Thus marches on for weeks the floral procession, new turns bringing new banners into view, or casting on old ones a brighter light, but ever showing a riotous profusion of splendor until member after member drops gradually out of the ranks, and only a band of stragglers is left marching away into the summer. But myriads of ferns, twenty-one varieties of which are quite common, and of a fineness and delicacy rarely seen elsewhere, still stand green in the shade of the rocks and trees along the hills, and many a flower lingers in the timber or cañons long after its friends on the open hills or plains have faded away. In the cañons and timber are also many flowers that are not found in the open ground, and as late as the middle of September, only twenty miles from the sea, and at an elevation of but fifteen hundred feet, I have gathered bouquets that would attract immediate attention anywhere. The whole land abounds with flowers both curious and lovely; but those only have been mentioned which force themselves upon one's attention. Where the sheep have not ruined all beauty, and the rains have been sufficient, they take as full possession of the land as the daisy and wild carrot do of some Eastern meadows. There are thousands of others, which it would be a hopeless task to enumerate, which are even more numerous than most of the favorite wild flowers are in the East, yet they are not abundant enough to give character to the country. For instance, there is a great larkspur, six feet high, with a score of branching arms, all studded with spurred flowers of such brilliant red that it looks like a fountain of strontium fire; but you will not see it every time you turn around. A tall lily grows in the same way, with a hundred golden flowers shining on its many arms, but it must be sought in certain places. So the tiger-lily and the columbine must be sought in the mountains, the rose and sweetbrier on low ground, the night-shades and the helianthus in the timbered cañons and gulches.

Delicacy and brilliancy characterize nearly all the California flowers, and nearly all are so strange, so different from the other members of their families, that they would be an ornament to any greenhouse. The alfileria, for instance, is the richest and strongest fodder in the world. It is the main-stay of the stock-grower,

and when raked up after drying makes excellent hay; yet it is a geranium, delicate and pretty, when not too rank.

But suddenly the full blaze of color is gone, and the summer is at hand. Brown tints begin to creep over the plains; the wild oats no longer ripple in silvery waves beneath the sun and wind; and the foxtail, that shone so brightly green along the hill-side, takes on a golden hue. The light lavender tint of the chorizanthe now spreads along the hills where the poppy so lately flamed, and over the dead morning-glory the dodder weaves its orange floss. A vast army of cruciferæ and compositæ soon overruns the land with bright yellow, and numerous varieties of mint tinge it with blue or purple; but the greater portion of the annual vegetation is dead or dying. The distant peaks of granite now begin to glow at evening with a soft purple hue; the light poured into the deep ravines towards sundown floods them with a crimson mist; on the shady hill-sides the chaparral looks bluer, and on the sunny hill-sides is a brighter green than before.

[Pg 207]

COMPARATIVE TEMPERATURE AROUND THE WORLD.

The following table, published by the Pasadena Board of Trade, shows the comparative temperature of well-known places in various parts of the world, arranged according to the difference between their average winter and average summer:

Place.	Winter.	Spring.	Summer.	Autumn.	Difference Summer, Winter.
Funchal, Madeira	62.88	64.55	70.89	70.19	8.01
St. Michael, Azores	57.83	61.17	68.33	62.33	10.50
PASADENA	56.00	61.07	67.61	62.31	11.61
Santa Cruz, Canaries	64.65	68.87	76.68	74.17	12.03
Santa Barbara	54.29	59.45	67.71	63.11	13.42
Nassau, Bahama Islands	70.67	77.67	86.00	80.33	15.33
San Diego, California	54.09	60.14	69.67	64.63	15.58
Cadiz, Spain	52.90	59.93	70.43	65.35	17.53
Lisbon, Portugal	53.00	60.00	71.00	62.00	18.00
Malta	57.46	62.76	78.20	71.03	20.74
Algiers	55.00	66.00	77.00	60.00	22.00
St Augustine, Florida	58.25	68.69	80.36	71.90	22.11
Rome, Italy	48.90	57.65	72.16	63.96	23.26
Sacramento, California	47.92	59.17	71.19	61.72	23.27
Mentone	49.50	60.00	73.00	56.60	23.50
Nice, Italy	47.88	56.23	72.26	61.63	24.44
New Orleans, Louisiana	56.00	69.37	81.08	69.80	25.08
Cairo, Egypt	58.52	73.58	85.10	71.48	26.58
Jacksonville, Florida	55.02	68.88	81.93	62.54	26.91
Pau, France	41.86	54.06	70.72	57.39	28.86
Florence, Italy	44.30	56.00	74.00	60.70	29.70
San Antonio, Texas	52.74	70.48	83.73	71.56	30.99
Aiken, South Carolina	45.82	61.32	77.36	61.96	31.54
Fort Yuma, California	57.96	73.40	92.07	75.66	34.11
Visalia, California	45.38	59.40	80.78	60.34	35.40
Santa Fé, New Mexico	30.28	50.06	70.50	51.34	40.22
Boston, Mass	28.08	45.61	68.68	51.04	40.60
New York, N. Y.	31.93	48.26	72.62	48.50	40.69
Albuquerque, New Mexico	34.78	56.36	76.27	56.33	41.40
Denver, Colorado,	27.66	46.33	71.66	47.16	44.00
St. Paul, Minnesota	15.09	41.29	68.03	44.98	52.94
Minneapolis, Minnesota	12.87	40.12	68.34	45.33	55.47

CALIFORNIA AND ITALY.

The Los Angeles Chamber of Commerce, in its pamphlet describing that city and county, gives a letter from the Signal Service Observer at Sacramento, comparing the temperature of places in California and Italy. He writes:

To prove to your many and intelligent readers the equability and uniformity Of the climate of Santa Barbara, San Diego, and Los Angeles, as compared with Mentone and San Remo, of the Riviera of Italy and of Corfu, I append the monthly temperature for each place. Please notice a much warmer temperature in winter at the California stations, and also a much cooler summer temperature at the same places than at any of the foreign places, except Corfu. The table speaks with more emphasis and certainty than I can, and is as follows:

Month.	San Diego's mean temperature.	Santa Barbara's mean temperature.	Los Angeles' mean temperature.	Mentone's mean temperature.	San Remo's mean temperature.	Corfu's mean temperature.
February	54.2	55.6	54.2	48.5	50.2	51.8
March	55.6	56.4	56.0	52.0	52.0	53.6
April	57.8	58.8	57.9	57.2	57.0	58.3
May	61.1	60.2	61.0	63.0	62.9	66.7

[Pg 208]

June	64.4	62.6	65.5	70.0	69.2	72.3
July	67.3	65.7	68.3	75.0	74.3	67.7
August	68.7	67.0	69.5	75.0	73.8	81.3
September	66.6	65.6	67.5	69.0	70.6	78.8
October	62.5	62.1	62.7	74.4	61.8	70.8
November	58.2	58.0	58.8	54.0	58.3	63.8
December	55.5	55.3	54.8	49.0	49.3	68.4
Averages	60.6	60.2	60.4	60.4	60.1	65.6

The table on pages 210 and 211, "Extremes of Heat and Cold," is published by the San Diego Land and Farm Company, whose pamphlet says:

The United States records at San Diego Signal Station show that in ten years there were but 120 days on which the mercury passed 80°. Of these 120 there were but 41 on which it passed 85°, but 22 when it passed 90°, but four over 95°, and only one over 100°; to wit, 101°, the highest ever recorded here. During all this time there was not a day on which the mercury did not fall to at least 70° during the night, and there were but five days on which it did not fall even lower. During the same ten years there were but six days on which the mercury fell below 35°. This low temperature comes only in extremely dry weather in winter, and lasts but a few minutes, happening just before sunrise. On two of these six days it fell to 32° at daylight, the lowest point ever registered here. The lowest mid-day temperature is 52°, occurring only four times in these ten years. From 65° to 70° is the average temperature of noonday throughout the greater part of the year.

[Pg 209]

FIVE YEARS IN SANTA BARBARA.

[Transcriber's note: Table has been turned from original to fit, along with using abbreviations for the months and a legend.]

The following table, from the self-registering thermometer in the observatory of Mr. Hugh D. Vail, shows the mean temperature of each month in the years 1885 to 1889 at Santa Barbara, and also the mean temperature of the warmest and coldest days in each month:

- A = Mean Temperature of each Month.
- B = Mean Temperature of Warmest Day.
- C = Mean Temperature of Coldest Day.
- D = Monthly Rainfall, Inches.

Month.

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sep.	Oct.	Nov.	Dec.

[Pg 210]

Observations made at San Diego City, compiled from Report Of the Chief Signal Officer of the U. S. Army.

[Transcriber's note: Table has been modified from original to fit, using a legend.]

Column headers:

- a = Average number of cloudy days for each month and year.
- b = Average number of fair days for each month and year.
- c = Average number of clear days for each month and year.
- d = Average cloudiness, scale 0 to 10, for each month and year.
- e = Average hourly velocity of wind for each month and year.
- f = Average precipitation for each month and year.
- g = Minimum temperature for each month and year.
- h = Maximum temperature for each month and year.
- i = Mean temperature for each month and year.

j = Mean normal barometer of San Diego for each month and year for four years.

Observations Extending over a Period of Twelve Years.

MONTH.	a	b	c	d	e	f	g	h	i	j
January	8.5	11.2	11.3	4.1	5.1	1.85	32.0	78.0	53.6	30.027

STATEMENTS OF SMALL CROPS.

The following statements of crops on small pieces of ground, mostly in Los Angeles County, in 1890, were furnished to the Chamber of Commerce in Los Angeles, and are entirely trustworthy. Nearly all of them bear date August 1st. This is a fair sample from all Southern California:

PEACHES.

Ernest Dewey, Pomona—Golden Cling Peaches, 10 acres, 7 years old, produced 47 tons green; sold dried for \$4800; cost of production, \$243.70; net profit, \$4556.30. Soil, sandy loam; not irrigated. Amount of rain, 28 inches, winter of 1889-90.

H. H. Rose, Santa Anita Township (3/4 of a mile from Lamanda Park)—2-6/7 acres; produced 47,543 pounds; sold for \$863.46; cost of production, \$104; net profit, \$759.46. Soil, light sandy loam; not irrigated. Produced in 1889 12,000 pounds, which sold at \$1.70 per 100 pounds.

E. R. Thompson, Azusa (2 miles south of depot)—2-1/6 acres, 233 trees, produced 57,655 pounds; sold for \$864.82-1/2; cost of production, \$140; net profit, \$724.82-1/2. Soil, sandy loam; irrigated three times in

summer, 1 inch to 7 acres. Trees 7 years old, not more than two-thirds grown.

P. O'Connor, Downey—20 trees produced 4000 pounds; sold for \$60; cost of production \$5; net profit, \$55. Soil, sandy loam; not irrigated. Crop sold on the ground.

H. Hood, Downey City (1/4 of a mile from depot)—1/4 of an acre produced 7-1/2 tons; sold for \$150; cost of production, \$10; net profit, \$140. Damp sandy soil; not irrigated. Pg 212]

F. D. Smith (between Azusa and Glendora, 1-1/4 miles from depot)—1 acre produced 14,361 pounds; sold for \$252.51; cost of production, \$20; net profit, \$232.51. Dark sandy loam; irrigated once. Trees 5 and 6 years old.

P. O. Johnson, Ranchito—17 trees, 10 years old, produced 4-3/4 tons; sold 4-1/4 tons for \$120; cost of production, \$10; net profit, \$110; very little irrigation. Sales were 1/2c. per pound under market rate.

PRUNES.

E. P. Naylor (3 miles from Pomona)—15 acres produced 149 tons; sold for \$7450; cost of production, \$527; net profit, \$6923. Soil, loam, with some sand; irrigated, 1 inch per 10 acres.

W. H. Baker, Downey (1/2 a mile from depot)—1-1/2 acres produced 12,529 pounds; sold for \$551.90; cost of production, \$50; net profit, \$501.90. Soil, sandy loam; not irrigated.

Howe Bros. (2 miles from Lordsburg)—800 trees, which had received no care for 2 years, produced 28 tons; sold for \$1400; cost of production, \$200; net profit, \$1200. Soil, gravelly loam, red; partially irrigated. Messrs. Howe state that they came into possession of this place in March, 1890. The weeds were as high as the trees and the ground was very hard. Only about 500 of the trees had a fair crop on them.

W. A. Spalding, Azusa—1/3 of an acre produced 10,404 pounds; sold for \$156.06; cost of production, \$10; net profit, \$146.06. Soil, sandy loam.

E. A. Hubbard, Pomona (1-1/2 miles from depot)—4-1/2 acres produced 24 tons; sold green for \$1080; cost of production, \$280; net profit, \$800. Soil, dark sandy loam; irrigated. This entire ranch of 9 acres was bought in 1884 for \$1575.

F. M. Smith (1-1/4 miles east of Azusa)—3/5 of an acre produced 17,174 pounds; sold for \$315.84; cost of production, \$25; net profit, \$290. Soil, deep, dark sandy loam; irrigated once in the spring. Trees 5 years old.

George Rhorer (1/2 of a mile east of North Pomona)—13 acres produced 88 tons; sold for \$4400 on the trees; cost of production, \$260; net profit, \$4140. Soil, gravelly loam; irrigated, 1 inch to 8 acres. Trees planted 5 years ago last spring.

J. S. Flory (between the Big and Little Tejunga rivers)—1-1/3 acres or 135 trees 20 feet apart each way; 100 of the trees 4 years old, the balance of the trees 5 years old; produced 5230 pounds dried; sold for \$523; cost of production, \$18; net profit, \$505. Soil, light loam, with some sand; not irrigated. [Pg 213]

W. Caruthers (2 miles north of Downey)—3/4 of an acre produced 5 tons; sold for \$222; cost of production, \$7.50; net profit, \$215. Soil, sandy loam; not irrigated. Trees 4 years old.

James Loney, Pomona—2 acres; product sold for \$1150; cost of production, \$50; net profit, \$1100. Soil, sandy loam.

I. W. Lord, Eswen—5 acres produced 40 tons; sold for \$2000; cost of production, \$300; net profit, \$1700. Soil, sandy loam.

M. B. Moulton, Pomona—3 acres; sold for \$1873; cost of production, \$215; net profit, \$1658. Soil, deep sandy loam. Trees 9 years old.

Ernest Dewey, Pomona—6 acres produced 38 tons green; dried, at 10 cents a pound, \$3147; cost of production, \$403; profit, \$2734. Soil, sandy loam; irrigated one inch to 10 acres. Sixty per cent. increase over former year.

C. S. Ambrose, Pomona—12 acres produced 77 tons; \$50 per ton gross, \$3850; labor of one hand one year, \$150; profit, \$3700. Soil, gravelly; very little irrigation. Prunes sold on trees.

ORANGES.

Joachim F. Jarchow, San Gabriel—2-1/2 acres; 10-year trees; product sold for \$1650; cost of production \$100, including cultivation of 7-1/2 acres, not bearing; net profit, \$1550.

F. D. Smith, Azusa—6-1/2 acres produced 600 boxes; sold for \$1200; cost of production, \$130; net profit, \$1070. Soil, dark sandy loam; irrigated three times. Trees 4 years old.

George Lightfoot, South Pasadena—5-1/2 acres produced 700 boxes; sold for \$1100; cost of production, \$50; net profit, \$1050. Soil, rich, sandy loam; irrigated once a year.

H. Hood, Downey—1/2 of an acre produced 275 boxes; sold for \$275; cost of production, \$25; net profit, \$250. Soil, damp, sandy; not irrigated.

W. G. Earle, Azusa—1 acre produced 210 boxes; sold for \$262; cost of production, \$15; net profit, \$247. Soil, sandy loam; irrigated four times.

Nathaniel Hayden, Vernon—4 acres; 986 boxes at \$1.20 per box; sales, \$1182; cost of production, \$50; net profit, \$1132. Loam; irrigated. Other products on the 4 acres.

H. O. Fosdick, Santa Ana—1 acre; 6 years old; 350 boxes; sales, \$700; cost of production and packing, \$50; net profit, \$650. Loam; irrigated.

J. H. Isbell, Rivera—1 acre, 82 trees; 16 years old; sales, \$600; cost of production, \$25; profit, \$575. Irrigated. \$1.10 per box for early delivery, \$1.65 for later. [Pg 214]

GRAPES.

William Bernhard, Monte Vista—10 acres produced 25 tons; sold for \$750; cost of production, \$70; net profit, \$680. Soil, heavy loam; not irrigated. Vines 5 years old.

Dillon, Kennealy & McClure, Burbank (1 mile from Roscoe Station)—200 acres produced 90,000 gallons of wine; cost of production, \$5000; net profit, about \$30,000. Soil, sandy loam; not irrigated; vineyard in very healthy condition.

P. O'Connor (2-1/2 miles south of Downey)—12 acres produced 100 tons; sold for \$1500; cost of production, \$360; net profit, \$1140. Soil, sandy loam; not irrigated. Vines planted in 1884, when the land would not sell for \$100 per acre.

J. K. Banks (1-3/4 miles from Downey)—40 acres produced 250 tons; sold for \$3900; cost of production, \$1300; net profit, \$2600. Soil, sandy loam.

BERRIES.

W. Y. Earle (2-1/2 miles from Azusa)—Strawberries, 2-1/2 acres produced 15,000 boxes; sold for \$750; cost of production, \$225; net profit, \$525. Soil, sandy loam; irrigated. Shipped 3000 boxes to Ogden, Utah, and 6000 boxes to Albuquerque and El Paso.

Benjamin Norris, Pomona—Blackberries, 1/4 of an acre produced 2500 pounds; sold for \$100; cost of production, \$5; net profit, \$95. Soil, light sandy; irrigated.

S. H. Eye, Covina—Raspberries, 5/9 of an acre produced 1800 pounds; sold for \$195; cost of production, \$85; net profit, \$110. Soil, sandy loam; irrigated.

J. O. Houser, Covina—Blackberries, 1/4 of an acre produced 648 pounds; sold for \$71.28; cost of production, \$18; net profit, \$53.28. Soil, sandy loam; irrigated. First year's crop.

APRICOTS.

T. D. Leslie (1 mile from Pomona)—1 acre produced 10 tons; sold for \$250; cost of production, \$60; net profit, \$190. Soil, loose, gravelly; irrigated; 1 inch to 10 acres. First crop.

George Lightfoot, South Pasadena—2 acres produced 11 tons; sold for \$260; cost of production, \$20; net profit, \$240. Soil, sandy loam; not irrigated.

T. D. Smith, Azusa—1 acre produced 13,555 pounds; sold for \$169.44; cost of production, \$25; net profit, \$144.44. Soil, sandy loam; irrigated once. Trees 5 years old. [Pg 215]

W. Y. Earle (2-1/2 miles from Azusa)—6 acres produced 6 tons; sold for \$350; cost of production, \$25; net profit, \$325. Soil, sandy loam; not irrigated. Trees 3 years old.

W. A. Spalding, Azusa—335 trees produced 15,478 pounds; sold for \$647.43; cost of production, \$50; net profit, \$597.43. Soil, sandy loam.

Mrs. Winkler, Pomona—3/4 of an acre, 90 trees; product sold for \$381; cost of production, \$28.40; net profit, \$352.60. Soil, sandy loam; not irrigated. Only help, small boys and girls.

MISCELLANEOUS FRUITS.

E. A. Bonine, Lamanda Park—Apricots, nectarines, prunes, peaches, and lemons, 30 acres produced 160 tons; sold for \$8000; cost of production, \$1500; net profit, \$6500. No irrigation.

J. P. Fleming (1-1/2 miles from Rivera)—Walnuts, 40 acres produced 12-1/2 tons; sold for \$2120; cost of production, \$120; net profit, \$2000. Soil, sandy loam; not irrigated.

George Lightfoot, South Pasadena—Lemons, 2 acres produced 500 boxes; sold for \$720; cost of production, \$20; net profit, \$700. Soil, rich sandy loam; not irrigated. Trees 10 years old.

W. A. Spalding, Azusa—Nectarines, 96 trees produced 19,378 pounds; sold for \$242.22; cost of production, \$35; net profit, \$207.22. Soil, sandy loam.

F. D. Smith, Azusa—Nectarines, 1-2/5 acres produced 36,350 pounds; sold for \$363.50; cost of production, \$35; net profit, \$318.50. Soil, deep dark sandy loam; irrigated once in spring. Trees 5 and 6 years old.

C. D. Ambrose (4 miles north of Pomona)—Pears, 3 acres produced 33,422 pounds; sold green for \$1092.66; cost of production, \$57; net profit, \$1035.66. Soil, foot-hill loam; partly irrigated.

N. Hayden—Statement of amount of fruit taken from 4 acres for one season at Vernon District: 985 boxes oranges, 15 boxes lemons, 8000 pounds apricots, 2200 pounds peaches, 200 pounds loquats, 2500 pounds nectarines, 4000 pounds apples, 1000 pounds plums, 1000 pounds prunes, 1000 pounds figs, 150 pounds walnuts, 500 pounds pears. Proceeds, \$1650. A family of five were supplied with all the fruit they wanted besides the above.

POTATOES.

O. Bullis, Compton—28-3/4 acres produced 3000 sacks; sold for \$3000; cost of production, \$500; net profit, \$2500. Soil, peat; not irrigated. This land has been in potatoes 3 years, and will be sown to cabbages, thus producing two crops this year. [Pg 216]

P. F. Cogswell, El Monte—25 acres produced 150 tons; sold for \$3400; cost of production, \$450; net profit, \$2950. Soil, sediment; not irrigated.

M. Metcalf, El Monte—8 acres produced 64 tons; sold for \$900; cost of production, \$50; net profit, \$850. Soil, sandy loam; not irrigated.

Jacob Vernon (1-1/2 miles from Covina)—3 acres produced 400 sacks; sold for \$405.88; cost of production, \$5; net profit, \$400.88. Soil, sandy loam; irrigated one acre. Two-thirds of crop was volunteer.

H. Hood, Downey—Sweet potatoes, 1 acre produced 300 sacks; sold for \$300; cost of production, \$30; net profit, \$270. Soil, sandy loam; not irrigated.

C. C. Stub, Savannah (1 mile from depot)—10 acres produced 1000 sacks; sold for \$2000; cost of production, \$100; net profit, \$1900. Soil, sandy loam; not irrigated. A grain crop was raised on the same land this year.

ONIONS.

F. A. Atwater and C. P. Eldridge, Clearwater—1 acre produced 211 sacks; sold for \$211; cost of production, \$100; net profit, \$111. Soil, sandy loam; no irrigation. At present prices the onions would have brought \$633.

Charles Lauber, Downey—1 acre produced 113 sacks; sold for \$642; cost of production, \$50; net profit, \$592. No attention was paid to the cultivation of this crop. Soil, sandy loam; not irrigated. At present prices the same onions would have brought \$803.

MISCELLANEOUS VEGETABLES.

Eugene Lassene, University—Pumpkins, 5 acres produced 150 loads; sold for \$4 per load; cost of production, \$3 per acre; net profit, \$585. Soil, sandy loam. A crop of barley was raised from the same land this year.

P. K. Wood, Clearwater—Pea-nuts, 3 acres produced 5000 pounds; sold for \$250; cost of production, \$40; net profit, \$210. Soil, light sandy; not irrigated. Planted too deep, and got about one-third crop.

Oliver E. Roberts (Terrace Farm, Cahuenga Valley)—3 acres tomatoes; sold product for \$461.75. Soil, foot-hill; not irrigated; second crop, watermelons. One-half acre green peppers; sold product for \$54.30. 1-1/2 acres of green peas; sold product for \$220. 17 fig-trees; first crop sold for \$40. Total product of 54 acres, \$776.05.

Jacob Miller, Cahuenga—Green peas, 10 acres; 43,615 pounds; sales, \$3052; cost of production and marketing, \$500; profit, \$2552. Soil, foot-hill; not irrigated. Second crop, melons. [Pg 217]

W. W. Bliss, Duarte—Honey, 215 stands; 15,000 pounds; sales, \$785. Mountain district. Bees worth \$1 to \$3 per stand.

James Stewart, Downey—Figs, 3 acres; 20 tons, at \$50, \$1000. Not irrigated; 26 inches rain; 1 acre of trees 16 years old, 2 acres 5 years. Figs sold on trees.

The mineral wealth of Southern California is not yet appreciated. Among the rare minerals which promise much is a very large deposit of tin in the Temescal Cañon, below South Riverside. It is in the hands of an English company. It is estimated that there are 23 square miles rich in tin ore, and it is said that the average yield of tin is 20-1/4 per cent.

MY WINTER ON THE NILE

By Charles Dudley Warner

Eighteenth Edition

Boston: Houghton, Mifflin and Company

1876

THE WOODEN MAN.
[6,000 YEARS OLD]

MY

WINTER ON THE NILE.

BY

CHARLES DUDLEY WARNER,
AUTHOR OF "IN THE LEVANT," ETC.

EIGHTEENTH EDITION.

BOSTON:
HOUGHTON, MIFFLIN AND COMPANY.
The Riverside Press, Cambridge.
1895

TO
MR. A. C. DUNHAM,
AND THE
VOYAGERS ON THE DAHABEËH "RIP VAN WINKLE,"
THIS
IMPERFECT RECORD OF THEIR EXPERIENCE IS
DEDICATED.

O Commander of the Faithful. Egypt is a compound of black earth and green plants, between a pulverized mountain and a red sand. Along the valley descends a river, on which the blessing of the Most High reposes both in the evening and the morning, and which rises and falls with the revolutions of the sun and moon. According to the vicissitudes of the seasons, the face of the country is adorned with a silver wave, a verdant emerald, and the deep yellow of a golden harvest.

From Amrou, Conqueror of Egypt, to the Khalif Omar.

PREFATORY NOTE.

“My Winter on the Nile,” and its sequel, “In the Levant,” which record the experiences and observations of an Oriental journey, were both published in 1876; but as this volume was issued only by subscription, it has never reached the large public which is served by the general book trade.

It is now republished and placed within the reach of those who have read “In the Levant.” Advantage has

been taken of its reissue to give it a careful revision, which, however, has not essentially changed it. Since it was written the Khedive of so many ambitious projects has given way to his son, Tufik Pasha; but I have let stand what was written of Ismail Pasha for whatever historical value it may possess. In other respects, what was written of the country and the mass of the people in 1876 is true now. The interest of Americans in the land of the oldest civilization has greatly increased within the past few years, and literature relating to the Orient is in more demand than at any previous time.

The brief and incidental allusion in the first chapter to the peculiarity in the construction of the oldest temple at Pæstum—a peculiarity here for the first time, so far as I can find, described in print—is worthy the attention of archaeologists. The use of curved lines in this so-called Temple of Neptune is more marked than in the Parthenon, and is the secret of its fascination. The relation of this secret to the irregularities of such mediæval buildings as the Duomo at Pisa is obvious.

Hartford, October, 1880.

C. D. W.

CHAPT. I.—AT THE GATES OF THE EAST.

The Mediterranean—The East unlike the West—A World risked for a Woman—An Unchanging World and a Pickle Sea—Still an Orient—Old Fashions—A Journey without Reasons—Off for the Orient—Leaving Naples—A Shaky Court—A Deserted District—Ruins of Pæstum—Temple of Neptune—Entrance to Purgatory—Safety Valves of the World—Enterprising Natives—Sunset on the Sea—Sicily—Crete—Our Passengers—The Hottest place on Record—An American Tourist—An Evangelical Dentist—On a Secret Mission—The Vanquished Dignitary

CHAPT. II.—WITHIN THE PORTALS.

Africa—Alexandria—Strange Contrasts—A New World—Nature—First View of the Orient—Hotel Europe—Mixed Nationalities—The First Backsheesh—Street Scenes in Alexandria—Familiar Pictures Idealized—Cemetery Day—A Novel Turn Out—A Moslem Cemetery—New Terrors for Death—Pompey's Pillar—Our First Camel—Along the Canal—Departed Glory—A set of Fine Fellows—Our Handsome Dragomen—Bazaars—Universal Good Humor—A Continuous Holiday—Private life in Egypt—Invisible Blackness—The Land of Color and the Sun—A Casino

CHAPT. III.—EGYPT OF TO-DAY.

Railways—Our Valiant Dragomen—A Hand-to-Hand Struggle—Alexandria to Cairo—Artificial Irrigation—An Arab Village—The Nile—Egyptian Festivals—Pyramids of Geezeh—Cairo—Natural Queries.

CHAPT. IV.—CAIRO.

A Rhapsody—At Shepherd's—Hotel life, Egyptian plan—English Noblemen—Life in the Streets—The Valuable Donkey and his Driver—The "swell tiling" in Cairo—A hint for Central Park—Eunuchs—"Yankee Doodles" of Cairo—A Representative Arab—Selecting Dragomen—The Great Business of Egypt—An Egyptian Market-Place—A Substitute for Clothes—Dahabeëhs of the Nile—A Protracted Negotiation—Egyptian wiles

CHAPT. V.—ON THE BAZAAR.

Sight Seeing in Cairo—An Eastern Bazaar—Courteous Merchants—The Honored Beggar—Charity to be Rewarded—A Moslem Funeral—The Gold Bazaar—Shopping for a Necklace—Conducting a Bride Home—A Partnership matter—Early Marriages and Decay—Longings for Youth

CHAPT. VI.—MOSQUES AND TOMBS.

The Sirocco—The Desert—The Citadel of Cairo—Scene of the Massacre of the Memlooks—The World's Verdict—The Mosque of Mohammed Ali—Tomb of the Memlook Sultans—Life out of Death

CHAPT. VII.—MOSLEM WORSHIP—THE CALL TO PRATER.

An Enjoyable City—Definition of Conscience—"Prayer is better than Sleep"—Call of the Muezzin—Moslems at Prayer—Interior of a Mosque—Oriental Architecture—The Slipper Fitters—Devotional Washing—An Inman's Supplications

CHAPT. VIII.—THE PYRAMIDS.

Ancient Sepulchres—Grave Robbers—The Poor Old Mummy—The Oldest Monument in the World—First View of the Pyramids—The resident Bedaween—Ascending the Steps—Patent Elevators—A View from the Top—The Guide's Opinions—Origin of "Murray's Guide Book"—Speculations on the Pyramids—The Interior—Absolute Night—A Taste of Death—The Sphinx—Domestic Life in a Tomb—Souvenirs of Ancient Egypt—Baksheesh!

CHAPT. IX.—PREPARATIONS FOR A VOYAGE.

A Weighty Question—The Seasons Bewitched—Poetic Dreams Realized—Egyptian Music—Public Garden—A Wonderful Rock—Its Patrons—The Playing Band—Native Love Songs—The Howling Derweeshes—An Exciting Performance—The Shakers put to Shame—Descendants of the Prophet—An Ancient Saracenic Home—The Land of the Elea and the Copt—Historical Curiosities—Preparing for our Journey—Laying in of Medicines and Rockets—A Determination to be Liberal—Official life in Egypt—An Interview with the Bey—Paying for our Rockets—A Walking Treasury—Waiting for Wind

CHAPT. X.—ON THE NILE.

On Board the "Rip Van Winkle"—A Farewell Dinner—The Three Months Voyage Commenced—On the Nile—Our Pennant's Device—Our Dahabeëh—Its Officers and Crew—Types of Egyptian Races—The Kingdom of the "Stick"—The false Pyramid of Maydoon—A Night on the River—Curious Crafts—Boat Races on the Nile—Native Villages—Songs of the Sailors—Incidents of the Day—The Copts—The Patriarch—The Monks of Gebel é Tayr—Disappointment all Round—A Royal Luxury—The Banks of the Nile—Gum Arabic—Unfair Reports of us—Speed of our Dahabeëh—Egyptian Bread—Hasheesh—Smoking—Egyptian Robbers—Sitting in Darkness—Agriculture—Gathering of Taxes—Successful Voyaging

CHAPT. XI.—PEOPLE ON THE RIVER BANK.

Sunday on the Nile—A Calm—A Land of Tombs—A New Divinity—Burial of a Child—A Sunday Companion on Shore—A Philosophical People—No Sunday Clothes—The Aristocratic Bedaween—The Sheykh—Rare Specimens for the Centennial—Tracts Needed—Woman's Rights—Pigeons and Cranes—Balmy Winter Nights—Tracking—Copying Nature in Dress—Resort of Crocodiles—A Hermit's Cave—Waiting for Nothing—Crocodile Mummies—The Boatmen's Song—Furling Sails—Life Again—Pictures on the Nile.

CHAPT. XII.—SPENDING CHRISTMAS ON THE NILE.

Independence in Spelling—Asioot—Christmas Day—The American Consul—A Visit to the Pasha—Conversing by an Interpreter—The Ghawazees at Home—Ancient Sculpture—Bird's Eye View of the Nile—Our Christmas Dinner—Our Visitor—Grand Reception—The Fire Works—Christmas Eve on the Nile

CHAPT. XIII.—SIGHTS AND SCENES ON THE RIVER.

Ancient and Modern Ruins—"We Pay Toll—Cold Weather—Night Sailing—Farshoot—A Visit from the Bey—The Market-Place—The Sakiyas or Water Wheels—The Nile is Egypt

CHAPT. XIV.—MIDWINTER IN EGYPT.

Midwinter in Egypt—Slaves of Time—Where the Water Jars are Made—Coming to Anchor and how it was Done—New Years—"Smits" Copper Popularity—Great Strength of the Women—Conscripts for the Army—Conscription a Good Thing—On the Threshold of Thebes

CHAPT. XV.—AMONG THE RUINS OF THEBES.

Situation of the City—Ruins—Questions—Luxor—Ivarnak—Glorification of the Pharaohs—Sculptures in Stone—The Twin Colossi—Four Hundred Miles in Sixteen Days

CHAPT. XVI.—HISTORY IN STONE.

A Dry City—A Strange Circumstance—A Pleasant Residence—Life on the Dahabeëh—Illustrious Visitors—Nose-Rings and Beauty—Little Fatimeh—A Mummy Hand and Thoughts upon it—Plunder of the Tombs—Exploits of the Great Sesostris—Gigantic Statues and their Object—Skill of Ancient Artists—Criticisms—Christian Churches and Pagan Temples—Society—A Peep into an Ancient Harem—Statue of Meiùn—Mysteries—Pictures of Heroic Girls—Women in History

CHAPT. XVII.—KARNAK.

An Egyptian Carriage—Wonderful Ruins—The Great Hall of Sethi—The Largest Obelisk in The World—A City of Temples and Palaces

CHAPT. XVIII.—ASCENDING THE RIVER.

Ascending the River—An Exciting Boat Race—Inside a Sugar Factory—Setting Fire to a Town—Who Stole the Rockets?—Striking Contrasts—A Jail—The Kodi or Judge—What we saw at Assouan—A Gale—Ruins of Kom Ombos—Mysterious Movement—Land of Eternal Leisure

CHAPT. XIX.—PASSING THE CATARACT OF THE NILE.

Passing the Cataract of the Nile—Nubian Hills in Sight—Island of Elephantine—Ownership of the Cataract—Difficulties of the Ascent—Negotiations for a Passage—Items about Assouan—Off for the Cataracts—Our Cataract Crew—First Impressions of the Cataract—In the Stream—Excitement—Audacious Swimmers—Close Steering—A Comical Orchestra—The Final Struggle—Victory—Above the Rapids—The Temple of Isis—Ancient Kings and Modern Conquerors

CHAPT. XX.—ON THE BORDERS OF THE DESERT.

Ethiopia—Relatives of the Ethiopians—Negro Land—Ancestry of the Negro—Conversion Made Easy—A Land of Negative Blessings—Cool air from the Desert—Abd-el-Atti's Opinions—A Land of Comfort—Nubian Costumes—Turning the Tables—The Great Desert—Sin, Grease and Taxes

CHAPT. XXI.—ETHIOPIA.

Primitive Attire—The Snake Charmer—A House full of Snakes—A Writ of Ejectments—Natives—The Tomb of Mohammed—Disasters—A Dandy Pilate—Nubian Beauty—Opening a Baby's Eyes—A Nubian Pigville

CHAPT. XXII.—LIFE IN THE TROPICS—WADY HALFA.

Life in the Tropics—Wady Haifa—Capital of Nubia—The Centre of Fashion—The Southern Cross—Castor Oil Plantations—Justice to a Thief—Abd-el-Atti's Court—Mourning for the Dead—Extreme of our Journey—A Comical Celebration—The March of Civilization.

CHAPT. XXIII.—APPROACHING THE SECOND CATARACT.

Two Ways to See It—Pleasures of Canal Riding—Bird's Eye View of the Cataracts—Signs of Wealth—Wady Haifa—A Nubian Belle—Classic Beauty—A Greek Bride—Interviewing a Crocodile—Joking with a Widow—A Model Village

CHAPT. XXIV.—GIANTS IN STONE.

The Colossi of Aboo Simbel, the largest in the World—Bombast—Exploits of Remeses II.—A Mysterious Temple—Feting Ancient Deities—Guardians of the Nile—The Excavated Rock—The Temple—A Row of Sacred Monkeys—Our Last View of The Giants

CHAPT. XXV.—FLITTING THROUGH NUBIA.

Learning the Language—Models of Beauty—Cutting up a Crocodile—Egyptian Loafers—A Modern David—A Present—Our Menagerie—The Chameleon—Woman's Rights—False Prophets—Incidents—The School Master at Home—Confusion—Too Much Conversion—Charity—Wonderful Birds at Mecca

CHAPT. XXVI.—MYSTERIOUS PHILÆ.

Leave "well enough" Alone—The Myth of Osiris—The Heights of Biggeh—Cleopatra's Favorite Spot—A Legend—Mr. Fiddle—Dreamland—Waiting for a Prince—An Inland Excursion—Quarries—Adieu

CHAPT. XXVII.—RETURNING

Downward Run—Kidnapping a Sheykh—Blessed with Relatives—Making the Chute—Artless Children—A Model of Integrity—Justice—An Accident—Leaving Nubia—A Perfect Shame

CHAPT. XXVIII.—MODERN FACTS AND ANCIENT MEMORIES.

The Mysterious Pebble—Ancient Quarries—Prodigies of Labor—Humor in Stone—A Simoon—Famous Grottoes—Naughty Attractions—Bogus Relics—Antiquity Smith

CHAPT. XXIX.—THE FUTURE OF THE MUMMY'S SOUL.

Ancient Egyptian Literature—Mummies—A Visit to the Tombs—Disturbing the Dead—The Funeral Ritual—Unpleasant Explorations A Mummy in Pledge—A Desolate Way—Buried Secrets—Building for Eternity—Before the Judgment Seat—Weighed in the Balance The Habitation of the Dead—Illuminated—Accommodations for the Mummy—The Pharaoh of the Exodus—A Baby Charon—Bats

CHAPT. XXX.—FAREWELL TO THEBES.

Social Festivities—An Oriental Dinner—Dancing Girls—Honored by the Sultan—The Native Consul—Finger Feeding—A Dance—Ancient Style of Dancing—The Poetry of Night—Karnak by Moonlight—Amusements at Luxor—Farewell to Thebes

CHAPT. XXXI.—LOITERING BY THE WAY.

“Very Grammatick”—The Lying in Temple—A Holy Man—Scarecrows—Asinine Performers—Antiquity—Old Masters—Profit and Loss—Hopeless “Fellahs”—Lion’s Oil—A Bad Reputation—An Egyptian Mozart

CHAPT. XXXII.—JOTTINGS.

Mission School—Education of Women—Contrasts—A Mirage—Tracks of Successive Ages—Bathers—Tombs of the Sacred Bulls—Religion and Grammar—Route to Darfoor—Winter Residence of the Holy Family—Grottoes—Mistaken Views—Dust and Ashes—Osman Bey—A Midsummer’s Night Dream—Ruins of Memphis—Departed Glory—A Second Visit to the Pyramids of Geezeh—An Artificial Mother

CHAPT. XXXIII.—THE KHEDIVE.

Al Gezereh—Aboo Yusef the Owner—Cairo Again—A Question—The Khedive—Solomon and the Viceroy—The Khedive’s Family Expenses—Another Joseph—Personal Government—Docks of Cairo—Raising Mud—Popular Superstitions—Leave Taking

CHAPT. XXXIV.—THE WOODEN MAN.

Visiting a Harem—A Reception—The Khedive at Home—Ladies of the Harem—Wife of Tufik Pasha—The Mummy—The Wooden Man Discoveries of Mariette Bey—Egypt and Greece Compared—Learned Opinions

CHAPT. XXXV.—ON THE WAY HOME.

Leaving our Dahabeeh—The Baths in Cairo—Curious Mode of Execution—The Guzeereh Palace—Empress Eugenia’s Sleeping Room—Medallion of Benjamin Franklin in Egypt—Heliopolis—The Bedaween Bride—Holy Places—The Resting Place of the Virgin Mary—Fashionable Drives—The Shoobra Palace—Forbidden Books—A Glimpse of a Bevy of Ladies—Uncomfortable Guardians.

CHAPT. XXXVI.—BY THE RED SEA.

Following the Track of the Children of Israel—Routes to Suez—Temples—Where was the Red Sea Crossed?—In sight of the Bitter Lakes—Approaching the Red Sea—Faith—The Suez Canal—The Wells of Moses—A Sentimental Pilgrimage—Price of one of the Wells—Miriam of Marah—Water of the Wells—Returning to Suez—A Caravan of Bedaweens—Lunch Baskets searched by Custom Officers—The Commerce of the East

CHAPT. XXXVII.—EASTWARD HO.

Leaving Suez—Ismailia—The Lotus—A Miracle—Egyptian Steamer—Information Sought—The Great Highway—Port Said—Abd-el-Atti again—Great Honors Lost—Farewell to Egypt

CHAPTER I.—AT THE GATES OF THE EAST.

T

HE Mediterranean still divides the East from the West. Ages of traffic and intercourse across its waters have not changed this fact; neither the going of armies nor of embassies, Northmen forays nor Saracenic maraudings, Christian crusades nor Turkish invasions, neither the borrowing from Egypt of its philosophy and science, nor the stealing of its precious monuments of antiquity, down to its bones, not all the love-making, slave-trading, war-waging, not all the commerce of four thousand years, by oar and sail and steam, have sufficed to make the East like the West.

Half the world was lost at Actium, they like to say, for the sake of a woman; but it was the half that I am convinced we never shall gain—for though the Romans did win it they did not keep it long, and they made no impression on it that is not, compared with its own individuality, as stucco to granite. And I suppose there is not now and never will be another woman in the East handsome enough to risk a world for.

There, across the most fascinating and fickle sea in the world—a feminine sea, inconstant as lovely, all sunshine and tears in a moment, reflecting in its quick mirror in rapid succession the skies of grey and of blue, the weather of Europe and of Africa, a sea of romance and nausea—lies a world in Everything unlike our own, a world perfectly known yet never familiar and never otherwise than strange to the European and American. I had supposed it otherwise; I had been led to think that modern civilization had more or less transformed the East to its own likeness; that, for instance the railway up the Nile had practically “done for” that historic stream. They say that if you run a red-hot nail through an orange, the fruit will keep its freshness and remain unchanged a long time. The thrusting of the iron into Egypt may arrest decay, but it does not appear to change the country.

There is still an Orient, and I believe there would be if it were all canaled, and railwayed, and converted; for I have great faith in habits that have withstood the influence of six or seven thousand years of changing dynasties and religions. Would you like to go a little way with me into this Orient?

The old-fashioned travelers had a formal fashion of setting before the reader the reasons that induced them to take the journey they described; and they not unfrequently made poor health an apology for their wanderings, judging that that excuse would be most readily accepted for their eccentric conduct. “Worn out in body and mind we set sail,” etc.; and the reader was invited to launch in a sort of funereal bark upon the Mediterranean and accompany an invalid in search of his last resting-place.

There was in fact no reason why we should go to Egypt—a remark that the reader will notice is made before he has a chance to make it—and there is no reason why any one indisposed to do so should accompany us. If information is desired, there are whole libraries of excellent books about the land of the Pharaohs, ancient and modern, historical, archaeological, statistical, theoretical, geographical; if amusement is wanted, there are also excellent books, facetious and sentimental. I suppose that volumes enough have been written about Egypt to cover every foot of its arable soil if they were spread out, or to dam the Nile if they were dumped into it, and to cause a drought in either case if they were not all interesting and the reverse of dry. There is therefore no *onus* upon the traveler in the East to-day to write otherwise than suits his humor; he may describe only what he chooses. With this distinct understanding I should like the reader to go with me through a winter in the Orient. Let us say that we go to escape winter.

It is the last of November, 1874—the beginning of what proved to be the bitterest winter ever known in America and Europe, and I doubt not it was the first nip of the return of the rotary glacial period—that we go on board a little Italian steamer in the harbor of Naples, reaching it in a row-boat and in a cold rain. The deck is wet and dismal; Vesuvius is invisible, and the whole sweep of the bay is hid by a slanting mist. Italy has been in a shiver for a month; snow on the Alban hills and in the Tusculan theatre; Rome was as chilly as a stone tomb with the door left open. Naples is little better; Boston, at any season, is better than Naples—now.

We steam slowly down the harbor amid dripping ships, losing all sight of villages and the lovely coast; only Capri comes out comely in the haze, an island cut like an antique cameo. Long after dark we see the light on it and also that of the Punta della Campanella opposite, friendly beams following us down the coast. We are off Pæstum, and I can feel that its noble temple is looming there in the darkness. This ruin is in some sort a door into, an introduction to, the East.

Pæstum has been a deadly marsh for eighteen hundred years, and deserted for almost a thousand. Nettles and unsightly brambles have taken the place of the “roses of Pæstum” of which the Roman poets sang; but still as a poetic memory, the cyclamen trails among the *debris* of the old city; and the other day I found violets waiting for a propitious season to bloom. The sea has retired away from the site of the town and broadened the marsh in front of it. There are at Pæstum three Greek temples, called, no one can tell why, the Temple of Neptune, the Basilica, and the Temple of Ceres; remains of the old town wall and some towers; a tumbledown house or two, and a wretched tavern. The whole coast is subject to tremors of the earth, and the few inhabitants hanging about there appear to have had all their bones shaken out of them by the fever and ague.

We went down one raw November morning from Naples, driving from a station on the Calabrian railway, called Battipaglia, about twelve miles over a black marshy plain, relieved only by the bold mountains, on the right and left. This plain is gradually getting reclaimed and cultivated; there is raised on it inferior cotton and some of the vile tobacco which the government monopoly compels the free Italians to smoke, and large olive-orchards have been recently set out. The soil is rich and the country can probably be made habitable again. Now, the few houses are wretched and the few people squalid. Women were pounding stone on the road we traveled, even young girls among them wielding the heavy hammers, and all of them very thinly clad, their one sleazy skirt giving little protection against the keen air. Of course the women were hard-featured and coarse-handed; and both they and the men have the swarthy complexion that may betoken a more Eastern origin. We fancied that they had a brigandish look. Until recently this plain has been a favorite field for brigands, who spied the rich traveler from the height of St. Angelo and pounced upon him if he was unguarded. Now, soldiers are quartered along the road, patrol the country on horseback, and lounge about the ruins at Pæstum. Perhaps they retire to some height for the night, for the district is too unhealthy for an Italian even, whose health may be of no consequence. They say that if even an Englishman, who goes merely

to shoot woodcock, sleeps there one night, in the right season, that night will be his last.

We saw the ruins of Pæstum under a cold grey sky, which harmonized with their isolation. We saw them best from the side of the sea, with the snow-sprinkled mountains rising behind for a background. Then they stood out, impressive, majestic, time-defying. In all Europe there are no ruins better worthy the study of the admirer of noble architecture than these.

The Temple of Neptune is older than the Parthenon, its Doric sister, at Athens. It was probably built before the Persians of Xerxes occupied the Acropolis and saw from there the flight of their ruined fleet out of the Strait of Salamis. It was built when the Doric had attained the acme of its severe majesty, and it is to-day almost perfect on the exterior. Its material is a coarse travertine which time and the weather have honeycombed, showing the petrifications of plants and shells; but of its thirty-six massive exterior columns not one has fallen, though those on the north side are so worn by age that the once deep fluting is nearly obliterated. You may care to know that these columns which are thirty feet high and seven and a half feet in diameter at the base, taper symmetrically to the capitals, which are the severest Doric.

At first we thought the temple small, and did not even realize its two hundred feet of length, but the longer we looked at it the larger it grew to the eye, until it seemed to expand into gigantic size; and from whatever point it was viewed its harmonious proportions were an increasing delight. The beauty is not in any ornament, for even the pediment is and always was vacant, but in its admirable lines.

The two other temples are fine specimens of Greek architecture, also Doric, pure and without fault, with only a little tendency to depart from severe simplicity in the curve of the capitals, and yet they did not interest us. They are of a period only a little later than the Temple of Neptune, and that model was before their builders, yet they missed the extraordinary, many say almost spiritual beauty of that edifice. We sought the reason, and found it in the fact that there are absolutely no straight lines in the Temple of Neptune. The side rows of columns curve a little out; the end rows curve a little in; at the ends the base line of the columns curves a trifle from the sides to the center, and the line of the architrave does the same. This may bewilder the eye and mislead the judgment as to size and distance, but the effect is more agreeable than almost any other I know in architecture. It is not repeated in the other temples, the builders of which do not seem to have known its secret. Had the Greek colony lost the art of this perfect harmony, in the little time that probably intervened between the erection of these edifices? It was still kept at Athens, as the Temple of Theseus and the Parthenon testify.

Looking from the interior of the temple out at either end, the entrance seems to be wider at the top than at the bottom, an Egyptian effect produced by the setting of the inward and outer columns. This appeared to us like a door through which we looked into Egypt, that mother of all arts and of most of the devices of this now confused world. We were on our way to see the first columns, prototypes of the Doric order, chiselled by man.

The custodian—there is one, now that twenty centuries of war and rapine and storms have wreaked themselves upon this temple—would not permit us to take our luncheon into its guarded precincts; on a fragment of the old steps, amid the weeds we drank our red Capri wine; not the usual compound manufactured at Naples, but the last bottle of pure Capri to be found on the island, so help the soul of the landlady at the hotel there; ate one of those imperfectly nourished Italian chicken's orphan birds, owning the pitiful legs with which the *table d'hote* frequenters in Italy are so familiar, and blessed the government for the care, tardy as it is, of its grandest monument of antiquity.

When I looked out of the port-hole of the steamer early in the morning, we were near the volcanic Lipari islands and islets, a group of seventeen altogether; which serve as chimneys and safety-valves to this part of the world. One of the small ones is of recent creation, at least it was heaved up about two thousand years ago, and I fancy that a new one may pop up here any time. From the time of the Trojan war all sorts of races and adventurers have fought for the possession of these coveted islands, and the impartial earthquake has shaken them all off in turn. But for the mist, we should have clearly seen Stromboli, the ever-active volcano, but now we can only say we saw it. We are near it, however, and catch its outline, and listen for the groans of lost souls which the credulous crusaders used to hear issuing from its depths. It was at that time the entrance of purgatory; we read in the guide-book that the crusaders implored the monks of Cluny to intercede for the deliverance of those confined there, and that therefore Odilo of Cluny instituted the observance of All Souls' Day.

The climate of Europe still attends us, and our first view of Sicily is through the rain. Clouds hide the coast and obscure the base of Ætna (which is oddly celebrated in America as an assurance against loss by fire); but its wide fields of snow, banked up high above the clouds, gleam as molten silver—treasure laid up in heaven—and give us the light of the rosy morning.

Rounding the point of Faro, the *locale* of Charybdis and Scylla, we come into the harbor of Messina and take shelter behind the long, curved horn of its mole. Whoever shunned the beautiful Scylla was liable to be sucked into the strong tide Charybdis; but the rock has lost its terror for moderns, and the current is no longer dangerous. We get our last dash of rain in this strait, and there is sunny weather and blue sky at the south. The situation of Messina is picturesque; the shores both of Calabria and Sicily are mountainous, precipitous and very rocky; there seems to be no place for vegetation except by terracing. The town is backed by lofty circling mountains, which form a dark setting for its white houses and the string of outlying villages. Mediaeval forts cling to the slopes above it.

No sooner is the anchor down than a fleet of boats surrounds the steamer, and a crowd of noisy men and boys swarms on board, to sell us muscles, oranges, and all sorts of merchandise, from a hair-brush to an under-wrapper. The Sunday is hopelessly broken into fragments in a minute. These lively traders use the English language and its pronouns with great freedom. The boot-black smilingly asks: "You black my boot?"

The vender of under-garments says: "I gif you four franc for dis one. I gif you for dese two a seven franc. No? What you gif?"

A bright orange-boy, we ask, "How much a dozen?"

"Half franc."

"Too much."

"How much you give? Tast him; he ver good; a sweet orange; you no like, you no buy. Yes, sir. Tak one. This a one, he sweet no more."

And they were sweet no more. They must have been lemons in oranges' clothing. The flattering tongue of that boy and our greed of tropical color made us owners of a lot of them, most of which went overboard before we reached Alexandria, and would make fair lemonade of the streak of water we passed through.

At noon we sail away into the warm south. We have before us the beautiful range of Aspromonte, and the village of Reggio bear which in 1862 Garibaldi received one of his wounds, a sort of inconvenient love-pat of fame. The coast is rugged and steep. High up is an isolated Gothic rock, pinnacled and jagged. Close by the shore we can trace the railway track which winds round the point of Italy, and some of the passengers look at it longingly; for though there is clear sky overhead, the sea has on an ungenerous swell; and what is blue sky to a stomach that knows its own bitterness and feels the world sinking away from under it?

We are long in sight of Italy, but Sicily still sulks in the clouds and Mount Ætna will not show itself. The night is bright and the weather has become milder; it is the prelude to a day calm and uninteresting. Nature rallies at night, however, and gives us a sunset in a pale gold sky with cloud-islands on the horizon and palm-groves on them. The stars come out in extraordinary profusion and a soft brilliancy unknown in New England, and the sky is of a tender blue—something delicate and not to be enlarged upon. A sunset is something that no one will accept second-hand.

On the morning of December 1st., we are off Crete; Greece we have left to the north, and are going at ten knots an hour towards great hulking Africa. We sail close to the island and see its long, high barren coast till late in the afternoon. There is no road visible on this side, nor any sign of human habitation, except a couple of shanties perched high up among the rocks. From this point of view, Crete is a mass of naked rock lifted out of the waves. Mount Ida crowns it, snow-capped and gigantic. Just below Crete spring up in our geography the little islands of Gozo and Antigozo, merely vast rocks, with scant patches of low vegetation on the cliffs, a sort of vegetable blush, a few stunted trees on the top of the first, and an appearance of grass which has a reddish color.

The weather is more and more delightful, a balmy atmosphere brooding on a smooth sea. The chill which we carried in our bones from New York to Naples finally melts away. Life ceases to be a mere struggle, and becomes a mild enjoyment. The blue tint of the sky is beyond all previous comparison delicate, like the shade of a silk, fading at the horizon into an exquisite grey or nearly white. We are on deck all day and till late at night, for once enjoying, by the help of an awning, real winter weather with the thermometer at seventy-two degrees.

Our passengers are not many, but selected. There are a German baron and his sparkling wife, delightful people, who handle the English language as delicately as if it were glass, and make of it the most *naïve* and interesting form of speech. They are going to Cairo for the winter, and the young baroness has the longing and curiosity regarding the land of the sun, which is peculiar to the poetical Germans; she has never seen a black man nor a palm-tree. In charge of the captain, there is an Italian woman, whose husband lives in Alexandria, who monopolizes the whole of the ladies' cabin, by a league with the slatternly stewardess, and behaves in a manner to make a state of war and wrath between her and the rest of the passengers. There is nothing bitterer than the hatred of people for each other on shipboard. When I afterwards saw this woman in the streets of Alexandria I had scarcely any wish to shorten her stay upon this earth. There are also two tough-fibered and strong-brained dissenting ministers from Australia, who have come round by the Sandwich Islands and the United States, and are booked for Palestine, the Suez Canal and the Red Sea. Speaking of Aden, which has the reputation of being as hot as Constantinople is wicked, one of them tells the story of an American (the English have a habit of fastening all their dubious anecdotes upon "an American") who said that if he owned two places, one in Aden and the other in H—, he would sell the one in Aden. These ministers are distinguished lecturers at home—a solemn thought, that even the most distant land is subjected to the blessing of the popular lecture.

Our own country is well represented, as it usually is abroad, whether by appointment or self-selection. It is said that the oddest people in the world go up the Nile and make the pilgrimage of Palestine. I have even heard that one must be a little cracked who will give a whole winter to high Egypt; but this is doubtless said by those who cannot afford to go. Notwithstanding the peculiarities of so many of those one meets drifting around the East (as eccentric as the English who frequent Italian *pensions*) it must be admitted that a great many estimable and apparently sane people go up the Nile—and that such are even found among Cook's "personally conducted."

There is on board an American, or a sort of Irish-American more or less naturalized, from Nebraska, a raw-boned, hard-featured farmer, abroad for a two-years' tour; a man who has no guide-book or literature, except the Bible which he diligently reads. He has spent twenty or thirty years in acquiring and subduing land in the new country, and without any time or taste for reading, there has come with his possessions a desire to see that old world about which he cared nothing before he breathed the vitalizing air of the West. That he knew absolutely nothing of Europe, Asia, or Africa, except the little patch called Palestine, and found a day in Rome too much for a place so run down, was actually none of our business. He was a good patriotic American, and the only wonder was that with his qualification he had not been made consul somewhere.

But a more interesting person, in his way, was a slender, no-blooded, youngish, married man, of the vegetarian and vegetable school, also alone, and bound for the Holy Land, who was sick of the sea and otherwise. He also was without books of travel, and knew nothing of what he was going to see or how to see it. Of what Egypt was he had the dimmest notion, and why we or he or anyone else should go there. What do you go up the Nile for? we asked. The reply was that the Spirit had called him to go through Egypt to Palestine. He had been a dentist, but now he called himself an evangelist. I made the mistake of supposing that he was one of those persons who have a call to go about and convince people that religion is one part milk (skimmed) and three parts water—harmless, however, unless you see too much of them. Twice is too much. But I gauged him inadequately. He is one of those few who comprehend the future, and, guided wholly by the Spirit and not by any scripture or tradition, his mission is to prepare the world for its impending change. He is *en rapport* with the vast uneasiness, which I do not know how to name, that pervades all lands.

He had felt our war in advance. He now feels a great change in the air; he is illuminated by an inner light that makes him clairvoyant. America is riper than it knows for this change. I tried to have him definitely define it, so that I could write home to my friends and the newspapers and the insurance companies; but I could only get a vague notion that there was about to be an end of armies and navies and police, of all forms of religion, of government, of property, and that universal brotherhood is to set in.

The evangelist had come aboard on an important and rather secret mission; to observe the progress of things in Europe; and to publish his observations in a book. Spiritualized as he was, he had no need of any language except the American; he felt the political and religious atmosphere of all the cities he visited without speaking to any one. When he entered a picture gallery, although he knew nothing of pictures, he saw more than any one else. I suppose he saw more than Mr. Ruskin sees. He told me, among other valuable information, that he found Europe not so well prepared for the great movement as America, but that I would be surprised at the number who were in sympathy with it, especially those in high places in society and in government. The Roman Catholic Church was going to pieces; not that he cared any more for this than for the Presbyterian—he, personally, took what was good in any church, but he had got beyond them all; he was now only working for the establishment of the truth, and it was because he had more of the truth than others that he could see further.

He expected that America would be surprised when he published his observations. "I can give you a little idea," he said, "of how things are working." This talk was late at night, and by the dim cabin lamp. "When I was in Rome, I went to see the head-man of the Pope. I talked with him over an hour, and I found that he knew all about it!"

"Good gracious! You don't say so!"

"Yes, sir. And he is in full sympathy. But he dare not say anything. He knows that his church is on its last legs. I told him that I did not care to see the Pope, but if he wanted to meet me, and discuss the infallibility question, I was ready for him."

"What did the Pope's head-man say to that?"

"He said that he would see the Pope, and see if he could arrange an interview; and would let me know. I waited a week in Rome, but no notice came. I tell you the Pope don't dare discuss it."

"Then he didn't see you?"

"No, sir. But I wrote him a letter from Naples."

"Perhaps he won't answer it."

"Well, if he doesn't, that is a confession that he can't. He leaves the field. That will satisfy me."

I said I thought he would be satisfied.

The Mediterranean enlarges on acquaintance. On the fourth day we are still without sight of Africa, though the industrious screw brings us nearer every moment. We talk of Carthage, and think we can see the color of the Libyan sand in the yellow clouds at night. It is two o'clock on the morning of December the third, when we make the Pharos of Alexandria, and wait for a pilot.

CHAPTER II.—WITHIN THE PORTALS.

EAGERNESS to see Africa brings us on deck at dawn. The low coast is not yet visible. Africa, as we had been taught, lies in heathen darkness. It is the policy of the Egyptian government to make the harbor difficult of access to hostile men-of-war, and we, who are peacefully inclined, cannot come in till daylight, nor then without a pilot.

The day breaks beautifully, and the Pharos is set like a star in the bright streak of the East. Before we can

distinguish land, we see the so-called Pompey's Pillar and the light-house, the palms, the minarets, and the outline of the domes painted on the straw-color of the sky—a dream-like picture. The curtain draws up with Eastern leisure—the sun appears to rise more deliberately in the Orient than elsewhere; the sky grows more brilliant, there are long lines of clouds, golden and crimson, and we seem to be looking miles and miles into an enchanted country. Then ships and boats, a vast number of them, become visible in the harbor, and as the light grows stronger, the city and land lose something of their beauty, but the sky grows more softly fiery till the sun breaks through. The city lies low along the flat coast, and seems at first like a brownish white streak, with fine lines of masts, palm-trees, and minarets above it.

The excitement of the arrival in Alexandria and the novelty of everything connected with the landing can never be repeated. In one moment the Orient flashes upon the bewildered traveler; and though he may travel far and see stranger sights, and penetrate the hollow shell of Eastern mystery, he never will see again at once such a complete contrast to all his previous experience. One strange, unfamiliar form takes the place of another so rapidly that there is no time to fix an impression, and everything is so *bizarre* that the new-comer has no points of comparison. He is launched into a new world, and has no time to adjust the focus of his observation. For myself, I wished the Orient would stand off a little and stand still so that I could try to comprehend it. But it would not; a revolving kaleidoscope never presented more bewildering figures and colors to a child, than the port of Alexandria to us.

Our first sight of strange dress is that of the pilot and the crew who bring him off—they are Nubians, he is a swarthy Egyptian. "How black they are," says the Baroness; "I don't like it." As the pilot steps on deck, in his white turban, loose robe of cotton, and red slippers, he brings the East with him; we pass into the influence of the Moslem spirit. Coming into the harbor we have pointed out to us the batteries, the palace and harem of the Pasha (more curiosity is felt about a harem than about any other building, except perhaps a lunatic asylum), and the new villas along the curve of the shore. It is difficult to see any ingress, on account of the crowd of shipping.

The anchor is not down before we are surrounded by rowboats, six or eight deep on both sides, with a mob of boatmen and guides, all standing up and shouting at us in all the broken languages of three continents. They are soon up the sides and on deck, black, brown, yellow, in turbans, in tarbooshes, in robes of white, blue, brown, in brilliant waist-shawls, slippered, and bare-legged, bare-footed, half-naked, with little on except a pair of cotton drawers and a red fez, eager, big-eyed, pushing, yelping, gesticulating, seizing hold of passengers and baggage, and fighting for the possession of the traveler's goods which seem to him about to be shared among a lot of pirates. I saw a dazed traveler start to land, with some of his traveling-bags in one boat, his trunk in a second, and himself in yet a third, and a *commissionaire* at each arm attempting to drag him into two others. He evidently couldn't make up his mind, which to take.

We have decided upon our hotel, and ask for the *commissionaire* of it. He appears. In fact there are twenty or thirty of him. The first one is a tall, persuasive, nearly naked Ethiop, who declares that he is the only Simon Pure, and grasps our handbags. Instantly, a fluent, business-like Alexandrian pushes him aside—"I am the *commissionaire*"—and is about to take possession of us. But a dozen others are of like mind, and Babel begins. We rescue our property, and for ten minutes a lively and most amusing altercation goes on as to who is the representative of the hotel. They all look like pirates from the Barbary coast, instead of guardians of peaceful travelers. Quartering an orange, I stand in the center of an interesting group, engaged in the most lively discussion, pushing, howling and fiery gesticulation. The dispute is finally between two:

"I Hotel Europe!"

"I Hotel Europe; he no hotel."

"He my brother, all same me."

"He! I never see he before," with a shrug of the utmost contempt.

As soon as we select one of them, the tumult subsides, the enemies become friends and cordially join in loading our luggage. In the first five minutes of his stay in Egypt the traveler learns that he is to trust and be served by people who haven't the least idea that lying is not a perfectly legitimate means of attaining any desirable end. And he begins to lose any prejudice he may have in favor of a white complexion and of clothes. In a decent climate he sees how little clothing is needed for comfort, and how much artificial nations are accustomed to put on from false modesty.

We begin to thread our way through a maze of shipping, and hundreds of small boats and barges; the scene is gay and exciting beyond expression. The first sight of the colored, pictured, lounging, waiting Orient is enough to drive an impressionable person wild; so much that is novel and picturesque is crowded into a few minutes; so many colors and flying robes, such a display of bare legs and swarthy figures. We meet flat boats coming down the harbor loaded with laborers, dark, immobile groups in turbans and gowns, squatting on deck in the attitude which is the most characteristic of the East; no one stands or sits—everybody squats or reposes cross-legged. Soldiers are on the move; smart Turkish officers dart by in light boats with half a dozen rowers; the crew of an English man-of-war pull past; in all directions the swift boats fly, and with their freight of color, it is like the thrusting of quick shuttles, in the weaving of a brilliant carpet, before our eyes.

We step on shore at the Custom-House. I have heard travelers complain of the delay in getting through it. I feel that I want to go slowly, that I would like to be all day in getting through—that I am hurried along like a person who is dragged hastily through a gallery, past striking pictures of which he gets only glimpses. What a group this is on shore; importunate guides, porters, coolies. They seize hold of us, We want to stay and look at them. Did ever any civilized men dress so gaily, so little, or so much in the wrong place? If that fellow would untwist the folds of his gigantic turban he would have cloth enough to clothe himself perfectly. Look! that's an East Indian, that's a Greek, that's a Turk that's a Syrian-Jew? No, he's Egyptian, the crook-nose is not uncommon to Egyptians, that tall round hat is Persian, that one is from Abyss—there they go, we haven't half seen them! We leave our passports at the entrance, and are whisked through into the baggage-room, where our guide pays a noble official three francs for the pleasure of his chance acquaintance; some nearly naked coolie-porters, who bear long cords, carry off our luggage, and before we know it we are in a carriage, and a rascally guide and interpreter—Heaven knows how he fastened himself upon us in the last five minutes

—is on the box and apparently owns us? (It took us half a day and liberal backsheesh to get rid of the evil-eyed fellow) We have gone only a little distance when half a dozen of the naked coolies rush after us, running by the carriage and laying hold of it, demanding backsheesh. It appears that either the boatman has cheated them, or they think he will, or they haven't had enough. Nobody trusts anybody else, and nobody is ever satisfied with what he gets, in Egypt. These blacks, in their dirty white gowns, swinging their porter's ropes and howling like madmen, pursue us a long way and look as if they would tear us in pieces. But nothing comes of it. We drive to the Place Mehemet Ali, the European square,—having nothing Oriental about it, a square with an equestrian statue of Mehemet Ali, some trees and a fountain—surrounded by hotels, bankers' offices and Frank shops.

There is not much in Alexandria to look at except the people, and the dirty bazaars. We never before had seen so much nakedness, filth and dirt, so much poverty, and such enjoyment of it, or at least indifference to it. We were forced to strike a new scale of estimating poverty and wretchedness. People are poor in proportion as their wants are not gratified. And here are thousands who have few of the wants that we have, and perhaps less poverty. It is difficult to estimate the poverty of those fortunate children to whom the generous sun gives a warm color for clothing, who have no occupation but to sit in the same, all day, in some noisy and picturesque thoroughfare, and stretch out the hand for the few paras sufficient to buy their food, who drink at the public fountain, wash in the tank of the mosque, sleep in street-corners, and feel sure of their salvation if they know the direction of Mecca. And the Mohammedan religion seems to be a sort of soul-compass, by which the most ignorant believer can always orient himself. The best-dressed Christian may feel certain of one thing, that he is the object of the cool contempt of the most naked, ophthalmic, flea-attended, wretched Moslem he meets. The Oriental conceit is a peg above ours—it is not self-conscious.

In a fifteen minutes walk in the streets the stranger finds all the pictures that he remembers in his illustrated books of Eastern life. There is turbaned Ali Baba, seated on the hindquarters of his sorry donkey, swinging his big feet in a constant effort to urge the beast forward; there is the one-eyed calender who may have arrived last night from Bagdad; there is the water-carrier, with a cloth about his loins, staggering under a full goat-skin—the skin, legs, head, and all the members of the brute distended, so that the man seems to be carrying a drowned and water-soaked animal: there is the veiled sister of Zobeide riding a grey donkey astride, with her knees drawn up, (as all women ride in the East), entirely enveloped in a white garment which covers her head and puffs out about her like a balloon—all that can be seen of the woman are the toes of her pointed yellow slippers and two black eyes; there is the seller of sherbet, a waterish, feeble, insipid drink, clinking his glasses; and the veiled woman in black, with hungry eyes, is gliding about everywhere. The veil is in two parts, a band about the forehead, and a strip of black which hangs underneath the eyes and terminates in a point at the waist; the two parts are connected by an ornamented cylinder of brass, or silver if the wearer can afford it, two and a half inches long and an inch in diameter. This ugly cylinder between the restless eyes, gives the woman an imprisoned, frightened look. Across the street from the hotel, upon the stone coping of the public square, is squatting hour after hour in the sun, a row of these forlorn creatures in black, impassive and waiting. We are told that they are washerwomen waiting for a job. I never can remove the impression that these women are half stifled behind their veils and the shawls which they draw over the head; when they move their heads, it is like the piteous dumb movement of an uncomplaining animal.

But the impatient reader is waiting for Pompey's Pillar. We drive outside the walls, though a thronged gateway, through streets and among people wretched and picturesque to the last degree. This is the road to the large Moslem cemetery, and to-day is Thursday, the day for visiting the graves. The way is lined with coffee-shops, where men are smoking and playing at draughts; with stands and booths for the sale of fried cakes and confections; and all along, under foot, so that it is difficult not to tread on them, are private markets for the sale of dates, nuts, raisins, wheat, and doora; the bare-legged owner sits on the ground and spreads his dust-covered untempting fare on a straw mat before him. It is more wretched and forlorn outside the gate than within. We are amid heaps of rubbish, small mountains of it, perhaps the ruins of old Alexandria, perhaps only the accumulated sweepings of the city for ages, piles of dust, and broken pottery. Every Egyptian town of any size is surrounded by these—the refuse of ages of weary civilization.

What a number of old men, of blind men, ragged men—though rags are no disgrace! What a lot of scrawny old women, lean old hags, some of them without their faces covered—even the veiled ones you can see are only bags of bones. There is a derweesh, a naked holy man, seated in the dirt by the wall, reading the Koran. He has no book, but he recites the sacred text in a loud voice, swaying his body backwards and forwards. Now and then we see a shrill-voiced, handsome boy also reading the Koran with all his might, and keeping a laughing eye upon the passing world. Here comes a novel turn-out. It is a long truck-wagon drawn by one bony-horse. Upon it are a dozen women, squatting about the edges, facing each other, veiled, in black, silent, jolting along like so many bags of meal. A black imp stands in front, driving. They carry baskets of food and flowers, and are going to the cemetery to spend the day.

We pass the cemetery, for the Pillar is on a little hillock overlooking it. Nothing can be drearier than this burying-ground—unless it may be some other Moslem cemetery. It is an uneven plain of sand, without a spear of grass or a green thing. It is covered thickly with ugly stucco, oven-like tombs, the whole inconceivably shabby and dust covered; the tombs of the men have head-stones to distinguish them from the women. Yet, shabby as all the details of this crumbling cheap place of sepulture are, nothing could be gayer or more festive than the scene before us. Although the women are in the majority, there are enough men and children present, in colored turbans, fezes, and gowns, and shawls of Persian dye, to transform the graveyard into the semblance of a parterre of flowers. About hundreds of the tombs are seated in a circle groups of women, with their food before them, and the flowers laid upon the tomb, wailing and howling in the very excess of dry-eyed grief. Here and there a group has employed a "welee" or holy man, or a boy, to read the Koran for it—and these Koran-readers turn an honest para by their vocation. The women spend nearly the entire day in this sympathetic visit to their departed friends—it is a custom as old as history, and the Egyptians used to build their tombs with a visiting ante-chamber for the accommodation of the living. I should think that the knowledge that such a group of women were to eat their luncheon, wailing and roosting about one's tomb every week, would add a new terror to death.

The Pillar, which was no doubt erected by Diocletian to his own honor, after the modest fashion of Romans as well as Egyptians, is in its present surroundings not an object of enthusiasm, though it is almost a hundred feet high, and the monolith shaft was, before age affected it, a fine piece of polished Syenite. It was no doubt a few thousand years older than Diocletian, and a remnant of that oldest civilization; the base and capital he gave it are not worthy of it. Its principal use now is as a surface for the paint-brushes and chisels of distinguished travelers, who have covered it with their precious names. I cannot sufficiently admire the *naïveté* and self-depreciation of those travelers who paint and cut their names on such monuments, knowing as they must that the first sensible person who reads the same will say, "This is an ass."

We drive, still outside the walls, towards the Mahmoodééh canal, passing amid mounds of rubbish, and getting a view of the desert-like country beyond. And now heaves in sight the unchanged quintessence of Orientalism—there is our first camel, a camel in use, in his native setting and not in a menagerie. There is a line of them, loaded with building-stones, wearily shambling along. The long bended neck apes humility, but the supercilious nose in the air expresses perfect contempt for all modern life. The contrast of this haughty "stuck-up-ativeness" (it is necessary to coin this word to express the camel's ancient conceit) with the royal ugliness of the brute, is both awe-inspiring and amusing. No human royal family dare be uglier than the camel. He is a mass of bones, faded tufts, humps, lumps, splay-joints and callosities. His tail is a ridiculous wisp, and a failure as an ornament or a fly-brush. His feet are simply big sponges. For skin covering he has patches of old buffalo robes, faded and with the hair worn off. His voice is more disagreeable than his appearance. With a reputation for patience, he is snappish and vindictive. His endurance is over-rated—that is to say he dies like a sheep on an expedition of any length, if he is not well fed. His gait moves every muscle like an ague. And yet this ungainly creature carries his head in the air, and regards the world out of his great brown eyes with disdain. The Sphinx is not more placid. He reminds me, I don't know why, of a pyramid. He has a resemblance to a palm-tree. It is impossible to make an Egyptian picture without him. What a Hapsburg lip he has! Ancient, royal? The very poise of his head says plainly, "I have come out of the dim past, before history was; the deluge did not touch me; I saw Menes come and go; I helped Shoofoo build the great pyramid; I knew Egypt when it hadn't an obelisk nor a temple; I watched the slow building of the pyramid at Sakkara. Did I not transport the fathers of your race across the desert? There are three of us; the date-palm, the pyramid, and myself. Everything else is modern. Go to!"

Along the canal, where lie dahabeëhs that will by and by make their way up the Nile, are some handsome villas, palaces and gardens. This is the favorite drive and promenade. In the gardens, that are open to the public, we find a profusion of tropical trees and flowering shrubs; roses are decaying, but the blossoms of the yellow acacia scent the air; there are Egyptian lilies; the plant with crimson leaves, not native here, grows as high as the arbuton tree; the red passion-flower is in bloom, and morning-glories cover with their running vine the tall and slender cypresses. The finest tree is the sycamore, with great gnarled trunk, and down-dropping branches. Its fruit, the sycamore fig, grows directly on the branch, without stem. It is an insipid fruit, sawdust-y, but the Arabs like it, and have a saying that he who eats one is sure to return to Egypt. After we had tried to eat one, we thought we should not care to return. The interior was filled with lively little flies; and a priest who was attending a school of boys taking a holiday in the grove, assured us that each fig had to be pierced when it was green, to let the flies out, in order to make it eatable. But the Egyptians eat them, flies and all.

The splendors of Alexandria must be sought in books. The traveler will see scarcely any remains of a magnificence which dazzled the world in the beginning of our era. He may like to see the mosque that marks the site of the church of St. Mark, and he may care to look into the Coptic convent whence the Venetians stole the body of the saint, about a thousand years ago. Of course we go to see that wonder of our childhood, Cleopatra's Needles, as the granite obelisks are called that were brought from Alexandria and set up before a temple of Caesar in the time of Tiberius. Only one is standing, the other, mutilated, lies prone beneath the soil. The erect one stands near the shore and in the midst of hovels and incredible filth. The name of the earliest king it bears is that of Thothmes III., the great man of Egypt, whose era of conquest was about 1500 years before St. Mark came on his mission to Alexandria.

The city which has had as many vicissitudes as most cities, boasting under the Cæsars a population of half a million, that had decreased to 6,000 in 1800, and has now again grown to over two hundred thousand, seems to be at a waiting point; the merchants complain that the Suez Canal has killed its trade. Yet its preeminence for noise, dirt and shabbiness will hardly be disputed; and its bazaars and streets are much more interesting, perhaps because it is the meeting-place of all races, than travelers usually admit.

We had scarcely set foot in our hotel when we were saluted and waited for by dragomans of all sorts. They knocked at our doors, they waylaid us in the passages; whenever we emerged from our rooms half a dozen rose up, bowing low; it was like being a small king, with obsequious attendants waiting every motion. They presented their cards, they begged we would step aside privately for a moment and look at the bundle of recommendations they produced; they would not press themselves, but if we desired a dragoman for the Nile they were at our service. They were of all shades of color, except white, and of all degrees of oriental splendor in their costume. There were Egyptians, Nubians, Maltese, Greeks, Syrians. They speak well all the languages of the Levant and of Europe, except the one in which you attempt to converse with them. I never made the acquaintance of so many fine fellows in the same space of time. All of them had the strongest letters of commendation from travelers whom they had served, well-known men of letters and of affairs. Travelers give these endorsements as freely as they sign applications for government appointments at home.

The name of the handsome dragoman who walked with us through the bazaars was, naturally enough, Ahmed Abdallah. He wore the red fez (tarboosh) with a gay kuffia bound about it; an embroidered shirt without collar or cravat; a long shawl of checked and bright-colored Beyrout silk girding the loins, in which was carried his watch and heavy chain; a cloth coat; and baggy silk trousers that would be a gown if they were not split enough to gather about each ankle. The costume is rather Syrian than Egyptian, and very elegant when the materials are fine; but with a suggestion of effeminacy, to Western eyes.

The native bazaars, which are better at Cairo, reveal to the traveler, at a glance, the character of the Orient; its cheap tinsel, its squalor, and its occasional richness and gorgeousness. The shops on each side of

the narrow street are little more than good-sized wardrobes, with room for shelves of goods in the rear and for the merchant to sit cross-legged in front. There is usually space for a customer to sit with him, and indeed two or three can rest on the edge of the platform. Upon cords stretched across the front hang specimens of the wares for sale. Wooden shutters close the front at night. These little cubbies are not only the places of sale but of manufacture of goods. Everything goes on in the view of all the world. The tailor is stitching, the goldsmith is blowing the bellows of his tiny forge, the saddler is repairing the old donkey-saddles, the shoemaker is cutting red leather, the brazier is hammering, the weaver sits at his little loom with the treadle in the ground—every trade goes on, adding its own clatter to the uproar.

What impresses us most is the good nature of the throng, under trying circumstances. The street is so narrow that three or four people abreast make a jam, and it is packed with those moving in two opposing currents. Through this mass comes a donkey with a couple of panniers of soil or of bricks, or bundles of scraggly sticks; or a camel surges in, loaded with building-joists or with lime; or a Turkish officer, with a gaily caparisoned horse impatiently stamping; a porter slams along with a heavy box on his back; the water-carrier with his nasty skin rubs through; the vender of sweetmeats finds room for his broad tray; the orange-man pushes his cart into the throng; the Jew auctioneer cries his antique brasses and more antique raiment. Everybody is jostled and pushed and jammed; but everybody is in an imperturbable good humor, for no one is really in a hurry, and whatever is, is as it always has been and will be. And what a cosmopolitan place it is. We meet Turks, Greeks, Copts, Egyptians, Nubians, Syrians, Armenians, Italians; tattered derweeshes, "welees" or holy Moslems, nearly naked, presenting the appearance of men who have been buried a long time and recently dug up; Greek priests, Jews, Persian Parsees, Algerines, Hindoos, negroes from Darfoor, and flat-nosed blacks from beyond Khartoom.

The traveler has come into a country of holiday which is perpetual. Under this sun and in this air there is nothing to do but to enjoy life and attend to religion five times a day. We look into a mosque; In the cool court is a fountain for washing; the mosque is sweet and quiet, and upon its clean matting a row of Arabs are prostrating themselves in prayer towards the niche that indicates the direction of Mecca. We stroll along the open streets encountering a novelty at every step. Here is a musician a Nubian playing upon a sort of tambour on a frame; a picking, feeble noise he produces, but he is accompanied by the oddest character we have seen yet. This is a stalwart, wild-eyed son of the sand, coal-black, with a great mass of uncombed, disordered hair hanging about his shoulders. His only clothing is a breech-cloth and a round shaving-glass bound upon his forehead; but he has hung about his waist heavy strings of goats' hoofs, and those he shakes, in time to the tambour, by a tremulous motion of his big hips as he minces about. He seems so vastly pleased with himself that I covet knowledge of his language, in order to tell him that he looks like an idiot.

Near the Fort Napoleon, a hill by the harbor, we encounter another scene peculiar to the East. A yellow-skinned, cunning-eyed conjurer has attracted a ring of idlers about him, who squat in the blowing dust, under the blazing sun, and patiently watch his antics. The conjurer himself performs no wonders, but the spectators are a study of color and feature. The costumes are brilliant red, yellow, and white. The complexions exhaust the possibilities of human color. I thought I had seen black people in South Carolina; but I saw a boy just now standing in a doorway who would have been invisible but for his white shirt; and here is a fat negress in a bright yellow gown and kerchief, whose jet face has taken an incredible polish; only the most accomplished boot-black could raise such a shine on a shoe; tranquil enjoyment oozes out of her. The conjurer is assisted by two mites of children, a girl and a boy (no clothing wasted on them), and between the three a great deal of jabber and whacking with cane sticks is going on, but nothing is performed except the taking of a long snake from a bag and tying it round the little girl's neck. Paras are collected, however, and that is the main object of all performances.

A little further on, another group is gathered around a storyteller, who is reeling off one of the endless tales in which the Arab delights; love-adventures, not always the most delicate but none the less enjoyed for that, or the story of some poor lad who has had a wonderful career and finally married the Sultan's daughter. He is accompanied in his narrative by two men thumping upon darabooka drums, in a monotonous, sleepy fashion, quite in accordance however with the everlasting leisure that pervades the air. Walking about are the venders of sweets, and of greasy cakes, who carry tripods on which to rest their brass trays, and who split the air with their cries.

It is color, color, that makes all this shifting panorama so fascinating, and hides the nakedness, the squalor, the wretchedness of all this unconcealed poverty; color in flowing garments, color in the shops, color in the sky. We have come to the land of the sun.

At night when we walk around the square we stumble over bundles of rags containing men who are asleep, in all the corners, stretched on doorsteps, laid away on the edge of the sidewalk. Opposite the hotel is a *casino*, which is more Frank than Egyptian. The musicians are all women and Germans or Bohemians; the waiter-girls are mostly Italian; one of them says she comes from Bohemia, and has been in India, to which she proposes to return. The *habitués* are mostly young Egyptians in Frank dress except the tarboosh, and Italians, all effeminate fellows. All the world of loose living and wandering meets here. Italian is much spoken. There is little that is Oriental here, except it may be a complaisance toward anything enervating and languidly wicked that Europe has to offer. This cheap concert is, we are told, all the amusement at night that can be offered the traveler, by the once pleasure-loving city of Cleopatra, in the once brilliant Greek capital in which Hypatia was a star.

CHAPTER III.—EGYPT OF TO-DAY.

EGYPT has excellent railways. There is no reason why it should not have. They are made without difficulty and easily maintained in a land of no frosts; only where they touch the desert an occasional fence is necessary against the drifting sand. The rails are laid, without wooden sleepers, on iron saucers, with connecting bands, and the track is firm and sufficiently elastic. The express train travels the 131 miles to Cairo in about four and a half hours, running with a punctuality, and with Egyptian drivers and conductors too, that is unique in Egypt. The opening scene at the station did not promise expedition or system.

We reach the station three quarters of an hour before the departure of the train, for it requires a longtime—in Egypt, as everywhere in Europe—to buy tickets and get baggage weighed. The officials are slower workers than our treasury-clerks. There is a great crowd of foreigners, and the baggage-room is piled with trunks of Americans, 'boxes' of Englishmen, and chests and bundles of all sorts. Behind a high counter in a smaller room stand the scales, the weigher, and the clerks. Piles of trunks are brought in and dumped by the porters, and thrust forward by the servants and dragomans upon the counter, to gain them preference at the scales. No sooner does a dragoman get in his trunk than another is thrust ahead of it, and others are hurled on top, till the whole pile comes down with a crash. There is no system, there are neither officials nor police, and the excited travelers are free to fight it out among themselves. To venture into the *mêlée* is to risk broken bones, and it is wiser to leave the battle to luck and the dragomans. The noise is something astonishing. A score or two of men are yelling at the top of their voices, screaming, scolding, damning each other in polyglot, gesticulating, jumping up and down, quivering with excitement. This is your Oriental repose! If there were any rule by which passengers could take their turns, all the trunks could be quickly weighed and passed on; but now in the scrimmage not a trunk gets to the scales, and a half hour goes by in which no progress is made and the uproar mounts higher.

Finally, Ahmed, slight and agile, handing me his cane, kuffia and watch, leaps over the heap of trunks on the counter and comes to close quarters with the difficulty. He succeeds in getting two trunks upon the platform of the scales, but a traveler, whose clothes were made in London, tips them off and substitutes his own. The weighers stand patiently waiting the result of the struggle. Ahmed hurls off the stranger's trunk, gives its owner a turn that sends him spinning over the baggage, and at last succeeds in getting our luggage weighed. He emerges from the scrimmage an exhausted man, and we get our seats in the carriage just in time. However, it does not start for half an hour.

The reader would like to ride from Alexandria to Cairo, but he won't care to read much about the route. It is our first experience of a country living solely by irrigation—the occasional winter showers being practically of no importance. We pass along and over the vast shallows of Lake Mareotis, a lake in winter and a marsh in summer, ride between marshes and cotton-fields, and soon strike firmer ground. We are traveling, in short, through a Jersey flat, a land black, fat, and rich, without an elevation, broken only by canals and divided into fields by ditches. Every rod is cultivated, and there are no detached habitations. The prospect cannot be called lively, but it is not without interest; there are ugly buffaloes in the coarse grass, there is the elegant white heron, which travelers insist is the sacred ibis, there are some doleful-looking fellaheen, with donkeys, on the bank of the canal, there is a file of camels, and there are shadoofs. The shadoof is the primitive method of irrigation, and thousands of years have not changed it. Two posts are driven into the bank of the canal, with a cross-piece on top. On this swings a pole with a bucket of leather suspended at one end, which is outweighed by a ball of clay at the other. The fellah stands on the slope of the bank and, dipping the bucket into the water, raises it and pours the fluid into a sluice-way above. If the bank is high, two and sometimes three shadoofs are needed to raise the water to the required level. The labor is prodigiously hard and back-straining, continued as it must be constantly. All the fellaheen we saw were clad in black, though some had a cloth about their loins. The workman usually stands in a sort of a recess in the bank, and his color harmonizes with the dark soil. Any occupation more wearisome and less beneficial to the mind I cannot conceive. To the credit of the Egyptians, the men alone work the shadoof. Women here tug water, grind the corn, and carry about babies, always; but I never saw one pulling at a shadoof pole.

There is an Arab village! We need to be twice assured that it is a village. Raised on a slight elevation, so as to escape high water, it is still hardly distinguishable from the land, certainly not in color. All Arab villages look like ruins; this is a compacted collection of shapeless mud-huts, flat-topped and irregularly thrown together. It is an aggregation of dog-kennels, baked in the sun and cracked. However, a clump of palm-trees near it gives it an air of repose, and if it possesses a mosque and a minaret it has a picturesque appearance, if the observer does not go too near. And such are the habitations of nearly all the Egyptians.

Sixty-five miles from Alexandria, we cross the Rosetta branch of the Nile, on a fine iron bridge—even this portion of the Nile is a broad, sprawling river; and we pass through several respectable towns which have an appearance of thrift—Tanta especially, with its handsome station and a palace of the Khedive. At Tanta is held three times a year a great religious festival and fair, not unlike the old fair of the ancient Egyptians at Bubastis in honor of Diana, with quite as many excesses, and like that, with a gramme of religion to a pound of pleasure. “Now,” says Herodotus, “when they are being conveyed to the city Bubastis, they act as follows:—for men and women embark together, and great numbers of both sexes in every barge: some of the women have castanets on which they play, and the men play on the flute during the whole voyage; and the rest of the women and men sing and clap their hands together at the same time.” And he goes on to say that when they came to any town they moored the barge, and the women chaffed those on shore, and danced with indecent gestures; and that at the festival more wine was consumed than all the rest of the year. The festival at Tanta is in honor of a famous Moslem saint whose tomb is there; but the tomb is scarcely so attractive as the field of the *fête*, with the story-tellers and the jugglers and booths of dancing girls.

We pass decayed Benha with its groves of Yoosef-Effendi oranges—the small fruit called Mandarin by foreigners, and preferred by those who like a slight medicinal smell and taste in the orange; and when we are yet twenty miles from Cairo, there in the south-west, visible for a moment and then hidden by the trees, and again in sight, faintly and yet clearly outlined against the blue sky, are two forms, the sight of which gives us a thrill. They stand still in that purple distance in which we have seen them all our lives. Beyond these level fields and these trees of sycamore and date-palm, beyond the Nile, on the desert’s edge, with the low Libyan hills falling off behind them, as delicate in form and color as clouds, as enduring as the sky they pierce, the Pyramids of Geezeh! I try to shake off the impression of their solemn antiquity, and imagine how they would strike one if all their mystery were removed. But that is impossible. The imagination always prompts the eye. And yet I believe that standing where they do stand, and in this atmosphere, they are the most impressive of human structures. But the pyramids would be effective, as the obelisk is not, out of Egypt.

Trees increase in number; we have villas and gardens; the grey ledges of the Mokattam hills come into view, then the twin slender spires of the Mosque of Mohammed Ali on the citadel promontory, and we are in the modern station of Cairo; and before we take in the situation are ignominiously driven away in a hotel-omnibus. This might happen in Europe. Yes; but then, who are these in white and blue and red, these squatters by the wayside, these smokers in the sun, these turbaned riders on braying donkeys and grumbling dromedaries; what is all this fantastic masquerade in open day? Do people live in these houses? Do women peep from these lattices? Isn’t that gowned Arab conscious that he is kneeling and praying out doors? Have we come to a land where all our standards fail and people are not ashamed of their religion?

CHAPTER IV.—CAIRO.

O CAIRO! Cairo! Masr-el-Kaherah, The Victorious! City of the Caliphs, of Salah-e'-deen, of the Memlooks! Town of mediaeval romance projected into a prosaic age! More Oriental than Damascus, or Samarcand. Vast, sprawling city, with dilapidated Saracenic architecture, pretentious modern barrack-palaces, new villas and gardens, acres of compacted, squalid, unsunned dwellings. Always picturesque, lamentably dirty, and thoroughly captivating.

Shall we rhapsodize over it, or attempt to describe it? Fortunately, writers have sufficiently done both. Let us enjoy it. We are at Shepherd’s. It is a caravansary through which the world flows. At its *table d’hote* are all nations; German princes, English dukes and shopkeepers, Indian officers, American sovereigns; explorers, *savants*, travelers; they have come for the climate of Cairo, they are going up the Nile, they are going to hunt in Abyssinia, to join an advance military party on the White Nile; they have come from India, from Japan, from Australia, from Europe, from America.

We are in the Frank quarter called the Ezbekeëh, which was many years ago a pond during high water, then a garden with a canal round it, and is now built over with European houses and shops, except the square reserved for the public garden. From the old terrace in front of the hotel, where the traveler used to look on trees, he will see now only raw new houses and a street usually crowded with passers and rows of sleepy donkeys and their voluble drivers. The hotel is two stories only, built round a court, damp in rainy or cloudy weather (and it is learning how to rain as high up the Nile as Cairo), and lacking the comforts which invalids require in the winter. It is kept on an ingenious combination of the American and European plans; that is, the traveler pays a fixed sum per day and then gets a bill of particulars, besides, which gives him all the pleasures of the European system. We heard that one would be more Orientally surrounded and better cared for at the Hotel du Nil; and the Khedive, who tries his hand at everything, has set up a New Hotel on the public square; but, somehow, one enters Shepherd's as easy as he goes into a city gate.

They call the house entirely European. But there are pelicans walking about in the tropical garden; on one side is the wall of a harem, a house belonging to the Khedive's mother, a harem with closed shutters, but uninteresting, because there is no one in it, though ostriches are strutting in its paved court; in the rear of the house stretches a great grove of tall date-palms standing in a dusty, *débris*-strewn field—a lazy wind is always singing through their tops, and a sakiya (a cow-impelled water-wheel) creaks there day and night; we never lock the doors of our rooms; long-gowned attendants are always watching in the passages, and, when we want one, in default of bells, we open the door and clap the hands. All this, with a juggler performing before the house; dragomans and servants and merchants in Oriental costume; the monotonous strumming of an Arab band in a neighboring *café*, bricklayers on the unfinished house opposite us, working in white night-gowns and turbans, who might be mistaken at a distance for female sleepwalkers; and from a minaret not far away, the tenor-voiced muezzins urging us in the most musical invitation ever extended to unbelievers, to come to prayer at daylight—this cannot be called European.

An end of the dinner-table, however, is occupied by a loud party of young Englishmen, a sprinkling of dukes and earls and those attendants and attentive listeners of the nobility who laugh inordinately when my lord says a good thing, and are encouraged when my lord laughs loudly at a sally of theirs and declares, "well, now, that's very good;" a party who seem to regard Cairo as beyond the line of civilization and its requirements. They talk loud, roar in laughing, stare at the ladies, and light their cigars before the latter have withdrawn. My comrade notices that they call for champagne before fish; we could overlook anything but that. Some travelers who are annoyed at their boisterousness speak to the landlord about them, without knowing their rank—supposing that one could always tell an earl by his superior manners. These young representatives of England have demanded that the Khedive shall send them on their hunting-tour in Africa, and he is to do so at considerable cost; and it is said that he pays their hotel bills in Cairo. The desire of the Khedive to stand well with all the European powers makes him an easy prey to any nobleman who does not like to travel in Egypt at his own expense. (It ought to be added that we encountered on the Nile an Englishman of high rank who had declined the Khedive's offer of a free trip).

Cairo is a city of vast distances, especially the new part which is laid out with broad streets, and built up with isolated houses having perhaps a garden or a green court; open squares are devoted to fountains and flower-beds. Into these broad avenues the sun pours, and through them the dust swirls in clouds; everything is covered with it; it imparts its grey tint to the town and sifts everywhere its impalpable powder. No doubt the health of Cairo is greatly improved and epidemics are lessened, by the destruction of the pestilent old houses and by running wide streets through the old quarters of twisting lanes and sunless alleys. But the wide streets are uninteresting, and the sojourner in the city likes to escape out of their glare and dust into the cool and shady recesses of the old town. And he has not far to go to do so. A few minutes walk from the Ezbekeëh brings one into a tangle like the crossing paths of an ants nest, into the very heart of the smell and color of the Orient, among people among shops, in the presence of manners, habits, costumes, occupations, centuries old, into a life in which the western man recognizes nothing familiar.

Cairo, between the Mokattam hill of limestone and the Nile, covers a great deal of ground—about three square miles—on which dwell somewhere from a third to a half of a million of people. The traveler cannot see its stock-sights in a fortnight, and though he should be there months he will find something novel in the street-life daily, even though he does not, as Mr. Lane has so admirably done, make a study of the people. And "life" goes on in the open streets, to an extent which always surprises us, however familiar we may be with Italian habits. People eat, smoke, pray, sleep, carry on all their trades in sight of the passers by—only into the recesses of the harem and the faces of the women one may not look. And this last mystery and reserve almost outweighs the openness of everything else. One feels as if he were in a masquerade; the part of the world which is really most important—womankind—appears to him only in shadow and flitting phantasm. What danger is he in from these wrapped and veiled figures which glide by, shooting him with a dark and perhaps wicked eye; what peril is he in as he slips through these narrow streets with their masked batteries of latticed windows! This Eastern life is all open to the sun; and yet how little of its secrets does the stranger fathom. I seem to feel, always, in an Eastern town, that there is a mask of duplicity and concealment behind which the Orientals live; that they habitually deceive the traveler in his "gropings after truth."

The best way of getting about Cairo and its environs is on the donkey. It is cheap and exhilarating. The donkey is easily mounted and easily got off from; not seldom he will weaken in his hind legs and let his rider to the ground—a sinking operation which destroys your confidence in life itself. Sometimes he stumbles and sends the rider over his head. But the *good* donkey never does either. He is the best animal, of his size and appearance, living. He has the two qualities of our greatest general, patience and obstinacy. The *good* donkey is easy as a rocking-chair, sure-footed as a chamois; he can thread any crowd and stand patiently dozing in any noisy thoroughfare for hours. To ride him is only a slight compromise of one's independence in walking. One is so near the ground, and so absent-mindedly can he gaze at what is around him, that he forgets that there is anything under him. When the donkey, in the excitement of company on the open street and stimulated by the whacks and cries of his driver, breaks into the rush of a gallop, there is so much flying of legs and such a general flutter that the rider fancies he is getting over the ground at an awful rate, running a breakneck race; but it does not appear so to an observer. The rider has the feeling of the swift locomotion of the Arab steed without its danger or its expense. Besides, a long-legged man, with a cork hat and a flying

linen "duster," tearing madly along on an animal as big as a sheep, is an amusing spectacle.

The donkey is abused, whacked, beaten till he is raw, saddled so that all the straps gall him, hard-ridden, left for hours to be assailed by the flies in the street, and ridiculed by all men. I wish we could know what sort of an animal centuries of good treatment would have made of him. Something no doubt quite beyond human deserts; as it is, he is simply indispensable in Eastern life. And not seldom he is a pet; he wears jingling bells and silver ornaments around his neck; his hair is shaved in spots to give him a variegated appearance, and his mane and tail are dyed with henna; he has on an embroidered cloth bridle and a handsome saddle, under which is a scarlet cloth worked with gold. The length and silkiness of his ears are signs of his gentle breeding. I could never understand why he is loaded with such an enormous saddle; the pommel of it rising up in front of the rider as big as a half-bushel measure. Perhaps it is thought well to put this mass upon his back so that he will not notice or mind any additional weight.

The donkey's saving quality, in this exacting world, is inertia. And, yet, he is not without ambition. He dislikes to be passed on the road by a fellow; and if one attempts it, he is certain to sheer in ahead of him and shove him off the track. "Donkey jealous one anoder," say the drivers.

Each donkey has his driver or attendant, without whose presence, behind or at the side, the animal ceases to go forward. These boys, and some of them are men in stature, are the quickest-witted, most importunate, good-natured vagabonds in this world. They make a study of human nature, and accurately measure every traveler the moment he appears. They are agile to do errands, some of them are better guides than the professionals, they can be entrusted with any purchases you may make, they run, carrying their slippers in their hand, all day beside the donkey, and get only a pittance of pay. They are however a jolly, larkish set, always skylarking with each other, and are not unlike the newspaper boys of New York; now and then one of them becomes a trader or a dragoman and makes his fortune.

If you prefer a carriage, good vehicles have become plenty of late years, since there are broad streets for driving; and some very handsome equipages are seen, especially towards evening on the Shoobra road, up and down which people ride and drive to be seen and to see, as they do in Central or Hyde parks. It is *en règle* to have a sais running before the carriage, and it is the "swell thing" to have two of them. The running sais before a rapidly driven carriage is the prettiest sight in Cairo. He is usually a slender handsome black fellow, probably a Nubian, brilliantly dressed, graceful in every motion, running with perfect ease and able to keep up his pace for hours without apparent fatigue. In the days of narrow streets his services were indispensable to clear the way; and even now he is useful in the frequented ways where every one walks in the middle of the street, and the chattering, chaffing throngs are as heedless of anything coming as they are of the day of judgment. In red tarboosh with long tassel, silk and gold embroidered vest and jacket, colored girdle with ends knotted and hanging at the side, short silk trousers and bare legs, and long staff, gold-tipped, in the hand, as graceful in running as Antinous, they are most elegant appendages to a fashionable turnout. If they could not be naturalized in Central Park, it might fill some of the requirements of luxury to train a patriot from the Green Isle to run before the horses, in knee-breeches, flourishing a shillalah. Faith, I think he would clear the way.

Especially do I like to see the sais coming down the wind before a carriage of the royal harem. The outriders are eunuchs, two in front and two behind; they are blacks, dressed in black clothes, European cut, except the tarboosh. They ride fine horses, English fashion, rising in the saddle; they have long limbs, lank bodies, cruel, weak faces, and yet cunning; they are sleek, shiny, emasculated. Having no sex, you might say they have no souls. How can these anomalies have any virtue, since virtue implies the opportunity of its opposite? These semblances of men seem proud enough of their position, however, and of the part they play to their masters, as if they did not know the repugnance they excite. The carriage they attend is covered, but the silken hangings of the glass windows are drawn aside, revealing the white-veiled occupants. They indeed have no constitutional objections to being seen; the thin veil enhances their charms, and the observer who sees their painted faces and bright languishing eyes, no doubt gives them credit for as much beauty as they possess; and as they flash by, I suppose that every one, is convinced that he has seen one of the mysterious Circassian or Georgian beauties.

The minute the traveler shows himself on the hotel terrace, the donkey-boys clamor, and push forward their animals upon the sidewalk; it is no small difficulty to select one out of the tangle; there is noise enough used to fit out an expedition to the desert, and it is not till the dragoman has laid vigorously about him with his stick that the way is clear. Your nationality is known at a glance, and a donkey is instantly named to suit you—the same one being called, indifferently, "Bismarck" if you are German, "Bonaparte" if you are French, and "Yankee Doodle" if you are American, or "Ginger Bob" at a venture.

We are going to Boulak, the so-called port of Cairo, to select a dahabeëh for the Nile voyage. We are indeed only getting ready for this voyage, and seeing the city by the way. The donkey-boys speak English like natives—of Egypt. The one running beside me, a handsome boy in a long cotton shirt, is named, royally, Mahmoud Hassan.

"Are you the brother of Hassan whom I had yesterday?"

"No. He, Hassan not my brother; he better, he friend. Breakfast, lunch, supper, all together, all same; all same money. We friends."

Abd-el-Atti, our dragoman, is riding ahead on his grey donkey, and I have no difficulty in following his broad back and short legs, even though his donkey should be lost to sight in the press. He rides as Egyptians do, without stirrups, and uses his heels as spurs. Since Mohammed Abd-el-Atti Effendi first went up the Nile, it is many years ago now, with Mr. Wm. C. Prime, and got his name prominently into the Nile literature, he has grown older, stout, and rich; he is entitled by his position to the distinction of "Effendi." He boasts a good family, as good as any; most of his relatives are, and he himself has been, in government employ; but he left it because, as he says, he prefers one master to a thousand. When a boy he went with the embassy of Mohammed Ali to England, and since that time he has traveled extensively as courier in Europe and the Levant and as mail-carrier to India. Mr. Prime described him as having somewhat the complexion and features of the North American Indian; it is true, but he has a shrewd restless eye, and very mobile features,

quick to image his good humor or the reverse, breaking into smiles, or clouding over upon his easily aroused suspicion. He is a good study of the Moslem and the real Oriental, a combination of the easy, procrastinating fatalism, and yet with a tindery temper and an activity of body and mind that we do not usually associate with the East. His prejudices are inveterate, and he is an unforgiving enemy and a fast, self-sacrificing friend. Not to be driven, he can always be won by kindness. Fond of money and not forgetting the last piastre due him, he is generous and lavish to a fault. A devout Moslem, he has seen too much of the world not to be liberalized. He knows the Koran and the legendary history of the Arabs, and speaks and writes Arabic above the average. An exceedingly shrewd observer and reader of character, and a mimic of other's peculiarities, he is a good *raconteur*, in his peculiar English, and capital company. It is, by the way, worth mentioning what sharp observers all these Eastern people become, whose business it is to study and humor the whims and eccentricities of travelers. The western man who thinks that the Eastern people are childlike or *effete*, will change his mind after a few months acquaintance with the shrewd Egyptians. Abd-el-Atti has a good deal of influence and even authority in his sphere, and although his executive ability is without system, he brings things to pass. Wherever he goes, however, there is a ripple and a noise. He would like to go to Nubia with us this winter, he says, "for shange of air."

So much is necessary concerning the character who is to be our companion for many months. No dragoman is better known in the East; he is the sheykh of the dragomans of Cairo, and by reason of his age and experience he is hailed on the river as the sultan of the Nile. He dresses like an Englishman, except his fez.

The great worry of the voyager in Egypt, from the moment he lands, is about a dragoman; his comfort and pleasure depend very much upon a right selection. The dragoman and the dahabeëh interest him more than the sphinx and the great pyramids. Taking strangers up the Nile seems to be the great business of Egypt, and all the intricacies and tricks of it are slowly learned. Ignorant of the language and of the character of the people, the stranger may well be in a maze of doubt and perplexity. His gorgeously attired dragoman, whose recommendations would fit him to hold combined the offices of President of the American Bible Society and caterer for Delmonico, often turns out to be ignorant of his simplest duties, to have an inhabited but uninhabitable boat, to furnish a meagre table, and to be a sly knave. The traveler will certainly have no peace from the importunity of the dragomans until he makes his choice. One hint can be given: it is always best in a Moslem country to take a Moslem dragoman.

We are on our way to Boulak. The sky is full of white light. The air is full of dust; the streets are full of noise color, vivid life and motion. Everything is flowing, free, joyous. Naturally people fall into picturesque groups, forming, separating, shifting like scenes on the stage. Neither the rich silks and brilliant dyes, nor the tattered rags, and browns and greys are out of place; full dress and nakedness are equally *en régie*. Here is a grave, long-bearded merchant in full turban and silk gown, riding his caparisoned donkey to his shop, followed by his pipe-bearer; here is a half-naked fellah seated on the rear of his sorry-eyed beast, with a basket of greens in front of him; here are a group of women, hunched astride their donkeys, some in white silk and some in black, shapeless in their balloon mantles, peeping at the world over their veils; here a handsome sais runs ahead of a carriage with a fat Turk lolling in it, and scatters the loiterers right and left; there are porters and beggars fast asleep by the roadside, only their heads covered from the sun; there are lines of idlers squatting in all-day leisure by the wall, smoking, or merely waiting for tomorrow.

As we get down to Old Boulak the Saturday market is encountered. All Egyptian markets occupy the street or some open place, and whatever is for sale here, is exposed to the dust and the sun; fish, candy, dates, live sheep, doora, beans, all the doubtful and greasy compounds on brass trays which the people eat, nuts, raisins, sugar-cane, cheap jewelry. It is difficult to force a way through the noisy crowd. The donkey-boy cries perpetually, to clear the way, take care, "*shimalak!*" to the left, "*yemenak!*" to the right, *ya!* *riglak!* look out for your left leg, look out for your right leg, make way boy, make way old woman; but we joggle the old woman, and just escape stepping on the children and babies strewn in the street, and tread on the edge of mats spread on the ground, upon which provisions are exposed (to the dust) for sale. In the narrow, shabby streets, with dilapidated old balconies meeting overhead, we encounter loaded camels, donkeys with double panniers, hawkers of vegetables; and dodge through, bewildered by color and stunned by noise. What is it that makes all picturesque? More dirt, shabbiness, and nakedness never were assembled. That fellow who has cut armholes in a sack for holding nuts, and slipped into it for his sole garment, would not make a good figure on Broadway, but he is in place here, and as fitly dressed as anybody. These rascals will wear a bit of old carpet as if it were a king's robe, and go about in a pair of drawers that are all rags and strings, and a coarse towel twisted about the head for turban, with a gay *insouciance* that is pleasing. In fact, I suppose that a good, well-fitting black or nice brown skin is about as good as a suit of clothes.

But O! the wrinkled, flabby-breasted old women, who make a pretence of drawing the shawl over one eye; the naked, big-stomached children with spindle legs, who sit in the sand and never brush away the circle of flies around each gummy eye! The tumble-down houses, kennels in which the family sleep, the poverty of thousands of years, borne as if it were the only lot of life! In spite of all this, there is not, I venture to say, in the world beside, anything so full of color, so gay and *bizarre* as a street in Cairo. And we are in a squalid suburb.

At the shore of the swift and now falling Nile, at Boulak, are moored, four or five deep, the passenger dahabeëhs, more than a hundred of them, gay with new paint and new carpets, to catch the traveler. There are small and large, old and new (but all looking new); those that were used for freight during the summer and may be full of vermin, and those reserved exclusively for strangers. They can be hired at from sixty pounds to two hundred pounds a month; the English owner of one handsomely furnished wanted seven hundred and fifty pounds for a three-months' voyage. The Nile trip adds luxury to itself every year, and is getting so costly that only Americans will be able to afford it.

After hours of search we settle upon a boat that will suit us, a large boat that had only made a short trip, and so new that we are at liberty to christen it; and the bargaining for it begins. That is, the bargaining revolves around that boat, but glances off as we depart in a rage to this or that other, until we appear to me to be hiring half the craft on the river. We appear to come to terms; again and again Abd-el-Atti says, "Well, it is finish," but new difficulties arise.

The owners were an odd pair: a tall Arab in soiled gown and turban, named Ahmed Aboo Yoosef, a mild and wary Moslem; and Habib Bagdadli, a furtive little Jew in Frank dress, with a cast in one of his pathetic eyes and a beseeching look, who spoke bad French fluently. Aboo Yoosef was ready to come to terms, but Bagdadli stood out; then Bagdadli acquiesced but Aboo made conditions. Ab-del-Atti alternately coaxed and stormed; he pulled the Arab's beard; and he put his arm round his neck and whispered in his ear.

"Come, let us to go, dis Jews make me mad. I can't do anything with dis little Jews."

Our dragoman's greatest abhorrence is a Jew. Where is this one from? I ask.

"He from Algiers." The Algerian Jews have a bad reputation.

"*No, no, monsieur, pas Algiers;*" cries the little Jew, appealing to me with a pitiful look; "I am from Bagdad." In proof of this there was his name—Habib Bagdadli.

The bargaining goes on, with fine gesticulation, despairing attitudes, tones of anger and of grief, violent protestations and fallings into apathy and dejection. It is Arab against Arab and a Jew thrown in.

"I will have this boat, but I not put you out of the way on it;" says Abd-el-Atti, and goes at it again.

My sympathies are divided. I can see that the Arab and the Jew will be ruined if they take what we offer. I know that we shall be ruined if we give what they ask. This pathetic-eyed little Jew makes me feel that I am oppressing his race; and yet I am quite certain that he is trying to overreach us. How the bargain is finally struck I know not, but made it seems to be, and clinched by Aboo reluctantly pulling his purse from his bosom and handing Abd-el-Atti a napoleon. That binds the bargain; instead of the hirer paying something, the lessor gives a pledge.

Trouble, however, is not ended. Certain alterations and additions are to be made, and it is nearly two weeks before the evasive couple complete them. The next day they offer us twenty pounds to release them. The pair are always hanging about for some mitigation or for some advance. The gentle Jew, who seems to me friendless, always excites the ire of our dragoman; "Here comes dis little Jews," he exclaims as he encounters him in the street, and forces him to go and fulfil some neglected promise.

The boat is of the largest size, and has never been above the Cataract; the owners guarantee that it can go, and there is put in the contract a forfeit of a hundred pounds if it will not. We shall see afterwards how the owners sought to circumvent us. The wiles of the Egyptians are slowly learned by the open-minded stranger.

CHAPTER V.—IN THE BAZAAR.

OUR sight-seeing in Cairo is accomplished under the superintendence of another guide and dragoman, a cheerful, willing, good-natured and careful Moslem, with one eye. He looks exactly like the one-eyed calender of the story; and his good eye has a humorous and inquiring twinkle in it. His name is Hassan, but he prefers to be called Hadji, the name he has taken since he made the pilgrimage to Mecca.

A man who has made the pilgrimage is called "the hhâgg," a woman "the hhâggeh."—often spelled and pronounced "hadj" and "hadjee." It seems to be a privilege of travelers to spell Arabic words as they please, and no two writers agree on a single word or name. The Arabs take a new name or discard an old one as they like, and half a dozen favorite names do duty for half the inhabitants. It is rare to meet one who hasn't somewhere about him the name of Mohammed, Ahmed, Ali, Hassan, Hosayn, or Mahmoud. People take a new name as they would a garment that strikes the fancy.

"You like go bazaar?" asks Hadji, after the party is mounted on donkeys in front of the hotel.

"Yes, Hadji, go by the way of the Mooskee."

The Mooskee is the best known street in Cairo, and the only one in the old part of the town that the traveler can find unaided. It runs straight, or nearly so, a mile perhaps, into the most densely built quarters, and is broad enough for carriages. A considerable part of it is roofed lightly over with cane or palm slats, through

which the sun sifts a little light, and, being watered, it is usually cool and pleasant. It cannot be called a good or even road, but carriages and donkeys pass over it without noise, the wheels making only a smothered sound: you may pass through it many times and not discover that a canal runs underneath it. The lower part of it is occupied by European shops. There are no fine shops in it like those in the Ezbekeeh, and it is not interesting like the bazaars, but it is always crowded. Probably no street in the world offers such a variety of costumes and nationalities, and in no one can be heard more languages. It is the main artery, from which branch off the lesser veins and reticulations leading into the bazaars.

If the Mooskee is crowded, the bazaars are a jam. Different trades and nationalities have separate quarters, articles that are wanted are far apart, and one will of necessity consume a day in making two or three purchases. It is an achievement to find and bargain for a piece of tape.

In one quarter are red slippers, nothing but red slippers, hundreds of shops hung with them, shops in which they are made and sold; the yellow slippers are in another quarter, and by no chance does one merchant keep both kinds. There are the silk bazaars, the gold bazaars, the silver bazaars, the brass, the arms, the antiquity, the cotton, the spice, and the fruit bazaars. In one quarter the merchants and manufacturers are all Egyptians, in another Turks, in another Copts, or Algerines, or Persians, or Armenians, or Greeks, or Syrians, or Jews.

And what is a bazaar? Simply a lane, narrow, straight or crooked, winding, involved, interrupted by a fountain, or a mosque, intersected by other lanes, a *congeries* of lanes, roofed with matting it may be, on each side of which are the little shops, not much bigger than a dry-goods box or a Saratoga trunk. Frequently there is a story above, with hanging balconies and latticed windows. On the ledge of his shop the merchant, in fine robes of silk and linen, sits cross-legged, probably smoking his chibook. He sits all day sipping coffee and gossiping with his friends, waiting for a customer. At the times of prayer he spreads his prayer-carpet and pursues his devotions in sight of all the world.

This Oriental microcosm called a bazaar is the most characteristic thing in the East, and affords most entertainment; in these cool recesses, which the sun only penetrates in glints, is all that is shabby and all that is splendid in this land of violent contrasts. The shops are rude, the passages are unpaved dirt, the matting above hangs in shreds, the unpainted balconies are about to tumble down, the lattice-work is grey with dust; fleas abound; you are jostled by an unsavory throng may be; run against by loaded donkeys; grazed by the dripping goat-skins of the water-carriers; beset by beggars; followed by Jews offering old brasses, old cashmeres, old armor; squeezed against black backs from the Soudan; and stunned by the sing-song cries of a dozen callings. But all this is nothing. Here are the perfumes of Arabia, the colors of Paradise. These narrow streets are streams of glancing color; these shops are more brilliant than any picture—but in all is a softened harmony, the ancient art of the East.

We are sitting at a corner, pricing some pieces of old brass and arms. The merchant sends for tiny cups of coffee and offers cigarettes. He and the dragoman are wrangling about the price of something for which five times its value is asked. Not unlikely it will be sold for less than it is worth, for neither trader nor traveler has any idea of its value. Opposite is a shop where three men sit cross-legged, making cashmere shawls by piecing old bits of India scarfs. Next shop is occupied only by a boy who is reading the Koran in a loud voice, rocking forwards and backwards. A stooping seller of sherbet comes along clinking his glasses. A vender of sweetmeats sets his tray before us. A sorry beggar, a dwarf, beseeches in figurative language.

“What does he want, Hadji?”

“He say him hungry, want piece bread; O, no matter for he.”

The dragomans never interpret anything, except by short cuts. What the dwarf is really saying, according to Mr. Lane, is, “For the sake of God! O ye charitable. I am seeking from my lord a cake of bread. I am the guest of God and the Prophet.”

As we cannot content him by replying in like strain, “God enrich thee,” we earn his blessing by a copper or two.

Across the street is an opening into a nest of shops, gaily hung with embroideries from Constantinople, silks from Broussa and Beyrout, stuffs of Damascus; a Persian rug is spread on the mastabah of the shop, swords and inlaid pistols with flint locks shine amid the rich stuffs. Looking down this street, one way, is a long vista of bright color, the street passing under round arches through which I see an old wall painted in red and white squares, upon which the sun falls in a flood of white light. The street in which we are sitting turns abruptly at a little distance, and apparently ends in a high Moorish house, with queer little latticed windows, and balconies, and dusty recesses full of mystery in this half light; and at the corner opposite that, I see part of a public fountain and hear very distinctly the “studying” of the school over it.

The public fountain is one of the best institutions of Cairo as well as one of the most ornamental. On the street it is a rounded Saracenic structure, highly ornamented in carved marble or stucco, and gaily painted, having in front two or three faucets from which the water is drawn. Within is a tank which is replenished by water brought in skins from the Nile. Most of these fountains are charitable foundations, by pious Moslems who leave or set apart a certain sum to ensure the yearly supply of so many skins of water. Charity to the poor is one of the good traits of the Moslems, and the giving of alms and the building of fountains are the works that will be rewarded in Paradise.

These fountains, some of which are very beautiful, are often erected near a mosque. Over them, in a room with a vaulted roof and open to the street by three or four arches with pillars, is usually a boys’ school. In this room on the floor sit the master and his scholars. Each pupil has before him his lesson written on a wooden tablet, and this he is reading at the top of his voice, committing it to memory, and swaying incessantly backwards and forwards—a movement that is supposed to assist the memory. With twenty boys shouting together, the noise is heard above all the clamor of the street. If a boy looks off or stops his recitation, the stick of the schoolmaster sets him going again.

The boys learn first the alphabet, then the ninety-nine epithets of God, and then the Koran, chapter by chapter. This is the sum of human knowledge absolutely necessary; if the boy needs writing and arithmetic he learns them from the steelyard weigher in the market; or if he is to enter any of the professions, he has a

regular course of study in the Mosque El Ezher, which has thousands of students and is the great University of the East.

Sitting in the bazaar for an hour one will see strange sights; wedding and funeral processions are not the least interesting of them. We can never get accustomed to the ungainly camel, thrusting his huge bulk into these narrow limits, and stretching his snake neck from side to side, his dark driver sitting high up in the dusk of the roof on the wooden saddle, and swaying to and fro with the long stride of the beast. The camel ought to be used in funeral processions, but I believe he is not.

We hear now a chanting down the dusky street. Somebody is being carried to his tomb in the desert outside the city. The procession has to squeeze through the crowd. First come a half dozen old men, ragged and half blind, harbingers of death, who move slowly, crying in a whining tone, "There is no deity but God; Mohammed is God's apostle; God bless and save him." Then come two or three schoolboys singing in a more lively air verses of a funeral hymn. The bier is borne by friends of the deceased, who are relieved occasionally by casual passengers. On the bier, swathed in grave-clothes, lies the body, with a Cashmere shawl thrown over it. It is followed by female hired mourners, who beat their breasts and howl with shrill and prolonged ululations. The rear is brought up by the female mourners, relations—a group of a dozen in this case—whose hair is dishevelled and who are crying and shrieking with a perfect abandonment to the luxury of grief. Passengers in the street stop and say, "God is most great," and the women point to the bier and say, "I testify that there is no deity but God."

When the funeral has passed and its incongruous mingling of chanting and shrieking dies away, we turn towards the gold bazaar. All the goldsmiths and silversmiths are Copts; throughout Egypt the working of the precious metals is in their hands. Descended from the ancient Egyptians, or at least having more of the blood of the original race in them than others, they have inherited the traditional skill of the ancient workers in these metals. They reproduce the old jewelry, the barbarous ornaments, and work by the same rude methods, producing sometimes the finest work with the most clumsy tools.

The gold-bazaar is the narrowest passage we have seen. We step down into its twilight from a broader street. It is in fact about three feet wide, a lane with an uneven floor of earth, often slippery. On each side are the little shops, just large enough for the dealer and his iron safe, or for a tiny forge, bellows and anvil. Two people have to make way for each other in squeezing along this alley, and if a donkey comes through he monopolizes the way and the passengers have to climb upon the mastabahs either side. The mastabah is a raised seat of stone or brick, built against the front of the shop and level with its floor, say two feet and a half high and two feet broad. The lower shutter of the shop turns down upon the mastabah and forms a seat upon which a rug is spread. The shopkeeper may sit upon this, or withdraw into his shop to make room for customers, who remove their shoes before drawing up their feet upon the carpet. Sometimes three or four persons will crowd into this box called a shop. The bazaar is a noisy as well as a crowded place, for to the buzz of talk and the cries of the itinerant vendors is added the clang of the goldsmiths' hammers; it winds down into the recesses of decaying houses and emerges in another direction.

We are to have manufactured a bracelet of gold of a pattern as old as the Pharaohs, and made with the same instruments that the cunning goldsmiths used three thousand years ago. While we are seated and bargaining for the work, the goldsmith unlocks his safe and shows us necklaces, bracelets, anklets, and earrings in the very forms, *bizarre* but graceful, of the jewelry of which the Israelites spoiled the Egyptian women. We see just such in the Museum at Boulak; though these are not so fine as the magnificent jewelry which Queen Aah-hotep, the mother of Amosis, attempted to carry with her into the under-world, and which the scientific violators of her tomb rescued at Thebes.

In the shop opposite to us are squeezed in three Egyptian women and a baby, who have come to spend the day in cheapening some bit of jewelry. There is apparently nothing that the Cairo women like so much as shopping—at least those who are permitted to go out at all—and they eke out its delights by consuming a day or two in buying one article. These women are taking the trade leisurely, examining slowly and carefully the whole stock of the goldsmith and deliberating on each bead and drop of a necklace, glancing slyly at us and the passers-by out of their dark eyes meantime. They have brought cakes of bread for lunch, and the baby is publicly fed as often as he desires. These women have the power of sitting still in one spot for hours, squatting with perfect patience in a posture that would give a western woman the cramp for her lifetime. We are an hour in bargaining with the goldsmith, and are to return late in the afternoon and see the bracelet made before our eyes, for no one is expected to trust his fellow here.

Thus far the gold has only been melted into an ingot, and that with many precautions against fraud. I first count out the napoleons of which the bracelet is to be made. These are weighed. A fire is then kindled in the little forge, the crucible heated, and I drop the napoleons into it, one by one. We all carefully watch the melting to be sure that no gold is spilled in the charcoal and no base metal added. The melted mass is then run into an ingot, and the ingot is weighed against the same number of napoleons that compose it. And I carry away the ingot.

When we return the women are still squatting in the shop in the attitude of the morning. They show neither impatience nor weariness; nor does the shopkeeper. The baby is sprawled out in his brown loveliness, and the purchase of a barbarous necklace of beads is about concluded. Our goldsmith now removes his outer garment, revealing his fine gown of striped silk, pushes up his sleeves and prepares for work. His only-tools are a small anvil, a hammer and a pair of pincers. The ingot is heated and hammered, and heated and hammered, until it is drawn out into an even, thick wire. This is then folded in three to the required length, and twisted, till the gold looks like molasses candy; the ends are then hammered together, and the bracelet is bent to its form. Finally it is weighed again and cleaned. If the owner wishes he can have put on it the government stamp. Gold ornaments that are stamped, the goldsmith will take back at any time and give for them their weight in coin, less two per cent.

On our way home we encounter a wedding procession; this is the procession conducting the bride to the house of the bridegroom; that to the bath having taken place two days before. The night of the day before going to the bridegroom is called the "Night of henna." The bride has an entertainment at her own house, receives presents of money, and has her hands and her feet dyed with henna. The going to the bridegroom is

on the eve of either Monday or Friday. These processions we often meet in the streets of Cairo; they wander about circuitously through the town making all the noise and display possible. The procession is a rambling affair and generally attended by a rabble of boys and men.

This one is preceded by half a dozen shabbily dressed musicians beating different sorts of drums and blowing hautboys, each instrument on its own hook; the tune, if there was one, has become discouraged, and the melody has dropped out; thump, pound, squeak, the music is more disorganized than the procession, and draggles on in noisy dissonance like a drunken militia band at the end of a day's "general training."

Next come some veiled women in black; and following them are several small virgins in white. The bride walks next, with a woman each side of her to direct her steps. This is necessary, for she is covered from head to feet with a red cashmere shawl hanging from a sort of crown on the top of her head. She is in appearance, simply a red cone. Over her and on three sides of her, but open in front, is a canopy of pink silk, borne on poles by four men. Behind straggle more musicians, piping and thumping in an independent nonchalance, followed by gleeful boys. One attendant sprinkles rose-water on the spectators, and two or three others seem to have a general direction of the course of the train, and ask backsheesh for it whenever a stranger is met.

The procession gets tired occasionally and sits down in the dust of the road to rest. Sometimes it is accompanied by dancers and other performers to amuse the crowd. I saw one yesterday which had halted by the roadside, all the women except the bride squatting down in patient resignation. In a hollow square of spectators, in front, a male dancer was exhibiting his steps. Holding a wand perpendicularly before him with both hands, he moved backwards and forwards, with a mincing gait, exhibiting neither grace nor agility, but looking around with the most conceited expression I ever saw on a human face. Occasionally he would look down at his legs with the most approving glance, as much as to say, "I trust, God being great, that you are taking particular notice of those legs; it seems to me that they couldn't be improved." The fellow enjoyed his dancing if no one else did, and it was impossible to get him to desist and let the procession move on. At last the *cortege* made a *detour* round the man who seemed to be so popular with himself, and left him to enjoy his own performance.

Sometimes the expense of this *zeffeh*, or bridal procession, is shared by two parties, and I have seen two brides walking under the same canopy, but going to different husbands. The public is not excluded from an interest in these weddings. The house of a bridegroom, near the Mooskee, was illuminated a night or two before the wedding, colored lanterns were hung across the street, and story-tellers were engaged to recite in front of the house. On the night of the marriage there was a crowd which greatly enjoyed the indelicate songs and stories of the hired performers. Late in the evening an old woman appeared at a window and proclaimed that the husband was contented with his wife.

An accompaniment of a bridal procession which we sometimes saw we could not understand. Before the procession proper, walked another, preceded by a man carrying on his head a high wooden cabinet, with four legs, the front covered with pieces of looking-glass and bits of brass; behind him were musicians and attendants, followed by a boy on horseback, dressed richly in clothes too large for him and like a girl's. It turned out to be a parade before circumcision, the friends of the lad having taken advantage of the bridal ceremony of a neighbor to make a display. The wooden case was merely the sign of the barber who walked in the procession and was to perform the operation.

"I suppose you are married?" I ask Hadji when the procession has gone by.

"Yes, sir, long time."

"And you have never had but one wife?"

"Have one. He quite nuff for me."

"How old was she when you married her?"

"Oh, I marry he, when he much girl! I tink he eleven, maybe twelve, not more I tink."

Girls in Egypt are marriageable at ten or eleven, and it is said that if not married before they are fourteen they have an excellent chance of being old maids. Precocious to mature, they are quick to fall away and lose their beauty; the laboring classes especially are ugly and flabby before eighteen. The low mental, not to say physical, condition of Egyptian women is no doubt largely due to these early marriages. The girl is married and is a mother before she has an opportunity to educate herself or to learn the duties of wife or mother, ignorant of how to make a home pleasant and even of housekeeping, and when she is utterly unfit to have the care and training of a child. Ignorant and foolish, and, as Mr. Lane says, passionate, women and mothers can never produce a great race. And the only reform for Egypt that will give it new vitality and a place in the world must begin with the women.

The Khedive, who either has foresight or listens to good advice, issued a firman some years ago forbidding the marriage of girls under fifteen. It does not seem to be respected either in city or country; though I believe that it has some influence in the city, and generally girls are not married so young in Cairo as in the country. Yet I heard recently in this city of a man of sixty who took a wife of twelve. As this was not his first wife, it could not be said of him, as it is said of some great geniuses, that he struck twelve the first time.

CHAPTER VI.—MOSQUES AND TOMBS.

WHAT we in Cairo like most to do, is to do nothing in the charming winter weather—to postpone the regular and necessary sight-seeing to that limbo to which the Arabs relegate everything—*bookra*, that is, tomorrow. Why not as well go to the Pyramids or to Heliopolis or to the tombs of the Memlooks tomorrow! It is to be the same fair weather; we never plan an excursion, with the proviso, "If it does not rain." This calm certainty of a clear sky adds twenty-five per cent, to the value of life.

And yet, there is the Sirocco; that enervating, depressing south wind, when all the sands of the hot desert rise up into the air and envelope everything in grit and gloom. I have been on the Citadel terrace when the city was only dimly outlined in the thick air, and all the horizon and the sky were veiled in dust as if by a black Scotch mist. We once waited three days after we had set a time to visit the Pyramids, for the air to clear. The Sirocco is bad enough in the town, the fine dust penetrates the closed recesses of all apartments; but outside the city it is unbearable. Indeed any wind raises the sand disagreeably; and dust is the great plague of Egypt. The streets of Cairo, except those that are sprinkled, are seldom free from clouds of it. And it is an ancient dust. I suppose the powdered dead of thousands of years are blowing about in the air.

The desert makes itself apparent even in Cairo. Not only is it in the air, but it lies in wait close to the walls and houses, ready to enter at the gates, sifting in through every crevice. Only by constant irrigation can it be driven back. As soon as we pass beyond the compact city eastward, we enter the desert, unless we follow the course of some refreshing canal. The drive upon it is a favorite one on summer nights. I have spoken of the desert as hot; but it is always cool at night; and it is the habit of foreigners who are detained in Cairo in the summer to go every night to the desert to cool off.

The most conspicuous object in Cairo, from all points, is the Citadel, built on a bold spur of the Mokattam range, and the adjoining Mosque of Mohammed Ali in which that savage old reformer is buried. The mosque is rather Turkish than Saracenic, and its two slender minarets are much criticised. You who have been in Constantinople are familiar with the like slight and graceful forms in that city; they certainly are not so rich or elegant as many of the elaborately carved and more robust minarets of Cairo which the genius of the old architects reared in the sun-burst of Saracenic architecture; but they are very picturesque and effective in their position and especially against a poetic evening sky.

When Salah-e'-deen robbed the pyramids to build the Citadel, he doubtless thought he was erecting a fortification that would forever protect his city and be an enduring home for the Sultans of Egypt. But Mohammed Ali made it untenable as a fort by placing a commanding battery on the Mokattam ledge; and now the Citadel (by which I mean all the group of buildings) useless as a fort (except to overawe the city) and abandoned as a palace, is little more than a ghost-walk of former splendors. There are barracks in it; recruits are drilling in its squares; the minister-of-war occupies some of its stately apartments; the American General Stone, the chief officer of the Khedive's army, uses others; in some we find the printing presses and the bureaus of the engineers and the typographical corps; but vast halls and chambers of audience, and suites of apartments of the harem, richly carved and gilded, are now vacant and echo the footsteps of sentries and servitors. And they have the shabby look of most Eastern architecture when its first freshness is gone.

We sat in the room and on the platform where Mohammed Ali sat when the slaughter of the Memlooks was going on; he sat motionless, so it is reported, and gave no other sign of nervousness than the twisting of a piece of paper in his hands. And yet he must have heard the cries under his window, and, of course, the shots of the soldiers on the walls who were executing his orders. We looked down from the balcony into the narrow, walled lane, with its closed gates, in which the five hundred Memlooks were hemmed in and massacred. Think of the nerve of the old Turk, sitting still without changing countenance while five hundred, or more, gallant swash-bucklers were being shot in cool blood under his window! Probably he would not have been so impassive if he had seen one of the devoted band escape by spurring his horse through a break in the wall and take a fearful flying leap upon the rubbish below.

The world agrees to condemn this treacherous and ferocious act of Mohammed Ali and, generally, I believe, to feel grateful to him for it. Never was there a clan of men that needed exterminating so much as the Memlooks. Nothing less would have suited their peculiarities. They were merely a band of robbers, blackmailers, and freebooters, a terror to Egypt. Dislodged from actual power, they were still greatly to be dreaded, and no ruler was safe who did not obey them. The term Memlook means "a white male slave," and is still so used. The Memlooks, who originally were mostly Circassian white slaves, climbed from the position of favorites to that of tyrants. They established a long dynasty of sultans, and their tombs yonder at the edge of the desert are among the most beautiful specimens of the Saracenic architecture. Their sovereignty was overthrown by Sultan Selim in 1517, but they remained a powerful and aristocratic band which controlled

governors, corrupted even Oriental society by the introduction of monstrous vices, and oppressed the people. I suppose that in the time of the French invasion they may have been joined by bold adventurers of many nations. Egypt could have no security so long as any of them remained. It was doubtless in bad taste for Mohammed Ali to extend a friendly invitation to the Memlooks to visit him, and then murder them when they were caught in his trap; he finally died insane, and perhaps the lunacy was providentially on him at that time.

In the Citadel precincts is a hall occupied by the "parliament" of the Khedive, when it is in session; a parliament whose members are selected by the Viceroy from all over Egypt, in order that he may have information of the state of the country, but a body that has no power and certainly not so much influence in the state as the harem has. But its very assemblage is an innovation in the Orient, and it may lead in time to infinite gab, to election briberies and multitudinous legislation, the accompaniments of the highest civilization. We may yet live to see a member of it rise to enquire into the expenses of the Khedive's numerous family.

The great Mosque of Mohammed Ali is in the best repair and is the least frequented of any in Cairo. Its vast, domed interior, rich in materials and ambitious in design, is impressive, but this, like all other great mosques, strikes the Western man as empty. On the floor are beautiful rugs; a tawdry chandelier hangs in the center, and the great spaces are strung with lanterns. No one was performing ablution at the handsome fountain in the marble-paved court; only a single worshipper was kneeling at prayer in all the edifice. But I heard a bird singing sweetly in the airy height of the dome.

The view from the terrace of the mosque is the finest in Egypt, not perhaps in extent, but certainly in variety and objects of interest; and if the atmosphere and the light are both favorable, it is the most poetic. From it you command not only the city and a long sweep of the Nile, with fields of living green and dark lines of palms, but the ruins and pyramids of slumberous old Memphis, and, amid the yellow sands and backed by the desolate Libyan hills, the dreamy pyramids of Geezeh. We are advised to get this view at sunset, because then the light is soft and all the vast landscape has color. This is good advice so far as the city at our feet is concerned, with its hundreds of minarets and its wide expanse of flat roofs, palm-tops and open squares; there is the best light then also on the purple Mokattam hills; and the tombs of the Memlooks, north of the cemetery, with their fairy domes and exquisite minarets and the encompassing grey desert, the whole bathed in violet light, have a beauty that will linger with one who has once seen them forever. But looking beyond the Nile, you have the sun in your face. I should earnestly entreat the stranger to take this view at sunrise. I never saw it myself at that hour, being always otherwise engaged, but I am certain that the Pyramids and the Libyan desert would wake at early morning in a glow of transcendent beauty.

We drive out the gate or Bab e' Nasr beyond the desolate Moslem cemetery, to go to the tombs of the Circassian Memlook Sultans. We pass round and amid hills of rubbish, dirt, and broken pottery, the dumpings of the city for centuries, and travel a road so sandy that the horses can scarcely drag the heavy carriage through it. The public horses of Cairo are sorry beasts and only need a slight excuse for stopping at any time. There is nothing agreeable about the great Moslem cemetery; it is a field of sand-heaps, thickly dotted with little oven-shaped stucco tombs. They may be pleasanter below ground; for the vault into which the body is put, without a coffin, is high enough to permit its occupant to sit up, which he is obliged to do, whether he is able to sit up or not, the first night of his stay there, in order to answer the questions of two angels who come to examine him on his religious practices and views.

The Tombs of the Sultans, which are in the desert, are in fact vast structures,—tombs and mosques united—and are built of parti-colored stone. They are remarkable for the beautiful and varied forms of their minarets and for their aërial domes; the latter are covered with the most wonderful arabesque carving and tracing. They stand deserted, with the sand drifting about them, and falling to rapid decay. In the interiors are still traces of exquisite carving and color, but much of the ornamentation, being of stucco on rude wooden frames, only adds to the appearance of decay. The decay of finery is never respectable.

It is not correct, however, to speak of these mosque-tombs as deserted. Into all of them have crept families of the poor or of the vicious. And the business of the occupants, who call themselves guardians, is to extract backsheesh from the visitor. Spinning, knitting, baking, and all the simple household occupations go on in the courts and in the gaunt rooms; one tomb is used as a grist-mill. The women and girls dwelling there go unveiled; they were tattooed slightly upon the chin and the forehead, as most Egyptian women are; some of the younger were pretty, with regular features and handsome dark eyes. Near the mosques are lanes of wretched homes, occupied by as wretched people. The whole mortal neighborhood swarms (life out of death) with children; they are as thick as jars at a pottery factory; they are as numerous as the flies that live on the rims of their eyes and noses; they are as naked, most of them, as when they were born. The distended condition of their stomachs testify that they have plenty to eat, and they tumble about in the dirt, in the full enjoyment of this delicious climate. People can afford to be poor when nature is their friend.

CHAPTER VII.—MOSLEM WORSHIP.—THE CALL TO PRAYER.

I SHOULD like to go once to an interesting city where there are no sights. That city could be enjoyed; and conscience—which never leaves any human being in peace until it has nagged him into a perfect condition morally, and keeps punching him about frivolous little details of duty, especially at the waking morning hour—would not come to insert her thumb among the rosy fingers of the dawn.

Perhaps I do not make myself clear about conscience. Conscience is a kind of gastric juice that gnaws upon the very coatings of a person's moral nature, if it has no indigestible sin to feed on. Of course I know that neither conscience nor gastric juice has a thumb. And, to get out of these figures, all I wish to say is, that in Cairo, when the traveler is aware of the glow of the morning stealing into his room, as if the day were really opened gently (not ripped and torn open as it is in our own cold north) by a rosy-fingered maiden, and an atmosphere of sweet leisure prevails, then Conscience suggests remorselessly: "To-day you must go to the Pyramids," or, "You must take your pleasure in a drive in the Shoobra road," or "You must explore dirty Old Cairo and its Coptic churches," or "You must visit the mosques, and see the Howling Derweeshes."

But for this Conscience, I think nothing would be so sweet as the coming of an eastern morning. I fancy that the cool wind stirring in the palms is from the pure desert. It may be that these birds, so melodiously singing in the garden, are the small green birds who eat the fruits and drink the waters of Paradise, and in whose crops the souls of martyrs abide until Judgment. As I lie quite still, I hear the call of a muezzin from a minaret not far off, the voice now full and clear and now faint, as he walks around the tower to send his entreaty over the dark roofs of the city. I am not disturbed by this early call to the unconverted, for this is not my religion. With the clamor of morning church bells in Italy it is different; for to one born in New England, Conscience is in the bells.

Sometimes at midnight I am dimly conscious of the first call to prayer, which begins solemnly:

"Prayer is better than sleep."

But the night calls are not obligatory, and I do not fully wake. The calls during the night are long chants, that of the daytime is much shorter. Mr. Lane renders it thus:

"God is most Great" (four times repeated). "I testify that there is no deity but God" (twice). "I testify that Mohammed is God's Apostle" (twice). "Come to prayer" (twice). "Come to security" (twice). "God is most Great" (twice). "There is no deity but God."

The muezzin whom I hear when the first faint light appears in the east, has a most sonorous and sweet tenor voice, and his chant is exceedingly melodious. In the perfect hush of that hour his voice fills all the air, and might well be mistaken for a sweet entreaty out of heaven. This call is a long one, and is in fact a confession and proclamation as well as a call to prayer. It begins as follows:

"[I extol] the perfection of God, the Existing forever and ever" (three times): "the perfection of God, the Desired, the Existing, the Single, the Supreme: the perfection of God, the One, the Sole: the perfection of Him who taketh to Himself, in his great dominion, neither female companion nor male partner, nor any like unto Him, nor any that is disobedient, nor any deputy, nor any equal, nor any offspring. His perfection [be extolled]: and exalted be His name. He is a Deity who knew what hath been before it was, and called into existence what hath been; and He is now existing, as He was [at the first]. His perfection [be extolled]: and exalted be His name."

And it ends: "O God, bless and save and still beatify the beatified Prophet, our lord Mohammed. And may God, whose name be blessed and exalted, be well pleased with thee, O our lord El-Hassan, and with thee, O our lord El-Hoseyn, and with thee, O Aboo-Farrâg, O Sheykh of the Arabs, and with all the favorites ['.he welees'. of God. Amen."

The mosques of Cairo are more numerous than the churches in Rome; there are about four hundred, many of them in ruins, but nearly all in daily use. The old ones are the more interesting architecturally, but all have a certain attraction. They are always open, they are cool quiet retreats out of the glare of the sun and the noise of the street; they are democratic and as hospitable to the beggar in rags as to the pasha in silk; they offer water for the dusty feet of the pilgrim and a clean mat on which to kneel; and in their hushed walls, with no images to distract the mind and no ritual to rely on, the devout worshipper may feel the presence of the Unseen. At all hours you will see men praying there or reading the Koran, unconscious of any observers. Women I have seen in there occasionally, but rarely, at prayer; still it is not uncommon to see a group of poor women resting in a quiet corner, perhaps sewing or talking in low voices. The outward steps and open courts

are refuges for the poor, the friendless, the lazy, and the tired. Especially the old and decaying mosques, do the poor frequent. There about the fountains, the children play, and under the stately colonnades the men sleep and the women knit and sew. These houses of God are for the weary as well as for the pious or the repentant.

The mosques are all much alike. We enter by a few or by a flight of steps from the street into a large paved court, open to the sky, and surrounded by colonnades. There is a fountain in the center, a round or octagonal structure of carved stone, usually with a fanciful wooden roof; from faucets in the exterior, water runs into a surrounding stone basin about which the worshippers crouch to perform the ablutions before prayer. At one side of the court is the entrance to the mosque, covered by a curtain. Pushing this aside you are in a spacious room lighted from above, perhaps with a dome, the roof supported by columns rising to elegant arches. You will notice also the peculiar Arabic bracketing-work, called by architects "pendentive," fitting the angles and the transitions from the corners below to the dome. In decaying mosques, where the plaster has fallen, revealing the round stick frame-work of this bracketing, the perishable character of Saracenic ornament is apparent.

The walls are plain, with the exception of gilded texts from the Koran. Above, on strings extending across the room are little lamps, and very often hundreds of ostrich eggs are suspended. These eggs are almost always seen in Coptic and often in Greek churches. What they signify I do not know, unless the ostrich, which can digest old iron, is a symbol of the credulity that can swallow any tradition. Perhaps her eggs represent the great "cosmic egg" which modern philosophers are trying to teach (if we may be allowed the expression) their grandmothers to suck.

The stone pavement is covered with matting and perhaps with costly rugs from Persia, Smyrna, and Tunis. The end towards Mecca is raised a foot or so; in it is the prayer niche, towards which all worshippers turn, and near that is the high pulpit with its narrow steps in front; a pulpit of marble carved, or of wood cut in bewildering arabesque, and inlaid with pearl.

The oldest mosque in Cairo is Ahmed ebn e' Tooloon, built in 879 A.D., and on the spot where, according to a tradition (of how high authority I do not know), Abraham was prevented from offering up his son by the appearance of a ram. The modern name of this hill is, indeed, Kalat-el-Kebsh, the Citadel of the Ram. I suppose the tradition is as well based as is the belief of Moslems that it was Ishmael and not Isaac whose life was spared. The center of this mosque is an open court, surrounded by rows of fine columns, five deep on the East side; and what gives it great interest is the fact that the columns all support *pointed arches*, and exceedingly graceful ones, with a slight curve of the horse-shoe at the base. These arches were constructed about three centuries before the introduction of the pointed arch into Europe; their adoption in Europe was probably one of the results of the Crusades.

In this same court I saw an old Nebk tree, which grows on the spot where the ark of Noah is said to have rested after its voyage. This goes to show, if it goes to show anything, that the Flood was "general" enough to reach Egypt.

The mosque of Sultan Hassan, notwithstanding its ruined and shabby condition, is the finest specimen of pure Arabic architecture in the city; and its lofty and ornamented porch is, I think, as fine as anything of its kind in the world. One may profitably spend hours in the study of its exquisite details. I often found myself in front of it, wondering at the poetic invention and sensitiveness to the beautiful in form, which enabled the builders to reach the same effects that their Gothic successors only produced by the aid of images and suggestions drawn from every department of nature.

We ascend the high steps, pass through some dilapidated parts of the building, which are inhabited, and come to the threshold. Here the Moslem removes his shoes, or street-slippers, and carries them in his hand. Over this sill we may not step, shod as we are. An attendant is ready, however, with big slippers which go on over our shoes. Eager, bright little boys and girls put them on for us, and then attend us in the mosque, keeping a close watch that the slippers are not shuffled off. When one does get off, leaving the unholy shoe to touch the ground, they affect a sort of horror and readjust it with a laugh. Even the children are beginning to feel the general relaxation of bigotry. To-day the heels of my shoes actually touch the floor at every step, a transgression which the little girl who is leading me by the hand points out with a sly shake of the head. The attention of this pretty little girl looks like affection, but I know by sad experience that it means "backsheesh." It is depressing to think that her natural, sweet, coquettish ways mean only that. She is fierce if any other girl seeks to do me the least favor, and will not permit my own devotion to her to wander.

The mosque of Sultan Hassan was built in the fourteenth century, and differs from most others. Its great, open court has a square recess on each side, over which is a noble arch; the east one is very spacious, and is the place of prayer. Behind this, in an attached building, is the tomb of Hassan; lights are always burning over it, and on it lies a large copy of the Koran.

When we enter, there are only a few at their devotions, though there are several groups enjoying the serenity of the court; picturesque groups, all color and rags! In a far corner an old man is saying his prayers and near him a negro, perhaps a slave, also prostrates himself. At the fountain are three or four men preparing for devotion; and indeed the prayers begin with the washing. The ablution is not a mere form with these soiled laborers—though it does seem a hopeless task for men of the color of these to scrub themselves. They bathe the head, neck, breast, hands and arms, legs and feet; in fact, they take what might be called a fair bath in any other country. In our sight this is simply a wholesome "wash"; to them it is both cleanliness and religion, as we know, for Mr. Lane has taught us what that brown man in the blue gown is saying. It may help us to understand his acts if we transcribe a few of his ejaculations.

When he washes his face, he says:—"O God whiten my face with thy light, on the day when thou shalt whiten the faces of thy favorites; and do not blacken my face, on the day when Thou shalt blacken the faces of thine enemies." Washing his right arm, he entreats:—"O God, give me my book in my right hand; and reckon with me with an easy reckoning." Passing his wetted hand over his head under his raised turban, he says:—"O God, cover me with thy mercy, and pour down thy blessing upon me; and shade me under the shadow of thy canopy, on the day when there shall be no shade but its shade."

One of the most striking entreaties is the prayer upon washing the right foot:—"O God, make firm my feet upon the Sirat, on the day when feet shall slip upon it."

"Es Sirât" is the bridge, which extends over the midst of Hell, finer than a hair and sharper than the edge of a sword, over which all must pass, and from which the wicked shall fall into Hell.

In these mosques order and stillness always reign, and the devotions are conducted with the utmost propriety, whether there are single worshippers, or whether the mosque is filled with lines of gowned and turbaned figures prostrating themselves and bowing with one consent. But, much stress as the Moslems lay upon prayer, they say that they do not expect to reach Paradise by that, or by any merit of their own, but only by faith and forgiveness. This is expressed frequently both in prayers and in the sermons on Friday. A sermon by an Imam of a Cairo mosque contains these implorings:—"O God! unloose the captivity of the captives, and annul the debts of the debtors; and make this town to be safe and secure, and blessed with wealth and plenty, and all the towns of the Moslems, O Lord of the beings of the whole earth. And decree safety and health to us and to all travelers, and pilgrims, and warriors, and wanderers, upon thy earth, and upon thy sea, such as are Moslems, O Lord of the beings of the whole world. O Lord, we have acted unjustly towards our own souls, and if Thou do not forgive us and be merciful unto us, we shall surely be of those who perish. I beg of God, the Great, that He may forgive me and you, and all the people of Mohammed, the servants of God."

CHAPTER VIII.—THE PYRAMIDS.

THE ancient Egyptians of the Upper Country excavated sepulchres for their great dead in the solid rocks of the mountain; the dwellers in the lower country built a mountain of stone in which to hide the royal mummy. In the necropolis at Thebes there are the vast rock-tombs of the kings; at Sakkara and Geezeh stand the Pyramids. On the upper Nile isolated rocks and mountains cut the sky in pyramidal forms; on the lower Nile the mountain ranges run level along the horizon, and the constructed pyramids relieve the horizontal lines which are otherwise unbroken except by the palms.

The rock-tombs were walled up and their entrances concealed as much as possible, by a natural arrangement of masses of rock; the pyramids were completely encased and the openings perfectly masked. False passages, leading through gorgeously carved and decorated halls and chambers to an empty pit or a blind wall, were hewn in the rock-tombs, simply to mislead the violator of the repose of the dead as to the position of the mummy. The entrance to the pyramids is placed away from the center, and misleading passages run from it, conducting the explorer away from the royal sarcophagus. Rock-tomb and pyramid were for the same purpose, the eternal security of the mummy.

That purpose has failed; the burial-place was on too grand a scale, its contents were too tempting. There is no security for any one after death but obscurity; to preserve one's body is to lose it. The bones must be consumed if they would be safe, or else the owner of them must be a patriot and gain a forgotten grave. There is nothing that men so enjoy as digging up the bones of their ancestors. It is doubtful if even the Egyptian plunderers left long undisturbed the great tombs which contained so much treasure; and certainly the Persians, the Greeks, the Romans, the Saracens, left comparatively little for the scientific grave-robbers of our excellent age. They did, however, leave the tombs, the sarcophagi, most of the sculptures, and a fair share of the preserved dead.

But time made a pretty clean sweep of the mummy and nearly all his personal and real property. The best sculptures of his tomb might legally be considered in the nature of improvements attaching themselves to the realty, but our scientists have hacked them off and carried them away as if they were personal estate. We call the Arabs thieves and ghouls who prowl in the tombs in search of valuables. But motive is everything; digging up the dead and taking his property, tomb and all, in the name of learning and investigation is

respectable and commendable. It comes to the same thing for the mummy, however, this being turned out of house and home in his old age. The deed has its comic aspect, and it seems to me that if a mummy has any humor left in his dried body, he must smile to see what a ludicrous failure were his costly efforts at concealment and repose. For there is a point where frustration of plans may be so sweeping as to be amusing; just as the mummy himself is so ghastly that his aspect is almost funny.

Nothing more impresses the mind with the antiquity of Egypt than its vast cemeteries, into which the harvests of the dead have been gathered for so many thousands of years. Of old Memphis, indeed, nothing remains except its necropolis, whose monuments have outlasted the palaces and temples that were the wonder of the world. The magnificence of the city can be estimated by the extent of its burial-ground.

On the west side of the Nile, opposite Cairo, and extending south along the edge of the desert, is a nearly continuous necropolis for fifteen miles. It is marked at intervals by pyramids. At Geezeh are three large and several small ones; at Abooseer are four; at Sakkara are eleven; at Dashoor are four. These all belonged to the necropolis of Memphis. At Geezeh is the largest, that of Cheops or Shoofoo, the third king of the fourth dynasty, reigning at Memphis about 4235 B.C., according to the chronology of Mariette Bey, which every new discovery helps to establish as the most probably correct. This pyramid was about four hundred and eighty feet high, and the length of a side of its base was about seven hundred and sixty-four feet; it is now four hundred and fifty feet high and its base line is seven hundred and forty-six feet. It is big enough yet for any practical purpose. The old pyramid at Sakkara is believed to have been built by Ouenephes, the fourth king of the first dynasty, and to be the *oldest monument in the world*. Like the mounds of the Chaldeans, it is built in degrees or stages, of which there are five. Degraded now and buried at the base in its own rubbish, it rises only about one hundred and ninety feet above the ground.

It is a drive of two hours from Cairo to the Pyramids of Geezeh, over a very good road; and we are advised to go by carriage. Hadji is on the seat with the driver, keeping his single twinkling eye active in the service of the howadji. The driver is a polished Nubian, with a white turban and a white gown; feet and legs go bare. You wouldn't call it a stylish turnout for the Bois, but it would be all right if we had a gorgeous sais to attract attention from ourselves.

We drive through the wide and dusty streets of the new quarter. The barrack-like palace, on the left of abroad place, is the one in which the Khedive is staying just now, though he may be in another one to-night. The streets are the same animated theater-like scenes of vivid color and picturesque costume and indolent waiting on Providence to which we thought we should never become accustomed, but which are already beginning to lose their novelty. The fellaheen are coming in to market, trudging along behind donkeys and camels loaded with vegetables or freshly cut grass and beans for fodder. Squads of soldiers in white uniform pass; bugle notes are heard from Kasr e' Neel, a barrack of troops on the river. Here, as in Europe, the great business most seriously pursued is the drilling of men to stand straight, handle arms, roll their eyes, march with a thousand legs moving as one, and shoot on sight other human beings who have learned the same tricks. God help us, it is a pitiful thing for civilized people.

The banks of the Nile here above Boolak are high and steep. We cross the river on a fine bridge of iron, and drive over the level plain, opposite, on a raised and winding embankment. This is planted on each side with lebbekh and sycamore trees. Part of the way the trees are large and the shade ample; the roots going down into moist ground. Much of the way the trees are small and kept alive by constant watering. On the right, by a noble avenue are approached the gardens and the palace of Gezeereh. We pass by the new summer palace of Geezeh. Other large ones are in process of construction. If the viceroy is measured for a new suit of clothes as often as he orders a new palace, his tailors must be kept busy. Through the trees we see green fields, intersected with ditches, wheat, barley, and beans, the latter broad-sown and growing two to three feet high; here and there are lines of palms, clumps of acacias; peasants are at work or asleep in the shade; there are trains of camels, and men plowing with cows or buffaloes. Leaving the squalid huts that are the remains of once beautiful Geezeh, the embankment strides straight across the level country.

And there before us, on a rocky platform a hundred feet higher than the meadows, are the pyramids, cutting the stainless blue of the sky with their sharp lines. They master the eye when we are an hour away, and as we approach they seem to recede, neither growing larger nor smaller, but simply withdrawing with a grand reserve.

I suppose there are more "emotions" afloat about the pyramids than concerning any other artificial' objects. There are enough. It becomes constantly more and more difficult for the ordinary traveler to rise to the height of these accumulated emotions, and it is entirely impossible to say how much the excitement one experiences on drawing near them results from reading and association, and how much is due to these simple forms in such desolate surroundings. But there they stand, enduring standards, and every visitor seems inclined to measure his own height by their vastness, in telling what impression they produce upon *him*. They have been treated sentimentally, off-handedly, mathematically, solemnly, historically, humorously. They yield to no sort of treatment. They are nothing but piles of stone, and shabby piles at that, and they stand there to astonish people. Mr. Bayard Taylor is entirely right when he says that the pyramids are and will remain unchanged and unapproachably impressive however modern life may surge about them, and though a city should creep about their bases.

Perhaps they do not appear so gigantic when the visitor is close to them as he thought they would from their mass at a distance. But if he stands at the base of the great pyramid, and casts his eye along the steps of its enormous side and up the dizzy height where the summit seems to pierce the solid blue, he will not complain of want of size. And if he walks around one, and walks from one to another wading in the loose sand and under a midday sun, his respect for the pyramids will increase every moment.

Long before we reach the ascent of the platform we are met by Arab boys and men, sellers of antiquities, and most persistent beggars. The antiquities are images of all sorts, of gods, beasts, and birds, in pottery or in bronze, articles from tombs, bits of mummy-cloth, beads and scarabæi, and Roman copper coins; all of them at least five thousand years old in appearance.

Our carriage is stuck in the sand, and we walk a quarter of a mile up the platform, attended by a rabble of

coaxing, imploring, importunate, half-clad Bedaween. "Look a here, you take dis; dis ver much old, he from mummy; see here, I get him in tomb; one shillin; in Cairo you get him one pound; ver sheap. You no like? No anteeka, no money. How much?"

"One penny."

"Ah," ironically, "ket'-ther khâyarak (much obliged). You take him sixpence. Howadji, say, me guide, you want go top pyramid, go inside, go Sphinkee, allée tomba?"

Surrounded by an increasing swarm of guides and antiquity-hawkers, and beset with offers, entreaties, and opportunities, we come face to face with the great pyramid. The ground in front of it is piled high with its *debris*. Upon these rocks, in picturesque attitudes, some in the shade and some in the sun, others of the tribe are waiting the arrival of pyramid climbers; in the intense light their cotton garments and turbans are like white paint, brilliant in the sun, ashy in the shadow. All the shadows are sharp and deep. A dark man leaning on his spear at the corner of the pyramid makes a picture. At a kiosk near by carriages are standing and visitors are taking their lunch. But men, carriages, kiosks, are dwarfed in this great presence. It is, as I said, a shabby pile of stone, and its beauty is only that of mathematical angles; but then it is so big, it casts such a shadow; we all beside it are like the animated lines and dots which represent human beings in the etchings of Callot.

To be rid of importunities we send for the sheykh of the pyramid tribe. The Bedaween living here have a sort of ownership of these monuments, and very good property they are. The tribe supports itself mainly by tolls levied upon visitors. The sheykh assigns guides and climbers, and receives the pay for their services. This money is divided among the families; but what individuals get as backsheesh or by the sale of antiquities, they keep. They live near by, in huts scarcely distinguishable from the rocks, many of them in vacant tombs, and some have shanties on the borders of the green land. Most of them have the appearance of wretched poverty, and villainous faces abound. But handsome, intelligent faces and finely developed forms are not rare, either.

The Sheykh, venerable as Jacob, respectable as a New England deacon, suave and polite as he traditionally should be, wears a scarf of camel's hair and a bright yellow and black kuffia, put on like a hood, fastened about the head by a cord and falling over the shoulders. He apportioned his guides to take us up the pyramid and to accompany us inside. I had already sent for a guide who had been recommended to me in the city, and I found Ali Gobree the frank, manly, intelligent, quiet man I had expected, handsome also, and honesty and sincerity beaming from his countenance. How well-bred he was, and how well he spoke English. Two other men were given me; for the established order is that two shall pull and one shall push the visitor up. And it is easier to submit to the regulation than to attempt to go alone and be followed by an importunate crowd.

I am aware that every one who writes of the pyramids is expected to make a scene of the ascent, but if I were to romance I would rather do it in a fresher field. The fact is that the ascent is not difficult, unless the person is very weak in the legs or attempts to carry in front of himself a preposterous stomach. There is no difficulty in going alone; occasionally the climber encounters a step from three to four feet high, but he can always flank it. Of course it is tiresome to go up-stairs, and the great pyramid needs an "elevator"; but a person may leisurely zig-zag up the side without great fatigue. We went straight up at one corner; the guides insisting on taking me by the hand; the boosting Arab who came behind earned his money by grunting every time we reached a high step, but he didn't lift a pound.

We stopped frequently to look down and to measure with the eye the mass on the surface of which we were like flies. When we were a third of the way up, and turned from the edge to the middle, the height to be climbed seemed as great as when we started. I should think that a giddy person might have unpleasant sensations in looking back along the corner and seeing no resting-place down the sharp edges of the steps short of the bottom, if he should fall. We measure our ascent by the diminishing size of the people below, and by the widening of the prospect. The guides are perfectly civil, they do not threaten to throw us off, nor do they even mention backsheesh. Stopping to pick out shells from the nummulitic limestone blocks or to try our glasses on some distant object, we come easily to the summit in a quarter of an hour.

The top, thirty feet square, is strewn with big blocks of stone and has a flag-staff. Here ambitious people sometimes breakfast. Arabs are already here with koollehs of water and antiquities. When the whole party arrives the guides set up a perfunctory cheer; but the attempt to give an air of achievement to our climbing performance and to make it appear that we are the first who have ever accomplished the feat, is a failure. We sit down upon the blocks and look over Egypt, as if we were used to this sort of thing at home.

All that is characteristic of Egypt is in sight; to the west, the Libyan hills and the limitless stretch of yellow desert sand; to the north, desert also and the ruined pyramid of Abooroâsh; to the south, that long necropolis of the desert marked by the pyramids of Abooseér, Sakkarah, and Dashoor; on the east, the Nile and its broad meadows widening into the dim Delta northward, the white line of Cairo under the Mokattam hills, and the grey desert beyond. Egypt is a ribbon of green between two deserts. Canals and lines of trees stripe the green of the foreground; white sails flicker southward along the river, winging their way to Nubia; the citadel and its mosque shine in the sun.

An Arab offers to run down the side of this pyramid, climb the second one, the top of which is still covered with the original casing, and return in a certain incredible number of minutes. We decline, because we don't like to have a half-clad Arab thrust his antics between us and the contemplation of dead yet mighty Egypt. We regret our refusal afterwards, for there is nothing people like to read about so much as feats of this sort. Humanity is more interesting than stones. I am convinced that if Martha Rugg had fallen off the pyramid instead of the rock at Niagara Falls, people would have looked at the spot where she fell, and up at the stairs she came bobbing down, with more interest than at the pyramid itself. Nevertheless, this Arab, or another did, while we were there, climb the second pyramid like a monkey; he looked only a black speck on its side.

That accidents sometimes happen on the pyramids, I gather from the conversation of Hadji, who is full of both information and philosophy to-day.

"Sometime man, he fool, he go up. Man say, 'go this way.' Fool, he say, 'let me lone.' Umbrella he took him, threw him off; he dead in hundred pieces."

As to the selling of Scarabæi to travelers, Hadji inclines to the side of the poor:—"Good one, handsome one, —one pound. Not good for much—but what to do? Gentleman he want it; man he want the money."

For Murray's Guide-Book he has not more respect than guides usually have who have acted as interpreters in the collection of information for it. For "interpret" Hadji always says "spell."

"When the Murray come here I spell it to the man, the man to Murray and him put it down. He don't know anything before. He told me, what is this? I told him what it is. Something," with a knowing nod, "be new after Murray. Look here, Murray very old now."

Hadji understands why the cost of living has gone up so much in Egypt. "He was very sheap; now very different, dearer—because plenty people. I build a house, another people build a house, and another people he build a house. Plenty men to work, make it dear." I have never seen Hadji's dwelling, but it is probably of the style of those that he calls—when in the street we ask him what a specially shabby mud-wall with a ricketty door in it is—"a brivate house."

