwellings. Worth's is the trading center of the region, has a post office and a saw-mill and a big country store; and the dwelling of the proprietor is not unlike a roomy New England country house. Worth's has been immemorially a stopping-place in a region where places of accommodation are few. The proprietor, now an elderly man, whose reminiscences are long ante bellum, has seen the world grow up about him, he the honored, just center of it, and a family come up into the modern notions of life, with a boarding-school education and glimpses of city life and foreign travel. I fancy that nothing but tradition and a remaining Southern hospitality could induce this private family to suffer the incursions of this wayfaring man. Our travelers are not apt to be surprised at anything in American life, but they did not expect to find a house in this region with two pianos and a bevy of young ladies, whose clothes were certainly not made on Cut Laurel Gap, and to read in the books scattered about the house the evidences of the finishing schools with which our country is blessed, nor to find here pupils of the Stonewall Jackson Institute at Abingdon. With a flush of local pride, the Professor took up, in the roomy, pleasant chamber set apart for the guests, a copy of Porter's "Elements of Moral Science."

"Where you see the 'Elements of Moral Science,'" the Friend generalized, "there'll be plenty of water and

towels;" and the sign did not fail. The friends intended to read this book in the cool of the day; but as they sat on the long veranda, the voice of a maiden reading the latest novel to a sewing group behind the blinds in the drawing-room; and the antics of a mule and a boy in front of the store opposite; and the arrival of a spruce young man, who had just ridden over from somewhere, a matter of ten miles' gallop, to get a medicinal potion for his sick mother, and lingered chatting with the young ladies until we began to fear that his mother would recover before his return; the coming and going of lean women in shakily wagons to trade at the store; the coming home of the cows, splashing through the stream, hooking right and left, and lowing for the hand of the milker,—all these interruptions, together with the generally drowsy quiet of the approach of evening, interfered with the study of the Elements. And when the travelers, after a refreshing rest, went on their way next morning, considering the Elements and the pianos and the refinement, to say nothing of the cuisine, which is not treated of in the text-book referred to, they were content with a bill double that of brother Egger, in his brick magnificence.

The simple truth is, that the traveler in this region must be content to feed on natural beauties. And it is an unfortunate truth in natural history that the appetite for this sort of diet fails after a time, if the inner man is not supplied with other sort of food. There is no landscape in the world that is agreeable after two days of rusty-bacon and slack biscuit.

"How lovely this would be," exclaimed the Professor, if it had a background of beefsteak and coffee!

We were riding along the west fork of the Laurel, distinguished locally as Three Top Creek,—or, rather, we were riding in it, crossing it thirty-one times within six miles; a charming wood (and water) road, under the shade of fine trees with the rhododendron illuminating the way, gleaming in the forest and reflected in the stream, all the ten miles to Elk Cross Roads, our next destination. We had heard a great deal about Elk Cross Roads; it was on the map, it was down in the itinerary furnished by a member of the Coast Survey. We looked forward to it as a sweet place of repose from the noontide heat. Alas! Elk Cross Roads is a dirty grocery store, encumbered with dry-goods boxes, fly-blown goods, flies, loafers. In reply to our inquiry we were told that they had nothing to eat, for us, and not a grain of feed for the horses. But there was a man a mile farther on, who was well to do and had stores of food,—old man Tatern would treat us in bang-up style. The difficulty of getting feed for the horses was chronic all through the journey. The last corn crop had failed, the new oats and corn had not come in, and the country was literally barren. We had noticed all along that the hens were taking a vacation, and that chickens were not put forward as an article of diet.

We were unable, when we reached the residence of old man Tatem, to imagine how the local superstition of his wealth arose. His house is of logs, with two rooms, a kitchen and a spare room, with a low loft accessible by a ladder at the side of the chimney. The chimney is a huge construction of stone, separating the two parts of the house; in fact, the chimney was built first, apparently, and the two rooms were then built against it. The proprietor sat in a little railed veranda. These Southern verandas give an air to the meanest dwelling, and they are much used; the family sit here, and here are the washbasin and pail (which is filled from the neighboring spring-house), and the row of milk-pans. The old man Tatern did not welcome us with enthusiasm; he had no corn,—these were hard times. He looked like hard times, grizzled times, dirty times. It seemed time out of mind since he had seen comb or razor, and although the lovely New River, along which we had ridden to his house,—a broad, inviting stream,—was in sight across the meadow, there was no evidence that he had ever made acquaintance with its cleansing waters. As to corn, the necessities of the case and pay being dwelt on, perhaps he could find a dozen ears. A dozen small cars he did find, and we trust that the horses found them.

We took a family dinner with old man Tatern in the kitchen, where there was a bed and a stove,—a meal that the host seemed to enjoy, but which we could not make much of, except the milk; that was good. A painful meal, on the whole, owing to the presence in the room of a grown-up daughter with a graveyard cough, without physician or medicine, or comforts. Poor girl! just dying of "a misery."

In the spare room were two beds; the walls were decorated with the gay-colored pictures of patent-medicine advertisements—a favorite art adornment of the region; and a pile of ancient illustrated papers with the usual patent-office report, the thoughtful gift of the member for the district. The old man takes in the "Blue Ridge Baptist," a journal which we found largely taken up with the experiences of its editor on his journeys roundabout in search of subscribers. This newspaper was the sole communication of the family with the world at large, but the old man thought he should stop it,—he did n't seem to get the worth of his money out of it. And old man Tatem was a thrifty and provident man. On the hearth in this best room—as ornaments or memento mori were a couple of marble gravestones, a short headstone and foot-stone, mounted on bases and ready for use, except the lettering. These may not have been so mournful and significant as they looked, nor the evidence of simple, humble faith; they may have been taken for debt. But as parlor ornaments they had a fascination which we could not escape.

It was while we were bathing in the New River, that afternoon, and meditating on the grim, unrelieved sort of life of our host, that the Professor said, "judging by the face of the 'Blue Ridge Baptist,' he will charge us smartly for the few nubbins of corn and the milk." The face did not deceive us; the charge was one dollar. At this rate it would have broken us to have tarried with old man Tatem (perhaps he is not old, but that is the name he goes by) over night.

It was a hot afternoon, and it needed some courage to mount and climb the sandy hill leading us away from the corn-crib of Tatem. But we entered almost immediately into fine stretches of forest, and rode under the shade of great oaks. The way, which began by the New River, soon led us over the hills to the higher levels of Watauga County. So far on our journey we had been hemmed in by low hills, and without any distant or mountain outlooks. The excessive heat seemed out of place at the elevation of over two thousand feet, on which we were traveling. Boone, the county seat of Watauga County, was our destination, and, ever since morning, the guideboards and the trend of the roads had notified us that everything in this region tends towards Boone as a center of interest. The simple ingenuity of some of the guide-boards impressed us. If, on coming to a fork, the traveler was to turn to the right, the sign read,

To BOONE 10 M.

If he was to go to the left, it read, .M 01 ENOOB oT

A short ride of nine miles, on an ascending road, through an open, unfenced forest region, brought us long before sundown to this capital. When we had ridden into its single street, which wanders over gentle hills, and landed at the most promising of the taverns, the Friend informed his comrade that Boone was 3250 feet above Albemarle Sound, and believed by its inhabitants to be the highest village east of the Rocky Mountains. The Professor said that it might be so, but it was a God-forsaken place. Its inhabitants numbered perhaps two hundred and fifty, a few of them colored. It had a gaunt, shabby court-house and jail, a store or two, and two taverns. The two taverns are needed to accommodate the judges and lawyers and their clients during the session of the court. The court is the only excitement and the only amusement. It is the event from which other events date. Everybody in the county knows exactly when court sits, and when court breaks. During the session the whole county is practically in Boone, men, women, and children. They camp there, they attend the trials, they take sides; half of them, perhaps, are witnesses, for the region is litigious, and the neighborhood quarrels are entered into with spirit. To be fond of lawsuits seems a characteristic of an isolated people in new conditions. The early settlers of New England were.

Notwithstanding the elevation of Boone, which insured a pure air, the thermometer that afternoon stood at from 85 to 89 deg. The flies enjoyed it. How they swarmed in this tavern! They would have carried off all the food from the dining-room table (for flies do not mind eating off oilcloth, and are not particular how food is cooked), but for the machine with hanging flappers that swept the length of it; and they destroy all possibility of sleep except in the dark. The mountain regions of North Carolina are free from mosquitoes, but the fly has settled there, and is the universal scourge. This tavern, one end of which was a store, had a veranda in front, and a back gallery, where there were evidences of female refinement in pots of plants and flowers. The landlord himself kept tavern very much as a hostler would, but we had to make a note in his favor that he had never heard of a milk punch. And it might as well be said here, for it will have to be insisted on later, that the traveler, who has read about the illicit stills till his imagination dwells upon the indulgence of his vitiated tastes in the mountains of North Carolina, is doomed to disappointment. If he wants to make himself an exception to the sober people whose cooking will make him long for the maddening bowl, he must bring his poison with him. We had found no bread since we left Virginia; we had seen cornmeal and water, slack-baked; we had seen potatoes fried in grease, and bacon incrusting with salt (all thirst-provokers), but nothing to drink stronger than buttermilk. And we can say that, so far as our example is concerned, we left the country as temperate as we found it. How can there be mint juleps (to go into details) without ice? and in the summer there is probably not a pound of ice in all the State north of Buncombe County.

There is nothing special to be said about Boone. We were anxious to reach it, we were glad to leave it; we note as to all these places that our joy at departing always exceeds that on arriving, which is a merciful provision of nature for people who must keep moving. This country is settled by genuine Americans, who have the aboriginal primitive traits of the universal Yankee nation. The front porch in the morning resembled a carpenter's shop; it was literally covered with the whittlings of the row of natives who had spent the evening there in the sedative occupation of whittling.

We took that morning a forest road to Valle Crusis, seven miles, through noble growths of oaks, chestnuts, hemlocks, rhododendrons,—a charming wood road, leading to a place that, as usual, did not keep the promise of its name. Valle Crusis has a blacksmith shop and a dirty, flyblown store. While the Professor consulted the blacksmith about a loose shoe, the Friend carried his weariness of life without provisions up to a white house on the hill, and negotiated for boiled milk. This house was occupied by flies. They must have numbered millions, settled in black swarms, covering tables, beds, walls, the veranda; the kitchen was simply a hive of them. The only book in sight, Whewell's—"Elements of Morality," seemed to attract flies. Query, Why should this have such a different effect from Porter's? A white house,—a pleasant-looking house at a distance,—amiable, kindly people in it,—why should we have arrived there on its dirty day? Alas! if we had been starving, Valle Crusis had nothing to offer us.

So we rode away, in the blazing heat, no poetry exuding from the Professor, eight miles to Banner's Elk, crossing a mountain and passing under Hanging Rock, a conspicuous feature in the landscape, and the only outcropping of rock we had seen: the face of a ledge, rounded up into the sky, with a green hood on it. From the summit we had the first extensive prospect during our journey. The road can be described as awful,—steep, stony, the horses unable to make two miles an hour on it. Now and then we encountered a rude log cabin without barns or outhouses, and a little patch of feeble corn. The women who regarded the passers from their cabin doors were frowzy and looked tired. What with the heat and the road and this discouraged appearance of humanity, we reached the residence of Dugger, at Banner's Elk, to which we had been directed, nearly exhausted. It is no use to represent this as a dash across country on impatient steeds. It was not so. The love of truth is stronger than the desire of display. And for this reason it is impossible to say that Mr. Dugger, who is an excellent man, lives in a clean and attractive house, or that he offers much that the pampered child of civilization can eat. But we shall not forget the two eggs, fresh from the hens, whose temperature must have been above the normal, nor the spring-house in the glen, where we found a refuge from the flies and the heat. The higher we go, the hotter it is. Banner's Elk boasts an elevation of thirty-five to thirty-seven hundred feet.

We were not sorry, towards sunset, to descend along the Elk River towards Cranberry Forge. The Elk is a lovely stream, and, though not very clear, has a reputation for trout; but all this region was under operation of a three-years game law, to give the trout a chance to multiply, and we had no opportunity to test the value of its reputation. Yet a boy whom we encountered had a good string of quarter-pound trout, which he had taken out with a hook and a feather rudely tied on it, to resemble a fly. The road, though not to be commended, was much better than that of the morning, the forests grew charming in the cool of the evening, the whippoorwill sang, and as night fell the wanderers, in want of nearly everything that makes life desirable, stopped at the Iron Company's hotel, under the impression that it was the only comfortable hotel in North Carolina.

II

Cranberry Forge is the first wedge of civilization fairly driven into the northwest mountains of North Carolina. A narrow-gauge railway, starting from Johnson City, follows up the narrow gorge of the Doe River, and pushes into the heart of the iron mines at Cranberry, where there is a blast furnace; and where a big company store, rows of tenement houses, heaps of slag and refuse ore, interlacing tracks, raw embankments, denuded hillsides, and a blackened landscape, are the signs of a great devastating American enterprise. The Cranberry iron is in great esteem, as it has the peculiar quality of the Swedish iron. There are remains of old furnaces lower down the stream, which we passed on our way. The present "plant" is that of a Philadelphia company, whose enterprise has infused new life into all this region, made it accessible, and spoiled some pretty scenery.

When we alighted, weary, at the gate of the pretty hotel, which crowns a gentle hill and commands a pleasing, evergreen prospect of many gentle hills, a mile or so below the works, and wholly removed from all sordid associations, we were at the point of willingness that the whole country should be devastated by civilization. In the local imagination this hotel of the company is a palace of unequalled magnificence, but probably its good taste, comfort, and quiet elegance are not appreciated after all. There is this to be said about Philadelphia,—and it will go far in pleading for it in the Last Day against its monotonous rectangularity and the babel-like ambition of its Public Building,—that wherever its influence extends, there will be found comfortable lodgings and the luxury of an undeniably excellent cuisine. The visible seal that Philadelphia sets on its enterprise all through the South is a good hotel.

This Cottage Beautiful has on two sides a wide veranda, set about with easy chairs; cheerful parlors and pretty chambers, finished in native woods, among which are conspicuous the satin stripes of the cucumber-tree; luxurious beds, and an inviting table ordered by a Philadelphia landlady, who knows a beefsteak from a boot-tap. Is it "low" to dwell upon these things of the senses, when one is on a tour in search of the picturesque? Let the reader ride from Abingdon through a wilderness of cornpone and rusty bacon, and then judge. There were, to be sure, novels lying about, and newspapers, and fragments of information to be picked up about a world into which the travelers seemed to emerge. They, at least, were satisfied, and went off to their rooms with the restful feeling that they had arrived somewhere and no unquiet spirit at morn would say "to horse." To sleep, perchance to dream of Tatem and his household cemetery; and the Professor was heard muttering in his chamber,

*"Weary with toil, I haste me to my bed,
The dear repose for limbs with travel tired;
But then begins a journey in my head,
To work my mind, when body's work's expir'd."*

The morning was warm (the elevation of the hotel must be between twenty-five hundred and three thousand feet), rainy, mildly rainy; and the travelers had nothing better to do than lounge upon the veranda, read feeble ten-cent fictions, and admire the stems of the white birches, glistening in the moisture, and the rhododendron—trees, twenty feet high, which were shaking off their last pink blossoms, and look down into the valley of the Doe. It is not an exciting landscape, nothing bold or specially wild in it, but restful with the monotony of some of the wooded Pennsylvania hills.

Sunday came up smiling, a lovely day, but offering no church privileges, for the ordinance of preaching is only occasional in this region. The ladies of the hotel have, however, gathered in the valley a Sunday-school of fifty children from the mountain cabins. A couple of rainy days, with the thermometer rising to 80 deg., combined with natural laziness to detain the travelers in this cottage of ease. They enjoyed this the more because it was on their consciences that they should visit Linville Falls, some twenty-five miles eastward, long held up before them as the most magnificent feature of this region, and on no account to be omitted. Hence, naturally, a strong desire to omit it. The Professor takes bold ground against these abnormal freaks of nature, and it was nothing to him that the public would demand that we should see Linville Falls. In the first place, we could find no one who had ever seen them, and we spent two days in catechizing natives and strangers. The nearest we came to information was from a workman at the furnace, who was born and raised within three miles of the Falls. He had heard of people going there. He had never seen them himself. It was a good twenty-five miles there, over the worst road in the State we'd think it thirty before we got there. Fifty miles of such travel to see a little water run down-hill! The travelers reflected. Every country has a local waterfall of which it boasts; they had seen a great many. One more would add little to the experience of life. The vagueness of information, to be sure, lured the travelers to undertake the journey; but the temptation was resisted—something ought to be left for the next explorer—and so Linville remains a thing of the imagination.

Towards evening, July 29, between showers, the Professor and the Friend rode along the narrow-gauge road, down Johnson's Creek, to Roan Station, the point of departure for ascending Roan Mountain. It was a ride of an hour and a half over a fair road, fringed with rhododendrons, nearly blossomless; but at a point on the stream this sturdy shrub had formed a long bower where under a table might have been set for a temperance picnic, completely overgrown with wild grape, and still gay with bloom. The habitations on the way are mostly board shanties and mean frame cabins, but the railway is introducing ambitious architecture here and there in the form of ornamental filigree work on flimsy houses; ornamentation is apt to precede comfort in our civilization.

Roan Station is on the Doe River (which flows down from Roan Mountain), and is marked at 1265 feet above the sea. The visitor will find here a good hotel, with open wood fires (not ungrateful in a July evening), and obliging people. This railway from Johnson City, hanging on the edge of the precipices that wall the gorge of the Doe, is counted in this region by the inhabitants one of the engineering wonders of the world. The tourist is urged by all means to see both it and Linville Falls.

The tourist on horseback, in search of exercise and recreation, is not probably expected to take stock of

moral conditions. But this Mitchell County, although it was a Union county during the war and is Republican in politics (the Southern reader will perhaps prefer another adverb to "although"), has had the worst possible reputation. The mountains were hiding-places of illicit distilleries; the woods were full of grog-shanties, where the inflaming fluid was sold as "native brandy," quarrels and neighborhood difficulties were frequent, and the knife and pistol were used on the slightest provocation. Fights arose about boundaries and the title to mica mines, and with the revenue officers; and force was the arbiter of all disputes. Within the year four murders were committed in the sparsely settled county. Travel on any of the roads was unsafe. The tone of morals was what might be expected with such lawlessness. A lady who came up on the road on the 4th of July, when an excursion party of country people took possession of the cars, witnessed a scene and heard language past belief. Men, women, and children drank from whisky bottles that continually circulated, and a wild orgy resulted. Profanity, indecent talk on topics that even the license of the sixteenth century would not have tolerated, and freedom of manners that even Teniers would have shrunk from putting on canvas, made the journey horrible.

The unrestrained license of whisky and assault and murder had produced a reaction a few months previous to our visit. The people had risen up in their indignation and broken up the groggeries. So far as we observed temperance prevailed, backed by public-opinion. In our whole ride through the mountain region we saw only one or two places where liquor was sold.

It is called twelve miles from Roan Station to Roan Summit. The distance is probably nearer fourteen, and our horses were five hours in walking it. For six miles the road runs by Doe River, here a pretty brook shaded with laurel and rhododendron, and a few cultivated patches of ground, and infrequent houses. It was a blithe morning, and the horsemen would have given full indulgence to the spirit of adventure but for the attitude of the Professor towards mountains. It was not with him a matter of feeling, but of principle, not to ascend them. But here lay Roan, a long, sprawling ridge, lifting itself 6250 feet up into the sky. Impossible to go around it, and the other side must be reached. The Professor was obliged to surrender, and surmount a difficulty which he could not philosophize out of his mind.

From the base of the mountain a road is very well engineered, in easy grades for carriages, to the top; but it was in poor repair and stony. We mounted slowly through splendid forests, specially of fine chestnuts and hemlocks. This big timber continues till within a mile and a half of the summit by the winding road, really within a short distance of the top. Then there is a narrow belt of scrubby hardwood, moss-grown, and then large balsams, which crown the mountain. As soon as we came out upon the southern slope we found great open spaces, covered with succulent grass, and giving excellent pasturage to cattle. These rich mountain meadows are found on all the heights of this region. The surface of Roan is uneven, and has no one culminating peak that commands the country, like the peak of Mount Washington, but several eminences within its range of probably a mile and a half, where various views can be had. Near the highest point, sheltered from the north by balsams, stands a house of entertainment, with a detached cottage, looking across the great valley to the Black Mountain range. The surface of the mountain is pebbly, but few rocks crop out; no ledges of any size are seen except at a distance from the hotel, on the north side, and the mountain consequently lacks that savage, unsubduable aspect which the White Hills of New Hampshire have. It would, in fact, have been difficult to realize that we were over six thousand feet above the sea, except for that pallor in the sunlight, that atmospheric thinness and want of color which is an unpleasant characteristic of high altitudes. To be sure, there is a certain brilliancy in the high air,—it is apt to be foggy on Roan,—and objects appear in sharp outline, but I have often experienced on such places that feeling of melancholy, which would, of course, deepen upon us all if we were sensible that the sun was gradually withdrawing its power of warmth and light. The black balsam is neither a cheerful nor a picturesque tree; the frequent rains and mists on Roan keep the grass and mosses green, but the ground damp. Doubtless a high mountain covered with vegetation has its compensation, but for me the naked granite rocks in sun and shower are more cheerful.

The advantage of Roan is that one can live there and be occupied for a long time in mineral and botanical study. Its mild climate, moisture, and great elevation make it unique in this country for the botanist. The variety of plants assembled there is very large, and there are many, we were told, never or rarely found elsewhere in the United States. At any rate, the botanists rave about Roan Mountain, and spend weeks at a time on it. We found there ladies who could draw for us Grey's lily (then passed), and had kept specimens of the rhododendron (not growing elsewhere in this region) which has a deep red, almost purple color.

The hotel (since replaced by a good house) was a rude mountain structure, with a couple of comfortable rooms for office and sitting-room, in which big wood fires were blazing; for though the thermometer might record 60 deg., as it did when we arrived, fire was welcome. Sleeping-places partitioned off in the loft above gave the occupants a feeling of camping out, all the conveniences being primitive; and when the wind rose in the night and darkness, and the loose boards rattled and the timbers creaked, the sensation was not unlike that of being at sea. The hotel was satisfactorily kept, and Southern guests, from as far south as New Orleans, were spending the season there, and not finding time hang heavy on their hands. This statement is perhaps worth more than pages of description as to the character of Roan, and its contrast to Mount Washington.

The summer weather is exceedingly uncertain on all these North Carolina mountains; they are apt at any moment to be enveloped in mist; and it would rather rain on them than not. On the afternoon of our arrival there was fine air and fair weather, but not a clear sky. The distance was hazy, but the outlines were preserved. We could see White Top, in Virginia; Grandfather Mountain, a long serrated range; the twin towers of Linville; and the entire range of the Black Mountains, rising from the valley, and apparently lower than we were. They get the name of Black from the balsams which cover the summits.

The rain on Roan was of less annoyance by reason of the delightful company assembled at the hotel, which was in a manner at home there, and, thrown upon its own resources, came out uncommonly strong in agreeableness. There was a fiddle in the house, which had some of the virtues of that celebrated in the history of old Mark Langston; the Professor was enabled to produce anything desired out of the literature of the eighteenth century; and what with the repartee of bright women, big wood fires, reading, and chat, there was no dull day or evening on Roan. I can fancy, however, that it might tire in time, if one were not a botanist, without the resource of women's society. The ladies staying here were probably all accomplished

botanists, and the writer is indebted to one of them for a list of plants found on Roan, among which is an interesting weed, catalogued as *Humana, perplexia negligens*. The species is, however, common elsewhere.

The second morning opened, after a night of high wind, with a thunder-shower. After it passed, the visitors tried to reach Eagle Cliff, two miles off, whence an extensive western prospect is had, but were driven back by a tempest, and rain practically occupied the day. Now and then through the parted clouds we got a glimpse of a mountain-side, or the gleam of a valley. On the lower mountains, at wide intervals apart, were isolated settlements, commonly a wretched cabin and a spot of girdled trees. A clergyman here, not long ago, undertook to visit some of these cabins and carry his message to them. In one wretched hut of logs he found a poor woman, with whom, after conversation on serious subjects, he desired to pray. She offered no objection, and he kneeled down and prayed. The woman heard him, and watched him for some moments with curiosity, in an effort to ascertain what he was doing, and then said:

"Why, a man did that when he put my girl in a hole."

Towards night the wind hauled round from the south to the northwest, and we went to High Bluff, a point on the north edge, where some rocks are piled up above the evergreens, to get a view of the sunset. In every direction the mountains were clear, and a view was obtained of the vast horizon and the hills and lowlands of several States—a continental prospect, scarcely anywhere else equaled for variety or distance. The grandeur of mountains depends mostly on the state of the atmosphere. Grandfather loomed up much more loftily than the day before, the giant range of the Blacks asserted itself in grim inaccessibility, and we could see, a small pyramid on the southwest horizon, King's Mountain in South Carolina, estimated to be distant one hundred and fifty miles. To the north Roan falls from this point abruptly, and we had, like a map below us, the low country all the way into Virginia. The clouds lay like lakes in the valleys of the lower hills, and in every direction were ranges of mountains wooded to the summits. Off to the west by south lay the Great Smoky Mountains, disputing eminence with the Blacks.

Magnificent and impressive as the spectacle was, we were obliged to contrast it unfavorably with that of the White Hills. The rock here is a sort of sand or pudding stone; there is no limestone or granite. And all the hills are tree-covered. To many this clothing of verdure is most restful and pleasing. I missed the sharp outlines, the delicate artistic sky lines, sharply defined in uplifted bare granite peaks and ridges, with the purple and violet color of the northern mountains, and which it seems to me that limestone and granite formations give. There are none of the great gorges and awful abysses of the White Mountains, both valleys and mountains here being more uniform in outline. There are few precipices and jutting crags, and less is visible of the giant ribs and bones of the planet.

Yet Roan is a noble mountain. A lady from Tennessee asked me if I had ever seen anything to compare with it—she thought there could be nothing in the world. One has to dodge this sort of question in the South occasionally, not to offend a just local pride. It is certainly one of the most habitable of big mountains. It is roomy on top, there is space to move about without too great fatigue, and one might pleasantly spend a season there, if he had agreeable company and natural tastes.

Getting down from Roan on the south side is not as easy as ascending on the north; the road for five miles to the foot of the mountain is merely a river of pebbles, gullied by the heavy rains, down which the horses picked their way painfully. The travelers endeavored to present a dashing and cavalier appearance to the group of ladies who waved good-by from the hotel, as they took their way over the waste and wind-blown declivities, but it was only a show, for the horses would neither caracole nor champ the bit (at a dollar a day) down-hill over the slippery stones, and, truth to tell, the wanderers turned with regret from the society of leisure and persiflage to face the wilderness of Mitchell County.

"How heavy," exclaimed the Professor, pricking Laura Matilda to call her attention sharply to her footing—

*"How heavy do I journey on the way,
When what I seek—my weary travel's end
Doth teach that ease and that repose to say,
Thus far the miles are measur'd from thy friend!
The beast that bears me, tired with my woe,
Plods dully on, to bear that weight in me,
As if by some instinct the wretch did know
His rider loved not speed, being made from thee:
The bloody spur cannot provoke him on
That sometimes anger thrusts into his hide,
Which heavily he answers with a groan,
More sharp to me than spurring to his side;
For that same groan doth put this in my mind;
My grief lies onward and my joy behind."*

This was not spoken to the group who fluttered their farewells, but poured out to the uncomplaining forest, which rose up in ever statelier—and grander ranks to greet the travelers as they descended—the silent, vast forest, without note of bird or chip of squirrel, only the wind tossing the great branches high overhead in response to the sonnet. Is there any region or circumstance of life that the poet did not forecast and provide for? But what would have been his feelings if he could have known that almost three centuries after these lines were penned, they would be used to express the emotion of an unsentimental traveler in the primeval forests of the New World? At any rate, he peopled the New World with the children of his imagination. And, thought the Friend, whose attention to his horse did not permit him to drop into poetry, Shakespeare might have had a vision of this vast continent, though he did not refer to it, when he exclaimed:

*"What is your substance, whereof are you made,
That millions of strange shadows on you tend?"*

Bakersville, the capital of Mitchell County, is eight miles from the top of Roan, and the last three miles of the way the horsemen found tolerable going, over which the horses could show their paces. The valley looked fairly thrifty and bright, and was a pleasing introduction to Bakersville, a pretty place in the hills, of some six

hundred inhabitants, with two churches, three indifferent hotels, and a court-house. This mountain town, 2550 feet above the sea, is said to have a decent winter climate, with little snow, favorable to fruit-growing, and, by contrast with New England, encouraging to people with weak lungs.

This is the center of the mica mining, and of considerable excitement about minerals. All around, the hills are spotted with "diggings." Most of the mines which yield well show signs of having been worked before, a very long time ago, no doubt by the occupants before the Indians. The mica is of excellent quality and easily mined. It is got out in large irregular-shaped blocks and transported to the factories, where it is carefully split by hand, and the laminae, of as large size as can be obtained, are trimmed with shears and tied up in packages for market. The quantity of refuse, broken, and rotten mica piled up about the factories is immense, and all the roads round about glisten with its scales. Garnets are often found imbedded in the laminae, flattened by the extreme pressure to which the mass was subjected. It is fascinating material, this mica, to handle, and we amused ourselves by experimenting on the thinness to which its scales could be reduced by splitting. It was at Bakersville that we saw specimens of mica that resembled the delicate tracery in the moss-gate and had the iridescent sheen of the rainbow colors—the most delicate greens, reds, blues, purples, and gold, changing from one to the other in the reflected light. In the texture were the tracings of fossil forms of ferns and the most exquisite and delicate vegetable beauty of the coal age. But the magnet shows this tracery to be iron. We were shown also emeralds and "diamonds," picked up in this region, and there is a mild expectation in all the inhabitants of great mineral treasure. A singular product of the region is the flexible sandstone. It is a most uncanny stone. A slip of it a couple of feet long and an inch in diameter each way bends in the hand like a half-frozen snake. This conduct of a substance that we have been taught to regard as inflexible impairs one's confidence in the stability of nature and affects him as an earthquake does.

This excitement over mica and other minerals has the usual effect of starting up business and creating bad blood. Fortunes have been made, and lost in riotous living; scores of visionary men have been disappointed; lawsuits about titles and claims have multiplied, and quarrels ending in murder have been frequent in the past few years. The mica and the illicit whisky have worked together to make this region one of lawlessness and violence. The travelers were told stories of the lack of common morality and decency in the region, but they made no note of them. And, perhaps fortunately, they were not there during court week to witness the scenes of license that were described. This court week, which draws hither the whole population, is a sort of Saturnalia. Perhaps the worst of this is already a thing of the past; for the outrages a year before had reached such a pass that by a common movement the sale of whisky was stopped (not interdicted, but stopped), and not a drop of liquor could be bought in Bakersville nor within three miles of it.

The jail at Bakersville is a very simple residence. The main building is brick, two stories high and about twelve feet square. The walls are so loosely laid up that it seems as if a colored prisoner might butt his head through. Attached to this is a room for the jailer. In the lower room is a wooden cage, made of logs bolted together and filled with spikes, nine feet by ten feet square and perhaps seven or eight feet high. Between this cage and the wall is a space of eighteen inches in width. It has a narrow door, and an opening through which the food is passed to the prisoners, and a conduit leading out of it. Of course it soon becomes foul, and in warm weather somewhat warm. A recent prisoner, who wanted more ventilation than the State allowed him, found some means, by a loose plank, I think, to batter a hole in the outer wall opposite the window in the cage, and this ragged opening, seeming to the jailer a good sanitary arrangement, remains. Two murderers occupied this apartment at the time of our visit. During the recent session of court, ten men had been confined in this narrow space, without room enough for them to lie down together. The cage in the room above, a little larger, had for tenant a person who was jailed for some misunderstanding about an account, and who was probably innocent—from the jailer's statement. This box is a wretched residence, month after month, while awaiting trial.

We learned on inquiry that it is practically impossible to get a jury to convict of murder in this region, and that these admitted felons would undoubtedly escape. We even heard that juries were purchasable here, and that a man's success in court depended upon the length of his purse. This is such an unheard-of thing that we refused to credit it. When the Friend attempted to arouse the indignation of the Professor about the barbarity of this jail, the latter defended it on the ground that as confinement was the only punishment that murderers were likely to receive in this region, it was well to make their detention disagreeable to them. But the Friend did not like this wild-beast cage for men, and could only exclaim,

"Oh, murder! what crimes are done in thy name."

If the comrades wished an adventure, they had a small one, more interesting to them than to the public, the morning they left Bakersville to ride to Burnsville, which sets itself up as the capital of Yancey. The way for the first three miles lay down a small creek and in a valley fairly settled, the houses, a store, and a grist-mill giving evidence of the new enterprise of the region. When Toe River was reached, there was a choice of routes. We might ford the Toe at that point, where the river was wide, but shallow, and the crossing safe, and climb over the mountain by a rough but sightly road, or descend the stream by a better road and ford the river at a place rather dangerous to those unfamiliar with it. The danger attracted us, but we promptly chose the hill road on account of the views, for we were weary of the limited valley prospects.

The Toe River, even here, where it bears westward, is a very respectable stream in size, and not to be trifled with after a shower. It gradually turns northward, and, joining the Nollechucky, becomes part of the Tennessee system. We crossed it by a long, diagonal ford, slipping and sliding about on the round stones, and began the ascent of a steep hill. The sun beat down unmercifully, the way was stony, and the horses did not relish the weary climbing. The Professor, who led the way, not for the sake of leadership, but to be the discoverer of laden blackberry bushes, which began to offer occasional refreshment, discouraged by the inhospitable road and perhaps oppressed by the moral backwardness of things in general, cried out:

*"Tired with all these, for restful death I cry,—
As, to behold desert a beggar born,
And needy nothing trimm'd in jollity,
And purest faith unhappily foresworn,
And gilded honor shamefully misplaced,
And maiden virtue rudely strumpeted,*

*And right perfection wrongfully disgraced,
And strength by limping sway disabled,
And art made tongue-tied by authority,
And folly (doctor-like) controlling skill,
And simple truth miscall'd simplicity,
And captive good attending captain ill:
Tired with all these, from these would I be gone,
Save that, to die, I leave my love alone."*

In the midst of a lively discussion of this pessimistic view of the inequalities of life, in which desert and capacity are so often put at disadvantage by birth in beggarly conditions, and brazen assumption raises the dust from its chariot wheels for modest merit to plod along in, the Professor swung himself off his horse to attack a blackberry bush, and the Friend, representing simple truth, and desirous of getting a wider prospect, urged his horse up the hill. At the top he encountered a stranger, on a sorrel horse, with whom he entered into conversation and extracted all the discouragement the man had as to the road to Burnsville.

Nevertheless, the view opened finely and extensively. There are few exhilarations comparable to that of riding or walking along a high ridge, and the spirits of the traveler rose many degrees above the point of restful death, for which the Professor was crying when he encountered the blackberry bushes. Luckily the Friend soon fell in with a like temptation, and dismounted. He discovered something that spoiled his appetite for berries. His coat, strapped on behind the saddle, had worked loose, the pocket was open, and the pocket-book was gone. This was serious business. For while the Professor was the cashier, and traveled like a Rothschild, with large drafts, the Friend represented the sub-treasury. That very morning, in response to inquiry as to the sinews of travel, the Friend had displayed, without counting, a roll of bills. These bills had now disappeared, and when the Friend turned back to communicate his loss, in the character of needy nothing not trimm'd in jollity, he had a sympathetic listener to the tale of woe.

Going back on such a journey is the woofulest experience, but retrace our steps we must. Perhaps the pocket-book lay in the road not half a mile back. But not in half a mile, or a mile, was it found. Probably, then, the man on the sorrel horse had picked it up. But who was the man on the sorrel horse, and where had he gone? Probably the coat worked loose in crossing Toe River and the pocket-book had gone down-stream. The number of probabilities was infinite, and each more plausible than the others as it occurred to us. We inquired at every house we had passed on the way, we questioned every one we met. At length it began to seem improbable that any one would remember if he had picked up a pocketbook that morning. This is just the sort of thing that slips an untrained memory.

At a post office or doctor's shop, or inn for drovers, it might be either or neither, where several horses were tied to the fence, and a group of men were tilted back in cane chairs on the veranda, we unfolded our misfortune and made particular inquiries for a man on a sorrel horse. Yes, such a man, David Thomas by name, had just ridden towards Bakersville. If he had found the pocket-book, we would recover it. He was an honest man. It might, however, fall into hands that would freeze to it.

Upon consultation, it was the general verdict that there were men in the county who would keep it if they had picked it up. But the assembly manifested the liveliest interest in the incident. One suggested Toe River. Another thought it risky to drop a purse on any road. But there was a chorus of desire expressed that we should find it, and in this anxiety was exhibited a decided sensitiveness about the honor of Mitchell County. It seemed too bad that a stranger should go away with the impression that it was not safe to leave money anywhere in it. We felt very much obliged for this genuine sympathy, and we told them that if a pocket-book were lost in this way on a Connecticut road, there would be felt no neighborhood responsibility for it, and that nobody would take any interest in the incident except the man who lost, and the man who found.

By the time the travelers pulled up at a store in Bakersville they had lost all expectation of recovering the missing article, and were discussing the investment of more money in an advertisement in the weekly newspaper of the capital. The Professor, whose reform sentiments agreed with those of the newspaper, advised it. There was a group of idlers, mica acquaintances of the morning, and philosophers in front of the store, and the Friend opened the colloquy by asking if a man named David Thomas had been seen in town. He was in town, had ridden in within an hour, and his brother, who was in the group, would go in search of him. The information was then given of the loss, and that the rider had met David Thomas just before it was discovered, on the mountain beyond the Toe. The news made a sensation, and by the time David Thomas appeared a crowd of a hundred had drawn around the horsemen eager for further developments. Mr. Thomas was the least excited of the group as he took his position on the sidewalk, conscious of the dignity of the occasion and that he was about to begin a duel in which both reputation and profit were concerned. He recollected meeting the travelers in the morning.

The Friend said, "I discovered that I had lost my purse just after meeting you; it may have been dropped in Toe River, but I was told back here that if David Thomas had picked it up, it was as safe as if it were in the bank."

"What sort of a pocket-book was it?" asked Mr. Thomas.

"It was of crocodile skin, or what is sold for that, very likely it is an imitation, and about so large indicating the size."

"What had it in it?"

"Various things. Some specimens of mica; some bank checks, some money."

"Anything else?"

"Yes, a photograph. And, oh, something that I presume is not in another pocket-book in North Carolina,—in an envelope, a lock of the hair of George Washington, the Father of his Country." Sensation mixed with incredulity. Washington's hair did seem such an odd part of an outfit for a journey of this kind.

"How much money was in it?"

"That I cannot say, exactly. I happen to remember four twenty-dollar United States notes, and a roll of small bills, perhaps something over a hundred dollars."

"Is that the pocket-book?" asked David Thomas, slowly pulling the loved and lost out of his trousers pocket.

"It is."

"You'd be willing to take your oath on it?"

"I should be delighted to."

"Well, I guess there ain't so much money in it. You can count it [handing it over]; there hain't been nothing taken out. I can't read, but my friend here counted it over, and he says there ain't as much as that."

Intense interest in the result of the counting. One hundred and ten dollars! The Friend selected one of the best engraved of the notes, and appealed to the crowd if they thought that was the square thing to do. They did so think, and David Thomas said it was abundant. And then said the Friend:

"I'm exceedingly grateful to you besides. Washington's hair is getting scarce, and I did not want to lose these few hairs, gray as they are. You've done the honest thing, Mr. Thomas, as was expected of you. You might have kept the whole. But I reckon if there had been five hundred dollars in the book and you had kept it, it wouldn't have done you half as much good as giving it up has done; and your reputation as an honest man is worth a good deal more than this pocket-book. [The Professor was delighted with this sentiment, because it reminded him of a Sunday-school.] I shall go away with a high opinion of the honesty of Mitchell County."

"Oh, he lives in Yancey," cried two or three voices. At which there was a great laugh.

"Well, I wondered where he came from." And the Mitchell County people laughed again at their own expense, and the levee broke up. It was exceedingly gratifying, as we spread the news of the recovered property that afternoon at every house on our way to the Toe, to see what pleasure it gave. Every man appeared to feel that the honor of the region had been on trial—and had stood the test.

The eighteen miles to Burnsville had now to be added to the morning excursion, but the travelers were in high spirits, feeling the truth of the adage that it is better to have loved and lost, than never to have lost at all. They decided, on reflection, to join company with the mail-rider, who was going to Burnsville by the shorter route, and could pilot them over the dangerous ford of the Toe.

The mail-rider was a lean, sallow, sinewy man, mounted on a sorry sorrel nag, who proved, however, to have blood in her, and to be a fast walker and full of endurance. The mail-rider was taciturn, a natural habit for a man who rides alone the year round, over a lonely road, and has nothing whatever to think of. He had been in the war sixteen months, in Hugh White's regiment,—reckon you've heerd of him?

"Confederate?"

"Which?"

"Was he on the Union or Confederate side?"

"Oh, Union."

"Were you in any engagements?"

"Which?"

"Did you have any fighting?"

"Not reg'lar."

"What did you do?"

"Which?"

"What did you do in Hugh White's regiment?"

"Oh, just cavorted round the mountains."

"You lived on the country?"

"Which?"

"Picked up what you could find, corn, bacon, horses?"

"That's about so. Did n't make much difference which side was round, the country got cleaned out."

"Plunder seems to have been the object?"

"Which?"

"You got a living out of the farmers?"

"You bet."

Our friend and guide seemed to have been a jayhawker and mountain marauder—on the right side. His attachment to the word "which" prevented any lively flow of conversation, and there seemed to be only two trains of ideas running in his mind: one was the subject of horses and saddles, and the other was the danger of the ford we were coming to, and he exhibited a good deal of ingenuity in endeavoring to excite our alarm. He returned to the ford from every other conversational excursion, and after every silence.

"I do' know's there 's any great danger; not if you know the ford. Folks is carried away there. The Toe gits up sudden. There's been right smart rain lately.

"If you're afraid, you can git set over in a dugout, and I'll take your horses across. Mebbe you're used to fording? It's a pretty bad ford for them as don't know it. But you'll get along if you mind your eye. There's some rocks you'll have to look out for. But you'll be all right if you follow me."

Not being very successful in raising an interest in the dangers of his ford, although he could not forego indulging a malicious pleasure in trying to make the strangers uncomfortable, he finally turned his attention to a trade. "This hoss of mine," he said, "is just the kind of brute-beast you want for this country. Your hosses is too heavy. How'll you swap for that one o' yourn?" The reiterated assertion that the horses were not ours, that they were hired, made little impression on him. All the way to Burnsville he kept referring to the subject of a trade. The instinct of "swap" was strong in him. When we met a yoke of steers, he turned round and bantered the owner for a trade. Our saddles took his fancy. They were of the army pattern, and he allowed that one of them would just suit him. He rode a small flat English pad, across which was flung the United

States mail pouch, apparently empty. He dwelt upon the fact that his saddle was new and ours were old, and the advantages that would accrue to us from the exchange. He did n't care if they had been through the war, as they had, for he fancied an army saddle. The Friend answered for himself that the saddle he rode belonged to a distinguished Union general, and had a bullet in it that was put there by a careless Confederate in the first battle of Bull Run, and the owner would not part with it for money. But the mail-rider said he did n't mind that. He would n't mind swapping his new saddle for my old one and the rubber coat and leggings. Long before we reached the ford we thought we would like to swap the guide, even at the risk of drowning. The ford was passed, in due time, with no inconvenience save that of wet feet, for the stream was breast high to the horses; but being broad and swift and full of sunken rocks and slippery stones, and the crossing tortuous, it is not a ford to be commended. There is a curious delusion that a rider has in crossing a swift broad stream. It is that he is rapidly drifting up-stream, while in fact the tendency of the horse is to go with the current.

The road in the afternoon was not unpicturesque, owing to the streams and the ever noble forests, but the prospect was always very limited. Agriculturally, the country was mostly undeveloped. The travelers endeavored to get from the rider an estimate of the price of land. Not much sold, he said. "There was one sale of a big piece last year; the owner enthorted Big Tom Wilson to sell it, but I d'know what he got for it."

All the way along, the habitations were small log cabins, with one room, chinked with mud, and these were far between; and only occasionally thereby a similar log structure, unchinked, laid up like a cob house, that served for a stable. Not much cultivation, except now and then a little patch of poor corn on a steep hillside, occasionally a few apple-trees, and a peach-tree without fruit. Here and there was a house that had been half finished and then abandoned, or a shanty in which a couple of young married people were just beginning life. Generally the cabins (confirming the accuracy of the census of 1880) swarmed with children, and nearly all the women were thin and sickly.

In the day's ride we did not see a wheeled vehicle, and only now and then a horse. We met on the road small sleds, drawn by a steer, sometimes by a cow, on which a bag of grist was being hauled to the mill, and boys mounted on steers gave us good-evening with as much pride as if they were bestriding fiery horses.

In a house of the better class, which was a post-house, and where the rider and the woman of the house had a long consultation over a letter to be registered, we found the rooms decorated with patent-medicine pictures, which were often framed in strips of mica, an evidence of culture that was worth noting. Mica was the rage. Every one with whom we talked, except the rider, had more or less the mineral fever. The impression was general that the mountain region of North Carolina was entering upon a career of wonderful mineral development, and the most extravagant expectations were entertained. Mica was the shining object of most "prospecting," but gold was also on the cards.

The country about Burnsville is not only mildly picturesque, but very pleasing. Burnsville, the county-seat of Yancey, at an elevation of 2840 feet, is more like a New England village than any hitherto seen. Most of the houses stand about a square, which contains the shabby court-house; around it are two small churches, a jail, an inviting tavern with a long veranda, and a couple of stores. On an overlooking hill is the seminary. Mica mining is the exciting industry, but it is agriculturally a good country. The tavern had recently been enlarged to meet the new demands for entertainment and is a roomy structure, fresh with paint and only partially organized. The travelers were much impressed with the brilliant chambers, the floors of which were painted in alternate stripes of vivid green and red. The proprietor, a very intelligent and enterprising man, who had traveled often in the North, was full of projects for the development of his region and foremost in its enterprises, and had formed a considerable collection of minerals. Besides, more than any one else we met, he appreciated the beauty of his country, and took us to a neighboring hill, where we had a view of Table Mountain to the east and the nearer giant Blacks. The elevation of Burnsville gives it a delightful summer climate, the gentle undulations of the country are agreeable, the views noble, the air is good, and it is altogether a "livable" and attractive place. With facilities of communication, it would be a favorite summer resort. Its nearness to the great mountains (the whole Black range is in Yancey County), its fine pure air, its opportunity for fishing and hunting, commend it to those in search of an interesting and restful retreat in summer.

But it should be said that before the country can attract and retain travelers, its inhabitants must learn something about the preparation of food. If, for instance, the landlord's wife at Burnsville had traveled with her husband, her table would probably have been more on a level with his knowledge of the world, and it would have contained something that the wayfaring man, though a Northerner, could eat. We have been on the point several times in this journey of making the observation, but have been restrained by a reluctance to touch upon politics, that it was no wonder that a people with such a cuisine should have rebelled. The travelers were in a rebellious mood most of the time.

The evidences of enterprise in this region were pleasant to see, but the observers could not but regret, after all, the intrusion of the money-making spirit, which is certain to destroy much of the present simplicity. It is as yet, to a degree, tempered by a philosophic spirit. The other guest of the house was a sedate, long-bearded traveler for some Philadelphia house, and in the evening he and the landlord fell into a conversation upon what Socrates calls the disadvantage of the pursuit of wealth to the exclusion of all noble objects, and they let their fancy play about Vanderbilt, who was agreed to be the richest man in the world, or that ever lived.

"All I want," said the long-bearded man, "is enough to be comfortable. I would n't have Vanderbilt's wealth if he'd give it to me."

"Nor I," said the landlord. "Give me just enough to be comfortable." [The tourist couldn't but note that his ideas of enough to be comfortable had changed a good deal since he had left his little farm and gone into the mica business, and visited New York, and enlarged and painted his tavern.] "I should like to know what more Vanderbilt gets out of his money than I get out of mine. I heard tell of a young man who went to Vanderbilt to get employment. Vanderbilt finally offered to give the young man, if he would work for him, just what he got himself. The young man jumped at that—he'd be perfectly satisfied with that pay. And Vanderbilt said that all he got was what he could eat and wear, and offered to give the young man his board and clothes."

"I declare" said the long-bearded man. "That's just it. Did you ever see Vanderbilt's house? Neither did I, but I heard he had a vault built in it five feet thick, solid. He put in it two hundred millions of dollars, in gold. After a year, he opened it and put in twelve millions more, and called that a poor year. They say his house has gold shutters to the windows, so I've heard."

"I shouldn't wonder," said the landlord. "I heard he had one door in his house cost forty thousand dollars. I don't know what it is made of, unless it's made of gold."

Sunday was a hot and quiet day. The stores were closed and the two churches also, this not being the Sunday for the itinerant preacher. The jail also showed no sign of life, and when we asked about it, we learned that it was empty, and had been for some time. No liquor is sold in the place, nor within at least three miles of it. It is not much use to try to run a jail without liquor.

In the course of the morning a couple of stout fellows arrived, leading between them a young man whom they had arrested,—it didn't appear on any warrant, but they wanted to get him committed and locked up. The offense charged was carrying a pistol; the boy had not used it against anybody, but he had flourished it about and threatened, and the neighbors wouldn't stand that; they were bound to enforce the law against carrying concealed weapons.

The captors were perfectly good-natured and on friendly enough terms with the young man, who offered no resistance, and seemed not unwilling to go to jail. But a practical difficulty arose. The jail was locked up, the sheriff had gone away into the country with the key, and no one could get in. It did not appear that there was any provision for boarding the man in jail; no one in fact kept it. The sheriff was sent for, but was not to be found, and the prisoner and his captors loafed about the square all day, sitting on the fence, rolling on the grass, all of them sustained by a simple trust that the jail would be open some time.

Late in the afternoon we left them there, trying to get into the jail. But we took a personal leaf out of this experience. Our Virginia friends, solicitous for our safety in this wild country, had urged us not to venture into it without arms—take at least, they insisted, a revolver each. And now we had to congratulate ourselves that we had not done so. If we had, we should doubtless on that Sunday have been waiting, with the other law-breaker, for admission into the Yancey County jail.

III

From Burnsville the next point in our route was Asheville, the most considerable city in western North Carolina, a resort of fashion, and the capital of Buncombe County. It is distant some forty to forty-five miles, too long a journey for one day over such roads. The easier and common route is by the Ford of Big Ivy, eighteen miles, the first stopping-place; and that was a long ride for the late afternoon when we were in condition to move.

The landlord suggested that we take another route, stay that night on Caney River with Big Tom Wilson, only eight miles from Burnsville, cross Mount Mitchell, and go down the valley of the Swannanoa to Asheville. He represented this route as shorter and infinitely more picturesque. There was nothing worth seeing on the Big Ivy way. With scarcely a moment's reflection and while the horses were saddling, we decided to ride to Big Tom Wilson's. I could not at the time understand, and I cannot now, why the Professor consented. I should hardly dare yet confess to my fixed purpose to ascend Mount Mitchell. It was equally fixed in the Professor's mind not to do it. We had not discussed it much. But it is safe to say that if he had one well-defined purpose on this trip, it was not to climb Mitchell. "Not," as he put it,—

*"Not mine own fears, nor the prophetic soul
Of the wide world dreaming on things to come,"*

had suggested the possibility that he could do it.

But at the moment the easiest thing to do seemed to be to ride down to Wilson's. When there we could turn across country to the Big Ivy, although, said the landlord, you can ride over Mitchell just as easy as anywhere—a lady rode plump over the peak of it last week, and never got off her horse. You are not obliged to go; at Big Tom's, you can go any way you please.

Besides, Big Tom himself weighed in the scale more than Mount Mitchell, and not to see him was to miss one of the most characteristic productions of the country, the typical backwoodsman, hunter, guide. So we rode down Bolling Creek, through a pretty, broken country, crossed the Caney River, and followed it up a few miles to Wilson's plantation. There are little intervalles along the river, where hay is cut and corn grown, but the region is not much cleared, and the stock browse about in the forest. Wilson is the agent of the New York owner of a tract of some thirteen thousand acres of forest, including the greater portion of Mount Mitchell, a wilderness well stocked with bears and deer, and full of streams abounding in trout. It is also the playground of the rattlesnake. With all these attractions Big Tom's life is made lively in watching game poachers, and endeavoring to keep out the foraging cattle of the few neighbors. It is not that the cattle do much injury in the forest, but the looking after them is made a pretense for roaming around, and the roamers are liable to have to defend themselves against the deer, or their curiosity is excited about the bears, and lately they have taken to exploding powder in the streams to kill the fish.

Big Tom's plantation has an openwork stable, an ill-put-together frame house, with two rooms and a kitchen, and a veranda in front, a loft, and a spring-house in the rear. Chickens and other animals have free run of the premises. Some fish-rods hung in the porch, and hunter's gear depended on hooks in the passage-way to the kitchen. In one room were three beds, in the other two, only one in the kitchen. On the porch was a loom, with a piece of cloth in process. The establishment had the air of taking care of itself. Neither Big Tom nor his wife was at home. Sunday seemed to be a visiting day, and the travelers had met many parties on

horseback. Mrs. Wilson was away for a visit of a day or two. One of the sons, who was lounging on the veranda, was at last induced to put up the horses; a very old woman, who mumbled and glared at the visitors, was found in the kitchen, but no intelligible response could be got out of her. Presently a bright little girl, the housekeeper in charge, appeared. She said that her paw had gone up to her brother's (her brother was just married and lived up the river in the house where Mr. Murchison stayed when he was here) to see if he could ketch a bear that had been rootin' round in the corn-field the night before. She expected him back by sundown—by dark anyway. 'Les he'd gone after the bear, and then you could n't tell when he would come.

It appeared that Big Tom was a thriving man in the matter of family. More boys appeared. Only one was married, but four had "got their time." As night approached, and no Wilson, there was a good deal of lively and loud conversation about the stock and the chores, in all of which the girl took a leading and intelligent part, showing a willingness to do her share, but not to have all the work put upon her. It was time to go down the road and hunt up the cows; the mule had disappeared and must be found before dark; a couple of steers hadn't turned up since the day before yesterday, and in the midst of the gentle contention as to whose business all this was, there was an alarm of cattle in the corn-patch, and the girl started off on a run in that direction. It was due to the executive ability of this small girl, after the cows had been milked and the mule chased and the boys properly stirred up, that we had supper. It was of the oilcloth, iron fork, tin spoon, bacon, hot bread and honey variety, distinguished, however, from all meals we had endured or enjoyed before by the introduction of fried eggs (as the breakfast next morning was by the presence of chicken), and it was served by the active maid with right hearty good-will and genuine hospitable intent.

While it was in progress, after nine o'clock, Big Tom arrived, and, with a simple greeting, sat down and attacked the supper and began to tell about the bear. There was not much to tell except that he hadn't seen the bear, and that, judged by his tracks and his sloshing around, he must be a big one. But a trap had been set for him, and he judged it wouldn't be long before we had some bear meat. Big Tom Wilson, as he is known all over this part of the State, would not attract attention from his size. He is six feet and two inches tall, very spare and muscular, with sandy hair, long gray beard, and honest blue eyes. He has a reputation for great strength and endurance; a man of native simplicity and mild manners. He had been rather expecting us from what Mr. Murchison wrote; he wrote (his son had read out the letter) that Big Tom was to take good care of us, and anybody that Mr. Murchison sent could have the best he'd got.

Big Tom joined us in our room after supper. This apartment, with two mighty feather-beds, was hung about with all manner of stuffy family clothes, and had in one end a vast cavern for a fire. The floor was uneven, and the hearthstones billowy. When the fire was lighted, the effect of the bright light in the cavern and the heavy shadows in the room was Rembrandtish. Big Tom sat with us before the fire and told bear stories. Talk? Why, it was not the least effort. The stream flowed on without a ripple. "Why, the old man," one of the sons confided to us next morning, "can begin and talk right over Mount Mitchell and all the way back, and never make a break." Though Big Tom had waged a lifelong warfare with the bears, and taken the hide off at least a hundred of them, I could not see that he had any vindictive feeling towards the varmint, but simply an insatiable love of killing him, and he regarded him in that half-humorous light in which the bear always appears to those who study him. As to deer—he couldn't tell how many of them he had slain. But Big Tom was a gentleman: he never killed deer for mere sport. With rattlesnakes, now, it was different. There was the skin of one hanging upon a tree by the route we would take in the morning, a buster, he skinned him yesterday. There was an entire absence, of braggadocio in Big Tom's talk, but somehow, as he went on, his backwoods figure loomed larger and larger in our imagination, and he seemed strangely familiar. At length it came over us where we had met him before. It was in Cooper's novels. He was the Leather-Stocking exactly. And yet he was an original; for he assured us that he had never read the Leather-Stocking Tales. What a figure, I was thinking, he must have made in the late war! Such a shot, such a splendid physique, such iron endurance! I almost dreaded to hear his tales of the havoc he had wrought on the Union army. Yes, he was in the war, he was sixteen months in the Confederate army, this Homeric man. In what rank? "Oh, I was a fifer!"

But hunting and war did not by any means occupy the whole of Big Tom's life. He was also engaged in "lawin'." He had a long-time feud with a neighbor about a piece of land and alleged trespass, and they'd been "lawin'" for years, with no definite result; but as a topic of conversation it was as fully illustrative of frontier life as the bear-fighting.

Long after we had all gone to bed, we heard Big Tom's continuous voice, through the thin partition that separated us from the kitchen, going on to his little boy about the bear; every circumstance of how he tracked him, and what corner of the field he entered, and where he went out, and his probable size and age, and the prospect of his coming again; these were the details of real everyday life, and worthy to be dwelt on by the hour. The boy was never tired of pursuing them. And Big Tom was just a big boy, also, in his delight in it all.

Perhaps it was the fascination of Big Tom, perhaps the representation that we were already way off the Big Ivy route, and that it would, in fact, save time to go over the mountain and we could ride all the way, that made the Professor acquiesce, with no protest worth noticing, in the preparations that went on, as by a natural assumption, for going over Mitchell. At any rate, there was an early breakfast, luncheon was put up, and by half-past seven we were riding up the Caney,—a half-cloudy day,—Big Tom swinging along on foot ahead, talking nineteen to the dozen. There was a delightful freshness in the air, the dew-laden bushes, and the smell of the forest. In half an hour we called at the hunting shanty of Mr. Murchison, wrote our names on the wall, according to custom, and regretted that we could not stay for a day in that retreat and try the speckled trout. Making our way through the low growth and bushes of the valley, we came into a fine open forest, watered by a noisy brook, and after an hour's easy going reached the serious ascent.

From Wilson's to the peak of Mitchell it is seven and a half miles; we made it in five and a half hours. A bridle path was cut years ago, but it has been entirely neglected. It is badly washed, it is stony, muddy, and great trees have fallen across it which wholly block the way for horses. At these places long detours were necessary, on steep hillsides and through gullies, over treacherous sink-holes in the rocks, through quaggy places, heaps of brush, and rotten logs. Those who have ever attempted to get horses over such ground will not wonder at the slow progress we made. Before we were halfway up the ascent, we realized the folly of attempting it on horseback; but then to go on seemed as easy as to go back. The way was also exceedingly

steep in places, and what with roots, and logs, and slippery rocks and stones, it was a desperate climb for the horses.

What a magnificent forest! Oaks, chestnuts, Poplars, hemlocks, the cucumber (a species of magnolia, with a pinkish, cucumber-like cone), and all sorts of northern and southern growths meeting here in splendid array. And this gigantic forest, with little diminution in size of trees, continued two thirds of the way up. We marked, as we went on, the maple, the black walnut, the buckeye, the hickory, the locust, and the guide pointed out in one section the largest cherry-trees we had ever seen; splendid trunks, each worth a large sum if it could be got to market. After the great trees were left behind, we entered a garden of white birches, and then a plateau of swamp, thick with raspberry bushes, and finally the ridges, densely crowded with the funereal black balsam.

Halfway up, Big Tom showed us his favorite, the biggest tree he knew. It was a poplar, or tulip. It stands more like a column than a tree, rising high into the air, with scarcely a perceptible taper, perhaps sixty, more likely a hundred, feet before it puts out a limb.

Its girth six feet from the ground is thirty-two feet! I think it might be called Big Tom. It stood here, of course, a giant, when Columbus sailed from Spain, and perhaps some sentimental traveler will attach the name of Columbus to it.

In the woods there was not much sign of animal life, scarcely the note of a bird, but we noticed as we rode along in the otherwise primeval silence a loud and continuous humming overhead, almost like the sound of the wind in pine tops. It was the humming of bees! The upper branches were alive with these industrious toilers, and Big Tom was always on the alert to discover and mark a bee-gum, which he could visit afterwards. Honey hunting is one of his occupations. Collecting spruce gum is another, and he was continually hacking off with his hatchet knobs of the translucent secretion. How rich and fragrant are these forests! The rhododendron was still in occasional bloom' and flowers of brilliant hue gleamed here and there.

The struggle was more severe as we neared the summit, and the footing worse for the horses. Occasionally it was safest to dismount and lead them up slippery ascents; but this was also dangerous, for it was difficult to keep them from treading on our heels, in their frantic flounderings, in the steep, wet, narrow, brier-grown path. At one uncommonly pokerish place, where the wet rock sloped into a bog, the rider of Jack thought it prudent to dismount, but Big Tom insisted that Jack would "make it" all right, only give him his head. The rider gave him his head, and the next minute Jack's four heels were in the air, and he came down on his side in a flash. The rider fortunately extricated his leg without losing it, Jack scrambled out with a broken shoe, and the two limped along. It was a wonder that the horses' legs were not broken a dozen times.

As we approached the top, Big Tom pointed out the direction, a half mile away, of a small pond, a little mountain tarn, overlooked by a ledge of rock, where Professor Mitchell lost his life. Big Tom was the guide that found his body. That day, as we sat on the summit, he gave in great detail the story, the general outline of which is well known.

The first effort to measure the height of the Black Mountains was made in 1835, by Professor Elisha Mitchell, professor of mathematics and chemistry in the University of North Carolina at Chapel Hill. Mr. Mitchell was a native of Connecticut, born in Washington, Litchfield County, in 1793; graduated at Yale, ordained a Presbyterian minister, and was for a time state surveyor; and became a professor at Chapel Hill in 1818. He first ascertained and published the fact that the Black Mountains are the highest land east of the Rocky Mountains. In 1844 he visited the locality again. Measurements were subsequently made by Professor Guyot and by Senator Clingman. One of the peaks was named for the senator (the one next in height to Mitchell is described as Clingman on the state map), and a dispute arose as to whether Mitchell had really visited and measured the highest peak. Senator Clingman still maintains that he did not, and that the peak now known as Mitchell is the one that Clingman first described. The estimates of altitudes made by the three explorers named differed considerably. The height now fixed for Mount Mitchell is 6711; that of Mount Washington is 6285. There are twelve peaks in this range higher than Mount Washington, and if we add those in the Great Smoky Mountains which overtop it, there are some twenty in this State higher than the granite giant of New Hampshire.

In order to verify his statement, Professor Mitchell (then in his sixty-fourth year) made a third ascent in June, 1857. He was alone, and went up from the Swannanoa side. He did not return. No anxiety was felt for two or three days, as he was a good mountaineer, and it was supposed he had crossed the mountain and made his way out by the Caney River. But when several days passed without tidings of him, a search party was formed. Big Tom Wilson was with it. They explored the mountain in all directions unsuccessfully. At length Big Tom separated himself from his companions and took a course in accordance with his notion of that which would be pursued by a man lost in the clouds or the darkness. He soon struck the trail of the wanderer, and, following it, discovered Mitchell's body lying in a pool at the foot of a rocky precipice some thirty feet high. It was evident that Mitchell, making his way along the ridge in darkness or fog, had fallen off. It was the ninth (or the eleventh) day of his disappearance, but in the pure mountain air the body had suffered no change. Big Tom brought his companions to the place, and on consultation it was decided to leave the body undisturbed till Mitchell's friends could be present.

There was some talk of burying him on the mountain, but the friends decided otherwise, and the remains, with much difficulty, were got down to Asheville and there interred.

Some years afterwards, I believe at the instance of a society of scientists, it was resolved to transport the body to the summit of Mount Mitchell; for the tragic death of the explorer had forever settled in the popular mind the name of the mountain. The task was not easy. A road had to be cut, over which a sledge could be hauled, and the hardy mountaineers who undertook the removal were three days in reaching the summit with their burden. The remains were accompanied by a considerable concourse, and the last rites on the top were participated in by a hundred or more scientists and prominent men from different parts of the State. Such a strange cortege had never before broken the silence of this lonely wilderness, nor was ever burial more impressive than this wild interment above the clouds.

We had been preceded in our climb all the way by a huge bear. That he was huge, a lunker, a monstrous old

varmint, Big Tom knew by the size of his tracks; that he was making the ascent that morning ahead of us, Big Tom knew by the freshness of the trail. We might come upon him at any moment; he might be in the garden; was quite likely to be found in the raspberry patch. That we did not encounter him I am convinced was not the fault of Big Tom, but of the bear.

After a struggle of five hours we emerged from the balsams and briers into a lovely open meadow, of lush clover, timothy, and blue grass. We unsaddled the horses and turned them loose to feed in it. The meadow sloped up to a belt of balsams and firs, a steep rocky knob, and climbing that on foot we stood upon the summit of Mitchell at one o'clock. We were none too soon, for already the clouds were preparing for what appears to be a daily storm at this season.

The summit is a nearly level spot of some thirty or forty feet in extent either way, with a floor of rock and loose stones. The stunted balsams have been cut away so as to give a view. The sweep of prospect is vast, and we could see the whole horizon except in the direction of Roan, whose long bulk was enveloped in cloud. Portions of six States were in sight, we were told, but that is merely a geographical expression. What we saw, wherever we looked, was an inextricable tumble of mountains, without order or leading line of direction,—domes, peaks, ridges, endless and countless, everywhere, some in shadow, some tipped with shafts of sunlight, all wooded and green or black, and all in more softened contours than our Northern hills, but still wild, lonesome, terrible. Away in the southwest, lifting themselves up in a gleam of the western sky, the Great Smoky Mountains loomed like a frowning continental fortress, sullen and remote. With Clingman and Gibbs and Holdback peaks near at hand and apparently of equal height, Mitchell seemed only a part and not separate from the mighty congregation of giants.

In the center of the stony plot on the summit lie the remains of Mitchell. To dig a grave in the rock was impracticable, but the loose stones were scooped away to the depth of a foot or so, the body was deposited, and the stones were replaced over it. It was the original intention to erect a monument, but the enterprise of the projectors of this royal entombment failed at that point. The grave is surrounded by a low wall of loose stones, to which each visitor adds one, and in the course of ages the cairn may grow to a good size. The explorer lies there without name or headstone to mark his awful resting-place. The mountain is his monument. He is alone with its majesty. He is there in the clouds, in the tempests, where the lightnings play, and thunders leap, amid the elemental tumult, in the occasional great calm and silence and the pale sunlight. It is the most majestic, the most lonesome grave on earth.

As we sat there, awed a little by this presence, the clouds were gathering from various quarters and drifting towards us. We could watch the process of thunder-storms and the manufacture of tempests. I have often noticed on other high mountains how the clouds, forming like genii released from the earth, mount into the upper air, and in masses of torn fragments of mist hurry across the sky as to a rendezvous of witches. This was a different display. These clouds came slowly sailing from the distant horizon, like ships on an aerial voyage. Some were below us, some on our level; they were all in well-defined, distinct masses, molten silver on deck, below trailing rain, and attended on earth by gigantic shadows that moved with them. This strange fleet of battle-ships, drifted by the shifting currents, was maneuvering for an engagement. One after another, as they came into range about our peak of observation, they opened fire. Sharp flashes of lightning darted from one to the other; a jet of flame from one leaped across the interval and was buried in the bosom of its adversary; and at every discharge the boom of great guns echoed through the mountains. It was something more than a royal salute to the tomb of the mortal at our feet, for the masses of cloud were rent in the fray, at every discharge the rain was precipitated in increasing torrents, and soon the vast hulks were trailing torn fragments and wreaths of mist, like the shot-away shrouds and sails of ships in battle. Gradually, from this long-range practice with single guns and exchange of broadsides, they drifted into closer conflict, rushed together, and we lost sight of the individual combatants in the general tumult of this aerial war.

We had barely twenty minutes for our observations, when it was time to go; and had scarcely left the peak when the clouds enveloped it. We hastened down under the threatening sky to the saddles and the luncheon. Just off from the summit, amid the rocks, is a complete arbor, or tunnel, of rhododendrons. This cavernous place a Western writer has made the scene of a desperate encounter between Big Tom and a catamount, or American panther, which had been caught in a trap and dragged it there, pursued by Wilson. It is an exceedingly graphic narrative, and is enlivened by the statement that Big Tom had the night before drunk up all the whisky of the party which had spent the night on the summit. Now Big Tom assured us that the whisky part of the story was an invention; he was not (which is true) in the habit of using it; if he ever did take any, it might be a drop on Mitchell; in fact, when he inquired if we had a flask, he remarked that a taste of it would do him good then and there. We regretted the lack of it in our baggage. But what inclined Big Tom to discredit the Western writer's story altogether was the fact that he never in his life had had a difficulty with a catamount, and never had seen one in these mountains.

Our lunch was eaten in haste. Big Tom refused the chicken he had provided for us, and strengthened himself with slices of raw salt pork, which he cut from a hunk with his clasp-knife. We caught and saddled our horses, who were reluctant to leave the rich feed, enveloped ourselves in waterproofs, and got into the stony path for the descent just as the torrent came down. It did rain. It lightened, the thunder crashed, the wind howled and twisted the treetops. It was as if we were pursued by the avenging spirits of the mountains for our intrusion. Such a tempest on this height had its terrors even for our hardy guide. He preferred to be lower down while it was going on. The crash and reverberation of the thunder did not trouble us so much as the swish of the wet branches in our faces and the horrible road, with its mud, tripping roots, loose stones, and slippery rocks. Progress was slow. The horses were in momentary danger of breaking their legs. In the first hour there was not much descent. In the clouds we were passing over Clingman, Gibbs, and Holdback. The rain had ceased, but the mist still shut off all view, if any had been attainable, and bushes and paths were deluged. The descent was more uncomfortable than the ascent, and we were compelled a good deal of the way to lead the jaded horses down the slippery rocks.

From the peak to the Widow Patten's, where we proposed to pass the night, is twelve miles, a distance we rode or scrambled down, every step of the road bad, in five and a half hours. Halfway down we came out upon a cleared place, a farm, with fruit-trees and a house in ruins. Here had been a summer hotel much

resorted to before the war, but now abandoned. Above it we turned aside for the view from Elizabeth rock, named from the daughter of the proprietor of the hotel, who often sat here, said Big Tom, before she went out of this world. It is a bold rocky ledge, and the view from it, looking south, is unquestionably the finest, the most pleasing and picture-like, we found in these mountains. In the foreground is the deep gorge of a branch of the Swannanoa, and opposite is the great wall of the Blue Ridge (the Blue Ridge is the most capricious and inexplicable system) making off to the Blacks. The depth of the gorge, the sweep of the sky line, and the reposeful aspect of the scene to the sunny south made this view both grand and charming. Nature does not always put the needed dash of poetry into her extensive prospects.

Leaving this clearing and the now neglected spring, where fashion used to slake its thirst, we zigzagged down the mountain-side through a forest of trees growing at every step larger and nobler, and at length struck a small stream, the North Fork of the Swannanoa, which led us to the first settlement. Just at night,—it was nearly seven o'clock,—we entered one of the most stately forests I have ever seen, and rode for some distance in an alley of rhododendrons that arched overhead and made a bower. It was like an aisle in a temple; high overhead was the somber, leafy roof, supported by gigantic columns. Few widows have such an avenue of approach to their domain as the Widow Patten has.

Cheering as this outcome was from the day's struggle and storm, the Professor seemed sunk in a profound sadness. The auguries which the Friend drew from these signs of civilization of a charming inn and a royal supper did not lighten the melancholy of his mind. "Alas," he said,

*"Why didst thou promise such a beauteous day,
And make me travel forth without my cloak,
To let base clouds o'ertake me in my way,
Hiding thy bravery in their rotten smoke?
'T is not enough that through the cloud thou break,
To dry the rain on my storm-beaten face,
For no man well of such a salve can speak
That heals the wound, and cures not the disgrace:
Nor can thy shame give physic to my grief:
Though thou repent, yet I have still the loss."*

"Loss of what?" cried the Friend, as he whipped up his halting steed.

"Loss of self-respect. I feel humiliated that I consented to climb this mountain."

"Nonsense! You'll live to thank me for it, as the best thing you ever did. It's over and done now, and you've got it to tell your friends."

"That's just the trouble. They'll ask me if I went up Mitchell, and I shall have to say I did. My character for consistency is gone. Not that I care much what they think, but my own self-respect is gone. I never believed I would do it. A man ca'n't afford to lower himself in his own esteem, at my time of life."

The Widow Patten's was only an advanced settlement in this narrow valley on the mountain-side, but a little group of buildings, a fence, and a gate gave it the air of a place, and it had once been better cared for than it is now. Few travelers pass that way, and the art of entertaining, if it ever existed, is fallen into desuetude. We unsaddled at the veranda, and sat down to review our adventure, make the acquaintance of the family, and hear the last story from Big Tom. The mountaineer, though wet, was as fresh as a daisy, and fatigue in no wise checked the easy, cheerful flow of his talk. He was evidently a favorite with his neighbors, and not unpleasantly conscious of the extent of his reputation. But he encountered here another social grade. The Widow Patten was highly connected. We were not long in discovering that she was an Alexander. She had been a schoolmate of Senator Vance,—“Zeb Vance” he still was to her,—and the senator and his wife had stayed at her house. I wish I could say that the supper, for which we waited till nine o'clock, was as “highly connected” as the landlady. It was, however, a supper that left its memory. We were lodged in a detached house, which we had to ourselves, where a roaring wood fire made amends for other things lacking. It was necessary to close the doors to keep out the wandering cows and pigs, and I am bound to say that, notwithstanding the voices of the night, we slept there the sleep of peace.

In the morning a genuine surprise awaited us; it seemed impossible, but the breakfast was many degrees worse than the supper; and when we paid our bill, large for the region, we were consoled by the thought that we paid for the high connection as well as for the accommodations. This is a regular place of entertainment, and one is at liberty to praise it without violation of delicacy.

The broken shoe of Jack required attention, and we were all the morning hunting a blacksmith, as we rode down the valley. Three blacksmith's shanties were found, and after long waiting to send for the operator it turned out in each case that he had no shoes, no nails, no iron to make either of. We made a detour of three miles to what was represented as a regular shop. The owner had secured the service of a colored blacksmith for a special job, and was, not inclined to accommodate us; he had no shoes, no nails. But the colored blacksmith, who appreciated the plight we were in, offered to make a shoe, and to crib four nails from those he had laid aside for a couple of mules; and after a good deal of delay, we were enabled to go on. The incident shows, as well as anything, the barrenness and shiftlessness of the region. A horseman with whom we rode in the morning gave us a very low estimate of the trustworthiness of the inhabitants. The valley is wild and very pretty all the way down to Colonel Long's,—twelve miles,—but the wretched-looking people along the way live in a wretched manner.

Just before reaching Colonel Long's we forded the stream (here of good size), the bridge having tumbled down, and encountered a party of picnickers under the trees—signs of civilization; a railway station is not far off. Colonel Long's is a typical Southern establishment: a white house, or rather three houses, all of one story, built on to each other as beehives are set in a row, all porches and galleries. No one at home but the cook, a rotund, broad-faced woman, with a merry eye, whose very appearance suggested good cooking and hospitality; the Missis and the children had gone up to the river fishing; the Colonel was somewhere about the place; always was away when he was wanted. Guess he'd take us in, mighty fine man the Colonel; and she dispatched a child from a cabin in the rear to hunt him up. The Colonel was a great friend of her folks down to Greenville; they visited here. Law, no, she didn't live here. Was just up here spending the summer, for her

health. God-forsaken lot of people up here, poor trash. She wouldn't stay here a day, but the Colonel was a friend of her folks, the firstest folks in Greenville. Nobody round here she could 'sociate with. She was a Presbyterian, the folks round here mostly Baptists and Methodists. More style about the Presbyterians. Married? No, she hoped not. She did n't want to support no husband. Got 'nuff to do to take care of herself. That her little girl? No; she'd only got one child, down to Greenville, just the prettiest boy ever was, as white as anybody. How did she what? reconcile this state of things with not being married and being a Presbyterian? Sho! she liked to carry some religion along; it was mighty handy occasionally, mebbe not all the time. Yes, indeed, she enjoyed her religion.

The Colonel appeared and gave us a most cordial welcome. The fat and merry cook blustered around and prepared a good dinner, memorable for its "light" bread, the first we had seen since Cranberry Forge. The Colonel is in some sense a public man, having been a mail agent, and a Republican. He showed us photographs and engravings of Northern politicians, and had the air of a man who had been in Washington. This was a fine country for any kind of fruit,—apples, grapes, pears; it needed a little Northern enterprise to set things going. The travelers were indebted to the Colonel for a delightful noonday rest, and with regret declined his pressing invitation to pass the night with him.

The ride down the Swannanoa to Asheville was pleasant, through a cultivated region, over a good road. The Swannanoa is, however, a turbid stream. In order to obtain the most impressive view of Asheville we approached it by the way of Beaucatcher Hill, a sharp elevation a mile west of the town. I suppose the name is a corruption of some descriptive French word, but it has long been a favorite resort of the frequenters of Asheville, and it may be traditional that it is a good place to catch beaux. The summit is occupied by a handsome private residence, and from this ridge the view, which has the merit of "bursting" upon the traveler as he comes over the hill, is captivating in its extent and variety. The pretty town of Asheville is seen to cover a number of elevations gently rising out of the valley, and the valley, a rich agricultural region, well watered and fruitful, is completely inclosed by picturesque hills, some of them rising to the dignity of mountains. The most conspicuous of these is Mount Pisgah, eighteen miles distant to the southwest, a pyramid of the Balsam range, 5757 feet high. Mount Pisgah, from its shape, is the most attractive mountain in this region.

The sunset light was falling upon the splendid panorama and softening it. The windows of the town gleamed as if on fire. From the steep slope below came the mingled sounds of children shouting, cattle driven home, and all that hum of life that marks a thickly peopled region preparing for the night. It was the leisure hour of an August afternoon, and Asheville was in all its watering-place gayety, as we reined up at the Swannanoa hotel. A band was playing on the balcony. We had reached ice-water, barbers, waiters, civilization.

IV

Asheville, delightful for situation, on small hills that rise above the French Broad below its confluence with the Swannanoa, is a sort of fourteenth cousin to Saratoga. It has no springs, but lying 2250 feet above the sea and in a lovely valley, mountain girt, it has pure atmosphere and an equable climate; and being both a summer and winter resort, it has acquired a watering-place air. There are Southerners who declare that it is too hot in summer, and that the complete circuit of mountains shuts out any lively movement of air. But the scenery is so charming and noble, the drives are so varied, the roads so unusually passable for a Southern country, and the facilities for excursions so good, that Asheville is a favorite resort.

Architecturally the place is not remarkable, but its surface is so irregular, there are so many acclivities and deep valleys that improvements can never obliterate, that it is perforce picturesque. It is interesting also, if not pleasing, in its contrasts—the enterprise of taste and money-making struggling with the *laissez faire* of the South. The negro, I suppose, must be regarded as a conservative element; he has not much inclination to change his clothes or his cabin, and his swarming presence gives a ragged aspect to the new civilization. And to say the truth, the new element of Southern smartness lacks the trim thrift the North is familiar with; though the visitor who needs relaxation is not disposed to quarrel with the easy-going terms on which life is taken.

Asheville, it is needless to say, appeared very gay and stimulating to the riders from the wilderness. The Professor, who does not even pretend to patronize Nature, had his revenge as we strolled about the streets (there is but one of much consideration), immensely entertained by the picturesque contrasts. There was more life and amusement here in five minutes, he declared, than in five days of what people called scenery—the present rage for scenery, anyway, being only a fashion and a modern invention. The Friend suspected from this penchant for the city that the Professor must have been brought up in the country.

There was a kind of predetermined and willful gayety about Asheville however, that is apt to be present in a watering-place, and gave to it the melancholy tone that is always present in gay places. We fancied that the lively movement in the streets had an air of unreality. A band of musicians on the balcony of the Swannanoa were scraping and tooting and twanging with a hired air, and on the opposite balcony of the Eagle a rival band echoed and redoubled the perfunctory joyousness. The gayety was contagious: the horses felt it; those that carried light burdens of beauty minced and pranced, the pony in the dog-cart was inclined to dash, the few passing equipages had an air of pleasure; and the people of color, the comely waitress and the slouching corner-loafer, responded to the animation of the festive strains. In the late afternoon the streets were full of people, wagons, carriages, horsemen, all with a holiday air, dashed with African color and humor—the irresponsibility of the most insouciant and humorous race in the world, perhaps more comical than humorous; a mixture of recent civilization and rudeness, peculiar and amusing; a happy coming together, it seemed, of Southern abandon and Northern wealth, though the North was little represented at this season.

As evening came on, the streets, though wanting gas, were still more animated; the shops were open, some

very good ones, and the white and black throng increasing, especially the black, for the negro is preeminently a night bird. In the hotels dancing was promised—the german was announced; on the galleries and in the corridors were groups of young people, a little loud in manner and voice,—the young gentleman, with his over-elaborate manner to ladies in bowing and hat-lifting, and the blooming girls from the lesser Southern cities, with the slight provincial note, and yet with the frank and engaging cordiality which is as charming as it is characteristic. I do not know what led the Professor to query if the Southern young women were not superior to the Southern young men, but he is always asking questions nobody can answer. At the Swannanoa were half a dozen bridal couples, readily recognizable by the perfect air they had of having been married a long time. How interesting such young voyagers are, and how interesting they are to each other! Columbus never discovered such a large world as they have to find out and possess each in the other.

Among the attractions of the evening it was difficult to choose. There was a lawn-party advertised at Battery Point (where a fine hotel has since been built) and we walked up to that round knob after dark. It is a hill with a grove, which commands a charming view, and was fortified during the war. We found it illuminated with Chinese lanterns; and little tables set about under the trees, laden with cake and ice-cream, offered a chance to the stranger to contribute money for the benefit of the Presbyterian Church. I am afraid it was not a profitable entertainment, for the men seemed to have business elsewhere, but the ladies about the tables made charming groups in the lighted grove. Man is a stupid animal at best, or he would not make it so difficult for the womenkind to scrape together a little money for charitable purposes. But probably the women like this method of raising money better than the direct one.

The evening gayety of the town was well distributed. When we descended to the Court-House Square, a great crowd had collected, black, white, and yellow, about a high platform, upon which four glaring torches lighted up the novel scene, and those who could read might decipher this legend on a standard at the back of the stage:

HAPPY JOHN.
ONE OF THE SLAVES OF WADE HAMPTON.
COME AND SEE HIM!

Happy John, who occupied the platform with Mary, a “bright” yellow girl, took the comical view of his race, which was greatly enjoyed by his audience. His face was blackened to the proper color of the stage-darkey, and he wore a flaming suit of calico, the trousers and coat striped longitudinally according to Punch's idea of “Uncle Sam,” the coat a swallow-tail bound and faced with scarlet, and a bell-crowned white hat. This conceit of a colored Yankee seemed to tickle all colors in the audience amazingly. Mary, the “bright” woman (this is the universal designation of the light mulatto), was a pleasing but bold yellow girl, who wore a natty cap trimmed with scarlet, and had the assured or pert manner of all traveling sawdust performers.

“Oh, yes,” exclaimed a bright woman in the crowd, “Happy John was sure enough one of Wade Hampton's slaves, and he's right good looking when he's not blackened up.”

Happy John sustained the promise of his name by spontaneous gayety and enjoyment of the fleeting moment; he had a glib tongue and a ready, rude wit, and talked to his audience with a delicious mingling of impudence, deference, and patronage, commenting upon them generally, administering advice and correction in a strain of humor that kept his hearers in a pleased excitement. He handled the banjo and the guitar alternately, and talked all the time when he was not singing. Mary (how much harder featured and brazen a woman is in such a position than a man of the same caliber!) sang, in an untutored treble, songs of sentiment, often risqué, in solo and in company with John, but with a cold, indifferent air, in contrast to the rollicking enjoyment of her comrade.

The favorite song, which the crowd compelled her to repeat, touched lightly the uncertainties of love, expressed in the falsetto pathetic refrain:

“Mary's gone away wid de coon.”

All this, with the moon, the soft summer night, the mixed crowd of darkies and whites, the stump eloquence of Happy John, the singing, the laughter, the flaring torches, made a wild scene. The entertainment was quite free, with a “collection” occasionally during the performance.

What most impressed us, however, was the turning to account by Happy John of the “nigger” side of the black man as a means of low comedy, and the enjoyment of it by all the people of color. They appeared to appreciate as highly as anybody the comic element in themselves, and Happy John had emphasized it by deepening his natural color and exaggerating the “nigger” peculiarities. I presume none of them analyzed the nature of his infectious gayety, nor thought of the pathos that lay so close to it, in the fact of his recent slavery, and the distinction of being one of Wade Hampton's niggers, and the melancholy mirth of this light-hearted race's burlesque of itself.

A performance followed which called forth the appreciation of the crowd more than the wit of Happy John or the faded songs of the yellow girl. John took two sweet-cakes and broke each in fine pieces into a saucer, and after sugaring and eulogizing the dry messes, called for two small darkey volunteers from the audience to come up on the platform and devour them. He offered a prize of fifteen cents to the one who should first eat the contents of his dish, not using his hands, and hold up the saucer empty in token of his victory. The cake was tempting, and the fifteen cents irresistible, and a couple of boys in ragged shirts and short trousers and a suspender apiece came up shamefacedly to enter for the prize. Each one grasped his saucer in both hands, and with face over the dish awaited the word “go,” which John gave, and started off the contest with a banjo accompaniment. To pick up with the mouth the dry cake and choke it down was not so easy as the boys apprehended, but they went into the task with all their might, gobbling and swallowing as if they loved cake, occasionally rolling an eye to the saucer of the contestant to see the relative progress, John strumming, ironically encouraging, and the crowd roaring. As the combat deepened and the contestants strangled and stuffed and sputtered, the crowd went into spasms of laughter. The smallest boy won by a few seconds, holding up his empty saucer, with mouth stuffed, vigorously trying to swallow, like a chicken with his throat clogged with dry meal, and utterly unable to speak. The impartial John praised the victor in mock heroics, but

said that the trial was so even that he would divide the prize, ten cents to one and five to the other—a stroke of justice that greatly increased his popularity. And then he dismissed the assembly, saying that he had promised the mayor to do so early, because he did not wish to run an opposition to the political meeting going on in the courthouse.

The scene in the large court-room was less animated than that out-doors; a half-dozen tallow dips, hung on the wall in sconces and stuck on the judge's long desk, feebly illuminated the mixed crowd of black and white who sat in, and on the backs of, the benches, and cast only a fitful light upon the orator, who paced back and forth and pounded the rail. It was to have been a joint discussion between the two presidential electors running in that district, but, the Republican being absent, his place was taken by a young man of the town. The Democratic orator took advantage of the absence of his opponent to describe the discussion of the night before, and to give a portrait of his adversary. He was represented as a cross between a baboon and a jackass, who would be a natural curiosity for Barnum. "I intend," said the orator, "to put him in a cage and exhibit him about the deestriect." This political hit called forth great applause. All his arguments were of this pointed character, and they appeared to be unanswerable. The orator appeared to prove that there wasn't a respectable man in the opposite party who wasn't an office-holder, nor a white man of any kind in it who was not an office-holder. If there were any issues or principles in the canvass, he paid his audience the compliment of knowing all about them, for he never alluded to any. In another state of society, such a speech of personalities might have led to subsequent shootings, but no doubt his adversary would pay him in the same coin when next they met, and the exhibition seemed to be regarded down here as satisfactory and enlightened political canvassing for votes. The speaker who replied, opened his address with a noble tribute to woman (as the first speaker had ended his), directed to a dozen of that sex who sat in the gloom of a corner. The young man was moderate in his sarcasm, and attempted to speak of national issues, but the crowd had small relish for that sort of thing. At eleven o'clock, when we got away from the unsavory room (more than half the candles had gone out), the orator was making slow headway against the refished blackguardism of the evening. The german was still "on" at the hotel when we ascended to our chamber, satisfied that Asheville was a lively town.

The sojourner at Asheville can amuse himself very well by walking or driving to the many picturesque points of view about the town; livery stables abound, and the roads are good. The Beau-catcher Hill is always attractive; and Connolly's, a private place a couple of miles from town, is ideally situated, being on a slight elevation in the valley, commanding the entire circuit of mountains, for it has the air of repose which is so seldom experienced in the location of a dwelling in America whence an extensive prospect is given. Or if the visitor is disinclined to exertion, he may lounge in the rooms of the hospitable Asheville Club; or he may sit on the sidewalk in front of the hotels, and talk with the colonels and judges and generals and ex-members of Congress, the talk generally drifting to the new commercial and industrial life of the South, and only to politics as it affects these; and he will be pleased, if the conversation takes a reminiscent turn, with the lack of bitterness and the tone of friendliness. The negro problem is commonly discussed philosophically and without heat, but there is always discovered, underneath, the determination that the negro shall never again get the legislative upper hand. And the gentleman from South Carolina who has an upland farm, and is heartily glad slavery is gone, and wants the negro educated, when it comes to ascendancy in politics—such as the State once experienced—asks you what you would do yourself. This is not the place to enter upon the politico-social question, but the writer may note one impression gathered from much friendly and agreeable conversation. It is that the Southern whites misapprehend and make a scarecrow of "social equality." When, during the war, it was a question at the North of giving the colored people of the Northern States the ballot, the argument against it used to be stated in the form of a question: "Do you want your daughter to marry a negro?" Well, the negro has his political rights in the North, and there has come no change in the social conditions whatever. And there is no doubt that the social conditions would remain exactly as they are at the South if the negro enjoyed all the civil rights which the Constitution tries to give him. The most sensible view of this whole question was taken by an intelligent colored man, whose brother was formerly a representative in Congress. "Social equality," he said in effect, "is a humbug. We do not expect it, we do not want it. It does not exist among the blacks themselves. We have our own social degrees, and choose our own associates. We simply want the ordinary civil rights, under which we can live and make our way in peace and amity. This is necessary to our self-respect, and if we have not self-respect, it is not to be supposed that the race can improve. I'll tell you what I mean. My wife is a modest, intelligent woman, of good manners, and she is always neat, and tastefully dressed. Now, if she goes to take the cars, she is not permitted to go into a clean car with decent people, but is ordered into one that is repellent, and is forced into company that any refined woman would shrink from. But along comes a flauntingly dressed woman, of known disreputable character, whom my wife would be disgraced to know, and she takes any place that money will buy. It is this sort of thing that hurts."

We took the eastern train one evening to Round Nob (Henry's Station), some thirty miles, in order to see the wonderful railway that descends, a distance of eight miles, from the summit of Swannanoa Gap (2657 feet elevation) to Round Nob Hotel (1607 feet). The Swannanoa Summit is the dividing line between the waters that flow to the Atlantic and those that go to the Gulf of Mexico. This fact was impressed upon us by the inhabitants, who derive a good deal of comfort from it. Such divides are always matter of local pride. Unfortunately, perhaps, it was too dark before we reached Henry's to enable us to see the road in all its loops and parallels as it appears on the map, but we gained a better effect. The hotel, when we first sighted it, all its windows blazing with light, was at the bottom of a well. Beside it—it was sufficiently light to see that—a column of water sprang straight into the air to the height, as we learned afterwards from two official sources, of 225 and 265 feet; and the information was added that it is the highest fountain in the world. This stout column, stiff as a flagstaff, with its feathery head of mist gleaming like silver in the failing light, had the most charming effect. We passed out of sight of hotel and fountain, but were conscious of being—whirled on a circular descending grade, and very soon they were in sight again. Again and again they disappeared and came to view, now on one side and now on the other, until our train seemed to be bewitched, making frantic efforts by dodgings and turnings, now through tunnels and now over high pieces of trestle, to escape the inevitable attraction that was gravitating it down to the hospitable lights at the bottom of the well. When we

climbed back up the road in the morning, we had an opportunity to see the marvelous engineering, but there is little else to see, the view being nearly always very limited.

The hotel at the bottom of the ravine, on the side of Round Nob, offers little in the way of prospect, but it is a picturesque place, and we could understand why it was full of visitors when we came to the table. It was probably the best-kept house of entertainment in the State, and being in the midst of the Black Hills, it offers good chances for fishing and mountain climbing.

In the morning the fountain, which is, of course, artificial, refused to play, the rain in the night having washed in debris which clogged the conduit. But it soon freed itself and sent up for a long time, like a sulky geyser, mud and foul water. When it got freedom and tolerable clearness, we noted that the water went up in pulsations, which were marked at short distances by the water falling off, giving the column the appearance of a spine. The summit, always beating the air in efforts to rise higher, fell over in a veil of mist.

There are certain excursions that the sojourner at Asheville must make. He must ride forty-five miles south through Henderson and Transylvania to Caesar's Head, on the South Carolina border, where the mountain system abruptly breaks down into the vast southern plain; where the observer, standing on the edge of the precipice, has behind him and before him the greatest contrast that nature can offer. He must also take the rail to Waynesville, and visit the much-frequented White Sulphur Springs, among the Balsam Mountains, and penetrate the Great Smoky range by way of Quallatown, and make the acquaintance of the remnant of Cherokee Indians living on the north slope of Cheoah Mountain. The Professor could have made it a matter of personal merit that he escaped all these encounters with wild and picturesque nature, if his horse had not been too disabled for such long jaunts. It is only necessary, however, to explain to the public that the travelers are not gormandizers of scenery, and were willing to leave some portions of the State to the curiosity of future excursionists.

But so much was said about Hickory Nut Gap that a visit to it could not be evaded. The Gap is about twenty-four miles southeast of Asheville. In the opinion of a well-informed colonel, who urged us to make the trip, it is the finest piece of scenery in this region. We were brought up on the precept "get the best," and it was with high anticipations that we set out about eleven o'clock one warm, foggy morning. We followed a very good road through a broken, pleasant country, gradually growing wilder and less cultivated. There was heavy rain most of the day on the hills, and occasionally a shower swept across our path. The conspicuous object toward which we traveled all the morning was a shapely conical hill at the beginning of the Gap.

At three o'clock we stopped at the Widow Sherrill's for dinner. Her house, only about a mile from the summit, is most picturesquely situated on a rough slope, giving a wide valley and mountain view. The house is old rambling, many-roomed, with wide galleries on two sides. If one wanted a retired retreat for a few days, with good air and fair entertainment, this could be commended. It is an excellent fruit region; apples especially are sound and of good flavor. That may be said of all this part of the State. The climate is adapted to apples, as the hilly part of New England is. I fancy the fruit ripens slowly, as it does in New England, and is not subject to quick decay like much of that grown in the West. But the grape also can be grown in all this mountain region. Nothing but lack of enterprise prevents any farmer from enjoying abundance of fruit. The industry carried on at the moment at the Widow Sherrill's was the artificial drying of apples for the market. The apples are pared, cored, and sliced in spirals, by machinery, and dried on tin sheets in a patented machine. The industry appears to be a profitable one hereabouts, and is about the only one that calls in the aid of invention.

While our dinner was preparing, we studied the well-known pictures of "Jane" and "Eliza," the photographs of Confederate boys, who had never returned from the war, and the relations, whom the traveling photographers always like to pillory in melancholy couples, and some stray volumes of the Sunday-school Union. Madame Sherrill, who carries on the farm since the death of her husband, is a woman of strong and liberal mind, who informed us that she got small comfort in the churches in the neighborhood, and gave us, in fact, a discouraging account of the unvital piety of the region.

The descent from the summit of the Gap to Judge Logan's, nine miles, is rapid, and the road is wild and occasionally picturesque, following the Broad River, a small stream when we first overtook it, but roaring, rocky, and muddy, owing to frequent rains, and now and then tumbling down in rapids. The noisy stream made the ride animated, and an occasional cabin, a poor farmhouse, a mill, a schoolhouse, a store with an assemblage of lean horses tied to the hitching rails, gave the Professor opportunity for remarks upon the value of life under such circumstances.

The valley which we followed down probably owes its celebrity to the uncommon phenomena of occasional naked rocks and precipices. The inclosing mountains are from 3000 to 4000 feet high, and generally wooded. I do not think that the ravine would be famous in a country where exposed ledges and buttressing walls of rock are common. It is only by comparison with the local scenery that this is remarkable. About a mile above Judge Logan's we caught sight, through the trees, of the famous waterfall. From the top of the high ridge on the right, a nearly perpendicular cascade pours over the ledge of rocks and is lost in the forest. We could see nearly the whole of it, at a great height above us, on the opposite side of the river, and it would require an hour's stiff climb to reach its foot. From where we viewed it, it seemed a slender and not very important, but certainly a very beautiful cascade, a band of silver in the mass of green foliage. The fall is said to be 1400 feet. Our colonel insists that it is a thousand. It may be, but the valley where we stood is at least at an elevation of 1300 feet; we could not believe that the ridge over which the water pours is much higher than 3000 feet, and the length of the fall certainly did not appear to be a quarter of the height of the mountain from our point of observation. But we had no desire to belittle this pretty cascade, especially when we found that Judge Logan would regard a foot abated from the 1400 as a personal grievance. Mr. Logan once performed the functions of local judge, a Republican appointment, and he sits around the premises now in the enjoyment of that past dignity and of the fact that his wife is postmistress. His house of entertainment is at the bottom of the valley, a place shut in, warm, damp, and not inviting to a long stay, although the region boasts a good many natural curiosities.

It was here that we encountered again the political current, out of which we had been for a month. The Judge himself was reticent, as became a public man, but he had conspicuously posted up a monster

prospectus, sent out from Augusta, of a campaign life of Blaine and Logan, in which the Professor read, with shaking knees, this sentence: "Sure to be the greatest and hottest [campaign and civil battle] ever known in this world. The thunder of the supreme struggle and its reverberations will shake the continents for months, and will be felt from Pole to Pole."

For this and other reasons this seemed a risky place to be in. There was something sinister about the murky atmosphere, and a suspicion of mosquitoes besides. Had there not been other travelers staying here, we should have felt still more uneasy. The house faced Bald Mountain, 4000 feet high, a hill that had a very bad reputation some years ago, and was visited by newspaper reporters. This is, in fact, the famous Shaking Mountain. For a long time it had a habit of trembling, as if in an earthquake spasm, but with a shivering motion very different from that produced by an earthquake. The only good that came of it was that it frightened all the "moonshiners," and caused them to join the church. It is not reported what became of the church afterwards. It is believed now that the trembling was caused by the cracking of a great ledge on the mountain, which slowly parted asunder. Bald Mountain is the scene of Mrs. Burnett's delightful story of "Louisiana," and of the play of "Esmeralda." A rock is pointed out toward the summit, which the beholder is asked to see resembles a hut, and which is called "Esmeralda's Cottage." But this attractive maiden has departed, and we did not discover any woman in the region who remotely answers to her description.

In the morning we rode a mile and a half through the woods and followed up a small stream to see the celebrated pools, one of which the Judge said was two hundred feet deep, and another bottomless. These pools, not round, but on one side circular excavations, some twenty feet across, worn in the rock by pebbles, are very good specimens, and perhaps remarkable specimens, of "pot-holes." They are, however, regarded here as one of the wonders of the world. On the way to them we saw beautiful wild trumpet-creepers in blossom, festooning the trees.

The stream that originates in Hickory Nut Gap is the westernmost branch of several forks of the Broad, which unite to the southeast in Rutherford County, flow to Columbia, and reach the Atlantic through the channel of the Santee. It is not to be confounded with the French Broad, which originates among the hills of Transylvania, runs northward past Asheville, and finds its way to the Tennessee through the Warm Springs Gap in the Bald Mountains. As the French claimed ownership of all the affluents of the Mississippi, this latter was called the French Broad.

It was a great relief the next morning, on our return, to rise out of the lifeless atmosphere of the Gap into the invigorating air at the Widow Sherrill's, whose country-seat is three hundred feet higher than Asheville. It was a day of heavy showers, and apparently of leisure to the scattered population; at every store and mill was a congregation of loafers, who had hitched their scrawny horses and mules to the fences, and had the professional air of the idler and gossip the world over. The vehicles met on the road were a variety of the prairie schooner, long wagons with a top of hoops over which is stretched a cotton cloth. The wagons are without seats, and the canvas is too low to admit of sitting upright, if there were. The occupants crawl in at either end, sit or lie on the bottom of the wagon, and jolt along in shiftless uncomfortableness.

Riding down the French Broad was one of the original objects of our journey. Travelers with the same intention may be warned that the route on horseback is impracticable. The distance to the Warm Springs is thirty-seven miles; to Marshall, more than halfway, the road is clear, as it runs on the opposite side of the river from the railway, and the valley is something more than river and rails. But below Marshall the valley contracts, and the rails are laid a good portion of the way in the old stage road. One can walk the track, but to ride a horse over its sleepers and culverts and occasional bridges, and dodge the trains, is neither safe nor agreeable. We sent our horses round—the messenger taking the risk of leading them, between trains, over the last six or eight miles,—and took the train.

The railway, after crossing a mile or two of meadows, hugs the river all the way. The scenery is the reverse of bold. The hills are low, monotonous in form, and the stream winds through them, with many a pretty turn and "reach," with scarcely a ribbon of room to spare on either side. The river is shallow, rapid, stony, muddy, full of rocks, with an occasional little island covered with low bushes. The rock seems to be a clay formation, rotten and colored. As we approach Warm Springs the scenery becomes a little bolder, and we emerge into the open space about the Springs through a narrower defile, guarded by rocks that are really picturesque in color and splintered decay, one of them being known, of course, as the "Lover's Leap," a name common in every part of the modern or ancient world where there is a settlement near a precipice, with always the same legend attached to it.

There is a little village at Warm Springs, but the hotel—since burned and rebuilt—(which may be briefly described as a palatial shanty) stands by itself close to the river, which is here a deep, rapid, turbid stream. A bridge once connected it with the road on the opposite bank, but it was carried away three or four years ago, and its ragged butments stand as a monument of procrastination, while the stream is crossed by means of a flatboat and a cable. In front of the hotel, on the slight slope to the river, is a meager grove of locusts. The famous spring, close to the stream, is marked only by a rough box of wood and an iron pipe, and the water, which has a temperature of about one hundred degrees, runs to a shabby bath-house below, in which is a pool for bathing. The bath is very agreeable, the tepid water being singularly soft and pleasant. It has a slightly sulphurous taste. Its good effects are much certified. The grounds, which might be very pretty with care, are ill-kept and slatternly, strewn with debris, as if everything was left to the easy-going nature of the servants. The main house is of brick, with verandas and galleries all round, and a colonnade of thirteen huge brick and stucco columns, in honor of the thirteen States,—a relic of post-Revolutionary times, when the house was the resort of Southern fashion and romance. These columns have stood through one fire, and perhaps the recent one, which swept away the rest of the structure. The house is extended in a long wooden edifice, with galleries and outside stairs, the whole front being nearly seven hundred feet long. In a rear building is a vast, barrack-like dining-room, with a noble ball-room above, for dancing is the important occupation of visitors.

The situation is very pretty, and the establishment has a picturesqueness of its own. Even the ugly little brick structure near the bath-house imposes upon one as Wade Hampton's cottage. No doubt we liked the place better than if it had been smart, and enjoyed the negligé condition, and the easy terms on which life is taken there. There was a sense of abundance in the sight of fowls tiptoeing about the verandas, and to meet a

chicken in the parlor was a sort of guarantee that we should meet him later on in the dining-room. There was nothing incongruous in the presence of pigs, turkeys, and chickens on the grounds; they went along with the good-natured negro-service and the general hospitality; and we had a mental rest in the thought that all the gates would have been off the hinges, if there had been any gates. The guests were very well treated indeed, and were put under no sort of restraint by discipline. The long colonnade made an admirable promenade and lounging-place and point of observation. It was interesting to watch the groups under the locusts, to see the management of the ferry, the mounting and dismounting of the riding-parties, and to study the colors on the steep hill opposite, halfway up which was a neat cottage and flower-garden. The type of people was very pleasantly Southern. Colonels and politicians stand in groups and tell stories, which are followed by explosions of laughter; retire occasionally into the saloon, and come forth reminded of more stories, and all lift their hats elaborately and suspend the narratives when a lady goes past. A company of soldiers from Richmond had pitched its tents near the hotel, and in the evening the ball-room was enlivened with uniforms. Among the graceful dancers—and every one danced well, and with spirit was pointed out the young widow of a son of Andrew Johnson, whose pretty cottage overlooks the village. But the Professor, to whom this information was communicated, doubted whether here it was not a greater distinction to be the daughter of the owner of this region than to be connected with a President of the United States.

A certain air of romance and tradition hangs about the French Broad and the Warm Springs, which the visitor must possess himself of in order to appreciate either. This was the great highway of trade and travel. At certain seasons there was an almost continuous procession of herds of cattle and sheep passing to the Eastern markets, and of trains of big wagons wending their way to the inviting lands watered by the Tennessee. Here came in the summer-time the Southern planters in coach and four, with a great retinue of household servants, and kept up for months that unique social life, a mixture of courtly ceremony and entire freedom, the civilization which had the drawing-room at one end and the negro-quarters at the other,—which has passed away. It was a continuation into our own restless era of the manners and the literature of George the Third, with the accompanying humor and happy-go-lucky decadence of the negro slaves. On our way down we saw on the river-bank, under the trees, the old hostelry, Alexander's, still in decay,—an attractive tavern, that was formerly one of the notable stopping-places on the river. Master, and fine lady, and obsequious, larking darky, and lumbering coach, and throng of pompous and gay life, have all disappeared. There was no room in this valley for the old institutions and for the iron track.

*"When in the chronicle of wasted time
I see descriptions of the fairest wights,
And beauty making beautiful old rhyme
In praise of ladies dead and lovely knights,
We, which now behold these present days,
Have eyes to wonder, but lack tongues to praise."*

This perverted use of noble verse was all the response the Friend got in his attempt to drop into the sentimental vein over the past of the French Broad.

The reader must not think there is no enterprise in this sedative and idle resort. The conceited Yankee has to learn that it is not he alone who can be accused of the thrift of craft. There is at the Warm Springs a thriving mill for crushing and pulverizing barites, known vulgarly as heavy-spar. It is the weight of this heaviest of minerals, and not its lovely crystals, that gives it value. The rock is crushed, washed, sorted out by hand, to remove the foreign substances, then ground and subjected to acids, and at the end of the process it is as white and fine as the best bolted flour. This heavy adulterant is shipped to the North in large quantities,—the manager said he had recently an order for a hundred thousand dollars' worth of it. What is the use of this powder? Well, it is of use to the dealer who sells white lead for paint, to increase the weight of the lead, and it is the belief hereabouts that it is mixed with powdered sugar. The industry is profitable to those engaged in it.

It was impossible to get much information about our route into Tennessee, except that we should go by Paint Rock, and cross Paint Mountain. Late one morning,—a late start is inevitable here,—accompanied by a cavalcade, we crossed the river by the rope ferry, and trotted down the pretty road, elevated above the stream and tree-shaded, offering always charming glimpses of swift water and overhanging foliage (the railway obligingly taking the other side of the river), to Paint Rock,—six miles. This Paint Rock is a naked precipice by the roadside, perhaps sixty feet high, which has a large local reputation. It is said that its face shows painting done by the Indians, and hieroglyphics which nobody can read. On this bold, crumbling cliff, innumerable visitors have written their names. We stared at it a good while to discover the paint and hieroglyphics, but could see nothing except iron stains. Round the corner is a farmhouse and place of call for visitors, a neat cottage, with a display of shells and minerals and flower-pots; and here we turned north crossed the little stream called Paint River, the only clear water we had seen in a month, passed into the State of Tennessee, and by a gentle ascent climbed Paint Mountain. The open forest road, with the murmur of the stream below, was delightfully exhilarating, and as we rose the prospect opened,—the lovely valley below, Bald Mountains behind us, and the Butt Mountains rising as we came over the ridge.

Nobody on the way, none of the frowzy women or unintelligent men, knew anything of the route, or could give us any information of the country beyond. But as we descended in Tennessee the country and the farms decidedly improved,—apple-trees and a grapevine now and then.

A ride of eight miles brought us to Waddle's, hungry and disposed to receive hospitality. We passed by an old farm building to a new two-storied, gayly painted house on a hill. We were deceived by appearances. The new house, with a new couple in it, had nothing to offer us except some buttermilk. Why should anybody be obliged to feed roving strangers? As to our horses, the young woman with a baby in her arms declared,

"We've got nothing for stock but roughness; perhaps you can get something at the other house."

"Roughness," we found out at the other house, meant hay in this region. We procured for the horses a light meal of green oats, and for our own dinner we drank at the brook and the Professor produced a few sonnets. On this sustaining repast we fared on nearly twelve miles farther, through a rolling, good farming country,

offering little for comment, in search of a night's lodging with one of the brothers Snap. But one brother declined our company on the plea that his wife was sick, and the other because his wife lived in Greenville, and we found ourselves as dusk came on without shelter in a tavernless land. Between the two refusals we enjoyed the most picturesque bit of scenery of the day, at the crossing of Camp Creek, a swift little stream, that swirled round under the ledge of bold rocks before the ford. This we learned was a favorite camp-meeting ground. Mary was calling the cattle home at the farm of the second Snap. It was a very peaceful scene of rural life, and we were inclined to tarry, but Mary, instead of calling us home with the cattle, advised us to ride on to Alexander's before it got dark.

It is proper to say that at Alexander's we began to see what this pleasant and fruitful country might be, and will be, with thrift and intelligent farming. Mr. Alexander is a well-to-do farmer, with plenty of cattle and good barns (always an evidence of prosperity), who owes his success to industry and an open mind to new ideas. He was a Unionist during the war, and is a Democrat now, though his county (Greene) has been Republican. We had been riding all the afternoon through good land, and encountering a better class of farmers. Peach-trees abounded (though this was an off year for fruit), and apples and grapes thrived. It is a land of honey and of milk. The persimmon flourishes; and, sign of abundance generally, we believe, great flocks of turkey-buzzards—majestic floaters in the high air—hovered about. This country was ravaged during the war by Unionists and Confederates alternately, the impartial patriots as they passed scooping in corn, bacon, and good horses, leaving the farmers little to live on. Mr. Alexander's farm cost him forty dollars an acre, and yields good crops of wheat and maize. This was the first house on our journey where at breakfast we had grace before meat, though there had been many tables that needed it more. From the door the noble range of the Big Bald is in sight and not distant; and our host said he had a shanty on it, to which he was accustomed to go with his family for a month or six weeks in the summer and enjoy a real primitive woods life.

Refreshed by this little touch of civilization, and with horses well fed, we rode on next morning towards Jonesboro, over a rolling, rather unpicturesque country, but ennobled by the Big Bald and Butt ranges, which we had on our right all day. At noon we crossed the Nollechucky River at a ford where the water was up to the saddle girth, broad, rapid, muddy, and with a treacherous stony bottom, and came to the little hamlet of Boylesville, with a flour-mill, and a hospitable old-fashioned house, where we found shelter from the heat of the hot day, and where the daughters of the house, especially one pretty girl in a short skirt and jaunty cap, contradicted the currently received notion that this world is a weary pilgrimage. The big parlor, with its photographs and stereoscope, and bits of shell and mineral, a piano and a melodeon, and a coveted old sideboard of mahogany, recalled rural New England. Perhaps these refinements are due to the Washington College (a school for both sexes), which is near. We noted at the tables in this region a singular use of the word fruit. When we were asked, Will you have some of the fruit? and said Yes, we always got applesauce.

Ten miles more in the late afternoon brought us to Jonesboro, the oldest town in the State, a pretty place, with a flavor of antiquity, set picturesquely on hills, with the great mountains in sight. People from further South find this an agreeable summering place, and a fair hotel, with odd galleries in front and rear, did not want company. The Warren Institute for negroes has been flourishing here ever since the war.

A ride of twenty miles next day carried us to Union. Before noon we forded the Watauga, a stream not so large as the Nollechucky, and were entertained at the big brick house of Mr. Devault, a prosperous and hospitable farmer. This is a rich country. We had met in the morning wagon-loads of watermelons and muskmelons, on the way to Jonesboro, and Mr. Devault set abundance of these refreshing fruits before us as we lounged on the porch before dinner.

It was here that we made the acquaintance of a colored woman, a withered, bent old pensioner of the house, whose industry (she excelled any modern patent apple-parer) was unabated, although she was by her own confession (a woman, we believe, never owns her age till she has passed this point) and the testimony of others a hundred years old. But age had not impaired the brightness of her eyes, nor the limberness of her tongue, nor her shrewd good sense. She talked freely about the want of decency and morality in the young colored folks of the present day. It was n't so when she was a girl. Long, long time ago, she and her husband had been sold at sheriff's sale and separated, and she never had another husband. Not that she blamed her master so much he could n't help it; he got in debt. And she expounded her philosophy about the rich, and the danger they are in. The great trouble is that when a person is rich, he can borrow money so easy, and he keeps drawin' it out of the bank and pilin' up the debt, like rails on top of one another, till it needs a ladder to get on to the pile, and then it all comes down in a heap, and the man has to begin on the bottom rail again. If she'd to live her life over again, she'd lay up money; never cared much about it till now. The thrifty, shrewd old woman still walked about a good deal, and kept her eye on the neighborhood. Going out that morning she had seen some fence up the road that needed mending, and she told Mr. Devault that she didn't like such shiftlessness; she didn't know as white folks was much better than colored folks. Slavery? Yes, slavery was pretty bad—she had seen five hundred niggers in handcuffs, all together in a field, sold to be sent South.

About six miles from here is a beech grove of historical interest, worth a visit if we could have spared the time. In it is the large beech (six and a half feet around six feet from the ground) on which Daniel Boone shot a bear, when he was a rover in this region. He himself cut an inscription on the tree recording his prowess, and it is still distinctly legible:

D. BOONE CILT A BAR ON THIS TREE, 1760.

This tree is a place of pilgrimage, and names of people from all parts of the country are cut on it, until there is scarcely room for any more records of such devotion. The grove is ancient looking, the trees are gnarled and moss-grown. Hundreds of people go there, and the trees are carved all over with their immortal names.

A pleasant ride over a rich rolling country, with an occasional strip of forest, brought us to Union in the evening, with no other adventure than the meeting of a steam threshing-machine in the road, with steam up, clattering along. The devil himself could not invent any machine calculated to act on the nerves of a horse like this. Jack took one look and then dashed into the woods, scraping off his rider's hat but did not succeed in getting rid of his burden or knocking down any trees.

Union, on the railway, is the forlornest of little villages, with some three hundred inhabitants and a forlorn hotel, kept by an ex-stage-driver. The village, which lies on the Holston, has no drinking-water in it nor enterprise enough to bring it in; not a well nor a spring in its limits; and for drinking-water everybody crosses the river to a spring on the other side. A considerable part of the labor of the town is fetching water over the bridge. On a hill overlooking the village is a big, pretentious brick house, with a tower, the furniture of which is an object of wonder to those who have seen it. It belonged to the late Mrs. Stover, daughter of Andrew Johnson. The whole family of the ex-President have departed this world, but his memory is still green in this region, where he was almost worshiped—so the people say in speaking of him.

Forlorn as was the hotel at Union, the landlord's daughters were beginning to draw the lines in rural refinement. One of them had been at school in Abingdon. Another, a mature young lady of fifteen, who waited on the table, in the leisure after supper asked the Friend for a light for her cigarette, which she had deftly rolled.

"Why do you smoke?"

"So as I shan't get into the habit of dipping. Do you think dipping is nice?"

The traveler was compelled to say that he did not, though he had seen a good deal of it wherever he had been.

"All the girls dips round here. But me and my sisters rather smoke than get in a habit of dipping."

To the observation that Union seemed to be a dull place:

"Well, there's gay times here in the winter—dancing. Like to dance? Well, I should say! Last winter I went over to Blountsville to a dance in the court-house; there was a trial between Union and Blountsville for the best dancing. You bet I brought back the cake and the blue ribbon."

The country was becoming too sophisticated, and the travelers hastened to the end of their journey. The next morning Bristol, at first over a hilly country with magnificent oak-trees,—happily not girdled, as these stately monarchs were often seen along the roads in North Carolina,—and then up Beaver Creek, a turbid stream, turning some mills. When a closed woolen factory was pointed out to the Professor (who was still traveling for Reform), as the result of the agitation in Congress, he said, Yes, the effect of agitation was evident in all the decayed dams and ancient abandoned mills we had seen in the past month.

Bristol is mainly one long street, with some good stores, but generally shabby, and on this hot morning sleepy. One side of the street is in Tennessee, the other in Virginia. How handy for fighting this would have been in the war, if Tennessee had gone out and Virginia stayed in. At the hotel—may a kind Providence wake it up to its responsibilities—we had the pleasure of reading one of those facetious handbills which the great railway companies of the West scatter about, the serious humor of which is so pleasing to our English friends. This one was issued by the accredited agents of the Ohio and Mississippi Railway, and dated April 1, 1884. One sentence will suffice:

"Allow us to thank our old traveling friends for the many favors in our line, and if you are going on your bridal trip, or to see your girl out West, drop in at the general office of the Ohio and Mississippi Railway and we will fix you up in Queen Anne style. Passengers for Dakota, Montana, or the Northwest will have an overcoat and sealskin cap thrown in with all tickets sold on or after the above date."

The great republic cannot yet take itself seriously. Let us hope the humors of it will last another generation. Meditating on this, we hailed at sundown the spires of Abingdon, and regretted the end of a journey that seems to have been undertaken for no purpose.

X. LAST YEARS—THE CHARACTER OF HIS LITERATURE

EDITOR'S NOTE

WASHINGTON IRVING, the first biography published in the American Men of Letters Series, came out in December, 1881. It was an expansion of a biographical and critical sketch prefixed to the first volume of a new edition of Irving's works which began to appear in 1880. It was entitled the Geoffrey Crayon edition, and was in twenty-seven volumes, which were brought out, in most cases, in successive months. The first volume appeared in April. The essay was subsequently published during the same year in a volume entitled "Studies of Irving," which contained also Bryant's oration and George P. Putnam's personal reminiscences.

"The Work of Washington Irving" was published early in August, 1893. Originally it was delivered as a lecture to the Brooklyn Institute of Arts and Sciences on April 3, 1893, the one hundred and tenth anniversary of Irving's birth.

T. R. L.

WASHINGTON IRVING

I. PRELIMINARY

It is over twenty years since the death of Washington Irving removed that personal presence which is always a powerful, and sometimes the sole, stimulus to the sale of an author's books, and which strongly affects the contemporary judgment of their merits. It is nearly a century since his birth, which was almost coeval with that of the Republic, for it took place the year the British troops evacuated the city of New York, and only a few months before General Washington marched in at the head of the Continental army and took possession of the metropolis. For fifty years Irving charmed and instructed the American people, and was the author who held, on the whole, the first place in their affections. As he was the first to lift American literature into the popular respect of Europe, so for a long time he was the chief representative of the American name in the world of letters. During this period probably no citizen of the Republic, except the Father of his Country, had so wide a reputation as his namesake, Washington Irving.

It is time to inquire what basis this great reputation had in enduring qualities, what portion of it was due to local and favoring circumstances, and to make an impartial study of the author's literary rank and achievement.

The tenure of a literary reputation is the most uncertain and fluctuating of all. The popularity of an author seems to depend quite as much upon fashion or whim as upon a change in taste or in literary form. Not only is contemporary judgment often at fault, but posterity is perpetually revising its opinion. We are accustomed to say that the final rank of an author is settled by the slow consensus of mankind in disregard of the critics; but the rank is after all determined by the few best minds of any given age, and the popular judgment has very little to do with it. Immediate popularity, or currency, is a nearly valueless criterion of merit. The settling of high rank even in the popular mind does not necessarily give currency; the so-called best authors are not those most widely read at any given time. Some who attain the position of classics are subject to variations in popular and even in scholarly favor or neglect. It happens to the princes of literature to encounter periods of varying duration when their names are revered and their books are not read. The growth, not to say the fluctuation, of Shakespeare's popularity is one of the curiosities of literary history. Worshiped by his contemporaries, apostrophized by Milton only fourteen years after his death as the "dear son of memory, great heir to fame",

*"So sepulchred in such pomp dost lie,
That kings, for such a tomb, would wish to die,"*

he was neglected by the succeeding age, the subject of violent extremes of opinion in the eighteenth century, and so lightly esteemed by some that Hume could doubt if he were a poet "capable of furnishing a proper entertainment to a refined and intelligent audience," and attribute to the rudeness of his "disproportioned and misshapen" genius the "reproach of barbarism" which the English nation had suffered from all its neighbors. Only recently has the study of him by English scholars—I do not refer to the verbal squabbles over the text—been proportioned to his preeminence, and his fame is still slowly asserting itself among foreign peoples.

There are already signs that we are not to accept as the final judgment upon the English contemporaries of Irving the currency their writings have now. In the case of Walter Scott, although there is already visible a reaction against a reaction, he is not, at least in America, read by this generation as he was by the last. This faint reaction is no doubt a sign of a deeper change impending in philosophic and metaphysical speculation. An age is apt to take a lurch in a body one way or another, and those most active in it do not always perceive how largely its direction is determined by what are called mere systems of philosophy. The novelist may not know whether he is steered by Kant, or Hegel, or Schopenhauer. The humanitarian novel, the fictions of passion, of realism, of doubt, the poetry and the essays addressed to the mood of unrest, of questioning, to the scientific spirit and to the shifting attitudes of social change and reform, claim the attention of an age that is completely adrift in regard to the relations of the supernatural and the material, the ideal and the real. It would be natural if in such a time of confusion the calm tones of unexaggerated literary art should be not so much heeded as the more strident voices. Yet when the passing fashion of this day is succeeded by the fashion of another, that which is most acceptable to the thought and feeling of the present may be without an audience; and it may happen that few recent authors will be read as Scott and the writers of the early part of this century will be read. It may, however, be safely predicted that those writers of fiction worthy to be called literary artists will best retain their hold who have faithfully painted the manners of their own time.

Irving has shared the neglect of the writers of his generation. It would be strange, even in America, if this were not so. The development of American literature (using the term in its broadest sense) in the past forty years is greater than could have been expected in a nation which had its ground to clear, its wealth to win, and its new governmental experiment to adjust; if we confine our view to the last twenty years, the national production is vast in amount and encouraging in quality. It suffices to say of it here, in a general way, that the most vigorous activity has been in the departments of history, of applied science, and the discussion of social and economic problems. Although pure literature has made considerable gains, the main achievement has been in other directions. The audience of the literary artist has been less than that of the reporter of affairs and discoveries and the special correspondent. The age is too busy, too harassed, to have time for literature; and enjoyment of writings like those of Irving depends upon leisure of mind. The mass of readers have cared less for form than for novelty and news and the satisfying of a recently awakened curiosity. This was inevitable in an era of journalism, one marked by the marvelous results attained in the fields of religion, science, and art, by the adoption of the comparative method. Perhaps there is no better illustration of the vigor and intellectual activity of the age than a living English writer, who has traversed and illuminated almost every province of modern thought, controversy, and scholarship; but who supposes that Mr. Gladstone has added anything to permanent literature? He has been an immense force in his own time, and his influence the next generation will still feel and acknowledge, while it reads, not the writings of Mr. Gladstone, but, maybe, those of the author of "Henry Esmond" and the biographer of "Rab and His Friends." De Quincey divides literature into two sorts, the literature of power and the literature of knowledge. The latter is of necessity for to-day only, and must be revised to-morrow. The definition has scarcely De Quincey's usual verbal felicity, but we can apprehend the distinction he intended to make.

It is to be noted also, and not with regard to Irving only, that the attention of young and old readers has been so occupied and distracted by the flood of new books, written with the single purpose of satisfying the wants of the day, produced and distributed with marvelous cheapness and facility, that the standard works of approved literature remain for the most part unread upon the shelves. Thirty years ago Irving was much read in America by young people, and his clear style helped to form a good taste and correct literary habits. It is not so now. The manufacturers of books, periodicals, and newspapers for the young keep the rising generation fully occupied, with a result to its taste and mental fiber which, to say the least of it, must be regarded with some apprehension. The "plant," in the way of money and writing industry invested in the production of juvenile literature, is so large and is so permanent an interest, that it requires more discriminating consideration than can be given to it in a passing paragraph.

Besides this, and with respect to Irving in particular, there has been in America a criticism—sometimes called the destructive, sometimes the Donnybrook Fair—that found "earnestness" the only amusing thing in the world, that brought to literary art the test of utility, and disparaged what is called the "Knickerbocker School" (assuming Irving to be the head of it) as wanting in purpose and virility, a merely romantic development of the post-Revolutionary period. And it has been to some extent the fashion to damn with faint admiration the pioneer if not the creator of American literature as the "genial" Irving.

Before I pass to an outline of the career of this representative American author, it is necessary to refer for a moment to certain periods, more or less marked, in our literature. I do not include in it the works of writers either born in England or completely English in training, method, and tradition, showing nothing distinctively American in their writings except the incidental subject. The first authors whom we may regard as characteristic of the new country—leaving out the productions of speculative theology—devoted their genius to politics. It is in the political writings immediately preceding and following the Revolution—such as those of Hamilton, Madison, Jay, Franklin, Jefferson that the new birth of a nation of original force and ideas is declared. It has been said, and I think the statement can be maintained, that for any parallel to those treatises on the nature of government, in respect to originality and vigor, we must go back to classic times. But literature, that is, literature which is an end in itself and not a means to something else, did not exist in America before Irving. Some foreshadowings (the autobiographical fragment of Franklin was not published

till 1817) of its coming may be traced, but there can be no question that his writings were the first that bore the national literary stamp, that he first made the nation conscious of its gift and opportunity, and that he first announced to trans-Atlantic readers the entrance of America upon the literary field. For some time he was our only man of letters who had a reputation beyond seas.

Irving was not, however, the first American who made literature a profession and attempted to live on its fruits. This distinction belongs to Charles Brockden Brown, who was born in Philadelphia, January 27, 1771, and, before the appearance in a newspaper of Irving's juvenile essays in 1802, had published several romances, which were hailed as original and striking productions by his contemporaries, and even attracted attention in England. As late as 1820 a prominent British review gives Mr. Brown the first rank in our literature as an original writer and characteristically American. The reader of to-day who has the curiosity to inquire into the correctness of this opinion will, if he is familiar with the romances of the eighteenth century, find little originality in Brown's stories, and nothing distinctively American. The figures who are moved in them seem to be transported from the pages of foreign fiction to the New World, not as it was, but as it existed in the minds of European sentimentalists.

Mr. Brown received a fair education in a classical school in his native city, and studied law, which he abandoned on the threshold of practice, as Irving did, and for the same reason. He had the genuine literary impulse, which he obeyed against all the arguments and entreaties of his friends. Unfortunately, with a delicate physical constitution he had a mind of romantic sensibility, and in the comparative inaction imposed by his frail health he indulged in visionary speculation, and in solitary wanderings which developed the habit of sentimental musing. It was natural that such reveries should produce morbid romances. The tone of them is that of the unwholesome fiction of his time, in which the "seducer" is a prominent and recognized character in social life, and female virtue is the frail sport of opportunity. Brown's own life was fastidiously correct, but it is a curious commentary upon his estimate of the natural power of resistance to vice in his time, that he regarded his feeble health as good fortune, since it protected him from the temptations of youth and virility.

While he was reading law he constantly exercised his pen in the composition of essays, some of which were published under the title of the "Rhapsodist;" but it was not until 1797 that his career as an author began, by the publication of "Alcuin: a Dialogue on the Rights of Women." This and the romances which followed it show the powerful influence upon him of the school of fiction of William Godwin, and the movement of emancipation of which Mary Wollstonecraft was the leader. The period of social and political ferment during which "Alcuin" was put forth was not unlike that which may be said to have reached its height in extravagance and millennial expectation in 1847-48. In "Alcuin" are anticipated most of the subsequent discussions on the right of women to property and to self-control, and the desirability of revising the marriage relation. The injustice of any more enduring union than that founded upon the inclination of the hour is as ingeniously urged in "Alcuin" as it has been in our own day.

Mr. Brown's reputation rests upon six romances: "Wieland," "Ormond," "Arthur Mervyn," "Edgar Huntly," "Clara Howard," and "Jane Talbot." The first five were published in the interval between the spring of 1798 and the summer of 1801, in which he completed his thirtieth year. "Jane Talbot" appeared somewhat later. In scenery and character, these romances are entirely unreal. There is in them an affectation of psychological purpose which is not very well sustained, and a somewhat clumsy introduction of supernatural machinery. Yet they have a power of engaging the attention in the rapid succession of startling and uncanny incidents and in adventures in which the horrible is sometimes dangerously near the ludicrous. Brown had not a particle of humor. Of literary art there is little, of invention considerable; and while the style is to a certain extent unformed and immature, it is neither feeble nor obscure, and admirably serves the author's purpose of creating what the children call a "crawly" impression. There is undeniable power in many of his scenes, notably in the descriptions of the yellow fever in Philadelphia, found in the romance of "Arthur Mervyn." There is, however, over all of them a false and pallid light; his characters are seen in a spectral atmosphere. If a romance is to be judged, not by literary rules, but by its power of making an impression upon the mind, such power as a ghastly story has, told by the chimney-corner on a tempestuous night, then Mr. Brown's romances cannot be dismissed without a certain recognition. But they never represented anything distinctively American, and their influence upon American literature is scarcely discernible.

Subsequently Mr. Brown became interested in political subjects, and wrote upon them with vigor and sagacity. He was the editor of two short-lived literary periodicals which were nevertheless useful in their day: "The Monthly Magazine and American Review," begun in New York in the spring of 1798, and ending in the autumn of 1800; and "The Literary Magazine and American Register," which was established in Philadelphia in 1803—It was for this periodical that Mr. Brown, who visited Irving in that year, sought in vain to enlist the service of the latter, who, then a youth of nineteen, had a little reputation as the author of some humorous essays in the "Morning Chronicle" newspaper.

Charles Brockden Brown died, the victim of a lingering consumption, in 1810, at the age of thirty-nine. In pausing for a moment upon his incomplete and promising career, we should not forget to recall the strong impression he made upon his contemporaries as a man of genius, the testimony to the charm of his conversation and the goodness of his heart, nor the pioneer service he rendered to letters before the provincial fetters were at all loosened.

The advent of Cooper, Bryant, and Halleck was some twenty years after the recognition of Irving; but thereafter the stars thicken in our literary sky, and when in 1832 Irving returned from his long sojourn in Europe, he found an immense advance in fiction, poetry, and historical composition. American literature was not only born,—it was able to go alone. We are not likely to overestimate the stimulus to this movement given by Irving's example, and by his success abroad. His leadership is recognized in the respectful attitude towards him of all his contemporaries in America. And the cordiality with which he gave help whenever it was asked, and his eagerness to acknowledge merit in others, secured him the affection of all the literary class, which is popularly supposed to have a rare appreciation of the defects of fellow craftsmen.

The period from 1830 to 1860 was that of our greatest purely literary achievement, and, indeed, most of the greater names of to-day were familiar before 1850. Conspicuous exceptions are Motley and Parkman and a

few belles-lettres writers, whose novels and stories mark a distinct literary transition since the War of the Rebellion. In the period from 1845 to 1860, there was a singular development of sentimentalism; it had been, growing before, it did not altogether disappear at the time named, and it was so conspicuous that this may properly be called the sentimental era in our literature. The causes of it, and its relation to our changing national character, are worthy the study of the historian. In politics, the discussion of constitutional questions, of tariffs and finance, had given way to moral agitations. Every political movement was determined by its relation to slavery. Eccentricities of all sorts were developed. It was the era of "transcendentalism" in New England, of "come-outers" there and elsewhere, of communistic experiments, of reform notions about marriage, about woman's dress, about diet; through the open door of abolitionism women appeared upon its platform, demanding a various emancipation; the agitation for total abstinence from intoxicating drinks got under full headway, urged on moral rather than on the statistical and scientific grounds of to-day; reformed drunkards went about from town to town depicting to applauding audiences the horrors of delirium tremens, —one of these peripatetics led about with him a goat, perhaps as a scapegoat and sin-offering; tobacco was as odious as rum; and I remember that George Thompson, the eloquent apostle of emancipation, during his tour in this country, when on one occasion he was the cynosure of a protracted anti-slavery meeting at Peterboro, the home of Gerrit Smith, deeply offended some of his co-workers, and lost the admiration of many of his admirers, the maiden devotees of green tea, by his use of snuff. To "lift up the voice" and wear long hair were signs of devotion to a purpose.

In that seething time, the lighter literature took a sentimental tone, and either spread itself in manufactured fine writing, or lapsed into a reminiscent and melting mood. In a pretty affectation, we were asked to meditate upon the old garret, the deserted hearth, the old letters, the old well-sweep, the dead baby, the little shoes; we were put into a mood in which we were defenseless against the lukewarm flood of the Tupperian Philosophy. Even the newspapers caught the bathetic tone. Every "local" editor breathed his woe over the incidents of the police court, the falling leaf, the tragedies of the boardinghouse, in the most lachrymose periods he could command, and let us never lack fine writing, whatever might be the dearth of news. I need not say how suddenly and completely this affectation was laughed out of sight by the coming of the "humorous" writer, whose existence is justified by the excellent service he performed in clearing the tearful atmosphere. His keen and mocking method, which is quite distinct from the humor of Goldsmith and Irving, and differs, in degree at least, from the comic-almanac exaggeration and coarseness which preceded it, puts its foot on every bud of sentiment, holds few things sacred, and refuses to regard anything in life seriously. But it has no mercy for any sham.

I refer to this sentimental era—remembering that its literary manifestation was only a surface disease, and recognizing fully the value of the great moral movement in purifying the national life—because many regard its literary weakness as a legitimate outgrowth of the Knickerbocker School, and hold Irving in a manner responsible for it. But I find nothing in the manly sentiment and true tenderness of Irving to warrant the sentimental gush of his followers, who missed his corrective humor as completely as they failed to catch his literary art. Whatever note of localism there was in the Knickerbocker School, however dilettante and unfruitful it was, it was not the legitimate heir of the broad and eclectic genius of Irving. The nature of that genius we shall see in his life.

II. BOYHOOD

Washington Irving was born in the city of New York, April 3, 1783. He was the eighth son of William and Sarah Irving, and the youngest of eleven children, three of whom died in infancy. His parents, though of good origin, began life in humble circumstances. His father was born on the island of Shapinska. His family, one of the most respectable in Scotland, traced its descent from William De Irwyn, the secretary and armorbearer of Robert Bruce; but at the time of the birth of William Irving its fortunes had gradually decayed, and the lad sought his livelihood, according to the habit of the adventurous Orkney Islanders, on the sea.

It was during the French War, and while he was serving as a petty officer in an armed packet plying between Falmouth and New York, that he met Sarah Sanders, a beautiful girl, the only daughter of John and Anna Sanders, who had the distinction of being the granddaughter of an English curate. The youthful pair were married in 1761, and two years after embarked for New York, where they landed July 18, 1763. Upon settling in New York William Irving quit the sea and took to trade, in which he was successful until his business was broken up by the Revolutionary War. In this contest he was a staunch Whig, and suffered for his opinions at the hands of the British occupants of the city, and both he and his wife did much to alleviate the misery of the American prisoners. In this charitable ministry his wife, who possessed a rarely generous and sympathetic nature, was especially zealous, supplying the prisoners with food from her own table, visiting those who were ill, and furnishing them with clothing and other necessaries.

Washington was born in a house on William Street, about half-way between Fulton and John; the following year the family moved across the way into one of the quaint structures of the time, its gable end with attic window towards the street; the fashion of which, and very likely the bricks, came from Holland. In this homestead the lad grew up, and it was not pulled down till 1849, ten years before his death. The patriot army occupied the city. "Washington's work is ended," said the mother, "and the child shall be named after him." When the first President was again in New York, the first seat of the new government, a Scotch maid-servant of the family, catching the popular enthusiasm, one day followed the hero into a shop and presented the lad to him. "Please, your honor," said Lizzie, all aglow, "here's a bairn was named after you." And the grave Virginian placed his hand on the boy's head and gave him his blessing. The touch could not have been more efficacious, though it might have lingered longer, if he had known he was propitiating his future biographer.

New York at the time of our author's birth was a rural city of about twenty-three thousand inhabitants,

clustered about the Battery. It did not extend northward to the site of the present City Hall Park; and beyond, then and for several years afterwards, were only country residences, orchards, and corn-fields. The city was half burned down during the war, and had emerged from it in a dilapidated condition. There was still a marked separation between the Dutch and the English residents, though the Irvings seem to have been on terms of intimacy with the best of both nationalities. The habits of living were primitive; the manners were agreeably free; conviviality at the table was the fashion, and strong expletives had not gone out of use in conversation. Society was the reverse of intellectual: the aristocracy were the merchants and traders; what literary culture found expression was formed on English models, dignified and plentifully garnished with Latin and Greek allusions; the commercial spirit ruled, and the relaxations and amusements partook of its hurry and excitement. In their gay, hospitable, and mercurial character, the inhabitants were true progenitors of the present metropolis. A newspaper had been established in 1732, and a theater had existed since 1750. Although the town had a rural aspect, with its quaint dormer-window houses, its straggling lanes and roads, and the water-pumps in the middle of the streets, it had the aspirations of a city, and already much of the metropolitan air.

These were the surroundings in which the boy's literary talent was to develop. His father was a deacon in the Presbyterian church, a sedate, God-fearing man, with the strict severity of the Scotch Covenanter, serious in his intercourse with his family, without sympathy in the amusements of his children; he was not without tenderness in his nature, but the exhibition of it was repressed on principle,—a man of high character and probity, greatly esteemed by his associates. He endeavored to bring up his children in sound religious principles, and to leave no room in their lives for triviality. One of the two weekly half-holidays was required for the catechism, and the only relaxation from the three church services on Sunday was the reading of "Pilgrim's Progress." This cold and severe discipline at home would have been intolerable but for the more lovingly demonstrative and impulsive character of the mother, whose gentle nature and fine intellect won the tender veneration of her children. Of the father they stood in awe; his conscientious piety failed to waken any religious sensibility in them, and they revolted from a teaching which seemed to regard everything that was pleasant as wicked. The mother, brought up an Episcopalian, conformed to the religious forms and worship of her husband, but she was never in sympathy with his rigid views. The children were repelled from the creed of their father, and subsequently all of them except one became attached to the Episcopal Church. Washington, in order to make sure of his escape, and feel safe while he was still constrained to attend his father's church, went stealthily to Trinity Church at an early age, and received the rite of confirmation. The boy was full of vivacity, drollery, and innocent mischief. His sportiveness and disinclination to religious seriousness gave his mother some anxiety, and she would look at him, says his biographer, with a half-mournful admiration, and exclaim, "O Washington! if you were only good!" He had a love of music, which became later in life a passion, and great fondness for the theater. The stolen delight of the theater he first tasted in company with a boy who was somewhat his senior, but destined to be his literary comrade,—James K. Paulding, whose sister was the wife of Irving's brother William. Whenever he could afford this indulgence, he stole away early to the theater in John Street, remained until it was time to return to the family prayers at nine, after which he would retire to his room, slip through his window and down the roof to a back alley, and return to enjoy the after-piece.

Young Irving's school education was desultory, pursued under several more or less incompetent masters, and was over at the age of sixteen. The teaching does not seem to have had much discipline or solidity; he studied Latin a few months, but made no other incursion into the classics. The handsome, tender-hearted, truthful, susceptible boy was no doubt a dawdler in routine studies, but he assimilated what suited him. He found his food in such pieces of English literature as were floating about, in "Robinson Crusoe" and "Sindbad;" at ten he was inspired by a translation of "Orlando Furioso;" he devoured books of voyages and travel; he could turn a neat verse, and his scribbling propensities were exercised in the composition of childish plays. The fact seems to be that the boy was a dreamer and saunterer; he himself says that he used to wander about the pier heads in fine weather, watch the ships departing on long voyages, and dream of going to the ends of the earth. His brothers Peter and John had been sent to Columbia College, and it is probable that Washington would have had the same advantage if he had not shown a disinclination to methodical study. At the age of sixteen he entered a law office, but he was a heedless student, and never acquired either a taste for the profession or much knowledge of law. While he sat in the law office, he read literature, and made considerable progress in his self-culture; but he liked rambling and society quite as well as books. In 1798 we find him passing a summer holiday in Westchester County, and exploring with his gun the Sleepy Hollow region which he was afterwards to make an enchanted realm; and in 1800 he made his first voyage up the Hudson, the beauties of which he was the first to celebrate, on a visit to a married sister who lived in the Mohawk Valley. In 1802 he became a law clerk in the office of Josiah Ogden Hoffman, and began that enduring intimacy with the refined and charming Hoffman family which was so deeply to influence all his life. His health had always been delicate, and his friends were now alarmed by symptoms of pulmonary weakness. This physical disability no doubt had much to do with his disinclination to severe study. For the next two or three years much time was consumed in excursions up the Hudson and the Mohawk, and in adventurous journeys as far as the wilds of Ogdensburg and to Montreal, to the great improvement of his physical condition, and in the enjoyment of the gay society of Albany, Schenectady, Ballston, and Saratoga Springs. These explorations and visits gave him material for future use, and exercised his pen in agreeable correspondence; but his tendency at this time, and for several years afterwards, was to the idle life of a man of society. Whether the literary impulse which was born in him would have ever insisted upon any but an occasional and fitful expression, except for the necessities of his subsequent condition, is doubtful.

Irving's first literary publication was a series of letters, signed Jonathan Oldstyle, contributed in 1802 to the "Morning Chronicle," a newspaper then recently established by his brother Peter. The attention that these audacious satires of the theater, the actors, and their audience attracted is evidence of the literary poverty of the period. The letters are open imitations of the "Spectator" and the "Tatler," and, although sharp upon local follies, are of no consequence at present except as foreshadowing the sensibility and quiet humor of the future author, and his chivalrous devotion to woman. What is worthy of note is that a boy of nineteen should turn aside from his caustic satire to protest against the cruel and unmanly habit of jesting at ancient maidens.

It was enough for him that they are women, and possess the strongest claim upon our admiration, tenderness, and protection.

III. MANHOOD—FIRST VISIT TO EUROPE

Irving's health, always delicate, continued so much impaired when he came of age, in 1804., that his brothers determined to send him to Europe. On the 19th of May he took passage for Bordeaux in a sailing vessel, which reached the mouth of the Garonne on the 25th of June. His consumptive appearance when he went on board caused the captain to say to himself, "There's a chap who will go overboard before we get across;" but his condition was much improved by the voyage.

He stayed six weeks at Bordeaux to improve himself in the language, and then set out for the Mediterranean. In the diligence he had some merry companions, and the party amused itself on the way. It was their habit to stroll about the towns in which they stopped, and talk with whomever they met. Among his companions was a young French officer and an eccentric, garrulous doctor from America. At Tonneins, on the Garonne, they entered a house where a number of girls were quilting. The girls gave Irving a needle and set him to work. He could not understand their patois, and they could not comprehend his bad French, and they got on very merrily. At last the little doctor told them that the interesting young man was an English prisoner whom the French officer had in custody. Their merriment at once gave place to pity. "Ah! le pauvre garçon!" said one to another; "he is merry, however, in all his trouble." "And what will they do with him?" asked a young woman. "Oh, nothing of consequence," replied the doctor; "perhaps shoot him, or cut off his head." The good souls were much distressed; they brought him wine, loaded his pockets with fruit, and bade him good-by with a hundred benedictions. Over forty years after, Irving made a detour, on his way from Madrid to Paris, to visit Tonneins, drawn thither solely by the recollection of this incident, vaguely hoping perhaps to apologize to the tender-hearted villagers for the imposition. His conscience had always pricked him for it. "It was a shame," he said, "to leave them with such painful impressions." The quilting party had dispersed by that time. "I believe I recognized the house," he says; "and I saw two or three old women who might once have formed part of the merry group of girls; but I doubt whether they recognized, in the stout elderly gentleman, thus rattling in his carriage through their streets, the pale young English prisoner of forty years since."

Bonaparte was emperor. The whole country was full of suspicion. The police suspected the traveler, notwithstanding his passport, of being an Englishman and a spy, and dogged him at every step. He arrived at Avignon, full of enthusiasm at the thought of seeing the tomb of Laura. "Judge of my surprise," he writes, "my disappointment, and my indignation, when I was told that the church, tomb, and all were utterly demolished in the time of the Revolution. Never did the Revolution, its authors and its consequences, receive a more hearty and sincere execration than at that moment. Throughout the whole of my journey I had found reason to exclaim against it for depriving me of some valuable curiosity or celebrated monument, but this was the severest disappointment it had yet occasioned." This view of the Revolution is very characteristic of Irving, and perhaps the first that would occur to a man of letters. The journey was altogether disagreeable, even to a traveler used to the rough jaunts in an American wilderness: the inns were miserable; dirt, noise, and insolence reigned without control. But it never was our author's habit to stroke the world the wrong way: "When I cannot get a dinner to suit my taste, I endeavor to get a taste to suit my dinner." And he adds: "There is nothing I dread more than to be taken for one of the Smellfungi of this world. I therefore endeavor to be pleased with everything about me, and with the masters, mistresses, and servants of the inns, particularly when I perceive they have 'all the dispositions in the world' to serve me; as Sterne says, 'It is enough for heaven and ought to be enough for me.'"

The traveler was detained at Marseilles, and five weeks at Nice, on one or another frivolous pretext of the police, and did not reach Genoa till the 20th of October. At Genoa there was a delightful society, and Irving seems to have been more attracted by that than by the historical curiosities. His health was restored, and his spirits recovered elasticity in the genial hospitality; he was surrounded by friends to whom he became so much attached that it was with pain he parted from them. The gayety of city life, the levees of the Doge, and the balls, were not unattractive to the handsome young man; but what made Genoa seem like home to him was his intimacy with a few charming families, among whom he mentions those of Mrs. Bird, Madame Gabriac, and Lady Shaftesbury. From the latter he experienced the most cordial and unreserved friendship; she greatly interested herself in his future, and furnished him with letters from herself and the nobility to persons of the first distinction in Florence, Rome, and Naples.

Late in December Irving sailed for Sicily in a Genoese packet. Off the island of Planoca it was overpowered and captured by a little picaroon, with lateen sails and a couple of guns, and a most villainous crew, in poverty-stricken garments, rusty cutlasses in their hands and stiletos and pistols stuck in their waistbands. The pirates thoroughly ransacked the vessel, opened all the trunks and portmanteaus, but found little that they wanted except brandy and provisions. In releasing the vessel, the ragamuffins seem to have had a touch of humor, for they gave the captain a "receipt" for what they had taken, and an order on the British consul at Messina to pay for the same. This old-time courtesy was hardly appreciated at the moment.

Irving passed a couple of months in Sicily, exploring with some thoroughness the ruins, and making several perilous inland trips, for the country was infested by banditti. One journey from Syracuse through the center of the island revealed more wretchedness than Irving supposed existed in the world. The half-starved peasants lived in wretched cabins and often in caverns, amid filth and vermin. "God knows my mind never suffered so much as on this journey," he writes, "when I saw such scenes of want and misery continually before me, without the power of effectually relieving them." His stay in the ports was made agreeable by the officers of American ships cruising in those waters. Every ship was a home, and every officer a friend. He had

a boundless capacity for good-fellowship. At Messina he chronicles the brilliant spectacle of Lord Nelson's fleet passing through the straits in search of the French fleet that had lately got out of Toulon. In less than a year Nelson's young admirer was one of the thousands that pressed to see the remains of the great admiral as they lay in state at Greenwich, wrapped in the flag that had floated at the masthead of the Victory.

From Sicily he passed over to Naples in a fruit boat which dodged the cruisers, and reached Rome the last of March. Here he remained several weeks, absorbed by the multitudinous attractions. In Italy the worlds of music and painting were for the first time opened to him. Here he made the acquaintance of Washington Allston, and the influence of this friendship came near changing the whole course of his life. To return home to the dry study of the law was not a pleasing prospect; the masterpieces of art, the serenity of the sky, the nameless charm which hangs about an Italian landscape, and Allston's enthusiasm as an artist, nearly decided him to remain in Rome and adopt the profession of a painter. But after indulging in this dream, it occurred to him that it was not so much a natural aptitude for the art as the lovely scenery and Allston's companionship that had attracted him to it. He saw something of Roman society; Torlonia the banker was especially assiduous in his attentions. It turned out when Irving came to make his adieus that Torlonia had all along supposed him a relative of General Washington. This mistake is offset by another that occurred later, after Irving had attained some celebrity in England. An English lady passing through an Italian gallery with her daughter stopped before a bust of Washington. The daughter said, "Mother, who was Washington?" "Why, my dear, don't you know?" was the astonished reply. "He wrote the 'Sketch-Book.'" It was at the house of Baron von Humboldt, the Prussian minister, that Irving first met Madame de Stael, who was then enjoying the celebrity of "Delphine." He was impressed with her strength of mind, and somewhat astounded at the amazing flow of her conversation, and the question upon question with which she plied him.

In May the wanderer was in Paris, and remained there four months, studying French and frequenting the theaters with exemplary regularity. Of his life in Paris there are only the meagerest reports, and he records no observations upon political affairs. The town fascinated him more than any other in Europe; he notes that the city is rapidly beautifying under the emperor, that the people seem gay and happy, and 'Vive la bagatelle!' is again the burden of their song. His excuse for remissness in correspondence was, "I am a young man and in Paris."

By way of the Netherlands he reached London in October, and remained in England till January. The attraction in London seems to have been the theater, where he saw John Kemble, Cooke, and Mrs. Siddons. Kemble's acting seemed to him too studied and over-labored; he had the disadvantage of a voice lacking rich bass tones. Whatever he did was judiciously conceived and perfectly executed; it satisfied the head, but rarely touched the heart. Only in the part of Zanga was the young critic completely overpowered by his acting,—Kemble seemed to have forgotten himself. Cooke, who had less range than Kemble, completely satisfied Irving as Iago. Of Mrs. Siddons, who was then old, he scarcely dares to give his impressions lest he should be thought extravagant. "Her looks," he says, "her voice; her gestures, delighted me. She penetrated in a moment to my heart. She froze and melted it by turns; a glance of her eye, a start, an exclamation, thrilled through my whole frame. The more I see her, the more I admire her. I hardly breathe while she is on the stage. She works up my feelings till I am like a mere child." Some years later, after the publication of the "Sketch-Book," in a London assembly Irving was presented to the tragedy queen, who had left the stage, but had not laid aside its stately manner. She looked at him a moment, and then in a deep-toned voice slowly enunciated, "You've made me weep." The author was so disconcerted that he said not a word, and retreated in confusion. After the publication of "Bracebridge Hall" he met her in company again, and was persuaded to go through the ordeal of another presentation. The stately woman fixed her eyes on him as before, and slowly said, "You've made me weep again." This time the bashful author acquitted himself with more honor.

This first sojourn abroad was not immediately fruitful in a literary way, and need not further detain us. It was the irresolute pilgrimage of a man who had not yet received his vocation. Everywhere he was received in the best society, and the charm of his manner and his ingenuous nature made him everywhere a favorite. He carried that indefinable passport which society recognizes and which needs no 'visee.' He saw the people who were famous, the women whose recognition is a social reputation; he made many valuable friends; he frequented the theater, he indulged his passion for the opera; he learned how to dine, and to appreciate the delights of a brilliant salon; he was picking up languages; he was observing nature and men, and especially women. That he profited by his loitering experience is plain enough afterward, but thus far there is little to prophesy that Irving would be anything more in life than a charming 'flaneur.'

IV. SOCIETY AND "SALMAGUNDI"

On Irving's return to America in February, 1806, with reestablished health, life did not at first take on a more serious purpose. He was admitted to the bar, but he still halted.—[Irving once illustrated his legal acquirements at this time by the relation of the following anecdote to his nephew: Josiah Ogden Hoffman and Martin Wilkins, an effective and witty advocate, had been appointed to examine students for admission. One student acquitted himself very lamely, and at the supper which it was the custom for the candidates to give to the examiners, when they passed upon their several merits, Hoffman paused in coming to this one, and turning to Wilkins said, as if in hesitation, "though all the while intending to admit him, Martin, I think he knows a little law."—"Make it stronger, Jo," was the reply; "d—d little."—]—Society more than ever attracted him and devoured his time. He willingly accepted the office of "champion at the tea-parties;" he was one of a knot of young fellows of literary tastes and convivial habits, who delighted to be known as "The Nine Worthies," or "Lads of Kilkenny." In his letters of this period I detect a kind of callowness and affectation which is not discernible in his foreign letters and journal.

These social worthies had jolly suppers at the humble taverns of the city, and wilder revelries in an old

country house on the Passaic, which is celebrated in the "Salmagundi" papers as Cockloft Hall. We are reminded of the change of manners by a letter of Mr. Paulding, one of his comrades, written twenty years after, who recalls to mind the keeper of a porter house, "who whilom wore a long coat, in the pockets whereof he jingled two bushels of sixpenny pieces, and whose daughter played the piano to the accompaniment of broiled oysters." There was some affectation of roistering in all this; but it was a time of social good-fellowship, and easy freedom of manners in both sexes. At the dinners there was much sentimental and bacchanalian singing; it was scarcely good manners not to get a little tipsy; and to be laid under the table by the compulsory bumper was not to the discredit of a guest. Irving used to like to repeat an anecdote of one of his early friends, Henry Ogden, who had been at one of these festive meetings. He told Irving the next day that in going home he had fallen through a grating which had been carelessly left open, into a vault beneath. The solitude, he said, was rather dismal at first, but several other of the guests fell in, in the course of the evening, and they had, on the whole, a pleasant night of it.

These young gentlemen liked to be thought "sad dogs." That they were less abandoned than they pretended to be the sequel of their lives shows among Irving's associates at this time who attained honorable consideration were John and Gouverneur Kemble, Henry Brevoort, Henry Ogden, James K. Paulding, and Peter Irving. The saving influence for all of them was the refined households they frequented and the association of women who were high-spirited without prudery, and who united purity and simplicity with wit, vivacity, and charm of manner. There is some pleasant correspondence between Irving and Miss Mary Fairlie, a belle of the time, who married the tragedian, Thomas A. Cooper; the "fascinating Fairlie," as Irving calls her, and the Sophie Sparkle of the "Salmagundi." Irving's susceptibility to the charms and graces of women—a susceptibility which continued always fresh—was tempered and ennobled by the most chivalrous admiration for the sex as a whole. He placed them on an almost romantic pinnacle, and his actions always conformed to his romantic ideal, although in his writings he sometimes adopts the conventional satire which was more common fifty years ago than now. In a letter to Miss Fairlie, written from Richmond, where he was attending the trial of Aaron Burr, he expresses his exalted opinion of the sex. It was said in accounting for the open sympathy of the ladies with the prisoner that Burr had always been a favorite with them; "but I am not inclined," he writes, "to account for it in so illiberal a manner; it results from that merciful, that heavenly disposition, implanted in the female bosom, which ever inclines in favor of the accused and the unfortunate. You will smile at the high strain in which I have indulged; believe me, it is because I feel it; and I love your sex ten times better than ever."—[An amusing story in connection with this Richmond visit illustrates the romantic phase of Irving's character. Cooper, who was playing at the theater, needed small-clothes for one of his parts; Irving lent him a pair,—knee breeches being still worn,—and the actor carried them off to Baltimore. From that city he wrote that he had found in the pocket an emblem of love, a mysterious locket of hair in the shape of a heart. The history of it is curious: when Irving sojourned at Genoa, he was much taken with the beauty of a young Italian lady, the wife of a Frenchman. He had never spoken with her, but one evening before his departure he picked up from the floor her handkerchief which she had dropped, and with more gallantry than honesty carried it off to Sicily. His pocket was picked of the precious relic while he was attending a religious function in Catania, and he wrote to his friend Storm, the consul at Genoa, deploring his loss. The consul communicated the sad misfortune to the lovely Bianca, for that was the lady's name, who thereupon sent him a lock of her hair, with the request that he would come to see her on his return. He never saw her again, but the lock of hair was inclosed in a locket and worn about his neck, in memory of a radiant vision that had crossed his path and vanished.]

Personally, Irving must have awakened a reciprocal admiration. A drawing by Vanderlyn, made in Paris in 1805, and a portrait by Jarvis in 1809, present him to us in the fresh bloom of manly beauty. The face has an air of distinction and gentle breeding; the refined lines, the poetic chin, the sensitive mouth, the shapely nose, the large dreamy eyes, the intellectual forehead, and the clustering brown locks are our ideal of the author of the "Sketch-Book" and the pilgrim in Spain. His biographer, Mr. Pierre M. Irving, has given no description of his appearance; but a relative, who saw much of our author in his latter years, writes to me: "He had dark gray eyes; a handsome straight nose, which might perhaps be called large; a broad, high, full forehead, and a small mouth. I should call him of medium height, about five feet eight and a half to nine inches, and inclined to be a trifle stout. There was no peculiarity about his voice; but it was pleasant and had a good intonation. His smile was exceedingly genial, lighting up his whole face and rendering it very attractive; while, if he were about to say anything humorous, it would beam forth from his eyes even before the words were spoken. As a young man his face was exceedingly handsome, and his head was well covered with dark hair; but from my earliest recollection of him he wore neither whiskers nor moustache, but a dark brown wig, which, although it made him look younger, concealed a beautifully shaped head." We can understand why he was a favorite in the society of Baltimore, Washington, Philadelphia, and Albany, as well as of New York, and why he liked to linger here and there, sipping the social sweets, like a man born to leisure and seemingly idle observation of life.

It was in the midst of these social successes, and just after his admission to the bar, that Irving gave the first decided evidence of the choice of a career. This was his association with his eldest brother, William, and Paulding in the production of "Salmagundi," a semimonthly periodical, in small duodecimo sheets, which ran with tolerable regularity through twenty numbers, and stopped in full tide of success, with the whimsical indifference to the public which had characterized its every issue. Its declared purpose was "simply to instruct the young, reform the old, correct the town, and castigate the age." In manner and purpose it was an imitation of the "Spectator" and the "Citizen of the World," and it must share the fate of all imitations; but its wit was not borrowed, and its humor was to some extent original; and so perfectly was it adapted to local conditions that it may be profitably read to-day as a not untrue reflection of the manners and spirit of the time and city. Its amusing audacity and complacent superiority, the mystery hanging about its writers, its affectation of indifference to praise or profit, its fearless criticism, lively wit, and irresponsible humor, piqued, puzzled, and delighted the town. From the first it was an immense success; it had a circulation in other cities, and many imitations of it sprung up. Notwithstanding many affectations and puerilities it is still readable to Americans. Of course, if it were offered now to the complex and sophisticated society of New York, it would fail to attract anything like the attention it received in the days of simplicity and literary

dearth; but the same wit, insight, and literary art, informed with the modern spirit and turned upon the follies and "whim-whams" of the metropolis, would doubtless have a great measure of success. In Irving's contributions to it may be traced the germs of nearly everything that he did afterwards; in it he tried the various stops of his genius; he discovered his own power; his career was determined; thereafter it was only a question of energy or necessity.

In the summer of 1808 there were printed at Ballston-Spa—then the resort of fashion and the arena of flirtation—seven numbers of a duodecimo bagatelle in prose and verse, entitled "The Literary Picture Gallery and Admonitory Epistles to the Visitors of Ballston-Spa, by Simeon Senex, Esquire." This piece of summer nonsense is not referred to by any writer who has concerned himself about Irving's life, but there is reason to believe that he was a contributor to it, if not the editor.—[For these stray reminders of the old-time gayety of Ballston-Spa, I am indebted to J. Carson Brevoort, Esq., whose father was Irving's most intimate friend, and who told him that Irving had a hand in them.]

In these yellow pages is a melancholy reflection of the gayety and gallantry of the Sans Souci Hotel seventy years ago. In this "Picture Gallery," under the thin disguise of initials, are the portraits of well-known belles of New York whose charms of person and graces of mind would make the present reader regret his tardy advent into this world, did not the "Admonitory Epistles," addressed to the same sex, remind him that the manners of seventy years ago left much to be desired. In respect of the habit of swearing, "Simeon" advises "Myra" that if ladies were to confine themselves to a single round oath, it would be quite sufficient; and he objects, when he is at the public table, to the conduct of his neighbor who carelessly took up "Simeon's" fork and used it as a toothpick. All this, no doubt, passed for wit in the beginning of the century. Punning, broad satire, exaggerated compliment, verse which has love for its theme and the "sweet bird of Venus" for its object, an affectation of gallantry and of ennui, with anecdotes of distinguished visitors, out of which the screaming fun has quite evaporated, make up the staple of these faded mementos of an ancient watering-place. Yet how much superior is our comedy of to-day? The beauty and the charms of the women of two generations ago exist only in tradition; perhaps we should give to the wit of that time equal admiration if none of it had been preserved.

Irving, notwithstanding the success of "Salmagundi," did not immediately devote himself to literature, nor seem to regard his achievements in it as anything more than aids to social distinction. He was then, as always, greatly influenced by his surroundings. These were unfavorable to literary pursuits. Politics was the attractive field for preferment and distinction; and it is more than probable that, even after the success of the Knickerbocker history, he would have drifted through life; half lawyer and half placeman, if the associations and stimulus of an old civilization, in his second European residence, had not fired his ambition. Like most young lawyers with little law and less clients, he began to dabble in local politics. The experiment was not much to his taste, and the association and work demanded, at that time, of a ward politician soon disgusted him. "We have toiled through the purgatory of an election," he writes to the fair Republican, Miss Fairlie, who rejoiced in the defeat he and the Federals had sustained.

"What makes me the more outrageous is, that I got fairly drawn into the vortex, and before the third day was expired, I was as deep in mud and politics as ever a moderate gentleman would wish to be; and I drank beer with the multitude; and I talked hand-bill fashion with the demagogues; and I shook hands with the mob, whom my heart abhorreth. 'T is true, for the first two days I maintained my coolness and indifference. The first day I merely hunted for whim, character, and absurdity, according to my usual custom; the second day being rainy, I sat in the bar-room at the Seventh Ward, and read a volume of 'Galatea,' which I found on a shelf; but before I had got through a hundred pages, I had three or four good Feds sprawling round me on the floor, and another with his eyes half shut, leaning on my shoulder in the most affectionate manner, and spelling a page of the book as if it had been an electioneering hand-bill. But the third day—ah! then came the tug of war. My patriotism then blazed forth, and I determined to save my country!

"Oh, my friend, I have been in such holes and corners; such filthy nooks and filthy corners; sweep offices and oyster cellars! I have sworn brother to a leash of drawers, and can drink with any tinker in his own language during my life,—faugh! I shall not be able to bear the smell of small beer and tobacco for a month to come.... Truly this saving one's country is a nauseous piece of business, and if patriotism is such a dirty virtue,—prythee, no more of it."

He unsuccessfully solicited some civil appointment at Albany, a very modest solicitation, which was never renewed, and which did not last long, for he was no sooner there than he was "disgusted by the servility and duplicity and rascality witnessed among the swarm of scrub politicians." There was a promising young artist at that time in Albany, and Irving wishes he were a man of wealth, to give him a helping hand; a few acts of munificence of this kind by rich nabobs, he breaks out, "would be more pleasing in the sight of Heaven, and more to the glory and advantage of their country, than building a dozen shingle church steeples, or buying a thousand venal votes at an election." This was in the "good old times!"

Although a Federalist, and, as he described himself, "an admirer of General Hamilton, and a partisan with him in politics," he accepted a retainer from Burr's friends in 1807, and attended his trial in Richmond, but more in the capacity of an observer of the scene than a lawyer. He did not share the prevalent opinion of Burr's treason, and regarded him as a man so fallen as to be shorn of the power to injure the country, one for whom he could feel nothing but compassion. That compassion, however, he received only from the ladies of the city, and the traits of female goodness manifested then sunk deep into Irving's heart. Without pretending, he says, to decide on Burr's innocence or guilt, "his situation is such as should appeal eloquently to the feelings of every generous bosom. Sorry am I to say the reverse has been the fact: fallen, proscribed, prejudged, the cup of bitterness has been administered to him with an unsparing hand. It has almost been considered as culpable to evince toward him the least sympathy or support; and many a hollow-hearted caitiff have I seen, who basked in the sunshine of his bounty while in power, who now skulked from his side, and even mingled among the most clamorous of his enemies.... I bid him farewell with a heavy heart, and he expressed with peculiar warmth and feeling his sense of the interest I had taken in his fate. I never felt in a more melancholy mood than when I rode from his solitary prison." This is a good illustration of Irving's tender-heartedness; but considering Burr's whole character, it is altogether a womanish case of misplaced

sympathy with the cool slayer of Alexander Hamilton.

V. THE KNICKERBOCKER PERIOD

Not long after the discontinuance of "Salmagundi," Irving, in connection with his brother Peter, projected the work that was to make him famous. At first nothing more was intended than a satire upon the "Picture of New York," by Dr. Samuel Mitchell, just then published. It was begun as a mere burlesque upon pedantry and erudition, and was well advanced, when Peter was called by his business to Europe, and its completion was fortunately left to Washington. In his mind the idea expanded into a different conception. He condensed the mass of affected learning, which was their joint work, into five introductory chapters,—subsequently he said it would have been improved if it had been reduced to one, and it seems to me it would have been better if that one had been thrown away,—and finished "A History of New York, by Diedrich Knickerbocker," substantially as we now have it. This was in 1809, when Irving was twenty-six years old.

But before this humorous creation was completed, the author endured the terrible bereavement which was to color all his life. He had formed a deep and tender passion for Matilda Hoffman, the second daughter of Josiah Ogden Hoffman, in whose family he had long been on a footing of the most perfect intimacy, and his ardent love was fully reciprocated. He was restlessly casting about for some assured means of livelihood which would enable him to marry, and perhaps his distrust of a literary career was connected with this desire, when after a short illness Miss Hoffman died, in the eighteenth year of her age. Without being a dazzling beauty, she was lovely in person and mind, with most engaging manners, a refined sensibility, and a delicate and playful humor. The loss was a crushing blow to Irving, from the effects of which he never recovered, although time softened the bitterness of his grief into a tender and sacred memory. He could never bear to hear her name spoken even by his most intimate friends, or any allusion to her. Thirty years after her death, it happened one evening at the house of Mr. Hoffman, her father, that a granddaughter was playing for Mr. Irving, and in taking her music from the drawer, a faded piece of embroidery was brought forth. "Washington," said Mr. Hoffman, picking it up, "this is a piece of poor Matilda's workmanship." The effect was electric. He had been talking in the sprightliest mood before, but he sunk at once into utter silence, and in a few moments got up and left the house.

After his death, in a private repository of which he always kept the key, was found a lovely miniature, a braid of fair hair, and a slip of paper, on which was written in his own hand, "Matilda Hoffman;" and with these treasures were several pages of a memorandum in ink long since faded. He kept through life her Bible and Prayer Book; they were placed nightly under his pillow in the first days of anguish that followed her loss, and ever after they were the inseparable companions of all his wanderings. In this memorandum—which was written many years afterwards—we read the simple story of his love:

"We saw each other every day, and I became excessively attached to her. Her shyness wore off by degrees. The more I saw of her the more I had reason to admire her. Her mind seemed to unfold leaf by leaf, and every time to discover new sweetness. Nobody knew her so well as I, for she was generally timid and silent; but I in a manner studied her excellence. Never did I meet with more intuitive rectitude of mind, more native delicacy, more exquisite propriety in word, thought, and action, than in this young creature. I am not exaggerating; what I say was acknowledged by all who knew her. Her brilliant little sister used to say that people began by admiring her, but ended by loving Matilda. For my part, I idolized her. I felt at times rebuked by her superior delicacy and purity, and as if I was a coarse, unworthy being in comparison."

At this time Irving was much perplexed about his career. He had "a fatal propensity to belles-lettres;" his repugnance to the law was such that his mind would not take hold of the study; he anticipated nothing from legal pursuits or political employment; he was secretly writing the humorous history, but was altogether in a low-spirited and disheartened state. I quote again from the memorandum:

"In the mean time I saw Matilda every day, and that helped to distract me. In the midst of this struggle and anxiety she was taken ill with a cold. Nothing was thought of it at first; but she grew rapidly worse, and fell into a consumption. I cannot tell you what I suffered. The ills that I have undergone in this life have been dealt out to me drop by drop, and I have tasted all their bitterness. I saw her fade rapidly away; beautiful, and more beautiful, and more angelical to the last. I was often by her bedside; and in her wandering state of mind she would talk to me with a sweet, natural, and affecting eloquence, that was overpowering. I saw more of the beauty of her mind in that delirious state than I had ever known before. Her malady was rapid in its career, and hurried her off in two months. Her dying struggles were painful and protracted. For three days and nights I did not leave the house, and scarcely slept. I was by her when she died; all the family were assembled round her, some praying, others weeping, for she was adored by them all. I was the last one she looked upon. I have told you as briefly as I could what, if I were to tell with all the incidents and feelings that accompanied it, would fill volumes. She was but about seventeen years old when she died. "I cannot tell you what a horrid state of mind I was in for a long time. I seemed to care for nothing; the world was a blank to me. I abandoned all thoughts of the law. I went into the country, but could not bear solitude, yet could not endure society. There was a dismal horror continually in my mind, that made me fear to be alone. I had often

to get up in the night, and seek the bedroom of my brother, as if the having a human being by me would relieve me from the frightful gloom of my own thoughts. "Months elapsed before my mind would resume any tone; but the despondency I had suffered for a long time in the course of this attachment, and the anguish that attended its catastrophe, seemed to give a turn to my whole character, and throw some clouds into my disposition, which have ever since hung about it. When I became more calm and collected, I applied myself, by way of occupation, to the finishing of my work. I brought it to a close, as well as I could, and published it; but the time and circumstances in which it was produced rendered me always unable to look upon it with satisfaction. Still it took with the public, and gave me celebrity, as an original work was something remarkable and uncommon in America. I was noticed, caressed, and, for a time, elevated by the popularity I had gained. I found myself uncomfortable in my feelings in New York, and traveled about a little. Wherever I went, I was overwhelmed with attentions; I was full of youth and animation, far different from the being I now am, and I was quite flushed with this early taste of public favor. Still, however, the career of gayety and notoriety soon palled on me. I seemed to drift about without aim or object, at the mercy of every breeze; my heart wanted anchorage. I was naturally susceptible, and tried to form other attachments, but my heart would not hold on; it would continually recur to what it had lost; and whenever there was a pause in the hurry of novelty and excitement, I would sink into dismal dejection. For years I could not talk on the subject of this hopeless regret; I could not even mention her name; but her image was continually before me, and I dreamt of her incessantly."

This memorandum, it subsequently appeared, was a letter, or a transcript of it, addressed to a married lady, Mrs. Foster, in which the story of his early love was related, in reply to her question why he had never married. It was in the year 1823, the year after the publication of "Bracebridge Hall," while he sojourned in Dresden, that he became intimate with an English family residing there, named Foster, and conceived for the daughter, Miss Emily Foster, a warm friendship and perhaps a deep attachment. The letter itself, which for the first time broke the guarded seclusion of Irving's heart, is evidence of the tender confidence that existed between him and this family. That this intimacy would have resulted in marriage, or an offer of marriage, if the lady's affections had not been preoccupied, the Fosters seem to have believed. In an unauthorized addition to the "Life and Letters," inserted in the English edition without the knowledge of the American editor, with some such headings as, "History of his First Love brought to us, and returned," and "Irving's Second Attachment," the Fosters tell the interesting story of Irving's life in Dresden, and give many of his letters, and an account of his intimacy with the family. From this account I quote:

"Soon after this, Mr. Irving, who had again for long felt 'the tenderest interest warm his bosom, and finally enthrall his whole soul,' made one vigorous and valiant effort to free himself from a hopeless and consuming attachment. My mother counseled him, I believe, for the best, and he left Dresden on an expedition of several weeks into a country he had long wished to see; though, in the main, it disappointed him; and he started with young Colbourne (son of general Colbourne) as his companion. Some of his letters on this journey are before the public; and in the agitation and eagerness he there described, on receiving and opening letters from us, and the tenderness in his replies,—the longing to be once more in the little Pavilion, to which we had moved in the beginning of the summer,—the letters (though carefully guarded by the delicacy of her who intrusted them to the editor, and alone retained among many more calculated to lay bare his true feelings, even fragmentary as they are), point out the truth. "Here is the key to the journey to Silesia, the return to Dresden, and, finally, to the journey from Dresden to Rotterdam in our company, first planned so as to part at Cassel, where Mr. Irving had intended to leave us and go down the Rhine, but subsequently could not find in his heart to part. Hence, after a night of pale and speechless melancholy, the gay, animated, happy countenance with which he sprang to our coach-box to take his old seat on it, and accompany us to Rotterdam. There even could he not part, but joined us in the steamboat; and, after bearing us company as far as a boat could follow us, at last tore himself away, to bury himself in Paris, and try to work.... "It was fortunate, perhaps, that this affection was returned by the warmest friendship only, since it was destined that the accomplishment of his wishes was impossible, for many obstacles which lay in his way; and it is with pleasure I can truly say that in time he schooled himself to view, also with friendship only, one who for some time past has been the wife of another."

Upon the delicacy of this revelation the biographer does not comment, but he says that the idea that Irving thought of marriage at that time is utterly disproved by the following passage from the very manuscript which he submitted to Mrs. Foster:

"You wonder why I am not married. I have shown you why I was not long since. When I had sufficiently recovered from that loss, I became involved in ruin. It was not for a man broken down in the world, to drag down any woman to his paltry circumstances. I was too proud to tolerate the idea of ever mending my circumstances by matrimony. My time has now gone by; and I have growing claims upon my thoughts and upon my means, slender and precarious as they are. I feel as if I already had a family to think and provide for."

Upon the question of attachment and depression, Mr. Pierre Irving says:

"While the editor does not question Mr. Irving's great enjoyment of his intercourse with the Fosters, or his deep regret at parting from them, he is too familiar with his occasional fits of depression to have drawn from their recurrence on his return to Paris any such inference as that to which the lady alludes. Indeed, his memorandum book and letters show him to have had, at this time, sources of anxiety of quite a different nature. The allusion to his having to put once more to sea evidently refers to his anxiety on returning to his literary pursuits, after a season of entire idleness."

It is not for us to question the judgment of the biographer, with his full knowledge of the circumstances and his long intimacy with his uncle; yet it is evident that Irving was seriously impressed at Dresden, and that he was very much unsettled until he drove away the impression by hard work with his pen; and it would be nothing new in human nature and experience if he had for a time yielded to the attractions of loveliness and a most congenial companionship, and had returned again to an exclusive devotion to the image of the early loved and lost.

That Irving intended never to marry is an inference I cannot draw either from his fondness for the society of women, from his interest in the matrimonial projects of his friends and the gossip which has feminine attractions for its food, or from his letters to those who had his confidence. In a letter written from Birmingham, England, March 15, 1816, to his dear friend Henry Brevoort, who was permitted more than perhaps any other person to see his secret heart, he alludes, with gratification, to the report of the engagement of James Paulding, and then says:

"It is what we must all come to at last. I see you are hankering after it, and I confess I have done so for a long time past. We are, however, past that period [Irving was thirty-two] when a man marries suddenly and inconsiderately. We may be longer making a choice, and consulting the convenience and concurrence of easy circumstances, but we shall both come to it sooner or later. I therefore recommend you to marry without delay. You have sufficient means, connected with your knowledge and habits of business, to support a genteel establishment, and I am certain that as soon as you are married you will experience a change in your ideas. All those vagabond, roving propensities will cease. They are the offspring of idleness of mind and a want of something to fix the feelings. You are like a bark without an anchor, that drifts about at the mercy of every vagrant breeze or trifling eddy. Get a wife, and she'll anchor you. But don't marry a fool because she has a pretty face, and don't seek after a great belle. Get such a girl as Mary—, or get her if you can; though I am afraid she has still an unlucky kindness for poor—, which will stand in the way of her fortunes. I wish to God they were rich, and married, and happy!"

The business reverses which befell the Irving brothers, and which drove Washington to the toil of the pen, and cast upon him heavy family responsibilities, defeated his plans of domestic happiness in marriage. It was in this same year, 1816, when the fortunes of the firm were daily becoming more dismal, that he wrote to Brevoort, upon the report that the latter was likely to remain a bachelor: "We are all selfish beings. Fortune by her tardy favors and capricious freaks seems to discourage all my matrimonial resolves, and if I am doomed to live an old bachelor, I am anxious to have good company. I cannot bear that all my old companions should launch away into the married state, and leave me alone to tread this desolate and sterile shore." And, in view of a possible life of scant fortune, he exclaims: "Thank Heaven, I was brought up in simple and inexpensive habits, and I have satisfied myself that, if need be, I can resume them without repining or inconvenience. Though I am willing, therefore, that Fortune should shower her blessings upon me, and think I can enjoy them as well as most men, yet I shall not make myself unhappy if she chooses to be scanty, and shall take the position allotted me with a cheerful and contented mind."

When Irving passed the winter of 1823 in the charming society of the Fosters at Dresden, the success of the "Sketch-Book" and "Bracebridge Hall" had given him assurance of his ability to live comfortably by the use of his pen.

To resume. The preliminary announcement of the History was a humorous and skillful piece of advertising. Notices appeared in the newspapers of the disappearance from his lodging of "a small, elderly gentleman, dressed in an old black coat and cocked hat, by the name of Knickerbocker." Paragraphs from week to week, purporting to be the result of inquiry, elicited the facts that such an old gentleman had been seen traveling north in the Albany stage; that his name was Diedrich Knickerbocker; that he went away owing his landlord; and that he left behind a very curious kind of a written book, which would be sold to pay his bills if he did not return. So skillfully was this managed that one of the city officials was on the point of offering a reward for the discovery of the missing Diedrich. This little man in knee breeches and cocked hat was the germ of the whole "Knickerbocker legend," a fantastic creation, which in a manner took the place of history, and stamped upon the commercial metropolis of the New World the indelible Knickerbocker name and character; and even now in the city it is an undefined patent of nobility to trace descent from "an old Knickerbocker family."

The volume, which was first printed in Philadelphia, was put forth as a grave history of the manners and government under the Dutch rulers, and so far was the covert humor carried that it was dedicated to the New York Historical Society. Its success was far beyond Irving's expectation. It met with almost universal acclaim. It is true that some of the old Dutch inhabitants who sat down to its perusal, expecting to read a veritable account of the exploits of their ancestors, were puzzled by the indirection of its commendation; and several excellent old ladies of New York and Albany were in blazing indignation at the ridicule put upon the old Dutch people, and minded to ostracize the irreverent author from all social recognition. As late as 1818, in an address before the Historical Society, Mr. Gulian C. Verplanck, Irving's friend, showed the deep irritation the book had caused, by severe strictures on it as a "coarse caricature." But the author's winning ways soon dissipated the social cloud, and even the Dutch critics were ere long disarmed by the absence of all malice in the gigantic humor of the composition. One of the first foreigners to recognize the power and humor of the

book was Walter Scott. "I have never," he wrote, "read anything so closely resembling the style of Dean Swift as the annals of Diedrich Knickerbocker. I have been employed these few evenings in reading them aloud to Mrs. S. and two ladies who are our guests, and our sides have been absolutely sore with laughing. I think, too, there are passages which indicate that the author possesses power of a different kind, and has some touches which remind me of Sterne."

The book is indeed an original creation, and one of the few masterpieces of humor. In spontaneity, freshness, breadth of conception, and joyous vigor, it belongs to the springtime of literature. It has entered into the popular mind as no other American book ever has, and it may be said to have created a social realm which, with all its whimsical conceit, has almost historical solidity. The Knickerbocker pantheon is almost as real as that of Olympus. The introductory chapters are of that elephantine facetiousness which pleased our great-grandfathers, but which is exceedingly tedious to modern taste; and the humor of the book occasionally has a breadth that is indelicate to our apprehension, though it perhaps did not shock our great-grandmothers. But, notwithstanding these blemishes, I think the work has more enduring qualities than even the generation which it first delighted gave it credit for. The world, however, it must be owned, has scarcely yet the courage of its humor, and dullness still thinks it necessary to apologize for anything amusing. There is little doubt that Irving himself supposed that his serious work was of more consequence to the world.

It seems strange that after this success Irving should have hesitated to adopt literature as his profession. But for two years, and with leisure, he did nothing. He had again some hope of political employment in a small way; and at length he entered into a mercantile partnership with his brothers, which was to involve little work for him, and a share of the profits that should assure his support, and leave him free to follow his fitful literary inclinations. Yet he seems to have been mainly intent upon society and the amusements of the passing hour, and, without the spur of necessity to his literary capacity, he yielded to the temptations of indolence, and settled into the unpromising position of a "man about town." Occasionally, the business of his firm and that of other importing merchants being imperiled by some threatened action of Congress, Irving was sent to Washington to look after their interests. The leisurely progress he always made to the capital through the seductive society of Philadelphia and Baltimore did not promise much business dispatch. At the seat of government he was certain to be involved in a whirl of gayety. His letters from Washington are more occupied with the odd characters he met than with the measures of legislation. These visits greatly extended his acquaintance with the leading men of the country; his political leanings did not prevent an intimacy with the President's family, and Mrs. Madison and he were sworn friends.

It was of the evening of his first arrival in Washington that he writes: "I emerged from dirt and darkness into the blazing splendor of Mrs. Madison's drawing-room. Here I was most graciously received; found a crowded collection of great and little men, of ugly old women and beautiful young ones, and in ten minutes was hand and glove with half the people in the assemblage. Mrs. Madison is a fine, portly, buxom dame, who has a smile and a pleasant word for everybody. Her sisters, Mrs. Cutts and Mrs. Washington, are like two merry wives of Windsor; but as to Jemmy Madison,—oh, poor Jemmy!—he is but a withered little apple john."