About the Great Pyramid has long waged an archaeological war. Years have been spent in studying it, measuring it inside and outside, drilling holes into it, speculating why this stone is in one position and that in another, and constructing theories about the purpose for which it was built. Books have been written on it, diagrams of all its chambers and passages, with accurate measurements of every stone in them, are printed. If I had control of a restless genius who was dangerous to the peace of society, I would set him at the Great Pyramid, certain that he would have occupation for a lifetime and never come to any useful result. The interior has peculiarities, which distinguish it from all other pyramids; and many think that it was not intended for a sepulchre mainly; but that it was erected for astronomical purposes, or as a witness to the true north, east, south, and west, or to serve as a standard of measure; not only has the passage which descends obliquely three hundred and twenty feet from the opening into the bed-rock, and permits a view of the sky from that depth, some connection with the observation of Sirius and the fixing of the Sothic year; not only is the porphyry sarcophagus that is in the King's Chamber, secure from fluctuations of temperature, a fixed standard of measure; but the positions of various stones in the passages (stones which certainly are stumbling-blocks to everybody who begins to think why they are there) are full of a mystic and even religious signification. It is most restful, however, to the mind to look upon this pyramid as a tomb, and that it was a sepulchre like all the others is the opinion of most scholars.

Whatever it was, it is a most unpleasant place to go into. But we wanted one idea of Cimmerian darkness, and the sensation of being buried alive, and we didn't like to tell a lie when asked if we had been in, and therefore we went. You will not understand where we went without a diagram, and you never will have any idea of it until you go. We, with a guide for each person, light candles, and slide and stumble down an incline; we crawl up an incline; we shuffle along a level passage that seems interminable, backs and knees bent double till both are apparently broken, and the torture of the position is almost unbearable; we get up the Great Gallery, a passage over a hundred and fifty feet long, twenty-eight high, and seven broad, and about as easy to ascend as a logging-sluice, crawl under three or four portcullises, and emerge, dripping with perspiration and covered with dust, into the king's chamber, a room thirty-four feet long, seventeen broad, and nineteen high. It is built of magnificent blocks of syenite, polished and fitted together perfectly, and contains the lidless sarcophagus.

If it were anywhere else and decently lighted, it would be a stylish apartment; but with a dozen torches and candles smoking in it and heating it, a lot of perspiring Arabs shouting and kicking up a dust, and the feeling that the weight of the superincumbent mass was upon us, it seemed to me too small and confined even for a tomb. The Arabs thought they ought to cheer here as they did on top; we had difficulty in driving them all out and sending the candles with them, in order that we might enjoy the quiet and blackness of this retired situation. I suppose we had for once absolute night, a room full of the original Night, brother of Chaos, night bottled up for four or five thousand years, the very night in which old Cheops lay in a frightful isolation, with all the portcullises down and the passages sealed with massive stones.

Out of this blackness the eye even by long waiting couldn't get a ray; a cat's eye would be invisible in it. Some scholars think that Cheops never occupied this sarcophagus. I can understand his feeling if he ever came in here alive. I think he may have gone away and put up "to let" on the door.

We scrambled about a good deal in this mountain, visited the so-called Queen's Chamber, entered by another passage, below the King's, lost all sense of time and of direction, and came out, glad to have seen the wonderful interior, but welcoming the burst of white light and the pure air, as if we were being born again. To remain long in that gulf of mortality is to experience something of the mystery of death.

Ali Gobree had no antiquities to press upon us, but he could show us some choice things in his house, if we would go there. Besides, his house would be a cool place in which to eat our lunch. We walked thither, a quarter of a mile down the sand slope on the edge of the terrace. We had been wondering where the Sphinx was, expecting it to be as conspicuous almost as the Pyramids. Suddenly, turning a sand-hill, we came upon it, the rude lion's body struggling out of the sand, the human head lifted up in that stiff majesty which we all know.

So little of the body is now visible, and the features are so much damaged that it is somewhat difficult to imagine what impression this monstrous union of beast and man once produced, when all the huge proportions stood revealed, and color gave a startling life-likeness to that giant face. It was cut from the rock of the platform; its back was patched with pieces of sandstone to make the *contour*; its head was solid. It was approached by flights of stairs descending, and on the paved platform where it stood were two small temples; between its paws was a sort of sanctuary, with an altar. Now, only the back, head and neck are above the drifting sand. Traces of the double crown of Upper and Lower Egypt which crowned the head are seen on the forehead, but the crown has gone. The kingly beard that hung from the chin has been chipped away. The vast wig—the false mass of hair that encumbered the shaven heads of the Egyptians, living or dead—still stands out on either side the head, and adds a certain dignity. In spite of the broken condition of the face, with the nose gone, it has not lost its character. There are the heavy eyebrows, the prominent cheek-bones, the full lips, the poetic chin, the blurred but on-looking eyes. I think the first feeling of the visitor is that the face is

marred beyond recognition, but the sweep of the majestic lines soon becomes apparent; it is not difficult to believe that there is a smile on the sweet mouth, and the stony stare of the eyes, once caught, will never be forgotten.

The Sphinx, grossly symbolizing the union of physical and intellectual force, and hinting at one of those recondite mysteries which we still like to believe existed in the twilight of mankind, was called Hor-em-Khoo ("the Sun in his resting-place"), and had divine honors paid to it as a deity.

This figure, whatever its purpose, is older than the Pyramid of Cheops. It has sat facing the east, on the edge of this terrace of tombs, expecting the break of day, since a period that is lost in the dimness of tradition. All the achievements of the race, of which we know anything, have been enacted since that figure was carved. It has seen, if its stony eyes could see, all the procession of history file before it. Viewed now at a little distance or with evening shadows on it, its features live again, and it has the calmness, the simple majesty that belong to high art. Old writers say that the face was once sweet and beautiful. How long had that unknown civilization lasted before it produced this art?

Why should the Sphinx face the rising sun? Why does it stand in a necropolis like a sleepy warden of the dead who sleep? Was it indeed the guardian of those many dead, the mighty who slept in pyramids, in rock-hewn tombs, in pits, their bodies ready for any pilgrimage; and does it look to the east expecting the resurrection?

Not far from the Sphinx is a marvelous temple of syenite, which the sand almost buries; in a well in one of its chambers was found the splendid red-granite statue of Chephren, the builder of the second pyramid, a piece of art which succeeding ages did not excel. All about the rock plateau are tombs, and in some of them are beautiful sculptures, upon which the coloring is fresh. The scenes depicted are of common life, the occupations and diversions of the people, and are without any religious signification. The admirable sculptures represent no gods and no funeral mysteries; when they were cut the Egyptian theology was evidently not constructed.

The residence of our guide is a tomb, two dry chambers in the rock, the entrance closed by a wooden door. The rooms are large enough for tables and chairs; upon the benches where the mummies have lain, are piled antique fragments of all sorts, set off by a grinning skull or a thigh-bone; the floor is covered with fine yellow sand. I don't know how it may have seemed to its first occupant, but we found it an excellent luncheon place, and we could sleep there calmly and securely, when the door was shut against the jackals—though I believe it has never been objected to a tomb that one couldn't sleep in it. While we sip our coffee Ali brings forth his antique images and scarabæi. These are all genuine, for Ali has certificates from most of the well-known Egyptologists as to his honesty and knowledge of antiquities. We are looking for genuine ones; those offered us at the pyramids were suspicious. We say to Ali:—

"We should like to get a few good scarabæi; we are entirely ignorant of them; but we were sent to you as an honest man. You select half a dozen that you consider the best, and we will pay you a fair price; if they do not pass muster in Cairo you shall take them back."

"As you are a friend of Mr. Blank," said Ali, evidently pleased with the confidence reposed in him, "you shall have the best I have, for about what they cost me."

The Scarabæus is the black beetle that the traveler will constantly see tumbling about in the sand, and rolling up balls of dirt as he does in lands where he has not so sounding a name. He was sacred to the old Egyptians as an emblem of immortality, because he was supposed to have the power of self-production. No mummy went away into the shades of the nether world without one on his breast, with spread-wings attached to it. Usually many scarabæi were buried with the mummy—several hundreds have been found in one mummy-case. They were cut from all sorts of stones, both precious and common, and made of limestone, or paste, hardened, glazed and baked. Some of them are exquisitely cut, the intaglio on the under side being as clean, true, and polished as Greek work. The devices on them are various; the name of a reigning or a famous king, in the royal oval, is not uncommon, and an authentic scarabæus with a royal name is considered of most value. I saw an insignificant one in soft stone and of a grey color, held at a hundred pounds; it is the second one that has ever been found with the name of Cheops on it. The scarabæi were worn in rings, carried as charms, used as seals; there are large coarse ones of blue pottery which seem to have been invitations to a funeral, by the inscriptions on them.

The Scarabæus is at once the most significant and portable *souvenir* of ancient Egypt that the traveler can carry away, and although the supply was large, it could not fill the demand. Consequently antique scarabæi are now manufactured in large quantities at Thebes, and in other places, and distributed very widely over the length of Egypt; the dealers have them with a sprinkling of the genuine; almost every peasant can produce one from his deep pocket; the women wear them in their bosoms.

The traveler up the Nile is pretty sure to be attacked with the fever of buying Scarabæi; he expects to happen upon one of great value, which he will get for a few piastres. It is his intention to do so. The Scarabæus becomes to him the most beautiful and desirable object in the world. He sees something fascinating in its shape, in its hieroglyphics, however ugly it may be to untaught eyes.

Ali selected our scarabæi. They did not seem to us exactly the antique gems that we had expected to see, and they did not give a high idea of the old Egyptian art. But they had a mysterious history and meaning; they had shared the repose of a mummy perhaps before Abraham departed from Ur. We paid for them. We paid in gold. We paid Ali for his services as guide. We gave him backsheesh on account of his kindness and intelligence, besides. We said good-bye to his honest face with regret, and hoped to see him again.

It was not long before we earnestly desired to meet him. He was a most accomplished fellow, and honesty was his best policy. There isn't a more agreeable Bedawee at the Pyramids; and yet Ali is a modern Egyptian, just like his scarabæi, all the same. The traveler who thinks the Egyptians are not nimble-witted and clever is likely to pay for his knowledge to the contrary. An accumulated experience of five thousand years, in one spot, is not for nothing.

We depart from the pyramids amid a clamor of importunity; prices have fallen to zero; antiquities old as Pharaoh will be given away; "backsheesh, backsheesh, O Howadji," "I havn't any bread to *mangere*, I have six

children; what is a piastre for eight persons?" They run after us, they hang upon the carriage, they follow us a mile, begging, shrieking, howling, dropping off one by one, swept behind by the weight of a copper thrown to them.

The shadows fall to the east; there is a lovely light on the plain; we meet long lines of camels, of donkeys, of fellaheen returning from city and field. All the west is rosy; the pyramids stand in a purple light; the Sphinx casts its shade on the yellow sand; its expectant eyes look beyond the Nile into the mysterious East.

CHAPTER IX.—PREPARATIONS FOR A VOYAGE.

WE are giving our minds to a name for our dahabeëh. The owners have desired us to christen it, and the task is getting heavy. Whatever we are doing; guiding a donkey through the mazes of a bazaar; eating oranges at the noon breakfast; watching the stream of color and fantastic apparel, swaying camels and dashing harem-equipage with running saïses and outriding eunuchs, flowing by the hotel; following a wedding procession in its straggling parade, or strolling vacantly along, knocked, jostled, evaded by a dozen races in a dozen minutes and lost in the whirl, color, excitement of this perpetual masquerade, we are suddenly struck with, "what *shall* we call that boat?"

We want a name that is characteristic of the country and expressive of our own feelings, poetic and not sentimental, sensible and not common-place. It seems impossible to suggest a good name that is not already borne by a dahabeëh on the river—names such as the Lotus, the Ibis, the Gazelle, Cleopatra, Zenobia, names with an Eastern flavor. And we must have not only a name for the boat, but a motto or device for our pennant, or "distinguisher flag," as the dragoman calls the narrow fifty feet long strip of bunting that is to stream from the forward yard. We carry at the stern the flag of our country, but we float our individuality in the upper air. If we had been a bridal party we should of course have taken some such device as that of a couple who went up the river under the simple but expressive legend of "Nestle-down," written on their banner.

What would *you* name a Nile dahabeëh?

The days go all too rapidly for us to catch the shifting illusions about us. It is not so much what we see of the stated sights that can be described, but it is the atmosphere in which we live that makes the strangeness of our existence. It is as if we had been born into another world. And the climate is as strange as the people, the costumes, the habits, the morals. The calendar is bewitched. December is a mixture of September and July. Alas, yes. There are the night-fogs of September, and the mosquitoes of July. You cannot tell whether the season is going backwards or forwards. But for once you are content to let Providence manage it, at least so long as there is a north wind, and you forget that the sky has any shade other than blue.

And the prophecy of the poet is realized. The nights are filled with music, and the cares that infest the day are invariably put off till tomorrow, in this deliciously procrastinating land. Perhaps, however, Mr. Longfellow would not be satisfied with the music; for it seems to be the nasal daughter of Lassitude and Monotony, ancient gods of the East. Two or three strings stretched over a sounding skin and a parchment drum suffice to express the few notes that an Arab musician commands; harmony does not enter into his plan. Yet the people are fond of what they consider music. We hear on all sides at night the picking of strings, the throb of the darabooka and the occasional outburst of a wailing and sentimental strain. Like all barbarous music, this is always minor. When the performers are sailors or common strollers, it is doubtless exactly the same music that delighted the ancient Egyptians; even the instruments are the same, and the method of clapping the hands in accentuation of the music is unchanged.

There is a *café chantant* on one side of the open, tree-grown court of a native hotel, in the Ezbekeëh where one may hear a mongrel music, that is not inexpressive of both the morals and the mixed condition of Cairo to-day. The instruments of the band are European; the tunes played are Egyptian. When the first strain is heard we say that it is strangely wild, a weird and plaintive minor; but that is the whole of it. The strain is repeated over and over again for a half hour, as if it were ground out of a coffee-mill, in an iteration sufficient to drive the listener insane, the dissolute scraping and thumping and barbarous dissonance never changing nor ending. From time to time this is varied with singing, of the nasal, fine-tooth-comb order, with the most extraordinary attempts at shakes and trills, and with all the agony of a moonlit cat on a house-top. All this the grave Arabs and young Egyptian rakes, who sit smoking, accept with entire satisfaction. Later in the evening dancing begins and goes on with the strumming, monotonous music till at least the call for morning prayer.

In the handsome Ezbekeëh park or garden, where there are shady walks and some fine sycamores and

banyans to be seen, a military band plays every afternoon, while the foreigners of both sexes, and Egyptian men promenade. Of course no Egyptian lady or woman of respectability is ever seen in so public a place. In another part of the garden, more retired, a native band is always playing at nightfall. In this sheltered spot, under the lee of some gigantic rock and grotto-work are tables and chairs, and a divan for the band. This rock has water pleasantly running through it, but it must have been struck by somebody besides Moses, for beer is brought out of its cool recesses, as well. Rows of men of all colors and costumes may be seen there, with pipe and mug and coffee cup; and on settees more elevated and next the grotto, are always sitting veiled women, in outer wrappers of black silk, sometimes open enough to show an underskirt of bright color and feet in white slippers. These women call for beer or something stronger, and smoke like the men; they run no risk in being in this publicity, for they have nothing to lose here or elsewhere. Opposite them on a raised divan, not unlike a roomy bedstead, sits the band.

It is the most disreputable of bands. Nothing in the whole East so expressed to me its fagged-out dissoluteness as this band and its performances. It is a sleepy, nonchalant band, as if it had been awake all the previous night; some of its members are blear-eyed, some have one eye, some have two; they are in turbans, in tarbooshes, in gowns of soiled silk, of blue cotton, of white drilling. It is the feeblest band; and yet it is subject to spurts of bacchantic fervor. Sometimes all the instruments are striving together, and then only one or two dribble the monotonous refrain; but somehow, with all the stoppings to light cigarettes and sip coffee, the tune is kept groaning on, in a minor that is as wild as the desert and suggestive of sin.

The instruments are as African as the music. There is the *darabooka*, a drum made of an earthen or wooden cylinder with a flaring head, over which is stretched a parchment; the *tar*, a kind of tambourine; *kemengeh*, a viol of two strings, with a cocoa-nut sounding-body; the *kanoon*, an instrument of strings held on the knees, and played with the fingers; the *'od*, a sort of guitar with seven double strings; played with a plectrum, a slip of vultures' feather held between the thumb and finger; and the *nay*, a reed-flute blown at the end.

In the midst of the thumping and scraping, a rakish youth at the end, is liable, at any moment, to throw back his head and break out in a soft womanish voice, which may go no farther than a nasal *yah, ah, m-a-r-r*, that appears to satisfy his yearnings; or it may expand into a droning song, "*Ya benat Iskendereeyeh*," like that which Mr. Lane renders:—

"O ye damsels of Alexandria!
Your walk over the furniture is alluring:
Ye wear the Kashmeer shawl with embroidered work,
And your lips are sweet as sugar."

Below the divan sit some idlers or supernumeraries, who, as inclination moves them, mark the rhythm by striking the palms of the hands together, or cry out a prolonged *ah-yah*, but always in a forgetful, uninterested manner, and then subside into silence, while the picking and throbbing of the demoralized tune goes on. It is the "devilish iteration" of it, I think, that steals away the senses; this, and some occult immorality in the debased tune, that blots virtue out of the world. Yet there is something comic in these blinking owls of the night, giving sentimental tongue to the poetic imagery of the Eastern love-song—"for a solitary gazelle has taken away my soul":—

"The beloved came to me with a vacillating gait;
And her eyelids were the cause of my intoxication.
I extended my hand to take the cup;
And was intoxicated by her eyes.
O thou in the rose-colored dress!
O thou in the rose-colored dress!
Beloved of my heart! remain with me."

Or he pipes to the "dark-complexioned, and with two white roses":—

"O damsel! thy silk shirt is worn out, and thine arms have become visible,
And I fear for thee, on account of the blackness of thine eyes.
I desire to intoxicate myself, and kiss thy cheeks,
And do deeds that Antar did not."

To all of which the irresponsible chorus, swaying its head, responds *O! y-a-a-a-h!* And the motley audience sips and smokes; the veiled daughters of sin flash invitation from their kohl-stained eyes; and the cool night comes after the flaring heat of the day; and all things are as they have been for thousands of years. It is time to take you to something religious.

The Howling Derweeshes are the most active religionists in the East; I think they spend more force in devotion than the Whirling Derweeshes, though they are probably not more meritorious. They exceed our own western "Jumpers," and by contrast make the worship of our dancing Shakers tame and worldly. Of all the physical manifestations of religious feeling there is none more warming than the *zikr* of these devotees. The derweeshes are not all wanderers, beggars, saints in patched garments and filthy skin; perhaps the most of those who belong to one of the orders pursue some regular occupation; they are fishermen, laborers in the fields, artisans, and water-carriers, and only occasionally join in the ceremonies, processions and *zikrs* of their faith. I have seen a laborer drop into the ring, take his turn at a *zikr*, and drop out again, very much as the western man happens in and takes a hand in a "free fight," and then retires.

This mosque at which the Howling Derweeshes perform is circular, and large enough to admit a considerable number of spectators, who sit, or stand against the wall. Since the exercise is one of the sights of the metropolis, and strangers are expected, it has a little the air of a dress-parade, and I could not but fear that the devotion lost somewhat of its singleness of purpose. When we enter, about forty men stand in an oblong ring facing each other; the ring is open towards the *mehhrab*, or niche which marks the direction of Mecca. In the opening stands the Sheykh, to direct the performance; and at his left are seated the musicians.

The derweeshes have divested themselves of turbans, fezes, outer gowns and slippers, which lie in a heap in the middle of the circle, an indistinguishable mass of old clothes, from which when the owners come to draw they cannot fail to get as good as they deposited. The ceremony begins with a little uneasiness on the part of the musical instruments; the sheykh bows his head and brings the palms of his hands together; and the derweeshes, standing close together, with their hands straight at their sides, begin slowly to bow and to sway to the right in a compound motion which is each time extended. The *daraboo-ka* is beaten softly and the *'od* is picked to a slow measure. As the worshippers sway, they chant, *La ilaha illa-Allah* ("There is no deity but God") in endless repetition, and imperceptibly quickening the enunciation as they bow more rapidly. The music gets faster, and now and again one of the roguish boys who is thumping the drum breaks out into vocal expression of his piety or of his hilarity. The circle is now under full swing, the bowings are lower and much more rapid, and the ejaculation has become merely *Allah, Allah, Allah*, with a strong stress on the final syllable.

The peculiarities of the individual performers begin to come out. Some only bow and swing in a perfunctory manner; others throw their strength into the performance, and their excitement is evinced by the working of the face and the rolling of the eyes. Many of them have long hair, which has evidently known neither scissors nor comb for years, and is matted and twisted in a hopeless tangle. One of the most conspicuous and the least clad, a hairy man of the desert, is, exactly in apparel and features, like the conventional John the Baptist. His enormous shock of faded brown hair is two feet long and its ends are dyed yellow with henna. When he bends forward his hair sweeps the floor, and when he throws his head back the mass whips over with a *swish* through the air. The most devout person, however, is a negro, who puts all the fervor of the tropics into his exercise. His ejaculations are rolled out with extraordinary volume, and his black skin shines with moisture; there is, too, in his swaying and bowing, an *abandon*, a laxity of muscles, and a sort of jerk that belong only to his sympathetic race.

The exercise is every moment growing more rapid, but in regular increments, as the music hastens—five minutes, ten minutes, fifteen minutes—until there is a very high pressure on, the revolutions of the cylinder are almost one in two seconds, and the piston moves quicker and quicker. The music, however, is not louder, only more intense, and now and then the reed-flute executes a little obligato, a plaintive strain, that steals into the frenzy like the note of a lost bird, sweet as love and sad as death. The performers are now going so rapidly that they can only ejaculate one syllable, *'ah, 'lah, 'lah*, which is aspirated in a hoarse voice every time the head is flung forward to the floor. The hands are now at liberty, and swing with the body, or are held palm to palm before the face. The negro cannot longer contain himself but breaks occasionally into a shrill "hoo!" He and two or three others have "the power," and are not far from an epileptic fit.

There is a limit, however, to the endurance of the body; the swaying has become so rapid that it is difficult to distinguish faces, and it is impossible for the performers to repeat even a syllable of the name of *Allah*, all they can do is to push out from the depths of the lungs a vast hoarse aspiration of *la-a-h*, which becomes finally a gush exactly like the cut-off of a steam engine, short and quick.

The end has nearly come; in vain the cymbals clang, in vain the drum is beaten harder, and the horn calls to quicker work. The limit is reached, and while the reed expresses its plaintive fear, the speed slackens, the steam puffs are slower, and with an irregular *hoo!* from the colored brother, the circle stands still.

You expect to see them sink down exhausted. Not a bit of it. One or two having had enough of it, take their clothes and withdraw, and their places are filled by others and by some very sensible-looking men, tradespeople evidently. After a short rest they go through the same or a similar performance, and so on for an hour and a half, the variations being mainly in the chanting. At the end, each derweesh affectionately embraces the Sheykh, kisses his hand without servility, resumes his garments and quietly withdraws. They seem to have enjoyed the exercise, and certainly they had plenty of it. I should like to know what they think of us, the infidel spectators, who go to look at their religious devotions as if they were a play.

That derweesh beggar in a green turban is by that token a shereef, or descendant of the Prophet. No one but a shereef is allowed to wear the green turban. The shereefs are in all ranks of society, many of them wretched paupers and in the most menial occupations; the title is inherited from either parent and the representatives of the race have become common. Some who are entitled to the green turban wear the white instead, and prefer to be called *Sevd* (master or lord) instead of *Shereef*. Such a man is *Seyd Sadat*, the most conspicuous representative of the family of the Prophet in Cairo. His ancestors for a long period were the trustees of the funds of all the great mosques of Cairo, and consequently handled an enormous revenue and enjoyed great power. These millions of income from the property of the mosques the Khedive has diverted to his own purposes by the simple process of making himself their trustee. Thus the secular power interferes every few centuries, in all countries, with the accumulation of property in religious houses. The strict Moslems think with the devout Catholics, that it is an impious interference.

Seyd Sadat lives in the house that his family have occupied for over eight centuries! It is perhaps the best and richest specimen of Saracenic domestic architecture now standing in the East. This house, or collection of houses and disconnected rooms opening upon courts and gardens, is in some portions of it in utter decay; a part, whose elegant arches and marvelous carvings in stone, with elaborate hanging balconies and painted recesses, are still studies of beauty, is used as a stable. The inhabited rooms of the house are tiled two-thirds of the way to the lofty ceilings; the floors are of variegated marbles, and the ceilings are a mass of wood in the most intricate arabesque carving, and painted in colors as softly blended as the hues of an ancient camels' hair shawl. In one of these gorgeous apartments, the furniture of which is not at all in keeping with the decorations (an incongruity which one sees constantly in the East—shabbiness and splendor are indissolubly married), we are received by the Descendant with all the ceremony of Eastern hospitality. Seated

upon the divan raised above the fountain at one end of the apartment, we begin one of those encounters of compliments through an interpreter, out of which the traveler always comes beaten out of sight. The Seyd is a handsome intelligent man of thirty-five, sleek with good living and repose, and a master of Oriental courtesy. His attire is all of silk, the blue color predominating; his only ornament is a heavy gold chain about the neck. We frame long speeches to the Seyd, and he appears to reply with equal verbosity, but what he says or what is said to him we never know. The Eastern dragoman is not averse to talking, but he always interprets in a sort of short-hand that is fatal to conversation. I think the dragomans at such interviews usually translate you into what they think you ought to say, and give you such a reply as they think will be good for you.

"Say to his lordship that we thank him for the honor of being permitted to pay our respects to a person so distinguished."

"His excellency (who has been talking two minutes) say you do him too much honor."

"We were unwilling to leave Cairo without seeing the residence of so celebrated a family."

"His excellency (who has now got fairly going) feels in deep the visit of strangers so distinguish."

"It is a great pleasure also to us to see an Arab house so old and magnificent."

"His excellency (who might have been reciting two chapters of the Koran in the interval) say not to mention it; him sorry it is not more worth you to see."

The attendants bring sherbet in large and costly cups, and chibooks elegantly mounted, and the conversation flounders along. The ladies visit the harem above, and we look about the garden and are shown into room after room, decorated in endless variety and with a festivity of invention and harmony of color which the moderns have lost. The harem turns out to be, like all ordinary harems, I think, only mysterious on the outside. We withdraw with profuse thanks, frittered away through our dragoman, and "His excellency say he hope you have pleasant voyage and come safe to your family and your country." About the outer court, and the door where we mount our donkeys, are many idlers in the sun, half beggars, half attendants, all of whom want backsheesh, besides the regular servants who expect a fee in proportion to the "distinguish" of the visitor. They are probably not unlike the clients of an ancient Roman house, or the retainers of a baronial lord of the middle ages.

If the visitor, however, really desires to see the antiquities of the Christian era, he will ride out to Old Cairo, and mouse about among the immense rubbish heaps that have been piled there since Fostat (as the ancient city was called) was reduced to ashes, more than seven hundred years ago, by a fire which raged nearly two months. There is the ruined mosque of Amer, and there are the quaint old Coptic convents and churches, built about with mud walls, and hidden away amid mounds of rubbish. To these dust-filled lanes and into these mouldering edifices the antiquarian will gladly go. These churches are the land of the flea and the home of the Copt. Anything dingier, darker, dirtier, doesn't exist. To one of them, the Sitt Miriam, Church of Our Lady, we had the greatest difficulty in getting admission. It is up-stairs in one of the towers of the old Roman gateway of Babylon. It is a small church, but it has five aisles and some very rich wood-carving and stone-mosaics. It was cleaner than the others because it was torn to pieces in the process of renovation. In these churches are hung ostrich eggs, as in the mosques, and in many of them are colored marbles, and exquisite mosaics of marble, mother-of-pearl, and glass. Aboo Sirgeh, the one most visited, has a subterranean chapel which is the seat of an historical transaction that may interest some minds. There are two niches in the wall, and in one of them, at the time of the Flight into Egypt, the Virgin Mary rested with the Child, and in the other St. Joseph reposed. That is all.

A little further on, by the river bank, opposite the southern end of the island of Rhoda, the Moslems show you the spot where little Moses lay in his little basket, when the daughter of Pharaoh came down to bathe (for Pharaoh hadn't a bath-tub in his house) and espied him. The women of the Nile do to-day exactly what Pharaoh's daughter and her maidens did, but there are no bulrushes at this place now, and no lad of the promise of Moses is afloat.

One can never have done with an exploration of Cairo, with digging down into the strata of overlying civilizations, or studying the shifting surface of its Oriental life. Here, in this Old Cairo, was an ancient Egyptian town no doubt; the Romans constructed here massive walls and towers; the followers of St. Mark erected churches; the friends of Mohammed built mosques; and here the mongrel subjects of the Khedive, a mixture of ancient Egyptian, conquering Arabian, subject Nubian, enslaved Soudan, inheritors of all civilizations and appropriators of none, kennel amid these historic ash-heaps, caring neither for their past nor their future. But it is drawing towards the middle of December; there are signs that warn us to be off to the south. It may rain. There are symptoms of chill in the air, especially at night, and the hotel, unwarmed, is cheerless as a barn, when the sun does not shine. Indeed, give Cairo the climate of London in November and everybody would perish in a week. Our preparations drift along. It is always "tomorrow." It requires a week to get the new name of the boat printed on a tin. The first day the bargain for it is made; the work is to be finished *bookra*, tomorrow. Next day the letters are studied. The next the tin is prepared. The next day is Friday or Wednesday or some other day in which repose is required. And the next the workman comes to know what letters the howadji desires to have upon the tin, and how big a sign is required.

Two other necessary articles remain to be procured; rockets and other fire-works to illuminate benighted Egypt, and medicines. As we were not taking along a physician and should find none of those experimenting people on the Nile, I did not see the use of carrying drugs. Besides we were going into the one really salubrious region of the globe. But everybody takes medicines; you must carry medicines. The guide-book gives you a list of absolutely essential, nasty drugs and compounds, more than you would need if you were staying at home in an artificial society, with nothing to do but take them, and a physician in every street.

I bought chunks of drugs, bottles of poisons, bundles of foul smells and bitter tastes. And then they told me that I needed balances to weigh them in. This was too much. I was willing to take along an apothecary's shop on this pleasure excursion; I was not willing to become an apothecary. No, I said, if I am to feed out these nauseous things on the Nile, I will do it generously, according to taste, and like a physician, never stinting the quantity. I would never be mean about giving medicine to other people. And it is not difficult to get up a

reputation for generosity on epsom salts, rhubarb and castor oil.

We carried all these drugs on the entreaty of friends and the druggist, who said it would be very unsafe to venture so far without them. But I am glad we had them with us. The knowledge that we had them was a great comfort. To be sure we never experienced a day's illness, and brought them all back, except some doses that I was able to work off upon the crew. There was a gentle black boy, who had been stolen young out of Soudan, to whom it was a pleasure to give the most disagreeable mixtures; he absorbed enormous doses as a lily drinks dew, and they never seemed to harm him. The aboriginal man, whose constitution is not weakened by civilization, can stand a great amount of doctor's stuff. The Nile voyager is earnestly advised to carry a load of drugs with him; but I think we rather overdid the business in castor-oil; for the fact is that the people in Nubia fairly swim in it, and you can cut the cane and suck it whenever you feel like it.

By all means, go drugged on your pleasure voyage. It is such a cheerful prelude to it, to read that you will need blue-pills, calomel, rhubarb, Dover's powder, James's powder, carboic acid, laudanum, quinine, sulphuric acid, sulphate of zinc, nitrate of silver, ipecacuanha, and blistering plaster. A few simple directions go with these. If you feel a little unwell, take a few blue pills, only about as many as you can hold in your hand; follow these with a little Dover's powder, and then repeat, if you feel worse, as you probably will; when you rally, take a few swallows of castor-oil, and drop into your throat some laudanum; and then, if you are alive, drink a dram of sulphuric acid. The consulting friends then generally add a little rice-water and a teaspoonful of brandy.

In the opinion of our dragoman it is scarcely reputable to go up the Nile without a store of rockets and other pyrotechnics. Abd-el-Atti should have been born in America. He would enjoy a life that was a continual Fourth of July. He would like his pathway to be illuminated with lights, blue, red, and green, and to blaze with rockets. The supreme moment of his life is when he feels the rocket-stick tearing out of his hand. The common fire-works in the Mooskee he despised; nothing would do but the government-made, which are very good. The passion of some of the Egyptians for fire-arms and gunpowder is partially due to the prohibition. The government strictly forbids the use of guns and pistols and interdicts the importation or selling of powder. On the river a little powder and shot are more valued than money.

We had obtained permission to order some rockets manufactured at the government works, and in due time we went with Abd-el-Atti to the bureau at the citadel to pay for them. The process was attended with all that deliberation which renders life so long and valuable in the East.

We climbed some littered and dusty steps, to a roof terrace upon which opened several apartments, brick and stucco chambers with cement floors, the walls whitewashed, but yellow with time and streaked with dirt. These were government offices, but office furniture was scarce. Men and boys in dilapidated gowns were sitting about on their heels smoking. One of them got up and led the way, and pulling aside a soiled curtain showed us into the presence of a bey, a handsomely dressed Turk, with two gold chains about his neck, squatting on a ragged old divan at one end of the little room; and this divan was absolutely all the furniture that this cheerless closet, which had one window obscured with dust, contained. Two or three officers were waiting to get the bey's signature to papers, and a heap of documents lay beside him, with an inkhorn, on the cushions. Half-clad attendants or petitioners shuffled in and out of the presence of this head of the bureau. Abd-el-Atti produced his papers, but they were not satisfactory, and we were sent elsewhere.

Passing through one shabby room after another, we came into one dimmer, more stained and littered than the others. About the sides of the room upon low divans sat, cross-legged, the clerks. Before each was a shabby wooden desk which served no purpose, however, but to hold piles of equally shabby account books. The windows were thick with dust, the floor was dirty, the desks, books, and clerks were dirty. But the clerks were evidently good fellows, just like those in all government offices—nothing to do and not pay enough to make them uneasy to be rich. They rolled cigarettes and smoked continually; one or two of them were casting up columns of figures, holding the sheet of paper in the left hand and calling each figure in a loud voice (as if a little doubtful whether the figure would respond to that name); and some of them wrote a little, by way of variety. When they wrote the thin sheet of paper was held in the left hand and the writing done upon the palm (as the Arabs always write); the pen used was a blunt reed and the ink about as thick as tar. The writing resulting from these unfavorable conditions is generally handsome.

Our entry and papers were an event in that office, and the documents became the subject of a general conversation. Other public business (except the cigarettes) was suspended, and nearly every clerk gave his opinion on the question, whatever it was. I was given a seat on a rickety divan, coffee was brought in, the clerks rolled cigarettes for me and the business began to open; not that anybody showed any special interest in it, however. On the floor sat two or three boys, eating their dinner of green bean leaves and some harmless mixture of grease and flour; and a cloud of flies settled on them undisturbed. What service the ragged boys rendered to the government I could not determine. Abd-el-Atti was bandying jocularities with the clerks, and directing the conversation now and then upon the rockets.

In course of time a clerk found a scrap of paper, daubed one side of it with Arabic characters, and armed with this we went to another office and got a signature to it. This, with the other documents, we carried to another room much like the first, where the business appeared to take a fresh start; that is, we sat down and talked; and gradually induced one official after another to add a suggestion or a figure or two. Considering that we were merely trying to pay for some rockets that were ready to be delivered to us, it did seem to me that almost a whole day was too much to devote to the affair. But I was mistaken. The afternoon was waning when we went again to the Bey. He was still in his little "cubby," and made room for me on the divan. A servant brought coffee. We lighted cigarettes, and, without haste, the bey inked the seal that hung to his gold chain, wet the paper and impressed his name in the proper corner. We were now in a condition to go to the treasury office and pay.

I expected to see a guarded room and heavily bolted safes. Instead of this there was no treasury apartment, nor any strong box. But we found the "treasury" walking about in one of the passages, in the shape of an old Arab in a white turban and faded yellow gown. This personage fished out of his deep breast-pocket a rag of a purse, counted out some change, and put what we paid him into the same receptacle. The Oriental simplicity of the transaction was pleasing. And the money ought to be safe, for one would as soon think of robbing a

derweesh as this yellow old man.

The medicine is shipped, the rockets are on board, the crew have been fitted out with cotton drawers, at our expense, (this garment is an addition to the gown they wear), the name of the boat is almost painted, the flags are ready to hoist, and the dahabeëh has been taken from Boulak and is moored above the drawbridge. We only want a north wind.

CHAPTER X.—ON THE NILE.

WE have taken possession of our dahabeëh, which lies moored under the bank, out of the current, on the west side of the river above the bridge. On the top of the bank are some structures that seem to be only mounds and walls of mud, but they are really "brivate houses," and each one has a wooden door, with a wooden lock and key. Here, as at every other rod of the river, where the shore will permit, the inhabitants come to fill their water-jars, to wash clothes, to bathe, or to squat on their heels and wait for the Nile to run dry.

And the Nile is running rapidly away. It sweeps under the arches of the bridge like a freshet, with a current of about three miles an hour. Our *sandal* (the broad clumsy row-boat which we take in tow) is obliged to aim far above its intended landing-place when we cross, and four vigorous rowers cannot prevent its drifting rapidly down stream. The Nile is always in a hurry on its whole length; even when it spreads over flats for miles, it keeps a channel for swift passage. It is the only thing that is in a hurry in Egypt; and the more one sees it the stronger becomes the contrast of this haste with the flat valley through which it flows and the apathetic inhabitants of its banks.

We not only have taken possession of our boat, but we have begun housekeeping in it. We have had a farewell dinner-party on board. Our guests, who are foreigners, declare that they did not suppose such a dinner possible in the East; a better could not be expected in Paris. We admit that such dinners are not common in this hungry world out of New York. Even in New York the soup would not have been made of lentils.

We have passed a night under a mosquito net, more comfortably than on shore to be sure, but we are anxious to get into motion and change the mosquitoes, the flies, the fleas of Cairo for some less rapacious. It is the seventeenth of December. We are in the bazaars, buying the last things, when, at noon we perceive that the wind has shifted. We hasten on board. Where is the dragoman! "Mohammed Effendi Abd-el-Atti goin' bazaar come directly," says the waiter. At half-past two the stout dragoman slides off his donkey and hastens on board with all the speed compatible with short legs, out of breath, but issuing a storm of orders like a belated captain of a seventy-two. He is accompanied by a black boy bearing the name of our dahabeëh, rudely painted on a piece of tin, the paint not yet dry. The dragoman regards it with some pride, and well he may, for it has cost time and trouble. No Arab on the river can pronounce the name, but they all understand its signification when the legend attached to it is related, and having a similar tale in the Koran, they have no objection to sail in a dahabeëh called the RIP VAN WINKLE.

The name has a sort of appropriateness in the present awakening of Egypt to modern life, but exactly what it is we cannot explain.

We seat ourselves on deck to watch the start. There is as much noise and confusion as if the boat were on fire. The moment has come to cast off, when it is discovered that two of the crew are absent, no doubt dallying in some coffee-house. We cannot wait, they must catch us as they can. The stake is pulled up; the plank is drawn in; the boat is shoved off from its sand bed with grunting and yah-hoo-ing, some of the crew in the water, and some pushing with poles; the great sail drops down from the yard and the corner is hauled in to a wild chorus, and we take the stream. For a moment it seems as if we should be carried against the bridge; but the sail is large, the wind seizes us, and the three-months' voyage has begun.

We are going slowly but steadily, perhaps at the rate of three or four miles an hour, past the receding city, drawing away from the fleet of boats and barges on the shore and the multitudinous life on its banks. It is a scene of color, motion, variety. The river is alive with crafts of all sorts, the shores are vocal with song, laughter, and the unending "chaff" of a river population. Beyond, the spires and domes of the city are lovely in the afternoon light. The citadel and the minarets gleam like silver against the purple of the Mokattam hills. We pass the long white palace of the Queen-mother; we are abreast the isle of Rhoda, its yellow palace and its ancient Nilometer. In the cove at Geezeh are passenger-dahabeëhs, two flying the American flag, with which we exchange salutes as we go. The people on their decks are trying with a telescope to make out the device on our pennant at the yard-arm. It affords occupation for a great many people at different times during the voyage. Upon a white ground is a full sun, in red; following it in red letters is the legend *Post Nubila Phobus*; it is the motto on the coat of arms of the City of Hartford. Here it signifies that we four Hartford people, beginning this voyage, exchange the clouds of New England for the sun of Egypt. The flag extends beyond the motto in a bifurcated blue streamer.

Flag, streamer and sail take the freshening north wind. A smaller sail is set aft. The reïs crouches on the bow, watching the channel; the steersman, a grave figure, pushes slowly back and forth the long iron handle of the tiller at the stern; the crew, waiting for their supper, which is cooking near the mast, begin to sing, one taking the solo and the others striking in with a minor response; it is not a song but a one-line ejaculation, followed by a sympathetic and barbaric assent in chorus.

The shores glide past like that land of the poet's dream where "it is always afternoon"; reposeful and yet brilliant. The rows of palms, the green fields, the lessening minarets, the groups of idlers in flowing raiment, picturesque in any attitudes they assume, the depth of blue above and the transparent soft air—can this be a permanent condition, or is it only the scene of a play?

In fact, we are sailing not only away from Europe, away from Cairo, into Egypt and the confines of mysterious Africa; we are sailing into the past. Do you think our voyage is merely a thousand miles on the Nile? We have committed ourselves to a stream that will lead us thousands of years backwards in the ages, into the depths of history. When we loosed from Cairo we let go our hold upon the modern. As we recede, perhaps we shall get a truer perspective, and see more correctly the width of the strip of time which we call "our era." There are the pyramids of Geezeh watching our departure, lifting themselves aloft in the evening sky; there are the pyramids of Sakkara, sentinels of that long past into which we go.

It is a splendid start, for the wind blows steadily and we seem to be flying before it. It is probable that we are making five miles an hour, which is very well against such a current. Our dahabeëh proves to be an excellent sailer, and we have the selfish pleasure of passing boat after boat, with a little ripple of excitement not enough to destroy our placid enjoyment. It is much pleasanter to lift your hat to the travelers on a boat that you are drawing ahead of than it is to those of one that is dropping your boat astern.

The Nile voyage is so peculiar, and is, in fact, such a luxurious method of passing a winter, that it may be well to say a little more concerning our boat. It is about one hundred and twenty feet long, and eighteen broad in the center, with a fiat bottom and no keel; consequently it cannot tack or sail contrary to the wind. In the bow is the cook's "cubby" with the range, open to the weather forward. Behind it stands the mast, some forty feet high, and on the top of it is lashed the slender yard, which is a hundred feet long, and hangs obliquely. The enormous triangular sail stretches the length of the yard and its point is hauled down to the deck. When it is shifted, the rope is let go, leaving the sail flapping, the end of the yard is carried round the mast and the sail is hauled round in the opposite direction, with an amount of pulling, roaring, jabbering, and chorusing, more than would be necessary to change the-course of an American fleet of war. The flat, open forward deck is capable of accommodating six rowers on a side. It is floored over now, for the sweeps are only used in descending.

Then comes the cabin, which occupies the greater part of the boat, and makes it rather top-heavy and difficult of management in an adverse wind. First in the cabin are the pantry and dragoman's room; next a large saloon, used for dining, furnished with divans, mirrors, tables, and chairs, and lighted by large windows close together. Next are rows of bedrooms, bathroom etc; a passage between leads to the after or lounging cabin, made comfortable with divans and Eastern rugs. Over the whole cabin runs the deck, which has sofas and chairs and an awning, and is good promenading space. The rear portion of it is devoted to the steersman, who needs plenty of room for the sweep of the long tiller. The steering apparatus is of the rudest. The tiller goes into a stern-post which plays in a hole big enough for four of it, and creakingly turns a rude rudder.

If you are familiar with the Egyptian temple you will see that our dahabeëh is built on this plan. If there is no pylon, there is the mast which was always lashed to it. Then comes the dromos of sphinxes, the forward deck, with the crew sitting along the low bulwarks; the first cabin is the hall of columns, or *vestibulum*; behind it on each side of the passage are various chambers; and then comes the *adytum* or sanctuary—the inner cabin. The deck is the flat roof upon which wound the solemn processions; and there is a private stairway to the deck just as there was always an inner passage to the roof from one of the small chambers of the temple.

The boat is manned by a numerous company whose appearance in procession would excite enthusiasm in any American town. Abd-el-Atti has for companion and clerk his nephew, a young Egyptian, (employed in the telegraph office) but in Frank dress, as all government officials are required to be.

The reïs, or captain, is Hassan, Aboo Seyda, a rather stately Arab of sixty years, with a full turban, a long gown of blue cotton, and bare-footed. He walks the deck with an ease and grace that an actor might envy; there is neither stiffness nor strut in it; it is a gait of simple majesty which may be inherited from generations of upright ancestors, but could never be acquired. Hassan is an admirable figure-head to the expedition, but he has no more pluck or authority than an old hen, and was of not much more use on board than a hen would be in a chicken-hatching establishment.

Abdel Hady Hased, the steersman, is a Nubian from the First Cataract, shiny black in color, but with regular and delicate features. I can see him now, with his turban set well back on his head, in a loose, long-sleeved, brown garment, and without stockings or slippers, leaning against his tiller and looking straight

ahead with unchanging countenance. His face had the peculiarity, which is sometimes seen, of appearing always to have a smile on it. He was born with that smile; he will die with it. An admirable person, who never showed the least excitement. That man would run us fast on a sand-bank, put us on a rock in plain sight, or let his sail jibe, without changing a muscle of his face, and in the most agreeable and good-natured manner in the world. And he never exhibited the least petulance at his accidents. I hope he will be rewarded for the number of hours he patiently stood at that tiller. The reis would take the helm when Abdel wanted to say his prayers or to eat his simple meals; but, otherwise, I always found him at his post, late at night or in the early morning, gazing around on Egypt with that same stereotyped expression of pleasure.

The cook, Hasaneyn Mahrowan (the last name has an Irish sound, but the first is that of the sacred mosque where is buried the head of the martyr El Hoseyn) is first among his craft, and contrives to produce on his little range in the bow a dinner that would have made Raineses II. a better man. He is always at his post, like the steersman, and no matter what excitement or peril we may be in, Hasaneyn stirs his soup or bastes his chicken with perfect *sang froid*. The fact is that these Orientals have got a thousand or two thousand years beyond worry, and never feel any responsibility for what others are doing.

The waiter, a handsome Cairene, is the perfection of a trained servant, who understands signs better than English. Hoseyn Ali also rejoices in a noble name. Hasan and Hoseyn are, it is well known, the "two lords of the youths of the people of Paradise, in Paradise"; they were grandsons of the Prophet. Hoseyn was slain at the battle of the Plain of Karbalà. Hoseyn is the most smartly dressed fellow on board. His jacket and trousers are of silk; he wears a gay kuffia about his fez and his waist is girded with a fine Cashmere shawl. The fatal defect in his dress is that the full trowsers do not quite meet the stockings. There is always some point of shabbiness or lack of finish in every Oriental object.

The waiter's lieutenant is an Abyssinian boy who rejoices in the name of Ahman Abdallah (or, "Slave of God"); and the cook's boy is Gohah ebn Abdallah ("His father slave of God"). This is the poetical way of putting their condition; they were both slaves of Abd-el-Atti, but now, he says, he has freed them. For Gohah he gave two napoleons when the lad was new. Greater contrast could not be between two colored boys. Ahman is black enough, but his features are regular and well made, he has a bright merry eye, and is quick in all his intuitions, and intellectually faithful to the least particular. He divines the wants of his masters by his quick wit, and never neglects or forgets anything. Gohah is from the Soudan, and a perfect Congo negro in features and texture of skin—lips protruding and nose absolutely level with his cheeks; as faithful and affectionate as a Newfoundland dog, a mild, gentle boy. What another servant would know through his sharpened interest, Gohah comprehends by his affections.

I have described these persons, because they are types of the almost infinite variety of races and tribes in Egypt. Besides these there are fourteen sailors, and no two of the same shade or with similar features. Most of them are of Upper Egypt, and two or three of them are Nubians, but I should say that all are hopelessly mixed in blood. Ahmed, for instance, is a Nubian, and the negro blood comes out in him in his voice and laugh and a certain rolling antic movement of the body. Another sailor has that flush of red under dark in the face which marks the quadroom. The dress of the crew is usually a gown, a pair of drawers, and a turban. Ahmed wears a piece of Turkish toweling round his head. The crew is an incongruous lot altogether; a third of them smoke hasheesh whenever they can get it; they never obey an order without talking about it and suggesting something different; they are all captains in fact; they are rarely quiet, jabbering, or quarreling, or singing, when they are not hauling the sail, hoisting us from a sandbar, or stretched on deck in deep but not noiseless slumber. You cannot but like the good-natured rascals.

An irresponsible, hard-working, jolly, sullen, contradictory lot of big children, who, it is popularly reported, need a *koorbag* (a whip of hippopotamus hide) to keep them in the way of industry and obedience. It seems to me that a little kindness would do better than a good deal of whip. But the kindness ought to have begun some generations back. The *koorbag* is the legitimate successor of the stick, and the Egyptians have been ruled by the stick for a period of which history reports not to the contrary. In the sculptures on the earliest tombs, laborers are driven to their tasks with the stick. Sailors on the old Nile boats are menaced with the stick. The overseer in the field swings the stick. Prisoners and slaves are marshalled in line with the stick. The stick is to-day also the one visible and prevalent characteristic of the government of Egypt. And I think that it is a notion among the subject classes, that a beating is now and then good for them. They might feel neglected without it. I cannot find that Egypt was ever governed in any other way than on the old plan of force and fear.

If there is anything that these officers and sailors do not understand, it is the management of a Nile boat. But this is anticipating. Just now all goes as merrily as a colored ball. The night is soft, the moon is half full; the river spreads out in shining shallows; the shores are dim and show lines of feathery palms against the sky; we meet or pass white sails which flash out of the dimness and then vanish; the long line of pyramids of Sakkara is outlined beyond the palms; now there is a light on shore and a voice or the howling of a dog is heard; along the bank by the ruins of old Memphis a jackal runs barking in the moonlight. By half-past nine we are abreast the pyramids of Dashoor. A couple of dahabeëhs are laid up below for the night, and the lights from their rows of cabin windows gleam cheerfully on the water.

We go right on, holding our way deeper and deeper into this enchanted country. The night is simply superb, such a wide horizon, such brilliancy above! Under the night, the boat glides like a phantom ship; it is perfectly steady, and we should not know we were in motion but for the running ripple at the sides. By this lulling sound we sleep, having come, for once in the world, into a country of tranquillity, where nothing need ever be done till tomorrow, for tomorrow is certain to be like to-day.

When we came on deck at eight o'clock in the morning after "flying" all night as on birds' wings, we found that we had made thirty-five miles, and were almost abreast of the False Pyramid of Maydoom, so called because it is supposed to be built about a rock; a crumbled pyramid but curiously constructed, and perhaps older than that of Cheops. From a tomb in the necropolis here came the two life-size and striking figures that are in the Boulak Museum at Cairo. The statues, carved in calcareous limestone, represent two exceedingly respectable and intelligent looking persons, who resemble each other enough to be brother and sister; they were probably alive in the third dynasty. They sit up now, with hands on knees, having a bright look on their

faces as if they hadn't winked in five thousand years, and were expecting company.

I said we were "flying" all night. This needs qualification. We went aground three times and spent a good part of the night in getting off. It is the most natural thing in navigation. We are conscious of a slight grating, then a gentle lurch, not enough to disturb a dream, followed, however, by a step on deck, and a jabber of voices forward. The sail is loosed; the poles are taken from the rack and an effort is made to shove off by the use of some muscle and a good deal of chorus; when this fails, the crew jump overboard and we hear them splashing along the side. They put their backs to the boat and lift, with a grunting "*Euh-h'e, euh-h'e*" which changes into a rapid "halee, halee, halee," as the boat slides off; and the crew scramble on board to haul tight the sail, with an emphatic "Yah! Mohammed, Yah! Mohammed."

We were delayed some hours altogether, we learn. But it was not delay. There can be no delay on this voyage; for there is no one on board who is in any haste. Are we not the temporary owners of this boat, and entirely irresponsible for any accident, so that if it goes down with all on board, and never comes to port, no one can hold us for damages?

The day is before us, and not only the day, but, Providence permitting, a winter of days like it. There is nothing to be done, and yet we are too busy to read even the guide-book. There is everything to be seen; it is drifting past us, we are gliding away from it. It is all old and absolutely novel. If this is laziness that is stealing over us, it is of an alert sort. In the East, laziness has the more graceful title of resignation; but we have not come to that condition even; curiosity is constantly excited, and it is a sort of employment to breathe this inspiring air.

We are spectators of a pageant that never repeats itself; for although there is a certain monotony in the character of the river and one would think that its narrow strips of arable land would soon be devoid of interest, the scenes are never twice alike. The combinations vary, the desert comes near and recedes, the mountains advance in bold precipices or fall away; the groups of people, villages, trees, are always shifting.

And yet, in fact, the scenery changes little during the day. There are great reaches of river, rapidly flowing, and wide bends across which we see vessels sailing as if in the meadows. The river is crowded all day with boats, pleasure dahabeëhs, and trading vessels uncouth and picturesque. The passenger dahabëeh is long, handsomely painted, carries an enormous sail on its long yard, has a national flag and a long streamer; and groups of white people sit on deck under the awning; some of them are reading, some sketching, and now and then a man rises and discharges his shot-gun at a flock of birds a half a mile beyond its range.

The boats of African traders are short, high-pooped, and have the rudder stepped out behind. They usually carry no flag, and are dirty and lack paint, but they carry a load that would interest the most *blasé* European. Those bound up-stream, under full sail, like ourselves, are piled with European boxes and bales, from stem to stern; and on top of the freight, in the midst of the freight, sitting on it, stretched out on it, peeping from it, is another cargo of human beings, men, women and children, black, yellow, clothed in all the hues of heaven and the rags of earth. It is an impassive load that stares at us with incurious, unwinking eyes.

The trading boats coming down against the current, are even more strange and barbarous. They are piled with merchandise, but of a different sort. The sails and yards are down, and the long sweeps are in motion, balanced on outriggers, for the forward deck is filled, and the rowers walk on top of the goods as they move the oars to and fro. How black the rowers are! How black everybody on board is! They come suddenly upon us, like those nations we have read of, who sit in great darkness. The rowers are stalwart fellows whose basalt backs shine in the sun as they bend to the oar; in rowing they walk towards the cabin and pull the heavy oars as they step backwards, and every sweep is accompanied by the burst of a refrain in chorus, a wild response to a line that has been chanted by the leader as they stepped forwards. The passengers sit immovable in the sun and regard us with a calmness and gravity which are only attainable near the equatorial regions, where things approach an equilibrium.

Sometimes we count nearly one hundred dahabeëhs in sight, each dipping or veering or turning in the sun its bird-wing sail—the most graceful in the world. A person with fancies, who is watching them, declares that the triangular sails resemble quills cut at the top for pens, and that the sails, seen over the tongue of land of a long bend ahead, look like a procession of goose quills.

The day is warm enough to call out all the birds; flocks of wild geese clang overhead, and companies of them, ranks on ranks, stand on the low sand-dunes; there are pelicans also, motionless in the shallow water near the shore, meditating like a derweesh on one leg, and not caring that the thermometer does mark 740. Little incidents entertain us. We like to pass the Dongola, flying "Ohio" from its yard, which took advantage of our stopping for milk early in the morning to go by us. We overhaul an English boat and have a mildly exciting race with her till dark, with varying fortune, the boats being nearly a match, and the victory depending upon some trick or skill on the part of the crew. All the party look at us, in a most unsympathetic manner, through goggles, which the English always put on whenever they leave the twilight of England. I do not know that we have any right to complain of this habit of wearing wire eye-screens and goggles; persons who have it mean no harm by it, and their appearance is a source of gratification to others. But I must say that goggles have a different effect in different lights. When we were sailing slowly past the Englishman, the goggles regarded us with a feeble and hopeless look. But when the Englishman was, in turn, drawing ahead of us, the goggles had a glare of "Who the devil are you?" Of course it was only in the goggles. For I have seen many of these races on the Nile, and passengers always affect an extreme indifference, leaving all demonstrations of interest to the crews of the boats.

The two banks of the river keep all day about the same relative character—the one sterile, the other rich. On the east, the brown sand licks down almost to the water; there is only a strip of green; there are few trees, and habitations only at long intervals. Only a little distance back are the Mokattam hills, which keep a rarely broken and level sky-line for two hundred and fifty miles south of Cairo.

The west side is a broad valley. The bank is high and continually caving in, like the alluvial bottoms of the Missouri; it is so high that from our deck we can see little of the land. There are always, however, palm-trees in sight, massed in groves, standing in lines, or waving their single tufts in the blue. These are the date-palms, which have no branches on their long poles; each year the old stalks are cut off for fuel, and the trunk,

a mass of twisted fibres, comes to have a rough bark, as if the tree had been shingled the wrong way. Stiff in form and with only the single crown of green, I cannot account for its effect of grace and beauty. It is the life of the Nile, as the Nile is life to it. It bears its annual crop of fruit to those who want it, and a crop of taxes for the Khedive. Every palm pays in fact a poll-tax, whether it brings forth dates or not.

Where the bank slopes we can see the springing wheat and barley darkly green; it is sown under the palms even, for no foot of ground is left vacant. All along the banks are shadoofs, at which men in black stand all day raising water, that flows back in regulated streams; for the ground falls slightly away from the height of the bank. At intervals appears a little collection of mud hovels, dumped together without so much plan as you would find in a beaver settlement, but called a village, and having a mud minaret and perhaps a dome. An occasional figure is that of a man plowing with a single ox; it has just the stiff square look of the sculptures in the tombs.

Now and then where a zig-zag path is cut, or the bank slopes, women are washing clothes in the river, or groups of them are filling their water-jars. They come in files from the villages and we hear their shrill voices in incessant chatter. These country-women are invariably in black or dark brown; they are not veiled, but draw their head shawl over the face as our boat passes. Their long gowns are drawn up, exposing bare feet and legs as they step into the stream. The jars are large and heavy when unfilled, and we marvel how they can raise them to their heads when they are full of water. The woman drags her jar out upon the sand, squats before it, lifts it to her head with her hands, and then rises steadily and walks up the steep bank and over the sand, holding her robe with one hand and steadying the jar with the other, with perfect grace and ease of motion. The strength of limbs required to raise that jar to the head and then rise with it, ought to be calculated by those in our own land who are striving to improve the condition of woman.

We are still flying along with the unfailing wind, and the merry progress communicates its spirit to the crew. Before sunset they get out their musical instruments, and squatting in a circle on the forward deck, prepare to enjoy themselves. One thumps and shakes the tambourine, one softly beats with his fingers the darabooka drum, and another rattles castanets. All who are not so employed beat time by a jerking motion of the raised hands, the palms occasionally coming together when the rhythm is properly accented. The leader, who has a very good tenor voice, chants a minor and monotonous love-song to which the others respond, either in applause of the sentiment or in a burst of musical enthusiasm which they cannot contain. Ahmed, the Nubian, whose body is full of Congoism, enters into it with a delightful *abandon*, swaying from side to side and indulging in an occasional shout, as if he were at a camp-meeting. His ugly and good-natured face beams with satisfaction, an expression that is only slightly impaired by the vacant place where two front teeth ought to shine. The song is rude and barbarous but not without a certain plaintiveness; the song, and scene belong together. In this manner the sailors of the ancient Egyptians amused themselves without doubt; their instruments were the same; thus they sat upon the ground, thus they clapped hands, thus they improvised ejaculations to the absent beloved:—

“The night! The night! O thou with sweet hands!
Holding the dewy peach.”

The sun goes down, leaving a rosy color in the sky, that changes into an ashes-of-roses color, that gradually fades into the indefinable softness of night punctured with stars.

We are booming along all night, under the waxing moon. This is not so much a voyage as a flight, chased by the north wind. The sail is always set, the ripples are running always along the sides, the shores slide by as in a dream; the reis is at the bow, the smiling steersman is at the helm; if we were enchanted we could not go on more noiselessly. There is something ghostly about this night-voyage through a land so imperfectly defined to the senses but so crowded with history. If only the dead who are buried on these midnight shores were to rise, we should sail through a vast and ghastly concourse packing the valley and stretching away into the desert.

About midnight I step out of the cabin to look at the night. I stumble over a sleeping Arab. Two sailors, set to hold the sail-ropes and let it go in case of a squall of wind, are nodding over it. The night is not at all gloomy or mysterious, but in all the broad sweep of it lovely and full of invitation. We are just passing the English dahabeëh, whose great sail is dark as we approach, and then takes the moon full upon it as we file abreast. She is hugging the bank and as we go by there is a snap. In the morning Abd-el-Atti says that she broke the tip of her yard against the bank. At any rate she lags behind like a crippled bird.

In the morning we are in sight of four dahabeëhs, but we overhaul and pass them all. We have contracted a habit of doing it. One of them gets her stern-sprit knocked off as she sheers before us, whereupon the sailors exchange compliments, and our steersman smiles just as he would have done if he had sent the Prussian boat to the bottom. The morning is delicious, not a cloud in the sky, and the thermometer indicating a temperature of 56°; this moderates speedily under the sun, but if you expected an enervating climate in the winter on the Nile you will be disappointed; it is on the contrary inspiring.

We pass the considerable town of Golosaneh, not caring very much about it; we have been passing towns and mounds and vestiges of ancient and many times dug-up civilizations, day and night. We cannot bother with every ash-heap described in the guide-book. Benisooef, which has been for thousands of years an enterprising city, we should like to have seen, but we went by in the night. And at night most of these towns are as black as the moon will let them be, lights being very rare. We usually receive from them only the salute of a barking dog. Inland from Golosaneh rises the tall and beautiful minaret of Semaloot, a very pretty sight above the palm-groves; so a church spire might rise out of a Connecticut meadow. At 10 o'clock we draw near the cliffs of Gebel e' Tayr, upon the long flat summit of which stands the famous Coptic convent of Sitteh Miriam el Adra, “Our Lady Mary the Virgin,”—called also Dayr el Adra.

We are very much interested in the Copts, and are glad of the opportunity to see something of the practice of their religion. For the religion is as peculiar as the race. In fact, the more one considers the Copt, the more difficult it is to define him. He is a descendant of the ancient Egyptians, it is admitted, and he retains the

cunning of the ancients in working gold and silver; but his blood is crossed with Abyssinian, Nubian, Greek and Arab, until the original is lost, and to-day the representatives of the pure old Egyptian type of the sculptures are found among the Abyssinians and the Noobeh (genuine Nubians) more frequently than among the Copts. The Copt usually wears a black or brown turban or cap; but if he wore a white one it would be difficult to tell him from a Moslem. The Copts universally use Arabic; their ancient language is practically dead, although their liturgy and some of their religious books are written in it. This old language is supposed to be the spoken tongue of the old Egyptians.

The number of Christian Copts in Egypt is small—but still large enough; they have been persecuted out of existence, or have voluntarily accepted Mohammedanism and married among the faithful. The Copts in religion are seceders from the orthodox church, and their doctrine of the Trinity was condemned by the council of Chalcedon; they consequently hate the Greeks much more than they hate the Moslems. They reckon St. Mark their first patriarch.

Their religious practice is an odd jumble of many others. Most of them practice circumcision. The baptism of infants is held to be necessary; for a child dying unbaptized will be blind in the next life. Their fasts are long and strict; in their prayers they copy both Jews and Moslems, praying often and with endless repetitions. They confess before taking the sacrament; they abstain from swine's flesh, and make pilgrimages to Jerusalem. Like the Moslems they put off their shoes on entering the place of worship, but they do not behave there with the decorum of the Moslem; they stand always in the church and as the service is three or four hours long, beginning often at daybreak, the long staff or crutch upon which they lean is not a useless appendage. The patriarch, who dwells in Cairo, is not, I think, a person to be envied. He must be a monk originally and remain unmarried, and this is a country where marriage is so prevalent. Besides this, he is obliged to wear always a woolen garment next the skin, an irritation in this climate more constant than matrimony. And report says that he lives under rules so rigid that he is obliged to be waked up, if he sleeps, every fifteen minutes. I am inclined to think, however, that this is a polite way of saying that the old man has a habit of dropping off to sleep every quarter of an hour.

The cliffs of Gebel e' Tayr are of soft limestone, and seem to be two hundred feet high. In one place a road is cut down to the water, partly by a zig-zag covered gallery in the face of the rock, and this is the usual landing-place for the convent. The convent, which is described as a church under ground, is in the midst of a mud settlement of lay brothers and sisters, and the whole is surrounded by a mud wall. From below it has the appearance of an earthwork fortification. The height commands the river for a long distance up and down, and from it the monks are on the lookout for the dahabeëhs of travelers. It is their habit to plunge into the water, clothed on only with their professions of holiness, swim to the boats, climb on board and demand "backsheesh" on account of their religion.

It is very rough as we approach the cliffs, the waves are high, and the current is running strong. We fear we are to be disappointed, but the monks are superior to wind and waves. While we are yet half a mile off, I see two of them in the water, their black heads under white turbans, bobbing about in the tossing and muddy waves. They make' heroic efforts to reach us; we can hear their voices faintly shouting: *Ana Christian, O Howadji*, "I am a Christian, O! Howadji."

"We have no doubt you are exceptional Christians," we shout to them in reply, "Why don't you come aboard—back-s-h-e-e-s-h!"

They are much better swimmers than the average Christian with us. But it is in vain. They are swept by us and away from us like corks on the angry waves, and even their hail of Christian fellowship is lost in the whistling wind. When we are opposite the convent another head is seen bobbing about in the water; he is also swept below us, but three-quarters of a mile down-stream he effects a landing on another dahabeëh. As he climbs into the jolly-boat which is towed behind and stands erect, he resembles a statue in basalt.

It is a great feat to swim in a current so swift as this and lashed by such a wind. I should like to have given these monks something, if only to encourage so robust a religion. But none of them succeeded in getting on board. Nothing happens to us as to other travelers, and we have no opportunity to make the usual remarks upon the degraded appearance of these Coptic monks at Dayr el Adra. So far as I saw them they were very estimable people.

At noon we are driving past Minieh with a strong wind. It appears to be—but if you were to land you would find that it is not—a handsome town, for it has two or three graceful minarets, and the long white buildings of the sugar-factory, with its tall chimneys, and the palace of the Khedive, stretching along the bank give it an enterprising and cheerful aspect. This new palace of his Highness cost about half a million of dollars, and it is said that he has never passed a night in it. I confess I rather like this; it must be a royal sensation to be able to order houses made like suits of clothes without ever even trying them on. And it is a relief to see a decent building and a garden now and then, on the river.

We go on, however, as if we were running away from the sheriff, for we cannot afford to lose the advantage of such a wind. Along the banks the clover is growing sweet and green as in any New England meadow in May, and donkeys are browsing in it tended by children; a very pleasant sight, to see this ill-used animal for once in clover and trying to bury his long ears in luxury. Patches of water-melon plants are fenced about by low stockades of dried rushes stuck in the sand—for the soil looks like sand.

This vegetation is not kept alive, however, without constant labor; weeds never grow, it is true, but all green things would speedily wither if the shadoofs were not kept in motion, pouring the Nile into the baked and thirsty soil.

These simple contrivances for irrigation, unchanged since the time of the Pharaohs, have already been described. Here two tiers are required to lift the water to the level of the fields; the first dipping takes it into a canal parallel with the bank, and thence it is raised to the top. Two men are dipping the leathern buckets at each machine, and the constant bending down and lifting up of their dark bodies are fatiguing even to the spectator. Usually in barbarous countries one pities the woman; but I suppose this is a civilized region, for here I pity the men. The women have the easier tasks of washing clothes in the cool stream, or lying in the sand. The women all over the East have an unlimited capacity for sitting motionless all day by a running

stream or a pool of water.

In the high wind the palm-trees are in constant motion tossing their feather tufts in the air; some of them are blown like an umbrella turned wrong side out, and a grove presents the appearance of crowd of people overtaken by a sudden squall. The acacia tree, which the Arabs call the *sont*, the acanthus of Strabo (*Mimosa Nilotica*) begins to be seen with the palm. It is a thorny tree, with small yellow blossoms and bears a pod. But what interests us most is the gum that exudes from its bark; for this is the real Gum Arabic! That Heaven has been kind enough to let us see that mysterious gum manufacturing itself! The Gum Arabic of our childhood!

How often have I tried to imagine the feelings of a distant and unconverted boy to whom Gum Arabic was as common as spruce gum to a New England lad.

As I said, we go on as if we were evading the law; our *daha-beëh* seems to have taken the bit in its teeth and is running away with us. We pass everything that sails, and begin to feel no pride in doing so; it is a matter of course. The other *dalabeëhs* are left behind, some with broken yards. I heard reports afterwards that we broke their yards, and that we even drowned a man. It is not true. We never drowned a man, and never wished to. We were attending to our own affairs. The crew were busy the first day or two of the voyage in cutting up their bread and spreading it on the upper deck to dry—heaps of it, bushels of it. It is a black bread, made of inferior unbolted wheat, about as heavy as lead, and sour to the uneducated taste. The Egyptians like it, however, and it is said to be very healthful. The men gnaw chunks of it with relish, but it is usually prepared for eating by first soaking it in Nile-water and warming it over a fire, in a big copper dish. Into the “stodge” thus made is sometimes thrown some “greens” snatched from the shore. The crew seat themselves about this dish when it is ready, and each one dips his right hand into the mass and claws out a mouthful. The dish is always scraped clean. Meat is very rarely had by them, only a few times during the whole voyage; but they vary their diet by eating green beans, lettuce, onions, lentils, and any sort of “greens” they can lay hands on. The meal is cooked on a little fire built on a pile of stones near the mast. When it is finished they usually gather about the fire for a pull at the “hubble-bubble.” This is a sort of pipe with a cocoa-nut shell filled with water, through which the smoke passes. Usually a lump of *hasheesh* is put into the bowl with the tobacco. A puff or two of this mixture is enough; it sets the smoker coughing and conveys a pleasant stupor to his brain. Some of the crew never smoke it, but content themselves with cigarettes. And the cigarettes, they are always rolling up and smoking while they are awake.

The *hasheesh*-smokers are alternately elated and depressed, and sometimes violent and noisy. A man addicted to the habit is not good for much; the *hasheesh* destroys his nerves and brain, and finally induces idiocy. *Hasheesh* intoxication is the most fearful and prevalent vice in Egypt. The government has made many attempts to stop it, but it is too firmly fixed; the use of *hasheesh* is a temporary refuge from poverty, hunger, and all the ills of life, and appears to have a stronger fascination than any other indulgence. In all the towns one may see the dark little shops where the drug is administered, and generally rows of victims in a stupid doze stretched on the mud benches. Sailors are so addicted to *hasheesh* that it is almost impossible to make up a decent crew for a *dahabeëh*.

Late in the afternoon we are passing the famous rock-tombs of Beni Hassan, square holes cut in the face of the cliff, high up. With our glasses we can see paths leading to them over the *debris* and along the ledges. There are two or three rows of these tombs, on different ledges; they seem to be high, dry, and airy, and I should rather live in them, dead or alive, than in the mud hovels of the *fellaheen* below. These places of sepulchre are older than those at Thebes, and from the pictures and sculptures in them, more than from any others, the antiquarians have reconstructed the domestic life of the ancient Egyptians. This is a desolate spot now; there is a decayed old mud village below, and a little south of it is the new town; both can barely be distinguished from the brown sand and rock in which and in front of which they stand. This is a good place for thieves, or was before *Ibraheem Pasha* destroyed these two villages. We are warned that this whole country produces very skillful robbers, who will swim off and glean the valuables from a *dahabeëh* in a twinkling.

Notwithstanding the stiff breeze the thermometer marks 74°; but both wind and temperature sink with the sun. Before the sun sets, however, we are close under the east bank, and are watching the play of light on a magnificent palm-grove, beneath which stand the huts of the modern village of *Sheykh Abâdeh*. It adds romance to the loveliness of the scene to know that this is the site of ancient *Antinoë*, built by the Emperor *Adrian*. To be sure we didn't know it till this moment, but the traveler warms up to a fact of this kind immediately, and never betrays even to his intimate friends that he is not drawing upon his inexhaustible memory.

“That is the ancient *Antinoë*, built by *Adrian*.”

Oh, the hypocrisy and deceit of the enthusiastic,

“*Is it?*”

“Yes, and handsome *Antinous* was drowned here in the Nile.”

“Did they recover his body?”

Upon the bank there are more camels, dogs, and donkeys than we have seen all day; buffaloes are wallowing in the muddy margin. They are all in repose; the dogs do not bark, and the camels stretch their necks in a sort of undulatory expression of discontent, but do not bleat, or roar, or squawk, or make whatever the unearthly noise which they make is called. The men and the women are crouching in the shelter of their mud walls, with the light of the setting sun upon their dark faces. They draw their wraps closer about them to protect themselves from the north wind, and regard us stolidly and without interest as we go by. And when the light fades, what is there for them? No cheerful lamp, no book, no newspaper. They simply crawl into their kennels and sleep the sleep of “inwardness” and peace.

Just here the arable land on the east bank is broader than usual, and there was evidently a fine city built on the edge of the desert behind it. The Egyptians always took waste and desert land for dwellings and for burial-places, leaving every foot of soil available for cultivation free. There is evidence all along here of a once much larger population, though I doubt if the east bank of the river was ever much inhabited. The river banks would support many more people than we find here if the land were cultivated with any care. Its fertility, with

the annual deposit, is simply inexhaustible, and it is good for two and sometimes three crops a year. But we pass fields now and then that are abandoned, and others that do not yield half what they might. The people are oppressed with taxes and have no inducement to raise more than is absolutely necessary to keep them alive. But I suppose this has always been the case in Egypt. The masters have squeezed the last drop from the people, and anything like an accumulation of capital by the laborers is unknown. The Romans used a long rake, with fine and sharp teeth, and I have no doubt that they scraped the country as clean as the present government does.

The government has a very simple method of adjusting its taxes on land and crops. They are based upon the extent of the inundation. So many feet rise, overflowing such an area, will give such a return in crops; and tax on this product can be laid in advance as accurately as when the crops are harvested. Nature is certain to do her share of the work; there will be no frost, nor any rain to spoil the harvest, nor any freakishness whatever on the part of the weather. If the harvest is not up to the estimate, it is entirely the fault of the laborer, who has inadequately planted or insufficiently watered. In the same manner a tax is laid upon each palm-tree, and if it does not bear fruit, that is not the fault of the government.

There must be some satisfaction in farming on the Nile. You are always certain of the result of your labor. * Whereas, in our country farming is the merest lottery. The season will open too wet or too dry, the seed may rot in the ground, the young plant may be nipped with frost or grow pale for want of rain, the crop runs the alternate hazards of drought or floods, it is wasted by rust or devoured by worms; and, to cap the climax, if the harvest is abundant and of good quality, the price goes down to an unremunerative figure. In Egypt you may scratch the ground, put in the seed, and then go to sleep for three months, in perfect certainty of a good harvest, if only the shadoof and the sakiya are kept in motion.

** It should be said, however, that the ancient Egyptians found the agricultural conditions beset with some vexations. A papyrus in the British Museum contains a correspondence between Ameneman, the librarian of Rameses II, and his pupil Pentaour, who wrote the celebrated epic upon the exploits of that king on the river Orontes. One of the letters describes the life of the agricultural people:—"Have you ever conceived what sort of life the peasant leads who cultivates the soil? Even before it is ripe, insects destroy part of his harvest. . . Multitudes of rats are in the field; next come invasions of locusts, cattle ravage his harvest, sparrows alight in flocks on his sheaves. If he delays to get in his harvest, robbers come to carry it off with him; his horse dies of fatigue in drawing the plow; the tax-collector arrives in the district, and has with him men armed with sticks, negroes with palm-branches. All say, 'Give us of your corn,' and he has no means of escaping their exactions. Next the unfortunate wretch is seized, bound, and carried off by force to work on the canals; his wife is bound, his children are stripped. And at the same time his neighbors have each of them his own trouble."*

By eight o'clock in the evening, on a falling wind, we are passing Rhoda, whose tall chimneys have been long in sight. Here is one of the largest of the Khedive's sugar-factories, and a new palace which has never been occupied. We are one hundred and eighty-eight miles from Cairo, and have made this distance in two days, a speed for which I suppose history has no parallel; at least our dragoman says that such a run has never been made before at this time of the year, and we are quite willing to believe a statement which reflects so much honor upon ourselves, for choosing such a boat and such a dragoman.

This Nile voyage is nothing, after all; its length has been greatly overestimated. We shall skip up the river and back again before the season is half spent, and have to go somewhere else for the winter. A man feels all-powerful, so long as the wind blows; but let his sails collapse and there is not a more crest-fallen creature. Night and day our sail has been full, and we are puffed up with pride.

At this rate we shall hang out our colored lanterns at Thebes on Christmas night.

CHAPTER XI.—PEOPLE ON THE RIVER BANKS.

THE morning puts a new face on our affairs. It is Sunday, and the most devout could not desire a quieter day. There is a thick fog on the river, and not breeze enough stirring to show the stripes on our flag; the boat holds its own against the current by a sort of accumulated impulse. During the night we may have made five miles altogether, and now we barely crawl. We have run our race; if we have not come into a haven, we are at a stand-still, and it does not seem now as if we ever should wake up and go on again. However, it is just as well. Why should we be tearing through this sleepy land at the rate of four miles an hour?

The steersman half dozes at the helm; the reïs squats near him watching the flapping sails; the crew are nearly all asleep on the forward deck, with their burnouses drawn over their head and the feet bare, for it is chilly as late as nine o'clock, and the thermometer has dropped to 54. Abd-el-Atti slips his beads uneasily along between his fingers, and remembers that when he said that we would reach Asiout in another day, he forgot to ejaculate; "God willing." Yet he rises and greets our coming from the cabin with a willing smile, and a—

"Morning sir, morning marm. I hope you enjoyin' you sleep, marm."

"Where are we now, Abd-el-Atti?"

"Not much, marm; this is a place call him Hadji Kandeel. But we do very well; I not to complain."

"Do you think we shall have any wind to-day?"

"I d'know, be sure. The wind come from Lord. Not so?"

Hadji Kandeel is in truth only a scattered line of huts, but one lands here to visit the grottoes or rock-tombs of Tel el Amarna. All this country is gaping with tombs apparently; all the cliffs are cut into receptacles for the dead, all along the margin of the desert on each side are old necropolises and moslem cemeteries, in which generation after generation, for almost fabulous periods of time, has been deposited. Here behind Hadji Kandeel are remains of a once vast city built let us say sixteen hundred years before our era, by Amunoph IV., a wayward king of the eighteenth dynasty, and made the capital of Egypt. In the grottoes of Tel el Amarna were deposited this king and his court and favorites, and his immediate successors—all the splendor of them sealed up there and forgotten. This king forsook the worship of the gods of Thebes, and set up that of a Semitic deity, Aten, a radiating disk, a sun with rays terminating in human hands. It was his mother who led him into this, and she was not an Egyptian; neither are the features of the persons sculptured in the grottoes Egyptian.

Thus all along the stream of Egyptian history cross currents are coming in, alien sovereigns and foreign task-masters; and great breaks appear, as if one full civilization had run its course of centuries, and decay had come, and then ruin, and then a new start and a fresh career.

Early this morning, when we were close in to the west bank, I heard measured chanting, and saw a procession of men and women coming across the field. The men bore on a rude bier the body of a child. They came straight on to the bank, and then turned by the flank with military precision and marched upstream to the place where a clumsy country ferry-boat had just landed. The chant of the men, as they walked, was deep-voiced and solemn, and I could hear in it frequently repeated the name of Mohammed. The women in straggling file followed, like a sort of ill-omened birds in black, and the noise they made, a kind of wail, was exactly like the cackle of wild geese. Indeed before I saw the procession I thought that some geese were flying overhead.

The body was laid on the ground and four men kneeled upon the bank as if in prayer. The boat meantime was unloading, men, women and children scrambling over the sides into the shallow water, and the donkeys, urged with blows, jumping after them. When they were all out the funeral took possession of the boat, and was slowly wafted across, as dismal a going to a funeral as if this were the real river of death. When the mourners had landed we saw them walking under the palm-trees, to the distant burial-place in the desert, with a certain solemn dignity, and the chanting and wailing were borne to us very distinctly.

It is nearly a dead calm all day, and our progress might be imperceptible to an eye naked, and certainly it must be so to the eyes of these natives which are full of flies. It grows warm, however, and is a summer temperature when we go ashore in the afternoon on a tour of exploration. We have for attendant, Ahmed, who carries a big stick as a defence against dogs. Ahmed does not differ much in appearance from a wild barbarian, his lack of a complete set of front teeth alone preventing him from looking fierce. A towel is twisted about his head, feet and legs are bare, and he wears a blue cotton robe with full sleeves longer than his arms, gathered at the waist by a piece of rope, and falling only to the knees. A nice person to go walking with on the Holy Sabbath.

The whole land is green with young wheat, but the soil is baked and cracked three or four inches deep, even close to the shore where the water has only receded two or three days ago. The land stretches for several miles, perfectly level and every foot green and smiling, back to the desert hills. Sprinkled over this expanse, which is only interrupted by ditches and slight dykes upon which the people walk from village to village, are frequent small groves of palms. Each grove is the nucleus of a little settlement, a half dozen sun-baked habitations, where people, donkeys, pigeons, and smaller sorts of animated nature live together in dirty amity. The general plan of building is to erect a circular wall of clay six or seven feet high, which dries, hardens, and cracks in the sun. This is the Oriental court. In side this and built against the wall is a low mud-hut with a wooden door, and perhaps here and there are two similar huts, or half a dozen, according to the

size of the family. In these hovels the floor is of smooth earth, there is a low bedstead or some matting laid in one corner, but scarcely any other furniture, except some earthen jars holding doora or dried fruit, and a few cooking utensils. A people who never sit, except on their heels, do not need chairs, and those who wear at once all the clothes they possess need no closets or wardrobes. I looked at first for a place where they could keep their "Sunday clothes" and "nice things," but this philosophical people do not have anything that is too good for daily use. It is nevertheless true that there is no hope of a people who do not have "Sunday clothes."

The inhabitants did not, however, appear conscious of any such want. They were lounging about or squatting in the dust in picturesque idleness; the children under twelve years often without clothes and not ashamed, and the women wearing no veils. The women are coming and going with the heavy water-jars, or sitting on the ground, sorting doora and preparing it for cooking; not prepossessing certainly, in their black or dingy brown gowns and shawls of cotton. Children abound. In all the fields men are at work, picking up the ground with a rude hoe shaped like an adze. Tobacco plants have just been set out, and water-melons carefully shaded from the sun by little tents of rushes. These men are all Fellaheen, coarsely and scantily clad in brown cotton gowns, open at the breast. They are not bad figures, better than the women, but there is a hopeless acceptance of the portion of slaves in their bearing.

We encountered a very different race further from the river, where we came upon an encampment of Bedaween, or desert Arabs, who hold themselves as much above the Fellaheen as the poor white trash used to consider itself above the negroes in our Southern States. They pretend to keep their blood pure by intermarrying only in desert tribes, and perhaps it is pure; so, I suppose, the Gipsies are pure blood enough, but one would not like them for neighbors. These Bedaween, according to their wandering and predatory habit, have dropped down here from the desert to feed their little flock of black sheep and give their lean donkeys a bite of grass. Their tents are merely strips of coarse brown cloth, probably camel's hair, like sacking, stretched horizontally over sticks driven into the sand, so as to form a cover from the sun and a protection from the north wind. Underneath them are heaps of rags, matting, old clothes, blankets, mingled with cooking-utensils and the nameless broken assortment that beggars usually lug about with them. Hens and lambs are at home there, and dogs, a small, tawny wolfish breed, abound. The Arabs are worthy of their dwellings, a dirty, thievish lot to look at, but, as I said, no doubt of pure blood, and having all the virtues for which these nomads have been celebrated since the time when Jacob judiciously increased his flock at the expense of Laban.

A half-naked boy of twelve years escorts us to the bank of the canal near which the tents are pitched, and we are met by the sheykh of the tribe, a more venerable and courtly person than the rest of these pure-blood masqueraders in rags, but not a whit less dirty. The fellaheen had paid no attention to us; this sheykh looked upon himself as one of the proprietors of this world, and bound to extend the hospitalities of this portion of it to strangers. He received us with a certain formality. When two Moslems meet there is no end to their formal salutation and complimentary speeches, which may continue as long as their stock of religious expressions holds out. The usual first greeting is *Es-salaam, aleykoom*, "peace be on you," to which the reply is *Aleykoom es-salam*, "on you be peace." It is said that persons of another religion, however, should never make use of this salutation to a Moslem, and that the latter should not and will not return it. But we were overflowing with charity and had no bigotry, and went through Egypt salaaming right and left, sometimes getting no reply and sometimes a return, to our "peace be on you," of *Wa-aleykoom*, "and on you."

The salutations by gesture are as varied as those by speech. When Abd-el-Atti walked in Cairo with us, he constantly varied his gestures according to the rank of the people we met. To an inferior he tossed a free salaam; an equal he saluted by touching with his right hand in one rapid motion his breast, lips, and head; to a superior he made the same motion except that his hand first made a dip down to his knees; and when he met a person of high rank the hand scooped down to the ground before it passed up to the head.

I flung a cheerful *salaam* at the sheykh and gave him the Oriental salute, which he returned. We then shook hands, and the sheykh kissed his after touching mine, a token of friendship which I didn't know enough to imitate, not having been brought up to kiss my own hand.

"Anglais or Français?" asked the sheykh.

"No," I said, "Americans."

"Ah," he ejaculated, throwing back his head with an aspiration of relief, "Melicans; *tyeb* (good)."

A ring of inquisitive Arabs gathered about us and were specially interested in studying the features and costume of one of our party; the women standing further off and remaining closely veiled kept their eyes fixed on her. The sheykh invited us to sit and have coffee, but the surroundings were not tempting to the appetite and we parted with profuse salutations. I had it in mind to invite him to our American centennial; I should like to set him off against some of our dirty red brethren of the prairies. I thought that if I could transport these Bedaween, tents, children, lank, veiled women, donkeys, and all to the centennial grounds they would add a most interesting (if unpleasant) feature. But, then, I reflected, what is a centennial to this Bedawee whose ancestors were as highly civilized as he is when ours were wading about the fens with the Angles or burrowing in German forests. Besides, the Bedawee would be at a disadvantage when away from the desert, or the bank of this Nile whose unceasing flow symbolizes his tribal longevity.

As we walk along through the lush-fields which the despised Fellaheen are irritating into a fair yield of food, we are perplexed with the query, what is the use of the Bedaween in this world? They produce nothing. To be sure they occupy a portion of the earth that no one else would inhabit; they dwell on the desert. But there is no need of any one dwelling on the desert, especially as they have to come from it to levy contributions on industrious folds in order to live. At this stage of the inquiry, the philosopher asks, what is the use of any one living?

As no one could answer this, we waded the water where it was shallow and crossed to a long island, such as the Nile frequently leaves in its sprawling course. This island was green from end to end, and inhabited more thickly than the main-land. We attracted a good deal of attention from the mud-villages, and much anxiety was shown lest we should walk across the wheat-fields. We expected that the dahabeëh would come on and take us off, but its streamer did not advance, and we were obliged to rewade the shallow channel and walk

back to the starting-place. There was a Sunday calm in the scene. At the rosy sunset the broad river shone like a mirror and the air was soft as June. How strong is habit. Work was going on as usual, and there could have been no consent of sky, earth, and people, to keep Sunday, yet there seemed to be the Sunday spell upon the landscape. I suspect that people here have got into the way of keeping all the days. The most striking way in which an American can keep Sunday on the Nile is by not going gunning, not even taking a "flyer" at a hawk from the deck of the dahabeëh. There is a chance for a tract on this subject.

Let no one get the impression that we are idling away our time, because we are on Monday morning exactly where we were on Sunday morning. We have concluded to "keep" another day. There is not a breath of wind to scatter the haze, thermometer has gone down, and the sun's rays are feeble. This is not our fault, and I will not conceal the adverse circumstances in order to give you a false impression of the Nile.

We are moored against the bank. The dragoman has gone on shore to shoot pigeons and buy vegetables. Our turkeys, which live in cages on the stern-deck, have gone ashore and are strutting up and down the sand; their gobble is a home sound and recalls New England. Women, as usual, singly and in groups, come to the river to fill their heavy water-jars. There is a row of men and boys on the edge of the bank. Behind are two camels yoked wide apart drawing a plow. Our crew chaff the shore people. The cook says to a girl, "You would make me a good wife; we will take you along." Men, squatting on the bank say, "Take her along, she is of no use."

Girl retorts, "You are not of more use than animals, you sit idle all day, while I bring water and grind the corn."

One is glad to see this assertion of the rights of women in this region where nobody has any rights; and if we had a tract we would leave it with her. Some good might be done by travelers if they would distribute biscuit along the Nile, stamped in Arabic with the words, "Man ought to do half the work," or, "Sisters rise!"

In the afternoon we explore a large extent of country, my companion carrying a shot-gun for doves. These doves are in fact wild pigeons, a small and beautiful pearly-grey bird. They live on the tops of the houses in nests formed for them by the insertion of tiles or earthen pots in the mud-walls. Many houses have an upper story of this sort on purpose for the doves; and a collection of mere mud-cabins so ornamented is a picturesque sight, under a palm-grove. Great flocks of these birds are flying about, and the shooting is permitted, away from the houses.

We make efforts to get near the wild geese and the cranes, great numbers of which are sunning themselves on the sandbanks, but these birds know exactly the range of a gun, and fly at the right moment. A row of cranes will sometimes trifle with our feelings. The one nearest will let us approach almost within range before he lifts his huge wings and sails over the river, the next one will wait for us to come a few steps further before he flies, and so on until the sand-spit is deserted of these long-legged useless birds. Hawks are flying about the shore and great greyish crows, or ravens, come over the fields and light on the margin of sand—a most gentlemanly looking bird, who is under a queer necessity of giving one hop before he can raise himself in flight. Small birds, like sand-pipers, are flitting about the bank. The most beautiful creature, however, is a brown bird, his wing marked with white, long bill, head erect and adorned with a high tuft, as elegant as the blue-jay; the natives call it the crocodile's guide.

We cross vast fields of wheat and of beans, the Arab "fool," which are sown broadcast, interspersed now and then with a melon-patch. Villages, such as they are, are frequent; one of them has a mosque, the only one we have seen recently. The water for ablution is outside, in a brick tank sunk in the ground. A row of men are sitting on their heels in front of the mosque, smoking; some of them in white gowns, and fine-looking men. I hope there is some saving merit in this universal act of sitting on the heels, the soles of the feet flat on the ground; it is not an easy thing for a Christian to do, as he will find out by trying.

Toward night a steamboat flying the star and crescent of Egypt, with passengers on board, some of "Cook's personally conducted," goes thundering down stream, filling the air with smoke and frightening the geese, who fly before it in vast clouds. I didn't suppose there were so many geese in the world.

Truth requires it to be said that on Tuesday morning the dahabeëh holds about the position it reached on Sunday morning; we begin to think we are doing well not to lose anything in this rapid current. The day is warm and cloudy, the wind is from the east and then from the south-east, exactly the direction we must go. It is in fact a sirocco, and fills one with languor, which is better than being frost-bitten at home. The evening, with the cabin windows all open, is like one of those soft nights which come at the close of sultry northern days, in which there is a dewy freshness. This is the sort of winter that we ought to cultivate.

During the day we attempt tracking two or three times, but with little success; the wind is so strong that the boat is continually blown ashore. Tracking is not very hard for the passengers and gives them an opportunity to study the bank and the people on it close at hand. A long cable fastened on the forward deck is carried ashore, and to the far end ten or twelve sailors attach themselves at intervals by short ropes which press across the breast. Leaning in a slant line away from the river, they walk at a snail's pace, a file of parti-colored raiment and glistening legs; occasionally bursting into a snatch of a song, they slowly pull the bark along. But obstructions to progress are many. A spit of sand will project itself, followed by deepwater, through which the men will have to wade in order to bring the boat round; occasionally the rope must be passed round trees which overhang the caving bank; and often freight-boats, tied to the shore, must be passed. The leisure with which the line is carried outside another boat is amusing even in this land of deliberation. The groups on these boats sit impassive and look at us with a kind of curiosity that has none of our eagerness in it. The well-bred indifferent "stare" of these people, which is not exactly brazen and yet has no element of emotion in it, would make the fortune of a young fellow in a London season. The Nubian boatmen who are tracking the freight-dahabeëh appear to have left their clothes in Cairo; they flop in and out of the water, they haul the rope along the bank, without consciousness apparently that any spectators are within miles; and the shore-life goes on all the same, men sit on the banks, women come constantly to fill their jars, these crews stripped to their toil excite no more attention than the occasional fish jumping out of the Nile. The habit seems to be general of minding one's own business.

At early morning another funeral crossed the river to a desolate burial-place in the sand, the women wailing

the whole distance of the march; and the noise was more than before like the clang of wild geese. These women have inherited the Oriental art of "lifting up the voice," and it adds not a little to the weirdness of this ululation and screeching to think that for thousands of years the dead have been buried along this valley with exactly the same feminine tenderness.

These women wear black; all the countrywomen we have seen are dressed in sombre gowns and shawls of black or deep blue-black; none of them have a speck of color in their raiment, not a bit of ribbon nor a bright kerchief, nor any relief to the dullness of their apparel. And yet they need not fear to make themselves too attractive. The men have all the colors that are worn; though the Fellaheen as a rule wear brownish garments, blue and white are not uncommon, and a white turban or a red fez, or a silk belt about the waist gives variety and agreeable relief to the costumes. In this these people imitate that nature which we affect to admire, but outrage constantly. They imitate the birds. The male birds have all the gay plumage; the feathers of the females are sober and quiet, as befits their domestic position. And it must be admitted that men need the aid of gay dress more than women.

The next morning when the sun shows over the eastern desert, the sailors are tracking, hauling the boat slowly along an ox-bow in the river, until at length the sail can catch the light west wind which sprang up with the dawn. When we feel that, the men scramble aboard, and the dahabeÿh, like a duck that has been loitering in an eddy for days, becomes instinct with life and flies away to the cliffs opposite, the bluffs called Gebel Aboofayda, part of the Mokattam range that here rises precipitously from the river and overhangs it for ten or twelve miles. I think these limestone ledges are two or three hundred feet high. The face is scarred by the slow wearing of ages, and worn into holes and caves innumerable. Immense numbers of cranes are perched on the narrow ledges of the cliff, and flocks of them are circling in front of it, apparently having nests there. As numerous also as swallows in a sand-bank is a species of duck called the diver; they float in troops on the stream, or wheel about the roosting cranes.

This is a spot famed for its sudden gusts of wind which sometimes flop over the brink and overturn boats. It also is the resort of the crocodile, which seldom if ever comes lower down the Nile now. But the crocodile is evidently shy of exhibiting himself, and we scan the patches of sand at the foot of the rocks with our glasses for a long time in vain. The animal dislikes the puffing, swashing steamboats, and the rifle-balls that passing travelers pester him with. At last we see a scaly log six or eight feet long close to the water under the rock. By the aid of the glass it turns out to be a crocodile. He is asleep, and too far off to notice at all the volley of shot with which we salute him. It is a great thing to *say* you saw a crocodile. It isn't much to *see* one.

And yet the scaly beast is an interesting and appropriate feature in such a landscape,[#] and the expectation of seeing a crocodile adds to your enjoyment. On our left are these impressive cliffs; on the right is a level island. Half-naked boys and girls are tending small flocks of black sheep on it. Abd-el-Atti raises his gun as if he would shoot the children and cries out to them, "lift up your arm," words that the crocodile hunter uses when he is near enough to fire, and wants to attract the attention of the beast so that it will raise its fore-paw to move off, and give the sportsman a chance at the vulnerable spot. The children understand the allusion and run laughing away.

Groups of people are squatting on the ground, doing nothing, waiting for nothing, expecting nothing; buffaloes and cattle are feeding on the thin grass, and camels are kneeling near in stately indifference; women in blue-black robes come—the everlasting sight—to draw water. The whole passes in a dumb show. The hot sun bathes all.

We pass next the late residence of a hermit, a Moslem "welee" or holy man. On a broad ledge of the cliff, some thirty feet above the water, is a hut built of stone and plaster and whitewashed, about twelve feet high, the roof rounded like an Esquimau snow-hut and with a knob at the top. Here the good man lived, isolated from the world, fed by the charity of passers-by, and meditating on his own holiness. Below him, out of the rock, with apparently no better means of support than he had, grows an acacia-tree, now in yellow blossoms. Perhaps the saint chewed the gum-arabic that oozed from it. Just above, on the river, is a slight strip of soil, where he used to raise a few cucumbers and other cooling vegetables. The farm, which is no larger than two bed blankets, is deserted now. The saint died, and is buried in his house, in a hole excavated in the rock, so that his condition is little changed, his house being his tomb, and the Nile still soothing his slumber.

But if it is easy to turn a house into a tomb it is still easier to turn a tomb into a house. Here are two square-cut tombs in the rock, of which a family has taken possession, the original occupants probably having moved out hundreds of years ago. Smoke is issuing from one of them, and a sorry-looking woman is pulling dead grass among the rocks for fuel. There seems to be no inducement for any one to live in this barren spot, but probably rent is low. A little girl seven or eight years old comes down and walks along the bank, keeping up with the boat, incited of course by the universal expectation of backsheesh. She has on a head-veil, covering the back of the head and neck and a single shirt of brown rags hanging in strings. I throw her an apple, a fruit she has probably never seen, which she picks up and carries until she joined is by an elder sister, to whom she shows it. Neither seems to know what it is. The elder smells it, sticks her teeth into it, and then takes a bite. The little one tastes, and they eat it in alternate bites, growing more and more eager for fair bites as the process goes on.

Near the southern end of the cliffs of Gebel Aboofayda are the crocodile-mummy pits which Mr. Prime explored; caverns in which are stacked up mummied crocodiles and lizards by the thousands. We shall not go nearer to them. I dislike mummies; I loathe crocodiles; I have no fondness for pits. What could be more unpleasant than the three combined! To crawl on one's stomach through crevices and hewn passages in the rock, in order to carry a torch into a stifling chamber, packed with mummies and cloths soaked in bitumen, is an exploit that we willingly leave to Egyptologists. If one takes a little pains, he can find enough unpleasant things above ground.

It requires all our skill to work the boat round the bend above these cliffs; we are every minute about to go aground on a sand-bar, or jibe the sail, or turn about. Heaven only knows how we ever get on at all, with all the crew giving orders and no one obeying. But by five o'clock we are at the large market-town of Manfaloot, which has half a dozen minarets and is sheltered by a magnificent palm-grove. You seem to be approaching an earthly paradise; and one can keep up the illusion if he does not go ashore. And yet this is a spot that

ought to interest the traveler, for here Lot is said to have spent a portion of the years of his exile, after the accident to his wife.

At sunset old Abo Arab comes limping along the bank with a tin pail, having succeeded at length in overtaking the boat; and in reply to the question, where he has been asleep all day, pulls out from his bosom nine small fish as a peace-offering. He was put off at sunrise to get milk for breakfast. What a happy-go-lucky country it is.

After sundown, the crew, who have worked hard all day, on and off, tacking, poling, and shifting sail, get their supper round an open fire on deck, take each some whiffs from the "hubble-bubble," and, as we sail out over the broad, smooth water, sing a rude and plaintive melody to the subdued thump of the darabooka. Towards dark, as we are about to tie up, the wind, which had failed, rises, and we voyage on, the waves rippling against the sides in a delicious lullaby. The air is soft, the moon is full and peeps out from the light clouds which obscure the sky and prevent dew.

The dragoman asleep on the cabin deck, the reïs crouched, attentive of the course, near him, part of the sailors grouped about the bow in low chat, and part asleep in the shadow of the sail, we voyage along under the wide night, still to the south and warmer skies, and seem to be sailing through an enchanted land.

Put not your trust in breezes. The morning finds us still a dozen miles from Asioot where we desire to celebrate Christmas; we just move with sails up, and the crew poling. The head-man chants a line or throws out a word, and the rest come in with a chorus, as they walk along, bending the shoulder to the pole. The leader—the "shanty man" the English sailors call their leader, from the French *chanter* I suppose—ejaculates a phrase, sometimes prolonging it, or dwelling on it with a variation, like "O! Mohammed!" or "O! Howadji!" or some scraps from a love-song, and the men strike in in chorus: "Hâ Yâlēsah, hâ Yâlēsah," a response that the boatmen have used for hundreds of years.

We sail leisurely past a large mud-village dropped in a splendid grove of palms and acacias. The scene is very poetical before details are inspected, and the groves, we think, ought to be the home of refinement and luxury. Men are building a boat under the long arcade of trees, women are stooping with the eternal water-jars which do not appear to retain fluid any better than the sieves of the Danaïdes, and naked children run along the bank crying "Baksheesh, O Howadji." Our shot-gun brings down a pigeon-hawk close to the shore. A boy plunges in and gets it, handing it to us on deck from the bank, but not relinquishing his hold with one hand until he feels the half-piastre in the other. So early is distrust planted in the human breast.

Getting away from this idyllic scene, which has not a single resemblance to any civilized town, we work our way up to El Hamra late in the afternoon. This is the landing-place for Asioot; the city itself is a couple of miles inland, and could be reached by a canal at high water. We have come again into an active world, and there are evidences that this is a busy place. New boats are on the stocks, and there is a forge for making some sort of machinery. So much life has not been met with since we left Cairo. The furling our great sail is a fine sight as we round in to the bank, the sailors crawling out on the slender, hundred-feet-long yard, like monkeys, and drawing up the hanging slack with both feet and hands.

It is long since we have seen so many or so gaily dressed people as are moving on shore; a procession of camels passes along; crowds of donkeys are pushed down to the boat by their noisy drivers; old women come to sell eggs, and white grease that pretends to be butter, and one of them pulls some live pigeons from a bag. We lie at the mud-bank, and classes of half-clad children, squatting in the sand, study us. Two other dahabeëhs are moored near us, their passengers sitting under the awning and indolently observing the novel scene, book in hand, after the manner of Nile voyagers.

These are the pictures constantly recurring on the river, only they are never the same in grouping or color, and they never weary one. It is wonderful, indeed, how satisfying the Nile is in itself and how little effort travelers make for the society of each other. Boats pass or meet and exchange salutes, but with little more effusion than if they were on the Thames. Nothing afloat is so much like a private house as a dahabeëh, and I should think, by what we hear, that sociability decreases on the Nile with increase of travel and luxury.

CHAPTER XII.—SPENDING CHRISTMAS ON THE NILE.

PROBABLY this present writer has the distinction of being the only one who has written about the Nile and has not invented a new way of spelling the name of the town whose many minarets and brown roofs are visible over the meadows.

It is written Asioot, Asyoot, Asiüt, Ssout, Siôout, Osyoot, Osioot, O'Sioôt, Siüt, Sioot, O'siout, Si-ôôt, Siout, Syouth, and so on, indefinitely. People take the liberty to spell names as they sound to them, and there is consequently a pleasing variety in the names of all places, persons, and things in Egypt; and when we add to the many ways of spelling an Arabic word, the French the German, and the English translation or equivalent, you are in a hopeless jumble of nomenclature. The only course is to strike out boldly and spell everything as it seems good in your eyes, and differently in different moods. Even the name of the Prophet takes on half a dozen forms; there are not only ninety-nine names of the attributes of God, but I presume there are ninety-nine ways of spelling each of them.

This Asioot has always been a place of importance. It was of old called Lycopolis, its divinity being the wolf or the wolf-headed god; and in a rock-mountain behind the town were not only cut the tombs of the inhabitants, but there were deposited the mummies of the sacred wolves. About these no one in Asioot knows or cares much, to day. It is a city of twenty-five thousand people, with a good many thriving Copt Christians; the terminus, to day, of the railway, and the point of arrival and departure of the caravans to and from Darfoor—a desert march of a month. Here are made the best clay pipe-bowls in Egypt, and a great variety of ornamented dishes and vases in clay, which the traveler buys and doesn't know what to do with. The artisans also work up elephants' tusks and ostrich feathers into a variety of "notions."

Christmas day opens warm and with an air of festivity. Great palm-branches are planted along the bank and form an arbor over the gang-plank. The cabin is set with them, in gothic arches over windows and doors, with yellow oranges at the apex. The forward and saloon decks are completely embowered in palms, which also run up the masts and spars. The crew have entered with zeal into the decoration, and in the early morning transformed the boat into a floating bower of greenery; the effect is Oriental, but it is difficult to believe that this is really Christmas day. The weather is not right, for one thing. It is singularly pleasant, in fact like summer. We miss the usual snow and ice and the hurtling of savage winds that bring suffering to the poor and make charity meritorious. Besides, the Moslems are celebrating the day for us and, I fear, regarding it simply as an occasion of backsheesh. The sailors are very quick to understand so much of our religion as is profitable to themselves.

In such weather as this it would be possible for "shepherds to watch their flocks by night."

Early in the day we have a visit from Wasef el Khyat, the American consul here for many years, a Copt and a native of Asioot, who speaks only Arabic; he is accompanied by one of his sons, who was educated at the American college in Beyrout. So far does that excellent institution send its light; scattered rays to be sure, but it is from it and such schools that the East is getting the real impetus of civilization.

I do not know what the consul at Asioot does for America, but our flag is of great service to him, protecting his property from the exactions of his own government. Wasef is consequently very polite to all Americans, and while he sipped coffee and puffed cigars in our cabin he smiled unutterable things. This is the pleasantest kind of intercourse in a warm climate, where a puff and an occasional smile will pass for profuse expressions of social enjoyment.

His excellency Shakirr Pasha, the governor of this large and rich province, has sent word that he is about to put carriages and donkeys at our disposal, but this probably meant that the consul would do it; and the consul has done it. The carriage awaits us on the bank. It is a high, paneled, venerable ark, that moves with trembling dignity; and we choose the donkeys as less pretentious and less liable to come to pieces. This is no doubt the only carriage between Cairo and Kartoom, and its appearance is regarded as an event.

Our first visit is paid to the Pasha, who has been only a few days in his province, and has not yet transferred his harem from Cairo. We are received with distinguished ceremony, to the lively satisfaction of Abd-el-Atti, whose face beams like the morning, in bringing together such "distinguish" people as his friend the Pasha, and travelers in his charge. The Pasha is a courtly Turk, of most elegant manners, and the simplicity of high breeding, a man of the world and one of the ablest governors in Egypt. The room into which we are ushered, through a dirty alley and a mud-wall court is hardly in keeping with the social stilts on which we are all walking. In our own less favored land, it would answer very well for a shed or an out-house to store beans in, or for a "reception room" for sheep; a narrow oblong apartment, covered with a flat roof of palm logs, with a couple of dirty little windows high up, the once whitewashed walls stained variously, the cheap divans soiled.

The hospitality of this gorgeous *salon* was offered us with effusion, and we sat down and exchanged compliments as if we had been in a palace. I am convinced that there is nothing like the Oriental imagination. An attendant (and the servants were in keeping with the premises) brought in *fangans* of coffee. The servant presents the cup in his right hand, holding the bottom of the silver receptacle in his thumb and finger; he takes it away empty with both hands, placing the left under and the right on top of it. These formalities are universal and all-important. Before taking it you ought to make the salutation, by touching breast, lips, and forehead, with the right hand—an acknowledgment not to the servant but to the master. Cigars are then handed round, for it is getting to be considered on the Nile that cigars are more "swell" than pipes; more's the pity.

The exchange of compliments meantime went on, and on the part of the Pasha with a fineness, adroitness, and readiness that showed the practice of a lifetime in social fence. He surpassed our most daring invention with a smiling ease, and topped all our extravagances with an art that made our pool efforts appear clumsy.

And what the effect would have been if we could have understood the flowery Arabic I can only guess; nor can we ever know how many flowers of his own the dragoman cast in.

"His excellency say that he feel the honor of your visit."

"Say to his excellency that although we are only spending one day in his beautiful capital, we could not forego the-pleasure of paying our respects to his excellency." This sentence is built by the critic, and strikes us all favorably.

"His excellency himself not been here many days, and sorry he not know you coming, to make some preparations to receive you."

"Thank his excellency for the palms that decorate our boat."

"They are nothing, nothing, he say not mention it; the dahabeëh look very different now if the Nile last summer had not wash away all his flower-garden. His excellency say, how you enjoyed your voyage?"

"It has been very pleasant; only for a day or two we have wanted wind."

"Your misfortune, his excellency say, his pleasure; it give him the opportunity of your society. But he say if you want wind he sorry no wind; it cause him to suffer that you not come here sooner."

"Will his excellency dine with us to-day?"

"He say he think it too much honor."

"Assure his excellency that we feel that the honor is conferred by him."

And he consents to come. After we have taken our leave, the invitation is extended to the consul, who is riding with us.

The way to the town is along a winding, shabby embankment, raised above high water, and shaded with sycamore-trees. It is lively with people on foot and on donkeys, in more colored and richer dress than that worn by country-people; the fields are green, the clover is springing luxuriantly, and spite of the wrecks of unburned-brick houses, left gaping by the last flood, and spite of the general untidiness of everything, the ride is enjoyable. I don't know why it is that an irrigated country never is pleasing on close inspection, neither is an irrigated garden. Both need to be seen from a little distance, which conceals the rawness of the alternately dry and soaked soil, the frequent thinness of vegetation, the unkempt swampy appearance of the lowest levels, and the painful whiteness of paths never wet and the dustiness of trees unwashed by rain. There is no Egyptian landscape or village that is neat, on near inspection.

Asioot has a better entrance than most towns, through an old gateway into the square (which is the court of the palace); and the town has extensive bazaars and some large dwellings. But as we ride through it, we are always hemmed in by mud-walls, twisting through narrow alleys, encountering dirt and poverty at every step. We pass through the quarter of the Ghawâzees, who, since their banishment from Cairo, form little colonies in all the large Nile towns. There are the dancing-women whom travelers are so desirous of seeing; the finest-looking women and the most abandoned courtesans, says Mr. Lane, in Egypt. In showy dresses of bright yellow and red, adorned with a profusion of silver-gilt necklaces, earrings, and bracelets, they sit at the doors of their hovels in idle expectation. If these happen to be the finest-looking women in Egypt, the others are wise in keeping their veils on.

Outside the town we find a very pretty cemetery of the Egyptian style, staring white tombs, each dead person resting under his own private little stucco oven. Near it is encamped a caravan just in from Darfoor, bringing cinnamon, gum-arabic, tusks, and ostrich feathers. The camels are worn with the journey; their drivers have a fierce and free air in striking contrast with the bearing of the fellaheen. Their noses are straight, their black hair is long and shaggy, their garment is a single piece of coarse brown cloth; they have the wildness of the desert.

The soft limestone ledge back of the town is honeycombed with grottoes and tombs; rising in tiers from the bottom to the top. Some of them have merely square-cut entrances into a chamber of moderate size, in some part of which, or in a passage beyond, is a pit cut ten or twenty feet deep in the rock, like a grave, for the mummy. One of them has a magnificent entrance through a doorway over thirty feet high and fifteen deep; upon the jambs are gigantic figures cut in the rock. Some of the chambers are vast and were once pillared, and may have served for dwellings. These excavations are very old. The hieroglyphics and figures on the walls are not in relief on the stone, but cut in at the outer edge and left in a gradual swell in the center—an *intaglio relievato*. The drawing is generally spirited, and the figures show knowledge of form and artistic skill. It is wonderful that such purely conventional figures, the head almost always in profile and the shoulders square to the front, can be so expressive. On one wall is a body of infantry marching, with the long pointed shields mentioned by Xenophon in describing Egyptian troops. Everywhere are birds, gracefully drawn and true to species, and upon some of them the blue color is fresh. A ceiling of one grotto is wrought in ornamental squares—a "Greek pattern," executed long before the time of the Greeks. Here we find two figures with the full face turned towards us, instead of the usual profile.

These tombs have served for a variety of purposes. As long as the original occupants rested here, no doubt their friends came and feasted and were mournfully merry in these sightly chambers overlooking the Nile. Long after they were turned out, Christian hermits nested in them, during that extraordinary period of superstition when men thought they could best secure their salvation by living like wild beasts in the deserts of Africa. Here one John of Lycopolis had his den, in which he stayed fifty years, without ever opening the door or seeing the face of a woman. At least, he enjoyed that reputation. Later, persecuted Christians dwelt in these tombs, and after them have come wanderers, and jackals, and houseless Arabs. I think I should rather live here than in Asioot; the tombs are cleaner and better built than the houses of the town, and there is good air here and no danger of floods.

When we are on the top of the bluff, the desert in broken ridges is behind us. The view is one of the best of the usual views from hills near the Nile, the elements of which are similar; the spectator has Egypt in all its variety at his feet. The valley here is broad, and we look a long distance up and down the river. The Nile twists and turns in its bed like one of the chimerical serpents sculptured in the chambers of the dead; canals wander from it through the plain; and groves of palms and lines of sycamores contrast their green with that

of the fields. All this level expanse is now covered with wheat, barley and thick clover, and the green has a vividness that we have never seen in vegetation before. This owes somewhat to the brown contrast near at hand and something maybe to the atmosphere, but I think the growing grain has a lustre unknown to other lands. This smiling picture is enclosed by the savage frame of the desert, gaunt ridges of rocky hills, drifts of stones, and yellow sand that sends its hot tongues in long darts into the plain. At the foot of the mountain lies Asiout brown as the mud of the Nile, a city built of sun-dried bricks, but presenting a singular and not unpleasing appearance on account of the dozen white stone minarets, some of them worked like lace, which spring out of it.

The consul's home is one of the best in the city, but outside it shows only a mud-wall like the meanest. Within is a paved court, and offices about it; the rooms above are large, many-windowed, darkened with blinds, and not unlike those of a plain house in America. The furniture is European mainly, and ugly, and of course out of place in Africa. We see only the male members of the family. Confectionery and coffee are served and some champagne, that must have been made by the Peninsular and Oriental Steamship Company; their champagne is well known in the Levant, and there is no known decoction that is like it. In my judgment, if it is proposed to introduce Christianity and that kind of wine into Egypt, the country would better be left as it is.

During our call the consul presents us fly-whisks with ivory handles, and gives the ladies beautiful fans of ostrich feathers mounted in ivory. These presents may have been due to a broad hint from the Pasha, who said to the consul at our interview in the morning:—

"I should not like to have these distinguished strangers go away without some remembrance of Asiout. I have not been here long; what is there to get for them?"

"O, your excellency, I will attend to that," said the consul.

In the evening, with the dahabeëh beautifully decorated and hung with colored lanterns, upon the deck, which, shut in with canvas and spread with Turkish rugs, was a fine reception-room, we awaited our guests, as if we had been accustomed to this sort of thing in America from our infancy, and as if we usually celebrated Christmas outdoors, fans in hand, with fire-works. A stand for the exhibition of fireworks had been erected on shore. The Pasha was received as he stepped on board, with three rockets, (that being, I suppose, the number of his official "tails,") which flew up into the sky and scattered their bursting bombs of color amid the stars, announcing to the English dahabeëhs, the two steamboats and the town of Asiout, that the governor of the richest province in Egypt was about to eat his dinner.

The dinner was one of those perfections that one likes to speak of only in confidential moments to dear friends. It wanted nothing either in number of courses or in variety, in meats, in confections, in pyramids of gorgeous construction, in fruits and flowers. There was something touching about the lamb roasted whole, reclining his head on his own shoulder. There was something tender about the turkey. There was a terrible moment when the plum-pudding was borne in on fire, as if it had been a present from the devil himself. The Pasha regarded it with distrust, and declined, like a wise man, to eat flame. I fear that the English have fairly introduced this dreadful dish into the Orient, and that the natives have come to think that all foreigners are Molochs who can best be pleased by offering up to them its indigestible ball set on fire of H. It is a fearful spectacle to see this heathen people offering this incense to a foreign idol, in the subserviency which will sacrifice even religion to backsheesh.

The conversation during dinner is mostly an exchange of compliments, in the art of which the Pasha is a master, displaying in it a wit, a variety of resource and a courtliness that make the game a very entertaining one. The Arabic language gives full play to this sort of social *espièglerie*, and lends a delicacy to encounters of compliment which the English language does not admit.

Coffee and pipes are served on deck, and the fire-works begin to tear and astonish the night. The Khedive certainly employs very good pyrotechnists, and the display by Abd-el-Atti and his equally excited helpers although simple is brilliant. The intense delight that the soaring and bursting of a rocket give to Abd-el-Atti is expressed in unconscious and unrestrained demonstration. He might be himself in flames but he would watch the flight of the rushing stream of fire, jumping up and down in his anxiety for it to burst:—

"There! there! that's—a he, hooray!"

Every time one bursts, scattering its colored stars, the crew, led by the dragoman, cheer, "Heep, heep, hooray! heep, heep, hooray!"

A whirligig spins upon the river, spouting balls of fire, and the crew come in with a "Heep, heep, hooray! heep, heep, hooray!"

The steamer, which has a Belgian prince on board, illuminates, and salutes with shot-guns. In the midst of a fusillade of rockets and Roman candles, the crew develop a new accomplishment. Drilled by the indomitable master of ceremonies, they attempt the first line of that distinctively American melody,

"We won't go home till morning."

They really catch the air, and make a bubble, bubble of sounds, like automata, that somewhat resembles the words. Probably they think that it is our national anthem, or perhaps a Christmas hymn. No doubt, "won't-go-home-till-morning" sort of Americans have been up the river before us.

The show is not over when the Pasha pleads an engagement to take a cup of tea with the Belgian prince, and asks permission to retire. He expresses his anguish at leaving us, and he will not depart if we say "no." Of course, our anguish in letting the Pasha go exceeds his suffering in going, but we sacrifice ourselves to the demand of his station, and permit him to depart. At the foot of the cabin stairs he begs us to go no further, insisting that we do him too much honor to come so far.

The soft night grows more brilliant. Abd-el-Atti and his minions are still blazing away. The consul declares that Asiout in all his life has never experienced a night like this. We express ourselves as humbly thankful in being the instruments of giving Asiout (which is asleep there two miles off) such an "eye-opener." (This

remark has a finer sound when translated into Arabic.)

The spectacle closes by a voyage out upon the swift river in the sandal. We take Roman candles, blue, red, and green lights and floaters which Abd-el-Atti lets off, while the crew hoarsely roar, "We won't go home till morning," and mingle "Heep, heep, hooray," with "Hà Yâlèsah, hà Yâlèsah."

The long range of lights on the steamers, the flashing lines and pyramids of colors on our own dahabeëh, the soft June-like night, the moon coming up in fleecy clouds, the broad Nile sparkling under so many fires, kindled on earth and in the sky, made a scene unique, and as beautiful as any that the Arabian Nights suggest.

To end all, there was a hubbub on shore among the crew, caused by one of them who was crazy with hasheesh, and threatened to murder the reïs and dragoman, if he was not permitted to go on board. It could be demonstrated that he was less likely to slay them if he did not come on board, and he was therefore sent to the governor's lock-up, with a fair prospect of going into the Khedive's army. We left him behind, and about one o'clock in the morning stole away up the river with a gentle and growing breeze.

Net result of pleasure:—one man in jail, and Abd-el-Atti's wrist so seriously burned by the fire-works, that he has no use of his arm for weeks. But, "'twas a glorious victory." For a Christmas, however, it was a little too much like the Fourth of July.

CHAPTER XIII.—SIGHTS AND SCENES ON THE RIVER.

AS WE sail down into the heart of Egypt and into the remote past, living in fact, by books and by eye-sight, in eras so far-reaching that centuries count only as years in them, the word "ancient" gets a new signification. We pass every day ruins, ruins of the Old Empire, of the Middle Empire, of the Ptolomies, of the Greeks, of the Romans, of the Christians, of the Saracens; but nothing seems ancient to us any longer except the remains of Old Egypt.

We have come to have a singular contempt for anything so modern as the work of the Greeks, or Romans. Ruins pointed out on shore as Roman, do not interest us enough to force us to raise the field-glass. Small antiquities that are of the Roman period are not considered worth examination. The natives have a depreciatory shrug when they say of an idol or a brick-wall, "Roman!"

The Greeks and the Romans are moderns like ourselves. They are as broadly separated in the spirit of their life and culture from those ancients as we are; we can understand them; it is impossible for us to enter into the habits of thought and of life of the early Pharaonic times. When the variation of two thousand years in the assignment of a dynasty seems to us a trifle, the two thousand years that divide us and the Romans shrink into no importance.

In future ages the career of the United States and of Rome will be reckoned in the same era; and children will be taught the story of George Washington suckled by the wolf, and Romulus cutting the cherry-tree with his little hatchet. We must have distance in order to put things in their proper relations. In America, what have we that will endure a thousand years? Even George Washington's hatchet may be forgotten sooner than the *fiabellum* of Pharaoh.

The day after Christmas we are going with a stiff wind, so fresh that we can carry only the forward sail. The sky is cloudy and stormy-looking. It is in fact as disagreeable and as sour a fall day as you can find anywhere. We keep the cabin, except for a time in the afternoon, when it is comfortable sitting on deck in an overcoat. We fly by Abooteeg; Raâineli, a more picturesque village, the top of every house being a pigeon-tower; Gow, with its remnants of old Antæopolis—it was in the river here that Horus defeated Typhon in a great battle, as, thank God! he is always doing in this flourishing world, with a good chance of killing him outright some day,

when Typhon will no more take the shape of crocodile or other form of evil, war, or paper currency; Tahtah, conspicuous by its vast mounds of an ancient city; and Gebel Sheykh Hereédee, near the high cliffs of which we run, impressed by the grey and frowning crags.

As we are passing these rocks a small boat dashes out to our side, with a sail in tatters and the mast carrying a curiously embroidered flag, the like of which is in no signal-book. In the stern of this fantastic craft sits a young and very shabbily clad Sheykh, and demands backsheesh, as if he had a right to demand toll of all who pass his dominions. This right our reïs acknowledges and tosses him some paras done up in a rag. I am sure I like this sort of custom-house better than some I have seen.

We go on in the night past Soohag, the capital of the province of Girgeh; and by other villages and spots of historic interest, where the visitor will find only some~heaps of stones and rubbish to satisfy a curiosity raised by reading of their former importance; by the White Monastery and the Red Convent; and, coming round a bend, as we always are coming round a bend, and bringing the wind ahead, the crew probably asleep, we ignominiously run into the bank, and finally come to anchor in mid-stream.

As if to crowd all weathers into twenty-four hours, it clears off cold in the night; and in the morning when we are opposite the the pretty town of Ekhmeem, a temperature of 51° makes it rather fresh for the men who line the banks working the shadoofs, with no covering but breech-cloths. The people here, when it is cold, bundle up about the head and shoulders with thick wraps, and leave the feet and legs bare. The natives are huddled in clusters on the bank, out of the shade of the houses, in order to get the warmth of the sun; near one group a couple of discontented camels kneel; and the naked boy, making no pretence of a superfluous wardrobe by hanging his shirt on a bush while he goes to bed, is holding it up to dry.

We skim along in almost a gale the whole day, passing, in the afternoon, an American dahabeëh tied up, repairing a broken yard, and giving Bellianeh the go-by as if it were of no importance. And yet this is the landing for the great Abydus, a city once second only to Thebes, the burial-place of Osiris himself, and still marked by one of the finest temples in Egypt. But our business now is navigation, and we improve the night as well as the day; much against the grain of the crew. There is always more or less noise and row in a night-sail, going aground, splashing, and boosting in the water to get off, shouting and chorusing and tramping on deck, and when the thermometer is as low as 52° these night-baths are not very welcome when followed by exposure to keen wind, in a cotton shirt. And with the dragoman in bed, used up like one of his burnt-out rockets, able only to grumble at "dese fellow care for nothing but smoke hasheesh," the crew are not very subordinate. They are liable to go to sleep and let us run aground, or they are liable to run aground in order that they may go to sleep. They seem to try both ways alternately.

But moving or stranded, the night is brilliant all the same; the night-skies are the more lustrous the farther we go from the moisture of Lower Egypt, and the stars scintillate with splendor, and flash deep colors like diamonds in sunlight. Late, the moon rises over the mountains under which we are sailing, and the effect is magically lovely. We are approaching Farshoot.

Farshoot is a market-town and has a large sugar-factory, the first set up in Egypt, built by an uncle of the Khedive. It was the seat of power of the Howara tribe of Arabs, and famous for its breed of Howara horses and dogs, the latter bigger and fiercer than the little wolfish curs with which Egypt swarms. It is much like other Egyptian towns now, except that its inhabitants, like its dogs, are a little wilder and more ragged than the fellaheen below. This whole district of Hamram is exceedingly fertile and bursting with a tropical vegetation.

The Turkish governor pays a formal visit and we enjoy one of those silent and impressive interviews over chibooks and coffee; in which nothing is said that one can regret. We finally make the governor a complimentary speech, which Hoseyn, who only knows a little table-English, pretends to translate. The Bey replies, talking very rapidly for two or three minutes. When we asked Hoseyn to translate, he smiled and said—"Thank you"—which was no doubt the long palaver.

The governor conducts us through the sugar-factory, which is not on so grand a scale as those we shall see later, but hot enough and sticky enough, and then gives us the inevitable coffee in his office; seemingly, if you clap your hands anywhere in Egypt, a polite and ragged attendant will appear with a tiny cup of coffee.

The town is just such a collection of mud-hovels as the others, and we learn nothing new in it. Yes, we do. We learn how to scour brass dishes. We see at the doorway of a house where a group of women sit on the ground waiting for their hair to grow, two boys actively engaged in this scouring process. They stand in the dishes, which have sand in them, and, supporting themselves by the side of the hut, whirl half-way round and back. The soles of their feet must be like leather. This method of scouring is worth recording, as it may furnish an occupation for boys at an age when they are usually, and certainly here, useless.

The weekly market is held in the open air at the edge of the town. The wares for sale are spread upon the ground, the people sitting behind them in some sort of order, but the crowd surges everywhere and the powdered dust rises in clouds. It is the most motley assembly we have seen. The women are tattooed on the face and on the breast; they wear anklets of bone and of silver, and are loaded with silver ornaments. As at every other place where a fair, a wedding, or a funeral attracts a crowd, there are some shanties of the Ghawazees, who are physically superior to the other women, but more tattooed, their necks, bosoms and waists covered with their whole fortune in silver, their eyelids heavily stained with Kohl—bold-looking jades, who come out and stare at us with a more than masculine impudence.

The market offers all sorts of green country produce, and eggs, corn, donkeys, sheep, lentils, tobacco, pipe-stems, and cheap ornaments in glass. The crowd hustles about us in a troublesome manner, showing special curiosity about the ladies, as if they had rarely seen white women. Ahmed and another sailor charge into them with their big sticks to open a passage for us, but they follow us, commenting freely upon our appearance. The sailors jabber at them and at us, and are anxious to get us back to the boat; where we learn that the natives "not like you." The feeling is mutual, though it is discouraging to our pride to be despised by such barbarous half-clad folk.

Beggars come to the boat continually for backsheesh; a tall juggler in a white, dirty tunic, with a long snake coiled about his neck, will not go away for less than half a piastre. One tariff piastre (five cents) buys four

eggs here, double the price of former years, but still discouraging to a hen. However, the hens have learned to lay their eggs small. All the morning we are trading in the desultory way in which everything is done here, buying a handful of eggs at a time, and live chickens by the single one.

In the afternoon the boat is tracked along through a land that is bursting with richness, waving with vast fields of wheat, of lentils, of sugar-cane, interspersed with melons and beans. The date-palms are splendid in stature and mass of crown. We examine for the first time the Dôm Palm, named from its shape, which will not flourish much lower on the river than here. Its stem grows up a little distance and then branches in two, and these two limbs each branch in two; always in two. The leaves are shorter than those of the date-palm and the tree is altogether more scraggy, but at a little distance it assumes the dome form. The fruit, now green, hangs in large bunches a couple of feet long; each fruit is the size of a large Flemish Beauty pear. It has a thick rind, and a stone, like vegetable ivory, so hard that it is used for drill-sockets. The fibrous rind is gnawed off by the natives when it is ripe and is said to taste like gingerbread. These people live on gums and watery vegetables and fibrous stuff that wouldn't give a northern man strength enough to gather them.

We find also the *sont* acacia here, and dig the gum-arabic from its bark. In the midst of a great plain of wheat, intersected by ditches and raised footways we come upon a Safciya, embowered in trees, which a long distance off makes itself known by the most doleful squeaking. These water-wheels, which are not unlike those used by the Persians, are not often seen lower down the river, where the water is raised by the shadoof. Here we find a well sunk to the depth of the Nile, and bricked up. Over it is a wheel, upon which is hung an endless rope of palm fibres and on its outer rim are tied earthen jars. As the wheel revolves these jars dip into the well and coming up discharge the water into a wooden trough, whence it flows into channels of earth. The cogs of this wheel fit into another, and the motive power of the clumsy machine is furnished by a couple of oxen or cows, hitched to a pole swinging round an upright shaft. A little girl, seated on the end of the pole is driving the oxen, whose slow hitching gait, sets the machine rattling and squeaking as if in pain. Nothing is exactly in gear, the bearings are never oiled; half the water is spilled before it gets to the trough; but the thing keeps grinding on, night and day, and I suppose has not been improved or changed in its construction for thousands of years.

During our walk we are attended by a friendly crowd of men and boys; there are always plenty of them who are as idle as we are, and are probably very much puzzled to know why we roam about in this way. I am sure a New England farmer, if he saw a troop of these Arabs, strolling through his corn-field, would set his dogs on them.

Both sides of the river are luxuriant here. The opposite bank, which is high, is lined with shadoofs, generally in sets of three, in order to raise the water to the required level. The view is one long to remember:—the long curving shore, with the shadoofs and the workmen, singing as they dip; people in flowing garments moving along the high bank, and processions of donkeys and camels as well; rows of palms above them, and beyond the purple Libyan hills, in relief against a rosy sky, slightly clouded along the even mountain line. In the foreground the Nile is placid and touched with a little color.

We feel more and more that the Nile is Egypt. Everything takes place on its banks. From our boat we study its life at our leisure. The Nile is always vocal with singing, or scolding, or calling to prayer; it is always lively with boatmen or workmen, or picturesque groups, or women filling their water-jars. It is the highway; it is a spectacle a thousand miles long. It supplies everything. I only wonder at one thing. Seeing that it is so swift, and knowing that it flows down and out into a world whence so many wonders come, I marvel that its inhabitants are contented to sit on its banks year after year, generation after generation, shut in behind and before by desert hills, without any desire to sail down the stream and get into a larger world. We meet rather intelligent men who have never journeyed so far as the next large town.

Thus far we have had only a few days of absolutely cloudless skies; usually we have some clouds, generally at sunrise and sunset, and occasionally an overcast day like this. But the cloudiness is merely a sort of shade; there is no possibility of rain in it.

And sure of good weather, why should we hasten? In fact, we do not. It is something to live a life that has in it neither worry nor responsibility. We take an interest, however, in How and Disnah and Fow, places where people have been living and dying now for a long time, which we cannot expect you to share. In the night while we are anchored a breeze springs up, and Abd-el-Atti roars at the sailors, to rouse them, but unsuccessfully, until he cries, "Come to prayer!"

The sleepers, waking, answer, "God is great, and Mohammed is his prophet."

They then get up and set the sail. This is what it is to carry religion into daily life.

To-day we have been going northward, for variety. Keneh, which is thirty miles higher up the river than How, is nine minutes further north. The Nile itself loiters through the land. As the crew are poling slowly along this hot summer day, we have nothing to do but to enjoy the wide and glassy Nile, its fertile banks vocal with varied life. The songs of Nubian boatmen, rowing in measured stroke down the stream, come to us. The round white wind-mills of Keneh are visible on the sand-hills above the town. Children are bathing and cattle and donkeys wading in the shallows, and the shrill chatter of women is heard on the shore. If this is winter, I wonder what summer here is like.

CHAPTER XIV.—MIDWINTER IN EGYPT.

WHETHER we go north or south, or wait for some wandering, unemployed wind to take us round the next bend, it is all the same to us. We have ceased to care much for time, and I think we shall adopt the Assyrian system of reckoning.

The period of the precession of the equinoxes was regarded as *one day* of the life of the universe; and this day equals 43,200 of our years. This day, of 43,200 years, the Assyrians divided into twelve cosmic *hours* or "sars," each one of 3,600 years; each of these hours into six "ners," of 600 years; and the "ner" into ten "sosses" or cosmic *minutes*, of 600 years. And thus, as we reckon sixty seconds to a minute, our ordinary year was a *second* of the great chronological period. What then is the value of a mere second of time? What if we do lie half a day at this bank, in the sun, waiting for a lazy breeze? There certainly is time enough, for we seem to have lived a cosmic hour since we landed in Egypt.

One sees here what an exaggerated importance we are accustomed to attach to the exact measurement of time. We constantly compare our watches, and are anxious that they should not gain or lose a second. A person feels his own importance somehow increased if he owns an accurate watch. There is nothing that a man resents more than the disparagement of his watch. (It occurs to me, by the way, that the superior attractiveness of women, that quality of repose and rest which the world finds in them, springs from the same amiable *laissez aller* that suffers their watches never to be correct. When the day comes that women's watches keep time, there will be no peace in this world). When two men meet, one of the most frequent interchanges of courtesies is to compare watches; certainly, if the question of time is raised, as it is sure to be shortly among a knot of men with us, every one pulls out his watch, and comparison is made.

We are, in fact, the slaves of time and of fixed times. We think it a great loss and misfortune to be without the correct time; and if we are away from the town-clock and the noon-gun, in some country place, we importune the city stranger, who appears to have a good watch, for the time; or we lie in wait for the magnificent conductor of the railway express, who always has the air of getting the promptest time from headquarters.

Here in Egypt we see how unnatural and unnecessary this anxiety is. Why should we care to know the exact time? It is 12 o'clock, Arab time, at sunset, and that shifts every evening, in order to wean us from the rigidity of iron habits. Time is flexible, it waits on our moods and we are not slaves to its accuracy. Watches here never agree, and no one cares whether they do or not. My own, which was formerly as punctual as the stars in their courses, loses on the Nile a half hour or three quarters of an hour a day (speaking in our arbitrary, artificial manner); so that, if I were good at figures, I could cypher out the length of time, which would suffice by the *loss* of time by my watch, to set me back into the age of Thothmes III.—a very good age to be in. We are living now by great cosmic periods, and have little care for minute divisions of time.

This morning we are at Balias, no one knows how, for we anchored three times in the night. At Balias are made the big earthen jars which the women carry on their heads, and which are sent from here the length of Egypt. Immense numbers of them are stacked upon the banks, and boat-loads of them are waiting for the wind. Rafts of these jars are made and floated down to the Delta; a frail structure, one would say, in the swift and shallow Nile, but below this place there are neither rocks in the stream nor stones on the shore.

The sunrise is magnificent, opening a cloudless day, a day of hot sun, in which the wheat on the banks and under the palm-groves, now knee-high and a vivid green, sparkles as if it had dew on it. At night there are colors of salmon and rose in the sky, and on the water; and the end of the mountain, where Thebes lies, takes a hue of greyish or pearly pink. Thebes! And we are really coming to Thebes! It is fit that it should lie in such a bath of color. Very near to-night seems that great limestone ledge in which the Thebans entombed their dead; but it is by the winding river thirty miles distant.

The last day of the year 1874 finds us lounging about in this pleasant Africa, very much after the leisurely manner of an ancient maritime expedition, the sailors of which spent most of their time in marauding on shore, watching for auguries, and sailing a little when the deities favored. The attempts, the failures, the mismanagements of the day add not a little to your entertainment on the Nile.

In the morning a light breeze springs up and we are slowly crawling forward, when the wind expires, and we come to anchor in mid-stream. The Nile here is wide and glassy, but it is swift, and full of eddies that make this part of the river exceedingly difficult of navigation. We are too far from the shore for tracking, and another resource is tried. The sandal is sent ahead with an anchor and a cable, the intention being to drop the anchor and then by the cable pull up to it, and repeat the process until we get beyond these eddies and treacherous sand-bars.

Of course the sailors in the sandal, who never think of two things at the same time, miscalculate the

distance, and after they drop the anchor, have not rope enough to get back to the dahabeëh. There they are, just above us, and just out of reach, in a most helpless condition, but quite resigned to it. After various futile experiments they make a line with their tracking-cords and float an oar to us, and we send them rope to lengthen their cable. Nearly an hour is consumed in this. When the cable is attached, the crew begin slowly to haul it in through the pullies, walking the short deck in a round and singing a chorus of, "O Mohammed" to some catch-word or phrase of the leader. They like this, it is the kind of work that boys prefer, a sort of frolic:

"Allah, Allah!"

And in response,

"O Mohammed!"

"God forgive us!"

"O Mohammed!"

"God is most great!"

"O Mohammed!"

"El Hoseyn!"

"O Mohammed!"

And so they go round as hilarious as if they played at leapfrog, with no limit of noise and shouting. They cannot haul a rope or pull an oar without this vocal expression. When the anchor is reached it is time for the crew to eat dinner.

We make not more than a mile all day, with hard work, but we reach the shore. We have been two days in this broad, beautiful bend of the river, surrounded by luxuriant fields and palm-groves, the picture framed in rosy mountains of limestone, which glow in the clear sunshine. It is a becalmment in an enchanted place, out of which there seems to be no way, and if there were we are losing the desire to go. At night, as we lie at the bank, a row of ragged fellaheen line the high shore, like buzzards, looking down on us. There is something admirable in their patience, the only virtue they seem to practice.

Later, Abd-el-Atti is thrown into a great excitement upon learning that this is the last day of the year. He had set his heart on being at Luxor, and celebrating the New Year with a grand illumination and burst of fireworks. If he had his way we should go blazing up the river in a perpetual fizz of pyrotechnic glory. At Luxor especially, where many boats are usually gathered, and which is for many the end of the voyage, the dragomans like to outshine each other in display. This is the fashionable season at Thebes, and the harvest-time of its merchants of antiquities; entertainments are given on shore, boats are illuminated, and there is a general rivalry in gaiety. Not to be in Thebes on New Year's is a misfortune. Something must be done. The Sheykh of the village of Tookh is sent for, in the hope that he can help us round the bend. The Sheykh comes, and sits on the deck and smokes. Orion also comes up the eastern sky, like a conqueror, blazing amid a blazing heaven. But we don't stir.

Upon the bank sits the guard of men from the village, to protect us; the sight of the ragamuffins grouped round their lanterns is very picturesque. Whenever we tie up at night we are obliged to procure from the Sheykh of the nearest village a guard to keep thieves from robbing us, for the thieves are not only numerous but expert all along the Nile. No wonder. They have to steal their own crops, in order to get a fair share of the produce of the land they cultivate under the exactions of the government. The Sheykh would not dare to refuse the guard asked for. The office of Sheykh is still hereditary from father to eldest son, and the Sheykh has authority over his own village, according to the ancient custom, but he is subject to a Bey, set by the government to rule a district.

New Year's morning is bright, sparkling, cloudless. When I look from my window early, the same row of buzzards sit on the high bank, looking down upon our deck and peering into our windows. Brown, ragged heaps of humanity; I suppose they are human. One of the youngsters makes mouths and faces at me; and, no doubt, despises us, as dogs and unbelievers. Behold our critic—he has on a single coarse brown garment, through which his tawny skin shows in spots, and he squats in the sand.

What can come out of such a people? Their ignorance exceeds their poverty; and they appear to own nothing save a single garment. They look not ill-fed, but ill-conditioned. And the country is skinned; all the cattle, the turkeys, the chickens are lean. The fatness of the land goes elsewhere.

In what contrast are these people, in situation, in habits, in every thought, to the farmers of America. This Nile valley is in effect cut off from the world; nothing of what we call news enters it, no news, or book, no information of other countries, nor of any thought, or progress, or occurrences.

These people have not, in fact, the least conception of what the world is; they know no more of geography than they do of history. They think the world is flat, with an ocean of water round it. Mecca is the center. It is a religious necessity that the world should be flat in order to have Mecca its center. All Moslems believe that it is flat, as a matter of faith, though a few intelligent men know better.

These people, as I say, do not know anything, as we estimate knowledge. And yet these watchmen and the group on the bank talked all night long; their tongues were racing incessantly, and it appeared to be conversation and not monologue or narration. What could they have been talking about? Is talk in the inverse ratio of knowledge, and do we lose the power or love for mere talk, as we read and are informed?

These people, however, know the news of the river. There is a sort of freemasonry of communication by which whatever occurs is flashed up and down both banks. They know all about the boats and who are on them, and the name of the dragomans, and hear of all the accidents and disasters.

There was an American this year on the river, by the name of Smith—not that I class the coming of Smith as a disaster—who made the voyage on a steamboat. He did not care much about temples or hieroglyphics, and he sought to purchase no antiquities. He took his enjoyment in another indulgence. Having changed some of

his pounds sterling into copper paras, he brought bags of this money with him. When the boat stopped at a town, Smith did not go ashore. He stood on deck and flung his coppers with a free hand at the group of idlers he was sure to find there. But Smith combined amusement with his benevolence, by throwing his largesse into the sand and into the edge of the river, where the recipients of it would have to fight and scramble and dive for what they got. When he cast a handful, there was always a tremendous scrimmage, a rolling of body over body, a rending of garments, and a tumbling into the river. This feat not only amused Smith, but it made him the most popular man on the river. Fast as the steamer went, his fame ran before him, and at every landing there was sure to be a waiting crowd, calling, "Smit, Smit." There has been no one in Egypt since Cambyses who has made so much stir as Smit.

I should not like to convey the idea that the inhabitants here are stupid; far from it; they are only ignorant, and oppressed by long misgovernment. There is no inducement for any one to do more than make a living. The people have sharp countenances, they are lively, keen at a bargain, and, as we said, many of them expert thieves. They are full of deceit and cunning, and their affability is unailing. Both vices and good qualities are products not of savagery, but of a civilization worn old and threadbare. The Eastern civilization generally is only one of manners, and I suspect that of the old Egyptian was no more.

These people may or may not have a drop of the ancient Egyptian blood in them; they may be no more like the Egyptians of the time of the Pharaohs than the present European Jews are like the Jews of Judea in Herod's time; but it is evident that, in all the changes in the occupants of the Nile valley, there has been a certain continuity of habits, of modes of life, a holding to ancient traditions; the relation of men to the soil is little changed. The Biblical patriarchs, fathers of nomadic tribes, have their best representatives to-day, in mode of life and even in poetical and highly figurative speech, not in Israelite bankers in London nor in Israelite beggars in Jerusalem, but in the Bedaween of the desert. And I think the patient and sharp-witted, but never educated, Egyptians of old times are not badly represented by the present settlers in the Nile valley.

There are ages of hereditary strength in the limbs of the Egyptian women, who were here, carrying these big water-jars, before Menes turned the course of the Nile at Memphis. I saw one to-day sit down on her heels before a full jar that could not weigh less than a hundred pounds, lift it to her head with her hands, and then rise straight up with it, as if the muscles of her legs were steel. The jars may be heavier than I said, for I find a full one not easy to lift, and I never saw an Egyptian man touch one.

We go on towards Thebes slowly; though the river is not swifter here than elsewhere, we have the feeling that we are pulling up-hill. We come in the afternoon to Negâdeh, and into one of the prettiest scenes on the Nile. The houses of the old town are all topped with pigeon-towers, and thousands of these birds are circling about the palm-groves or swooping in large flocks along the shore. The pigeons seem never to be slain by the inhabitants, but are kept for the sake of the fertilizer they furnish. It is the correct thing to build a second story to your house for a deposit of this kind. The inhabitants here are nearly all Copts, but we see a Roman Catholic church with its cross; and a large wooden cross stands in the midst of the village—a singular sight in a Moslem country.

A large barge lies here waiting for a steamboat to tow it to Keneh. It is crowded, packed solidly, with young fellows who have been conscripted for the army, so that it looks like a floating hulk covered by a gigantic swarm of black bees. And they are all buzzing in a continuous hum, as if the queen bee had not arrived. On the shore are circles of women, seated in the sand, wailing and mourning as if for the dead—the mothers and wives of the men who have just been seized for the service of their country. We all respect grief, and female grief above all; but these women enter into grief as if it were a pleasure, and appear to enjoy it. If the son of one of the women in the village is conscripted, all the women join in with her in mourning.

I presume there are many hard cases of separation, and that there is real grief enough in the scene before us. The expression of it certainly is not wanting; relays of women relieve those who have wailed long enough; and I see a little clay hut into which the women go, I have no doubt for refreshments, and from which issues a burst of sorrow every time the door opens.

Yet I suppose that there is no doubt that the conscription (much as I hate the trade of the soldier) is a good thing for the boys and men drafted, and for Egypt. Shakirr Pasha told us that this is the first conscription in fifteen years, and that it does not take more than two per cent, of the men liable to military duty—one or two from a village. These lumpish and ignorant louts are put for the first time in their lives under discipline, are taught to obey; they learn to read and write, and those who show aptness and brightness have an opportunity, in the technical education organized by General Stone, to become something more than common soldiers. When these men have served their time and return to their villages, they will bring with them some ideas of the world and some habits of discipline and subordination. It is probably the speediest way, this conscription, by which the dull cloddishness of Egypt can be broken up. I suppose that in time we shall discover something better, but now the harsh discipline of the military service is often the path by which a nation emerges into a useful career.

Leaving this scene of a woe over which it is easy to be philosophical—the raw recruits, in good spirits, munching black bread on the barge while the women howl on shore—we celebrate the night of the New Year by sailing on, till presently the breeze fails us, when it is dark; the sailors get out the small anchor forward, and the steersman calmly lets the sail jibe, and there is a shock, a prospect of shipwreck, and a great tumult, everybody commanding, and no one doing anything to prevent the boat capsizing or stranding. It is exactly like boys' play, but at length we get out of the tangle, and go on, Heaven knows how, with much pushing and hauling, and calling upon "Allah" and "Mohammed."

No. We are not going on, but fast to the bottom, near the shore.

In the morning we are again tracking with an occasional puff of wind, and not more than ten miles from Luxor. We can, however, outwalk the boat; and we find the country very attractive and surprisingly rich; the great fields of wheat, growing rank, testify to the fertility of the soil, and when the fields are dotted with palm-trees the picture is beautiful.

It is a scene of wide cultivation, teeming with an easy, ragged, and abundant life. The doleful sakiyas are

creaking in their ceaseless labor; frequent mud-villages dot with brown the green expanse, villages abounding in yellow dogs and coffee-colored babies; men are working in the fields, directing the irrigating streams, digging holes for melons and small vegetables, and plowing. The plow is simply the iron-pointed stick that has been used so long, and it scratches the ground five or six inches deep. The effort of the government to make the peasants use a modern plow, in the Delta, failed. Besides the wheat, we find large cotton-fields, the plant in yellow blossoms, and also ripening, and sugar-cane. With anything like systematic, intelligent agriculture, what harvests this land would yield.

"Good morning!"

The words were English, the speaker was one of two eager Arabs, who had suddenly appeared at our side.

"Good morning. O, yes. Me guide Goorna."

"What is Goorna?"

"Yes. Temp de Goorna. Come bime by."

"What is Goorna?"

"Plenty. I go you. You want buy any *antiques*? Come bime by."

"Do you live in Goorna?"

"All same. Memnonium, Goorna, I show all gentlemens. Me guide. Antiques! O plenty. Come bime by."

Come Bime By's comrade, an older man, loped along by his side, unable to join in this intelligent conversation, but it turned out that he was the real guide, and all the better in that he made no pretence of speaking any English.

"Can you get us a mummy, a real one, in the original package, that hasn't been opened?"

"You like. Come plenty mummy. Used be. Not now. You like, I get. Come bime by, *bookra*."

We are in fact on the threshold of great Thebes. These are two of the prowlers among its sepulchres, who have spied our dahabeeh approaching from the rocks above the plain, and have come to prey on us. They prey equally upon the living and the dead, but only upon the dead for the benefit of the living. They try to supply the demand which we tourists create. They might themselves be content to dwell in the minor tombs, in the plain, out of which the dead were long ago ejected; but Egyptologists have set them the example and taught them the profit of digging. If these honest fellows cannot always find the ancient scarabæi and the vases we want, they manufacture very good imitations of them. So that their industry is not altogether so ghastly as it may appear.

We are at the north end of the vast plain upon which Thebes stood; and in the afternoon we land, and go to visit the northernmost ruin on the west bank, the Temple of Koorneh (Goorneh), a comparatively modern structure, begun by Sethi I., a great warrior and conqueror of the nineteenth dynasty, before the birth of Moses.

CHAPTER XV.—AMONG THE RUINS OF THEBES.

YOU need not fear that you are to have inflicted upon you a description of Thebes, its ruins of temples, its statues, obelisks, pylons, tombs, holes in the ground, mummy-pits and mounds, with an attempt to reconstruct the fabric of its ancient splendor, and present you, gratis, the city as it was thirty-five hundred years ago, when Egypt was at the pinnacle of her glory, the feet of her kings were on the necks of every nation, and this, her capital, gorged with the spoils of near and distant maraudings, the spectator of triumph succeeding triumph, the *depot* of all that was precious in the ancient world, at once a treasure-house and a granary, ruled by an aristocracy of cruel and ostentatious soldiers and crafty and tyrannical priests, inhabited

by abject Egyptians and hordes of captive slaves—was abandoned to a sensuous luxury rivaling that of Rome in her days of greatest wealth and least virtue in man or woman.

I should like to do it, but you would go to sleep before you were half through it, and forget to thank the cause of your comfortable repose. We can see, however, in a moment, the unique situation of the famous town.

We shall have to give up, at the outset, the notion of Homer's "hundred-gated Thebes." It is one of his generousities of speech. There never were any walls about Thebes, and it never needed any; if it had any gates they must have been purely ornamental structures; and perhaps the pylons of the many temples were called gates. If Homer had been more careful in the use of his epithets he would have saved us a deal of trouble.

Nature prepared a place here for a vast city. The valley of the Nile, narrow above and below, suddenly spreads out into a great circular plain, the Arabian and Libyan ranges of mountains falling back to make room for it. In the circle of these mountains, which are bare masses of limestone, but graceful and bold in outline, lies the plain, with some undulation of surface, but no hills: the rim of the setting is grey, pink, purple, according to the position of the sun; the enclosure is green as the emerald. The Nile cuts this plain into two unequal parts. The east side is the broader, and the hills around it are neither so near the stream nor so high as the Libyan range.

When the Nile first burst into this plain it seems to have been undecided what course to take through it. I think it has been undecided ever since, and has wandered about, shifting from bluff to bluff, in the long ages. Where it enters, its natural course would be under the eastern hills, and there, it seems to me, it once ran. Now, however, it sweeps to the westward, leaving the larger portion of the plain on the right bank.

The situation is this: on the east side of the river are the temple of Luxor on a slight elevation and the modern village built in and around it; a mile and a half below and further from the river, are the vast ruins of Karnak; two or three miles north-east of Karnak are some isolated columns and remains of temples. On the west side of the river is the great necropolis. The crumbling Libyan hills are pierced with tombs. The desert near them is nothing but a cemetery. In this desert are the ruins of the great temples, Medeenet Hâboo, Dayr el Bahree, the Memnonium (or Rameseum, built by Rameses II., who succeeded in affixing his name to as many things in Egypt as Michael Angelo did in Italy), the temple of Koorneh, and several smaller ones. Advanced out upon the cultivated plain a mile or so from the Memnonium, stand the two Colossi. Over beyond the first range of Libyan hills, or precipices, are the Tombs of the Kings, in a wild gorge, approached from the north by a winding sort of canon, a defile so hot and savage that a mummy passing through it couldn't have had much doubt of the place he was going to.

The ancient city of Thebes spread from its cemetery under and in the Libyan hills, over the plain beyond Ivarnak. Did the Nile divide that city? Or did the Nile run under the eastern bluff and leave the plain and city one?

It is one of the most delightful questions in the world, for no one knows anything about it, nor ever can know. Why, then, discuss it? Is it not as important as most of the questions we discuss? What, then, would become of learning and scholarship, if we couldn't dispute about the site of Troy, and if we all agreed that the temple of Pandora Regina was dedicated to Neptune and not to Jupiter? I am for united Thebes.

Let the objector consider. Let him stand upon one of the terraces of Dayr el Bahree, and casting his eye over the plain and the Nile in a straight line to Ivarnak, notice the conformity of directions of the lines of both temples, and that their avenues of sphinxes produced would have met; and let him say whether he does not think they did meet.

Let the objector remember that the Colossi, which now stand in an alluvial soil that buries their bases over seven feet and is annually inundated, were originally on the hard sand of the desert; and that all the arable land of the west side has been made within a period easily reckoned; that every year adds to it the soil washed from the eastern bank.

Farther, let him see how rapidly the river is eating away the bank at Luxor; wearing its way back again, is it not? to the old channel under the Arabian bluff, which is still marked. The temple at Luxor is only a few rods from the river. The English native consul, who built his house between the pillars of the temple thirty years ago, remembers that, at that time, he used to saddle his donkey whenever he wanted to go to the river. Observation of the land and stream above, at Erment, favors the impression that the river once ran on the east side and that it is working its way back to the old channel.

The village of Erment is about eight miles above Luxor, and on the west side of the river. An intelligent Arab at Luxor told me that one hundred and fifty years ago Erment was on the east side. It is an ancient village, and boasts ruins; among the remaining sculptures is an authentic portrait of Cleopatra, who appears to have sat to all the stone-cutters in Upper Egypt. Here then is an instance of the Nile going round a town instead of washing it away.

One thing more: Karnak is going to tumble into a heap some day, Great Hall of Columns and all. It is slowly having its foundations sapped by inundations and leachings from the Nile. Now, does it stand to reason that Osirtasen, who was a sensible king and a man of family; that the Thothmes people, and especially Hatasoo Thothmes, the woman who erected the biggest obelisk ever raised; and that the vain Rameses II., who spent his life in an effort to multiply his name and features in stone, so that time couldn't rub them out, would have spent so much money in structures that the Nile was likely to eat away in three or four thousand years?

The objector may say that the bed of the Nile has risen; and may ask how the river got over to the desert of the west side without destroying Karnak on its way. There is Erment, for an example.

Have you now any idea of the topography of the plain? I ought to say that along the western bank, opposite Luxor, stretches a long sand island joined to the main, in low water, and that the wide river is very shallow on the west side.

We started for Koorneh across a luxuriant wheat-field, but soon struck the desert and the *debris* of the old city. Across the river, we had our first view of the pillars of Luxor and the pylons of Karnak, sights to heat the imagination and set the blood dancing. But how far off they are; on what a grand scale this Thebes is laid out

—if one forgets London and Paris and New York.

The desert we pass over is full of rifled tombs, hewn horizontally in rocks that stand above the general level. Some of them are large chambers, with pillars left for support. The doors are open and the sand drifts in and over the rocks in which they are cut. A good many of them are inhabited by miserable Arabs, who dwell in them and in huts among them. I fancy that, if the dispossessed mummies should reappear, they would differ little, except perhaps in being better clad, from these bony living persons who occupy and keep warm their sepulchres.

Our guide leads us at a lively pace through these holes and heaps of the dead, over sand hot to the feet, under a sky blue and burning, for a mile and a half. He is the first Egyptian I have seen who can walk. He gets over the ground with a sort of skipping lope, barefooted, and looks not unlike a tough North American Indian. As he swings along, holding his thin cotton robe with one hand, we feel as if we were following a shade despatched to conduct us to some Unhappy Hunting-Grounds.

Near the temple are some sycamore-trees and a collection of hovels called Koorneh, inhabited by a swarm of ill-conditioned creatures, who are not too proud to beg and probably are not ashamed to steal. They beset us there and in the ruins to buy all manner of valuable antiquities, strings of beads from mummies, hands and legs of mummies, small green and blue images, and the like, and raise such a clamor of importunity that one can hold no communion, if he desires to, with the spirits of Sethi I., and his son Rameses II., who spent the people's money in erecting these big columns and putting the vast stones on top of them.

We are impressed with the massiveness and sombreness of the Egyptian work, but this temple is too squat to be effective, and is scarcely worth visiting, in comparison with others, except for its sculptures. Inside and out it is covered with them; either the face of the stone cut away, leaving the figures in relief, or the figures are cut in at the sides and left in relief in the center. The rooms are small—from the necessary limitations of roof-stones that stretched from wall to wall, or from column to column; but all the walls, in darkness or in light, are covered with carving.

The sculptures are all a glorification of the Pharaohs. We should like to know the unpronounceable names of the artists, who, in the conventional limits set them by their religion, drew pictures of so much expression and figures so life-like, and chiseled these stones with such faultless execution; but there are no names here but of Pharaoh and of the gods.

The king is in battle, driving his chariot into the thick of the fight; the king crosses rivers, destroys walled cities, routs armies the king appears in a triumphal procession with chained captives, sacks of treasure, a menagerie of beasts, and a garden of exotic trees and plants borne from conquered countries; the king is making offerings to his predecessors, or to gods many, hawk-headed, cow-headed, ibis-headed, man-headed. The king's scribe is taking count of the hands, piled in a heap, of the men the king has slain in battle. The king, a gigantic figure, the height of a pylon, grasps by the hair of the head a bunch of prisoners, whom he is about to slay with a raised club—as one would cut off the tops of a handful of radishes.

There is a vein of "Big Injun" running through them all. The same swagger and boastfulness, and cruelty to captives. I was glad to see one woman in the mythic crowd, doing the generous thing: Isis, slim and pretty, offers her breast to her son, and Horus stretches up to the stone opportunity and takes his supper like a little gentleman. And there is color yet in her cheek and robe that was put on when she was thirty-five hundred years younger than she is now.

Towards the south we saw the more extensive ruins of the Memnonium and, more impressive still, the twin Colossi, one of them the so-called vocal statue of Memnon, standing up in the air against the evening sky more than a mile distant. They rose out of a calm green plain of what seemed to be wheat, but which was a field of beans. The friendly green about them seemed to draw them nearer to us in sympathy. At this distance we could not see how battered they were. And the unspeakable calm of these giant figures, sitting with hands on knees, fronting the east, like the Sphinx, conveys the same impression of lapse of time and of endurance that the pyramids give.

The sunset, as we went back across the plain, was gorgeous in vermilion, crimson, and yellow. The Colossi dominated the great expanse, and loomed up in the fading light like shapes out of the mysterious past.

Our dahabeëh had crept up to the east side of the island, and could only be reached by passing through sand and water. A deep though not wide channel of the Nile ran between us and the island. We were taken over this in a deep tub of a ferryboat. Laboriously wading through the sand and plowed fields of the island, we found our boat anchored in the stream, and the shore so shallow that even the sandal could not land. The sailors took us off to the row-boat on their backs.

In the evening the dahabeëh is worked across and secured to the crumbling bank of the Luxor. And the accomplishment of a voyage of four hundred and fifty miles in sixteen days is, of course, announced by rockets.

CHAPTER XVI.—HISTORY IN STONE.

IT NEVER rains at Thebes; you begin with that fact. But everybody is anxious to have it rain, so that he can say, "It rained when I was at Thebes, for the first time in four thousand years."

It has not rained for four thousand years, and the evidence of this is that no representation of rain is found in any of the sculptures on temples or monuments; and all Egyptologists know that what is not found thus represented has had no existence.

To-day, it rained for the first time in four thousand years. The circumstances were these. We were crossing at sunset from the west side to the island, in a nasty little ferry, built like a canal-berge, its depths being full of all uncleanness and smell—donkeys, peasants, and camels using it for crossing. (The getting of a camel in and out of such a deep trough is a work of time and considerable pounding and roaring of beast and men.) The boat was propelled by two half-clad, handsome, laughing Egyptian boys, who rowed with some crooked limbs of trees, and sang "Hâ! Yâlesah," and "Yah! Mohammed" as they stood and pulled the unwieldy oars.

We were standing, above the reek, on a loose platform of sticks at the stern, when my comrade said, "It rains, I think I felt a drop on my hand."

"It can't be," I said, "it has not rained here in four thousand years;" and I extended my hand. I felt nothing. And yet I could not swear that a drop or two did not fall into the river.

It had that appearance, nearly. And we have seen no flies skipping on the Nile at this season.

In the sculpture we remember that the king is often represented extending his hand. He would not put it out for nothing, for everything done anciently in Egypt, every scratch on a rock, has a deep and profound meaning. Pharaoh is in the attitude of fearing that it is going to rain. Perhaps it did rain last night. At any rate, there were light clouds over the sky.

The morning opens with a cool west wind, which increases and whirls the sand in great clouds over the Libyan side of the river, and envelopes Luxor in its dry storm. Luxor is for the most part a collection of miserable mud-hovels on a low ridge, with the half-buried temple for a nucleus, and a few houses of a better sort along the bank, from which float the consular flags.

The inhabitants of Luxor live upon the winter travelers. Sometimes a dozen or twenty gay dahabeëhs and several steamboats are moored here, and the town assumes the appearance of a fashionable watering-place. It is the best place on the river on the whole, considering its attractions for scholars and sightseers, to spend the winter, and I have no doubt it would be a great resort if it had any accommodations for visitors. But it has not; the stranger must live in his boat. There is not indeed in the whole land of Egypt above Cairo such a thing as an inn; scarcely a refuge where a clean Christian, who wishes to keep clean, can pass a night, unless it be in the house of some governor or a palace of the Khedive. The perfection of the world's climate in winter is, to be sure, higher up, in Nubia; but that of Thebes is good enough for people accustomed to Europe and New England. With steamboats making regular trips and a railroad crawling up the river, there is certain to be the Rameses Hotel at Thebes before long, and its rival a Thothmes House; together with the Mummy Restaurant, and the Scarabæus Saloon.

You need two or three weeks to see properly the ruins of Thebes, though Cook's "personally conducted tourists" do it in four days, and have a *soirée* of the dancing-girls besides. The region to be traveled over is not only vast (Strabo says the city was nine miles long) but it is exceedingly difficult getting about, and fatiguing, if haste is necessary. Crossing the swift Nile in a sandal takes time; you must wade or be carried over shallows to the island beach; there is a weary walk or ride over this; another stream is to be crossed, and then begins the work of the day. You set out with a cavalcade of mules, servants, water-carriers, and a retinue of hungry, begging Arabs, over the fields and through the desert to the temples and tombs. The distances are long, the sand is glaring, the incandescent sun is reflected in hot waves from the burning Libyan chain. It requires hours to master the plan of a vast temple in its ruins, and days to follow out the story of the wonderful people who built it, in its marvelous sculptures—acres of inside and outside walls of picture cut in stone.

Perhaps the easiest way of passing the time in an ancient ruin was that of two Americans, who used to spread their rugs in some shady court, and sit there, drinking brandy and champagne all day, letting the ancient civilization gradually reconstruct itself in their brains.

Life on the dahabeëh is much as usual; in fact, we are only waiting a favorable wind to pursue our voyage, expecting to see Thebes satisfactorily on our return. Of the inhabitants and social life of Luxor, we shall have more to say by and by. We have daily a *levee* of idlers on the bank, who spend twilight hours in watching the boat; we are visited by sharp-eyed dealers in antiquities, who pull out strings of scarabæi from their bosoms,

or cautiously produce from under their gowns a sculptured tablet, or a stone image, or some articles from a mummy-case—*antiques* really as good as new. Abd-el-Atti sits on the forward-deck cheapening the poor chickens with old women, and surrounded by an admiring group of Arab friends, who sit all day smoking and sipping coffee, and kept in a lively enjoyment by his interminable *facetiae* and *badinage*.

Our most illustrious visitors are the American consul, Ali Effendi Noorad, and the English consul, Mustapha Aga. Ali is a well-featured, bronze-complexioned Arab of good family (I think of the Ababdehs), whose brother is Sheykh of a tribe at Karnak.

He cannot speak English, but he has a pleasanter smile than any other American consul I know. Mustapha, now very old and well known to all Nile travelers, is a venerable wise man of the East, a most suave, courtly Arab, plausible, and soft of speech; under his bushy eyebrows one sees eyes that are keen and yet glazed with a film of secrecy; the sort of eye that you cannot look into, but which you have no doubt looks into you.