Odd characters congregated then in Washington as now. One honest fellow, who, by faithful fagging at the heels of Congress, had obtained a profitable post under government, shook Irving heartily by the hand, and professed himself always happy to see anybody that came from New York; "somehow or another, it was natteral to him," being the place where he was first born. Another fellow-townsmen was "endeavoring to obtain a deposit in the Mechanics' Bank, in case the United States Bank does not obtain a charter. He is as deep as usual; shakes his head and winks through his spectacles at everybody he meets. He swore to me the other day that he had not told anybody what his opinion was, whether the bank ought to have a charter or not. Nobody in Washington knew what his opinion was—not one—nobody; he defied any one to say what it was—anybody—damn the one! No, sir, nobody knows; and if he had added nobody cares, I believe honest would have been exactly in the right. Then there's his brother George: 'Damn that fellow,—knows eight or nine languages; yes, sir, nine languages,—Arabic, Spanish, Greek, Ital—And there's his wife, now,—she and Mrs. Madison are always together. Mrs. Madison has taken a great fancy to her little daughter. Only think, sir, that child is only six years old, and talks the Italian like a book, by—; little devil learnt it from an Italian servant,—damned clever fellow; lived with my brother George ten years. George says he would not part with him for all Tripoli,'" etc.

It was always difficult for Irving, in those days, to escape from the genial blandishments of Baltimore and Philadelphia. Writing to Brevoort from Philadelphia, March 16, 1811, he says: "The people of Baltimore are exceedingly social and hospitable to strangers, and I saw that if I once let myself get into the stream, I should not be able to get out under a fortnight at least; so, being resolved to push home as expeditiously as was honorably possible, I resisted the world, the flesh, and the devil at Baltimore; and after three days' and nights' stout carousal, and a fourth's sickness, sorrow, and repentance, I hurried off from that sensual city."

Jarvis, the artist, was at that time the eccentric and elegant lion of society in Baltimore. "Jack Randolph" had recently sat to him for his portrait. "By the bye [the letter continues] that little 'hydra and chimera dire,' Jarvis, is in prodigious circulation at Baltimore. The gentlemen have all voted him a rare wag and most brilliant wit; and the ladies pronounce him one of the queerest, ugliest, most agreeable little creatures in the world. The consequence is there is not a ball, tea-party, concert, supper, or other private regale but that Jarvis is the most conspicuous personage; and as to a dinner, they can no more do without him than they could without Friar John at the roystering revels of the renowned Pantagruel." Irving gives one of his bon mots which was industriously repeated at all the dinner tables, a profane sally, which seemed to tickle the Baltimoreans exceedingly. Being very much importuned to go to church, he resolutely refused, observing that it was the same thing whether he went or stayed at home. "If I don't go," said he, "the minister says I 'll be d—d, and I 'll be d—d if I do go."

This same letter contains a pretty picture, and the expression of Irving's habitual kindly regard for his fellow-men:

"I was out visiting with Ann yesterday, and met that little assemblage of smiles and fascinations, Mary Jackson. She was bounding with youth, health, and innocence, and

good humor. She had a pretty straw hat, tied under her chin with a pink ribbon, and looked like some little woodland nymph, just turned out by spring and fine weather. God bless her light heart, and grant it may never know care or sorrow! It's enough to cure spleen and melancholy only to look at her. "Your familiar pictures of home made me extremely desirous again to be there.... I shall once more return to sober life, satisfied with having secured three months of sunshine in this valley of shadows and darkness. In this space of time I have seen considerable of the world, but I am sadly afraid I have not grown wiser thereby, inasmuch as it has generally been asserted by the sages of every age that wisdom consists in a knowledge of the wickedness of mankind, and the wiser a man grows the more discontented he becomes with those around him. Whereas, woe is me, I return in infinitely better humor with the world than I ever was before, and with a most melancholy good opinion and good will for the great mass of my fellow-creatures!"

Free intercourse with men of all parties, he thought, tends to divest a man's mind of party bigotry.

"One day [he writes] I am dining with a knot of honest, furious Federalists, who are damning all their opponents as a set of consummate scoundrels, panders of Bonaparte, etc. The next day I dine, perhaps, with some of the very men I have heard thus anathematized, and find them equally honest, warm, and indignant; and if I take their word for it, I had been dining the day before with some of the greatest knaves in the nation, men absolutely paid and suborned by the British government."

His friends at this time attempted to get him appointed secretary of legation to the French mission, under Joel Barlow, then minister, but he made no effort to secure the place. Perhaps he was deterred by the knowledge that the author of "The Columbiad" suspected him, though unjustly, of some strictures on his great epic. He had in mind a book of travel in his own country, in which he should sketch manners and characters; but nothing came of it. The peril to trade involved in the War of 1812 gave him some forebodings, and aroused him to exertion. He accepted the editorship of a periodical called "Select Reviews," afterwards changed to the "Analectic Magazine," for which he wrote sketches, some of which were afterwards put into the "Sketch-Book," and several reviews and naval biographies. A brief biography of Thomas Campbell was also written about this time, as introductory to an edition of "Gertrude of Wyoming." But the slight editorial care required by the magazine was irksome to a man who had an unconquerable repugnance to all periodical labor.

In 1813 Francis Jeffrey made a visit to the United States. Henry Brevoort, who was then in London, wrote an anxious letter to Irving to impress him with the necessity of making much of Mr. Jeffrey. "It is essential," he says,—"that Jeffrey may imbibe a just estimate of the United States and its inhabitants; he goes out strongly biased in our favor, and the influence of his good opinion upon his return to this country will go far to efface the calumnies and the absurdities that have been laid to our charge by ignorant travelers. Persuade him to visit Washington, and by all means to see the Falls of Niagara." The impression seems to have prevailed that if Englishmen could be made to take a just view of the Falls of Niagara, the misunderstandings between the two countries would be reduced. Peter Irving, who was then in Edinburgh, was impressed with the brilliant talent of the editor of the "Review," disguised as it was by affectation, but he said he "would not give the Minstrel for a wilderness of Jeffreys."

The years from 1811 to 1815, when he went abroad for the second time, were passed by Irving in a sort of humble waiting on Providence. His letters to Brevoort during this period are full of the ennui of irresolute youth. He idled away weeks and months in indolent enjoyment in the country; he indulged his passion for the theater when opportunity offered; and he began to be weary of a society which offered little stimulus to his mind. His was the temperament of the artist, and America at that time had little to evoke or to satisfy the artistic feeling. There were few pictures and no galleries; there was no music, except the amateur torture of strings which led the country dance, or the martial inflammation of fife and drum, or the sentimental dawdling here and there over the ancient harpsichord, with the songs of love, and the broad or pathetic staves and choruses of the convivial table; and there was no literary atmosphere.

After three months of indolent enjoyment in the winter and spring of 1811, Irving is complaining to Brevoort in June of the enervation of his social life: "I do want most deplorably to apply my mind to something that will arouse and animate it; for at present it is very indolent and relaxed, and I find it very difficult to shake off the lethargy that enthralls it. This makes me restless and dissatisfied with myself, and I am convinced I shall not feel comfortable and contented until my mind is fully employed. Pleasure is but a transient stimulus, and leaves the mind more enfeebled than before. Give me rugged toils, fierce disputation, wrangling controversy, harassing research,—give me anything that calls forth the energies of the mind; but for Heaven's sake shield me from those calms, those tranquil slumberings, those enervating triflings, those siren blandishments, that I have for some time indulged in, which lull the mind into complete inaction, which benumb its powers, and cost it such painful and humiliating struggles to regain its activity and independence!"

Irving at this time of life seemed always waiting by the pool for some angel to come and trouble the waters. To his correspondent, who was in the wilds of Michilimackinac, he continues to lament his morbid inability. The business in which his thriving brothers were engaged was the importation and sale of hardware and cutlery, and that spring his services were required at the "store." "By all the martyrs of Grub Street [he exclaims], I 'd sooner live in a garret, and starve into the bargain, than follow so sordid, dusty, and soul-killing a way of life, though certain it would make me as rich as old Croesus, or John Jacob Astor himself!" The sparkle of society was no more agreeable to him than the rattle of cutlery. "I have scarcely [he writes] seen anything of the ———s since your departure; business and an amazing want of inclination have kept me from their threshold. Jim, that sly poacher, however, prowls about there, and vitrifies his heart by the furnace of their charms. I accompanied him there on Sunday evening last, and found the Lads and Miss Knox with

them. S—was in great spirits, and played the sparkler with such great success as to silence the whole of us excepting Jim, who was the agreeable rattle of the evening. God defend me from such vivacity as hers, in future,—such smart speeches without meaning, such bubble and squeak nonsense! I 'd as lieve stand by a frying-pan for an hour and listen to the cooking of apple fritters. After two hours' dead silence and suffering on my part I made out to drag him off, and did not stop running until I was a mile from the house." Irving gives his correspondent graphic pictures of the social warfare in which he was engaged, the "host of rascally little tea-parties" in which he was entangled; and some of his portraits of the "divinities," the "blossoms," and the beauties of that day would make the subjects of them flutter with surprise in the churchyards where they lie. The writer was sated with the "tedious commonplace of fashionable society," and languishing to return to his books and his pen.

In March, 1812, in the shadow of the war and the depression of business, Irving was getting out a new edition of the "Knickerbocker," which Inskeep was to publish, agreeing to pay \$1200 at six months for an edition of fifteen hundred. The modern publisher had not then arisen and acquired a proprietary right in the brains of the country, and the author made his bargains like an independent being who owned himself.

Irving's letters of this period are full of the gossip of the town and the matrimonial fate of his acquaintances. The fascinating Mary Fairlie is at length married to Cooper, the tragedian, with the opposition of her parents, after a dismal courtship and a cloudy prospect of happiness. Goodhue is engaged to Miss Clarkson, the sister to the pretty one. The engagement suddenly took place as they walked from church on Christmas Day, and report says "the action was shorter than any of our naval victories, for the lady struck on the first broadside." The war colored all social life and conversation. "This war [the letter is to Brevoort, who is in Europe] has completely changed the face of things here. You would scarcely recognize our old peaceful city. Nothing is talked of but armies, navies, battles, etc." The same phenomenon was witnessed then that was observed in the war for the Union: "Men who had loitered about, the hangers-on and encumbrances of society, have all at once risen to importance, and been the only useful men of the day." The exploits of our young navy kept up the spirits of the country. There was great rejoicing when the captured frigate Macedonian was brought into New York, and was visited by the curious as she lay wind-bound above Hell Gate. "A superb dinner was given to the naval heroes, at which all the great eaters and drinkers of the city were present. It was the noblest entertainment of the kind I ever witnessed. On New Year's Eve a grand ball was likewise given, where there was a vast display of great and little people. The Livingstons were there in all their glory. Little Rule Britannia made a gallant appearance at the head of a train of beauties, among whom were the divine H—, who looked very inviting, and the little Taylor, who looked still more so. Britannia was gorgeously dressed in a queer kind of hat of stiff purple and silver stuff, that had marvelously the appearance of copper, and made us suppose that she had procured the real Mambrino helmet. Her dress was trimmed with what we simply mistook for scalps, and supposed it was in honor of the nation; but we blushed at our ignorance on discovering that it was a gorgeous trimming of marten tips. Would that some eminent furrier had been there to wonder and admire!"

With a little business and a good deal of loitering, waiting upon the whim of his pen, Irving passed the weary months of the war. As late as August, 1814, he is still giving Brevoort, who has returned, and is at Rockaway Beach, the light gossip of the town. It was reported that Brevoort and Dennis had kept a journal of their foreign travel, "which is so exquisitely humorous that Mrs. Cooper, on only looking at the first word, fell into a fit of laughing that lasted half an hour." Irving is glad that he cannot find Brevoort's flute, which the latter requested should be sent to him: "I do not think it would be an innocent amusement for you, as no one has a right to entertain himself at the expense of others." In such dallying and badinage the months went on, affairs every day becoming more serious. Appended to a letter of September 9, 1814, is a list of twenty well-known mercantile houses that had failed within the preceding three weeks. Irving himself, shortly after this, enlisted in the war, and his letters thereafter breathe patriotic indignation at the insulting proposals of the British and their rumored attack on New York, and all his similes, even those having love for their subject, are martial and bellicose. Item: "The gallant Sam has fairly changed front, and, instead of laying siege to Douglas castle, has charged sword in hand, and carried little Cooper's' entrenchments."

As a Federalist and an admirer of England, Irving had deplored the war, but his sympathies were not doubtful after it began, and the burning of the national Capitol by General Ross aroused him to an active participation in the struggle. He was descending the Hudson in a steamboat when the tidings first reached him. It was night, and the passengers had gone into the cabin, when a man came on board with the news, and in the darkness related the particulars: the burning of the President's house and government offices, and the destruction of the Capitol, with the library and public archives. In the momentary silence that followed, somebody raised his voice, and in a tone of complacent derision "wondered what Jimmy Madison would say now." "Sir," cried Mr. Irving, in a burst of indignation that overcame his habitual shyness, "do you seize upon such a disaster only for a sneer? Let me tell you, sir, it is not now a question about Jimmy Madison or Jimmy Armstrong. The pride and honor of the nation are wounded; the country is insulted and disgraced by this barbarous success, and every loyal citizen would feel the ignominy and be earnest to avenge it." There was an outburst of applause, and the sneerer was silenced. "I could not see the fellow," said Mr. Irving, in relating the anecdote, "but I let fly at him in the dark."

The next day he offered his services to Governor Tompkins, and was made the governor's aid and military secretary, with the right to be addressed as Colonel Washington Irving. He served only four months in this capacity, when Governor Tompkins was called to the session of the legislature at Albany. Irving intended to go to Washington and apply for a commission in the regular army, but he was detained at Philadelphia by the affairs of his magazine, until news came in February, 1815, of the close of the war. In May of that year he embarked for England to visit his brother, intending only a short sojourn. He remained abroad seventeen years.

VI. LIFE IN EUROPE—LITERARY ACTIVITY

When Irving sailed from New York, it was with lively anticipations of witnessing the stirring events to follow the return of Bonaparte from Elba. When he reached Liverpool, the curtain had fallen in Bonaparte's theater. The first spectacle that met the traveler's eye was the mail coaches, darting through the streets, decked with laurel and bringing the news of Waterloo. As usual, Irving's sympathies were with the unfortunate. "I think," he says, writing of the exile of St. Helena, "the cabinet has acted with littleness toward him. In spite of all his misdeeds he is a noble fellow [pace Madame de Remusat], and I am confident will eclipse, in the eyes of posterity, all the crowned wiseacres that have crushed him by their overwhelming confederacy. If anything could place the Prince Regent in a more ridiculous light, it is Bonaparte suing for his magnanimous protection. Every compliment paid to this bloated sensualist, this inflation of sack and sugar, turns to the keenest sarcasm."

After staying a week with his brother Peter, who was recovering from an indisposition, Irving went to Birmingham, the residence of his brother-in-law, Henry Van Wart, who had married his youngest sister, Sarah; and from thence to Sydenham, to visit Campbell. The poet was not at home. To Mrs. Campbell Irving expressed his regret that her husband did not attempt something on a grand scale.

"It is unfortunate for Campbell," said she, "that he lives in the same age with Scott and Byron." I asked why. "Oh," said she, "they write so much and so rapidly. Mr. Campbell writes slowly, and it takes him some time to get under way; and just as he has fairly begun out comes one of their poems, that sets the world agog, and quite daunts him, so that he throws by his pen in despair." I pointed out the essential difference in their kinds of poetry, and the qualities which insured perpetuity to that of her husband. "You can't persuade Campbell of that," said she. "He is apt to undervalue his own works, and to consider his own little lights put out, whenever they come blazing out with their great torches." "I repeated the conversation to Scott some time afterward, and it drew forth a characteristic comment. "Pooh!" said he, good humoredly; "how can Campbell mistake the matter so much? Poetry goes by quality, not by bulk. My poems are mere Cairngorms, wrought up, perhaps, with a cunning hand, and may pass well in the market as long as Cairngorms are the fashion; but they are mere Scotch pebbles, after all. Now, Tom Campbell's are real diamonds, and diamonds of the first water."

Returning to Birmingham, Irving made excursions to Kenilworth, Warwick, and Stratford-on-Avon, and a tour through Wales with James Renwick, a young American of great promise, who at the age of nineteen had for a time filled the chair of natural philosophy in Columbia College. He was a son of Mrs. Jane Renwick, a charming woman and a lifelong friend of Irving, the daughter of the Rev. Andrew Jeffrey, of Lochmaben, Scotland, and famous in literature as "The Blue-Eyed Lassie" of Burns. From another song, "When first I saw my Face," which does not appear in the poet's collected works, the biographer quotes:

*"But, sair, I doubt some happier swain
Has gained my Jeanie's favor;
If sae, may every bliss be hers,
Tho' I can never have her."*

*"But gang she east, or gang she west,
'Twixt Nith and Tweed all over,
While men have eyes, or ears, or taste,
She'll always find a lover."*

During Irving's protracted stay in England he did not by any means lose his interest in his beloved New York and the little society that was always dear to him. He relied upon his friend Brevoort to give him the news of the town, and in return he wrote long letters,—longer and more elaborate and formal than this generation has leisure to write or to read; letters in which the writer laid himself out to be entertaining, and detailed his emotions and state of mind as faithfully as his travels and outward experiences.

No sooner was our war with England over than our navy began to make a reputation for itself in the Mediterranean. In his letter of August, 1815, Irving dwells with pride on Decatur's triumph over the Algerine pirates. He had just received a letter from "that—worthy little tar, Jack Nicholson," dated on board the Flambeau, off Algiers. In it Nicholson says that "they fell in with and captured the admiral's ship, and killed him." Upon which Irving remarks: "As this is all that Jack's brevity will allow him to say on the subject, I should be at a loss to know whether they killed the admiral before or after his capture. The well-known humanity of our tars, however, induces me to the former conclusion." Nicholson, who has the honor of being alluded to in "The Croakers," was always a great favorite with Irving. His gallantry on shore was equal to his bravery at sea, but unfortunately his diffidence was greater than his gallantry; and while his susceptibility to female charms made him an easy and a frequent victim, he could never muster the courage to declare his passion. Upon one occasion, when he was desperately enamored of a lady whom he wished to marry, he got Irving to write for him a love-letter, containing an offer of his heart and hand. The enthralled but bashful sailor carried the letter in his pocket till it was worn out, without ever being able to summon pluck enough to deliver it.

While Irving was in Wales the Wiggins family and Madame Bonaparte passed through Birmingham, on their way to Cheltenham. Madame was still determined to assert her rights as a Bonaparte. Irving cannot help expressing sympathy for Wiggins: "The poor man has his hands full, with such a bevy of beautiful women under his charge, and all doubtless bent on pleasure and admiration." He hears, however, nothing further of her, except the newspapers mention her being at Cheltenham. "There are so many stars and comets thrown out of their orbits, and whirling about the world at present, that a little star like Madame Bonaparte attracts but slight attention, even though she draw after her so sparkling a tail as the Wiggins family." In another letter he exclaims: "The world is surely topsy-turvy, and its inhabitants shaken out of place: emperors and

kings, statesmen and philosophers, Bonaparte, Alexander, Johnson, and the Wigginses, all strolling about the face of the earth."

The business of the Irving brothers soon absorbed all Washington's time and attention. Peter was an invalid, and the whole weight of the perplexing affairs of the failing firm fell upon the one who detested business, and counted every hour lost that he gave to it. His letters for two years are burdened with harassments in uncongenial details and unsuccessful struggles. Liverpool, where he was compelled to pass most of his time, had few attractions for him, and his low spirits did not permit him to avail himself of such social advantages as were offered. It seems that our enterprising countrymen flocked abroad, on the conclusion of peace. "This place [writes Irving] swarms with Americans. You never saw a more motley race of beings. Some seem as if just from the woods, and yet stalk about the streets and public places with all the easy nonchalance that they would about their own villages. Nothing can surpass the dauntless independence of all form, ceremony, fashion, or reputation of a downright, unsophisticated American. Since the war, too, particularly, our lads seem to think they are 'the salt of the earth' and the legitimate lords of creation. It would delight you to see some of them playing Indian when surrounded by the wonders and improvements of the Old World. It is impossible to match these fellows by anything this side the water. Let an Englishman talk of the battle of Waterloo, and they will immediately bring up New Orleans and Plattsburg.

"A thoroughbred, thoroughly appointed soldier is nothing to a Kentucky rifleman," etc., etc. In contrast to this sort of American was Charles King, who was then abroad: "Charles is exactly what an American should be abroad: frank, manly, and unaffected in his habits and manners, liberal and independent in his opinions, generous and unprejudiced in his sentiments towards other nations, but most loyally attached to his own." There was a provincial narrowness at that date and long after in America, which deprecated the open-minded patriotism of King and of Irving as it did the clear-sighted loyalty of Fenimore Cooper.

The most anxious time of Irving's life was the winter of 1815-16. The business worry increased. He was too jaded with the din of pounds, shillings, and pence to permit his pen to invent facts or to adorn realities. Nevertheless, he occasionally escapes from the treadmill. In December he is in London, and entranced with the acting of Miss O'Neil. He thinks that Brevoort, if he saw her, would infallibly fall in love with this "divine perfection of a woman." He writes: "She is, to my eyes, the most soul-subduing actress I ever saw; I do not mean from her personal charms, which are great, but from the truth, force, and pathos of her acting. I have never been so completely melted, moved, and overcome at a theatre as by her performances.... Kean, the prodigy, is to me insufferable. He is vulgar, full of trick, and a complete mannerist. This is merely my opinion. He is cried up as a second Garrick, as a reformer of the stage, etc. It may be so. He may be right, and all the other actors wrong. This is certain: he is either very good or very bad. I think decidedly the latter; and I find no medium opinions concerning him. I am delighted with Young, who acts with great judgment, discrimination, and feeling. I think him much the best actor at present on the English stage.... In certain characters, such as may be classed with Macbeth, I do not think that Cooper has his equal in England. Young is the only actor I have seen who can compare with him." Later, Irving somewhat modified his opinion of Kean. He wrote to Brevoort: "Kean is a strange compound of merits and defects. His excellence consists in sudden and brilliant touches, in vivid exhibitions of passion and emotion. I do not think him a discriminating actor, or critical either at understanding or delineating character; but he produces effects which no other actor does."

In the summer of 1816, on his way from Liverpool to visit his sister's family at Birmingham, Irving tarried for a few days at a country place near Shrewsbury on the border of Wales, and while there encountered a character whose portrait is cleverly painted. It is interesting to compare this first sketch with the elaboration of it in the essay on "The Angler" in the "Sketch-Book."

"In one of our morning strolls [he writes, July 15] along the banks of the Aleen, a beautiful little pastoral stream that rises among the Welsh mountains and throws itself into the Dee, we encountered a veteran angler of old Isaac Walton's school. He was an old Greenwich outdoor pensioner, had lost one leg in the battle of Camperdown, had been in America in his youth, and indeed had been quite a rover, but for many years past had settled himself down in his native village, not far distant, where he lived very independently on his pension and some other small annual sums, amounting in all to about L 40. His great hobby, and indeed the business of his life, was to angle. I found he had read Isaac Walton very attentively; he seemed to have imbibed all his simplicity of heart, contentment of mind, and fluency of tongue. We kept company with him almost the whole day, wandering along the beautiful banks of the river, admiring the ease and elegant dexterity with which the old fellow managed his angle, throwing the fly with unerring certainty at a great distance and among overhanging bushes, and waving it gracefully in the air, to keep it from entangling, as he stumped with his staff and wooden leg from one bend of the river to another. He kept up a continual flow of cheerful and entertaining talk, and what I particularly liked him for was, that though we tried every way to entrap him into some abuse of America and its inhabitants, there was no getting him to utter an ill-natured word concerning us. His whole conversation and deportment illustrated old Isaac's maxims as to the benign influence of angling over the human heart.... I ought to mention that he had two companions—one, a ragged, picturesque varlet, that had all the air of a veteran poacher, and I warrant would find any fish-pond in the neighborhood in the darkest night; the other was a disciple of the old philosopher, studying the art under him, and was son and heir apparent to the landlady of the village tavern."

A contrast to this pleasing picture is afforded by some character sketches at the little watering-place of Buxton, which our kindly observer visited the same year.

"At the hotel where we put up [he writes] we had a most singular and whimsical

assemblage of beings. I don't know whether you were ever at an English watering-place, but if you have not been, you have missed the best opportunity of studying English oddities, both moral and physical. I no longer wonder at the English being such excellent caricaturists, they have such an inexhaustible number and variety of subjects to study from. The only care should be not to follow fact too closely, for I'll swear I have met with characters and figures that would be condemned as extravagant, if faithfully delineated by pen or pencil. At a watering-place like Buxton, where people really resort for health, you see the great tendency of the English to run into excrescences and bloat out into grotesque deformities. As to noses, I say nothing of them, though we had every variety: some snubbed and turned up, with distended nostrils, like a dormer window on the roof of a house; others convex and twisted like a buck-handled knife; and others magnificently efflorescent, like a full-blown cauliflower. But as to the persons that were attached to these noses, fancy any distortion, protuberance, and fungous embellishment that can be produced in the human form by high and gross feeding, by the bloating operations of malt liquors, and by the rheumy influence of a damp, foggy, vaporous climate. One old fellow was an exception to this, for instead of acquiring that expansion and sponginess to which old people are prone in this country, from the long course of internal and external soakage they experience, he had grown dry and stiff in the process of years. The skin of his face had so shrunk away that he could not close eyes or mouth—the latter, therefore, stood on a perpetual ghastly grin, and the former on an incessant stare. He had but one serviceable joint in his body, which was at the bottom of the backbone, and that creaked and grated whenever he bent. He could not raise his feet from the ground, but skated along the drawing-room carpet whenever he wished to ring the bell. The only sign of moisture in his whole body was a pellucid drop that I occasionally noticed on the end of along, dry nose. He used generally to shuffle about in company with a little fellow that was fat on one side and lean on the other. That is to say, he was warped on one side as if he had been scorched before the fire; he had a wry neck, which made his head lean on one shoulder; his hair was smugly powdered, and he had a round, smirking, smiling, apple face, with a bloom on it like that of a frostbitten leaf in autumn. We had an old, fat general by the name of Trotter, who had, I suspect, been promoted to his high rank to get him out of the way of more able and active officers, being an instance that a man may occasionally rise in the world through absolute lack of merit. I could not help watching the movements of this redoubtable old Hero, who, I'll warrant, has been the champion and safeguard of half the garrison towns in England, and fancying to myself how Bonaparte would have delighted in having such toast-and-butter generals to deal with. This old cad is doubtless a sample of those generals that flourished in the old military school, when armies would manoeuvre and watch each other for months; now and then have a desperate skirmish, and, after marching and countermarching about the 'Low Countries' through a glorious campaign, retire on the first pinch of cold weather into snug winter quarters in some fat Flemish town, and eat and drink and fiddle through the winter. Boney must have sadly disconcerted the comfortable system of these old warriors by the harrowing, restless, cut-and-slash mode of warfare that he introduced. He has put an end to all the old carte and tierce system in which the cavaliers of the old school fought so decorously, as it were with a small sword in one hand and a chapeau bras in the other. During his career there has been a sad laying on the shelf of old generals who could not keep up with the hurry, the fierceness and dashing of the new system; and among the number I presume has been my worthy house-mate, old Trotter. The old gentleman, in spite of his warlike title, had a most pacific appearance. He was large and fat, with a broad, hazy, muffin face, a sleepy eye, and a full double chin. He had a deep ravine from each corner of his mouth, not occasioned by any irascible contraction of the muscles, but apparently the deep-worn channels of two rivulets of gravy that oozed out from the huge mouthfuls that he masticated. But I forbear to dwell on the odd beings that were congregated together in one hotel. I have been thus prolix about the old general because you desired me in one of your letters to give you ample details whenever I happened to be in company with the 'great and glorious,' and old Trotter is more deserving of the epithet than any of the personages I have lately encountered."

It was at the same resort of fashion and disease that Irving observed a phenomenon upon which Brevoort had commented as beginning to be noticeable in America.

"Your account [he writes of the brevity of the old lady's nether garments] distresses me.... I cannot help observing that this fashion of short skirts must have been invented by the French ladies as a complete trick upon John Bull's 'woman-folk.' It was introduced just at the time the English flocked in such crowds to Paris. The French women, you know, are remarkable for pretty feet and ankles, and can display them in perfect security. The English are remarkable for the contrary. Seeing the proneness of the English women to follow French fashions, they therefore led them into this disastrous one, and sent them home with their petticoats up to their knees, exhibiting such a variety of sturdy little legs as would have afforded Hogarth an ample choice to match one of his assemblages of queer heads. It is really a great source of curiosity and amusement on the promenade of a watering-place to observe the little sturdy English women, trudging about in their stout leather shoes, and to study the various 'understandings' betrayed to view by this mischievous fashion."

The years passed rather wearily in England. Peter continued to be an invalid, and Washington himself, never robust, felt the pressure more and more of the irksome and unprosperous business affairs. Of his own want of health, however, he never complains; he maintains a patient spirit in the ill turns of fortune, and his impatience in the business complications is that of a man hindered from his proper career. The times were depressing.

"In America [he writes to Brevoort] you have financial difficulties, the embarrassments of trade, the distress of merchants, but here you have what is far worse, the distress of the poor—not merely mental sufferings, but the absolute miseries of nature: hunger, nakedness, wretchedness of all kinds that the laboring people in this country are liable to. In the best of times they do but subsist, but in adverse times they starve. How the country is to extricate itself from its present embarrassment, how it is to escape from the poverty that seems to be overwhelming it, and how the government is to quiet the multitudes that are already turbulent and clamorous, and are yet but in the beginning of their real miseries, I cannot conceive."

The embarrassments of the agricultural and laboring classes and of the government were as serious in 1816 as they have again become in 1881.

During 1817 Irving was mostly in the depths of gloom, a prey to the monotony of life and torpidity of intellect. Rays of sunlight pierce the clouds occasionally. The Van Wart household at Birmingham was a frequent refuge for him, and we have pretty pictures of the domestic life there; glimpses of Old Parr, whose reputation as a gourmand was only second to his fame as a Grecian, and of that delightful genius, the Rev. Rann Kennedy, who might have been famous if he had ever committed to paper the long poems that he carried about in his head, and the engaging sight of Irving playing the flute for the little Van Warts to dance. During the holidays Irving paid another visit to the haunts of Isaac Walton, and his description of the adventures and mishaps of a pleasure party on the banks of the Dove suggest that the incorrigible bachelor was still sensitive to the allurements of life; and liable to wander over the "dead-line" of matrimonial danger. He confesses that he was all day in Elysium. "When we had descended from the last precipice," he says, "and come to where the Dove flowed musically through a verdant meadow—then—fancy me, oh, thou 'sweetest of poets,' wandering by the course of this romantic stream—a lovely girl hanging on my arm, pointing out the beauties of the surrounding scenery, and repeating in the most dulcet voice tracts of heaven-born poetry. If a strawberry smothered in cream has any consciousness of its delicious situation, it must feel as I felt at that moment." Indeed, the letters of this doleful year are enlivened by so many references to the graces and attractions of lovely women, seen and remembered, that insensibility cannot be attributed to the author of the "Sketch-Book."

The death of Irving's mother in the spring of 1817 determined him to remain another year abroad. Business did not improve. His brother-in-law Van Wart called a meeting of his creditors, the Irving brothers floundered on into greater depths of embarrassment, and Washington, who could not think of returning home to face poverty in New York, began to revolve a plan that would give him a scanty but sufficient support. The idea of the "Sketch-Book" was in his mind. He had as yet made few literary acquaintances in England. It is an illustration of the warping effect of friendship upon the critical faculty that his opinion of Moore at this time was totally changed by subsequent intimacy. At a later date the two authors became warm friends and mutual admirers of each other's productions. In June, 1817, "Lalla Rookh" was just from the press, and Irving writes to Brevoort: "Moore's new poem is just out. I have not sent it to you, for it is dear and worthless. It is written in the most effeminate taste, and fit only to delight boarding-school girls and lads of nineteen just in their first loves. Moore should have kept to songs and epigrammatic conceits. His stream of intellect is too small to bear expansion—it spreads into mere surface." Too much cream for the strawberry!

Notwithstanding business harassments in the summer and fall of 1817 he found time for some wandering about the island; he was occasionally in London, dining at Murray's, where he made the acquaintance of the elder D'Israeli and other men of letters (one of his notes of a dinner at Murray's is this: "Lord Byron told Murray that he was much happier after breaking with Lady Byron—he hated this still, quiet life"); he was publishing a new edition of the "Knickerbocker," illustrated by Leslie and Allston; and we find him at home in the friendly and brilliant society of Edinburgh; both the magazine publishers, Constable and Blackwood, were very civil to him, and Mr. Jeffrey (Mrs. Renwick was his sister) was very attentive; and he passed some days with Walter Scott, whose home life he so agreeably describes in his sketch of "Abbotsford." He looked back longingly to the happy hours there (he writes to his brother): "Scott reading, occasionally, from 'Prince Arthur;' telling border stories or characteristic anecdotes; Sophy Scott singing with charming 'naivete' a little border song; the rest of the family disposed in listening groups, while greyhounds, spaniels, and cats bask in unbounded indulgence before the fire. Everything about Scott is perfect character and picture."

In the beginning of 1818 the business affairs of the brothers became so irretrievably involved that Peter and Washington went through the humiliating experience of taking the bankrupt act. Washington's connection with the concern was little more than nominal, and he felt small anxiety for himself, and was eager to escape from an occupation which had taken all the elasticity out of his mind. But on account of his brothers, in this dismal wreck of a family connection, his soul was steeped in bitterness. Pending the proceedings of the commissioners, he shut himself up day and night to the study of German, and while waiting for the examination used to walk up and down the room, conning over the German verbs.

In August he went up to London and cast himself irrevocably upon the fortune of his pen. He had accumulated some materials, and upon these he set to work. Efforts were made at home to procure for him the position of Secretary of Legation in London, which drew from him the remark, when they came to his knowledge, that he did not like to have his name hackneyed about among the office-seekers in Washington. Subsequently his brother William wrote him that Commodore Decatur was keeping open for him the office of Chief Clerk in the Navy Department. To the mortification and chagrin of his brothers, Washington declined the position. He was resolved to enter upon no duties that would interfere with his literary pursuits.

This resolution, which exhibited a modest confidence in his own powers, and the energy with which he

threw himself into his career, showed the fiber of the man. Suddenly, by the reverse of fortune, he who had been regarded as merely the ornamental genius of the family became its stay and support. If he had accepted the aid of his brothers, during the experimental period of his life, in the loving spirit of confidence in which it was given, he was not less ready to reverse the relations when the time came; the delicacy with which his assistance was rendered, the scrupulous care taken to convey the feeling that his brothers were doing him a continued favor in sharing his good fortune, and their own unjealous acceptance of what they would as freely have given if circumstances had been different, form one of the pleasantest instances of brotherly concord and self-abnegation. I know nothing more admirable than the lifelong relations of this talented and sincere family.

Before the "Sketch-Book" was launched, and while Irving was casting about for the means of livelihood, Walter Scott urged him to take the editorship of an anti-Jacobin periodical in Edinburgh. This he declined because he had no taste for politics, and because he was averse to stated, routine literary work. Subsequently Mr. Murray offered him a salary of a thousand guineas to edit a periodical to be published by himself. This was declined, as also was another offer to contribute to the "London Quarterly" with the liberal pay of one hundred guineas an article. For the "Quarterly" he would not write, because, he says, "it has always been so hostile to my country, I cannot draw a pen in its service." This is worthy of note in view of a charge made afterwards, when he was attacked for his English sympathies, that he was a frequent contributor to this anti-American review. His sole contributions to it were a gratuitous review of the book of an American author, and an explanatory article, written at the desire of his publisher, on the "Conquest of Granada." It is not necessary to dwell upon the small scandal about Irving's un-American feeling. If there was ever a man who loved his country and was proud of it; whose broad, deep, and strong patriotism did not need the saliency of ignorant partisanship, it was Washington Irving. He was, like his namesake, an American, and with the same pure loyalty and unpartisan candor.

The first number of the "Sketch-Book" was published in America in May, 1819. Irving was then thirty-six years old. The series was not completed till September, 1820. The first installment was carried mainly by two papers, "The Wife" and "Rip Van Winkle;" the one full of tender pathos that touched all hearts, because it was recognized as a genuine expression of the author's nature; and the other a happy effort of imaginative humor, one of those strokes of genius that re-create the world and clothe it with the unfading hues of romance; the theme was an old-world echo, transformed by genius into a primal story that will endure as long as the Hudson flows through its mountains to the sea. A great artist can paint a great picture on a small canvas.

The "Sketch-Book" created a sensation in America, and the echo of it was not long in reaching England. The general chorus of approval and the rapid sale surprised Irving, and sent his spirits up, but success had the effect on him that it always has on a fine nature. He writes to Leslie: "Now you suppose I am all on the alert, and full of spirit and excitement. No such thing. I am just as good for nothing as ever I was; and, indeed, have been flurried and put out of my way by these puffings. I feel something as I suppose you did when your picture met with success,—anxious to do something better, and at a loss what to do."

It was with much misgiving that Irving made this venture. "I feel great diffidence," he writes Brevoort, March 3, 1819, "about this reappearance in literature. I am conscious of my imperfections, and my mind has been for a long time past so pressed upon and agitated by various cares and anxieties, that I fear it has lost much of its cheerfulness and some of its activity. I have attempted no lofty theme, nor sought to look wise and learned, which appears to be very much the fashion among our American writers at present. I have preferred addressing myself to the feelings and fancy of the reader more than to his judgment. My writings may appear, therefore, light and trifling in our country of philosophers and politicians. But if they possess merit in the class of literature to which they belong, it is all to which I aspire in the work. I seek only to blow a flute accompaniment in the national concert, and leave others to play the fiddle and Frenchhorn." This diffidence was not assumed. All through his career, a breath of criticism ever so slight acted temporarily like a boar-frost upon his productive power. He always saw reasons to take sides with his critic. Speaking of "vanity" in a letter of March, 1820, when Scott and Lockhart and all the Reviews were in a full chorus of acclaim, he says: "I wish I did possess more of it, but it seems my curse at present to have anything but confidence in myself or pleasure in anything I have written."

In a similar strain he had written, in September, 1819, on the news of the cordial reception of the "Sketch-Book" in America:

"The manner in which the work has been received, and the eulogiums that have been passed upon it in the American papers and periodical works, have completely overwhelmed me. They go far, far beyond my most sanguine expectations, and indeed are expressed with such peculiar warmth and kindness as to affect me in the tenderest manner. The receipt of your letter, and the reading of some of the criticisms this morning, have rendered me nervous for the whole day. I feel almost appalled by such success, and fearful that it cannot be real, or that it is not fully merited, or that I shall not act up to the expectations that may be formed. We are whimsically constituted beings. I had got out of conceit of all that I had written, and considered it very questionable stuff; and now that it is so extravagantly be praised, I begin to feel afraid that I shall not do as well again. However, we shall see as we get on. As yet I am extremely irregular and precarious in my fits of composition. The least thing puts me out of the vein, and even applause flurries me and prevents my writing, though of course it will ultimately be a stimulus.... "I have been somewhat touched by the manner in which my writings have been noticed in the 'Evening Post.' I had considered Coleman as cherishing an ill-will toward me, and, to tell the truth, have not always been the most courteous in my opinions concerning him. It is a painful thing either to dislike others or to fancy they dislike us, and I have felt both pleasure and self-reproach at finding myself so mistaken with respect to Mr. Coleman. I like to out with a good feeling as soon as it rises, and so I have dropt Coleman a line on the subject. "I hope you will not attribute all this sensibility to the kind reception I have met to an author's vanity. I am

sure it proceeds from very different sources. Vanity could not bring the tears into my eyes as they have been brought by the kindness of my countrymen. I have felt cast down, blighted, and broken-spirited, and these sudden rays of sunshine agitate me more than they revive me. I hope—I hope I may yet do something more worthy of the appreciation lavished on me.”

Irving had not contemplated publishing in England, but the papers began to be reprinted, and he was obliged to protect himself. He offered the sketches to Murray, the princely publisher, who afterwards dealt so liberally with him, but the venture was declined in a civil note, written in that charming phraseology with which authors are familiar, but which they would in vain seek to imitate. Irving afterwards greatly prized this letter. He undertook the risks of the publication himself, and the book sold well, although “written by an author the public knew nothing of, and published by a bookseller who was going to ruin.” In a few months Murray, who was thereafter proud to be Irving's publisher, undertook the publication of the two volumes of the “Sketch-Book,” and also of the “Knickerbocker” history, which Mr. Lockhart had just been warmly praising in “Blackwood's.” Indeed, he bought the copyright of the “Sketch-Book” for two hundred pounds. The time for the publisher's complaisance had arrived sooner even than Scott predicted in one of his kindly letters to Irving, “when

*“Your name is up and may go
From Toledo to Madrid.”*

Irving passed five years in England. Once recognized by the literary world, whatever was best in the society of letters and of fashion was open to him. He was a welcome guest in the best London houses, where he met the foremost literary personages of the time, and established most cordial relations with many of them; not to speak of statesmen, soldiers, and men and women of fashion, there were the elder D'Israeli, Southey, Campbell, Hallam, Gifford, Milman, Foscolo, Rogers, Scott, and Belzoni fresh from his Egyptian explorations. In Irving's letters this old society passes in review: Murray's drawing-rooms; the amusing blue-stocking coteries of fashion of which Lady Caroline Lamb was a promoter; the Countess of Besborough's, at whose house the Duke could be seen; the Wimbledon country seat of Lord and Lady Spence; Belzoni, a giant of six feet five, the center of a group of eager auditors of the Egyptian marvels; Hallam, affable and unpretending, and a copious talker; Gifford, a small, shriveled, deformed man of sixty, with something of a humped back, eyes that diverge, and a large mouth, reclining on a sofa, propped up by cushions, with none of the petulance that you would expect from his Review, but a mild, simple, unassuming man,—he it is who prunes the contributions and takes the sting out of them (one would like to have seen them before the sting was taken out); and Scott, the right honest-hearted, entering into the passing scene with the hearty enjoyment of a child, to whom literature seems a sport rather than a labor or ambition, an author void of all the petulance, egotism, and peculiarities of the craft. We have Moore's authority for saying that the literary dinner described in the “Tales of a Traveller,” whimsical as it seems and pervaded by the conventional notion of the relations of publishers and authors, had a personal foundation. Irving's satire of both has always the old-time Grub Street flavor, or at least the reminiscent tone, which is, by the way, quite characteristic of nearly everything that he wrote about England. He was always a little in the past tense. Buckthorne's advice to his friend is, never to be eloquent to an author except in praise of his own works, or, what is nearly as acceptable, in disparagement of the work of his contemporaries. “If ever he speaks favorably of the productions of a particular friend, dissent boldly from him; pronounce his friend to be a blockhead; never fear his being vexed. Much as people speak of the irritability of authors, I never found one to take offense at such contradictions. No, no, sir, authors are particularly candid in admitting the faults of their friends.” At the dinner Buckthorne explains the geographical boundaries in the land of literature: you may judge tolerably well of an author's popularity by the wine his bookseller gives him. “An author crosses the port line about the third edition, and gets into claret; and when he has reached the sixth or seventh, he may revel in champagne and burgundy.” The two ends of the table were occupied by the two partners, one of whom laughed at the clever things said by the poet, while the other maintained his sedateness and kept on carving. “His gravity was explained to us by my friend Buckthorne. He informed me that the concerns of the house were admirably distributed among the partners. Thus, for instance, said he, the grave gentleman is the carving partner, who attends to the joints; and the other is the laughing partner, who attends to the jokes.” If any of the jokes from the lower end of the table reached the upper end, they seldom produced much effect. “Even the laughing partner did not think it necessary to honor them with a smile; which my neighbor Buckthorne accounted for by informing me that there was a certain degree of popularity to be obtained before a book seller could afford to laugh at an author's jokes.”

In August, 1820, we find Irving in Paris, where his reputation secured him a hearty welcome: he was often at the Cannings' and at Lord Holland's; Talma, then the king of the stage, became his friend, and there he made the acquaintance of Thomas Moore, which ripened into a familiar and lasting friendship. The two men were drawn to each other; Irving greatly admired the “noble hearted, manly, spirited little fellow, with a mind as generous as his fancy is brilliant.” Talma was playing “Hamlet” to overflowing houses, which hung on his actions with breathless attention, or broke into ungovernable applause; ladies were carried fainting from the boxes. The actor is described as short in stature, rather inclined to fat, with a large face and a thick neck; his eyes are bluish, and have a peculiar cast in them at times. He said to Irving that he thought the French character much changed—graver; the day of the classic drama, mere declamation and fine language, had gone by; the Revolution had taught them to demand real life, incident, passion, character. Irving's life in Paris was gay enough, and seriously interfered with his literary projects. He had the fortunes of his brother Peter on his mind also, and invested his earnings, then and for some years after, in enterprises for his benefit that ended in disappointment.

The “Sketch-Book” was making a great fame for him in England. Jeffrey, in the “Edinburgh Review,” paid it a most flattering tribute, and even the savage “Quarterly” praised it. A rumor attributed it to Scott, who was always masquerading; at least, it was said, he might have revised it, and should have the credit of its exquisite style. This led to a sprightly correspondence between Lady Littleton, the daughter of Earl Spencer,

one of the most accomplished and lovely women of England, and Benjamin Rush, Minister to the Court of St. James, in the course of which Mr. Rush suggested the propriety of giving out under his official seal that Irving was the author of "Waverley." "Geoffrey Crayon is the most fashionable fellow of the day," wrote the painter Leslie. Lord Byron, in a letter to Murray, underscored his admiration of the author, and subsequently said to an American, "His Crayon,—I know it by heart; at least, there is not a passage that I cannot refer to immediately." And afterwards he wrote to Moore, "His writings are my delight." There seemed to be, as some one wrote, "a kind of conspiracy to hoist him over the heads of his contemporaries." Perhaps the most satisfactory evidence of his popularity was his publisher's enthusiasm. The publisher is an infallible contemporary barometer.

It is worthy of note that an American should have captivated public attention at the moment when Scott and Byron were the idols of the English-reading world.

In the following year Irving was again in England, visiting his sister in Birmingham, and tasting moderately the delights of London. He was, indeed, something of an invalid. An eruptive malady,—the revenge of nature, perhaps, for defeat in her earlier attack on his lungs,—appearing in his ankles, incapacitated him for walking, tormented him at intervals so that literary composition was impossible, sent him on pilgrimages to curative springs, and on journeys undertaken for distraction and amusement, in which all work except that of seeing and absorbing material had to be postponed. He was subject to this recurring invalidism all his life, and we must regard a good part of the work he did as a pure triumph of determination over physical discouragement. This year the fruits of his interrupted labor appeared in "Bracebridge Hall," a volume that was well received, but did not add much to his reputation, though it contained "Dolph Heyliger," one of his most characteristic Dutch stories, and the "Stout Gentleman," one of his daintiest and most artistic bits of restrained humor.—[I was once' says his biographer reading aloud in his presence a very flattering review of his works, which, had been sent him by the critic in 1848, and smiled as I came to this sentence: 'His most comical pieces have always a serious end in view.'—'You laugh,' said he, but it is true. I have kept that to myself hitherto, but that man has found me out. He has detected the moral of the Stout Gentleman with that air of whimsical significance so natural to him.']

Irving sought relief from his malady by an extended tour in Germany. He sojourned some time in Dresden, whither his reputation had preceded him, and where he was cordially and familiarly received, not only by the foreign residents, but at the prim and antiquated little court of King Frederick Augustus and Queen Amalia. Of Irving at this time Mrs. Emily Fuller (nee Foster), whose relations with him have been referred to, wrote in 1860:

"He was thoroughly a gentleman, not merely in external manners and look, but to the innermost fibres and core of his heart; sweet-tempered, gentle, fastidious, sensitive, and gifted with the warmest affections; the most delightful and invariably interesting companion; gay and full of humor, even in spite of occasional fits of melancholy, which he was, however, seldom subject to when with those he liked; a gift of conversation that flowed like a full river in sunshine,—bright, easy, and abundant."

Those were pleasant days at Dresden, filled up with the society of bright and warm-hearted people, varied by royal boar hunts, stiff ceremonies at the little court, tableaux, and private theatricals, yet tinged with a certain melancholy, partly constitutional, that appears in most of his letters. His mind was too unsettled for much composition. He had little self-confidence, and was easily put out by a breath of adverse criticism. At intervals he would come to the Fosters to read a manuscript of his own.

"On these occasions strict orders were given that no visitor should be admitted till the last word had been read, and the whole praised or criticised, as the case may be. Of criticism, however, we were very spare, as a slight word would put him out of conceit of a whole work. One of the best things he has published was thrown aside, unfinished, for years, because the friend to whom he read it, happening, unfortunately, not to be well, and sleepy, did not seem to take the interest in it he expected. Too easily discouraged, it was not till the latter part of his career that he ever appreciated himself as an author. One condemning whisper sounded louder in his ear than the plaudits of thousands."

This from Miss Emily Foster, who elsewhere notes his kindness in observing life:

"Some persons, in looking upon life, view it as they would view a picture, with a stern and criticising eye. He also looks upon life as a picture, but to catch its beauties, its lights,—not its defects and shadows. On the former he loves to dwell. He has a wonderful knack at shutting his eyes to the sinister side of anything. Never beat a more kindly heart than his; alive to the sorrows, but not to the faults, of his friends, but doubly alive to their virtues and goodness. Indeed, people seemed to grow more good with one so unselfish and so gentle."

In London, some years later:

"He was still the same; time changed him very little. His conversation was as interesting as ever [he was always an excellent relater]; his dark gray eyes still full of varying feeling; his smile 'half playful, half melancholy, but ever kind. All that was mean, or envious, or harsh, he seemed to turn from so completely that, when with him, it seemed that such things were not. All gentle and tender affections, Nature in her sweetest or grandest moods, pervaded his whole imagination, and left no place for low or evil thoughts; and when in good spirits, his humor, his droll descriptions, and his fun would make the gravest or the saddest laugh."

As to Irving's "state of mind" in Dresden, it is pertinent to quote a passage from what we gather to be a journal kept by Miss Flora Foster:

"He has written. He has confessed to my mother, as to a true and dear friend, his love for E—, and his conviction of its utter hopelessness. He feels himself unable to combat it. He thinks he must try, by absence, to bring more peace to his mind. Yet he cannot bear to give up our friendship,—an intercourse become so dear to him, and so necessary to his daily happiness. Poor Irving!"

It is well for our peace of mind that we do not know what is going down concerning us in "journals." On his way to the Herrnhuthers, Mr. Irving wrote to Mrs. Foster:

"When I consider how I have trifled with my time, suffered painful vicissitudes of feeling, which for a time damaged both mind and body,—when I consider all this, I reproach myself that I did not listen to the first impulse of my mind, and abandon Dresden long since. And yet I think of returning! Why should I come back to Dresden? The very inclination that dooms me thither should furnish reasons for my staying away."

In this mood, the Herrnhuthers, in their right-angled, whitewashed world, were little attractive.

"If the Herrnhuthers were right in their notions, the world would have been laid out in squares and angles and right lines, and everything would have been white and black and snuff-color, as they have been clipped by these merciless retrenchers of beauty and enjoyment. And then their dormitories! Think of between one and two hundred of these simple gentlemen cooped up at night in one great chamber! What a concert of barrel-organs in this great resounding saloon! And then their plan of marriage! The very birds of the air choose their mates from preference and inclination; but this detestable system of lot! The sentiment of love may be, and is, in a great measure, a fostered growth of poetry and romance, and balder-dashed with false sentiment; but with all its vitiations, it is the beauty and the charm, the flavor and the fragrance, of all intercourse between man and woman; it is the rosy cloud in the morning of life; and if it does too often resolve itself into the shower, yet, to my mind, it only makes our nature more fruitful in what is excellent and amiable."

Better suited him Prague, which is certainly a part of the "naughty world" that Irving preferred:

"Old Prague still keeps up its warrior look, and swaggers about with its rusty corselet and helm, though both sadly battered. There seems to me to be an air of style and fashion about the first people of Prague, and a good deal of beauty in the fashionable circle. This, perhaps, is owing to my contemplating it from a distance, and my imagination lending it tints occasionally. Both actors and audience, contemplated from the pit of a theatre, look better than when seen in the boxes and behind the scenes. I like to contemplate society in this way occasionally, and to dress it up by the help of fancy, to my own taste. When I get in the midst of it, it is too apt to lose its charm, and then there is the trouble and ennui of being obliged to take an active part in the farce; but to be a mere spectator is amusing. I am glad, therefore, that I brought no letters to Prague. I shall leave it with a favorable idea of its society and manners, from knowing nothing accurate of either; and with a firm belief that every pretty woman I have seen is an angel, as I am apt to think every pretty woman, until I have found her out."

In July, 1823, Irving returned to Paris, to the society of the Moores and the fascinations of the gay town, and to fitful literary work. Our author wrote with great facility and rapidity when the inspiration was on him, and produced an astonishing amount of manuscript in a short period; but he often waited and fretted through barren weeks and months for the movement of his fitful genius. His mind was teeming constantly with new projects, and nothing could exceed his industry when once he had taken a work in hand; but he never acquired the exact methodical habits which enable some literary men to calculate their power and quantity of production as accurately as that of a cotton mill.

The political changes in France during the period of Irving's long sojourn in Paris do not seem to have taken much of his attention. In a letter dated October 5, 1826, he says: "We have had much bustle in Paris of late, between the death of one king and the succession of another. I have become a little callous to public sights, but have, notwithstanding, been to see the funeral of the late king, and the entrance into Paris of the present one. Charles X. begins his reign in a very conciliating manner, and is really popular. The Bourbons have gained great accession of power within a few years."

The succession of Charles X. was also observed by another foreigner, who was making agreeable personal notes at that time in Paris, but who is not referred to by Irving, who, for some unexplained reason, failed to meet the genial Scotsman at breakfast. Perhaps it is to his failure to do so that he owes the semi-respectful reference to himself in Carlyle's "Reminiscences." Lacking the stimulus to his vocabulary of personal acquaintance, Carlyle simply wrote: "Washington Irving was said to be in Paris, a kind of lion at that time, whose books I somewhat esteemed. One day the Emerson-Tennant people bragged that they had engaged him to breakfast with us at a certain cafe next morning. We all attended duly, Strackey among the rest, but no Washington came. 'Could n't rightly come,' said Malcolm to me in a judicious aside, as we cheerfully breakfasted without him. I never saw Washington at all, but still have a mild esteem of the good man." This ought to be accepted as evidence of Carlyle's disinclination to say ill-natured things of those he did not know.

The "Tales of a Traveller" appeared in 1826. In the author's opinion, with which the best critics agreed, it

contained some of his best writing. He himself said in a letter to Brevoort, "There was more of an artistic touch about it, though this is not a thing to be appreciated by the many." It was rapidly written. The movement has a delightful spontaneity, and it is wanting in none of the charms of his style, unless, perhaps, the style is over-refined; but it was not a novelty, and the public began to criticise and demand a new note. This may have been one reason why he turned to a fresh field and to graver themes. For a time he busied himself on some American essays of a semi-political nature, which were never finished, and he seriously contemplated a Life of Washington; but all these projects were thrown aside for one that kindled his imagination,—the Life of Columbus; and in February, 1826, he was domiciled at Madrid, and settled down to a long period of unremitting and intense labor.

VII. IN SPAIN

Irving's residence in Spain, which was prolonged till September, 1829, was the most fruitful period in his life, and of considerable consequence to literature. It is not easy to overestimate the debt of Americans to the man who first opened to them the fascinating domain of early Spanish history and romance. We can conceive of it by reflecting upon the blank that would exist without "The Alhambra," "The Conquest of Granada," "The Legends of the Conquest of Spain," and I may add the popular loss if we had not "The Lives of Columbus and his Companions." Irving had the creative touch, or at least the magic of the pen, to give a definite, universal, and romantic interest to whatever he described. We cannot deny him that. A few lines about the inn of the Red Horse at Stratford-on-Avon created a new object of pilgrimage right in the presence of the house and tomb of the poet. And how much of the romantic interest of all the English-reading world in the Alhambra is due to him; the name invariably recalls his own, and every visitor there is conscious of his presence. He has again and again been criticised almost out of court, and written down to the rank of the mere idle humorist; but as often as I take up "The Conquest of Granada" or "The Alhambra" I am aware of something that has eluded the critical analysis, and I conclude that if one cannot write for the few, it may be worth while to write for the many.

It was Irving's intention, when he went to Madrid, merely to make a translation of some historical documents which were then appearing, edited by M. Navarrete, from the papers of Bishop Las Casas and the journals of Columbus, entitled "The Voyages of Columbus." But when he found that this publication, although it contained many documents, hitherto unknown, that threw much light on the discovery of the New World, was rather a rich mass of materials for a history than a history itself, and that he had access in Madrid libraries to great collections of Spanish colonial history, he changed his plan, and determined to write a Life of Columbus. His studies for this led him deep into the old chronicles and legends of Spain, and out of these, with his own travel and observation, came those books of mingled fables, sentiment, fact, and humor which are, after all, the most enduring fruits of his residence in Spain.

Notwithstanding his absorption in literary pursuits, Irving was not denied the charm of domestic society, which was all his life his chief delight. The house he most frequented in Madrid was that of Mr. D'Oubril, the Russian Minister. In his charming household were Madame D'Oubril and her niece, Mademoiselle Antoinette Bollviller, and Prince Dolgorouki, a young attache of the legation. His letters to Prince Dolgorouki and to Mademoiselle Antoinette give a most lively and entertaining picture of his residence and travels in Spain. In one of them to the prince, who was temporarily absent from the city, we have glimpses of the happy hours, the happiest of all hours, passed in this refined family circle. Here is one that exhibits the still fresh romance in the heart of forty-four years:

"Last evening, at your house, we had one of the most lovely tableaux I ever beheld. It was the conception of Murillo, represented by Madame A——. Mademoiselle Antoinette arranged the tableau with her usual good taste, and the effect was enchanting. It was more like a vision of something spiritual and celestial than a representation of anything merely mortal; or rather it was woman as in my romantic days I have been apt to imagine her, approaching to the angelic nature. I have frequently admired Madame A——as a mere beautiful woman, when I have seen her dressed up in the fantastic attire of the mode; but here I beheld her elevated into a representative of the divine purity and grace, exceeding even the beau ideal of the painter, for she even surpassed in beauty the picture of Murillo. I felt as if I could have knelt down and worshiped her. Heavens! what power women would have over us, if they knew how to sustain the attractions which nature has bestowed upon them, and which we are so ready to assist by our imaginations! For my part, I am superstitious in my admiration of them, and like to walk in a perpetual delusion, decking them out as divinities. I thank no one to undeceive me, and to prove that they are mere mortals."

And he continues in another strain:

"How full of interest is everything connected with the old times in Spain! I am more and more delighted with the old literature of the country, its chronicles, plays, and romances. It has the wild vigor and luxuriance of the forests of my native country, which, however savage and entangled, are more captivating to my imagination than the finest parks and cultivated woodlands. "As I live in the neighborhood of the library of the Jesuits' College of St. Isidoro, I pass most of my mornings there. You cannot think what a delight I feel in passing through its galleries, filled with old parchment-bound books. It is a perfect wilderness of curiosity to me. What a deep-felt, quiet luxury there

is in delving into the rich ore of these old, neglected volumes! How these hours of uninterrupted intellectual enjoyment, so tranquil and independent, repay one for the ennui and disappointment too often experienced in the intercourse of society! How they serve to bring back the feelings into a harmonious tone, after being jarred and put out of tune by the collisions with the world!"

With the romantic period of Spanish history Irving was in ardent sympathy. The story of the Saracens entranced his mind; his imagination disclosed its oriental quality while he pored over the romance and the ruin of that land of fierce contrasts, of arid wastes beaten by the burning sun, valleys blooming with intoxicating beauty, cities of architectural splendor and picturesque squalor. It is matter of regret that he, who seemed to need the southern sun to ripen his genius, never made a pilgrimage into the East, and gave to the world pictures of the lands that he would have touched with the charm of their own color and the witchery of their own romance.

I will quote again from the letters, for they reveal the man quite as well as the more formal and better known writings. His first sight of the Alhambra is given in a letter to Mademoiselle Bollviller:

"Our journey through La Mancha was cold and uninteresting, excepting when we passed through the scenes of some of the exploits of Don Quixote. We were repaid, however, by a night amidst the scenery of the Sierra Morena, seen by the light of the full moon. I do not know how this scenery would appear in the daytime, but by moonlight it is wonderfully wild and romantic, especially after passing the summit of the Sierra. As the day dawned we entered the stern and savage defiles of the Despena Perros, which equals the wild landscapes of Salvator Rosa. For some time we continued winding along the brinks of precipices, overhung with cragged and fantastic rocks; and after a succession of such rude and sterile scenes we swept down to Carolina, and found ourselves in another climate. The orange-trees, the aloes, and myrtle began to make their appearance; we felt the warm temperature of the sweet South, and began to breathe the balmy air of Andalusia. At Andujar we were delighted with the neatness and cleanliness of the houses, the patios planted with orange and citron trees, and refreshed by fountains. We passed a charming evening on the banks of the famous Guadalquivir, enjoying the mild, balmy air of a southern evening, and rejoicing in the certainty that we were at length in this land of promise.... "But Granada, bellissima Granada! Think what must have been our delight when, after passing the famous bridge of Pinos, the scene of many a bloody encounter between Moor and Christian, and remarkable for having been the place where Columbus was overtaken by the messenger of Isabella, when about to abandon Spain in despair, we turned a promontory of the arid mountains of Elvira, and Granada, with its towers, its Alhambra, and its snowy mountains, burst upon our sight! The evening sun shone gloriously upon its red towers as we approached it, and gave a mellow tone to the rich scenery of the vega. It was like the magic glow which poetry and romance have shed over this enchanting place... "The more I contemplate these places, the more my admiration is awakened for the elegant habits and delicate taste of the Moorish monarchs. The delicately ornamented walls; the aromatic groves, mingling with the freshness and the enlivening sounds of fountains and rivers of water; the retired baths, bespeaking purity and refinement; the balconies and galleries; open to the fresh mountain breeze, and overlooking the loveliest scenery of the valley of the Darro and the magnificent expanse of the vega,—it is impossible to contemplate this delicious abode and not feel an admiration of the genius and the poetical spirit of those who first devised this earthly paradise. There is an intoxication of heart and soul in looking over such scenery at this genial season. All nature is just teeming with new life, and putting on the first delicate verdure and bloom of spring. The almond-trees are in blossom; the fig-trees are beginning to sprout; everything is in the tender bud, the young leaf, or the half-open flower. The beauty of the season is but half developed, so that while there is enough to yield present delight, there is the flattering promise of still further enjoyment. Good heavens! after passing two years amidst the sunburnt wastes of Castile, to be let loose to rove at large over this fragrant and lovely land!"

It was not easy, however, even in the Alhambra, perfectly to call up the past:

"The verity of the present checks and chills the imagination in its picturings of the past. I have been trying to conjure up images of Boabdil passing in regal splendor through these courts; of his beautiful queen; of the Abencerrages, the Gomares, and the other Moorish cavaliers, who once filled these halls with the glitter of arms and the splendor of Oriental luxury; but I am continually awakened from my reveries by the jargon of an Andalusian peasant who is setting out rose-bushes, and the song of a pretty Andalusian girl who shows the Alhambra, and who is chanting a little romance that has probably been handed down from generation to generation since the time of the Moors."

In another letter, written from Seville, he returns to the subject of the Moors. He is describing an excursion to Alcalá de la Guadaira:

"Nothing can be more charming than the windings of the little river among banks hanging with gardens and orchards of all kinds of delicate southern fruits, and tufted with flowers and aromatic plants. The nightingales throng this lovely little valley as

numerously as they do the gardens of Aranjuez. Every bend of the river presents a new landscape, for it is beset by old Moorish mills of the most picturesque forms, each mill having an embattled tower, a memento of the valiant tenure by which those gallant fellows, the Moors, held this earthly paradise, having to be ready at all times for war, and as it were to work with one hand and fight with the other. It is impossible to travel about Andalusia and not imbibe a kind feeling for those Moors. They deserved this beautiful country. They won it bravely; they enjoyed it generously and kindly. No lover ever delighted more to cherish and adorn a mistress, to heighten and illustrate her charms, and to vindicate and defend her against all the world than did the Moors to embellish, enrich, elevate, and defend their beloved Spain. Everywhere I meet traces of their sagacity, courage, urbanity, high poetical feeling, and elegant taste. The noblest institutions in this part of Spain, the best inventions for comfortable and agreeable living, and all those habitudes and customs which throw a peculiar and Oriental charm over the Andalusian mode of living may be traced to the Moors. Whenever I enter these beautiful marble patios, set out with shrubs and flowers, refreshed by fountains, sheltered with awnings from the sun; where the air is cool at noonday, the ear delighted in sultry summer by the sound of falling water; where, in a word, a little paradise is shut up within the walls of home, I think on the poor Moors, the inventors of all these delights. I am at times almost ready to join in sentiment with a worthy friend and countryman of mine whom I met in Malaga, who swears the Moors are the only people that ever deserved the country, and prays to Heaven that they may come over from Africa and conquer it again."

In a following paragraph we get a glimpse of a world, however, that the author loves still more:

"Tell me everything about the children. I suppose the discreet princess will soon consider it an indignity to be ranked among the number. I am told she is growing with might and main, and is determined not to stop until she is a woman outright. I would give all the money in my pocket to be with those dear little women at the round table in the saloon, or on the grass-plot in the garden, to tell them some marvelous tales."

And again:

"Give my love to all my dear little friends of the round table, from the discreet princess down to the little blue-eyed boy. Tell la petite Marie that I still remain true to her, though surrounded by all the beauties of Seville; and that I swear (but this she must keep between ourselves) that there is not a little woman to compare with her in all Andalusia."

The publication of "The Life of Columbus," which had been delayed by Irving's anxiety to secure historical accuracy in every detail, did not take place till February, 1828. For the English copyright Mr. Murray paid him L 3150. He wrote an abridgment of it, which he presented to his generous publisher, and which was a very profitable book (the first edition of ten thousand copies sold immediately). This was followed by the "Companions," and by "The Chronicle of the Conquest of Granada," for which he received two thousand guineas. "The Alhambra" was not published till just before Irving's return to America, in 1832, and was brought out by Mr. Bentley, who bought it for one thousand guineas.

"The Conquest of Granada," which I am told Irving in his latter years regarded as the best of all his works, was declared by Coleridge "a chef-d'oeuvre of its kind." I think it bears rereading as well as any of the Spanish books. Of the reception of the "Columbus" the author was very doubtful. Before it was finished he wrote:

"I have lost confidence in the favorable disposition of my countrymen, and look forward to cold scrutiny and stern criticism, and this is a line of writing in which I have not hitherto ascertained my own powers. Could I afford it, I should like to write, and to lay my writings aside when finished. There is an independent delight in study and in the creative exercise of the pen; we live in a world of dreams, but publication lets in the noisy rabble of the world, and there is an end of our dreaming."

In a letter to Brevoort, February 23, 1828, he fears that he can never regain:

"that delightful confidence which I once enjoyed of not the good opinion, but the good will, of my countrymen. To me it is always ten times more gratifying to be liked than to be admired; and I confess to you, though I am a little too proud to confess it to the world, the idea that the kindness of my countrymen toward me was withering caused me for a long time the most weary depression of spirits, and disheartened me from making any literary exertions."

It has been a popular notion that Irving's career was uniformly one of ease. In this same letter he exclaims: "With all my exertions, I seem always to keep about up to my chin in troubled water, while the world, I suppose, thinks I am sailing smoothly, with wind and tide in my favor."

In a subsequent letter to Brevoort, dated at Seville, December 26, 1828, occurs almost the only piece of impatience and sarcasm that this long correspondence affords. "Columbus" had succeeded beyond his expectation, and its popularity was so great that some enterprising American had projected an abridgment, which it seems would not be protected by the copyright of the original. Irving writes:

"I have just sent to my brother an abridgment of 'Columbus' to be published

immediately, as I find some paltry fellow is pirating an abridgment. Thus every line of life has its depredation. 'There be land rats and water rats, land pirates and water pirates,—I mean thieves,' as old Shylock says. I feel vexed at this shabby attempt to purloin this work from me, it having really cost me more toil and trouble than all my other productions, and being one that I trusted would keep me current with my countrymen; but we are making rapid advances in literature in America, and have already attained many of the literary vices and diseases of the old countries of Europe. We swarm with reviewers, though we have scarce original works sufficient for them to alight and prey upon, and we closely imitate all the worst tricks of the trade and of the craft in England. Our literature, before long, will be like some of those premature and aspiring whipsters, who become old men before they are young ones, and fancy they prove their manhood by their profligacy and their diseases."

But the work had an immediate, continued, and deserved success. It was critically contrasted with Robertson's account of Columbus, and it is open to the charge of too much rhetorical color here and there, and it is at times too diffuse; but its substantial accuracy is not questioned, and the glow of the narrative springs legitimately from the romance of the theme. Irving understood, what our later historians have fully appreciated, the advantage of vivid individual portraiture in historical narrative. His conception of the character and mission of Columbus is largely outlined, but firmly and most carefully executed, and is one of the noblest in literature. I cannot think it idealized, though it required a poetic sensibility to enter into sympathy with the magnificent dreamer, who was regarded by his own generation as the fool of an idea. A more prosaic treatment would have utterly failed to represent that mind, which existed from boyhood in an ideal world, and, amid frustrated hopes, shattered plans, and ignoble returns for his sacrifices, could always rebuild its glowing projects and conquer obloquy and death itself with immortal anticipations.

Towards the close of his residence in Spain, Irving received unexpectedly the appointment of Secretary of Legation to the Court of St. James, at which Louis McLane was American Minister; and after some hesitation, and upon the urgency of his friends, he accepted it. He was in the thick of literary projects. One of these was the History of the Conquest of Mexico, which he afterwards surrendered to Mr. Prescott, and another was the "Life of Washington," which was to wait many years for fulfillment. His natural diffidence and his reluctance to a routine life made him shrink from the diplomatic appointment; but once engaged in it, and launched again in London society, he was reconciled to the situation. Of honors there was no lack, nor of the adulation of social and literary circles. In April, 1830, the Royal Society of Literature awarded him one of the two annual gold medals placed at the disposal of the society by George IV., to be given to authors of literary works of eminent merit, the other being voted to the historian Hallam; and this distinction was followed by the degree of D. C. L. from the University of Oxford,—a title which the modest author never used.

VIII. RETURN TO AMERICA—SUNNYSIDE— THE MISSION TO MADRID

In 1831 Mr. Irving was thrown, by his diplomatic position, into the thick of the political and social tumult, when the Reform Bill was pending and war was expected in Europe. It is interesting to note that for a time he laid aside his attitude of the dispassionate observer, and caught the general excitement. He writes in March, expecting that the fate of the cabinet will be determined in a week, looking daily for decisive news from Paris, and fearing dismal tidings from Poland. "However," he goes on to say in a vague way, "the great cause of all the world will go on. What a stirring moment it is to live in! I never took such intense interest in newspapers. It seems to me as if life were breaking out anew with me, or that I were entering upon quite a new and almost unknown career of existence, and I rejoice to find sensibilities, which were waning as to many objects of past interest, reviving with all their freshness and vivacity at the scenes and prospects opening around me." He expects the breaking of the thralldom of falsehood woven over the human mind; and, more definitely, hopes that the Reform Bill will prevail. Yet he is oppressed by the gloom hanging over the booksellers' trade, which he thinks will continue until reform and cholera have passed away.

During the last months of his residence in England, the author renewed his impressions of Stratford (the grateful landlady of the Red Horse Inn showed him a poker which was locked up among the treasures of her house, on which she had caused to be engraved "Geoffrey Crayon's Sceptre"); spent some time at Newstead Abbey; and had the sorrowful pleasure in London of seeing Scott once more, and for the last time. The great novelist, in the sad eclipse of his powers, was staying in the city, on his way to Italy, and Mr. Lockhart asked Irving to dine with him. It was but a melancholy repast. "Ah," said Scott, as Irving gave him his arm, after dinner, "the times are changed, my good fellow, since we went over the Eildon Hills together. It is all nonsense to tell a man that his mind is not affected when his body is in this state."

Irving retired from the legation in September, 1831, to return home, the longing to see his native land having become intense; but his arrival in New York was delayed till May, 1832.

If he had any doubts of the sentiments of his countrymen toward him, his reception in New York dissipated them. America greeted her most famous literary man with a spontaneous outburst of love and admiration. The public banquet in New York, that was long remembered for its brilliancy, was followed by the tender of the same tribute in other cities, an honor which his unconquerable shrinking from this kind of publicity compelled him to decline.

The "Dutch Herodotus, Diedrich Knickerbocker," to use the phrase of a toast, having come out of one such encounter with fair credit, did not care to tempt Providence further. The thought of making a dinner-table speech threw him into a sort of whimsical panic,—a noble infirmity, which characterized also Hawthorne and

Thackeray.

The enthusiasm manifested for the homesick author was equaled by his own for the land and the people he supremely loved. Nor was his surprise at the progress made during seventeen years less than his delight in it. His native place had become a city of two hundred thousand inhabitants; the accumulation of wealth and the activity of trade astonished him, and the literary stir was scarcely less unexpected. The steamboat had come to be used, so that he seemed to be transported from place to place by magic; and on a near view the politics of America seemed not less interesting than those of Europe. The nullification battle was set; the currency conflict still raged; it was a time of inflation and land speculation; the West, every day more explored and opened, was the land of promise for capital and energy. Fortunes were made in a day by buying lots in "paper towns." Into some of these speculations Irving put his savings; the investments were as permanent as they were unremunerative.

Irving's first desire, however, on his recovery from the state of astonishment into which these changes plunged him, was to make himself thoroughly acquainted with the entire country and its development. To this end he made an extended tour in the South and West, which passed beyond the bounds of frontier settlement. The fruit of his excursion into the Pawnee country, on the waters of the Arkansas, a region untraversed by white men, except solitary trappers, was "A Tour on the Prairies," a sort of romance of reality, which remains to-day as good a description as we have of hunting adventure on the plains. It led also to the composition of other books on the West, which were more or less mere pieces of book-making for the market.

Our author was far from idle. Indeed, he could not afford to be. Although he had received considerable sums from his books, and perhaps enough for his own simple wants, the responsibility of the support of his two brothers, Peter and Ebenezer, and several nieces, devolved upon him. And, besides, he had a longing to make himself a home, where he could pursue his calling undisturbed, and indulge the sweets of domestic and rural life, which of all things lay nearest his heart. And these two undertakings compelled him to be diligent with his pen to the end of his life. The spot he chose for his "Roost" was a little farm on the bank of the river at Tarrytown, close to his old Sleepy Hollow haunt, one of the loveliest, if not the most picturesque, situations on the Hudson. At first he intended nothing more than a summer retreat, inexpensive and simply furnished. But his experience was that of all who buy, and renovate, and build. The farm had on it a small stone Dutch cottage, built about a century before, and inhabited by one of the Van Tassels. This was enlarged, still preserving the quaint Dutch characteristics; it acquired a tower and a whimsical weather-cock, the delight of the owner ("it was brought from Holland by Gill Davis, the King of Coney Island, who says he got it from a windmill which they were demolishing at the gate of Rotterdam, which windmill has been mentioned in 'Knickerbocker'"), and became one of the most snug and picturesque residences on the river. When the slip of Melrose ivy, which was brought over from Scotland by Mrs. Renwick and given to the author, had grown and well overrun it, the house, in the midst of sheltering groves and secluded walks, was as pretty a retreat as a poet could desire. But the little nook proved to have an insatiable capacity for swallowing up money, as the necessities of the author's establishment increased: there was always something to be done to the grounds; some alterations in the house; a greenhouse, a stable, a gardener's cottage, to be built,—and to the very end the outlay continued. The cottage necessitated economy in other personal expenses, and incessant employment of his pen. But Sunnyside, as the place was named, became the dearest spot on earth to him; it was his residence, from which he tore himself with reluctance, and to which he returned with eager longing; and here, surround by relatives whom he loved, he passed nearly all the remainder of his years, in as happy conditions, I think, as a bachelor ever enjoyed. His intellectual activity was unremitting, he had no lack of friends, there was only now and then a discordant note in the general estimation of his literary work, and he was the object of the most tender care from his nieces. Already, he writes, in October, 1838, "my little cottage is well stocked. I have Ebenezer's five girls, and himself also, whenever he can be spared from town; sister Catherine and her daughter; Mr. Davis occasionally, with casual visits from all the rest of our family connection. The cottage, therefore, is never lonely." I like to dwell in thought upon this happy home, a real haven of rest after many wanderings; a seclusion broken only now and then by enforced absence, like that in Madrid as minister, but enlivened by many welcome guests. Perhaps the most notorious of these was a young Frenchman, a "somewhat quiet guest," who, after several months' imprisonment on board a French man-of-war, was set on shore at Norfolk, and spent a couple of months in New York and its vicinity, in 1837. This visit was vividly recalled by Irving in a letter to his sister, Mrs. Storrow, who was in Paris in 1853, and had just been presented at court:

"Louis Napoleon and Eugenie Montijo, Emperor and Empress of France! one of whom I have had a guest at my cottage on the Hudson; the other, whom, when a child, I have had on my knee at Granada. It seems to cap the climax of the strange dramas of which Paris has been the theatre during my lifetime. I have repeatedly thought that each grand coup de theatre would be the last that would occur in my time; but each has been succeeded by another equally striking; and what will be the next, who can conjecture? "The last time I saw Eugenie Montijo she was one of the reigning belles of Madrid; and she and her giddy circle had swept away my charming young friend, the beautiful and accomplished———, into their career of fashionable dissipation. Now Eugenie is upon a throne, and a voluntary recluse in a convent of one of the most rigorous orders! Poor——! Perhaps, however, her fate may ultimately be the happiest of the two. "The storm" with her 'is o'er, and she's at rest;' but the other is launched upon a returnless shore, on a dangerous sea, infamous for its tremendous shipwrecks. Am I to live to see the catastrophe of her career, and the end of this suddenly conjured-up empire, which seems to 'be of such stuff as dreams are made of'?"

As we have seen, the large sums Irving earned by his pen were not spent in selfish indulgence. His habits and tastes were simple, and little would have sufficed for his individual needs. He cared not much for money, and seemed to want it only to increase the happiness of those who were confided to his care. A man less warm-hearted and more selfish, in his circumstances, would have settled down to a life of more ease and less

responsibility.

To go back to the period of his return to America. He was now past middle life, having returned to New York in his fiftieth year. But he was in the full flow of literary productiveness. I have noted the dates of his achievements, because his development was somewhat tardy compared that of many of his contemporaries; but he had the "staying" qualities. The first crop of his mind was of course the most original; time and experience had toned down his exuberant humor; but the spring of his fancy was as free, his vigor was not abated, and his art was more refined. Some of his best work was yet to be done.

And it is worthy of passing mention, in regard to his later productions, that his admirable sense of literary proportion, which is wanting in many good writers, characterized his work to the end.

High as his position as a man of letters was at this time, the consideration in which he was held was much broader than that,—it was that of one of the first citizens of the Republic. His friends, readers, and admirers were not merely the literary class and the general public, but included nearly all the prominent statesmen of the time. Almost any career in public life would have been open to him if he had lent an ear to their solicitations. But political life was not to his taste, and it would have been fatal to his sensitive spirit. It did not require much self-denial, perhaps, to decline the candidacy for mayor of New York, or the honor of standing for Congress; but he put aside also the distinction of a seat in Mr. Van Buren's cabinet as Secretary of the Navy. His main reason for declining it, aside from a diffidence in his own judgment in public matters, was his dislike of the turmoil of political life in Washington, and his sensitiveness to personal attacks which beset the occupants of high offices. But also he had come to a political divergence with Mr. Van Buren. He liked the man,—he liked almost everybody,—and esteemed him as a friend, but he apprehended trouble from the new direction of the party in power. Irving was almost devoid of party prejudice, and he never seemed to have strongly marked political opinions. Perhaps his nearest confession to a creed is contained in a letter he wrote to a member of the House of Representatives, Gouverneur Kemble, a little time before the offer of a position in the cabinet, in which he said that he did not relish some points of Van Buren's policy, nor believe in the honesty of some of his elbow counselors. I quote a passage from it:

"As far as I know my own mind, I am thoroughly a republican, and attached, from complete conviction, to the institutions of my country; but I am a republican without gall, and have no bitterness in my creed. I have no relish for Puritans, either in religion or politics, who are for pushing principles to an extreme, and for overturning everything that stands in the way of their own zealous career.... Ours is a government of compromise. We have several great and distinct interests bound up together, which, if not separately consulted and severally accommodated, may harass and impair each other.... I always distrust the soundness of political councils that are accompanied by acrimonious and disparaging attacks upon any great class of our fellow-citizens. Such are those urged to the disadvantage of the great trading and financial classes of our country."

During the ten years preceding his mission to Spain, Irving kept fagging away at the pen, doing a good deal of miscellaneous and ephemeral work. Among his other engagements was that of regular contributor to the "Knickerbocker Magazine," for a salary of two thousand dollars. He wrote the editor that he had observed that man, as he advances in life, is subject to a plethora of the mind, occasioned by an accumulation of wisdom upon the brain, and that he becomes fond of telling long stories and doling out advice, to the annoyance of his friends. To avoid becoming the bore of the domestic circle, he proposed to ease off this surcharge of the intellect by inflicting his tediousness on the public through the pages of the periodical. The arrangement brought reputation to the magazine (which was published in the days when the honor of being in print was supposed by the publisher to be ample compensation to the scribe), but little profit to Mr. Irving. During this period he interested himself in an international copyright, as a means of fostering our young literature. He found that a work of merit, written by an American who had not established a commanding name in the market, met very cavalier treatment from our publishers, who frankly said that they need not trouble themselves about native works, when they could pick up every day successful books from the British press, for which they had to pay no copyright. Irving's advocacy of the proposed law was entirely unselfish, for his own market was secure.

His chief works in these ten years were, "A Tour on the Prairies," "Recollections of Abbotsford and Newstead Abbey," "The Legends of the Conquest of Spain," "Astoria" (the heavy part of the work of it was done by his nephew Pierre), "Captain Bonneville," and a number of graceful occasional papers, collected afterwards under the title of "Wolfert's Roost." Two other books may properly be mentioned here, although they did not appear until after his return from his absence of four years and a half at the court of Madrid; these are the "Biography of Goldsmith" and "Mahomet and his Successors." At the age of sixty-six he laid aside the "Life of Washington," on which he was engaged, and rapidly threw off these two books. The "Goldsmith" was enlarged from a sketch he had made twenty-five years before. It is an exquisite, sympathetic piece of work, without pretension or any subtle verbal analysis, but on the whole an excellent interpretation of the character. Author and subject had much in common: Irving had at least a kindly sympathy for the vagabondish inclinations of his predecessor, and with his humorous and cheerful regard of the world; perhaps it is significant of a deeper unity in character that both, at times, fancied they could please an intolerant world by attempting to play the flute. The "Mahomet" is a popular narrative, which throws no new light on the subject; it is pervaded by the author's charm of style and equity of judgment, but it lacks the virility of Gibbon's masterly picture of the Arabian prophet and the Saracenic onset.

We need not dwell longer upon this period. One incident of it, however, cannot be passed in silence—that was the abandonment of his lifelong project of writing the History of the Conquest of Mexico to Mr. William H. Prescott. It had been a scheme of his boyhood; he had made collections of materials for it during his first residence in Spain; and he was actually and absorbedly engaged in the composition of the first chapters, when he was sounded by Mr. Cogswell, of the Astor Library, in behalf of Mr. Prescott. Some conversation showed that Mr. Prescott was contemplating the subject upon which Mr. Irving was engaged, and the latter

instantly authorized Mr. Cogswell to say that he abandoned it. Although our author was somewhat far advanced, and Mr. Prescott had not yet collected his materials, Irving renounced the glorious theme in such a manner that Prescott never suspected the pain and loss it cost him, nor the full extent of his own obligation. Some years afterwards Irving wrote to his nephew that in giving it up he in a manner gave up his bread, as he had no other subject to supply its place: "I was," he wrote, "dismounted from my cheval de bataille, and have never been completely mounted since." But he added that he was not sorry for the warm impulse that induced him to abandon the subject, and that Mr. Prescott's treatment of it had justified his opinion of him. Notwithstanding Prescott's very brilliant work, we cannot but feel some regret that Irving did not write a Conquest of Mexico. His method, as he outlined it, would have been the natural one. Instead of partially satisfying the reader's curiosity in a preliminary essay, in which the Aztec civilization was exposed, Irving would have begun with the entry of the conquerors, and carried his reader step by step onward, letting him share all the excitement and surprise of discovery which the invaders experienced, and learn of the wonders of the country in the manner most likely to impress both the imagination and the memory; and with his artistic sense of the value of the picturesque he would have brought into strong relief the dramatis personae of the story.

In 1842 Irving was tendered the honor of the mission to Madrid. It was an entire surprise to himself and to his friends. He came to look upon this as the "crowning honor of his life," and yet when the news first reached him, he paced up and down his room, excited and astonished, revolving in his mind the separation from home and friends, and was heard murmuring, half to himself and half to his nephew: "It is hard,—very hard; yet I must try to bear it. God tempers the wind to the shorn lamb." His acceptance of the position was doubtless influenced by the intended honor to his profession, by the gratifying manner in which it came to him, by his desire to please his friends, and the belief, which was a delusion, that diplomatic life in Madrid would offer no serious interruption to his "Life of Washington," in which he had just become engaged. The nomination, the suggestion of Daniel Webster, Tyler's Secretary of State, was cordially approved by the President and cabinet, and confirmed almost by acclamation in the Senate. "Ah," said Mr. Clay, who was opposing nearly all the President's appointments, "this is a nomination everybody will concur in!" "If a person of more merit and higher qualification," wrote Mr. Webster in his official notification, "had presented himself, great as is my personal regard for you, I should have yielded it to higher considerations."

No other appointment could have been made so complimentary to Spain, and it remains to this day one of the most honorable to his own country.

In reading Irving's letters written during his third visit abroad, you are conscious that the glamour of life is gone for him, though not his kindness towards the world, and that he is subject to few illusions; the show and pageantry no longer enchant,—they only weary. The novelty was gone, and he was no longer curious to see great sights and great people. He had declined a public dinner in New York, and he put aside the same hospitality offered by Liverpool and by Glasgow. In London he attended the Queen's grand fancy ball, which surpassed anything he had seen in splendor and picturesque effect. "The personage," he writes, "who appeared least to enjoy the scene seemed to me to be the little Queen herself. She was flushed and heated, and evidently fatigued and oppressed with the state she had to keep up and the regal robes in which she was arrayed, and especially by a crown of gold, which weighed heavy on her brow, and to which she was continually raising her hand to move it slightly when it pressed. I hope and trust her real crown sits easier." The bearing of Prince Albert he found prepossessing, and he adds, "He speaks English very well;" as if that were a useful accomplishment for an English Prince Consort. His reception at court and by the ministers and diplomatic corps was very kind, and he greatly enjoyed meeting his old friends, Leslie, Rogers, and Moore. At Paris, in an informal presentation to the royal family, he experienced a very cordial welcome from the King and Queen and Madame Adelaide, each of whom took occasion to say something complimentary about his writings; but he escaped as soon as possible from social engagements. "Amidst all the splendors of London and Paris, I find my imagination refuses to take fire, and my heart still yearns after dear little Sunnyside." Of an anxious friend in Paris, who thought Irving was ruining his prospects by neglecting to leave his card with this or that duchess who had sought his acquaintance, he writes: "He attributes all this to very excessive modesty, not dreaming that the empty intercourse of saloons with people of rank and fashion could be a bore to one who has run the rounds of society for the greater part of half a century, and who likes to consult his own humor and pursuits."

When Irving reached Madrid, the affairs of the kingdom had assumed a powerful dramatic interest, wanting in none of the romantic elements that characterize the whole history of the peninsula. "The future career [he writes of this gallant soldier, Espartero, whose merits and services have placed him at the head of the government, and the future fortunes of these isolated little princesses, the Queen and her sister], have an uncertainty hanging about them worthy of the fifth act in a melodrama." The drama continued, with constant shifting of scene, as long as Irving remained in Spain, and gave to his diplomatic life intense interest, and at times perilous excitement. His letters are full of animated pictures of the changing progress of the play; and although they belong rather to the gossip of history than to literary biography, they cannot be altogether omitted. The duties which the minister had to perform were unusual, delicate, and difficult; but I believe he acquitted himself of them with the skill of a born diplomatist. When he went to Spain before, in 1826, Ferdinand VII. was, by aid of French troops, on the throne, the liberties of the kingdom were crushed, and her most enlightened men were in exile. While he still resided there, in 1829, Ferdinand married, for his fourth wife, Maria Christina, sister of the King of Naples, and niece of the Queen of Louis Philippe. By her he had two daughters, his only children. In order that his own progeny might succeed him, he set aside the Salique law (which had been imposed by France) just before his death, in 1833, and revived the old Spanish law of succession. His eldest daughter, then three years old, was proclaimed Queen by the name of Isabella II, and her mother guardian during her minority, which would end at the age of fourteen. Don Carlos, the king's eldest brother, immediately set up the standard of rebellion, supported by the absolutist aristocracy, the monks, and a great part of the clergy. The liberals rallied to the Queen. The Queen Regent did not, however, act in good faith with the popular party she resisted all salutary reform, would not restore the Constitution of 1812 until compelled to by a popular uprising, and disgraced herself by a scandalous connection with one Munos, one of the royal bodyguards. She enriched this favorite and amassed a vast

fortune for herself, which she sent out of the country. In 1839, when Don Carlos was driven out of the country by the patriot soldier Espartero, she endeavored to gain him over to her side, but failed. Espartero became Regent, and Maria Christina repaired to Paris, where she was received with great distinction by Louis Philippe, and Paris became the focus of all sorts of machinations against the constitutional government of Spain, and of plots for its overthrow. One of these had just been defeated at the time of Irving's arrival. It was a desperate attempt of a band of soldiers of the rebel army to carry off the little Queen and her sister, which was frustrated only by the gallant resistance of the halberdiers in the palace. The little princesses had scarcely recovered from the horror of this night attack when our minister presented his credentials to the Queen through the Regent, thus breaking a diplomatic deadlock, in which he was followed by all the other embassies except the French. I take some passages from the author's description of his first audience at the royal palace:

"We passed through the spacious court, up the noble staircase, and through the long suites of apartments of this splendid edifice, most of them silent and vacant, the casements closed to keep out the heat, so that a twilight reigned throughout the mighty pile, not a little emblematical of the dubious fortunes of its inmates. It seemed more like traversing a convent than a palace. I ought to have mentioned that in ascending the grand staircase we found the portal at the head of it, opening into the royal suite of apartments, still bearing the marks of the midnight attack upon the palace in October last, when an attempt was made to get possession of the persons of the little Queen and her sister, to carry them off.... The marble casements of the doors had been shattered in several places, and the double doors themselves pierced all over with bullet holes, from the musketry that played upon them from the staircase during that eventful night. What must have been the feelings of those poor children, on listening, from their apartment, to the horrid tumult, the outcries of a furious multitude, and the reports of firearms echoing and reverberating through the vaulted halls and spacious courts of this immense edifice, and dubious whether their own lives were not the object of the assault!

"After passing through various chambers of the palace, now silent and sombre, but which I had traversed in former days, on grand court occasions in the time of Ferdinand VII, when they were glittering with all the splendor of a court, we paused in a great saloon, with high-vaulted ceiling incrusting with florid devices in porcelain, and hung with silken tapestry, but all in dim twilight, like the rest of the palace. At one end of the saloon the door opened to an almost interminable range of other chambers, through which, at a distance, we had a glimpse of some indistinct figures in black. They glided into the saloon slowly, and with noiseless steps. It was the little Queen, with her governess, Madame Mina, widow of the general of that name, and her guardian, the excellent Arguelles, all in deep mourning for the Duke of Orleans. The little Queen advanced some steps within the saloon and then paused. Madame Mina took her station a little distance behind her. The Count Almodovar then introduced me to the Queen in my official capacity, and she received me with a grave and quiet welcome, expressed in a very low voice. She is nearly twelve years of age, and is sufficiently well grown for her years. She had a somewhat fair complexion, quite pale, with bluish or light gray eyes; a grave demeanor, but a graceful deportment. I could not but regard her with deep interest, knowing what important concerns depended upon the life of this fragile little being, and to what a stormy and precarious career she might be destined. Her solitary position, also, separated from all her kindred except her little sister, a mere effigy of royalty in the hands of statesmen, and surrounded by the formalities and ceremonials of state, which spread sterility around the occupant of a throne."

I have quoted this passage, not more on account of its intrinsic interest, than as a specimen of the author's consummate art of conveying an impression by what I may call the tone of his style; and this appears in all his correspondence relating to this picturesque and eventful period. During the four years of his residence the country was in a constant state of excitement and often of panic. Armies were marching over the kingdom. Madrid was in a state of siege, expecting an assault at one time; confusion reigned amid the changing adherents about the person of the child-queen. The duties of a minister were perplexing enough, when the Spanish government was changing its character and its personnel with the rapidity of shifting scenes in a pantomime. "This consumption of ministers," wrote Irving to Mr. Webster, "is appalling. To carry on a negotiation with such transient functionaries is like bargaining at the window of a railroad-car: before you can get a reply to a proposition the other party is out of sight."

Apart from politics, Irving's residence was full of half-melancholy recollections and associations. In a letter to his old comrade, Prince Polgorouki, then Russian Minister at Naples, he recalls the days of their delightful intercourse at the D'Oubrils':

"Time dispels charms and illusions. You remember how much I was struck with a beautiful young woman (I will not mention names) who appeared in a tableau as Murillo's Virgin of the Assumption? She was young, recently married, fresh and unhackneyed in society, and my imagination decked her out with everything that was pure, lovely, innocent, and angelic in womanhood. She was pointed out to me in the theatre shortly after my arrival in Madrid. I turned with eagerness to the original of the picture that had ever remained hung up in sanctity in my mind. I found her still handsome, though somewhat matronly in appearance, seated, with her daughters, in the box of a fashionable nobleman, younger than herself, rich in purse but poor in intellect, and who was openly and notoriously her cavalier servante. The charm was broken, the picture fell from the wall. She may have the customs of a depraved country and licentious state of society to excuse her; but I can never think of her again in the halo of feminine purity and loveliness that surrounded the Virgin of Murillo."

During Irving's ministry he was twice absent, briefly in Paris and London, and was called to the latter place for consultation in regard to the Oregon boundary dispute, in the settlement of which he rendered valuable service. Space is not given me for further quotations from Irving's brilliant descriptions of court, characters, and society in that revolutionary time, nor of his half-melancholy pilgrimage to the southern scenes of his former reveries. But I will take a page from a letter to his sister, Mrs. Paris, describing his voyage from

Barcelona to Marseilles, which exhibits the lively susceptibility of the author and diplomat who was then in his sixty-first year:

"While I am writing at a table in the cabin, I am sensible of the power of a pair of splendid Spanish eyes which are occasionally flashing upon me, and which almost seem to throw a light upon the paper. Since I cannot break the spell, I will describe the owner of them. She is a young married lady, about four or five and twenty, middle sized, finely modeled, a Grecian outline of face, a complexion sallow yet healthful, raven black hair, eyes dark, large, and beaming, softened by long eyelashes, lips full and rosy red, yet finely chiseled, and teeth of dazzling whiteness. She is dressed in black, as if in mourning; on one hand is a black glove; the other hand, ungloved, is small, exquisitely formed, with taper fingers and blue veins. She has just put it up to adjust her clustering black locks. I never saw female hand more exquisite. Really, if I were a young man, I should not be able to draw the portrait of this beautiful creature so calmly. "I was interrupted in my letter writing, by an observation of the lady whom I was describing. She had caught my eye occasionally, as it glanced from my letter toward her. 'Really, Senor,' said she, at length, with a smile, 'I one would think you were a painter taking my likeness.' I could not resist the impulse. 'Indeed,' said I, 'I am taking it; I am writing to a friend the other side of the world, discussing things that are passing before me, and I could not help noting down one of the best specimens of the country that I had met with: A little bantering took place between the young lady, her husband, and myself, which ended in my reading off, as well as I could into Spanish, the description I had just written down. It occasioned a world of merriment, and was taken in excellent part. The lady's cheek, for once, mantled with the rose. She laughed, shook her head, and said I was a very fanciful portrait painter; and the husband declared that, if I would stop at St. Filian, all the ladies in the place would crowd to have their portraits taken, —my pictures were so flattering. I have just parted with them. The steamship stopped in the open sea, just in front of the little bay of St. Filian; boats came off from shore for the party. I helped the beautiful original of the portrait into the boat, and promised her and her husband if ever I should come to St. Filian I would pay them a visit. The last I noticed of her was a Spanish farewell wave of her beautiful white hand, and the gleam of her dazzling teeth as she smiled adieu. So there 's a very tolerable touch of romance for a gentleman of my years."

When Irving announced his recall from the court of Madrid, the young Queen said to him in reply: "You may take with you into private life the intimate conviction that your frank and loyal conduct has contributed to draw closer the amicable relations which exist between North America and the Spanish nation, and that your distinguished personal merits have gained in my heart the appreciation which you merit by more than one title." The author was anxious to return. From the midst of court life in April, 1845, he had written: "I long to be once more back at dear little Sunnyside, while I have yet strength and good spirits to enjoy the simple pleasures of the country, and to rally a happy family group once more about me. I grudge every year of absence that rolls by. To-morrow is my birthday. I shall then be sixty-two years old. The evening of life is fast drawing over me; still I hope to get back among my friends while there is a little sunshine left."

It was the 19th of September, 1846, says his biographer, "when the impatient longing of his heart was gratified, and he found himself restored to his home for the thirteen years of happy life still remaining to him."

IX. THE CHARACTERISTIC WORKS

The "Knickerbocker's History of New York" and the "Sketch-Book" never would have won for Irving the gold medal of the Royal Society of Literature, or the degree of D. C. L. from Oxford.

However much the world would have liked frankly to honor the writer for that which it most enjoyed and was under most obligations for, it would have been a violent shock to the constitution of things to have given such honor to the mere humorist and the writer of short sketches. The conventional literary proprieties must be observed. Only some laborious, solid, and improving work of the pen could sanction such distinction,—a book of research or an historical composition. It need not necessarily be dull, but it must be grave in tone and serious in intention, in order to give the author high recognition.

Irving himself shared this opinion. He hoped, in the composition of his "Columbus" and his "Washington," to produce works which should justify the good opinion his countrymen had formed of him, should reasonably satisfy the expectations excited by his lighter books, and should lay for him the basis of enduring reputation. All that he had done before was the play of careless genius, the exercise of frolicsome fancy, which might amuse and perhaps win an affectionate regard for the author, but could not justify a high respect or secure a permanent place in literature. For this, some work of scholarship and industry was needed.

And yet everybody would probably have admitted that there was but one man then living who could have created and peopled the vast and humorous world of the Knickerbockers; that all the learning of Oxford and Cambridge together would not enable a man to draw the whimsical portrait of Ichabod Crane, or to outline the fascinating legend of Rip Van Winkle; while Europe was full of scholars of more learning than Irving, and writers of equal skill in narrative, who might have told the story of Columbus as well as he told it and perhaps better. The under-graduates of Oxford who hooted their admiration of the shy author when he appeared in the theater to receive his complimentary degree perhaps understood this, and expressed it in their shouts of

"Diedrich Knickerbocker," "Ichabod Crane," "Rip Van Winkle."

Irving's "gift" was humor; and allied to this was sentiment. These qualities modified and restrained each other; and it was by these that he touched the heart. He acquired other powers which he himself may have valued more highly, and which brought him more substantial honors; but the historical compositions, which he and his contemporaries regarded as a solid basis of fame, could be spared without serious loss, while the works of humor, the first fruits of his genius, are possessions in English literature the loss of which would be irreparable. The world may never openly allow to humor a position "above the salt," but it clings to its fresh and original productions, generation after generation, finding room for them in its accumulating literary baggage, while more "important" tomes of scholarship and industry strew the line of its march.

I feel that this study of Irving as a man of letters would be incomplete, especially for the young readers of this generation, if it did not contain some more extended citations from those works upon which we have formed our estimate of his quality. We will take first a few passages from the—"History of New York".

It has been said that Irving lacked imagination. That, while he had humor and feeling and fancy, he was wanting in the higher quality, which is the last test of genius. We have come to attach to the word "imagination" a larger meaning than the mere reproduction in the mind of certain absent objects of sense that have been perceived; there must be a suggestion of something beyond these, and an ennobling suggestion, if not a combination, that amounts to a new creation. Now, it seems to me that the transmutation of the crude and heretofore unpoetical materials which he found in the New World into what is as absolute a creation as exists in literature, was a distinct work of the imagination. Its humorous quality does not interfere with its largeness of outline, nor with its essential poetic coloring. For, whimsical and comical as is the Knickerbocker creation, it is enlarged to the proportion of a realm, and over that new country of the imagination is always the rosy light of sentiment.

This largeness of modified conception cannot be made apparent in such brief extracts as we can make, but they will show its quality and the author's humor. The Low-Dutch settlers of the Nieuw Nederlandts are supposed to have sailed from Amsterdam in a ship called the Goede Vrouw, built by the carpenters of that city, who always model their ships on the fair forms of their countrywomen. This vessel, whose beauteous model was declared to be the greatest belle in Amsterdam, had one hundred feet in the beam, one hundred feet in the keel, and one hundred feet from the bottom of the stern-post to the taffrail. Those illustrious adventurers who sailed in her landed on the Jersey flats, preferring a marshy ground, where they could drive piles and construct dykes. They made a settlement at the Indian village of Communipaw, the egg from which was hatched the mighty city of New York. In the author's time this place had lost its importance:

"Communipaw is at present but a small village, pleasantly situated, among rural scenery, on that beauteous part of the Jersey shore which was known in ancient legends by the name of Pavonia, —[Pavonia, in the ancient maps, is given to a tract of country extending from about Hoboken to Amboy]—and commands a grand prospect of the superb bay of New York. It is within but half an hour's sail of the latter place, provided you have a fair wind, and may be distinctly seen from the city. Nay, it is a well known fact, which I can testify from my own experience, that on a clear still summer evening, you may hear, from the Battery of New York, the obstreperous peals of broad-mouthed laughter of the Dutch negroes at Communipaw, who, like most other negroes, are famous for their risible powers. This is peculiarly the case on Sunday evenings, when, it is remarked by an ingenious and observant philosopher, who has made great discoveries in the neighborhood of this city, that they always laugh loudest, which he attributes to the circumstance of their having their holiday clothes on. "These negroes, in fact, like the monks of the dark ages, engross all the knowledge of the place, and being infinitely more adventurous and more knowing than their masters, carry on all the foreign trade; making frequent voyages to town in canoes loaded with oysters, buttermilk, and cabbages. They are great astrologers, predicting the different changes of weather almost as accurately as an almanac; they are moreover exquisite performers on three-stringed fiddles; in whistling they almost boast the far-famed powers of Orpheus's lyre, for not a horse or an ox in the place, when at the plough or before the wagon, will budge a foot until he hears the well-known whistle of his black driver and companion. And from their amazing skill at casting up accounts upon their fingers, they are regarded with as much veneration as were the disciples of Pythagoras of yore, when initiated into the sacred quaternary of numbers. "As to the honest burghers of Communipaw, like wise men and sound philosophers, they never look beyond their pipes, nor trouble their heads about any affairs out of their immediate neighborhood; so that they live in profound and enviable ignorance of all the troubles, anxieties, and revolutions of this distracted planet. I am even told that many among them do verily believe that Holland, of which they have heard so much from tradition, is situated somewhere on Long Island,—that Spiking-devil and the Narrows are the two ends of the world,—that the country is still under the dominion of their High Mightinesses,—and that the city of New York still goes by the name of Nieuw Amsterdam. They meet every Saturday afternoon at the only tavern in the place, which bears as a sign a square-headed likeness of the Prince of Orange, where they smoke a silent pipe, by way of promoting social conviviality, and invariably drink a mug of cider to the success of Admiral Van Tromp, who they imagine is still sweeping the British channel with a broom at his mast-head. "Communipaw, in short, is one of the numerous little villages in the vicinity of this most beautiful of cities, which are so many strongholds and fastnesses, whither the primitive manners of our Dutch forefathers have retreated, and where they are cherished with devout and scrupulous strictness. The dress of the original settlers is handed down inviolate, from father to son: the identical broad-brimmed hat, broad-skirted coat, and broad-bottomed breeches, continue from

generation to generation; and several gigantic knee-buckles of massy silver are still in wear, that made gallant display in the days of the patriarchs of Communipaw. The language likewise continues unadulterated by barbarous innovations; and so critically correct is the village schoolmaster in his dialect, that his reading of a Low-Dutch psalm has much the same effect on the nerves as the filing of a handsaw."

The early prosperity of this settlement is dwelt on with satisfaction by the author:

"The neighboring Indians in a short time became accustomed to the uncouth sound of the Dutch language, and an intercourse gradually took place between them and the new-comers. The Indians were much given to long talks, and the Dutch to long silence;—in this particular, therefore, they accommodated each other completely. The chiefs would make long speeches about the big bull, the Wabash, and the Great Spirit, to which the others would listen very attentively, smoke their pipes, and grunt 'yah, mynher', whereat the poor savages were wondrously delighted. They instructed the new settlers in the best art of curing and smoking tobacco, while the latter, in return, made them drunk with true Hollands—and then taught them the art of making bargains. "A brisk trade for furs was soon opened; the Dutch traders were scrupulously honest in their dealings and purchased by weight, establishing it as an invariable table of avoirdupois, that the hand of a Dutchman weighed one pound, and his foot two pounds. It is true, the simple Indians were often puzzled by the great disproportion between bulk and weight, for let them place a bundle of furs, never so large, in one scale, and a Dutchman put his hand or foot in the other, the bundle was sure to kick the beam;—never was a package of furs known to weigh more than two pounds in the market of Communipaw! "This is a singular fact,—but I have it direct from my great-great-grandfather, who had risen to considerable importance in the colony, being promoted to the office of weigh-master, on account of the uncommon heaviness of his foot. "The Dutch possessions in this part of the globe began now to assume a very thriving appearance, and were comprehended under the general title of Nieuw Nederlandts, on account, as the Sage Vander Donck observes, of their great resemblance to the Dutch Netherlands, —which indeed was truly remarkable, excepting that the former were rugged and mountainous, and the latter level and marshy. About this time the tranquillity of the Dutch colonists was doomed to suffer a temporary interruption. In 1614, Captain Sir Samuel Argal, sailing under a commission from Dale, governor of Virginia, visited the Dutch settlements on Hudson River, and demanded their submission to the English crown and Virginian dominion. To this arrogant demand, as they were in no condition to resist it, they submitted for the time, like discreet and reasonable men. "It does not appear that the valiant Argal molested the settlement of Communipaw; on the contrary, I am told that when his vessel first hove in sight, the worthy burghers were seized with such a panic, that they fell to smoking their pipes with astonishing vehemence; insomuch that they quickly raised a cloud, which, combining with the surrounding woods and marshes, completely enveloped and concealed their beloved village, and overhung the fair regions of Pavoniaso that the terrible Captain Argal passed on totally unsuspecting that a sturdy little Dutch settlement lay snugly couched in the mud, under cover of all this pestilent vapor. In commemoration of this fortunate escape, the worthy inhabitants have continue, to smoke, almost without intermission, unto this very day; which is said to be the cause of the remarkable fog which often hangs over Communipaw of a clear afternoon."

The golden age of New York was under the reign of Walter Van Twiller, the first governor of the province, and the best it ever had. In his sketch of this excellent magistrate Irving has embodied the abundance and tranquillity of those halcyon days:

"The renowned Wouter (or Walter Van Twiller) was descended from a long line of Dutch burgomasters, who had successively dozed away their lives, and grown fat upon the bench of magistracy in Rotterdam; and who had comported themselves with such singular wisdom and propriety that they were never either heard or talked of —which, next to being universally applauded, should be the object of ambition of all magistrates and rulers. There are two opposite ways by which some men make a figure in the world: one, by talking faster than they think, and the other, by holding their tongues and not thinking at all. By the first, many a smatterer acquires the reputation of a man of quick parts; by the other, many a dunderpate, like the owl, the stupidest of birds, comes to be considered the very type of wisdom. This, by the way, is a casual remark, which I would not, for the universe, have it thought I apply to Governor Van Twiller. It is true he was a man shut up within himself, like an oyster, and rarely spoke, except in monosyllables; but then it was allowed he seldom said a foolish thing. So invincible was his gravity that he was never known to laugh or even to smile through the whole course of along and prosperous life. Nay, if a joke were uttered in his presence, that set light-minded hearers in a roar, it was observed to throw him into a state of perplexity. Sometimes he would deign to inquire into the matter, and when, after much explanation, the joke was made as plain as a pikestaff, he would continue to smoke his pipe in silence, and at length, knocking out the ashes, would exclaim, 'Well! I see nothing in all that to laugh about.' "With all his reflective habits, he never made up his mind on a subject. His adherents accounted for this by the astonishing magnitude of his

ideas. He conceived every subject on so grand a scale that he had not room in his head to turn it over and examine both sides of it. Certain it is, that, if any matter were propounded to him on which ordinary mortals would rashly determine at first glance, he would put on a vague, mysterious look, shake his capacious head, smoke some time in profound silence, and at length observe, that 'he had his doubts about the matter;' which gained him the reputation of a man slow of belief and not easily imposed upon. What is more, it has gained him a lasting name; for to this habit of the mind has been attributed his surname of Twiller; which is said to be a corruption of the original *Twijfler*, or, in plain English, *Doubter*. "The person of this illustrious old gentleman was formed and proportioned, as though it had been moulded by the hands of some cunning Dutch statuary, as a model of majesty and lordly grandeur. He was exactly five feet six inches in height, and six feet five inches in circumference. His head was a perfect sphere, and of such stupendous dimensions, that dame Nature, with all her sex's ingenuity, would have been puzzled to construct a neck capable of supporting it; wherefore she wisely declined the attempt, and settled it firmly on the top of his backbone, just between the shoulders. His body was oblong and particularly capacious at bottom; which was wisely ordered by Providence, seeing that he was a man of sedentary habits, and very averse to the idle labor of walking. His legs were short, but sturdy in proportion to the weight they had to sustain; so that when erect he had not a little the appearance of a beer-barrel on skids. His face, that infallible index of the mind, presented a vast expanse, unfurrowed by any of those lines and angles which disfigure the human countenance with what is termed expression. Two small gray eyes twinkled feebly in the midst, like two stars of lesser magnitude in a hazy firmament, and his full-fed cheeks, which seemed to have taken toll of everything that went into his mouth, were curiously mottled and streaked with dusky red, like a *spitzenberg* apple. "His habits were as regular as his person. He daily took his four stated meals, appropriating exactly an hour to each; he smoked and doubted eight hours, and he slept the remaining twelve of the four-and-twenty. Such was the renowned *Wouter Van Twiller*,—a true philosopher, for his mind was either elevated above, or tranquilly settled below, the cares and perplexities of this world. He had lived in it for years, without feeling the least curiosity to know whether the sun revolved round it, or it round the sun; and he had watched, for at least half a century, the smoke curling from his pipe to the ceiling, without once troubling his head with any of those numerous theories by which a philosopher would have perplexed his brain, in accounting for its rising above the surrounding atmosphere. "In his council he presided with great state and solemnity. He sat in a huge chair of solid oak, hewn in the celebrated forest of the *Hague*, fabricated by an experienced timmerman of *Amsterdam*, and curiously carved about the arms and feet into exact imitations of gigantic eagle's claws. Instead of a sceptre, he swayed a long Turkish pipe, wrought with jasmine and amber, which had been presented to a stadtholder of *Holland* at the conclusion of a treaty with one of the petty *Barbary* powers. In this stately chair would he sit, and this magnificent pipe would he smoke, shaking his right knee with a constant motion, and fixing his eye for hours together upon a little print of *Amsterdam*, which hung in a black frame against the opposite wall of the council-chamber. Nay, it has even been said, that when any deliberation of extraordinary length and intricacy was on the carpet, the renowned *Wouter* would shut his eyes for full two hours at a time, that he might not be disturbed by external objects; and at such times the internal commotion of his mind was evinced by certain regular guttural sounds, which his admirers declared were merely the noise of conflict, made by his contending doubts and opinions.... "I have been the more anxious to delineate fully the person and habits of *Wouter Van Twiller*, from the consideration that he was not only the first but also the best governor that ever presided over this ancient and respectable province; and so tranquil and benevolent was his reign, that I do not find throughout the whole of it a single instance of any offender being brought to punishment, —a most indubitable sign of a merciful governor, and a case unparalleled, excepting in the reign of the illustrious *King Log*, from whom, it is hinted, the renowned *Van Twiller* was a lineal descendant. "The very outset of the career of this excellent magistrate was distinguished by an example of legal acumen that gave flattering presage of a wise and equitable administration. The morning after he had been installed in office, and at the moment that he was making his breakfast from a prodigious earthen dish, filled with milk and Indian pudding, he was interrupted by the appearance of *Wandle Schoonhoven*, a very important old burgher of *New Amsterdam*, who complained bitterly of one *Barent Bleecker*, inasmuch as he refused to come to a settlement of accounts, seeing that there was a heavy balance in favor of the said *Wandle*. Governor *Van Twiller*, as I have already observed, was a man of few words; he was likewise a mortal enemy to multiplying writings—or being disturbed at his breakfast. Having listened attentively to the statement of *Wandle Schoonhoven*, giving an occasional grunt, as he shoveled a spoonful of Indian pudding into his mouth,—either as a sign that he relished the dish, or comprehended the story,—he called unto him his constable, and pulling out of his breeches-pocket a huge jackknife, dispatched it after the defendant as a summons, accompanied by his tobacco-box as a warrant. "This summary process was as effectual in those simple days as was the seal-ring of the great *Haroun Alraschid* among the true believers. The two parties being confronted before him, each produced a book of accounts, written in a language and character that would have puzzled any but a *High-Dutch* commentator, or a learned decipherer of *Egyptian* obelisks. The sage *Wouter* took them one after the other, and

having poised them in his hands, and attentively counted over the number of leaves, fell straightway into a very great doubt, and smoked for half an hour without saying a word; at length, laying his finger beside his nose, and shutting his eyes for a moment, with the air of a man who has just caught a subtle idea by the tail, he slowly took his pipe from his mouth, puffed forth a column of tobacco-smoke, and with marvelous gravity and solemnity pronounced that, having carefully counted over the leaves and weighed the books, it was found that one was just as thick and as heavy as the other: therefore, it was the final opinion of the court that the accounts were equally balanced: therefore, Wandle should give Barent a receipt, and Barent should give Wandle a receipt, and the constable should pay the costs. This decision, being straightway made known, diffused general joy throughout New Amsterdam, for the people immediately perceived that they had a very wise and equitable magistrate to rule over them. But its happiest effect was, that not another lawsuit took place throughout the whole of his administration; and the office of constable fell into such decay that there was not one of those losel scouts known in the province for many years. I am the more particular in dwelling on this transaction, not only because I deem it one of the most sage and righteous judgments on record, and well worthy the attention of modern magistrates, but because it was a miraculous event in the history of the renowned Wouter—being the only time he was ever known to come to a decision in the whole course of his life.”

This peaceful age ended with the accession of William the Testy, and the advent of the enterprising Yankees. During the reigns of William Kieft and Peter Stuyvesant, between the Yankees of the Connecticut and the Swedes of the Delaware, the Dutch community knew no repose, and the “History” is little more than a series of exhausting sieges and desperate battles, which would have been as heroic as any in history if they had been attended with loss of life. The forces that were gathered by Peter Stuyvesant for the expedition to avenge upon the Swedes the defeat at Fort Casimir, and their appearance on the march, give some notion of the military prowess of the Dutch. Their appearance, when they were encamped on the Bowling Green, recalls the Homeric age:

“In the centre, then, was pitched the tent of the men of battle of the Manhattoes, who, being the inmates of the metropolis, composed the lifeguards of the governor. These were commanded by the valiant Stoffel Brinkerhoof, who whilom had acquired such immortal fame at Oyster Bay; they displayed as a standard a beaver rampant on a field of orange, being the arms of the province, and denoting the persevering industry and the amphibious origin of the Nederlanders. “On their right hand might be seen the vassals of that renowned Mynheer, Michael Paw, who lorded it over the fair regions of ancient Pannonia, and the lands away south even unto the Navesink Mountains, and was, moreover, patroon of Gibbet Island. His standard was borne by his trusty squire, Cornelius Van Vorst; consisting of a huge oyster recumbent upon a sea-green field; being the armorial bearings of his favorite metropolis, Communipaw. He brought to the camp a stout force of warriors, heavily armed, being each clad in ten pair of linsey-woolsey breeches, and overshadowed by broad-brimmed beavers, with short pipes twisted in their hatbands. These were the men who vegetated in the mud along the shores of Pannonia, being of the race of genuine copperheads, and were fabled to have sprung from oysters. “At a little distance was encamped the tribe of warriors who came from the neighborhood of Hell-gate. These were commanded by the Suy Dams, and the Van Dams,—incontinent hard swearers, as their names betoken. They were terrible looking fellows, clad in broad-skirted gaberdines, of that curious colored cloth called thunder and lightning, and bore as a standard three devil's darning-needles, volant, in a flame-colored field. “Hard by was the tent of the men of battle from the marshy borders of the Waale-Boght and the country thereabouts. These were of a sour aspect, by reason that they lived on crabs, which abound in these parts. They were the first institutors of that honorable order of knighthood called Fly-market shirks, and, if tradition speak true, did likewise introduce the far-famed step in dancing called 'double trouble.' They were commanded by the fearless Jacobus Varra Vanger,—and had, moreover, a jolly band of Breuckelen ferry-men, who performed a brave concerto on conch shells. “But I refrain from pursuing this minute description, which goes on to describe the warriors of Bloemen-dael, and Weehawk, and Hoboken, and sundry other places, well known in history and song; for now do the notes of martial music alarm the people of New Amsterdam, sounding afar from beyond the walls of the city. But this alarm was in a little while relieved, for lo! from the midst of a vast cloud of dust, they recognized the brimstone-colored breeches and splendid silver leg of Peter Stuyvesant, glaring in the sunbeams; and beheld him approaching at the head of a formidable army, which he had mustered along the banks of the Hudson. And here the excellent but anonymous writer of the Stuyvesant manuscript breaks out into a brave and glorious description of the forces, as they defiled through the principal gate of the city, that stood by the head of Wall Street. “First of all came the Van Bummels, who inhabit the pleasant borders of the Bronx: these were short fat men, wearing exceeding large trunk-breeches, and were renowned for feats of the trencher. They were the first inventors of suppawn, or mush and milk.—Close in their rear marched the Van Vlotens, of Kaatskill, horrible quaffers of new cider, and arrant braggarts in their liquor.—After them came the Van Pelts of Groot Esopus, dexterous horsemen, mounted upon goodly switch-tailed steeds of the Esopus breed. These were mighty hunters of minks and musk-rats, whence came the word Peltry. —Then the Van Nests of Kinderhoeck, valiant robbers of birds'-nests, as their name denotes. To these, if report may be believed, are

we indebted for the invention of slap-jacks, or buckwheat-cakes.—Then the Van Higginbottoms, of Wapping's creek. These came armed with ferules and birchen rods, being a race of schoolmasters, who first discovered the marvelous sympathy between the seat of honor and the seat of intellect,—and that the shortest way to get knowledge into the head was to hammer it into the bottom.—Then the Van Grolls, of Antony's Nose, who carried their liquor in fair, round little pottles, by reason they could not house it out of their canteens, having such rare long noses. Then the Gardeniers, of Hudson and thereabouts, distinguished by many triumphant feats, such as robbing watermelon patches, smoking rabbits out of their holes, and the like, and by being great lovers of roasted pigs' tails. These were the ancestors of the renowned congressman of that name.—Then the Van Hoesens, of Sing-Sing, great choristers and players upon the jew's-harp. These marched two and two, singing the great song of St. Nicholas. Then the Couenhovens, of Sleepy Hollow. These gave birth to a jolly race of publicans, who first discovered the magic artifice of conjuring a quart of wine into a pint bottle.—Then the Van Kortlandts, who lived on the wild banks of the Croton, and were great killers of wild ducks, being much spoken of for their skill in shooting with the long bow.—Then the Van Bunschotens, of Nyack and Kakiat, who were the first that did ever kick with the left foot. They were gallant bushwhackers and hunters of raccoons by moonlight.—Then the Van Winkles, of Haerlem, potent suckers of eggs, and noted for running of horses, and running up of scores at taverns. They were the first that ever winked with both eyes at once.—Lastly came the KNICKERBOCKERS, of the great town of Scaghtikoke, where the folk lay stones upon the houses in windy weather, lest they should be blown away. These derive their name, as some say, from Knicker, to shake, and Beker, a goblet, indicating thereby that they were sturdy tosspots of yore; but, in truth, it was derived from Knicker, to nod, and Boeken, books: plainly meaning that they were great nodders or dozers over books. From them did descend the writer of this history.”

In the midst of Irving's mock-heroics, he always preserves a substratum of good sense. An instance of this is the address of the redoubtable wooden-legged governor, on his departure at the head of his warriors to chastise the Swedes:

“Certain it is, not an old woman in New Amsterdam but considered Peter Stuyvesant as a tower of strength, and rested satisfied that the public welfare was secure so long as he was in the city. It is not surprising, then, that they looked upon his departure as a sore affliction. With heavy hearts they draggled at the heels of his troop, as they marched down to the river-side to embark. The governor, from the stern of his schooner, gave a short but truly patriarchal address to his citizens, wherein he recommended them to comport like loyal and peaceable subjects,—to go to church regularly on Sundays, and to mind their business all the week besides. That the women should be dutiful and affectionate to their husbands,—looking after nobody's concerns but their own,—eschewing all gossipings and morning gaddings,—and carrying short tongues and long petticoats. That the men should abstain from intermeddling in public concerns, intrusting the cares of government to the officers appointed to support them, staying at home, like good citizens, making money for themselves, and getting children for the benefit of their country. That the burgomasters should look well to the public interest,—not oppressing the poor nor indulging the rich,—not tasking their ingenuity to devise new laws, but faithfully enforcing those which were already made, rather bending their attention to prevent evil than to punish it; ever recollecting that civil magistrates should consider themselves more as guardians of public morals than rat-catchers employed to entrap public delinquents. Finally, he exhorted them, one and all, high and low, rich and poor, to conduct themselves as well as they could, assuring them that if they faithfully and conscientiously complied with this golden rule, there was no danger but that they would all conduct themselves well enough. This done, he gave them a paternal benediction, the sturdy Antony sounded a most loving farewell with his trumpet, the jolly crews put up a shout of triumph, and the invincible armada swept off proudly down the bay.”

The account of an expedition against Fort Christina deserves to be quoted in full, for it is an example of what war might be, full of excitement, and exercise, and heroism, without danger to life. We take up the narrative at the moment when the Dutch host,

“Brimful of wrath and cabbage,”

and excited by the eloquence of the mighty Peter, lighted their pipes, and charged upon the fort:

“The Swedish garrison, ordered by the cunning Risingh not to fire until they could distinguish the whites of their assailants' eyes, stood in horrid silence on the covert-way, until the eager Dutchmen had ascended the glacis. Then did they pour into them such a tremendous volley, that the very hills quaked around, and were terrified even unto an incontinence of water, insomuch that certain springs burst forth from their sides, which continue to run unto the present day. Not a Dutchman but would have bitten the dust beneath that dreadful fire, had not the protecting Minerva kindly taken care that the Swedes should, one and all, observe their usual custom of shutting their eyes and turning away their heads at the moment of discharge. “The Swedes followed up their fire by leaping the counterscarp, and falling tooth and nail upon the foe with

curious outcries. And now might be seen prodigies of valor, unmatched in history or song. Here was the sturdy Stoffel Brinkerhoff brandishing his quarter-staff, like the giant Blanderon his oak-tree (for he scorned to carry any other weapon), and drumming a horrific tune upon the hard heads of the Swedish soldiery. There were the Van Kortlandts, posted at a distance, like the Locrian archers of yore, and plying it most potently with the long-bow, for which they were so justly renowned. On a rising knoll were gathered the valiant men of Sing-Sing, assisting marvelously in the fight by chanting the great song of St. Nicholas; but as to the Gardeniers of Hudson, they were absent on a marauding party, laying waste the neighboring water-melon patches. "In a different part of the field were the Van Grolls of Antony's Nose, struggling to get to the thickest of the fight, but horribly perplexed in a defile between two hills, by reason of the length of their noses. So also the Van Bunschotens of Nyack and Kakiat, so renowned for kicking with the left foot, were brought to a stand for want of wind, in consequence of the hearty dinner they had eaten, and would have been put to utter rout but for the arrival of a gallant corps of voltigeurs, composed of the Hoppers, who advanced nimbly to their assistance on one foot. Nor must I omit to mention the valiant achievements of Antony Van Corlear, who, for a good quarter of an hour, waged stubborn fight with a little porsy Swedish drummer, whose hide he drummed most magnificently, and whom he would infallibly have annihilated on the spot, but that he had come into the battle with no other weapon but his trumpet. "But now the combat thickened. On came the mighty Jacobus Varra Vanger and the fighting-men of the Wallabout; after them thundered the Van Pelts of Esopus, together with the Van Rippers and the Van Brunts, bearing down all before them; then the Suy Dams, and the Van Dams, pressing forward with many a blustering oath, at the head of the warriors of Hell-gate, clad in their thunder-and-lightning gaberdines; and lastly, the standard-bearers and body-guard of Peter Stuyvesant, bearing the great beaver of the Manhattoes. "And now commenced the horrid din, the desperate struggle, the maddening ferocity, the frantic desperation, the confusion and self-abandonment of war. Dutchman and Swede commingled, tugged, panted, and blowed. The heavens were darkened with a tempest of missives. Bang! went the guns; whack! went the broad-swords; thump went the cudgels; crash! went the musket-stocks; blows, kicks, cuffs; scratches, black eyes and bloody noses swelling the horrors of the scene! Thick thwack, cut and hack, helter-skelter, higgledy-piggledy, hurly-burly, head-over-heels, rough-and-tumble! Dunder and blixum! swore the Dutchmen; splitter and splutter! cried the Swedes. Storm the works! shouted Hardkoppig Peter. Fire the mine roared stout Risingh. Tanta-rar-ra-ra! twanged the trumpet of Antony Van Corlear;—until all voice and sound became unintelligible,—grunts of pain, yells of fury, and shouts of triumph mingling in one hideous clamor. The earth shook as if struck with a paralytic stroke; trees shrunk aghast, and withered at the sight; rocks burrowed in the ground like rabbits; and even Christina Creek turned from its course and ran up a hill in breathless terror. "Long hung the contest doubtful; for though a heavy shower of rain, sent by the 'cloud-compelling Jove,' in some measure cooled their ardor, as doth a bucket of water thrown on a group of fighting mastiffs, yet did they but pause for a moment, to return with tenfold fury to the charge. Just at this juncture a vast and dense column of smoke was seen slowly rolling toward the scene of battle. The combatants paused for a moment, gazing in mute astonishment, until the wind, dispelling the murky cloud, revealed the flaunting banner of Michael Paw, the Patroon of Communipaw. That valiant chieftain came fearlessly on at the head of a phalanx of oyster-fed Pavonians and a corps de reserve of the Van Arsdales and Van Bummels, who had remained behind to digest the enormous dinner they had eaten. These now trudged manfully forward, smoking their pipes with outrageous vigor, so as to raise the awful cloud that has been mentioned, but marching exceedingly slow, being short of leg, and of great rotundity in the belt. "And now the deities who watched over the fortunes of the Nederlanders having unthinkingly left the field, and stepped into a neighboring tavern to refresh themselves with a pot of beer, a direful catastrophe had well-nigh ensued. Scarce had the myrmidons of Michael Paw attained the front of battle, when the Swedes, instructed by the cunning Risingh, leveled a shower of blows full at their tobacco-pipes. Astounded at this assault, and dismayed at the havoc of their pipes, these ponderous warriors gave way, and like a drove of frightened elephants broke through the ranks of their own army. The little Hoppers were borne down in the surge; the sacred banner emblazoned with the gigantic oyster of Communipaw was trampled in the dirt; on blundered and thundered the heavy-sterned fugitives, the Swedes pressing on their rear and applying their feet a parte poste of the Van Arsdales and the Van Bummels with a vigor that prodigiously accelerated their movements; nor did the renowned Michael Paw himself fail to receive divers grievous and dishonorable visitations of shoe-leather. "But what, oh Muse! was the rage of Peter Stuyvesant, when from afar he saw his army giving way! In the transports of his wrath he sent forth a roar, enough to shake the very hills. The men of the Manhattoes plucked up new courage at the sound, or, rather, they rallied at the voice of their leader, of whom they stood more in awe than of all the Swedes in Christendom. Without waiting for their aid, the daring Peter dashed, sword in hand, into the thickest of the foe. Then might be seen achievements worthy of the days of the giants. Wherever he went the enemy shrank before him; the Swedes fled to right and left, or were driven, like dogs, into their own ditch; but as he pushed forward, singly with headlong courage, the foe closed behind and hung upon his rear. One aimed a blow full at his heart; but the protecting power

which watches over the great and good turned aside the hostile blade and directed it to a side-pocket, where reposed an enormous iron tobacco-box, endowed, like the shield of Achilles, with supernatural powers, doubtless from bearing the portrait of the blessed St. Nicholas. Peter Stuyvesant turned like an angry bear upon the foe, and seizing him, as he fled, by an immeasurable queue, 'Ah, whoreson caterpillar,' roared he, 'here's what shall make worms' meat of thee!' so saying he whirled his sword and dealt a blow that would have decapitated the varlet, but that the pitying steel struck short and shaved the queue forever from his crown. At this moment an arquebusier leveled his piece from a neighboring mound, with deadly aim; but the watchful Minerva, who had just stopped to tie up her garter, seeing the peril of her favorite hero, sent old Boreas with his bellows, who, as the match descended to the pan, gave a blast that blew the priming from the touch-hole. "Thus waged the fight, when the stout Risingh, surveying the field from the top of a little ravelin, perceived his troops banged, beaten, and kicked by the invincible Peter. Drawing his falchion, and uttering a thousand anathemas, he strode down to the scene of combat with some such thundering strides as Jupiter is said by Hesiod to have taken when he strode down the spheres to hurl his thunder-bolts at the Titans. "When the rival heroes came face to face, each made a prodigious start in the style of a veteran stage-champion. Then did they regard each other for a moment with the bitter aspect of two furious ram-cats on the point of a clapper-clawing. Then did they throw themselves into one attitude, then into another, striking their swords on the ground, first on the right side, then on the left: at last at it they went with incredible ferocity. Words cannot tell the prodigies of strength and valor displayed in this direful encounter,—an encounter compared to which the far-famed battles of Ajax with Hector, of Aeneas with Turnus, Orlando with Rodomont, Guy of Warwick with Colbrand the Dane, or of that renowned Welsh knight, Sir Owen of the Mountains, with the giant Guylon, were all gentle sports and holiday recreations. At length the valiant Peter, watching his opportunity, aimed a blow enough to cleave his adversary to the very chine; but Risingh, nimbly raising his sword, warded it off so narrowly, that, glancing on one side, it shaved away a huge canteen in which he carried his liquor,—thence pursuing its trenchant course, it severed off a deep coat-pocket, stored with bread and cheese,—which provant, rolling among the armies, occasioned a fearful scrambling between the Swedes and Dutchmen, and made the general battle to wax more furious than ever. "Enraged to see his military stores laid waste, the stout Risingh, collecting all his forces, aimed a mighty blow full at the hero's crest. In vain did his fierce little cocked hat oppose its course. The biting steel clove through the stubborn ram beaver, and would have cracked the crown of any one not endowed with supernatural hardness of head; but the brittle weapon shivered in pieces on the skull of Hardkoppig Piet, shedding a thousand sparks, like beams of glory, round his grizzly visage. "The good Peter reeled with the blow, and turning up his eyes beheld a thousand suns, besides moons and stars, dancing about the firmament; at length, missing his footing, by reason of his wooden leg, down he came on his seat of honor with a crash which shook the surrounding hills, and might have wrecked his frame, had he not been received into a cushion softer than velvet, which Providence, or Minerva, or St. Nicholas, or some cow, had benevolently prepared for his reception. "The furious Risingh, in despite of the maxim, cherished by all true knights, that 'fair play is a jewel,' hastened to take advantage of the hero's fall; but, as he stooped to give a fatal blow, Peter Stuyvesant dealt him a thwack over the sconce with his wooden leg, which set a chime of bells ringing triple bob-majors in his cerebellum. The bewildered Swede staggered with the blow, and the wary Peter seizing a pocket-pistol, which lay hard by, discharged it full at the head of the reeling Risingh. Let not my reader mistake; it was not a murderous weapon loaded with powder and ball, but a little sturdy stone pottle charged to the muzzle with a double dram of true Dutch courage, which the knowing Antony Van Corlear carried about him by way of replenishing his valor, and which had dropped from his wallet during his furious encounter with the drummer. The hideous weapon sang through the air, and true to its course as was the fragment of a rock discharged at Hector by bully Ajax, encountered the head of the gigantic Swede with matchless violence. "This heaven-directed blow decided the battle. The ponderous pericranium of General Jan Risingh sank upon his breast; his knees tottered under him; a deathlike torpor seized upon his frame, and he tumbled to the earth with such violence that old Pluto started with affright, lest he should have broken through the roof of his infernal palace. "His fall was the signal of defeat and victory: the Swedes gave way, the Dutch pressed forward; the former took to their heels, the latter hotly pursued. Some entered with them, pell-mell, through the sally-port; others stormed the bastion, and others scrambled over the curtain. Thus in a little while the fortress of Fort Christina, which, like another Troy, had stood a siege of full ten hours, was carried by assault, without the loss of a single man on either side. Victory, in the likeness of a gigantic ox-fly, sat perched upon the cocked hat of the gallant Stuyvesant; and it was declared by all the writers whom he hired to write the history of his expedition that on this memorable day he gained a sufficient quantity of glory to immortalize a dozen of the greatest heroes in Christendom!"

In the "Sketch-Book," Irving set a kind of fashion in narrative essays, in brief stories of mingled humor and pathos, which was followed for half a century. He himself worked the same vein in "Bracebridge Hall" and "Tales of a Traveller." And there is no doubt that some of the most fascinating of the minor sketches of Charles Dickens, such as the story of the Bagman's Uncle, are lineal descendants of, if they were not

suggested by, Irving's "Adventure of My Uncle," and the "Bold Dragoon."

The taste for the leisurely description and reminiscent essay of the "Sketch-Book" does not characterize the readers of this generation, and we have discovered that the pathos of its elaborated scenes is somewhat "literary." The sketches of "Little Britain," and "Westminster Abbey," and, indeed, that of "Stratford-on-Avon," will for a long time retain their place in selections of "good reading;" but the "Sketch-Book" is only floated, as an original work, by two papers, the "Rip Van Winkle" and the "Legend of Sleepy Hollow;" that is to say by the use of the Dutch material, and the elaboration of the "Knickerbocker Legend," which was the great achievement of Irving's life. This was broadened and deepened and illustrated by the several stories of the "Money Diggers," of "Wolfert Webber" and "Kidd the Pirate," in the "Tales of a Traveller," and by "Dolph Heyliger" in "Bracebridge Hall." Irving was never more successful than in painting the Dutch manners and habits of the early time, and he returned again and again to the task until he not only made the shores of the Hudson and the islands of New York harbor and the East River classic ground, but until his conception of Dutch life in the New World had assumed historical solidity and become a tradition of the highest poetic value. If in the multiplicity of books and the change of taste the bulk of Irving's works shall go out of print, a volume made up of his Knickerbocker history and the legends relating to the region of New York and the Hudson would survive as long as anything that has been produced in this country.

The philosophical student of the origin of New World society may find food for reflection in the "materiality" of the basis of the civilization of New York. The picture of abundance and of enjoyment of animal life is perhaps not overdrawn in Irving's sketch of the home of the Van Tassels, in the "Legend of Sleepy Hollow." It is all the extract we can make room for from that careful study.

"Among the musical disciples who assembled, one evening in each week, to receive his instructions in psalmody, was Katrina Van Tassel, the daughter and only child of a substantial Dutch farmer. She was a blooming lass of fresh eighteen; plump as a partridge; ripe and melting and rosy-checked as one of her father's peaches, and universally famed, not merely for her beauty, but her vast expectations. She was, withal, a little of a coquette, as might be perceived even in her dress, which was a mixture of ancient and modern fashions, as most suited to set off her charms. She wore the ornaments of pure yellow gold which her great-great-grandmother had brought over from Saardam; the tempting stomacher of the olden time; and withal a provokingly short petticoat, to display the prettiest foot and ankle in the country round. Ichabod Crane had a soft and foolish heart towards the sex; and it is not to be wondered at that so tempting a morsel soon found favor in his eyes, more especially after he had visited her in her paternal mansion. Old Baltus Van Tassel was a perfect picture of a thriving, contented, liberal-hearted farmer. He seldom, it is true, sent either his eyes or his thoughts beyond the boundaries of his own farm; but within those everything was snug, happy, and well-conditioned. He was satisfied with his wealth, but not proud of it; and piqued himself upon the hearty abundance rather than the style in which he lived. His stronghold was situated on the banks of the Hudson, in one of those green, sheltered, fertile nooks in which the Dutch farmers are so fond of nestling. A great elm-tree spread its broad branches over it, at the foot of which bubbled up a spring, of the softest and sweetest water, in a little well, formed of a barrel, and then stole sparkling away through the grass to a neighboring brook, that bubbled along among alders and dwarf willows. Hard by the farm-house was a vast barn, that might have served for a church, every window and crevice of which seemed bursting forth with the treasures of the farm. The flail was busily resounding within it from morning till night; swallows and martins skimmed twittering about the eaves; and rows of pigeons, some with one eye turned up, as if watching the weather, some with their heads under their wings, or buried in their bosoms, and others swelling and cooing and bowing about their dames, were enjoying the sunshine on the roof. Sleek, unwieldy porkers were grunting in the repose and abundance of their pens, whence sallied forth, now and then, troops of sucking pigs, as if to snuff the air. A stately squadron of snowy geese were riding in an adjoining pond, conveying whole fleets of ducks; regiments of turkeys were gobbling through the farm-yard, and guinea fowls fretting about it, like ill-tempered housewives, with their peevish, discontented cry. Before the barn door strutted the gallant cock, that pattern of a husband, a warrior, and a fine gentleman, clapping his burnished wings, and crowing in the pride and gladness of his heart —sometimes tearing up the earth with his feet, and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered. The pedagogue's mouth watered as he looked upon this sumptuous promise of luxurious winter fare. In his devouring mind's eye he pictured to himself every roasting-pig running about with a pudding in his belly, and an apple in his mouth; the pigeons were snugly put to bed in a comfortable pie, and tucked in with a coverlet of crust; the geese were swimming in their own gravy, and the ducks pairing cosily in dishes, like snug married couples, with a decent competency of onion-sauce. In the porkers he saw carved out the future sleek side of bacon, and juicy, relishing ham; not a turkey but he beheld daintily trussed up, with its gizzard under its wing, and, peradventure, a necklace of savory sausages; and even bright chanticleer himself lay sprawling on his back, in a side-dish, with uplifted claws, as if craving that quarter which his chivalrous spirit disdained to ask while living. As the enraptured Ichabod fancied all this, and as he rolled his great green eyes over the fat meadow-lands, the rich fields of wheat, of rye, of buckwheat, and Indian corn, and the orchard burdened with ruddy fruit, which surrounded the warm tenement of Van Tassel, his heart yearned after the damsel who was to inherit these domains, and his imagination expanded with the idea how they might be readily turned into cash, and

the money invested in immense tracts of wild land and shingle palaces in the wilderness. Nay, his busy fancy already realized his hopes, and presented to him the blooming Katrina, with a whole family of children, mounted on the top of a wagon loaded with household trumpery, with pots and kettles dangling beneath; and he beheld himself bestriding a pacing mare, with a colt at her heels, setting out for Kentucky, Tennessee, or the Lord knows where. "When he entered the house, the conquest of his heart was complete. It was one of those spacious farm-houses, with high-ridged, but lowly-sloping roofs, built in the style handed down from the first Dutch settlers; the low projecting eaves forming a piazza along the front, capable of being closed up in bad weather. Under this were hung flails, harness, various utensils of husbandry, and nets for fishing in the neighboring river. Benches were built along the sides for summer use; and a great spinning-wheel at one end, and a churn at the other, showed the various uses to which this important porch might be devoted. From this piazza the wondering Ichabod entered the hall, which formed the centre of the mansion and the place of usual residence. Here, rows of resplendent pewter, ranged on a long dresser, dazzled his eyes. In one corner stood a huge bag of wool ready to be spun; in another a quantity of linsey-woolsey just from the loom; ears of Indian corn, and strings of dried apples and peaches, hung in gay festoons along the walls, mingled with the gaud of red peppers; and a door left ajar gave him a peep into the best parlor, where the claw-footed chairs and dark mahogany tables shone like mirrors; and irons, with their accompanying shovel and tongs, glistened from their covert of asparagus tops; mock-oranges and conch-shells decorated the mantelpiece; strings of various colored birds' eggs were suspended above it; a great ostrich egg was hung from the centre of the room, and a corner cupboard, knowingly left open, displayed immense treasures of old silver and well-mended china."

It is an abrupt transition from these homely scenes, which humor commends to our liking, to the chivalrous pageant unrolled for us in the "Conquest of Granada." The former are more characteristic and the more enduring of Irving's writings, but as a literary artist his genius lent itself just as readily to oriental and medieval romance as to the Knickerbocker legend; and there is no doubt that the delicate perception he had of chivalric achievements gave a refined tone to his mock heroics, which greatly heightened their effect. It may almost be claimed that Irving did for Granada and the Alhambra what he did, in a totally different way, for New York and its vicinity.

The first passage I take from the "Conquest" is the description of the advent at Cordova of the Lord Scales, Earl of Rivers, who was brother of the queen of Henry VII, a soldier who had fought at Bosworth field, and now volunteered to aid Ferdinand and Isabella in the extermination of the Saracens. The description is put into the mouth of Fray Antonio Agapidda, a fictitious chronicler invented by Irving, an unfortunate intervention which gives to the whole book an air of unveracity:

"This cavalier [he observes] was from the far island of England, and brought with him a train of his vassals; men who had been hardened in certain civil wars which raged in their country. They were a comely race of men, but too fair and fresh for warriors, not having the sunburnt, warlike hue of our old Castilian soldiery. They were huge feeders also, and deep carousers, and could not accommodate themselves to the sober diet of our troops, but must fain eat and drink after the manner of their own country. They were often noisy and unruly, also, in their wassail; and their quarter of the camp was prone to be a scene of loud revel and sudden brawl. They were, withal, of great pride, yet it was not like our inflammable Spanish pride: they stood not much upon the 'pundonor,' the high punctilio, and rarely drew the stiletto in their disputes; but their pride was silent and contumelious. Though from a remote and somewhat barbarous island, they believed themselves the most perfect men upon earth, and magnified their chieftain, the Lord Scales, beyond the greatest of their grandees. With all this, it must be said of them that they were marvelous good men in the field, dexterous archers, and powerful with the battleaxe. In their great pride and self-will, they always sought to press in the advance and take the post of danger, trying to outvie our Spanish chivalry. They did not rush on fiercely to the fight, nor make a brilliant onset like the Moorish and Spanish troops, but they went into the fight deliberately, and persisted obstinately, and were slow to find out when they were beaten. Withal they were much esteemed yet little liked by our soldiery, who considered them staunch companions in the field, yet coveted but little fellowship with them in the camp. "Their commander, the Lord Scales, was an accomplished cavalier, of gracious and noble presence and fair speech; it was a marvel to see so much courtesy in a knight brought up so far from our Castilian court. He was much honored by the king and queen, and found great favor with the fair dames about the court, who indeed are rather prone to be pleased with foreign cavaliers. He went always in costly state, attended by pages and esquires, and accompanied by noble young cavaliers of his country, who had enrolled themselves under his banner, to learn the gentle exercise of arms. In all pageants and festivals, the eyes of the populace were attracted by the singular bearing and rich array of the English earl and his train, who prided themselves in always appearing in the garb and manner of their country-and were indeed something very magnificent, delectable, and strange to behold." "The worthy chronicler is no less elaborate in his description of the masters of Santiago, Calatrava, and Alcantara, and their valiant knights, armed at all points, and decorated with the badges of their orders. These, he affirms, were the flower of Christian chivalry; being constantly in service they became more steadfast and accomplished in discipline than the irregular and

temporary levies of feudal nobles. Calm, solemn, and stately, they sat like towers upon their powerful chargers. On parades they manifested none of the show and ostentation of the other troops: neither, in battle, did they endeavor to signalize themselves by any fiery vivacity, or desperate and vainglorious exploit,—everything, with them, was measured and sedate; yet it was observed that none were more warlike in their appearance in the camp, or more terrible for their achievements in the field. “The gorgeous magnificence of the Spanish nobles found but little favor in the eyes of the sovereigns. They saw that it caused a competition in expense ruinous to cavaliers of moderate fortune; and they feared that a softness and effeminacy might thus be introduced, incompatible with the stern nature of the war. They signified their disapprobation to several of the principal noblemen, and recommended a more sober and soldier-like display while in actual service. “These are rare troops for a tourney, my lord [said Ferdinand to the Duke of Infantado, as he beheld his retainers glittering in gold and embroidery]; but gold, though gorgeous, is soft and yielding: iron is the metal for the field.” “Sire replied the duke, if my men parade in gold, your majesty will find they fight with steel.” The king smiled, but shook his head, and the duke treasured up his speech in his heart.”

Our author excels in such descriptions as that of the progress of Isabella to the camp of Ferdinand after the capture of Loxa, and of the picturesque pageantry which imparted something of gayety to the brutal pastime of war:

“It was in the early part of June that the queen departed from Cordova, with the Princess Isabella and numerous ladies of her court. She had a glorious attendance of cavaliers and pages, with many guards and domestics. There were forty mules for the use of the queen, the princess, and their train. “As this courtly cavalcade approached the Rock of the Lovers, on the banks of the river Yeguas, they beheld a splendid train of knights advancing to meet them. It was headed by that accomplished cavalier the Marques Duke de Cadiz, accompanied by the adelantado of Andalusia. He had left the camp the day after the capture of Illora, and advanced thus far to receive the queen and escort her over the borders. The queen received the marques with distinguished honor, for he was esteemed the mirror of chivalry. His actions in this war had become the theme of every tongue, and many hesitated not to compare him in prowess with the immortal Cid. “Thus gallantly attended, the queen entered the vanquished frontier of Granada, journeying securely along the pleasant banks of the Xenel, so lately subject to the scourings of the Moors. She stopped at Loxa, where she administered aid and consolation to the wounded, distributing money among them for their support, according to their rank. “The king, after the capture of Illora, had removed his camp before the fortress of Moclin, with an intention of besieging it. Thither the queen proceeded, still escorted through the mountain roads by the Marques of Cadiz. As Isabella drew near to the camp, the Duke del Infantado issued forth a league and a half to receive her, magnificently arrayed, and followed by all his chivalry in glorious attire. With him came the standard of Seville, borne by the men-at-arms of that renowned city, and the Prior of St. Juan, with his followers. They ranged themselves in order of battle, on the left of the road by which the queen was to pass. “The worthy Agapida is loyally minute in his description of the state and grandeur of the Catholic sovereigns. The queen rode a chestnut mule, seated in a magnificent saddle-chair, decorated with silver gilt. The housings of the mule were of fine crimson cloth; the borders embroidered with gold; the reins and head-piece were of satin, curiously embossed with needlework of silk, and wrought with golden letters. The queen wore a brial or regal skirt of velvet, under which were others of brocade; a scarlet mantle, ornamented in the Moresco fashion; and a black hat, embroidered round the crown and brim. “The infanta was likewise mounted on a chestnut mule, richly caparisoned. She wore a brial or skirt of black brocade, and a black mantle ornamented like that of the queen. “When the royal cavalcade passed by the chivalry of the Duke del Infantado, which was drawn out in battle array, the queen made a reverence to the standard of Seville, and ordered it to pass to the right hand. When she approached the camp, the multitude ran forth to meet her, with great demonstrations of joy; for she was universally beloved by her subjects. All the battalions sallied forth in military array, bearing the various standards and banners of the camp, which were lowered in salutation as she passed. “The king now came forth in royal state, mounted on a superb chestnut horse, and attended by many grandees of Castile. He wore a jubon or close vest of crimson cloth, with cuisses or short skirts of yellow satin, a loose cassock of brocade, a rich Moorish scimitar, and a hat with plumes. The grandees who attended him were arrayed with wonderful magnificence, each according to his taste and invention. “These high and mighty princes [says Antonio Agapida] regarded each other with great deference, as allied sovereigns rather than with connubial familiarity, as mere husband and wife. When they approached each other, therefore, before embracing, they made three profound reverences, the queen taking off her hat, and remaining in a silk net or cawl, with her face uncovered. The king then approached and embraced her, and kissed her respectfully on the cheek. He also embraced his daughter the princess; and, making the sign of the cross, he blessed her, and kissed her on the lips. “The good Agapida seems scarcely to have been more struck with the appearance of the sovereigns than with that of the English earl. He followed [says he] immediately after the king, with great pomp, and, in an extraordinary manner, taking precedence of all the rest. He was mounted ‘a

la guisa,' or with long stirrups, on a superb chestnut horse, with trappings of azure silk which reached to the ground. The housings were of mulberry, powdered with stars of gold. He was armed in proof, and wore over his armor a short French mantle of black brocade; he had a white French hat with plumes, and carried on his left arm a small round buckler, banded with gold. Five pages attended him, appareled in silk and brocade, and mounted on horses sumptuously caparisoned; he had also a train of followers, bravely attired after the fashion of his country. "He advanced in a chivalrous and courteous manner, making his reverences first to the queen and infanta, and afterwards to the king. Queen Isabella received him graciously, complimenting him on his courageous conduct at Loxa, and condoling with him on the loss of his teeth. The earl, however, made light of his disfiguring wound, saying that your blessed Lord, who had built all that house, had opened a window there, that he might see more readily what passed within; whereupon the worthy Fray Antonio Agapida is more than ever astonished at the pregnant wit of this island cavalier. The earl continued some little distance by the side of the royal family, complimenting them all with courteous speeches, his horse curveting and caracoling, but being managed with great grace and dexterity, leaving the grandees and the people at large not more filled with admiration at the strangeness and magnificence of his state than at the excellence of his horsemanship. "To testify her sense of the gallantry and services of this noble English knight, who had come from so far to assist in their wars, the queen sent him the next day presents of twelve horses, with stately tents, fine linen, two beds with coverings of gold brocade, and many other articles of great value."

The protracted siege of the city of Granada was the occasion of feats of arms and hostile courtesies which rival in brilliancy any in the romances of chivalry. Irving's pen is never more congenially employed than in describing these desperate but romantic encounters. One of the most picturesque of these was known as "the queen's skirmish." The royal encampment was situated so far from Granada that only the general aspect of the city could be seen as it rose from the vega, covering the sides of the hills with its palaces and towers. Queen Isabella expressed a desire for a nearer view of the city, whose beauty was renowned throughout the world, and the courteous Marques of Cadiz proposed to give her this perilous gratification.

"On the morning of June the 18th, a magnificent and powerful train issued from the Christian camp. The advanced guard was composed of legions of cavalry, heavily armed, looking like moving masses of polished steel. Then came the king and queen, with the prince and princesses, and the ladies of the court, surrounded by the royal bodyguard, sumptuously arrayed, composed of the sons of the most illustrious houses of Spain; after these was the rearguard, a powerful force of horse and foot; for the flower of the army sallied forth that day. The Moors gazed with fearful admiration at this glorious pageant, wherein the pomp of the court was mingled with the terrors of the camp. It moved along in radiant line, across the vega, to the melodious thunders of martial music, while banner and plume, and silken scarf, and rich brocade, gave a gay and gorgeous relief to the grim visage of iron war that lurked beneath. "The army moved towards the hamlet of Zubia, built on the skirts of the mountain to the left of Granada, and commanding a view of the Alhambra, and the most beautiful quarter of the city. As they approached the hamlet, the Marques of Villena, the Count Urena, and Don Alonzo de Aguilar filed off with their battalions, and were soon seen glittering along, the side of the mountain above the village. In the mean time the Marques of Cadiz, the Count de Tendilla, the Count de Cabra, and Don Alonzo Fernandez, senior of Alcaudrete and Montemayor, drew up their forges in battle array on the plain below the hamlet, presenting a living barrier of loyal chivalry between the sovereigns and the city. "Thus securely guarded, the royal party alighted, and, entering one of the houses of the hamlet, which had been prepared for their reception, enjoyed a full view which the city from its terraced roof. The ladies of the court gazed with delight at the red towers of the Alhambra, rising from amid shady groves, anticipating the time when the Catholic sovereigns should be enthroned within its walls, and its courts shine with the splendor of Spanish chivalry. 'The reverend prelates and holy friars, who always surrounded the queen, looked with serene satisfaction,' says Fray Antonio Agapida, at this modern Babylon, enjoying the triumph that awaited them, when those mosques and minarets should be converted into churches, and goodly priests and bishops should succeed to the infidel alfaquis.' "When the Moors beheld the Christians thus drawn forth in full array in the plain, they supposed it was to offer battle, and hesitated not to accept it. In a little while the queen beheld a body of Moorish cavalry pouring into the vega, the riders managing their fleet and fiery steeds with admirable address. They were richly armed, and clothed in the most brilliant colors, and the caparisons of their steeds flamed with gold and embroidery. This was the favorite squadron of Muza, composed of the flower of the youthful cavaliers of Granada. Others succeeded, some heavily armed, others a la gineta, with lance and buckler; and lastly came the legions of foot-soldiers, with arquebus and crossbow, and spear and scimiter. "When the queen saw this army issuing from the city, she sent to the Marques of Cadiz, and forbade any attack upon the enemy, or the acceptance of any challenge to a skirmish; for she was loth that her curiosity should cost the life of a single human being. "The marques promised to obey, though sorely against his will; and it grieved the spirit of the Spanish cavaliers to be obliged to remain with sheathed swords while bearded by the foe. The Moors could not comprehend the meaning of this inaction of the Christians, after having apparently invited a battle. They sallied several times from their ranks, and

approached near enough to discharge their arrows; but the Christians were immovable. Many of the Moorish horsemen galloped close to the Christian ranks, brandishing their lances and scimiters, and defying various cavaliers to single combat; but Ferdinand had rigorously prohibited all duels of this kind, and they dared not transgress his orders under his very eye. "Here, however, the worthy Fray Antonio Agapida, in his enthusiasm for the triumphs of the faith, records the following incident, which we fear is not sustained by any grave chronicler of the times, but rests merely on tradition, or the authority of certain poets and dramatic writers, who have perpetuated the tradition in their works. While this grim and reluctant tranquillity prevailed along the Christian line, says Agapida, there rose a mingled shout and sound of laughter near the gate of the city. A Moorish horseman, armed at all points, issued forth, followed by a rabble, who drew back as he approached the scene of danger. The Moor was more robust and brawny than was common with his countrymen. His visor was closed; he bore a huge buckler and a ponderous lance; his scimiter was of a Damascus blade, and his richly ornamented dagger was wrought by an artificer of Fez. He was known by his device to be Tarfe, the most insolent, yet valiant, of the Moslem warriors—the same who had hurled into the royal camp his lance, inscribed to the queen. As he rode slowly along in front of the army, his very steed, prancing with fiery eye and distended nostril, seemed to breathe defiance to the Christians. "But what were the feelings of the Spanish cavaliers when they beheld, tied to the tail of his steed, and dragged in the dust, the very inscription, 'AVE MARIA,' which Hernan Perez del Pulgar had affixed to the door of the mosque! A burst of horror and indignation broke forth from the army. Hernan was not at hand, to maintain his previous achievement; but one of his young companions in arms, Garcilasso de la Vega by name, putting spurs to his horse, galloped to the hamlet of Zubia, threw himself on his knees before the king, and besought permission to accept the defiance of this insolent infidel, and to revenge the insult offered to our Blessed Lady. The request was too pious to be refused. Garcilasso remounted his steed, closed his helmet, graced by four sable plumes, grasped his buckler of Flemish workmanship, and his lance of matchless temper, and defied the haughty Moor in the midst of his career. A combat took place in view of the two armies and of the Castilian court. The Moor was powerful in wielding his weapons, and dexterous in managing his steed. He was of larger frame than Garcilasso, and more completely aimed, and the Christians trembled for their champion. The shock of their encounter was dreadful; their lances were shivered, and sent up splinters in the air. Garcilasso was thrown back in his saddle—his horse made a wide career before he could recover, gather up the reins, and return to the conflict. They now encountered each other with swords. The Moor circled round his opponent, as a hawk circles when about to make a swoop; his steed obeyed his rider with matchless quickness; at every attack of the infidel, it seemed as if the Christian knight must sink beneath his flashing scimiter. But if Garcilasso was inferior to him in power, he was superior in agility; many of his blows he parried; others he received upon his Flemish shield, which was proof against the Damascus blade. The blood streamed from numerous wounds received by either warrior. The Moor, seeing his antagonist exhausted, availed himself of his superior force, and, grappling, endeavored to wrest him from his saddle. They both fell to earth; the Moor placed his knee upon the breast of his victim, and, brandishing his dagger, aimed a blow at his throat. A cry of despair was uttered by the Christian warriors, when suddenly they beheld the Moor rolling lifeless in the dust. Garcilasso had shortened his sword, and, as his adversary raised his arm to strike, had pierced him to the heart. It was a singular and miraculous victory,' says Fray Antonio Agapida; 'but the Christian knight was armed by the sacred nature of his cause, and the Holy Virgin gave him strength, like another David, to slay this gigantic champion of the Gentiles.' "The laws of chivalry were observed throughout the combat—no one interfered on either side. Garcilasso now despoiled his adversary; then, rescuing the holy inscription of 'AVE MARIA' from its degrading situation, he elevated it on the point of his sword, and bore it off as a signal of triumph, amidst the rapturous shouts of the Christian army. "The sun had now reached the meridian, and the hot blood of the Moors was inflamed by its rays, and by the sight of the defeat of their champion. Muza ordered two pieces of ordnance to open a fire upon the Christians. A confusion was produced in one part of their ranks: Muza called to the chiefs of the army, 'Let us waste no more time in empty challenges—let us charge upon the enemy: he who assaults has always an advantage in the combat.' So saying, he rushed forward, followed by a large body of horse and foot, and charged so furiously upon the advance guard of the Christians, that he drove it in upon the battalion of the Marques of Cadiz. "The gallant marques now considered himself absolved from all further obedience to the queen's commands. He gave the signal to attack. 'Santiago!' was shouted along the line; and he pressed forward to the encounter, with his battalion of twelve hundred lances. The other cavaliers followed his example, and the battle instantly became general. "When the king and queen beheld the armies thus rushing to the combat, they threw themselves on their knees, and implored the Holy Virgin to protect her faithful warriors. The prince and princess, the ladies of the court, and the prelates and friars who were present, did the same; and the effect of the prayers of these illustrious and saintly persons was immediately apparent. The fierceness with which the Moors had rushed to the attack was suddenly cooled; they were bold and adroit for a skirmish, but unequal to the veteran Spaniards in the open field. A panic seized upon the foot-soldiers—they turned and took to flight. Muza and his cavaliers in vain endeavored to

rally them. Some took refuge in the mountains; but the greater part fled to the city, in such confusion that they overturned and trampled upon each other. The Christians pursued them to the very gates. Upwards of two thousand were either killed, wounded, or taken prisoners; and the two pieces of ordnance were brought off as trophies of the victory. Not a Christian lance but was bathed that day in the blood of an infidel. "Such was the brief but bloody action which was known among the Christian warriors by the name of 'The Queen's Skirmish;' for when the Marques of Cadiz waited upon her majesty to apologize for breaking her commands, he attributed the victory entirely to her presence. The queen, however, insisted that it was all owing to her troops being led on by so valiant a commander. Her majesty had not yet recovered from her agitation at beholding so terrible a scene of bloodshed, though certain veterans present pronounced it as gay and gentle a skirmish as they had ever witnessed."

The charm of the "Alhambra" is largely in the leisurely, loitering, dreamy spirit in which the temporary American resident of the ancient palace-fortress entered into its moldering beauties and romantic associations, and in the artistic skill with which he wove the commonplace daily life of his attendant: there into the more brilliant woof of its past. The book abounds in delightful legends, and yet then are all so touched with the author's airy humor that our credulity is never overtaxed; we imbibe all the romantic interest of the place without for a moment losing our hold upon reality. The enchantment of this Moorish paradise become part of our mental possessions, without the least shock to our common sense. After a few days of residence in the part of the Alhambra occupied by Dame Tia Antonia and her family, of which the handmaid Dolores was the most fascinating member, Irving succeeded in establishing himself in a remote and vacant part of the vast pile, in a suite of delicate and elegant chambers with secluded gardens and fountains, that had once been occupied by the beautiful Elizabeth of Farnese, daughter of the Duke of Parma, and more than four centuries ago by a Moorish beauty named Lindaraxa, who flourished in the court of Muhamed the Left-Handed. These solitary and ruined chambers had their own terrors and enchantments, and for the first nights gave the author little but sinister suggestions and grotesque food for his imagination. But familiarity dispersed the gloom and the superstitious fancies.

"In the course of a few evenings a thorough change took place in the scene and its associations. The moon, which, when I took possession of my new apartments, was invisible, gradually gained each evening upon the darkness of the night, and at length rolled in full splendor above the towers, pouring a flood of tempered light into every court and hall. The garden beneath my window, before wrapped in gloom, was gently lighted up; the orange and citron trees were tipped with silver; the fountain sparkled in the moonbeams, and even the blush of the rose was faintly visible. "I now felt the poetic merit of the Arabic inscription on the walls: 'How beauteous is this garden; where the flowers of the earth vie with the stars of heaven. What can compare with the vase of yon alabaster fountain filled with crystal water? nothing but the moon in her fullness, shining in the midst of an unclouded sky!' "On such heavenly nights I would sit for hours at my window inhaling the sweetness of the garden, and musing on the checkered fortunes of those whose history was dimly shadowed out in the elegant memorials around. Sometimes, when all was quiet, and the clock from the distant cathedral of Granada struck the midnight hour, I have sallied out on another tour and wandered over the whole building; but how different from my first tour! No longer dark and mysterious; no longer peopled with shadowy foes; no longer recalling scenes of violence and murder; all was open, spacious, beautiful; everything called up pleasing and romantic fancies; Lindaraxa once more walked in her garden; the gay chivalry of Moslem Granada once more glittered about the Court of Lions! Who can do justice to a moonlight night in such a climate and such a place? The temperature of a summer midnight in Andalusia is perfectly ethereal. We seem lifted up into a purer atmosphere; we feel a serenity of soul, a buoyancy of spirits, an elasticity of frame, which render mere existence happiness. But when moonlight is added to all this, the effect is like enchantment. Under its plastic sway the Alhambra seems to regain its pristine glories. Every rent and chasm of time, every mouldering tint and weather-stain, is gone; the marble resumes its original whiteness; the long colonnades brighten in the moonbeams; the halls are illuminated with a softened radiance, we tread the enchanted palace of an Arabian tale. "What a delight, at such a time, to ascend to the little airy pavilion of the queen's toilet (el tocador de la reyna), which, like a bird-cage, overhangs the valley of the Darro, and gaze from its light arcades upon the moonlight prospect! To the right, the swelling mountains of the Sierra Nevada, robbed of their ruggedness and softened into a fairy land, with their snowy summits gleaming like silver clouds against the deep blue sky. And then to lean over the parapet of the Tocador and gaze down upon Granada and the Albaycin spread out like a map below; all buried in deep repose; the white palaces and convents sleeping in the moonshine, and beyond all these the vapory vega fading away like a dreamland in the distance. "Sometimes the faint click of castanets rises from the Alameda, where some gay Andalusians are dancing away the summer night. Sometimes the dubious tones of a guitar and the notes of an amorous voice, tell perchance the whereabouts of some moonstruck lover serenading his lady's window. "Such is a faint picture of the moonlight nights I have passed loitering about the courts and halls and balconies of this most suggestive pile; 'feeding my fancy with sugared suppositions,' and enjoying that mixture of reverie and sensation which steals away existence in a southern climate; so that it has been almost morning before I have retired to bed, and been lulled to sleep by the falling waters of the fountain of Lindaraxa."

One of the writer's vantage points of observation was a balcony of the central window of the Hall of Ambassadors, from which he had a magnificent prospect of mountain, valley, and vega, and could look down upon a busy scene of human life in an alameda, or public walk, at the foot of the hill, and the suburb of the city, filling the narrow gorge below. Here the author used to sit for hours, weaving histories out of the casual incidents passing under his eye, and the occupations of the busy mortals below. The following passage exhibits his power in transmuting the commonplace life of the present into material perfectly in keeping with the romantic associations of the place:

*"There was scarce a pretty face or a striking figure that I daily saw, about which I had not thus gradually framed a dramatic story, though some of my characters would occasionally act in direct opposition to the part assigned them, and disconcert the whole drama. Reconnoitring one day with my glass the streets of the Albaycin, I beheld the procession of a novice about to take the veil; and remarked several circumstances which excited the strongest sympathy in the fate of the youthful being thus about to be consigned to a living tomb. I ascertained to my satisfaction that she was beautiful, and, from the paleness of her cheek, that she was a victim rather than a votary. She was arrayed in bridal garments, and decked with a chaplet of white flowers, but her heart evidently revolted at this mockery of a spiritual union, and yearned after its earthly loves. A tall, stern-looking man walked near her in the procession: it was, of course, the tyrannical father, who, from some bigoted or sordid motive, had compelled this sacrifice. Amid the crowd was a dark, handsome youth, in Andalusian garb, who seemed to fix on her an eye of agony. It was doubtless the secret lover from whom she was forever to be separated. My indignation rose as I noted the malignant expression painted on the countenances of the attendant monks and friars. The procession arrived at the chapel of the convent; the sun gleamed for the last time upon the chaplet of the poor novice, as she crossed the fatal threshold and disappeared within the building. The throng poured in with cowl, and cross, and minstrelsy; the lover paused for a moment at the door. I could divine the tumult of his feelings; but he mastered them, and entered. There was a long interval. I pictured to myself the scene passing within: the poor novice despoiled of her transient finery, and clothed in the conventual garb; the bridal chaplet taken from her brow, and her beautiful head shorn of its long silken tresses. I heard her murmur the irrevocable vow. I saw her extended on a bier; the death-pall spread over her; the funeral service performed that proclaimed her dead to the world; her sighs were drowned in the deep tones of the organ, and the plaintive requiem of the nuns; the father looked on, unmoved, without a tear; the lover—no my imagination refused to portray the anguish of the lover—there the picture remained a blank. "After a time the throng again poured forth and dispersed various ways, to enjoy the light of the sun and mingle with the stirring scenes of life; but the victim, with her bridal chaplet, was no longer there. The door of the convent closed that severed her from the world forever. I saw the father and the lover issue forth; they were in earnest conversation. The latter was vehement in his gesticulations; I expected some violent termination to my drama; but an angle of a building interfered and closed the scene. My eye afterwards was frequently turned to that convent with painful interest. I remarked late at night a solitary light twinkling from a remote lattice of one of its towers. 'There,' said I, the unhappy nun sits weeping in her cell, while perhaps her lover paces the street below in unavailing anguish.'... "The officious Mateo interrupted my meditations and destroyed in an instant the cobweb tissue of my fancy. With his usual zeal he had gathered facts concerning the scene, which put my fictions all to flight. The heroine of my romance was neither young nor handsome; she had no lover; she had entered the convent of her own free will, as a respectable asylum, and was one of the most cheerful residents within its walls. "It was some little while before I could forgive the wrong done me by the nun in being thus happy in her cell, in contradiction to all the rules of romance; I diverted my spleen, however, by watching, for a day or two, the pretty coquetries of a dark-eyed brunette, who, from the covert of a balcony shrouded with flowering shrubs and a silken awning, was carrying on a mysterious correspondence with a handsome, dark, well-whiskered cavalier, who lurked frequently in the street beneath her window. Sometimes I saw him at an early hour, stealing forth wrapped to the eyes in a mantle. Sometimes he loitered at a corner, in various disguises, apparently waiting for a private signal to slip into the house. Then there was the tinkling of a guitar at night, and a lantern shifted from place to place in the balcony. I imagined another intrigue like that of *Almaviva*, but was again disconcerted in all my suppositions. The supposed lover turned out to be the husband of the lady, and a noted contrabandista; and all his mysterious signs and movements had doubtless some smuggling scheme in view.... "I occasionally amused myself with noting from this balcony the gradual changes of the scenes below, according to the different stages of the day. "Scarce has the gray dawn streaked the sky, and the earliest cock crowed from the cottages of the hill-side, when the suburbs give sign of reviving animation; for the fresh hours of dawning are precious in the summer season in a sultry climate. All are anxious to get the start of the sun, in the business of the day. The muleteer drives forth his loaded train for the journey; the traveler slings his carbine behind his saddle, and mounts his steed at the gate of the hostel; the brown peasant from the country urges forward his loitering beasts, laden with panniers of sunny fruit and fresh dewy vegetables, for already the thrifty housewives are hastening to the market. "The sun is up and sparkles along the valley, tipping the transparent foliage of the groves. The matin bells resound melodiously through the pure bright air, announcing the hour of*

devotion. The muleteer halts his burdened animals before the chapel, thrusts his staff through his belt behind, and enters with hat in hand, smoothing his coal-black hair, to hear a mass, and to put up a prayer for a prosperous wayfaring across the sierra. And now steals forth on fairy foot the gentle Senora, in trim basquina, with restless fan in hand, and dark eye flashing from beneath the gracefully folded mantilla; she seeks some well-frequented church to offer up her morning orisons; but the nicely adjusted dress, the dainty shoe and cobweb stocking, the raven tresses exquisitely braided, the fresh-plucked rose, gleaming among them like a gem, show that earth divides with Heaven the empire of her thoughts. Keep an eye upon her, careful mother, or virgin aunt, or vigilant duenna, whichever you may be, that walk behind! "As the morning advances, the din of labor augments on every side; the streets are thronged with man, and steed, and beast of burden, and there is a hum and murmur, like the surges of the ocean. As the sun ascends to his meridian, the hum and bustle gradually decline; at the height of noon there is a pause. The panting city sinks into lassitude, and for several hours there is a general repose. The windows are closed, the curtains drawn, the inhabitants retired into the coolest recesses of their mansions; the full-fed monk snores in his dormitory; the brawny porter lies stretched on the pavement beside his burden; the peasant and the laborer sleep beneath the trees of the Alameda, lulled by the sultry chirping of the locust. The streets are deserted, except by the water-carrier, who refreshes the ear by proclaiming the merits of his sparkling beverage, 'colder than the mountain snow (mas fria que la nieve).' "As the sun declines, there is again a gradual reviving, and when the vesper bell rings out his sinking knell, all nature seems to rejoice that the tyrant of the day has fallen. Now begins the bustle of enjoyment, when the citizens pour forth to breathe the evening air, and revel away the brief twilight in the walks and gardens of the Darro and Xenil. "As night closes, the capricious scene assumes new features. Light after light gradually twinkles forth; here a taper from a balconied window; there a votive lamp before the image of a saint. Thus, by degrees, the city emerges the banners of the haughty chiefs of Spain, and flaunted in triumph through these Moslem halls. I picture to myself Columbus, the future discoverer of a world, taking his modest stand in a remote corner, the humble and neglected spectator of the pageant. I see in imagination the Catholic sovereigns prostrating themselves before the altar, and pouring forth thanks for their victory; while the vaults resound with sacred minstrelsy and the deep-toned Te Deum. "The transient illusion is over,—the pageant melts from the fancy, —monarch, priest, and warrior return into oblivion with the poor Moslems over whom they exulted. The hall of their triumph is waste and desolate. The bat flits about its twilight vault, and the owl hoots from the neighboring tower of Comares."

It is a Moslem tradition that the court and army of Boabdil the Unfortunate, the last Moorish king of Granada, are shut up in the mountain by a powerful enchantment, and that it is written in the book of fate that when the enchantment is broken, Boabdil will descend from the mountain at the head of his army, resume his throne in the Alhambra, and, gathering together the enchanted warriors from all parts of Spain, reconquer the peninsula. Nothing in this volume is more amusing and at the same time more poetic and romantic than the story of "Governor Manco and the Soldier," in which this legend is used to cover the exploit of a dare-devil contrabandista. But it is too long to quote. I take, therefore, another story, which has something of the same elements, that of a merry mendicant student of Salamanca, Don Vicente by name, who wandered from village to village, and picked up a living by playing the guitar for the peasants, among whom he was sure of a hearty welcome. In the course of his wandering he had found a seal-ring, having for its device the cabalistic sign invented by King Solomon the Wise, and of mighty power in all cases of enchantment.

"At length he arrived at the great object of his musical vagabondizing, the far-famed city of Granada, and hailed with wonder and delight its Moorish towers, its lovely vega, and its snowy mountains glistening through a summer atmosphere. It is needless to say with what eager curiosity he entered its gates and wandered through its streets, and gazed upon its Oriental monuments. Every female face peering through a window or beaming from a balcony was to him a Zorayda or a Zelinda, nor could he meet a stately dame on the Alameda but he was ready to fancy her a Moorish princess, and to spread his student's robe beneath her feet. "His musical talent, his happy humor, his youth and his good looks, won him a universal welcome in spite of his ragged robes, and for several days he led a gay life in the old Moorish capital and its environs. One of his occasional haunts was the fountain of Avellanos, in the valley of Darro. It is one of the popular resorts of Granada, and has been so since the days of the Moors; and here the student had an opportunity of pursuing his studies of female beauty; a branch of study to which he was a little prone. "Here he would take his seat with his guitar, improvise love-ditties to admiring groups of majos and majas, or prompt with his music the ever-ready dance. He was thus engaged one evening when he beheld a padre of the church advancing, at whose approach every one touched the hat. He was evidently a man of consequence; he certainly was a mirror of good if not of holy living; robust and rosy-faced, and breathing at every pore with the warmth of the weather and the exercise of the walk. As he passed along he would every now and then draw a maravedi out of his pocket and bestow it on a beggar, with an air of signal beneficence. 'Ah, the blessed father!' would be the cry; long life to him, and may he soon be a bishop!" "To aid his steps in ascending the hill he leaned gently now and then on the arm of a handmaid, evidently the pet-lamb of this kindest of pastors. Ah, such a damsel! Andalus from head

to foot; from the rose in her hair, to the fairy shoe and lacework stocking; Andalus in every movement; in every undulation of the body:—ripe, melting Andalus! But then so modest!—so shy!—ever, with downcast eyes, listening to the words of the padre; or, if by chance she let flash a side glance, it was suddenly checked and her eyes once more cast to the ground. “The good padre looked benignantly on the company about the fountain, and took his seat with some emphasis on a stone bench, while the handmaid hastened to bring him a glass of sparkling water. He sipped it deliberately and with a relish, tempering it with one of those spongy pieces of frosted eggs and sugar so dear to Spanish epicures, and on returning the glass to the hand of the damsel pinched her cheek with infinite loving-kindness. “Ah, the good pastor!” whispered the student to himself; ‘what a happiness would it be to be gathered into his fold with such a pet-lamb for a companion!’ “But no such good fare was likely to befall him. In vain he essayed those powers of pleasing which he had found so irresistible with country curates and country lasses. Never had he touched his guitar with such skill; never had he poured forth more soul-moving ditties, but he had no longer a country curate or country lass to deal with. The worthy priest evidently did not relish music, and the modest damsel never raised her eyes from the ground. They remained but a short time at the fountain; the good padre hastened their return to Granada. The damsel gave the student one shy glance in retiring; but it plucked the heart out of his bosom! “He inquired about them after they had gone. Padre Tomas was one of the saints of Granada, a model of regularity; punctual in his hour of rising; his hour of taking a paseo for an appetite; his hours of eating; his hour of taking his siesta; his hour of playing his game of tresillo, of an evening, with some of the dames of the cathedral circle; his hour of supping, and his hour of retiring to rest, to gather fresh strength for another day’s round of similar duties. He had an easy sleek mule for his riding; a matronly housekeeper skilled in preparing tidbits for his table; and the pet-lamb, to smooth his pillow at night and bring him his chocolate in the morning. “Adieu now to the gay, thoughtless life of the student; the side-glance of a bright eye had been the undoing of him. Day and night he could not get the image of this most modest damsel out of his mind. He sought the mansion of the padre. Alas! it was above the class of houses accessible to a strolling student like himself. The worthy padre had no sympathy with him; he had never been Estudiante sopista, obliged to sing for his supper. He blockaded the house by day, catching a glance of the damsel now and then as she appeared at a casement; but these glances only fed his flame without encouraging his hope. He serenaded her balcony at night, and at one time was flattered by the appearance of something white at a window. Alas, it was only the nightcap of the padre. “Never was lover more devoted; never damsel more shy: the poor student was reduced to despair. At length arrived the eve of St. John, when the lower classes of Granada swarm into the country, dance away the afternoon, and pass midsummer’s night on the banks of the Darro and the Xenil. Happy are they who on this eventful night can wash their faces in those waters just as the cathedral bell tells midnight; for at that precise moment they have a beautifying power. The student, having nothing to do, suffered himself to be carried away by the holiday-seeking throng until he found himself in the narrow valley of the Darro, below the lofty hill and ruddy towers of the Alhambra. The dry bed of the river; the rocks which border it; the terraced gardens which overhang it, were alive with variegated groups, dancing under the vines and fig-trees to the sound of the guitar and castanets. “The student remained for some time in doleful dumps, leaning against one of the huge misshapen stone pomegranates which adorn the ends of the little bridge over the Darro. He cast a wistful glance upon the merry scene, where every cavalier had his dame; or, to speak more appropriately, every Jack his Jill; sighed at his own solitary state, a victim to the black eye of the most unapproachable of damsels, and repined at his ragged garb, which seemed to shut the gate of hope against him. “By degrees his attention was attracted to a neighbor equally solitary with himself. This was a tall soldier, of a stern aspect and grizzled beard, who seemed posted as a sentry at the opposite pomegranate. His face was bronzed by time; he was arrayed in ancient Spanish armor, with buckler and lance, and stood immovable as a statue. What surprised the student was, that though thus strangely equipped, he was totally unnoticed by the passing throng, albeit that many almost brushed against him. “This is a city of old time peculiarities,’ thought the student, I and doubtless this is one of them with which the inhabitants are too familiar to be surprised.’ His own curiosity, however, was awakened, and being of a social disposition, he accosted the soldier. “A rare old suit of armor that which you wear, comrade. May I ask what corps you belong to?’ “The soldier gasped out a reply from a pair of jaws which seemed to have rusted on their hinges. “The royal guard of Ferdinand and Isabella.’ “Santa Maria! Why, it is three centuries since that corps was in service.’ “And for three centuries have I been mounting guard. Now I trust my tour of duty draws to a close. Dost thou desire fortune?’ “The student held up his tattered cloak in reply. “I understand thee. If thou hast faith and courage, follow me, and thy fortune is made.’ “Softly, comrade; to follow thee would require small courage in one who has nothing to lose but life and an old guitar, neither of much value; but my faith is of a different matter, and not to be put in temptation. If it be any criminal act by which I am to mend my fortune, think not my ragged coat will make me undertake it.’ “The soldier turned on him a look of high displeasure. ‘My sword,’ said he, ‘has never been drawn but in the cause of the faith and the throne. I am a ‘Cristiano viejo;’ trust in me and fear no evil.’ “The student followed him wondering. He observed that no one heeded their conversation, and that the soldier made his way through the various

groups of idlers unnoticed, as if invisible. "Crossing the bridge, the soldier led the way by a narrow and steep path past a Moorish mill and aqueduct, and up the ravine which separates the domains of the Generalife from those of the Alhambra. The last ray of the sun shone upon the red battlements of the latter, which beetled far above; and the convent-bells were proclaiming the festival of the ensuing day. The ravine was overshadowed by fig-trees, vines, and myrtles, and the outer towers and walls of the fortress. It was dark and lonely, and the twilight-loving bats began to flit about. At length the soldier halted at a remote and ruined tower apparently intended to guard a Moorish aqueduct. He struck the foundation with the butt-end of his spear. A rumbling sound was heard, and the solid stones yawned apart, leaving an opening as wide as a door. "Enter in the name of the Holy Trinity," said the soldier, "and fear nothing." The student's heart quaked, but he made the sign of the cross, muttered his Ave Maria, and followed his mysterious guide into a deep vault cut out of the solid rock under the tower, and covered with Arabic inscriptions. The soldier pointed to a stone seat hewn along one side of the vault. 'Behold,' said he, 'my couch for three hundred years.' The bewildered student tried to force a joke. 'By the blessed St. Anthony,' said he, 'but you must have slept soundly, considering the hardness of your couch.' "On the contrary, sleep has been a stranger to these eyes; incessant watchfulness has been my doom. Listen to my lot. I was one of the royal guards of Ferdinand and Isabella; but was taken prisoner by the Moors in one of their sorties, and confined a captive in this tower. When preparations were made to surrender the fortress to the Christian sovereigns, I was prevailed upon by an alfaqui, a Moorish priest, to aid him in secreting some of the treasures of Boabdil in this vault. I was justly punished for my fault. The alfaqui was an African necromancer, and by his infernal arts cast a spell upon me—to guard his treasures. Something must have happened to him, for he never returned, and here have I remained ever since, buried alive. Years and years have rolled away; earthquakes have shaken this hill; I have heard stone by stone of the tower above tumbling to the ground, in the natural operation of time; but the spell-bound walls of this vault set both time and earthquakes at defiance. "Once every hundred years, on the festival of St. John, the enchantment ceases to have thorough sway; I am permitted to go forth and post myself upon the bridge of the Darro, where you met me, waiting until some one shall arrive who may have power to break this magic spell. I have hitherto mounted guard there in vain. I walk as in a cloud, concealed from mortal sight. You are the first to accost me for now three hundred years. I behold the reason. I see on your finger the seal-ring of Solomon the Wise, which is proof against all enchantment. With you it remains to deliver me from this awful dungeon, or to leave me to keep guard here for another hundred years.' "The student listened to this tale in mute wonderment. He had heard many tales of treasures shut up under strong enchantment in the vaults of the Alhambra, but had treated them as fables. He now felt the value of the seal-ring, which had, in a manner, been given to him by St. Cyprian. Still, though armed by so potent a talisman, it was an awful thing to find himself *tete-a-tete* in such a place with an enchanted soldier, who, according to the laws of nature, ought to have been quietly in his grave for nearly three centuries. "A personage of this kind, however, was quite out of the ordinary run, and not to be trifled with, and he assured him he might rely upon his friendship and good will to do everything in his power for his deliverance. "I trust to a motive more powerful than friendship," said the soldier. "He pointed to a ponderous iron coffer, secured by locks inscribed with Arabic characters. 'That coffer,' said he, 'contains countless treasure in gold and jewels and precious stones. Break the magic spell by which I am enthralled, and one half of this treasure shall be thine.' "But how am I to do it?" "The aid of a Christian priest and a Christian maid is necessary. The priest to exorcise the powers of darkness; the damsel to touch this chest with the seal of Solomon. This must be done at night. But have a care. This is solemn work, and not to be effected by the carnal-minded. The priest must be a Cristiano viejo, a model of sanctity; and must mortify the flesh before he comes here, by a rigorous fast of four-and-twenty hours: and as to the maiden, she must be above reproach, and proof against temptation. Linger not in finding such aid. In three days my furlough is at an end; if not delivered before midnight of the third, I shall have to mount guard for another century.' "Fear not," said the student, 'I have in my eye the very priest and damsel you describe; but how am I to regain admission to this tower?' "The seal of Solomon will open the way for thee.' "The student issued forth from the tower much more gayly than he had entered. The wall closed behind him, and remained solid as before. "The next morning he repaired boldly to the mansion of the priest, no longer a poor strolling student, thrumming his way with a guitar; but an ambassador from the shadowy world, with enchanted treasures to bestow. No particulars are told of his negotiation, excepting that the zeal of the worthy priest was easily kindled at the idea of rescuing an old soldier of the faith and a strong-box of King Chico from the very clutches of Satan; and then what alms might be dispensed, what churches built, and how many poor relatives enriched with the Moorish treasure! "As to the immaculate handmaid, she was ready to lend her hand, which was all that was required, to the pious work; and if a shy glance now and then might be believed, the ambassador began to find favor in her modest eyes. "The greatest difficulty, however, was the fast to which the good padre had to subject himself. Twice he attempted it, and twice the flesh was too strong for the spirit. It was only on the third day that he was enabled to withstand the temptations of the cupboard; but it was still a question whether he would hold out until the spell was broken. "At a late hour of the night the party groped their way up the ravine by the

light of a lantern, and bearing a basket with provisions for exorcising the demon of hunger so soon as the other demons should be laid in the Red Sea. "The seal of Solomon opened their way into the tower. They found the soldier seated on the enchanted strong-box, awaiting their arrival. The exorcism was performed in due style. The damsel advanced and touched the locks of the coffer with the seal of Solomon. The lid flew open; and such treasures of gold and jewels and precious stones as flashed upon the eye! "Here's cut and come again!" cried the student, exultingly, as he proceeded to cram his pockets. "Fairly and softly," exclaimed the soldier. 'Let us get the coffer out entire, and then divide: "They accordingly went to work with might and main; but it was a difficult task; the chest was enormously heavy, and had been imbedded there for centuries. While they were thus employed the good dominie drew on one side and made a vigorous onslaught on the basket, by way of exorcising the demon of hunger which was raging in his entrails. In a little while a fat capon was devoured, and washed down by a deep potation of Val de penas; and, by way of grace after meat, he gave a kind-hearted kiss to the pet-lamb who waited on him. It was quietly done in a corner, but the tell-tale walls babbled it forth as if in triumph. Never was chaste salute more awful in its effects. At the sound the soldier gave a great cry of despair; the coffer, which was half raised, fell back in its place and was locked once more. Priest, student, and damsel found themselves outside of the tower, the wall of which closed with a thundering jar. Alas! the good padre had broken his fast too soon! "When recovered from his surprise, the student would have reentered the tower, but learnt to his dismay that the damsel, in her fright, had let fall the seal of Solomon; it remained within the vault. "In a word, the cathedral bell tolled midnight; the spell was renewed; the soldier was doomed to mount guard for another hundred years, and there he and the treasure remain to this day—and all because the kind-hearted padre kissed his handmaid. 'Ah, father! father!' said the student, shaking his head ruefully, as they returned down the ravine, 'I fear there was less of the saint than the sinner in that kiss!' "Thus ends the legend as far as it has been authenticated. There is a tradition, however, that the student had brought off treasure enough in his pocket to set him up in the world; that he prospered in his affairs, that the worthy padre gave him the pet-lamb in marriage, by way of amends for the blunder in the vault; that the immaculate damsel proved a pattern for wives as she had been for handmaids, and bore her husband a numerous progeny; that the first was a wonder; it was born seven months after her marriage, and though a seven months' boy, was the sturdiest of the flock. The rest were all born in the ordinary course of time. "The story of the enchanted soldier remains one of the popular traditions of Granada, though told in a variety of ways; the common people affirm that he still mounts guard on midsummer eve beside the gigantic stone pomegranate on the bridge of the Darro; but remains invisible excepting to such lucky mortal as may possess the seal of Solomon."

These passages from the most characteristic of Irving's books do not by any means exhaust his variety, but they afford a fair measure of his purely literary skill, upon which his reputation must rest. To my apprehension this "charm" in literature is as necessary to the amelioration and enjoyment of human life as the more solid achievements of scholarship. That Irving should find it in the prosaic and materialistic conditions of the New World as well as in the tradition-laden atmosphere of the Old, is evidence that he possessed genius of a refined and subtle quality, if not of the most robust order.

X. LAST YEARS—THE CHARACTER OF HIS LITERATURE

The last years of Irving's life, although full of activity and enjoyment,—abated only by the malady which had so long tormented him,—offer little new in the development of his character, and need not much longer detain us. The calls of friendship and of honor were many, his correspondence was large, he made many excursions to scenes that were filled with pleasant memories, going even as far south as Virginia, and he labored assiduously at the "Life of Washington,"—attracted, however, now and then, by some other tempting theme. But his delight was in the domestic circle at Sunnyside. It was not possible that his occasional melancholy vein should not be deepened by change and death and the lengthening shade of old age. Yet I do not know the closing days of any other author of note that were more cheerful, serene, and happy than his. Of our author, in these latter days, Mr. George William Curtis put recently into his "Easy Chair" papers an artistically touched little portrait. "Irving was as quaint a figure," he says, "as the Diedrich Knickerbocker in the preliminary advertisement of the 'History of New York.' Thirty years ago he might have been seen on an autumnal afternoon tripping with an elastic step along Broadway, with 'low-quartered' shoes neatly tied, and a Talma cloak—a short garment that lung from the shoulders like the cape of a coat. There was a chirping, cheery, old-school air in his appearance which was undeniably Dutch, and most harmonious with the associations of his writing. He seemed, indeed, to have stepped out of his own books; and the cordial grace and humor of his address, if he stopped for a passing chat, were delightfully characteristic. He was then our most famous man of letters, but he was simply free from all self-consciousness and assumption and dogmatism." Congenial occupation was one secret of Irving's cheerfulness and contentment, no doubt. And he was called away as soon as his task was done, very soon after the last volume of the "Washington" issued from the press. Yet he lived long enough to receive the hearty approval of it from the literary men whose

familiarity with the Revolutionary period made them the best judges of its merits.

He had time also to revise his works. It is perhaps worthy of note that for several years, while he was at the height of his popularity, his books had very little sale. From 1842 to 1848 they were out of print; with the exception of some stray copies of a cheap Philadelphia edition, and a Paris collection (a volume of this, at my hand, is one of a series entitled a "Collection of Ancient and Modern British Authors"), they were not to be found. The Philadelphia publishers did not think there was sufficient demand to warrant a new edition. Mr. Irving and his friends judged the market more wisely, and a young New York publisher offered to assume the responsibility. This was Mr. George P. Putnam. The event justified his sagacity and his liberal enterprise. From July, 1848, to November, 1859, the author received on his copyright over eighty-eight thousand dollars. And it should be added that the relations between author and publisher, both in prosperity and in times of business disaster, reflect the highest credit upon both. If the like relations always obtained, we should not have to say, "May the Lord pity the authors in this world, and the publishers in the next."

I have outlined the life of Washington Irving in vain, if we have not already come to a tolerably clear conception of the character of the man and of his books. If I were to follow his literary method exactly, I should do nothing more. The idiosyncrasies of the man are the strength and weakness of his works. I do not know any other author whose writings so perfectly reproduce his character, or whose character may be more certainly measured by his writings. His character is perfectly transparent: his predominant traits were humor and sentiment; his temperament was gay with a dash of melancholy; his inner life and his mental operations were the reverse of complex, and his literary method is simple. He felt his subject, and he expressed his conception not so much by direct statement or description as by almost imperceptible touches and shadings here and there, by a diffused tone and color, with very little show of analysis. Perhaps it is a sufficient definition to say that his method was the sympathetic. In the end the reader is put in possession of the luminous and complete idea upon which the author has been brooding, though he may not be able to say exactly how the impression has been conveyed to him; and I doubt if the author could have explained his sympathetic process. He certainly would have lacked precision in any philosophical or metaphysical theme, and when, in his letters, he touches upon politics, there is a little vagueness of definition that indicates want of mental grip in that direction. But in the region of feeling his genius is sufficient to his purpose; either when that purpose is a highly creative one, as in the character and achievements of his Dutch heroes, or merely that of portraiture, as in the "Columbus" and the "Washington." The analysis of a nature so simple and a character so transparent as Irving's, who lived in the sunlight and had no envelope of mystery, has not the fascination that attaches to Hawthorne.

Although the direction of his work as a man of letters was largely determined by his early surroundings,—that is, by his birth in a land void of traditions, and into a society without much literary life, so that his intellectual food was of necessity a foreign literature that was at the moment becoming a little antiquated in the land of its birth, and his warm imagination was forced to revert to the past for that nourishment which his crude environment did not offer,—yet he was by nature a retrospective man. His face was set towards the past, not towards the future. He never caught the restlessness of this century, nor the prophetic light that shone in the faces of Coleridge, Shelley, and Keats; if he apprehended the stir of the new spirit, he still, by mental affiliation, belonged rather to the age of Addison than to that of Macaulay. And his placid, retrospective, optimistic strain pleased a public that were excited and harrowed by the mocking and lamenting of Lord Byron, and, singularly enough, pleased even the great pessimist himself.

His writings induce to reflection; to quiet musing, to tenderness for tradition; they amuse, they entertain, they call a check to the feverishness of modern life; but they are rarely stimulating or suggestive. They are better adapted, it must be owned, to please the many than the critical few, who demand more incisive treatment and a deeper consideration of the problems of life. And it is very fortunate that a writer who can reach the great public and entertain it can also elevate and refine its tastes, set before it high ideas, instruct it agreeably, and all this in a style that belongs to the best literature. It is a safe model for young readers; and for young readers there is very little in the overwhelming flood of to-day that is comparable to Irving's books, and especially, it seems to me, because they were not written for children.

Irving's position in American literature, or in that of the English tongue, will be determined only by the slow settling of opinion, which no critic can foretell, and the operation of which no criticism seems able to explain. I venture to believe, however, that the verdict will not be in accord with much of the present prevalent criticism. The service that he rendered to American letters no critic disputes; nor is there any question of our national indebtedness to him for investing a crude and new land with the enduring charms of romance and tradition. In this respect, our obligation to him is that of Scotland to Scott and Burns; and it is an obligation due only, in all history, to here and there a fortunate creator to whose genius opportunity is kind. The Knickerbocker Legend and the romance with which Irving has invested the Hudson are a priceless legacy; and this would remain an imperishable possession in popular tradition if the literature creating it were destroyed. This sort of creation is unique in modern times. New York is the Knickerbocker city; its whole social life remains colored by his fiction; and the romantic background it owes to him in some measure supplies to it what great age has given to European cities. This creation is sufficient to secure for him an immortality, a length of earthly remembrance that all the rest of his writings together might not give.

Irving was always the literary man; he had the habits, the idiosyncrasies, of his small genus. I mean that he regarded life not from the philanthropic, the economic, the political, the philosophic, the metaphysic, the scientific, or the theologic, but purely from the literary point of view. He belongs to that small class of which Johnson and Goldsmith are perhaps as good types as any, and to which America has added very few. The literary point of view is taken by few in any generation; it may seem to the world of very little consequence in the pressure of all the complex interests of life, and it may even seem trivial amid the tremendous energies applied to immediate affairs; but it is the point of view that endures; if its creations do not mold human life, like the Roman law, they remain to charm and civilize, like the poems of Horace. You must not ask more of them than that. This attitude toward life is defensible on the highest grounds. A man with Irving's gifts has the right to take the position of an observer and describer, and not to be called on for a more active participation in affairs than he chooses to take. He is doing the world the highest service of which he is

capable, and the most enduring it can receive from any man. It is not a question whether the work of the literary man is higher than that of the reformer or the statesman; it is a distinct work, and is justified by the result, even when the work is that of the humorist only. We recognize this in the case of the poet. Although Goethe has been reproached for his lack of sympathy with the liberalizing movement of his day (as if his novels were quieting social influences), it is felt by this generation that the author of "Faust" needs no apology that he did not spend his energies in the effervescing politics of the German states. I mean, that while we may like or dislike the man for his sympathy or want of sympathy, we concede to the author the right of his attitude; if Goethe had not assumed freedom from moral responsibility, I suppose that criticism of his aloofness would long ago have ceased. Irving did not lack sympathy with humanity in the concrete; it colored whatever he wrote. But he regarded the politics of his own country, the revolutions in France, the long struggle in Spain, without heat; and he held aloof from projects of agitation and reform, and maintained the attitude of an observer, regarding the life about him from the point of view of the literary artist, as he was justified in doing.

Irving had the defects of his peculiar genius, and these have no doubt helped to fix upon him the complimentary disparagement of "genial." He was not aggressive; in his nature he was wholly unpartisan, and full of lenient charity; and I suspect that his kindly regard of the world, although returned with kindly liking, cost him something of that respect for sturdiness and force which men feel for writers who flout them as fools in the main. Like Scott, he belonged to the idealists, and not to the realists, whom our generation affects. Both writers stimulate the longing for something better. Their creed was short: "Love God and honor the King." It is a very good one for a literary man, and might do for a Christian. The supernatural was still a reality in the age in which they wrote. Irving's faith in God and his love of humanity were very simple; I do not suppose he was much disturbed by the deep problems that have set us all adrift. In every age, whatever is astir, literature, theology, all intellectual activity, takes one and the same drift, and approximates in color. The bent of Irving's spirit was fixed in his youth, and he escaped the desperate realism of this generation, which has no outcome, and is likely to produce little that is noble.

I do not know how to account, on principles of culture which we recognize, for our author's style. His education was exceedingly defective, nor was his want of discipline supplied by subsequent desultory application. He seems to have been born with a rare sense of literary proportion and form; into this, as into a mold, were run his apparently lazy and really acute observations of life. That he thoroughly mastered such literature as he fancied there is abundant evidence; that his style was influenced by the purest English models is also apparent. But there remains a large margin for wonder how, with his want of training, he could have elaborated a style which is distinctively his own, and is as copious, felicitous in the choice of words, flowing, spontaneous, flexible, engaging, clear, and as little wearisome when read continuously in quantity as any in the English tongue. This is saying a great deal, though it is not claiming for him the compactness, nor the robust vigor, nor the depth of thought, of many other masters in it. It is sometimes praised for its simplicity. It is certainly lucid, but its simplicity is not that of Benjamin Franklin's style; it is often ornate, not seldom somewhat diffuse, and always exceedingly melodious. It is noticeable for its metaphorical felicity. But it was not in the sympathetic nature of the author, to which I just referred, to come sharply to the point. It is much to have merited the eulogy of Campbell that he had "added clarity to the English tongue." This elegance and finish of style (which seems to have been as natural to the man as his amiable manner) is sometimes made his reproach, as if it were his sole merit, and as if he had concealed under this charming form a want of substance. In literature form is vital. But his case does not rest upon that. As an illustration his "Life of Washington" may be put in evidence. Probably this work lost something in incisiveness and brilliancy by being postponed till the writer's old age. But whatever this loss, it is impossible for any biography to be less pretentious in style, or less ambitious in proclamation. The only pretension of matter is in the early chapters, in which a more than doubtful genealogy is elaborated, and in which it is thought necessary to Washington's dignity to give a fictitious importance to his family and his childhood, and to accept the southern estimate of the hut in which he was born as a "mansion." In much of this false estimate Irving was doubtless misled by the fables of Weems. But while he has given us a dignified portrait of Washington, it is as far as possible removed from that of the smileless prig which has begun to weary even the popular fancy. The man he paints is flesh and blood, presented, I believe, with substantial faithfulness to his character; with a recognition of the defects of his education and the deliberation of his mental operations; with at least a hint of that want of breadth of culture and knowledge of the past, the possession of which characterized many of his great associates; and with no concealment that he had a dower of passions and a temper which only vigorous self-watchfulness kept under. But he portrays, with an admiration not too highly colored, the magnificent patience, the courage to bear misconstruction, the unflinching patriotism, the practical sagacity, the level balance of judgment combined with the wisest toleration, the dignity of mind, and the lofty moral nature which made him the great man of his epoch. Irving's grasp of this character; his lucid marshaling of the scattered, often wearisome and uninteresting details of our dragging, unpicturesque Revolutionary War; his just judgment of men; his even, almost judicial, moderation of tone; and his admirable proportion of space to events, render the discussion of style in reference to this work superfluous. Another writer might have made a more brilliant performance: descriptions sparkling with antitheses, characters projected into startling attitudes by the use of epithets; a work more exciting and more piquant, that would have started a thousand controversies, and engaged the attention by daring conjectures and attempts to make a dramatic spectacle; a book interesting and notable, but false in philosophy, and untrue in fact.

When the "Sketch-Book" appeared, an English critic said it should have been first published in England, for Irving was an English writer. The idea has been more than once echoed here. The truth is, that while Irving was intensely American in feeling, he was, first of all, a man of letters, and in that capacity he was cosmopolitan; he certainly was not insular. He had a rare accommodation of tone to his theme. Of England, whose traditions kindled his susceptible fancy, he wrote as Englishmen would like to write about it. In Spain he was saturated with the romantic story of the people and the fascination of the clime; and he was so true an interpreter of both as to earn from the Spaniards the title of "the poet Irving." I chanced once, in an inn at Frascati, to take up "The Tales of a Traveller," which I had not seen for many years. I expected to revive the somewhat faded humor and fancy of the past generation. But I found not only a sprightly humor and vivacity

which are modern, but a truth to Italian local color that is very rare in any writer foreign to the soil. As to America, I do not know what can be more characteristically American than the Knickerbocker, the Hudson River tales, the sketches of life and adventure in the far West. But underneath all this diversity there is one constant quality,—the flavor of the author. Open by chance and read almost anywhere in his score of books,—it may be the “Tour on the Prairies,” the familiar dream of the Alhambra, or the narratives of the brilliant exploits of New World explorers; surrender yourself to the flowing current of his transparent style, and you are conscious of a beguilement which is the crowning excellence of all lighter literature, for which we have no word but “charm.”

The consensus of opinion about Irving in England and America for thirty years was very remarkable. He had a universal popularity rarely enjoyed by any writer. England returned him to America medaled by the king, honored by the university which is chary of its favors, followed by the applause of the whole English people. In English households, in drawing-rooms of the metropolis, in political circles no less than among the literary coteries, in the best reviews, and in the popular newspapers the opinion of him was pretty much the same. And even in the lapse of time and the change of literary fashion authors so unlike as Byron and Dickens were equally warm in admiration of him. To the English indorsement America added her own enthusiasm, which was as universal. His readers were the million, and all his readers were admirers. Even American statesmen, who feed their minds on food we know not of, read Irving. It is true that the uncritical opinion of New York was never exactly reechoed in the cool recesses of Boston culture; but the magnates of the “North American Review” gave him their meed of cordial praise. The country at large put him on a pinnacle. If you attempt to account for the position he occupied by his character, which won the love of all men, it must be remembered that the quality which won this, whatever its value, pervades his books also.

And yet it must be said that the total impression left upon the mind by the man and his works is not that of the greatest intellectual force. I have no doubt that this was the impression he made upon his ablest contemporaries. And this fact, when I consider the effect the man produced, makes the study of him all the more interesting. As an intellectual personality he makes no such impression, for instance, as Carlyle, or a dozen other writers now living who could be named. The incisive critical faculty was almost entirely wanting in him. He had neither the power nor the disposition to cut his way transversely across popular opinion and prejudice that Ruskin has, nor to draw around him disciples equally well pleased to see him fiercely demolish to-day what they had delighted to see him set up yesterday as eternal. He evoked neither violent partisanship nor violent opposition. He was an extremely sensitive man, and if he had been capable of creating a conflict, he would only have been miserable in it. The play of his mind depended upon the sunshine of approval. And all this shows a certain want of intellectual virility.

A recent anonymous writer has said that most of the writing of our day is characterized by an intellectual strain. I have no doubt that this will appear to be the case to the next generation. It is a strain to say something new even at the risk of paradox, or to say something in a new way at the risk of obscurity. From this Irving was entirely free. There is no visible straining to attract attention. His mood is calm and unexaggerated. Even in some of his pathos, which is open to the suspicion of being “literary,” there is no literary exaggeration. He seems always writing from an internal calm, which is the necessary condition of his production. If he wins at all by his style, by his humor, by his portraiture of scenes or of character, it is by a gentle force, like that of the sun in spring. There are many men now living, or recently dead, intellectual prodigies, who have stimulated thought, or upset opinions, created mental eras, to whom Irving stands hardly in as fair a relation as Goldsmith to Johnson. What verdict the next generation will put upon their achievements I do not know; but it is safe to say that their position and that of Irving as well will depend largely upon the affirmation or the reversal of their views of life and their judgments of character. I think the calm work of Irving will stand when much of the more startling and perhaps more brilliant intellectual achievement of this age has passed away.

And this leads me to speak of Irving's moral quality, which I cannot bring myself to exclude from a literary estimate, even in the face of the current gospel of art for art's sake. There is something that made Scott and Irving personally loved by the millions of their readers, who had only the dimmest ideas of their personality. This was some quality perceived in what they wrote. Each one can define it for himself; there it is, and I do not see why it is not as integral a part of the authors—an element in the estimate of their future position—as what we term their intellect, their knowledge, their skill, or their art. However you rate it, you cannot account for Irving's influence in the world without it. In his tender tribute to Irving, the great-hearted Thackeray, who saw as clearly as anybody the place of mere literary art in the sum total of life, quoted the dying words of Scott to Lockhart,—“Be a good man, my dear.” We know well enough that the great author of “The Newcomes” and the great author of “The Heart of Midlothian” recognized the abiding value in literature of integrity, sincerity, purity, charity, faith. These are beneficences; and Irving's literature, walk round it and measure it by whatever critical instruments you will, is a beneficent literature. The author loved good women and little children and a pure life; he had faith in his fellow-men, a kindly sympathy with the lowest, without any subservience to the highest; he retained a belief in the possibility of chivalrous actions, and did not care to envelop them in a cynical suspicion; he was an author still capable of an enthusiasm. His books are wholesome, full of sweetness and charm, of humor without any sting, of amusement without any stain; and their more solid qualities are marred by neither pedantry nor pretension.

Washington Irving died on the 28th of November, 1859, at the close of a lovely day of that Indian summer which is nowhere more full of a melancholy charm than on the banks of the lower Hudson, and which was in perfect accord with the ripe and peaceful close of his life. He was buried on a little elevation overlooking Sleepy Hollow and the river he loved, amidst the scenes which his magic pen has made classic and his sepulcher hallows.

I. FORTRESS MONROE

When Irene looked out of her stateroom window early in the morning of the twentieth of March, there was a softness and luminous quality in the horizon clouds that prophesied spring. The steamboat, which had left Baltimore and an arctic temperature the night before, was drawing near the wharf at Fortress Monroe, and the passengers, most of whom were seeking a mild climate, were crowding the guards, eagerly scanning the long facade of the Hygeia Hotel.

"It looks more like a conservatory than a hotel," said Irene to her father, as she joined him.

"I expect that's about what it is. All those long corridors above and below enclosed in glass are to protect the hothouse plants of New York and Boston, who call it a Winter Resort, and I guess there's considerable winter in it."

"But how charming it is—the soft sea air, the low capes yonder, the sails in the opening shining in the haze, and the peaceful old fort! I think it's just enchanting."

"I suppose it is. Get a thousand people crowded into one hotel under glass, and let 'em buzz around—that seems to be the present notion of enjoyment. I guess your mother'll like it."

And she did. Mrs. Benson, who appeared at the moment, a little flurried with her hasty toilet, a stout, matronly person, rather overdressed for traveling, exclaimed: "What a homelike looking place! I do hope the Stimpsons are here!"

"No doubt the Stimpsons are on hand," said Mr. Benson. "Catch them not knowing what's the right thing to do in March! They know just as well as you do that the Reynoldses and the Van Peagrims are here."

The crowd of passengers, alert to register and secure rooms, hurried up the windy wharf. The interior of the hotel kept the promise of the outside for comfort. Behind the glass-defended verandas, in the spacious office and general lounging-room, sea-coal fires glowed in the wide grates, tables were heaped with newspapers and the illustrated pamphlets in which railways and hotels set forth the advantages of leaving home; luxurious chairs invited the lazy and the tired, and the hotel-bureau, telegraph-office, railway-office, and post-office showed the new-comer that even in this resort he was still in the centre of activity and uneasiness. The Bensons, who had fortunately secured rooms a month in advance, sat quietly waiting while the crowd filed before the register, and took its fate from the courteous autocrat behind the counter. "No room," was the nearly uniform answer, and the travelers had the satisfaction of writing their names and going their way in search of entertainment. "We've eight hundred people stowed away," said the clerk, "and not a spot left for a hen to roost."

ARRIVAL AT FORTRESS MONROE.

At the end of the file Irene noticed a gentleman, clad in a perfectly-fitting rough traveling suit, with the inevitable crocodile hand-bag and tightly-rolled umbrella, who made no effort to enroll ahead of any one else, but having procured some letters from the post-office clerk, patiently waited till the rest were turned away, and then put down his name. He might as well have written it in his hat. The deliberation of the man, who appeared to be an old traveler, though probably not more than thirty years of age, attracted Irene's attention, and she could not help hearing the dialogue that followed.

"What can you do for me?"

"Nothing," said the clerk.

"Can't you stow me away anywhere? It is Saturday, and very inconvenient for me to go any farther."

"Cannot help that. We haven't an inch of room."

"Well, where can I go?"

"You can go to Baltimore. You can go to Washington; or you can go to Richmond this afternoon. You can go anywhere."

"Couldn't I," said the stranger, with the same deliberation—"wouldn't you let me go to Charleston?"

"Why," said the clerk, a little surprised, but disposed to accommodate—"why, yes, you can go to Charleston. If you take at once the boat you have just left, I guess you can catch the train at Norfolk."

As the traveler turned and called a porter to reshuffle his baggage, he was met by a lady, who greeted him with the cordiality of an old acquaintance and a volley of questions.

"Why, Mr. King, this is good luck. When did you come? have you a good room? What, no, not going?"

Mr. King explained that he had been a resident of Hampton Roads just fifteen minutes, and that, having had a pretty good view of the place, he was then making his way out of the door to Charleston, without any breakfast, because there was no room in the inn.

"Oh, that never'll do. That cannot be permitted," said his engaging friend, with an air of determination. "Besides, I want you to go with us on an excursion today up the James and help me chaperon a lot of young ladies. No, you cannot go away."

And before Mr. Stanhope King—for that was the name the traveler had inscribed on the register—knew exactly what had happened, by some mysterious power which women can exercise even in a hotel, when they choose, he found himself in possession of a room, and was gayly breakfasting with a merry party at a little round table in the dining-room.

"He appears to know everybody," was Mrs. Benson's comment to Irene, as she observed his greeting of one and another as the guests tardily came down to breakfast. "Anyway, he's a genteel-looking party. I wonder if he belongs to Sotor, King and Co., of New York?"

"Oh, mother," began Irene, with a quick glance at the people at the next table; and then, "if he is a genteel party, very likely he's a drummer. The drummers know everybody."

And Irene confined her attention strictly to her breakfast, and never looked up, although Mrs. Benson kept prattling away about the young man's appearance, wondering if his eyes were dark blue or only dark gray,

and why he didn't part his hair exactly in the middle and done with it, and a full, close beard was becoming, and he had a good, frank face anyway, and why didn't the Stimpsons come down; and, "Oh, there's the Van Peagrims," and Mrs. Benson bowed sweetly and repeatedly to somebody across the room.

To an angel, or even to that approach to an angel in this world, a person who has satisfied his appetite, the spectacle of a crowd of people feeding together in a large room must be a little humiliating. The fact is that no animal appears at its best in this necessary occupation. But a hotel breakfast-room is not without interest. The very way in which people enter the room is a revelation of character. Mr. King, who was put in good humor by falling on his feet, as it were, in such agreeable company, amused himself by studying the guests as they entered. There was the portly, florid man, who "swelled" in, patronizing the entire room, followed by a meek little wife and three timid children. There was the broad, dowager woman, preceded by a meek, shrinking little man, whose whole appearance was an apology. There was a modest young couple who looked exceedingly self-conscious and happy, and another couple, not quite so young, who were not conscious of anybody, the gentleman giving a curt order to the waiter, and falling at once to reading a newspaper, while his wife took a listless attitude, which seemed to have become second nature. There were two very tall, very graceful, very high-bred girls in semi-mourning, accompanied by a nice lad in tight clothes, a model of propriety and slender physical resources, who perfectly reflected the gracious elevation of his sisters. There was a preponderance of women, as is apt to be the case in such resorts. A fact explicable not on the theory that women are more delicate than men, but that American men are too busy to take this sort of relaxation, and that the care of an establishment, with the demands of society and the worry of servants, so draw upon the nervous energy of women that they are glad to escape occasionally to the irresponsibility of hotel life. Mr. King noticed that many of the women had the unmistakable air of familiarity with this sort of life, both in the dining-room and at the office, and were not nearly so timid as some of the men. And this was very observable in the case of the girls, who were chaperoning their mothers—shrinking women who seemed a little confused by the bustle, and a little awed by the machinery of the great caravansary.

At length Mr. King's eye fell upon the Benson group. Usually it is unfortunate that a young lady should be observed for the first time at table. The act of eating is apt to be disenchanting. It needs considerable infatuation and perhaps true love on the part of a young man to make him see anything agreeable in this performance. However attractive a girl may be, the man may be sure that he is not in love if his admiration cannot stand this test. It is saying a great deal for Irene that she did stand this test even under the observation of a stranger, and that she handled her fork, not to put too fine a point upon it, in a manner to make the fastidious Mr. King desirous to see more of her. I am aware that this is a very unromantic view to take of one of the sweetest subjects in life, and I am free to confess that I should prefer that Mr. King should first have seen Irene leaning on the balustrade of the gallery, with a rose in her hand, gazing out over the sea with "that far-away look in her eyes." It would have made it much easier for all of us. But it is better to tell the truth, and let the girl appear in the heroic attitude of being superior to her circumstances.

Presently Mr. King said to his friend, Mrs. Cortlandt, "Who is that clever-looking, graceful girl over there?"

"That," said Mrs. Cortlandt, looking intently in the direction indicated—"why, so it is; that's just the thing," and without another word she darted across the room, and Mr. King saw her in animated conversation with the young lady. Returning with satisfaction expressed in her face, she continued, "Yes, she'll join our party—without her mother. How lucky you saw her!"

"Well! Is it the Princess of Paphlagonia?"

"Oh, I forgot you were not in Washington last winter. That's Miss Benson; just charming; you'll see. Family came from Ohio somewhere. You'll see what they are—but Irene! Yes, you needn't ask; they've got money, made it honestly. Began at the bottom—as if they were in training for the presidency, you know—the mother hasn't got used to it as much as the father. You know how it is. But Irene has had every advantage—the best schools, masters, foreign travel, everything. Poor girl! I'm sorry for her. Sometimes I wish there wasn't any such thing as education in this country, except for the educated. She never shows it; but of course she must see what her relatives are."

The Hotel Hygeia has this advantage, which is appreciated, at least by the young ladies. The United States fort is close at hand, with its quota of young officers, who have the leisure in times of peace to prepare for war, domestic or foreign; and there is a naval station across the bay, with vessels that need fashionable inspection. Considering the acknowledged scarcity of young men at watering-places, it is the duty of a paternal government to place its military and naval stations close to the fashionable resorts, so that the young women who are studying the german [(dance) D.W.] and other branches of the life of the period can have agreeable assistants. It is the charm of Fortress Monroe that its heroes are kept from ennui by the company assembled there, and that they can be of service to society.

AN EXCURSION.

When Mrs. Cortlandt assembled her party on the steam-tug chartered by her for the excursion, the army was very well represented. With the exception of the chaperons and a bronzed veteran, who was inclined to direct the conversation to his Indian campaigns in the Black Hills, the company was young, and of the age and temper in which everything seems fair in love and war, and one that gave Mr. King, if he desired it, an opportunity of studying the girl of the period—the girl who impresses the foreigner with her extensive knowledge of life, her fearless freedom of manner, and about whom he is apt to make the mistake of supposing that this freedom has not perfectly well-defined limits. It was a delightful day, such as often comes, even in winter, within the Capes of Virginia; the sun was genial, the bay was smooth, with only a light breeze that kept the water sparkling brilliantly, and just enough tonic in the air to excite the spirits. The little tug, which was pretty well packed with the merry company, was swift, and danced along in an exhilarating manner. The bay, as everybody knows, is one of the most commodious in the world, and would be one of the most beautiful if it had hills to overlook it. There is, to be sure, a tranquil beauty in its wooded headlands and long capes, and it is no wonder that the early explorers were charmed with it, or that they lost their way in its inlets, rivers, and bays. The company at first made a pretense of trying to understand its geography, and asked a hundred questions about the batteries, and whence the Merrimac appeared, and where the Congress was sunk, and from what place the Monitor darted out upon its big antagonist. But everything was on a scale so vast that it was difficult to localize these petty incidents (big as they were in consequences), and the party soon abandoned history and geography for the enjoyment of the moment. Song began to take the place of conversation. A couple of banjos were produced, and both the facility and the repertoire of the young ladies who handled them astonished Irene. The songs were of love and summer seas, chansons in French, minor melodies in Spanish, plain declarations of affection in distinct English, flung abroad with classic abandon, and caught up by the chorus in lilting strains that partook of the bounding, exhilarating motion of the little steamer. Why, here is material, thought King, for a troupe of bacchantes, lighthearted leaders of a summer festival. What charming girls, quick of wit, dashing in repartee, who can pick the strings, troll a song, and dance a brando!

"It's like sailing over the Bay of Naples," Irene was saying to Mr. King, who had found a seat beside her in the little cabin; "the guitar-strumming and the impassioned songs, only that always seems to me a manufactured gayety, an attempt to cheat the traveler into the belief that all life is a holiday. This is spontaneous."

"Yes, and I suppose the ancient Roman gayety, of which the Neapolitan is an echo, was spontaneous once. I wonder if our society is getting to dance and frolic along like that of old at Baiae!"

"Oh, Mr. King, this is an excursion. I assure you the American girl is a serious and practical person most of the time. You've been away so long that your standards are wrong. She's not nearly so knowing as she seems to be."

The boat was preparing to land at Newport News—a sand bank, with a railway terminus, a big elevator, and a hotel. The party streamed along in laughing and chatting groups, through the warehouse and over the tracks and the sandy hillocks to the hotel. On the way they captured a novel conveyance, a cart with an ox harnessed in the shafts, the property of an aged negro, whose white hair and variegated raiment proclaimed him an ancient Virginian, a survival of the war. The company chartered this establishment, and swarmed upon it till it looked like a Neapolitan 'calesso', and the procession might have been mistaken for a harvest-

home—the harvest of beauty and fashion. The hotel was captured without a struggle on the part of the regular occupants, a dance extemporized in the dining-room, and before the magnitude of the invasion was realized by the garrison, the dancing feet and the laughing girls were away again, and the little boat was leaping along in the Elizabeth River towards the Portsmouth Navy-yard.

It isn't a model war establishment this Portsmouth yard, but it is a pleasant resort, with its stately barracks and open square and occasional trees. In nothing does the American woman better show her patriotism than in her desire to inspect naval vessels and understand dry-docks under the guidance of naval officers. Besides some old war hulks at the station, there were a couple of training-ships getting ready for a cruise, and it made one proud of his country to see the interest shown by our party in everything on board of them, patiently listening to the explanation of the breech-loading guns, diving down into the between-decks, crowded with the schoolboys, where it is impossible for a man to stand upright and difficult to avoid the stain of paint and tar, or swarming in the cabin, eager to know the mode of the officers' life at sea. So these are the little places where they sleep? and here is where they dine, and here is a library—a haphazard case of books in the saloon.

It was in running her eyes over these that a young lady discovered that the novels of Zola were among the nautical works needed in the navigation of a ship of war.

On the return—and the twenty miles seemed short enough—lunch was served, and was the occasion of a good deal of hilarity and innocent badinage. There were those who still sang, and insisted on sipping the heel-taps of the morning gayety; but was King mistaken in supposing that a little seriousness had stolen upon the party—a serious intention, namely, between one and another couple? The wind had risen, for one thing, and the little boat was so tossed about by the vigorous waves that the skipper declared it would be imprudent to attempt to land on the Rip-Raps. Was it the thought that the day was over, and that underneath all chaff and hilarity there was the question of settling in life to be met some time, which subdued a little the high spirits, and gave an air of protection and of tenderness to a couple here and there? Consciously, perhaps, this entered into the thought of nobody; but still the old story will go on, and perhaps all the more rapidly under a mask of raillery and merriment.

There was great bustling about, hunting up wraps and lost parasols and mislaid gloves, and a chorus of agreement on the delight of the day, upon going ashore, and Mrs. Cortlandt, who looked the youngest and most animated of the flock, was quite overwhelmed with thanks and congratulations upon the success of her excursion.

"Yes, it was perfect; you've given us all a great deal of pleasure, Mrs. Cortlandt," Mr. King was saying, as he stood beside her, watching the exodus.

Perhaps Mrs. Cortlandt fancied his eyes were following a particular figure, for she responded, "And how did you like her?"

"Like her—Miss Benson? Why, I didn't see much of her. I thought she was very intelligent—seemed very much interested when Lieutenant Green was explaining to her what made the drydock dry—but they were all that. Did you say her eyes were gray? I couldn't make out if they were not rather blue after all—large, changeable sort of eyes, long lashes; eyes that look at you seriously and steadily, without the least bit of coquetry or worldliness; eyes expressing simplicity and interest in what you are saying—not in you, but in what you are saying. So few women know how to listen; most women appear to be thinking of themselves and the effect they are producing."

Mrs. Cortlandt laughed. "Ah; I see. And a little 'sadness' in them, wasn't there? Those are the most dangerous eyes. The sort that follow you, that you see in the dark at night after the gas is turned off."

"I haven't the faculty of seeing things in the dark, Mrs. Cortlandt. Oh, there's the mother!" And the shrill voice of Mrs. Benson was heard, "We was getting uneasy about you. Pa says a storm's coming, and that you'd be as sick as sick."

The weather was changing. But that evening the spacious hotel, luxurious, perfectly warmed, and well lighted, crowded with an agreeable if not a brilliant company—for Mr. King noted the fact that none of the gentlemen dressed for dinner—seemed all the more pleasant for the contrast with the weather outside. Thus housed, it was pleasant to hear the waves dashing against the breakwater. Just by chance, in the ballroom, Mr. King found himself seated by Mrs. Benson and a group of elderly ladies, who had the perfunctory air of liking the mild gayety of the place. To one of them Mr. King was presented, Mrs. Stimpson—a stout woman with a broad red face and fishy eyes, wearing an elaborate head-dress with purple flowers, and attired as if she were expecting to take a prize. Mrs. Stimpson was loftily condescending, and asked Mr. King if this was his first visit. She'd been coming here years and years; never could get through the spring without a few weeks at the Hygeia. Mr. King saw a good many people at this hotel who seemed to regard it as a home.

"I hope your daughter, Mrs. Benson, was not tired out with the rather long voyage today."

"Not a mite. I guess she enjoyed it. She don't seem to enjoy most things. She's got everything heart can wish at home. I don't know how it is. I was tellin' pa, Mr. Benson, today that girls ain't what they used to be in my time. Takes more to satisfy 'em. Now my daughter, if I say it as shouldn't, Mr. King, there ain't a better appearin,' nor smarter, nor more dutiful girl anywhere—well, I just couldn't live without her; and she's had the best schools in the East and Europe; done all Europe and Rome and Italy; and after all, somehow, she don't seem contented in Cyrusville—that's where we live in Ohio—one of the smartest places in the state; grown right up to be a city since we was married. She never says anything, but I can see. And we haven't spared anything on our house. And society—there's a great deal more society than I ever had."

Mr. King might have been astonished at this outpouring if he had not observed that it is precisely in hotels and to entire strangers that some people are apt to talk with less reserve than to intimate friends.

"I've no doubt," he said, "you have a lovely home in Cyrusville."

"Well, I guess it's got all the improvements. Pa, Mr. Benson, said that he didn't know of anything that had been left out, and we had a man up from Cincinnati, who did all the furnishing before Irene came home."

"Perhaps your daughter would have preferred to furnish it herself?"

"Mebbe so. She said it was splendid, but it looked like somebody else's house. She says the queerest things sometimes. I told Mr. Benson that I thought it would be a good thing to go away from home a little while and travel round. I've never been away much except in New York, where Mr. Benson has business a good deal. We've been in Washington this winter."

"Are you going farther south?"

"Yes; we calculate to go down to the New Orleans Centennial. Pa wants to see the Exposition, and Irene wants to see what the South looks like, and so do I. I suppose it's perfectly safe now, so long after the war?"

"Oh, I should say so."

"That's what Mr. Benson says. He says it's all nonsense the talk about what the South 'll do now the Democrats are in. He says the South wants to make money, and wants the country prosperous as much as anybody. Yes, we are going to take a regular tour all summer round to the different places where people go. Irene calls it a pilgrimage to the holy places of America. Pa thinks we'll get enough of it, and he's determined we shall have enough of it for once. I suppose we shall. I like to travel, but I haven't seen any place better than Cyrusville yet."

As Irene did not make her appearance, Mr. King tore himself away from this interesting conversation and strolled about the parlors, made engagements to take early coffee at the fort, to go to church with Mrs. Cortlandt and her friends, and afterwards to drive over to Hampton and see the copper and other colored schools, talked a little politics over a late cigar, and then went to bed, rather curious to see if the eyes that Mrs. Cortlandt regarded as so dangerous would appear to him in the darkness.

When he awoke, his first faint impressions were that the Hygeia had drifted out to sea, and then that a dense fog had drifted in and enveloped it. But this illusion was speedily dispelled. The window-ledge was piled high with snow. Snow filled the air, whirled about by a gale that was banging the window-shutters and raging exactly like a Northern tempest.

It swirled the snow about in waves and dark masses interspersed with rifts of light, dark here and luminous there. The Rip-Raps were lost to view. Out at sea black clouds hung in the horizon, heavy reinforcements for the attacking storm. The ground was heaped with the still fast-falling snow—ten inches deep he heard it said when he descended. The Baltimore boat had not arrived, and could not get in. The waves at the wharf rolled in, black and heavy, with a sullen beat, and the sky shut down close to the water, except when a sudden stronger gust of wind cleared a luminous space for an instant. Stormbound: that is what the Hygeia was—a winter resort without any doubt.

The hotel was put to a test of its qualities. There was no getting abroad in such a storm. But the Hygeia appeared at its best in this emergency. The long glass corridors, where no one could venture in the arctic temperature, gave, nevertheless, an air of brightness and cheerfulness to the interior, where big fires blazed, and the company were exalted into good-fellowship and gayety—a decorous Sunday gayety—by the elemental war from which they were securely housed.

If the defenders of their country in the fortress mounted guard that morning, the guests at the Hygeia did not see them, but a good many of them mounted guard later at the hotel, and offered to the young ladies there that protection which the brave like to give the fair. Notwithstanding this, Mr. Stanhope King could not say the day was dull. After a morning presumably spent over works of a religious character, some of the young ladies, who had been the life of the excursion the day before, showed their versatility by devising

serious amusements befitting the day, such as twenty questions on Scriptural subjects, palmistry, which on another day is an aid to mild flirtation, and an exhibition of mind-reading, not public—oh, dear, no—but with a favored group in a private parlor. In none of these groups, however, did Mr. King find Miss Benson, and when he encountered her after dinner in the reading-room, she confessed that she had declined an invitation to assist at the mind-reading, partly from a lack of interest, and partly from a reluctance to dabble in such things.

“Surely you are not uninterested in what is now called psychical research?” he asked.

“That depends,” said Irene. “If I were a physician, I should like to watch the operation of the minds of 'sensitives' as a pathological study. But the experiments I have seen are merely exciting and unsettling, without the least good result, with a haunting notion that you are being tricked or deluded. It is as much as I can do to try and know my own mind, without reading the minds of others.”

“But you cannot help the endeavor to read the mind of a person with whom you are talking.”

“Oh, that is different. That is really an encounter of wits, for you know that the best part of a conversation is the things not said. What they call mindreading is a vulgar business compared to this. Don't you think so, Mr. King?”

What Mr. King was actually thinking was that Irene's eyes were the most unfathomable blue he ever looked into, as they met his with perfect frankness, and he was wondering if she were reading his present state of mind; but what he said was, “I think your sort of mind-reading is a good deal more interesting than the other,” and he might have added, dangerous. For a man cannot attempt to find out what is in a woman's heart without a certain disturbance of his own. He added, “So you think our society is getting too sensitive and nervous, and inclined to make dangerous mental excursions?”

“I'm afraid I do not think much about such things,” Irene replied, looking out of the window into the storm. “I'm content with a very simple faith, even if it is called ignorance.”

Mr. King was thinking, as he watched the clear, spirited profile of the girl shown against the white tumult in the air, that he should like to belong to the party of ignorance himself, and he thought so long about it that the subject dropped, and the conversation fell into ordinary channels, and Mrs. Benson appeared. She thought they would move on as soon as the storm was over. Mr. King himself was going south in the morning, if travel were possible. When he said good-by, Mrs. Benson expressed the pleasure his acquaintance had given them, and hoped they should see him in Cyrusville. Mr. King looked to see if this invitation was seconded in Irene's eyes; but they made no sign, although she gave him her hand frankly, and wished him a good journey.

The next morning he crossed to Norfolk, was transported through the snow-covered streets on a sledge, and took his seat in the cars for the most monotonous ride in the country, that down the coast-line.

When next Stanhope King saw Fortress Monroe it was in the first days of June. The summer which he had left in the interior of the Hygeia was now out-of-doors. The winter birds had gone north; the summer birds had not yet come. It was the interregnum, for the Hygeia, like Venice, has two seasons, one for the inhabitants of colder climes, and the other for natives of the country. No spot, thought our traveler, could be more lovely. Perhaps certain memories gave it a charm, not well defined, but still gracious. If the house had been empty, which it was far from being, it would still have been peopled for him. Were they all such agreeable people whom he had seen there in March, or has one girl the power to throw a charm over a whole watering-place? At any rate, the place was full of delightful repose. There was movement enough upon the water to satisfy one's lazy longing for life, the waves lapped soothingly along the shore, and the broad bay, sparkling in the sun, was animated with boats, which all had a holiday air. Was it not enough to come down to breakfast and sit at the low, broad windows and watch the shifting panorama? All about the harbor slanted the white sails; at intervals a steamer was landing at the wharf or backing away from it; on the wharf itself there was always a little bustle, but no noise, some pretense of business, and much actual transaction in the way of idle attitudinizing, the colored man in castoff clothes, and the colored sister in sun-bonnet or turban, lending themselves readily to the picturesque; the scene changed every minute, the sail of a tiny boat was hoisted or lowered under the window, a dashing cutter with its uniformed crew was pulling off to the German man-of-war, a puffing little tug dragged along a line of barges in the distance, and on the horizon a fleet of coasters was working out between the capes to sea. In the open window came the fresh morning breeze, and only the softened sounds of the life outside. The ladies came down in cool muslin dresses, and added the needed grace to the picture as they sat breakfasting by the windows, their figures in silhouette against the blue water.

A DEFENDER OF HIS COUNTRY.

No wonder our traveler lingered there a little! Humanity called him, for one thing, to drive often with humanely disposed young ladies round the beautiful shore curve to visit the schools for various colors at Hampton. Then there was the evening promenading on the broad verandas and out upon the miniature pier, or at sunset by the water-batteries of the old fort—such a peaceful old fortress as it is. All the morning there were “inspections” to be attended, and nowhere could there be seen a more agreeable mingling of war and love than the spacious, tree-planted interior of the fort presented on such occasions. The shifting figures of the troops on parade; the martial and daring manoeuvres of the regimental band; the groups of ladies seated on benches under the trees, attended by gallants in uniform, momentarily off duty and full of information, and by gallants not in uniform and never off duty and desirous to learn; the ancient guns with French arms and English arms, reminiscences of Yorktown, on one of which a pretty girl was apt to be perched in the act of being photographed—all this was enough to inspire any man to be a countryman and a lover. It is beautiful to see how fearless the gentle sex is in the presence of actual war; the prettiest girls occupied the front and most exposed seats; and never flinched when the determined columns marched down on them with drums beating and colors flying, nor showed much relief when they suddenly wheeled and marched to another part of the parade in search of glory. And the officers' quarters in the casemates—what will not women endure to serve their country! These quarters are mere tunnels under a dozen feet of earth, with a door on the parade side and a casement window on the outside—a damp cellar, said to be cool in the height of summer. The only excuse for such quarters is that the women and children will be comparatively safe in case the fortress is bombarded.

THE GOVERNMENT WHARF, FORTRESS MONROE.

The hotel and the fortress at this enchanting season, to say nothing of other attractions, with laughing eyes and slender figures, might well have detained Mr. Stanhope King, but he had determined upon a sort of roving summer among the resorts of fashion and pleasure. After a long sojourn abroad, it seemed becoming that he should know something of the floating life of his own country. His determination may have been strengthened by the confession of Mrs. Benson that her family were intending an extensive summer tour. It gives a zest to pleasure to have even an indefinite object, and though the prospect of meeting Irene again was not definite, it was nevertheless alluring. There was something about her, he could not tell what, different from the women he had met in France. Indeed, he went so far as to make a general formula as to the impression the American women made on him at Fortress Monroe—they all appeared to be innocent.

II. CAPE MAY, ATLANTIC CITY

“Of course you will not go to Cape May till the season opens. You might as well go to a race-track the day there is no race.” It was Mrs. Cortlandt who was speaking, and the remonstrance was addressed to Mr. Stanhope King, and a young gentleman, Mr. Graham Forbes, who had just been presented to her as an artist, in the railway station at Philadelphia, that comfortable home of the tired and bewildered traveler. Mr. Forbes, with his fresh complexion, closely cropped hair, and London clothes, did not look at all like the traditional artist, although the sharp eyes of Mrs. Cortlandt detected a small sketch-book peeping out of his side pocket.

“On the contrary, that is why we go,” said Mr. King. “I’ve a fancy that I should like to open a season once myself.”

“Besides,” added Mr. Forbes, “we want to see nature unadorned. You know, Mrs. Cortlandt, how people sometimes spoil a place.”

“I’m not sure,” answered the lady, laughing, “that people have not spoiled you two and you need a rest. Where else do you go?”

“Well, I thought,” replied Mr. King, “from what I heard, that Atlantic City might appear best with nobody there.”

“Oh, there’s always some one there. You know, it is a winter resort now. And, by the way—But there’s my train, and the young ladies are beckoning to me.” (Mrs. Cortlandt was never seen anywhere without a party of young ladies.) “Yes, the Bensons passed through Washington the other day from the South, and spoke of going to Atlantic City to tone up a little before the season, and perhaps you know that Mrs. Benson took a great fancy to you, Mr. King. Good-by, au revoir,” and the lady was gone with her bevy of girls, struggling in the stream that poured towards one of the wicket-gates.

“Atlantic City? Why, Stanhope, you don’t think of going there also?”

“I didn’t think of it, but, hang it all, my dear fellow, duty is duty. There are some places you must see in order to be well informed. Atlantic City is an important place; a great many of its inhabitants spend their winters in Philadelphia.”

“And this Mrs. Benson?”

“No, I’m not going down there to see Mrs. Benson.”

Expectancy was the word when our travelers stepped out of the car at Cape May station. Except for some people who seemed to have business there, they were the only passengers. It was the ninth of June. Everything was ready—the sea, the sky, the delicious air, the long line of gray-colored coast, the omnibuses, the array of hotel tooters. As they stood waiting in irresolution a grave man of middle age and a disinterested manner sauntered up to the travelers, and slipped into friendly relations with them. It was impossible not to incline to a person so obliging and well stocked with local information. Yes, there were several good hotels

open. It didn't make much difference; there was one near at hand, not pretentious, but probably as comfortable as any. People liked the table; last summer used to come there from other hotels to get a meal. He was going that way, and would walk along with them. He did, and conversed most interestingly on the way. Our travelers felicitated themselves upon falling into such good hands, but when they reached the hotel designated it had such a gloomy and in fact boardinghouse air that they hesitated, and thought they would like to walk on a little farther and see the town before settling. And their friend appeared to feel rather grieved about it, not for himself, but for them. He had moreover, the expression of a fisherman who has lost a fish after he supposed it was securely hooked. But our young friends had been angled for in a good many waters, and they told the landlord, for it was the landlord, that while they had no doubt his was the best hotel in the place, they would like to look at some not so good. The one that attracted them, though they could not see in what the attraction lay, was a tall building gay with fresh paint in many colors, some pretty window balconies, and a portico supported by high striped columns that rose to the fourth story. They were fond of color, and were taken by six little geraniums planted in a circle amid the sand in front of the house, which were waiting for the season to open before they began to grow. With hesitation they stepped upon the newly varnished piazza and the newly varnished office floor, for every step left a footprint. The chairs, disposed in a long line on the piazza, waiting for guests, were also varnished, as the artist discovered when he sat in one of them and was held fast. It was all fresh and delightful. The landlord and the clerks had smiles as wide as the open doors; the waiters exhibited in their eagerness a good imitation of unselfish service.

It was very pleasant to be alone in the house, and to be the first-fruits of such great expectations. The first man of the season is in such a different position from the last. He is like the King of Bavaria alone in his royal theatre. The ushers give him the best seat in the house, he hears the tuning of the instruments, the curtain is about to rise, and all for him. It is a very cheerful desolation, for it has a future, and everything quivers with the expectation of life and gayety. Whereas the last man is like one who stumbles out among the empty benches when the curtain has fallen and the play is done. Nothing is so melancholy as the shabbiness of a watering-place at the end of the season, where is left only the echo of past gayety, the last guests are scurrying away like leaves before the cold, rising wind, the varnish has worn off, shutters are put up, booths are dismantled, the shows are packing up their tawdry ornaments, and the autumn leaves collect in the corners of the gaunt buildings.

Could this be the Cape May about which hung so many traditions of summer romance? Where were those crowds of Southerners, with slaves and chariots, and the haughtiness of a caste civilization, and the belles from Baltimore and Philadelphia and Charleston and Richmond, whose smiles turned the heads of the last generation? Had that gay society danced itself off into the sea, and left not even a phantom of itself behind? As he sat upon the veranda, King could not rid himself of the impression that this must be a mocking dream, this appearance of emptiness and solitude. Why, yes, he was certainly in a delusion, at least in a reverie. The place was alive. An omnibus drove to the door (though no sound of wheels was heard); the waiters rushed out, a fat man descended, a little girl was lifted down, a pretty woman jumped from the steps with that little extra bound on the ground which all women confessedly under forty always give when they alight from a vehicle, a large woman lowered herself cautiously out, with an anxious look, and a file of men stooped and emerged, poking their umbrellas and canes in each other's backs. Mr. King plainly saw the whole party hurry into the office and register their names, and saw the clerk repeatedly touch a bell and throw back his head and extend his hand to a servant. Curious to see who the arrivals were, he went to the register. No names were written there. But there were other carriages at the door, there was a pile of trunks on the veranda, which he nearly stumbled over, although his foot struck nothing, and the chairs were full, and people were strolling up and down the piazza. He noticed particularly one couple promenading—a slender brunette, with a brilliant complexion; large dark eyes that made constant play—could it be the belle of Macon?—and a gentleman of thirty-five, in black frock-coat, unbuttoned, with a wide-brimmed soft hat—clothes not quite the latest style—who had a good deal of manner, and walked apart from the young lady, bending towards her with an air of devotion. Mr. King stood one side and watched the endless procession up and down, up and down, the strollers, the mincers, the languid, the nervous steppers; noted the eye-shots, the flashing or the languishing look that kills, and never can be called to account for the mischief it does; but not a sound did he hear of the repartee and the laughter. The place certainly was thronged. The avenue in front was crowded with vehicles of all sorts; there were groups strolling on the broad beach—children with their tiny pails and shovels digging pits close to the advancing tide, nursery-maids in fast colors, boys in knickerbockers racing on the beach, people lying on the sand, resolute walkers, whose figures loomed tall in the evening light, doing their constitutional. People were passing to and fro on the long iron pier that spider-legged itself out into the sea; the two rooms midway were filled with sitters taking the evening breeze; and the large ball and music room at the end, with its spacious outside promenade—yes, there were dancers there, and the band was playing. Mr. King could see the fiddlers draw their bows, and the corneters lift up their horns and get red in the face, and the lean man slide his trombone, and the drummer flourish his sticks, but not a note of music reached him. It might have been a performance of ghosts for all the effect at this distance.

ON THE PIER, CAPE MAY.

Mr. King remarked upon this dumb-show to a gentleman in a blue coat and white vest and gray hat, leaning against a column near him. The gentleman made no response. It was most singular. Mr. King stepped back to be out of the way of some children racing down the piazza, and, half stumbling, sat down in the lap of a dowager—no, not quite; the chair was empty, and he sat down in the fresh varnish, to which his clothes stuck fast. Was this a delusion? No. The tables were filled in the dining-room, the waiters were scurrying about, there were ladies on the balconies looking dreamily down upon the animated scene below; all the movements of gayety and hilarity in the height of a season. Mr. King approached a group who were standing waiting for a carriage, but they did not see him, and did not respond to his trumped-up question about the next train. Were these, then, shadows, or was he a spirit himself? Were these empty omnibuses and carriages that discharged ghostly passengers? And all this promenading and flirting and languishing and love-making, would it come to nothing—nothing more than usual? There was a charm about it all—the movement, the color, the gray sand, and the rosy blush on the sea—a lovely place, an enchanted place. Were these throngs the guests that were to come, or those that had been herein other seasons? Why could not the former “materialize” as well as the latter? Is it not as easy to make nothing out of what never yet existed as out of what has ceased to exist? The landlord, by faith, sees all this array which is prefigured so strangely to Mr. King; and his comely young wife sees it and is ready for it; and the fat son at the supper table—a living example of the good eating to be had here—is serene, and has the air of being polite and knowing to a houseful. This scrap of a child, with the aplomb of a man of fifty, wise beyond his fatness, imparts information to the travelers about the wine, speaks to the waiter with quiet authority, and makes these mature men feel like boys before the gravity of our perfect flower of American youth who has known no childhood. This boy at least is no phantom; the landlord is real, and the waiters, and the food they bring.

“I suppose,” said Mr. King to his friend, “that we are opening the season. Did you see anything outdoors?”

“Yes; a horseshoe-crab about a mile below here on the smooth sand, with a long dotted trail behind him, a couple of girls in a pony-cart who nearly drove over me, and a tall young lady with a red parasol, accompanied by a big black-and-white dog, walking rapidly, close to the edge of the sea, towards the sunset. It's just lovely, the silvery sweep of coast in this light.”

“It seems a refined sort of place in its outlines, and quietly respectable. They tell me here that they don't want the excursion crowds that overrun Atlantic City, but an Atlantic City man, whom I met at the pier, said that Cape May used to be the boss, but that Atlantic City had got the bulge on it now—had thousands to the hundreds here. To get the bulge seems a desirable thing in America, and I think we'd better see what a place is like that is popular, whether fashion recognizes it or not.”

The place lost nothing in the morning light, and it was a sparkling morning with a fresh breeze. Nature, with its love of simple, sweeping lines, and its feeling for atmospheric effect, has done everything for the place, and bad taste has not quite spoiled it. There is a sloping, shallow beach, very broad, of fine, hard sand, excellent for driving or for walking, extending unbroken three miles down to Cape May Point, which has hotels and cottages of its own, and lifesaving and signal stations. Off to the west from this point is the long sand line to Cape Henlopen, fourteen miles away, and the Delaware shore. At Cape May Point there is a little village of painted wood houses, mostly cottages to let, and a permanent population of a few hundred inhabitants. From the pier one sees a mile and a half of hotels and cottages, fronting south, all flaming, tasteless, carpenter's architecture, gay with paint. The sea expanse is magnificent, and the sweep of beach is fortunately unencumbered, and vulgarized by no bath-houses or show-shanties. The bath-houses are in front of the hotels and in their enclosures; then come the broad drive, and the sand beach, and the sea. The line is broken below by the lighthouse and a point of land, whereon stands the elephant. This elephant is not indigenous, and he stands alone in the sand, a wooden sham without an explanation. Why the hotel-keeper's mind along the coast regards this grotesque structure as a summer attraction it is difficult to see. But when one resort had him, he became a necessity everywhere. The travelers walked down to this monster, climbed the stairs in one of his legs, explored the rooms, looked out from the saddle, and pondered on the problem. This beast was unfinished within and unpainted without, and already falling into decay. An elephant on the desert, fronting the Atlantic Ocean, had, after all, a picturesque aspect, and all the more so because he was a deserted ruin.

The elephant was, however, no emptier than the cottages about which our friends strolled. But the cottages were all ready, the rows of new chairs stood on the fresh piazzas, the windows were invitingly open, the pathetic little patches of flowers in front tried hard to look festive in the dry sands, and the stout landladies in their rocking-chairs calmly knitted and endeavored to appear as if they expected nobody, but had almost a houseful.

Yes, the place was undeniably attractive. The sea had the blue of Nice; why must we always go to the Mediterranean for an aqua marina, for poetic lines, for delicate shades? What charming gradations had this picture-gray sand, blue waves, a line of white sails against the pale blue sky! By the pier railing is a bevy of little girls grouped about an ancient colored man, the very ideal old Uncle Ned, in ragged, baggy, and disreputable clothes, lazy good-nature oozing out of every pore of him, kneeling by a telescope pointed to a bunch of white sails on the horizon; a dainty little maiden, in a stiff white skirt and golden hair, leans against him and tiptoes up to the object-glass, shutting first one eye and then the other, and making nothing out of it all. "Why, ov co'se you can't see nuffln, honey," said Uncle Ned, taking a peep, "wid the 'scope p'inted up in the sky."

UNCLE NED ADJUSTING THE TELESCOPE.

In order to pass from Cape May to Atlantic City one takes a long circuit by rail through the Jersey sands. Jersey is a very prolific State, but the railway traveler by this route is excellently prepared for Atlantic City, for he sees little but sand, stunted pines, scrub oaks, small frame houses, sometimes trying to hide in the clumps of scrub oaks, and the villages are just collections of the same small frame houses hopelessly decorated with scroll-work and obtrusively painted, standing in lines on sandy streets, adorned with lean shade-trees. The handsome Jersey people were not traveling that day—the two friends had a theory about the relation of a sandy soil to female beauty—and when the artist got out his pencil to catch the types of the country, he was well rewarded. There were the fat old women in holiday market costumes, strong-featured, positive, who shook their heads at each other and nodded violently and incessantly, and all talked at once; the old men in rusty suits, thin, with a deprecatory manner, as if they had heard that clatter for fifty years, and perky, sharp-faced girls in vegetable hats, all long-nosed and thin-lipped. And though the day was cool, mosquitoes had the bad taste to invade the train. At the junction, a small collection of wooden shanties, where the travelers waited an hour, they heard much of the glories of Atlantic City from the postmistress, who was waiting for an excursion some time to go there (the passion for excursions seems to be a growing one), and they made the acquaintance of a cow tied in the room next the ticket-office, probably also waiting for a passage to the city by the sea.

JERSEY TYPES.

And a city it is. If many houses, endless avenues, sand, paint, make a city, the artist confessed that this was one. Everything is on a large scale. It covers a large territory, the streets run at right angles, the avenues to the ocean take the names of the states. If the town had been made to order and sawed out by one man, it could not be more beautifully regular and more satisfactorily monotonous. There is nothing about it to give the most commonplace mind in the world a throb of disturbance. The hotels, the cheap shops, the cottages, are all of wood, and, with three or four exceptions in the thousands, they are all practically alike, all ornamented with scroll-work, as if cut out by the jig-saw, all vividly painted, all appealing to a primitive taste just awakening to the appreciation of the gaudy chromo and the illuminated and consoling household motto. Most of the hotels are in the town, at considerable distance from the ocean, and the majestic old sea, which can be monotonous but never vulgar, is barricaded from the town by five or six miles of stark-naked plank walk, rows on rows of bath closets, leagues of flimsy carpentry-work, in the way of cheap-John shops, tin-type booths, peep-shows, go-rounds, shooting-galleries, pop-beer and cigar shops, restaurants, barber shops, photograph galleries, summer theatres. Sometimes the plank walk runs for a mile or two, on its piles, between rows of these shops and booths, and again it drops off down by the waves. Here and there is a gayly-painted wooden canopy by the shore, with chairs where idlers can sit and watch the frolicking in the water, or a space railed off, where the select of the hotels lie or lounge in the sand under red umbrellas. The calculating mind wonders how many million feet of lumber there are in this unpicturesque barricade, and what gigantic forests have fallen to make this timber front to the sea. But there is one thing man cannot do. He has made this show to suit himself, he has pushed out several iron piers into the sea, and erected, of course, a skating rink on the end of one of them. But the sea itself, untamed, restless, shining, dancing, raging, rolls in from the southward, tossing the white sails on its vast expanse, green, blue, leaden, white-capped, many-colored, never two minutes the same, sounding with its eternal voice I knew not what rebuke to man.

When Mr. King wrote his and his friend's name in the book at the Mansion House, he had the curiosity to turn over the leaves, and it was not with much surprise that he read there the names of A. J. Benson, wife, and daughter, Cyrusville, Ohio.

"Oh, I see!" said the artist; "you came down here to see Mr. Benson!"

That gentleman was presently discovered tilted back in a chair on the piazza, gazing vacantly into the vacant street with that air of endurance that fathers of families put on at such resorts. But he brightened up when Mr. King made himself known.

"I'm right glad to see you, sir. And my wife and daughter will be. I was saying to my wife yesterday that I couldn't stand this sort of thing much longer."

"You don't find it lively?"

"Well, the livelier it is the less I shall like it, I reckon. The town is well enough. It's one of the smartest

places on the coast. I should like to have owned the ground and sold out and retired. This sand is all gold. They say they sell the lots by the bushel and count every sand. You can see what it is, boards and paint and sand. Fine houses, too; miles of them."

"And what do you do?"

"Oh, they say there's plenty to do. You can ride around in the sand; you can wade in it if you want to, and go down to the beach and walk up and down the plank walk—walk up and down—walk up and down. They like it. You can't bathe yet without getting pneumonia. They have gone there now. Irene goes because she says she can't stand the gayety of the parlor."

From the parlor came the sound of music. A young girl who had the air of not being afraid of a public parlor was drumming out waltzes on the piano, more for the entertainment of herself than of the half-dozen ladies who yawned over their worsted-work. As she brought her piece to an end with a bang, a pretty, sentimental miss with a novel in her hand, who may not have seen Mr. King looking in at the door, ran over to the player and gave her a hug. "That's beautiful! that's perfectly lovely, Mamie!"—"This," said the player, taking up another sheet, "has not been played much in New York." Probably not, in that style, thought Mr. King, as the girl clattered through it.

There was no lack of people on the promenade, tramping the boards, or hanging about the booths where the carpenters and painters were at work, and the shop men and women were unpacking the corals and the sea-shells, and the cheap jewelry, and the Swiss wood-carving, the toys, the tinsel brooches, and agate ornaments, and arranging the soda fountains, and putting up the shelves for the permanent pie. The sort of preparation going on indicated the kind of crowd expected. If everything had a cheap and vulgar look, our wandering critics remembered that it is never fair to look behind the scenes of a show, and that things would wear a braver appearance by and by. And if the women on the promenade were homely and ill-dressed, even the bonnes in unpicturesque costumes, and all the men were slouchy and stolid, how could any one tell what an effect of gayety and enjoyment there might be when there were thousands of such people, and the sea was full of bathers, and the flags were flying, and the bands were tooting, and all the theatres were opened, and acrobats and spangled women and painted red-men offered those attractions which, like government, are for the good of the greatest number? What will you have? Shall vulgarity be left just vulgar, and have no apotheosis and glorification? This is very fine of its kind, and a resort for the million. The million come here to enjoy themselves. Would you have an art-gallery here, and high-priced New York and Paris shops lining the way?

"Look at the town," exclaimed the artist, "and see what money can do, and satisfy the average taste without the least aid from art. It's just wonderful. I've tramped round the place, and, taking out a cottage or two, there isn't a picturesque or pleasing view anywhere. I tell you people know what they want, and enjoy it when they get it."

"You needn't get excited about it," said Mr. King. "Nobody said it wasn't commonplace, and glaringly vulgar if you like, and if you like to consider it representative of a certain stage in national culture, I hope it is not necessary to remind you that the United States can beat any other people in any direction they choose to expand themselves. You'll own it when you've seen watering-places enough."

After this defense of the place, Mr. King owned it might be difficult for Mr. Forbes to find anything picturesque to sketch. What figures, to be sure! As if people were obliged to be shapely or picturesque for the sake of a wandering artist! "I could do a tree," growled Mr. Forbes, "or a pile of boards; but these shanties!"

When they were well away from the booths and bath-houses, Mr. King saw in the distance two ladies. There was no mistaking one of them—the easy carriage, the grace of movement. No such figure had been afield all day. The artist was quick to see that. Presently they came up with them, and found them seated on a bench, looking off upon Brigantine Island, a low sand dune with some houses and a few trees against the sky, the most pleasing object in view.

Mrs. Benson did not conceal the pleasure she felt in seeing Mr. King again, and was delighted to know his friend; and, to say the truth, Miss Irene gave him a very cordial greeting.

"I'm 'most tired to death," said Mrs. Benson, when they were all seated. "But this air does me good. Don't you like Atlantic City?"

"I like it better than I did at first." If the remark was intended for Irene, she paid no attention to it, being absorbed in explaining to Mr. Forbes why she preferred the deserted end of the promenade.

"It's a place that grows on you. I guess it's grown the wrong way on Irene and father; but I like the air—

after the South. They say we ought to see it in August, when all Philadelphia is here."

"I should think it might be very lively."

"Yes; but the promiscuous bathing. I don't think I should like that. We are not brought up to that sort of thing in Ohio."

"No? Ohio is more like France, I suppose?"

"Like France!" exclaimed the old lady, looking at him in amazement—"like France! Why, France is the wickedest place in the world."

"No doubt it is, Mrs. Benson. But at the sea resorts the sexes bathe separately."

"Well, now! I suppose they have to there."

"Yes; the older nations grow, the more self-conscious they become."

"I don't believe, for all you say, Mr. King, the French have any more conscience than we have."

"Nor do I, Mrs. Benson. I was only trying to say that they pay more attention to appearances."

"Well, I was brought up to think it's one thing to appear, and another thing to be," said Mrs. Benson, as dismissing the subject. "So your friend's an artist? Does he paint? Does he take portraits? There was an artist at Cyrusville last winter who painted portraits, but Irene wouldn't let him do hers. I'm glad we've met Mr. Forbes. I've always wanted to have—"

"Oh, mother," exclaimed Irene, who always appeared to keep one ear for her mother's conversation, "I was just saying to Mr. Forbes that he ought to see the art exhibitions down at the other end of the promenade, and the pictures of the people who come here in August. Are you rested?"

The party moved along, and Mr. King, by a movement that seemed to him more natural than it did to Mr. Forbes, walked with Irene, and the two fell to talking about the last spring's trip in the South.

"Yes, we enjoyed the exhibition, but I am not sure but I should have enjoyed New Orleans more without the exhibition. That took so much time. There is nothing so wearisome as an exhibition. But New Orleans was charming. I don't know why, for it's the flattest, dirtiest, dampest city in the world; but it is charming. Perhaps it's the people, or the Frenchness of it, or the tumble-down, picturesque old creole quarter, or the roses; I didn't suppose there were in the world so many roses; the town was just wreathed and smothered with them. And you did not see it?"

"No; I have been to exhibitions, and I thought I should prefer to take New Orleans by itself some other time. You found the people hospitable?"

"Well, they were not simply hospitable; they were that, to be sure, for father had letters to some of the leading men; but it was the general air of friendliness and good-nature everywhere, of agreeableness—it went along with the roses and the easy-going life. You didn't feel all the time on a strain. I don't suppose they are any better than our people, and I've no doubt I should miss a good deal there after a while—a certain tonic and purpose in life. But, do you know, it is pleasant sometimes to be with people who haven't so many corners as our people have. But you went south from Fortress Monroe?"

"Yes; I went to Florida."

"Oh, that must be a delightful country!"

"Yes, it's a very delightful land, or will be when it is finished. It needs advertising now. It needs somebody to call attention to it. The modest Northerners who have got hold of it, and staked it all out into city lots, seem to want to keep it all to themselves."

"How do you mean 'finished'?"

"Why, the State is big enough, and a considerable portion of it has a good foundation. What it wants is building up. There's plenty of water and sand, and palmetto roots and palmetto trees, and swamps, and a perfectly wonderful vegetation of vines and plants and flowers. What it needs is land—at least what the Yankees call land. But it is coming on. A good deal of the State below Jacksonville is already ten to fifteen feet above the ocean."

"But it's such a place for invalids!"

"Yes, it is a place for invalids. There are two kinds of people there—invalids and speculators. Thousands of people in the bleak North, and especially in the Northwest, cannot live in the winter anywhere else than in Florida. It's a great blessing to this country to have such a sanitarium. As I said, all it needs is building up, and then it wouldn't be so monotonous and malarious."

"But I had such a different idea of it!"

"Well, your idea is probably right. You cannot do justice to a place by describing it literally. Most people are fascinated by Florida: the fact is that anything is preferable to our Northern climate from February to May."

"And you didn't buy an orange plantation, or a town?"

"No; I was discouraged. Almost any one can have a town who will take a boat and go off somewhere with a surveyor, and make a map."

The truth is—the present writer had it from Major Blifill, who runs a little steamboat upon one of the inland creeks where the alligator is still numerous enough to be an entertainment—that Mr. King was no doubt malarious himself when he sailed over Florida. Blifill says he offended a whole boatfull one day when they were sailing up the St. John's. Probably he was tired of water, and swamp and water, and scraggy trees and water. The captain was on the bow, expatiating to a crowd of listeners on the fertility of the soil and the salubrity of the climate. He had himself bought a piece of ground away up there somewhere for two hundred dollars, cleared it up, and put in orange-trees, and thousands wouldn't buy it now. And Mr. King, who listened attentively, finally joined in with the questioners, and said, "Captain, what is the average price of land down in this part of Florida by the—gallon?"

They had come down to the booths, and Mrs. Benson was showing the artist the shells, piles of conchs, and other outlandish sea-fabrications in which it is said the roar of the ocean can be heard when they are hundreds of miles away from the sea. It was a pretty thought, Mr. Forbes said, and he admired the open

shells that were painted on the inside—painted in bright blues and greens, with dabs of white sails and a lighthouse, or a boat with a bare-armed, resolute young woman in it, sending her bark spinning over waves mountain-high.

"Yes," said the artist, "what cheerfulness those works of art will give to the little parlors up in the country, when they are set up with other shells on the what-not in the corner! These shells always used to remind me of missionaries and the cause of the heathen; but when I see them now I shall think of Atlantic City."

"But the representative things here," interrupted Irene, "are the photographs, the tintypes. To see them is just as good as staying here to see the people when they come."

"Yes," responded Mr. King, "I think art cannot go much further in this direction."

If there were not miles of these show-cases of tintypes, there were at least acres of them. Occasionally an instantaneous photograph gave a lively picture of the beach, when the water was full of bathers—men, women, children, in the most extraordinary costumes for revealing or deforming the human figure—all tossing about in the surf. But most of the pictures were taken on dry land, of single persons, couples, and groups in their bathing suits. Perhaps such an extraordinary collection of humanity cannot be seen elsewhere in the world, such a uniformity of one depressing type reduced to its last analysis by the sea-toilet. Sometimes it was a young man and a maiden, handed down to posterity in dresses that would have caused their arrest in the street, sentimentally reclining on a canvas rock. Again it was a maiden with flowing hair, raised hands clasped, eyes upturned, on top of a crag, at the base of which the waves were breaking in foam. Or it was the same stalwart maiden, or another as good, in a boat which stood on end, pulling through the surf with one oar, and dragging a drowning man (in a bathing suit also) into the boat with her free hand. The legend was, "Saved." There never was such heroism exhibited by young women before, with such raiment, as was shown in these rare works of art.

As they walked back to the hotel through a sandy avenue lined with jig-saw architecture, Miss Benson pointed out to them some things that she said had touched her a good deal. In the patches of sand before each house there was generally an oblong little mound set about with a rim of stones, or, when something more artistic could be afforded, with shells. On each of these little graves was a flower, a sickly geranium, or a humble marigold, or some other floral token of affection.

Mr. Forbes said he never was at a watering-place before where they buried the summer boarders in the front yard. Mrs. Benson didn't like joking on such subjects, and Mr. King turned the direction of the conversation by remarking that these seeming trifles were really of much account in these days, and he took from his pocket a copy of the city newspaper, 'The Summer Sea-Song,' and read some of the leading items: "S., our eye is on you." "The Slopers have come to their cottage on Q Street, and come to stay." "Mr. E. P. Borum has painted his front steps." "Mr. Diffendorfer's marigold is on the blow." And so on, and so on. This was probably the marigold mentioned that they were looking at.

The most vivid impression, however, made upon the visitor in this walk was that of paint. It seemed unreal that there could be so much paint in the world and so many swearing colors. But it ceased to be a dream, and they were taken back into the hard, practical world, when, as they turned the corner, Irene pointed out her favorite sign:

*Silas Lapham, mineral paint.
Branch Office.*

The artist said, a couple of days after this morning, that he had enough of it. "Of course," he added, "it is a great pleasure to me to sit and talk with Mrs. Benson, while you and that pretty girl walk up and down the piazza all the evening; but I'm easily satisfied, and two evenings did for me."

So that, much as Mr. King was charmed with Atlantic City, and much as he regretted not awaiting the arrival of the originals of the tintypes, he gave in to the restlessness of the artist for other scenes; but not before he had impressed Mrs. Benson with a notion of the delights of Newport in July.

III. THE CATSKILLS

The view of the Catskills from a certain hospitable mansion on the east side of the Hudson is better than any mew from those delectable hills. The artist said so one morning late in June, and Mr. King agreed with him, as a matter of fact, but would have no philosophizing about it, as that anticipation is always better than realization; and when Mr. Forbes went on to say that climbing a mountain was a good deal like marriage—the world was likely to look a little flat once that cerulean height was attained—Mr. King only remarked that that was a low view to take of the subject, but he would confess that it was unreasonable to expect that any rational object could fulfill, or even approach, the promise held out by such an exquisite prospect as that before them.

The friends were standing where the Catskill hills lay before them in echelon towards the river, the ridges lapping over each other and receding in the distance, a gradation of lines most artistically drawn, still further refined by shades of violet, which always have the effect upon the contemplative mind of either religious exaltation or the kindling of a sentiment which is in the young akin to the emotion of love. While the artist was making some memoranda of these outlines, and Mr. King was drawing I know not what auguries of hope from these purple heights, a young lady seated upon a rock near by—a young lady just stepping over the border-line of womanhood—had her eyes also fixed upon those dreamy distances, with that look we all know so well, betraying that shy expectancy of life which is

unconfessed, that tendency to maidenly reverie which it were cruel to interpret literally. At the moment she is more interesting than the Catskills—the brown hair, the large eyes unconscious of anything but the most natural emotion, the shapely waist just beginning to respond to the call of the future—it is a pity that we shall never see her again, and that she has nothing whatever to do with our journey. She also will have her romance; fate will meet her in the way some day, and set her pure heart wildly beating, and she will know what those purple distances mean. Happiness, tragedy, anguish—who can tell what is in store for her? I cannot but feel profound sadness at meeting her in this casual way and never seeing her again. Who says that the world is not full of romance and pathos and regret as we go our daily way in it? You meet her at a railway station; there is the flutter of a veil, the gleam of a scarlet bird, the lifting of a pair of eyes—she is gone; she is entering a drawing-room, and stops a moment and turns away; she is looking from a window as you pass—it is only a glance out of eternity; she stands for a second upon a rock looking seaward; she passes you at the church door—is that all? It is discovered that instantaneous photographs can be taken. They are taken all the time; some of them are never developed, but I suppose these impressions are all there on the sensitive plate, and that the plate is permanently affected by the impressions. The pity of it is that the world is so full of these undeveloped knowledges of people worth knowing and friendships worth making.

The comfort of leaving some things to the imagination was impressed upon our travelers when they left the narrow-gauge railway at the mountain station, and identified themselves with other tourists by entering a two-horse wagon to be dragged wearily up the hill through the woods. The ascent would be more tolerable if any vistas were cut in the forest to give views by the way; as it was, the monotony of the pull upward was only relieved by the society of the passengers. There were two bright little girls off for a holiday with their Western uncle, a big, good-natured man with a diamond breast-pin, and his voluble son, a lad about the age of his little cousins, whom he constantly pestered by his rude and dominating behavior. The boy was a product which it is the despair of all Europe to produce, and our travelers had great delight in him as an epitome of American "smartness." He led all the conversation, had confident opinions about everything, easily put down his deferential papa, and pleased the other passengers by his self-sufficient, know-it-all air. To a boy who had traveled in California and seen the Alps it was not to be expected that this humble mountain could afford much entertainment, and he did not attempt to conceal his contempt for it. When the stage reached the Rip Van Winkle House, half-way, the shy schoolgirls were for indulging a little sentiment over the old legend, but the boy, who concealed his ignorance of the Irving romance until his cousins had prattled the outlines of it, was not to be taken in by any such chaff, and though he was a little staggered by Rip's own cottage, and by the sight of the cave above it which is labeled as the very spot where the vagabond took his long nap, he attempted to bully the attendant and drink-mixer in the hut, and openly flaunted his incredulity until the bar-tender showed him a long bunch of Rip's hair, which hung like a scalp on a nail, and the rusty barrel and stock of the musket. The cabin is, indeed, full of old guns, pistols, locks of hair, buttons, cartridge-boxes, bullets, knives, and other undoubted relics of Rip and the Revolution. This cabin, with its facilities for slaking thirst on a hot day, which Rip would have appreciated, over a hundred years old according to information to be obtained on the spot, is really of unknown antiquity, the old boards and timber of which it is constructed having been brought down from the Mountain House some forty years ago.

RIP VAN WINKLE.

The old Mountain House, standing upon its ledge of rock, from which one looks down upon a map of a considerable portion of New York and New England, with the lake in the rear, and heights on each side that offer charming walks to those who have in contemplation views of nature or of matrimony, has somewhat lost its importance since the vast Catskill region has come to the knowledge of the world. A generation ago it was

the centre of attraction, and it was understood that going to the Catskills was going there. Generations of searchers after immortality have chiseled their names in the rock platform, and one who sits there now falls to musing on the vanity of human nature and the transitoriness of fashion. Now New York has found that it has very convenient to it a great mountain pleasure-ground; railways and excellent roads have pierced it, the varied beauties of rocks, ravines, and charming retreats are revealed, excellent hotels capable of entertaining a thousand guests are planted on heights and slopes commanding mountain as well as lowland prospects, great and small boarding-houses cluster in the high valleys and on the hillsides, and cottages more thickly every year dot the wild region. Year by year these accommodations will increase, new roads around the gorges will open more enchanting views, and it is not improbable that the species of American known as the "summer boarder" will have his highest development and apotheosis in these mountains.

Nevertheless Mr. King was not uninterested in renewing his memories of the old house. He could recall without difficulty, and also without emotion now, a scene on this upper veranda and a moonlight night long ago, and he had no doubt he could find her name carved on a beech-tree in the wood near by; but it was useless to look for it, for her name had been changed. The place was, indeed, full of memories, but all chastened and subdued by the indoor atmosphere, which impressed him as that of a faded Sunday. He was very careful not to disturb the decorum by any frivolity of demeanor, and he cautioned the artist on this point; but Mr. Forbes declared that the dining-room fare kept his spirits at a proper level. There was an old-time satisfaction in wandering into the parlor, and resting on the haircloth sofa, and looking at the hair-cloth chairs, and pensively imagining a meeting there, with songs out of the Moody and Sankey book; and he did not tire of dropping into the reposeful reception-room, where he never by any chance met anybody, and sitting with the melodeon and big Bible Society edition of the Scriptures, and a chance copy of the Christian at Play. These amusements were varied by sympathetic listening to the complaints of the proprietor about the vandalism of visitors who wrote with diamonds on the window-panes, so that the glass had to be renewed, or scratched their names on the pillars of the piazza, so that the whole front had to be repainted, or broke off the azalea blossoms, or in other ways desecrated the premises. In order to fit himself for a sojourn here, Mr. King tried to commit to memory a placard that was neatly framed and hung on the veranda, wherein it was stated that the owner cheerfully submits to all necessary use of the premises, "but will not permit any unnecessary use, or the exercise of a depraved taste or vandalism." There were not as yet many guests, and those who were there seemed to have conned this placard to their improvement, for there was not much exercise of any sort of taste. Of course there were two or three brides, and there was the inevitable English nice middle-class tourist with his wife, the latter ram-rod and uncompromising, in big boots and botanical, who, in response to a gentleman who was giving her information about travel, constantly ejaculated, in broad English, "Yas, yas; ow, ow, ow, really!"

And there was the young bride from Kankazoo, who frightened Mr. King back into his chamber one morning when he opened his door and beheld the vision of a woman going towards the breakfast-room in what he took to be a robe de nuit, but which turned out to be one of the "Mother-Hubbards" which have had a certain celebrity as street dresses in some parts of the West. But these gayeties palled after a time, and one afternoon our travelers, with their vandalism all subdued, walked a mile over the rocks to the Kaaterskill House, and took up their abode there to watch the opening of the season. Naturally they expected some difficulty in transferring their two trunks round by the road, where there had been nothing but a wilderness forty years ago; but their change of base was facilitated by the obliging hotelkeeper in the most friendly manner, and when he insisted on charging only four dollars for moving the trunks, the two friends said that, considering the wear and tear of the mountain involved, they did not see how he could afford to do it for such a sum, and they went away, as they said, well pleased.

It happened to be at the Kaaterskill House—it might have been at the Grand, or the Overlook—that the young gentlemen in search of information saw the Catskill season get under way. The phase of American life is much the same at all these great caravansaries. It seems to the writer, who has the greatest admiration for the military genius that can feed and fight an army in the field, that not enough account is made of the greater genius that can organize and carry on a great American hotel, with a thousand or fifteen hundred guests, in a short, sharp, and decisive campaign of two months, at the end of which the substantial fruits of victory are in the hands of the landlord, and the guests are allowed to depart with only their personal baggage and side-arms, but so well pleased that they are inclined to renew the contest next year. This is a triumph of mind over mind. It is not merely the organization and the management of the army under the immediate command of the landlord, the accumulation and distribution of supplies upon this mountain-top, in the uncertainty whether the garrison on a given day will be one hundred or one thousand, not merely the lodging, rationing and amusing of this shifting host, but the satisfying of as many whims and prejudices as there are people who leave home on purpose to grumble and enjoy themselves in the exercise of a criticism they dare not indulge in their own houses. Our friends had an opportunity of seeing the machinery set in motion in one of these great establishments. Here was a vast balloon structure, founded on a rock, but built in the air, and anchored with cables, with towers and a high pillared veranda, capable, with its annex, of lodging fifteen hundred people. The army of waiters and chamber-maids, of bellboys, and scullions and porters and laundry-folk, was arriving; the stalwart scrubbers were at work, the store-rooms were filled, the big kitchen shone with its burnished coppers, and an array of white-capped and aproned cooks stood in line under their chef; the telegraph operator was waiting at her desk, the drug clerk was arranging his bottles, the newspaper stand was furnished, the post-office was open for letters. It needed but the arrival of a guest to set the machinery in motion. And as soon as the guest came the band would be there to launch him into the maddening gayety of the season. It would welcome his arrival in triumphant strains; it would pursue him at dinner, and drown his conversation; it will fill his siesta with martial dreams, and it would seize his legs in the evening, and entreat him to caper in the parlor. Everything was ready. And this was what happened. It was the evening of the opening day. The train wagons might be expected any moment. The electric lights were blazing. All the clerks

THE BRIDE FROM KANKAZOO.

stood expectant, the porters were by the door, the trim, uniformed bell-boys were all in waiting line, the register clerk stood fingering the leaves of the register with a gracious air. A noise is heard outside, the big door opens, there is a rush forward, and four people flock in a man in a linen duster, a stout woman, a lad of ten, a smartly dressed young lady, and a dog. Movement, welcome, ringing of bells, tramping of feet—the whole machinery has started. It was adjusted to crack an egg-shell or smash an iron-bound trunk. The few drops presaged a shower. The next day there were a hundred on the register; the day after, two hundred; and the day following, an excursion.

With increasing arrivals opportunity was offered for the study of character. Away from his occupation, away from the cares of the household and the demands of society, what is the self-sustaining capacity of the ordinary American man or woman? It was interesting to note the enthusiasm of the first arrival, the delight in the view—Round Top, the deep gorges, the charming vista of the lowlands, a world and wilderness of beauty; the inspiration of the air, the alertness to explore in all directions, to see the lake, the falls, the mountain paths. But is a mountain sooner found out than a valley, or is there a want of internal resources, away from business, that the men presently become rather listless, take perfunctory walks for exercise, and are so eager for meal-time and mail-time? Why do they depend so much upon the newspapers, when they all despise the newspapers? Mr. King used to listen of an evening to the commonplace talk about the fire, all of which was a dilution of what they had just got out of the newspapers, but what a lively assent there was to a glib talker who wound up his remarks with a denunciation of the newspapers! The man was no doubt quite right, but did he reflect on the public loss of his valuable conversation the next night if his newspaper should chance to fail? And the women, after their first feeling of relief, did they fall presently into petty gossip, complaints about the table, criticisms of each other's dress, small discontents with nearly everything? Not all of them.

An excursion is always resented by the regular occupants of a summer resort, who look down upon the excursionists, while they condescend to be amused by them. It is perhaps only the common attitude of the wholesale to the retail dealer, although it is undeniable that a person seems temporarily to change his nature when he becomes part of an excursion; whether it is from the elation at the purchase of a day of gayety below the market price, or the escape from personal responsibility under a conductor, or the love of being conspicuous as a part of a sort of organization, the excursionist is not on his ordinary behavior.

An excursion numbering several hundreds, gathered along the river towns by the benevolent enterprise of railway officials, came up to the mountain one day. The officials seemed to have run a drag-net through factories, workshops, Sunday-schools, and churches, and scooped in the weary workers at homes and in shops unaccustomed to a holiday. Our friends formed a part of a group on the hotel piazza who watched the straggling arrival of this band of pleasure. For by this time our two friends had found a circle of acquaintances, with the facility of watering-place life, which in its way represented certain phases of American life as well as the excursion. A great many writers have sought to classify and label and put into a paragraph a description of the American girl. She is not to be disposed of by any such easy process. Undoubtedly she has some common marks of nationality that distinguish her from the English girl, but in variety she is practically infinite, and likely to assume almost any form, and the characteristics of a dozen nationalities. No one type represents her. What, indeed, would one say of this little group on the hotel piazza, making its comments upon the excursionists? Here is a young lady of, say, twenty-three years, inclining already to stoutness, domestic, placid, with matron written on every line of her unselfish face, capable of being, if necessity were, a notable housekeeper, learned in preserves and jellies and cordials, sure to have her closets in order, and a place for every remnant, piece of twine, and all odds and ends. Not a person to read Browning with, but to call on if one needed a nurse, or a good dinner, or a charitable deed. Beside her, in an invalid's chair, a young girl, scarcely eighteen, of quite another sort, pale, slight, delicate, with a lovely face and large sentimental eyes, all nerves, the product, perhaps, of a fashionable school, who in one season in New York, her first, had utterly broken down into what is called nervous prostration. In striking contrast was Miss Nettie Sumner, perhaps twenty-one, who corresponded more nearly to what the internationalists call the American type; had evidently taken school education as a duck takes water, and danced along in society into apparent robustness of person and knowledge of the world. A handsome girl, she would be a comely woman, good-natured, quick at repartee, confining her knowledge of books to popular novels, too natural and frank to be a flirt, an adept in all the nice slang current in fashionable life, caught up from collegians and brokers, accustomed to meet men in public life, in hotels, a very "jolly" companion, with a fund of good sense that made her entirely capable of managing her own affairs. Mr. King was at the moment conversing with still another young lady, who had more years than the last-named-short, compact figure, round girlish face, good, strong, dark eyes, modest in bearing, self-possessed in manner, sensible—who made ready and incisive comments, and seemed to have thought deeply on a large range of topics, but had a sort of downright practicality and cool independence, with all her femininity of bearing, that rather, puzzled her interlocutor. It occurred to Mr. King to guess that Miss Selina Morton might be from Boston, which she was not, but it was with a sort of shock of surprise that he learned later that this young girl, moving about in society in the innocent panoply of girlhood, was a young doctor, who had no doubt looked through and through him with her keen eyes, studied him in the light of heredity, constitutional tendencies, habits, and environment, as a possible patient. It almost made him ill to think of it. Here were types enough for one morning; but there was still another.

The artist had seated himself on a rock a little distance from the house, and was trying to catch some of the figures as they appeared up the path, and a young girl was looking over his shoulder with an amused face, just as he was getting an elderly man in a long flowing duster, straggling gray hair, hat on the back of his head, large iron-rimmed spectacles, with a baggy umbrella, who stopped breathless at the summit, with a wild glare of astonishment at the view. This young girl, whom the careless observer might pass without a second glance, was discovered on better acquaintance to express in her face and the lines of her figure some subtle intellectual quality not easily interpreted. Marion Lamont, let us say at once, was of Southern origin, born in London during the temporary residence of her parents there, and while very young deprived with death of her natural protectors. She had a small, low voice, fine hair of a light color, which contrasted with dark eyes, waved back from her forehead, delicate, sensitive features—indeed, her face, especially in conversation with any one, almost always had a wistful, appealing look; in figure short and very slight, lithe and graceful, full of unconscious artistic poses, fearless and sure-footed as a gazelle in climbing about the rocks, leaping from stone to stone, and even making her way up a tree that had convenient branches, if the whim took her, using her hands and arms like a gymnast, and performing whatever feat of daring or dexterity as if the exquisitely molded form was all instinct with her indomitable will, and obeyed it, and always with an air of refinement and spirited breeding. A child of nature in seeming, but yet a woman who was not to be fathomed by a chance acquaintance.

The old man with the spectacles was presently overtaken by a stout, elderly woman, who landed in the exhausted condition of a porpoise that has come ashore, and stood regardless of everything but her own weight, while member after member of the party straggled up. No sooner did this group espy the artist than they moved in his direction. "There's a painter." "I wonder what he's painting." "Maybe he'll paint us." "Let's see what he's doing." "I should like to see a man paint." And the crowd flowed on, getting in front of the sketcher, and creeping round behind him for a peep over his shoulder. The artist closed his sketch-book and retreated, and the stout woman, balked of that prey, turned round a moment to the view, exclaimed, "Ain't that elegant!" and then waddled off to the hotel.

"I wonder," Mr. King was saying, "if these excursionists are representative of general American life?"

"If they are," said the artist, "there's little here for my purpose. A good many of them seem to be foreigners, or of foreign origin. Just as soon as these people get naturalized, they lose the picturesqueness they had abroad."

"Did it never occur to your highness that they may prefer to be comfortable rather than picturesque, and that they may be ignorant that they were born for artistic purposes?" It was the low voice of Miss Lamont, and that demure person looked up as if she really wanted information.

"I doubt about the comfort," the artist began to reply.

"And so do I," said Miss Sumner. "What on earth do you suppose made those girls come up here in white dresses, blowing about in the wind, and already drabbed? Did you ever see such a lot of cheap millinery? I haven't seen a woman yet with the least bit of style."

"Poor things, they look as if they'd never had a holiday before in their lives, and didn't exactly know what to do with it," apologized Miss Lamont.

"Don't you believe it. They've been to more church and Sunday-school picnics than you ever attended. Look over there!"

It was a group seated about their lunch-baskets. A young gentleman, the comedian of the party, the life of the church sociable, had put on the hat of one of the girls, and was making himself so irresistibly funny in it

that all the girls tittered, and their mothers looked a little shamefaced and pleased.

"Well," said Mr. King, "that's the only festive sign I've seen. It's more like a funeral procession than a pleasure excursion. What impresses me is the extreme gravity of these people—no fun, no hilarity, no letting themselves loose for a good time, as they say. Probably they like it, but they seem to have no capacity for enjoying themselves; they have no vivacity, no gayety—what a contrast to a party in France or Germany off for a day's pleasure—no devices, no resources."

"Yes, it's all sad, respectable, confoundedly uninteresting. What does the doctor say?" asked the artist.

"I know what the doctor will say," put in Miss Summer, "but I tell you that what this crowd needs is missionary dressmakers and tailors. If I were dressed that way I should feel and act just as they do. Well, Selina?"

"It's pretty melancholy. The trouble is constant grinding work and bad food. I've been studying these people. The women are all—"

"Ugly," suggested the artist.

"Well, ill-favored, scrimped; that means ill-nurtured simply. Out of the three hundred there are not half a dozen well-conditioned, filled out physically in comfortable proportions. Most of the women look as if they had been dragged out with indoor work and little intellectual life, but the real cause of physical degeneration is bad cooking. If they lived more out-of-doors, as women do in Italy, the food might not make so much difference, but in our climate it is the prime thing. This poor physical state accounts for the want of gayety and the lack of beauty. The men, on the whole, are better than the women, that is, the young men. I don't know as these people are overworked, as the world goes. I dare say, Nettie, there's not a girl in this crowd who could dance with you through a season. They need to be better fed, and to have more elevating recreations—something to educate their taste."

"I've been educating the taste of one excursionist this morning, a good-faced workman, who was prying about everywhere with a curious air, and said he never'd been on an excursion before. He came up to me in the office, deferentially asked me if I would go into the parlor with him, and, pointing to something hanging on the wall, asked, 'What is that?' 'That,' I said, 'is a view from Sunset Rock, and a very good one.' 'Yes,' he continued, walking close up to it, 'but what is it?' 'Why, it's a painting.' 'Oh, it isn't the place?' 'No, no; it's a painting in oil, done with a brush on a piece of canvas—don't you see—, made to look like the view over there from the rock, colors and all.' 'Yes, I thought, perhaps—you can see a good ways in it. It's pooty.' 'There's another one,' I said—'falls, water coming down, and trees.' 'Well, I declare, so it is! And that's jest a make-believe? I s'pose I can go round and look?' 'Certainly.' And the old fellow tiptoed round the parlor, peering at all the pictures in a confused state of mind, and with a guilty look of enjoyment. It seems incredible that a person should attain his age with such freshness of mind. But I think he is the only one of the party who even looked at the paintings."

"I think it's just pathetic," said Miss Lamont. "Don't you, Mr. Forbes?"

"No; I think it's encouraging. It's a sign of an art appreciation in this country. That man will know a painting next time he sees one, and then he won't rest till he has bought a chromo, and so he will go on."

"And if he lives long enough, he will buy one of Mr. Forbes's paintings."

"But not the one that Miss Lamont is going to sit for."

When Mr. King met the party at the dinner-table, the places of Miss Lamont and Mr. Forbes were still vacant. The other ladies looked significantly at them, and one of them said, "Don't you think there's something in it? don't you think they are interested in each other?" Mr. King put down his soup-spoon, too much amazed to reply. Do women never think of anything but mating people who happen to be thrown together? Here were this young lady and his friend, who had known each other for three days, perhaps, in the most casual way, and her friends had her already as good as married to him and off on a wedding journey. All that Mr. King said, after apparent deep cogitation, was, "I suppose if it were here it would have to be in a traveling-dress," which the women thought frivolous.

THE ARTIST'S FAVORITE OCCUPATION.

Yet it was undeniable that the artist and Marion had a common taste for hunting out picturesque places in the wood-paths, among the rocks, and on the edges of precipices, and they dragged the rest of the party many a mile through wildernesses of beauty. Sketching was the object of all these expeditions, but it always happened—there seemed a fatality in it that whenever they halted anywhere for a rest or a view, the Lamont girl was sure to take an artistic pose, which the artist couldn't resist, and his whole occupation seemed to be drawing her, with the Catskills for a background. "There," he would say, "stay just as you are; yes, leaning a little so"—it was wonderful how the lithe figure adapted itself to any background—"and turn your head this way, looking at me." The artist began to draw, and every time he gave a quick glance upwards from his book, there were the wistful face and those eyes. "Confound it! I beg your pardon—the light. Will you please turn your eyes a little off, that way-so." There was no reason why the artist should be nervous, the face was perfectly demure; but the fact is that art will have only one mistress. So the drawing limped on from day to day, and the excursions became a matter of course. Sometimes the party drove, extending their explorations miles among the hills, exhilarated by the sparkling air, excited by the succession of lovely changing prospects, bestowing their compassion upon the summer boarders in the smartly painted boarding-houses, and comparing the other big hotels with their own. They couldn't help looking down on the summer boarders, any more than cottagers at other places can help a feeling of superiority to people in hotels. It is a natural desire to make an aristocratic line somewhere. Of course they saw the Kaaterskill Falls, and bought twenty-five cents' worth of water to pour over them, and they came very near seeing the Haines Falls, but were a little too late.

"Have the falls been taken in today?" asked Marion, seriously.

"I'm real sorry, miss," said the proprietor, "but there's just been a party here and taken the water. But you can go down and look if you want to, and it won't cost you a cent."

They went down, and saw where the falls ought to be. The artist said it was a sort of dry-plate process, to be developed in the mind afterwards; Mr. King likened it to a dry smoke without lighting the cigar; and the doctor said it certainly had the sanitary advantage of not being damp. The party even penetrated the Platerskill Cove, and were well rewarded by its exceeding beauty, as is every one who goes there. There are sketches of all these lovely places in a certain artist's book, all looking, however, very much alike, and consisting principally of a graceful figure in a great variety of unstudied attitudes.

"Isn't this a nervous sort of a place?" the artist asked his friend, as they sat in his chamber overlooking the world.

"Perhaps it is. I have a fancy that some people are born to enjoy the valley, and some the mountains."

"I think it makes a person nervous to live on a high place. This feeling of constant elevation tires one; it gives a fellow no such sense of bodily repose as he has in a valley. And the wind, it's constantly nagging, rattling the windows and banging the doors. I can't escape the unrest of it." The artist was turning the leaves and contemplating the poverty of his sketch-book. "The fact is, I get better subjects on the seashore."

"Probably the sea would suit us better. By the way, did I tell you that Miss Lamont's uncle came last night from Richmond? Mr. De Long, uncle on the mother's side. I thought there was French blood in her."

"What is he like?"

"Oh, a comfortable bachelor, past middle age; business man; Southern; just a little touch of the 'cyar' for 'car.' Said he was going to take his niece to Newport next week. Has Miss Lamont said anything about going

there?"

"Well, she did mention it the other day."

The house was filling up, and, King thought, losing its family aspect. He had taken quite a liking for the society of the pretty invalid girl, and was fond of sitting by her, seeing the delicate color come back to her cheeks, and listening to her shrewd little society comments. He thought she took pleasure in having him push her wheel-chair up and down the piazza at least she rewarded him by grateful looks, and complimented him by asking his advice about reading and about being useful to others. Like most young girls whose career of gayety is arrested as hers was, she felt an inclination to coquet a little with the serious side of life. All this had been pleasant to Mr. King, but now that so many more guests had come, he found himself most of the time out of business. The girl's chariot was always surrounded by admirers and sympathizers. All the young men were anxious to wheel her up and down by the hour; there was always a strife for this sweet office; and at night, when the vehicle had been lifted up the first flight, it was beautiful to see the eagerness of sacrifice exhibited by these young fellows to wheel her down the long corridor to her chamber. After all, it is a kindly, unselfish world, full of tenderness for women, and especially for invalid women who are pretty. There was all day long a competition of dudes and elderly widowers and bachelors to wait on her. One thought she needed a little more wheeling; another volunteered to bring her a glass of water; there was always some one to pick up her fan, to recover her handkerchief (why is it that the fans and handkerchiefs of ugly women seldom go astray?), to fetch her shawl—was there anything they could do? The charming little heiress accepted all the attentions with most engaging sweetness. Say what you will, men have good hearts.

THE ASCENT TO KAATERSKILL FALLS.

"THERE WAS ALL DAY LONG A COMPETITION OF DUDES AND ELDERLY WIDOWERS AND BACHELORS TO WAIT ON HER."

Yes, they were going to Newport. King and Forbes, who had not had a Fourth of July for some time, wanted to see what it was like at Newport. Mr. De Long would like their company. But before they went the artist must make one more trial at a sketch—must get the local color. It was a large party that went one morning to see it done under the famous ledge of rocks on the Red Path. It is a fascinating spot, with its coolness, sense of seclusion, mosses, wild flowers, and ferns. In a small grotto under the frowning wall of the precipice is said to be a spring, but it is difficult to find, and lovers need to go a great many times in search of it. People not in love can sometimes find a damp place in the sand. The question was where Miss Lamont should pose. Should she nestle under the great ledge, or sit on a projecting rock with her figure against the sky? The artist could not satisfy himself, and the girl, always adventurous, kept shifting her position, climbing about on the jutting ledge, until she stood at last on the top of the precipice, which was some thirty or forty feet high. Against the top leaned a dead balsam, just as some tempest had cast it, its dead branches bleached and scraggy. Down this impossible ladder the girl announced her intention of coming. "No, no," shouted a chorus of voices; "go round; it's unsafe; the limbs will break; you can't get through them; you'll break your neck." The girl stood calculating the possibility. The more difficult the feat seemed, the more she longed to try it.

ON THE RED PATH.

"For Heaven's sake don't try it, Miss Lamont," cried the artist.

"But I want to. I think I must. You can sketch me in the act. It will be something new."

And before any one could interpose, the resolute girl caught hold of the balsam and swung off. A boy or a squirrel would have made nothing of the feat. But for a young lady in long skirts to make her way down that balsam, squirming about and through the stubs and dead limbs, testing each one before she trusted her weight to it, was another affair. It needed a very cool head and the skill of a gymnast. To transfer her hold from one limb to another, and work downward, keeping her skirts neatly gathered about her feet, was an achievement that the spectators could appreciate; the presence of spectators made it much more difficult. And the lookers-on were a good deal more excited than the girl. The artist had his book ready, and when the little figure was half-way down, clinging in a position at once artistic and painful, he began. "Work fast," said the girl. "It's hard hanging on." But the pencil wouldn't work. The artist made a lot of wild marks. He would have given the world to sketch in that exquisite figure, but every time he cast his eye upward the peril was so evident that his hand shook. It was no use. The danger increased as she descended, and with it the excitement of the spectators. All the young gentlemen declared they would catch her if she fell, and some of them seemed to hope she might drop into their arms. Swing off she certainly must when the lowest limb was reached. But that was ten feet above the ground and the alighting-place was sharp rock and broken bowlders. The artist kept up a pretense of drawing. He felt every movement of her supple figure and the strain upon the slender arms, but this could not be transferred to the book. It was nervous work. The girl was evidently getting weary, but not losing her pluck. The young fellows were very anxious that the artist should keep at his work; they would catch her. There was a pause; the girl had come to the last limb; she was warily meditating a slide or a leap; the young men were quite ready to sacrifice themselves; but somehow, no one could tell exactly how, the girl swung low, held herself suspended by her hands for an instant, and then dropped into the right place—trust a woman for that; and the artist, his face flushed, set her down upon the nearest flat rock. Chorus from the party, "She is saved!"

“THE DANGER INCREASED AS SHE DESCENDED.”

“And my sketch is gone up again.”

“I’m sorry, Mr. Forbes.” The girl looked full of innocent regret. “But when I was up there I had to come down that tree. I couldn’t help it, really.”

IV. NEWPORT

On the Fourth of July, at five o'clock in the morning, the porters called the sleepers out of their berths at Wickford Junction. Modern civilization offers no such test to the temper and to personal appearance as this early preparation to meet the inspection of society after a night in the stuffy and luxuriously upholstered tombs of a sleeping-car. To get into them at night one must sacrifice dignity; to get out of them in the morning, clad for the day, gives the proprietors a hard rub. It is wonderful, however, considering the twisting and scrambling in the berth and the miscellaneous and ludicrous presentation of humanity in the washroom at the end of the car, how presentable people make themselves in a short space of time. One realizes the debt of the ordinary man to clothes, and how fortunate it is for society that commonly people do not see each other in the morning until art has done its best for them. To meet the public eye, cross and tousled and disarranged, requires either indifference or courage. It is disenchanting to some of our cherished ideals. Even the trig, irreproachable commercial drummer actually looks banged-up, and nothing of a man; but after a few moments, boot-blackened and paper-collared, he comes out as fresh as a daisy, and all ready to drum.

Our travelers came out quite as well as could be expected, the artist sleepy and a trifle disorganized, Mr. King in a sort of facetious humor that is more dangerous than grumbling, Mr. De Long yawning and stretching and declaring that he had not slept a wink, while Marion alighted upon the platform unruffled in plumage, greeting the morning like a bird. There were the usual early loafers at the station, hands deep in pockets, ruminant, listlessly observant. No matter at what hour of day or night a train may arrive or depart at a country station in America, the loafers are so invariably there in waiting that they seem to be a part of our railway system. There is something in the life and movement that seems to satisfy all the desire for activity they have.

Even the most sleepy tourist could not fail to be impressed with the exquisite beauty of the scene at Wickford Harbor, where the boat was taken for Newport. The slow awaking of morning life scarcely disturbed its tranquillity. Sky and sea and land blended in a tone of refined gray. The shores were silvery, a silvery light came out of the east, streamed through the entrance of the harbor, and lay molten and glowing on the water. The steamer's deck and chairs and benches were wet with dew, the noises in transferring the baggage and

getting the boat under way were all muffled and echoed in the surrounding silence. The sail-boats that lay at anchor on the still silver surface sent down long shadows, and the slim masts seemed driven down into the water to hold the boats in place. The little village was still asleep. It was such a contrast; the artist was saying to Marion, as they leaned over the taffrail, to the new raw villages in the Catskills. The houses were large, and looked solid and respectable, many of them were shingled on the sides, a spire peeped out over the green trees, and the hamlet was at once homelike and picturesque. Refinement is the note of the landscape. Even the old warehouses dropping into the water, and the decaying piles of the wharves, have a certain grace. How graciously the water makes into the land, following the indentations, and flowing in little streams, going in and withdrawing gently and regretfully, and how the shore puts itself out in low points, wooing the embrace of the sea—a lovely union. There is no haze, but all outlines are softened in the silver light. It is like a dream, and there is no disturbance of the repose when a family party, a woman, a child, and a man come down to the shore, slip into a boat, and scull away out by the lighthouse and the rocky entrance of the harbor, off, perhaps, for a day's pleasure. The artist has whipped out his sketch-book to take some outlines of the view, and his comrade, looking that way, thinks this group a pleasing part of the scene, and notes how the salt, dewy morning air has brought the color into the sensitive face of the girl. There are not many such hours in a lifetime, he is also thinking, when nature can be seen in such a charming mood, and for the moment it compensates for the night ride.

The party indulged this feeling when they landed, still early, at the Newport wharf, and decided to walk through the old town up to the hotel, perfectly well aware that after this no money would hire them to leave their beds and enjoy this novel sensation at such an hour. They had the street to themselves, and the promenade was one of discovery, and had much the interest of a landing in a foreign city.

"It is so English," said the artist.

"It is so colonial," said Mr. King, "though I've no doubt that any one of the sleeping occupants of these houses would be wide-awake instantly, and come out and ask you to breakfast, if they heard you say it is so English."

"If they were not restrained," Marion suggested, "by the feeling that that would not be English. How fine the shade trees, and what brilliant banks of flowers!"

"And such lawns! We cannot make this turf in Virginia," was the reflection of Mr. De Long.

"Well, colonial if you like," the artist replied to Mr. King. "What is best is in the colonial style; but you notice that all the new houses are built to look old, and that they have had Queen Anne pretty bad, though the colors are good."

"That's the way with some towns. Queen Anne seems to strike them all of a sudden, and become epidemic. The only way to prevent it is to vaccinate, so to speak, with two or three houses, and wait; then it is not so likely to spread."

AT THE CASINO, NEWPORT.

Laughing and criticising and admiring, the party strolled along the shaded avenue to the Ocean House. There were as yet no signs of life at the Club, or the Library, or the Casino; but the shops were getting open, and the richness and elegance of the goods displayed in the windows were the best evidence of the wealth and refinement of the expected customers—culture and taste always show themselves in the shops of a town. The long gray-brown front of the Casino, with its shingled sides and hooded balconies and galleries, added to the already strong foreign impression of the place. But the artist was dissatisfied. It was not at all his idea of Independence Day; it was like Sunday, and Sunday without any foreign gayety. He had expected firing of cannon and ringing of bells—there was not even a flag out anywhere; the celebration of the Fourth seemed to have shrunk into a dull and decorous avoidance of all excitement. "Perhaps," suggested Miss Lamont, "if the New-Englanders keep the Fourth of July like Sunday, they will by and by keep Sunday like the Fourth of July. I hear it is the day for excursions on this coast."

Mr. King was perfectly well aware that in going to a hotel in Newport he was putting himself out of the pale of the best society; but he had a fancy for viewing this society from the outside, having often enough seen it from the inside. And perhaps he had other reasons for this eccentric conduct. He had, at any rate, declined the invitation of his cousin, Mrs. Bartlett Glow, to her cottage on the Point of Rocks. It was not without regret that he did this, for his cousin was a very charming woman, and devoted exclusively to the most exclusive social life. Her husband had been something in the oil line in New York, and King had watched with interest his evolution from the business man into the full-blown existence of a man of fashion. The process is perfectly

charted. Success in business, membership in a good club, tandem in the Park, introduction to a good house, marriage to a pretty girl of family and not much money, a yacht, a four-in-hand, a Newport villa. His name had undergone a like evolution. It used to be written on his business card, Jacob B. Glow. It was entered at the club as J. Bartlett Glow. On the wedding invitations it was Mr. Bartlett Glow, and the dashing pair were always spoken of at Newport as the Bartlett-Glows.

When Mr. King descended from his room at the Ocean House, although it was not yet eight o'clock, he was not surprised to see Mr. Benson tilted back in one of the chairs on the long piazza, out of the way of the scrubbers, with his air of patient waiting and observation. Irene used to say that her father ought to write a book—"Life as Seen from Hotel Piazzas." His only idea of recreation when away from business seemed to be sitting about on them.

"The women-folks," he explained to Mr. King, who took a chair beside him, "won't be down for an hour yet. I like, myself, to see the show open."

"Are there many people here?"

"I guess the house is full enough. But I can't find out that anybody is actually stopping here, except ourselves and a lot of schoolmarms come to attend a convention. They seem to enjoy it. The rest, those I've talked with, just happen to be here for a day or so, never have been to a hotel in Newport before, always stayed in a cottage, merely put up here now to visit friends in cottages. You'll see that none of them act like they belonged to the hotel. Folks are queer."

At a place we were last summer all the summer boarders, in boarding-houses round, tried to act like they were staying at the big hotel, and the hotel people swelled about on the fact of being at a hotel. Here you're nobody. I hired a carriage by the week, driver in buttons, and all that. It don't make any difference. I'll bet a gold dollar every cottager knows it's hired, and probably they think by the drive."

"It's rather stupid, then, for you and the ladies."

"Not a bit of it. It's the nicest place in America: such grass, such horses, such women, and the drive round the island—there's nothing like it in the country. We take it every day. Yes, it would be a little lonesome but for the ocean. It's a good deal like a funeral procession, nobody ever recognizes you, not even the hotel people who are in hired hacks. If I were to come again, Mr. King, I'd come in a yacht, drive up from it in a box on two wheels, with a man clinging on behind with his back to me, and have a cottage with an English gardener. That would fetch 'em. Money won't do it, not at a hotel. But I'm not sure but I like this way best. It's an occupation for a man to keep up a cottage."

"And so you do not find it dull?"

"No. When we aren't out riding, she and Irene go on to the cliffs, and I sit here and talk real estate. It's about all there is to talk of."

There was an awkward moment or two when the two parties met in the lobby and were introduced before going in to breakfast. There was a little putting up of guards on the part of the ladies. Between Irene and Marion passed that rapid glance of inspection, that one glance which includes a study and the passing of judgment upon family, manners, and dress, down to the least detail. It seemed to be satisfactory, for after a few words of civility the two girls walked in together, Irene a little dignified, to be sure, and Marion with her wistful, half-inquisitive expression. Mr. King could not be mistaken in thinking Irene's manner a little constrained and distant to him, and less cordial than it was to Mr. Forbes, but the mother righted the family balance.

"I'm right glad you've come, Mr. King. It's like seeing somebody from home. I told Irene that when you came I guess we should know somebody. It's an awful fashionable place."

"And you have no acquaintances here?"

"No, not really. There's Mrs. Peabody has a cottage here, what they call a cottage, but there no such house in Cyrusville. We drove past it. Her daughter was to school with Irene. We've met 'em out riding several times, and Sally (Miss Peabody) bowed to Irene, and pa and I bowed to everybody, but they haven't called. Pa says it's because we are at a hotel, but I guess it's been company or something. They were real good friends at school."

Mr. King laughed. "Oh, Mrs. Benson, the Peabodys were nobodys only a few years ago. I remember when they used to stay at one of the smaller hotels."

"Well, they seem nice, stylish people, and I'm sorry on Irene's account."

At breakfast the party had topics enough in common to make conversation lively. The artist was sure he should be delighted with the beauty and finish of Newport. Miss Lamont doubted if she should enjoy it as much as the freedom and freshness of the Catskills. Mr. King amused himself with drawing out Miss Benson on the contrast with Atlantic City. The dining-room was full of members of the Institute, in attendance upon the annual meeting, graybearded, long-faced educators, devotees of theories and systems, known at a glance by a certain earnestness of manner and intensity of expression, middle-aged women of a resolute, intellectual countenance, and a great crowd of youthful schoolmistresses, just on the dividing line between domestic life and self-sacrifice, still full of sentiment, and still leaning perhaps more to Tennyson and Lowell than to mathematics and Old English.

"They have a curious, mingled air of primness and gayety, as if gayety were not quite proper," the artist began. "Some of them look downright interesting, and I've no doubt they are all excellent women."

"I've no doubt they are all good as gold," put in Mr. King. "These women are the salt of New England." (Irene looked up quickly and appreciatively at the speaker.) "No fashionable nonsense about them. What's in you, Forbes, to shy so at a good woman?"

"I don't shy at a good woman—but three hundred of them! I don't want all my salt in one place. And see here—I appeal to you, Miss Lamont—why didn't these girls dress simply, as they do at home, and not attempt a sort of ill-fitting finery that is in greater contrast to Newport than simplicity would be?"

"If you were a woman," said Marion, looking demurely, not at Mr. Forbes, but at Irene, "I could explain it to you. You don't allow anything for sentiment and the natural desire to please, and it ought to be just pathetic to you that these girls, obeying a natural instinct, missed the expression of it a little."

"Men are such critics," and Irene addressed the remark to Marion, "they pretend to like intellectual women, but they can pardon anything better than an ill-fitting gown. Better be frivolous than badly dressed."

"Well," stoutly insisted Forbes, "I'll take my chance with the well-dressed ones always; I don't believe the frumpy are the most sensible."

"No; but you make out a prima facie case against a woman for want of taste in dress, just as you jump at the conclusion that because a woman dresses in such a way as to show she gives her mind to it she is of the right sort. I think it's a relief to see a convention of women devoted to other things who are not thinking of their clothes."

"Pardon me; the point I made was that they are thinking of their clothes, and thinking erroneously."

"Why don't you ask leave to read a paper, Forbes, on the relation of dress to education?" asked Mr. King.

They rose from the table just as Mrs. Benson was saying that for her part she liked these girls, they were so homelike; she loved to hear them sing college songs and hymns in the parlor. To sing the songs of the students is a wild, reckless dissipation for girls in the country.

When Mr. King and Irene walked up and down the corridor after breakfast the girl's constraint seemed to have vanished, and she let it be seen that she had sincere pleasure in renewing the acquaintance. King himself began to realize how large a place the girl's image had occupied in his mind. He was not in love—that would be absurd on such short acquaintance—but a thought dropped into the mind ripens without consciousness, and he found that he had anticipated seeing Irene again with decided interest. He remembered exactly how she looked at Fortress Monroe, especially one day when she entered the parlor, bowing right and left to persons she knew, stopping to chat with one and another, tall, slender waist swelling upwards in symmetrical lines, brown hair, dark-gray eyes—he recalled every detail, the high-bred air (which was certainly not inherited), the unconscious perfect carriage, and his thinking in a vague way that such ease and grace meant good living and leisure and a sound body. This, at any rate, was the image in his mind—a sufficiently distracting thing for a young man to carry about with him; and now as he walked beside her he was conscious that there was something much finer in her than the image he had carried with him, that there was a charm of speech and voice and expression that made her different from any other woman he had ever seen. Who can define this charm, this difference? Some women have it for the universal man—they are desired of every man who sees them; their way to marriage (which is commonly unfortunate) is over a causeway of prostrate forms, if not of cracked hearts; a few such women light up and make the romance of history. The majority of women fortunately have it for one man only, and sometimes he never appears on the scene at all! Yet every man thinks his choice belongs to the first class; even King began to wonder that all Newport was not raving over Irene's beauty. The present writer saw her one day as she alighted from a carriage at the Ocean House, her face flushed with the sea air, and he remembers that he thought her a fine girl. "By George, that's a fine woman!" exclaimed a New York bachelor, who prided himself on knowing horses and women and all that; but the country is full of fine women—this to him was only one of a thousand.

What were this couple talking about as they promenaded, basking in each other's presence? It does not matter. They were getting to know each other, quite as much by what they did not say as by what they did say, by the thousand little exchanges of feeling and sentiment which are all-important, and never appear even in a stenographer's report of a conversation. Only one thing is certain about it, that the girl could recall every word that Mr. King said, even his accent and look, long after he had forgotten even the theme of the talk. One thing, however, he did carry away with him, which set him thinking. The girl had been reading the "Life of

Carlyle," and she took up the cudgels for the old curmudgeon, as King called him, and declared that, when all was said, Mrs. Carlyle was happier with him than she would have been with any other man in England. "What woman of spirit wouldn't rather mate with an eagle, and quarrel half the time, than with a humdrum barn-yard fowl?" And Mr. Stanhope King, when he went away, reflected that he who had fitted himself for the bar, and traveled extensively, and had a moderate competence, hadn't settled down to any sort of career. He had always an intention of doing something in a vague way; but now the thought that he was idle made him for the first time decidedly uneasy, for he had an indistinct notion that Irene couldn't approve of such a life.

This feeling haunted him as he was making a round of calls that day. He did not return to lunch or dinner—if he had done so he would have found that lunch was dinner and that dinner was supper—another vital distinction between the hotel and the cottage. The rest of the party had gone to the cliffs with the artist, the girls on a pretense of learning to sketch from nature. Mr. King dined with his cousin.

"You are a bad boy, Stanhope," was the greeting of Mrs. Bartlett Glow, "not to come to me. Why did you go to the hotel?"

"Oh, I thought I'd see life; I had an unaccountable feeling of independence. Besides, I've a friend with me, a very clever artist, who is re-seeing his country after an absence of some years. And there are some other people."

"Oh, yes. What is her name?"

"Why, there is quite a party. We met them at different places. There's a very bright New York girl, Miss Lamont, and her uncle from Richmond." ("Never heard of her," interpolated Mrs. Glow.) "And a Mr. and Mrs. Benson and their daughter, from Ohio. Mr. Benson has made money; Mrs. Benson, good-hearted old lady, rather plain and—"

"Yes, I know the sort; had a falling-out with Lindley Murray in her youth and never made it up. But what I want to know is about the girl. What makes you beat about the bush so? What's her name?"

"Irene. She is an uncommonly clever girl; educated; been abroad a good deal, studying in Germany; had all advantages; and she has cultivated tastes; and the fact is that out in Cyrusville—that is where they live—You know how it is here in America when the girl is educated and the old people are not—"

"The long and short of it is, you want me to invite them here. I suppose the girl is plain, too—takes after her mother?"

"Not exactly. Mr. Forbes—that's my friend—says she's a beauty. But if you don't mind, Penelope, I was going to ask you to be a little civil to them."

"Well, I'll admit she is handsome—a very striking-looking girl. I've seen them driving on the Avenue day after day. Now, Stanhope, I don't mind asking them here to a five o'clock; I suppose the mother will have to come. If she was staying with somebody here it would be easier. Yes, I'll do it to oblige you, if you will make yourself useful while you are here. There are some girls I want you to know, and mind, my young friend, that you don't go and fall in love with a country girl whom nobody knows, out of the set. It won't be comfortable."

"You are always giving me good advice, Penelope, and I should be a different man if I had profited by it."

"Don't be satirical, because you've coaxed me to do you a favor."

Late in the evening the gentlemen of the hotel party looked in at the skating-rink, a great American institution that has for a large class taken the place of the ball, the social circle, the evening meeting. It seemed a little incongruous to find a great rink at Newport, but an epidemic is stronger than fashion, and even the most exclusive summer resort must have its rink. Roller-skating is said to be fine exercise, but the benefit of it as exercise would cease to be apparent if there were a separate rink for each sex. There is a certain exhilaration in the lights and music and the lively crowd, and always an attraction in the freedom of intercourse offered. The rink has its world as the opera has, its romances and its heroes. The frequenters of the rink know the young women and the young men who have a national reputation as adepts, and their exhibitions are advertised and talked about as are the appearances of celebrated 'prime donne' and 'tenori' at the opera. The visitors had an opportunity to see one of these exhibitions. After a weary watching of the monotonous and clattering round and round of the swinging couples or the stumbling single skaters, the floor was cleared, and the darling of the rink glided upon the scene. He was a slender, handsome fellow, graceful and expert to the nicest perfection in his profession. He seemed not so much to skate as to float about the floor, with no effort except volition. His rhythmic movements were followed with pleasure, but it was his feats of dexterity, which were more wonderful than graceful, that brought down the house. It was evident that he was a hero to the female part of the spectators, and no doubt his charming image continued to float round and round in the brain of many a girl when she put her head on the pillow that night. It is said that a good many matches which are not projected or registered in heaven are made at the rink.

At the breakfast-table it appeared that the sketching-party had been a great success—for everybody except the artist, who had only some rough memoranda, like notes for a speech, to show. The amateurs had made finished pictures.

Miss Benson had done some rocks, and had got their hardness very well. Miss Lamont's effort was more ambitious; her picture took in no less than miles of coast, as much sea as there was room for on the paper, a navy of sail-boats, and all the rocks and figures that were in the foreground, and it was done with a great deal of naivete and conscientiousness. When it was passed round the table, the comments were very flattering.

"It looks just like it," said Mr. Benson.

"It's very comprehensive," remarked Mr. Forbes.

"What I like, Marion," said Mr. De Long, holding it out at arm's-length, "is the perspective; it isn't an easy thing to put ships up in the sky."

"Of course," explained Irene, "it was a kind of hazy day."

"But I think Miss Lamont deserves credit for keeping the haze out of it." King was critically examining it, turning his head from side to side. "I like it; but I tell you what I think it lacks: it lacks atmosphere. Why don't you cut a hole in it, Miss Lamont, and let the air in?"

"Mr. King," replied Miss Lamont, quite seriously, "you are a real friend, I can only repay you by taking you to church this morning."

"You didn't make much that time, King," said Forbes, as he lounged out of the room.

After church King accepted a seat in the Benson carriage for a drive on the Ocean Road. He who takes this drive for the first time is enchanted with the scene, and it has so much variety, deliciousness in curve and winding, such graciousness in the union of sea and shore, such charm of color, that increased acquaintance only makes one more in love with it. A good part of its attraction lies in the fickleness of its aspect. Its serene and soft appearance might pall if it were not now and then, and often suddenly, and with little warning, transformed into a wild coast, swept by a tearing wind, enveloped in a thick fog, roaring with the noise of the angry sea slapping the rocks and breaking in foam on the fragments its rage has cast down. This elementary mystery and terror is always present, with one familiar with the coast, to qualify the gentleness of its lovelier aspects. It has all moods. Perhaps the most exhilarating is that on a brilliant day, when shore and sea sparkle in the sun, and the waves leap high above the cliffs, and fall in diamond showers.

This Sunday the shore was in its most gracious mood, the landscape as if newly created. There was a light, luminous fog, which revealed just enough to excite the imagination, and refined every outline and softened every color. Mr. King and Irene left the carriage to follow the road, and wandered along the sea path. What softness and tenderness of color in the gray rocks, with the browns and reds of the vines and lichens! They went out on the iron fishing-stands, and looked down at the shallow water. The rocks under water took on the most exquisite shades—purple and malachite and brown; the barnacles clung to them; the long sea-weeds, in half a dozen varieties, some in vivid colors, swept over them, flowing with the restless tide, like the long locks of a drowned woman's hair. King, who had dabbled a little in natural history, took great delight in pointing out to Irene this varied and beautiful life of the sea; and the girl felt a new interest in science, for it was all pure science, and she opened her heart to it, not knowing that love can go in by the door of science as well as by any other opening. Was Irene really enraptured by the dear little barnacles and the exquisite sea-weeds? I have seen a girl all of a flutter with pleasure in a laboratory when a young chemist was showing her the retorts and the crooked tubes and the glass wool and the freaks of color which the alkalies played with the acids. God has made them so, these women, and let us be thankful for it.

What a charm there was about everything! Occasionally the mist became so thin that a long line of coast and a great breadth of sea were visible, with the white sails drifting.

"There's nothing like it," said King—"there's nothing like this island. It seems as if the Creator had determined to show man, once for all, a landscape perfectly refined, you might almost say with the beauty of high-breeding, refined in outline, color, everything softened into loveliness, and yet touched with the wild quality of picturesqueness."

"It's just a dream at this moment," murmured Irene. They were standing on a promontory of rock. "See those figures of people there through the mist—silhouettes only. And look at that vessel—there—no—it has gone."

As she was speaking, a sail-vessel began to loom up large in the mysterious haze. But was it not the ghost of a ship? For an instant it was coming, coming; it was distinct; and when it was plainly in sight it faded away, like a dissolving view, and was gone. The appearance was unreal. What made it more spectral was the bell on the reefs, swinging in its triangle, always sounding, and the momentary scream of the fog-whistle. It was like an enchanted coast. Regaining the carriage, they drove out to the end, Agassiz's Point, where, when the mist lifted, they saw the sea all round dotted with sails, the irregular coasts and islands with headlands and lighthouses, all the picture still, land and water in a summer swoon.

Late that afternoon all the party were out upon the cliff path in front of the cottages. There is no more lovely sea stroll in the world, the way winding over the cliff edge by the turquoise sea, where the turf, close cut and green as Erin, set with flower beds and dotted with noble trees, slopes down, a broad pleasure park, from the stately and picturesque villas. But it was a social mistake to go there on Sunday. Perhaps it is not the height of good form to walk there any day, but Mr. King did not know that the fashion had changed, and that on Sunday this lovely promenade belongs to the butlers and the upper maids, especially to the butlers, who make it resplendent on Sunday afternoons when the weather is good. As the weather had thickened in the late afternoon, our party walked in a dumb-show, listening to the soft swish of the waves on the rocks below, and watching the figures of other promenaders, who were good enough ladies and gentlemen in this friendly mist.

The next day Mr. King made a worse mistake. He remembered that at high noon everybody went down to the first beach, a charming sheltered place at the bottom of the bay, where the rollers tumble in finely from the south, to bathe or see others bathe. The beach used to be lined with carriages at that hour, and the surf, for a quarter of a mile, presented the appearance of a line of picturesquely clad skirmishers going out to battle with the surf. Today there were not half a dozen carriages and omnibuses altogether, and the bathers were few-nursery maids, fragments of a day-excursion, and some of the fair conventionists. Newport was not there. Mr. King had led his party into another social blunder. It has ceased to be fashionable to bathe at Newport.

Strangers and servants may do so, but the cottagers have withdrawn their support from the ocean. Saltwater may be carried to the house and used without loss of caste, but bathing in the surf is vulgar. A gentleman may go down and take a dip alone—it had better be at an early hour—and the ladies of the house may be heard to apologize for his eccentricity, as if his fondness for the water were abnormal and quite out of experience. And the observer is obliged to admit that promiscuous bathing is vulgar, as it is plain enough to be seen when it becomes unfashionable. It is charitable to think also that the cottagers have made it unfashionable because it is vulgar, and not because it is a cheap and refreshing pleasure accessible to everybody.

Nevertheless, Mr. King's ideas of Newport were upset. "It's a little off color to walk much on the cliffs; you lose caste if you bathe in the surf. What can you do?"

"Oh," explained Miss Lamont, "you can make calls; go to teas and receptions and dinners; belong to the

Casino, but not appear there much; and you must drive on the Ocean Road, and look as English as you can. Didn't you notice that Redfern has an establishment on the Avenue? Well, the London girls wear what Redfern tells them to wear—much to the improvement of their appearance—and so it has become possible for a New-Yorker to become partially English without sacrificing her native taste.”

Before lunch Mrs. Bartlett Glow called on the Bensons, and invited them to a five-o'clock tea, and Miss Lamont, who happened to be in the parlor, was included in the invitation. Mrs. Glow was as gracious as possible, and especially attentive to the old lady, who purred with pleasure, and beamed and expanded into familiarity under the encouragement of the woman of the world. In less than ten minutes Mrs. Glow had learned the chief points in the family history, the state of health and habits of pa (Mr. Benson), and all about Cyrusville and its wonderful growth. In all this Mrs. Glow manifested a deep interest, and learned, by observing out of the corner of her eye, that Irene was in an agony of apprehension, which she tried to conceal under an increasing coolness of civility. “A nice lady,” was Mrs. Benson's comment when Mrs. Glow had taken herself away with her charmingly-scented air of frank cordiality—“a real nice lady. She seemed just like our folks.”

Irene heaved a deep sigh. “I suppose we shall have to go.”

“Have to go, child? I should think you'd like to go. I never saw such a girl—never. Pa and me are just studying all the time to please you, and it seems as if—” And the old lady's voice broke down.

“Why, mother dear”—and the girl, with tears in her eyes, leaned over her and kissed her fondly, and stroked her hair—“you are just as good and sweet as you can be; and don't mind me; you know I get in moods sometimes.”

The old lady pulled her down and kissed her, and looked in her face with beseeching eyes.

“What an old frump the mother is!” was Mrs. Glow's comment to Stanhope, when she next met him; “but she is immensely amusing.”

FIVE O'CLOCK TEA.

“She is a kind-hearted, motherly woman,” replied King, a little sharply.

“Oh, motherly! Has it come to that? I do believe you are more than half gone. The girl is pretty; she has a beautiful figure; but my gracious! her parents are impossible—just impossible. And don't you think she's a little too intellectual for society? I don't mean too intellectual, of course, but too mental, don't you know—shows that first. You know what I mean.”

“But, Penelope, I thought it was the fashion now to be intellectual—go in for reading, and literary clubs, Dante and Shakespeare, and political economy, and all that.”

“Yes, I belong to three clubs. I'm going to one tomorrow morning. We are going to take up the 'Disestablishment of the English Church.' That's different; we make it fit into social life somehow, and it doesn't interfere. I'll tell you what, Stanhope, I'll take Miss Benson to the Town and County Club next Saturday.”

“That will be too intellectual for Miss Benson. I suppose the topic will be Transcendentalism?”

“No; we have had that. Professor Spor, of Cambridge, is going to lecture on Bacteria—if that's the way you pronounce it—those mites that get into everything.”

“I should think it would be very improving. I'll tell Miss Benson that if she stays in Newport she must improve her mind.”

“You can make yourself as disagreeable as you like to me, but mind you are on your good behavior at dinner tonight, for the Misses Pelham will be here.”

The five-o'clock at Mrs. Bartlett Glow's was probably an event to nobody in Newport except Mrs. Benson. To most it was only an incident in the afternoon round and drive, but everybody liked to go there, for it is one of the most charming of the moderate-sized villas. The lawn is planted in exquisite taste, and the gardener has set in the open spaces of green the most ingenious devices of flowers and foliage plants, and nothing could be more enchanting than the view from the wide veranda on the sea side. In theory, the occupants lounge there, read, embroider, and swing in hammocks; in point of fact, the breeze is usually so strong that these occupations are carried on indoors.

The rooms were well filled with a moving, chattering crowd when the Bensons arrived, but it could not be said that their entrance was unnoticed, for Mr. Benson was conspicuous, as Irene had in vain hinted to her father that he would be, in his evening suit, and Mrs. Benson's beaming, extra-gracious manner sent a little shiver of amusement through the polite civility of the room.

"I was afraid we should be too late," was Mrs. Benson's response to the smiling greeting of the hostess, with a most friendly look towards the rest of the company. "Mr. Benson is always behindhand in getting dressed for a party, and he said he guessed the party could wait, and—"

Before the sentence was finished Mrs. Benson found herself passed on and in charge of a certain general, who was charged by the hostess to get her a cup of tea. Her talk went right on, however, and Irene, who was still standing by the host, noticed that wherever her mother went there was a lull in the general conversation, a slight pause as if to catch what this motherly old person might be saying, and such phrases as, "It doesn't agree with me, general; I can't eat it," "Yes, I got the rheumatiz in New Orleans, and he did too," floated over the hum of talk.

In the introduction and movement that followed Irene became one of a group of young ladies and gentlemen who, after the first exchange of civilities, went on talking about matters of which she knew nothing, leaving her wholly out of the conversation. The matters seemed to be very important, and the conversation was animated: it was about so-and-so who was expected, or was or was not engaged, or the last evening at the Casino, or the new trap on the Avenue—the delightful little chit-chat by means of which those who are in society exchange good understandings, but which excludes one not in the circle. The young gentleman next to Irene threw in an explanation now and then, but she was becoming thoroughly uncomfortable. She could not be unconscious, either, that she was the object of polite transient scrutiny by the ladies, and of glances of interest from gentlemen who did not approach her. She began to be annoyed by the staring (the sort of stare that a woman recognizes as impudent admiration) of a young fellow who leaned against the mantel—a youth in English clothes who had caught very successfully the air of an English groom. Two girls near her, to whom she had been talking, began speaking in lowered voices in French, but she could not help overhearing them, and her face flushed hotly when she found that her mother and her appearance were the subject of their foreign remarks.

Luckily at the moment Mr. King approached, and Irene extended her hand and said, with a laugh, "Ah, monsieur," speaking in a very pretty Paris accent, and perhaps with unnecessary distinctness, "you were quite right: the society here is very different from Cyrusville; there they all talk about each other."

Mr. King, who saw that something had occurred, was quick-witted enough to reply jestingly in French, as they moved away, but he asked, as soon as they were out of ear-shot, "What is it?"

"Nothing," said the girl, recovering her usual serenity. "I only said something for the sake of saying something; I didn't mean to speak so disrespectfully of my own town. But isn't it singular how local and provincial society talk is everywhere? I must look up mother, and then I want you to take me on the veranda for some air. What a delightful house this is of your cousin's!"

The two young ladies who had dropped into French looked at each other for a moment after Irene moved away, and one of them spoke for both when she exclaimed: "Did you ever see such rudeness in a drawing-room! Who could have dreamed that she understood?" Mrs. Benson had been established very comfortably in a corner with Professor Slem, who was listening with great apparent interest to her accounts of the early life in Ohio. Irene seemed relieved to get away into the open air, but she was in a mood that Mr. King could not account for. Upon the veranda they encountered Miss Lamont and the artist, whose natural enjoyment of the scene somewhat restored her equanimity. Could there be anything more refined and charming in the world than this landscape, this hospitable, smiling house, with the throng of easy-mannered, pleasant-speaking guests, leisurely flowing along in the conventional stream of social comity. One must be a churl not to enjoy it. But Irene was not sorry when, presently, it was time to go, though she tried to extract some comfort from her mother's enjoyment of the occasion. It was beautiful. Mr. Benson was in a calculating mood. He thought it needed a great deal of money to make things run so smoothly.

Why should one inquire in such a paradise if things do run smoothly? Cannot one enjoy a rose without pulling it up by the roots? I have no patience with those people who are always looking on the seamy side. I agree with the commercial traveler who says that it will only be in the millennium that all goods will be alike on both sides. Mr. King made the acquaintance in Newport of the great but somewhat philosophical Mr. Snodgrass, who is writing a work on "The Discomforts of the Rich," taking a view of life which he says has been wholly overlooked. He declares that their annoyances, sufferings, mortifications, envies, jealousies, disappointments, dissatisfactions (and so on through the dictionary of disagreeable emotions), are a great deal more than those of the poor, and that they are more worthy of sympathy. Their troubles are real and unbearable, because they are largely of the mind. All these are set forth with so much powerful language and variety of illustration that King said no one could read the book without tears for the rich of Newport, and he asked Mr. Snodgrass why he did not organize a society for their relief. But the latter declared that it was not a matter for levity. The misery is real. An imaginary case would illustrate his meaning. Suppose two persons quarrel about a purchase of land, and one builds a stable on his lot so as to shut out his neighbor's view of the sea. Would not the one suffer because he could not see the ocean, and the other by reason of the revengeful state of his mind? He went on to argue that the owner of a splendid villa might have, for reasons he gave, less content in it than another person in a tiny cottage so small that it had no spare room for his mother-in-law even, and that in fact his satisfaction in his own place might be spoiled by the more showy place of his neighbor. Mr. Snodgrass attempts in his book a philosophical explanation of this. He says that if every man designed his own cottage, or had it designed as an expression of his own ideas, and developed his grounds and landscape according to his own tastes, working it out himself, with the help of specialists, he would be satisfied. But when owners have no ideas about architecture or about gardening, and their places are the creation of some experimenting architect and a foreign gardener, and the whole effort is not to express a person's individual taste and character, but to make a show, then discontent as to his own will arise whenever some new and more showy villa is built. Mr. Benson, who was poking about a good deal, strolling along the lanes and getting into the rears of the houses, said, when this book was discussed, that his impression was that the real object of these fine places was to support a lot of English gardeners, grooms, and stable-boys. They are a kind of aristocracy. They have really made Newport (that is the summer, transient Newport, for it is largely a transient Newport). "I've been inquiring," continued Mr. Benson, "and you'd be surprised to know the number of people who come here, buy or build expensive villas, splurge out for a year or two, then fail or

get tired of it, and disappear."

Mr. Snodgrass devotes a chapter to the parvenues at Newport. By the parvenu—his definition may not be scientific—he seems to mean a person who is vulgar, but has money, and tries to get into society on the strength of his money alone. He is more to be pitied than any other sort of rich man. For he not only works hard and suffers humiliation in getting his place in society, but after he is in he works just as hard, and with bitterness in his heart, to keep out other parvenues like himself. And this is misery.

But our visitors did not care for the philosophizing of Mr. Snodgrass—you can spoil almost anything by turning it wrong side out. They thought Newport the most beautiful and finished watering-place in America. Nature was in the loveliest mood when it was created, and art has generally followed her suggestions of beauty and refinement. They did not agree with the cynic who said that Newport ought to be walled in, and have a gate with an inscription, "None but Millionaires allowed here." It is very easy to get out of the artificial Newport and to come into scenery that Nature has made after artistic designs which artists are satisfied with. A favorite drive of our friends was to the Second Beach and the Purgatory Rocks overlooking it. The photographers and the water-color artists have exaggerated the Purgatory chasm into a Colorado canon, but anybody can find it by help of a guide. The rock of this locality is a curious study. It is an agglomerate made of pebbles and cement, the pebbles being elongated as if by pressure. The rock is sometimes found in detached fragments having the form of tree trunks. Whenever it is fractured, the fracture is a clean cut, as if made by a saw, and through both pebbles and cement, and the ends present the appearance of a composite cake filled with almonds and cut with a knife. The landscape is beautiful.

"All the lines are so simple," the artist explained. "The shore, the sea, the gray rocks, with here and there the roof of a quaint cottage to enliven the effect, and few trees, only just enough for contrast with the long, sweeping lines."

"You don't like trees?" asked Miss Lamont.

"Yes, in themselves. But trees are apt to be in the way. There are too many trees in America. It is not often you can get a broad, simple effect like this."

It happened to be a day when the blue of the sea was that of the Mediterranean, and the sky and sea melted into each other, so that a distant sail-boat seemed to be climbing into the heavens. The waves rolled in blue on the white sand beach, and broke in silver. Three young girls on horseback galloping in a race along the hard beach at the moment gave the needed animation to a very pretty picture.

North of this the land comes down to the sea in knolls of rock breaking off suddenly—rocks gray with lichen, and shaded with a touch of other vegetation. Between these knifed-back ledges are plots of sea-green grass and sedge, with little ponds, black, and mirroring the sky. Leaving this wild bit of nature, which has got the name of Paradise (perhaps because few people go there), the road back to town sweeps through sweet farm land; the smell of hay is in the air, loads of hay encumber the roads, flowers in profusion half smother the farm cottages, and the trees of the apple-orchards are gnarled and picturesque as olives.

The younger members of the party climbed up into this paradise one day, leaving the elders in their carriages. They came into a new world, as unlike Newport as if they had been a thousand miles away. The spot was wilder than it looked from a distance. The high ridges of rock lay parallel, with bosky valleys and ponds between, and the sea shining in the south—all in miniature. On the way to the ridges they passed clean pasture fields, boulders, gray rocks, aged cedars with flat tops like the stone-pines of Italy. It was all wild but exquisite, a refined wildness recalling the pictures of Rousseau.

Irene and Mr. King strolled along one of the ridges, and sat down on a rock looking off upon the peaceful expanse, the silver lines of the curving shores, and the blue sea dotted with white sails.

"Ah," said the girl, with an inspiration, "this is the sort of five-o'clock I like."

"And I'm sure I'd rather be here with you than at the Blims' reception, from which we ran away."

"I thought," said Irene, not looking at him, and jabbing the point of her parasol into the ground, "I thought you liked Newport."

"So I do, or did. I thought you would like it. But, pardon me, you seem somehow different from what you were at Fortress Monroe, or even at lovely Atlantic City," this with a rather forced laugh.

"Do I? Well, I suppose I am; that is, different from what you thought me. I should hate this place in a week more, beautiful as it is."

"Your mother is pleased here?"

The girl looked up quickly. "I forgot to tell you how much she thanked you for the invitation to your cousin's. She was delighted there."

"And you were not?"

"I didn't say so; you were very kind."

"Oh, kind; I didn't mean to be kind. I was purely selfish in wanting you to go. Cannot you believe, Miss Benson, that I had some pride in having my friends see you and know you?"

"Well, I will be as frank as you are, Mr. King. I don't like being shown off. There, don't look displeased. I didn't mean anything disagreeable."

"But I hoped you understood my motives better by this time."

"I did not think about motives, but the fact is" (another jab of the parasol), "I was made desperately uncomfortable, and always shall be under such circumstances, and, my friend—I should like to believe you are my friend—you may as well expect I always will be."

"I cannot do that. You under—"

"I just see things as they are," Irene went on, hastily. "You think I am different here. Well, I don't mind saying that when I made your acquaintance I thought you different from any man I had met." But now it was out, she did mind saying it; and stopped, confused, as if she had confessed something. But she continued, almost immediately: "I mean I liked your manner to women; you didn't appear to flatter, and you didn't talk complimentary nonsense."

“And now I do?”

“No. Not that. But everything is somehow changed here. Don't let's talk of it. There's the carriage.”

Irene arose, a little flushed, and walked towards the point. Mr. King, picking his way along behind her over the rocks, said, with an attempt at lightening the situation, “Well, Miss Benson, I'm going to be just as different as ever a man was.”

V. NARRAGANSETT PIER AND NEWPORT AGAIN; MARTHA'S VINEYARD AND PLYMOUTH

We have heard it said that one of the charms, of Narragansett Pier is that you can see Newport from it. The summer dwellers at the Pier talk a good deal about liking it better than Newport; it is less artificial and more restful. The Newporters never say anything about the Pier. The Pier people say that it is not fair to judge it when you come direct from Newport, but the longer you stay there the better you like it; and if any too frank person admits that he would not stay in Narragansett a day if he could afford to live in Newport, he is suspected of aristocratic proclivities.

In a calm summer morning, such as our party of pilgrims chose for an excursion to the Pier, there is no prettier sail in the world than that out of the harbor, by Conanicut Island and Beaver-tail Light. It is a holiday harbor, all these seas are holiday seas—the yachts, the sail vessels, the puffing steamers, moving swiftly from one headland to another, or loafing about the blue, smiling sea, are all on pleasure bent. The vagrant vessels that are idly watched from the rocks at the Pier may be coasters and freight schooners engaged seriously in trade, but they do not seem so. They are a part of the picture, always to be seen slowly dipping along in the horizon, and the impression is that they are manoeuvred for show, arranged for picturesque effect, and that they are all taken in at night.

The visitors confessed when they landed that the Pier was a contrast to Newport. The shore below the landing is a line of broken, ragged, slimy rocks, as if they had been dumped there for a riprap wall. Fronting this unkempt shore is a line of barrack-like hotels, with a few cottages of the cheap sort. At the end of this row of hotels is a fine granite Casino, spacious, solid, with wide verandas, and a tennis-court—such a building as even Newport might envy. Then come more hotels, a cluster of cheap shops, and a long line of bath-houses facing a lovely curving beach. Bathing is the fashion at the Pier, and everybody goes to the beach at noon. The spectators occupy chairs on the platform in front of the bath-houses, or sit under tents erected on the smooth sand. At high noon the scene is very lively, and even picturesque, for the ladies here dress for bathing with an intention of pleasing. It is generally supposed that the angels in heaven are not edified by this promiscuous bathing, and by the spectacle of a crowd of women tossing about in the surf, but an impartial angel would admit that many of the costumes here are becoming, and that the effect of the red and yellow caps, making a color line in the flashing rollers, is charming. It is true that there are odd figures in the shifting melee—one solitary old gentleman, who had contrived to get his bathing-suit on hind-side before, wandered along the ocean margin like a lost Ulysses; and that fat woman and fat man were never intended for this sort of exhibition; but taken altogether, with its colors, and the silver flash of the breaking waves, the scene was exceedingly pretty. Not the least pretty part of it was the fringe of children tumbling on the beach, following the retreating waves, and flying from the incoming rollers with screams of delight. Children, indeed, are a characteristic of Narragansett Pier—children and mothers. It might be said to be a family place; it is a good deal so on Sundays, and occasionally when the “business men” come down from the cities to see how their wives and children get on at the hotels.

A CATAMARAN.

After the bathing it is the fashion to meet again at the Casino and take lunch—sometimes through a straw—and after dinner everybody goes for a stroll on the cliffs. This is a noble sea-promenade; with its handsome villas and magnificent rocks, a fair rival to Newport. The walk, as usually taken, is two or three miles along the bold, rocky shore, but an ambitious pedestrian may continue it to the light on Point Judith. Nowhere on this coast are the rocks more imposing, and nowhere do they offer so many studies in color. The visitor's curiosity is excited by a massive granite tower which rises out of a mass of tangled woods planted on the crest of the hill, and his curiosity is not satisfied on nearer inspection, when he makes his way into this thick and gloomy forest, and finds a granite cottage near the tower, and the signs of neglect and wildness that might mark the home of a recluse. What is the object of this noble tower? If it was intended to adorn the landscape, why was it ruined by piercing it irregularly with square windows like those of a factory?

One has to hold himself back from being drawn into the history and romance of this Narragansett shore. Down below the bathing beach is the pretentious wooden pile called Canonchet, that already wears the air of tragedy. And here, at this end, is the mysterious tower, and an ugly unfinished dwelling-house of granite, with the legend "Druid's Dream" carved over the entrance door; and farther inland, in a sandy and shrubby landscape, is Kendall Green, a private cemetery, with its granite monument, surrounded by heavy granite posts, every other one of which is hollowed in the top as a receptacle for food for birds. And one reads there these inscriptions: "Whatever their mode of faith, or creed, who feed the wandering birds, will themselves be fed." "Who helps the helpless, Heaven will help." This inland region, now apparently deserted and neglected, was once the seat of colonial aristocracy, who exercised a princely hospitality on their great plantations, exchanged visits and ran horses with the planters of Virginia and the Carolinas, and were known as far as Kentucky, and perhaps best known for their breed of Narragansett pacers. But let us get back to the shore.

In wandering along the cliff path in the afternoon, Irene and Mr. King were separated from the others, and unconsciously extended their stroll, looking for a comfortable seat in the rocks. The day was perfect. The sky had only a few fleecy, high-sailing clouds, and the great expanse of sea sparkled under the hectoring of a light breeze. The atmosphere was not too clear on the horizon for dreamy effects; all the headlands were softened and tinged with opalescent colors. As the light struck them, the sails which enlivened the scene were either dark spots or shining silver sheets on the delicate blue. At one spot on this shore rises a vast mass of detached rock, separated at low tide from the shore by irregular boulders and a tiny thread of water. In search of a seat the two strollers made their way across this rivulet over the broken rocks, passed over the summit of the giant mass, and established themselves in a cavernous place close to the sea. Here was a natural seat, and the bulk of the seamed and colored ledge, rising above their heads and curving around them, shut them out of sight of the land, and left them alone with the dashing sea, and the gulls that circled and dipped their silver wings in their eager pursuit of prey. For a time neither spoke. Irene was looking seaward, and Mr. King, who had a lower seat, attentively watched the waves lapping the rocks at their feet, and the fine profile and trim figure of the girl against the sky. He thought he had never seen her looking more lovely, and yet he had a sense that she never was so remote from him. Here was an opportunity, to be sure, if he had anything to say, but some fine feeling of propriety restrained him from taking advantage of it. It might not be quite fair, in a place so secluded and remote, and with such sentimental influences, shut in as they were to the sea and the sky.

"It seems like a world by itself," she began, as in continuation of her thought. "They say you can see Gay Head Light from here."

"Yes. And Newport to the left there, with its towers and trees rising out of the sea. It is quite like the Venice Lagoon in this light."

"I think I like Newport better at this distance. It is very poetical. I don't think I like what is called the world much, when I am close to it."

The remark seemed to ask for sympathy, and Mr. King ventured: "Are you willing to tell me, Miss Benson, why you have not seemed as happy at Newport as elsewhere? Pardon me; it is not an idle question." Irene, who seemed to be looking away beyond Gay Head, did not reply. "I should like to know if I have been in any way the cause of it. We agreed to be friends, and I think I have a friend's right to know." Still no response. "You must see—you must know," he went on, hurriedly, "that it cannot be a matter of indifference to me."

"It had better be," she said, as if speaking deliberately to herself, and still looking away. But suddenly she turned towards him, and the tears sprang to her eyes, and the words rushed out fiercely, "I wish I had never left Cyrusville. I wish I had never been abroad. I wish I had never been educated. It is all a wretched mistake."

King was unprepared for such a passionate outburst. It was like a rift in a cloud, through which he had a glimpse of her real life. Words of eager protest sprang to his lips, but, before they could be uttered, either her mood had changed or pride had come to the rescue, for she said: "How silly I am! Everybody has discontented days. Mr. King, please don't ask me such questions. If you want to be a friend, you will let me be unhappy now and then, and not say anything about it."

"But, Miss Benson—Irene—"

"There—'Miss Benson' will do very well."

"Well, Miss—Irene, then, there was something I wanted to say to you the other day in Paradise—"

"Look, Mr. King. Did you see that wave? I'm sure it is nearer our feet than when we sat down here."

"Oh, that's just an extra lift by the wind. I want to tell you. I must tell you that life—has all changed since I met you—Irene, I—"

"There! There's no mistake-about that. The last wave came a foot higher than the other!"

King sprang up. "Perhaps it is the tide. I'll go and see." He ran up the rock, leaped across the fissures, and looked over on the side they had ascended. Sure enough, the tide was coming in. The stones on which they had stepped were covered, and a deep stream of water, rising with every pulsation of the sea, now, where

there was only a rivulet before. He hastened back. "There is not a moment to lose. We are caught by the tide, and if we are not off in five minutes we shall be prisoners here till the turn."

CAUGHT BY THE TIDE.

He helped her up the slope and over the chasm. The way was very plain when they came on, but now he could not find it. At the end of every attempt was a precipice. And the water was rising. A little girl on the shore shouted to them to follow along a ledge she pointed out, then descend between two bowlders to the ford. Precious minutes were lost in accomplishing this circuitous descent, and then they found the stepping-stones under water, and the sea-weed swishing about the slippery rocks with the incoming tide. It was a ridiculous position for lovers, or even "friends"—ridiculous because it had no element of danger except the ignominy of getting wet. If there was any heroism in seizing Irene before she could protest, stumbling with his burden among the slimy rocks, and depositing her, with only wet shoes, on the shore, Mr. King shared it, and gained the title of "Life-preserver." The adventure ended with a laugh.

The day after the discovery and exploration of Narragansett, Mr. King spent the morning with his cousin at the Casino. It was so pleasant that he wondered he had not gone there oftener, and that so few people frequented it. Was it that the cottagers were too strong for the Casino also, which was built for the recreation of the cottagers, and that they found when it came to the test that they could not with comfort come into any sort of contact with popular life? It is not large, but no summer resort in Europe has a prettier place for lounging and reunion. None have such an air of refinement and exclusiveness. Indeed, one of the chief attractions and entertainments in the foreign casinos and conversation-halls is the mingling there of all sorts of peoples, and the animation arising from diversity of conditions. This popular commingling in pleasure resorts is safe enough in aristocratic countries, but it will not answer in a republic.

The Newport Casino is in the nature of a club of the best society. The building and grounds express the most refined taste. Exteriorly the house is a long, low Queen Anne cottage, with brilliant shops on the ground-floor, and above, behind the wooded balconies, is the clubroom. The tint of the shingled front is brown, and all the colors are low and blended. Within, the court is a mediaeval surprise. It is a miniature castle, such as might serve for an opera scene. An extension of the galleries, an ombre, completes the circle around the plot of close-clipped green turf. The house itself is all balconies, galleries, odd windows half overgrown and hidden by ivy, and a large gilt clock-face adds a touch of piquancy to the antique charm of the facade. Beyond the first court is a more spacious and less artificial lawn, set with fine trees, and at the bottom of it is the brown building containing ballroom and theatre, bowling-alley and closed tennis-court, and at an angle with the second lawn is a pretty field for lawn-tennis. Here the tournaments are held, and on these occasions, and on ball nights, the Casino is thronged.

If the Casino is then so exclusive, why is it not more used as a rendezvous and lounging-place? Alas! it must be admitted that it is not exclusive. By an astonishing concession in the organization any person can gain admittance by paying the sum of fifty cents. This tax is sufficient to exclude the deserving poor, but it is only an inducement to the vulgar rich, and it is even broken down by the prodigal excursionist, who commonly sets out from home with the intention of being reckless for one day. It is easy to see, therefore, why the charm of this delightful place is tarnished.

The band was playing this morning—not rink music—when Mrs. Glow and King entered and took chairs on the ombre. It was a very pretty scene; more people were present than usual of a morning. Groups of half a dozen had drawn chairs together here and there, and were chatting and laughing; two or three exceedingly well-preserved old bachelors, in the smart rough morning suits of the period, were entertaining their lady friends with club and horse talk; several old gentlemen were reading newspapers; and there were some dowager-looking mammas, and seated by them their cold, beautiful, high-bred daughters, who wore their visible exclusiveness like a garment, and contrasted with some other young ladies who were promenading with English-looking young men in flannel suits, who might be described as lawn-tennis young ladies conscious of being in the mode, but wanting the indescribable atmosphere of high-breeding. Doubtless the most interesting persons to the student of human life were the young fellows in lawn-tennis suits. They had

the languid air which is so attractive at their age, of having found out life, and decided that it is a bore. Nothing is worth making an exertion about, not even pleasure. They had come, one could see, to a just appreciation of their value in life, and understood quite well the social manners of the mammas and girls in whose company they condescended to dawdle and make, languidly, cynical observations. They had, in truth, the manner of playing at fashion and elegance as in a stage comedy. King could not help thinking there was something theatrical about them altogether, and he fancied that when he saw them in their "traps" on the Avenue they were going through the motions for show and not for enjoyment. Probably King was mistaken in all this, having been abroad so long that he did not understand the evolution of the American gilded youth.

In a pause of the music Mrs. Bartlett Glow and Mr. King were standing with a group near the steps that led down to the inner lawn. Among them were the Postlethwaite girls, whose beauty and audacity made such a sensation in Washington last winter. They were bantering Mr. King about his Narragansett excursion, his cousin having maliciously given the party a hint of his encounter with the tide at the Pier... Just at this moment, happening to glance across the lawn, he saw the Bensons coming towards the steps, Mrs. Benson waddling over the grass and beaming towards the group, Mr. Benson carrying her shawl and looking as if he had been hired by the day, and Irene listlessly following. Mrs. Glow saw them at the same moment, but gave no other sign of her knowledge than by striking into the banter with more animation. Mr. King intended at once to detach himself and advance to meet the Bensons. But he could not rudely break away from the unfinished sentence of the younger Postlethwaite girl, and the instant that was concluded, as luck would have it, an elderly lady joined the group, and Mrs. Glow went through the formal ceremony of introducing King to her. He hardly knew how it happened, only that he made a hasty bow to the Bensons as he was shaking hands with the ceremonious old lady, and they had gone to the door of exit. He gave a little start as if to follow them, which Mrs. Glow noticed with a laugh and the remark, "You can catch them if you run," and then he weakly submitted to his fate. After all, it was only an accident which would hardly need a word of explanation. But what Irene saw was this: a distant nod from Mrs. Glow, a cool survey and stare from the Postlethwaite girls, and the failure of Mr. King to recognize his friends any further than by an indifferent bow as he turned to speak to another lady. In the raw state of her sensitiveness she felt all this as a terrible and perhaps intended humiliation.

King did not return to the hotel till evening, and then he sent up his card to the Bensons. Word came back that the ladies were packing, and must be excused. He stood at the office desk and wrote a hasty note to Irene, attempting an explanation of what might seem to her a rudeness, and asked that he might see her a moment. And then he paced the corridor waiting for a reply. In his impatience the fifteen minutes that he waited seemed an hour. Then a bell-boy handed him this note:

"MY DEAR MR. KING,—No explanation whatever was needed. We never shall forget your kindness. Good-by. IRENE BENSON"

He folded the note carefully and put it in his breast pocket, took it out and reread it, lingering over the fine and dainty signature, put it back again, and walked out upon the piazza. It was a divine night, soft and sweet-scented, and all the rustling trees were luminous in the electric light. From a window opening upon a balcony overhead came the clear notes of a barytone voice enunciating the old-fashioned words of an English ballad, the refrain of which expressed hopeless separation.

The eastern coast, with its ragged outline of bays, headlands, indentations, islands, capes, and sand-spits, from Watch Hill, a favorite breezy resort, to Mount Desert, presents an almost continual chain of hotels and summer cottages. In fact, the same may be said of the whole Atlantic front from Mount Desert down to Cape May. It is to the traveler an amazing spectacle. The American people can no longer be reproached for not taking any summer recreation. The amount of money invested to meet the requirements of this vacation idleness is enormous. When one is on the coast in July or August it seems as if the whole fifty millions of people had come down to lie on the rocks, wade in the sand, and dip into the sea. But this is not the case. These crowds are only a fringe of the pleasure-seeking population. In all the mountain regions from North Carolina to the Adirondacks and the White Hills, along the St. Lawrence and the lakes away up to the Northwest, in every elevated village, on every mountain-side, about every pond, lake, and clear stream, in the wilderness and the secluded farmhouse, one encounters the traveler, the summer boarder, the vacation idler, one is scarcely out of sight of the American flag flying over a summer resort. In no other nation, probably, is there such a general summer hejira, no other offers on such a vast scale such a variety of entertainment, and it is needless to say that history presents no parallel to this general movement of a people for a summer outing. Yet it is no doubt true that statistics, which always upset a broad generous statement such as I have made, would show that the majority of people stay at home in the summer, and it is undeniable that the vexing question for everybody is where to go in July and August.

“MINISTERING ANGELS” AT THE SEA-SIDE HOTEL.

But there are resorts suited to all tastes, and to the economical as well as to the extravagant. Perhaps the strongest impression one has in visiting the various watering-places in the summer-time, is that the multitudes of every-day folk are abroad in search of enjoyment. On the New Bedford boat for Martha's Vineyard our little party of tourists sailed quite away from Newport life—Stanhope with mingled depression and relief, the artist with some shrinking from contact with anything common, while Marion stood upon the bow beside her uncle, inhaling the salt breeze, regarding the lovely fleeting shores, her cheeks glowing and her eyes sparkling with enjoyment. The passengers and scene, Stanhope was thinking, were typically New England, until the boat made a landing at Naushon Island, when he was reminded somehow of Scotland, as much perhaps by the wild furzy appearance of the island as by the “gentle-folks” who went ashore.

The boat lingered for the further disembarkation of a number of horses and carriages, with a piano and a cow. There was a farmer's lodge at the landing, and over the rocks and amid the trees the picturesque roof of the villa of the sole proprietor of the island appeared, and gave a feudal aspect to the domain. The sweet grass affords good picking for sheep, and besides the sheep the owner raises deer, which are destined to be chased and shot in the autumn.

The artist noted that there were several distinct types of women on board, besides the common, straight-waisted, flat-chested variety. One girl who was alone, with a city air, a neat, firm figure, in a traveling suit of elegant simplicity, was fond of taking attitudes about the rails, and watching the effect produced on the spectators. There was a blue-eyed, sharp-faced, rather loose-jointed young girl, who had the manner of being familiar with the boat, and talked readily and freely with anybody, keeping an eye occasionally on her sister of eight years, a child with a serious little face in a poke-bonnet, who used the language of a young lady of sixteen, and seemed also abundantly able to take care of herself. What this mite of a child wants of all things, she confesses, is a pug-faced dog. Presently she sees one come on board in the arms of a young lady at Wood's Holl. “No,” she says, “I won't ask her for it; the lady wouldn't give it to me, and I wouldn't waste my breath;” but she draws near to the dog, and regards it with rapt attention. The owner of the dog is a very pretty black-eyed girl with banged hair, who prattles about herself and her dog with perfect freedom. She is staying at Cottage City, lives at Worcester, has been up to Boston to meet and bring down her dog, without which she couldn't live another minute. “Perhaps,” she says, “you know Dr. Ridgerton, in Worcester; he's my brother. Don't you know him? He's a chiropodist.”

These girls are all types of the skating-rink—an institution which is beginning to express itself in American manners.

AN INTERIOR.

The band was playing on the pier when the steamer landed at Cottage City (or Oak Bluff, as it was formerly called), and the pier and the gallery leading to it were crowded with spectators, mostly women a pleasing mingling of the skating-rink and sewing-circle varieties—and gayety was apparently about setting in with the dusk. The rink and the ground opposite the hotel were in full tilt. After supper King and Forbes took a cursory view of this strange encampment, walking through the streets of fantastic tiny cottages among the scrub oaks, and saw something of family life in the painted little boxes, whose wide-open front doors gave to view the whole domestic economy, including the bed, centre-table, and melodeon. They strolled also on the elevated plank promenade by the beach, encountering now and then a couple enjoying the lovely night. Music abounded. The circus-pumping strains burst out of the rink, calling to a gay and perhaps dissolute life. The band in the nearly empty hotel parlor, in a mournful mood, was wooing the guests who did not come to a soothing tune, something like China—"Why do we mourn departed friends?" A procession of lasses coming up the broad walk, advancing out of the shadows of night, was heard afar off as the stalwart singers strode on, chanting in high nasal voices that lovely hymn, which seems to suit the rink as well as the night promenade and the campmeeting:

*"We shall me-um um-we shall me-eet, me-eet-um um
-we shall meet,
In the sweet by-am-by, by-am-by-um um-by-am-by.
On the bu-u-u-u-on the bu-u-u-u-on the bu-te-ful shore."*

In the morning this fairy-like settlement, with its flimsy and eccentric architecture, took on more the appearance of reality. The season was late, as usual, and the hotels were still waiting for the crowds that seem to prefer to be late and make a rushing carnival of August, but the tiny cottages were nearly all occupied. At 10 A.M. the band was playing in the three-story pagoda sort of tower at the bathing-place, and the three stories were crowded with female spectators. Below, under the bank, is a long array of bath-houses, and the shallow water was alive with floundering and screaming bathers. Anchored a little out was a raft, from which men and boys and a few venturesome girls were diving, displaying the human form in graceful curves. The crowd was an immensely good-humored one, and enjoyed itself. The sexes mingled together in the water, and nothing thought of it, as old Pepys would have said, although many of the tightly-fitting costumes left less to the imagination than would have been desired by a poet describing the scene as a phase of the 'comédie humaine.' The band, having played out its hour, trudged back to the hotel pier to toot while the noon steamboat landed its passengers, in order to impress the new arrivals with the mad joyousness of the place. The crowd gathered on the high gallery at the end of the pier added to this effect of reckless holiday enjoyment. Miss Lamont was infected with this gayety, and took a great deal of interest in this peripatetic band, which was playing again on the hotel piazza before dinner, with a sort of mechanical hilariousness. The rink band opposite kept up a lively competition, grinding out go-round music, imparting, if one may say so, a glamour to existence. The band is on hand at the pier at four o'clock to toot again, and presently off, tramping to some other hotel to satisfy the serious pleasure of this people.

While Mr. King could not help wondering how all this curious life would strike Irene—he put his lonesomeness and longing in this way—and what she would say about it, he endeavored to divert his mind by a study of the conditions, and by some philosophizing on the change that had come over American summer life within a few years. In his investigations he was assisted by Mr. De Long, to whom this social life was absolutely new, and who was disposed to regard it as peculiarly Yankee—the staid dissipation of a serious-minded people. King, looking at it more broadly, found this pasteboard city by the sea one of the most interesting developments of American life. The original nucleus was the Methodist camp-meeting, which, in the season, brought here twenty thousand to thirty thousand people at a time, who camped and picnicked in a somewhat primitive style. Gradually the people who came here ostensibly for religious exercises made a longer and more permanent occupation, and, without losing its ephemeral character, the place grew and demanded more substantial accommodations. The spot is very attractive. Although the shore looks to the east, and does not get the prevailing southern breeze, and the beach has little surf, both water and air are mild, the bathing is safe and agreeable, and the view of the illimitable sea dotted with sails and fishing-boats

is always pleasing. A crowd begets a crowd, and soon the world's people made a city larger than the original one, and still more fantastic, by the aid of paint and the jigsaw. The tent, however, is the type of all the dwelling-houses. The hotels, restaurants, and shops follow the usual order of flamboyant seaside architecture. After a time the Baptists established a camp, ground on the bluffs on the opposite side of the inlet. The world's people brought in the commercial element in the way of fancy shops for the sale of all manner of cheap and bizarre "notions," and introduced the common amusements. And so, although the camp-meetings do not begin till late in August, this city of play-houses is occupied the summer long. The shops and shows represent the taste of the million, and although there is a similarity in all these popular coast watering-places, each has a characteristic of its own. The foreigner has a considerable opportunity of studying family life, whether he lounges through the narrow, sometimes circular, streets by night, when it appears like a fairy encampment, or by daylight, when there is no illusion. It seems to be a point of etiquette to show as much of the interiors as possible, and one can learn something of cooking and bed-making and mending, and the art of doing up the back hair. The photographer revels here in pictorial opportunities. The pictures of these bizarre cottages, with the family and friends seated in front, show very serious groups. One of the Tabernacle—a vast iron hood or dome erected over rows of benches that will seat two or three thousand people—represents the building when it is packed with an audience intent upon the preacher. Most of the faces are of a grave, severe type, plain and good, of the sort of people ready to die for a notion. The impression of these photographs is that these people abandon themselves soberly to the pleasures of the sea and of this packed, gregarious life, and get solid enjoyment out of their recreation.

Here, as elsewhere on the coast, the greater part of the population consists of women and children, and the young ladies complain of the absence of men—and, indeed, something is desirable in society besides the superannuated and the boys in roundabouts.

The artist and Miss Lamont, in search of the picturesque, had the courage, although the thermometer was in the humor to climb up to ninety degrees, to explore the Baptist encampment. They were not rewarded by anything new except at the landing, where, behind the bath-houses, the bathing suits were hung out to dry, and presented a comical spectacle, the humor of which seemed to be lost upon all except themselves. It was such a caricature of humanity! The suits hanging upon the line and distended by the wind presented the appearance of headless, bloated forms, fat men and fat women kicking in the breeze, and vainly trying to climb over the line. It was probably merely fancy, but they declared that these images seemed larger, more bloated, and much livelier than those displayed on the Cottage City side. When travelers can be entertained by trifles of this kind it shows that there is an absence of more serious amusement. And, indeed, although people were not wanting, and music was in the air, and the bicycle and tricycle stable was well patronized by men and women, and the noon bathing was well attended, it was evident that the life of Cottage City was not in full swing by the middle of July.

LAST GLIMPSE OF MARTHA'S VINEYARD.

The morning on which our tourists took the steamer for Wood's Holl the sea lay shimmering in the heat, only stirred a little by the land breeze, and it needed all the invigoration of the short ocean voyage to brace them up for the intolerably hot and dusty ride in the cars through the sandy part of Massachusetts. So long as the train kept by the indented shore the route was fairly picturesque; all along Buzzard Bay and Onset Bay and Monument Beach little cottages, gay with paint and fantastic saw-work explained, in a measure, the design of Providence in permitting this part of the world to be discovered; but the sandy interior had to be reconciled to the deeper divine intention by a trial of patience and the cultivation of the heroic virtues evoked by a struggle for existence, of fitting men and women for a better country. The travelers were confirmed, however, in their theory of the effect of a sandy country upon the human figure. This is not a juicy land, if the expression can be tolerated, any more than the sandy parts of New Jersey, and its unsympathetic dryness is favorable to the production—one can hardly say development of the lean, enduring, flat-chested, and angular style of woman.

In order to reach Plymouth a wait of a couple of hours was necessary at one of the sleepy but historic villages. There was here no tavern, no restaurant, and nobody appeared to have any license to sell anything for the refreshment of the travelers. But at some distance from the station, in a two-roomed dwelling-house, a good woman was found who was willing to cook a meal of victuals, as she explained, and a sign on her front door attested, she had a right to do. What was at the bottom of the local prejudice against letting the wayfaring man have anything to eat and drink, the party could not ascertain, but the defiant air of the woman revealed the fact that there was such a prejudice. She was a noble, robust, gigantic specimen of her sex, well formed, strong as an ox, with a resolute jaw, and she talked, through tightly-closed teeth, in an aggressive manner. Dinner was ordered, and the party strolled about the village pending its preparation; but it was not ready when they returned. "I ain't goin' to cook no victuals," the woman explained, not ungraciously, "till I know folks is goin' to eat it." Knowledge of the world had made her justly cautious. She intended to set out a good meal, and she had the true housewife's desire that it should be eaten, that there should be enough of it, and that the guests should like it. When she waited on the table she displayed a pair of arms that would discourage any approach to familiarity, and disincline a timid person to ask twice for pie; but in point of fact, as soon as the party became her bona-fide guests, she was royally hospitable, and only displayed anxiety lest they should not eat enough.

"I like folks to be up and down and square," she began saying, as she vigilantly watched the effect of her culinary skill upon the awed little party. "Yes, I've got a regular hotel license; you bet I have. There's been folks lawed in this town for sellin' a meal of victuals and not having one. I ain't goin' to be taken in by anybody. I warn't raised in New Hampshire to be scared by these Massachusetts folks. No, I hain't got a girl now. I had one a spell, but I'd rather do my own work. You never knew what a girl was doin' or would do. After she'd left I found a broken plate tucked into the ash-barrel. Sho! you can't depend on a girl. Yes, I've got a husband. It's easier to manage him. Well, I tell you a husband is better than a girl. When you tell him to do anything, you know it's going to be done. He's always about, never loafin' round; he can take right hold and wash dishes, and fetch water, and anything."

THE MODEL HUSBAND.

King went into the kitchen after dinner and saw this model husband, who had the faculty of making himself generally useful, holding a baby on one arm, and stirring something in a pot on the stove with the other. He looked hot but resigned. There has been so much said about the position of men in Massachusetts that the travelers were glad of this evidence that husbands are beginning to be appreciated. Under proper training they are acknowledged to be "better than girls."

It was late afternoon when they reached the quiet haven of Plymouth—a place where it is apparently always afternoon, a place of memory and reminiscences, where the whole effort of the population is to hear and to tell some old thing. As the railway ends there, there is no danger of being carried beyond, and the train slowly ceases motion, and stands still in the midst of a great and welcome silence. Peace fell upon the travelers like a garment, and although they had as much difficulty in landing their baggage as the early Pilgrims had in getting theirs ashore, the circumstance was not able to disquiet them much. It seemed natural that their trunks should go astray on some of the inextricably interlocked and branching railways, and they had no doubt that when they had made the tour of the State they would be discharged, as they finally were, into this cul-de-sac.

The Pilgrims have made so much noise in the world, and so powerfully affected the continent, that our tourists were surprised to find they had landed in such a quiet place, and that the spirit they have left behind them is one of such tranquillity. The village has a charm all its own. Many of the houses are old-fashioned and square, some with colonial doors and porches, irregularly aligned on the main street, which is arched by ancient and stately elms. In the spacious door-yards the lindens have had room and time to expand, and in the beds of bloom the flowers, if not the very ones that our grandmothers planted, are the sorts that they loved. Showing that the town has grown in sympathy with human needs and eccentricities, and is not the work of a surveyor, the streets are irregular, forming picturesque angles and open spaces.

Nothing could be imagined in greater contrast to a Western town, and a good part of the satisfaction our tourists experienced was in the absence of anything Western or "Queen Anne" in the architecture.

In the Pilgrim Hall—a stone structure with an incongruous wooden-pillared front—they came into the very presence of the early worthies, saw their portraits on the walls, sat in their chairs, admired the solidity of their shoes, and imbued themselves with the spirit of the relics of their heroic, uncomfortable lives. In the town there was nothing to disturb the serenity of mind acquired by this communion. The Puritan interdict of unseemly excitement still prevailed, and the streets were silent; the artist, who could compare it with the placidity of Holland towns, declared that he never walked in a village so silent; there was no loud talking; and even the children played without noise, like little Pilgrims... God bless such children, and increase their numbers! It might have been the approach of Sunday—if Sunday is still regarded in eastern Massachusetts—that caused this hush, for it was now towards sunset on Saturday, and the inhabitants were washing the fronts of the houses with the hose, showing how cleanliness is next to silence.

Possessed with the spirit of peace, our tourists, whose souls had been vexed with the passions of many watering-places, walked down Leyden Street (the first that was laid out), saw the site of the first house, and turned round Carver Street, walking lingeringly, so as not to break the spell, out upon the hill—Cole's Hill—where the dead during the first fearful winter were buried. This has been converted into a beautiful esplanade, grassed and graveled and furnished with seats, and overlooks the old wharves, some coal schooners, and shabby buildings, on one of which is a sign informing the reckless that they can obtain there clam-chowder and ice-cream, and the ugly, heavy granite canopy erected over the "Rock." No reverent person can see this rock for the first time without a thrill of excitement. It has the date of 1620 cut in it, and it is a good deal cracked and patched up, as if it had been much landed on, but there it is, and there it will remain a witness to a great historic event, unless somebody takes a notion to cart it off uptown again. It is

said to rest on another rock, of which it formed a part before its unfortunate journey, and that lower rock as everybody knows, rests upon the immutable principle of self-government. The stone lies too far from the water to enable anybody to land on it now, and it is protected from vandalism by an iron grating. The sentiment of the hour was disturbed by the advent of the members of a baseball nine, who wondered why the Pilgrims did not land on the wharf, and, while thrusting their feet through the grating in a commendable desire to touch the sacred rock, expressed a doubt whether the feet of the Pilgrims were small enough to slip through the grating and land on the stone. It seems that there is nothing safe from the irreverence of American youth.

“LOOKING SEAWARD, AS WAS THE WONT OF PURITAN MAIDENS.”

Has any other coast town besides Plymouth had the good sense and taste to utilize such an elevation by the water-side as an esplanade? It is a most charming feature of the village, and gives it what we call a foreign air. It was very lovely in the afterglow and at moonrise. Staid citizens with their families occupied the benches, groups were chatting under the spreading linden-tree at the north entrance, and young maidens in white muslin promenaded, looking seaward, as was the wont of Puritan maidens, watching a receding or coming Mayflower. But there was no loud talking, no laughter, no outbursts of merriment from the children, all ready to be transplanted to the Puritan heaven! It was high tide, and all the bay was silvery with a tinge of color from the glowing sky. The long, curved sand-spit-which was heavily wooded when the Pilgrims landed-was silvery also, and upon its northern tip glowed the white sparkle in the lighthouse like the evening-star. To the north, over the smooth pink water speckled with white sails, rose Captain Hill, in Duxbury, bearing the monument to Miles Standish. Clarke's Island (where the Pilgrims heard a sermon on the first Sunday), Saguish Point, and Gurnett Headland (showing now twin white lights) appear like a long island intersected by thin lines of blue water. The effect of these ribbons of alternate sand and water, of the lights and the ocean (or Great Bay) beyond, was exquisite.

Even the unobtrusive tavern at the rear of the esplanade, ancient, feebly lighted, and inviting, added something to the picturesqueness of the scene. The old tree by the gate—an English linden—illuminated by the street lamps and the moon, had a mysterious appearance, and the tourists were not surprised to learn that it has a romantic history. The story is that the twig or sapling from which it grew was brought over from England by a lover as a present to his mistress, that the lovers quarreled almost immediately, that the girl in a pet threw it out of the window when she sent her lover out of the door, and that another man picked it up and planted it where it now grows. The legend provokes a good many questions. One would like to know whether this was the first case of female rebellion in Massachusetts against the common-law right of a man to correct a woman with a stick not thicker than his little finger—a rebellion which has resulted in the position of man as the tourists saw him where the New Hampshire Amazon gave them a meal of victuals; and whether the girl married the man who planted the twig, and, if so, whether he did not regret that he had not kept it by him.