Mustapha, as I said, built his house between two columns of the temple of Luxor. These magnificent columns, with flaring lotus capitals, are half-buried in sand, and the whole area is so built in and over by Arab habitations that little of the once extensive and splendid structure can be seen. Indeed, the visitor will do well to be content with the well-known poetic view of the columns from the river. The elegant obelisk, whose mate is in Paris, must however be seen, as well as the statues of Rameses II. sitting behind it up to their necks in sand—as if a sitz-bath had been prescribed. I went one day into the interior of the huts, in order to look at some of the sculptures, especially that of a king's chariot which is shaded by a parasol—an article which we invented three or four thousand years after the Egyptians, who first used it, had gone to the shades where parasols are useless. I was sorry that I went. The private house I entered was a mud enclosure with a creaky wooden door. Opening this I found myself in what appeared to be a private hen-yard, where babies, chickens, old women, straw, flies, and dust, mingled with the odors of antiquity; about this were the rooms in which the family sleep—mere dog-kennels. Two of the women had nose-rings put through the right nostril, hoops of gold two or three inches across. I cannot say that a nose-ring adds to a woman's beauty, but if I had to manage a harem of these sharp-tongued creatures I should want rings in their noses—it would need only a slight pull of the cord in the ring to cause the woman to cry, in Oriental language, "where thou goest, I will go." The parasol sculpture was half-covered by the mud-wall and the oven; but there was Pharaoh visible, riding on in glory through all this squalor. The Pharaohs and priests never let one of the common people set foot inside these superb temples; and there is a sort of base satisfaction now! in seeing the ignorant and oppressed living in their palaces, and letting the hens roost on Pharaoh's sun-shade. But it was difficult to make picturesque the inside of this temple-palace, even with all the flowing rags of its occupants.

We spend a day in a preliminary visit to the Memnonium and the vast ruins known as those of Medeenet Hâboo. Among our attendants over the plain are half a dozen little girls, bright, smiling lasses, who salute us with a cheery "Good morning," and devote themselves to us the whole day. Each one carries on her head a light, thin water-*koolleh*, that would hold about a quart, balancing it perfectly as she runs along. I have seen mere infants carrying very small *koollehs*, beginning thus young to learn the art of walking with the large ones, which is to be the chief business of their lives.

One of the girls, who says her name is Fatimeh (the name of the Prophet's favorite daughter is in great request), is very pretty, and may be ten or eleven years old, not far from the marriageable age. She has black hair, large, soft, black eyes, the lids stained with kohl, dazzling white teeth and a sweet smile. She wears cheap earrings, a necklace of beads and metal, and a slight ring on one hand; her finger-nails and the palms of her little hands are stained with henna. For dress she has a sort of shawl used as a head-veil, and an ample outer-garment, a mantle of dark-blue cotton, ornamented down the front seams with colored beads—a coquettish touch that connects her with her sisters of the ancient *régime* who seem to have used the cylindrical blue bead even more profusely than ladies now-a-day the jet "bugles," in dress trimming. I fear the pretty heathen is beginning to be aware of her attractions.

The girls run patiently beside us or wait for us at the temples all day, bruising their feet on the stony ways, getting nothing to eat unless we give them something, chatting cheerfully, smiling at us and using their little stock of English to gain our good will, constantly ready with their *koollehs*, and say nothing of backsheesh until they are about to leave us at night and go to their homes. But when they begin to ask, and get a copper or two, they beg with a mixture of pathos and anxiety and a use of the pronouns that is irresistible.

"You tired. Plenty backsheesh for little girl. Yes."

"Why don't you give us backsheesh? We are tired too," we reply.

"Yes. Me give you backsheesh you tired all day."

Fatimeh only uses her eyes, conscious already of her power. They are satisfied with a piastre; which the dragoman says is too much, and enough to spoil them. But, after all, five cents is not a magnificent gift, from a stranger who has come five thousand miles, to a little girl in the heart of Africa, who has lighted up the desert a whole day with her charming smiles!

The donkey-boy pulls the strings of pathos for his backsheesh, having no beauty to use; he says, "Father and mother *all* dead." Seems to have belonged to a harem.

Before we can gain space or quiet either to examine or enjoy a temple, we have to free ourselves of a crowd of adhesive men, boys, and girls, who press upon us their curiosities, relics of the dead, whose only value is their antiquity. The price of these relics is of course wholly "fancy," and I presume that Thebes, where the influence of the antique is most strong, is the best market in the world for these trifles; and that however cheaply they may be bought here, they fetch a better price than they would elsewhere.

I suppose if I were to stand in Broadway and offer passers-by such a mummy's hand as this which is now pressed upon my notice, I could scarcely give it away. This hand has been "doctored" to sell; the present owner has re-wrapped its bitumen-soaked flesh in mummy-cloth, and partially concealed three rings on the fingers. Of course the hand is old and the cheap rings are new. It is pleasant to think of these merchants in dried flesh prowling about among the dead, selecting a limb here and there that they think will decorate well, and tricking out with cheap jewelry these mortal fragments. This hand, which the rascal has chosen, is small, and may have been a source of pride to its owner long ago; somebody else may have been fond of it, though

even he—the lover—would not care to hold it long now. A pretty little hand; I suppose it has in its better days given many a caress and love-pat, and many a slap in the face; belonged to one of the people, or it would not have been found in a common mummy-pit; perhaps the hand of a sweet water-bearer like Fatimeh, perhaps of some slave-girl whose fatal beauty threw her into the drag-net that the Pharaohs occasionally cast along the Upper Nile—slave-hunting raids that appear on the monuments as great military achievements. This hand, naked, supple, dimpled, henna-tipped, may have been offered for nothing once; there are wanted for it four piastres now, rings and all. A dear little hand!

Great quantities of antique beads are offered us in strings, to one end of which is usually tied a small image of Osiris, or the winged sun, or the scarabæus with wings. The inexhaustible supply of these beads and images leads many to think that they are manufactured to suit the demand. But it is not so. Their blue is of a shade that is not produced now-a-days. And, besides, there is no need to manufacture what exists in the mummy-pits in such abundance. The beads and bugles are of glass; they were much used for necklaces and are found covering the breasts of mummies, woven in a network of various patterns, like old bead purses. The vivid blue color was given by copper.

The little blue images of Osiris which are so abundant are also genuine. They are of porcelain, a sort of porcelain-glass, a sand-paste, glazed, colored blue, and baked. They are found in great quantities in all tombs; and it was the Egyptian practice to thickly strew with them the ground upon which the foundations and floors of temples were laid. These images found in tombs are more properly figures of the dead under the form of Osiris, and the hieroglyphics on them sometimes give the name and quality of the departed. They are in fact a sort of "p.p. c." visiting-card, which the mummy has left for future ages. The Egyptians succeeded in handing themselves down to posterity; but the manner in which posterity has received them is not encouraging to us to salt ourselves down for another age.

The Memnonium, or more properly Rameseum, since it was built by Rameses II., and covered with his deeds, writ in stone, gives you even in its ruins a very good idea of one of the most symmetrical of Egyptian temples; the vast columns of its great hall attest its magnificence, while the elaboration of its sculpture, wanting the classic purity of the earlier work found in the tombs of Geezeh and Sakkara, speaks of a time when art was greatly stimulated by royal patronage.

It was the practice of the Pharaohs when they came to the throne to make one or more military expeditions of conquest and plunder, slay as many enemies as possible (all people being considered "enemies" who did not pay tribute), cut as wide a swarth of desolation over the earth as they were able, loot the cities, drag into captivity the pleasing women, and return laden with treasure and slaves and the evidences of enlarged dominion. Then they spent the remainder of their virtuous days in erecting huge temples and chiseling their exploits on them. This is, in a word, the history of the Pharaohs.

But I think that Rameses II., who was the handsomest and most conceited swell of them all, was not so particular about doing the deeds as he was about recording them. He could not have done much else in his long reign than erect the temples, carve the hieroglyphics, and set up the statues of himself, which proclaim his fame. He literally spread himself all over Egypt, and must have kept the whole country busy, quarrying, and building, and carving for his glorification. That he did a tenth of the deeds he is represented performing, no one believes now; and I take a vindictive pleasure in abusing him. By some historic fatality he got the name of the Great Sesostris, and was by tradition credited with the exploits of Thothmes III., the greatest of the Pharaohs, a real hero and statesman, during whose reign it was no boast to say that Egypt "placed her frontier where it pleased herself," and with those of his father Sethi I., a usurper in the line, but a great soldier.

However, this Rameses did not have good luck with his gigantic statues; I do not know one that is not shattered, defaced, or thrown down. This one at the Rameseum is only a wreck of gigantic fragments. It was a monolith of syenite, and if it was the largest statue in Egypt, as it is said, it must have been over sixty feet high. The arithmeticians say that it weighed about eight hundred and eighty-seven tons, having a solid content of three times the largest obelisk in the world, that at Karnak. These figures convey no idea to my mind. When a stone man is as big as a four-story house, I cease to grasp him. I climbed upon the arm of this Rameses, and found his name cut deeply in the hard granite, the cutting polished to the very bottom like the finest intaglio. The polishing alone of this great mass must have been an incredible labor. How was it moved from its quarry in Assouan, a hundred and thirty miles distant? And how was it broken into the thousand fragments in which it lies? An earthquake would not do it. There are no marks of drilling or the use of an explosive material. But if Cambyses broke it—and Cambyses must have been remembered in Egypt as Napoleon I. is in Italy, the one for smashing, the other for stealing—he had something as destructive as nitro-glycerine.

Rameses II. impressed into his service not only art but literature. One of his achievements depicted here is his victory over the Khitas (Hittites), an Asiatic tribe; the king is in the single-handed act of driving the enemy over the river Orontes,—a bluish streak meandering down the wall. This scene is the subject of a famous poem, known as the Poem of Pentaour, which is carved in hieroglyphics at Karnak and at Luxor. The battle is very spiritedly depicted here. On the walls are many side-scenes and acts characteristic of the age and the people. The booty from the enemy is collected in a heap; and the quantity of gold is indicated by the size of a bag of it which is breaking the back of an ass; a soldier is pulling the beard of his prisoner, and another is beating his captives, after the brutal manner of the Egyptians.

The temples at Medeenet Haboo are to me as interesting as those at Karnak. There are two; the smaller one is of various ages; but its oldest portions were built by Amun-noo-het, the sister of Thothmes, the woman who has left more monuments of her vigor than any other in history, and, woman-like, the monuments are filial offerings, and not erections to her own greatness; the larger temple is the work of Rameses III. The more you visit it, the more you will be impressed with the splendor of its courts, halls and columns, and you may spend days in the study of its sculptures without exhausting them.

Along these high-columned halls stalk vast processions, armies going to battle, conquerors in triumphal entry, priests and soldiers bearing sacrifices, and rows of stone deities of the Egyptian pantheon receiving them in a divine indifference. Again the battle rages, the chariots drive furiously, arrows fill the air, the foot-

troops press forward with their big spears and long shields, and the king is slaying the chief, who tumbles from his car. The alarm has spread to the country beyond; the terrified inhabitants are in flight; a woman, such is the detail, is seen to snatch her baby and run into the woods, leaving her pot of broth cooking on the fire.

The carving in this temple is often very deep, cut in four or five inches in the syenite, and beautifully polished to the bottom, as if done with emery. The colors that once gave each figure its character, are still fresh, red, green, blue, and black. The ceilings of some of the chambers yet represent the blue and star-sprinkled sky. How surpassingly brilliant these must have been once! We see how much the figure owed to color, when the color designated the different nationalities, the enemies or the captives, the shade of their skin, hair, beard and garments. We recognize, even, textures of cloth, and the spotted leopard-skins worn by the priests. How gay are the birds of varied plumage.

There is considerable variety in sculpture here, but, after all an endless repetition on wall after wall, in chamber after chamber of the same royal persons, gods, goddesses, and priests. There is nothing on earth so tiresome as a row of stone gods, in whom I doubt if anybody ever sincerely believed, standing to receive the offerings of a Turveydrop of a king. Occasionally the gods take turn about, and pour oil on the head of a king, at his coronation, and with this is usually the very pretty device of four birds flying to the four quarters of the globe to announce the event. But whatever the scene, warlike or religious, it is for the glorification of Pharaoh, all the same. He is commonly represented of gigantic size, and all the other human figures about him are small in comparison. It must have kept the Pharaoh in a constantly inflated condition, to walk these halls and behold, on all sides, his extraordinary apotheosis. But the Pharaoh was not only king but high priest, and the divine representative on earth, and about to become, in a peculiar sense, Osiris himself, at his death.

The Egyptians would have saved us much trouble if they had introduced perspective into these pictures. It is difficult to feel that a pond of water, a tree and a house, one above the other on a wall, are intended to be on the same level. We have to accustom ourselves to figures always in profile, with the eye cut in full as if seen in front, and both shoulders showing. The hands of prisoners are tied behind them, but this is shown by bringing both elbows, with no sort of respect for the man's anatomy, round to the side, toward us, yet it is wonderful what character and vivacity they gave to their figures, and how by simple profile they represent nationalities and races, Ethiops, Nubians, Jews, Assyrians, Europeans.

These temples are inlaid and overlaid and surrounded with heaps of rubbish, and the *débris* of ancient and modern mud and unbaked-brick dwellings; part of the great pillars are entirely covered. The Christians once occupied the temples, and there are remains of a church, and a large church, in one of the vast courts, built of materials at hand, but gone to ruin more complete than the structure around it. The early Christians hewed away the beautiful images of Osiris from the pillars (an Osiride pillar is one upon one side of which, and the length of it, is cut in full relief, only attached at the back, a figure of Osiris), and covered the hieroglyphics and sculptures with plaster. They defaced these temples as the Reformers hacked and whitewashed the cathedrals of Germany. And sometimes the plaster which was meant to cover forever from sight the images of a mysterious religion, has defeated the intentions of the plasterers, by preserving, to an age that has no fear of stone gods, the ancient pictures, sharp in outline and fresh in color.

It is indeed marvelous that so much has been preserved, considering what a destructive creature man is, and how it pleases his ignoble soul to destroy the works of his forerunners on the earth. The earthquake has shaken up Egypt time and again, but Cambyses was worse; he was an earthquake with malice and purpose, and left little standing that he had leisure to overturn. The ancient Christians spent a great deal of time in rubbing out the deep-cut hieroglyphics, chiseling away the heads of strange gods, covering the pictures of ancient ceremonies and sacrifices, and painting on the walls their own rude conceptions of holy persons and miraculous occurrences. And then the Moslems came, hating all images and pictorial representations alike, and scraped away or battered with bullets the work of pagans and Christians.

There is much discussion whether these so-called temples were not palaces and royal residences as well as religious edifices. Doubtless many of them served a double purpose; the great pylons and propylons having rooms in which men might have lived, who did not know what a comfortable house is. Certainly no palaces of the Pharaohs have been discovered in Egypt, if these temples are not palaces in part; and it is not to be supposed that the Pharaoh dwelt in a mud-house with a palm-roof, like a common mortal. He was the religious as well as the civil head, Pope and Cæsar in one, and it is natural that he should have dwelt in the temple precincts.

The pyramidal towers of the great temple of Medeenet Haboo are thought to be the remains of the palace of Rameses III. Here indeed the Egyptologists point out his harem and the private apartments, when the favored of Amun-Re unbent himself from his usual occupation of seizing a bunch of captives by the hair and slashing off their heads at a blow, in the society of his women and the domestic enjoyments of a family man. Here we get an insight into the private life of the awful monarch, and are able to penetrate the mysteries of his retirement. It is from such sculptures as one finds here that scholars have been able to rehabilitate old Egyptian society and tell us not only what the Egyptians did but what they were thinking about. The scholar, to whom we are most indebted for the reconstruction of the ancient life of the Egyptians, Sir Gardner Wilkinson, is able not only to describe to us a *soirée*, from paintings in tombs at Thebes, but to tell us what the company talked about and what their emotions were. "In the meantime," he says, "the conversation became animated," (as it sometimes does at parties) "and the ladies fluently discussed the question of dress," "the maker of an earring and the shop where it was purchased was anxiously inquired." On one occasion when the guests were in "raptures of admiration" over something, an awkward youth overturned a pedestal, creating great confusion and frightening the women, who screamed; however, no one was hurt, and harmony being restored, "the incident afforded fresh matter for conversation, to be related in full details to their friends when they returned home."

This is very wonderful art, and proves that the Egyptians excelled all who came after them in the use of the chisel and brush; since they could not only represent in a drawing on the wall of a tomb the gaiety of an evening party and the subject of its conversation, but could make the picture convey as well the talk of the guests to their friends after they returned home!

We had read a good deal about the harem of Rameses III., and it was naturally the first object of our search at Medeenet Haboo. At the first visit we could not find it, and all our expectation of his sweet domestic life was unrealized. It was in vain that we read over the description:—"Here the king is attended by his harem, some of whom present him with flowers, or wave before him fans and flabella; and a favorite is caressed, or invited to divert his leisure hours with a game of draughts." We climbed everywhere, and looked into every room, but the king and his harem were not visible. And yet the pictures, upon which has been built all this fair fabric of the domestic life of Rameses, must exist somewhere in these two pyramidal towers. And what a gallery of delights it must be, we thought. The king attended by his harem!

Upon a subsequent visit, we insisted that the guide should take us into this harem. That was not possible, but he would show it to us. We climbed a broken wall, from the top of which we could look up, through a window, into a small apartment in the tower. The room might be ten feet by twelve in size, probably smaller. There was no way of getting to it by any interior stairway or by any exterior one, that we could see, and I have no doubt that if Pharaoh lived there he climbed up by a ladder and pulled his harem up after him.

But the pictures on the walls, which we made out by the help of an opera-glass, prove this to have been one of the private apartments, they say. There are only two pictures, only one, in fact, not defaced; but as these are the only examples of the interior decoration of an ancient royal palace in all Egypt, it is well to make the most of them. They are both drawn in spirited outlines and are very graceful, the profile faces having a Greek beauty. In one Rameses III., of colossal size, is represented seated on an elegant *fauteuil*, with his feet on a stool. He wears the royal crown, a necklace, and sandals. Before him stands a lady of his harem, clad in a high crown of lotus-stems, a slight necklace, and sandals turned up like skates. It must be remembered that the weather was usually very warm in Thebes, especially on this side the river. The lady is holding up a lotus-flower, but it is very far from the royal nose, and indeed she stands so far off, that the king has to stretch out his arm to chuck her under the chin. The Pharaoh's beautiful face preserves its immortal calm, and the "favorite is caressed" in accordance with the chastest requirements of high art.

In the other picture, the Pharaoh is seated as before, but he is playing at draughts. In his left hand he holds some men, and his right is extended lifting a piece from the draughtboard. His antagonist has been unfortunate. Her legs are all gone; her head has disappeared. There remain of this "favorite" only the outline of part of the body, the right arm and the hand which lifts a piece, and a suggestion of the left arm extended at full length and pushing a lotus-bud close to the king's nose. It is an exhibition of man's selfishness—The poor woman is not only compelled to entertain the despot at the game, but she must regale his fastidious and scornful nose at the same time; it must have been very tiresome to keep the left hand thus extended through a whole game. What a passion the Egyptians had for the heavy perfume of this flower. They are smelling it in all their pictures.

We climbed afterwards, by means of a heap of rubbish, into a room similar to this one, in the other tower, where we saw remains of the same sculpture. It was like the Egyptians to repeat that picture five hundred times in the same palace.

The two Colossi stand half a mile east of the temple of Medeenet Haboo, and perhaps are the survivors of like figures which lined an avenue to another temple. One of them is better known to fame than any other ancient statue, and rests its reputation on the most shadowy basis. In a line with these statues are the remains of other colossi of nearly the same size, buried in the alluvial deposit. These figures both represent Amunoph III. (about 1500 or 1600 b. c.); they are seated; and on either side of the legs of the king, and attached to the throne, are the statues of his mother and daughter, little women, eighteen feet high. The colossi are fifty feet high without the bases, and must have stood sixty feet in the air before the Nile soil covered the desert on which they were erected. The pedestal is a solid stone thirty-three feet long.

Both were monoliths. The southern one is still one piece, but shockingly mutilated. The northern one is the famous Vocal Statue of Memnon; though why it is called of Memnon and why "vocal" is not easily explained. It was broken into fragments either by some marauder, or by an earthquake at the beginning of our era, and built up from the waist by blocks of stone, in the time of the Roman occupation, during the reign of Septimius Severus.

There was a tradition—perhaps it was only the tradition of a tradition—that it used to sing every morning at sunrise. No mention is made of this singing property, however, until after it was overthrown; and its singing ceased to be heard after the Roman Emperor put it into the state in which we now see it. It has been assumed that it used to sing, and many theories have been invented to explain its vocal method. Very likely the original report of this prodigy was a Greek or Roman fable; and the noise may have been produced by a trick for Hadrian's benefit (who is said to have heard it) in order to keep up the reputation of the statue.

Amunoph III. (or Amenôphis, or Amen-hotep—he never knew how to spell his name) was a tremendous slasher-about over the territories of other people; there is an inscription down at Samneh (above the second cataract) which says that he brought, in one expedition, out of Soudan, seven hundred and forty negro prisoners, half of whom were women and children. On the records which this modest man made, he is "Lord of both worlds, absolute master, Son of the Sun." He is Horus, the strong bull. "He marches and victory is gained, like Horus, son of Isis, like the Sun in heaven." He also built almost as extensively as Rameses II; he covered both banks of the Nile with splendid monuments; his structures are found from Ethiopia to the Sinaitic peninsula. He set up his image in this Colossus, the statue which the Greeks and Romans called Memnon, the fame of which took such possession of the imagination of poets and historians. They heard, or said they heard, Memnon, the Ethiopian, one of the defenders of Troy, each morning saluting his mother, Aurora.

If this sound was heard, scientists think it was produced by the action of the sun's rays upon dew fallen in the crevices of the broken figure. Others think the sound was produced by a priest who sat concealed in the lap of the figure and struck a metallic stone. And the cavity and the metallic stone exist there now. Of course the stone was put in there and the cavity left, when the statue was repaired, it having been a monolith. And as the sound was never heard before the statue was broken nor after it was repaired, the noise was not produced by the metallic stone. And if I am required to believe that the statue sang with his head off, I begin to doubt altogether. I incline to think that we have here only one of those beautiful myths in which the Greeks

and Romans loved to clothe the distant and the gigantic.

One of the means of accounting for a sound which may never have been heard, is that the priests produced it in order to strike with awe the people. Now, the Egyptian priests never cared anything about the people, and wouldn't have taken the trouble; indeed, in the old times "people" wouldn't have been allowed anywhere within such a sacred inclosure as this in which the Colossus stood. And, besides, the priest could not have got into the cavity mentioned. When the statue was a monolith, it would puzzle him to get in; and there is no stairway or steps by which he could ascend now. We sent an Arab up, who scaled the broken fragments with extreme difficulty, and struck the stone. The noise produced was like that made by striking the metallic stones we find in the desert,—not a resonance to be heard far.

So that I doubt that there was any singing at sunrise by the so-called Memnon (which was Amunoph), and I doubt that it was a priestly device.

This Amunoph family, whose acquaintance we have been obliged to make, cut a wide swath in their day; they had eccentricities, and there are told a great many stories about them, which might interest you if you could believe that the Amunophs were as real as the Hapsburgs and the Stuarts and the Grants.

Amunoph I. (or Amen-hotep) was the successor of Amosis (or Ahmes) who expelled the Shepherds, and even pursued them into Canaan and knocked their walled-towns about their heads. Amunoph I. subdued the Shasu or Bedaween of the desert between Egypt and Syria, as much as those hereditary robbers were ever subdued. This was in the seventeenth century b. c. This king also made a naval expedition up the Nile into Ethiopia, and it is said that he took captive there the "chief of the mountaineers." Probably then, he went into Abyssinia, and did not discover the real source of the Nile.

The fourth Amunoph went conquering in Asia, as his predecessors had done, for nations did not stay conquered in those days. He was followed by his seven daughters in chariots of war. These heroic girls fought, with their father, and may be seen now, in pictures, gently driving their chariot-wheels over the crushed Asiatics. When Amunoph IV. came home and turned his attention to religion, he made lively work with the Egyptian pantheon. This had grown into vast proportions from the time of Menes, and Amunoph did not attempt to improve it or reform it; he simply set it aside, and established a new religion. He it was who abandoned Thebes and built Tel-el-Amarna, and there set up the worship of a single god, Aten, represented by the sun's disc. He shut up the old temples, effaced the images of the ancient gods, and persecuted mercilessly their worshippers throughout the empire.

He was prompted to all this by his mother, for he himself was little better than an imbecile. It was from his mother that he took his foreign religion as he did his foreign blood, for there was nothing of the Egyptian type in his face. His mother, Queen Taia, wife of Amunoph III., had light hair, blue eyes and rosy cheeks, the characteristics of northern women. She was not of royal family, and not Egyptian; but the child of a foreign family then living in the Delta, and probably the king married her for her beauty and cleverness.

M. Lenormant thinks she was a Hebrew. That people were then very numerous in the Delta, where they lived unmolested keeping their own religion, a very much corrupted and materialized monotheism. Queen Taia has the complexion and features of the Hebrews—I don't mean of the Jews who are now dispersed over the continents. Lenormant credits the Hebrews, through the Queen Taia, with the overthrow of the Pharaonic religion and the establishment of the monotheism of Amunoph IV.—a worship that had many external likenesses to the Hebrew forms. At Tel-el-Amarna we see, among the utensils of the worship of Aten, the Israelitish "Table of Shew-bread." It is also noticed that the persecution of the Hebrews coincides with the termination of the religious revolution introduced by the son of Taia.

Whenever a pretty woman of talent comes into history she makes mischief. The episode of Queen Taia is however a great relief to the granite-faced monotony of the conservative Pharaohs. Women rulers and regents always make the world lively for the time being—and it took in this case two or three generations to repair the damages. Smashing things and repairing damages—that is history.

History starts up from every foot of this Theban plain, piled four or five deep with civilizations. These temples are engulfed in rubbish; what the Persians and the earthquake spared, Copts and Arabs for centuries have overlaid with their crumbling habitations. It requires a large draft upon the imagination to reinstate the edifices that once covered this vast waste; but we are impressed with the size of the city, when we see the long distances that the remaining temples are apart, and the evidence, in broken columns, statues, and great hewn blocks of stone shouldering out of the sand, of others perhaps as large.

CHAPTER XVII.—KARNAK.

THE WEATHER is almost unsettled. There was actually a dash of rain against the cabin window last night—over before you could prepare an affidavit to the fact—and today is cold, more or less cloudy with a drop, only a drop, of rain occasionally. Besides, the wind is in the south-west and the sand flies. We cannot sail, and decide to visit Karnak, in spite of the entreaty of the hand-book to leave this, as the crown of all sight-seeing, until we have climbed up to its greatness over all the lesser ruins.

Perhaps this is wise; but I think I should advise a friend to go at once to Karnak and outrageously astonish himself, while his mind is fresh, and before he becomes at all sated with ruins or familiar with other vast and exceedingly impressive edifices. They are certain to dull a little his impression of Karnak even "Madam—" it is Abd-el-Atti who comes in, rubbing his hands—"your carriage stops the way."

"Carriage?"

"Yes, ma'am, I just make him."

The carriage was an arm-chair slung between two pushing-poles; between each end of them was harnessed a surly diminutive donkey who seemed to feel his degradation. Each donkey required a driver; Ahmed, with his sleeves rolled up and armed with a big club, walked beside, to steady the swaying chair, and to beat the boys when their donkeys took a fancy to lie down; and a cloud of interested Arabs hovered about it, running with it, adding to the noise, dust, and picturesqueness of our cavalcade.

On the outskirts of the mud-cabins we pass through the weekly market, a motley assemblage of country-folks and produce, camels, donkeys, and sheep. It is close by the Ghawazee quarter, where is a colony of a hundred or more of these dancing-girls. They are always conspicuous among Egyptian women by their greater comeliness and gay apparel. They wear red and yellow gowns, many tinkling ornaments of silver and gold, and their eyes are heavily darkened with kohl. I don't know what it is in this kohl, that it gives woman such a wicked and dangerous aspect. They come out to ask for backsheesh in a brazen but probably intended to be a seductive manner; they are bold, but some of them rather well-looking. They claim to be an unmixed race of ancient lineage; but I suspect their blood is no purer than their morals. There is not much in Egypt that is *not* hopelessly mixed.

Of the mile-and-a-half avenue of Sphinxes that once connected Luxor with Karnak, we see no trace until we are near the latter. The country is open and beautiful with green wheat, palms, and sycamores. Great Karnak does not show itself until we are close upon it; its vast extent is hidden by the remains of the wall of circuit, by the exterior temples and pylons. It is not until we have passed beyond the great—but called small—temple of Rameses III., at the north entrance, and climbed the pyramidal tower to the west of the Great Hall, that we begin to comprehend the magnitude of these ruins, and that only days of wandering over them and of study would give us their gigantic plan.

Karnak is not a temple, but a city rather; a city of temples, palaces, obelisks, colossal statues, It is, like a city, a growth of many centuries. It is not a conception or the execution of a purpose; it is the not always harmonious accretion of time and wealth and vanity. Of the slowness of its growth some idea may be gained from the fact that the hieroglyphics on one face of one of its obelisks were cut two hundred and fifty years after those on the opposite face. So long ago were both chiseled, however, they are alike venerable to us. I shouldn't lose my temper with a man who differed with me only a thousand years about the date of any event in Egypt.

They were working at this mass of edifices, sacred or profane, all the way from Osirtasen I. down to Alexander II.; that is from about 3064 B. c. according to Mariette (Bunsen, 2781, Wilkinson, 2080,—it doesn't matter) to only a short time before our era. There was a modest beginning in the plain but chaste temple of Osirtasen; but each king sought to outdo his predecessor until Sethi I. forever distanced rivalry in building the Great Hall. And after him it is useless for anyone else to attempt greatness by piling up stones. The length of the temples, pylons, and obelisks, *en suite* from west to east, is 1180 feet; but there are other outlying and gigantic ruins; I suppose it is fully a mile and a half round the wall of circuit.

There is nothing in the world of architecture like the Great Hall; nothing so massive, so surprising, and, for me, at least, so crushingly oppressive. What monstrous columns! And how thickly they are crowded together! Their array is always compared to a forest. The comparison is apt in some respects; but how free, uplifting is a forest, how it expands into the blue air, and lifts the soul with it. A piece of architecture is to be judged, I suppose, by the effect it produces. It is not simply that this hall is pagan in its impression; it misses the highest architectural effect by reason of its unrelieved heaviness. It is wonderful; it was a prodigious achievement to build so many big columns.

The setting of enormous columns so close together that you can only see a few of them at one point of view is the architecture of the Great Hall. Upon these, big stones are put for a roof. There is no reason why this might not have been repeated over an acre of ground. Neither from within nor from without can you see the extent of the hall. * The best view of it is down the center aisle, formed by the largest columns; and as these have height as well as bulk, and the sky is now seen above them, the effect is of the highest majesty. This hall was dimly lighted by windows in the clerestory, the frames of which exhibit a freedom of device and grace of carving worthy of a Gothic cathedral. These columns, all richly sculptured, are laid up in blocks of stone of half the diameter, the joints broken. If the Egyptians had dared to use the arch, the principle of which they knew, in this building, so that the columns could have stood wide apart and still upheld the roof, the sight of the interior would have been almost too much for the human mind. The spectator would have been exalted, not crushed by it.

** The Great Hall measures one hundred and seventy feet by three hundred and twenty-nine; in this space stand one hundred and thirty-four columns; twelve of these, forming the central avenue of one hundred and seventy feet, are sixty-two feet high, without plinth and abacus, and eleven feet six inches in diameter; the other one hundred and twenty-two columns are forty-two feet five inches in height and about nine feet in diameter. The great columns stand only fifteen or sixteen feet apart.*

Not far off is the obelisk which Amunoo-het erected to the memory of her father. I am not sure but it will stand long after The Hall of Sethi is a mass of ruins; for already is the water sapping the foundations of the latter, some of the columns lean like reeling drunken men, and one day, with crash after crash, these giants will totter, and the blocks of stone of which they are built will make another of those shapeless heaps to which sooner or later our solidest works come. The red granite shaft of the faithful daughter lifts itself ninety-two feet into the air, and is the most beautiful as it is the largest obelisk ever raised.

The sanctuary of red granite was once very rich and beautiful; the high polish of its walls and the remains of its exquisite carving, no less than the colors that still remain, attest that. The sanctuary is a heap of ruins, thanks to that ancient Shaker, Cambyses, but the sculptures in one of the chambers are the most beautiful we have seen; the colors, red, blue, and green are still brilliant, the ceiling is spangled with stars on a blue firmament. Considering the hardness of this beautiful syenite and the difficulty of working it, I think this is the most admirable piece of work in Thebes.

It may be said of some of the sculptures here, especially of the very spirited designs and intelligent execution of those of the Great Hall, that they are superior to those on the other side of the river. And yet there is endless theological reiteration here; there are dreary miles of the same gods in the same attitudes; and you cannot call all of them respectable gods. The longer the religion endured the more conventional and repetitious its representations became. The sculptors came to have a traditional habit of doing certain scenes and groups in a certain way; and the want of life and faith in them becomes very evident in the sculptures of the Ptolemaic period.

In this vast area you may spend days and not exhaust the objects worth examination. On one of our last visits we found near the sacred lake very striking colossal statues which we had never seen before.

When this city of temples and palaces, the favorite royal residence, was entire and connected with Luxor by the avenue of sphinxes, and the great edifices and statues on the west side of the river were standing, this broad basin of the Nile, enclosed by the circle of rose-colored limestone mountains, which were themselves perforated with vast tombs, must have been what its splendid fame reports, when it could send to war twenty thousand chariots. But, I wonder whether the city, aside from its conspicuous temples and attached palaces, was one of mud-hovels, like those of most peoples of antiquity, and of the modern Egyptians.

CHAPTER XVIII.—ASCENDING THE RIVER.

WE resume our voyage on the sixth of January, but we leave a hostage at Luxor as we did at Asiout.

This is a sailor who became drunk and turbulent last night on hasheesh, and was sent to the governor.

We found him this morning with a heavy chain round his neck and tied to a stake in one corner of the courtyard of the house where the governor has his office. I think he might have pulled up the stake and run away; but I believe it is not considered right here for a prisoner to escape. The common people are so subdued that they wilt, when authority puts its heavy hand on them. Near the sailor was a mud-kennel into which he could crawl if he liked. This is the jail of Luxor. Justice is summary here. This sailor is confined without judge or jury and will be kept till he refunds his advance wages, since he was discharged from the boat as a dangerous man.

The sailors dread the lock-up, for they may be forced into the army as the only way out of it; they would much prefer the stick. They are used to the stick; four thousand years of Egyptians have been accustomed to the stick. A beating they do not mind much, or at least are not humiliated by it as another race would be. But neither the prospect of the jail nor the stick will wean them from hasheesh, which is the curse of Egypt.

We spread our sails to a light breeze and depart in company with two other dahabeëhs, one English (the *Philæ*) and one American (the *Dongola*). Africa and weeks of leisure and sunny skies are before us. We loiter along in company, in friendly company one may say, now passing a boat and now falling behind, like three ducks coquetting in a swift current. We are none of us in a hurry, we are indifferent to progress, our minds are calm and our worst passions not excited. We do not appear to be going rapidly, I sometimes doubt if we are going forward at all, but it gradually becomes apparent that we are in the midst of a race!

Everything in this world is relative. I can imagine a fearfully exciting match of mud-turtles on a straight track. Think of the agony, prolonged, that the owner of the slow turtle would suffer! We are evidently in for it; and a race like this, that lasts all day, will tire out the hardest sportsman.

The *Rip Van Winkle* is the largest boat and happens to have the lead; but the *Philo*, a very graceful, gay boat, is crawling up to us; the *Dongola* also seems to feel a breeze that we have not. We want a strong wind—the *Rip Van Winkle* does not wake up in a mild air. As we desire, it freshens a little, the big sail swells, and the ripples are louder at the bow. Unfortunately there is breeze enough for three, and the other vessels shake themselves out like ducks about to fly. It is a pretty sight just now; the spread of three great bird-wing sails, the long gaily-painted cabins and decks, the sweeping yards and the national colors and variegated streamers flying!

They are gaining on us; the *Philæ* gets inside, and taking our wind, for a moment, creeps ahead, and attempts to sheer across our bow to force us into the swifter current; the *Dongola* sails in at the same time, and a jam and collision appear inevitable. A storm of language bursts out of each boat; men run to stern and bow, to ward off intruders or to disengage an entangled spar; all the crew, sailors, reises, and dragomans are in the most active vociferation. But the *Philæ* sails out of the coil, the *Dongola* draws ahead at the risk of going into the bank, and our crew seize the punt-poles and have active work to prevent going fast on a sand-bar to leeward.

But the prosperity of the wicked is short. The wind falls flat. Instantly our men are tumbling into the water and carrying the rope ashore to track. The lines are all out, and the men are attempting to haul us round a deep bend. The steersmen keep the head of the vessels off shore, and the strain on the trackers is tremendous. The cables flop along the bank and scrape over the shadoofs, raking down a stake now and then, and bring out from their holes the half-naked, protesting proprietors, who get angry and gesticulate,—as if they had anything to do with our race!

The men cannot hold the cable any longer; one by one they are forced to let go, at the risk of being drawn down the crumbling bank, and the cable splashes into the water. The sailors run ahead and come down upon a sand-spit; there are puffs of wind in our sail, and we appear to have made a point, when the men wade on board and haul in the rope. The *Dongola* is close upon us; the *Philæ* has lost by keeping too far out in the current. Oh, for a wind!

Instead of a wind, there is a bland smile in the quiet sky. Why, O children, do you hasten? Have not Nile sailors been doing this for four thousand years? The boats begin to yaw about. Poles are got out. We are all in danger of going aground; we are all striving to get the inside track at yonder point; we are in danger of collision; we are most of all in danger of being left behind. The crews are crazy with excitement; as they hurriedly walk the deck, rapidly shifting their poles in the shallow water, calling upon Yâlèsah in quicker and quicker respirations, "Hâ Yâlèsah," "Hâ Yâlèsah," as they run to change the sail at the least indication of a stray breeze, as they see first one dahabeëh and then the other crawling ahead, the contest assumes a serious aspect, and their cries are stronger and more barbaric.

The *Philæ* gets inside again and takes the bank. We are all tracking, when we come to the point, beyond which is a deep bay. If we had wind we should sail straight across; the distance round the bay is much greater—but then we can track along the bank; there is deep water close under the bank and there is deep water in mid-river. The *Philæ* stands away into the river, barely holding its own in the light zephyr. The *Dongola* tries to follow the *Philæ*, but swings round, and her crew take to the poles. Our plan appears to be more brilliant. Our men take the cable out upon a sand-bank in the stream and attempt to tow us along the center channel. All goes well. We gain on the *Philæ* and pass it. We see the *Dongola* behind, struggling in the shallows. But the sand-bank is a failure. The men begin to go from it into deeper water; it is up to their knees, it reaches our "drawers," which we bought for the crew; it comes to the waist, their shoulders are going under. It is useless; the cable is let go, and the men rush back to the sand-bar. There they are. Our cable is trailing down-stream; we have lost our crew, and the wind is just coming up. While we are sending the sandal to rescue our mariners, the *Philæ* sails away, and the *Dongola* shows her stern.

The travelers on the three boats, during all this contest, are sitting on the warm, sunny decks, with a pretence of books, opera-glasses in hand; apparently regarding the scene with indifference, but no doubt, underneath this mask, longing to "lick" the other boats.

After all, we come to Erment (which is eight miles from Luxor) not far apart. The race is not to the swift. There is no swift on the Nile. But I do not know how there could be a more exciting race of eight miles a day!

At Erment is a large sugar-factory belonging to the Khedive; and a governor lives here in a big house and harem. The house has an extensive garden laid out by old Mohammed Ali, and a plantation of oranges, Yusef Effendis, apples, apricots, peaches, lemons, pomegranates, and limes. The plantation shows that fruit will grow on the Upper Nile, if one will take the trouble to set out and water the trees. But we see none. The high Nile here last September so completely washed out the garden that we can get neither flowers nor vegetables. And some people like the rapidly-grown watery vegetables that grow along the Nile.

Our dragoman wanted some of the good, unrefined loaf-sugar from the factory here, and I went with him to see how business is transacted. We had difficulty in finding any office or place of sale about the establishment.

But a good-natured dwarf, who seemed to spring out of the ground on our landing, led us through courts and amid dilapidated warehouses to a gate, in which sat an Arab in mixed costume. Within the gate hung a pair of steelyards, and on one side was a bench. The gate, the man, the steelyards and the bench constituted an office. Beyond was an avenue, having low enclosures on each side, that with broken pillars and walls of

brick looked very much like Pompeii; in a shallow bin was a great heap of barley, thrashed, and safe and dry in the open air.

The indifferent man in the gate sent for a slow boy, who, in his own time, came, bearing a key, a stick an inch square and a foot long, with four short iron spikes stuck in one side near the end. He led us up a dirty brick stairway outside a building, and inserting the key in a wooden lock to match (both lock and key are unchanged since the Pharaohs) let us into a long, low room, like an old sail-loft full of dust, packages of sugar-paper and old account-books. When the shutters were opened we found at one end a few papers of sugar, which we bought, and our own sailor carried down to the steelyards. The indifferent man condescended to weigh the sugar, and took the pay; but he lazily handed the money to the boy, who sauntered off with it. Naturally, you wouldn't trust that boy; but there was an indescribable sense of the worthlessness of time and of money and of all trade, about this transaction, that precluded the possibility of the smartness of theft.

The next day the race is resumed, with little wind and a good deal of tracking; we pass the *Dongola* and are neck-and-neck with the *Philæ* till afternoon, when we bid her good-bye; and yet not with unmixed pleasure.

It is a pleasure to pass a boat and leave her toiling after; but the pleasure only lasts while she is in sight. If I had my way, we should constantly overhaul boats and pass them, and so go up the stream in continual triumph. It is only the cold consciousness of duty performed that sustains us, when we have no spectators of our progress.

We go on serenely. Hailing a crossing ferry-boat, loaded with squatting, turbaned tatterdemalion Arabs, the dragoman cries, "*Salaam aleykoom.*"

The reply is, "*Salaam*; peace be with you; may God meet you in the way; may God receive you to himself." The Old Testament style.

While we were loitering along by Mutâneh—where there is a sugar-factory, and an irrigating steam-pump—trying to count the string of camels, hundreds of them moving along the bank against the sunset—camels that bring the cane to be ground—and our crew were eating supper, I am sorry to say that the *Philæ* poled ahead of us, and went on to Esneh. But something happened at Esneh.

It was dark when we arrived at that prosperous town, and, of course, Abd-el-Atti, who would like to have us go blazing through Egypt like Cambyses, sent up a rocket. Its fiery serpent tore the black night above us, exploded in a hundred colored stars, and then dropped its stick into the water. Splendid rockets! The only decent rockets to be had in Egypt are those made by the government; and Abd-el-Atti was the only dragoman who had been thoughtful enough to make interest with the authorities and procure government rockets. Hence our proud position on the river. We had no firman, and the Khedive did not pay our expenses, but the Viceroy himself couldn't out-rocket us.

As soon as we had come to shore and tied up, an operation taking some time in the darkness, we had a visit from the governor, a friend of our dragoman; but this visit was urgent and scarcely friendly. An attempt had been made to set the town on fire! A rocket from an arriving boat had been thrown into the town, set fire to the straw on top of one of the houses and—

"Did it spread?"

"No, but it might. Allah be praised, it was put out. But the town might have been burned down. What a way is this, to go along the Nile firing the towns at night?"

"'Twasn't our rocket. Ours exploded in the air and fell into the river. Did the other boat, did the *Philæ* send up a rocket when she arrived?"

"Yes. There was another rocket."

"Dat's it, dat's it," says Abd-el-Atti. "Why you no go on board the *Philæ* and not come here?" And then he added to us, as if struck by a new idea, "Where the *Philæ* get dat rocket? I think he have no rocket before. Not send any up Christmas in Asioot, not send any up in Luxor. I think these very strange. Not so?"

"What kind of rocket was it, that burnt the town?" we ask the governor.

"I have it." The governor ran to the cabin door and called. A servant brought in the exploded missile. It was a large-sized rocket, like our own; twice as large as the rockets that are not made by the government, and which travelers usually carry.

"Seems like our stick," cries Abd-el-Atti, getting excited. He examined the sheath with great care. We all gathered round the cabin lamp to look at the fatal barrel. It had a mark on it, something in Arabic. Abd-el-Atti turned it sideways and upside down, in an effort to get at the meaning of the writing.

"That is government; make 'em by the government; no doubt," he says, standing off and becoming solemn. "Dat rocket been stole. Looks like our rocket."

Abd-el-Atti flies out, and there is a commotion outside. "Who has been stealing rockets and sell 'em to that dragoman?" Boxes are opened. Rockets are brought in and compared. The exploded one has the same mark as ours, it is the same size.

A new anxiety dawns upon Abd-el-Atti. What if the *Philæ* has government rockets? Our distinction is then gone. No it can't be. "I know what every dragoman do in Cairo. *He* can't get dese rocket. Nobody get 'em dis year 'cept us." Abd-el-Atti is for probing the affair to the bottom. Perhaps the hasheesh-eating sailor we discharged at Luxor stole some of our rockets and sold them, and thus they came into possession of the dragoman of the *Philæ*.

The young governor, however, has had enough of it. He begins to see a great deal of vexation to himself, and a row with an English and an American dahabeëh and with natives besides. Let it drop, he says. The governor sits on the divan smoking a cigar. He is accompanied by a Greek friend, a merchant of the place. When the governor's cigar goes out, in his distraction, the Greek takes it, and re-lights it, puffing it till it is well enflamed, and then handing it again to the governor. This is a custom of the East. The servant often "starts" the cigarette for his master.

"Oh, let it go," says the governor, appealing to us: "It is finish now. It was no damage done."

"But it might," cries Abd-el-Atti, "it might burn the town," taking now the *rôle* which the governor had dropped.

"But you are not to blame. It is not you have done it."

"Then why you come to me, why you come to us wid de rocket? Why you no go to the *Philo*? Yes. You know that we, nobody else on the river got government rockets. This government rocket—look the mark," seizing the exploded one and a new one, and bringing the ends of both so near the lamp that we all fear an explosion. "There is something underhands here."

"But it's all right now."

"How it's all right? Story go back to Cairo; *Rip Van Winkle* been gone set fire to Esneh. Whose rockets? Government rockets. Nobody have government rockets 'cept Abd-el-Atti."

A terrific confab goes on in the cabin for nearly an hour between the dragoman, the governor, and the Greek; a lively entertainment and exhibition of character which we have no desire to curtail. The governor is a young, bright, presentable fellow, in Frank dress, who for liveliness of talk and gesture would pass for an Italian.

When the governor has departed, our reïs comes in and presents us a high-toned "certificate" from the gentleman on board the *Philo*.—he has learned from our reïs, steersman and some sailors (who are in a panic) that they are all to be hauled before the governor and punished on a charge of stealing rockets and selling them to his dragoman. He certifies that he bought his own rockets in the Mooskee; that his dragoman was with him when he bought them; and that our men are innocent. The certificate further certifies that our conduct toward our crew is unjustifiable and an unheard of cruelty!

Here was a *casus belli*! Foreign powers had intervened. The right of search and seizure was again asserted; the war of 1812 was about to be renewed. Our cruelty unheard of? We should think so. All the rest of it was unheard of also. We hadn't the slightest intention of punishing anybody or hauling anybody before the governor. When Abd-el-Atti hears the certificate, he shakes his head:—

"Buy 'em like this in the Mooskee? Not be. Not find government rockets in any shop in the Mooskee. Something underhands by that dragoman!"

Not wishing to light the flames of war in Africa, we immediately took servants and lanterns and called on the English Man-of-War. The Man-of-War had gone to bed. It was nine o'clock.

"What for he send a certificate and go to bed?" Abd-el-Atti wants to know. "I not like the looks of it." He began to be suspicious of all the world.

In the morning the gentleman returned our call. He did not know or care whose rocket set fire to the town. Couldn't hurt these towns much to burn them; small loss if all were burned. The governor had called on him to say that no damage was done. Our dragoman had, however, no right to accuse his of buying stolen rockets. His were bought in Cairo, etc., etc. And the matter dropped amicably and without bloodshed. But Abd-el-Atti's suspicions widened as he thought it over:—

"What for de Governor come to me? What for he not go to dat boat what fire de rocket? What for de Governor come been call on me wid a rocket? The Governor never come been call on me wid a rocket before!"

It is customary for all boats which are going above the first cataract to stop at Esneh twenty-four hours to bake bread for the crew; frequently they are detained longer, for the wheat has to be bought, ground in one of the little ox-power mills, mixed and baked; and the crew hire a mill and oven for the time being and perform the labor. We had sent sailors ahead to bake the bread, and it was ready in the morning; but we stayed over., according to immemorial custom. The sailors are entitled to a holiday, and they like to take it where there are plenty of coffee-houses and a large colony of Ghawazee girls.

Esneh is not a bad specimen of an Egyptian town. There is a temple here, of which only the magnificent portico has been excavated; the remainder lies under the town. We descend some thirty feet to get to the floor of the portico,—to such a depth has it been covered. And it is a modern temple, after all, of the period of the Roman occupation. We find here the cartouches of the Cæsars. The columns are elegant and covered with very good sculpture; each of the twenty-five has a different capital, and some are developed into a hint of the Corinthian and the composite. The rigid constraints of the Egyptian art are beginning to give way.

The work in the period of the Romans differs much from the ancient; it is less simple, more ornamented and debased. The hieroglyphics are not so carefully and nicely cut. The figures are not so free in drawing, and not so good as the old, except that they show more anatomical knowledge, and begin to exhibit a little thought of perspective. The later artists attempt to work out more details in the figure, to show muscles and various members in more particularity. Some of the forms and faces have much beauty, but most of them declare a decline of art, or perhaps an attempt to reconcile the old style with new knowledge, and consequent failure.

We called on the governor. He was absent at the mosque, but his servant gave us coffee. The Oriental magnificence of the gubernatorial residence would impress the most faithless traveler. The entrance was through a yard that would be a fair hen-yard (for common fowl) at home, and the small apartment into which we were shown might serve for a stable; but it had a divan, some carpets and chairs, and three small windows. Its roof was flat, made of rough split palm-trees covered with palm-leaves. The governor's lady lives somewhere in the rear of this apartment of the ruler, in a low mud-house, of which we saw the outside only.

Passing near the government house, we stopped in to see the new levy of soldiers, which amounts to some four hundred from this province. Men are taken between the ages of eighteen and twenty-four, and although less than three per cent, of those liable are seized, the draft makes a tremendous excitement all along the river. In some places the bazaars are closed and there is a general panic as if pestilence had broken out.

Outside the government house, and by the river bank, are women, squatting in the sand, black figures of woe and dirt, bewailing their relations taken away. In one mud-hovel there is so much howling and vocal grief that we think at first a funeral is in progress. We are permitted to look into the lock-up where the recruits are detained waiting transportation down the river. A hundred or two fellaheen, of the average as to nakedness and squalor of raiment, are crowded into a long room with a dirt floor, and among them are many with heavy

chains on their ankles. These latter are murderers and thieves, awaiting trial or further punishment. It is in fact the jail, and the soldiers are forced into this companionship until their departure. One would say this is a bad nursery for patriots.

The court of justice is in the anteroom of this prison; and the two ought to be near together. The Kadi, or judge, sits cross-legged on the ground, and others squat around him, among them a scribe. When we enter, we are given seats on a mat near the judge, and offered coffee and pipes. This is something like a court of justice, sociable and friendly. It is impossible to tell who is prisoner, who are witnesses, and who are spectators. All are talking together, the prisoner (who is pointed out) louder than any other, the spectators all joining in with the witnesses. The prisoner is allowed to "talk back," which must be a satisfaction to him. When the hubbub subsides, the judge pronounces sentence; and probably he does as well as an ordinary jury.

The remainder of this town is not sightly. In fact I do not suppose that six thousand people could live in one dirtier, dustier, of more wretched houses; rows of unclean, shriveled women, with unclean babies, their eyes plastered with flies, sitting along the lanes called streets; plenty of men and boys in no better case as to clothing; but the men are physically superior to the women. In fact we see no comely women except the Ghawazees. Upon the provisions, the grain, the sweet-cakes exposed for sale on the ground, flies settle so that all look black.

Not more palaces and sugar-mills, O! Khedive, will save this Egypt, but some plan that will lift these women out of dirt and ignorance!

Our next run is to Assouan. Let us sketch it rapidly, and indicate by a touch the panorama it unrolled for us.

We are under way at daylight, leaving our two companions of the race asleep. We go on with a good wind, and by lovely sloping banks of green; banks that have occasionally a New England-river aspect; but palm-trees are behind them, and beyond are uneven mountain ranges, the crumbling limestone of which is so rosy in the sun. The wind freshens, and we spin along five miles an hour. The other boats have started, but they have a stern chase, and we lose them round a bend.

The atmosphere is delicious, a little under a summer heat, so that it is pleasant to sit in the sun; we seem to fly, with our great wings of sails, by the lovely shores. An idle man could desire nothing more. The crew are cutting up the bread baked yesterday and spreading it on the deck to dry. They prefer this to bread made of bolted wheat; and it would be very good, if it were not heavy and sour, and dirty to look at, and somewhat gritty to the teeth.

In the afternoon we pass the new, the Roman, and the old town of El Kab, back of which are the famous grottoes of Eilethyas with their pictures of domestic and agricultural life. We go on famously, leaving Edfoo behind, to the tune of five miles an hour; and, later, we can distinguish the top of the sail of the *Philæ* at least ten miles behind. Before dark we are abreast of the sandstone quarries of Silsilis, the most wonderful in the world, and the river is swift, narrow and may be rocky. We have accomplished fifty-seven miles since morning, and wishing to make a day's run that shall astonish Egypt, we keep on in the dark. The wind increases, and in the midst of our career we go aground. We tug and push and splash, however, get off the sand, and scud along again. In a few moments something happens. There is a thump and a lurch, and bedlam breaks loose on deck.

We have gone hard on the sand. The wind is blowing almost a gale, and in the shadow of these hills the night is black. Our calm steersman lets the boat swing right about, facing down-stream, the sail jibes, and we are in great peril of upsetting, or carrying away yard, mast and all. The hubbub is something indescribable. The sailors are ordered aloft to take in the sail. They fear to do it. To venture out upon that long slender yard, which is foul and threatens to snap every moment, the wind whipping the loose sail, is no easy or safe task. The yelling that ensues would astonish the regular service. Reis and sailors are all screaming together, and above all can be heard the storming of the dragoman, who is most alive to the danger, his voice broken with excitement and passion. The crew are crouching about the mast, in terror, calling upon Mohammed. The reis is muttering to the Prophet, in the midst of his entreaty. Abd-el-Atti is rapidly telling his beads, while he raves. At last Ahmed springs up the rigging, and the others, induced by shame and the butt-end of a hand-spike, follow him, and are driven out along the shaking yard. Amid intense anxiety and with extreme difficulty, the sail is furled and we lie there, aground, with an anchor out, the wind blowing hard and the waves pounding us, as if we were making head against a gale at sea. A dark and wildish night it is, and a lonesome place, the rocky shores dimly seen; but there is starlight. We should prefer to be tied to the bank, sheltered from the wind rather than lie swinging and pounding here. However, it shows us the Nile in a new aspect. And another good comes out of the adventure. Ahmed, who saved the boat, gets a new suit of clothes. Nobody in Egypt needed one more. A suit of clothes is a blue cotton gown.

The following morning (Sunday) is cold, but we are off early as if nothing had happened, and run rapidly against the current—or the current against us, which produces the impression of going fast. The river is narrower, the mountains come closer to the shores, and there is, on either side, only a scant strip of vegetation. Egypt, along here, is really only three or four rods wide. The desert sands drift down to the very shores, and the desert hills, broken, jagged, are savage walls of enclosure.

The Nile no doubt once rose annually and covered these now bleached wastes, and made them fruitful. But that was long ago. At Silsilis, below here, where the great quarries are, there was once a rocky barrier, probably a fall, which set the Nile back, raising its level from here to Assouan. In some convulsion this was carried away. When? There is some evidence on this point at hand. By ten o'clock we have rounded a long bend, and come to the temples of Kom Ombos, their great columns conspicuous on a hill close to the river. They are rather fine structures, for the Ptolemies. One of them stands upon foundations of an ancient edifice built by Thothmes I. (eighteenth dynasty); and these foundations rest upon alluvial deposit. Consequently the lowering of the Nile above Silsilis, probably by breaking through the rock-dam there, was before the time of Thothmes I. The Nile has never risen to the temple site since. These striking ruins are, however, destined to be swept away; opposite the bend where they stand a large sand-island is forming, and every hour the soil is washing from under them. Upon this sand-island this morning are flocks of birds, sunning themselves, and bevies of sand-grouse take wing at our approach. A crocodile also lifts his shoulders and lunges into the

water, when we get near enough to see his ugly scales with the glass.

As we pass the desolate Kom Ombos, a solitary figure emerges from the ruins and comes down the slope of the sand-hill, with turban flowing, ragged cotton robe, and a long staff; he runs along the sandy shore and then turns away into the desert, like a fleeing Cain, probably with no idea that it is Sunday, and that the "first bell" is about to ring in Christian countries.

The morning air is a little too sharp for idle comfort, although we can sit in the sun on deck and read. This west wind coming from the mountains of the desert brings always cold weather, even in Nubia.

Above Kom Ombos we come to a little village in a palm-grove—a scene out of the depths of Africa,—such as you have often seen in pictures—which is the theatre of an extraordinary commotion. There is enacted before us in dumb-show something like a pantomime in a play-house; but this is even more remote and enigmatical than that, and has in it all the elements of a picture of savagery. In the interior of Africa are they not all children, and do they not spend their time in petty quarreling and fighting?

On the beach below the village is moored a trading vessel, loaded with ivory, cinnamon, and gum-arabic, and manned by Nubians, black as coals. People are climbing into this boat and jumping out of it, splashing in the water, in a state of great excitement; people are running along the shore, shouting and gesticulating wildly, flourishing long staves; parties are chasing each other, and whacking their sticks together; and a black fellow, in a black gown and white shoes, is chasing others with an uplifted drawn sword. It looks like war or revolution, picturesque war in the bright sun on the yellow sand, with all attention to disposition of raiment and color and striking attitudes. There are hurryings to and fro, incessant clamors of noise and shoutings and blows of cudgels; some are running away, and some are climbing into palm trees, but we notice that no one is hit by cane or sword. Neither is anybody taken into custody, though there is a great show of arresting somebody. It is a very animated encounter, and I am glad that we do not understand it.

Sakiyas increase in number along the bank, taking the place of the shadoof, and we are never out of hearing of their doleful songs. Labor here is not hurried. I saw five men digging a well in the bank—into which the Sakiya buckets dip; that is, there were four, stripped, coal-black slaves from Soudan superintended by an Arab. One man was picking up the dirt with a pick-axe hoe. Three others were scraping out the dirt with a contrivance that would make a lazy man laugh;—one fellow held the long handle of a small scraper, fastened on like a shovel; to this upright scraper two ropes were attached which the two others pulled, indolently, thus gradually scraping the dirt out of the hole a spoonful at a time. One man with a shovel would have thrown it out four times as fast. But why should it be thrown out in a hurry? Must we always intrude our haste into this land of eternal leisure?

By afternoon, the wind falls, and we loiter along. The desert apparently comes close to the river on each side. On one bank are a hundred camels, attended by a few men and boys, browsing on the coarse tufts of grass and the scraggy bushes; the hard surroundings suit the ungainly animals. It is such pictures of a life, differing in all respects from ours, that we come to see. A little boat with a tattered sail is towed along close to the bank by half a dozen ragged Nubians, who sing a not unmelodious refrain as they walk and pull,—better at any rate than the groan of the sakiyas.

There is everywhere a sort of Sabbath calm—a common thing here, no doubt, and of great antiquity; and yet, you would not say that the people are under any deep religious impression.

As we advance the scenery becomes more Nubian, the river narrower and apparently smaller, when it should seem larger. This phenomenon of a river having more and more water as we ascend, is one that we cannot get accustomed to. The Nile, having no affluents, loses, of course, continually by evaporation by canals, and the constant drain on it for irrigation. No wonder the Egyptians were moved by its mystery no less than by its beneficence to a sort of worship of it.

The rocks are changing their character; granite begins to appear amid the limestone and sandstone. Along here, seven or eight miles below Assouan, there is no vegetation in sight from the boat, except strips of thrifty palm-trees, but there must be soil beyond, for the sakiyas are always creaking. The character of the population is changed also; above Kom Ombos it is mostly Nubian—who are to the Fellaheen as granite is to sandstone. The Nubian hills lift up their pyramidal forms in the south, and we seem to be getting into real Africa.

CHAPTER XIX.—PASSING THE CATARACT OF THE NILE.

AT LAST, twenty-four days from Cairo, the Nubian hills are in sight, lifting themselves up in the south, and we appear to be getting into the real Africa—Africa, which still keeps its barbarous secret, and dribbles down this commercial highway the Nile, as it has for thousands of years, its gums and spices and drugs, its tusks and skins of wild animals, its rude weapons and its cunning work in silver, its slave-boys and slave-girls. These native boats that we meet, piled with strange and fragrant merchandise, rowed by antic crews of Nubians whose ebony bodies shine in the sun as they walk backward and forward at the long sweeps, chanting a weird, barbarous refrain,—what tropical freights are these for the imagination!

At sunset we are in a lonesome place, the swift river flowing between narrow rocky shores, the height beyond Assouan grey in the distance, and vultures watching our passing boat from the high crumbling sandstone ledges. The night falls sweet and cool, the soft new moon is remote in the almost purple depths, the thickly strewn stars blaze like jewels, and we work slowly on at the rate of a mile an hour, with the slightest wind, amid the granite rocks of the channel. In this channel we are in the shadow of the old historical seat of empire, the island of Elephantine; and, turning into the narrow passage to the left, we announce by a rocket to the dalabeehs moored at Assouan the arrival of another inquisitive American. It is Sunday night. Our dragoman des patches a messenger to the chief reïs of the cataract, who lives at Philæ, five miles above. A second one is sent in the course of the night; and a third meets the old patriarch on his way to our boat at sunrise. It is necessary to impress the Oriental mind with the importance of the travelers who have arrived at the gate of Nubia.

The Nile voyager who moors his dahabeëh at the sandbank, with the fleet of merchant boats, above Assouan, seems to be at the end of his journey. Travelers from the days of Herodotus even to this century have followed each other in saying that the roar of the cataract deafened the people for miles around. Civilization has tamed the rapids. Now there is neither sight nor sound of them here at Assouan. To the southward, the granite walls which no doubt once dammed the river have been broken through by some prehistoric convulsion that strewed the fragments about in grotesque confusion. The island of Elephantine, originally a long heap of granite, is thrown into the middle of the Nile, dividing it into two narrow streams. The southern end rises from the water, a bold mass of granite. Its surface is covered with ruins, or rather with the *débris* of many civilizations; and into this mass and hills of brick, stone, pottery and ashes, Nubian women and children may be seen constantly poking, digging out coins, beads and images, to sell to the howadji. The north portion of the island is green with wheat; and it supports two or three mud-villages, which offer a good field for the tailor and the missionary.

The passage through the east channel, between Assouan and Elephantine, is through walls of granite rocks; and southward at the end of it the view is bounded by a field of broken granite gradually rising, and apparently forbidding egress in that direction. If the traveler comes for scenery, as some do, nothing could be wilder and at the same time more beautiful than these fantastically piled crags; but considered as a navigable highway the river here is a failure.

Early in the morning the head sheykh of the cataract comes on board, and the long confab which is preliminary to any undertaking, begins. There are always as many difficulties in the way of a trade or an arrangement as there are quills on a porcupine; and a great part of the Egyptian bargaining is the preliminary plucking out of these quills. The cataracts are the hereditary property of the Nubian sheykhs and their tribes who live near them—belonging to them more completely than the rapids of the St. Lawrence to the Indian pilots; almost their whole livelihood comes from helping boats up and down the rapids, and their harvest season is the winter when the dahabeëhs of the howadji require their assistance. They magnify the difficulties and dangers and make a mystery of their skill and knowledge. But, with true Orientalism, they appear to seek rather to lessen than to increase their business. They oppose intolerable delays to the traveler, keep him waiting at Assouan by a thousand excuses, and do all they can to drive him discouraged down the river. During this winter boats have been kept waiting two weeks on one frivolous excuse or another—the day was unlucky, or the wind was unfavorable, or some prince had the preference. Princes have been very much in the way this winter; the fact would seem to be that European princes are getting to run up the Nile in shoals, as plenty as shad in the Connecticut, more being hatched at home than Europe has employment for.

Several thousand people, dwelling along the banks from Assouan to three or four miles above Philæ, share in the profits of the passing boats; and although the sheykhs, and head reises (or captains) of the cataract get the elephant's share, every family receives something—it may be only a piastre or two—on each dahabeëh; and the sheykhs draw from the villages as many men as are required for each passage. It usually takes two days for a boat to go up the cataract and not seldom they are kept in it three or four days, and sometimes a week. The first day the boat gets as far as the island of Séhayl, where it ties up and waits for the cataract people to gather next morning. They may take it into their heads not to gather, in which case the traveler can sun himself all day on the rocks, or hunt up the inscriptions which the Pharaohs, on their raids into Africa for slaves and other luxuries, cut in the granite in their days of leisure three or four thousand years ago, before the world got its present impetus of hurry. Or they may come and pull the boat up a rapid or two, then declare they have not men enough for the final struggle, and leave it for another night in the roaring desolation. To put on force enough, and cables strong enough not to break, and promptly drag the boat through in one day would lessen the money-value of the achievement perhaps, in the mind of the owner of the boat. Nature has done a great deal to make the First Cataract an obstacle to navigation, but the wily Nubian could teach nature a lesson; at any rate he has never relinquished the key to the gates. He owns the cataracts as the Bedowees own the pyramids of Geezeh and the routes across the desert to Sinai and Petra.

The aged reïs comes on board; and the preliminary ceremonies, exchange of compliments, religious and

social, between him and our astute dragoman begin. Coffee is made, the reïs's pipe is lighted, and the conversation is directed slowly to the ascent of the cataracts. The head reïs is accompanied by two or three others of inferior dignity and by attendants who squat on the deck in attitudes of patient indifference. The world was not made in a day. The reïs looks along the deck and says: "This boat is very large; it is too long to go up the cataract." There is no denying it. The dahabeëh is larger than almost any other on the river; it is one hundred and twenty feet long. The dragoman says:

"But you took up General McClellan's boat, and that is large."

"Very true, Effendi; but why the howadji no come when Genel Clemen come, ten days ago?"

"We chose to come now."

"Such a long boat never went up. Why you no come two months ago when the river was high?" This sort of talk goes on for half an hour. Then the other sheykh speaks:—"What is the use of talking all this stuff to Mohammed Abd-el-Atti Effendi; he knows all about it."

"That is true. We will go."

"Well, it is 'finish'," says Abd-el-Atti.

When the long negotiation is concluded, the reïs is introduced into the cabin to pay his respects to the howadji; he seats himself with dignity and salutes the ladies with a watchful self-respect. The reïs is a sedate Nubian, with finely cut features but a good many shades darker than would be fellowshipped by the Sheltering Wings Association in America, small feet, and small hands with long tapering fingers that confess an aristocratic exemption from manual labor. He wears a black gown, and a white turban; a camel's hair scarf distinguishes him from the vulgar. This sheykh boasts I suppose as ancient blood as runs in any aristocratic veins, counting his ancestors back in unbroken succession to the days of the Prophet at least, and not improbably to Ishmael. That he wears neither stockings nor slippers does not detract from his simple dignity. Our conversation while he pays his visit is confined to the smoking of a cigar and some well-meant grins and smiles of mutual good feeling.

While the morning hours pass, we have time to gather all the knowledge of Assouan that one needs for the enjoyment of life in this world. It is an ordinary Egyptian town of sunbaked brick, brown, dusty and unclean, with shabby bazaars containing nothing, and full of importunate beggars and insatiable traders in curiosities of the upper country. Importunate venders beset the traveler as soon as he steps ashore, offering him all manner of trinkets which he is eager to purchase and doesn't know what to do with when he gets them. There are crooked, odd-shaped knives and daggers, in ornamental sheaths of crocodile skin, and savage spears with great round hippopotamus shields from Kartoom or Abyssinia; jagged iron spears and lances and ebony clubs from Darfoor; cunning Nubian silver-work, bracelets and great rings that have been worn by desert camel-drivers; moth-eaten ostrich feathers; bows and arrows tipped with flint from the Soudan, necklaces of glass and dirty leather charms (containing words from the Koran); broad bracelets and anklets cut out of big tusks of elephants and traced in black, rude swords that it needs two hands to swing; bracelets of twisted silver cord and solid silver as well; earrings so large that they need to be hitched to a strand of the hair for support; nose-rings of brass and silver and gold, as large as the earrings; and "Nubian costumes" for women—a string with leather fringe depending to tie about the loins—suggestions of a tropical life under the old dispensation.

The beach, crowded with trading vessels and piled up with merchandise, presents a lively picture. There are piles of Manchester cotton and boxes of English brandy—to warm outwardly and inwardly the natives of the Soudan—which are being loaded, for transport above the rapids, upon kneeling dromedaries which protest against the load in that most vulgar guttural of all animal sounds, more uncouth and less musical than the agonized bray of the donkey—a sort of grating menagerie-grumble which has neither the pathos of the sheep's bleat nor the dignity of the lion's growl; and bales of cinnamon and senna and ivory to go down the river. The wild Bisharee Arab attends his dromedaries; he has a clear-cut and rather delicate face, is bareheaded, wears his black hair in ringlets long upon his shoulders, and has for all dress a long strip of brown cotton cloth twisted about his body and his loins, leaving his legs and his right arm free. There are the fat, sleek Greek merchant, in sumptuous white Oriental costume, lounging amid his merchandise; the Syrian in gay apparel, with pistols in his shawl-belt, preparing for his journey to Kartoom; and the black Nubian sailors asleep on the sand. To add a little color to the picture, a Ghawazee, or dancing-girl, in striped flaming gown and red slippers, dark but comely, covered with gold or silver-gilt necklaces and bracelets, is walking about the shore, seeking whom she may devour.

At twelve o'clock we are ready to push off. The wind is strong from the north. The cataract men swarm on board, two or three Sheykhs and thirty or forty men. They take command and possession of the vessel, and our reïs and crew give way. We have carefully closed the windows and blinds of our boat, for the cataract men are reputed to have long arms and fingers that crook easily. The Nubians run about like cats; four are at the helm, some are on the bow, all are talking and giving orders; there is an indescribable bustle and whirl as our boat is shoved off from the sand, with the chorus of "Hâ! Yâlêshah. Hâ! Yâlêshah!" and takes the current. The great sail, shaped like a bird's wing, and a hundred feet long, is shaken out forward, and we pass swiftly on our way between the granite walls. The excited howadji are on deck feeling to their finger ends the thrill of expectancy.

** Yalesah (I spell the name according the sound of the pronunciation) was, some say, one of the sons of Noah who was absent at the time the ark sailed, having gone down into Abyssinia. They pushed the ark in pursuit of him, and Noah called after his son, as the crew poled along, "Ha! Yalesah!" And still the Nile boatmen call Yalesah to come, as they push the poles and haul the sail, and urge the boat toward Abyssinia. Very likely "Ha! Yale-sah" (as I catch it) is only a corruption of "Halee!'.esà Seyyidnà Eesà" is the Moslem name for "Our Lord Jesus."*

The first thing the Nubians want is something to eat—a chronic complaint here in this land of romance. Squatting in circles all over the boat they dip their hands into the bowls of softened bread, cramming the food

down their throats, and swallow all the coffee that can be made for them, with the gusto and appetite of simple men who have a stomach and no conscience.

While the Nubians are chattering and eating, we are gliding up the swift stream, the granite rocks opening a passage for us; but at the end of it our way seems to be barred. The only visible opening is on the extreme left, where a small stream struggles through the boulders. While we are wondering if that can be our course, the helm is suddenly put hard about, and we then shoot to the right, finding our way, amid whirlpools and boulders of granite, past the head of Elephantine island; and before we have recovered from this surprise we turn sharply to the left into a narrow passage, and the cataract is before us.

It is not at all what we have expected. In appearance this is a cataract without any falls and scarcely any rapids. A person brought up on Niagara or Montmorency feels himself trifled with here. The fishermen in the mountain streams of America has come upon many a scene that resembles this—a river-bed strewn with boulders. Only, this is on a grand scale. We had been led to expect at least high precipices, walls of lofty rock, between which we should sail in the midst of raging rapids and falls; and that there would be hundreds of savages on the rocks above dragging our boat with cables, and occasionally plunging into the torrent in order to carry a life-line to the top of some seagirt rock. All of this we did not see; but yet we have more respect for the cataract before we get through it than when it first came in sight.

What we see immediately before us is a basin, it may be a quarter of a mile, it may be half a mile broad, and two miles long; a wild expanse of broken granite rocks and boulders strewn hap-hazard, some of them showing the red of the syenite and others black and polished and shining in the sun; a field of rocks, none of them high, of fantastic shapes; and through this field the river breaks in a hundred twisting passages and chutes, all apparently small, but the water in them is foaming and leaping and flashing white; and the air begins to be pervaded by the multitudinous roar of rapids. On the east, the side of the land-passage between Assouan and Philæ, were high and jagged rocks in odd forms, now and then a palm-tree, and here and there a mud-village. On the west the basin of the cataract is hemmed in by the desert hills, and the yellow Libyan sand drifts over them in shining waves and rifts, which in some lights have the almost maroon color that we see in Gerome's pictures. To the south is an impassable barrier of granite and sand—mountains of them—beyond the glistening fields of rocks and water through which we are to find our way.

The difficulty of this navigation is not one cataract to be overcome by one heroic effort, but a hundred little cataracts or swift tortuous sluiceways, which are much more formidable when we get into them than they are when seen at a distance. The dahabeëhs which attempt to wind through them are in constant danger of having holes knocked in their hulls by the rocks.

The wind is strong, and we are sailing swiftly on. It is impossible to tell which one of the half-dozen equally uninviting channels we are to take. We guess, and of course point out the wrong one. We approach, with sails still set, a narrow passage through which the water pours in what is a very respectable torrent; but it is not a straight passage, it has a bend in it; if we get through it, we must make a sharp turn to the left or run upon a ridge of rocks, and even then we shall be in a boiling surge; and if we fail to make head against the current we shall go whirling down the caldron, bumping on the rocks—not a pleasant thing for a dahabeëh one hundred and twenty feet long with a cabin in it as large as a hotel. The passage of a boat of this size is evidently an event of some interest to the cataract people, for we see groups of them watching us from the rocks, and following along the shore. And we think that seeing our boat go up from the shore might be the best way of seeing it.

We draw slowly in, the boat trembling at the entrance of the swift water; it enters, nosing the current, feeling the tug of the sail, and hesitates. Oh, for a strong puff of wind! There are five watchful men at the helm; there is a moment's silence, and the boat still hesitates. At this critical instant, while we hold our breath, a naked man, whose name I am sorry I cannot give to an admiring American public, appears on the bow with a rope in his teeth; he plunges in and makes for the nearest rock. He swims hand over hand, swinging his arms from the shoulders out of water and striking them forward splashing along like a sidewheeler—the common way of swimming in the heavy water of the Nile. Two other black figures follow him and the rope is made fast to the point of the rock. We have something to hold us against the stream.

And now a terrible tumult arises on board the boat which is seen to be covered with men; one gang is hauling on the rope to draw the great sail close to its work; another gang is hauling on the rope attached to the rock, and both are singing that wild chanting chorus without which no Egyptian sailors pull an ounce or lift a pound; the men who are not pulling are shouting and giving orders; the Sheykhs, on the upper deck where we sit with American serenity exaggerated amid the Babel, are jumping up and down in a frenzy of excitement, screaming and gesticulating. We hold our own; we gain a little; we pull forward where the danger of a smash against the rocks is increased. More men appear on the rocks, whom we take to be spectators of our passage. No; they lay hold of the rope. With the additional help we still tremble in the jaws of the pass. I walk aft, and the stern is almost upon the rocks; it grazes them; but in the nick of time the bow swings round, we turn short off into an eddy; the great wing of a sail is let go, and our cat-like sailors are aloft, crawling along the slender yard, which is a hundred feet in length, and furling the tugging canvas. We breathe more freely, for the first danger is over. The first gate is passed.

In this lull there is a confab with the Sheykhs. We are at the island of Sehâyl, and have accomplished what is usually the first day's journey of boats. It would be in harmony with the Oriental habit to stop here for the remainder of the day and the night. But our dragoman has in mind to accomplish, if not the impossible, what is synonymous with it in the East, the unusual. The result of the inflammatory stump-speeches on both sides is that two or three gold pieces are passed into the pliant hand of the head Sheykh, and he sends for another Sheykh and more men.

For some time we have been attended by increasing processions of men and boys on shore; they cheered us as we passed the first rapid; they came out from the villages, from the crevices of the rocks, their blue and white gowns flowing in the wind, and make a sort of holiday of our passage. Less conspicuous at first are those without gowns—they are hardly distinguishable from the black rocks amid which they move. As we lie here, with the rising roar of the rapids in our ears, we can see no further opening for our passage.

But we are preparing to go on. Ropes are carried out forward over the rocks. More men appear, to aid us. We said there were fifty. We count seventy; we count eighty; there are at least ninety. They come up by a sort of magic. From whence are they, these black forms: They seem to grow out of the rocks at the wave of the Sheykh's hand; they are of the same color, shining men of granite. The swimmers and divers are simply smooth statues hewn out of the syenite or the basalt. They are not unbaked clay like the rest of us. One expects to see them disappear like stones when they jump into the water. The mode of our navigation is to draw the boat along, hugged close to the shore rocks, so closely that the current cannot get full hold of it, and thus to work it round the bends.

We are crawling slowly on in this manner, clinging to the rocks, when unexpectedly a passage opens to the left. The water before us runs like a mill-race. If we enter it, nothing would seem to be able to hold the boat from dashing down amidst the breakers. But the bow is hardly let to feel the current before it is pulled short round, and we are swinging in the swift stream. Before we know it we are in the anxiety of another tug. Suppose the rope should break! In an instant the black swimmers are overboard striking out for the rocks; two ropes are sent out, and secured; and, the gangs hauling on them, we are working inch by inch through, everybody on board trembling with excitement. We look at our watches; it seems only fifteen minutes since we left Assouan; it is an hour and a quarter. Do we gain in the chute? It is difficult to say; the boat hangs back and strains at the cables; but just as we are in the pinch of doubt, the big sail unfurls its wing with exciting suddenness, a strong gust catches it, we feel the lift, and creep upward, amid an infernal din of singing and shouting and calling on the Prophet from the gangs who haul in the sail-rope, who tug at the cables attached to the rocks, who are pulling at the hawsers on the shore. We forge ahead and are about to dash into a boiling caldron before us, from which there appears to be no escape, when a skillful turn of the great creaking helm once more throws us to the left, and we are again in an eddy with the stream whirling by us, and the sail is let go and is furled.

The place where we lie is barely long enough to admit our boat; its stern just clears the rocks, its bow is aground on hard sand. The number of men and boys on the rocks has increased; it is over one hundred, it is one hundred and thirty; on a re-count it is one hundred and fifty. An anchor is now carried out to hold us in position when we make a new start; more ropes are taken to the shore, two hitched to the bow and one to the stern. Straight before us is a narrow passage through which the water comes in foaming ridges with extraordinary rapidity. It seems to be our way; but of course it is not. We are to turn the corner sharply, before reaching it; what will happen then we shall see.

There is a slight lull in the excitement, while the extra hawsers are got out and preparations are made for the next struggle. The sheykhs light their long pipes, and squatting on deck gravely wait. The men who have tobacco roll up cigarettes and smoke them. The swimmers come on board for reinforcement. The poor fellows are shivering as if they had an ague fit. The Nile may be friendly, though it does not offer a warm bath at this time of the year, but when they come out of it naked on the rocks the cold north wind sets their white teeth chattering. The dragoman brings out a bottle of brandy. It is none of your ordinary brandy, but must have cost over a dollar a gallon, and would burn a hole in a new piece of cotton cloth. He pours out a tumblerful of it, and offers it to one of the granite men. The granite man pours it down his throat in one flow, without moving an eye-winker, and holds the glass out for another. His throat must be lined with zinc. A second tumblerful follows the first. It is like pouring liquor into a brazen image.

I said there was a lull, but this is only in contrast to the preceding fury. There is still noise enough, over and above the roar of the waters, in the preparations going forward, the din of a hundred people screaming together, each one giving orders, and elaborating his opinion by a rhetorical use of his hands. The waiting crowd scattered over the rocks disposes itself picturesquely, as an Arab crowd always does, and probably cannot help doing, in its blue and white gowns and white turbans. In the midst of these preparations, and unmindful of any excitement or contusion, a Sheykh, standing upon a little square of sand amid the rocks, and so close to the deck of the boat that we can hear his "Allâhoo Akbar" (God is most Great), begins his kneeling and prostrations towards Mecca, and continues at his prayers, as undisturbed and as unregarded as if he were in a mosque, and wholly oblivious of the babel around him. So common has religion become in this land of its origin! Here is a half-clad Sheykh of the desert stopping, in the midst of his contract to take the howadji up the cataract, to raise his forefinger and say, "I testify that there is no deity but God; and I testify that Mohammed is his servant and his apostle."

Judging by the eye, the double turn we have next to make is too short to admit our long hull. It does not seem possible that we can squeeze through; but we try. We first swing out and take the current as if we were going straight up the rapids. We are held by two ropes from the stern, while by four ropes from the bow, three on the left shore and one on an islet to the right, the cataract people are tugging to draw us up. As we watch almost breathless the strain on the ropes, look! there is a man in the tumultuous rapid before us swiftly coming down as if to his destruction. Another one follows, and then another, till there are half a dozen men and boys in this jeopardy, this situation of certain death to anybody not made of cork. And the singular thing about it is that the men are seated upright, sliding down the shining water like a boy, who has no respect for his trowsers, down a snow-bank. As they dash past us, we see that each man is seated on a round log about five feet long; some of them sit upright with their legs on the log, displaying the soles of their feet, keeping the equilibrium with their hands. These are smooth slimy logs that a white man would find it difficult to sit on if they were on shore, and in this water they would turn with him only once—the log would go one way and the man another. But these fellows are in no fear of the rocks below; they easily guide their barks out of the rushing floods, through the whirlpools and eddies, into the slack shore-water in the rear of the boat, and stand up like men and demand backsheesh. These logs are popular ferry-boats in the Upper Nile; I have seen a woman crossing the river on one, her clothes in a basket and the basket on her head—and the Nile is nowhere an easy stream to swim.

Far ahead of us the cataract people are seen in lines and groups, half-hidden by the rocks, pulling and stumbling along; black figures are scattered along lifting the ropes over the jagged stones, and freeing them so that we shall not be drawn back, as we slowly advance; and severe as their toil is, it is not enough to keep them warm when the chilly wind strikes them. They get bruised on the rocks also, and have time to show us

their barked shins and request backsheesh. An Egyptian is never too busy or too much in peril to forget to prefer that request at the sight of a traveler. When we turn into the double twist I spoke of above, the bow goes sideways upon a rock, and the stern is not yet free. The punt-poles are brought into requisition; half the men are in the water; there is poling and pushing and grunting, heaving, and "Yah Mohammed, Yah Mohammed" with all which noise and outlay of brute strength, the boat moves a little on and still is held close in hand. The current runs very swiftly We have to turn almost by a right angle to the left and then by the same angle to the right; and the question is whether the boat is not too long to turn in the space. We just scrape along the rocks, the current growing every moment stronger, and at length get far enough to let the stern swing. I run back to see if it will go free. It is a close fit. The stern is clear; but if our boat had been four or five feet longer, her voyage would have ended then and there. There is now before us a straight pull up the swiftest and narrowest rapid we have thus far encountered.

Our sandal—the row-boat belonging to the dahabeëh, that becomes a felucca when a mast is stepped into it—which has accompanied us fitfully during the passage, appearing here and there tossing about amid the rocks, and aiding occasionally in the transport of ropes and men to one rock and another, now turns away to seek a less difficult passage. The rocks all about us are low, from three feet to ten feet high. We have one rope out ahead, fastened to a rock, upon which stand a gang of men, pulling. There is a row of men in the water under the left side of the boat, heaving at her with their broad backs, to prevent her smashing on the rocks. But our main dragging force is in the two long lines of men attached to the ropes on the left shore. They stretch out ahead of us so far that it needs an opera-glass to discover whether the leaders are pulling or only soldiering. These two long struggling lines are led and directed by a new figure who appears upon this operatic scene. It is a comical Sheykh, who stands upon a high rock at one side and lines out the catch-lines of a working refrain, while the gangs howl and haul, in a surging chorus. Nothing could be wilder or more ludicrous, in the midst of this roar of rapids and strain of cordage. The Sheykh holds a long staff which he swings like the baton of the leader of an orchestra, quite unconscious of the odd figure he cuts against the blue sky. He grows more and more excited, he swings his arms, he shrieks, but always in tune and in time with the hauling and the wilder chorus of the cataract men, he lifts up his right leg, he lifts up his left leg, he is in the very ecstasy of the musical conductor, displaying his white teeth, and raising first one leg and then the other in a delirious swinging motion, all the more picturesque on account of his flowing blue robe and his loose white cotton drawers. He lifts his leg with a gigantic pull, which is enough in itself to draw the boat onward, and every time he lifts it, the boat gains on the current. Surely such an orchestra and such a leader was never seen before. For the orchestra is scattered over half an acre of ground, swaying and pulling and singing in rhythmic show, and there is a high wind and a blue sky, and rocks and foaming torrents, and an African village with palms in the background, amid the *debris* of the great convulsion of nature which has resulted in this chaos. Slowly we creep up against the stiff boiling stream, the good Moslems on deck muttering prayers and telling their beads, and finally make the turn and pass the worst eddies; and as we swing round into an ox-bow channel to the right, the big sail is again let out and hauled in, and with cheers we float on some rods and come into a quiet shelter, a stage beyond the journey usually made the first day. It is now three o'clock.

We have come to the real cataract, to the stiffest pull and the most dangerous passage.

A small freight dahabeëh obstructs the way, and while this is being hauled ahead, we prepare for the final struggle. The chief cataract is called Bab (gate) Aboo Rabbia, from one of Mohammed Ali's captains who some years ago vowed that he would take his dahabeëh up it with his own crew and without aid from the cataract people. He lost his boat. It is also sometimes called Bab Inglese from a young Englishman, named Cave, who attempted to swim down it early one morning, in imitation of the Nubian swimmers, and was drawn into the whirlpools, and not found for days after. For this last struggle, in addition to the other ropes, an enormous cable is bent on, not tied to the bow, but twisted round the cross-beams of the forward deck, and carried out over the rocks. From the shelter where we lie we are to push out and take the current at a sharp angle. The water of this main cataract sucks down from both sides above through a channel perhaps one hundred feet wide, very rapid and with considerable fall, and with such force as to raise a ridge in the middle. To pull up this hill of water is the tug; if the ropes let go we shall be dashed into a hundred pieces on the rocks below and be swallowed in the whirlpools. It would not be a sufficient compensation for this fate to have this rapid hereafter take our name.

The preparations are leisurely made, the lines are laid along the rocks and the men are distributed. The fastenings are carefully examined. Then we begin to move. There are now four conductors of this gigantic orchestra (the employment of which as a musical novelty I respectfully recommend to the next Boston Jubilee), each posted on a high rock, and waving a stick with a white rag tied to it. It is now four o'clock. An hour has been consumed in raising the curtain for the last act. We are now carefully under way along the rocks which are almost within reach, held tight by the side ropes, but pushed off and slowly urged along by a line of half-naked fellows under the left side, whose backs are against the boat and whose feet walk along the perpendicular ledge. It would take only a sag of the boat, apparently, to crush them. It does not need our eyes to tell us when the bow of the boat noses the swift water. Our sandal has meantime carried a line to a rock on the opposite side of the channel, and our sailors haul on this and draw us ahead. But we are held firmly by the shore lines. The boat is never suffered, as I said, to get an inch the advantage, but is always held tight in hand.

As we appear at the foot of the rapid, men come riding down it on logs as before, a sort of horseback feat in the boiling water, steering themselves round the eddies and landing below us. One of them swims round to the rock where a line is tied, and looses it as we pass; another, sitting on the slippery stick and showing the white soles of his black feet, paddles himself about amid the whirlpools. We move so slowly that we have time to enjoy all these details, to admire the deep yellow of the Libyan sand drifted over the rocks at the right, and to cheer a sandal bearing the American flag which is at this moment shooting the rapids in another channel beyond us, tossed about like a cork. We see the meteor flag flashing out, we lose it behind the rocks, and catch it again appearing below. "Oh star spang"—but our own orchestra is in full swing again. The comical Sheykh begins to swing his arms and his stick back and forth in an increasing measure, until his whole body is drawn into the vortex of his enthusiasm, and one leg after the other, by a sort of rhythmic hitch, goes up

displaying the white and baggy cotton drawers. The other three conductors join in, and a deafening chorus from two hundred men goes up along the ropes, while we creep slowly on amid the suppressed excitement of those on board who anxiously watch the straining cables, and with a running fire of "backsheesh, backsheesh," from the boys on the rocks close at hand. The cable holds; the boat nags and jerks at it in vain; through all the roar and rush we go on, lifted I think perceptibly every time the sheykh lifts his leg.

At the right moment the sail is again shaken down; and the boat at once feels it. It is worth five hundred men. The ropes slacken; we are going by the wind against the current; haste is made to unbend the cable; line after line is let go until we are held by one alone; the crowd thins out, dropping away with no warning and before we know that the play is played out, the cataract people have lost all interest in it and are scattering over the black rocks to their homes. A few stop to cheer; the chief conductor is last seen on a rock, swinging the white rag, hurraing and salaaming in grinning exultation; the last line is cast off, and we round the point and come into smooth but swift water, and glide into a calm mind. The noise, the struggle, the tense strain, the uproar of men and waves for four hours are all behind; and hours of keener excitement and enjoyment we have rarely known. At 12.20 we left Assouan; at 4.45 we swung round the rocky bend above the last and greatest rapid. I write these figures, for they will be not without a melancholy interest to those who have spent two or three days or a week in making this passage.

Turning away from the ragged mountains of granite which obstruct the straight course of the river, we sail by Mahatta, a little village of Nubians, a port where the trading and freight boats plying between the First and Second Cataract load and unload. There is a forest of masts and spars along the shore which is piled with merchandise, and dotted with sunlit figures squatting in the sand as if waiting for the goods to tranship themselves. With the sunlight slanting on our full sail, we glide into the shadow of high rocks, and enter, with the suddenness of a first discovery, into a deep winding river, the waters of which are dark and smooth, between lofty walls of granite. These historic masses, which have seen pass so many splendid processions and boastful expeditions of conquest in what seems to us the twilight of the world, and which excited the wonder of Father Herodotus only the other day, almost in our own time (for the Greeks belong to us and not to antiquity as it now unfolds itself), are piled in strange shapes, tottling rock upon rock, built up grotesquely, now in likeness of an animal, or the gigantic profile of a human face, or temple walls and castle towers and battlements. We wind through this solemn highway, and suddenly, in the very gateway, Philæ! The lovely! Philæ, the most sentimental ruin in Egypt. There are the great pylon of the temple of Isis, the long colonnades of pillars, the beautiful square temple, with lofty columns and elongated capitals, misnamed Pharaoh's bed. The little oblong island, something like twelve hundred feet long, banded all round by an artificial wall, an island of rock completely covered with ruins, is set like the stone of a ring, with a circle of blue water about it, in the clasp of higher encircling granite peaks and ledges. On the left bank, as we turn to pass to the east of the island, is a gigantic rock which some persons have imagined was a colossus once, perhaps in pre-Adamic times, but which now has no resemblance to human shape, except in a breast and left arm. Some Pharaoh cut his cartouche on the back—a sort of postage-stamp to pass the image along down the ages. The Pharaohs were ostentatious; they cut their names wherever they could find a conspicuous and smooth place.

While we are looking, distracted with novelty at every turn and excited by a grandeur and loveliness opening upon us every moment, we have come into a quiet haven, shut in on all sides by broken ramparts,—alone with this island of temples. The sun is about to set, and its level light comes to us through the columns, and still gilds with red and yellow gold the Libyan sand sifted over the cliffs. We moor at once to a sand-bank which has formed under the broken walls, and at once step on shore. We climb to the top of the temple walls; we walk on the stone roof; we glance into the temple on the roof, where is sculptured the resurrection of Osiris. This cannot be called an old temple. It is a creation of the Ptolemies, though it doubtless replaced an older edifice. The temple of Isis was not begun more than three centuries before our era. Not all of these structures were finished—the priests must have been still carving on their walls these multitudes of sculptures, when Christ began his mission; and more than four centuries after that the mysterious rites of Isis were still celebrated in these dark chambers. It is silent and dead enough here now; and there lives nowhere upon the earth any man who can even conceive the state of mind that gave those rites vitality. Even Egypt has changed its superstitions.

Peace has come upon the earth after the strain of the last few hours. We can scarcely hear the roar of the rapids, in the beating of which we had been. The sun goes, leaving a changing yellow and faint orange on the horizon. Above in the west is the crescent moon; and now all the sky thereabout is rosy, even to the zenith, a delicate and yet deep color, like that of the blush-rose—a transparent color that glows. A little later we see from our boat the young moon through the columns of the lesser temple. The January night is clear and perfectly dry; no dew is falling—no dew ever falls here—and the multiplied stars burn with uncommon lustre. When everything else is still, we hear the roar of the rapids coming steadily on the night breeze, sighing through the old and yet modern palace-temples of the *parvenu* Ptolemies, and of Cleopatra—a new race of conquerors and pleasure-hunters, who in vain copied the magnificent works of the ancient Pharaohs.

Here on a pylon gate, General Dessaix has recorded the fact that in February (Ventose) in the seventh year of the Republic, General Bonaparte being then in possession of Lower Egypt he pursued to this spot the retreating Memlooks. Egyptian kings, Ethiopian usurpers, Persians, Greeks, Romans, Nectanebo, Cambyses, Ptolemy, Philadelphus, Cleopatra and her Roman lovers, Dessaix,—these are all shades now.

CHAPTER XX.—ON THE BORDERS OF THE DESERT.

IN PASSING the First Cataract of the Nile we pass an ancient boundary line; we go from the Egypt of old to the Ethiopia of old; we go from the Egypt proper of to-day, into Nubia. We find a different country, a different river; the people are of another race; they have a different language. We have left the mild, lazy, gentle fellaheen—a mixed lot, but in general of Arabic blood—and come to Barâbra, whose district extends from Philæ to the Second Cataract, a freer, manlier, sturdier people altogether. There are two tribes of them, the Kendos and the Nooba; each has its own language.

Philæ was always the real boundary line, though the Pharaohs pushed their frontier now and again, down towards the Equator, and built temples and set up their images, as at Aboo Simbel, as at Samneh, and raked the south land for slaves and ivory, concubines and gold. But the Ethiopians turned the tables now and again, and conquered Egypt, and reigned in the palaces of the Pharaohs, taking that title even, and making their names dreaded as far as Judea and Assyria.

The Ethiopians were cousins indeed of the old Egyptians, and of the Canaanites, for they were descendants of Cush, as the Egyptians were of Mizriam, and the Canaanites were of Canaan; three of the sons of Ham. The Cushites, or Ethiops, although so much withdrawn from the theater of history, have done their share of fighting—the main business of man hitherto. Besides quarrels with their own brethren, they had often the attentions of the two chief descendants of Shem,—the Jews and the Arabs; and after Mohammed's coming, the Arabs descended into Nubia and forced the inhabitants into their religion at the point of the sword. Even the sons of Japhet must have their crack at these children of the "Sun-burned." It was a Roman prefect who, to avenge an attack on Svene by a warlike woman, penetrated as far south as El Berkel (of the present day), and overthrew Candace the Queen of the Ethiopians in Napata, her capital; the large city, also called Meroë, of which Herodotus heard such wonders.

Beyond Ethiopia lies the vast, black cloud of Negroland. These negroes, with the crisp, woolly hair, did not descend from anybody, according to the last reports; neither from Shem, Ham nor Japhet. They have no part in the royal house of Noah. They are left out in the heat. They are the puzzle of ethnologists, the mystery of mankind. They are the real aristocracy of the world, their origin being lost in the twilight of time; no one else can trace his descent so far back and come to nothing. M. Lenormant says the black races have no tradition of the Deluge. They appear to have been passed over altogether, then. Where were they hidden? When we first know Central Africa they are there. Where did they come from? The great effort of ethnologists is to get them dry-shod round the Deluge, since derivation from Noah is denied them. History has no information how they came into Africa. It seems to me that, in history, whenever we hear of the occupation of a new land, there is found in it a primitive race, to be driven out or subdued. The country of the primitive negro is the only one that has never invited the occupation of a more powerful race. But the negro blood, by means of slavery, has been extensively distributed throughout the Eastern world.

These reflections did not occur to us the morning we left Philæ. It was too early. In fact, the sun was just gilding "Pharaoh's bed," as the beautiful little Ptolemaic temple is called, when we spread sail and, in the shadow of the broken crags and savage rocks, began to glide out of the jaws of this wild pass. At early morning everything has the air of adventure. It was as if we were discoverers, about to come into a new African kingdom at each turn in the swift stream.

One must see, he cannot imagine, the havoc and destruction hereabout, the grotesque and gigantic fragments of rock, the islands of rock, the precipices of rock, made by the torrent when it broke through here. One of these islands is Biggeh—all rocks, not enough soft spot on it to set a hen. The rocks are piled up into the blue sky; from their summit we get the best view of Philæ—the jewel set in this rim of stone.

Above Philæ we pass the tomb of a holy man, high on the hill, and underneath it, clinging to the slope, the oldest mosque in Nubia, the Mosque of Belal, falling now into ruin, but the minaret shows in color no sign of great age. How should it in this climate, where you might leave a pair of white gloves upon the rocks for a year, and expect to find them unsoiled.

"How old do you suppose that mosque is Abd-el-Atti?"

"I tink about twelve hundred years old. Him been built by the Friends of our prophet when they come up here to make the people believe."

I like this euphuism. "But," we ask, "suppose they didn't believe, what then?"

"When thim believe, all right; when thim not believe, do away wid 'em."

"But they might believe something else, if not what Mohammed believed."

"Well, what our Prophet say? Mohammed, he say, find him anybody believe in God, not to touch him; find him anybody believe in the Christ, not to touch him; find him anybody believe in Moses, not to touch him; find him believe in the prophets, not to touch him; find him believe in bit wood, piece stone, do way wid him. Not so? Men worship something wood, stone, I can't tell—I tink dis is nothing."

Abd-el-Atti always says the "Friends" of Mohammed, never followers or disciples. It is a pleasant word, and reminds us of our native land. Mohammed had the good sense that our politicians have. When he wanted anything, a city taken, a new strip of territory added, a "third term," or any trifle, he "put himself in the hands of his friends."

The Friends were successful in this region. While the remote Abyssinians retained Christianity, the Nubians all became Moslems, and so remain to this day.

"You think, then, Abd-el-Atti, that the Nubians believed?"

"Thim 'bliged. But I tink these fellows, all of 'em, Musselmens as far as the throat; it don't go lower down."

The story is that this mosque was built by one of Mohammed's captains after the great battle here with the Infidels—the Nubians. Those who fell in the fight, it is also only tradition, were buried in the cemetery near Assouan, and they are martyrs: to this day the Moslems who pass that way take off their slippers and shoes.

After the battle, as the corpses of the slain lay in indistinguishable heaps, it was impossible to tell who were martyrs and who were unbelievers. Mohammed therefore ordered that they should bury as Moslems all those who had large feet, and pleasant faces, with the mark of prayer on the forehead. The bodies of the others were burned as infidels.

As we sweep along, the mountains are still high on either side, and the strips of verdure are very slight. On the east bank, great patches of yellow sand, yellow as gold, and yet reddish in some lights, catch the sun.

I think it is the finest morning I ever saw, for clearness and dryness. The thermometer indicates only 60°, and yet it is not too cool. The air is like wine. The sky is absolutely cloudless, and of wonderful clarity. Here is a perfectly pure and sweet atmosphere. After a little, the wind freshens, and it is somewhat cold on deck, but the sky is like sapphire; let the wind blow for a month, it will raise no cloud, nor any film of it.

Everything is wanting in Nubia that would contribute to the discomfort of a winter residence:—

It never rains;

There is never any dew above Philæ;

There are no flies;

There are no fleas;

There are no bugs, nor any insects whatever.

The attempt to introduce fleas into Nubia by means of dahabeëhs has been a failure.

In fact there is very little animal life; scarcely any birds are seen; fowls of all sorts are rare. There are gazelles, however, and desert hares, and chameleons. Our chameleons nearly starved for want of flies. There are big crocodiles and large lizards.

In a bend a few miles above Philæ is a whirlpool called Shaymtel Wah, from which is supposed to be a channel communicating under the mountain to the Great Oasis one hundred miles distant. The popular belief in these subterranean communications is very common throughout the East. The holy well, Zem-Zem, at Mecca, has a connection with a spring at El Gebel in Syria. I suppose that is perfectly well known. Abd-el-Atti has tasted the waters of both; and they are exactly alike; besides, did he not know of a pilgrim who lost his drinking-cup in Zem-Zem and recovered it in El Gebel.

This Nubia is to be sure but a river with a colored border, but I should like to make it seem real to you and not a mere country of the imagination. People find room to live here; life goes on after a fashion, and every mile there are evidences of a mighty civilization and a great power which left its record in gigantic works. There was a time, before the barriers broke away at Silsilis, when this land was inundated by the annual rise; the Nile may have perpetually expanded above here into a lake, as Herodotus reports.

We sail between low ridges of rocky hills, with narrow banks of green and a few palms, but occasionally there is a village of square mud-houses. At Gertasse, boldly standing out on a rocky platform, are some beautiful columns, the remains of a temple built in the Roman time. The wind is strong and rather colder with the turn of noon; the nearer we come to the tropics the colder it becomes. The explanation is that we get nothing but desert winds; and the desert is cool at this season; that is, it breeds at night cool air, although one does not complain of its frigidity who walks over it at midday.

After passing Tafa, a pretty-looking village in the palms, which boasts ruins both pagan and Christian, we come to rapids and scenery almost as wild and lovely as that at Philæ. The river narrows, there are granite rocks and black boulders in the stream; we sail for a couple of miles in swift and deep water, between high cliffs, and by lofty rocky islands—not without leafage and some cultivation, and through a series of rapids, not difficult but lively. And so we go cheerily on, through savage nature and gaunt ruins of forgotten history; past Kalâbshe, where are remains of the largest temple in Nubia; past Bayt el Wellee—"the house of the saint"—where Rameses II. hewed a beautiful temple out of the rock; past Gerf Hosdyn, where Rameses II. hewed a still larger temple out of the rock and covered it with his achievements, pictures in which he appears twelve feet high, and slaying small enemies as a husbandman threshes wheat with a flail. I should like to see an ancient stone wall in Egypt, where this Barnum of antiquity wasn't advertising himself.

We leave him flailing the unfortunate; at eight in the evening we are still going on, first by the light of the crescent moon, and then by starlight, which is like a pale moonlight, so many and lustrous are the stars; and last, about eleven o'clock we go aground, and stop a little below Dakkeh, or seventy-one miles from Philæ, that being our modest run for the day.

Dakkeh, by daylight, reveals itself as a small mud-village attached to a large temple. You would not expect to find a temple here, but its great pylon looms over the town and it is worth at least a visit. To see such a structure in America we would travel a thousand miles; the traveler on the Nile debates whether he will go ashore.

The bank is lined with the natives who have something to sell, eggs, milk, butter in little greasy "pats," and a sheep. The men are, as to features and complexion, rather Arabic than Nubian. The women have the high cheek-bones and broad faces of our Indian squaws, whom they resemble in a general way. The little girls who wear the Nubian costume (a belt with fringe) and strings of beads, are not so bad; some of them well formed. The morning is cool and the women all wear some outer garment, so that the Nubian costume is not seen in its simplicity, except as it is worn by children. I doubt if it is at any season. So far as we have observed the Nubian women they are as modest in their dress as their Egyptian sisters. Perhaps ugliness and modesty are sisters in their country. All the women and girls have their hair braided in a sort of plait in front, and heavily soaked with grease, so that it looks as if they had on a wig or a frontlet of leather; it hangs in small, hard, greasy curls, like leathern thongs, down each side. The hair appears never to be undone—only freshly greased every morning. Nose-rings and earrings abound.

This handsome temple was began by Ergamenes, an Ethiopian king ruling at Meroë, at the time of the second Ptolemy, during the Greek period; and it was added to both by Ptolemies and Cæsars. This Nubia would seem to have been in possession of Ethiopians and Egyptians turn and turn about, and, both having the same religion, the temples prospered.

Ergamenes has gained a reputation by a change he made in his religion, as it was practiced in Meroë. When the priests thought a king had reigned long enough it was their custom to send him notice that the gods had ordered him to die; and the king, who would rather die than commit an impiety, used to die. But Ergamenes tried another method, which he found worked just as well; he assembled all the priests, and slew them—a very sensible thing on his part.

You would expect such a man to build a good temple. The sculptures are very well executed, whether they are of his time, or owe their inspiration to Berenice and Cleopatra; they show greater freedom and variety than those of most temples; the figures of lion, monkeys, cows, and other animals are excellent; and there is a picture of a man playing on a musical instrument, a frame with strings stretched over it, played like a harp but not harp shaped—the like of which is seen nowhere else. The temple has the appearance of a fortification as well as a place of worship. The towers of the propylon are ascended by interior flights of stairs, and have, one above the other, four good-sized chambers. The stairways and the rooms are lighted by slits in the wall about an inch in diameter on the outside; but cut with a slant from the interior through some five feet of solid stone. These windows are exactly like those in European towers, and one might easily imagine himself in a Middle Age fortification. The illusion is heightened by the remains of Christian paintings on the walls, fresh in color, and in style very like those of the earliest Christian art in Italian churches. In the temple we are attended by a Nubian with a long and threatening spear, such as the people like to carry here; the owner does not care for blood, however; he only wants a little backsheesh.

Beyond Dakkeh the country opens finely; the mountains fall back, and we look a long distance over the desert on each side, the banks having only a few rods of green. Far off in the desert on either hand and in front, are sharp pyramidal mountains, in ranges, in groups, the resemblance to pyramids being very striking. The atmosphere as to purity is extraordinary. Simply to inspire it is a delight for which one may well travel thousands of miles.

We pass small patches of the castor-oil plant, and of a reddish-stemmed bush, bearing the Indian *bendigo*, Arabic *bahima*, the fruit a sort of bean in appearance and about as palatable. The castor-oil is much used by the women as a hair-dressing, but they are not fastidious; they use something else if oil is wanting. The demand for butter for this purpose raised the price of it enormously this morning at Dakkeh.

In the afternoon, waiting for wind, we walk ashore and out upon the naked desert—the desert which is broken only by an occasional oasis, from the Atlantic to the Red Sea; it has a basis of limestone, strewn with sand like gold-dust, and a *detritus* of stone as if it had been scorched by fire and worn by water. There is a great pleasure in strolling over this pure waste blown by the free air. We visit a Nubian village, and buy some spurious scarabæi off the necks of the ladies of the town—alas, for rural simplicity! But these women are not only sharp, they respect themselves sufficiently to dress modestly and even draw their shawls over their faces. The children take the world as they find it, as to clothes.

The night here, there being no moisture in the air is as brilliant as the day; I have never seen the moon and stars so clear elsewhere. These are the evenings that invite to long pipes and long stories. Abd-el-Atti opens his budget from time to time, as we sit on deck and while the time with anecdotes and marvels out of old Arab chronicles, spiced with his own ready wit and singular English. Most of them are too long for these pages; but here is an anecdote which, whether true or not illustrates the character of old Mohammed Ali:—

"Mohammed Ali sent one of his captains, name of Walee Kasheef, to Derr, capital of Nubia (you see it by and by, very fashionable place, like I see 'em in Hydee Park, what you call Rotten Row). Walee when he come there, see the women, their hair all twisted up and stuck together with grease and castor-oil, and their bodies covered with it. He called the sheykhs together and made them present of soap, and told them to make the women clean the hair and wash themselves, and make themselves fit for prayer. It was in accordin' to the Moslem religion so to do.

"The Nubians they not like this part of our religion, they not like it at all. They send the sheykhs down to have conversation with Mohammed Ali, who been stop at Esneh. They complain of what Walee done. Mohammed send for Walee, and say, 'What this you been done in Nubia?' 'Nothing, your highness, 'cept trying to make the Nubians conform to the religion.' 'Well,' says old Mohammed, 'I not send you up there as a priest; I send you up to get a little money. Don't you trouble the Nubians. We don't care if they go to Gennéh or Gehennem, if you get the money.'"

So the Nubians were left in sin and grease, and taxed accordingly. And at this day the taxes are even heavier. Every date-palm and every sakiya is taxed. A sakiya sometimes pays three pounds a year, when there is not a piece of fertile land for it to water three rods square.

CHAPTER XXI—ETHIOPIA.

IT IS a sparkling morning at Wady Saboda; we have the desert and some of its high, scarred, and sandy pyramidal peaks close to us, but as is usual where a wady, or valley, comes to the river, there is more cultivated land. We see very little of the temple of Rameses II. in this "Valley of the Lions," nor of the sphinxes in front of it. The desert sand has blown over it and over it in drifts like snow, so that we walk over the buried sanctuary, greatly to our delight. It is a pleasure to find one *adytum* into which we cannot go and see this Rameses pretending to make offerings, but really, as usual, offering to show himself.

At the village under the ledges, many of the houses are of stone, and the sheykh has a pretentious stone enclosure with little in it, all to himself. Shadoofs are active along the bank, and considerable crops of wheat, beans, and corn are well forward. We stop to talk with a bright-looking Arab, who employs men to work his shadoofs, and lives here in an enclosure of cornstalks, with a cornstalk kennel in one corner, where he and his family sleep. There is nothing pretentious about this establishment, but the owner is evidently a man of wealth, and, indeed, he has the bearing of a shrewd Yankee. He owns a camel, two donkeys, several calves and two cows, and two young Nubian girls for wives, black as coal and greased, but rather pleasant-faced. He has also two good guns—appears to have duplicates of nearly everything. Out of the cornstalk shanty his wives bring some handsome rugs for us to sit on.

The Arab accompanies us on our walk, as a sort of host of the country, and we are soon joined by others, black fellows; some of them carry the long flint-lock musket, for which they seem to have no powder; and all wear a knife in a sheath on the left arm; but they are as peaceable friendly folk as you would care to meet, and simple-minded. I show the Arab my field-glass, an object new to his experience. He looks through it, as I direct, and is an astonished man, making motions with his hand, to indicate how the distant objects are drawn towards him, laughing with a soft and childlike delight, and then lowering the glass, looks at it, and cries, "Bismillah! Bismillah," an ejaculation of wonder, and also intended to divert any misfortune from coming upon him on account of his indulgence in this pleasure.

He soon gets the use of the glass and looks beyond the river and all about, as if he were discovering objects unknown to him before. The others all take a turn at it, and are equally astonished and delighted. But when I cause them to look through the large end at a dog near by, and they see him remove far off in the desert, their astonishment is complete. My comrade's watch interested them nearly as much, although they knew its use; they could never get enough of its ticking and of looking at its works, and they concluded that the owner of it must be a Pasha.

The men at work dress in the slight manner of the ancient Egyptians; the women, however, wear garments covering them, and not seldom hide the face at our approach. But the material of their dress is not always of the best quality; an old piece of sacking makes a very good garment for a Nubian woman. Most of them wear some trinkets, beads or bits of silver or carnelian round the neck, and heavy bracelets of horn. The boys have not yet come into their clothing, but the girls wear the leathern belt and fringe adorned with shells.

The people have little, but they are not poor. It may be that this cornstalk house of our friend is only his winter residence, while his shadoof is most active, and that he has another establishment in town. There are too many sakiyas in operation for this region to be anything but prosperous, apparently. They are going all night as we sail along, and the screaming is weird enough in the stillness. I should think that a prisoner was being tortured every eighth of a mile on the bank. We are never out of hearing of their shrieks. But the cry is not exactly that of pain; it is rather a song than a cry, with an impish squeak in it, and a monotonous iteration of one idea, like all the songs here. It always repeats one sentence, which sounds like *Iskander logheh-n-e-e-e-n*—whatever it is in Arabic; and there is of course a story about it. The king, Alexander, had concealed under his hair two horns. Unable to keep the secret to himself he told it in confidence to the sakiya; the sakiya couldn't hold the news, but shrieked out, "Alexander has two horns," and the other sakiyas got it; and the scandal went the length of the Nile, and never can be hushed.

The Arabs personify everything, and are as full of superstitions as the Scotch; peoples who have nothing in common except it may be that the extreme predestinationism of the one approaches the fatalism of the other—begetting in both a superstitious habit, which a similar cause produced in the Greeks. From talking of the sakiya we wander into stories illustrative of the credulity and superstition of the Egyptians. Charms and incantations are relied on for expelling diseases and warding off dangers. The snake-charmer is a person still in considerable request in towns and cities. Here in Nubia there is no need of his offices, for there are no snakes; but in Lower Egypt, where snakes are common, the mud-walls and dirt-floors of the houses permit them to come in and be at home with the family. Even in Cairo, where the houses are of brick, snakes are much feared, and the house that is reputed to have snakes in it cannot be rented. It will stand vacant like an

old mansion occupied by a ghost in a Christian country. The snake-charmers take advantage of this popular fear.

Once upon a time when Abd-el-Atti was absent from the city, a snake-charmer came to his house, and told his sister that he divined that there were snakes in the house. "My sister," the story goes on, "never see any snake to house, but she woman, and much 'fraid of snakes, and believe what him say. She told the charmer to call out the snakes. He set to work his mumble, his conjor—('xorcism'. yes, dat's it, exorcism 'em, and bring out a snake. She paid him one dollar.

"Then the conjuror say, 'This the wife; the husband still in the house and make great trouble if he not got out.'"

"He want him one pound for get the husband out, and my sister give it.

"When I come home I find my sister very sick, very sick indeed, and I say what is it? She tell me the story that the house was full of snakes and she had a man call them out, but the fright make her long time ill.

"I said, you have done very well to get the snakes out, what could we do with a house full of the nasty things? And I said, I must get them out of another house I have—house I let him since to machinery.

"Machinery? For what kind of machinery! Steam-engines?"

"No, misheenary—have a school in it."

"Oh, missionary."

"Yes, let 'em have it for bout three hundred francs less than I get before. I think the school good for Cairo. I send for the snake-charmer, and I say I have 'nother house I think has snakes in it, and I ask him to divine and see. He comes back and says, my house is full of snakes, but he can charm them out.

"I say, good, I will pay you well. We appointed early next morning for the operation, and I agreed to meet the charmer at my house. I take with me big black fellow I have in the house, strong like a bull. When we get there I find the charmer there in front of the house and ready to begin. But I propose that we go in the house, it might make disturbance to the neighborhood to call so many serpents out into the street. We go in, and I sav, tell me the room of the most snakes. The charmer say, and as soon as we go in there, I make him sign the black fellow and he throw the charmer on the ground, and we tie him with a rope. We find in his bosom thirteen snakes and scorpions. I tell him I had no idea there were so many snakes in my house. Then I had the fellow before the Kadi; he had to pay back all the money he got from my sister and went to prison. But," added Abd-el-Atti, "the doctor did not pay back the money for my sister's illness."

Alexandria was the scene of another snake story. The owner of a house there had for tenants an Italian and his wife, whose lease had expired, but who would not vacate the premises. He therefore hired a snake-charmer to go to the house one day when the family were out, and leave snakes in two of the rooms. When the lady returned and found a snake in one room she fled into another, but there another serpent raised his head and hissed at her. She was dreadfully frightened, and sent for the charmer, and had the snakes called out but she declared that she wouldn't occupy such a house another minute. And the family moved out that day of their own accord. A novel writ of ejection.

In the morning we touched bottom as to cold weather, the thermometer at sunrise going down to 47° it did, indeed, as we heard afterwards, go below 40° at Wady Haifa the next morning, but the days were sure to be warm enough. The morning is perfectly calm, and the depth of the blueness of the sky, especially as seen over the yellow desert sand and the blackened surface of the sandstone hills, is extraordinary. An artist's representation of this color would be certain to be called an exaggeration. The skies of Lower Egypt are absolutely pale in comparison.

Since we have been in the tropics, the quality of the sky has been the same day and night—sometimes a turquoise blue, such as on rare days we get in America through a break in the clouds, but exquisitely delicate for all its depth. We passed the Tropic of Cancer in the night, somewhere about Dendodr, and did not see it. I did not know, till afterwards, that there had been any trouble about it. But it seems that it has been moved from Assouan, where Strabo put it and some modern atlases still place it, southward, to a point just below the ruins of the temple of Dendoor, where Osiris and Isis were worshipped. Probably the temple, which is thought to be of the time of Augustus and consequently is little respected by any antiquarian, was not built with any reference to the Tropic of Cancer; but the point of the turning of the sun might well have been marked by a temple to the mysterious deity who personified the sun and who was slain and rose again.

Our walk on shore to-day reminded us of a rugged path in Switzerland. Before we come to Kalkeh (which is of no account, except that it is in the great bend below Korosko) the hills of sandstone draw close to the east bank, in some places in sheer precipices, in others leaving a strip of sloping sand. Along the cliff is a narrow donkey-path, which travel for thousands of years has worn deep; and we ascend along it high above the river. Wherever at the foot of the precipices there was a chance to grow a handful of beans or a hill of corn, we found the ground occupied. In one of these lonely recesses we made the acquaintance of an Arab family.

Walking rapidly, I saw something in the path, and held my foot just in time to avoid stepping upon a naked brown baby, rather black than brown, as a baby might be who spent his time outdoors in the sun without any umbrella.

"By Jorge! a nice plumpee little chile," cried Abd-el-Atti, who is fond of children, and picks up and shoulders the boy, who shews no signs of fear and likes the ride.

We come soon upon his parents. The man was sitting on a rock smoking a pipe. The woman, dry and withered, was picking some green leaves and blossoms, of which she would presently make a sort of *purée*, that appears to be a great part of the food of these people. They had three children. Their farm was a small piece of the sloping bank, and was in appearance exactly like a section of sandy railroad embankment grown to weeds. They had a few beans and some squash or pumpkin vines, and there were remains of a few hills of doora which had been harvested.

While the dragoman talked with the family, I climbed up to their dwelling, in a ravine in the rocks. The house was of the simplest architecture—a circular stone enclosure, so loosely laid up that you could anywhere put your hand through it. Over a segment of this was laid some cornstalks, and under these the piece of

matting was spread for the bed. That matting was the only furniture of the house. All their clothes the family had on them, and those were none too many—they didn't hold out to the boy. And the mercury goes down to 470 these mornings! Before the opening of this shelter, was a place for a fire against the rocks, and a saucepan, water-jar, and some broken bottles. The only attraction about this is its simplicity. Probably this is the country-place of the proprietor, where he retires for "shange of air" during the season when his crops are maturing, and then moves into town under the palm-trees during the heat of summer.

Talking about Mohammed (we are still walking by the shore) I found that Abd-el-Atti had never heard the legend of the miraculous suspension of the Prophet's coffin between heaven and earth; no Moslem ever believed any such thing; no Moslem ever heard of it.

"Then there isn't any tradition or notion of that sort among Moslems?"

"No, sir. Who said it?"

"Oh, it's often alluded to in English literature—by Mr-Carlyle for one, I think."

"What for him say that? I tink he must put something in his book to make it sell. How could it? Every year since Mohammed died, pilgrims been make to his grave, where he buried in the ground; shawl every year carried to cover it; always buried in that place. No Moslem tink that."

"Once a good man, a Walee of Fez, a friend of the Prophet, was visited by a vision and by the spirit of the Prophet, and he was gecited (excited) to go to Mecca and see him. When he was come near in the way, a messenger from the Prophet came to the Walee, and told him not to come any nearer; that he should die and be buried in the spot where he then was. And it was so. His tomb you see it there now before you come to Mecca.

"When Mohammed was asked the reason why he would not permit the Walee to come to his tomb to see him, he said that the Walee was a great friend of his, and if he came to his tomb he should feel bound to rise and see him; and he ought not to do that, for the time of the world was not yet fully come; if he rose from his tomb, it would be finish, the world would be at an end. Therefore he was 'bliged to refuse his friend.

"Nobody doubt he buried in the ground. But Ali, different. Ali, the son-in-law of Mohammed (married his daughter Fat'meh, his sons Hasan and Hoseyn,) died in Medineh. When he died, he ordered that he should be put in a coffin, and said that in the morning there would come from the desert a man with a dromedary; that his coffin should be bound upon the back of the dromedary, and let go. In the morning, as was foretold, the man appeared, leading a dromedary; his head was veiled except his eyes. The coffin was bound upon the back of the beast, and the three went away into the desert; and no man ever saw either of them more, or knows, to this day, where Ali is buried. Whether it was a man or an angel with the dromedary, God knows!"

Getting round the great bend at Korosko and Amada is the most vexatious and difficult part of the Nile navigation. The distance is only about eight miles, but the river takes a freak here to run south-south-east, and as the wind here is usually north-north-west, the boat has both wind and current against it. But this is not all; it is impossible to track on the west bank on account of the shallows and sandbars, and the channel on the east side is beset with dangerous rocks. We thought ourselves fortunate in making these eight miles in two days, and one of them was a very exciting day. The danger was in stranding the dahabeëh on the rocks, and being compelled to leave her; and our big boat was handled with great difficulty.

Traders and travelers going to the Upper Nile leave the river at Korosko. Here begins the direct desert route—as utterly waste, barren and fatiguing as any in Africa—to Aboo Hamed, Sennaar and Kartoom. The town lies behind a fringe of palms on the river, and backed by high and savage desert mountains.

As we pass we see on the high bank piles of merchandise and the white tents of the caravans.

This is still the region of slavery. Most of the Arabs, poor as they appear, own one or two slaves, got from Sennaar or Darfoor—though called generally Nubians. We came across a Sennaar girl to day of perhaps ten years of age, hoeing alone in the field. The poor creature, whose ideas were as scant as her clothing, had only a sort of animal intelligence; she could speak a little Arabic, however (much more than we could—speaking of intelligence!) and said she did not dare come with us for fear her mistress would beat her. The slave trade is, however, greatly curtailed by the expeditions of the Khedive. The bright Abyssinian boy, Ahmed, whom we have on board, was brought from his home across the Red Sea by way of Mecca. This is one of the ways by which a few slaves still sift into Cairo.

We are working along in sight of Korosko all day. Just above it, on some rocks in the channel, lies a handsome dahabeëh belonging to a party of English gentlemen, which went on a week ago; touched upon concealed rocks in the evening as the crew were tracking, was swung further on by the current, and now lies high and almost dry, the Nile falling daily, in a position where she must wait for the rise next summer. The boat is entirely uninjured and no doubt might have been got off the first day, if there had only been mechanical skill in the crew. The governor at Derr sent down one hundred and fifty men, who hauled and heaved at it two or three days, with no effect. Half a dozen Yankees, with a couple of jack-screws, and probably with only logs for rollers, would have set it afloat. The disaster is exceedingly annoying to the gentlemen, who have, however, procured a smaller boat from Wady Haifa in which to continue their voyage. We are several hours in getting past these two boats, and accomplish it not without a tangling of rigging, scraping off of paint, smashing of deck rails, and the expenditure of a whole dictionary of Arabic. Our Arabs never see but one thing at a time. If they are getting the bow free, the stay-ropes and stern must take care of themselves. If, by simple heedlessness, we are letting the yard of another boat rip into our rigging, God wills it. While we are in this confusion and excitement, the dahabeëh of General McClellan and half a dozen in company, sweep down past us, going with wind and current.

It is a bright and delicious Sunday morning that we are still tracking above Korosko. To-day is the day the pilgrims to Mecca spend upon the mountain of Arafat. Tomorrow they sacrifice; our crew will celebrate it by killing a sheep and eating it—and it is difficult to see where the sacrifice comes in for them. The Moslems along this shore lost their reckoning, mistook the day, and sacrificed yesterday.

This is not the only thing, however, that keeps this place in our memory. We saw here a pretty woman. Considering her dress, hair, the manner in which she had been brought up, and her looks, a tolerably pretty

woman; a raving beauty in comparison with her comrades. She has a slight cast, in one eye, that only shows for a moment occasionally and then disappears. If these feeble tributary lines ever meet that eye, I beg her to know that, by reason of her slight visual defect, she is like a revolving light, all the more brilliant when she flashes out.

We lost time this morning, were whirled about in eddies and drifted on sandbars, owing to contradictory opinions among our navigators, none of whom seem to have the least scone. They generally agree, however, not to do anything that the pilot orders. Our pilot from Philæ to Wady Haifa and back, is a Barâbra, and one of the reises of the Cataract, a fellow very tall, and thin as a hop-pole, with a withered face and a high forehead. His garments a white cotton nightgown without sleeves, a brown over-gown with flowing sleeves, both reaching to the ankles, and a white turban. He is barefooted and barelegged, and, in his many excursions into the river to explore sandbars, I have noticed a hole where he has stuck his knee through his nightgown. His stature and his whole bearing have in them something, I know not what, of the theatrical air of the Orient.

He had a quarrel to day with the crew, for the reason mentioned above, in which he was no doubt quite right, a quarrel conducted as usual with an extraordinary expense of words and vituperation. In his inflamed remarks, he at length threw out doubts about the mother of one of the crew, and probably got something back that enraged him still more. While the wrangle went on, the crew had gathered about their mess-dish on the forward deck, squatting in a circle round it, and dipping out great mouthfuls of the *puree* with the right hand. The pilot paced the upper deck, and his voice, which is like that of many waters, was lifted up in louder and louder lamentations, as the other party grew more quiet and were occupied with their dinner—throwing him a loose taunt now and then, followed by a chorus of laughter. He strode back and forth, swinging his arms, and declaring that he would leave the boat, that he would not stay where he was so treated, that he would cast himself into the river.

“When you do, you’d better leave your clothes behind,” suggested Abd-el-Atti.

Upon this cruel sarcasm he was unable to contain himself longer. He strode up and down, raised high his voice, and tore his hair and rent his garments—the supreme act of Oriental desperation. I had often read of this performance, both in the Scriptures and in other Oriental writings, but I had never seen it before. The manner in which he tore his hair and rent his garments was as follows, to wit:—He almost entirely unrolled his turban, doing it with an air of perfect recklessness; and then he carefully wound it again round his smoothly-shaven head. That stood for tearing his hair. He then swung his long arms aloft, lifted up his garment above his head, and with desperate force, appeared to be about to rend it in twain. But he never started a seam nor broke a thread. The nightgown wouldn’t have stood much nonsense.

In the midst of his most passionate outburst, he went forward and filled his pipe, and then returned to his tearing and rending and his lamentations. The picture of a strong man in grief is always touching.

The country along here is very pretty, the curved shore for miles being a continual palm-grove, and having a considerable strip of soil which the sakiya irrigation makes very productive. Beyond this rise mountains of rocks in ledges; and when we climb them we see only a waste desert of rock strewn with loose shale and, further inland, black hills of sandstone, which thickly cover the country all the way to the Red Sea.

Under the ledges are the habitations of the people, square enclosures of stone and clay of considerable size, with interior courts and kennels. One of them—the only sign of luxury we have seen in Nubia—had a porch in front of it covered with palm boughs. The men are well-made and rather prepossessing in appearance, and some of them well-dressed—they had no doubt made the voyage to Cairo; the women are hideous without exception. It is no pleasure to speak thus continually of woman; and I am sometimes tempted to say that I see here the brown and bewitching maids, with the eyes of the gazelle and the form of the houri, which gladden the sight of more fortunate voyagers through this idle land; but when I think of the heavy amount of misrepresentation that would be necessary to give any one of these creatures a reputation for good looks abroad, I shrink from the undertaking.

They are decently covered with black cotton mantles, which they make a show of drawing over the face; but they are perhaps wild rather than modest, and have a sort of animal shyness. Their heads are sights to behold. The hair is all braided in strings, long at the sides and cut off in front, after the style adopted now-a-days for children (and women) in civilized countries, and copied from the young princes, prisoners in the Tower. Each round strand of hair has a dab of clay on the end of it. The whole is drenched with castor-oil, and when the sun shines on it, it is as pleasant to one sense as to another. They have flattish noses, high cheek-bones, and always splendid teeth; and they all, young girls as well as old women, hold tobacco in their under lip and squirt out the juice with placid and scientific accuracy. They wear two or three strings of trumpery beads and necklaces, bracelets of horn and of greasy leather, and occasionally a finger-ring or two. Nose-rings they wear if they have them; if not, they keep the bore open for one by inserting a kernel of doora.

In going back to the boat we met a party of twenty or thirty of these attractive creatures, who were returning from burying a boy of the village. They came striding over the sand, chattering in shrill and savage tones. Grief was not so weighty on them that they forgot to demand backsheesh, and (unrestrained by the men in the town) their clamor for it was like the cawing of crows; and their noise, when they received little from us, was worse. The tender and loving woman, stricken in grief by death, is, in these regions, when denied backsheesh, an enraged, squawking bird of prey. They left us with scorn in their eyes and abuse on their tongues.

At a place below Korosko we saw a singular custom, in which the women appeared to better advantage. A whole troop of women, thirty or forty of them, accompanied by children, came in a rambling procession down to the Nile, and brought a baby just forty days old. We thought at first that they were about to dip the infant into Father Nile, as an introduction to the fountain of all the blessings of Egypt. Instead of this, however, they sat down on the bank, took kohl and daubed it in the little fellow’s eyes. They perform this ceremony by the Nile when the boy is forty days old, and they do it that he may have a fortunate life. Kohl seems to enlarge the pupil, and doubtless it is intended to open the boy’s eyes early.

At one of the little settlements to-day the men were very hospitable, and brought us out plates (straw) of

sweet dried dates. Those that we did not eat, the sailor with us stuffed into his pocket; our sailors never let a chance of provender slip, and would, so far as capacity "to live on the country" goes, make good soldiers. The Nubian dates are called the best in Egypt. They are longer than the dates of the Delta, but hard and quite dry. They take the place of coffee here in the complimentary hospitality. Whenever a native invites you to take "coffee," and you accept, he will bring you a plate of dates and probably a plate of popped doora, like our popped corn. Coffee seems not to be in use here; even the governors entertain us with dates and popped corn.

We are working up the river slowly enough to make the acquaintance of every man, woman, and child on the banks; and a precious lot of acquaintances we shall have. I have no desire to force them upon the public, but it is only by these details that I can hope to give you any idea of the Nubian life.

We stop at night. The moon-and-starlight is something superb. From the high bank under which we are moored, the broad river, the desert opposite, and the mountains, appear in a remote African calm—a calm only broken by the shriek of the sakiyas which pierce the air above and below us.

In the sakiya near us, covered with netting to keep off the north wind, is a little boy, patient and black, seated on the pole of the wheel, urging the lean cattle round and round. The little chap is alone and at some distance from the village, and this must be for him lonesome work. The moonlight, through the chinks of the palm-leaf, touches tenderly his pathetic figure, when we look in at the opening, and his small voice utters the one word of Egypt—"backsheesh."

Attracted by a light—a rare thing in a habitation here—we walk over to the village. At the end of the high enclosure of a dwelling there is a blaze of fire, which is fed by doora-stalks, and about it squat five women, chattering; the fire lights up their black faces and hair shining with the castor-oil. Four of them are young; and one is old and skinny, and with only a piece of sacking for all clothing. Their husbands are away in Cairo, or up the river with a trading dahabeëh (so they tell our guide); and these poor creatures are left here (it may be for years it may be forever) to dig their own living out of the ground. It is quite the fashion husbands have in this country; but the women are attached to their homes; they have no desire to go elsewhere. And I have no doubt that in Cairo they would pine for the free and simple life of Nubia.

These women all want backsheesh, and no doubt will quarrel over the division of the few piastres they have from us. Being such women as I have described, and using tobacco as has been sufficiently described also, crouching about these embers, this group composes as barbaric a picture as one can anywhere see. I need not have gone so far to set such a miserable group; I could have found one as wretched in Pigville (every city has its Pigville)? Yes, but this is characteristic of the country. These people are as good as anybody here. (We have been careful to associate only with the first families.) These women have necklaces and bracelets, and rings in their ears, just like any women, and rings in the hair, twisted in with the clay and castor-oil. And in Pigville one would not have the range of savage rocks, which tower above these huts, whence the jackals, wolves, and gazelles come down to the river, nor the row of palms, nor the Nile, and the sands beyond, yellow in the moonlight.

CHAPTER XXII.—LIFE IN THE TROPICS. WADY HALFA.

OURS is the crew to witch the world with noble seamanship. It is like a first-class orchestra, in which all the performers are artists. Ours are all captains. The reis is merely an elder brother. The pilot is not heeded at all. With so many intentions on board, it is an hourly miracle that we get on at all.

We are approaching the capital of Nubia, trying to get round a sharp bend in the river, with wind adverse, current rapid, sandbars on all sides. Most of the crew are in the water ahead, trying to haul us round the point of a sand-spit on which the stream foams, and then swirls in an eddy below. I can see now the Pilot, the

long Pilot, who has gone in to feel about for deep water, in his white nightgown, his shaven head, denuded of its turban, shining in the sun, standing in two feet of water, throwing his arms wildly above his head, screaming entreaties, warnings, commands, imprecations upon the sailors in the river and the commanders on the boat. I can see the crew, waist deep, slacking the rope which they have out ahead, stopping to discuss the situation. I can see the sedate reïs on the bow arguing with the raving pilot, the steersman, with his eternal smile, calmly regarding the peril, and the boat swinging helplessly about and going upon the shoals. "Stupids," mutters Abd-el-Atti, who is telling his beads rapidly, as he always does in exciting situations.

When at length we pass the point, we catch the breeze so suddenly and go away with it, that there is no time for the men to get on board, and they are obliged to scamper back over the sand-spits to the shore and make a race of it to meet us at Derr. We can see them running in file, dodging along under the palms by the shore, stopping to grab occasionally a squash or a handful of beans for the pot.

The capital of Nubia is the New York of this region, not so large, nor so well laid out, nor so handsomely built, but the centre of fashion and the residence of the *ton*. The governor lives in a whitewashed house, and there is a Sycamore here eight hundred years old, which is I suppose older than the Stuyvesant Pear in New York. The houses are not perched up in the air like tenement buildings for the poor, but aristocratically keep to the ground in one-story rooms; and they are beautifully moulded of a tough clay. The whole town lies under a palm-grove. The elegance of the capital, however, is not in its buildings, but in its women; the ladies who come to the the river to fill their jars are arrayed in the height of the mode. Their hair is twisted and clayed and castoroiled, but, besides this and other garments, they wear an outer robe of black which sweeps the ground for a yard behind, and gives them the grace and dignity that court-robcs always give. You will scarcely see longer skirts on Broadway or in a Paris *salon*. I have, myself, no doubt that the Broadway fashions came from Derr, all except the chignons. Here the ladies wear their own hair.

Making no landing in this town so dangerous to one susceptible to the charms of fashion, we went on, and stopped at night near Ibream, a lofty precipice, or range of precipices, the southern hill crowned with ruins and fortifications which were last occupied by the Memlooks, half a century and more ago. The night blazed with beauty; the broad river was a smooth mirror, in which the mountains and the scintillating hosts of heaven were reflected. And we saw a phenomenon which I have never seen elsewhere. Not only were the rocky ledges reproduced in a perfect definition of outline, but even in the varieties of shade, in black and reddish-brown color.

Perhaps it needs the affidavits of all the party to the more surprising fact, that we were all on deck next morning before five o'clock, to see the Southern Cross. The moon had set, and these famous stars of the southern sky flashed color and brilliancy like enormous diamonds. "Other worlds than ours"? I should think so! All these myriads of burning orbs only to illuminate our dahabeëh and a handful of Nubians, who are asleep! The Southern Cross lay just above the horizon and not far from other stars of the first quality. There are I believe only three stars of the first magnitude and one of the second, in this constellation, and they form, in fact, not a cross but an irregular quadrilateral. It needs a vivid imagination and the aid of small stars to get even a semblance of a cross out of it. But if you add to it, as we did, for the foot of the cross, a brilliant in a neighboring constellation, you have a noble cross.

This constellation is not so fine as Orion, and for all we saw, we would not exchange our northern sky for the southern; but this morning we had a rare combination. The Morning Star was blazing in the east; and the Great Bear (who has been nightly sinking lower and lower, until he dips below the horizon) having climbed high up above the Pole in the night, filled the northern sky with light. In this lucid atmosphere the whole heavens from north to south seemed to be crowded with stars of the first size.

During the morning we walked on the west bank through a castor-oil plantation; many of the plants were good-sized trees, with boles two and a half to three inches through, and apparently twenty-five feet high. They were growing in the yellow sand which had been irrigated by sakiyas, but was then dry, and some of the plants were wilting. We picked up the ripe seeds and broke off some of the fat branches; and there was not water enough in the Nile to wash away the odor afterwards.

Walking back over the great sand-plain towards the range of desert mountains, we came to an artificial mound—an ash-heap, in fact—fifty or sixty feet high. At its base is a habitation of several compartments, formed by sticking the stalks of castor-oil plants into the ground, with a roof of the same. Here we found several women with very neat dabs of clay on the ends of their hair-twists, and a profusion of necklaces, rings in the hair and other ornaments—among them, scraps of gold. The women were hospitable, rather modest than shy, and set before us plates of dried dates; and no one said "backsheesh." A better class of people than those below, and more purely Nubian.

It would perhaps pay to dig open this mound. Near it are three small oases, watered by sakiyas, which draw from wells that are not more than twenty feet deep. The water is clear as crystal but not cool. These are ancient Egyptian wells, which have been re-opened within a few years; and the ash-mound is no doubt the *débris* of a village and an old Egyptian settlement.

At night we are a dozen miles from Aboo Simbel (Ipsamboul), the wind—which usually in the winter blows with great and steady force from the north in this part of the river—having taken a fancy to let us see the country.

A morning walk takes us over a rocky desert; the broken shale is distributed as evenly over the sand as if the whole had once been under water, and the shale were a dried mud, cracked in the sun. The miserable dwellings of the natives are under the ledges back of the strip of arable land. The women are shy and wild as hawks, but in the mode; they wear a profusion of glass beads and trail their robes in the dust.

It is near this village that we have an opportunity to execute justice. As the crew were tracking, and lifting the rope over a sakiya, the hindmost sailor saw a sheath-knife on the bank, and thrust it into his pocket as he walked on. In five minutes the owner of the knife discovered the robbery, and came to the boat to complain. The sailor denied having the knife, but upon threat of a flogging gave it up. The incident, however, aroused the town, men and women came forth discussing it in a high key, and some foolish fellows threatened to stone our boat. Abd-el-Atti replied that he would stop and give them a chance to do it. Thereupon they

apologized; and as there was no wind, the dragoman asked leave to stop and do justice.

A court was organized on shore. Abd-el-Atti sat down on a lump of earth, grasping a marline-spike, the crew squatted in a circle in the high beans, and the culprit was arraigned. The owner testified to his knife, a woman swore she saw the sailor take it, Abd-el-Atti pronounced sentence, and rose to execute it with his stake. The thief was thrown upon the ground and held by two sailors. Abd-el-Atti, resolute and solemn as an executioner, raised the club and brought it down with a tremendous whack—not however upon the back of the victim, he had at that instant squirmed out of the way. This conduct greatly enraged the minister of justice, who thereupon came at his object with fury, and would no doubt have hit him if the criminal had not got up and ran, screaming, with the sailors and Abd-el-Atti after him. The ground was rough, the legs of Abd-el-Atti are not long and his wind is short. The fellow was caught, and escaped again and again, but the punishment was a mere scrimmage; whenever Abd-el-Atti, in the confusion, could get a chance to strike he did so, but generally hit the ground, sometimes the fellow's gown and perhaps once or twice the man inside, but never to his injury. He roared all the while, that he was no thief, and seemed a good deal more hurt by the charge that he was, than by the stick. The beating was, in short, only a farce laughable from beginning to end, and not a bad sample of Egyptian justice. And it satisfied everybody.

Having put ourselves thus on friendly relations with this village, one of the inhabitants brought down to the boat a letter for the dragoman to interpret. It had been received two weeks before from Alexandria, but no one had been able to read it until our boat stopped here. Fortunately we had the above little difficulty here. The contents of the letter gave the village employment for a month. It brought news of the death of two inhabitants of the place, who were living as servants in Alexandria, one of them a man eighty years old and his son aged sixty.

I never saw grief spread so fast and so suddenly as it did with the uncorking of this vial of bad news. Instantly a lamentation and wild mourning began in all the settlement. It wasn't ten minutes before the village was buried in grief. And, in an incredible short space of time, the news had spread up and down the river, and the grief-stricken began to arrive from other places. Where they came from, I have no idea; it did not seem that we had passed so many women in a week as we saw now. They poured in from all along the shore, long strings of them, striding over the sand, throwing up their garments, casting dust on their heads (and all of it stuck), howling, flocking like wild geese to a rendezvous, and filling the air with their clang. They were arriving for an hour or two.

The men took no part in this active demonstration. They were seated gravely before the house in which the bereaved relatives gathered; and there I found Abd-el-Atti, seated also, and holding forth upon the inevitable coming of death, and saying that there was nothing to be regretted in this case, for the time of these men had come. If it hadn't come, they wouldn't have died. Not so?

The women crowded into the enclosure and began mourning in a vigorous manner. The chief ones grouping themselves in an irregular ring, cried aloud: "O that he had died here!"

"O that I had seen his face when he died;" repeating these lamentations over and over again, throwing up the arms, and then the legs in a kind of barbaric dance as they lamented, and uttering long and shrill ululations at the end of each sentence.

To-day they kill a calf and feast, and tomorrow the lamentations and the African dance will go on, and continue for a week. These people are all feeling. It is a heathen and not a Moslem custom however; and whether it is of negro origin or of ancient Egyptian I do not know, but probably the latter. The ancient Egyptian women are depicted in the tombs mourning in this manner; and no doubt the Jews also so bewailed, when they "lifted up their voices" and cast dust on their heads, as we saw these Nubians do. It is an unselfish pleasure to an Eastern woman to "lift up the voice." The heavy part of the mourning comes upon the women, who appear to enjoy it. It is their chief occupation, after the carrying of water and the grinding of doora, and probably was so with the old race; these people certainly keep the ancient customs; they dress the hair, for one thing, very much as the Egyptians did, even to the castor-oil.

At this village, as in others in Nubia, the old women are the corn-grinders. These wasted skeletons sit on the ground before a stone with a hollow in it; in this they bruise the doora with a smaller stone; the flour is then moistened and rubbed to a paste. The girls and younger women, a great part of the time, are idling about in their finery. But, then, they have the babies and the water to bring; and it must be owned that some of them work in the field—grubbing grass and stuff for "greens" and for fuel, more than the men. The men do the heavy work of irrigation.

But we cannot stay to mourn with those who mourn a week in this style; and in the evening, when a strong breeze springs up, we spread our sail and go, in the "daylight of the moon," flying up the river, by black and weird shores; and before midnight pass lonesome Aboo Simbel, whose colossi sit in the moonlight with the impassive mien they have held for so many ages.

In the morning, with an easy wind, we are on the last stage of our journey. We are almost at the limit of dahabeëh navigation. The country is less interesting than it was below. The river is very broad, and we look far over the desert on each side. The strip of cultivated soil is narrow and now and again disappears altogether. To the east are seen, since we passed Aboo Simbel, the pyramid hills, some with truncated tops, scattered without plan over the desert. It requires no stretch of fancy to think that these mathematically built hills are pyramids erected by races anterior to Menes, and that all this waste that they dot is a necropolis of that forgotten people.

The sailors celebrate the finishing of the journey by a ceremony of state and dignity. The chief actor is Farrag, the wit of the crew. Suddenly he appears as the Governor of Wady Haifa, with horns on his head, face painted, a long beard, hair sprinkled with flour, and dressed in shaggy sheepskin. He has come on board to collect his taxes. He opens his court, with the sailors about him, holding a long marline spike which he pretends to smoke as a chibook. His imitation of the town dignitaries along the river is very comical, and his remarks are greeted with roars of laughter. One of the crew acts as his bailiff and summons all the officers and servants of the boat before him, who are thrown down upon the deck and bastinadoed, and released on payment of backsheesh. The travelers also have to go before the court and pay a fine for passing through the

Governor's country. The Governor is treated with great deference till the end of the farce, when one of his attendants sets fire to his beard, and another puts him out with a bucket of water.

'The end of our journey is very much like the end of everything else—there is very little in it. When we follow anything to its utmost we are certain to be disappointed—simply because it is the nature of things to taper down to a point. I suspect it must always be so with the traveler, and that the farther he penetrates into any semi-savage continent, the meaner and ruder will he find the conditions of life. When we come to the end, ought we not to expect the end?

We have come a thousand miles not surely to see Wady Haifa but to see the thousand miles. And yet Wady Haifa, figuring as it does on the map, the gate of the great Second Cataract, the head of navigation, the destination of so many eager travelers, a point of arrival and departure of caravans, might be a little less insignificant than it is. There is the thick growth of palm-trees under which the town lies, and beyond it, several miles, on the opposite, west bank, is the cliff of Aboosir, which looks down upon the cataract; but for this noble landmark, this dominating rock, the traveler could not feel that he had arrived anywhere, and would be so weakened by the shock of arriving nowhere at the end of so long a journey (as a man is by striking a blow in the air) that he would scarcely have strength to turn back.

At the time of our arrival, however, Wady Haifa has some extra life. An expedition of the government is about to start for Darfoor. When we moor at the east bank, we see on the west bank the white tents of a military encampment set in right lines on the yellow sand; near them the government storehouse and telegraph-office, and in front a mounted howitzer and a Gatling gun. No contrast could be stronger. Here is Wady Halfah, in the doze of an African town, a collection of mud-huts under the trees, listless, apathetic, sitting at the door of a vast region, without either purpose or ambition. There, yonder, is a piece of life out of our restless age. There are the tents, the guns, the instruments, the soldiers and servants of a new order of things for Africa. We hear the trumpet call to drill. The flag which is planted in the sand in front of the commander's tent is to be borne to the equator.

But this is not a military expedition. It is a corps of scientific observation, simply. Since the Sultan of Darfoor is slain and the Khedive's troops have occupied his capital, and formally attached that empire to Egypt, it is necessary to know something of its extent, resources, and people, concerning all of which we have only the uncertain reports of traders. It is thought by some that the annexation of Darfoor adds five millions to the population of the Khedive's growing empire. In order that he may know what he has conquered, he has sent out exploring expeditions, of which this is one. It is under command of Purdy Bey assisted by Lieutenant-Colonel Mason, two young American officers of the Khedive, who fought on opposite sides in our civil war. They are provided with instruments for making all sorts of observations, and are to report upon the people and the physical character and capacity of the country. They expect to be absent three years, and after surveying Darfoor, will strike southward still, and perhaps contribute something to the solution of the Nile problem. For escort they have a hundred soldiers only, but a large train of camels and intendants. In its purpose it is an expedition that any civilized ruler might be honored for setting on foot. It is a brave overture of civilization to barbarism. The nations are daily drawing nearer together. As we sit in the telegraph-office here, messages are flashed from Cairo to Kartoom.

CHAPTER XXIII.—APPROACHING THE SECOND CATARACT.

THERE are two ways of going to see the Second Cataract and the cliff of Aboosir, which is about six miles above Wady Haifa; one is by small boat, the other by dromedary over the desert. We chose the latter, and the American officers gave us a mount and their company also. Their camp presented a lively scene when we crossed over to it in the morning. They had by requisition pressed into their service three or four hundred camels, and were trying to select out of the lot half a dozen fit to ride. The camels were, in fact, mostly burden camels and not trained to the riding-saddle; besides, half of them were poor, miserable rucks of bones, half-starved to death; for the Arabs, whose business it had been to feed them, had stolen the government supplies. An expedition which started south two weeks ago lost more than a hundred camels, from starvation, before it reached Semneh, thirty-five miles up the river. They had become so weak, that they wilted and died on the first hard march. For his size and knotty appearance, the camel is the most disappointing of beasts. He is a sheep as to endurance. As to temper, he is vindictive.

Authorities differ in regard to the distinction between the camel and the dromedary. Some say that there are no camels in Egypt, that they are all dromedaries, having one hump; and that the true camel is the Bactrian, which has two humps. It is customary here, however, to call those camels which are beasts of burden, and those dromedaries which are trained to ride; the distinction being that between the cart-horse

and the saddle-horse.

The camel-drivers, who are as wild Arabs as you will meet anywhere, select a promising beast and drag him to the tent. He is reluctant to come; he rebels against the saddle; he roars all the time it is being secured on him, and when he is forced to kneel, not seldom he breaks away from his keepers and shambles off into the desert. The camel does this always; and every morning on a march he receives his load only after a struggle. The noise of the drivers is little less than the roar of the beasts, and with their long hair, shaggy breasts, and bare legs they are not less barbarous in appearance.

Mounting the camel is not difficult, but it has some sweet surprises for the novice. The camel lies upon the ground with all his legs shut up under him like a jackknife. You seat yourself in the broad saddle, and cross your legs in front of the pommel. Before you are ready, something like a private earthquake begins under you. The camel raises his hindquarters suddenly, and throws you over upon his neck; and, before you recover from that he straightens up his knees and gives you a jerk over his tail; and, while you are not at all certain what has happened, he begins to move off with that dislocated walk which sets you into a see-saw motion, a waving backwards and forwards in the capacious saddle. Not having a hinged back fit for this movement, you lash the beast with your *koorbâsh* to make him change his gait. He is nothing loth to do it, and at once starts into a high trot which sends you a foot into the air at every step, bobs you from side to side, drives your backbone into your brain, and makes castanets of your teeth. Capital exercise. When you have enough of it, you pull up, and humbly enquire what is the heathen method of riding a dromedary.

It is simple enough. Shake the loose halter-rope (he has neither bridle nor bit) against his neck as you swing the whip, and the animal at once swings into an easy pace; that is, a pretty easy pace, like that of a rocking-horse. But everything depends upon the camel. I happened to mount one that it was a pleasure to ride, after I brought him to the proper gait. We sailed along over the smooth sand, with level keel, and (though the expression is not nautical) on cushioned feet. But it is hard work for the camel, this constant planting of his glossy feet in the yielding sand.

Our way lay over the waste and rolling desert (the track of the southern caravans,) at some little distance from the river; and I suppose six miles of this travel are as good as a hundred. The sun was blazing hot, the yellow sand glowed in it, and the far distance of like sand and bristling ledges of black rock shimmered in waves of heat. No tree, no blade of grass, nothing but blue sky bending over a sterile land. Yet, how sweet was the air, how pure the breath of the desert, how charged with electric life the rays of the sun!

The rock Aboosir, the *ultima Thule* of pleasure-travel on the Nile, is a sheer precipice of perhaps two to three hundred feet above the Nile; but this is high enough to make it one of the most extensive lookouts in Egypt. More desert can be seen here than from almost anywhere else. The Second Cataract is spread out beneath us. It is less a "fall" even than the First. The river is from a half mile to a mile in breadth and for a distance of some five miles is strewn with trap-rock, boulders and shattered fragments, through which the Nile swiftly forces itself in a hundred channels. There are no falls of any noticeable height. Here, on the flat rock, where we eat our luncheon, a cool breeze blows from the north. Here on this eagle's perch, commanding a horizon of desert and river for a hundred miles, fond visitors have carved their immortal names, following an instinct of ambition that is well-nigh universal, in the belief no doubt that the name will have for us who come after all the significance it has in the eyes of him who carved it. But I cannot recall a single name I read there; I am sorry that I cannot, for it seems a pitiful and cruel thing to leave them there in their remote obscurity.

From this rock we look with longing to the southward, into vast Africa, over a land we may not further travel, which we shall probably never see again; or the far horizon the blue peaks of Dongola are visible, and beyond these we know are the ruins of Meroë, that ancient city, the capital of that Ethiopian Queen, Candace, whose dark face is lighted up by a momentary gleam from the Scriptures.

On the beach at Wady Haifa are half a dozen trading-vessels, loaded with African merchandise for Cairo, and in the early morning there is a great hubbub among the merchants and the caravan owners. A sudden dispute arises among a large group around the ferry-boat, and there ensues that excited war, or movement, which always threatens to come to violence in the East but never does; Niagaras of talk are poured out; the ebb and flow of the parti-colored crowd, and the violent and not ungraceful gestures make a singular picture.

Bales of merchandise are piled on shore, cases of brandy and cottons from England, to keep the natives of Soudan warm inside and out; Greek merchants splendid in silk attire, are lounging amid their goods, slowly bargaining for their transportation. Groups of camels are kneeling on the sand with their Bedaween drivers. These latter are of the Bisharee Arabs, and free sons of the desert. They wear no turban, and their only garment is a long strip of brown cotton thrown over the shoulder so as to leave the right arm free, and then wound about the waist and loins. The black hair is worn long, braided in strands which shine with oil, and put behind the ears. This sign of effeminacy is contradicted by their fine, athletic figures; by a bold, strong eye, and a straight, resolute nose.

Wady Haifa (*wady* is valley, and *Haifa* is a sort of coarse grass) has a post-office and a mosque, but no bazaar, nor any center of attraction. Its mud-houses are stretched along the shore for a mile and a half, and run back into the valley, under the lovely palm-grove; but there are no streets and no roads through the deep sand. There is occasionally a sign of wealth in an extensive house, that is, one consisting of several enclosed courts and apartments within one large mud-wall; and in one we saw a garden, watered by a *sakiya*, and two latticed windows in a second story looking on it, as if some one had a harem here which was handsome enough to seclude..

We called on the Kadi, the judicial officer of this district, whose house is a specimen of the best, and as good as is needed in this land of the sun. On one side of an open enclosure is his harem; in the other is the reception-room where he holds court. This is a mud-hut, with nothing whatever in it except some straw mats. The Kadi sent for rugs, and we sat on the mud-bench outside, while attendants brought us dates, popped-corn, and even coffee; and then they squatted in a row in front of us and stared at us, as we did at them. The ladies went into the harem, and made the acquaintance of the judge's one wife and his dirty children. Not without cordiality and courtesy of manner these people; but how simple are the terms of life here; and what a

thoroughly African picture this is, the mud-huts, the sand, the palms, the black-skinned groups.

The women here are modestly clad, but most of them frightfully ugly and castor-oily; yet we chanced upon two handsome girls, or rather married women, of fifteen or sixteen. One of them had regular features and a very pretty expression, and evidently knew she was a beauty, for she sat apart on the ground, keeping her head covered most of the time, and did not join the women who thronged about us to look with wonder at the costume of our ladies and to beg for backsheesh. She was loaded with necklaces, bracelets of horn and ivory, and had a ring on every finger. There was in her manner something of scorn and resentment at our intrusion; she no doubt had her circle of admirers and was queen in it. Who are these pale creatures who come to stare at my charms? Have they no dark pretty women in their own land? And she might well have asked, what would she do—a beauty of New York city, let us say—when she sat combing her hair on the marble doorsteps of her father's palace in Madison Square, if a lot of savage, impolite Nubians, should come and stand in a row in front of her and stare?

The only shops here are the temporary booths of traders, birds of passage to or from the equatorial region. Many of them have pitched their gay tents under the trees, making the scene still more like a fair or an encampment for the night. In some are displayed European finery and trumpery, manufactured for Africa, calico in striking colors, glass beads and cotton cloth; others are coffee-shops, where men are playing at a sort of draughts—the checker-board being holes made in the sand and the men pebbles. At the door of a pretty tent stood a young and handsome Syrian merchant, who cordially invited us in, and pressed upon us the hospitality of his house. He was on his way to Darfoor, and might remain there two or three years, trading with the natives. We learned this by the interpretation of his girl-wife, who spoke a little barbarous French. He had married her only recently, and this was their bridal tour, we inferred. Into what risks and perils was this pretty woman going? She was Greek, from one of the islands, and had the *naïvete* and freshness of both youth and ignorance. Her fair complexion was touched by the sun and ruddy with health. Her blue eyes danced with the pleasure of living. She wore her hair natural, with neither oil nor ornament, but cut short and pushed behind the ears. For dress she had a simple calico gown of pale yellow, cut high in the waist, *à la Grecque*, the prettiest costume women ever assumed. After our long regimen of the hideous women of the Nile, plastered with dirt, soaked in oil, and hung with tawdry ornaments, it may be imagined how welcome was this vision of a woman, handsome, natural and clean, with neither the shyness of an animal nor the brazenness of a Ghawazee.

Our hospitable entertainers hastened to set before us what they had; a bottle of Maraschino was opened, very good European cigars were produced, and a plate of pistachio nuts, to eat with the cordial. The artless Greek beauty cracked the nuts for us with her shining teeth, laughing all the while; urging us to eat, and opening her eyes in wonder that we would not eat more, and would not carry away more. It must be confessed that we had not much conversation, but we made it up in constant smiling, and ate our pistachios and sipped our cordial in great glee. What indeed could we have done more with words, or how have passed a happier hour? We perfectly understood each other; we drank each other's healths; we were civilized beings, met by chance in a barbarous place; we were glad to meet, and we parted in the highest opinion of each other, with gay salaams, and not in tears. What fate I wonder had these handsome and adventurous merchants among the savages of Darfoor and Kordofan?

The face of our black boy, Gohah, was shining with pleasure when we walked away, and he said with enthusiasm, pointing to the tent, "*Sitt tyeb, quéi-is.*" Accustomed as he was to the African beauties of Soudan, I do not wonder that Gohah thought this "lady" both "good" and "beautiful."

We have seen Wady Haifa. The expedition to Darfoor is packing up to begin its desert march in the morning. Our dahabeéh has been transformed and shorn of a great part of its beauty. We are to see no more the great bird-wing sail. The long yard has been taken down and is slung above us the whole length of the deck. The twelve big sweeps are put in place; the boards of the forward deck are taken up, so that the Lowers will have place for their feet as they sit on the beams. They sit fronting the cabin, and rise up and take a step forward at each stroke, settling slowly back to their seats. On the mast is rigged the short stern-yard and sail, to be rarely spread. Hereafter we are to float, and drift, and whirl, and try going with the current and against the wind.

At ten o'clock of a moonlight night, a night of summer heat, we swing off, the rowers splashing their clumsy oars and setting up a shout and chorus in minor, that sound very much like a wail, and would be quite appropriate if they were ferrymen of the Styx. We float a few miles, and then go aground and go to bed.

The next day we have the same unchanging sky, the same groaning and creaking of the sakiyas, and in addition the irregular splashing of the great sweeps as we slide down the river. Two crocodiles have the carelessness to show themselves on a sand-island, one a monstrous beast, whose size is magnified every time we think how his great back sunk into the water when our sandal was yet beyond rifle-shot. Of course he did not know that we carried only a shot-gun and intended only to amuse him, or he would not have been in such haste.

The wind is adverse, we gain little either by oars or by the current, and at length take to the shore, where something novel always rewards us. This time we explore some Roman ruins, with round arches of unburned bricks, and find in them also the unmistakable sign of Roman occupation, the burnt bricks—those thin slabs, eleven inches long, five wide, and two thick, which, were a favorite form with them, bricks burnt for eternity, and scattered all over the East wherever the Roman legions went.

Beyond these is a village, not a deserted village, but probably the laziest in the world. Men, and women for the most part too, were lounging about and in the houses, squatting in the dust, in absolute indolence, except that the women, all of them, were suckling their babies, and occasionally one of them was spinning a little cotton-thread on a spindle whirled in the hand. The men are more cleanly than the women, in every respect in better condition, some of them bright, fine-looking fellows. One of them showed us through his house, which was one of the finest in the place, and he was not a little proud of it. It was a large mud-wall enclosure. Entering by a rude door we came into an open space, from which opened several doors, irregular breaks in the wall, closed by shackling doors of wood. Stepping over the sill and stooping, we entered the living-rooms. First, is the kitchen; the roof of this is the sky—you are always liable to find yourself outdoors in these houses

—and the fire for cooking is built in one corner. Passing through another hole in the wall we come to a sleeping-room, where were some jars of dates and doora, and a mat spread in one corner to lie on. Nothing but an earth-floor, and dust and grime everywhere. A crowd of tittering girls were flitting about, peeping at us from doorways, and diving into them with shrill screams, like frightened rabbits, if we approached.

Abd-el-Atti raises a great laugh by twisting a piastre into the front lock of hair of the ugliest hag there, calling her his wife, and drawing her arm under his to take her to the boat. It is an immense joke. The old lady is a widow and successfully conceals her reluctance. The tying the piece of silver in the hair is a sign of marriage. All the married women wear a piastre or some scale of silver on the forehead; the widows leave off this ornament from the twist; the young girls show, by the hair plain, except always the clay dabs, that they are in the market. The simplicity of these people is noticeable. I saw a woman seated on the ground, in dust three inches thick, leaning against the mud-bank in front of the house, having in her lap a naked baby; on the bank sat another woman, braiding the hair of the first, wetting it with muddy water, and working into it sand, clay, and tufts of dead hair. What a way to spend Sunday!

This is, on the whole, a model village. The people appear to have nothing, and perhaps they want nothing. They do nothing, and I suppose they would thank no one for coming to increase their wants and set them to work. Nature is their friend.

I wonder what the staple of conversation of these people is, since the weather offers nothing, being always the same, and always fine.

A day and a night and a day we fight adverse winds, and make no headway. One day we lie at Farras, a place of no consequence, but having, almost as a matter of course, ruins of the time of the Romans and the name Rameses II. cut on a rock. In a Roman wall we find a drain-tile exactly like those we use now. In the evening, after moon-rise, we drop down to Aboo Simbel.

CHAPTER XXIV.—GIANTS IN STONE.

WHEN daylight came the Colossi of Aboo Simbel (or Ipsambool) were looking into our windows; greeting the sunrise as they have done every morning for three thousand five hundred years; and keeping guard still over the approach to the temple, whose gods are no longer anywhere recognized, whose religion disappeared from the earth two thousand years ago:—vast images, making an eternity of time in their silent waiting.

The river here runs through an unmitigated desert. On the east the sand is brown, on the west the sand is yellow; that is the only variety. There is no vegetation, there are no habitations, there is no path on the shore, there are no footsteps on the sand, no one comes to break the spell of silence. To find such a monument of ancient power and art as this temple in such a solitude enhances the visitor's wonder and surprise. The Pyramids, Thebes, and Aboo Simbel are the three wonders of Egypt. But the great temple of Aboo Simbel is unique. It satisfies the mind. It is complete in itself, it is the projection of one creative impulse of genius. Other temples are growths, they have additions, afterthoughts, we can see in them the workings of many minds and many periods. This is a complete thought, struck out, you would say, at a heat.

In order to justify this opinion, I may be permitted a little detail concerning this temple, which impressed us all as much as anything in Egypt. There are two temples here, both close to the shore, both cut in the mountain of rock which here almost overhangs the stream. We need not delay to speak of the smaller one, although it would be wonderful, if it were not for the presence of the larger. Between the two was a rocky gorge. This is now nearly filled up, to the depth of a hundred feet, by the yellow sand that has drifted and still drifts over from the level of the desert hills above.

This sand, which drifts exactly like snow, lies in ridges like snow, and lies loose and sliding under the feet or packs hard like snow, once covered the façade of the big temple altogether, and now hides a portion of it.

The entrance to the temple was first cleared away in 1817 by Belzoni and his party, whose gang of laborers worked eight hours a day for two weeks with the thermometer at 1120 to 1160 Fahrenheit in the shade—an almost incredible endurance when you consider what the heat must have been in the sun beating upon this dazzling wall of sand in front of them.

The rock in which the temple is excavated was cut back a considerable distance, but in this cutting the great masses were left which were to be fashioned into the four figures. The façade thus made, to which these statues are attached, is about one hundred feet high. The statues are seated on thrones with no intervening screens, and, when first seen, have the appearance of images in front of and detached from the rock of which they form a part. The statues are all tolerably perfect, except one, the head of which is broken and lies in masses at its feet; and at the time of our visit the sand covered the two northernmost to the knees. The door of entrance, over which is a hawk-headed figure of Re, the titular divinity, is twenty feet high. Above the colossi, and as a frieze over the curve of the cornice, is a row of monkeys, (there were twenty-one originally, but some are split away), like a company of negro minstrels, sitting and holding up their hands in the most comical manner. Perhaps the Egyptians, like the mediaeval cathedral builders, had a liking for grotesque effects in architecture; but they may have intended nothing comic here, for the monkey had sacred functions; he was an emblem of Thoth, the scribe of the under-world, who recorded the judgments of Osiris.

These colossi are the largest in the world*; they are at least fifteen feet higher than the wonders of Thebes, but it is not their size principally that makes their attraction. As works of art they are worthy of study. Seated, with hands on knees, in that eternal, traditional rigidity of Egyptian sculpture, nevertheless the grandeur of the head and the noble beauty of the face take them out of the category of mechanical works. The figures represent Rameses II. and the features are of the type which has come down to us as the perfection of Egyptian beauty.

** The following are some of the measurements of one of these giants:—height of figure sixty-six feet; pedestal on which it sits, ten; leg from knee to heel, twenty; great toe, one and a half feet thick; ear, three feet, five inches long; fore-finger, three feet; from inner side of elbow-joint to end of middle finger, fifteen feet.*

I climbed up into the lap of one of the statues; it is there only that you can get an adequate idea of the size of the body. What a roomy lap! Nearly ten feet between the wrists that rest upon the legs! I sat comfortably in the navel of the statue, as in a niche, and mused on the passing of the nations. To these massive figures the years go by like the stream. With impassive, serious features, unchanged in expression in thousands of years, they sit listening always to the flowing of the unending Nile, that fills all the air and takes away from that awful silence which would else be painfully felt in this solitude.

The interior of this temple is in keeping with its introduction. You enter a grand hall supported by eight massive Osiride columns, about twenty-two feet high as we estimated them. They are figures of Rameses become Osiris—to be absorbed into Osiris is the end of all the transmigrations of the blessed soul. The expression of the faces of such of these statues as are uninjured, is that of immortal youth—a beauty that has in it the promise of immortality. The sides of this hall are covered with fine sculptures, mainly devoted to the exploits of Rameses II.; and here is found again, cut in the stone the long Poem of the poet Pentaour, celebrating the single-handed exploit of Rameses against the Khitas on the river Orontes. It relates that the king, whom his troops dared not follow, charged with his chariot alone into the ranks of the enemy and rode through them again and again, and slew them by hundreds. Rameses at that time was only twenty-three; it was his first great campaign. Pursuing the enemy, he overtook them in advance of his troops, and, rejecting the councils of his officers, began the fight at once. “The footmen and the horsemen then,” says the poet (the translator is M. de Rouge), “recoiled before the enemy who were masters of Kadesh, on the left bank of the Orontes.... Then his majesty, in the pride of his strength, rising up like the god Mauth, put on his fighting dress. Completely armed, he looked like Baal in the hour of his might. Urging on his chariot, he pushed into the army of the vile Khitas; he was alone, no one was with him. He was surrounded by 2,500 chariots, and the swiftest of the warriors of the vile Khitas, and of the numerous nations who accompanied them, threw themselves in his way.... Each chariot bore three men, and the king had with him neither princes nor generals, nor his captains of archers nor of chariots.”

Then Rameses calls upon Amun; he reminds him of the obelisk he has raised to him, the bulls he has slain for him:—“Thee, I invoke, O my Father! I am in the midst of a host of strangers, and no man is with me. My archers and horsemen have abandoned me; when I cried to them, none of them has heard, when I called for help. But I prefer Amun to thousands of millions of archers, to millions of horsemen, to millions of young heroes all assembled together. The designs of men are nothing, Amun overrules them.”

Needless to say the prayer was heard, the king rode slashing through the ranks of opposing chariots, slaying, and putting to rout the host. Whatever basis of fact the poem may have had in an incident of battle or in the result of one engagement, it was like one of Napoleon’s bulletins from Egypt. The Khitas were not subdued and, not many years after, they drove the Egyptians out of their land and from nearly all Palestine, forcing them, out of all their conquests, into the valley of the Nile itself. During the long reign of this Rameses, the power of Egypt steadily declined, while luxury increased and the nation was exhausted in building the enormous monuments which the king projected. The close of his pretentious reign has been aptly compared to that of Louis XIV.—a time of decadence; in both cases the great fabric was ripe for disaster.

But Rameses liked the poem of Pentaour. It is about as long as a book of the Iliad, but the stone-cutters of his reign must have known it by heart. He kept them carving it and illustrating it all his life, on every wall he built where there was room for the story. He never, it would seem, could get enough of it. He killed those vile Khitas a hundred times; he pursued them over all the stone walls in his kingdom. The story is told here at Ipsambool; it is carved in the Rameseum; the poem is graved on Luxor and Karnak.

Out of this great hall open eight other chambers, all more or less sculptured, some of them covered with well-drawn figures on which the color is still vivid. Two of these rooms are long and very narrow, with a bench running round the walls, the front of which is cut out so as to imitate seats with short pillars. In one

are square niches, a foot deep, cut in the wall. The sculptures in one are unfinished, the hieroglyphics and figures drawn in black but not cut—some event having called off the artists and left their work incomplete. We seem to be present at the execution of these designs, and so fresh are the colors of those finished, that it seems it must have been only yesterday that the workman laid down the brush. (A small chamber in the rock outside the temple, which was only opened in 1874, is wonderful in the vividness of its colors; we see there better than anywhere else the colors of vestments.)

These chambers are not the least mysterious portion of this temple. They are in absolute darkness, and have no chance of ventilation. By what light was this elaborate carving executed? If people ever assembled in them, and sat on these benches, when lights were burning, how could they breathe? If they were not used, why should they have been so decorated? They would serve very well for the awful mysteries of the Odd Fellows. Perhaps they were used by the Free Masons in Solomon's time.

Beyond the great hall is a transverse hall (having two small chambers off from it) with four square pillars, and from this a corridor leads to the adytum. Here, behind an altar of stone, sit four marred gods, facing the outer door, two hundred feet from it. They sit in a twilight that is only-brightened by rays that find their way in at the distant door; but at morning they can see, from the depth of their mountain cavern, the rising sun.

We climbed, up the yielding sand-drifts, to the top of the precipice in which the temple is excavated, and walked back to a higher ridge. The view from there is perhaps the best desert view on the Nile, more extensive and varied than that of Aboosir. It is a wide sweep of desolation. Up and down the river we see vast plains of sand and groups of black hills; to the west and north the Libyan desert extends with no limit to a horizon fringed with sharp peaks, like aiguilles of the Alps, that have an exact resemblance to a forest.

At night, we give the ancient deities a sort of Fourth of July, and illuminate the temple with colored lights. A blue-light burns upon the altar in the adytum before the four gods, who may seem in their penitentialia to receive again the worship to which they were accustomed three thousand years ago. A green flame in the great hall brings out mysteriously the features of the gigantic Osiride, and revives the midnight glow of the ancient ceremonies. In the glare of torches and colored lights on the outside, the colossi loom in their gigantic proportions and cast grotesque shadows.

Imagine this temple as it appeared to a stranger initiated into the mysteries of the religion of the Pharaohs—a *cultus* in which the mathematical secrets of the Pyramid and the Sphinx, art and architecture, were wrapped in the same concealment with the problem of the destiny of the soul; when the colors on these processions of gods and heroes, upon these wars and pilgrimages sculptured in large on the walls, were all brilliant; when these chambers were gorgeously furnished, when the heavy doors that then hung in every passage, separating the different halls and apartments, only swung open to admit the neophyte to new and deeper mysteries, to halls blazing with light, where he stood in the presence of these appalling figures, and of hosts of priests and acolytes.

The temple of Aboo Simbel was built early in the reign of Rameses II., when art, under the impulse of his vigorous predecessors was in its flower, and before the visible decadence which befel it later under a royal patronage and "protection," and in the demand for a wholesale production, which always reduces any art to mechanical conditions. It seemed to us about the finest single conception in Egypt. It must have been a genius of rare order and daring who evoked in this solid mountain a work of such grandeur and harmony of proportion, and then executed it without a mistake. The first blow on the exterior, that began to reveal the Colossi, was struck with the same certainty and precision as that which brought into being the gods who are seated before the altar in the depth of the mountain. A bolder idea was never more successfully wrought out.

Our last view of this wonder was by moonlight and by sunrise. We arose and went forth over the sand-bank at five o'clock. Venus blazed as never before. The Southern Cross was paling in the moonlight. The moon, in its last half, hung over the south-west corner of the temple rock, and threw a heavy shadow across a portion of the sitting figures. In this dimness of the half-light their proportions were supernatural. Details were lost.

These might be giants of pre-historic times, or the old fabled gods of antediluvian eras, outlined largely and majestically, groping their way out of the hills.

Above them was the illimitable, purplish blue of the sky. The Moon, one of the goddesses of the temple, withdrew more and more before the coming of Re, the sun-god to whom the temple is dedicated, until she cast no shadow on the façade. The temple, even the interior, caught the first glow of the reddening east. The light came, as it always comes at dawn, in visible waves, and these passed over the features of the Colossi, wave after wave, slowly brightening them into life.

In the interior the first flush was better than the light of many torches, and the Osiride figures were revealed in their hiding-places. At the spring equinox the sun strikes squarely in, two hundred feet, upon the faces of the sitting figures in the *adytum*. That is their annual salute! Now it only sent its light to them; but it made rose the Osiride faces on one side of the great hall.

The morning was chilly, and we sat on a sand-drift, wrapped up against the cutting wind, watching the marvellous revelation. The dawn seemed to ripple down the gigantic faces of the figures outside, and to touch their stony calm with something like a smile of gladness; it almost gave them motion, and we would hardly have felt surprised to see them arise and stretch their weary limbs, cramped by ages of inaction, and sing and shout at the coming of the sun-god. But they moved not, the strengthening light only revealed their stony impassiveness; and when the sun, rapidly clearing the eastern hills of the desert, gilded first the row of grinning monkeys, and then the light crept slowly down over faces and forms to the very feet, the old heathen helplessness stood confessed.

And when the sun swung free in the sky, we silently drew away and left the temple and the guardians alone and unmoved. We called the reis and the crew; the boat was turned to the current, the great sweeps dipped into the water, and we continued our voyage down the eternal river, which still sings and flows in this lonely desert place, where sit the most gigantic figures man ever made.

CHAPTER XXV.—FLITTING THROUGH NUBIA.

WE HAVE been learning the language. The language consists merely of *tyeb*. With *tyeb* in its various accents and inflections, you can carry on an extended conversation. I have heard two Arabs talking for a half hour, in which one of them used no word for reply or response except *tyeb* "good."

Tyeb is used for assent, agreement, approval, admiration, both interrogatively and affectionately. It does the duty of the Yankee "all right" and the vulgarism "that's so" combined; it has as many meanings as the Italian *va bene*, or the German *So!* or the English girl's yes! yes? ye-e-s, ye-e-as? yes (short), 'n ye-e-es in doubt and really a negative—ex.:—"How lovely Blanche looks to-night!" "'n ye-e-es." You may hear two untutored Americans talking, and one of them, through a long interchange of views will utter nothing except, "that's so," "that's so?" "*that's so*," "that's *so*." I think two Arabs meeting could come to a perfect understanding with:

"Tyeb?"

"Tyeb."

"Tyeb!" (both together).

"Tyeb?" (showing something).

"Tyeb" (emphatically, in admiration).

"Tyeb" (in approval of the other's admiration).

"Tyeb Ketér" ("good, much").

"Tyeb Keter?"

"Tyeb."

"Tyeb." (together, in ratification of all that has been said).

I say *tyeb* in my satisfaction with you; you say *tyeb* in pleasure at my satisfaction; I say *tyeb* in my pleasure at your pleasure. The servant says *tyeb* when you give him an order; you say *tyeb* upon his comprehending it. The Arabic is the richest of languages. I believe there are three hundred names for earth, a hundred for lion, and so on. But the vocabulary of the common people is exceedingly limited. Our sailors talk all day with the aid of a very few words.

But we have got beyond *tyeb*. We can say *eiwa* ("yes")—or *nam*, when we wish to be elegant—and *la* ("no"). The universal negative in Nubia, however, is simpler than this—it is a cluck of the tongue in the left cheek and a slight upward jerk of the head. This cluck and jerk makes "no," from which there is no appeal. If you ask a Nubian the price of anything—*be-kam dee?*—and he should answer *khamisa* ("five"), and you should offer *thelata* ("three"), and he should *kch* and jerk up his head, you might know the trade was hopeless; because the *kch* expresses indifference as well as a negative. The best thing you could do would be to say *bookra* ("to-morrow"), and go away—meaning in fact to put off the purchase forever, as the Nubian very well knows when he politely adds, *tyeb*.

But there are two other words necessary to be mastered before the traveller can say he knows Arabic. To the constant call for "backsheesh" and the obstructing rabble of beggars and children, you must be able to say *mafeesh* ("nothing"), and *im'shee* ("getaway," "clear out," "scat.") It is my experience that this *im'shee* is the most necessary word in Egypt.

We do nothing all day but drift, or try to drift, against the north wind, not making a mile an hour, constantly turning about, floating from one side of the river to the other. It is impossible to row, for the steersman cannot keep the boat's bow to the current.

There is something exceedingly tedious, even to a lazy and resigned man, in this perpetual drifting hither and thither. To float, however slowly, straight down the current, would be quite another thing. To go

sideways, to go stern first, to waltz around so that you never can tell which bank of the river you are looking at, or which way you are going, or what the points of the compass are, is confusing and unpleasant. It is the one serious annoyance of a dahabeëh voyage. If it is calm, we go on delightfully with oars and current; if there is a southerly breeze we travel rapidly, and in the most charming way in the world. But our high-cabined boats are helpless monsters in this wind, which continually blows; we are worse than becalmed, we are badgered.

However, we might be in a worse winter country, and one less entertaining. We have just drifted in sight of a dahabeëh, with the English flag, tied up to the bank. On the shore is a picturesque crowd; an awning is stretched over high poles; men are busy at something under it—on the rock near sits a group of white people under umbrellas. What can it be? Are they repairing a broken yard? Are they holding a court over some thief? Are they performing some mystic ceremony? We take the sandal and go to investigate.

An English gentleman has shot two crocodiles, and his people are skinning them, stuffing the skin, and scraping the flesh from the bones, preparing the skeletons for a museum. Horrible creatures they are, even in this butchered condition. The largest is twelve feet long; that is called a big crocodile here; but last winter the gentleman killed one that was seventeen feet long; that was a monster.

In the stomach of one of these he found two pairs of bracelets, such as are worn by Nubian children, two "cunning" little leathern bracelets ornamented with shells—a most useless ornament for a crocodile. The animal is becoming more and more shy every year, and it is very difficult to get a shot at one. They come out in the night, looking for bracelets. One night we nearly lost Ahmed, one of our black boys; he had gone down upon the rudder, when an enquiring crocodile came along and made a snap at him—when the boy climbed on deck he looked white even by starlight.

The invulnerability of the crocodile hide is exaggerated. One of these had two bullet-holes in his back. His slayer says he has repeatedly put bullets through the hide on the back.

When we came away we declined steaks, but the owner gave us some eggs, so that we might raise our own crocodiles.

Gradually we drift out of this almost utterly sterile country, and come to long strips of palm-groves, and to sakiyas innumerable, shrieking on the shore every few hundred feet. We have time to visit a considerable village, and see the women at their other occupation (besides lamentation) braiding each other's hair; sitting on the ground, sometimes two at a head, patiently twisting odds and ends of loose hair into the snaky braids, and muddling the whole with sand, water, and clay, preparatory to the oil. A few women are spinning with a hand-spindle and producing very good cotton-thread. All appear to have time on their hands. And what a busy place this must be in summer, when the heat is like that of an oven! The men loaf about like the women, and probably do even less. Those at work are mostly slaves, boys and girls in the slightest clothing; and even these do a great deal of "standing round." Wooden hoes are used.

The desert over which we walked beyond the town was very different from the Libyan with its drifts and drifts of yellow sand. We went over swelling undulations (like our rolling prairies), cut by considerable depressions, of sandstone with a light sand cover but all strewn with shale or shingle. This black shale is sometimes seen adhering like a layer of glazing to the coarse rock; and, though a part of the rock, it has the queer appearance of having been a deposit solidified upon it and subsequently broken off. On the tops of these hills we found everywhere holes scooped out by the natives in search of nitre; the holes showed evidence, in dried mud, of the recent presence of water.

We descended into a deep gorge, in which the rocks were broken squarely down the face, exhibiting strata of red, white, and variegated sandstone; the gorge was a Wady that ran far back into the country among the mountains; we followed it down to a belt of *sunt* acacias and palms on the river. This wady was full of rocks, like a mountain stream at home; a great torrent running long in it, had worn the rocks into fantastic shapes, cutting punch-bowls and the like, and water had recently dried in the hollows. But it had not rained on the river.

This morning we are awakened by loud talking and wrangling on deck, that sounds like a Paris revolution. We have only stopped for milk! The forenoon we spend among the fashionable ladies of Derr, the capital of Nubia, studying the modes, in order that we may carry home the latest. This is an aristocratic place. One of the eight-hundred-years-old sycamore trees, of which we made mention, is still vigorous and was bearing the sycamore fig. The other is in front of a grand mud-house with latticed windows, the residence of the Kashefs of Sultan Selim whose descendants still occupy it, and, though shorn of authority, are said to be proud of their Turkish origin. One of them, Hassan Kashef, an old man in the memory of our dragoman, so old that he had to lift up his eyelids with his finger when he wanted to see, died only a few years ago. This patriarch had seventy-two wives as his modest portion in this world; and as the Koran allows only four, there was some difficulty in settling the good man's estate. The matter was referred to the Khedive, but he wisely refused to interfere. When the executor came to divide the property among the surviving children, he found one hundred and five to share the inheritance.

The old fellow had many other patriarchal ways. On his death-bed he left a legacy of both good and evil wishes, requests to reward this friend, and to "serve out" that enemy, quite in the ancient style, and in the Oriental style, recalling the last recorded words of King David, whose expiring breath was an expression of a wish for vengeance upon one of his enemies, whom he had sworn not to kill. It reads now as if it might have been spoken by a Bedawee sheykh to his family only yesterday:—"And, behold, thou hast with thee Shimei the son of Gera, a Benjamite of Bahurim, which cursed me with a grievous curse in the day when I went to Mahanaim; but he came down to meet me at Jordan, and I sware to him by the Lord, saying, I will not put thee to death with the sword. Now therefore hold him not guiltless: for thou art a wise man, and knowest what thou oughtest to do unto him; but his hoar head bring thou down to the grave with blood. So David slept with his fathers, and was buried in the city of David."

We call at the sand-covered temple at A'mada, and crawl into it; a very neat little affair, with fresh color and fine sculptures, and as old as the time of Osirtasen III. (the date of the obelisk of Heliopolis, of the Tombs of Beni Hassan, say about fifteen hundred years before Rameses II.); and then sail quickly down to Korosko,

passing over in an hour or so a distance that required a day and a half on the ascent.

At Korosko there are caravans in from Kartoom; the camel-drivers wear monstrous silver rings, made in the interior, the crown an inch high and set with blood-stone. I bought from the neck of a pretty little boy a silver "charm," a flat plate with the name of Allah engraved on it. Neither the boy nor the charm had been washed since they came into being.

The caravan had brought one interesting piece of freight, which had just been sent down the river. It was the *head* of the Sultan of Darfoor, preserved in spirits, and forwarded to the Khedive as a present. This was to certify that the Sultan was really killed, when Darfoor was captured by the army of the Viceroy; though I do not know that there is any bounty on the heads of African Sultans. It is an odd gift to send to a ruler who wears the European dress and speaks French, and whose chief military officers are Americans.

The desolate hills behind Korosko rise a thousand feet, and we climbed one of the peaks to have a glimpse of the desert route and the country towards Kartoom. I suppose a more savage landscape does not exist. The peak of black disintegrated rocks on which we stood was the first of an assemblage of such as far as we could see south; the whole horizon was cut by these sharp peaks; and through these thickly clustering hills the caravan trail made its way in sand and powdered dust. Shut in from the breeze, it must be a hard road to travel, even with a winter sun multiplying its rays from all these hot rocks; in the summer it would be frightful. But on these summits, or on any desert swell, the air is an absolute elixir of life; it has a quality of lightness but not the rarity that makes respiration difficult.

At a village below Korosko we had an exhibition of the manner of fighting with the long Nubian war-spear and the big round shield made of hippopotamus-hide. The men jumped about and uttered frightening cries, and displayed more agility than fight, the object being evidently to terrify by a threatening aspect; but the scene was as barbarous as any we see in African pictures. Here also was a pretty woman (pretty for her) with beautiful eyes, who wore a heavy nose-ring of gold, which she said she put on to make her face beautiful; nevertheless she would sell the ring for nine dollars and a half. The people along here will sell anything they have, ornaments, charms to protect them from the evil-eye,—they will part with anything for money. At this village we took on a crocodile ten feet long, which had been recently killed, and lashed it to the horizontal yard. It was Abd-el-Atti's desire to present it to a friend in Cairo, and perhaps he was not reluctant, when we should be below the cataract, to have it take the appearance, in the eyes of spectators, of having been killed by some one on this boat.

We obtained above Korosko one of the most beautiful animals in the world—a young gazelle—to add to our growing menagerie; which consists of a tame duck, who never gets away when his leg is tied; a timid desert hare, who has lived for a long time in a tin box in the cabin, trembling like an aspen leaf night and day; and a chameleon.

The chameleon ought to have a chapter to himself. We have reason to think that he has the soul of some transmigrating Egyptian. He is the most uncanny beast. We have made him a study, and find very little good in him. His changeableness of color is not his worst quality. He has the nature of a spy, and he is sullen and snappish besides. We discovered that his color is not a purely physical manifestation, but that it depends upon his state of mind, upon his temper. When everything is serene, he is green as a May morning, but anger changes him instantly for the worse. It is however true that he takes his color mainly from the substance upon which he dwells, not from what he eats; for he eats flies and allows them to make no impression on his exterior. When he was taken off an acacia-tree, this chameleon was of the bright-green color of the leaves. Brought into our cabin, his usual resting-place was on the reddish maroon window curtains, and his green changed muddily into the color of the woollen. When angry, he would become mottled with dark spots, and have a thick cloudy color. This was the range of his changes of complexion; it is not enough (is it?) to give him his exaggerated reputation.

I confess that I almost hated him, and perhaps cannot do him justice. He is a crawling creature at best, and his mode of getting about is disagreeable; his feet have the power of clinging to the slightest roughness, and he can climb anywhere; his feet are like hands; besides, his long tail is like another hand; it is prehensile like the monkey's. He feels his way along very carefully, taking a turn with his tail about some support, when he is passing a chasm, and not letting go until his feet are firmly fixed on something else. And, then, the way he uses his eye is odious. His eye-balls are stuck upon the end of protuberances on his head, which protuberances work like ball-and-socket joints—as if you had your eye on the end of your finger. When he wants to examine anything, he never turns his head; he simply swivels his eye round and brings it to bear on the object. Pretending to live in cold isolation on the top of a window curtain, he is always making clammy excursions round the cabin, and is sometimes found in our bed-chambers. You wouldn't like to feel his cold tail dragging over you in the night.

The first question every morning, when we come to breakfast, is,

"Where is that chameleon?"

He might be under the table, you know, or on the cushions, and you might sit on him. Commonly he conceals his body behind the curtain, and just lifts his head above the roller. There he sits, spying us, gyrating his evil eye upon us, and never stirring his head; he takes the color of the curtain so nearly that we could not see him if it was not for that swivel eye. It is then that he appears malign, and has the aspect of a wise but ill-disposed Egyptian whose soul has had ill luck in getting into any respectable bodies for three or four thousand years. He lives upon nothing,—you would think he had been raised in a French *pension*. Few flies happen his way; and, perhaps he is torpid out of the sun so much of the time, he is not active to catch those that come. I carried him a big one the other day, and he repaid my kindness by snapping my finger. And I am his only friend.

Alas, the desert hare, whom we have fed with corn, and greens, and tried to breed courage in for a long time, died this morning at an early hour; either he was chilled out of the world by the cold air on deck, or he died of palpitation of the heart; for he was always in a flutter of fear, his heart going like a trip-hammer, when anyone approached him. He only rarely elevated his long silky ears in a serene enjoyment of society. His tail was too short, but he was, nevertheless, an animal to become attached to.

Speaking of Hassan Kashef's violation of the Moslem law, in taking more than four wives, is it generally known that the women in Mohammed's time endeavored also to have the privileges of men? Forty women who had cooked for the soldiers who were fighting the infidels and had done great service in the campaign, were asked by the Prophet to name their reward. The chief lady, who was put forward to prefer the request of the others, asked that as men were permitted four wives women might be allowed to have four husbands. The Prophet gave them a plain reason for refusing their petition, and it has never been renewed. The legend shows that long ago women protested against their disabilities.

The strong north wind, with coolish weather, continues. On Sunday we are nowhere in particular, and climb a high sandstone peak, and sit in the shelter of a rock, where wandering men have often come to rest. It is a wild, desert place, and there is that in the atmosphere of the day which leads to talk of the end of the world.

Like many other Moslems, Abd-el-Atti thinks that these are the last days, bad enough days, and that the end draws near. We have misunderstood what Mr. Lane says about Christ coming to "judge" the world. The Moslems believe that Christ, who never died, but was taken up into heaven away from the Jews,—a person in his likeness being crucified in his stead,—will come to rule, to establish the Moslem religion and a reign of justice (the Millenium); and that after this period Christ will die, and be buried in Medineh, not far from Mohammed. Then the world will end, and Azrael, the angel of death, will be left alone on the earth for forty days. He will go to and fro, and find no one; all will be in their graves. Then Christ and Mohammed and all the dead will rise. But the Lord God will be the final judge of all.

"Yes, there have been many false prophets. A man came before Haroun e' Rasheed pretending to be a prophet.

"What proof have you that you are one? What miracle can you do?'"

"Anything you like."

"Christ, on whom be peace, raised men from the dead."

"So will I.' This took place before the king and the chief-justice. 'Let the head of the chief-justice be cut off,' said the pretended prophet, 'and I will restore him to life.'"

"Oh,' cried the chief-justice, 'I believe that the man is a real prophet. Anyone who does not believe can have his head cut off, and try it.'"

"A woman also claimed to be a prophetess. 'But,' said the Khalif Haroun e' Rasheed, 'Mohammed declared that he was the last man who should be a prophet.'"

"He didn't say that a *woman* shouldn't be,' the woman she answer."

The people vary in manners and habits here from village to village, much more than we supposed they would. Walking this morning for a couple of miles through the two villages of Maharraka—rude huts scattered under palm-trees—we find the inhabitants, partly Arab, partly Barabra, and many negro slaves, more barbaric than any we have seen; boys and girls, till the marriageable age, in a state of nature, women neither so shy nor so careful about covering themselves with clothing as in other places, and the slaves wretchedly provided for. The heads of the young children are shaved in streaks, with long tufts of hair left; the women are loaded with tawdry necklaces, and many of them, poor as they are, sport heavy hoops of gold in the nose, and wear massive silver bracelets.

The slaves, blacks and mulattoes, were in appearance like those seen formerly in our southern cotton-fields. I recall a picture, in abolition times, representing a colored man standing alone, and holding up his arms, in a manner beseeching the white man, passing by, to free him. To-day I saw the picture realized. A very black man, standing nearly naked in the midst of a bean-field, raised up both his arms, and cried aloud to us as we went by. The attitude had all the old pathos in it. As the poor fellow threw up his arms in a wild despair, he cried "Baksheesh, baksheesh, O! howadji!"

For the first time we found the crops in danger. The country was overrun with reddish-brown locusts, which settled in clouds upon every green thing; and the people in vain attempted to frighten them from their scant strip of grain. They are not, however, useless. The attractive women caught some, and, pulling off the wings and legs, offered them to us to eat. They said locusts were good; and I suppose they are such as John the Baptist ate. We are not Baptists.

As we go down the river we take in two or three temples a day, besides these ruins of humanity in the village,—Dakkeh, Gerf Hossâyn, Dendoor. It is easy to get enough of these second-class temples. That at Gerf Hossâyn is hewn in the rock, and is in general arrangement like Ipsambool—it was also made by Rameses II.—but is in all respects inferior, and lacks the Colossi. I saw sitting in the *adytum* four figures whom I took to be Athos, Parthos, Aramis, and D'Artignan—though this edifice was built long before the day of the "Three Guardsmen."

The people in the village below have such a bad reputation that the dragoman in great fright sent sailors after us, when he found we were strolling through the country alone. We have seen no natives so well off in cattle, sheep, and cooking-utensils, or in nose-rings, beads, and knives; they are, however, a wild, noisy tribe, and the whole village followed us for a mile, hooting for baksheesh. The girls wear a nose-ring and a girdle; the boys have no rings or girdles. The men are fierce and jealous of their wives, perhaps with reason, stabbing and throwing them into the river on suspicion, if they are caught talking with another man. So they say. At this village we saw pits dug in the sand (like those described in the Old Testament), in which cattle, sheep and goats were folded; it being cheaper to dig a pit than to build a stone fence.

At Kalâbshee are two temples, ruins on a sufficiently large scale to be imposing; sculptures varied in character and beautifully colored; pylons with narrow staircases, and concealed rooms, and deep windows bespeaking their use as fortifications and dungeons as well as temples; and columns of interest to the architect; especially two, fluted (time of Rameses II.) with square projecting abacus like the Doric, but with broad bases. The inhabitants are the most pestilent on the river, crowding their curiosities upon us, and clamoring for money. They have for sale gazelle-horns, and the henna (which grows here), in the form of a green powder.

However, Kalâbshee has educational facilities. I saw there a boys' school in full operation. In the open air,

but in the sheltering angle of a house near the ruins, sat on the ground the schoolmaster. Behind him leaned his gun against the wall; before him lay an open Koran; and in his hand he held a thin palm rod with which he enforced education. He was dictating sentences from the book to a scrap of a scholar, a boy who sat on the ground, with an inkhorn beside him, and wrote the sentences on a board slate, repeating the words in aloud voice as he wrote. Nearby was another urchin, seated before a slate leaning against the angle of of the wall, committing the writing on it to memory, in a loud voice also. When he looked off the stick reminded him to attend to his slate. I do not know whether he calls this a private or a public school.

Quitting these inhospitable savages as speedily as we can, upon the springing up of a south wind, we are going down stream at a spanking rate, leaving a rival dahabeëh, belonging to an English lord, behind, when the adversary puts it into the head of our pilot to steer across the river, and our prosperous career is suddenly arrested on a sandbar. We are fast, and the English boat, keeping in the channel, shows us her rudder and disappears round the bend.

Extraordinary confusion follows; the crew are in the water, they are on deck, the anchor is got out, there are as many opinions, as people, and no one obeys. The long pilot is a spectacle, after he has been wading about in the stream and comes on deck. His gown is off and his turban also; his head is shaved; his drawers are in tatters like lace-work. He strides up and down beating his breast, his bare poll shining in the sun like a billiard ball. We are on the sand nearly four hours, and the accident, causing us to lose this wind, loses us, it so happens, three days. By dark we tie up near the most excruciating Sakiya in the world. It is suggested to go on shore and buy the property and close it out. But the boy who is driving will neither sell nor stop his cattle.

At Gertasse we have more ruins and we pass a beautiful, single column, conspicuous for a long distance over the desert, as fine as the once "nameless column" in the Roman forum. These temples, or places of worship, are on the whole depressing. There was no lack of religious privileges if frequency of religious edifices gave them. But the people evidently had no part in the ceremonies, and went never into these dark chambers, which are now inhabited by bats. The old religion does not commend itself to me. Of what use would be one of these temples on Asylum Hill, in Hartford, and how would the Rev. Mr. Twichell busy himself in its dark recesses, I wonder, even with the help of the deacons and the committee? The Gothic is quite enough for us.

This morning—we have now entered upon the month of February—for the first time in Nubia, we have early a slight haze, a thin veil of it; and passing between shores rocky and high and among granite breakers, we are reminded of the Hudson river on a June morning. A strong north wind, however, comes soon to puff away this illusion, and it blows so hard that we are actually driven up-stream.

The people and villages under the crumbling granite ledges that this delay enables us to see, are the least promising we have encountered; women and children are more nearly barbarians in dress and manners; for the women, a single strip of brown cotton, worn *à la* Bedawee, leaving free the legs, the right arm and breast, is a common dress. And yet, some of these women are not without beauty. One pretty girl sitting on a rock, the sun glistening on the castor-oil of her hair, asked for backsheesh in a sweet voice, her eyes sparkling with merriment. A flower blooming in vain in this desert!

Is it a question of "converting" these people? Certainly, nothing but the religion of the New Testament, put in practice here, bringing in its train, industry, self-respect, and a desire to know, can awaken the higher nature, and lift these creatures into a respectable womanhood. But the task is more difficult than it would be with remote tribes in Central Africa. These people have been converted over and over again. They have had all sorts of religions during the last few thousand years, and they remain essentially the same. They once had the old Egyptian faith, whatever it was; and subsequently they varied that with the Greek and Roman shades of heathenism. They then accepted the early Christianity, as the Abyssinians did, and had, for hundreds of years, opportunity of Christian worship, when there were Christian churches all along the Nile from Alexander to Meroë, and holy hermits in every eligible cave and tomb. And then came Mohammed's friends, giving them the choice of belief or martyrdom, and they embraced the religion of Mecca as cordially as any other.

They have remained essentially unchanged through all their changes. This hopelessness of their condition is in the fact that in all the shiftings of religions and of dynasties, the women have continued to soak their hair in castor-oil. The fashion is as old as the Nile world. Many people look upon castor-oil as an excellent remedy. I should like to know what it has done for Africa.

At Dabod is an interesting ruin, and a man sits there in front of his house, weaving, confident that no rain will come to spoil his yarn. He sits and works the treadle of his loom in a hole in the ground, the thread being stretched out twenty or thirty feet on the wall before him. It is the only industry of the village, and a group of natives are looking on. The poor weaver asks backsheesh, and when I tell him I have nothing smaller than an English sovereign, he says he can change it!

Here we find also a sort of Holly-Tree Inn, a house for charitable entertainment, such as is often seen in Moslem villages. It is a square mud-structure, entered by two doors, and contains two long rooms with communicating openings. The dirt-floors are cleanly swept and fresh mats are laid down at intervals. Any stranger or weary traveler, passing by, is welcome to come in and rest or pass the night, to have a cup of coffee and some bread. There are two cleanly dressed attendants, and one of them is making coffee, within, over a handful of fire, in a tiny coffee-pot. In front, in the sun, on neat mats, sit half a dozen turbaned men, perhaps tired wanderers and pilgrims in this world, who have turned aside to rest for an hour, for a day, or for a week. They appear to have been there forever. The establishment is maintained by a rich man of the place; but signs of an abode of wealth we failed to discover in any of the mud-enclosures.

When we are under way again, we express surprise at finding here such an excellent charity.

"You no think the Lord he take care for his own?" says Abd-el-Atti. "When the kin' [king] of Abyssinia go to 'stroy the Kaabeh in Mecca"—

"Did you ever see the Kaabeh?"

"Many times. Plenty times I been in Mecca."

"In what part of the Kaabeh is the Black Stone?"

"So. The Kaabeh is a building like a cube, about, I think him, thirty feet high, built in the middle of the mosque at Mecca. It was built by Abraham, of white marble. In the outside the east wall, near the corner, 'bout so (four feet) high you find him, the Black Stone, put there by Abraham, call him *haggeh el ashad*, the lucky, the fortunate stone. It is opposite the sunrise. Where Abraham get him? God knows. If any one sick, he touch this stone, be made so well as he was. So I *hunderstand*. The Kaabeh is in the centre of the earth, and has fronts to the four quarters of the globe, Asia, Hindia, Egypt, all places, toward which the Moslem kneel in prayer. Near the Kaabeh is the well, the sacred well Zem-Zem, has clear water, beautiful, so lifely. One time a year, in the month before Ramadan, Zem-Zem spouts up high in the air, and people come to drink of it. When Hagar left Ishmael, to look for water, being very thirsty, the little fellow scratched with his fingers in the sand, and a spring of water rushed up; this is the well Zem-Zem. I told you the same water is in the spring in Syria, El Gebel; I find him just the same; come under the earth from Zem-Zem."

"When the kin' of Abyssinia, who not believe, what you call infidel, like that Englishman, yes, Mr. Buckle, I see him in Sinai and Petra—very wise man, know a great deal, very nice gentleman, I like him very much, but I think he not believe—when the kin' of Abyssinia came with all his great army and his elephants to fight against Mecca, and to 'stroy the Kaabeh as well the same time to carry off all the cattle of the people, then the people they say, 'the cattle are ours, but the Kaabeh is the Lord's, and he will have care over it; the Kaabeh is not ours.' There was one of the elephants of the kin' of Abyssinia, the name of Mahmoud, and he was very wise, more wise than anybody else. When he came in sight of Mecca, he turned back and went the other way, and not all the spears and darts of the soldiers could stop him. The others went on. Then the Lord sent out of the hell very small birds, with very little stones, taken out of hell, in their claws, no larger than mustard seeds; and the birds dropped these on the heads of the soldiers that rode on the elephants—generally three or four on an elephant. The little seeds went right down through the men and through the elephants, and killed them, and by this the army was 'stroyed."

"When the kin', after that, come into the mosque, some power outside himself made him to bow down in respect to the Kaabeh. He went away and did not touch it. And it stands there the same now."

CHAPTER XXVI.—MYSTERIOUS PHILÆ.

WE are on deck early to see the approach to Philæ, which is through a gateway of high rocks. The scenery is like parts of the Rhine; and as we come in sight of the old mosque perched on the hillside, and the round tomb on the pinnacle above, it is very like the Rhine, with castle ruins. The ragged and rock island of Biggeh rises before us and seems to stop the way, but, at a turn in the river, the little temple, with its conspicuous columns, then the pylon of the great temple, and at length the mass of ruins, that cover the little island of Philæ, open on the view.

In the narrows we meet the fleet of government boats conveying the engineer expedition going up to begin the railway from Wady Haifa to Berber. Abd-el-Atti does not like the prospect of Egypt running deeper and deeper in debt, with no good to come of it, he says; he believes that the Khedive is acting under the advice of England, which is entirely selfish and only desires a short way to India, in case the French should shut the Suez Canal against them (his view is a very good example of a Moslem's comprehension of affairs). Also thinking, with all Moslems, that it is best to leave the world and its people as the Lord has created and placed them, he replied to an enquiry about his opinion of the railroad, with this story of Jonah:—

"When the prophet Jonah came out of the whale and sat down on the bank to dry under a tree (I have seen the tree) in Syria, there was a blind man sitting near by, who begged the prophet to give him sight. Then Jonah asked the Lord for help and the blind man was let to see. The man was eating dates at the same time, and the first thing he did when he got his eyes open was to snap the hard seeds at Jonah, who you know was very tender from being so long in the whale. Jonah was stung on his skin, and bruised by the stones, and he cry out, 'O! Lord, how is this?' And the Lord said, 'Jonah, you not satisfied to leave things as I placed 'em; and now you must suffer for it'."

One muses and dreams at Philæ, and does not readily arouse himself to the necessity of exploring and comprehending the marvels and the beauties that insensibly lead him into sentimental reveries. If ever the spirit of beauty haunted a spot, it is this. Whatever was harsh in the granite ledges, or too sharp in the granite walls, whatever is repellant in the memory concerning the uses of these temples of a monstrous theogony, all is softened now by time, all asperities are worn away; nature and art grow lovely together in a gentle decay, sunk in a repose too beautiful to be sad. Nowhere else in Egypt has the grim mystery of the

Egyptians *cultus* softened into so harmless a memory.

The oval island contains perhaps a hundred acres. It is a rock, with only a patch or two of green, and a few scattered palms, just enough to give it a lonely, poetic, and not a fruitful aspect, and, as has been said, is walled all round from the water's edge. Covered with ruins, the principal are those of the temple of Isis. Beginning at the southern end of the island, where a flight of steps led up to it, it stretches along, with a curved and broadening colonnade, giant pylons, great courts and covered temples. It is impossible to imagine a structure or series of structures, more irregular in the lines or capricious in the forms. The architects gave free play to their fancy, and we find here the fertility and variety, if not the grotesqueness of imagination of the mediaeval cathedral builders. The capitals of the columns of the colonnade are sculptured in rich variety; the walls of the west cloister are covered with fine carvings, the color on them still fresh and delicate; and the ornamental designs are as beautiful and artistic as the finest Greek work, which some of it suggests: as rich as the most lovely Moorish patterns, many of which seem to have been copied from these living creations—diamond-work, birds, exquisite medallions of flowers, and sphinxes.

Without seeing this mass of buildings, you can have no notion of the labor expended in decorating them. All the surfaces of the gigantic pylons, of the walls and courts, exterior and interior, are covered with finely and carefully cut figures and hieroglyphics, and a great deal of the work is minute and delicate chiselling. You are lost in wonder if you attempt to estimate the time and the number of workmen necessary to accomplish all this. It seems incredible that men could ever have had patience or leisure for it. A great portion of the figures, within and without, have been, with much painstaking, defaced; probably it was done by the early Christians, and this is the only impress they have left of their domination in this region.

The most interesting sculptures, however, at Philæ are those in a small chamber, or mortuary chapel, on the roof of the main temple, touching the most sacred mystery of the Egyptian religion, the death and resurrection of Osiris. This myth, which took many fantastic forms, was no doubt that forbidden topic upon which Herodotus was not at liberty to speak. It was the growth of a period in the Egyptian theology when the original revelation of one God grew weak and began to disappear under a monstrous symbolism. It is possible that the priests, who held their religious philosophy a profound secret from the vulgar (whose religion was simply a gross worship of symbols), never relinquished the belief expressed in their sacred texts, which say of God "that He is the sole generator in heaven and earth, and that He has not been begotten.... That He is the only living and true God, who was begotten by Himself.... He who has existed from the beginning.... who has made all things and was not Himself made." It is possible that they may have held to this and still kept in the purity of its first conception the myth of the manifestation of Osiris, however fantastic the myth subsequently became in mythology and in the popular worship.

Osiris, the personification of the sun, the life-giving, came upon the earth to benefit men, and one of his titles was the "manifester of good and truth." He was slain in a conflict with Set the spirit of evil and darkness; he was buried; he was raised from the dead by the prayers of his wife, Isis; he became the judge of the dead; he was not only the life-giving but the saving deity; "himself the first raised from the dead, he assisted to raise those who were justified, after having aided them to overcome all their trials."

But whatever the priests and the initiated believed, this myth is here symbolized in the baldest forms. We have the mummy of Osiris passing through its interment and the successive stages of the under-world; then his body is dismembered and scattered, and finally the limbs and organs are reassembled and joined together, and the resurrection takes place before our eyes. It reminds one of a pantomime of the Ravels, who used to chop up the body of a comrade and then put him together again as good as new, with the *insouciance* of beings who lived in a world where such transactions were common. This whole temple indeed, would be a royal place for the tricks of a conjurer or the delusions of a troop of stage wizards. It is full of dark chambers and secret passages, some of them in the walls and some subterranean, the entrances to which are only disclosed by removing a close-fitting stone.

The great pylons, ascended by internal stairways, have habitable chambers in each story, lighted by deep slits of windows, and are like palace fortresses. The view from the summit of one of them is fascinating, but almost grim; that is, your surroundings are huge masses of granite mountains and islands, only relieved by some patches of green and a few palms on the east shore. But time has so worn and fashioned the stones of the overtopping crags, and the color of the red granite is so warm, and the *contours* are so softened that under the brilliant sky the view is mellowed and highly poetical, and ought not to be called grim.

This little island, gay with its gorgeously colored walls, graceful colonnades, garden-roofs and spreading terraces, set in its rim of swift water, protected by these granite fortresses, bent over by this sky, must have been a dear and sacred place to the worshippers of Isis and Osiris, and we scarcely wonder that the celebration of their rites was continued so long in our era. We do not need, in order to feel the romance of the place, to know that it was a favorite spot with Cleopatra, and that she moored her silken-sailed dahabeëh on the sandbank where ours now lies. Perhaps she was not a person of romantic nature. There is a portrait of her here (the authenticity of which rests upon I know not what authority) stiffly cut in the stone, in which she appears to be a resolute woman with full sensual lips and a determined chin. Her hair is put up in decent simplicity. But I half think that she herself was like her other Egyptian sisters and made her silken locks to shine with the juice of the castor-oil plant. But what were these mysteries in which she took part, and what was this worship, conducted in these dark and secret chambers? It was veiled from all vulgar eyes; probably the people were scarcely allowed to set foot upon the sacred island.

Sunday morning was fresh and cool, with fleecy clouds, light and summer-like. Instead of Sabbath bells, when I rose late, I heard the wild chant of a crew rowing a dahabeëh down the echoing channel. And I wondered how church bells, rung on the top of these pylons, would sound reverberating among these granite rocks and boulders. We climbed, during the afternoon, to the summit of the island of Biggeh, which overshadows Philæ, and is a most fantastic pile of crags. You can best understand this region by supposing that a gigantic internal explosion lifted the granite strata into the air, and that the fragments fell hap-hazard. This Biggeh might have been piled up by the giants who attempted to scale heaven, when Zeus blasted them and their work with his launched lightning.

From this summit, we have in view the broken, rock-strewn field called the Cataract, and all the

extraordinary islands of rock above, that almost dam the river; there, over Philæ, on the north shore, is the barrack-like Austrian Mission, and near it the railway that runs through the desert waste, round the hills of the Cataract, to Assouan. These vast piled-up fragments and splintered ledges, here and all about us, although of raw granite and syenite, are all disintegrating and crumbling into fine atoms. It is this decay that softens the hardness of the outlines, and harmonizes with the ruins below. Wild as the convulsion was that caused this fantastic wreck, the scene is not without a certain peace now, as we sit here this Sunday afternoon, on a high crag, looking down upon the pagan temples, which resist the tooth of time almost as well as the masses of granite rock that are in position and in form their sentinels.

Opposite, on the hill, is the mosque, and the plastered dome of the sheykh's tomb, with its prayer-niche, a quiet and commanding place of repose. The mosque looks down upon the ever-flowing Nile, upon the granite desolation, upon the decaying temple of Isis,—converted once into a temple of the true God, and now merely the marvel of the traveler. The mosque itself, representative of the latest religion, is falling to ruin. What will come next? What will come to break up this civilized barbarism?

"Abd-el-Atti, why do you suppose the Lord permitted the old heathen to have such a lovely place as this Philæ for the practice of their superstitions?"

"Do' know, be sure. Once there was a stranger, I reckon him travel without any dragoman, come to the tent of the prophet Abraham, and ask for food and lodging; he was a kind of infidel, not believe in God, not to believe in anything but a bit of stone. And Abraham was very angry, and sent him away without any dinner. Then the Lord, when he saw it, scolded Abraham.

"'But,' says Abraham, 'the man is an infidel, and does not believe in Thee.'

"'Well,' the Lord he answer to Abraham, 'he has lived in my world all his life, and I have suffered him, and taken care of him, and prospered him, and borne his infidelity; and you could not give him a dinner, or shelter for one night in your house!

"Then Abraham ran after the infidel, and called him back, and told him all that the Lord he say. And the infidel when he heard it, answer, 'If the Lord says that, I believe in Him; and I believe that you are a prophet.'

"And do you think, Abd-el-Atti, that men have been more tolerant, the Friends of Mohammed, for instance, since then?"

"Men pretty nearly always the same; I see 'em all 'bout alike. I read in our books a little, what you call 'em?—yes, anecdote, how a Moslem 'ulama, and a Christian priest, and a Jewish rabbi, were in a place together, and had some conversation, and they agreed to tell what each would like best to happen.

"The priest he began:—'I should like,' says he, 'as many Moslems to die as there are animals sacrificed by them on the day of sacrifice.'

"'And I,' says the 'ulama, 'would like to see put out of the way so many Christians as they eat eggs on Easter.'

"Now it is your turn, says they both to the rabbi:—'Well, I should like you both to have your wishes.' I think the Jew have the best of it. Not so?"

The night is soft and still, and envelopes Philæ in a summer warmth. The stars crowd the blue-black sky with scintillant points, obtrusive and blazing in startling nearness; they are all repeated in the darker blue of the smooth river, where lie also, perfectly outlined, the heavy shadows of the granite masses. Upon the silence suddenly breaks the notes of a cornet, from a dahabeëh moored above us, in pulsations, however, rather to emphasize than to break the hush of the night.

"Eh! that's Mr. Fiddle," cries Abd-el-Atti, whose musical nomenclature is not very extensive, "that's a him."

Once on a moonless night in Upper Nubia, as we lay tied to the bank, under the shadow of the palms, there had swept past us, flashing into sight an instant and then gone in the darkness, an upward-bound dahabeëh, from the deck of which a cornet-à-piston flung out, in salute, the lively notes of a popular American air. The player (whom the dragoman could never call by any name but "Mr. Fiddle") as we came to know later, was an Irish gentleman, Anglicized and Americanized, and indeed cosmopolitan, who has a fancy for going about the world and awaking here and there remote and commonly undisturbed echoes with his favorite brass horn. I daresay that moonlight voyagers on the Hudson have heard its notes dropping down from the Highlands; it has stirred the air of every land on the globe except India; our own Sierras have responded to its invitations, and Mount Sinai itself has echoed its strains. There is a prejudice against the cornet, that it is not exactly a family instrument; and not more suited to assist in morning and evening devotions than the violin, which a young clergyman, whom I knew, was endeavoring to learn, in order to play it, gently, at family prayers.

This traveled cornet, however, begins to play, with deliberate pauses between the bars, the notes of that glorious hymn, "How firm a foundation ye saints of the Lord," following it with the Prayer from Der Freischutz, and that, again, with some familiar Scotch airs (a transition perfectly natural in home-circles on Sunday evening), every note of which, leisurely floating out into the night, is sent back in distant echoes. Nothing can be lovelier than the scene,—the tropical night, the sentimental island, the shadows of columns and crags, the mysterious presence of a brooding past,—and nothing can be sweeter than these dulcet, lingering, re-echoing strains, which are the music of our faith, of civilization, of home. From these old temples did never come, in the days of the flute and the darabooka, such melodies. And do the spirits of Isis and Osiris, and of Berenice, Cleopatra, and Antoninus, who worshipped them here, listen, and know perhaps that a purer and better spirit has come into the world?

In the midst of this echoing melody, a little boat, its sail noiselessly furled, its gunwales crowded with gowned and white-turbaned Nubians, glides out of the shadow and comes alongside, as silently as a ferry-boat of the under-world bearing the robed figures of the departed, and the venerable Reis of the Cataract steps on board, with *es-salam 'aleykum*; and the negotiation for shooting the rapids in the morning begins.

The reis is a Nubian of grave aspect, of a complexion many shades darker than would have been needed to disqualify its possessor to enjoy civil rights in our country a few years ago, and with watchful and shrewd black eyes which have an occasional gleam of humor; his robe is mingled black and white, his turban is a fine

camels-hair shawl; his legs are bare, but he wears pointed red-morocco slippers. There is a long confab between him and the dragoman, over pipes and coffee, about the down trip. It seems that there is a dahabeëh at Assouan, carrying the English Prince Arthur and a Moslem Prince, which has been waiting for ten days the whim of the royal scion, to make the ascent. Meantime no other boat can go up or down. The cataract business is at a standstill. The government has given orders that no other boat shall get in the way; and many travelers' boats have been detained from one to two weeks; some of them have turned back, without seeing Nubia, unable to spend any longer time in a vexatious uncertainty. The prince has signified his intention of coming up the Cataract tomorrow morning, and consequently we cannot go down, although the descending channel is not the same as the ascending. A considerable fleet of boats is now at each end of the cataract, powerless to move.

The cataract people express great dissatisfaction at this interference in their concerns by the government, which does not pay them as much as the ordinary traveler does for passing the cataract. And yet they have their own sly and mysterious method of dealing with boats that is not less annoying than the government favoritism. They will very seldom take a dahabeëh through in a day; they have delight in detaining it in the rapids and showing their authority.

When, at length, the Reis comes into the cabin, to pay us a visit of courtesy, he is perfect in dignity and good-breeding, in spite of his bare legs; and enters into a discourse of the situation with spirit and intelligence. In reply to a remark, that, in America we are not obliged to wait for princes, his eyes sparkle, as he answers, with much vivacity of manner, "You quite right. In Egypt we are in a mess. Egypt is a ewe sheep from which every year they shear the wool close off; the milk that should go the lamb they drink; and when the poor old thing dies, they give the carcass to the people—the skin they cut up among themselves. This season," he goes on, "is to the cataracts like what the pilgrimage is to Mecca and to Jerusalem—the time when to make the money from the traveler. And when the princes they come, crowding the traveler to one side, and the government makes everything done for them for nothing, and pays only one dollar for a turkey for which the traveler pays two, 'bliges the people to sell their provisions at its own price,"—the sheykh stopped.

"The Reis, then, Abd-el-Atti, doesn't fancy this method of doing business?"

"No, him say he not like it at all."

And the Reis kindled up, "You may call the Prince anything you like, you may call him king; but the real Sultan is the man who pays his money and does not come here at the cost of the government. Great beggars some of these big nobility; all the great people want the Viceroy to do 'em charity and take 'em up the Nile, into Abyssinia, I don't know where all. I think the greatest beggars always those who can best afford to pay."

With this philosophical remark the old Sheykh concludes a long harangue, the substance of which is given above, and takes his leave with a hundred complimentary speeches.

Forced to wait, we employed Monday advantageously in exploring the land-route to Assouan, going by Mahatta, where the trading-boats lie and piles of merchandise lumber the shore. It is a considerable village, and full of most persistent beggars and curiosity venders. The road, sandy and dusty, winds through hills of granite boulders—a hot and desolate though not deserted highway, for strings of camels, with merchandise, were in sight the whole distance. We passed through the ancient cemetery, outside of Assouan, a dreary field of sand and rocks, the leaning grave-stones covered with inscriptions in old Arabic, (or Cufic), where are said to rest the martyred friends of the prophet who perished in the first battle with the infidels above Philæ.

Returning, we made a *detour* to the famous syenite quarries, the openings of several of which are still visible. They were worked from the sides and not in pits, and offer little to interest the ordinary sight-seer. Yet we like to see where the old workmen chipped away at the rocks; there are frequent marks of the square holes that they drilled, in order to split off the stone with wet wedges of wood. The great obelisk which lies in the quarry, half covered by sand, is unfinished; it is tapered from the base to its tip, ninety-eight feet, but it was doubtless, as the marks indicate, to be worked down to the size of the big obelisk at Karnak; the part which is exposed measures ten to eleven feet square. It lies behind ledges of rock, and it could only have been removed by cutting away the enormous mass in front of it or by hoisting it over. The suggestion of Mr. Wilkinson that it was to be floated out by a canal, does not commend itself to one standing on the ground.

We came back by the long road, the ancient traveled way, along which, on the boulders, are rudely-cut sculptures and hieroglyphics, mere scratchings on the stone, but recording the passage of kings and armies as long ago as the twelfth dynasty. Nearly all the way from Assouan to Philæ are remains of a huge wall of unburnt bricks, ten to fifteen feet broad and probably fifteen to twenty feet high, winding along the valley and over the low ridges. An apparently more unnecessary wall does not exist; it is said by people here to have been thrown up by the Moslems as a protection against the Nubians when they first traversed this desert; but it is no doubt Roman. There are indications that the Nile once poured its main flood through this opening.

We emerge not far from the south end of the railway track, and at the deserted Austrian Mission. A few Nubian families live in huts on the bank of the stream. Among the bright-eyed young ladies, with shining hair, who entreat backsheesh, while we are waiting for our sandal, is the daughter of our up-river pilot. We should have had a higher opinion of his dignity and rank if we had not seen his house and his family.

After sunset the dahabeëhs of the Prince came up and were received with salutes by the waiting boats, which the royal craft did not return. Why the dragoman of the arriving dahabeëh came to ours with the Prince's request, as he said, for our cards, we were not informed; we certainly intended no offence by the salute; it was, on the part of the other boats, a natural expression of pleasure that the royal boat was at last out of the way.

At dark we loose from lovely Philæ, in order to drop down to Mahatta and take our station for running the cataract in the morning. As we draw out from the little fleet of boats, Irish, Hungarian, American, English, rockets and blue lights illumine the night, and we go off in a blaze of glory. Regardless of the Presence, the Irish gentleman responds on his cornet with the Star-Spangled Banner, the martial strains of which echo from all the hills.

In a moment, the lights are out, the dahabeëhs disappear and the enchanting island is lost to sight. We are

gliding down the swift and winding channel, through granite walls, under the shadow of giant boulders, immersed in the gloom of a night which the stars do not penetrate. There is no sound save the regular, chopping fall of the heavy sweeps, which steady the timorous boat, and are the only sign, breaking the oppressive silence, that we are not a phantom ship in a world of shades. It is a short but ghostly voyage, and we see at length with a sigh of relief the lines of masts and spars in the port of Mahatta. Working the boat through the crowd that lie there we moor for the night, with the roar of the cataract in our ears.

CHAPTER XXVII.—RETURNING.

WE ARE on deck before sunrise, a film is over the sky and a light breeze blows out our streamer—a bad omen for the passage.

The downward run of the Cataract is always made in the early morning, that being the time when there is least likely to be any wind. And a calm is considered absolutely necessary to the safety of the boat. The north wind, which helps the passage up, would be fatal going down. The boat runs with the current, and any exterior disturbance would whirl her about and cast her upon the rocks.

If we are going this morning, we have no time to lose, for it is easy to see that this breeze, which is now uncertainly dallying with our colors, will before long strengthen. The Cataract people begin to arrive; there is already a blue and white row of them squatting on the bank above us, drawing their cotton robes about them, for the morning is a trifle chilly. They come loitering along the bank and sit down as if they were merely spectators, and had no interest in the performance.

The sun comes, and scatters the cloud-films; as the sun rises we are ready to go; everything has been made snug and fast above and below; and the breeze has subsided entirely. We ought to take instant advantage of the calm; seconds count now. But we wait for the Reis of the Cataract, the head reis, without whose consent no move can be made. It is the sly old sheykh with whom we have already negotiated, and he has his reasons for delaying. By priority of arrival at Philæ our boat is entitled to be first taken down; but the dragoman of another boat has been crossing the palms of the guileless patriarch with gold pieces, and he has agreed to give the other boat the preference. It is not probable that the virtuous sheykh ever intended to do so, but he must make some show of keeping his bargain. He would like to postpone our voyage, and take the chances of another day.

But here he comes, mounted on a donkey, in state, wrapped about the head and neck in his cashmere, and with a train of attendants—the imperturbable, shrewd old man. He halts a moment on the high bank, looks up at our pennant, mutters something about “wind, not good day, no safe,” and is coolly about to ride by.

Our dragoman in an instant is at his side, and with half-jocular but firm persistence, invites him to dismount. It is in vain that the sheykh invents excuse after excuse for going on. There is a neighbor in the village whose child is dead, and he must visit him. The consolation, Abd-el-Atti thinks, can be postponed an hour or two, Allah is all merciful. He is chilly, his fingers are cold, he will just ride to the next house and warm his hands, and by that time we can tell whether it is to be a good morning; Abd-el-Atti is sure that he can warm his fingers much better on our boat, in fact he can get warm all through there.

“I’ll warm him if he won’t come.” continues the dragoman, turning to us; “if I let him go by, the old rascal, he slip down to Assouan, and that become the last of him.”

Before the patriarch knows exactly what has happened, or the other dragoman can hinder, he is gently hustled down the steep bank aboard our boat. There is a brief palaver, and then he is seated, with a big bowl of coffee and bread; we are still waiting, but it is evident that the decisive nod has been given. The complexion of affairs has changed!

The people are called from the shore; before we interpret rightly their lazy stir, they are swarming on board. The men are getting their places on the benches at the oars—three stout fellows at each oar; it looks

like "business." The three principal reïses are on board; there are at least a dozen steersmen; several heads of families are present, and a dozen boys. More than seventy-five men have invaded us—and they may all be needed to get ropes ashore in case of accident. This unusual swarm of men and the assistance of so many sheykhs, these extra precautions, denote either fear, or a desire to impress us with the magnitude of the undertaking. The head reï shakes his head at the boat and mutters, "much big." We have aboard almost every skillful pilot of the rapids.

The Cataract flag, two bands of red and yellow with the name of "Allah" worked on it in white, is set up by the cabin stairs.

There is a great deal of talking, some confusion, and a little nervousness. Our dragoman cheerfully says, "we will hope for the better," as the beads pass through his fingers. The reïses are audibly muttering their prayers. The pilots begin to strip to their work. A bright boy of twelve years, squat on deck by the tiller, is loudly and rapidly reciting the Koran.

At the last moment, the most venerable reï of the cataract comes on board, as a great favor to us. He has long been superannuated, his hair is white, his eye-sight is dim, but when he is on board all will go well. Given a conspicuous seat in a chair on the cabin deck, he begins at once prayers for our safe passage. This sheykh is very distinguished, tracing his ancestry back beyond the days of Abraham; his family is very large—seven hundred is the number of his relations; this seems to be a favorite number; Ali Moorad at Luxor has also seven hundred relations. The sheykh is treated with great deference; he seems to have had something to do with designing the cataract, and opening it to the public.

The last rope is hauled in; the crowd on shore cheer; our rowers dip the oars, and in a moment we are sweeping along in the stiff current, avoiding the boulders on either side. We go swiftly. Everybody is muttering prayers now; two venerable reïses seated on a box in front of the rudder increase the speed of their devotions; and the boy chants the Koran with a freer swing.

Our route down is not the same as it was up. We pass the head of the chief rapid—in which we struggle—into which it would need only a wink of the helm to turn us—and sweep away to the west side; and even appear to go a little out of our way to run near a precipice of rock. A party of ladies and gentlemen who have come down from their dahabeëh above, to see us make the chûte, are standing on the summit, and wave handkerchiefs and hats as we rush by.

Before us, we can see the great rapids—a down-hill prospect. The passage is narrow, and so crowded is the hurrying water that there is a ridge down the centre. On this ridge, which is broken and also curved, we are to go. If it were straight, it would be more attractive, but it curves short to the right near the bottom of the rapid, and, if we do not turn sharp with it, we shall dash against the rocks ahead, where the waves strike in curling foam. All will depend upon the skill and strength of the steersmen, and the sheer at the exact instant.

There is not long to think of it, however, and no possibility now of evading the trial. Before we know it, the nose of the boat is in the rapid, which flings it up in the air; the next second we are tossed on the waves. The bow dips, and a heavy wave deluges the cook's domain; we ship a tun or two of water, the dragoman, who stands forward, is wet to his breast; but the boat shakes it off and rises again, tossed like an egg-shell. It is glorious. The boat obeys her helm admirably, as the half-dozen pilots, throwing their weight upon the tiller, skillfully veer it slightly or give it a broad sweep.

It is a matter of only three or four minutes, but they are minutes of intense excitement. In the midst of them, the reï of our boat, who has no command now and no responsibility, and is usually imperturbably calm, becomes completely unmanned by the strain upon his nerves, and breaks forth into convulsive shouting, tears and perspiration running down his cheeks. He has "the power," and would have hysterics if he were not a man. A half-dozen people fly to his rescue, snatch off his turban, hold his hands, mop his face, and try to call him out of his panic. By the time he is somewhat composed, we have shunned the rocks and made the turn, and are floating in smoother but still swift water. The reïses shake hands and come to us with salaams and congratulations. The chief pilot desires to put my fez on his own head in token of great joy and amity. The boy stops shouting the Koran, the prayers cease, the beads are put up. It is only when we are in a tight place that it is necessary to call upon the name of the Lord vigorously.

"You need not have feared," says a reï of the Cataract to ours, pointing to the name on the red and yellow flag, "Allah would bring us through."

That there was no danger in this passage we cannot affirm. The dahabeëhs that we left at Mahatta, ready to go down, and which might have been brought through that morning, were detained four or five days upon the whim of the reïses. Of the two that came first, one escaped with a slight knock against the rocks, and the other was dashed on them, her bottom staved in, and half filled with water immediately. Fortunately, she was fast on the rock; the passengers, luggage, and stores were got ashore; and after some days the boat was rescued and repaired.

For a mile below this chûte we have rapid going, rocks to shun, short turns to make, and quite uncertainty enough to keep us on the *qui vive*, and finally, another lesser rapid, where there is infinitely more noise by the crew, but less danger from the river than above.

As we approach the last rapid, a woman appears in the swift stream, swimming by the help of a log—that being the handy ferry-boat of the country; her clothes are all in a big basket, and the basket is secured on her head. The sandal, which is making its way down a side channel, with our sheep on board, is signalled to take this lady of the lake in, and land her on the opposite shore. These sheep of ours, though much tossed about, seem to enjoy the voyage and look about upon the raging scene with that indifference which comes of high breeding. They are black, but that was not to their prejudice in their Nubian home. They are comely animals in life, and in death are the best mutton in the East; it is said that they are fed on dates, and that this diet imparts to their flesh its sweet flavor. I think their excellence is quite as much due to the splendid air they breathe.

While we are watching the manoeuvring of the boat, the woman swims to a place where she can securely lodge her precious log in the rocks and touch bottom with her feet. The boat follows her and steadies itself against the same rocks, about which the swift current is swirling. The water is up to the woman's neck, and

the problem seems to be to get the clothes out of the basket which is on her head, and put them on, and not wet the clothes. It is the old myth of Venus rising from the sea, but under changed conditions, and in the face of modern sensitiveness. How it was accomplished, I cannot say, but when I look again the aquatic Venus is seated in the sandal, clothed, dry, and placid.

We were an hour passing the rapids, the last part of the time with a strong wind against us; if it had risen sooner we should have had serious trouble. As it was, it took another hour with three men at each oar, to work down to Assouan through the tortuous channel, which is full of rocks and whirlpools, The men at each bank of oars belonged to different tribes, and they fell into a rivalry of rowing, which resulted in an immense amount of splashing, spurting, yelling, chorusing, and calling on the Prophet. When the contest became hot, the oars were all at sixes and sevens, and in fact the rowing gave way to vituperation and a general scrimmage. Once, in one of the most ticklish places in the rapids, the rowers had fallen to quarrelling, and the boat would have gone to smash, if the reïs had not rushed in and laid about him with a stick. These artless children of the sun! However we came down to our landing in good form, exchanging salutes with the fleet of boats waiting to make the ascent.

At once four boats, making a gallant show with their spread wings, sailed past us, bound up the cataract. The passengers fired salutes, waved their handkerchiefs, and exhibited the exultation they felt in being at last under way for Philæ; and well they might, for some of them had been waiting here fifteen days.

But alas for their brief prosperity. The head reïs was not with them; that autocrat was still upon our deck, leisurely stowing away coffee, eggs, cold meat, and whatever provisions were brought him, with the calmness of one who has a good conscience. As the dahabeëhs swept by he shook his head and murmured, "not much go."

And they did "not much go." They stopped indeed, and lay all day at the first gate, and all night. The next morning, two dahabeëhs, carrying persons of rank, passed up, and were given the preference, leaving the first-comers still in the rapids; and two days after, they were in mid-passage, and kept day after day in the roar and desolation of the cataract, at the pleasure of its owners. The only resource they had was to write indignant letters of remonstrance to the governor at Assouan.

This passage of the cataract is a mysterious business, the secrets of which are only mastered by patient study. Why the reises should desire to make it so vexatious is the prime mystery. The traveler who reaches Assouan often finds himself entangled in an invisible web of restraints. There is no opposition to his going on; on the contrary the governor, the reises, and everyone overflow with courtesy and helpfulness. But, somehow, he does not go on, he is played with from day to day. The old sheykh, before he took his affectionate leave of us that morning, let out the reason of the momentary hesitation he had exhibited in agreeing to take our boat up the cataract when we arrived. The excellent owners, honest Aboo Yoosef and the plaintive little Jew of Bagdad, had sent him a bribe of a whole piece of cotton cloth, and some money to induce him to prevent our passage. He was not to refuse, not by any means, for in that case the owners would have been liable to us for the hundred pounds forfeit named in the contract in case the boat could not be taken up; but he was to amuse us, and encourage us, and delay us, on various pretexts, so long that we should tire out and freely choose not to go any farther.

The integrity of the reïs was proof against the seduction of this bribe; he appropriated it, and then earned the heavy fee for carrying us up, in addition. I can add nothing by way of eulogium upon this clever old man, whose virtue enabled him to withstand so much temptation.

We lay for two days at the island Elephantine, opposite Assouan, and have ample time to explore its two miserable villages, and to wander over the heaps on heaps, the *débris* of so many successive civilizations. All day long, women and children are clambering over these mounds of ashes, pottery, bricks, and fragments of stone, unearthing coins, images, beads, and bits of antiquity, which the strangers buy. There is nothing else on the island. These indistinguishable mounds are almost the sole evidence of the successive occupation of ancient Egyptians, Canaanites, Ethiopians, Persians, Greeks, Romans, Christians, and conquering Arabs. But the grey island has an indefinable charm. The northern end is green with wheat and palms; but if it were absolutely naked, its fine granite outlines would be attractive under this splendid sky. The days are lovely, and the nights enchanting. Nothing more poetic could be imagined than the silvery reaches of river at night, with their fringed islands and shores, the stars and the new moon, the uplifted rocks, and the town reflected in the stream.

Of Assouan itself, its palm-groves and dirty huddle of dwellings, we have quite enough in a day. Curiosity leads us to visit the jail, and we find there, by chance, one of our sailors, who is locked up for insubordination, and our venerable reïs keeping him company, for being inefficient in authority over his crew. In front of the jail, under the shade of two large acacia trees, the governor has placed his divan and holds his *levées* in the open air, transacting business, and entertaining his visitors with coffee and cigars. His excellency is a very "smartish," big black fellow, not a negro nor a Nubian exactly, but an Ababdeh, from a tribe of desert Arabs; a man of some aptitude for affairs and with very little palaver. The jail has an outer guard-room, furnished with divans and open at both ends, and used as a court of justice. A not formidable door leads to the first room, which is some twenty feet square; and here, seated upon the ground with some thirty others, we are surprised to recognize our reïs. The respectable old incapable was greatly humiliated by the indignity. Although he was speedily released, his incarceration was a mistake; it seemed to break his spirit, and he was sullen and uncheerful ever afterwards. His companions were in for trivial offences: most of them for not paying the government taxes, or for debt to the Khedive, as the phrase was. In an adjoining, smaller room, were the great criminals, the thieves and murderers. Three murderers were chained together by enormous iron cables attached to collars about their necks, and their wrists were clamped in small wooden stocks. In this company were five decent-looking men, who were also bound together by heavy chains from neck to neck; we were told that these were the brothers of men who had run away from the draft, and that they would be held until their relations surrendered themselves. They all sat glumly on the ground. The jail does not differ in comfort from the ordinary houses; and the men are led out once a day for fresh air; we saw the murderers taking an airing, and exercise also in lugging their ponderous irons.

We departed from Assouan early in the morning, with water and wind favorable for a prosperous day. At

seven o'clock our worthy steersman stranded us on a rock. It was a little difficult to do it, for he had to go out of his way and to leave the broad and plainly staked-out channel. But he did it very neatly. The rock was a dozen feet out of water, and he laid the boat, without injury, on the shelving upper side of it, so that the current would constantly wash it further on, and the falling river would desert it. The steersman was born in Assouan and knows every rock and current here, even in the dark. This accident no doubt happened out of sympathy with the indignity to the reis. That able commander is curled up on the deck ill, and no doubt felt greatly grieved when he felt the grating of the bottom upon the rock; but he was not too ill to exchange glances with the serene and ever-smiling steersman. Three hours after the stranding, our crew have succeeded in working us a little further on than we were at first, and are still busy; surely there are in all history no such navigators as these.

It is with some regret that we leave, or are trying to leave, Nubia, both on account of its climate and its people. The men, various sorts of Arabs as well as the Nubians, are better material than the fellaheen below, finer looking, with more spirit and pride, more independence and self-respect. They are also more barbarous; they carry knives and heavy sticks universally, and guns if they can get them, and in many places have the reputation of being quarrelsome, turbulent, and thieves. But we have rarely received other than courteous treatment from them. Some of the youngest women are quite pretty, or would be but for the enormous nose and ear rings, the twisted hair and the oil; the old women are all unnecessarily ugly. The children are apt to be what might be called free in apparel, except that the girls wear fringe, but the women are as modest in dress and manner as those of Egypt. That the highest morality invariably prevails, however, one cannot affirm, notwithstanding the privilege of husbands, which we are assured is sometimes exercised, of disposing of a wife (by means of the knife and the river) who may have merely incurred suspicion by talking privately with another man. This process is evidently not frequent, for women are plenty, and we saw no bodies in the river.

But our chief regret at quitting Nubia is on account of the climate. It is incomparably the finest winter climate I have ever known; it is nearly perfect. The air is always elastic and inspiring; the days are full of sun; the nights are cool and refreshing; the absolute dryness seems to counteract the danger from changes of temperature. You may do there what you cannot in any place in Europe in the winter—get warm. You may also, there, have repose without languor.

We went on the rock at seven and got off at two. The governor of Assouan was asked for help and he sent down a couple of boat-loads of men, who lifted us off by main strength and the power of their lungs. We drifted on, but at sunset we were not out of sight of the mosque of Assouan. Strolling ashore, we found a broad and rich plain, large palm-groves and wheat-fields, and a swarming population—in striking contrast to the country above the Cataract. The character of the people is wholly different; the women are neither so oily, nor have they the wild shyness of the Nubians; they mind their own business and belong to a more civilized society; slaves, negroes as black as night, abound in the fields. Some of the large wheat-fields are wholly enclosed by substantial unburnt brick walls, ten feet high.

Early in the evening, our serene steersman puts us hard aground again on a sandbar. I suppose it was another accident. The wife and children of the steersman live at a little town opposite the shoal upon which we have so conveniently landed, and I suppose the poor fellow wanted an opportunity to visit them. He was not permitted leave of absence while the boat lay at Assouan, and now the dragoman says that, so far as he is concerned, the permission shall not be given from here, although the village is almost in sight; the steersman ought to be punished for his conduct, and he must wait till he comes up next year before he can see his wife and children. It seems a hard case, to separate a man from his family in this manner.

"I think it's a perfect shame," cries Madame, when she hears of it, "not to see his family for a year!"

"But one of his sons is on board, you know, as a sailor. And the steersman spent most of his time with his wife the boy's mother, when we were at Assouan."

"I thought you said his wife lived opposite here?"

"Yes, but this is a newer one, a younger one; that is his old wife, in Assouan."

"Oh!"

"The poor fellow has another in Cairo."

"Oh!"

"He has wives, I daresay, at proper distances along the Nile, and whenever he wants to spend an hour or two with his family, he runs us aground."

"I don't care to hear anything more about him."

The Moslem religion is admirably suited to the poor mariner, and especially to the sailor on the Nile through a country that is all length and no width.

CHAPTER XXVIII.—MODERN FACTS AND ANCIENT MEMORIES.

ON a high bluff stands the tottering temple of Kom Ombos conspicuous from a distance, and commanding a dreary waste of desert. Its gigantic columns are of the Ptolemaic time, and the capitals show either Greek influence or the relaxation of the Egyptian hieratic restraint.

The temple is double, with two entrances and parallel suites of apartments, a happy idea of the builders, impartially to split the difference between good and evil; one side is devoted to the worship of Horus, the embodiment of the principle of Light, and the other to that of Savak, the crocodile-headed god of Darkness. I fear that the latter had here the more worshippers; his title was Lord of Ombos, and the fear of him spread like night. On the sand-bank, opposite, the once-favored crocodiles still lounge in the sun, with a sharp eye out for the rifle of the foreigner, and, no doubt, wonder at the murderous spirit which has come into the world to supplant the peaceful heathenism.

These ruins are an example of the jealousy with which the hierarchy guarded their temples from popular intrusion. The sacred precincts were enclosed by a thick and high brick wall, which must have concealed the temple from view except on the river side; so formidable was this wall, that although the edifice stands upon an eminence, it lies in a basin formed by the ruins of the enclosure. The sun beating in it at noon converted it into a reverberating furnace—a heat sufficient to melt any image not of stone, and not to be endured by persons who do not believe in Savak.

We walked a long time on the broad desert below Ombos, over sand as hard as a sea-beach pounded by the waves, looking for the bed of pebbles mentioned in the handbook, and found it a couple of miles below. In the soft bank an enormous mass of pebbles has been deposited, and is annually added to—sweepings of the Nubian deserts, flints and agates, bits of syenite from Assouan, and colored stones in great variety. There is a tradition that a sailor once found a valuable diamond here, and it seems always possible that one may pick some precious jewel out of the sand. Some of the desert pebbles, polished by ages of sand-blasts, are very beautiful.

Every day when I walk upon the smooth desert away from the river, I look for colored stones, pebbles, flints, chalcedonies, and agates. And I expect to find, some day, the *ewige* pebble, the stone translucent, more beautiful than any in the world—perhaps, the lost seal of Solomon, dropped by some wandering Bedawee. I remind myself of one looking, always in the desert, for the pearl of great price, which all the markets and jewelers of the world wait for. It seems possible, here under this serene sky, on this expanse of sand, which has been trodden for thousands of years by all the Oriental people in turn, by caravans, by merchants and warriors and wanderers, swept by so many geologic floods and catastrophes, to find it. I never tire of looking, and curiously examine every bit of translucent and variegated flint that sparkles in the sand. I almost hope, when I find it, that it will not be cut by hand of man, but that it will be changeable in color, and be fashioned in a cunning manner by nature herself. Unless, indeed, it should be, as I said, the talismanic ring of Solomon, which is known to be somewhere in the world.

In the early morning we have drifted down to Silsilis, one of the most interesting localities on the Nile. The difference in the level of the land above and below and the character of the rocky passage at Silsilis teach that the first cataract was here before the sandstone dam wore away and transferred it to Assouan. Marks have been vainly sought here for the former height of the Nile above; and we were interested in examining the upper strata of rocks laid bare in the quarries. At a height of perhaps sixty feet from the floor of a quarry, we saw *between* two strata of sandstone a layer of other material that had exactly the appearance of the deposits of the Nile which so closely resemble rock along the shore. Upon reaching it we found that it was friable and, in fact, a sort of hardened earth. Analysis would show whether it is a Nile deposit, and might contribute something to the solution of the date of the catastrophe here.

The interest at Silsilis is in these vast sandstone quarries, and very little in the excavated grottoes and rock-temples on the west shore, with their defaced and smoke-obscured images. Indeed, nothing in Egypt, not even the temples and pyramids, has given us such an idea of the immense labor the Egyptians expended in building, as these vast excavations in the rock. We have wondered before where all the stone came from that we have seen piled up in buildings and heaped in miles of ruins; we wonder now what use could have been made of all the stone quarried from these hills. But we remember that it was not removed in a century, nor in ten centuries, but that for great periods of a thousand years workmen were hewing here, and that much of the stone transported and scattered over Egypt has sunk into the soil out of sight.

There are half a dozen of these enormous quarries close together, each of which has its communication with the river. The method of working was this:—a narrow passage was cut in from the river several hundred feet into the mountain, or until the best-working stone was reached, and then the excavation was broadened out without limit. We followed one of these passages, the sides of which are evenly-cut rock, the height of the hill. At length we came into an open area, like a vast cathedral in the mountain, except that it wanted both pillars and roof. The floor was smooth, the sides were from fifty to seventy-five feet high, and all perpendicular, and as even as if dressed down with chisel and hammer. This was their general character, but in some of them steps were left in the wall and platforms, showing perfectly the manner of working. The quarrymen worked from the top down perpendicularly, stage by stage. We saw one of these platforms, a third of the distance from the top, the only means of reaching which was by nicks cut in the face of the rock, in which one might plant his feet and swing down by a rope. There was no sign of splitting by drilling or by the use of plugs, or of any explosive material. The walls of the quarries are all cut down in fine lines that run from top to bottom slantingly and parallel. These lines have every inch or two round cavities, as if the stone had been bored by some flexible instrument that turned in its progress. The workmen seem to have cut out the stone always of the shape and size they wanted to use; if it was for a statue, the place from which it came

in the quarry is rounded, showing the *contour* of the figure taken. They took out every stone by the most patient labor. Whether it was square or round, they cut all about it a channel four to five inches wide, and then separated it from the mass underneath by a like broad cut. Nothing was split away; all was carefully chiseled out, apparently by small tools. Abandoned work, unfinished, plainly shows this. The ages and the amount of labor required to hew out such enormous quantities of stone are heightened in our thought, by the recognition of this slow process. And what hells these quarries must have been for the workmen, exposed to the blaze of a sun intensified by the glaring reflection from the light-colored rock, and stifled for want of air. They have left the marks of their unending task in these little chiselings on the face of the sandstone walls. Here and there some one has rudely sketched a figure or outlined a hieroglyphic. At intervals places are cut in the rock through which ropes could be passed, and these are worn deeply, showing the use of ropes, and no doubt of derricks, in handling the stones.

These quarries are as deserted now as the temples which were taken from them; but nowhere else in Egypt was I more impressed with the duration, the patience, the greatness of the race that accomplished such prodigies of labor.

The grottoes, as I said, did not detain us; they are common calling-places, where sailors and wanderers often light fires at night and where our crew slept during the heat of this day. We saw there nothing more remarkable than the repeated figure of the boy Horus taking nourishment from the breast of his mother, which provoked the irreverent remark of a voyager that Horus was more fortunate than his dragoman had been in finding milk in this stony region.

Creeping on, often aground and always expecting to be, the weather growing warmer as we went north, we reached Edfoo. It was Sunday, and the temperature was like that of a July day, a south wind and the mercury at 85°.

In this condition of affairs it was not unpleasant to find a temple, entire, clean, perfectly excavated, and a cool retreat from the glare of the sun. It was not unlike entering a cathedral. The door by which we were admitted was closed and guarded; we were alone; and we experienced something of the sentiment of the sanctuary, that hush and cool serenity which is sometimes mistaken for religion, in the presence of ecclesiastical architecture.

Although this is a Ptolemaic temple, it is, by reason of its nearly perfect condition, the best example for study. The propylon which is two hundred and fifty feet high and one hundred and fifteen long, contains many spacious chambers, and confirms our idea that these portions of the temples were residences. The roof is something enormous, being composed of blocks of stone, three feet thick, by twelve wide, and twenty-two long. Upon this roof are other chambers. As we wandered through the vast pillared courts, many chambers and curious passages, peered into the secret ways and underground and intermural alleys, and emerged upon the roof, we thought what a magnificent edifice it must have been for the gorgeous processions of the old worship, which are sculptured on the walls.

But outside this temple and only a few feet from it is a stone wall of circuit, higher than the roof of the temple itself. Like every inch of the temple walls, this wall outside and inside is covered with sculptures, scenes in river life, showing a free fancy and now and then a dash of humor; as, when a rhinoceros is made to tow a boat—recalling the western sportiveness of David Crockett with the alligator. Not only did this wall conceal the temple from the vulgar gaze, but outside it was again an *enciente* of unbaked brick, effectually excluding and removing to a safe distance all the populace. Mariette Bey is of the opinion that all the imposing ceremonies of the old ritual had no witnesses except the privileged ones of the temple; and that no one except the king could enter the *adytum*.

It seems to us also that the King, who was high priest and King, lived in these palace-temples, the pylons of which served him for fortresses as well as residences. We find no ruins of palaces in Egypt, and it seems not reasonable that the king who had all the riches of the land at his command would have lived in a hut of mud.

From the summit of this pylon we had an extensive view of the Nile and the fields of ripening wheat. A glance into the squalid town was not so agreeable. I know it would be a severe test of any village if it were unroofed and one could behold its varied domestic life. We may from such a sight as this have some conception of the appearance of this world to the angels looking down. Our view was into filthy courts and roofless enclosures, in which were sorry women and unclad children, sitting in the dirt; where old people, emaciated and feeble, and men and women ill of some wasting disease, lay stretched upon the ground, uncared for, stifled by the heat and swarmed upon of flies.

The heated day lapsed into a delicious evening, a half-moon over head, the water glassy, the shores fringed with palms, the air soft. As we came to El Kab, where we stopped, a caravan was whistling on the opposite shore—a long, shrill whistle like that of a mocking-bird. If we had known, it was a warning to us that the placid appearances of the night were deceitful, and that violence was masked under this smiling aspect. The barometer indeed had been falling rapidly for two days. We were about to have our first experience of what may be called a simoon.

Towards nine o'clock, and suddenly, the wind began to blow from the north, like one of our gusts in summer, proceeding a thunderstorm. The boat took the alarm at once and endeavored to fly, swinging to the wind and tugging at her moorings. With great difficulty she was secured by strong cables fore and aft anchored in the sand, but she trembled and shook and rattled, and the wind whistled through the rigging as if we had been on the Atlantic—any boat loose upon the river that night must have gone to inevitable wreck. It became at once dark, and yet it was a ghastly darkness; the air was full of fine sand that obscured the sky, except directly overhead, where there were the ghost of a wan moon and some spectral stars. Looking upon the river, it was like a Connecticut fog—but a sand fog; and the river itself roared, and high waves ran against the current. When we stepped from the boat, eyes, nose, and mouth were instantly choked with sand, and it was almost impossible to stand. The wind increased, and rocked the boat like a storm at sea; for three hours it blew with much violence, and in fact did not spend itself in the whole night.

“The worser storm, God be merciful,” says Abd-el-Atti, “ever I saw in Egypt.”

When it somewhat abated, the dragoman recognized a divine beneficence in it; “It show that God ‘member

us.”

It is a beautiful belief of devout Moslems that personal afflictions and illnesses are tokens of a heavenly care. Often when our dragoman has been ill, he has congratulated himself that God was remembering him.

“Not so? A friend of me in Cairo was never in his life ill, never any pain, toothache, headache, nothing. Always well. He begin to have fear that something should happen, mebbe God forgot him. One day I meet him in the Mooskee very much pleased; all right now, he been broke him the arm; God ‘member him.”

During the gale we had a good specimen of Arab character. When it was at its height, and many things about the attacked vessel needed looking after, securing and tightening, most of the sailors rolled themselves up, drawing their heads into their burnouses, and went sound asleep. The after-sail was blown loose and flapping in the wind; our reïs sat composedly looking at it, never stirring from his haunches, and let the canvas whip to rags; finally a couple of men were aroused, and secured the shreds. The Nile crew is a marvel of helplessness in an emergency; and considering the dangers of the river to these top-heavy boats, it is a wonder that any accomplish the voyage in safety. There is no more discipline on board than in a district-school meeting at home. The boat might as well be run by ballot.

It was almost a relief to have an unpleasant day to talk about. The forenoon was like a mixed fall and spring day in New England, strong wind, flying clouds, but the air full of sand instead of snow; there was even a drop of rain, and we heard a peal or two of feeble thunder—evidently an article not readily manufactured in this country; but the afternoon settled back into the old pleasantness.

Of the objects of interest at Eilethyas I will mention only two, the famous grottoes, and a small temple of Amunoph III., not often visited. It stands between two and three miles from the river, in a desolate valley, down which the Bisharee Arabs used to come on marauding excursions. What freak placed it in this remote solitude? It contains only one room, a few paces square, and is, in fact, only a chapel, but it is full of capital pieces of sculptures of a good period of art. The architect will find here four pillars, which clearly suggest the Doric style. They are fourteen-sided, but one of the planes is broader than the others and has a raised tablet of sculptures which terminate above in a face, said to be that of Lucina, to whom the temple is dedicated, but resembling the cow-headed Isis. These pillars, with the sculptures on one side finished at the top with a head, may have suggested the Osiride pillars.

The grottoes are tombs in the sandstone mountain, of the time of the eighteenth dynasty, which began some thirty-five hundred years ago. Two of them have remarkable sculptures, the coloring of which is still fresh; and I wish to speak of them a little, because it is from them (and some of the same character) that Egyptologists have largely reconstructed for us the common life of the ancient Egyptians. Although the work is somewhat rude, it has a certain veracity of execution which is pleasing.

We assume this tomb to have been that of a man of wealth. This is the ante-chamber; the mummy was deposited in a pit let into a small excavation in the rear. On one wall are sculptured agricultural scenes: plowing, sowing, reaping wheat and pulling doora (the color indicates the kind of grain), hatching the latter, while oxen are treading out the wheat, and the song of the threshers encouraging the oxen is written in hieroglyphics above; the winnowing and storing of the grain; in a line under these, the various domestic animals of the deceased are brought forward to a scribe, who enumerates them and notes the numbers on a roll of papyrus. There are river-scenes:—grain is loaded into freight-boats; pleasure-dahabeëhs are on the stream, gaily painted, with one square sail amidship, rowers along the sides, and windows in the cabin; one has a horse and chariot on board, the reïs stands at the bow, the overseer, kurbash in hand, is threatening the crew, a sailor is falling overboard. Men are gathering grapes, and treading out the wine with their feet; others are catching fish and birds in nets, and dressing and curing them. At the end of this wall, offerings are made to Osiris. In one compartment a man is seated holding a boy on his lap.

On the opposite wall are two large figures, supposed to be the occupant of the tomb and his wife, seated on a *fauteuil*; men and women, in two separate lines, facing the large figures, are seated, one leg bent under them, each smelling a lotus flower. In the rear, men are killing and cutting up animals as if preparing for a feast. To the leg of the *fauteuil* is tied a monkey; and Mr. Wilkinson says that it was customary at entertainments for the hosts to have a “favorite monkey” tied to the leg of the chair. Notwithstanding the appearance of the monkey here in that position, I do not suppose that he would say that an ordinary entertainment is represented here. For, although there are preparations for a feast, there is a priest standing between the friends and the principal personages, making offerings, and the monkey may be present in his character of emblem of Thoth. It seems to be a funeral and not a festive representation. The pictures apparently tell the story of the life of the deceased and his occupations, and represent the mourning at his tomb. In other grottoes, where the married pair are seated as here, the arm of the woman on the shoulder of the man, and the “favorite monkey” tied to the chair, friends are present in the act of mourning, throwing dust on their heads, and accompanied by musicians; and the mummy is drawn on a sledge to the tomb, a priest standing on the front, and a person pouring oil on the ground that the runners may slip easily.

The setting sun strikes into these chambers, so carefully prepared for people of rank of whom not a pinch of dust now remains, and lights them up with a certain cheer and hope. We cannot make anything melancholy out of a tomb so high and with such a lovely prospect from its front door. The former occupants are unknown, but not more unknown than the peasants we see on the fields below, still at the tasks depicted in these sculptures. Thirty-five hundred years is not so very long ago! Slowly we pick our way down the hill and regain our floating home; and, bidding farewell forever to El Kab, drift down in the twilight. In the morning we are at Esneh.

In Esneh the sound of the grinding is never low. The town is full of primitive ox-power mills in which the wheat is ground, and there are always dahabeëhs staying here for the crew to bake their bread. Having already had one day of Esneh we are tired of it, for it is exactly like all other Egyptian towns of its size: we know all the possible combinations of mud-hovels, crooked lanes, stifling dust, nakedness, squalor. We are so accustomed to picking our way in the street amid women and children sprawling in the dirt, that the scene has lost its strangeness; it is even difficult to remember that in other countries women usually keep indoors and sit on chairs.

The town is not without liveliness. It is half Copt, and beggars demand *backsheesh* on the ground that they are Christians, and have a common interest with us. We wander through the bazaars where there is nothing to buy and into the market-place, always the most interesting study in an unknown city. The same wheat lies on the ground in heaps; the same roots and short stalks of the *doorra* are tied in bundles and sold for fuel, and cakes of dried manure for the like use; people are lying about in the sun in all picturesque attitudes, some curled up and some on their backs fast asleep; more are squatting before little heaps of corn or beans or some wilted "greens," or dried tobacco-leaves and pipe-bowls; children swarm and tumble about everywhere; donkeys and camels pick their way through the groups.

I spent half an hour in teaching a handsome young Copt how to pronounce English words in his Arabic-English primer. He was very eager to learn and very grateful for assistance. We had a large and admiring crowd about us, who laughed at every successful and still more at every unsuccessful attempt on the part of the pupil, and repeated the English words themselves when they could catch the sound,—an exceedingly good-natured lot of idlers. We found the people altogether pleasant, some in the ingrained habit of begging, quick to take a joke and easily excited. While I had my scholar, a *fantasia* of music on two tambourines was performed for the amusement of my comrade, which had also its ring of spectators watching the effect of the monotonous thumping, upon the grave *howadji*; he was seated upon the *mastabah* of a shop, with all formality, and enjoyed all the honors of the entertainment, as was proper, since he bore the entire expense alone,—about five cents.

The coffee-shops of Esneh are many, some respectable and others decidedly otherwise. The former are the least attractive, being merely long and dingy mud-apartments, in which the visitors usually sit on the floor and play at draughts. The coffee-houses near the river have porticoes and pleasant terraces in front, and look not unlike some picturesque Swiss or Italian wine-shops. The attraction there seems to be the *Ghawazees* or dancing-girls, of whom there is a large colony here, the colony consisting of a tribe. All the family act as procurers for the young women, who are usually married. Their dress is an extraordinary combination of stripes and colors, red and yellow being favorites, which harmonize well with their dark, often black, skins, and eyes heavily shaded with *kohl*. I suppose it must be admitted, in spite of their total want of any womanly charm of modesty, that they are the finest-looking women in Egypt, though many of them are ugly; they certainly are of a different type from the Egyptians, though not of a pure type; they boast that they have preserved themselves without admixture with other peoples or tribes from a very remote period; one thing is certain, their profession is as old as history and their antiquity may entitle them to be considered an aristocracy of vice. They say that their race is allied in origin to that of the people called gypsies, with whom many of their customs are common. The men are tinkers, blacksmiths, or musicians, and the women are the ruling element in the band; the husband is subject to the wife. But whatever their origin, it is admitted that their dance is the same as that with which the dancing-women amused the Pharaohs, the same that the Phoenicians carried to Gades and which Juvenal describes, and, Mr. Lane thinks, the same by which the daughter of Herodias danced off the head of John the Baptist. Modified here and there, it is the immemorial dance of the Orient.

Esneh has other attractions for the sailors of the Nile; there are the *mahsheshehs*, or shops where *hasheesh* is smoked; an attendant brings the "hubble-bubble" to the guests who are lolling on the *mastabah*; they inhale their portion, and then lie down in a stupor, which is at every experiment one remove nearer idiocy.

Still drifting, giving us an opportunity to be on shore all the morning. We visit the sugar establishment at *Mutâneh*, and walk along the high bank under the shade of the acacias for a couple of miles below it. Nothing could be lovelier in this sparkling morning—the silver-grey range of mountains across the river and the level smiling land on our left. This is one of the Viceroy's possessions, bought of one of his relations at a price fixed by his highness. There are ten thousand acres of arable land, of which some fifteen hundred is in sugar-cane, and the rest in grain. The whole is watered by a steam-pump, which sends a vast stream of water inland, giving life to the broad fields and the extensive groves, as well as to a village the minaret of which we can see. It is a noble estate. Near the factory are a palace and garden, somewhat in decay, as is usual in this country, but able to offer us roses and lemons.

The works are large, modern, with improved machinery for crushing and boiling, and apparently well managed; there is said to be one of the sixteen sugar-factories of the Khedive which pays expenses; perhaps this is the one. A great quantity of rum is distilled from the refuse. The vast field in the rear, enclosed by a whitewashed wall, presented a lively appearance, with camels bringing in the cane and unloading it and arranging it upon the endless trough for the crushers. In the factory, the workmen wear little clothing and are driven to their task; all the overseers march among them *kurbash* in hand; the sight of the black fellows treading about in the crystallized sugar, while putting it up in sacks, would decide a fastidious person to take her tea unsweetened.

The next morning we pass *Erment* without calling, satisfied to take the word of others that you may see there a portrait of Cleopatra; and by noon come to our old mooring-place at Luxor, and add ours to the painted *dalabeëhs* lounging in this idle and gay resort.

During the day we enjoyed only one novel sensation. We ate of the ripe fruit of the *dôm-palm*. It tastes and smells like stale gingerbread, made of sawdust instead of flour.

I do not know how long one could stay contentedly at Thebes; certainly a winter, if only to breathe the inspiring air, to bask in the sun, to gaze, never sated, upon plains and soft mountains which climate and association clothe with hues of beauty and romance, to yield for once to a leisure that is here rebuked by no person and by no urgency of affairs; perhaps for years, if one seriously attempted a study of antiquities.

The habit of leisure is at least two thousand years old here; at any rate, we fell into it without the least desire to resist its spell. This is one of the eddies of the world in which the modern hurry is unfelt. If it were not for the coughing steamboats and the occasional glimpse one has of a whisking file of Cook's tourists, Thebes would be entirely serene, and an admirable place of retirement.

It has a reputation, however, for a dubious sort of industry. All along the river from Geezeh to Assouan, whenever a spurious scarabæus or a bogus image turned up, we would hear, "Yes, make 'em in Luxor." As we

drew near to this great mart of antiquities, the specification became more personal—"Can't tell edzactly whether that make by Mr. Smith or by that Moslem in Goorneh, over the other side."

The person named is well known to all Nile voyagers as Antiquity Smith, and he has, though I cannot say that he enjoys, the reputation hinted at above. How much of it is due to the enmity of rival dealers in relics of the dead, I do not know; but it must be evident to anyone that the very clever forgeries of antiquities, which one sees, could only be produced by skillful and practiced workmen. We had some curiosity to see a man who has made the American name so familiar the length of the Nile, for Mr. Smith is a citizen of the United States. For seventeen years he has been a voluntary exile here, and most of the time the only foreigner resident in the place; long enough to give him a good title to the occupation of any grotto he may choose.

In appearance Mr. Smith is somewhat like a superannuated agent of the tract society, of the long, thin, shrewd, learned Yankee type. Few men have enjoyed his advantages for sharpening the wits. Born in Connecticut, reared in New Jersey, trained for seventeen years among the Arabs and antiquity-mongers of this region, the sharpest in the Orient, he ought to have not only the learning attached to the best-wrapped mummy, but to be able to read the hieroglyphics on the most inscrutable human face among the living.

Mr. Smith lives on the outskirts of the village, in a house, surrounded by a garden, which is a kind of museum of the property, not to say the bones, of the early Egyptians.

"You seem to be retired from society here Mr. Smith," we ventured to say.

"Yes, for eight months of the year, I see nobody, literally nobody. It is only during the winter that strangers come here."

"Isn't it lonesome?"

"A little, but you get used to it."

"What do you do during the hottest months?"

"As near nothing as possible."

"How hot is it?"

"Sometimes the thermometer goes to 120° Fahrenheit. It stays a long time at 100°. The worst of it is that the nights are almost as hot as the days."

"How do you exist?"

"I keep very quiet, don't write, don't read anything that requires the least thought. Seldom go out, never in the daytime. In the early morning I sit a while on the verandah, and about ten o'clock get into a big bath-tub, which I have on the ground-floor, and stay in it nearly all day, reading some very mild novel, and smoking the weakest tobacco. In the evening I find it rather cooler outside the house than in. A white man can't do anything here in the summer."

I did not say it to Mr. Smith, but I should scarcely like to live in a country where one is obliged to be in water half the year, like a pelican. We can have, however, from his experience some idea what this basin must have been in summer, when its area was a crowded city, upon which the sun, reverberated from the incandescent limestone hills, beat in unceasing fervor.

CHAPTER XXIX.—THE FUTURE OF THE MUMMY'S SOUL.

I SHOULD like to give you a conception, however faint, of the Tombs of the ancient Egyptians, for in them is to be found the innermost secret of the character, the belief, the immortal expectation of that accomplished and wise people. A barren description of these places of sepulchre would be of small service to you, for the key would be wanting, and you would be simply confused by a mass of details and measurements,

which convey no definite idea to a person who does not see them with his own eyes. I should not indeed be warranted in attempting to say anything about these great Tombs at Thebes, which are so completely described in many learned volumes, did I not have the hope that some readers, who have never had access to the works referred to will be glad to know something of that which most engaged the educated Egyptian mind.

No doubt the most obvious and immediate interest of the Tombs of old Egypt, is in the sculptures that depict so minutely the life of the people, represent all their occupations and associations, are, in fact, their domestic and social history written in stone. But it is not of this that I wish to speak here; I want to write a word upon the tombs and what they contain, in their relation to the future life.

A study of the tombs of the different epochs, chronologically pursued, would show, I think, pretty accurately, the growth of the Egyptian theology, its development, or rather its departure from the primitive revelation of one God, into the monstrosities of its final mixture of coarse polytheistic idolatry and the vaguest pantheism. These two extremes are represented by the beautiful places of sepulchre of the fourth and fifth dynasties at Geezeh and Memphis, in which all the sculptures relate to the life of the deceased and no deities are represented; and the tombs of the twenty-fourth dynasty at Thebes which are so largely covered with the gods and symbols of a religion become wholly fantastic. It was in the twenty-sixth dynasty (just before the conquest of Egypt by the Persians) that the Funeral Ritual received its final revision and additions—the sacred chart of the dead which had grown, paragraph by paragraph, and chapter by chapter, from its brief and simple form in the earliest times.

The Egyptians had a considerable, and also a rich literature, judging by the specimens of it preserved and by the value set upon it by classical writers; in which no department of writing was unrepresented. The works which would seem of most value to the Greeks were doubtless those on agriculture, astronomy, and geometry; the Egyptians wrote also on medicine, but the science was empirical then as it is now. They had an enormous bulk of historical literature, both in verse and prose, probably as semifabulous and voluminous as the thousand great volumes of Chinese history. They did not lack, either, in the department of *belles lettres*; there were poets, poor devils no doubt who were compelled to celebrate in grandiose strains achievements they did not believe; and essayists and letter-writers, graceful, philosophic, humorous. Nor was the field of fiction unoccupied; some of their lesser fables and romances have been preserved; they are however of a religious character, myths of doctrine, and it is safe to say different from our Sunday-School tales. The story of Cinderella was a religious myth. No one has yet been fortunate enough to find an Egyptian novel, and we may suppose that the *quid-nunes*, the critics of Thebes, were all the time calling upon the writers of that day to make an effort and produce The Great Egyptian Novel.

The most important part, however, of the literature of Egypt was the religious, and of that we have, in the Ritual or Book of the Dead, probably the most valuable portion. It will be necessary to refer to this more at length. A copy of the Funeral Ritual, or "The Book of the Manifestation to Light" as it was entitled, or some portion of it—probably according to the rank or wealth of the deceased, was deposited with every mummy. In this point of view, as this document was supposed to be of infinite service, a person's wealth would aid him in the next world; but there came a point in the peregrination of every soul where absolute democracy was reached, and every man stood for judgment on his character. There was a foreshadowing of this even in the ceremonies of the burial. When the mummy, after the lapse of the seventy days of mourning, was taken by the friends to the sacred lake of the nome (district), across which it must be transported in the boat of Charon before it could be deposited in the tomb, it was subjected to an ordeal. Forty-two judges were assembled on the shore of the lake, and if anyone accused the deceased, and could prove that he led an evil life, he was denied burial. Even kings were subjected to this trial, and those who had been wicked, in the judgment of their people, were refused the honors of sepulchre. Cases were probably rare where one would dare to accuse even a dead Pharaoh.

Debts would sometimes keep a man out of his tomb, both because he was wrong in being in debt, and because his tomb was mortgaged. For it was permitted a man to mortgage not only his family tomb but the mummy of his father,—a kind of mortmain security that could not run away, but a ghastly pledge to hold. A man's tomb, it would seem, was accounted his chief possession; as the one he was longest to use. It was prepared at an expense never squandered on his habitation in life.

You may see as many tombs as you like at Thebes, you may spend weeks underground roaming about in vast chambers or burrowing in zig-zag tunnels, until the upper-world shall seem to you only a passing show; but you will find little, here or elsewhere, after the Tombs of the Kings, to awaken your keenest interest; and the exploration of a very few of these will suffice to satisfy you. We visited these gigantic masoleums twice; it is not an easy trip to them, for they are situated in wild ravines or gorges that lie beyond the western mountains which circle the plain and ruins of Thebes. They can be reached by a footpath over the crest of the ridge behind Medeenet Haboo; the ancient and usual road to them is up a valley that opens from the north.

The first time we tried the footpath, riding over the blooming valley and leaving our donkeys at the foot of the ascent. I do not know how high this mountain backbone may be, but it is not a pleasant one to scale. The path winds, but it is steep; the sun blazes on it; every step is in pulverized limestone, that seems to have been calcined by the intense heat, and rises in irritating powder; the mountain-side is white, chalky, glaring, reflecting the solar rays with blinding brilliancy, and not a breath of air comes to temper the furnace temperature. On the summit however there was a delicious breeze, and we stood long looking over the great basin, upon the temples, the villages, the verdant areas of grain, the patches of desert, all harmonized by the wonderful light, and the purple eastern hills—a view unsurpassed. The descent to the other side was steeper than the ascent, and wound by precipices, on narrow ledges, round sharp turns, through jagged gorges, amid rocks stricken with the ashy hue of death, into the bottoms of intersecting ravines, a region scarred, blasted, scorched, a grey Gehenna, more desolate than imagination ever conceived.

Another day we rode to it up the valley from the river, some three miles. It is a winding, narrow valley, little more than the bed of a torrent; but as we advanced windings became shorter, the sides higher, fantastic precipices of limestone frowned on us, and there was evidence of a made road and of rocks cut away to broaden it. The scene is wilder, more freakishly savage, as we go on, and knowing that it is a funereal way

and that only, and that it leads to graves and to nothing else, our procession imperceptibly took on the sombre character of an expedition after death, relieved by I know not what that is droll in the impish forms of the crags, and the reaction of our natures against this unnecessary accumulation of grim desolation. The sun overhead was like a dish from which poured liquid heat, I could feel the waves, I thought I could see it running in streams down the crumbling ashy slopes; but it was not unendurable, for the air was pure and elastic and we had no sense of weariness; indeed, now and then a puff of desert air suddenly greeted us as we turned a corner. The slender strip of sky seen above the grey limestone was of astonishing depth and color—a purple, almost like a night sky, but of unimpeachable delicacy.

Up this strange road were borne in solemn state, as the author of Job may have seen, "*the kings and counsellors of the earth, which built desolate places for themselves*;" the journey was a fitting prelude to an entry into the depths of these frightful hills. It must have been an awful march, awful in its errand, awful in the desolation of the way: and, in the heat of summer, a mummy passing this way might have melted down in his *cercueil* before he could reach his cool retreat.

When we come to the end of the road, we see no tombs. There are paths winding in several directions, round projecting ridges and shoulders of powdered rock, but one might pass through here and not know he was in a cemetery. Above the rubbish here and there we see, when they are pointed out, holes in the rock. We climb one of these heaps, and behold the entrance, maybe half-filled up, of one of the great tombs. This entrance may have been laid open so as to disclose a portal cut in the face of the rock and a smoothed space in front. Originally the tomb was not only walled up and sealed, but rocks were tumbled down over it, so as to restore that spot in the hill to its natural appearance. The chief object of every tomb was to conceal the mummy from intrusion forever. All sorts of misleading devices were resorted to for this purpose.

Twenty-five tombs (of the nineteenth and twentieth dynasties) have been opened in this locality, but some of them belonged to princes and other high functionaries; in a valley west of this are tombs of the eighteenth dynasty, and in still another gorge are the tombs of the queens. These tombs all differ in plan, in extent, in decoration; they are alike in not having, as many others elsewhere have, an exterior chamber where friends could assemble to mourn; you enter all these tombs by passing through an insignificant opening, by an inclined passage, directly into the heart of the mountain, and there they open into various halls chambers, and grottoes. One of them, that of Sethi I., into whose furthestmost and most splendid halls Belzoni broke his way, extends horizontally four hundred and seventy feet into the hill, and descends to a depth of one hundred and eighty feet below the opening. The line of direction of the excavation is often changed, and the continuation skillfully masked, so that the explorer may be baffled. You come by several descents and passages, through grand chambers and halls, to a hall vast in size and magnificently decorated; here is a pit, here is the granite sarcophagus; here is the fitting resting-place of the royal mummy. But it never occupied this sarcophagus. Somewhere in this hall is a concealed passage. It was by breaking through a wall of solid masonry in such a room, smoothly stuccoed and elaborately painted with a continuation of the scenes on the side-walls, that Belzoni discovered the magnificent apartment beyond, and at last a chamber that was never finished, where one still sees the first draughts of the figures for sculpture on the wall, and gets an idea of the bold freedom of the old draughtsmen, in the long, graceful lines, made at a stroke by the Egyptian artists. Were these inner chambers so elaborately concealed, by walls and stucco and painting, *after* the royal mummy was somewhere hidden in them? Or was the mummy deposited in some obscure lateral pit, and was it the fancy of the king himself merely to make these splendid and highly decorated inner apartments private?

It is not uncommon to find rooms in the tombs unfinished. The excavation of the tomb was begun when the king began to reign; it was a work of many years and might happen to be unfinished at his death. He might himself become so enamoured of his enterprise and his ideas might expand in regard to his requirements, as those of builders always do, that death would find him still excavating and decorating. I can imagine that if one thought he were building a house for eternity—or cycles beyond human computation,—he would, up to his last moment, desire to add to it new beauties and conveniences. And he must have had a certain humorous satisfaction in his architectural tricks, for putting posterity on a false scent about his remains.

It would not be in human nature to leave undisturbed tombs containing so much treasure as was buried with a rich or royal mummy. The Greeks walked through all these sepulchres; they had already been rifled by the Persians; it is not unlikely that some of them had been ransacked by Egyptians, who could appreciate jewelry and fine-work in gold as much as we do that found by M. Mariette on the cold person of Queen Aah-hotep. This dainty lady might have begun to flatter herself, having escaped through so many ages of pillage, that danger was over, but she had not counted upon there coming an age of science. It is believed that she was the mother of Amosis, who expelled the Shepherds, and the wife of Kamés, who long ago went to his elements. After a repose here at Thebes, not far from the temple of Koorneh, of about thirty-five hundred years, Science one day cried,—“Aah-hotep of Drah-Abou-l-neggah! we want you for an Exposition of the industries of all nations at Paris; put on your best things and come forth.”

I suppose that there is no one living who would not like to be the first to break into an Egyptian tomb (and there are doubtless still some undisturbed in this valley), to look upon its glowing paintings before the air had impaired a tint, and to discover a sweet and sleeping princess, simply encrusted in gems, and cunning work in gold, of priceless value—in order that he might add something to our knowledge of ancient art!

But the government prohibits all excavations by private persons. You are permitted, indeed, to go to the common pits and carry off an armful of mummies, if you like; but there is no pleasure in the disturbance of this sort of mummy; he may perhaps be a late Roman; he has no history, no real antiquity, and probably not a scarabæus of any value about him.

When we pass out of the glare of the sun and descend the incline down which the mummy went, we feel as if we had begun his awful journey. On the walls are sculptured the ceremonies and liturgies of the dead, the grotesque monsters of the under-world, which will meet him and assail him on his pilgrimage, the deities friendly and unfriendly, the tremendous scenes of cycles of transmigration. Other sculptures there are; to be sure, and in some tombs these latter predominate, in which astronomy, agriculture, and domestic life are depicted. In one chamber are exhibited trades, in another the kitchen, in another arms, in another the gay boats and navigation of the Nile, in another all the vanities of elegant house-furniture. But all these only

emphasize the fact that we are passing into another world, and one of the grimmest realities. We come at length, whatever other wonders or beauties may detain us, to the king, the royal mummy, in the presence of the deities, standing before Osiris, Athor, Phtah, Isis, Horus, Anubis, and Nofre-Atmoo.

Somewhere in this vast and dark mausoleum the mummy has been deposited; he has with him the roll of the Funeral Ritual; the sacred scarabæus is on his breast; in one chamber bread and wine are set out; his bearers withdraw, the tomb is closed, sealed, all trace of its entrance effaced. The mummy begins his pilgrimage.

The Ritual * describes all the series of pilgrimages of the soul in the lower-world; it contains the hymns, prayers, and formula for all funeral ceremonies and the worship of the dead; it embodies the philosophy and religion of Egypt; the basis of it is the immortality of the soul, that is of the souls of the justified, but a clear notion of the soul's personality apart from the body it does not give.

* *Lenormant's Epitome.*

The book opens with a grand dialogue, at the moment of death, in which the deceased, invoking the god of the lower-world, asks entrance to his domain; a chorus of glorified souls interposes for him; the priest implores the divine clemency; Osiris responds, granting permission, and the soul enters Kar-Neter, the land of the dead; and then renews his invocations. Upon his entry he is dazzled by the splendor of the sun (which is Osiris) in this subterranean region, and sings to it a magnificent hymn.

The second part traces the journeys of the soul. Without knowledge, he would fail, and finally be rejected at the tribunal.

Knowledge is in Egyptian *sbo*, that is, "food in plenty," knowledge and food are identified in the Ritual; "the knowledge of religious truths is the mysterious nourishment that the soul must carry with it to sustain it in its journeys and trials." This necessary preliminary knowledge is found in the statement of the Egyptian faith in the Ritual; other information is given him from time to time on his journey. But although his body is wrapped up, and his soul instructed, he cannot move, he has not the use of his limbs; and he prays to be restored to his faculties that he may be able to walk, speak, eat, fight; the prayer granted, he holds his scarabæus over his head, as a passport, and enters Hades.

His way is at once beset by formidable obstacles; monsters, servants of Typhon, assail him; slimy reptiles, crocodiles, serpents seek to devour him; he begins a series of desperate combats, in which the hero and his enemies hurl long and insulting speeches at each other. Out of these combats he comes victorious, and sings songs of triumph; and after rest and refreshment from the Tree of Life, given him by the goddess Nu, he begins a dialogue with the personification of the divine Light, who instructs him, explaining the sublime mysteries of nature. Guided by this new Light, he advances, and enters into a series of transformations, identifying himself with the noblest divine symbols: he becomes a hawk, an angel, a lotus, the god Ptah, a heron, etc.

Up to this time the deceased has been only a shade, an *eidolon*, the simulacrum of the appearance of his body. He now takes his body, which is needed for the rest of the journey; it was necessary therefore that it should be perfectly preserved by the embalming process. He goes on to new trials and dangers, to new knowledge, to severer examinations of his competence: he shuns wiles and delusions; he sails down a subterranean river and comes to the Elysian Fields, in fact, to a reproduction of Egypt with its camels and its industries, when the soul engages in agriculture, sowing and reaping divine fruit for the bread of knowledge which he needs now more than ever.

At length he comes to the last and severest trial, to the judgment-hall where Osiris awaits him, seated on his throne, accompanied by the forty-two assessors of the dead. Here his knowledge is put to the test; here he must give an account of his whole life. He goes on to justify himself by declaring at first, negatively, the crimes that he has not committed. "I have not blasphemed," he says in the Ritual; "I have not stolen; I have not smitten men privily; I have not treated any person with cruelty; I have not stirred up trouble; I have not been idle; I have not been intoxicated; I have not made unjust commandments; I have shown no improper curiosity; I have not allowed my mouth to tell secrets; I have not wounded anyone; I have not put anyone in fear; I have not slandered anyone; I have not let envy gnaw my heart; I have spoken evil neither of the king nor of my father; I have not falsely accused anyone; I have not withheld milk from the mouths of sucklings; I have not practiced any shameful crime; I have not calumniated a slave to his master."

The deceased then speaks of the good he has done in his lifetime; and the positive declarations rise to a higher morality than the negative; among them is this wonderful sentence:—"I have given food to the hungry, drink to the thirsty, and clothes to the naked."

The heart of the deceased, who is now called Osiris, is then weighed in the balance against "truth," and (if he is just) is not found wanting; the forty-two assessors decide that his knowledge is sufficient, the god Osiris gives sentence of justification, Thoth (the Hermes of the Greeks, the conductor of souls, the scribe of Osiris, and also the personification of literature or letters) records it, and the soul enters into bliss.

In a chamber at Dayr el Medeeneh you may see this judgment-scene. Osiris is seated on his throne waiting the introduction of souls into Amenti; the child Harpocrates, with his finger on his lip, sits upon his crook; behind are the forty-two assessors. The deceased humbly approaches; Thoth presents his good deeds written upon papyrus; they are weighed in the balance against an ostrich-feather, the symbol of truth; on the beam sits a monkey, the emblem of Thoth.

The same conceit of weighing the soul in judgment-scenes was common to the mediaeval church; it is very quaintly represented in a fresco in the porch of the church of St. Lawrence at Rome.

Sometimes the balance tipped the wrong way; in the tomb of Rameses VI. is sculptured a wicked soul, unjustified, retiring from the presence of Osiris in the ignoble form of a pig.

The justified soul retired into bliss. What was this bliss? The third part of the Ritual is obscure. The deceased is Osiris, identified with the sun, traversing with him, and as him, the various houses of heaven; afterwards he seems to pass into an identification with all the deities of the pantheon. This is a poetical flight. The justified soul was absorbed into the intelligence from which it emanated. For the wicked, there was

annihilation; they were destroyed, decapitated by the evil powers. In these tombs you will see pictures of beheadings at the block, of dismembered bodies.

It would seem that in some cases the souls of the wicked returned to the earth and entered unclean animals. We always had a suspicion, a mere idle fancy, that the chameleon, which we had on our boat, which had a knowing and wicked eye, had been somebody.

The visitor's first astonishment here is to find such vast and rich tombs, underground temples in fact, in a region so unutterably desolate, remote from men, to be reached only by a painful pilgrimage. He is bewildered by the variety and beauty of the decorations, the grace and freedom of art, the minute finish of birds and flowers, the immortal loveliness of faces here and there; and he cannot understand that all this was not made for exhibition, that it was never intended to be seen, that it was not seen except by the workmen and the funeral attendants, and that it was then sealed away from human eyes forever. Think of the years of labor expended, the treasure lavished in all this gorgeous creation, which was not for men to see! Has human nature changed? Expensive monuments and mausoleums are built now as they have been in all the Christian era; but they are never concealed from the public view. I cannot account for these extraordinary excavations, not even for one at the Assaseef, which extends over an acre and a quarter of ground, upon an ostentation of wealth, for they were all closed from inspection, and the very entrances masked. The builders must have believed in the mysteries of the under-world, or they would not have expended so much in enduring representations of them; they must have believed also that the soul had need of such a royal abode. Did they have the thought that money lavished in this pious labor would benefit the soul, as much as now-a-days legacies bequeathed to missions and charities?

On our second visit to these tombs we noticed many details that had escaped us before. I found sculptured a cross of equal arms, three or four inches long, among other sacred symbols. We were struck by the peculiar whiteness of the light, the sort of chalkiness of the sunshine as we saw it falling across the entrance of a tomb from which we were coming, and by the lightness of the shadows. We illuminated some of the interiors, lighting up the vast sculptured and painted halls and corniced chambers, to get the *tout ensemble* of colors and figures. The colors came out with startling vividness on the stuccoed, white walls, and it needed no imagination, amidst these awful and *bizarre* images and fantastic scenes, to feel that we were in a real underworld. And all this was created for darkness!

But these chambers could neither have been cut nor decorated without light, and bright light. The effect of the rich ceiling and sides could not have been obtained without strong light. I believe that these rooms, as well as the dark and decorated chambers in the temples, must have been brilliantly illuminated on occasion; the one at the imposing funeral ceremonies, the other at the temple services. What light was used? The sculptures give us no information. But the light must have been not only a very brilliant but a pure flame, for these colors were fresh and unsullied when the tombs were opened. However these chambers were lighted, some illuminating substance was used that produced no smoke, nor formed any gas that could soil the whiteness of the painted lotus.

In one of these brilliant apartments, which is finished with a carved and painted cornice, and would serve for a drawing-room with the addition of some furniture, we almost had a feeling of comfort and domesticity—as long as the illumination lasted. When that flashed but, and we were left in that thick darkness of the grave which one can feel gathering itself in folds about him, and which the twinkling candles in our hands punctured but did not scatter, and we groped our way, able to see only a step ahead and to examine only a yard square of wall at a time, there was something terrible in this subterranean seclusion. And yet, this tomb was intended as the place of abode of the deceased owner during the long ages before soul and body, united, should be received into bliss; here were buried with him no doubt some portions of his property, at least jewels and personal ornaments of value; here were pictured his possessions and his occupations while on earth; here were his gods, visibly cut in stone; here were spread out, in various symbols and condensed writing, the precepts of profound wisdom and the liturgies of the book of the dead. If at any time he could have awakened (as no doubt he supposed he should), and got rid of his heavy granite sarcophagus (if his body ever lay in it) and removed the myrrh and pitch from his person, he would have found himself in a most spacious and gay mansion, of which the only needs were food, light, and air.

While remembering, however, the grotesque conception the Egyptians had of the next world, it seems to me that the decorators of these tombs often let their imaginations run riot, and that not every fantastic device has a deep signification. Take the elongated figures on the ceiling, stretching fifty feet across, the legs bent down one side and the head the other; or such a picture as this:—a sacred boat having a crocodile on the deck, on the back of the crocodile a human head, out of the head a long stick protruding which bears on its end the crown of lower Egypt; or this conceit:—a small boat ascending a cataract, bearing a huge beetle (*scarabæus*) having a ram's head, and sitting on each side of it a bird with a human head. I think much of this work is pure fancy.

In these tombs the snake plays a great part, the snake purely, coiled or extended, carried in processions his length borne on the shoulders of scores of priests, crawling along the walls in hideous convolutions; and, again, the snake with two, three, and four heads, with two and six feet; the snake with wings; the snake coiled about the statues of the gods, about the images of the mummies, and in short everywhere. The snake is the most conspicuous figure.

The monkey is also numerous, and always pleasing; I think he is the comic element of hell, though perhaps gravely meant. He squats about the lower-world of the heathen, and gives it an almost cheerful and *debonnair* aspect. It is certainly refreshing to meet his self-possessed, grave, and yet friendly face amid all the serpents, crocodiles, hybrids, and chimerical monsters of the Egyptian under-world.

Conspicuous in ceremonies represented in the tombs and in the temples is the sacred boat or *ark*, reminding one always, in its form and use and the sacredness attached to it, of the Jewish Ark of the Covenant. The arks contain the sacred emblems, and sometimes the beetle of the sun, overshadowed by the wings of the goddess of Thmei or Truth, which suggest the cherubim of the Jews. Mr. Wilkinson notices the fact, also, that Thmei, the name of the goddess who was worshipped under the double character of Truth and Justice, is the origin of the Hebrew *Thummim*—a word implying "truth"; this Thummim (a symbol perfectly

comprehensible now that we know its origin) which was worn only by the high priest of the Jews, was, like the Egyptian figure, which the archjudge put on when he sat at the trial of a case, studded with precious stones of various colors.

Before we left the valley we entered the tomb of Menephtah (or Merenphtah), and I broke off a bit of crumbling limestone from the inner cave as a memento of the Pharaoh of the Exodus. I used to suppose that this Pharaoh was drowned in the Red Sea; but he could not have been if he was buried here; and here certainly is his tomb. It is the opinion of scholars that Menephtah long survived the Exodus. There is nothing to conflict with this in the Biblical description of the disaster to the Egyptians. It says that all Pharaoh's host was drowned, but it does not say that the king was drowned; if he had been, so important a fact, it is likely, would have been emphasized. Joseph came into Egypt during the reign of one of the usurping Shepherd Kings, Apepi probably. Their seat of empire was at Tanis, where their tombs have been discovered. The Israelites were settled in that part of the Delta. After some generations the Shepherds were expelled, and the ancient Egyptian race of kings was reinstated in the dominion of all Egypt. This is probably the meaning of the passage, "now there arose up a new king over Egypt, which knew not Joseph." The narrative of the Exodus seems to require that the Pharaoh should be at Memphis. The kings of the nineteenth dynasty, to which Menephtah belonged, had the seat of their empire at Thebes; he alone of that dynasty established his court at Memphis. But it was natural that he should build his tomb at Thebes.

We went again and again to the temples on the west side and to the tombs there. I never wearied of the fresh morning ride across the green plain, saluting the battered Colossi as we passed under them, and galloping (don't, please, remember that we were mounted on donkeys) out upon the desert. Not all the crowd of loping Arabs with glittering eyes and lying tongues, who attended us, offering their dead merchandise, could put me out of humor. Besides, there were always slender, pretty, and cheerful little girls running beside us with their water-koollehs. And may I never forget the baby Charon on the vile ferry-boat that sets us over one of the narrow streams. He is the cunningest specimen of a boy in Africa. His small brothers pole the boat, but he is steersman, and stands aft pushing about the tiller, which is level with his head. He is a mere baby as to stature, and is in fact only four years old, but he is a perfect beauty, even to the ivory teeth which his engaging smile discloses. And such self-possession and self-respect. He is a man of business, and minds his helm, "the dear little scrap," say the ladies. When we give him some evidently unexpected coppers, his eyes and whole face beam with pleasure, and in the sweetest voice he says, *Ket'ther khdyrak, keteer* ("Thank you very much indeed").

I yield myself to, but cannot account for the fascination of this vast field of desolation, this waste of crumbled limestone, gouged into ravines and hills, honeycombed with tombs and mummy-pits, strewn with the bones of ancient temples, brightened by the glow of sunshine on elegant colonnades and sculptured walls, saddened by the mud-hovels of the fellaheen. The dust is abundant, and the glare of the sun reflected from the high, white precipices behind is something unendurable.

Of the tombs of the Assaseef, we went far into none, except that of the priest Petamunoph, the one which occupies, with its many chambers and passages, an acre and a quarter of underground. It was beautifully carved and painted throughout, but the inscriptions are mostly illegible now, and so fouled by bats as to be uninteresting. Our guide said truly, "bats not too much good for 'scriptions." In truth, the place smells horribly of bats,—an odor that will come back to you with sickening freshness days after,—and a strong stomach is required for the exploration.

Even the chambers of some of the temples here were used in later times as receptacles for mummies. The novel and most interesting temple of Dayr el Bahree did not escape this indignity. It was built by Amun-noo-het, or Hatasoo as we more familiarly call her, and like everything else that this spirited woman did it bears the stamp of originality and genius. The structure rises up the side of the mountain in terraces, temple above temple, and is of a most graceful architecture; its varied and brilliant sculptures must be referred to a good period of art. Walls that have recently been laid bare shine with extraordinary vividness of color. The last chambers in the rock are entered by arched doorways, but the arch is in appearance, not in principle. Its structure is peculiar. Square stones were laid up on each side, the one above lapping over the one beneath until the last two met at the top; the interior corners were then cut away, leaving a perfect round arch; but there is no lateral support or keystone. In these interior rooms were depths on depths of mummy-wrappings and bones, and a sickening odor of dissolution.

There are no tombs better known than those of Sheykh el Koorneh, for it is in them that so much was discovered revealing the private life, the trades, the varied pursuits of the Egyptians. We entered those called the most interesting, but they are so smoked, and the paintings are so defaced, that we had small satisfaction in them. Some of them are full of mummy-cloths and skeletons, and smell of mortality, to that degree that it needs all the wind of the desert to take the scent of death out of our nostrils.

All this plain and its mounds and hills are dug over and pawed out for remnants of the dead, scarabæi, beads, images, trinkets sacred and profane. It is the custom of some travelers to descend into the horrible and common mummy-pits, treading about among the dead, and bring up in their arms the body of some man, or some woman, who may have been, for aught the traveler knows, not a respectable person. I confess to an uncontrollable aversion to all of them, however well preserved they are. The present generation here (I was daily beset by an Arab who wanted always to sell mean arm or a foot, from whose eager, glittering eyes I seemed to see a ghoulish looking out,) lives by plundering the dead. A singular comment upon our age and upon the futile hope of security for the body after death, even in the strongest house of rock.

Old Petamunoph, with whom be peace, builded better than he knew; he excavated a vast hotel for bats. Perhaps he changed into bats himself in the course of his transmigrations, and in this state is only able to see dimly, as bats do, and to comprehend only partially, as an old Egyptian might, our modern civilization.

CHAPTER XXX.—FAREWELL TO THEBES.

SOcial life at Thebes, in the season, is subject to peculiar conditions. For one thing, you suspect a commercial element in it. Back of all the politeness of native consuls and resident effendis, you see spread out a collection of antiques, veritable belongings of the ancient Egyptians, the furniture of their tombs, the ornaments they wore when they began their last and most solemn journey, the very scarabæus, cut on the back in the likeness of the mysterious eye of Osiris, which the mummy held over his head when he entered the ominously silent land of Kar-Neter, the intaglio seal which he always used for his signature, the “charms” that he wore at his guard-chain, the necklaces of his wife, the rings and bracelets of his daughter.

These are very precious things, but you may have them—such is the softening influence of friendship—for a trifle of coined gold, a mere trifle, considering their value and the impossibility of replacing them. What are two, five, even ten pounds for a genuine bronze figure of Isis, for a sacred cat, for a bit of stone, wrought four thousand years ago by an artist into the likeness of the immortal beetle, carved exquisitely with the name of the Pharaoh of that epoch, a bit of stone that some Egyptian wore at his chain during his life and which was laid upon his breast when he was wrapped up for eternity. Here in Thebes, where the most important personage is the mummy and the Egyptian past is the only real and marketable article, there comes to be an extraordinary value attached to these trinkets of mortality. But when the traveler gets away, out of this charmed circle of enthusiasm for antiquity, away from this fictitious market in sentiment, among the cold people of the world who know not Joseph, and only half believe in Potiphar, and think the little blue images of Osiris ugly, and the me my-beads trash, and who never heard of the scarabæus, when, I say, he comes with his load of *antiques* into this air of scepticism, he finds that he has invested in a property no longer generally current, objects of *vertu* for which Egypt is actually the best market. And if he finds, as he may, that a good part of his purchases are only counterfeits of the antique, manufactured and doctored to give them an appearance of age, he experiences a sinking of the heart mingled with a lively admiration of the adroitness of the smooth and courtly Arabs of Luxor.

Social life is so peculiar in the absence of the sex that is thought to add a charm to it in other parts of the world. We receive visits or ceremony or of friendship from the chief citizens of the village, we entertain them at dinner, but they are never accompanied by their wives or daughters; we call at their houses and are *feted* in turn, but the light of the harem never appears. Dahabeëhs of all nations are arriving and departing, there are always several moored before the town, some of them are certain to have lovely passengers, and the polite Arabs are not insensible to the charm of their society: there is much visiting constantly on the boats; but when it is returned at the houses of the natives, at an evening entertainment, the only female society offered is that of the dancing-girls.

Of course, when there is so much lingual difficulty in intercourse, the demonstrations of civility must be mainly overt, and in fact they are mostly illuminations and “fantasies.” Almost every boat once in the course of its stay, and usually upon some natal day or in honor of some arrival, will be beautifully illuminated and display fireworks. No sight is prettier than a dahabeëh strung along its decks and along its masts and yards with many colored lanterns. The people of Luxor respond with illuminations in the houses, to which they add barbarous music and the kicking and posturing of the Ghawazees. In this consists the gaiety of the Luxor season.

Perhaps we reached the high-water mark of this gaiety in an entertainment given us by Ali Moorad Effendi, the American consular agent, in return for a dinner on the dahabeëh. Ali is of good Bedawee blood; and has relations at Karnak enough to fill an opera-house, we esteemed him one of the most trustworthy Arabs in the country, and he takes great pains and pleasure in performing all the duties of his post, which are principally civilities to American travelers. The entertainment consisted of a dinner and a ‘fantasia.’ It was understood that it was to be a dinner in Arab style.

We go at sunset when all the broad surface of the Nile is like an opal in the reflected light. The consul’s house is near the bank of the river, and is built against the hill so that we climb two or three narrow stairways before we get to the top of it. The landing-places of the stairways are terraces overlooking the river; and the word terrace has such a grand air that it is impossible to describe this house without making it appear better than it is. The consul comes down to the bank to receive us; we scramble up its crumbling face. We ascend a stairway to the long consular reception-room, where we sit for half an hour, during which coffee is served and we get the last of the glowing sunset from the windows.

We are then taken across a little terrace, up another flight of steps, to the main house, which is seen to consist of a broad hall with small rooms on each side. No other members of the consul’s family appear, and, regarding Arab etiquette, we make no inquiry for them. We could not commit a greater breach of good-

breeding than to ask after the health of any members of the harem. Into one of the little rooms we are shown for dinner. It is very small, only large enough to contain a divan and a round table capable of seating eight persons. The only ornaments of the room are an American flag, and a hand-mirror hung too high for anyone to see herself in it. The round table is of metal, hammered out and turned at the edge,—a little barrier that prevents anything rolling off. At each place are a napkin and a piece of bread—no plate or knives or forks.

Deference is so far paid to European prejudice that we sit in chairs, but I confess that when I am to eat with my fingers I prefer to sit on the ground—the position in a chair is too formal for what is to follow. When we are seated, a servant brings water in a basin and ewer, and a towel, and we wash our right hands—the left hand is not to be used. Soup is first served. The dish is placed in the middle of the table, and we are given spoons with which each one dips in, and eats rapidly or slowly according to habit; but there is necessarily some deliberation about it, for we cannot all dip at once. The soup is excellent, and we praise it, to the great delight of our host, who shows his handsome teeth and says *tyeb* all that we have hitherto said was *tyeb*, we now add *kateér*. More smiles; and claret is brought in—another concession to foreign tastes.

After the soup, we rely upon our fingers, under the instructions of Ali and an Arab guest. The dinner consists of many courses, each article served separately, but sometimes placed upon the table in three or four dishes for the convenience of the convive in reaching it. There are meats and vegetables of all sorts procurable, fish, beef, mutton, veal, chickens, turkeys, quails and other small birds, pease, beans, salad, and some compositions which defied such analysis as one could make with his thumb and finger. Our host prided himself upon having a Turkish artist in the kitchen, and the cooking was really good and toothsome, even to the pastry and sweetmeats; *we* did not accuse him of making the champagne.

There is no difficulty in getting at the meats; we tear off strips, mutually assisting each other in pulling them asunder; but there is more trouble about such dishes as pease and a *purée* of something. One hesitates to make a scoop of his four fingers, and plunge in; and then it is disappointing to an unskilled person to see how few peas he can convey to his mouth at a time. I sequester and keep by me the breast-bone of a chicken, which makes an excellent scoop for small vegetables and gravies, and I am doing very well with it, until there is a universal protest against the unfairness of the device.

Our host praises everything himself in the utmost simplicity, and urges us to partake of each dish; he is continually picking out nice bits from the dish and conveying them to the mouth of his nearest guest. My friend who sits next to Ali, ought to be grateful for this delicate attention, but I fear he is not. The fact is that Ali, by some accident, in fishing, hunting, or war, has lost the tip of the index finger of his right hand, the very hand that conveys the delicacies to my friend's mouth. And he told me afterwards, that he felt each time he was fed that he had swallowed that piece of the consul's finger.

During the feast there is music by performers in the adjoining hall, music in minor, barbaric strains insisted on with the monotonous *nonchalance* of the Orient, and calculated, I should say, to excite a person to ferocity, and to make feeding with his fingers a vent to his aroused and savage passions. At the end of the courses water is brought for us to lave our hands, and coffee and chibooks are served.

"Dinner very nice, very fine," says Ali, speaking the common thought which most hosts are too conventional to utter.

"A splendid dinner, O! consul; I have never seen such an one in America."

The Ghawazees have meantime arrived; we hear a burst of singing occasionally with the wail of the instruments. The dancing is to be in the narrow hall of the house, which is lighted as well as a room can be with so many dusky faces in it. At the far end are seated on the floor the musicians, with two stringed instruments, a tambourine and a darabooka. That which answers for a violin has two strings of horsehair, stretched over a cocoon-shell; the bowstring, which is tightened by the hand as it is drawn, is of horsehair. The music is certainly exciting, harassing, plaintive, complaining; the very monotony of it would drive one wild in time. Behind the musicians is a dark cloud of turbaned servants and various privileged retainers of the house. In front of the musicians sit the Ghawazees, six girls, and an old woman with parchment skin and twinkling eyes, who has been a famous dancer in her day. They are waiting a little wearily, and from time to time one of them throws out the note or two of a song, as if the music were beginning to work in her veins. The spectators are grouped at the entrance of the hall and seated on chairs down each side, leaving but a narrow space for the dancers between; and there are dusky faces peering in at the door.

Before the dance begins we have an opportunity to see what these Ghawazees are like, a race which prides itself upon preserving a pure blood for thousands of years, and upon an ancestry that has always followed the most disreputable profession. These girls are aged say from sixteen to twenty; one appears much older and looks exactly like an Indian squaw, but, strange to say, her profile is also exactly that of Rameses as we see it in the sculptures. The leading dancer is dressed in a flaring gown of red and figured silk, a costly Syrian dress; she is fat, rather comely, but coarsely uninteresting, although she is said to have on more jewelry than any other dancing-girl in Egypt; her abundant black hair is worn long and in strands thickly hung with gold coins; her breast is covered with necklaces of gold-work and coins; and a mass of heavy twinkling silver ornaments hangs about her waist. A third dancer is in an almost equally striking gown of yellow, and wears also much coin; she is a Pharaonic beauty, with a soft skin and the real Oriental eye and profile. The dresses of all are plainly cut, and straight-waisted, like an ordinary calico gown of a milkmaid. They wear no shawls or any other Oriental wrappings, and dance in their stocking-feet.

At a turn in the music, the girl in red and the girl in yellow stand up; for an instant they raise their castanets till the time of the music is caught, and then start forward, with less of languor and a more skipping movement than we expected; and they are not ungraceful as they come rapidly down the hall, throwing the arms aloft and the feet forward, to the rattle of the castanets. These latter are small convex pieces of brass, held between the thumb and finger, which have a click like the rattle of the snake. In mid-advance they stop, face each other, *chassée*, retire, and again come further forward, stop, and the peculiar portion of the dance begins, which is not dancing at all, but a quivering, undulating motion given to the body, as the girl stands with feet planted wide apart. The feet are still, the head scarcely stirs, except with an almost imperceptible snakelike movement, but the muscles of the body to the hips quiver in time to the monotonous music, in

muscular thrills, in waves running down, and at intervals extending below the waist. Sometimes one side of the body quivers while the other is perfectly still, and then the whole frame, for a second, shares in the ague. It is certainly an astonishing muscular performance, but you could not call it either graceful or pleasing. Some people see in the intention of the dance a deep symbolic meaning, something about the Old Serpent of the Nile, with its gliding, quivering movement and its fatal fascination. Others see in it only the common old Snake that was in Eden. I suppose in fact that it is the old and universal Oriental dance, the chief attraction of which never was its modesty.

After standing for a brief space, with the body throbbing and quivering, the castanets all the time held above the head in sympathetic throbs, the dancers start forward, face each other, pass, pirouette, and take some dancing steps, retire, advance and repeat the earthquake performance. This is kept up a long time, and with wonderful endurance, without change of figure; but sometimes the movements are more rapid, when the music hastens, and more passion is shown. But five minutes of it is as good as an hour. Evidently the dance is nothing except with a master, with an actress who shall abandon herself to the tide of feeling which the music suggests and throw herself into the full passion of it; who knows how to tell a story by pantomime, and to depict the woes of love and despair. All this needs grace, beauty, and genius. Few dancing-girls have either. An old resident of Luxor complains that the dancing is not at all what it was twenty years ago, that the old fire and art seem to be lost.

"The old hag, sitting there on the floor, was asked to exhibit the ancient style; she consented, and danced marvelously for a time, but the performance became in the end too shameful to be witnessed."

I fancy that if the dance has gained anything in propriety, which is hard to believe, it has lost in spirit. It might be passionate, dramatic, tragic. But it needs genius to make it anything more than a suggestive and repulsive vulgarity.

During the intervals, the girls sing to the music; the singing is very wild and barbaric. The song is in praise of the Night, a love-song consisting of repeated epithets:—

"O the Night! nothing is so lovely as the Night!
O my heart! O my soul! O my liver!
My love he passed my door, and saw me not;
O the night! How lovely is the Night!"

The strain is minor, and there is a wail in the voices which stridently chant to the twanging strings. Is it only the echo of ages of sin in those despairing voices? How melancholy it all becomes! The girl in yellow, she of the oblong eyes, straight nose and high type of Oriental beauty, dances down alone; she is slender, she has the charm of grace, her eyes never wander to the spectators. Is there in her soul any faint contempt for herself or for the part she plays? Or is the historic consciousness of the antiquity of both her profession and her sin strong enough to throw yet the lights of illusion over such a performance? Evidently the fat girl in red is a prey to no such misgiving, as she comes bouncing down the line, and flings herself into her ague fit.

"Look out, the hippopotamus!" cries Abd-el-Atti, "I 'fraid she kick me."

While the dance goes on, pipes, coffee, and brandy are frequently passed; the dancers swallow the brandy readily. The house is illuminated, and the entertainment ends with a few rockets from the terrace. This is a full-blown "fantasia."

As the night is still young and the moon is full, we decide to efface, as much as may be, the vulgarities of modern Egypt, by a vision of the ancient, and taking donkeys we ride to Karnak.

For myself I prefer day to night, and abounding sunshine to the most generous moonlight; there is always some disappointment in the night effect in ruins, under the most favorable conditions. But I have great deference to that poetic yearning for half-light, which leads one to grope about in the heavy night-shadows of a stately temple; there is no bird more worthy of respect than the round-eyed attendant of Pallas-Athene.

And it cannot be denied that there is something mysterious and almost ghostly in our silent night ride. For once, our attendants fall into the spirit of the adventure, keep silent, and are only shades at our side. Not a word or a blow is heard as we emerge from the dark lanes of Luxor and come out into the yellow light of the plain; the light seems strong and yet the plain is spectral, small objects become gigantic, and although the valley is flooded in radiance, the end of our small procession is lost in dimness. Nothing is real, all things take fantastic forms, and all proportions are changed. One moves as in a sort of spell, and it is this unreality which becomes painful. The old Egyptians had need of little imagination to conjure up the phantasmagoria of the under-world; it is this without the sun.

So far as we can see it, the great mass of stone is impressive as we approach—I suspect because we know how vast and solid it is; and the pylons never seemed so gigantic before. We do our best to get into a proper frame of mind, by wandering apart, and losing ourselves in the heavy shadows. And for moments we succeed. It would have been the shame of our lives not to have seen Karnak by moonlight. The Great Hall, with its enormous columns planted close together, it is more difficult to see by night than by day, but such glimpses as we have of it, the silver light slanting through the stone forest and the heavy shadows, are profoundly impressive. I climb upon a tottering pylon where I can see over the indistinct field and chaos of stone, and look down into the weird and half-illuminated Hall of Columns. In this isolated situation I am beginning to fall into the classical meditation of Marius at Carthage, when another party of visitors arrives, and their donkeys, meeting our donkeys in the center of the Great Hall, begin (it is their donkeys that begin) such a braying as never was heard before; the challenge is promptly responded to, and a duet ensues and is continued and runs into a chorus, so hideous, so unsanctified, so wretchedly attuned, and out of harmony with history, romance, and religion, that sentiment takes wings with silence and flies from the spot.

We can pick up again only some scattered fragments of emotion by wandering alone in the remotest nooks. But we can go nowhere that an Arab, silent and gowned, does not glide from behind a pillar or step out of the shade, staff in hand, and stealthily accompany us. Even the donkey-boys have cultivated their sensibilities by

association with other nocturnal pilgrims, and encourage our gush of feeling by remarking in a low voice, "Karnak very good." One of them, who had apparently attended only the most refined and appreciative, keeps repeating at each point of view, "Exquisite!"

As I am lingering behind the company a shadow glides up to me in the gloom of the great columns, with "good evening"; and, when I reply, it draws nearer, and, in confidential tones, whispers, as if it knew that the moonlight visit was different from that by day, "Backsheesh."

There is never wanting something to do at Luxor, if all the excursions were made. There is always an exchange of courtesies between dahabeëhs, calls are made and dinners given. In the matter of visits the naval etiquette prevails, and the last comer makes the first call. But if you do not care for the society of travelers, you can at least make one of the picturesque idlers on the bank; you may chance to see a display of Arab horsemanship; you may be entertained by some new device of the curiosity-mongers; and there always remain the "collections" of the dealers to examine. One of the best of them is that of the German consul, who rejoices in the odd name of Todrous Paulos, which reappears in his son as Moharb Todrous; a Copt who enjoys the reputation among Moslems of a trustworthy man—which probably means that a larger proportion of his antiquities are genuine than of theirs. If one were disposed to moralize there is abundant field for it here in Luxor. I wonder if there is an insatiable demoralization connected with the dealing in antiquities, and especially in the relics of the departed. When a person, as a business, obtains his merchandise from the unresisting clutch of the dead, in violation of the firman of his ruler, does he add to his wickedness by manufacturing imitations and selling them as real? And what of the traveler who encourages both trades by buying?

One night the venerable Mustapha Aga gave a grand entertainment, in honor of his reception of a firman from the Sultan, who sent him a decoration of diamonds set in silver. Nothing in a Moslem's eyes could exceed the honor of this recognition by the Khalif, the successor of the Prophet. It was an occasion of religious as well as of social demonstration of gratitude. There was service, with the reading of the Koran in the mosque, for the faithful only; there was a slaughter of sheep with a distribution of the mutton among the poor; and there was a fantasia at the residence of Mustapha (the house built into the columns of the temple of Luxor), to which everybody was bidden. There had been an arrival of Cook's Excursionists by steamboat, and there must have been as many as two hundred foreigners at the entertainment in the course of the evening.

The way before the house was arched with palms and hung with colored lanterns; bands of sailors from the dahabeëhs sat in front, strumming the darabooka and chanting their wild refrains; crowds of Arabs squatted in the light of the illumination and filled the steps and the doorway. Within were feasting, music, and dancing, in Oriental abandon. In the hall, which was lined with spectators, was to be seen the stiff-legged sprawling-about and quivering of the Ghawazees, to the barbarous tum-tum, thump-thump, of the musicians; in each side-room also dancing was extemporized, until the house was pervaded with the monotonous vulgarity, which was more pronounced than at the house of Ali.

In the midst of these strange festivities, the grave Mustapha received congratulations upon his newly conferred honor, with the air of a man who was responding to it in the finest Oriental style. Nothing grander than this entertainment could be conceived in Luxor.

Let us try to look at it also with Oriental eyes. How fatal it would be to it *not* to look at it with Oriental eyes, we can conceive by transferring the scene to New York. A citizen, from one of the oldest families, has received from the President, let us suppose, the decoration of the Grand Order of Inspector of Consulates. In order to do honor to the occasion, he throws open his residence on Gramercy Park, procures a lot of sailors to sit on his steps and sing nautical ditties, and drafts a score of girls from Centre-street to entertain his guests with a style of dancing which could not be worse if it had three thousand years of antiquity.

I prefer not to regard this Luxor entertainment in such a light; and although we hasten from it as soon as we can with civility, I am haunted for a long time afterwards by I know not what there was in it of fantastic and barbaric fascination.

The last afternoon at Luxor we give to a long walk to Karnak and beyond, through the wheat and barley fields now vocal with the songs of birds. We do not, however, reach the conspicuous pillars of a temple on the desert far to the northeast; but, returning, climb the wall of circuit and look our last upon these fascinating ruins. From this point the relative vastness of the Great Hall is apparent. The view this afternoon is certainly one of the most beautiful in the world. You know already the elements of it.

Late at night, after a parting dinner of ceremony, and with a pang of regret, although we are in bed, the dahabeëh is loosed from Luxor and we quietly drop down below old Thebes.

CHAPTER XXXI.—LOITERING BY THE WAY.

WE ARE at home again. Our little world, which has been somewhat disturbed by the gaiety of Thebes, and is already as weary of tombs as of temples and of the whole incubus of Egyptian civilization, readjusts itself and settles into its usual placid enjoyment.

We have now two gazelles on board, and a most disagreeable lizard, nearly three feet long; I dislike the way his legs are set on his sides; I dislike his tail, which is a fat continuation of his body; and the "feel" of his cold, creeping flesh is worse than his appearance; he is exceedingly active, darting rapidly about in every direction to the end of his rope. The gazelles chase each other about the deck, frolicking in the sun, and their eyes express as much tenderness and affection as any eyes can, set like theirs. If they were mounted in a woman's head, and properly shaded with long lashes, she would be the most dangerous being in existence.

Somehow there is a little change in the atmosphere of the dahabeëh. The jester of the crew, who kept them alternately laughing and grumbling, singing and quarreling, turbulent with hasheesh or sulky for want of it, was left in jail at Assouan. The reis has never recovered the injury to his dignity inflicted by his brief incarceration, and gives us no more a cheerful good-morning. The steersman smiles still, with the fixed look of enjoyment that his face assumed when it first came into the world, but he is listless; I think he has struck a section of the river in which there is a dearth of his wives; he has complained that his feet were cold in the fresh mornings, but the stockings we gave him he does not wear, and probably is reserving for a dress occasion. Abd-el-Atti meditates seriously upon a misunderstanding with one of his old friends at Luxor; he likes to tell us about the diplomatic and sarcastic letter he addressed him on leaving; "I wrote it," he says, "very grammatick, the meaning of him very deep; I think he feel it." There is no language like the Arabic for the delivery of courtly sarcasm, in soft words, at which no offence can be taken,—for administering a smart slap in the face, so to say, with a feather.

It is a ravishing sort of day, a slight haze, warm but life-giving air, and we row a little and sail a little down the broadening river, by the palms, and the wheat-fields growing yellow, and the soft chain of Libyan hills,—the very *dolce far niente* of life. Other dahabeëhs accompany us, and we hear the choruses of their crews responding to ours. From the shore comes the hum of labor and of idleness, men at the shadoofs, women at the shore for water; there are flocks of white herons and spoonbills on the sandbars; we glide past villages with picturesque pigeon-houses; a ferry-boat ever and anon puts across, a low black scow, its sides banked up with clay, a sail all patches and tatters, and crowded in it three or four donkeys and a group of shawled women and turbaned men, silent and sombre. The country through which we walk, towards night, is a vast plain of wheat, irrigated by canals, with villages in all directions; the peasants are shabbily dressed, as if taxes ate up all their labor, but they do not beg.

The city of Keneh, to which we come next morning, is the nearest point of the Nile to the Red Sea, the desert route to Kosseir being only one hundred and twenty miles; it is the Neapolis of which Herodotus speaks, near which was the great city of Chemmis, that had a temple dedicated to Perseus. The Chemmitæ declared that this demi-god often appeared to them on earth, and that he was descended from citizens of their country who had sailed into Greece; there is no doubt that Perseus came here when he made the expedition into Libya to bring the Gorgon's head.

Keneh is now a thriving city, full of evidences of wealth, and of well-dressed people, and there are handsome houses and bazaars like those of Cairo. From time immemorial it has been famous for its *koollehs*, which are made of a fine clay found only in this vicinity, of which ware is manufactured almost as thin as paper. The process of making them has not changed since the potters of the Pharaohs' time. The potters of to-day are very skillful at the wheel. A small mass of moistened clay, mixed with sifted ashes of halfeh-grass and kneaded like bread, is placed upon a round plate of wood which whirls by a treadle. As it revolves the workman with his hands fashions the clay into vessels of all shapes, graceful and delicate, with a sleight of hand that is wonderful. He makes a koolleh, or a drinking-cup, or a vase with a slender neck, in a few seconds, fashioning it as truly as if it were cast in a mould. It was like magic to see the fragile forms grow in his hands. We sat for a long time in one of the cool rooms where two or three potters were at work, shaded from the sun by palm-branches, which let the light flicker upon the earth-floor, upon the freshly made vessels and the spinning wheels of the turbaned workmen, whose deft fingers wrought out unceasingly these beautiful shapes from the revolving clay.

At the house of the English consul we have coffee; he afterwards lunches with us and insists, but in vain, that we stay and be entertained by a Ghawazee dance in the evening. It is a kind of amusement of which a very little satisfies one. At his house, Prince Arthur and his suite were also calling; a slender, pleasant appearing young gentleman, not noticeable anywhere and with a face of no special force, but bearing the family likeness. As we have had occasion to remark more than once, Princes are so plenty on the Nile this year as to be a burden to the officials,—especially German princes, who, however, do not count any more. The private, unostentatious traveler, who asks no favor of the Khedive, is becoming almost a rarity. I hear the natives complain that almost all the Englishmen of rank who come to Egypt, beg, or shall we say accept? substantial favors of the Khedive. The nobility appear to have a new rendering of *noblesse oblige*. This is rather humiliating to us Americans, who are, after all, almost blood-relations of the English; and besides, we are often taken for *Inglese*, in villages where few strangers go. It cannot be said that all Americans are modest, unassuming travelers; but we are glad to record a point or two in their favor:—they pay their way, and they do not appear to cut and paint their names upon the ruins in such numbers as travelers from other

countries; the French are the greatest offenders in this respect, and the Germans next.

We cross the river in the afternoon and ride to the temple of Athor or Venus at Denderah. This temple, although of late construction, is considered one of the most important in Egypt. But it is incomplete, smaller, and less satisfactory than that at Edfoo. The architecture of the portico and succeeding hall is on the whole noble, but the columns are thick and ungraceful, and the sculptures are clumsy and unartistic. The myth of the Egyptian Avenues is worked out everywhere with the elaboration of a later Greek temple. On the ceiling of several rooms her gigantic figure is bent round three sides, and from a globe in her lap rays proceed in the vivifying influence of which trees are made to grow.

Everywhere in the temple are subterranean and intramural passages, entrance to which is only had by a narrow aperture, once closed by a stone. For what were these perfectly dark alleys intended? Processions could not move in them, and if they were merely used for concealing valuables, why should their inner sides have been covered with such elaborate sculptures?

The most interesting thing at Denderah is the small temple of Osiris, which is called the "lying-in temple," the subjects of sculptures being the mystical conception, birth, and babyhood of Osiris. You might think from the pictures on the walls, of babes at nurse and babes in arms, that you had obtruded into one of the institutions of charity called a Day Nursery. We are glad to find here, carved in large, the image of the four-headed ugly little creature we have been calling Typhon, the spirit of evil; and to learn that it is not Typhon but is the god Bes, a jolly promoter of merriment and dancing. His appearance is very much against him.

Mariette Bey makes the great mystery of the *adytum* of the large temple, which the king alone could enter, the golden *sistrum* which was kept there. The *sistrum* was the mysterious emblem of Venus; it is sculptured everywhere in this building—although it is one of the sacred symbols found in all temples. This sacred instrument *par excellence* of the Egyptians played as important a part in their worship, says Mr. Wilkinson, as the tinkling bell in Roman Catholic services. The great privilege of holding it was accorded to queens, and ladies of rank who were devoted to the service of the deity. The *sistrum* is a strip of gold, or bronze, bent in a long loop, and the ends, coming together, are fastened in an ornamented handle. Through the loop bars are run upon which are rings, and when the instrument is shaken the rings move to and fro. Upon the sides of the handle were sometimes carved the faces of Isis and of Nephthys, the sister goddesses, representing the beginning and the end.

It is a little startling to find, when we get at the inner secret of the Egyptian religion, that it is a rattle! But it is the symbol of eternal agitation, without which there is no life. And the Egyptians profoundly knew this great secret of the universe.

We pass next day, quietly, to the exhibition of a religious devotion which is trying to get on without any *sistrum* or any agitation whatever. Towards sunset, below How, we come to a place where a holy man, called Sheykh Saleem, roosts forever on a sloping bank, with a rich country behind him; beyond, on the plain, hundreds of men and boys are at work throwing up an embankment against the next inundation; but he does not heed them. The holy man is stark naked and sits upon his haunches, his head, a shock of yellow hair, upon his knees. He is of that sickly, whitey-black color which such holy skin as his gets by long exposure. Before him on the bank is a row of large water-jars; behind him is a little kennel of mud, into which he can crawl if it ever occurs to him to go to bed.

About him, seated on the ground, is a group of his admirers. Boys run after us along the bank begging backsheesh for Sheykh Saleem. A crowd of hangers-on, we are told, always surround him, and live on the charity that his piety evokes from the faithful. His own wants are few. He spend his life in this attitude principally, contemplating the sand between his knees. He has sat here for forty years.

People pass and repass, camels swing by him, the sun shines, a breeze as of summer moves the wheat behind him and our great barque, with its gay flags and a dozen rowers rowing in time, sweeps before him, but he does not raise his head. Perhaps he has found the secret of perfect happiness. But his example cannot be widely imitated. There are not many climates in the world in which a man can enjoy such a religion out of doors at all seasons of the year.

We row on and by sundown are opposite Farshoot and its sugar-factories; the river broadens into a lake, shut in to the north by limestone hills rosy in this light, and it is perfectly still at this hour. But for the palms against the sky, and the cries of men at the shadoofs, and the clumsy native boats with their freight of immobile figures, this might be a glassy lake in the remote Adirondack forest, especially when the light has so much diminished that the mountains no longer appear naked.

The next morning as we were loitering along, wishing for a breeze to take us quickly to Bellianeh, that we might spend the day in visiting old Abydus, a beautiful wind suddenly arose according to our desire.

"You always have good fortune," says the dragoman.

"I thought you didn't believe in luck?"

"Not to call him luck. You think the wind to blow 'thout the Lord know it?"

We approach Bellianeh under such fine headway that we fall almost into the opposite murmuring, that this helpful breeze should come just when we were obliged to stop and lose the benefit. We half incline to go on, and leave Abydus in its ashes, but the absurdity of making a journey of seven thousand miles and then passing near to, but unseen, the spot most sacred to the old Egyptians, flashes upon us, and we meekly land. But our inclination to go on was not so absurd as it seems; the mind is so constituted that it can contain only a certain amount of old ruins, and we were getting a mental indigestion of them. Loathing is perhaps too strong a word to use in regard to a piece of sculpture, but I think that a sight at this time, of Rameses II. in his favorite attitude of slicing off the heads of a lot of small captives, would have made us sick.

By eleven o'clock we were mounted for the ride of eight miles, and it may give some idea of the speed of the donkey under compulsion, to say that we made the distance in an hour and forty minutes. The sun was hot, the wind fresh, the dust considerable,—a fine sandy powder that, before night, penetrated clothes and skin. Nevertheless, the ride was charming. The way lay through a plain extending for many miles in every direction, every foot of it green with barley (of which here and there a spot was ripening), with clover, with

the rank, dark Egyptian bean. The air was sweet, and filled with songs of the birds that glanced over the fields or poised in air on even wing like the lark. Through the vast, unfenced fields were narrow well-beaten roads in all directions, upon which men women, and children, usually poorly and scantily clad, donkeys and camels, were coming and going. There was the hum of voices everywhere, the occasional agonized blast of the donkey and the caravan bleat of the camel. It often seems to us that the more rich and broad the fields and the more abundant the life, the more squalor among the people.

We had noticed, at little distances apart in the plain, mounds of dirt five or six feet high. Upon each of these stood a solitary figure, usually a naked boy—a bronze image set up above the green.

“What are these?” we ask.

“What you call scarecrows, to frighten the birds; see that chile throw dirt at ‘em!”

“They look like sentries; do the people here steal?”

“Everybody help himself, if nobody watch him.”

At length we reach the dust-swept village of Arâbat, on the edge of the desert, near the ruins of the ancient Thinis (or Abvdus), the so-called cradle of the Egyptian monarchy. They have recently been excavated. I cannot think that this ancient and most important city was originally so far from the Nile; in the day of its glory the river must have run near it. Here was the seat of the first Egyptian dynasty, five thousand and four years before Christ, according to the chronology of Mariette Bey. I find no difficulty in accepting the five thousand but I am puzzled about the *four* years. It makes Menes four years older than he is generally supposed to have been. It is the accuracy of the date that sets one pondering. Menes, the first-known Egyptian king, and the founder of Memphis, was born here. If he established his dynasty here six thousand eight hundred and seventy-nine years ago, he must have been born some time before that date; and to be a ruler he must have been of noble parents, and no doubt received a good education. I should like to know what sort of a place, as to art, say, and literature, and architecture, Thinis was seven thousand and four years ago. It is chiefly sand-heaps now.

Not only was Menes born here, in the grey dawn of history, but Osiris, the manifestation of Light on earth, was buried here in the greyer dawn of a mythic period. His tomb was venerated by the Pharaonic worshippers as the Holy Sepulchre is by Christians, and for many ages. It was the last desire of the rich and noble Egyptians to be buried at Thinis, in order that they might lie in the same grave with Osiris; and bodies were brought here from all parts of Egypt to rest in the sacred earth. Their tombs were heaped up one above another, about the grave of the god. There are thousands of mounds here, clustering thickly about a larger mound; and, by digging, M. Mariette hopes to find the reputed tomb of Osiris. An enclosure of crude brick marks the supposed site of this supposed most ancient city of Egypt.

From these prehistoric ashes, it is like going from Rome to Peoria, to pass to a temple built so late as the time of Sethi I., only about thirty-three hundred years ago. It has been nearly all excavated and it is worth a long ride to see it. Its plan differs from that of all other temples, and its varied sculpture ranks with the best of temple carving; nowhere else have we found more life and grace of action in the figures and more expressive features; in number of singular emblems and devices, and in their careful and beautiful cutting, and brilliant coloring, the temple is unsurpassed. The non-stereotyped plan of the temple beguiled us into a hearty enjoyment of it. Its numerous columns are pure Egyptian of the best style—lotus capitals; and it contains some excellent specimens of the Doric column, or of its original, rather. The famous original tablet of kings, seventy-six, from Menes to Sethi, a partial copy of which is in the British Museum, has been re-covered with sand for its preservation. This must have been one of the finest of the old temples. We find here the novelty of vaulted roofs, formed by a singular method. The roof stones are not laid flat, as elsewhere, but on edge, and the roof, thus having sufficient thickness, is hollowed out on the under side, and the arch is decorated with stars and other devices. Of course, there is a temple of Rameses II., next door to this one, but it exists now only in its magnificent foundations.

We rode back through the village of Arâbat in a whirlwind of dust, amid cries of “backsheesh,” hailed from every door and pursued by yelling children. One boy, clad in the loose gown that passes for a wardrobe in these parts, in order to earn his money, threw a summersault before us, and, in a flash, turned completely out of his clothes, like a new-made Adam! Nothing was ever more neatly done; except it may have been a feat of my donkey a moment afterwards, executed perhaps in rivalry of the boy. Pretending to stumble, he went on his head, and threw a summersault also. When I went back to look for him, his head was doubled under his body so that he had to be helped up.

When we returned we found six other dahabeëhs moored near ours. Out of the seven, six carried the American flag—one of them in union with the German—and the seventh was English. The American flags largely outnumber all others on the Nile this year; in fact Americans and various kinds of Princes appear to be monopolizing this stream. A German, who shares a boat with Americans, drops in for a talk. It is wonderful how much more space in the world every German needs, now that there is a Germany. Our visitor expresses the belief that the Germans and the Americans are to share the dominion of the world between them. I suppose that this means that we are to be permitted to dwell on our present possessions in peace, if we don't make faces; but one cannot contemplate the extinction of all the other powers without regret.