This is a world of illusions. By daylight, when the tide was out, the pretty silver bay of the night before was a mud flat, and the tourists, looking over it from Monument Hill, lost some of their respect for the Pilgrim sagacity in selecting a landing-place. They had ascended the hill for a nearer view of the monument, King with a reverent wish to read the name of his Mayflower ancestor on the tablet, the others in a spirit of cold, New York criticism, for they thought the structure, which is still unfinished, would look uglier near at hand than at a distance. And it does. It is a pile of granite masonry surmounted by symbolic figures.

“It is such an unsympathetic, tasteless-looking thing!” said Miss Lamont.

“Do you think it is the worst in the country?”

"I wouldn't like to say that," replied the artist, "when the competition in this direction is so lively. But just look at the drawing" (holding up his pencil with which he had intended to sketch it). "If it were quaint, now, or rude, or archaic, it might be in keeping, but bad drawing is just vulgar. I should think it had been designed by a carpenter, and executed by a stone-mason."

"Yes," said the little Lamont, who always fell in with the most abominable opinions the artist expressed; "it ought to have been made of wood, and painted and sanded."

"You will please remember," mildly suggested King, who had found the name he was in search of, "that you are trampling on my ancestral sensibilities, as might be expected of those who have no ancestors who ever landed or ever were buried anywhere in particular. I look at the commemorative spirit rather than the execution of the monument."

"So do I," retorted the girl; "and if the Pilgrims landed in such a vulgar, ostentatious spirit as this, I'm glad my name is not on the tablet."

The party were in a better mood when they had climbed up Burial Hill, back of the meeting-house, and sat down on one of the convenient benches amid the ancient gravestones, and looked upon the wide and magnificent prospect. A soft summer wind waved a little the long gray grass of the ancient resting-place, and seemed to whisper peace to the weary generation that lay there. What struggles, what heroisms, the names on the stones recalled! Here had stood the first fort of 1620, and here the watchtower of 1642, from the top of which the warder espied the lurking savage, or hailed the expected ship from England. How much of history this view recalled, and what pathos of human life these graves made real. Read the names of those buried a couple of centuries ago—captains, elders, ministers, governors, wives well beloved, children a span long, maidens in the blush of womanhood—half the tender inscriptions are illegible; the stones are broken, sunk, slanting to fall. What a pitiful attempt to keep the world mindful of the departed!

VI. MANCHESTER-BY-THE-SEA, ISLES OF SHOALS

Mr. Stanhope King was not in very good spirits. Even Boston did not make him cheerful. He was half annoyed to see the artist and Miss Lamont drifting along in such laughing good-humor with the world, as if a summer holiday was just a holiday without any consequences or responsibilities. It was to him a serious affair ever since that unsatisfactory note from Miss Benson; somehow the summer had lost its sparkle. And yet was it not preposterous that a girl, just a single girl, should have the power to change for a man the aspect of a whole coast-by her presence to make it iridescent with beauty, and by her absence to take all the life out of it? And a simple girl from Ohio! She was not by any means the prettiest girl in the Newport Casino that morning, but it was her figure that he remembered, and it was the look of hurt sensibility in her eyes that stayed with him. He resented the attitude of the Casino towards her, and he hated himself for his share in it. He would write to her.... He composed letter after letter in his mind, which he did not put on paper. How many millions of letters are composed in this way! It is a favorite occupation of imaginative people; and as they say that no thoughts or mental impressions are ever lost, but are all registered—made, as it were, on a "dry-plate," to be developed hereafter—what a vast correspondence must be lying in the next world, in the Dead-letter Office there, waiting for the persons to whom it is addressed, who will all receive it and read it some day! How unpleasant and absurd it will be to read, much of it! I intend to be careful, for my part, about composing letters of this sort hereafter. Irene, I dare say, will find a great many of them from Mr. King, thought out in those days. But he mailed none of them to her. What should he say? Should he tell her that he didn't mind if her parents were what Mrs. Bartlett Glow called "impossible"? If he attempted any explanation, would it not involve the offensive supposition that his social rank was different from hers? Even if he convinced her that he recognized no caste in American society, what could remove from her mind the somewhat morbid impression that her education had put her in a false position? His love probably could not shield her from mortification in a society which, though indefinable in its limits and code, is an entity more vividly felt than the government of the United States.

"Don't you think the whole social atmosphere has changed," Miss Lamont suddenly asked, as they were running along in the train towards Manchester-by-the-Sea, "since we got north of Boston? I seem to find it so. Don't you think it's more refined, and, don't you know, sort of cultivated, and subdued, and Boston? You notice the gentlemen who get out at all these stations, to go to their country-houses, how highly civilized they look, and ineffably respectable and intellectual, all of them presidents of colleges, and substantial bank directors, and possible ambassadors, and of a social cult (isn't that the word?) uniting brains and gentle manners."

"You must have been reading the Boston newspapers; you have hit the idea prevalent in these parts, at any rate. I was, however, reminded myself of an afternoon train out of London, say into Surrey, on which you are apt to encounter about as high a type of civilized men as anywhere."

"And you think this is different from a train out of New York?" asked the artist.

"Yes. New York is more mixed. No one train has this kind of tone. You see there more of the broker type and politician type, smarter apparel and nervous manners, but, dear me, not this high moral and intellectual respectability."

"Well," said the artist, "I'm changing my mind about this country. I didn't expect so much variety. I thought that all the watering-places would be pretty much alike, and that we should see the same people everywhere. But the people are quite as varied as the scenery."

"There you touch a deep question—the refining or the vulgarizing influence of man upon nature, and the opposite. Now, did the summer Bostonians make this coast refined, or did this coast refine the Bostonians

who summer here?"

"Well, this is primarily an artistic coast; I feel the influence of it; there is a refined beauty in all the lines, and residents have not vulgarized it much. But I wonder what Boston could have done for the Jersey coast?"

In the midst of this high and useless conversation they came to the Masconomo House, a sort of concession, in this region of noble villas and private parks, to the popular desire to get to the sea. It is a long, low house, with very broad passages below and above, which give lightness and cheerfulness to the interior, and each of the four corners of the entrance hall has a fireplace. The pillars of the front and back piazzas are pine stems stained, with the natural branches cut in unequal lengths, and look like the stumps for the bears to climb in the pit at Berne. Set up originally with the bark on, the worms worked underneath it in secret, at a novel sort of decoration, until the bark came off and exposed the stems most beautifully vermiculated, giving the effect of fine carving. Back of the house a meadow slopes down to a little beach in a curved bay that has rocky headlands, and is defended in part by islands of rock. The whole aspect of the place is peaceful. The hotel does not assert itself very loudly, and if occasionally transient guests appear with flash manners, they do not affect the general tone of the region.

One finds, indeed, nature and social life happily blended, the exclusiveness being rather protective than offensive. The special charm of this piece of coast is that it is bold, much broken and indented, precipices fronting the waves, promontories jutting out, high rocky points commanding extensive views, wild and picturesque, and yet softened by color and graceful shore lines, and the forest comes down to the edge of the sea. And the occupants have heightened rather than lessened this picturesqueness by adapting their villas to a certain extent to the rocks and inequalities in color and form, and by means of roads, allies, and vistas transforming the region into a lovely park.

Here, as at Newport, is cottage life, but the contrast of the two places is immense. There is here no attempt at any assembly or congregated gayety or display. One would hesitate to say that the drives here have more beauty, but they have more variety. They seem endless, through odorous pine woods and shady lanes, by private roads among beautiful villas and exquisite grounds, with evidences everywhere of wealth to be sure, but of individual taste and refinement. How sweet and cool are these winding ways in the wonderful woods, overrun with vegetation, the bayberry, the sweet-fern, the wild roses, wood-lilies, and ferns! and it is ever a fresh surprise at a turn to find one's self so near the sea, and to open out an entrancing coast view, to emerge upon a promontory and a sight of summer isles, of lighthouses, cottages, villages—Marblehead, Salem, Beverly. What a lovely coast! and how wealth and culture have set their seal on it.

It possesses essentially the same character to the north, although the shore is occasionally higher and bolder, as at the picturesque promontory of Magnolia, and Cape Ann exhibits more of the hotel and popular life. But to live in one's own cottage, to choose his calling and dining acquaintances, to make the long season contribute something to cultivation in literature, art, music—to live, in short, rather more for one's self than for society—seems the increasing tendency of the men of fortune who can afford to pay as much for an acre of rock and sand at Manchester as would build a decent house elsewhere. The tourist does not complain of this, and is grateful that individuality has expressed itself in the great variety of lovely homes, in cottages very different from those on the Jersey coast, showing more invention, and good in form and color.

There are New-Yorkers at Manchester, and Bostonians at Newport; but who was it that said New York expresses itself at Newport, and Boston at Manchester and kindred coast settlements? This may be only fancy. Where intellectual life keeps pace with the accumulation of wealth, society is likely to be more natural, simpler, less tied to artificial rules, than where wealth runs ahead. It happens that the quiet social life of Beverly, Manchester, and that region is delightful, although it is a home rather than a public life. Nowhere else at dinner and at the chance evening musicale is the foreigner more likely to meet sensible men who are good talkers, brilliant and witty women who have the gift of being entertaining, and to have the events of the day and the social and political problems more cleverly discussed. What is the good of wealth if it does not bring one back to freedom, and the ability to live naturally and to indulge the finer tastes in vacation-time?

After all, King reflected, as the party were on their way to the Isles of Shoals, what was it that had most impressed him at Manchester? Was it not an evening spent in a cottage amid the rocks, close by the water, in the company of charming people? To be sure, there were the magical reflection of the moonlight and the bay, the points of light from the cottages on the rocky shore, the hum and swell of the sea, and all the mystery of the shadowy headlands; but this was only a congenial setting for the music, the witty talk, the free play of intellectual badinage, and seriousness, and the simple human cordiality that were worth all the rest.

What a kaleidoscope it is, this summer travel, and what an entertainment, if the tourist can only keep his "impression plates" fresh to take the new scenes, and not sink into the state of chronic grumbling at hotels and minor discomforts! An interview at a ticket-office, a whirl of an hour on the rails, and to Portsmouth, anchored yet to the colonial times by a few old houses, and resisting with its respectable provincialism the encroachments of modern smartness, and the sleepy wharf in the sleepy harbor, where the little steamer is obligingly waiting for the last passenger, for the very last woman, running with a bandbox in one hand, and dragging a jerked, fretting child by the other hand, to make the hour's voyage to the Isles of Shoals.

(The shrewd reader objects to the bandbox as an anachronism: it is no longer used. If I were writing a novel, instead of a veracious chronicle, I should not have introduced it, for it is an anachronism. But I was powerless, as a mere narrator, to prevent the woman coming aboard with her bandbox. No one but a trained novelist can make a long-striding, resolute, down-East woman conform to his notions of conduct and fashion.)

If a young gentleman were in love, and the object of his adoration were beside him, he could not have chosen a lovelier day nor a prettier scene than this in which to indulge his happiness; and if he were in love, and the object absent, he could scarcely find a situation fitter to nurse his tender sentiment. Doubtless there is a stage in love when scenery of the very best quality becomes inoperative. There was a couple on board seated in front of the pilot-house, who let the steamer float along the pretty, long, landlocked harbor, past the Kittery Navy-yard, and out upon the blue sea, without taking the least notice of anything but each other. They were on a voyage of their own, Heaven help them! probably without any chart, a voyage of discovery, just as fresh and surprising as if they were the first who ever took it. It made no difference to them that there was a personally conducted excursion party on board, going, they said, to the Oceanic House on Star Island, who had out their maps and guide-books and opera-glasses, and wrung the last drop of the cost of their tickets out of every foot of the scenery. Perhaps it was to King a more sentimental journey than to anybody else, because he invoked his memory and his imagination, and as the lovely shores opened or fell away behind the steamer in ever-shifting forms of beauty, the scene was in harmony with both his hope and his longing. As to Marion and the artist, they freely appropriated and enjoyed it. So that mediaeval structure, all tower, growing out of the rock, is Stedman's Castle—just like him, to let his art spring out of nature in that way. And that is the famous Kittery Navy-yard!

"What do they do there, uncle?" asked the girl, after scanning the place in search of dry-docks and vessels and the usual accompaniments of a navy-yard.

"Oh, they make 'repairs,' principally just before an election. It is very busy then."

"What sort of repairs?"

"Why, political repairs; they call them naval in the department. They are always getting appropriations for them. I suppose that this country is better off for naval repairs than any other country in the world."

"And they are done here?"

"No; they are done in the department. Here is where the voters are. You see, we have a political navy. It costs about as much as those navies that have ships and guns, but it is more in accord with the peaceful spirit of the age. Did you never hear of the leading case of 'repairs' of a government vessel here at Kittery? The 'repairs' were all done here, at Portsmouth, New Hampshire; the vessel lay all the time at Portsmouth, Virginia. How should the department know that there were two places of the same name? It usually intends to have 'repairs' and the vessel in the same navy-yard."

The steamer was gliding along over smooth water towards the seven blessed isles, which lay there in the sun, masses of rock set in a sea sparkling with diamond points. There were two pretty girls in the pilot-house, and the artist thought their presence there accounted for the serene voyage, for the masts of a wrecked schooner rising out of the shallows to the north reminded him that this is a dangerous coast. But he said the passengers would have a greater sense of security if the usual placard (for the benefit of the captain) was put up: "No flirting with the girl at the wheel."

At a distance nothing could be more barren than these islands, which Captain John Smith and their native poet have enveloped in a halo of romance, and it was not until the steamer was close to it that any landing-place was visible on Appledore, the largest of the group.

The boat turned into a pretty little harbor among the rocks, and the settlement was discovered: a long, low, old-fashioned hotel with piazzas, and a few cottages, perched on the ledges, the door-yards of which were perfectly ablaze with patches of flowers, masses of red, yellow, purple-poppies, marigolds, nasturtiums,

bachelor's-buttons, lovely splashes of color against the gray lichen-covered rock. At the landing is an interior miniature harbor, walled in, and safe for children to paddle about and sail on in tiny boats. The islands offer scarcely any other opportunity for bathing, unless one dare take a plunge off the rocks.

A MINIATURE HARBOR.

Talk of the kaleidoscope! At a turn of the wrist, as it were, the elements of society had taken a perfectly novel shape here. Was it only a matter of grouping and setting, or were these people different from all others the tourists had seen? There was a lively scene in the hotel corridor, the spacious office with its long counters and post-office, when the noon mail was opened and the letters called out. So many pretty girls, with pet dogs of all degrees of ugliness (dear little objects of affection overflowing and otherwise running to waste—one of the most pathetic sights in this sad world), jaunty suits with a nautical cut, for boating and rock-climbing, family groups, so much animation and excitement over the receipt of letters, so much well-bred chaffing and friendliness, such an air of refinement and “style,” but withal so homelike. These people were “guests” of the proprietors, who nevertheless felt a sort of proprietorship themselves in the little island, and were very much like a company together at sea. For living on this island is not unlike being on shipboard at sea, except that this rock does not heave about in a nauseous way.

Mr. King discovered by the register that the Bensons had been here (of all places in the world, he thought this would be the ideal one for a few days with her), and Miss Lamont had a letter from Irene, which she did not offer to read.

“They didn't stay long,” she said, as Mr. King seemed to expect some information out of the letter, “and they have gone on to Bar Harbor. I should like to stop here a week; wouldn't you?”

“Ye-e-s,” trying to recall the mood he was in before he looked at the register; “but—but” (thinking of the words “gone on to Bar Harbor”) “it is a place, after all, that you can see in a short time—go all over it in half a day.”

“But you want to sit about on the rocks, and look at the sea, and dream.”

“I can't dream on an island—not on a small island. It's too cooped up; you get a feeling of being a prisoner.”

“I suppose you wish 'that little isle had wings, and you and I within its shady—'”

“There's one thing I will not stand, Miss Lamont, and that's Moore.”

“Come, let's go to Star Island.”

The party went in the tug Pinafore, which led a restless, fussy life, puffing about among these islands, making the circuit of Appledore at fixed hours, and acting commonly as a ferry. Star Island is smaller than Appledore and more barren, but it has the big hotel (and a different class of guests from those on Appledore), and several monuments of romantic interest. There is the ancient stone church, rebuilt some time in this century; there are some gravestones; there is a monument to Captain John Smith, the only one existing anywhere to that interesting adventurer—a triangular shaft, with a long inscription that could not have been more eulogistic if he had composed it himself. There is something pathetic in this lonely monument when we recall Smith's own touching allusion to this naked rock, on which he probably landed when he once coasted along this part of New England, as being his sole possession in the world at the end of his adventurous career:

“No lot for me but Smith's Isles, which are an array of barren rocks, the most overgrown with shrubs and sharpe whins you can hardly pass them; without either grasse or wood, but three or foure short shrubby old cedars.”

ARRIVAL OF THE MAIL.

Every tourist goes to the south end of Star Island, and climbs down on the face of the precipice to the "Chair," a niche where a school-teacher used to sit as long ago as 1848. She was sitting there one day when a wave came up and washed her away into the ocean. She disappeared. But she who loses her life shall save it. That one thoughtless act of hers did more for her reputation than years of faithful teaching, than all her beauty, grace, and attractions. Her "Chair" is a point of pilgrimage. The tourist looks at it, guesses at its height above the water, regards the hungry sea with aversion, re-enacts the drama in his imagination, sits in the chair, has his wife sit in it, has his boy and girl sit in it together, wonders what the teacher's name was, stops at the hotel and asks the photograph girl, who does not know, and the proprietor, who says it's in a book somewhere, and finally learns that it was Underhill, and straightway forgets it when he leaves the island.

What a delicious place it is, this Appledore, when the elements favor! The party were lodged in a little cottage, whence they overlooked the hotel and the little harbor, and could see all the life of the place, looking over the bank of flowers that draped the rocks of the door-yard. How charming was the miniature pond, with the children sailing round and round, and the girls in pretty costumes bathing, and sunlight lying so warm upon the greenish-gray rocks! But the night, following the glorious after-glow, the red sky, all the level sea, and the little harbor burnished gold, the rocks purple—oh! the night, when the moon came! Oh, Irene! Great heavens! why will this world fall into such a sentimental fit, when all the sweetness and the light of it are away at Bar Harbor!

Love and moonlight, and the soft lapse of the waves and singing? Yes, there are girls down by the landing with a banjo, and young men singing the songs of love, the modern songs of love dashed with college slang. The banjo suggests a little fastness; and this new generation carries off its sentiment with some bravado and a mocking tone. Presently the tug Pinafore glides up to the landing, the engineer flings open the furnace door, and the glowing fire illumines the interior, brings out forms and faces, and deepens the heavy shadows outside. It is like a cavern scene in the opera. A party of ladies in white come down to cross to Star. Some of these insist upon climbing up to the narrow deck, to sit on the roof and enjoy the moonlight and the cinders. Girls like to do these things, which are more unconventional than hazardous, at watering-places.

What a wonderful effect it is, the masses of rock, water, sky, the night, all details lost in simple lines and forms! On the piazza of the cottage is a group of ladies and gentlemen in poses more or less graceful; one lady is in a hammock; on one side is the moonlight, on the other come gleams from the curtained windows touching here and there a white shoulder, or lighting a lovely head; the vines running up on strings and half enclosing the piazza make an exquisite tracery against the sky, and cast delicate shadow patterns on the floor; all the time music within, the piano, the violin, and the sweet waves of a woman's voice singing the songs of Schubert, floating out upon the night. A soft wind blows out of the west.

The northern part of Appledore Island is an interesting place to wander. There are no trees, but the plateau is far from barren. The gray rocks crop out among bayberry and huckleberry bushes, and the wild rose, very large and brilliant in color, fairly illuminates the landscape, massing its great bushes. Amid the chaotic desert of broken rocks farther south are little valleys of deep green grass, gay with roses. On the savage precipices at the end one may sit in view of an extensive sweep of coast with a few hills, and of other rocky islands, sails, and ocean-going steamers. Here are many nooks and hidden corners to dream in and make love in, the soft sea air being favorable to that soft-hearted occupation.

"A NOOK TO DREAM IN AND MAKE' LOVE IN."

One could easily get attached to the place, if duty and Irene did not call elsewhere. Those who dwell here the year round find most satisfaction when the summer guests have gone and they are alone with freaky nature. "Yes," said the woman in charge of one of the cottages, "I've lived here the year round for sixteen years, and I like it. After we get fixed up comfortable for winter, kill a critter, have pigs, and make my own sassaengers, then there ain't any neighbors comin' in, and that's what I like."

VII. BAR HARBOR

The attraction of Bar Harbor is in the union of mountain and sea; the mountains rise in granite majesty right out of the ocean. The traveler expects to find a repetition of Mount Athos rising six thousand feet out of the AEgean.

The Bar-Harborers made a mistake in killing—if they did kill—the stranger who arrived at this resort from the mainland, and said it would be an excellent sea-and-mountain place if there were any mountains or any sea in sight. Instead, if they had taken him in a row-boat and pulled him out through the islands, far enough, he would have had a glimpse of the ocean, and if then he had been taken by the cog-railway seventeen hundred feet to the top of Green Mountain, he would not only have found himself on firm, rising ground, but he would have been obliged to confess that, with his feet upon a solid mountain of granite, he saw innumerable islands and, at a distance, a considerable quantity of ocean. He would have repented his hasty speech. In two days he would have been a partisan of the place, and in a week he would have been an owner of real estate there.

There is undeniably a public opinion in Bar Harbor in favor of it, and the visitor would better coincide with it. He is anxiously asked at every turn how he likes it, and if he does not like it he is an object of compassion. Countless numbers of people who do not own a foot of land there are devotees of the place. Any number of certificates to its qualities could be obtained, as to a patent medicine, and they would all read pretty much alike, after the well-known formula: "The first bottle I took did, me no good, after the second I was worse, after the third I improved, after the twelfth I walked fifty miles in one day; and now I never do without it, I take never less than fifty bottles a year." So it would be: "At first I felt just as you do, shut-in place, foggy, stayed only two days. Only came back again to accompany friends, stayed a week, foggy, didn't like it. Can't tell how I happened to come back again, stayed a month, and I tell you, there is no place like it in America. Spend all my summers here."

The genesis of Bar Harbor is curious and instructive. For many years, like other settlements on Mount Desert Island; it had been frequented by people who have more fondness for nature than they have money, and who were willing to put up with wretched accommodations, and enjoyed a mild sort of "roughing it." But some society people in New York, who have the reputation of setting the mode, chanced to go there; they declared in favor of it; and instantly, by an occult law which governs fashionable life, Bar Harbor became the fashion. Everybody could see its preeminent attractions. The word was passed along by the Boudoir Telephone from Boston to New Orleans, and soon it was a matter of necessity for a debutante, or a woman of fashion, or a man of the world, or a blase boy, to show themselves there during the season. It became the scene of summer romances; the student of manners went there to study the "American girl." The notion spread that it was the finest sanitarium on the continent for flirtations; and as trade is said to follow the flag, so in this case real-estate speculation rioted in the wake of beauty and fashion.

There is no doubt that the "American girl" is there, as she is at divers other sea-and-land resorts; but the present peculiarity of this watering-place is that the American young man is there also. Some philosophers have tried to account for this coincidence by assuming that the American girl is the attraction to the young man. But this seems to me a misunderstanding of the spirit of this generation. Why are young men quoted as "scarce" in other resorts swarming with sweet girls, maidens who have learned the art of being agreeable, and interesting widows in the vanishing shades of an attractive and consolable grief? No. Is it not rather the cold, luminous truth that the American girl found out that Bar Harbor, without her presence, was for certain reasons, such as unconventionality, a bracing air, opportunity for boating, etc., agreeable to the young man? But why do elderly people go there? This question must have been suggested by a foreigner, who is ignorant that in a republic it is the young ones who know what is best for the elders.

Our tourists passed a weary, hot day on the coast railway of Maine. Notwithstanding the high temperature, the country seemed cheerless, the sunlight to fall less genially than in more fertile regions to the south, upon a landscape stripped of its forests, naked, and unpicturesque. Why should the little white houses of the prosperous little villages on the line of the rail seem cold and suggest winter, and the land seem scrimped and without an atmosphere? It chanced so, for everybody knows that it is a lovely coast. The artist said it was the Maine Law. But that could not be, for the only drunken man encountered on their tour they saw at the Bangor Station, where beer was furtively sold.

They were plunged into a cold bath on the steamer in the half-hour's sail from the end of the rail to Bar Harbor. The wind was fresh, white-caps enlivened the scene, the spray dashed over the huge pile of baggage on the bow, the passengers shivered, and could little enjoy the islands and the picturesque shore, but fixed eyes of hope upon the electric lights which showed above the headlands, and marked the site of the hotels and the town in the hidden harbor. Spits of rain dashed in their faces, and in some discomfort they came to the wharf, which was alive with vehicles and tooters for the hotels. In short, with its lights and noise, it had every appearance of being an important place, and when our party, holding on to their seats in a buckboard, were whirled at a gallop up to Rodick's, and ushered into a spacious office swarming with people, they realized that they were entering upon a lively if somewhat haphazard life. The first confused impression was

of a bewildering number of slim, pretty girls, nonchalant young fellows in lawn-tennis suits, and indefinite opportunities in the halls and parlors and wide piazzas for promenade and flirtations.

ON THE PIAZZA AT RODICK'S.

Rodick's is a sort of big boarding-house, hesitating whether to be a hotel or not, no bells in the rooms, no bills of fare (or rarely one), no wine-list, a go-as-you-please, help-yourself sort of place, which is popular because it has its own character, and everybody drifts into it first or last. Some say it is an acquired taste; that people do not take to it at first. The big office is a sort of assembly-room, where new arrivals are scanned and discovered, and it is unblushingly called the "fish-pond" by the young ladies who daily angle there. Of the unconventional ways of the establishment Mr. King had an illustration when he attempted to get some washing done. Having read a notice that the hotel had no laundry, he was told, on applying at the office, that if he would bring his things down there they would try to send them out for him. Not being accustomed to carrying about soiled clothes, he declined this proposal, and consulted a chambermaid. She told him that ladies came to the house every day for the washing, and that she would speak to one of them. No result following this, after a day King consulted the proprietor, and asked him point blank, as a friend, what course he would pursue if he were under the necessity of having washing done in that region. The proprietor said that Mr. King's wants should be attended to at once. Another day passed without action, when the chambermaid was again applied to. "There's a lady just come in to the hall I guess will do it."

"Is she trustworthy?"

"Don't know, she washes for the woman in the room next to you." And the lady was at last secured.

Somebody said that those who were accustomed to luxury at home liked Rodick's, and that those who were not grumbled. And it was true that fashion for the moment elected to be pleased with unconventionality, finding a great zest in freedom, and making a joke of every inconvenience. Society will make its own rules, and although there are several other large hotels, and good houses as watering-place hotels go, and cottage-life here as elsewhere is drawing away its skirts from hotel life, society understood why a person might elect to stay at Rodick's. Bar Harbor has one of the most dainty and refined little hotels in the world—the Malvern. Any one can stay there who is worth two millions of dollars, or can produce a certificate from the Recorder of New York that he is a direct descendant of Hendrick Hudson or Diedrich Knickerbocker. It is needless to say that it was built by a Philadelphian—that is to say one born with a genius for hotel-keeping. But though a guest at the Malvern might not eat with a friend at Rodick's, he will meet him as a man of the world on friendly terms.

Bar Harbor was indeed an interesting society study. Except in some of the cottages, it might be said that society was on a lark. With all the manners of the world and the freemasonry of fashionable life, it had elected to be unconventional. The young ladies liked to appear in nautical and lawn-tennis toilet, carried so far that one might refer to the "cut of their jib," and their minds were not much given to any elaborate dressing for evening. As to the young gentlemen, if there were any dress-coats on the island, they took pains not to display them, but delighted in appearing in the evening promenade, and even in the ballroom, in the nondescript suits that made them so conspicuous in the morning, the favorite being a dress of stripes, with striped jockey cap to match, that did not suggest the penitentiary uniform, because in state-prisons the stripes run round. This negligé costume was adhered to even in the ballroom. To be sure, the ballroom was little frequented, only an adventurous couple now and then gliding over the floor, and affording scant amusement to the throng gathered on the piazza and about the open windows.

Mrs. Montrose, a stately dame of the old school, whose standard was the court in the days of Calhoun, Clay, and Webster, disapproved of this laxity, and when a couple of young fellows in striped array one evening whirled round the room together, with brier-wood pipes in their mouths, she was scandalized. If the young ladies shared her sentiments they made no resolute protests, remembering perhaps the scarcity of young men elsewhere, and thinking that it is better to be loved by a lawn-tennis suit than not to be loved at all. The daughters of Mrs. Montrose thought they should draw the line on the brier-wood pipe.

Dancing, however, is not the leading occupation at Bar Harbor, it is rather neglected. A cynic said that the chief occupation was to wait at the "fishpond" for new arrivals—the young ladies angling while their mothers and chaperons—how shall we say it to complete the figure?—held the bait. It is true that they did talk in fisherman's lingo about this, asked each other if they had a nibble or a bite, or boasted that they had hauled one in, or complained that it was a poor day for fishing. But this was all chaff, born of youthful spirits and the air of the place. If the young men took airs upon themselves under the impression they were in much demand, they might have had their combs cut if they had heard how they were weighed and dissected and imitated, and taken off as to their peculiarities, and known, most of them, by sobriquets characteristic of their appearance or pretensions. There was one young man from the West, who would have been flattered with the appellation of "dude," so attractive in the fit of his clothes, the manner in which he walked and used his cane and his eyeglass, that Mr. King wanted very much to get him and bring him away in a cage. He had no doubt that he was a favorite with every circle and wanted in every group, and the young ladies did seem to get a great deal of entertainment out of him. He was not like the young man in the Scriptures except that he was credited with having great possessions.

No, the principal occupation at Bar Harbor was not fishing in the house. It was outdoor exercise, incessant activity in driving, walking, boating, rowing and sailing—bowling, tennis, and flirtation. There was always an excursion somewhere, by land or sea, watermelon parties, races in the harbor in which the girls took part, drives in buckboards which they organized—indeed, the canoe and the buckboard were in constant demand. In all this there was a pleasing freedom—of course under proper chaperonage. And such delightful chaperons as they were, their business being to promote and not to hinder the intercourse of the sexes!

This activity, this desire to row and walk and drive and to become acquainted, was all due to the air. It has a peculiar quality. Even the skeptic has to admit this. It composes his nerves to sleep, it stimulates to

unwonted exertion. The fanatics of the place declare that the fogs are not damp as at other resorts on the coast. Fashion can make even a fog dry. But the air is delicious. In this latitude, and by reason of the hills, the atmosphere is pure and elastic and stimulating, and it is softened by the presence of the sea. This union gives a charming effect. It is better than the Maine Law. The air being like wine, one does not need stimulants. If one is addicted to them and is afraid to trust the air, he is put to the trouble of sneaking into masked places, and becoming a party to petty subterfuges for evading the law. And the wretched man adds to the misdemeanor of this evasion the moral crime of consuming bad liquor.

"Everybody" was at Bar Harbor, or would be there in course of the season. Mrs. Cortlandt was there, and Mrs. Pendragon of New Orleans, one of the most brilliant, amiable, and charming of women. I remember her as far back as the seventies. A young man like Mr. King, if he could be called young, could not have a safer and more sympathetic social adviser. Why are not all handsome women cordial, good-tempered, and well-bred! And there were the Ashleys—clever mother and three daughters, au-fait girls, racy and witty talkers; I forget whether they were last from Paris, Washington, or San Francisco. Family motto: "Don't be dull." All the Van Dams from New York, and the Sleiderheifers and Mulligrubs of New Jersey, were there for the season, some of them in cottages. These families are intimate, even connected by marriage, with the Bayardiers of South Carolina and the Lontoons of Louisiana. The girls are handsome, dashing women, without much information, but rattling talkers, and so exclusive! and the young men, with a Piccadilly air, fancy that they belong to the "Prince of Wales set," you know. There is a good deal of monarchical simplicity in our heterogeneous society.

Mrs. Cortlandt was quite in her element here as director-general of expeditions and promoter of social activity. "I have been expecting you," she was kind enough to say to Mr. King the morning after his arrival. "Kitty Van Sanford spied you last night, and exclaimed, 'There, now, is a real reinforcement!' You see that you are mortgaged already."

"It's very kind of you to expect me. Is there anybody else here I know?"

"Several hundreds, I should say. If you cannot find friends here, you are a subject for an orphan-asylum. And you have not seen anybody?"

"Well, I was late at breakfast."

"And you have not looked on the register?"

"Yes, I did run my eye over the register."

"And you are standing right before me and trying to look as if you did not know that Irene Benson is in the house. I didn't think, Mr. King, it had gone that far—indeed I didn't. You know I'm in a manner responsible for it. And I heard all about you at Newport. She's a heart of gold, that girl."

"Did she—did Miss Benson say anything about Newport?"

"No. Why?"

"Oh, I didn't know but she might have mentioned how she liked it."

"I don't think she liked it as much as her mother did. Mrs. Benson talks of nothing else. Irene said nothing special to me. I don't know what she may have said to Mr. Meigs," this wily woman added, in the most natural manner.

"Who is Mr. Meigs?"

"Mr. Alfred Meigs, Boston. He is a rich widower, about forty—the most fascinating age for a widower, you know. I think he is conceited, but he is really a most entertaining man; has traveled all over the world—Egypt, Persia—lived in Japan, prides himself a little on never having been in Colorado or Florida."

"What does he do?"

"Do? He drives Miss Benson to Otter Cliffs, and out on the Cornice Road, about seven days in the week, and gets up sailing-parties and all that in the intervals."

"I mean his occupation."

"Isn't that occupation enough? Well, he has a library and a little archaeological museum, and prints monographs on art now and then. If he were a New-Yorker, you know, he would have a yacht instead of a library. There they are now."

A carriage with a pair of spirited horses stood at the bottom of the steps on the entrance side. Mrs. Cortlandt and King turned the corner of the piazza and walked that way. On the back seat were Mrs. Benson and Mrs. Simpkins. The gentleman holding the reins was just helping Irene to the high seat in front. Mr. King was running down the long flight of steps. Mrs. Benson saw him, bowed most cordially, and called his name. Irene, turning quickly, also bowed—he thought there was a flush on her face. The gentleman, in the act of starting the horses, raised his hat. King was delighted to notice that he was bald. He had a round head, snugly-trimmed beard slightly dashed with gray, was short and a trifle stout—King thought dumpy. "I suppose women like that kind of man," he said to Mrs. Cortlandt when the carriage was out of sight.

"Why not? He has perfect manners; he knows the world—that is a great point, I can tell you, in the imagination of a girl; he is rich; and he is no end obliging."

"How long has he been here?"

"Several days. They happened to come up from the Isles of Shoals together. He is somehow related to the Simpkinses. There! I've wasted time enough on you. I must go and see Mrs. Pendragon about a watermelon party to Jordan Pond. You'll see, I'll arrange something."

King had no idea what a watermelon party was, but he was pleased to think that it was just the sort of thing that Mr. Meigs would shine in. He said to himself that he hated dilettante snobs. His bitter reflections were interrupted by the appearance of Miss Lamont and the artist, and with them Mr. Benson. The men shook hands with downright heartiness. Here is a genuine man, King was thinking.

"Yes. We are still at it," he said, with his humorous air of resignation. "I tell my wife that I'm beginning to understand how old Christian felt going through Vanity Fair. We ought to be pretty near the Heavenly Gates by this time. I reckoned she thought they opened into Newport. She said I ought to be ashamed to ridicule the

Bible. I had to have my joke. It's queer how different the world looks to women."

"And how does it look to men?" asked Miss Lamont.

"Well, my dear young lady, it looks like a good deal of fuss, and tolerably large bills."

"But what does it matter about the bills if you enjoy yourself?"

"That's just it. Folks work harder to enjoy themselves than at anything else I know. Half of them spend more money than they can afford to, and keep under the harrow all the time, just because they see others spend money."

"I saw your wife and daughter driving away just now," said King, shifting the conversation to a more interesting topic.

"Yes. They have gone to take a ride over what they call here the Cornneechy. It's a pretty enough road along the bay, but Irene says it's about as much like the road in Europe they name it from as Green Mountain is like Mount Blanck. Our folks seem possessed to stick a foreign name on to everything. And the road round through the scrub to Eagle Lake they call Norway. If Norway is like that, it's pretty short of timber. If there hadn't been so much lumbering here, I should like it better. There is hardly a decent pine-tree left. Mr. Meigs—they have gone riding with Mr. Meigs—says the Maine government ought to have a Maine law that amounts to something—one that will protect the forests, and start up some trees on the coast."

"Is Mr. Meigs in the lumber business?" asked King.

"Only for scenery, I guess. He is great on scenery. He's a Boston man. I tell the women that he is what I call a bric-er-brac man. But you come to set right down with him, away from women, and he talks just as sensible as anybody. He is shrewd enough. It beats all how men are with men and with women."

Mr. Benson was capable of going on in this way all day. But the artist proposed a walk up to Newport, and Mr. King getting Mrs. Pendragon to accompany them, the party set out. It is a very agreeable climb up Newport, and not difficult; but if the sun is out, one feels, after scrambling over the rocks and walking home by the dusty road, like taking a long pull at a cup of shandygaff. The mountain is a solid mass of granite, bare on top, and commands a noble view of islands and ocean, of the gorge separating it from Green Mountain, and of that respectable hill. For this reason, because it is some two or three hundred feet lower than Green Mountain, and includes that scarred eminence in its view, it is the most picturesque and pleasing elevation on the island. It also has the recommendation of being nearer to the sea than its sister mountain. On the south side, by a long slope, it comes nearly to the water, and the longing that the visitor to Bar Harbor has to see the ocean is moderately gratified. The prospect is at once noble and poetic.

CLIMBING UP NEWPORT.

Mrs. Pendragon informed Mr. King that he and Miss Lamont and Mr. Forbes were included in the watermelon party that was to start that afternoon at five o'clock. The plan was for the party to go in buckboards to Eagle Lake, cross that in the steamer, scramble on foot over the "carry" to Jordan Pond, take row-boats to the foot of that, and find at a farmhouse there the watermelons and other refreshments, which would be sent by the shorter road, and then all return by moonlight in the buckboards.

A BAR HARBOR BUCK-BOARD.

This plan was carried out. Mrs. Cortlandt, Mrs. Pendragon, and Mrs. Simpkins were to go as chaperons, and Mr. Meigs had been invited by Mrs. Cortlandt, King learned to his disgust, also to act as a chaperon. All the proprieties are observed at Bar Harbor. Half a dozen long buckboards were loaded with their merry freight. At the last Mrs. Pendragon pleaded a headache, and could not go. Mr. King was wandering about among the buckboards to find an eligible seat. He was not put in good humor by finding that Mr. Meigs had ensconced himself beside Irene, and he was about crowding in with the Ashley girls—not a bad fate—when word was passed down the line from Mrs. Cortlandt, who was the autocrat of the expedition, that Mr. Meigs was to come back and take a seat with Mrs. Simpkins in the buckboard with the watermelons. She could not walk around the “carry”; she must go by the direct road, and of course she couldn't go alone. There was no help for it, and Mr. Meigs, looking as cheerful as an undertaker in a healthy season, got down from his seat and trudged back. Thus two chaperons were disposed of at a stroke, and the young men all said that they hated to assume so much responsibility. Mr. King didn't need prompting in this emergency; the wagons were already moving, and before Irene knew exactly what had happened, Mr. King was begging her pardon for the change, and seating himself beside her. And he was thinking, “What a confoundedly clever woman Mrs. Cortlandt is!”

There is an informality about a buckboard that communicates itself at once to conduct. The exhilaration of the long spring-board, the necessity of holding on to something or somebody to prevent being tossed overboard, put occupants in a larkish mood that they might never attain in an ordinary vehicle. All this was favorable to King, and it relieved Irene from an embarrassment she might have felt in meeting him under ordinary circumstances. And King had the tact to treat himself and their meeting merely as accidents.

“The American youth seem to have invented a novel way of disposing of chaperons,” he said. “To send them in one direction and the party chaperoned in another is certainly original.”

“I'm not sure the chaperons like it. And I doubt if it is proper to pack them off by themselves, especially when one is a widow and the other is a widower.”

INDIAN VILLAGE, BAR HARBOR.

“It's a case of chaperon eat chaperon. I hope your friend didn't mind it. I had nearly despaired of finding a seat.”

“Mr. Meigs? He did not say he liked it, but he is the most obliging of men.”

“I suppose you have pretty well seen the island?”

“We have driven about a good deal. We have seen Southwest Harbor, and Somes's Sound and Schooner Head, and the Ovens and Otter Cliffs—there's no end of things to see; it needs a month. I suppose you have been up Green Mountain?”

“No. I sent Mr. Forbes.”

"You ought to go. It saves buying a map. Yes, I like the place immensely. You mustn't judge of the variety here by the table at Rodick's. I don't suppose there's a place on the coast that compares with it in interest; I mean variety of effects and natural beauty. If the writers wouldn't exaggerate so, talk about 'the sublimity of the mountains challenging the eternal grandeur of the sea!'"

"Don't use such strong language there on the back seat," cried Miss Lamont. "This is a pleasure party. Mr. Van Dusen wants to know why Maud S. is like a salamander?"

"He is not to be gratified, Marion. If it is conundrums, I shall get out and walk."

Before the conundrum was guessed, the volatile Van Dusen broke out into, "Here's a how d'e do!" One of the Ashley girls in the next wagon caught up the word with, "Here's a state of things!" and the two buckboards went rattling down the hill to Eagle Lake in a "Mikado" chorus.

"The Mikado troupe seems to have got over here in advance of Sullivan," said Mr. King to Irene. "I happened to see the first representation."

"Oh, half these people were in London last spring. They give you the impression that they just run over to the States occasionally. Mr. Van Dusen says he keeps his apartments in whatever street it is off Piccadilly, it's so much more convenient."

On the steamer crossing the lake, King hoped for an opportunity to make an explanation to Irene. But when the opportunity came he found it very difficult to tell what it was he wanted to explain, and so blundered on in commonplaces.

"You like Bar Harbor so well," he said, "that I suppose your father will be buying a cottage here?"

"Hardly. Mr. Meigs" (King thought there was too much Meigs in the conversation) "said that he had once thought of doing so, but he likes the place too well for that. He prefers to come here voluntarily. The trouble about owning a cottage at a watering-place is that it makes a duty of a pleasure. You can always rent, father says. He has noticed that usually when a person gets comfortably established in a summer cottage he wants to rent it."

"And you like it better than Newport?"

"On some accounts—the air, you know, and—"

"I want to tell you," he said breaking in most illogically—"I want to tell you, Miss Benson, that it was all a wretched mistake at Newport that morning. I don't suppose you care, but I'm afraid you are not quite just to me."

"I don't think I was unjust." The girl's voice was low, and she spoke slowly. "You couldn't help it. We can't any of us help it. We cannot make the world over, you know." And she looked up at him with a faint little smile.

"But you didn't understand. I didn't care for any of those people. It was just an accident. Won't you believe me? I do not ask much. But I cannot have you think I'm a coward."

"I never did, Mr. King. Perhaps you do not see what society is as I do. People think they can face it when they cannot. I can't say what I mean, and I think we'd better not talk about it."

The boat was landing; and the party streamed up into the woods, and with jest and laughter and feigned anxiety about danger and assistance, picked its way over the rough, stony path. It was such a scramble as young ladies enjoy, especially if they are city bred, for it seems to them an achievement of more magnitude than to the country lasses who see nothing uncommon or heroic in following a cow-path. And the young men like it because it brings out the trusting, dependent, clinging nature of girls. King wished it had been five miles long instead of a mile and a half. It gave him an opportunity to show his helpful, considerate spirit. It was necessary to take her hand to help her over the bad spots, and either the bad spots increased as they went on, or Irene was deceived about it. What makes a path of this sort so perilous to a woman's heart? Is it because it is an excuse for doing what she longs to do? Taking her hand recalled the day on the rocks at Narragansett, and the nervous clutch of her little fingers, when the footing failed, sent a delicious thrill through her lover. King thought himself quite in love with Forbes—there was the warmest affection between the two—but when he hauled the artist up a Catskill cliff there wasn't the least of this sort of a thrill in the grip of hands. Perhaps if women had the ballot in their hands all this nervous fluid would disappear out of the world.

At Jordan Pond boats were waiting. It is a pretty fresh-water pond between high sloping hills, and twin peaks at the north end give it even picturesqueness. There are a good many trout in it—at least that is the supposition, for the visitors very seldom get them out. When the boats with their chattering passengers had pushed out into the lake and accomplished a third of the voyage, they were met by a skiff containing the faithful chaperons Mrs. Simpkins and Mr. Meigs. They hailed, but Mr. King, who was rowing his boat, did not slacken speed. "Are you much tired, Miss Benson?" shouted Mr. Meigs. King didn't like this assumption of protection. "I've brought you a shawl."

"Hang his paternal impudence!" growled King, under his breath, as he threw himself back with a jerk on the oars that nearly sent Irene over the stern of the boat.

Evidently the boat-load, of which the Ashley girls and Mr. Van Dusen were a part, had taken the sense of this little comedy, for immediately they struck up:

*"For he is going to marry Yum-Yum—
Yum-Yum!
For he is going to marry Yum-Yum—
Yum-Yum!"*

This pleasantry passed entirely over the head of Irene, who had not heard the "Mikado," but King accepted it as a good omen, and forgave its impudence. It set Mr. Meigs thinking that he had a rival.

At the landing, however, Mr. Meigs was on hand to help Irene out, and a presentation of Mr. King followed. Mr. Meigs was polite even to cordiality, and thanked him for taking such good care of her. Men will make

such blunders sometimes.

"Oh, we are old friends," she said carelessly.

Mr. Meigs tried to mend matters by saying that he had promised Mrs. Benson, you know, to look after her. There was that in Irene's manner that said she was not to be appropriated without leave. But the consciousness that her look betrayed this softened her at once towards Mr. Meigs, and decidedly improved his chances for the evening. The philosopher says that women are cruelest when they set out to be kind.

The supper was an 'al fresco' affair, the party being seated about on rocks and logs and shawls spread upon the grass near the farmer's house. The scene was a very pretty one, at least the artist thought so, and Miss Lamont said it was lovely, and the Ashley girls declared it was just divine. There was no reason why King should not enjoy the chaff and merriment and the sunset light which touched the group, except that the one woman he cared to serve was enveloped in the attentions of Mr. Meigs. The drive home in the moonlight was the best part of the excursion, or it would have been if there had not been a general change of seats ordered, altogether, as Mr. King thought, for the accommodation of the Boston man. It nettled him that Irene let herself fall to the escort of Mr. Meigs, for women can always arrange these things if they choose, and he had only a melancholy satisfaction in the college songs and conundrums that enlivened the festive buckboard in which he was a passenger. Not that he did not join in the hilarity, but it seemed only a poor imitation of pleasure. Alas, that the tone of one woman's voice, the touch of her hand, the glance of her eye, should outweigh the world!

THE WATERMELON PARTY.

Somehow, with all the opportunities, the suit of our friend did not advance beyond a certain point. Irene was always cordial, always friendly, but he tried in vain to ascertain whether the middle-aged man from Boston had touched her imagination. There was a boating party the next evening in Frenchman's Bay, and King had the pleasure of pulling Miss Benson and Miss Lamont out seaward under the dark, frowning cliffs until they felt the ocean swell, and then of making the circuit of Porcupine Island. It was an enchanting night, full of mystery. The rock face of the Porcupine glistened white in the moonlight as if it were encrusted with salt, the waves beat in a continuous roar against its base, which is honeycombed by the action of the water, and when the boat glided into its shadow it loomed up vast and wonderful. Seaward were the harbor lights, the phosphorescent glisten of the waves, the dim forms of other islands; all about in the bay row-boats darted in and out of the moonlight, voices were heard calling from boat to boat, songs floated over the water, and the huge Portland steamer came plunging in out of the night, a blazing, trembling monster. Not much was said in the boat, but the impression of such a night goes far in the romance of real life.

Perhaps it was this impression that made her assent readily to a walk next morning with Mr. King along the bay. The shore is nearly all occupied by private cottages, with little lawns running down to the granite edge of the water. It is a favorite place for strolling; couples establish themselves with books and umbrellas on the rocks, children are dabbling in the coves, sails enliven the bay, row-boats dart about, the cawing of crows is heard in the still air. Irene declared that the scene was idyllic. The girl was in a most gracious humor, and opened her life more to King than she had ever done before. By such confidences usually women invite avowals, and as the two paced along, King felt the moment approach when there would be the most natural chance in the world for him to tell this woman what she was to him; at the next turn in the shore, by that rock, surely the moment would come. What is this airy nothing by which women protect themselves in such emergencies, by a question, by a tone, an invisible strong barrier that the most impetuous dare not attempt to break?

King felt the subtle restraint which he could not define or explain. And before he could speak she said: "We are going away tomorrow." "We? And who are we?" "Oh, the Simpkinses and our whole family, and Mr. Meigs." "And where?"

"Mr. Meigs has persuaded mother into the wildest scheme. It is nothing less than to leap from, here across all the intervening States to the White Sulphur Springs in Virginia. Father falls into the notion because he wants to see more of the Southerners, Mrs. Simpkins and her daughter are crazy to go, and Mr. Meigs says he has been trying to get there all his life, and in August the season is at its height. It was all arranged before I was consulted, but I confess I rather like it. It will be a change."

"Yes, I should think it would be delightful," King replied, rather absent-mindedly. "It's a long journey, a very long journey. I should think it would be too long a journey for Mr. Meigs—at his time of life."

It was not a fortunate remark, and still it might be; for who could tell whether Irene would not be flattered by this declaration of his jealousy of Mr. Meigs. But she passed it over as not serious, with the remark that the going did not seem to be beyond the strength of her father.

The introduction of Mr. Meigs in the guise of an accepted family friend and traveling companion chilled King and cast a gloom over the landscape. Afterwards he knew that he ought to have dashed in and scattered this encompassing network of Meigs, disregarded the girl's fence of reserve, and avowed his love. More women are won by a single charge at the right moment than by a whole campaign of strategy.

On the way back to the hotel he was absorbed in thought, and he burst into the room where Forbes was touching up one of his sketches, with a fully-formed plan. "Old fellow, what do you say to going to Virginia?"

Forbes put in a few deliberate touches, moving his head from side to side, and with aggravating slowness said, "What do you want to go to Virginia for?"

"Why White Sulphur, of course; the most characteristic watering-place in America. See the whole Southern life there in August; and there's the Natural Bridge."

"I've seen pictures of the Natural Bridge. I don't know as I care much" (still contemplating the sketch from different points of view, and softly whistling) "for the whole of Southern life."

"See here, Forbes, you must have some deep design to make you take that attitude."

"Deep design!" replied Forbes, facing round. "I'll be hanged if I see what you are driving at. I thought it was Saratoga and Richfield, and mild things of that sort."

"And the little Lamont. I know we talked of going there with her and her uncle; but we can go there afterwards. I tell you what I'll do: I'll go to Richfield, and stay till snow comes, if you will take a dip with me down into Virginia first. You ought to do it for your art. It's something new, picturesque—negroes, Southern belles, old-time manners. You cannot afford to neglect it."

"I don't see the fun of being yanked all over the United States in the middle of August."

"You want shaking up. You've been drawing seashores with one figure in them till your pictures all look like—well, like Lamont and water."

"That's better," Forbes retorted, "than Benson and gruel."

And the two got into a huff. The artist took his sketch-book and went outdoors, and King went to his room to study the guide-books and the map of Virginia. The result was that when the friends met for dinner, King said:

"I thought you might do it for me, old boy."

And Forbes replied: "Why didn't you say so? I don't care a rap where I go. But it's Richfield afterwards."

VIII. NATURAL BRIDGE, WHITE SULFUR

What occurred at the parting between the artist and the little Lamont at Bar Harbor I never knew. There was that good comradeship between the two, that frank enjoyment of each other's society, without any sentimental nonsense, so often seen between two young people in America, which may end in a friendship of a summer, or extend to the cordial esteem of a lifetime, or result in marriage. I always liked the girl; she had such a sunny temper, such a flow of originality in her mental attitude towards people and things without being a wit or a critic, and so much piquancy in all her little ways. She would take to matrimony, I should say, like a duck to water, with unruffled plumage, but as a wife she would never be commonplace, or anything but engaging, and, as the saying is, she could make almost any man happy. And, if unmarried, what a delightful sister-in-law she would be, especially a deceased wife's sister!

I never imagined that she was capable of a great passion, as was Irene Benson, who under a serene exterior was moved by tides of deep feeling, subject to moods, and full of aspirations and longings which she herself only dimly knew the meaning of. With Irene marriage would be either supreme happiness or extreme wretchedness, no half-way acceptance of a conventional life. With such a woman life is a failure, either tragic or pathetic, without a great passion given and returned. It is fortunate, considering the chances that make unions in society, that for most men and women the "grand passion" is neither necessary nor possible. I did not share King's prejudice against Mr. Meigs. He seemed to me, as the world goes, a 'bon parti,' cultivated by travel and reading, well-bred, entertaining, amiable, possessed of an ample fortune, the ideal husband in the eyes of a prudent mother. But I used to think that if Irene, attracted by his many admirable qualities, should become his wife, and that if afterwards the Prince should appear and waken the slumbering woman's heart in her, what a tragedy would ensue. I can imagine their placid existence if the Prince should not appear, and I can well believe that Irene and Stanhope would have many a tumultuous passage in the passionate symphony of their lives. But, great heavens, is the ideal marriage a Holland!

If Marion had shed any tears overnight, say on account of a little lonesomeness because her friend was speeding away from her southward, there were no traces of them when she met her uncle at the breakfast-table, as bright and chatty as usual, and in as high spirits as one can maintain with the Rodick coffee.

What a world of shifting scenes it is! Forbes had picked up his traps and gone off with his unreasonable companion like a soldier. The day after, when he looked out of the window of his sleeping-compartment at half-past four, he saw the red sky of morning, and against it the spires of Philadelphia.

At ten o'clock the two friends were breakfasting comfortably in the car, and running along down the Cumberland Valley. What a contrast was this rich country, warm with color and suggestive of abundance, to the pale and scrimped coast land of Maine denuded of its trees! By afternoon they were far down the east valley of the Shenandoah, between the Blue Ridge and the Massanutten range, in a country broken, picturesque, fertile, so attractive that they wondered there were so few villages on the route, and only now

and then a cheap shanty in sight; and crossing the divide to the waters of the James, at sundown, in the midst of a splendid effect of mountains and clouds in a thunderstorm, they came to Natural Bridge station, where a coach awaited them.

This was old ground to King, who had been telling the artist that the two natural objects east of the Rocky Mountains that he thought entitled to the epithet "sublime" were Niagara Falls and the Natural Bridge; and as for scenery, he did not know of any more noble and refined than this region of the Blue Ridge. Take away the Bridge altogether, which is a mere freak, and the place would still possess, he said, a charm unique. Since the enlargement of hotel facilities and the conversion of this princely domain into a grand park, it has become a favorite summer resort. The gorge of the Bridge is a botanical storehouse, greater variety of evergreens cannot be found together anywhere else in the country, and the hills are still clad with stately forests. In opening drives, and cutting roads and vistas to give views, the proprietor has shown a skill and taste in dealing with natural resources, both in regard to form and the development of contrasts of color in foliage, which are rare in landscape gardening on this side of the Atlantic. Here is the highest part of the Blue Ridge, and from the gentle summit of Mount Jefferson the spectator has in view a hundred miles of this remarkable range, this ribbed mountain structure, which always wears a mantle of beauty, changeable purple and violet.

After supper there was an illumination of the cascade, and the ancient gnarled arbor-vita: trees that lean over it—perhaps the largest known specimens of this species—of the gorge and the Bridge. Nature is apt to be belittled by this sort of display, but the noble dignity of the vast arch of stone was superior to this trifling, and even had a sort of mystery added to its imposing grandeur. It is true that the flaming bonfires and the colored lights and the tiny figures of men and women standing in the gorge within the depth of the arch made the scene theatrical, but it was strange and weird and awful, like the fantasy of a Walpurgis' Night or a midnight revel in Faust.

The presence of the colored brother in force distinguished this from provincial resorts at the North, even those that employ this color as servants.

The flavor of Old Virginia is unmistakable, and life drops into an easy-going pace under this influence. What fine manners, to be sure! The waiters in the dining-room, in white ties and dress-coats, move on springs, starting even to walk with a complicated use of all the muscles of the body, as if in response to the twang of a banjo; they do nothing without excessive motion and flourish. The gestures and good-humored vitality expended in changing plates would become the leader of an orchestra. Many of them, besides, have the expression of class-leaders—of a worldly sort. There were the aristocratic chambermaid and porter, who had the air of never having waited on any but the first families. And what clever flatterers and readers of human nature! They can tell in a moment whether a man will be complimented by the remark, "I tuk you for a Richmond gemman, never shod have know'd you was from de Norf," or whether it is best to say, "We depen's on de gemmen frum de Norf; folks down hyer never gives noflin; is too pore." But to a Richmond man it is always, "The Yankee is mighty keerful of his money; we depen's on the old sort, marse." A fine specimen of the "Richmond darkey" of the old school-polite, flattering, with a venerable head of gray wool, was the bartender, who mixed his juleps with a flourish as if keeping time to music. "Haven't I waited on you befo', sah? At Capon Springs? Sorry, sah, but tho't I knowed you when you come in. Sorry, but glad to know you now, sah. If that julep don't suit you, sah, throw it in my face."

“HAVEN'T I WAITED ON YOU BEFO', SAH?”

A friendly, restful, family sort of place, with music, a little mild dancing, mostly performed by children, in the pavilion, driving and riding-in short, peace in the midst of noble scenery. No display of fashion, the artist soon discovered, and he said he longed to give the pretty girls some instruction in the art of dress. Forbes was a missionary of “style.” It hurt his sense of the fitness of things to see women without it. He used to say that an ill-dressed woman would spoil the finest landscape. For such a man, with an artistic feeling so sensitive, the White Sulphur Springs is a natural goal. And he and his friend hastened thither with as much speed as the Virginia railways, whose time-tables are carefully adjusted to miss all connections, permit.

“What do you think of a place,” he wrote Miss Lamont—the girl read me a portion of his lively letter that summer at Saratoga—“into which you come by a belated train at half-past eleven at night, find friends waiting up for you in evening costume, are taken to a champagne supper at twelve, get to your quarters at one, and have your baggage delivered to you at two o'clock in the morning?” The friends were lodged in “Paradise Row”—a whimsical name given to one of the quarters assigned to single gentlemen. Put into these single-room barracks, which were neat but exceedingly primitive in their accommodations, by hilarious negro attendants who appeared to regard life as one prolonged lark, and who avowed that there was no time of day or night when a mint-julep or any other necessary of life would not be forthcoming at a moment's warning, the beginning of their sojourn at “The White” took on an air of adventure, and the two strangers had the impression of having dropped into a garrison somewhere on the frontier. But when King stepped out upon the gallery, in the fresh summer morning, the scene that met his eyes was one of such peaceful dignity, and so different from any in his experience, that he was aware that he had come upon an original development of watering-place life.

The White Sulphur has been for the better part of a century, as everybody knows, the typical Southern resort, the rendezvous of all that was most characteristic in the society of the whole South, the meeting-place of its politicians, the haunt of its belles, the arena of gayety, intrigue, and fashion. If tradition is to be believed, here in years gone by were concocted the measures that were subsequently deployed for the government of the country at Washington, here historic matches were made, here beauty had triumphs that were the talk of a generation, here hearts were broken at a ball and mended in Lovers' Walk, and here fortunes were nightly lost and won. It must have been in its material conditions a primitive place in the days of its greatest fame. Visitors came to it in their carriages and unwieldy four-horse chariots, attended by troops of servants, making slow but most enjoyable pilgrimages over the mountain roads, journeys that lasted a week or a fortnight, and were every day enlivened by jovial adventure. They came for the season. They were all of one social order, and needed no introduction; those from Virginia were all related to each other, and though life there was somewhat in the nature of a picnic, it had its very well-defined and ceremonious code of etiquette. In the memory of its old habitues it was at once the freest and the most aristocratic assembly in the world. The hotel was small and its arrangements primitive; a good many of the visitors had their own cottages, and the rows of these cheap structures took their names from their occupants. The Southern presidents, the senators, and statesmen, the rich planters, lived in cottages which still have an historic interest in their memory. But cottage life was never the exclusive affair that it is elsewhere; the society was one body, and the hotel was the centre.

Time has greatly changed the White Sulphur; doubtless in its physical aspect it never was so beautiful and attractive as it is today, but all the modern improvements have not destroyed the character of the resort, which possesses a great many of its primitive and old-time peculiarities. Briefly the White is an elevated and charming mountain region, so cool, in fact, especially at night, that the “season” is practically limited to July and August, although I am not sure but a quiet person, who likes invigorating air, and has no daughters to marry off, would find it equally attractive in September and October, when the autumn foliage is in its glory. In a green rolling interval, planted with noble trees and flanked by moderate hills, stands the vast white caravansary, having wide galleries and big pillars running round three sides. The front and two sides are elevated, the galleries being reached by flights of steps, and affording room underneath for the large billiard and bar-rooms. From the hotel the ground slopes down to the spring, which is surmounted by a round canopy

on white columns, and below is an opening across the stream to the race-track, the servants' quarters, and a fine view of receding hills. Three sides of this charming park are enclosed by the cottages and cabins, which back against the hills, and are more or less embowered in trees. Most of these cottages are built in blocks and rows, some single rooms, others large enough to accommodate a family, but all reached by flights of steps, all with verandas, and most of them connected by galleries. Occasionally the forest trees have been left, and the galleries built around them. Included in the premises are two churches, a gambling-house, a couple of country stores, and a post-office. There are none of the shops common at watering-places for the sale of fancy articles, and, strange to say, flowers are not systematically cultivated, and very few are ever to be had. The hotel has a vast dining-room, besides the minor eating-rooms for children and nurses, a large ballroom, and a drawing-room of imposing dimensions. Hotel and cottages together, it is said, can lodge fifteen hundred guests.

The natural beauty of the place is very great, and fortunately there is not much smart and fantastic architecture to interfere with it. I cannot say whether the knowledge that Irene was in one of the cottages affected King's judgment, but that morning, when he strolled to the upper part of the grounds before breakfast, he thought he had never beheld a scene of more beauty and dignity, as he looked over the mass of hotel buildings, upon the park set with a wonderful variety of dark green foliage, upon the elevated rows of galleried cottages marked by colonial simplicity, and the soft contour of the hills, which satisfy the eye in their delicate blending of every shade of green and brown. And after an acquaintance of a couple of weeks the place seemed to him ravishingly beautiful.

King was always raving about the White Sulphur after he came North, and one never could tell how much his judgment was colored by his peculiar experiences there. It was my impression that if he had spent those two weeks on a barren rock in the ocean, with only one fair spirit for his minister, he would have sworn that it was the most lovely spot on the face of the earth. He always declared that it was the most friendly, cordial society at this resort in the country. At breakfast he knew scarcely any one in the vast dining-room, except the New Orleans and Richmond friends with whom he had a seat at table. But their acquaintance sufficed to establish his position. Before dinner-time he knew half a hundred; in the evening his introductions had run up into the hundreds, and he felt that he had potential friends in every Southern city; and before the week was over there was not one of the thousand guests he did not know or might not know. At his table he heard Irene spoken of and her beauty commented on. Two or three days had been enough to give her a reputation in a society that is exceedingly sensitive to beauty. The men were all ready to do her homage, and the women took her into favor as soon as they saw that Mr. Meigs, whose social position was perfectly well known, was of her party. The society of the White Sulphur seems perfectly easy of access, but the ineligible will find that it is able, like that of Washington, to protect itself. It was not without a little shock that King heard the good points, the style, the physical perfections, of Irene so fully commented on, and not without some alarm that he heard predicted for her a very successful career as a belle.

Coming out from breakfast, the Benson party were encountered on the gallery, and introductions followed. It was a trying five minutes for King, who felt as guilty, as if the White Sulphur were private property into which he had intruded without an invitation. There was in the civility of Mr. Meigs no sign of an invitation. Mrs. Benson said she was never so surprised in her life, and the surprise seemed not exactly an agreeable one, but Mr. Benson looked a great deal more pleased than astonished. The slight flush in Irene's face as she greeted him might have been wholly due to the unexpectedness of the meeting. Some of the gentlemen lounged off to the office region for politics and cigars, the elderly ladies took seats upon the gallery, and the rest of the party strolled down to the benches under the trees.

"So Miss Benson was expecting you!" said Mrs. Farquhar, who was walking with King. It is enough to mention Mrs. Farquhar's name to an habitue of the Springs. It is not so many years ago since she was a reigning belle, and as noted for her wit and sparkling raillery as for her beauty. She was still a very handsome woman, whose original cleverness had been cultivated by a considerable experience of social life in this country as well as in London and Paris.

"Was she? I'm sure I never told her I was coming here."

"No, simple man. You were with her at Bar Harbor, and I suppose she never mentioned to you that she was coming here?"

"But why did you think she expected me?"

POLITICS AND CIGARS.

"You men are too aggravatingly stupid. I never saw astonishment better feigned. I dare say it imposed upon that other admirer of hers also. Well, I like her, and I'm going to be good to her." This meant a good deal. Mrs. Farquhar was related to everybody in Virginia—that is, everybody who was anybody before the war—and she could count at that moment seventy-five cousins, some of them first and some of them double-first cousins, at the White Sulphur. Mrs. Farquhar's remark meant that all these cousins and all their friends the South over would stand by Miss Benson socially from that moment.

The morning german had just begun in the ballroom. The gallery was thronged with spectators, clustering like bees about the large windows, and the notes of the band came floating out over the lawn, bringing to the groups there the lulling impression that life is all a summer holiday.

THE MORNING GERMAN.

"And they say she is from Ohio. It is right odd, isn't it? but two or three of the prettiest women here are from that State. There is Mrs. Martin, sweet as a jacqueminot. I'd introduce you if her husband were here. Ohio! Well, we get used to it. I should have known the father and mother were corn-fed. I suppose you prefer the corn-feds to the Confeds. But there's homespun and homespun. You see those under the trees yonder? Georgia homespun! Perhaps you don't see the difference. I do."

"I suppose you mean provincial."

"Oh, dear, no. I'm provincial. It is the most difficult thing to be in these leveling days. But I am not going to interest you in myself. I am too unselfish. Your Miss Benson is a fine girl, and it does not matter about her parents. Since you Yankees upset everything by the war, it is really of no importance who one's mother is. But, mind, this is not my opinion. I'm trying to adjust myself. You have no idea how reconstructed I am."

And with this Mrs. Farquhar went over to Miss Benson, and chatted for a few moments, making herself particularly agreeable to Mr. Meigs, and actually carried that gentleman off to the spring, and then as an escort to her cottage, shaking her fan as she went away at Mr. King and Irene, and saying, "It is a waste of time for you youngsters not to be in the german."

The german was just ended, and the participants were grouping themselves on the gallery to be photographed, the usual custom for perpetuating the memory of these exercises, which only take place every other morning. And since something must be done, as there are only six nights for dancing in the week, on the off mornings there are champagne and fruit parties on the lawn.

It was not about the german, however, that King was thinking. He was once more beside the woman he

loved, and all the influences of summer and the very spirit of this resort were in his favor. If I cannot win her here, he was saying to himself, the Meigs is in it. They talked about the journey, about Luray, where she had been, and about the Bridge, and the abnormal gayety of the Springs.

"The people are all so friendly," she said, "and strive so much to put the stranger at his ease, and putting themselves out lest time hang heavy on one's hands. They seem somehow responsible."

"Yes," said King, "the place is unique in that respect. I suppose it is partly owing to the concentration of the company in and around the hotel."

"But the sole object appears to me to be agreeable, and make a real social life. At other like places nobody seems to care what becomes of anybody else."

"Doubtless the cordiality and good feeling are spontaneous, though something is due to manner, and a habit of expressing the feeling that arises. Still, I do not expect to find any watering-place a paradise. This must be vastly different from any other if it is not full of cliques and gossip and envy underneath. But we do not go to a summer resort to philosophize. A market is a market, you know."

"I don't know anything about markets, and this cordiality may all be on the surface, but it makes life very agreeable, and I wish our Northerners would catch the Southern habit of showing sympathy where it exists."

"Well, I'm free to say that I like the place, and all its easy-going ways, and I have to thank you for a new experience."

"Me? Why so?"

"Oh, I wouldn't have come if it had not been for your suggestion—I mean for your—your saying that you were coming here reminded me that it was a place I ought to see."

"I'm glad to have served you as a guide-book."

"And I hope you are not sorry that I—"

At this moment Mrs. Benson and Mr. Meigs came down with the announcement of the dinner hour, and the latter marched off with the ladies with a "one-of-the-family" air.

FLIRTATION ON THE LAWN.

The party did not meet again till evening in the great drawing-room. The business at the White Sulphur is pleasure. And this is about the order of proceedings: A few conscientious people take an early glass at the spring, and later patronize the baths, and there is a crowd at the post-office; a late breakfast; lounging and gossip on the galleries and in the parlor; politics and old-fogy talk in the reading-room and in the piazza corners; flirtation on the lawn; a german every other morning at eleven; wine-parties under the trees; morning calls at the cottages; servants running hither and thither with cooling drinks; the bar-room not absolutely deserted and cheerless at any hour, day or night; dinner from two to four; occasionally a riding-party; some driving; though there were charming drives in every direction, few private carriages, and no display of turn-outs; strolls in Lovers' Walk and in the pretty hill paths; supper at eight, and then the full-dress assembly in the drawing-room, and a "walk around" while the children have their hour in the ballroom; the nightly dance, witnessed by a crowd on the veranda, followed frequently by a private german and a supper given by some lover of his kind, lasting till all hours in the morning; and while the majority of the vast encampment reposes in slumber, some resolute spirits are fighting the tiger, and a light gleaming from one cottage and another shows where devotees of science are backing their opinion of the relative value of chance bits of pasteboard, in certain combinations, with a liberality and faith for which the world gives them no credit. And lest their life should become monotonous, the enterprising young men are continually organizing entertainments, mock races, comical games. The idea seems to prevail that a summer resort ought to be a place of enjoyment.

The White Sulphur is the only watering-place remaining in the United States where there is what may be called an "assembly," such as might formerly be seen at Saratoga or at Ballston Spa in Irving's young days.

Everybody is in the drawing-room in the evening, and although, in the freedom of the place, full dress is not exacted, the habit of parade in full toilet prevails. When King entered the room the scene might well be called brilliant, and even bewildering, so that in the maze of beauty and the babble of talk he was glad to obtain the services of Mrs. Farquhar as cicerone. Between the rim of people near the walls and the elliptical centre was an open space for promenading, and in this beauty and its attendant cavalier went round and round in unending show. This is called the "tread-mill." But for the seriousness of this frank display, and the unflagging interest of the spectators, there would have been an element of high comedy in it. It was an education to join a wall group and hear the free and critical comments on the style, the dress, the physical perfection, of the charming procession. When Mrs. Farquhar and King had taken a turn or two, they stood on one side to enjoy the scene.

"Did you ever see so many pretty girls together before? If you did, don't you dare say so."

"But at the North the pretty women are scattered in a thousand places. You have here the whole South to draw on. Are they elected as representatives from the various districts, Mrs. Farquhar?"

"Certainly. By an election that your clumsy device of the ballot is not equal to. Why shouldn't beauty have a reputation? You see that old lady in the corner? Well, forty years ago the Springs just raved over her; everybody in the South knew her; I suppose she had an average of seven proposals a week; the young men went wild about her, followed her, toasted her, and fought duels for her possession—you don't like duels?—why, she was engaged to three men at one time, and after all she went off with a worthless fellow."

"That seems to me rather a melancholy history."

"Well, she is a most charming old lady; just as entertaining! I must introduce you. But this is history. Now look! There's the belle of Mobile, that tall, stately brunette. And that superb figure, you wouldn't guess she is the belle of Selma. There is a fascinating girl. What a mixture of languor and vivacity! Creole, you know; full blood. She is the belle of New Orleans—or one of them. Oh! do you see that Paris dress? I must look at it again when it comes around; she carries it well, too—belle of Richmond. And, see there; there's one of the prettiest girls in the South—belle of Macon. And that handsome woman—Nashville?—Louisville? See, that's the new-comer from Ohio." And so the procession went on, and the enumeration—belle of Montgomery, belle of Augusta, belle of Charleston, belle of Savannah, belle of Atlanta—always the belle of some place.

"No, I don't expect you to say that these are prettier than Northern women; but just between friends, Mr. King, don't you think the North might make a little more of their beautiful women? Yes, you are right; she is handsome" (King was bowing to Irene, who was on the arm of Mr. Meigs), "and has something besides beauty. I see what you mean" (King had not intimated that he meant anything), "but don't you dare to say it."

"Oh, I'm quite subdued."

"I wouldn't trust you. I suppose you Yankees cannot help your critical spirit."

"Critical? Why, I've heard more criticism in the last half-hour from these spectators than in a year before. And—I wonder if you will let me say it?"

"Say on."

"Seems to me that the chief topic here is physical beauty—about the shape, the style, the dress, of women, and whether this or that one is well made and handsome."

"Well, suppose beauty is worshiped in the South—we worship what we have; we haven't much money now, you know. Would you mind my saying that Mr. Meigs is a very presentable man?"

"You may say what you like about Mr. Meigs."

"That's the reason I took him away this morning."

"Thank you."

"He is full of information, and so unobtrusive—"

"I hadn't noticed that."

COLONEL FANE.

"And I think he ought to be encouraged. I'll tell you what you ought to do, Mr. King: you ought to give a german. If you do not, I shall put Mr. Meigs up to it—it is the thing to do here."

"Mr. Meigs give a german!"—[Dance, cotillion—always lively. D.W.]

"Why not? You see that old beau there, the one smiling and bending towards her as he walks with the belle of Macon? He does not look any older than Mr. Meigs. He has been coming here for fifty years; he owns up to sixty-five and the Mexican war; it's my firm belief that he was out in 1812. Well, he has led the german here for years. You will find Colonel Fane in the ballroom every night. Yes, I shall speak to Mr. Meigs."

The room was thinning out. King found himself in front of a row of dowagers, whose tongues were still going about the departing beauties. "No mercy there," he heard a lady say to her companion; "that's a jury for conviction every time." What confidential communication Mrs. Farquhar made to Mr. Meigs, King never knew, but he took advantage of the diversion in his favor to lead Miss Benson off to the ballroom.

IX. OLD SWEET AND WHITE SULFUR

The days went by at the White Sulphur on the wings of incessant gayety. Literally the nights were filled with music, and the only cares that infested the day appeared in the anxious faces of the mothers as the campaign became more intricate and uncertain. King watched this with the double interest of spectator and player. The artist threw himself into the melee with abandon, and pacified his conscience by an occasional

letter to Miss Lamont, in which he confessed just as many of his conquests and defeats as he thought it would be good for her to know.

The colored people, who are a conspicuous part of the establishment, are a source of never-failing interest and amusement. Every morning the mammies and nurses with their charges were seated in a long, shining row on a part of the veranda where there was most passing and repassing, holding a sort of baby show, the social consequence of each one depending upon the rank of the family who employed her, and the dress of the children in her charge. High-toned conversation on these topics occupied these dignified and faithful mammies, upon whom seemed to rest to a considerable extent the maintenance of the aristocratic social traditions. Forbes had heard that while the colored people of the South had suspended several of the ten commandments, the eighth was especially regarded as nonapplicable in the present state of society. But he was compelled to revise this opinion as to the White Sulphur. Nobody ever locked a door or closed a window. Cottages most remote were left for hours open and without guard, miscellaneous articles of the toilet were left about, trunks were not locked, waiters, chambermaids, porters, washerwomen, were constantly coming and going, having access to the rooms at all hours, and yet no guest ever lost so much as a hairpin or a cigar. This fashion of trust and of honesty so impressed the artist that he said he should make an attempt to have it introduced elsewhere. This sort of esprit de corps among the colored people was unexpected, and he wondered if they are not generally misunderstood by writers who attribute to them qualities of various kinds that they do not possess. The negro is not witty or consciously humorous, or epigrammatic. The humor of his actions and sayings lies very much in a certain primitive simplicity. Forbes couldn't tell, for instance, why he was amused at a remark he heard one morning in the store. A colored girl sauntered in, looking about vacantly. "You ain't got no cotton, is you?" "Why, of course we have cotton." "Well" (the girl only wanted an excuse to say something), "I only ast, is you?"

Sports of a colonial and old English flavor that have fallen into disuse elsewhere varied the life at the White. One day the gentlemen rode in a mule-race, the slowest mule to win, and this feat was followed by an exhibition of negro agility in climbing the greased pole and catching the greased pig; another day the cavaliers contended on the green field surrounded by a brilliant array of beauty and costume, as two Amazon baseball nines, the one nine arrayed in yellow cambric frocks and sun-bonnets, and the other in bright red gowns—the whiskers and big boots and trousers adding nothing whatever to the illusion of the female battle.

The two tables, King's and the Benson's, united in an expedition to the Old Sweet, a drive of eighteen miles. Mrs. Farquhar arranged the affair, and assigned the seats in the carriages. It is a very picturesque drive, as are all the drives in this region, and if King did not enjoy it, it was not because Mrs. Farquhar was not even more entertaining than usual. The truth is that a young man in love is poor company for himself and for everybody else. Even the object of his passion could not tolerate him unless she returned it. Irene and Mr. Meigs rode in the carriage in advance of his, and King thought the scenery about the tamest he had ever seen, the roads bad, the horses slow. His ill-humor, however, was concentrated on one spot; that was Mr. Meigs's back; he thought he had never seen a more disagreeable back, a more conceited back. It ought to have been a delightful day; in his imagination it was to be an eventful day. Indeed, why shouldn't the opportunity come at the Old Sweet, at the end of the drive?—there was something promising in the name. Mrs. Farquhar was in a mocking mood all the way. She liked to go to the Old Sweet, she said, because it was so intolerably dull; it was a sensation. She thought, too, that it might please Miss Benson, there was such a fitness in the thing—the old sweet to the Old Sweet. "And he is not so very old either," she added; "just the age young girls like. I should think Miss Benson in danger—seriously, now—if she were three or four years younger."

The Old Sweet is, in fact, a delightful old-fashioned resort, respectable and dull, with a pretty park, and a crystal pond that stimulates the bather like a glass of champagne, and perhaps has the property of restoring youth. King tried the spring, which he heard Mrs. Farquhar soberly commending to Mr. Meigs; and after dinner he manoeuvred for a half-hour alone with Irene. But the fates and the women were against him. He had the mortification to see her stroll away with Mr. Meigs to a distant part of the grounds, where they remained in confidential discourse until it was time to return.

In the rearrangement of seats Mrs. Farquhar exchanged with Irene. Mrs. Farquhar said that it was very much like going to a funeral each way. As for Irene, she was in high, even feverish spirits, and rattled away in a manner that convinced King that she was almost too happy to contain herself.

Notwithstanding the general chaff, the singing, and the gayety of Irene, the drive seemed to him intolerably long. At the half-way house, where in the moonlight the horses drank from a shallow stream, Mr. Meigs came forward to the carriage and inquired if Miss Benson was sufficiently protected against the chilliness of the night. King had an impulse to offer to change seats with him; but no, he would not surrender in the face of the enemy. It would be more dignified to quietly leave the Springs the next day.

It was late at night when the party returned. The carriage drove to the Benson cottage; King helped Irene to alight, coolly bade her good-night, and went to his barracks. But it was not a good night to sleep. He tossed about, he counted every step of the late night birds on his gallery; he got up and lighted a cigar, and tried dispassionately to think the matter over. But thinking was of no use. He took pen and paper; he would write a chill letter of farewell; he would write a manly avowal of his passion; he would make such an appeal that no woman could resist it. She must know, she did know—what was the use of writing? He sat staring at the blank prospect. Great heavens! what would become of his life if he lost the only woman in the world? Probably the world would go on much the same. Why, listen to it! The band was playing on the lawn at four o'clock in the morning. A party was breaking up after a night of german and a supper, and the revelers were dispersing. The lively tunes of "Dixie," "Marching through Georgia," and "Home, Sweet Home," awoke the echoes in all the galleries and corridors, and filled the whole encampment with a sad gayety. Dawn was approaching. Good-nights and farewells and laughter were heard, and the voice of a wanderer explaining to the trees, with more or less broken melody, his fixed purpose not to go home till morning.

Stanhope King might have had a better though still a sleepless night if he had known that Mr. Meigs was packing his trunks at that hour to the tune of "Home, Sweet Home," and if he had been aware of the scene at the Benson cottage after he bade Irene good-night. Mrs. Benson had a light burning, and the noise of the carriage awakened her. Irene entered the room, saw that her mother was awake, shut the door carefully, sat down on the foot of the bed, said, "It's all over, mother," and burst into the tears of a long-repressed nervous excitement.

"What's over, child?" cried Mrs. Benson, sitting bolt-upright in bed.

"Mr. Meigs. I had to tell him that it couldn't be. And he is one of the best men I ever knew."

"You don't tell me you've gone and refused him, Irene?"

"Please don't scold me. It was no use. He ought to have seen that I did not care for him, except as a friend. I'm so sorry!"

"You are the strangest girl I ever saw." And Mrs. Benson dropped back on the pillow again, crying herself now, and muttering, "I'm sure I don't know what you do want."

When King came out to breakfast he encountered Mr. Benson, who told him that their friend Mr. Meigs had gone off that morning—had a sudden business call to Boston. Mr. Benson did not seem to be depressed about it. Irene did not appear, and King idled away the hours with his equally industrious companion under the trees. There was no german that morning, and the hotel band was going through its repertoire for the benefit of a champagne party on the lawn. There was nothing melancholy about this party; and King couldn't help saying to Mrs. Farquhar that it hardly represented his idea of the destitution and depression resulting from the war; but she replied that they must do something to keep up their spirits.

"And I think," said the artist, who had been watching, from the little distance at which they sat, the table of the revelers, "that they will succeed. Twenty-six bottles of champagne, and not many more guests! What a happy people, to be able to enjoy champagne before twelve o'clock!"

"Oh, you never will understand us!" said Mrs. Farquhar; "there is nothing spontaneous in you."

"We do not begin to be spontaneous till after dinner," said King.

"And then it is all calculated. Think of Mr. Forbes counting the bottles! Such a dreadfully mercenary spirit! Oh, I have been North. Because you are not so open as we are, you set up for being more virtuous."

"And you mean," said King, "that frankness and impulse cover a multitude of—"

"I don't mean anything of the sort. I just mean that conventionality isn't virtue. You yourself confessed that

you like the Southern openness right much, and you like to come here, and you like the Southern people as they are at home."

"Well?"

"And now will you tell me, Mr. Prim, why it is that almost all Northern people who come South to live become more Southern than the Southerners themselves; and that almost all Southern people who go North to live remain just as Southern as ever?"

"No. Nor do I understand any more than Dr. Johnson did why the Scotch, who couldn't scratch a living at home, and came up to London, always kept on bragging about their native land and abused the metropolis."

This sort of sparring went on daily, with the result of increasing friendship between the representatives of the two geographical sections, and commonly ended with the declaration on Mrs. Farquhar's part that she should never know that King was not born in the South except for his accent; and on his part that if Mrs. Farquhar would conceal her delightful Virginia inflection she would pass everywhere at the North for a Northern woman.

"I hear," she said, later, as they sat alone, "that Mr. Meigs has beat a retreat, saving nothing but his personal baggage. I think Miss Benson is a great goose. Such a chance for an establishment and a position! You didn't half appreciate him."

"I'm afraid I did not."

"Well, it is none of my business; but I hope you understand the responsibility of the situation. If you do not, I want to warn you about one thing: don't go strolling off before sunset in the Lovers' Walk. It is the most dangerous place. It is a fatal place. I suppose every turn in it, every tree that has a knoll at the foot where two persons can sit, has witnessed a tragedy, or, what is worse, a comedy. There are legends enough about it to fill a book. Maybe there is not a Southern woman living who has not been engaged there once at least. I'll tell you a little story for a warning. Some years ago there was a famous belle here who had the Springs at her feet, and half a dozen determined suitors. One of them, who had been unable to make the least impression on her heart, resolved to win her by a stratagem. Walking one evening on the hill with her, the two stopped just at a turn in the walk—I can show you the exact spot, with a chaperon—and he fell into earnest discourse with her. She was as cool and repellent as usual. Just then he heard a party approaching; his chance had come. The moment the party came in sight he suddenly kissed her. Everybody saw it. The witnesses discreetly turned back. The girl was indignant. But the deed was done. In half an hour the whole Springs would know it. She was compromised. No explanations could do away with the fact that she had been kissed in Lovers' Walk. But the girl was game, and that evening the engagement was announced in the drawing-room. Isn't that a pretty story?"

However much Stanhope might have been alarmed at this recital, he betrayed nothing of his fear that evening when, after walking to the spring with Irene, the two sauntered along and unconsciously, as it seemed, turned up the hill into that winding path which has been trodden by generations of lovers with loitering steps—steps easy to take and so hard to retrace! It is a delightful forest, the walk winding about on the edge of the hill, and giving charming prospects of intervalles, stream, and mountains. To one in the mood for a quiet hour with nature, no scene could be more attractive.

The couple walked on, attempting little conversation, both apparently prepossessed and constrained. The sunset was spoken of, and when Irene at length suggested turning back, that was declared to be King's object in ascending the hill to a particular point; but whether either of them saw the sunset, or would have known it from a sunrise, I cannot say. The drive to the Old Sweet was pleasant. Yes, but rather tiresome. Mr. Meigs had gone away suddenly. Yes; Irene was sorry his business should have called him away. Was she very sorry? She wouldn't lie awake at night over it, but he was a good friend. The time passed very quickly here. Yes; one couldn't tell how it went; the days just melted away; the two weeks seemed like a day. They were going away the next day. King said he was going also.

"And," he added, as if with an effort, "when the season is over, Miss Benson, I am going to settle down to work."

"I'm glad of that," she said, turning upon him a face glowing with approval.

"Yes, I have arranged to go on with practice in my uncle's office. I remember what you said about a dilettante life."

"Why, I never said anything of the kind."

"But you looked it. It is all the same."

They had come to the crown of the hill, and stood looking over the intervalles to the purple mountains. Irene was deeply occupied in tying up with grass a bunch of wild flowers. Suddenly he seized her hand.

"Irene!"

"No, no," she cried, turning away. The flowers dropped from her hand.

"You must listen, Irene. I love you—I love you."

She turned her face towards him; her lips trembled; her eyes were full of tears; there was a great look of wonder and tenderness in her face.

"Is it all true?"

“SHE WAS IN HIS ARMS.”

She was in his arms. He kissed her hair, her eyes—ah me! it is the old story. It had always been true. He loved her from the first, at Fortress Monroe, every minute since. And she—well, perhaps she could learn to love him in time, if he was very good; yes, maybe she had loved him a little at Fortress Monroe. How could he? what was there in her to attract him? What a wonder it was that she could tolerate him! What could she see in him?

So this impossible thing, this miracle, was explained? No, indeed! It had to be inquired into and explained over and over again, this absolutely new experience of two people loving each other.

She could speak now of herself, of her doubt that he could know his own heart and be stronger than the social traditions, and would not mind, as she thought he did at Newport—just a little bit—the opinions of other people. I do not by any means imply that she said all this bluntly, or that she took at all the tone of apology; but she contrived, as a woman can without saying much, to let him see why she had distrusted, not the sincerity, but the perseverance of his love. There would never be any more doubt now. What a wonder it all is.

The two parted—alas! alas! till supper-time!

I don't know why scoffers make so light of these partings—at the foot of the main stairs of the hotel gallery, just as Mrs. Farquhar was descending. Irene's face was radiant as she ran away from Mrs. Farquhar.

“Bless you, my children! I see my warning was in vain, Mr. King. It is a fatal walk. It always was in our family. Oh, youth! youth!” A shade of melancholy came over her charming face as she turned alone towards the spring.

X. LONG BRANCH, OCEAN GROVE

Mrs. Farquhar, Colonel Fane, and a great many of their first and second cousins were at the station the morning the Bensons and King and Forbes departed for the North. The gallant colonel was foremost in his expressions of regret, and if he had been the proprietor of Virginia, and of the entire South added thereto, and had been anxious to close out the whole lot on favorable terms to the purchaser, he would not have exhibited greater solicitude as to the impression the visitors had received. This solicitude was, however, wholly in his manner—and it is the traditional-manner that has nearly passed away—for underneath all this humility it was plain to be seen that the South had conferred a great favor, sir, upon these persons by a recognition of their merits.

"I am not come to give you good-by, but au revoir," said Mrs. Farquhar to Stanhope and Irene, who were standing apart. "I hate to go North in the summer, it is so hot and crowded and snobbish, but I dare say I shall meet you somewhere, for I confess I don't like to lose sight of so much happiness. No, no, Miss Benson, you need not thank me, even with a blush; I am not responsible for this state of things. I did all I could to warn you, and I tell you now that my sympathy is with Mr. Meigs, who never did either of you any harm, and I think has been very badly treated."

"I don't know any one, Mrs. Farquhar, who is so capable of repairing his injuries as yourself," said King.

"Thank you; I'm not used to such delicate elephantine compliments. It is just like a man, Miss Benson, to try to kill two birds with one stone—get rid of a rival by sacrificing a useless friend. All the same, au revoir."

"We shall be glad to see you," replied Irene, "you know that, wherever we are; and we will try to make the North tolerable for you."

"Oh, I shall hide my pride and go. If you were not all so rich up there! Not that I object to wealth; I enjoy it. I think I shall take to that old prayer: 'May my lot be with the rich in this world, and with the South in the next!'"

I suppose there never was such a journey as that from the White Sulphur to New York. If the Virginia scenery had seemed to King beautiful when he came down, it was now transcendently lovely. He raved about it, when I saw him afterwards—the Blue Ridge, the wheat valleys, the commercial advantages, the mineral resources of the State, the grand old traditional Heaven knows what of the Old Dominion; as to details he was obscure, and when I pinned him down, he was not certain which route they took. It is my opinion that the most costly scenery in the world is thrown away upon a pair of newly plighted lovers.

The rest of the party were in good spirits. Even Mrs. Benson, who was at first a little bewildered at the failure of her admirably planned campaign, accepted the situation with serenity.

"So you are engaged!" she said, when Irene went to her with the story of the little affair in Lovers' Walk. "I suppose he'll like it. He always took a fancy to Mr. King. No, I haven't any objections, Irene, and I hope you'll be happy. Mr. King was always very polite to me—only he didn't never seem exactly like our folks. We only want you to be happy." And the old lady declared with a shaky voice, and tears streaming down her cheeks, that she was perfectly happy if Irene was.

Mr. Meigs, the refined, the fastidious, the man of the world, who had known how to adapt himself perfectly to Mrs. Benson, might nevertheless have been surprised at her implication that he was "like our folks."

At the station in Jersey City—a place suggestive of love and romance and full of tender associations—the party separated for a few days, the Bensons going to Saratoga, and King accompanying Forbes to Long Branch, in pursuance of an agreement which, not being in writing, he was unable to break. As the two friends went in the early morning down to the coast over the level salt meadows, cut by bayous and intersected by canals, they were curiously reminded both of the Venice lagoons and the plains of the Teche; and the artist went into raptures over the colors of the landscape, which he declared was Oriental in softness and blending. Patriotic as we are, we still turn to foreign lands for our comparisons.

Long Branch and its adjuncts were planned for New York excursionists who are content with the ocean and the salt air, and do not care much for the picturesque. It can be described in a phrase: a straight line of sandy coast with a high bank, parallel to it a driveway, and an endless row of hotels and cottages. Knowing what the American seaside cottage and hotel are, it is unnecessary to go to Long Branch to have an accurate picture of it in the mind. Seen from the end of the pier, the coast appears to be all built up—a thin, straggling city by the sea. The line of buildings is continuous for two miles, from Long Branch to Elberon; midway is the West End, where our tourists were advised to go as the best post of observation, a medium point of respectability between the excursion medley of one extremity and the cottage refinement of the other, and equally convenient to the races, which attract crowds of metropolitan betting men and betting women. The fine toilets of these children of fortune are not less admired than their fashionable race-course manners. The satirist who said that Atlantic City is typical of Philadelphia, said also that Long Branch is typical of New York. What Mr. King said was that the satirist was not acquainted with the good society of either place.

All the summer resorts get somehow a certain character, but it is not easy always to say how it is produced. The Long Branch region was the resort of politicians, and of persons of some fortune who connect politics with speculation. Society, which in America does not identify itself with politics as it does in England, was not specially attracted by the newspaper notoriety of the place, although, fashion to some extent declared in favor of Elberon.

In the morning the artist went up to the pier at the bathing hour. Thousands of men, women, and children were tossing about in the lively surf promiscuously, revealing to the spectators such forms as Nature had given them, with a modest confidence in her handiwork. It seemed to the artist, who was a student of the human figure, that many of these people would not have bathed in public if Nature had made them self-conscious. All down the shore were pavilions and bath-houses, and the scene at a distance was not unlike that when the water is occupied by schools of leaping mackerel. An excursion steamer from New York landed at the pier. The passengers were not of any recognized American type, but mixed foreign races a crowd of respectable people who take their rare holidays rather seriously, and offer little of interest to an artist. The boats that arrive at night are said to bring a less respectable cargo.

It is a pleasant walk or drive down to Elberon when there is a sea-breeze, especially if there happen to be a dozen yachts in the offing. Such elegance as this watering-place has lies in this direction; the Elberon is a refined sort of hotel, and has near it a group of pretty cottages, not too fantastic for holiday residences, and even the "greeny-yellow" ones do not much offend, for eccentricities of color are toned down by the sea atmosphere. These cottages have excellent lawns set with brilliant beds of flowers; and the turf rivals that of Newport; but without a tree or shrub anywhere along the shore the aspect is too unrelieved and photographically distinct. Here as elsewhere the cottage life is taking the place of hotel life.

There were few handsome turn-outs on the main drive, and perhaps the popular character of the place was indicated by the use of omnibuses instead of carriages. For, notwithstanding Elberon and such fashion as is there gathered, Long Branch lacks "style." After the White Sulphur, it did not seem to King alive with gayety, nor has it any society. In the hotel parlors there is music in the evenings, but little dancing except by children. Large women, offensively dressed, sit about the veranda, and give a heavy and "company" air to the drawing-rooms. No, the place is not gay. The people come here to eat, to bathe, to take the air; and these are reasons enough for being here. Upon the artist, alert for social peculiarities, the scene made little impression,

for to an artist there is a limit to the interest of a crowd showily dressed, though they blaze with diamonds.

It was in search of something different from this that King and Forbes took the train and traveled six miles to Asbury Park and Ocean Grove. These great summer settlements are separated by a sheet of fresh water three-quarters of a mile long; its sloping banks are studded with pretty cottages, its surface is alive with boats gay with awnings of red and blue and green, and seats of motley color, and is altogether a fairy spectacle. Asbury Park is the worldly correlative of Ocean Grove, and esteems itself a notch above it in social tone. Each is a city of small houses, and each is teeming with life, but Ocean Grove, whose centre is the camp-meeting tabernacle, lodges its devotees in tents as well as cottages, and copies the architecture of Oak Bluffs. The inhabitants of the two cities meet on the two-mile-long plank promenade by the sea. Perhaps there is no place on the coast that would more astonish the foreigner than Ocean Grove, and if he should describe it faithfully he would be unpopular with its inhabitants. He would be astonished at the crowds at the station, the throngs in the streets, the shops and stores for supplying the wants of the religious pilgrims, and used as he might be to the promiscuous bathing along our coast, he would inevitably comment upon the freedom existing here. He would see women in their bathing dresses, wet and clinging, walking in the streets of the town, and he would read notices posted up by the camp-meeting authorities forbidding women so clad to come upon the tabernacle ground. He would also read placards along the beach explaining the reason why decency in bathing suits is desirable, and he would wonder why such notices should be necessary. If, however, he walked along the shore at bathing times he might be enlightened, and he would see besides a certain simplicity of social life which sophisticated Europe has no parallel for. A peculiar custom here is sand-burrowing. To lie in the warm sand, which accommodates itself to any position of the body, and listen to the dash of the waves, is a dreamy and delightful way of spending a summer day. The beach for miles is strewn with these sand-burrowers in groups of two or three or half a dozen, or single figures laid out like the effigies of Crusaders. One encounters these groups sprawling in all attitudes, and frequently asleep in their promiscuous beds. The foreigner is forced to see all this, because it is a public exhibition. A couple in bathing suits take a dip together in the sea, and then lie down in the sand. The artist proposed to make a sketch of one of these primitive couples, but it was impossible to do so, because they lay in a trench which they had scooped in the sand two feet deep, and had hoisted an umbrella over their heads. The position was novel and artistic, but beyond the reach of the artist. It was a great pity, because art is never more agreeable than when it concerns itself with domestic life.

IN THE SURF.

While this charming spectacle was exhibited at the beach, afternoon service was going on in the tabernacle, and King sought that in preference. The vast audience under the canopy directed its eyes to a man on the platform, who was violently gesticulating and shouting at the top of his voice. King, fresh from the scenes of the beach, listened a long time, expecting to hear some close counsel on the conduct of life, but he heard nothing except the vaguest emotional exhortation. By this the audience were apparently unmoved, for it was

only when the preacher paused to get his breath on some word on which he could dwell by reason of its vowels, like w-o-r-l-d or a-n-d, that he awoke any response from his hearers. The spiritual exercise of prayer which followed was even more of a physical demonstration, and it aroused more response. The officiating minister, kneeling at the desk, gesticulated furiously, doubled up his fists and shook them on high, stretched out both arms, and pounded the pulpit. Among people of his own race King had never before seen anything like this, and he went away a sadder if not a wiser man, having at least learned one lesson of charity—never again to speak lightly of a negro religious meeting.

This vast city of the sea has many charms, and is the resort of thousands of people, who find here health and repose. But King, who was immensely interested in it all as one phase of American summer life, was glad that Irene was not at Ocean Grove.

XI. SARATOGA

It was the 22d of August, and the height of the season at Saratoga. Familiar as King had been with these Springs, accustomed as the artist was to foreign Spas, the scene was a surprise to both. They had been told that fashion had ceased to patronize it, and that its old-time character was gone. But Saratoga is too strong for the whims of fashion; its existence does not depend upon its decrees; it has reached the point where it cannot be killed by the inroads of Jew or Gentile. In ceasing to be a society centre, it has become in a manner metropolitan; for the season it is no longer a provincial village, but the meeting-place of as mixed and heterogeneous a throng as flows into New York from all the Union in the autumn shopping period.

It was race week, but the sporting men did not give Saratoga their complexion. It was convention time, but except in the hotel corridors politicians were not the feature of the place. One of the great hotels was almost exclusively occupied by the descendants of Abraham, but the town did not at all resemble Jerusalem. Innumerable boarding-houses swarmed with city and country clergymen, who have a well-founded impression that the waters of the springs have a beneficent relation to the bilious secretions of the year, but the resort had not an oppressive air of sanctity. Nearly every prominent politician in the State and a good many from other States registered at the hotels, but no one seemed to think that the country was in danger. Hundreds of men and women were there because they had been there every year for thirty or forty years back, and they have no doubt that their health absolutely requires a week at Saratoga; yet the village has not the aspect of a sanitarium. The hotel dining-rooms and galleries were thronged with large, overdressed women who glittered with diamonds and looked uncomfortable in silks and velvets, and Broadway was gay with elegant equipages, but nobody would go to Saratoga to study the fashions. Perhaps the most impressive spectacle in this lowly world was the row of millionaires sunning themselves every morning on the piazza of the States, solemn men in black broadcloth and white hats, who said little, but looked rich; visitors used to pass that way casually, and the townspeople regarded them with a kind of awe, as if they were the king-pins of the whole social fabric; but even these magnates were only pleasing incidents in the kaleidoscopic show.

The first person King encountered on the piazza of the Grand Union was not the one he most wished to see, although it could never be otherwise than agreeable to meet his fair cousin, Mrs. Bartlett Glow. She was in a fresh morning toilet, dainty, *comme il faut*, radiant, with that unobtrusive manner of "society" which made the present surroundings, appear a trifle vulgar to King, and to his self-disgust forced upon him the image of Mrs. Benson.

“SOLEMN MEN WHO SAID LITTLE, BUT LOOKED RICH.”

“You here?” was his abrupt and involuntary exclamation.

“Yes—why not?” And then she added, as if from the Newport point of view some explanation were necessary: “My husband thinks he must come here for a week every year to take the waters; it's an old habit, and I find it amusing for a few days. Of course there is nobody here. Will you take me to the spring? Yes, Congress. I'm too old to change. If I believed the pamphlets the proprietors write about each other's springs I should never go to either of them.”

Mrs. Bartlett Glow was not alone in saying that nobody was there. There were scores of ladies at each hotel who said the same thing, and who accounted for their own presence there in the way she did. And they were not there at all in the same way they would be later at Lenox. Mrs. Pendragon, of New Orleans, who was at the United States, would have said the same thing, remembering the time when the Southern colony made a very distinct impression upon the social life of the place; and the Ashleys, who had put up at the Congress Hall in company with an old friend, a returned foreign minister, who stuck to the old traditions—even the Ashleys said they were only lookers-on at the pageant.

Paying their entrance, and passing through the turnstile in the pretty pavilion gate, they stood in the Congress Spring Park. The band was playing in the kiosk; the dew still lay on the flowers and the green turf; the miniature lake sparkled in the sun. It is one of the most pleasing artificial scenes in the world; to be sure, nature set the great pine-trees on the hills, and made the graceful little valley, but art and exquisite taste have increased the apparent size of the small plot of ground, and filled it with beauty. It is a gem of a place with a character of its own, although its prettiness suggests some foreign Spa. Groups of people, having taken the water, were strolling about the graveled paths, sitting on the slopes overlooking the pond, or wandering up the glen to the tiny deer park.

"So you have been at the White Sulphur?" said Mrs. Glow. "How did you like it?"

"Immensely. It's the only place left where there is a congregate social life."

"You mean provincial life. Everybody knows everybody else."

"Well," King retorted, with some spirit, "it is not a place where people pretend not to know each other, as if their salvation depended on it."

"Oh, I see; hospitable, frank, cordial—all that. Stanhope, do you know, I think you are a little demoralized this summer. Did you fall in love with a Southern belle? Who was there?"

"Well, all the South, pretty much. I didn't fall in love with all the belles; we were there only two weeks. Oh! there was a Mrs. Farquhar there."

"Georgiana Randolph! Georgie! How did she look? We were at Madame Sequin's together, and a couple of seasons in Paris. Georgie! She was the handsomest, the wittiest, the most fascinating woman I ever saw. I hope she didn't give you a turn?"

"Oh, no. But we were very good friends. She is a very handsome woman—perhaps you would expect me to say handsome still; but that seems a sort of treason to her mature beauty."

"And who else?"

"Oh, the Storbes from New Orleans, the Slifers from Mobile—no end of people—some from Philadelphia—and Ohio."

"Ohio? Those Bensons!" said she, turning sharply on him.

"Yes, those Bensons, Penelope. Why not?"

"Oh, nothing. It's a free country. I hope, Stanhope, you didn't encourage her. You might make her very unhappy."

"I trust not," said King stoutly. "We are engaged."

"Engaged!" repeated Mrs. Glow, in a tone that implied a whole world of astonishment and improbability.

"Yes, and you are just in time to congratulate us. There they are!" Mr. Benson, Mrs. Benson, and Irene were coming down the walk from the deer park. King turned to meet them, but Mrs. Glow was close at his side, and apparently as pleased at seeing them again as the lover. Nothing could be more charming than the grace and welcome she threw into her salutations. She shook hands with Mr. Benson; she was delighted to meet Mrs. Benson again, and gave her both her little hands; she almost embraced Irene, placed a hand on each shoulder, kissed her on the cheek, and said something in a low voice that brought the blood to the girl's face and suffused her eyes with tenderness.

When the party returned to the hotel the two women were walking lovingly arm in arm, and King was following after, in the more prosaic atmosphere of Cyrusville, Ohio. The good old lady began at once to treat King as one of the family; she took his arm, and leaned heavily on it, as they walked, and confided to him all her complaints. The White Sulphur waters, she said, had not done her a mite of good; she didn't know but she'd oughter see a doctor, but he said that it warn't nothing but indigestion. Now the White Sulphur agreed with Irene better than any other place, and I guess that I know the reason why, Mr. King, she said, with a faintly facetious smile. Meantime Mrs. Glow was talking to Irene on the one topic that a maiden is never

wearily of, her lover; and so adroitly mingled praises of him with flattery of herself that the girl's heart went out to her in entire trust.

"She is a charming girl," said Mrs. Glow to King, later. "She needs a little forming, but that will be easy when she is separated from her family. Don't interrupt me. I like her. I don't say I like it. But if you will go out of your set, you might do a great deal worse. Have you written to your uncle and to your aunt?"

"No; I don't know why, in a matter wholly personal to myself, I should call a family council. You represent the family completely, Penelope."

"Yes. Thanks to my happening to be here. Well, I wouldn't write to them if I were you. It's no use to disturb the whole connection now. By the way, Imogene Cypher was at Newport after you left; she is more beautiful than ever—just lovely; no other girl there had half the attention."

"I am glad to hear it," said King, who did not fancy the drift their conversation was taking. "I hope she will make a good match. Brains are not necessary, you know."

"Stanhope, I never said that—never. I might have said she wasn't a *bas bleu*. No more is she. But she has beauty, and a good temper, and money. It isn't the cleverest women who make the best wives, sir."

"Well, I'm not objecting to her being a wife. Only it does not follow that, because my uncle and aunts are in love with her, I should want to marry her."

"I said nothing about marriage, my touchy friend. I am not advising you to be engaged to two women at the same time. And I like Irene immensely."

It was evident that she had taken a great fancy to the girl. They were always together; it seemed to happen so, and King could hardly admit to himself that Mrs. Glow was *de trop* as a third. Mr. Bartlett Glow was very polite to King and his friend, and forever had one excuse and another for taking them off with him—the races or a lounge about town. He showed them one night, I am sorry to say, the inside of the Temple of Chance and its decorous society, its splendid buffet, the quiet tables of *rouge et noir*, and the highly respectable attendants—aged men, whitehaired, in evening costume, devout and almost godly in appearance, with faces chastened to resignation and patience with a wicked world, sedate and venerable as the deacons in a Presbyterian church. He was lonesome and wanted company, and, besides, the women liked to be by themselves occasionally.

One might be amused at the Saratoga show without taking an active part in it, and indeed nobody did seem to take a very active part in it. Everybody was looking on. People drove, visited the springs—in a vain expectation that excessive drinking of the medicated waters would counteract the effect of excessive gormandizing at the hotels—sat about in the endless rows of armchairs on the piazzas, crowded the heavily upholstered parlors, promenaded in the corridors, listened to the music in the morning, and again in the afternoon, and thronged the stairways and passages, and blocked up the entrance to the ballrooms. Balls? Yes, with dress *de rigueur*, many beautiful women in wonderful toilets, a few debutantes, a scarcity of young men, and a delicious band—much better music than at the White Sulphur.

And yet no society. But a wonderful agglomeration, the artist was saying. It is a robust sort of place. If Newport is the queen of the watering-places, this is the king. See how well fed and fat the people are, men and women large and expansive, richly dressed, prosperous—looking! What a contrast to the family sort of life at the White Sulphur! Here nobody, apparently, cares for anybody else—not much; it is not to be expected that people should know each other in such a heterogeneous concern; you see how comparatively few greetings there are on the piazzas and in the parlors. You notice, too, that the types are not so distinctively American as at the Southern resort—full faces, thick necks—more like Germans than Americans. And then the everlasting white hats. And I suppose it is not certain that every man in a tall white hat is a politician, or a railway magnate, or a sporting man.

These big hotels are an epitome of expansive, gorgeous American life. At the Grand Union, King was No. 1710, and it seemed to him that he walked the length of the town to get to his room after ascending four stories. He might as well, so far as exercise was concerned, have taken an apartment outside. And the dining-room. Standing at the door, he had a vista of an eighth of a mile of small tables, sparkling with brilliant service of glass and porcelain, chandeliers and frescoed ceiling. What perfect appointments! what well-trained waiters!—perhaps they were not waiters, for he was passed from one "officer" to another "officer" down to his place. At the tables silent couples and restrained family parties, no hilarity, little talking; and what a contrast this was to the happy-go-lucky service and jollity of the White Sulphur! Then the interior parks of the United States and the Grand Union, with corridors and cottages, close-clipped turf, banks of flowers, forest trees, fountains, and at night, when the band filled all the air with seductive strains, the electric and the colored lights, gleaming through the foliage and dancing on fountains and greensward, made a scene of enchantment. Each hotel was a village in itself, and the thousands of guests had no more in common than the frequenters of New York hotels and theatres. But what a paradise for lovers!

"It would be lonesome enough but for you, Irene," Stanhope said, as they sat one night on the inner piazza of the Grand Union, surrendering themselves to all the charms of the scene.

"I love it all," she said, in the full tide of her happiness.

On another evening they were at the illumination of the Congress Spring Park. The scene seemed the creation of magic. By a skillful arrangement of the colored globes an illusion of vastness was created, and the little enclosure, with its glowing lights, was like the starry heavens for extent. In the mass of white globes and colored lanterns of paper the eye was deceived as to distances. The allies stretched away interminably, the pines seemed enormous, and the green hillsides mountainous. Nor were charming single effects wanting. Down the winding walk from the hill, touched by a distant electric light, the loitering people, in couples and in groups, seemed no more in real life than the supernumeraries in a scene at the opera. Above, in the illuminated foliage, were doubtless a castle and a broad terrace, with a row of statues, and these gay promenaders were ladies and cavaliers in an old-time masquerade. The gilded kiosk on the island in the centre of the miniature lake and the fairy bridge that leads to it were outlined by colored globes; and the lake, itself set about with brilliants, reflected kiosk and bridge and lights, repeating a hundredfold the fantastic scene, while from their island retreat the band sent out through the illumined night strains of sentiment and gayety and sadness. In the intervals of the music there was silence, as if the great throng were too deeply enjoying this feast of the senses to speak. Perhaps a foreigner would have been impressed with the decorous respectability of the assembly; he would have remarked that there were no little tables scattered about the ground, no boys running about with foaming mugs of beer, no noise, no loud talking; and how restful to all the senses!

Mrs. Bartlett Glow had the whim to devote herself to Mrs. Benson, and was repaid by the acquisition of a great deal of information concerning the social and domestic life in Cyrusville, Ohio, and the maternal ambition for Irene. Stanhope and Irene sat a little apart from the others, and gave themselves up to the witchery of the hour. It would not be easy to reproduce in type all that they said; and what was most important to them, and would be most interesting to the reader, are the things they did not say—the half exclamations, the delightful silences, the tones, the looks that are the sign language of lovers. It was Irene who first broke the spell of this delightful mode of communication, and in a pause of the music said, “Your cousin has been telling me of your relatives in New York, and she told me more of yourself than you ever did.”

“Very likely. Trust your friends for that. I hope she gave me a good character.”

“Oh, she has the greatest admiration for you, and she said the family have the highest expectations of your career. Why didn't you tell me you were the child of such hopes? It half frightened me.”

“It must be appalling. What did she say of my uncle and aunts?”

“Oh, I cannot tell you, except that she raised an image in my mind of an awful vision of ancient family and exclusiveness, the most fastidious, delightful, conventional people, she said, very old family, looked down upon Washington Irving, don't you know, because he wrote. I suppose she wanted to impress me with the value of the prize I've drawn, dear. But I should like you just as well if your connections had not looked down on Irving. Are they so very high and mighty?”

“Oh, dear, no. Much like other people. My aunts are the dearest old ladies, just a little nearsighted, you

know, about seeing people that are not—well, of course, they live in a rather small world. My uncle is a bachelor, rather particular, not what you would call a genial old man; been abroad a good deal, and moved mostly in our set; sometimes I think he cares more for his descent than for his position at the bar, which is a very respectable one, by the way. You know what an old bachelor is who never has had anybody to shake him out of his contemplation of his family?"

"Do you think," said Irene, a little anxiously, letting her hand rest a moment upon Stanhope's, "that they will like poor little me? I believe I am more afraid of the aunts than of the uncle. I don't believe they will be as nice as your cousin."

"Of course they will like you. Everybody likes you. The aunts are just a little old-fashioned, that is all. Habit has made them draw a social circle with a small radius. Some have one kind of circle, some another. Of course my aunts are sorry for any one who is not descended from the Van Schlovenhovens—the old Van Schlovenhoven had the first brewery of the colony in the time of Peter Stuyvesant. In New York it's a family matter, in Philadelphia it's geographical. There it's a question whether you live within the lines of Chestnut Street and Spruce Street—outside of these in the city you are socially impossible: Mrs. Cortlandt told me that two Philadelphia ladies who had become great friends at a summer resort—one lived within and the other without the charmed lines—went back to town together in the autumn. At the station when they parted, the 'inside' lady said to the other: 'Good-by. It has been such a pleasure to know you! I suppose I shall see you sometimes at Moneymaker's!' Moneymaker's is the Bon Marche of Philadelphia."

The music ceased; the band were hurrying away; the people all over the grounds were rising to go, lingering a little, reluctant to leave the enchanting scene. Irene wished, with a sigh, that it might never end; unreal as it was, it was more native to her spirit than that future which her talk with Stanhope had opened to her contemplation. An ill-defined apprehension possessed her in spite of the reassuring presence of her lover and her perfect confidence in the sincerity of his passion; and this feeling was somehow increased by the appearance of Mrs. Glow with her mother; she could not shake off the uneasy suggestion of the contrast.

At the hour when the ladies went to their rooms the day was just beginning for a certain class of the habitués. The parlors were nearly deserted, and few chairs were occupied on the piazzas, but the ghosts of another generation seemed to linger, especially in the offices and barroom. Flitting about were to be seen the social heroes who had a notoriety thirty and forty years ago in the newspapers. This dried-up old man in a bronze wig, scuffling along in list slippers, was a famous criminal lawyer in his day; this gentleman, who still wears an air of gallantry, and is addressed as General, had once a reputation for successes in the drawing-room as well as on the field of Mars; here is a genuine old beau, with the unmistakable self-consciousness of one who has been a favorite of the sex, but who has slowly decayed in the midst of his cosmetics; here saunter along a couple of actors with the air of being on the stage. These people all have the "nightcap" habit, and drift along towards the bar-room—the last brilliant scene in the drama of the idle day, the necessary portal to the realm of silence and sleep.

This is a large apartment, brightly lighted, with a bar extending across one end of it. Modern taste is conspicuous here, nothing is gaudy, colors are subdued, and its decorations are simple even the bar itself is refined, substantial, decorous, wanting entirely the meretricious glitter and barbarous ornamentation of the old structures of this sort, and the attendants have wholly laid aside the smart antics of the former bartender, and the customers are swiftly and silently served by the deferential waiters. This is one of the most striking changes that King noticed in American life.

There is a certain sort of life—whether it is worth seeing is a question that we can see nowhere else, and for an hour Mr. Glow and King and Forbes, sipping their raspberry shrub in a retired corner of the bar-room, were interested spectators of the scene. Through the padded swinging doors entered, as in a play, character after character. Each actor as he entered stopped for a moment and stared about him, and in this act revealed his character—his conceit, his slyness, his bravado, his self-importance. There was great variety, but practically one prevailing type, and that the New York politician. Most of them were from the city, though the country politician apes the city politician as much as possible, but he lacks the exact air, notwithstanding the black broadcloth and the white hat. The city men are of two varieties—the smart, perky-nosed, vulgar young ward worker, and the heavy-featured, gross, fat old fellow. One after another they glide in, with an always conscious air, swagger off to the bar, strike attitudes in groups, one with his legs spread, another with a foot behind on tiptoe, another leaning against the counter, and so pose, and drink "My respects"—all rather solemn and stiff, impressed perhaps by the decorousness of the place, and conscious of their good clothes. Enter together three stout men, a yard across the shoulders, each with an enormous development in front, waddle up to the bar, attempt to form a triangular group for conversation, but find themselves too far apart to talk in that position, and so arrange themselves side by side—a most distinguished-looking party, like a portion of a swell-front street in Boston. To them swaggers up a young sport, like one of Thackeray's figures in the "Irish Sketch-Book"—short, in a white hat, poor face, impudent manner, poses before the swell fronts, and tosses off his glass. About a little table in one corner are three excessively "ugly mugs," leering at each other and pouring down champagne. These men are all dressed as nearly like gentlemen as the tailor can make them, but even he cannot change their hard, brutal faces. It is not their fault that money and clothes do not make a gentleman; they are well fed and vulgarly prosperous, and if you inquire you will find that their women are in silks and laces. This is a good place to study the rulers of New York; and impressive as they are in appearance, it is a relief to notice that they unbend to each other, and hail one another familiarly as "Billy" and "Tommy." Do they not ape what is most prosperous and successful in American life? There is one who in make-up, form, and air, even to the cut of his side-whiskers, is an exact counterpart of the great railway king. Here is a heavy-faced young fellow in evening dress, perhaps endeavoring to act the part of a gentleman, who has come from an evening party unfortunately a little "slewed," but who does not know how to sustain the character, for presently he becomes very familiar and confidential with the dignified colored waiter at the buffet, who requires all his native politeness to maintain the character of a gentleman for two.

If these men had millions, could they get any more enjoyment out of life? To have fine clothes, drink champagne, and pose in a fashionable bar-room in the height of the season—is not this the apotheosis of the "heeler" and the ward "worker"? The scene had a fascination for the artist, who declared that he never tired

watching the evolutions of the foreign element into the full bloom of American citizenship.

XII. LAKE GEORGE, AND SARATOGA AGAIN

The intimacy between Mrs. Bartlett Glow and Irene increased as the days went by. The woman of society was always devising plans for Irene's entertainment, and winning her confidence by a thousand evidences of interest and affection. Pleased as King was with this at first, he began to be annoyed at a devotion to which he could have no objection except that it often came between him and the enjoyment of the girl's society alone; and latterly he had noticed that her manner was more grave when they were together, and that a little something of reserve mingled with her tenderness.

They made an excursion one day to Lake George—a poetical pilgrimage that recalled to some of the party (which included some New Orleans friends) the romance of early days. To the Bensons and the artist it was all new, and to King it was seen for the first time in the transforming atmosphere of love. To men of sentiment its beauties will never be exhausted; but to the elderly and perhaps rheumatic tourist the draughty steamboats do not always bring back the remembered delight of youth. There is no pleasanter place in the North for a summer residence, but there is a certain element of monotony and weariness inseparable from an excursion: travelers have been known to yawn even on the Rhine. It was a gray day, the country began to show the approach of autumn, and the view from the landing at Caldwell's, the head of the lake, was never more pleasing. In the marshes the cat-tails and the faint flush of color on the alders and soft maples gave a character to the low shore, and the gentle rise of the hills from the water's edge combined to make a sweet and peaceful landscape.

The tourists find the steamer waiting for them at the end of the rail, and if they are indifferent to the war romances of the place, as most of them are, they hurry on without a glance at the sites of the famous old forts St. George and William Henry. Yet the head of the lake might well detain them a few hours though they do not care for the scalping Indians and their sometime allies the French or the English. On the east side the lake is wooded to the shore, and the jutting points and charming bays make a pleasant outline to the eye. Crosbyside is the ideal of a summer retreat, nestled in foliage on a pretty point, with its great trees on a sloping lawn, boathouses and innumerable row and sail boats, and a lovely view, over the blue waters, of a fine range of hills. Caldwell itself, on the west side, is a pretty tree-planted village in a break in the hills, and a point above it shaded with great pines is a favorite rendezvous for pleasure parties, who leave the ground strewn with egg-shells and newspapers. The Fort William Henry Hotel was formerly the chief resort on the lake. It is a long, handsome structure, with broad piazzas, and low evergreens and flowers planted in front. The view from it, under the great pines, of the lake and the northern purple hills, is lovely. But the tide of travel passes it by, and the few people who were there seemed lonesome. It is always so. Fashion demands novelty; one class of summer boarders and tourists drives out another, and the people who want to be sentimental at this end of the lake now pass it with a call, perhaps a sigh for the past, and go on to fresh pastures where their own society is encamped.

Lake George has changed very much within ten years; hotels and great boarding-houses line the shores; but the marked difference is in the increase of cottage life. As our tourists sailed down the lake they were surprised by the number of pretty villas with red roofs peeping out from the trees, and the occupation of every island and headland by gay and often fantastic summer residences. King had heard this lake compared with Como and Maggiore, and as a patriot he endeavored to think that its wild and sylvan loveliness was

more pleasing than the romantic beauty of the Italian lakes. But the effort failed. In this climate it is impossible that Horicon should ever be like Como. Pretty hills and forests and temporary summer structures cannot have the poetic or the substantial interest of the ancient villages and towns clinging to the hills, the old stone houses, the vines, the ruins, the atmosphere of a long civilization. They do the lovely Horicon no service who provoke such comparisons.

The lake has a character of its own. As the traveler sails north and approaches the middle of the lake, the gems of green islands multiply, the mountains rise higher, and shouldering up in the sky seem to bar a further advance; toward sunset the hills, which are stately but lovely, a silent assembly of round and sharp peaks, with long, graceful slopes, take on exquisite colors, violet, bronze, and green, and now and again a bold rocky bluff shines like a ruby in the ruddy light. Just at dusk the steamer landed midway in the lake at Green Island, where the scenery is the boldest and most romantic; from the landing a park-like lawn, planted with big trees, slopes up to a picturesque hotel. Lights twinkled from many a cottage window and from boats in the bay, and strains of music saluted the travelers. It was an enchanting scene.

The genius of Philadelphia again claims the gratitude of the tourist, for the Sagamore Hotel is one of the most delightful hostelries in the world. A peculiar, interesting building, rambling up the slope on different levels, so contrived that all the rooms are outside, and having a delightful irregularity, as if the house had been a growth. Naturally a hotel so dainty in its service and furniture, and so refined, was crowded to its utmost capacity. The artist could find nothing to complain of in the morning except that the incandescent electric light in his chamber went out suddenly at midnight and left him in blank darkness in the most exciting crisis of a novel. Green Island is perhaps a mile long. A bridge connects it with the mainland, and besides the hotel it has a couple of picturesque stone and timber cottages. At the north end are the remains of the English intrenchments of 1755—signs of war and hate which kindly nature has almost obliterated with sturdy trees. With the natural beauty of the island art has little interfered; near the hotel is the most stately grove of white birches anywhere to be seen, and their silvery sheen, with occasional patches of sedge, and the tender sort of foliage that Corot liked to paint, gives an exceptional refinement to the landscape. One needs, indeed, to be toned up by the glimpses, under the trees, over the blue water, of the wooded craggy hills, with their shelf-like ledges, which are full of strength and character. The charm of the place is due to this combination of loveliness and granitic strength.

Irene long remembered the sail of that morning, seated in the bow of the steamer with King, through scenes of ever-changing beauty, as the boat wound about the headlands and made its calls, now on one side and now on the other, at the pretty landings and decorated hotels. On every hand was the gayety of summer life—a striped tent on a rocky point with a platform erected for dancing, a miniature bark but on an island, and a rustic arched bridge to the mainland, gaudy little hotels with winding paths along the shore, and at all the landings groups of pretty girls and college lads in boating costume. It was wonderful how much these holiday makers were willing to do for the entertainment of the passing travelers. A favorite pastime in this peaceful region was the broom drill, and its execution gave an operatic character to the voyage. When the steamer approaches, a band of young ladies in military ranks, clad in light marching costume, each with a broom in place of a musket, descend to the landing and delight the spectators with their warlike manoeuvres. The march in the broom-drill is two steps forward and one step back, a mode of progression that conveys the notion of a pleasing indecision of purpose, which is foreign to the character of these handsome Amazons, who are quite able to hold the wharf against all comers. This act of war in fancy, dress, with its two steps forward and one back, and the singing of a song, is one of the most fatal to the masculine peace of mind in the whole history of carnage.

A BROOM DRILL, LAKE GEORGE.

Mrs. Bartlett Glow, to be sure, thought it would be out of place at the Casino; but even she had to admit that the American girl who would bewitch the foreigner with her one, two, and one, and her flourish of broom on Lake George, was capable of freezing his ardor by her cool good-breeding at Newport.

There was not much more to be done at Saratoga. Mrs. Benson had tried every spring in the valley, and thus anticipated a remedy, as Mr. Benson said, for any possible "complaint" that might visit her in the future. Mr. Benson himself said that he thought it was time for him to move to a new piazza, as he had worn out half the chairs at the Grand Union. The Bartlett-Glows were already due at Richfield; in fact, Penelope was impatient to go, now that she had persuaded the Bensons to accompany her; and the artist, who had been for some time grumbling that there was nothing left in Saratoga to draw except corks, reminded King of his agreement at Bar Harbor, and the necessity he felt for rural retirement after having been dragged all over the continent.

On the last day Mr. Glow took King and Forbes off to the races, and Penelope and the Bensons drove to the lake. King never could tell why he consented to this arrangement, but he knew in a vague way that it is useless to attempt to resist feminine power, that shapes our destiny in spite of all our rough-hewing of its outlines. He had become very uneasy at the friendship between Irene and Penelope, but he could give no reason for his suspicion, for it was the most natural thing in the world for his cousin to be interested in the girl who was about to come into the family. It seemed also natural that Penelope should be attracted by her nobility of nature. He did not know till afterwards that it was this very nobility and unselfishness which Penelope saw could be turned to account for her own purposes. Mrs. Bartlett Glow herself would have said that she was very much attached to Irene, and this would have been true; she would have said also that she pitied her, and this would have been true; but she was a woman whose world was bounded by her own social order, and she had no doubt in her own mind that she was loyal to the best prospects of her cousin, and, what was of more importance, that she was protecting her little world from a misalliance when she preferred Imogene Cypher to Irene Benson. In fact, the Bensons in her set were simply an unthinkable element. It disturbed the established order of things. If any one thinks meanly of Penelope for counting upon the heroism of Irene to effect her unhappiness, let him reflect of how little consequence is the temporary happiness of one or two individuals compared with the peace and comfort of a whole social order. And she might also well make herself believe that she was consulting the best interests of Irene in keeping her out of a position where she might be subject to so many humiliations. She was capable of crying over the social adventures of the heroine of a love story, and taking sides with her against the world, but as to the actual world itself, her practical philosophy taught her that it was much better always, even at the cost of a little heartache in youth, to go with the stream than against it.

The lake at Saratoga is the most picturesque feature of the region, and would alone make the fortune of any other watering-place. It is always a surprise to the stranger, who has bowled along the broad drive of five miles through a pleasing but not striking landscape, to come suddenly, when he alights at the hotel, upon what seems to be a "fault," a sunken valley, and to look down a precipitous, grassy, tree-planted slope upon a lake sparkling at the bottom and reflecting the enclosing steep shores. It is like an aqua-marine gem countersunk in the green landscape. Many an hour had Irene and Stanhope passed in dreamy contemplation of it. They had sailed down the lake in the little steamer, they had whimsically speculated about this and that couple who took their ices or juleps under the trees or on the piazza of the hotel, and the spot had for them a thousand tender associations. It was here that Stanhope had told her very fully the uneventful story of his life, and it was here that she had grown into full sympathy with his aspirations for the future.

It was of all this that Irene thought as she sat talking that day with Penelope on a bench at the foot of the hill by the steamboat landing. It was this very future that the woman of the world was using to raise in the mind of Irene a morbid sense of her duty. Skillfully with this was insinuated the notion of the false and contemptible social pride and exclusiveness of Stanhope's relations, which Mrs. Bartlett Glow represented as implacable while she condemned it as absurd. There was not a word of opposition to the union of Irene and Stanhope: Penelope was not such a bungler as to make that mistake. It was not her cue to definitely suggest a sacrifice for the welfare of her cousin. If she let Irene perceive that she admired the courage in her that could face all these adverse social conditions that were conjured up before her, Irene could never say that Penelope had expressed anything of the sort. Her manner was affectionate, almost caressing; she declared that she felt a sisterly interest in her. This was genuine enough. I am not sure that Mrs. Bartlett Glow did not sometimes waver in her purpose when she was in the immediate influence of the girl's genuine charm, and felt how sincere she was. She even went so far as to wish to herself that Irene had been born in her own world.

It was not at all unnatural that Irene should have been charmed by Penelope, and that the latter should gradually have established an influence over her. She was certainly kind-hearted, amiable, bright, engaging. I think all those who have known her at Newport, or in her New York home, regard her as one of the most charming women in the world. Nor is she artificial, except as society requires her to be, and if she regards the conventions of her own set as the most important things in life, therein she does not differ from hosts of excellent wives and mothers. Irene, being utterly candid herself, never suspected that Penelope had at all exaggerated the family and social obstacles, nor did it occur to her to doubt Penelope's affection for her. But she was not blind. Being a woman, she comprehended perfectly the indirection of a woman's approaches, and knew well enough by this time that Penelope, whatever her personal leanings, must feel with her family in regard to this engagement. And that she, who was apparently her friend, and who had Stanhope's welfare so much at heart, did so feel was an added reason why Irene was drifting towards a purpose of self-sacrifice. When she was with Stanhope such a sacrifice seemed as impossible as it would be cruel, but when she was with Mrs. Bartlett Glow, or alone, the subject took another aspect. There is nothing more attractive to a noble woman of tender heart than a duty the performance of which will make her suffer. A false notion of duty has to account for much of the misery in life.

It was under this impression that Irene passed the last evening at Saratoga with Stanhope on the piazza of the hotel—an evening that the latter long remembered as giving him the sweetest and the most contradictory and perplexing glimpses of a woman's heart.

XIII. RICHFIELD SPRINGS, COOPERSTOWN

“THE OATEN PIPE UNDER THE SPREADING MAPLES.”

After weeks of the din of Strauss and Gungl, the soothing strains of the Pastoral Symphony. Now no more the kettle-drum and the ceaseless promenade in showy corridors, but the oaten pipe under the spreading maples, the sheep feeding on the gentle hills of Otsego, the carnival of the hop-pickers. It is time to be rural, to adore the country, to speak about the dew on the upland pasture, and the exquisite view from Sunset Hill. It is quite English, is it not? this passion for quiet, refined country life, which attacks all the summer revelers at certain periods in the season, and sends them in troops to Richfield or Lenox or some other peaceful retreat, with their simple apparel bestowed in modest fourstory trunks. Come, gentle shepherdesses, come, sweet youths in white flannel, let us tread a measure on the greensward, let us wander down the lane, let us pass under the festoons of the hop-vines, let us saunter in the paths of sentiment, that lead to love in a cottage and a house in town.

"LET US PASS UNDER THE FESTOONS OF THE HOP-VINES."

Every watering-place has a character of its own, and those who have given little thought to this are surprised at the endless variety in the American resorts. But what is even more surprising is the influence that these places have upon the people that frequent them, who appear to change their characters with their surroundings. One woman in her season plays many parts, dashing in one place, reserved in another, now gay and active, now listless and sentimental, not at all the same woman at Newport that she is in the Adirondack camps, one thing at Bar Harbor and quite another at Saratoga or at Richfield. Different tastes, to be sure, are suited at different resorts, but fashion sends a steady procession of the same people on the round of all.

The charm of Richfield Springs is in the character of the landscape. It is a limestone region of gentle slopes and fine lines; and although it is elevated, the general character is refined rather than bold, the fertile valleys in pleasing irregularity falling away from rounded wooded hills in a manner to produce the impression of peace and repose. The lay of the land is such that an elevation of a few hundred feet gives a most extensive prospect, a view of meadows and upland pastures, of lakes and ponds, of forests hanging in dark masses on the limestone summits, of fields of wheat and hops, and of distant mountain ranges. It is scenery that one grows to love, and that responds to one's every mood in variety and beauty. In a whole summer the pedestrian will not exhaust the inspiring views, and the drives through the gracious land, over hills, round the lakes, by woods and farms, increase in interest as one knows them better. The habitudes of the place, year after year, are at a loss for words to convey their peaceful satisfaction.

In this smiling country lies the pretty village of Richfield, the rural character of which is not entirely lost by reason of the hotels, cottages, and boardinghouses which line the broad principal street. The centre of the town is the old Spring House and grounds. When our travelers alighted in the evening at this mansion, they were reminded of an English inn, though it is not at all like an inn in England except in its atmosphere of comfort. The building has rather a colonial character, with its long corridors and pillared piazzas; built at different times, and without any particular plans except to remain old-fashioned, it is now a big, rambling white mass of buildings in the midst of maple-trees, with so many stairs and passages on different levels, and so many nooks and corners, that the stranger is always getting lost in it—turning up in the luxurious smoking-room when he wants to dine, and opening a door that lets him out into the park when he is trying to go to bed. But there are few hotels in the country where the guests are so well taken care of.

This was the unbought testimony of Miss Lamont, who, with her uncle, had been there long enough to acquire the common anxiety of sojourners that the newcomers should be pleased, and who superfluously explained the attractions of the place to the artist, as if in his eyes, that rested on her, more than one attraction was needed. It was very pleasant to see the good comradeship that existed between these two, and the frank expression of their delight in meeting again. Here was a friendship without any reserve, or any rueful misunderstandings, or necessity for explanations. Irene's eyes followed them with a wistful look as they went off together round the piazza and through the parlors, the girl playing the part of the hostess, and

inducting him into the mild gayeties of the place.

The height of the season was over, she said; there had been tableaux and charades, and broom-drills, and readings and charity concerts. Now the season was on the sentimental wane; every night the rooms were full of whist-players, and the days were occupied in quiet strolling over the hills, and excursions to Cooperstown and Cherry Valley and "points of view," and visits to the fields to see the hop-pickers at work. If there were a little larking about the piazzas in the evening, and a group here and there pretending to be merry over tall glasses with ice and straws in them, and lingering good-nights at the stairways, why should the aged and rheumatic make a note of it? Did they not also once prefer the dance to hobbling to the spring, and the taste of ginger to sulphur?

Of course the *raison d'être* of being here is the sulphur spring. There is no doubt of its efficacy. I suppose it is as unpleasant as any in the country. Everybody smells it, and a great many drink it. The artist said that after using it a week the blind walk, the lame see, and the dumb swear. It renews youth, and although the analyzer does not say that it is a "love philter," the statistics kept by the colored autocrat who ladles out the fluid show that there are made as many engagements at Richfield as at any other summer fair in the country.

There is not much to chronicle in the peaceful flow of domestic life, and, truth to say, the charm of Richfield is largely in its restfulness. Those who go there year after year converse a great deal about their liking for it, and think the time well spent in persuading new arrivals to take certain walks and drives. It was impressed upon King that he must upon no account omit a visit to Rum Hill, from the summit of which is had a noble prospect, including the Adirondack Mountains. He tried this with a walking party, was driven back when near the summit by a thunder, storm, which offered a series of grand pictures in the sky and on the hills, and took refuge in a farmhouse which was occupied by a band of hop-pickers. These adventurers are mostly young girls and young men from the cities and factory villages, to whom this is the only holiday of the year. Many of the pickers, however, are veterans. At this season one meets them on all the roads, driving from farm to farm in lumber wagons, carrying into the dull rural life their slang, and "Captain Jinks" songs, and shocking free manners. At the great hop fields they lodge all together in big barracks, and they make lively for the time whatever farmhouse they occupy. They are a "rough lot," and need very much the attention of the poet and the novelist, who might (if they shut their eyes) make this season as romantic as vintage-time on the Rhine, or "moonshining" on the Southern mountains. The hop field itself, with its tall poles draped in graceful vines which reach from pole to pole, and hang their yellowing fruit in pretty festoons and arbors, is much more picturesque than the vine-clad hills.

Mrs. Bartlett Glow found many acquaintances here from New York and Philadelphia and Newport, and, to do her justice, she introduced Irene to them and presently involved her in so many pleasure parties and excursions that she and King were scarcely ever alone together. When opportunity offered for a stroll *à deux*, the girl's manner was so constrained that King was compelled to ask the reason of it. He got very little satisfaction, and the puzzle of her conduct was increased by her confession that she loved him just the same, and always should.

"But something has come between us," he said. "I think I have the right to be treated with perfect frankness."

"So you have," she replied. "There is nothing—nothing at least that changes my feeling towards you."

"But you think that mine is changed for you?"

"No, not that, either, never that;" and her voice showed excitement as she turned away her head. "But don't you know, Stanhope, you have not known me very long, and perhaps you have been a little hasty, and—how shall I say it?—if you had more time to reflect, when you go back to your associates and your active life, it might somehow look differently to you, and your prospects—"

"Why, Irene, I have no prospects without you. I love you; you are my life. I don't understand. I am just yours, and nothing you can do will ever make it any different for me; but if you want to be free—"

"No, no," cried the girl, trying in vain to restrain her agitation and her tears, "not that. I don't want to be free. But you will not understand. Circumstances are so cruel, and if, Stanhope, you ever should regret when it is too late! It would kill me. I want you to be happy. And, Stanhope, promise me that, whatever happens, you will not think ill of me."

Of course he promised, he declared that nothing could happen, he vowed, and he protested against this ridiculous phantom in her mind. To a man, used to straightforward cuts in love as in any other object of his desire, this feminine exaggeration of conscientiousness is wholly incomprehensible. How under heavens a

woman could get a kink of duty in her mind which involved the sacrifice of herself and her lover was past his fathoming.

The morning after this conversation, the most of which the reader has been spared, there was an excursion to Cooperstown. The early start of the tally-ho coaches for this trip is one of the chief sensations of the quiet village. The bustle to collect the laggards, the importance of the conductors and drivers, the scramble up the ladders, the ruses to get congenial seat-neighbors, the fine spirits of everybody evoked by the fresh morning air, and the elevation on top of the coaches, give the start an air of jolly adventure. Away they go, the big red-and-yellow arks, swinging over the hills and along the well-watered valleys, past the twin lakes to Otsego, over which hangs the romance of Cooper's tales, where a steamer waits. This is one of the most charming of the little lakes that dot the interior of New York; without bold shores or anything sensational in its scenery, it is a poetic element in a refined and lovely landscape. There are a few fishing-lodges and summer cottages on its banks (one of them distinguished as "Sinners' Rest"), and a hotel or two famous for dinners; but the traveler would be repaid if there were nothing except the lovely village of Cooperstown embowered in maples at the foot. The town rises gently from the lake, and is very picturesque with its church spires and trees and handsome mansions; and nothing could be prettier than the foreground, the gardens, the allees of willows, the long boat wharves with hundreds of rowboats and sail-boats, and the exit of the Susquehanna River, which here swirls away under drooping foliage, and begins its long journey to the sea. The whole village has an air of leisure and refinement. For our tourists the place was pervaded by the spirit of the necromancer who has woven about it a spell of romance; but to the ordinary inhabitants the long residence of the novelist here was not half so important as that of the very distinguished citizen who had made a great fortune out of some patent, built here a fine house, and adorned his native town. It is not so very many years since Cooper died, and yet the boatmen and loungers about the lake had only the faintest impression of the man-there was a writer by that name, one of them said, and some of his family lived near the house of the great man already referred to. The magician who created Cooperstown sleeps in the old English-looking church-yard of the Episcopal church, in the midst of the graves of his relations, and there is a well-worn path to his head-stone. Whatever the common people of the town may think, it is that grave that draws most pilgrims to the village. Where the hillside cemetery now is, on the bank of the lake, was his farm, which he visited always once and sometimes twice a day. He commonly wrote only from ten to twelve in the morning, giving the rest of the time to his farm and the society of his family. During the period of his libel suits, when the newspapers represented him as morose and sullen in his retirement, he was, on the contrary, in the highest spirits and the most genial mood. "Deer-slayer" was written while this contest was at its height. Driving one day from his farm with his daughter, he stopped and looked long over his favorite prospect on the lake, and said, "I must write one more story, dear, about our little lake." At that moment the "Deerslayer" was born. He was silent the rest of the way home, and went immediately to his library and began the story.

The party returned in a moralizing vein. How vague already in the village which his genius has made known over the civilized world is the fame of Cooper! To our tourists the place was saturated with his presence, but the new generation cares more for its smart prosperity than for all his romance. Many of the passengers on the boat had stopped at a lakeside tavern to dine, preferring a good dinner to the associations which drew our sentimentalists to the spots that were hallowed by the necromancer's imagination. And why not? One cannot live in the past forever. The people on the boat who dwelt in Cooperstown were not talking about Cooper, perhaps had not thought of him for a year. The ladies, seated in the bow of the boat, were comparing notes about their rheumatism and the measles of their children; one of them had been to the funeral of a young girl who was to have been married in the autumn, poor thing, and she told her companion who were at the funeral, and how they were dressed, and how little feeling Nancy seemed to show, and how shiftless it was not to have more flowers, and how the bridegroom bore up-well, perhaps it's an escape, she was so weakly.

The day lent a certain pensiveness to all this; the season was visibly waning; the soft maples showed color, the orchards were heavy with fruit, the mountain-ash hung out its red signals, the hop-vines were yellowing, and in all the fence corners the golden-rod flamed and made the meanest high-road a way of glory. On Irene fell a spell of sadness that affected her lover. Even Mrs. Bartlett-Glow seemed touched by some regret for the fleeting of the gay season, and the top of the coach would have been melancholy enough but for the high spirits of Marion and the artist, whose gayety expanded in the abundance of the harvest season. Happy natures, unrestrained by the subtle melancholy of a decaying year!

The summer was really going. On Sunday the weather broke in a violent storm of wind and rain, and at sunset, when it abated, there were portentous gleams on the hills, and threatening clouds lurking about the sky. It was time to go. Few people have the courage to abide the breaking of the serenity of summer, and remain in the country for the more glorious autumn days that are to follow. The Glows must hurry back to Newport. The Bensons would not be persuaded out of their fixed plan to "take in," as Mr. Benson expressed it, the White Mountains. The others were going to Niagara and the Thousand Islands; and when King told Irene that he would much rather change his route and accompany her, he saw by the girl's manner that it was best not to press the subject. He dreaded to push an explanation, and, foolish as lovers are, he was wise for once in trusting to time. But he had a miserable evening. He let himself be irritated by the lightheartedness of Forbes. He objected to the latter's whistling as he went about his room packing up his traps. He hated a fellow that was always in high spirits. "Why, what has come over you, old man?" queried the artist, stopping to take a critical look at his comrade. "Do you want to get out of it? It's my impression that you haven't taken sulphur water enough."

“WHY, WHAT HAS COME OVER YOU, OLD MAN?”

On Monday morning there was a general clearing out. The platform at the station was crowded. The palace-cars for New York, for Niagara, for Albany, for the West, were overflowing. There was a pile of trunks as big as a city dwelling-house. Baby-carriages cumbered the way; dogs were under foot, yelping and rending the tender hearts of their owners; the porters staggered about under their loads, and shouted till they were hoarse; farewells were said; rendezvous made—alas! how many half-fledged hopes came to an end on that platform! The artist thought he had never seen so many pretty girls together in his life before, and each one had in her belt a bunch of goldenrod. Summer was over, sure enough.

At Utica the train was broken up, and its cars despatched in various directions. King remembered that it was at Utica that the younger Cato sacrificed himself. In the presence of all the world Irene bade him good-by. “It will not be for long,” said King, with an attempt at gayety. “Nothing is for long,” she said with the same manner. And then added in a low tone, as she slipped a note into his hand, “Do not think ill of me.”

King opened the note as soon as he found his seat in the car, and this was what he read as the train rushed westward towards the Great Fall:

“MY DEAR FRIEND,—How can I ever say it? It is best that we separate. I have thought and thought; I have struggled with myself. I think that I know it is best for you. I have been happy—ah me! Dear, we must look at the world as it is. We cannot change it—if we break our hearts, we cannot. Don't blame your cousin. It is nothing that she has done. She has been as sweet and kind to me as possible, but I have seen through her what I feared, just how it is. Don't reproach me. It is hard now. I know it. But I believe that you will come to see it as I do. If it was any sacrifice that I could make, that would be easy. But to think that I had sacrificed you, and that you should some day become aware of it! You are free. I am not silly. It is the future I am thinking of. You must take your place in the world where your lot is cast. Don't think I have a foolish pride. Perhaps it is pride that tells me not to put myself in a false position; perhaps it is something else. Never think it is want of heart in. “Good-by. “IRENE”

As King finished this he looked out of the window.
The landscape was black.

XIV. NIAGARA

In the car for Niagara was an Englishman of the receptive, guileless, thin type, inquisitive and overflowing with approval of everything American—a type which has now become one of the common features of travel in this country. He had light hair, sandy side-whiskers, a face that looked as if it had been scrubbed with soap and sandpaper, and he wore a sickly yellow traveling-suit. He was accompanied by his wife, a stout, resolute matron, in heavy boots, a sensible stuff gown, with a lot of cotton lace fudged about her neck, and a broad

brimmed hat with a vegetable garden on top. The little man was always in pursuit of information, in his guide-book or from his fellow-passengers, and whenever he obtained any he invariably repeated it to his wife, who said "Fancy!" and "Now, really!" in a rising inflection that expressed surprise and expectation.

The conceited American, who commonly draws himself into a shell when he travels, and affects indifference, and seems to be losing all natural curiosity, receptivity, and the power of observation, is pretty certain to undervalue the intelligence of this class of English travelers, and get amusement out of their peculiarities instead of learning from them how to make everyday of life interesting. Even King, who, besides his national crust of exclusiveness, was today wrapped in the gloom of Irene's letter, was gradually drawn to these simple, unpretending people. He took for granted their ignorance of America—ignorance of America being one of the branches taught in the English schools—and he soon discovered that they were citizens of the world. They not only knew the Continent very well, but they had spent a winter in Egypt, lived a year in India, and seen something of China and much of Japan. Although they had been scarcely a fortnight in the United States, King doubted if there were ten women in the State of New York, not professional teachers, who knew as much of the flora of the country as this plain-featured, rich-voiced woman. They called King's attention to a great many features of the landscape he had never noticed before, and asked him a great many questions about farming and stock and wages that he could not answer. It appeared that Mr. Stanley Stubbs, Stoke-Cruden—for that was the name and address of the present discoverers of America—had a herd of short-horns, and that Mrs. Stubbs was even more familiar with the herd-book than her husband. But before the fact had enabled King to settle the position of his new acquaintance satisfactorily to himself, Mrs. Stubbs upset his estimate by quoting Tennyson.

"Your great English poet is very much read here," King said, by way of being agreeable.

"So we have heard," replied Mrs. Stubbs. "Mr. Stubbs reads Tennyson beautifully. He has thought of giving some readings while we are here. We have been told that the Americans are very fond of readings."

"Yes," said King, "they are devoted to them, especially readings by Englishmen in their native tongue. There is a great rage now for everything English; at Newport hardly anything else is spoken."

Mrs. Stubbs looked for a moment as if this might be an American joke; but there was no smile upon King's face, and she only said, "Fancy! You must make a note of Newport, dear. That is one of the places we must see. Of course Mr. Stubbs has never read in public, you know. But I suppose that would make no difference, the Americans are so kind and so appreciative."

"Not the least difference," replied King. "They are used to it."

"It is a wonderful country," said Mr. Stubbs.

"Most interesting," chimed in Mrs. Stubbs; "and so odd!"

"You know, Mr. King, we find some of the Americans so clever. We have been surprised, really. It makes us feel quite at home. At the hotels and everywhere, most obliging."

"Do you make a long stay?"

"Oh, no. We just want to study the people and the government, and see the principal places. We were told that Albany is the capital, instead of New York; it's so odd, you know. And Washington is another capital. And there is Boston. It must be very confusing." King began to suspect that he must be talking with the editor of the Saturday Review. Mr. Stubbs continued: "They told us in New York that we ought to go to Paterson on the Island of Jersey, I believe. I suppose it is as interesting as Niagara. We shall visit it on our return. But we came over more to see Niagara than anything else. And from there we shall run over to Chicago and the Yosemite. Now we are here, we could not think of going back without a look at the Yosemite."

King said that thus far he had existed without seeing the Yosemite, but he believed that next to Chicago it was the most attractive place in the country.

It was dark when they came into the station at Niagara—dark and silent. Our American tourists, who were accustomed to the clamor of the hackmen here, and expected to be assaulted by a horde of wild Comanches in plain clothes, and torn limb from baggage, if not limb from limb, were unable to account for this silence, and the absence of the common highwaymen, until they remembered that the State had bought the Falls, and

the agents of the government had suppressed many of the old nuisances. It was possible now to hear the roar of the cataract.

This unaccustomed human stillness was ominous to King. He would have welcomed a Niagara of importunity and imprecations; he was bursting with impatience to express himself; it seemed as if he would die if he were silent an hour longer under that letter. Of course the usual American relief of irritability and impatience suggested itself. He would telegraph; only electricity was quick enough and fiery enough for his mood. But what should he telegraph? The telegraph was not invented for love-making, and is not adapted to it. It is ridiculous to make love by wire. How was it possible to frame a message that should be commercial on its face, and yet convey the deepest agony and devotion of the sender's heart? King stood at the little telegraph window, looking at the despatcher who was to send it, and thought of this. Depressed and intent as he was, the whimsicality of the situation struck him. What could he say? It illustrates our sheeplike habit of expressing ourselves in the familiar phrase or popular slang of the day that at the instant the only thing King could think of to send was this: "Hold the fort, for I am coming." The incongruity of this made him smile, and he did not write it. Finally he composed this message, which seemed to him to have a businesslike and innocent aspect: "Too late. Impossible for me to change. Have invested everything. Expect letter." Mechanically he counted the words when he had written this. On the fair presumption that the company would send "everything" as one word, there were still two more than the conventional ten, and, from force of habit, he struck out the words "for me." But he had no sooner done this than he felt a sense of shame. It was contemptible for a man in love to count his words, and it was intolerable to be haggling with himself at such a crisis over the expense of a despatch. He got cold over the thought that Irene might also count them, and see that the cost of this message of passion had been calculated. And with recklessness he added: "We reach the Profile House next week, and I am sure I can convince you I am right."

King found Niagara pitched to the key of his lacerated and tumultuous feelings. There were few people at the Cataract House, and either the bridal season had not set in, or in America a bride has been evolved who does not show any consciousness of her new position. In his present mood the place seemed deserted, the figures of the few visitors gliding about as in a dream, as if they too had been subdued by the recent commission which had silenced the drivers, and stopped the mills, and made the park free, and was tearing down the presumptuous structures along the bank. In this silence, which emphasized the quaking of the earth and air, there was a sense of unknown, impending disaster. It was not to be borne indoors, and the two friends went out into the night.

On the edge of the rapids, above the hotel, the old bath-house was in process of demolition, its shaking piazza almost overhanging the flood. Not much could be seen from it, but it was in the midst of an elemental uproar. Some electric lamps shining through the trees made high lights on the crests of the rapids, while the others near were in shadow and dark. The black mass of Goat Island appeared under the lightning flashes in the northwest sky, and whenever these quick gleams pierced the gloom the frail bridge to the island was outlined for a moment, and then vanished as if it had been swept away, and there could only be seen sparks of light in the houses on the Canadian shore, which seemed very near. In this unknown, which was rather felt than seen, there was a sense of power and of mystery which overcame the mind; and in the black night the roar, the cruel haste of the rapids, tossing white gleams and hurrying to the fatal plunge, begat a sort of terror in the spectators. It was a power implacable, vengeful, not to be measured. They strolled down to Prospect Park. The gate was closed; it had been the scene of an awful tragedy but a few minutes before. They did not know it, but they knew that the air shuddered, and as they skirted the grounds along the way to the foot-bridge the roar grew in their stunned ears. There, projected out into the night, were the cables of steel holding the frail platform over the abyss of night and terror. Beyond was Canada. There was light enough in

the sky to reveal, but not to dissipate, the appalling insecurity. What an impious thing it seemed to them, this trembling structure across the chasm! They advanced upon it. There were gleams on the mill cascades below, and on the mass of the American Fall. Below, down in the gloom, were patches of foam, slowly circling around in the eddy—no haste now, just sullen and black satisfaction in the awful tragedy of the fall. The whole was vague, fearful. Always the roar, the shuddering of the air. I think that a man placed on this bridge at night, and ignorant of the cause of the aerial agitation and the wild uproar, could almost lose his reason in the panic of the scene. They walked on; they set foot on Her Majesty's dominions; they entered the Clifton House—quite American, you know, with its new bar and office. A subdued air about everybody here also, and the same quaking, shivering, and impending sense of irresponsible force. Even "two fingers," said the artist, standing at the bar, had little effect in allaying the impression of the terror out there. When they returned the moon was coming up, rising and struggling and making its way slowly through ragged masses of colored clouds. The river could be plainly seen now, smooth, deep, treacherous; the falls on the American side showed fitfully like patches of light and foam; the Horseshoe, mostly hidden by a cold silver mist, occasionally loomed up a white and ghostly mass. They stood for a long time looking down at the foot of the American Fall, the moon now showing clearly the plunge of the heavy column—a column as stiff as if it were melted silver-hushed and frightened by the weird and appalling scene. They did not know at that moment that there where their eyes were riveted, there at the base of the fall, a man's body was churning about, plunged down and cast up, and beaten and whirled, imprisoned in the reflux eddy. But a body was there. In the morning a man's overcoat was found on the parapet at the angle of the fall. Someone then remembered that in the evening, just before the park gate closed, he had seen a man approach the angle of the wall where the overcoat was found. The man was never seen after that. Night first, and then the hungry water, swallowed him. One pictures the fearful leap into the dark, the midway repentance, perhaps, the despair of the plunge. A body cast in here is likely to tarry for days, eddying round and round, and tossed in that terrible maelstrom, before a chance current ejects it, and sends it down the fierce rapids below. King went back to the hotel in a terror of the place, which did not leave him so long as he remained. His room quivered, the roar filled all the air. Is not life real and terrible enough, he asked himself, but that brides must cast this experience also into their honeymoon?

The morning light did not efface the impressions of the night, the dominating presence of a gigantic, pitiless force, a blind passion of nature, uncontrolled and uncontrollable. Shut the windows and lock the door, you could not shut out the terror of it. The town did not seem safe; the bridges, the buildings on the edge of the precipices with their shaking casements, the islands, might at any moment be engulfed and disappear. It was a thing to flee from.

I suspect King was in a very sensitive mood; the world seemed for the moment devoid of human sympathy, and the savageness and turmoil played upon his bare nerves. The artist himself shrank from contact with this overpowering display, and said that he could not endure more than a day or two of it. It needed all the sunshine in the face of Miss Lamont and the serenity of her cheerful nature to make the situation tolerable, and even her sprightliness was somewhat subdued. It was a day of big, broken, high-sailing clouds, with a deep blue sky and strong sunlight. The slight bridge to Goat Island appeared more presumptuous by daylight, and the sharp slope of the rapids above it gave a new sense of the impetuosity of the torrent. As they walked slowly on, past the now abandoned paper-mills and the other human impertinences, the elemental turmoil increased, and they seemed entering a world the foundations of which were broken up. This must have been a good deal a matter of impression, for other parties of sightseers were coming and going, apparently unawed, and intent simply on visiting every point spoken of in the guide-book, and probably unconscious of the all-pervading terror. But King could not escape it, even in the throng descending and ascending the stairway to Luna Island. Standing upon the platform at the top, he realized for the first time the immense might of the downpour of the American Fall, and noted the pale green color, with here and there a violet tone, and the white cloud mass spurting out from the solid color. On the foam-crested river lay a rainbow forming nearly a complete circle. The little steamer Maid of the Mist was coming up, riding the waves, dashed here and there by conflicting currents, but resolutely steaming on—such is the audacity of man—and poking her venturesome nose into the boiling foam under the Horseshoe. On the deck are pigmy passengers in oil-skin suits, clumsy figures, like arctic explorers. The boat tosses about like a chip, it hesitates and quivers, and then, slowly swinging, darts away down the current, fleeing from the wrath of the waters, and pursued by the angry roar.

Surely it is an island of magic, unsubstantial, liable to go adrift and plunge into the canon. Even in the forest path, where the great tree trunks assure one of stability and long immunity, this feeling cannot be shaken off. Our party descended the winding staircase in the tower, and walked on the shelf under the mighty ledge to the entrance of the Cave of the Winds. The curtain of water covering this entrance was blown back and forth by the wind, now leaving the platform dry and now deluging it. A woman in the pathway was beckoning frantically and calling to a man who stood on the platform, entirely unconscious of danger, looking up to the green curtain and down into the boiling mist. It was Mrs. Stubbs; but she was shouting against Niagara, and her husband mistook her pantomime for gestures of wonder and admiration. Some moments passed, and then the curtain swung in, and tons of water drenched the Englishman, and for an instant hid him from sight. Then, as the curtain swung back, he was seen clinging to the handrail, sputtering and astonished at such treatment. He came up the bank dripping, and declaring that it was extraordinary, most extraordinary, but he wouldn't have missed it for the world. From this platform one looks down the narrow, slippery stairs that are lost in the boiling mist, and wonders at the daring that built these steps down into that hell, and carried the frail walk of planks over the bowlders outside the fall. A party in oil-skins, making their way there, looked like lost men and women in a Dante Inferno. The turbulent waters dashed all about them; the mist occasionally wrapped them from sight; they clung to the rails, they tried to speak to each other; their gestures seemed motions of despair. Could that be Eurydice whom the rough guide was tenderly dragging out of the hell of waters, up the stony path, that singular figure in oil-skin trousers, who disclosed a pretty face inside her hood as she emerged? One might venture into the infernal regions to rescue such a woman; but why take her there? The group of adventurers stopped a moment on the platform, with the opening into the misty cavern for a background, and the artist said that the picture was, beyond all power of the pencil,

strange and fantastic. There is nothing, after all, that the human race will not dare for a new sensation.

A PARTY IN OIL-SKINS.

The walk around Goat Island is probably unsurpassed in the world for wonder and beauty. The Americans have every reason to be satisfied with their share of the fall; they get nowhere one single grand view like that from the Canada side, but infinitely the deepest impression of majesty and power is obtained on Goat Island. There the spectator is in the midst of the war of nature. From the point over the Horseshoe Fall our friends, speaking not much, but more and more deeply moved, strolled along in the lovely forest, in a rural solemnity, in a local calm, almost a seclusion, except for the ever-present shuddering roar in the air. On the shore above the Horseshoe they first comprehended the breadth, the great sweep, of the rapids. The white crests of the waves in the west were coming out from under a black, lowering sky; all the foreground was in bright sunlight, dancing, sparkling, leaping, hurrying on, converging to the angle where the water becomes a deep emerald at the break and plunge. The rapids above are a series of shelves, bristling with jutting rocks and lodged trunks of trees, and the wildness of the scene is intensified by the ragged fringe of evergreens on the opposite shore.

Over the whole island the mist, rising from the caldron, drifts in spray when the wind is rable; but on this day the forest was bright and cheerful, and as the strollers went farther away from the Great Fall; the beauty of the scene began to steal away its terror. The roar was still dominant, but far off and softened, and did not crush the ear. The triple islands, the Three Sisters, in their picturesque wildness appeared like playful freaks of nature in a momentary relaxation of the savage mood. Here is the finest view of the river; to one standing on the outermost island the great flood seems tumbling out of the sky. They continued along the bank of the river. The shallow stream races by headlong, but close to the edge are numerous eddies, and places where one might step in and not be swept away. At length they reached the point where the river divides, and the water stands for an instant almost still, hesitating whether to take the Canadian or American plunge. Out a little way from the shore the waves leap and tumble, and the two currents are like race-horses parted on two ways to the goal. Just at this point the water swirls and lingers; having lost all its fierceness and haste, and spreads itself out placidly, dimpling in the sun. It may be a treacherous pause, this water may be as cruel as that which rages below and exults in catching a boat or a man and bounding with the victim over the cataract; but the calm was very grateful to the stunned and buffeted visitors; upon their jarred nerves it was like the peace of God.

"The preacher might moralize here," said King. "Here is the parting of the ways for the young man; here is a moment of calm in which he can decide which course he will take. See, with my hand I can turn the water to Canada or to America! So momentous is the easy decision of the moment."

"Yes," said the artist, "your figure is perfect. Whichever side the young man takes, he goes to destruction."

"Or," continued King, appealing to Miss Lamont against this illogical construction, "this is the maiden at the crucial instant of choosing between two impetuous suitors."

"You mean she will be sorry, whichever she chooses?"

"You two practical people would spoil any illustration in the world. You would divest the impressive drop of water on the mountain summit, which might go to the Atlantic or to the Pacific, of all moral character by saying that it makes no difference which ocean it falls into."

The relief from the dread of Niagara felt at this point of peace was only temporary. The dread returned when the party approached again the turmoil of the American Fall, and fell again under the influence of the merciless haste of the flood. And there every islet, every rock, every point, has its legend of terror; here a boat lodged with a man in it, and after a day and night of vain attempts to rescue him, thousands of people saw him take the frightful leap, throwing up his arms as he went over; here a young woman slipped, and was instantly whirled away out of life; and from that point more than one dazed or frantic visitor had taken the suicidal leap. Death was so near here and so easy!

One seems in less personal peril on the Canadian side, and has more the feeling of a spectator and less that of a participant in the wild uproar. Perhaps there is more sense of force, but the majesty of the scene is relieved by a hundred shifting effects of light and color. In the afternoon, under a broken sky, the rapids above the Horseshoe reminded one of the seashore on a very stormy day. Impeded by the rocks, the flood hesitated and even ran back, as if reluctant to take the final plunge! The sienna color of the water on the table contrasted sharply with the emerald at the break of the fall. A rainbow springing out of the centre of the caldron arched clear over the American cataract, and was one moment bright and the next dimly seen through the mist, which boiled up out of the foam of waters and swayed in the wind. Through this veil darted adventurous birds, flashing their wings in the prismatic colors, and circling about as if fascinated by the awful rush and thunder. With the shifting wind and the passing clouds the scene was in perpetual change; now the American Fall was creamy white, and the mist below dark, and again the heavy mass was gray and sullen, and the mist like silver spray. Perhaps nowhere else in the world is the force of nature so overpowering to the mind, and as the eye wanders from the chaos of the fall to the far horizon, where the vast rivers of rapids are poured out of the sky, one feels that this force is inexhaustible and eternal.

If our travelers expected to escape the impression they were under by driving down to the rapids and whirlpool below, they were mistaken. Nowhere is the river so terrible as where it rushes, as if maddened by its narrow bondage, through the canon. Flung down the precipice and forced into this contracted space, it fumes and tosses and rages with vindictive fury, driving on in a passion that has almost a human quality in it. Restrained by the walls of stone from being destructive, it seems to rave at its own impotence, and when it reaches the whirlpool it is like a hungry animal, returning and licking the shore for the prey it has missed. But it has not always wanted a prey. Now and again it has a wreck or a dead body to toss and fling about. Although it does not need the human element of disaster to make this canon grewsome, the keepers of the show places make the most of the late Captain Webb. So vivid were their narratives that our sympathetic party felt his presence continually, saw the strong swimmer tossed like a chip, saw him throw up his hands, saw the agony in his face at the spot where he was last seen. There are several places where he disappeared, each vouched for by credible witnesses, so that the horror of the scene is multiplied for the tourist. The late afternoon had turned gray and cold, and dashes of rain fell as our party descended to the whirlpool. As they looked over the heaped-up and foaming waters in this eddy they almost expected to see Captain Webb or the suicide of the night before circling round in the maelstrom. They came up out of the gorge silent, and drove back to the hotel full of nervous apprehension.

King found no telegram from Irene, and the place seemed to him intolerable. The artist was quite ready to go on in the morning; indeed, the whole party, although they said it was unreasonable, confessed that they were almost afraid to stay longer; the roar, the trembling, the pervading sense of a blind force and rage, inspired a nameless dread. The artist said, the next morning at the station, that he understood the feelings of Lot.

XV. THE THOUSAND ISLES

The occupation of being a red man, a merchant of baskets and beadwork, is taken up by so many traders with a brogue and a twang at our watering-places that it is difficult for the traveler to keep alive any sentiment about this race. But at a station beyond Lewiston our tourists were reminded of it, and of its capacity for adopting our civilization in its most efflorescent development. The train was invaded by a band of Indians, or, to speak correctly, by an Indian band. There is nothing in the world like a brass band in a country town; it probably gives more pleasure to the performers than any other sort of labor. Yet the delight it imparts to the listeners is apt to be tempered by a certain sense of incongruity between the peaceful citizens who compose it and the bellicose din they produce. There is a note of barbarism in the brassy jar and clamor of the instruments, enhanced by the bewildering ambition of each player to force through his piece the most noise and jangle, which is not always covered and subdued into a harmonious whole by the whang of the bass drum.

There was nothing of this incongruity between this band of Tuscaroras and their occupation. Unaccustomed to associate the North American Indian with music, the traveler at once sees the natural relation of the Indians with the brass band. These Tuscaroras were stalwart fellows, broad-faced, big-limbed, serious, and they carried themselves with a clumsy but impressive dignity. There was no uniformity in their apparel, yet each one wore some portion of a martial and resplendent dress—an ornamented kepi, or a scarlet sash, or big golden epaulets, or a military coat braided with yellow. The leader, who was a giant, and carried the smallest instrument, outshone all the others in his incongruous splendor. No sooner had they found seats at one end of the car than they unlimbered, and began through their various reluctant instruments to deploy a tune. Although the tune did not get well into line, the effect was marvelous. The car was instantly filled to bursting. Miss Lamont, who was reading at the other end of the car, gave a nervous start, and looked up in alarm. King and Forbes promptly opened windows, but this gave little relief. The trombone pumped and growled, the trumpet blared, the big brass instrument with a calyx like the monstrous tropical water-lily quivered and howled, and the drum, banging into the discord, smashed every tympanum in the car. The Indians looked pleased. No sooner had they broken one tune into fragments than they took up another, and the car roared and rattled and jarred all the way to the lonely station where the band debarked, and was last seen conveying a straggling Odd-Fellows' picnic down a country road.

The incident, trivial in itself, gave rise to serious reflections touching the capacity and use of the red man in modern life. Here is a peaceful outlet for all his wild instincts. Let the government turn all the hostiles on the frontier into brass bands, and we shall hear no more of the Indian question.

The railway along the shore of Lake Ontario is for the most part monotonous. After leaving the picturesque highlands about Lewiston, the country is flat, and although the view over the lovely sheet of blue water is always pleasing, there is something bleak even in summer in this vast level expanse from which the timber has been cut away. It may have been mere fancy, but to the tourists the air seemed thin, and the scene, artistically speaking, was cold and colorless. With every desire to do justice to the pretty town of Oswego, which lies on a gentle slope by the lake, it had to them an out-of-doors, unprotected, remote aspect. Seen from the station, it did not appear what it is, the handsomest city on Lake Ontario, with the largest starch factory in the world.

It was towards evening when the train reached Cape Vincent, where the steamer waited to transport passengers down the St. Lawrence. The weather had turned cool; the broad river, the low shores, the long islands which here divide its lake-like expanse, wanted atmospheric warmth, and the tourists could not escape the feeling of lonesomeness, as if they were on the other side of civilization, rather than in one of the great streams of summer frolic and gayety. It was therefore a very agreeable surprise to them when a traveling party alighted from one of the cars, which had come from Rome, among whom they recognized Mrs. Farquhar.

"I knew my education never could be complete," said that lady as she shook hands, "and you never would consider me perfectly in the Union until I had seen the Thousand Islands; and here I am, after many Yankee tribulations."

"And why didn't you come by Niagara?" asked Miss Lamont.

"My dear, perhaps your uncle could tell you that I saw enough of Niagara when I was a young lady, during the war. The cruelest thing you Yankees did was to force us, who couldn't fight, to go over there for sympathy. The only bearable thing about the fall of Richmond was that it relieved me from that Fall. But where," she added, turning to King, "are the rest of your party?"

"If you mean the Bensons," said he, with a rather rueful countenance, "I believe they have gone to the White Mountains."

"Oh, not lost, but gone before. You believe? If you knew the nights I have lain awake thinking about you two, or you three! I fear you have not been wide-awake enough yourself."

"I knew I could depend on you, Mrs. Farquhar, for that."

The steamer was moving off, taking a wide sweep to follow the channel. The passengers were all engaged in ascertaining the names of the islands and of the owners of the cottages and club-houses. "It is a kind of information I have learned to dispense with," said Mrs. Farquhar. And the tourists, except three or four

resolutely inquisitive, soon tired of it. The islands multiplied; the boat wound in and out among them in narrow straits. To sail thus amid rocky islets, hirsute with firs, promised to be an unfailing pleasure. It might have been, if darkness had not speedily fallen. But it is notable how soon passengers on a steamer become indifferent and listless in any sort of scenery. Where the scenery is monotonous and repeats itself mile after mile and hour after hour, an intolerable weariness falls upon the company. The enterprising group who have taken all the best seats in the bow, with the intention of gormandizing the views, exhibit little staying power; either the monotony or the wind drives them into the cabin. And passengers in the cabin occupying chairs and sofas, surrounded by their baggage, always look bored and melancholy.

"I always think," said Mrs. Farquhar, "that I am going to enjoy a ride on a steamer, but I never do. It is impossible to get out of a draught, and the progress is so slow that variety enough is not presented to the eye to keep one from ennui." Nevertheless, Mrs. Farquhar and King remained on deck, in such shelter as they could find, during the three hours' sail, braced up by the consciousness that they were doing their duty in regard to the enterprise that has transformed this lovely stream into a highway of display and enjoyment. Miss Lamont and the artist went below, frankly confessing that they could see all that interested them from the cabin windows. And they had their reward; for in this little cabin, where supper was served, a drama was going on between the cook and the two waiting-maids and the cabin boy, a drama of love and coquetry and jealousy and hope deferred, quite as important to those concerned as any of the watering-place comedies, and played with entire unconsciousness of the spectators.

The evening was dark, and the navigation in the tortuous channels sometimes difficult, and might have been dangerous but for the lighthouses. The steamer crept along in the shadows of the low islands, making frequent landings, and never long out of sight of the illuminations of hotels and cottages. Possibly by reason of these illuminations this passage has more variety by night than by day. There was certainly a fascination about this alternating brilliancy and gloom. On nearly every island there was at least a cottage, and on the larger islands were great hotels, camp-meeting establishments, and houses and tents for the entertainment of thousands of people. Late as it was in the season, most of the temporary villages and solitary lodges were illuminated; colored lamps were set about the grounds, Chinese lanterns hung in the evergreens, and on half a dozen lines radiating from the belfry of the hotel to the ground, while all the windows blazed and scintillated. Occasionally as the steamer passed these places of irrepressible gayety rockets were let off, Bengal-lights were burned, and once a cannon attempted to speak the joy of the sojourners. It was like a continued Fourth of July, and King's heart burned within him with national pride. Even Mrs. Farquhar had to admit that it was a fairy spectacle. During the months of July and August this broad river, with its fantastic islands, is at night simply a highway of glory. The worldlings and the camp-meeting gatherings vie with each other in the display of colored lights and fireworks. And such places as the Thousand Islands Park, Wellesley and Wesley parks, and so on, twinkling with lamps and rosy with pyrotechnics, like sections of the sky dropped upon the earth, create in the mind of the steamer pilgrim an indescribable earthly and heavenly excitement. He does not look upon these displays as advertisements of rival resorts, but as generous contributions to the hilarity of the world.

It is, indeed, a marvelous spectacle, this view for thirty or forty miles, and the simple traveler begins to realize what American enterprise is when it lays itself out for pleasure. These miles and miles of cottages, hotels, parks, and camp-meetings are the creation of only a few years, and probably can scarcely be paralleled elsewhere in the world for rapidity of growth. But the strongest impression the traveler has is of the public spirit of these summer sojourners, speculators, and religious enthusiasts. No man lives to himself alone, or builds his cottage for his selfish gratification. He makes fantastic carpentry, and paints and decorates and illuminates and shows fireworks, for the genuine sake of display. One marvels that a person should come here for rest and pleasure in a spirit of such devotion to the public weal, and devote himself night after night for months to illuminating his house and lighting up his island, and tearing open the sky with rockets and shaking the air with powder explosions, in order that the river may be continually en fete.

At half-past eight the steamer rounded into view of the hotels and cottages at Alexandria Bay, and the enchanting scene drew all the passengers to the deck.

The Thousand Islands Hotel, and the Crossman House, where our party found excellent accommodations, were blazing and sparkling like the spectacular palaces in an opera scene. Rows of colored lamps were set thickly along the shore, and disposed everywhere among the rocks on which the Crossman House stands; lights glistened from all the islands, from a thousand row-boats, and in all the windows. It was very like Venice, seen from the lagoon, when the Italians make a gala-night.

If Alexandria Bay was less enchanting as a spectacle by daylight, it was still exceedingly lovely and picturesque; islands and bays and winding waterways could not be better combined for beauty, and the structures that taste or ambition has raised on the islands or rocky points are well enough in keeping with the general holiday aspect. One of the prettiest of these cottages is the Bonnicastle of the late Dr. Holland, whose spirit more or less pervades this region. It is charmingly situated on a projecting point of gray rocks veined with color, enlivened by touches of scarlet bushes and brilliant flowers planted in little spots of soil, contrasting with the evergreen shrubs. It commands a varied and delicious prospect, and has an air of repose and peace.

I am sorry to say that while Forbes and Miss Lamont floated, so to speak, in all this beauty, like the light-hearted revelers they were, King was scarcely in a mood to enjoy it. It seemed to him fictitious and a little forced. There was no message for him at the Crossman House. His restlessness and absentmindedness could not escape the observation of Mrs. Farquhar, and as the poor fellow sadly needed a confidante, she was soon in possession of his story.

"I hate slang," she said, when he had painted the situation black enough to suit Mrs. Bartlett Glow even, "and I will not give my sex away, but I know something of feminine doubtings and subterfuges, and I give you my judgment that Irene is just fretting herself to death, and praying that you may have the spirit to ride rough-shod over her scruples. Yes, it is just as true in this prosaic time as it ever was, that women like to be carried off by violence. In their secret hearts, whatever they may say, they like to see a knight batter down the tower and put all the garrison except themselves to the sword. I know that I ought to be on Mrs. Glow's

side. It is the sensible side, the prudent side; but I do admire recklessness in love. Probably you'll be uncomfortable, perhaps unhappy—you are certain to be if you marry to please society and not yourself—but better a thousand times one wild rush of real passion, of self-forgetting love, than an age of stupid, conventional affection approved by your aunt. Oh, these calculating young people!" Mrs. Farquhar's voice trembled and her eyes flashed. "I tell you, my friend, life is not worth living in a conventional stagnation. You see in society how nature revenges itself when its instincts are repressed."

Mrs. Farquhar turned away, and King saw that her eyes were full of tears. She stood a moment looking away over the sparkling water to the soft islands on the hazy horizon. Was she thinking of her own marriage? Death had years ago dissolved it, and were these tears, not those of mourning, but for the great experience possible in life, so seldom realized, missed forever? Before King could frame, in the tumult of his own thoughts, any reply, she turned towards him again, with her usual smile, half of badinage and half of tenderness, and said:

"Come, this is enough of tragedy for one day; let us go on the Island Wanderer, with the other excursionists, among the isles of the blest."

The little steamer had already its load, and presently was under way, puffing and coughing, on its usual afternoon trip among the islands. The passengers were silent, and appeared to take the matter seriously—a sort of linen-duster congregation, of the class who figure in the homely dialect poems of the Northern bards, Mrs. Farquhar said. They were chiefly interested in knowing the names of the successful people who had built these fantastic dwellings, and who lived on illuminations. Their curiosity was easily gratified, for in most cases the owners had painted their names, and sometimes their places of residence, in staring white letters on conspicuous rocks. There was also exhibited, for the benefit of invalids, by means of the same white paint, here and there the name of a medicine that is a household word in this patent-right generation. So the little steamer sailed, comforted by these remedies, through the strait of Safe Nervine, round the bluff of Safe Tonic, into the open bay of Safe Liver Cure. It was a healing voyage, and one in which enterprise was so allied with beauty that no utilitarian philosopher could raise a question as to the market value of the latter.

The voyage continued as far as Gananoque, in Canada, where the passengers went ashore, and wandered about in a disconsolate way to see nothing. King said, however, that he was more interested in the place than in any other he had seen, because there was nothing interesting in it; it was absolutely without character, or a single peculiarity either of Canada or of the United States. Indeed, this north shore seemed to all the party rather bleak even in summertime, and the quality of the sunshine thin.

It was, of course, a delightful sail, abounding in charming views, up "lost channels," through vistas of gleaming water overdrooped by tender foliage, and now and then great stretches of sea, and always islands, islands.

"Too many islands too much alike," at length exclaimed Mrs. Farquhar, "and too many tasteless cottages and temporary camping structures."

The performance is, indeed, better than the prospectus. For there are not merely the poetical Thousand Islands; by actual count there are sixteen hundred and ninety-two. The artist and Miss Lamont were trying to sing a fine song they discovered in the Traveler's Guide, inspired perhaps by that sentimental ditty, "The Isles of Greece, the Isles of Greece," beginning,

"O Thousand Isles! O Thousand Isles!"

It seemed to King that a poem might be constructed more in accordance with the facts and with the scientific spirit of the age. Something like this:

*"O Sixteen Hundred Ninety-two Isles!
O Islands 1692!
Where the fisher spreads his wiles,
And the muskallonge goes through!
Forever the cottager gilds the same
With nightly pyrotechnic flame;
And it's O the Isles!
The 1692!"*

Aside from the pyrotechnics, the chief occupations of this place are boating and fishing. Boats abound—row-boats, sail-boats, and steam-launches for excursion parties. The river consequently presents an animated appearance in the season, and the prettiest effects are produced by the white sails dipping about among the green islands. The favorite boat is a canoe with a small sail stepped forward, which is steered without centre-board or rudder, merely by a change of position in the boat of the man who holds the sheet. While the fishermen are here, it would seem that the long, snaky pickerel is the chief game pursued and caught. But this is not the case when the fishermen return home, for then it appears that they have been dealing mainly with muskallonge, and with bass by the way. No other part of the country originates so many excellent fish stories as the Sixteen Hundred and Ninety-two Islands, and King had heard so many of them that he suspected there must be fish in these waters. That afternoon, when they returned from Gananoque he accosted an old fisherman who sat in his boat at the wharf awaiting a customer.

A FISHERMAN.

"I suppose there is fishing here in the season?"

The man glanced up, but deigned no reply to such impertinence.

"Could you take us where we would be likely to get any muskallonge?"

"Likely?" asked the man. "What do you suppose I am here for?"

"I beg your pardon. I'm a stranger here. I'd like to try my hand at a muskallonge. About how do they run here as to size?"

"Well," said the fisherman, relenting a little, "that depends upon who takes you out. If you want a little sport, I can take you to it. They are running pretty well this season, or were a week ago."

"Is it too late?"

"Well, they are scarcer than they were, unless you know where to go. I call forty pounds light for a muskallonge; fifty to seventy is about my figure. If you ain't used to this kind of fishing, and go with me, you'd better tie yourself in the boat. They are a powerful fish. You see that little island yonder? A muskallonge dragged me in this boat four times round that island one day, and just as I thought I was tiring him out he jumped clean over the island, and I had to cut the line."

King thought he had heard something like this before, and he engaged the man for the next day. That evening was the last of the grand illuminations for the season, and our party went out in the Crossman steam-launch to see it. Although some of the cottages were vacated, and the display was not so extensive as in August, it was still marvelously beautiful, and the night voyage around the illuminated islands was something long to be remembered.

There were endless devices of colored lamps and lanterns, figures of crosses, crowns, the Seal of Solomon, and the most strange effects produced on foliage and in the water by red and green and purple fires. It was a night of enchantment, and the hotel and its grounds on the dark background of the night were like the stately pleasure-house in "Kubla Khan."

But the season was drawing to an end. The hotels, which could not find room for the throngs on Saturday night, say, were nearly empty on Monday, so easy are pleasure-seekers frightened away by a touch of cold, forgetting that in such a resort the most enjoyable part of the year comes with the mellow autumn days. That night at ten o'clock the band was scraping away in the deserted parlor, with not another person in attendance, without a single listener. Miss Lamont happened to peep through the window-blinds from the piazza and discover this residuum of gayety. The band itself was half asleep, but by sheer force of habit it kept on, the fiddlers drawing the perfunctory bows, and the melancholy clarionet men breathing their expressive sighs. It was a dismal sight. The next morning the band had vanished.

The morning was lowering, and a steady rain soon set in for the day. No fishing, no boating; nothing but drop, drop, and the reminiscence of past pleasure. Mist enveloped the islands and shut out the view. Even the

spirits of Mrs. Farquhar were not proof against this, and she tried to amuse herself by reconstructing the season out of the specimens of guests who remained, who were for the most part young ladies who had duty written on their faces, and were addicted to spectacles.

"It could not have been," she thought, "ultrafashionable or madly gay. I think the good people come here; those who are willing to illuminate."

"Oh, there is a fast enough life at some of the hotels in the summer," said the artist.

"Very likely. Still, if I were recruiting for schoolmarms, I should come here. I like it thoroughly, and mean to be here earlier next year. The scenery is enchanting, and I quite enjoy being with 'Proverbial Philosophy' people."

Late in the gloomy afternoon King went down to the office, and the clerk handed him a letter. He took it eagerly, but his countenance fell when he saw that it bore a New York postmark, and had been forwarded from Richfield. It was not from Irene. He put it in his pocket and went moodily to his room. He was in no mood to read a homily from his uncle.

Ten minutes after, he burst into Forbes's room with the open letter in his hand.

"See here, old fellow, I'm off to the Profile House. Can you get ready?"

"Get ready? Why, you can't go anywhere tonight."

"Yes I can. The proprietor says he will send us across to Redwood to catch the night train for Ogdensburg."

"But how about the Lachine Rapids? You have been talking about those rapids for two months. I thought that was what we came here for."

"Do you want to run right into the smallpox at Montreal?"

"Oh, I don't mind. I never take anything of that sort."

"But don't you see that it isn't safe for the Lamonts and Mrs. Farquhar to go there?"

"I suppose not; I never thought of that. You have dragged me all over the continent, and I didn't suppose there was any way of escaping the rapids. But what is the row now? Has Irene telegraphed you that she has got over her chill?"

"Read that letter."

Forbes took the sheet and read:

"NEW YORK, September 2, 1885.