Of course we have outstayed the south wind; the next morning we are slowly drifting against the north wind. As I look from the window before breakfast, a Nubian trader floats past, and on the bow deck is crouched a handsome young lion, honest of face and free of glance, little dreaming of the miserable menagerie life before him. There are two lions and a leopard, and a cargo of cinnamon, senna, elephants' tusks, and ostrich-feathers, on board; all Central Africa seems to float beside us, and the coal-black crew do not lessen the barbaric impression.

It is after dark when we reach Girgeh, and are guided to our moorage by the lights of other dahabeëhs. All that we see of this decayed but once capital town, are four minarets, two of them surrounding picturesque ruins and some slender columns of a mosque, the remainder of the building having been washed into the river. As we land, a muezzin sings the evening call to prayer in a sweet, high tenor voice; and it sounds like a welcome.

Decayed, did we say of Girgeh? What is not decayed, or decaying, or shifting, on this aggressive river? How age laps back on age and one religion shuffles another out of sight. In the hazy morning we are passing Menshëeh, the site of an old town that once was not inferior to Memphis; and then we come to Ekhmeem—ancient Panopolis. You never heard of it? A Roman visitor called it the oldest city of all Egypt; it was in fact founded by Ekhmeem, the son of Misraim, the offspring of Cush, the son of Ham. There you are, almost personally present at the Deluge. Below here are two Coptic convents, probably later than the time of the Empress Helena. On the shore are walking some Coptic Christians, but they are in no way superior in appearance to other natives; a woman, whom we hail, makes the sign of the cross, and then demands backsheesh.

We had some curiosity to visit a town of such honorable foundation. We found in it fine mosques and elegant minarets, of a good Saracenic epoch. Upon the lofty stone top of one sat an eagle, who looked down upon us unscared; the mosque was ruinous and the door closed, but through the windows we could see the gaily decorated ceiling; the whole was in the sort of decay that the traveler learns to think Moslemism itself.

We made a pretence of searching for the remains of a temple of Pan,—though we probably care less for Pan than we do for Rameses. Making known our wants, several polite gentlemen in turbans, offered to show us the way—the gentlemen in these towns seem to have no other occupation than to sit on the ground and smoke the chibook—and we were attended by a procession, beyond the walls, to the cemetery. There, in a hollow, we saw a few large stones, some of them showing marks of cutting. This was the temple spoken of in the hand-book. Our hosts then insisted upon dragging us half a mile further through the dust of the cemetery mounds, in the glare of the sun, and showed us a stone half buried, with a few hieroglyphics on one end. Never were people so polite. A grave man here joined us, and proposed to show us some *quei-is antéeka* (“beautiful antiquities”); and we followed this obliging person half over town; and finally, in the court of a private house, he pointed to the torso of a blue granite statue. All this was done out of pure hospitality; the people could not have been more attentive if they had had something really worth seeing. The town has handsome, spacious coffee-houses and shops, and an appearance of Oriental luxury.

One novelty the place offered, and that was in a drinking-fountain. Under a canopy, in a wall-panel, in the street, was inserted a copper nipple, which was worn, by constant use, as smooth as the toe of St. Peter at Rome. When one wishes to drink, he applies his mouth to this nipple and draws; it requires some power of suction to raise the water, but it is good and cool when it comes. As Herodotus would remark, now I have done speaking about this nipple.

We walked on interminably and at length obtained a native boat, with a fine assortment of fellahs and donkeys for passengers, to set us over to Soohag, the capital of the province, a busy and insupportably dirty town, with hordes of free-and-easy natives loafing about, and groups of them, squatting by little dabs of tobacco, or candy, or doora, or sugar-cane, making what they are pleased to call a market.

It seemed to be a day for hauling us about. Two bright boys seized us, and urged us to go with them and see something marvelously beautiful. One of them was an erect, handsome lad, with courtly and even elegant dignity, a high and yet simple bearing, which I venture to say not a king’s son in Europe is possessed of. They led us a chase, through half the sprawling town, by lanes and filthy streets, under bazaars, into the recesses of domestic poverty, among unknown and inquisitive natives, until we began to think that we should never see our native dahabeëh again. At last we were landed in a court where sat two men, adding up columns of figures. It was an Oriental picture, but scarcely worth coming so far to see.

The men looked at us in wondering query, as if demanding what we wanted.

We stood looking at them, but could not tell them what we wanted, since we did not know. And if we had known, we could not have told them. We only pointed to the boys who had brought us. The boys pointed to the ornamental portals of a closed door.

After a long delay, and the most earnest posturing and professions of our young guides, and evident suspicion of us, a key was brought, and we were admitted, into a cool and clean Coptic church, which had fresh matting and an odor of incense. Ostrich-eggs hung before the holy places, as in mosques; an old clock, with a long and richly inlaid dial-case, stood at one end; and there were paintings in the Byzantine style of “old masters.” One of them represented the patron saint of the Copts, St. George, slaying the dragon; the conception does equal honor to the saint and the artist; the wooden horse, upon which St. George is mounted, and its rider, fill nearly all the space of the canvas, leaving very little room for the landscape with its trees, for the dragon, for the maiden, and for her parents looking down upon her from the castle window. And this picture perfectly represents the present condition of art in the whole Orient.

At Soohag a steamboat passed down towing four barges, packed with motley loads of boys and men, impressed to work in the Khedive’s sugar-factory at Rhodes. They are seized, so many from a village, like the recruits for the army. They receive from two to two and a half piastres (ten to twelve and a half cents) a day wages, and a couple of pounds of bread each.

I suspect the reason the Khedive’s agricultural operations and his sugar-factories are unprofitable, is to be sought in the dishonest agents and middle-men—a kind of dishonesty that seems to be ingrained in the Eastern economy. The Khedive loses both ways:—that which he attempts to expend on a certain improvement is greatly diminished before it reaches its object; and the returns from the investment, on their way back to his highness, are rubbed away, passing through so many hands, to the vanishing point. It is the same with the taxes; the fellah pays four times as much as he ought, and the Khedive receives not the government due. The abuse is worse than it was in France with the farmers-general in the time of Louis XIV. and Louis XV. The tax apportioned to a province is required of its governor. He adds a lumping per cent, to the total, and divides the increased amount among his sub-governors for collection; they add a third to their levy and divide it among the tax-gatherers of sections of the district; these again swell their quota before apportioning it among the sheykhs or actual collectors, and the latter take the very life-blood out of the fellah.

As we sail down the river in this approaching harvest-season we are in continual wonder at the fertility of the land; a fertility on the slightest cultivation, the shallowest plowing, and without fertilization. It is customary to say that the soil is inexhaustible, that crop after crop of the same kind can be depended on, and

the mud (*limon*) of the overflowing Nile will repair all wastes.

And yet, I somehow get an impression of degeneracy, of exhaustion, both in Upper and Lower Egypt, in the soil; and it extends to men and to animals; horses, cattle, donkeys, camels, domestic fowls look impoverished—we have had occasion to say before that the hens lay ridiculously small eggs—they put the contents of one egg into three shells. (They might not take this trouble if eggs were sold by weight, as they should be.) The food of the country does not sufficiently nourish man or beast. Its quality is deficient. The Egyptian wheat does not make wholesome bread; most of it has an unpleasant odor—it tends to speedy corruption, it lacks certain elements, phosphorus probably. The bread that we eat on the dahabeëh is made from foreign wheat. The Egyptian wheat is at a large discount in European markets. One reason of this inferiority is supposed to be the succession of a wheat crop year after year upon the same field; another is the absolute want of any fertilizer except the Nile mud; and another the use of the same seed forever. Its virtue has departed from it, and the most hopeless thing in the situation is the unwillingness of the fellah to try anything new, in his contented ignorance. The Khedive has made extraordinary efforts to introduce improved machinery and processes, and he has set the example on his own plantations. It has no effect on the fellah. He will have none of the new inventions or new ways. It seems as hopeless to attempt to change him as it would be to convert a pyramid into a Congregational meeting-house.

For the political economist and the humanitarian, Egypt is the most interesting and the saddest study of this age; its agriculture and its people are alike unique. For the ordinary traveler the country has not less interest, and I suppose he may be pardoned if he sometimes loses sight of the misery in the strangeness, the antique barbarity, the romance by which he is surrounded.

As we lay, windbound, a few miles below Soohag, the Nubian trading-boat I had seen the day before was moored near; and we improved this opportunity for an easy journey to Central Africa, by going on board. The forward-deck was piled with African hides so high that the oars were obliged to be hung on outriggers; the cabin deck was loaded with bags of gums, spices, medicines; and the cabin itself was stored so full, that when we crawled down into it, there was scarcely room to sit upright on the bags. Into this penetralia of barbaric merchandise, the ladies preceded us, upon the promise of the sedate and shrewd-eyed traveler to exhibit his ostrich-feathers. I suppose nothing in the world of ornament is so fascinating to a woman as an ostrich-feather; and to delve into a mine of them, to be able to toss about handfuls, sheafs of them, to choose any size and shape and any color, glossy black, white, grey, and white with black tips,—it makes one a little delirious to think of it! There is even a mild enjoyment in seeing a lady take up a long, drooping plume, hold it up before her dancing, critical eyes, turning the head a little one side, shaking the feathered curve into its most graceful fall—“Isn’t it a beauty?” Is she thinking how it will look upon a hat of the mode? Not in the least. The ostrich-feather is the symbol of truth and justice; things that are equal to the same thing are equal to each other—it is also the symbol of woman. In the last Judgment before Osiris, the ostrich-feather is weighed in the balance against all the good deeds of a man’s life. You have seen many a man put all his life against the pursuit of an ostrich-feather in a woman’s hat—the plume of truth in beauty’s bonnet.

While the ostrich-trade is dragging along its graceful length, other curiosities are produced; the short, dangerous tusks of the wild boar; the long tusks of the elephant—a beast whose enormous strength is only made a snow of, like that of Samson; and pretty silver-work from Soudan.

“What is this beautiful tawny skin, upon which I am sitting?”

“Lion’s; she was the mother of one of the young lions out yonder. And this,” continued the trader, drawing something from the corner, “is her skull.” It gave a tender interest to the orphan outside, to see these remains of his mother. But sadness is misplaced on her account; it is better that she died, than to live to see her child in a menagerie.

“What’s that thick stuff in a bottle there behind you?”

“That’s lion’s oil, some of *her* oil.” Unhappy family, the mother skinned and boiled, the offspring dragged into slavery.

I took the bottle. To think that I held in my hand the oil of a lion! Bear’s oil is vulgar. But this is different; one might anoint himself for any heroic deed with this royal ointment.

“And is that another bottle of it?”

“*Mais*, no; you don’t get a lion every day for oil; that is ostrich-oil. This is good for rheumatism.”

It ought to be. There is nothing rheumatic about the ostrich. When I have tasted sufficiently the barbaric joys of the cabin I climb out upon the deck to see more of this strange craft.

Upon the narrow and dirty bow, over a slow fire, on a shallow copper dish, a dark and slender boy is cooking flap-jacks as big as the flap of a leathern apron. He takes the flap-jack up by the edge in his fingers and turns it over, when one side is cooked, as easily as if it were a sheepskin. There is a pile of them beside him, enough to make a whole suit of clothes, burnous and all, and very durable it would prove. Near him is tied, by a cotton cord, a half-grown leopard, elegantly spotted, who has a habit of running out his tongue, giving a side-lick of his chops, and looking at you in the most friendly manner. If I were the boy I wouldn’t stand with my naked back to a leopard which is tied with a slight string.

On shore, on the sand and in the edge of the wheat, are playing in the sun a couple of handsome young lions, gentle as kittens. After watching their antics for some time, and calculating the weight of their paws as they cuff each other, I satisfy a long ungratified Van Amburg ambition, by patting the youngest on the head and putting my hand (for an exceedingly brief instant) into his mouth, experiencing a certain fearful pleasure, remembering that although young he is a lion!

The two play together very prettily, and when I leave them they have lain down to sleep, face to face, with their arms round each other’s necks, like the babes in the wood. The lovely leopard occasionally rises to his feet and looks at them, and then lies down again, giving a soft sweep to his long and rather vicious tail. His countenance is devoid of the nobility of the lion’s. The lion’s face inspires you with confidence; but I can see little to trust in the yellow depths of his eyes. The lion’s eyes, like those of all untamed beasts, have the repulsive trait of looking at you without any recognition in them—the dull glare of animality.

The next morning, when the wind falls, we slip out from our cover, like the baffled mariners of Jason, and row past the bold, purplish-grey cliff of Gebel Sheykh Herēedee, in which are grottoes and a tomb of the sixth dynasty, and on to Tahta, a large town, almost as picturesque, in the distance, with its tall minarets and one great, red-colored building, as Venice from the Lido. Then the wind rises, and we are again tantalized with no progress. One likes to dally and eat the lotus by his own will; but when the elements baffle him, and the wind blows contrary to his desires, the old impatience, the free will of ancient Adam, arises, and man falls out of his paradise. We are tempted to wish to be hitched (just for a day, or to get round a bend,) to one of these miserable steamboats that go swashing by, frightening all the gamebirds, and fouling the sweet air of Egypt with the black smoke of their chimneys.

In default of going on, we climb a high spur of the Mokattam, which has a vast desert plain on each side, and in front, and up and down the very crooked river (the wind would need to change every five minutes to get us round these bends), an enormous stretch of green fields, dotted with villages, flocks of sheep and cattle, and strips of palm-groves. Whenever we get in Egypt this extensive view over mountains, desert, arable land, and river it is always both lovely and grand. There was this afternoon on the bare limestone precipices a bloom as of incipient spring verdure. There is always some surprise of color for the traveler who goes ashore, or looks from his window, on the Nile,—either in the sky, or in the ground which has been steeped in color for so many ages that even the brown earth is rich.

The people hereabouts have a bad reputation, perhaps given them by the government, against which they rebelled on account of excessive taxes; the insurrection was reduced by knocking a village or two into the original dust with cannon balls. We, however, found the inhabitants very civil. In the village was one of the houses of entertainment for wanderers—a half-open cow-shed it would be called in less favored lands. The interior was decorated with the rudest designs in bright colors, and sentences from the Koran; we were told that any stranger could lodge in it and have something to eat and drink; but I should advise the coming traveler to bring his bed, and board also. We were offered the fruit of the nabbek tree (something like a sycamore), a small apple, a sort of cross between the thorn and the crab, with the disagreeable qualities of both. Most of the vegetables and fruits of the valley we find insipid; but the Fellaheen seem to like neutral flavors as they do neutral colors. The almost universal brown of the gowns in this region harmonizes with the soil, and the color does not show dirt; a great point for people who sit always on the ground.

The next day we still have need of patience; we start, meet an increasing wind, which whirls us about and blows us up stream. We creep under a bank and lie all day, a cold March day, and the air dark with dust.

After this Sunday of rest, we walk all the following morning through fields of wheat and lentils, along the shore. The people are uninteresting, men gruff; women ugly; clothes scarce; fruit, the nabbek, which a young lady climbs a tree to shake down for us. But I encountered here a little boy who filled my day with sunshine.

He was a sort of shepherd boy, and I found him alone in a field, the guardian of a donkey which was nibbling coarse grass. But his mind was not on his charge, and he was so much absorbed in his occupation that he did not notice my approach. He was playing, for his own delight and evidently with intense enjoyment, upon a reed pipe—an instrument of two short reeds, each with four holes, bound together, and played like a clarinet.

Its compass was small, and the tune ran round and round in it, accompanied by one of the most doleful drones imaginable. Nothing could be more harrowing to the nerves. I got the boy to play it a good deal. I saw that it was an antique instrument (it was in fact Pan's pipe unchanged in five thousand years), and that the boy was a musical enthusiast—a gentle Mozart who lived in an ideal world which he created for himself in the midst of the most forlorn conditions. The little fellow had the knack of inhaling and blowing at the same time, expanding his cheeks, and using his stomach like the bellows of the Scotch bagpipe, and producing the same droning sound as that delightful instrument. But I would rather hear this boy half a day than the bagpipe a week.

I talked about buying the pipe, but the boy made it himself, and prized it so highly that I could not pay him what he thought it was worth, and I had not the heart to offer its real value. Therefore I left him in possession of his darling, and gave him half a silver piastre. He kissed it and thanked me warmly, holding the unexpected remuneration for his genius in his hand, and looking at it with shining eyes. I feel an instant pang, and I am sorry that I gave it to him. I have destroyed the pure and ideal world in which he played to himself, and tainted the divine love of sweet sounds with the idea of gain and the scent of money. The serenity of his soul is broken up, and he will never again be the same boy, exercising his talent merely for the pleasure of it. He will inevitably think of profit, and will feverishly expect something from every traveler. He may even fall so far as to repair to landings where boats stop, and play in the hope of backsheesh.

At night we came to Assiout, greeted from afar by the sight of its slender and tall minarets and trees, on the rocky background of sunset.

CHAPTER XXXII.—JOTTINGS.

LETTING our dahabeëh drift on in the morning, we spend the day at Assiout, intending to overtake it by a short cut across the oxbow which the river makes here. We saw in the city two examples, very unlike, of the new activity in Egypt. One related to education, the other to the physical development of the country and to conquest.

After paying out respects to the consul, we were conducted by his two sons to the Presbyterian Mission-School. These young men were educated at the American College in Beyrout. Nearly everywhere we have been in the East, we have found a graduate of this school, that is as much as to say, a person intelligent and anxious and able to aid in the regeneration of his country. It would not be easy to overestimate the services that this one liberal institution of learning is doing in the Orient.

The mission-school was under the charge of the Rev. Dr. John Hogg and his wife (both Scotch), with two women-teachers, and several native assistants. We were surprised to find an establishment of about one hundred and twenty scholars, of whom over twenty were girls. Of course the majority of the students were in the primary studies, and some were very young; but there were classes in advanced mathematics, in logic, history, English, etc. The Arab young men have a fondness for logic and metaphysics, and develop easily an inherited subtlety in such studies. The text-books in use are Arabic, and that is the medium of teaching.

The students come from all parts of Upper Egypt, and are almost all the children of Protestant parents, and they are, with an occasional exception, supported by their parents, who pay at least their board while they are at school. There were few Moslems among them, I think only one Moslem girl. I am bound to say that the boys and young men in their close rooms did not present an attractive appearance; an ill-assorted assembly, with the stamp of physical inferiority and dullness—an effect partially due to their scant and shabby apparel, for some of them had bright, intelligent faces.

The school for girls, small as it is, impressed us as one of the most hopeful things in Egypt. I have no confidence in any scheme for the regeneration of the country, in any development of agriculture, or extension of territory, or even in education, that does not reach woman and radically change her and her position. It is not enough to say that the harem system is a curse to the East: woman herself is everywhere degraded. Until she becomes totally different from what she now is, I am not sure but the Arab is right in saying that the harem is a necessity: the woman is secluded in it (and in the vast majority of harems there is only one wife) and has a watch set over her, because she cannot be trusted. One hears that Cairo is full of intrigue, in spite of locked doors and eunuchs. The large towns are worse than the country; but I have heard it said that woman is the evil and plague of Egypt—though I don't know how the country could go on without her. Sweeping generalizations are dangerous, but it is said that the sole education of most Egyptian women is in arts to stimulate the passion of men. In the idleness of the most luxurious harem, in the grim poverty of the lowest cabin, woman is simply an animal.

What can you expect of her? She is literally uneducated, untrained in every respect. She knows no more of domestic economy than she does of books, and she is no more fitted to make a house attractive or a room tidy than she is to hold an intelligent conversation. Married when she is yet a child, to person she may have never seen, and a mother at an age when she should be in school, there is no opportunity for her to become anything better than she is.

A primary intention in this school is to fit the girls to become good wives, who can set an example of tidy homes economically managed, in which there shall be something of social life and intelligent companionship between husband and wife. The girls are taught the common branches, sewing, cooking, and housekeeping—as there is opportunity for learning it in the family of the missionaries. This house of Dr. Hogg's, with its books, music, civilized *menage*, is a school in itself, and the girl who has access to it for three or four years will not be content with the inconvenience, the barren squalor of her parental hovel; for it is quite as much ignorance as poverty that produces miserable homes. Some of the girls now here expect to become teachers; some will marry young men who are also at this school. Such an institution would be of incalculable service if it did nothing else than postpone the marriage of women a few years. This school is a small seed in Egypt, but it is, I believe, the germ of a social revolution. It is, I think, the only one in Upper Egypt. There is a mission school of similar character in Cairo, and the Khedive also has undertaken schools for the education of girls.

In the last room we came to the highest class, a dozen girls, some of them mere children in appearance, but all of marriageable age. I asked the age of one pretty child, who showed uncommon brightness in her exercises.

"She is twelve," said the superintendent, "and no doubt would be married, if she were not here. The girls become marriageable from eleven years, and occasionally they marry younger; if one is not married at fifteen she is in danger of remaining single."

"Do the Moslems oppose your school?"

"The heads of the religion endeavor to prevent Moslem children coming to it; we have had considerable trouble; but generally the mothers would like to have their girls taught here, they become better daughters and more useful at home."

"Can you see that you gain here?"

"Little by little. The mission has been a wonderful success. I have been in Egypt eighteen years; since the ten years that we have been at Assiout, we have planted, in various towns in Upper Egypt, ten churches."

"What do you think is your greatest difficulty?"

"Well, perhaps the Arabic language."

"The labor of mastering it?"

"Not that exactly, although it is an unending study. Arabic is an exceedingly rich language, as you know—a

tongue that has often a hundred words for one simple object has almost infinite capabilities for expressing shades of meaning. To know Arabic grammatically is the work of a lifetime. A man says, when he has given a long life to it, that he knows a little Arabic. My Moslem teacher here, who was as learned an Arab as I ever knew, never would hear me in a grammatical lesson upon any passage he had not carefully studied beforehand. He begged me to excuse him, one morning, from hearing me (I think we were reading from the Koran) because he had not had time to go over the portion to be read. Still, the difficulty of which I speak, is that Arabic and the Moslem religion are one and the same thing, in the minds of the faithful. To know Arabic is to learn the Koran, and that is the learning of a learned Arab. He never gets to the end of the deep religious meaning hidden in the grammatical intricacies. Religion and grammar thus become one."

"I suppose that is what our dragoman means, when he is reading me something out of the Koran, and comes to a passage that he calls too deep."

"Yes. There is room for endless differences of opinion in the rendering of almost any passage, and the disagreement is important, because it becomes a religious difference. I had an example of the unity of the language and the religion in the Moslem mind. When I came here the learned thought I must be a Moslem because I knew the grammatical Arabic; they could not conceive how else I should know it."

When we called upon his excellency, Shakeer Pasha, the square in front of his office and the streets leading to it were so covered with sitting figures that it was difficulty to make a way amidst them. There was an unusual assembly of some sort, but its purport we could not guess. It was hardly in the nature of a popular convention, although its members sat at their ease, smoking, and a babel of talk arose. Nowhere else in Egypt have I seen so many fine and even white-looking men gathered together. The center of every group was a clerk, with inkhorn and reed, going over columns of figures.

The governor's quarters were a good specimen of Oriental style and shabbiness; spacious whitewashed apartments, with dirty faded curtains. But we were received with a politeness that would have befitted a palace, and with the cordial ease of old friends. The Pasha was heartbroken that we had not notified him of our coming, and that now our time would not permit us to stay and accept a dinner—had we not promised to do so on our return? He would send couriers and recall our boat, he would detain us by force. Allowing for all the exaggeration of Oriental phraseology, it appeared only too probable that the Pasha would die if we did not stay to dinner and spend the night. But we did not.

This great concourse? Oh, they were sheykhs and head men of all the villages in the country round, whom he had summoned to arrange for the purchase of dromedaries. The government has issued orders for the purchase of a large number, which it wants to send to Darfour. The Khedive is making a great effort to open the route to Darfour (twenty-eight days by camel) to regular and safe travel, and to establish stations on the road. That immense and almost unknown territory will thus be brought within the commercial world.

During our call we were served with a new beverage in place of coffee; it was a hot and sweetened tea of cinnamon, and very delicious.

On our return to the river, we passed the new railway station building which is to be a handsome edifice of white limestone. Men women, and children are impressed to labor on it, and, an intelligent Copt told us, without pay. Very young girls were the mortar-carriers, and as they walked to and fro, with small boxes on their heads, they sang, the precocious children, an Arab love-song;—

"He passed by my door, he did not speak to me."

We have seen little girls, quite as small as these, forced to load coal upon the steamers, and beaten and cuffed by the overseers. It is a hard country for women. They have only a year or two of time, in which all-powerful nature and the wooing sun sing within them the songs of love, then a few years of married slavery, and then ugliness, old age, and hard work.

I do not know a more melancholy subject of reflection than the condition, the lives of these women we have been seeing for three months. They have neither any social nor any religious life. If there were nothing else to condemn the system of Mohammed, this is sufficient. I know what splendors of art it has produced, what achievements in war, what benefits to literature and science in the dark ages of Europe. But all the culture of a race that in its men has borne accomplished scholars, warriors, and artists, has never touched the women. The condition of woman in the Orient is the conclusive verdict against the religion of the Prophet.

I will not contrast that condition with the highest; I will not compare a collection of Egyptian women, assembled for any purpose, a funeral or a wedding, with a society of American ladies in consultation upon some work of charity, nor with an English drawing-room. I chanced once to be present at a representation of Verdi's Grand Mass, in Venice, when all the world of fashion, of beauty, of intelligence, assisted. The *coup d'oil* was brilliant. Upon the stage, half a hundred of the chorus-singers were ladies. The leading solo-singers were ladies. I remember the freshness, the beauty even, the vivacity, the gay decency of the toilet, of that group of women who contributed their full share in a most intelligent and at times profoundly pathetic rendering of the Mass. I recall the sympathetic audience, largely composed of women, the quick response to a noble strain nobly sung, the cheers, the tears even which were not wanting in answer to the solemn appeal, in fine, the highly civilized sensitiveness to the best product of religious art. Think of some such scene as that, and of the women of an European civilization; and then behold the women who are the product of this,—the sad, dark fringe of water-drawers and baby-carriers, for eight hundred miles along the Nile.

We have a row in the sandal of nine miles before we overtake our dahabeëh, which the wind still baffles. However, we slip along under the cover of darkness, for, at dawn, I hear the muezzin calling to prayer at Manfaloot, trying in vain to impress a believing but drowsy world, that prayer is better than sleep. This is said to be the place where Lot passed the period of his exile. Near here, also, the Holy Family sojourned when it spent a winter in Egypt. (The Moslems have appropriated and localized everything in our Scriptures which is picturesque, and they plant our Biblical characters where it is convenient). It is a very pretty town, with minarets and gardens.

It surprises us to experience such cool weather towards the middle of March; at nine in the morning the thermometer marks 55°; the north wind is cold, but otherwise the day is royal. Having nothing better to do we climb the cliffs of Gebel Aboofeyda, at least a thousand feet above the river; for ten miles it presents a bold precipice, unscalable except at intervals. We find our way up a ravine. The rocks' *surface* in the river and the ravine are worn exactly as the sea wears rock, honeycombed by the action of water, and excavated into veritable sea-caves near the summit. The limestone is rich in fossil shells.

The plain on top presented a singular appearance. It was strewn with small boulders, many of them round and as shapely as cannon-balls, all formed no doubt before the invention of the conical missiles. While we were amusing ourselves with the thousand fantastic freaks of nature in hardened clay, two sinister Arabs approached us from behind and cut off our retreat. One was armed with a long gun and the other with a portentous spear. We saluted them in the most friendly manner, and hoped that they would pass on: but, no, they attached themselves to us. I tried to think of cases of travelers followed into the desert on the Nile and murdered, but none occurred to me. There seemed to be no danger from the gun so long as we kept near its owner, for the length of it would prevent his bringing it into action close at hand. The spear appeared to be the more effective weapon of the two; it was so, for I soon ascertained that the gun was not loaded and that its bearer had neither powder nor balls. It turned out that this was a detachment of the local guard, sent out to protect us; it would have been a formidable party in case of an attack.

Continuing our walk over the stone-clad and desolate swells, it suddenly occurred to us that we had become so accustomed to this sort of desert-walking, with no green or growing thing in sight, that it had ceased to seem strange to us. It gave us something like a start, therefore, shortly after, to see, away to the right, blue water forming islands out of the hill-tops along the horizon; there was an appearance of verdure about the edge of the water, and dark clouds sailed over it. There was, however, when we looked steadily, about the whole landscape a shimmer and a shadowy look that taught us to know that it was a *mirage*, the rich Nile valley below us, with the blue water, the green fields, the black lines of palms, was dimly mirrored in the sky and thrown upon the desert hills in the distance. We stood where we could compare the original picture with the blurred copy.

Making our way down the face of the cliff, along some ledges, we came upon many grottoes and mummy-pits cut in the rock, all without sculptures, except one; this had on one side an arched niche and pilasters from which the arch sprung. The vault of the niche had been plastered and painted, and a Greek cross was chiseled in each pilaster; but underneath the plaster the rock was in ornamental squares, lozenges and curves in Saracenic style, although it may have been ancient Egyptian. How one religion has whitewashed, and lived on the remains of another here; the tombs of one age become the temples of another and the dwellings of a third. On these ledges, and on the desert above, we found bits of pottery. Wherever we have wandered, however far into the desert from the river, we never get beyond the limit of broken pottery; and this evidence of man's presence everywhere, on the most barren of these high or low plains of stone and sand, speak of age and of human occupation as clearly as the temples and monuments. There is no virgin foot of desert even; all is worn and used. Human feet have trodden it in every direction for ages. Even on high peaks where the eagles sit, men have piled stones and made shelters, perhaps lookouts for enemies, it may be five hundred, it may be three thousand years ago. There is nowhere in Egypt a virgin spot.

By moonlight we are creeping under the frowning cliffs of Aboofeyda, and voyage on all night in a buccaneerish fashion; and next day sail by Hadji Kandeel, where travelers disembark for Tel el Amarna. The remains of a once vast city strew the plain, but we only survey it through a field-glass. What, we sometimes say in our more modern moments, is one spot more than another? The whole valley is a sepulchre of dead civilizations; its inhabitants were stowed away, tier on tier, shelf on shelf, in these ledges.

However, respect for age sent us in the afternoon to the grottoes on the north side of the cliff of Sheykh Said. This whole curved range, away round to the remains of Antinoë, is full of tombs. Some that we visited are large and would be very comfortable dwellings; they had been used for Christian churches, having been plastered and painted. Traces of one painting remain—trees and a comical donkey, probably part of the story of the flight of the Holy Family into Egypt. We found in one the ovals of Cheops, the builder of the great pyramid, and much good sculpture in the best old manner—agricultural scenes, musicians, dancers, beautifully cut, with careful details and also with spirit. This is very old work, and, even abused as it has been, it is as good as any the traveler will find in Egypt. This tomb no doubt goes back to the fourth dynasty, and its drawing of animals, cows, birds, and fish is better than we usually see later. In a net in which fish are taken, many kinds are represented, and so faithfully that the species are recognizable; in a marsh is seen a hippopotamus, full of life and viciousness, drawn with his mouth stretched asunder wide enough to serve for a menagerie show-bill. There are some curious false doors and architectural ornaments, like those of the same epoch in the tombs at the pyramids.

At night we were at Rhoda, where is one of the largest of the Khedive's sugar-factories; and the next morning at Beni Hassan, famed, next to Thebes, for its grottoes, which have preserved to us, in painted scenes, so much of the old Egyptian life. Whoever has seen pictures of these old paintings and read the vast amount of description and inferences concerning the old Egyptian life, based upon them, must be disappointed when he sees them to-day. In the first place they are only painted, not cut, and in this respect are inferior to those in the grottoes of Sheykh Saïd; in the second place, they are so defaced, as to be with difficulty deciphered, especially those depicting the trades.

Some of the grottoes are large—sixty feet by forty feet; fine apartments in the rock, high and well lighted by the portal. Architecturally, no tombs are more interesting; some of the ceilings are vaulted, in three sections; they are supported by fluted pillars some like the Doric, and some in the beautiful lotus style; the pillars have architraves; and there are some elaborately wrought false doorways. And all this goes to show that, however ancient these tombs are, they imitated stone buildings already existing in a highly developed architecture.

Essentially the same subjects are represented in all the tombs; these are the trades, occupations, amusements of the people. Men are blowing glass, working in gold, breaking flax, tending herds (even doctoring animals that are ill), chiseling statues, painting, turning the potter's wheel; the barber shaves his customer; two men play at draughts; the games most in favor are wrestling and throwing balls, and in the

latter women play. But what one specially admires is the honesty of the decorators, which conceals nothing from posterity; the punishment of the bastinado is again and again represented, and even women are subject to it; but respect was shown for sex; the women was not cast upon the ground, she kneels and takes the flagellation on her shoulders.

We saw in these tombs no horses among the many animals; we have never seen the horse in any sculptures except harnessed in a war-chariot; "the horse and his rider" do not appear.

There is a scene here which was the subject of a singular mistake, that illustrates the needless zeal of early explorers to find in everything in Egypt confirmation of the Old Testament narrative. A procession, painted on the wall, now known to represent the advent of an Asiatic tribe into Egypt, perhaps the Shepherds, in a remote period, was declared to represent the arrival of Joseph's brethren. The tomb, however, was made several centuries before the advent of Joseph himself. And even if it were of later date than the event named, we should not expect to find in it a record of an occurrence of such little significance at that time. We ought not to be surprised at the absence in Egypt of traces of the Israelitish sojourn, and we should not be, if we looked at the event from the Egyptian point of view and not from ours. In a view of the great drama of the ancient world in the awful Egyptian perspective, the Jewish episode is relegated to its proper proportion in secular history. The whole Jewish history, as a worldly phenomenon, occupies its narrow limits. The incalculable effect upon desert tribes of a long sojourn in a highly civilized state, the subsequent development of law and of a literature unsurpassed in after times, and the final flower into Christianity,—it is in the light of all this that we read the smallest incident of Jewish history, and are in the habit of magnifying its contemporary relations. It was the slenderest thread in the days of Egyptian puissance. In the ancient atmosphere of Egypt, events purely historical fall into their proper proportions. Many people have an idea that the ancient world revolved round the Jews, and even hold it as a sort of religious faith.

It is difficult to believe that the race we see here are descendants of the active, inventive, joyous people who painted their life upon these tombs. As we lie all the afternoon before a little village opposite Beni Hassan I wonder for the hundredth time what it is that saves such miserable places from seeming to us as vile as the most wretched abodes of poverty in our own land. Is it because, with an ever-cheerful sun and a porous soil, this village is not so filthy as a like abode of misery would be with us? Is it that the imagination invests the foreign and the Orient with its own hues; or is it that our reading, prepossessing our minds, gives the lie to all our senses? I cannot understand why we are not more disgusted with such a scene as this. Not to weary you with a repetition of scenes sufficiently familiar, let us put the life of the Egyptian fellah, as it appears at the moment, into a paragraph.

Here is a jumble of small mud-hovels, many of them only roofed with cornstalks, thrown together without so much order as a beaver would use in building a village, distinguishable only from dog-kennels in that they have wooden doors—not distinguishable from them when the door is open and a figure is seen in the aperture. Nowhere any comfort or cleanliness, except that sometimes the inner kennel, of which the woman guards the key, will have its floor swept and clean matting in one corner. The court about which there are two or three of these kennels, serves the family for all purposes; there the fire for cooking is built, there are the water-jars, and the stone for grinding corn; there the chickens and the dogs are; there crouch in the dirt women and men, the women spinning, making bread, or nursing children, the men in vacant idleness. While the women stir about and go for water, the men will sit still all day long. The amount of sitting down here in Egypt is inconceivable; you might almost call it the feature of the country. No one in the village knows anything, either of religion or of the world; no one has any plans; no one exhibits any interest in anything; can any of them have any hopes? From this life nearly everything but the animal is eliminated. Children, and pretty children, swarm, tumbling about everywhere; besides, nearly every woman has one in her arms.

We ought not to be vexed at this constant north wind which baffles us, for they say it is necessary to the proper filling out of the wheat heads. The boat drifts about all day in a mile square, having passed the morning on a sand-spit where the stupidity and laziness of the crew placed it; and we have leisure to explore the large town of Minieh, which lies prettily along the river. Here is a costly palace, which I believe has never been occupied by the Khedive, and a garden attached, less slovenly in condition than those of country palaces usually are. The sugar-factory is furnished with much costly machinery, which could not have been bought for less than half a million of dollars. Many of the private houses give evidences of wealth in their highly ornamented doorways and Moorish arches, but the mass of the town is of the usual sort here—tortuous lanes in which weary hundreds of people sit in dirt, poverty, and resignation. We met in the street and in the shops many coal-black Nubians and negroes, smartly dressed in the recent European style, having an impudent air, who seemed to be persons of wealth and consideration here. In the course of our wanderings I came to a large public building, built in galleries about an open court, and unwittingly in my examination of it, stumbled into the apartment of the Governor, Osman Bey, who was giving audience to all comers. Justice is still administered in patriarchal style; the door is open to all; rich and poor were crowding in, presenting petitions and papers of all sorts, and among them a woman preferred a request. Whether justice was really done did not appear, but Oriental hospitality is at least unflinching. Before I could withdraw, having discovered my blunder, the governor welcomed me with all politeness and gave me a seat beside him. We smiled at each other in Arabic and American, and came to a perfect understanding on coffee and cigarettes.

The next morning we are slowly passing the Copt convent of Gebel e' Tayr, and expecting the appearance of the swimming Christians. There is a good opportunity to board us, but no one appears. Perhaps because it is Sunday and these Christians do not swim on Sunday. No. We learn from a thinly clad and melancholy person who is regarding us from the rocks that the Khedive has forbidden this disagreeable exhibition of muscular Christianity. It was quite time. But thus, one by one, the attractions of the Nile vanish.

What a Sunday! But not an exceptional day. "Oh dear," says madame, in a tone of injury, "here's another fine day!" Although the north wind is strong, the air is soft, caressing, elastic.

More and more is forced upon us the contrast of the scenery of Upper and Lower Egypt. Here it is not simply that the river is wider and the mountains more removed and the arable land broader; the lines are all straight and horizontal, the mountain-ranges are level-topped, parallel to the flat prairies—at sunset a low level of white limestone hills in the east looked exactly like a long line of fence whitewashed. In Upper Egypt,

as we have said, the plains roll, the hills are broken, there are pyramidal mountains, and evidences of upheaval and disorder. But these wide sweeping and majestic lines have their charm; the sunsets and sunrises are in some respects finer than in Nubia; the tints are not so delicate, the colors not so pure, but the moister atmosphere and clouds make them more brilliant and various. The dawn, like the after-glow, is long; the sky burns half round with rose and pink, the color mounts high up. The sunsets are beyond praise, and always surprise. Last night the reflection in the east was of a color unseen before—almost a purple below and a rose above; and the west glowed for an hour in changing tints. The night was not less beautiful—we have a certain comfort in contrasting both with March in New England. It was summer; the Nile slept, the moon half-full, let the stars show; and as we glided swiftly down, the oars rising and falling to the murmured chorus of the rowers, there were deep shadows under the banks, and the stately palms, sentinelling the vast plain of moonlight over which we passed,—the great silence of an Egyptian night—seemed to remove us all into dreamland. The land was still, except for the creak of an occasional shadoof worked by some wise man who thinks it easier to draw water in the night than in the heat of the day, or an aroused wolfish dog, or a solitary bird piping on the shore.

Thus we go, thus we stay, in the delicious weather, encouraged now and again by a puff of southern wind, but held back from our destination by some mysterious angel of delay. But one day the wind comes, the sail is distended, the bow points downstream, and we move at the dizzy rate of five miles an hour.

It is a day of incomparable beauty. We see very little labor along the Nile; the crops are maturing. But the whole population comes to the river, to bathe, to sit in the shallows, to sit on the bank. All the afternoon we pass groups, men, women, children, motionless, the picture of idleness. There they are, hour after hour, in the sun. Women, coming for water, put down their jars, and bathe and frolic in the grateful stream. In some distant reaches of the river there are rows of women along the shore, exactly like the birds which stand in the shallow places or sun themselves on the sand. There are more than twenty miles of bathers, of all sexes and ages.

When at last we come to a long sand-reef, dotted with storks, cranes and pelicans, the critic says he is glad to see something with feathers on it.

We are in full tide of success and puffed up with confidence: it is perfectly easy to descend the Nile. All the latter part of the afternoon we are studying the False Pyramid of Maydoom, that structure, older than Cheops, built, like all the primitive monuments, in degrees, as the Tower of Babel was, as the Chaldean temples were. It lifts up, miles away from the river, only a broken mass from the *debris* at its base. We leave it behind. We shall be at Bedreshayn, for Memphis, before daylight. As we turn in, the critic says, "We've got the thing in our own hands now."

Alas! the Lord reached down and took it out. The wind chopped suddenly, and blew a gale from the north. At breakfast time we were waltzing round opposite the pyramids of Dashoor, liable to go aground on islands and sandbars, and unable to make the land. Determined not to lose the day, we anchored, took the sandal, had a long pull, against the gale, to Bedreshayn, and mounted donkeys for the ruins of ancient Memphis.

When Herodotus visited Memphis, probably about four hundred and fifty years before Christ, it was a great city. He makes special mention of its temple of Vulcan, whose priests gave him a circumstantial account of the building of the city by Menes, the first Pharaoh. Four hundred years later, Diodorus found it magnificent; about the beginning of the Christian era, Strabo says it was next in size to Alexandria. Although at the end of the twelfth century it had been systematically despoiled to build Cairo, an Arab traveler says that, "its ruins occupy a space half a day's journey every way," and that its wonders could not be described. Temples, palaces, gardens, villas, acres of common dwellings—the city covered this vast plain with its splendor and its squalor.

The traveler now needs a guide to discover a vestige, a stone here and there, of this once most magnificent capital. Here came Moses and Aaron, from the Israelitish settlement in the Delta, from Zoan (Tanis) probably, to beg Menephtah to let the Jews depart; here were performed the miracles of the Exodus. This is the Biblical Noph, against which burned the wrath of the prophets. "No (Heliopolis, or On) shall be rent asunder, and Noph shall have distresses daily." The decree *was* "published in Noph":—"Noph shall be waste and desolate without an inhabitant;" "I will cause their images to cease out of Noph."

The images have ceased, the temples have either been removed or have disappeared under the deposits of inundations; you would ride over old Memphis without knowing it, but the inhabitants have returned to this fertile and exuberant plain. It is only in the long range of pyramids and the great necropolis in the desert that you can find old Memphis.

The superabundant life of the region encountered us at once. At Bedreshayn is a ferry, and its boats were thronged, chiefly by women, coming and going, and always with a load of grain or other produce on the head. We rode round the town on an elevated dyke, lined with palms, and wound onward over a flat, rich with wheat and barley, to Mitrahenny, a little village in a splendid palm-grove. This marks the central spot of the ruins of old Memphis. Here are some mounds, here are found fragments of statues and cut stones, which are preserved in a temporary shelter. And here, lying on its side, in a hollow from which the water was just subsiding, is a polished colossal statue of Rameses II.—the Pharaoh who left more monuments of less achievements than any other "swell" of antiquity. The face is handsome, as all his statues are, and is probably conventionalized like our pictures of George Washington, or Napoleon's busts of himself. I confess to a feeling of perfect satisfaction at seeing his finely chiseled nose rooting in the mud.

This—some mounds, some fragments of stone, and the statue,—was all we saw of Memphis. But I should like to have spent a day in this lovely grove, which was carpeted with the only turf I saw in Egypt; reclining upon the old mounds in the shade, and pretending to think of Menes and Moses and Menephtah; and of Rhampsinitus, the king who "descended alive into the place which the Greeks call Hades, and there played at dice with Ceres, and sometimes won, and other times lost," and of the treasure-house he built here; and whether, as Herodotus believed, Helen, the beautiful cause of the Iliad, really once dwelt in a palace here, and whether Homer ever recited his epic in these streets.

We go on over the still rich plain to the village of Sakkarah—chiefly babies and small children. The cheerful

life of this prairie fills us with delight—flocks of sheep, herds of buffaloes, trains of dromedaries, hundreds of laborers of both sexes in the fields, children skylarking about; on every path are women, always with a basket on the head, their blue cotton gown (the only article of dress except a head-shawl,) open in front, blowing back so as to show their figures as they walk.

When we reach the desert we are in the presence of death—perhaps the most mournful sight on this earth is a necropolis in the desert, savage, sand-drifted, plundered, all its mounds dug over and over. We ride along at the bases of the pyramids. I stop at one, climb over the *débris* at its base, and break off a fragment of stone. The pyramid is of crumbling limestone, and, built in stages or degrees, like that of Maydoom; it is slowly becoming an unsightly heap. And it is time. This is believed to be the oldest structure in the world, except the Tower of Babel. It seems to have been the sepulchre of Keken, a king of the second dynasty. At this period hieroglyphic writing was developed, but the construction and ornamentation of the doorway of the pyramid exhibit art in its infancy. This would seem to show that the Egyptians did not emigrate from Asia with the developed and highly perfected art found in the sculptures of the tombs of the fourth, fifth, and sixth dynasties, as some have supposed, but that there was a growth, which was arrested later.

But no inference in regard to old Egypt is safe; a discovery tomorrow may upset it. Statues recently found, representing persons living in the third dynasty, present a different type of race from that shown in statues of the fourth and fifth dynasties. So that, in that period in which one might infer a growth of art, there may have been a change of the dominating race.

The first great work of Mariette Bey in Egypt—and it is a monument of his sagacity, enthusiasm, and determination, was the unearthing, in this waste of Memphis, the lost Serapeum and the Apis Mausoleum, the tombs of the sacred bulls. The remains of the temple are again covered with sand; but the visitor can explore the Mausoleum. He can walk, taper in hand, through endless galleries, hewn in the rock, passing between rows of gigantic granite sarcophagi, in which once rested the mummies of the sacred bulls. Living, the bull was daintily fed—the Nile water unfiltered was thought to be too fattening for him—and devotedly worshipped; and dying, he was entombed in a sepulchre as magnificent as that of kings, and his adorers lined the walls of his tomb with votive offerings. It is partly from these stelæ, or slabs with inscriptions, that Mariette Bey has added so much to our knowledge of Egyptian history.

Near the Serapeum is perhaps the most elegant tomb in Egypt, the tomb of Tih, who lived in the fifth dynasty, some time later than Cheops, but when hippopotami abounded in the river in front of his farm, Although Tih was a priest, he was a gentleman of elegant tastes, an agriculturist, a sportsman. He had a model farm, as you may see by the buildings and by the thousand details of good management here carved. His tomb does him great credit. In all the work of later times there is nothing so good as this sculpture, so free, so varied, so beautiful; it promises everything. Tih even had, what we do not expect in people of that early time, humor; you are sure of it from some of the pictures here. He must have taken delight in decorating his tomb, and have spent, altogether, some pleasant years in it before he occupied it finally; so that he had become accustomed to staying here.

But his rule was despotic, it was that of the “stick.” Egyptians have never changed in this respect, as we have remarked before. They are now, as then, under the despotism of some notion of governance—divine or human—despotic and fateful. The “stick” is as old as the monarchy; it appears in these tombs; as to day, nobody then worked or paid taxes without its application.

The sudden arrest of Egyptian art was also forced upon us next day, in a second visit to the pyramids of Geezeh. We spent most of the day in the tombs there. In some of them we saw the ovals of all the kings of the fourth dynasty, many of them perfect and fresh in color. As to drawing, cutting, variety, liveliness of attitude and color, there is nothing better, little so good, in tombs of recent date. We find almost every secular subject in the early tombs that is seen in the latest. In thousands of years, the Egyptians scarcely changed or made any progress. The figures of men and animals are better executed in these old tombs than in the later. Again, these tombs are free from the endless repetitions of gods and of offerings to them. The life of the people represented is more natural, less superstitious; common events are naively portrayed, with the humorous unconsciousness of a simple age; art has thought it not unworthy its skill to represent the fact in one tomb, that men acted as midwives to cows, in the dawn of history.

While we lay at Geezeh we visited one of the chicken-hatching establishments for which the Egyptians have been famous from a remote period. It was a very unpretending affair, in a dirty suburb of the town. We were admitted into a low mud-building, and into a passage with ovens on each side. In these ovens the eggs are spread upon mats, and the necessary fire is made underneath. The temperature is at 100° to 108° Fahrenheit. Each oven has a hole in the center, through which the naked attendant crawls to turn the eggs from time to time. The process requires usually twenty-one days, but some eggs hatch on the twentieth. The eggs are supplied by the peasants who usually receive, without charge, half as many chickens as they bring eggs. About one third of the eggs do not hatch. The hatching is only performed about three months in the year, during the spring.

In the passage, before one of the ovens, was a heap of soft chickens, perhaps half a bushel, which the attendant scraped together whenever they attempted to toddle off. We had the pleasure of taking up some handfuls of them. We also looked into the ovens, where there was a stir of life, and were permitted to hold some eggs while the occupants kicked off the shell.

I don't know that a plan will ever be invented by which eggs, as well as chickens, will be produced without the intervention of the hen. If one could be, it would leave the hen so much more time to scratch—it would relieve her from domestic cares so that she could take part in public affairs. The hen in Egypt is only partially emancipated, But since she is relieved from setting, I do not know that she is any better hen. She lays very small eggs.

This ends what I have to say about the hen. We have come to Cairo, and the world is again before us.

CHAPTER XXXIII.—THE KHEWIVE.

WHAT excitement there is in adjacency to a great city! To hear its inarticulate hum, to feel the thrill of its myriads, the magnetism of a vast society! How the pulse quickens at the mere sight of multitudes of buildings, and the overhanging haze of smoke and dust that covers a little from the sight of the angels the great human struggle and folly. How impatient one is to dive into the ocean of his fellows.

The stir of life has multiplied every hour in the past two days. The river swarms with boats, the banks are vocal with labor, traffic, merriment. This morning early we are dropping down past huge casernes full of soldiers—the bank is lined with them, thousands of them, bathing and washing their clothes, their gabble filling the air. We see again the lofty mosque of Mohamed Ali, the citadel of Salâdin, the forest of minarets above the brown roofs of the town. We pass the isle of Rhoda and the ample palaces of the Queen-Mother. We moor at Gezereh amid a great shoal of dahabeëhs, returned from High Egypt, deserted of their passengers, flags down, blinds closed—a spectacle to fill one with melancholy that so much pleasure is over.

The dahabeëhs usually discharge their passengers at Gezereh, above the bridge. If the boat goes below with baggage it is subject to a port-duty, as if it were a traveler,—besides the tax for passing the draw-bridge. We decide to remain some days on our boat, because it is comfortable, and because we want to postpone the dreaded breaking up of housekeeping, packing up our scattered effects, and moving. Having obtained permission to moor at the government dock below Kasr-el-Nil, we drop down there.

The first person to greet us there is Aboo Yusef, the owner. Behind him comes Habib Bagdadli, the little Jew partner. There is always that in his mien which says, "I was really born in Bagdad, but I know you still think I am a Jew from Algiers. No, gentlemens, you wrong a man to whom reputation is everything." But he is glad to see his boat safe; he expresses as much pleasure as one can throw from an eye with a cast in it. Aboo Yusef is radiant. He is attired gorgeously, in a new suit, from fresh turban to red slippers, on the profits of the voyage. His robe is silk, his sash is cashmere. He overflows with complimentary speech.

"Allah be praised, I see you safe."

"We have reason to be grateful."

"And that you had a good journey."

"A perfect journey."

"We have been made desolate by your absence; thank God, you have enjoyed the winter."

"I suppose you are glad to see the boat back safe also?"

"That is nothing, not to mention it, I not think of it; the return of the boat safe, that is nothing. I only think that you are safe. But it is a good boat. You will say it is the first-class of boats? And she goes up the cataract all right. Did I not say she go up the cataract? Abd-el-Atti he bear me witness."

"You did. You said so. Habib said so also. Was there any report here in Cairo that we could not go up?"

"Mashallah. Such news. The boat was lost in the cataract; the reïs was drowned. For the loss of the boat I did not care; only if you were safe."

"Did you hear that the cataract reises objected to take us up?"

"What rascals! They always make the traveler some trouble. But, Allah forgive us all, the head reïs is dead. Not so, Abd-el-Atti?"

"What, the old reïs that we said good-bye to only a little while ago at Assouan?"

"Him dead," says Abd-el-Atti. "I have this morning some conversation with a tradin' boat from the Cataract. Him dead shortly after we leave."

It was the first time it had ever occurred to me that one of these tough old Bedaween could die in the ordinary manner.

But alas his spirit was too powerful for his frame. We have not in this case the consolation of feeling that his

loss is our gain; for there are plenty more like him at the First Cataract. He took money from Aboo Yusef for *not* taking us up the Cataract, and he took money from us *for* taking us up. His account is balanced. He was an impartial man. Peace to his colored ashes.

Aboo Yusef and the little Jew took leave with increased demonstrations of affection, and repeated again and again their joy that we had ascended the Cataract and returned safe. The Jew, as I said, had a furtive look, but Aboo is open as the day. He is an Arab you would trust. I can scarcely believe that it was he and his partner who sent the bribe to the reïs of the Cataract to prevent our going up.

As we ride to town through the new part, the city looks exceedingly bright and attractive; the streets are very broad; the handsome square houses—ornamented villas, with balconies, pillared piazzas, painted with lively figures and in *bizarre* patterns—stand behind walls overgrown with the convolvulus, and in the midst of gardens; plats in the center of open spaces and at the angles of streets are gay with flowers in bloom—chiefly scarlet geraniums. The town wears a spring aspect, and would be altogether bright but for the dust which overlays everything, houses, streets, foliage. No amount of irrigation can brighten the dust-powdered trees.

When we came to Cairo last fall, fresh from European cities, it seemed very shabby. Now that we come from Upper Egypt, with our eyes trained to eight hundred miles of mud-hovels, Cairo is magnificent. But it is Cairo. There are just as many people squatting in the dust of the highways as when we last saw them, and they have the air of not having moved in three months. We ride to Shepherd's Hotel; there are twenty dragomans for every tourist who wants to go to Syria, there is the usual hurry of arrival and departure, and no one to be found; we call at the consul's: it is not his hour; we ride through the blindest ways to the bankers, in the Rosetti Gardens (don't imagine there is any garden there), they do no business from twelve to three. It is impossible to accomplish anything in Cairo without calm delay. And, falling into the mode, we find ourselves sauntering through one of the most picturesque quarters, the bazaar of Khan Khaléel, feasting the eye on the Oriental splendors of silks, embroidered stuffs, stiff with gold and silver, sown with pearls, antique Persian brasses, old arms of the followers of Saladin. How cool, how quiet it is. All the noises are soft. Noises enough there are, a babel of traffic, jostling, pushing, clamoring; and yet we have a sense of quiet in it all. There is no rudeness, no angularity, no glare of sun. At times you feel an underflow of silence. I know no place so convenient for meditation as the recesses of these intricate bazaars. Their unlikeness to the streets of other cities is mainly in the absence of any hard pavement. From the moment you come into the Mooskee, you strike a silent way, no noise of wheels or hoofs, nor footfalls of the crowd. It is this absence of footfall-patter which is always heard in our streets, that gives us the impression here of the underflow of silence.

Returning through the Ezbekeëh Park and through the new streets, we are glad we are not to judge the manhood of Egypt by the Young Egypt we meet here, nor the future of Egypt by the dissolute idlers of Cairo and Alexandria. From Cairo to Wady Halfeh we have seen men physically well developed, fine specimens of their race, and better in Nubia than in Egypt Proper; but these youths are feeble, and of unclean appearance, even in their smart European dress. They are not unlike the effeminate and gilded youth of Italy that one sees in the cities, or Parisians of the same class. Egypt, which needed a different importation, has added most of the vices of Europe to its own; it is noticeable that the Italians, who emigrate elsewhere little, come here in great numbers, and men and women alike take kindly to this loose feebleness. French as well as Italians adapt themselves easily to Eastern dissoluteness. The French have never shown in any part of the globe any prejudice against a mingling of races. The mixture here of the youths of the Latin races and the worn-out Orientals, who are a little polished by a lacquer of European vice, is not a good omen for Egypt. Happily such youths are feeble and, I trust, not to be found outside the two large cities.

The great question in Egypt, among foreigners and observers (there *is* no great question among the common people), is about the Khedive, Ismail Pasha, his policy and his real intentions with regard to the country. You will hear three distinct opinions; one from devout Moslems, another from the English, and a third from the Americans. The strict and conservative Moslems like none of the changes and innovations, and express not too much confidence in the Khedive's religion. He has bought pictures and statues for his palaces, he has marble images of himself, he has set up an equestrian statue in the street; all this is contrary to the religion. He introduces European manners and costumes, every government *employé* is obliged to wear European dress, except the tarboosh. What does he want with such a great army; why are the taxes so high, and growing higher every day?

With the Americans in Cairo, as a rule, the Khedive is popular; they sympathize with his ambition, and think that he has the good of Egypt at heart; almost uniformly they defend him. The English, generally, distrust the Khedive and criticise his every movement. Scarcely ever have I heard Englishmen speak well of the Khedive and his policy. They express a want of confidence in the sincerity of his efforts to suppress the slave-trade, for one thing. How much the fact that American officers are preferred in the Khedive's service has to do with the English and the American estimate, I do not know; the Americans are naturally preferred over all others, for in case of a European complication over Egypt they would have no entangling alliances.

The Americans point to what has actually been accomplished by the present Viceroy, the radical improvements in the direction of a better civilization, improvements which already change the aspect of Egypt to the most casual observer. There are the railroads, which intersect the Delta in all directions, and extend over two hundred and fifty miles up the Nile, and the adventurous iron track which is now following the line of the telegraph to distant Kartoom. There are the canals, the Sweet-Water that runs from Cairo and makes life on the Isthmus possible, and the network of irrigating canals and system of ditches, which have not only transformed the Delta, but have changed its climate, increasing enormously the rainfall. No one who has not seen it can have any conception of the magnitude of this irrigation by canals which all draw water from the Nile, nor of the immense number of laborers necessary to keep the canals in repair. Talk of the old Pharaohs, and their magnificent canals, projected or constructed, and their vaunted expeditions of conquest into Central Africa! Their achievements, take them all together, are not comparable to the marvels the Khedive is producing under our own eyes, in spite of a people ignorant, superstitious, reluctant. He does not simply make raids into Africa: he occupies vast territories, he has absolutely stopped the Nile slave-trade, he has converted the great slave-traders into his allies, by making it more their interest to develop legitimate commerce than to deal in flesh and blood; he has permanently opened a region twice as large as Egypt to

commercial intercourse; he sends explorers and scientific expeditions into the heart of Africa. It is true that he wastes money, that he is robbed and cheated by his servants, but he perseveres, and behold the results. Egypt is waking out of its sleep, it is annexing territory, and population by millions, it is becoming a power. And Ismail Pasha is the center and spring of the whole movement.

Look at Cairo! Since the introduction of gas, the opening of broad streets, the tearing down of some of the worst rookeries, the admission of sun and air, Cairo is exempt from the old epidemics, the general health is improved, and even that scourge, ophthalmia, has diminished. You know his decree forbidding early marriages; you know he has established and encourages schools for girls; you see what General Stone is doing in the education of the common soldiers, and in his training of those who show any aptitude in engineering, draughting, and the scientific accomplishments of the military profession.

Thus the warmest admirers of the Khedive speak. His despotism, which is now the most absolute in the world, perhaps, and least disputed, is referred to as a "personal government." And it is difficult to see how under present circumstances it could be anything else. There is absolutely in Egypt no material for anything else. The Khedive has annually summoned for several years, a sort of parliament of the chief men of Egypt, for information and consultation. At first it was difficult to induce the members to say a word, to give any information or utter an opinion. It is a new thing in a despotic government, the shadow even of a parliament.

An English gentleman in Cairo, and a very intelligent man, gives the Khedive credit for nothing but a selfish desire to enrich himself, to establish his own family, and to enjoy the traditional pleasures of the Orient.

"But he is suppressing the slave-trade."

"He is trying to make England believe so. Slaves still come to Cairo; not so many down the Nile, but by the desert. I found a slave-den in some desert tombs once over the other side the river; horrible treatment of women and children; a caravan came from Darfour by way of Assiout."

"But that route is cut off by the capture of Darfour."

"Well, you'll see; slaves will come if they are wanted. Why, look at the Khedive's harem!"

"He hasn't so many wives as Solomon, who had seven hundred; the Khedive has only four."

"Yes, but he has more concubines; Solomon kept only three hundred, the Khedive has four hundred and fifty, and perhaps nearer five hundred. Some of them are beautiful Circassians for whom it is said he paid as much as £2000 and even £3000 sterling."

"I suppose that is an outside price."

"Of course, but think of the cost of keeping them. Then, each of his four wives has her separate palace and establishment. Rather an expensive family."

"Almost as costly as the royal family of England."

"That's another affair; to say nothing of the difference of income. The five hundred, more or less, concubines are under the charge of the Queen-mother, but they have *carte blanche* in indulgence in jewels, dress, and all that. They wear the most costly Paris modes. They spend enormous sums in pearls and diamonds. They have their palaces refurnished whenever the whim seizes them, re-decorated in European style. Where does the money come from? You can see that Egypt is taxed to death. I heard to-day that the Khedive was paying seventeen per cent, for money, money borrowed to pay the interest on his private debts. What does he do with the money he raises?"

"Spends a good deal of it on his improvements, canals, railroads, on his army."

"I think he runs in debt for his improvements. Look again at his family. He has something like forty palaces, costing from one half-million to a million dollars each; some of them, which he built, he has never occupied, many of them are empty, many of those of his predecessors, which would lodge a thousand people, are going to decay; and yet he is building new ones all the time. There are two or three in process of erection on the road to the pyramids."

"Perhaps they are for his sons or for his high officers? Victor Emanuel, whose treasury is in somewhat the condition of the Khedive's, has a palace in every city of Italy, and yet he builds more."

"If the Khedive is building for his children, I give it up. He has somewhere between twenty and thirty acknowledged children. But he does give away palaces and houses. When he has done with a pretty slave, he may give her, with a palace or a fine house here in town, to a favorite officer. I can show you houses here that were taken away from their owners, at a price fixed by the Khedive and not by the owner, because the Viceroy wanted them to give away with one or another of his concubines."

"I suppose that is Oriental custom."

"I thought you Americans defended the Khedive on account of his progressive spirit."

"He is a man who is accomplishing wonders, trammelled as he is by usages thousands of years old, which appear monstrous to us, but are to him as natural as any other Oriental condition. Yet I confess that he stands in very contradictory lights. If he knew it, he could do the greatest service to Egypt by abolishing his harem of concubines, converting it into—I don't know what—a convent, or a boarding-school, or a milliner's shop, or an establishment for canning fruit—and then set the example of living, openly, with one wife."

"Wait till he does. And you talk about the condition of Egypt! Every palm-tree, and every sakiya is taxed, and the tax has doubled within a few years. The taxes are now from one pound and a half to three pounds an acre on all lands not owned by him."

"In many cases, I know this is not a high tax (compared with taxes elsewhere) considering the yield of the land, and the enormous cost of the irrigating canals."

"It is high for such managers as the fellahs. But they will not have to complain long. The Khedive is getting into his own hands all the lands of Egypt. He owns I think a third of it now, and probably half of it is in his family; and this is much the better land."

"History repeats itself in Egypt. He is following the example of Joseph who, you know, taking advantage of the famine, wrung all the land, except that in possession of the priests, from the people, and made it over to Pharaoh; by Joseph's management the king owned, before the famine was over, not only all the land, but all

the money, all the cattle, and all the people of Egypt. And he let the land to them for a fifth of its increase."

"I don't know that it is any better because Egypt is used to it. Joseph was a Jew. The Khedive pretends to be influenced by the highest motives, the elevation of the condition of the people, the regeneration of Egypt."

"I think he is sincerely trying to improve Egypt and the Egyptians. Of course a despot, reared in Oriental prejudices, is slow to see that you can't make a nation except by making men; that you can't make a rich nation unless individuals have free scope to accumulate property. I confess that the chief complaint I heard up the river was, that no one dared to show that he had any money, or to engage in extensive business, for fear he would be 'squeezed.'"

"So he would be. The Khedive has some sixteen sugar-factories, worked by forced labor, very poorly paid. They ought to be very profitable."

"They are not."

"Well, he wants more money, at any rate. I have just heard that he is resorting to a forced loan, in the form of bonds. A land-owner is required to buy them in the proportion of one dollar and a half for each acre he owns; and he is to receive seven per cent, interest on the bonds. In Cairo a person is required to take these bonds in a certain proportion on his personal property. And it is said that the bonds are not transferable, and that they will be worthless to the heirs. I heard of this new dodge from a Copt."

"I suppose the Khedive's friends would say that he is trying to change Egypt in a day, whereas it is the work of generations."

When we returned to the dahabeëh we had a specimen of "personal government." Abd-el-Atti was standing on the deck, slipping his beads, and looking down.

"What has happened?"

"Ahman, been took him."

"Who took him?"

"Police, been grab him first time he go 'shore, and lock him up."

"What had he been doing?"

"Nothing he been done; I send him uptown of errand; police catch him right out there."

"What for?"

"Take him down to Soudan to work; the vice-royal he issue an order for the police to catch all the black fellows in Cairo, and take 'em to the Soudan, down to Gondokora for what I know, to work the land there."

"But Ahman is our servant; he can't be seized."

"Oh, I know, Ahman belong to me, he was my slave till I give him liberty; I go to get him out directly. These people know me, I get him off."

"But if you had no influence with the police, Ahman would be dragged off to Soudan to work in a cotton or rice field?"

"Lots of black fellows like him sent off. But I get him back, don't you have worry. What the vice-royal to do with my servant—I don't care if he Kin' of Constantinople!"

Sure enough, early in the evening the handsome Abyssinian boy came back, none the worse, except for a thorough scare, eyes and teeth shining, and bursting into his usual hearty laugh upon allusion to his capture.

"Police *tyeb*?"

"*Moosh-tyeb*" ("bad"), with an explosion of merriment.

The boy hadn't given himself much uneasiness, for he regards his master as his Providence.

We are moored at the dock and below the lock of the Sweet-Water Canal which runs to Ismailia. A dredge-boat lies in the entrance, and we have an opportunity of seeing how government labor is performed; we can understand why it is that so many laborers are needed, and that the great present want of Egypt is stout and willing arms.

In the entrance of the canal and in front of the lock is a flat-boat upon which are fifteen men. They have two iron scoops, which would hold about a gallon each; to each is attached a long pole and a rope. Two men jab the pole down and hold the pot on the bottom, while half a dozen pull leisurely on the rope, with a "*yah-sah*" or other chorus, and haul in the load; when it comes up, a man scrapes out the mud with his hand, sometimes not getting more than two quarts. It is very restful to watch their unexhausting toil. It takes several minutes to capture a pot of sand. There are fifteen men at this spoon-work, but one scoop is only kept going at a time. After it is emptied, the men stop and look about, converse a little, and get ready for another effort, standing meantime in liquid mud, ankle deep. When they have rested, over goes the scoop again, and the men stand to the rope, and pull feebly, but only at intervals, that is when they sing the response to the line of the leader. The programme of singing and pulling is something like this:

Salee ah nadd (voice of the leader).

Yalee, halee (chorus, pull altogether).

Salee ah nadd.

Yalee, halee (pull).

Salee ah nadd.

Yalee, halee (pull).

And the outcome of three or four minutes of hauling and noise enough to raise a ton, is about a quart of mud!

The river panorama is always varied and entertaining, and we are of a divided mind between a lazy inclination to sit here and watch the busy idleness of the population, or address ourselves to the much that still remains to be seen in Cairo. I ought to speak, however, of an American sensation on the river. This is a little steam-yacht—fifty feet long by seven and a half broad—which we saw up the Nile, where it attracted more attention along the banks than anything else this season. I call it American, because it carries the

American flag and is owned by a New-York art student, Mr. Anderson, and an English-American, Mr. Medler; but the yacht was built in London, and shipped on a large steamboat to Alexandria. It is the first steam-vessel, I believe, carrying anything except Egyptian (or Turkish) colors that has ever been permitted to ascend the Nile. We took a trip on it one fine morning up to Helwân, and enjoyed the animation of its saucy speed. When put to its best, it makes eighteen miles an hour; but life would not be as long on it as it is on a dahabeëh. At Helwân are some hot sulphur-springs, famous and much resorted to in the days of the Pharaohs, and just now becoming fashionable again.

Our days pass we can hardly say how, while we wait for the proper season for Syria, and regard the invincible obstacles that debar us from the longed-for desert journey to Sinai and Arabia Petra. The bazaars are always a refuge from the heat, a never-failing entertainment. We spend hours in lounging through them. We lunch at the shops of the sweatmeat makers, on bread, pistachio-nuts, conserve of roses, I know not what, and Nile-water, with fingans of coffee fetched hot and creamy from the shop near by. We give a copper to an occasional beggar: for beggars are few in the street, and these are either blind or very poor, or derweeshes; and to all these, being regarded as Allah's poor, the Moslems give cheerfully, for charity is a part of their religion. We like also to stand at the doors of the artisans. There is a street where all the workmen are still making the old flint-lock guns and pistols, and the firearms with the flaring blunderbuss muzzles, as if the object was to scatter the charge, and hit a great many people but to kill none. I think the peace society would do well to encourage this kind of gun. There are shops also where a man sits before a heap of flint-chalk, chipping the stone with a flat iron mallet, and forming the flints for the antiquated locks.

We happen to come often in our wanderings, the distinction being a matter of luck, upon a very interesting old city-gate of one of the quarters. The gate itself is a wooden one of two leaves, crossed with iron bands fastened with heavy spikes, and not remarkable except as an illustration of one of the popular superstitions of the Arabs. The wood is driven full of nails, bits of rags flutter on it, and human teeth are crowded under the iron bands. It is believed that if a person afflicted with headache will drive a nail into this door he will never have the headache again. Other ills are relieved by other offerings, bits of rag, teeth, etc. It would seem to be a pretty sure cure for toothache to leave the tooth in this gate. The Arabs are called the most superstitious of peoples, they wear charms against the evil-eye ("charm from the eye of girl, sharper than a spike; charm from the eye of boy, more painful than a whip"), and they have a thousand absurd practices. Yet we can match most of them in Christian communities.

How patiently all the people work, and wait. Complaints are rare. The only reproof I ever received was from a donkey-boy, whom I had kept waiting late one evening at the Hotel Nil. When I roused him from his sleep on the ground, he asked, with an accent of weariness, "how much clock you got?"

By the twenty-third day of March it is getting warm; the thermometer is 81°. It is not simply the heat, but the Khâmaseen, the south wind, the smoky air, the dust in the city, the languor. To-day it rained a few drops, and looked threatening, just as it does in a hot summer day at home. The outskirts of Cairo are enveloped in dust, and the heat begins to simmer over the palaces and gardens. The travelers are leaving. The sharp traders, Jews from Bagdad, Syrians, Jews from Constantinople, Greeks, Armenians from Damascus, all sorts, are packing up their goods, in order to meet the traveler and fleece him again in Jerusalem, in Beyrout, in Damascus, in Smyrna, on the Golden Horn. In the outskirts, especially on the open grounds by the canal, are the coffee-booths and dance-shanties—rows of the disreputable. The life, always out of doors even in the winter, is now more flamboyantly displayed in these open and verandahed dwellings; there is a yielding to the relaxation of summer. We hear at night, as we sit on the deck of our dahabeëh, the throbbing of the darabookah-drum and the monotonous song of the dissolute ones.

CHAPTER XXXIV.—THE WOODEN MAN.

THE Khedive and his court, if it may be so called, are not hedged in by any formidable barriers; but there are peculiarities of etiquette. When his Highness gives a grand ball and public reception, of course only the male members of his household are present, only the men of the Egyptian society; it would in fact be a male assembly but for the foreign ladies visiting or residing in the city. Of course there cannot be any such thing as "society" under such circumstances; and as there are no women to regulate the ball invitations, the assembly is "mixed." There is no such thing as reciprocity with the Arabs and Turks; they are willing to meet the wives or the female friends of all foreigners; they never show their own.

If a lady visiting Cairo wishes to visit one of the royal harems, it is necessary that her husband or some gentleman of her party, should first be presented to the Khedive. After this ceremony, notice is received through the chamberlain of the Viceroy that the lady will be received on such a day and hour, in a palace named, by her Highness So So. Which Highness? That you can never tell before the notice is received. It is a matter of royal convenience at the time. In a family so large and varied as that of the Khedive, you can only be presented to a fragment of it. You may be received by one of his wives; it may please the Queen, mother, who is in charge of his largest harem, to do the honors or the wife of the heir-apparent, or of one of the younger sons, may open her doors to you. I suppose it is a good deal a matter of whim with the inmates of the harem; sometimes they are tired of seeing strangers and of dressing for them. Usually they are eager to break the monotony of their lives with a visit that promises to show them a new costume. There is only one condition made as to the dress of the lady who is to be received at a royal harem; she must not wear black, there is a superstition connected with a black dress, it puts the inmates of the harem in low spirits. Gentlemen presented to the Khedive wear the usual evening dress.

The Khedive's winter-residence is the Palace of Abdeen, not far from the Ezbekeëh, and it was there that Dr. Lamborn and myself were presented to his highness by Mr. Beardsley, our consul-general. Nothing regal could be more simple or less ceremonious. We arrived at the door at the moment fixed, for the Khedive is a man of promptness and I imagine has his entire day parcelled out in engagements. We first entered a spacious entrance-hall, from which a broad stairway leads to the first story; here were thirty or forty janizaries, gentlemen-in-waiting, and eunuchs, standing motionless, at the sides, and guarding the approach to the stairway, in reception attitudes. Here we were received by an attendant who conducted us to a room on the left, where we were introduced to the chamberlain, and deposited our outer coats and hats. The chamberlain then led us to the foot of the stairs, but accompanied us no further; we ascended to the first landing, and turning to another broad stairway saw the Khedive awaiting us at the head of it. He was unattended; indeed we saw no officer or servant on this floor. The furniture above and below was European, except the rich, thick carpets of Turkey and Persia.

His Highness, who wore a dress altogether European except the fez, received us cordially, shaking hands and speaking with simplicity, as a private gentleman might, and, wasting no time in Oriental compliments, led the way to a small reception-room furnished in blue satin. We were seated together in a corner of the apartment, and an animated talk at once began. Dr. Lamborn's special errand was to ascertain whether Egypt would be represented in our Centennial, about which the Khedive was well informed. The conversation then passed to the material condition of Egypt, the development of its resources, its canals and railroads, and especially the new road into Soudan, and the opening of Darfour. The Khedive listened attentively to any practical information, either about railroads, factories, or agriculture, that my companion was able to give him, and had the air of a man eager to seize any idea that might be for the advancement of Egypt; when he himself spoke, it was with vivacity, shrewdness, and good sense. And he is not without a gleam of humor now and then,—a very hopeful quality in a sovereign and especially in an Oriental ruler.

The Khedive, in short, is a person to inspire confidence; he appears to be an able, energetic man of affairs, quick and resolute; there is not the slightest stiffness or "divine right" pretence in his manner. He is short, perhaps five feet seven or eight inches in height, and stout. He has a well-proportioned, solid head, good features, light complexion, and a heavy, strong jaw, which his closely-trimmed beard does not conceal. I am not sure that the penetration of his glance does not gain a little from a slight defect in one eye—the result of ophthalmia in his boyhood.

When the interview had lasted about fifteen minutes, the Khedive ended it by rising; at the head of the stairs we shook hands and exchanged the proper speeches; at the bottom of the first flight we turned and bowed, his highness still standing and bowing, and then we saw him no more. As we passed out an order had come from above which set the whole household in a flurry of preparation, a running hither and thither as for speedy departure—the sort of haste that is mingled with fear, as for the command of a power that will not brook an instant's delay.

Exaggerated notions are current about harems and harem-receptions, notions born partly of the seclusion of the female portion of the household in the East. Of course the majority of harems in Egypt are simply the apartment of the one wife and her children. The lady who enters one of them pays an ordinary call, and finds no mystery whatever. If there is more than one wife, a privileged visitor, able to converse with the inmates, might find some skeletons behind the screened windows. It is also true that a foreign lady may enter one of the royal harems and be received with scarcely more ceremony than would attend an ordinary call at home. The receptions at which there is great display, at which crowds of beautiful or ugly slaves line the apartments, at which there is music and dancing by almehs, an endless service of sweets and pipes and coffee, and a dozen changes of dress by the hostess during the ceremony, are not frequent, are for some special occasion, the celebration of a marriage, or the entertainment of a visitor of high rank. One who expects, upon a royal invitation to the harem, to wander into the populous dove-cote of the Khedive, where languish the beauties of Asia, the sisters from the Gardens of Gul, pining for a new robe of the mode from Paris, will be most cruelly disappointed.

But a harem remains a harem, in the imagination. The ladies went one day to the house—I suppose it is a harem—of Hussein, the waiter who has served us with unremitting fidelity and cleverness. The house was one

of the ordinary sort of unburnt brick, very humble, but perfectly tidy and bright. The secret of its cheerfulness was in a nice, cheery, happy little wife, who made a home for Hussein such as it was a pleasure to see in Egypt. They had four children, the eldest a daughter, twelve years old and very good-mannered and pretty. As she was of marriageable age, her parents were beginning to think of settling her in life.

"What a nice girl she is, Hussein," says Madame.

"Yes'm," says Hussein, waving his hands in his usual struggle with the English language, and uttering the longest speech ever heard from him in that tongue, but still speaking as if about something at table, "yes'm; good man have it; bad man, drinkin' man, smokin' man, eatin' man not have it."

I will describe briefly two royal presentations, one to the favorite wife of the Khedive, the other to the wife of Mohammed Tufik Pasha, the eldest son and heir-apparent, according to the late revolution in the rules of descent. French, the court language, is spoken not only by the Khedive but by all the ladies of his family who receive foreigners. The lady who was presented to the Khedive's wife, after passing the usual guard of eunuchs in the palace, was escorted through a long suite of showy apartments. In each one she was introduced to a maid of honor who escorted her to the next, each lady-in-waiting being more richly attired than her predecessor, and the lady was always thinking that *now* this one must be the princess herself. Female slaves were in every room, and a great number of them waited in the hall where the princess received her visitor. She was a strikingly handsome woman, dressed in pink satin and encrusted with diamonds. The conversation consisted chiefly of the most exaggerated and barefaced compliments on both sides, both as to articles of apparel and personal appearance. Coffee, cigarettes, and sweets without end, in cups of gold set with precious stones, were served by the female slaves. The wife was evidently delighted with the impression made by her beauty, her jewels, and her rich dress.

The wife of Tufik Pasha received at one of the palaces in the suburbs. At the door eunuchs were in waiting to conduct the visitors up the flight of marble steps, and to deliver them to female slaves in waiting. Passing up several broad stairways, they were ushered into a grand reception-hall furnished in European style, except the divans. Only a few servants were in attendance, and they were white female slaves. The princess is *petite*, pretty, intelligent, and attractive. She received her visitors with entire simplicity, and without ceremony, as a lady would receive callers in America. The conversation ran on the opera, the travel on the Nile, and topics of the town. Coffee and cigarettes were offered, and the sensible interview ended like an occidental visit. It is a little disenchanting, all this adoption of European customs; but the wife of Tufik Pasha should ask him to go a little further, and send all the eunuchs out of the palace.

We had believed that summer was come. But we learned that March in Cairo is, like the same month the world over, treacherous. The morning of the twenty-sixth was cold, the thermometer 60°. A north wind began to blow, and by afternoon increased to a gale, such as had not been known here for years. The town was enveloped in a whirlwind of sand; everything loose was shaking and flying; it was impossible to see one's way, and people scudding about the streets with their heads drawn under their robes continually dashed into each other. The sun was wholly hidden. From our boat we could see only a few rods over the turbulent river. The air was so thick with sand, that it had the appearance of a yellow canvas. The desert had invaded the air—that was all. The effect of the light through this was extremely weird; not like a dark day of clouds and storm in New England, but a pale, yellowish, greenish, phantasmagoric light, which seemed to presage calamity. Such a light as may be at the Judgment Day. Cairo friends who dined with us said they had never seen such a day in Egypt. Dahabeëhs were torn from their moorings; trees were blown down in the Ezbekëeh Gardens.

We spent the day, as we had spent other days, in the Museum of Antiquities at Boulak. This wonderful collection, which is the work of Mariette Bey, had a thousand times more interest for us now than before we made the Nile voyage and acquired some knowledge of ancient Egypt through its monuments. Everything that we saw had meaning—statues, mummy-cases, images, scarabæi, seals, stelæ, gold jewelry, and the simple articles in domestic use.

It must be confessed that to a person uninformed about Egypt and unaccustomed to its ancient art, there is nothing in the world so dreary as a collection of its antiquities. The endless repetition of designs, the unyielding rigidity of forms, the hideous mingling of the human and the bestial, the dead formality, are insufferably wearisome. The mummy is thoroughly disagreeable. You can easily hate him and all his belongings; there is an air of infinite conceit about him; I feel it in the exclusive box in which he stands, in the smirk of his face painted on his case. I wonder if it is the perkishness of immortality—as if his race alone were immortal. His very calmness, like that of so many of the statues he made, is an offensive contempt. It is no doubt unreasonable, but as a living person I resent this intrusion of a preserved dead person into our warm times,—an appearance anachronistic and repellent.

But as an illustration of Egyptian customs, art, and history, the Boulak museum is almost a fascinating place. True it is not so rich in many respects as some European collections of Egyptian antiquities, but it has some objects that are unique; for instance, the jewels of Queen Aah-hotep, a few statues, and some stelæ, which furnish the most important information.

This is not the place, had I the knowledge, to enter upon any discussion of the antiquity of these monuments or of Egyptian chronology. I believe I am not mistaken, however, in saying that the discoveries of Mariette Bey tend strongly to establish the credit of the long undervalued list of Egyptian sovereigns made by Manetho, and that many Oriental scholars agree with the director of this museum that the date of the first Egyptian dynasty is about five thousand years before the Christian era. But the almost startling thought presented by this collection is not in the antiquity of some of these objects, but in the long civilization anterior to their production, and which must have been necessary to the growth of the art here exhibited.

It could not have been a barbarous people who produced, for instance, these life-like images found at Maydoom, statues of a prince and princess who lived under the ancient king Snéfrou, the last sovereign of the third dynasty, and the predecessor of Cheops. At no epoch, says M. Mariette, did Egypt produce portraits more speaking, though they want the breadth of style of the statue in wood—of which more anon. But it is as much in an ethnographic as an art view that these statues are important. If the Egyptian race at that epoch was of the type offered by these portraits, it resembled in nothing the race which inhabited the north of Egypt

not many years after Snéfrou. To comprehend the problem here presented we have only to compare the features of these statues with those of others in this collection belonging to the fourth and fifth dynasties.

The best work of art in the Museum is the statue of Chephron, the builder of the second pyramid. "The epoch of Chephron," says M. Mariette, "corresponding to the third reign of the fourth dynasty of Manetho, our statue is not less than six thousand years old." It is a life-size sitting figure, executed in red granite. We admire its tranquil majesty, we marvel at the close study of nature in the moulding of the breast and limbs, we confess the skill that could produce an effect so fine in such intractable material. It seems as if Egyptian art were about to burst its trammels. But it never did; it never exceeded this cleverness; on the contrary it constantly fell away from it.

The most interesting statue to us, and perhaps the oldest image in Egypt, and, if so, in the world, is the Wooden Man, which was found at Memphis. This image, one metre and ten centimetres high, stands erect, holding a staff. The figure is full of life, the *pose* expresses vigor, action, pride, the head, round in form, indicates intellect. The eyes are crystal, in a setting of bronze, giving a startling look of life to the regard. It is no doubt a portrait. "There is nothing more striking," says its discoverer, "than this image, in a manner living, of a person who has been dead six thousand years." He must have been a man of mark, and a citizen of a state well-civilized; this is not the portrait of a barbarian, nor was it carved by a rude artist. Few artists, I think, have lived since, who could impart more vitality to wood.

And if the date assigned to this statue is correct, sculpture in Egypt attained its maximum of development six thousand years ago. This conclusion will be resisted by many, and on different grounds. I heard a clergyman of the Church of England say to his comrade, as they were looking at this figure:—

"It's all nonsense; six thousand years! It couldn't be. That's before the creation of man."

"Well," said the other, irreverently, "perhaps this was the model."

This museum is for the historian, the archaeologist, not for the artist, except in his study of the history of art. What Egypt had to impart to the world of art was given thousands of years ago—intimations, suggestions, outlines that, in freer circumstances, expanded into works of immortal beauty. The highest beauty, that last touch of genius, that creative inspiration which is genius and not mere talent, Egyptian art never attained. It achieved wonders; they are all mediocre wonders; miracles of talent. The architecture profoundly impresses, almost crushes one; it never touches the highest in the soul, it never charms, it never satisfies.

The total impression upon myself of this ancient architecture and this plastic art is a melancholy one. And I think this is not altogether due to its monotony. The Egyptian art is said to be *sui generis*; it has a character that is instantly recognized; whenever and wherever we see a specimen of it, we say without fear of mistake, "that is Egyptian." We are as sure of it as we are of a piece of Greek work of the best age, perhaps surer. Is Egyptian art, then, elevated to the dignity of a type, of itself? Is it so to be studied, as something which has flowered into a perfection of its kind? I know we are accustomed to look at it as if it were, and to set it apart; in short, I have heard it judged absolutely, as if it were a rule to itself. I cannot bring myself so to look at it. All art is one. We recognize peculiarities of an age or of a people; but there is only one absolute standard; to that touchstone all must come.

It seems to me then that the melancholy impression produced by Egyptian art is not alone from its monotony, its rigidity, its stiff formality, but it is because we recognize in it an arrested development. It is archaic. The peculiarity of it is that it always remained archaic. We have seen specimens of the earliest Etruscan figure-drawing, Gen. Cesnola found in Cyprus Phoenician work, and we have statues of an earlier period of Greek sculpture, all of which more or less resemble Egyptian art. The latter are the beginnings of a consummate development. Egypt stopped at the beginnings. And we have the sad spectacle of an archaic art, not growing, but elaborated into a fixed type and adhered to as if it were perfection. In some of the figures I have spoken of in this museum, you can find that art was about to emancipate itself. In all later works you see no such effort, no such tendency, no such hope. It had been abandoned. By and by impulse died out entirely. For thousands of years the Egyptians worked at perfecting the mediocre. Many attribute this remote and total repression to religious influence. Something of the same sort may be seen in the paintings of saints in the Greek chambers of the East to-day; the type of which is that of the Byzantine period. Are we to attribute a like arrest of development in China to the same cause?

It is a theory very plausibly sustained, that the art of a people is the flower of its civilization, the final expression of the conditions of its growth and its character. In reading Mr. Taine's ingenious observations upon art in the Netherlands and art in Greece, we are ready to assent to the theory. It may be the general law of a free development in national life and in art. If it is, then it is not disturbed by the example of Egypt. Egyptian art is not the expression of the natural character, for its art was never developed. The Egyptians were a joyous race, given to mirth, to the dance, to entertainments, to the charms of society, a people rather gay than grave; they lived in the open air, in the most friendly climate in the world. The sculptures in the early tombs represent their life—an existence full of gaiety, grace, humor. This natural character is not expressed in the sombre temples, nor in their symbolic carvings, nor in these serious, rigid statues, whose calm faces look straight on as if into eternity. This art may express the religion of the priestly caste; when it had attained the power to portray the rigid expectation of immortality, the inscrutable repose of the Sphinx, it was arrested there, and never allowed in any respect to change its formality. And I cannot but believe that if it had been free, Egyptian art would have budded and bloomed into a grace of form in harmony with the character of the climate and the people.

It is true that the architecture of Egypt was freer than its sculptures, but the whole of it together is not worth one edifice like the Greek temple at Pæstum. And to end, by what may seem a sweeping statement, I have had more pleasure from a bit of Greek work—an intaglio, or a coin of the best period, or the sculptures on a broken entablature—than from anything that Egypt ever produced in art.

CHAPTER XXXV.—ON THE WAY HOME.

FOR two days after the sand-storm, it gives us pleasure to write, the weather was cold, raw, thoroughly unpleasant, resembling dear New England quite enough to make one homesick. As late as the twenty-eighth of March, this was. The fact may be a comfort to those who dwell in a region where winter takes a fresh hold in March.

We broke up our establishment on the dahabeëh and moved to the hotel, abandoning I know not how many curiosities, antiquities and specimens, the possession of which had once seemed to us of the last importance. I shall spare you the scene at parting with our crew. It would have been very touching, but for the backsheesh. Some of them were faithful fellows to whom we were attached; some of them were graceless scamps. But they all received backsheesh. That is always the way. It was clearly understood that we should reward only the deserving, and we had again and again resolved not to give a piastre to certain ones of the crew. But, at the end, the obdurate howadji always softens; and the Egyptians know that he will. Egypt is full of good-for-nothings who have not only received presents but certificates of character from travelers whom they have disobliged for three months. There was, however, some discrimination in this case; backsheesh was distributed with some regard to good conduct; at the formal judgment on deck, Abd-el-Atti acted the part of Thoth in weighing out the portions, and my friend took the *rôle* of Osiris, receiving, vicariously for all of us, the kisses on his hand of the grateful crew. I shall not be misunderstood in saying that the faithful Soudan boy, Gohah, would have felt just as much grief in bidding us good-bye if he had not received a penny (the rest of the crew would have been inconsolable in like case); his service was always marked by an affectionate devotion without any thought of reward. He must have had a magnanimous soul to forgive us for the doses we gave him when he was ill during the voyage.

We are waiting in Cairo professedly for the weather to become settled and pleasant in Syria—which does not happen, one year with another, till after the first of April; but we are contented, for the novelties of the town are inexhaustible, and we are never weary of its animation and picturesque movement. I suppose I should be held in low estimation if I said nothing concerning the baths of Cairo. It is expected of every traveler that he will describe them, or one at least—one is usually sufficient. Indeed when I have read these descriptions, I have wondered how the writers lived to tell their story. When a person has been for hours roasted and stifled, and had all his bones broken, you could not reasonably expect him to write so powerfully of the bath as many travelers write who are so treated. I think these bath descriptions are among the marvels of Oriental literature; Mr. Longfellow says of the Roman Catholic system, that it is a religion of the deepest dungeons and the highest towers; the Oriental bath (in literature) is like this; the unwashed infidel is first plunged in a gulf of dark despair, and then he is elevated to a physical bliss that is ecstatic. The story is too long at each end.

I had experience of several different baths in Cairo, and I invariably found them less vigorous, that is milder in treatment, than the Turkish baths of New York or of Germany. With the Orientals the bath is a luxury, a thing to be enjoyed, and not an affair of extreme shocks and brutal surprises. In the bath itself there is never the excessive heat that I have experienced in such baths in New York, nor the sudden change of temperature in water, nor the vigorous manipulation. The Cairo bath, in my experience, is gentle, moderate, enjoyable. The heat of the rooms is never excessive, the air is very moist, and water flows abundantly over the marble floors; the attendants are apt to be too lazy to maltreat the bather, and perhaps err in gentleness. You are never roasted in a dry air and then plunged suddenly into cold water. I do not wonder that the Orientals are fond of their bath. The baths abound, for men and for women, and the natives pay a very small sum for the privilege of using them. Women make up parties, and spend a good part of the day in a bath; having an entertainment there sometimes, and a frolic. It is said that mothers sometimes choose wives for their sons from girls they see at the baths. Some of them are used by men in the forenoon and by women in the afternoon, and I have seen a great crowd of veiled women waiting at the door at noon. There must be over seventy-five of these public baths in Cairo.

As the harem had not yet gone over to the Gezeereh palace, we took the opportunity to visit it. This palace was built by the Khedive, on what was the island of Gezeereh, when a branch of the Nile was suffered to run to the west of its present area. The ground is now the seat of gardens, and of the most interesting botanical and horticultural experiments on the part of the Khedive, under charge of competent scientific men. A botanist or an arboriculturist would find material in the nurseries for long study. I was chiefly interested (since I half believe in the malevolence of some plants) in a sort of murderous East Indian cane, which grows about fifteen to twenty feet high, and so rapidly that (we were told) it attains its growth in a day or two. At any rate, it thrusts up its stalks so vigorously and rapidly that Indian tyrants have employed it to execute

criminals. The victim is bound to the ground over a bed of this cane at night, and in the morning it has grown up through his body. We need such a vengeful vegetable as this in our country, to plant round the edges of our city gardens.

The grounds about the palace are prettily, but formally laid out in flower-gardens, with fountains and a kiosk in the style of the Alhambra. Near by is a hot-house, with one of the best collections of orchids in the world; and not far off is the zoological garden, containing a menagerie of African birds and beasts, very well arranged and said to be nearly complete.

The palace is a square building of iron and stucco, the light pillars and piazzas painted in Saracenic designs and Persian colors, but the whole rather dingy, and beginning to be shabby. Inside it is at once a showy and a comfortable palace, and much better than we expected to see in Egypt; the carpenter and mason work are, however, badly done, as if the Khedive had been swindled by sharp Europeans; it is full of rich and costly furniture. The rooms are large and effective, and we saw a good deal of splendor in hangings and curtains, especially in the apartments fitted up for the occupation of the Empress Eugénie. It is wonderful, by the way, with what interest people look at a bed in which an Empress has slept; and we may add awe, for it is usually a broad, high and awful place of repose. Scattered about the rooms are, in defiance of the Prophet's religion, several paintings, all inferior, and a few busts (some of the Khedive) and other pieces of statuary. The place of honor is given to an American subject, although the group was executed by an Italian artist. It stands upon the first landing of the great staircase. An impish-looking young Jupiter is seated on top of a chimney, below which is the suggestion of a house-roof. Above his head is the point of a lightning-rod. The celestial electrician is discharging a bolt into the rod, which is supposed to pass harmless over the roof below. Upon the pedestal is a medallion, the head of Benjamin Franklin, and encircling it, the legend:—*Eripuit coelo fulmen. 1790.* The group looks better than you would imagine from the description.

Beyond the garden is the harem-building, which was undergoing a thorough renovation and refurnishing, in the most gaudy French style—such being the wish of the ladies who occupy it. They are eager to discard the beautiful Moorish designs which once covered the walls and to substitute French decoration. The dormitory portions consist of passages with rooms on each side, very much like a young ladies' boarding-school; the rooms are large enough to accommodate three or four occupants. While we were leisurely strolling through the house, we noticed a great flurry and scurry in the building, and the attendants came to us in a panic, and made desperate efforts to hurry us out of the building by a side-entrance, giving signs of woe and destruction to themselves if we did not flee. The Khedive had arrived, on horseback, and unexpectedly, to inspect his domestic hearths.

We rode, one sparkling morning, after a night of heavy rain, to Heliopolis; there was no mud, however, the rain having served to beat the sand firm. Heliopolis is the On of the Bible, and in the time of Herodotus, its inhabitants were esteemed the most learned in history of all the Egyptians. The father-in-law of Joseph was a priest there, and there Moses and Plato both learned wisdom. The road is excellent and planted most of the distance with acacia trees; there are extensive gardens on either hand, plantations of trees, broad fields under cultivation, and all the way the air was full of the odor of flowers, blossoms of lemon and orange. In luxuriance and riant vegetation, it seemed an Oriental paradise. And the whole of this beautiful land of verdure, covered now with plantations so valuable, was a sand-desert as late as 1869. The water of the Nile alone has changed the desert into a garden.

On the way we passed the race-course belonging to the Khedive, an observatory, and the old palace of Abbas Pasha, now in process of demolition, the foundations being bad, like his own. It is said that the favorite wife of this hated tyrant, who was a Bedawee girl of rank, always preferred to live on the desert, and in a tent rather than a palace. Here at any rate, on the sand, lived Abbas Pasha, in hourly fear of assassination by his enemies. It was not difficult to conjure up the cowering figure, hiding in the recesses of this lonely palace, listening for the sound of horses' hoofs coming on the city road, and ready to mount a swift dromedary, which was kept saddled night and day in the stable, and flee into the desert for Bedaween protection.

At Mataréeh, we turned into a garden to visit the famous Sycamore tree, under which the Virgin sat to rest, in the time of the flight of the Holy Family. It is a large, scrubby-looking tree, probably two hundred years old. I wonder that it does not give up the ghost, for every inch of its bark, even to the small limbs, is cut with names. The Copt, who owns it, to prevent its destruction, has put a fence about it; and that also is covered all over. I looked in vain for the name of "Joseph"; but could find it neither on the fence nor on the tree.

At Heliopolis one can work up any number of reflections; but all he can see is the obelisk, which is sunken somewhat in the ground. It is more correct, however, to say that the ground about it, and the whole site of the former town and Temple of the Sun, have risen many feet since the beginning of the Christian Era. This is the oldest obelisk in Egypt, and bears the *cartouche* of Amenemhe I., the successor of Osirtasen I.—about three thousand b. c., according to Mariette; Wilkinson and Mariette are only one thousand years apart, on this date of this monument. The wasps or bees have filled up the lettering on one side, and given it the appearance of being plastered with mud. There was no place for us to sit down and meditate, and having stood, surrounded by a swarm of the latest children of the sun, and looked at the remains as long as etiquette required, without a single historical tremor, we mounted and rode joyfully city-ward between the lemon hedges.

In this Spring-time, late in the afternoon, the fashionable drive out the Shoobra road, under the arches of sycamore trees, is more thronged than in winter even. Handsome carriages appear and now and then a pair of blooded Arab horses. There are two lines of vehicles extending for a mile or so, the one going out and the other returning, and the round of the promenade continues long enough for everybody to see everybody. Conspicuous always are the neat two-horse cabriolets, lined with gay silks and belonging to the royal harem; outriders are in advance, and eunuchs behind, and within each are two fair and painted Circassians, shining in their thin white veils, looking from the windows, eager to see the world, and not averse to be seen by it. The veil has become with them, as it is in Constantinople, a mere pretext and a heightener of beauty. We saw by chance one day some of these birds of paradise abroad in the Shoobra Garden—and live to speak of it.

The Shoobra palace and its harem, hidden by a high wall, were built by Mohammed Ali; he also laid out the celebrated garden; and the establishment was in his day no doubt the handsomest in the East. The garden is

still rich in rare trees, fruit-trees native and exotic, shrubs, and flowers, but fallen into a too-common Oriental decay. Instead of keeping up this fine place the Khedive builds a new one. These Oriental despots erect costly and showy palaces, in a manner that invites decay, and their successors build new ones, as people get new suits of clothes instead of wearing the garments of their fathers.

In the midst of the garden is a singular summer-palace, built upon terraces and hidden by trees; but the great attraction is the immense Kiosk, the most characteristic Oriental building I have seen, and a very good specimen of the costly and yet cheap magnificence of the Orient. It is a large square pavilion, the center of which is a little lake, but large enough for boats, and it has an orchestral platform in the middle; the verandah about this is supported on marble pillars and has a highly-decorated ceiling; carvings in marble abound; and in the corners are apartments decorated in the height of barbaric splendor.

The pipes are still in place which conveyed gas to every corner and outline of this bizarre edifice. I should like to have seen it illuminated on a summer night when the air was heavy with the garden perfumes. I should like to have seen it then thronged with the dark-eyed girls of the North, in their fleecy splendors of drapery, sailing like water-nymphs in these fairy boats, flashing their diamonds in the mirror of this pool, dancing down the marble floor to the music of soft drums and flutes that beat from the orchestral platform hidden by the water-lilies. Such a vision is not permitted to an infidel. But on such a night old Mohammed Ali might have been excused if he thought he was already in El Genneh, in the company of the girls of Paradise, "whose eyes will be very large and entirely black, and whose stature will be proportioned to that of the men, which will be the height of a tall palm-tree," or about sixty feet and that he was entertained in "a tent erected for him of pearls, jacinths, and emeralds, of a very large extent."

While we were lounging in this place of melancholy gaiety, which in the sunlight bears something the aspect of a tawdry watering-place when the season is over, several harem carriages drove to the entrance: but the eunuchs seeing that unbelievers were in the kiosk would not permit the ladies to descend, and the *cortege* went on and disappeared in the shrubbery. The attendants invited us to leave. While we were still near the kiosk the carriages came round again, and the ladies began to alight. The attendants in the garden were now quite beside themselves, and endeavored to keep our eyes from beholding, and to hustle us down a side-path.

It was in vain that we said to them that we were not afraid, that we were accustomed to see ladies walk in gardens, and that it couldn't possibly harm us. They persisted in misunderstanding us, and piteously begged us to turn away and flee. The ladies were already out of the carriages, veils withdrawn, and beginning to enjoy rural life in the garden. They seemed to have no more fear than we. The horses of the out-riders were led down our path; superb animals, and we stopped to admire them. The harem ladies, rather over-dressed for a promenade, were in full attire of soft silks, blue and pink, in delicate shades, and really made a pretty appearance amid the green. It seemed impossible that it could be wrong to look at them. The attendants couldn't deny that the horses were beautiful, but they regarded our admiration of them as inopportune. They seemed to fear we might look under, or over, or around the horses, towards that forbidden sight by the kiosk. It was useless for us to enquire the age and the breed of the horses. Our efforts to gain information only added to the agony of the gardeners. They wrung their hands, they tried to face us about, they ran hither and thither, and it was not till we were out of sight of the odalisques that they recovered any calmness and began to cull flowers for us, and to produce some Yusef Effendis, as a sign of amity and willingness to accept a few piastres.

The last day of March has come. It is time to depart. Even the harem will soon be going out of town. We have remained in the city long enough to imbibe its atmosphere; not long enough to wear out its strangeness, nor to become familiar with all objects of interest. And we pack our trunks with reluctance, in the belief that we are leaving the most thoroughly Oriental and interesting city in all the East.

CHAPTER XXXVI.—BY THE RED SEA.

A GENTLEMAN started from Cairo a few days before us, with the avowed purpose of following in the

track of the Children of Israel and viewing the exact point where they crossed the Red Sea. I have no doubt that he was successful. So many routes have been laid out for the Children across the Isthmus, that one can scarcely fail to fall into one of them. Our purpose was merely to see Suez and the famous Sea, and the great canal of M. Lesseps; not doubting, however, that when we looked over the ground we should decide where the Exodus must have taken place.

The old direct railway to Suez is abandoned; the present route is by Zagazeeg and Ismailia—a tedious journey, requiring a day. The ride is wearisome, for the country is flat and presents nothing new to one familiar with Egyptian landscapes. The first part of the journey is, however, enlivened by the company of the canal of Fresh Water, and by the bright verdure of the plain which the canal produces. And this luxuriant vegetation continues until you come to the still unreclaimed desert of the Land of Goshen. Now that water can be supplied it only needs people to make this Land as fat as it was in the days of the Israelites.

Some twenty miles from Cairo we pass near the so-called Mound of the Jew, believed to be the ruins of the city of Orion and the temple built by the high priest Onias in the reign of Ptolemy Philometer and Cleopatra, as described by Josephus. The temple was after the style of that at Jerusalem. This Jewish settlement was made upon old Egyptian ruins; in 1870 the remains of a splendid temple of the time of Rameses II. were laid open. The special interest to Biblical scholars of this Jewish colony here, which multiplied itself and spread over considerable territory, is that its establishment fulfilled a prophesy of Isaiah (xix, 19, etc.); and Onias urged this prophesy, in his letter to the Ptolemy, asking permission to purge the remains of the heathen temple in the name of Heliopolis and to erect there a temple to Almighty God. Ptolemy and Cleopatra replied that they wondered Onias should desire to build a temple in a place so unclean and so full of sacred animals, but since Isaiah foretold it, he had leave to do so. We saw nothing of this ancient and once flourishing seat of Jewish enterprise, save some sharp mounds in the distance.

Nor did we see more of the more famous city of Bubastis, where was the temple to Pasht, the cat or lioness-headed deity (whom Herodotus called Diana), the avenger of crimes. According to Herodotus, all the cats of Egypt were embalmed and buried in Bubastis. This city was the residence of the Pharaoh Sheshonk I. (the Shishak of the Bible) who sacked Jerusalem, and it was at that time the capital of Egypt. It was from here, on the Bubastic (or Pelusiac) branch of the Nile, that the ancient canal was dug to connect with the Heroôpolite Gulf (now the Bitter Lakes), the northernmost arm of the Red Sea at that date; and the city was then, by that fresh-water canal, on the water-way between the Red Sea and the Mediterranean. But before the Christian era the Red Sea had retired to about its present limit (the Bitter Lakes being cut off from it), and the Bubastic branch of the Nile was nearly dried up. Bubastis and all this region are now fed by the canal which leaves the Nile at Cairo and runs to Ismailia, and thence to Suez. It is a startling thought that all this portion of the Delta, east, and south, and the Isthmus depend for life upon the keeper of the gate of the canal at Cairo. If we were to leave the train here and stumble about in the mounds of Bubastis, we should find only fragments of walls, blocks of granite, and a few sculptures.

At the Zagazeeg station, where there is a junction with the Alexandria and Cairo main line, we wait some time, and find very pleasant the garden and the picturesque refreshment-house in which our minds are suddenly diverted from ancient Egypt by a large display of East Indian and Japanese curiosities on sale.

From this we follow, substantially, the route of the canal, running by villages and fertile districts, and again on the desert's edge. We come upon no traces of the Israelites until we reach Masamah, which is supposed to be the site of Rameses, one of the treasure-cities mentioned in the Bible, and the probable starting-point of the Jews in their flight. This is about the center of the Land of Goshen, and Rameses may have been the chief city of the district.

If I knew exactly the route the Israelites took, I should not dare to disclose it; for this has become, I do not know why, a tender subject. But it seems to me that if the Jews were assembled here from the Delta for a start, a very natural way of exit would have been down the Wadee to the head of the Heroopolite Gulf, the route of the present and the ancient canal. And if it should be ascertained beyond a doubt that Sethi I. built as well as planned such a canal, the argument of probability would be greatly strengthened that Moses led his vast host along the canal. Any dragoman to-day, desiring to cross the Isthmus and be beyond pursuit as soon as possible, supposing the condition of the country now as it was at the time of the Exodus, would strike for the shortest line. And it is reasonable to suppose that Moses would lead his charge to a point where the crossing of the sea, or one of its arms, was more feasible than it is anywhere below Suez; unless we are to start with the supposition that Moses expected a miracle, and led the Jews to a spot where, apparently, escape for them was hopeless if the Egyptian pursued. It is believed that at the time of the Exodus there was a communication between the Red Sea and the Bitter Lakes—formerly called Heroopolite Gulf—which it was the effort of many rulers to keep open by a canal. Very anciently, it is evident, the Red Sea extended to and included these lakes; and it is not improbable that, in the time of Moses, the water was, by certain winds, forced up to the north into these lakes: and again, that, crossings could easily be made, the wind being favorable, at several points between what is now Suez and the head of the Bitter Lakes. Many scholars make Cha-loof, about twelve miles above Suez the point of passage.

We only touch the outskirts of Ismailia in going on to Suez. Below, we pass the extensive plantation and garden of the Khedive, in which he has over fifty thousand young trees in a nursery. This spot would be absolute desert but for the Nile-water let in upon it. All day our astonishment has increased at the irrigation projects of the Viceroy, and his herculean efforts to reclaim a vast land of desert; the enlarging of the Sweet-Water Canal, and the gigantic experiments in arboriculture and agriculture.

We noticed that the Egyptian laborers at work with the wheelbarrows (instead of the baskets formerly used by them) on the enlargement of the canal, were under French contractors, for the most part. The men are paid from a franc to a franc and a quarter per day; but they told us that it was very difficult to get laborers, so many men being drafted for the army.

At dark we come in sight of the Bitter Lakes, through which the canal is dredged; we can see vessels of various sorts and steamers moving across them in one line; and we see nothing more until we reach Suez. The train stops "at nowhere," in the sand, outside the town. It is the only train of the day, but there are neither carriages nor donkeys in waiting. There is an air about the station of not caring whether anyone comes or not. We walk a mile to the hotel, which stands close to the sea, with nothing but a person's good sense to prevent his walking off the platform into the water. In the night the water looked like the sand, and it was only by accident that we did not step off into it; however, it turned out to be only a couple of feet deep.

The hotel, which I suppose is rather Indian than Egyptian, is built round a pleasant court; corridors and latticed doors are suggestive of hot nights; the servants and waiters are all Hindoos; we have come suddenly in contact with another type of Oriental life.

Coming down from Ismailia, a friend who was with us had no ticket. It was a case beyond the conductor's experience; he utterly refused backsheesh and he insisted on having a ticket. At last he accepted ten francs and went away. Looking in the official guide we found that the fare was nine francs and a quarter. The conductor, thinking he had opened a guileless source of supply, soon returned and demanded two francs more. My friend countermined him by asking the return of the seventy-five centimes overpaid. An amusing pantomime ensued. At length the conductor lowered his demand to one franc, and, not getting that, he begged for backsheesh. I was sorry to have my high ideal of a railway-conductor, formed in America, lowered in this manner.

We are impatient above all things for a sight of the Red Sea. But in the brilliant starlight, all that appears is smooth water and a soft picture of vessels at anchor or aground looming up in the night. Suez, seen by early daylight, is a scattered city of some ten thousand inhabitants, too modern and too cheap in its buildings to be interesting. There is only a little section of it, where we find native bazaars, twisting streets, overhanging balconies, and latticed windows. It lies on a sand peninsula, and the sand-drifts close all about it, ready to lick it up, if the canal of fresh water should fail.

The only elevation near is a large mound, which may be the site of the fort of ancient Clyasma, or Gholzim as it was afterwards called—the city believed to be the predecessor of Suez. Upon this mound an American has built, and presented to the Khedive, a sort of *châlet* of wood—the whole transported from America ready-made, one of those white, painfully unpicturesque things with two little gables at the end, for which our country is justly distinguished. Cheap. But then it is of wood, and wood is one of the dearest things in Egypt. I only hope the fashion of it may not spread in this land of grace.

It was a delightful morning, the wind west and fresh. From this hillock we commanded one of the most interesting prospects in the world. We looked over the whole desert-flat on which lies the little town, and which is pierced by an arm of the Gulf that narrows into the Suez canal; we looked upon two miles of curved causeway which runs down to the docks and the anchoring place of the steam-vessels—there cluster the dry-docks, the dredges, the canal-offices, and just beyond the shipping lay; in the distance we saw the Red Sea, like a long lake, deep-green or deep-blue, according to the light, and very sparkling; to the right was the reddish limestone range called Gebel Attâka—a continuation of the Mokattam; on the left there was a great sweep of desert, and far off—one hundred and twenty miles as the crow flies—the broken Sinai range of mountains, in which we tried to believe we could distinguish the sacred peak itself.

I asked an intelligent railway official, a Moslem, who acted as guide that morning, "What is the local opinion as to the place where the Children of Israel crossed over?"

"The French," he replied, "are trying to make it out that it was at Chaloof, about twenty miles above here, where there is little water. But we think it was at a point twenty miles below here; we must put it there, or there wouldn't be any miracle. You see that point, away to the right? That's the spot. There is a wady comes down the side."

"But where do the Christians think the crossing was?"

"Oh, here at Suez; there, about at this end of Gebel Attâka." The Moslems' faith in the miraculous deliverance is disturbed by no speculations. Instead of trying to explain the miracle by the use of natural causes, and seeking for a crossing where the water might at one time have been heaped and at another forced away by the winds, their only care is to fix the passage where the miracle would be most striking.

After breakfast and preparations to visit Moses' Well, we rode down the causeway to the made land where the docks are. The earth dumped here by the dredging-machines (and which now forms solid building ground), is full of a great variety of small sea-shells; the walls that enclose it are of rocks conglomerate of shells. The ground all about gives evidence of salt we found shallow pools evaporated so that a thick crust of excellent salt had formed on the bottom and at the sides. The water in them was of a decidedly rosy color, caused by some infusorial growth. The name, Red Sea, however, has nothing to do with this appearance, I believe.

We looked at the pretty houses and gardens, the dry-dock and the shops, and the world-famous dredges, without which the Suez Canal would very likely never have been finished. These enormous machines have arms or ducts, an iron spout of semi-elliptical form, two hundred and thirty feet long, by means of which the dredger working in the center of the channel could discharge its contents over the bank. One of them removed, on an average, eighty thousand cubic yards of soil a month. A faint idea may be had of this gigantic work by the amount of excavation here, done by the dredgers, in one month,—two million seven hundred and sixty-three thousand cubic yards. M. de Lesseps says that if this soil were "laid out between the Arc de Triomphe and the Place de la Concorde, it would cover the entire length and breadth of the Champs Elysées, a distance equal to a mile and a quarter, and reach to the top of the trees on either side."

At the pier our felucca met us and we embarked and sailed into the mouth of the canal. The channel leading to it is not wide, and is buoyed at short intervals. The mouth of the canal is about nine hundred feet wide and twenty-seven deep, * and it is guarded on the east by a long stone mole projected from the Asiatic shore. There is considerable ebb and flow of the tide in this part of the canal and as far as the Bitter Lakes, where it is nearly all lost in the expanse, being only slightly felt at Lake Timsah, from which point there is a slight uniform current to the Mediterranean.

* Total length of Canal, 100 miles. Width of water-line, where banks are low, 328 feet; in deep cuttings, 190; width at base, 2; depth, 26.

From the canal entrance we saw great ships and steamboats in the distance, across the desert, and apparently sailing in the desert; but we did not follow them; we turned, and crossed to the Asiatic shore. We had brought donkeys with us, and were soon mounted for a scrambling gallop of an hour and a half, down the coast, over level and hard sand, to Moses' Well. The air was delicious and the ride exhilarating. I tried to get from our pleasant Arab guide, who had a habit of closing one eye, what he thought of the place of the passage.

"Where did the Children of Israel cross?"

"Over dat mountain."

"Yes, but where did they cross the Sea?"

"You know Moses?"

"Yes, I know Moses. Where did he cross?"

"Well," closing his eye very tight, "him long time ago, not now. He cross way down there, can't see him from here."

On the way we passed the white tents of the Quarantine Station, on our right by the shore, where the caravan of Mecca pilgrims had been detained. We hoped to see it: but it had just set out on its desert march further inland. It was seen from Suez all day, straggling along in detachments, and at night camped about two miles north of the town. However, we found a dozen or two of the pilgrims, dirty, ragged, burned by the sun, and hungry, lying outside the enclosure at the wells.

The Wells of Moses (or *Ain Moosa*, "Moses' Well," in the Arabic) are distant a mile or more from the low shore, and our first warning of nearness to them was the appearance of some palms in a sandy depression. The attempt at vegetation is rather sickly, and the spot is but a desolate one. It is the beginning of the route to Mount Sinai, however, and is no doubt a very welcome sight to returning pilgrims. Contrast is everything; it is contrast with its surroundings that has given Damascus its renown.

There are half a dozen of these wells, three of which are some fifteen to twenty feet across, and are in size and appearance very respectable frog-ponds. One of them is walled with masonry, evidently ancient, and two shadoofs draw water from it for the garden, an enclosure of an acre, fenced with palm-matting. It contains some palms and shrubs and a few vegetables. Here also is a half-deserted house, that may once have been a hotel and is now a miserable trattoria without beds. It is in charge of an Arab who lives in a hut at the other side of the garden, with his wife and a person who bore the unmistakable signs of being a mother-in-law. The Arab made coffee for us, and furnished us a table, on which we spread our luncheon under the verandah. He also gave us Nile-water which had been brought from Suez in a cask on camel-back; and his whole charge was only one bob (a shilling) each. I mention the charge, because it is disenchanting in a spot of so much romance to pay for your entertainment in "bobs."

We had come, upon what I may truly call a sentimental pilgrimage, on account of Moses and the Children of Israel. If they crossed over from Mount Attaka yonder, then this might be the very spot where Miriam sang the song of triumph. If they crossed at Chalooft, twenty miles above, as it is more probable they did, then this might be the Marah whose bitter waters Moses sweetened for the time being; the Arabs have a tradition that Moses brought up water here by striking the ground with his stick. At all events, the name of Moses is forever attached to this oasis, and it did not seem exactly right that the best well should be owned by an Arab who makes it the means of accumulating bobs. One room of the house was occupied by three Jews, traders, who establish themselves here a part of the year in order to buy, from the Bedaween, turquoise and antiquities which are found at Mount Sinai. I saw them sorting over a peck of rough and inferior turquoise, which would speedily be forwarded to Constantinople, Paris, and London. One of them sold me a small intaglio, which was no doubt of old Greek workmanship, and which he swore was picked up at Mount Sinai. There is nothing I long more to know, sometimes, than the history of wandering coins and intaglios which we see in the Orient.

It is not easy to reckon the value of a tradition, nor of a traditional spot like this in which all the world feels a certain proprietorship. It seemed to us, however, that it would be worth while to own this famous Asiatic well; and we asked the owner what he would take for it. He offered to sell the ranche for one hundred and fifty guineas; this, however, would not include the camel,—for that he wanted ten pounds in addition; but it did include a young gazelle, two goats, a brownish-yellow dog, and a cat the color of the sand. And it also comprised, in the plantation, a few palms, some junipers, of the Biblical sort, the acacia or "shittah" tree of the Bible, and, best of all, the large shrub called the tamarisk, which exudes during two months in the year a sweet gummy substance that was the "manna" of the Israelites.

Mother-in-law wore a veil, a string of silver-gilt imitation coins, several large silver bracelets, and a necklace upon which was sewed a string of small Arabic gold coins. As this person more than anyone else there represented Miriam,—not being too young,—we persuaded her to sell us some of the coins as mementoes of our visit. We could not determine, as I said, whether this spot is associated with Miriam or whether it is the Marah of bitter waters; consequently it was difficult to say what our emotions should be. However, we decided to let them be expressed by the inscription that a Frenchman had written on a wall of the house, which reads:—*Le cour me palpait comme un amant qui revoit sa bien aimée.*

There are three other wells enclosed, but unwallled, the largest of which—and it has near it a sort of *loggia* or open shed where some dirty pilgrims were reposing—is an unsightly pond full of a green growth of algæ. In this enclosure, which contains two or three acres, are three smaller wells, or natural springs, as they all are, and a considerable thicket of palms and tamarisks. The larger well is the stronger in taste and most bitter, containing more magnesia. The water in all is flat and unpleasant, and not enlivened by carbonic acid gas, although we saw bubbles coming to the surface constantly. If the spring we first visited could be aerated, it would not be worse to drink than many waters that are sought after. The donkeys liked it; but a donkey likes any thing. About these feeble plantations the sand drifts from all directions, and it would soon cover them but for the protecting fence. The way towards Sinai winds through shifting sand-mounds, and is not

inviting.

The desert over which we return is dotted frequently with tufts of a flat-leaved, pale-green plant, which seem to thrive without moisture; and in the distance this vegetation presents an appearance of large shrub growth, greatly relieving the barrenness of the sand-plain. We had some fine effects of mirage, blue lakes and hazy banks, as of streams afar off. When we reached an elevation that commanded a view of the indistinct Sinai range, we asked the guide to point out to us the "rosy peaks of Mount Sinai" which Murray sees from Suez when he is there. The guide refused to believe that you can see a rosy peak one hundred and twenty miles through the air, and confirmed the assertion of the inhabitants of Suez that Mount Sinai cannot be seen from there.

On our return we overtook a caravan of Bedaween returning from the holy mount, armed with long rifles, spears, and huge swords, swinging along on their dromedaries,—a Colt's revolver would put the whole lot of braggarts to flight. One of them was a splendid specimen of manhood, and we had a chance to study his graceful carriage, as he ran besides us all the way; he had the traditional free air, a fine face and well-developed limbs, and his picturesque dress of light-blue and buff, somewhat in rags, added to his attractions. It is some solace to the traveler to call these fellows beggars, since he is all the time conscious that their natural grand manner contrasts so strongly with the uncouthness of his more recent and western civilization.

Coming back into Suez, from this journey to another continent, we were stopped by two customs-officers, who insisted upon searching our lunch-basket, to see if we were attempting to smuggle anything from Asia. We told the guide to give the representative of his Highness, with our compliments, a hard-boiled egg.

Suez itself has not many attractions. But we are much impressed at the hotel by the grave Hindoo waiters, who serve at table in a close-fitting habit, like the present extremely narrow gown worn by ladies, and ludicrous to our eyes accustomed to the flowing robes of the Arabs. They wear also, while waiting, broad-brimmed, white, cork hats, slightly turned up at the rim. It is like being waited on by serious genii. These men also act as chambermaids. Their costume is Bengalee, and would not be at all "style" in Bombay.

Suez is reputed a healthful place, enjoying both sea and desert air, free from malaria, and even in summer the heat is tempered. This is what the natives say. The English landlady admits that it is very pleasant in winter, but the summer is intensely hot, especially when the Khamseen, or south wind, blows—always three days at a time—it is hardly endurable; the thermometer stands at 110° to 1140 in the shaded halls of the hotel round the court. It is unsafe for foreigners to stay here more than two years at a time; they are certain to have a fever or some disease of the liver.

The town is very much depressed now, and has been ever since the opening of the canal. The great railway business fell off at once, all freight going by water. Hundreds of merchants, shippers and forwarders are out of employment. We hear the Khedive much blamed for his part in the canal, and people here believe that he regrets it. Egypt, they say, is ruined by this loss of trade; Suez is killed; Alexandria is ruined beyond reparation, business there is entirely stagnant. What a builder and a destroyer of cities has been the fluctuation of the course of the East India commerce!

CHAPTER XXXVII.—“EASTWARD HO!”

WE left Suez at eight in the morning by rail, and reached Ismailia in four hours, the fare—to do justice to the conductor already named—being fourteen francs. A part of the way the Bitter Lakes are visible, and we can see where the canal channel is staked out through them. Next we encountered the Fresh-Water Canal, and came in view of Lake Timsah, through which the Suez canal also flows. This was no doubt once a fresh-water lake, fed by water taken from the Nile at Bubastis.

Ismailia is a surprise, no matter how much you have heard of it. True, it has something the appearance of a rectangular streeted town dropped, ready-made, at a railway station on a western prairie; but Ismailia was dropped by people of good taste. In 1860 there was nothing here but desert sand, not a drop of water, not a spear of vegetation. To-day you walk into a pretty village, of three or four thousand inhabitants, smiling with verdure. Trees grow along the walks; little gardens bloom by every cottage. Fronting the quay Mohammed Ali, which extends along the broad Fresh-Water Canal, are the best residences, and many of them have better gardens than you can find elsewhere, with few exceptions, in Egypt.

The first house we were shown was that which had most interest for us—the Swiss-like ch[^]let of M. de Lesseps; a summerish, cheerful box, furnished simply, but adorned with many Oriental curiosities. The garden which surrounds it is rich in native and exotic plants, flowers and fruits. On this quay are two or three

barn-like, unfurnished palaces built hastily and cheaply by the Khedive for the entertainment of guests. The finest garden, however, and as interesting as any we saw in the East, is that belonging to M. Pierre, who has charge of the waterworks. In this garden can be found almost all varieties of European and Egyptian flowers; strawberries were just ripening. We made inquiry here, as we had done throughout Egypt, for the lotus, the favorite flower of the old Egyptians, the sacred symbol, the mythic plant, the feeding upon which lulls the conscience, destroys ambition, dulls the memory of all unpleasant things, enervates the will, and soothes one in a sensuous enjoyment of the day to which there is no tomorrow. It seems to have disappeared from Egypt with the papyrus.

The lotus of the poets I fear never existed, not even in Egypt. The lotus represented so frequently in the sculptures, is a water-plant, the *Nymphaea lutea*, and is I suppose the plant that was once common. The poor used its bulb for food in times of scarcity. The Indian lotus, or *Nelumbium*, is not seen in the sculptures, though Latin writers say it existed in Egypt. It may have been this that had the lethean properties; although the modern eaters and smokers of Indian hemp appear to be the legitimate descendants of the lotus-eaters of the poets. However, the lotus whose stalks and buds gave character to a distinct architectural style, we enquired for in vain on the Nile. If it still grows there it would scarcely be visible above water in the winter. But M. Pierre has what he supposes to be the ancient lotus-plant; and his wife gave us seeds of it in the seed-vessel—a large flat-topped funnel-shaped receptacle, exactly the shape of the sprinkler of a watering-pot. Perhaps this is the plant that Herodotus calls a lily like a rose, the fruit of which is contained in a separate pod, that springs up from the root in form very like a wasp's nest; in this are many berries fit to be eaten.

The garden adjoins the water-works, in which two powerful pumping-engines raise the sweet water into a stand-pipe, and send it forward in iron pipes fifty miles along the Suez Canal to Port Said, at which port there is a reservoir that will hold three days' supply. This stream of fresh water is the sole dependence of Port Said and all the intervening country.

We rode out over the desert on an excellent road, lined with sickly acacias growing in the watered ditches, to station No 6 on the canal. The way lies along Lake Timsah. Upon a considerable elevation, called the Heights of El Guisr, is built a *château* for the Khedive; and from this you get an extensive view of the desert, of Lake Timsah and the Bitter Lakes. Below us was the deep cutting of the Canal. El Guisr is the highest point in the Isthmus, an elevated plateau six miles across and some sixty-five feet above the level of the sea. The famous gardens that flourished here during the progress of the excavation have entirely disappeared with the cessation of the water from Ismailia. While we were there an East India bound steamboat moved slowly up the canal, creating, of course, waves along the banks, but washing them very little, for the speed is limited to five miles an hour.

Although the back streets of Ismailia are crude and unpicturesque, the whole effect of the town is pleasing; and it enjoys a climate that must commend it to invalids. It is dry, free from dust, and even in summer not too warm, for there is a breeze from the lakes by day, and the nights are always cooled by the desert air. Sea-bathing can be enjoyed there the year round. It ought to be a wholesome spot, for there is nothing in sight around it but sand and salt-water. The invalid who should go there would probably die shortly of ennui, but he would escape the death expected from his disease. But Ismailia is well worth seeing. The miracle wrought here by a slender stream of water from the distant Nile, is worthy the consideration of those who have the solution of the problem of making fertile our western sand-deserts.

We ate at Suez and Ismailia what we had not tasted for several months—excellent fish. The fish of the Nile are nearly as good as a New-England sucker, grown in a muddy mill-pond. I saw fishermen angling in the salt canal at Ismailia, and the fish are good the whole length of it; they are of excellent quality even in the Bitter Lakes, which are much saltier than the Mediterranean—in fact the bottom of these lakes is encrusted with salt.

We took passage towards evening on the daily Egyptian pocket-boat for Port Said—a puffing little cigar-box of a vessel, hardly fifty feet long. The only accommodation for passengers was in the forward cabin, which is about the size of an omnibus, and into it were crammed twenty passengers, Greeks, Jews, Koorlanders, English clergymen, and American travelers, and the surly Egyptian mail-agent, who occupied a great deal of room, and insisted on having the windows closed. Some of us tried perching on the scrap of a deck, hanging our legs over the side; but it was bitterly cold and a strong wind drove us below. In the cabin the air was utterly vile; and when we succeeded in opening the hatchway for a moment, the draught chilled us to the bones.

I do not mean to complain of all this; but I want it to appear that sailing on the Suez Canal, especially at night, is not a pleasure-excursion. It might be more endurable by day; but I do not know. In the hours we had of daylight, I became excessively weary of looking at the steep sand-slopes between which we sailed, and of hoping that every turn would bring us to a spot where we could see over the bank.

At eight o'clock we stopped at Katanah for supper, and I climbed the bank to see if I could obtain any information about the Children of Israel. They are said to have crossed here. This is the highest point of the low hills which separate Lake Menzaleh from the interior lakes. Along this ridge is still the caravan-route between Egypt and Syria; it has been, for ages unnumbered, the great highway of commerce and of conquest. This way Thothmes III., the greatest of the Pharaohs and the real Sesostris, led his legions into Asia; and this way Cambyses came to repay the visit with interest.

It was so dark that I could see little, but I had a historic sense of all this stir and movement, of the passage of armies laden with spoils, and of caravans from Nineveh and Damascus. And, although it was my first visit to the place, it seemed strange to see here a restaurant, and waiters hurrying about, and travelers snatching a hasty meal in the night on this wind-blown sand-hill. And to feel that the stream of travel is no more along this divide but across it! By the half-light I could distinguish some Bedaween loitering about; their little caravan had camped here, for they find it very convenient to draw water from the iron pipes.

It was quite dark when we presently sailed into Lake Menzaleh, and we could see little. I only know that we held a straight course through it for some thirty miles to Port Said. In the daytime you can see a dreary expanse of morass and lake, a few little islands clad with tamarisks, and flocks of aquatic birds floating in the

water or drawn up on the sand-spits in martial array—the white spoonbill, the scarlet flamingo, the pink pelican. It was one o'clock in the morning when we saw the Pharos of Port Said and sailed into the basin, amid many lights.

Port Said was made out of nothing, and it is pretty good. A town of eight to ten thousand inhabitants, with docks, quays, squares, streets, shops, mosques, hospitals, public buildings; in front of our hotel is a garden and public square; all this fed by the iron pipe and the pump at Ismailia—without this there is no fresh water nearer than Damietta. It is a shabby city, and just now has the over-done appearance of one of our own western town inflations. But its history is a record of one of the most astonishing achievements of any age. Before there could be any town here it was necessary to build a standpoint for it with a dredging machine.

Along this coast from Damietta to the gulf of Pelusium, where once emptied the Pelusiac branch of the Nile, is a narrow strip of sand, separating the Mediterranean from Lake Menzaleh; a high sea often breaks over it. It would have saved much in distance to have carried the canal to the Pelusium gulf, but the Mediterranean is shallow there many miles from shore. The spot on which Port Said now stands was selected for the entrance of the canal, because it was here that the land can be best approached—the Mediterranean having sufficient depth at only two miles from the shore. Here therefore, the dredgers began to work. The lake was dredged for interior basins; the strip of sand was cut through; the outer harbor was dredged; and the dredgings made the land for the town. Artificial stone was then manufactured on the spot, and of this the long walls, running out into the sea and protecting the harbor, the quays, and the lighthouses were built. We saw enormous blocks of this composite of sand and hydraulic lime, which weigh twenty-five tons each.

It is impossible not to respect a city built by such heroic labor as this; but we saw enough of it in half a day. The shops are many, and the signs are in many languages, Greek being most frequent. I was pleased to read an honest one in English—"Blood-Letting and Tooth-picking." I have no doubt they all would take your blood. In the streets are vagabonds, adventurers, merchants, travelers, of all nations; and yet you would not call the streets picturesque. Everything is strangely modernized and made uninteresting. There is, besides, no sense of permanence here. The traders appear to occupy their shops as if they were booths for the day. It is a place of transit; a spot of sand amid the waters. I have never been in any locality that seemed to me so nearly nowhere. A spot for an African bird to light on a moment on his way to Asia. But the world flows through here. Here lie the great vessels in the Eastern trade; all the Mediterranean steamers call here.

The Erymanthe is taking in her last freight, and it is time for us to go on board. Abd-el-Atti has arrived with the baggage from Cairo. He has the air of one with an important errand. In the hotels, on the street, in the steamer, his manner is that of one who precedes an imposing embassy. He likes state. If he had been born under the Pharaohs he would have been the bearer of the flabellum before the king; and he would have carried it majestically, with perhaps a humorous twinkle in his eye for some comrade by the way. Ahman Abdallah, the faithful, is with him. He it was who made and brought us the early morning coffee to-day,—recalling the peace of those days on the Nile which now are in the dim past. It is ages ago since we were hunting in the ruins of Abydos for the tomb of Osiris. It was in another life, that delicious winter in Nubia, those weeks following weeks, free from care and from all the restlessness of this driving age.

"I shouldn't wonder if you were right, Abd-el-Atti, in not wanting to start for Syria sooner. It was very cold on the boat last night."

"Not go in Syria before April; always find him bad. 'Member what I say when it rain in Cairo?—'This go to be snow in Jerusalem.' It been snow there last week, awful storm, nobody go on the road, travelers all stop, not get anywhere. So I hunderstand."

"What is the prospect for landing at Jaffa tomorrow morning?"

"Do' know, be sure. We hope for the better."

We get away beyond the breakwater, as the sun goes down. The wind freshens, and short waves hector the long sea swell, Egypt lies low; it is only a line; it fades from view.

PREFATORY NOTE.

To Henry M. Alden, Esq., Editor of Harper's Monthly:

My dear Mr. Alden,—It was at your suggestion that these Studies were undertaken; all of them passed under your eye, except "Society in the New South," which appeared in the *New Princeton Review*. The object was not to present a comprehensive account of the country South and West—which would have been impossible in the time and space given—but to note certain representative developments, tendencies, and dispositions, the communication of which would lead to a better understanding between different sections. The subjects chosen embrace by no means all that is important and interesting, but it is believed that they are

fairly representative. The strongest impression produced upon the writer in making these Studies was that the prosperous life of the Union depends upon the life and dignity of the individual States.

C. D. W,

STUDIES IN THE SOUTH AND WEST

I.—IMPRESSIONS OF THE SOUTH IN 1885.

It is borne in upon me, as the Friends would say, that I ought to bear my testimony of certain impressions made by a recent visit to the Gulf States. In doing this I am aware that I shall be under the suspicion of having received kindness and hospitality, and of forming opinions upon a brief sojourn. Both these facts must be confessed, and allowed their due weight in discrediting what I have to say. A month of my short visit was given to New Orleans in the spring, during the Exposition, and these impressions are mainly of Louisiana.

The first general impression made was that the war is over in spirit as well as in deed. The thoughts of the people are not upon the war, not much upon the past at all, except as their losses remind them of it, but upon the future, upon business, a revival of trade, upon education, and adjustment to the new state of things. The thoughts are not much upon politics either, or upon offices; certainly they are not turned more in this direction than the thoughts of people at the North are. When we read a despatch which declares that there is immense dissatisfaction throughout Arkansas because offices are not dealt out more liberally to it, we may know that the case is exactly what it is in, say, Wisconsin—that a few political managers are grumbling, and that the great body of the people are indifferent, perhaps too indifferent, to the distribution of offices.

Undoubtedly immense satisfaction was felt at the election of Mr. Cleveland, and elation of triumph in the belief that now the party which had been largely a non-participant in Federal affairs would have a large share and weight in the administration. With this went, however, a new feeling of responsibility, of a stake in the country, that manifested itself at once in attachment to the Union as the common possession of all sections. I feel sure that Louisiana, for instance, was never in its whole history, from the day of the Jefferson purchase, so consciously loyal to the United States as it is to-day. I have believed that for the past ten years there has been growing in this country a stronger feeling of nationality—a distinct American historic consciousness—and nowhere else has it developed so rapidly of late as at the South. I am convinced that this is a genuine development of attachment to the Union and of pride in the nation, and not in any respect a political movement for unworthy purposes. I am sorry that it is necessary, for the sake of any lingering prejudice at the North, to say this. But it is time that sober, thoughtful, patriotic people at the North should quit representing the desire for office at the South as a desire to get into the Government saddle and ride again with a “rebel” impulse. It would be, indeed, a discouraging fact if any considerable portion of the South held aloof in sullenness from Federal affairs. Nor is it any just cause either of reproach or of uneasiness that men who were prominent in the war of the rebellion should be prominent now in official positions, for with a few exceptions the worth and weight of the South went into the war. It would be idle to discuss the question whether the masses of the South were not dragooned into the war by the politicians; it is sufficient to recognize the fact that it became practically, by one means or another, a unanimous revolt.

One of the strongest impressions made upon a Northerner who visits the extreme South now, having been familiar with it only by report, is the extent to which it suffered in the war. Of course there was extravagance and there were impending bankruptcies before the war, debt, and methods of business inherently vicious, and no doubt the war is charged with many losses which would have come without it, just as in every crisis half the failures wrongfully accuse the crisis. Yet, with all allowance for these things, the fact remains that the war practically wiped out personal property and the means of livelihood. The completeness of this loss and disaster never came home to me before. In some cases the picture of the *ante bellum* civilization is more roseate in the minds of those who lost everything than cool observation of it would justify. But conceding this, the actual disaster needs no embellishment of the imagination. It seems to me, in the reverse, that the Southern people do not appreciate the sacrifices the North made for the Union. They do not, I think, realize the fact that the North put into the war its best blood, that every battle brought mourning into our households, and filled our churches day by day and year by year with the black garments of bereavement; nor did they ever understand the tearful enthusiasm for the Union and the flag, and the unselfish devotion that underlay all the self-sacrifice. Some time the Southern people will know that it was love for the Union, and not hatred of the South, that made heroes of the men and angels of renunciation of the women.

Yes, say our Southern friends, we can believe that you lost dear ones and were in mourning; but, after all, the North was prosperous; you grew rich; and when the war ended, life went on in the fulness of material prosperity. We lost not only our friends and relatives, fathers, sons, brothers, till there was scarcely a household that was not broken up, we lost not only the cause on which we had set our hearts, and for which we had suffered privation and hardship, were fugitives and wanderers, and endured the bitterness of defeat at the end, but our property was gone, we were stripped, with scarcely a home, and the whole of life had to be begun over again, under all the disadvantage of a sudden social revolution.

It is not necessary to dwell upon this or to heighten it, but it must be borne in mind when we observe the temper of the South, and especially when we are looking for remaining bitterness, and the wonder to me is that after so short a space of time there is remaining so little of resentment or of bitter feeling over loss and discomfiture. I believe there is not in history any parallel to it. Every American must take pride in the fact that Americans have so risen superior to circumstances, and come out of trials that thoroughly threshed and winnowed soul and body in a temper so gentle and a spirit so noble. It is good stuff that can endure a test of this kind.

A lady, whose family sustained all the losses that were possible in the war, said to me—and she said only what several others said in substance—“We are going to get more out of this war than you at the North, because we suffered more. We were drawn out of ourselves in sacrifices, and were drawn together in a tenderer feeling of humanity; I do believe we were chastened into a higher and purer spirit.”

Let me not be misunderstood. The people who thus recognize the moral training of adversity and its effects upon character, and who are glad that slavery is gone, and believe that a new and better era for the South is at hand, would not for a moment put themselves in an attitude of apology for the part they took in the war, nor confess that they were wrong, nor join in any denunciation of the leaders they followed to their sorrow. They simply put the past behind them, so far as the conduct of the present life is concerned. They do not propose to stamp upon memories that are tender and sacred, and they cherish certain sentiments which are to them loyalty to their past and to the great passionate experiences of their lives. When a woman, who enlisted by the consent of Jeff Davis, whose name appeared for four years upon the rolls, and who endured all the perils and hardships of the conflict as a field-nurse, speaks of “President” Davis, what does it mean? It is only a sentiment. This heroine of the war on the wrong side had in the Exposition a tent, where the veterans of the Confederacy recorded their names. On one side, at the back of the tent, was a table piled with touching relics of the war, and above it a portrait of Robert E. Lee, wreathed in immortelles. It was surely a harmless shrine.

On the other side was also a table, piled with fruit and cereals—not relics, but signs of prosperity and peace—and above it a portrait of Ulysses S. Grant. Here was the sentiment, cherished with an aching heart maybe, and here was the fact of the Union and the future.

Another strong impression made upon the visitor is, as I said, that the South has entirely put the past behind it, and is devoting itself to the work of rebuilding on new foundations. There is no reluctance to talk about the war, or to discuss its conduct and what might have been. But all this is historic. It engenders no heat. The mind of the South to-day is on the development of its resources, upon the rehabilitation of its affairs. I think it is rather more concerned about national prosperity than it is about the great problem of the negro—but I will refer to this further on. There goes with this interest in material development the same interest in the general prosperity of the country that exists at the North—the anxiety that the country should prosper, acquit itself well, and stand well with the other nations. There is, of course, a sectional feeling—as to tariff, as to internal improvements—but I do not think the Southern States are any more anxious to get things for themselves out of the Federal Government than the Northern States are. That the most extreme of Southern politicians have any sinister purpose (any more than any of the Northern “rings” on either side have) in wanting to “rule” the country, is, in my humble opinion, only a chimera evoked to make political capital.

As to the absolute subsidence of hostile intention (this phrase I know will sound queer in the South), and the laying aside of bitterness for the past, are not necessary in the presence of a strong general impression, but they might be given in great number. I note one that was significant from its origin, remembering, what is well known, that women and clergymen are always the last to experience subsidence of hostile feeling after a civil war. On the Confederate Decoration Day in New Orleans I was standing near the Confederate monument in one of the cemeteries when the veterans marched in to decorate it. First came the veterans of the Army of Virginia, last those of the Army of Tennessee, and between them the veterans of the Grand Army of the Republic, Union soldiers now living in Louisiana. I stood beside a lady whose name, if I mentioned it, would be recognized as representative of a family which was as conspicuous, and did as much and lost as much, as any other in the war—a family that would be popularly supposed to cherish unrelenting feelings. As the veterans, some of them on crutches, many of them with empty sleeves, grouped themselves about the monument, we remarked upon the sight as a touching one, and I said: “I see you have no address on Decoration Day. At the North we still keep up the custom.”

“No,” she replied; “we have given it up. So many imprudent things were said that we thought best to discontinue the address.” And then, after a pause, she added, thoughtfully: “Each side did the best it could; it is all over and done with, and let’s have an end of it.” In the mouth of the lady who uttered it, the remark was very significant, but it expresses, I am firmly convinced, the feeling of the South.

Of course the South will build monuments to its heroes, and weep over their graves, and live upon the memory of their devotion and genius. In Heaven’s name, why shouldn’t it? Is human nature itself to be changed in twenty years?

A long chapter might be written upon the dis-likeness of North and South, the difference in education, in training, in mental inheritances, the misapprehensions, radical and very singular to us, of the civilization of the North. We must recognize certain historic facts, not only the effect of the institution of slavery, but other facts in Southern development. Suppose we say that an unreasonable prejudice exists, or did exist, about the people of the North. That prejudice is a historic fact, of which the statesman must take account. It enters into the question of the time needed to effect the revolution now in progress. There are prejudices in the North

about the South as well. We admit their existence. But what impresses me is the rapidity with which they are disappearing in the South. Knowing what human nature is, it seems incredible that they could have subsided so rapidly. Enough remain for national variety, and enough will remain for purposes of social badinage, but common interests in the country and in making money are melting them away very fast. So far as loyalty to the Government is concerned, I am not authorized to say that it is as deeply rooted in the South as in the North, but it is expressed as vividly, and felt with a good deal of fresh enthusiasm. The "American" sentiment, pride in this as the most glorious of all lands, is genuine, and amounts to enthusiasm with many who would in an argument glory in their rebellion. "We had more loyalty to our States than you had," said one lady, "and we have transferred it to the whole country."

But the negro? Granting that the South is loyal enough, wishes never another rebellion, and is satisfied to be rid of slavery, do not the people intend to keep the negroes practically a servile class, slaves in all but the name, and to defeat by chicanery or by force the legitimate results of the war and of enfranchisement?

This is a very large question, and cannot be discussed in my limits. If I were to say what my impression is, it would be about this: the South is quite as much perplexed by the negro problem as the North is, and is very much disposed to await developments, and to let time solve it. One thing, however, must be admitted in all this discussion. The Southerners will not permit such Legislatures as those assembled once in Louisiana and South Carolina to rule them again. "Will you disfranchise the blacks by management or by force?"

"Well, what would you do in Ohio or in Connecticut? Would you be ruled by a lot of ignorant field-hands allied with a gang of plunderers?"

In looking at this question from a Northern point of view we have to keep in mind two things: first, the Federal Government imposed colored suffrage without any educational qualification—a hazardous experiment; in the second place, it has handed over the control of the colored people in each State to the State, under the Constitution, as completely in Louisiana as in New York. The responsibility is on Louisiana. The North cannot relieve her of it, and it cannot interfere, except by ways provided in the Constitution. In the South, where fear of a legislative domination has gone, the feeling between the two races is that of amity and mutual help. This is, I think, especially true in Louisiana. The Southerners never have forgotten the loyalty of the slaves during the war, the security with which the white families dwelt in the midst of a black population while all the white men were absent in the field; they often refer to this. It touches with tenderness the new relation of the races. I think there is generally in the South a feeling of good-will towards the negroes, a desire that they should develop into true manhood and womanhood. Undeniably there are indifference and neglect and some remaining suspicion about the schools that Northern charity has organized for the negroes. As to this neglect of the negro, two things are to be said: the whole subject of education (as we have understood it in the North) is comparatively new in the South; and the necessity of earning a living since the war has distracted attention from it. But the general development of education is quite as advanced as could be expected. The thoughtful and the leaders of opinion are fully awake to the fact that the mass of the people must be educated, and that the only settlement of the negro problem is in the education of the negro, intellectually and morally. They go further than this. They say that for the South to hold its own—since the negro is there and will stay there, and is the majority of the laboring class—it is necessary that the great agricultural mass of unskilled labor should be transformed, to a great extent, into a class of skilled labor, skilled on the farm, in shops, in factories, and that the South must have a highly diversified industry. To this end they want industrial as well as ordinary schools for the colored people.

It is believed that, with this education and with diversified industry, the social question will settle itself, as it does the world over. Society cannot be made or unmade by legislation. In New Orleans the street-ears are free to all colors; at the Exposition white and colored people mingled freely, talking and looking at what was of common interest.

We who live in States where hotel-keepers exclude Hebrews cannot say much about the exclusion of negroes from Southern hotels. There are prejudices remaining. There are cases of hardship on the railways, where for the same charge perfectly respectable and nearly white women are shut out of cars while there is no discrimination against dirty and disagreeable white people. In time all this will doubtless rest upon the basis it rests on at the North, and social life will take care of itself. It is my impression that the negroes are no more desirous to mingle socially with the whites than the whites are with the negroes. Among the negroes there are social grades as distinctly marked as in white society. What will be the final outcome of the juxtaposition nobody can tell; meantime it must be recorded that good-will exists between the races.

I had one day at the Exposition an interesting talk with the colored woman in charge of the Alabama section of the exhibit of the colored people. This exhibit, made by States, was suggested and promoted by Major Burke in order to show the whites what the colored people could do, and as a stimulus to the latter. There was not much time—only two or three months—in which to prepare the exhibit, and it was hardly a fair showing of the capacity of the colored people. The work was mainly women's work—embroidery, sewing, household stuffs, with a little of the handiwork of artisans, and an exhibit of the progress in education; but small as it was, it was wonderful as the result of only a few years of freedom. The Alabama exhibit was largely from Mobile, and was due to the energy, executive ability, and taste of the commissioner in charge. She was a quadroon, a widow, a woman of character and uncommon mental and moral quality. She talked exceedingly well, and with a practical good-sense which would be notable in anybody. In the course of our conversation the whole social and political question was gone over. Herself a person of light color, and with a confirmed social prejudice against black people, she thoroughly identified herself with the colored race, and it was evident that her sympathies were with them. She confirmed what I had heard of the social grades among colored people, but her whole soul was in the elevation of her race as a race, inclining always to their side, but with no trace of hostility to the whites. Many of her best friends were whites, and perhaps the most valuable part of her education was acquired in families of social distinction. "I can illustrate," she said, "the state of feeling between the two races in Mobile by an incident last summer. There was an election coming off in the City Government, and I knew that the reformers wanted and needed the colored vote. I went, therefore, to some of the chief men, who knew me and had confidence in me, for I had had business relations with many of them [she had kept a fashionable boarding-house], and told them that I wanted the Opera-house

for the colored people to give an entertainment and exhibition in. The request was extraordinary. Nobody but white people had ever been admitted to the Opera-house. But, after some hesitation and consultation, the request was granted. We gave the exhibition, and the white people all attended. It was really a beautiful affair, lovely tableaux, with gorgeous dresses, recitations, etc., and everybody was astonished that the colored people had so much taste and talent, and had got on so far in education. They said they were delighted and surprised, and they liked it so well that they wanted the entertainment repeated—it was given for one of our charities—but I was too wise for that. I didn't want to run the chance of destroying the impression by repeating, and I said we would wait a while, and then show them something better. Well, the election came off in August, and everything went all right, and now the colored people in Mobile can have anything they want. There is the best feeling between the races. I tell you we should get on beautifully if the politicians would let us alone. It is politics that has made all the trouble in Alabama and in Mobile." And I learned that in Mobile, as in many other places, the negroes were put in minor official positions, the duties of which they were capable of discharging, and had places in the police.

On "Louisiana Day" in the Exposition the colored citizens took their full share of the parade and the honors. Their societies marched with the others, and the races mingled on the grounds in unconscious equality of privileges. Speeches were made, glorifying the State and its history, by able speakers, the Governor among them; but it was the testimony of Democrats of undoubted Southern orthodoxy that the honors of the day were carried off by a colored clergyman, an educated man, who united eloquence with excellent good-sense, and who spoke as a citizen of Louisiana, proud of his native State, dwelling with richness of allusion upon its history. It was a perfectly manly speech in the assertion of the rights and the position of his race, and it breathed throughout the same spirit of good-will and amity in a common hope of progress that characterized the talk of the colored woman commissioner of Mobile. It was warmly applauded, and accepted, so far as I heard, as a matter of course.

No one, however, can see the mass of colored people in the cities and on the plantations, the ignorant mass, slowly coming to moral consciousness, without a recognition of the magnitude of the negro problem. I am glad that my State has not the practical settlement of it, and I cannot do less than express profound sympathy with the people who have. They inherit the most difficult task now anywhere visible in human progress. They will make mistakes, and they will do injustice now and then; but one feels like turning away from these, and thanking God for what they do well.

There are many encouraging things in the condition of the negro. Good-will, generally, among the people where he lives is one thing; their tolerance of his weaknesses and failings is another. He is himself, here and there, making heroic sacrifices to obtain an education. There are negro mothers earning money at the wash-tub to keep their boys at school and in college. In the South-west there is such a call for colored teachers that the Straight University in New Orleans, which has about five hundred pupils, cannot begin to supply the demand, although the teachers, male and female, are paid from thirty-five to fifty dollars a month. A colored graduate of this school a year ago is now superintendent of the colored schools in Memphis, at a salary of \$1200 a year.

Are these exceptional cases? Well, I suppose it is also exceptional to see a colored clergyman in his surplice seated in the chancel of the most important white Episcopal church in New Orleans, assisting in the service; but it is significant. There are many good auguries to be drawn from the improved condition of the negroes on the plantations, the more rational and less emotional character of their religious services, and the hold of the temperance movement on all classes in the country places.

II.—SOCIETY IN THE NEW SOUTH.

The American Revolution made less social change in the South than in the North. Under conservative influences the South developed her social life with little alteration in form and spirit—allowing for the decay that always attends conservatism—down to the Civil War. The social revolution which was in fact accomplished contemporaneously with the political severance from Great Britain, in the North, was not effected in the South until Lee offered his sword to Grant, and Grant told him to keep it and beat it into a ploughshare. The change had indeed been inevitable, and ripening for four years, but it was at that moment universally recognized. Impossible, of course, except by the removal of slavery, it is not wholly accounted for by the removal of slavery; it results also from an economical and political revolution, and from a total alteration of the relations of the South to the rest of the world. The story of this social change will be one of the most marvellous the historian has to deal with.

Provincial is a comparative term. All England is provincial to the Londoner, all America to the Englishman. Perhaps New York looks upon Philadelphia as provincial; and if Chicago is forced to admit that Boston resembles ancient Athens, then Athens, by the Chicago standard, must have been a very provincial city. The root of provincialism is localism, or a condition of being on one side and apart from the general movement of contemporary life. In this sense, and compared with the North in its absolute openness to every wind from all parts of the globe, the South was provincial. Provincialism may have its decided advantages, and it may nurture many superior virtues and produce a social state that is as charming as it is interesting, but along with it goes a certain self-appreciation, which ultracosmopolitan critics would call Concord-like, that seems

exaggerated to outsiders.

The South, and notably Virginia and South Carolina, cherished English traditions long after the political relation was severed. But it kept the traditions of the time of the separation, and did not share the literary and political evolution of England. Slavery divided it from the North in sympathy, and slavery, by excluding European emigration, shut out the South from the influence of the new ideas germinating in Europe. It was not exactly true to say that the library of the Southern gentleman stopped with the publications current in the reign of George the Third, but, well stocked as it was with the classics and with the English literature become classic, it was not likely to contain much of later date than the Reform Bill in England and the beginning of the abolition movement in the North. The pages of *De Bow's Review* attest the ambition and direction of Southern scholarship—a scholarship not much troubled by the new problems that were at the time rending England and the North. The young men who still went abroad to be educated brought back with them the traditions and flavor of the old England and not the spirit of the new, the traditions of the universities and not the new life of research and doubt in them. The conservatism of the Southern life was so strong that the students at Northern colleges returned unchanged by contact with a different civilization. The South met the North in business and in politics, and in a limited social intercourse, but from one cause and another for three-quarters of a century it was practically isolated, and consequently developed a peculiar social life.

One result of this isolation was that the South was more homogeneous than the North, and perhaps more distinctly American in its characteristics. This was to be expected, since it had one common and overmastering interest in slavery, had little foreign admixture, and was removed from the currents of commerce and the disturbing ideas of Reform. The South, so far as society was concerned, was an agricultural aristocracy, based upon a perfectly defined lowest class in the slaves, and holding all trade, commerce, and industrial and mechanical pursuits in true mediæval contempt. Its literature was monarchical, tempered by some Jeffersonian, doctrinaire notions of the rights of man, which were satisfied, however, by an insistence upon the sovereignty of the States, and by equal privileges to a certain social order in each State. Looked at, then, from the outside, the South appeared to be homogeneous, but from its own point of view, socially, it was not at all so. Social life in these jealously independent States developed almost as freely and variously as it did in the Middle Ages in the free cities of Italy. Virginia was not at all like South Carolina (except in one common interest), and Louisiana—especially in its centre, New Orleans—more cosmopolitan than any other part of the South by reason of its foreign elements, more closely always in sympathy with Paris than with New York or Boston, was widely, in its social life, separated from its sisters. Indeed, in early days, before the slavery agitation, there was, owing to the heritage of English traditions, more in common between Boston and Charleston than between New Orleans and Charleston. And later, there was a marked social difference between towns and cities near together—as, for instance, between agricultural Lexington and commercial Louisville, in Kentucky.

The historian who writes the social life of the Southern States will be embarrassed with romantic and picturesque material. Nowhere else in this levelling age will he find a community developing so much of the dramatic, so much splendor and such pathetic contrasts in the highest social cultivation, as in the plantation and city life of South Carolina. Already, in regarding it, it assumes an air of unreality, and vanishes in its strong lights and heavy shades like a dream of the chivalric age. An allusion to its character is sufficient for the purposes of this paper. Persons are still alive who saw the prodigal style of living and the reckless hospitality of the planters in those days, when in the Charleston and Sea Island mansions the guests constantly entertained were only outnumbered by the swarms of servants; when it was not incongruous and scarcely ostentatious that the courtly company, which had the fine and free manner of another age, should dine off gold and silver plate; and when all that wealth and luxury could suggest was lavished in a princely magnificence that was almost barbaric in its profusion. The young men were educated in England; the young women were reared like helpless princesses, with a servant for every want and whim; it was a day of elegant accomplishments and deferential manners, but the men gamed like Fox and drank like Sheridan, and the duel was the ordinary arbiter of any difference of opinion or of any point of honor. Not even slavery itself could support existence on such a scale, and even before the war it began to give way to the conditions of our modern life. And now that old peculiar civilization of South Carolina belongs to romance. It can never be repeated, even by the aid of such gigantic fortunes as are now accumulating in the North.

The agricultural life of Virginia appeals with scarcely less attraction to the imagination of the novelist. Mr. Thackeray caught the flavor of it in his "Virginians" from an actual study of it in the old houses, when it was becoming a faded memory. The vast estates—principalities in size—with troops of slaves attached to each plantation; the hospitality, less costly, but as free as that of South Carolina; the land in the hands of a few people; politics and society controlled by a small number of historic families, intermarried until all Virginians of a certain grade were related—all this forms a picture as feudal-like and foreign to this age as can be imagined. The writer recently read the will of a country gentleman of the last century in Virginia, which raises a distinct image of the landed aristocracy of the time. It devised his plantation of six thousand acres with its slaves attached, his plantation of eighteen hundred acres and slaves, his plantation of twelve hundred acres and slaves, with other farms and outlying property; it mentioned all the cattle, sheep, and hogs, the riding-horses in stables, the racing-steeds, the several coaches with the six horses that drew them (an acknowledgment of the wretched state of the roads), and so on in all the details of a vast domain. All the slaves are called by name, all the farming implements were enumerated, and all the homely articles of furniture down to the beds and kitchen utensils. This whole structure of a unique civilization is practically swept away now, and with it the peculiar social life it produced. Let us pause a moment upon a few details of it, as it had its highest development in Eastern Virginia.

The family was the fetich. In this high social caste the estates were entailed to the limit of the law, for one generation, and this entail was commonly religiously renewed by the heir. It was not expected that a widow would remarry; as a rule she did not, and it was almost a matter of course that the will of the husband should make the enjoyment of even the entailed estate dependent upon the non-marriage of the widow. These prohibitions upon her freedom of choice were not considered singular or cruel in a society whose chief gospel was the preservation of the family name.

The planters lived more simply than the great seaboard planters of South Carolina and Georgia, with not less pride, but with less ostentation and show. The houses were of the accepted colonial pattern, square, with four rooms on a floor, but with wide galleries (wherein they differed from the colonial houses in New England), and sometimes with additions in the way of offices and lodging-rooms. The furniture was very simple and plain—a few hundred dollars would cover the cost of it in most mansions. There were not in all Virginia more than two or three magnificent houses. It was the taste of gentlemen to adorn the ground in front of the house with evergreens, with the locust and acanthus, and perhaps the maple-trees not native to the spot; while the oak, which is nowhere more stately and noble than in Virginia, was never seen on the lawn or the drive-way, but might be found about the “quarters,” or in an adjacent forest park. As the interior of the houses was plain, so the taste of the people was simple in the matter of ornament—jewellery was very little worn; in fact, it is almost literally true that there were in Virginia no family jewels.

So thoroughly did this society believe in itself and keep to its traditions that the young gentleman of the house, educated in England, brought on his return nothing foreign home with him—no foreign tastes, no bric-à-brac for his home, and never a foreign wife. He came back unchanged, and married the cousin he met at the first country dance he went to.

The pride of the people, which was intense, did not manifest itself in ways that are common elsewhere—it was sufficient to itself in its own homespun independence. What would make one distinguished elsewhere was powerless here. Literary talent, and even acquired wealth, gave no distinction; aside from family and membership of the caste, nothing gave it to any native or visitor. There was no lion-hunting, no desire whatever to attract the attention of, or to pay any deference to, men of letters. If a member of society happened to be distinguished in letters or in scholarship, it made not the slightest difference in his social appreciation. There was absolutely no encouragement for men of letters, and consequently there was no literary class and little literature. There was only one thing that gave a man any distinction in this society, except a long pedigree, and that was the talent of oratory—that was prized, for that was connected with prestige in the State and the politics of the dominant class. The planters took few newspapers, and read those few very little. They were a fox-hunting, convivial race, generally Whig in politics, always orthodox in religion. The man of cultivation was rare, and, if he was cultivated, it was usually only on a single subject. But the planter might be an astute politician, and a man of wide knowledge and influence in public affairs. There was one thing, however, that was held in almost equal value with pedigree, and that was female beauty. There was always the recognized “belle,” the beauty of the day, who was the toast and the theme of talk, whose memory was always green with her chivalrous contemporaries; the veterans liked to recall over the old Madeira the wit and charms of the raving beauties who had long gone the way of the famous vintages of the cellar.

The position of the clergyman in the Episcopal Church was very much what his position was in England in the time of James II. He was patronized and paid like any other adjunct of a well-ordered society. If he did not satisfy his masters he was quietly informed that he could probably be more useful elsewhere. If he was acceptable, one element of his popularity was that he rode to hounds and could tell a good story over the wine at dinner.

The pride of this society preserved itself in a certain high, chivalrous state. If any of its members were poor, as most of them became after the war, they took a certain pride in their poverty. They were too proud to enter into a vulgar struggle to be otherwise, and they were too old to learn the habit of labor. No such thing was known in it as scandal. If any breach of morals occurred, it was apt to be acknowledged with a Spartan regard for truth, and defiantly published by the families affected, who announced that they accepted the humiliation of it. Scandal there should be none. In that caste the character of women was not even to be the subject of talk in private gossip and innuendo. No breach of social caste was possible. The overseer, for instance, and the descendants of the overseer, however rich, or well educated, or accomplished they might become, could never marry into the select class. An alliance of this sort doomed the offender to an absolute and permanent loss of social position. This was the rule. Beauty could no more gain entrance there than wealth.

This plantation life, of which so much has been written, was repeated with variations all over the South. In Louisiana and lower Mississippi it was more prodigal than in Virginia. To a great extent its tone was determined by a relaxing climate, and it must be confessed that it had in it an element of the irresponsible—of the “after us the deluge.” The whole system wanted thrift and, to an English or Northern visitor, certain conditions of comfort. Yet everybody acknowledged its fascination; for there was nowhere else such a display of open-hearted hospitality. An invitation to visit meant an invitation to stay indefinitely. The longer the visit lasted, if it ran into months, the better were the entertainers pleased. It was an uncalculating hospitality, and possibly it went along with littleness and meanness, in some directions, that were no more creditable than the alleged meanness of the New England farmer. At any rate, it was not a systematized generosity. The hospitality had somewhat the character of a new country and of a society not crowded. Company was welcome on the vast, isolated plantations. Society also was really small, composed of a few families, and intercourse by long visits and profuse entertainments was natural and even necessary.

This social aristocracy had the faults as well as the virtues of an aristocracy so formed. One fault was an undue sense of superiority, a sense nurtured by isolation from the intellectual contests and the illusion-destroying tests of modern life. And this sense of superiority diffused itself downward through the mass of the Southern population. The slave of a great family was proud; he held himself very much above the poor white, and he would not associate with the slave of the small farmer; and the poor white never doubted his own superiority to the Northern “mudsill”—as the phrase of the day was. The whole life was somehow pitched to a romantic key, and often there was a queer contrast between the Gascon-like pretension and the reality—all the more because of a certain sincerity and single-mindedness that was unable to see the anachronism of trying to live in the spirit of Scott’s romances in our day and generation.

But with all allowance for this, there was a real basis for romance in the impulsive, sun-nurtured people, in the conflict between the two distinct races, and in the system of labor that was an anomaly in modern life. With the downfall of this system it was inevitable that the social state should radically change, and especially

as this downfall was sudden and by violence, and in a struggle that left the South impoverished, and reduced to the rank of bread-winners those who had always regarded labor as a thing impossible for themselves.

As a necessary effect of this change, the dignity of the agricultural interest was lowered, and trade and industrial pursuits were elevated. Labor itself was perforce dignified. To earn one's living by actual work, in the shop, with the needle, by the pen, in the counting-house or school, in any honorable way, was a lot accepted with cheerful courage. And it is to the credit of all concerned that reduced circumstances and the necessity of work for daily bread have not thus far cost men and women in Southern society their social position. Work was a necessity of the situation, and the spirit in which the new life was taken up brought out the solid qualities of the race. In a few trying years they had to reverse the habits and traditions of a century. I think the honest observer will acknowledge that they have accomplished this without loss of that social elasticity and charm which were heretofore supposed to depend very much upon the artificial state of slave labor. And they have gained much. They have gained in losing a kind of suspicion that was inevitable in the isolation of their peculiar institution. They have gained freedom of thought and action in all the fields of modern endeavor, in the industrial arts, in science, in literature. And the fruits of this enlargement must add greatly to the industrial and intellectual wealth of the world.

Society itself in the new South has cut loose from its old moorings, but it is still in a transition state, and offers the most interesting study of tendencies and possibilities. Its danger, of course, is that of the North—a drift into materialism, into a mere struggle for wealth, undue importance attached to money, and a loss of public spirit in the selfish accumulation of property. Unfortunately, in the transition of twenty years the higher education has been neglected. The young men of this generation have not given even as much attention to intellectual pursuits as their fathers gave. Neither in polite letters nor in politics and political history have they had the same training. They have been too busy in the hard struggle for a living. It is true at the North that the young men in business are not so well educated, not so well read, as the young women of their own rank in society. And I suspect that this is still more true in the South. It is not uncommon to find in this generation Southern young women who add to sincerity, openness and frankness of manner; to the charm born of the wish to please, the graces of cultivation; who know French like their native tongue, who are well acquainted with the French and German literatures, who are well read in the English classics—though perhaps guiltless of much familiarity with our modern American literature. But taking the South at large, the schools for either sex are far behind those of the North both in discipline and range. And this is especially to be regretted, since the higher education is an absolute necessity to counteract the intellectual demoralization of the newly come industrial spirit.