"MY DEAR STANHOPE,—We came back to town yesterday, and I find a considerable arrears of business demanding my attention. A suit has been brought against the Laval Iron Company, of which I have been the attorney for some years, for the possession of an important part of its territory, and I must send somebody to Georgia before the end of this month to look up witnesses and get ready for the defense. If you are through your junketing by that time, it will be an admirable opportunity for you to learn the practical details of the business.... Perhaps it may quicken your ardor in the matter if I communicate to you another fact. Penelope wrote me from Richfield, in a sort of panic, that she feared you had compromised your whole future by a rash engagement with a young lady from Cyrusville, Ohio—a Miss Benson—and she asked me to use my influence with you. I replied to her that I thought that, in the language of the street, you had compromised your future, if that were true, for about a hundred cents on the dollar. I have had business relations with Mr. Benson for twenty years. He is the principal owner in the Laval Iron Mine, and he is one of the most sensible, sound, and upright men of my acquaintance. He comes of a good old New England stock, and if his daughter has the qualities of her father and I hear that she has been exceedingly well educated besides she is not a bad match even for a Knickerbocker.

"Hoping that you will be able to report at the office before the end of the month,

"I am affectionately yours,

"SCHUYLER BREVOORT."

"Well, that's all right," said the artist, after a pause. "I suppose the world might go on if you spend another night in this hotel. But if you must go, I'll bring on the women and the baggage when navigation opens in the morning."

XVI. WHITE MOUNTAINS, LENNOX.

The White Mountains are as high as ever, as fine in sharp outline against the sky, as savage, as tawny; no other mountains in the world of their height so well keep, on acquaintance, the respect of mankind. There is a quality of refinement in their granite robustness; their desolate, bare heights and sky-scraping ridges are rosy in the dawn and violet at sunset, and their profound green gulfs are still mysterious. Powerful as man is, and pushing, he cannot wholly vulgarize them. He can reduce the valleys and the show "freaks" of nature to his own moral level, but the vast bulks and the summits remain for the most part haughty and pure.

Yet undeniably something of the romance of adventure in a visit to the White Hills is wanting, now that the railways penetrate every valley, and all the physical obstacles of the journey are removed. One can never again feel the thrill that he experienced when, after a weary all-day jolting in the stage-coach, or plodding hour after hour on foot, he suddenly came in view of a majestic granite peak. Never again by the new rail can he have the sensation that he enjoyed in the ascent of Mount Washington by the old bridlepath from Crawford's, when, climbing out of the woods and advancing upon that marvelous backbone of rock, the whole world opened upon his awed vision, and the pyramid of the summit stood up in majesty against the sky. Nothing, indeed, is valuable that is easily obtained. This modern experiment of putting us through the world—the world of literature, experience, and travel—at excursion rates is of doubtful expediency.

A HALT FOR THE VIEW.

I cannot but think that the White Mountains are cheapened a little by the facilities of travel and the multiplication of excellent places of entertainment. If scenery were a sentient thing, it might feel indignant at being vulgarly stared at, overrun and trampled on, by a horde of tourists who chiefly value luxurious hotels and easy conveyance. It would be mortified to hear the talk of the excursionists, which is more about the quality of the tables and the beds, and the rapidity with which the "whole thing can be done," than about the beauty and the sublimity of nature. The mountain, however, was made for man, and not man for the mountain; and if the majority of travelers only get out of these hills what they are capable of receiving, it may be some satisfaction to the hills that they still reserve their glories for the eyes that can appreciate them. Perhaps nature is not sensitive about being run after for its freaks and eccentricities. If it were, we could account for the catastrophe, a few years ago, in the Franconia Notch flume. Everybody went there to see a boulder which hung suspended over the stream in the narrow canon. This curiosity attracted annually thousands of people, who apparently cared more for this toy than for anything else in the region. And one day, as if tired of this misdirected adoration, nature organized a dam on the side of Mount Lafayette, filled it with water, and then suddenly let loose a flood which tore open the canon, carried the boulder away, and spread ruin far and wide. It said as plainly as possible, you must look at me, and not at my trivial accidents. But man is an ingenious creature, and nature is no match for him. He now goes, in increasing number, to see where the boulder once hung, and spends his time in hunting for it in the acres of wreck and debris. And in order to satisfy reasonable human curiosity, the proprietors of the flume have been obliged to select a boulder and label it as the one that was formerly the shrine of pilgrimage.

In his college days King had more than once tramped all over this region, knapsack on back, lodging at chance farmhouses and second-class hotels, living on viands that would kill any but a robust climber, and enjoying the life with a keen zest only felt by those who are abroad at all hours, and enabled to surprise Nature in all her varied moods. It is the chance encounters that are most satisfactory; Nature is apt to be whimsical to him who approaches her of set purpose at fixed hours. He remembered also the jolting stage-coaches, the scramble for places, the exhilaration of the drive, the excitement of the arrival at the hotels, the sociability engendered by this juxtaposition and jostle of travel. It was therefore with a sense of personal injury that, when he reached Bethlehem junction, he found a railway to the Profile House, and another to Bethlehem. In the interval of waiting for his train he visited Bethlehem Street, with its mile of caravansaries, big boarding-houses, shops, and city veneer, and although he was delighted, as an American, with the "improvements" and with the air of refinement, he felt that if he wanted retirement and rural life, he might as well be with the hordes in the depths of the Adirondack wilderness. But in his impatience to reach his destination he was not sorry to avail himself of the railway to the Profile House. And he admired the ingenuity which had carried this road through nine miles of shabby firs and balsams, in a way absolutely devoid of interest, in order to heighten the effect of the surprise at the end in the sudden arrival at the Franconia Notch. From whichever way this vast white hotel establishment is approached, it is always a surprise. Midway between Echo Lake and Profile Lake, standing in the very jaws of the Notch, overhung on the one side by Cannon Mountain and on the other by a bold spur of Lafayette, it makes a contrast between the elegance and order of civilization and the untouched ruggedness and sublimity of nature scarcely anywhere else to be seen.

The hotel was still full, and when King entered the great lobby and office in the evening a very animated scene met his eye. A big fire of logs was blazing in the ample chimney-place; groups were seated about at ease, chatting, reading, smoking; couples promenaded up and down; and from the distant parlor, through the

long passage, came the sound of the band. It was easy to see at a glance that the place had a distinct character, freedom from conventionality, and an air of reposeful enjoyment. A large proportion of the assembly being residents for the summer, there was so much of the family content that the transient tourists could little disturb it by the introduction of their element of worry and haste.

King found here many acquaintances, for fashion follows a certain routine, and there is a hidden law by which the White Mountains break the transition from the sea-coast to Lenox. He was therefore not surprised to be greeted by Mrs. Cortlandt, who had arrived the day before with her usual train.

"At the end of the season," she said, "and alone?"

"I expect to meet friends here."

"So did I; but they have gone, or some of them have."

"But mine are coming tomorrow. Who has gone?"

"Mrs. Pendragon and the Bensons. But I didn't suppose I could tell you any news about the Bensons."

"I have been out of the way of the newspapers lately. Did you happen to hear where they have gone?"

"Somewhere around the mountains. You need not look so indifferent; they are coming back here again. They are doing what I must do; and I wish you would tell me what to see. I have studied the guide-books till my mind is a blank. Where shall I go?"

"That depends. If you simply want to enjoy yourselves, stay at this hotel—there is no better place—sit on the piazza, look at the mountains, and watch the world as it comes round. If you want the best panoramic view of the mountains, the Washington and Lafayette ranges together, go up to the Waumbec House. If you are after the best single limited view in the mountains, drive up to the top of Mount Willard, near the Crawford House—a delightful place to stay in a region full of associations, Willey House, avalanche, and all that. If you would like to take a walk you will remember forever, go by the carriage road from the top of Mount Washington to the Glen House, and look into the great gulfs, and study the tawny sides of the mountains. I don't know anything more impressive hereabouts than that. Close to, those granite ranges have the color of the hide of the rhinoceros; when you look up to them from the Glen House, shouldering up into the sky, and rising to the cloud-clapped summit of Washington, it is like a purple highway into the infinite heaven. No, you must not miss either Crawford's or the Glen House; and as to Mount Washington, that is a duty."

"You might personally conduct us and expound by the way."

King said he would like nothing better. Inquiry failed to give him any more information of the whereabouts of the Bensons; but the clerk said they were certain to return to the Profile House. The next day the party which had been left behind at Alexandria Bay appeared, in high spirits, and ready for any adventure. Mrs. Farquhar declared at once that she had no scruples about going up Washington, commonplace as the trip was, for her sympathies were now all with the common people. Of course Mount Washington was of no special importance, now that the Black Mountains were in the Union, but she hadn't a bit of prejudice.

King praised her courage and her patriotism. But perhaps she did not know how much she risked. He had been talking with some habitue's of the Profile, who had been coming here for years, and had just now for the first time been up Mount Washington, and they said that while the trip was pleasant enough, it did not pay for the exertion. Perhaps Mrs. Farquhar did not know that mountain-climbing was disapproved of here as sea-bathing was at Newport. It was hardly the thing one would like to do, except, of course, as a mere lark, and, don't you know, with a party.

Mrs. Farquhar said that was just the reason she wanted to go. She was willing to make any sacrifice; she considered herself just a missionary of provincialism up North, where people had become so cosmopolitan that they dared not enjoy anything. She was an enemy of the Boston philosophy. What is the Boston philosophy? Why, it is not to care about anything you do care about.

The party that was arranged for this trip included Mrs. Cortlandt and her bevy of beauty and audacity, Miss Lamont and her uncle, Mrs. Farquhar, the artist, and the desperate pilgrim of love. Mrs. Farquhar vowed to Forbes that she had dragged King along at the request of the proprietor of the hotel, who did not like to send a guest away, but he couldn't have all the trees at Profile Lake disfigured with his cutting and carving. People were running to him all the while to know what it meant with "I. B.," "I. B.," "I. B.," everywhere, like a grove of Baal.

From the junction to Fabyan's they rode in an observation car, all open, and furnished with movable chairs, where they sat as in a balcony. It was a picturesque load of passengers. There were the young ladies in trim traveling-suits, in what is called compact fighting trim; ladies in mourning; ladies in winter wraps; ladies in Scotch wraps; young men with shawl-straps and opera-glasses, standing, legs astride, consulting maps and imparting information; the usual sweet pale girl with a bundle of cat-tails and a decorative intention; and the nonchalant young man in a striped English boating cap, who nevertheless spoke American when he said anything.

THE OBSERVATION CAR.

As they were swinging slowly along the engine suddenly fell into a panic, puffing and sending up shrill shrieks of fear in rapid succession. There was a sedate cow on the track. The engine was agitated, it shrieked more shrilly, and began backing in visible terror. Everybody jumped and stood up, and the women clung to the men, all frightened. It was a beautiful exhibition of the sweet dependence of the sex in the hour of danger. The cow was more terrible than a lion on the track. The passengers all trembled like the engine. In fact, the only calm being was the cow, which, after satisfying her curiosity, walked slowly off, wondering what it was all about.

The cog-wheel railway is able to transport a large number of excursionists to the top of the mountain in the course of the morning. The tourists usually arrive there about the time the mist has crept up from the valleys and enveloped everything. Our party had the common experience. The Summit House, the Signal Station, the old Tip-top House, which is lashed down with cables, and rises ten feet higher than the highest crag, were all in the clouds. Nothing was to be seen except the dim outline of these buildings.

"I wonder," said Mrs. Farquhar, as they stumbled along over the slippery stones, "what people come here for."

"Just what we came for," answered Forbes, "to say they have been on top of the mountain."

They took refuge in the hotel, but that also was invaded by the damp, chill atmosphere, wrapped in and pervaded by the clouds. From the windows nothing more was to be seen than is visible in a Russian steam bath. But the tourists did not mind. They addressed themselves to the business in hand. This was registering their names. A daily newspaper called *Among the Clouds* is published here, and every person who gets his name on the register in time can see it in print before the train goes. When the train descends, every passenger has one of these two-cent certificates of his exploit. When our party entered, there was a great run on the register, especially by women, who have a repugnance, as is well known, to seeing their names in print. In the room was a hot stove, which was more attractive than the cold clouds, but unable to compete in interest with the register. The artist, who seemed to be in a sardonic mood, and could get no chance to enter his name, watched the scene, while his friends enjoyed the view of the stove. After registering, the visitors all bought note-paper with a chromo heading, "*Among the Clouds*," and a natural wild-flower stuck on the corner, and then rushed to the writing-room in order to indite an epistle "from the summit." This is indispensable.

After that they were ready for the Signal Station. This is a great attraction. The sergeant in charge looked bored to death, and in the mood to predict the worst kind of weather. He is all day beset with a crowd craning their necks to look at him, and bothered with ten thousand questions. He told King that the tourists made his life miserable; they were a great deal worse than the blizzards in the winter. And the government, he said, does not take this into account in his salary.

Occasionally there was an alarm that the mist was getting thin, that the clouds were about to break, and a rush was made out-of-doors, and the tourists dispersed about on the rocks. They were all on the qui vive to see the hotel or the boarding-house they had left in the early morning. Excursionists continually swarmed in by rail or by carriage road. The artist, who had one of his moods for wanting to see nature, said there were too many women; he wanted to know why there were always so many women on excursions. "You can see nothing but excursionists; whichever way you look, you see their backs." These backs, looming out of the mist, or discovered in a rift, seemed to enrage him.

At length something actually happened. The curtain of cloud slowly lifted, exactly as in a theatre; for a

moment there was a magnificent view of peaks, forests, valleys, a burst of sunshine on the lost world, and then the curtain dropped, amid a storm of "Ohs!" and "Ahs!" and intense excitement. Three or four times, as if in response to the call of the spectators, this was repeated, the curtain lifting every time on a different scene, and then it was all over, and the heavy mist shut down on the registered and the unregistered alike. But everybody declared that they preferred it this way; it was so much better to have these wonderful glimpses than a full view. They would go down and brag over their good-fortune.

The excursionists by-and-by went away out of the clouds, gliding breathlessly down the rails. When snow covers this track, descent is sometimes made on a toboggan, but it is such a dangerous venture that all except the operatives are now forbidden to try it. The velocity attained of three and a half miles in three minutes may seem nothing to a locomotive engineer who is making up time; it might seem slow to a lover whose sweetheart was at the foot of the slide; to ordinary mortals a mile a minute is quite enough on such an incline.

Our party, who would have been much surprised if any one had called them an excursion, went away on foot down the carriage road to the Glen House. A descent of a few rods took them into the world of light and sun, and they were soon beyond the little piles of stones which mark the spots where tourists have sunk down bewildered in the mist and died of exhaustion and cold. These little mounds help to give Mount Washington its savage and implacable character. It is not subdued by all the roads and rails and scientific forces. For days it may lie basking and smiling in the sun, but at any hour it is liable to become inhospitable and pitiless, and for a good part of the year the summit is the area of elemental passion.

How delightful it was to saunter down the winding road into a region of peace and calm; to see from the safe highway the great giants in all their majesty; to come to vegetation, to the company of familiar trees, and the haunts of men! As they reached the Glen House all the line of rugged mountain-peaks was violet in the reflected rays. There were people on the porch who were looking at this spectacle. Among them the eager eyes of King recognized Irene.

"Yes, there she is," cried Mrs. Farquhar; "and there—oh, what a treacherous North—is Mr. Meigs also."

It was true. There was Mr. Meigs, apparently domiciled with the Benson family. There might have been a scene, but fortunately the porch was full of loungers looking at the sunset, and other pedestrians in couples and groups were returning from afternoon strolls. It might be the crisis of two lives, but to the spectator nothing more was seen than the everyday meeting of friends and acquaintances. A couple say good-night at the door of a drawing-room. Nothing has happened—nothing except a look, nothing except the want of pressure of the hand. The man lounges off to the smoking-room, cool and indifferent; the woman, in her chamber, falls into a passion of tears, and at the end of a wakeful night comes into a new world, hard and cold and uninteresting. Or the reverse happens. It is the girl who tosses the thing off with a smile, perhaps with a sigh, as the incident of a season, while the man, wounded and bitter, loses a degree of respect for woman, and pitches his life henceforth on a lower plane.

In the space of ten steps King passed through an age of emotions, but the strongest one steadied him. There was a general movement, exclamations, greetings, introductions. King was detained a moment by Mr. and Mrs. Benson; he even shook hands with Mr. Meigs, who had the tact to turn immediately from the group and talk with somebody else; while Mrs. Farquhar and Miss Lamont and Mrs. Cortlandt precipitated themselves upon Irene in a little tempest of cries and caresses and delightful feminine fluttering. Truth to say, Irene was so overcome by these greetings that she had not the strength to take a step forward when King at length approached her. She stood with one hand grasping the back of the chair. She knew that that moment would decide her life. Nothing is more admirable in woman, nothing so shows her strength, as her ability to face in public such a moment. It was the critical moment for King—how critical the instant was, luckily, he did not then know. If there had been in his eyes any doubt, any wavering, any timidity, his cause would have been lost. But there was not. There was infinite love and tenderness, but there was also resolution, confidence, possession, mastery. There was that that would neither be denied nor turned aside, nor accept any subterfuge. If King had ridden up on a fiery steed, felled Meigs with his "mailed hand," and borne away the fainting girl on his saddle pommel, there could have been no more doubt of his resolute intention. In that look all the mists of doubt that her judgment had raised in Irene's mind to obscure love vanished. Her heart within her gave a great leap of exultation that her lover was a man strong enough to compel, strong enough to defend. At that instant she knew that she could trust him against the world. In that moment, while he still held her hand, she experienced the greatest joy that woman ever knows—the bliss of absolute surrender.

"I have come," he said, "in answer to your letter. And this is my answer."

She had it in his presence, and read it in his eyes. With the delicious sense thrilling her that she was no longer her own master there came a new timidity. She had imagined that if ever she should meet Mr. King again, she should defend her course, and perhaps appear in his eyes in a very heroic attitude. Now she only said, falteringly, and looking down, "I—I hoped you would come."

That evening there was a little dinner given in a private parlor by Mr. Benson in honor of the engagement of his daughter. It was great larks for the young ladies whom Mrs. Cortlandt was chaperoning, who behaved with an elaboration of restraint and propriety that kept Irene in a flutter of uneasiness. Mr. Benson, in mentioning the reason for the "little spread," told the story of Abraham Lincoln's sole response to Lord Lyons, the bachelor minister of her majesty, when he came officially to announce the marriage of the Prince of Wales—"Lord Lyons, go thou and do likewise;" and he looked at Forbes when he told it, which made Miss Lamont blush, and appear what the artist had described her to King—the sweetest thing in life. Mrs. Benson beamed with motherly content, and was quite as tearful as ungrammatical, but her mind was practical and forecasting. "There'll have to be," she confided to Miss Lamont, "more curtains in the parlor, and I don't know but new paper." Mr. Meigs was not present. Mrs. Farquhar noticed this, and Mrs. Benson remembered that he had said something about going down to North Conway, which gave King an opportunity to say to Mrs. Farquhar that she ought not to despair, for Mr. Meigs evidently moved in a circle, and was certain to cross her path again. "I trust so," she replied. "I've been his only friend through all this miserable business." The dinner was not a great success. There was too much self-consciousness all round, and nobody was witty

and brilliant.

The next morning King took Irene to the Crystal Cascade. When he used to frequent this pretty spot as a college boy, it had seemed to him the ideal place for a love scene—much better than the steps of a hotel. He said as much when they were seated at the foot of the fall. It is a charming cascade fed by the water that comes down Tuckerman's Ravine. But more beautiful than the fall is the stream itself, foaming down through the boulders, or lying in deep limpid pools which reflect the sky and the forest. The water is as cold as ice and as clear as cut glass; few mountain streams in the world, probably, are so absolutely without color. "I followed it up once," King was saying, by way of filling in the pauses with personal revelations, "to the source. The woods on the side are dense and impenetrable, and the only way was to keep in the stream and climb over the boulders. There are innumerable slides and cascades and pretty falls, and a thousand beauties and surprises. I finally came to a marsh, a thicket of alders, and around this the mountain closed in an amphitheatre of naked perpendicular rock a thousand feet high. I made my way along the stream through the thicket till I came to a great bank and arch of snow—it was the last of July—from under which the stream flowed. Water dripped in many little rivulets down the face of the precipices—after a rain there are said to be a thousand cascades there. I determined to climb to the summit, and go back by the Tip-top House. It does not look so from a little distance, but there is a rough, zigzag sort of path on one side of the amphitheatre, and I found this, and scrambled up. When I reached the top the sun was shining, and although there was nothing around me but piles of granite rocks, without any sign of a path, I knew that I had my bearings so that I could either reach the house or a path leading to it. I stretched myself out to rest a few moments, and suddenly the scene was completely shut in by a fog. [Irene put out her hand and touched King's.] I couldn't tell where the sun was, or in what direction the hut lay, and the danger was that I would wander off on a spur, as the lost usually do. But I knew where the ravine was, for I was still on the edge of it."

"Why," asked Irene, trembling at the thought of that danger so long ago—"why didn't you go back down the ravine?"

"Because," and King took up the willing little hand and pressed it to his lips, and looked steadily in her eyes—"because that is not my way. It was nothing. I made what I thought was a very safe calculation, starting from the ravine as a base, to strike the Crawford bridle-path at least a quarter of a mile west of the house. I hit it—but it shows how little one can tell of his course in a fog—I struck it within a rod of the house! It was lucky for me that I did not go two rods further east."

Ah me! how real and still present the peril seemed to the girl! "You will solemnly promise me, solemnly, will you not, Stanhope, never to go there again—never—without me?"

The promise was given. "I have a note," said King, after the promise was recorded and sealed, "to show you. It came this morning. It is from Mrs. Bartlett Glow."

"Perhaps I'd rather not see it," said Irene, a little stiffly.

"Oh, there is a message to you. I'll read it."

It was dated at Newport.

*"MY DEAR STANHOPE,—The weather has changed. I hope it is more congenial where you are. It is horrid here. I am in a bad humor, chiefly about the cook. Don't think I'm going to inflict a letter on you. You don't deserve it besides. But I should like to know Miss Benson's address. We shall be at home in October, late, and I want her to come and make me a little visit. If you happen to see her, give her my love, and believe me your affectionate cousin,
PENELOPE."*

The next day they explored the wonders of the Notch, and the next were back in the serene atmosphere of the Profile House. How lovely it all was; how idyllic; what a bloom there was on the hills; how amiable everybody seemed; how easy it was to be kind and considerate! King wished he could meet a beggar at every turn. I know he made a great impression on some elderly maiden ladies at the hotel, who thought him the most gentlemanly and good young man they had ever seen. Ah! if one could always be in love and always young!

They went one day by invitation, Irene and Marion and King and the artist—as if it made any difference where they went—to Lonesome Lake, a private pond and fishing-lodge on the mountain-top, under the ledge of Cannon. There, set in a rim of forest and crags, lies a charming little lake—which the mountain holds like a mirror for the sky and the clouds and the sailing hawks—full of speckled trout, which have had to be educated by skillful sportsmen to take the fly. From this lake one sees the whole upper range of Lafayette, gray and purple against the sky. On the bank is a log cabin touched with color, with great chimneys, and as luxuriously comfortable as it is picturesque.

While dinner was preparing, the whole party were on the lake in boats, equipped with fishing apparatus, and if the trout had been in half as willing humor as the fisher, it would have been a bad day for them. But perhaps they apprehended that it was merely a bridal party, and they were leaping all over the lake, flipping their tails in the sun, and scorning all the visible wiles. Fish, they seemed to say, are not so easily caught as men.

There appeared to be a good deal of excitement in the boat that carried the artist and Miss Lamont. It was fly-fishing under extreme difficulties. The artist, who kept his flies a good deal of the time out of the boat, frankly confessed that he would prefer an honest worm and hook, or a net, or even a grappling-iron. Miss Lamont, with a great deal of energy, kept her line whirling about, and at length, on a successful cast, landed the artist's hat among the water-lilies. There was nothing discouraging in this, and they both resumed operations with cheerfulness and enthusiasm. But the result of every other cast was entanglement of each other's lines, and King noticed that they spent most of their time together in the middle of the boat, getting out of snarls. And at last, drifting away down to the outlet, they seemed to have given up fishing for the more interesting occupation.

The clouds drifted on; the fish leaped; the butcher-bird called from the shore; the sun was purpling Lafayette. There were kinks in the leader that would not come out, the lines were inextricably tangled. The cook made the signals for dinner, and sent his voice echoing over the lake time and again before these devoted anglers heard or heeded. At last they turned the prow to the landing, Forbes rowing, and Marion dragging her hand in the water, and looking as if she had never cast a line. King was ready to pull the boat on to the float, and Irene stood by the landing expectant. In the bottom of the boat was one poor little trout, his tail curled up and his spots faded.

"Whose trout is that?" asked Irene.

"It belongs to both of us," said Forbes, who seemed to have some difficulty in adjusting his oars.

"But who caught it?"

"Both of us," said Marion, stepping out of the boat; "we really did." There was a heightened color in her face and a little excitement in her manner as she put her arm round Irene's waist and they walked up to the cabin. "Yes, it is true, but you are not to say anything about it yet, dear, for Mr. Forbes has to make his way, you know."

When they walked down the mountain the sun was setting. Half-way down, at a sharp turn in the path, the trees are cut away just enough to make a frame, in which Lafayette appears like an idealized picture of a mountain. The sun was still on the heights, which were calm, strong, peaceful. They stood gazing at this heavenly vision till the rose had deepened into violet, and then with slow steps descended through the fragrant woods.

In October no region in the North has a monopoly of beauty, but there is a certain refinement, or it may be a repose, in the Berkshire Hills which is in a manner typical of a distinct phase of American fashion. There is here a note of country life, of retirement, suggestive of the old-fashioned "country-seat." It is differentiated from the caravansary or the cottage life in the great watering-places. Perhaps it expresses in a sincerer way an innate love of rural existence. Perhaps it is only a whim of fashion. Whatever it may be, there is here a moment of pause, a pensive air of the closing scene. The estates are ample, farms in fact, with a sort of villa and park character, woods, pastures, meadows. When the leaves turn crimson and brown and yellow, and the frequent lakes reflect the tender sky and the glory of the autumn foliage, there is much driving over the hills from country place to country place; there are lawn-tennis parties on the high lawns, whence the players in the pauses of the game can look over vast areas of lovely country; there are open-air fetes, chance meetings at the clubhouse, chats on the highway, walking excursions, leisurely dinners. In this atmosphere one is on the lookout for an engagement, and a wedding here has a certain eclat. When one speaks of Great Barrington or Stockbridge or Lenox in the autumn, a certain idea of social position is conveyed.

Did Their Pilgrimage end on these autumn heights? To one of them, I know, the colored landscape, the dreamy atmosphere, the unique glory that comes in October days, were only ecstatic suggestions of the life that opened before her. Love is victorious over any mood of nature, even when exquisite beauty is used to heighten the pathos of decay. Irene raved about the scenery. There is no place in the world beautiful enough to have justified her enthusiasm, and there is none ugly enough to have killed it.

I do not say that Irene's letters to Mr. King were entirely taken up with descriptions of the beauty of Lenox. That young gentleman had gone on business to Georgia. Mr. and Mrs. Benson were in Cyrusville. Irene was staying with Mrs. Farquhar at the house of a friend. These letters had a great deal of Lovers' Latin in them—enough to have admitted the writer into Yale College if this were a qualification. The letters she received were equally learned, and the fragments Mrs. Farquhar was permitted to hear were so interrupted by these cabalistic expressions that she finally begged to be excused. She said she did not doubt that to be in love was a liberal education, but pedantry was uninteresting. Latin might be convenient at this stage; but later on, for little tiffs and reconciliations, French would be much more useful.

One of these letters southward described a wedding. The principals in it were unknown to King, but in the minute detail of the letter there was a personal flavor which charmed him. He would have been still more charmed could he have seen the girl's radiant face as she dashed it off. Mrs. Farquhar watched her with a pensive interest awhile, went behind her chair, and, leaning over, kissed her forehead, and then with slow step and sad eyes passed out to the piazza, and stood with her face to the valley and the purple hills. But it was a faded landscape she saw.

INTRODUCTORY SKETCH

The title naturally suggested for this story was "A Dead Soul," but it was discarded because of the similarity to that of the famous novel by Nikolai Gogol—"Dead Souls"—though the motive has nothing in common with that used by the Russian novelist. Gogol exposed an extensive fraud practiced by the sale, in connection with lands, of the names of "serfs" (called souls) not living, or "dead souls."

This story is an attempt to trace the demoralization in a woman's soul of certain well-known influences in our existing social life. In no other way could certain phases of our society be made to appear so distinctly as when reflected in the once pure mirror of a woman's soul.

The character of Margaret is the portrait of no one woman. But it was suggested by the career of two women (among others less marked) who had begun life with the highest ideals, which had been gradually

eaten away and destroyed by "prosperous" marriages and association with unscrupulous methods of acquiring money.

The deterioration was gradual. The women were in all outward conduct unchanged, the conventionalities of life were maintained, the graces were not lost, the observances of the duties of charities and of religion were even emphasized, but worldliness had eaten the heart out of them, and they were "dead souls." The tragedy of the withered life was a thousand-fold enhanced by the external show of prosperous respectability.

The story was first published (in 1888) in Harper's Monthly. During its progress—and it was printed as soon as each installment was ready (a very poor plan)—I was in receipt of the usual letters of sympathy, or protest, and advice. One sympathetic missive urged the removal of Margaret to a neighboring city, where she could be saved by being brought under special Christian influences. The transfer, even in a serial, was impossible, and she by her own choice lived the life she had entered upon.

And yet, if the reader will pardon the confidence, pity intervened to shorten it. I do not know how it is with other writers, but the persons that come about me in a little drama are as real as those I meet in every-day life, and in this case I found it utterly impossible to go on to what might have been the bitter, logical development of Margaret's career. Perhaps it was as well. Perhaps the writer should have no despotic power over his creations, however slight they are. He may profitably recall the dictum of a recent essayist that "there is no limit to the mercy of God."

CHARLES DUDLEY WARNER.

Hartford, August 11, 1899.

A LITTLE JOURNEY IN THE WORLD

I

We were talking about the want of diversity in American life, the lack of salient characters. It was not at a club. It was a spontaneous talk of people who happened to be together, and who had fallen into an uncompelled habit of happening to be together. There might have been a club for the study of the Want of Diversity in American Life. The members would have been obliged to set apart a stated time for it, to attend as a duty, and to be in a mood to discuss this topic at a set hour in the future. They would have mortgaged another precious portion of the little time left us for individual life. It is a suggestive thought that at a given hour all over the United States innumerable clubs might be considering the Want of Diversity in American Life. Only in this way, according to our present methods, could one expect to accomplish anything in regard to this foreign-felt want. It seems illogical that we could produce diversity by all doing the same thing at the same time, but we know the value of congregate effort. It seems to superficial observers that all Americans are born busy. It is not so. They are born with a fear of not being busy; and if they are intelligent and in circumstances of leisure, they have such a sense of their responsibility that they hasten to allot all their time into portions, and leave no hour unprovided for. This is conscientiousness in women, and not restlessness. There is a day for music, a day for painting, a day for the display of tea-gowns, a day for Dante, a day for the Greek drama, a day for the Dumb Animals' Aid Society, a day for the Society for the Propagation of Indians, and so on. When the year is over, the amount that has been accomplished by this incessant activity can hardly be estimated. Individually it may not be much. But consider where Chaucer would be but for the work of the Chaucer clubs, and what an effect upon the universal progress of things is produced by the associate concentration upon the poet of so many minds.

A cynic says that clubs and circles are for the accumulation of superficial information and unloading it on others, without much individual absorption in anybody. This, like all cynicism, contains only a half-truth, and simply means that the general diffusion of half-digested information does not raise the general level of intelligence, which can only be raised to any purpose by thorough self-culture, by assimilation, digestion, meditation. The busy bee is a favorite simile with us, and we are apt to overlook the fact that the least important part of his example is buzzing around. If the hive simply got together and buzzed, or even brought unrefined treacle from some cyclopaedia, let us say, of treacle, there would be no honey added to the general store.

It occurred to some one in this talk at last to deny that there was this tiresome monotony in American life. And this put a new face on the discussion. Why should there be, with every race under the heavens represented here, and each one struggling to assert itself, and no homogeneity as yet established even between the people of the oldest States? The theory is that democracy levels, and that the anxious pursuit of a common object, money, tends to uniformity, and that facility of communication spreads all over the land the same fashion in dress; and repeats everywhere the same style of house, and that the public schools give all the children in the United States the same superficial smartness. And there is a more serious notion, that in a society without classes there is a sort of tyranny of public opinion which crushes out the play of individual peculiarities, without which human intercourse is uninteresting. It is true that a democracy is intolerant of variations from the general level, and that a new society allows less latitude in eccentricities to its members than an old society.

But with all these allowances, it is also admitted that the difficulty the American novelist has is in hitting upon what is universally accepted as characteristic of American life, so various are the types in regions

widely separated from each other, such different points of view are had even in conventionalities, and conscience operates so variously on moral problems in one community and another. It is as impossible for one section to impose upon another its rules of taste and propriety in conduct—and taste is often as strong to determine conduct as principle—as it is to make its literature acceptable to the other. If in the land of the sun and the jasmine and the alligator and the fig, the literature of New England seems passionless and timid in face of the ruling emotions of life, ought we not to thank Heaven for the diversity of temperament as well as of climate which will in the long-run save us from that sameness into which we are supposed to be drifting?

When I think of this vast country with any attention to local developments I am more impressed with the unlikenesses than with the resemblances. And besides this, if one had the ability to draw to the life a single individual in the most homogeneous community, the product would be sufficiently startling. We cannot flatter ourselves, therefore, that under equal laws and opportunities we have rubbed out the salencies of human nature. At a distance the mass of the Russian people seem as monotonous as their steppes and their commune villages, but the Russian novelists find characters in this mass perfectly individualized, and, indeed, give us the impression that all Russians are irregular polygons. Perhaps if our novelists looked at individuals as intently, they might give the world the impression that social life here is as unpleasant as it appears in the novels to be in Russia.

This is partly the substance of what was said one winter evening before the wood fire in the library of a house in Brandon, one of the lesser New England cities. Like hundreds of residences of its kind, it stood in the suburbs, amid forest-trees, commanding a view of city spires and towers on the one hand, and on the other of a broken country of clustering trees and cottages, rising towards a range of hills which showed purple and warm against the pale straw-color of the winter sunsets. The charm of the situation was that the house was one of many comfortable dwellings, each isolated, and yet near enough together to form a neighborhood; that is to say, a body of neighbors who respected each other's privacy, and yet flowed together, on occasion, without the least conventionality. And a real neighborhood, as our modern life is arranged, is becoming more and more rare.

I am not sure that the talkers in this conversation expressed their real, final sentiments, or that they should be held accountable for what they said. Nothing so surely kills the freedom of talk as to have some matter-of-fact person instantly bring you to book for some impulsive remark flashed out on the instant, instead of playing with it and tossing it about in a way that shall expose its absurdity or show its value. Freedom is lost with too much responsibility and seriousness, and the truth is more likely to be struck out in a lively play of assertion and retort than when all the words and sentiments are weighed. A person very likely cannot tell what he does think till his thoughts are exposed to the air, and it is the bright fallacies and impulsive, rash ventures in conversation that are often most fruitful to talker and listeners. The talk is always tame if no one dares anything. I have seen the most promising paradox come to grief by a simple "Do you think so?" Nobody, I sometimes think, should be held accountable for anything said in private conversation, the vivacity of which is in a tentative play about the subject. And this is a sufficient reason why one should repudiate any private conversation reported in the newspapers. It is bad enough to be held fast forever to what one writes and prints, but to shackle a man with all his flashing utterances, which may be put into his mouth by some imp in the air, is intolerable slavery. A man had better be silent if he can only say today what he will stand by tomorrow, or if he may not launch into the general talk the whim and fancy of the moment. Racy, entertaining talk is only exposed thought, and no one would hold a man responsible for the thronging thoughts that contradict and displace each other in his mind. Probably no one ever actually makes up his mind until he either acts or puts out his conclusion beyond his recall. Why should one be debarred the privilege of pitching his crude ideas into a conversation where they may have a chance of being precipitated?

I remember that Morgan said in this talk that there was too much diversity. "Almost every church has trouble with it—the different social conditions."

An Englishman who was present pricked-up his ears at this, as if he expected to obtain a note on the character of Dissenters. "I thought all the churches here were organized on social affinities?" he inquired.

"Oh, no; it is a good deal a matter of vicinage. When there is a real-estate extension, a necessary part of the plan is to build a church in the centre of it, in order to—"

"I declare, Page," said Mrs. Morgan, "you'll give Mr. Lyon a totally erroneous notion. Of course there must be a church convenient to the worshipers in every district."

"That is just what I was saying, my dear: As the settlement is not drawn together on religious grounds, but perhaps by purely worldly motives, the elements that meet in the church are apt to be socially incongruous, such as cannot always be fused even by a church-kitchen and a church-parlor."

"Then it isn't the peculiarity of the church that has attracted to it worshipers who would naturally come together, but the church is a neighborhood necessity?" still further inquired Mr. Lyon.

"All is," I ventured to put in, "that churches grow up like schoolhouses, where they are wanted."

"I beg your pardon," said Mr. Morgan; "I'm talking about the kind of want that creates them. If it's the same that builds a music hall, or a gymnasium, or a railway waiting-room, I've nothing more to say."

"Is it your American idea, then, that a church ought to be formed only of people socially agreeable together?" asked the Englishman.

"I have no American idea. I am only commenting on facts; but one of them is that it is the most difficult thing in the world to reconcile religious association with the real or artificial claims of social life."

"I don't think you try much," said Mrs. Morgan, who carried along her traditional religious observance with grateful admiration of her husband.

Mr. Page Morgan had inherited money, and a certain advantageous position for observing life and criticising it, humorously sometimes, and without any serious intention of disturbing it. He had added to his fair fortune by marrying the daintily reared daughter of a cotton-spinner, and he had enough to do in attending meetings of directors and looking out for his investments to keep him from the operation of the State law regarding vagrants, and give greater social weight to his opinions than if he had been compelled to

work for his maintenance. The Page Morgans had been a good deal abroad, and were none the worse Americans for having come in contact with the knowledge that there are other peoples who are reasonably prosperous and happy without any of our advantages.

"It seems to me," said Mr. Lyon, who was always in the conversational attitude of wanting to know, "that you Americans are disturbed by the notion that religion ought to produce social equality."

Mr. Lyon had the air of conveying the impression that this question was settled in England, and that America was interesting on account of numerous experiments of this sort. This state of mind was not offensive to his interlocutors, because they were accustomed to it in transatlantic visitors. Indeed, there was nothing whatever offensive, and little defensive, in Mr. John Lyon. What we liked in him, I think, was his simple acceptance of a position that required neither explanation nor apology—a social condition that banished a sense of his own personality, and left him perfectly free to be absolutely truthful. Though an eldest son and next in succession to an earldom, he was still young. Fresh from Oxford and South Africa and Australia and British Columbia he had come to study the States with a view of perfecting himself for his duties as a legislator for the world when he should be called to the House of Peers. He did not treat himself like an earl, whatever consciousness he may have had that his prospective rank made it safe for him to flirt with the various forms of equality abroad in this generation.

"I don't know what Christianity is expected to produce," Mr. Morgan replied, in a meditative way; "but I have an idea that the early Christians in their assemblies all knew each other, having met elsewhere in social intercourse, or, if they were not acquainted, they lost sight of distinctions in one paramount interest. But then I don't suppose they were exactly civilized."

"Were the Pilgrims and the Puritans?" asked Mrs. Fletcher, who now joined the talk, in which she had been a most animated and stimulating listener, her deep gray eyes dancing with intellectual pleasure.

"I should not like to answer 'no' to a descendant of the Mayflower. Yes, they were highly civilized. And if we had adhered to their methods, we should have avoided a good deal of confusion. The meeting-house, you remember, had a committee for seating people according to their quality. They were very shrewd, but it had not occurred to them to give the best pews to the sitters able to pay the most money for them. They escaped the perplexity of reconciling the mercantile and the religious ideas."

"At any rate," said Mrs. Fletcher, "they got all sorts of people inside the same meeting-house."

"Yes, and made them feel they were all sorts; but in those, days they were not much disturbed by that feeling."

"Do you mean to say," asked Mr. Lyon, "that in this country you have churches for the rich and other churches for the poor?"

"Not at all. We have in the cities rich churches and poor churches, with prices of pews according to the means of each sort, and the rich are always glad to have the poor come, and if they do not give them the best seats, they equalize it by taking up a collection for them."

"Mr. Lyon," Mrs. Morgan interrupted, "you are getting a travesty of the whole thing. I don't believe there is elsewhere in the world such a spirit of Christian charity as in our churches of all sects."

"There is no doubt about the charity; but that doesn't seem to make the social machine run any more smoothly in the church associations. I'm not sure but we shall have to go back to the old idea of considering the churches places of worship, and not opportunities for sewing-societies, and the cultivation of social equality."

"I found the idea in Rome," said Mr. Lyon, "that the United States is now the most promising field for the spread and permanence of the Roman Catholic faith."

"How is that?" Mr. Fletcher asked, with a smile of Puritan incredulity.

"A high functionary at the Propaganda gave as a reason that the United States is the most democratic country and the Roman Catholic is the most democratic religion, having this one notion that all men, high or low, are equally sinners and equally in need of one thing only. And I must say that in this country I don't find the question of social equality interfering much with the work in their churches."

"That is because they are not trying to make this world any better, but only to prepare for another," said Mrs. Fletcher.

"Now, we think that the nearer we approach the kingdom-of-heaven idea on earth, the better off we shall be hereafter. Is that a modern idea?"

"It is an idea that is giving us a great deal of trouble. We've got into such a sophisticated state that it seems easier to take care of the future than of the present."

"And it isn't a very bad doctrine that if you take care of the present, the future will take care of itself," rejoined Mrs. Fletcher.

"Yes, I know," insisted Mr. Morgan; "it's the modern notion of accumulation and compensation—take care of the pennies and the pounds will take care of themselves—the gospel of Benjamin Franklin."

"Ah," I said, looking up at the entrance of a newcomer, "you are just in time, Margaret, to give the coup de grace, for it is evident by Mr. Morgan's reference, in his Bunker Hill position, to Franklin, that he is getting out of powder."

The girl stood a moment, her slight figure framed in the doorway, while the company rose to greet her, with a half-hesitating, half-inquiring look in her bright face which I had seen in it a thousand times.

I remember that it came upon me with a sort of surprise at the moment that we had never thought or spoken much of Margaret Debree as beautiful. We were so accustomed to her; we had known her so long, we had known her always. We had never analyzed our admiration of her. She had so many qualities that are better than beauty that we had not credited her with the more obvious attraction. And perhaps she had just become visibly beautiful. It may be that there is an instant in a girl's life corresponding to what the Puritans called conversion in the soul, when the physical qualities, long maturing, suddenly glow in an effect which we call beauty. It cannot be that women do not have a consciousness of it, perhaps of the instant of its advent. I remember when I was a child that I used to think that a stick of peppermint candy must burn with a consciousness of its own deliciousness.

Margaret was just turned twenty. As she paused there in the doorway her physical perfection flashed upon me for the first time. Of course I do not mean perfection, for perfection has no promise in it, rather the sad note of limit, and presently recession. In the rounded, exquisite lines of her figure there was the promise of that ineffable fullness and delicacy of womanhood which all the world raves about and destroys and mourns. It is not fulfilled always in the most beautiful, and perhaps never except to the woman who loves passionately, and believes she is loved with a devotion that exalts her body and soul above every other human being.

It is certain that Margaret's beauty was not classic. Her features were irregular even to piquancy. The chin had strength; the mouth was sensitive and not too small; the shapely nose with thin nostrils had an assertive quality that contradicted the impression of humility in the eyes when downcast; the large gray eyes were uncommonly soft and clear, an appearance of alternate tenderness and brilliancy as they were veiled or uncovered by the long lashes. They were gently commanding eyes, and no doubt her most effective point. Her abundant hair, brown with a touch of red in it in some lights, fell over her broad forehead in the fashion of the time. She had a way of carrying her head, of throwing it back at times, that was not exactly imperious, and conveyed the impression of spirit rather than of mere vivacity. These details seem to me all inadequate and misleading, for the attraction of the face that made it interesting is still undefined. I hesitate to say that there was a dimple near the corner of her mouth that revealed itself when she smiled lest this shall seem mere prettiness, but it may have been the keynote of her face. I only knew there was something about it that won the heart, as a too conscious or assertive beauty never does. She may have been plain, and I may have seen the loveliness of her nature, which I knew well, in features that gave less sign of it to strangers. Yet I noticed that Mr. Lyon gave her a quick second glance, and his manner was instantly that of deference, or at least attention, which he had shown to no other lady in the room. And the whimsical idea came into my mind—we are all so warped by international possibilities—to observe whether she did not walk like a countess (that is, as a countess ought to walk) as she advanced to shake hands with my wife. It is so easy to turn life into a comedy!

Margaret's great-grandmother—no, it was her great-great-grandmother, but we have kept the Revolutionary period so warm lately that it seems near—was a Newport belle, who married an officer in the suite of Rochambeau what time the French defenders of liberty conquered the women of Rhode Island. After the war was over, our officer resigned his love of glory for the heart of one of the loveliest women and the care of the best plantation on the Island. I have seen a miniature of her, which her lover wore at Yorktown, and which he always swore that Washington coveted—a miniature painted by a wandering artist of the day, which entirely justifies the French officer in his abandonment of the trade of a soldier. Such is man in his best estate. A charming face can make him campaign and fight and slay like a demon, can make a coward of him, can fill him with ambition to win the world, and can tame him into the domesticity of a drawing-room cat. There is this noble capacity in man to respond to the divinest thing visible to him in this world. Etienne Debree became, I believe, a very good citizen of the republic, and in '93 used occasionally to shake his head with satisfaction to find that it was still on his shoulders. I am not sure that he ever visited Mount Vernon, but after Washington's death Debree's intimacy with our first President became a more and more important part of his life and conversation. There is a pleasant tradition that Lafayette, when he was here in 1784, embraced the young bride in the French manner, and that this salute was valued as a sort of heirloom in the family.

I always thought that Margaret inherited her New England conscience from her great-great-grandmother, and a certain esprit or gayety—that is, a sub-gayety which was never frivolity—from her French ancestor. Her father and mother had died when she was ten years old, and she had been reared by a maiden aunt, with whom she still lived. The combined fortunes of both required economy, and after Margaret had passed her school course she added to their resources by teaching in a public school. I remember that she taught history, following, I suppose, the American notion that any one can teach history who has a text-book, just as he or she can teach literature with the same help. But it happened that Margaret was a better teacher than many, because she had not learned history in school, but in her father's well-selected library.

There was a little stir at Margaret's entrance; Mr. Lyon was introduced to her, and my wife, with that subtle feeling for effect which women have, slightly changed the lights. Perhaps Margaret's complexion or her black dress made this readjustment necessary to the harmony of the room. Perhaps she felt the presence of a different temperament in the little circle.

I never can tell exactly what it is that guides her in regard to the influence of light and color upon the intercourse of people, upon their conversation, making it take one cast or another. Men are susceptible to these influences, but it is women alone who understand how to produce them. And a woman who has not this subtle feeling always lacks charm, however intellectual she may be; I always think of her as sitting in the glare of disenchanting sunlight as indifferent to the exposure as a man would be. I know in a general way that a sunset light induces one kind of talk and noonday light another, and I have learned that talk always brightens up with the addition of a fresh crackling stick to the fire. I shouldn't have known how to change the lights for Margaret, although I think I had as distinct an impression of her personality as had my wife. There was nothing disturbing in it; indeed, I never saw her otherwise than serene, even when her voice betrayed strong emotion. The quality that impressed me most, however, was her sincerity, coupled with intellectual courage and clearness that had almost the effect of brilliancy, though I never thought of her as a brilliant woman.

"What mischief have you been attempting, Mr. Morgan?" asked Margaret, as she took a chair near him.

"Were you trying to make Mr. Lyon comfortable by dragging in Bunker Hill?"

"No; that was Mr. Fairchild, in his capacity as host."

"Oh, I'm sure you needn't mind me," said Mr. Lyon, good-humoredly. "I landed in Boston, and the first thing I went to see was the Monument. It struck me as so odd, you know, that the Americans should begin life by celebrating their first defeat."

"That is our way," replied Margaret, quickly. "We have started on a new basis over here; we win by losing. He who loses his life shall find it. If the red slayer thinks he slays he is mistaken. You know the Southerners say that they surrendered at last simply because they got tired of beating the North."

"How odd!"

"Miss Debree simply means," I exclaimed, "that we have inherited from the English an inability to know when we are whipped."

"But we were not fighting the battle of Bunker Hill, or fighting about it, which is more serious, Miss Debree. What I wanted to ask you was whether you think the domestication of religion will affect its power in the regulation of conduct."

"Domestication? You are too deep for me, Mr. Morgan. I don't any more understand you than I comprehend the writers who write about the feminization of literature."

"Well, taking the mystery out of it, the predominant element of worship, making the churches sort of good-will charitable associations for the spread of sociability and good-feeling."

"You mean making Christianity practical?"

"Partially that. It is a part of the general problem of what women are going to make of the world, now they have got hold of it, or are getting hold of it, and are discontented with being women, or with being treated as women, and are bringing their emotions into all the avocations of life."

"They cannot make it any worse than it has been."

"I'm not sure of that. Robustness is needed in churches as much as in government. I don't know how much the cause of religion is advanced by these church clubs of Christian Endeavor if that is the name, associations of young boys and girls who go about visiting other like clubs in a sufficiently hilarious manner. I suppose it's the spirit of the age. I'm just wondering whether the world is getting to think more of having a good time than it is of salvation."

"And you think woman's influence—for you cannot mean anything else—is somehow taking the vigor out of affairs, making even the church a soft, purring affair, reducing us all to what I suppose you would call a mush of domesticity."

"Or femininity."

"Well, the world has been brutal enough; it had better try a little femininity now."

"I hope it will not be more cruel to women."

"That is not an argument; that is a stab. I fancy you are altogether skeptical about woman. Do you believe in her education?"

"Up to a certain point, or rather, I should say, after a certain point."

"That's it," spoke up my wife, shading her eyes from the fire with a fan. "I begin to have my doubts about education as a panacea. I've noticed that girls with only a smattering—and most of them in the nature of things can go, no further—are more liable to temptations."

"That is because 'education' is mistaken for the giving of information without training, as we are finding out in England," said Mr. Lyon.

"Or that it is dangerous to awaken the imagination without a heavy ballast of principle," said Mr. Morgan.

"That is a beautiful sentiment," Margaret exclaimed, throwing back her head, with a flash from her eyes. "That ought to shut out women entirely. Only I cannot see how teaching women what men know is going to give them any less principle than men have. It has seemed to me a long while that the time has come for treating women like human beings, and giving them the responsibility of their position."

"And what do you want, Margaret?" I asked.

"I don't know exactly what I do want," she answered, sinking back in her chair, sincerity coming to modify her enthusiasm. "I don't want to go to Congress, or be a sheriff, or a lawyer, or a locomotive engineer. I want the freedom of my own being, to be interested in everything in the world, to feel its life as men do. You don't know what it is to have an inferior person condescend to you simply because he is a man."

"Yet you wish to be treated as a woman?" queried Mr. Morgan.

"Of course. Do you think I want to banish romance out of the world?"

"You are right, my dear," said my wife. "The only thing that makes society any better than an industrial ant-hill is the love between women and men, blind and destructive as it often is."

"Well," said Mrs. Morgan, rising to go, "having got back to first principles—"

"You think it is best to take your husband home before he denies even them," Mr. Morgan added.

When the others had gone, Margaret sat by the fire, musing, as if no one else were in the room. The Englishman, still alert and eager for information, regarded her with growing interest. It came into my mind as odd that, being such an uninteresting people as we are, the English should be so curious about us. After an interval, Mr. Lyon said:

"I beg your pardon, Miss Debree, but would you mind telling me whether the movement of Women's Rights is gaining in America?"

"I'm sure I don't know, Mr. Lyon," Margaret replied, after a pause, with a look of weariness. "I'm tired of all the talk about it. I wish men and women, every soul of them, would try to make the most of themselves, and see what would come of that."

"But in some places they vote about schools, and you have conventions—"

"Did you ever attend any kind of convention yourself, Mr. Lyon?"

"I? No. Why?"

"Oh, nothing. Neither did I. But you have a right to, you know. I should like to ask you one question, Mr. Lyon," the girl, continued, rising.

"Should be most obliged."

"Why is it that so few English women marry Americans?"

"I—I never thought of that," he stammered, reddening. "Perhaps—perhaps it's because of American women."

"Thank you," said Margaret, with a little courtesy. "It's very nice of you to say that. I can begin to see now why so many American women marry Englishmen."

The Englishman blushed still more, and Margaret said good-night.

It was quite evident the next day that Margaret had made an impression on our visitor, and that he was struggling with some new idea.

"Did you say, Mrs. Fairchild," he asked my wife, "that Miss Debree is a teacher? It seems very odd."

"No; I said she taught in one of our schools. I don't think she is exactly a teacher."

"Not intending always to teach?"

"I don't suppose she has any definite intentions, but I never think of her as a teacher."

"She's so bright, and—and interesting, don't you think? So American?"

"Yes; Miss Debree is one of the exceptions."

"Oh, I didn't mean that all American women were as clever as Miss Debree."

"Thank you," said my wife. And Mr. Lyon looked as if he couldn't see why she should thank him.

The cottage in which Margaret lived with her aunt, Miss Forsythe, was not far from our house. In summer it was very pretty, with its vine-shaded veranda across the front; and even in winter, with the inevitable raggedness of deciduous vines, it had an air of refinement, a promise which the cheerful interior more than fulfilled. Margaret's parting word to my wife the night before had been that she thought her aunt would like to see the "chrysalis earl," and as Mr. Lyon had expressed a desire to see something more of what he called the "gentry" of New England, my wife ended their afternoon walk at Miss Forsythe's.

It was one of the winter days which are rare in New England, but of which there had been a succession all through the Christmas holidays. Snow had not yet come, all the earth was brown and frozen, whichever way you looked the interlacing branches and twigs of the trees made a delicate lace-work, the sky was gray-blue, and the low-sailing sun had just enough heat to evoke moisture from the frosty ground and suffuse the atmosphere into softness, in which all the landscape became poetic. The phenomenon known as "red sunsets" was faintly repeated in the greenish crimson glow along the violet hills, in which Venus burned like a jewel.

There was a fire smoldering on the hearth in the room they entered, which seemed to be sitting-room, library, parlor, all in one; the old table of oak, too substantial for ornament, was strewn with late periodicals and pamphlets—English, American, and French—and with books which lay unarranged as they were thrown down from recent reading. In the centre was a bunch of red roses in a pale-blue Granada jug. Miss Forsythe rose from a seat in the western window, with a book in her hand, to greet her callers. She was slender, like Margaret, but taller, with soft brown eyes and hair streaked with gray, which, sweeping plainly aside from her forehead in a fashion then antiquated, contrasted finely with the flush of pink in her cheeks. This flush did not suggest youth, but rather ripeness, the tone that comes with the lines made in the face by gentle acceptance of the inevitable in life. In her quiet and self-possessed manner there was a little note of graceful timidity, not perhaps noticeable in itself, but in contrast with that unmistakable air of confidence which a woman married always has, and which in the unrefined becomes assertive, an exaggerated notion of her importance, of the value added to her opinions by the act of marriage. You can see it in her air the moment she walks away from the altar, keeping step to Mendelssohn's tune. Jack Sharpley says that she always seems to be saying, "Well, I've done it once for all." This assumption of the married must be one of the hardest things for single women to bear in their self-congratulating sisters.

I have no doubt that Georgiana Forsythe was a charming girl, spirited and handsome; for the beauty of her years, almost pathetic in its dignity and self-renunciation, could not have followed mere prettiness or a commonplace experience. What that had been I never inquired, but it had not soured her. She was not communicative nor confidential, I fancy, with any one, but she was always friendly and sympathetic to the trouble of others, and helpful in an undemonstrative way. If she herself had a secret feeling that her life was a failure, it never impressed her friends so, it was so even, and full of good offices and quiet enjoyment. Heaven only knows, however, the pathos of this apparently undisturbed life. For did a woman ever live who would not give all the years of tasteless serenity, for one year, for one month, for one hour, of the uncalculating delirium of love poured out upon a man who returned it? It may be better for the world that there are these women to whom life has still some mysteries, who are capable of illusions and the sweet sentimentality that grows out of a romance unrealized.

Although the recent books were on Miss Forsythe's table, her tastes and culture were of the past age. She admired Emerson and Tennyson. One may keep current with the news of the world without changing his principles. I imagine that Miss Forsythe read without injury to herself the passionate and the pantheistic novels of the young women who have come forward in these days of emancipation to teach their grandmothers a new basis of morality, and to render meaningless all the consoling epitaphs on the mossy New England gravestones. She read Emerson for his sweet spirit, for his belief in love and friendship, her simple Congregationalist faith remaining undisturbed by his philosophy, from which she took only a habit of toleration.

"Miss Debree has gone to church," she said, in answer to Mr. Lyon's glance around the room.

"To vespers?"

"I believe they call it that. Our evening meetings, you know, only begin at early candlelight."

"And you do not belong to the Church?"

"Oh, yes, to the ancient aristocratic church of colonial times," she replied, with a little smile of amusement. "My niece has stepped off Plymouth Rock."

"And was your religion founded on Plymouth Rock?"

"My niece says so when I rally her deserting the faith of her fathers," replied Miss Forsythe, laughing at the working of the Episcopalian mind.

"I should like to understand about that; I mean about the position of Dissenters in America."

"I'm afraid I could not help you, Mr. Lyon. I fancy an Englishman would have to be born again, as the phrase used to be, to comprehend that."

While Mr. Lyon was still unsatisfied on this point, he found the conversation shifted to the other side. Perhaps it was a new experience to him that women should lead and not follow in conversation. At any rate, it was an experience that put him at his ease. Miss Forsythe was a great admirer of Gladstone and of General Gordon, and she expressed her admiration with a knowledge that showed she had read the English newspapers.

"Yet I confess I don't comprehend Gladstone's conduct with regard to Egypt and Gordon's relief," she said.

"Perhaps," interposed my wife, "it would have been better for Gordon if he had trusted Providence more and Gladstone less."

"I suppose it was Gladstone's humanity that made him hesitate."

"To bombard Alexandria?" asked Mr. Lyon, with a look of asperity.

"That was a mistake to be expected of a Tory, but not of Mr. Gladstone, who seems always seeking the broadest principles of justice in his statesmanship."

"Yes, we regard Mr. Gladstone as a very great man, Miss Forsythe. He is broad enough. You know we consider him a rhetorical phenomenon. Unfortunately he always 'muffs' anything he touches."

"I suspected," Miss Forsythe replied, after a moment, "that party spirit ran as high in England as it does with us, and is as personal."

Mr. Lyon disclaimed any personal feeling, and the talk drifted into a comparison of English and American politics, mainly with reference to the social factor in English politics, which is so little an element here.

In the midst of the talk Margaret came in. The brisk walk in the rosy twilight had heightened her color, and given her a glowing expression which her face had not the night before, and a tenderness and softness, an unworldliness, brought from the quiet hour in the church.

*"My lady comes at last,
Timid and stepping fast,
And hastening hither,
Her modest eyes downcast."*

She greeted the stranger with a Puritan undemonstrativeness, and as if not exactly aware of his presence.

"I should like to have gone to vespers if I had known," said Mr. Lyon, after an embarrassing pause.

"Yes?" asked the girl, still abstractedly. "The world seems in a vesper mood," she added, looking out the west windows at the red sky and the evening star.

In truth Nature herself at the moment suggested that talk was an impertinence. The callers rose to go, with an exchange of neighborhood friendliness and invitations.

"I had no idea," said Mr. Lyon, as they walked homeward, "what the New World was like."

III

Mr. Lyon's invitation was for a week. Before the end of the week I was called to New York to consult Mr. Henderson in regard to a railway investment in the West, which was turning out more permanent than profitable. Rodney Henderson—the name later became very familiar to the public in connection with a certain Congressional investigation—was a graduate of my own college, a New Hampshire boy, a lawyer by profession, who practiced, as so many American lawyers do, in Wall Street, in political combinations, in Washington, in railways. He was already known as a rising man.

When I returned Mr. Lyon was still at our house. I understood that my wife had persuaded him to extend his visit—a proposal he was little reluctant to fall in with, so interested had he become in studying social life in America. I could well comprehend this, for we are all making a "study" of something in this age, simple enjoyment being considered an unworthy motive. I was glad to see that the young Englishman was improving himself, broadening his knowledge of life, and not wasting the golden hours of youth. Experience is what we all need, and though love or love-making cannot be called a novelty, there is something quite fresh about the study of it in the modern spirit.

Mr. Lyon had made himself very agreeable to the little circle, not less by his inquiring spirit than by his unaffected manners, by a kind of simplicity which women recognize as unconscious, the result of an inherited habit of not thinking about one's position. In excess it may be very disagreeable, but when it is combined with genuine good-nature and no self-assertion, it is attractive. And although American women like a man who is aggressive towards the world and combative, there is the delight of novelty in one who has leisure to be agreeable, leisure for them, and who seems to their imagination to have a larger range in life than those who are driven by business—one able to offer the peace and security of something attained.

There had been several little neighborhood entertainments, dinners at the Morgans' and at Mrs. Fletcher's, and an evening cup of tea at Miss Forsythe's. In fact Margaret and Mr. Lyon had been thrown much together. He had accompanied her to vespers, and they had taken a wintry walk or two together before the snow came. My wife had not managed it—she assured me of that; but she had not felt authorized to interfere; and she had visited the public library and looked into the British Peerage. Men were so suspicious. Margaret was quite able to take care of herself. I admitted that, but I suggested that the Englishman was a stranger in a strange land, that he was far from home, and had perhaps a weakened sense of those powerful social influences which must, after all, control him in the end. The only response to this was, "I think, dear, you'd better wrap him up in cotton and send him back to his family."

Among her other activities Margaret was interested in a mission school in the city, to which she devoted an occasional evening and Sunday afternoons. This was a new surprise for Mr. Lyon. Was this also a part of the restlessness of American life? At Mrs. Howe's german the other evening the girl had seemed wholly absorbed in dress, and the gayety of the serious formality of the occasion, feeling the responsibility of it scarcely less than the "leader." Yet her mind was evidently much occupied with the "condition of women," and she taught in a public school. He could not at all make it out. Was she any more serious about the german than about the mission school? It seemed odd at her age to take life so seriously. And was she serious in all her various occupations, or only experimenting? There was a certain mocking humor in the girl that puzzled the Englishman still more.

"I have not seen much of your life," he said one night to Mr. Morgan; "but aren't most American women a little restless, seeking an occupation?"

"Perhaps they have that appearance; but about the same number find it, as formerly, in marriage."

"But I mean, you know, do they look to marriage as an end so much?"

"I don't know that they ever did look to marriage as anything but a means."

"I can tell you, Mr. Lyon," my wife interrupted, "you will get no information out of Mr. Morgan; he is a scoffer."

"Not at all, I do assure you," Morgan replied. "I am just a humble observer. I see that there is a change going on, but I cannot comprehend it. When I was young, girls used to go in for society; they danced their feet off from seventeen to twenty-one. I never heard anything about any occupation; they had their swing and their fling, and their flirtations; they appeared to be skimming off of those impressionable, joyous years the cream of life."

"And you think that fitted them for the seriousness of life?" asked his wife.

"Well, I am under the impression that very good women came out of that society. I got one out of that dancing crowd who has been serious enough for me."

"And little enough you have profited by it," said Mrs. Morgan.

"I'm content. But probably I'm old-fashioned. There is quite another spirit now. Girls out of pinafores must begin seriously to consider some calling. All their flirtation from seventeen to twenty-one is with some occupation. All their dancing days they must go to college, or in some way lay the foundation for a useful life. I suppose it's all right. No doubt we shall have a much higher style of women in the future than we ever had in the past."

"You allow nothing," said Mrs. Fletcher, "for the necessity of earning a living in these days of competition. Women never will come to their proper position in the world, even as companions of men, which you regard as their highest office, until they have the ability to be self-supporting."

"Oh, I admitted the fact of the independence of women a long time ago. Every one does that before he comes to middle life. About the shifting all round of this burden of earning a living, I am not so sure. It does not appear yet to make competition any less; perhaps competition would disappear if everybody did earn his own living and no more. I wonder, by-the-way, if the girls, the young women, of the class we seem to be discussing ever do earn as much as would pay the wages of the servants who are hired to do the housework in their places?"

"That is a most ignoble suggestion," I could not help saying, "when you know that the object in modern life is the cultivation of the mind, the elevation of women, and men also, in intellectual life."

"I suppose so. I should like to have asked Abigail Adams's opinion on the way to do it."

"One would think," I said, "that you didn't know that the spinning-jenny and the stocking-knitter had been invented. Given these, the women's college was a matter of course."

"Oh, I'm a believer in all kinds of machinery anything to save labor. Only, I have faith that neither the jenny nor the college will change human nature, nor take the romance out of life."

"So have I," said my wife. "I've heard two things affirmed: that women who receive a scientific or professional education lose their faith, become usually agnostics, having lost sensitiveness to the mysteries of life."

"And you think, therefore, that they should not have a scientific education?"

"No, unless all scientific prying into things is a mistake. Women may be more likely at first to be upset than men, but they will recover their balance when the novelty is worn off. No amount of science will entirely change their emotional nature; and besides, with all our science, I don't see that the supernatural has any less hold on this generation than on the former."

"Yes, and you might say the world was never before so credulous as it is now. But what was the other thing?"

"Why, that co-education is likely to diminish marriages among the co-educated. Daily familiarity in the classroom at the most impressionable age, revelation of all the intellectual weaknesses and petulances, absorption of mental routine on an equality, tend to destroy the sense of romance and mystery that are the most powerful attractions between the sexes. It is a sort of disenchanting familiarity that rubs off the bloom."

"Have you any statistics on the subject?"

"No. I fancy it is only a notion of some old foggy who thinks education in any form is dangerous for women."

"Yes, and I fancy that co-education will have about as much effect on life generally as that solemn meeting of a society of intelligent and fashionable women recently in one of our great cities, who met to discuss the advisability of limiting population."

"Great Scott!" I exclaimed, "this is an interesting age."

I was less anxious about the vagaries of it when I saw the very old-fashioned way in which the international drama was going on in our neighborhood. Mr. Lyon was increasingly interested in Margaret's mission work. Nor was there much affectation in this. Philanthropy, anxiety about the working-classes, is nowhere more serious or in the fashion than it is in London. Mr. Lyon, wherever he had been, had made a special study of the various aid and relief societies, especially of the work for young waifs and strays.

One Sunday afternoon they were returning from the Bloom Street Mission. Snow covered the ground, the sky was leaden, and the air had a penetrating chill in it far more disagreeable than extreme cold.

"We also," Mr. Lyon was saying, in continuation of a conversation, "are making a great effort for the common people."

"But we haven't any common people here," replied Margaret, quickly. "That bright boy you noticed in my class, who was a terror six months ago, will no doubt be in the City Council in a few years, and likely enough mayor."

"Oh, I know your theory. It practically comes to the same thing, whatever you call it. I couldn't see that the work in New York differed much from that in London. We who have leisure ought to do something for the working-classes."

"I sometimes doubt if it is not all a mistake most of our charitable work. The thing is to get people to do something for themselves."

"But you cannot do away with distinctions?"

"I suppose not, so long as so many people are born vicious, or incompetent, or lazy. But, Mr. Lyon, how much good do you suppose condescending charity does?" asked Margaret, firing up in a way the girl had at times. "I mean the sort that makes the distinctions more evident. The very fact that you have leisure to meddle in their affairs may be an annoyance to the folks you try to help by the little palliatives of charity. What effect upon a wretched city neighborhood do you suppose is produced by the advent in it of a stylish carriage and a lady in silk, or even the coming of a well-dressed, prosperous woman in a horse-car, however gentle and unassuming she may be in this distribution of sympathy and bounty? Isn't the feeling of inequality intensified? And the degrading part of it may be that so many are willing to accept this sort of bounty. And your men of leisure, your club men, sitting in the windows and seeing the world go by as a spectacle—men who never did an hour's necessary work in their lives—what effect do you suppose the sight of them has upon men out of work, perhaps by their own fault, owing to the same disposition to be idle that the men in the club windows have?"

"And do you think it would be any better if all were poor alike?"

"I think it would be better if there were no idle people. I'm half ashamed that I have leisure to go every time I go to that mission. And I'm almost sorry, Mr. Lyon, that I took you there. The boys knew you were English. One of them asked me if you were a 'lord' or a 'juke' or something. I cannot tell how they will take it. They may resent the spying into their world of an 'English juke,' and they may take it in the light of a show."

Mr. Lyon laughed. And then, perhaps after a little reflection upon the possibility that the nobility was becoming a show in this world, he said:

"I begin to think I'm very unfortunate, Miss Debree. You seem to remind me that I am in a position in which I can do very little to help the world along."

"Not at all. You can do very much."

"But how, when whatever I attempt is considered a condescension? What can I do?"

"Pardon me," and Margaret turned her eyes frankly upon him. "You can be a good earl when your time comes."

Their way lay through the little city park. It is a pretty place in summer—a varied surface, well planted with forest and ornamental trees, intersected by a winding stream. The little river was full now, and ice had formed on it, with small openings here and there, where the dark water, hurrying along as if in fear of arrest, had a more chilling aspect than the icy cover. The ground was white with snow, and all the trees were bare except for a few frozen oak-leaves here and there, which shivered in the wind and somehow added to the desolation. Leaden clouds covered the sky, and only in the west was there a gleam of the departing winter day.

Upon the elevated bank of the stream, opposite to the road by which they approached, they saw a group of people—perhaps twenty-drawn closely together, either in the sympathy of segregation from an unfeeling world, or for protection from the keen wind. On the hither bank, and leaning on the rails of the drive, had collected a motley crowd of spectators, men, women, and boys, who exhibited some impatience and much curiosity, decorous for the most part, but emphasized by occasional jocose remarks in an undertone. A serious ceremony was evidently in progress. The separate group had not a prosperous air. The women were thinly clad for such a day. Conspicuous in the little assembly was a tall, elderly man in a shabby long coat and a broad felt hat, from under which his white hair fell upon his shoulders. He might be a prophet in Israel come out to testify to an unbelieving world, and the little group around him, shaken like reeds in the wind, had the appearance of martyrs to a cause. The light of another world shone in their thin, patient faces. Come, they seemed to say to the worldlings on the opposite bank—come and see what happiness it is to serve the Lord. As they waited, a faint tune was started, a quavering hymn, whose feeble notes the wind blew away of first, but which grew stronger.

Before the first stanza was finished a carriage appeared in the rear of the group. From it descended a middle-aged man and a stout woman, and they together helped a young girl to alight. She was clad all in

white. For a moment her thin, delicate figure shrank from the cutting wind. Timid, nervous, she glanced an instant at the crowd and the dark icy stream; but it was only a protest of the poor body; the face had the rapt, exultant look of joyous sacrifice.

The tall man advanced to meet her, and led her into the midst of the group.

For a few moments there was prayer, inaudible at a distance. Then the tall man, taking the girl by the hand, advanced down the slope to the stream. His hat was laid aside, his venerable locks streamed in the breeze, his eyes were turned to heaven; the girl walked as in a vision, without a tremor, her wide-opened eyes fixed upon invisible things. As they moved on, the group behind set up a joyful hymn in a kind of mournful chant, in which the tall man joined with a strident voice. Fitfully the words came on the wind, in an almost heart-breaking wail:

*"Beyond the smiling and the weeping I shall be soon;
Beyond the waking and the sleeping,
Beyond the sowing and the reaping, I shall be soon."*

They were near the water now, and the tall man's voice sounded out loud and clear:

"Lord, tarry not, but come!"

They were entering the stream where there was an opening clear of ice; the footing was not very secure, and the tall man ceased singing, but the little band sang on:

"Beyond the blooming and the fading I shall be soon."

The girl grew paler and shuddered. The tall man sustained her with an attitude of infinite sympathy, and seemed to speak words of encouragement. They were in the mid-stream; the cold flood surged about their waists. The group sang on:

*"Beyond the shining and the shading,
Beyond the hoping and the dreading, I shall be soon."*

The strong, tender arms of the tall man gently lowered the white form under the cruel water; he staggered a moment in the swift stream, recovered himself, raised her, white as death, and the voices of the wailing tune came:

*"Love, rest, and home
Sweet hope! Lord, tarry not, but come!"*

And the tall man, as he struggled to the shore with his almost insensible burden, could be heard above the other voices and the wind and the rush of the waters:

"Lord, tarry not, but come!"

The girl was hurried into the carriage, and the group quickly dispersed. "Well, I'll be—" The tender-hearted little wife of the rough man in the crowd who began that sentence did not permit him to finish it. "That'll be a case for a doctor right away," remarked a well-known practitioner who had been looking on.

Margaret and Mr. Lyon walked home in silence. "I can't talk about it," she said. "It's such a pitiful world."

IV

In the evening, at our house, Margaret described the scene in the park.

"It's dreadful," was the comment of Miss Forsythe. "The authorities ought not to permit such a thing."

"It seemed to me as heroic as pitiful, aunt. I fear I should be incapable of making such a testimony."

"But it was so unnecessary."

"How do we know what is necessary to any poor soul? What impressed me most strongly was that there is in the world still this longing to suffer physically and endure public scorn for a belief."

"It may have been a disappointment to the little band," said Mr. Morgan, "that there was no demonstration from the spectators, that there was no loud jeering, that no snowballs were thrown by the boys."

"They could hardly expect that," said I; "the world has become so tolerant that it doesn't care."

"I rather think," Margaret replied, "that the spectators for a moment came under the spell of the hour, and were awed by something supernatural in the endurance of that frail girl."

"No doubt," said my wife, after a little pause. "I believe that there is as much sense of mystery in the world as ever, and as much of what we call faith, only it shows itself eccentrically. Breaking away from traditions and not going to church have not destroyed the need in the minds of the mass of people for something outside themselves."

"Did I tell you," interposed Morgan—"it is almost in the line of your thought—of a girl I met the other day on the train? I happened to be her seat-mate in the car—thin face, slight little figure—a commonplace girl, whom I took at first to be not more than twenty, but from the lines about her large eyes she was probably nearer forty. She had in her lap a book, which she conned from time to time, and seemed to be committing

verses to memory as she looked out the window. At last I ventured to ask what literature it was that interested her so much, when she turned and frankly entered into conversation. It was a little Advent song-book. She liked to read it on the train, and hum over the tunes. Yes, she was a good deal on the cars; early every morning she rode thirty miles to her work, and thirty miles back every evening. Her work was that of clerk and copyist in a freight office, and she earned nine dollars a week, on which she supported herself and her mother. It was hard work, but she did not mind it much. Her mother was quite feeble. She was an Adventist. 'And you?' I asked. 'Oh, yes; I am. I've been an Adventist twenty years, and I've been perfectly happy ever since I joined—perfectly,' she added, turning her plain face, now radiant, towards me. 'Are you one?' she asked, presently. 'Not an immediate Adventist,' I was obliged to confess. 'I thought you might be, there are so many now, more and more.' I learned that in our little city there were two Advent societies; there had been a split on account of some difference in the meaning of original sin. 'And you are not discouraged by the repeated failure of the predictions of the end of the world?' I asked. 'No. Why should we be? We don't fix any certain day now, but all the signs show that it is very near. We are all free to think as we like. Most of our members now think it will be next year.'—'I hope not!' I exclaimed. 'Why?' she asked, turning to me with a look of surprise. 'Are you afraid?' I evaded by saying that I supposed the good had nothing to fear. 'Then you must be an Adventist, you have so much sympathy.'—'I shouldn't like to have the world come to an end next year, because there are so many interesting problems, and I want to see how they will be worked out.'—'How can you want to put it off'—and there was for the first time a little note of fanaticism in her voice—'when there is so much poverty and hard work? It is such a hard world, and so much suffering and sin. And it could all be ended in a moment. How can you want it to go on?' The train approached the station, and she rose to say good-by. 'You will see the truth some day,' she said, and went away as cheerful as if the world was actually destroyed. She was the happiest woman I have seen in a long time."

"Yes," I said, "it is an age of both faith and credulity."

"And nothing marks it more," Morgan added, "than the popular expectation among the scientific and the ignorant of something to come out of the dimly understood relation of body and mind. It is like the expectation of the possibilities of electricity."

"I was going on to say," I continued, "that wherever I walk in the city of a Sunday afternoon, I am struck with the number of little meetings going on, of the faithful and the unfaithful, Adventists, socialists, spiritualists, culturists, Sons and Daughters of Edom; from all the open windows of the tall buildings come notes of praying, of exhortation, the melancholy wail of the inspiring Sankey tunes, total abstinence melodies, over-the-river melodies, songs of entreaty, and songs of praise. There is so much going on outside of the regular churches!"

"But the churches are well attended," suggested my wife.

"Yes, fairly, at least once a day, and if there is sensational preaching, twice. But there is nothing that will so pack the biggest hall in the city as the announcement of inspirational preaching by some young woman who speaks at random on a text given her when she steps upon the platform. There is something in her rhapsody, even when it is incoherent, that appeals to a prevailing spirit."

"How much of it is curiosity?" Morgan asked. "Isn't the hall just as jammed when the clever attorney of Nothingism, Ham Saversoul, jokes about the mysteries of this life and the next?"

"Very likely. People like the emotional and the amusing. All the same, they are credulous, and entertain doubt and belief on the slightest evidence."

"Isn't it natural," spoke up Mr. Lyon, who had hitherto been silent, "that you should drift into this condition without an established church?"

"Perhaps it's natural," Morgan retorted, "that people dissatisfied with an established religion should drift over here. Great Britain, you know, is a famous recruiting-ground for our socialistic experiments."

"Ah, well," said my wife, "men will have something. If what is established repels to the extent of getting itself disestablished, and all churches should be broken up, society would somehow precipitate itself again spiritually. I heard the other day that Boston, getting a little weary of the Vedas, was beginning to take up the New Testament."

"Yes," said Morgan, "since Tolstoi mentioned it."

After a little the talk drifted into psychic research, and got lost in stories of "appearances" and "long-distance" communications. It appeared to me that intelligent people accepted this sort of story as true on evidence on which they wouldn't risk five dollars if it were a question of money. Even scientists swallow tales of prehistoric bones on testimony they would reject if it involved the title to a piece of real estate.

Mr. Lyon still lingered in the lap of a New England winter as if it had been Capua. He was anxious to visit Washington and study the politics of the country, and see the sort of society produced in the freedom of a republic, where there was no court to give the tone and there were no class lines to determine position. He was restless under this sense of duty. The future legislator for the British Empire must understand the Constitution of its great rival, and thus be able to appreciate the social currents that have so much to do with political action.

In fact he had another reason for uneasiness. His mother had written him, asking why he stayed so long in an unimportant city, he who had been so active a traveler hitherto. Knowledge of the capitals was what he needed. Agreeable people he could find at home, if his only object was to pass the time. What could he reply? Could he say that he had become very much interested in studying a schoolteacher—a very charming schoolteacher? He could see the vision raised in the minds of his mother and of the earl and of his elder sister as they should read this precious confession—a vision of a schoolma'am, of an American girl, and an American girl without any money at that, moving in the little orbit of Chisholm House. The thing was absurd. And yet why was it absurd? What was English politics, what was Chisholm House, what was everybody in England compared to this noble girl? Nay, what would the world be without her? He grew hot in thinking of it, indignant at his relations and the whole artificial framework of things.

The situation was almost humiliating. He began, to doubt the stability of his own position. Hitherto he had

met no obstacle: whatever he had desired he had obtained. He was a sensible fellow, and knew the world was not made for him; but it certainly had yielded to him in everything. Why did he doubt now? That he did doubt showed him the intensity of his interest in Margaret. For love is humble, and undervalues self in contrast with that which it desires. At this touchstone rank, fortune, all that go with them, seemed poor. What were all these to a woman's soul? But there were women enough, women enough in England, women more beautiful than Margaret, doubtless as amiable and intellectual. Yet now there was for him only one woman in the world. And Margaret showed no sign. Was he about to make a fool of himself? If she should reject him he would seem a fool to himself. If she accepted him he would seem a fool to the whole circle that made his world at home. The situation was intolerable. He would end it by going.

But he did not go. If he went today he could not see her tomorrow. To a lover anything can be borne if he knows that he shall see her tomorrow. In short, he could not go so long as there was any doubt about her disposition towards him.

And a man is still reduced to this in the latter part of the nineteenth century, notwithstanding all our science, all our analysis of the passion, all our wise jabber about the failure of marriage, all our commonsense about the relation of the sexes. Love is still a personal question, not to be reasoned about or in any way disposed of except in the old way. Maidens dream about it; diplomats yield to it; stolid men are upset by it; the aged become young, the young grave, under its influence; the student loses his appetite—God bless him! I like to hear the young fellows at the club rattle on bravely, indifferent to the whole thing—skeptical, in fact, about it. And then to see them, one after another, stricken down, and looking a little sheepish and not saying much, and by-and-by radiant. You would think they owned the world. Heaven, I think, shows us no finer sarcasm than one of these young skeptics as a meek family man.

Margaret and Mr. Lyon were much together.

And their talk, as always happens when two persons find themselves much together, became more and more personal. It is only in books that dialogues are abstract and impersonal. The Englishman told her about his family, about the set in which he moved—and he had the English frankness in setting it out unreservedly—about the life he led at Oxford, about his travels, and so on to what he meant to do in the world. Margaret in return had little to tell, her own life had been so simple—not much except the maidenly reserves, the discontents with herself, which interested him more than anything else; and of the future she would not speak at all. How can a woman, without being misunderstood? All this talk had a certain danger in it, for sympathy is unavoidable between two persons who look ever so little into each other's hearts and compare tastes and desires.

"I cannot quite understand your social life over here," Mr. Lyon was saying one day. "You seem to make distinctions, but I cannot see exactly for what."

"Perhaps they make themselves. Your social orders seem able to resist Darwin's theory, but in a republic natural selection has a better chance."

"I was told by a Bohemian on the steamer coming over that money in America takes the place of rank in England."

"That isn't quite true."

"And I was told in Boston by an acquaintance of very old family and little fortune that 'blood' is considered here as much as anywhere."

"You see, Mr. Lyon, how difficult it is to get correct information about us. I think we worship wealth a good deal, and we worship family a good deal, but if any one presumes too much upon either, he is likely to come to grief. I don't understand it very well myself."

"Then it is not money that determines social position in America?"

"Not altogether; but more now than formerly. I suppose the distinction is this: family will take a person everywhere, money will take him almost everywhere; but money is always at this disadvantage—it takes more and more of it to gain position. And then you will find that it is a good deal a matter of locality. For instance, in Virginia and Kentucky family is still very powerful, stronger than any distinction in letters or politics or success in business; and there is a certain diminishing number of people in New York, Philadelphia, Boston, who cultivate a good deal of exclusiveness on account of descent."

"But I am told that this sort of aristocracy is succumbing to the new plutocracy."

"Well, it is more and more difficult to maintain a position without money. Mr. Morgan says that it is a disheartening thing to be an aristocrat without luxury; he declares that he cannot tell whether the Knickerbockers of New York or the plutocrats are more uneasy just now. The one is hungry for social position, and is morose if he cannot buy it; and when the other is seduced by luxury and yields, he finds that his distinction is gone. For in his heart the newly rich only respects the rich. A story went about of one of the Bonanza princes who had built his palace in the city, and was sending out invitations to his first entertainment. Somebody suggested doubts to him about the response. 'Oh,' he said, 'the beggars will be glad enough to come!'"

"I suppose, Mr. Lyon," said Margaret, demurely, "that this sort of thing is unknown in England?"

"Oh, I couldn't say that money is not run after there to some extent."

"I saw a picture in Punch of an auction, intended as an awful satire on American women. It struck me that it might have two interpretations."

"Yes, Punch is as friendly to America as it is to the English aristocracy."

"Well, I was only thinking that it is just an exchange of commodities. People will always give what they have for what they want. The Western man changes his pork in New York for pictures. I suppose that—what do you call it?—the balance of trade is against us, and we have to send over cash and beauty."

"I didn't know that Miss Debree was so much of a political economist."

"We got that out of books in school. Another thing we learned is that England wants raw material; I thought I might as well say it, for it wouldn't be polite for you."

"Oh, I'm capable of saying anything, if provoked. But we have got away from the point. As far as I can see, all sorts of people intermarry, and I don't see how you can discriminate socially—where the lines are."

Mr. Lyon saw the moment that he had made it that this was a suggestion little likely to help him. And Margaret's reply showed that he had lost ground.

"Oh, we do not try to discriminate—except as to foreigners. There is a popular notion that Americans had better marry at home."

"Then the best way for a foreigner to break your exclusiveness is to be naturalized." Mr. Lyon tried to adopt her tone, and added, "Would you like to see me an American citizen?"

"I don't believe you could be, except for a little while; you are too British."

"But the two nations are practically the same; that is, individuals of the nations are. Don't you think so?"

"Yes, if one of them gives up all the habits and prejudices of a lifetime and of a whole social condition to the other."

"And which would have to yield?"

"Oh, the man, of course. It has always been so. My great-great-grandfather was a Frenchman, but he became, I have always heard, the most docile American republican."

"Do you think he would have been the one to give in if they had gone to France?"

"Perhaps not. And then the marriage would have been unhappy. Did you never take notice that a woman's happiness, and consequently the happiness of marriage, depends upon a woman's having her own way in all social matters? Before our war all the men who married down South took the Southern view, and all the Southern women who married up North held their own, and sensibly controlled the sympathies of their husbands."

"And how was it with the Northern women who married South, as you say?"

"Well, it must be confessed that a good many of them adapted themselves, in appearance at least. Women can do that, and never let anyone see they are not happy and not doing it from choice."

"And don't you think American women adapt themselves happily to English life?"

"Doubtless some; I doubt if many do; but women do not confess mistakes of that kind. Woman's happiness depends so much upon the continuation of the surroundings and sympathies in which she is bred. There are always exceptions. Do you know, Mr. Lyon, it seems to me that some people do not belong in the country where they were born. We have men who ought to have been born in England, and who only find themselves really they go there. There are who are ambitious, and court a career different from any that a republic can give them. They are not satisfied here. Whether they are happy there I do not know; so few trees, when at all grown, will bear transplanting."

"Then you think international marriages are a mistake?"

"Oh, I don't theorize on subjects I am ignorant of."

"You give me very cold comfort."

"I didn't know," said Margaret, with a laugh that was too genuine to be consoling, "that you were traveling for comfort; I thought it was for information."

"And I am getting a great deal," said Mr. Lyon, rather ruefully. "I'm trying to find out where. I ought to have been born."

"I'm not sure," Margaret said, half seriously, "but you would have been a very good American."

This was not much of an admission, after all, but it was the most that Margaret had ever made, and Mr. Lyon tried to get some encouragement out of it. But he felt, as any man would feel, that this beating about the bush, this talk of nationality and all that, was nonsense; that if a woman loved a man she wouldn't care where he was born; that all the world would be as nothing to him; that all conditions and obstacles society and family could raise would melt away in the glow of a real passion. And he wondered for a moment if American girls were not "calculating"—a word to which he had learned over here to attach a new and comical meaning.

V

The afternoon after this conversation Miss Forsythe was sitting reading in her favorite window-seat when Mr. Lyon was announced. Margaret was at her school. There was nothing unusual in this afternoon call; Mr. Lyon's visits had become frequent and informal; but Miss Forsythe had a nervous presentiment that something important was to happen, that showed itself in her greeting, and which was perhaps caught from a certain new diffidence in his manner.

Perhaps the maiden lady preserves more than any other this sensitiveness, inborn in women, to the approach of the critical moment in the affairs of the heart. The day may some time be past when she—is sensitive for herself—philosophers say otherwise—but she is easily put in a flutter by the affair of another. Perhaps this is because the negative (as we say in these days) which takes impressions retains all its delicacy from the fact that none of them have ever been developed, and perhaps it is a wise provision of nature that age in a heart unsatisfied should awaken lively apprehensive curiosity and sympathy about the manifestation of the tender passion in others. It certainly is a note of the kindness and charity of the maiden mind that its sympathies are so apt to be most strongly excited in the success of the wooer. This interest may be quite separable from the common feminine desire to make a match whenever there is the least chance of it. Miss Forsythe was not a match-maker, but Margaret herself would not have been more embarrassed than she was at the beginning of this interview.

When Mr. Lyon was seated she made the book she had in her hand the excuse for beginning a talk about

the confidence young novelists seem to have in their ability to upset the Christian religion by a fictitious representation of life, but her visitor was too preoccupied to join in it. He rose and stood leaning his arm upon the mantel-piece, and looking into the fire, and said, abruptly, at last:

"I called to see you, Miss Forsythe, to—to consult you about your niece."

"About her career?" asked Miss Forsythe, with a nervous consciousness of falsehood.

"Yes, about her career; that is, in a way," turning towards her with a little smile.

"Yes?"

"You must have seen my interest in her. You must have known why I stayed on and on. But it was, it is, all so uncertain. I wanted to ask your permission to speak my mind to her."

"Are you quite sure you know your own mind?" asked Miss Forsythe, defensively.

"Sure—sure; I have never had the feeling for any other woman I have for her."

"Margaret is a noble girl; she is very independent," suggested Miss Forsythe, still avoiding the point.

"I know. I don't ask you her feeling." Mr. Lyon was standing quietly looking down into the coals. "She is the only woman in the world to me. I love her. Are you against me?" he asked, suddenly looking up, with a flush in his face.

"Oh, no! no!" exclaimed Miss Forsythe, with another access of timidity. "I shouldn't take the responsibility of being against you, or—otherwise. It is very manly in you to come to me, and I am sure I—we all wish nothing but your own happiness. And so far as I am concerned—"

"Then I have your permission?" he asked, eagerly.

"My permission, Mr. Lyon? why, it is so new to me, I scarcely realized that I had any permission," she said, with a little attempt at pleasantry. "But as her aunt—and guardian, as one may say—personally I should have the greatest satisfaction to know that Margaret's destiny was in the hands of one we all esteem and know as we do you."

"Thank you, thank you," said Mr. Lyon, coming forward and seizing her hand.

"But you must let me say, let me suggest, that there are a great many things to be thought of. There is such a difference in education, in all the habits of your lives, in all your relations. Margaret would never be happy in a position where less was accorded to her than she had all her life. Nor would her pride let her take such a position."

"But as my wife—"

"Yes, I know that is sufficient in your mind. Have you consulted your mother, Mr. Lyon?"

"Not yet."

"And have you written to any one at home about my niece?"

"Not yet."

"And does it seem a little difficult to do so?" This was a probe that went even deeper than the questioner knew. Mr. Lyon hesitated, seeing again as in a vision the astonishment of his family. He was conscious of an attempt at self-deception when he replied:

"Not difficult, not at all difficult, but I thought I would wait till I had something definite to say."

"Margaret is, of course, perfectly free to act for herself. She has a very ardent nature, but at the same time a great deal of what we call common sense. Though her heart might be very much engaged, she would hesitate to put herself in any society which thought itself superior to her. You see I speak with great frankness."

It was a new position for Mr. Lyon to find his prospective rank seemingly an obstacle to anything he desired. For a moment the whimsicality of it interrupted the current of his feeling. He thought of the probable comments of the men of his London club upon the drift his conversation was taking with a New England spinster about his fitness to marry a school-teacher. With a smile that was summoned to hide his annoyance, he said, "I don't see how I can defend myself, Miss Forsythe."

"Oh," she replied, with an answering smile that recognized his view of the humor of the situation, "I was not thinking of you, Mr. Lyon, but of the family and the society that my niece might enter, to which rank is of the first importance."

"I am simply John Lyon, Miss Forsythe. I may never be anything else. But if it were otherwise, I did not suppose that Americans objected to rank."

It was an unfortunate speech, felt to be so the instant it was uttered. Miss Forsythe's pride was touched, and the remark was not softened to her by the air of half banter with which the sentence concluded. She said, with a little stillness and formality: "I fear, Mr. Lyon, that your sarcasm is too well merited. But there are Americans who make a distinction between rank and blood. Perhaps it is very undemocratic, but there is nowhere else more pride of family, of honorable descent, than here. We think very much of what we call good blood. And you will pardon me for saying that we are accustomed to speak of some persons and families abroad which have the highest rank as being thoroughly bad blood. If I am not mistaken, you also recognize the historic fact of ignoble blood in the owners of noble titles. I only mean, Mr. Lyon," she added, with a softening of manner, "that all Americans do not think that rank covers a multitude of sins."

"Yes, I think I get your American point of view. But to return to myself, if you will allow me; if I am so fortunate as to win Miss Debree's love, I have no fear that she would not win the hearts of all my family. Do you think that my—my prospective position would be an objection to her?"

"Not your position, no; if her heart were engaged. But expatriation, involving a surrender of all the habits and traditions and associations of a lifetime and of one's kindred, is a serious affair. One would need to be very much in love"—and Miss Forsythe blushed a little as she said it—"to make such a surrender."

"I know. I am sure I love her too much to wish to bring any change in her life that would ever cause her unhappiness."

"I am glad to feel sure of that."

"And so I have your permission?"

"Most sincerely," said Miss Forsythe, rising and giving him her hand. "I could wish nothing better for Margaret than union with a man like you. But whatever I wish, you two have your destiny in your own hands." Her tone was wholly frank and cordial, but there was a wistful look in her face, as of one who knew how roughly life handles all youthful enthusiasms.

When John Lyon walked away from her door his feelings were very much mixed. At one instant his pride rebelled against the attitude he had just assumed. But this was only a flash, which he put away as unbecoming a man towards a true woman. The next thought was one of unselfish consideration for Margaret herself. He would not subject her to any chance of social mortifications. He would wait. He would return home and test his love by renewing his lifelong associations, and by the reception his family would give to his proposal. And the next moment he saw Margaret as she had become to him, as she must always be to him. Should he risk the loss of her by timidity? What were all these paltry considerations to his love?

Was there ever a young man who could see any reasons against the possession of the woman he loved? Was there ever any love worth the name that could be controlled by calculations of expediency? I have no doubt that John Lyon went through the usual process which is called weighing a thing in the mind. It is generally an amusing process, and it is consoling to the conscience. The mind has little to do with it except to furnish the platform on which the scales are set up. A humorist says that he must have a great deal of mind, it takes him so long to make it up. There is the same apparent deliberation where love is concerned. Everything "contra" is carefully placed in one scale of the balance, and it is always satisfactory and convincing to see how quickly it kicks the beam when love is placed in the other scale. The lightest love in the world, under a law as invariable as gravitation, is heavier than any other known consideration. It is perhaps doing injustice to Mr. Lyon not to dwell upon this struggle in his mind, and to say that in all honesty he may not have known that the result of it was predetermined. But interesting and commendable as are these processes of the mind, I confess that I should have respected him less if the result had not been predetermined. And this does not in any way take from him the merit of a restless night and a tasteless breakfast.

Philosophizers on this topic say that a man ought always to be able to tell by a woman's demeanor towards him whether she is favorably inclined, and that he need run no risk. Little signs, the eyes alone, draw people together, and make formal language superfluous. This theory is abundantly sustained by examples, and we might rest on it if all women knew their own minds, and if, on the other hand, they could always tell whether a man was serious before he made a definite avowal. There is another notion, fortunately not yet extinct, that the manliest thing a man can do is to take his life in his hand, pay the woman he loves the highest tribute in his power by offering her his heart and name, and giving her the definite word that may be the touchstone to reveal to herself her own feeling. In our conventional life women must move behind a mask in a world of uncertainties. What wonder that many of them learn in their defensive position to play a game, and sometimes experiment upon the honest natures of their admirers! But even this does not absolve the chivalrous man from the duty of frankness and explicitness. Life seems ideal in that far country where the handsome youth stops his carriage at the gate of the vineyard, and says to the laughing girl carrying a basket of grapes on her head, "My pretty maid, will you marry me?" And the pretty maid, dropping a courtesy, says, "Thank you, sir; I am already bespoken," or "Thank you; I will consider of it when I know you better."

Not for a moment, I suppose, is a woman ever ignorant of a man's admiration of her, however uncertain she may be of his intentions, and it was with an unusual flutter of the heart that Margaret received Mr. Lyon that afternoon. If she had doubts, they were dissipated by a certain constraint in his manner, and the importance he seemed to be attaching to his departure, and she was warned to go within her defenses. Even the most complaisant women like at least the appearance of a siege.

"I'm off tomorrow," he said, "for Washington. You know you recommended it as necessary to my American education."

"Yes. We send Representatives and strangers there to be educated. I have never been there myself."

"And do you not wish to go?"

"Very much. All Americans want to go to Washington. It is the great social opportunity; everybody there is in society. You will be able to see there, Mr. Lyon, how a republican democracy manages social life."

"Do you mean to say there are no distinctions?"

"Oh, no; there are plenty of official distinctions, and a code that is very curious and complicated, I believe. But still society is open."

"It must be—pardon me—a good deal like a mob."

"Well, our mobs of that sort are said to be very well behaved. Mr. Morgan says that Washington is the only capital in the world where the principle of natural selection applies to society; that it is there shown for the first time that society is able to take care of itself in the free play of democratic opportunities."

"It must be very interesting to see that."

"I hope you will find it so. The resident diplomats, I have heard, say that they find society there more agreeable than at any other capital—at least those who have the qualities to make themselves agreeable independent of their rank."

"Is there nothing like a court? I cannot see who sets the mode."

"Officially there may be something like a court, but it can be only temporary, for the personnel of it is dissolved every four years. And society, always forming and reforming, as the voters of the republic dictate, is almost independent of the Government, and has nothing of the social caste of Berlin or London."

"You make quite an ideal picture."

"Oh, I dare say it is not at all ideal; only it is rather fluid, and interesting, to see how society, without caste and subject to such constant change, can still be what is called 'society.' And I am told that while it is all open in a certain way, it nevertheless selects itself into agreeable groups, much as society does elsewhere. Yes, you

ought to see what a democracy can do in this way."

"But I am told that money makes your aristocracy here."

"Very likely rich people think they are an aristocracy. You see, Mr. Lyon, I don't know much about the great world. Mrs. Fletcher, whose late husband was once a Representative in Washington, says that life is not nearly so simple there as it used to be, and that rich men in the Government, vying with rich men who have built fine houses and who live there permanently without any Government position, have introduced an element of expense and display that interferes very much with the natural selection of which Mr. Morgan speaks. But you will see. We are all right sorry to have you leave us," Margaret added, turning towards him with frank, unclouded eyes.

"It is very good in you to say so. I have spent here the most delightful days of my life."

"Oh, that is charming flattery. You will make us all very conceited."

"Don't mock me, Miss Debree. I hoped I had awakened something more valuable to me than conceit," Lyon said, with a smile.

"You have, I assure you: gratitude. You have opened quite another world to us. Reading about foreign life does not give one at all the same impression of it that seeing one who is a part of it does."

"And don't you want to see that life for yourself? I hope some time—"

"Of course," Margaret said, interrupting; "all Americans expect to go to Europe. I have a friend who says she should be mortified if she reached heaven and there had to confess that she never had seen Europe. It is one of the things that is expected of a person. Though you know now that the embarrassing question that everybody has to answer is, 'Have you been to Alaska?' Have you been to Alaska, Mr. Lyon?"

This icy suggestion seemed very inopportune to Lyon. He rose and walked a step or two, and stood by the fire facing her. He confessed, looking down, that he had not been in Alaska, and he had no desire to go there. "In fact, Miss Debree," he said, with effort at speaking lightly, "I fear I am not in a geographical mood today. I came to say good-by, and—and—"

"Shall I call my aunt?" said Margaret, rising also.

"No, I beg; I had something to say that concerns us; that is, that concerns myself. I couldn't go away without knowing from you—that is, without telling you—"

The color rose in Margaret's cheek, and she made a movement of embarrassment, and said, with haste: "Some other time; I beg you will not say—I trust that I have done nothing that—"

"Nothing, nothing," he went on quickly; "nothing except to be yourself; to be the one woman"—he would not heed her hand raised in a gesture of protest; he stood nearer her now, his face flushed and his eyes eager with determination—"the one woman I care for. Margaret, Miss Debree, I love you!"

Her hand that rested on the table trembled, and the hot blood rushed to her face, flooding her in an agony of shame, pleasure, embarrassment, and anger that her face should contradict the want of tenderness in her eyes. In an instant self-possession came back to her mind, but not strength to her body, and she sank into the chair, and looking up, with only pity in her eyes, said, "I am sorry."

Lyon stopped; his heart seemed to stand still; the blood left his face; for an instant the sunshine left the world. It was a terrible blow, the worst a man can receive—a bludgeon on the head is nothing to it. He half turned, he looked again for an instant at the form that was more to him than all the world besides, unable to face the dreadful loss, and recovering speech, falteringly said, "Is that all?"

"That is all, Mr. Lyon," Margaret answered, not looking up, and in a voice that was perfectly steady.

He turned to go mechanically, and passed to the door in a sort of daze, forgetful of all conventionality; but habit is strong, and he turned almost immediately back from the passage. Margaret was still sitting, with no recognition of his departure.

"I beg you will make my excuses, and say good-by to Miss Forsythe. I had mentioned it to her. I thought perhaps she had told you, perhaps—I should like to know if it is anything about difference in—in nationality, about family, or—"

"No, no," said Margaret; "this could never be anything but a personal question with me. I—"

"But you said, 'some other time:' Might I ever expect—"

"No, no; there is no other time; do not go on. It can only be painful."

And then, with a forced cheerfulness: "You will no doubt thank me some day. Your life must be so different from mine. And you must not doubt my esteem, my appreciation," (her sense of justice forced this from her), "my good wishes. Good-by." She gave him her hand. He held it for a second, and then was gone.

She heard his footstep, rapid and receding. So he had really gone! She was not sorry—no. If she could have loved him! She sank back in her chair.

No, she could not love him. The man to command her heart must be of another type. But the greatest experience in a woman's life had come to her here, just now, in this commonplace room. A man had said he loved her. A thousand times as a girl she had dreamed of that, hardly confessing it to herself, and thought of such a scene, and feared it. And a man had said that he loved her. Her eyes grew tenderer and her face burned at the thought. Was it with pleasure? Yes, and with womanly pain. What an awful thing it was! Why couldn't he have seen? A man had said he loved her. Perhaps it was not in her to love any one. Perhaps she should live on and on like her aunt Forsythe. Well, it was over; and Margaret roused herself as her aunt entered the room.

"Has Mr. Lyon been here?"

"Yes; he has just gone. He was so sorry not to see you and say good-by. He left ever so many messages for you."

"And" (Margaret was moving as if to go) "did he say nothing—nothing to you?"

"Oh yes, he said a great deal," answered this accomplished hypocrite, looking frankly in her aunt's eyes. "He said how delightful his visit had been, and how sorry he was to go."

"And nothing else, Margaret?"

"Oh yes; he said he was going to Washington." And the girl was gone from the room.

VI

Margaret hastened to her chamber. Was the air oppressive? She opened the window and sat down by it. A soft south wind was blowing, eating away the remaining patches of snow; the sky was full of fleecy clouds. Where do these days come from in January? Why should nature be in a melting mood? Margaret instinctively would have preferred a wild storm, violence, anything but this elemental languor. Her emotion was incredible to herself.

It was only an incident. It had all happened in a moment, and it was over. But it was the first of the kind in a woman's life. The thrilling, mysterious word had been dropped into a woman's heart. Hereafter she would be changed. She never again would be as she was before. Would her heart be hardened or softened by the experience? She did not love him; that was clear. She had done right; that was clear. But he had said he loved her. Unwittingly she was following him in her thought. She had rejected plain John Lyon, amiable, intelligent, unselfish, kindly, deferential. She had rejected also the Earl of Chisholm, a conspicuous position, an honorable family, luxury, a great opportunity in life. It came to the girl in a flash. She moved nervously in her chair. She put down the thought as unworthy of her. But she had entertained it for a moment. In that second, ambition had entered the girl's soul. She had a glimpse of her own nature that seemed new to her. Was this, then, the meaning of her restlessness, of her charitable activities, of her unconfessed dreams of some career? Ambition had entered her soul in a definite form. She expelled it. It would come again in some form or other. She was indignant at herself as she thought of it. How odd it was! Her privacy had been invaded. The even tenor of her life had been broken. Henceforth would she be less or more sensitive to the suggestion of love, to the allurements of ambition? Margaret tried, in accordance with her nature, to be sincere with herself.

After all, what nonsense it was! Nothing really had happened. A stranger of a few weeks before had declared himself. She did not love him; he was no more to her than any other man. It was a common occurrence. Her judgment accorded with her feeling in what she had done. How was she to know that she had made a mistake, if mistake it was? How was she to know that this hour was a crisis in her life? Surely the little tumult would pass; surely the little whisper of worldliness could not disturb her ideals. But all the power of exclusion in her mind could not exclude the returning thought of what might have been if she had loved him. Alas! in that moment was born in her heart something that would make the idea of love less simple than it had been in her mind. She was heart-free, but her nature was too deep not to be profoundly affected by this experience.

Looking back upon this afternoon in the light of after-years, she probably could not feel—no one could say—that she had done wrong. How was she to tell? Why is it that to do the right thing is often to make the mistake of a life? Nothing could have been nobler than for Margaret indignantly to put aside a temptation that her heart told her was unworthy. And yet if she had yielded to it?

I ought to ask pardon, perhaps, for dwelling upon a thing so slight as the entrance of a thought in a woman's life. For as to Margaret, she seemed unchanged. She made no sign that anything unusual had occurred. We only knew that Mr. Lyon went away less cheerful than he usually was, that he said nothing of returning in response to our invitations, and that he seemed to anticipate nothing but the fulfillment of a duty in his visit to Washington.

What had happened was regarded as only an episode. In fact, however, I doubt if there are any episodes in our lives, any asides, that do not permanently affect our entire career. Are not the episodes, the casual thoughts, the fortuitous, unplanned meetings, the brief and maybe at the moment unnoted events, those which exercise the most influence on our destiny? To all observation the career of Lyon, and not of Margaret, was most affected by their interview. But often the implanting of an idea in the mind is more potent than the frustration of a plan or the gratification of a desire, so hidden are the causes that make character.

For some time I saw little of Margaret. Affairs in which I was not alone or chiefly concerned took me from home. One of the most curious and interesting places in the world is a Chamber in the business heart of New York—if that scene of struggle and passion can be said to have a heart—situated midway where the currents of eagerness to acquire the money of other people, not to make it, ceaselessly meet and dash against each other. If we could suppose there was a web covering this region, spun by the most alert and busy of men to catch those less alert and more productive, here in this Chamber would sit the ingenious spiders. But the analogy fails, for spiders do not prey upon each other. Scientists say that the human system has two nerve-centres—one in the brain, to which and from which are telegraphed all movements depending upon the will, and another in the small of the back, the centre of the involuntary operations of respiration, digestion, and so on. It may be fanciful to suppose that in the national system Washington is the one nervous centre and New York the other. And yet it does sometimes seem that the nerves and ganglions in the small of the back in the commercial metropolis act automatically and without any visible intervention of intelligence. For all that, their operations may be as essential as the other, in which the will-power sometimes gets into a deadlock, and sometimes telegraphs the most eccentric and incomprehensible orders. Puzzled by these contradictions, some philosophers have said that there may be somewhere outside of these two material centres another power that keeps affairs moving along with some steadiness.

This noble Chamber has a large irregular area of floor space, is very high, and has running round three sides a narrow elevated gallery, from which spectators can look down upon the throng below. Upon a raised dais at one side sits the presiding genius of the place, who rules very much as Jupiter was supposed to govern the earthly swarms, by letting things run and occasionally launching a thunderbolt. High up on one side, in an Olympian seclusion, away from the noise and the strife, sits a Board, calm as fate, and panoplied in the

responsibility of chance, whose function seems to be that of switch-shifters in their windowed cubby at a network of railway intersections—to prevent collisions.

At both ends of the floor and along one side are narrow railed-off spaces full of clerks figuring at desks, of telegraph operators clicking their machines, of messenger-boys arriving and departing in haste, of unprivileged operators nervously watching the scene and waiting the chance of a word with some one on the floor; through noiseless swinging doors men are entering and departing every moment—men in a hurry, men with anxious faces, conscious that the fate of the country is in their hands. On the floor itself are five hundred, perhaps a thousand, men, gathered for the most part in small groups about little stands upon the summit of which is a rallying legend, talking, laughing, screaming, good-natured, indifferent, excited, running hither and thither in response to changing figures in the checker-board squares on the great wall opposite—calm, cynical one moment, the next violently agitated, shouting, gesticulating, rushing together, shaking their fists in a tumult of passion which presently subsides.

The swarms ebb and flow about these little stands—bees, not bringing any honey, but attracted to the hive where it is rumored most honey is to be had. By habit some always stand or sit about a particular hive, waiting for the show of comb. By-and-by there is a stir; the crowd thickens; one beardless youth shouts out the figure "one-half"; another howls, "three-eighths." The first one nods. It is done. The electric wire running up the stand quivers and takes the figure, passes it to all the other wires, transmits it to every office and hotel in the city, to all the "tickers" in ten thousand chambers and "bucketshops" and offices in the republic. Suddenly on the bulletin-boards in New Orleans, Chicago, San Francisco, Podunk, Liverpool, appear the mysterious "three-eighths," electrifying the watchers of these boards, who begin to jabber and gesticulate and "transact business." It is wonderful.

What induced the beardless young man to make this "investment" in "three-eighths"—who can tell? Perhaps he had heard, as he came into the room, that the Secretary of the Treasury was going to make a call of Fives; perhaps he had heard that Bismarck had said that the French blood was too thin and needed a little more iron; perhaps he had heard that a norther in Texas had killed a herd of cattle, or that two grasshoppers had been seen in the neighborhood of Fargo, or that Jay Hawker had been observed that morning hurrying to his brokers with a scowl on his face and his hat pulled over his eyes. The young man sold what he did not have, and the other young man bought what he will never get.

This is business of the higher and almost immaterial sort, and has an element of faith in it, and, as one may say, belief in the unseen, whence it is characterized by an expression—"dealing in futures." It is not gambling, for there are no "chips" used, and there is no roulette-table in sight, and there are no piles of money or piles of anything else. It is not a lottery, for there is no wheel at which impartial men preside to insure honest drawings, and there are no predestined blanks and prizes, and the man who buys and the man who sells can do something, either in the newspapers or elsewhere, to affect the worth of the investment, whereas in a lottery everything depends upon the turn of the blind wheel. It is not necessary, however, to attempt a defense of the Chamber. It is one of the recognized ways of becoming important and powerful in this world. The privilege of the floor—a seat, as it is called—in this temple of the god Chance to be Rich is worth more than a seat in the Cabinet. It is not only true that a fortune may be made here in a day or lost here in a day, but that a nod and a wink here enable people all over the land to ruin others or ruin themselves with celerity. The relation of the Chamber to the business of the country is therefore evident. If an earthquake should suddenly sink this temple and all its votaries into the bowels of the earth, with all its nervousness and all its electricity, it is appalling to think what would become of the business of the country.

Not far from this vast Chamber, where great financial operations are conducted on the highest principles of honor, and with the strictest regard to the Marquis of Dusenbury's rules, there is another less pretentious Chamber, known as "open," a sort of overflow meeting. Those who have not quite left hope behind can go in here. Here are the tickers communicating with the Chamber, tended by lads, who transfer the figures to big blackboards on the wall. In front of these boards sit, from morning to night, rows, perhaps relays, of men intently or listlessly watching the figures. Many of them, who seldom make a sign, come here from habit; they have nowhere else to go. Some of them were once lords in the great Chamber, who have been, as the phrase is, "cleaned out." There is a gray-bearded veteran in seedy clothes, with sunken fiery eyes, who was once many times a millionaire, was a power in the Board, followed by reporters, had a palace in the Avenue, and drove to his office with coachman and footman in livery, and his wife headed the list of charities. Now he spends his old age watching this blackboard, and considers it a good day that brings him five dollars and his car-fare. At one end of the low-ceiled apartment are busy clerks behind a counter, alert and cheerful. If one should go through a side door and down a passage he might encounter the smell of rum. Smart young men, clad in the choicest raiment from the misfit counters, with greed stamped on their astute faces, bustle about, watch the blackboards, and make investments with each other. Middle-aged men in slouch hats lounge around with hungry eyes. The place is feverish rather than exciting. A tall fellow, whose gait and clothes proclaim him English, with a hard face and lack-lustre eyes, saunters about; his friends at home suppose he is making his fortune in America. A dapper young gentleman, quite in the mode, and with the quick air of prosperity, rapidly enters the room and confers with a clerk at the counter. He has the run of the Chamber, and is from the great house of Flamm and Slamm. Perhaps he is taking a "flier" on his own account, perhaps he represents his house in a side transaction; there are so many ways open to enterprising young men in the city; at any rate, his entrance is regarded as significant: This is not a hospital for the broken down and "cleaned out" of the Chamber, but it is a place of business, which is created and fed by the incessant "ticker." How men existed or did any business at all before the advent of the "ticker" is a wonder.

But the Chamber, the creator of low-pressure and high-pressure, the inspirer of the "ticker," is the great generator of business. Here I found Henderson in the morning hour, and he came up to me on the call of a messenger. He approached, nonchalant and smiling as usual. "Do you see that man," he said, as we stood a moment looking down, "sitting there on a side bench—big body, small head, hair grayish, long beard parted—apparently taking no interest in anything?"

"That's Flink, who made the corner in O. B.—one of the longest-headed operators in the Chamber. He is about the only man who dare try a hold with Jay Hawker. And for some reason or another, though they have

apparent tussles, Hawker rather favors him. Five years ago he could just raise money enough to get into the Chamber. Now he is reckoned at anywhere from five to ten millions. I was at his home the other night. Everybody was there. I had a queer feeling, in all the magnificence, that the sheriff might be in there in ten days. Yet he may own a good slice of the island in ten years. His wife, whom I complimented, and who thanked me for coming, said she had invited none but the resherhsy."

"He looks like a rascal," I ventured to remark.

"Oh, that is not a word used in the Chamber. He is called a 'daisy.' I was put into his pew in church the other Sunday, and the preacher described him and his methods so exactly that I didn't dare look at him. When we came out he whispered, 'That was rather hard on Slack; he must have felt it.' These men rather like that sort of preaching."

"I don't come here often," Henderson resumed, as we walked away. "The market is flat today. There promised to be a little flurry in L. and P., and I looked in for a customer."

We walked to his down-town club to lunch. Everybody, I noticed, seemed to know Henderson, and his presence was hailed with a cordial smile, a good-humored nod, or a hearty grasp of the hand. I never knew a more prepossessing man; his bonhomie was infectious. Though his demeanor was perfectly quiet and modest, he carried the air of good-fellowship. He was entirely frank, cordial, and had that sort of sincerity which one can afford to have who does not take life too seriously. Tall—at least six feet—with a well-shaped head set on square shoulders, brown hair inclined to curl, large blue eyes which could be merry or exceedingly grave, I thought him a picture of manly beauty. Good-natured, clever, prosperous, and not yet thirty. What a dower!

After we had disposed of our little matter of business, which I confess was not exactly satisfactory to me, although when I was told that "the first bondholders will be obliged to come in," he added that "of course we shall take care of our friends," we went to his bachelor quarters uptown. "I want you to see," he said, "how a hermit lives."

The apartments were not my idea of a hermitage—except in the city. A charming library, spacious, but so full as to be cozy, with an open fire; chamber, dressing-room, and bathroom connecting, furnished with everything that a luxurious habit could suggest and good taste would not refuse, made a retreat that could almost reconcile a sinner to solitude. There were a few good paintings, many rare engravings, on the walls, a notable absence, even in the sleeping-room, of photographs of actresses and professional beauties, but here and there souvenirs of travel and evidences that the gentler sex had contributed the skill of their slender fingers to the cheerfulness of the bachelor's home. Scattered about were the daily and monthly products of the press, the newest sensations, the things talked about at dinners, but the walls for the most part were lined with books that are recognized as the proper possessions of the lover of books, and most of them in exquisite bindings. Less care, I thought, had been given in the collection to "sets" of "standards" than to those that are rare, or for some reason, either from distinguished ownership or autograph notes, have a peculiar value.

In this atmosphere, when we were prepared to take our ease, the talk was no longer of stocks, or railways, or schemes, but of books. Whether or not Henderson loved literature I did not then make up my mind, but he had a passion for books, especially for rare and first editions; and the delight with which he exhibited his library, the manner in which he handled the books that he took down one after the other, the sparkle in his eyes over a "find" or a bargain, gave me a side of his character quite different from that I should have gained by seeing him "in the street" only. He had that genuine respect and affection for a "book" which has become almost traditional in these days of cheap and flimsy publications, a taste held by scholars and collectors, and quite beyond the popular comprehension. The respect for a book is essential to the dignity and consideration of the place of literature in the world, and when books are treated with no more regard than the newspaper, it is a sign that literature is losing its power. Even the collector, who may read little and care more for the externals than for the soul of his favorites, by the honor he pays them, by the solicitude he expends upon their preservation without spot, by the lavishness of expense upon binding, contributes much to the dignity of that art which preserves for the race the continuity of its thought and development. If Henderson loved books merely as a collector whose taste for luxury and expense takes this direction, his indulgence could not but have a certain refining influence. I could not see that he cultivated any decided specialty, but he had many rare copies which had cost fabulous prices, the possession of which gives a reputation to any owner. "My shelves of Americana," he said, "are nothing like Goodloe's, who has a lot of scarce things that I am hoping to get hold of some day. But there's a little thing" (it was a small coffee-colored tract of six leaves, upon which the binder of the city had exercised his utmost skill) "which Goodloe offered me five hundred dollars for the other day. I picked it up in a New Hampshire garret." Not the least interesting part of the collection was first editions of American authors—a person's value to a collector is often in proportion to his obscurity—and what most delighted him among them were certain thin volumes of poetry, which the authors since becoming famous had gone to a good deal of time and expense to suppress. The world seems to experience a lively pleasure in holding a man to his early follies. There were many examples of superb binding, especially of exquisite tooling on hog-skin covers—the appreciation of which has lately greatly revived. The recent rage for bindings has been a sore trouble to students and collectors in special lines, raising the prices of books far beyond their intrinsic value. I had a charming afternoon in Henderson's library, an enjoyment not much lessened at the time by experiencing in it, with him, rather a sense of luxury than of learning. It is true, one might pass an hour altogether different in the garret of a student, and come away with quite other impressions of the pageant of life.

At five o'clock his stylish trap was sent around from the boarding stable, and we drove in the Park till twilight. Henderson handling the reins, and making a part of that daily display which is too heterogeneous to have distinction, reverted quite naturally to the tone of worldliness and tolerant cynicism which had characterized his conversation in the morning. If the Park and the moving assemblage had not the air of distinction, it had that of expense, which is quite as attractive to many. Here, as downtown, my companion seemed to know and be known by everybody, returning the familiar salutes of brokers and club men, receiving gracious bows from stout matrons, smiles and nods from pretty women, and more formal recognition from stately and stiff elderly men, who sat bolt-upright beside their wives and tried to look like

millionaires. For every passerby Henderson had a quick word of characterization sufficiently amusing, and about many a story which illuminated the social life of the day. It was wonderful how many of this chance company had little "histories"—comic, tragic, pitiful, interesting enough for the pages of a novel.

"There is a young lady"—Henderson touched his hat, and I caught a glimpse of golden hair and a flash of dark eyes out of a mass of furs—"who has no history: the world is all before her."

"Who is that?"

"The daughter of old Eschelle—Carmen Eschelle—the banker and politician, you remember; had a diplomatic position abroad, and the girl was educated in Europe. She is very clever. She and her mother have more money than they ought to know what to do with."

"That was the celebrated Jay Hawker" (a moment after), "in the modest coupe—not much display about him."

"Is he recognized by respectable people?"

"Recognized?" Henderson laughed. "He's a power. There are plenty of people who live by trying to guess what he is going to do. Hawker isn't such a bad fellow. Other people have used the means he used to get rich and haven't succeeded. They are not held up to point a moral. The trouble is that Hawker succeeded. Of course, it's a game. He plays as fair as anybody."

"Yes," Henderson resumed, walking his horses in sight of the obelisk, which suggested the long continuance of the human race, "it is the same old game, and it is very interesting to those who are in it. Outsiders think it is all greed. In the Chamber it is a good deal the love of the game, to watch each other, to find out a man's plans, to circumvent him, to thwart him, to start a scheme and manipulate it, to catch somebody, to escape somebody; it is a perpetual excitement."

"The machine in the Chamber appears to run very smoothly," I said. "Oh, that is a public register and indicator. The system back of it is comprehensive, and appears to be complicated, but it is really very simple. Spend an hour some day in the office of Flamm and Slamm, and you will see a part of the system. There are, always a number of men watching the blackboard, figures on which are changed every minute by the attendants. Telegrams are constantly arriving from every part of the Union, from all over the continent, from all the centres in Europe, which are read by some one connected with the firm, and then displayed for the guidance of the watchers of the blackboard. Upon this news one or another says, 'I think I'll buy,' or 'I think I'll sell,' so and so. His order is transmitted instantly to the Chamber. In two minutes the result comes back and appears upon the blackboard."

"But where does the news come from?"

"From the men whose special business it is to pick it up or make it. They are inside of politics, of the railways, of the weather bureau, everywhere. The other day in Chicago I sat some time in a broker's office with others watching the market, and dropped into conversation with a bright young fellow, at whose right hand, across the rail, was a telegraph operator at the end of a private wire. Soon a man came in quietly, and whispered in the ear of my neighbor and went out. The young fellow instantly wrote a despatch and handed it to the operator, and turning to me, said, 'Now watch the blackboard.'

"In an incredibly short space of time a fall in a leading railway showed on the blackboard. 'What was it?' I asked. 'Why, that man was the general freight manager of the A. B. road. He told me that they were to cut rates. I sent it to New York by a private wire.' I learned by further conversation that my young gentleman was a Manufacturer of News, and that such was his address and intelligence that though he was not a member of the broker's firm, he made ten thousand a year in the business. Soon another man came in, whispered his news, and went away. Another despatch—another responsive change in the figures. 'That,' explained my companion, 'was a man connected with the weather bureau. He told me that there would be a heavy frost tonight in the Northwest.'"

"Do they sell the weather?" I asked, very much amused.

"Yes, twice; once over a private wire, and then to the public, after the value of it has been squeezed out, in the shape of predictions. Oh, the weather bureau is worth all the money it costs, for business purposes. It is a great auxiliary."

Dining that evening with Henderson at his club, I had further opportunity to study a representative man. He was of a good New Hampshire family, exceedingly respectable without being distinguished. Over the chimney-place in the old farmhouse hung a rusty Queen Anne that had been at the taking of Louisburg. His grandfather shouldered a musket at Bunker Hill; his father, the youngest son, had been a judge as well as a farmer, and noted for his shrewdness and reticence. Rodney, inheriting the thrift of his ancestors, had pushed out from his home, adapting this thrift to the modern methods of turning it to account. He had brought also to the city the stamina of three generations of plain living—a splendid capital, by which the city is constantly reinforced, and which one generation does not exhaust, except by the aid of extreme dissipation. With sound health, good ability, and fair education, he had the cheerful temperament which makes friends, and does not allow their misfortunes to injure his career. Generous by impulse, he would rather do a favor than not, and yet he would be likely to let nothing interfere with any object he had in view for himself. Inheriting a conventional respect for religion and morality, he was not so bigoted as to rebuke the gayety of a convivial company, nor so intractable as to make him an uncomfortable associate in any scheme, according to the modern notions of business, that promised profit. His engaging manner made him popular, and his good-natured adroitness made him successful. If his early experience of life caused him to be cynical, he was not bitterly so; his cynicism was of the tolerant sort that does not condemn the world and withdraw from it, but courts it and makes the most of it, lowering his private opinion of men in proportion as he is successful in the game he plays with them. At this period I could see that he had determined to be successful, and that he had not determined to be unscrupulous. He would only drift with the tide that made for fortune. He enjoyed the world—a sufficient reason why the world should like him. His business morality was gauged by what other people do in similar circumstances. In short, he was a product of the period since the civil war closed, that great upheaval of patriotic feeling and sacrifice, which ended in so much expansion and so many opportunities. If he had remained in New Hampshire he would probably have been a successful politician,

successful not only in keeping in place, but in teaching younger aspirants that serving the country is a very good way to the attainment of luxury and the consideration that money brings. But having chosen the law as a stepping-stone to the lobby, to speculation, and the manipulation of chances, he had a poor opinion of politics and of politicians. His success thus far, though considerable, had not been sufficient to create for him powerful enemies, so that he may be said to be admired by all and feared by none. In the general opinion he was a downright good fellow and amazingly clever.

VII

In youth, as at the opera, everything seems possible. Surely it is not necessary to choose between love and riches. One may have both, and the one all the more easily for having attained the other. It must be a fiction of the moralists who construct the dramas that the god of love and the god of money each claims an undivided allegiance. It was in some wholly legendary, perhaps spiritual, world that it was necessary to renounce love to gain the Rhine gold. The boxes at the Metropolitan did not believe this. The spectators of the boxes could believe it still less. For was not beauty there seen shining in jewels that have a market value, and did not love visibly preside over the union, and make it known that his sweetest favors go with a prosperous world? And yet, is the charm of life somewhat depending upon a sense of its fleetingness, of its phantasmagorical character, a note of coming disaster, maybe, in the midst of its most seductive pageantry, in the whirl and glitter and hurry of it? Is there some subtle sense of exquisite satisfaction in snatching the sweet moments of life out of the very delirium of it, that must soon end in an awakening to bankruptcy of the affections, and the dreadful loss of illusions? Else why do we take pleasure—a pleasure so deep that it touches the heart like melancholy—in the common drama of the opera? How gay and joyous is the beginning! Mirth, hilarity, entrancing sound, brilliant color, the note of a trumpet calling to heroism, the beseeching of the concordant strings, and the soft flute inviting to pleasure; scenes placid, pastoral, innocent; light-hearted love, the dance on the green, the stately pageant in the sunlit streets, the court, the ball, the mad splendor of life. And then love becomes passion, and passion thwarted hurries on to sin, and sin lifts to the heights of the immortal, sweetly smiling gods, and plunges to the depths of despair. In vain the orchestra, the inevitable accompaniment of life, warns and pleads and admonishes; calm has gone, and gayety has gone; there is no sweetness now but in the wildness of surrender and of sacrifice. How sad are the remembered strains that aforetime were incentives to love and promises of happiness! Gloom settles upon the scene; Mephisto, the only radiant one, flits across it, and mocks the poor broken-hearted girl clinging to the church door. There is a dungeon, the chanting of the procession of tonsured priests, the passing-bell. Seldom appears the golden bridge over which the baffled and tired pass into Valhalla.

Do we like this because it is life, or because there is a certain satisfaction in seeing the tragedy which impends over all, pervades the atmosphere, as it were, and adds something of zest to the mildest enjoyment? Should we go away from the mimic stage any, better and stronger if the drama began in the dungeon and ended on the greensward, with innocent love and resplendent beauty in possession of the Rhine gold?

How simple, after all, was the created world on the stage to the real world in the auditorium, with its thousand complexities and dramatic situations, and if the little knot of players of parts for an hour could have had leisure to be spectators of the audience, what a deeper revelation of life would they not have seen! For the world has never assembled such an epitome of itself, in its passion for pleasure and its passion for display, as in the modern opera, with its ranks and tiers of votaries from the pit to the dome. I fancy that even Margaret, whose love for music was genuine, was almost as much fascinated by the greater spectacle as by the less.

It was a crowded night, for the opera was one that appealed to the senses and stimulated them to activity, and left the mind free to pursue its own schemes; in a word, orchestra and the scenes formed a sort of accompaniment and interpreter to the private dramas in the boxes. The opera was made for society, and not society for the opera. We occupied a box in the second tier—the Morgans, Margaret, and my wife. Morgan said that the glasses were raised to us from the parquet and leveled at us from the loges because we were a country party, but he well enough knew whose fresh beauty and enthusiastic young face it was that drew the fire when the curtain fell on the first act, and there was for a moment a little lull in the hum of conversation.

"I had heard," Morgan was saying, "that the opera was not acclimated in New York; but it is nearly so. The audience do not jabber so loud nor so incessantly as at San Carlo, and they do not hum the airs with the singers—"

"Perhaps," said my wife, "that is because they do not know the airs."

"But they are getting on in cultivation, and learning how to assert the social side of the opera, which is not to be seriously interfered with by the music on the stage."

"But the music, the scenery, were never before so good," I replied to these cynical observations.

"That is true. And the social side has risen with it. Do you know what an impudent thing the managers did the other night in protesting against the raising of the lights by which the house was made brilliant and the cheap illusions of the stage were destroyed? They wanted to make the house positively gloomy for the sake of a little artificial moonlight on the painted towers and the canvas lakes."

As the world goes, the scene was brilliant, of course with republican simplicity. The imagination was helped by no titled names any more than the eye was by the insignia of rank, but there was a certain glow of feeling, as the glass swept the circle, to know that there were ten millions in this box, and twenty in the next, and fifty in the next, attested well enough by the flash of jewels and the splendor of attire, and one might indulge a genuine pride in the prosperity of the republic. As for beauty, the world, surely, in this later time, had flowered here—flowered with something of Aspasia's grace and something of the haughty coldness of

Agrippina. And yet it was American. Here and there in the boxes was a thoroughbred portrait by Copley—the long shapely neck, the sloping shoulders, the drooping eyelids, even to the gown in which the great-grandmother danced with the French officers.

“Who is that lovely creature?” asked Margaret, indicating a box opposite.

I did not know. There were two ladies, and behind them I had no difficulty in making out Henderson and—Margaret evidently had not seen him Mr. Lyon. Almost at the same moment Henderson recognized me, and signaled for me to come to his box. As I rose to do so, Mrs. Morgan exclaimed: “Why, there is Mr. Lyon! Do tell him we are here.” I saw Margaret's color rise, but she did not speak.

I was presented to Mrs. Eschelle and her daughter; in the latter I recognized the beauty who had flashed by us in the Park. The elder lady inclined to stoutness, and her too youthful apparel could not mislead one as to the length of her pilgrimage in this world, nor soften the hard lines of her worldly face-lines acquired, one could see, by a social struggle, and not drawn there by an innate patrician insolence.

“We are glad to see a friend of Mr. Henderson's,” she said, “and of Mr. Lyon's also. Mr. Lyon has told us much of your charming country home. Who is that pretty girl in your box, Mr. Fairchild?”

Miss Eschelle had her glass pointed at Margaret as I gave the desired information.

“How innocent!” she murmured. “And she's quite in the style— isn't she, Mr. Lyon?” she asked, turning about, her sweet mobile face quite the picture of what she was describing. “We are all innocent in these days.”

“It is a very good style,” I said.

“Isn't it becoming?” asked the girl, making her dark eyes at once merry and demure.

Mr. Lyon was looking intently at the opposite box, and a slight shade came over his fine face. “Ah, I see!”

“I beg your pardon, Miss Eschelle,” he said, after a second, “I hardly know which to admire most, the beauty, or the wit, or the innocence of the American women.”

“There is nothing so confusing, though, as the country innocence,” the girl said, with the most natural air; “it never knows where to stop.”

“You are too absurd, Carmen,” her mother interposed; “as if the town girl did!”

“Well, mamma, there is authority for saying that there is a time for everything, only one must be in the fashion, you know.”

Mr. Lyon looked a little dubious at this turn of the talk; Mr. Henderson was as evidently amused at the girl's acting. I said I was glad to see that goodness was in fashion.

“Oh, it often is. You know we were promised a knowledge of good as well as evil. It depends upon the point of view. I fancy, now, that Mr. Henderson tolerates the good—that is the reason we get on so well together; and Mr. Lyon tolerates the evil—that's the reason he likes New York. I have almost promised him that I will have a mission school.”

The girl looked quite capable of it, or of any other form of devotion. Notwithstanding her persistent banter, she had a most inviting innocence of manner, almost an ingenuousness, that well became her exquisite beauty. And but for a tentative daring in her talk, as if the gentle creature were experimenting as to how far one could safely go, her innocence might have seemed that of ignorance.

It came out in the talk that Mr. Lyon had been in Washington for a week, and would return there later on.

“We had a claim on him,” said Mrs. Eschelle, “for his kindness to us in London, and we are trying to convince him that New York is the real capital.”

“Unfortunately,” added Miss Eschelle, looking up in Mr. Lyon's face, “he visited Brandon first, and you seem to have bewitched him with your simple country ways. I can get him to talk of nothing else.”

“You mean to say,” Mr. Lyon replied, with the air of retorting, “that you have asked me about nothing else.”

“Oh, you know we felt a little responsible for you; and there is no place so dangerous as the country. Now here you are protected—we put all the wickedness on the stage, and learn to recognize and shun it.”

“It may be wicked,” said her mother, “but it is dull. Don't you find it so, Mr. Henderson? I am passionately fond of Wagner, but it is too noisy for anything tonight.”

“I notice, dear,” the dutiful daughter replied for all of us, “that you have to raise your voice. But there is the ballet. Let us all listen now.”

Mr. Lyon excused himself from going with me, saying that he would call at our hotel, and I took Henderson. “I shall count the minutes you are going to lose,” the girl said as we went out to our box. The lobbies in the interact were thronged with men—for the most part the young speculators of the Chamber turned into loungers in the foyer—knowing, alert, attitudinizing in the extreme of the mode, unable even in this hour to give beauty the preference to business, well knowing, perhaps, that beauty itself in these days has a fine eye for business.

I liked Henderson better in our box than in his own. Was it because the atmosphere was more natural and genuine? Or was it Margaret's transparent nature, her sincere enjoyment of the scene, her evident pleasure in the music, the color, the gayety of the house, that made him drop the slight cynical air of the world which had fitted him so admirably a moment before? He already knew my wife and the Morgans, and, after the greetings were made, he took a seat by Margaret, quite content while the act was going on to watch its progress in the play of her responsive features. How quickly she felt, how the frown followed the smile, how, she seemed to weigh and try to apprehend the meaning of what went on—how her every sense enjoyed life!

“It is absurd,” she said, turning her bright face to him when the curtain dropped, “to be so interested in fictitious trouble.”

“I'm not so sure that it is,” he replied, in her own tone; “the opera is a sort of pulpit, and not seldom preaches an awful sermon—more plainly than the preacher dares to make it.”

“But not in nomine Dei.”

"No. But who can say what is most effective? I often wonder, as I watch the congregations coming from the churches on the Avenue, if they are any more solemnized than the audiences that pour out of this house. I confess that I cannot shake off 'Lohengrin' in a good while after I hear it."

"And so you think the theatres have a moral influence?"

"Honestly"—and I heard his good-natured laugh—"I couldn't swear to that. But then we don't know what New York might be without them."

"I don't know," said Margaret, reflectively, "that my own good impulses, such as I have, are excited by anything I see on the stage; perhaps I am more tolerant, and maybe toleration is not good. I wonder if I should grow worldly, seeing more of it?"

"Perhaps it is not the stage so much as the house," Henderson replied, beginning to read the girl's mind.

"Yes, it would be different if one came alone and saw the play, unconscious of the house, as if it were a picture. I think it is the house that disturbs one, makes one restless and discontented."

"I never analyzed my emotions," said Henderson, "but when I was a boy and came to the theatre I well remember that it made me ambitious; every sort of thing seemed possible of attainment in the excitement of the crowded house, the music, the lights, the easy successes on the stage; nothing else is more stimulating to a lad; nothing else makes the world more attractive."

"And does it continue to have the same effect, Mr. Henderson?"

"Hardly," and he smiled; "the illusion goes, and the stage is about as real as the house—usually less interesting. It can hardly compete with the comedy in the boxes."

"Perhaps it is lack of experience, but I like the play for itself."

"Oh yes; desire for the dramatic is natural. People will have it somehow. In the country village where there are no theatres the people make dramas out of each other's lives; the most trivial incidents are magnified and talked about—dramatized, in short."

"You mean gossiped about?"

"Well, you may call it gossip—nothing can be concealed; everybody knows about everybody else; there is no privacy; everything is used to create that illusory spectacle which the stage tries to give. I think that in the country village a good theatre would be a wholesome influence, satisfy a natural appetite indicated by the inquisition into the affairs of neighbors, and by the petty scandal."

"We are on the way to it," said Mr. Morgan, who sat behind them; "we have theatricals in the church parlors, which may grow into a nineteenth century substitute for the miracle-plays. You mustn't, Margaret, let Mr. Henderson prejudice you against the country."

"No," said the latter, quickly; "I was only trying to defend the city. We country people always do that. We must base our theatrical life on something in nature."

"What is the difference, Mr. Henderson," asked Margaret, "between the gossip in the boxes and the country gossip you spoke of?"

"In toleration mainly, and lack of exact knowledge. It is here rather cynical persiflage, not concentrated public opinion."

"I don't follow you," said Morgan. "It seems to me that in the city you've got gossip plus the stage."

"That is to say, we have the world."

"I don't like to believe that," said Margaret, seriously—"your definition of the world."

"You make me see that it was a poor jest," he said, rising to go. "By-the-way, we have a friend of yours in our box tonight—a young Englishman."

"Oh, Mr. Lyon. We were all delighted with him. Such a transparent, genuine nature!"

"Tell him," said my wife, "that we should be happy to see him at our hotel."

When Henderson came back to his box Carmen did not look up, but she said, indifferently: "What, so soon? But your absence has made one person thoroughly miserable. Mr. Lyon has not taken his eyes off you. I never saw such an international attachment."

"What more could I do for Miss Eschelle than to leave her in such company?"

"I beg your pardon," said Lyon. "Miss Eschelle must believe that I thoroughly appreciate Mr. Henderson's self-sacrifice. If I occasionally looked over where he was, I assure you it was in pity."

"You are both altogether too self-sacrificing," the beauty replied, turning to Henderson a look that was sweetly forgiving. "They who sin much shall be forgiven much, you know."

"That leaves me," Mr. Lyon answered, with a laugh, "as you say over here, out in the cold, for I have passed a too happy evening to feel like a transgressor."

"The sins of omission are the worst sort," she retorted.

"You see what you must do to be forgiven," Henderson said to Lyon, with that good-natured smile that was so potent to smooth away sharpness.

"I fear I can never do enough to qualify myself." And he also laughed.

"You never will," Carmen answered, but she accompanied the doubt with a witching smile that denied it.

"What is all this about forgiveness?" asked Mrs. Eschelle, turning to them from regarding the stage.

"Oh, we were having an experience meeting behind your back, mamma, only Mr. Henderson won't tell his experience."

"Miss Eschelle is in such a forgiving humor tonight that she absolves before any one has a chance to confess," he replied.

"Don't you think I am always so, Mr. Lyon?"

Mr. Lyon bowed. "I think that an opera-box with Miss Eschelle is the easiest confessional in the world."

"That's something like a compliment. You see" (to Henderson) "how much you Americans have to learn."

"Will you be my teacher?"

"Or your pupil," the girl said, in a low voice, standing near him as she rose.

The play was over. In the robing and descending through the corridors there were the usual chatter, meaning looks, confidential asides. It is always at the last moment, in the hurry, as in a postscript, that woman says what she means, or what for the moment she wishes to be thought to mean. In the crowd on the main stairway the two parties saw each other at a distance, but without speaking.

"Is it true that Lyon is 'epris' there?" Carmen whispered to Henderson when she had scanned and thoroughly inventoried Margaret.

"You know as much as I do."

"Well, you did stay a long time," she said, in a lower tone.

As Margaret's party waited for their carriage she saw Mrs. Eschelle and her daughter enter a shining coach, with footman and coachman in livery. Henderson stood raising his hat. A little white hand was shaken to him from the window, and a sweet, innocent face leaned forward—a face with dark, eyes and golden hair, lit up with a radiant smile. That face for the moment was New York to Margaret, and New York seemed a vain show.

Carmen threw herself back in her seat as if weary. Mrs. Eschelle sat bolt-upright.

"What in the world, child, made you go on so tonight?"

"I don't know."

"What made you snub Mr. Lyon so often?"

"Did I? He won't mind much. Didn't you see, mother, that he was distraught the moment he espied that girl? I'm not going to waste my time. I know the signs. No fisheries imbroglia for me, thank you."

"Fish? Who said anything about fish?"

"Oh, the international business. Ask Mr. Henderson to explain it. The English want to fish in our waters, I believe. I think Mr. Lyon has had a nibble from a fresh-water fish. Perhaps it's the other way, and he's hooked. There be fishers of men, you know, mother."

"You are a strange child, Carmen. I hope you will be civil to both of them." And they rode on in silence.

VIII

In real life the opera or the theatre is only the prologue to the evening. Our little party supped at Delgado's. The play then begins. New York is quite awake by that time, and ready to amuse itself. After the public duty, the public attitudinizing, after assisting at the artificial comedy and tragedy which imitate life under a mask, and suggest without satisfying, comes the actual experience. My gentle girl—God bless your sweet face and pure heart!—who looked down from the sky-parlor at the Metropolitan upon the legendary splendor of the stage, and the alluring beauty and wealth of the boxes, and went home to create in dreams the dearest romance in a maiden's life, you did not know that for many the romance of the night just began when the curtain fell.

The streets were as light as day. At no other hour were the pavements so thronged, was there such a crush of carriages, such a blockade of cars, such running, and shouting, greetings and decorous laughter, such a swirl of pleasurable excitement. Never were the fashionable cafes and restaurants so crowded and brilliant. It is not a carnival time; it is just the flow and ebb of a night's pleasure, an electric night which has all of the morning except its peace, a night of the gayest opportunity and unlimited possibility.

At each little table was a drama in progress, light or serious—all the more serious for being light at the moment and unconsidered. Morgan, who was so well informed in the gossip of society and so little involved in it—some men have this faculty, which makes them much more entertaining than the daily newspaper—knew the histories of half the people in the room. There were an Italian marquis and his wife supping together like lovers, so strong is the force of habit that makes this public life necessary even when the domestic life is established. There is a man who shot himself rather seriously on the doorsteps of the beauty who rejected him, and in a year married the handsome and more wealthy woman who sits opposite him in that convivial party. There is a Russian princess, a fair woman with cool observant eyes, making herself agreeable to a mixed company in three languages. In this brilliant light is it not wonderful how dazzlingly beautiful the women are—brunettes in yellow and diamonds, blondes in elaborately simple toilets, with only a bunch of roses for ornament, in the flush of the midnight hour, in a radiant glow that even the excitement and the lifted glass cannot heighten? That pretty girl yonder—is she wife or widow?—slight and fresh and fair, they say has an ambition to extend her notoriety by going upon the stage; the young lady with her, who does not seem to fear a public place, may be helping her on the road. The two young gentlemen, their attendants, have the air of taking life more seriously than the girls, but regard with respectful interest the mounting vivacity of their companions, which rises and sparkles like the bubbles in the slender glasses which they raise to their lips with the dainty grace of practice. The staid family parties who are supping at adjoining tables notice this group with curiosity, and express their opinion by elevated eyebrows.

Margaret leaned back in her chair and regarded the whole in a musing' frame of mind. I think she apprehended nothing of it except the light, the color, the beauty, the movement of gayety. For her the notes of the orchestra sounded through it all—the voices of the singers, the hum of the house; it was all a spectacle and a play. Why should she not enjoy it? There was something in the nature of the girl that responded to this form of pleasure—the legitimate pleasure the senses take in being gratified. "It is so different," she said to me, "from the pleasure one has in an evening by the fire. Do you know, even Mr. Morgan seems worldly here."

It was a deeper matter than she thought, this about worldliness, which had been raised in Margaret's mind. Have we all double natures, and do we simply conform to whatever surrounds us? Is there any difference in kind between the country worldliness and the city worldliness? I do not suppose that Margaret formulated any of these ideas in words. Her knowledge of the city had hitherto been superficial. It was a place for shopping, for a day in a picture exhibition, for an evening in the theatre, no more a part of her existence than a novel or a book of travels: of the life of the town she knew nothing. That night in her room she became aware for the first time of another world, restless, fascinating, striving, full of opportunities. What must London be?

If we could only note the first coming into the mind of a thought that changes life and re-forms character—supposing that every act and every new departure has this subtle beginning—we might be less the sport of circumstances than we seem to be. Unnoted, the desire so swiftly follows the thought and juggles with the will.

The next day Mr. Henderson left his card and a basket of roses. Mr. Lyon called. It was a constrained visit. Margaret was cordially civil, and I fancied that Mr. Lyon would have been more content if she had been less so. If he were a lover, there was little to please him in the exchange of the commonplaces of the day.

"Yes," he was saying to my wife, "perhaps I shall have to change my mind about the simplicity of your American life. It is much the same in New York and London. It is only a question of more or less sophistication."

"Mr. Henderson tells us," said my wife, "that you knew the Eschelles in London."

"Yes. Miss Eschelle almost had a career there last season."

"Why almost?"

"Well—you will pardon me—one needs for success in these days to be not only very clever, but equally daring. It is every day more difficult to make a sensation."

"I thought her, across the house," Margaret said, "very pretty and attractive. I did not know you were so satirical, Mr. Lyon. Do you mean that one must be more daring, as you call it, in London than in New York?"

"I hope it will not hurt your national pride, Miss Debree, if I say that there is always the greater competition in the larger market."

"Oh, my pride," Margaret answered, "does not lie in that direction."

"And to do her justice, I don't think Miss Eschelle's does, either. She appears to be more interested now in New York than in London."

He laughed as he said this, and Margaret laughed also, and then stopped suddenly, thinking of the roses that came that morning. Could she be comparing the Londoner with the handsome American who sat by her side at the opera last night? She was half annoyed with herself at the thought.

"And are not you also interested in New York, Mr. Lyon?" my wife asked.

"Yes, moderately so, if you will permit me to say it." It was an effort on his part to keep up the conversation, Margaret was so wholly unresponsive; and afterwards, knowing how affairs stood with them, I could understand his well-bred misery. The hardest thing in the world is to suffer decorously and make no sign in the midst of a society which insists on stoicism, no matter how badly one is hurt. The Society for First Aid to the Injured hardens its heart in these cases. "I have never seen another place," he continued, "where the women are so busy in improving themselves. Societies, clubs, parlor lectures, readings, recitations, musicales, classes—it fatigues one to keep in sight of them. Every afternoon, every evening, something. I doubt if men are capable of such incessant energy, Mrs. Fairchild."

"And you find they have no time to be agreeable?"

"Quite the contrary. There is nothing they are not interesting in, nothing about which they cannot talk, and talk intensely. They absorb everything, and have the gift of acquiring intelligence without, as one of them told me, having to waste time in reading. Yes, it is a most interesting city."

The coming in of Mr. Morgan gave another turn to the talk. He had been to see a rural American play, an exhibition of country life and character, constructed in absolute disregard of any traditions of the stage.

"I don't suppose," Mr. Morgan said, "a foreigner would understand it; it would be impossible in Paris, incomprehensible in London."

"Yes, I saw it," said Mr. Lyon, thus appealed to. "It was very odd, and seemed to amuse the audience immensely. I suppose one must be familiar with American farm life to see the points of it. I confess that while I sat there, in an audience so keenly in sympathy with the play—almost a part of it, one might say—I doubted if I understood your people as well as I thought I did when I had been here a week only. Perhaps this is the beginning of an American drama."

"Some people say that it is."

"But it is so local!"

"Anything that is true must be true to local conditions, to begin with. The only question is, is it true to human nature? What puzzled me in this American play was its raising the old question of nature and art. You've seen Coquelin? Well, that is acting, as artificial as a sonnet, the perfection of training, skill in an art. You never doubt that he is performing in a play for the entertainment of an audience. You have the same enjoyment of it that you have of a picture—a picture, I mean, full of character and sentiment, not a photograph. But I don't think of Denman Thompson as an actor trained to perfection in a dramatic school, but as a New Hampshire farmer. I don't admire his skill; I admire him. There is plenty that is artificial, vulgarly conventional, in his play, plenty of imitation of the rustic that shows it is imitation, but he is the natural man. If he is a stage illusion, he does not seem so to me." "Probably to an American audience only he does not," Mr. Lyon remarked.

"Well, that is getting to be a tolerably large audience."

"I doubt if you will change the laws of art," said Mr. Lyon, rising to go.

"We shall hope to see you again at our house," my wife said.

"You are very good. I should like it; but my time is running out."

"If you cannot come, you may leave your adieus with Miss Debree, who is staying some time in the city," my wife said, evidently to Margaret's annoyance. But she could do no less than give him her city address, though the information was not accompanied by any invitation in her manner.

Margaret was to stay some time with two maiden ladies, old friends of her mother, the Misses Arbuser. The Arbusers were people of consequence in their day, with a certain social prestige; in fact, the excellent ladies were two generations removed from successful mercantile life, which in the remote prospective took on an old-family solidity. Nowhere else in the city could Margaret have come closer in contact with a certain phase of New York life in which women are the chief actors—a phase which may be a transition, and may be only a craze. It is not so much a condescension of society to literature as it is a discovery that literature and art, in the persons of those who produce both, may be sources of amusement, or perhaps, to be just, of the enlargement of the horizon and the improvement of the mind. The society mind was never before so hospitable to new ideas and new sensations. Charities, boards of managers, missions, hospitals, news-rooms, and lodging-houses for the illiterate and the homeless—these are not sufficient, even with balls, dancing classes, and teas, for the superfluous energies of this restless, improving generation; there must be also radical clubs, reading classes, study classes, ethical, historical, scientific, literary lectures, the reading of papers by ladies of distinction and gentlemen of special attainments—an unremitting pursuit of culture and information. Curiosity is awake. The extreme of social refinement and a mild Bohemianism almost touch. It passes beyond the affectation of knowing persons who write books and write for the press, artists in paint and artists in music. "You cannot be sure in the most exclusive circle"—it was Carmen Eschelle who said this—"that you will not meet an author or even a journalist." Not all the women, however, adore letters or affect enthusiasm at drawing-room lectures; there are some bright and cynical ones who do not, who write papers themselves, and have an air of being behind the scenes.

Margaret had thought that she was fully occupied in the country, with her teaching, her reading, her literature and historical clubs, but she had never known before what it was to be busy and not have time for anything, always in pursuit of some new thing, and getting a fragment here and there; life was a good deal like reading the dictionary and remembering none of the words. And it was all so cosmopolitan and all-embracingly sympathetic. One day it was a paper by a Servian countess on the social life of the Servians, absorbingly interesting both in itself and because it was a countess who read it; and this was followed by the singing of an Icelandic tenor and a Swedish soprano, and a recital on the violin by a slight, red-haired, middle-aged woman from London. All the talents seem to be afloat and at the service of the strenuous ones who are cultivating themselves.

The first function at which Margaret assisted in the long drawing-rooms of the Arbusers was a serious one—one that combined the charm of culture with the temptations of benevolence. The rooms were crowded with the fashion of the town, with a sprinkling of clergymen and of thin philanthropic gentlemen in advanced years. It was a four-o'clock, and the assembly had the cheerfulness of a reception, only that the display of toilets was felt to be sanctified by a purpose. The performance opened with a tremendous prelude on the piano by Herr Bloomgarten, who had been Liszt's favorite pupil; indeed, it was whispered that Liszt had said that, old as he was, he never heard Bloomgarten without learning something. There was a good deal of subdued conversation while the pianist was in his extreme agony of execution, and a hush of extreme admiration—it was divine, divine, ravishing—when he had finished. The speaker was a learned female pundit from India, and her object was to interest the women of America in the condition of their unfortunate Hindoo sisters. It appeared that thousands and tens of thousands of them were doomed to early and lifelong widowhood, owing to the operation of cruel caste laws, which condemned even girls betrothed to deceased Brahmins to perpetual celibacy. This fate could only be alleviated by the education and elevation of women. And money was needed for schools, especially for medical schools, which would break down the walls of prejudice and enfranchise the sex. The appeal was so charmingly made that every one was moved by it, especially the maiden ladies present, who might be supposed to enter into the feelings of their dusky sisters beyond the seas. The speaker said, with a touch of humor that always intensifies a serious discourse, that she had been told that in one of the New England States there was a superfluity of unmarried women; but this was an entirely different affair; it was a matter of choice with these highly educated and accomplished women. And the day had come when woman could make her choice! At this there was a great clapping of hands. It was one thing to be free to lead a life of single self-culture, and quite another to be compelled to lead a single life without self-culture. The address was a great success, and much enthusiasm spread abroad for the cause of the unmarried women of India.

In the audience were Mrs. Eschelle and her daughter. Margaret and Carmen were made acquainted, and were drawn together by curiosity, and perhaps by a secret feeling of repulsion. Carmen was all candor and sweetness, and absorbingly interested in the women of India, she said. With Margaret's permission she would come and see her, for she believed they had common friends.

It would seem that there could not be much sympathy between natures so opposed, persons who looked at life from such different points of view, but undeniably Carmen had a certain attraction for Margaret. The New Englander, whose climate is at once his enemy and his tonic, always longs for the tropics, which to him are a region of romance, as Italy is to the German. In his nature, also, there is something easily awakened to the allurements of a sensuous existence, and to a desire for a freer experience of life than custom has allowed him. Carmen, who showed to Margaret only her best side—she would have been wise to exhibit no other to Henderson, but women of her nature are apt to cheapen themselves with men—seemed an embodiment of that graceful gayety and fascinating worldliness which make the world agreeable.

One morning, a few days after the Indian function, Margaret was alone in her own cozy sitting-room. Nothing was wanting that luxury could suggest to make it in harmony with a beautiful woman, nothing that did not flatter and please, or nurse, perhaps, a personal sense of beauty, and impart that glow of satisfaction which comes when the senses are adroitly ministered to. Margaret had been in a mood that morning to pay extreme attention to her toilet. The result was the perfection of simplicity, of freshness, of maiden purity,

enhanced by the touch of art. As she surveyed herself in the pier-glass, and noted the refined lines of the morning-gown which draped but did not conceal the more exquisite lines of her figure, and adjusted a rose in her bosom, she did not feel like a Puritan, and, although she may not have noted the fact, she did not look like one. It was not a look of vanity that she threw into the mirror, or of special self-consciousness; in her toilet she had obeyed only her instinct (that infallible guide in a woman of refinement), and if she was conscious of any emotion, it was of the stirring within her of the deepest womanly nature.

In fact, she was restless. She flung herself into an easy-chair before the fire, and took up a novel. It was a novel with a religious problem. In vain she tried to be interested in it. At home she would have absorbed it eagerly; they would have discussed it; the doubts and suggestions in it would have assumed the deepest personal importance. It might have made an era in her thoughtful country life. Here it did not so appeal to her; it seemed unreal and shadowy in a life that had so much more of action than of reflection in it. It was a life fascinating and exciting, and profoundly unsatisfactory. Yet, after all, it was more really life than that placid vegetation in the country. She felt that in the whirl of only a few days of it—operas, receptions, teas, readings, dances, dinners, where everybody sparkled with a bewildering brilliancy, and yet from which one brought away nothing but a sense of strain; such gallantry, such compliments, such an easy tossing about of every topic under heaven; such an air of knowing everything, and not caring about anything very much; so much mutual admiration and personal satisfaction! She liked it, and perhaps was restless because she liked it. To be admired, to be deferred to—was there any harm in that? Only, if one suffers admiration today, it becomes a necessity tomorrow. She began to feel the influence of that life which will not let one stand still for a moment. If it is not the opera, it is a charity; if it is not a lover, it is some endowed cot in a hospital. There must be something going on every day, every hour.

Yes, she was restless, and could not read. She thought of Mr. Henderson. He had called formally. She had seen him, here and there, again and again. He had sought her out in all companies; his face had broken into a smile when he met her; he had talked with her lightly, gayly; she remembered the sound of his voice; she had learned to know his figure in a room among a hundred; and she blushed as she remembered that she had once or twice followed him with her eyes in a throng. He was, to be sure, nothing to her; but he was friendly; he was certainly entertaining; he was a part, somehow, of this easy-flowing life.

Miss Eschelle was announced. Margaret begged that she would come upstairs without ceremony. The mutual taking-in of the pretty street costume and the pretty morning toilet was the work of a moment—the photographer has invented no machine that equals a woman's eyes for such a purpose.

"How delightful it is! how altogether charming!" and Margaret felt that she was included with the room in this admiration. "I told mamma that I was coming to see you this morning, even if I missed the Nestors' luncheon. I like to please myself sometimes. Mamma says I'm frivolous, but do you know"—the girls were comfortably seated by the fire, and Carmen turned her sweet face and candid eyes to her companion—"I get dreadfully tired of all this going round and round. No, I don't even go to the Indigent Mothers' Home; it's part of the same thing, but I haven't any gift that way. Ah, you were reading—that novel."

"Yes; I was trying to read it; I intend to read it."

"Oh, we have had it! It's a little past now, but it has been all the rage. Everybody has read it; that is, I don't know that anybody has read it, but everybody has been talking about it. Of course somebody must have read it, to set the thing agoing. And it has been discussed to death. I sometimes feel as if I had changed my religion half a dozen times in a fortnight. But I haven't heard anything about it for a week. We have taken up the Hindoo widows now, you know." And the girl laughed, as if she knew she were talking nonsense.

"And you do not read much in the city?" Margaret asked, with an answering smile.

"Yes; in the summer. That is, some do. There is a reading set. I don't know that they read much, but there is a reading set. You know, Miss Debree, that when a book is published—really published, as Mr. Henderson says—you don't need to read it. Somehow it gets into the air and becomes common property. Everybody hears the whole thing. You can talk about it from a notice. Of course there are some novels that one must read in order to understand human nature. Do you read French?"

"Yes; but not many French novels; I cannot."

"Nor can I," said Carmen, with a sincere face. "They are too realistic for me." She was at the moment running over in her mind a "situation" in a paper-covered novel turned down on her nightstand. "Mr. Henderson says that everybody condemns the French novels, and that people praise the novels they don't read."

"You know Mr. Henderson very well?"

"Yes; we've known him a long time. He is the only man I'm afraid of."

"Afraid of?"

"Well, you know he is a sort of Club man; that style of man provokes your curiosity, for you never can tell how much such men know. It makes you a little uneasy."

Carmen was looking into the fire, as if abstractedly reflecting upon the nature of men in general, but she did not fail to notice a slight expression of pain on Margaret's face.

"But there is your Mr. Lyon—"

Margaret laughed. "You do me too much honor. I think you discovered him first."

"Well, our Mr. Lyon." Carmen was still looking into the fire. "He is such a good young man!"

Margaret did not exactly fancy this sort of commendation, and she replied, with somewhat the tone of defending him, "We all have the highest regard for Mr. Lyon."

"Yes, and he is quite gone on Brandon, I assure you. He intends to do a great deal of good in the world. I think he spends half his time in New York studying, he calls it, our charitable institutions. Mamma reproaches me that I don't take more interest in philanthropy. That is her worldly side. Everybody has a worldly side. I'm as worldly as I can be"—this with a look of innocence that denied the self-accusation—"but I haven't any call to marry into Exeter Hall and that sort of thing. That is what she means—dear mamma. Are you High-Church

or evangelical?" she asked, after a moment, turning to Margaret?

Margaret explained that she was neither.

"Well, I am High-Church, and Mr. Lyon is evangelical-Church evangelical. There couldn't be any happiness, you know, without harmony in religious belief."

"I should think not," said Margaret, now quite recovering herself. "It must be a matter of great anxiety to you here."

Carmen was quick to note the change of tone, and her face beamed with merriment as she rose.

"What nonsense I've been talking! I did not intend to go into such deep things. You must not mind what I said about Mr.—(a little pause to read Margaret's face)—Mr. Lyon. We esteem him as much as you do. How charming you are looking this morning! I wish I had your secret of not letting this life tell on one." And she was gone in a shower of compliments and smiles and caressing ways. She had found out what she came to find out. Mr. Henderson needs watching, she said to herself.

The interview, as Margaret thought it over, was amusing, but it did not raise her spirits. Was everybody worldly and shallow? Was this the sort of woman whom Mr. Henderson fancied? Was Mr. Henderson the sort of man to whom such a woman would be attracted?

IX

It was a dinner party in one of the up-town houses—palaces—that begin to repeat in size, spaciousness of apartments, and decoration the splendor of the Medicean merchant princes. It is the penalty that we pay for the freedom of republican opportunity that some must be very rich. This is the logical outcome of the open chance for everybody to be rich—and it is the surest way to distinction. In a free country the course must be run, and it is by the accumulation of great wealth that one can get beyond anxiety, and be at liberty to indulge in republican simplicity.

Margaret and Miss Arbuser were ushered in through a double row of servants in livery—shortclothes and stockings—in decorous vacuity—an array necessary to bring into relief the naturalness and simplicity of the entertainers. Vulgarity, one can see, consists in making one's self a part of the display of wealth: the thing to be attained is personal simplicity on a background of the richest ostentation. It is difficult to attain this, and theory says that it takes three generations for a man to separate himself thus from his display. It was the tattle of the town that the first owner of the pictures in the gallery of the Stott mansion used to tell the prices to his visitors; the third owner is quite beyond remembering them. He might mention, laughingly, that the ornamented shovel in the great fireplace in the library was decorated by Vavani—it was his wife's fancy. But he did not say that the ceiling in the music-room was painted by Pontifex Lodge, or that six Italian artists had worked four years making the Corean room, every inch of it exquisite as an intaglio—indeed, the reporters had made the town familiar with the costly facts.

The present occupants understood quite well the value of a background: the house swarmed with servants—retainers, one might say. Margaret, who was fresh from her history class, recalled the days of Elizabeth, when a man's importance was gauged by the retinue of servitors and men and women in waiting. And this is, after all, a better test of wealth than a mere accumulation of things and cost of decoration; for though men and women do not cost so much originally as good pictures—that is, good men and women—everybody knows that it needs more revenue to maintain them. Though the dinner party was not large, there was to be a dance afterwards, and for every guest was provided a special attendant.

The dinner was served in the state dining-room, to which Mr. Henderson had the honor of conducting Margaret. Here prevailed also the same studied simplicity. The seats were for sixteen. The table went to the extremity of elegant plainness, no crowding, no confusion of colors under the soft lights; if there was ostentation anywhere, it was in the dazzling fineness of the expanse of table-linen, not in the few rare flowers, or the crystal, or the plate, which was of solid gold, simply modest. The eye is pleased by this chastity—pure whiteness, the glow of yellow, the slight touch of sensuous warmth in the rose. The dinner was in keeping, short, noiselessly served under the eye of the maitre d'hotel, few courses, few wines; no anxiety on the part of the host and hostess—perhaps just a little consciousness that everything was simple and elegant, a little consciousness of the background; but another generation will remove that.

If to Margaret's country apprehension the conversation was not quite up to the level of the dinner and the house—what except that of a circle of wits, who would be out of place there, could be?—the presence of Mr. Henderson, who devoted himself to her, made the lack unnoticed. The talk ran, as usual, on the opera, Wagner, a Christmas party at Lenox, at Tuxedo, somebody's engagement, some lucky hit in the Exchange, the irritating personalities of the newspapers, the last English season, the marriage of the Duchess of Bolinbroke, a confidential disclosure of who would be in the Cabinet and who would have missions, a jocular remark across the table about a "corner" (it is impossible absolutely here, as well as at a literary dinner, to sink the shop), the Sunday opening of galleries—anything to pass the hour, the ladies contributing most of the vivacity and persiflage.

"I saw you, Mr. Henderson"—it was Mrs. Laflamme raising her voice—"the other night in a box with a very pretty woman."

"Yes—Miss Eschelle."

"I don't know them. We used to hear of them in Naples, Venice, various places; they were in Europe some time; I believe. She was said to be very entertaining—and enterprising."

"Well, I suppose they have seen something of the world. The other lady was her mother. And the man with us—that might interest you more, Mrs. Laflamme, was Mr. Lyon, who will be the Earl of Chisholm."

"Ah! Then I suppose she has money?"

"I never saw any painful evidence of poverty. But I don't think Mr. Lyon is fortune-hunting. He seems to be after information and—goodness."

Margaret flushed a little, but apparently Henderson did not notice it. Then she said (after Mrs. Laflamme had dropped the subject with the remark that he had come to the right place), "Miss Eschelle called on me yesterday."

"And was, no doubt, agreeable."

"She was, as Mrs. Laflamme says, entertaining. She quoted you a good deal."

"Quoted me? For what?"

"As one would a book, as a familiar authority."

"I suppose I ought to be flattered, if you will excuse the street expression, to have my stock quotable. Perhaps you couldn't tell whether Miss Eschelle was a bull or a bear in this case?"

"I don't clearly know what that is. She didn't offer me any," said Margaret, in a tone of carrying on the figure without any personal meaning.

"Well, she is a bit of an operator. A good many women here amuse themselves a little in stocks."

"It doesn't seem to me very feminine."

"No? But women generally like to take risks and chances. In countries where lotteries are established they always buy tickets."

"Ah! then they only risk what they have. I think women are more prudent and conservative than men."

"No doubt. They are conservatives usually. But when they do go in for radical measures and risks, they leave us quite behind." Mr. Henderson did not care to extend the conversation in this direction, and he asked, abruptly, "Are you finding New York agreeable, Miss Debree?"

"Yes. Yes and no. One has no time to one's self. Do you understand why it is, Mr. Henderson, that one can enjoy the whole day and then be thoroughly dissatisfied with it?"

"Perfectly; when the excitement is over."

"And then I don't seem to be myself here. I have a feeling of having lost myself."

"Because the world is so big?"

"Not that. Do you know, the world seems much smaller here than at home."

"And the city appears narrow and provincial?"

"I cannot quite explain it. The interests of life don't seem so large—the questions, I mean, what is going on in Europe, the literature, the reforms, the politics. I get a wider view when I stand off—at home. I suppose it is more concentrated here. And, oh dear, I'm so stupid! Everybody is so alert in little things, so quick to turn a compliment, and say a bright thing. While I am getting ready to say what I really think about Browning, for instance, he is disposed of in a sentence."

"That is because you try to say what you really think."

"If one don't, what's the use of talk?"

"Oh, to pass the time."

Margaret looked up to see if Henderson was serious. There was a smile of amusement on his face, but not at all offensive, because the woman saw that it was a look of interest also.

"Then I sha'n't be serious any more," she said, as there was a movement to quit the table.

"That lays the responsibility on me of being serious," he replied, in the same light tone.

Later they were wandering through the picture-gallery together. A gallery of modern pictures appeals for the most part to the senses—represents the pomps, the color, the allurements of life. It struck Henderson forcibly that this gallery, which he knew well, appeared very different looking at it with Miss Debree from what it would if he had been looking at it with Miss Eschelle. There were some pictures that he hurried past, some technical excellences only used for sensuous effects—that he did not call attention to as he might have done with another. Curiously enough, he found himself seeking sentiment, purity. If the drawing was bad, Margaret knew it; if a false note was struck, she saw it. But she was not educated up to a good many of the suggestions of the gallery. Henderson perceived this, and his manner to her became more deferential and protective. It was a manner to which every true woman responds, and Margaret was happy, more herself, and talked with a freedom and gayety, a spice of satire, and a note of reality that made her every moment more attractive to her companion. In her, animation the charm of her unworn beauty blazed upon him with a direct personal appeal. He hardly cared to conceal his frank admiration. She, on her part, was thinking, what could Miss Eschelle mean by saying that she was afraid of him?

"Does the world seem any larger here, Miss Debree?" he asked, as they had lingeringly made the circuit of the room and passed out through the tropical conservatory to join the rest of the company.

"Yes—away from people."

"Then it is not numbers, I am glad to know, that make a world."

She did not reply. But when he encountered her, robed for departure, at the foot of the stairway, she gave him her hand in good-night, and their eyes met for a moment.

I wonder if that was the time? Probably not. I fancy that when the right day came she confessed that the moment was when she first saw him enter their box at the opera.

Henderson walked down the avenue slowly, hearing the echo of his own steps in the deserted street. He was in no haste to reach home. It was such a delightful evening—snowing a little, and cold, but so exhilarating. He remembered just how she turned her head as she got into the carriage. She had touched his arm lightly once in the gallery to call his attention to a picture. Yes, the world was larger, larger, by one, and it would seem large—her image came to him distinctly—if she were the only one.

Henderson was under the spell of this evening when the next, in response to a note asking him to call for a moment on business, he was shown into the Eschelle drawing-room. It was dimly lighted, but familiarity with the place enabled him without difficulty to find his way down the long suite, rather overcrowded with luxurious furniture, statuary, and pictures on easels, to the little library at the far end glowing in a rosy light.

There, ensconced in a big chair, a book in her hand, one pretty foot on the fender, sat Carmen, in a grayish, vaporous toilet, which took a warm hue from the color of the spreading lamp-shades. On the carved table near was a litter of books and of nameless little articles, costly and coquettish, which assert femininity, even in a literary atmosphere. Over the fireplace hung a picture of spring—a budding girl, smiling and winning, in a semi-transparent raiment, advancing with swift steps to bring in the season of flowers and of love. The hand that held the book rested upon the arm of the chair, a finger inserted in the place where she had been reading, her rounded white arm visible to the elbow, and Carmen was looking into the fire in the attitude of reflection upon a suggestive passage.

Women have so many forms of attraction, different women are attractive in so many different ways, moods are so changing, beauty is so undefinable, and has so many weapons. And yet men are called inconstant!

It was not until Henderson had time to take in the warmth of this domestic picture that Carmen rose.

"It is so good of you to come, with all your engagements. Mamma is excused with a headache, but she has left me power of attorney to ask questions about our little venture."

"I hope the attorney will not put me through a cross-examination."

"That depends upon how you have been behaving, Mr. Henderson. I'm not very cross yet. Now, sit there so that I can look at you and see how honest you are."

"Do you want me to put on my business or my evening expression?"

"Oh, the first, if you mean business."

"Well, your stocks are going up."

"That's nice. You are so lucky! Everything goes up with you. Do you know what they say of you."

"Nothing bad, I hope."

"That everything you touch turns to gold. That you will be one of the nabobs of New York in ten years."

"That's a startling destiny."

"Isn't it? I don't like it." The girl seemed very serious. "I'd like you to be distinguished. To be in the Cabinet. To be minister—go to England. But one needs a great deal of money for that, to go as one ought to go. What a career is open to a man in this country if he has money!"

"But I don't care for politics."

"Who does? But position. You can afford that if you have money enough. Do you know, Mr. Henderson, I think you are dull."

"Thank you. I reckoned you'd find it out."

"The other night at the Nestor ball a lady—no, I won't tell you who she is—asked me if I knew who that man was across the room; such an air of distinction; might be the new British Minister. You know, I almost blushed when I said I did know him."

"Well?"

"You see what people expect of you. When a man looks distinguished and is clever, and knows how to please if he likes, he cannot help having a career, unless he is afraid to take the chances."

Henderson was not conscious of ever being wanting in this direction. The picture conjured up by the ingenious girl was not unfamiliar to his mind, and he understood quite well the relation to it that Carmen had in her mind; but he did not take the lead offered. Instead, he took refuge in the usual commonplace, and asked, "Wouldn't you like to have been a man?"

"Heaven forbid! I should be too wicked. It is responsibility enough to be a woman. I did not expect such a banality from you. Do you think, Mr. Henderson, we had better sell?"

"Sell what?"

"Our stocks. You are so occupied that I thought they might fall when you are up in the clouds somewhere."

"No, I shall not forget."

"Well, such things happen. I might forget you if it were not for the stocks."

"Then I shall keep the stocks, even if they fall."

"And we should both fall together. That would be some compensation. Not much. Going to smash with you would be something like going to church with Mr. Lyon. It might have a steadying effect."

"What has come over you tonight, Carmen?" Henderson asked, leaning forward with an expression of half amusement, half curiosity.

"I've been thinking—doesn't that astonish you?—about life. It is very serious. I got some new views talking with that Miss Debree from Brandon. Chiefly from what she didn't say. She is such a lovely girl, and just as unsophisticated—well, as we are. I fear I shocked her by telling her your opinion of French novels."

"You didn't tell her that I approved of all the French novels you read?"

"Oh no! I didn't say you approved of any. It sort of came out that you knew about them. She is so downright and conscientious. I declare I felt virtuous shivers running all over me all the time I was with her. I'm conscientious myself. I want everybody to know the worst of me. I wish I could practice some concealment. But she rather discourages me. She would take the color out of a career. She somehow doesn't allow for color, I could see. Duty, duty—that is the way she looks at life. She'd try to keep me up to it; no playing by the way. I liked her very much. I like people not to have too much toleration. She would be just the wife for some nice country rector."

"Perhaps I ought to tell her your plan for her? I dined with her last night at the Stotts'."

"Yes?" Carmen had been wondering if he would tell her of that. "Was it very dull?"

"Not very. There was music, distant enough not to interfere with conversation, and the gallery afterwards."

"It must have been very exhilarating. You talked about the Duchess of Bolinbroke, and the opera, and Prince Talleyrand, and the corner in wheat—dear me, I know, so decorous! And you said Miss Debreë was there?"

"I had the honor of taking her out."

"Mr. Henderson"—the girl had risen to adjust the lamp-shade, and now stood behind his chair with her arm resting on it, so that he was obliged to turn his head backward to see her—"Mr. Henderson, do you know you are getting to be a desperate flirt?" The laughing eyes looking into his said that was not such a desperate thing to do if he chose the right object.

"Who taught me?" He raised his left hand. She did not respond to the overture, except to snap the hand with her index-finger, and was back in her chair again, regarding him demurely.

"I think we shall go abroad soon." The little foot was on the fender again, and the face had the look of melancholy resolution.

"And leave Mr. Lyon without any protection here?" The remark was made in a tone of good-humored raillery, but for some reason it seemed to sting the girl.

"Pshaw!" she said. "How can you talk such nonsense? You," and she rose to her feet in indignation—"you to advise an American girl to sell herself for a title—the chance of a title. I'm ashamed of you!"

"Why, Carmen," he replied, flushing, "I advised nothing of the sort. I hadn't the least idea. I don't care a straw for Mr. Lyon."

"That's just it; you don't care," sinking into her seat, still unappeased. "I think I'll tell Mr. Lyon that he will have occupation enough to keep him in this country if he puts his money into that scheme you were talking over the other night."

Henderson was in turn annoyed. "You can tell him anything you like. I'm no more responsible for his speculations than for his domestic concerns."

"Now you are offended. It's not nice of you to put me in the wrong when you know how impulsive I am. I wish I didn't let my feelings run away with me." This said reflectively, and looking away from him. And then, turning towards him with wistful, pleading eyes: "Do you know, I sometimes wish I had never seen you. You have so much power to make a person very bad or very good."

"Come, come," said Henderson, rising, "we mustn't quarrel about an Englishman—such old friends."

"Yes, we are very old friends." The girl rose also, and gave him her hand. "Perhaps that's the worst of it. If I should lose your esteem I should go into a convent." She dropped his hand, and snatching a bunch of violets from the table, fixed them in his button-hole, looking up in his face with vestal sweetness. "You are not offended?"

"Not a bit; not the least in the world," said Henderson, heartily, patting the hand that still lingered upon his lapel.

When he had gone, Carmen sank into her chair with a gesture of vexation, and there were hard lines in her sweet face. "What an insensible stick!" Then she ran up-stairs to her mother, who sat in her room reading one of the town-weeklies, into which some elderly ladies look for something to condemn.

"Well?"

"Such a stupid evening! He is just absorbed in that girl from Brandon. I told him we were going abroad."

"Going abroad! You are crazy, child. New York is forty times as amusing."

"And forty times as tiresome. I'm sick of it. Mamma, don't you think it would be only civil to ask Mr. Lyon to a quiet dinner before he goes?"

"Certainly. That is what I said the other day. I thought you—"

"Yes, I was ill-natured then. But I want to please you. And we really ought to be civil."

One day is so like another in the city. Every day something new, and, the new the same thing over again. And always the expectation that it will be different tomorrow. Nothing is so tiresome as a kaleidoscope, though it never repeats itself.

Fortunately there are two pursuits that never pall—making money and making love.

Henderson had a new object in life, though the new one did not sensibly divert him from the old; it rather threw a charming light over it, and made the possibilities of it more attractive. In all his schemes he found the thought of Margaret entering. Why should it not have been Carmen? he sometimes thought. She thoroughly understood him. She would never stand in the way of his most daring ambitions with any scruples. Her conscience would never nag his. She would be ambitious for a career for him. Would she care for him or the career? How clever she was! And affectionate? She would be if she had a heart.

He was not balancing the two. What man ever does, in fact? It was simply because Margaret had a heart that he loved her, that she seemed necessary to him. He was quite capable of making a match for his advancement, but he felt strong enough to make one for his own pleasure. And if there are men so worldly as not to be attracted to unworldliness in a woman, Henderson was not one of them. If his heart had not dictated, his brain would have told him the value of the sympathy of a good woman.

He was a very busy man, in the thick of the struggle for a great fortune. It did not occur to him to reflect whether she would approve all the methods he resorted to, but all the women he knew liked success, and the thought of her invigorated him. If she once loved him, she would approve what he did.

He saw much of her in those passing days—days that went like a dream to one of them at least. He was a welcome guest at the Arbusers', but he saw little of Margaret alone. It did not matter. A chance look is a volume; a word is a library. They saw each other; they heard each other. And then passion grows almost as well in the absence as in the presence of the object. Imagination then has free play. A little separation sometimes will fan it into a flame.

The days went by, and Margaret's visit was over. I am obliged to say that the leave-taking was a gay one, as full of laughter as it was of hope. Brandon was such a little way off. Henderson often had business there. The Misses Arbuser said, "Of course." And Margaret said he must not forget that she lived there. Even when she bade her entertainers an affectionate good-by, she could not look very unhappy.

Spring was coming. That day in the cars there were few signs of it on the roadside to be seen, but the buds were swelling. And Margaret, neglecting the book which lay on her lap, and looking out the window, felt it in all her veins.

X

It is said that the world is created anew for every person who is in love. There is therefore this constant miracle of a new heavens and a new earth. It does not depend upon the seasons. The subtle force which is in every human being, more or less active, has this power, as if love were somehow a principle pervading nature itself, and capable of transforming it. Is this a divine gift? Can it be used more than once? Once spent, does the world to each succeeding experimenter in it become old and stale? We say the world is old. In one sense, the real sense to every person, it is no older than the lives lived in it at any given time. If it is always passing away, it is always being renewed. Every time a youth looks love in a maiden's eyes, and sees the timid appealing return of the universal passion, the world for those two is just as certainly created as it was on the first morning, in all its color, odor, song, freshness, promise. This is the central mystery of life.

Unconsciously to herself, Margaret had worked this miracle. Never before did the little town look so bright; never before was there exactly such a color on the hills—sentiment is so pale compared with love; never before did her home appear so sweet; never before was there such a fine ecstasy in the coming of spring.

For all this, home-coming, after the first excitement of arrival is over, is apt to be dull. The mind is so occupied with other emotions that the friends even seem a little commonplace and unresponsive, and the routine is tame. Out of such a whirl of new experiences to return and find that nothing has happened; that the old duties and responsibilities are waiting! Margaret had eagerly leaped from the carriage to throw herself into her aunt's arms—what a sweet welcome it is, that of kin!—and yet almost before the greeting was over she felt alone. There was that in the affectionate calmness of Miss Forsythe that seemed to chill the glow and fever of passion in her new world. And she had nothing to tell. Everything had changed, and she must behave as if nothing had happened. She must take up her old life—the interests of the neighborhood. Even the little circle of people she loved appeared distant from her at the moment; impossible it seemed to bring them into the rushing current of her life. Their joy in getting her back again she could not doubt, nor the personal affection with which she was welcomed. But was the New England atmosphere a little cold? What was the flavor she missed in it all? The next day a letter came. The excuse for it was the return of a fan which Mr. Henderson had carried off in his pocket from the opera. What a wonderful letter it was—his handwriting, the first note from him! Miss Forsythe saw in it only politeness. For Margaret it outweighed the town of Brandon. It lay in her lap as she sat at her chamber window looking out over the landscape, which was beginning to be flushed with a pale green. There was a robin on the lawn, and a blackbird singing in the pine. "Go not, happy day," she said, with tears in her eyes. She took up the brief letter and read it again. Was he really hers, "truly"? And she answered the letter, swiftly and with no hesitation, but with a throbbing heart. It was a civil acknowledgment; that was all. Henderson might have read it aloud in the Exchange. But what color, what charming turns of expression, what of herself, had the girl put into it, that gave him such a thrill of pleasure when he read it? What secret power has a woman to make a common phrase so glow with her very self?

Here was something in her life that was her own, a secret, a hope, and yet a tremulous anticipation to be guarded almost from herself. It colored everything; it was always, whatever she was doing or saying, present, like an air that one unconsciously hums for days after it has caught his fancy. Blessed be the capacity of being fond and foolish! If that letter was under her pillow at night, if this new revelation was last in her thought as she fell asleep, if it mingled with the song of the birds in the spring morning, as some great good pervading the world, is there anything distinguishing in such an experience that it should be dwelt on? And if there were questionings and little panics of doubt, did not these moments also reveal Margaret to herself more certainly than the hours of happy dreaming?

Questionings no doubt there were, and, later, serious questionings; for habit is almost as strong as love, and the old ways of life and of thought will reassert themselves in a thoughtful mind, and reason will insist on analyzing passion and even hope.

Gradually the home life and every-day interests began to assume their natural aspect and proportions. It was so sweet and sane, this home life, interesting and not feverish. There was time for reading, time for turning over things in the mind, time for those interchanges of feeling and of ideas, by the fireside; she was not required to be always on dress parade, in mind or person, always keyed up to make an impression or receive one; how much wider and sounder was Morgan's view of the world, allowing for his kindly cynicism, than that prevalent in the talk where she had lately been! How sincere and hearty and free ran the personal currents in this little neighborhood! In the very fact that the daily love and affection for her and interest in her were taken for granted she realized the difference between her position here and that among newer friends who showed more open admiration.

Little by little there was a readjustment. In comparison, the city life, with its intensity of action and feeling, began to appear distant, not so real, mixed, turbid, even frivolous. And was Henderson a vanishing part of this pageant? Was his figure less distinct as the days went by? It could not be affirmed. Love is such a little juggler, and likes, now and again, to pretend to be so reasonable and judicious. There were no more letters. If there had been a letter now and then, on any excuse, the nexus would have been more distinct: nothing feeds the flame exactly like a letter; it has intention, personality, secrecy. And the little excitement of it grows.

Once a week gets to be twice a week, three times, four times, and then daily. And then a day without a letter is such a blank, and so full of fear! What can have happened? Is he ill? Has he changed? The opium habit is nothing to the letter habit-between lovers. Not that Margaret expected a letter. Indeed, reason told her that it had not gone so far as that. But she should see him. She felt sure of that. And the thought filled all the vacant places in her imagination of the future.

And yet she thought she was seeing him more clearly than when he was with her. Oh wise young woman! She fancied she was deliberating, looking at life with great prudence. It must be one's own fault if one makes a radical mistake in marriage. She was watching the married people about her with more interest—the Morgans, our own household, Mrs. Fletcher; and besides, her aunt, whose even and cheerful life lacked this experience. It is so wise to do this, to keep one's feelings in control, not to be too hasty! Everybody has these intervals of prudence. That is the reason there are so few mistakes.

I dare say that all these reflections and deliberations in the maidenly mind were almost unconscious to herself; certainly unacknowledged. It was her imagination that she was following, and scarcely a distinct reality or intention. She thought of Henderson, and he gave a certain personality, vivid maybe, to that dream of the future which we all in youth indulge; but she would have shrunk from owning this even to herself. We deceive ourselves as often as we deceive others. Margaret would have repudiated with some warmth any intimation that she had lost her heart, and was really predicting the practical possibilities of that loss, and she would have been quite honest with herself in thinking that she was still mistress of her own feeling. Later on she would know, and delight to confess, that her destiny was fixed at a certain hour, at a certain moment, in New York, for subsequent events would run back to that like links in a chain. And she would have been right and also wrong in that; for but for those subsequent events the first impression would have faded, and been taken little account of in her life. I am more and more convinced that men and women act more upon impulse and less upon deep reflection and self-examination than the analytic novelists would have us believe, duly weighing motives and balancing considerations; and that men and women know themselves much less thoroughly than they suppose they do. There is a great deal of exaggeration, I am convinced, about the inward struggles and self-conflicts. The reader may know that Margaret was hopelessly in love, because he knows everything; but that charming girl would have been shocked and wounded to the most indignant humiliation if she had fancied that her friends thought that. Nay, more, if Henderson had at this moment made by letter a proposal for her hand, her impulse would have been to repudiate the offer as unjustified by anything that had taken place, and she would no doubt have obeyed that impulse.

But something occurred, while she was in this mood, that did not shock her maidenly self-consciousness, nor throw her into antagonism, but which did bring her face to face with a possible reality. And this was simply the receipt of a letter from Henderson; not a love-letter—far enough from that—but one in which there was a certain tone and intention that the most inexperienced would recognize as possibly serious. Aside from the announcement in the letter, the very fact of writing it was significant, conveying an intimation that the reader might be interested in what concerned the writer. The letter was longer than it need have been, for one thing, as if the pen, once started on its errand, ran on *con amore*. The writer was coming to Brandon; business, to be sure, was the excuse; but why should it have been necessary to announce to her a business visit? There crept into the letter somehow a good deal about his daily life, linked, to be sure, with mention of places and people in which she had recently an interest. He had been in Washington, and there were slight sketches of well-known characters in Congress and in the Government; he had been in Chicago, and even as far as Denver, and there were little pictures of scenes that might amuse her. There was no special mystery about all this travel and hurrying from place to place, but it gave Margaret a sense of varied and large occupations that she did not understand. Through it all there was the personality that had been recently so much in her thoughts. He was coming. That was a very solid fact that she must meet. And she did not doubt that he was coming to see her, and soon. That was a definite and very different idea from the dim belief that he would come some time. He had signed himself hers “faithfully.”

It was a letter that could not be answered like the other one; for it raised questions and prospects, and the thousand doubts that make one hesitate in any definite step; and, besides, she pleased herself to think that she did not know her own mind. He had not asked if he might come; he had said he was coming, and really there was no answer to that. Therefore she put it out of her mind—another curious mental process we have in dealing with a matter that is all the time the substratum of our existence. And she was actually serious; if she was reflective, she was conscious of being judicially reflective.

But in this period of calm and reflection it was impossible that a woman of Margaret's habits and temperament should not attempt to settle in her mind what that life was yonder of which she had a little taste; what was the career that Henderson had marked out for himself; what were his principles; what were the methods and reasons of his evident success. Endeavoring in her clear mind to separate the person, about whose personality she was so fondly foolish, from his schemes, which she so dimly comprehended, and applying to his somewhat hazy occupations her simple moral test, were the schemes quite legitimate? Perhaps she did not go so far as this; but what she read in the newspapers of moneymaking in these days made her secretly uneasy, and she found herself wishing that he were definitely practicing some profession, or engaged in some one solid occupation.

In the little parliament at our house, where everything, first and last, was overhauled and brought to judgment, without, it must be confessed, any visible effect on anything, one evening a common “incident” of the day started the conversation. It was an admiring account in a newspaper of a brilliant operation by which three or four men had suddenly become millionaires.

“I don't see,” said my wife, “any mention in this account of the thousands who have been reduced to poverty by this operation.”

“No,” said Morgan; “that is not interesting.”

“But it would be very interesting to me,” Mrs. Fletcher remarked. “Is there any protection, Mr. Morgan, for people who have invested their little property?”

“Yes; the law.”

"But suppose your money is all invested, say in a railway, and something goes wrong, where are you to get the money to pay for the law that will give you restitution? Is there anything in the State, or public opinion, or anywhere, that will protect your interests against clever swindling?"

"Not that I know of," Morgan admitted. "You take your chance when you let your money go out of your stocking. You see there are so many people who want it. You can put it in the ground."

"But if I own the ground I put it in, the voters who have no ground will tax it till there is nothing left for me."

"That is equality."

"But it isn't equality, for somebody gets very rich in railways or lands, while we lose our little all. Don't you think there ought to be a public official whose duty it is to enforce the law gratis which I cannot afford to enforce when I am wronged?"

"The difficulty is to discover whether you are wronged or only unfortunate. It needs a lawyer to find that out. And very likely if you are wronged, the wrongdoer has so cleverly gone round the law that it needs legislation to set you straight, and that needs a lobbyist, whom the lawyer must hire, or he must turn lobbyist himself. Now, a lawyer costs money, and a lobbyist is one of the most expensive of modern luxuries; but when you have a lawyer and lobbyist in one, you will find it economical to let him take your claim and all that can be made out of it, and not bother you any more about it. But there is no doubt about the law, as I said. You can get just as much law as you can pay for. It is like any other commodity."

"You mean to say," I asked, "that the lawyer takes what the operator leaves?"

"Not exactly. There is a great deal of unreasonable prejudice against lawyers. They must live. There is no nobler occupation than the application of the principle of justice in human affairs. The trouble is that public opinion sustains the operator in his smartness, and estimates the lawyer according to his adroitness. If we only evoked the aid of a lawyer in a just cause, the lawyers would have less to do."

"Usually and naturally the best talent goes with the biggest fees."

"It seems to me," said my wife, musing along, in her way, on parallel lines, "that there ought to be a limit to the amount of property one man can get into his absolute possession, to say nothing of the methods by which he gets it."

"That never yet could be set," Morgan replied. "It is impossible for any number of men to agree on it. I don't see any line between absolute freedom of acquisition, trusting to circumstances, misfortune, and death to knock things to pieces, and absolute slavery, which is communism."

"Do you believe, Mr. Morgan, that any vast fortune was ever honestly come by?"

"That is another question. Honesty is such a flexible word. If you mean a process the law cannot touch, yes. If you mean moral consideration for others, I doubt. But property accumulates by itself almost. Many a man who has got a start by an operation he would not like to have investigated, and which he tries to forget, goes on to be very rich, and has a daily feeling of being more and more honorable and respectable, using only means which all the world calls fair and shrewd."

"Mr. Morgan," suddenly asked Margaret, who had been all the time an uneasy listener to the turn the talk had taken, "what is railroad wrecking?"

"Oh, it is very simple, at least in some of its forms. The 'wreckers,' as they are called, fasten upon some railway that is prosperous, pays dividends, pays a liberal interest on its bonds, and has a surplus. They contrive to buy, no matter of what cost, a controlling interest in it, either in its stock or its management. Then they absorb its surplus; they let it run down so that it pays no dividends, and by-and-by cannot even pay its interest; then they squeeze the bondholders, who may be glad to accept anything that is offered out of the wreck, and perhaps then they throw the property into the hands of a receiver, or consolidate it with some other road at a value enormously greater than the cost to them in stealing it. Having in one way or another sucked it dry, they look round for another road."

"And all the people who first invested lose their money, or the most of it?"

"Naturally, the little fish get swallowed."

"It is infamous," said Margaret—"infamous! And men go to work to do this, to get other people's property, in cool blood?"

"I don't know how cool, but it is in the way of business."

"What is the difference between that and getting possession of a bank and robbing it?" she asked, hot with indignation.

"Oh, one is an operation, and the other is embezzlement."

"It is a shame. How can people permit it? Suppose, Mrs. Fletcher, a wrecker should steal your money that way?"

"I was thinking of that."

I never saw Margaret more disturbed—out of all proportion, I thought, to the cause; for we had talked a hundred times about such things.

"Do you think all men who are what you call operating around are like that?" she asked.

"Oh, no," I said. "Probably most men who are engaged in what is generally called speculation are doing what seems to them a perfectly legitimate business. It is a common way of making a fortune."

"You see, Margaret," Morgan explained, "when people in trade buy anything, they expect to sell it for more than they gave for it."

"It seems to me," Margaret replied, more calmly, "that a great deal of what you men call business is just trying to get other people's money, and doesn't help anybody or produce anything."

"Oh, that is keeping up the circulation, preventing stagnation."

"And that is the use of brokers in grain and stocks?"

"Partly. They are commonly the agents that others use to keep themselves from stagnation."

"I cannot see any good in it," Margaret persisted. "No one seems to have the things he buys or sells. I don't understand it."

"That is because you are a woman, if you will pardon me for saying it. Men don't need to have things in hand; business is done on faith and credit, and when a transaction is over, they settle up and pay the difference, without the trouble of transporting things back and forth."

"I know you are chaffing me, Mr. Morgan. But I should call that betting."

"Oh, there is a risk in everything you do. But you see it is really paying for a difference of knowledge or opinion."

"Would you buy stocks that way?"

"What way?"

"Why, agreeing to pay for your difference of opinion, as you call it, not really having any stock at all."

"I never did. But I have bought stocks and sold them pretty soon, if I could make anything by the sale. All merchants act on that principle."

"Well," said Margaret, dimly seeing the sophistry of this, "I don't understand business morality."

"Nobody does, Margaret. Most men go by the law. The Golden Rule seems to be suspended by a more than two-thirds vote."

It was by such inquiries, leading to many talks of this sort, that Margaret was groping in her mind for the solution of what might become to her a personal question. Consciously she did not doubt Henderson's integrity or his honor, but she was perplexed about the world of which she had recently had a glimpse, and it was impossible to separate him from it. Subjected to an absolutely new experience, stirred as her heart had never been before by any man—a fact which at once irritated and pleased her—she was following the law of her own nature, while she was still her own mistress, to ponder these things and to bring her reason to the guidance of her feeling. And it is probable that she did not at all know the strength of her feeling, or have any conception of the real power of love, and how little the head has to do with the great passion of life, the intensity of which the poets have never in the least exaggerated. If she thought of Mr. Lyon occasionally, of his white face and pitiful look of suffering that day, she could not, after all, make it real or permanently serious. Indeed, she was sure that no emotion could so master her. And yet she looked forward to Henderson's coming with a sort of nervous apprehension, amounting almost to dread.

XI

It was the susceptible time of the year for plants, for birds, for maids: all innocent natural impulses respond to the subtle influence of spring. One may well gauge his advance in selfishness, worldliness, and sin by his loss of this annual susceptibility, by the failure of this sweet appeal to touch his heart. One must be very far gone if some note of it does not for a moment bring back the tenderest recollections of the days of joyous innocence.

Even the city, with its mass of stone and brick, rectangles, straight lines, dust, noise, and fever of activity, is penetrated by this divine suggestion of the renewal of life. You can scarcely open a window without letting in a breath of it; the south wind, the twitter of a sparrow, the rustle of leaves in the squares, the smell of the earth and of some struggling plant in the area, the note of a distant hand-organ softened by distance, are begetting a longing for youth, for green fields, for love. As Carmen walked down the avenue with Mr. Lyon on a spring morning she almost made herself believe that an unworldly life with this simple-hearted gentleman—when he should come into his title and estate—would be more to her liking than the most brilliant success in place and power with Henderson. Unfortunately the spring influence also suggested the superior attractiveness of the only man who had ever taken her shallow fancy. And unfortunately the same note of nature suggested to Mr. Lyon the contrast of this artificial piece of loveliness with the domestic life of which he dreamed.

As for Margaret, she opened her heart to the spring without reserve. It was May. The soft maples had a purple tinge, the chestnuts showed color, the apple-trees were in bloom (all the air was full of their perfume), the blackbirds were chattering in convention in the tall oaks, the bright leaves and the flowering shrubs were alive with the twittering and singing of darting birds. The soft, fleecy clouds, hovering as over a world just created, seemed to make near and participant in the scene the delicate blue of the sky. Margaret—I remember the morning—was standing on her piazza, as I passed through the neighborhood drive, with a spray of apple-blossoms in her hand. For the moment she seemed to embody all the maiden purity of the scene, all its promise. I said, laughing:

"We shall have to have you painted as spring."

"But spring isn't painted at all," she replied, holding up the apple—blossoms, and coming down the piazza with a dancing step.

"And so it won't last. We want something permanent," I was beginning to say, when a carriage passed, going to our house. "I think that must be Henderson."

"Ah!" she exclaimed. Her sunny face clouded at once, and she turned to go in as I hurried away.

It was Mr. Henderson, and there was at least pretense enough of business to occupy us, with Mr. Morgan, the greater part of the day. It was not till late in the afternoon that Henderson appeared to remember that Margaret was in the neighborhood, and spoke of his intention of calling. My wife pointed out the way to him across the grounds, and watched him leisurely walking among the trees till he was out of sight.

"What an agreeable man Mr. Henderson is!" she said, turning to me; "most companionable; and yet—and yet, my dear, I'm glad he is not my husband. You suit me very well." There was an air of conviction about this remark, as if it were the result of deep reflection and comparison, and it was emphasized by the little possessory act of readjusting my necktie—one of the most subtle of female flatteries.

"But who wanted him to be your husband?" I asked. "Married women have the oddest habit of going about the world picking out the men they would not like to have married. Do they need continually to justify themselves?"

"No; they congratulate themselves. You never can understand."

"I confess I cannot. My first thought about an attractive woman whose acquaintance I make is not that I am glad I did not marry her."

"I dare say not. You are all inconsistent, you men. But you are the least so of any man in the world, I do believe."

It would be difficult to say whether the spring morning seemed more or less glorious to Margaret when she went indoors, but its serenity was gone.

It was like the premonition in nature of a change. She put the apple blossoms in water and placed the jug on the table, turning it about half a dozen times, moving her head from side to side to get the effect. When it was exactly right, she said to her aunt, who sat sewing in the bay-window, in a perfectly indifferent tone, "Mr. Fairchild just passed here, and said that Mr. Henderson had come."

"Ah!" Her aunt did not lift her eyes from her work, or appear to attach the least importance to this tremendous piece of news. Margaret was annoyed at what seemed to her an assumed indifference. Her nerves were quivering with the knowledge that he had arrived, that he was in the next house, that he might be here any moment—the man who had entered into her whole life—and the announcement was no more to her aunt than if she had said it rained. She was provoked at herself that she should be so disturbed, yes, annoyed, at his proximity. She wished he had not come—not today, at any rate. She looked about for something to do, and began to rearrange this and that trifle in the sitting-room, which she had perfectly arranged once before in the morning, moving about here and there in a rather purposeless manner, until her aunt looked up and for a moment followed her movements till Margaret left the room. In her own chamber she sat by the window and tried to think, but there was no orderly mental process; in vain she tried to run over in her mind the past month and all her reflections and wise resolves. She heard the call of the birds, she inhaled the odor of the new year, she was conscious of all that was gracious and inviting in the fresh scene, but in her sub-consciousness there was only one thought—he was there, he was coming. She took up her sewing, but the needle paused in the stitch, and she found herself looking away across the lawn to the hills; she took up a book, but the words had no meaning, read and reread them as she would. He is there, he is coming. And what of it? Why should she be so disturbed? She was uncommitted, she was mistress of her own actions. Had she not been coolly judging his conduct? She despised herself for being so nervous and unsettled. If he was coming, why did he not come? Why was he waiting so long? She arose impatiently and went down-stairs. There was a necessity of doing something.

"Is there anything that you want from town, auntie?"

"Nothing that I know of. Are you going in?"

"No, unless you have an errand. It is such a fine day that it seems a pity to stay indoors."

"Well, I would walk if I were you." But she did not go; she went instead to her room. He might come any moment. She ought not to run away; and yet she wished she were away. He said he was coming on business. Was it not, then, a pretense? She felt humiliated in the idea of waiting for him if the business were not a pretense.

How insensible men are! What a mere subordinate thing to them in life is the love of a woman! Yes, evidently business was more important to him than anything else. He must know that she was waiting; and she blushed to herself at the very possibility that he should think such a thing. She was not waiting. It was lunch-time. She excused herself. In the next moment she was angry that she had not gone down as usual. It was time for him to come. He would certainly come immediately after lunch. She would not see him. She hoped never to see him. She rose in haste, put on her hat, put it on carefully, turning and returning before the glass, selected fresh gloves, and ran down-stairs.

"I'm going, auntie, for a walk to town."

The walk was a long one. She came back tired. It was late in the afternoon. Her aunt was quietly reading. She needed to ask her nothing: Mr. Henderson had not been there. Why had he written to her?

"Oh, the Fairchilds want us to come over to dinner," said Miss Forsythe, without looking up.

"I hope you will go, auntie. I sha'n't mind being alone."

"Why? It's perfectly informal. Mr. Henderson happens to be there."

"I'm too stupid. But you must go. Mr. Henderson, in New York, expressed the greatest desire to make your acquaintance."

Miss Forsythe smiled. "I suppose he has come up on purpose. But, dear, you must go to chaperon me. It would hardly be civil not to go, when you knew Mr. Henderson in New York, and the Fairchilds want to make it agreeable for him."

"Why, auntie, it is just a business visit. I'm too tired to make the effort. It must be this spring weather."

Perhaps it was. It is so unfortunate that the spring, which begets so many desires, brings the languor that defeats their execution. But there is a limit to the responsibility even of spring for a woman's moods. Just as Margaret spoke she saw, through the open window, Henderson coming across the lawn, walking briskly, but evidently not inattentive to the charm of the landscape. It was his springy step, his athletic figure, and, as he came nearer, the joyous anticipation in his face. And it was so sudden, so unexpected—the vision so long looked for! There was no time for flight, had she wanted to avoid him; he was on the piazza; he was at the open door. Her hand went quickly to her heart to still the rapid flutter, which might be from pain and might

be from joy—she could not tell. She had imagined their possible meeting so many times, and it was not at all like this. She ought to receive him coldly, she ought to receive him kindly, she ought to receive him indifferently. But how real he was, how handsome he was! If she could have obeyed the impulse of the moment I am not sure but she would have fled, and cast herself face downward somewhere, and cried a little and thanked God for him. He was in the room. In his manner there was no hesitation, in his expression no uncertainty. His face beamed with pleasure, and there was so much open admiration in his eyes that Margaret, conscious of it to her heart's core, feared that her aunt would notice it. And she met him calmly enough, frankly enough. The quickness with which a woman can pull herself together under such circumstances is testimony to her superior fibre.

"I've been looking across here ever since morning," he said, as soon as the hand-shaking and introduction were over, "and I've only this minute been released." There was no air of apology in this, but a delicate intimation of impatience at the delay. And still, what an unconscious brute a man is!

"I thought perhaps you had returned," said Margaret, "until my aunt was just telling me we were asked to dine with you."

Henderson gave her a quick glance. Was it possible she thought he could go away without seeing her?

"Yes, and I was commissioned to bring you over when you are ready." "I will not keep you waiting long, Mr. Henderson," interposed Miss Forsythe, out of the goodness of her heart. "My niece has been taking a long walk, and this debilitating spring weather—"

"Oh, since the sun has gone away, I think I'm quite up to the exertion, since you wish it, auntie," a speech that made Henderson stare again, wholly unable to comprehend the reason of an indirection which he could feel—he who had been all day impatient for this moment. There was a little talk about the country and the city at this season, mainly sustained by Miss Forsythe and Henderson, and then he was left alone. "Of course you should go, Margaret," said her aunt, as they went upstairs; "it would not be at all the thing for me to leave you here. And what a fine, manly, engaging fellow Mr. Henderson is!"

"Yes, he acts very much like a man;" and Margaret was gone into her room.

Go? There was not force enough in the commonwealth, without calling out the militia, to keep Margaret from going to the dinner. She stopped a moment in the middle of her chamber to think. She had almost forgotten how he looked—his eyes, his smile. Dear me! how the birds were singing outside, and how fresh the world was! And she would not hurry. He could wait. No doubt he would wait now any length of time for her. He was in the house, in the room below, perhaps looking out of the window, perhaps reading, perhaps spying about at her knick-knacks—she would like to look in at the door a moment to see what he was doing. Of course he was here to see her, and all the business was a pretext. As she sat a moment upon the edge of her bed reflecting what to put on, she had a little pang that she had been doing him injustice in her thought. But it was only for an instant. He was here. She was not in the least flurried. Indeed, her mental processes were never clearer than when she settled upon her simple toilet, made as it was in every detail with the sure instinct of a woman who dresses for her lover. Heavens! what a miserable day it had been, what a rebellious day! He ought to be punished for it somehow. Perhaps the rose she put in her hair was part of the punishment. But he should not see how happy she was; she would be civil, and just a little reserved; it was so like a man to make a woman wait all day and then think he could smooth it all over simply by appearing.

But somehow in Henderson's presence these little theories of conduct did not apply. He was too natural, direct, unaffected, his pleasure in being with her was so evident! He seemed to brush aside the little defenses and subterfuges. There was this about him that appeared to her admirable, and in contrast with her own hesitating indirection, that whatever he wanted—money, or position, or the love of woman—he went straight to his object with unconsciousness that failure was possible. Even in walking across the grounds in the soft sunset light, and chatting easily, their relations seemed established on a most natural basis, and Margaret found herself giving way to the simple enjoyment of the hour. She was not only happy, but her spirits rose to inexpressible gayety, which ran into the humor of badinage and a sort of spiritual elation, in which all things seemed possible. Perhaps she recognized in herself, what Henderson saw in her. And with it all there was an access of tenderness for her aunt, the dear thing whose gentle life appeared so colorless.

I had never seen Margaret so radiant as at the dinner; her high spirits infected the table, and the listening and the talking were of the best that the company could give. I remembered it afterwards, not from anything special that was said, but from its flow of high animal spirits, and the electric responsive mood everyone was in; no topic carried too far, and the chance seriousness setting off the sparkling comments on affairs. Henderson's talk had the notable flavor of direct contact with life, and very little of the speculative and reflective tone of Morgan's, who was always generalizing and theorizing about it. He had just come from the West, and his off-hand sketches of men had a special cynicism, not in the least condemnatory, mere good-natured acceptance, and in contrast to Morgan's moralizing and rather pitying cynicism. It struck me that he did not believe in his fellows as much as Morgan did; but I fancied that Margaret only saw in his attitude a tolerant knowledge of the world.

"Are the people on the border as bad as they are represented?" she asked.

"Certainly not much worse than they represent themselves," he replied; "I suppose the difference is that men feel less restraint there."

"It is something more than that," added Morgan. "There is a sort of drift-wood of adventure and devil-may-care-ism that civilization throws in advance of itself; but that isn't so bad as the slag it manufactures in the cities."

"I remember you said, Mr. Morgan, that men go West to get rid of their past," said Margaret.

"As New Yorkers go to Europe to get rid of their future?" Henderson inquired, catching the phrase.

"Yes"—Morgan turned to Margaret—"doubtless there is a satisfaction sometimes in placing the width of a continent between a man and what he has done. I've thought that one of the most popular verses in the Psalter, on the border, must be the one that says—you will know if I quote it right 'Look how wide also the East is from the West; so far hath He set our sins from us.'"

"That is dreadful," exclaimed Margaret. "To think of you spending your time in the service picking out passages to fit other people!"

"It sounds as if you had manufactured it," was Henderson's comment.

"No; that quiet Mr. Lyon pointed it out to me when we were talking about Montana. He had been there."

"By-the-way, Mr. Henderson," my wife asked, "do you know what has become of Mr. Lyon?"

"I believe he is about to go home."

"I fancied Miss Eschelle might have something to say about that," Morgan remarked.

"Perhaps, if she were asked. But Mr. Lyon appeared rather indifferent to American attractions."

Margaret looked quickly at Henderson as he said this, and then ventured, a little slyly, "She seemed to appreciate his goodness."

"Yes; Miss Eschelle has an eye for goodness."

This was said without change of countenance, but it convinced the listener that Carmen was understood.

"And yet," said Margaret, with a little air of temerity, "you seem to be very good friends."

"Oh, she is very charitable; she sees, I suppose, what is good in me; and I'll spare you the trouble of remarking that she must necessarily be very sharp-sighted."

"And I'm not going to destroy your illusion by telling you her real opinion of you," Margaret retorted.

Henderson begged to know what it was, but Margaret evaded the question by new raillery. What did she care at the moment what Carmen thought of Henderson? What—did either of them care what they were saying, so long as there was some personal flavor in the talk! Was it not enough to talk to each other, to see each other?

As we sat afterwards upon the piazza with our cigars, inhaling the odor of the apple blossoms, and yielding ourselves, according to our age, to the influence of the mild night, Margaret was in the high spirits which accompany the expectation of bliss, without the sobering effect of its responsibility. Love itself is very serious, but the overture is full of freakish gayety. And it was all gayety that night. We all constituted ourselves a guard of honor to Miss Forsythe and Margaret when they went to their cottage, and there was a merry leave-taking in the moonlight. To be sure, Margaret walked with Henderson, and they lagged a little behind, but I had no reason to suppose that they were speaking of the stars, or that they raised the ordinary question of their being inhabited. I doubt if they saw the stars at all. How one remembers little trifles, that recur like the gay bird notes of the opening scenes that are repeated in the tragedy of the opera! I can see Margaret now, on some bantering pretext, running back, after we had said good-night, to give Henderson the blush-rose she had worn in her hair. How charming the girl was in this freakish action!

"Do you think he is good enough for her?" asked my wife, when we were alone.

"Who is good enough for whom?" I said, a yawn revealing my want of sentiment.

"Don't be stupid. You are not so blind as you pretend."

"Well, if I am not so blind as I pretend, though I did not pretend to be blind, I suppose that is mainly her concern."

"But I wish she had cared for Lyon."

"Perhaps Lyon did not care for her," I suggested.

"You never see anything. Lyon was a noble fellow."

"I didn't deny that. But how was I to know about Lyon, my dear? I never heard you say that you were glad he wasn't your husband."

"Don't be silly. I think Henderson has very serious intentions."

"I hope he isn't frivolous," I said.

"Well, you are. It isn't a joking matter—and you pretend to be so fond of Margaret!"

"So that is another thing I pretend? What do you want me to do? Which one do you want me to make my enemy by telling him or her that the other isn't good enough?"

"I don't want you to do anything, except to be reasonable, and sympathize."

"Oh, I sympathize all round. I assure you I've no doubt you are quite right." And in this way I crawled out of the discussion, as usual.

What a pretty simile it is, comparing life to a river, because rivers are so different! There are the calm streams that flow eagerly from the youthful sources, join a kindred flood, and go placidly to the sea, only broadening and deepening and getting very muddy at times, but without a rapid or a fall. There are others that flow carelessly in the upper sunshine, begin to ripple and dance, then run swiftly, and rush into rapids in which there is no escape (though friends stand weeping and imploring on the banks) from the awful plunge of the cataract. Then there is the tumult and the seething, the exciting race and rage through the canon, the whirlpools and the passions of love and revelations of character, and finally, let us hope, the happy emergence into the lake of a serene life. And the more interesting rivers are those that have tumults and experiences.

I knew well enough before the next day was over that it was too late for the rescue of Margaret or Henderson. They were in the rapids, and would have rejected any friendly rope thrown to draw them ashore. And notwithstanding the doubts of my wife, I confess that I had so much sympathy with the genuineness of it that I enjoyed this shock of two strong natures rushing to their fate. Was it too sudden? Do two living streams hesitate when they come together? When they join they join, and mingle and reconcile themselves afterwards. It is only canals that flow languidly in parallel lines, and meet, if they meet at all, by the orderly contrivance of a lock.

In the morning the two were off for a stroll. There is a hill from which a most extensive prospect is had of the city, the teeming valley, with a score of villages and innumerable white spires, of forests and meadows and broken mountain ranges. It was a view that Margaret the night before had promised to show Henderson,

that he might see what to her was the loveliest landscape in the world. Whether they saw the view I do not know. But I know the rock from which it is best seen, and could fancy Margaret sitting there, with her face turned towards it and her hands folded in her lap, and Henderson sitting, half turned away from it, looking in her face. There is an apple orchard just below. It was in bloom, and all the invitation of spring was in the air. That he saw all the glorious prospect reflected in her mobile face I do not doubt—all the nobility and tenderness of it. If I knew the faltering talk in that hour of growing confidence and expectation, I would not repeat it. Henderson lunched at the Forsythe's, and after lunch he had some talk with Miss Forsythe. It must have been of an exciting nature to her, for, immediately after, that good woman came over in a great flutter, and was closeted with my wife, who at the end of the interview had an air of mysterious importance. It was evidently a woman's day, and my advice was not wanted, even if my presence was tolerated. All I heard my wife say through the opening door, as the consultation ended, was, "I hope she knows her own mind fully before anything is decided."

As to the objects of this anxiety, they were upon the veranda of the cottage, quite unconscious of the necessity of digging into their own minds. He was seated, and she was leaning against the railing on which the honeysuckle climbed, pulling a flower in pieces.

"It is such a short time I have known you," she was saying, as if in apology for her own feeling.

"Yes, in one way;" and he leaned forward, and broke his sentence with a little laugh. "I think I must have known you in some pre-existent state."

"Perhaps. And yet, in another way, it seems long—a whole month, you know." And the girl laughed a little in her turn.

"It was the longest month I ever knew, after you left the city."

"Was it? I oughtn't to have said that first. But do you know, Mr. Henderson, you seem totally different from any other man I ever knew."

That this was a profound and original discovery there could be no doubt, from the conviction with which it was announced. "I felt from the first that I could trust you."

"I wish"—and there was genuine feeling in the tone—"I were worthier of such a generous trust."

There was a wistful look in her face—timidity, self-depreciation, worship—as Henderson rose and stood near her, and she looked up while he took the broken flower from her hand. There was but one answer to this, and in spite of the open piazza and the all-observant, all-revealing day, it might have been given; but at the moment Miss Forsythe was seen hurrying towards them through the shrubbery. She came straight to where they stood, with an air of New England directness and determination. One hand she gave to Henderson, the other to Margaret. She essayed to speak, but tears were in her eyes, and her lips trembled; the words would not come. She regarded them for an instant with all the overflowing affection of a quarter of a century of repression, and then quickly turned and went in. In a moment they followed her. Heaven go with them!

After Henderson had made his hasty adieus at our house and gone, before the sun was down, Margaret came over. She came swiftly into the room, gave me a kiss as I rose to greet her, with a delightful impersonality, as if she owed a debt somewhere and must pay it at once—we men who are so much left out of these affairs have occasionally to thank Heaven for a merciful moment—seized my wife, and dragged her to her room.

"I couldn't wait another moment," she said, as she threw herself on my wife's bosom in a passion of tears. "I am so happy! he is so noble, and I love him so!" And she sobbed as if it were the greatest calamity in the world. And then, after a little, in reply to a question—for women are never more practical than in such a crisis: "Oh, no—not for a long, long, long time. Not before autumn."

And the girl looked, through her glad tears, as if she expected to be admired for this heroism. And I have no doubt she was.

XII

Well, that was another success. The world is round, and like a ball seems swinging in the air, and swinging very pleasantly, thought Henderson, as he stepped on board the train that evening. The world is truly what you make it, and Henderson was determined to make it agreeable. His philosophy was concise, and might be hung up, as a motto: Get all you can, and don't fret about what you cannot get.

He went into the smoking compartment, and sat musing by the window for some time before he lit his cigar, feeling a glow of happiness that was new in his experience. The country was charming at twilight, but he was little conscious of that. What he saw distinctly was Margaret's face, trustful and wistful, looking up into his as she bade him goodby. What he was vividly conscious of was being followed, enveloped, by a woman's love.

"You will write, dear, the moment you get there, will you not? I am so afraid of accidents," she had said.

"Why, I will telegraph, sweet," he had replied, quite gayly.

"Will you? Telegraph? I never had that sort of a message." It seemed a very wonderful thing that he should use the public wire for this purpose, and she looked at him with new admiration.

"Are you timid about the train?" he asked.

"No. I never think of it. I never thought of it for myself; but this is different."

"Oh, I see." He put his arm round her and looked down into her eyes. This was a humorous suggestion to him, who spent half his time on the trains. "I think I'll take out an accident policy."

"Don't say that. But you men are so reckless. Promise you won't stand on the platform, and won't get off while the train is in motion, and all the rest of the directions," she said, laughing a little with him; "and you will be careful?"

"I'll take such care of myself as I never did before, I promise. I never felt of so much consequence in my life."

"You'll think me silly. But you know, don't you, dear?" She put a hand on each shoulder, and pushing him back, studied his face. "You are all the world. And only to think, day before yesterday, I didn't think of the trains at all."

To have one look like that from a woman! To carry it with him! Henderson still forgot to light his cigar.

"Hello, Rodney!"

"Ah, Hollowell! I thought you were in Kansas City."

The new-comer was a man of middle age, thick set, with rounded shoulders, deep chest, heavy neck, iron-gray hair close cut, gray whiskers cropped so as to show his strong jaw, blue eyes that expressed at once resolution and good-nature.

"Well, how's things? Been up to fix the Legislature?"

"No; Perkins is attending to that," said Henderson, rather indifferently, like a man awakened out of a pleasant dream. "Don't seem to need much fixing. The public are fond of parallels."

Hollowell laughed. "I guess that's so—till they get 'em."

"Or don't get them," Henderson added. And then both laughed.

"It looks as if it would go through this time. Bemis says the C. D.'s badly scared. They'll have to come down lively."

"I shouldn't wonder. By-the-way, look in tomorrow. I've got something to show you."

Henderson lit his cigar, and they both puffed in silence for some moments.

"By-the-way, did I ever show you this?" Hollowell took from his breast-pocket a handsome morocco case, and handed it to his companion. "I never travel without that. It's better than an accident policy."

Henderson unfolded the case, and saw seven photographs—a showy-looking handsome woman in lace and jewels, and six children, handsome like their mother, the whole group with the photographic look of prosperity.

Henderson looked at it as if it had been a mirror of his own destiny, and expressed his admiration.

"Yes, it's hard to beat," Hollowell confessed, with a soft look in his face. "It's not for sale. Seven figures wouldn't touch it." He looked at it lovingly before he put it up, and then added: "Well, there's a figure for each, Rodney, and a big nest-egg for the old woman besides. There's nothing like it, old man. You'd better come in." And he put his hand affectionately on Henderson's knee.

Jeremiah Hollowell—commonly known as Jerry—was a remarkable man. Thirty years ago he had come to the city from Maine as a "hand" on a coast schooner, obtained employment in a railroad yard, then as a freight conductor, gone West, become a contractor, in which position a lucky hit set him on the road of the unscrupulous accumulation of property. He was now a railway magnate, the president of a system, a manipulator of dexterity and courage. All this would not have come about if his big head had not been packed with common-sense brains, and he had not had uncommon will and force of character. Success had developed the best side of him, the family side; and the worst side of him—a brutal determination to increase his big fortune. He was not hampered by any scruples in business, but he had the good-sense to deal squarely with his friends when he had distinctly agreed to do so.

Henderson did not respond to the matrimonial suggestion; it was not possible for him to vulgarize his own affair by hinting it to such a man as Hollowell; but they soon fell into serious talk about schemes in which they were both interested. This talk so absorbed Henderson that after they had reached the city he had walked some blocks towards his lodging before he recalled his promise about the message. On his table he found a note from Carmen bidding him to dinner informally—an invitation which he had no difficulty in declining on account of a previous engagement. And then he went to his club, and passed a cheerful evening. Why not? There was nothing melancholy about the young fellows in the smoking-room, who liked a good story and the latest gossip, and were attracted to the society of Henderson, who was open-handed and full of animal spirits, and above all had a reputation for success, and for being on the inside of affairs. There is nowhere else so much wisdom and such understanding of life as in a city club of young fellows, who have their experience still, for the most part, before them. Henderson was that night in great "force"—as the phrase is. His companions thought he had made a lucky turn, and he did not tell them that he had won the love of the finest girl in the world, who was at that moment thinking of him as fondly as he was thinking of her—but this was the subconsciousness of his gayety. Late at night he wrote her a long letter—an honest letter of love and admiration, which warmed into the tenderness of devotion as it went on; a letter that she never parted with all her life long; but he left a description of the loneliness of his evening without her to her imagination.

It was for Margaret also a happy evening, but not a calm one, and not gay. She was swept away by a flood of emotions. She wanted to be alone, to think it over, every item of the short visit, every look, every tone. Was it all true? The great change made her tremble: of the future she dared scarcely think. She was restless, but not restless as before; she could not be calm in such a great happiness. And then the wonder of it, that he should choose her of all others—he who knew the world so well, and must have known so many women. She followed him on his journey, thinking what he was doing now, and now, and now. She would have given the world to see him just for a moment, to look in his eyes and be sure again, to have him say that little word once more: there was a kind of pain in her heart, the separation was so cruel; it had been over two hours now. More than once in the evening she ran down to the sitting-room, where her aunt was pretending to be absorbed in a book, to kiss her, to pet her, to smooth her grayish hair and pat her cheek, and get her to talk about her girlhood days. She was so happy that tears were in her eyes half the time. At nine o'clock there was

a pull at the bell that threatened to drag the wire out, and an insignificant little urchin appeared with a telegram, which frightened Miss Forsythe, and seemed to Margaret to drop out of heaven. Such an absurd thing to do at night, said the aunt, and then she kissed Margaret, and laughed a little, and declared that things had come to a queer pass when people made love by telegraph. There wasn't any love in the telegram, Margaret said; but she knew better—the sending word of his arrival was a marvelous exhibition of thoughtfulness and constancy.

And then she led her aunt on to talk of Mr. Henderson, to give her impression, how he looked, what she really thought of him, and so on, and so on.

There was not much to say, but it could be said over and over again in various ways. It was the one night of the world, and her overwrought feeling sought relief. It would not be so again. She would be more reticent and more coquettish about her lover, but now it was all so new and strange.

That night when the girl went to sleep the telegram was under her pillow, and it seemed to throb with a thousand messages, as if it felt the pulsation of the current that sent it.

The prospective marriage of the budding millionaire Rodney Henderson was a society paper item in less than a week—the modern method of publishing the banns. This was accompanied by a patronizing reference to the pretty school-ma'am, who was complimented upon her good-fortune in phrases so neatly turned as to give Henderson the greatest offense, and leave him no remedy, since nothing could have better suited the journal than further notoriety. He could not remember that he had spoken of it to any one except the Eschelles, to whom his relations made the communication a necessity, and he suspected Carmen, without, however, guessing that she was a habitual purveyor of the town gossip.

"It is a shameful impertinence," she burst out, introducing the subject herself, when he called to see her. "I would horsewhip the editor." Her indignation was so genuine, and she took his side with such warm good comradeship, that his suspicions vanished for a moment.

"What good?" he answered, cooling down at the sight of her rage. "It is true, we are to be married, and she has taught school. I can't drag her name into a row about it. Perhaps she never will see it."

"Oh dear! dear me! what have I done?" the girl cried, with an accent of contrition. "I never thought of that. I was so angry that I cut it out and put it in the letter that was to contain nothing but congratulations, and told her how perfectly outrageous I thought it. How stupid!" and there was a world of trouble in her big dark eyes, while she looked up penitently, as if to ask his forgiveness for a great crime.

"Well, it cannot be helped," Henderson said, with a little touch of sympathy for Carmen's grief. "Those who know her will think it simply malicious, and the others will not think of it a second time."

"But I cannot forgive myself for my stupidity. I'm not sure but I'd rather you'd think me wicked than stupid," she continued, with the smile in her eyes that most men found attractive. "I confess—is that very bad?—that I feel it more for you than for her. But" (she thought she saw a shade in his face) "I warn you, if you are not very nice, I shall transfer my affections to her."

The girl was in her best mood, with the manner of a confiding, intimate friend. She talked about Margaret, but not too much, and a good deal more about Henderson and his future, not laying too great stress upon the marriage, as if it were, in fact, only an incident in his career, contriving always to make herself appear as a friend, who hadn't many illusions or much romance, to be sure, but who could always be relied on in any mood or any perplexity, and wouldn't be frightened or very severe at any confidences. She posed as a woman who could make allowances, and whose friendship would be no check or hinderance. This was conveyed in manner as much as in words, and put Henderson quite at his ease. He was not above the weakness of liking the comradeship of a woman of whom he was not afraid, a woman to whom he could say anything, a woman who could make allowances. Perhaps he was hardly conscious of this. He knew Carmen better than she thought he knew her, and he couldn't approve of her as a wife; and yet the fact was that she never gave him any moral worries.

"Yes," she said, when the talk drifted that way, "the chrysalis earl has gone. I think that mamma is quite inconsolable. She says she doesn't understand girls, or men, or anything, these days."

"Do you?" asked Henderson, lightly.

"I? No. I'm an agnostic—except in religion. Have you got it into your head, my friend, that I ever fancied Mr. Lyon?"

"Not for himself—" began Henderson, mischievously.

"That will do." She stopped him. "Or that he ever had any intention—"

"I don't see how he could resist such—"

"Stuff! See here, Mr. Rodney!" The girl sprang up, seized a plaque from the table, held it aloft in one hand, took half a dozen fascinating, languid steps, advancing and retreating with the grace of a Nautch girl, holding her dress with the other hand so as to allow a free movement. "Do you think I'd ever do that for John the Lyon's head on a charger?"

Then her mood changed to the domestic, as she threw herself into an easy-chair and said: "After all, I'm rather sorry he has gone. He was a man you could trust; that is, if you wanted to trust anybody—I wish I had been made good."

When Henderson bade her good-night it was with the renewed impression that she was a very diverting comrade.

"I'm sort of sorry for you," she said, and her eyes were not so serious as to offend, as she gave him her hand, "for when you are married, you know, as the saying is, you'll want some place to spend your evenings." The audacity of the remark was quite obscured in the innocent frankness and sweetness of her manner.

What Henderson had to show Hollowell in his office had been of a nature greatly to interest that able financier. It was a project that would have excited the sympathy of Carmen, but Henderson did not speak of it to her—though he had found that she was a safe deposit of daring schemes in general—on account of a feeling of loyalty to Margaret, to whom he had never mentioned it in any of his daily letters. The scheme

made a great deal of noise, later on, when it came to the light of consummation in legislatures and in courts, both civil and criminal; but its magnitude and success added greatly to Henderson's reputation as a bold and fortunate operator, and gave him that consideration which always attaches to those who command millions of money, and have the nerve to go undaunted through the most trying crises. I am anticipating by saying that it absolutely ruined thousands of innocent people, caused widespread strikes and practical business paralysis over a large region; but those things were regarded as only incidental to a certain sort of development, and did not impair the business standing, and rather helped the social position, of the two or three men who counted their gains by millions in the operation. It furnished occupation and gave good fees to a multitude of lawyers, and was dignified by the anxious consultation of many learned judges. A moralist, if he were poor and pessimistic, might have put the case in a line, and taken that line from the Mosaic decalogue (which was not intended for this new dispensation); but it was involved in such a cloud of legal technicalities, and took on such an aspect of enterprise and development of resources, and what not, that the general public mind was completely befogged about it. I am charitable enough to suppose that if the scheme had failed, the public conscience is so tender that there would have been a question of Henderson's honesty. But it did not fail.

Of this scheme, however, we knew nothing at the time in Brandon. Henderson was never in better spirits, never more agreeable, and it did not need inquiry to convince one that he was never so prosperous. He was often with us, in flying visits, and I can well remember that his coming and the expectation of it gave a kind of elation to the summer—that and Margaret's supreme and sunny happiness. Even my wife admitted that it was on both sides a love-match, and could urge nothing against it except the woman's instinct that made her shrink from the point of ever thinking of him as a husband for herself, which seemed to me a perfectly reasonable feeling under all the circumstances.

The summer—or what we call summer in the North, which is usually a preparation for warm weather, ending in a preparation for cold weather—seemed to me very short—but I have noticed that each summer is a little shorter than the preceding one. If Henderson had wanted to gain the confidence of my wife he could not have done so more effectually than he did in making us the confidants of a little plan he had in the city, which was a profound secret to the party most concerned. This was the purchase and furnishing of a house, and we made many clandestine visits with him to town in the early autumn in furtherance of his plan. He was intent on a little surprise, and when I once hinted to him that women liked to have a hand in making the home they were to occupy, he said he thought that my wife knew Margaret's taste—and besides, he added, with a smile, "it will be only temporary; I should like her, if she chooses, to build and furnish a house to suit herself." In any one else this would have seemed like assumption, but with Henderson it was only the simple belief in his career.

We were still more surprised when we came to see the temporary home that Henderson had selected, the place where the bride was to alight, and look about her for such a home as would suit her growing idea of expanding fortune and position. It was one of the old-fashioned mansions on Washington Square, built at a time when people attached more importance to room and comfort than to outside display—a house that seemed to have traditions of hospitality and of serene family life. It was being thoroughly renovated and furnished, with as little help from the decorative artist and the splendid upholsterer as consisted with some regard to public opinion; in fact the expenditure showed in solid dignity and luxurious ease, and not in the construction of a museum in which one could only move about with the constant fear of destroying something. My wife was given almost *carte blanche* in the indulgence of her taste, and she confessed her delight in being able for once to deal with a house without the feeling that she was ruining me. Only in the suite designed for Margaret did Henderson seriously interfere, and insist upon a luxury that almost took my wife's breath away. She opposed it on moral grounds. She said that no true woman could stand such pampering of her senses without destruction of her moral fibre. But Henderson had his way, as he always had it. What pleased her most in the house was the conservatory, opening out from the drawing-room—a spacious place with a fountain and cool vines and flowering plants, not a tropical hothouse in a stifling atmosphere, in which nothing could live except orchids and flowers born near the equator, but a garden with a temperature adapted to human lungs, where one could sit and enjoy the sunshine, and the odor of flowers, and the clear and not too incessant notes of Mexican birds. But when it was all done, undoubtedly the most agreeable room in the house was that to which least thought had been given, the room to which any odds and ends could be sent, the room to which everybody gravitated when rest and simple enjoyment without restraint were the object Henderson's own library, with its big open fire, and the books and belongings of his bachelor days. Man is usually not credited with much taste or ability to take care of himself in the matter of comfortable living, but it is frequently noticed that when woman has made a dainty paradise of every other portion of the house, the room she most enjoys, that from which it is difficult to keep out the family, is the one that the man is permitted to call his own, in which he retains some of the comforts and can indulge some of the habits of his bachelor days. There is an important truth in this fact with regard to the sexes, but I do not know what it is.

They were married in October, and went at once to their own house. I suppose all other days were but a preparation for this golden autumn day on which we went to church and returned to the wedding-breakfast. I am sure everybody was happy. Miss Forsythe was so happy that tears were in her eyes half the time, and she bustled about with an affectation of cheerfulness that was almost contagious. Poor, dear, gentle lady! I can imagine the sensations of a peach-tree, in an orchard of trees which bud and bloom and by-and-by are weighty with yellow fruit, year after year—a peach-tree that blooms, also, but never comes to fruition, only wastes its delicate sweetness on the air, and finally blooms less and less, but feels nevertheless in each returning spring the stir of the sap and the longing for that fuller life, while all the orchard bursts into flower, and the bees swarm about the pink promises, and the fruit sets and slowly matures to lusciousness in the sun of July. I fancy the wedding, which robbed us all, was hardest for her, for it was in one sense a finality of her life. Whereas if Margaret had regrets—and deep sorrow she had in wrenching herself from the little neighborhood, though she never could have guessed the vacancy she caused by the withdrawal of her loved presence—her own life was only just beginning, and she was sustained by the longing which every human soul has for a new career, by the curiosity and imagination which the traveler feels when he departs for a land which he desires, and yet dreads to see lest his illusions should vanish. Margaret was about to take that

journey in the world which Miss Forsythe had dreamed of in her youth, but had never set out on. There are some who say that those are happiest who keep at home and content themselves with reading about the lands of the imagination. But happily the world does not believe this, and indeed would be very unhappy if it could not try and prove all the possibilities of human nature, to suffer as well as to enjoy.

I do not know how we fell into the feeling that this marriage was somehow exceptional and important, since marriages take place every day, and are so common and ordinarily so commonplace, when the first flutter is over. Even Morgan said, in his wife's presence, that he thought there had been weddings enough; at least he would interdict those that upset things like this one. For one thing, it brought about the house-keeping union of Mrs. Fletcher and Miss Forsythe in the tatter's cottage—a sort of closing up of the ranks that happens on the field during a fatal engagement. As we go on, it becomes more and more difficult to fill up the gaps.

We were very unwilling to feel that Margaret had gone out of our life. "But you cannot," Morgan used to say, "be friends with the rich, and that is what makes the position of the very rich so pitiful, for the rich get so tired of each other."

"But Margaret," my wife urged, "will never be of that sort: money will not change either her habits or her affections."

"Perhaps. You can never trust to inherited poverty. I have no doubt that she will resist the world, if anybody can, but my advice is that if you want to keep along with Margaret, you'd better urge your husband to make money. Experience seems to teach that while they cannot come to us, we may sometimes go to them."

My wife and Mrs. Fletcher were both indignant at this banter, and accused Morgan of want of faith, and even lack of affection for Margaret; in short, of worldly-mindedness himself.

"Perhaps I am rather shop-worn," he confessed. "It's not distrust of Margaret's intentions, but knowledge of the strength of the current on which she has embarked. Henderson will not stop in his career short of some overwhelming disaster or of death."

"I thought you liked him? At any rate, Margaret will make a good use of his money."

"It isn't a question, my dear Mrs. Fairchild, of the use of money, but of the use money makes of you. Yes, I do like Henderson, but I can't give up my philosophy of life for the sake of one good fellow."

"Philosophy of fudge!" exclaimed my wife. And there really was no answer to this.

After six weeks had passed, my wife paid a visit to Margaret. Nothing could exceed the affectionate cordiality of her welcome. Margaret was overjoyed to see her, to show the house, to have her know her husband better, to take her into her new life. She was hardly yet over the naive surprises of her lovely surroundings. Or if it is too much to say that her surprise had lasted six weeks—for it is marvelous how soon women adapt themselves to new conditions if they are agreeable—she was in a glow of wonder at her husband's goodness, at his love, which had procured all this happiness for her.

"You have no idea," she said, "how thoughtful he is about everything—and he makes so little of it all. I am to thank you, he tells me always, for whatever pleases my taste in the house, and indeed I think I should have known you had been here if he had not told me. There are so many little touches that remind me of home. I am glad of that, for it is the more likely to make you feel that it is your home also."

She clung to this idea in the whirl of the new life. In the first days she dwelt much on this theme; indeed it was hardly second in her talk to her worship—I can call it nothing less—of her husband. She liked to talk of Brandon and the dear life there and the dearer friends—this much talk about it showed that it was another life, already of the past, and beginning to be distant in the mind. My wife had a feeling that Margaret, thus early, was conscious of a drift, of a widening space, and was making an effort to pull the two parts of her life together, that there should be no break, as one carried away to sea by a resistless tide grasps the straining rope that still maintains his slender connection with the shore.

But it was all so different: the luxurious house, the carriage at call, the box at the opera, the social duties inevitable with her own acquaintances and the friends of her husband. She spoke of this in moments of confidence, and when she was tired, with a consciousness that it was a different life, but in no tone of regret, and I fancy that the French blood in her veins, which had so long run decorously in Puritan channels, leaped at its return into new gayety. Years ago Margaret had thought that she might some time be a missionary, at least that she should like to devote her life to useful labors among the poor and the unfortunate. If conscience ever reminded her of this, conscience was quieted by the suggestion that now she was in a position to be more liberal than she ever expected to be; that is, to give everything except the essential thing—herself. Henderson liked a gay house, brightness, dinners, entertainment, and that his wife should be seen and admired. Proof of his love she found in all this, and she entered into it with spirit, and an enjoyment increased by the thought that she was lightening the burden of his business, which she could see pressed more and more. Not that Henderson made any account of his growing occupations, or that any preoccupation was visible except to the eye of love, which is quick to see all moods. These were indeed happy days, full of the brightness of an expanding prosperity and unlimited possibilities of the enjoyment of life. It was in obedience to her natural instinct, and not yet a feeling of compensation and propitiation, that enlisted Margaret in the city charities, connection with which was a fashionable self-entertainment with some, and a means of social promotion with others. My wife came home a little weary with so much of the world, but, on the whole, impressed with Margaret's good-fortune. Henderson in his own house was the soul of consideration and hospitality, and Margaret was blooming in the beauty that shines in satisfied desire.

XIII

It is so painful to shrink, and so delightful to grow! Every one knows the renovation of feeling—often mistaken for a moral renewal—when the worn dress of the day is exchanged for the fresh evening toilet. The

expansiveness of prosperity has a like effect, though the moralist is always piping about the beneficent uses of adversity. The moralist is, of course, right, time enough given; but what does the tree, putting out its tender green leaves to the wooing of the south wind, care for the moralist? How charming the world is when you go with it, and not against it!

It was better than Margaret had thought. When she came to Washington in the winter season the beautiful city seemed to welcome her and respond to the gayety of her spirit. It was so open, cheerful, hospitable, in the appearance of its smooth, broad avenues and pretty little parks, with the bronze statues which all looked noble—in the moonlight; it was such a combination and piquant contrast of shabby ease and stately elegance—negro cabins and stone mansions, picket-fences and sheds, and flower-banked terraces before rows of residences which bespoke wealth and refinement. The very aspect of the street population was novel; compared to New York, the city was as silent as a country village, and the passers, who have the fashion of walking in the middle of the street upon the asphalt as freely as upon the sidewalks, had a sort of busy leisureliness, the natural air of thousands of officials hived in offices for a few hours and then left in irresponsible idleness. But what most distinguished the town, after all, in Margaret's first glimpse of it, was the swarming negro population pervading every part of it—the slouching plantation negro, the smart mulatto girl with gay raiment and mincing step, the old-time auntie, the brisk waiter-boy with uncertain eye, the washerwoman, the hawkers and fruiterers, the loafing strollers of both sexes—carrying everywhere color, abandon, a certain picturesqueness and irresponsibility and good-nature, and a sense of moral relaxation in a too strict and duty-ridden world.

In the morning, when Margaret looked from the windows of the hotel, the sky was gray and yielding, and all the outlines of the looming buildings were softened in the hazy air. The dome of the Capitol seemed to float like a bubble, and to be as unsubstantial as the genii edifices in the Arabian tale. The Monument, the slim white shaft as tall as the Great Pyramid, was still more a dream creation, not really made of hard marble, but of something as soft as vapor, almost melting into the sky, and yet distinct, unwavering, its point piercing the upper air, threatening every instant to dissolve, as if it were truly the baseless fabric of a vision—light, unreal, ghost-like, spotless, pure as an unsullied thought; it might vanish in a breath; and yet, no; it is solid: in the mist of doubt, in the assault of storms, smitten by the sun, beaten by the tempests, it stands there, springing, graceful, immovable—emblem, let us say, of the purity and permanence of the republic.

"You never half told me, Rodney, how beautiful it all is!" Margaret exclaimed, in a glow of delight.

"Yes," said Henderson, "the Monument is behaving very well this morning. I never saw it before look so little like a factory chimney."

"That is, you never looked at it with my eyes before, cynic. But it is all so lovely, everywhere."

"Of course it is, dear." They were standing together at the window, and his arm was where it should have been. "What did you expect? There are concentrated here the taste and virtue of sixty millions of people."

"But you always said the Washington hotels were so bad. These apartments are charming."

"Yes"—and he drew her closer to him—"there is no denying that. But presently I shall have to explain to you an odd phenomenon. Virginia, you know, used to be famous for its good living, and Maryland was simply unapproachable for good cooking. It was expected when the District was made out of these two that the result would be something quite extraordinary in the places of public entertainment. But, by a process which nobody can explain, in the union the art of cooking in hotels got mislaid."

"Well," she said, with winning illogicality, "you've got me."

"If you could only eat the breakfasts for me, as you can see the Monument for me!"

"Dear, I could eat the Monument for you, if it would do you any good." And neither of them was ashamed of this nonsense, for both knew that married people indulge in it when they are happy.

Although Henderson came to Washington on business, this was Margaret's wedding journey. There is no other city in the world where a wedding journey can better be combined with such business as is transacted here, for in both is a certain element of mystery. Washington is gracious to a bride, if she is pretty and agreeable—devotion to governing, or to legislation, or to diplomacy, does not render a man insensible to feminine attractions; and if in addition to beauty a woman has the reputation of wealth, she is as nearly irresistible here as anywhere. To Margaret, who was able to return the hospitality she received, and whose equipage was almost as much admired as her toilets, all doors were open—a very natural thing, surely, in a good-natured, give-and-take world. The colonel—Margaret had laughed till she cried when first she heard her husband saluted by this title in Washington by his New Hampshire acquaintances, but he explained to her that he had justly won it years ago by undergoing the hardship of receptions as a member of the Governor's staff—the colonel had brought on his horses and carriages, not at all by way of ostentation, but simply out of regard to what was due her as his wife, and because a carriage at call is a constant necessity in this city, whose dignity is equal to the square of its distances, and because there is something incongruous in sending a bride about in a herdic. Margaret's unworldly simplicity had received a little shock when she first saw her servants in livery, but she was not slow to see the propriety and even necessity of it in a republican society, since elegance cannot be a patchwork, but must be harmonious, and there is no harmony between a stylish turnout—noble horses nobly caparisoned—and a coachman and footman on the box dressed according to their own vulgar taste. Given a certain position, one's sense of fitness and taste must be maintained. And there is so much kindness and consideration in human nature—Margaret's gorgeous coachman and footman never by a look revealed their knowledge that she was new to the situation, and I dare say that their respectful demeanor contributed to raise her in her own esteem as one of the select and favored in this prosperous world. The most self-poised and genuine are not insensible to the tribute of this personal consideration. My lady giving orders to her respectful servitors, and driving down the avenue in her luxurious turnout, is not at all the same person in feeling that she would be if dragged about in a dissolute-looking hack whose driver has the air of the stable. We take kindly to this transformation, and perhaps it is only the vulgar in soul who become snobbish in it. Little by little, under this genial consideration, Margaret advanced in the pleasant path of worldliness; and we heard, by the newspapers and otherwise—indeed, Mr. and Mrs. Morgan were there for a couple of weeks in the winter—that she was never more sweet and gracious and lovely than

in this first season at the capital. I don't know that the town was raving, as they said, about her beauty and wit—there is nothing like the wit of a handsome woman—and amiability and unostentatious little charities, but she was a great favorite. We used to talk about it by the fire in Brandon, where everything reminded us of the girl we loved, and rejoice in her good-fortune and happiness, and get rather heavy-hearted in thinking that she had gone away from us into such splendor.

"I wish you were here," she wrote to my wife. "I am sure you would enjoy it. There are so many distinguished people and brilliant people—though the distinguished are not always brilliant nor the brilliant distinguished—and everybody is so kind and hospitable, and Rodney is such a favorite. We go everywhere, literally, and all the time. You must not scold, but I haven't opened a book, except my prayerbook, in six weeks—it is such a whirl. And it is so amusing. I didn't know there were so many kinds of people and so many sorts of provincialism in the world. The other night, at the British Minister's, a French attache, who complimented my awful French—I told him that I inherited all but the vocabulary and the accent—said that if specimens of the different kinds of women evolved in all out-of-the-way places who come to Washington could be exhibited, nobody would doubt any more that America is an interesting country. Wasn't it an impudent speech? I tried to tell him, in French, how grateful American women are for any little attention from foreigners who have centuries of politeness behind them. Ah me! I sometimes long for one of the old-fashioned talks before your smoldering logs! What we talk about here, Heaven only knows. I sometimes tell Rodney at night—it is usually morning—that I feel like an extinct piece of fireworks. But next day it is all delightful again; and, dear friend, I don't know but that I like being fireworks."

Among the men who came oftenest to see Henderson was Jerry Hollowell. It seemed to Margaret an odd sort of companionship; it could not be any similarity of tastes that drew them together, and she could not understand the nature of the business transacted in their mysterious conferences. Social life had few attractions for Hollowell, for his family were in the West; he appeared to have no relations with any branch of government; he wanted no office, though his influence was much sought by those who did want it.

"You spend a good deal of time here, Mr. Hollowell," Margaret said one day when he called in Henderson's absence.

"Yes, ma'am, considerable. Things need a good deal of fixing up. Washington is a curious place. It's a sort of exchange for the whole country: you can see everybody here, and it is a good place to arrange matters."

"With Congress, do you mean?" Margaret had heard much of the corruption of Congress.

"No, not Congress particularly. Congressmen are just about like other people. It's all nonsense, this talk about buying Congressmen. You cannot buy them any more than you can buy other people, but you can sort of work together with some of them. We don't want anything of Congress, except to be let alone. If we are doing something to develop the trade in the Southwest, build it up, some member who thinks he is smart will just as likely as not try to put in a block somewhere, or investigate, or something, in order to show his independence, and then he has to be seen, and shown that he is going against the interests of his constituents. It is just as it is everywhere: men have to be shown what their real interest is. No; most Congressmen are poor, and they stay poor. It is a good deal easier to deal with those among them who are rich and have some idea about the prosperity of the country. It is just so in the departments. You've got to watch things, if you expect them to go smooth. You've got to get acquainted with the men. Most men are reasonable when you get well acquainted with them. I tell your husband that people are about as reasonable in Washington as you'll find them anywhere."

"Washington is certainly very pleasant."

"Yes, that's so; it is pleasant. Where most everybody wants something, they are bound to be accommodating. That's my idea. I reckon you don't find Jerry Hollowell trying to pull a cat by its tail," he added, dropping into his native manner.

"Well, I must go and hunt up the old man. Glad to have made your acquaintance, Mrs. Henderson." And then, with a sly look, "If I knew you better, ma'am, I should take the liberty of congratulating you that Henderson has come round so handsomely."

"Come round?" asked Margaret, in amused wonder.

"Well, I took the liberty of giving him a hint that he wasn't cut-out for a single man. I showed him that," and he lugged out his photograph-case from a mass of papers in his breast-pocket and handed it to her.

"Ah, I see," said Margaret, studying the photographs with a peculiar smile.

"Oh, Henderson knows a good thing when he sees it," said Hollowell, complacently.

It was not easy to be offended with Hollowell's kind-hearted boorishness, and after he had gone, Margaret sat a long time reflecting upon this new specimen of man in her experience. She was getting many new ideas in these days, the moral lines were not as clearly drawn as she had thought; it was impossible to ticket men off into good and bad. In Hollowell she had a glimpse of a world low-toned and vulgar; she had heard that he was absolutely unscrupulous, and she had supposed that he would appear to be a very wicked man. But he seemed to be good-hearted and tolerant and friendly. How fond he was of his family, and how charitable about Congress! And she wondered if the world was generally on Hollowell's level. She met many men more cultivated than he, gentlemen in manner and in the first social position, who took, after all, about his tone in regard to the world, very agreeable people usually, easy to get on with, not exacting, or professing much faith in anybody, and mildly cynical—only bitterly cynical when they failed to get what they wanted, and felt the good things of life slipping away from them. It was to take her some time to learn that some of the most agreeable people are those who have succeeded by the most questionable means; and when she came to this knowledge, what would be her power of judgment as to these means?

"Mr. Hollowell has been here," she said, when Henderson returned.

"Old Jerry? He is a character."

"Do you trust him?"

"It never occurred to me. Yes, I suppose so, as far as his interests go. He isn't a bad sort of fellow—very long-headed."

"Dear," said Margaret, with hesitation, "I wish you didn't have anything to do with such men."

"Why, dearest?"

"Oh, I don't know. You needn't laugh. It rather lets one down; and it isn't like you."

Henderson laughed aloud now. "But you needn't associate with Hollowell. We men cannot pick our companions in business and politics. It needs all sorts to keep the world going."

"Then I'd rather let it stop," Margaret said.

"And sell out at auction?" he cried, with a look of amusement.

"But aren't Mr. Morgan and Mr. Fairchild business men?"

"Yes—of the old-fashioned sort. The fact—is, Margaret, you've got a sort of preserve up in Brandon, and you fancy that the world is divided into sheep and goats. It's a great mistake. There is no such division. Every man almost is both a sheep and a goat."

"I don't believe it, Rodney. You are neither." She came close to him, and taking the collar of his coat in each hand, gave him a little shake, and looking up into his face with quizzical affection, asked, "What is your business here?"

Henderson stooped down and kissed her forehead, and tenderly lifted the locks of her brown hair. "You wouldn't understand, sweet, if I told you."

"You might try."

"Well, there's a man here from Fort Worth who wants us to buy a piece of railroad, and extend it, and join it with Hollowell's system, and open up a lot of new country."

"And isn't it a good piece of road?"

"Yes; that's the trouble. The owners want to keep it to themselves, and prevent the general development. But we shall get it."

"It isn't anything like wrecking, is it, dear?"

"Do you think we would want to wreck our own property?"

"But what has Congress to do with it?"

"Oh, there's a land grant. But some of the members who were not in the Congress that voted it say that it is forfeited."

In this fashion the explanation went on. Margaret loved to hear her husband talk, and to watch the changing expression of his face, and he explained about this business until she thought he was the sweetest fellow in the world.

The Morgans had arrived at the same hotel, and Margaret went about with them in the daytime, while Henderson was occupied. It was like a breath of home to be with them, and their presence, reviving that old life, gave a new zest to the society spectacle, to the innocent round of entertainments, which more and more absorbed her. Besides, it was very interesting to have Mr. Morgan's point of view of Washington, and to see the shifting panorama through his experience. He had been very much in the city in former years, but he came less and less now, not because it was less beautiful or attractive in a way, but because it had lost for him a certain charm it once had.

"I am not sure," he said, as they were driving one day, "that it is not now the handsomest capital in the world; at any rate, it is on its way to be that. No other has public buildings more imposing, or streets and avenues so attractive in their interrupted regularity, so many stately vistas ending in objects refreshing to the eye—a bit of park, banks of flowers, a statue or a monument that is decorative, at least in the distance. As the years go on we shall have finer historical groups, triumphal arches and columns that will give it more and more an air of distinction, the sort of splendor with which the Roman Empire celebrated itself, and, added to this, the libraries and museums and galleries that are the chief attractions of European cities. Oh, we have only just begun—the city is so accessible in all directions, and lends itself to all sorts of magnificence and beauty."

"I declare," said Mrs. Morgan to Margaret, "I didn't know that he could be so eloquent. Page, you ought to be in Congress."

"In order to snuff myself out? Congress is not so important a feature as it used to be. Washington is getting to have a character of its own; it seems as if it wouldn't be much without its official life, yet the process is going on here that is so marked all over the country—the divorce of social and political life. I used to think, fifteen years ago, that Washington was a standing contradiction to the old aphorism that a democracy cannot make society—there was no more agreeable society in the world than that in Washington even ten years ago: society selected itself somehow without any marked class distinction, and it was delightfully simple and accessible."

"And what has changed it?" Margaret asked.

"Money, which changes everything and everybody. The whole scale has altered. There is so much more display and expense. I remember when a private carriage in Washington was a rare object. The possession of money didn't help one much socially. What made a person desired in any company was the talent of being agreeable, talent of some sort, not the ability to give a costly dinner or a big ball."

"But there are more literary and scientific people here, everybody says," said Margaret, who was becoming a partisan of the city.

"Yes, and they keep more to themselves—withdraw into their studies, or hive in their clubs. They tell me that the delightful informality and freedom of the old life is gone. Ask the old Washington residents whether the coming in of rich people with leisure hasn't demoralized society, or stiffened it, and made it impossible after the old sort. It is as easy here now as anywhere else to get together a very heavy dinner party—all very grand, but it isn't amusing. It is more and more like New York."

"But we have been to delightful dinners," Margaret insisted.

"No doubt. There are still houses of the old sort, where wit and good-humor and free hospitality are more

conspicuous than expense; but when money selects, there is usually an incongruous lot about the board. An oracular scientist at the club the other night put it rather neatly when he said that a society that exists mainly to pay its debts gets stupid."

"That's as clever," Margaret retorted, "as the remark of an under-secretary at a cabinet reception the other night, that it is one thing to entertain and another to be entertaining. I won't have you slander Washington. I should like to spend all my winters here."

"Dear me!" said Morgan, "I've been praising Washington. I should like to live here also, if I had the millions of Jerry Hollowell. Jerry is going to build a palace out on the Massachusetts Avenue extension bigger than the White House."

"I don't want to hear anything about Hollowell."

"But he is the coming man. He represents the democratic plutocracy that we are coming to."

All Morgan's banter couldn't shake Margaret's enjoyment of the cheerful city. "You like it as well as anybody," she told him. And in truth he and Mrs. Morgan dipped into every gayety that was going. "Of course I do," he said, "for a couple of weeks. I shouldn't like to be obliged to follow it as a steady business. Washington is a good place to take a plunge occasionally. And then you can go home and read King Solomon with appreciation."

Margaret had thought when she came to Washington that she should spend a good deal of time at the Capitol, listening to the eloquence of the Senators and Representatives, and that she should study the collections and the Patent-office and explore all the public buildings, in which she had such intense historical interest as a teacher in Brandon. But there was little time for these pleasures, which weighed upon her like duties. She did go to the Capitol once, and tired herself out tramping up and down, and was very proud of it all, and wondered how any legislation was ever accomplished, and was confused by the hustling about, the swinging of doors, the swarms in the lobbies, and the racing of messengers, and concluded unjustly that it was a big hive of whispered conference, and bargaining, and private interviewing. Morgan asked her if she expected that the business of sixty millions of people was going to be done with the order and decorum of a lyceum debating society. In one of the committee-rooms she saw Hollowell, looking at ease, and apparently an indispensable part of the government machine. Her own husband, who had accompanied the party, she lost presently, whisked away somewhere. He was sought in vain afterwards, and at last Margaret came away dazed and stunned by the noise of the wheels of the great republic in motion. She did not try it again, and very little strolling about the departments satisfied her. The west end claimed her—the rolling equipages, the drawing-rooms, the dress, the vistas of evening lamps, the gay chatter in a hundred shining houses, the exquisite dinners, the crush of the assemblies, the full flow of the tide of fashion and of enjoyment—what is there so good in life? To be young, to be rich, to be pretty, to be loved, to be admired, to compliment and be complimented—every Sunday at morning service, kneeling in a fluttering row of the sweetly devout, whose fresh toilets made it good to be there, and who might humbly hope to be forgiven for the things they have left undone, Margaret thanked Heaven for its gifts.

And it went well with Henderson meantime. Surely he was born under a lucky star—if it is good-luck for a man to have absolute prosperity and the gratification of all his desires. One reason why Hollowell sought his cooperation was a belief in this luck, and besides Henderson was, he knew, more presentable, and had social access in quarters where influence was desirable, although Hollowell was discovering that with most men delicacy in presenting anything that is for their interest is thrown away. He found no difficulty in getting recruits for his little dinners at Champolion's—dinners that were not always given in his name, and where he appeared as a guest, though he footed the bills. Bungling grossness has disappeared from all really able and large transactions, and genius is mainly exercised in the supply of motives for a line of conduct. The public good is one of the motives that looks best in Washington.

Henderson and Hollowell got what they wanted in regard to the Southwest consolidation, and got it in the most gentlemanly way. Nobody was bought, no one was offered a bribe. There were, of course, fees paid for opinions and for professional services, and some able men induced to take a prospective interest in what was demonstrably for the public good. But no vote was given for a consideration—at least this was the report of an investigating committee later on. Nothing, of course, goes through Congress of its own weight, except occasionally a resolution of sympathy with the Koreans, and the calendar needs to be watched, and the good offices of friends secured. Skillful wording of a clause, the right moment, and opportune recognition do the business. The main thing is to create a favorable atmosphere and avoid discussion. When the bill was passed, Hollowell did give a dinner on his own invitation, a dinner that was talked of for its refinement as well as its cost. The chief topic of conversation was the development of the Southwest and the extension of our trade relations with Mexico. The little scheme, hatched in Henderson's New York office, in order to transfer certain already created values to the pockets of himself and his friends, appeared to have a national importance. When Henderson rose to propose the health of Jerry Hollowell, neither he nor the man he eulogized as a creator of industries whose republican patriotism was not bound by State lines nor circumscribed by sections was without a sense of the humor of the situation.

And yet in a certain way Mr. Hollowell was conscious that he merited the eulogy. He had come to believe that the enterprises in which he was engaged, that absolutely gave him, it was believed, an income of a million a year, were for the public good. Such vast operations lent him the importance of a public man. If he was a victim of the confusion of mind which mistook his own prosperity for the general benefit, he only shared a wide public opinion which regards the accumulation of enormous fortunes in a few hands as an evidence of national wealth.

Margaret left Washington with regret. She had a desire to linger in the opening of the charming spring there, for the little parks were brilliant with flower beds—tulips, hyacinths, crocuses, violets—the magnolias and redbuds in their prodigal splendor attracted the eye a quarter of a mile away, and the slender twigs of the trees began to be suffused with tender green. It was the sentimental time of the year. But Congress had gone, and whatever might be the promise of the season, Henderson had already gathered the fruits that had been forced in the hothouse of the session. He was in high spirits.

"It has all been so delightful, dear!" said Margaret as they rode away in the train, and caught their last sight of the dome. They were in Hollowell's private car, which the good-natured old fellow had put at their disposal. And Margaret had a sense of how delightful and prosperous this world is as seen from a private car.

"Yes," Henderson answered, thinking of various things; "it has been a successful winter. The capital is really attractive. It occurred to me the other day that America has invented a new kind of city, the apotheosis of the village—Washington."

They talked of the city, of the acquaintances of the winter, of Hollowell's thoughtfulness in lending them his car, that their bridal trip, as he had said, might have a good finish. Margaret's heart opened to the world. She thought of the friends at Brandon, she thought of the poor old ladies she was accustomed to look after in the city, of the ragged-school that she visited, of the hospital in which she was a manager, of the mission chapel. The next Sunday would be Easter, and she thought of a hundred ways in which she could make it brighter for so many of the unfortunates. Her heart was opened to the world, and looking across to Henderson, who was deep in the morning paper, she said, with a wife's unblushing effrontery, "Dearest, how handsome you are!"

The home life took itself up again easily and smoothly in Washington Square. Did there ever come a moment of reflection as to the nature of this prosperity which was altogether so absorbing and agreeable? If it came, did it give any doubts and raise any of the old questions that used to be discussed at Brandon? Wasn't it the use that people made of money, after all, that was the real test? She did not like Hollowell, but on acquaintance he was not the monster that he had appeared to her in the newspapers. She was perplexed now and then by her husband's business, but did it differ from that of other men she had known, except that it was on a larger scale? And how much good could be done with money!

On Easter morning, when Margaret returned from early service, to which she had gone alone, she found upon her dressing-table a note addressed to "My Wife," and in it a check for a large sum to her order, and a card, on which was written, "For Margaret's Easter Charities." Flushed with pleasure, she ran to meet her husband on the landing as he was descending to breakfast, threw her arms about his neck, and, with tears in her eyes, cried, "Dearest, how good you are!"

It is such a good and prosperous generation.

XIV

Our lives are largely made up of the things we do not have. In May, the time of the apple blossoms—just a year from the swift wooing of Margaret—Miss Forsythe received a letter from John Lyon. It was in a mourning envelope. The Earl of Chisholm was dead, and John Lyon was Earl of Chisholm. The information was briefly conveyed, but with an air of profound sorrow. The letter spoke of the change that this loss brought to his own life, and the new duties laid upon him, which would confine him more closely to England. It also contained congratulations—which circumstances had delayed—upon Mrs. Henderson's marriage, and a simple wish for her happiness. The letter was longer than it need have been for these purposes; it seemed to love to dwell upon the little visit to Brandon and the circle of friends there, and it was pervaded by a tone, almost affectionate, towards Miss Forsythe, which touched her very deeply. She said it was such a manly letter.

America, the earl said, interested him more and more. In all history, he wrote, there never had been such an opportunity for studying the formation of society, for watching the working out of political problems; the elements meeting were so new, and the conditions so original, that historical precedents were of little service as guides. He acknowledged an almost irresistible impulse to come back, and he announced his intention of another visit as soon as circumstances permitted.

I had noticed this in English travelers of intelligence before. Crude as the country is, and uninteresting according to certain established standards, it seems to have a "drawing" quality, a certain unexplained fascination. Morgan says that it is the social unconventionality that attracts, and that the American women are the loadstone. He declares that when an Englishman secures and carries home with him an American wife, his curiosity about the country is sated. But this is generalizing on narrow premises.

There was certainly in Lyon's letter a longing to see the country again, but the impression it made upon me when I read it—due partly to its tone towards Miss Forsythe, almost a family tone—was that the earldom was an empty thing without the love of Margaret Debee. Life is so brief at the best, and has so little in it when the one thing that the heart desires is denied. That the earl should wish to come to America again without hope or expectation was, however, quite human nature. If a man has found a diamond and lost it, he is likely to go again and again and wander about the field where he found it, not perhaps in any defined hope of finding another, but because there is a melancholy satisfaction in seeing the spot again. It was some such feeling that impelled the earl to wish to see again Miss Forsythe, and perhaps to talk of Margaret, but he certainly had no thought that there were two Margaret Debees in America.

To her aunt's letter conveying the intelligence of Mr. Lyon's loss, Margaret replied with a civil message of condolence. The news had already reached the Eschelles, and Carmen, Margaret said, had written to the new earl a most pious note, which contained no allusion to his change of fortune, except an expression of sympathy with his now enlarged opportunity for carrying on his philanthropic plans—a most unworldly note. "I used to think," she had said, when confiding what she had done to Margaret, "that you would make a perfect missionary countess, but you have done better, my dear, and taken up a much more difficult work among us fashionable sinners. Do you know," she went on, "that I feel a great deal less worldly than I used to?"

Margaret wrote a most amusing account of this interview, and added that Carmen was really very good-hearted, and not half as worldly-minded as she pretended to be; an opinion with which Miss Forsythe did not

at all agree. She had spent a fortnight with Margaret after Easter, and she came back in a dubious frame of mind. Margaret's growing intimacy with Carmen was one of the sources of her uneasiness. They appeared to be more and more companionable, although Margaret's clear perception of character made her estimate of Carmen very nearly correct. But the fact remained that she found her company interesting. Whether the girl tried to astonish the country aunt, or whether she was so thoroughly a child of her day as to lack certain moral perceptions, I do not know, but her candid conversation greatly shocked Miss Forsythe.

"Margaret," she said one day, in one of her apparent bursts of confidence, "seems to have had such a different start in life from mine. Sometimes, Miss Forsythe, she puzzles me. I never saw anybody so much in love as she is with Mr. Henderson; she doesn't simply love him, she is in love with him. I don't wonder she is fond of him—any woman might be that—but, do you know, she actually believes in him."

"Why shouldn't she believe in him?" exclaimed Miss Forsythe, in astonishment.

"Oh, of course, in a way," the girl went on. "I like Mr. Henderson—I like him very much—but I don't believe in him. It isn't the way now to believe in anybody very much. We don't do it, and I think we get along just as well—and better. Don't you think it's nicer not to have any deceptions?"

Miss Forsythe was too much stunned to make any reply. It seemed to her that the bottom had fallen out of society.

"Do you think Mr. Henderson believes in people?" the girl persisted.

"If he does not he isn't much of a man. If people don't believe in each other, society is going to pieces. I am astonished at such a tone from a woman."

"Oh, it isn't any tone in me, my dear Miss Forsythe," Carmen continued, sweetly. "Society is a great deal pleasanter when you are not anxious and don't expect too much."

Miss Forsythe told Margaret that she thought Miss Eschelle was a dangerous woman. Margaret did not defend her, but she did not join, either, in condemning her; she appeared to have accepted her as a part of her world. And there were other things that Margaret seemed to have accepted without that vigorous protest which she used to raise at whatever crossed her conscience. To her aunt she was never more affectionate, never more solicitous about her comfort and her pleasure, and it was almost enough to see Margaret happy, radiant, expanding day by day in the prosperity that was illimitable, only there was to her a note of unreality in all the whirl and hurry of the busy life. She liked to escape to her room with a book, and be out of it all, and the two weeks away from her country life seemed long to her. She couldn't reconcile Margaret's love of the world, her tolerance of Carmen, and other men and women whose lives seemed to be based on Carmen's philosophy, with her devotion to the church services, to the city missions, and the dozens of charities that absorb so much of the time of the leaders of society.

"You are too young, dear, to be so good and devout," was Carmen's comment on the situation.

To Miss Forsythe's wonder, Margaret did not resent this impertinence, but only said that no accumulation of years was likely to bring Carmen into either of these dangers. And the reply was no more satisfactory to Miss Forsythe than the remark that provoked it.

That she had had a delightful visit, that Margaret was more lovely than ever, that Henderson was a delightful host, was the report of Miss Forsythe when she returned to us. In a confidential talk with my wife she confessed, however, that she couldn't tell whither Margaret was going.

One of the worries of modern life is the perplexity where to spend the summer. The restless spirit of change affects those who dwell in the country, as well as those who live in the city. No matter how charming the residence is, one can stay in it only a part of the year. He actually needs a house in town, a villa by the sea, and a cottage in the hills. When these are secured—each one an establishment more luxurious year by year—then the family is ready to travel about, and is in a greater perplexity than before whether to spend the summer in Europe or in America, the novelties of which are beginning to excite the imagination. This nomadism, which is nothing less than society on wheels, cannot be satirized as a whim of fashion; it has a serious cause in—the discovery of the disease called nervous prostration, which demands for its cure constant change of scene, without any occupation. Henderson recognized it, but he said that personally he had no time to indulge in it. His summer was to be a very busy one. It was impossible to take Margaret with him on his sudden and tedious journeys from one end of the country to the other, but she needed a change. It was therefore arranged that after a visit to Brandon she should pass the warm months with the Arbusers in their summer home at Lenox, with a month—the right month—in the Eschelle villa at Newport; and he hoped never to be long absent from one place or the other.

Margaret came to Brandon at the beginning of June, just at the season when the region was at its loveliest, and just when its society was making preparations to get away from it to the sea, or the mountains, or to any place that was not home. I could never understand why a people who have been grumbling about snow and frost for six months, and longing for genial weather, should flee from it as soon as it comes. I had made the discovery, quite by chance—and it was so novel that I might have taken out a patent on it—that if one has a comfortable home in our northern latitude, he cannot do better than to stay in it when the hum of the mosquito is heard in the land, and the mercury is racing up and down the scale between fifty and ninety. This opinion, however, did not extend beyond our little neighborhood, and we may be said to have had the summer to ourselves.

I fancied that the neighborhood had not changed, but the coming of Margaret showed me that this was a delusion. No one can keep in the same place in life simply by standing still, and the events of the past two years had wrought a subtle change in our quiet. Nothing had been changed to the eye, yet something had been taken away, or something had been added, a door had been opened into the world. Margaret had come home, yet I fancied it was not the home to her that she had been thinking about. Had she changed?

She was more beautiful. She had the air—I should hesitate to call it that of the fine lady—of assured position, something the manner of that greater world in which the possession of wealth has supreme importance, but it was scarcely a change of manner so much as of ideas about life and of the things valuable in it gradually showing itself. Her delight at being again with her old friends was perfectly genuine, and she

had never appeared more unselfish or more affectionate. If there was a subtle difference, it might very well be in us, though I found it impossible to conceive of her in her former role of teacher and simple maiden, with her heart in the little concerns of our daily life. And why should she be expected to go back to that stage? Must we not all live our lives? Miss Forsythe's solicitude about Margaret was mingled with a curious deference, as to one who had a larger experience of life than her own. The girl of a year ago was now the married woman, and was invested with something of the dignity that Miss Forsythe in her pure imagination attached to that position. Without yielding any of her opinions, this idea somehow changed her relations to Margaret; a little, I thought, to the amusement of Mrs. Fletcher and the other ladies, to whom marriage took on a less mysterious aspect. It arose doubtless from a renewed sense of the incompleteness of her single life, long as it had been, and enriched as it was by observation.

In that June there were vexatious strikes in various parts of the country, formidable combinations of laboring-men, demonstrations of trades-unions, and the exhibition of a spirit that sharply called attention to the unequal distribution of wealth. The discontent was attributed in some quarters to the exhibition of extreme luxury and reckless living by those who had been fortunate. It was even said that the strikes, unreasonable and futile as they were, and most injurious to those who indulged in them, were indirectly caused by the railway manipulation, in the attempt not only to crush out competition, but to exact excessive revenues on fictitious values. Resistance to this could be shown to be blind, and the strikers technically in the wrong, yet the impression gained ground that there was something monstrously wrong in the way great fortunes were accumulated, in total disregard of individual rights, and in a materialistic spirit that did not take into account ordinary humanity. For it was not alone the laboring class that was discontented, but all over the country those who lived upon small invested savings, widows and minors, found their income imperiled by the trickery of rival operators and speculators in railways and securities, who treated the little private accumulations as mere counters in the games they were playing. The loss of dividends to them was poorly compensated by reflections upon the development of the country, and the advantage to trade of great consolidations, which inured to the benefit of half a dozen insolent men.

In discussing these things in our little parliament we were not altogether unprejudiced, it must be confessed. For, to say nothing of interests of Mr. Morgan and my own, which seemed in some danger of disappearing for the "public good," Mrs. Fletcher's little fortune was nearly all invested in that sound "rock-bed" railway in the Southwest that Mr. Jerry Hollowell had recently taken under his paternal care. She was assured, indeed, that dividends were only reserved pending some sort of reorganization, which would ultimately be of great benefit to all the parties concerned; but this was much like telling a hungry man that if he would possess his appetite in patience, he would very likely have a splendid dinner next year. Women are not constituted to understand this sort of reasoning. It is needless to say that in our general talks on the situation these personalities were not referred to, for although Margaret was silent, it was plain to see that she was uneasy.

Morgan liked to raise questions of casuistry, such as that whether money dishonestly come by could be accepted for good purposes.

"I had this question referred to me the other day," he said. "A gambler—not a petty cheater in cards, but a man who has a splendid establishment in which he has amassed a fortune, a man known for his liberality and good-fellowship and his interest in politics—offered the president of a leading college a hundred thousand dollars to endow a professorship. Ought the president to take the money, knowing how it was made?"

"Wouldn't the money do good—as much good as any other hundred thousand dollars?" asked Margaret.

"Perhaps. But the professorship was to bear his name, and what would be the moral effect of that?"

"Did you recommend the president to take the money, if he could get it without using the gambler's name?"

"I am not saying yet what I advised. I am trying to get your views on a general principle."

"But wouldn't it be a sneaking thing to take a man's money, and refuse him the credit of his generosity?"

"But was it generosity? Was not his object, probably, to get a reputation which his whole life belied, and to get it by obliterating the distinction between right and wrong?"

"But isn't it a compromising distinction," my wife asked, "to take his money without his name? The president knows that it is money fraudulently got, that really belongs to somebody else; and the gambler would feel that if the president takes it, he cannot think very disapprovingly of the manner in which it was acquired. I think it would be more honest and straightforward to take his name with the money."

"The public effect of connecting the gambler's name with the college would be debasing," said Morgan; "but, on the contrary, is every charity or educational institution bound to scrutinize the source of every benefaction? Isn't it better that money, however acquired, should be used for a good purpose than a bad one?"

"That is a question," I said, "that is a vital one in our present situation, and the sophistry of it puzzles the public. What would you say to this case? A man notoriously dishonest, but within the law, and very rich, offered a princely endowment to a college very much in need of it. The sum would have enabled it to do a great work in education. But it was intimated that the man would expect, after a while, to be made one of the trustees. His object, of course, was social position."

"I suppose, of course," Margaret replied, "that the college couldn't afford that. It would look like bribery."

"Wouldn't he be satisfied with an LL.D.?" Morgan asked.

"I don't see," my wife said, "any difference between the two cases stated and that of the stock gambler, whose unscrupulous operations have ruined thousands of people, who founds a theological seminary with the gains of his slippery transactions. By accepting his seminary the public condones his conduct. Another man, with the same shaky reputation, endows a college. Do you think that religion and education are benefited in the long-run by this? It seems to me that the public is gradually losing its power of discrimination between the value of honesty and dishonesty. Real respect is gone when the public sees that a man is able to buy it."

This was a hot speech for my wife to make. For a moment Margaret flamed up under it with her old-time indignation. I could see it in her eyes, and then she turned red and confused, and at length said:

"But wouldn't you have rich men do good with their money?"

"Yes, dear, but I would not have them think they can blot out by their liberality the condemnation of the means by which many of them make money. That is what they are doing, and the public is getting used to it."

"Well," said Margaret, with some warmth, "I don't know that they are any worse than the stingy saints who have made their money by saving, and act as if they expected to carry it with them."

"Saints or sinners, it does not make much difference to me," now put in Mrs. Fletcher, who was evidently considering the question from a practical point of view, "what a man professes, if he founds a hospital for indigent women out of the dividends that I never received."

Morgan laughed. "Don't you think, Mrs. Fletcher, that it is a good sign of the times, that so many people who make money rapidly are disposed to use it philanthropically?"

"It may be for them, but it does not console me much just now."

"But you don't make allowance enough for the rich. Perhaps they are under a necessity of doing something. I was reading this morning in the diary of old John Ward of Stratford-on-Avon this sentence: 'It was a saying of Navisson, a lawyer, that no man could be valiant unless he hazarded his body, nor rich unless he hazarded his soul.'"

"Was Navisson a modern lawyer?" I asked.

"No; the diary is dated 1648-1679."

"I thought so."

There was a little laugh at this, and the talk drifted off into a consideration of the kind of conscience that enables a professional man to espouse a cause he knows to be wrong as zealously as one he knows to be right; a talk that I should not have remembered at all, except for Margaret's earnestness in insisting that she did not see how a lawyer could take up the dishonest side.

Before Margaret went to Lenox, Henderson spent a few days with us. He brought with him the abounding cheerfulness, and the air of a prosperous, smiling world, that attended him in all circumstances. And how happy Margaret was! They went over every foot of the ground on which their brief courtship had taken place, and Heaven knows what joy there was to her in reviving all the tenderness and all the fear of it! Busy as Henderson was, pursued by hourly telegrams and letters, we could not but be gratified that his attention to her was that of a lover. How could it be otherwise, when all the promise of the girl was realized in the bloom and the exquisite susceptibility of the woman? Among other things, she dragged him down to her mission in the city, to which he went in a laughing and bantering mood. When he had gone away, Margaret ran over to my wife, bringing in her hand a slip of paper.

"See that!" she cried, her eyes dancing with pleasure. It was a check for a thousand dollars. "That will refurnish the mission from top to bottom," she said, "and run it for a year."

"How generous he is!" cried my wife. Margaret did not reply, but she looked at the check, and there were tears in her eyes.

XV

The Arbuser cottage at Lenox was really a magnificent villa. Richardson had built it. At a distance it had the appearance of a mediaeval structure, with its low doorways, picturesque gables, and steep roofs, and in its situation on a gentle swell of green turf backed by native forest-trees it imparted to the landscape an ancestral tone which is much valued in these days. But near to, it was seen to be mediaevalism adapted to the sunny hospitality of our summer climate, with generous verandas and projecting balconies shaded by gay awnings, and within spacious, open to the breezes, and from its broad windows offering views of lawns and flower-beds and ornamental trees, of a great sweep of pastures and forests and miniature lakes, with graceful and reposeful hills on the horizon.

It was, in short, the modern idea of country simplicity. The passion for country life, which has been in decadence for nearly half a century, has again become the fashion. Nature, which, left to itself, is a little ragged, not to say monotonous and tiresome, is discovered to be a valuable ally for aid in passing the time when art is able to make portions of it exclusive. What the Arbusers wanted was a simple home in the country, and in obtaining it they were indulging a sentiment of returning to the primitive life of their father, who had come to the city from a hill farm, and had been too busy all his life to recur to the tastes of his boyhood. At least that was the theory of his daughters; but the old gentleman had a horror of his early life, and could scarcely be dragged away from the city even in the summer. He would no doubt have been astonished at the lofty and substantial stone stables, the long range of greenhouses, and at a farm which produced nothing except lawns and flower-beds, ornamental fields of clover, avenues of trees, lawn-tennis grounds, and a few Alderneys tethered to feed among the trees, where their beauty would heighten the rural and domestic aspect of the scene. The Arbusers liked to come to this place as early as possible to escape the society exactions of the city. That was another theory of theirs. All their set in the city met there for the same purpose.

Margaret was welcomed with open arms.

"We have been counting the days," said the elder of the sisters. "Your luggage has come, your rooms are all ready, and your coachman, who has been here some days, says that the horses need exercise. Everybody is here, and we need you for a hundred things."

"You are very kind. It is so charming here. I knew it would be, but I couldn't bear to shorten my visit in Brandon."

"Your aunt must miss you very much. Is she well?"

"Perfectly."

"Wouldn't she have come with you? I've a mind to telegraph."

"I think not. She is wedded to quiet, and goes away from her little neighborhood with reluctance."

"So Brandon was a little dull?" said Miss Arbuser, with a shrewd guess at the truth.

"Oh no," quickly replied Margaret, shrinking a little from what was in her own mind; "it was restful and delightful; but you know that we New England people take life rather seriously, and inquire into the reason of things, and want an object in life."

"A very good thing to have," answered this sweet woman of the world, whose object was to go along pleasantly and enjoy it.

"But to have it all the time!" Margaret suggested, lightly, as she ran up-stairs. But even in this suggestion she was conscious of a twinge of disloyalty to her former self. Deep down in her heart, coming to the atmosphere of Lenox was a relief from questionings that a little disturbed her at her old home, and she was indignant at herself that it should be so, and then indignant at the suggestions that put her out of humor with herself. Was it a sin, she said, to be happy and prosperous?

On her dressing-table was a letter from her husband. He was detained in the city by a matter of importance. He scratched only a line, to catch the mail, during a business interview. It was really only a business interview, and had no sort of relation to Lenox or the summer gayety there.

Henderson was in his private office. The clerks in the outer offices, in the negligé of summer costumes, winked to each other as they saw old Jerry Hollowell enter and make his way to the inner room unannounced. Something was in the wind.

"Well, old man," said Uncle Jerry, in the cheeriest manner, coming in, depositing his hat on the table, and taking a seat opposite Henderson, "we seem to have stirred up the animals."

"Only a little flurry," replied Henderson, laying down his pen and folding a note he had just finished; "they'll come to reason."

"They've got to." Mr. Hollowell drew out a big bandanna and mopped his heated face. "I've just got a letter from Jorkins. There's the certificates that make up the two-thirds-more than we need, anyway. No flaw about that, is there?"

"No. I'll put these with the balance in the safe. It's all right, if Jorkins has been discreet. It may make a newspaper scandal if they get hold of his operations."

"Oh, Jorkins is close. But he is a little overworked. I don't know but it would do him good to have a little nervous prostration and go abroad for a while."

"I guess it would do Jorkins good to take a turn in Europe for a year or so."

"Well, you write to him. Give him a sort of commission to see the English bondholders, and explain the situation. They will appreciate that half a loaf is better than no bread. What bothers me is the way the American bondholders take it. They kick."

"Let 'em kick. The public don't care for a few soreheads and impracticables in an operation that is going to open up the whole Southwest. I've an appointment with one of them this morning. He ought to be here now."

At the moment Henderson's private secretary entered and laid on the table the card of Mr. John Hopper, who was invited to come in at once. Mr. Hopper was a man of fifty, with iron-gray hair, a heavy mustache, and a smooth-shaven chin that showed resolution. In dress and manner his appearance was that of the shrewd city capitalist—quiet and determined, who is neither to be deceived nor bullied. With a courteous greeting to both the men, whom he knew well, he took a seat and stated his business.

"I have called to see you, Mr. Henderson, about the bonds of the A. and B., and I am glad to find Mr. Hollowell here also."

"What amount do you represent, Mr. Hopper?" asked Henderson.

"With my own and my friends', altogether, rising a million. What do you propose?"

"You got our circular?"

"Yes, and we don't accept the terms."

"I'm sorry. It is the best that we could do."

"That is, the best you would do!"

"Pardon me, Mr. Hopper, the best we could do under the circumstances. We gave you your option, to scale down on a fair estimate of the earnings of the short line (the A. and B.), or to surrender your local bonds and take new ones covering the whole consolidation, or, as is of course in your discretion, to hold on and take the chances."

"Which your operations have practically destroyed."

"Not at all, Mr. Hopper. We offer you a much better security on the whole system instead of a local road."

"And you mean to tell me, Mr. Henderson, that it is for our advantage to exchange a seven per cent. bond on a road that has always paid its interest promptly, for a four and a half on a system that is manipulated nobody knows how? I tell you, gentlemen, that it looks to outsiders as if there was crookedness somewhere."

"That is a rather rough charge, Mr. Hopper," said Henderson, with a smile.

"But we are to understand that if we do not accept your terms, it's a freeze-out?"

"You are to understand that we want to make the best arrangement possible for all parties in interest."

"How some of those interests were acquired may be a question for the courts," replied Mr. Hopper, resolutely. "When we put our money in good seven per cent. bonds, we propose to inquire into the right of anybody to demand that we shall exchange them for four and a half per cents. on other security."

"Perfectly right, Mr. Hopper," said Henderson, with imperturbable good-humor; "the transfer books are open to your inspection."

"Well, we prefer to hold on to our bonds."

"And wait for your interest," interposed Hollowell.

Mr. Hopper turned to the speaker. "And while we are waiting we propose to inquire what has become of the surplus of the A. and B. The bondholders had the first claim on the entire property."

"And we propose to protect it. See here, Mr. Hopper," continued Uncle Jerry, with a most benevolent expression, "I needn't tell you that investments fluctuate—the Lord knows mine do! The A. and B. was a good road. I know that. But it was going to be paralleled. We'd got to parallel it to make our Southwest connections. If we had, you'd have waited till the Gulf of Mexico freezes over before you got any coupons paid. Instead of that, we took it into our system, and it's being put on a permanent basis. It's a little inconvenient for holders, and they have got to stand a little shrinkage, but in the long-run it will be better for everybody. The little road couldn't stand alone, and the day of big interest is about over."

"That explanation may satisfy you, Mr. Hollowell, but it don't give us our money, and I notify you that we shall carry the matter into the courts. Good-morning."

When Mr. Hopper had gone, the two developers looked at each other a moment seriously.

"Hopper 'll fight," Hollowell said at last.

"And we have got the surplus to fight him with," replied Henderson.

"That's so," and Uncle Jerry chuckled to himself. "The rats that are on the inside of the crib are a good deal better off than the rats on the outside."

"The reporter of The Planet wants five minutes," announced the secretary, opening the door. Henderson told him to let him in.

The reporter was a spruce young gentleman, in a loud summer suit, with a rose in his button-hole, and the air of assurance which befits the commissioner of the public curiosity.

"I am sent by The Planet," said the young man, "to show you this and ask you if you have anything to say to it."

"What is it?" asked Henderson.

"It's about the A. and B."

"Very well. There is the president, Mr. Hollowell. Show it to him."

The reporter produced a long printed slip and handed it to Uncle Jerry, who took it and began to read. As his eye ran down the column he was apparently more and more interested, and he let it be shown on his face that he was surprised, and even a little astonished. When he had finished, he said:

"Well, my young friend, how did you get hold of this?"

"Oh, we have a way," said the reporter, twirling his straw hat by the elastic, and looking more knowing than old Jerry himself.

"So I see," replied Jerry, with an admiring smile; "there is nothing that you newspaper folks don't find out. It beats the devil!"

"Is it true, sir?" said the young gentleman, elated with this recognition of his own shrewdness.

"It is so true that there is no fun in it. I don't see how the devil you got hold of it."

"Have you any explanations?"

"No, I guess not," said Uncle Jerry, musingly. "If it is to come out, I'd rather The Planet would have it than any, other paper. It's got some sense. No; print it. It'll be a big beat for your paper. While you are about it—I s'pose you'll print it anyway?" (the reporter nodded)—"you might as well have the whole story."

"Certainly. We'd like to have it right. What is wrong about it?"

"Oh, nothing but some details. You have got it substantially. There's a word or two and a date you are out on, naturally enough, and there are two or three little things that would be exactly true if they were differently stated."

"Would you mind telling me what they are?"

"No," said Jerry, with a little reluctance; "might as well have it all out—eh, Henderson?"

And the old man took his pencil and changed some dates and a name or two, and gave to some of the sentences a turn that seemed to the reporter only another way of saying the same thing.

"There, that is all I know. Give my respects to Mr. Goss."

When the commissioner had withdrawn, Uncle Jerry gave vent to a long whistle. Then he rose suddenly and called to the secretary, "Tell that reporter to come back." The reporter reappeared.

"I was just thinking, and you can tell Mr. Goss, that now you have got onto this thing, you might as well keep the lead on it. The public is interested in what we are doing in the Southwest, and if you, or some other bright fellow who has got eyes in his head, will go down there, he will see something that will astonish him. I'm going tomorrow in my private car, and if you could go along, I assure you a good time. I want you to see for yourself, and I guess you would. Don't take my word. I can't give you any passes, and I know you don't want any, but you can just get into my private car and no expense to anybody, and see all there is to be seen. Ask Goss, and let me know tonight."

The young fellow went off feeling several inches higher than when he came in. Such is the power of a good address, and such is the omnipotence of the great organ. Mr. Jerry Hollowell sat down and began to fan himself. It was very hot in the office.

"Seems to me it's lunch-time. Great Scott! what a lot of time I used to waste fighting the newspapers! That thing would have played the devil as it stood. It will be comparatively harmless now. It will make a little talk, but there is nothing to get hold of. Queer, about the difference of a word or two. Come, old man, I'm thirsty."

"Uncle Jerry," said Henderson, taking his arm as they went out, "you ought to be President of the United States."

"The salary is too small," said Uncle Jerry.

Of all this there was nothing to write to Margaret, who was passing her time agreeably in the Berkshire hills, a little impatient for her husband's arrival, postponed from day to day, and full of sympathy for him, condemned to the hot city and the harassment of a business the magnitude of which gave him the obligations and the character of a public man. Henderson sent her instead a column from *The Planet* devoted to a description of his private library. Mr. Goss, the editor, who was college bred, had been round to talk with Henderson about the Southwest trip, and the conversation drifting into other matters, Henderson had taken from his desk and shown him a rare old book which he had picked up the day before in a second-hand shop. This led to further talk about Henderson's hobby, and the editor had asked permission to send a reporter down to make a note of Henderson's collection. It would make a good midsummer item, "The Stock-Broker in Literature," "The Private Tastes of a Millionaire," etc. The column got condensed into a portable paragraph, and went the rounds of the press, and changed the opinions of a good many people about the great operator—he wasn't altogether devoted to vulgar moneymaking. Uncle Jerry himself read the column with appreciation of its value. "It diverts the public mind," he said. He himself had recently diverted the public mind by the gift of a bell to the Norembega Theological (colored) Institute, and the paragraph announcing the fact conveyed the impression that while Uncle Jerry was a canny old customer, his heart was on the right side. "There are worse men than Uncle Jerry who are not worth a cent," was one of the humorous paragraphs tacked on to the item.

Margaret was not alone in finding the social atmosphere of Lenox as congenial as its natural beauties. Mrs. Laflamme declared that it was the perfection of existence for a couple of months, one in early summer and another in the golden autumn with its pathetic note of the falling curtain dropping upon the dream of youth. Mrs. Laflamme was not a sentimental person, but she was capable of drifting for a moment into a poetic mood—a great charm in a woman of her vivacity and air of the world. Margaret remembered her very distinctly, although she had only exchanged a word with her at the memorable dinner in New York when Henderson had revealed her feelings to herself. Mrs. Laflamme had the immense advantage—it seemed so to her after five years of widowhood of being a widow on the sunny side of thirty-five. If she had lost some illusions she had gained a great deal of knowledge, and she had no feverish anxiety about what life would bring her. Although she would not put it in this way to herself, she could look about her deliberately, enjoying the prospect, and please herself. Her position had two advantages—experience and opportunity. A young woman unmarried, she said, always has the uneasy sense of the possibility—well, it is impossible to escape slang, and she said it with the merriest laugh—the possibility of being left. A day or two after Margaret's arrival she had driven around to call in her dog-cart, looking as fresh as a daisy in her sunhat. She held the reins, but her seat was shared by Mr. Fox McNaughton, the most useful man in the village, indispensable indeed; a bachelor, with no intentions, no occupation, no ambition (except to lead the german), who could mix a salad, brew a punch, organize a picnic, and chaperon anything in petticoats with entire propriety, without regard to age. And he had a position of social authority. This eminence Mr. Fox McNaughton had attained by always doing the correct thing. The obligation of society to such men is never enough acknowledged. While they are trusted and used, and worked to death, one is apt to hear them spoken of in a deprecatory tone.

"You hold the reins a moment, please. No, I don't want any help," she said, as she jumped down with an elastic spring, and introduced him to Margaret. "I've got Mr. McNaughton in training, and am thinking of bringing him out."

She walked in with Margaret, chatting about the view and the house and the divine weather.

"And your husband has not come yet?"

"He may come any day. I think business might suspend in the summer."

"So do I. But then, what would become of Lenox? It is rather hard on the men, only I dare say they like it. Don't you think Mr. Henderson would like a place here?"

"He cannot help being pleased with Lenox."

"I'm sure he would if you are. I have hardly seen him since that evening at the Stotts'. Can I tell you?—I almost had five minutes of envy that evening. You won't mind it in such an old woman?"

"I should rather trust your heart than your age, Mrs. Laflamme," said Margaret, with a laugh.

"Yes, my heart is as old as my face. But I had a feeling, seeing you walk away that evening into the conservatory. I knew what was coming. I think I have discovered a great secret, Mrs. Henderson to be able to live over again in other people. By-the-way, what has become of that quiet Englishman, Mr. Lyon?"

"He has come into his title. He is the Earl of Chisholm."

"Dear me, how stupid in us not to have taken a sense of that! And the Eschelles—do you know anything of the Eschelles?"

"Yes; they are at their house in Newport."

"Do you think there was anything between Miss Eschelle and Mr. Lyon? I saw her afterwards several times."

"Not that I ever heard. Miss Eschelle says that she is thoroughly American in her tastes."

"Then her tastes are not quite conformed to her style. That girl might be anything—Queen of Spain, or coryphee in the opera ballet. She is clever as clever. One always expects to hear of her as the heroine of an adventure."

"Didn't you say you knew her in Europe?"

"No. We heard of her and her mother everywhere. She was very independent. She had the sort of reputation to excite curiosity. But I noticed that the men in New York were a little afraid of her. She is a woman who likes to drive very near the edge."

Mrs. Laflamme rose. "I must not keep Mr. McNaughton waiting for any more of my gossip. We expect you and the Misses Arbuser this afternoon. I warn you it will be dull. I should like to hear of some summer resort where the men are over sixteen and under sixty."

Mrs. Laflamme liked to drive near the edge as much as Carmen did, and this piquancy was undeniably an attraction in her case. But there was this difference between the two: there was a confidence that Mrs. Laflamme would never drive over the edge, whereas no one could tell what sheer Carmen might not suddenly take. A woman's reputation is almost as much affected by the expectation of what she may do as by anything she has done. It was Fox McNaughton who set up the dictum that a woman may do almost anything if it is known that she draws a line somewhere.

The lawn party was not at all dull to Margaret. In the first place, she received a great deal of attention. Henderson's name was becoming very well known, and it was natural that the splendor of his advancing fortune should be reflected in the person of his young wife, whose loveliness was enhanced by her simple enjoyment of the passing hour. Then the toilets of the women were so fresh and charming, the colors grouped so prettily on the greensward, the figures of the slender girls playing at tennis or lounging on the benches under the trees, recalled scenes from the classic poets. It was all so rich and refined. Nor did she miss the men of military age, whose absence Mrs. Laflamme had deplored, for she thought of her husband. And, besides, she found even the college boys (who are always spoken of as men) amusing, and the elderly gentlemen—upon whom watering-place society throws much responsibility—gallant, facetious, complimentary, and active in whatever was afoot. Their boyishness, indeed, contrasted with—the gravity of the undergraduates, who took themselves very seriously, were civil to the young ladies,—confidential with the married women, and had generally a certain reserve and dignity which belong to persons upon whom such heavy responsibility rests.

There were, to be sure, men who looked bored, and women who were listless, missing the stimulus of any personal interest; but the scene was so animated, the weather so propitious, that, on the whole, a person must be very cynical not to find the occasion delightful.

There was a young novelist present whose first story, "The Girl I Left Behind Me," had made a hit the last season. It was thought to take a profound hold upon life, because it was a book that could not be read aloud in a mixed company. Margaret was very much interested in him, although Mr. Summers Bass was not her idea of an imaginative writer. He was a stout young gentleman, with very black hair and small black eyes, to which it was difficult to give a melancholy cast even by an habitual frown. Mr. Bass dressed himself scrupulously in the fashion, was very exact in his pronunciation, careful about his manner, and had the air of a little weariness, of the responsibility of one looking at life. It was only at rare moments that his face expressed intensity of feeling.

"It is a very pretty scene. I suppose, Mr. Bass, that you are making studies," said Margaret, by way of opening a conversation.

"No; hardly that. One must always observe. It gets to be a habit. The thing is to see reality under appearances."

"Then you would call yourself a realist?"

Mr. Bass smiled. "That is a slang term, Mrs. Henderson. What you want is nature, color, passion—to pierce the artificialities."

"But you must describe appearance."

"Certainly, to an extent—form, action, talk as it is, even trivialities—especially the trivialities, for life is made up of the trivial."

"But suppose that does not interest me?"

"Pardon me, Mrs. Henderson, that is because you are used to the conventional, the selected. Nature is always interesting."

"I do not find it so."

"No? Nature has been covered up; it has been idealized. Look yonder," and Mr. Bass pointed across the lawn. "See that young woman upon whom the sunlight falls standing waiting her turn. See the quivering of the eyelids, the heaving of the chest, the opening lips; note the curve of her waist from the shoulder, and the line rounding into the fall of the folds of the Austrian cashmere. I try to saturate myself with that form, to impress myself with her every attitude and gesture, her color, her movement, and then I shall imagine the form under the influence of passion. Every detail will tell. I do not find unimportant the tie of her shoe. The picture will be life."

"But suppose, Mr. Bass, when you come to speak with her, you find that she has no ideas, and talks slang."

"All the better. It shows what we are, what our society is. And besides, Mrs. Henderson, nearly everybody has the capacity of being wicked; that is to say, of expressing emotion."

"You take a gloomy view, Mr. Bass."

"I take no view, Mrs. Henderson. My ambition is to record. It will not help matters by pretending that people are better than they are."

"Well, Mr. Bass, you may be quite right, but I am not going to let you spoil my enjoyment of this lovely scene," said Margaret, moving away. Mr. Bass watched her until she disappeared, and then entered in his notebook a phrase for future use, "The prosperous propriety of a pretty plutocrat." He was gathering materials for his forthcoming book, "The Last Sigh of the Prude."

The whole world knows how delightful Lenox is. It even has a club where the men can take refuge from the exactions of society, as in the city. The town is old enough to have "histories"; there is a romance attached to nearly every estate, a tragedy of beauty, and money, and disappointment; great writers have lived here, families whose names were connected with our early politics and diplomacy; there is a tradition of a society of wit and letters, of women whose charms were enhanced by a spice of adventure, of men whose social brilliancy ended in misanthropy. All this gave a background of distinction to the present gayety, luxury, and adaptation of the unsurpassed loveliness of nature to the refined fashion of the age.

Here, if anywhere, one could be above worry, above the passion of envy; for did not every new "improvement" and every new refinement in living add to the importance of every member of this favored

community? For Margaret it was all a pageant of beauty. The Misses Arbuser talked about the quality of the air, the variety of the scenery, the exhilaration of the drives, the freedom from noise and dust, the country quiet. There were the morning calls, the intellectual life of the reading clubs, the tennis parties, the afternoon teas, combined with charming drives from one elegant place to another; the siestas, the idle swinging in hammocks, with the latest magazine from which to get a topic for dinner, the mild excitement of a tete-a-tete which might discover congenial tastes or run on into an interesting attachment. Half the charm of life, says a philosopher, is in these personal experiments.

When Henderson came, as he did several times for a few days, Margaret's happiness was complete. She basked in the sun of his easy enjoyment of life. She liked to take him about with her, and see the welcome in all companies of a man so handsome, so natural and cordial, as her husband. Especially did she like the consideration in which he was evidently held at the club, where the members gathered about him to listen to his racy talk and catch points about the market. She liked to think that he was not a woman's man. He gave her his version of some recent transactions that had been commented on in the newspapers, and she was indignant over the insinuations about him. It was the price, he said, that everybody had to pay for success. Why shouldn't he, she reflected, make money? Everybody would if they could, and no one knew how generous he was. If she had been told that the family of Jerry Hollowell thought of him in the same way, she would have said that there was a world-wide difference in the two men. Insensibly she was losing the old standards she used to apply to success. Here in Lenox, in this prosperous, agreeable world, there was nothing to remind her of them.

In her enjoyment of this existence without care, I do not suppose it occurred to her to examine if her ideals had been lowered. Sometimes Henderson had a cynical, mocking tone about the world, which she reproved with a caress, but he was always tolerant and good-natured. If he had told her that he acted upon the maxim that every man and woman has his and her price she would have been shocked, but she was getting to make allowances that she would not have made before she learned to look at the world through his eyes. She could see that the Brandon circle was over-scrupulous. Her feeling of this would have been confirmed if she had known that when her aunt read the letter announcing a month's visit to the Eschelles in Newport, she laid it down with a sigh.

XVI

Uncle Jerry was sitting on the piazza of the Ocean House, absorbed in the stock reports of a New York journal, answering at random the occasional observations of his wife, who filled up one of the spacious chairs near him—a florid woman, with diamonds in her ears, who had the resolute air of enjoying herself. It was an August Newport morning, when there is a salty freshness in the air, but a temperature that discourages exertion. A pony phaeton dashed by containing two ladies. The ponies were cream-colored, with flowing manes and tails, and harness of black and gold; the phaeton had yellow wheels with a black body; the diminutive page with folded arms, on the seat behind, wore a black jacket and yellow breeches. The lady who held the yellow silk reins was a blonde with dark eyes. As they flashed by, the lady on the seat with her bowed, and Mr. Hollowell returned the salute.

“Who's that?” asked Mrs. Hollowell.

“That's Mrs. Henderson.”

“And the other one?”

“I don't know her. She knows how to handle the ribbons, though.”

“I seen her at the Casino the other night, before you come, with that tandem-driving count. I don't believe he's any more count than you are.”

“Oh, he's all right. He's one of the Spanish legation. This is just the place for counts. I shouldn't wonder, Maria, if you'd like to be a countess. We can afford it—the Countess Jeremiah, eh?” and Uncle Jerry's eyes twinkled.

“Don't be a goose, Mr. Hollowell,” bringing her fat hands round in front of her, so that she could see the sparkle of the diamond rings on them. “She's as pretty as a picture, that girl, but I should think a good wind would blow her away. I shouldn't want to have her drive me round.”

“Jorkins has sailed,” said Mr. Hollowell, looking up from his paper. “The Planet reporter tried to interview him, but he played sick, said he was just going over and right back for a change. I guess it will be long enough before they get a chance at him again.”

“I'm glad he's gone. I hope the papers will mind their own business for a spell.”

The house of the Eschelles was on the sea, looking over a vast sweep of lawn to the cliff and the dimpling blue water of the first beach. It was known as the Yellow Villa. Coming from the elegance of Lenox, Margaret was surprised at the magnificence and luxury of this establishment, the great drawing-rooms, the spacious chambers, the wide verandas, the pictures, the flowers, the charming nooks and recessed windows, with handy book-stands, and tables littered with the freshest and most-talked-of issues from the press of Paris, Madrid, and London. Carmen had taken a hint from Henderson's bachelor apartment, which she had visited once with her mother, and though she had no literary taste, further than to dip in here and there to what she found toothsome and exciting in various languages, yet she knew the effect of the atmosphere of books, and she had a standing order at a book-shop for whatever was fresh and likely to come into notice.

And Carmen was a delightful hostess, both because her laziness gave an air of repose to the place, and she had the tact never to appear to make any demands upon her guests, and because she knew when to be piquant and exhibit personal interest, and when to show even a little abandon of vivacity. Society flowed through her house without any obstructions. It was scarcely ever too early and never too late for visitors.

Those who were intimate used to lounge in and take up a book, or pass an hour on the veranda, even when none of the family were at home. Men had a habit of dropping in for a five o'clock cup of tea, and where the men went the women needed little urging to follow. At first there had been some reluctance about recognizing the Eschelles fully, and there were still houses that exhibited a certain reserve towards them, but the example of going to this house set by the legations, the members of which enjoyed a chat with Miss Eschelle in the freedom of their own tongues and the freedom of her tongue, went far to break down this barrier. They were spoken of occasionally as "those Eschelles," but almost everybody went there, and perhaps enjoyed it all the more because there had been a shade of doubt about it.

Margaret's coming was a good card for Carmen. The little legend about her French ancestry in Newport, and the romantic marriage in Rochambeau's time, had been elaborated in the local newspaper, and when she appeared the ancestral flavor, coupled with the knowledge of Henderson's accumulating millions, lent an interest and a certain charm to whatever she said and did. The Eschelle house became more attractive than ever before, so much so that Mrs. Eschelle declared that she longed for the quiet of Paris. To her motherly apprehension there was no result in this whirl of gayety, no serious intention discoverable in any of the train that followed Carmen. "You act, child," she said, "as if youth would last forever."

Margaret entered into this life as if she had been born to it. Perhaps she was. Perhaps most people never find the career for which they are fitted, and struggle along at cross-purposes with themselves. We all thought that Margaret's natural bent was for some useful and self-sacrificing work in the world, and never could have imagined that under any circumstances she would develop into a woman of fashion.

"I intend to read a great deal this month," she said to Carmen on her arrival, as she glanced at the litter of books.

"That was my intention," replied Carmen; "now we can read together. I'm taking Spanish lessons of Count Crispo. I've learned two Spanish poems and a Castilian dance."

"Is he married?"

"Not now. He told me, when he was teaching me the steps, that his heart was buried in Seville."

"He seems to be full of sentiment."

"Perhaps that is because his salary is so small. Mamma says, of all things an impecunious count! But he is amusing."

"But what do you care for money?" asked Margaret, by way of testing Carmen's motives.

"Nothing, my dear. But deliver me from a husband who is poor; he would certainly be a tyrant. Besides, if I ever marry, it will be with an American."

"But suppose you fall in love with a poor man?"

"That would be against my principles. Never fall below your ideals—that is what I heard a speaker say at the Town and Country Club, and that is my notion. There is no safety for you if you lose your principles."

"That depends upon what they are," said Margaret, in the same bantering tone.

"That sounds like good Mr. Lyon. I suspect he thought I hadn't any. Mamma said I tried to shock him; but he shocked me. Do you think you could live with such a man twenty-four hours, even if he had his crown on?"

"I can imagine a great deal worse husbands than the Earl of Chisholm."

"Well, I haven't any imagination."

There was no reading that day nor the next. In the morning there was a drive with the ponies through town, in the afternoon in the carriage by the sea, with a couple of receptions, the five o'clock tea, with its chatter, and in the evening a dinner party for Margaret. One day sufficed to launch her, and there-after Carmen had only admiration for the unflagging spirit which Margaret displayed. "If you were only unmarried," she said, "what larks we could have!" Margaret looked grave at this, but only for a moment, for she well knew that she could not please her husband better than by enjoying the season to the full. He never criticised her for taking the world as it is; and she confessed to herself that life went very pleasantly in a house where there were never any questions raised about duties. The really serious thought in Carmen's mind was that perhaps after all a woman had no real freedom until she was married. And she began to be interested in Margaret's enjoyment of the world.

It was not, after all, a new world, only newly arranged, like another scene in the same play. The actors, who came and went, were for the most part the acquaintances of the Washington winter, and the callers and diners and opera-goers and charity managers of the city. In these days Margaret was quite at home with the old set: the British Minister, the Belgian, the French, the Spanish, the Mexican, the German, and the Italian, with their families and attaches—nothing was wanting, not even the Chinese mandarin, who had rooms at the hotel, going about everywhere in the conscientious discharge of his duties as ambassador to American society, a great favorite on account of his silk apparel, which gave him the appearance of a clumsy woman, and the everlasting, three-thousand-year-old smile on his broad face, punctiliously leaving in every house a big flaring red piece of paper which the ladies pinned up for a decoration; a picture of helpless, childlike enjoyment, and almost independent of the interpreter who followed him about, when he had learned, upon being introduced to a lady, or taking a cup of tea, to say "good-by" as distinctly as an articulating machine; a truly learned man, setting an example of civility and perfect self-possession, but keenly observant of the oddities of the social life to which his missionary government had accredited him. One would like to have heard the comments of the minister and his suite upon our manners; but perhaps they were too polite to make any even in their seclusion. Certain it is that no one ever heard any of the legation express any opinion but the most suave and flattering.

And yet they must have been amazed at the activity of this season of repose, the endurance of American women who rode to the fox meets, were excited spectators of the polo, played lawn-tennis, were incessantly dining and calling, and sat through long dinners served with the formality and dullness and the swarms of liveried attendants of a royal feast. And they could not but admire the young men, who did not care for politics or any business beyond the chances of the stock exchange, but who expended an immense amount of energy in the dangerous polo contests, in riding at fences after the scent-bag, in driving tandems and four-in-

hands, and yet had time to dress in the cut and shade demanded by every changing hour.

Formerly the annual chronicle of this summer pageant, in which the same women appeared day after day, and the same things were done over and over again, Margaret used to read with a contempt for the life; but that she enjoyed it, now she was a part of it, shows that the chroniclers for the press were unable to catch the spirit of it, the excitement of the personal encounters that made it new every day. Looking at a ball is quite another thing from dancing.

"Yes, it is lively enough," said Mr. Ponsonby, one afternoon when they had returned from the polo grounds and were seated on the veranda. Mr. Ponsonby was a middle-aged Englishman, whose diplomatic labors at various courts had worn a bald spot on his crown. Carmen had not yet come, and they were waiting for a cup of tea. "And they ride well; but I think I rather prefer the Wild West Show."

"You Englishmen," Margaret retorted, "seem to like the uncivilized. Are you all tired of civilization?"

"Of some kinds. When we get through with the London season, you know, Mrs. Henderson, we like to rough it, as you call it, for some months. But, 'pon my word, I can't see much difference between Washington and Newport."

"We might get up a Wild West Show here, or a prize-fight, for you. Do you know, Mr. Ponsonby, I think it will take full another century for women to really civilize men."

"How so?"

"Get the cruelty and love of brutal sports out of them."

"Then you'd cease to like us. Nothing is so insipid, I fancy, to a woman as a man made in her own image."

"Well, what have you against Newport?"

"Against it? I'm sure nothing could be better than this." And Mr. Ponsonby allowed his adventurous eyes to rest for a moment upon Margaret's trim figure, until he saw a flush in her face. "This prospect," he added, turning to the sea, where a few sails took the slant rays of the sun.

"Where every prospect pleases," quoted Margaret, "and only man—"

"I beg your pardon, Mrs. Henderson; men are not to be considered. The women in Newport would make the place a paradise even if it were a desert."

"That is another thing I object to in men."

"What's that?"

"Flattery. You don't say such things to each other at the club. What is your objection to Newport?"

"I didn't say I had any. But if you compel me well, the whole thing seems to be a kind of imitation."

"How?"

"Oh, the way things go on—the steeple-chasing and fox-hunting, and the carts, and the style of the swell entertainments. Is that ill-natured?"

"Not at all. I like candor, especially English candor. But there is Miss Eschelle."

Carmen drove up with Count Crispo, threw the reins to the groom, and reached the ground with a touch on the shoulder of the count, who had alighted to help her down.

"Carmen," said Margaret, "Mr. Ponsonby says that all Newport is just an imitation."

"Of course it is. We are all imitations, except Count Crispo. I'll bet a cup of tea against a pair of gloves," said Carmen, who had facility in picking up information, "that Mr. Ponsonby wasn't born in England."

Mr. Ponsonby looked redder than usual, and then laughed, and said, "Well, I was only three years old when I left Halifax."

"I knew it!" cried Carmen, clapping her hands. "Now come in and have a cup of English breakfast tea. That's imitation, too."

"The mistake you made," said Margaret, "was not being born in Spain."

"Perhaps it's not irreparable," the count interposed, with an air of gallantry.

"No, no," said Carmen, audaciously; "by this time I should be buried in Seville. No, I should prefer Halifax, for it would have been a pleasure to emigrate from Halifax. Was it not, Mr. Ponsonby?"

"I can't remember. But it is a pleasure to sojourn in any land with Miss Eschelle."

"Thank you. Now you shall have two cups. Come."

The next morning, Mr. Jerry Hollowell, having inquired where Margaret was staying, called to pay his respects, as he phrased it. Carmen, who was with Margaret in the morning-room, received him with her most distinguished manner. "We all know Mr. Hollowell," she said.

"That's not always an advantage," retorted Uncle Jerry, seating himself, and depositing his hat beside his chair. "When do you expect your husband, Mrs. Henderson?"

"Tomorrow. But I don't mean to tell him that you are here—not at first."

"No," said Carmen; "we women want Mr. Henderson a little while to ourselves."

"Why, I'm the idlest man in America. I tell Henderson that he ought to take more time for rest. It's no good to drive things. I like quiet."

"And you get it in Newport?" Margaret asked.

"Well, my wife and children get what they call quiet. I guess a month of it would use me up. She says if I had a place here I'd like it. Perhaps so. You are very comfortably fixed, Miss Eschelle."

"It does very well for us, but something more would be expected of Mr. Hollowell. We are just camping-out here. What Newport needs is a real palace, just to show those foreigners who come here and patronize us. Why is it, Mr. Hollowell, that all you millionaires can't think of anything better to do with your money than to put up a big hotel or a great elevator or a business block?"

"I suppose," said Uncle Jerry, blandly, "that is because they are interested in the prosperity of the country, and have simple democratic tastes for themselves. I'm afraid you are not democratic, Miss Eschelle."

"Oh, I'm anxious about the public also. I'm on your side, Mr. Hollowell; but you don't go far enough. You just throw in a college now and then to keep us quiet, but you owe it to the country to show the English that a democrat can have as fine a house as anybody."

"I call that real patriotism. When I get rich, Miss Eschelle, I'll bear it in mind."

"Oh, you never will be rich," said Carmen, sweetly, bound to pursue her whim. "You might come to me for a start to begin the house. I was very lucky last spring in A. and B. bonds."

"How was that? Are you interested in A. and B.?" asked Uncle Jerry, turning around with a lively interest in this gentle little woman.

"Oh, no; we sold out. We sold when we heard what an interest there was in the road. Mamma said it would never do for two capitalists to have their eggs in the same basket."

"What do you mean, Carmen?" asked Margaret, startled. "Why, that is the road Mr. Henderson is in."

"Yes, I know, dear. There were too many in it."

"Isn't it safe?" said Margaret, turning to Hollowell.

"A great deal more solid than it was," he replied. "It is part of a through line. I suppose Miss Eschelle found a better investment."

"One nearer home," she admitted, in the most matter-of-fact way.

"Henderson must have given the girl points," thought Hollowell. He began to feel at home with her. If he had said the truth, it would have been that she was more his kind than Mrs. Henderson, but that he respected the latter more.

"I think we might go in partnership, Miss Eschelle, to mutual advantage—but not in building. Your ideas are too large for me there."

"I should be a very unreliable partner, Mr. Hollowell; but I could enlarge your ideas, if I had time."

Hollowell laughed, and said he hadn't a doubt of that. Margaret inquired for Mrs. Hollowell and the children, and she and Carmen appointed an hour for calling at the Ocean House. The talk went to other topics, and after a half-hour ended in mutual good-feeling.

"What a delightful old party!" said Carmen, after he had gone. "I've a mind to adopt him."

In a week Hollowell and Carmen were the best of friends. She called him "Uncle Jerry," and buzzed about him, to his great delight. "The beauty of it is," he said, "you never can tell where she will light."

Everybody knows what Newport is in August, and we need not dwell on it. To Margaret, with its languidly moving pleasures, its well-bred scenery, the luxury that lulled the senses into oblivion of the vulgar struggle and anxiety which ordinarily attend life, it was little less than paradise. To float along with Carmen, going deeper and deeper into the shifting gayety which made the days fly without thought and with no care for tomorrow, began to seem an admirable way of passing life. What could one do fitter, after all, for a world hopelessly full of suffering and poverty and discontent, than to set an example of cheerfulness and enjoyment, and to contribute, as occasion offered, to the less fortunate? Would it help matters to be personally anxious and miserable? To put a large bill in the plate on Sunday, to open her purse wide for the objects of charity and relief daily presented, was indeed a privilege and a pleasure, and a satisfaction to the conscience which occasionally tripped her in her rapid pace.

"I don't believe you have a bit of conscience," said Margaret to Carmen one Sunday, as they walked home from morning service, when Margaret had responded "extravagantly," as Carmen said, to an appeal for the mission among the city pagans.

"I never said I had, dear. It must be the most troublesome thing you can carry around with you. Of course I am interested in the heathen, but charity—that is where I agree with Uncle Jerry—begins at home, and I don't happen to know a greater heathen than I am."

"If you were as bad as you make yourself out, I wouldn't walk with you another step."

"Well, you ask mother. She was in such a rage one day when I told Mr. Lyon that he'd better look after Ireland than go pottering round among the neglected children. Not that I care anything about the Irish," added this candid person.

"I suppose you wanted to make it pleasant for Mr. Lyon?"

"No; for mother. She can't get over the idea that she is still bringing me up. And Mr. Lyon! Goodness! there was no living with him after his visit to Brandon. Do you know, Margaret, that I think you are just a little bit sly?"

"I don't know what you mean," said Margaret, looking offended.

"Dear, I don't blame you," said the impulsive creature, wheeling short round and coming close to Margaret. "I'd kiss you this minute if we were not in the public road."

When Henderson came, Margaret's world was full; no desire was ungratified. He experienced a little relief when she did not bother him about his business nor inquire into his operations with Hollowell, and he fancied that she was getting to accept the world as Carmen accepted it. There had been moments since his marriage when he feared that Margaret's scruples would interfere with his career, but never a moment when he had doubted that her love for him would be superior to any solicitations from others. Carmen, who knew him like a book, would have said that the model wife for Henderson would be a woman devoted to him and to his interests, and not too scrupulous. A wife is a torment, if you can't feel at ease with her.

"If there were only a French fleet in the harbor, dear," said Margaret one day, "I should feel that I had quite taken up the life of my great-great-grandmother."

They were sailing in Hollowell's yacht, in which Uncle Jerry had brought his family round from New York. He hated the water, but Mrs. Hollowell and the children doted on the sea, he said.

"Wouldn't the torpedo station make up for it?" Henderson asked.

"Hardly. But it shows the change of a hundred years. Only, isn't it odd, this personal dropping back into an

old situation? I wonder what she was like?"

"The accounts say she was the belle of Newport. I suppose Newport has a belle once in a hundred years. The time has come round. But I confess I don't miss the French fleet," replied Henderson, with a look of love that thrilled Margaret through and through.

"But you would have been an officer on the fleet, and I should have fallen in love with you. Ah, well, it is better as it is."

And it was better. The days went by without a cloud. Even after Henderson had gone, the prosperity of life filled her heart more and more.

"She might have been like me," Carmen said to herself, "if she had only started right; but it is so hard to get rid of a New England conscience."

When Margaret stayed in her room, one morning, to write a long-postponed letter to her aunt, she discovered that she had very little to write, at least that she wanted to write, to her aunt. She began, however, resolutely with a little account of her life. But it seemed another thing on paper, addressed to the loving eyes at Brandon. There were too much luxury and idleness and triviality in it, too much Carmen and Count Crispo and flirtation and dissipation in it.

She tore it up, and went to the window and looked out upon the sea. She was indignant with the Brandon people that they should care so little about this charming life. She was indignant at herself that she had torn up the letter. What had she done that anybody should criticise her? Why shouldn't she live her life, and not be hampered everlastingly by comparisons?

She sat down again, and took up her pen. Was she changing—was she changed? Why was it that she had felt a little relief when her last Brandon visit was at an end, a certain freedom in Lenox and a greater freedom in Newport? The old associations became strong again in her mind, the life in the little neighborhood, the simplicity of it, the high ideals of it, the daily love and tenderness. Her aunt was no doubt wondering now that she did not write, and perhaps grieving that Margaret no more felt at home in Brandon. It was too much. She loved them, she loved them all dearly. She would write that, and speak only generally of her frivolous, happy summer. And she began, but somehow the letter seemed stiff and to lack the old confiding tone.

But why should they disapprove of her? She thought of her husband. If circumstances had altered, was she to blame? Could she always be thinking of what they would think at Brandon? It was an intolerable bondage. They had no right to set themselves up over her. Suppose her aunt didn't like Carmen. She was not responsible for Carmen. What would they have her do? Be unhappy because Henderson was prosperous, and she could indulge her tastes and not have to drudge in school? Suppose she did look at some things differently from what she used to. She knew more of the world. Must you shut yourself up because you found you couldn't trust everybody? What was Mr. Morgan always hitting at? Had he any better opinion of men and women than her husband had? Was he any more charitable than Uncle Jerry? She smiled as she thought of Uncle Jerry and his remark—"It's a very decent world if you don't huff it." No; she did like this life, and she was not going to pretend that she didn't. It would be dreadful to lose the love and esteem of her dear old friends, and she cried a little as this possibility came over her. And then she hardened her heart a little at the thought that she could not help it if they chose to misunderstand her and change.

Carmen was calling from the stairs that it was time to dress for the drive. She dashed off a note. It contained messages of love for everybody, but it was the first one in her life written to her aunt not from her heart.

XVII

Shall we never have done with this carping at people who succeed? Are those who start and don't arrive any better than those who do arrive? Did not men always make all the money they had an opportunity to make? Must we always have the old slow-coach merchants and planters thrown up to us? Talk of George Washington and the men of this day! Were things any better because they were on a small scale? Wasn't the thrifty George Washington always adding to his plantations, and squeezing all he could out of his land and his slaves? What are the negro traditions about it? Were they all patriots in the Revolutionary War? Were there no contractors who amassed fortunes then? And how was it in the late war? The public has a great spasm of virtue all of a sudden. But we have got past the day of stage-coaches.

Something like this Henderson was flinging out to Carmen as he paced back and forth in her parlor. It was very unlike him, this outburst, and Carmen knew that he would indulge in it to no one else, not even to Uncle Jerry. She was coiled up in a corner of the sofa, her eyes sparkling with admiration of his indignation and force. I confess that he had been irritated by the comments of the newspapers, and by the prodding of the lawyers in the suit then on trial over the Southwestern consolidation.

"Why, there was old Mansfield saying in his argument that he had had some little experience in life, but he never had known a man to get rich rapidly, barring some piece of luck, except by means that it would make him writhe to have made public. I don't know but that Uncle Jerry was right, that we made a mistake in not retaining him for the corporation."

"Not if you win," said Carmen, softly. "The public won't care for the remark unless you fail."

"And he tried to prejudice the Court by quoting the remark attributed to Uncle Jerry, 'The public be d—d' as if, said Mansfield, the public has no rights as—against the railroad wreckers. Uncle Jerry laughed, and interrupted: 'That's nonsense, reporters' nonsense. What I said was that if the public thought I was fool enough to make it our enemy, the public might be d—d (begging your honor's pardon).' Then everybody laughed. 'It's the bond holders, who want big dividends, that stand in the way of the development of the country, that's what it is,' said he, as he sat down, to those around him, but loud enough to be heard all over

the room. Mansfield asked the protection of the Court against these clap-trap interruptions. The judge said it was altogether irregular, and Uncle Jerry begged pardon. The reporters made this incident the one prominent thing in the case that day."

"What a delightful Uncle Jerry it is!" said Carmen. "You'd better keep an eye on him, Rodney; he'll be giving your money to that theological seminary in Alabama."

"That reminds me," Henderson said, cooling down, "of a paragraph in *The Planet*, the other day, about the amount of my gifts unknown to the public. I showed it to Uncle Jerry, and he said, 'Yes, I mentioned it to the editor; such things don't do any harm.'"

"I saw it, and wondered who started it," Carmen replied, wrinkling her brows as if she had been a good deal perplexed about it.

"I thought," said Henderson, with a smile, "that it ought to be explained to you."

"No," she said, reflectively; "you are liberal enough, goodness knows—too liberal—but you are not a flat."

Henderson was in the habit of dropping in at the Eschelles' occasionally, when he wanted to talk freely. He had no need to wear a mask with Carmen. Her moral sense was tolerant and elastic, and feminine sympathy of this sort is a grateful cushion. She admired Henderson, without thinking any too well of the world in general, and she admired him for the qualities that were most conformable to his inclination. It was no case of hero-worship, to be sure, nor for tragedy; but then what a satisfaction it must be to sweet Lady Macbeth, coiled up on her sofa, to feel that the thane of Cawdor has some nerve!

The Hendersons had come back to Washington Square late in the autumn. It is a merciful provision that one has an orderly and well-appointed home to return to from the fatigues of the country. Margaret, at any rate, was a little tired with the multiform excitements of her summer, and experienced a feeling of relief when she crossed her own threshold and entered into the freedom and quiet of her home. She was able to shut the door there even against the solicitations of nature and against the weariness of it also. How quiet it was in the square in those late autumn days, and yet not lifeless by any means! Indeed, it seemed all the more a haven because the roar of the great city environed it, and one could feel, without being disturbed by, the active pulsation of human life. And then, if one has sentiment, is there anywhere that it is more ministered to than in the city at the close of the year? The trees in the little park grow red and yellow and brown, the leaves fall and swirl and drift in windrows by the paths, the flower-beds flame forth in the last dying splendor of their color; the children, chasing each other with hoop and ball about the walks, are more subdued than in the spring-time; the old men, seeking now the benches where the sunshine falls, sit in dreamy reminiscence of the days that are gone; the wandering minstrel of Italy turns the crank of his wailing machine, O! bella, bella, as in the spring, but the notes seem to come from far off and to be full of memory rather than of promise; and at early morning, or when the shadows lengthen at evening, the south wind that stirs the trees has a salt smell, and sends a premonitory shiver of change to the fading foliage. But how bright are the squares and the streets, for all this note of melancholy! Life is to begin again.

But the social season opened languidly. It takes some time to recover from the invigoration of the summer gayety—to pick up again the threads and weave them into that brilliant pattern, which scarcely shows all its loveliness of combination and color before the weavers begin to work in the subdued tints of Lent. How delightful it is to see this knitting and unraveling of the social fabric year after year! and how untiring are the senders of the shuttles, the dyers, the hatchelers, the spinners, the ever-busy makers and destroyers of the intricate web we call society! After one campaign, must there not be time given to organize for another? Who has fallen out, who are the new recruits, who are engaged, who will marry, who have separated, who has lost his money? Before we can safely reorganize we must not only examine the hearts but the stock-list. No matter how many brilliant alliances have been arranged, no matter how many husbands and wives have drifted apart in the local whirlpools of the summer's current, the season will be dull if Wall Street is torpid and discouraged. We cannot any of us, you see, live to ourselves alone. Does not the preacher say that? And do we not all look about us in the pews, when he thus moralizes, to see who has prospered? The B's have taken a back seat, the C's have moved up nearer the pulpit. There is a reason for these things, my friends.

I am sorry to say that Margaret was usually obliged to go alone to the little church where she said her prayers; for however restful her life might have been while that season was getting under way, Henderson was involved in the most serious struggle of his life—a shameful kind of conspiracy, Margaret told Carmen, against him. I have hinted at his annoyance in the courts. Ever since September he had been pestered with injunctions, threatened with attachments. And now December had come and Congress was in session; in the very first days an investigation had been ordered into the land grants involved in the Southwestern operations. Uncle Jerry was in Washington to explain matters there, and Henderson, with the ablest counsel in the city, was fighting in the courts. The affair made a tremendous stir. Some of the bondholders of the A. and B. happened to be men of prominence, and able to make a noise about their injury. As several millions were involved in this one branch of the case—the suit of the bondholders—the newspapers treated it with the consideration and dignity it deserved. It was a vast financial operation, some said, scathingly, a "deal," but the magnitude of it prevented it from falling into the reports of petty swindling that appear in the police-court column. It was a public affair, and not to be judged by one's private standard. I know that there were remarks made about Henderson that would have pained Margaret if she had heard them, but I never heard that he lost standing in the street. Still, in justice to the street it must be said that it charitably waits for things to be proven, and that if Henderson had failed, he might have had little more lenient judgment in the street than elsewhere.

In fact, those were very trying days for him—days when he needed all the private sympathy he could get, and to be shielded, in his great fight with the conspiracy, from petty private annoyances. It needed all his courage and good-temper and bonhomie to carry him through. That he went through was evidence not only of his adroitness and ability, but it was proof also that he was a good fellow. If there were people who thought otherwise, I never heard that they turned their backs on him, or failed in that civility which he never laid aside in his intercourse with others.

If a man present a smiling front to the world under extreme trial, is not that all that can be expected of

him? Shall he not be excused for showing a little irritation at home when things go badly? Henderson was as good-humored a man as I ever knew, and he loved Margaret, he was proud of her, he trusted her. Since when did the truest love prevent a man from being petulant, even to the extent of wounding those he best loves, especially if the loved one shows scruples when sympathy is needed? The reader knows that the present writer has no great confidence in the principle of Carmen; but if she had been married, and her husband had wrecked an insurance company and appropriated all the surplus belonging to the policy-holders, I don't believe she would have nagged him about it.

And yet Margaret loved Henderson with her whole soul. And in this stage of her progress in the world she showed that she did, though not in the way Carmen would have showed her love, if she had loved, and if she had a soul capable of love.

It may have been inferred from Henderson's exhibition of temper that his case had gone against him. It is true; an injunction had been granted in the lower court, and public opinion went with the decree, and was in a great measure satisfied by it. But this fight had really only just begun; it would go on in the higher courts, with new resources and infinite devices, which the public would be unable to fathom or follow, until by-and-by it would come out that a compromise had been made, and the easy public would not understand that this compromise gave the looters of the railway substantially all they ever expected to get. The morning after the granting of the injunction Henderson had been silent and very much absorbed at breakfast, hardly polite, Margaret thought, and so inattentive to her remarks that she asked him twice whether they should accept the Brandon invitation to Christmas. "Christmas! I don't know. I've got other things to think of than Christmas," he said, scarcely looking at her, and rising abruptly and going away to his library.

When the postman brought Margaret's mail there was a letter in it from her aunt, which she opened leisurely after the other notes had been glanced through, on the principle that a family letter can wait, or from the fancy that some have of keeping the letter likely to be most interesting till the last. But almost the first line enchainned her attention, and as she read, her heart beat faster, and her face became scarlet. It was very short, and I am able to print it, because all Margaret's correspondence ultimately came into possession of her aunt:

"BRANDON, December 17th.

"DEAREST MARGARET,—You do not say whether you will come for Christmas, but we infer from your silence that you will. You know how pained we shall all be if you do not. Yet I fear the day will not be as pleasant as we could wish. In fact, we are in a good deal of trouble. You know, dear, that poor Mrs. Fletcher had nearly every dollar of her little fortune invested in the A. and B. bonds, and for ten months she has not had a cent of income, and no prospect of any. Indeed, Morgan says that she will be lucky if she ultimately saves half her principal. We try to cheer her up, but she is so cast down and mortified to have to live, as she says, on charity. And it does make rather close house-keeping, though I'm sure I couldn't live alone without her. It does not make so much difference with Mr. Fairchild and Mr. Morgan, for they have plenty of other resources. Mr. Fairchild tells her that she is in very good company, for lots of the bonds are held in Brandon, and she is not the only widow who suffers; but this is poor consolation. We had great hopes, the other day, of the trial, but Morgan says it may be years before any final settlement. I don't believe Mr. Henderson knows. But there, dearest, I won't find fault. We are all well, and eager to see you. Do come.

"Your affectionate aunt,

"GEORGIAN A."

Margaret's hand that held the letter trembled, and the eyes that read these words were hot with indignation; but she controlled herself into an appearance of calmness as she marched away with it straight to the library.

As she entered, Henderson was seated at his desk, with bowed head and perplexed brows, sorting a pile of papers before him, and making notes. He did not look up until she came close to him and stood at the end of his desk. Then, turning his eyes for a moment, and putting out his left hand to her, he said, "Well, what is it, dear?"

"Will you read that?" said Margaret, in a voice that sounded strange in her own ears.

"What?"

"A letter from Aunt Forsythe."

"Family matter. Can't it wait?" said Henderson, going on with his figuring.

"If it can, I cannot," Margaret answered, in a tone that caused him to turn abruptly and look at her. He was so impatient and occupied that even yet he did not comprehend the new expression in her face.

"Don't you see I am busy, child? I have an engagement in twenty minutes in my office."

"You can read it in a moment," said Margaret, still calm.

Henderson took the letter with a gesture of extreme annoyance, ran his eye through it, flung it from him on the table, and turned squarely round in his chair.

"Well, what of it?"

"To ruin poor Mrs. Fletcher and a hundred like her!" cried Margaret, with rising indignation.

"What have I to do with it? Did I make their investments? Do you think I have time to attend to every poor duck? Why don't people look where they put their money?"

"It's a shame, a burning shame!" she cried, regarding him steadily.

"Oh, yes; no doubt. I lost a hundred thousand yesterday; did I whine about it? If I want to buy anything in the market, have I got to look into every tuppenny interest concerned in it? If Mrs. Fletcher or anybody else has any complaint against me, the courts are open. I defy the whole pack!" Henderson thundered out, rising and buttoning his coat—"the whole pack!"

"And you have nothing else to say, Rodney?" Margaret persisted, not quailing in the least before his indignation. He had never seen her so before, and he was now too much in a passion to fully heed her.

"Oh, women, women!" he said, taking up his hat, "you have sympathy enough for anybody but your husbands." He pushed past her, and was gone without another word or look.

Margaret turned to follow him. She would have cried "Stop!" but the word stuck in her throat. She was half beside herself with rage for a moment. But he had gone. She heard the outer door close. Shame and grief overcame her. She sat down in the chair he had just occupied. It was infamous the way Mrs. Fletcher was treated. And her husband—her husband was so regardless of it. If he was not to blame for it, why didn't he tell her—why didn't he explain? And he had gone away without looking at her. He had left her for the first time since they were married without kissing her! She put her head down on the desk and sobbed; it seemed as if her heart would break. Perhaps he was angry, and wouldn't come back, not for ever so long.

How cruel to say that she did not sympathize with her husband! How could he be angry with her for her natural anxiety about her old friend! He was unjust. There must be something wrong in these schemes, these great operations that made so many confiding people suffer. Was everybody grasping and selfish? She got up and walked about the dear room, which recalled to her only the sweetest memories; she wandered aimlessly about the lower part of the house. She was wretchedly unhappy. Was her husband capable of such conduct? Would he cease to love her for what she had done—for what she must do? How lovely this home was! Everything spoke of his care, his tenderness, his quickness to anticipate her slightest wish or whim. It had been all created for her. She looked listlessly at the pictures, the painted ceiling, where the loves garlanded with flowers chased each other; she lifted and let drop wearily the rich hangings. He had said that it was all hers. How pretty was this vista through the luxurious rooms down to the green and sunny conservatory. And she shrank instinctively from it all. Was it hers? No; it was his. And was she only a part of it? Was she his? How cold his look as he went away!

What is this love, this divine passion, of which we hear so much? Is it, then, such a discernor of right and wrong? Is it better than anything else? Does it take the place of duty, of conscience? And yet what an unbearable desert, what a den of wild beasts it would be, this world, without love, the passionate, all-surrendering love of the man and the woman!

In the chambers, in her own apartments, into which she dragged her steps, it was worse than below. Everything here was personal. Mrs. Fairchild had said that it was too rich, too luxurious; but her husband would have it so. Nothing was too costly, too good, for the woman he loved. How happy she had been in this boudoir, this room, her very own, with her books, the souvenirs of all her happy life!

It seemed alien now, external, unsympathetic. Here, least of all places, could she escape from herself, from her hateful thoughts. It was a chilly day, and a bright fire crackled on the hearth. The square was almost deserted, though the sun illuminated it, and showed all the delicate tracery of the branches and twigs. It was a December sun. Her easy-chair was drawn to the fire and her book-stand by it, with the novel turned down that she had been reading the night before. She sat down and took up the book. She had lost her interest in the characters. Fiction! What stuff it was compared to the reality of her own life! No, it was impossible. She must do something. She went to her dressing-room and selected a street dress. She took pleasure in putting on the plainest costume she could find, rejecting every ornament, everything but the necessary and the simple. She wanted to get back to herself. Her maid appeared in response to the bell.

"I am going out, Marie."

"Will madame have the carriage?"

"No, I will walk; I need exercise. Tell Jackson not to serve lunch."

Yes, she would walk; for it was his carriage, after all.

It was after mid-day. In the keen air and the bright sunshine the streets were brilliant. Margaret walked on up the avenue. How gay was the city, what a zest of life in the animated scene! The throng increased as she approached Twenty-third Street. In the place where three or four currents meet there was the usual jam of carriages, furniture wagons, carts, cars, and hurried, timid, half-bewildered passengers trying to make their way through it. It was all such a whirl and confusion. A policeman aided Margaret to gain the side of the square. Children were playing there; white-capped maids were pushing about baby-carriages; the sparrows chattered and fought with as much vivacity as if they were natives of the city instead of foreigners in possession. It seemed all so empty and unreal. What was she, one woman with an aching heart, in the midst of it all? What had she done? How could she have acted otherwise? Was he still angry with her? The city was so vast and cruel. On the avenue again there was the same unceasing roar of carts and carriages; business, pleasure, fashion, idleness, the stream always went by. From one and another carriage Margaret received a bow, a cool nod, or a smile of greeting. Perhaps the occupants wondered to see her on foot and alone. What did it matter? How heartless it all was! what an empty pageant! If he was alienated, there was nothing. And yet she was right. For a moment she thought of the Arbusers. She thought of Carmen. She must see somebody. No, she couldn't talk. She couldn't trust herself. She must bear it alone.

And how weary it was, walking, walking, with such a burden! House after house, street after street, closed doors, repellant fronts, staring at her. Suppose she were poor and hungry, a woman wandering forlorn, how stony and pitiless these insolent mansions! And was she not burdened and friendless and forlorn! Tired, she reached at last, and with no purpose, the great white cathedral. The door was open. In all this street of churches and palaces there was no other door open. Perhaps here for a moment she could find shelter from the world, a quiet corner where she could rest and think and pray.

She entered. It was almost empty, but down the vista of the great columns hospitable lights gleamed, and here and there a man or a woman—more women than men—was kneeling in the great aisle, before a picture, at the side of a confessional, at the steps of the altar. How hushed and calm and sweet it was! She crept into

a pew in a side aisle in the shelter of a pillar; and sat down. Presently, in the far apse, an organ began to play, its notes stealing softly out through the great spaces like a benediction. She fancied that the saints, the glorified martyrs in the painted windows illumined by the sunlight, could feel, could hear, were touched by human sympathy in their beatitude. There was peace here at any rate, and perhaps strength. What a dizzy whirl it all was in which she had been borne along! The tones of the organ rose fuller and fuller, and now at the side entrances came pouring in children, the boys on one side, the girls on another—school children with their books and satchels, the poor children of the parish, long lines of girls and of boys, marshaled by priests and nuns, streaming in—in frolicsome mood, and filling all the pews of the nave at the front. They had their books out, their singing-books; at a signal they all stood up; a young priest with his baton stepped into the centre aisle; he waved his stick, Margaret heard his sweet tenor voice, and then the whole chorus of children's voices rising and filling all the house with the innocent concord, but always above all the penetrating, soaring notes of the priest—strong, clear, persuading. Was it not almost angelic there at the moment? And how inspired the beautiful face of the singer leading the children!

Ah, me! it is not all of the world worldly, then. I don't know that the singing was very good: it was not classical, I fear; not a voice, maybe, that priest's, not a chorus, probably, that, for the Metropolitan. I hear the organ is played better elsewhere. Song after song, chorus after chorus, repeated, stopped, begun again: it was only drilling the little urchins of the parochial schools—little ragamuffins, I dare say, many of them. What was there in this to touch a woman of fashion, sitting there crying in her corner? Was it because they were children's voices, and innocent? Margaret did not care to check her tears. She was thinking of her old home, of her own childhood, nay, of her girlhood—it was not so long ago—of her ideals then, of her notion of the world and what it would bring her, of the dear, affectionate life, the simple life, the school, the little church, her room in the cottage—the chamber where first the realization of love came to her with the odors of May. Was it gone, that life?—gone or going out of her heart? And—great heavens!—if her husband should be cold to her! Was she very worldly? Would he love her if she were as unworldly as she once was? Why should this childish singing raise these contrasts, and put her at odds so with her own life? For a moment I doubt not this dear girl saw herself as we were beginning to see her. Who says that the rich and the prosperous and the successful do not need pity?

Was this a comforting hour, do you think, for Margaret in the cathedral? Did she get any strength, I wonder? When the singing was over and the organ ceased, and the children had filed out, she stole away also, wearily and humbly enough, and took the stage down the avenue. It was near the dinner-hour, and Henderson, if he came, would be at home any moment. It seemed as if she could not wait—only to see him!

XVIII

Do you suppose that Henderson had never spoken impatiently and sharply to his wife before, that Margaret had never resented it and replied with spirit, and been hurt and grieved, and that there had never been reconciliations? In writing any biography there are some things that are taken for granted with an intelligent public. Are men always gentle and considerate, and women always even-tempered and consistent, simply by virtue of a few words said to the priest?

But this was a more serious affair. Margaret waited in a tumult of emotion. She felt that she would die if she did not see him soon, and she dreaded his coming. A horrible suspicion had entered her mind that respect for her husband, confidence in him, might be lowered, and a more horrible doubt that she might lose his love. That she could not bear. And was Henderson unconscious of all this? I dare say that in the perplexing excitement of the day he did recall for a moment with a keen thrust of regret the scene of the morning—his wife standing there flushed, wounded, indignant. "I might have turned back, and taken her in my arms, and told her it was all right," he thought. He wished he had done so. But what nonsense it was to think that she could be seriously troubled! Besides, he couldn't have women interfering with him every moment.

How inconsiderate men are! They drop a word or a phrase—they do not know how cruel it is—or give a look—they do not know how cold it is—and are gone without a second thought about it; but it sinks into the woman's heart and rankles there. For the instant it is like a mortal blow, it hurts so, and in the brooding spirit it is exaggerated into a hopeless disaster. The wound will heal with a kind word, with kisses. Yes, but never, never without a little scar. But woe to the woman's love when she becomes insensible to these little stabs!

Henderson hurried home, then, more eagerly than usual, with reparation in his heart, but still with no conception of the seriousness of the breach. Margaret heard the key in the door, heard his hasty step in the hall, heard him call, as he always did on entering, "Margaret! where is Margaret?" and she, sitting there in the deep window looking on the square, longed to run to him, as usual also, and be lifted up in his strong arms; but she could not stir. Only when he found her did she rise up with a wistful look and a faint smile. "Have you had a good day, child?" And he kissed her. But her kiss was on her lips only, for her heart was heavy.

"Dinner will be served as soon as you dress," she said. What a greeting was this! Who says that a woman cannot be as cruel as a man? The dinner was not very cheerful, though Margaret did her best not to appear constrained, and Henderson rattled on about the events of the day. It had been a deuce of a day, but it was coming right; he felt sure that the upper court would dissolve the injunction; the best counsel said so; and the criminal proceedings—"Had there been criminal proceedings?" asked Margaret, with a stricture at her heart—had broken down completely, hadn't a leg to stand on, never had, were only begun to bluff the company. It was a purely malicious prosecution. And Henderson did not think it necessary to tell Margaret that only Uncle Jerry's dexterity had spared both of them the experience of a night in the Ludlow Street jail.

"Come," said Henderson—"come into the library. I have something to tell you." He put his arm round her as they walked, and seating himself in his chair by his desk in front of the fire, he tried to draw Margaret to sit

on his knee.

"No; I'll sit here, so that I can see you," she said, composed and unyielding.

He took out his pocket-book, selected a slip of paper, and laid it on the table before him. "There, that is a check for seven hundred dollars. I looked in the books. That is the interest for a year on the Fletcher bonds. Might as well make it an even year; it will be that soon."

"Do you mean to say—" asked Margaret, leaning forward.

"Yes; to brighten up the Christmas up there a little."

"—that you are going to send that to Mrs. Fletcher?" Margaret had risen.

"Oh, no; that wouldn't do. I cannot send it, nor know anything about it. It would raise the—well, it would—the other bondholders knew anything about it. But you can change that for your check, and nobody the wiser."

"Oh, Rodney!" She was on his knee now. He was good, after all. Her head was on his shoulder, and she was crying a little. "I've been so unhappy, so unhappy, all day! And I can send that?" She sprang up. "I'll do it this minute—I'll run and get my check-book!" But before she reached the door she turned back, and came and stood by him and kissed him again and again, and tumbled up his hair, and looked at him. There is, after all, nothing in the world like a woman.

"Time enough in the morning," said Henderson, detaining her. "I want to tell you all about it."

What he told her was, in fact, the case as it had been presented by his lawyers, and it seemed a very large, a constitutional, kind of case. "Of course," he said, "in the rivalry and competition of business somebody must go to the wall, and in a great scheme of development and reorganization of the transportation of a region as big as an empire some individual interests will suffer. You can't help these changes. I'm sorry for some of them—very sorry; but nothing would ever be done if we waited to consider every little interest. And that the men who create these great works, and organize these schemes for the benefit of the whole public, shouldn't make anything by their superior enterprise and courage is all nonsense. The world is not made that way."

The explanation, I am bound to say, was one that half the world considers valid; it was one that squeezed through the courts. And when it was done, and the whole thing had blown over, who cared? There were some bondholders who said that it was rascally, that they had been boldly swindled. In the clubs, long after, you would hear it said that Hollowell and Henderson were awfully sharp, and hard to beat. It is a very bad business, said the Brandon parliament, and it just shows that the whole country is losing its moral sense, its capacity to judge what is right and what is wrong.

I do not say that this explanation, the nature of which I have only indicated, would have satisfied the clear mind of Margaret a year or two before. But it was made by the man she loved, the man who had brought her out into a world that was full of sunlight and prosperity and satisfied desire; and more and more, day by day, she saw the world through his eyes, and accepted his estimate of the motives of people—and a low estimate I fear it was. Who would not be rich if he could? Do you mean to tell me that a man who is getting fat dividends out of a stock does not regard more leniently the manner in which that stock is manipulated than one who does not own any of it? I dare say, if Carmen had heard that explanation, and seen Margaret's tearful, happy acceptance of it, she would have shaken her pretty head and said, "They are getting too worldly for me."

In the morning the letter was despatched to Miss Forsythe, enclosing the check for Mrs. Fletcher—a joyful note, full of affection. "We cannot come," Margaret wrote. "My husband cannot leave, and he does not want to spare me"—the little hypocrite! he had told her that she could easily go for a day "but we shall think of you dear ones all day, and I do hope that now there will not be the least cloud on your Christmas."

It seems a great pity, in view of the scientific organization of society, that there are so many sensibilities unclassified and unprovided for in the otherwise perfect machinery. Why should the beggar to whom you toss a silver dollar from your carriage feel a little grudge against you? Perhaps he wouldn't like to earn the dollar, but if it had been accompanied by a word of sympathy, his sensibility might have been soothed by your recognition of human partnership in the goods of this world. People not paupers are all eager to take what is theirs of right; but anything in the semblance of charity is a bitter pill to swallow until self-respect is a little broken down. Probably the resentment lies in the recognition of the truth that it is much easier to be charitable than to be just. If Margaret had seen the effect produced by her letter she might have thought of this; she might have gone further, and reflected upon what would have been her own state of mind two years earlier if she had received such a letter. Miss Forsythe read it with a very heavy heart. She hesitated about showing it to Mrs. Fletcher, and when she did, and gave her the check, it was with a sense of shame.

"The insolence of the thing!" cried Mrs. Fletcher, as soon as she comprehended it.

"Not insolence," pleaded Miss Forsythe, softly; "it is out of the kindness of her heart. She would be dreadfully wounded to know that you took it so."

"Well," said Mrs. Fletcher, hotly, "I like that kind of sensibility. Does she think I have no feeling? Does she think I would take from her as a charity what her husband knows is mine by right?"

"Perhaps her husband—"

"No," Mrs. Fletcher interrupted. "Why didn't he send it, then? why didn't the company send it? They owe it. I'm not a pauper. And all the other bondholders who need the money as much as I do! I'm not saying that if the company sent it I should refuse it because the others had been treated unjustly; but to take it as a favor, like a beggar!"

"Of course you cannot take it from Margaret," said Miss Forsythe sadly.

"How dreadful it is!"

Mrs. Fletcher would have shared her last crust with Miss Forsythe, and if her own fortune were absolutely lost, she would not hesitate to accept the shelter of her present home, using her energies to add to their limited income, serving and being served in all love and trust. But this is different from taking a bounty from the rich.

The check had to go back. Even my wife, who saw no insolence in Margaret's attempt, applauded Mrs.

Fletcher's spirit. She told Miss Forsythe that if things did not mend they might get a few little pupils for Mrs. Fletcher from the neighborhood, and Miss Forsythe knew that she was thinking that her own boy might have been one of them if he had lived. Mr. Morgan was a little satirical, as usual. He thought it would be a pity to check Margaret's growing notion that there was no wrong that money could not heal a remark that my wife thought unjust to the girl. Mrs. Fletcher was for re-enclosing the check without a word of comment, but that Miss Forsythe would not do.

"My dearest Margaret," she wrote, "I know the kindness of heart that moved you to do this, and I love you more than ever, and am crying as I think of it. But you must see yourself, when you reflect, that Mrs. Fletcher could not take this from you. Her self-respect would not permit it. Somebody has done a great wrong, and only those who have done it can undo it. I don't know much about such things, my dear, and I don't believe all that the newspapers have been saying, but there would be no need for charity if there had not been dishonesty somewhere. I cannot help thinking that. We do not blame you. And you must not take it to heart that I am compelled to send this back. I understand why you sent it, and you must try to understand why it cannot be kept."

There was more of this sort in the letter. It was full of a kind of sorrowful yearning, as if there was fear that Margaret's love were slipping away and all the old relations were being broken up, but yet it had in it a certain moral condemnation that the New England spinster could not conceal. Softened as it was by affectionate words, and all the loving messages of the season, it was like a slap in the face to Margaret. She read it in the first place with intense mortification, and then with indignation. This was the way her loving spirit was flung back upon her! They did not blame her! They blamed her husband, then. They condemned him. It was his generosity that was spurned.

Is there a particular moment when we choose our path in life, when we take the right or the left? At this instant, when Margaret arose with the crumpled letter in her hand, and marched towards her husband's library, did she choose, or had she been choosing for the two years past, and was this only a publication of her election? Why had she secretly been a little relieved from restraint when her Brandon visit ended in the spring? They were against her husband; they disapproved of him, that was clear. Was it not a wife's duty to stand by her husband? She was indignant with the Brandon scrupulousness; it chafed her. Was this simply because she loved her husband, or was this indignation a little due also to her liking for the world which so fell in with her inclinations? The motives in life are so mixed that it seems impossible wholly to condemn or wholly to approve. If Margaret's destiny had been united with such a man as John Lyon, what would have been her discernment in such a case as this? It is such a pity that for most people there is only one chance in life.

She laid the letter and the check upon her husband's desk. He read it with a slight frown, which changed to a smile of amusement as he looked up and saw Margaret's excitement.

"Well, it was a miss-go. Those folks up there are too good for this world. You'd better send it to the hospital."

"But you see that they say they do not blame me," Margaret said, with warmth.

"Oh, I can stand it. People usually don't try to hurt my feelings that way. Don't mind it, child. They will come to their senses, and see what nonsense it all is."

Yes, it was nonsense. And how generous and kind at heart her husband was! In his skillful making little of it she was very much comforted, and at the same time drawn into more perfect sympathy with him. She was glad she was not going to Brandon for Christmas; she would not submit herself to its censorship. The note of acknowledgment she wrote to her aunt was short and almost formal. She was very sorry they looked at the matter in that way. She thought she was doing right, and they might blame her or not, but her aunt would see that she could not permit any distinction to be set up between her and her husband, etc.

Was this little note a severance of her present from her old life? I do not suppose she regarded it so. If she had fully realized that it was a step in that direction, would she have penned it with so little regret as she felt? Or did she think that circumstances and not her own choice were responsible for her state of feeling? She was mortified, as has been said, but she wrote with more indignation than pain.

A year ago Carmen would have been the last person to whom Margaret would have spoken about a family affair of this kind. Nor would she have done so now, notwithstanding the intimacy established at Newport, if Carmen had not happened in that day, when Margaret was still hurt and excited, and skillfully and most sympathetically extracted from her the cause of the mood she found her in. But even with all these allowances, that Margaret should confide such a matter to Carmen was the most startling sign of the change that had taken place in her.

"Well," said this wise person, after she had wormed out the whole story, and expressed her profound sympathy, and then fallen into an attitude of deep reflection—"well, I wish I could cast my bread upon the waters in that way. What are you going to do with the money?"

"I've sent it to the hospital."

"What extravagance! And did you tell your aunt that?"

"Of course not."

"Why not? I couldn't have resisted such a righteous chance of making her feel bad."

"But I don't want to make her feel bad."

"Just a little? You will never convince people that you are unworldly this way. Even Uncle Jerry wouldn't do that."

"You and Uncle Jerry are very much alike," cried Margaret, laughing in spite of herself—"both of you as bad as you can be."

"But, dear, we don't pretend, do we?" asked Carmen, innocently.

To some of us at Brandon, Margaret's letter was scarcely a surprise, though it emphasized a divergence we had been conscious of. But with Miss Forsythe it was far otherwise. The coolness of Margaret's tone filled her

with alarm; it was the premonition of a future which she did not dare to face.

There was a passage in the letter which she did not show; not that it was unfeeling, she told my wife afterwards, but that it exhibited a worldly-mindedness that she could not have conceived of in Margaret. She could bear separation from the girl on whom she had bestowed her tenderest affection, that she had schooled herself to expect upon her marriage—that, indeed, was only a part of her life of willing self-sacrifice—their paths must lie apart, and she could hope to see little of her. But what she could not bear was the separation in spirit, the wrenching apart of sympathy, the loss of her heart, and the thought of her going farther and farther away into that world whose cynical and materialistic view of life made her shudder. I think there are few tragedies in life comparable to this to a sensitive, trusting soul—not death itself, with its gracious healing and oblivion and pathos. Family quarrels have something sustaining in them, something of a sense of wrong and even indignation to keep up the spirits. There was no family quarrel here, no indignation, just simple, helpless grief and sense of loss. In one sense it seemed to the gentle spinster that her own life was ended, she had lived so in this girl—ever since she came to her a child, in long curls and short frocks, the sweetest, most trustful, mischievous, affectionate thing. These two then never had had any secrets, never any pleasure, never any griefs they did not share. She had seen the child's mind unfold, the girl's grace and intelligence, the woman's character. Oh, Margaret, she cried, to herself, if you only knew what you are to me!

Margaret's little chamber in the cottage was always kept ready for her, much in the condition she had left it. She might come back at any time, and be a girl again. Here were many of the things which she had cherished; indeed everything in the room spoke of the simple days of her maidenhood. It was here that Miss Forsythe sat in her loneliness the morning after she received the letter, by the window with the muslin curtain, looking out through the shrubbery to the blue hills. She must be here; she could stay nowhere else in the house, for here the little Margaret came back to her. Ah, and when she turned, would she hear the quick steps and see the smiling face, and would she put back the tangled hair and lift her up and kiss her? There in that closet still hung articles of her clothing—dresses that had been laid aside when she became a woman—kept with the sacred sentiment of New England thrift. How each one, as Miss Forsythe took them down, recalled the girl! In the inner closet was a pile of paper boxes. I do not know what impulse it was that led the heavy-hearted woman to take them down one by one, and indulge her grief in the memories enshrined in them. In one was a little bonnet, a spring bonnet; Margaret had worn it on the Easter Sunday when she took her first communion. The little thing was out of fashion now; the ribbons were all faded, but the spray of moss rose-buds on the side was almost as fresh as ever. How well she remembered it, and the girl's delight in the nodding roses!

When Mrs. Fletcher had called again and again, with no response, and finally opened the door and peeped in, there the spinster sat by the window, the pitiful little bonnet in her hand, and the tears rolling down her cheeks. God help her!

XIX

The medical faculty are of the opinion that a sprain is often worse than a broken limb; a purely scientific, view of the matter, in which the patient usually does not coincide. Well-bred people shrink from the vulgarity of violence, and avoid the publicity of any open rupture in domestic and social relations. And yet, perhaps, a lively quarrel would be less lamentable than the withering away of friendship while appearances are kept up. Nothing, indeed, is more pitiable than the gradual drifting apart of people who have been dear to each other—a severance produced by change of views and of principle, and the substitution of indifference for sympathy. This disintegration is certain to take the spring and taste out of life, and commonly to habituate one to a lower view of human nature.

There was no rupture between the Hendersons and the Brandon circle, but there was little intercourse of the kind that had existed before. There was with us a profound sense of loss and sorrow, due partly to the growing knowledge, not pleasing to our vanity, that Margaret could get on very well without us, that we were not necessary to her life. Miss Forsythe recovered promptly her cheerful serenity, but not the elasticity of hope; she was irretrievably hurt; it was as if life was now to be endured. That Margaret herself was apparently unconscious of this, and that it did not affect much her own enjoyment, made it the harder to bear. The absolute truth probably was that she regretted it, and had moments of sentimental unhappiness; but there is great compensation for such loss in the feeling of freedom to pursue a career that is more and more agreeable. And I had to confess, when occasionally I saw Margaret during that winter, that she did not need us. Why should she? Did not the city offer her everything that she desired? And where in the world are beauty, and gayety with a touch of daring, and a magnificent establishment better appreciated? I do not know what criterion newspaper notoriety is of social prestige, but Mrs. Rodney Henderson's movements were as faithfully chronicled as if she had been a visiting princess or an actress of eccentric proclivities. Her name appeared as patroness of all the charities, the balls, the soirees, musical and literary, and if it did not appear in a list of the persons at any entertainment, one might suspect that the affair lacked the cachet of the best society. I suppose the final test of one's importance is to have all the details of one's wardrobe spread before the public. Judged by this, Margaret's career in New York was phenomenal. Even our interested household could not follow her in all the changing splendor of her raiment. In time even Miss Forsythe ceased to read all these details, but she cut them out, deposited them with other relics in a sort of mortuary box of the child and the maiden. I used to wonder if, in the Brandon attitude of mind at this period, there were not just a little envy of such unclouded prosperity. It is so much easier to forgive a failure than a success.

In the spring the Hendersons went abroad. The resolution to go may have been sudden, for Margaret wrote of it briefly, and had not time to run up and say good-by. The newspapers said that the trip was taken on account of Mrs. Henderson's health; that it was because Henderson needed rest from overwork; that he found

it convenient to be away for a time, pending the settlement of certain complications. There were ugly stories afloat, but they were put in so many forms, and followed by so many different sorts of denial, and so much importance was attached to every word Henderson uttered, and every step he took, that the general impression of his far-reaching sagacity and Napoleonic command of fortune was immensely raised. Nothing is more significant of our progress than the good-humored deference of the world to this sort of success. It is said that the attraction of gravitation lessens according to the distance from the earth, and there seems to be a region of aerial freedom, if one can attain it, where the moral forces cease to be operative.

They remained in Europe a year, although Mr. Henderson in the interim made two or three hasty trips to this country, always, so far as it was made public, upon errands of great importance, and in connection with names of well-known foreign capitalists and enterprises of dignity. Margaret wrote seldom, but always with evident enjoyment of her experiences, which were mainly social, for wherever they went they commanded the consideration that is accorded to fortune. What most impressed me in these hasty notes was that the woman was so little interested in the persons and places which in the old days she expressed such a lively desire to see. If she saw them at all, it was from a different point of view than that she formerly had. She did indeed express her admiration of some charming literary friends of ours in London, to whom I had written to call on her—people in very moderate circumstances, I am ashamed to say—but she had not time to see much of them. She and her husband had spent a couple of days at Chisholm—delightful days. Of the earl she had literally nothing to say, except that he was very kind, and that his family received them with the most engaging and simple cordiality. "It makes me laugh," she wrote from Chisholm, "when I think what we considered fine at Lenox and Newport. I've got some ideas for our new house." A note came from "John Lyon" to Miss Forsythe, expressing the great pleasure it was to return, even in so poor a way, the hospitality he had received at Brandon. I did not see it, but Miss Forsythe said it was a sad little note.

In Paris Margaret was ill—very ill; and this misfortune caused for a time a revival of all the old affection, in sympathy with a disappointment which awoke in our womankind all the tenderness of their natures. She was indeed a little delicate for some time, but all our apprehensions were relieved by the reports from Rome of a succession of gayeties little interfered with by archaeological studies. They returned in June. Of the year abroad there was nothing to chronicle, and there would be nothing to note except that when Margaret passed a day with us on her return, we felt, as never before, that our interests in life were more and more divergent.

How could it be otherwise? There were so many topics of conversation that we had to avoid. Even light remarks on current news, comments that we used to make freely on the conduct of conspicuous persons, now carried condemnation that took a personal color. The doubtful means of making money, the pace of fashionable life, the wasteful prodigality of the time, we instinctively shrank from speaking of before Margaret. Perhaps we did her injustice. She was never more gracious, never more anxious to please. I fancied that there was at times something pathetic in her wistful desire for our affection and esteem. She was always a generous girl, and I have no doubt she felt repelled at the quiet rejection of her well-meant efforts to play the Lady Bountiful. There were moments during her brief visit when her face was very sad, but no doubt her predominant feeling escaped her in regard to the criticism quoted from somebody on Jerry Hollowell's methods and motives. "People are becoming very self-righteous," she said.

My wife said to me that she was reminded of the gentle observation of Carmen Eschelle, "The people I cannot stand are those who pretend they are not wicked." If one does not believe in anybody his cynicism has usually a quality of contemptuous bitterness in it. One brought up as Margaret had been could not very well come to her present view of life without a touch of this quality, but her disposition was so lovely—perhaps there is no moral quality in a good temper—that change of principle could not much affect it. And then she was never more winning; perhaps her beauty had taken on a more refined quality from her illness abroad; perhaps it was that indefinable knowledge of the world, which is recognized as well in dress as in manner, which increased her attractiveness. This was quite apart from the fact that she was not so sympathetically companionable to us as she once was, and it was this very attractiveness of the worldly sort, I fancied, that pained her aunt, and marked the separateness of their sympathies.

How could it be otherwise than that our interests should diverge? It was a very busy summer with the Hendersons. They were planning the New York house, which had been one of the objects of Henderson's early ambition. The sea-air had been prescribed for Margaret, and Henderson had built a steam-yacht, the equipment and furnishing of which had been a prolific newspaper topic. It was greatly admired by yachtsmen for the beauty of its lines and its speed, and pages were written about its sumptuous and comfortable interior. I never saw it, having little faith in the comfort of any structure that is not immovably reposeful, but from the descriptions it was a boudoir afloat. In its short voyages were made during the summer all along the coast from New York to Maine, and the arrival and departure of the Henderson yacht was one of the telegraphic items we always looked for. Carmen Eschelle was usually of the party on board, sometimes the Misses Arbuser; it was always a gay company, and in whatever harbor it dropped anchor there was a new impetus given to the somewhat languid pleasure of the summer season. We read of the dinners and lunches on board, the entertainments where there were wine and dancing and moonlight, and all that. I always thought of it as a fairy sort of ship, sailing on summer seas, freighted with youth and beauty, and carrying pleasure and good-fortune wherever it went. What more pleasing spectacle than this in a world that has such a bad name for want and misery?

Henderson was master of the situation. The sudden accumulation of millions of money is a mystery to most people. If Henderson had been asked about it he would have said that he had not a dollar which he had not earned by hard work. None worked harder. If simple industry is a virtue, he would have been an example for Sunday-school children. The object of life being to make money, he would have been a perfect example. What an inspiration, indeed, for all poor boys were the names of Hollowell and Henderson, which were as familiar as the name of the President! There was much speculation as to the amount of Henderson's fortune, and many wild estimates of it, but by common consent he was one of the three or four great capitalists. The gauge of this was his power, and the amounts he could command in an emergency. There was a mystery in the very fact that the amount he could command was unknown. I have said that his accumulation was sudden; it was probably so only in appearance. For a dozen years, by operations, various, secret, untiring, he had been

laying the foundations for his success, and in the maturing of his schemes it became apparent how vast his transactions had been. For years he had been known as a rising man, and suddenly he became an important man. The telegraph, the newspapers, chronicled his every movement; whatever he said was construed like a Delphic oracle. The smile or the frown of Jay Hawker himself had not a greater effect upon the market. The Southwest operation, which made so much noise in the courts, was merely an incident. In the lives of many successful men there are such incidents, which they do not care to have inquired into, turning-points that one slides over in the subsequent gilded biography, or, as it is called, the nickel-plated biography. The uncomfortable A. and B. bondholders had been settled with and silenced, after a fashion. In the end, Mrs. Fletcher had received from the company nearly the full amount of her investment. I always thought this was due to Margaret, but I made no inquiries. There were many people who had no confidence in Henderson, but generally his popularity was not much affected, and whatever was said of him in private, his social position was almost as unchallenged as his financial. It was a great point in his favor that he was very generous to his family and his friends, and his public charities began to be talked of. Nothing could have been more admirable than a paper which appeared about this time in one of the leading magazines, written by a great capitalist during a strike in his "system," off the uses of wealth and the responsibilities of rich men. It amused Henderson and Uncle Jerry, and Margaret sent it, marked, to her aunt. Uncle Jerry said it was very timely, for at the moment there was a report that Hollowell and Henderson had obtained possession of one of the great steamship lines in connection with their trans-continental system. I thought at the time that I should like to have heard Carmen's comments on the paper.

The continued friendly alliance of Rodney Henderson and Jerry Hollowell was a marvel to the public, which expected to read any morning that the one had sold out the other, or unloaded in a sly deal. The Stock Exchange couldn't understand it; it was so against all experience that it was considered something outside of human nature. But the explanation was simple enough. The two kept a sharp eye on each other, and, as Uncle Jerry would say, never dropped a stitch; but the simple fact was that they were necessary to each other, and there had been no opportunity when the one could handsomely swallow the other. So it was beautiful to see their accord, and the familiar understanding between them.

One day in Henderson's office—it was at the time they were arranging the steamship "scoop" while they were waiting for the drafting of some papers, Uncle Jerry suddenly asked:

"By the way, old man, what's all this about a quarter of a million for a colored college down South?"

"Oh, that's Mrs. Henderson's affair. They say it's the most magnificent college building south of Washington. It's big enough. I've seen the plan of it. Henderson Hall, they are going to call it. I suggested Margaret Henderson Hall, but she wouldn't have it."

"What is it for?"

"One end of it is scientific, geological, chemical, electric, biological, and all that; and the other end is theological. Miss Eschelle says it's to reconcile science and religion."

"She's a daisy—that girl. Seems to me, though, that you are educating the colored brother all on top. I suppose, however, it wouldn't have been so philanthropic to build a hall for a white college."

Henderson laughed. "You keep your eye on the religious sentiment of the North, Uncle Jerry. I told Mrs. Henderson that we had gone long on the colored brother a good while. She said this was nothing. We could endow a Henderson University by-and-by in the Southwest, white as alabaster, and I suppose we shall."

"Yes, probably we've got to do something in that region to keep 'em quiet. The public is a curious fish. It wants plenty of bait."

"And something to talk about," continued Henderson. "We are going down next week to dedicate Henderson Hall. I couldn't get out of it."

"Oh, it will pay," said Uncle Jerry, as he turned again to business.

The trip was made in Henderson's private car; in fact, in a special train, vestibuled; a neat baggage car with library and reading-room in one end, a dining-room car, a private car for invited guests, and his own car—a luxurious structure, with drawing-room, sleeping-room, bath-room, and office for his telegrapher and typewriter. The whole was a most commodious house of one story on wheels. The cost of it would have built and furnished an industrial school and workshop for a hundred negroes; but this train was, I dare say, a much more inspiring example of what they might attain by the higher education. There were half a dozen in the party besides the Hendersons—Carmen, of course; Mr. Ponsonby, the English attache; and Mrs. Laflamme, to matronize three New York young ladies. Margaret and Carmen had never been so far South before.

Is it not agreeable to have sweet charity silver shod? This sumptuous special train caused as much comment as the errand on which it went. Its coming was telegraphed from station to station, and crowds everywhere collected to see it. Brisk reporters boarded it; the newspapers devoted columns to descriptions of it; editorials glorified it as a signal example of the progress of the great republic, or moralized on it as a sign of the luxurious decadence of morals; pointing to Carthage and Rome and Alexandria in withering sarcasm that made those places sink into insignificance as corrupters of the world. There were covert allusions to Cleopatra ensconced in the silken hangings of the boudoir car, and one reporter went so far as to refer to the luxury of Capua and Baiae, to their disparagement. All this, however, was felt to add to the glory of the republic, and it all increased the importance of Henderson. To hear the exclamations, "That's he!" "That's him!" "That's Henderson!" was to Margaret in some degree a realization of her ambition; and Carmen declared that it was for her a sweet thought to be identified with Cleopatra.

So the Catachoobee University had its splendid new building—as great a contrast to the shanties from which its pupils came as is the Capitol at Washington to the huts of a third of its population. If the reader is curious he may read in the local newspapers of the time glowing accounts of its "inaugural dedication"; but universities are so common in this country that it has become a little wearisome to read of ceremonies of this sort. Mr. Henderson made a modest reply to the barefaced eulogy on himself, which the president pronounced in the presence of six hundred young men and women of various colors and invited guests—a eulogy which no one more thoroughly enjoyed than Carmen. I am sorry to say that she refused to take the affair seriously.

"I felt for you, Mr. Henderson," she said, after the exercises were over. "I blushed for you. I almost felt ashamed, after all the president said, that you had given so little."

"You seem, Miss Eschelle," remarked Mr. Ponsonby, "to be enthusiastic about the education and elevation of the colored people."