We have yet to study the compensations left to the South in their century of isolation from this industrial spirit, and from the absolutely free inquiry of our modern life. Shall we find something sweet and sound there, that will yet be a powerful conservative influence in the republic? Will it not be strange, said a distinguished biblical scholar and an old-time antislavery radical, if we have to depend, after all, upon the orthodox conservatism of the South? For it is to be noted that the Southern pulpit holds still the traditions of the old theology, and the mass of Southern Christians are still undisturbed by doubts. They are no more troubled by agnosticism in religion than by altruism in sociology. There remains a great mass of sound and simple faith. We are not discussing either the advantage or the danger of disturbing thought, or any question of morality or of the conduct of life, nor the shield or the peril of ignorance—it is simply a matter of fact that the South is comparatively free from what is called modern doubt.

Another fact is noticeable. The South is not and never has been disturbed by "isms" of any sort. "Spiritualism" or "Spiritism" has absolutely no lodgement there. It has not even appealed in any way to the excitable and superstitious colored race. Inquiry failed to discover to the writer any trace of this delusion among whites or blacks. Society has never been agitated on the important subjects of graham-bread or of the divided skirt. The temperance question has forced itself upon the attention of deeply drinking communities here and there. Usually it has been treated in a very common-sense way, and not as a matter of politics. Fanaticism may sometimes be a necessity against an overwhelming evil; but the writer knows of communities in the South that have effected a practical reform in liquor selling and drinking without fanatical excitement. Bar-room drinking is a fearful curse in Southern cities, as it is in Northern; it is an evil that the colored people fall into easily, but it is beginning to be met in some Southern localities in a resolute and sensible manner.

The students of what we like to call "progress," especially if they are disciples of Mr. Ruskin, have an admirable field of investigation in the contrast of the social, economic, and educational structure of the North and the South at the close of the war. After a century of free schools, perpetual intellectual agitation, extraordinary enterprise in every domain of thought and material achievement, the North presented a spectacle at once of the highest hope and the gravest anxiety. What diversity of life! What fulness! What intellectual and even social emancipation! What reforms, called by one party Heavensent, and by the other reforms against nature! What agitations, doubts, contempt of authority! What wild attempts to conduct life on no basis philosophic or divine! And yet what prosperity, what charities, what a marvellous growth, what an improvement in physical life! With better knowledge of sanitary conditions and of the culinary art, what an increase of beauty in women and of stalwartness in men! For beauty and physical comeliness, it must be acknowledged (parenthetically), largely depend upon food.

It is in the impoverished parts of the country, whether South or North, the sandy barrens, and the still vast regions where cooking is an unknown art, that scrawny and dyspeptic men and women abound—the sallow-faced, flat-chested, spindle-limbed.

This Northern picture is a veritable nineteenth-century spectacle. Side by side with it was the other society, also covering a vast domain, that was in many respects a projection of the eighteenth century into the nineteenth. It had much of the conservatism, and preserved something of the manners, of the eighteenth century, and lacked a good deal the so-called spirit of the age of the nineteenth, together with its doubts, its isms, its delusions, its energies. Life in the South is still on simpler terms than in the North, and society is not so complex. I am inclined to think it is a little more natural, more sincere in manner though not in fact, more frank and impulsive. One would hesitate to use the word unworldly with regard to it, but it may be less

calculating. A bungling male observer would be certain to get himself into trouble by expressing an opinion about women in any part of the world; but women make society, and to discuss society at all is to discuss them. It is probably true that the education of women at the South, taken at large, is more superficial than at the North, lacking in purpose, in discipline, in intellectual vigor. The aim of the old civilization was to develop the graces of life, to make women attractive, charming, good talkers (but not too learned), graceful, and entertaining companions. When the main object is to charm and please, society is certain to be agreeable. In Southern society beauty, physical beauty, was and is much thought of, much talked of. The "belle" was an institution, and is yet. The belle of one city or village had a wide reputation, and trains of admirers wherever she went—in short, a veritable career, and was probably better known than a poetess at the North. She not only ruled in her day, but she left a memory which became a romance to the next generation. There went along with such careers a certain lightness and gayety of life, and now and again a good deal of pathos and tragedy.

With all its social accomplishments, its love of color, its climatic tendency to the sensuous side of life, the South has been unexpectedly wanting in a fine-art development—namely, in music and pictorial art. Culture of this sort has been slow enough in the North, and only lately has had any solidity or been much diffused. The love of art, and especially of art decoration, was greatly quickened by the Philadelphia Exhibition, and the comparatively recent infusion of German music has begun to elevate the taste. But I imagine that while the South naturally was fond of music of a light sort, and New Orleans could sustain and almost make native the French opera when New York failed entirely to popularize any sort of opera, the musical taste was generally very rudimentary; and the poverty in respect to pictures and engravings was more marked still. In a few great houses were fine paintings, brought over from Europe, and here and there a noble family portrait. But the traveller to-day will go through city after city, and village after village, and find no art-shop (as he may look in vain in large cities for any sort of book-store except a news-room); rarely will see an etching or a fine engraving; and he will be led to doubt if the taste for either existed to any great degree before the war. Of course he will remember that taste and knowledge in the fine arts may be said in the North to be recent acquirements, and that, meantime, the South has been impoverished and struggling in a political and social revolution.

Slavery and isolation and a semi-feudal state have left traces that must long continue to modify social life in the South, and that may not wear out for a century to come. The new life must also differ from that in the North by reason of climate, and on account of the presence of the alien, *insouciant* colored race. The vast black population, however it may change, and however education may influence it, must remain a powerful determining factor. The body of the slaves, themselves inert, and with no voice in affairs, inevitably influenced life, the character of civilization, manners, even speech itself. With slavery ended, the Southern whites are emancipated, and the influence of the alien race will be other than what it was, but it cannot fail to affect the tone of life in the States where it is a large element.

When, however, we have made all allowance for difference in climate, difference in traditions, total difference in the way of looking at life for a century, it is plain to be seen that a great transformation is taking place in the South, and that Southern society and Northern society are becoming every day more and more alike. I know there are those, and Southerners, too, who insist that we are still two peoples, with more points of difference than of resemblance—certainly farther apart than Gascons and Bretons.

This seems to me not true in general, though it may be of a portion of the passing generation. Of course there is difference in temperament, and peculiarities of speech and manner remain and will continue, as they exist in different portions of the North—the accent of the Bostonian differs from that of the Philadelphian, and the inhabitant of Richmond is known by his speech as neither of New Orleans nor New York. But the influence of economic laws, of common political action, of interest and pride in one country, is stronger than local bias in such an age of intercommunication as this. The great barrier between North and South having been removed, social assimilation must go on. It is true that the small farmer in Vermont, and the small planter in Georgia, and the village life in the two States, will preserve their strong contrasts. But that which, without clearly defining, we call society becomes yearly more and more alike North and South. It is becoming more and more difficult to tell in any summer assembly—at Newport, the White Sulphur, Saratoga, Bar Harbor—by physiognomy, dress, or manner, a person's birthplace. There are noticeable fewer distinctive traits that enable us to say with certainty that one is from the South, or the West, or the East. No doubt the type at such a Southern resort as the White Sulphur is more distinctly American than at such a Northern resort as Saratoga. We are prone to make a good deal of local peculiarities, but when we look at the matter broadly and consider the vastness of our territory and the varieties of climate, it is marvellous that there is so little difference in speech, manner, and appearance. Contrast us with Europe and its various irreconcilable races occupying less territory. Even little England offers greater variety than the United States. When we think of our large, widely scattered population, the wonder is that we do not differ more.

Southern society has always had a certain prestige in the North. One reason for this was the fact that the ruling class South had more leisure for social life. Climate, also, had much to do in softening manners, making the temperament ardent, and at the same time producing that leisurely movement which is essential to a polished life. It is probably true, also, that mere wealth was less a passport to social distinction than at the North, or than it has become at the North; that is to say, family, or a certain charm of breeding, or the talent of being agreeable, or the gift of cleverness, or of beauty, were necessary, and money was not. In this respect it seems to be true that social life is changing at the South; that is to say, money is getting to have the social power in New Orleans that it has in New York. It is inevitable in a commercial and industrial community that money should have a controlling power, as it is regrettable that the enjoyment of its power very slowly admits a sense of its responsibility. The old traditions of the South having been broken down, and nearly all attention being turned to the necessity of making money, it must follow that mere wealth will rise as a social factor. Herein lies one danger to what was best in the old régime. Another danger is that it must be put to the test of the ideas, the agitations, the elements of doubt and disintegration that seem inseparable to "progress," which give Northern society its present complexity, and just cause of alarm to all who watch its headlong career. Fulness of life is accepted as desirable, but it has its dangers.

Within the past five years social intercourse between North and South has been greatly increased. Northerners who felt strongly about the Union and about slavery, and took up the cause of the freedman, and were accustomed all their lives to absolute free speech, were not comfortable in the post-reconstruction atmosphere. Perhaps they expected too much of human nature—a too sudden subsidence of suspicion and resentment. They felt that they were not welcome socially, however much their capital and business energy were desired. On the other hand, most Southerners were too poor to travel in the North, as they did formerly. But all these points have been turned. Social intercourse and travel are renewed. If difficulties and alienations remain they are sporadic, and melting away. The harshness of the Northern winter climate has turned a stream of travel and occupation to the Gulf States, and particularly to Florida, which is indeed now scarcely a Southern State except in climate. The Atlanta and New Orleans Exhibitions did much to bring people of all sections together socially. With returning financial prosperity all the Northern summer resorts have seen increasing numbers of Southern people seeking health and pleasure. I believe that during the past summer more Southerners have been travelling and visiting in the North than ever before.

This social intermingling is significant in itself, and of the utmost importance for the removal of lingering misunderstandings. They who learn to like each other personally will be tolerant in political differences, and helpful and unsuspecting in the very grave problems that rest upon the late slave States. Differences of opinion and different interests will exist, but surely love is stronger than hate, and sympathy and kindness are better solvents than alienation and criticism. The play of social forces is very powerful in such a republic as ours, and there is certainly reason to believe that they will be exerted now in behalf of that cordial appreciation of what is good and that toleration of traditional differences which are necessary to a people indissolubly bound together in one national destiny. Alienated for a century, the society of the North and the society of the South have something to forget but more to gain in the union that every day becomes closer.

III.—NEW ORLEANS.

The first time I saw New Orleans was on a Sunday morning in the month of March. We alighted from the train at the foot of Esplanade Street, and walked along through the French Market, and by Jackson Square to the Hotel Royal. The morning, after rain, was charming; there was a fresh breeze from the river; the foliage was a tender green; in the balconies and on the mouldering window-ledges flowers bloomed, and in the decaying courts climbing-roses mingled their perfume with the orange; the shops were open; ladies tripped along from early mass or to early market; there was a twittering in the square and in the sweet old gardens; caged birds sang and screamed the songs of South America and the tropics; the language heard on all sides was French or the degraded jargon which the easy-going African has manufactured out of the tongue of Bienville. Nothing could be more shabby than the streets, ill-paved, with undulating sidewalks and open gutters green with slime, and both stealing and giving odor; little canals in which the cat, become the companion of the crawfish, and the vegetable in decay sought in vain a current to oblivion; the streets with rows of one-story houses, wooden, with green doors and batten window-shutters, or brick, with the painted stucco peeling off, the line broken often by an edifice of two stories, with galleries and delicate tracery of wrought-iron, houses pink and yellow and brown and gray—colors all blending and harmonious when we get a long vista of them and lose the details of view in the broad artistic effect. Nothing could be shabbier than the streets, unless it is the tumble-down, picturesque old market, bright with flowers and vegetables and many-hued fish, and enlivened by the genial African, who in the New World experiments in all colors, from coal black to the pale pink of the sea-shell, to find one that suits his mobile nature. I liked it all from the first; I lingered long in that morning walk, liking it more and more, in spite of its shabbiness, but utterly unable to say then or ever since wherein its charm lies. I suppose we are all wrongly made up and have a fallen nature; else why is it that while the most thrifty and neat and orderly city only wins our approval, and perhaps gratifies us intellectually, such a thriftless, battered and stained, and lazy old place as the French quarter of New Orleans takes our hearts?

I never could find out exactly where New Orleans is. I have looked for it on the map without much enlightenment. It is dropped down there somewhere in the marshes of the Mississippi and the bayous and lakes. It is below the one, and tangled up among the others, or it might some day float out to the Gulf and disappear. How the Mississippi gets out I never could discover. When it first comes in sight of the town it is running east; at Carrollton it abruptly turns its rapid, broad, yellow flood and runs south, turns presently eastward, circles a great portion of the city, then makes a bold push for the north in order to avoid Algiers and reach the foot of Canal Street, and encountering there the heart of the town, it sheers off again along the old French quarter and Jackson Square due east, and goes no one knows where, except perhaps Mr. Eads.

The city is supposed to lie in this bend of the river, but it in fact extends eastward along the bank down to the Barracks, and spreads backward towards Lake Pontchartrain over a vast area, and includes some very good snipe-shooting.

Although New Orleans has only about a quarter of a million of inhabitants, and so many only in the winter, it is larger than Pekin, and I believe than Philadelphia, having an area of about one hundred and five square miles. From Carrollton to the Barracks, which are not far from the Battle-field, the distance by the river is some thirteen miles. From the river to the lake the least distance is four miles. This vast territory is traversed by lines of horse-cars which all meet in Canal Street, the most important business thoroughfare of the city,

which runs north-east from the river, and divides the French from the American quarter. One taking a horse-car in any part of the city will ultimately land, having boxed the compass, in Canal Street. But it needs a person of vast local erudition to tell in what part of the city, or in what section of the home of the frog and crawfish, he will land if he takes a horse-ear in Canal Street. The river being higher than the city, there is of course no drainage into it; but there is a theory that the water in the open gutters does move, and that it moves in the direction of the Bayou St. John, and of the cypress swamps that drain into Lake Pontchartrain. The stranger who is accustomed to closed sewers, and to get his malaria and typhoid through pipes conducted into his house by the most approved methods of plumbing, is aghast at this spectacle of slime and filth in the streets, and wonders why the city is not in perennial epidemic; but the sun and the wind are great scavengers, and the city is not nearly so unhealthy as it ought to be with such a city government as they say it endures.

It is not necessary to dwell much upon the external features of New Orleans, for innumerable descriptions and pictures have familiarized the public with them. Besides, descriptions can give the stranger little idea of the peculiar city. Although all on one level, it is a town of contrasts. In no other city of the United States or of Mexico is the old and romantic preserved in such integrity and brought into such sharp contrast to the modern. There are many handsome public buildings, churches, club-houses, elegant shops, and on the American side a great area of well-paved streets solidly built up in business blocks. The Square of the original city, included between the river and canal, Rampart and Esplanade streets, which was once surrounded by a wall, is as closely built, but the streets are narrow, the houses generally are smaller, and although it swarms with people, and contains the cathedral, the old Spanish buildings, Jackson Square, the French Market, the French Opera-house, and other theatres, the Mint, the Custom-house, the old Ursuline convent (now the residence of the archbishop), old banks, and scores of houses of historic celebrity, it is a city of the past, and specially interesting in its picturesque decay. Beyond this, eastward and northward extend interminable streets of small houses, with now and then a flowery court or a pretty rose garden, occupied mainly by people of French and Spanish descent. The African pervades all parts of the town, except the new residence portion of the American quarter. This, which occupies the vast area in the bend of the river west of the business blocks as far as Carrollton, is in character a great village rather than a city. Not all its broad avenues and handsome streets are paved (and those that are not are in some seasons impassable), its houses are nearly all of wood, most of them detached, with plots of ground and gardens, and as the quarter is very well shaded, the effect is bright and agreeable. In it are many stately residences, occupying a square or half a square, and embowered in foliage and flowers. Care has been given lately to turf-culture, and one sees here thick-set and handsome lawns. The broad Esplanade Street, with its elegant old-fashioned houses, and double rows of shade trees, which has long been the rural pride of the French quarter, has now rivals in respectability and style on the American side.

New Orleans is said to be delightful in the late fall months, before the winter rains set in, but I believe it looks its best in March and April. This is owing to the roses. If the town was not attached to the name of the Crescent City, it might very well adopt the title of the City of Roses. So kind are climate and soil that the magnificent varieties of this queen of flowers, which at the North bloom only in hot-houses, or with great care are planted out-doors in the heat of our summer, thrive here in the open air in prodigal abundance and beauty. In April the town is literally embowered in them; they fill door-yards and gardens, they overrun the porches, they climb the sides of the houses, they spread over the trees, they take possession of trellises and fences and walls, perfuming the air and entrancing the heart with color. In the outlying parks, like that of the Jockey Club, and the florists' gardens at Carrollton, there are fields of them, acres of the finest sorts waving in the spring wind. Alas! can beauty ever satisfy? This wonderful spectacle fills one with I know not what exquisite longing. These flowers pervade the town, old women on the street corners sit behind banks of them, the florists' windows blush with them, friends despatch to each other great baskets of them, the favorites at the theatre and the amateur performers stand behind high barricades of roses which the good-humored audience piles upon the stage, everybody carries roses and wears roses, and the houses overflow with them. In this passion for flowers you may read a prominent trait of the people. For myself I like to see a spot on this earth where beauty is enjoyed for itself and let to run to waste, but if ever the industrial spirit of the French-Italians should prevail along the littoral of Louisiana and Mississippi, the raising of flowers for the manufacture of perfumes would become a most profitable industry.

New Orleans is the most cosmopolitan of provincial cities. Its comparative isolation has secured the development of provincial traits and manners, has preserved the individuality of the many races that give it color, morals, and character, while its close relations with France—an affiliation and sympathy which the late war has not altogether broken—and the constant influx of Northern men of business and affairs have given it the air of a metropolis. To the Northern stranger the aspect and the manners of the city are foreign, but if he remains long enough he is sure to yield to its fascinations, and become a partisan of it. It is not altogether the soft and somewhat enervating and occasionally treacherous climate that beguiles him, but quite as much the easy terms on which life can be lived. There is a human as well as a climatic amiability that wins him. No doubt it is better for a man to be always braced up, but no doubt also there is an attraction in a complaisance that indulges his inclinations.

Socially as well as commercially New Orleans is in a transitive state. The change from river to railway transportation has made her levees vacant; the shipment of cotton by rail and its direct transfer to ocean carriage have nearly destroyed a large middle-men industry; a large part of the agricultural tribute of the South-west has been diverted; plantations have either not recovered from the effects of the war or have not adjusted themselves to new productions, and the city waits the rather blind developments of the new era. The falling off of law business, which I should like to attribute to the growth of common-sense and good-will is, I fear, rather due to business lassitude, for it is observed that men quarrel most when they are most actively engaged in acquiring each other's property. The business habits of the Creoles were conservative and slow; they do not readily accept new ways, and in this transition time the American element is taking the lead in all enterprises. The American element itself is toned down by the climate and the contagion of the leisurely habits of the Creoles, and loses something of the sharpness and excitability exhibited by business men in all Northern cities, but it is certainly changing the social as well as the business aspect of the city. Whether

these social changes will make New Orleans a more agreeable place of residence remains to be seen.

For the old civilization had many admirable qualities. With all its love of money and luxury and an easy life, it was comparatively simple. It cared less for display than the society that is supplanting it. Its rule was domesticity. I should say that it had the virtues as well as the prejudices and the narrowness of intense family feeling, and its exclusiveness. But when it trusted, it had few reserves, and its cordiality was equal to its *naivete*. The Creole civilization differed totally from that in any Northern city; it looked at life, literature, wit, manners, from altogether another plane; in order to understand the society of New Orleans one needs to imagine what French society would be in a genial climate and in the freedom of a new country. Undeniably, until recently, the Creoles gave the tone to New Orleans. And it was the French culture, the French view of life, that was diffused. The young ladies mainly were educated in convents and French schools. This education had womanly agreeability and matrimony in view, and the graces of social life. It differed not much from the education of young ladies of the period elsewhere, except that it was from the French rather than the English side, but this made a world of difference. French was a study and a possession, not a fashionable accomplishment. The Creole had gayety, sentiment, spice with a certain climatic languor, sweetness of disposition, and charm of manner, and not seldom winning beauty; she was passionately fond of dancing and of music, and occasionally an adept in the latter; and she had candor, and either simplicity or the art of it. But with her tendency to domesticity and her capacity for friendship, and notwithstanding her gay temperament, she was less worldly than some of her sisters who were more gravely educated after the English manner. There was therefore in the old New Orleans life something nobler than the spirit of plutocracy. The Creole middle-class population had, and has yet, captivating *naivete*, friendliness, cordiality.

But the Creole influence in New Orleans is wider and deeper than this. It has affected literary sympathies and what may be called literary morals. In business the Creole is accused of being slow, conservative, in regard to improvements obstinate and reactionary, preferring to nurse a prejudice rather than run the risk of removing it by improving himself, and of having a conceit that his way of looking at life is better than the Boston way. His literary culture is derived from France, and not from England or the North. And his ideas a good deal affect the attitude of New Orleans towards English and contemporary literature. The American element of the town was for the most part commercial, and little given to literary tastes. That also is changing, but I fancy it is still true that the most solid culture is with the Creoles, and it has not been appreciated because it is French, and because its point of view for literary criticism is quite different from that prevailing elsewhere in America. It brings our American and English contemporary authors, for instance, to comparison, not with each other, but with French and other Continental writers. And this point of view considerably affects the New Orleans opinion of Northern literature. In this view it wants color, passion; it is too self-conscious and prudish, not to say Puritanically mock-modest. I do not mean to say that the Creoles as a class are a reading people, but the literary standards of their scholars and of those among them who do cultivate literature deeply are different from those at the North. We may call it provincial, or we may call it cosmopolitan, but we shall not understand New Orleans until we get its point of view of both life and letters.

In making these observations it will occur to the reader that they are of necessity superficial, and not entitled to be regarded as criticism or judgment. But I am impressed with the foreignness of New Orleans civilization, and whether its point of view is right or wrong, I am very far from wishing it to change. It contains a valuable element of variety for the republic. We tend everywhere to sameness and monotony. New Orleans is entering upon a new era of development, especially in educational life. The Tulane University is beginning to make itself felt as a force both in polite letters and in industrial education. And I sincerely hope that the literary development of the city and of the South-west will be in the line of its own traditions, and that it will not be a copy of New England or of Dutch Manhattan. It can, if it is faithful to its own sympathies and temperament, make an original and valuable contribution to our literary life.

There is a great temptation to regard New Orleans through the romance of its past; and the most interesting occupation of the idler is to stroll about in the French part of the town, search the shelves of French and Spanish literature in the second-hand book-shops, try to identify the historic sites and the houses that are the seats of local romances, and observe the life in the narrow streets and alleys that, except for the presence of the colored folk, recall the quaint picturesqueness of many a French provincial town. One never tires of wandering in the neighborhood of the old cathedral, facing the smart Jackson Square, which is flanked by the respectable Pontalba buildings, and supported on either side by the ancient Spanish courthouse, the most interesting specimens of Spanish architecture this side of Mexico. When the court is in session, iron cables are stretched across the street to prevent the passage of wagons, and justice is administered in silence only broken by the trill of birds in the Place d'Armes and in the old flower-garden in the rear of the cathedral, and by the muffled sound of footsteps in the flagged passages. The region is saturated with romance, and so full of present sentiment and picturesqueness that I can fancy no ground more congenial to the artist and the story-teller. To enter into any details of it would be to commit one's self to a task quite foreign to the purpose of this paper, and I leave it to the writers who have done and are doing so much to make old New Orleans classic.

Possibly no other city of the United States so abounds in stories pathetic and tragic, many of which cannot yet be published, growing out of the mingling of races, the conflicts of French and Spanish, the presence of adventurers from the Old World and the Spanish Main, and especially out of the relations between the whites and the fair women who had in their thin veins drops of African blood. The quadrone and the octroone are the staple of hundreds of thrilling tales. Duels were common incidents of the Creole dancing assemblies, and of the *cordon bleu* balls—the deities of which were the quadrone women, “the handsomest race of women in the world,” says the description, and the most splendid dancers and the most exquisitely dressed—the affairs of honor being settled by a midnight thrust in a vacant square behind the cathedral, or adjourned to a more French daylight encounter at “The Oaks,” or “Les Trois Capalins.” But this life has all gone. In a stately building in this quarter, said by tradition to have been the quadrone ball-room, but I believe it was a white assembly-room connected with the opera, is now a well-ordered school for colored orphans, presided over by colored Sisters of Charity.

It is quite evident that the peculiar prestige of the quadrone and the octroone is a thing of the past. Indeed,

the result of the war has greatly changed the relations of the two races in New Orleans. The colored people withdraw more and more to themselves. Isolation from white influence has good results and bad results, the bad being, as one can see, in some quarters of the town, a tendency to barbarism, which can only be counteracted by free public schools, and by a necessity which shall compel them to habits of thrift and industry. One needs to be very much an optimist, however, to have patience for these developments.

I believe there is an instinct in both races against mixture of blood, and upon this rests the law of Louisiana, which forbids such intermarriages; the time may come when the colored people will be as strenuous in insisting upon its execution as the whites, unless there is a great change in popular feeling, of which there is no sign at present; it is they who will see that there is no escape from the equivocal position in which those nearly white in appearance find themselves except by a rigid separation of races. The danger is of a reversal at any time to the original type, and that is always present to the offspring of any one with a drop of African blood in the veins. The pathos of this situation is infinite, and it cannot be lessened by saying that the prejudice about color is unreasonable; it exists. Often the African strain is so attenuated that the possessor of it would pass to the ordinary observer for Spanish or French; and I suppose that many so-called Creole peculiarities of speech and manner are traceable to this strain. An incident in point may not be uninteresting.

I once lodged in the old French quarter in a house kept by two maiden sisters, only one of whom spoke English at all. They were refined, and had the air of decayed gentlewomen. The one who spoke English had the vivacity and agreeability of a Paris landlady, without the latter's invariable hardness and sharpness. I thought I had found in her pretty mode of speech the real Creole dialect of her class. "You are French," I said, when I engaged my room.

"No," she said, "no, m'sieu, I am an American; we are of the United States," with the air of informing a stranger that New Orleans was now annexed.

"Yes," I replied, "but you are of French descent?"

"Oh, and a little Spanish."

"Can you tell me, madame," I asked, one Sunday morning, "the way to Trinity Church?"

"I cannot tell, m'sieu; it is somewhere the other side; I do not know the other side."

"But have you never been the other side of Canal Street?"

"Oh yes, I went once, to make a visit on a friend on New-Year's."

I explained that it was far uptown, and a Protestant church.

"M'sieu, is he Cat'olic?"

"Oh no; I am a Protestant."

"Well, me, I am Cat'olic; but Protestan' o' Cat'olic, it is 'mos' ze same."

This was purely the instinct of politeness, and that my feelings might not be wounded, for she was a good Catholic, and did not believe at all that it was "'mos' ze same."

It was Exposition year, and then April, and madame had never been to the Exposition. I urged her to go, and one day, after great preparation for a journey to the other side, she made the expedition, and returned enchanted with all she had seen, especially with the Mexican band. A new world was opened to her, and she resolved to go again. The morning of Louisiana Day she rapped at my door and informed me that she was going to the fair. "And"—she paused at the door-way, her eyes sparkling with her new project—"you know what I goin' do?"

"No."

"I goin' get one big bouquet, and give to the leader of the orchestre."

"You know him, the leader?"

"No, not yet."

I did not know then how poor she was, and how much sacrifice this would be to her, this gratification of a sentiment.

The next year, in the same month, I asked for her at the lodging. She was not there. "You did not know," said the woman then in possession—"good God! her sister died four days ago, from want of food, and madame has gone away back of town, nobody knows where. They told nobody, they were so proud; none of their friends knew, or they would have helped. They had no lodgers, and could not keep this place, and took another opposite; but they were unlucky, and the sheriff came." I said that I was very sorry that I had not known; she might have been helped. "No," she replied, with considerable spirit; "she would have accepted nothing; she would starve rather. So would I." The woman referred me to some well-known Creole families who knew madame, but I was unable to find her hiding-place. I asked who madame was. "Oh, she was a very nice woman, very respectable. Her father was Spanish, her mother was an octoroon."

One does not need to go into the past of New Orleans for the picturesque; the streets have their peculiar physiognomy, and "character" such as the artists delight to depict is the result of the extraordinary mixture of races and the habit of out-door life. The long summer, from April to November, with a heat continuous, though rarely so excessive as it occasionally is in higher latitudes, determines the mode of life and the structure of the houses, and gives a leisurely and amiable tone to the aspect of people and streets which exists in few other American cities. The French quarter is out of repair, and has the air of being for rent; but in fact there is comparatively little change in occupancy, Creole families being remarkably adhesive to localities. The stranger who sees all over the French and the business parts of the town the immense number of lodging-houses—some of them the most stately old mansions—let largely by colored landladies, is likely to underestimate the home life of this city. New Orleans soil is so wet that the city is without cellars for storage, and its court-yards and odd corners become catch-alls of broken furniture and other lumber. The solid window-shutters, useful in the glare of the long summer, give a blank appearance to the streets. This is relieved, however, by the queer little Spanish houses, and by the endless variety of galleries and balconies. In one part of the town the iron-work of the balconies is cast, and uninteresting in its set patterns; in French-town much of it is hand-made, exquisite in design, and gives to a street vista a delicate lace-work appearance.

I do not know any foreign town which has on view so much exquisite wrought-iron work as the old part of New Orleans. Besides the balconies, there are recessed galleries, old dormer-windows, fantastic little nooks and corners, tricked out with flower-pots and vines.

The glimpses of street life are always entertaining, because unconscious, while full of character. It may be a Creole court-yard, the walls draped with vines, flowers blooming in hap-hazard disarray, and a group of pretty girls sewing and chatting, and stabbing the passer-by with a charmed glance. It may be a cotton team in the street, the mules, the rollicking driver, the creaking cart. It may be a single figure, or a group in the market or on the levee—a slender yellow girl sweeping up the grains of rice, a colored gleaner recalling Ruth; an ancient darky asleep, with mouth open, in his tipped-up two-wheeled cart, waiting for a job; the "solid South," in the shape of an immense "aunty" under a red umbrella, standing and contemplating the river; the broad-faced women in gay bandannas behind their cake-stands; a group of levee hands about a rickety table, taking their noonday meal of pork and greens; the blind-man, capable of sitting more patiently than an American Congressman, with a dog trained to hold his basket for the pennies of the charitable; the black stalwart vender of tin and iron utensils, who totes in a basket, and piled on his head, and strung on his back, a weight of over two hundred and fifty pounds; and negro women who walk erect with baskets of clothes or enormous bundles balanced on their heads, smiling and "jawing," unconscious of their burdens. These are the familiar figures of a street life as varied and picturesque as the artist can desire.

New Orleans amuses itself in the winter with very good theatres, and until recently has sustained an excellent French opera. It has all the year round plenty of *cafes chantants*, gilded saloons, and gambling-houses, and more than enough of the resorts upon which the police are supposed to keep one blind eye. "Back of town," towards Lake Pontchartrain, there is much that is picturesque and blooming, especially in the spring of the year—the charming gardens of the Jockey Club, the City Park, the old duelling-ground with its superb oaks, and the Bayou St. John with its idling fishing-boats, and the colored houses and plantations along the banks—a piece of Holland wanting the Dutch windmills. On a breezy day one may go far for a prettier sight than the river-bank and esplanade at Carrollton, where the mighty coffee-colored flood swirls by, where the vast steamers struggle and cough against the stream, or swiftly go with it round the bend, leaving their trail of smoke, and the delicate line of foliage against the sky on the far opposite shore completes the outline of an exquisite landscape. Suburban resorts much patronized, and reached by frequent trains, are the old Spanish Fort and the West End of Lake Pontchartrain. The way lies through cypress swamp and palmetto thickets, brilliant at certain seasons with *fleur-de-lis*. At each of these resorts are restaurants, dancing-halls, promenade-galleries, all on a large scale; boat-houses, and semi-tropical gardens very prettily laid out in walks and labyrinths, and adorned with trees and flowers. Even in the heat of summer at night the lake is sure to offer a breeze, and with waltz music and moonlight and ices and tinkling glasses with straws in them and love's young dream, even the *ennuyé* globe-trotter declares that it is not half bad.

The city, indeed, offers opportunity for charming excursions in all directions. Parties are constantly made up to visit the river plantations, to sail up and down the stream, or to take an outing across the lake, or to the many lovely places along the coast. In the winter, excursions are made to these places, and in summer the well-to-do take the sea-air in cottages, at such places as Mandeville across the lake, or at such resorts on the Mississippi as Pass Christian.

I crossed the lake one spring day to the pretty town of Mandeville, and then sailed up the Tehefuncta River to Covington. The winding Tchefuncta is in character like some of the narrow Florida streams, has the same luxuriant overhanging foliage, and as many shy lounging alligators to the mile, and is prettier by reason of occasional open glades and large moss-draped live-oaks and China-trees. From the steamer landing in the woods we drove three miles through a lovely open pine forest to the town. Covington is one of the oldest settlements in the State, is the centre of considerable historic interest, and the origin of several historic families. The land is elevated a good deal above the coast-level, and is consequently dry. The town has a few roomy oldtime houses, a mineral spring, some pleasing scenery along the river that winds through it, and not much else. But it is in the midst of pine woods, it is sheltered from all "northers," it has the soft air, but not the dampness, of the Gulf, and is exceedingly salubrious in all the winter months, to say nothing of the summer. It has lately come into local repute as a health resort, although it lacks sufficient accommodations for the entertainment of many strangers. I was told by some New Orleans physicians that they regarded it as almost a specific for pulmonary diseases, and instances were given of persons in what was supposed to be advanced stages of lung and bronchial troubles who had been apparently cured by a few months' residence there; and invalids are, I believe, greatly benefited by its healing, soft, and piny atmosphere.

I have no doubt, from what I hear and my limited observation, that all this coast about New Orleans would be a favorite winter resort if it had hotels as good as, for instance, that at Pass Christian. The region has many attractions for the idler and the invalid. It is, in the first place, interesting; it has a good deal of variety of scenery and of historical interest; there is excellent fishing and shooting; and if the visitor tires of the monotony of the country, he can by a short ride on cars or a steamer transfer himself for a day or a week to a large and most hospitable city, to society, the club, the opera, balls, parties, and every variety of life that his taste craves. The disadvantage of many Southern places to which our Northern regions force us is that they are uninteresting, stupid, and monotonous, if not malarious. It seems a long way from New York to New Orleans, but I do not doubt that the region around the city would become immediately a great winter resort if money and enterprise were enlisted to make it so.

New Orleans has never been called a "strait-laced" city; its Sunday is still of the Continental type; but it seems to me free from the socialistic agnosticism which flaunts itself more or less in Cincinnati, St. Louis, and Chicago; the tone of leading Presbyterian churches is distinctly Calvinistic, one perceives comparatively little of religious speculation and doubt, and so far as I could see there is harmony and entire social good feeling between the Catholic and Protestant communions. Protestant ladies assist at Catholic fairs, and the compliment is returned by the society ladies of the Catholic faith when a Protestant good cause is to be furthered by a bazaar or a "pink tea." Denominational lines seem to have little to do with social affiliations. There may be friction in the management of the great public charities, but on the surface there is toleration and united good-will. The Catholic faith long had the prestige of wealth, family, and power, and the education

of the daughters of Protestant houses in convent schools tended to allay prejudice. Notwithstanding the reputation New Orleans has for gayety and even frivolity—and no one can deny the fast and furious living of ante-bellum days—it possesses at bottom an old-fashioned religious simplicity. If any one thinks that “faith” has died out of modern life, let him visit the mortuary chapel of St. Roch. In a distant part of the town, beyond the street of the Elysian Fields, and on Washington avenue, in a district very sparsely built up, is the Campo Santo of the Catholic Church of the Holy Trinity. In this foreign-looking cemetery is the pretty little Gothic Chapel of St. Roch, having a background of common and swampy land. It is a brown stuccoed edifice, wholly open in front, and was a year or two ago covered with beautiful ivy. The small interior is paved in white marble, the windows are stained glass, the side-walls are composed of tiers of vaults, where are buried the members of certain societies, and the spaces in the wall and in the altar area are thickly covered with votive offerings, in wax and in *naïve* painting—contributed by those who have been healed by the intercession of the saints. Over the altar is the shrine of St. Roch—a cavalier, staff in hand, with his clog by his side, the faithful animal which accompanied this eighth-century philanthropist in his visitations to the plague-stricken people of Munich. Within the altar rail are rows of lighted candles, tended and renewed by the attendant, placed there by penitents or by seekers after the favor of the saint. On the wooden benches, kneeling, are ladies, servants, colored women, in silent prayer. One approaches the lighted, picturesque shrine through the formal rows of tombs, and comes there into an atmosphere of peace and faith. It is believed that miracles are daily wrought here, and one notices in all the gardeners, keepers, and attendants of the place the accent and demeanor of simple faith. On the wall hangs this inscription:

“O great St. Roch, deliver us, we beseech thee, from the scourges of God. Through thy intercessions preserve our bodies from contagious diseases, and our souls from the contagion of sin. Obtain for us salubrious air; but, above all, purity of heart. Assist us to make good use of health, to bear suffering with patience, and after thy example to live in the practice of penitence and charity, that we may one day enjoy the happiness which thou hast merited by thy virtues.

“St. Roch, pray for us.

“St. Roch, pray for us.

“St. Roch, pray for us.”

There is testimony that many people, even Protestants, and men, have had wounds cured and been healed of diseases by prayer in this chapel. To this distant shrine come ladies from all parts of the city to make the “novena”—the prayer of nine days, with the offer of the burning taper—and here daily resort hundreds to intercede for themselves or their friends. It is believed by the damsels of this district that if they offer prayer daily in this chapel they will have a husband within the year, and one may see kneeling here every evening these trustful devotees to the welfare of the human race. I asked the colored woman who sold medals and leaflets and renewed the candles if she personally knew any persons who had been miraculously cured by prayer, or novena, in St. Roch. “Plenty, sir, plenty.” And she related many instances, which were confirmed by votive offerings on the walls. “Why,” said she, “there was a friend of mine who wanted a place, and could hear of none, who made a novena here, and right away got a place, a good place, and” (conscious that she was making an astonishing statement about a New Orleans servant) “she kept it a whole year!”

“But one must come in the right spirit,” I said.

“Ah, indeed. It needs to believe. You can’t fool God!”

One might make various studies of New Orleans: its commercial life; its methods, more or less antiquated, of doing business, and the leisure for talk that enters into it; its admirable charities and its mediaeval prisons; its romantic French and Spanish history, still lingering in the old houses, and traits of family and street life; the city politics, which nobody can explain, and no other city need covet; its sanitary condition, which needs an intelligent despot with plenty of money and an ingenuity that can make water run uphill; its colored population—about a fourth of the city—with its distinct social grades, its superstition, nonchalant good-humor, turn for idling and basking in the sun, slowly awaking to a sense of thrift, chastity, truth-speaking, with many excellent order-loving, patriotic men and women, but a mass that needs moral training quite as much as the spelling-book before it can contribute to the vigor and prosperity of the city; its schools and recent libraries, and the developing literary and art taste which will sustain book-shops and picture-galleries; its cuisine, peculiar in its mingling of French and African skill, and determined largely by a market unexcelled in the quality of fish, game, and fruit—the fig alone would go far to reconcile one to four or five months of hot nights; the climatic influence in assimilating races meeting there from every region of the earth.

But whatever way we regard New Orleans., it is in its aspect, social tone, and character *sui generis*; its civilization differs widely from that of any other, and it remains one of the most interesting places in the republic. Of course, social life in these days is much the same in all great cities in its observances, but that of New Orleans is markedly cordial, ingenuous, warmhearted. I do not imagine that it could tolerate, as Boston does, absolute freedom of local opinion on all subjects, and undoubtedly it is sensitive to criticism; but I believe that it is literally true, as one of its citizens said, that it is still more sensitive to kindness.

The metropolis of the South-west has geographical reasons for a great future. Louisiana is rich in alluvial soil, the capability of which has not yet been tested, except in some localities, by skilful agriculture. But the prosperity of the city depends much upon local conditions. Science and energy can solve the problem of drainage, can convert all the territory between the city and Lake Pontchartrain into a veritable garden, surpassing in fertility the flat environs of the city of Mexico. And the steady development of common-school education, together with technical and industrial schools, will create a skill which will make New Orleans the industrial and manufacturing centre of that region.

IV.—A VOODOO DANCE.

There was nothing mysterious about it. The ceremony took place in broad day, at noon in the upper chambers of a small frame house in a street just beyond Congo Square and the old Parish prison in New Orleans. It was an incantation rather than a dance—a curious mingling of African Voodoo rites with modern “spiritualism” and faith-cure.

The explanation of Voodooism (or Vaudouism) would require a chapter by itself. It is sufficient to say for the purpose of this paper that the barbaric rites of Voodooism originated with the Congo and Guinea negroes, were brought to San Domingo, and thence to Louisiana. In Hayti the sect is in full vigor, and its midnight orgies have reverted more and more to the barbaric original in the last twenty-five years. The wild dance and incantations are accompanied by sacrifice of animals and occasionally of infants, and with cannibalism, and scenes of most indecent license. In its origin it is serpent worship. The Voodoo signifies a being all-powerful on the earth, who is, or is represented by, a harmless species of serpent (*couleuvre*), and in this belief the sect perform rites in which the serpent is propitiated. In common parlance, the chief actor is called the Voodoo—if a man, the Voodoo King; if a woman, the Voodoo Queen. Some years ago Congo Square was the scene of the weird midnight rites of this sect, as unrestrained and barbarous as ever took place in the Congo country. All these semi-public performances have been suppressed, and all private assemblies for this worship are illegal, and broken up by the police when discovered. It is said in New Orleans that Voodooism is a thing of the past. But the superstition remains, and I believe that very few of the colored people in New Orleans are free from it—that is, free from it as a superstition. Those who repudiate it, have nothing to do with it, and regard it as only evil, still ascribe power to the Voodoo, to some ugly old woman or man, who is popularly believed to have occult power (as the Italians believe in the “evil-eye”), can cast a charm and put the victims under a spell, or by incantations relieve them from it. The power of the Voodoo is still feared by many who are too intelligent to believe in it intellectually. That persons are still Voodooed, probably few doubt; and that people are injured by charms secretly placed in their beds, or are bewitched in various ways, is common belief—more common than the Saxon notion that it is ill-luck to see the new moon over the left shoulder.

Although very few white people in New Orleans have ever seen the performance I shall try to describe, and it is said that the police would break it up if they knew of it, it takes place every Wednesday at noon at the house where I saw it; and there are three or four other places in the city where the rites are celebrated sometimes at night. Our admission was procured through a friend who had, I suppose, vouched for our good intentions.

We were received in the living-rooms of the house on the ground-floor by the “doctor,” a good-looking mulatto of middle age, clad in a white shirt with gold studs, linen pantaloons, and list slippers. He had the simple-minded shrewd look of a “healing medium.” The interior was neat, though in some confusion; among the rude attempts at art on the walls was the worst chromo print of General Grant that was probably ever made. There were several negroes about the door, many in the rooms and in the backyard, and all had an air of expectation and mild excitement. After we had satisfied the scruples of the doctor, and signed our names in his register, we were invited to ascend by a narrow, crooked stair-way in the rear. This led to a small landing where a dozen people might stand, and from this a door opened into a chamber perhaps fifteen feet by ten, where the rites were to take place; beyond this was a small bedroom. Around the sides of these rooms were benches and chairs, and the close quarters were already well filled.

The assembly was perfectly orderly, but a motley one, and the women largely outnumbered the men. There were coal-black negroes, porters, and stevedores, fat cooks, slender chamber-maids, all shades of complexion, yellow girls and comely quadroons, most of them in common servant attire, but some neatly dressed. And among them were, to my surprise, several white people.

On one side of the middle room where we sat was constructed a sort of buffet or bureau, used as an altar. On it stood an image of the Virgin Mary in painted plaster, about two feet high, flanked by lighted candles and a couple of cruets, with some other small objects. On a shelf below were two other candles, and on this shelf and the floor in front were various offerings to be used in the rites—plates of apples, grapes, bananas, oranges; dishes of sugar, of sugarplums; a dish of powdered orris root, packages of candles, bottles of brandy and of water. Two other lighted candles stood on the floor, and in front an earthen bowl. The clear space in front for the dancer was not more than four or five feet square.

Some time was consumed in preparations, or in waiting for the worshippers to assemble. From conversation with those near me, I found that the doctor had a reputation for healing the diseased by virtue of his incantations, of removing “spells,” of finding lost articles, of ministering to the troubles of lovers, and, in short, of doing very much what clairvoyants and healing mediums claim to do in what are called civilized communities. But failing to get a very intelligent account of the expected performance from the negro woman next me, I moved to the side of the altar and took a chair next a girl of perhaps twenty years old, whose complexion and features gave evidence that she was white. Still, finding her in that company, and there as a participant in the Voodoo rites, I concluded that I must be mistaken, and that she must have colored blood in her veins. Assuming the privilege of an inquirer, I asked her questions about the coming performance, and in doing so carried the impression that she was kin to the colored race. But I was soon convinced, from her manner and her replies, that she was pure white. She was a pretty, modest girl, very reticent, well-bred, polite, and civil. None of the colored people seemed to know who she was, but she said she had been there before. She told me, in course of the conversation, the name of the street where she lived (in the American part of the town), the private school at which she had been educated (one of the best in the city), and that she and her parents were Episcopalians. Whatever her trouble was, mental or physical, she was evidently infatuated with the notion that this Voodoo doctor could conjure it away, and said that she thought he had already been of service to her. She did not communicate her difficulties to him or speak to him, but she

evidently had faith that he could discern what every one present needed, and minister to them. When I asked her if, with her education, she did not think that more good would come to her by confiding in known friends or in regular practitioners, she wearily said that she did not know. After the performance began, her intense interest in it, and the light in her eyes, were evidence of the deep hold the superstition had upon her nature. In coming to this place she had gone a step beyond the young ladies of her class who make a novena at St. Roch.

While we still waited, the doctor and two other colored men called me into the next chamber, and wanted to be assured that it was my own name I had written on the register, and that I had no unfriendly intentions in being present. Their doubts at rest, all was ready.

The doctor squatted on one side of the altar, and his wife, a stout woman of darker hue, on the other.

"*Commençons,*" said the woman, in a low voice. All the colored people spoke French, and French only, to each other and in the ceremony.

The doctor nodded, bent over, and gave three sharp raps on the floor with a bit of wood. (This is the usual opening of Voodoo rites.) All the others rapped three times on the floor with their knuckles. Anyone coming in to join the circle afterwards, stooped and rapped three times. After a moment's silence, all kneeled and repeated together in French the Apostles' Creed, and still on their knees, they said two prayers to the Virgin Mary.

The colored woman at the side of the altar began a chant in a low, melodious voice. It was the weird and strange "Dansé Calinda." A tall negress, with a bright, good-natured face, entered the circle with the air of a chief performer, knelt, rapped the floor, laid an offering of candles before the altar, with a small bottle of brandy, seated herself beside the singer, and took up in a strong, sweet voice the bizarre rhythm of the song. Nearly all those who came in had laid some little offering before the altar. The chant grew, the single line was enunciated in stronger pulsations, and other voices joined in the wild refrain,

"Dansé Calinda, boudoum, boudoum
Dansé Calinda, boudoum, boudoum!"

bodies swayed, the hands kept time in soft patpatting, and the feet in muffled accentuation. The Voodoo arose, removed his slippers, seized a bottle of brandy, dashed some of the liquid on the floor on each side of the brown bowl as a libation, threw back his head and took a long pull at the bottle, and then began in the open space a slow measured dance, a rhythmical shuffle, with more movement of the hips than of the feet, backward and forward, round and round, but accelerating his movement as the time of the song quickened and the excitement rose in the room. The singing became wilder and more impassioned, a strange minor strain, full of savage pathos and longing, that made it almost impossible for the spectator not to join in the swing of its influence, while the dancer wrought himself up into the wild passion of a Cairene dervish. Without a moment ceasing his rhythmical steps and his extravagant gesticulation, he poured liquid into the basin, and dashing in brandy, ignited the fluid with a match. The liquid flamed up before the altar. He seized then a bunch of candles, plunged them into the bowl, held them up all flaming with the burning brandy, and, keeping his step to the maddening "Calinda," distributed them lighted to the devotees. In the same way he snatched up dishes of apples, grapes, bananas, oranges, deluged them with burning brandy, and tossed them about the room to the eager and excited crowd. His hands were aflame, his clothes seemed to be on fire; he held the burning dishes close to his breast, apparently inhaling the flame, closing his eyes and swaying his head backward and forward in an ecstasy, the hips advancing and receding, the feet still shuffling to the barbaric measure.

Every moment his own excitement and that of the audience increased. The floor was covered with the débris of the sacrifice—broken candy, crushed sugarplums, scattered grapes—and all more or less in flame. The wild dancer was dancing in fire! In the height of his frenzy he grasped a large plate filled with lump-sugar. That was set on fire. He held the burning mass to his breast, he swung it round, and finally, with his hand extended under the bottom of the plate (the plate only adhering to his hand by the rapidity of his circular motion), he spun around like a dancing dervish, his eyes shut, the perspiration pouring in streams from his face, in a frenzy. The flaming sugar scattered about the floor, and the devotees scrambled for it. In intervals of the dance, though the singing went on, the various offerings which had been conjured were passed around—bits of sugar and fruit and orris powder. That which fell to my share I gave to the young girl next me, whose eyes were blazing with excitement, though she had remained perfectly tranquil, and joined neither by voice or hands or feet in the excitement. She put the conjured sugar and fruit in her pocket, and seemed grateful to me for relinquishing it to her.

Before this point had been reached the chant had been changed for the wild *canga*, more rapid in movement than the *chanson africaine*:

"Eh! eli! Bomba, hen! hen!
Canga bafio té
Canga mouné dé lé
Canga do ki la
Canga li."

At intervals during the performance, when the charm had begun to work, the believers came forward into the open space, and knelt for "treatment." The singing, the dance, the wild incantation, went on uninterruptedly; but amid all his antics the dancer had an eye to business. The first group that knelt were four stalwart men, three of them white laborers. All of them, I presume, had some disease which they had faith the incantation would drive away. Each held a lighted candle in each hand. The doctor successively

extinguished each candle by putting it in his mouth, and performed a number of antics of a saltatory sort. During his dancing and whirling he frequently filled his mouth with liquid, and discharged it in spray, exactly as a Chinese laundryman sprinkles his clothes, into the faces and on the heads of any man or woman within reach. Those so treated considered themselves specially favored. Having extinguished the candles of the suppliants, he scooped the liquid from the bowl, flaming or not as it might be, and with his hands vigorously scrubbed their faces and heads, as if he were shampooing them. While the victim was still sputtering and choking he seized him by the right hand, lifted him up, spun him round half a dozen times, and then sent him whirling.

This was substantially the treatment that all received who knelt in the circle, though sometimes it was more violent. Some of them were slapped smartly upon the back and the breast, and much knocked about. Occasionally a woman was whirled till she was dizzy, and perhaps swung about in his arms as if she had been a bundle of clothes. They all took it meekly and gratefully. One little girl of twelve, who had rickets, was banged about till it seemed as if every bone in her body would be broken. But the doctor had discrimination, even in his wildest moods. Some of the women were gently whirled, and the conjurer forbore either to spray them from his mouth or to shampoo them.

Nearly all those present knelt, and were whirled and shaken, and those who did not take this "cure" I suppose got the benefit of the incantation by carrying away some of the consecrated offerings. Occasionally a woman in the whirl would whisper something-in the doctor's ear, and receive from him doubtless the counsel she needed. But generally the doctor made no inquiries of his patients, and they said nothing to him.

While the wild chanting, the rhythmic movement of hands and feet, the barbarous dance, and the fiery incantations were at their height, it was difficult to believe that we were in a civilized city of an enlightened republic. Nothing indecent occurred in word or gesture, but it was so wild and bizarre that one might easily imagine he was in Africa or in hell.

As I said, nearly all the participants were colored people; but in the height of the frenzy one white woman knelt and was sprayed and whirled with the others. She was a respectable married woman from the other side of Canal Street. I waited with some anxiety to see what my modest little neighbor would do. She had told me that she should look on and take no part. I hoped that the senseless antics, the mummery, the rough treatment, would disgust her. Towards the close of the séance, when the spells were all woven and the flames had subsided, the tall, good-natured negress motioned to me that it was my turn to advance into the circle and kneel. I excused myself. But the young girl was unable to resist longer. She went forward and knelt, with a candle in her hand. The conjurer was either touched by her youth and race, or he had spent his force. He gently lifted her by one hand, and gave her one turn around, and she came back to her seat.

The singing ceased, The doctor's wife passed round the hat for contributions, and the ceremony, which had lasted nearly an hour and a half, was over. The doctor retired exhausted with the violent exertions. As for the patients, I trust they were well cured of rheumatism, of fever, or whatever ill they had, and that the young ladies have either got husbands to their minds or have escaped faithless lovers. In the breaking up I had no opportunity to speak further to the interesting young white neophyte; but as I saw her resuming her hat and cloak in the adjoining room there was a strange excitement in her face, and in her eyes a light of triumph and faith. We came out by the back way, and through an alley made our escape into the sunny street and the air of the nineteenth century.

V.—THE ACADIAN LAND.

If one crosses the river from New Orleans to Algiers, and takes Morgan's Louisiana and Texas Railway (now a part of the Southern Pacific line), he will go west, with a dip at first southerly, and will pass through a region little attractive except to water-fowl, snakes, and alligators, by an occasional rice plantation, an abandoned indigo field, an interminable stretch of cypress swamps, thickets of Spanish-bayonets, black waters, rank and rampant vegetation, vines, and water-plants; by-and-by firmer arable land, and cane plantations, many of them forsaken and become thickets of undergrowth, owing to frequent inundations and the low price of sugar.

At a distance of eighty miles Morgan City is reached, and the broad Atchafalaya Bayou is crossed. Hence is steamboat communication with New Orleans and Vera Cruz. The Atchafalaya Bayou has its origin near the mouth of the Red River, and diverting from the Mississippi most of that great stream, it makes its tortuous way to the Gulf, frequently expanding into the proportions of a lake, and giving this region a great deal more water than it needs. The Bayou Teche, which is, in fact, a lazy river, wanders down from the rolling country of Washington and Opelousas, with a great deal of uncertainty of purpose, but mainly south-easterly, and parallel with the Atchafalaya, and joins the latter at Morgan City. Steamers of good size navigate it as far as New Iberia, some forty to fifty miles, and the railway follows it to the latter place, within sight of its fringe of live-oaks and cotton-woods. The region south and west of the Bayou Teche, a vast plain cut by innumerable small bayous and streams, which have mostly a connection with the bay of Côte Blanche and Vermilion Bay, is the home of the Nova Scotia Acadians.

The Acadians in 1755 made a good exchange, little as they thought so at the time, of bleak Nova Scotia for these sunny, genial, and fertile lands. They came into a land and a climate suited to their idiosyncrasies, and

which have enabled them to preserve their primitive traits. In a comparative isolation from the disturbing currents of modern life, they have preserved the habits and customs of the eighteenth century. The immigrants spread themselves abroad among those bayous, made their homes wide apart, and the traveller will nowhere find—at least I did not—large and compact communities of them, unalloyed with the American and other elements. Indeed, I imagine that they are losing, in the general settlement of the country, their conspicuousness. They still give the tone, however, to considerable districts, as in the village and neighborhood of Abbeville. Some places, like the old town of St. Martinsville, on the Teche, once the social capital of the region, and entitled, for its wealth and gayety, the Petit Paris, had a large element of French who were not Acadians.

The Teche from Morgan City to New Iberia is a deep, slow, and winding stream, flowing through a flat region of sugar plantations. It is very picturesque by reason of its tortuousness and the great spreading live-oak trees, moss-draped, that hang over it. A voyage on it is one of the most romantic entertainments offered to the traveller. The scenery is peaceful, and exceedingly pretty. There are few conspicuous plantations with mansions and sugar-stacks of any pretensions, but the panorama from the deck of the steamer is always pleasing. There is an air of leisure and “afternoon” about the expedition, which is heightened by the idle case of the inhabitants lounging at the rude wharves and landing-places, and the patience of the colored fishers, boys in scant raiment and women in sun-bonnets, seated on the banks. Typical of this universal contentment is the ancient colored man stretched on a plank close to the steamer’s boiler, oblivious of the heat, apparently asleep, with his spacious mouth wide open, but softly singing.

“Are you asleep, uncle?”

“No, not adzackly asleep, boss. I jes wake up, and thinkin’ how good de Lord is, I couldn’t help singin’.”

The panorama is always interesting. There are wide silvery expanses of water, into which fall the shadows of great trees. A tug is dragging along a tow of old rafts composed of cypress logs all water-soaked, green with weeds and grass, so that it looks like a floating garden. What pictures! Clusters of oaks on the prairie; a picturesque old cotton-press; a house thatched with palmettoes; rice-fields irrigated by pumps; darkies, field-hands, men and women, hoeing in the cane-fields, giving stalwart strokes that exhibit their robust figures; an old sugar-mill in ruin and vine-draped; an old begass chimney against the sky; an antique cotton-press with its mouldering roof supported on timbers; a darky on a mule motionless on the bank, clad in Attakapas cloth, his slouch hat falling about his head like a roof from which the rafters have been withdrawn; palmettoes, oaks, and funereal moss; lines of Spanish-bayonets; rickety wharves; primitive boats; spider-legged bridges. Neither on the Teche nor the Atchafalaya, nor on the great plain near the Mississippi, fit for amphibious creatures, where one standing on the level wonders to see the wheels of the vast river steamers above him, apparently without cause, revolving, is there any lack of the picturesque.

New Iberia, the thriving mart of the region, which has drawn away the life from St. Martinsville, ten miles farther up the bayou, is a village mainly of small frame houses, with a smart court-house, a lively business street, a few pretty houses, and some oldtime mansions on the bank of the bayou, half smothered in old rose gardens, the ground in the rear sloping to the water under the shade of gigantic oaks. One of them, which with its outside staircases in the pillared gallery suggests Spanish taste on the outside, and in the interior the arrangement of connecting rooms a French chateau, has a self-keeping rose garden, where one might easily become sentimental; the vines disport themselves like holiday children, climbing the trees, the side of the house, and revelling in an abandon of color and perfume.

The population is mixed—Americans, French, Italians, now and then a Spaniard and even a Mexican, occasionally a basket-making Attakapas, and the all-pervading person of color. The darky is a born fisherman, in places where fishing requires no exertion, and one may see him any hour seated on the banks of the Teche, especially the boy and the sun-bonneted woman, placidly holding their poles over the muddy stream, and can study, if he like, the black face in expectation of a bite. There too are the washer-women, with their tubs and a plank thrust into the water, and a handkerchief of bright colors for a turban. These people somehow never fail to be picturesque, whatever attitude they take, and they are not at all self-conscious. The groups on Sunday give an interest to church-going—a lean white horse, with a man, his wife, and boy strung along its backbone, an aged darky and his wife seated in a cart, in stiff Sunday clothes and flaming colors, the wheels of the cart making all angles with the ground, and wabbling and creaking along, the whole party as proud of its appearance as Julius Caesar in a triumph.

I drove on Sunday morning early from New Iberia to church at St. Martinsville. It was a lovely April morning. The way lay over fertile prairies, past fine cane plantations, with some irrigation, and for a distance along the pretty Teche, shaded by great live-oaks, and here and there a fine magnolia-tree; a country with few houses, and those mostly shanties, but a sunny, smiling land, loved of the birds. We passed on our left the Spanish Lake, a shallow, irregular body of water. My driver was an ex-Confederate soldier, whose tramp with a musket through Virginia had not greatly enlightened him as to what it was all about. As to the Acadians, however, he had a decided opinion, and it was a poor one. They are no good. “You ask them a question, and they shrug their shoulders like a tarrapin—don’t know no more’n a dead alligator; only language they ever have is ‘no’ and ‘what?’.”

If St. Martinsville, once the scat of fashion, retains anything of its past elegance, its life has departed from it. It has stopped growing anything but old, and yet it has not much of interest that is antique; it is a village of small white frame houses, with three or four big gaunt brick structures, two stories and a half high, with galleries, and here and there a Creole cottage, the stairs running up inside the galleries, over which roses climb in profusion.

I went to breakfast at a French inn, kept by Madame Castillo, a large red-brick house on the banks of the Teche, where the live-oaks cast shadows upon the silvery stream. It had, of course, a double gallery. Below, the waiting-room, dining-room, and general assembly-room were paved with brick, and instead of a door, Turkey-red curtains hung in the entrance, and blowing aside, hospitably invited the stranger within. The breakfast was neatly served, the house was scrupulously clean, and the guest felt the influence of that personal hospitality which is always so pleasing. Madame offered me a seat in her pew in church, and meantime a chair on the upper gallery, which opened from large square sleeping chambers. In that fresh

morning I thought I never had seen a more sweet and peaceful place than this gallery. Close to it grew graceful China-trees in full blossom and odor; up and down the Teche were charming views under the oaks; only the roofs of the town could be seen amid the foliage of China-trees; and there was an atmosphere of repose in all the scene.

It was Easter morning. I felt that I should like to linger there a week in absolute forgetfulness of the world. French is the ordinary language of the village, spoken more or less corruptly by all colors.

The Catholic church, a large and ugly structure, stands on the plaza, which is not at all like a Spanish plaza, but a veritable New England "green," with stores and shops on all sides—New England, except that the shops are open on Sunday. In the church apse is a noted and not bad painting of St. Martin, and at the bottom of one aisle a vast bank of black stucco clouds, with the Virgin standing on them, and the legend, "*Je suis l'immaculee conception.*"

Country people were pouring into town for the Easter service and festivities—more blacks than whites—on horseback and in rickety carriages, and the horses were hitched on either side of the church. Before service the square was full of lively young colored lads cracking Easter-eggs. Two meet and strike together the eggs in their hands, and the one loses whose egg breaks. A tough shell is a valuable possession. The custom provokes a good deal of larking and merriment. While this is going on, the worshippers are making their way into the church through the throng, ladies in the neat glory of provincial dress, and high-stepping, saucy colored belles, yellow and black, the blackest in the most radiant apparel of violent pink and light blue, and now and then a society favorite in all the hues of the rainbow. The centre pews of the church are reserved for the whites, the seats of the side aisles for the negroes. When mass begins, the church is crowded. The boys, with occasional excursions into the vestibule to dip the finger in the holy-water, or perhaps say a prayer, are still winning and losing eggs on the preen.

On the gallery at the inn it is also Sunday. The air is full of odor. A strong south wind begins to blow. I think the south wind is the wind of memory and of longing. I wonder if the gay spirits of the last generation ever return to the scenes of their revelry? Will they come back to the theatre this Sunday night, and to the Grand Ball afterwards? The admission to both is only twenty-five cents, including gombo file.

From New Iberia southward towards Vermilion Bay stretches a vast prairie; if it is not absolutely fiat, if it resembles the ocean, it is the ocean when its long swells have settled nearly to a calm. This prairie would be monotonous were it not dotted with small round ponds, like hand-mirrors for the flitting birds and sailing clouds, were its expanse not spotted with herds of cattle, scattered or clustering like fishing-boats on a green sea, were it not for a cabin here and there, a field of cane or cotton, a garden plot, and were it not for the forests which break the horizon line, and send out dark capes into the verdant plains. On a gray day, or when storms and fogs roll in from the Gulf, it might be a gloomy region, but under the sunlight and in the spring it is full of life and color; it has an air of refinement and repose that is very welcome. Besides the uplift of the spirit that a wide horizon is apt to give, one is conscious here of the neighborhood of the sea, and of the possibilities of romantic adventure in a coast intersected by bayous, and the presence of novel forms of animal and vegetable life, and of a people with habits foreign and strange. There is also a grateful sense of freedom and expansion.

Soon, over the plain, is seen on the horizon, ten miles from New Iberia, the dark foliage on the island of Petite Anse, or Wery's Island. This unexpected upheaval from the marsh, bounded by the narrow, circling Petite Anse Bayou, rises into the sky one hundred and eighty feet, and has the effect in this flat expanse of a veritable mountain, comparatively a surprise, like Pike's Peak seen from the elevation of Denver. Perhaps nowhere else would a hill of one hundred and eighty feet make such an impression on the mind. Crossing the bayou, where alligators sun themselves and eye with affection the colored people angling at the bridge, and passing a long causeway over the marsh, the firm land of the island is reached. This island, which is a sort of geological puzzle, has a very uneven surface, and is some two and a half miles long by one mile broad. It is a little kingdom in itself, capable of producing in its soil and adjacent waters nearly everything one desires of the necessaries of life. A portion of the island is devoted to a cane plantation and sugar-works; a part of it is covered with forests; and on the lowlands and gentle slopes, besides thickets of palmetto, are gigantic live-oaks, moss-draped trees monstrous in girth, and towering into the sky with a vast spread of branches. Scarcely anywhere else will one see a nobler growth of these stately trees. In a depression is the famous saltmine, unique in quality and situation in the world. Here is grown and put up the Tobasco pepper; here, amid fields of clover and flowers, a large apiary flourishes. Stones of some value for ornament are found.

Indeed, I should not be surprised at anything turning up there, for I am told that good kaoline has been discovered; and about the residences of the hospitable proprietors roses bloom in abundance, the China-tree blossoms sweetly, and the mocking-bird sings.

But better than all these things I think I like the view from the broad cottage piazzas, and I like it best when the salt breeze is strong enough to sweep away the coast mosquitoes—a most undesirable variety. I do not know another view of its kind for extent and color comparable to that from this hill over the waters seaward. The expanse of luxuriant grass, brown, golden, reddish, in patches, is intersected by a network of bayous, which gleam like silver in the sun, or trail like dark fabulous serpents under a cloudy sky. The scene is limited only by the power of the eye to meet the sky line. Vast and level, it is constantly changing, almost in motion with life; the long grass and weeds run like waves when the wind blows, great shadows of clouds pass on its surface, alternating dark masses with vivid ones of sunlight; fishing-boats and the masts of schooners creep along the threads of water; when the sun goes down, a red globe of fire in the Gulf mists, all the expanse is warm and ruddy, and the waters sparkle like jewels; and at night, under the great field of stars, marsh fires here and there give a sort of lurid splendor to the scene. In the winter it is a temperate spot, and at all times of the year it is blessed by an invigorating seabreeze.

Those who have enjoyed the charming social life and the unbounded hospitality of the family who inhabit this island may envy them their paradisiacal home, but they would be able to select none others so worthy to enjoy it.

It is said that the Attakapas Indians are shy of this island, having a legend that it was the scene of a great

catastrophe to their race. Whether this catastrophe has any connection with the upheaval of the salt mountain I do not know. Many stories are current in this region in regard to the discovery of this deposit. A little over a quarter of a century ago it was unsuspected. The presence of salt in the water of a small spring led somebody to dig in that place, and at the depth of sixteen feet below the surface solid salt was struck. In stripping away the soil several relics of human workmanship came to light, among them stone implements and a woven basket, exactly such as the Attakapas make now. This basket, found at the depth of sixteen feet, lay upon the salt rock, and was in perfect preservation. Half of it can now be seen in the Smithsonian Institution. At the beginning of the war great quantities of salt were taken from this mine for the use of the Confederacy. But this supply was cut off by the Unionists, who at first sent gunboats up the bayou within shelling distance, and at length occupied it with troops.

The ascertained area of the mine is several acres; the depth of the deposit is unknown. The first shaft was sunk a hundred feet; below this a shaft of seventy feet fails to find any limit to the salt. The excavation is already large. Descending, the visitor enters vast cathedral-like chambers; the sides are solid salt, sparkling with crystals; the floor is solid salt; the roof is solid salt, supported on pillars of salt left by the excavators, forty or perhaps sixty feet square. When the interior is lighted by dynamite the effect is superbly weird and grotesque. The salt is blasted by dynamite, loaded into ears which run on rails to the elevator, hoisted, and distributed into the crushers, and from the crushers directly into the bags for shipment. The crushers differ in crushing capacity, some producing fine and others coarse salt. No bleaching or cleansing process is needed; the salt is almost absolutely pure. Large blocks of it are sent to the Western plains for "cattle licks." The mine is connected by rail with the main line at New Iberia.

Across the marshes and bayous eight miles to the west from Petite Anse Island rises Orange Island, famous for its orange plantation, but called Jefferson Island since it became the property and home of Joseph Jefferson. Not so high as Petite Anse, it is still conspicuous with its crown of dark forest. From a high point on Petite Anse, through a lovely vista of trees, with flowering cacti in the foreground, Jefferson's house is a white spot in the landscape. We reached it by a circuitous drive of twelve miles over the prairie, sometimes in and sometimes out of the water, and continually diverted from our course by fences. It is a good sign of the thrift of the race, and of its independence, that the colored people have taken up or bought little tracts of thirty or forty acres, put up cabins, and new fences round their domains regardless of the travelling public. We zigzagged all about the country to get round these little enclosures. At one place, where the main road was bad, a thrifty Acadian had set up a toll of twenty-five cents for the privilege of passing through his premises. The scenery was pastoral and pleasing.

There were frequent round ponds, brilliant with lilies and *fleurs-de-lis*, and hundreds of cattle feeding on the prairie or standing in the water, and generally of a dun-color, made always an agreeable picture. The monotony was broken by lines of trees, by cape-like woods stretching into the plain, and the horizon line was always fine. Great variety of birds enlivened the landscape, game birds abounding. There was the lively little nonpareil, which seems to change its color, and is red and green and blue, I believe of the oriole family, the papabotte, a favorite on New Orleans tables in the autumn, snipe, killdeer, the cherooke (snipe?), the meadow-lark, and quantities of teal ducks in the ponds. These little ponds are called "bull-holes." The traveller is told that they are started in this watery soil by the pawing of bulls, and gradually enlarged as the cattle frequent them. He remembers that he has seen similar circular ponds in the North not made by bulls.

Mr. Jefferson's residence—a pretty rose-vine-covered cottage—is situated on the slope of the hill, overlooking a broad plain and a vast stretch of bayou country. Along one side of his home enclosure for a mile runs a superb hedge of Chickasaw roses. On the slope back of the house, and almost embracing it, is a magnificent grove of live-oaks, great gray stems, and the branches hung with heavy masses of moss, which swing in the wind like the pendent boughs of the willow, and with something of its sentimental and mournful suggestion. The recesses of this forest are cool and dark, but upon ascending the hill, suddenly bursts upon the view under the trees a most lovely lake of clear blue water. This lake, which may be a mile long and half a mile broad, is called Lake Peigneur, from its fanciful resemblance, I believe, to a wool-comber. The shores are wooded. On the island side the bank is precipitous; on the opposite shore amid the trees is a hunting-lodge, and I believe there are plantations on the north end, but it is in aspect altogether solitary and peaceful. But the island did not want life. The day was brilliant, with a deep blue sky and high-sailing fleecy clouds, and it seemed a sort of animal holiday: squirrels chattered; cardinal-birds flashed through the green leaves; there flitted about the red-winged blackbird, blue jays, redheaded woodpeckers, thrushes, and occasionally a rain-crow crossed the scene; high overhead sailed the heavy buzzards, describing great aerial circles; and off in the still lake the ugly heads of alligators were toasting in the sun.

It was very pleasant to sit on the wooded point, enlivened by all this animal activity, looking off upon the lake and the great expanse of marsh, over which came a refreshing breeze. There was great variety of forest-trees. Besides the live-oaks, in one small area I noticed the water-oak, red-oak, pin-oak, the elm, the cypress, the hackberry, and the pecan tree.

This point is a favorite rendezvous for the buzzards. Before I reached it I heard a tremendous whirring in the air, and, lo! there upon the oaks were hundreds and hundreds of buzzards. Upon one dead tree, vast, gaunt, and bleached, they had settled in black masses. When I came near they rose and flew about with clamor and surprise, momentarily obscuring the sunlight. With these unpleasant birds consorted in unclean fellowship numerous long-necked water-turkeys.

Doré would have liked to introduce into one of his melodramatic pictures this helpless dead tree, extending its gray arms loaded with these black scavengers. It needed the blue sky and blue lake to prevent the scene from being altogether uncanny. I remember still the harsh, croaking noise of the buzzards and the water-turkeys when they were disturbed, and the flapping of their funereal wings, and perhaps the alligators lying off in the lake noted it, for they grunted and bellowed a response. But the birds sang merrily, the wind blew softly; there was the repose as of a far country undisturbed by man, and a silvery tone on the water and all the landscape that refined the whole.

If the Acadians can anywhere be seen in the prosperity of their primitive simplicity, I fancy it is in the parish of Vermilion, in the vicinity of Abbeville and on the Bayou Tigre. Here, among the intricate bayous that

are their highways and supply them with the poorer sort of fish, and the fair meadows on which their cattle pasture, and where they grow nearly everything their simple habits require, they have for over a century enjoyed a quiet existence, practically undisturbed by the agitations of modern life, ignorant of its progress. History makes their departure from the comparatively bleak meadows of Grand Pré a cruel hardship, if a political necessity. But they made a very fortunate exchange. Nowhere else on the continent could they so well have preserved their primitive habits, or found climate and soil so suited to their humor. Others have exhaustively set forth the history and idiosyncrasies of this peculiar people; it is in my way only to tell what I saw on a spring day.

To reach the heart of this abode of contented and perhaps wise ignorance we took boats early one morning at Petite Anse Island, while the dew was still heavy and the birds were at matins, and rowed down the Petite Anse Bayou. A stranger would surely be lost in these winding, branching, interlacing streams. Evangeline and her lover might have passed each other unknown within hail across these marshes. The party of a dozen people occupied two row-boats. Among them were gentlemen who knew the route, but the reserve of wisdom as to what bayous and cutoffs were navigable was an ancient ex-slave, now a voter, who responded to the name of "Honorable"—a weather-beaten and weather-wise darky, a redoubtable fisherman, whose memory extended away beyond the war, and played familiarly about the person of Lafayette, with whom he had been on agreeable terms in Charleston, and who dated his narratives, to our relief, not from the war, but from the year of some great sickness on the coast. From the Petite Anse we entered the Carlin Bayou, and wound through it is needless to say what others in our tortuous course. In the fresh morning, with the salt air, it was a voyage of delight. Mullet were jumping in the glassy stream, perhaps disturbed by the gar-fish, and alligators lazily slid from the reedy banks into the water at our approach. All the marsh was gay with flowers, vast patches of the blue *fleur-de-lis* intermingled with the exquisite white spider-lily, nodding in clusters on long stalks; an amaryllis (*pancratium*), its pure half-disk fringed with delicate white filaments. The air was vocal with the notes of birds, the nonpareil and the meadow-lark, and most conspicuous of all the handsome boat-tail grackle, a blackbird, which alighted on the slender dead reeds that swayed with his weight as he poured forth his song. Sometimes the bayou narrowed so that it was impossible to row with the oars, and poling was resorted to, and the current was swift and strong. At such passes we saw only the banks with nodding flowers, and the reeds, with the blackbirds singing, against the sky. Again we emerged into placid reaches overhung by gigantic live-oaks and fringed with cypress. It was enchanting. But the way was not quite solitary. Numerous fishing parties were encountered, boats on their way to the bay, and now and then a party of stalwart men drawing a net in the bayou, their clothes being deposited on the banks. Occasionally a large schooner was seen, tied to the bank or slowly working its way, and on one a whole family was domesticated. There is a good deal of queer life hidden in these bayous.

After passing through a narrow artificial canal, we came into the Bayou Tigre, and landed for breakfast on a greensward, with meadow-land and signs of habitations in the distance, under spreading live-oaks. Under one of the most attractive of these trees, close to the stream, we did not spread our table-cloth and shawls, because a large moccasin snake was seen to glide under the roots, and we did not know but that his modesty was assumed, and he might join the breakfast party. It is said that these snakes never attack any one who has kept all the ten commandments from his youth up. Cardinal-birds made the wood gay for us while we breakfasted, and we might have added plenty of partridges to our *menu* if we had been armed.

Resuming our voyage, we presently entered the inhabited part of the bayou, among cultivated fields, and made our first call on the Thibodeaux. They had been expecting us, and Andonia came down to the landing to welcome us, and with a formal, pretty courtesy led the way to the house. Does the reader happen to remember, say in New England, say fifty years ago, the sweetest maiden lady in the village, prim, staid, full of kindness, the proportions of the figure never quite developed, with a row of small corkscrew curls about her serene forehead, and all the juices of life that might have overflowed into the life of others somehow withered into the sweetness of her wistful face? Yes; a little timid and appealing, and yet trustful, and in a scant, quaint gown? Well, Andonia was never married, and she had such curls, and a high-waisted gown, and a kerchief folded across her breast; and when she spoke, it was in the language of France as it is rendered in Acadia.

The house, like all in this region, stands upon blocks of wood, is in appearance a frame house, but the walls between timbers are of concrete mixed with moss, and the same inside as out. It had no glass in tin windows, which were closed with solid shutters. Upon the rough walls were hung sacred pictures and other crudely colored prints. The furniture was rude and apparently home-made, and the whole interior was as painfully neat as a Dutch parlor. Even the beams overhead and ceiling had been scrubbed. Andonia showed us with a blush of pride her neat little sleeping-room, with its souvenirs of affection, and perhaps some of the dried flowers of a possible romance, and the ladies admired the finely woven white counterpane on the bed. Andonia's married sister was a large, handsome woman, smiling and prosperous. There were children and, I think, a baby about, besides Mr. Thibodeaux. Nothing could exceed the kindly manner of these people. Andonia showed us how they card, weave, and spin the cotton out of which then-blankets and the jean for their clothing are made. They use the old-fashioned hand-cards, spin on a little wheel with a foot-treadle, have the most primitive warping-bars, and weave most laboriously on a rude loom. But the cloth they make will wear forever, and the colors they use are all fast. It is a great pleasure, we might almost say shock, to encounter such honest work in these times. The Acadians grow a yellow or nankeen sort of cotton which, without requiring any dye, is woven into a handsome yellow stuff. When we departed Andonia slipped into the door-yard, and returned with a rose for each of us. I fancied she was loath to have us go, and that the visit was an event in the monotony of her single life.

Embarking again on the placid stream, we moved along through a land of peace. The houses of the Acadians are scattered along the bayou at considerable distances apart. The voyager seems to be in an unoccupied country, when suddenly the turn of the stream shows him a farm-house, with its little landing-wharf, boats, and perhaps a schooner moored at the bank, and behind it cultivated fields and a fringe of trees. In the blossoming time of the year, when the birds are most active, these scenes are idyllic. At a bend in the bayou, where a tree sent its horizontal trunk half across it, we made our next call, at the house of Mr. Vallet, a large frame house, and evidently the abode of a man of means. The house was ceiled outside and inside with native woods. As usual in this region, the premises were not as orderly as those about some

Northern farm-houses, but the interior of the house was spotlessly clean, and in its polish and barrenness of ornament and of appliances of comfort suggested a Brittany home, while its openness and the broad veranda spoke of a genial climate. Our call here was brief, for a sick man, very ill, they said, lay in the front room—a stranger who had been overtaken with fever, and was being cared for by these kind-hearted people.

Other calls were made—this visiting by boat recalls Venice—but the end of our voyage was the plantation of Simonette Le Blanc, a sturdy old man, a sort of patriarch in this region, the centre of a very large family of sons, daughters, and grandchildren. The residence, a rambling story-and-a-half house, grown by accretions as more room was needed, calls for no comment. It was all very plain, and contained no books, nor any adornments except some family photographs, the poor work of a travelling artist. But in front, on the bayou, Mr. Le Blanc had erected a grand ballroom, which gave an air of distinction to the place. This hall, which had benches along the wall, and at one end a high dais for the fiddlers, and a little counter where the gombo filé (the common refreshment) is served, had an air of gayety by reason of engravings cut from the illustrated papers, and was shown with some pride. Here neighborhood dances take place once in two weeks, and a grand ball was to come off on Easter-Sunday night, to which we were urgently invited to come.

Simonette Le Blanc, with several of his sons, had returned at midnight from an expedition to Vermilion Bay, where they had been camping for a couple of weeks, fishing and taking oysters. Working the schooner through the bayou at night had been fatiguing, and then there was supper, and all the news of the fortnight to be talked over, so that it was four o'clock before the house was at rest, but neither the hale old man nor his stalwart sons seemed the worse for the adventure. Such trips are not uncommon, for these people seem to have leisure for enjoyment, and vary the toil of the plantation with the pleasures of fishing and lazy navigation. But to the women and the home-stayers this was evidently an event. The men had been to the outer world, and brought back with them the gossip of the bayous and the simple incidents of the camping life on the coast. "There was a great deal to talk over that had happened in a fortnight," said Simonette—he and one of his sons spoke English. I do not imagine that the talk was about politics, or any of the events that seem important in other portions of the United States, only the faintest echoes of which ever reach this secluded place. This is a purely domestic and patriarchal community, where there are no books to bring in agitating doubts, and few newspapers to disquiet the nerves. The only matter of politics broached was in regard to an appropriation by Congress to improve a cut-off between two bayous. So far as I could learn, the most intelligent of these people had no other interest in or concern about the Government. There is a neighborhood school where English is taught, but no church nearer than Abbeville, six miles away. I should not describe the population as fanatically religious, nor a churchgoing one except on special days. But by all accounts it is moral, orderly, sociable, fond of dancing, thrifty, and conservative.

The Acadians are fond of their homes. It is not the fashion for the young people to go away to better their condition. Few young men have ever been as far from home as New Orleans; they marry young, and settle down near the homestead. Mr. Le Blanc has a colony of his descendants about him, within hail from his door. It must be large, and his race must be prolific, judging by the number of small children who gathered at the homestead to have a sly peep at the strangers. They took small interest in the war, and it had few attractions for them. The conscription carried away many of their young men, but I am told they did not make very good soldiers, not because they were not stalwart and brave, but because they were so intolerably homesick that they deserted whenever they had a chance. The men whom we saw were most of them fine athletic fellows, with honest, dark, sun-browned faces; some of the children were very pretty, but the women usually showed the effects of isolation and toil, and had the common plainness of French peasants. They are a self-supporting community, raise their own cotton, corn, and sugar, and for the most part manufacture their own clothes and articles of household use. Some of the cotton jeans, striped with blue, indigo-dyed, made into garments for men and women, and the blankets, plain yellow (from the native nankeen cotton), curiously clouded, are very pretty and serviceable. Further than that their habits of living are simple, and their ways primitive, I saw few eccentricities. The peculiarity of this community is in its freedom from all the hurry and worry and information of our modern life. I have read that the gallants train their little horses to prance and curvet and rear and fidget about, and that these are called "courtin' horses," and are used when a young man goes courting, to impress his mistress with his manly horsemanship. I have seen these horses perform under the saddle, but I was not so fortunate as to see any courting going on.

In their given as well as their family names these people are classical and peculiar. I heard, of men, the names L'Odias, Peigneur, Niolas, Elias, Homère, Lemaire, and of women, Emilite, Ségoura, Antoinette, Clarise, Elia.

We were very hospitably entertained by the Le Blancs. On our arrival tiny cups of black coffee were handed round, and later a drink of syrup and water, which some of the party sipped with a sickly smile of enjoyment. Before dinner we walked up to the bridge over the bayou on the road leading to Abbeville, where there is a little cluster of houses, a small country store, and a closed drug-shop—the owner of which had put up his shutters and gone to a more unhealthy region. Here is a fine grove of oaks, and from the bridge we had in view a grand sweep of prairie, with trees, single and in masses, which made with the winding silvery stream a very pleasing picture. We sat down to a dinner—the women waiting on the table—of gombo file, fried oysters, eggs, sweet-potatoes (the delicious saccharine, sticky sort), with syrup out of a bottle served in little saucers, and afterwards black coffee. We were sincerely welcome to whatever the house contained, and when we departed the whole family, and indeed all the neighborhood, accompanied us to our boats, and we went away down the stream with a chorus of adieus and good wishes.

We were watching for a hail from the Thibodeaux. The doors and shutters were closed, and the mansion seemed blank and forgetful. But as we came opposite the landing, there stood Andonia, faithful, waving her handkerchief. Ah me!

We went home gayly and more swiftly, current and tide with us, though a little pensive, perhaps, with too much pleasure and the sunset effects on the wide marshes through which we voyaged. Cattle wander at will over these marshes, and are often stalled and lost. We saw some pitiful sights. The cattle venturing too near the boggy edge to drink become inextricably involved. We passed an ox sunken to his back, and dead; a cow frantically struggling in the mire, almost exhausted, and a cow and calf, the mother dead, the calf moaning

beside her. On a cattle lookout near by sat three black buzzards surveying the prospect with hungry eyes.

When we landed and climbed the hill, and from the rose-embowered veranda looked back over the strange land we had sailed through, away to Bayou Tigre, where the red sun was setting, we felt that we had been in a country that is not of this world.

VI.—THE SOUTH REVISITED, IN 1887.

In speaking again of the South in Harper's Monthly, after an interval of about two years, and as before at the request of the editor, I said, I shrink a good deal from the appearance of forwardness which a second paper may seem to give to observations which have the single purpose of contributing my mite towards making the present spirit of the Southern people, their progress in industries and in education, their aspirations, better known. On the other hand, I have no desire to escape the imputation of a warm interest in the South, and of a belief that its development and prosperity are essential to the greatness and glory of the nation. Indeed, no one can go through the South, with his eyes open, without having his patriotic fervor quickened and broadened, and without increased pride in the republic.

We are one people. Different traditions, different education or the lack of it, the demoralizing curse of slavery, different prejudices, made us look at life from irreconcilable points of view; but the prominent common feature, after all, is our Americanism. In any assembly of gentlemen from the two sections the resemblances are greater than the differences. A score of times I have heard it said, "We look alike, talk alike, feel alike; how strange it is we should have fought!" Personal contact always tends to remove prejudices, and to bring into prominence the national feeling, the race feeling, the human nature common to all of us.

I wish to give as succinctly as I can the general impressions of a recent six weeks' tour, made by a company of artists and writers, which became known as the "Harper party," through a considerable portion of the South, including the cities of Lynchburg, Richmond, Danville, Atlanta, Augusta (with a brief call at Charleston and Columbia, for it was not intended to take in the eastern seaboard on this trip), Knoxville, Chattanooga, South Pittsburg, Nashville, Birmingham, Montgomery, Pensacola, Mobile, New Orleans, Baton Rouge, Vicksburg, Memphis, Louisville. Points of great interest were necessarily omitted in a tour which could only include representatives of the industrial and educational development of the New South. Naturally we were thrown more with business men and with educators than with others; that is, with those who are actually making the New South; but we saw something of social life, something of the homes and mode of living of every class, and we had abundant opportunities of conversation with whites and blacks of every social grade and political affinity. The Southern people were anxious to show us what they were doing, and they expressed their sentiments with entire frankness; if we were misled, it is our own fault. It must be noted, however, in estimating the value of our observations, that they were mainly made in cities and large villages, and little in the country districts.

Inquiries in the South as to the feeling of the North show that there is still left some misapprehension of the spirit in which the North sent out its armies, though it is beginning to be widely understood that the North was not animated by hatred of the South, but by intense love of the Union. On the other hand, I have no doubt there still lingers in the North a little misapprehension of the present feeling of the Southern people about the Union. It arises from a confusion of two facts which it is best to speak of plainly. Everybody knows that the South is heartily glad that slavery is gone, and that a new era of freedom has set in. Everybody who knows the South at all is aware that any idea of any renewal of the strife, now or at any time, is nowhere entertained, even as a speculation, and that to the women especially, who are said to be first in war, last in peace, and first in the hearts of their countrymen, the idea of war is a subject of utter loathing. The two facts to which I refer are the loyalty of the Southern whites to the Union, and their determination to rule in domestic affairs. Naturally there are here and there soreness and some bitterness over personal loss and ruin, life-long grief, maybe, over lost illusions—the observer who remembers what human nature is wonders that so little of this is left—but the great fact is that the South is politically loyal to the Union of the States, that the sentiment for its symbol is growing into a deep reality which would flame out in passion under any foreign insult, and that nationality, pride in the republic, is everywhere strong and prominent. It is hardly necessary to say this, but it needs to be emphasized when the other fact is dwelt on, namely, the denial of free suffrage to the colored man. These two things are confused, and this confusion is the source of much political misunderstanding. Often when a Southern election "outrage" is telegraphed, when intimidation or fraud is revealed, it is said in print, "So that is Southern loyalty!" In short, the political treatment of the negro is taken to be a sign of surviving war feeling, if not of a renewed purpose of rebellion. In this year of grace 1887 the two things have no isolation to each other. It would be as true to say that election frauds and violence to individuals and on the ballot-box in Cincinnati are signs of hatred of the Union and of Union men, as that a suppressed negro vote at the South, by adroit management or otherwise, is indication of remaining hostility to the Union. In the South it is sometimes due to the same depraved party spirit that causes frauds in the North—the determination of a party to get or keep the upper-hand at all hazards; but it is, in its origin and generally, simply the result of the resolution of the majority of the brains and property of the South to govern the cities and the States, and in the Southern mind this is perfectly consistent with entire allegiance to the Government. I could name men who were abettors of what is called the "shotgun policy" whose

national patriotism is beyond question, and who are warm promoters of negro education and the improvement of the condition of the colored people.

We might as well go to the bottom of this state of things, and look it squarely in the face. Under reconstruction, sometimes owing to a tardy acceptance of the new conditions by the ruling class, the State governments and the municipalities fell under the control of ignorant colored people, guided by unscrupulous white adventurers. States and cities were prostrate under the heel of ignorance and fraud, crushed with taxes, and no improvements to show for them. It was ruin on the way to universal bankruptcy. The regaining of power by the intelligent and the property owners was a question of civilization. The situation was intolerable. There is no Northern community that would have submitted to it; if it could not have been changed by legal process, it would have been upset by revolution, as it was at the South. Recognizing as we must the existence of race prejudice and pride, it was nevertheless a struggle for existence. The methods resorted to were often violent, and being sweeping, carried injustice. To be a Republican, in the eyes of those smarting under carpet-bag *government* and the rule of the ignorant lately enfranchised, was to be identified with the detested carpetbag government and with negro rule. The Southern Unionist and the Northern emigrant, who justly regarded the name Republican as the proudest they could bear, identified as it was with the preservation of the Union and the national credit, could not show their Republican principles at the polls without personal danger in the country and social ostracism in the cities. Social ostracism on account of politics even outran social ostracism on account of participation in the education of the negroes. The very men who would say, "I respect a man who fought for the Union more than a Northern Copperhead, and if I had lived North, no doubt I should have gone with my section," would at the same time say, or think, "But you cannot be a Republican down here now, for to be that is to identify yourself with the party here that is hostile to everything in life that is dear to us." This feeling was intensified by the memories of the war, but it was in a measure distinct from the war feeling, and it lived on when the latter grew weak, and it still survives in communities perfectly loyal to the Union, glad that slavery is ended, and sincerely desirous of the establishment and improvement of public education for colored and white alike.

Any tampering with the freedom of the ballot-box in a republic, no matter what the provocation, is dangerous; the methods used to regain white ascendancy were speedily adopted for purely party purposes and factional purposes; the chicanery, even the violence, employed to render powerless the negro and "carpetbag" vote were freely used by partisans in local elections against each other, and in time became means of preserving party and ring ascendancy. Thoughtful men South as well as North recognize the vital danger to popular government if voting and the ballot-box are not sacredly protected. In a recent election in Texas, in a district where, I am told, the majority of the inhabitants are white, and the majority of the whites are Republicans, and the majority of the colored voters voted the Republican ticket, and greatly the larger proportion of the wealth and business of the district are in Republican hands, there was an election row; ballot-boxes were destroyed in several precincts, persons killed on both sides, and leading Republicans driven out of the State. This is barbarism. If the case is substantiated as stated, that in the district it was not a question of race ascendancy, but of party ascendancy, no fair-minded man in the South can do otherwise than condemn it, for under such conditions not only is a republican form of government impossible, but development and prosperity are impossible.

For this reason, and because separation of voters on class lines is always a peril, it is my decided impression that throughout the South, though not by everybody, a breaking up of the solidarity of the South would be welcome; that is to say, a breaking up of both the negro and the white vote, and the reforming upon lines of national and economic policy, as in the old days of Whig and Democrat, and liberty of free action in all local affairs, without regard to color or previous party relations. There are politicians who would preserve a solid South, or as a counterpart a solid North, for party purposes. But the sense of the country, the perception of business men North and South, is that this condition of politics interferes with the free play of industrial development, with emigration, investment of capital, and with that untrammelled agitation and movement in society which are the life of prosperous States.

Let us come a little closer to the subject, dealing altogether with facts, and not with opinions. The Republicans of the North protest against the injustice of an increased power in the Lower House and in the Electoral College based upon a vote which is not represented. It is a valid protest in law; there is no answer to it. What is the reply to it? The substance of hundreds of replies to it is that "we dare not let go so long as the negroes all vote together, regardless of local considerations or any economic problems whatever; we are in danger of a return to a rule of ignorance that was intolerable, and as long as you wave the bloody shirt at the North, which means to us a return to that rule, the South will be solid." The remark made by one man of political prominence was perhaps typical: "The waving of the bloody shirt suits me exactly as a political game; we should have hard work to keep our State Democratic if you did not wave it." So the case stands. The Republican party will always insist on freedom, not only of political opinion, but of action, in every part of the Union; and the South will keep "solid" so long as it fears, or so long as politicians can persuade it to fear, the return of the late disastrous domination. And recognizing this fact, and speaking in the interest of no party, but only in that of better understanding and of the prosperity of the whole country, I cannot doubt that the way out of most of our complications is in letting the past drop absolutely, and addressing ourselves with sympathy and good-will all around to the great economical problems and national issues. And I believe that in this way also lies the speediest and most permanent good to the colored as well as the white population of the South.

There has been a great change in the aspect of the South and in its sentiment within two years; or perhaps it would be more correct to say that the change maturing for fifteen years is more apparent in a period of comparative rest from race or sectional agitation. The educational development is not more marvellous than the industrial, and both are unparalleled in history. Let us begin by an illustration.

I stood one day before an assembly of four hundred pupils of a colored college—called a college, but with a necessary preparatory department—children and well-grown young women and men. The buildings are fine, spacious, not inferior to the best modern educational buildings either in architectural appearance or in interior furnishing, with scientific apparatus, a library, the appliances approved by recent experience in

teaching, with admirable methods and discipline, and an accomplished corps of instructors. The scholars were neat, orderly, intelligent in appearance. As I stood for a moment or two looking at their bright expectant faces the profound significance of the spectacle and the situation came over me, and I said: "I wonder if you know what you are doing, if you realize what this means. Here you are in a school the equal of any of its grade in the land, with better methods of instruction than prevailed anywhere when I was a boy, with the gates of all knowledge opened as freely to you as to any youth in the land—here, in this State, where only about twenty years ago it was a misdemeanor, punishable with fine and imprisonment, to teach a colored person to read and write. And I am brought here to see this fine school, as one of the best things he can show me in the city, by a Confederate colonel. Not in all history is there any instance of a change like this in a quarter of a century: no, not in one nor in two hundred years. It seems incredible."

This is one of the schools instituted and sustained by Northern friends of the South; but while it exhibits the capacity of the colored people for education, it is not so significant in the view we are now taking of the New South as the public schools. Indeed, next to the amazing industrial change in the South, nothing is so striking as the interest and progress in the matter of public schools. In all the cities we visited the people were enthusiastic about their common schools. It was a common remark, "I suppose we have one of the best school systems in the country." There is a wholesome rivalry to have the best. We found everywhere the graded system and the newest methods of teaching in vogue. In many of the primary rooms in both white and colored schools, when I asked if these little children knew the alphabet when they came to school, the reply was, "Not generally we prefer they should not; we use the new method of teaching words." In many schools the youngest pupils were taught to read music by sight, and to understand its notation by exercises on the blackboard. In the higher classes generally, the instruction in arithmetic, in reading, in geography, in history, and in literature was wholly in the modern method. In some of the geography classes and in the language classes I was reminded of the drill in the German schools. In all the cities, as far as I could learn, the public money was equally distributed to the colored and to the white schools, and the number of schools bore a just proportion to the number of the two races. When the town was equally divided in population, the number of pupils in the colored schools was about the same as the number in the white schools. There was this exception: though provision was made for a high-school to terminate the graded for both colors, the number in the colored high-school department was usually very small; and the reason given by colored and white teachers was that the colored children had not yet worked up to it. The colored people prefer teachers of their own race, and they are quite generally employed; but many of the colored schools have white teachers, and generally, I think, with better results, although I saw many thoroughly good colored teachers, and one or two colored classes under them that compared favorably with any white classes of the same grade.

The great fact, however, is that the common-school system has become a part of Southern life, is everywhere accepted as a necessity, and usually money is freely voted to sustain it. But practically, as an efficient factor in civilization, the system is yet undeveloped in the country districts. I can only speak from personal observation of the cities, but the universal testimony was that the common schools in the country for both whites and blacks are poor. Three months' schooling in the year is about the rule, and that of a slack and inferior sort, under incompetent teachers. In some places the colored people complain that ignorant teachers are put over them, who are chosen simply on political considerations. More than one respectable colored man told me that he would not send his children to such schools, but combined with a few others to get them private instruction. The colored people are more dependent on public schools than the whites, for while there are vast masses of colored people in city and country who have neither the money nor the disposition to sustain schools, in all the large places the whites are able to have excellent private schools, and do have them. Scarcely anywhere can the colored people as yet have a private school without white aid from somewhere. At the present rate of progress, and even of the increase of tax-paying ability, it must be a long time before the ignorant masses, white and black, in the country districts, scattered over a wide area, can have public schools at all efficient. The necessity is great. The danger to the State of ignorance is more and more apprehended; and it is upon this that many of the best men of the South base their urgent appeal for temporary aid from the Federal Government for public schools. It is seen that a State cannot soundly prosper unless its laborers are to some degree intelligent. This opinion is shown in little things. One of the great planters of the Yazoo Delta told me that he used to have no end of trouble in settling with his hands. But now that numbers of them can read and cipher, and explain the accounts to the others, lie never has the least trouble.

One cannot speak too highly of the private schools in the South, especially of those for young women. I do not know what they were before the war, probably mainly devoted to "accomplishments," as most of girls' schools in the North were. Now most of them are wider in range, thorough in discipline, excellent in all the modern methods. Some of them, under accomplished women, are entirely in line with the best in the country. Before leaving this general subject of education, it is necessary to say that the advisability of industrial training, as supplementary to book-learning, is growing in favor, and that in some colored schools it is tried with good results.

When we come to the New Industrial South the change is marvellous, and so vast and various that I scarcely know where to begin in a short paper that cannot go much into details. Instead of a South devoted to agriculture and politics, we find a South wide awake to business, excited and even astonished at the development of its own immense resources in metals, marbles, coal, timber, fertilizers, eagerly laying lines of communication, rapidly opening mines, building furnaces, founderies, and all sorts of shops for utilizing the native riches. It is like the discovery of a new world. When the Northerner finds great founderies in Virginia using only (with slight exceptions) the products of Virginia iron and coal mines; when he finds Alabama and Tennessee making iron so good and so cheap that it finds ready market in Pennsylvania, and founderies multiplying near the great furnaces for supplying Northern markets; when he finds cotton-mills running to full capacity on grades of cheap cottons universally in demand throughout the South and South-west; when he finds small industries, such as paper-box factories and wooden bucket and tub factories, sending all they can make into the North and widely over the West; when he sees the loads of most beautiful marbles shipped North; when he learns that some of the largest and most important engines and mill machinery were made in Southern shops; when he finds in Richmond a "pole locomotive," made to run on logs laid end to end, and

drag out from Michigan forests and Southern swamps lumber hitherto inaccessible; when he sees worn-out highlands in Georgia and Carolina bear more cotton than ever before by help of a fertilizer the base of which is the cotton-seed itself (worth more as a fertilizer than it was before the oil was extracted from it); when he sees a multitude of small shops giving employment to men, women, and children who never had any work of that sort to do before; and when he sees Roanoke iron cast in Richmond into car-irons, and returned to a car-factory in Roanoke which last year sold three hundred cars to the New York and New England Railroad—he begins to open his eyes. The South is manufacturing a great variety of things needed in the house, on the farm, and in the shops, for home consumption, and already sends to the North and West several manufactured products. With iron, coal, timber contiguous and easily obtained, the amount sent out is certain to increase as the labor becomes more skilful. The most striking industrial development today is in iron, coal, lumber, and marbles; the more encouraging for the self-sustaining life of the Southern people is the multiplication of small industries in nearly every city I visited.

When I have been asked what impressed me most in this hasty tour, I have always said that the most notable thing was that everybody was at work. In many cities this was literally true: every man, woman, and child was actively employed, and in most there were fewer idlers than in many Northern towns. There are, of course, slow places, antiquated methods, easy-going ways, a-hundred-years-behind-the-time makeshifts, but the spirit in all the centres, and leavening the whole country, is work. Perhaps the greatest revolution of all in Southern sentiment is in regard to the dignity of labor. Labor is honorable, made so by the example of the best in the land. There are, no doubt, fossils or Bourbons, sitting in the midst of the ruins of their estates, martyrs to an ancient pride; but usually the leaders in business and enterprise bear names well known in politics and society. The nonsense that it is beneath the dignity of any man or woman to work for a living is pretty much eliminated from the Southern mind. It still remains true that the Anglo-Saxon type is prevalent in the South; but in all the cities the business sign-boards show that the enterprising Hebrew is increasingly prominent as merchant and trader, and he is becoming a plantation owner as well.

It cannot be too strongly impressed upon the public mind that the South, to use a comprehensible phrase, "has joined the procession." Its mind is turned to the development of its resources, to business, to enterprise, to education, to economic problems; it is marching with the North in the same purpose of wealth by industry. It is true that the railways, mines, and furnaces could not have been without enormous investments of Northern capital, but I was continually surprised to find so many and important local industries the result solely of home capital, made and saved since the war.

In this industrial change, in the growth of manufactures, the Southern people are necessarily divided on the national economic problems. Speaking of it purely from the side of political economy and not of politics, great sections of the South—whole States, in fact—are becoming more in favor of "protection" every day. All theories aside, whenever a man begins to work up the raw material at hand into manufactured articles for the market, he thinks that the revenue should be so adjusted as to help and not to hinder him.

Underlying everything else is the negro problem. It is the most difficult ever given to a people to solve.

It must, under our Constitution, be left to the States concerned, and there is a general hopefulness that time and patience will solve it to the advantage of both races. The negro is generally regarded as the best laborer in the world, and there is generally goodwill towards him, desire that he shall be educated and become thrifty. The negro has more confidence now than formerly in the white man, and he will go to him for aid and advice in everything except politics. Again and again colored men said to me, "If anybody tells you that any considerable number of colored men are Democrats, don't you believe him; it is not so." The philanthropist who goes South will find many things to encourage him, but if he knows the colored people thoroughly, he will lose many illusions. But to speak of things hopeful, the progress in education, in industry, in ability to earn money, is extraordinary—much greater than ought to have been expected in twenty years even by their most sanguine friends, and it is greater now than at any other period. They are generally well paid, according to the class of work they do. Usually I found the same wages for the same class of work as whites received. I cannot say how this is in remote country districts. The treatment of laborers depends, I have no doubt, as elsewhere, upon the nature of the employer. In some districts I heard that the negroes never got out of debt, never could lay up anything, and were in a very bad condition. But on some plantations certainly, and generally in the cities, there is an improvement in thrift shown in the ownership of bits of land and houses, and in the possession of neat and pretty homes. As to morals, the gain is slower, but it is discernible, and exhibited in a growing public opinion against immorality and lax family relations. He is no friend to the colored people who blinks this subject, and does not plainly say to them that their position as citizens in the enjoyment of all civil rights depends quite as much upon their personal virtue and their acquiring habits of thrift as it does upon school privileges.

I had many interesting talks with representative colored men in different sections. While it is undoubtedly true that more are indifferent to politics than formerly, owing to causes already named and to the unfulfilled promises of wheedling politicians, it would be untrue to say that there is not great soreness over the present situation. At Nashville I had an interview with eight or ten of the best colored citizens, men of all shades of color. One of them was a trusted clerk in the post-office; another was a mail agent, who had saved money, and made more by an investment in Birmingham; another was a lawyer of good practice in the courts, a man of decided refinement and cultivation; another was at the head of one of the leading transportation lines in the city, and another had the largest provision establishment in town, and both were men of considerable property; and another, a slave when the war ended, was a large furniture dealer, and reputed worth a hundred thousand dollars. They were all solid, sensible business men, and all respected as citizens. They talked most intelligently of politics, and freely about social conditions. In regard to voting in Tennessee there was little to complain of; but in regard to Mississippi, as an illustration, it was an outrage that the dominant party had increased power in Congress and in the election of President, while the colored Republican vote did not count. What could they do? Some said that probably nothing could be done; time must be left to cure the wrong. Others wanted the Federal Government to interfere, at least to the extent of making a test case on some member of Congress that his election was illegal. They did not think that need excite anew any race prejudice. As to exciting race and sectional agitation, we discussed this question: whether the present

marvellous improvement of the colored people, with general good-will, or at least a truce everywhere, would not be hindered by anything like a race or class agitation; that is to say, whether under the present conditions of education and thrift the colored people (whatever injustice they felt) were not going on faster towards the realization of all they wanted than would be possible under any circumstances of adverse agitation. As a matter of policy most of them assented to this. I put this question: "In the first reconstruction days, how many colored men were there in the State of Mississippi fitted either by knowledge of letters, law, political economy, history, or politics to make laws for the State?" Very few. Well then, it was unfortunate that they should have attempted it. There are more to-day, and with education and the accumulation of property the number will constantly increase. In a republic, power usually goes with intelligence and property.

Finally I asked this intelligent company, every man of which stood upon his own ability in perfect self-respect, "What do you want here in the way of civil rights that you have not?" The reply from one was that he got the respect of the whites just as he was able to command it by his ability and by making money, and, with a touch of a sense of injustice, he said he had ceased to expect that the colored race would get it in any other way. Another reply was—and this was evidently the deep feeling of all: "We want to be treated like men, like anybody else, regardless of color. We don't mean by this social equality at all; that is a matter that regulates itself among whites and colored people everywhere. We want the public conveyances open to us according to the fare we pay; we want privilege to go to hotels and to theatres, operas and places of amusement. We wish you could see our families and the way we live; you would then understand that we cannot go to the places assigned us in concerts and theatres without loss of self-respect." I might have said, but I did not, that the question raised by this last observation is not a local one, but as wide as the world.

If I tried to put in a single sentence the most widespread and active sentiment in the South to-day, it would be this: The past is put behind us; we are one with the North in business and national ambition: we want a sympathetic recognition of this fact.

VII.—A FAR AND FAIR COUNTRY.

Lewis and Clarke, sent out by Mr. Jefferson in 1804 to discover the North-west by the route of the Missouri River, left the town of St. Charles early in the spring, sailed and poled and dragged their boats up the swift, turbulent, and treacherous stream all summer, wintered with the Mandan Indians, and reached the Great Falls of the Missouri in about a year and a quarter from the beginning of their voyage. Now, when we wish to rediscover this interesting country, which is still virgin land, we lay down a railway-track in the spring and summer, and go over there in the autumn in a palace-car—a much more expeditious and comfortable mode of exploration.

In beginning a series of observations and comments upon Western life it is proper to say that the reader is not to expect exhaustive statistical statements of growth or development, nor descriptions, except such as will illustrate the point of view taken of the making of the Great West. Materialism is the most obtrusive feature of a cursory observation, but it does not interest one so much as the forces that underlie it, the enterprise and the joyousness of conquest and achievement that it stands for, or the finer processes evolved in the marvellous building up of new societies. What is the spirit, what is the civilization of the West? I have not the presumption to expect to answer these large questions to any one's satisfaction—least of all to my own—but if I may be permitted to talk about them familiarly, in the manner that one speaks to his friends of what interested him most in a journey, and with flexibility in passing from one topic to another, I shall hope to contribute something to a better understanding between the territories of a vast empire. How vast this republic is, no one can at all appreciate who does not actually travel over its wide areas. To many of us the West is still the West of the geographies of thirty years ago; it is the simple truth to say that comparatively few Eastern people have any adequate conception of what lies west of Chicago and St. Louis: perhaps a hazy geographical notion of it, but not the faintest idea of its civilization and society. Now, a good understanding of each other between the great sections of the republic is politically of the first importance. We shall hang together as a nation; blood, relationship, steel rails, navigable waters, trade, absence of natural boundaries, settle that. We shall pull and push and grumble, we shall vituperate each other, parties will continue to make capital out of sectional prejudice, and wantonly inflame it (what a pitiful sort of "politics" that is!), but we shall stick together like wax. Still, anything like smooth working of our political machine depends upon good understanding between sections. And the remark applies to East and West as well as to North and South. It is a common remark at the West that "Eastern people know nothing about us; they think us half civilized and there is mingled with slight irritability at this ignorance a waxing feeling of superiority over the East in force and power." One would not say that repose as yet goes along with this sense of great capacity and great achievement; indeed, it is inevitable that in a condition of development and of quick growth unparalleled in the history of the world there should be abundant self-assertion and even monumental boastfulness.

When the Western man goes East he carries the consciousness of playing a great part in the making of an empire; his horizon is large; but he finds himself surrounded by an atmosphere of indifference or non-comprehension of the prodigiousness of his country, of incredulity as to the refinement and luxury of his civilization; and self-assertion is his natural defence. This longitudinal incredulity and swagger is a curious phenomenon. London thinks New York puts on airs, New York complains of Chicago's want of modesty, Chicago can see that Kansas City and Omaha are aggressively boastful, and these cities acknowledge the

expansive self-appreciation of Denver and Helena.

Does going West work a radical difference in a man's character? Hardly. We are all cut out of the same piece of cloth. The Western man is the Eastern or the Southern man let loose, with his leading-strings cut. But the change of situation creates immense diversity in interests and in spirit. One has but to take up any of the great newspapers, say in St. Paul or Minneapolis, to be aware that he is in another world of ideas, of news, of interests. The topics that most interest the East he does not find there, nor much of its news. Persons of whom he reads daily in the East drop out of sight, and other persons, magnates in politics, packing, railways, loom up. It takes columns to tell the daily history of places which have heretofore only caught the attention of the Eastern reader for freaks of the thermometer, and he has an opportunity to read daily pages about Dakota, concerning which a weekly paragraph has formerly satisfied his curiosity. Before he can be absorbed in these lively and intelligent newspapers he must change the whole current of his thoughts, and take up other subjects, persons, and places than those that have occupied his mind. He is in a new world.

One of the most striking facts in the West is State pride, attachment to the State, the profound belief of every citizen that his State is the best. Engendered perhaps at first by a permanent investment and the spur of self-interest, it speedily becomes a passion, as strong in the newest State as it is in any one of the original thirteen. Rivalry between cities is sharp, and civic pride is excessive, but both are outdone by the larger devotion to the commonwealth. And this pride is developed in the inhabitants of a Territory as soon as it is organized. Montana has condensed the ordinary achievements of a century into twenty years, and loyalty to its present and expectation of its future are as strong in its citizens as is the attachment of men of Massachusetts to the State of nearly three centuries of growth. In Nebraska I was pleased with the talk of a clergyman who had just returned from three months' travel in Europe. He was full of his novel experiences; he had greatly enjoyed the trip; but he was glad to get back to Nebraska and its full, vigorous life. In England and on the Continent he had seen much to interest him; but he could not help comparing Europe with Nebraska; and as for him, this was the substance of it: give him Nebraska every time. What astonished him most, and wounded his feelings (and there was a note of pathos in his statement of it), was the general foreign ignorance abroad about Nebraska—the utter failure in the European mind to take it in. I felt guilty, for to me it had been little more than a geographical expression, and I presume the Continent did not know whether Nebraska was a new kind of patent medicine or a new sort of religion. To the clergymen this ignorance of the central, richest, about-to-be-the-most-important of States, was simply incredible.

This feeling is not only admirable in itself, but it has an incalculable political value, especially in the West, where there is a little haze as to the limitations of Federal power, and a notion that the Constitution was swaddling-clothes for an infant, which manly limbs may need to kick off. Healthy and even assertive State pride is the only possible counterbalance in our system against that centralization which tends to corruption in the centre and weakness and discontent in the individual members.

It should be added that the West, speaking of it generally, is defiantly "American." It wants a more vigorous and assertive foreign policy. Conscious of its power, the growing pains in the limbs of the young giant will not let it rest. That this is the most magnificent country, that we have the only government beyond criticism, that our civilization is far and away the best, does not admit of doubt. It is refreshing to see men who believe in something heartily and without reserve, even if it is only in themselves. There is a tonic in this challenge of all time and history. A certain attitude of American assertion towards other powers is desired. For want of this our late representatives to Great Britain are said to be un-American; "political dudes" is what the Governor of Iowa calls them. It is his indictment against the present Minister to St. James that "he is numerous in his visits to the castles of English noblemen, and profuse in his obsequiousness to British aristocrats." And perhaps the Governor speaks for a majority of Western voters and fighters when he says that "timidity has characterized our State Department for the last twenty years."

By chance I begin these Western studies with the North-west. Passing by for the present the intelligent and progressive State of Wisconsin, we will consider Minnesota and the vast region at present more or less tributary to it. It is necessary to remember that the State was admitted to the Union in 1858, and that its extraordinary industrial development dates from the building of the first railway in its limits—ten miles from St. Paul to St. Anthony—in 1862. For this road the first stake was driven and the first shovelful of earth lifted by a citizen of St. Paul who has lived to see his State gridironed with railways, and whose firm constructed in 1887 over eleven hundred miles of railroad.

It is unnecessary to dwell upon the familiar facts that Minnesota is a great wheat State, and that it is intersected by railways that stimulate the enormous yield and market it with facility. The discovery that the State, especially the Red River Valley, and Dakota and the country beyond, were peculiarly adapted to the production of hard spring-wheat, which is the most desirable for flour, probably gave this vast region its first immense advantage. Minnesota, a prairie country, rolling, but with no important hills, well watered, well grassed, with a repellent reputation for severe winters, not well adapted to corn, nor friendly to most fruits, attracted nevertheless hardy and adventurous people, and proved specially inviting to the Scandinavians, who are tough and industrious. It would grow wheat without end. And wheat is the easiest crop to raise, and returns the greatest income for the least labor. In good seasons and with good prices it is a mine of wealth. But Minnesota had to learn that one industry does not suffice to make a State, and that wheat-raising alone is not only unreliable, but exhaustive. The grasshopper scourge was no doubt a blessing in disguise. It helped to turn the attention of farmers to cattle and sheep, and to more varied agriculture. I shall have more to say about this in connection with certain most interesting movements in Wisconsin.

The notion has prevailed that the North-west was being absorbed by owners of immense tracts of land, great capitalists who by the aid of machinery were monopolizing the production of wheat, and crowding out small farmers. There are still vast wheat farms under one control, but I am happy to believe that the danger of this great land monopoly has reached its height, and the tendency is the other way. Small farms are on the increase, practising a more varied agriculture. The reason is this: A plantation of 5000 or 15,000 acres, with a good season, freedom from blight and insects, will enrich the owner if prices are good; but one poor crop, with low prices, will bankrupt him. Whereas the small farmer can get a living under the most adverse

circumstances, and taking one year with another, accumulate something, especially if he varies his products and feeds them to stock, thus returning the richness of his farm to itself. The skinning of the land by sending away its substance in hard wheat is an improvidence of natural resources, which belongs, like cattle-ranging, to a half-civilized era, and like cattle-ranging has probably seen its best days. One incident illustrates what can be done. Mr. James J. Hill, the president of the Manitoba railway system, an importer and breeder of fine cattle on his Minnesota country place, recently gave and loaned a number of blooded bulls to farmers over a wide area in Minnesota and Dakota. The result of this benefaction has been surprising in adding to the wealth of those regions and the prosperity of the farmers. It is the beginning of a varied farming and of cattle production, which will be of incalculable benefit to the North-west.

It is in the memory of men still in active life when the Territory of Minnesota was supposed to be beyond the pale of desirable settlement. The State, except in the north-east portion, is now well settled, and well sprinkled with thriving villages and cities. Of the latter, St. Paul and Minneapolis are still a wonder to themselves, as they are to the world. I knew that they were big cities, having each a population nearly approaching 175,000, but I was not prepared to find them so handsome and substantial, and exhibiting such vigor and activity of movement. One of the most impressive things to an Eastern man in both of them is their public spirit, and the harmony with which business men work together for anything which will build up and beautify the city. I believe that the ruling force in Minneapolis is of New England stock, while St. Paul has a larger proportion of New York people, with a mixture of Southern; and I have a fancy that there is a social shading that shows this distinction. It is worth noting, however, that the Southerner, transplanted to Minnesota or Montana, loses the *laissez faire* with which he is credited at home, and becomes as active and pushing as anybody. Both cities have a very large Scandinavian population. The laborers and the domestic servants are mostly Swedes. In forecasting what sort of a State Minnesota is to be, the Scandinavian is a largely determining force. It is a virile element. The traveller is impressed with the idea that the women whom he sees at the stations in the country and in the city streets are sturdy, ruddy, and better able to endure the protracted season of cold and the highly stimulating atmosphere than the American-born women, who tend to become nervous in these climatic conditions. The Swedes are thrifty, taking eagerly to politics, and as ready to profit by them as anybody; unreservedly American in intention, and on the whole, good citizens.

The physical difference of the two cities is mainly one of situation. Minneapolis spreads out on both sides of the Mississippi over a plain, from the gigantic flouring-mills and the canal and the Falls of St. Anthony as a centre (the falls being, by-the-way, planked over with a wooden apron to prevent the total wearing away of the shaly rock) to rolling land and beautiful building sites on moderate elevations. Nature has surrounded the city with a lovely country, diversified by lakes and forests, and enterprise has developed it into one of the most inviting of summer regions. Twelve miles west of it, Lake Minnetonka, naturally surpassingly lovely, has become, by an immense expenditure of money, perhaps the most attractive summer resort in the North-west. Each city has a hotel (the West in Minneapolis, the Ryan in St. Paul) which would be distinguished monuments of cost and elegance in any city in the world, and each city has blocks of business houses, shops, and offices of solidity and architectural beauty, and each has many private residences which are palaces in size, in solidity, and interior embellishment, but they are scattered over the city in Minneapolis, which can boast of no single street equal to Summit avenue in St. Paul. The most conspicuous of the private houses is the stone mansion of Governor Washburn, pleasing in color, harmonious in design, but so gigantic that the visitor (who may have seen palaces abroad) expects to find a somewhat vacant interior. He is therefore surprised that the predominating note is homelikeness and comfort, and he does not see how a family of moderate size could well get along with less than the seventy rooms (most of them large) which they have at their disposal.

St. Paul has the advantage of picturesqueness of situation. The business part of the town lies on a spacious uneven elevation above the river, surrounded by a semicircle of bluffs averaging something like two hundred feet high. Up the sides of these the city climbs, beautifying every vantage-ground with handsome and stately residences. On the north the bluffs maintain their elevation in a splendid plateau, and over this dry and healthful plain the two cities advance to meet each other, and already meet in suburbs, colleges, and various public buildings. Summit avenue curves along the line of the northern bluff, and then turns northward, two hundred feet broad, graded a distance of over two miles, and with a magnificent asphalt road-way for more than a mile. It is almost literally a street of palaces, for although wooden structures alternate with the varied and architecturally interesting mansions of stone and brick on both sides, each house is isolated, with a handsome lawn and ornamental trees, and the total effect is spacious and noble. This avenue commands an almost unequalled view of the sweep of bluffs round to the Indian Mounds, of the city, the winding river, and the town and heights of West St. Paul. It is not easy to recall a street and view anywhere finer than this, and this is only one of the streets on this plateau conspicuous for handsome houses. I see no reason why St. Paul should not become, within a few years, one of the notably most beautiful cities in the world. And it is now wonderfully well advanced in that direction. Of course the reader understands that both these rapidly growing cities are in the process of "making," and that means cutting and digging and slashing, torn-up streets, shabby structures alternating with gigantic and solid buildings, and the usual unsightliness of transition and growth.

Minneapolis has the State University, St. Paul the Capitol, an ordinary building of brick, which will not long, it is safe to say, suit the needs of the pride of the State. I do not set out to describe the city, the churches, big newspaper buildings, great wholesale and ware houses, handsome club-house (the Minnesota Club), stately City Hall, banks, Chamber of Commerce, and so on. I was impressed with the size of the buildings needed to house the great railway offices. Nothing can give one a livelier idea of the growth and grasp of Western business than one of these plain structures, five or six stories high, devoted to the several departments of one road or system of roads, crowded with busy officials and clerks, offices of the president, vice-president, assistant of the president, secretary, treasurer, engineer, general manager, general superintendent, general freight, general traffic, general passenger, perhaps a land officer, and so on—affairs as complicated and vast in organization and extensive in detail as those of a State government.

There are sixteen railways which run in Minnesota, having a total mileage of 5024 miles in the State. Those

which have over two hundred miles of road in the State are the Chicago and North-western, Chicago, Milwaukee, and St. Paul, Chicago, St. Paul, Minneapolis, and Omaha, Minneapolis and St. Louis, Northern Pacific, St. Paul and Duluth, and the St. Paul, Minneapolis, and Manitoba. The names of these roads give little indication of their location, as the reader knows, for many of them run all over the North-west like spider-webs.

It goes without saying that the management of these great interests—imperial, almost continental in scope—requires brains, sobriety, integrity; and one is not surprised to find that the railways command and pay liberally for the highest talent and skill. It is not merely a matter of laying rails and running trains, but of developing the resources—one might almost say creating the industries—of vast territories. These are gigantic interests, concerning which there is such sharp rivalry and competition, and as a rule it is the generous, large-minded policy that wins. Somebody has said that the railway managers and magnates (I do not mean those who deal in railways for the sake of gambling) are the *élite* of Western life. I am not drawing distinctions of this sort, but I will say, and it might as well be said here and simply, that next to the impression I got of the powerful hand of the railways in the making of the West, was that of the high character, the moral stamina, the ability, the devotion to something outside themselves, of the railway men I met in the North-west. Specialists many of them are, and absorbed in special work, but I doubt if any other profession or occupation can show a proportionally larger number of broad-minded, fair-minded men, of higher integrity and less pettiness, or more inclined to the liberalizing culture in art and social life. Either dealing with large concerns has lifted up the men, or the large opportunities have attracted men of high talent and character; and I sincerely believe that we should have no occasion for anxiety if the average community did not go below the standard of railway morality and honorable dealing.

What is the *raison d'être* of these two phenomenal, cities? why do they grow? why are they likely to continue to grow? I confess that this was an enigma to me until I had looked beyond to see what country was tributary to them, what a territory they have to supply. Of course, the railways, the flouring-mills, the vast wholesale dry goods and grocery houses speak for themselves. But I had thought of these cities as on the confines of civilization. They are, however, the two posts of the gate-way to an empire. In order to comprehend their future, I made some little trips north-east and north-west.

Duluth, though as yet with only about twenty-five to thirty thousand inhabitants, feels itself, by its position, a rival of the cities on the Mississippi. A few figures show the basis of this feeling. In 1880 the population was 3740; in 1886, 25,000. In 1880 the receipts of wheat were 1,347,679 bushels; in 1886, 22,425,730 bushels; in 1860 the shipments of wheat 1,453,647 bushels; in 1886, 17,981,965 bushels. In 1880 the shipments of flour were 551,800 bushels; in 1886, 1,500,000 bushels. In 1886 there were grain elevators with a capacity of 18,000,000 bushels. The tax valuation had increased from 8669,012 in 1880 to 811,773,729 in 1886. The following comparisons are made: The receipt of wheat in Chicago in 1885 was 19,266,000 bushels; in Duluth, 14,880,000 bushels. The receipt of wheat in 1886 was at Duluth 22,425,730 bushels; at Minneapolis, 33,394,450; at Chicago, 15,982,524; at Milwaukee, 7,930,102. This shows that an increasing amount of the great volume of wheat raised in north Dakota and north-west Minnesota (that is, largely in the Red River Valley) is seeking market by way of Duluth and water transportation. In 1869 Minnesota raised about 18,000,000 bushels of wheat; in 1886, about 50,000,000. In 1869 Dakota grew no grain at all; in 1886 it produced about 50,000,000 bushels of wheat. To understand the amount of transportation the reader has only to look on the map and see the railway lines—the Northern Pacific, the Chicago, St. Paul, Minneapolis, and Omaha, the St. Paul, Minneapolis, and Manitoba, and other lines, running to Duluth, and sending out spurs, like the roots of an elm-tree, into the wheat lands of the North-west.

Most of the route from St. Paul to Duluth is uninteresting; there is nothing picturesque except the Dalles of the St. Louis River, and a good deal of the country passed through seems agriculturally of no value. The approaches to Duluth, both from the Wisconsin and the Minnesota side, are rough and vexatious by reason of broken, low, hummocky, and swamp land. Duluth itself, with good harbor facilities, has only a strip of level ground for a street, and inadequate room for railway tracks and transfers. The town itself climbs up the hill, whence there is a good view of the lake and the Wisconsin shore, and a fair chance for both summer and winter breezes. The residence portion of the town, mainly small wooden houses, has many highly ornamental dwellings, and the long street below, following the shore, has many noble buildings of stone and brick, which would be a credit to any city. Grading and sewer-making render a large number of the streets impassable, and add to the signs of push, growth, and business excitement.

For the purposes of trade, Duluth, and the towns of Superior and West Superior, in Wisconsin, may be considered one port; and while Duluth may continue to be the money and business centre, the expansion for railway terminal facilities, elevators, and manufactures is likely to be in the Wisconsin towns on the south side of the harbor. From the Great Northern Elevator in West Superior the view of the other elevators, of the immense dock room, of the harbor and lake, of a net-work of miles and miles of terminal tracks of the various roads, gives one an idea of gigantic commerce; and the long freight trains laden with wheat, glutting all the roads and sidings approaching Duluth, speak of the bursting abundance of the tributary country. This Great Northern Elevator, belonging to the Manitoba system, is the largest in the world; its dimensions are 360 feet long, 95 in width, 115 in height, with a capacity of 1,800,000 bushels, and with facilities for handling 40 car-loads an hour, or 400 cars in a day of 10 hours. As I am merely illustrating the amount of the present great staple of the North-west, I say nothing here of the mineral, stone, and lumber business of this region. Duluth has a cool, salubrious summer and a snug winter climate. I ought to add that the enterprising inhabitants attend to education as well as the elevation of grain; the city has eight commodious school buildings.

To return to the Mississippi. To understand what feeds Minneapolis and St. Paul, and what country their great wholesale houses supply, one must take the rail and penetrate the vast North-west. The famous Park or Lake district, between St. Cloud (75 miles north-west of St. Paul) and Fergus Falls, is too well known to need description. A rolling prairie, with hundreds of small lakes, tree fringed, it is a region of surpassing loveliness, and already dotted, as at Alexandria, with summer resorts. The whole region, up as far as Moorhead (240 miles from St. Paul), on the Red River, opposite Fargo, Dakota, is well settled, and full of prosperous towns. At Fargo, crossing the Northern Pacific, we ran parallel with the Red River, through a line of bursting

elevators and wheat farms, clown to Grand Forks, where we turned westward, and passed out of the Red River Valley, rising to the plateau at Larimore, some three hundred feet above it.

The Red River, a narrow but deep and navigable stream, has from its source to Lake Winnipeg a tortuous course of about 600 miles, while the valley itself is about 285 miles long, of which 180 miles is in the United States. This valley, which has astonished the world by its wheat production, is about 160 miles in breadth, and level as a floor, except that it has a northward slope of, I believe, about five feet to the mile. The river forms the boundary between Minnesota and Dakota; the width of valley on the Dakota side varies from 50 to 100 miles. The rich soil is from two to three feet deep, underlaid with clay. Fargo, the centre of this valley, is 940 feet above the sea. The climate is one of extremes between winter and summer, but of much constancy of cold or heat according to the season. Although it is undeniable that one does not feel the severe cold there as much as in more humid atmospheres, it cannot be doubted that the long continuance of extreme cold is trying to the system. And it may be said of all the North-west, including Minnesota, that while it is more favorable to the lungs than many regions where the thermometer has less sinking power, it is not free from catarrh (the curse of New England), nor from rheumatism. The climate seems to me specially stimulating, and I should say there is less excuse here for the use of stimulants (on account of "lowness" or lassitude) than in almost any other portion of the United States with which I am acquainted.

But whatever attractions or drawbacks this territory has as a place of residence, its grain and stock growing capacity is inexhaustible, and having seen it, we begin to comprehend the vigorous activity and growth of the twin cities. And yet this is the beginning of resources; there lies Dakota, with its 149,100 square miles (96,596,480 acres of land), larger than all the New England States and New York combined, and Montana beyond, together making a belt of hard spring-wheat land sufficient, one would think, to feed the world. When one travels over 1200 miles of it, doubt ceases.

I cannot better illustrate the resources and enterprise of the North-west than by speaking in some detail of the St. Paul, Minneapolis, and Manitoba Railway (known as the Manitoba system), and by telling briefly the story of one season's work, not because this system is bigger or more enterprising or of more importance in the West than some others I might name, but because it has lately pierced a comparatively unknown region, and opened to settlement a fertile empire.

The Manitoba system gridirons north Minnesota, runs to Duluth, puts two tracks down the Red River Valley (one on each side of the river) to the Canada line, sends out various spurs into Dakota, and operates a main line from Grand Forks westward through the whole of Dakota, and through Montana as far as the Great Falls of the Missouri, and thence through the canon of the Missouri and the canon of the Prickly-Pear to Helena—in all about 3000 miles of track. Its president is Mr. James J. Hill, a Canadian by birth, whose rapid career from that of a clerk on the St. Paul levee to his present position of influence, opportunity, and wealth is a romance in itself, and whose character, integrity, tastes, and accomplishments, and domestic life, were it proper to speak of them, would satisfactorily answer many of the questions that are asked about the materialistic West.

The Manitoba line west had reached Minot, 530 miles from St. Paul, in 1886. I shall speak of its extension in 1887, which was intrusted to Mr. D. C. Shepard, a veteran engineer and railway builder of St. Paul, and his firm, Messrs. Shepard, Winston & Co. Credit should be given by name to the men who conducted this Napoleonic enterprise; for it required not only the advance of millions of money, but the foresight, energy, vigilance, and capacity that insure success in a distant military campaign.

It needs to be noted that the continuation of the St. Paul, Minneapolis, and Manitoba road from Great Falls to Helena, 98 miles, is called the Montana Central. The work to be accomplished in 1887 was to grade 500 miles of railroad to reach Great Falls, to put in the bridging and mechanical structures (by hauling all material brought up by rail ahead of the track by teams, so as not to delay the progress of the track) on 530 miles of continuous railway, and to lay and put in good running condition 643 miles of rails continuously and from one end only.

In the winter of 1886-87 the road was completed to a point five miles west of Minot, and work was done beyond which if consolidated would amount to about fifty miles of completed grading, and the mechanical structures were done for twenty miles west from Minot. On the Montana Central the grading and mechanical structures were made from Helena as a base, and completed before the track reached Great Falls. St. Paul, Minneapolis, and Duluth were the primary bases of operations, and generally speaking all materials, labor, fuel, and supplies originated at these three points; Minot was the secondary base, and here in the winter of 1886-87 large depots of supplies and materials for construction were formed.

Track-laying began April 2, 1887, but was greatly retarded by snow and ice in the completed cuts, and by the grading, which was heavy. The cuts were frozen more or less up to May 15th. The forwarding of grading forces to Minot began April 6th, but it was a labor of considerable magnitude to outfit them at Minot and get them forward to the work; so that it was as late as May 10th before the entire force was under employment.

The average force on the grading was 3300 teams and about 8000 men. Upon the track-laying, surfacing, piling, and timber-work there were 225 teams and about 650 men. The heaviest work was encountered on the eastern end, so that the track was close upon the grading up to the 10th of June. Some of the cuttings and embankments were heavy. After the 10th of June progress upon the grading was very rapid. From the mouth of Milk River to Great Falls (a distance of 200 miles) grading was done at an average rate of seven miles a day. Those who saw this army of men and teams stretching over the prairie and casting up this continental highway think they beheld one of the most striking achievements of civilization.

I may mention that the track is all cast up (even where the grading is easy) to such a height as to relieve it of drifting snow; and to give some idea of the character of the work, it is noted that in preparing it there were moved 9,700,000 cubic yards of earth, 15,000 cubic yards of loose rock, and 17,500 cubic yards of solid rock, and that there were hauled ahead of the track and put in the work to such distance as would not obstruct the track-laying (in some instances 30 miles), 9,000,000 feet (board measure) of timber and 390,000 lineal feet of piling.

On the 5th of August the grading of the entire line to Great Falls was either finished or properly manned for its completion the first day of September, and on the 10th of August it became necessary to remove outfits to

the east as they completed their work, and about 2500 teams and their quota of men were withdrawn between the 10th and 20th of August, and placed upon work elsewhere.

The record of track laid is as follows: April 2d to 30th, 30 miles; May, 82 miles; June, 79.8 miles; July, 100.8 miles; August, 115.4 miles; September, 102.4 miles; up to October 15th to Great Falls, 34.0 miles—a total to Great Falls of 545 miles. October 10th being Sunday, no track was laid. The track started from Great Falls Monday, October 17th, and reached Helena on Friday, November 18th, a distance of 98 miles, making a grand total of 643 miles, and an average rate for every working-day of three and one-quarter miles. It will thus be seen that laying a good road was a much more expeditious method of reaching the Great Falls of the Missouri than that adopted by Lewis and Clarke.

Some of the details of this construction and tracklaying will interest railroad men. On the 16th of July 7 miles and 1040 feet of track were laid, and on the 8th of August 8 miles and 60 feet were laid, in each instance by daylight, and by the regular gang of track-layers, without any increase of their numbers whatever. The entire work was done by handling the iron on low iron cars, and depositing it on the track from the car at the front end. The method pursued was the same as when one mile of track is laid per day in the ordinary manner. The force of track-layers was maintained at the proper number for the ordinary daily work, and was never increased to obtain any special result. The result on the 11th of August was probably decreased by a quarter to a half mile by the breaking of an axle of an iron car while going to the front with its load at about 4 p.m. From six to eight iron cars were employed in doing this day's work. The number ordinarily used was four to five.

Sidings were graded at intervals of seven to eight miles, and spur tracks, laid on the natural surface, put in at convenient points, sixteen miles apart, for storage of materials and supplies at or near the front. As the work went on, the spur tracks in the rear were taken up. The construction train contained box cars two and three stories high, in which workmen were boarded and lodged. Supplies, as a rule, were taken by wagon-trains from the spur tracks near the front to their destination, an average distance of one hundred miles and an extreme one of two hundred miles. Steamboats were employed to a limited extent on the Missouri River in supplying such remote points as Fort Benton and the Coal Banks, but not more than fifteen per cent, of the transportation was done by steamers. A single item illustrating the magnitude of the supply transportation is that there were shipped to Minot and forwarded and consumed on the work 590,000 bushels of oats.

It is believed that the work of grading 500 miles of railroad in five months, and the transportation into the country of everything consumed, grass and water excepted, and of every rail, tie, bit of timber, pile, tool, machine, man, or team employed, and laying 643 miles of track in seven and a half months, from one end, far exceeds in magnitude and rapidity of execution any similar undertaking in this or any other country. It reflects also the greatest credit on the managers of the railway transportation (it is not invidious to mention the names of Mr. A. Manvel, general manager, and Mr. J. M. Egan, general superintendent, upon whom the working details devolved) when it is stated that the delays for material or supplies on the entire work did not retard it in the aggregate one hour. And every hour counted in this masterly campaign.

The Western people apparently think no more of throwing down a railroad, if they want to go anywhere, than a conservative Easterner does of taking an unaccustomed walk across country; and the railway constructors and managers are a little amused at the Eastern slowness and want of facility in construction and management. One hears that the East is antiquated, and does not know anything about railroad building. Shovels, carts, and wheelbarrows are of a past age; the big wheel-scraper does the business. It is a common remark that a contractor accustomed to Eastern work is not desired on a Western job.

On Friday afternoon, November 18th, the news was flashed that the last rail was laid, and at 6 p.m. a special train was on the way from St. Paul with a double complement of engineers and train-men. For the first 500 miles there was more or less delay in avoiding the long and frequent freight trains, but after that not much except the necessary stops for cleaning the engine. Great Falls, about 1100 miles, was reached Sunday noon, in thirty-six hours, an average of over thirty miles an hour. A part of the time the speed was as much as fifty miles an hour. The track was solid, evenly graded, heavily tied, well aligned, and the cars ran over it with no more swing and bounce than on an old road. The only exception to this is the piece from Great Falls to Helena, which had not been surfaced all the way. It is excellent railway construction, and it is necessary to emphasize this when we consider the rapidity with which it was built.

The company has built this road without land grant or subsidy of any kind. The Montana extension, from Minot, Dakota, to Great Falls, runs mostly through Indian and military reservations, permission to pass through being given by special Act of Congress, and the company buying 200 feet road-way. Little of it, therefore, is open to settlement.

These reservations, naming them in order westward, are as follows: The Fort Berthold Indian reservation, Dakota, the eastern boundary of which is twenty-seven miles west of Minot, has an area of 4550 square miles (about as large as Connecticut), or 2,912,000 acres. The Fort Buford military reservation, lying in Dakota and Montana, has an area of 900 square miles, or 576,000 acres. The Blackfeet Indian reserve has an area of 34,000 square miles (the State of New York has 46,000), or 21,760,000 acres. The Fort Assiniboin military reserve has an area of 869.82 square miles, or 556,684 acres.

It is a liberal estimate that there are 6000 Indians on the Blackfeet and Fort Berth old reservations. As nearly as I could ascertain, there are not over 3500 Indians (some of those I saw were Créés on a long visit from Canada) on the Blackfeet reservation of about 22,000,000 acres. Some judges put the number as low as 2500 to all this territory, and estimate that there was about one Indian to ten square miles, or one Indian family to fifty square miles. We rode through 300 miles of this territory along the Milk River, nearly every acre of it good soil, with thick, abundant grass, splendid wheat land.

I have no space to take up the Indian problem. But the present condition of affairs is neither fair to white settlers nor just or humane to the Indians. These big reservations are of no use to them, nor they to the reservations. The buffaloes have disappeared; they do not live by hunting; they cultivate very little ground; they use little even to pasture their ponies. They are fed and clothed by the Government, and they camp about the agencies in idleness, under conditions that pauperize them, destroy their manhood, degrade them

into dependent, vicious lives. The reservations ought to be sold, and the proceeds devoted to educating the Indians and setting them up in a self-sustaining existence. They should be allotted an abundance of good land, in the region to which they are acclimated, in severalty, and under such restrictions that they cannot alienate it at least for a generation or two. As the Indian is now, he will neither work, nor keep clean, nor live decently. Close to, the Indian is not a romantic object, and certainly no better now morally than Lewis and Clarke depicted him in 1804. But he is a man; he has been barbarously treated; and it is certainly not beyond honest administration and Christian effort to better his condition. And his condition will not be improved simply by keeping from settlement and civilization the magnificent agricultural territory that is reserved to him.

Of this almost unknown country, pierced by the road west from Larimore, I can only make the briefest notes. I need not say that this open, unobstructed highway of arable land and habitable country, from the Red River to the Rocky Mountains, was an astonishment to me; but it is more to the purpose to say that the fertile region was a surprise to railway men who are perfectly familiar with the West.

We had passed some snow in the night, which had been very cold, but there was very little at Larimore, a considerable town; there was a high, raw wind during the day, and a temperature of about 10° above, which heavily frosted the car windows. At Devil's Lake (a body of brackish water twenty-eight miles long) is a settlement three years old, and from this and two insignificant stations beyond were shipped, in 1887, 1,500,000 bushels of wheat. The country beyond is slightly rolling, fine land, has much wheat, little houses scattered about, some stock, very promising altogether. Minot, where we crossed the Mouse River the second time, is a village of 700 people, with several brick houses and plenty of saloons. Thence we ran up to a plateau some three hundred feet higher than the Mouse River Valley, and found a land more broken, and interspersed with rocky land and boulders—the only touch of "bad lands" I recall on the route. We crossed several small streams, White Earth, Sandy, Little Muddy, and Muddy, and before reaching Williston descended into the valley of the Missouri, reached Fort Buford, where the Yellowstone comes in, entered what is called Paradise Valley, and continued parallel with the Missouri as far as the mouth of Milk River. Before reaching this we crossed the Big Muddy and the Poplar rivers, both rising in Canada. At Poplar Station is a large Indian agency, and hundreds of Teton Sioux Indians (I was told 1800) camped there in their conical tepees. I climbed the plateau above the station where the Indians bury their dead, wrapping the bodies in blankets and buffalo-ropes, and suspending them aloft on crossbars supported by stakes, to keep them from the wolves. Beyond Assiniboin I saw a platform in a cottonwood-tree on which reposed the remains of a chief and his family. This country is all good, so far as I could see and learn.

It gave me a sense of geographical deficiency in my education to travel three hundred miles on a river I had never heard of before. But it happened on the Milk River, a considerable but not navigable stream, although some six hundred miles long. The broad Milk River Valley is in itself an empire of excellent land, ready for the plough and the wheat-sower. Judging by the grass (which cures into the most nutritious feed as it stands), there had been no lack of rain during the summer; but if there is lack of water, all the land can be irrigated by the Milk River, and it may also be said of the country beyond to Great Falls that frequent streams make irrigation easy, if there is scant rainfall. I should say that this would be the only question about water.

Leaving the Milk River Valley, we began to curve southward, passing Fort Assiniboin on our right. In this region and beyond at Fort Benton great herds of cattle are grazed by Government contractors, who supply the posts with beef. At the Big Sandy Station they were shipping cattle eastward. We crossed the Marias River (originally named Maria's River), a stream that had the respectful attention of Lewis and Clarke, and the Teton, a wilfully erratic watercourse in a narrow valley, which caused the railway constructors a good deal of trouble. We looked down, in passing, on Fort Benton, nestled in a bend of the Missouri; a smart town, with a daily newspaper, an old trading station. Shortly after leaving Assiniboin we saw on our left the Bear Paw Mountains and the noble Highwood Mountains, fine peaks, snow-dusted, about thirty miles from us, and adjoining them the Belt Mountains. Between them is a shapely little pyramid called the Wolf Butte. Far to our right were the Sweet Grass Hills, on the Canada line, where gold-miners are at work. I have noted of all this country that it is agriculturally fine. After Fort Benton we had glimpses of the Rockies, off to the right (we had seen before the Little Rockies in the south, towards Yellowstone Park); then the Bird-tail Divide came in sight, and the mathematically Square Butte, sometimes called Fort Montana.

At noon, November 20th, we reached Great Falls, where the Sun River, coming in from the west, joins the Missouri. The railway crosses the Sun River, and runs on up the left bank of the Missouri. Great Falls, which lies in a bend of the Missouri on the east side, was not then, but soon will be, connected with the line by a railway bridge. I wish I could convey to the reader some idea of the beauty of the view as we came out upon the Sun River Valley, or the feeling of exhilaration and elevation we experienced. I had come to no place before that did not seem remote, far from home, lonesome. Here the aspect was friendly, livable, almost home-like. We seemed to have come out, after a long journey, to a place where one might be content to stay for some time—to a far but fair country, on top of the world, as it were. Not that the elevation is great—only about 3000 feet above the sea—nor the horizon illimitable, as on the great plains; its spaciousness is brought within human sympathy by guardian hills and distant mountain ranges.

A more sweet, smiling picture than the Sun River Valley the traveller may go far to see. With an average breadth of not over two and a half to five miles, level, richly grassed, flanked by elevations that swell up to plateaus, through the valley the Sun River, clear, full to the grassy banks, comes down like a ribbon of silver, perhaps 800 feet broad before its junction. Across the far end of it, seventy-five miles distant, but seemingly not more than twenty, run the silver serrated peaks of the Rocky Mountains, snow-clad and sparkling in the sun. At distances of twelve and fifty miles up the valley have been for years prosperous settlements, with school-houses and churches, hitherto cut off from the world.

The whole rolling, arable, though treeless country in view is beautiful, and the far prospects are magnificent. I suppose that something of the homelikeness of the region is due to the presence of the great Missouri River (a connection with the world we know), which is here a rapid, clear stream, in permanent rock-laid banks. At the town a dam has been thrown across it, and the width above the dam, where we crossed it, is about 1800 feet. The day was fair and not cold, but a gale of wind from the south-west blew with

such violence that the ferry-boat was unmanageable, and we went over in little skiffs, much tossed about by the white-capped waves.

In June, 1886, there was not a house within twelve miles of this place. The country is now taken up and dotted with claim shanties, and Great Falls is a town of over 1000 inhabitants, regularly laid out, with streets indeed extending far on to the prairie, a handsome and commodious hotel, several brick buildings, and new houses going up in all directions. Central lots, fifty feet by two hundred and fifty, are said to sell for \$5000, and I was offered a corner lot on Tenth Street, away out on the prairie, for \$1500, including the corner stake.

It is difficult to write of this country without seeming exaggeration, and the habitual frontier boastfulness makes the acquisition of bottom facts difficult. It is plain to be seen that it is a good grazing country, and the experimental fields of wheat near the town show that it is equally well adapted to wheatraising. The vegetables grown there are enormous and solid, especially potatoes and turnips; I have the outline of a turnip which measured seventeen inches across, seven inches deep, and weighed twenty-four pounds. The region is underlaid by bituminous coal, good coking quality, and extensive mines are opening in the neighborhood. I have no doubt from what I saw and heard that iron of good quality (hematite) is abundant. It goes without saying that the Montana mountains are full of other minerals. The present advantage of Great Falls is in the possession of unlimited water-power in the Missouri River.

As to rainfall and climate? The grass shows no lack of rain, and the wheat was raised in 1887 without irrigation. But irrigation from the Missouri and Sun rivers is easy, if needed. The thermometer shows a more temperate and less rigorous climate than Minnesota and north Dakota. Unless everybody fibs, the winters are less severe, and stock ranges and fattens all winter. Less snow falls here than farther east and south, and that which falls does not usually remain long. The truth seems to be that the mercury occasionally goes very low, but that every few days a warm Pacific wind from the south-west, the "Chinook," blows a gale, which instantly raises the temperature, and sweeps off the snow in twenty-four hours. I was told that ice rarely gets more than ten inches thick, and that ploughing can be done as late as the 20th of December, and recommenced from the 1st to the 15th of March. I did not stay long enough to verify these statements. There had been a slight fall of snow in October, which speedily disappeared. November 20th was pleasant, with a strong Chinook wind. November 21st there was a driving snow-storm.

The region is attractive to the sight-seer. I can speak of only two things, the Springs and the Falls.

There is a series of rapids and falls, for twelve miles below the town; and the river drops down rapidly into a canyon which is in some places nearly 200 feet deep. The first fall is twenty-six feet high. The most beautiful is the Rainbow Fall, six miles from town. This cataract, in a wild, deep gorge, has a width of 1400 feet, nearly as straight across as an artificial dam, with a perpendicular plunge of fifty feet. What makes it impressive is the immense volume of water. Dashed upon the rocks below, it sends up clouds of spray, which the sun tinges with prismatic colors the whole breadth of the magnificent fall. Standing half-way down the precipice another considerable and regular fall is seen above, while below are rapids and falls again at the bend, and beyond, great reaches of tumultuous river in the canon. It is altogether a wild and splendid spectacle. Six miles below, the river takes a continuous though not perpendicular plunge of ninety-six feet.

One of the most exquisitely beautiful natural objects I know is the Spring, a mile above Rainbow Fall. Out of a rocky ledge, sloping up some ten feet above the river, burst several springs of absolutely crystal water, powerfully bubbling up like small geysers, and together forming instantly a splendid stream, which falls into the Missouri. So perfectly transparent is the water that the springs seem to have a depth of only fifteen inches; they are fifteen feet deep. In them grow flat-leaved plants of vivid green, shades from lightest to deepest emerald, and when the sunlight strikes into their depths the effect is exquisitely beautiful. Mingled with the emerald are maroon colors that heighten the effect. The vigor of the outburst, the volume of water, the transparency, the play of sunlight on the lovely colors, give one a positively new sensation.

I have left no room to speak of the road of ninety-eight miles through the canon of the Missouri and the canon of the Prickly-Pear to Helena—about 1400 feet higher than Great Falls. It is a marvellously picturesque road, following the mighty river, winding through crags and precipices of trap-rock set on end in fantastic array, and wild mountain scenery. On the route are many pleasant places, openings of fine valleys, thriving ranches, considerable stock and oats, much land ploughed and cultivated. The valley broadens out before we reach Helena and enter Last Chance Gulch, now the main street of the city, out of which millions of gold have been taken.

At Helena we reach familiar ground. The 21st was a jubilee day for the city and the whole Territory. Cannon, bells, whistles, welcomed the train and the man, and fifteen thousand people hurraed; the town was gayly decorated; there was a long procession, speeches and music in the Opera-house in the afternoon, and fireworks, illumination, and banquet in the evening. The reason of the boundless enthusiasm of Helena was in the fact that the day gave it a new competing line to the East, and opened up the coal, iron, and wheat fields of north Montana.

VIII.—ECONOMIC AND SOCIAL TOPICS. MINNESOTA AND WISCONSIN.

A visitor at a club in Chicago was pointed out a table at which usually lunched a hundred and fifty millions of dollars! This impressive statement was as significant in its way as the list of the men, in the days of Emerson, Agassiz, and Longfellow, who dined together as the Saturday Club in Boston. We cannot, however, generalize from this that the only thing considered in the North-west is money, and that the only thing held in esteem in Boston is intellect.

The chief concerns in the North-west are material, and the making of money, sometimes termed the "development of resources," is of the first importance. In Minneapolis and St. Paul, social position is more determined by money than it is in most Eastern cities, and this makes social life more democratic, so far as traditions and family are concerned. I desire not to overstate this, for money is potent everywhere; but I should say that a person not devoted to business, or not succeeding in it, but interested rather in intellectual pursuits—study, research, art (not decorative), education, and the like—would find less sympathy there than in Eastern cities of the same size and less consideration. Indeed, I was told, more than once, that the spirit of plutocracy is so strong in these cities as to make a very disagreeable atmosphere for people who value the higher things in life more than money and what money only will procure, and display which is always more or less vulgar. But it is necessary to get closer to the facts than this statement.

The materialistic spirit is very strong in the West; of necessity it is, in the struggle for existence and position going on there, and in the unprecedented opportunities for making fortunes. And hence arises a prevailing notion that any education is of little value that does not bear directly upon material success. I should say that the professions, including divinity and the work of the scholar and the man of letters, do not have the weight there that they do in some other places. The professional man, either in the college or the pulpit, is expected to look alive and keep up with the procession. Tradition is weak; it is no objection to a thing that it is new, and in the general strain "sensations" are welcome. The general motto is, "Be alive; be practical." Naturally, also, wealth recently come by desires to assert itself a little in display, in ostentatious houses, luxurious living, dress, jewellery, even to the frank delight in the diamond shirt-stud.

But we are writing of Americans, and the Americans are the quickest people in the world to adapt themselves to new situations. The Western people travel much, at home and abroad, and they do not require a very long experience to know what is in bad taste. They are as quick as anybody—I believe they gave us the phrase—to "catch on" to quietness and a low tone. Indeed, I don't know but they would boast that if it is a question of subdued style, they can beat the world. The revolution which has gone all over the country since the Exposition of 1876 in house-furnishing and decoration is quite as apparent in the West as in the East. The West has not suffered more than the East from eccentricities of architecture in the past twenty years. Violations of good taste are pretty well distributed, but of new houses the proportion of handsome, solid, good structures is as large in the West as in the East, and in the cities I think the West has the advantage in variety. It must be frankly said that if the Easterner is surprised at the size, cost, and palatial character of many of their residences, he is not less surprised by the refinement and good taste of their interiors. There are cases where money is too evident, where the splendor has been ordered, but there are plenty of other cases where individual taste is apparent, and love of harmony and beauty. What I am trying to say is that the East undervalues the real refinement of living going along with the admitted cost and luxury in the West. The art of dining is said to be a test of civilization—on a certain plane. Well, dining, in good houses (I believe that is the phrase), is much the same East and West as to appointments, service, cuisine, and talk, with a trifle more freedom and sense of newness in the West. No doubt there is a difference in tone, appreciable but not easy to define. It relates less to the things than the way the things are considered. Where a family has had "things" for two or three generations they are less an object than an unregarded matter of course; where things and a manner of living are newly acquired, they have more importance in themselves. An old community, if it is really civilized (I mean a state in which intellectual concerns are paramount), values less and less, as an end, merely material refinement. The tendency all over the United States is for wealth to run into vulgarity.

In St. Paul and Minneapolis one thing notable is the cordial hospitality, another is the public spirit, and another is the intense devotion to business, the forecast and alertness in new enterprises. Where society is fluid and on the move, it seems comparatively easy to interest the citizens in any scheme for the public good. The public spirit of those cities is admirable. One notices also an uncommon power of organization, of devices for saving time. An illustration of this is the immense railway transfer ground here. Midway between the cities is a mile square of land where all the great railway lines meet, and by means of communicating tracks easily and cheaply exchange freight cars, immensely increasing the facility and lessening the cost of transportation. Another illustration of system is the State office of Public Examiner, an office peculiar to Minnesota, an office supervising banks, public institutions, and county treasuries, by means of which a uniform system of accounting is enforced for all public funds, and safety is insured.

There is a large furniture and furnishing store in Minneapolis, well sustained by the public, which gives one a new idea of the taste of the North-west. A community that buys furniture so elegant and chaste in design, and stuffs and decorations so aesthetically good, as this shop offers it, is certainly not deficient either in material refinement or the means to gratify the love of it.

What is there besides this tremendous energy, very material prosperity, and undeniable refinement in living? I do not know that the excellently managed public-school system offers anything peculiar for comment. But the High-school in St. Paul is worth a visit. So far as I could judge, the method of teaching is admirable, and produces good results. It has no rules, nor any espionage. Scholars are put upon their honor. One object of education being character, it is well to have good behavior consist, not in conformity to artificial laws existing only in school, but to principles of good conduct that should prevail everywhere. There is system here, but the conduct expected is that of well-bred boys and girls anywhere. The plan works well, and there are very few cases of discipline. A manual training school is attached—a notion growing in favor in the West, and practised in a scientific and truly educational spirit. Attendance is not compulsory, but a

considerable proportion of the pupils, boys and girls, spend a certain number of hours each week in the workshops, learning the use of tools, and making simple objects to an accurate scale from drawings on the blackboard. The design is not at all to teach a trade. The object is strictly educational, not simply to give manual facility and knowledge in the use of tools, but to teach accuracy, the mental training that there is in working out a definite, specific purpose.

The State University is still in a formative condition, and has attached to it a preparatory school. Its first class graduated only in 1872. It sends out on an average about twenty graduates a year in the various departments, science, literature, mechanic arts, and agriculture. The bane of a State university is politics, and in the West the hand of the Granger is on the college, endeavoring to make it "practical." Probably this modern idea of education will have to run its course, and so long as it is running its course the Eastern colleges which adhere to the idea of intellectual discipline will attract the young men who value a liberal rather than a material education. The State University of Minnesota is thriving in the enlargement of its facilities. About one-third of its scholars are women, but I notice that in the last catalogue, in the Senior Class of twenty-six there is only one woman. There are two independent institutions also that should be mentioned, both within the limits of St. Paul, the Hamline University, under Methodist auspices, and the McAllister College, under Presbyterian. I did not visit the former, but the latter, at least, though just beginning, has the idea of a classical education foremost, and does not adopt co-education. Its library is well begun by the gift of a miscellaneous collection, containing many rare and old books, by the Rev. E. D. Neill, the well-known antiquarian, who has done so much to illuminate the colonial history of Virginia and Maryland. In the State Historical Society, which has rooms in the Capitol in St. Paul, a vigorous and well-managed society, is a valuable collection of books illustrating the history of the North-west. The visitor will notice in St. Paul quite as much taste for reading among business men as exists elsewhere, a growing fancy for rare books, and find some private collections of interest. Though music and art cannot be said to be generally cultivated, there are in private circles musical enthusiasm and musical ability, and many of the best examples of modern painting are to be found in private houses. Indeed, there is one gallery in which is a collection of pictures by foreign artists that would be notable in any city. These things are mentioned as indications of a liberalizing use of wealth.

Wisconsin is not only one of the most progressive, but one of the most enlightened, States in the Union. Physically it is an agreeable and beautiful State, agriculturally it is rich, in the southern and central portions at least, and it is overlaid with a perfect network of railways. All this is well known. I wish to speak of certain other things which give it distinction. I mean the prevailing spirit in education and in social-economic problems. In some respects it leads all the other States.

There seem to be two elements in the State contending for the mastery, one the New England, but emancipated from tradition, the other the foreign, with ideas of liberty not of New England origin. Neither is afraid of new ideas nor of trying social experiments. Co-education seems to be everywhere accepted without question, as if it were already demonstrated that the mingling of the sexes in the higher education will produce the sort of men and women most desirable in the highest civilization. The success of women in the higher schools, the capacity shown by women in the management of public institutions and in reforms and charities, have perhaps something to do with the favor to woman suffrage. It may be that, if women vote there in general elections as well as school matters, on the ground that every public office "relates to education," Prohibition will be agitated as it is in most other States, but at present the lager-bier interest is too strong to give Prohibition much chance. The capital invested in the manufacture of beer makes this interest a political element of great importance.

Milwaukee and Madison may be taken to represent fairly the civilization of Wisconsin. Milwaukee, having a population of about 175,000, is a beautiful city, with some characteristics peculiar to itself, having the settled air of being much older than it is, a place accustomed to money and considerable elegance of living. The situation on the lake is fine, the high curving bluffs offering most attractive sites for residences, and the rolling country about having a quiet beauty. Grand avenue, an extension of the main business thoroughfare of the city, runs out into the country some two miles, broad, with a solid road, a stately avenue, lined with fine dwellings, many of them palaces in size and elegant in design. Fashion seems to hesitate between the east side and the west side, but the east or lake side seems to have the advantage in situation, certainly in views, and contains a greater proportion of the American population than the other. Indeed, it is not easy to recall a quarter of any busy city which combines more comfort, evidences of wealth and taste and refinement, and a certain domestic character, than this portion of the town on the bluffs, Prospect avenue and the adjacent streets. With the many costly and elegant houses there is here and there one rather fantastic, but the whole effect is pleasing, and the traveller feels no hesitation in deciding that this would be an agreeable place to live. From the avenue the lake prospect is wonderfully attractive—the beauty of Lake Michigan in changing color and variety of lights in sun and storm cannot be too much insisted on—and this is especially true of the noble Esplanade, where stands the bronze statue (a gift of two citizens) of Solomon Juneau, the first settler of Milwaukee in 1818. It is a very satisfactory figure, and placed where it is, it gives a sort of foreign distinction to the open place which the city has wisely left for public use. In this part of the town is the house of the Milwaukee Club, a good building, one of the most tasteful internally, and one of the best appointed, best arranged, and comfortable club-houses in the country. Near this is the new Art Museum (also the gift of a private citizen), a building greatly to be commended for its excellent proportions, simplicity, and chasteness of style, and adaptability to its purpose. It is a style that will last, to please the eye, and be more and more appreciated as the taste of the community becomes more and more refined.

In this quarter are many of the churches, of the average sort, but none calling for special mention except St. Paul's, which is noble in proportions and rich in color, and contains several notable windows of stained glass, one of them occupying the entire end of one transept, the largest, I believe, in the country. It is a copy of Doré's painting of Christ on the way to the Crucifixion, an illuminated street scene, with superb architecture of marble and porphyry, and crowded with hundreds of figures in colors of Oriental splendor. The colors are rich and harmonious, but it is very brilliant, flashing in the sunlight with magnificent effect, and I am not sure but it would attract the humble sinners of Milwaukee from a contemplation of their little faults which they go to church to confess.

The city does not neglect education, as the many thriving public schools testify. It has a public circulating library of 42,000 volumes, sustained at an expense of \$22,000 a year by a tax; is free, and well patronized. There are good private collections of books also, one that I saw large and worthy to be called a library, especially strong in classic English literature.

Perhaps the greatest industry of the city, certainly the most conspicuous, is brewing. I do not say that the city is in the hands of the brewers, but with their vast establishments they wield great power. One of them, about the largest in the country, and said to equal in its capacity any in Europe, has in one group seven enormous buildings, and is impressive by its extent and orderly management, as well as by the rivers of amber fluid which it pours out for this thirsty country. Milwaukee, with its large German element—two-thirds of the population, most of whom are freethinkers—has no Sunday except in a holiday sense; the theatres are all open, and the pleasure-gardens, which are extensive, are crowded with merrymakers in the season. It is, in short, the Continental fashion, and while the churches and church-goers are like churches and church-goers everywhere, there is an air of general Continental freedom.

The general impression of Milwaukee is that it is a city of much wealth and a great deal of comfort, with a settled, almost conservative feeling, like an Eastern city, and charming, cultivated social life, with the grace and beauty that are common in American society anywhere. I think the men generally would be called well-looking, robust, of the quiet, assured manner of an old community. The women seen on the street and in the shops are of good physique and good color and average good looks, without anything startling in the way of beauty or elegance. I speak of the general aspect of the town, and I mention the well-to-do physical condition because it contradicts the English prophecy of a physical decadence in the West, owing to the stimulating climate and the restless pursuit of wealth. On the train to Madison (the line runs through a beautiful country) one might have fancied that he was on a local New England train: the same plain, good sort of people, and in abundance the well-looking, domestic sort of young women.

Madison is a great contrast to Milwaukee. Although it is the political and educational centre, has the Capitol and the State University, and a population of about 15,000, it is like a large village, with the village habits and friendliness. On elevated, hilly ground, between two charming lakes, it has an almost unrivalled situation, and is likely to possess, in the progress of years and the accumulation of wealth, the picturesqueness and beauty that travellers ascribe to Stockholm. With the hills of the town, the gracefully curving shores of the lakes and their pointed bays, the gentle elevations beyond the lakes, and the capacity of these two bodies of water as pleasure resorts, with elegant music pavilions and fleets of boats for the sail and the oar—why do we not take a hint from the painted Venetian sail?—there is no limit to what may be expected in the way of refined beauty of Madison in the summer, if it remains a city of education and of laws, and does not get up a “boom,” and set up factories, and blacken all the landscape with coal smoke!

The centre of the town is a big square, pleasantly tree-planted, so large that the facing rows of shops and houses have a remote and dwarfed appearance, and in the middle of it is the great pillared State-house, American style. The town itself is one of unpretentious, comfortable houses, some of them with elegant interiors, having plenty of books and the spoils of foreign travel. In one of them, the old-fashioned but entirely charming mansion of Governor Fairchild, I cannot refrain from saying, is a collection which, so far as I know, is unique in the world—a collection to which the helmet of Don Quixote gives a certain flavor; it is of barbers’ basins, of all ages and countries.