"Yes, I am; I quite share Mr. Henderson's feeling about it. I'm for the elevation of everything."

"There is a capital chance for you," said Henderson; "the university wants some scholarships."

"And I've half a mind to found one—the Eschelle Scholarship of Washing and Clear-starching. You ought to have seen my clothes that came back to the car. Probably they were not done by your students. The things looked as if they had been dragged through the Cat-a-what-do-you-call-it River, and ironed with a pine chip."

"Could you do them any better, with all your cultivation?" asked Margaret.

"I think I could, if I was obliged to. But I couldn't get through that university, with all its ologies and laboratories and Greek and queer bottles and machines. You have neglected my education, Mr. Henderson."

"It is not too late to begin now; you might see if you could pass the examination here. It is part of our plan gradually to elevate the whites," said Henderson.

"Yes, I know; and did you see that some of the scholars had red hair and blue eyes, quite in the present style? And how nice the girls looked," she rattled on; "and what a lot of intelligent faces, and how they kindled up when the president talked about the children of Israel in the wilderness forty years, and Caesar crossing the Rubicon! And you, sir"—she turned to the Englishman—"I've heard, were against all this emancipation during the war."

"Bless my soul!" exclaimed Ponsonby, "we never were against emancipation, and wanted the best side to win."

"You had a mighty queer way of showing it, then."

"Well, honestly, Miss Eschelle, do you think the negroes are any better off?"

"You'd better ask them. My opinion is that everybody should do what he likes in this world."

"Then what are you girding Mr. Henderson for about his university?"

"Because these philanthropists, like Mr. Henderson and Uncle Jerry Hollowell, are all building on top; putting on the frosting before the cake rises."

"Haven't you found out, Mr. Ponsonby," Margaret interrupted, "that if there were eight sides to a question, Miss Eschelle would be on every one of them?"

"And right, too. There are eight sides to every question, and generally more. I think the negro question has a hundred. But there is only one side to Henderson Hall. It is a noble institution. I like to think about it, and Uncle Caesar Hollowell crossing the Rubicon in his theological seminary. It is all so beautiful!"

"You are a bad child," said Margaret. "We should have left you at home."

"No, not bad, dear; only confused with such a lot of good deeds in a naughty world."

That this junketing party was deeply interested in the cause of education for whites or blacks, no one would have gathered from the conversation. Margaret felt that Carmen had exactly hit the motives of this sort of philanthropy, and she was both amused and provoked by the girl's mockery. By force of old habit she defended, as well she might, these schools.

"You must have a high standard," she said. "You cannot have good lower schools without good higher schools. And these colleges, which you think above the colored people, will stimulate them and gradually raise the whole mass. You cannot do anything until you educate teachers."

"So I have always heard," replied the incorrigible. "I have always been a philanthropist about the negro till I came down here, and I intend to be again when I go back."

Mrs. Laflamme was not a very eager apostle either, and the young ladies devoted themselves to the picturesque aspects of the population, without any concern for the moral problems. They all declared that they liked the negro. But Margaret was not to be moved from her good-humor by any amount of badgering. She liked Henderson Hall; she was proud of the consideration it brought her husband; she had a comfortable sense of doing something that was demanded by her opportunity. It is so difficult to analyze motives, and in Margaret's case so hard to define the change that had taken place in her. That her heart was not enlisted in this affair, as it would have been a few years before, she herself knew. Insensibly she had come to look at the world, at men and women, through her husband's eyes, to take the worldly view, which is not inconsistent with much good feeling and easy-going charity. She also felt the necessity—a necessity totally unknown to such a nature as Carmen's—of making compensation, of compounding for her pleasures. Gradually she was learning to play her husband's game in life, and to see no harm in it. What, then, is this thing we call conscience? Is it made of India-rubber? I once knew a clever Southern woman, who said that New England women seemed to her all conscience—Southern women all soul and impulse. If it were possible to generalize in this way, we might say that Carmen had neither conscience nor soul, simply very clever reason. Uncle Jerry had no more conscience than Carmen, but he had a great deal of natural affection. Henderson, with an abundance of good-nature, was simply a man of his time, troubled with no scruples that stood in the way of his success. Margaret, with a finer nature than either of them, stifling her scruples in an atmosphere of worldly-mindedness, was likely to go further than either of them. Even such a worldling as Carmen understood this. "I do things," she said to Mrs. Laflamme—she made anybody her confidant when the fit was on her—"I do things because I don't care. Mrs. Henderson does the same, but she does care."

Margaret would be a sadder woman, but not a better woman, when the time came that she did not care. She had come to the point of accepting Henderson's methods of overreaching the world, and was tempering the result with private liberality. Those were hypocrites who criticised him; those were envious who disparaged him; the sufficient ethics of the world she lived in was to be successful and be agreeable. And it is difficult to condemn a person who goes with the general opinion of his generation. Carmen was under no illusions about Henderson, or the methods and manners of which she was a part. "Why pretend?" she said. "We are all bad together, and I like it. Uncle Jerry is the easiest person to get on with." I remember a

delightful, wicked old baroness whom I met in my youth stranded in Geneva on short allowance—European resorts are full of such characters. "My dear," she said, "why shouldn't I renege? Why shouldn't men cheat at cards? It's all in the game. Don't we all know we are trying to deceive each other and get the best of each other? I stopped pretending after Waterloo. Fighting for the peace of Europe! Bah! We are all fighting for what we can get."

So the Catachoobee Henderson Hall was dedicated, and Mr. Henderson got great credit out of it.

"It's a noble deed, Mr. Henderson," Carmen remarked, when they were at dinner on the car the day of their departure. "But"—in an aside to her host—"I advise the lambs in Wall Street to look alive at your next deal."

XX

We can get used to anything. Morgan says that even the New England summer is endurable when you learn to dress warmly enough. We come to endure pain and loss with equanimity; one thing and another drops out of our lives—youth, for instance, and sometimes enthusiasm—and still we go on with a good degree of enjoyment. I do not say that Miss Forsythe was quite the same, or that a certain zest of life and spring had not gone out of the little Brandon neighborhood.

As the months and the years went by we saw less and less of Margaret—less and less, that is, in the old way. Her rare visits were perfunctory, and gave little satisfaction to any of us; not that she was ungracious or unkindly, but simply because the things we valued in life were not the same. There was no doubt that any of us were welcome at the Hendersons' when they were in the city, genuinely, though in an exterior way, but gradually we almost ceased to keep up an intercourse which was a little effort on both sides. Miss Forsythe came back from her infrequent city visits weary and sad.

Was Margaret content? I suppose so. She was gay; she was admired; she was always on view in that semi-public world in which Henderson moved; she attained a newspaper notoriety which many people envied. If she journeyed anywhere, if she tarried anywhere, if she had a slight illness, the fact was a matter of public concern. We knew where she worshiped; we knew the houses she frequented, the charities she patronized, the fetes she adorned, every new costume that her wearing made the fashion. Was she content? She could perhaps express no desire that an attempt was not made to gratify it. But it seems impossible to get enough things enough money, enough pleasure. They had a magnificent place in Newport; it was not large enough; they were always adding to it—awning, a ballroom, some architectural whim or another. Margaret had a fancy for a cottage at Bar Harbor, but they rarely went there. They had an interest in Tuxedo; they belonged to an exclusive club on Jekyl Island. They passed one winter yachting among the islands in the eastern Mediterranean; a part of another sailing from one tropical paradise to another in the West Indies. If there was anything that money could not obtain, it seemed to be a place where they could rest in serene peace with themselves.

I used to wonder whether Margaret was satisfied with her husband's reputation. Perhaps she mistook the newspaper homage, the notoriety, for public respect. She saw his influence and his power. She saw that he was feared, and of course hated, by some—the unsuccessful—but she saw the terms he was on with his intimates, due to the fact that everybody admitted that whatever Henderson was in "a deal," privately he was a deuced good fellow.

Was this an ideal married life? Henderson's selfishness was fully developed, and I could see that he was growing more and more hard. Would Margaret not have felt it, if she also had not been growing hard, and accustomed to regard the world in his unbelieving way? No, there was sharpness occasionally between them, tiffs and disagreements. He was a great deal away from home, and she plunged into a life of her own, which had all the external signs of enjoyment. I doubt if he was ever very selfish where she was concerned, and love can forgive almost any conduct where there is personal indulgence. I had a glimpse of the real state of things in a roundabout way. Henderson loved his wife and was proud of her, and he was not unkind, but he might have been a brute and tied her up to the bedpost, and she never would have shown by the least sign to the world that she was not the most happy of wives.

When the Earl of Chisholm was in this country it was four years after Margaret's marriage—we naturally saw a great deal of him. The young fellow whom we liked so much had become a man, with a graver demeanor, and I thought a trace of permanent sadness in his face; perhaps it was only the responsibility of his position, or, as Morgan said, the modern weight that must press upon an earl who is conscientious. He was still unmarried. The friendship between him and Miss Forsythe, which had been kept alive by occasional correspondence, became more cordial and confidential. In New York he had seen much of Margaret, not at all to his peace of mind in many ways, though the generous fellow would have been less hurt if he had not estimated at its real value the life she was leading. It did not need Margaret's introduction for the earl to be sought for by the novelty and pleasure loving society of the city; but he got, as he confessed, small satisfaction out of the whirl of it, although we knew that he met Mrs. Henderson everywhere, and in a manner assisted in her social triumphs. But he renewed his acquaintance with Miss Eschelle, and it was the prattle of this ingenuous creature that made him more heavy-hearted than anything else.

"How nice it is of you, Mr. Lyon—may I call you so, to bring back the old relations?—to come here and revive the memory of the dear old days when we were all innocent and happy! Dear me, I used to think I could patronize that little country girl from Brandon! I was so worldly—don't you remember?—and she was so good. And now she is such a splendid woman, it is difficult for the rest of us to keep pace with her. The nerve she has, and the things she will do! I just envy her. I sometimes think she will drive me into a convent. And don't you think she is more beautiful than ever? Of course her face is a little careworn, but nobody makes up as she does; she was just ravishing the other night. Do you know, I think she takes her husband too seriously."

"I trust she is happy," the earl had said.

"Why shouldn't she be?" Carmen asked in return. "She has everything she wants. They both have a little temper; life would be flat without that; she is a little irritable sometimes; she didn't use to be; and when they don't agree they let each other alone for a little. I think she is as happy as anybody can be who is married. Now you are shocked! Well, I don't know any one who is more in love than she is, and that may be happiness. She is becoming exactly like Mr. Henderson. You couldn't ask anything more than that."

If Margaret were really happy, the earl told Miss Forsythe, he was glad, but it was scarcely the career he would have thought would have suited her.

Meantime, the great house was approaching completion. Henderson's palace, in the upper part of the city, had long been a topic for the correspondents of the country press. It occupied half a square. Many critics were discontented with it because it did not occupy the whole square. Everybody was interested in having it the finest residence on the continent. Why didn't Henderson take the whole block of ground, build his palace on three sides, with the offices and stables on the fourth, throw a glass roof over the vast interior court, plant it with tropical trees and plants, adorn it with flower-beds and fountains, and make a veritable winter-garden, giving the inhabitants a temperate climate all the cold months? He might easily have summer in the centre of the city from November to April. These rich people never know what to do with their money. Such a place would give distinction to the city, and compel foreigners to recognize the high civilization of America. A great deal of fault was found with Henderson privately for his parsimony in such a splendid opportunity.

Nevertheless it was already one of the sights of the town. Strangers were taken to see it, as it rose in its simple grandeur. Local reporters made articles on the progress of the interior whenever they could get an entrance. It was not ornate enough to please, generally, but those who admired the old Louvre liked the simplicity of its lines and the dignity of the elevations. They discovered the domestic note in its quiet character, and said that the architect had avoided the look of an "institution" in such a great mass. He was not afraid of dignified wall space, and there was no nervous anxiety manifested, which would have belittled it with trivial ornamentation.

Perhaps it was not an American structure, although one could find in it all the rare woods and stones of the continent. Great numbers of foreign workmen were employed in its finishing and decoration. One could wander in it from Pompeii to Japan, from India to Versailles, from Greece to the England of the Tudors, from the Alhambra to colonial Salem. It was so cosmopolitan that a representative of almost any nationality, ancient or modern, could have been suited in it with an apartment to his taste, and if the interior lacked unity it did not lack a display of variety that appealed to the imagination. From time to time paragraphs appeared in English, French, and Italian journals, regarding the work of this and that famous artist who was designing a set of furniture or furnishing the drawings of a room, or carving the paneling and statuary, or painting the ceiling of an apartment in the great Palazzo Henderson in New York—Washington. The United American Workers (who were half foreigners by birth) passed resolutions denouncing Henderson for employing foreign pauper labor, and organized more than one strike while the house was building. It was very unpatriotic and un-American to have anything done that could not be done by a member of the Union. There was a firm of excellent stone-cutters which offered to make all the statuary needed in the house, and set it up in good shape, and when the offer was declined, it memorialized Congress for protection.

Although Henderson gave what time he could spare to the design and erection of the building, it pleased him to call it Margaret's house, and to see the eagerness with which she entered into its embellishment. There was something humorous in the enlargement of her ideas since the days when she had wondered at the magnificence of the Washington Square home, and modestly protested against its luxury. Her own boudoir was a cheap affair compared with that in the new house.

"Don't you think, dear," she said, puzzling over the drawings, "that it would better be all sandalwood? I hate mosaics. It looks so cheap to have little bits of precious woods stuck about."

"I should think so. But what do you do with the ebony?"

"Oh, the ebony and gold? That is the adjoining sitting-room—such a pretty contrast."

"And the teak?"

"It has such a beautiful polish. That is another room. Carmen says that will be our sober room, where we go when we want to repent of things."

"Well, if you have any sandal-wood left over, you can work it into your Boys' Lodging-house, you know."

"Don't be foolish! And then the ballroom, ninety feet long—it looks small on the paper. And do you think we'd better have those life-size figures all round, mediaeval statues, with the incandescents? Carmen says she would prefer a row of monks—something piquant about that in a ballroom. I don't know that I like the figures, after all; they are too crushing and heavy."

"It would make a good room for the Common Council," Henderson suggested. "Wouldn't it be prettier hung with silken arras figured with a chain of dancing-girls? Dear me, I don't know what to do. Rodney, you must put your mind on it."

"Might line it with gold plate. I'll make arrangements so that you can draw on the Bank of England."

Margaret looked hurt. "But you told me, dear, not to spare anything—that we would have the finest house in the city. I'm sure I sha'n't enjoy it unless you want it."

"Oh, I want it," resumed Henderson, good-humoredly. "Go ahead, little wife. We shall pull through."

"Women beat me," Henderson confessed to Uncle Jerry next day. "They are the most economical of beings and the most extravagant. I've got to look round for an extra million somewhere today."

"Yes, there is this good thing about women," Uncle Jerry responded, with a twinkle in his eyes, "they share your riches just as cheerfully as they do your poverty. I tell Maria that if I had the capacity for making money that she has for spending it I could assume the national debt."

To have the finest house in the city, or rather, in the American newspaper phrase, in the Western world, was a comprehensible ambition for Henderson, for it was a visible expression of his wealth and his cultivated

taste. But why Margaret should wish to exchange her dainty and luxurious home in Washington Square for the care of a vast establishment big enough for a royal court, my wife could not comprehend. But why not? To be the visible leader in her world, to be able to dispense a hospitality which should surpass anything heretofore seen, to be the mistress and autocrat of an army of servants, with ample room for their evolution, in a palace whose dimensions and splendor should awaken envy and astonishment—would this not be an attraction to a woman of imagination and spirit?

Besides, they had outgrown the old house. There was no longer room for the display, scarcely for the storage, of the works of art, the pictures, the curiosities, the books, that unlimited money and the opportunity of foreign travel had collected in all these years. "We must either build or send our things to a warehouse," Henderson had long ago said. Among the obligations of wealth is the obligation of display. People of small means do not allow for the expansion of mind that goes along with the accumulation of property. It was only natural that Margaret, who might have been contented with two rooms and a lean-to as the wife of a country clergyman, should have felt cramped in her old house, which once seemed a world too large for the country girl.

"I don't see how you could do with less room," Carmen said, with an air of profound conviction. They were looking about the house on its last uninhabited day, directing the final disposition of its contents. For Carmen, as well as for Margaret, the decoration and the furnishing of the house had been an occupation. The girl had the whim of playing the part of restrainer and economizer in everything; but Henderson used to say, when Margaret told him of Carmen's suggestions, that a little more of her economy would ruin him.

"Yes," Margaret admitted, "there does not seem to be anything that is not necessary."

"Not a thing. When you think of it, two people require as much space as a dozen; when you go beyond one room, you must go on. Of course you couldn't get on without a reception-room, drawing-rooms, a conservatory, a music-room, a library, a morning-room, a breakfast-room, a small dining-room and a state dining-room, Mr. Henderson's snuggery, with his own library, a billiard-room, a picture-gallery—it is full already; you'll have to extend it or sell some pictures—your own suite and Mr. Henderson's suite, and the guest-rooms, and I forgot the theatre in the attic. I don't see but you have scrimped to the last degree."

"And yet there is room to move about," Margaret acknowledged, with a gratified smile, as they wandered around. "Dear me, I used to think the Stotts' house was a palace."

It was the height of the season before Lent. There had been one delay and another, but at last all the workmen had been expelled, and Margaret was mistress of her house. Cards for the house-warming had been out for two weeks, and the event was near. She was in her own apartments this pale, wintry afternoon, putting the finishing touches to her toilet. Nothing seemed to suit. The maid found her in a very bad humor. "Remember," she had said to her husband, when he ordered his brougham after breakfast, "sharp seven, we are to dine alone the first time." It lacked two hours yet of dinner-time, but she was dressing for want of other occupation.

Was this then the summit of her ambition? She had indeed looked forward to some such moment as this as one of exultation in the satisfaction of all her wishes. She took up a book of apothegms that lay on the table, and opened by chance to this, "Unhappy are they whose desires are all ratified." It was like a sting. Why should she think at this moment of her girlhood; of the ideals indulged in during that quiet time; of her aunt's cheerful, tender, lonely life; of her rejection of Mr. Lyon? She did not love Mr. Lyon; she was not satisfied then. How narrow that little life in Brandon had been! She threw the book from her. She hated all that restraint and censoriousness. If her aunt could see her in all this splendor, she would probably be sadder than ever. What right had she to sit there and mourn—as she knew her aunt did—and sigh over her career? What right had they to sit in judgment on her?

She went out from her room, down the great stairway, into the spacious house, pausing in the great hall to see opening vista after vista in the magnificent apartments. It was the first time that she had alone really taken the full meaning of it—had possessed it with the eye. It was hers. Wherever she went, all hers. No, she had desires yet. It should be filled with life—it should be the most brilliant house in the world. Society should see, should acknowledge the leadership. Yes—as she glanced at herself in a drawing-room mirror—they should see that Henderson's wife was capable of a success equal to his own, and she would stop the hateful gossip about him. She set her foot firmly as she thought about it; she would crush those people who had sneered at them as parvenu. She strayed into the noble gallery. Some face there touched her, some landscape soothed her. No, she said to herself, I will win them, I do not want hateful strife.

Who knows what is in a woman? how many moods in a quarter of an hour, and which is the characteristic one? Was this the Margaret who had walked with Lyon that Sunday afternoon of the baptism, and had a heart full of pain for the pitiful suffering of the world?

As she sat there she grew calmer. Her thoughts went away in a vision of all the social possibilities of this wonderful house. From vaguely admiring what she looked at, she began to be critical; this and that could be changed to advantage; this shade of hanging was not harmonious; this light did not fall right. She smiled to think that her husband thought it all done. How he would laugh to find that she was already planning to rearrange it! Hadn't she been satisfied for almost twenty-four hours? That was a long time for a woman. Then she thought of the reception; of the guests; of what some of them would wear; how they would look about; what they would say. She was already in that world which was so shining and shifting and attractive. She did not hear Henderson come in until his arm was around her.

"Well, sweet, keeping house alone? I've had a jolly day; lucky as old Mr. Luck."

"Have you?" she cried, springing up. "I'm so glad. Come, see the house."

"You look a little pale," he said, as they strolled out to the conservatory together.

"Just a little tired," she admitted. "Do you know, Rodney, I hated this house at five o'clock—positively hated it?"

"Why?"

"Oh, I don't know; I was thinking. But I liked it at half-past six. I love it now. I've got used to it, as if I had

always lived here. Isn't it beautiful everywhere? But I'm going to make some changes."

"A hanging garden on the roof?" Henderson asked, with meekness.

"That would be nice. No, not now. But to make over and take off the new look. Everything looks so new."

"Well, we will try to live that down."

And so they wandered on, admiring, bantering, planning. Could Etienne Debree have seen his descendant at this moment he would have been more than ever proud of his share in establishing the great republic, and of his appreciation of the promise of its beauty. What satisfies a woman's heart is luxury, thought Henderson, in an admiring cynical moment.

They had come into his own den and library, and he stood looking at the rows of his favorite collection shining in their new home. For all its newness it had a familiar look. He thought for a moment that he might be in his old bachelor quarters. Suddenly Margaret made a rush at him. She shook the great fellow. She feasted her eyes on him.

"What's got into you to look so splendid? Do you hear, go this instant and dress, and make yourself ten times as fascinating."

XXI

Live not unto yourselves! Can any one deny that this blessed sentiment is extending in modern life? Do we build houses for ourselves or for others? Do we make great entertainments for our own comfort? I do not know that anybody regarded the erection of the Henderson palace as an altruistic performance. The socialistic newspapers said that it was pure ostentation. But had it not been all along in the minds of the builders to ask all the world to see it, to share the delight of it? Is this a selfish spirit? When I stroll in the Park am I not pleased with the equipages, with the display of elegance upon which so much money has been lavished for my enjoyment?

All the world was asked to the Henderson reception. The coming event was the talk of the town. I have now cuttings from the great journals, articles describing the house, more beautifully written than Gibbon's stately periods about the luxury of later Rome. It makes one smile to hear that the day of fine writing is over. Everybody was eager to go; there was some plotting to obtain invitations by those who felt that they could not afford to be omitted from the list that would be printed; by those who did not know the Hendersons, and did not care to know them, but who shared the general curiosity; and everybody vowed that he supposed he must go, but he hated such a crush and jam as it was sure to be. Yet no one would have cared to go if it had not promised to be a crush. I said that all the world was asked, which is our way of saying that a thousand or two had been carefully selected from the million within reach.

Invitations came to Brandon, of course, for old times' sake. The Morgans said that they preferred a private view; Miss Forsythe declared that she hadn't the heart to go; in short, Mr. and Mrs. Fairchild alone went to represent the worldly element.

I am sorry to say that the reader must go to the files of the city press for an account of the night's festivity. The pen that has been used in portraying Margaret's career is entirely inadequate to it. There is a general impression that an American can do anything that he sets his hand to, but it is not true; it is true only that he tries everything. The reporter is born, as the poet is; it cannot be acquired—that astonishing, irresponsible command of the English language; that warm, lyrical tone; that color, and bewildering metaphorical brilliancy; that picturesqueness; that use of words as the painter uses pigments, in splashes and blotches which are so effective; that touch of raillery and sarcasm and condescension; that gay enjoyment of reveling in the illimitable; that air of superior knowledge and style; that dash of sentiment; that calm and somewhat haughty judgment.

I am always impressed at such an entertainment with the good-humor of the American people, no matter what may be the annoyance and discomfort.

In all the push and thrust and confusion, amid the rending of trains, the tearing of lace, the general crushing of costumes, there was the merriest persiflage, laughter, and chatter, and men and women entered into and drew out of the fashionable wreck in the highest spirits. For even in such a spacious mansion there were spots where currents met, and rooms where there was a fight for mere breath. It would have been a tame affair without this struggle. And what an epitome of life it all was! There were those who gave themselves up to admiration, who gushed with enthusiasm; there were those who had the weary air of surfeit with splendor of this sort; there were the bustling and volatile, who made facetious remarks, and treated the affair like a Fourth of July; and there were also groups dark and haughty, like the Stotts, who held a little aloof, and coldly admitted that it was most successful; it lacked *je ne sais quoi*, but it was in much better taste than they had expected. Is there something in the very nature of a crowd to bring out the inherent vulgarity of the best-bred people, so that some have doubted whether the highest civilization will tolerate these crushing and hilarious assemblies?

At any rate, one could enjoy the general effect. There might be vulgar units, and one caught notes of talk that disenchanting, but there were so many women of rare and stately beauty, of exquisite loveliness, of charm in manner and figure—so many men of fine presence, with such an air of power and manly prosperity and self-reliance—I doubt if any other assembly in the world, undecorated by orders and uniforms, with no blazon of rank, would have a greater air of distinction. Looking over it from a landing in the great stairway that commanded vistas and ranges of the lofty, brilliant apartments, vivified by the throng, which seemed ennobled by the spacious splendor in which it moved, one would be pardoned a feeling of national pride in the spectacle. I drew aside to let a stately train of beauty and of fashion descend, and saw it sweep through the hall, and enter the drawing-rooms, until it was lost in a sea of shifting color. It was like a dream.

And the centre of all this charming plutocratic graciousness and beauty was Margaret—Margaret and her handsome husband. Where did the New Hampshire boy learn this simple dignity of bearing, this good-humored cordiality without condescension, this easy air of the man of the world? Was this the railway wrecker, the insurance manipulator, the familiar of Uncle Jerry, the king of the lobby, the pride and the bugaboo of Wall Street? Margaret was regnant. And how charmingly she received her guests! How well I knew that half-imperious toss of the head, and the glance of those level, large gray eyes, softened instantly, on recognition, into the sweetest smile of welcome playing about the dimple and the expressive mouth! What woman would not feel a little thrill of triumph? The world was at her feet. Why was it, I wonder, as I stood there watching the throng which saluted this queenly woman of the world, in an hour of supreme social triumph, while the notes of the distant orchestra came softly on the air, and the overpowering perfume of banks of flowers and tropical plants—why was it that I thought of a fair, simple girl, stirred with noble ideals, eager for the intellectual life, tender, sympathetic, courageous? It was Margaret DeBree—how often I had seen her thus!—sitting on her little veranda, swinging her chip hat by the string, glowing from some errand in which her heart had played a much more important part than her purse. I caught the odor of the honeysuckle that climbed on the porch, and I heard the note of the robin that nested there.

"You seem to be in a brown study," said Carmen, who came up, leaning on the arm of the Earl of Chisholm.

"I'm lost in admiration. You must make allowance, Miss Eschelle, for a person from the country."

"Oh, we are all from the country. That is the beauty of it. There is Mr. Hollowell, used to drive a peddler's cart, or something of that sort, up in Maine, talking with Mr. Stott, whose father came in on the towpath of the Erie Canal. You don't dance? The earl has just been giving me a whirl in the ballroom, and I've been trying to make him understand about democracy."

"Yes," the earl rejoined; "Miss Eschelle has been interpreting to me republican simplicity."

"And he cannot point out, Mr. Fairchild, why this is not as good as a reception at St. James. I suppose it's his politeness."

"Indeed, it is all very charming. It must be a great thing to be the architect of your own fortune."

"Yes; we are all self-made," Carmen confessed.

"I am, and I get dreadfully tired of it sometimes. I have to read over the Declaration and look at the map of the Western country at such times. A body has to have something to hold on to."

"Why, this seems pretty substantial," I said, wondering what the girl was driving at.

"Oh, yes; I suppose the world looks solid from a balloon. I heard one man say to another just now, 'How long do you suppose Henderson will last?' Probably we shall all come down by the run together by-and-by."

"You seem to be on a high plane," I suggested.

"I guess it's the influence of the earl. But I am the most misunderstood of women. What I really like is simplicity. Can you have that without the social traditions," she appealed to the earl, "such as you have in England?"

"I really cannot say," the earl replied, laughing. "I fancied there was simplicity in Brandon; perhaps that was traditional."

"Oh, Brandon!" Carmen cried, "see what Brandon does when it gets a chance. I assure your lordship that we used to be very simple people in New York. Come, let us go and tell Mrs. Henderson how delightful it all is. I'm so sorry for her."

As I moved about afterwards with my wife we heard not many comments, a word here and there about Henderson's wonderful success, a remark about Margaret's beauty, some sympathy for her in such a wearisome ordeal—the world is full of kindness—the house duly admired, and the ordinary compliments paid; the people assembled were, as usual, absorbed in their own affairs. From all we could gather, all those present were used to living in a palace, and took all the splendor quite as a matter of course. Was there no envy? Was there nothing said about the airs of a country school-ma'am, the aplomb of an adventurer? Were there no criticisms afterwards as the guests rolled home in their carriages, surfeited and exhausted? What would you have? Do you expect the millennium to begin in New York?

The newspapers said that it was the most brilliant affair the metropolis had ever seen. I have no doubt it was. And I do not judge, either, by the newspaper estimates of the expense. I take the simple words addressed by the earl to Margaret, when he said good-night, at their full value. She flushed with pleasure at his modest commendation. Perhaps it was to her the seal of her night's triumph.

The house was opened. The world had seen it. The world had gone. If sleep did not come that night to her tired head on the pillow, what wonder? She had a position in the great world. In imagination it opened wider and wider. Could not the infinite possibilities of it fill the hunger of any soul?

The echoes of the Henderson reception continued long in the country press. Items multiplied as to the cost. It was said that the sum expended in flowers alone, which withered in a night, would have endowed a ward in a charity hospital. Some wag said that the price of the supper would have changed the result of the Presidential election. Views of the mansion were given in the illustrated papers, and portraits of Mr. and Mrs. Henderson. In country villages, in remote farmhouses, this great social event was talked of, Henderson's wealth was the subject of conjecture, Margaret's toilet was an object of interest. It was a shining example of success. Preachers, whose sensational sermons are as widely read as descriptions of great crimes, moralized on Henderson's career and Henderson's palace, and raised up everywhere an envied image of worldly prosperity. When he first arrived in New York, with only fifty cents in his pocket—so the story ran—and walked up Broadway and Fifth Avenue, he had nearly been run over at the corner of Twenty-sixth Street by a carriage, the occupants of which, a lady and gentleman, had stared insolently at the country youth. Never mind, said the lad to himself, the day will come when you will cringe to me. And the day did come when the gentleman begged Henderson to spare him in Wall Street, and his wife intrigued for an invitation to Mrs. Henderson's ball. The reader knows there is not a word of truth in this. Alas! said the preacher, if he had only devoted his great talents to the service of the Good and the True! Behold how vain are all the triumphs of this world! see the result of the worship of Mammon! My friends, the age is materialized, a spirit of worldliness is

abroad; be vigilant, lest the deceitfulness of riches send your souls to perdition. And the plain country people thanked God for such a warning, and the country girl dreamed of Margaret's career, and the country boy studied the ways of Henderson's success, and resolved that he, too, would seek his fortune in this bad metropolis.

The Hendersons were important people. It was impossible that a knowledge of their importance should not have a reflex influence upon Margaret. Could it be otherwise than that gradually the fineness of her discrimination should be dulled by the almost universal public consent in the methods by which Henderson had achieved his position, and that in time she should come to regard adverse judgment as the result of envy? Henderson himself was under less illusion; the world was about what he had taken it for, only a little worse—more gullible, and with less principle. Carmen had mocked at Margaret's belief in Henderson. It is certainly a pitiful outcome that Margaret, with her naturally believing nature, should in the end have had a less clear perception of what was right and wrong than Henderson himself. Yet Henderson would not have shrunk, any more than Carmen would, from any course necessary to his ends, while Margaret would have shrunk from many things; but in absolute worldliness, in devotion to it, the time had come when Henderson felt that his Puritan wife was no restraint upon him. It was this that broke gentle Miss Forsythe's heart when she came fully to realize it.

I said that the world was at Margaret's feet. Was it? How many worlds are there, and does one ever, except by birth (in a republic), conquer them all? Truth to say, there were penitentials in New York society concerning which this successful woman was uneasy in her heart. There were people who had accepted her invitations, to whose houses she had been, who had a dozen ways of making her feel that she was not of them. These people—I suppose that if two castaways landed naked on a desert island, one of them would instantly be the ancien regime—had spoken of Mrs. Henderson and her ambition to the Earl of Chisholm in a way that pained him. They graciously assumed that he, as one of the elect, would understand them. It was therefore with a heavy heart that he came to say good-by to Margaret before his return.

I cannot imagine anything more uncomfortable for an old lover than a meeting of this sort; but I suppose the honest fellow could not resist the inclination to see Margaret once more. I dare say she had a little flutter of pride in receiving him, in her consciousness of the change in herself into a wider experience of the world. And she may have been a little chagrined that he was not apparently more impressed by her surroundings, nor noticed the change in herself, but met her upon the ground of simple sincerity where they had once stood. What he tried to see, what she felt he was trying to see, was not the beautiful woman about whose charm and hospitality the town talked, but the girl he had loved in the old days.

He talked a little, a very little, about himself and his work in England, and a great deal about what had interested him here on his second visit, the social drift, the politics, the organized charities; and as he talked, Margaret was conscious how little the world in which she lived seemed to interest him; how little importance he attached to it. And she saw, as in a momentary vision of herself, that the things that once absorbed her and stirred her sympathies were now measurably indifferent to her. Book after book which he casually mentioned, as showing the drift of the age, and profoundly affecting modern thought, she knew only by name. "I guess," said Carmen, afterwards, when Margaret spoke of the earl's conversation, "that he is one of those who are trying to live in the spirit—what do they call it?—care for things of the mind."

"You are doing a noble work," he said, "in your Palace of Industry."

"Yes, it is very well managed," Margaret replied; "but it is uphill work, the poor are so ungrateful for charity."

"Perhaps nobody, Mrs. Henderson, likes to be treated as an object of charity."

"Well, work isn't what they want when we give it, and they'd rather live in the dirt than in clean apartments."

"Many of them don't know any better, and a good many of our poor resent condescension."

"Yes," said Margaret, with warmth; "they are getting to demand things as their right, and they are insolent. The last time I drove down in that quarter I was insulted by their manner. What are you going to do with such people? One big fellow who was leaning against a lamp-post growled, 'You'd better stay in your own palace, miss, and not come prying round here.' And a brazen girl cried out: 'Shut yer mouth, Dick; the lady's got to have some pleasure. Don't yer see, she's a-slummin'?"

"It's very hard, I know," said the earl; "perhaps we are all on the wrong track."

"Maybe. Mr. Henderson says that the world would get on better if everybody minded his own business."

"I wish it were possible," the earl remarked, with an air of finishing the topic. "I have just been up to Brandon, Mrs. Henderson. I fear that I have seen the dear place for the last time."

"You don't mean that you are tired of America?"

"Not that. I shall never, even in thought, tire of Brandon."

"Yes, they are dear, good people."

"I thought Miss Forsythe—what a sweet, brave woman she is!—was looking sad and weary."

"Oh, aunt won't do anything, or take an interest in anything. She just stays there. I've tried in vain to get her here. Do you know"—and she turned upon the earl a look of the old playfulness—"she doesn't quite approve of me."

"Oh," he replied, hesitating a little—"I think, Mrs. Henderson, that her heart is bound up in you. It isn't for me to say that you haven't a truer friend in the world."

"Yes, I know. If I'd only—" and she stopped, with a petulant look on her fair face—"well, it doesn't matter. She is a dear soul."

"I—suppose," said the earl, rising, "we shall see you again on the other side?"

"Perhaps," with a smile. Could anything be more commonplace than such a parting? Good-by, I shall see you tomorrow or next year, or in the next world. Hail and farewell! That is the common experience. But, oh, the bitterness of it to many a soul!

It is quite possible that when the Earl of Chisholm said good-by, with an air of finality, Margaret felt that another part of her life was closed. He was not in any way an extraordinary person, he was not a very rich peer, probably with his modesty and conscientiousness, and devotion to the ordinary duties of his station, he would never attain high rank in the government. Yet no one could be long with him without apprehending that his life was on a high plane. It was with a little irritation that Margaret recognized this, and remembered, with a twinge of conscience, that it was upon that plane that her life once traveled. The time had been when the more important thing to her was the world of ideas, of books, of intellectual life, of passionate sympathy with the fortunes of humanity, of deepest interest in all the new thoughts struck out by the leaders who studied the profound problems of life and destiny.

That peace of mind which is found only in the highest activity for the noblest ends she once had, though she thought it then unrest and striving—what Carmen, who was under no illusions about Henderson, or Uncle Jerry, or the world of fashion, and had an intuitive perception of cant that is sometimes denied to the children of light, called “taking pleasure in the things of the mind.” To do Margaret justice, there entered into her reflections no thought of the title and position of the Earl of Chisholm. They had never been alluring to her. If one could take any satisfaction in this phase of her character, her worldliness was purely American.

“I hardly know which I should prefer,” Carmen was saying when they were talking over the ball and the earl's departure, “to be an English countess or the wife of an American millionaire.”

“It might depend upon the man,” replied Margaret, with a smile.

“The American,” continued Carmen, not heeding this suggestion, “has the greater opportunities, and is not hindered by traditions. If you were a countess you would have to act like a countess. If you are an American you can act—like anything—you can do what you please. That is nicer. Now, an earl must do what an earl has always done. What could you do with such a husband? Mind! Yes, I know, dear, about things of the mind. First, you know, he will be a gentleman socialist (in the magazines), and maybe a Christian socialist, or a Christian scientist, or something of that sort, interested in the Mind Cure.”

“I should think that would suit you. Last I knew, you were deep in the Mind Cure.”

“So I was. That was last week. Now I'm in the Faith Cure; I've found out about both. The difference is, in the Mind Cure you don't require any faith; in the Faith Cure you don't require any mind. The Faith Cure just suits me.”

“So you put your faith in an American millionaire?”

“Yes, I think I should, until an American millionaire put faith in me. That might shake me. It is such a queer world. No, I'm in doubt. If you loved an earl he would stay an earl. If you loved an American millionaire, ten to one he would fail.”

Margaret did not escape the responsibility of her success. Who does? My dear Charmian, who wrote the successful novel of last year, do you not already repent your rash act? If you do not write a better novel this year, will not the public flout you and jeer you for a pretender? Did the public overpraise you at first? Its mistaken partiality becomes now your presumption. Last year the press said you were the rival of Hawthorne. This year it is, “that Miss Charmian who set herself up as a second Hawthorne.” When the new house was opened, it might be said that socially Mrs. Henderson had “arrived.” Had she? When one enters on the path of worldliness is there any resting-place? Is not eternal vigilance the price of position?

Henderson was apparently on good terms with the world. Many envied him, many paid him the sincerest flattery, that of imitation. He was a king in the street, great enterprises sought his aid, all the charities knocked at his door, his word could organize a syndicate or a trust, his nod could smash a “corner.” There were fabulous stories about his wealth, about his luck. This also was Margaret's world. Her ambition expanded in it with his. The things he set his heart on she coveted. Alas! there is always another round to the ladder.

Seeing the means by which he gained his ends, and the public condonation of them, would not his cynicism harden into utter unbelief in general virtue and goodness? I don't know that Henderson changed much, accented as his grasping selfishness was on occasion; prosperity had not impaired that indifferent good-fellowship and toleration which had early gained him popularity. His presence was nowhere a rebuke to whatever was going on. He was always accessible, often jocular. The younger members in the club said Henderson was a devilish good fellow, whatever people said. The President of the United States used to send for him and consult him, because he wanted no office; he knew men, and it was a relief to talk with a liberal rich man of so much bonhomie who wanted nothing.

And Margaret, what view of the world did all this give her? Did she come in contact with any one who had not his price, who was not going or wanting to go in the general current? Was it not natural that she should take Henderson's view? Dear me, I am not preaching about her. We did not see much of her in those days, and for one or two years of what I suppose was her greatest enjoyment of her social triumphs. So far as we heard, she was liked, admired, followed, envied. It could not be otherwise, for she did not lose her beauty nor her charm, and she tried to please. Once when I saw her in the city and we fell into talk—and the talk was gay enough and unconstrained—I was struck with a certain hardness of tone, a little bitterness quite unlike her old self. It is a very hard thing to say, and I did not say it even to my wife, but I had a painful impression that she was valuing people by the money they had, by the social position they had attained.

Was she content in that great world in which she moved? I had heard stories of slights, of stabs, of rebuffs, of spiteful remarks. Had she not come to know how success even in social life is sometimes attained—the meannesses, the jealousies, the cringing? Even with all her money at command, did she not know that her position was at the price of incessant effort? Because she had taken a bold step today, she must take a bolder one tomorrow—more display, more servants, some new invention of luxury and extravagance. And seeing, as I say, the inside of this life and what it required, and how triumphs and notoriety were gained, was it a wonder that she gradually became in her gayety cynical, in her judgments bitter?

I am not criticising her. What are we, who have had no opportunities, to sit in judgment on her! I believe that it is true that it was at her solicitation that Henderson at last did endow a university in the Southwest. I know that her name was on all the leading charities of the city. I know that of all the patronesses of the

charity ball her costume was the most exquisite, and her liberality was most spoken of. I know that in the most fashionable house of worship (the newspapers call it that) she was a constant attendant; that in her modest garb she never missed a Lenten service; and we heard that she performed a novena during this penitential season.

Why protract the story of how Margaret was lost to us? Could this interest any but us—we who felt the loss because we still loved her? And why should we presume to set up our standard of what is valuable in life, of what is a successful career? She had not become what we hoped, and little by little all the pleasure of intercourse on both sides, I dare say, disappeared. Could we say that life, after all, had not given her what she most desired? Rather than write on in this strain about her, I would like to read her story as it appeared to the companions whose pleasures were her pleasures, whose successes were her successes—her story written by one who appreciated her worldly advantages, and saw all the delight there was in this attractive worldliness.

What comfort there was in it we had in knowing that she was a favorite in the society of which we read such glowing descriptions, and that no one else bore its honors more winningly. It was not an easy life, with all its exactions and incessant movement. It demanded more physical strength than most women possess, and we were not surprised to hear from time to time that she was delicate, and that she went through her season with feverish excitement. But she chose it; it had become necessary to her. Can women stop in such a career, even if they wish to stop?

Yes, she chose it. I, for one, never begrudged her any pleasure she had in life, and I do not know but she was as happy as it is possible for human being to be in a full experiment of worldliness. Who is the judge? But we, I say, who loved her, and knew so well the noble possibilities of her royal nature under circumstances favorable to its development, felt more and more her departure from her own ideals. Her life in its spreading prosperity seemed more and more shallow. I do not say she was heartless, I do not say she was uncharitable, I do not say that in all the externals of worldly and religious observance she was wanting; I do not say that the more she was assimilated to the serenely worldly nature of her husband she did not love him, or that she was unlovely in the worldliness that engulfed her and bore her onward. I do not know that there is anything singular in her history. But the pain of it to us was in the certainty—and it seemed so near—that in the decay of her higher life, in the hardening process of a material existence, in the transfer of all her interests to the trivial and sensuous gratifications—time, mind, heart, ambition, all fixed on them—we should never regain our Margaret. What I saw in a vision of her future was a dead soul—a beautiful woman in all the success of envied prosperity, with a dead soul.

XXII

It is difficult not to convey a false impression of Margaret at this time. Habits, manners, outward conduct—nay, the superficial kindness in human intercourse, the exterior graceful qualities, may all remain when the character has subtly changed, when the real aims have changed, when the ideals are lowered. The fair exterior may be only a shell. I can imagine the heart retaining much tenderness and sympathy with suffering when the soul itself has ceased to struggle for the higher life, when the mind has lost, in regard to life, the final discrimination of what is right and wrong.

Perhaps it is fairer to Margaret to consider the general opinion of the world regarding her. No doubt, if we had now known her for the first time, we should have admired her exceedingly, and probably have accounted her thrice happy in filling so well her brilliant position. That her loss of interest in things intellectual, in a wide range of topics of human welfare, which is in the individual soul a sign of warmth and growth, made her less companionable to some is true, but her very absorption in the life of her world made her much more attractive to others. I well remember a dinner one day at the Hendersons', when Mr. Morgan and I happened to be in town, and the gay chat and persiflage of the society people there assembled. Margaret shone in it. The light and daring touch of her raillery Carmen herself might have envied, and the spirit in which she handled the trifles and personal gossip tossed to the surface, like the bubbles on the champagne.

It was such a pretty picture—the noble diningroom, the table sparkling with glass and silver and glowing with masses of choicest flowers from the conservatory, the animated convives, and Margaret presiding, radiant in a costume of white and gold.

"After all," Morgan was saying, apropos of the position of women, "men get mighty little out of it in the modern arrangement."

"I've always said, Mr. Morgan," Margaret retorted, "that you came into the world a couple of centuries too late; you ought to have been here in the squaw age."

"Well, men were of some account then. I appeal to Henderson," Morgan persisted, "if he gets more than his board and clothes."

"Oh, my husband has to make his way; he's no time for idling and philosophizing round."

"I should think not. Come, Henderson, speak up; what do you get out of it?"

"Oh," said Henderson, glancing at his wife with an amused expression, "I'm doing very well. I'm very well taken care of, but I often wonder what the fellows did when polygamy was the fashion."

"Polygamy, indeed!" cried Margaret. "So men only dropped the a pluribus unum method on account of the expense?"

"Not at all," replied Henderson. "Women are so much better now than formerly that one wife is quite enough."

"You have got him well in hand, Mrs. Henderson, but—" Morgan began.

"But," continued Margaret for him, "you think as things are going that polyandry will have to come in fashion—a woman will need more than one husband to support her?"

"And I was born too soon," murmured Carmen.

"Yes, dear, you'll have to be born again. But, Mr. Morgan, you don't seem to understand what civilization is."

"I'm beginning to. I've been thinking—this is entirely impersonal—that it costs more to keep one fine lady going than it does a college. Just reckon it up." (Margaret was watching him with sparkling eyes.) "The palace in town is for her, the house in the mountains, the house by the sea, are for her, the army of servants is for her, the horses and carriages for all weathers are for her, the opera box is for her, and then the wardrobe—why, half Paris lives on what women wear. I say nothing of what would become of the medical profession but for her."

"Have you done?" asked Margaret.

"No, but I'm taking breath."

"Well, why shouldn't we support the working-people of Paris and elsewhere? Do you want us to make our own clothes and starve the sewing-women? Suppose there weren't any balls and fine dresses and what you call luxury. What would the poor do without the rich? Isn't it the highest charity to give them work? Even with it they are ungrateful enough."

"That is too deep for me," said Morgan, evasively. "I suppose they ought to be contented to see us enjoying ourselves. It's all in the way of civilization, I dare say."

"It's just as I thought," said Margaret, more lightly. "You haven't an inkling of what civilization is. See that flower before you. It is the most exquisite thing in this room. See the refinement of its color and form. That was cultivated. The plant came from South Africa. I don't know what expense the gardener has been to about it, what material and care have been necessary to bring it to perfection. You may take it to Mrs. Morgan as an object-lesson. It is a thing of beauty. You cannot put any of your mercantile value on it. Well, that is woman, the consummate flower of civilization. That is what civilization is for."

"I'm sorry for you, old fellow," said Henderson.

"I'm sorry for myself," Carmen said, demurely.

"I admit all that," Morgan replied. "Take Mr. Henderson as a gardener, then."

"Suppose you take somebody else, and let my husband eat his dinner."

"Oh, I don't mind preaching; I've got used to being made to point a moral."

"But he will go on next about the luxury of the age, and the extravagance of women, and goodness knows what," said Margaret.

"No, I'm talking about men," Morgan continued. "Consider Henderson—it's entirely impersonal—as a gardener. What does he get out of his occupation? He can look at the flower. Perhaps that is enough. He gets a good dinner when he has time for it, an hour at his club now and then, occasionally an evening or half a day off at home, a decent wardrobe—"

"Fifty-two suits," interposed Margaret.

"His own brougham—"

"And a four-in-hand," added Margaret.

"A pass on the elevated road—"

"And a steam-yacht."

"Which he never gets time to sail in; practically all the time on the road, or besieged by a throng in his office, hustled about from morning till night, begged of, interviewed, a telegraphic despatch every five minutes, and—"

"And me!" cried Margaret, rising. The guests all clapped their hands.

The Hendersons liked to have their house full, something going on—dinners, musicales, readings, little comedies in the theatre; there was continual coming and going, calling, dropping in for a cup of tea, late suppers after the opera; the young fellows of town found no place so agreeable for a half-hour after business as Mrs. Henderson's reception-room. I fancied that life would be dull and hang heavily, especially for Margaret, without this perpetual movement and excitement. Henderson, who certainly had excitement enough without seeking it at home, was pleased that his wife should be a leader in society, as he was in the great enterprises in which his fortune waxed to enormous proportions. About what we call the home life I do not know. Necessarily, as heretofore, Henderson was often absent, and whether Margaret accompanied him or not, a certain pace of life had to be kept up.

I suppose there is no delusion more general than that of retiring upon a fortune—as if, when gained, a fortune would let a person retire, or, still more improbable, as if it ever were really attained. It is not at all probable that Henderson had set any limit to that he desired; the wildest speculations about its amount would no doubt fall short of satisfying the love of power which he expected to gratify in immeasurably increasing it. Does not history teach us that to be a great general, or poet, or philanthropist, is not more certain to preserve one's name than to be the richest man, the Croesus, in his age? I could imagine Margaret having a certain growing pride in this distinction, and a glowing ambition to be socially what her husband was financially.

Heaven often plans more mercifully for us than we plan for ourselves. Had not the Hebrew prophets a vision of the punishment by prosperity? Perhaps it applied to an old age, gratified to the end by possession of everything that selfishness covets, and hardened into absolute worldliness. I knew once an old lady whose position and wealth had always made her envied, and presumably happy, who was absolutely to be pitied for a soul empty of all noble feeling.

The sun still shone on Margaret, and life yielded to her its specious sweets. She was still young. If in her great house, in her dazzling career, in the whirl of resplendent prosperity, she had hours of unsatisfied yearning for something unattainable in this direction, the world would not have guessed it. Whenever we

heard of her she was the centre and star of whatever for the moment excited the world of fashion. It was indeed, at last, in the zenith of her gay existence that I, became aware of a certain feminine anxiety about her in our neighborhood. She had been, years before, very ill in Paris, and the apprehensions for her safety now were based upon the recollection of her peril then. The days came when the tender-hearted Miss Forsythe went about the house restless, impatient, tearful, waiting for a summons that was sure to come when she was needed. She thought only of her child, as she called her, and all the tenderness of her nature was stirred—these years of cloud and separation and pain were as they had not been. Little Margaret had promised to send for her. She would not obtrude before she was wanted, but Margaret was certain to send. And she was ready for departure the instant the despatch came from Henderson—"Margaret wants you to come at once." I went with her.

In calamity, trouble, sorrow, it is wonderful how the ties of blood assert themselves. In this hour I am sure that Margaret longed for no one more than her dear aunt, in whose arms, as a child, she had so often forgotten her griefs. She had been able to live without her—nay, for a long time her presence had been something of a restraint and a rebuke, and her feelings had hardened towards her. Why is it that the heart hardens in prosperity?

When we arrived Margaret was very ill. The house itself had a serious air: it was no longer the palace of festivity and gayety, precautions had been taken to secure quiet, the pavement was littered, and within the hushed movements and the sombre looks spoke of apprehension and the absence of the spirit that had been the life and light of the house. Our arrival seemed to be a relief to Henderson. Little was said. I had never before seen him nervous, never before so restless and anxious, probably never before in all his career had he been unnerved with a sense of his own helplessness.

"She has been asking for you this moment," he said, as he accompanied Miss Forsythe to Margaret's apartment.

"Dear, dear aunt, I knew you would come—I love you so;" she had tried to raise herself a little in her bed, and was sobbing like a child in her aunt's arms.

"You must have courage, Margaret; it will all be well."

"Yes, but I'm so discouraged; I'm so tired."

The vigil began. The nurses were in waiting. The family physician would not leave the house. He was a man of great repute in his profession. Dr. Seftel's name was well known to me, but I had never met him before; a man past middle life, smooth shaven, thin iron-gray hair, grave, usually taciturn, deliberate in all his movements, as if every gesture were important and significant, but with a kindly face. Knowing that every moment of his waking life was golden, I could not but be impressed with the power that could command his exclusive service for an indefinite time. When he came down, we talked together in Henderson's room.

"It is a question of endurance, of constitution," he said; "many weak women have this quality of persistence; many strong women go to pieces at once; we know little about it. Mrs. Henderson"—glancing about him—"has everything to live for; that's in her favor. I suppose there are not two other men in the country whose fortune equals Henderson's."

I do not know how it was, probably the patient was not forgotten, but in a moment the grave doctor was asking me if I had seen the last bulletin about the yacht regatta. He took the keenest interest in the contest, and described to me the build and sailing qualities of the different yachts entered, and expressed his opinion as to which would win, and why. From this he passed to the city government and the recent election—like a true New Yorker, his chief interest centred in the city politics and not in the national elections. Without the least unbending from his dignity, he told me many anecdotes about city politicians, which would have been amusing if I had not been anxious about other things.

The afternoon passed, and the night, and the day, I cannot tell how. But at evening I knew by the movements in the house that the crisis had come. I was waiting in Henderson's library. An hour passed, when Henderson came hurrying in, pale, excited, but joyous.

"Thank God," he cried, "it is a boy!"

"And Margaret?" I gasped.

"Is doing very well!" He touched a bell, and gave an order to the servant. "We will drink to the dear girl and to the heir of the house."

He was in great spirits. The doctor joined us, but I noticed that he was anxious, and he did not stay long. Henderson was in and out, talking, excited, restless. But everything was going very well, he thought. At last, as we sat talking, a servant appeared at the door, with a frightened look.

"The baby, sir!"

"What?"

Alas! there had been an heir of the house of Henderson for just two hours; and Margaret was not sustaining herself.

Why go on? Henderson was beside himself; stricken with grief, enraged, I believe, as well, at the thought of his own impotence. Messengers were despatched, a consultation was called. The best skill of the city, at any cost, was at Margaret's bedside. Was there anything, then, that money could not do? How weak we are!

The next day the patient was no better, she was evidently sinking. The news went swiftly round the city. It needed a servant constantly at the door to answer the stream of sympathetic inquirers. Reporters were watching the closed house from the opposite pavement. I undertook to satisfy some of them who gained the steps and came forward, civil enough and note-books in hand, when the door was opened. This intrusion of curiosity seemed so dreadful.

The great house was silent. How vain and empty and pitiful it all seemed as I wandered alone through the gorgeous apartments! What a mockery it all was of the tragedy impending above-stairs—the approach on listshod feet of the great enemy! Let us not be unjust. He would have come just the same if his prey had lain in a farmhouse among the hills, or in a tenement-house in C Street.

A day and a night, and another day—and then! It was Miss Forsythe who came down to me, with strained eyes and awe in her face. It needed no words. She put her face upon my shoulder, and sobbed as if her heart were broken.

I could not stay in the house. I went out into the streets, the streets brilliant in the sun of an autumn day, into the town, gay, bustling, crowded, pulsing with vigorous life. How blue the sky was! The sparrows twittered in Madison Square, the idlers sat in the sun, the children chased their hoops about the fountain.

I wandered into the club. The news had preceded me there. More than one member in the reading-room grasped my hand, with just a word of sympathy. Two young fellows, whom I had last seen at the Henderson dinner, were seated at a small table.

"It's rough, Jack"—the speaker paused, with a match in his hand—"it's rough. I'll be if she was not the finest woman I ever knew."

My wife and I were sitting in the orchestra stalls of the Metropolitan. The opera was Siegfried. At the close of the first act, as we turned to the house, we saw Carmen enter a box, radiant, in white. Henderson followed, and took a seat a little in shadow behind her. There were others in the box. There was a little movement and flutter as they came in and glasses were turned that way.

"Married, and it is only two years," I said.

"It is only a year and eight months," my wife replied.

And the world goes on as cheerfully and prosperously as ever.

I

It was near midnight: The company gathered in a famous city studio were under the impression, diligently diffused in the world, that the end of the century is a time of license if not of decadence. The situation had its own piquancy, partly in the surprise of some of those assembled at finding themselves in bohemia, partly in a flutter of expectation of seeing something on the border-line of propriety. The hour, the place, the anticipation of the lifting of the veil from an Oriental and ancient art, gave them a titillating feeling of adventure, of a moral hazard bravely incurred in the duty of knowing life, penetrating to its core. Opportunity for this sort of fruitful experience being rare outside the metropolis, students of good and evil had made the pilgrimage to this midnight occasion from less-favored cities. Recondite scholars in the physical beauty of the Greeks, from Boston, were there; fair women from Washington, whose charms make the reputation of many a newspaper correspondent; spirited stars of official and diplomatic life, who have moments of longing to shine in some more languorous material paradise, had made a hasty flitting to be present at the ceremony, sustained by a slight feeling of bravado in making this exceptional descent. But the favored hundred spectators were mainly from the city-groups of late diners, who fluttered in under that pleasurable glow which the red Jacqueminot always gets from contiguity with the pale yellow Clicquot; theatre parties, a little jaded, and quite ready for something real and stimulating; men from the clubs and men from studios—representatives of society and of art graciously mingled, since it is discovered that it is easier to make art fashionable than to make fashion artistic.

The vast, dimly lighted apartment was itself mysterious, a temple of luxury quite as much as of art. Shadows lurked in the corners, the ribs of the roof were faintly outlined; on the sombre walls gleams of color, faces of loveliness and faces of pain, studies all of a mood or a passion, bits of shining brass, reflections from lusted ware struggling out of obscurity; hangings from Fez or Tetuan, bits of embroidery, costumes in silk and in velvet, still having the aroma of balls a hundred years ago, the faint perfume of a scented society of ladies and gallants; a skeleton scarcely less fantastic than the draped wooden model near it; heavy rugs of Daghestan and Persia, making the footfalls soundless on the floor; a fountain tinkling in a thicket of japonicas

and azaleas; the stems of palmettoes, with their branches waving in the obscurity overhead; points of light here and there where a shaded lamp shone on a single red rose in a blue Granada vase on a toppling stand, or on a mass of jonquils in a barbarous pot of Chanak-Kallessi; tacked here and there on walls and hangings, colored memoranda of Capri and of the North Woods, the armor of knights, trophies of small-arms, crossed swords of the Union and the Confederacy, easels, paints, and palettes, and rows of canvases leaning against the wall—the studied litter, in short, of a successful artist, whose surroundings contribute to the popular conception of his genius.

On the wall at one end of the apartment was stretched a white canvas; in front of it was left a small cleared space, on the edge of which, in the shadow, squatting on the floor, were four swarthy musicians in Oriental garments, with a mandolin, a guitar, a ney, and a darabooka drum. About this cleared space, in a crescent, knelt or sat upon the rugs a couple of rows of men in evening dress; behind them, seated in chairs, a group of ladies, whose white shoulders and arms and animated faces flashed out in the semi-obscurity; and in their rear stood a crowd of spectators—beautiful young gentlemen with vacant faces and the elevated Oxford shoulders, rosy youth already blase to all this world can offer, and gray-headed men young again in the prospect of a new sensation. So they kneel or stand, worshipers before the shrine, expecting the advent of the Goddess of AEsthetic Culture.

The moment has come. There is a tap on the drum, a tuning of the strings, a flash of light from the rear of the room inundates the white canvas, and suddenly a figure is poised in the space, her shadow cast upon the glowing background.

It is the Spanish dancer!

The apparition evokes a flutter of applause. It is a superb figure, clad in a high tight bodice and long skirts simply draped so as to show every motion of the athletic limbs. She seems, in this pose and light, supernaturally tall. Through her parted lips white teeth gleam, and she smiles. Is it a smile of anticipated triumph, or of contempt? Is it the smile of the daughter of Herodias, or the invitation of a 'ghazeeyeh'? She pauses. Shall she surprise, or shock, or only please? What shall the art that is older than the pyramids do for these kneeling Christians? The drum taps, the ney pipes, the mandolin twangs, her arms are extended—the castanets clink, a foot is thrust out, the bosom heaves, the waist trembles. What shall it be—the old serpent dance of the Nile, or the posturing of decorous courtship when the olives are purple in the time of the grape harvest? Her head, wreathed with coils of black hair, a red rose behind the left ear, is thrown back. The eyes flash, there is a snakelike movement of the limbs, the music hastens slowly in unison with the quickening pulse, the body palpitates, seems to flash invitation like the eyes, it turns, it twists, the neck is thrust forward, it is drawn in, while the limbs move still slowly, tentatively; suddenly the body from the waist up seems to twist round, with the waist as a pivot, in a flash of athletic vigor, the music quickens, the arms move more rapidly to the click of the heated castanets, the steps are more pronounced, the whole woman is agitated,

bounding, pulsing with physical excitement. It is a Maenad in an access of gymnastic energy. Yes, it is gymnastics; it is not grace; it is scarcely alluring. Yet it is a physical triumph. While the spectators are breathless, the fury ceases, the music dies, and the Spaniard sinks into a chair, panting with triumph, and inclines her dark head to the clapping of hands and the bravos. The kneelers rise; the spectators break into chattering groups; the ladies look at the dancer with curious eyes; a young gentleman with the elevated Oxford shoulders leans upon the arm of her chair and fans her. The pose is correct; it is the somewhat awkward tribute of culture to physical beauty.

To be on speaking terms with the phenomenon was for the moment a distinction. The young ladies wondered if it would be proper to go forward and talk with her.

"Why not?" said a wit. "The Duke of Donnycastle always shakes hands with the pugilists at a mill."

"It is not so bad"—the speaker was a Washington beauty in an evening dress that she would have condemned as indecorous for the dancer it is not so bad as I—

"Expected?" asked her companion, a sedate man of thirty-five, with the cynical air of a student of life.

"As I feared," she added, quickly. "I have always had a curiosity to know what these Oriental dances mean."

"Oh, nothing in particular, now. This was an exhibition dance. Of course its origin, like all dancing, was religious. The fault I find with it is that it lacks seriousness, like the modern exhibition of the dancing dervishes for money."

"Do you think, Mr. Mavick, that the decay of dancing is the reason our religion lacks seriousness? We are in Lent now, you know. Does this seem to you a Lenten performance?"

"Why, yes, to a degree. Anything that keeps you up till three o'clock in the morning has some penitential quality."

"You give me a new view, Mr. Mavick. I confess that I did not expect to assist at what New Englanders call an 'evening meeting.' I thought Eros was the deity of the dance."

"That, Mrs. Lamon, is a vulgar error. It is an ancient form of worship. Virtue and beauty are the same thing—the two graces."

"What a nice apothegm! It makes religion so easy and agreeable."

"As easy as gravitation."

"Dear me, Mr. Mavick, I thought this was a question of levitation. You are upsetting all my ideas. I shall not have the comfort of repenting of this episode in Lent."

"Oh yes; you can be sorry that the dancing was not more alluring."

Meantime there was heard the popping of corks. Venetian glasses filled with champagne were quaffed under the blessing of sparkling eyes, young girls, almond-eyed for the occasion, in the costume of Tokyo, handed round ices, and the hum of accelerated conversation filled the studio.

"And your wife didn't come?"

"Wouldn't," replied Jack Delancy, with a little bow, before he raised his glass. And then added, "Her taste isn't for this sort of thing."

The girl, already flushed with the wine, blushed a little—Jack thought he had never seen her look so dazzlingly handsome—as she said, "And you think mine is?"

"Bless me, no, I didn't mean that; that is, you know"—Jack didn't exactly see his way out of the dilemma—"Edith is a little old-fashioned; but what's the harm in this, anyway?"

"I did not say there was any," she replied, with a smile at his embarrassment. "Only I think there are half a dozen women in the room who could do it better, with a little practice. It isn't as Oriental as I thought it would be."

"I cannot say as to that. I know Edith thinks I've gone into the depths of the Orient. But, on the whole, I'm glad—" Jack stopped on the verge of speaking out of his better nature.

"Now don't be rude again. I quite understand that she is not here."

The dialogue was cut short by a clapping of hands. The spectators took their places again, the lights were lowered, the illumination was turned on the white canvas, and the dancer, warmed with wine and adulation, took a bolder pose, and, as her limbs began to move, sang a wild Moorish melody in a shrill voice, action and words flowing together into the passion of the daughter of tents in a desert life. It was all vigorous, suggestive, more properly religious, Mavick would have said, and the applause was vociferous.

More wine went about. There was another dance, and then another, a slow languid movement, half melancholy and full of sorrow, if one might say that of a movement, for unrepented sin; a gypsy dance this, accompanied by the mournful song of Boabdil, "The Last Sigh of the Moor." And suddenly, when the feelings of the spectators were melted to tender regret, a flash out of all this into a joyous defiance, a wooing of pleasure with smiling lips and swift feet, with the clash of cymbals and the quickened throb of the drum. And so an end with the dawn of a new day.

It was not yet dawn, however, for the clocks were only striking three as the assembly, in winter coats and soft wraps, fluttered out to its carriages, chattering and laughing, with endless good-nights in the languages of France, Germany, and Spain.

The streets were as nearly deserted as they ever are; here and there a lumbering market-wagon from Jersey, an occasional street-car with its tinkling bell, rarer still the rush of a trembling train on the elevated, the voice of a belated reveler, a flitting female figure at a street corner, the roll of a livery hack over the ragged pavement. But mainly the noise of the town was hushed, and in the sharp air the stars, far off and uncontaminated, glowed with a pure lustre.

Farther up town it was quite still, and in one of the noble houses in the neighborhood of the Park sat Edith Delancy, married not quite a year, listening for the roll of wheels and the click of a night-key.

II

Everybody liked John Corlear Delancy, and this in spite of himself, for no one ever knew him to make any effort to incur either love or hate. The handsome boy was a favorite without lifting his eyebrows, and he sauntered through the university, picking his easy way along an elective course, winning the affectionate regard of every one with whom he came in contact. And this was not because he lacked quality, or was merely easy-going and negative or effeminate, for the same thing happened to him when he went shooting in the summer in the Rockies. The cowboys and the severe moralists of the plains, whose sedate business in life is to get the drop on offensive persons, regarded him as a brother. It isn't a bad test of personal quality, this power to win the loyalty of men who have few or none of the conventional virtues. These non-moral enforcers of justice—as they understood it liked Jack exactly as his friends in the New York clubs liked him—and perhaps the moral standard of approval of the one was as good as the other.

Jack was a very good shot and a fair rider, and in the climate of England he might have taken first-rate rank in athletics. But he had never taken first-rate rank in anything, except good-fellowship. He had a great many expensive tastes, which he could not afford to indulge, except in imagination. The luxury of a racing-stable, or a yacht, or a library of scarce books bound by Paris craftsmen was denied him. Those who account for failures in life by a man's circumstances, and not by a lack in the man himself, which is always the secret of failure, said that Jack was unfortunate in coming into a certain income of twenty thousand a year. This was just enough to paralyze effort, and not enough to permit a man to expand in any direction. It is true that he was related to millions and moved in a millionaire atmosphere, but these millions might never flow into his bank account. They were not in hand to use, and they also helped to paralyze effort—like black clouds of an impending shower that may pass around, but meantime keeps the watcher indoors.

The best thing that Jack Delancy ever did, for himself, was to marry Edith Fletcher. The wedding, which took place some eight months before the advent of the Spanish dancer, was a surprise to many, for the girl had even less fortune than Jack, and though in and of his society entirely, was supposed to have ideals. Her family, indeed, was an old one on the island, and was prominent long before the building of the stone bridge on Canal Street over the outlet of Collect Pond. Those who knew Edith well detected in her that strain of moral earnestness which made the old Fletchers such stanch and trusty citizens. The wonder was not that Jack, with his easy susceptibility to refined beauty, should have been attracted to her, or have responded to a true instinct of what was best for him, but that Edith should have taken up with such a perfect type of the aimlessness of the society strata of modern life. The wonder, however, was based upon a shallow conception

of the nature of woman. It would have been more wonderful if the qualities that endeared Jack to college friends and club men, to the mighty sportsmen who do not hesitate, in the clubs, to devastate Canada and the United States of big game, and to the border ruffians of Dakota, should not have gone straight to the tender heart of a woman of ideals. And when in all history was there a woman who did not believe, when her heart went with respect for certain manly traits, that she could inspire and lift a man into a noble life?

The silver clock in the breakfast-room was striking ten, and Edith was already seated at the coffee-urn, when Jack appeared. She was as fresh as a rose, and greeted him with a bright smile as he came behind her chair and bent over for the morning kiss—a ceremony of affection which, if omitted, would have left a cloud on the day for both of them, and which Jack always declared was simply a necessity, or the coffee would have no flavor. But when a man has picked a rose, it is always a sort of climax which is followed by an awkward moment, and Jack sat down with the air of a man who has another day to get through with.

"Were you amused with the dancing—this morning?"

"So, so," said Jack, sipping his coffee. "It was a stunning place for it, that studio; you'd have liked that. The Lamons and Mavick and a lot of people from the provinces were there. The company was more fun than the dance, especially to a fellow who has seen how good it can be and how bad in its home."

"You have a chance to see the Spanish dancer again, under proper auspices," said Edith, without looking up.

"How's that?"

"We are invited by Mrs. Brown—"

"The mother of the Bible class at St. Philip's?"

"Yes—to attend a charity performance for the benefit of the Female Waifs' Refuge. She is to dance."

"Who? Mrs. Brown?"

Edith paid no attention to this impertinence. "They are to make an artificial evening at eleven o'clock in the morning."

"They must have got hold of Mavick's notion that this dance is religious in its origin. Do you, know if the exercises will open with prayer?"

"Nonsense, Jack. You know I don't intend to go. I shall send a small check."

"Well, draw it mild. But isn't this what I'm accused of doing—shirking my duty of personal service by a contribution?"

"Perhaps. But you didn't have any of that shirking feeling last night, did you?"

Jack laughed, and ran round to give the only reply possible to such a gibe. These breakfast interludes had not lost piquancy in all these months. "I'm half a mind to go to this thing. I would, if it didn't break up my day so."

"As for instance?"

"Well, this morning I have to go up to the riding-school to see a horse—Storm; I want to try him. And then I have to go down to Twist's and see a lot of Japanese drawings he's got over. Do you know that the birds and other animals those beggars have been drawing, which we thought were caricatures, are the real thing? They have eyes sharp enough to see things in motion—flying birds and moving horses which we never caught till we put the camera on them. Awfully curious. Then I shall step into the club a minute, and—"

"Be in at lunch? Bess is coming."

"Don't wait lunch. I've a lot to do."

Edith followed him with her eyes, a little wistfully; she heard the outer door close, and still sat at the table, turning over the pile of notes at her plate, and thinking of many things—things that it began to dawn upon her mind could not be done, and things of immediate urgency that must be done. Life did not seem quite such a simple problem to her as it had looked a year ago. That there is nothing like experiment to clear the vision is the general idea, but oftener it is experience that perplexes. Indeed, Edith was thinking that some things seemed much easier to her before she had tried them.

As she sat at the table with a faultless morning-gown, with a bunch of English violets in her bosom, an artist could have desired no better subject. Many people thought her eyes her best feature; they were large brown eyes, yet not always brown, green at times, liquid, but never uncertain, apt to have a smile in them, yet their chief appealing characteristic was trustfulness, a pure sort of steadfastness, that always conveyed the impression of a womanly personal interest in the person upon whom they were fixed. They were eyes that haunted one like a remembered strain of music. The lips were full, and the mouth was drawn in such exquisite lines that it needed the clear-cut and emphasized chin to give firmness to its beauty. The broad forehead, with arching eyebrows, gave an intellectual cast to a face the special stamp of which was purity. The nose, with thin open nostrils, a little too strong for beauty, together with the chin, gave the impression of firmness and courage; but the wonderful eyes, the inviting mouth, so modified this that the total impression was that of high spirit and great sweetness of character. It was the sort of face from which one might expect passionate love or unflinching martyrdom. Her voice had a quality the memory of which lingered longer even than the expression of her eyes; it was low, and, as one might say, a fruity voice, not quite clear, though sweet, as if veiled in femininity. This note of royal womanhood was also in her figure, a little more than medium in height, and full of natural grace. Somehow Edith, with all these good points, had not the reputation of a belle or a beauty—perhaps for want of some artificial splendor—but one could not be long in her company without feeling that she had great charm, without which beauty becomes insipid and even commonplace, and with which the plainest woman is attractive.

Edith's theory of life, if one may so dignify the longings of a young girl, had been very simple, and not at all such as would be selected by the heroine of a romance. She had no mission, nor was she afflicted by that modern form of altruism which is a yearning for notoriety by conspicuous devotion to causes and reforms quite outside her normal sphere of activity. A very sincere person, with strong sympathy for humanity tempered by a keen perception of the humorous side of things, she had a purpose, perhaps not exactly

formulated, of making the most out of her own life, not in any outward and shining career, but by a development of herself in the most helpful and harmonious relations to her world. And it seemed to her, though she had never philosophized it, that a marriage such as she believed she had made was the woman's way to the greatest happiness and usefulness. In this she followed the dictates of a clear mind and a warm heart. If she had reasoned about it, considering how brief life is, and how small can be any single contribution to a better social condition, she might have felt more strongly the struggle against nature, and the false position involved in the new idea that marriage is only a kind of occupation, instead of an ordinance decreed in the very constitution of the human race. With the mere instinct of femineity she saw the falseness of the assumption that the higher life for man or woman lies in separate and solitary paths through the wilderness of this world. To an intelligent angel, seated on the arch of the heavens, the spectacle of the latter-day pseudo-philosophic and economic dribble about the doubtful expediency of having a wife, and the failure of marriage, must seem as ludicrous as would a convention of birds or of flowers reasoning that the processes of nature had continued long enough. Edith was simply a natural woman, who felt rather than reasoned that in a marriage such as her heart approved she should make the most of her life.

But as she sat here this morning this did not seem to be so simple a matter as it had appeared. It began to be suspected that in order to make the most of one's self it was necessary to make the most of many other persons and things. The stream in its own channel flowed along not without vexations, friction and foaming and dashings from bank to bank; but it became quite another and a more difficult movement when it was joined to another stream, with its own currents and eddies and impetuositities and sluggishness, constantly liable to be deflected if not put altogether on another course. Edith was not putting it in this form as she turned over her notes of invitation and appointments and engagements, but simply wondering where the time for her life was to come in, and for Jack's life, which occupied a much larger space than it seemed to occupy in the days before it was joined to hers. Very curious this discovery of what another's life really is. Of course the society life must go on, that had always gone on, for what purpose no one could tell, only it was the accepted way of disposing of time; and now there were the dozen ways in which she was solicited to show her interest in those supposed to be less fortunate in life than herself—the alleviation of the miseries of her own city. And with society, and charity, and sympathy with the working classes, and her own reading, and a little drawing and painting, for which she had some talent, what became of that comradeship with Jack, that union of interests and affections, which was to make her life altogether so high and sweet?

This reverie, which did not last many minutes, and was interrupted by the abrupt moving away of Edith to the writing-desk in her own room, was caused by a moment's vivid realization of what Jack's interests in life were. Could she possibly make them her own? And if she did, what would become of her own ideals?

III

It was indeed a busy day for Jack. Great injustice would be done him if it were supposed that he did not take himself and his occupations seriously. His mind was not disturbed by trifles. He knew that he had on the right sort of four-in-hand necktie, with the appropriate pin of pear-shaped pearl, and that he carried the cane of the season. These things come by a sort of social instinct, are in the air, as it were, and do not much tax the mind. He had to hasten a little to keep his half-past-eleven o'clock appointment at Stalker's stables, and when he arrived several men of his set were already waiting, who were also busy men, and had made a little effort to come round early and assist Jack in making up his mind about the horse.

When Mr. Stalker brought out Storm, and led him around to show his action, the connoisseurs took on a critical attitude, an attitude of judgment, exhibited not less in the poise of the head and the serious face than in the holding of the cane and the planting of legs wide apart. And the attitude had a refined nonchalance which professional horsemen scarcely ever attain. Storm could not have received more critical and serious attention if he had been a cooked terrapin. He could afford to stand this scrutiny, and he seemed to move about with the consciousness that he knew more about being a horse than his judges.

Storm was, in fact, a splendid animal, instinct with life from his thin flaring nostril to his small hoof; black as a raven, his highly groomed skin took the polish of ebony, and showed the play of his powerful muscles, and, one might say, almost the nervous currents that thrilled his fine texture. His large, bold eyes, though not wicked, flamed now and then with an energy and excitement that gave ample notice that he would obey no master who had not stronger will and nerve than his own. It was a tribute to Jack's manliness that, when he mounted him for a turn in the ring, Storm seemed to recognize the fine quality of both seat and hand, and appeared willing to take him on probation.

"He's got good points," said Mr. Herbert Albert Flick, "but I'd like a straighter back."

"I'll be hanged, though, Jack," was Mr. Mowbray Russell's comment, "if I'd ride him in the Park before he's docked. Say what you like about action, a horse has got to have style."

"Moves easy, falls off a little too much to suit me in the quarter," suggested Mr. Pennington Docstater, sucking the head of his cane. "How about his staying quality, Stalker?"

"That's just where he is, Mr. Docstater; take him on the road, he's a stayer for all day. Goes like a bird. He'll take you along at the rate of nine miles in forty-five minutes as long as you want to sit there."

"Jump?" queried little Bobby Simerton, whose strong suit at the club was talking about meets and hunters.

"Never refused anything I put him at," replied Stalker; "takes every fence as if it was the regular thing."

Storm was in this way entirely taken to pieces, praised and disparaged, in a way to give Stalker, it might be inferred from his manner, a high opinion of the knowledge of these young gentlemen. "It takes a gentleman," in fact, Stalker said, "to judge a hoss, for a good hoss is a gentleman himself." It was much discussed whether Storm would do better for the Park or for the country, whether it would be better to put him in the field or keep him for a roadster. It might, indeed, be inferred that Jack had not made up his mind whether he should buy a horse for use in the Park or for country riding. Even more than this might be inferred from the long morning's work, and that was that while Jack's occupation was to buy a horse, if he should buy one his occupation would be gone. He was known at the club to be looking for the right sort of a horse, and that he knew what he wanted, and was not easily satisfied; and as long as he occupied this position he was an object of interest to sellers and to his companions.

Perhaps Mr. Stalker understood this, for when the buyers had gone he remarked to the stable-boy, "Mr. Delancy, he don't want to buy no hoss."

When the inspection of the horse was finished it was time for lunch, and the labors of the morning were felt to justify this indulgence, though each of the party had other engagements, and was too busy to waste the time. They went down to the Knickerbocker.

The lunch was slight, but its ordering took time and consideration, as it ought, for nothing is so destructive of health and mental tone as the snatching of a mid-day meal at a lunch counter from a bill of fare prepared by God knows whom. Mr. Russell said that if it took time to buy a horse, it ought to take at least equal time and care to select the fodder that was to make a human being wretched or happy. Indeed, a man who didn't give his mind to what he ate wouldn't have any mind by-and-by to give to anything. This sentiment had the assent of the table, and was illustrated by varied personal experience; and a deep feeling prevailed, a serious feeling, that in ordering and eating the right sort of lunch a chief duty of a useful day had been discharged.

It must not be imagined from this, however, that the conversation was about trifles. Business men and operators could have learned something about stocks and investments, and politicians about city politics. Mademoiselle Vivienne, the new skirt dancer, might have been surprised at the intimate tone in which she was alluded to, but she could have got some useful hints in effects, for her judges were cosmopolitans who had seen the most suggestive dancing in all parts of the world. It came out incidentally that every one at table had been "over" in the course of the season, not for any general purpose, not as a sightseer, but to look at somebody's stables, or to attend a wedding, or a sale of etchings, or to see his bootmaker, or for a little shooting in Scotland, just as one might run down to Bar Harbor or Tuxedo. It was only an incident in a busy season; and one of the fruits of it appeared to be as perfect a knowledge of the comparative merits of all the ocean racers and captains as of the English and American stables and the trainers. One not informed of the progress of American life might have been surprised to see that the fad is to be American, with a sort of patronage of things and ways foreign, especially of things British, a large continental kind of attitude,

begotten of hearing much about Western roughing it, of Alaska, of horse-breeding and fruit-raising on the Pacific, of the Colorado River Canon. As for stuffs, well yes, London. As for style, you can't mistake a man who is dressed in New York.

The wine was a white Riesling from California. Docstater said his attention had been called to it by Tom Dillingham at the Union, who had a ranch somewhere out there. It was declared to be sound and palatable; you know what you are drinking. This led to a learned discussion of the future of American wines, and a patriotic impulse was given to the trade by repeated orders. It was declared that in American wines lay the solution of the temperance question. Bobby Simerton said that Burgundy was good enough for him, but Russell put him down, as he saw the light yellow through his glass, by the emphatic affirmation that plenty of cheap American well-made wine would knock the bottom out of all the sentimental temperance societies and shut up the saloons, dry up all those not limited to light wines and beer. It was agreed that the saloons would have to go.

This satisfactory conclusion was reached before the coffee came on and the cigarettes, and the sound quality of the Riesling was emphasized by a pony of cognac.

It is fortunate when the youth of a country have an ideal. No nation is truly great without a common ideal, capable of evoking enthusiasm and calling out its energies. And where are we to look for this if not in the youth, and especially in those to whom fortune and leisure give an opportunity of leadership? It is they who can inspire by their example, and by their pursuits attract others to a higher conception of the national life. It may take the form of patriotism, as in this country, pride in the great republic, jealousy of its honor and credit, eagerness for its commanding position among the nations, patriotism which will show itself, in all the ardor of believing youth, in the administration of law, in the purity of politics, in honest local government, and in a noble aspiration for the glory of the country. It may take the form of culture, of a desire that the republic-liable, like all self-made nations, to worship wealth-should be distinguished not so much by a vulgar national display as by an advance in the arts, the sciences, the education that adorns life, in the noble spirit of humanity, and in the nobler spirit of recognition of a higher life, which will be content with no civilization that does not tend to make the country for every citizen a better place to live in today than it was yesterday. Happy is the country, happy the metropolis of that country, whose fortunate young men have this high conception of citizenship!

What is the ideal of their country which these young men cherish? There was a moment—was there not for them?—in the late war for the Union, when the republic was visible to them in its beauty, in its peril, and in a passion of devotion they were eager—were they not?—to follow the flag and to give their brief lives to its imperishable glory. Nothing is impossible to a nation with an ideal like that. It was this flame that ran over Europe in the struggle of France against a world in arms. It was this national ideal that was incarnate in Napoleon, as every great idea that moves the world is sooner or later incarnated. What was it that we saw in

Washington on his knees at Valley Forge, or blazing with wrath at the cowardice on Monmouth? in Lincoln entering Richmond with bowed head and infinite sorrow and yearning in his heart? An embodiment of a great national idea and destiny.

In France this ideal burns yet like a flame, and is still evoked by a name. It is the passion of glory, but the desire of a nation, and Napoleon was the incarnation of passion. They say that he is not dead as others are dead, but that he may come again and ride at the head of his legions, and strike down the enemies of France; that his bugle will call the youth from every hamlet, that the roll of his drum will transform France into a camp, and the grenadiers will live again and ride with him, amid hurrahs, and streaming tears, and shouts of "My Emperor! Oh, my Emperor!" Is it only a legend? But the spirit is there; not a boy but dreams of it, not a girl but knots the thought in with her holiday tricolor. That is to have an abiding ideal, and patiently to hold it, in isolation, in defeat, even in an overripe civilization.

We believe—do we not?—in other triumphs than those of the drum and the sword. Our aspirations for the republic are for a nobler example of human society than the world has yet seen. Happy is the country, and the metropolis of the country, whose youth, gilded only by their virtues, have these aspirations.

When the party broke up, the street lamps were beginning to twinkle here and there, and Jack discovered to his surprise that the Twiss business would have to go over to another day. It was such a hurrying life in New York. There was just time for a cup of tea at Mrs. Trafton's. Everybody dropped in there after five o'clock, when the duties of the day were over, with the latest news, and to catch breath before rushing into the program of the evening.

There were a dozen ladies in the drawing-room when Jack entered, and his first impression was that the scream of conversation would be harder to talk against than a Wagner opera; but he presently got his cup of tea, and found a snug seat in the chimney-corner by Miss Tavish; indeed, they moved to it together, and so got a little out of the babel. Jack thought the girl looked even prettier in her walking-dress than when he saw her at the studio; she had style, there was no doubt about that; and then, while there was no invitation in her manner, one felt that she was a woman to whom one could easily say things, and who was liable at any moment to say things interesting herself.

"Is this your first appearance since last night, Mr. Delancy?"

"Oh no; I've been racing about on errands all day. It is very restful to sit down by a calm person."

"Well, I never shut my eyes till nine o'clock. I kept seeing that Spanish woman whirl around and contort, and—do you mind my telling you?—I couldn't just help it, I" (leaning forward to Jack) "got up and tried it before the glass. There! Are you shocked?"

"Not so much shocked as excluded," Jack dared to say. "But do you think—"

"Yes, I know. There isn't anything that an American girl cannot do. I've made up my mind to try it. You'll

see."

"Will I?"

"No, you won't. Don't flatter yourself. Only girls. I don't want men around."

"Neither do I," said Jack, honestly.

Miss Tavish laughed. "You are too forward, Mr. Delancy. Perhaps some time, when we have learned, we will let in a few of you, to look in at the door, fifty dollars a ticket, for some charity. I don't see why dancing isn't just as good an accomplishment as playing the harp in a Greek dress."

"Nor do I; I'd rather see it. Besides, you've got Scripture warrant for dancing off the heads of people. And then it is such a sweet way of doing a charity. Dancing for the East Side is the best thing I have heard yet."

"You needn't mock. You won't when you find out what it costs you."

"What are you two plotting?" asked Mrs. Trafton, coming across to the fireplace.

"Charity," said Jack, meekly.

"Your wife was here this morning to get me to go and see some of her friends in Hester Street."

"You went?"

"Not today. It's awfully interesting, but I've been."

"Edith seems to be devoted to that sort of thing," remarked Miss Tavish.

"Yes," said Jack, slowly, "she's got the idea that sympathy is better than money; she says she wants to try to understand other people's lives."

"Goodness knows, I'd like to understand my own."

"And were you trying, Mr. Delancy, to persuade Miss Tavish into that sort of charity?"

"Oh dear, no," said Jack; "I was trying to interest the East End in something, for the benefit of Miss Tavish."

"You'll find that's one of the most expensive remarks you ever made," retorted Miss Tavish, rising to go.

"I wish Lily Tavish would marry," said Mrs. Trafton, watching the girl's slender figure as it passed through the portiere; "she doesn't know what to do with herself."

Jack shrugged his shoulders. "Yes, she'd be a lovely wife for somebody;" and then he added, as if reminiscently, "if he could afford it. Good-by."

"That's just a fashion of talking. I never knew a time when so many people afforded to do what they wanted to do. But you men are all alike. Good-by."

When Jack reached home it was only a little after six o'clock, and as they were not to go out to dine till eight, he had a good hour to rest from the fatigues of the day, and run over the evening papers and dip into the foreign periodicals to catch a topic or two for the dinner-table.

"Yes, sir," said the maid, "Mrs. Delancy came in an hour ago."

IV

Edith's day had been as busy as Jack's, notwithstanding she had put aside several things that demanded her attention. She denied herself the morning attendance on the Literature Class that was raking over the eighteenth century. This week Swift was to be arraigned. The last time when Edith was present it was Steele. The judgment, on the whole, had been favorable, and there had been a little stir of tenderness among the bonnets over Thackeray's comments on the Christian soldier. It seemed to bring him near to them. "Poor Dick Steele!" said the essayist. Edith declared afterwards that the large woman who sat next to her, Mrs. Jerry Hollowell, whispered to her that she always thought his name was Bessemer; but this was, no doubt, a pleasantry. It was a beautiful essay, and so stimulating! And then there was bouillon, and time to look about at the toilets. Poor Steele, it would have cheered his life to know that a century after his death so many beautiful women, so exquisitely dressed, would have been concerning themselves about him. The function lasted two hours. Edith made a little calculation. In five minutes she could have got from the encyclopaedia all the facts in the essay, and while her maid was doing her hair she could have read five times as much of Steele as the essayist read. And, somehow, she was not stimulated, for the impression seemed to prevail that now Steele was disposed of. And she had her doubts whether literature would, after all, prove to be a permanent social distraction. But Edith may have been too severe in her judgment. There was probably not a woman in the class that day who did not go away with the knowledge that Steele was an author, and that he lived in the eighteenth century. The hope for the country is in the diffusion of knowledge.

Leaving the class to take care of Swift, Edith went to the managers' meeting at the Women's Hospital, where there was much to do of very practical work, pitiful cases of women and children suffering through no fault of their own, and money more difficult to raise than sympathy. The meeting took time and thought. Dismissing her carriage, and relying on elevated and surface cars, Edith then took a turn on the East Side, in company with a dispensary physician whose daily duty called her into the worst parts of the town. She had a habit of these tours before her marriage, and, though they were discouragingly small in direct results, she gained a knowledge of city life that was of immense service in her general charity work. Jack had suggested the danger of these excursions, but she had told him that a woman was less liable to insult in the East Side than in Fifth Avenue, especially at twilight, not because the East Side was a nice quarter of the city, but because it was accustomed to see women who minded their own business go about unattended, and the prowlers had not the habit of going there. She could even relate cases of chivalrous protection of "ladies" in some of the worst streets.

What Edith saw this day, open to be seen, was not so much sin as ignorance of how to live, squalor, filthy

surroundings acquiesced in as the natural order, wonderful patience in suffering and deprivation, incapacity, ill-paid labor, the kindest spirit of sympathy and helpfulness of the poor for each other. Perhaps that which made the deepest impression on her was the fact that such conditions of living could seem natural to those in them, and that they could get so much enjoyment of life in situations that would have been simple misery to her.

The visitors were in a foreign city. The shop signs were in foreign tongues; in some streets all Hebrew. On chance news-stands were displayed newspapers in Russian, Bohemian, Arabic, Italian, Hebrew, Polish, German—none in English. The theatre bills were in Hebrew or other unreadable type. The sidewalks and the streets swarmed with noisy dealers in every sort of second-hand merchandise—vegetables that had seen a better day, fish in shoals. It was not easy to make one's way through the stands and push-carts and the noisy dickering buyers and sellers, who haggled over trifles and chaffed good-naturedly and were strictly intent on their own affairs. No part of the town is more crowded or more industrious. If youth is the hope of the country, the sight was encouraging, for children were in the gutters, on the house steps, at all the windows. The houses seemed bursting with humanity, and in nearly every room of the packed tenements, whether the inmates were sick or hungry, some sort of industry was carried on. In the damp basements were junk-dealers, rag-pickers, goose-pickers. In one noisome cellar, off an alley, among those sorting rags, was an old woman of eighty-two, who could reply to questions only in a jargon, too proud to beg, clinging to life, earning a few cents a day in this foul occupation. But life is sweet even with poverty and rheumatism and eighty years. Did her dull eyes, turning inward, see the Carpathian Hills, a free girlhood in village drudgery and village sports, then a romance of love, children, hard work, discontent, emigration to a New World of promise? And now a cellar by day, the occupation of cutting rags for carpets, and at night a corner in a close and crowded room on a flock bed not fit for a dog. And this was a woman's life.

Picturesque foreign women going about with shawls over their heads and usually a bit of bright color somewhere, children at their games, hawkers loudly crying their stale wares, the click of sewing-machines heard through a broken window, everywhere animation, life, exchange of rough or kindly banter. Was it altogether so melancholy as it might seem? Not everybody was hopelessly poor, for here were lawyers' signs and doctors' signs—doctors in whom the inhabitants had confidence because they charged all they could get for their services—and thriving pawnbrokers' shops. There were parish schools also—perhaps others; and off some dark alley, in a room on the ground-floor, could be heard the strident noise of education going on in high-voiced study and recitation. Nor were amusements lacking—notices of balls, dancing this evening, and ten-cent shows in palaces of legerdemain and deformity.

It was a relenting day in March; patches of blue sky overhead, and the sun had some quality in its shining. The children and the caged birds at the open windows felt it—and there were notes of music here and there above the traffic and the clamor. Turning down a narrow alley, with a gutter in the centre, attracted by festive sounds, the visitors came into a small stone-paved court with a hydrant in the centre surrounded by tall tenement-houses, in the windows of which were stuffed the garments that would no longer hold together to adorn the person. Here an Italian girl and boy, with a guitar and violin, were recalling *la bella Napoli*, and a couple of pretty girls from the court were footing it as merrily as if it were the grape harvest. A woman opened a lower room door and sharply called to one of the dancing girls to come in, when Edith and the doctor appeared at the bottom of the alley, but her tone changed when she recognized the doctor, and she said, by way of apology, that she didn't like her daughter to dance before strangers. So the music and the dance went on, even little dots of girls and boys shuffling about in a stiff-legged fashion, with applause from all the windows, and at last a largesse of pennies—as many as five altogether—for the musicians. And the sun fell lovingly upon the pretty scene.

But then there were the sweaters' dens, and the private rooms where half a dozen pale-faced tailors stitched and pressed fourteen and sometimes sixteen hours a day, stifling rooms, smelling of the hot goose and steaming cloth, rooms where they worked, where the cooking was done, where they ate, and late at night, when overpowered with weariness, lay down to sleep. Struggle for life everywhere, and perhaps no more discontent and heart-burning and certainly less ennui than in the palaces on the avenues.

The residence of Karl Mulhaus, one of the doctor's patients, was typical of the homes of the better class of poor. The apartment fronted on a small and not too cleanly court, and was in the third story. As Edith mounted the narrow and dark stairways she saw the plan of the house. Four apartments opened upon each landing, in which was the common hydrant and sink. The Mulhaus apartment consisted of a room large enough to contain a bed, a cook-stove, a bureau, a rocking-chair, and two other chairs, and it had two small windows, which would have more freely admitted the southern sun if they had been washed, and a room adjoining, dark, and nearly filled by a big bed. On the walls of the living room were hung highly colored advertising chromos of steamships and palaces of industry, and on the bureau Edith noticed two illustrated newspapers of the last year, a patent-medicine almanac, and a volume of Schiller. The bureau also held Mr. Mulhaus's bottles of medicine, a comb which needed a dentist, and a broken hair-brush. What gave the room, however, a cheerful aspect were some pots of plants on the window-ledges, and half a dozen canary-bird cages hung wherever there was room for them.

None of the family happened to be at home except Mr. Mulhaus, who occupied the rocking-chair, and two children, a girl of four years and a boy of eight, who were on the floor playing "store" with some blocks of wood, a few tacks, some lumps of coal, some scraps of paper, and a tangle of twine. In their prattle they spoke, the English they had learned from their brother who was in a store.

"I feel some better today," said Mr. Mulhaus, brightening up as the visitors entered, "but the cough hangs on. It's three months since this weather that I haven't been out, but the birds are a good deal of company." He spoke in German, and with effort. He was very thin and sallow, and his large feverish eyes added to the pitiful look of his refined face. The doctor explained to Edith that he had been getting fair wages in a type-foundry until he had become too weak to go any longer to the shop.

It was rather hard to have to sit there all day, he explained to the doctor, but they were getting along. Mrs. Mulhaus had got a job of cleaning that day; that would be fifty cents. Ally—she was twelve—was learning to sew. That was her afternoon to go to the College Settlement. Jimmy, fourteen, had got a place in a store, and

earned two dollars a week.

"And Vicky?" asked the doctor.

"Oh, Vicky," piped up the eight-year-old boy. "Vicky's up to the 'stution"—the hospital was probably the institution referred to—"ever so long now. I seen her there, me and Jim did. Such a bootifer place! 'Nd chicken!" he added. "Sis got hurt by a cart."

Vicky was seventeen, and had been in a fancy store.

"Yes," said Mulhaus, in reply to a question, "it pays pretty well raising canaries, when they turn out singers. I made fifteen dollars last year. I hain't sold much lately. Seems 's if people stopped wanting 'em such weather. I guess it 'll be better in the spring."

"No doubt it will be better for the poor fellow himself before spring," said the doctor as they made their way down the dirty stairways. "Now I'll show you one of my favorites."

They turned into a broader street, one of the busy avenues, and passing under an archway between two tall buildings, entered a court of back buildings. In the third story back lived Aunt Margaret. The room was scarcely as big as a ship's cabin, and its one window gave little light, for it opened upon a narrow well of high brick walls. In the only chair Aunt Margaret was seated close to the window. In front of her was a small work-table, with a kerosene lamp on it, but the side of the room towards which she looked was quite occupied by a narrow couch—ridiculously narrow, for Aunt Margaret was very stout. There was a thin chest of drawers on the other side, and the small coal stove that stood in the centre so nearly filled the remaining space that the two visitors were one too many.

"Oh, come in, come in," said the old lady, cheerfully, when the door opened. "I'm glad to see you."

"And how goes it?" asked the doctor.

"First rate. I'm coming on, doctor. Work's been pretty slack for two weeks now, but yesterday I got work for two days. I guess it will be better now."

The work was finishing pantaloons. It used to be a good business before there was so much cutting in.

"I used to get fifteen cents a pair, then ten; now they don't pay but five. Yes, the shop furnishes the thread."

"And how many pairs can you finish in a day?" asked Edith.

"Three—three pairs, to do 'em nice—and they are very particular—if I work from six in the morning till twelve at night. I could do more, but my sight ain't what it used to be, and I've broken my specs."

"So you earn fifteen cents a day?"

"When I've the luck to get work, my lady. Sometimes there isn't any. And things cost so much. The rent is the worst."

It appeared that the rent was two dollars and a half a month. That must be paid, at any rate. Edith made a little calculation that on a flush average of ninety cents a week earned, and allowing so many cents for coal and so many cents for oil, the margin for bread and tea must be small for the month. She usually bought three cents' worth of tea at a time.

"It is kinder close," said the old lady, with a smile. "The worst is, my feet hurt me so I can't stir out. But the neighbors is real kind. The little boy next room goes over to the shop and fetches my pantaloons and takes 'em back. I can get along if it don't come slack again."

Sitting all day by that dim window, half the night stitching by a kerosene lamp; lying for six hours on that narrow couch! How to account for this old soul's Christian resignation and cheerfulness! "For," said the doctor, "she has seen better days; she has moved in high society; her husband, who died twenty years ago, was a policeman. What the old lady is doing is fighting for her independence. She has only one fear—the almshouse."

It was with such scenes as these in her eyes that Edith went to her dressing-room to make her toilet for the Henderson dinner.

V

It was the first time they had dined with the Hendersons. It was Jack's doings. "Certainly, if you wish it," Edith had said when the invitation came. The unmentioned fact was that Jack had taken a little flier in Oshkosh, and a hint from Henderson one evening at the Union, when the venture looked squally, had let him out of a heavy loss into a small profit, and Jack felt grateful.

"I wonder how Henderson came to do it?" Jack was querying, as he and old Fairfax sipped their five-o'clock "Manhattan."

"Oh, Henderson likes to do a good-natured thing still, now and then. Do you know his wife?"

"No. Who was she?"

"Why, old Eschelle's daughter, Carmen; of course you wouldn't know; that was ten years ago. There was a good deal of talk about it at the time."

"How?"

"Some said they'd been good friends before Mrs. Henderson's death."

"Then Carmen, as you call her, wasn't the first?"

"No, but she was an easy second. She's a social climber; bound to get there from the start."

"Is she pretty?"

"Devilish. She's a little thing. I saw her once at Homburg, on the promenade with her mother."

"The kind of sweet blonde, I said to myself, that would mix a man up in a duel before he knew where he was."

"She must be interesting."

"She was always clever, and she knows enough to play a straight game and when to propitiate. I'll bet a five she tells Henderson whom to be good to when the chance offers."

"Then her influence on him is good?"

"My dear sir, she gets what she wants, and Henderson is going to the... well, look at the lines in his face. I've known Henderson since he came fresh into the Street. He'd rarely knife a friend when his first wife was living. Now, when you see the old frank smile on his face, it's put on."

It was half-past eight when Mr. Henderson with Mrs. Delancy on his arm led the way to the diningroom. The procession was closed by Mrs. Henderson and Mr. Delancy. The Van Dams were there, and Mrs. Chesney and the Chesney girls, and Miss Tavish, who sat on Jack's right, but the rest of the guests were unknown to Jack, except by name. There was a strong dash of the Street in the mixture, and although the Street was tabooed in the talk, there was such an emanation of aggressive prosperity at the table that Jack said afterwards that he felt as if he had been at a meeting of the board.

If Jack had known the house ten years ago, he would have noticed certain subtle changes in it, rather in the atmosphere than in many alterations. The newness and the glitter of cost had worn off. It might still be called a palace, but the city had now a dozen handsomer houses, and Carmen's idea, as she expressed it, was to make this more like a home. She had made it like herself. There were pictures on the walls that would not have hung there in the late Mrs. Henderson's time; and the prevailing air was that of refined sensuousness. Life, she said, was her idea, life in its utmost expression, untrammelled, and yes, a little Greek. Freedom was perhaps the word, and yet her latest notion was simplicity. The dinner was simple. Her dress was exceedingly simple, save that it had in it somewhere a touch of audacity, revealing in a flash of invitation the hidden nature of the woman. She knew herself better than any one knew her, except Henderson, and even he was forced to laugh when she travestied Browning in saying that she had one soul-side to face the world with, one to show the man she loved, and she declared he was downright coarse when on going out of the door he muttered, "But it needn't be the seamy side." The reported remark of some one who had seen her at church that she looked like a nun made her smile, but she broke into a silvery laugh when she heard Van Dam's comment on it, "Yes, a devil of a nun."

The library was as cozy as ever, but did not appear to be used much as a library. Henderson, indeed, had no time to add to his collection or enjoy it. Most of the books strewn on the tables were French novels or such American tales as had the cachet of social riskiness. But Carmen liked the room above all others. She enjoyed her cigarette there, and had a fancy for pouring her five-o'clock tea in its shelter. Books which had all sorts of

things in them gave somehow an unconventional atmosphere to the place, and one could say things there that one couldn't say in a drawing-room.

Henderson himself, it must be confessed, had grown stout in the ten years, and puffy under the eyes. There were lines of irritation in his face and lines of weariness. He had not kept the freshness of youth so well as Carmen, perhaps because of his New England conscience. To his guest he was courteous, seemed to be making an effort to be so, and listened with well-assumed interest to the story of her day's pilgrimage. At length he said, with a smile, "Life seems to interest you, Mrs. Delancy."

"Yes, indeed," said Edith, looking up brightly; "doesn't it you?"

"Why, yes; not life exactly, but things, doing things—conflict."

"Yes, I can understand that. There is so much to be done for everybody."

Henderson looked amused. "You know in the city the gospel is that everybody is to be done."

"Well," said Edith, not to be diverted, "but, Mr. Henderson, what is it all for—this conflict? Perhaps, however, you are fighting the devil?"

"Yes, that's it; the devil is usually the other fellow. But, Mrs. Delancy," added Henderson, with an accent of seriousness, "I don't know what it's all for. I doubt if there is much in it."

"And yet the world credits you with finding a great deal in it."

"The world is generally wrong. Do you understand poker, Mrs. Delancy? No! Of course you do not. But the interest of the game isn't so much in the cards as in the men."

"I thought it was the stakes."

"Perhaps so. But you want to win for the sake of winning. If I gambled it would be a question of nerve. I suppose that which we all enjoy is the exercise of skill in winning."

"And not for the sake of doing anything—just winning? Don't you get tired of that?" asked Edith, quite simply.

There was something in Edith's sincerity, in her fresh enthusiasm about life, that appeared to strike a reminiscent note in Henderson. Perhaps he remembered another face as sweet as hers, and ideals, faint and long ago, that were once mixed with his ideas of success. At any rate, it was with an accent of increased deference, and with a look she had not seen in his face before, that he said:

"People get tired of everything. I'm not sure but it would interest me to see for a minute how the world looks through your eyes." And then he added, in a different tone, "As to your East Side, Mrs. Henderson tried that some years ago."

"Wasn't she interested?"

"Oh, very much. For a time. But she said there was too much of it." And Edith could detect no tone of sarcasm in the remark.

Down at the other end of the table, matters were going very smoothly. Jack was charmed with his hostess. That clever woman had felt her way along from the heresy trial, through Tuxedo and the Independent Theatre and the Horse Show, until they were launched in a perfectly free conversation, and Carmen knew that she hadn't to look out for thin ice.

"Were you thinking of going on to the Conventional Club tonight, Mr. Delancy?" she was saying.

"I don't belong," said Jack. "Mrs. Delancy said she didn't care for it."

"Oh, I don't care for it, for myself," replied Carmen.

"I do," struck in Miss Tavish. "It's awfully nice."

"Yes, it does seem to fill a want. Why, what do you do with your evenings, Mr. Delancy?"

"Well, here's one of them."

"Yes, I know, but I mean between twelve o'clock and bedtime."

"Oh," said Jack, laughing out loud, "I go to bed—sometimes."

"Yes, there's always that. But you want some place to go to after the theatres and the dinners; after the other places are shut up you want to go somewhere and be amused."

"Yes," said Jack, falling in, "it is a fact that there are not many places of amusement for the rich; I understand. After the theatres you want to be amused. This Conventional Club is—"

"I tell you what it is. It's a sort of Midnight Mission for the rich. They never have had anything of the kind in the city."

"And it's very nice," said Miss Tavish, demurely.

"The performers are selected. You can see things there that you want to see at other places to which you can't go. And everybody you know is there."

"Oh, I see," said Jack. "It's what the Independent Theatre is trying to do, and what all the theatrical people say needs to be done, to elevate the character of the audiences, and then the managers can give better plays."

"That's just it. We want to elevate the stage," Carmen explained.

"But," continued Jack, "it seems to me that now the audience is select and elevated, it wants to see the same sort of things it liked to see before it was elevated."

"You may laugh, Mr. Delancy," replied Carmen, throwing an earnest simplicity into her eyes, "but why shouldn't women know what is going on as well as men?"

"And why," Miss Tavish asked, "will the serpentine dances and the London topical songs do any more harm to women than to men?"

"And besides, Mr. Delancy," Carmen said, chiming in, "isn't it just as proper that women should see women dance and throw somersaults on the stage as that men should see them? And then, you know, women are such a restraining influence."

"I hadn't thought of that," said Jack. "I thought the Conventional was for the benefit of the audience, not for the salvation of the performers."

"It's both. It's life. Don't you think women ought to know life? How are they to take their place in the world unless they know life as men know it?"

"I'm sure I don't know whose place they are to take, the serpentine dancer's or mine," said Jack, as if he were studying a problem. "How does your experiment get on, Miss Tavish?"

Carmen looked up quickly.

"Oh, I haven't any experiment," said Miss Tavish, shaking her head. "It's just Mr. Delancy's nonsense."

"I wish I had an experiment. There is so little for women to do. I wish I knew what was right." And Carmen looked mournfully demure, as if life, after all, were a serious thing with her.

"Whatever Mrs. Henderson does is sure to be right," said Jack, gallantly.

Carmen shot at him a quick sympathetic glance, tempered by a grateful smile. "There are so many points of view."

Jack felt the force of the remark as he did the revealing glance. And he had a swift vision of Miss Tavish leading him a serpentine dance, and of Carmen sweetly beckoning him to a pleasant point of view. After all it doesn't much matter. Everything is in the point of view.

After dinner and cigars and cigarettes in the library, the talk dragged a little in duets. The dinner had been charming, the house was lovely, the company was most agreeable. All said that. It had been so somewhere else the night before that, and would be the next night. And the ennui of it all! No one expressed it, but Henderson could not help looking it, and Carmen saw it. That charming hostess had been devoting herself to Edith since dinner. She was so full of sympathy with the East-Side work, asked a hundred questions about it, and declared that she must take it up again. She would order a cage of canaries from that poor German for her kitchen. It was such a beautiful idea. But Edith did not believe in her one bit. She told Jack afterwards that "Mrs. Henderson cares no more for the poor of New York than she does for—"

"Henderson?" suggested Jack.

"Oh, I don't know anything about that. Henderson has only one idea—to get the better of everybody, and be the money king of New York. But I should not wonder if he had once a soft spot in his heart. He is better than she is."

It was still early, lacked half an hour of midnight, and the night was before them. Some one proposed the Conventional. "Yes," said Carmen; "all come to our box." The Van Dams would go, Miss Tavish, the Chesneys; the suggestion was a relief to everybody. Only Mr. Henderson pleaded important papers that must have his attention that night. Edith said that she was too tired, but that her desertion must not break up the party.

"Then you will excuse me also," said Jack, a little shade of disappointment in his face.

"No, no," said Edith, quickly; "you can drop me on the way. Go, by all means, Jack."

"Do you really want me to go, dear?" said Jack, aside.

"Why of course; I want you to be happy."

And Jack recalled the loving look that accompanied these words, later on, as he sat in the Henderson box at the Conventional, between Carmen and Miss Tavish, and saw, through the slight haze of smoke, beyond the orchestra, the praiseworthy efforts of the Montana Kicker, who had just returned with the imprimatur of Paris, to relieve the ennui of the modern world.

The complex affair we call the world requires a great variety of people to keep it going. At one o'clock in the morning Carmen and our friend Mr. Delancy and Miss Tavish were doing their part. Edith lay awake listening for Jack's return. And in an alley off Rivington Street a young girl, pretty once, unknown to fortune but not to fame, was about to render the last service she could to the world by leaving it.

The impartial historian scarcely knows how to distribute his pathos. By the electric light (and that is the modern light) gayety is almost as pathetic as suffering. Before the Montana girl hit upon the happy device that gave her notoriety, her feet, whose every twinkle now was worth a gold eagle, had trod a thorny path. There was a fortune now in the whirl of her illusory robes, but any day—such are the whims of fashion—she might be wandering again, sick at heart, about the great city, knocking at the side doors of variety shows for any engagement that would give her a pittance of a few dollars a week. How long had Carmen waited on the social outskirts; and now she had come into her kingdom, was she anything but a tinsel queen? Even Henderson, the great Henderson, did the friends of his youth respect him? had he public esteem? Carmen used to cut out the newspaper paragraphs that extolled Henderson's domestic virtue and his generosity to his family, and show them to her lord, with a queer smile on her face. Miss Tavish, in the nervous consciousness of fleeting years, was she not still waiting, dashing here and there like a bird in a net for the sort of freedom, audacious as she was, that seemed denied her? She was still beautiful, everybody said, and she was sought and flattered, because she was always merry and good-natured. Why should Van Dam, speaking of women, say that there were horses that had been set up, and checked up and trained, that held their heads in an aristocratic fashion, moved elegantly, and showed style, long after the spirit had gone out of them? And Jack himself, happily married, with a comfortable income, why was life getting flat to him? What sort of career was it that needed the aid of Carmen and the serpentine dancer? And why not, since it is absolutely necessary that the world should be amused?

We are in no other world when we enter the mean tenement in the alley off Rivington Street. Here also is the life of the town. The room is small, but it contains a cook-stove, a chest of drawers, a small table, a couple of chairs, and two narrow beds. On the top of the chest are a looking-glass, some toilet articles, and bottles of

medicine. The cracked walls are bare and not clean. In one of the beds are two children, sleeping soundly, and on the foot of it is a middle-aged woman, in a soiled woolen gown with a thin figured shawl drawn about her shoulders, a dirty cap half concealing her frowzy hair; she looks tired and worn and sleepy. On the other bed lies a girl of twenty years, a woman in experience. The kerosene lamp on the stand at the head of the bed casts a spectral light on her flushed face, and the thin arms that are restlessly thrown outside the cover. By the bedside sits the doctor, patient, silent, and watchful. The doctor puts her hand caressingly on that of the girl. It is hot and dry. The girl opens her eyes with a startled look, and says, feebly:

"Do you think he will come?"

"Yes, dear, presently. He never fails."

The girl closed her eyes again, and there was silence. The dim rays of the lamp, falling upon the doctor, revealed the figure of a woman of less than medium size, perhaps of the age of thirty or more, a plain little body, you would have said, who paid the slightest possible attention to her dress, and when she went about the city was not to be distinguished from a working-woman. Her friends, indeed, said that she had not the least care for her personal appearance, and unless she was watched, she was sure to go out in her shabbiest gown and most battered hat. She wore tonight a brown ulster and a nondescript black bonnet drawn close down on her head and tied with black strings. In her lap lay her leathern bag, which she usually carried under her arm, that contained medicines, lint, bandages, smelling-salts, a vial of ammonia, and so on; to her patients it was a sort of conjurer's bag, out of which she could produce anything that an emergency called for.

Dr. Leigh was not in the least nervous or excited. Indeed, an artist would not have painted her as a rapt angelic visitant to this abode of poverty. This contact with poverty and coming death was quite in her ordinary experience. It would never have occurred to her that she was doing anything unusual, any more than it would have occurred to the objects of her ministrations to overwhelm her with thanks. They trusted her, that was all. They met her always with a pleasant recognition. She belonged perhaps to their world. Perhaps they would have said that "Dr. Leigh don't handsome much," but their idea was that her face was good. That was what anybody would have said who saw her tonight, "She has such a good face;" the face of a woman who knew the world, and perhaps was not very sanguine about it, had few illusions and few antipathies, but accepted it, and tried in her humble way to alleviate its hardships, without any consciousness of having a mission or making a sacrifice.

Dr. Leigh—Miss Ruth Leigh—was Edith's friend. She had not come from the country with an exalted notion of being a worker among the poor about whom so much was written; she had not even descended from some high circle in the city into this world, moved by a restless enthusiasm for humanity. She was a woman of the people, to adopt a popular phrase. From her childhood she had known them, their wants, their sympathies, their discouragements; and in her heart—though you would not discover this till you had known her long and well—there was a burning sympathy with them, a sympathy born in her, and not assumed for the sake of having a career. It was this that had impelled her to get a medical education, which she obtained by hard labor and self-denial. To her this was not a means of livelihood, but simply that she might be of service to those all about her who needed help more than she did. She didn't believe in charity, this stout-hearted, clearheaded little woman; she meant to make everybody pay for her medical services who could pay; but somehow her practice was not lucrative, and the little salary she got as a dispensary doctor melted away with scarcely any perceptible improvement in her own wardrobe. Why, she needed nothing, going about as she did.

She sat—now waiting for the end; and the good face, so full of sympathy for the living, had no hope in it. Just another human being had come to the end of her path—the end literally. It was so everyday. Somebody came to the end, and there was nothing beyond. Only it was the end, and that was peace. One o'clock—half-past one. The door opened softly. The old woman rose from the foot of the bed with a start and a low "Herr! gross Gott." It was Father Damon. The girl opened her eyes with a frightened look at first, and then an eager appeal. Dr. Leigh rose to make room for him at the bedside. They bowed as he came forward, and their eyes met. She shook her head. In her eyes was no expectation, no hope. In his was the glow of faith. But the eyes of the girl rested upon his face with a rapt expression. It was as if an angel had entered the room.

Father Damon was a young man, not yet past thirty, slender, erect. He had removed as he came in his broad-brimmed soft hat. The hair was close-cut, but not tonsured. He wore a brown cassock, falling in straight lines, and confined at the waist with a white cord. From his neck depended from a gold chain a large gold cross. His face was smooth-shaven, thin, intellectual, or rather spiritual; the nose long, the mouth straight, the eyes deep gray, sometimes dreamy and puzzling, again glowing with an inner fervor. A face of long vigils and the schooled calmness of repressed energy. You would say a fanatic of God, with a dash of self-consciousness. Dr. Leigh knew him well. They met often on their diverse errands, and she liked, when she could, to go to vespers in the little mission chapel of St. Anselm, where he ministered. It was not the confessional that attracted her, that was sure; perhaps not altogether the service, though that was soothing in certain moods; but it was the noble personality of Father Damon. He was devoted to the people as she was, he understood them; and for the moment their passion of humanity assumed the same aspect, though she knew that what he saw, or thought he saw, lay beyond her agnostic vision.

Father Damon was an Englishman, a member of a London Anglican order, who had taken the three vows of poverty, chastity, and obedience, who had been for some years in New York, and had finally come to live on the East Side, where his work was. In a way he had identified himself with the people; he attended their clubs; he was a Christian socialist; he spoke on the inequalities of taxation; the strikers were pretty sure of his sympathy; he argued the injustice of the present ownership of land. Some said that he had joined a lodge of the Knights of Labor. Perhaps it was these things, quite as much as his singleness of purpose and his spiritual fervor, that drew Dr. Leigh to him with a feeling that verged on devotion. The ladies up-town, at whose tables Father Damon was an infrequent guest, were as fully in sympathy with this handsome and aristocratic young priest, and thought it beautiful that he should devote himself to the poor and the sinful; but they did not see why he should adopt their views.

It was at the mission that Father Damon had first seen the girl. She had ventured in not long ago at

twilight, with her cough and her pale face, in a silk gown and flower-garden of a hat, and crept into one of the confessional boxes, and told him her story.

"Do you think, Father," said the girl, looking up wistfully, "that I can—can be forgiven?"

Father Damon looked down sadly, pitifully. "Yes, my daughter, if you repent. It is all with our Father. He never refuses."

He knelt down, with his cross in his hand, and in a low voice repeated the prayer for the dying. As the sweet, thrilling voice went on in supplication the girl's eyes closed again, and a sweet smile played about her mouth; it was the innocent smile of the little girl long ago, when she might have awakened in the morning and heard the singing of birds at her window.

When Father Damon arose she seemed to be sleeping. They all stood in silence for a moment.

"You will remain?" he asked the doctor.

"Yes," she said, with the faintest wan smile on her face. "It is I, you know, who have care of the body."

At the door he turned and said, quite low, "Peace be to this house!"

VI

Father Damon came dangerously near to being popular. The austerity of his life and his known self-chastening vigils contributed to this effect. His severely formal, simple ecclesiastical dress, coarse in material but perfect in its saintly lines, separated him from the world in which he moved so unostentatiously and humbly, and marked him as one who went about doing good. His life was that of self-absorption and hardship, mortification of the body, denial of the solicitation of the senses, struggling of the spirit for more holiness of purpose—a life of supplication for the perishing souls about him. And yet he was so informed with the modern spirit that he was not content, as a zealot formerly might have been, to snatch souls out of the evil that is in the world, but he strove to lessen the evil. He was a reformer. It was probably this feature of his activity, and not his spiritual mission, that attracted to him the little group of positivists on the East Side, the demagogues of the labor lodges, the practical workers of the working-girls' clubs, and the humanitarian agnostics like Dr. Leigh, who were literally giving their lives without the least expectation of reward. Even the refined ethical-culture groups had no sneer for Father Damon. The little chapel of St. Anselm was well known. It was always open. It was plain, but its plainness was not the barrenness of a non-conformist chapel. There were two confessionals; a great bronze lamp attached to one of the pillars scarcely dispelled the obscurity, but cast an unnatural light upon the gigantic crucifix that hung from a beam in front of the chancel. There were half a dozen rows of backless benches in the centre of the chapel. The bronze lamp, and the candles always burning upon the altar, rather accented than dissipated the heavy shadows in the vaulted roof. At no hour was it empty, but at morning prayer and at vespers the benches were apt to be filled, and groups of penitents or spectators were kneeling or standing on the floor. At vespers there were sure to be carriages in front of the door, and among the kneeling figures were ladies who brought into these simple services for the poor something of the refinement of grace as it is in the higher circles. Indeed, at the hour set apart for confession, there were in the boxes saints from up-town as well as sinners from the slums. Sometimes the sinners were from up-town and the saints from the slums.

When the organ sounded, and through a low door in the chancel the priest entered, preceded by a couple of acolytes, and advanced swiftly to the reading-desk, there was an awed hush in the congregation. One would not dare to say that there was a sentimental feeling for the pale face and rapt expression of the devotee. It was more than that. He had just come from some scene of suffering, from the bed of one dying; he was weary with watching. He was faint with lonely vigils; he was visibly carrying the load of the poor and the despised. Even Ruth Leigh, who had dropped in for half an hour in one of her daily rounds—even Ruth Leigh, who had in her stanch, practical mind a contempt for forms and rituals, and no faith in anything that she could not touch, and who at times was indignant at the efforts wasted over the future of souls concerning which no one knew anything, when there were so many bodies, which had inherited disease and poverty and shame, going to worldly wreck before so-called Christian eyes—even she could scarcely keep herself from adoring this self-sacrificing spirit. The woes of humanity grieved him as they grieved her, and she used to say she did not care what he believed so long as he gave his life for the needy.

It was when he advanced to the altar-rail to speak that the man best appeared. His voice, which was usually low and full of melody, could be something terrible when it rose in denunciation of sin. Those who had traveled said that he had the manner of a preaching friar—the simple language, so refined and yet so homely and direct, the real, the inspired word, the occasional hastening torrent of words. When he had occasion to address one of the societies of ladies for the promotion of something among the poor, his style and manner were simplicity itself. One might have said there was a shade of contempt in his familiar and not seldom slightly humorous remarks upon society and its aims and aspirations, about which he spoke plainly and vigorously. And this was what the ladies liked. Especially when he referred to the pitifulness of class distinctions, in the light of the example of our Lord, in our short pilgrimage in this world. This unveiling and denunciation made them somehow feel nearer to their work, and, indeed, while they sat there, co-workers with this apostle of righteousness.

Perhaps there was something in the priestly dress that affected not only the congregation in the chapel, but all the neighborhood in which Father Damon lived. There was in the long robe, with its feminine lines, an assurance to the women that he was set apart and not as others were; and, on the other hand, the semi-feminine suggestion of the straight-falling garment may have had for the men a sort of appeal for defense and even protection. It is certain, at any rate, that Father Damon had the confidence of high and low, rich and poor. The forsaken sought him out, the hungry went to him, the dying sent for him, the criminal knocked at

the door of his little room, even the rich reprobate would have opened his bad heart to him sooner than to any one else. It is evident, therefore, that Father Damon was dangerously near to being popular. Human vanity will feed on anything within its reach, and there has been discovered yet no situation that will not minister to its growth. Suffering perhaps it prefers, and contumely and persecution. Are not opposition, spiteful anger, slander even, rejection of men, stripes even, if such there could be in these days, manna to the devout soul consciously set apart for a mission? But success, obsequiousness, applause, the love of women, the concurrent good opinion of all humanitarians, are these not almost as dangerous as persecution? Father Damon, though exalted in his calling, and filled with a burning zeal, was a sincere man, and even his eccentricities of saintly conduct expressed to his mind only the high purpose of self-sacrifice. Yet he saw, he could not but see, the spiritual danger in this rising tide of adulation. He fought against its influence, he prayed against it, he tried to humiliate himself, and his very humiliations increased the adulation. He was perplexed, almost ashamed, and examined himself to see how it was that he himself seemed to be thwarting his own work. Sometimes he withdrew from it for a week together, and buried himself in a retreat in the upper part of the island. Alas! did ever a man escape himself in a retreat? It made him calm for the moment. But why was it, he asked himself, that he had so many followers, his religion so few? Why was it, he said, that all the humanitarians, the reformers, the guilds, the ethical groups, the agnostics, the male and female knights, sustained him, and only a few of the poor and friendless knocked, by his solicitation, at the supernatural door of life? How was it that a woman whom he encountered so often, a very angel of mercy, could do the things he was doing, tramping about in the misery and squalor of the great city day and night, her path unilluminated by a ray from the future life?

Perhaps he had been remiss in his duty. Perhaps he was letting a vague philanthropy take the place of a personal solicitude for individual souls. The elevation of the race! What had the land question to do with the salvation of man? Suppose everybody on the East Side should become as industrious, as self-denying, as unselfish as Ruth Leigh, and yet without belief, without hope! He had accepted the humanitarian situation with her, and never had spoken to her of the eternal life. What unfaithfulness to his mission and to her! It should be so no longer.

It was after one of his weeks of retreat, at the close of vesper service, that Dr. Leigh came to him. He had been saying in his little talk that poverty is no excuse for irreligion, and that all aid in the hardship of this world was vain and worthless unless the sinner laid hold on eternal life. Dr. Leigh, who was laboring with a serious practical problem, heard this coldly, and with a certain contempt for what seemed to her a vague sort of consolation.

"Well," he said, when she came to him in the vestry, with a drop from the rather austere manner in which he had spoken, "what can I do for you?"

"For me, nothing, Father Damon. I thought perhaps you would go round with me to see a pretty bad case. It is in your parish."

"Ah, did they send for me? Do they want spiritual help?"

"First the natural, then the spiritual," she replied, with a slight tone of sarcasm in her voice. "That's just like a priest," she was thinking. "I do not know what to do, and something must be done."

"Did you report to the Associated Charities?"

"Yes. But there's a hitch somewhere. The machine doesn't take hold. The man says he doesn't want any charity, any association, treating him like a pauper. He's off peddling; but trade is bad, and he's been away a week. I'm afraid he drinks a little."

"Well?"

"The mother is sick in bed. I found her trying to do some fine stitching, but she was too weak to hold up the muslin. There are five young children. The family never has had help before."

Father Damon put on his hat, and they went out together, and for some time picked their way along the muddy streets in silence.

At length he asked, in a softened voice, "Is the mother a Christian?"

"I didn't ask," she replied shortly. "I found her crying because the children were hungry."

Father Damon, still under the impression of his neglect of duty, did not heed her warning tone, but persisted, "You have so many opportunities, Dr. Leigh, in your visits of speaking a word."

"About what?" she asked, refusing to understand, and hardened at the slightest sign of what she called cant.

"About the necessity of repentance and preparation for another life," he answered, softly but firmly. "You surely do not think human beings are created just for this miserable little experience here?"

"I don't know. I have too much to do with the want and suffering I see to raise anxieties about a world of which no one can possibly know anything."

"Pardon me," he persisted, "have you no sense of incompleteness in this life, in your own life? no inward consciousness of an undying personality?"

The doctor was angry for a moment at this intrusion. It had seemed natural enough for Father Damon to address his exhortations to the poor and sinful of his mission. She admired his spirit, she had a certain sympathy with him; for who could say that ministering to minds diseased might not have a physical influence to lift these people into a more decent and prosperous way of living? She had thought of herself as working with him to a common end. But for him now to turn upon her, absolutely ignoring the solid, rational, and scientific ground on which he knew, or should know, she stood, and to speak to her as one of the "lost," startled her, and filled her with indignation. She had on her lips a sarcastic reply to the effect that even if she had a soul, she had not taken up her work in the city as a means of saving it; but she was not given to sarcasm, and before she spoke she looked at her companion, and saw in the eyes a look of such genuine humble feeling, contradicting the otherwise austere expression of his face, that her momentary bitterness passed away.

"I think, Father Damon," she said, gently, "we had better not talk of that. I don't have much time for theorizing, you know, nor much inclination," she added.

The priest saw that for the present he could make no progress, and after a little silence the conversation went back to the family they were about to visit.

They found the woman better—at least, more cheerful. Father Damon noticed that there were medicines upon the stand, and that there were the remains of a meal which the children had been eating. He turned to the doctor. "I see that you have been providing for them."

"Oh, the eldest boy had already been out and begged a piece of bread when I came. Of course they had to have something more at once. But it is very little that I can do."

He sat down by the bed, and talked with the mother, getting her story, while the doctor tidied up the room a bit, and then, taking the youngest child in her lap and drawing the others about her, began to tell a story in a low voice. Presently she was aware that the priest was on his knees and saying a prayer. She stopped in her story, and looked out through the dirty window into the chill and dark area.

"What is he doing?" whispered one of the children.

"I don't know," she said, and a sort of chill came over her heart. It all seemed a mockery, in these surroundings.

When he rose he said to the woman, "We will see that you do not want till your husband comes back."

"And I will look in tomorrow," said the doctor.

When they were in the street, Father Damon thanked her for calling his attention to the case, thanked her a little formally, and said that he would make inquiries and have it properly attended to. And then he asked: "Is your work ended for the day? You must be tired."

"Oh, no; I have several visits to make. I'm not tired. I rather think it is good for me, being out-of-doors so much." She thanked him, and said good-by.

For a moment he stood and watched the plain, resolute little woman threading her way through the crowded and unclean street, and then slowly walked away to his apartment, filled with sadness and perplexity.

The apartment which he occupied was not far from the mission chapel, and it was the one clean spot among the ill-kept tenements; but as to comfort, it was not much better than the cell of an anchorite. Of this, however, he was not thinking as he stretched himself out on his pallet to rest a little from the exhausting labors of the day. Probably it did not occur to him that his self-imposed privations lessened his strength for his work.

He was thinking of Ruth Leigh. What a rare soul! And yet apparently she did not think or care whether she had a soul. What could be the spring of her incessant devotion? If ever woman went about doing good in an unselfish spirit it was she. Yet she confessed her work hopeless. She had no faith, no belief in immortality, no expectation of any reward, nothing to offer to anybody beyond this poor life. Was this the enthusiasm of humanity, of which he heard so much? But she did not seem to have any illusions, or to be burned up by enthusiasm. She just kept on. Ah, he thought, what a woman she would be if she were touched by the fire of faith!

Meantime, Ruth Leigh went on her round. One day was like another, except that every day the kaleidoscope of misery showed new combinations, new phases of suffering and incompetence, and there was always a fresh interest in that. For years now this had been her life, in the chill of winter and the heat of summer, without rest or vacation. The amusements, the social duties, the allurements of dress and society, that so much occupied the thoughts of other women, did not seem to come into her life. For books she had little time, except the books of her specialty. The most exciting novels were pale compared with her daily experiences of real life. Almost her only recreation was a meeting of the working-girls, a session of her labor lodge, or an assembly at the Cooper Union, where some fiery orator, perhaps a priest, or a clever agitator, a working-man glib of speech, who had a mass of statistics at the end of his tongue, who read and discussed, in some private club of zealots of humanity, metaphysics, psychology, and was familiar with the whole literature of labor and socialism, awoke the enthusiasm of the discontented or the unemployed, and where men and women, in clear but homely speech, told their individual experiences of wrong and injustice. There was evidence in all these demonstrations and organizations that the world was moving, and that the old order must change.

Years and years the little woman had gone on with her work, and she frankly confessed to Edith, one day when they were together going her rounds, that she could see no result from it all. The problem of poverty and helplessness and incapacity seemed to her more hopeless than when she began. There might be a little enlightenment here and there, but there was certainly not less misery. The state of things was worse than she thought at first; but one thing cheered her: the people were better than she thought. They might be dull and suspicious in the mass, but she found so much patience, unselfishness, so many people of good hearts and warm affections.

"They are the people," she said, "I should choose for friends. They are natural, unsophisticated. And do you know," she went on, "that what most surprises me is the number of reading, thoughtful people among those who do manual labor. I doubt if on your side of town the best books, the real fundamental and abstruse books, are so read and discussed, or the philosophy of life is so seriously considered, as in certain little circles of what you call the working-classes."

"Isn't it all very revolutionary?" asked Edith.

"Perhaps," replied the doctor, dryly. "But they have no more fads than other people. Their theories seem to them not only practical, but they try to apply them to actual legislation; at any rate, they discriminate in vagaries. You would have been amused the other night in a small circle at the lamentations over a member—he was a car-driver—who was the authoritative expositor of Schopenhauer, because he had gone off into Theosophy. It showed such weakness."

"I have heard that the members of that circle were Nihilists."

"The club has not that name, but probably the members would not care to repudiate the title, or deny that they were Nihilists theoretically—that is, if Nihilism means an absolute social and political overturning in order that something better may be built up. And, indeed, if you see what a hopeless tangle our present situation is, where else can the mind logically go?"

"It is pitiful enough," Edith admitted. "But all this movement you speak of seems to me a vague agitation."

"I don't think," the doctor said, after a moment, "that you appreciate the intellectual force that is in it all, or allow for the fermenting power in the great discontented mass of these radical theories on the problem of life."

This was a specimen of the sort of talk that Edith and the doctor often drifted into in their mission work. As Ruth Leigh tramped along late this afternoon in the slush of the streets, from one house of sickness and poverty to another, a sense of her puny efforts in this great mass of suffering and injustice came over her anew. Her indignation rose against the state of things. And Father Damon, who was trying to save souls, was he accomplishing anything more than she? Why had he been so curt with her when she went to him for help this afternoon? Was he just a narrow-minded, bigoted priest? A few nights before she had heard him speak on the single tax at a labor meeting. She recalled his eloquence, his profound sympathy with the cause of the people, the thrilling, pathetic voice, the illumination of his countenance, the authority, the consecration in his attitude and dress; and he was transfigured to her then, as he was now in her thought, into an apostle of humanity. Alas! she thought, what a leader he would be if he would break loose from his superstitious traditions!

VII

The acquaintance between the house of Henderson and the house of Delancy was not permitted to languish. Jack had his reasons for it, which may have been financial, and Carmen had her reasons, which were probably purely social. What was the good of money if it did not bring social position? and what, on the other hand, was the good of social position if you could not use it to get money?

In his recent association with the newly rich, Jack's twenty thousand a year began to seem small. In fact, in the lowering of the rate of interest and the shrinkage of securities, it was no longer twenty thousand a year. This would have been a matter of little consequence in the old order. His lot was not cast among the poor; most of his relations had solid fortunes, and many of them were millionaires, or what was equivalent to that, before the term was invented. But they made little display; none at all merely for the purpose of exhibition, or to gain or keep social place. In this atmosphere in which he was born Jack floated along without effort, with no demand upon him to keep up with a rising standard of living. Even impecuniosity, though inconvenient, would not have made him lose caste.

All this was changing now. Since the introduction of a new element even the conservative old millions had begun to feel the stir of uneasiness, and to launch out into extravagance in rivalry with the new millions. Even with his relations Jack began to feel that he was poor. It did not spur him to do anything, to follow the example, for instance, of the young fellows from the country, who were throwing themselves into Wall Street with the single purpose of becoming suddenly rich, but it made him uneasy. And when he was with the Hendersons, or Miss Tavish, whose father, though not newly rich, was one of the most aggressive of speculators, and saw how easily every luxurious desire glided into fulfillment, he felt for the first time in his life the emotion of envy. It seemed then that only unlimited money could make the world attractive. Why, even to keep up with the unthinking whims of Miss Tavish would bankrupt him in six months. That little spread at Wherry's for the theatre party the other night, though he made light of it to Edith, was almost the price he couldn't afford to pay for Storm. He had a grim thought that midwinter flowers made dining as expensive as dying. Carmen, whom nothing escaped, complimented him on his taste, quite aware that he couldn't afford it, and, apropos, told him of a lady in Chicago who, hearing that the fashion had changed, wrote on her dinner cards, "No flowers." It was only a matter of course for these people to build a new country-house in any spot that fashion for the moment indicated, to equip their yachts for a Mediterranean voyage or for loitering down the Southern coast, to give a ball that was the talk of the town, to make up a special train of luxurious private cars for Mexico or California. Even at the clubs the talk was about these things and the opportunities for getting them.

There was a rumor about town that Henderson was a good deal extended. It alarmed a hundred people, not on Henderson's account, but their own. When one of them consulted Uncle Jerry, that veteran smiled.

"Oh, I guess Henderson's all right. But I wouldn't wonder if it meant a squeeze. Of course if he's extended, it's an excuse for settling up, and the shorts will squeal. I've seen Henderson extended a good many times," and the old man laughed. "Don't you worry about him."

This opinion, when reported, did not seem to quiet Jack's fears, who saw his own little venture at the mercy of a sweeping Street game. It occurred to him that he possibly might get a little light on the matter by dropping in that afternoon and taking a quiet cup of tea with Mrs. Henderson.

He found her in the library. Outdoors winter was slouching into spring with a cold drizzle, with a coating of ice on the pavements-animating weather for the medical profession. Within, there was the glow of warmth and color that Carmen liked to create for herself. In an entrancing tea-gown, she sat by a hickory fire, with a fresh magazine in one hand and a big paper-cutter in the other. She rose at Jack's entrance, and, extending her hand, greeted him with a most cordial smile. It was so good of him! She was so lonesome! He could himself see that the lonesomeness was dissipated, as she seated him in a comfortable chair by the fire, and then stood a moment looking at him, as if studying his comfort. She was such a domestic woman!

"You look tired, monsieur," she said, as she passed behind his chair and rested the tip of her forefinger for a second on his head. "I shall make you a cup of tea at once."

"Not tired, but bothered," said Jack, stretching out his legs.

"I know," she replied; "it's a bothering world." She was still behind him, and spoke low, but with sympathy. "I remember, it's only one lump."

He could feel her presence, so womanly and friendly. "I don't care what people say," he was thinking, "she's a good-hearted little thing, and understands men." He felt that he could tell her anything, almost anything that he could tell a man. She was sympathetic and not squeamish.

"There," she said, handing him the tea and looking down on him.

The cup was dainty, the fragrance of the tea delicious, the woman exquisite.

"I'm better already," said Jack, with a laugh.

She made a cup for herself, handed him the cigarettes, lit one for herself, and sat on a low stool not far from him.

"Now what is it?"

"Oh, nothing—a little business worry. Have you heard any Street rumor?"

"Rumor?" she repeated, with a little start. And then, leaning forward, "Do you mean that about Mr. Henderson in the morning papers?"

"Yes."

Carmen, relieved, gave a liquid little laugh, and then said, with a change to earnestness: "I'm going to trust you, my friend. Henderson put it in himself! He told me so this morning when I asked him about it. This is just between ourselves."

Jack said, "Of course," but he did not look relieved. The clever creature divined the situation without another word, for there was no turn in the Street that she was not familiar with. But there was no apparent recognition of it, except in her sympathetic tone, when she said: "Well, the world is full of annoyances. I'm bothered myself—and such a little thing."

"What is it?"

"Oh nothing, not even a rumor. You cannot do anything about it. I don't know why I should tell you. But I will." And she paused a moment, looking down in an innocent perplexity. "It's just this: I am on the Foundlings' Board with Mrs. Schuyler Blunt, and I don't know her, and you can't think how awkward it is having to meet her every week in that stiff kind of way." She did not go on to confide to Jack how she had intrigued to get on the board, and how Mrs. Schuyler Blunt, in the most well-bred manner, had practically ignored her.

"She's an old friend of mine."

"Indeed! She's a charming woman."

"Yes. We were great cronies when she was Sadie Mack. She isn't a genius, but she is good-hearted. I suppose she is on all the charity boards in the city. She patronizes everything," Jack continued, with a smile.

"I'm sure she is," said Carmen, thinking that however good-hearted she might be she was very "snubby." "And it makes it all the more awkward, for I am interested in so many things myself."

"I can arrange all that," Jack said, in an off-hand way. Carmen's look of gratitude could hardly be distinguished from affection. "That's easy enough. We are just as good friends as ever, though I fancy she doesn't altogether approve of me lately. It's rather nice for a fellow, Mrs. Henderson, to have a lot of women keeping him straight, isn't it?" asked Jack, in the tone of a bad boy.

"Yes. Between us all we will make a model of you. I am so glad now that I told you."

Jack protested that it was nothing. Why shouldn't friends help each other? Why not, indeed, said Carmen, and the talk went on a good deal about friendship, and the possibility of it between a man and a woman. This sort of talk is considered serious and even deep, not to say philosophic. Carmen was a great philosopher in it. She didn't know, but she believed, it seemed natural, that every woman should have one man friend. Jack rose to go.

"So soon?" And it did seem pathetically soon. She gave him her hand, and then by an impulse she put her left hand over his, and looked up to him in quite a business way.

"Mr. Delancy, don't you be troubled about that rumor we were speaking of. It will be all right. Trust me."

He understood perfectly, and expressed both his understanding and his gratitude by bending over and kissing the little hand that lay in his.

When he had gone, Carmen sat a long time by the fire reflecting. It would be sweet to humiliate the Delancy and Schuyler Blunt set, as Henderson could. But what would she gain by that? It would be sweeter still to put them under obligations, and profit by that. She had endured a good many social rebuffs in her day, this tolerant little woman, and the sting of their memory could only be removed when the people who had ignored her had to seek social favors she could give. If Henderson only cared as much for such things as she did! But he was at times actually brutal about it. He seemed to have only one passion. She herself liked money, but only for what it would bring. Henderson was like an old Pharaoh, who was bound to build the biggest pyramid ever built to his memory; he hated to waste a block. But what was the good of that when one had passed beyond the reach of envy?

Revolving these deep things in her mind, she went to her dressing-room and made an elaborate toilet for dinner. Yet it was elaborately simple. That sort needed more study than the other. She would like to be the Carmen of ten years ago in Henderson's eyes.

Her lord came home late, and did not dress for dinner. It was often so, and the omission was usually not allowed to pass by Carmen without notice, to which Henderson was sure to growl that he didn't care to be always on dress parade. Tonight Carmen was all graciousness and warmth. Henderson did not seem to notice it. He ate his dinner abstractedly, and responded only in monosyllables to her sweet attempts at conversation. The fact was that the day had been a perplexing one; he was engaged in one of his big fights, a scheme that aroused all his pugnacity and taxed all his resources. He would win—of course; he would smash everybody, but he would win. When he was in this mood Carmen felt that she was like a daisy in the path of a cyclone. In the first year of their marriage he used to consult her about all his schemes, and value her keen understanding. She wondered why he did not now. Did he distrust even her, as he did everybody else? Tonight she asked no questions. She was unruffled by his short responses to her conversational attempts; by her subtle, wifely manner she simply put herself on his side, whatever the side was.

In the library she brought him his cigar, and lighted it. She saw that his coffee was just as he liked it. As she moved about, making things homelike, Henderson noticed that she was more Carmenish than he had seen her in a long time. The sweet ways and the simple toilet must be by intention. And he knew her so well. He began to be amused and softened. At length he said, in his ordinary tone, "Well, what is it?"

"What is what, dear?"

"What do you want?"

Carmen looked perplexed and sweetly surprised. There is nothing so pitiful about habitual hypocrisy as that it never deceives anybody. It was not the less painful now that Carmen knew that Henderson knew her to the least fibre of her self-seeking soul, and that she felt that there were currents in his life that she could not calculate. A man is so much more difficult to understand than a woman, she reflected. And yet he is so susceptible that he can be managed even when he knows he is being managed. Carmen was not disconcerted for a moment. She replied, with her old candor:

"What an idea! You give me everything I want before I know what it is."

"And before I know it either," he responded, with a grim smile. "Well, what is the news today?"

"Just the same old round. The Foundlings' Board, for one thing."

"Are you interested in foundlings?"

"Not much," said Carmen, frankly. "I'm interested in those that find them. I told you how hateful that Mrs. Schuyler Blunt is."

"Why don't you cut her? Why don't you make it uncomfortable for her?"

"I can't find out," she said, with a laugh, dropping into the language of the Street, "anything she is short in, or I would."

"And you want me to get a twist on old Blunt?" and Henderson roared with laughter at the idea.

"No, indeed. Dear, you are just a goose, socially. It is nothing to you, but you don't understand what we women have to go through. You don't know how hard it is—that woman!"

"What has she done?"

"Nothing. That's just it. What do you say in the Street—freeze? Well, she is trying to freeze me out."

Henderson laughed again. "Oh, I'll back you against the field."

"I don't want to be backed," said Carmen; "I want some sympathy."

"Well, what is your idea?"

"I was going to tell you. Mr. Delancy dropped in this afternoon for a cup of tea—"

"Oh!"

"Yes, and he knows Mrs. Schuyler Blunt well; they are old friends, and he is going to arrange it."

"Arrange what?"

"Why, smooth everything out, don't you know. But, Rodney, I do want you to do something for me; not for me exactly, but about this. Won't you look out for Mr. Delancy in this deal?"

"Seems to me you are a good deal interested in Jack Delancy," said Henderson, in a sneering tone. The remark was a mistake, for it gave Carmen the advantage, and he did not believe it was just. He knew that Carmen was as passionless as a diamond, whatever even she might pretend for a purpose.

"Aren't you ashamed!" she cried, with indignation, and her eyes flared for an instant and then filled with tears. "And I try so hard."

"But I can't look out for all the lame ducks."

"He isn't a duck," said Carmen, using her handkerchief; "I'd hate him for a duck. It's just to help me, when you know, when you know—and it is so hard," and the tears came again.

Did Henderson believe? After all, what did it matter? Perhaps, after all, the woman had a right to her game, as he had to his.

"Oh, well," he said, "don't take on about it. I'll fix it. I'll make a memorandum this minute. Only don't you bother me in the future with too many private kites."

Carmen dried her eyes. She did not look triumphant; she just looked sweet and grateful, like a person who had been helped. She went over and kissed her lord on the forehead, and sat on the arm of his chair, not too long, and then patted him on the shoulder, and said he was a good fellow, and she was a little bother, and so went away like a dutiful little wife.

And Henderson sat looking into the fire and musing, with the feeling that he had been at the theatre, and that the comedy had been beautifully played.

His part of the play was carried out next day in good faith. One of the secrets of Henderson's success was that he always did what he said he would do. This attracted men to him personally, and besides he found, as Bismarck did, that it was more serviceable to him than lying, for the crafty world usually banks upon insincerity and indirectness. But while he kept his word he also kept his schemes to himself, and executed them with a single regard to his own interest and a Napoleonic selfishness. He did not lie to enemy or friend, but he did not spare either when either was in his way. He knew how to appeal to the self-interest of his fellows, and in time those who had most to do with him trusted him least when he seemed most generous in his offers.

When, the next day, his secretary reported to him briefly that Delancy was greatly elated with the turn things had taken for him, and was going in again, Henderson smiled sardonically, and said, "It was the worst thing I could have done for him."

Jack, who did not understand the irony of his temporary rescue, and had little experience of commercial integrity, so called, was intent on fulfilling his part of the understanding with Carmen. This could best be effected by a return dinner to the Hendersons. The subject was broached at breakfast in an off-hand manner to Edith.

It was not an agreeable subject to Edith, that was evident; but it was not easy for her to raise objections to the dinner. She had gone to the Hendersons' to please Jack, in her policy of yielding in order to influence him; but having accepted the hospitality, she could not object to returning it. The trouble was in making the list.

"I do not know," said Edith, "who are the Hendersons' friends."

"Oh, that doesn't matter. Ask our friends. If we are going to do a thing to please them, no use in doing it half-way, so as to offend them, by drawing social lines against them."

"Well, suggest."

"There's Mavick; he'll be over from Washington next week."

"That's good; and, oh, I'll ask Father Damon."

"Yes; he'll give a kind of flavor to it. I shouldn't wonder if he would like to meet such a man as Henderson."

"And then the Van Dams and Miss Tavish; they were at Henderson's, and would help to make it easy."

"Yes; well, let's see. The Schuyler Blunts?"

"Oh, they wouldn't do at all. They wouldn't come. She wouldn't think of going to the Hendersons'."

"But she would come to us. I don't think she would mind once in a way."

"But why do you want them?"

"I don't want them particularly; but it would no doubt please the Hendersons more than any other thing we could do—and, well, I don't want to offend Henderson just now. It's a little thing, anyway. What's the use of all this social nonsense? We are not responsible for either the Hendersons or the Blunts being in the world. No harm done if they don't come. You invite them, and I'll take the responsibility."

So it was settled, against Edith's instinct of propriety, and the dinner was made up by the addition of the elder Miss Chesney. And Jack did persuade Mrs. Blunt to accept. In fact, she had a little curiosity to see the man whose name was in the newspapers more prominently than that of the President.

It was a bright thought to secure Mr. Mavick. Mr. Thomas Mavick was socially one of the most desirable young men of the day. Matrimonially he was not a prize, for he was without fortune and without powerful connections. He had a position in the State Department. Originally he came from somewhere in the West, it was said, but he had early obtained one or two minor diplomatic places; he had lived a good deal abroad; he

had traveled a little—a good deal, it would seem, from his occasional Oriental allusions. He threw over his past a slight mystery, not too much; and he always took himself seriously. His salary was sufficient to set up a bachelor very comfortably who always dined out; he dressed in the severity of the fashion; he belonged only to the best clubs, where he unbent more than anywhere else; he was credited with knowing a good deal more than he would tell. It was believed, in fact, that he had a great deal of influence. The President had been known to send for him on delicate personal business with regard to appointments, and there were certain ticklish diplomatic transactions that he was known to have managed most cleverly. His friends could see his hand in state papers. This he disclaimed, but he never denied that he knew the inside of whatever was going on in Washington. Even those who thought him a snob said he was clever. He had perfectly the diplomatic manner, and the reserve of one charged with grave secrets. Whatever he disclosed was always in confidence, so that he had the reputation of being as discreet as he was knowing. With women he was of course a favorite, for he knew how to be confidential without disclosing anything, and the hints he dropped about persons in power simply showed that he was secretly manoeuvring important affairs, and could make the most interesting revelations if he chose. His smile and the shake of his head at the club when talk was personal conveyed a world of meaning. Tom Mavick was, in short, a most accomplished fellow. It was evident that he carried on the State Department, and the wonder to many was that he was not in a position to do it openly. His social prestige was as mysterious as his diplomatic, but it was now unquestioned, and he might be considered as one of the first of a class who are to reconcile social and political life in this country.

VIII

Looking back upon this dinner of the Delancys, the student of human affairs can see how Providence uses small means for the accomplishment of its purposes. Of all our social contrivances, the formal dinner is probably the cause of more anxiety in the arrangement, of more weariness in the performance, and usually of less satisfaction in the retrospect than any other social function. However carefully the guests are selected, it lacks the spontaneity that gives intellectual zest to the chance dining together of friends. This Delancy party was made up for reasons which are well understood, and it seemed to have been admirably well selected; and yet the moment it assembled it was evident that it could not be very brilliant or very enjoyable. Doubtless you, madam, would have arranged it differently, and not made it up of such incongruous elements.

As a matter of fact, scarcely one of those present would not have had more enjoyment somewhere else. Father Damon, whose theory was that the rich needed saving quite as much as the poor, would nevertheless have been in better spirits sitting down to a collation with the working-women in Clinton Place. It was a good occasion for the cynical observation of Mr. Mavick, but it was not a company that he could take in hand and impress with his mysterious influence in public affairs. Henderson was not in the mood, and would have had much more ease over a chop and a bottle of half-and-half with Uncle Jerry. Carmen, socially triumphant, would have been much more in her element at a petit souper of a not too fastidious four. Mrs. Schuyler Blunt was in the unaccustomed position of having to maintain a not too familiar and not too distant line of deportment. Edith and Jack felt the responsibility of having put an incongruous company on thin conventional ice. It was only the easy-going Miss Tavish and two or three others who carried along their own animal spirits and love of amusement who enjoyed the chance of a possible contretemps.

And yet the dinner was providentially arranged. If these people had not met socially, this history would have been different from what it must be. The lives of several of them were appreciably modified by this meeting. It is too much to say that Father Damon's notion of the means by which such men as Henderson succeed was changed, but personal contact with the man may have modified his utterances about him, and he may have turned his mind to the uses to which his wealth might be applied rather than to the means by which he obtained it. Carmen's ingenuous interest in his work may have encouraged the hope that at least a portion of this fortune might be rescued to charitable uses. For Carmen, dining with Mrs. Schuyler Blunt was a distinct gain, and indirectly opened many other hitherto exclusive doors. That lady may not have changed her opinion about Carmen, but she was good-natured and infected by the incoming social tolerance; and as to Henderson, she declared that he was an exceedingly well-bred man, and she did not believe half the stories about him. Henderson himself at once appreciated the talents of Mavick, gauged him perfectly, and saw what services he might be capable of rendering at Washington. Mr. Mavick appreciated the advantage of a connection with such a capitalist, and of having open to him another luxurious house in New York. At the dinner-table Carmen and Mr. Mavick had not exchanged a dozen remarks before these clever people felt that they were congenial spirits. It was in the smoking-room that Henderson and Mavick fell into an interesting conversation, which resulted in an invitation for Mavick to drop in at Henderson's office in the morning. The dinner had not been a brilliant one. Henderson found it not easy to select topics equally interesting to Mrs. Delancy and Mrs. Blunt, and finally fell into geographical information to the latter about Mexico and Honduras. For Edith, the sole relief of the evening was an exchange of sympathy with Father Damon, and she was too much preoccupied to enjoy that. As for Carmen, placed between Jack and Mr. Mavick, and conscious that the eyes of Mrs. Blunt were on her, she was taking a subdued role, which Jack found much less attractive than her common mood. But this was not her only self-sacrifice of the evening. She went without her usual cigarette.

To Edith the dinner was a revelation of new difficulties in the life she proposed for herself, though they were rather felt than distinctly reasoned about. The social atmosphere was distasteful; its elements were out of harmony with her ideals. Not that this society was new to her, but that she saw it in a new light. Before her marriage all these things had been indifferent to this high-spirited girl. They were merely incidents of the social state into which she was born, and she pursued her way among them, having a tolerably clear conception of what her own life should be, with little recognition of their tendencies. Were only her own life concerned, they would still be indifferent to her. But something had happened. That which is counted the best

thing in life had come to her, that best thing which is the touchstone of character as it is of all conditions, and which so often introduces inextricable complications. She had fallen in love with Jack Delancy and married him.

The first effect of this was to awake and enlarge what philosophers would call her enthusiasm of humanity. The second effect was to show her—and this was what this little dinner emphasized—that she had put limitations upon herself and taken on unthought-of responsibilities. To put this sort of life one side, or make it secondary to her own idea of a useful and happy life, would have been easy but for one thing—she loved Jack. This philosophic reasoning about it does her injustice. It did not occur to her that she could go her way and let him go his way. Nor must it be supposed that the problem seemed as grave to her as it really was—the danger of frittering away her own higher nature in faithfulness to one of the noblest impulses of that nature. Yet this is the way that so many trials of life come, and it is the greatest test of character. She felt—as many women do feel—that if she retained her husband's love all would be well, and the danger involved to herself probably did not cross her mind.

But what did cross her mind was that these associations meant only evil for Jack, and that to be absorbed in the sort of life that seemed to please him was for her to drift away from all her ideals.

A confused notion of all this was in her thoughts when she talked with Father Damon, while the gentlemen were in the smoking-room. She asked him about his mission.

"The interest continues," he replied; "but your East Side, Mrs. Delancy, is a puzzling place."

"How so?"

"Perhaps you'll laugh if I say there is too much intelligence."

Edith did laugh, and then said: "Then you'd better move your mission over to this side. Here is a field of good, unadulterated worldliness. But what, exactly, do you mean?"

"Well, the attempt of science to solve the problem of sin and wretchedness. What can you expect when the people are socialists and their leaders agnostics?"

"But I thought you were something of a socialist yourself!"

"So I am," he said, frankly, "when I see the present injustice, the iniquitous laws and combinations that leave these people so little chance. They are ignorant, and expect the impossible; but they are right in many things, and I go with them. But my motive is not theirs. I hope not. There is no hope except in a spiritual life. Materialism down at the bottom of society is no better than materialism at the top. Do you know," he went on, with increased warmth, "that pessimism is rather the rule over that side, and that many of those who labor most among the poor have the least hope of ever making things substantially better?"

"But such unselfish people as Dr. Leigh do a great deal of good," Edith suggested.

"Yes," he said reflecting—"yes, I have no doubt. I don't understand it. She is not hopeful. She sees nothing beyond. I don't know what keeps her up."

"Love of humanity, perhaps."

"I wish the phrase had never been invented. Religion of humanity! The work is to save the souls of those people."

"But," said Edith, with a flush of earnestness "but, Father Damon, isn't human love the greatest power to save?"

The priest looked at the girl. His face softened, and he said, more gently, "I don't know. Of the soul, yes. But human love is so apt to stand in the way of the higher life."

In her soul Edith resented this as an ascetic and priestly view; but she knew his devotion to that humanity which he in vain tried to eliminate from his austere life, and she turned the talk lightly by saying, "Ah, that is your theory. But I am coming over soon, and shall expect you and Dr. Leigh to take me about."

The next morning Mr. Mavick's card gave him instant admission to the inner office of Mr. Henderson, the approach to whom was more carefully guarded than that to the President of the United States. This was not merely necessary to save him from the importunities of cranks who might carry concealed dynamite arguments, but as well to protect him from hundreds of business men with whom he was indirectly dealing, and with whom he wished to evade explanations. He thoroughly understood the advantages of delay. He also understood the value of the mystery that attends inaccessibility. Even Mr. Mavick himself was impressed by the show of ceremony, by the army of clerks, and by the signs of complete organization. He knew that the visitor was specially favored who penetrated these precincts so far as to get an interview, usually fruitless, with Henderson's confidential man. This confidential man was a very grave and confidence-begetting person, who dealt out dubious hints and promises, and did not at all mind when Henderson found it necessary to repudiate as unauthorized anything that had been apparently said in his name. To be sure, this gave a general impression that Henderson was an inscrutable man to deal with, but at the same time it was confessed that his spoken word could be depended on. Anything written might, it is true, lead to litigation, and this gave rise to a saying in the Street that Henderson's word was better than his bond.

Henderson was not a politician, but he was a friend of politicians. It was said that he contributed about equally to both sides in a political campaign, and that this showed patriotism more than partisanship. It was for his interest to have friends on both sides in Congress, and friends in the Cabinet, and it was even hinted that he was concerned to have men whose economic and financial theories accorded with his own on the Supreme Bench. He had unlimited confidence in the power of money. His visitor of the morning was not unlike him in many respects. He also was not a politician. He would have described himself as a governmental man, and had a theory of running the government with as little popular interference as possible. He regarded himself as belonging to the governing class.

Between these two men, who each had his own interests in view, there was naturally an apparent putting aside of reserve.

"I was very glad to make your acquaintance, Mr. Mavick," said Henderson, cordially. "I have known of you for a long time."

"Yes? I've been in the employ of the government for some time."

"And I suppose it pays pretty well," said Henderson, smilingly.

"Oh, extravagantly," Mavick rejoined, in the same spirit. "You just about get your board and clothes out of government. Your washing is another thing. You are expected, you know, to have your washing done where you vote."

"Well, it's a sure thing."

"Yes, till you are turned out. You know the theory at Washington is that virtue is its own reward. Tom Fakeltree says it's enough."

"I wonder how he knows?"

"Observation, probably. Tom startled a dinner table the other day with the remark that when a man once gives himself up to the full enjoyment of a virtuous life, it seems strange to him that more people do not follow his example."

"The trouble with the virtue of Washington is that it always wants to interfere with other people's business. Fellows like Tom are always hunting up mares' nests in order to be paid for breaking them up."

"I can't say about Tom," rejoined Mavick. "I suppose it is necessary to live."

"I suppose so. And that goes along with another proposition—that the successful have no rights which the unsuccessful are bound to respect. As soon as a man gets ahead," Henderson continued, with a tone of bitterness, "the whole pack are trying to pull him down. A capitalist is a public enemy. Why, look at that Hodge bill! Strikes directly at the ability of the railways to develop the country. Have you seen it?"

"Yes," Mavick admitted; "the drawer of it was good enough to consult me on its constitutionality. It's a mighty queer bill."

"It can't get through the Senate," said Henderson; "but it's a bother. Such schemes are coming up all the time, and they unsettle business. These fellows need watching."

"And managing," added Mavick.

"Exactly. I can't be in Washington all the time. And I need to know what is going on every twenty-four hours from the inside. I can't rely on politicians or lobbyists."

"Well," said Mr. Mavick, in his easiest manner, "that's easy enough. You want a disinterested friend."

Henderson nodded, but did not even smile, and the talk went on about other measures, and confidentially about certain men in Washington, until, after twenty minutes' conversation, the two men came to a perfect understanding. When Mavick arose to go they shook hands even more cordially than at first, and Henderson said:

"Well, I expect to hear from you, and remember that our house will always be your home in the city."

IX

It seemed very fortunate to Jack Delancy that he should have such a clever woman as Carmen for his confidante, a man so powerful as Henderson as his backer, and a person so omniscient as Mavick for his friend. No combination could be more desirable for a young man who proposed to himself a career of getting money by adroit management and spending it in pure and simple self-indulgence. There are plenty of men who have taken advantage of like conditions to climb from one position to another, and have then kicked down the ladders behind them as fast as they attained a new footing. It was Jack's fault that he was not one of these. You could scarcely dignify his character by saying that he had an aim, except to saunter through life with as little personal inconvenience as possible. His selfishness was boneless. It was not by any means negative, for no part of his amiable nature was better developed than regard for his own care and comfort; but it was not strong enough to give him Henderson's capacity for hard work and even self-denial, nor Mavick's cool, persevering skill in making a way for himself in the world. Why was not Edith his confidante? His respect for her was undoubted; his love for her was unquestioned; his trust in her was absolute. And yet with either Carmen or Miss Tavish he fell into confidential revelations of himself which instinctively he did not make to Edith. The explanation of this is on the surface, and it is the key to half the unhappiness in domestic life. He felt that Edith was not in sympathy with the associations and the life he was leading. The pitiful and hopeless part of it is that if she had been in sympathy with them, Jack would have gone on in his frivolous career at an accelerated pace. It was not absence of love, it was not unfaithfulness, that made Jack enjoy the hours he spent with Carmen, or with the pleasing and not too fastidious Miss Tavish, with a zest that was wanting to his hours at home. If he had been upon a sinking steamboat with the three women, and could have saved only one of them, he would not have had a moment's hesitation in rescuing Edith and letting the other two sink out of his life. The character is not unusual, nor the situation uncommon. What is a woman to do? Her very virtues are enemies of her peace; if she appears as a constant check and monitor, she repels; if she weakly acquiesces, the stream will flow over both of them. The dilemma seems hopeless.

It would be a mistake to suppose that either Edith or Jack put their relations in any such definite shape as this. He was unthinking. She was too high-spirited, too confident of her position, to be assailed by such fears. And it must be said, since she was a woman, that she had the consciousness of power which goes along with the possession of loveliness and keen wit. Those who knew her best knew that under her serenity was a gay temperament, inherited from the original settlers of Manhattan, an abounding enjoyment of life, and capacity for passion. It was early discovered in her childhood that little Edith had a will of her own.

Lent was over. It was the time of the twittering of sparrows, of the opening of windows, of putting in order the little sentimental spots called "squares," where the poor children get their idea of forests, and the rich renew their faint recollections of innocence and country life; when the hawkers go about the streets, and the

hand-organs celebrate the return of spring and the possibility of love. Even the idle felt that it was a time for relaxation and quiet.

"Have you answered Miss Tavish's invitation?" asked Jack one morning at the breakfast-table.

"Not yet. I shall decline today for myself."

"Why? It's for charity."

"Well, my charity extends to Miss Tavish. I don't want to see her dance."

"That leaves me in a nice hole. I said I'd go."

"And why not? You go to a good many places you don't take me—the clubs, brokers' offices, Stalker's, the Conventional, and—"

"Oh, go on. Why do you object to my going to see this dance?"

"My dear Jack," said Edith, "I haven't objected the least in the world;" and her animated face sparkled with a smile, which seemed to irritate Jack more than a frown would have done.

"I don't see why you set yourself up. I'll bet Miss Tavish will raise more money for the Baxter Street Guild, yes, and do more good, than you and the priest and that woman doctor slopping about on the East Side in six months."

"Very likely," replied Edith, still with the same good-humored smile. "But, Jack, it's delightful to see your philanthropic spirit stirred up in this way. You ought to be encouraged. Why don't you join Miss Tavish in this charity? I have no doubt that if it was advertised that Miss Tavish and Mr. Jack Delancy would dance for the benefit of an East Side guild in the biggest hall in the city, there wouldn't be standing room."

"Oh, bosh!" said Jack, getting up from his chair and striding about the room, with more irritation than he had ever shown to Edith before. "I wouldn't be a prude."

Edith's eyes flashed and her face flushed, but her smile came back in a moment, and she was serene again. "Come here, Jack. Now, old fellow, look me straight in the eyes, and tell me if you would like to have me dance the serpentine dance before a drawing-room full of gossiping women, with, as you say, just a few men peeping in at the doors."

Jack did look, and the serene eyes, yet dancing with amusement at the incongruous picture, seemed to take a warmer glow of love and pleading.

"Oh, hang it! that's different," and he stooped and gave her an awkward kiss.

"I'm glad you know it's different," she said, with a laugh that had not a trace of mockery in it; "and since you do, you'd better go along and do your charity, and I'll stay at home, and try to be—different when you come back."

And Jack went; with a little feeling of sheepishness that he would not have acknowledged at the time, and he found himself in a company where he was entirely at his ease. He admired the dancing of the blithe, graceful girl, he applauded her as the rest did with hand-clapping and bravas, and said it was ravishing. It all suited him perfectly. And somehow, in the midst of it all, in the sensuous abandon of this electric-light eccentricity at mid-day, he had a fleeting vision of something very different, of a womanhood of another sort, and a flush came to his face for a moment as he imagined Edith in a skirt dance under the gaze of this sensation-loving society. But this was only for a moment. When he congratulated Miss Tavish his admiration was entirely sincere; and the girl, excited with her physical triumph, seemed to him as one emancipated out of acquired prudishness into the Greek enjoyment of life. Miss Tavish, who would not for the world have violated one of the social conventions of her set, longed, as many women do, for the sort of freedom and the sort of applause which belongs to women who succeed upon the stage. Not that she would have forfeited her position by dancing at a theatre for money; but, within limits, she craved the excitement, the abandon, the admiration, that her grace and passion could win. This was not at all the ambition which led the Egyptian queen Hatshepsu to assume the dress of a man, but rather that more famous aspiration which led the daughter of Herodias, in a pleasure-loving court, to imitate and excel the professional dancing-girls. If in this inclination of the women of the day, which is not new, but has characterized all societies to which wealth has brought idleness, there was a note of demoralization, it did not seem so to Jack, who found the world day by day more pleasing and more complaisant.

As the months went by, everything prospered with him on his drifting voyage. Of all voyages, that is the easiest to make which has no port in view, that depends upon the varying winds, if the winds happen to be soft and the chance harbors agreeable. Jack was envied, thanks to Henderson. He was lucky in whatever he touched. Without any change in his idle habits, and with no more attention to business than formerly, money came to him so freely that he not only had a complacent notion that he was a favorite of fortune, but the idea of his own importance in the financial world increased enormously, much to the amusement of Mavick, when he was occasionally in the city, to whom he talked somewhat largely of his operations, and who knew that he had no more comprehension of the sweep of Henderson's schemes than a baby has of the stock exchange when he claps his hands with delight at the click of the ticker.

His prosperity was visible. It showed in the increase of his accounts at the Union, in his indifference to limits in the game of poker, in a handsome pair of horses which he insisted on Edith's accepting for her own use, in an increased scale of living at home, in the hundred ways that a man of fashion can squander money in a luxurious city. If he did not haunt the second-hand book-shops or the stalls of dealers in engravings, or bring home as much bric-a-brac as he once had done, it was because his mind was otherwise engaged; his tailor's bills were longer, and there were more expensive lunches at the clubs, at which there was a great deal of sage talk about stocks and combinations, and much wisdom exhibited in regard to wines; and then there were the little suppers at Wherry's after the theatres, which a bird could have eaten and a fish have drunken, and only a spendthrift have paid for.

"It is absurd," Edith had said one night after their return. "It makes us ridiculous in the eyes of anybody but fools." And Jack had flared up about it, and declared that he knew what he could afford, and she had retorted that as for her she would not countenance it. And Jack had attempted to pass it off lightly, at last, by saying, "Very well then, dear, if you won't back me, I shall have to rely upon my bankers." At any rate, neither

Carmen nor Miss Tavish took him to task. They complimented him on his taste, and Carmen made him feel that she appreciated his independence and his courage in living the life that suited him. She knew, indeed, how much he made in his speculations, how much he lost at cards; she knew through him the gossip of the clubs, and venturing herself not too far at sea, liked to watch the undertow of fashionable life. And she liked Jack, and was not incapable of throwing him a rope when the hour came that he was likely to be swept away by that undertow.

It was remarked at the Union, and by the men in the Street who knew him, that Jack was getting rapid. But no one thought the less of him for his pace—that is, no one appeared to, for this sort of estimate of a man is only tested by his misfortunes, when the day comes that he must seek financial backing. In these days he was generally in an expansive mood, and his free hand and good-humor increased his popularity. There were those who said that there were millions of family money back of Jack, and that he had recently come in for something handsome.

But this story did not deceive Major Fairfax, whose business it was to know to a dot the standing of everybody in society, in which he was a sort of oracle and privileged favorite. No one could tell exactly how the Major lived; no one knew the rigid economy that he practiced; no one had ever seen his small dingy chamber in a cheap lodging-house. The name of Fairfax was as good as a letter of introduction in the metropolis, and the Major had lived on it for years, on that and a carefully nursed little income—an habitue of the club, and a methodical cultivator of the art of dining out. A most agreeable man, and perhaps the wisest man in his generation in those things about which it would be as well not to know anything.

Seated one afternoon in his favorite corner for street observation, by the open window, with the evening paper in his hand, in the attitude of one expecting the usual five o'clock cocktail, he hailed Jack, who was just coming down-stairs from a protracted lunch.

"I say, Delancy, what's this I hear?"

"About what?" said Jack, sauntering along to a seat opposite the Major, and touching a bell on the little table as he sat down. Jack's face was flushed, but he talked with unusual slowness and distinctness. "What have you heard, Major?"

"That you have bought Benham's yacht."

"No, I haven't; but I was turning the thing over in my mind," Jack replied, with the air of a man declining an appointment in the Cabinet. "He offers it cheap."

"My dear boy, there is no such thing as a cheap yacht, any more than there is a cheap elephant."

"It's better to buy than build," Jack insisted. "A man's got to have some recreation."

"Recreation! Why don't you charter a Fifth Avenue stage and take your friends on a voyage to the Battery? That'll make 'em sick enough." It was a misery of the Major's life that, in order to keep in with necessary friends, he had to accept invitations for cruises on yachts, and pretend he liked it. Though he had the gout, he vowed he would rather walk to Newport than go round Point Judith in one of those tipping tubs. He had tried it, and, as he said afterwards, "The devil of it was that Mrs. Henderson and Miss Tavish sympathized with me. Gad! it takes away a person's manhood, that sort of thing."

The Major sipped his bitters, and then added: "Or I'll tell you what; if you must do something, start a newspaper—the drama, society, and letters, that sort of thing, with pictures. I heard Miss Tavish say she wished she had a newspaper."

"But," said Jack, with gravity, "I'm not buying a yacht for Miss Tavish."

"I didn't suppose you were. Devilish fine girl, though. I don't care who you buy it for if you don't buy it for yourself. Why don't you buy it for Henderson? He can afford it."

"I'd like to know what you mean, Major Fairfax!" cried Jack. "What business—"

"There!" exclaimed the Major, sinking back in his chair, with a softened expression in his society beaten face. "It's no use of nonsense, Jack. I'm an average old sinner, and I'm not old enough yet to like a milksop. But I've known you since you were so high, and I knew your father; he used to stay weeks on my plantation when we were both younger. And your mother—that was a woman!—did me a kindness once when I was in a d—d tight place, and I never forgot it. See here, Jack, if I had money enough I'd buy a yacht and put Carmen and Miss Tavish on it, and send them off on the longest voyage there is."

"Who's been talking?" exclaimed Jack, touched a little, but very much offended.

"The town, Jack. Don't mind the talk. People always talk. I suppose people talk about me: At your age I should have been angry too at a hint even from an old friend. But I've learned. It doesn't pay. I don't get angry any more. Now there's Henderson—"

"What have you got against Henderson?"

"Nothing. He is a very good fellow, for that sort of man. But, Lord! Henderson is a big machine. You might as well try to stand in with a combination of gang-saws, or to make friends with the Department of the Interior. Look at the men who have gone in with Henderson from time to time. The ground is strewn with them. He's got no more feeling in business than a reaper-and-binder."

"I don't know what Henderson's got to do with my having a yacht."

"I beg your pardon, Jack; it's none of my business. Only I do not put my investments"—Jack smiled faintly, as if the conversation were taking a humorous turn—"at the mercy of Henderson's schemes. If I did, I wouldn't try to run a yacht at the same time. I should be afraid that some day when I got to sea I should find myself out of coal. You know, my boy, that the good book says you cannot serve two masters."

"Nobody ever accused you of that, Major," retorted Jack, with a laugh. "But what two have you in mind?"

"Oh, I don't mean anything personal. I just use names as typical. Say Henderson and Carmen." And the Major leaned back and tapped his fingers together, as if he were putting a general proposition.

Jack flushed, and then thought a moment—it would be ridiculous to get angry with old Fairfax—and then said: "Major, if I were you, I wouldn't have anything to do with either of them. You'll spoil your digestion."

"Umph!" the Major grunted, as he rose from his chair. "This is an age of impudence. There's no more respect for gray hair than if it were dyed. I cannot waste any more time on you. I've got an early dinner. Devilish uphill work trying to encourage people who dine at seven. But, my boy, think on these things, as the saint says."

And the old fellow limped away. There was one good thing about the Major. He stood up in church every Sunday and read his prayers, like a faithful old sinner as he was.

Jack, sobered by the talk, walked home in a very irritated mood, blaming everybody except himself. For old Fairfax's opinion he didn't care, but evidently the old fellow represented a lot of gossip. He wished people would mind their own business. His irritation was a little appeased by Edith's gay and loving greeting; but she, who knew every shade of his face, saw it.

"Have you had a worrying day?"

"No; not specially. I've had an hour of old Fairfax, who hasn't any business of his own to attend to."

"Oh, nobody minds the Major," Edith said, as she gave him a shake and another kiss; but a sharp pang went through her heart, for she guessed what had happened, since she had had a visit that afternoon from another plain-speaking person.

They were staying late in town. Edith, who did not care to travel far, was going presently to a little cottage by the sea, and Mrs. Schuyler Blunt had looked in for a moment to say good-by before she went up to her Lenox house.

"It's only an old farmhouse made over," Mrs. Blunt was saying; "hardly smart enough to ask anybody to, but we hope to have you and Jack there some time."

"That would be very nice. I hear Lenox is more beautiful than ever."

"Yes, it is, and about as difficult to get into as the kingdom of heaven. It's being spoiled for moderate people. The Hendersons and the Van Dams and that sort are in a race to see who shall build houses with the biggest rooms, and give the most expensive entertainments. It's all show. The old flavor has gone."

"But they cannot spoil the scenery."

"My child, they are the scenery. You can't see anything else. It doesn't bother me, but some of my old neighbors are just ruining themselves trying to keep the pace. I do think the Americans are the biggest fools on earth."

"Father Damon says the trouble is we haven't any middle class for a balance."

"Yes, that's the English of it. But it's a pity that fashion has got hold of the country, and is turning our summers into a worry and a burden. I thought years ago when we went to Lenox that it was a good thing the country was getting to be the fashion; but now it's fashionable, and before we know it every desirable spot will be what they call syndicated. Miss Tavish says she is coming to visit the Hendersons there."

"I thought she went to Bar Harbor."

"But she is coming down for part of the season. These people don't stay anywhere. Just long enough in one place to upset everything with their extravagance. That's the reason I didn't ask you and Jack up this summer."

"Thank you, we couldn't go, you know," said Edith, simply, and then, with curiosity in her eyes, asked; "but I don't quite understand what's the reason."

"Well," said Mrs. Blunt, as if nerving herself up to say what must be said, "I thought perhaps you wouldn't like to be where they are."

"I don't know why I should or why I should not," Edith replied.

"Nor have Jack with them," continued Mrs. Blunt, stoutly.

"What do you mean, Mrs. Blunt?" cried Edith, her brown eyes flaming.

"Don't turn on me, Edith dear. I oughtn't to have said anything. But I thought it was my duty. Of course it is only talk."

"Well?"

"That Jack is always with one or the other of those women."

"It is false!" cried Edith, starting up, with tears now in her eyes; "it's a cruel lie if it means anything wrong in Jack. So am I with those women; so are you. It's a shame. If you hear any one say such things, you can tell them for me that I despise them."

"I said it was a shame, all such talk. I said it was nonsense. But, dear, as a friend, oughtn't I to tell you?" And the kind-hearted gossip put her arm round Edith, and kept saying that she perfectly understood it, and that nobody really meant anything. But Edith was crying now, with a heart both hurt and indignant.

"It's a most hateful world, I know," Mrs. Blunt answered; "but it's the best we have, and it's no use to fret about it."

When the visitor had gone, Edith sat a long time in misery. It was the first real shock of her married life. And in her heart she prayed. For Jack? Oh no. The dear girl prayed for herself, that suspicions might not enter her heart. She could not endure that the world should talk thus of him. That was all. And when she had thought it all over and grown calm, she went to her desk and wrote a note to Carmen. It asked Mrs. Henderson, as they were so soon to leave town, to do her the favor to come round informally and lunch with her the next day, and afterwards perhaps a little drive in the Park.

Jack was grateful for Edith's intervention. He comprehended that she had stepped forward as a shield to him in the gossip about Carmen. He showed his appreciation in certain lover-like attentions and in a gayety of manner, but it was not in his nature to feel the sacrifice she had made or its full magnanimity; he was relieved, and in a manner absolved. Another sort of woman might have made him very uncomfortable. Instead of being rebuked he had a new sense of freedom.

"Not one woman in a thousand would have done it," was the comment of Major Fairfax when he heard of the drive in the Park. "Gad! most of 'em would have cut Carmen dead and put Jack in Coventry, and then there would have been the devil to pay. It takes quality, though; she's such a woman as Jack's mother. If there were not one of them now and then society would deliquesce." And the Major knew, for his principal experience had been with a deliquescent society.

Whether Carmen admired Mrs. Delancy or thought her weak it is impossible to say, but she understood the advances made and responded to them, for they fell in perfectly with her social plans. She even had the face to eulogize Mrs. Delancy to Jack, her breadth of view, her lack of prejudice, and she had even dared to say, "My dear friend, she is too good for us," and Jack had not protested, but with a laugh had accepted the implication of his position on a lower moral level. Perhaps he did not see exactly what it meant, this being on confidential terms about his wife with another woman; all he cared for at the moment was that the comradeship of Miss Tavish and Carmen was agreeable to him. They were no restraint upon him. So long as they remained in town the exchange of civilities was kept up. Carmen and Miss Tavish were often at his house, and there was something reassuring to Jack in the openness with which affairs went on.

Early in June Edith went down to their rented cottage on the south Long Island shore. In her delicate health the doctor had recommended the seaside, and this locality as quiet and restful, and not too far from the whirl of the city. The place had a charm of its own, the charm, namely, of a wide sky, illimitable, flashing, changing sea, rolling in from the far tropical South with its message of romance to the barren Northern shore, and the pure sand dunes, the product of the whippings of tempests and wild weather. The cottage was in fact an old farmhouse, not an impertinent, gay, painted piece of architecture set on the sand like a tent for a month, but a solid, ugly, fascinating habitation, with barns and outhouses, and shrubs, and an old garden—a place with a salty air friendly to delicate spring blossoms and summer fruits and foliage. If it was a farmhouse, the sea was an important part of the farm, and the low-ceiled rooms suggested cabins; it required little imagination to fancy that an East-Indian ship had some time come ashore and settled in the sand, that it had been remodeled and roofed over, and its sides pierced with casement windows, over which roses had climbed in order to bind the wanderer to the soil. It had been painted by the sun and the wind and the salt air, so that its color depended upon the day, and it was sometimes dull and almost black, or blue-black, under a lowering sky, and again a golden brown, especially at sunset, and Edith, feeling its character rather than its appearance to ordinary eyes, had named it the Golden House. Nature is such a beautiful painter of wood.

With Edith went one of her Baltimore cousins, a young kindergarten teacher of fine intelligence and sympathetic manner, who brought to her work a long tradition of gentle breeding and gayety and simplicity—qualities which all children are sure to recognize. What a hopeful thing it is, by-the-way, in the world, that all conditions of people know a lady at sight! Jack found the place delightful. He liked its quaintness, the primitiveness of the farmer-fisherman neighbors, he liked the sea. And then he could run up to the city any morning and back at night. He spent the summer with Edith at the Golden House. This was his theory. When he went to town in the morning he expected to return at night. But often he telegraphed in the afternoon that he was detained by business; he had to see Henderson, or Mavick was over from Washington. Occasionally, but not often, he missed the train. He had too keen a sense of the ridiculous to miss the train often. When he was detained over for two or three days, or the better part of the week, he wrote Edith dashing, hurried letters, speaking of ever so many places he had been to and ever so many people he had seen—yes, Carmen and Miss Tavish and everybody who was in town, and he did not say too much about the hot city and its discomforts.

Henderson's affairs kept him in town, Miss Tavish still postponed Bar Harbor, and Carmen willingly remained. She knew the comfort of a big New York house when the season is over, when no social duties are required, and one is at leisure to lounge about in cool costumes, to read or dream, to open the windows at night for the salt breeze from the bay, to take little excursions by boat or rail, to dine *al fresco* in the garden of some semi-foreign hotel, to taste the unconventional pleasures of the town, as if one were in some foreign city. She used to say that New York in matting and hollands was almost as nice as Buda-Pesth. These were really summer nights, operatic sorts of nights, with music floating in the air, gay groups in the streets, a stage imitation of nature in the squares with the thick foliage and the heavy shadows cast on the asphalt by the electric lights, the brilliant shops, the nonsense of the summer theatres, where no one expected anything, and no one was disappointed, the general air of enjoyment, and the suggestion of intrigue. Sometimes, when Mavick was over, a party was made up for the East Side, to see the foreign costumes, the picturesque street markets, the dime museums, and the serious, tragical theatres of the people. The East Side was left pretty much to itself, now that the winter philanthropists had gone away, and was enjoying its summer nights and its irresponsible poverty.

They even looked in at Father Damon's chapel, the dimly lighted fragrant refuge from the world and from sin. Why not? They were interested in the morals of the region. Had not Miss Tavish danced for one of the guilds; and had not Carmen given Father Damon a handsome check in support of his mission? It was so satisfactory to go into such a place and see the penitents kneeling here and there, the little group of very plainly dressed sinners attracted by Father Damon's spiritual face and unselfish enthusiasm. Carmen said she felt like kneeling at one of the little boxes and confessing—the sins of her neighbors. And then the four—Carmen, Miss Tavish, Mavick, and Jack—had a little supper at Wherry's, which they enjoyed all the more for the good action of visiting the East Side—a little supper which lasted very late, and was more and more enjoyed as it went on, and was, in fact, so gay that when the ladies were set down at their houses, Jack insisted on dragging Mavick off to the Beefsteak Club and having something manly to drink; and while they drank he analyzed the comparative attractions of Carmen and Miss Tavish; he liked that kind of women, no nonsense in them; and presently he wandered a little and lost the cue of his analysis, and, seizing Mavick by the arm, and regarding him earnestly, in a burst of confidence declared that, notwithstanding all appearances, Edith was the dearest girl in the world.

It was at this supper that the famous society was formed, which the newspapers ridiculed, and which deceived so many excellent people in New York because it seemed to be in harmony with the philanthropic endeavor of the time, but which was only an expression of the Mephistophelian spirit of Carmen—the Society for Supplying Two Suspenders to Those who have only One.

By the end of June there was no more doubt about the heat of the town than about its odors. The fashionable residence part was dismantled and deserted. At least miles and miles of houses seemed to be closed. Few carriages were seen in this quarter, the throngs of fashion had disappeared, comparatively few women were about, and those that appeared in the Sunday promenade were evidently sight-seers and idlers from other quarters; the throng of devotees was gone from the churches, and indeed in many of them services were suspended till a more convenient season. The hotels, to be sure, were full of travelers, and the club-houses had more habitués than usual, and were more needed by the members whose families had gone into the country.