Wisconsin is working out its educational ideas on an intelligent system, and one that may be expected to demonstrate the full value of the popular method—I mean a more intimate connection of the university with the life of the people than exists elsewhere. What effect this will have upon the higher education in the ultimate civilization of the State is a question of serious and curious interest. Unless the experience of the ages is misleading, the tendency of the “practical” in all education is a downward and material one, and the highest civilization must continue to depend upon a pure scholarship, and upon what are called abstract ideas. Even so practical a man as Socrates found the natural sciences inadequate to the inner needs of the soul. “I thought,” he says, “as I have failed in the contemplation of true existence (by means of the sciences), I ought to be careful that I did not lose the eye of the soul, as people may injure their bodily eye by gazing on the sun during an eclipse.... That occurred to me, and I was afraid that my soul might be blinded altogether if I looked at things with my eyes, or tried by the help of the senses to apprehend them. And I thought I had better have recourse to ideas, and seek in them the truth of existence.” The intimate union of the university with the life of the people is a most desirable object, if the university does not descend and lose its high character in the process.

The graded school system of the State is vigorous, all working up to the University. This is a State institution, and the State is fairly liberal to it, so far as practical education is concerned. It has a magnificent new Science building, and will have excellent shops and machinery for the sciences (especially the applied) and the mechanic arts. The system is elective. A small per cent, of the students take Greek, a larger number Latin, French, and German, but the University is largely devoted to science. In all the departments, including law, there are about six hundred students, of whom above one hundred are girls. There seems to be no doubt about co-education as a practical matter in the conduct of the college, and as a desirable thing for women. The girls are good students, and usually take more than half the highest honors on the marking scale. Notwithstanding the testimony of the marks, however, the boys say that the girls don’t “know” as much as they do about things generally, and they (the boys) have no doubt of their ability to pass the girls either in scholarship or practical affairs in the struggle of life. The idea seems to be that the girls are serious in education only up to a certain point, and that marriage will practically end the rivalry.

The distinguishing thing, however, about the State University is its vital connection with the farmers and the agricultural interests. I do not refer to the agricultural department, which it has in common with many colleges, nor to the special short agricultural course of three months in the winter, intended to give farmers’ boys, who enter it without examination or other connection with the University, the most available agricultural information in the briefest time, the intention being not to educate boys away from a taste for farming but to make them better farmers. The students must be not less than sixteen years old, and have a common-school education. During the term of twelve weeks they have lectures by the professors and

recitations on practical and theoretical agriculture, on elementary and agricultural chemistry, on elemental botany, with laboratory practice, and on the anatomy of our domestic animals and the treatment of their common diseases. But what I wish to call special attention to is the connection of the University with the farmers' institutes.

A special Act of the Legislature, drawn by a lawyer, Mr. C. E. Estabrook, authorized the farmers' institutes, and placed them under the control of the regents of the University, who have the power to select a State superintendent to control them. A committee of three of the regents has special charge of the institutes. Thus the farmers are brought into direct relation with the University, and while, as a prospectus says, they are not actually non-resident students of the University, they receive information and instruction directly from it. The State appropriates twelve thousand dollars a year to this work, which pays the salaries of Mr. W. H. Morrison, the superintendent, to whose tact and energy the success of the institutes is largely due, and his assistants, and enables him to pay the expenses of specialists and agriculturists who can instruct the farmers and wisely direct the discussions at the meetings. By reason of this complete organization, which penetrates every part of the State, subjects of most advantage are considered, and time is not wasted in merely amateur debates.

I know of no other State where a like system of popular instruction on a vital and universal interest of the State, directed by the highest educational authority, is so perfectly organized and carried on with such unity of purpose and detail of administration; no other in which the farmer is brought systematically into such direct relations to the university. In the current year there have been held eighty-two farmers' institutes in forty-five counties. The list of practical topics discussed is 279, and in this service have been engaged one hundred and seven workers, thirty-one of whom are specialists from other States. This is an "agricultural college," on a grand scale, brought to the homes of the people. The meetings are managed by local committees in such a way as to evoke local pride, interest, and talent. I will mention some of the topics that were thoroughly discussed at one of the institutes: clover as a fertilizer; recuperative agriculture; bee-keeping; taking care of the little things about the house and farm; the education for farmers' daughters; the whole economy of sheep husbandry; egg production; poultry; the value of thought and application in farming; horses to breed for the farm and market; breeding and management of swine; mixed farming; grain-raising; assessment and collection of taxes; does knowledge pay? (with illustrations of money made by knowledge of the market); breeding and care of cattle, with expert testimony as to the best sorts of cows; points in corn culture; full discussion of small-fruit culture; butter-making as a line art; the daily; our country roads; agricultural education. So, during the winter, every topic that concerns the well-being of the home, the proflit of the farm, the moral welfare of the people and their prosperity, was intelligently discussed, with audiences fully awake to the value of this practical and applied education. Some of the best of these discussions are printed and widely distributed. Most of them are full of wise details in the way of thrift and money-making, but I am glad to see that the meetings also consider the truth that as much care should be given to the rearing of boys and girls as of calves and colts, and that brains are as necessary in farming as in any other occupation.

As these farmers' institutes are conducted, I do not know any influence comparable to them in waking up the farmers to think, to inquire into new and improved methods, and to see in what real prosperity consists. With prosperity, as a rule, the farmer and his family are conservative, law-keeping, church-going, good citizens. The little appropriation of twelve thousand dollars has already returned to the State a hundred-fold financially and a thousand-fold in general intelligence.

I have spoken of the habit in Minnesota and Wisconsin of depending mostly upon one crop—that of spring wheat—and the disasters from this single reliance in bad years. Hard lessons are beginning to teach the advantage of mixed farming and stockraising. In this change the farmers' institutes of Wisconsin have been potent. As one observer says, "They have produced a revolution in the mode of farming, raising crops, and caring for stock." The farmers have been enabled to protect themselves against the effects of drought and other evils. Taking the advice of the institute in 1886, the farmers planted 50,000 acres of ensilage corn, which took the place of the short hay crop caused by the drought. This provision saved thousands of dollars' worth of stock in several counties. From all over the State comes the testimony of farmers as to the good results of the institute work, like this: "Several thousand dollars' worth of improved stock have been brought in. Creameries and cheese-factories have been established and well supported. Farmers are no longer raising grain exclusively as heretofore. Our hill-sides are covered with clover. Our farmers are encouraged to labor anew. A new era of prosperity in our State dates from the farmers' institutes."

There is abundant evidence that a revolution is going on in the farming of Wisconsin, greatly assisted, if not inaugurated, by this systematic popular instruction from the University as a centre. It may not greatly interest the reader that the result of this will be greater agricultural wealth in Wisconsin, but it does concern him that putting intelligence into farming must inevitably raise the level of the home life and the general civilization of Wisconsin. I have spoken of this centralized, systematic effort in some detail because it seems more efficient than the work of agricultural societies and sporadic institutes in other States.

In another matter Wisconsin has taken a step in advance of other States; that is, in the care of the insane. The State has about 2600 insane, increasing at the rate of about 167 a year. The provisions in the State for these are the State Hospital (capacity of 500), Northern Hospital (capacity of 600), the Milwaukee Asylum (capacity of 255), and fifteen county asylums for the chronic insane, including two nearly ready (capacity 1220). The improvement in the care of the insane consists in several particulars—the doing away of restraints, either by mechanical appliances or by narcotics, reasonable separation of the chronic cases from the others, increased liberty, and the substitution of wholesome labor for idleness. Many of these changes have been brought about by the establishment of county asylums, the feature of which I wish specially to speak. The State asylums were crowded beyond their proper capacity, classification was difficult in them, and a large number of the insane were miserably housed in county jails and poor-houses. The evils of great establishments were more and more apparent, and it was determined to try the experiment of county asylums. These have now been in operation for six years, and a word about their constitution and perfectly successful operation may be of public service.

These asylums, which are only for the chronic insane, are managed by local authorities, but under constant and close State supervision; this last provision is absolutely essential, and no doubt accounts for the success of the undertaking. It is not necessary here to enter into details as to the construction of these buildings. They are of brick, solid, plain, comfortable, and of a size to accommodate not less than fifty nor more than one hundred inmates: an institution with less than fifty is not economical; one with a larger number than one hundred is unwieldy, and beyond the personal supervision of the superintendent. A farm is needed for economy in maintenance and to furnish occupation for the men; about four acres for each inmate is a fair allowance. The land should be fertile, and adapted to a variety of crops as well as to cattle, and it should have woodland to give occupation in the winter. The fact is recognized that idleness is no better for an insane than for a sane person. The house-work is all done by the women; the farm, garden, and general out-door work by the men. Experience shows that three-fourths of the chronic insane can be furnished occupation of some sort, and greatly to their physical and moral well-being. The nervousness incident always to restraint and idleness disappears with liberty and occupation. Hence greater happiness and comfort to the insane, and occasionally a complete or partial cure.

About one attendant to twenty insane persons is sufficient, but it is necessary that these should have intelligence and tact; the men capable of leading in farm-work, the women to instruct in house-work and dress-making, and it is well if they can play some musical instrument and direct in amusements. One of the most encouraging features of this experiment in small asylums has been the discovery of so many efficient superintendents and matrons among the intelligent farmers and business men of the rural districts, who have the practical sagacity and financial ability to carry on these institutions successfully.

These asylums are as open as a school; no locked doors (instead of window-bars, the glass-frames are of iron painted white), no pens made by high fences. The inmates are free to go and come at their work, with no other restraint than the watch of the attendants. The asylum is a home and not a prison. The great thing is to provide occupation. The insane, it is found, can be trained to regular industry, and it is remarkable how little restraint is needed if an earnest effort is made to do without it. In the county asylums of Wisconsin about one person in a thousand is in restraint or seclusion each day. The whole theory seems to be to treat the insane like persons in some way diseased, who need occupation, amusement, kindness. The practice of this theory in the Wisconsin county asylums is so successful that it must ultimately affect the treatment of the insane all over the country.

And the beauty of it is that it is as economical as it is enlightened and humane. The secret of providing occupation for this class is to buy as little material and hire as little labor as possible; let the women make the clothes, and the men do the farm-work without the aid of machinery. The surprising result of this is that some of these asylums approach the point of being self-supporting, and all of them save money to the counties, compared with the old method. The State has not lost by these asylums, and the counties have gained; nor has the economy been purchased at the expense of humanity to the insane; the insane in the county asylums have been as well clothed, lodged, and fed as in the State institutions, and have had more freedom, and consequently more personal comfort and a better chance of abating their mania. This is the result arrived at by an exhaustive report on these county asylums in the report of the State Board of Charities and Reforms, of which Mr. Albert O. Wright is secretary. The average cost per week per capita of patients in the asylums by the latest report was, in the State Hospital, \$4.39; in the Northern Hospital, \$4.33; in the county asylums, \$1.89.

The new system considers the education of the chronic insane an important part of their treatment; not specially book-learning (though that may be included), but training of the mental, moral, and physical faculties in habits of order, propriety, and labor. By these means wonders have been worked for the insane. The danger, of course, is that the local asylums may fall into unproductive routine, and that politics will interfere with the intelligent State supervision. If Wisconsin is able to keep her State institutions out of the clutches of men with whom politics is a business simply for what they can make out of it (as it is with those who oppose a civil service not based upon partisan dexterity and subserviency), she will carry her enlightened ideas into the making of a model State. The working out of such a noble reform as this in the treatment of the insane can only be intrusted to men specially qualified by knowledge, sympathy, and enthusiasm, and would be impossible in the hands of changing political workers. The systematized enlightenment of the farmers in the farmers' institutes by means of their vital connection with the University needs the steady direction of those who are devoted to it, and not to any party success. As to education generally, it may be said that while for the present the popular favor to the State University depends upon its being "practical" in this and other ways, the time will come when it will be seen that the highest service it can render the State is by upholding pure scholarship, without the least material object.

Another institution of which Wisconsin has reason to be proud is the State Historical Society—a corporation (dating from 1853) with perpetual succession, supported by an annual appropriation of five thousand dollars, with provisions for printing the reports of the society and the catalogues of the library. It is housed in the Capitol. The society has accumulated interesting historical portraits, cabinets of antiquities, natural history, and curiosities, a collection of copper, and some valuable MSS. for the library. The library is one of the best historical collections in the country. The excellence of it is largely due to Lyman C. Draper, LL.D., who was its secretary for thirty-three years, but who began as early as 1834 to gather facts and materials for border history and biography, and who had in 1852 accumulated thousands of manuscripts and historical statements, the nucleus of the present splendid library, which embraces rare and valuable works relating to the history of nearly every State. This material is arranged by States, and readily accessible to the student. Indeed, there are few historical libraries in the country where historical research in American subjects can be better prosecuted than in this. The library began in January, 1854, with fifty volumes. In January, 1887, it had 57,935 volumes and 60,731 pamphlets and documents, making a total of 118,666 titles.

There is a large law library in the State-house, the University has a fair special library for the students, and in the city is a good public circulating library, free, supported by a tax, and much used. For a young city, it is therefore very well off for books.

Madison is not only an educational centre, but an intelligent city; the people read and no doubt buy books,

but they do not support book-stores. The shops where books are sold are variety-shops, dealing in stationery, artists' materials, cheap pictures, bric-à-brac. Books are of minor importance, and but few are "kept in stock." Indeed, bookselling is not a profitable part of the business; it does not pay to "handle" books, or to keep the run of new publications, or to keep a supply of standard works. In this the shops of Madison are not peculiar. It is true all over the West, except in two or three large cities, and true, perhaps, not quite so generally in the East; the book-shops are not the literary and intellectual centres they used to be.

There are several reasons given for this discouraging state of the book-trade. Perhaps it is true that people accustomed to newspapers full of "selections," to the flimsy publications found on the cheap counters, and to the magazines, do not buy "books that are books," except for "furnishing;" that they depend more and more upon the circulating libraries for anything that costs more than an imported cigar or half a pound of candy. The local dealers say that the system of the great publishing houses is unsatisfactory as to prices and discounts. Private persons can get the same discounts as the dealers, and can very likely, by ordering a list, buy more cheaply than of the local bookseller, and therefore, as a matter of business, he says that it does not pay to keep books; he gives up trying to sell them, and turns his attention to "varieties." Another reason for the decline in the trade may be in the fact that comparatively few booksellers are men of taste in letters, men who read, or keep the run of new publications. If a retail grocer knew no more of his business than many booksellers know of theirs, he would certainly fail. It is a pity on all accounts that the book-trade is in this condition. A bookseller in any community, if he is a man of literary culture, and has a love of books and knowledge of them, can do a great deal for the cultivation of the public taste. His shop becomes a sort of intellectual centre of the town. If the public find there an atmosphere of books, and are likely to have their wants met for publications new or rare, they will generally sustain the shop; at least this is my observation. Still, I should not like to attempt to say whether the falling off in the retail book-trade is due to want of skill in the sellers, to the publishing machinery, or to public indifference. The subject is worthy the attention of experts. It is undeniably important to maintain everywhere these little depots of intellectual supply. In a town new to him the visitor is apt to estimate the taste, the culture, the refinement, as well as the wealth of the town, by its shops. The stock in the dry goods and fancy stores tells one thing, that in the art-stores another thing, that in the book-stores another thing, about the inhabitants. The West, even on the remote frontiers, is full of magnificent stores of goods, telling of taste as well as luxury; the book-shops are the poorest of all.

The impression of the North-west, thus far seen, is that of tremendous energy, material refinement, much open-mindedness, considerable self-appreciation, uncommon sagacity in meeting new problems, generous hospitality, the Old Testament notion of possessing this world, rather more recognition of the pecuniary as the only success than exists in the East and South, intense national enthusiasm, and unblushing and most welcome "Americanism."

In these sketchy observations on the North-west nothing has seemed to me more interesting and important than the agricultural changes going on in eastern Dakota, Minnesota, and Wisconsin. In the vast wheat farms, as well as in the vast cattle ranges, there is an element of speculation, if not of gambling, of the chance of immense profits or of considerable loss, that is neither conducive to the stable prosperity nor to the moral soundness of a State. In the breaking up of the great farms, and in the introduction of varied agriculture and cattle-raising on a small scale, there will not be so many great fortunes made, but each State will be richer as a whole, and less liable to yearly fluctuations in prosperity. But the gain most worth considering will be in the home life and the character of the citizens. The best life of any community depends upon varied industries. No part of the United States has ever prospered, as regards the well-being of the mass of the people, that relied upon the production of a single staple.

IX.—CHICAGO. [*First Paper.*]

Chicago is becoming modest. Perhaps the inhabitants may still be able to conceal their modesty, but nevertheless they feel it. The explanation is simple. The city has grown not only beyond the most sanguine expectations of those who indulged in the most inflated hope of its future, but it has grown beyond what they said they expected. This gives the citizens pause—as it might an eagle that laid a roc's egg.

The fact is, Chicago has become an independent organism, growing by a combination of forces and opportunities, beyond the contrivance of any combination of men to help or hinder, beyond the need of flaming circulars and reports of boards of trade, and process pictures. It has passed the danger or the fear of rivalry, and reached the point where the growth of any other portion of the great North-west, or of any city in it (whatever rivalry that city may show in industries or in commerce), is in some way a contribution to the power and wealth of Chicago. To them that have shall be given. Cities, under favoring conditions for local expansion, which reach a certain amount of population and wealth, grow by a kind of natural increment, the law of attraction, very well known in human nature, which draws a person to an active city of two hundred thousand rather than to a stagnant city of one hundred thousand. And it is a fortunate thing for civilization that this attraction is almost as strong to men of letters as it is to men of affairs. Chicago has, it seems to me, only recently turned this point of assured expansion, and, as I intimated, the inhabitants have hardly yet become accustomed to this idea; but I believe that the time is near when they will be as indifferent to what strangers think of Chicago as the New-Yorkers are to what strangers think of New York. New York is to-day the only American city free from this anxious note of provincialism—though in Boston it rather takes the form

of pity for the unenlightened man who doubts its superiority; but the impartial student of Chicago to-day can see plenty of signs of the sure growth of this metropolitan indifference. And yet there is still here enough of the old Chicago stamp to make the place interesting.

It is everything in getting a point of view. Last summer a lady of New Orleans who had never before been out of her native French city, and who would look upon the whole North with the impartial eyes of a foreigner—and more than that, with Continental eyes—visited Chicago, and afterwards New York. “Which city did you like best?” I asked, without taking myself seriously in the question. To my surprise, she hesitated. This hesitation was fatal to all my preconceived notions. It mattered not thereafter which she preferred: she had hesitated. She was actually comparing Chicago to New York in her mind, as one might compare Paris and London. The audacity of the comparison I saw was excused by its innocence. I confess that it had never occurred to me to think of Chicago in that Continental light. “Well,” she said, not seeing at all the humor of my remark, “Chicago seems to me to have finer buildings and residences, to be the more beautiful city; but of course there is more in New York; it is a greater city; and I should prefer to live there for what I want.” This naïve observation set me thinking, and I wondered if there was a point of view, say that of divine omniscience and fairness, in which Chicago would appear as one of the great cities of the world, in fact a metropolis, by-and-by to rival in population and wealth any city of the seaboard. It has certainly better commercial advantages, so far as water communication and railways go, than Paris or Peking or Berlin, and a territory to supply and receive from infinitely vaster, richer, and more promising than either. This territory will have many big cities, but in the nature of things only one of surpassing importance. And taking into account its geographical position—a thousand miles from the Atlantic seaboard on the one side, and from the mountains on the other, with the acknowledged tendency of people and of money to it as a continental centre—it seems to me that Chicago is to be that one.

The growth of Chicago is one of the marvels of the world. I do not wonder that it is incomprehensible even to those who have seen it year by year. As I remember it in 1860, it was one of the shabbiest and most unattractive cities of about a hundred thousand inhabitants anywhere to be found; but even then it had more than trebled its size in ten years; the streets were mud sloughs, the sidewalks were a series of stairs and more or less rotten planks, half the town was in process of elevation above the tadpole level, and a considerable part of it was on wheels—the moving house being about the only wheeled vehicle that could get around with any comfort to the passengers. The west side was a straggling shanty-town, the north side was a country village with two or three “aristocratic” houses occupying a square, the south side had not a handsome business building in it, nor a public edifice of any merit except a couple of churches, but there were a few pleasant residences on Michigan avenue fronting the encroaching lake, and on Wabash avenue. Yet I am not sure that even then the exceedingly busy and excited traders and speculators did not feel that the town was more important than New York. For it had a great business. Aside from its real estate operations, its trade that year was set down at \$97,000,000, embracing its dealing in produce, its wholesale supply business, and its manufacturing.

No one then, however, would have dared to predict that the value of trade in 1887 would be, as it was, \$1,103,000,000. Nor could any one have believed that the population of 100,000 would reach in 1887 nearly 800,000 (estimated 782,644), likely to reach in 1888, with the annexation of contiguous villages that have become physically a part of the city, the amount of 900,000. Growing at its usual rate for several years past, the city is certain in a couple of years to count its million of people. And there is not probably anywhere congregated a more active and aggressive million, with so great a proportion of young, ambitious blood. Other figures keep pace with those of trade and population. I will mention only one or two of them here. The national banks, in 1887, had a capital of \$15,800,000, in which the deposits were \$80,473,740, the loans and discounts \$63,113,821, the surplus and profits \$6,320,559. The First National is, I believe, the second or third largest banking house in the country, having a deposit account of over twenty-two millions. The figures given only include the national banks; add to these the private banks, and the deposits of Chicago in 1887 were \$105,307,000. The aggregate bank clearings of the city were \$2,969,216,210.00, an increase of 14 per cent, over 1880. It should be noted that there were only twenty-one banks in the clearing house (with an aggregate capital and surplus of \$28,514,000), and that the fewer the banks the smaller the total clearings will be. The aggregate Board of Trade clearings for 1887 were \$78,179,809. In the year 1880 Chicago imported merchandise entered for consumption to the value of \$11,574,449, and paid \$4,349,237 duties on it. I did not intend to go into statistics, but these and a few other figures will give some idea of the volume of business in this new city. I found on inquiry that—owing to legislation that need not be gone into—there are few savings-banks, and the visible savings of labor cut a small figure in this way. The explanation is that there are several important loan and building associations. Money is received on deposit in small amounts, and loaned at a good rate of interest to those wishing to build or buy houses, the latter paying in small instalments. The result is that these loan institutions have been very profitable to those who have put money in them, and that the laborers who have borrowed to build have also been benefited by putting all their savings into houses. I believe there is no other large city, except Philadelphia perhaps, where so large a proportion of the inhabitants own the houses they live in. There is no better prevention of the spread of anarchical notions and communist foolishness than this.

It is an item of interest that the wholesale drygoods jobbing establishments increased their business in 1887 12 1/2 per cent, over 1886. Five houses have a capital of \$9,000,000, and the sales in 1887 were nearly \$74,000,000. And it is worth special mention that one man in Chicago, Marshall Field, is the largest wholesale and retail dry-goods merchant in the world. In his retail shop and wholesale store there are 3000 employes on the pay-roll. As to being first in his specialty, the same may be said of Philip D. Armour, who not only distances all rivals in the world as a packer, but no doubt also as a merchant of such products as the hog contributes to the support of life. His sales in one year have been over \$51,000,000. The city has also the distinction of having among its citizens Henry W. King, the largest dealer, in establishments here and elsewhere, in clothing in the world.

In nothing has the growth of Chicago been more marked in the past five years than in manufactures. I cannot go into the details of all the products, but the totals of manufacture for 1887 were, in 2396 firms, \$113,960,000 capital employed, 134,615 workers, \$74,567,000 paid in wages, and the value of the product

was \$403,109,500—an increase of product over 1886 of about 15 1/2 per cent. A surprising item in this is the book and publishing business. The increase of sales of books in 1887 over 1886 was 20 per cent. The wholesale sales for 1887 are estimated at \$10,000,000. It is now claimed that as a book-publishing centre Chicago ranks second only to New York, and that in the issue of subscription-books it does more business than New York, Boston, and Philadelphia combined. In regard to musical instruments the statement is not less surprising. In 1887 the sales of pianos amounted to about \$2,600,000—a gain of \$300,000 over 1886. My authority for this, and for some, but not all, of the other figures given, is the *Tribune*, which says that Chicago is not only the largest reed-organ market in the world, but that more organs are manufactured here than in any other city in Europe or America. The sales for 1887 were \$2,000,000—an increase over 1886 of \$500,000. There were \$1,000,000 worth of small musical instruments sold, and of sheet music and music-books a total of \$450,000. This speaks well for the cultivation of musical taste in the West, especially as there was a marked improvement in the class of the music bought.

The product of the iron manufactures in 1887, including rolling-mills (\$23,952,000) and founderies (\$10,000,000), was \$61,187,000 against \$46,790,000 in 1886, and the wages paid in iron and steel work was \$14,899,000. In 1887 there were erected 4833 buildings, at a reported cost of \$19,778,100—a few more build-ings, but yet at nearly two millions less cost, than in 1886. A couple of items interested me: that Chicago made in 1887 \$900,000 worth of toys and \$500,000 worth of perfumes. The soap-makers waged a gallant but entirely unsuccessful war against the soot and smoke of the town in producing \$6,250,000 worth of soap and candles. I do not see it mentioned, but I should think the laundry business in Chicago would be the most profitable one at present.

Without attempting at all to set forth the business of Chicago in detail, a few more figures will help to indicate its volume. At the beginning of 1887 the storage capacity for grain in 29 elevators was 27,025,000 bushels. The total receipts of flour and grain in 1882, '3, '4, '5, and '6, in bushels, were respectively, 126,155,483, 164,924,732, 159,561,474, 156,408,228, 151,932,995. In 1887 the receipts in bushels were: flour, 6,873,544; wheat, 21,848,251; corn, 51,578,410; oats, 45,750,842; rye, 852,726; barley, 12,476,547—total, 139,380,320. It is useless to go into details of the meat products, but interesting to know that in 1886 Chicago shipped 310,039,600 pounds of lard and 573,496,012 pounds of dressed beef.

I was surprised at the amount of the lake commerce, the railway traffic (nearly 50,000 miles tributary to the city) making so much more show. In 1882 the tonnage of vessels clearing this port was 4,904,999; in 1880 it was 3,950,762. The report of the Board of Trade for 1886 says the arrivals and clearances, foreign and coastwise, for this port for the year ending June 30th were 22,096, which was 869 more than at the ports of Baltimore, Boston, New Orleans, Philadelphia, Portland and Falmouth, and San Francisco combined; 315 more than at New York, New Orleans, Portland and Falmouth, and San Francisco; and 100 more than at New York, Baltimore, and Portland and Falmouth. It will not be overlooked that this lake commerce is training a race of hardy sailors, who would come to the front in case of a naval war, though they might have to go out on rafts.

In 1888 Chicago is a magnificent city. Although it has been incorporated fifty years, during which period its accession of population has been rapid and steady—hardly checked by the devastating fires of 1871 and 1874—its metropolitan character and appearance is the work of less than fifteen years. There is in history no parallel to this product of a freely acting democracy: not St. Petersburg rising out of the marshes at an imperial edict, nor Berlin, the magic creation of a consolidated empire and a Caesar's power. The north-side village has become a city of broad streets, running northward to the parks, lined with handsome residences interspersed with stately mansions of most varied and agreeable architecture, marred by very little that is bizarre and pretentious—a region of churches and club-houses and public buildings of importance. The west side, the largest section, and containing more population than the other two divisions combined, stretching out over the prairie to a horizon fringed with villages, expanding in three directions, is more mediocre in buildings, but impressive in its vastness; and the stranger driving out the stately avenue of Washington some four miles to Garfield Park will be astonished by the evidences of wealth and the vigor of the city expansion.

But it is the business portion of the south side that is the miracle of the time, the solid creation of energy and capital since the fire—the square mile containing the Post-office and City Hall, the giant hotels, the opera-houses and theatres, the Board of Trade building, the many-storied offices, the great shops, the clubhouses, the vast retail and wholesale warehouses. This area has the advantage of some other great business centres in having broad streets at right angles, but with all this openness for movement, the throng of passengers and traffic, the intersecting street and cable railways, the loads of freight and the crush of carriages, the life and hurry and excitement are sufficient to satisfy the most eager lover of metropolitan pandemonium. Unfortunately for a clear comprehension of it, the manufactories vomit dense clouds of bituminous coal smoke, which settle in a black mass in this part of the town, so that one can scarcely see across the streets in a damp day, and the huge buildings loom up in the black sky in ghostly dimness. The climate of Chicago, though some ten degrees warmer than the average of its immediately tributary territory, is a harsh one, and in the short winter days the centre of the city is not only black, but damp and chilly. In some of the November and December days I could without any stretch of the imagination fancy myself in London. On a Sunday, when business gives place to amusement and religion, the stately city is seen in all its fine proportions. No other city in the Union can show business warehouses and offices of more architectural nobility. The mind inevitably goes to Florence for comparison with the structures of the Medicean merchant princes. One might name the Pullman Building for offices as an example, and the wholesale warehouse of Marshall Field, the work of that truly original American architect, Richardson, which in massiveness, simplicity of lines, and admirable blending of artistic beauty with adaptability to its purpose, seems to me unrivalled in this country. A few of these buildings are exceptions to the general style of architecture, which is only good of its utilitarian American kind, but they give distinction to the town, and I am sure are prophetic of the concrete form the wealth of the city will take. The visitor is likely to be surprised at the number and size of the structures devoted to offices, and to think, as he sees some of them unfilled, that the business is overdone. At any given moment it may be, but the demand for "offices" is always surprising to those who pay most attention to this subject, and I am told that if the erection of office buildings should cease for a year, the demand would pass beyond the means of satisfying it.

Leaving the business portion of the south side, the city runs in apparently limitless broad avenues southward into suburban villages and a region thickly populated to the Indiana line. The continuous slightly curving lake front of the city is about seven miles, pretty solidly occupied with houses. The Michigan avenue of 1860, with its wooden fronts and cheap boarding-houses, has taken on quite another appearance, and extends its broad way in unbroken lines of fine residences five miles, which will be six miles next summer, when its opening is completed to the entrance of Washington Park. I do not know such another street in the world. In the evening the converging lines of gas lamps offer a prospective of unequalled beauty of its kind. The south parks are reached now by turning either into the Drexel Boulevard or the Grand Boulevard, a magnificent avenue a mile in length, tree-planted, gay with flower-beds in the season, and crowded in the sleighing-time with fast teams and fancy turnouts.

This leads me to speak of another feature of Chicago, which has no rival in this country: I mean the facility for pleasure driving and riding. Michigan avenue from the mouth of the river, the centre of town, is macadamized. It and the other avenues immediately connected with the park system are not included in the city street department, but are under the care of the Commissioners of Parks. No traffic is permitted on them, and consequently they are in superb condition for driving, summer and winter. The whole length of Michigan avenue you will never see a loaded team. These roads—that is, Michigan avenue and the others of the park system, and the park drives—are superb for driving or riding, perfectly made for drainage and permanency, with a top-dressing of pulverized granite. The cost of the Michigan avenue drive was two hundred thousand dollars a mile. The cost of the parks and boulevards in each of the three divisions is met by a tax on the property in that division. The tax is considerable, but the wise liberality of the citizens has done for the town what only royalty usually accomplishes—given it magnificent roads; and if good roads are a criterion of civilization, Chicago must stand very high. But it needed a community with a great deal of daring and confidence in the future to create this park system.

One in the heart of the city has not to drive three or four miles over cobble-stones and ruts to get to good driving-ground. When he has entered Michigan avenue he need not pull rein for twenty to thirty miles. This is almost literally true as to extent, without counting the miles of fine drives in the parks; for the city proper is circled by great parks, already laid out as pleasure-grounds, tree-planted and beautified to a high degree, although they are nothing to what cultivation will make them in ten years more. On the lake shore, at the south, is Jackson Park; next is Washington Park, twice as large as Central Park, New York; then, farther to the west, and north, Douglas Park and Garfield Park; then Humboldt Park, until we come round to Lincoln Park, on the lake shore on the north side. These parks are all connected by broad boulevards, some of which are not yet fully developed, thus forming a continuous park drive, with enough of nature and enough of varied architecture for variety, unsurpassed, I should say, in the world within any city limits. Washington Park, with a slightly rolling surface and beautiful landscape-gardening, has not only fine drive-ways, but a splendid road set apart for horsemen. This is a dirt road, always well sprinkled, and the equestrian has a chance besides of a gallop over springy turf. Water is now so abundantly provided that this park is kept green in the driest season. From anywhere in the south side one may mount his horse or enter his carriage for a turn of fifteen or twenty miles on what is equivalent to a country road—that is to say, an English country road. Of the effect of this facility on social life I shall have occasion to speak. On the lake side of Washington Park are the grounds of the Washington Park Racing Club, with a splendid track, and stables and other facilities which, I am told, exceed anything of the kind in the country. The club-house itself is very handsome and commodious, is open to the members and their families summer and winter, and makes a favorite rendezvous for that part of society which shares its privileges. Besides its large dining and dancing halls, it has elegant apartments set apart for ladies. In winter its hospitable rooms and big wood fires are very attractive after a zero drive.

Almost equal facility for driving and riding is had on the north side by taking the lake-shore drive to Lincoln Park. Too much cannot be said of the beauty of this drive along the curving shore of an inland sea, ever attractive in the play of changing lights and colors, and beginning to be fronted by palatial houses—a foretaste of the coming Venetian variety and splendor. The park itself, dignified by the Lincoln statue, is an exquisite piece of restful landscape, looked over by a thickening assemblage of stately residences. It is a quarter of spacious elegance.

One hardly knows how to speak justly of either the physical aspect or the social life of Chicago, the present performance suggesting such promise and immediate change. The excited admiration waits a little upon expectation. I should like to see it in five years—in ten years; it is a formative period, but one of such excellence of execution that the imagination takes a very high flight in anticipating the result of another quarter of a century. What other city has begun so nobly or has planned so liberally for metropolitan solidity, elegance, and recreation? What other has such magnificent avenues and boulevards, and such a system of parks? The boy is born here who will see the town expanded far beyond these splendid pleasure-grounds, and what is now the circumference of the city will be to Chicago what the vernal gardens from St. James to Hampton are to London. This anticipation hardly seems strange when one remembers what Chicago was fifteen years ago.

Architecturally, Chicago is more interesting than many older cities. Its wealth and opportunity for fine building coming when our national taste is beginning to be individual, it has escaped the monotony and mediocrity in which New York for so many years put its money, and out of the sameness of which it is escaping in spots. Having also plenty of room, Chicago has been able to avoid the block system in its residences, and to give play to variety and creative genius. It is impossible to do much with the interior of a house in a block, however much you may load the front with ornament. Confined to a long parallelogram, and limited as to light and air, neither comfort nor individual taste can be consulted or satisfied. Chicago is a city of detached houses, in the humbler quarters as well as in the magnificent avenues, and the effect is home-like and beautiful at the same time. There is great variety—stone, brick, and wood intermingled, plain and ornamental; but drive where you will in the favorite residence parts of the vast city, you will be continually surprised with the sight of noble and artistic houses and homes displaying taste as well as luxury. In addition to the business and public buildings of which I spoke, there are several, like the Art Museum, the Studebaker Building, and the new Auditorium, which would be conspicuous and admired in any city in the world. The city

is rich in a few specimens of private houses by Mr. Richardson (whose loss to the country is still apparently irreparable), houses worth a long journey to see, so simple, so noble, so full of comfort, sentiment, unique, having what may be called a charming personality. As to interiors, there has been plenty of money spent in Chicago in mere show; but, after all, I know of no other city that has more character and individuality in its interiors, more evidences of personal refinement and taste. There is, of course—Boston knows that—a grace and richness in a dwelling in which generations have accumulated the best fruits of wealth and cultivation; but any tasteful stranger here, I am sure, will be surprised to find in a city so new so many homes pervaded by the atmosphere of books and art and refined sensibility, due, I imagine, mainly to the taste of the women, for while there are plenty of men here who have taste, there are very few who have leisure to indulge it; and I doubt if there was ever anywhere a livable house—a man can build a palace, but he cannot make a home—that was not the creation of a refined woman. I do not mean to say that Chicago is not still very much the victim of the upholsterer, and that the eye is not offended by a good deal that is gaudy and pretentious, but there is so much here that is in exquisite taste that one has a hopeful heart about its future. Everybody is not yet educated up to the “Richardson houses,” but nothing is more certain than that they will powerfully influence all the future architecture of the town.

Perhaps there never was before such an opportunity to study the growth of an enormous city, physically and socially, as is offered now in Chicago, where the development of half a century is condensed into a decade. In one respect it differs from all other cities of anything like its size. It is not only surrounded by a complete net-work of railways, but it is permeated by them. The converging lines of twenty-one (I think it is) railways paralleling each other or criss-crossing in the suburbs concentrate upon fewer tracks as they enter the dense part of the city, but they literally surround it, and actually pierce its heart. So complete is this environment and interlacing that you cannot enter the city from any direction without encountering a network of tracks. None of the water-front, except a strip on the north side, is free from them. The finest residence part of the south side, including the boulevards and parks, is surrounded and cut by them. There are a few viaducts, but for the most part the tracks occupy streets, and the crossings are at grade. Along the Michigan avenue water-front and down the lake shore to Hyde Park, on the Illinois Central and the Michigan Central and their connections, the foreign and local trains pass incessantly (I believe over sixty a day), and the Illinois crosses above Sixteenth Street, cutting all the great southward avenues; and farther down, the tracks run between Jackson Park and Washington Park, crossing at grade the 500-foot-wide boulevard which connects these great parks and makes them one. These tracks and grade crossings, from which so few parts of the city are free, are a serious evil and danger, and the annoyance is increased by the multiplicity of street railway's, and by the swiftly running cable-cars, which are a constant source of alarm to the timid. The railways present a difficult problem. The town covers such a vast area (always extending in a ratio that cannot be calculated) that to place all the passenger stations outside would be a great inconvenience, to unite the lines in a single station probably impracticable. In time, however, the roads must come in on elevated viaducts, or concentrate in three or four stations which communicate with the central parts of the town by elevated roads.

This state of things arose from the fact that the railways antedated, and we may say made, the town, which has grown up along their lines. To a town of pure business, transportation was the first requisite, and the newer roads have been encouraged to penetrate as far into the city as they could. Now that it is necessary to make it a city to live in safely and agreeably, the railways are regarded from another point of view. I suppose a sociologist would make some reflections on the effect of such a thorough permeation of tracks, trains, engines, and traffic upon the temperament of a town, the action of these exciting and irritating causes upon its nervous centres. Living in a big railway-station must have an effect on the nerves. At present this seems a legitimate part of the excited activity of the city; but if it continues, with the rapid increase of wealth and the growth of a leisure class, the inhabitants who can afford to get away will live here only the few months necessary to do their business and take a short season of social gayety, and then go to quieter places early in the spring and for the summer months.

It is at this point of view that the value of the park system appears, not only as a relief, as easily accessible recreation-grounds for the inhabitants in every part of the city, but as an element in society life. These parks, which I have already named, contain 1742 acres. The two south parks, connected so as to be substantially one, have 957 acres. Their great connecting boulevards are interfered with somewhat by railway-tracks, and none of them, except Lincoln, can be reached without crossing tracks on which locomotives run, yet, as has been said, the most important of them are led to by good driving-roads from the heart of the city. They have excellent roads set apart for equestrians as well as for driving. These facilities induce the keeping of horses, the setting up of fine equipages, and a display for which no other city has better opportunity. This cannot but have an appreciable effect upon the growth of luxury and display in this direction. Indeed, it is already true that the city keeps more private carriages—for the pleasure not only of the rich, but of the well-to-do—in proportion to its population, than any other large city I know. These broad thoroughfares, kept free from traffic, furnish excellent sleighing when it does not exist in the city streets generally, and in the summer unequalled avenues for the show of wealth and beauty and style. In a few years the turnouts on the Grand Boulevard and the Lincoln Park drive will be worth going far to see for those who admire—and who does not? for, the world over, wealth has no spectacle more attractive to all classes—fine horses and the splendor of moving equipages. And here is no cramped mile or two for parade, like most of the fashionable drives of the world, but space inviting healthful exercise as well as display. These broad avenues and park outlooks, with ample ground-room, stimulate architectural rivalry, and this opportunity for driving and riding and being on view cannot but affect very strongly the social tone. The foresight of the busy men who planned this park system is already vindicated. The public appreciate their privileges. On fair days the driving avenues are thronged. One Sunday afternoon in January, when the sleighing was good, some one estimated that there were as many as ten thousand teams flying up and down Michigan avenue and the Grand Boulevard. This was, of course, an over-estimate, but the throng made a ten-thousand impression on the mind. Perhaps it was a note of Western independence that a woman was here and there seen “speeding” a fast horse, in a cutter, alone.

I suppose that most of these people had been to church in the morning, for Chicago, which does everything

it puts its hand to with tremendous energy, is a church-going city, and I believe presents some contrast to Cincinnati in this respect. Religious, mission, and Sunday-school work is very active, churches are many, whatever the liberality of the creeds of a majority of them, and there are several congregations of over two thousand people. One vast music-hall and one theatre are thronged Sunday after Sunday with organized, vigorous, worshipful congregations. Besides these are the Sunday meetings for ethical culture and Christian science. It is true that many of the theatres are open as on week-days, and there is a vast foreign population that takes its day of rest in idleness or base-ball and garden amusements, but the prevailing aspect of the city is that of Sunday observance. There is a good deal of wholesome New England in its tone. And it welcomes any form of activity—orthodoxy, liberalism, revivals, ethical culture.

A special interest in Chicago at the moment is because it is forming—full of contrasts and of promise, palaces and shanties side by side. Its forces are gathered and accumulating, but not assimilated. What a mass of crude, undigested material it has! In one region on the west side are twenty thousand Bohemians and Poles; the street signs are all foreign and of unpronounceable names—a physically strong, but mentally and morally brutal, people for the most part; the adults generally do not speak English, and clanging as they do, they probably never will. There is no hope that this generation will be intelligent American citizens, or be otherwise than the political prey of demagogues. But their children are in the excellent public schools, and will take in American ideas and take on American ways. Still, the mill has about as much grist as it can grind at present.

Social life is, speaking generally, as unformed, unselected, as the city—that is, more fluid and undetermined than in Eastern large cities. That is merely to say, however, that while it is American, it is young. When you come to individuals, the people in society are largely from the East, or have Eastern connections that determine their conduct. For twenty years the great universities, Harvard, Yale, Amherst, Princeton, and the rest, have been pouring in their young men here. There is no better element in the world, and it is felt in every pulse of the town. Young couples marry and come here from every sort of Eastern circle. But the town has grown so fast, and so many new people have come into the ability suddenly to spend money in fine houses and equipages, that the people do not know each other. You may drive past miles of good houses, with a man who has grown up with the town, who cannot tell you who any of the occupants of the houses are. Men know each other on change, in the courts, in business, and are beginning to know each other in clubs, but society has not got itself sorted out and arranged, or discovered its elements. This is a metropolitan trait, it is true, but the condition is socially very different from what it is in New York or Boston; the small village associations survive a little yet, struggling against the territorial distances, but the social mass is still unorganized, although “society” is a prominent feature in the newspapers. Of course it is understood that there are people “in society,” and dinners, and all that, in nowise different from the same people and events the world over.

A striking feature of the town is “youth,” visible in social life as well as in business. An Eastern man is surprised to see so many young men in responsible positions, at the head, or taking the managing oar, in great moneyed institutions, in railway corporations, and in societies of charity and culture. A young man, graduate of the city high-school, is at the same time president of a prominent bank, president of the Board of Trade, and president of the Art Institute. This youthful spirit must be contagious, for apparently the more elderly men do not permit themselves to become old, either in the business or the pleasures of life. Everything goes on with youthful vim and spirit.

Next to the youth, and perhaps more noticeable, the characteristic feature of Chicago is money-making, and the money power is as obtrusive socially as on change. When we come to speak of educational and intellectual tendencies, it will be seen how this spirit is being at once utilized and mitigated; but for the moment money is the recognized power. How could it be otherwise? Youth and energy did not flock here for pleasure or for society, but simply for fortune. And success in money-getting was about the only one considered. And it is still that by which Chicago is chiefly known abroad, by that and by a certain consciousness of it which is noticed. And as women reflect social conditions most vividly, it cannot be denied that there is a type known in Europe and in the East as the Chicago young woman, capable rather than timid, dashing rather than retiring, quite able to take care of herself. But this is not by any means an exhaustive account of the Chicago woman of to-day.

While it must be said that the men, as a rule, are too much absorbed in business to give heed to anything else, yet even this statement will need more qualification than would appear at first, when we come to consider the educational, industrial, and reformatory projects. And indeed a veritable exception is the Literary Club, of nearly two hundred members, a mingling of business and professional men, who have fine rooms in the Art Building, and meet weekly for papers and discussions. It is not in every city that an equal number of busy men will give the time to this sort of intellectual recreation. The energy here is superabundant; in whatever direction it is exerted it is very effective; and it may be said, in the language of the street, that if the men of Chicago seriously take hold of culture, they will make it hum.

Still it remains true here, as elsewhere in the United States, that women are in advance in the intellectual revival. One cannot yet predict what will be the result of this continental furor for literary, scientific, and study clubs—in some places in the East the literary wave has already risen to the height of the scientific study of whist—but for the time being Chicago women are in the full swing of literary life. Mr. Browning says that more of his books are sold in Chicago than in any other American city. Granting some affectation, some passing fashion, in the Browning, Dante, and Shakespeare clubs, I think it is true that the Chicago woman, who is imbued with the energy of the place, is more serious in her work than are women in many other places; at least she is more enthusiastic. Her spirit is open, more that of frank admiration than of criticism of both literature and of authors. This carries her not only further into the heart of literature itself, but into a genuine enjoyment of it—wanting almost to some circles at the East, who are too cultivated to admire with warmth or to surrender themselves to the delights of learning, but find their avocation rather in what may be called literary detraction, the spirit being that of dissection of authors and books, much as social gossips pick to pieces the characters of those of their own set. And one occupation is as good as the other. Chicago has some reputation for beauty, for having pretty, dashing, and attractive women; it is as much entitled to be

considered for its intelligent women who are intellectually agreeable. Comparisons are very unsafe, but it is my impression that there is more love for books in Chicago than in New York society, and less of the critical, *nil admirari* spirit than in Boston.

It might be an indication of no value (only of the taste of individuals) that books should be the principal "favors" at a fashionable German, but there is a book-store in the city whose evidence cannot be set aside by reference to any freak of fashion. McClurg's book-store is a very extensive establishment in all departments—publishing, manufacturing, retailing, wholesaling, and importing. In some respects it has not its equal in this country. The book-lover, whether he comes from London or New York, will find there a stock, constantly sold and constantly replenished, of books rare, curious, interesting, that will surprise him. The general intelligence that sustains a retail shop of this variety and magnitude must be considerable, and speaks of a taste for books with which the city has not been credited; but the cultivation, the special love of books for themselves, which makes possible this rich corner of rare and imported books at McClurg's, would be noticeable in any city, and women as well as men in Chicago are buyers and appreciators of first editions, autograph and presentation copies, and books valued because they are scarce and rare.

Chicago has a physical peculiarity that radically affects its social condition, and prevents its becoming homogeneous. It has one business centre and three distinct residence parts, divided by the branching river. Communication between the residence sections has to be made through the business city, and is further hindered by the bridge crossings, which cause irritating delays the greater part of the year. The result is that three villages grew up, now become cities in size, and each with a peculiar character. The north side was originally the more aristocratic, and having fewer railways and a less-occupied-with-business lake front, was the more agreeable as a place of residence, always having the drawback of the bridge crossings to the business part. After the great fire, building lots were cheaper there than on the south side within reasonable distance of the active city. It has grown amazingly, and is beautified by stately houses and fine architecture, and would probably still be called the more desirable place of residence. But the south side has two great advantages—easy access to the business centre and to the great southern parks and pleasure-grounds. This latter would decide many to live there. The vast west side, with its lumber-yards and factories, its foreign settlements, and its population outnumbering the two other sections combined, is practically an unknown region socially to the north side and south side. The causes which produced three villages surrounding a common business centre will continue to operate. The west side will continue to expand with cheap houses, or even elegant residences on the park avenues—it is the glory of Chicago that such a large proportion of its houses are owned by their occupants, and that there are few tenement rookeries, and even few gigantic apartment houses—over a limitless prairie; the north side will grow in increasing beauty about Lincoln Park; and the south side will more and more gravitate with imposing houses about the attractive south parks. Thus the two fashionable parts of the city, separated by five, eight, and ten miles, will develop a social life of their own, about as distinct as New York and Brooklyn. It remains to be seen which will call the other "Brooklyn." At present these divisions account for much of the disorganization of social life, and prevent that concentration which seems essential to the highest social development.

In this situation Chicago is original, as she is in many other ways, and it makes one of the interesting phases in the guesses at her future.

X.—CHICAGO [*Second Paper.*]

The country gets its impression of Chicago largely from the Chicago newspapers. In my observation, the impression is wrong. The press is able, vigorous, voluminous, full of enterprise, alert, spirited; its news columns are marvellous in quantity, if not in quality; nowhere are important events, public meetings, and demonstrations more fully, graphically, and satisfactorily reported; it has keen and competent writers in several departments of criticism—theatrical, musical, and occasionally literary; independence, with less of personal bias than in some other cities; the editorial pages of most of the newspapers are bright, sparkling, witty, not seldom spiced with knowing drollery, and strong, vivid, well-informed and well-written, in the discussion of public questions, with an allowance always to be made for the "personal equation" in dealing with particular men and measures—as little provincial in this respect as any press in the country.

But it lacks tone, elevation of purpose; it represents to the world the inferior elements of a great city rather than the better, under a mistaken notion in the press and the public, not confined to Chicago, as to what is "news." It cannot escape the charge of being highly sensational; that is, the elevation into notoriety of mean persons and mean events by every rhetorical and pictorial device. Day after day the leading news, the most displayed and most conspicuous, will be of vulgar men and women, and all the more expanded if it have in it a spice of scandal. This sort of reading creates a diseased appetite, which requires a stronger dose daily to satisfy; and people who read it lose their relish for the higher, more decent, if less piquant, news of the world. Of course the Chicago newspapers are not by any means alone in this course; it is a disease of the time. Even New York has recently imitated successfully this feature of what is called "Western journalism."

But it is largely from the Chicago newspapers that the impression has gone abroad that the city is preeminent in divorces, pre-eminent in scandals, that its society is fast, that it is vulgar and pretentious, that its tone is "shoddy," and its culture a sham. The laws of Illinois in regard to divorces are not more lax than in

some Eastern States, and divorces are not more numerous there of residents (according to population) than in some Eastern towns; but while the press of the latter give merely an official line to the court separations, the Chicago papers parade all the details, and illustrate them with pictures. Many people go there to get divorces, because they avoid scandal at their homes, and because the Chicago courts offer unusual facilities in being open every month in the year. Chicago has a young, mobile population, an immense foreign brutal element. I watched for some weeks the daily reports of divorces and scandals. Almost without exception they related to the lower, not to say the more vulgar, portions of social life. In several years the city has had, I believe, only two *causes célèbres* in what is called good society—a remarkable record for a city of its size. Of course a city of this magnitude and mobility is not free from vice and immorality and fast living; but I am compelled to record the deliberate opinion, formed on a good deal of observation and inquiry, that the moral tone in Chicago society, in all the well-to-do industrious classes which give the town its distinctive character, is purer and higher than in any other city of its size with which I am acquainted, and purer than in many much smaller. The tone is not so fast, public opinion is more restrictive, and women take, and are disposed to take, less latitude in conduct. This was not my impression from the newspapers. But it is true not only that social life holds itself to great propriety, but that the moral atmosphere is uncommonly pure and wholesome. At the same time, the city does not lack gayety of movement, and it would not be called prudish, nor in some respects conventional.

It is curious, also, that the newspapers, or some of them, take pleasure in mocking at the culture of the town. Outside papers catch this spirit, and the "culture" of Chicago is the butt of the paragraphers. It is a singular attitude for newspapers to take regarding their own city. Not long ago Mr. McClurg published a very neat volume, in vellum, of the fragments of Sappho, with translations. If the volume had appeared in Boston it would have been welcomed and most respectfully received in Chicago. But instead of regarding it as an evidence of the growing literary taste of the new town, the humorists saw occasion in it for exquisite mockery in the juxtaposition of Sappho with the modern ability to kill seven pigs a minute, and in the cleverest and most humorous manner set all the country in a roar over the incongruity. It goes without saying that the business men of Chicago were not sitting up nights to study the Greek poets in the original; but the fact was that there was enough literary taste in the city to make the volume a profitable venture, and that its appearance was an evidence of intellectual activity and scholarly inclination that would be creditable to any city in the land. It was not at all my intention to intrude my impressions of a newspaper press so very able and with such magnificent opportunities as that of Chicago, but it was unavoidable to mention one of the causes of the misapprehension of the social and moral condition of the city.

The business statistics of Chicago, and the story of its growth, and the social movement, which have been touched on in a previous paper, give only a half-picture of the life of the town. The prophecy for its great and more hopeful future is in other exhibitions of its incessant activity. My limits permit only a reference to its churches, extensive charities (which alone would make a remarkable and most creditable chapter), hospitals, medical schools, and conservatories of music. Club life is attaining metropolitan proportions. There is on the south side the Chicago, the Union League, the University, the Calumet, and on the north side the Union—all vigorous, and most of them housed in superb buildings of their own. The Women's Exchange is a most useful organization, and the Ladies' Fortnightly ranks with the best intellectual associations in the country. The Commercial Club, composed of sixty representative business men in all departments, is a most vital element in the prosperity of the city. I cannot dwell upon these. But at least a word must be said about the charities, and some space must be given to the schools.

The number of solicitors for far West churches and colleges who pass by Chicago and come to New York and New England for money have created the impression that Chicago is not a good place to go for this purpose. Whatever may be the truth of this, the city does give royally for private charities, and liberally for mission work beyond her borders. It is estimated by those familiar with the subject that Chicago contributes for charitable and religious purposes, exclusive of the public charities of the city and county, not less than five millions of dollars annually. I have not room to give even the partial list of the benevolent societies that lies before me, but beginning with the Chicago Relief and Aid, and the Armour Mission, and going down to lesser organizations, the sum annually given by them is considerably over half a million dollars. The amount raised by the churches of various denominations for religious purposes is not less than four millions yearly. These figures prove the liberality, and I am able to add that the charities are most sympathetically and intelligently administered.

Inviting, by its opportunities for labor and its facilities for business, comers from all the world, a large proportion of whom are aliens to the language and institutions of America, Chicago is making a noble fight to assimilate this material into good citizenship. The popular schools are liberally sustained, intelligently directed, practise the most advanced and inspiring methods, and exhibit excellent results. I have not the statistics of 1887; but in 1886, when the population was only 703,000, there were 129,000 between the ages of six and sixteen, of whom 83,000 were enrolled as pupils, and the average daily attendance in schools was over 65,000. Besides these there were about 43,000 in private schools. The census of 1886 reports only 34 children between the ages of six and twenty-one who could neither read nor write. There were 91 school buildings owned by the city, and two rented. Of these, three are high-schools, one in each division, the newest, on the west side, having 1000 students. The school attendance increases by a large per cent, each year. The principals of the high-schools were men; of the grammar and primary schools, 35 men and 42 women. The total of teachers was 1440, of whom 56 were men. By the census of 1886 there were 106,929 children in the city under six years of age. No kindergartens are attached to the public schools, but the question of attaching them is agitated. In the lower grades, however, the instruction is by object lessons, drawing, writing, modelling, and exercises that train the eye to observe, the tongue to describe, and that awaken attention without weariness. The alertness of the scholars and the enthusiasm of the teachers were marked. It should be added that German is extensively taught in the grammar schools, and that the number enrolled in the German classes in 1886 was over 28,000. There is some public sentiment for throwing out German from the public schools, and generally for restricting studies in the higher branches.

The argument against this is that very few of the children, and the majority of those girls, enter the high-schools; the boys are taken out early for business, and get no education afterwards. In 1885 were organized

public elementary evening schools (which had, in 1886, 6709 pupils), and an evening high-school, in which book-keeping, stenography, mechanical drawing, and advanced mathematics were taught. The School Committee also have in charge day schools for the education of deaf and dumb children.

The total expenditure for 1880 was \$2,000,803; this includes \$1,023,394 paid to superintendents and teachers, and large sums for new buildings, apparatus, and repairs. The total cash receipts for school purposes were \$2,091,951. Of this was from the school tax fund \$1,758,053 (the total city tax for all purposes was \$5,308,409), and the rest from State dividend and school fund bonds and miscellaneous sources. These figures show that education is not neglected.

Of the quality and efficacy of this education there cannot be two opinions, as seen in the schools which I visited. The high-school on the west side is a model of its kind; but perhaps as interesting an example of popular education as any is the Franklin grammar and primary school on the north side, in a district of laboring people. Here were 1700 pupils, all children of working people, mostly Swedes and Germans, from the age of six years upwards. Here were found some of the children of the late anarchists, and nowhere else can one see a more interesting attempt to manufacture intelligent American citizens. The instruction rises through the several grades from object lessons, drawing, writing and reading (and writing and reading well), to elementary physiology, political and constitutional history, and physical geography. Here is taught to young children what they cannot learn at home, and might never clearly comprehend otherwise; not only something of the geography and history of the country, but the distinctive principles of our government, its constitutional ideas, the growth, creeds, and relations of political parties, and the personality of the great men who have represented them. That the pupils comprehend these subjects fairly well I had evidence in recitations that were as pleasing as surprising. In this way Chicago is teaching its alien population American ideas, and it is fair to presume that the rising generation will have some notion of the nature and value of our institutions that will save them from the inclination to destroy them.

The public mind is agitated a good deal on the question of the introduction of manual training into the public schools. The idea of some people is that manual training should only be used as an aid to mental training, in order to give definiteness and accuracy to thought; others would like actual trades taught; and others think that it is outside the function of the State to teach anything but elementary mental studies. The subject would require an essay by itself, and I only allude to it to say that Chicago is quite alive to the problems and the most advanced educational ideas. If one would like to study the philosophy and the practical working of what may be called physico-mental training, I know no better place in the country to do so than the Cook County Normal School, near Englewood, under the charge of Colonel F. W. Parker, the originator of what is known as the Quincy (Massachusetts) System. This is a training school for about 100 teachers, in a building where they have practice on about 500 children in all stages of education, from the kindergarten up to the eighth grade. This may be called a thorough manual training school, but not to teach trades, work being done in drawing, modelling in clay, making raised maps, and wood-carving. The Quincy System, which is sometimes described as the development of character by developing mind and body, has a literature to itself. This remarkable school, which draws teachers for training from all over the country, is a notable instance of the hospitality of the West to new and advanced ideas. It does not neglect the literary side in education. Here and in some of the grammar schools of Chicago the experiment is successfully tried of interesting young children in the best literature by reading to them from the works of the best authors, ancient and modern, and giving them a taste for what is excellent, instead of the trash that is likely to fall into their hands—the cultivation of sustained and consecutive interest in narratives, essays, and descriptions in good literature, in place of the scrappy selections and reading-books written down to the childish level. The written comments and criticisms of the children on what they acquire in this way are a perfect vindication of the experiment. It is to be said also that this sort of education, coupled with the manual training, and the inculcated love for order and neatness, is beginning to tell on the homes of these children. The parents are actually being educated and civilized through the public schools.

An opportunity for superior technical education is given in the Chicago Manual Training School, founded and sustained by the Commercial Club. It has a handsome and commodious building on the corner of Michigan avenue and Twelfth Street, which accommodates over two hundred pupils, under the direction of Dr. Henry H. Belfield, assisted by an able corps of teachers and practical mechanics. It has only been in operation since 1884, but has fully demonstrated its usefulness in the training of young men for places of responsibility and profit. Some of the pupils are from the city schools, but it is open to all boys of good character and promise. The course is three years, in which the tuition is \$80, \$100, and \$120 a year; but the club provides for the payment of the tuition of a limited number of deserving boys whose parents lack the means to give them this sort of education. The course includes the higher mathematics, English, and French or Latin, physics, chemistry—in short, a high-school course—with drawing, and all sorts of technical training in work in wood and iron, the use and making of tools, and the building of machinery, up to the construction of steam-engines, stationary and locomotive. Throughout the course one hour each day is given to drawing, two hours to shop-work, and the remainder of the school day to study and recitation. The shops—the wood-work rooms, the foundery, the forge-room, the machine-shop—are exceedingly well equipped and well managed. The visitor cannot but be pleased by the tone of the school and the intelligent enthusiasm of the pupils. It is an institution likely to grow, and perhaps become the nucleus of a great technical school, which the West much needs. It is worthy of notice also as an illustration of the public spirit, sagacity, and liberality of the Chicago business men. They probably see that if the city is greatly to increase its importance as a manufacturing centre, it must train a considerable proportion of its population to the highest skilled labor, and that splendidly equipped and ably taught technical schools would do for Chicago what similar institutions in Zurich have done for Switzerland. Chicago is ready for a really comprehensive technical and industrial college, and probably no other investment would now add more to the solid prosperity and wealth of the town.

Such an institution would not hinder, but rather help, the higher education, without which the best technical education tends to materialize life. Chicago must before long recognize the value of the intellectual side by beginning the foundation of a college of pure learning. For in nothing is the Western society of to-day more in danger than in the superficial half-education which is called "practical," and in the lack of logic and

philosophy. The tendency to the literary side—awakening a love for good books—in the public schools is very hopeful. The existence of some well-chosen private libraries shows the same tendency. In art and archæology there is also much promise. The Art Institute is a very fine building, with a vigorous school in drawing and painting, and its occasional loan exhibitions show that the city contains a good many fine pictures, though scarcely proportioned to its wealth. The Historical Society, which has had the irreparable misfortune twice to lose its entire collections by fire, is beginning anew with vigor, and will shortly erect a building from its own funds. Among the private collections which have a historical value is that relating to the Indian history of the West made by Mr. Edward Ayer, and a large library of rare and scarce books, mostly of the English Shakespeare period, by the Rev. Frank M. Bristoll. These, together with the remarkable collection of Mr. C. F. Gunther (of which further mention will be made), are prophecies of a great literary and archaeological museum.

The city has reason to be proud of its Free Public Library, organized under the general library law of Illinois, which permits the support of a free library in every incorporated city, town, and township by taxation. This library is sustained by a tax of one halfmill on the assessed value of all the city property. This brings it in now about \$80,000 a year, which makes its income for 1888, together with its fund and fines, about \$90,000. It is at present housed in the City Hall, but will soon have a building of its own (on Dearborn Park), towards the erection of which it has a considerable fund. It has about 130,000 volumes, including a fair reference library and many expensive art books. The institution has been well managed hitherto, notwithstanding its connection with politics in the appointment of the trustees by the mayor, and its dependence upon the city councils. The reading-rooms are thronged daily; the average daily circulation has increased yearly; it was 2263 in 1887—a gain of eleven per cent, over the preceding year. This is stimulated by the establishment of eight delivering stations in different parts of the city. The cosmopolitan character of the users of the library is indicated by the uncommon number of German, French, Dutch, Bohemian, Polish, and Scandinavian books. Of the books issued at the delivery stations in 1887 twelve per cent, were in the Bohemian language. The encouraging thing about this free library is that it is not only freely used, but that it is as freely sustained by the voting population.

Another institution, which promises to have still more influence on the city, and indeed on the whole North-west, is the Newberry Library, now organizing under an able board of trustees, who have chosen Mr. W. F. Poole as librarian. The munificent fund of the donor is now reckoned at about 82,500,000, but the value of the property will be very much more than this in a few years. A temporary building for the library, which is slowly forming, will be erected at once, but the library, which is to occupy a square on the north side, will not be erected until the plans are fully matured. It is to be a library of reference and study solely, and it is in contemplation to have the books distributed in separate rooms for each department, with ample facilities for reading and study in each room. If the library is built and the collections are made in accordance with the ample means at command, and in the spirit of its projectors, it will powerfully tend to make Chicago not only the money but the intellectual centre of the North-west, and attract to it hosts of students from all quarters. One can hardly over-estimate the influence that such a library as this may be will have upon the character and the attractiveness of the city.

I hope that it will have ample space for, and that it will receive, certain literary collections, such as are the glory and the attraction, both to students and sight-seers, of the great libraries of the world. And this leads me to speak of the treasures of Mr. Gunther, the most remarkable private collection I have ever seen, and already worthy to rank with some of the most famous on public exhibition. Mr. Gunther is a candy manufacturer, who has an archaeological and "curio" taste, and for many years has devoted an amount of money to the purchase of historical relics that if known would probably astonish the public. Only specimens of what he has can be displayed in the large apartment set apart for the purpose over his shop. The collection is miscellaneous, forming a varied and most interesting museum. It contains relics—many of them unique, and most of them having a historical value—from many lands and all periods since the Middle Ages, and is strong in relics and documents relating to our own history, from the colonial period down to the close of our civil war. But the distinction of the collection is in its original letters and manuscripts of famous people, and its missals, illuminated manuscripts, and rare books. It is hardly possible to mention a name famous since America was discovered that is not here represented by an autograph letter or some personal relics. We may pass by such mementos as the Appomattox table, a sampler worked by Queen Elizabeth, a prayer-book of Mary, Queen of Scots, personal belongings of Washington, Lincoln, and hundreds of other historical characters, but we must give a little space to the books and manuscripts, in order that it may be seen that all the wealth of Chicago is not in grain and meat.

It is only possible here to name a few of the original letters, manuscripts, and historical papers in this wonderful collection of over seventeen thousand. Most of the great names in the literature of our era are represented. There is an autograph letter of Molière, the only one known outside of France, except one in the British Museum; there are letters of Voltaire, Victor Hugo, Madame Roland, and other French writers. It is understood that this is not a collection of mere autographs, but of letters or original manuscripts of those named. In Germany, nearly all the great poets and writers—Goethe, Schiller, Uhland, Lessing, etc.; in England, Milton, Pope, Shelley, Keats, Wordsworth, Coleridge, Cowper, Hunt, Gray, etc.; the manuscript of Byron's "Prometheus," the "Auld Lang Syne" of Burns, and his "Journal in the Highlands," "Sweet Home" in the author's hand; a poem by Thackeray; manuscript stories of Scott and Dickens. Among the Italians, Tasso. In America, the known authors, almost without exception. There are letters from nearly all the prominent reformers—Calvin, Melanethon, Zwingli, Erasmus, Savonarola; a letter of Luther in regard to the Pope's bull; letters of prominent leaders—William the Silent, John the Steadfast, Gustavus Adolphus, Wallenstein. There is a curious collection of letters of the saints—St. Francis de Sales, St. Vincent de Paul, St. Borromeo; letters of the Popes for three centuries and a half, and of many of the great cardinals.

I must set down a few more of the noted names, and that without much order. There is a manuscript of Charlotte Corday (probably the only one in this country), John Bunyan, Izaak Walton, John Cotton, Michael Angelo, Galileo, Lorenzo the Magnificent; letters of Queen Elizabeth, Mary, Queen of Scots, Mary of England, Anne, several of Victoria (one at the age of twelve), Catherine de' Medici, Marie Antoinette, Josephine, Marie Louise; letters of all the Napoleons, of Frederick the Great, Marat, Robespierre, St. Just; a letter of Hernando

Cortez to Charles the Fifth; a letter of Alvarez; letters of kings of all European nations, and statesmen and generals without number.

The collection is rich in colonial and Revolutionary material; original letters from Plymouth Colony, 1621, 1622, 1623—I believe the only ones known; manuscript sermons of the early American ministers; letters of the first bishops, White and Seabury; letters of John André, Nathan Hale, Kosciusko, Pulaski, De Kalb, Steuben, and of great numbers of the general and subordinate officers of the French and Revolutionary wars; William Tudor's manuscript account of the battle of Bunker Hill; a letter of Aide-de-camp Robert Orhm to the Governor of Pennsylvania relating Braddock's defeat; the original of Washington's first Thanksgiving proclamation; the report of the committee of the Continental Congress on its visit to Valley Forge on the distress of the army; the original proceedings of the Commissioners of the Colonies at Cambridge for the organization of the Continental army; original returns of the Hessians captured at Princeton; orderly books of the Continental army; manuscripts and surveys of the early explorers; letters of Lafitte, the pirate, Paul Jones, Captain Lawrence, Bainbridge, and so on. Documents relating to the Washington family are very remarkable: the original will of Lawrence Washington bequeathing Mount Vernon to George; will of John Custis to his family; letters of Martha, of Mary, the mother of George, of Betty Lewis, his sister, of all his step and grand children of the Custis family.

In music there are the original manuscript compositions of all the leading musicians in our modern world, and there is a large collection of the choral books from ancient monasteries and churches. There are exquisite illuminated missals on parchment of all periods from the eighth century. Of the large array of Bibles and other early printed books it is impossible to speak, except in a general way. There is a copy of the first English Bible, Coverdale's, also of the very rare second Matthews, and of most of the other editions of the English Bible; the first Scotch, Irish, French, Welsh, and German Luther Bibles; the first Eliot's Indian Bible, of 1662, and the second, of 1685; the first American Bibles; the first American primers, almanacs, newspapers, and the first patent, issued in 1794; the first book printed in Boston; the first printed accounts of New York, Pennsylvania, New Jersey, Virginia, South Carolina, Georgia; the first picture of New York City, an original plan of the city in 1700, and one of it in 1765; early surveys of Boston, Philadelphia, and New York; the earliest maps of America, including the first, second, and third map of the world in which America appears.

Returning to England, there are the Shakespeare folio editions of 1632 and 1685; the first of his printed "Poems" and the "Rape of Lucrece;" an early quarto of "Othello;" the first edition of Ben Jonson, 1616, in which Shakespeare's name appears in the cast for a play; and letters from the Earl of Southampton, Shakespeare's friend, and Sir Walter Raleigh, Francis Bacon, and Essex. There is also a letter written by Oliver Cromwell while he was engaged in the conquest of Ireland.

The relics, documents, and letters illustrating our civil war are constantly being added to. There are many old engravings, caricatures, and broadsides. Of oil-portraits there are three originals of Washington, one by Stuart, one by Peale, one by Polk, and I think I remember one or two miniatures. There is also a portrait in oil of Shakespeare which may become important. The original canvas has been remounted, and there are indubitable signs of its age, although the picture can be traced back only about one hundred and fifty years. The Owner hopes to be able to prove that it is a contemporary work. The interesting fact about it is that while it is not remarkable as a work of art, it is recognizable at once as a likeness of what we suppose from other portraits and the busts to be the face and head of Shakespeare, and yet it is different from all other pictures we know, so that it does not suggest itself as a copy.

The most important of Mr. Gunther's collection is an autograph of Shakespeare; if it prove to be genuine, it will be one of the four in the world, and a great possession for America. This autograph is pasted on the fly-leaf of a folio of 1632, which was the property of one John Ward. In 1839 there was published in London, from manuscripts in possession of the Medical Society, extracts from the diary of John Ward (1648-1679), who was vicar and doctor at Stratford-on-Avon. It is to this diary that we owe certain facts theretofore unknown about Shakespeare. The editor, Mr. Stevens, had this volume in his hands while he was compiling his book, and refers to it in his preface. He supposed it to have belonged to the John Ward, vicar, who kept the diary. It turns out, however, to have been the property of John Ward the actor, who was in Stratford in 1740, was an enthusiast in the revival of Shakespeare, and played Hamlet there in order to raise money to repair the bust of the poet in the church. This folio has the appearance of being much used. On the fly-leaf is writing by Ward and his signature; there are marginal notes and directions in his hand, and several of the pages from which parts were torn off have been repaired by manuscript text neatly joined.

The Shakespeare signature is pasted on the leaf above Ward's name. The paper on which it is written is unlike that of the book in texture. The slip was pasted on when the leaf was not as brown as it is now, as can be seen at one end where it is lifted. The signature is written out fairly and in full, *William Shakspeare*, like the one to the will, and differs from the two others, which are hasty scrawls, as if the writer were cramped for room, or finished off the last syllable with a flourish, indifferent to the formation of the letters. I had the opportunity to compare it with a careful tracing of the signature to the will sent over by Mr. Hallowell-Phillips. At first sight the two signatures appear to be identical; but on examination they are not; there is just that difference in the strokes, spaces, and formation of the letters that always appears in two signatures by the same hand. One is not a copy of the other, and the one in the folio had to me the unmistakable stamp of genuineness. The experts in handwriting and the micro-scopists in this country who have examined ink and paper as to antiquity, I understand, regard it as genuine.

There seems to be all along the line no reason to suspect forgery. What more natural than that John Ward, the owner of the book, and a Shakespeare enthusiast, should have enriched his beloved volume with an autograph which he found somewhere in Stratford? And in 1740 there was no craze or controversy about Shakespeare to make the forgery of his autograph an object. And there is no suspicion that the book has been doctored for a market. It never was sold for a price. It was found in Utah, whither it had drifted from England in the possession of an emigrant, and he readily gave it in exchange for a new and fresh edition of Shakespeare's works.

I have dwelt upon this collection at some length, first because of its intrinsic value, second because of its

importance to Chicago as a nucleus for what (I hope in connection with the Newberry Library) will become one of the most interesting museums in the country, and lastly as an illustration of what a Western business man may do with his money.

New York is the first and Chicago the second base of operations on this continent—the second in point of departure, I will not say for another civilization, but for a great civilizing and conquering movement, at once a reservoir and distributing point of energy, power, and money. And precisely here is to be fought out and settled some of the most important problems concerning labor, supply, and transportation. Striking as are the operations of merchants, manufacturers, and traders, nothing in the city makes a greater appeal to the imagination than the railways that centre there, whether we consider their fifty thousand miles of track, the enormous investment in them, or their competition for the carrying trade of the vast regions they pierce, and apparently compel to be tributary to the central city. The story of their building would read like a romance, and a simple statement of their organization, management, and business rivals the affairs of an empire. The present development of a belt road round the city, to serve as a track of freight exchange for all the lines, like the transfer grounds between St. Paul and Minneapolis, is found to be an affair of great magnitude, as must needs be to accommodate lines of traffic that represent an investment in stock and bonds of \$1,305,000,000.

As it is not my purpose to describe the railway systems of the West, but only to speak of some of the problems involved in them, it will suffice to mention two of the leading corporations. Passing by the great eastern lines, and those like the Illinois Central, and the Chicago, Alton, and St. Louis, and the Atchison, Topeka, and Santa Fé, which are operating mainly to the south and south-west, and the Chicago, Milwaukee, and St. Paul, one of the greatest corporations, with a mileage which had reached 4921, December 1, 1885, and has increased since, we may name the Chicago and North-western, and the Chicago, Burlington, and Quincy. Each of these great systems, which has grown by accretion and extension and consolidations of small roads, operates over four thousand miles of road, leaving out from the North-western's mileage that of the Omaha system, which it controls. Looked at on the map, each of these systems completely occupies a vast territory, the one mainly to the north of the other, but they interlace to some extent and parallel each other in very important competitions.

The North-western system, which includes, besides the lines that have its name, the St. Paul, Minneapolis, and Omaha, the Fremont; Elkhorn, and Missouri Valley, and several minor roads, occupies northern Illinois and southern Wisconsin, sends a line along Lake Michigan to Lake Superior, with branches, a line to St. Paul, with branches tapping Lake Superior again at Bayfield and Duluth, sends another trunk line, with branches, into the far fields of Dakota, drops down a tangle of lines through Iowa and into Nebraska, sends another great line through northern Nebraska into Wyoming, with a divergence into the Black Hills, and runs all these feeders into Chicago by another trunk line from Omaha. By the report of 1887 the gross earnings of this system (in round numbers) were over twenty-six millions, expenses over twenty millions, leaving a net income of over six million dollars. In these items the receipts for freight were over nineteen millions, and from passengers less than six millions. Not to enter into confusing details, the magnitude of the system is shown in the general balance-sheet for May, 1887, when the cost of road (4101 miles), the sinking funds, the general assets, and the operating assets foot up \$176,048,000. Over 3500 miles of this road are laid with steel rails; the equipment required 735 engines and over 23,000 cars of all sorts. It is worthy of note that a table makes the net earnings of 4000 miles of road, 1887, only a little more than those of 3000 miles of road in 1882—a greater gain evidently to the public than to the railroad.

In speaking of this system territorially, I have included the Chicago, St. Paul, Minneapolis, and Omaha, but not in the above figures. The two systems have the same president, but different general managers and other officials, and the reports are separate. To the over 4000 miles of the other North-western lines, therefore, are to be added the 1360 miles of the Omaha system (report of December, 1886, since considerably increased). The balance-sheet of the Omaha system (December, 1886) shows a cost of over fifty-seven millions. Its total net earnings over operating expenses and taxes were about \$2,304,000. It then required an equipment of 194 locomotives and about 6000 cars. These figures are not, of course, given for specific railroad information, but merely to give a general idea of the magnitude of operations. This may be illustrated by another item. During the year for which the above figures have been given the entire North-western system ran on the average 415 passenger and 732 freight trains each day through the year. It may also be an interesting comparison to say that all the railways in Connecticut, including those that run into other States, have 416 locomotives, 668 passenger cars, and 11,502 other cars, and that their total mileage in the State is 1405 miles.

The Chicago, Burlington, and Quincy (report of December, 1886) was operating 4036 miles of road. Its only eccentric development was the recent Burlington and Northern, up the Mississippi River to St. Paul. Its main stem from Chicago branches out over northern and western Illinois, runs down to St. Louis, from thence to Kansas City by way of Hannibal, has a trunk line to Omaha, criss-crosses northern Missouri and southern Iowa, skirts and pierces Kansas, and fairly occupies three-quarters of Nebraska with a network of tracks, sending out lines north of the Platte, and one to Cheyenne and one to Denver. The whole amount of stock and bonds, December, 1886, was reported at \$155,920,000. The gross earnings for 1886 were over twenty-six millions (over nineteen of which was for freight and over five for passengers), operating expenses over fourteen millions, leaving over twelve millions net earnings. The system that year paid eight per cent, dividends (as it had done for a long series of years), leaving over fixed charges and dividends about a million and a half to be carried to surplus or construction outlays. The equipment for the year required 619 engines and over 24,000 cars. These figures do not give the exact present condition of the road, but only indicate the magnitude of its affairs.

Both these great systems have been well managed, and both have been, and continue to be, great agents in developing the West. Both have been profitable to investors. The comparatively small cost of building roads in the West and the profit hitherto have invited capital, and stimulated the construction of roads not absolutely needed. There are too many miles of road for capitalists. Are there too many for the accommodation of the public? What locality would be willing to surrender its road?

It is difficult to understand the attitude of the Western Granger and the Western Legislatures towards the railways, or it would be if we didn't understand pretty well the nature of demagogues the world over. The

people are everywhere crazy for roads, for more and more roads. The whole West we are considering is made by railways. Without them the larger part of it would be uninhabitable, the lands of small value, produce useless for want of a market. No railways, no civilization. Year by year settlements have increased in all regions touched by railways, land has risen in price, and freight charges have diminished. And yet no sooner do the people get the railways near them than they become hostile to the companies; hostility to railway corporations seems to be the dominant sentiment in the Western mind, and the one most naturally invoked by any political demagogue who wants to climb up higher in elective office. The roads are denounced as "monopolies"—a word getting to be applied to any private persons who are successful in business—and their consolidation is regarded as a standing menace to society.

Of course it goes without saying that great corporations with exceptional privileges are apt to be arrogant, unjust, and grasping, and especially when, as in the case of railways, they unite private interests and public functions, they need the restraint of law and careful limitations of powers. But the Western situation is nevertheless a very curious one. Naturally when capital takes great risks it is entitled to proportionate profits; but profits always encourage competition, and the great Western lines are already in a war for existence that does not need much unfriendly legislation to make fatal. In fact, the lowering of rates in railway wars has gone on so rapidly of late years that the most active Granger Legislature cannot frame hostile bills fast enough to keep pace with it. Consolidation is objected to. Yet this consideration must not be lost sight of: the West is cut up by local roads that could not be maintained; they would not pay running expenses if they had not been made parts of a great system. Whatever may be the danger of the consolidation system, the country has doubtless benefited by it.

The present tendency of legislation, pushed to its logical conclusion, is towards a practical confiscation of railway property; that is, its tendency is to so interfere with management, so restrict freedom of arrangement, so reduce rates, that the companies will with difficulty continue operations. The first effect of this will be, necessarily, poorer service and deteriorated equipments and tracks. Roads that do not prosper cannot keep up safe lines. Experienced travellers usually shun those that are in the hands of a receiver. The Western roads of which I speak have been noted for their excellent service and the liberality towards the public in accommodations, especially in fine cars and matters pertaining to the comfort of passengers. Some dining cars on the Omaha system were maintained last year at a cost to the company of ten thousand dollars over receipts. The Western Legislatures assume that because a railway which is thickly strung with cities can carry passengers for two cents a mile, a railway running over an almost unsettled plain can carry for the same price. They assume also that because railway companies in a foolish fight for business cut rates, the lowest rate they touch is a living one for them. The same logic that induces Legislatures to fix rates of transportation, directly or by means of a commission, would lead it to set a price on meat, wheat, and groceries. Legislative restriction is one thing; legislative destruction is another. There is a craze of prohibition and interference. Iowa has an attack of it. In Nebraska, not only the Legislature but the courts have been so hostile to railway enterprise that one hundred and fifty miles of new road graded last year, which was to receive its rails this spring, will not be railed, because it is not safe for the company to make further investments in that State. Between the Grangers on the one side and the labor unions on the other, the railways are in a tight place. Whatever restrictions great corporations may need, the sort of attack now made on them in the West is altogether irrational. Is it always made from public motives? The legislators of one Western State had been accustomed to receive from the various lines that centred at the capital trip passes, in addition to their personal annual passes. Trip passes are passes that the members can send to their relations, friends, and political allies who want to visit the capital. One year the several roads agreed that they would not issue trip passes. When the members asked the agent for them they were told that they were not ready. As days passed and no trip passes were ready, hostile and annoying bills began to be introduced into the Legislature. In six weeks there was a shower of them. The roads yielded, and began to give out the passes. After that, nothing more was heard of the bills.

What the public have a right to complain of is the manipulation of railways in Wall Street gambling. But this does not account for the hostility to the corporations which are developing the West by an extraordinary outlay of money, and cutting their own throats by a war of rates. The vast interests at stake, and the ignorance of the relation of legislation to the laws of business, make the railway problem to a spectator in Chicago one of absorbing interest.

In a thorough discussion of all interests it must be admitted that the railways have brought many of their troubles upon themselves by their greedy wars with each other, and perhaps in some cases by teaching Legislatures that have bettered their instructions, and that tyrannies in management and unjust discriminations (such as the Inter-State Commerce Law was meant to stop) have much to do in provoking hostility that survives many of its causes.

I cannot leave Chicago without a word concerning the town of Pullman, although it has already been fully studied in the pages of Harper's Monthly. It is one of the most interesting experiments in the world. As it is only a little over seven years old, it would be idle to prophesy about it, and I can only say that thus far many of the predictions as to the effect of "paternalism" have not come true. If it shall turn out that its only valuable result is an "object lesson" in decent and orderly living, the experiment will not have been in vain. It is to be remembered that it is not a philanthropic scheme, but a purely business operation, conducted on the idea that comfort, cleanliness, and agreeable surroundings conduce more to the prosperity of labor and of capital than the opposites.

Pullman is the only city in existence built from the foundation on scientific and sanitary principles, and not more or less the result of accident and variety of purpose and incapacity. Before anything else was done on the flat prairie, perfect drainage, sewerage, and water supply were provided. The shops, the houses, the public buildings, the parks, the streets, the recreation grounds, then followed in intelligent creation. Its public buildings are fine, and the grouping of them about the open flower-planted spaces is very effective. It is a handsome city, with the single drawback of monotony in the well-built houses. Pullman is within the limits of the village of Hyde Park, but it is not included in the annexation of the latter to Chicago.

It is certainly a pleasing industrial city. The workshops are spacious, light, and well ventilated, perfectly

systematized; for instance, timber goes into one end of the long car-shop and, without turning back, comes out a freight car at the other, the capacity of the shop being one freight car every fifteen minutes of the working hours. There are a variety of industries, which employ about 4500 workmen. Of these about 500 live outside the city, and there are about 1000 workmen who live in the city and work elsewhere. The company keeps in order the streets, parks, lawns, and shade trees, but nothing else except the schools is free. The schools are excellent, and there are over 1300 children enrolled in them. The company has a well-selected library of over 6000 volumes, containing many scientific and art books, which is open to all residents on payment of an annual subscription of three dollars. Its use increases yearly, and study classes are formed in connection with it. The company rents shops to dealers, but it carries on none of its own. Wages are paid to employes without deduction, except as to rent, and the women appreciate a provision that secures them a home beyond peradventure.

The competition among dealers brings prices to the Chicago rates, or lower, and then the great city is easily accessible for shopping. House rent is a little higher for ordinary workmen than in Chicago, but not higher in proportion to accommodations, and living is reckoned a little cheaper. The reports show that the earnings of operatives exceed those of other working communities, averaging per capita (exclusive of the higher pay of the general management) \$590 a year. I noticed that piece-wages were generally paid, and always when possible. The town is a hive of busy workers; employment is furnished to all classes except the school-children, and the fine moral and physical appearance of the young women in the upholstery and other work rooms would please a philanthropist.

Both the health and the *morale* of the town are exceptional; and the moral tone of the workmen has constantly improved under the agreeable surroundings. Those who prefer the kind of independence that gives them filthy homes and demoralizing associations seem to like to live elsewhere. Pullman has a population of 10,000. I do not know another city of 10,000 that has not a place where liquor is sold, nor a house nor a professional woman of ill repute. With the restrictions as to decent living, the community is free in its political action, its church and other societies, and in all healthful social activity. It has several ministers; it seems to require the services of only one or two policemen; it supports four doctors and one lawyer.

I know that any control, any interference with individual responsibility, is un-American. Our theory is that every person knows what is best for himself. It is not true, but it may be safer, in working out all the social problems, than any lessening of responsibility either in the home or in civil affairs. When I contrast the dirty tenements, with contiguous seductions to vice and idleness, in some parts of Chicago, with the homes of Pullman, I am glad that this experiment has been made. It may be worth some sacrifice to teach people that it is better for them, morally and pecuniarily, to live cleanly and under educational influences that increase their self-respect. No doubt it is best that people should own their homes, and that they should assume all the responsibilities of citizenship. But let us wait the full evolution of the Pullman idea. The town could not have been built as an object lesson in any other way than it was built. The hope is that laboring people will voluntarily do hereafter what they have here been induced to accept. The model city stands there as a lesson, the wonderful creation of less than eight years. The company is now preparing to sell lots on the west side of the railway-tracks, and we shall see what influence this nucleus of order, cleanliness, and system will have upon the larger community rapidly gathering about it. Of course people should be free to go up or go down. Will they be injured by the opportunity of seeing how much pleasanter it is to go up than to go down?

XI.—THREE CAPITALS—SPRINGFIELD, INDIANAPOLIS, COLUMBUS.

To one travelling over this vast country, especially the northern and western portions, the superficial impression made is that of uniformity, and even monotony: towns are alike, cities have a general resemblance, State lines are not recognized, and the idea of conformity and centralization is easily entertained. Similar institutions, facility of communication, a disposition to stronger nationality, we say, are rapidly fusing us into one federal mass.

But when we study a State at its centre, its political action, its organization, its spirit, the management of its institutions of learning and of charity, the tendencies, restrictive or liberal, of its legislation, even the tone of social life and the code of manners, we discover distinctions, individualities, almost as many differences as resemblances. And we see—the saving truth in our national life—that each State is a well-nigh indestructible entity, an empire in itself, proud and conscious of its peculiarities, and jealous of its rights. We see that State boundaries are not imaginary lines, made by the geographers, which could be easily altered by the central power. Nothing, indeed, in our whole national development, considering the common influences that have made us, is so remarkable as the difference of the several States. Even on the lines of a common settlement, say from New England and New York, note the differences between northern Ohio, northern Indiana, northern Illinois, Wisconsin, and Minnesota. Or take another line, and see the differences between southern Ohio, southern Indiana, southern Illinois, and northern Missouri. But each State, with its diverse population, has a certain homogeneity and character of its own. We can understand this where there are great differences of climate, or when one is mountainous and the other flat. But why should Indiana be so totally unlike the two States that flank it, in so many of the developments of civilized life or in retarded action; and

why should Iowa, in its entire temper and spirit, be so unlike Illinois? One State copies the institutions of another, but there is always something in its life that it does not copy from any other. And the perpetuity of the Union rests upon the separateness and integrity of this State life. I confess that I am not so much impressed by the magnitude of our country as I am by the wonderful system of our complex government in unity, which permits the freest development of human nature, and the most perfect adaptability to local conditions. I can conceive of no greater enemy to the Union than he who would by any attempt at further centralization weaken the self-dependence, pride, and dignity of a single State. It seems to me that one travels in vain over the United States if he does not learn that lesson.

The State of Illinois is geographically much favored both for agriculture and commerce. With access to the Gulf by two great rivers that bound it on two sides, and communicating with the Atlantic by Lake Michigan, enterprise has aided these commercial advantages by covering it with railways. Stretching from Galena to Cairo, it has a great variety of climate; it is well watered by many noble streams, and contains in its great area scarcely any waste land. It has its contrasts of civilization. In the northern half are the thriving cities; the extreme southern portion, owing in part to a more debilitating, less wholesome climate, and in part to a less virile, ambitious population, still keeps its "Egyptian" reputation. But the railways have already made a great change in southern Illinois, and education is transforming it. The establishment of a normal school at Carbondale in 1874-75 has changed the aspect of a great region. I am told by the State Superintendent of Education that the contrast in dress, manners, cultivation, of the country crowd which came to witness the dedication of the first building, and those who came to see the inauguration of the new school, twelve years later, was something astonishing.

Passing through the central portion of the State to Springfield, after an interval of many years, let us say a generation, I was impressed with the transformation the country had undergone by tree-planting and the growth of considerable patches of forest. The State is generally prosperous. The farmers have money, some surplus to spend in luxuries, in the education of their children, in musical instruments, in the adornment of their homes. This is the universal report of the commercial travellers, those modern couriers of business and information, who run in swarms to and fro over the whole land. To them it is significant—their opinion can go for what it is worth—that Illinois has not tried the restrictive and prohibitory legislation of its western neighbor, Iowa, which, with its rolling prairies and park-like timber, loved in the season of birds and flowers, is one of the most fertile and lovely States in the West.

Springfield, which spreads its 30,000 people extensively over a plain on the Sangamon River, is prosperous, and in the season when any place can be agreeable, a beautiful city. The elm grows well in the rich soil, and its many broad, well-shaded streets, with pretty detached houses and lawns, make it very attractive, a delightful rural capital. The large Illinois towns are slowly lifting themselves out of the slough of rich streets, better adapted to crops than to trade; though good material for pavement is nowhere abundant. Springfield has recently improved its condition by paving, mostly with cedar blocks, twenty-five miles of streets. I notice that in some of the Western towns tile pavement is being tried. Manufacturing is increasing—there is a prosperous rolling-mill and a successful watch factory—but the overwhelming interest of the city is that it is the centre of the political and educational institutions—of the life emanating from the State-house.

The State-house is, I believe, famous. It is a big building, a great deal has been spent on it in the way of ornamentation, and it enjoys the distinction of the highest State-house dome in the country—350 feet. It has the merit also of being well placed on an elevation, and its rooms are spacious and very well planned. It is an incongruous pile externally, mixing many styles of architecture, placing Corinthian capitals on Doric columns, and generally losing the impression of a dignified mass in details. Within, it is especially rich in wall-casings of beautiful and variegated marbles, each panel exquisite, but all together tending to dissipate any idea of unity of design or simplicity. Nothing whatever can be said for many of the scenes in relief, or the mural paintings (except that they illustrate the history of the State), nor for most of the statues in the corridors, but the decoration of the chief rooms, in mingling of colors and material, is frankly barbarous.

Illinois has the reputation of being slow in matters of education and reform. A day in the State offices, however, will give the visitor an impression of intelligence and vigor in these directions. The office of the State Board of Pharmacy in the Capitol shows a strict enforcement of the law in the supervision of drugs and druggists. Prison management has also most intelligent consideration. The two great penitentiaries, the Southern, at Chester (with about 800 convicts), and the Northern, at Joliet (with about 1600 convicts), call for no special comment. The one at Joliet is a model of its kind, with a large library, and such schooling as is practicable in the system, and is well administered; and I am glad to see that Mr. McClaughry, the warden, believes that incorrigibles should be permanently held, and that grading, the discipline of labor and education, with a parole system, can make law-abiding citizens of many convicts.

In school education the State is certainly not supine in efforts. Out of a State population of about 8,500,000, there were, in 1887, 1,627,841 under twenty-one years, and 1,096,464 between the ages of six and twenty-one. The school age for free attendance is from six to twenty-one; for compulsory attendance, from eight to fourteen. There were 749,994 children enrolled, and 500,197 in daily attendance. Those enrolled in private schools numbered 87,725. There were 2258 teachers in private schools, and 22,925 in public schools; of this latter, 7402 were men and 15,403 women. The average monthly salary of men was \$51.48, and of women \$42.17. The sum available for school purposes in 1887 was \$12,890,515, in an assessed value of taxable property of \$797,752,888. These figures are from Dr. X. W. Edwards, Superintendent of Public Instruction, whose energy is felt in every part of the State.

The State prides itself on its institutions of charity. I saw some of them at Jacksonville, an hour's ride west of Springfield. Jacksonville is a very pretty city of some 15,000, with elm-shaded avenues that crest but do not rival New Haven—one of those intellectual centres that are a continual surprise to our English friends in their bewildered exploration of our monotonous land. In being the Western centre of Platonic philosophy, it is more like Concord than like New Haven. It is the home of a large number of people who have travelled, who give intelligent attention to art, to literary study in small societies and clubs—its Monday Evening Club of men long antedated most of the similar institutions at the East—and to social problems. I certainly did not expect to find, as I did, water-colors by Turner in Jacksonville, besides many other evidences of a culture that must

modify many Eastern ideas of what the West is and is getting to be.

The Illinois College is at Jacksonville. It is one of twenty-five small colleges in the State, and I believe the only one that adheres to the old curriculum, and does not adopt co-education. It has about sixty students in the college proper, and about one hundred and thirty in the preparatory academy. Most of the Illinois colleges have preparatory departments, and so long as they do, and the various sects scatter their energies among so many institutions, the youth of the State who wish a higher education will be obliged to go East. The school perhaps the most vigorous just now is the University of Illinois, at Urbana, a school of agriculture and applied science mainly. The Central Hospital for the Insane (one of three in the State), under the superintendence of Dr. Henry F. Carriel, is a fine establishment, a model of neatness and good management, with over nine hundred patients, about a third of whom do some light work on the farm or in the house. A large conservatory of plants and flowers is rightly regarded as a remedial agency in the treatment of the patients. Here also is a fine school for the education of the blind.

The Institution for the Education of Deaf-Mutes, Dr. Philip H. Gillette, superintendent, is, I believe, the largest in the world, and certainly one of the most thoroughly equipped and successful in its purposes. It has between five hundred and six hundred pupils. All the departments found in many other institutions are united here. The school has a manual training department; articulation is taught; the art school exhibits surprising results in aptitude for both drawing and painting; and industries are taught to the extent of giving every pupil a trade or some means of support—shoemaking, cabinet-making, printing, sewing, gardening, and baking.

Such an institution as this raises many interesting questions. It is at once evident that the loss of the sense of hearing has an effect on character, moral and intellectual. Whatever may be the education of the deaf-mute, he will remain, in some essential and not easily to be characterized respects, different from other people. It is exceedingly hard to cultivate in them a spirit of self-dependence, or eradicate the notion that society owes them perpetual care and support. The education of deaf-mutes, and the teaching them trades, so that they become intelligent and productive members of society, of course induce marriages among them. Is not this calculated to increase the number of deaf-mutes? Dr. Gillette thinks not. The vital statistics show that consanguineous marriages are a large factor in deaf-muteism; about ten per cent., it is estimated, of the deaf-mutes are the offspring of parents related by blood. Ancestral defects are not always perpetuated in kind; they may descend in physical deformity, in deafness, in imbecility. Deafness is more apt to descend in collateral branches than in a straight line. It is a striking fact in a table of relationships prepared by Dr. Gillette that, while the 450 deaf-mutes enumerated had 770 relationships to other deaf-mutes, making a total of 1220, only twelve of them had deaf-mute parents, and only two of them one deaf-mute parent, the mother of these having been able to hear, and that in no case was the mother alone a deaf-mute. Of the pupils who have left this institution, 251 have married deaf-mutes, and 19 hearing persons. These marriages have been as fruitful as the average, and among them all only sixteen have deaf-mute children; in some of the families having a deaf child there are other children who hear. These facts, says the report, clearly indicate that the probability of deaf offspring from deaf parentage is remote, while other facts may clearly indicate that a deaf person probably has or will have a deaf relation other than a child.

Springfield is old enough to have a historic flavor and social traditions; perhaps it might be called a Kentucky flavor, so largely did settlers from Kentucky determine it. There was a leisurely element in it, and it produced a large number of men prominent in politics and in the law, and women celebrated for beauty and spirit. It was a hospitable society, with a certain tone of "family" that distinguished it from other frontier places, a great liking for the telling of racy stories, and a hearty enjoyment of life. The State has provided a Gubernatorial residence which is at once spacious and pleasant, and is a mansion, with its present occupants, typical in a way of the old regime and of modern culture.

To the country at large Springfield is distinguished as the home of Abraham Lincoln to an extent perhaps not fully realized by the residents of the growing capital, with its ever new interests. And I was perhaps unreasonably disappointed in not finding that sense of his personality that I expected. It is, indeed, emphasized by statues in the Capitol and by the great mausoleum in the cemetery—an imposing structure, with an excellent statue in bronze, and four groups, relating to the civil war, of uncommon merit. But this great monumental show does not satisfy the personal longing of which I speak. Nor is the Lincoln residence much more satisfactory in this respect. The plain two-story wooden house has been presented to the State by his son Robert, and is in charge of a custodian. And although the parlor is made a show-room and full of memorials, there is no atmosphere of the man about it. On Lincoln's departure for Washington the furniture was sold and the house rented, never to be again occupied by him. There is here nothing of that personal presence that clings to the Hermitage, to Marshfield, to Mount Vernon, to Monticello. Lincoln was given to the nation, and—a frequent occurrence in our uprooting business life—the home disappeared. Lincoln was honored and beloved in Springfield as a man, but perhaps some of the feeling towards him as a party leader still lingers, although it has disappeared almost everywhere else in the country. Nowhere else was the personal partisanship hotter than in this city, and it is hardly to be expected that political foes in this generation should quite comprehend the elevation of Lincoln, in the consenting opinion of the world, among the greatest characters of all ages. It has happened to Lincoln that every year and a more intimate knowledge of his character have added to his fame and to the appreciation of his moral grandeur. There is a natural desire to go to some spot pre-eminently sacred to his personality. This may be his birthplace. At any rate, it is likely that before many years Kentucky will be proud to distinguish in some way the spot where the life began of the most illustrious man born in its borders.

When we come to the capital of Indiana we have, in official language, to report progress. One reason assigned for the passing of emigrants through Indiana to Illinois was that the latter was a prairie country, more easily subdued than the more wooded region of Indiana. But it is also true that the sluggish, illiterate character of its early occupants turned aside the stream of Western emigration from its borders. There has been a great deal of philosophic speculation upon the acknowledged backwardness of civilization in Indiana, its slow development in institutions of education, and its slow change in rural life, compared with its sister States. But this concerns us less now than the awakening which is visible at the capital and in some of the northern towns. The forests of hard timber which were an early disadvantage are now an important element

in the State industry and wealth. Recent developments of coal-fields and the discovery of natural gas have given an impetus to manufacturing, which will powerfully stimulate agriculture and traffic, and open a new career to the State.

Indianapolis, which stood still for some years in a reaction from real-estate speculation, is now a rapidly improving city, with a population of about 125,000. It is on the natural highway of the old National Turnpike, and its central location in the State, in the midst of a rich agricultural district, has made it the centre of fifteen railway lines, and of active freight and passenger traffic. These lines are all connected for freight purposes by a belt road, over which pass about 5000 freight cars daily. This belt road also does an enormous business for the stock-yards, and its convenient line is rapidly filling up with manufacturing establishments. As a consequence of these facilities the trade of the city in both wholesale and retail houses is good and increasing. With this increase of business there has been an accession of banking capital. The four national and two private banks have an aggregate capital of about three millions, and the Clearing-house report of 1887 showed a business of about one hundred millions, an increase of nearly fifty per cent, over the preceding year. But the individual prosperity is largely due to the building and loan associations, of which there are nearly one hundred, with an aggregate capital of seven millions, the loans of which exceed those of the banks. These take the place of savings-banks, encourage the purchase of homesteads, and are preventives of strikes and labor troubles in the factories.

The people of Indianapolis call their town a Park City. Occupying a level plain, its streets (the principal ones with a noble width of ninety feet) intersect each other at right angles; but in the centre of the city is a Circle Park of several acres, from which radiate to the four quarters of the town avenues ninety feet broad that relieve the monotony of the right lines. These streets are for the most part well shaded, and getting to be well paved, lined with pleasant but not ambitious residences, so that the whole aspect of the city is open and agreeable. The best residences are within a few squares of the most active business streets, and if the city has not the distinction of palaces, it has fewer poor and shabby quarters than most other towns of its size. In the Circle Park, Here now stands a statue of Governor Morton, is to be erected immediately the Soldiers' Monument, at a cost of \$250,000.

The city is fortunate in its public buildings. The County Court-house (which cost \$1,000,000) and City Hall are both fine buildings; in the latter are the city markets, and above, a noble auditorium with seats for 4000 people. But the State Capitol, just finished within the appropriation of \$2,000,000, is pre-eminent among State Capitols in many respects. It is built of the Bedford limestone, one of the best materials both for color and endurance found in the country. It follows the American plan of two wings and a dome; but it is finely proportioned; and the exterior, with rows of graceful Corinthian columns above the basement story, is altogether pleasing. The interior is spacious and impressive, the Chambers fine, the furnishing solid and in good taste, with nowhere any over-ornamentation or petty details to mar the general noble effect. The State Library contains, besides the law-books, about 20,000 miscellaneous volumes.

When Matthew Arnold first came to New York the place in the West about which he expressed the most curiosity was Indianapolis; that he said he must see, if no other city. He had no knowledge of the place, and could give no reason for his preference except that the name had always had a fascination for him. He found there, however, a very extensive book-store, where his own works were sold in numbers that pleased and surprised him. The shop has a large miscellaneous stock, and does a large jobbing and retail business, but the miscellaneous books dealt in are mostly cheap reprints of English works, with very few American copyright books. This is a significant comment on the languishing state of the market for works of American authors in the absence of an international copyright law.

The city is not behind any other in educational efforts. In its five free public libraries are over 70,000 volumes. The city has a hundred churches and a vigorous Young Men's Christian Association, which cost \$75,000. Its private schools have an excellent reputation. There are 20,000 children registered of school age, and 11,000 in daily attendance in twenty-eight free-school houses. In methods of efficacy these are equal to any in the Union, as is shown by the fact that there are reported in the city only 325 persons between the ages of six and twenty-one unable to read and write. The average cost of instruction for each pupil is \$19.04 a year. In regard to advanced methods and manual training, Indianapolis schools claim to be pioneers.

The latest reports show educational activity in the State as well as in the capital. In 1880 the revenues expended in public schools were about \$5,000,000. The State supports the Indiana University at Bloomington, with about 300 students, the Agricultural College at Lafayette, with over 300, and a normal school at Terre Haute, with an attendance of about 500. There are, besides, seventeen private colleges and several other normal schools. In 1886 the number of school-children enrolled in the State was 500,000, of whom 340,000 were in daily attendance. To those familiar with Indiana these figures show a greatly increased interest in education.

Several of the State benevolent institutions are in Indianapolis: a hospital for the insane, which cost \$1,200,000, and accommodates 1000 patients; an asylum for the blind, which has 132 pupils; and a school for deaf-mutes which cost \$500,000, and has about 400 scholars. The novel institution, however, that I saw at Indianapolis is a reformatory for women and girls, controlled entirely by women. The board of trustees are women, the superintendent, physician, and keepers are women. In one building, but in separate departments, were the female convicts, 42 in number, several of them respectable-looking elderly women who had killed their husbands, and about 150 young girls. The convicts and the girls—who are committed for restraint and reform—never meet except in chapel, but it is more than doubtful if it is wise for the State to subject girls to even this sort of contiguity with convicts, and to the degradation of penitentiary suggestions. The establishment is very neat and well ordered and well administered. The work of the prison is done by the convicts, who are besides kept employed at sewing and in the laundry. The girls in the reformatory work half a day, and are in school the other half.

This experiment of the control of a State-prison by women is regarded as doubtful by some critics, who say that women will obey a man when they will not obey a woman. Female convicts, because they have fallen lower than men, or by reason of their more nervous organization, are commonly not so easily controlled as male convicts, and it is insisted that they indulge in less "tantrums" under male than under female authority.

This is denied by the superintendent of this prison, though she has incorrigible cases who can only be controlled by solitary confinement. She has daily religious exercises, Bible reading and exposition, and a Sunday-school; and she doubts if she could control the convicts without this religious influence. It not only has a daily quieting effect, but has resulted in several cases in "conversion." There are in the institution several girls and women of color, and I asked the superintendent if the white inmates exhibited any prejudice against them on account of their color. To my surprise, the answer was that the contrary is the case. The whites look up to the colored girls, and seem either to have a respect for them or to be fascinated by them. This surprising statement was supplemented by another, that the influence of the colored girls on the whites is not good; the white girl who seeks the company of the colored girl deteriorates, and the colored girl does not change.

Indianapolis, which is attractive by reason of a climate that avoids extremes, bases its manufacturing and its business prosperity upon the large coal-beds lying to the west and south of it, the splendid and very extensive quarries of Bedford limestone contiguous to the coal-fields, the abundant supply of various sorts of hard-wood for the making of furniture, and the recent discovery of natural gas. The gas-field region, which is said to be very much larger than any other in the country, lies to the north-west, and comes within eight miles of the city. Pipes are already laid to the city limits, and the whole heating and manufacturing of the city will soon be done by the gas. I saw this fuel in use in a large and successful pottery, where are made superior glazed and encaustic tiles, and nothing could be better for the purpose. The heat in the kilns is intense; it can be perfectly regulated; as fuel the gas is free from smoke and smut, and its cost is merely nominal. The excitement over this new agent is at present extraordinary. The field where it has been found is so extensive as to make the supply seem inexhaustible. It was first discovered in Indiana at Eaton, in Delaware County, in 1880. From January 1, 1887, to February, 1888, it is reported that 1000 wells were opened in the gas territory, and that 245 companies were organized for various manufactures, with an aggregate capital of \$25,000,000. Whatever the figures may be, there are the highest expectations of immense increase of manufactures in Indianapolis and in all the gas region. Of some effects of this revolution in fuel we may speak when we come to the gas wells of Ohio.

I had conceived of Columbus as a rural capital, pleasant and slow, rather a village than a city. I was surprised to find a city of 80,000 people, growing with a rapidity astonishing even for a Western town, with miles of prosperous business blocks (High Street is four miles long), and wide avenues of residences extending to suburban parks. Broad Street, with its four rows of trees and fine houses and beautiful lawns, is one of the handsomest avenues in the country, and it is only one of many that are attractive. The Capitol Square, with several good buildings about it, makes an agreeable centre of the city. Of the Capitol building not much is to be said. The exterior is not wholly bad, but it is surmounted by a truncated something that is neither a dome nor a revolving turret, and the interior is badly arranged for room, light, and ventilation. Space is wasted, and many of the rooms, among them the relic-room and the flag-room, are inconvenient and almost inaccessible. The best is the room of the Supreme Court, which has attached a large law library. The general State Library contains about 54,000 volumes, with a fair but not large proportion of Western history.

Columbus is a city of churches, of very fine public schools, of many clubs, literary and social, in which the intellectual element predominates, and of an intelligent, refined, and most hospitable society. Here one may study the educational and charitable institutions of the State, many of the more important of which are in the city, and also the politics. It was Ohio's hard fate to be for many years an "October State," and the battle-field and corruption-field of many outside influences. This no doubt demoralized the politics of the State, and lowered the tone of public morality. With the removal of the cause of this decline, I believe the tone is being raised. Recent trials for election frauds, and the rehabilitation of the Cincinnati police, show that a better spirit prevails.

Ohio is growing in wealth as it is in population, and is in many directions an ambitious and progressive State. Judged by its institutions of benevolence and of economies, it is a leading State. No other State provides more liberally for its unfortunates, in asylums for the insane, the blind, the deaf-mutes, the idiotic, the young waifs and strays, nor shows a more intelligent comprehension of the legitimate functions of a great commonwealth, in the creation of boards of education and of charities and of health, in a State inspection of workshops and factories, in establishing bureaus of meteorology and of forestry, a fish commission, and an agricultural experiment station. The State has thirty-four colleges and universities, a public-school system which has abolished distinctions of color, and which by the reports is as efficient as any in the Union. Cincinnati, the moral tone of which, the Ohio people say, is not fairly represented by its newspapers, is famous the world over for its cultivation in music and its progress in the fine and industrial arts. It would be possible for a State to have and be all this and yet rise in the general scale of civilization only to a splendid mediocrity, without the higher institutions of pure learning, and without a very high standard of public morality. Ohio is in no less danger of materialism, with all its diffused intelligence, than other States. There is a recognizable limit to what a diffused level of education, say in thirty-four colleges, can do for the higher life of a State. I heard an address in the Capitol by ex-President Hayes on the expediency of adding a manual-training school to the Ohio State University at Columbus. The comment of some of the legislators on it was that we have altogether too much book-learning; what we need is workshops in our schools and colleges. It seems to a stranger that whatever first-class industrial and technical schools Ohio needs, it needs more the higher education, and the teaching of philosophy, logic, and ethics. In 1886 Governor Foraker sent a special message to the Legislature pointing out the fact that notwithstanding the increase of wealth in the State, the revenue was inadequate to the expenditure, principally by reason of the undervaluation of taxable property (there being a yearly decline in the reported value of personal property), and a fraudulent evasion of taxes. There must have been a wide insensibility to the wrong of cheating the State to have produced this state of things, and one cannot but think that it went along with the low political tone before mentioned. Of course Ohio is not a solitary sinner among States in this evasion of duty, but she helps to point the moral that the higher life of a State needs a great deal of education that is neither commercial nor industrial nor simply philanthropic.

It is impossible and unnecessary for the purposes of this paper to speak of many of the public institutions of the State, even of those in the city. But educators everywhere may study with profit the management of the

public schools under the City Board of Education, of which Mr. R. W. Stevenson is superintendent. The High-school, of over 600 pupils, is especially to be commended. Manual training is not introduced into the schools, and the present better sentiment is against it; but its foundation, drawing, is thoroughly taught from the primaries up to the High-school, and the exhibits of the work of the schools of all grades in modelling, drawing, and form and color studies, which were made last year in New York and Chicago, gave these Columbus schools a very high rank in the country. Any visitor to them must be impressed with the intelligence of the methods employed, the apprehension of modern notions, and also the conservative spirit of common-sense.

The Ohio State University has an endowment from the State of over half a million dollars, and a source of ultimate wealth in its great farm and grounds, which must increase in value as the city extends. It is a very well equipped institution for the study of the natural sciences and agriculture, and might easily be built up into a university in all departments, worthy of the State. At present it has 335 students, of whom 150 are in the academic department, 41 in special practical courses, and 143 in the preparatory school. All the students are organized in companies, under an officer of the United States, for military discipline; the uniform, the drill, the lessons of order and obedience, are invaluable in the transforming of carriage and manners. The University has a museum of geology which ranks among the important ones of the country. It is a pity that a consolidation of other State institutions with this cannot be brought about.

The Ohio Penitentiary at Columbus is an old building, not in keeping with the modern notions of prison construction. In 1887 it had about 1300 convicts, some 100 less than in the preceding year. The management is subject to political changes, and its officers have to be taken from various parts of the State at the dictation of political workers. Under this system the best management is liable to be upset by an election. The special interest in the prison at this time was in the observation of the working of the Parole Law. Since the passage of the Act in May, 1885, 283 prisoners have been paroled, and while several of the convicts have been returned for a violation of parole, nearly the whole number are reported as law-abiding citizens. The managers are exceedingly pleased with the working of the law; it promotes good conduct in the prison, and reduces the number in confinement. The reduction of the number of convicts in 1887 from the former year was ascribed partially to the passage of the General Sentence Law in 1884, and the Habitual Crimes Act in 1885. The criminals dread these laws, the first because it gives no fixed time to build their hopes upon, but all depends upon their previous record and good conduct in prison, while the latter affects the incorrigible, who are careful to shun the State after being convicted twice, and avoid imprisonment for life. The success of these laws and the condition of the State finances delay the work on the Intermediate Prison, or Reformatory, begun at Mansfield. This Reformatory is intended for first offenders, and has the distinct purpose of prevention of further deterioration, and of reformation by means of the discipline of education and labor. The success of the tentative laws in this direction, as applied to the general prisons, is, in fact, a strong argument for the carrying out of the Mansfield scheme.

There cannot be a more interesting study of the "misfits" of humanity than that offered in the Institution for Feeble-minded Youth, under the superintendence of Dr. G. A. Doren. Here are 715 imbeciles in all stages of development from absolute mental and physical incapacity. There is scarcely a problem that exists in education, in the relation of the body and mind, in the inheritance of mental and physical traits, in regard to the responsibility for crime, in psychology or physiology, that is not here illustrated. It is the intention of the school to teach the idiot child some trade or occupation that will make him to some degree useful, and to carry him no further than the common branches in learning. The first impression, I think, made upon a visitor is the almost invariable physical deformity that attends imbecility—ill-proportioned, distorted bodies, dwarfed, misshapen gelatinoids, with bones that have no stiffness. The next impression is the preponderance of the animal nature, the persistence of the lower passions, and the absence of moral qualities in the general immaturity. And perhaps the next impression is of the extraordinary effect that physical training has in awakening the mind, and how soon the discipline of the institution creates the power of self-control. From almost blank imbecility and utter lack of self-restraint the majority of these children, as we saw them in their schoolrooms and workshops, exhibited a sense of order, of entire decency, and very considerable intelligence. It was demonstrated that most imbeciles are capable of acquiring the rudiments of an education and of learning some useful occupation. Some of the boys work on the farm, others learn trades. The boys in the shoe-shop were making shoes of excellent finish. The girls do plain sewing and house-work apparently almost as well as girls of their age outside. Two or three things that we saw may be mentioned to show the scope of the very able management and the capacities of the pupils. There was a drill of half a hundred boys and girls in the dumb-bell exercise, to music, under the leadership of a pupil, which in time, grace, and exact execution of complicated movements would have done credit to any school. The institution has two bands, one of brass and one of strings, which perform very well. The string band played for dancing in the large amusement hall. Several hundred children were on the floor dancing cotillions, and they went through the variety of changes not only in perfect time and decorum, but without any leader to call the figures. It would have been a remarkable performance for any children. There were many individual cases of great and deplorable interest. Cretins, it was formerly supposed, were only born in mountainous regions. There are three here born in Ohio. There were five imbeciles of what I should call the ape type, all of one Ohio family. Two of them were the boys exhibited some years ago by Barnum as the Aztec children—the last of an extinct race. He exhibited them as a boy and a girl. When they had grown a little too large to show as children, or the public curiosity was satisfied about the extinct race, he exhibited them as wild Australians.

The humanity of so training these imbeciles that they can have some enjoyment of life, and be occasionally of some use to their relations, is undeniable. But since the State makes this effort in the survival of the unfittest, it must go further and provide a permanent home for them. The girls who have learned to read and write and sew and do house-work, and are of decent appearance, as many of them are, are apt to marry when they leave the institution. Their offspring are invariably idiots. I saw in this school the children of mothers who had been trained here. It is no more the intention of the State to increase the number of imbeciles than it is the number of criminals. Many of our charitable and penal institutions at present do both.

I should like to approach the subject of Natural Gas in a proper spirit, but I have neither the imagination nor the rhetoric to do justice to the expectations formed of it. In the restrained language of one of the

inhabitants of Findlay, its people "have, caught the divine afflatus which came with the discovery of natural gas." If Findlay had only natural gas, "she would be the peer, if not the superior, of any municipality on earth;" but she has much more, "and in all things has no equal or superior between the oceans and the lakes and the gulf, and is marching on to the grandest destiny ever prepared for any people, in any land, or in any period, since the morning stars first sang together, and the flowers in the garden of Eden budded and blossomed for man." In fact, "this she has been doing in the past two years in the grandest and most satisfactory way, and that she will continue to progress is as certain as the stars that hold their midnight revel around the throne of Omnipotence."

Notwithstanding this guarded announcement, it is evident that the discovery of natural gas has begun a revolution in fuel, which will have permanent and far-reaching economic and social consequences, whether the supply of gas is limited or inexhaustible.

Those who have once used fuel in this form are not likely to return to the crude and wasteful heating by coal. All the cities and large towns west of the Alleghenies are made disagreeable by bituminous coal smoke. The extent of this annoyance and its detraction from the pleasure of daily living cannot be exaggerated. The atmosphere is more or less vitiated, and the sky obscured, houses, furniture, clothing, are dirty, and clean linen and clean hands and face are not expected. All this is changed where gas is used for fuel. The city becomes cheerful, and the people can see each other. But this is not all. One of the great burdens of our Northern life, fire building and replenishing, disappears, house-keeping is simplified, the expense of servants reduced, cleanliness restored. Add to this that in the gas regions the cost of fuel is merely nominal, and in towns distant some thirty or forty miles it is not half that of coal. It is easy to see that this revolution in fuel will make as great a change in social life as in manufacturing, and that all the change may not be agreeable. This natural gas is a very subtle fluid, somewhat difficult to control, though I have no doubt that invention will make it as safe in our houses as illuminating gas is. So far as I have seen its use, the heat from it is intense and withering. In a closed stove it is intolerable; in an open grate, with a simulated pile of hard coal or logs, it is better, but much less agreeable than soft coal or wood. It does not, as at present used, promote a good air in the room, and its intense dryness ruins the furniture. But its cheapness, convenience, and neatness will no doubt prevail; and we are entering upon a gas age, in which, for the sake of progress, we shall doubtless surrender something that will cause us to look back to the more primitive time with regret. If the gas-wells fail, artificial gas for fuel will doubtless be manufactured.

I went up to the gas-fields of northern Ohio in company with Prof. Edward Orton, the State Geologist, who has made a study of the subject, and pretty well defined the fields of Indiana and Ohio. The gas is found at a depth of between 1100 and 1200 feet, after passing through a great body of shale and encountering salt-water, in a porous Trenton limestone. The drilling and tubing enter this limestone several feet to get a good holding. This porous limestone holds the gas like a sponge, and it rushes forth with tremendous force when released. It is now well settled that these are reservoirs of gas that are tapped, and not sources of perpetual supply by constant manufacture. How large the supply may be in any case cannot be told, but there is a limit to it. It can be exhausted, like a vein of coal. But the fields are so large, both in Indiana and Ohio, that it seems probable that by sinking new wells the supply will be continued for a long time. The evidence that it is not inexhaustible in any one well is that in all in which the flow of gas has been tested at intervals the force of pressure is found to diminish. For months after the discovery the wells were allowed to run to waste, and billions of feet of gas were lost. A better economy now prevails, and this wastefulness is stopped. The wells are all under control, and large groups of them are connected by common service-pipes. The region about Fostoria is organized under the North-western Gas Company, and controls a large territory. It supplies the city of Toledo, which uses no other fuel, through pipes thirty miles long, Fremont, and other towns. The loss per mile in transit through the pipes is now known, so that the distance can be calculated at which it will pay to send it. I believe that this is about fifty to sixty miles. The gas when it comes from the well is about the temperature of 32° Fahr., and the common pressure is 400 pounds to the square inch. The velocity with which it rushes, unchecked, from the pipe at the mouth of the well may be said to be about that of a minie-ball from an ordinary rifle. The Ohio area of gas is between 2000 and 3000 square miles. The claim for the Indiana area is that it is 20,000 square miles, but the geologists make it much less.

The speculation in real estate caused by this discovery has been perhaps without parallel in the history of the State, and, as is usual in such cases, it is now in a lull, waiting for the promised developments. But these have been almost as marvellous as the speculation. Findlay was a sleepy little village in the black swamp district, one of the most backward regions of Ohio. For many years there had been surface indications of gas, and there is now a house standing in the city which used gas for fuel forty years ago. When the first gas-well was opened, ten years ago, the village had about 4500 inhabitants. It has now probably 15,000, it is a city, and its limits have been extended to cover an area six miles long by four miles wide. This is dotted over with hastily built houses, and is rapidly being occupied by manufacturing establishments. The city owns all the gas-wells, and supplies fuel to factories and private houses at the simple cost of maintaining the service-pipes. So rapid has been the growth and the demand for gas that there has not been time to put all the pipes underground, and they are encountered on the surface all over the region. The town is pervaded by the odor of the gas, which is like that of petroleum, and the traveller is notified of his nearness to the town by the smell before he can see the houses. The surface pipes, hastily laid, occasionally leak, and at these weak places the gas is generally ignited in order to prevent its tainting the atmosphere. This immediate neighborhood has an oil-field contiguous to the gas, plenty of limestone (the kilns are burned by gas), good building stone, clay fit for making bricks and tiles, and superior hard-wood forests. The cheap fuel has already attracted here manufacturing industries of all sorts, and new plants are continually made.

I have a list of over thirty different mills and factories which are either in full operation or getting under way. Among the most interesting of these are the works for making window-glass and table glass. The superiority of this fuel for the glass-furnaces seems to be admitted.

Although the wells about Findlay are under control, the tubing is anchored, and the awful force is held under by gates and levers of steel, it is impossible to escape a feeling of awe in this region at the subterranean energies which seem adequate to blow the whole country heavenward. Some of the wells were

opened for us. Opening a well is unscrewing the service-pipe and letting the full force of the gas issue from the pipe at the mouth of the well. When one of these wells is thus opened the whole town is aware of it by the roaring and the quaking of the air. The first one exhibited was in a field a mile and a half from the city. At the first freedom from the screws and clamps the gas rushed out in such density that it was visible. Although we stood several rods from it, the roar was so great that one could not make himself heard shouting in the ear of his neighbor. The geologist stuffed cotton in his ears and tied a shawl about his head, and, assisted by the chemist, stood close to the pipe to measure the flow. The chemist, who had not taken the precaution to protect himself, was quite deaf for some time after the experiment. A four-inch pipe, about sixty feet in length, was then screwed on, and the gas ignited as it issued from the end on the ground. The roaring was as before. For several feet from the end of the tube there was no flame, but beyond was a sea of fire sweeping the ground and rioting high in the air—billows of red and yellow and blue flame, fierce and hot enough to consume everything within reach. It was an awful display of power.

We had a like though only a momentary display at the famous Karg well, an eight-million-foot well. This could only be turned on for a few seconds at a time, for it is in connection with the general system. If the gas is turned off, the fires in houses and factories would go out, and if it were turned on again without notice, the rooms would be full of gas, and an explosion follow an attempt to relight it. This danger is now being removed by the invention of an automatic valve in the pipe supplying each fire, which will close and lock when the flow of gas ceases, and admit no more gas until it is opened. The ordinary pressure for house service is about two pounds to the square inch. The Karg well is on the bank of the creek, and the discharge-pipe through which the gas (though not in its full force) was turned for our astonishment extends over the water. The roar was like that of Niagara; all the town shakes when the Karg is loose. When lighted, billows of flame rolled over the water, brilliant in color and fantastic in form, with a fury and rage of conflagration enough to strike the spectator with terror. I have never seen any other display of natural force so impressive as this. When this flame issues from an upright pipe, the great mass of fire rises eighty feet into the air, leaping and twisting in fiendish fury. For six weeks after this well was first opened its constant roaring shook the nerves of the town, and by night its flaming torch lit up the heaven and banished darkness. With the aid of this new agent anything seems possible.

The feverishness of speculation will abate; many anticipations will not be realized. It will be discovered that there is a limit to manufacturing, even with fuel that costs next to nothing. The supply of natural gas no doubt has its defined limits. But nothing seems more certain to me than that gas, manufactured if not to be the fuel of the future in the West, and that the importance of this economic change in social life is greater than we can at present calculate.

XII.—CINCINNATI AND LOUISVILLE.

Cincinnati is a city that has a past. As Daniel Webster said, that at least is secure. Among the many places that have been and are the Athens of America, this was perhaps the first. As long ago as the first visit of Charles Dickens to this country it was distinguished as a town of refinement as well as cultivation; and the novelist, who saw little to admire, though much to interest him in our raw country, was captivated by this little village on the Ohio. It was already the centre of an independent intellectual life, and produced scholars, artists, writers, who subsequently went east instead of west. According to tradition, there seems to have been early a tendency to free thought, and a response to the movement which, for lack of a better name, was known in Massachusetts as transcendentalism.

The evolution of Cincinnati seems to have been a little peculiar in American life. It is a rich city, priding itself on the solidity of its individual fortunes and business, and the freedom of its real property from foreign mortgages. Usually in our development the pursuit of wealth comes first, and then all other things are added thereto, as we read the promise. In Cincinnati there seems to have been a very considerable cultivation first in time, and we have the spectacle of what wealth will do in the way of the sophistication and materialization of society. Ordinarily we have the process of an uncultivated community gradually working itself out into a more or less ornamented and artistic condition as it gets money. The reverse process we might see if the philosophic town of Concord, Massachusetts, should become the home of rich men engaged in commerce and manufacturing. I may be all wrong in my notion of Cincinnati, but there is a sort of tradition, a remaining flavor of old-time culture before the town became commercially so important as it was before the war.

It is difficult to think of Cincinnati as in Ohio. I cannot find their similarity of traits. Indeed, I think that generally in the State there is a feeling that it is an alien city; the general characteristics of the State do not flow into and culminate in Cincinnati as its metropolis. It has had somehow an independent life. If you look on a geologic map of the State, you see that the glacial drift, I believe it is called, which flowed over three-fourths of the State and took out its wrinkles did not advance into the south-west. And Cincinnati lies in the portion that was not smoothed into a kind of monotony. When a settlement was made here it was a good landing-place for trade up and down the river, and was probably not so much thought of as a distributing and receiving point for the interior north of it. Indeed, up to the time of the war, it looked to the South for its trade, and naturally, even when the line of war was drawn, a good deal of its sympathies lay in the direction of its trade. It had become a great city, and grown rich both in trade and manufactures, but in the decline of steamboating and in the era of railways there were physical difficulties in the way of adapting itself easily to

the new conditions. It was not easy to bring the railways down the irregular hills and to find room for them on the landing. The city itself had to contend with great natural obstacles to get adequate foothold, and its radiation over, around, and among the hills produced some novel features in business and in social life.

What Cincinnati would have been, with its early culture and its increasing wealth, if it had not become so largely German in its population, we can only conjecture. The German element was at once conservative as to improvements and liberalizing, as the phrase is, in theology and in life. Bituminous coal and the Germans combined to make a novel American city. When Dickens saw the place it was a compact, smiling little city, with a few country places on the hills. It is now a scattered city of country places, with a little nucleus of beclouded business streets. The traveller does not go there to see the city, but to visit the suburbs, climbing into them, out of the smoke and grime, by steam "inclines" and grip railways. The city is indeed difficult to see. When you are in it, by the river, you can see nothing; when you are outside of it you are in any one of half a dozen villages, in regions of parks and elegant residences, altogether charming and geographically confusing; and if from some commanding point you try to recover the city idea, you look down upon black roofs half hid in black smoke, through which the fires of factories gleam, and where the colored Ohio rolls majestically along under a dark canopy. Looked at in one way, the real Cincinnati is a German city, and you can only study its true character "Over the Rhine," and see it successfully through the bottom of an upturned beer glass. Looked at another way, it is mainly an affair of elegant suburbs, beautifully wooded hills, pleasure-grounds, and isolated institutions of art or charity. I am thankful that there is no obligation on me to depict it.

It would probably be described as a city of art rather than of theology, and one of rural homes rather than metropolitan society. Perhaps the German element has had something to do in giving it its musical character, and the early culture may have determined its set more towards art than religion. As the cloud of smoke became thicker and thicker in the old city those who disliked this gloom escaped out upon the hills in various directions. Many, of course, still cling to the solid ancestral houses in the city, but the country movement was so general that church-going became an affair of some difficulty, and I can imagine that the church-going habit was a little broken up while the new neighborhoods were forming on the hills and in the winding valleys, and before the new churches in the suburbs were erected. Congregations were scattered, and society itself was more or less disintegrated. Each suburb is fairly accessible from the centre of the city, either by a winding valley or by a bold climb up a precipice, but owing to the configuration of the ground, it is difficult to get from one suburb to another without returning to the centre and taking a fresh start. This geographical hinderance must necessarily interfere with social life, and tend to isolation of families, or to merely neighborhood association.

Although much yet remains to be done in the way of good roads, nature and art have combined to make the suburbs of the city wonderfully beautiful. The surface is most picturesquely broken, the forests are fine, from this point and that there are views pleasing, poetic, distant, perfectly satisfying in form and variety, and in advantageous situations taste has guided wealth in the construction of stately houses, having ample space in the midst of manorial parks. You are not out of sight of these fine places in any of the suburbs, and there are besides, in every direction, miles of streets of pleasing homes. I scarcely know whether to prefer Clifton, with its wide sweeping avenues rounding the hills, or the perhaps more commanding heights of Walnut, nearer the river, and overlooking Kentucky. On the East Walnut Hills is a private house worth going far to see for its color. It is built of broken limestone, the chance find of a quarry, making the richest walls I have anywhere seen, comparable to nothing else than the exquisite colors in the rocks of the Yellowstone Falls, as I recall them in Mr. Moran's original studies.

If the city itself could substitute gas fuel for its smutty coal, I fancy that, with its many solid homes and stately buildings, backed by the picturesque hills, it would be a city at once curious and attractive to the view. The visitor who ascends from the river as far as Fourth Street is surprised to find room for fair avenues, and many streets and buildings of mark. The Probasco fountain in another atmosphere would be a thing of beauty, for one may go far to find so many groups in bronze so good. The Post-office building is one of the best of the Mullet-headed era of our national architecture—so good generally that one wonders that the architect thought it expedient to destroy the effect of the monolith columns by cutting them to resemble superimposed blocks. A very remarkable building also is the new Chamber of Commerce structure, from Richardson's design, massive, mediæval, challenging attention, and compelling criticism to give way to genuine admiration. There are other buildings, public and private, that indicate a city of solid growth; and the activity of its strong Chamber of Commerce is a guarantee that its growth will be maintained with the enterprise common to American cities. The effort is to make manufacturing take the place in certain lines of business that, as in the item of pork-packing, has been diverted by various causes. Money and effort have been freely given to regain the Southern trade interrupted by the war, and I am forced to believe that the success in this respect would have been greater if some of the city newspapers had not thought it all-important to manufacture political capital by keeping alive old antagonisms and prejudices. Whatever people may say, sentiment does play a considerable part in business, and it is within the knowledge of the writer that prominent merchants in at least one Southern city have refused trade contracts that would have been advantageous to Cincinnati, on account of this exhibition of partisan spirit, as if the war were not over. Nothing would be more contemptible than to see a community selling its principles for trade; but it is true that men will trade, other things being equal, where they are met with friendly cordiality and toleration, and where there is a spirit of helpfulness instead of suspicion. Professional politicians, North and South, may be able to demonstrate to their satisfaction that they should have a chance to make a living, but they ask too much when this shall be at the expense of free-flowing trade, which is in itself the best solvent of any remaining alienation, and the surest disintegrator of the objectionable political solidity, and to the hinderance of that entire social and business good feeling which is of all things desirable and necessary in a restored and compacted Union. And it is as bad political as it is bad economic policy. As a matter of fact, the politicians of Kentucky are grateful to one or two Republican journals for aid in keeping their State "solid." It is a pity that the situation has its serious as well as its ridiculous aspect.

Cincinnati in many respects is more an Eastern than a Western town; it is developing its own life, and so far as I could see, without much infusion of young fortune-hunting blood from the East. It has attained its

population of about 275,000 by a slower growth than some other Western cities, and I notice in its statistical reports a pause rather than excitement since 1878-79-80. The valuation of real and personal property has kept about the same for nearly ten years (1886, real estate about \$129,000,000, personal about \$42,000,000), with a falling off in the personalty, and a noticeable decrease in the revenue from taxation. At the same time manufacturing has increased considerably. In 1880 there was a capital of \$60,623,350, employing 74,798 laborers, with a product of \$148,957,280. In 1886 the capital was \$76,248,200, laborers 93,103, product \$190,722,153. The business at the Post-office was a little less in 1886 than in 1883. In the seven years ending with 1886 there was a considerable increase in banking capital, which reached in the city proper over ten millions, and there was an increase in clearings from 1881 to 1886.

It would teach us nothing to follow in detail the fluctuations of the various businesses in Cincinnati, either in appreciation or decline, but it may be noted that it has more than held its own in one of the great staples—leaf tobacco—and still maintains a leading position. Yet I must refer to one of the industries for the sake of an important experiment made in connection with it. This is the experiment of profit-sharing at Ivorydale, the establishment of Messrs. Procter and Gamble, now, I believe, the largest soap factory in the world. The soap and candle industry has always been a large one in Cincinnati, and it has increased about seventy-five per cent, within the past two years. The proprietors at Ivorydale disclaim any intention of philanthropy in their new scheme—that is, the philanthropy that means giving something for nothing, as a charity: it is strictly a business operation. It is an experiment that I need not say will be watched with a good deal of interest as a means of lessening the friction between the interests of capital and labor. The plan is this: Three trustees are named who are to declare the net profits of the concern every six months; for this purpose they are to have free access to the books and papers at all times, and they are to permit the employes to designate a book-keeper to make an examination for them also. In determining the net profits, interest on all capital invested is calculated as an expense at the rate of six per cent., and a reasonable salary is allowed to each member of the firm who gives his entire time to the business. In order to share in the profits, the employé must have been at work for three consecutive months, and must be at work when the semi-annual account is made up. All the men share whose wages have exceeded \$5 a week, and all the women whose wages have exceeded \$4.25 a week. The proportion divided to each employé is determined by the amount of wages earned; that is, the employés shall share as between themselves in the profits exactly as they have shared in the entire fund paid as wages to the whole body, excluding the first three months' wages. In order to determine the profits for distribution, the total amount of wages paid to all employés (except travelling salesmen, who do not share) is ascertained. The amount of all expenses, including interest and salaries, is ascertained, and the total net profits shall be divided between the firm and the employés sharing in the fund. The amount of the net profit to be distributed will be that proportion of the whole net profit which will correspond to the proportion of the wages paid as compared with the entire cost of production and the expense of the business. To illustrate: If the wages paid to all employés shall equal twenty per cent, of the entire expenditure in the business, including interest and salaries of members of the firm, then twenty per cent, of the net profit will be distributed to employés.

It will be noted that this plan promotes steadiness in work, stimulates to industry, and adds a most valuable element of hopefulness to labor. As a business enterprise for the owners it is sound, for it makes every workman an interested party in increasing the profits of the firm—interested not only in production, but in the marketableness of the thing produced. There have been two divisions under this plan. At the declaration of the first the workmen had no confidence in it; many of them would have sold their chances for a glass of beer. They expected that "expenses" would make such a large figure that nothing would be left to divide. When they received, as the good workmen did, considerable sums of money, life took on another aspect to them, and we may suppose that their confidence in fair dealing was raised. The experiment of a year has been entirely satisfactory; it has not only improved the class of employés, but has introduced into the establishment a spirit of industrial cheerfulness. Of course it is still an experiment. So long as business is good, all will go well; but if there is a bad six months, and no profits, it is impossible that suspicion should not arise. And there is another consideration: the publishing to the world that the business of six months was without profit might impair credit. But, on the other hand, this openness in legitimate business may be contagious, and in the end promotive of a wider and more stable business confidence. Ivorydale is one of the best and most solidly built industrial establishments anywhere to be found, and doubly interesting for the intelligent attempt to solve the most difficult problem in modern society. The first semi-annual dividend amounted to about an eighth increase of wages. A girl who was earning five dollars a week would receive as dividend about thirty dollars a year. I think it was not in my imagination that the laborers in this establishment worked with more than usual alacrity, and seemed contented. If this plan shall prevent strikes, that alone will be as great a benefit to the workmen as to those who risk capital in employing them.

Probably to a stranger the chief interest of Cincinnati is not in its business enterprises, great as they are, but in another life just as real and important, but which is not always considered in taking account of the prosperity of a community—the development of education and of the fine arts. For a long time the city has had an independent life in art and in music. Whether a people can be saved by art I do not know. The pendulum is always swinging backward and forward, and we seem never to be able to be enthusiastic in one direction without losing something in another. The art of Cincinnati has a good deal the air of being indigenous, and the outcome in the arts of carving and design and in music has exhibited native vigor. The city has made itself a reputation for wood-carving and for decorative pottery. The Rockwood pottery, the private enterprise of Mrs. Bellamy Storer, is the only pottery in this country in which the instinct of beauty is paramount to the desire of profit. Here for a series of years experiments have been going on with clays and glazing, in regard to form and color, and in decoration purely for effect, which have resulted in pieces of marvellous interest and beauty. The effort has always been to satisfy a refined sense rather than to cater to a vicious taste, or one for startling effects already formed. I mean that the effort has not been to suit the taste of the market, but to raise that taste. The result is some of the most exquisite work in texture and color anywhere to be found, and I was glad to learn that it is gaining an appreciation which will not in this case leave virtue to be its own reward.

The various private attempts at art expression have been consolidated in a public Museum and an Art

School, which are among the best planned and equipped in the country. The Museum Building in Eden Park, of which the centre pavilion and west wing are completed (having a total length of 214 feet from east to west), is in Romanesque style, solid and pleasing, with exceedingly well-planned exhibition-rooms and picture-galleries, and its collections are already choice and interesting. The fund was raised by the subscriptions of 455 persons, and amounts to \$310,501, of which Mr. Charles R. West led off with the contribution of \$150,000, invested as a permanent fund. Near this is the Art School, also a noble building, the gift of Mr. David Sinton, who in 1855 gave the Museum Association \$75,000 for this purpose. It should be said that the original and liberal endowment of the Art School was made by Mr. Nicholas Longworth, in accordance with the wish of his father, and that the association also received a legacy of \$40,000 from Mr. R. R. Springer. Altogether the association has received considerably over a million of dollars, and has in addition, by gift and purchase, property gained at nearly \$200,000. The Museum is the fortunate possessor of one of the three Russian Reproductions, the other two being in the South Kensington Museum of London and the Metropolitan of New York. Thus, by private enterprise, in the true American way, the city is graced and honored by art buildings which give it distinction, and has a school of art so well equipped and conducted that it attracts students from far and near, filling its departments of drawing, painting, sculpture, and wood-carving with eager learners. It has over 400 scholars in the various departments. The ample endowment fund makes the school really free, there being only a nominal charge of about \$5 a year.

In the collection of paintings, which has several of merit, is one with a history, which has a unique importance. This is B. R. Haydon's "Public Entry of Christ into Jerusalem." This picture of heroic size, and in the grand style which had a great vogue in its day, was finished in 1820, sold for £170 in 1831, and brought to Philadelphia, where it was exhibited. The exhibition did not pay expenses, and the picture was placed in the Academy as a companion piece to Benjamin West's "Death on the Pale Horse." In the fire of 1845 both canvases were rescued by being cut from the frames and dragged out like old blankets. It was finally given to the Cathedral in Cincinnati, where its existence was forgotten until it was discovered lately and loaned to the Museum. The interest in the picture now is mainly an accidental one, although it is a fine illustration of the large academic method, and in certain details is painted with the greatest care. Haydon's studio was the resort of English authors of his day, and the portraits of several of them are introduced into this picture. The face of William Hazlitt does duty as St. Peter; Wordsworth and Sir Isaac Newton and Voltaire appear as spectators of the pageant—the cynical expression of Voltaire is the worldly contrast to the believing faith of the disciples—and the inspired face of the youthful St. John is that of John Keats. This being the only portrait of Keats in life, gives this picture extraordinary interest.

The spirit of Cincinnati, that is, its concern for interests not altogether material, is also illustrated by its College of Music. This institution was opened in 1878. It was endowed by private subscription, the largest being \$100,000 by Mr. R. R. Springer. It is financially very prosperous; its possessions in real estate, buildings—including a beautiful concert hall—and invested endowments amount to over \$300,000. Its average attendance is about 550, and during the year 1887 it had about 650 different scholars. From tuition alone about \$45,000 were received, and although the expenditures were liberal, the college had at the beginning of 1888 a handsome cash balance. The object of the college is the development of native talent, and to evoke this the best foreign teachers obtainable have been secured. In the departments of the voice, the piano, and the violin, American youth are said to show special proficiency, and the result of the experiment thus far is to strengthen the belief that out of our mixed nationality is to come most artistic development in music. Free admission is liberally given to pupils who have talent but not the means to cultivate it. Recognizing the value of broad culture in musical education, the managers have provided courses of instruction in English literature, lectures upon American authors, and for the critical study of Italian. The college proper has forty teachers, and as many rooms for instruction. Near it, and connected by a covered way, is the great Music Hall, with a seating capacity of 5400, and the room to pack in nearly 7000 people. In this superb hall the great annual musical festivals are held. It has a plain interior, sealed entirely in wood, and with almost no ornamentation to impair its resonance. The courage of the projectors who dared to build this hall for a purely musical purpose and not for display is already vindicated. It is no doubt the best auditorium in the country. As age darkens the wood, the interior grows rich, and it is discovered that the effect of the seasoning of the wood or of the musical vibrations steadily improves the acoustic properties, having the same effect upon the sonorousness of the wood that long use has upon a good violin. The whole interior is a magnificent sounding-board, if that is the proper expression, and for fifty years, if the hall stands, it will constantly improve, and have a resonant quality unparalleled in any other auditorium.

The city has a number of clubs, well housed, such as are common to other cities, and some that are peculiar. The Cuvier Club, for the preservation of game, has a very large museum of birds, animals, and fishes, beautifully prepared and arranged. The Historical and Philosophical Society has also good quarters, a library of about 10,000 books and 44,000 pamphlets, and is becoming an important depository of historical manuscripts. The Literary Society, composed of 100 members, who meet weekly, in commodious apartments, to hear an essay, discuss general topics, and pass an hour socially about small tables, with something to eat and drink, has been vigorously-maintained since 1848.

An institution of more general importance is the Free Public Library, which has about 150,000 books and 18,000 pamphlets. This is supported in part by an accumulated fund, but mainly by a city tax, which is appropriated through the Board of Education. The expenditures for it in 1887 were about \$50,000. It has a notably fine art department. The Library is excellently managed by Mr. A. W. Whelpley, the librarian, who has increased its circulation and usefulness by recognizing the new idea that a librarian is not a mere custodian of books, but should be a stimulator and director of the reading of a community. This office becomes more and more important now that the good library has to compete for the attention of the young with the "cheap and nasty" publications of the day. It is probably due somewhat to direction in reading that books of fiction taken from the Library last year were only fifty-one per cent, of the whole.

An institution established in many cities as a helping hand to women is the Women's Exchange. The Exchange in Cincinnati is popular as a restaurant. Many worthy women support themselves by preparing food which is sold here over the counter, or served at the tables. The city has for many years sustained a very good Zoological Garden, which is much frequented except in the winter. Interest in it is not, however, as lively as it

was formerly. It seems very difficult to keep a "zoo" up to the mark in America.

I do not know that the public schools of Cincinnati call for special mention. They seem to be conservative schools, not differing from the best elsewhere, and they appear to be trying no new experiments. One of the high-schools which I saw with 600 pupils is well conducted, and gives good preparation for college. The city enumeration is over 87,000 children between the ages of six and twenty-one, and of these about 36,000 are reported not in school. Of the 2300 colored children in the city, about half were in school. When the Ohio Legislature repealed the law establishing separate schools for colored people, practically creating mixed schools, a majority of the colored parents in the city petitioned and obtained branch schools of their own, with colored teachers in charge. The colored people everywhere seem to prefer to be served by teachers and preachers of their own race.

The schools of Cincinnati have not adopted manual training, but a Technical School has been in existence about a year, with promise of success. The Cincinnati University under the presidency of Governor Cox shows new vitality. It is supported in part by taxation, and is open free to all resident youth, so that while it is not a part of the public-school system, it supplements it.

Cincinnati has had a great many discouragements of late, turbulent politics and dishonorable financial failures. But, for all that, it impresses one as a solid city, with remarkable development in the higher civilization.

In its physical aspect Louisville is in every respect a contrast to Cincinnati. Lying on a plain, sloping gently up from the river, it spreads widely in rectangular uniformity of streets—a city of broad avenues, getting to be well paved and well shaded, with ample spaces in lawns, houses detached, somewhat uniform in style, but with an air of comfort, occasionally of elegance and solid good taste. The city has an exceedingly open, friendly, cheerful appearance. In May, with its abundant foliage and flowery lawns, it is a beautiful city: a beautiful, healthful city in a temperate climate, surrounded by a fertile country, is Louisville. Beyond the city the land rises into a rolling country of Blue-Grass farms, and eastward along the river are fine bluffs broken into most advantageous sites for suburban residences. Looking northward across the Ohio are seen the Indiana "Knobs." In high-water the river is a majestic stream, covering almost entirely the rocks which form the "Falls," and the beds of "cement" which are so profitably worked. The canal, which makes navigation round the rapids, has its mouth at Shipping-port Island. About this spot clusters much of the early romance of Louisville. Here are some of the old houses and the old mill built by the Frenchman Tarascon in the early part of the century. Here in a weather-beaten wooden tenement, still standing, Tarascon offered border hospitality to many distinguished guests; Aaron Burr and Blennerhasset were among his visitors, and General Wilkinson, the projector of the canal, then in command of the armies of the United States; and it was probably here that the famous "Spanish conspiracy" was concocted. Corn Island, below the rapids, upon which the first settlement of Louisville was made in 1778, disappeared some years ago, gradually washed away by the swift river.

Opposite this point, in Indiana, is the village of Clarksville, which has a unique history. About 1785 Virginia granted to Gen. George Rogers Clark, the most considerable historic figure of this region, a large tract of land in recognition of his services in the war. When Virginia ceded this territory to Indiana the township of Clarksville was excepted from the grant. It had been organized with a governing board of trustees, self-perpetuating, and this organization still continues. Clarksville has therefore never been ceded to the United States, and if it is not an independent community, the eminent domain must still rest in the State of Virginia.

Some philosophers say that the character of a people is determined by climate and soil. There is a notion in this region that the underlying limestone and the consequent succulent Blue-Grass produce a race of large men, frank in manner, brave in war, inclined to oratory and ornamental conversation, women of uncommon beauty, and the finest horses in the Union. Of course a fertile soil and good living conduce to beauty of form and in a way to the free graces of life. But the contrast of Cincinnati and Louisville in social life and in the manner of doing business cannot all be accounted for by Blue-Grass. It would be very interesting, if one had the knowledge, to study the causes of this contrast in two cities not very far apart. In late years Louisville has awakened to a new commercial life, as one finds in it a strong infusion of Western business energy and ambition. It is jubilant in its growth and prosperity. It was always a commercial town, but with a dash of Blue-Grass leisure and hospitality, and a hereditary flavor of manners and fine living. Family and pedigree have always been held in as high esteem as beauty. The Kentuckian of society is a great contrast to the Virginian, but it may be only the development of the tide-water gentleman in the freer, wider opportunities of the Blue-Grass region. The pioneers of Kentucky were backwoodsmen, but many of the early settlers, whose descendants are now leaders in society and in the professions, came with the full-blown tastes and habits of Virginia civilization, as their spacious colonial houses, erected in the latter part of the last century and the early part of this, still attest. They brought and planted in the wilderness a highly developed social state, which was modified into a certain freedom by circumstances. One can fancy in the abundance of a temperate latitude a certain gayety and joyousness in material existence, which is contented with that, and has not sought the art and musical development which one finds in Cincinnati. All over the South, Louisville is noted for the beauty of its women, but the other ladies of the South say that they can always tell one from Louisville by her dress, something in it quite aware of the advanced fashion, something in the "cut"—a mystery known only to the feminine eye.

I did not intend, however, to enter upon a disquisition of the different types of civilization in Cincinnati and in Louisville. One observes them as evidences of what has heretofore been mentioned, the great variety in American life, when one looks below the surface. The traveller enjoys both types, and is rejoiced to find such variety, culture, taking in one city the form of the worship of beauty and the enjoyment of life, and in the other greater tendency to the fine arts. Louisville is a city of churches, of very considerable religious activity, and of pretty stanch orthodoxy. I do not mean to say that what are called modern ideas do not leaven its society. In one of its best literary clubs I heard the Spencerian philosophy expounded and advocated with the enthusiasm and keenness of an emancipated Eastern town. But it is as true of Louisville as it is of other Southern cities that traditional faith is less disturbed by doubts and isms than in many Eastern towns. One notes here also, as all over the South, the marked growth of the temperance movement. The Kentuckians

believe that they produce the best fluid from rye and corn in the Union, and that they are the best judges of it. Neither proposition will be disputed, nor will one trifle with a legitimate pride in a home production; but there is a new spirit abroad, and both Bourbon and the game that depends quite as much upon the knowledge of human nature as upon the turn of the cards are silently going to the rear. Always Kentuckians have been distinguished in politics, in oratory, in the professions of law and of medicine; nor has the city ever wanted scholars in historical lore, men who have not only kept alive the traditions of learning and local research, like Col. John Mason Brown, but have exhibited the true antiquarian spirit of Col. H. T. Durrett, whose historical library is worth going far to see and study. It will be a great pity if his exceedingly valuable collection is not preserved to the State to become the nucleus of a Historical Society worthy of the State's history. When I spoke of art it was in a public sense; there are many individuals who have good pictures and especially interesting portraits, and in the early days Kentucky produced at least one artist, wholly self-taught, who was a rare genius. Matthew H. Jouett was born in Mercer County in 1780, and died in Louisville in 1820. In the course of his life he painted as many as three hundred and fifty portraits, which are scattered all over the Union. In his mature years he was for a time with Stuart in Boston. Some specimens of his work in Louisville are wonderfully fine, recalling the style and traditions of the best masters, some of them equal if not superior to the best by Stuart, and suggesting in color and solidity the vigor and grace of Vandyck. He was the product of no school but nature and his own genius. Louisville has always had a scholarly and aggressive press, and its traditions are not weakened in Mr. Henry Watterson. On the social side the good-fellowship of the city is well represented in the Pendennis Club, which is thoroughly home-like and agreeable. The town has at least one book-store of the first class, but it sells very few American copyright books. The city has no free or considerable public library. The Polytechnic Society, which has a room for lectures, keeps for circulation among subscribers about 38,000 books. It has also a geological and mineral collection, and a room devoted to pictures, which contains an allegorical statue by Canova.

In its public schools and institutions of charity the city has a great deal to show that is interesting. In medicine it has always been famous. It has four medical colleges, a college of dentistry, a college of pharmacy, and a school of pharmacy for women. In nothing, however, is the spirit of the town better exhibited than in its public-school system. With a population of less than 180,000, the school enrolment, which has advanced year by year, was in 1887, 21,601, with an aggregate belonging of 17,392. The amount expended on schools, which was in 1880 \$197,699, had increased to \$323,943 in 1887—a cost of \$18.62 per pupil. Equal provision is made for colored schools as for white, but the number of colored pupils is less than 3000, and the colored high-school is small, as only a few are yet fitted to go so far in education. The negroes all prefer colored teachers, and so far as I could learn, they are quite content with the present management of the School Board. Co-education is not in the Kentucky idea, nor in its social scheme. There are therefore two high-schools—one for girls and one for boys—both of the highest class and efficiency, in excellent buildings, and under most intelligent management. Among the teachers in the schools are ladies of position, and the schools doubtless owe their good character largely to the fact that they are in the fashion: as a rule, all the children of the city are educated in them. Manual training is not introduced, but all the advanced methods in the best modern schools, object-lessons, word-building, moulding, and drawing, are practised. During the fall and winter months there are night schools, which are very well attended. In one of the intermediate schools I saw an exercise which illustrates the intelligent spirit of the schools. This was an account of the early settlement, growth, and prosperity of Louisville, told in a series of very short papers—so many that a large number of the pupils had a share in constructing the history. Each one took up connectively a brief period or the chief events in chronological order, with illustrations of manners and customs, fashions of dress and mode of life. Of course this mosaic was not original, but made up of extracts from various local histories and statistical reports. This had the merit of being a good exercise as well as inculcating an intelligent pride in the city.

Nearly every religious denomination is represented in the 142 churches of Louisville. Of these 9 are Northern Presbyterian and 7 Southern Presbyterian, 11 of the M.E. Church South and 6 of the M.E. Church North, 18 Catholic, 7 Christian, 1 Unitarian, and 31 colored. There are seven convents and monasteries, and a Young Men's Christian Association. In proportion to its population, the city is pre-eminent for public and private charities: there are no less than thirty-eight of these institutions, providing for the infirm and unfortunate of all ages and conditions. Unique among these in the United States is a very fine building for the maintenance of the widows and orphans of deceased Freemasons of the State of Kentucky, supported mainly by contributions of the Masonic lodges. One of the best equipped and managed industrial schools of reform for boys and girls is on the outskirts of the city. Mr. P. Caldwell is its superintendent, and it owes its success, as all similar schools do, to the peculiar fitness of the manager for this sort of work. The institution has three departments. There were 125 white boys and 79 colored boys, occupying separate buildings in the same enclosure, and 41 white girls in their own house in another enclosure.

The establishment has a farm, a garden, a greenhouse, a library building, a little chapel, ample and pleasant play-yards. There is as little as possible the air of a prison about the place, and as much as possible that of a home and school. The boys have organized a very fair brass band. The girls make all the clothes for the establishment; the boys make shoes, and last year earned \$8000 in bottoming chairs. The school is mainly sustained by taxation and city appropriations; the yearly cost is about \$26,000. Children are indentured out when good homes can be found for them.

The School for the Education of the Blind is a State institution, and admits none from outside the State. The fine building occupies a commanding situation on hills not far from the river, and is admirably built, the rooms spacious and airy, and the whole establishment is well ordered. There are only 79 scholars, and the few colored are accommodated by themselves in a separate building, in accordance with an Act of the Legislature in 1884 for the education of colored blind children. The distinction of this institution is that it has on its premises the United States printing-office for furnishing publications for the blind asylums of the country. Printing is done here both in letters and in points, by very ingenious processes, and the library is already considerable. The space required to store a library of books for the blind may be reckoned from the statement that the novel of "Ivan-hoe" occupies three volumes, each larger than Webster's Unabridged Dictionary. The weekly *Sunday-school Times* is printed here. The point writing consists entirely of dots in

certain combinations to represent letters, and it is noticed that about half the children prefer this to the alphabet. The preference is not explained by saying that it is merely a matter of feeling.

The city has as yet no public parks, but the very broad streets—from sixty to one hundred and twenty feet in width—the wide spacing of the houses in the residence parts, and the abundant shade make them less a necessity than elsewhere. The city spreads very freely and openly over the plain, and short drives take one into lovely Blue-Grass country. A few miles out on Churchill Downs is the famous Jockey Club Park, a perfect racing track and establishment, where worldwide reputations are made at the semi-annual meetings. The limestone region, a beautifully rolling country, almost rivals the Lexington plantations in the raising of fine horses. Driving out to one of these farms one day, we passed, not far from the river, the old Taylor mansion and the tomb of Zachary Taylor. It is in the reserved family burying-ground, where lie also the remains of Richard Taylor, of Revolutionary memory. The great tomb and the graves are overrun thickly with myrtle, and the secluded irregular ground is shaded by forest-trees. The soft wind of spring was blowing sweetly over the fresh green fields, and there was about the place an air of repose and dignity most refreshing to the spirit. Near the tomb stands the fine commemorative shaft bearing on its summit a good portrait statue of the hero of Buena Vista. I liked to linger there, the country was so sweet; the great river flowing in sight lent a certain grandeur to the resting-place, and I thought how dignified and fit it was for a President to be buried at his home.

The city of Louisville in 1888 has the unmistakable air of confidence and buoyant prosperity. This feeling of confidence is strengthened by the general awakening of Kentucky in increased immigration of agriculturists, and in the development of extraordinary mines of coal and iron, and in the railway extension. But locally the Board of Trade (an active body of 700 members) has in its latest report most encouraging figures to present. In almost every branch of business there was an increase in 1887 over 1886; in both manufactures and trade the volume of business increased from twenty to fifty per cent. For instance, stoves and castings increased from 16,574,547 pounds to 19,386,808; manufactured tobacco, from 12,729,421 pounds to 17,059,006; gas and water pipes, from 56,083,380 pounds to 63,745,216; grass and clover seed, from 4,240,908 bushels to 6,601,451. A conclusive item as to manufactures is that there were received in 1887 951,767 tons of bituminous coal, against 204,221 tons in 1886. Louisville makes the claim of being the largest tobacco market in the world in bulk and variety. It leads largely the nine principal leaf-tobacco markets in the West. The figures for 1887 are—receipts, 123,569 hogsheads; sales, 135,192 hogsheads; stock in hand, 36,431 hogsheads, against the corresponding figures of 62,074, 65,924, 13,972 of its great rival, Cincinnati. These large figures are a great increase over 1886, when the value of tobacco handled here was estimated at nearly \$20,000,000. Another great interest always associated with Louisville, whiskey, shows a like increase, there being shipped in 1887 119,637 barrels, against 101,943 barrels in 1886. In the Louisville collection district there were registered one hundred grain distilleries, with a capacity of 80,000 gallons a day. For the five years ending June 30, 1887, the revenue taxes on this product amounted to nearly \$30,000,000. I am not attempting a conspectus of the business of Louisville, only selecting some figures illustrating its growth. Its manufacture of agricultural implements has attained great proportions. The reputation of Louisville for tobacco and whiskey is widely advertised, but it is not generally known that it has the largest plough factory in the world. This is one of four which altogether employ about 2000 hands, and make a product valued at \$2,275,000. In 1880 Louisville made 80,000 ploughs; in 1886, 190,000. The capacity of manufacture in 1887 was increased by the enlargement of the chief factory to a number not given, but there were shipped that year 11,005,151 pounds of ploughs. There is a steadily increasing manufacture of woollen goods, and the production of the mixed fabric known as Kentucky jeans is another industry in which Louisville leads the world, making annually 7,500,000 yards of cloth, and its four mills increased their capacity twenty per cent, in 1887. The opening of the hard-wood lumber districts in eastern Kentucky has made Louisville one of the important lumber markets: about 125,000,000 feet of lumber, logs, etc., were sold here in 1887. But it is unnecessary to particularize. The Board of Trade think that the advantages of Louisville as a manufacturing centre are sufficiently emphasized from the fact that during the year 1887 seventy-three new manufacturing establishments, mainly from the North and East, were set up, using a capital of \$1,290,500, and employing 1621 laborers. The city has twenty-two banks, which had, July 1, 1887, \$8,200,200 capital, and \$19,927,138 deposits. The clearings for 1887 were \$281,110,402—an increase of nearly \$50,000,000 over 1886.

Another item which helps to explain the buoyant feeling of Louisville is that its population increased over 10,000 from 1886 to 1887, reaching, according to the best estimate, 177,000 people. I should have said also that no city in the Union is better served by street railways, which are so multiplied and arranged as to “correspondences” that for one fare nearly every inhabitant can ride within at least two blocks of his residence. In these cars, as in the railway cars of the State, there is the same absence of discrimination against color that prevails in Louisiana and in Arkansas. And it is an observation hopeful, at least to the writer, of the good time at hand when all party lines shall be drawn upon the broadest national issues, that there seems to be in Kentucky no social distinction between Democrats and Republicans.

XIII.—MEMPHIS AND LITTLE ROCK.

The State of Tennessee gets its diversity of climate and productions from the irregularity of its surface, not from its range over degrees of latitude, like Illinois; for it is a narrow State, with an average breadth of

only a hundred and ten miles, while it is about four hundred miles in length, from the mountains in the east—the highest land east of the Rocky Mountains—to the alluvial bottom of the Mississippi in the west. In this range is every variety of mineral and agricultural wealth, with some of the noblest scenery and the fairest farming-land in the Union, and all the good varieties of a temperate climate.

In the extreme south-west corner lies Memphis, differing as entirely in character from Knoxville and Nashville as the bottom-lands of the Mississippi differ from the valleys of the Great Smoky Mountains. It is the natural centre of the finest cotton-producing district in the world, the county of Shelby, of which it is legally known as the Taxing District, yielding more cotton than any other county in the Union except that of Washington in Mississippi. It is almost as much aloof politically from east and middle Tennessee as it is geographically. A homogeneous State might be constructed by taking west Tennessee, all of Mississippi above Vicksburg and Jackson, and a slice off Arkansas, with Memphis for its capital. But the redistricting would be a good thing neither for the States named nor for Memphis, for the more variety within convenient limits a State can have, the better, and Memphis could not wish a better or more distinguished destiny than to become the commercial metropolis of a State of such great possibilities and varied industries as Tennessee. Her political influence might be more decisive in the homogeneous State outlined, but it will be abundant for all reasonable ambition in its inevitable commercial importance. And besides, the western part of the State needs the moral tonic of the more elevated regions.

The city has a frontage of about four miles on the Mississippi River, but is high above it on the Chickasaw Bluffs, with an uneven surface and a rolling country back of it, the whole capable of perfect drainage. Its site is the best on the river for a great city from St. Louis to the Gulf; this advantage is emphasized by the concentration of railways at this point, and the great bridge, which is now on the eve of construction, to the Arkansas shore, no doubt fixes its destiny as the inland metropolis of the South-west. Memphis was the child of the Mississippi, and this powerful, wayward stream is still its fostering mother, notwithstanding the decay of river commerce brought about by the railways; for the river still asserts its power as a regulator of rates of transportation. I do not mean to say that the freighting on it in towed barges is not still enormous, but if it did not carry a pound to the markets of the world it is still the friend of all the inner continental regions, which says to the railroads, beyond a certain rate of charges you shall not go. With this advantage of situation, the natural receiver of the products of an inexhaustible agricultural region (one has only to take a trip by rail through the Yazoo Valley to be convinced of that), and an equally good point for distribution of supplies, it is inevitable that Memphis should grow with an accelerating impulse.

The city has had a singular and instructive history, and that she has survived so many vicissitudes and calamities, and entered upon an extraordinary career of prosperity, is sufficient evidence of the territorial necessity of a large city just at this point on the river. The student of social science will find in its history a striking illustration of the relation of sound sanitary and business conditions to order and morality. Before the war, and for some time after it, Memphis was a place for trade in one staple, where fortunes were quickly made and lost, where no attention was paid to sanitary laws. The cloud of impending pestilence always hung over it, the yellow-fever was always a possibility, and a devastating epidemic of it must inevitably be reckoned with every few years. It seems to be a law of social life that an epidemic, or the probability of it, engenders a recklessness of life and a low condition of morals and public order. Memphis existed, so to speak, on the edge of a volcano, and it cannot be denied that it had a reputation for violence and disorder. While little or nothing was done to make the city clean and habitable, or to beautify it, law was weak in its mobile, excitable population, and differences of opinion were settled by the revolver. In spite of these disadvantages, the profits of trade were so great there that its population of twenty thousand at the close of the war had doubled by 1878. In that year the yellow-fever came as an epidemic, and so increased in 1879 as nearly to depopulate the city; its population was reduced from nearly forty thousand to about fourteen thousand, two-thirds of which were negroes; its commerce was absolutely cut off, its manufactures were suspended, it was bankrupt. There is nothing more unfortunate for a State or a city than loss of financial credit. Memphis struggled in vain with its enormous debt, unable to pay it, unable to compromise it.