Notwithstanding the silence and vacation aspect of up-town, the public conveyances were still thronged, and a census would have shown no such diminution of population as seemed. Indeed, while nobody was in town, except accidentally, the greater portion of it presented a more animated appearance than usual, especially at night, on account of the open windows, the groups on door-steps and curb-stones, and the restless throng in the streets—buyers and sellers and idlers. To most this outdoor life was a great enjoyment, and to them the unclean streets with the odors and exhalations of decay were homelike and congenial. Nor did they seem surprised that a new country should so completely reproduce the evil smells and nastiness of the old civilization. It was all familiar and picturesque. Work still went on in the crowded tenement-houses, and sickness simply changed its character, death showing an increased friendliness to young children. Some impression was of course made by the agents of various charities, the guilds and settlements bravely strove at their posts, some of the churches kept their flags flying on the borders of the industrial districts, the Good Samaritans of the Fresh-air Fund were active, the public dispensaries did a thriving business, and the little band of self-sacrificing doctors, most of them women, went their rounds among the poor, the sick, and the friendless.

Among them Ruth Leigh was one who never took a vacation. There was no time for it. The greater the heat, the more noisome the town, the more people became ill from decaying food and bad air and bad habits, the more people were hungry from improvidence or lack of work, the more were her daily visits a necessity; and though she was weary of her monotonous work, and heart-sick at its small result in such a mass, there never came a day when she could quit it. She made no reputation in her profession by this course; perhaps she awoke little gratitude from those she served, and certainly had not so much of their confidence as the quacks

who imposed upon them and took their money; and she was not heartened much by hope of anything better in this world or any other; and as for pay, if there was enough of that to clothe her decently, she apparently did not spend it on herself.

It was, in short, wholly inexplicable that this little woman should simply go about doing good, without any ulterior purpose whatever, not even notoriety. Did she love these people? She did not ever say anything about that. In the Knights of Labor circle, and in the little clubs for the study of social questions, which she could only get leisure to attend infrequently, she was not at all demonstrative about any religion of humanity. Perhaps she simply felt that she was a part of these people, and that whether they rejected her or received her, there was nothing for her to do but to give herself to them. She would probably have been surprised if Father Damon had told her that she was in this following a great example, and there might have been a tang of agnostic bitterness in her reply. When she thought of it the condition seemed to her hopeless, and the attitude of what was called civilization towards it so remorseless and indifferent, and that of Christianity so pharisaical. If she ever lost her temper, it was when she let her mind run in this nihilistic channel, in bitterness against the whole social organization, and the total outcome of civilization so far as the mass of humanity is concerned.

One day Father Damon climbed up to the top of a wretched tenement in Baxter Street in search of a German girl, an impulsive and pretty girl of fifteen, whom he had missed for several days at the chapel services. He had been in the room before. It was not one of the worst, for though small and containing a cook-stove, a large bed, and a chest of drawers, there was an attempt to make it tidy. In a dark closet opening out from it was another large bed. As he knocked and opened the door, he saw that Gretchen was not at home. Her father sat in a rocking-chair by an open window, on the sill of which stood a pot of carnations, the Easter gift of St. George's, a wax-faced, hollow-eyed man of gentle manners, who looked round wearily at the priest. The mother was washing clothes in a tub in one corner; in another corner was a half-finished garment from a slop-shop. The woman alternated the needle at night and the tub in the daytime. Seated on the bed, with a thin, sick child in her arms, was Dr. Leigh. As she looked up a perfectly radiant smile illuminated her usually plain face, an unworldly expression of such purity and happiness that she seemed actually beautiful to the priest, who stopped, hesitating, upon the threshold.

"Oh, you needn't be afraid to come in, Father Damon," she cried out; "it isn't contagious—only rash."

Father Damon, who would as readily have walked through a pestilence as in a flower-garden, only smiled at this banter, and replied, after speaking to the sick man, and returning in German the greeting of the woman, who had turned from the tub, "I've no doubt you are disappointed that it isn't contagious!" And then, to the mother: "Where is Gretchen? She doesn't come to the chapel."

"Nein," replied the woman, in a mixture of German and English, "it don't come any more in dot place; it be in a shtore now; it be good girl."

"What, all day?"

"Yaas, by six o'clock, and abends so spate. Not much it get, but my man can't earn nothing any more." And the woman, as she looked at him, wiped her eyes with the corner of her apron.

"But, on Sunday?" Father Damon asked, still further.

"Vell, it be so tired, and goed up by de Park with Dick Loosing and dem oder girls."

"Don't you think it better, Father Damon," Dr. Leigh interposed, "that Gretchen should have fresh air and some recreation on Sunday?"

"Und such bootiful tings by de Museum," added the mother.

"Perhaps," said he, with something like a frown on his face, and then changed the subject to the sick child. He did not care to argue the matter when Dr. Leigh was present, but he resolved to come again and explain to the mother that her daughter needed some restraining power other than her own impulse, and that without religious guidance she was pretty certain to drift into frivolous and vulgar if not positively bad ways. The father was a free-thinker; but Father Damon thought he had some hold on the mother, who was of the Lutheran communion, but had followed her husband so far as to become indifferent to anything but their daily struggle for life. Yet she had a mother's instinct about the danger to her daughter, and had been pleased to have her go to Father Damon's chapel.

And, besides, he could not bring himself in that presence to seem to rebuke Ruth Leigh. Was she not practically doing what his Lord did—going about healing the sick, sympathizing with the poor and the discouraged, taking upon herself the burden of the disconsolate, literally, without thought of self, sharing, as it were, the misery and sin of this awful city? And today, for the first time, he seemed to have seen the woman in her—or was it the saint? and he recalled that wonderful illumination of her plain face that made her actually beautiful as she looked up from the little waif of humanity she held in her arms. It had startled him, and struck a new chord in his heart, and planted a new pang there that she had no belief in a future life.

It did not occur to him that the sudden joy in her face might have been evoked by seeing him, for it was a long time since she had seen him. Nor did he think that the pang at his heart had another cause than religious anxiety. Ah, priest and worldly saint, how subtle and enduring are the primal instincts of human nature!

"Yes," he said, as they walked away, in reply to her inquiry as to his absence, "I have been in retreat a couple of weeks."

"I suppose," she said, softly, "you needed the rest; though," and she looked at him professionally, "if you will allow me to say it, it seems to me that you have not rested enough."

"I needed strength"—and it was the priest that spoke—"in meditation and prayer to draw upon resources not my own."

"And in fasting, too, I dare say," she added, with a little smile.

"And why not?" he asked.

"Pardon me," she said; "I don't pretend to know what you need. I need to eat, though Heaven knows it's

hard enough to keep up an appetite down here. But it is physical endurance you need for the work here. Do you think fasting strengthens you to go through your work night and day?"

"I know I couldn't do it on my own strength." And Dr. Leigh recalled times when she had seen him officiating in the chapel apparently sustained by nothing but zeal and pure spirit, and wondered that he did not faint and fall. And faint and fall he did, she was sure, when the service was over.

"Well, it may be necessary to you, but not as an example to these people. I see enough involuntary fasting."

"We look at these people from different points of view, I fear." And after a moment he said: "But, doctor, I wanted to ask you about Gretchen. You see her?"

"Occasionally. She works too many hours, but she seems to be getting on very well, and brings her mother all she earns."

"Do you think she is able to stand alone?"

Dr. Leigh winced a little at this searching question, for no one knew better than she the vulgarizing influence of street life and chance associations upon a young girl, and the temptations. She was even forced to admit the value in the way of restraint, as a sort of police force, of the church and priestly influence, especially upon girls at the susceptible age. But she knew that Father Damon meant something more than this, and so she answered:

"But people have got to stand alone. She might as well begin."

"But she is so young."

"Yes, I know. She is in the way of temptation, but so long as she works industriously, and loves her mother, and feels the obligation, which the poor very easily feel, of doing her share for the family, she is not in so much moral danger as other girls of her age who lead idle and self-indulgent lives. The working-girls of the city learn to protect themselves."

"And you think this is enough, without any sort of religion—that this East Side can go on without any spiritual life?"

Ruth Leigh made a gesture of impatience. In view of the actual struggle for existence she saw around her, this talk seemed like cant. And she said:

"I don't know that anything can go on. Let me ask you a question, Father Damon. Do you think there is any more spirituality, any more of the essentials of what you call Christianity, in the society of the other side than there is on the East Side?"

"It is a deep question, this of spirituality," replied Father Damon, who was in the depths of his proselyting action a democrat and in sympathy with the people, and rated quite at its full value the conventional fashion in religion. "I shouldn't like to judge, but there is a great body of Christian men and women in this city who are doing noble work."

"Yes," replied the little doctor, bitterly, "trying to save themselves. How many are trying to save others—others except the distant and foreign sinners?"

"You surely cannot ignore," replied the father, still speaking mildly, "the immense amount of charitable work done by the churches!"

"Yes, I know; charity, charity, the condescension of the rich to the poor. What we want are understanding, fellowship, and we get alms! If there is so much spirituality as you say, and Christianity is what you say it is today, how happens it that this side is left in filth and misery and physical wretchedness? You know what it is, and you know the luxury elsewhere. And you think to bridge over the chasm between classes with flowers, in pots, yes, and Bible-readers and fashionable visitors and little aid societies—little palliatives for an awful state of things. Why, look at it! Last winter the city authorities hauled off the snow and the refuse from the fashionable avenues, and dumped it down in the already blockaded and filthy side streets, and left us to struggle with the increased pneumonia and diphtheria, and general unsanitary conditions. And you wonder that the little nihilist groups and labor organizations and associations of agnostics, as you call them, meeting to study political economy and philosophy, say that the existing state of things has got to be overturned violently, if those who have the power and the money continue indifferent."

"I do not wonder," replied Father Damon, sadly. "The world is evil, and I should be as despairing as you are if I did not know there was another life and another world. I couldn't bear it. Nobody could."

"And all you've got to offer, then, to this mass of wretchedness, poverty, ignorance, at close quarters with hunger and disease, is to grin and bear it, in hope of a reward somewhere else!"

"I think you don't quite—"

The doctor looked up and saw a look of pain on the priest's face.

"Oh," she hastened to say, almost as impetuously as she had spoken before, "I don't mean you—I don't mean you. I know what you do. Pardon me for speaking so. I get so discouraged sometimes." They stood still a moment, looking up and down the hot, crowded, odorful street they were in, with its flaunting rags of poverty and inefficiency. "I see so little result of what I can do, and there is so little help."

"I know," said the father, as they moved along. "I don't see how you can bear it alone."

This touched a sore spot, and aroused Ruth Leigh's combativeness. It seemed to her to approach the verge of cant again. But she knew the father's absolute sincerity; she felt she had already said too much; and she only murmured, as if to herself, "If we could only know." And then, after a moment, she asked, "Do you, Father Damon, see any sign of anything better here?"

"Yes, today." And he spoke very slowly and hesitatingly. "If you will excuse the personality of it. When I entered that room today, and saw you with that sick child in your arms, and comprehended what it all meant, I had a great wave of hope, and I knew, just then, that there is coming virtue enough in the world to redeem it."

Ruth was confounded. Her heart seemed to stand still, and then the hot blood flowed into her face in a crimson flood. "Ah," escaped from her lips, and she walked on more swiftly, not daring to look up. This from

him! This recognition from the ascetic father! If one of her dispensary comrades had said it, would she have been so moved?

And afterwards, when she had parted from him, and gone to her little room, the hot flush again came to her neck and brow, and she saw his pale, spiritual face, and could hear the unwonted tenderness of his voice. Yes, Father Damon had said it of her.

XI

The question has been very much discussed whether the devil, in temperate latitudes, is busier in the summer or in the winter. When Congress and the various State legislatures are in session, and the stock and grain exchanges are most active, and society is gayest, and the churches and benevolent and reformatory associations are most aggressive—at this season, which is the cool season, he seems to be most animated and powerful.

But is not this because he is then most opposed? The stream may not flow any faster because it is dammed, but it exhibits at the obstructed points greater appearance of agitation. Many people are under the impression that when they stop fighting there is a general truce: There is reason to believe that the arch enemy is pleased with this impression, that he likes a truce, and that it is his best opportunity, just as the weeds in the garden, after a tempest, welcome the sun and the placidity of the elements. It is well known that in summer virtue suffers from inertia, and that it is difficult to assemble the members of any vigilant organization, especially in cities, where the flag of the enemy is never lowered. But wherever the devil is there is always a quorum present for business. It is not his plan to seek an open fight, and many observers say that he gains more ground in summer than in any other season, and this notwithstanding people are more apt to lose their tempers, and even become profane, in the aggravations of what is known as spring than at any other time. The subject cannot be pursued here, but there is ground for supposing that the devil prefers a country where the temperature is high and pretty uniform.

At any rate, it is true that the development of character is not arrested by any geniality or languor of nature. By midsummer the Hendersons were settled in Lenox, where the Blunts had long been, and Miss Tavish and her party of friends were at Bar Harbor. Henderson was compelled to be in the city most of the time, and Jack Delancy fancied that business required his presence there also; but he had bought a yacht, and contemplated a voyage, with several of the club men, up the Maine coast. "No, I thank you," Major Fairfax had said; "I know an easier way to get to Bar Harbor."

Jack was irritable and restless, to be sure, in the absence of the sort of female society he had become accustomed to; but there were many compensations in his free-and-easy bachelor life, in his pretense of business, which consisted in watching the ticker, as it is called, in an occasional interview with Henderson, and in the floating summer amusements of the relaxed city. There was nothing unusual in this life except that he needed a little more stimulation, but this was not strange in the summer, and that he devoted more time to poker—but everybody knows that a person comes out about even in the game of poker if he keeps at it long enough—there was nothing unusual in this, only it was giving Jack a distaste for the quiet and it seemed to him the restraint of the Golden House down by the sea. And he was more irritable there than elsewhere. It is so difficult to estimate an interior deterioration of this sort, for Jack was just as popular with his comrades as ever, and apparently more prosperous.

It is true that Jack had had other ideas when he was courting Edith Fletcher, and at moments, at any rate, different aspirations from any he had now. With her at that time there had been nobler aspirations about life. But now she was his wife. That was settled. And not only that, but she was the best woman he knew; and if she were not his wife, he would spare no effort to win her. He felt sure of that. He did not put it to himself in the way an Oriental would do, "That is finished"; but it was an act done—a good act—and here was his world again, with a hundred interests, and there were people besides Edith to be thought of, other women and men, and affairs. Because a man was married, was he to be shut up to one little narrow career, that of husband? Probably it did not occur to him that women take a different view of this in the singleness of their purpose and faith. Edith, for instance, knew or guessed that Jack had no purpose in life that was twenty-four hours old; but she had faith—and no amount of observation destroys this faith in women—that marriage would inspire him with energy and ambition to take a man's place in the world.

With most men marriage is un fait accompli. Jack had been lucky, but there was, no doubt, truth in an observation of Mavick's. One night as they sat at the club Jack had asked him a leading question, apropos of Henderson's successful career: "Mavick, why don't you get married?" "I have never," he replied, with his usual cynical deliberation, "been obliged to. The fact is, marriage is a curb-bit. Some horses show off better with it, and some are enraged and kick over the traces. I cannot decide which I would be."

"That's true enough," said Jack, "from a bachelor's point of view of independence, but it's really a question of matching."

"The most difficult thing in the world—in horses. Just about impossible in temperament and movement, let alone looks. Most men are lucky if they get, like Henderson, a running mate."

"I see," said Jack, who knew something about the Henderson household, "your idea of a pair is that they should go single."

Mavick laughed, and said something about the ideas of women changing so much lately that nobody could tell what the relation of marriage would become, and Jack, who began to feel that he was disloyal, changed the subject. To do him justice, he would have been ashamed for Edith to hear this sort of flippant and shallow talk, which wouldn't have been at all out of place with Carmen or Miss Tavish.

"I wanted to ask you, Mavick, as a friend, do you think Henderson is square?"

"How square?"

"Well, safe?"

"Nobody is safe. Henderson is as safe as anybody. You can rely on what he says. But there's a good deal he doesn't say. Anything wrong?"

"Not that I know. I've been pretty lucky. But the fact is, I've gone in rather deep."

"Well, it's a game. Henderson plays it, as everybody does, for himself. I like Henderson. He plays to win, and generally does. But, you know, if one man wins, somebody else has got to lose in this kind of industry."

"But Henderson looks out for his friends?"

"Yes—when it doesn't cost too much. Times may come when a man has to look out for himself. Wealth isn't made out of nothing. There must be streams into the reservoir. These great accumulations of one—you can see that—must be made up of countless other men's small savings. There's Uncle Jerry. He operates a good deal with Henderson, and they'd incline to help each other out. But Uncle Jerry says he's got a small pond of his own, and he's careful not to connect it with Henderson's reservoir."

"What do you think of Missouri?"

"What do I think of the Milky Way? It doesn't much matter to me what becomes of Missouri, unless Henderson should happen to get smashed in it, and that isn't what he is there for. But when you look at the combinations, and the dropping-off of roads that have been drained, and the scaling down in refunding, and the rearranging, and the strikes, how much chance do you think the small fry stand? I don't doubt that Henderson will make a big thing out of it, and there will be lots of howling by those who were not so smart, and the newspapers will say that Henderson was too strong for them. What we respect nowadays are adroitness and strength."

"It's an exciting game," Mavick continued, after a moment's pause. "Let me know if you get uneasy. But I'll tell you what it is, Jack; if I had a comfortable income, I wouldn't risk it in any speculation. There is a good deal that is interesting going on in this world, and I like to be in it; but the best plan for a man who has anything is, as Uncle Jerry says, to sail close and salt down."

The fact was that Mavick's connection with Henderson was an appreciable addition to his income, and it was not a bad thing for Henderson. Mavick's reputation for knowing the inside of everything and being close-mouthed actually brought him confidences; that which at first was a clever assumption became a reality, and his reputation was so established for being behind the scenes that he was not believed when he honestly professed ignorance of anything. His modest disclaimer merely increased the impression that he was deep. Henderson himself had something of the Bismarck trait of brutal, contemptuous frankness. Mavick was never brutal and never contemptuous, but he had a cynical sort of frankness, which is a good deal more effectual in a business way than the oily, plausible manner which on 'Change, as well as in politics, is distrusted as hypocrisy. Now Uncle Jerry Hollowell was neither oily nor frank; he was long-headed and cautious, and had a reputation for shrewdness and just enough of plasticity of conscience to remove him out of the list of the impracticable and over-scrupulous. This reputation that business men and politicians acquire would be a very curious study. The world is very complacent, and apparently worships success and votes for smartness, but it would surprise some of our most successful men to know what a real respect there is in the community, after all, for downright integrity.

Even Jack, who fell into the current notion of his generation of young men that the Henderson sort of morality was best adapted to quick success, evinced a consciousness of want of nobility in the course he was pursuing by not making Edith his confidante. He would have said, of course, that she knew nothing about business, but what he meant was that she had a very clear conception of what was honest. All the evidences of his prosperity, shown in his greater freedom of living, were sore trials to her. She belonged to that old class of New-Yorkers who made trade honorable, like the merchants of Holland and Venice, and she knew also that Jack's little fortune had come out of honest toil and strict business integrity. Could there be any happiness in life in any other course?

It seemed cruel to put such a problem as this upon a young woman hardly yet out of girlhood, in the first flush of a new life, which she had dreamed should be so noble and high and so happy, in the period which is consecrated by the sweetest and loveliest visions and hopes that ever come into a woman's life.

As the summer wore on to its maximum of heat and discomfort in the city, Edith, who never forgot to measure the hardships of others by her own more fortunate circumstances, urged Dr. Leigh to come away from her labors and rest a few days by the sea. The reply was a refusal, but there was no complaint in the brief business-like note. One might have supposed that it was the harvest-time of the doctor, if he had not known that she gathered nothing for herself. There had never been so much sickness, she wrote, and such an opportunity for her. She was learning a great deal, especially about some disputed contagious diseases. She would like to see Mrs. Delancy, and she wouldn't mind a breath of air that was more easily to be analyzed than that she existed in, but nothing could induce her to give up her cases. All that appeared in her letter was her interest in her profession.

Father Damon, who had been persuaded by Edith's urgency to go down with Jack for a few days to the Golden House, seemed uncommonly interested in the reasons of Dr. Leigh's refusal to come.

"I never saw her," he said, "so cheerful. The more sickness there is, the more radiant she is. I don't mean," he added, laughing, "in apparel. Apparently she never thinks of herself, and positively she seems to take no time to eat or sleep. I encounter her everywhere. I doubt if she ever sits down, except when she drops in at the mission chapel now and then, and sits quite unmoved on a bench by the door during vespers."

"Then she does go there?" said Edith.

"That is a queer thing. She would promptly repudiate any religious interest. But I tell her she is a bit of a humbug. When I speak about her philanthropic zeal, she says her interest is purely scientific."

"Anyway, I believe," Jack put in, "that women doctors are less mercenary than men. I dare say they will get over that when the novelty of coming into the profession has worn off."

"That is possible," said Father Damon; "but that which drives women into professions now is the desire to do something rather than the desire to make something. Besides, it is seldom, in their minds, a finality; marriage is always a possibility."

"Yes," replied Edith, "and the probability of having to support a husband and family; then they may be as mercenary as men are."

"Still, the enthusiasm of women," Father Damon insisted, "in hospital and outdoor practice, the singleness

of their devotion to it, is in contrast to that of the young men-doctors. And I notice another thing in the city: they take more interest in philanthropic movements, in the condition of the poor, in the labor questions; they dive eagerly into philosophic speculations, and they are more aggressively agnostics. And they are not afraid of any social theories. I have one friend, a skillful practitioner they tell me, a linguist, and a metaphysician, a most agreeable and accomplished woman, who is in theory an extreme nihilist, and looks to see the present social and political order upset."

"I don't see," Jack remarked, "what women especially are to gain by such a revolution."

"Perhaps independence, Jack," replied Edith. "You should hear my club of working-girls, who read and think much on these topics, talk of these things."

"Yes," said Father Damon, "you toss these topics about, and discuss them in the magazines, and fancy you are interested in socialistic movements. But you have no idea how real and vital they are, and how the dumb discontent of the working classes is being formulated into ideas. It is time we tried to understand each other."

Not all the talk was of this sort at the Golden House. There were three worlds here—that of Jack, to which Edith belonged by birth and tradition and habit; that of which we have spoken, to which she belonged by profound sympathy; and that of Father Damon, to which she belonged by undefined aspiration. In him was the spiritual element asserting itself in a mediaeval form, in a struggle to mortify and deny the flesh and yet take part in modern life. Imagine a celibate and ascetic of the fifteenth century, who knew that Paradise must be gained through poverty and privation and suffering, interesting himself in the tenement-house question, in labor leagues, and the single tax.

Yet, hour after hour, in those idle summer days, when nature was in a mood that suggested grace and peace, when the waves lapsed along the shore and the cicada sang in the hedge, did Father Damon unfold to Edith his ideas of the spiritualization of modern life through a conviction of its pettiness and transitoriness. How much more content there would be if the poor could only believe that it matters little what happens here if the heart is only pure and fixed on the endless life.

"Oh, Father Damon," replied Edith, with a grave smile, "I think your mission ought to be to the rich."

"Yes," he replied, for he also knew his world, "if I wanted to make my ideas fashionable; but I want to make them operative. By-and-by," he added, also with a smile, "we will organize some fishermen and carpenters and tailors on a mission to the rich."

Father Damon's visit was necessarily short, for his work called him back to town, and perhaps his conscience smote him a little for indulging in this sort of retreat. By the middle of August Jack's yacht was ready, and he went with Mavick and the Van Dams and some other men of the club on a cruise up the coast. Edith was left alone with her Baltimore friend.

And yet not alone. As she lay in her hammock in those dreamy days a new world opened to her. It was not described in the chance romance she took up, nor in the volume of poems she sometimes held in her hand, with a finger inserted in the leaves. Of this world she felt herself the centre and the creator, and as she mused upon its mysteries, life took a new, strange meaning to her. It was apt to be a little hazy off there in the watery horizon, and out of the mist would glide occasionally a boat, and the sun would silver its sails, and it would dip and toss for half an hour in the blue, laughing sea, and then disappear through the mysterious curtain. Whence did it come? Whither had it gone? Was life like that? Was she on the shore of such a sea, and was this new world into which she was drifting only a dream? By her smile, by the momentary illumination that her sweet thoughts made in her lovely, hopeful face, you knew that it was not. Who can guess the thoughts of a woman at such a time? Are the trees glad in the spring, when the sap leaps in their trunks, and the buds begin to swell, and the leaves unfold in soft response to the creative impulse? The miracle is never old nor commonplace to them, nor to any of the human family. The anticipation of life is eternal. The singing of the birds, the blowing of the south wind, the sparkle of the waves, all found a response in Edith's heart, which leaped with joy. And yet there was a touch of melancholy in it all, the horizon was so vast, and the mist of uncertainty lay along it. Literature, society, charities, all that she had read and experienced and thought, was nothing to this, this great unknown anxiety and bliss, this saddest and sweetest of all human experiences. She prayed that she might be worthy of this great distinction, this responsibility and blessing.

And Jack, dear Jack, would he love her more?

XII

Although Father Damon had been absent from his charge only ten days, it was time for him to return. If he had not a large personal following, he had a wide influence. If comparatively few found their way to his chapel, he found his way to many homes; his figure was a familiar one in the streets, and his absence was felt by hundreds who had no personal relations with him, but who had become accustomed to seeing him go about on his errands of encouragement, and probably had never realized how much the daily sight of him had touched them. The priestly dress, which may once have provoked a sneer at his effeminacy, had now a suggestion of refinement, of unselfish devotion, of consecration to the service of the unfortunate, his spiritual face appealed to their better natures, and the visible heroism that carried his frail figure through labors that would have worn out the stoutest physique stirred in the hearts of the rudest some comprehension of the reality of the spirit.

It may not have occurred to them that he was of finer clay than they—perhaps he was not—but his presence was in their minds a subtle connection and not a condescending one, rather a confession of brotherhood, with another world and another view of life. They may not have known that their hearts were stirred because he had the gift of sympathy.

And was it an unmanly trait that he evoked in men that sentiment of chivalry which is never wanting in the

roughest community for a pure woman? Wherever Father Damon went there was respect for his purity and his unselfishness, even among those who would have been shamefaced if surprised in any exhibition of softness.

And many loved him, and many depended on him. Perhaps those who most depended on him were the least worthy, and those who loved him most were least inclined to sacrifice their own reasonable view of life to his own sublimated spiritual conception. It was the spirit of the man they loved, and not the creed of the priest. The little chapel in its subdued lights and shadows, with confessionals and crosses and candles and incense, was as restful a refuge as ever to the tired and the dependent; but wanting his inspiring face and voice, it was not the same thing, and the attendance always fell away when he was absent. There was needed there more than elsewhere the living presence.

He was missed, and the little world that missed him was astray. The first day of his return his heart was smitten by the thinness of the congregation. Had he, then, accomplished nothing; had he made no impression, established in his shifting flock no habit of continuance in well-doing that could survive even his temporary withdrawal? The fault must be his. He had not sufficiently humiliated and consecrated himself, and put under all strength of the flesh and trust in worldly instrumentalities. There must be more prayer, more vigils, more fasting, before the power would come back to him to draw these wandering minds to the light. And so in the heat of this exhausting August, at the time when his body most needed re-enforcement for the toil he required of it, he was more rigid in his spiritual tyranny and contempt of it.

Ruth Leigh was not dependent upon Father Damon, but she also learned how long ten days could be without a sight of him. When she looked into his chapel occasionally she realized, as never before, how much in the air his ceremonies and his creed were. There was nothing there for her except his memory. And she knew when she stepped in there, for her cool, reasoning mind was honest, that it was the thought of him that drew her to the place, and that going there was a sentimental indulgence. What she would have said was that she admired, loved Father Damon on account of his love for humanity. It was a common saying of all the professional women in her set, and of the working-girls, that they loved Father Damon. It is a comfort to women to be able to give their affection freely where conventionalities and circumstances make the return of it in degree unlikely.

At the close of a debilitating day Dr. Leigh found herself in the neighborhood of the mission chapel. She was tired and needed to rest somewhere. She knew that Father Damon had returned, but she had not seen him, and a double motive drew her steps. The attendance was larger than it had been recently, and she found a stool in a dark corner, and listened, with a weary sort of consciousness of the prayers and the singing, but not without a deeper feeling of peace in the tones of a voice every inflection of which she knew so well. It seemed to her that the reading cost him an effort, and there was a note of pathos in the voice that thrilled her. Presently he advanced towards the altar rail—he was accustomed to do this with his little flock—and placing one hand on the lectern, began to speak.

At first, and this was not usual, he spoke about himself in a strain of sincere humility, taking blame upon himself for his inability to do effectively the great service his Master had set him to do. He meant to have given himself more entirely to the dear people among whom he labored; he hoped to show himself more worthy of the trust they had given him; he was grateful for the success of his mission, but no one knew so well as he how far short it came of being what he ought to have made it. He knew indeed how weak he was, and he asked the aid of their sympathy and encouragement. It seemed to be with difficulty that he said this, and to Ruth's sympathetic ear there was an evidence of physical exhaustion in his tone. There was in it, also, for her, a confession of failure, the cry of the preacher, in sorrow and entreaty, that says, "I have called so long, and ye would not listen."

As he went on, still with an effort and feebly, there came over the little group a feeling of awe and wonderment, and the silence was profound. Still steadying himself by the reading-desk, he went on to speak of other things, of those of his followers who listened, of the great mass swirling about them in the streets who did not listen and did not care; of the little life that now is so full of pain and hardship and disappointment, of good intentions frustrated, of hopes that deceive, and of fair prospects that turn to ashes, of good lives that go wrong, of sweet natures turned to bitterness in the unaided struggle. His voice grew stronger and clearer, as his body responded to the kindling theme in his soul. He stepped away from the desk nearer the rail, the bowed head was raised. "What does it matter?" he said. "It is only for a little while, my children." Those who heard him that day say that his face shone like that of an angel, and that his voice was like a victorious clarion, so clear, so sweet, so inspiring, as he spoke of the life that is to come, and the fair certainty of that City where he with them all wished to be.

As he closed, some were kneeling, many were crying; all, profoundly moved, watched him as, with the benediction and the sign of the cross, he turned and walked swiftly to the door of the sacristy. It opened, and then Ruth Leigh heard a cry, "Father Damon! Father Damon!" and there was a rush into the chancel. Hastening through the throng, which promptly made way for the doctor, she found Father Damon lying across the threshold, as he had fallen, colorless and unconscious. She at once took command of the situation. The body was lifted to the plain couch in the room, a hasty examination was made of pulse and heart, a vial of brandy was produced from her satchel, and messengers were despatched for things needed, and especially for beef-tea.

"Is he dead, Dr. Leigh? Is he any better, doctor? What is the matter, doctor?"

"Want of nourishment," replied Dr. Leigh, savagely.

The room was cleared of all except a couple of stout lads and a friendly German woman whom the doctor knew. The news of the father's sudden illness had spread rapidly, with the report that he had fallen dead while standing at the altar; and the church was thronged, and the street rapidly blocked up with a hushed crowd, eager for news and eager to give aid. So great was the press that the police had to interfere, and push back the throng from the door. It was useless to attempt to disperse it with the assurance that Father Damon was better; it patiently waited to see for itself. The sympathy of the neighborhood was most impressive, and perhaps the thing that the public best remembers about this incident is the pathetic solicitude of the people

among whom Father Damon labored at the rumor of his illness, a matter which was greatly elaborated by the reporters from the city journals and the purveyors of telegraphic news for the country.

With the application of restoratives the patient revived. When he opened his eyes he saw figures in the room as in a dream, and his mind struggled to remember where he was and what had happened; but one thing was not a dream: Dr. Leigh stood by his bedside, with her left hand on his brow and the right grasping his own right hand, as if to pull him back to life. He saw her face, and then he lost it again in sheer weariness at the effort. After a few moments, in a recurring wave of strength, he looked up again, still bewildered, and said, faintly:

"Where am I?"

"With friends," said the doctor. "You were a little faint, that is all; you will be all right presently."

She quickly prepared some nourishment, which was what he most needed, and fed him from time to time, as he was able to receive it. Gradually he could feel a little vigor coming into his frame; and regaining control of himself, he was able to hear what had happened. Very gently the doctor told him, making light of his temporary weakness.

"The fact is, Father Damon," she said, "you've got a disease common in this neighborhood—hunger."

The father smiled, but did not reply. It might be so. For the time he felt his dependence, and he did not argue the point. This dependence upon a woman—a sort of Sister of Charity, was she not?—was not altogether unpleasant. When he attempted to rise, but found that he was too weak, and she said "Not yet," he submitted, with the feeling that to be commanded with such gentleness was a sort of luxury.

But in an hour's time he declared that he was almost himself again, and it was decided that he was well enough to be removed to his own apartments in the neighborhood. A carriage was sent for, and the transfer was made, and made through a crowd in the streets, which stood silent and uncovered as his carriage passed through it. Dr. Leigh remained with him for an hour longer, and then left him in charge of a young gentleman from the Neighborhood Guild, who gladly volunteered to watch for the night.

Ruth walked slowly home, weary now that the excitement was over, and revolving many things in her mind, as is the custom of women. She heard again that voice, she saw again that inspired face; but the impression most indelible with her was the prostrate form, the pallid countenance, the helplessness of this man whose will had before been strong enough to compel the obedience of his despised body. She had admired his strength; but it was his weakness that drew upon her woman's heart, and evolved a tenderness dangerous to her peace of mind. Yet it was the doctor and not the woman that replied to the inquiries at the dispensary.

"Yes, it was fasting and overwork. Men are so stupid; they think they can defy all the laws of nature, especially priests." And she determined to be quite plain with him next day.

And Father Damon, lying weary in his bed, before he fell asleep, saw the faces in the dim chapel turned to him in strained eagerness the moment before he lost consciousness; but the most vivid image was that of a woman bending over him, with eyes of tenderness and pity, and the smile with which she greeted his awakening. He could feel yet her hand upon his brow.

When Dr. Leigh called next day, on her morning rounds, she found a brother of the celibate order, Father Monies, in charge. He was sitting by the window reading, and when the doctor came up the steps he told her in a low voice to enter without knocking. Father Damon was better, much better; but he had advised him not to leave his bed, and the patient had been dozing all the morning. The doctor asked if he had eaten anything, and how much. The apartment was small and scantily furnished—a sort of anchorite cell. Through the drawn doors of the next room the bed was in sight. As they were talking in low voices there came from this room a cheerful:

"Good-morning, doctor."

"I hope you ate a good breakfast," she said, as she arose and went to his bedside.

"I suppose you mean better than usual," he replied, with a faint attempt at a smile. "No doubt you and Father Monies are satisfied, now you've got me laid up."

"That depends upon your intentions."

"Oh, I intend to get up tomorrow."

"If you do, without other change in your intentions, I am going to report you to the Organized Charity as a person who has no visible means of support."

She had brought a bunch of violets, and as they talked she had filled a glass with water and put them on a stand by the head of the bed. Then—oh, quite professionally—she smoothed out his pillows and straightened the bedclothes, and, talking all the time, and as if quite unconscious of what she was doing, moved about the room, putting things to rights, and saying, in answer to his protest, that perhaps she should lose her reputation as a physician in his eyes by appearing to be a professional nurse.

There was a timid knock at the door, and a forlorn little figure, clad in a rumpled calico, with an old shawl over her head, half concealing an eager and pretty face, stood in the doorway, and hesitatingly came in.

"Meine Mutter sent me to see how Father Damon is," she explained; "she could not come, because she washes."

She had a bunch of flowers in her hand, and encouraged by the greeting of the invalid, she came to the bedside and placed them in his outstretched hand—a faded blossom of scarlet geranium, a bachelor's button, and a sprig of parsley, probably begged of a street dealer as she came along. "Some blooms," she said.

"Bless you, my dear," said Father Damon; "they are very pretty."

"Dey smells nice," the child exclaimed, her eyes dancing with pleasure at the reception of her gift. She stood staring at him, and then, her eye catching the violets, she added, "Dose is pooty, too."

"If you can stay half an hour or so, I should like to step round to the chapel," Father Monies said to the doctor in the front room, taking up his hat.

The doctor could stay. The little girl had moved a chair up to the bedside, and sat quite silent, her grimy

little hand grasped in the father's. Ruth, saying that she hoped the father wouldn't mind, began to put in order the front room, which the incidents of the night had somewhat disturbed. Father Damon, holding fast by that little hand to the world of poverty to which he had devoted his life, could not refrain from watching her, as she moved about with the quick, noiseless way that a woman has when she is putting things to rights. This was indeed a novel invasion of his life. He was still too weak to reason about it much. How good she was, how womanly! And what a sense of peace and repose she brought into his apartment! The presence of Brother Monies was peaceful also, but hers was somehow different. His eyes had not cared to follow the brother about the room. He knew that she was unselfish, but he had not noticed before that her ways were so graceful. As she turned her face towards him from time to time he thought its expression beautiful. Ruth Leigh would have smiled grimly if any one had called her beautiful, but then she did not know how she looked sometimes when her feelings were touched. It is said that the lamp of love can illumine into beauty any features of clay through which it shines. As he gazed, letting himself drift as in a dream, suddenly a thought shot through his mind that made him close his eyes, and such a severe priestly look came upon his face that the little girl, who had never taken her eyes off him, exclaimed:

"It is worse?"

"No, my dear," he replied, with a reassuring smile; "at least, I hope not."

But when the doctor, finishing her work, drew a chair into the doorway, and sat by the foot of his bed, the stern look still remained on his pale face. And the doctor, she also was the doctor again, as matter of fact as in any professional visit.

"You are very kind," he said.

There was a shade of impatience on her face as she replied, "But you must be a little kind to yourself."

"It doesn't matter."

"But it does matter. You defeat the very work you want to do. I'm going to report you to your order." And then she added, more lightly, "Don't you know it is wrong to commit suicide?"

"You don't understand," he replied. "There is more than one kind of suicide; you don't believe in the suicide of the soul. Ah, me!" And a shade of pain passed over his face.

She was quick to see this. "I beg your pardon, Father Damon. It is none of my business, but we are all so anxious to have you speedily well again."

Just then Father Monies returned, and the doctor rose to go. She took the little girl by the hand and said, "Come, I was just going round to see your father. Good-by. I shall look in again tomorrow."

"Thank you—thank you a thousand times. But you have so much to do that you must not bother about me."

Whether he said this to quiet his own conscience, secretly hoping that he might see her again on the morrow, perhaps he himself could not have decided.

Late the next afternoon, after an unusually weary round of visits, made in the extreme heat and in a sort of hopeless faithfulness, Dr. Leigh reached the tenement in which Father Damon lodged: In all the miserable scenes of the day it had been in her mind, giving to her work a pleasure that she did not openly acknowledge even to herself, that she should see him.

The curtains were down, and there was no response to her knock, except from a door in the passage opposite. A woman opened the door wide enough to show her head and to make it evident that she was not sufficiently dressed to come out, and said that Father Damon had gone. He was very much better, and his friend had taken him up-town. Dr. Leigh thanked her, and said she was very glad.

She was so glad that, as she walked away, scarcely heeding her steps or conscious of the chaffing, chattering crowd, all interest in her work and in that quarter of the city seemed dead.

XIII

It is well that there is pleasure somewhere in the world. It is possible for those who have a fresh-air fund of their own to steam away in a yacht, out of the midsummer ennui and the weary gayety of the land. It is a costly pleasure, and probably all the more enjoyed on that account, for if everybody had a yacht there would be no more feeling of distinction in sailing one than in going to any of the second-rate resorts on the coast. There is, to be sure, some ennui in yachting on a rainy coast, and it might be dull but for the sensation created by arrivals at watering-places and the telegraphic reports of these sensations.

If there was any dullness on the Delancy yacht, means were taken to dispel it. While still in the Sound a society was formed for the suppression of total abstinence, and so successful was this that Point Judith was passed, in a rain and a high and chopping sea, with a kind of hilarious enjoyment of the commotion, which is one of the things desired at sea. When the party came round to Newport it declared that it had had a lovely voyage, and inquiry brought out the great general principle, applicable to most coast navigation for pleasure, that the enjoyable way to pass Point Judith is not to know you are passing Point Judith.

Except when you land, and even after you have got your sea-legs on, there is a certain monotony in yachting, unless the weather is very bad, and unless there are women aboard. A party of lively women make even the sea fresh and entertaining. Otherwise, the game of poker is much what it is on land, and the constant consulting of charts and reckoning of speed evince the general desire to get somewhere—that is, to arrive at a harbor. In the recollections of this voyage, even in Jack's recollections of it after he had paid the bills, it seemed that it had been simply glorious, free from care, generally a physical setting-up performance, and a lark of enormous magnitude. And everybody envied the fortunate sailors.

Mavick actually did enjoy it, for he had that brooding sort of nature, that self-satisfied attitude, that is able to appropriate to its own uses whatever comes. And being an unemotional and very tolerable sailor, he was able to be as cynical at sea as on land, and as much of an oracle, in his wholly unobtrusive way. The perfect personal poise of Mavick, which gave him an air of patronizing the ocean, and his lightly held skeptical view of life, made his company as full of flavor on ship as it was on shore. He didn't know anything more about the weather than the Weather Bureau knows, yet the helmsman of the yacht used to consult him about the appearances of the sky and a change of wind with a confidence in his opinion that he gave to no one else on board. And Mavick never forfeited this respect by being too positive. It was so with everything; he evidently knew a great deal more than he cared to tell. It is pleasing to notice how much credit such men as Mavick obtain in the world by circumspect reticence and a knowing manner. Jack, blundering along in his free-hearted, emotional way, and never concealing his opinion, was really right twice where Mavick was right once, but he never had the least credit for wisdom.

It was late in August that the Delancy yacht steamed into the splendid Bar Harbor, making its way slowly through one of the rare fogs which are sometimes seen by people who do not own real estate there. Even before they could see an island those on board felt the combination of mountain and sea air that makes this favored place at once a tonic and a sedative to the fashionable world.

The party were expected at Bar Harbor. It had been announced that the yacht was on its way, and some of the projected gayeties were awaiting its coming, for the society reinforcement of the half-dozen men on board was not to be despised. The news went speedily round that Captain Delancy's flag was flying at the anchorage off the landing.

Among the first to welcome them as they landed and strolled up to the hotel was Major Fairfax.

"Oh yes," he said; "we are all here—that is, all who know where they ought to be at the right moment."

To the new-comers the scene was animated. The exotic shops sparkled with cheap specialties; landaus, pony-phaetons, and elaborate buckboards dashed through the streets; aquatic and lawn-tennis costumes abounded. If there was not much rowing and lawn-tennis, there was a great deal of becoming morning dressing for these sports, and in all the rather aimless idleness there was an air of determined enjoyment. Even here it was evident that there was a surplus of women. These lovers of nature, in the summer season, who had retired to this wild place to be free from the importunities of society, betrayed, Mavick thought, the common instinct of curiosity over the new arrival, and he was glad to take it as an evidence that they loved not nature less but man more. Jack tripped up this ungallant speech by remarking that if Mavick was in this mood he did not know why he came ashore. And Van Dam said that sooner or later all men went ashore. This thin sort of talk was perhaps pardonable after the weariness of a sea voyage, but the Major promptly said it wouldn't do. And the Major seemed to be in charge of the place.

"No epigrams are permitted. We are here to enjoy ourselves. I'm ordered to bring the whole crew of you to tea at the Tavish cottage."

"Anybody else there?" asked Jack, carelessly.

"Well, it's the most curious coincidence, but Mrs. Henderson arrived last night; Henderson has gone to Missouri."

"Yes, he wrote me to look out for his wife on this coast," said Mavick.

"You kept mighty still about it," said Jack.

"So did you," retorted Mavick.

"It is very curious," the Major explained, "how fashionable intelligence runs along this coast, apparently independent of the telegraph; everybody knows where everybody else is."

The Tavish cottage was a summer palace of the present fashion, but there was one good thing about it: it had no tower, nor any make-believe balconies hung on the outside like bird-cages. The rooms were spacious, and had big fireplaces, and ample piazzas all round, so that the sun could be courted or the wind be avoided at all hours of the day. It was, in short, not a house for retirement and privacy, but for entertainment. It was furnished luxuriously but gayly, and with its rugs and portieres and divans it reminded Mavick of an Oriental marquee. Miss Tavish called it her tepee, an evolution of the aboriginal dwelling. She liked to entertain, and she never appeared to better advantage than when her house was full, and something was going on continually-lively breakfasts and dinners, dances, theatricals, or the usual flowing in and out of callers and guests, chattering groups, and flirtatious couples. It was her idea of repose from the winter's gayety, and in it she sustained the role of the non-fatigueable society girl. It is a performance that many working-girls regard with amazement.

There was quite a flutter in the cottage, as there always is when those who know each other well meet under new circumstances after a short separation.

"We are very glad to see you," Miss Tavish said, cordially; "we have been awfully dull."

"That is complimentary to me," said the Major.

"You can judge the depths we have been in when even the Major couldn't pull us out," she retorted. "Without him we should have simply died."

"And it would have been the liveliest obsequies I ever attended."

Carmen was not effusive in her greeting; she left that role to Miss Tavish, taking for herself that of confidential friend. She was almost retiring in her manner, but she made Jack feel that she had a strong personal interest in his welfare, and she asked a hundred questions about the voyage and about town and about Edith.

"I'm going to chaperon you up here," she said, "for Miss Tavish will lead you into all sorts of wild adventures."

There was that in the manner of the demure little woman when she made this proposal that convinced Jack that under her care he would be perfectly safe—from Miss Tavish.

After cigarettes were lighted she contrived to draw Mavick away to the piazza. She was very anxious to know what Henderson's latest moves were. Mavick was very communicative, and told her nothing that he knew she did not already know. And she was clever enough to see, without any apparent distrust, that whatever she got from him must be in what he did not say. As to Jack's speculations, she made little more progress. Jack gave every sign of being prosperous; he entertained royally on his yacht.

Mavick himself was puzzled to know whether Carmen really cared for Jack, or whether she was only interested as in a game, one of the things that amused her life to play, to see how far he would go, and to watch his ascension or his tumble. Mavick would have been surprised if he had known that as a result of this wholly agreeable and confidential talk, Carmen wrote that night in a letter to her husband:

"Your friend Mavick is here. What a very clever man he is! If I were you I would keep an eye on him."

A dozen plans were started at the tea for relieving the tedium of the daily drives and the regulation teas and receptions. For one thing, weather permitting, they would all breakfast at twelve on the yacht, and then sail about the harbor, and come home in the sunset.

The day was indeed charming, so stimulating as to raise the value of real estate, and incite everybody to go off in search of adventure, in wagons, in walking parties, in boats. There is no happiness like the anticipation of pleasure begot by such a morning. Those who live there said it was regular Bar Harbor weather.

Captain Delancy was on deck to receive his guests, who came out in small boats, chattering and fluttering and "ship-ahoying," as gay in spirits as in apparel. Anything but high spirits and nonsense would be unpardonable on such a morning. Breakfast was served on deck, under an awning, in sight of the mountains, the green islands, the fringe of breaking sea in the distant opening, the shimmer and sparkle of the harbor, the white sails of pleasure-boats, the painted canoes, the schooners and coal-boats and steamers swinging at anchor just enough to make all the scene alive. "This is my idea," said the Major, "of going to sea in a yacht; it would be perfect if we were tied up at the dock."

"I move that we throw the Major overboard," cried Miss Tavish.

"No," Jack exclaimed; "it is against the law to throw anything into the harbor."

"Oh, I expected Miss Tavish would throw me overboard when Mavick appeared."

Mavick raised his glass and proposed the health of Miss Tavish.

"With all my heart," the Major said; "my life is passed in returning good for evil."

"I never knew before," and Miss Tavish bowed her acknowledgments, "the secret of the Major's attractions."

"Yes," said Carmen, sweetly, "he is all things to all women."

"You don't appear to have a friend here, Major," Mavick suggested.

"No; my friends are all foul-weather friends; come a bright day, they are all off like butterflies. That comes of being constant."

"That's no distinction," Carmen exclaimed; "all men are that till they get what they want."

"Alas! that women also in these days here become cynical! It was not so when I was young. Here's to the ever young," and he bowed to Carmen and Miss Tavish.

"He's been with Ponce de Leon!" cried Miss Tavish.

"He's the dearest man living, except a few," echoed Carmen. "The Major's health."

The yellow wine sparkled in the glasses like the sparkling sea, the wind blew softly from the south, the sails in the bay darkened and flashed, and the breakfast, it seemed to go along of itself, and ere long the convives were eating ambrosia and sipping nectar. Van Dam told a shark story. Mavick demonstrated its innate improbability. The Major sang a song—a song of the forties, with a touch of sentiment. Jack, whose cheerful voice was a little of the cider-cellar order, and who never sang when he was sad, struck up the latest vaudeville ditty, and Carmen and Miss Tavish joined in the chorus.

"I like the sea," the Major declared. They all liked it. The breakfast lasted a long time, and when they rose from the table Jack said that presently they would take a course round the harbor. The Major remarked that that would suit him. He appeared to be ready to go round the world.

While they were preparing to start, Carmen and Jack strolled away to the bow, where she perched herself, holding on by the rigging. He thought he had never seen her look so pretty as at that moment, in her trim nautical costume, sitting up there, swinging her feet like a girl, and regarding him with half-mocking, half-admiring eyes.

What were they saying? Heaven only knows. What nonsense do people so situated usually talk? Perhaps she was warning him against Miss Tavish. Perhaps she was protesting that Julia Tavish was a very, very old friend. To an observer this admirable woman seemed to be on the defensive—her most alluring attitude. It was not, one could hear, exactly sober talk; there was laughter and raillery and earnestness mingled. It might be said that they were good comrades. Carmen professed to like good comradeship and no nonsense. But she liked to be confidential.

Till late in the afternoon they cruised about among the islands, getting different points of view of the coast, and especially different points of view of each other, in the freedom of talk and repartee permitted on an excursion. Before sunset they were out in the open, and could feel the long ocean swell. The wind had risen a little, and there was a low band of clouds in the south. The skipper told Mr. Delancy that it would be much fresher with the sinking of the sun, but Jack replied that it wouldn't amount to anything; the glass was all right.

*"Now the great winds shoreward blow;
Now the salt tides seaward flow;
Now the wild white horses play,
Champ and chafe and toss in the spray."*

Miss Tavish was in the wheel-house, and had taken the wheel. This clever girl knew her right hand from her left, instantly, without having to stop and think and look at her rings, and she knew what port and starboard meant, as orders, and exactly how to meet a wave with a turn of the wheel.

"I say, Captain Delancy," she cried out, "the steamer is about due. Let's go down and meet her, and race in."

"All right," replied Jack. "We can run round her three times and then beat her in."

The steamer's smoke was seen at that instant, and the yacht was headed for it. The wind was a little fresher, but the tight little craft took the waves like a duck, and all on board enjoyed the excitement of the change, except the Major, who said he didn't mind, but he didn't believe the steamer needed any escort.

By the time the steamer was reached the sun was going down in a band of clouds. There was no gale, but the wind increased in occasional puffs of spite, and the waves were getting up. The skipper took the wheel to turn the yacht in a circle to her homeward course. As this operation created strange motions, and did not interest the Major, he said he would go below and reflect.

In turning, the yacht came round on the seaward side of the steamer, but far behind. But the little craft speedily showed her breeding and overhauled her big rival, and began to forge ahead. The little group on the yacht waved their handkerchiefs as if in good-by, and the passengers on the steamer cheered. As the wind was every moment increasing, the skipper sheered away to allow plenty of sea-room between the boats. The race appeared to be over.

"It's a pity," said Miss Tavish.

"Let's go round her," said Jack; "eh, skipper?"

"If you like, sir," responded the skipper. "She can do it."

The yacht was well ahead, but the change in the direction brought the vessels nearer together. But there was no danger. The speed they were going would easily bring her round away ahead of the steamer.

But just then something happened. The yacht would not answer to her helm. The wheel flew around without resistance. The wind, hauled now into the east, struck her with violence and drove her sideways. The little thing was like a chip on the sea. The rudder-chain had broken. The yacht seemed to fly towards the long, hulking steamer. The danger was seen there, and her helm was put hard down, and her nose began to turn towards the shore. But it was too late. It seemed all over in an instant. The yacht dashed bow on to the side of the steamer, quivered an instant, and then dropped away. At the same moment the steamer slowed down and

began to turn to assist the wounded.

The skipper of the yacht and a couple of hands rushed below. A part of the bow had been carried away and a small hole made just above the waterline, through which the water spurted whenever she encountered a large wave. It was enough to waterlog her and sink her in such a sea. The two seamen grasped whatever bedding was in reach below, rammed it into the opening, and held it there. The skipper ran on deck, and by the aid of the men hauled out a couple of sails and dropped them over the bow. These would aid in keeping out the water. They could float now, but where were they going? "Going ashore," said Mavick, grimly. And so they were.

"Was there a panic on board?" it was asked afterwards. Not exactly. Among well-bred people a panic is never good form. But there were white faces and trembling knees and anxious looks. The steamer was coming towards them, and all eyes were fixed on that rather than on the rocks of the still distant shore.

The most striking incident of the moment—it seemed so to some of those who looked back upon it—was a singular test of character, or rather of woman's divination of character. Carmen instinctively flew to Jack and grasped and held his arm. She knew, without stopping to reason about it, that he would unhesitatingly imperil his life to save that of any woman. Whatever judgment is passed upon Jack, this should not be forgotten. And Miss Tavish; to whom did she fly in this peril? To the gallant Major? No. To the cool and imperturbable Mavick, who was as strong and sinewy as he was cool? No. She ran without hesitation to Van Dam, and clung to him, recognizing instinctively, with the woman's feeling, the same quality that Jack had. There are such men, who may have no great gifts, but who will always fight rather than run under fire, and who will always protect a woman.

Mavick saw all this, and understood it perfectly, and didn't object to it at the time—but he did not forget it.

The task of rescue was not easy in that sea and wind, but it was dexterously done. The steamer approached and kept at a certain distance on the windward side. A boat was lowered, and a line was brought to the yacht, which was soon in tow with a stout cable hitched to the steamer's anchor windlass.

It was all done with much less excitement than appeared from the telegraphic accounts, and while the party were being towed home the peril seemed to have been exaggerated, and the affair to look like an ordinary sea incident. But the skipper said that it was one escape in a hundred.

The captain of the steamer raised his hat gravely in reply to the little cheer from the yacht, when Carmen and Miss Tavish fluttered their handkerchiefs towards him. The only chaff from the steamer was roared out by a fat Boston man, who made a funnel of his hands and shouted, "The race is not always to the swift."

As soon as Jack stepped ashore he telegraphed to Edith that the yacht had had an accident in the harbor, but that no one was hurt. When he reached the hotel he found a letter from Edith of such a tenor that he sent another despatch, saying that she might expect him at once, leaving the yacht behind. There was a buzz of excitement in the town, and there were a hundred rumors, which the sight of the yacht and its passengers landed in safety scarcely sufficed to allay.

When Jack called at the Tavish cottage to say good-by, both the ladies were too upset to see him. He took a night train, and as he was whirled away in the darkness the events of the preceding forty-eight hours seemed like a dream. Even the voyage up the coast was a little unreal—an insubstantial episode in life. And the summer city by the sea, with its gayety and gossip and busy idleness, sank out of sight like a phantom. He drew his cap over his eyes, and was impatient that the rattling train did not go faster, for Edith, waiting there in the Golden House, seemed to stretch out her arms for him to come. Still behind him rose a picture of that bacchanalian breakfast—the Major and Carmen and Mavick and Miss Tavish dancing a reel on the sloping deck, then the rising wind, the reckless daring of the race, and a vision of sudden death. He shuddered for the first time in a quick realization of how nearly it came to being all over with life and its pleasures.

XIV

Edith had made no appeal to Jack to come home. His going, therefore, had the merit in his eyes of being a voluntary response to the promptings of his better nature. Perhaps but for the accident at Mount Desert he might have felt that his summer pleasure was needlessly interfered with, but the little shock of that was a real, if still temporary, moral turning-point for him. For the moment his inclination seemed to run with his duty, and he had his reward in Edith's happiness at his coming, the loving hunger in her eyes, the sweet trust that animated her face, the delightful appropriation of him that could scarcely brook a moment's absence from her sight. There could not be a stronger appeal to his manhood and his fidelity.

"Yes, Jack dear, it was a little lonesome." She was swinging in her hammock on the veranda in sight of the sea, and Jack sat by her with his cigar. "I don't mind telling you now that there were times when I longed for you dreadfully, but I was glad, all the same, that you were enjoying yourself, for it is tiresome down here for a man with nothing to do but to wait."

"You dear thing!" said Jack, with his hand on her head, smoothing her glossy hair and pushing it back from her forehead, to make her look more intellectual—a thing which she hated. "Yes, dear, I was a brute to go off at all."

"But you wanted to comeback?" And there was a wistful look in her eyes.

"Indeed I did," he answered, fervently, as he leaned over the hammock to kiss the sweet eyes into content; and he was quite honest in the expression of a desire that was nearly forty-eight hours old, and by a singular mental reaction seemed to have been always present with him.

"It was so good of you to telegraph me before I could see the newspaper."

"Of course I knew the account would be greatly exaggerated;" and he made light of the whole affair,

knowing that the facts would still be capable of shocking her, giving a comic picture of the Major's seafaring qualities, and Carmen's and Miss Tavish's chaff of the gallant old beau.

Even with this light sketching of the event she could not avoid a retrospective pang of apprehension, and the tightened grasp of his hand was as if she were holding him fast from that and all other peril.

The days went by in content, on the whole, shaded a little by anxiety and made grave by a new interest. It could not well be but that the prospect of the near future, with its increase of responsibility, should create a little uneasiness in Jack's mind as to his own career. Of this future they talked much, and in Jack's attitude towards her Edith saw, for the first time since her marriage, a lever of suggestion, and it came naturally in the contemplation of their future life that she should encourage his discontent at having no occupation. Facing, in this waiting-time of quiet, certain responsibilities, it was impressed upon him that the collecting of bric-a-brac was scarcely an occupation, and that idling in clubs and studios and dangling about at the beck of society women was scarcely a career that could save him from ultimate ennui. To be sure, he had plenty of comrades, young fellows of fortune, who never intended to do anything except to use it for their personal satisfaction; but they did not seem to be of much account except in the little circle that they ornamented. Speaking of one of them one day, Father Damon had said that it seemed a pity a fellow of such family and capacity and fortune should go to the devil merely for the lack of an object in life. In this closer communion with Edith, whose ideas he began to comprehend, Jack dimly apprehended this view, and for the moment impulsively accepted it.

"I'm half sorry," he said one day, "that I didn't go in for a profession. But it is late now. Law, medicine, engineering, architecture, would take years of study."

"There was Armstrong," Edith suggested, "who studied law after he was married."

"But it looks sort of silly for a fellow who has a wife to go to school, unless," said Jack, with a laugh, "he goes to school to his wife. Then there's politics. You wouldn't like to see me in that."

"I rather think, Jack"—she spoke musingly—"if I were a man I should go into politics."

"You would have nice company!"

"But it's the noblest career—government, legislation, trying to do something to make the world better. Jack, I don't see how the men of New York can stand it to be governed by the very worst elements."

"My dear, you have no idea what practical politics is."

"I've an idea what I'd make it. What is the good of young men of leisure if they don't do anything for the country? Too fine to do what Hamilton did and Jay did! I wish you could have heard my father talk about it. Abdicate their birthright for a four-in-hand!"

"Or a yacht," suggested Jack.

"Well, I don't see why a man cannot own a yacht and still care something about the decent management of his city."

"There's Mavick in politics."

"Not exactly. Mavick is in office for what he can make. No, I will not say that. No doubt he is a good civil servant, and we can't expect everybody to be unselfish. At any rate, he is intelligent. Do you remember what Mr. Morgan said last winter?" And Edith lifted herself up on her elbow, as if to add the weight of her attitude to her words, as Jack was still smiling at her earnestness.

"No; you said he was a delightful sort of pessimist."

"Mr. Morgan said that the trouble with the governing and legislation now in the United States is that everybody is superficially educated, and that the people are putting their superficial knowledge into laws, and that we are going to have a nice time with all these wild theories and crudities on the statute-book. And then educated people say that politics is so corrupt and absurd that they cannot have anything to do with it."

"And how far do you think we could get, my dear, in the crusade you propose?"

"I don't know that you would get anywhere. Yet I should think the young men of New York could organize its intelligence and do something. But you think I'm nothing but a woman." And Edith sank back, as if abandoning the field.

"I had thought that; but it is hard to tell, these days. Never mind, when we go back to town I'll stir round; you'll see."

This was an unusual sort of talk. Jack had never heard Edith break out in this direction before, and he wondered if many women were beginning to think of men in this way, as cowardly about their public duties. Not many in his set, he was sure. If Edith had urged him to go into Neighborhood Guild work, he could have understood that. Women and ethical cranks were interested in that. And women were getting queerer every day, beginning, as Mavick said, to take notice. However, it was odd, when you thought over it, that the city should be ruled by the slums.

It was easy to talk about these things; in fact, Jack talked a great deal about them in the clubs, and occasionally with a knot of men after dinner in a knowing, pessimistic sort of way. Sometimes the discussions were very animated and even noisy between these young citizens. It seemed, sometimes, about midnight, that something might be done; but the resolution vanished next morning when another day, to be lived through, confronted them. They illustrated the great philosophic observation that it is practically impossible for an idle man who has nothing to do to begin anything today.

To do Jack justice, this enforced detention in the country he did not find dull exactly. To be sure it was vacation-time, and his whole life was a vacation, and summer was rather more difficult to dispose of than winter, for one had to make more of an effort to amuse himself. But Edith was never more charming than in this new dependence, and all his love and loyalty were evoked in caring for her. This was occupation enough, even if he had been the busiest man in the world—to watch over her, to read to her, to anticipate her fancies, to live with her in that dream of the future which made life seem almost ideal. There came a time when he looked back upon this month at the Golden House as the happiest in his life.

The talk about an occupation was not again referred to. Edith seemed entirely happy to have Jack with her,

more entirely her own than he had ever been, and to have him just as he was. And yet he knew, by a sure instinct, that she saw him as she thought he would be, with some aim and purpose in life. And he made many good resolutions.

That which was nearest him attracted him most, and very feeble now were the allurements of the life and the company he had just left. Not that he would break with it exactly; it was not necessary to do that; but he would find something to do, something worth a man's doing, or, at any rate, some occupation that should tax his time and his energies. That, he knew, would make Edith happy, and to make her happy seemed now very much like a worthy object in life. She was so magnanimous, so unsuspecting, so full of all nobility. He knew she would stand by him whatever happened. Down here her attitude to life was no longer a rebuke to him nor a restraint upon him. Everything seemed natural and wholesome. Perhaps his vanity was touched, for there must be something in him if such a woman could love him. And probably there was, though he himself had never yet had a chance to find it out. Brought up in the expectation of a fortune, bred to idleness as others are to industry, his highest ambition having been to amuse himself creditably and to take life easily, what was to hinder his being one of the multitude of "good-for-nothings" in our modern life? If there had been war, he had spirit enough to carry him into it, and it would have surprised no one to hear that Jack had joined an exploring expedition to the North Pole or the highlands of Central Asia. Something uncommon he might do if opportunity offered.

About his operations with Henderson he had never told Edith, and he did not tell her now. Perhaps she divined it, and he rather wondered that she had never asked him about his increased expenditures, his yacht, and all that. He used to look at her steadily at times, as if he were trying to read the secrets of her heart.

"What are you looking at, Jack?"

"To see if I can find out how much you know, you look so wise."

"Do I? I was just thinking about you. I suppose that made me look so."

"No; about life and the world generally."

"Mighty little, Jack, except—well, I study you."

"Do you? Then you'll presently lose your mind:"

Jack and most men have little idea that they are windows through which their wives see the world; and how much more of the world they know in that way than men usually suspect or wives ever tell!

He did not tell her about Henderson, but he almost resolved that when his present venture was over he would let stocks alone as speculations, and go into something that he could talk about to his wife as he talked about stocks to Carmen.

From the stranded mariners at Bar Harbor Captain Jack had many and facetious letters. They wanted to know if his idea was that they should stick by the yacht until he got leisure to resume the voyage, or if he expected them to walk home. He had already given orders to the skipper to patch it up and bring it to New York if possible, and he advised his correspondents to stay by the yacht as long as there was anything in the larder, but if they were impatient, he offered them transportation on any vessel that would take able-bodied seamen. He must be excused from commanding, because he had been assigned to shore duty. Carmen and Miss Tavish wrote that it was unfair to leave them to sustain all the popularity and notoriety of the shipwreck, and that he owed it to the public to publish a statement, in reply to the insinuations of the newspapers, in regard to the sea-worthiness of the yacht and the object of this voyage. Jack replied that the only object of the voyage was to relieve the tedium of Bar Harbor, and, having accomplished this, he would present the vessel to Miss Tavish if she would navigate it back to the city.

The golden autumn days by the sea were little disturbed by these echoes of another life, which seemed at the moment to be a very shallow one. Yet the time was not without its undertone of anxieties, of grave perils that seemed to sanctify it and heighten its pleasures of hope. Jack saw and comprehended for the first time in his life the real nature of a pure woman, the depths of tenderness and self-abnegation, the heroism and calm trust and the nobility of an unworldly life. No wonder that he stood a little in awe of it, and days when he wandered down on the beach, with only the waves for company, or sat smoking in the arbor, with an unread book in his hand, his own career seemed petty and empty. Such moods, however, are not uncommon in any life, and are not of necessity fruitful. It need not be supposed that Jack took it too seriously, on the one hand, or, on the other, that a vision of such a woman's soul is ever without influence.

By the end of October they returned to town, Jack, and Edith with a new and delicate attractiveness, and young Fletcher Delancy the most wonderful and important personage probably who came to town that season. It seemed to Edith that his advent would be universally remarked, and Jack felt relieved when the boy was safely housed out of the public gaze. Yes, to Edith's inexpressible joy it was a boy, and while Jack gallantly said that a girl would have suited him just as well, he was conscious of an increased pride when he announced the sex to his friends. This undervaluation of women at the start is one of the mysteries of life. And until women themselves change their point of view, it is to be feared that legislation will not accomplish all that many of them wish.

"So it is a boy. I congratulate you," was the exclamation of Major Fairfax the first time Jack went down to the Union.

"I'm glad, Major, to have your approval."

"Oh, it's what is expected, that's all. For my part, I prefer girls. The announcement of boys is more expensive."

Jack understood, and it turned out in all the clubs that he had hit upon the most expensive sex in the view of responding to congratulations.

"It used to seem to me," said the Major, "that I must have a male heir to my estates. But, somehow, as the years go on, I feel more like being an heir myself. If I had married and had a boy, he would have crowded me out by this time; whereas, if it had been a girl, I should no doubt have been staying at her place in Lenox this summer instead of being shipwrecked on that desert island. There is nothing, my dear boy, like a girl well invested."

"You speak with the feelings of a father."

"I speak, sir, from observation. I look at society as it is, not as it would be if we had primogeniture and a landed aristocracy. A daughter under our arrangements is more likely to be a comfort to her parent in his declining years than a son."

"But you seem, Major, to have preferred a single life?"

"Circumstances—thank you, just a drop more—we are the creatures of circumstances. It is a long story. There were misrepresentation and misunderstanding. It is true, sir, that at that time my property was encumbered, but it was not unproductive. She died long ago. I have reason to believe that her married life was not happy. I was hot-blooded in those days, and my honor was touched, but I never blamed her. She was, at twenty, the most beautiful woman in Virginia. I have never seen her equal."

This was more than the Major had ever revealed about his private life before. He had created an illusion about himself which society accepted, and in which he lived in apparent enjoyment of metropolitan existence. This was due to a sanguine temperament and a large imagination. And he had one quality that made him a favorite—a hearty enjoyment of the prosperity of others. With regard to himself, his imagination was creative, and Jack could not now tell whether this "most beautiful woman of Virginia" was not evoked by the third glass, about which the Major remarked, as he emptied it, that only this extraordinary occasion could justify such an indulgence at this time of day.

The courtly old gentleman had inquired about madam—indeed, the second glass had been dedicated to "mother and child"—and he exhibited a friendly and almost paternal interest, as he always did, in Jack.

"By-the-way," he said, after a silence, "is Henderson in town?"

"I haven't heard. Why?"

"There's been a good deal of uneasiness in the Street as to what he is doing. I hope you haven't got anything depending on him."

"I've got something in his stocks, if that is what you mean; but I don't mind telling you I have made something."

"Well, it's none of my business, only the Henderson stocks have gone off a little, as you know."

Jack knew, and he asked the Major a little nervously if he knew anything further. The Major knew nothing except Street rumors. Jack was uneasy, for the Major was a sort of weathercock, and before he left the club he wrote to Mavick.

He carried home with him a certain disquiet, to which he had been for months a stranger. Even the sight of Edith, who met him with a happy face, and dragged him away at once to see how lovely the baby looked asleep, could not remove this. It seemed strange that such a little thing should make a change, introduce an alien element into this domestic peace. Jack was like some other men who lose heart not when they are doing a doubtful thing, but when they have to face the consequences—cases of misplaced conscience. The peace and content that he had left in the house in the morning seemed to have gone out of it when he returned at night.

Next day came a reassuring letter from Mavick.

Henderson was going on as usual. It was only a little bear movement, which wouldn't amount to anything. Still, day after day, the bears kept clawing down, and Jack watched the stock-list with increasing eagerness. He couldn't decide to sacrifice anything as long as he had a margin of profit.

In this state of mind it was impossible to consider any of the plans he had talked over with Edith before the baby was born. Inquiries he did make about some sort of position or regular occupation, and these he reported to Edith; but his heart was not in it.

As the days went by there was a little improvement in his stocks, and his spirits rose. But this mood was no more favorable than the other for beginning a new life, nor did there seem to be, as he went along, any need of it. He had an appearance of being busy every day; he rose late and went late to bed. It was the old life. Stocks down, there was a necessity of bracing up with whomever he met at any of the three or four clubs in which he lounged in the afternoon; and stocks up, there was reason for celebrating that fact in the same way.

It was odd how soon he became accustomed to consider himself and to be regarded as the father of a family. That, also, like his marriage, seemed something done, and in a manner behind him. There was a commonplaceness about the situation. To Edith it was a great event. To Jack it was a milestone in life. He was proud of the boy; he was proud of Edith. "I tell you, fellows," he would say at the club, "it's a great thing," and so on, in a burst of confidence, and he was quite sincere in this. But he preferred to be at the club and say these things rather than pass the same hours with his adorable family. He liked to think what he would do for that family—what luxuries he could procure for them, how they should travel and see the world. There wasn't a better father anywhere than Jack at this period. And why shouldn't a man of family amuse himself? Because he was happy in his family he needn't change all the habits of his life.

Presently he intended to look about him for something to do that would satisfy Edith and fill up his time; but meantime he drifted on, alternately anxious and elated, until the season opened. The Blunts and the Van Dams and the Chesneys and the Tavishes and Mrs. Henderson had called, invitations had poured in, subscriptions were asked, studies and gayeties were projected, and the real business of life was under way.

XV

To the nurse of the Delancy boy and to his mother he was by no means an old story or merely an incident of the year. He was an increasing wonder—new every morning, and exciting every evening. He was the centre of a world of solicitude and adoration. It would be scarcely too much to say that his coming into the world

promised a new era, and his traits, his likes and dislikes, set a new standard in his court. If he had apprehended his position his vanity would have outgrown his curiosity about the world, but he displayed no more consciousness of his royalty than a kicking Infanta of Spain. This was greatly to his credit in the opinion of the nurse, who devoted herself to the baby with that enthusiasm of women for infants which fortunately never fails, and won the heart of Edith by her worship. And how much they found to say about this marvel! To hear from the nurse, over and over again, what the baby had done and had not done, in a given hour, was to Edith like a fresh chapter out of an exciting romance.

And the boy's biographer is inclined to think that he had rare powers of discrimination, for one day when Carmen had called and begged to be permitted to go up into the nursery, and had asked to take him in her arms just for a moment, notwithstanding her soft dress and her caressing manner, Fletcher had made a wry face and set up a howl. "How much he looks like his father" (he didn't look like anything), Carmen said, handing him over to the nurse. What she thought was that in manner and disposition he was totally unlike Jack Delancy.

When they came down-stairs, Mrs. Schuyler Blunt was in the drawing-room. "I've had such a privilege, Mrs. Blunt, seeing the baby!" cried Carmen, in her sweetest manner.

"It must have been," that lady rejoined, stiffly.

Carmen, who hated to be seen through, of all things, did not know whether to resent this or not. But Edith hastened to the rescue of her guest.

"I think it's a privilege."

"And you know, Mrs. Blunt," said Carmen, recovering herself and smiling, "that I must have some excitement this dull season."

"I see," said Mrs. Blunt, with no relaxation of her manner; "we are all grateful to Mrs. Delancy."

"Mrs. Henderson does herself injustice," Edith again interposed. "I can assure you she has a great talent for domesticity."

Carmen did not much fancy this apology for her, but she rejoined: "Yes, indeed. I'm going to cultivate it."

"How is this privileged person?" Mrs. Blunt asked.

"You shall see," said Edith. "I am glad you came, for I wanted very much to consult you. I was going to send for you."

"Well, here I am. But I didn't come about the baby. I wanted to consult you. We miss you, dear, every day." And then Mrs. Blunt began to speak about some social and charitable arrangements, but stopped suddenly. "I'll see the baby first. Good-morning, Mrs. Henderson." And she left the room.

Carmen felt as much left out socially as about the baby, and she also rose to go.

"Don't go," said Edith. "What kind of a summer have you had?"

"Oh, very good. Some shipwrecks."

"And Mr. Henderson? Is he well?"

"Perfectly. He is away now. Husbands, you know, haven't so much talent for domesticity as we have."

"That depends," Edith replied, simply, but with that spirit and air of breeding before which Carmen always inwardly felt defeat—"that depends very much upon ourselves."

Naturally, with this absorption in the baby, Edith was slow to resume her old interests. Of course she knew of the illness of Father Damon, and the nurse, who was from the training-school in which Dr. Leigh was an instructor, and had been selected for this important distinction by the doctor, told her from time to time of affairs on the East Side. Over there the season had opened quite as usual; indeed, it was always open; work must go on every day, because every day food must be obtained and rent-money earned, and the change from summer to winter was only a climatic increase of hardships. Even an epidemic scare does not essentially vary the daily monotony, which is accepted with a dogged fatality:

There had been no vacation for Ruth Leigh, and she jokingly said, when at length she got a half-hour for a visit to Edith, that she would hardly know what to do with one if she had it.

"We have got through very well," she added. "We always dread the summer, and we always dread the winter. Science has not yet decided which is the more fatal, decayed vegetables or unventilated rooms. City residence gives both a fair chance at the poor."

"Are not the people learning anything?" Edith asked.

"Not much, except to bear it, I am sorry to say. Even Father Damon—"

"Is he at work again? Do you see him often?"

"Yes, occasionally."

"I should so like to see him. But I interrupted you."

"Well, Father Damon has come to see that nothing can be done without organization. The masses"—and there was an accent of bitterness in her use of the phrase—"must organize and fight for anything they want."

"Does Father Damon join in this?"

"Oh, he has always been a member of the Labor League. Now he has been at work with the Episcopal churches of the city, and got them to agree, when they want workmen for any purpose, to employ only union men."

"Isn't that," Edith exclaimed, "a surrender of individual rights and a great injustice to men not in the unions?"

"You would see it differently if you were in the struggle. If the working-men do not stand by each other, where are they to look for help? What have the Christians of this city done?" and the little doctor got up and began to pace the room. "Charities? Yes, little condescending charities. And look at the East Side! Is its condition any better? I tell you, Mrs. Delancy, I don't believe in charities—in any charities."

"It seems to me," said Edith, with a smile calculated to mollify this vehemence, "that you are a standing

refutation of your own theory."

"Me? No, indeed. I'm paid by the dispensary. And I make my patients pay—when they are able."

"So I have heard," Edith retorted. "Your bills must be a terror to the neighborhood."

"You may laugh. But I'm establishing a reputation over there as a working-woman, and if I have any influence, or do any little good, it's owing to that fact. Do you think they care anything about Father Damon's gospel?"

"I should be sorry to think they did not," Edith said, gravely.

"Well, very little they care. They like the man because they think he shares their feelings, and does not sympathize with them because they are different from him. That is the only kind of gospel that is good for anything over there."

"I don't think Father Damon would agree with you in that."

"Of course he would not. He's as mediaeval as any monk. But then he is not blind. He sees that it is never anything but personal influence that counts. Poor fellow," and the doctor's voice softened, "he'll kill himself with his ascetic notions. He is trying to take up the burden of this life while struggling under the terror of another."

"But he must be doing a great deal of good."

"Oh, I don't know. Nothing seems to do much good. But his presence is a great comfort. That is something. And I'm glad he is going about now rousing opposition to what is, rather than all the time preaching submission to the lot of this life for the sake of a reward somewhere else. That's a gospel for the rich."

Edith was accustomed to hear Ruth Leigh talk in this bitter strain when this subject was introduced, and she contrived to turn the conversation upon what she called practical work, and then to ask some particulars of Father Damon's sudden illness.

"He did rest," the doctor said, "for a little, in his way. But he will not spare himself, and he cannot stand it. I wish you could induce him to come here often—to do anything for diversion. He looks so worn."

There was in the appeal to Edith a note of personal interest which her quick heart did not fail to notice. And the thought came to her with a painful apprehension. Poor thing! Poor Father Damon!

Does not each of them have to encounter misery enough without this?

Doesn't life spare anybody?

She told her apprehension to Jack when he came home.

Jack gave a long whistle. "That is a deadlock!"

"His vows, and her absolute materialism! Both of them would go to the stake for what they believe, or don't believe. It troubles me very much."

"But," said Jack, "it's interesting. It's what they call a situation. There. I didn't mean to make light of it. I don't believe there is anything in it. But it would be comical, right here in New York."

"It would be tragical."

"Comedy usually is. I suppose it's the human nature in it. That is so difficult to get rid of. But I thought the missionary business was safe. Though, do you know, Edith, I should think better of both of them for having some human feeling. By-the-way, did Dr. Leigh say anything about Henderson?"

"No. What?"

"He has given Father Damon ten thousand dollars. It's in strict secrecy, but Father Damon said I might tell you. He said it was providential."

"I thought Mr. Henderson was wholly unscrupulous and cold as ice."

"Yes, he's got a reputation for freeze-outs. If the Street knew this it would say it was insurance money. And he is so cynical that he wouldn't care what the Street said."

"Do you think it came about through Mrs. Henderson?"

"I don't think so. She was speaking of Father Damon this morning in the Loan Exhibition. I don't believe she knows anything about it. Henderson is a good deal shut up in himself. They say at the Union that years ago he used to do a good many generous things—that he is a great deal harder than he used to be."

This talk was before dinner. She did not ask anything now about Carmen, though she knew that Jack had fallen into his old habit of seeing much of her. He was less and less at home, except at dinner-time, and he was often restless, and, she saw, often annoyed. When he was at home he tried to make up for his absence by extra tenderness and consideration for Edith and the boy. And this effort, and its evidence of a double if not divided life, wounded her more than the neglect. One night, when he came home late, he had been so demonstrative about the baby that Edith had sent the nurse out of the room until she could coax Jack to go into his own apartment. His fits of alternate good-humor and depression she tried to attribute to his business, to which he occasionally alluded without confiding in her.

The next morning Father Damon came in about luncheon-time. He apologized for not coming before since her return, but he had been a little upset, and his work was more and more interesting. His eyes were bright and his manner had quite the usual calm, but he looked pale and thinner, and so exhausted that Edith ran immediately for a glass of wine, and began to upbraid him for not taking better care of himself.

"I take too much care of myself. We all do. The only thing I've got to give is myself."

"But you will not last."

"That is of little moment; long or short, a man can only give himself. Our Lord was not here very long." And then Father Damon smiled, and said "My dear friend, I'm really doing very well. Of course I get tired. Then I come up again. And every now and then I get a lift. Did Jack tell you about Henderson?"

"Yes. Wasn't it strange?"

"I never was more surprised. He sent for me to come to his office. Without any circumlocution, he asked me how I was getting on, and, before I could answer, he said, in the driest business way, that he had been

thinking over a little plan, and perhaps I could help him. He had a little money he wanted to invest—RR” ‘In our mission chapel?’ I asked.

“‘No,’ he said, without moving a muscle. ‘Not that. I don’t know much about chapels, Father Damon. But I’ve been hearing what you are doing, and it occurred to me that you must come across a good many cases not in the regular charities that you could help judiciously, get them over hard spots, without encouraging dependence. I’m going to put ten thousand dollars into your hands, if you’ll be bothered with it, to use at your discretion.’

“I was taken aback, and I suppose I showed it, and I said that was a great deal of money to intrust to one man.

“Henderson showed a little impatience. It depended upon the man. That was his lookout. The money would be deposited, he said, in bank to my order, and he asked me for my signature that he could send with the deposit.

“Of course I thanked him warmly, and said I hoped I could do some good with it. He did not seem to pay much attention to what I was saying. He was looking out of the window to the bare trees in the court back of his office, and his hands were moving the papers on his table aimlessly about.

“‘I shall know,’ he said, ‘when you have drawn this out. I’ve got a fancy for keeping a little fund of this sort there.’ And then he added, still not looking at me, but at the dead branches, ‘You might call it the Margaret Fund.’”

“That was the name of his first wife!” Edith exclaimed.

“Yes, I remember. I said I would, and began to thank him again as I rose from my chair. He was still looking away, and saying, as if to himself, ‘I think she would like that.’ And then he turned, and, in his usual abrupt office manner, said: ‘Good-morning, good-morning. I am very much obliged to you.’”

“Wasn’t it all very strange!” Edith spoke, after a moment. “I didn’t suppose he cared. Do you think it was just sentiment?”

“I shouldn’t wonder. Men like Henderson do queer things. In the hearts of such hardened men there are sometimes roots of sentiment that you wouldn’t suspect. But I don’t know. The Lord somehow looks out for his poor.”

Notwithstanding this windfall of charity, Father Damon seemed somewhat depressed. “I wish,” he said, after a pause, “he had given it to the mission. We are so poor, and modern philanthropy all runs in other directions. The relief of temporary suffering has taken the place of the care of souls.”

“But Dr. Leigh said that you were interesting the churches in the labor unions.”

“Yes. It is an effort to do something. The church must put herself into sympathetic relations with these people, or she will accomplish nothing. To get them into the church we must take up their burdens. But it is a long way round. It is not the old method of applying the gospel to men’s sins.”

“And yet,” Edith insisted, “you must admit that such people as Dr. Leigh are doing a good work.”

Father Damon did not reply immediately. Presently he asked: “Do you think, Mrs. Delancy, that Dr. Leigh has any sympathy with the higher life, with spiritual things? I wish I could think so.”

“With the higher life of humanity, certainly.”

“Ah, that is too vague. I sometimes feel that she and those like her are the worst opponents to our work. They substitute humanitarianism for the gospel.”

“Yet I know of no one who works more than Ruth Leigh in the self-sacrificing spirit of the Master.”

“Whom she denies!” The quick reply came with a flush in his pale face, and he instantly arose and walked away to the window and stood for some moments in silence. When he turned there was another expression in his eyes and a note of tenderness in his voice that contradicted the severity of the priest. It was the man that spoke. “Yes, she is the best woman I ever knew. God help me! I fear I am not fit for my work.”

This outburst of Father Damon to her, so unlike his calm and trained manner, surprised Edith, although she had already some suspicion of his state of mind. But it would not have surprised her if she had known more of men, the necessity of the repressed and tortured soul for sympathy, and that it is more surely to be found in the heart of a pure woman than elsewhere.

But there was nothing that she could say, as she took his hand to bid him good-by, except the commonplace that Dr. Leigh had expressed anxiety that he was overworking, and that for the sake of his work he must be more prudent. Yet her eyes expressed the sympathy she did not put in words.

Father Damon understood this, and he went away profoundly grateful for her forbearance of verbal expression as much as for her sympathy. But he did not suspect that she needed sympathy quite as much as he did, and consequently he did not guess the extent of her self-control. It would have been an immense relief to have opened her heart to him—and to whom could she more safely do this than to a priest set apart from all human entanglements?—and to have asked his advice. But Edith’s peculiar strength—or was it the highest womanly instinct?—lay in her discernment of the truth that in one relation of life no confidences are possible outside of that relation except to its injury, and that to ask interference is pretty sure to seal its failure. As its highest joys cannot be participated in, so its estrangements cannot be healed by any influence outside of its sacred compact. To give confidence outside is to destroy the mutual confidence upon which the relation rests, and though interference may patch up livable compromises, the bloom of love and the joy of life are not in them. Edith knew that if she could not win her own battle, no human aid could win it for her.

And it was all the more difficult because it was vague and indefinite, as the greater part of domestic tragedies are. For the most part life goes on with external smoothness, and the public always professes surprise when some accident, a suit at law, a sudden death, a contested will, a slip from apparent integrity, or family greed or feminine revenge, turns the light of publicity upon a household, to find how hollow the life has been; in the light of forgotten letters, revealing check-books, servants’ gossip, and long-established habits of aversion or forbearance, how much sordidness and meanness!

Was not everything going on as usual in the Delancy house and in the little world of which it was a part? If

there had been any open neglect or jealousy, any quarrel or rupture, or any scene, these could be described. These would have an interest to the biographer and perhaps to the public. But at this period there was nothing of this sort to tell. There were no scenes. There were no protests or remonstrances or accusations, nor to the world was there any change in the daily life of these two.

It was more pitiful even than that. Here was a woman who had set her heart in all the passionate love of a pure ideal, and day by day she felt that the world, the frivolous world, with its low and selfish aims, was too strong for her, and that the stream was wrecking her life because it was bearing Jack away from her. What could one woman do against the accepted demoralizations of her social life? To go with them, not to care, to accept Jack's idle, good-natured, easy philosophy of life and conduct, would not that have insured a peaceful life? Why shouldn't she conform and float, and not mind?

To be sure, a wise woman, who has been blessed or cursed with a long experience of life, would have known that such a course could not forever, or for long, secure happiness, and that a man's love ultimately must rest upon a profound respect for his wife and a belief in her nobility. Perhaps Edith did not reason in this way. Probably it was her instinct for what was pure and true-showing, indeed, the quality of her love—that guided her.

To Jack's friends he was much the same as usual. He simply went on in his ante-marriage ways. Perhaps he drank a little more, perhaps he was a little more reckless at cards, and it was certain that his taste for amusing himself in second-hand book-shops and antiquity collections had weakened. His talked-of project for some regular occupation seemed to have been postponed, although he said to himself that it was only postponed until his speculations, which kept him in a perpetual fever, should put him in a position to command a business.

Meantime he did not neglect social life—that is, the easy, tolerant company which lived as he liked to live. There was at first some pretense of declining invitations which Edith could not accept, but he soon fell into the habit of a man whose family has temporarily gone abroad, with the privileges of a married man, without the responsibilities of a bachelor. Edith could see that he took great credit to himself for any evenings he spent at home, and perhaps he had a sort of support in the idea that he was sacrificing himself to his family. Major Fairfax, whom Edith distrusted as a misleader of youth, did not venture to interfere with Jack again, but he said to himself that it was a blank shame that with such a wife he should go dangling about with women like Carmen and Miss Tavish, not that the Major himself had any objection to their society, but, hang it all, that was no reason why Jack should be a fool.

In midwinter Jack went to Washington on business. It was necessary to see Mavick, and Mr. Henderson, who was also there. To spend a few weeks at the capital, in preparation for Lent, has become a part of the program of fashion. There can be met people like-minded from all parts of the Union, and there is gayety, and the entertainment to be had in new acquaintances, without incurring any of the responsibilities of social continuance. They meet there on neutral ground. Half Jack's set had gone over or were going. Young Van Dam would go with him. It will be only for a few days, Jack had said, gayly, when he bade Edith good-by, and she must be careful not to let the boy forget him.

It was quite by accident, apparently, that in the same train were the Chesneys, Miss Tavish, and Carmen going over to join her husband. This gave the business expedition the air of an excursion. And indeed at the hotel where they stayed this New York contingent made something of an impression, promising an addition to the gayety of the season, and contributing to the importance of the house as a centre of fashion. Henderson's least movements were always chronicled and speculated on, and for years he had been one of the stock subjects, out of which even the dullest interviewers, who watch the hotel registers in all parts of the country, felt sure that they could make an acceptable paragraph. The arrival of his wife, therefore, was a newspaper event.

They said in Washington at the time that Mrs. Henderson was one of the most fascinating of women, amiable, desirous to please, approachable, and devoted to the interests of her husband. If some of the women, residents in established society, were a little shy of her, if some, indeed, thought her dangerous—women are always thinking this of each other, and surely they ought to know-nothing of this appeared in the reports. The men liked her. She had so much vivacity, such esprit, she understood men so well, and the world, and could make allowances, and was always an entertaining companion. More than one Senator paid marked court to her, more than one brilliant young fellow of the House thought himself fortunate if he sat next her at dinner, and even cabinet officers waited on her at supper. It could not be doubted that a smile and a confidential or a witty remark from Mrs. Henderson brightened many an evening. Wherever she went her charming toilets were fully described, and the public knew as well as her jewelers the number and cost of her diamonds, her necklaces, her tiaras. But this was for the world and for state occasions. At home she liked simplicity. And this was what impressed the reporters when, in the line of their public duty, they were admitted to her presence. With them she was very affable, and she made them feel that they could almost be classed with her friends, and that they were her guardians against the vulgar publicity, which she disliked and shrank from.

There went abroad, therefore, an impression of her amiability, her fabulous wealth in jewels and apparel, her graciousness and her cleverness and her domesticity. Her manners seemed to the reporters those of a "lady," and of this both her wit and freedom from prudishness and her courteous treatment of them convinced them. And the best of all this was that while it was said that Henderson was one of the boldest and shrewdest of operators, and a man to be feared in the Street, he was in his family relations one of the most generous and kind-hearted of men.

Henderson himself had not much time for the frivolities of the season, and he evaded all but the more conspicuous social occasions, at which Carmen, sometimes with a little temper, insisted that he should accompany her. "You would come here," he once said, "when you knew I was immersed in most perplexing business."

"And now I am here," she had replied, in a tone equally wanting in softness, "you have got to make the best of me."

Was Jack happy in the whirl he was in? Some days exceedingly so. Some days he sulked, and some days he threw himself with recklessness born of artificial stimulants into the always gay and rattling moods of Miss Tavish. Somehow he could get no nearer to Henderson or to Mavick than when he was in New York. Not that he could accuse Mavick of trying to conceal anything; Mavick bore to him always the open, "all right" attitude, but there were things that he did not understand.

And then Carmen? Was she a little less dependent on him, in this wide horizon, than in New York? And had he noticed a little disposition to patronize on two or three occasions? It was absurd. He laughed at himself for such an idea. Old Eschelle's daughter patronize him! And yet there was something. She was very confidential with Mavick. They seemed to have a great deal in common. It so happened that even in the little expeditions of sightseeing these two were thrown much together, and at times when the former relations of Jack and Carmen should have made them comrades. They had a good deal to say to each other, and momentarily evidently serious things, and at receptions Jack had interrupted their glances of intelligence. But what stuff this was! He jealous of the attentions of his friend to another man's wife! If she was a coquette, what did it matter to him? Certainly he was not jealous. But he was irritated.

One day after a round of receptions, in which Jack had been specially disgruntled, and when he was alone in the drawing-room of the hotel with Carmen, his manner was so positively rude to her that she could not but notice it. There was this trait of boyishness in Jack, and it was one of the weaknesses that made him loved, that he always cried out when he was hurt.

Did Carmen resent this? Did she upbraid him for his manner? Did she apologize, as if she had done anything to provoke it? She sank down wearily in a chair and said:

"I'm so tired. I wish I were back in New York."

"You don't act like it," Jack replied, gruffly.

"No. You don't understand. And now you want to make me more miserable. See here, Mr. Delancy," and she started up in her seat and turned to him, "you are a man of honor. Would you advise me to make an enemy of Mr. Mavick, knowing all that he does know about Mr. Henderson's affairs?"

"I don't see what that has got to do with it," said Jack, wavering. "Lately your manner—"

"Nonsense!" cried Carmen, springing up and approaching Jack with a smile of animation and trust, and laying her hand on his shoulder. "We are old, old friends. And I have just confided to you what I wouldn't to any other living being. There!" And looking around at the door, she tapped him lightly on the cheek and ran out of the room.

Whatever you might say of Carmen, she had this quality of a wise person, that she never cut herself loose from one situation until she was entirely sure of a better position.

For one reason or another Jack's absence was prolonged. He wrote often, he made bright comments on the characters and peculiarities of the capital, and he said that he was tired to death of the everlasting whirl and scuffle. People plunged in the social whirlpool always say they are weary of it, and they complain bitterly of its exactions and its tax on their time and strength. Edith judged, especially from the complaints, that her husband was enjoying himself. She felt also that his letters were in a sense perfunctory, and gave her only the surface of his life. She sought in vain in them for those evidences of spontaneous love, of delight in writing to her of all persons in the world, the eagerness of the lover that she recalled in letters written in other days. However affectionate in expression, these were duty letters. Edith was not alone. She had no lack of friends, who came and went in the common round of social exchange, and for many of them she had a sincere affection. And there were plenty of relatives on the father's and on the mother's side. But for the most part they were old-fashioned, home-keeping New-Yorkers, who were sufficient to themselves, and cared little for the set into which Edith's marriage had more definitely placed her. In any real trouble she would not have lacked support. She was deemed fortunate in her marriage, and in her apparent serene prosperity it was believed that she was happy. If she had had mother or sister or brother, it is doubtful if she would have made either a confidant of her anxieties, but high-spirited and self-reliant as she was, there were days when she longed with intolerable heartache for the silent sympathy of a mother's presence.

It is singular how lonely a woman of this nature can be in a gay and friendly world. She had her interests, to be sure. As she regained her strength she took up her social duties, and she tried to resume her studies, her music, her reading, and she occupied herself more and more with the charities and the fortunes of her friends who were giving their lives to altruistic work. But there was a sense of unreality in all this. The real thing was the soul within, the longing, loving woman whose heart was heavy and unsatisfied. Jack was so lovable, he had in his nature so much nobility, if the world did not kill it, her life might be so sweet, and so completely fulfill her girlish dreams. All these schemes of a helpful, altruistic life had been in her dream, but how empty it was without the mutual confidence, the repose in the one human love for which she cared.

Though she was not alone, she had no confidant. She could have none. What was there to confide? There was nothing to be done. There was no flagrant wrong or open injustice. Some women in like circumstances become bitter and cynical. Others take their revenge in a career reckless, but within social conventions, going their own way in a sort of matrimonial truce. These are not noticeable tragedies. They are things borne with a dumb ache of the heart. There are lives into which the show of spring comes, but without the song of birds or the scent of flowers. They are endured bravely, with a heroism for which the world does not often give them credit. Heaven only knows how many noble women-noble in this if in nothing else—carry through life this burden of an unsatisfied heart, mocked by the outward convention of love.

But Edith had one confidant—the boy. And he was perfectly safe; he would reveal nothing. There were times when he seemed to understand, and whether he did or not she poured out her heart to him. Often in the twilight she sat by him in this silent communion. If he were asleep—and he was not troubled with insomnia—he was still company. And when he was awake, his efforts to communicate the dawning ideas of the queer world into which he had come were a never-failing delight. He wanted so many more things than he could ask for, which it was his mother's pleasure to divine; later on he would ask for so many things he could not get. The nurse said that he had uncommon strength of will.

These were happy hours, imagining what the boy would be, planning what she would make his life, hours enjoyed as a traveler enjoys wayside flowers, snatched before an approaching storm. It is a pity, the nurse would say, that his father cannot see him now. And at the thought Edith could only see the child through tears, and a great weight rested on her heart in all this happiness.

XVI

When Father Damon parted from Edith he seemed to himself strengthened in his spirit. His momentary outburst had shown him where he stood—the strength of his fearful temptation. To see it was to be able to conquer it. He would humiliate himself; he would scourge himself; he would fast and pray; he would throw himself more unreservedly into the service of his Master. He had been too compromising with sin and sinners, and with his own weakness and sin, the worst of all.

The priest walked swiftly through the wintry streets, welcoming as a sort of penance the biting frost which burned his face and penetrated his garments. He little heeded the passers in the streets, those who hurried or those who loitered, only, if he met or passed a woman or a group of girls, he instinctively drew himself away and walked more rapidly. He strode on uncompromisingly, and his clean-shaved face was set in rigid lines. Those who saw him pass would have said that there went an ascetic bent on judgment. Many who did know him, and who ordinarily would have saluted him, sure of a friendly greeting, were repelled by his stern

face and determined air, and made no sign. The father had something on his mind.

As he turned into Rivington Street there approached him from the opposite direction a girl, walking slowly and undecidedly. When he came near her she looked up, with an appealing recognition. In a flash of the quick passing he thought he knew her—a girl who had attended his mission and whom he had not seen for several months—but he made no sign and passed on.

“Father Damon!”

He turned about short at the sound of the weak, pleading voice, but with no relaxation of his severe, introverted mood. “Well?”

It was the girl he remembered. She wore a dress of silk that had once been fine, and over it an ample cloak that had quite lost its freshness, and a hat still gay with cheap flowers. Her face, which had a sweet and almost innocent expression, was drawn and anxious. The eyes were those of a troubled and hunted animal.

“I thought,” she said, hesitatingly, “you didn't know me.”

“Yes, I know you. Why haven't you been at the mission lately?”

“I couldn't come. I—”

“I'm afraid you have fallen into bad ways.”

She did not answer immediately. She looked away, and, still avoiding his gaze, said, timidly: “I thought I would tell you, Father Damon, that I'm—that I'm in trouble. I don't know what to do.”

“Have you repented of your sin?” asked he, with a little softening of his tone. “Did you want to come to me for help?”

“He's deserted me,” said the girl, looking down, absorbed in her own misery, and not heeding his question.

“Ah, so that is what you are sorry for?” The severe, reproving tone had come back to his voice.

“And they don't want me in the shop any more.”

The priest hesitated. Was he always to preach against sin, to strive to extirpate it, and yet always to make it easy for the sinner? This girl must realize her guilt before he could do her any good. “Are you sorry for what you have done?”

“Yes, I'm sorry,” she replied. Wasn't to be in deep trouble to be sorry? And then she looked up, and continued with the thought in her mind, “I didn't know who else to go to.”

“Well, my child, if you are sorry, and want to lead a different life, come to me at the mission and I will try to help you.”

The priest, with a not unkindly good-by, passed on. The girl stood a moment irresolute, and then went on her way heavily and despondent. What good would it do her to go to the mission now?

Three days later Dr. Leigh was waiting at the mission chapel to speak with the rector after the vesper service. He came out pale and weary, and the doctor hesitated to make known her errand when she saw how exhausted he was.

“Did you wish me for anything?” he asked, after the rather forced greeting.

“If you feel able. There is a girl at the Woman's Hospital who wants to see you.”

“Who is it?”

“It is the girl you saw on the street the other afternoon; she said she had spoken to you.”

“She promised to come to the mission.”

“She couldn't. I met the poor thing the same afternoon. She looked so aimless and forlorn that, though I did not remember her at first, I thought she might be ill, and spoke to her, and asked her what was the matter. At first she said nothing except that she was out of work and felt miserable; but the next moment she broke down completely, and said she hadn't a friend in the world.”

“Poor thing!” said the priest, with a pang of self-reproach.

“There was nothing to do but to take her to the hospital, and there she has been.”

“Is she very ill?”

“She may live, the house surgeon says. But she was very weak for such a trial.”

Little more was said as they walked along, and when they reached the hospital, Father Damon was shown without delay into the ward where the sick girl lay. Dr. Leigh turned back from the door, and the nurse took him to the bedside. She lay quite still in her cot, wan and feeble, with every sign of having encountered a supreme peril.

She turned her head on the low pillow as Father Damon spoke, saying he was very glad he could come to her, and hoped she was feeling better.

“I knew you would come,” she said, feebly. “The nurse says I'm better. But I wanted to tell you—” And she stopped.

“Yes, I know,” he said. “The Lord is very good. He will forgive all your sins now, if you repent and trust Him.”

“I hope—” she began. “I'm so weak. If I don't live I want him to know.”

“Want whom to know?” asked the father, bending over her.

She signed for him to come closer, and then whispered a name.

“Only if I never see him again, if you see him, you will tell him that I was always true to him. He said such hard words. I was always true.”

“I promise,” said the father, much moved. “But now, my child, you ought to think of yourself, of your—”

“He is dead. Didn't they tell you? There is nothing any more.”

The nurse approached with a warning gesture that the interview was too prolonged.

Father Damon knelt for a moment by the bedside, uttering a hardly articulate prayer. The girl's eyes were

closed. When he rose she opened them with a look of gratitude, and with the sign of blessing he turned away.

He intended to hasten from the house. He wanted to be alone. His trouble seemed to him greater than that of the suffering girl. What had he done? What was he in thought better than she? Was this intruding human element always to cross the purpose of his spiritual life?

As he was passing through the wide hallway the door of the reception-room was open, and he saw Dr. Leigh seated at the table, with a piece of work in her hands. She looked up, and stopped him with an unspoken inquiry in her face. It was only civil to pause a moment and tell her about the patient, and as he stepped within the room she rose.

"You should rest a moment, Father Damon. I know what these scenes are."

Yielding weakly, as he knew, he took the offered chair. But he raised his hand in refusal of the glass of wine which she had ready for him on the table, and offered before he could speak.

"But you must," she said, with a smile. "It is the doctor's prescription."

She did not look like a doctor. She had laid aside the dusty walking-dress, the business-jacket, the ugly little hat of felt, the battered reticule. In her simple house costume she was the woman, homelike, sympathetic, gentle, with the everlasting appeal of the strong feminine nature. It was not a temptress who stood before him, but a helpful woman, in whose kind eyes—how beautiful they were in this moment of sympathy—there was trust—and rest—and peace.

"So," she said, when he had taken the much-needed draught; "in the hospital you must obey the rules, one of which is to let no one sink in exhaustion."

She had taken her seat now, and resumed her work. Father Damon was looking at her, seeing the woman, perhaps, as he never had seen her before, a certain charm in her quiet figure and modest self-possession, while the thought of her life, of her labors, as he had seen her now for months and months of entire sacrifice of self, surged through his brain in a whirl of emotion that seemed sweeping him away. But when he spoke it was of the girl, and as if to himself.

"I was sorry to let her go that day. Friendless, I should have known. I did know. I should have felt. You—"

"No," she said, gently, interrupting him; "that was my business. You should not accuse yourself. It was a physician's business."

"Yes, a physician—the great Physician. The Master never let the sin hinder his compassion for the sinner."

To this she could make no reply. Presently she looked up and said: "But I am sure your visit was a great comfort to the poor girl! She was very eager to see you."

"I do not know."

His air was still abstracted. He was hardly thinking of the girl, after all, but of himself, of the woman who sat before him. It seemed to him that he would have given the world to escape—to fly from her, to fly from himself. Some invisible force held him—a strong, new, and yet not new, emotion, a power that seemed to clutch his very life. He could not think clearly about it. In all his discipline, in his consecration, in his vows of separation from the world, there seemed to have been no shield prepared for this. The human asserted itself, and came in, overwhelming his guards and his barriers like a strong flood in the spring-time of the year, breaking down all artificial contrivances. "They reckon ill who leave me out," is the everlasting cry of the human heart, the great passion of life, incarnate in the first man and the first woman.

With a supreme effort of his iron will—is the Will, after all, stronger than Love?—Father Damon rose. He stretched out his hand to say farewell. She also stood, and she felt the hand tremble that held hers.

"God bless you!" he said. "You are so good."

He was going. He took her other hand, and was looking down upon her face. She looked up, and their eyes met. It was for an instant, a flash, glance for glance, as swift as the stab of daggers.

All the power of heaven and earth could not recall that glance nor undo its revelations. The man and the woman stood face to face revealed.

He bent down towards her face. Affrighted by his passion, scarcely able to stand in her sudden emotion, she started back. The action, the instant of time, recalled him to himself. He dropped her hands, and was gone. And the woman, her knees refusing any longer to support her, sank into a chair, helpless, and saw him go, and knew in that moment the height of a woman's joy, the depth of a woman's despair.

It had come to her! Steeled by her science, shielded by her philanthropy, schooled in indifference to love, it had come to her! And it was hopeless. Hopeless? It was absurd. Her life was determined. In no event could it be in harmony with his opinions, with his religion, which was dearer to him than life. There was a great gulf between them which she could not pass unless she ceased to be herself. And he? A severe priest! Vowed and consecrated against human passion! What a government of the world—if there were any government—that could permit such a thing! It was terrible.

And yet she was loved! That sang in her heart with all the pain, with all the despair. And with it all was a great pity for him, alone, gone into the wilderness, as it would seem to him, to struggle with his fierce temptation.

It had come on darker as she sat there. The lamps were lighted, and she was reminded of some visits she must make. She went, mechanically, to her room to prepare for going. The old jacket, which she took up, did look rather rusty. She went to the press—it was not much of a wardrobe—and put on the one that was reserved for holidays. And the hat? Her friends had often joked her about the hat, but now for the first time she seemed to see it as it might appear to others. As she held it in her hand, and then put it on before the mirror, she smiled a little, faintly, at its appearance. And then she laid it aside for her better hat. She never had been so long in dressing before. And in the evening, too, when it could make no difference! It might, after all, be a little more cheerful for her forlorn patients. Perhaps she was not conscious that she was making selections, that she was paying a little more attention to her toilet than usual. Perhaps it was only the woman who was conscious that she was loved.

It would be difficult to say what emotion was uppermost in the mind of Father Damon as he left the house—

mortification, contempt of himself, or horror. But there was a sense of escape, of physical escape, and the imperative need of it, that quickened his steps almost into a run. In the increasing dark, at this hour, in this quarter of the town, there were comparatively few whose observation of him would recall him to himself. He thought only of escape, and of escape from that quarter of the city that was the witness of his labors and his failure. For the moment to get away from this was the one necessity, and without reasoning in the matter, only feeling, he was hurrying, stumbling in his haste, northward. Before he went to the hospital he had been tired, physically weary. He was scarcely conscious of it now; indeed, his body, his hated body, seemed lighter, and the dominant spirit now awakened to contempt of it had a certain pleasure in testing it, in drawing upon its vitality, to the point of exhaustion if possible. It should be seen which was master. His rapid pace presently brought him into one of the great avenues leading to Harlem. That was the direction he wished to go. That was where he knew, without making any decision, he must go, to the haven of the house of his order, on the heights beyond Harlem. A train was just clattering along on the elevated road above him. He could see the faces at the windows, the black masses crowding the platforms. It went pounding by as if it were freight from another world. He was in haste, but haste to escape from himself. That way, bearing him along with other people, and in the moving world, was to bring him in touch with humanity again, and so with what was most hateful in himself. He must be alone. But there was a deeper psychological reason than that for walking, instead of availing himself of the swiftest method of escape. He was not fleeing from justice or pursuit. When the mind is in torture and the spirit is torn, the instinctive effort is to bodily activity, to force physical exertion, as if there must be compensation for the mental strain in the weariness of nature. The priest obeyed this instinct, as if it were possible to walk away from himself, and went on, at first with almost no sense of weariness.

And the shame! He could not bear to be observed. It seemed to him that every one would see in his face that he was a recreant priest, perjured and forsworn. And so great had been his spiritual pride! So removed he had deemed himself from the weakness of humanity! And he had yielded at the first temptation, and the commonest of all temptations! Thank God, he had not quite yielded. He had fled. And yet, how would it have been if Ruth Leigh had not had a moment of reserve, of prudent repulsion! He groaned in anguish. The sin was in the intention. It was no merit of his that he had not with a kiss of passion broken his word to his Lord and lost his soul.

It was remorse that was driving him along the avenue; no room for any other thought yet, or feeling. Perhaps it is true in these days that the old-fashioned torture known as remorse is rarely experienced except under the name of detection. But it was a reality with this highly sensitive nature, with this conscience educated to the finest edge of feeling. The world need never know his moment's weakness; Ruth Leigh he could trust as he would have trusted his own sister to guard his honor—that was all over—never, he was sure, would she even by a look recall the past; but he knew how he had fallen, and the awful measure of his lapse from loyalty to his Master. And how could he ever again stand before erring, sinful men and women and speak about that purity which he had violated? Could repentance, confession, penitence, wipe away this stain?

As he went on, his mind in a whirl of humiliation, self-accusation, and contempt, at length he began to be conscious of physical weariness. Except the biscuit and the glass of wine at the hospital, he had taken nothing since his light luncheon. When he came to the Harlem Bridge he was compelled to rest. Leaning against one of the timbers and half seated, with the softened roar of the city in his ears, the lights gleaming on the heights, the river flowing dark and silent, he began to be conscious of his situation. Yes, he was very tired. It seemed difficult to go on without help of some sort. At length he crossed the bridge. Lights were gleaming from the saloons along the street. He paused in front of one, irresolute. Food he could not taste, but something he must have to carry him on. But no, that would not do; he could not enter that in his priest's garb. He dragged himself along until he came to a drug-shop, the modern saloon of the respectably virtuous. That he entered, and sat down on a stool by the soda-water counter. The expectant clerk stared at him while waiting the order, his hand tentatively seeking one of the faucets of refreshment.

"I feel a little feverish," said the father. "You may give me five grains of quinine in whisky."

"That'll put you all right," said the boy as he handed him the mixture. "It's all the go now."

It seemed to revive him, and he went out and walked on towards the heights. Somehow, seeing this boy, coming back to common life, perhaps the strong and unaccustomed stimulant, gave a new shade to his thoughts. He was safe. Presently he would be at the Retreat. He would rest, and then gird up his loins and face life again. The mood lasted for some time. And when the sense of physical weariness came back, that seemed to dull the acuteness of his spiritual torment. It was late when he reached the house and rang the night-bell. No one of the brothers was up except Father Monies, and it was he who came to the door.

"You! So late! Is anything the matter?"

"I needed to come," the father said, simply, and he grasped the door-post, steadying himself as he came in.

"You look like a ghost."

"Yes. I'm tired. I walked."

"Walked? From Rivington Street?"

"Nearly. I felt like it."

"It's most imprudent. You dined first?"

"I wasn't hungry."

"But you must have something at once." And Father Monies hurried away, heated some bouillon by a spirit-lamp, and brought it, with bread, and set it before his unexpected guest.

"There, eat that, and get to bed as soon as you can. It was great nonsense."

And Father Damon obeyed. Indeed, he was too exhausted to talk.

XVII

Father Damon slept the sleep of exhaustion. In this for a time the mind joined in the lethargy of the body. But presently, as the vital currents were aroused, the mind began to play its fantastic tricks. He was a seminary student, he was ordained, he was taking his vows before the bishop, he was a robust and consecrated priest performing his first service, shining, it seemed to him, before the congregation in the purity of his separation from the world. How strong he felt. And then came perplexities, difficulties, interests, and conflicting passions in life that he had not suspected, good that looked like evil, and evil that had an alloy of virtue, and the way was confused. And then there was a vision of a sort of sister of charity working with him in the evil and the good, drawing near to him, and yet repelling him with a cold, scientific skepticism that chilled him like blasphemy; but so patient was she, so unconscious of self, that gradually he lost this feeling of repulsion and saw only the woman, that wonderful creation, tender, pitiful comrade, the other self. And then there was darkness and blindness, and he stood once more before his congregation, speaking words that sounded hollow, hearing responses that mocked him, stared at by accusing eyes that knew him for a hypocrite. And he rushed away and left them, hearing their laughter as he went, and so into the street—plainly it was Rivington Street—and faces that he knew had a smile and a sneer, and he heard comments as he passed “Hulloa, Father Damon, come in and have a drink.” “I say, Father Damon, I seen her going round into Grand Street.”

When Father Monies looked in, just before daylight, Father Damon was still sleeping, but tossing restlessly and muttering incoherently; and he did not arouse him for the early devotions.

It was very late when he awoke, and opened his eyes to a confused sense of some great calamity. Father Monies was standing by the bedside with a cup of coffee.

“You have had a good sleep. Now take this, and then you may get up. The breakfast will wait for you.”

Father Damon started up. “Why didn't you call me? I am late for the mission.”

“Oh, Bendes has gone down long ago. You must take it easy; rest today. You'll be all right. You haven't a bit of fever.”

“But,” still declining the coffee, “before I break my fast, I have something to say to you. I—”

“Get some strength first. Besides, I have an engagement. I cannot wait. Pull yourself together; I may not be back before evening.”

So it was fated that he should be left still with himself. After his coffee he dressed slowly, as if it were not he, but some one else going through this familiar duty, as if it were scarcely worth while to do anything any more. And then, before attempting his breakfast, he went into the little oratory, and remained long in the attitude of prayer, trying to realize what he was and what he had done. He prayed for himself, for help, for humility, and he prayed for her; he had been used of late to pray for her guidance, now he prayed that she might be sustained.

When he came forth it was in a calmer frame of mind. It was all clear now. When Father Monies returned he would confess, and take his penance, and resolutely resume his life. He understood life better now. Perhaps this blow was needed for his spiritual pride.

It was a mild winter day, bright, and with a touch of summer, such as sometimes gets shuffled into our winter calendar. The book that he took up did not interest him; he was in no mood for the quiet meditation that it usually suggested to him, and he put it down and strolled out, directing his steps farther up the height, and away from the suburban stir. As he went on there was something consonant with his feelings in the bare wintry landscape, and when he passed the ridge and walked along the top of the river slope, he saw, as it seemed to him he had not seen it before, that lovely reach of river, the opposite wooded heights, the noble pass above, the peacefulness and invitation of nature. Had he a new sense to see all this? There was a softness in the distant outline, villas peeped out here and there, carriages were passing in the road below, there was a cheerful life in the stream—there was a harmony in the aspect of nature and humanity from this height. Was not the world beautiful? and human emotion, affection, love, were they alien to the Divine intention?

She loved beauty; she was fond of flowers; often she had spoken to him of her childish delight in her little excursions, rarely made, into the country. He could see her now standing just there and feasting her eyes on this noble panorama, and he could see her face all aglow, as she might turn to him and say, “Isn't it beautiful, Father Damon?” And she was down in those reeking streets, climbing about in the foul tenement-houses, taking a sick child in her arms, speaking a word of cheer—a good physician going about doing good!

And it might have been! Why was it that this peace of nature should bring up her image, and that they should seem in harmony? Was not the love of beauty and of goodness the same thing? Did God require in His service the atrophy of the affections? As long as he was in the world was it right that he should isolate himself from any of its sympathies and trials? Why was it not a higher life to enter into the common lot, and suffer, if need be, in the struggle to purify and ennoble all? He remembered the days he had once passed in the Trappist monastery of Gethsemane. The perfect peace of mind of the monks was purchased at the expense of the extirpation of every want, all will, every human interest. Were these men anything but specimens in a Museum of Failures? And yet, for the time being, it had seemed attractive to him, this simple vegetable existence, whose only object was preparation for death by the extinction of all passion and desire. No, these were not soldiers of the Lord, but the fainthearted, who had slunk into the hospital.

All this afternoon he was drifting in thought, arraigning his past life, excusing it, condemning it, and trying to forecast its future. Was this a trial of his constancy and faith, or had he made a mistake, entered upon a slavish career, from which he ought to extricate himself at any cost of the world's opinion? But presently he was aware that in all these debates with himself her image appeared. He was trying to fit his life to the thought of her. And when this became clearer in his tortured mind, the woman appeared as a temptation. It was not, then, the love of beauty, not even the love of humanity, and very far from being the service of his

Master, that he was discussing, but only his desire for one person. It was that, then, that made him, for that fatal instant, forget his vow, and yield to the impulse of human passion. The thought of that moment stung him with confusion and shame. There had been moments in this afternoon wandering—when it had seemed possible for him to ask for release, and to take up a human, sympathetic life with her, in mutual consecration in the service of the Lord's poor. Yes, and by love to lead her into a higher conception of the Divine love. But this breaking a solemn vow at the dictates of passion was a mortal sin—there was no other name for it—a sin demanding repentance and expiation.

As he at last turned homeward, facing the great city and his life there, this became more clear to him. He walked rapidly. The lines of his face became set in a hard judgment of himself. He thought no more of escaping from himself, but of subduing himself, stamping out the appeals of his lower nature. It was in this mood that he returned.

Father Monies was awaiting him, and welcomed him with that look of affection, of more than brotherly love, which the good man had for the younger priest.

"I hope your walk has done you good."

"Perhaps," Father Damon replied, without any leniency in his face; "but that does not matter. I must tell you what I could not last night. Can you hear me?"

They went together into the oratory. Father Damon did not spare himself. He kept nothing back that could heighten the enormity of his offense.

And Father Monies did not attempt to lessen the impression upon himself of the seriousness of the scandal. He was shocked. He was exceedingly grave, but he was even more pitiful. His experience of life had been longer than that of the penitent. He better knew its temptations. His own peace had only been won by long crucifixion of the natural desires.

"I have nothing to say as to your own discipline. That you know. But there is one thing. You must face this temptation, and subdue it."

"You mean that I must go back to my labor in the city?"

"Yes. You can rest here a few days if you feel too weak physically."

"No; I am well enough." He hesitated. "I thought perhaps some other field, for a time?"

"There is no other field for you. It is not for the moment the question of where you can do most good. You are to reinstate yourself. You are a soldier of the Lord Jesus, and you are to go where the battle is most dangerous."

That was the substance of it all. There was much affectionate counsel and loving sympathy mingled with all the inflexible orders of obedience, but the sin must be faced and extirpated in presence of the enemy.

On the morrow Father Damon went back to his solitary rooms, to his chapel, to the round of visitations, to his work with the poor, the sinful, the hopeless. He did not seek her; he tried not to seem to avoid her, or to seem to shun the streets where he was most likely to meet her, and the neighborhoods she frequented. Perhaps he did avoid them a little, and he despised himself for doing it. Almost involuntarily he looked to the bench by the chapel door which she occasionally occupied at vespers. She was never there, and he condemned himself for thinking that she might be; but yet wherever he walked there was always the expectation that he might encounter her. As the days went by and she did not appear, his expectation became a kind of torture. Was she ill, perhaps? It could not be that she had deserted her work.

And then he began to examine himself with a morbid introspection. Had the hope that he should see her occasionally influenced him at all in his obedience to Father Monies? Had he, in fact, a longing to be in the streets where she had walked, among the scenes that had witnessed her beautiful devotion? Had his willingness to take up this work again been because it brought him nearer to her in spirit?

No, she could not be ill. He heard her spoken of, here and there, in his calls and ministrations to the sick and dying. Evidently she was going about her work as usual. Perhaps she was avoiding him. Or perhaps she did not care, after all, and had lost her respect for him when he discovered to her his weakness. And he had put himself on a plane so high above her.

There was no conscious wavering in his purpose. But from much dwelling upon the thought, from much effort rather to put it away, his desire only to see her grew stronger day by day. He had no fear. He longed to test himself. He was sure that he would be impassive, and be all the stronger for the test. He was more devoted than ever in his Work. He was more severe with himself, more charitable to others, and he could not doubt that he was gaining a hold—yes, a real hold—upon the lives of many about him. The attendance was better at the chapel; more of the penitent and forlorn came to him for help. And how alone he was! My God, never even to see her!

In fact, Ruth Leigh was avoiding him. It was partly from a womanly reserve—called into expression in this form for the first time—and partly from a wish to spare him pain. She had been under no illusion from the first about the hopelessness of the attachment. She comprehended his character so thoroughly that she knew that for him any fall from his ideal would mean his ruin. He was one of the rare spirits of faith astray in a skeptical age. For a time she had studied curiously his efforts to adapt himself to his surroundings. One of these was joining a Knights of Labor lodge. Another was his approach to the ethical-culture movement of some of the leaders in the Neighborhood Guild. Another was his interest in the philanthropic work of agnostics like herself. She could see that he, burning with zeal to save the souls of men, and believing that there was no hope for the world except in the renunciation of the world, instinctively shrank from these contacts, which, nevertheless, he sought in the spirit of a Jesuit missionary to a barbarous tribe.

It was possible for such a man to be for a time overmastered by human passion; it was possible even that he might reason himself temporarily into conduct that this natural passion seemed to justify; yet she never doubted that there would follow an awakening from that state of mind as from a horrible delusion. It was simply because Ruth Leigh was guided by the exercise of reason, and had built up her scheme of life upon facts that she believed she could demonstrate, that she saw so clearly their relations, and felt that the faith, which was to her only a vagary of the material brain, was to him an integral part of his life.

Love, to be sure, was as unexpected in her scheme of life as it was in his; but there was on her part no reason why she should not yield to it. There was every reason in her nature and in her theory why she should, for, bounded as her vision of life was by this existence, love was the highest conceivable good in life. It had been with a great shout of joy that the consciousness had come to her that she loved and was loved. Though she might never see him again, this supreme experience for man or woman, this unsealing of the sacred fountain of life, would be for her an enduring sweetness in her lonely and laborious pilgrimage. How strong love is they best know to whom it is offered and denied.

And why, so far as she was concerned, should she deny it? An ordinary woman probably would not. Love is reason enough. Why should artificial conventions defeat it? Why should she sacrifice herself, if he were willing to brave the opinion of the world for her sake? Was it any new thing for good men to do this? But Ruth Leigh was not an ordinary woman. Perhaps if her intellect had not been so long dominant over her heart it would have been different. But the habit of being guided by reason was second nature. She knew that not only his vow, but the habit of life engendered by the vow, was an insuperable barrier. And besides, and this was the touchstone of her conception of life and duty, she felt that if he were to break his vow, though she might love him, her respect for him would be impaired.

It was a singular phenomenon—very much remarked at the time—that the women who did not in the least share Father Damon's spiritual faith, and would have called themselves in contradistinction materialists, were those who admired him most, were in a way his followers, loved to attend his services, were inspired by his personality, and drawn to him in a loving loyalty. The attraction to these very women was his unworldliness, his separateness, his devotion to an ideal which in their reason seemed a delusion. And no women would have been more sensitive than they to his fall from his spiritual pinnacle.

It was easy with a little contrivance to avoid meeting him. She did not go to the chapel or in its neighborhood when he was likely to be going to or from service. She let others send for him when in her calls his ministrations were required, and she was careful not to linger where he was likely to come. A little change in the time of her rounds was made without neglecting her work, for that she would not do, and she trusted that if accident threw him in her way, circumstances would make it natural and not embarrassing. And yet his image was never long absent from her thoughts; she wondered if he were dejected, if he were ill, if he were lonely, and mostly there was for him a great pity in her heart, a pity born, alas! of her own sense of loneliness.

How much she was repressing her own emotions she knew one evening when she returned from her visits and found a letter in his handwriting. The sight of it was a momentary rapture, and then the expectation of what it might contain gave her a feeling of faintness. The letter was long. Its coming needs a word of explanation.

Father Damon had begun to use the Margaret Fund. He found that its judicious use was more perplexing than he had supposed. He needed advice, the advice of those who had more knowledge than he had of the merits of relief cases. And then there might be many sufferers whom he in his limited field neglected. It occurred to him that Dr. Leigh would be a most helpful co-almoner. No sooner did this idea come to him than he was spurred to put it into effect. This common labor would be a sort of bond between them, a bond of charity purified from all personal alloy. He went at once to Mr. Henderson's office and told him his difficulties, and about Dr. Leigh's work, and the opportunities she would have. Would it not be possible for Dr. Leigh to draw from the fund on her own checks independent of him? Mr. Henderson thought not. Dr. Leigh was no doubt a good woman, but he didn't know much about woman visitors and that sort; their sympathies were apt to run away with them, and he should prefer at present to have the fund wholly under Father Damon's control. Some time, he intimated, he might make more lasting provisions with trustees. It would be better for Father Damon to give Dr. Leigh money as he saw she needed it.

The letter recited this at length; it had a check endorsed, and the writer asked the doctor to be his almoner. He dwelt very much upon the relief this would be to him, and the opportunity it would give her in many emergencies, and the absolute confidence he had in her discretion, as well as in her quick sympathy with the suffering about them. And also it would be a great satisfaction to him to feel that he was associated with her in such a work.

In its length, in its tone of kindness, of personal confidence, especially in its length, it was evident that the writing of it had been a pleasure, if not a relief, to the sender. Ruth read it and reread it. It was as if Father Damon were there speaking to her. She could hear the tones of his voice. And the glance of love—that last overmastering appeal and cry thrilled through her soul.

But in the letter there was no love; to any third person it would have read like an ordinary friendly philanthropic request. And her reply, accepting gratefully his trust, was almost formal, only the writer felt that she was writing out of her heart.

XVIII

The Roman poet Martial reckons among the elements of a happy life "an income left, not earned by toil," and also "a wife discreet, yet blythe and bright." Felicity in the possession of these, the epigrammatist might have added, depends upon content in the one and full appreciation of the other.

Jack Delancy returned from Washington more discontented than when he went. His speculation hung fire in a most tantalizing way; more than that, it had absorbed nearly all the "income not earned by toil," which was at the hazard of operations he could neither control nor comprehend. And besides, this little fortune had come to seem contemptibly inadequate. In his associations of the past year his spendthrift habits had increased, and he had been humiliated by his inability to keep pace with the prodigality of those with whom

he was most intimate. Miss Tavish was an heiress in her own right, who never seemed to give a thought to the cost of anything she desired; the Hendersons, for any whim, drew upon a reservoir of unknown capacity; and even Mavick began to talk as if he owned a flock of geese that laid golden eggs.

To be sure, it was pleasant coming home into an atmosphere of sincerity, of worship—was it not? It was very flattering to his self-esteem. The master had come! The house was in commotion. Edith flew to meet him, hugged him, shook him, criticised his appearance, rallied him for a recreant father. How well she looked—buoyant, full of vivacity, running over with joy, asking a dozen questions before he could answer one, testifying her delight, her affection, in a hundred ways. And the boy! He was so eager to see his papa. He could converse now—that is, in his way. And that prodigy, when Jack was dragged into his presence, and also fell down with Edith and worshiped him in his crib, did actually smile, and appear to know that this man belonged to him, was a part of his worldly possessions.

“Do you know,” said Edith, looking at the boy critically, “I think of making Fletcher a present, if you approve.”

“What's that?”

“He'll want some place to go to in the summer. I want to buy that old place where he was born and give it to him. Don't you think it would be a good investment?”

“Yes, permanent,” replied Jack, laughing at such a mite of a real-estate owner.

“I know he would like it. And you don't object?”

“Not in the least. It's next to an ancestral feeling to be the father of a land-owner.”

They were standing close to the crib, his arm resting lightly across her shoulders. He drew her closer to him, and kissed her tenderly. “The little chap has a golden-hearted mother. I don't know why he should not have a Golden House.”

Her eyes filled with sudden tears. She could not speak. But both arms were clasped round his neck now. She was too happy for words. And the baby, looking on with large eyes, seemed to find nothing unusual in the proceeding. He was used to a great deal of this sort of nonsense himself.

It was a happy evening. In truth, after the first surprise, Jack was pleased with this contemplated purchase. It was something removed beyond temptation. Edith's property was secure to her, and it was his honorable purpose never to draw it into his risks. But he knew her generosity, and he could not answer for himself if she should offer it, as he was sure she would do, to save him from ruin.

There was all the news to tell, the harmless gossip of daily life, which Edith had a rare faculty of making dramatically entertaining, with her insight and her feeling for comedy. There had been a musicale at the Blunts'—oh, strictly amateur—and Edith ran to the piano and imitated the singers and took off the players, until Jack declared that it beat the Conventional Club out of sight. And she had been to a parlor mind-cure lecture, and to a Theosophic conversation, and to a Reading Club for the Cultivation of a Feeling for Nature through Poetry. It was all immensely solemn and earnest. And Jack wondered that the managers did not get hold of these things and put them on the stage. Nothing could draw like them. Not burlesques, though, said Edith; not in the least. If only these circles would perform in public as they did in private, how they would draw!

And then Father Damon had been to consult her about his fund. He had been ill, and would not stay, and seemed more severe and ascetic than ever. She was sure something was wrong. For Dr. Leigh, whom she had sought out several times, was reserved, and did not voluntarily speak of Father Damon; she had heard that he was throwing himself with more than his usual fervor into his work. There was plenty to talk about. The purchase of the farm by the sea had better not be delayed; Jack might have to go down and see the owner. Yes, he would make it his first business in the morning. Perhaps it would be best to get some Long-Islander to buy it for them.

By the time it was ten o'clock, Jack said he thought he would step down to the Union a moment. Edith's countenance fell. There might be letters, he explained, and he had a little matter of business; he wouldn't be late.

It was very agreeable, home was, and Edith was charming. He could distinctly feel that she was charming. But Jack was restless. He felt the need of talking with somebody about what was on his mind. If only with Major Fairfax. He would not consult the Major, but the latter was in the way of picking up all sorts of gossip, both social and Street gossip.

And the Major was willing to unpack his budget. It was not very reassuring, what he had to tell; in fact, it was somewhat depressing, the general tightness and the panicky uncertainty, until, after a couple of glasses of Scotch, the financial world began to open a little and seem more hopeful.

“The Hendersons are going to build,” Jack said at length, after a remark of the Major's about that famous operator.

“Build? What for? They've got a palace.”

“Carmen says it's for an object-lesson. To show New York millionaires how to adorn their city.”

“It's like that little schemer. What does Henderson say?”

“He appears to be willing. I can't get the hang of Henderson. He doesn't seem to care what his wife does. He's a cynical cuss. The other night, at dinner, in Washington, when the thing was talked over, he said: 'My dear, I don't know why you shouldn't do that as well as anything. Let's build a house of gold, as Nero did; we are in the Roman age.' Carmen looked dubious for a moment, but she said, 'You know, Rodney, that you always used to say that some time you would show New York what a house ought to be in this climate.' 'Well, go on,' and he laughed. 'I suppose lightning will not strike that sooner than anything else.'” “Seems to me,” said the Major, reflectively, reaching out his hand for the brown mug, “the way he gives that woman her head, and doesn't care what she does, he must have a contempt for her.”

“I wish somebody had that sort of contempt for me,” said Jack, filling up his glass also.

“But, I tell you,” he continued, “Mrs. Henderson has caught on to the new notions. Her idea is the union of

all the arts. She has already got the refusal of a square 'way up-town, on the rise opposite the Park, and has been consulting architects about it. It is to be surrounded with the building, with a garden in the interior, a tropical garden, under glass in the winter. The facades are to be gorgeous and monumental. Artists and sculptors are to decorate it, inside and out. Why shouldn't there be color on the exterior, gold and painting, like the Fugger palaces in Augsburg, only on a great scale? The artists don't see any reason why there should not. It will make the city brilliant, that sort of thing, in place of our monotonous stone lanes. And it's using her wealth for the public benefit—the architects and artists all say that. Gad, I don't know but the little woman is beginning to regard herself as a public benefactor."

"She is that or nothing," echoed the Major, warmly.

"And do you know," continued Jack, confidentially, "I think she's got the right idea. If I have any luck—of course I sha'n't do that—but if I have any luck, I mean to build a house that's got some life in it—color, old boy—something unique and stunning."

"So you will," cried the Major, enthusiastically, and, raising his glass, "Here's to the house that Jack built!"

It was later than he thought it would be when he went home, but Jack was attended all the way by a vision of a Golden House—all gold wouldn't be too good, and he will build it, damme, for Edith and the boy. The next morning not even the foundations of this structure were visible. The master of the house came down to a late breakfast, out of sorts with life, almost surly. Not even Edith's bright face and fresh toilet and radiant welcome appealed to him. No one would have thought from her appearance that she had waited for him last night hour after hour, and had at last gone to bed with a heavy heart, and not to sleep—to toss, and listen, and suffer a thousand tortures of suspense. How many tragedies of this sort are there nightly in the metropolis, none the less tragic because they are subjects of jest in the comic papers and on the stage! What would be the condition of social life if women ceased to be anxious in this regard, and let loose the reins in an easy-going indifference? What, in fact, is the condition in those households where the wives do not care? One can even perceive a tender sort of loyalty to women in the ejaculation of that battered old veteran, the Major, "Thank God, there's nobody sitting up for me!"

Jack was not consciously rude. He even asked about the baby. And he sipped his coffee and glanced over the morning journal, and he referred to the conversation of the night before, and said that he would look after the purchase at once. If Edith had put on an aspect of injury, and had intimated that she had hoped that his first evening at home might have been devoted to her and the boy, there might have been a scene, for Jack needed only an occasion to vent his discontent. And for the chronicler of social life a scene is so much easier to deal with, an outburst of temper and sharp language, of accusation and recrimination, than the well-bred commonplace of an undefined estrangement.

And yet estrangement is almost too strong a word to use in Jack's case. He would have been the first to resent it. But the truth was that Edith, in the life he was leading, was a rebuke to him; her very purity and unworldliness were out of accord with his associations, with his ventures, with his dissipations in that smart and glittering circle where he was more welcome the more he lowered his moral standards. Could he help it if after the first hours of his return he felt the restraint of his home, and that the life seemed a little flat? Almost unconsciously to himself, his interests and his inclinations were elsewhere.

Edith, with the divination of a woman, felt this. Last night her love alone seemed strong enough to hold him, to bring him back to the purposes and the aspirations that only last summer had appeared to transform him. Now he was slipping away again. How pitiful it is, this contest of a woman who has only her own love, her own virtue, with the world and its allurements and seductions, for the possession of her husband's heart! How powerless she is against these subtle invitations, these unknown and all-encompassing temptations! At times the whole drift of life, of the easy morality of the time, is against her. The current is so strong that no wonder she is often swept away in it. And what could an impartial observer of things as they are say otherwise than that John Delancy was leading the common life of his kind and his time, and that Edith was only bringing trouble on herself by being out of sympathy with it?

He might not be in at luncheon, he said, when he was prepared to go down-town. He seldom was. He called at his broker's. Still suspense. He wrote to the Long Island farmer. At the Union he found a scented note from Carmen. They had all returned from the capital. How rejoiced she was to be at home! And she was dying to see him; no, not dying, but very much living; and it was very important. She should expect him at the usual hour. And could he guess what gown she would wear?

And Jack went. What hold had this woman on him? Undoubtedly she had fascinations, but he knew—knew well enough by this time—that her friendship was based wholly on calculation. And yet what a sympathetic comrade she could be! How freely he could talk with her; there was no subject she did not adapt herself to. No doubt it was this adaptability that made her such a favorite. She did not demand too much virtue or require too much conventionality. The hours he was with her he was wholly at his ease. She made him satisfied with himself, and she didn't disturb his conscience.

"I think," said Jack—he was holding both her hands with a swinging motion—when she came forward to greet him, and looking at her critically—"I think I like you better in New York than in Washington."

"That is because you see more of me here."

"Oh, I saw you enough in Washington."

"But that was my public manner. I have to live up to Mr. Henderson's reputation."

"And here you only have to live up to mine?"

"I can live for my friends," she replied, with an air of candor, giving a very perceptible pressure with her little hands. "Isn't that enough?"

Jack kissed each little hand before he let it drop, and looked as if he believed.

"And how does the house get on?"

"Famously. The lot is bought. Mr. Van Brunt was here all the morning. It's going to be something Oriental, mediaeval, nineteenth-century, gorgeous, and domestic. Van Brunt says he wants it to represent me."

"How?" inquired Jack; "all the four facades different?"

"With an interior unity—all the styles brought to express an individual taste, don't you know. A different house from the four sides of approach, and inside, home—that's the idea."

"It appears to me," said Jack, still bantering, "that it will look like an apartment-house."

"That is just what it will not—that is, outside unity, and inside a menagerie. This won't look gregarious. It is to have not more than three stories, perhaps only two. And then exterior color, decoration, statuary."

"And gold?"

"Not too much—not to give it a cheap gilded look. Oh, I asked him about Nero's house. As I remember it, that was mostly caverns. Mr. Van Brunt laughed, and said they were not going to excavate this house. The Roman notion was barbarous grandeur. But in point of beauty and luxury, this would be as much superior to Nero's house as the electric light is to a Roman lamp."

"Not classic, then?"

"Why, all that's good in classic form, with the modern spirit. You ought to hear Mr. Van Brunt talk. This country has never yet expressed itself in domestic inhabitation."

"It's going to cost! What does Mr. Henderson say?"

"I think he rather likes it. He told Mr. Van Brunt to consult me and go ahead with his plans. But he talks queerly. He said he thought he would have money enough at least for the foundation. Do you think, Jack," asked Carmen, with a sudden change of manner, "that Mr. Henderson is really the richest man in the United States?"

"Some people say so. Really, I don't know how any one can tell. If he let go his hand from his affairs, I don't know what a panic would do."

Carmen looked thoughtful. "He said to me once that he wasn't afraid of the Street any more. I told him this morning that I didn't want to begin this if it was going to incommode him."

"What did he say?"

"He was just going out. He looked at me a moment with that speculative sort of look-no, it isn't cynical, as you say; I know it so well—and then said: 'Oh, go ahead. I guess it will be all right. If anything happens, you can turn it into a boardinghouse. It will be an excellent sanitarium.' That was all. Anyway, it's something to do. Come, let's go and see the place." And she started up and touched the bell for the carriage. It was more than something to do. In those days before her marriage, when her mother was living, and when they wandered about Europe, dangerously near to the reputation of adventuresses, the girl had her dream of chateaux and castles and splendor. Her chance did not come in Europe, but, as she would have said, Providence is good to those who wait.

The next day Jack went to Long Island, and the farm was bought, and the deed brought to Edith, who, with much formality, presented it to the boy, and that young gentleman showed his appreciation of it by trying to eat it. It would have seemed a pretty incident to Jack, if he had not been absorbed in more important things.

But he was very much absorbed, and apparently more idle than ever. As the days went on, and the weeks, he was less and less at home, and in a worse humor—that is, at home. Carmen did not find him ill-humored, nor was there any change towards the fellows at the Union, except that it was noticed that he had his cross days. There was nothing specially to distinguish him from a dozen others, who led the same life of vacuity, of mild dissipation, of enforced pleasure. A wager now and then on an "event"; a fictitious interest in elections; lively partisanship in society scandals: Not much else. The theatres were stale, and only endurable on account of the little suppers afterwards; and really there wasn't much in life except the women who made it agreeable.

Major Fairfax was not a model; there had not much survived out of his checkered chances and experiences, except a certain instinct of being a gentleman, sir; the close of his life was not exactly a desirable goal; but even the Major shook his head over Jack.

XIX

The one fact in which men universally agree is that we come into the world alone and we go out of the world alone; and although we travel in company, make our pilgrimage to Canterbury or to Vanity Fair in a great show of fellowship, and of bearing one another's burdens, we carry our deepest troubles alone. When we think of it, it is an awful lonesomeness in this animated and moving crowd. Each one either must or will carry his own burden, which he commonly cannot, or by pride or shame will not, ask help in carrying.

Henderson drew more and more apart from confidences, and was alone in building up the colossal structure of his wealth. Father Damon was carrying his renewed temptation alone, after all his brave confession and attempt at renunciation. Ruth Leigh plodded along alone, with her secret which was the joy and the despair of her life—the opening of a gate into the paradise which she could never enter. Jack Delancy, the confiding, open-hearted good fellow, had come to a stage in his journey where he also was alone. Not even to Carmen could he confess the extent of his embarrassments, nor even in her company, nor in the distraction of his increasingly dissipated life, could he forget them. Not only had his investments been all transferred to his speculations, but his home had been mortgaged, and he did not dare tell Edith of the lowering cloud that hung over it; and that his sole dependence was the confidence of the Street, which any rumor might shatter, in that one of Henderson's schemes to which he had committed himself. Edith, the one person who could have comforted him, was the last person to whom he could have told this, for he had the most elementary, and the common conception of what marriage is.

But Edith's lot was the most pitiful of all. She was not only alone, but compelled to inaction. She saw the

fair fabric of her life dissolving, and neither by cries nor tears, by appeals nor protest, by show of anger nor by show of suffering, could she hinder the dissolution. Strong in herself and full of courage, day by day and week by week she felt her powerlessness. Heaven knows what it cost her—what it costs all women in like circumstances—to be always cheerful, never to show distrust. If her love were not enough, if her attractions were not enough, there was no human help to which she could appeal.

And what, pray, was there to appeal? There was no visible neglect, no sufficient alienation for gossip to take hold of. If there was a little talk about Jack's intimacy elsewhere, was there anything uncommon in that? Affairs went on as usual. Was it reasonable to suppose that society should notice that one woman's heart was full of foreboding, heavy with a sense of loss and defeat, and with the ruin of two lives? Could simple misery like this rise to the dignity of tragedy in a world that has its share of tragedies, shocking and violent, but is on the whole going on decorously and prosperously?

The season wore on. It was the latter part of May. Jack had taken Edith and the boy down to the Long Island house, and had returned to the city and was living at his club, feverishly waiting for some change in his affairs. It was a sufficient explanation of his anxiety that money was "tight," that failures were daily announced, and that there was a general fear of worse times. It was fortunate for Jack and other speculators that they could attribute their ill-luck to the general financial condition. There were reasons enough for this condition. Some attributed it to want of confidence, others to the tariff, others to the action of this or that political party, others to over-production, others to silver, others to the action of English capitalists in withdrawing their investments. It could all be accounted for without referring to the fact that most of the individual sufferers, like Jack, owed more than they could pay.

Henderson was much of the time absent—at the West and at the South. His every move was watched, his least sayings were reported as significant, and the Street was hopeful or depressed as he seemed to be cheerful or unusually taciturn. Uncle Jerry was the calmest man in town, and his observation that Henderson knew what he was about was reassuring. His serenity was well founded. The fact was that he had been pulling in and lowering canvas for months. Or, as he put it, he hadn't much hay out... "It's never a good plan," said Uncle Jerry, "to put off raking up till the shower begins."

It seems absurd to speak of the East Side in connection with the financial situation. But that was where the pinch was felt, and felt first. Work was slack, and that meant actual hunger for many families. The monetary solidarity of the town is remarkable. No one flies a kite in Wall Street that somebody in Rivington Street does not in consequence have to go without his dinner. As Dr. Leigh went her daily rounds she encountered painful evidence of the financial disturbance. Increased number of cases for the doctor followed want of sufficient food and the eating of cheap, unwholesome food. She was often obliged to draw upon the Margaret Fund, and to invoke the aid of Father Damon when the responsibility was too great for her. And Father Damon found that his ministry was daily diverted from the cure of souls to the care of bodies. Among all those who came to

the mission as a place of refuge and rest, and to whom the priest sought to offer the consolations of religion and of his personal sympathy, there were few who did not have a tale of suffering to tell that wrung his heart. Some of them were actually ill, or had at home a sick husband or a sick daughter. And such cases had to be reported to Dr. Leigh.

It became necessary, therefore, that these two, who had shunned each other for months, should meet as often as they had done formerly. This was very hard for both, for it meant only the renewal of heart-break, regret, and despair. And yet it had been almost worse when they did not see each other. They met; they talked of nothing but their work; they tried to forget themselves in their devotion to humanity. But the human heart will not be thus disposed of. It was impossible that some show of personal interest, some tenderness, should not appear. They were walking towards Fourth Avenue one evening—the priest could not resist the impulse to accompany her a little way towards her home—after a day of unusual labor and anxiety.

"You are working too hard," he said, gently; "you look fatigued."

"Oh no," she replied, looking up cheerfully; "I'm a regular machine. I get run down, and then I wind up. I get tired, and then I get rested. It isn't the work," she added, after a moment, "if only I could see any good of it. It seems so hopeless."

"From your point of view, my dear doctor," he answered, but without any shade of reproof in his tone. "But no good deed is lost. There is nothing else in the world—nothing for me." The close of the sentence seemed wholly accidental, and he stopped speaking as if he could not trust himself to go on.

Ruth Leigh looked up quickly. "But, Father Damon, it is you who ought to be rebuked for overwork. You are undertaking too much. You ought to go off for a vacation, and go at once."

The father looked paler and thinner than usual, but his mouth was set in firm lines, and he said: "It cannot be. My duty is here. And"—he turned, and looked her full in the face—"I cannot go."

No need to explain that simple word. No need to interpret the swift glance that their eyes exchanged—the eager, the pitiful glance. They both knew. It was not the work. It was not the suffering of the world. It was the pain in their own hearts, and the awful chasm that his holy vows had put between them. They stood so only an instant. He was trembling in the effort to master himself, and in a second she felt the hot blood rising to her face. Her woman's wit was the first to break the hopeless situation. She turned, and hailed a passing car. "I cannot walk any farther. Good-night." And she was gone.

The priest stood as if a sudden blow had struck him, following the retreating car till it was out of sight, and then turned homeward, dazed, and with feeble steps. What was this that had come to him to so shake his life? What devil was tempting him to break his vows and forsake his faith? Should he fly from the city and from his work, or should he face what seemed to him, in the light of his consecration, a monstrous temptation, and try to conquer himself? He began to doubt his power to do this. He had always believed that it was easy to conquer nature. And now a little brown woman had taught him that he reckons ill who leaves out the strongest human passion. And yet suppose he should break his solemn vows and throw away his ideal, and marry Ruth Leigh, would he ever be happy? Here was a mediaeval survival confronted by a nineteenth-century skepticism. The situation was plainly insoluble. It was as plainly so to the clear mind of the unselfish little woman without faith as it was to him. Perhaps she could not have respected him if he had yielded. Strangely enough, the attraction of the priest for her and for other women who called themselves servants of humanity was in his consecration, in his attitude of separation from the vanities and passions of this world. They believed in him, though they did not share his faith. To Ruth Leigh this experience of love was as unexpected as it was to the priest. Perhaps because her life was lived on a less exalted plane she could bear it with more equanimity. But who knows? The habit of her life was endurance, the sturdy meeting of the duty of every day, with at least only a calm regard of the future. And she would go on. But who can measure the inner change in her life? She must certainly be changed by this deep experience, and, terrible as it was, perhaps ennobled by it. Is there not something supernatural in such a love itself? It has a wonderful transforming power. It is certain that a new light, a tender light, was cast upon her world. And who can say that some time, in the waiting and working future, this new light might not change life altogether for this faithful soul?

There was one person upon whom the tragedy of life thus far sat lightly. Even her enemies, if she had any, would not deny that Carmen had an admirable temperament. If she had been a Moslem, it might be predicted that she would walk the wire 'El Serat' without a tremor. In these days she was busy with the plans of her new house. The project suited her ambition and her taste. The structure grew in her mind into barbaric splendor, but a barbaric splendor refined, which reveled in the exquisite adornment of the Alhambra itself. She was in daily conferences with her architect and her artists, she constantly consulted Jack about it, and Mavick whenever he was in town, and occasionally she awakened the interest of Henderson himself, who put no check upon her proceedings, although his mind was concerned with a vaster structure of his own. She talked of little else, until in her small world there grew up a vast expectation of magnificence, of which hints appeared from time to time in the newspapers, mysterious allusions to Roman luxury, to Nero and his Golden House. Henderson read these paragraphs, as he read the paragraphs about his own fortune, with a grim smile.

"Your house is getting a lot of free advertising," he said to Carmen one evening after dinner in the library, throwing the newspaper on the table as he spoke.

"They all seem to like the idea," replied Carmen. "Did you see what one of the papers said about the use of wealth in adorning the city? That's my notion."

"I suppose," said Henderson, with a smile, "that you put that notion into the reporter's head."

"But he thought he suggested it to me."

"Let's look over the last drawing." Henderson half rose from his chair to pull the sheet towards him, but instantly sank back, and put his hand to his heart. Carmen saw that he was very pale, and ran round to his chair.

"What is it?"

"Nothing," he said, taking a long breath. "Just a stitch. Indigestion. It must have been the coffee."

Carmen ran to the dining-room, and returned with a wineglass of brandy.

"There, take that."

He drank it. "Yes, that's better. I'm all right now." And he sat still, slowly recovering color and control of himself.

"I'm going to send for the doctor."

"No, no; nonsense. It has all passed," and he stretched out his arms and threw them back vigorously. "It was only a moment's faintness. It's quite gone."

He rose from his chair and took a turn or two about the room. Yes, he was quite himself, and he patted Carmen's head as he passed and took his seat again. For a moment or two there was silence. Then he said, still as if reflecting:

"Isn't it queer? In that moment of faintness all my life flashed through my mind."

"It has been a very successful life," Carmen said, by way of saying something.

"Yes, yes; but I wonder if it was worth while?"

"If I were a man, I should enjoy the power you have, the ability to do what you will."

"I suppose I do. That is all there is. I like to conquer obstacles, and I like to command. And money; I never did care for money in itself. But there is a fascination in building up a great fortune. It is like conducting a political or a military campaign. Now, I haven't much interest in anything else."

As he spoke he looked round upon the crowded shelves of his library, and, getting up, went to the corner where there was a shelf of rare editions and took down a volume.

"Do you remember when I got this, Carmen? It was when I was a bachelor. It was rare then. I saw it quoted the other day as worth twice the price I gave for it."

He replaced it carefully, and walked along the shelves looking at the familiar titles.

"I used to read then. And you read still; you have time."

"Not those books," she replied, with a laugh. "Those belong to the last generation."

"That is where I belong," he said, smiling also. "I don't think I have read a book, not really read it, in ten years. This modern stuff that pretends to give life is so much less exciting than my own daily experience that I cannot get interested in it. Perhaps I could read these calm old books."

"It is the newspapers that take your time," Carmen suggested.

"Yes, they pass the time when I am thinking. And they are full of suggestions. I suppose they are as accurate about other things as about me. I used to think I would make this library the choicest in the city. It is good as far as it goes. Perhaps I will take it up some day—if I live." And he turned away from the shelves and sat down. Carmen had never seen him exactly in this humor and was almost subdued by it.

He began to talk again, philosophizing about life generally and his own life. He seemed to like to recall his career, and finally said: "Uncle Jerry is successful too, and he never did care for anything else—except his family. There is a clerk in my office on five thousand a year who is never without a book when he comes to the office and when I see him on the train. He has a wife and a nice little family in Jersey. I ask him sometimes about his reading. He is collecting a library, but not of rare books; says he cannot afford that. I think he is successful too, or will be if he never gets more than five thousand a year, and is content with his books and his little daily life, coming and going to his family. Ah, well! Everybody must live his life. I suppose there is some explanation of it all."

"Has anything gone wrong?" asked Carmen, anxiously.

"No, not at all. Nothing to interfere with the house of gold." He spoke quite gently and sincerely. "I don't know what set me into this moralizing. Let's look at the plans."

The next day—it was the first of June—in consultation with the architect, a project was broached that involved such an addition of cost that Carmen hesitated. She declared that it was a question of ways and means, and that she must consult the chairman. Accordingly she called her carriage and drove down to Henderson's office.

It was a beautiful day, a little warm in the narrow streets of the lower city, but when she had ascended by the elevator to the high story that Henderson occupied in one of the big buildings that rise high enough to give a view of New York Harbor, and looked from the broad windows upon one of the most sparkling and animated scenes in the world, it seemed to her appreciative eyes a day let down out of Paradise.

The clerks all knew Mrs. Henderson, and they rose and bowed as she tripped along smiling towards her husband's rooms. It did not seem to be a very busy day, and she found no one waiting in the anteroom, and passed into the room of his private secretary.

"Is Mr. Henderson in?"

"Yes, madam."

"And busy?"

"Probably busy," replied the secretary, with a smile, "but he is alone. No one has disturbed him for over half an hour."

"Then I will go in."

She tapped lightly at the door. There was no response. She turned the knob softly and looked in, and then, glancing back at the secretary, with a finger uplifted, "I think he is asleep," opened the door, stepped in, and closed it carefully.

The large room was full of light, and through the half-dozen windows burst upon her the enchanting scene of the Bay, Henderson sat at his table, which was covered with neatly arranged legal documents, but bowed over it, his head resting upon his arms.

"So, Rodney, this is the way, old boy, that you wear yourself out in business!"

She spoke laughingly, but he did not stir, and she tiptoed along to awaken him.

She touched his hand. It moved heavily away from her hand. The left arm, released, dropped at his side.

She started back, her eyes round with terror, and screamed.

Instantly the secretary was at her side, and supported her, fainting, to a seat. Other clerks rushed in at the alarm. Henderson was lifted from his chair and laid upon a lounge. When the doctor who had been called arrived, Carmen was in a heap by the low couch, one arm thrown across the body, and her head buried in the cushion close to his.

The doctor instantly applied restoratives; he sent for an electric battery; everything was done that science could suggest. But all was of no avail. There was no sign of life. He must have been dead half an hour, said the doctor. It was evidently heart-failure.

Before the doctor had pronounced his verdict there was a whisper in the Stock Exchange.

"Henderson is dead!"

"It is not possible," said one.

"I saw him only yesterday," said another.

"I was in his office this morning," said a third. "I never saw him looking in better health."

The whisper was confirmed. There was no doubt of it. Henderson's private secretary had admitted it. Yet it seemed incredible. No provision had been made for it. Speculation had not discounted it. A panic set in. No one knew what to do, for no one knew well the state of Henderson's affairs. In the first thirty minutes there was a tremendous drop in Henderson stocks. Then some of them rallied, but before the partial recovery hundreds of men had been ruined. It was a wild hour in the Exchange. Certain stocks were hopelessly smashed for the time, and some combinations were destroyed; among them was one that Uncle Jerry had kept out of; and Jack Delancy was hopelessly ruined.

The event was flashed over the wires of the continent; it was bulletined; it was cried in the streets; it was the all-absorbing talk of the town. Already, before the dead man was removed to his own house, people were beginning to moralize about him and his career. Perhaps the truest thing was said by the old broker in the board whose reputation for piety was only equaled by his reputation of always having money to loan at exorbitant rates in a time of distress. He said to a group of downcast operators, "In the midst of life we are in death."

The place that Rodney Henderson occupied in the mind of the public was shown by the attention the newspapers paid to his death. All the great newspapers in all the cities of importance published long and minute biographies of him, with pictorial illustrations, and day after day characteristic anecdotes of his remarkable career. Nor was there, it is believed, a newspaper in the United States, secular, religious, or special, that did not comment upon his life. This was the more remarkable in that he was not a public man in the common use of the word: he had never interested himself in politics, or in public affairs, municipal or State or national; he had devoted himself entirely to building up his private fortune. If this is the duty of a citizen, he had discharged it with singleness of purpose; but no other duty of the citizen had he undertaken, if we except his private charities. And yet no public man of his day excited more popular interest or was the subject of more newspaper comment.

And these comments were nearly all respectful, and most of them kindly. There was some justice in this, for Henderson had been doing what everybody else was trying to do, usually without his good-fortune. If he was more successful than others in trying to get rich, surely a great deal of admiration was mingled with the envy of his career. To be sure, some journals were very severe upon his methods, and some revived the old stories of his unscrupulousness in transactions which had laid him open to criminal prosecution, from the effects of which he was only saved by uncommon adroitness and, some said, by legal technicalities. His career also was denounced by some as wholly vicious in its effect upon the youth of the republic, and as lowering the tone of public morals. And yet it was remembered that he had been a frank, open-hearted friend, kind to his family, and generous in contrast with some of his close-fisted contemporaries. There was nothing mean about him; even his rascalities, if you chose to call his transactions by that name, were on a grand scale. To be sure, he would let nothing stand between him and the consummation of his schemes—he was like Napoleon in that—but those who knew him personally liked him. The building up of his colossal fortune—which the newspapers were saying was the largest that had been accumulated in one lifetime in America—had ruined thousands of people, and carried disaster into many peaceful houses, and his sudden death had been a cyclone of destruction for an hour. But it was hardly fair, one journal pointed out, to hold Henderson responsible for his untimely death.

Even Jack Delancy, when the crushing news was brought him at the club, where he sat talking with Major Fairfax, although he saw his own ruin in a flash, said, "It wouldn't have happened if Henderson had lived."

"Not so soon," replied the Major, hesitatingly.

"Do you mean to say that Henderson and Mavick and Mrs. Henderson would have thrown me over?"

"Why, no, not exactly; but a big machine grinds on regardless, and when the crash comes everybody looks out for himself."

"I think I'll telegraph to Mavick."

"That wouldn't do any good now. He couldn't have stopped the panic. I tell you what, you'd better go down to your brokers and see just how matters stand."

And the two went down to Wall Street. It was after hours, but the brokers' office was full of excitement. No one knew what was left from the storm, nor what to expect. It was some time before Jack could get speech with one of the young men of the firm.

"How is it?" he asked.

"It's been a—of a time."

"And Henderson?"

"Oh, his estate is all right, so far as we know. He was well out of the Missouri."

"And the Missouri?"

"Bottom dropped out; temporarily, anyway."

"And my account?"

"Wiped out, I am sorry to say. Might come up by-and-by, if you've got a lot of money to put up, and wait."

"Then it's all up," said Jack, turning to the Major. He was very pale. He knew now that his fortune was gone absolutely—house, everything.

Few words were exchanged as they made their way back to the club. And here the Major did a most unusual thing for him. He ordered the drinks. But he did this delicately, apologetically.

"I don't know as you care for anything, but Wall Street has made me thirsty. Eh?"

"I don't mind if I do," Jack replied.

And they sat down.

The conversation was not cheerful; it was mainly ejaculatory. After a second glass, Jack said, "I don't suppose it would do any good, but I should like to see Mavick." And then, showing the drift of his thoughts, "I wonder what Carmen will do?"

"I should say that will depend upon the will," replied the Major.

"She is a good-hearted woman," and Jack's tone was one of inquiry.

"She hasn't any, Jack. Not the least bit of a heart. And I believe Henderson found it out. I shall be surprised if his will doesn't show that he knew it."

A servant came to the corner where they were sitting and handed Jack a telegram.

"What's this? Mavick?" He tore it open. "No; Edith." He read it with something like a groan, and passed it over to the Major.

What he read was this: "Don't be cast down, Jack. The boy and I are well. Come. Edith."

"That is splendid; that is just like her," cried the Major. "I'd be out of this by the first train."

"It is no use," replied Jack gloomily. "I couldn't 'face Edith now. I couldn't do it. I wonder how she knew?"

He called back the servant, and penned as reassuring a message as he could, but said that it was impossible to leave town. She must not worry about him. This despatched, they fell again into a talk about the situation. After another glass Jack was firm in his resolution to stay and watch things. It seemed not impossible that something might turn up.

On the third day after, both the Major and Jack attended the funeral at the house. Carmen was not visible. The interment was private. The day following, Jack left his card of condolence at the door; but one day passed, and another and another, and no word of acknowledgment came from the stricken widow. Jack said to himself that it was not natural to expect it. But he did expect it, and without reason, for he should have known that Carmen was not only overwhelmed with the sudden shock of her calamity, but that she would necessarily be busy with affairs that even grief would not permit her to neglect. Jack heard that Mavick had been in the city, and that he went to the Henderson house, but he had not called at the club, and the visit must have been a flying one.

A week passed, and Jack received no message from Carmen. His note offering his services if she needed the services of any one had not been answered.

Carmen was indeed occupied. It could not be otherwise. The state of Henderson's affairs could not wait upon conventionalities. The day after the funeral Mr. Henderson's private secretary came to the house, and had a long interview with Mrs. Henderson. He explained to her that the affairs should be immediately investigated, the will proved, and the estate put into the hands of the executors. It would be best for Mrs. Henderson herself to bring his keys down to the office, and to see the opening of his desk and boxes. Meantime it would be well for her to see if there were any papers of importance in the house; probably everything was in the office safe.

The next morning Carmen nerved herself to the task. With his keys in hand she went alone into the library and opened his writing-desk. Everything was in perfect order; letters and papers filed and labeled, and neatly arranged in drawers and pigeonholes. There lay his letter-book as he had last used it, and there lay fresh memoranda of his projects and engagements. She found in one of the drawers some letters of her own, mostly notes, and most of them written before her marriage. In another drawer were some bundles of letters, a little yellow with age, endorsed with the name of "Margaret." She shut the drawer without looking at them. She continued to draw papers from the pigeon-holes and glance at them. Most of them related to closed transactions. At length she drew out one that instantly fixed her attention. It was endorsed, "Last Will and Testament." She looked first at the date at the end—it was quite recent—and then leaned back in her chair and set herself deliberately to read it.

The document was long and full of repetitions and technicalities, but the purport of it was plain. As she read on she was at first astonished, then she was excited to trembling, and felt herself pale and faint; but when she had finished and fully comprehended it her pretty face was distorted with rage. The great bulk of the property was not for her. She sprang up and paced the floor. She came back and took up the document with a motion of tearing it in pieces. No—it would be better to burn it. Of course there must be another will deposited in the safe. Henderson had told her so. It was drawn up shortly after their marriage. It could not be worse for her than this. She lighted the gas-jet by the fireplace, and held the paper in her hand. Then a thought struck her. What if somebody knew of this will, and its execution could be proved! She looked again at the end. It was signed and sealed. There were the names of two witnesses. One was the name of their late butler, who had been long in Henderson's service, and who had died less than a month ago. The other name was Thomas Mavick. Evidently the will had been signed recently, on some occasion when Mavick was in the house. And Henderson's lawyer probably knew it also!

She folded the document carefully, put it back in the pigeon-hole, locked the desk, and rang the bell for her carriage. She was ready when the carriage came to the door, and told the coachman to drive to the office of Mr. Sage in Nassau Street. Mr. Sage had been for many years Henderson's most confidential lawyer.

He received Carmen in his private office, with the subdued respect due to her grief and the sudden tragedy that had overtaken her. He was a man well along in years, a small man, neat in his dress, a little formal and precise in his manner, with a smoothly shaven face and gray eyes, keen, but not unkindly in expression. He had the reputation, which he deserved, for great ability and integrity. After the first salutations and words of condolence were spoken, Carmen said, "I have come to consult you, Mr. Sage, about my husband's affairs."

"I am quite at your service, madam."

"I wanted to see you before I went to the office with the keys of his safe."

"Perhaps," said Mr. Sage, "I could spare you that trouble."

"Oh no; his secretary thought I had better come myself, if I could."

"Very well," said Mr. Sage.

Carmen hesitated a moment, and then said, in an inquiring tone, "I suppose the first thing is the will. He told me long ago that his will was made. I suppose it is in the safe. Didn't you draw it, Mr. Sage?"

"Oh yes," the lawyer replied, leaning back in his chair, "I drew that; a long time ago; shortly after your marriage. And about a year ago I drew another one. Did he ever speak of that?"

"No," Carmen replied, with a steady voice, but trembling inwardly at her narrow escape.

"I wonder," continued Mr. Sage, "if it was ever executed? He took it, and said he would think it over."

"Executed?" queried Carmen, looking up. "How do you mean, before a magistrate?"

"Oh, no; signed and witnessed. It is very simple. The law requires two witnesses; the testator and the witnesses must declare that they sign in the presence of each other. The witnesses prove the will, or, if they are dead, their signatures can be proved. I was one of the witnesses of the first will, and a clerk of Henderson's, who is still in his office, was the other."

"The last one is probably in the safe if it was executed."

"Probably," the lawyer assented. "If not, you'd better look for it in the house."

"Of course. Whether it exists or not, I want to carry out my husband's intention," Carmen said, sweetly. "Have you any memorandum of it?"

"I think so, somewhere, but the leading provisions are in my mind. It would astonish the public."

"Why?" asked Carmen.

"Well, the property was greater than any of us supposed, and—perhaps I ought not to speak to you of this now, Mrs. Henderson."

"I think I have a right to know what my husband's last wishes were," Carmen answered, firmly.

"Well, he had a great scheme. The greater part of his property after the large legacies—" The lawyer saw that Carmen looked pale, and he hesitated a moment, and then said, in a cheery manner: "Oh, I assure you, madam, that this will gave you a great fortune; all the establishment, and a very great fortune. But the residue was in trust for the building and endowment of an Industrial School on the East Side, with a great library and a reading-room, all to be free. It was a great scheme, and carefully worked out."

"I am so glad to know this," said Carmen. "Was there anything else?"

"Only some legacies." And Mr. Sage went on, trying to recall details that his attentive listener already knew. There were legacies to some of his relatives in New Hampshire, and there was a fund, quite a handsome fund, for the poor of the city, called the "Margaret Fund." And there was something also for a relative of the late Mrs. Henderson.

Carmen again expressed her desire to carry out her husband's wishes in everything, and Mr. Sage was much impressed by her sweet manner. When she had found out all that he knew or remembered of the new will, and arose to go, Mr. Sage said he would accompany her to the office. And Carmen gratefully accepted his escort, saying that she had wished to ask him to go with her, but that she feared to take up so much of his time.

At the office the first will was found, but no other. The lawyer glanced through it, and then handed it to Mrs. Henderson, with the remark, "It leaves you, madam, pretty much everything of which he died possessed." Carmen put it aside. She did not care to read it now. She would go home and search for the other one.

"If no other is found," said Mr. Sage, in bidding her good-morning, "this one ought to be proved tomorrow. I may tell you that you and Mr. Hollowell are named as executors."

On her way home Carmen stopped at a telegraph station, and sent a message to Mavick, in Washington, to take an afternoon train and come to New York.

When Carmen reached home she was in a serious but perfectly clear frame of mind. The revelation in the last will of Henderson's change of mind towards her was mortifying to a certain extent. It was true that his fortune was much increased since the first will was made, and that it justified his benevolent scheme. But he might have consulted her about it. If she had argued the matter with her conscience, she would have told her conscience that she would carry out this new plan in her own way and time. She was master of the situation, and saw before her a future of almost unlimited opportunity and splendor, except for one little obstacle. That obstacle was Mr. Mavick. She believed that she understood him thoroughly, but she could not take the next step until she had seen him. It was true that no one except herself positively knew that a second will now existed, but she did not know how much he might choose to remember.

She was very impatient to see Mr. Mavick. She wandered about the house, restless and feverish. Presently it occurred to her that it would be best to take the will wholly into her own keeping. She unlocked the desk, took it out with a trembling hand, but did not open it again. It was not necessary. A first reading had burned every item of it into her brain. It seemed to be a sort of living thing. She despised herself for being so agitated, and for the furtive feeling that overcame her as she glanced about to be sure that she was alone, and then she ran up stairs to her room and locked the document in her own writing-desk.

What was that? Oh, it was only the door-bell. But who could it be? Some one from the office, from her lawyer? She could see nobody. In two minutes there was a rap at her door. It was only the servant with a despatch. She took it and opened it without haste.

"Very well, Dobson; no answer. I expect Mr. Mavick on business at ten. I am at home to no one else."

At ten o'clock Mr. Mavick came, and was shown into the library, where Carmen awaited him.

"It was very good of you to come," she said, as she advanced to meet him and gave him her hand in the natural subdued manner that the circumstances called for.

"I took the first train after I received your despatch."

"I am sorry to inconvenience you so," she said, after they were seated, "but you know so much of Mr. Henderson's affairs that your advice will be needed. His will is to be proved tomorrow."

"Yes?" said Mavick.

"I went to see—Mr. Sage today, and he went with me to the office. The will was in the safe. I did not read it, but Mr. Sage said that it left everything to me except a few legacies."

"Yes?"

"He said it should be proved tomorrow, unless a later will turned up."

"Was there a later will?"

"That is what he did not know. He had drawn a new will about a year ago, but he doubted if it had ever been executed. Mr. Henderson was considering it. He thought he had a memorandum of it somewhere, but he remembered the principal features of it."

"Was it a great change from the first?" Mavick asked.

"Yes, considerable. In fact, the greater part of his property, as far as I could make out, was to go to endow a vast training-school, library, and reading-room on the East Side. Of course that would be a fine thing."

"Of course," said Mavick. "And no such will has been found?"

"I've looked everywhere," replied Carmen, simply; "all over the house. It should be in that desk if anywhere. We can look again, but I feel pretty sure there is no such document there."

She took in her hand the bunch of keys that lay on the table, as if she were about to rise and unlock the desk. Then she hesitated, and looked Mavick full in the face.

"Do you think, Mr. Mavick, that will was ever executed?"

For a moment they looked steadily at each other, and then he said, deliberately, their eyes squarely meeting, "I do not think it was." And in a moment he added, "He never said anything to me about such a disposition of his property."

Two things were evident to Carmen from this reply. He saw her interests as she saw them, and it was pretty certain that the contents of the will were not made known to him when he witnessed it. She experienced an immense feeling of relief as she arose and unlocked the desk. They sat down before it together, and went over its contents. Mavick made a note of the fresh business memoranda that might be of service next day, since Mrs. Henderson had requested him to attend the proving of the will, and to continue for the present the business relations with her that he had held with Mr. Henderson.

It was late when he left the house, but he took with him a note to Mr. Sage to drop into the box for morning delivery. The note said that she had searched the house, that no second will existed there, and that she had telegraphed to Mr. Mavick, who had much knowledge of Mr. Henderson's affairs, to meet him in the morning. And she read the note to Mavick before she sealed it.

Before the note could have been dropped into the box, Carmen was in her room, and the note was literally true. No second will existed.

The will was proved, and on the second day its contents were in all the newspapers. But with it went a very exciting story. This was the rumor of another will, and of Henderson's vast scheme of benevolence. Mr. Sage had been interviewed and Carmen had been interviewed. The memorandum (which was only rough and not wholly legible notes) had been found and sent to Carmen. There was no concealment about it. She gave the reporters all the details, and to every one she said that it was her intention to carry out her husband's wishes, so far as they could be ascertained from this memorandum, when his affairs had been settled. The thirst of the reporters for information amused even Carmen, who had seen much of this industrious tribe. One of them, to whom she had partially explained the situation, ended by asking her, "Are you going to contest the will?"

"Contest the will?" cried Carmen. "There is nothing to contest."

"I didn't know," said the young man, whose usual occupation was reporting sports, and who had a dim idea that every big will must be contested.

Necessarily the affair made a great deal of talk. The newspapers discussed it for days, and turned over the scheme in every light, the most saying that it was a noble gift to the city that had been intended, while only one or two doubted if charity institutions of this sort really helped the poor. Regret, of course, was expressed that the second will had never been executed, but with this regret was the confidence that the widow would carry out, eventually, Henderson's plans.

This revelation modified the opinion in regard to Henderson. He came to be regarded as a public benefactor, and his faithful wife shared the credit of his noble intention.

XXI

Waiting for something to turn up, Jack found a weary business. He had written to Mavick after the newspaper report that that government officer had been in the city on Henderson's affairs, and had received a very civil and unsatisfactory reply. In the note Mavick had asked him to come to Washington and spend a little time, if he had nothing better on hand, as his guest. Perhaps no offense was intended, but the reply enraged Jack. There was in the tone of the letter and in the manner of the invitation a note of patronage that was unendurable.

"Confound the fellow's impudence!" said Jack to himself; and he did not answer the invitation.

Personally his situation was desperate enough, but he was not inclined to face it. In a sort of stupor he let the law take its course. There was nothing left of his fortune, and his creditors were in possession of his house and all it contained. "Do not try to keep anything back that legally belongs to them," Edith had written when he informed her of this last humiliation. Of course decency was observed. Jack's and Edith's wardrobes, and some pieces of ancestral furniture that he pointed out as belonging to his wife, were removed before the auction flag was hung out. When this was over he still temporized. Edith's affectionate entreaties to him to leave the dreadful city and come home were evaded on one plea or another. He had wild schemes of going off West or South—of disappearing. Perhaps he would have luck somewhere. He couldn't ask aid or seek occupation of his friends, but some place where he was not known he felt that he might do something to regain his position, get some situation, or make some money—lots of men had done it in a new country and reinstate himself in Edith's opinion.

But he did not go, and days and weeks went by in irresolution. No word came from Carmen, and this humiliated Jack more than anything else—not the loss of her friendship, but the remembrance that he had ever danced attendance on her and trusted her. He was getting a good many wholesome lessons in these days.

One afternoon he called upon Miss Tavish. There was no change in her. She received him with her usual gay cordiality, and with no affectation.

"I didn't know what had become of you," she said.

"I've been busy," he replied, with a faint attempt at a smile.

"Yes, I know. It's been an awful time, what with Henderson's death and everything else. Almost everybody has been hit. But," and she looked at him cheerfully, "they will come up again; up and down; it is always so. Why, even I got a little twist in that panic." The girl was doing what she could in her way to cheer him up.

"I think of going off somewhere to seek my fortune," said Jack, with a rueful smile.

"Oh, I hope not; your friends wouldn't like that. There is no place like New York, I'm sure." And there was a real note of friendliness and encouragement in her tone. "Only," and she gave him another bright smile, "I think of running away from it myself, for a time. It's a secret yet. Carmen wants me to go abroad with her."

"I have not seen Mrs. Henderson since her husband's death. How is she?"

"Oh, she bears up wonderfully. But then she has so much to do, poor thing. And then the letters she gets, the begging letters. You've no idea. I don't wonder she wants to go abroad. Don't stay away so long again," she said as Jack rose to go. "And, oh, can't you come in to dinner tomorrow night—just Carmen—I think I can persuade her—and nobody else?"

"I'm sorry that I have an engagement," Jack answered.

"Well, some other time. Only soon."

This call did Jack temporarily a world of good. It helped his self-esteem. But it was only temporary. The black fact stared him in the face every morning that he was ruined. And it came over him gradually that he was a useless member of society. He never had done anything; he was not trained or fitted to do anything. And this was impressed upon him in the occasional attempts he made to get employment. He avoided as much as possible contact with those who knew him. Shame prevented him from applying to them for occupation, and besides he very well knew that to those who knew him his idle career was no recommendation. Yet he formed a habit of going down-town every day and looking for work. His appearance commanded civility, but everywhere he met with refusal, and he began to feel like a well-bred tramp. There had been in his mind before no excuse for tramps. He could see now how they were made.

It was not that he lacked capacity. He knew a great deal, in an amateurish way, about pictures, books, bric-a-brac, and about society. Why shouldn't he write? He visited the Loan Exhibition, and wrote a careful criticism on the pictures and sent it to a well-known journal. It was returned with thanks: the journal had its own art critic. He prepared other articles about curious books, and one about porcelain and pottery. They were all returned, except one which gave the history of a rare bit of majolica, which had been picked up forty cents and then sold for five hundred dollars, and was now owned by a collector who had paid four thousand dollars for it. For that the newspaper sent him five dollars. That was not encouraging, and his next effort for the same journal was returned. Either he hadn't the newspaper knack, or the competition was too great.

He had ceased going to his club. It was too painful to meet his acquaintances in his altered circumstances, and it was too expensive. It even annoyed him to meet Major Fairfax. That philosopher had not changed towards him any more than Miss Tavish had, but it was a melancholy business to talk of his affairs, and to listen to the repeated advice to go down to the country to Edith, and wait for some good opening. That was just what he could not do. His whole frivolous life he began now to see as she must have seen it. And it seemed to him that he could only retain a remnant of his self-respect by doing something that would reinstate him in her opinion.

"Very well," said the Major, at the close of the last of their talks at the club; "what are you going to do?"

"I'm going into some business," said Jack, stiffly.

"Have you spoken to any of your friends?"

"No. It's no use," he said, bitterly; "they are all like me, or they know me."

"And hasn't your wife some relations who are in business?"

"The last people I should apply to. No. I'm going to look around. Major, do you happen to know a cheap lodging-house that is respectable?"

"I don't know any that is not respectable," the Major replied, in a huffy manner.

"I beg your pardon," said Jack. "I want to reduce expenses."

The Major did know of a place in the neighborhood where he lived. He gave Jack the address, and thereafter the club and his usual resorts knew him no more.

As the days went by and nothing happened to break the monotony of his waiting and his fruitless search, he became despondent. Day after day he tramped about the city, among the business portions, and often on the East Side, to see misery worse than his own. He had saved out of the wreck his ample wardrobe, his watch, and some jewelry, and upon these he raised money for his cheap lodgings and his cheap food. He grew careless of his personal appearance. Every morning he rose and went about the city, always with less hope, and every night he returned to his lodging, but not always sober.

One day he read the announcement that Mrs. Rodney Henderson and Miss Tavish had sailed for Europe. That ended that chapter. What exactly he had expected he could not say. Help from Carmen? Certainly not. But there had never been a sign from her, nor any word from Mavick lately. There evidently was nothing. He had been thrown over. Carmen evidently had no more use for him. She had other plans. The thought that he had been used and duped was almost more bitter than his loss.

In after-days Jack looked back upon this time with a feeling akin to thankfulness for Carmen's utter heartlessness in regard to his affairs. He trembled to think what might have happened to him if she had sent for him and consulted him and drawn him again into the fatal embrace of her schemes and her fascinations. Now he was simply enraged when he thought of her, and irritated with himself.

These were dark days, days to which he looked back with a shudder. He wrote to Edith frequently—a brief note. He was straightening out his affairs; he was busy. But he did not give her his address, and he only got her letters when the Major forwarded them from the club, which was irregularly. A stranger, who met him at his lodgings or elsewhere, would have said that he was an idle and rather dissipated-looking man. He was idle, except in his feeble efforts to get work; he was worn and discouraged, but he was not doing anything

very bad. In his way of looking at it, he was carrying out his notion of honor. He was only breaking a woman's heart.

He was conscious of little except his own misfortunes and misery. He did not yet apprehend his own selfishness nor her nobility. He did not yet comprehend the unselfishness of a good woman's love.

On the East Side one day, as he was sauntering along Grand Street, he encountered Dr. Leigh, his wife's friend, whom he had seen once at his house. She did not at first recognize him until he stopped and spoke his name.

"Oh," she said, with surprise at seeing him, and at his appearance, "I didn't expect to see you here. I thought everybody had gone from the city. Perhaps you are going to the Neighborhood Guild?"

"No," and Jack forced a little laugh, "I'm not so good as that. I'm kept in town on business. I strolled over here to see how the other side of life looks."

"It doesn't improve. It is one of the worst summers I ever saw. Since Mr. Henderson's death—"

"What difference did Henderson's death make over here?"

"Why, he had deposited a little fund for Father Damon to draw on, and the day after his death the bank returned a small check with the notice that there was no deposit to draw on. It had been such a help in extraordinary cases. Perhaps you saw some allusion to it in the newspapers?"

"Wasn't it the Margaret Fund?"

"Yes. Father Damon dropped a note to Mrs. Henderson explaining about it. No reply came."

"As he might have expected." Dr. Leigh looked up quickly as if for an explanation, but Jack ignored the query, and went on. "And Father Damon, is he as active as ever?"

"He has gone."

"What, left the city, quit his work? And the mission?"

"I don't suppose he will ever quit his work while he lives, but he is much broken down. The mission chapel is not closed, but a poor woman told me that it seemed so."

"And he will not return? Mrs. Delancy will be so sorry."

"I think not. He is in retreat now, and I heard that he might go to Baltimore. I thought of your wife. She was so interested in his work. Is she well this summer?"

"Yes, thank you," said Jack, and they parted. But as she went on her way his altered appearance struck her anew, and she wondered what had happened.

This meeting with Mr. Delancy recalled most forcibly Edith, her interest in the East Side work, her sympathy with Father Damon and the mission, the first flush of those days of enthusiasm. When Father Damon began his work the ladies used to come in their carriages to the little chapel with flowers and money and hearts full of sympathy with the devoted priest. Alone of all these Edith had been faithful in her visits, always, when she was in town. And now the whole glittering show of charity had vanished for the time, and Father Damon—The little doctor stopped, consulted a memorandum in her hand-bag, looked up at the tenement-house she was passing, and then began to climb its rickety stairway.

Yes, Father Damon had gone, and Ruth Leigh simply went on with her work as before. Perhaps in all the city that summer there was no other person whose daily life was so little changed as hers. Others were driven away by the heat, by temporary weariness, by the need of a vacation and change of scene. Some charities and some clubs and schools were temporarily suspended; other charities, befitting the name, were more active, the very young children were most looked after, and the Good Samaritans of the Fresh-Air Funds went about everywhere full of this new enthusiasm of humanity. But the occupation of Ruth Leigh remained always the same, in a faithful pertinacity that nothing could wholly discourage, in a routine that no projects could kindle into much enthusiasm. Day after day she went about among the sick and the poor, relieving and counseling individuals, and tiring herself out in that personal service, and more and more conscious, when she had time, at night, for instance, to think, of the monstrous injustice somewhere, and at times in a mood of fierce revolt against the social order that made all this misery possible and hopeless.

Yet a great change had come into her life—the greatest that can come to any man or woman in the natural order. She loved and she was loved. An ideal light had been cast upon her commonplace existence, the depths of her own nature had been revealed to herself. In this illuminating light she walked about in the misery of this world. This love must be denied, this longing of the heart for companionship could never be gratified, yet after all it was a sweet self-sacrifice, and the love itself brought its own consolation. She had not to think of herself as weak, and neither was her lover's image dimmed to her by any surrender of his own principle or his own ideal. She saw him, as she had first seen him, a person consecrated and set apart, however much she might disagree with his supernatural vagaries—set apart to the service of humanity. She had bitter thoughts sometimes of the world, and bitter thoughts of the false system that controlled his conduct, but never of him.

It was unavoidable that she should recall her last interview with him, and that the image of his noble, spiritual face should be ever distinct in her mind. And there was even a certain comfort in this recollection.

Father Damon had indeed striven, under the counsel of his own courage and of Brother Monies, to conquer himself on the field of his temptation. But with his frail physique it was asking too much. This at last was so evident that the good brother advised him, and the advice was in the nature of a command in his order, to retire for a while, and then take up his work in a fresh field.

When this was determined on, his desire was nearly irresistible to see Ruth Leigh; he thought it would be cowardly to disappear and not say good-by. Indeed, it was necessary to see her and explain the stoppage of help from the Margaret Fund. The check that he had drawn, which was returned, had been for one of Dr. Leigh's cases. With his failure to elicit any response from Mrs. Henderson, the hope, raised by the newspaper comments on the unexecuted will, that the fund would be renewed was dissipated.

In the interview which Father Damon sought with Dr. Leigh at the Women's Hospital all this was explained, and ways and means were discussed for help elsewhere.

"I wanted to talk this over with you," said Father Damon, "because I am going away to take a rest."

"You need it, Father Damon," was Ruth's answer, in a professional manner.

"And—and," he continued, with some hesitation, "probably I shall not return to this mission."

"Perhaps that will be best," she said, simply, but looking up at him now, with a face full of tender sympathy.

"I am sure of it," he replied, turning away from her gaze. "The fact is, doctor, I am a little hipped—overworked, and all that. I shall pull myself together with a little rest. But I wanted to tell you how much I appreciate your work, and—and what a comfort you have been to me in my poor labors. I used to hope that some time you would see this world in relation to the other, and—"