Under these circumstances the city resorted to a novel expedient. It surrendered its charter to the State, and ceased to exist as a municipality. The leaders of this movement gave two reasons for it, the wish not to repudiate the city debt, but to gain breathing-time, and that municipal government in this country is a failure. The Legislature erected the former Memphis into The Taxing District of Shelby County, and provided a government for it. This government consists of a Legislative Council of eight members, made up of the Board of Fire and Police Commissioners, consisting of three, and the Board of Public Works, consisting of five. These are all elected by popular vote to serve a term of four years, but the elections are held every two years, so that the council always contains members who have had experience. The Board of Fire and Police Commissioners elects a President, who is the executive officer of the Taxing District, and has the power and duties of a mayor; he has a salary of \$2000, inclusive of his fees as police magistrate, and the other members of his board have salaries of \$500. The members of the Board of Public Works serve without compensation. No man can be eligible to either board who has not been a resident of the district for five years. In addition there is a Board of Health, appointed by the council. This government has the ordinary powers of a city government, defined carefully in the Act, but it cannot run the city in debt, and it cannot appropriate the taxes collected except for the specific purpose named by the State Legislature, which specific appropriations are voted annually by the Legislature on the recommendation of the council. Thus the government of the city is committed to eight men, and the execution of its laws to one man, the President of the Taxing District, who has extraordinary power. The final success of this scheme will be watched with a great deal of interest by other cities. On the surface it can be seen that it depends upon securing a non-partisan council, and an honest, conscientious President of the Taxing District—that is to say, upon the choice by popular vote of the best eight men to rule the city. Up to this time, with only slight hitches, it has worked exceedingly well, as will appear in a consideration of the condition of the city. The slight hitch mentioned was that the President was accused of using temporarily the sum appropriated for one city purpose for another.

The Supreme Court of the United States decided that Memphis had not evaded its obligations by a change of name and form of government. The result was a settlement with the creditors at fifty cents on the dollar; and then the city gathered itself together for a courageous effort and a new era of prosperity. The turning-

point in its career was the adoption of a system of drainage and sewerage which transformed it immediately into a fairly healthful city. With its uneven surface and abundance of water at hand, it was well adapted to the Waring system, which works to the satisfaction of all concerned, and since its introduction the inhabitants are relieved from apprehension of the return of a yellow-fever epidemic. Population and business returned with this sense of security, and there has been a change in the social atmosphere as well. In 1880 it had a population of less than 34,000; it can now truthfully claim between 75,000 and 80,000; and the business activity, the building both of fine business blocks and handsome private residences, are proportioned to the increase in inhabitants. In 1879-80 the receipt of cotton was 409,809 bales, valued at \$23,752,529; in 1886-87, 603,277 bales, valued at \$30,099,510. The estimate of the Board of Trade for 1888, judging from the first months of the year, is 700,000 bales. I notice in the comparative statement of leading articles of commerce and consumption an exceedingly large increase in 1887 over 1886. The banking capital in 1887 was \$3,300,000—an increase of \$1,560,000 over 1886. The clearings were \$101,177,377 in 1877, against \$82,642,192 in 1880.

The traveller, however, does not need figures to convince him of the business activity of the town; the piles of cotton beyond the capacity of storage, the street traffic, the extension of streets and residences far beyond the city limits, all speak of growth. There is in process of construction a union station to accommodate the six railways now meeting there and others projected. On the west of the river it has lines to Kansas City and Little Rock and to St. Louis; on the east, to Louisville and to the Atlantic seaboard direct, and two to New Orleans. With the building of the bridge, which is expected to be constructed in a couple of years, Memphis will be admirably supplied with transportation facilities.

As to its external appearance, it must be said that the city has grown so fast that city improvements do not keep pace with its assessable value. The inability of the city to go into debt is a wholesome provision, but under this limitation the city offices are shabby, the city police quarters and court would disgrace an indigent country village, and most of the streets are in bad condition for want of pavement. There are fine streets, many attractive new residences, and some fine old places, with great trees, and the gravelled pikes running into the country are in fine condition, and are favorite drives. There is a beautiful country round about, with some hills and pleasant woods. Looked at from an elevation, the town is seen to cover a large territory, and presents in the early green of spring a charming appearance. Some five miles out is the Montgomery race-track, park, and club-house—a handsome establishment, prettily laid out and planted, already attractive, and sure to be notable when the trees are grown.

The city has a public-school system, a Board of Education elected by popular vote, and divides its fund fairly between schools for white and colored children. But it needs good school-houses as much as it needs good pavements. In 1887 the tax of one and a half mills produced \$54,000 for carrying on the schools, and \$19,000 for the building fund. It was not enough—at least \$75,000 were needed. The schools were in debt. There is a plan adopted for a fine High-school building, but the city needs altogether more money and more energy for the public schools. According to some reports the public schools have suffered from politics, and are not as good as they were years ago, but they are undoubtedly gaining in public favor, notwithstanding some remaining Bourbon prejudice against them. The citizens are making money fast enough to begin to be liberal in matters educational, which are only second to sanitary measures in the well-being of the city. The new free Public Library, which will be built and opened in a couple of years, will do much for the city in this direction. It is the noble gift of the late F. H. Cossitt, of New York, formerly a citizen of Memphis, who left \$75,000 for that purpose.

Perhaps the public schools of Memphis would be better (though not so without liberal endowment) if the city had not two exceptionally good private schools for young ladies. These are the Clara Conway Institute and the Higby School for Young Ladies, taking their names from their principals and founders. Each of these schools has about 350 pupils, from the age of six to the mature age of graduation, boys being admitted until they are twelve years old. Each has pleasant grounds and fine buildings, large, airy, well planned, with ample room for all the departments—literature, science, art, music—of the most advanced education. One finds in them the best methods of the best schools, and a most admirable spirit. It is not too much to say that these schools give distinction to Memphis, and that the discipline and intellectual training the young ladies receive there will have a marked effect upon the social life of the city. If one who spent some delightful hours in the company of these graceful and enthusiastic scholars, and who would like heartily to acknowledge their cordiality, and his appreciation of their admirable progress in general study, might make a suggestion, it would be that what the frank, impulsive Southern girl, with her inborn talent for being agreeable and her vivid apprehension of life, needs least of all is the cultivation of the emotional, the rhetorical, the sentimental side. However cleverly they are done, the recitation of poems of sentiment, of passion, of lovemaking and marriage, above all, of those doubtful dialect verses in which a touch of pseudo-feeling is supposed to excuse the slang of the street and the vulgarity of the farm, is not an exercise elevating to the taste. I happen to speak of it here, but I confess that it is only a text from which a little sermon might be preached about “recitations” and declamations generally, in these days of overdone dialect and innuendoes about the hypocrisy of old-fashioned morality.

The city has a prosperous college of the Christian Brothers, another excellent school for girls in the St. Agnes Academy, and a colored industrial school, the Lemoyne, where the girls are taught cooking and the art of house-keeping, and the boys learn carpentering. This does not belong to the public-school system.

Whatever may be the opinion about the propriety of attaching industrial training to public schools generally, there is no doubt that this sort of training is indispensable to the colored people of the South, whose children do not at present receive the needed domestic training at borne, and whose education must contribute to their ability to earn a living. Those educated in the schools, high and low, cannot all be teachers or preachers, and they are not in the way of either social elevation or thrifty lives if they have neither a trade nor the taste to make neat and agreeable homes. The colored race cannot have it too often impressed upon them that their way to all the rights and privileges under a free government lies in industry, thrift, and morality. Whatever reason they have to complain of remaining discrimination and prejudice, there is only one way to overcome both, and that is by the acquisition of property and intelligence. In the history of the world a

people were never elevated otherwise. No amount of legislation can do it. In Memphis—in Southern cities generally—the public schools are impartially administered as to the use of money for both races. In the country districts they are as generally inadequate, both in quality and in the length of the school year. In the country, where farming and domestic service must be the occupations of the mass of the people, industrial schools are certainly not called for; but in the cities they are a necessity of the present development.

Ever since Memphis took itself in hand with a new kind of municipal government, and made itself a healthful city, good-fortune of one kind and another seems to have attended it. Abundant water it could get from the river for sewerage purposes, but for other uses either extensive filters were needed or cisterns were resorted to. The city was supplied with water, which the stranger would hesitate to drink or bathe in, from Wolf River, a small stream emptying into the Mississippi above the city. But within the year a most important discovery has been made for the health and prosperity of the town. This was the striking, in the depression of the Gayoso Bayou, at a depth of 450 feet, perfectly pure water, at a temperature of about 62°, in abundance, with a head sufficient to bring it in fountains some feet about the level of the ground. Ten wells had been sunk, and the water flowing was estimated at ten millions of gallons daily, or half enough to supply the city. It was expected that with more wells the supply would be sufficient for all purposes, and then Memphis will have drinking water not excelled in purity by that of any city in the land. It is not to be wondered at that this incalculable good-fortune should add buoyancy to the business, and even to the advance in the price, of real estate. The city has widely outgrown its corporate limits, there is activity in building and improvements in all the pleasant suburbs, and with the new pavements which are in progress, the city will be as attractive as it is prosperous.

Climate is much a matter of taste. The whole area of the alluvial land of the Mississippi has the three requisites for malaria—heat, moisture, and vegetable decomposition. The tendency to this is overcome, in a measure, as the land is thoroughly drained and cultivated. Memphis has a mild winter, long summer, and a considerable portion of the year when the temperature is just about right for enjoyment. In the table of temperature for 1887 I find that the mean was 61.9°, the mean of the highest by months was 84.9°, and the mean lowest was 37.4°. The coldest month was January, when the range of the thermometer was from 72.2° to 4.3°, and the hottest was July, when the range was from 99° to 67.30. There is a preponderance of fair, sunny weather. The record for 1887 was: 157 days of clear, 132 fair, 65 cloudy, 91 days of frost. From this it appears that Memphis has a pretty agreeable climate for those who do not insist upon a good deal of “bracing,” and it has a most genial and hospitable society.

Early on the morning of the 12th of April we crossed the river to the lower landing of the Memphis and Little Rock Railway, the upper landing being inaccessible on account of the high water. It was a delicious spring morning, the foliage, half unfolded, was in its first flush of green, and as we steamed down the stream the town, on bluffs forty feet high, was seen to have a noble situation. All the opposite country for forty miles from the river was afloat, and presented the appearance of a vast swamp, not altogether unpleasing in its fresh dress of green. For forty miles, to Madison, the road ran upon an embankment just above the flood; at intervals were poor shanties and little cultivated patches, but shanties, corn patches, and trees all stood in the water. The inhabitants, the majority colored, seemed of the sort to be content with half-amphibious lives. Before we reached Madison and crossed St. Francis River we ran through a streak of gravel. Forest City, at the crossing of the Iron Mountain Railway, turned out to be not exactly a city, in the Eastern meaning of the word, but a considerable collection of houses, with a large hotel. It seemed, so far in the wilderness, an irresponsible sort of place, and the crowd at the station were in a festive, hilarious mood. This was heightened by the playing of a travelling band which we carried with us in the second-class car, and which good-naturedly unlimbered at the stations. It consisted of a colored bass-viol, violin, and guitar, and a white cornet. On the way the negro population were in the majority, all the residences were shabby shanties, and the moving public on the trains and about the stations had not profited by the example of the commercial travellers, who are the only smartly dressed people one sees in these regions. A young girl who got into the car here told me that she came from Marianna, a town to the south, on the Languille River, and she seemed to regard it as a central place. At Brinkley we crossed the St. Louis, Arkansas, and Texas road, ran through more swamps to the Cache River, after which there was prairie and bottom-land, and at De Valle's Bluff we came to the White River. There is no doubt that this country is well watered. After White River fine reaches of prairie-land were encountered—in fact, a good deal of prairie and oak timber. Much of this prairie had once been cultivated to cotton, but was now turned to grazing, and dotted with cattle. A place named Prairie Centre had been abandoned; indeed, we passed a good many abandoned houses before we reached Carlisle and the Galloway. Lonoke is one of the villages of rather mean appearance, but important enough to be talked about and visited by the five aspirants for the gubernatorial nomination, who were travelling about together, each one trying to convince the people that the other four were unworthy the office. This is lowland Arkansas, supporting a few rude villages, inhabited by negroes and unambitious whites, and not a fairly representative portion of a great State.

At Argenta, a sort of railway and factory suburb of the city, we crossed the muddy, strong-flowing Arkansas River on a fine bridge, elevated so as to strike high up on the bluff on which Little Rock is built. The rock of the bluff, which the railway pierces, is a very shaly slate. The town lying along the bluff has a very picturesque appearance, in spite of its newness and the poor color of its brick. The situation is a noble one, commanding a fine prospect of river and plain, and mountains to the west rising from the bluff on a series of gentle hills, with conspicuous heights farther out for public institutions and country houses. The city, which has nearly thirty thousand inhabitants, can boast a number of handsome business streets with good shops and an air of prosperous trade, with well-shaded residence streets of comfortable houses; but all the thoroughfares are bad for want of paving, Little Rock being forbidden by the organic law (as Memphis is) to run in debt for city improvements. A city which has doubled its population within eight years, and been restrained from using its credit, must expect to suffer from bad streets, but its caution about debt is reassuring to intending settlers. The needed street improvements, it is understood, however, will soon be under way, and the citizens have the satisfaction of knowing that when they are made, Little Rock will be a beautiful city.

Below the second of the iron bridges which span the river is a boulder which gave the name of Little Rock

to the town. The general impression is that it is the first rock on the river above its confluence with the Mississippi; this is not literally true, but this rock is the first conspicuous one, and has become historic. On the opposite side of the river, a mile above, is a bluff several hundred feet high, called Big Rock. On the summit is a beautiful park, a vineyard, a summer hotel, and pleasure-grounds—a delightful resort in the hot weather. From the top one gains a fair idea of Arkansas—the rich delta of the river, the mighty stream itself, the fertile rolling land and forests, the mountains on the border of the Indian Territory, the fair city, the slightly prominences about it dotted with buildings—altogether a magnificent and most charming view.

There is a United States arsenal at Little Rock; the Government Post-office is a handsome building, and among the twenty-seven churches there are some of pleasing architecture. The State-house, which stands upon the bluff overlooking the river, is a relic of old times, suggesting the easy-going plantation style. It is an indescribable building, or group of buildings, with classic pillars of course, and rambling galleries that lead to old-fashioned, domestic-looking State offices. It is shabby in appearance, but has a certain interior air of comfort. The room of the Assembly—plain, with windows on three sides, open to the sun and air, and not so large that conversational speaking cannot be heard in it—is not at all the modern notion of a legislative chamber, which ought to be lofty, magnificently decorated, lighted from above, and shut in as much as possible from the air and the outside world. Arkansas, which is rapidly growing in population and wealth, will no doubt very soon want a new State-house. Heaven send it an architect who will think first of the comfortable, cheerful rooms, and second of imposing outside display! He might spend a couple of millions on a building which would astonish the natives, and not give them as agreeable a working room for the Legislature as this old chamber. The fashion is to put up an edifice whose dimensions shall somehow represent the dignity of the State, a vast structure of hall-ways and staircases, with half-lighted and ill-ventilated rooms. It seems to me that the American genius ought to be able to devise a capitol of a different sort, certainly one better adapted to the Southern climate. A group of connected buildings for the various departments might be better than one solid parallelogram, and I have a fancy that legislators would be clearer-headed, and would profit more by discussion, if they sat in a cheerful chamber, not too large to be easily heard in, and open as much as possible to the sun and air and the sight of tranquil nature. The present Capitol has an air of lazy neglect, and the law library which is stored in it could not well be in a worse condition; but there is something rather pleasing about the old, easy-going establishment that one would pretty certainly miss in a smart new building. Arkansas has an opportunity to distinguish itself by a new departure in State-houses.

In the city are several of the State institutions, most of them occupying ample grounds with fine sites in the suburbs. Conspicuous on high ground in the city is the Blind Asylum, a very commodious, and well-conducted institution, with about 80 inmates. The School for Deaf-mutes, with 125 pupils, is under very able management. But I confess that the State Lunatic Asylum gave me a genuine surprise, and if the civilization of Arkansas were to be judged by it, it would take high rank among the States. It is a very fine building, well constructed and admirably planned, on a site commanding a noble view, with eighty acres of forest and garden. More land is needed to carry out the superintendent's idea of labor, and to furnish supplies for the patients, of whom there are 450, the men and women, colored and white, in separate wings. The builders seem to have taken advantage of all the Eastern experience and shunned the Eastern mistakes, and the result is an establishment with all the modern improvements and conveniences, conducted in the most enlightened spirit. I do not know a better large State asylum in the United States. Of the State penitentiary nothing good can be said. Arkansas is still struggling with the wretched lease system, the frightful abuses of which she is beginning to appreciate. The penitentiary is a sort of depot for convicts, who are distributed about the State by the contractors. At the time of my visit a considerable number were there, more or less crippled and sick, who had been rescued from barbarous treatment in one of the mines. A gang were breaking stones in the yard, a few were making cigars, and the dozen women in the women's ward were doing laundry-work. But nothing appeared to be done to improve the condition of the inmates. In Southern prisons I notice comparatively few of the "professional" class which so largely make the population of Northern penitentiaries, and I always fancy that in the rather easy-going management, wanting the cast-iron discipline, the lot of the prisoners is not so hard. Thus far among the colored people not much odium attaches to one of their race who has been in prison.

The public-school system of the State is slowly improving, hampered by want of Constitutional power to raise money for the schools. By the Constitution, State taxes are limited to one per cent.; county taxes to one-half of one per cent., with an addition of one-half of one per cent, to pay debts existing when the Constitution was adopted in 1874; city taxes the same as county; in addition, for the support of common schools, the Assembly may lay a tax not to exceed two mills on the dollar on the taxable property of the State, and an annual *per capita* tax of one dollar on every male inhabitant over the age of twenty-one years; and it may also authorize each school district to raise for itself, by vote of its electors, a tax for school purposes not to exceed five mills on the dollar. The towns generally vote this additional tax, but in most of the country districts schools are not maintained for more than three months in the year. The population of the State is about 1,000,000, in an area of 53,045 square miles. The scholastic population enrolled has increased steadily for several years, and in 1886 was 164,757, of which 122,296 were white and 42,461 were colored. The total population of school age (including the enrolled) was 358,006, of which 266,188 were white and 91,818 colored. The school fund available for that year was \$1,327,710. The increased revenue and enrolment are encouraging, but it is admitted that the schools of the State (sparsely settled as it is) cannot be what they should be without more money to build decent school-houses, employ competent teachers, and have longer sessions.

Little Rock has fourteen school-houses, only one or two of which are commendable—The High-school, with 50 pupils and 2 teachers, is held in a district building. The colored people have their fair proportion of schools, with teachers of their own race. Little Rock is abundantly able to tax itself for better schools, as it is for better pavements. In all the schools most attention seems to be paid to mathematics, and it is noticeable how proficient colored children under twelve are in figures.

The most important school in the State, which I did not see, is the Industrial University at Fayetteville, which received the Congressional land grant and is a State beneficiary; its property, including endowments

and the University farm, is reckoned at \$300,000. The general intention is to give a practical industrial education. The collegiate department, a course of three years, has 77 pupils; in the preparatory department are about 200; but the catalogue, including special students in art and music, the medical department at Little Rock of 60, and the Normal School at Pine Bluff of 215, foots up about 600 students. The University is situated in a part of the State most attractive in its scenery and most healthful, and offers a chance for every sort of mental and manual training.

The most widely famous place in the State is the Hot Springs. I should like to have seen it when it was in a state of nature; I should like to see it when it gets the civilization of a European bath-place. It has been a popular and even crowded resort for several years, and the medical treatment which can be given there in connection with the use of the waters is so nearly a specific for certain serious diseases, and going there is so much a necessity for many invalids, that access to it ought by this time to be easy. But it is not. It is fifty-five miles south-west of Little Rock, but to reach it the traveller must leave the Iron Mountain road at Malvern for a ride over a branch line of some twenty miles. Unfortunately this is a narrow-gauge road, and however ill a person may be, a change of cars must be made at Malvern. This is a serious annoyance, and it is a wonder that the main railways and the hotel and bath keepers have not united to rid themselves of the monopoly of the narrow-gauge road.

The valley of the Springs is over seven hundred feet above the sea; the country is rough and broken; the hills, clad with small pines and hard-wood, which rise on either side of the valley to the height of two or three hundred feet, make an agreeable impression of greenness; and the place is capable, by reason of its irregularity, of becoming beautiful as well as picturesque. It is still in the cheap cottage and raw brick stage. The situation suggests Carlsbad, which is also jammed into a narrow valley. The Hot Springs Mountain—that is, the mountain from the side of which all the hot springs (about seventy) flow—is a Government reservation. Nothing is permitted to be built on it except the Government hospital for soldiers and sailors, the public bath-houses along the foot, and one hotel, which holds over on the reserved land. The Government has enclosed and piped the springs, built a couple of cement reservoirs, and lets the bath privileges to private parties at thirty dollars a tub, the number of tubs being limited. The rent money the Government is supposed to devote to the improvement of the mountain. This has now a private lookout tower on the summit, from which a most extensive view is had over the well-wooded State, and it can be made a lovely park. There is a good deal of criticism about favoritism in letting the bath privileges, and the words “ring” and “syndicate” are constantly heard. Before improvements were made, the hot water discharged into a creek at the base of the hill. This creek is now arched over and become a street, with the bath-houses on one side and shops and shanties on the other. Difficulty about obtaining a good title to land has until recently stood in the way of permanent improvements. All claims have now been adjudicated upon, the Government is prepared to give a perfect title to all its own land, except the mountain, forever reserved, and purchasers can be sure of peaceful occupation.

Opposite the Hot Springs Mountain rises the long sharp ridge of West Mountain, from which the Government does not permit the foliage to be stripped. The city runs around and back of this mountain, follows the winding valley to the north, climbs up all the irregular ridges in the neighborhood, and spreads itself over the valley on the south, near the Ouachita River. It is estimated that there are 10,000 residents in this rapidly growing town. Houses stick on the sides of the hills, perch on terraces, nestle in the ravines. Nothing is regular, nothing is as might have been expected, but it is all interesting, and promising of something pleasing and picturesque in the future. All the springs, except one, on Hot Springs Mountain are hot, with a temperature ranging from 93° to 157° Fahrenheit; there are plenty of springs in and among the other hills, but they are all cold. It is estimated that the present quantity of hot water, much of which runs to waste, would supply about 19,000 persons daily with 25 gallons each. The water is perfectly clear, has no odor, and is very agreeable for bathing. That remarkable cures are performed here the evidence does not permit one to doubt, nor can one question the wonderfully rejuvenating effect upon the system of a course of its waters.

It is necessary to suggest, however, that the value of the springs to invalids and to all visitors would be greatly enhanced by such regulations as those that govern Carlsbad and Marienbad in Bohemia. The success of those great “cures” depends largely upon the regimen enforced there, the impossibility of indulging in an improper diet, and the prevailing regularity of habits as to diet, sleep, and exercise. There is need at Hot Springs for more hotel accommodation of the sort that will make comfortable invalids accustomed to luxury at home, and at least one new and very large hotel is promised soon to supply this demand; but what Hot Springs needs is the comforts of life, and not means of indulgence at table or otherwise. Perhaps it is impossible for the American public, even the sick part of it, to submit itself to discipline, but we never will have the full benefit of our many curative springs until it consents to do so. Patients, no doubt, try to follow the varying regimen imposed by different doctors, but it is difficult to do so amid all the temptations of a go-as-you-please bath-place. A general regimen of diet applicable to all visitors is the only safe rule. Under such enlightened rules as prevail at Marienbad, and with the opportunity for mild entertainment in pretty shops, agreeable walks and drives, with music and the hundred devices to make the time pass pleasantly, Hot Springs would become one of the most important sanitary resorts in the world. It is now in a very crude state; but it has the water, the climate, the hills and woods; good saddle-horses are to be had, and it is an interesting country to ride over; those who frequent the place are attached to it; and time and taste and money will, no doubt, transform it into a place of beauty.

Arkansas surprised the world by the exhibition it made of itself at New Orleans, not only for its natural resources, but for the range and variety of its productions. That it is second to no other State in its adaptability to cotton-raising was known; that it had magnificent forests and large coal-fields and valuable minerals in its mountains was known; but that it raised fruit superior to any other in the South-west, and quite equal to any in the North, was a revelation. The mountainous part of the State, where some of the hills rise to the altitude of 2500 feet, gives as good apples, pears, and peaches as are raised in any portion of the Union; indeed, this fruit has taken the first prize in exhibitions from Massachusetts to Texas. It is as remarkable for flavor and firmness as it is for size and beauty. This region is also a good vineyard country. The State boasts more miles of navigable waters than any other, it has variety of soil and of surface to fit it for every crop in the temperate latitudes, and it has a very good climate. The range of northern mountains

protects it from "northerners," and its elevated portions have cold enough for a tonic. Of course the low and swampy lands are subject to malaria. The State has just begun to appreciate itself, and has organized efforts to promote immigration. It has employed a competent State geologist, who is doing excellent service. The United States has still a large quantity of valuable land in the State open to settlement under the homestead and preemption laws. The State itself has over 2,000,000 acres of land, forfeited and granted to it in various ways; of this, the land forfeited for taxes will be given to actual settlers in tracts of 160 acres to each person, and the rest can be purchased at a low price. I cannot go into all the details, but the reader may be assured that the immigration committee make an exceedingly good showing for settlers who wish to engage in farming, fruit-raising, mining, or lumbering. The Constitution of the State is very democratic, the statute laws are stringent in morality, the limitations upon town and city indebtedness are severe, the rate of taxation is very low, and the State debt is small. The State, in short, is in a good condition for a vigorous development of its resources.

There is a popular notion that Arkansas is a "bowie-knife" State, a lawless and an ignorant State. I shared this before I went there. I cannot disprove the ignorance of the country districts. As I said, more money is needed to make the public-school system effective. But in its general aspect the State is as orderly and moral as any. The laws against carrying concealed weapons are strict, and are enforced. It is a fairly temperate State. Under the high license and local option laws, prohibition prevails in two-thirds of the State, and the popular vote is strictly enforced. In forty-eight of the seventy-five counties no license is granted, in other counties only a single town votes license, and in many of the remaining counties many towns refuse it. In five counties only is liquor perfectly free. A special law prohibits liquor-selling within five miles of a college; within three miles of a church or school, a majority of the adult inhabitants can prohibit it. With regard to liquor-selling, woman suffrage practically exists. The law says that on petition of a majority of the adult population in any district the county judge must refuse license. The women, therefore, without going into politics, sign the petitions and create prohibition.

The street-cars and railways make no discrimination as to color of passengers. Everywhere I went I noticed that the intercourse between the two races was friendly. There is much good land on the railway between Little Rock and Arkansas City, heavily timbered, especially with the clean-boled, stately gum-trees. At Pine Bluff, which has a population of 5000, there is a good colored Normal School, and the town has many prosperous negroes, who support a racetrack of their own, and keep up a county fair. I was told that the most enterprising man in the place, the largest street-railway owner, is black as a coal. Farther down the road the country is not so good, the houses are mostly poor shanties, and the population, largely colored, appears to be of a shiftless character. Arkansas City itself, low-lying on the Mississippi, has a bad reputation.

Little Rock, already a railway centre of importance, is prosperous and rapidly improving. It has the settled, temperate, orderly society of an Eastern town, but democratic in its habits, and with a cordial hospitality which is more provincial than fashionable. I heard there a good chamber concert of stringed instruments, one of a series which had been kept up by subscription all winter, and would continue the coming winter. The performers were young Bohemians. The gentleman at whose pleasant, old-fashioned house I was entertained, a leading lawyer and jurist in the South-west, was a good linguist, had travelled in most parts of the civilized globe, had on his table the current literature of France, England, Germany, and America, a daily Paris newspaper, one New York journal (to give its name might impugn his good taste in the judgment of every other New York journal), and a very large and well-selected library, two-thirds of which was French, and nearly half of the remainder German. This was one of the many things I found in Arkansas which I did not expect to find.

XIV.—ST. LOUIS AND KANSAS CITY.

St. Louis is eighty years old. It was incorporated as a town in 1808, thirteen years before the admission of Missouri into the Union as a State. In 1764 a company of thirty Frenchmen made a settlement on its site and gave it its distinguished name. For nearly half a century, under French and Spanish jurisdiction alternately, it was little more than a trading post, and at the beginning of this century it contained only about a thousand inhabitants. This period, however, gave it a romantic historic background, and as late as 1853, when its population was a hundred thousand, it preserved French characteristics and a French appearance—small brick houses and narrow streets crowded down by the river. To the stranger it was the Planters' Hotel and a shoal of big steamboats moored along an extensive levee roaring with river traffic. Crowded, ill-paved, dirty streets, a few country houses on elevated sites, a population forced into a certain activity by trade, but hindered in municipal improvement by French conservatism, and touched with the rust of slavery—that was the St. Louis of thirty-five years ago.

Now everything is changed as by some magic touch. The growth of the city has always been solid, unspeculative, conservative in its business methods, with some persistence of the old French influence, only gradually parting from its ancient traditions, preserving always something of the aristocratic flavor of "old families," accounted "slow" in the impatience of youth. But it has burst its old bounds, and grown with a rapidity that would be marvellous in any other country. The levee is comparatively deserted, although the trade on the lower river is actually very large. The traveller who enters the city from the east passes over the St. Louis Bridge, a magnificent structure and one of the engineering wonders of the modern world, plunges

into a tunnel under the business portion of the old city, and emerges into a valley covered with a net-work of railway-tracks, and occupied by apparently interminable lines of passenger coaches and freight cars, out of the confusion of which he makes his way with difficulty to a carriage, impressed at once by the enormous railway traffic of the city. This is the site of the proposed Union Depot, which waits upon the halting action of the Missouri Pacific system. The eastern outlet for all this growing traffic is over the two tracks of the bridge; these are entirely inadequate, and during a portion of the year there is a serious blockade of freight. A second bridge over the Mississippi is already a necessity to the commerce of the city, and is certain to be built within a few years.

St. Louis, since the war, has spread westward over the gentle ridges which parallel the river, and become a city vast in territory and most attractive in appearance. While the business portion has expanded into noble avenues with stately business and public edifices, the residence parts have a beauty, in handsome streets and varied architecture, that is a continual surprise to one who has not seen the city for twenty years. I had set down the length of the city along the river-front as thirteen miles, with a depth of about six miles; but the official statistics are: length of river-front, 19.15 miles; length of western limits, 21.27; extent north and south in an air line, 17; and length east and west on an air line, 6.62. This gives an area of 61.37 square miles, or 39,276 acres. This includes the public parks (containing 2095 acres), and is sufficient room for the population of 450,000, which the city doubtless has in 1888. By the United States census of 1870 the population was reported much larger than it was, the figures having no doubt been manipulated for political purposes. Estimating the natural increase from this false report, the city was led to claim a population far beyond the actual number, and unjustly suffered a little ridicule for a mistake for which it was not responsible. The United States census of 1880 gave it 350,522. During the eight years from 1880 there were erected 18,574 new dwelling-houses, at a cost of over fifty millions of dollars.

The great territorial extension of the city in 1876 was for a time a disadvantage, for it threw upon the city the care of enormous street extensions, made a sporadic movement of population beyond Grand avenue, which left hiatuses in improvement, and created a sort of furor of fashion for getting away from what to me is still the most attractive residence portion of the town, namely, the elevated ridges west of Fourteenth Street, crossed by Lucas Place and adjoining avenues. In this quarter, and east of Grand avenue, are fine high streets, with detached houses and grounds, many of them both elegant and comfortable, and this is the region of the Washington University, some of the finest club-houses, and handsomest churches. The movements of city populations, however, are not to be accounted for. One of the finest parts of the town, and one of the oldest of the better residence parts, that south of the railways, containing broad, well-planted avenues, and very stately old homes, and the exquisite Lafayette Park, is almost wholly occupied now by Germans, who make up so large a proportion of the population.

One would have predicted at an early day that the slightly bluffs below the city would be the resort of fashion, and be occupied with fine country houses. But the movement has been almost altogether westward and away from the river. And this rolling, wooded region is most inviting, elevated, open, cheerful. No other city in the West has fairer suburbs for expansion and adornment, and its noble avenues, dotted with conspicuously fine residences, give promise of great beauty and elegance. In its late architectural development, St. Louis, like Chicago, is just in time to escape a very mediocre and merely imitative period in American building. Beyond Grand avenue the stranger will be shown Vandeventer Place, a semiprivate oblong park, surrounded by many pretty and some notably fine residences. Two of them are by Richardson, and the city has other specimens of his work. I cannot refrain from again speaking of the effect that this original genius has had upon American architecture, especially in the West, when money and enterprise afforded him free scope. It is not too much to say that he created a new era, and the influence of his ideas is seen everywhere in the work of architects who have caught his spirit.

The city has addressed itself to the occupation and adornment of its great territory and the improvement of its most travelled thoroughfares with admirable public spirit. The rolling nature of the ground has been taken advantage of to give it a nearly perfect system of drainage and sewerage. The old pavements of soft limestone, which were dust in dry weather and liquid mud in wet weather, are being replaced by granite in the business parts and asphalt and wood blocks (laid on a concrete base) in the residence portions. Up to the beginning of 1888 this new pavement had cost nearly three and a half million dollars, and over thirty-three miles of it were granite blocks. Street railways have also been pushed all over the territory. The total of street lines is already over one hundred and fifty-four miles, and over thirty miles of these give rapid transit by cable. These facilities make the whole of the wide territory available for business and residence, and give the poorest inhabitants the means of reaching the parks.

The park system is on the most liberal scale, both public and private; the parks are already famous for extent and beauty, but when the projected connecting boulevards are made they will attain world-wide notoriety. The most extensive of the private parks is that of the combined Agricultural Fair Grounds and Zoological Gardens. Here is held annually the St. Louis Fair, which is said to be the largest in the United States. The enclosure is finely laid out and planted, and contains an extensive park, exhibition buildings, cottages, a race-track, an amphitheatre, which suggests in size and construction some of the largest Spanish bull-rings, and picturesque houses for wild animals. The zoological exhibition is a very good one. There are eighteen public parks. One of the smaller (thirty acres) of these, and one of the oldest, is Lafayette Park, on the south side. Its beauty surprised me more than almost anything I saw in the city. It is a gem; just that artificial control of nature which most pleases—forest-trees, a pretty lake, fountains, flowers, walks planned to give everywhere exquisite vistas. It contains a statue of Thomas II. Benton, which may be a likeness, but utterly fails to give the character of the man. The largest is Forest Park, on the west side, a tract of 1372 acres, mostly forest, improved by excellent drives, and left as much as possible in a natural condition. It has ten miles of good driving-roads. This park cost the city about \$850,000, and nearly as much more has been expended on it since its purchase. The surface has great variety of slopes, glens, elevations, lakes, and meadows. During the summer music is furnished in a handsome pagoda, and the place is much resorted to. Fronting the boulevard are statues of Governor Edward Bates and Frank P. Blair, the latter very characteristic.

Next in importance is Tower Grove Park, an oblong of 276 acres. This and Shaw's Garden, adjoining, have been given to the city by Mr. Henry Shaw, an Englishman who made his fortune in the city, and they remain under his control as to care and adornment during his life. Those who have never seen foreign parks and pleasure-gardens can obtain a very good idea of their formal elegance and impressiveness by visiting Tower Grove Park and the Botanical Gardens. They will see the perfection of lawns, avenues ornamented by stately, flower-beds, and tasteful walks. The entrances, with stone towers and lodges, suggest similar effects in France and in England. About the music-stand are white marble busts of six chief musical composers. The drives are adorned with three statues in bronze, thirty feet high, designed and cast in Munich by Frederick Millier. They are figures of Shakespeare, Humboldt, and Columbus, and so nobly conceived and executed that the patriotic American must wish they had been done in this country. Of Shaw's Botanical Garden I need to say little, for its fame as a comprehensive and classified collection of trees, plants, and flowers is world-wide. It has no equal in this country. As a place for botanical study no one appreciated it more highly than the late Professor Asa Gray. Sometimes a peculiar classification is followed; one locality' is devoted to economic plants—camphor, quinine, cotton, tea, coffee, etc.; another to "Plants of the Bible." The space of fifty-four acres, enclosed by high stone walls, contains, besides the open garden and *allées* and glass houses, the summer residence and the tomb of Mr. Shaw. This old gentleman, still vigorous in his eighty-eighth year, is planning new adornments in the way of stately and busts of statesmen, poets, and scientists. His plans are all liberal and cosmopolitan. For over thirty years his botanical knowledge, his taste, and abundant wealth and leisure have been devoted to the creation of this wonderful garden and park, which all bear the stamp of his strong individuality, and of a certain pleasing foreign formality. What a source of unending delight it must have been to him! As we sat talking with him I thought how other millionaires, if they knew how, might envy a matured life, after the struggle for a competency is over, devoted to this most rational enjoyment, in an occupation as elevating to the taste as to the character, and having in mind always the public good. Over the entrance gate is the inscription, "Missouri Botanical Gardens." When the city has full control of the garden the word "Missouri" should be replaced by "Shaw."

The money expended for public parks gives some idea of the liberal and far-sighted provision for the health and pleasure of a great city. The parks originally cost the city 81,309,944, and three millions more have been spent upon their improvement and maintenance. This indicates an enlightened spirit, which we shall see characterizes the city in other things, and is evidence of a high degree of culture.

Of the commerce and manufactures of the town I can give no adequate statement without going into details, which my space forbids. The importance of the Mississippi River is much emphasized, not only as an actual highway of traffic, but as a regulator of railway rates. The town has by the official reports been discriminated against, and even the Inter-State Act has not afforded all the relief expected. In 1887 the city shipped to foreign markets by way of the Mississippi and the jetties 3,973,000 bushels of wheat and 7,365,000 bushels of corn—a larger exportation than ever before except in the years 1880 and 1881. An outlet like this is of course a check on railway charges. The trade of the place employs a banking capital of fifteen millions. The deposits in 1887 were thirty-seven millions; the clearings over 8894,527,731—the largest ever reached, and over ten per cent, in excess of the clearings of 1886. To whatever departments I turn in the report of the Merchants' Exchange for 1887 I find a vigorous growth—as in building—and in most articles of commerce a great increase. It appears by the tonnage statements that, taking receipts and shipments together, 12,060,995 tons of freight were handled in and out during 1886, against 14,359,059 tons in 1887—a gain of nineteen and a half per cent. The buildings in 1886 cost \$7,030,819; in 1887, \$8,162,914. There were \$44,740 more stamps sold at the post-office in 1887 than in 1886. The custom-house collections were less than in 1886, but reached the figures of \$1,414,747. The assessed value of real and personal property in 1887 was \$217,142,320, on which the rate of taxation in the old city limits was \$2.50.

It is never my intention in these papers to mention individual enterprises for their own sake, but I do not hesitate to do so when it is necessary in order to illustrate some peculiar development. It is a curious matter of observation that so many Western cities have one or more specialties in which they excel—houses of trade or manufacture larger and more important than can be found elsewhere. St. Louis finds itself in this category in regard to several establishments. One of these is a wooden-ware company, the largest of the sort in the country, a house which gathers its peculiar goods from all over the United States, and distributes them almost as widely—a business of gigantic proportions and bewildering detail. Its annual sales amount to as much as the sales of all the houses in its line in New York, Chicago, and Cincinnati together. Another is a hardware company, wholesale and retail, also the largest of its kind in the country, with sales annually amounting to six millions of dollars, a very large amount when we consider that it is made up of an infinite number of small and cheap articles in iron, from a fish-hook up—indeed, over fifty thousand separate articles. I spent half a day in this establishment, walking through its departments, noting the unequalled system of compact display, classification, and methods of sale and shipment. Merely as a method of system in business I have never seen anything more interesting. Another establishment, important on account of its central position in the continent and its relation to the Louisiana sugar-fields, is the St. Louis Sugar Refinery.

The refinery proper is the largest building in the Western country used for manufacturing purposes, and, together with its adjuncts of cooper-shops and warehouses, covers five entire blocks and employs 500 men. It has a capacity of working up 400 tons of raw sugar a day, but runs only to the extent of about 200 tons a day, making the value of its present product \$7,500,000 a year.

During the winter and spring it uses Louisiana sugars; the remainder of the year, sugars of Cuba and the Sandwich Islands. Like all other refineries of which I have inquired, this reckons the advent of the Louisiana crop as an important regulator of prices. This establishment, in common with other industries of the city, has had to complain of business somewhat hampered by discrimination in railway rates. St. Louis also has what I suppose, from the figures accessible, to be the largest lager-beer brewing establishment in the world; its solid, gigantic, and architecturally imposing buildings lift themselves up like a fortress over the thirty acres of ground they cover. Its manufacture and sales in 1887 were 456,511 barrels of beer—an increase of nearly 100,000 since 1885-86. It exports largely to Mexico, South America, the West Indies, and Australia. The establishment is a marvel of system and ingenious devices. It employs 1200 laborers, to whom it pays \$500,000 a year. Some of the details are of interest. In the bottling department we saw workmen filling,

corking, labelling, and packing at the rate of 100,000 bottles a day. In a year 25,000,000 bottles are used, packed in 400,000 barrels and boxes. The consumption of barley is 1,100,000 bushels yearly, and of hops over 700,000 pounds, and the amount of water used for all purposes is 250,000,000 gallons—nearly enough to float our navy. The charges for freight received and shipped by rail amount to nearly a million dollars a year. There are several other large breweries in the city. The total product manufactured in 1887 was 1,383,301 barrels, equal to 43,575,872 gallons—more than three times the amount of 1877. The barley used in the city and vicinity was 2,932,192 bushels, of which 340,335 bushels came from Canada. The direct export of beer during 1887 to foreign countries was equal to 1,924,108 quart bottles. The greater part of the barley used comes from Iowa, Minnesota, and Wisconsin.

It is useless to enumerate the many railways which touch and affect St. Louis. The most considerable is the agglomeration known as the Missouri Pacific, or South-western System, which operated 6994 miles of road on January 1, 1888. This great aggregate is likely to be much diminished by the surrender of lines, but the railway facilities of the city are constantly extending.

There are figures enough to show that St. Louis is a prosperous city, constantly developing new enterprises with fresh energy; to walk its handsome streets and drive about its great avenues and parks is to obtain an impression of a cheerful town on the way to be most attractive; but its chief distinction lies in its social and intellectual life, and in the spirit that has made it a pioneer in so many educational movements. It seems to me a very good place to study the influence of speculative thought in economic and practical affairs. The question I am oftenest asked is, whether the little knot of speculative philosophers accidentally gathered there a few years ago, and who gave a sort of fame to the city, have had any permanent influence. For years they discussed abstractions; they sustained for some time a very remarkable periodical of speculative philosophy, and in a limited sphere they maintained an elevated tone of thought and life quite in contrast with our general materialism. The circle is broken, the members are scattered. Probably the town never understood them, perhaps they did not altogether understand each other, and maybe the tremendous conflict of Kant and Hegel settled nothing. But if there is anything that can be demonstrated in this world it is the influence of abstract thought upon practical affairs in the long-run. And although one may not be able to point to any definite thing created or established by this metaphysical movement, I think I can see that it was a leaven that had a marked effect in the social, and especially in the educational, life of the town, and liberalized minds, and opened the way for the trial of theories in education. One of the disciples declares that the State Constitution of Missouri and the charter of St. Louis are distinctly Hegelian. However this may be, both these organic laws are uncommonly wise in their provisions. A study of the evolution of the city government is one of the most interesting that the student can make. Many of the provisions of the charter are admirable, such as those securing honest elections, furnishing financial checks, and guarding against public debt. The mayor is elected for four years, and the important offices filled by his appointment are not vacant until the beginning of the third year of his appointment, so that hope of reward for political work is too dim to affect the merits of an election. The composition and election of the school board is also worthy of notice. Of the twenty-one members, seven are elected on a general ticket, and the remaining fourteen by districts, made by consolidating the twenty-eight city wards, members to serve four years, divided into two classes. This arrangement secures immunity from the ward politician.

St. Louis is famous for its public schools, and especially for the enlightened methods, and the willingness to experiment in improving them. The school expenditures for the year ending June 30, 1887, were \$1,095,773; the school property in lots, buildings, and furniture in 1885 was estimated at \$3,445,254. The total number of pupils enrolled was 56,936. These required about 1200 teachers, of whom over a thousand were women. The actual average of pupils to each teacher was about 42. There were 106 school buildings, with a seating capacity for about 50,000 scholars. Of the district schools 13 were colored, in which were employed 78 colored teachers. The salaries of teachers are progressive, according to length of service. As for instance, the principal of the High-school has \$2400 the first year, \$2500 the second, \$2600 the third, \$2750 the fourth; a head assistant in a district school, \$650 the first year, \$700 the second, \$750 the third, \$800 the fourth, \$850 the fifth.

The few schools that I saw fully sustained their public reputation as to methods, discipline, and attainments. The Normal School, of something over 100 pupils, nearly all the girls being graduates of the High-school, was admirable in drill, in literary training, in calisthenic exercises. The High-school is also admirable, a school with a thoroughly elevated tone and an able principal. Of the 600 pupils at least two-thirds were girls. From appearances I should judge that it is attended by children of the most intelligent families, for certainly the girls of the junior and senior classes, in manner, looks, dress, and attainments, compared favorably with those of one of the best girls' schools I have seen anywhere, the Mary Institute, which is a department of the Washington University. This fact is most important, for the excellence of our public schools (for the product of good men and women) depends largely upon their popularity with the well-to-do classes. One of the most interesting schools I saw was the Jefferson, presided over by a woman, having fine fire-proof buildings and 1100 pupils, nearly all whom are of foreign parentage—German, Russian, and Italian, with many Hebrews also—a finely ordered, wide-awake school of eight grades. The kindergarten here was the best I saw; good teachers, bright and happy little children, with natural manners, throwing themselves gracefully into their games with enjoyment and without self-consciousness, and exhibiting exceedingly pretty fancy and kindergarten work. In St. Louis the kindergarten is a part of the public-school system, and the experiment is one of general interest. The question cannot be called settled. In the first place the experiment is hampered in St. Louis by a decision of the Supreme Court that the public money cannot be used for children out of the school age, that is, under six and over twenty. This prevents teaching English to adult foreigners in the evening schools, and, rigidly applied, it shuts out pupils from the kindergarten under six. One advantage from the kindergarten was expected to be an extension of the school period; and there is no doubt that the kindergarten instruction ought to begin before the age of six, especially for the mass of children who miss home training and home care. As a matter of fact, many of the children I saw in the kindergartens were only constructively six years old. It cannot be said, also, that the Froebel system is fully understood or accepted. In my observation, the success of the kindergarten depends entirely upon the teacher; where she is competent, fully believes in and understands the Froebel system, and is enthusiastic,

the pupils are interested and alert; otherwise they are listless, and fail to get the benefit of it. The Froebel system is the developing the concrete idea in education, and in the opinion of his disciples this is as important for children of the intelligent and well-to-do as for those of the poor and ignorant. They resist, therefore, the attempt which is constantly made, to introduce the primary work into the kindergarten. But for the six years' limit the kindergarten in St. Louis would have a better chance in its connection with the public schools. As the majority of children leave school for work at the age of twelve or fourteen, there is little time enough given for book education; many educators think time is wasted in the kindergarten, and they advocate the introduction of what they call kindergarten features in the primary classes. This is called by the disciples of Froebel an entire abandonment of his system. I should like to see the kindergarten in connection with the public school tried long enough to demonstrate all that is claimed for it in its influence on mental development, character, and manners, but it seems unlikely to be done in St. Louis, unless the public-school year begins at least as early as five, or, better still, is specially unlimited for kindergarten pupils.

Except in the primary work in drawing and modelling, there is no manual training feature in the St. Louis public schools. The teaching of German is recently dropped from all the district schools (though retained in the High), in accordance with the well-founded idea of Americanizing our foreign population as rapidly as possible.

One of the most important institutions in the Mississippi Valley, and one that exercises a decided influence upon the intellectual and social life of St. Louis, and is a fair measure of its culture and the value of the higher education, is the Washington University, which was incorporated in 1853, and was presided over until his death, in 1887, by the late Chancellor William Green-leaf Eliot, of revered memory. It covers the whole range of university studies, except theology, and allows no instruction either sectarian in religion or partisan in politics, nor the application of any sectarian or party test in the election of professors, teachers, or officers. Its real estate and buildings in use for educational purposes cost \$625,000; its libraries, scientific apparatus, casts, and machinery cost over \$100,000, and it has investments for revenue amounting to over \$650,000. The University comprehends an undergraduate department, including the college (a thorough classical, literary, and philosophical course, with about sixty students), open to women, and the polytechnic, an admirably equipped school of science; the St. Louis Law School, of excellent reputation; the Manual Training School, the most celebrated school of this sort, and one that has furnished more manual training teachers than any other; the Henry Shaw School of Botany; the St. Louis School of Fine Arts; the Smith Academy, for boys; and the Mary Institute, one of the roomiest and most cheerful school buildings I know, where 400 girls, whose collective appearance need not fear comparison with any in the country, enjoy the best educational advantages. Mary Institute is justly the pride of the city.

The School of Botany, which is endowed and has its own laboratory, workshop, and working library, was, of course, the outgrowth of the Shaw Botanical Garden; it has usually from twenty to thirty special students.

The School of Fine Arts, which was reorganized under the University in 1879, has enrolled over 200 students, and gives a wide and careful training in all the departments of drawing, painting, and modelling, with instructions in anatomy, perspective, and composition, and has life classes for both sexes, in drawing from draped and nude figures. Its lecture, working rooms, and galleries of paintings and casts are in its Crow Art Museum—a beautiful building, well planned and justly distinguished for architectural excellence. It ranks among the best Art buildings in the country.

The Manual Training School has been in operation since 1880. It may be called the most fully developed pioneer institution of the sort. I spent some time in its workshops and schools, thinking of the very interesting question at the bottom of the experiment, namely, the mental development involved in the training of the hand and the eye, and the reflex help to manual skill in the purely intellectual training of study. It is, it may be said again, not the purpose of the modern manual training to teach a trade, but to teach the use of tools as an aid in the symmetrical development of the human being. The students here certainly do beautiful work in wood-turning and simple carving, in ironwork and forging. They enjoy the work; they are alert and interested in it. I am certain that they are the more interested in it in seeing how they can work out and apply what they have learned in books, and I doubt not they take hold of literary study more freshly for this manual training in exactness. The school exacts close and thoughtful study with tools as well as in books, and I can believe that it gives dignity in the opinion of the working student to hand labor. The school is large, its graduates have been generally successful in practical pursuits and in teaching, and it has demonstrated in itself the correctness of the theory of its authors, that intellectual drill and manual training are mutually advantageous together. Whether manual training shall be a part of all district school education is a question involving many considerations that do not enter into the practicability of this school, but I have no doubt that manual training schools of this sort would be immensely useful in every city. There are many boys in every community who cannot in any other way be awakened to any real study. This training school deserves a chapter by itself, and as I have no space for details, I take the liberty of referring those interested to a volume on its aims and methods by Dr. C. M. Woodward, its director.

Notwithstanding the excellence of the public-school system of St. Louis, there is no other city in the country, except New Orleans, where so large a proportion of the youths are being educated outside the public schools. A very considerable portion of the population is Catholic. There are forty-four parochial schools, attended by nineteen thousand pupils, and over a dozen different Sisterhoods are engaged in teaching in them. Generally each parochial school has two departments—one for boys and one for girls. They are sustained entirely by the parishes. In these schools, as in the two Catholic universities, the prominence of ethical and religious training is to be noted. Seven-eighths of the schools are in charge of thoroughly trained religious teachers. Many of the boys' schools are taught by Christian Brothers. The girls are almost invariably taught by members of religious Sisterhoods. In most of the German schools the girls and smaller boys are taught by Sisters, the larger boys by lay teachers. Some reports of school attendance are given in the Catholic Directory: SS. Peter and Paul's (German), 1300 pupils; St. Joseph's (German), 957; St. Bridget's, 950; St. Malaehy's, 756; St. John's, 700; St. Patrick's, 700. There is a school for colored children of 150 pupils taught by colored Sisters.

In addition to these parochial schools there are a dozen academies and convents of higher education for

young ladies, all under charge of Catholic Sisterhoods, commonly with a mixed attendance of boarders and day scholars, and some of them with a reputation for learning that attracts pupils from other States, notably the Academy of the Sacred Heart, St. Joseph's Academy, and the Academy of the Visitation, in charge of cloistered nuns of that order. Besides these, in connection with various reformatory and charitable institutions, such as the House of the Good Shepherd and St. Mary's Orphan Asylum, there are industrial schools in charge of the Sisterhoods, where girls receive, in addition to their education, training in some industry to maintain themselves respectably when they leave their temporary homes. Statistics are wanting, but it will be readily inferred from these statements that there are in the city a great number of single women devoted for life, and by special religious and intellectual training, to the office of teaching.

For the higher education of Catholic young men the city is distinguished by two remarkable institutions. The one is the old St. Louis University, and the other is the Christian Brothers' College. The latter, which a few years ago outgrew its old buildings in the city, has a fine pile of buildings at Côte Brillante, on a commanding site about five miles out, with ample grounds, and in the neighborhood of the great parks and the Botanical Garden. The character of the school is indicated by the motto on the façade of the building—*Religio, Mores, Cultura*. The institution is designed to accommodate a thousand boarding students. The present attendance is 450, about half of whom are boarders, and represent twenty States. There is a corps of thirty-five professors, and three courses of study are maintained—the classical, the scientific, and the commercial. As several of the best parochial schools are in charge of Christian Brothers, these schools are feeders of the college, and the pupils have the advantage of an unbroken system with a consistent purpose from the day they enter into the primary department till they graduate at the college. The order has, at Glencoe, a large Normal School for the training of teachers. The fame and success of the Christian Brothers as educators in elementary and the higher education, in Europe and the United States, is largely due to the fact that they labor as a unit in a system that never varies in its methods of imparting instruction, in which the exponents of it have all undergone the same pedagogic training, in which there is no room for the personal fancy of the teacher in correction, discipline, or scholarship, for everything is judiciously governed by prescribed modes of procedure, founded on long experience, and exemplified in the co-operative plan of the Brothers. In vindication of the exceptional skill acquired by its teachers in the thorough drill of the order, the Brotherhood points to the success of its graduates in competitive examinations for public employment in this country and in Europe, and to the commendation its educational exhibits received at London and New Orleans.

The St. Louis University, founded in 1829 by members of the Society of Jesus, and chartered in 1834, is officered and controlled by the Jesuit Fathers. It is an unendowed institution, depending upon fees paid for tuition. Before the war its students were largely the children of Southern planters, and its graduates are found all over the South and South-west; and up to 1881 the pupils boarded and lodged within the precincts of the old buildings on the corner of Ninth Street and Washington, where for over half a century the school has vigorously flourished. The place, which is now sold and about to be used for business purposes, has a certain flavor of antique scholarship, and the quaint buildings keep in mind the plain but rather pleasing architecture of the French period. The University is in process of removal to the new buildings on Grand avenue, which are a conspicuous ornament to one of the most attractive parts of the city. Soon nothing will be left of the institution on Ninth Street except the old college church, which is still a favorite place of worship for the Catholics of the city. The new buildings, in the early decorated English Gothic style, are ample and imposing; they have a front of 270 feet, and the northern wing extends 325 feet westward from the avenue. The library, probably the finest room of the kind in the West, is sixty-seven feet high, amply lighted, and provided with three balconies. The library, which was packed for removal, has over 25,000 volumes, is said to contain many rare and interesting books, and to fairly represent science and literature. Besides this, there are special libraries, open to students, of over 0000 volumes. The museum of the new building is a noble ball, one hundred feet by sixty feet, and fifty-two feet high, without columns, and lighted from above and from the side. The University has a valuable collection of ores and minerals, and other objects of nature and art that will be deposited in this hall, which will also serve as a picture-gallery for the many paintings of historical interest. Philosophical apparatus, a chemical laboratory, and an astronomical observatory are the equipments on the scientific side.

The University has now no dormitories and no boarders. There are twenty-five professors and instructors. The entire course, including the preparatory, is seven years. A glance at the catalogue shows that in the curriculum the institution keeps pace with the demands of the age. Besides the preparatory course (89 pupils), it has a classical course (143 pupils), an English course (82 pupils), and 85 post-graduate students, making a total of 399. Its students form societies for various purposes; one, the Sodality of the Blessed Virgin Mary, with distinct organizations in the senior and junior classes, is for the promotion of piety and the practice of devotion towards the Blessed Virgin; another is for training in public speaking and philosophic and literary disputation; there is also a scientific academy, to foster a taste for scientific culture; and there is a student's library of 4000 volumes, independent of the religious books of the Sodality societies.

In a conversation with the president I learned that the prevailing idea in the courses of study is the gradual and healthy development of the mind. The classes are carefully graded. The classics are favorite branches, but mental philosophy, chemistry, physics, astronomy, are taught with a view to practical application. Much stress is laid upon mathematics. During the whole course of seven years, one hour each day is devoted to this branch. In short, I was impressed with the fact that this is an institution for mental training. Still more was I struck with the prominence in the whole course of ethical and religious culture. On assembling every morning, all the Catholic students hear mass. In every class in every year Christian doctrine has as prominent a place as any branch of study; beginning in the elementary class with the small catechism and practical instructions in the manner of reciting the ordinary prayers, it goes on through the whole range of doctrine—creed, evidences, ritual, ceremonial, mysteries—in the minutest details of theory and practice; ingraining, so far as repeated instruction can, the Catholic faith and pure moral conduct in the character, involving instructions as to what occasions and what amusements are dangerous to a good life, on the reading of good books and the avoiding bad books and bad company.

In the post-graduate course, lectures are given and examinations made in ethics, psychology, anthropology,

biology, and physics; and in the published abstracts of lectures for the past two years I find that none of the subjects of modern doubt and speculation are ignored—spiritism, psychical research, the cell theory, the idea of God, socialism, agnosticism, the Noachinn deluge, theories of government, fundamental notions of physical science, unity of the human species, potency of matter, and so on. During the past fifty years this faculty has contained many men famous as pulpit orators and missionaries, and this course of lectures on philosophic and scientific subjects has brought it prominently before the cultivated inhabitants of the town.

Another educational institution of note in St. Louis is the Concordia Seminar of the Old Lutheran, or the Evangelical Lutheran Church. This denomination, which originated in Saxony, and has a large membership in our Western States, adheres strictly to the Augsburg Confession, and is distinguished from the general Lutheran Church by greater strictness of doctrine and practice, or, as may be said, by a return to primitive Lutheranism; that is to say, it grounds itself upon the literal inspiration of the Scriptures, upon salvation by faith alone, and upon individual liberty. This Seminar is one of several related institutions in the Synod of Missouri, Ohio, and other States: there is a college at Fort Wayne, Indiana, a Progymnasium at Milwaukee, a Seminar of practical theology at Springfield, Illinois, and this Seminar at St. Louis, which is wholly devoted to theoretical theology. This Church numbers, I believe, about 200,000 members.

The Concordia Seminar is housed in a large, commodious building, effectively set upon high ground in the southern part of the city. It was erected and the institution is sustained by the contributions of the congregations. The interior, roomy, light, and commodious, is plain to barrenness, and has a certain monastic severity, which is matched by the discipline and the fare. In visiting it one takes a step backward into the atmosphere and theology of the sixteenth century. The ministers of the denomination are distinguished for learning and earnest simplicity. The president, a very able man, only thirty-five years of age, is at least two centuries old in his opinions, and wholly undisturbed by any of the doubts which have agitated the Christian world since the Reformation. He holds the faith "once for all" delivered to the saints. The Seminar has a hundred students. It is requisite to admission, said the president, that they be perfect Latin, Greek, and Hebrew scholars. A large proportion of the lectures are given in Latin, the remainder in German and English, and Latin is current in the institution, although German is the familiar speech. The course of study is exacting, the rules are rigid, and the discipline severe. Social intercourse with the other sex is discouraged. The pursuit of love and learning are considered incompatible at the same time; and if a student were inconsiderate enough to become engaged, he would be expelled. Each student from abroad may select or be selected by a family in the communion, at whose house he may visit once a week, which attends to his washing, and supplies to a certain extent the place of a home. The young men are trained in the highest scholarship and the strictest code of morals. I know of no other denomination which holds its members to such primitive theology and such strictness of life. Individual liberty and responsibility are stoutly asserted, without any latitude in belief. It repudiates Prohibition as an infringement of personal liberty, would make the use of wine or beer depend upon the individual conscience, but no member of the communion would be permitted to sell intoxicating liquors, or to go to a beer-garden or a theatre. In regard to the sacrament of communion, there is no authority for altering the plain directions in the Scripture, and communion without wine, or the substitution of any concoction for wine, would be a sin. No member would be permitted to join any labor union or secret society. The sacrament of communion is a mystery. It is neither transubstantiation nor consubstantiation. The president, whose use of English in subtle distinctions is limited, resorted to Latin and German in explanation of the mystery, but left the question of real and actual presence, of spirit and substance, still a matter of terms; one can only say that neither the ordinary Protestant nor the Catholic interpretation is accepted. Conversion is not by any act or ability of man; salvation is by faith alone. As the verbal inspiration of the Scriptures is insisted on in all cases, the world was actually created in six days of twenty-four hours each. When I asked the president what he did with geology, he smiled and simply waved his hand. This communion has thirteen flourishing churches in the city. In a town so largely German, and with so many freethinkers as well as free-livers, I cannot but consider this strict sect, of a simple unquestioning faith and high moral demands, of the highest importance in the future of the city. But one encounters with surprise, in our modern life, this revival of the sixteenth century, which plants itself so squarely against so much that we call "progress."

As to the institutions of charity, I must content myself with saying that they are many, and worthy of a great and enlightened city. There are of all denominations 211 churches; of these the Catholics lead with 47; the Presbyterians come next with 24; and the Baptists have 22; the Methodists North, 4; and the Methodists South, 8. The most interesting edifices, both for associations and architecture, are the old Cathedral; the old Christ Church (Episcopalian), excellent Gothic; and an exquisite edifice, the Church of the Messiah (Unitarian), in Locust Street.

The city has two excellent libraries. The Public Library, an adjunct of the public-school system, in the Polytechnic Building, has an annual appropriation of about \$14,000 from the School Board, and receives about \$5000 more from membership and other sources. It contains about 67,000 volumes, and is admirably managed. The Mercantile Library is in process of removal into a magnificent six-story building on Broadway and Locust Street. It is a solid and imposing structure, the first story of red granite, and the others of brick and terra-cotta. The library and reading-rooms are on the fifth story, the rest of the building is rented. This association, which is forty-two years old, has 3500 members, and had an income in 1887 of \$120,000, nearly all from membership. In January, 1888, it had 68,732 volumes, and in a circulation of over 168,000 in the year, it had the unparalleled distinction of reducing the fiction given out to 41.95 per cent. Both these libraries have many treasures interesting to a book-lover, and though neither is free, the liberal, intelligent management of each has been such as to make it a most beneficent institution for the city.

There are many handsome and stately buildings in the city, the recent erections showing growth in wealth and taste. The Chamber of Commerce, which is conspicuous for solid elegance, cost a million and a half dollars. There are 3295 members of the Merchants' Exchange. The Court-house, with its noble dome, is as well proportioned a building as can be found in the country. A good deal may be said for the size and effect of the Exposition Building, which covers what was once a pretty park at the foot of Lucas Place, and cost 6750,000. There are clubs many and flourishing. The St. Louis Club (social) has the finest building, an exceedingly tasteful piece of Romanesque architecture on Twenty-ninth Street. The University Club, which is

like its namesake in other cities, has a charming old-fashioned house and grounds on Pine Street. The Commercial Club, an organization limited in its membership to sixty, has no club-house, but, like its namesake in Chicago, is a controlling influence in the prosperity of the city. Representing all the leading occupations, it is a body of men who, by character, intellect, and wealth, can carry through any project for the public good, and which is animated by the highest public spirit.

Of the social life of the town one is permitted to speak only in general terms. It has many elements to make it delightful—long use in social civilities, interest in letters and in education, the cultivation of travel, traditions, and the refinement of intellectual pursuits. The town has no academy of music, but there is a good deal of musical feeling and cultivation; there is a very good orchestra, one of the very best choruses in the country, and Verdi's "Requiem" was recently given splendidly. I am told by men and women of rare and special cultivation that the city is a most satisfactory one to live in, and certainly to the stranger its society is charming. The city has, however, the Mississippi Valley climate—extreme heat in the summer, and trying winters.

There is no more interesting industrial establishment in the West than the plate-glass works at Crystal City, thirty miles south on the river. It was built up after repeated failures and reverses—for the business, like any other, had to be learned. The plant is very extensive, the buildings are of the best, the machinery is that most approved, and the whole represents a cash investment of \$1,500,000. The location of the works at this point was determined by the existence of a mountain of sand which is quarried out like rock, and is the finest and cleanest silica known in the country. The production is confined entirely to plate-glass, which is cast in great slabs, twelve feet by twelve and a half in size, each of which weighs, before it is reduced half in thickness by grinding, smoothing, and polishing, about 750 pounds. The product for 1887 was 1,200,000 feet. The coal used in the furnaces is converted into gas, which is found to be the most economical and most easily regulated fuel. This industry has drawn together a population of about 1500. I was interested to learn that labor in the production of this glass is paid twice as much as similar labor in England, and from three to four times as much as similar labor in France and Belgium. As the materials used in making plate-glass are inexpensive, the main cost, after the plant, is in labor. Since plate-glass was first made in this country, eighteen years ago, the price of it in the foreign market has been continually forced down, until now it costs the American consumer only half what it cost him before, and the jobber gets it at an average cost of 75 cents a foot, as against the \$1.50 a foot which we paid the foreign manufacturer before the establishment of American factories. And in these eighteen years the Government has had from this source a revenue of over seventeen millions, at an average duty, on all sizes, of less than 59 per cent.

Missouri is one of the greatest of our States in resources and in promise, and it is conspicuous in the West for its variety and capacity of interesting development. The northern portion rivals Iowa in beautiful rolling prairie, with high divides and park-like forests; its water communication is unsurpassed; its mineral resources are immense; it has noble mountains as well as fine uplands and fertile valleys, and it never impresses the traveller as monotonous. So attractive is it in both scenery and resources that it seems unaccountable that so many settlers have passed it by. But, first slavery, and then a rural population disinclined to change, have stayed its development. This state of things, however, is changing, has changed marvellously within a few years in the northern portion, in the iron regions, and especially in larger cities of the west, St. Joseph and Kansas City. The State deserves a study by itself, for it is on the way to be a great empire of most varied interests. I can only mention here one indication of its moral progress. It has adopted a high license and local option law. Under this the saloons are closed in nearly all the smaller villages and country towns. A shaded map shows more than three-fourths of the area of the State, including three-fifths of the population, free from liquor-selling. The county court may grant a license to sell liquor to a person of good moral character on the signed petition of a majority of the taxpaying citizens of a township or of a city block; it must grant it on the petition of two-thirds of the citizens. Thus positive action is required to establish a saloon. On the map there are 76 white counties free of saloons, 14 counties in which there are from one to three saloons only, and 24 shaded counties which have altogether 2263 saloons, of which 1450 are in St. Louis and 520 in Kansas City. The revenue from the saloons in St. Louis is about 8800,000, in Kansas City about 8375,000, annually. The heavily shaded portions of the map are on the great rivers.

Of all the wonderful towns in the West, none has attracted more attention in the East than Kansas City. I think I am not wrong in saying that it is largely the product of Eastern energy and capital, and that its closest relations have been with Boston. I doubt if ever a new town was from the start built up so solidly or has grown more substantially. The situation, at the point where the Missouri River makes a sharp bend to the east, and the Kansas River enters it, was long ago pointed out as the natural centre of a great trade. Long before it started on its present career it was the great receiving and distributing point of South-western commerce, which left the Missouri River at this point for Santa Fé and other trading marts in the South-west. Aside from this river advantage, if one studies the course of streams and the incline of the land in a wide circle to the westward, he is impressed with the fact that the natural business drainage of a vast area is Kansas City. The city was therefore not fortuitously located, and when the railways centred there, they obeyed an inevitable law. Here nature intended, in the development of the country, a great city. Where the next one will be in the South-west is not likely to be determined until the Indian Territory is open to settlement. To the north, Omaha, with reference to Nebraska and the West, possesses many similar advantages, and is likewise growing with great vigor and solidity. Its situation on a slope rising from the river is commanding and beautiful, and its splendid business houses, handsome private residences, and fine public schools give ample evidence of the intelligent enterprise that is directing its rapid growth.

It is difficult to analyze the impression Kansas City first makes upon the Eastern stranger. It is usually that of immense movement, much of it crude, all of it full of purpose. At the Union Station, at the time of the arrival and departure of trains, the whole world seems afloat; one is in the midst of a continental movement of most varied populations. I remember that the first time I saw it in passing, the detail that most impressed me was the racks and rows of baggage checks; it did not seem to me that the whole travelling world could need so many. At that time a drive through the city revealed a chaos of enterprise—deep cuts for streets, cable roads in process of construction over the sharp ridges, new buildings, hills shaved down, houses perched high up on slashed knolls, streets swarming with traffic and roaring with speculation. A little more

than a year later the change towards order was marvellous: the cable roads were running in all directions; gigantic buildings rising upon enormous blocks of stone gave distinction to the principal streets; the great residence avenues have been beautified, and showed all over the hills stately and picturesque houses. And it is worthy of remark that while the "boom" of speculation in lots had subsided, there was no slacking in building, and the reports showed a steady increase in legitimate business. I was confirmed in my theory that a city is likely to be most attractive when it has had to struggle heroically against natural obstacles in the building.

I am not going to describe the city. The reader knows that it lies south of the river Missouri, at the bend, and that the notable portion of it is built upon a series of sharp hills. The hill portion is already a beautiful city; the flat part, which contains the railway depot and yards, a considerable portion of the manufactories and wholesale houses, and much refuse and squatting population (white and black), is unattractive in a high degree. The Kaw, or Kansas, River would seem to be the natural western boundary, but it is not the boundary; the city and State line runs at some distance east of Kansas River, leaving a considerable portion of low ground in Kansas City, Kansas, which contains the larger number of the great packing-houses and the great stock-yards. This identity of names is confusing. Kansas City (Kansas), Wyandotte, Armourdale, Armstrong, and Riverview (all in the State of Kansas) have been recently consolidated under the name of Kansas City, Kansas. It is to be regretted that this thriving town of Kansas, which already claims a population of 40,000, did not take the name of Wyandotte. In its boundaries are the second largest stock-yards in the country, which received last year 670,000 cattle, nearly 2,500,000 hogs, and 210,000 sheep, estimated worth 851,000,000. There also are half a dozen large packing-houses, one of them ranking with the biggest in the country, which last year slaughtered 195,933 cattle, and 1,907,104 hogs. The great elevated railway, a wonderful structure, which connects Kansas City, Missouri, with Wyandotte, is owned and managed by men of Kansas City, Kansas. The city in Kansas has a great area of level ground for the accommodation of manufacturing enterprises, and I noticed a good deal of speculative feeling in regard to this territory. The Kansas side has fine elevated situations for residences, but Wyandotte itself does not compare in attractiveness with the Missouri city, and I fancy that the controlling impetus and capital will long remain with the city that has so much the start.

Looking about for the specialty which I have learned to expect in every great Western city, I was struck by the number of warehouses for the sale of agricultural implements on the flats, and I was told that Kansas City excels all others in the amount of sales of farming implements. The sale is put down at 815,000,000 for the year 1887—a fourth of the entire reported product manufactured in the United States. Looking for the explanation of this, one largely accounts for the growth of Kansas City, namely, the vast rich agricultural regions to the west and southwest, the development of Missouri itself, and the facilities of distribution. It is a general belief that settlement is gradually pushing the rainy belt farther and farther westward over the prairies and plains, that the breaking up of the sod by the plough and the tilling have increased evaporation and consequently rainfall. I find this questioned by competent observers, who say that the observation of ten years is not enough to settle the fact of a change of climate, and that, as not a tenth part of the area under consideration has been broken by the plough, there is not cause enough for the alleged effect, and that we do not yet know the cycle of years of drought and years of rain. However this may be, there is no doubt of the vast agricultural yield of these new States and Territories, nor of the quantities of improved machinery they use. As to facility of distribution, the railways are in evidence. I need not name them, but I believe I counted fifteen lines and systems centring there. In 1887, 4565 miles of railway were added to the facilities of Kansas City, stretching out in every direction. The development of one is notable as peculiar and far-sighted, the Fort Scott and Gulf, which is grasping the East as well as the South-west; turning eastward from Fort Scott, it already reaches the iron industries of Birmingham, pushes on to Atlanta, and seeks the seaboard. I do not think I over-estimate the importance of this quite direct connection of Kansas City with the Atlantic.

The population of Kansas City, according to the statistics of the Board of Trade, increased from 41,786 in 1877 to 165,924 in 1887, the assessed valuation from \$9,370,287 in 1877 to \$53,017,290 in 1887, and the rate of taxation was reduced in the same period from about 22 mills to 14. I notice also that the banking capital increased in a year—1886 to 1887—from \$3,873,000 to \$6,950,000, and the Clearing-house transactions in the same year from \$251,963,441 to \$353,895,458. This, with other figures which might be given, sustains the assertion that while real-estate speculation has decreased in the current year, there was a substantial increase of business. During the year ending June 30, 1886, there were built 4054 new houses, costing \$10,393,207; during the year ending June 30, 1887, 5889, costing \$12,839,808. An important feature of the business of Kansas City is in the investment and loan and trust companies, which are many, and aggregate a capital of \$7,773,000. Loans are made on farms in Kansas, Missouri, Nebraska, and Iowa, and also for city improvements.

Details of business might be multiplied, but enough have been given to illustrate the material prosperity of the city. I might add a note of the enterprise which last year paved (mainly with cedar blocks on concrete) thirteen miles of the city; the very handsome churches in process of erection, and one or two (of the many) already built, admirable in plan and appearance; the really magnificent building of the Board of Trade—a palace, in fact; and other handsome, costly structures on every hand. There are thirty-five miles of cable road. I am not sure but these cable roads are the most interesting—certainly the most exciting—feature of the city to a stranger. They climb such steps, they plunge down such grades, they penetrate and whiz through such crowded, lively thoroughfares, their trains go so rapidly, that the rider is in a perpetual exhilaration. I know no other locomotion more exciting and agreeable. Life seems a sort of holiday when one whizzes through the crowded city, up and down and around amid the tall buildings, and then launches off in any direction into the suburbs, which are alive with new buildings. Independence avenue is shown as one of the finest avenues, and very handsome it and that part of the town are, but I fancied I could detect a movement of fashion and preference to the hills southward.

In the midst of such a material expansion one has learned to expect fine houses, but I was surprised to find three very good book-stores (as I remember, St. Louis has not one so good), and a very good start for a public library, consisting of about 16,000 well-arranged and classified books. Members pay \$2 a year, and the library receives only about \$2500 a year from the city. The citizens could make no better-paying investment

than to raise this library to the first rank. There is also the beginning of an art school in some pretty rooms, furnished with casts and autotypes, where pupils practise drawing under direction of local artists. There are two social clubs—the University, which occupies pleasant apartments, and the Kansas City Club, which has just erected a handsome club-house. In these respects, and in a hundred refinements of living, the town, which has so largely drawn its young, enterprising population from the extreme East, has little the appearance of a frontier place; it is the push, the public spirit, the mixture of fashion and slouching negligence in street attire, the mingling of Eastern smartness with border emancipation in manner, and the general restlessness of movement, that proclaim the newness. It seems to me that the incessant stir, and especially the clatter, whirl, and rapidity of the cable cars, must have a decided effect on the nerves of the whole population. The appearance is certainly that of an entire population incessantly in motion.

I have spoken of the public spirit. Besides the Board of Trade there is a Merchants' and Manufacturers' Bureau, which works vigorously to bring to the city and establish mercantile and manufacturing enterprises. The same spirit is shown in the public schools. The expenditures in 1887 were, for school purposes, \$226,923; for interest on bonds, \$18,408; for grounds and buildings, \$110,087; in all, \$355,418. The total of children of school age was, white, 31,667; colored, 4204. Of these in attendance at school were, white, 12,933; colored, 1975. There were 25 school-houses and 212 teachers. The schools which I saw—one large grammar-school, a colored school, and the High-school of over 600 pupils—were good all through, full of intelligent emulation, the teachers alert and well equipped, and the attention to literature, to the science of government, to what, in short, goes to make intelligent citizens, highly commendable. I find the annual reports, under Prof. J. M. Greenwood, most interesting reading. Topics are taken up and investigations made of great public interest. These topics relate to the even physical and mental development of the young in distinction from the effort merely to stuff them with information. There is a most intelligent attempt to remedy defective eyesight. Twenty per cent, of school children have some anomaly of refraction or accommodation which should be recognized and corrected early; girls have a larger per cent, of anomalies than boys. Irish, Swedish, and German children have the highest percentage of affections of the eyes; English, French, Scotch, and Americans the lowest. Scientific observations of the eyes are made in the Kansas City schools, with a view to remedy defects. Another curious topic is the investigation of the Contents of Children's Minds—that is, what very small children know about common things. Prof. Stanley Hall published recently the result of examinations made of very little folks in Boston schools. Professor Greenwood made similar investigations among the lowest grade of pupils in the Kansas City schools, and a table of comparisons is printed. The per cent, of children ignorant of common things is astonishingly less in Kansas City schools than in the Boston; even the colored children of the Western city made a much better showing. Another subject of investigation is the alleged physical deterioration in this country. Examinations were made of hundreds of school children from the age of ten to fifteen, and comparisons taken with the tables in Mulhal's "Dictionary of Statistics," London, 1884. It turns out that the Kansas City children are taller, taking sex into account, than the average English child at the age of either ten or fifteen, weigh a fraction less at ten, but upwards of four pounds more at fifteen, while the average Belgian boy and girl compare favorably with American children two years younger. The tabulated statistics show two facts, that the average Kansas child stands fully as tall as the tallest, and that in weight he tips the beam against an older child on the other side of the Atlantic. With this showing, we trust that our American experiment will be permitted to go on.

In reaching the necessary limit of a paper too short for its subject, I can only express my admiration of the indomitable energy and spirit of that portion of the West which Kansas City represents, and congratulate it upon so many indications of attention to the higher civilization, without which its material prosperity will be wonderful but not attractive.

XV.—KENTUCKY.

All Kentucky, like Gaul, is divided into three parts. This division, which may not be sustained by the geologists or the geographers, perhaps not even by the ethnologists, is, in my mind, one of character: the east and south-east mountainous part, the central blue-grass region, and the great western portion, thrifty in both agriculture and manufactures. It is a great self-sustaining empire, lying midway in the Union, and between the North and the South (never having yet exactly made up its mind whether it is North or South), extending over more than seven degrees of longitude. Its greatest length east and west is 410 miles; its greatest breadth, 178 miles. Its area by latest surveys, and larger than formerly estimated, is 42,283 square miles. Within this area prodigal nature has brought together nearly everything that a highly civilized society needs: the most fertile soil, capable of producing almost every variety of product for food or for textile fabrics; mountains of coals and iron ores and limestone; streams and springs everywhere; almost all sorts of hard-wood timber in abundance. Nearly half the State is still virgin forest of the noblest trees, oaks, sugar-maple, ash, poplar, black-walnut, linn, elm, hickory, beech, chestnut, red cedar. The climate may honestly be called temperate: its inhabitants do not need to live in cellars in the summer, nor burn up their fences and furniture in the winter.

Kentucky is loved of its rivers. It can be seen by their excessively zigzag courses how reluctant they are to leave the State, and if they do leave it they are certain to return. The Kentucky and the Green wander about in the most uncertain way before they go to the Ohio, and the Licking and Big Sandy exhibit only a little less

reluctance. The Cumberland, after a wide detour in Tennessee, returns; and Powell's River, joining the Clinch and entering the Tennessee, finally persuades that river, after it has looked about the State of Tennessee and gladdened northern Alabama, to return to Kentucky.

Kentucky is an old State, with an old civilization. It was the pioneer in the great western movement of population after the Revolution. Although it was first explored in 1770, and the Boone trail through the wilderness of Cumberland Gap was not marked till 1775, a settlement had been made in Frankfort in 1774, and in 1790 the Territory had a population of 79,077. This was a marvellous growth, considering the isolation by hundreds of miles of wilderness from Eastern communities, and the savage opposition of the Indians, who selw fifteen hundred whilc settlers from 1783 to 1790. Kentucky was the home of no Indian tribe, but it was the favorite hunting and fighting ground of those north of the Ohio and south of the Cumberland, and they united to resent white interference. When the State came into the Union in 1792—the second admitted—it was the equal in population and agricultural wealth of some of the original States that had been settled a hundred and fifty years, and in 1800 could boast 220,750 inhabitants, and in 1810, 400,511.

At the time of the settlement, New York west of the Hudson, western Pennsylvania, and western Virginia were almost unoccupied except by hostile Indians; there was only chance and dangerous navigation down the Ohio from Pittsburg, and it was nearly eight hundred miles of a wilderness road, which was nothing but a bridle-path, from Philadelphia by way of the Cumberland Gap to central Kentucky. The majority of emigrants came this toilsome way, which was, after all, preferable to the river route, and all passengers and produce went that way eastward, for the steamboat had not yet made the ascent of the Ohio feasible. In 1779 Virginia resolved to construct a wagon-road through the wilderness, but no road was made for many years afterwards, and indeed no vehicle of any sort passed over it till a road was built by action of the Kentucky Legislature in 1700. I hope it was better than the portion of it I travelled from Pineville to the Gap in 1888.

Civilization made a great leap over nearly a thousand miles into the open garden-spot of central Kentucky, and the exploit is a unique chapter in our frontier development. Either no other land ever lent itself so easily to civilization as the blue-grass region, or it was exceptionally fortunate in its occupants. They formed almost immediately a society distinguished for its amenities, for its political influence, prosperous beyond precedent in farming, venturesome and active in trade, developing large manufactures, especially from hemp, of such articles as could be transported by river, and sending annually through the wilderness road to the East and South immense droves of cattle, horses, and swine. In the first necessity, and the best indication of superior civilization, good roads for transportation, Kentucky was conspicuous in comparison with the rest of the country. As early as 1825 macadam roads were projected, the turnpike from Lexington to Maysville on the Ohio was built in 1829, and the work went on by State and county co-operation until the central region had a system of splendid roads, unexcelled in any part of the Union. In 1830 one of the earliest railways in the United States, that from Lexington to Frankfort, was begun; two years later seven miles were constructed, and in 1835 the first locomotive and train of cars ran on it to Frankfort, twenty-seven miles, in two hours and twenty-nine minutes. The structure was composed of stone sills, in which grooves were cut to receive the iron bars. These stone blocks can still be seen along the line of the road, now a part of the Louisville and Nashville system. In all internal improvements the State was very energetic. The canal around the Falls of the Ohio at Louisville was opened in 1831, with some aid from the General Government. The State expended a great deal in improving the navigation of the Kentucky, the Green, and other rivers in its borders by an expensive system of locks and dams; in 1837 it paid \$19,500 to engineers engaged in turnpike and river improvement, and in 1839 \$31,075 for the same purpose.

The story of early Kentucky reads like a romance. By 1820 it counted a population of over 510,000, and still it had scarcely wagon-road communication with the East. Here was a singular phenomenon, a prosperous community, as one might say a garden in the wilderness, separated by natural barriers from the great life of the East, which pushed out north of it a connected, continuous development; a community almost self-sustaining, having for his centre the loveliest agricultural region in the Union, and evolving a unique social state so gracious and attractive that it was thought necessary to call in the effect of the blue-grass to explain it, unaided human nature being inadequate, it was thought, to such a result. Almost from the beginning fine houses attested the taste and prosperity of the settlers; by 1792 the blue-grass region was dotted with neat and commodious dwellings, fruit orchards and gardens, sugar groves, and clusters of villages; while, a little later, rose, in the midst of broad plantations and park-like forests, lands luxuriant with wheat and clover and corn and hemp and tobacco, the manorial dwellings of the colonial period, like the stately homes planted by the Holland Land Company along the Hudson and the Mohawk and in the fair Genesee, like the pillared structures on the James and the Staunton, and like the solid square mansions of old New England. A type of some of them stands in Frankfort now, a house which was planned by Thomas Jefferson and built in 1796, spacious, permanent, elegant in the low relief of its chaste ornamentation. For comfort, for the purposes of hospitality, for the quiet and rest of the mind, there is still nothing so good as the colonial house, with the slight modifications required by our changed conditions.

From 1820 onward the State grew by a natural increment of population, but without much aid from native or foreign emigration. In 1860 its population was only about 919,000 whites, with some 225,000 slaves and over 10,000 free colored persons. It had no city of the first class, nor any villages specially thriving. Louisville numbered only about 68,000, Lexington less than 15,000, and Frankfort, the capital, a little over 5000. It retained the lead in hemp and a leading position in tobacco; but it had fallen away behind its much younger rivals in manufactures and the building of railways, and only feeble efforts had been made in the development of its extraordinary mineral resources.

How is this arrest of development accounted for? I know that a short way of accounting for it has been the presence of slavery. I would not underestimate this. Free labor would not go where it had to compete with slave labor; white labor now does not like to come into relations with black labor; and capital also was shy of investment in a State where both political economy and social life were disturbed by a color line. But this does not wholly account for the position of Kentucky as to development at the close of the war. So attractive is the State in most respects, in climate, soil, and the possibilities of great wealth by manufactures, that I doubt not the State would have been forced into the line of Western progress and slavery become an

unimportant factor long ago, but for certain natural obstacles and artificial influences.

Let the reader look on the map, at the ranges of mountains running from the north-east to the southwest—the Blue Ridge, the Alleghanies, the Cumberland, and Pine mountains, continuous rocky ridges, with scarcely a water gap, and only at long intervals a passable mountain gap—and notice how these would both hinder and deflect the tide of emigration. With such barriers the early development of Kentucky becomes ten times a wonder. But about 1825 an event occurred that placed her at a greater disadvantage in the competition. The Erie Canal was opened. This made New York, and not Virginia, the great commercial highway. The railway development followed. It was easy to build roads north of Kentucky, and the tide of settlement followed the roads, which were mostly aided by land grants; and in order to utilize the land grants the railways stimulated emigration by extensive advertising. Capital and population passed Kentucky by on the north. To the south somewhat similar conditions prevailed. Comparatively cheap roads could be built along the eastern slope of the Alleghanies, following the great valley from Pennsylvania to Alabama; and these south-westwardly roads were also aided by the General Government. The North and South Railway of Alabama, and the Alabama and Great Southern, which cross at Birmingham, were land-grant roads. The roads which left the Atlantic seaboard passed naturally northward and southward of Kentucky, and left an immense area in the centre of the Union—all of western and southwestern Virginia and eastern Kentucky—without transportation facilities. Until 1880 here was the largest area east of the Mississippi impenetrated by railways.

The war removed one obstacle to the free movement of men desiring work and seeking agreeable homes, a movement marked in the great increase of the industrial population of Louisville and the awakening to varied industries and trade in western Kentucky. The offer of cheap land, which would reward skilful farming in agreeable climatic conditions, has attracted foreign settlers to the plateau south of the blue-grass region; and scientific investigation has made the mountain district in the south-east the object of the eager competition of both domestic and foreign capital. Kentucky, therefore, is entering upon a new era of development. Two phases of it, the Swiss colonies, and the opening of the coal, iron, and timber resources, present special points of interest.

This Incoming of the commercial spirit will change Kentucky for the better and for the worse, will change even the tone of the blue-grass country, and perhaps take away something of that charm about which so much has been written. So thoroughly has this region been set forth by the pen and the pencil and the lens that I am relieved of the necessity of describing it. But I must confess that all I had read of it, all the pictures I had seen, gave me an inadequate idea of its beauty and richness. So far as I know, there is nothing like it in the world. Comparison of it with England is often made in the use of the words "garden" and "park." The landscape is as unlike the finer parts of Old England as it is unlike the most carefully tended parts of New England. It has neither the intense green, the subdivisions in hedges, the bosky lanes, the picturesque cottages, the niceness of minute garden-culture, of England, nor the broken, mixed lawn gardening and neglected pastures and highways, with the sweet wild hills, of the Berkshire region. It is an open, elevated, rolling land, giving the traveller often the most extended views over wheat and clover, hemp and tobacco fields, forests and blue-grass pastures. One may drive for a hundred miles north and south over the splendid macadam turnpikes, behind blooded roadsters, at an easy ten-mile gait, and see always the same sight—a smiling agricultural paradise, with scarcely a foot, in fence corners, by the road-side, or in low grounds, of uncultivated, uncared-for land. The open country is more pleasing than the small villages, which have not the tidiness of the New England small villages; the houses are for the most part plain; here and there is a negro cabin, or a cluster of them, apt to be unsightly, but always in view somewhere is a plantation-house, more or less pretentious, generally old-fashioned and with the colonial charm. These are frequently off the main thoroughfare, approached by a private road winding through oaks and ash-trees, seated on some gentle knoll or slope, maybe with a small flower-garden, but probably with the old sentimental blooms that smell good and have reminiscences, in the midst of waving fields of grain, blue-grass pastures, and open forest glades watered by a dear stream. There seems to be infinite peace in a house so surrounded. The house may have pillars, probably a colonial porch and door-way with earving in bass-relief, a wide hall, large square rooms, low studded, and a general air of comfort. What is new in it in the way of art, furniture, or bric-à-brac may not be in the best taste, and may "swear" at the old furniture and the delightful old portraits. For almost always will be found some portraits of the post-Revolutionary period, having a traditional and family interest, by Copley or Jouett, perhaps a Stuart, maybe by some artist who evidently did not paint for fame, which carry the observer back to the colonial society in Virginia, Philadelphia, and New York. In a country house and in Lexington I saw portraits, life-size and miniature, of Rebecca Gratz, whose loveliness of person and character is still a tender recollection of persons living. She was a great beauty and toast in her day. It was at her house in Philadelphia, a centre of wit and gayety, that Washington Irving and Henry Brevoort and Gulian C. Verplanck often visited. She shone not less in New York society, and was the most intimate friend of Matilda Hoffman, who was betrothed to Irving; indeed, it was in her arms that Matilda died, fadeless always to us as she was to Irving, in the loveliness of her eighteenth year. The well-founded tradition is that Irving, on his first visit to Abbotsford, told Scott of his own loss, and made him acquainted with the beauty and grace of Rebecca Gratz, and that Scott, wanting at the moment to vindicate a race that was aspersed, used her as a model for Rebecca in "Ivanhoe."

One distinction of the blue-grass region is the forests, largely of gigantic oaks, free of all undergrowth, carpeted with the close-set, luscious, nutritive blue-grass, which remains green all the season when it is cropped by feeding. The blue-grass thrives elsewhere, notably in the upper Shenandoah Valley, where somewhat similar limestone conditions prevail; but this is its natural habitat. On all this elevated rolling plateau the limestone is near the surface. This grass blooms towards the middle of June in a bluish, almost a peacock blue, blossom, which gives to the fields an exquisite hue. By the end of the month the seed ripens into a yellowish color, and while the grass is still green and lush underneath, the surface presents much the appearance of a high New England pasture in August. When it is ripe, the top is cut for the seed. The limestone and the blue-grass together determine the agricultural pre-eminence of the region, and account for the fine breeding of the horses, the excellence of the cattle, the stature of the men, and the beauty of the women; but they have social and moral influence also. It could not well be otherwise, considering the relation of the physical condition to disposition and character. We should be surprised if a rich agricultural region,

healthful at the same time, where there is abundance of food, and wholesome cooking is the rule, did not affect the tone of social life. And I am almost prepared to go further, and think that blue-grass is a specific for physical beauty and a certain graciousness of life. I have been told that there is a natural relation between Presbyterianism and blue-grass, and am pointed to the Shenandoah and to Kentucky as evidence of it. Perhaps Presbyterians naturally seek a limestone country. But the relation, if it exists, is too subtle and the facts are too few to build a theory on. Still, I have no doubt there is a distinct variety of woman known as the blue-grass girl. A geologist told me that once when he was footing it over the State with a geologist from another State, as they approached the blue-grass region from the southward they were carefully examining the rock formation and studying the surface indications, which are usually marked on the border line, to determine exactly where the peculiar limestone formation began. Indications, however, were wanting. Suddenly my geologist looked up the road and exclaimed:

"We are in the blue-grass region now."

"How do you know?" asked the other.

"Why, there is a blue-grass girl."

There was no mistaking the neat dress, the style, the rounded contours, the gracious personage. A few steps farther on the geologists found the outcropping of the blue limestone.

Perhaps the people of this region are trying to live up to the thorough-bred. A pedigree is a necessity. The horse is of the first consideration, and either has or gives a sort of social distinction; first, the running horse, the thorough-bred, and now the trotting horse, which is beginning to have a recognizable descent, and is on the way to be a thorough-bred. Many of the finest plantations are horse farms; one might call them the feature of the country. Horse-raising is here a science, and as we drive from one estate to another, and note the careful tillage, the trim fences, the neat stables, the pretty paddocks, and the houses of the favorites, we see how everything is intended to contribute to the perfection in refinement of fibre, speed, and endurance of the noble animal. Even persons who are usually indifferent to horses cannot but admire these beautiful high-bred creatures, either the famous ones displayed at the stables, or the colts and fillies, which have yet their reputations to make, at play in the blue-grass pastures; and the pleasure one experiences is a refined one in harmony with the landscape. Usually horse-dealing carries with it a lowering of the moral tone, which we quite understand when we say of a man that he is "horsy." I suppose the truth is that man has degraded the idea of the horse by his own evil passions, using him to gamble and cheat with. Now, the visitor will find little of these degrading associations in the blue-grass region. It is an orthodox and a moral region. The best and most successful horse-breeders have nothing to do with racing or betting. The yearly product of their farms is sold at auction, without reserve or favor. The sole business is the production of the best animals that science and care can breed. Undeniably where the horse is of such importance he is much in the thought, and the use of "horsy" phrases in ordinary conversation shows his effect upon the vocabulary. The recital of pedigree at the stables, as horse after horse is led out, sounds a little like a chapter from the Book of Genesis, and naturally this Biblical formula gets into a conversation about people.

And after the horses there is whiskey. There are many distilleries in this part of the country, and a great deal of whiskey is made. I am not defending whiskey, at least any that is less than thirty years old and has attained a medicinal quality. But I want to express my opinion that this is as temperate as any region in the United States. There is a wide-spread strict temperance sentiment, and even prohibition prevails to a considerable degree. Whiskey is made and stored, and mostly shipped away; rightly or wrongly, it is regarded as a legitimate business, like wheatraising, and is conducted by honorable men. I believe this to be the truth, and that drunkenness does not prevail in the neighborhood of the distilleries, nor did I see anywhere in the country evidence of a habit of dram drinking, of the traditional matter-of-course offering of whiskey as a hospitality. It is true that mint grows in Kentucky, and that there are persons who would win the respect of a tide-water Virginian in the concoction of a julep. And no doubt in the mind of the born Kentuckian there is a rooted belief that if a person needed a stimulant, the best he can take is old hand-made whiskey. Where the manufacture of whiskey is the source of so much revenue, and is carried on with decorum, of course the public sentiment about it differs from that of a community that makes its money in raising potatoes for starch. Where the horse is so beautiful, fleet, and profitable, of course there is intense interest in him, and the general public take a lively pleasure in the races; but if the reader has been accustomed to associate this part of Kentucky with horse-racing and drinking as prominent characteristics, he must revise his opinion.

Perhaps certain colonial habits lingered longer in Kentucky than elsewhere. Travellers have spoken about the habit of profanity and gambling, especially the game of poker. In the West generally profane swearing is not as bad form as it is in the East. But whatever distinction central Kentucky had in profanity or poker, it has evidently lost it. The duel lingered long, and prompt revenge for insults, especially to women. The blue-grass region has "histories"—beauty has been fought about; women have had careers; families have run out through dissipation. One may hear stories of this sort even in the Berkshire Hills, in any place where there have been long settlement, wealth, and time for the development of family and personal eccentricities. And there is still a flavor left in Kentucky; there is still a subtle difference in its social tone; the intelligent women are attractive in another way from the intelligent New England women—they have a charm of their own. May Heaven long postpone the day when, by the commercial spirit and trade and education, we shall all be alike in all parts of the Union! Yet it would be no disadvantage to anybody if the graciousness, the simplicity of manner, the refined hospitality, of the blue-grass region should spread beyond the blue limestone of the Lower Silurian.

In the excellent State Museum at Frankfort, under the charge of Prof. John R. Procter, * who is State Geologist and also Director of the Bureau of Immigration, in addition to the admirable exhibit of the natural resources of Kentucky, are photographs, statistics, and products showing the condition of the Swiss and other foreign farming colonics recently established in the State, which were so interesting and offered so many instructive points that I determined to see some of the colonies.

** Whatever value this paper has is so largely due to Professor Procter that I desire to make to him the most explicit acknowledgments. One of the very best results of*

This museum and the geological department, the intelligent management of which has been of immense service to the commonwealth, is in one of the detached buildings which make up the present Capitol. The Capitol is altogether antiquated, and not a credit to the State. The room in which the Lower House meets is shabby and mean, yet I noticed that it is fairly well lighted by side windows, and debate can be heard in it conducted in an ordinary tone of voice. Kentucky will before many years be accommodated with new State buildings more suited to her wealth and dignity. But I should like to repeat what was said in relation to the Capitol of Arkansas. Why cannot our architects devise a capitol suited to the wants of those who occupy it? Why must we go on making these huge inconvenient structures, mainly for external display, in which the legislative Chambers are vast air-tight and water-tight compartments, commonly completely surrounded by other rooms and lobbies, and lighted only from the roof, or at best by high windows in one or two sides that permit no outlook—rooms difficult to speak or hear in, impossible to ventilate, needing always artificial light? Why should the Senators of the United States be compelled to occupy a gilded dungeon, unlighted ever by the sun, unvisited ever by the free wind of heaven, in which the air is so foul that the Senators sicken? What sort of legislation ought we to expect from such Chambers? It is perfectly feasible to build a legislative room cheerful and light, open freely to sun and air on three sides. In order to do this it may be necessary to build a group of connected buildings, instead of the parallelogram or square, which is mostly domed, with gigantic halls and stair-ways, and, considering the purpose for which it is intended, is a libel on our ingenuity and a burlesque on our civilization.

Kentucky has gone to work in a very sensible way to induce immigration and to attract settlers of the right sort. The Bureau of Immigration was established in 1880. It began to publish facts about the State, in regard to the geologic formation, the soils, the price of lands, both the uncleared and the lands injured by slovenly culture, the kind and amount of products that might be expected by thrifty farming, and the climate; not exaggerated general proclamations promising sudden wealth with little labor, but facts such as would attract the attention of men willing to work in order to obtain for themselves and their children comfortable homes and modest independence. Invitations were made for a thorough examination of lands—of the different sorts of soils in different counties—before purchase and settlement. The leading idea was to induce industrious farmers who were poor, or had not money enough to purchase high-priced improved lands, to settle upon lands that the majority of Kentuckians considered scarcely worth cultivating, and the belief was that good farming would show that these neglected lands were capable of becoming very productive. Eight years' experience has fully justified all these expectations. Colonies of Swiss, Germans, Austrians, have come, and Swedes also, and these have attracted many from the North and North-west. In this period I suppose as many as ten thousand immigrants of this class, thrifty cultivators of the soil, have come into the State, many of whom are scattered about the State, unconnected with the so-called colonies. These colonies are not organized communities in any way separated from the general inhabitants of the State. They have merely settled together for companionship and social reasons, where a sufficiently large tract of cheap land was found to accommodate them. Each family owns its own farm, and is perfectly independent. An indiscriminate immigration has not been desired or encouraged, but the better class of laboring agriculturists, grape-growers, and stock-raisers. There are several settlements of these, chiefly Swiss, dairy-farmers, cheese-makers, and vine-growers, in Laurel County; others in Lincoln County, composed of Swiss, Germans, and Austrians; a mixed colony in Rock Castle County; a thriving settlement of Austrians in Boyle County; a temperance colony of Scandinavians in Edmonson County; another Scandinavian colony in Grayson County; and scattered settlements of Germans and Scandinavians in Christian County. These settlements have from one hundred to over a thousand inhabitants each. The lands in Laurel and Lincoln counties, which I travelled through, are on a high plateau, with good air and temperate climate, but with a somewhat thin, loamy, and sandy soil, needing manure, and called generally in the State poor land—poor certainly compared with the blue-grass region and other extraordinarily fertile sections. These farms, which had been more or less run over by Kentucky farming, were sold at from one to five dollars an acre. They are farms that a man cannot live on in idleness. But they respond well to thrifty tillage, and it is a sight worth a long journey to see the beautiful farms these Swiss have made out of land that the average Kentuckian thought not worth cultivating. It has not been done without hard work, and as most of the immigrants were poor, many of them have had a hard struggle in building comfortable houses, reducing the neglected land to order, and obtaining stock. A great attraction to the Swiss was that this land is adapted to vine culture, and a reasonable profit was expected from selling grapes and making wine. The vineyards are still young; experiment has not yet settled what kind of grapes flourish best, but many vine-growers have realized handsome profits in the sale of fruit, and the trial is sufficient to show that good wine can be produced. The only interference thus far with the grapes has been the unprecedented late freeze last spring.

At the recent exposition in Louisville the exhibit of these Swiss colonies—the photographs showing the appearance of the unkempt land when they bought it, and the fertile fields of grain and meadow and vineyards afterwards, and the neat, plain farm cottages, the pretty Swiss chalet with its attendants of intelligent comely girls in native costumes offering articles illustrating the taste and the thrift of the colonies, wood-carving, the products of the dairy, and the fruit of the vine—attracted great attention.

I cannot better convey to the reader the impression I wish to in regard to this colonization and its lesson for the country at large than by speaking more in detail of one of the Swiss settlements in Laurel County. This is Bernstadt, about six miles from Pittsburg, on the Louisville and Nashville road, a coal-mining region, and offering a good market for the produce of the Swiss farmers. We did not need to be told when we entered the colony lands; neater houses, thrifty farming, and better roads proclaimed it. It is not a garden-spot; in some respects it is a poor-looking country; but it has abundant timber, good water, good air, a soil of light sandy loam, which is productive under good tillage. There are here, I suppose, some two hundred and fifty families, scattered about over a large area, each on its farm. There is no collection of houses; the church (Lutheran), the school-house, the store, the post-office, the hotel, are widely separated; for the hotel-keeper, the store-keeper, the postmaster, and, I believe, the school-master and the parson, are all farmers to a greater or less extent. It must be understood that it is a primitive settlement, having as yet very little that is picturesque, a community of simple working-people. Only one or two of the houses have any pretension to taste in

architecture, but this will come in time—the vine-clad porches, the quaint gables, the home-likeness. The Kentuckian, however, will notice the barns for the stock, and a general thriftiness about the places. And the appearance of the farms is an object-lesson of the highest value.

The chief interest to me, however, was the character of the settlers. Most of them were poor, used to hard work and scant returns for it in Switzerland. What they have accomplished, therefore, is the result of industry, and not of capital. There are among the colonists skilled laborers in other things than vine-growing and cheese-making—watch-makers and wood-carvers and adepts in various trades. The thrifty young farmer at whose pretty house we spent the night, and who has saw-mills at Pittsburg, is of one of the best Swiss families; his father was for many years President of the republic, and he was a graduate of the university at Lucerne. There were others of the best blood and breeding and schooling, and men of scientific attainments. But they are all at work close to the soil. As a rule, however, the colonists were men and women of small means at home. The notable thing is that they bring with them a certain old civilization, a unity of simplicity of life with real refinement, courtesy, politeness, good-humor. The girls would not be above going out to service, and they would not lose their self-respect in it. Many of them would be described as “peasants,” but I saw some, not above the labors of the house and farm, with real grace and dignity of manner and charm of conversation. Few of them as yet speak any English, but in most houses are evidences of some German culture. Uniformly there was courtesy and frank hospitality. The community amuses itself rationally. It has a very good brass band, a singing club, and in the evenings and holidays it is apt to assemble at the hotel and take a little wine and sing the songs of father-land. The hotel is indeed at present without accommodations for lodgers—nothing but a Wirthshaus with a German garden where dancing may take place now and then. With all the hard labor, they have an idea of the simple comforts and enjoyments of life. And they live very well, though plainly. At a house where we dined, in the colony Strasburg, near Bernstadt, we had an excellent dinner, well served, and including delicious soup. If the colony never did anything else than teach that part of the State how to make soup, its existence would be justified. Here, in short, is an element of homely thrift, civilization on a rational basis, good-citizenship, very desirable in any State. May their vineyards flourish! When we departed early in the morning—it was not yet seven—a dozen Switzers, fresh from the dewy fields, in their working dresses, had assembled at the hotel, where the young landlady also smiled a welcome, to send us off with a song, which ended, as we drove away, in a good-bye *yodel*.

A line drawn from the junction of the Scioto River with the Ohio south-west to a point in the southern boundary about thirty miles east of where the Cumberland leaves the State defines the eastern coal-measures of Kentucky. In area it is about a quarter of the State—a region of plateaus, mountains, narrow valleys, cut in all directions by clear, rapid streams, stuffed, one may say, with coals, streaked with iron, abounding in limestone, and covered with superb forests. Independent of other States a most remarkable region, but considered in its relation to the coals and iron ores of West Virginia, western Virginia, and eastern Tennessee, it becomes one of the most important and interesting regions in the Union. Looking to the south-eastern border, I hazard nothing in saying that the country from the Breaks of Sandy down to Big Creek Gap (in the Cumberland Mountain), in Tennessee, is on the eve of an astonishing development—one that will revolutionize eastern Kentucky, and powerfully affect the iron and coal markets of the country. It is a region that appeals as well to the imagination of the traveller as to the capitalist. My personal observation of it extends only to the portion from Cumberland Gap to Big Stone Gap, and the head-waters of the Cumberland between Cumberland Mountain and Pine Mountain, but I saw enough to comprehend why eager purchasers are buying the forests and the mining rights, why great companies, American and English, are planting themselves there and laying the foundations of cities, and why the gigantic railway corporations are straining every nerve to penetrate the mineral and forest heart of the region. A dozen roads, projected and in progress, are pointed towards this centre. It is a race for the prize. The Louisville and Nashville, running through soft-coal fields to Jellico and on to Knoxville, branches from Corbin to Barbourville (an old and thriving town) and to Pineville. From Pineville it is under contract, thirteen miles, to Cumberland Gap. This gap is being tunnelled (work going on at both ends) by an independent company, the tunnel to be open to all roads. The Louisville and Nashville may run up the south side of the Cumberland range to Big Stone Gap, or it may ascend the Cumberland River and its Clover Fork, and pass over to Big Stone Gap that way, or it may do both. A road is building from Knoxville to Cumberland Gap, and from Johnson City to Big Stone Gap. A road is running from Bristol to within twenty miles of Big Stone Gap; another road nears the same place—the extension of the Norfolk and Western—from Pocahontas down the Clinch River. From the north-west many roads are projected to pierce the great deposits of coking and cannel coals, and find or bore a way through the mountain ridges into south-western Virginia. One of these, the Kentucky Union, starting from Lexington (which is becoming a great railroad centre), has reached Clay City, and will soon be open to the Three Forks of the Kentucky River, and on to Jackson, in Breathitt County. These valley and transridge roads will bring within short hauling distance of each other as great a variety of iron ores of high and low grade, and of coals, coking and other, as can be found anywhere—according to the official reports, greater than anywhere else within the same radius. As an item it may be mentioned that the rich, pure, magnetic iron ore used in the manufacture of Bessemer steel, found in East Tennessee and North Carolina, and developed in greatest abundance at Cranberry Forge, is within one hundred miles of the superior Kentucky coking coal. This contiguity (a contiguity of coke, ore, and limestone) in this region points to the manufacture of Bessemer steel here at less cost than it is now elsewhere made.

It is unnecessary that I should go into details as to the ore and coal deposits of this region: the official reports are accessible. It may be said, however, that the reports of the Geological Survey as to both coal and iron have been recently perfectly confirmed by the digging of experts. Aside from the coal-measures below the sandstone, there have been found above the sandstone, north of Pine Mountain, 1650 feet of coal-measures, containing nine beds of coal of workable thickness, and between Pine and Cumberland mountains there is a greater thickness of coal-measures, containing twelve or more workable beds. Some of these are coking coals of great excellence. Cannel-coals are found in sixteen of the counties in the eastern coal-fields. Two of them at least are of unexampled richness and purity. The value of a cannel-coal is determined by its volatile combustible matter. By this test some of the Kentucky cannel-coal excels the most celebrated coals of Great Britain. An analysis of a cannel-coal in Breathitt County gives 66.28 of volatile combustible matter; the

highest in Great Britain is the Boghead, Scotland, 51.60 per cent. This beautiful cannel-coal has been brought out in small quantities *via* the Kentucky River; it will have a market all over the country when the railways reach it. The first coal identified as coking was named the Elkhorn, from the stream where it was found in Pike County. A thick bed of it has been traced over an area of 1600 square miles, covering several counties, but attaining its greatest thickness in Letcher, Pike, and Harlan. This discovery of coking coal adds greatly to the value of the iron ores in north-eastern Kentucky, and in the Red and Kentucky valleys, and also of the great deposits of ore on the south-east boundary, along the western base of the Cumberland, along the slope of Powell's Mountain, and also along Wallin's Ridge, three parallel lines, convenient to the coking coal in Kentucky. This is the Clinton or red fossil ore, stratified, having from 45 to 54 per cent, of metallic iron. Recently has been found on the north side of Pine Mountain in Kentucky, a third deposit of rich "brown" ore, averaging 52 per cent, of metallic iron. This is the same as the celebrated brown ore used in the furnaces at Clifton Forge; it makes a very tough iron. I saw a vein of it on Straight Creek, three miles north of Pineville, just opened, at least eight feet thick.

The railway to Pineville follows the old Wilderness road, the trail of Boone and the stage-road, along which are seen the ancient tavern stands where the jolly story-telling travellers of fifty years ago were entertained and the droves of horses and cattle were fed. The railway has been stopped a mile west of Pineville by a belligerent property owner, who sits there with his Winchester rifle, and will not let the work go on until the courts compel him. The railway will not cross the Cumberland at Pineville, but higher up, near the great elbow. There was no bridge over the stream, and we crossed at a very rough and rocky wagon-ford. Pineville, where there has loner been a backwoods settlement on the south bend of the river just after it breaks through Pine Mountain, is now the centre of a good deal of mining excitement and real-estate speculation. It has about five hundred inhabitants, and a temporary addition of land buyers, mineral experts, engineers, furnace projectors, and railway contractors. There is not level ground for a large city, but what there is is plotted out for sale. The abundant iron ore, coal, and timber here predict for it a future of some importance. It has already a smart new hotel, and business buildings, and churches are in process of erection. The society of the town had gathered for the evening at the hotel. A wandering one-eyed fiddler was providentially present who could sing and play "The Arkansas Traveller" and other tunes that lift the heels of the young, and also accompany the scream of the violin with the droning bagpipe notes of the mouth-harmonica. The star of the gay company was a graduate of Annapolis, in full evening dress uniform, a native boy of the valley, and his *vis-à-vis* was a heavy man in a long linen duster and carpet slippers, with a palm-leaf fan, who crashed through the cotillon with good effect. It was a pleasant party, and long after it had dispersed, the troubadour, sitting on the piazza, wiled away sleep by the break-downs, jigs, and songs of the frontier.

Pineville and its vicinity have many attractions; the streams are clear, rapid, rocky, the foliage abundant, the hills picturesque. Straight Creek, which comes in along the north base of Pine Mountain, is an exceedingly picturesque stream, having along its banks fertile little stretches of level ground, while the gentle bordering hills are excellent for grass, fruit orchards, and vineyards. The walnut-trees have been culled out, but there is abundance of oat, beech, poplar, cucumber, and small pines. And there is no doubt about the mineral wealth.

We drove from Pineville to Cumberland Gap, thirteen miles, over the now neglected Wilderness road, the two mules of the wagon unable to pull us faster than two miles an hour. The road had every variety of badness conceivable—loose stones, ledges of rock, boulders, sloughs, holes, mud, sand, deep fords. We crossed and followed up Clear Creek (a muddy stream) over Log Mountain (full of coal) to Canon Creek. Settlements were few—only occasional poor shanties. Climbing over another ridge, we reached the Yellow Creek Valley, through which the Yellow Creek meanders in sand. This whole valley, lying very prettily among the mountains, has a bad name for "difficulties." The hills about, on the sides and tops of which are ragged little farms, and the valley itself, still contain some lawless people. We looked with some interest at the Turner house, where a sheriff was killed a year ago, at a place where a "severe" man fired into a wagon-load of people and shot a woman, and at other places where in recent times differences of opinion had been settled by the revolver. This sort of thing is, however, practically over. This valley, close to Cumberland Gap, is the site of the great city, already plotted, which the English company are to build as soon as the tunnel is completed. It is called Middleborough, and the streets are being graded and preparations made for building furnaces. The north side of Cumberland Mountain, like the south side of Pine, is a conglomerate, covered with superb oak and chestnut trees. We climbed up to the mountain over a winding road of ledges, boulders, and deep gullies, rising to an extended pleasing prospect of mountains and valleys. The pass has a historic interest, not only as the ancient highway, but as the path of armies in the Civil War. It is narrow, a deep road between overhanging rocks. It is easily defended. A light bridge thrown over the road, leading to rifle-pits and breastworks on the north side, remains to attest the warlike occupation. Above, on the bald highest rocky head on the north, guns were planted to command the pass. Two or three houses, a blacksmith's shop, a drinking tavern, behind which on the rocks four men were playing old sledge, made up the sum of its human attractions as we saw it. Just here in the pass Kentucky, Tennessee, and Virginia touch each other. Virginia inserts a narrow wedge between the other two. On our way down the wild and picturesque road we crossed the State of Virginia and went to the new English hotel in Tennessee. We passed a magnificent spring, which sends a torrent of water into the valley, and turns a great millwheel—a picture in its green setting—saw the opening of the tunnel with its shops and machinery, noted the few houses and company stores of the new settlement, climbed the hill to the pretty hotel, and sat down on the piazza to look at the scene. The view is a striking one. The valley through which the Powell River runs is pleasant, and the bold, bare mountain of rock at the right of the pass is a noble feature in the landscape. With what joy must the early wilderness pilgrims have hailed this landmark, this gate-way to the Paradise beyond the mountains! Some miles north in the range are the White Rocks, gleaming in the sun and conspicuous from afar, the first signal to the weary travellers from the east of the region they sought. Cumberland Gap is full of expectation, and only awaits the completion of the tunnel to enter upon its development. Here railways from the north, south, and west are expected to meet, and in the Yellow Creek Valley beyond, the English are to build a great manufacturing city. The valleys and sides of these mountain ranges (which have a uniform elevation of not much more than 2000 to 2500 feet) enjoy a delightful climate, moderate in the winter and temperate in the summer. This whole

region, when it is accessible by rail, will be attractive to tourists.

We pursued our journey up the Powell River Valley, along the base of the Cumberland, on horseback—one day in a wagon in this country ought to satisfy anybody. The roads, however, are better on this side of the mountain; all through Lee County, In Virginia, in spots very good. This is a very fine valley, with good water, cold and clear, growing in abundance oats and corn, a constant succession of pretty views. We dined excellently at a neat farm-house on the river, and slept at the house of a very prosperous farmer near Boon's Path post-office. Here we are abreast the White Rocks, the highest point of the Cumberland (3451 feet), that used to be the beacon of immigration.

The valley grows more and more beautiful as we go up, full fields of wheat, corn, oats, friendly to fruit of all sorts, with abundance of walnut, oak, and chestnut timber—a fertile, agreeable valley, settled with well-to-do farmers. The next morning, beautifully clear and sparkling, we were off at seven o'clock through a lovely broken country, following the line of Cumberland (here called Stone) Mountain, alternately little hills and meadows, cultivated hill-sides, stretches of rich valley, exquisite views—a land picturesque and thriving. Continuing for nine miles up Powell Valley, we turned to the left through a break in the hills into Poor Valley, a narrow, wild, sweet ravine among the hills, with a swift crystal stream overhung by masses of rhododendrons in bloom, and shaded by magnificent forest-trees. We dined at a farm-house by Pennington's Gap, and had a swim in the north fork of Powell River, which here, with many a leap, breaks through the bold scenery in the gap. Farther on, the valley was broader and more fertile, and along the wide reaches of the river grew enormous beech-trees, the russet foliage of which took on an exquisite color towards evening. Indeed, the ride all day was excitingly interesting, with the great trees, the narrow rich valleys, the frequent sparkling streams, and lovely mountain views. At sunset we came to the house of an important farmer who has wide possessions, about thirteen miles from Big Stone Gap. We have nothing whatever against him except that he routed us out at five o'clock of a foggy Sunday morning, which promised to be warm—July 1st—to send us on our way to "the city." All along we had heard of "the city." In a radius of a hundred miles Big Stone Gap is called nothing but "the city," and our anticipations were raised.

That morning's ride I shall not forget. We crossed and followed Powell River. All along the banks are set the most remarkable beech-trees I have ever seen—great, wide-spreading, clean-boled trees, overbading the stream, and giving under their boughs, nearly all the way, ravishingly lovely views. This was the paradisiacal way to Big Stone Gap, which we found to be a round broken valley, shut in by wooded mountains, covered more or less with fine trees, the meeting-place of the Powell River, which comes through the gap, and its south fork. In the round elevation between them is the inviting place of the future city. There are two Big Stone Gaps—the one open fields and forests, a settlement of some thirty to forty houses, most of them new and many in process of building, a hotel, and some tents; the other, the city on the map. The latter is selling in small lots, has wide avenues, parks, one of the finest hotels in the South, banks, warehouses, and all that can attract the business man or the summer lounge.

The heavy investments in Big Stone Gap and the region I should say were fully justified by the natural advantages. It is a country of great beauty, noble mountain ranges, with the valleys diversified by small hills, fertile intervals, fine streams, and a splendid forest growth. If the anticipations of an important city at the gap are half realized, the slopes of the hills and natural terraces will be dotted with beautiful residences, agreeable in both summer and winter. It was the warmest time of the year when we were there, but the air was fresh and full of vitality. The Big Stone Gap Improvement Company has the city and its site in charge; it is a consolidation of the various interests of railway companies and heavy capitalists, who have purchased the land. The money and the character of the men behind the enterprise insure a vigorous prosecution of it. On the west side of the river are the depot and switching-grounds which the several railways have reserved for their use, and here also are to be the furnaces and shops. When the city outgrows its present site it can extend up valleys in several directions. We rode through line forests up the lovely Powell Valley to Powell Mountain, where a broad and beautiful meadow offers a site for a suburban village. The city is already planning for suburbs. A few miles south of the city a powerful stream of clear water falls over precipices and rocks seven hundred feet in continuous rapids. This is not only a charming addition to the scenic attractions of the region, but the stream will supply the town with excellent water and unlimited "power." Beyond, ten miles to the north-east, rises High Knob, a very sightly point, where one gets the sort of view of four States that he sees on an atlas. It is indeed a delightful region; but however one may be charmed by its natural beauty, he cannot spend a day at Big Stone Gap without being infected with the great enterprises brooding there.

We forded Powell River and ascended through the gap on its right bank. Before entering the gorge we galloped over a beautiful level plateau, the counterpart of that where the city is laid out, reserved for railways and furnaces. From this point the valley is seen to be wider than we suspected, and to have ample room for the manufacturing and traffic expected. As we turned to see what we shall never see again—the virgin beauty of nature in this site—the whole attractiveness of this marvellously picturesque region burst upon us—the great forests, the clear swift streams, the fertile meadows, the wooded mountains that have so long secluded this beauty and guarded the treasures of the hills.

The pass itself, which shows from a distance only a dent in the green foliage, surprised us by its wild beauty. The stony road, rising little by little above the river, runs through a magnificent forest, gigantic trees growing in the midst of enormous boulders, and towering among rocks that take the form of walls and buttresses, square structures like the Titanic ruins of castles; below, the river, full and strong, rages over rocks and dashes down, filling the forest with its roar, which is echoed by the towering cliffs on either side. The woods were fresh and glistening from recent rains, but what made the final charm of the way was the bloom of the rhododendron, which blazed along the road and illuminated the cool recesses of the forest. The time for the blooming of the azalea and the kalmia (mountain-laurel) was past, but the pink and white rhododendron was in full glory, masses of bloom, not small stalks lurking like underbrush, but on bushes attaining the dignity of trees, and at least twenty-five feet high. The splendor of the forest did not lessen as we turned to the left and followed up Pigeon Creek to a high farming region, rough but fertile, at the base of Black Mountain. Such a wealth of oak, beech, poplar, chestnut, and ash, and, sprinkled in, the pretty

cucumber-magnolia in bloom! By sunset we found our way, off the main road, to a lonely farm-house hidden away at the foot of Morris Pass, secluded behind an orchard of apple and peach trees. A stream of spring-water from the rocks above ran to the house, and to the eastward the ravine broadened into pastures. It seemed impossible to get farther from the world and its active currents. We were still in Virginia.

Our host, an old man over six feet in height, with spare, straight, athletic form, a fine head, and large clear gray eyes, lived here alone with his aged spouse. He had done his duty by his country in raising twelve children (that is the common and orthodox number in this region), who had all left him except one son, who lived in a shanty up the ravine. It was this son's wife who helped about the house and did the milking, taking care also of a growing family of her own, and doing her share of field-work. I had heard that the women in this country were more industrious than the men. I asked this woman, as she was milking that evening, if the women did all the work. No, she said; only their share. Her husband was all the time in the field, and even her boys, one only eight, had to work with him; there was no time to go to school, and indeed the school didn't amount to much anyway—only a little while in the fall. She had all the care of the cows. "Men," she added, "never notice milking;" and the worst of it was that she had to go miles around in the bush night and morning to find them. After supper we had a call from a bachelor who occupied a cabin over the pass, on the Kentucky side, a loquacious philosopher, who squatted on his heels in the door-yard where we were sitting, and interrogated each of us in turn as to our names, occupations, residence, ages, and politics, and then gave us as freely his own history and views of life. His eccentricity in this mountain region was that he had voted for Cleveland and should do it again. Mr. Morris couldn't go with him in this; and when pressed for his reasons he said that Cleveland had had the salary long enough, and got rich enough out of it. The philosopher brought the news, had heard it talked about on Sunday, that a man over Clover Fork way had killed his wife and brother. It was claimed to be an accident; they were having a game of cards and some whiskey, and he was trying to kill his son-in-law. Was there much killing round here? Well, not much lately. Last year John Cone, over on Clover Fork, shot Mat Harner in a dispute over cards. Well, what became of John Cone? Oh, he was killed by Jim Blood, a friend of Harner. And what became of Blood? Well, he got shot by Elias Travers. And Travers? Oh, he was killed by a man by the name of Jacobs. That ended it. None of 'em was of much account. There was a pleasing naivete in this narrative. And then the philosopher, whom the milkmaid described to me next morning as "a similar sort of man," went on to give his idea about this killing business. "All this killing in the mountains is foolish. If you kill a man, that don't aggravate him; he's dead and don't care, and it all comes on you."

In the early morning we crossed a narrow pass in the Black Mountain into "Canetucky," and followed down the Clover Fork of the Cumberland. All these mountains are perfectly tree-clad, but they have not the sombreness of the high regions of the Great Smoky and the Black Mountains of North Carolina. There are few black balsams, or any sort of evergreens, and the great variety of deciduous trees, from the shining green of the oak to the bronze hue of the beech, makes everywhere soft gradations of color most pleasing to the eye. In the autumn, they say, the brilliant maples in combination with the soberer bronzes and yellows of the other forest-trees give an ineffable beauty to these ridges and graceful slopes. The ride down Clover Fork, all day long, was for the most part through a virgin world. The winding valley is at all times narrow, with here and there a tiny meadow, and at long intervals a lateral opening down which another sparkling brook comes from the recesses of this wilderness of mountains. Houses are miles apart, and usually nothing but cabins half concealed in some sheltered nook. There is, however, hidden on the small streams, on mountain terraces, and high up on the slopes, a considerable population, cabin dwellers, cultivators of corn, on the almost perpendicular hills. Many of these cornfields are so steep that it is impossible to plough them, and all the cultivation is done with the hoe. I heard that a man was recently killed in this neighborhood by falling out of his cornfield. The story has as much foundation as the current belief that the only way to keep a mule in the field where you wish him to stay is to put him into the adjoining lot. But it is true that no one would believe that crops could be raised on such nearly perpendicular slopes as these unless he had seen the planted fields.

In my limited experience I can recall no day's ride equal in simple natural beauty—not magnificence—and splendor of color to that down Clover Fork. There was scarcely a moment of the day when the scene did not call forth from us exclamations of surprise and delight. The road follows and often crosses the swift, clear, rocky stream. The variegated forest rises on either hand, but all along the banks vast trees without underbrush dot the little intervalles. Now and then, in a level reach, where the road wound through these monarch stems, and the water spread in silver pools, the perspective was entrancing. But the color! For always there were the rhododendrons, either gleaming in masses of white and pink in the recesses of the forest, or forming for us an *allée*, close set, and uninterrupted for miles and miles; shrubs like trees, from twenty to thirty feet high, solid bouquets of blossoms, more abundant than any cultivated parterre, more brilliant than the finest display in a horticultural exhibition. There is an avenue of rhododendrons half a mile long at Hampton Court, which is world-wide famous. It needs a day to ride through the rhododendron avenue on Clover Fork, and the wild and free beauty of it transcends all creations of the gardener.

The inhabitants of the region are primitive and to a considerable extent illiterate. But still many strong and distinguished men have come from these mountain towns. Many families send their children away to school, and there are fair schools at Barbersville, Harlan Court-house, and in other places. Long isolated from the moving world, they have retained the habits of the early settlers, and to some extent the vernacular speech, though the dialect is not specially marked. They have been until recently a self-sustaining people, raising and manufacturing nearly everything required by their limited knowledge and wants. Not long ago the women spun and wove from cotton and hemp and wool the household linen, the bed-wear, and the clothes of the family. In many houses the loom is still at work. The colors used for dyeing were formerly all of home make except, perhaps, the indigo; now they use what they call the "brought in" dyes, bought at the stores; and prints and other fabrics are largely taking the places of the home-made. During the morning we stopped at one of the best houses on the fork, a house with a small apple-orchard in front, having a veranda, two large rooms, and a porch and kitchen at the back. In the back porch stood the loom with its web of half-finished cloth. The farmer was of the age when men sun themselves on the gallery and talk. His wife, an intelligent, barefooted old woman, was still engaged in household duties, but her weaving days were over. Her daughters did the weaving, and in one of the rooms were the linsey-woolsey dresses hung up, and piles of gorgeous bed

coverlets, enough to set up half a dozen families. These are the treasures and heirlooms handed down from mother to daughter, for these handmade fabrics never wear out. Only eight of the twelve children were at home. The youngest, the baby, a sickly boy of twelve, was lounging about the house. He could read a little, for he had been to school a few weeks. Reading and writing were not accomplishments in the family generally. The other girls and boys were in the cornfield, and going to the back door, I saw a line of them hoeing at the top of the field. The field was literally so steep that they might have rolled from the top to the bottom. The mother called them in, and they lounged leisurely down, the girls swinging themselves over the garden fence with athletic ease. The four eldest were girls: one, a woman of thirty-five, had lost her beauty, if she ever had any, with her teeth; one, of thirty, recently married, had a stately dignity and a certain nobility of figure; one, of sixteen, was undeniably pretty—almost the only woman entitled to this epithet that we saw in the whole journey. This household must have been an exception, for the girls usually marry very young. They were all, of course, barefooted. They were all laborers, and evidently took life seriously, and however much their knowledge of the world was limited, the household evidently respected itself. The elder girls were the weavers, and they showed a taste and skill in their fabrics that would be praised in the Orient or in Mexico. The designs and colors of the coverlets were ingenious and striking. There was a very handsome one in crimson, done in wavy lines and bizarre figures, that was called the Kentucky Beauty, or the Ocean Wave, that had a most brilliant effect. A simple, hospitable family this. The traveller may go all through this region with the certainty of kindly treatment, and in perfect security—if, I suppose, he is not a revenue officer, or sent in to survey land on which the inhabitants have squatted.

We came at night to Harlan Court-house, an old shabby hamlet, but growing and improving, having a new court-house and other signs of the awakening of the people to the wealth here in timber and mines. Here in a beautiful valley three streams—Poor, Martin, and Clover forks—unite to form the Cumberland. The place has fourteen “stores” and three taverns, the latter a trial to the traveller. Harlan has been one of the counties most conspicuous for lawlessness. The trouble is not simply individual wickedness, but the want of courage of public opinion, coupled with a general disrespect for authority. Plenty of people lament the state of things, but want the courage to take a public stand. The day before we reached the Court-house the man who killed his wife and his brother had his examination. His friends were able to take the case before a friendly justice instead of the judge. The facts sworn to were that in a drunken dispute over cards he tried to kill his son-in-law, who escaped out of the window, and that his wife and brother opposed him, and he killed them with his pistol. Therefore their deaths were accidental, and he was discharged. Many people said privately that he ought to be hanged, but there was entire public apathy over the affair. If Harlan had three or four resolute men who would take a public stand that this lawlessness must cease, they could carry the community with them. But the difficulty of enforcing law and order in some of these mountain counties is to find proper judges, prosecuting officers, and sheriffs. The officers are as likely as not to be the worst men in the community, and if they are not, they are likely to use their authority for satisfying their private grudges and revenges. Consequently men take the “law” into their own hands. The most personally courageous become bullies and the terror of the community. The worst citizens are not those who have killed most men, in the opinion of the public. It ought to be said that in some of the mountain counties there has been very little lawlessness, and in some it has been repressed by the local authorities, and there is great improvement on the whole. I was sorry not to meet a well-known character in the mountains, who has killed twenty-one men. He is a very agreeable “square” man, and I believe “high-toned,” and it is the universal testimony that he never killed a man who did not deserve killing, and whose death was a benefit to the community. He is called, in the language of the country, a “severe” man. In a little company that assembled at the Harlan tavern were two elderly men, who appeared to be on friendly terms enough. Their sons had had a difficulty, and two boys out of each family had been killed not very long ago. The fathers were not involved in the vendetta. About the old Harlan court-house a great many men have been killed during court week in the past few years. The habit of carrying pistols and knives, and whiskey, are the immediate causes of these deaths, but back of these is the want of respect for law. At the ford of the Cumberland at Pineville was anchored a little house-boat, which was nothing but a whiskey-shop. During our absence a tragedy occurred there. The sheriff with a posse went out to arrest some criminals in the mountain near. He secured his men, and was bringing them into Pineville, when it occurred to him that it would be a good plan to take a drink at the houseboat. The whole party got into a quarrel over their liquor, and in it the sheriff was killed and a couple of men seriously wounded. A resolute surveyor, formerly a general in our army, surveying land in the neighborhood of Pineville, under a decree of the United States Court, has for years carried on his work at the personal peril of himself and his party. The squatters not only pull up his stakes and destroy his work day after day, but it was reported that they had shot at his corps from the bushes. He can only go on with his work by employing a large guard of armed men.

This state of things in eastern Kentucky will not be radically changed until the railways enter it, and business and enterprise bring in law and order. The State Government cannot find native material for enforcing law, though there has been improvement within the past two years. I think no permanent gain can be expected till a new civilization comes in, though I heard of a bad community in one of the counties that had been quite subdued and changed by the labors of a devout and plain-spoken evangelist. So far as our party was concerned, we received nothing but kind treatment, and saw little evidences of demoralization, except that the young men usually were growing up to be “roughs,” and liked to lounge about with shot-guns rather than work. But the report of men who have known the country for years was very unfavorable as to the general character of the people who live on the mountains and in the little valleys—that they were all ignorant; that the men generally were idle, vicious, and cowardly, and threw most of the hard labor in the field and house upon the women; that the killings are mostly done from ambush, and with no show for a fair fight. This is a tremendous indictment, and it is too sweeping to be sustained. The testimony of the gentlemen of our party, who thoroughly know this part of the State, contradicted it. The fact is there are two sorts of people in the mountains, as elsewhere.

The race of American mountaineers occupying the country from western North Carolina to eastern Kentucky is a curious study. Their origin is in doubt. They have developed their peculiarities in isolation. In this freedom stalwart and able men have been from time to time developed, but ignorance and freedom from

the restraints of law have had their logical result as to the mass. I am told that this lawlessness has only existed since the war; that before, the people, though ignorant of letters, were peaceful. They had the good points of a simple people, and if they were not literate, they had abundant knowledge of their own region. During the war the mountaineers were carrying on a civil war at home. The opposing parties were not soldiers, but bushwhackers. Some of the best citizens were run out of the country, and never returned. The majority were Unionists, and in all the mountain region of eastern Kentucky I passed through there are few to-day who are politically Democrats. In the war, home-guards were organized, and these were little better than vigilance committees for private revenge. Disorder began with this private and partly patriotic warfare. After the war, when the bushwhackers got back to their cabins, the animosities were kept up, though I fancy that politics has little or nothing to do with them now. The habit of reckless shooting, of taking justice into private hands, is no doubt a relic of the disorganization during the war.

Worthless, good-for-nothing, irreclaimable, were words I often heard applied to people of this and that region. I am not so despondent of their future. Railways, trade, the sight of enterprise and industry, will do much with this material. Schools will do more, though it seems impossible to have efficient schools there at present. The people in their ignorance and their undeveloped country have a hard struggle for life. This region is, according to the census, the most prolific in the United States. The girls marry young, bear many children, work like galley-slaves, and at the time when women should be at their best they fade, lose their teeth, become ugly, and look old. One great cause of this is their lack of proper nourishment. There is nothing unhealthy in out-door work in moderation if the body is properly sustained by good food. But healthy, handsome women are not possible without good fare. In a considerable part of eastern Kentucky (not I hear in all) good wholesome cooking is unknown, and civilization is not possible without that. We passed a cabin where a man was very ill with dysentery. No doctor could be obtained, and perhaps that, considering what the doctor might have been, was not a misfortune. But he had no food fit for a sick man, and the women of the house were utterly ignorant of the diet suitable to a man in his state. I have no doubt that the abominable cookery of the region has much to do with the lawlessness, as it visibly has to do with the poor physical condition.

The road down the Cumberland, in a valley at times spreading out into fertile meadows, is nearly all the way through magnificent forests, along hill-sides fit for the vine, for fruit, and for pasture, while frequent outcroppings of coal testify to the abundance of the fuel that has been so long stored for the new civilization. These mountains would be profitable as sheep pastures did not the inhabitants here, as elsewhere in the United States, prefer to keep dogs rather than sheep.

I have thus sketched hastily some of the capacities of the Cumberland region. It is my belief that this central and hitherto neglected portion of the United States will soon become the theatre of vast and controlling industries.

I want space for more than a concluding word about western Kentucky, which deserves, both for its capacity and its recent improvements, a chapter to itself. There is a limestone area of some 10,000 square miles, with a soil hardly less fertile than that of the blue-grass region, a high agricultural development, and a population equal in all respects to that of the famous and historic grass country. Seven of the ten principal tobacco-producing counties in Kentucky and the largest Indian corn and wheat raising counties are in this part of the State. The western coal-field has both river and rail transportation, thick deposits of iron ore, and more level and richer farming lands than the eastern coal-field. Indeed, the agricultural development in this western coal region has attracted great attention.

Much also might be written of the remarkable progress of the towns of western Kentucky within the past few years. The increase in population is not more astonishing than the development of various industries. They show a vigorous, modern activity for which this part of the State has not, so far as I know, been generally credited. The traveller will find abundant evidence of it in Owensborough, Henderson, Hopkinsville, Bowling Green, and other places. As an illustration: Paducah, while doubling its population since 1880, has increased its manufacturing 150 per cent. The town had in 1880 twenty-six factories, with a capital of \$600,000, employing 950 men; now it has fifty factories, with a cash capital of \$2,000,000, employing 3250 men, engaged in a variety of industries—to which a large iron furnace is now being added. Taking it all together—variety of resources, excellence of climate, vigor of its people—one cannot escape the impression that Kentucky has a great future.

COMMENTS ON CANADA.

I.

The area of the Dominion of Canada is larger than that of the United States, excluding Alaska. It is fair, however, in the comparison, to add Alaska, for Canada has in its domain enough arctic and practically uninhabitable land to offset Alaska. Excluding the boundary great lakes and rivers, Canada has 3,470,257 square miles of territory, or more than one-third of the entire British Empire; the United States has 3,026,494 square miles, or, adding Alaska (577,390), 3,603,884 square miles. From the eastern limit of the maritime provinces to Vancouver Island the distance is over three thousand five hundred miles. This whole distance is settled, but a considerable portion of it only by a thin skirmish line. I have seen a map, colored according to the maker's idea of fertility, on which Canada appears little more than a green flush along the northern boundary of the United States. With a territory equal to our own, Canada has the population of the single State of New York—about five millions.

Most of Canada lies north of the limit of what was reckoned agreeably habitable before it was discovered that climate depends largely on altitude, and that the isothermal lines and the lines of latitude do not coincide. The division between the two countries is, however, mainly a natural one, on a divide sloping one way to the arctic regions, the other way to the tropics. It would seem better map-making to us if our line followed the northern mountains of Maine and included New Brunswick and the other maritime provinces. But it would seem a better rectification to Canadians if their line included Maine with the harbor of Portland, and dipped down in the North-west so as to take in the Red River of the North, and all the waters discharging into Hudson's Bay.

The great bulk of Canada is on the arctic slope. When we pass the highlands of New Hampshire, Vermont, and New York we fall away into a wide champaign country. The only break in this is the Laurentian granite mountains, north of the St. Lawrence, the oldest land above water, now degraded into hills of from 1500 to 2000 feet in height. The central mass of Canada consists of three great basins: that portion of the St. Lawrence in the Dominion, 400,000 square miles; the Hudson's Bay, 2,000,000 square miles; the Mackenzie, 550,000 square miles. That is to say, of the 3,470,257 square miles of the area of Canada, 3,010,000 have a northern slope.

This decrease in altitude from our northern boundary makes Canada a possible nation. The Rocky Mountains fall away north into the Mackenzie plain. The highest altitude attained by the Union Pacific Railroad is 8240 feet; the highest of the Canadian Pacific is 5296; and a line of railway still farther north, from the North Saskatchewan region, can, and doubtless some time will, reach the Pacific without any obstruction by the Rockies and the Selkirks. In estimating, therefore, the capacity of Canada for sustaining a large population we have to remember that the greater portion of it is but little above the sea-level; that the climate of the interior is modified by vast bodies of water; that the maximum summer heat of Montreal and Quebec exceeds that of New York; and that there is a vast region east of the Rockies and north of the Canadian Pacific Railway, not only the plains drained by the two branches of the Saskatchewan, but those drained by the Peace River still farther north, which have a fair share of summer weather, and winters much milder than are enjoyed in our Territories farther south but higher in altitude. The summers of this vast region are by all reports most agreeable, warm days and refreshing nights, with a stimulating atmosphere; winters with little snow, and usually bright and pleasant, occasional falls of the thermometer for two or three days to arctic temperature, but as certain a recovery to mildness by the "Chinook" or Pacific winds. It is estimated that the plains of the Saskatchewan—500,000 square miles—are capable of sustaining a population of thirty millions. But nature there must call forth a good deal of human energy and endurance. There is no doubt that frosts are liable to come very late in the spring and very early in the autumn; that persistent winds are hostile to the growth of trees; and that varieties of hardy cereals and fruits must be selected for success in agriculture and horticulture. The winters are exceedingly severe on all the prairies east of Winnipeg, and westward on the Canadian Pacific as far as Medicine Hat, the crossing of the South Saskatchewan. Heavy items in the cost of living there must always be fuel, warm clothing, and solid houses. Fortunately the region has an abundance of lignite and extensive fields of easily workable coal.

Canada is really two countries, separated from each other by the vast rocky wilderness between the lakes and James Bay. For a thousand miles west of Ottawa, till the Manitoba prairie is reached, the traveller on the line of the railway sees little but granite rock and stunted balsams, larches, and poplars—a dreary region, impossible to attract settlers. Copper and other minerals there are; and in the region north of Lake Superior there is no doubt timber, and arable land is spoken of; but the country is really unknown. Portions of this land, like that about Lake Nipigon, offer attractions to sportsmen. Lake navigation is impracticable about four months in the year, so that Canada seems to depend for political and commercial unity upon a telegraph wire and two steel rails running a thousand miles through a region where local traffic is at present insignificant.

The present government of Canada is an evolution on British lines, modified by the example of the republic of the United States. In form the resemblances are striking to the United States, but underneath, the differences are radical. There is a supreme federal government, comprehending a union of provinces, each having its local government. But the union in the two countries was brought about in a different way, and the restrictive powers have a different origin. In the one, power descends from the Crown; in the other, it originates with the people. In the Dominion Government all the powers not delegated to the provinces are held by the Federal Government. In the United States, all the powers not delegated to the Federal Government by the States are held by the States. In the United States, delegates from the colonies, specially elected for the purpose, met to put in shape a union already a necessity of the internal and external situation. And the union expressed in the Constitution was accepted by the popular vote in each State. In the provinces of Canada there was a long and successful struggle for responsible government. The first union was of the two Canadas, in 1840; that is, of the provinces of Upper and Lower Canada—Ontario and Quebec—with Parliaments sitting sometimes in Quebec and sometimes in Toronto, and at last in Ottawa, a site selected by the Queen. This Government was carried on with increasing friction. There is not space here to sketch the politics of this epoch. Many causes contributed to this friction, but the leading ones were the antagonism of French and English ideas, the superior advance in wealth and population of Ontario over Quebec, and the

resistance of what was called French domination. At length, in 1863-64, the two parties, the Conservatives and the Liberals (or, in the political nomenclature of the day, the "Tories" and the "Grits"—i. e., those of "clear grit"), were so evenly divided that a dead-lock occurred, neither was able to carry on the government, and a coalition ministry was formed. Then the subject of colonial confederation was actively agitated. Nova Scotia and New Brunswick contemplated a legislative union of the maritime provinces, and a conference was called at Charlottetown, Prince Edward Island, in the summer of 1864. Having in view a more comprehensive union, the Canadian Government sought and obtained admission to this conference, which was soon swallowed up in a larger scheme, and a conference of all the colonies was appointed to be held at Quebec in October. Delegates, thirty-three in number, were present from all the provinces, probably sent by the respective legislatures or governments, for I find no note of a popular election. The result of this conference was the adoption of resolutions as a basis of an act of confederation. The Canadian Parliament adopted this scheme after a protracted debate. But the maritime provinces stood out. Meantime the Civil War in the United States, the Fenian invasion, and the abrogation of the reciprocity treaty fostered a spirit of Canadian nationality, and discouraged whatever feeling existed for annexation to the United States. The colonies, therefore, with more or less willingness, came into the plan, and in 1867 the English Parliament passed the British North American Act, which is the charter of the Dominion. It established the union of the provinces of Canada, Nova Scotia, and New Brunswick, and provided for the admission to the union of the other parts of British North America; that is, Prince Edward Island, the Hudson Bay Territory, British Columbia, and Newfoundland, with its dependency Labrador. Nova Scotia was, however, still dissatisfied with the terms of the union, and was only reconciled on the granting of additional annual subsidies.

In 1868, by Act of the British Parliament, the Hudson's Bay Company surrendered to the Crown its territorial rights over the vast region it controlled, in consideration of £300,000 sterling, grants of land around its trading posts to the extent of fifty thousand acres in all, and one-twentieth of all the fertile land south of the north branch of the Saskatchewan, retaining its privileges of trade, without its exclusive monopoly. The attempt of the Dominion Government to take possession of this north-west territory (Manitoba was created a province July 15, 1870) was met by the rising of the squatters and half-breeds under Louis Riel in 1869-70. Riel formed a provisional government, and proceeded with a high hand to banish persons and confiscate property, and on a drumhead court-martial put to death Thomas Scott, a Canadian militia officer. The murder of Scott provoked intense excitement throughout Canada, especially in Ontario. Colonel Garnet Wolseley's expedition to Fort Garry (now Winnipeg) followed, and the Government authority was restored. Riel and his squatter confederates fled, and he was subsequently pardoned.

In 1871 British Columbia was admitted into the Dominion. In 1873 Prince Edward Island came in. The original Act for establishing the province of Manitoba provided for a Lieutenant-governor, a Legislative Council, and an elected Legislative Assembly. In 1876 Manitoba abolished the Council, and the government took its present form of a Lieutenant-governor and one Assembly. By subsequent legislation of the Dominion the district of Keewatin was created out of the eastern portion of the north-west territory, under the jurisdiction of the Lieutenant-governor of Manitoba, *ex officio*. The Territories of Assiniboin, Alberta, and Saskatchewan have been organized into a Territory called the North-west Territory, with a Lieutenant-governor and Council, and a representative in Parliament, the capital being Regina. Outside of this Territory, to the northward, lies Athabasca, of which the Lieutenant-governor at Regina is *ex officio* ruler. Newfoundland still remains independent, although negotiations for union were revived in 1888. Some years ago overtures were made for taking in Jamaica to the union, and a delegation from that island visited Ottawa; but nothing came of the proposal. It was said that the Jamaica delegates thought the Dominion debt too large.

The Dominion of Canada, therefore, has a central government at Ottawa, and is composed of the provinces of Nova Scotia (including Cape Breton), New Brunswick, Prince Edward Island, Quebec, Ontario, Manitoba, British Columbia, and the North-west Territory.

It has been necessary to speak in this brief detail of the manner of the formation of the union in order to understand the politics of Canada. For there are radicals in the Liberal party who still regard the union as forced and artificial, and say that the provinces outside of Ontario and Quebec were brought in only by the promise of local railways and the payment of large subsidies. And this idea more or less influences the opposition to the "strong government" at Ottawa. I do not say that the Liberals oppose the formation of a "nation"; but they are critics of its methods, and array themselves for provincial rights as against federal consolidation.

The Federal Government consists of the Queen, the Senate, and the House of Commons. The Queen is represented by the Governor-general, who is paid by Canada a salary of fifty thousand dollars a year. He has his personal staff, and is aided and advised by a council, called the Queen's Privy Council of Canada, thirteen members, constituting the ministry, who must be sustained by a Parliamentary majority. The English model is exactly followed. The Governor has nominally the power of veto, but his use of it is as much in abeyance as is the Queen's prerogative in regard to Acts of Parliament. The premier is in fact the ruler, but his power depends upon possessing a majority in the House of Commons. This responsible government, therefore, more quickly responds to popular action than ours. The Senators are chosen for life, and are in fact appointed by the premier in power. The House of Commons is elected for five years, unless Parliament is sooner dissolved, and according to a ratio of population to correspond with the province of Quebec, which has always the fixed number of sixty-five members. The voter for members of Parliament must have certain property qualifications, as owner or tenant, or, if in a city or town, as earning three hundred dollars a year—qualifications so low as practically to exclude no one who is not an idler and a waif; the Indian may vote (though not in the Territories), but the Mongolian or Chinese is excluded. Members of the House may be returned by any constituency in the Dominion without reference to residence. All bills affecting taxation or revenue must originate in the House, and be recommended by a message from the Governor-general. The Government introduces bills, and takes the responsibility of them. The premier is leader of the House; there is also a recognized leader of the Opposition. In case the Government cannot command a majority it resigns, and the Governor-general forms a new cabinet. In theory, also, if the Crown (represented by the Governor-general) should resort to the extreme exercise of its prerogative in refusing the advice of its ministers, the ministers must submit, or resign and give place to others.

The Federal Government has all powers not granted expressly to the provinces. In practice its jurisdiction extends over the public debt, expenditure, and public loans; treaties; customs and excise duties; trade and commerce; navigation, shipping, and fisheries; light-houses and harbors; the postal, naval, and military services; public statistics; monetary institutions, banks, banking, currency, coining (but all coining is done in England); insolvency; criminal law; marriage and divorce; public works, railways, and canals.

The provinces have no militia; that all belongs to the Dominion. Marriage is solemnized according to provincial regulations, but the power of divorce exists in Canada in the Federal Parliament only, except in the province of New Brunswick. This province has a court of divorce and matrimonial causes, with a single judge, a survival of pre-confederation times, which grants divorces *a vinculo* for scriptural causes, and *a mensa et thoro* for desertion or cruelty, with right of appeal to the Supreme Court of the province and to the Privy Council of the Dominion. Criminal law is one all over the Dominion, but there is no law against adultery or incest. The British Act contains no provision analogous to that in the Constitution of the United States which forbids any State to pass a law impairing the obligation of contracts—a serious defect.

The Federal Government has a Supreme Court, consisting of a chief-justice and five puisne judges, which has original jurisdiction in civil suits involving the validity of Dominion and provincial acts, and appellate in appeals from the provincial courts. The Federal Government appoints and pays the judges of the Superior, District, and County courts of the provinces; but the provinces may constitute, maintain, and organize provincial courts, civil and criminal, including procedure in civil matters in those courts. But as the provinces cannot appoint any judicial officer above the rank of magistrate, it may happen that a constituted court may be inoperative for want of a judge. This is one of the points of friction between the federal and provincial authorities, and in the fall of 1888 it led to the trouble in Quebec, when the Ottawa cabinet disallowed the appointment of two provincial judges made by the Quebec premier.

The Dominion has another power unknown to our Constitution; that is, disallowance or veto of provincial acts. This power is regarded with great jealousy by the provinces. It is claimed by one party that it should only be exercised on the ground of unconstitutionality; by the other, that it may be exercised in the interest of the Dominion generally. As a matter of fact it has been sometimes exercised in cases that the special province felt to be an interference with its rights.

Another cause of friction, aggravated by the power of disallowance, has arisen from conflict in jurisdiction as to railways. Both the Dominion and the provinces may charter and build railways. But the British Act forbids the province to legislate as to lines of steam or other ships, railways, canals, and telegraphs connecting the province with any other province, or extending beyond its limits, or any such work actually within the limits which the Canadian Parliament may declare for the general advantage of Canada; that is, declare it to be a Dominion work. A promoter, therefore, cannot tell with any certainty what a charter is worth, or who will have jurisdiction over it. The trouble in Manitoba in the fall of 1888 between the province and the Canadian Pacific road (which is a Dominion road in the meaning of the Act) could scarcely have arisen if the definition of Dominion and provincial rights had been clearer.

But a more serious cause of weakness to the provinces and embarrassment to the Dominion is in the provincial subsidies. When the present confederation was formed the Dominion took on the provincial debts up to a certain amount. It also agreed to pay annually to each province, in half-yearly payments, a subsidy. By the British Act this annual payment was \$80,000 to Ontario, \$70,000 to Quebec, \$60,000 to Nova Scotia, \$50,000 to New Brunswick, with something additional to the last two. In 1886-87 the subsidies paid to all the provinces amounted to \$4,169,341. This is as if the United States should undertake to raise a fixed revenue to distribute among the States—a proceeding alien to our ideas of the true function of the General Government, and certain to lead to State demoralization, and tending directly to undermine its self-support and dignity. It is an idea quite foreign to the conception of political economy that it is best for people to earn what they spend, and only spend what they earn. This subsidy under the Act was a grant equal to eighty cents a head of the population. Besides this there is given to each province an annual allowance for government; also an annual allowance of interest on the amount of debt allowed where the province has not reached the limit of the authorized debt. It is the theory of the Federal Government that in taking on these pecuniary burdens of the provinces they will individually feel them less, and that if money is to be raised the Dominion can procure it on more favorable terms than the provinces. The system, nevertheless, seems vicious to our apprehension, for nothing is clearer to us than that neither the State nor the general welfare would be promoted if the States were pensioners of the General Government.

The provinces are miniature copies of the Dominion Government. Each has a Lieutenant-governor, who is appointed by the Ottawa Governor-general and ministry (that is, in fact, by the premier), whose salary is paid by the Dominion Parliament. In theory he represents the Crown, and is above parties. He forms his cabinet out of the party in majority in the elective Assembly. Each province has an elective Assembly, and most of them have two Houses, one of which is a Senate appointed for life. The provincial cabinet has a premier, who is the leader of the House, and the Opposition is represented by a recognized leader. The Government is as responsible as the Federal Government. This organization of recognized and responsible leaders greatly facilitates the despatch of public business. Affairs are brought to a direct issue; and if the Government cannot carry its measures, or a dead-lock occurs, the ministry is changed, or an appeal is had to the people. Canadian statesmen point to the want of responsibility in the conduct of public business in our House, and the dead-lock between the Senate and the House, as a state of things that needs a remedy.

The provinces retain possession of the public lands belonging to them at the time of confederation; Manitoba, which had none when it was created a province out of north-west territory, has since had a gift of swamp lands from the Dominion. Emigration and immigration are subjects of both federal and provincial legislation, but provincial laws must not conflict with federal laws.

The provinces appoint all officers for the administration of justice except judges, and are charged with the general administration of justice and the maintenance of civil and criminal courts; they control jails, prisons, and reformatories, but not the penitentiaries, to which convicts sentenced for over two years must be committed. They control also asylums and charitable institutions, all strictly municipal institutions, local works, the solemnization of marriage, property and civil rights, and shop, tavern, and other licenses. In

regard to the latter, a conflict of jurisdiction arose on the passage in 1878 by the Canadian Parliament of a temperance Act. The result of judicial and Privy Council decisions on this was to sustain the right of the Dominion to legislate on temperance, but to give to the provincial legislatures the right to deal with the subject of licenses for the sale of liquors. In the Territories prohibition prevails under the federal statutes, modified by the right of the Lieutenant-governor to grant special permits. The effect of the general law has been most salutary in excluding liquor from the Indians.

But the most important subject left to the provinces is education, over which they have exclusive control. What this means we shall see when we come to consider the provinces of Quebec and Ontario as illustrations.

Broadly stated, Canada has representative government by ministers responsible to the people, a federal government charged with the general good of the whole, and provincial governments attending to local interests. It differs widely from the English Government in subjects remitted to the provincial legislatures and in the freedom of the municipalities, so that Canada has self-government comparable to that in the United States. Two striking limitations are that the provinces cannot keep a militia force, and that the provinces have no power of final legislation, every Act being subject to Dominion revision and veto.

The two parties are arranged on general lines that we might expect from the organization of the central and the local governments. The Conservative, which calls itself Liberal-Conservative, inclines to the consolidation and increase of federal power; the Liberal (styled the "Grits") is what we would call a State-rights party. Curiously enough, while the Ottawa Government is Conservative, and the ministry of Sir John A. Macdonald is sustained by a handsome majority, all the provincial governments are at present Liberal. The Conservatives say that this is because the opinion of the country sustains the general Conservative policy for the development of the Dominion, so that the same constituency will elect a Conservative member to the Dominion House and a Liberal member to the provincial House. The Liberals say that this result in some cases is brought about by the manner in which the central Government has arranged the voting districts for the central Parliament, which do not coincide with the provincial districts. There is no doubt some truth in this, but I believe that at present the sentiment of nationality is what sustains the Conservative majority in the Ottawa Government.

The general policy of the Conservative Government may fairly be described as one for the rapid development of the country. This leads it to desire more federal power, and there are some leading spirits who, although content with the present Constitution, would not oppose a legislative union of all the provinces. The policy of "development" led the party to adopt the present moderate protective tariff. It led it to the building of railways, to the granting of subsidies, in money and in land, to railways, to the subsidizing of steamship lines, to the active stimulation of immigration by offering extraordinary inducements to settlers. Having a vast domain, sparsely settled, but capable of sustaining a population not less dense than that in the northern parts of Europe, the ambition of the Conservative statesmen has been to open up the resources of the country and to plant a powerful nation. The Liberal criticism of this programme I shall speak of later. At present it is sufficient to say that the tariff did stimulate and build up manufactures in cotton, leather, iron, including implements of agriculture, to the extent that they were more than able to supply the Canadian market. As an item, after the abrogation of the reciprocity treaty, the factories of Ontario were able successfully to compete with the United States in the supply of agricultural implements to the great Northwest, and in fact to take the market. I think it cannot be denied that the protective tariff did not only build up home industries, but did give an extraordinary stimulus to the general business of the Dominion.

Under this policy of development and subsidies the Dominion has been accumulating a debt, which now reaches something over \$200,000,000. Before estimating the comparative size of this debt, the statistician wants to see whether this debt and the provincial debts together equal, per capita, the federal and State debts together of the United States. It is estimated by one authority that the public lands of the Dominion could pay the debt, and it is noted that it has mainly been made for railways, canals, and other permanent improvements, and not in offensive or defensive wars. The statistical record of 1887 estimates that the provincial debts added to the public debt give a per capita of \$48.88. The same year the united debts of States and general government in the United States gave a per capita of \$32, but, the municipal and county debts added, the per capita would be \$55. If the unreported municipal debts in Canada were added, I suppose the per capita would somewhat exceed that in the United States.

Before glancing at the development and condition of Canada in confederation we will complete the official outline by a reference to the civil service and to the militia. The British Government has withdrawn all the imperial troops from Canada except a small garrison at Halifax, and a naval establishment there and at Victoria. The Queen is commander-in-chief of all the military and naval forces in Canada, but the control of the same is in the Dominion Parliament. The general of the military force is a British officer. There are permanent corps and schools of instruction in various places, amounting in all to about 950 men, exclusive of officers, and the number is limited to 1000. There is a royal military school at Kingston, with about 80 cadets. The active militia, December 31, 1887, in all the provinces, the whole being under Dominion control, amounted to 38,152. The military expenditure that year was \$1,281,255. The diminishing military pensions of that year amounted to \$35,100. The reserve militia includes all the male inhabitants of the age of eighteen and under sixty. In 1887 the total active cavalry was under 2000.

The members of the civil service are nearly all Canadians. In the Federal Government and in the provinces there is an organized system; the federal system has been constantly amended, and is not yet free of recognized defects. The main points of excellence, more or less perfectly attained, may be stated to be a decent entrance examination for all, a special, strict, and particular examination for some who are to undertake technical duties, and a secure tenure of office. The federal Act of 1886, which has since been amended in details, was not arrived at without many experiments and the accumulation of testimonies and diverse reports; and it did not follow exactly the majority report of 1881, but leaned too much, in the judgment of many, to the English system, the working of which has not been satisfactory. The main features of the Act, omitting details, are these: The service has two divisions—first, deputy heads of departments and employés in the Ottawa departments; second, others than those employed in Ottawa departments, including customs officials, inland revenue officials, post-office inspectors, railway mail clerks, city postmasters, their

assistants, clerks, and carriers, and inspector of penitentiaries. A board of three examiners is appointed by the Governor in council. All appointments shall be "during pleasure," and no persons shall be appointed or promoted to any place below that of deputy head unless he has passed the requisite examination and served the probationary term of six months; he must not be over thirty-five years old for appointment in Ottawa departments (this limit is not fixed for the "outside" appointments), nor under fifteen in a lower grade than third-class clerk, nor under eighteen in other cases. Appointees must be sound in health and of good character. Women are not appointed. A deputy head may be removed "on pleasure," but the reasons for the removal must be laid before both Houses of Parliament. Appointments may be made without reference to age on the report of the deputy head, on account of technical or professional qualifications or the public interest. City postmasters, and such officers as inspectors and collectors, may be appointed without examination or reference to the rules for promotion. Examinations are dispensed with in other special cases. Removals may be made by the Governor in council. Reports of all examinations and of the entire civil service list must be laid before Parliament each session. Amendments have been made to the law in the direction of relieving from examination on their promotion men who have been long in the service, and an amendment of last session omitted some examinations altogether.

It must be stated also that the service is not free from favoritism, and that influence is used, if not always necessary, to get in and to get on in it. The law has been gone around by means of the plea of "special qualifications," and this evasion has sometimes been considered a political necessity on account of service to a minister or to the party generally. I suppose that the party in power favors its own adherents. The competitive system of England has a mischievous effect in the encouragement of the examinations to direct studies towards a service which nine in ten of the applicants will never reach. This evil, of numbers qualified but not appointed, has grown so great in Canada that it has lately been ordered that there shall be only one examination in each year.

The federal pension system cannot be considered settled. A man may be superannuated at any time, but by custom, not law, he retires at the full age of sixty. While in service he pays a superannuation allowance of two and a half per cent, on his salary for thirty-five years; after that, no more. If he is superannuated after ten years' service, say, he gets one-fiftieth of his salary for each year. If he is not in fault in any way, Government may add ten years more to his service, so as to give him a larger allowance. If a man serves the full term of thirty-five years he gets thirty-five fiftieths of his salary in pension. This pension system, recognized as essential to a good civil service, has this weakness: A man pays two and a half per cent, of his salary for twenty years. If the salary is \$3000, his payments would have amounted to \$1200, with interest, in that time. If he then dies, his widow gets only two months' salary as a solatium; all the rest is lost to her, and goes to the superannuation fund of the treasury. Or, a man is superannuated after thirty-five years; he has paid perhaps \$2100, with interest; he draws, say, one year's superannuative allowance, and then dies. His family get nothing at all, not even the two months' salary they would have had if he had died in service. This is illogical and unjust. If the two and a half per cent, had been put into a life policy, the insurance being undertaken by the Government, a decent sum would have been realized at death.

A civil service is also established in the provinces. That in Quebec is better organized than the federal; the Government adds to the pension fund one-fourth of that retained from the salaries, and half pensions are extended to widows and children.

It will be seen that this pension is an essential part of the civil service system, and the method of it is at once a sort of insurance and a stimulation to faithful service. Good service is a constant inducement to retention, to promotion, and to increase of pension. The Canadians say that the systems work well both in the federal and provincial services, and in this respect, as well as in the matter of responsible government, they think their government superior to ours.

The policy of the Dominion Government, when confederation had given it the form and territory of a great nation, was to develop this into reality and solidity by creating industries, building railways, and filling up the country with settlers. As to the means of carrying out this the two parties differed somewhat. The Conservatives favored active stimulation to the extent of drawing on the future; the Liberals favored what they call a more natural if a slower growth. To illustrate: the Conservatives enacted a tariff, which was protective, to build up industries, and it is now continued, as in their view a necessity for raising the revenue needed for government expenses and for the development of the country. The Liberals favored a low tariff, and in the main the principles of free-trade. It might be impertinence to attempt to say now whether the Canadian affiliations are with the Democratic or the Republican party in the United States, but it is historical to say that for the most part the Unionists had not the sympathy of the Conservatives during our Civil War, and that they had the sympathy of the Liberals generally, and that the sympathy of the Liberals continued with the Republican party down to the Presidential campaign of 1884. It seemed to the Conservatives a necessity for the unity and growth of the Dominion to push railway construction. The Liberals, if I understand their policy, opposed mortgaging the future, and would rather let railways spring from local action and local necessity throughout the Dominion. But whatever the policies of parties may be, the Conservative Government has promoted by subsidies of money and grants of land all the great so-called Dominion railways. The chief of these in national importance, because it crosses the continent, is the Canadian Pacific. In order that I might understand its relation to the development of the country, and have some comprehension of the extent of Canadian territory, I made the journey on this line—3000 miles—from Montreal to Vancouver.

The Canadians have contributed liberally to the promotion of railways. The Hand-book of 1886 says that \$187,000,000 have been given by the governments (federal and provincial) and by the municipalities towards the construction of the 13,000 miles of railways within the Dominion. The same authority says that from 1881 to July, 1885, the Federal Government gave \$74,500,000 to the Canadian Pacific. The Conservatives like to note that the railway development corresponds with the political life of Sir John A. Macdonald, for upon his entrance upon political life in 1844 there were only fourteen miles of railway in operation.

The Federal Government began surveys for the Canadian Pacific road in 1871, a company was chartered the same year to build it, but no results followed. The Government then began the construction itself, and built several disconnected sections. The present company was chartered in 1880. The Dominion Government

granted it a subsidy of \$25,000,000 and 25,000,000 acres of land, and transferred to it, free of cost, 713 miles of railway which had been built by the Government, at a cost of about \$35,000,000. In November, 1885, considerably inside the time of contract, the road was finished to the Pacific, and in 1886 cars were running regularly its entire length. In point of time, and considering the substantial character of the road, it is a marvellous achievement. Subsequently, in order to obtain a line from Montreal to the maritime ports, a subsidy of \$186,000 per annum for a term of twenty years was granted to the Atlantic and North-west Railway Company, which undertook to build or acquire a line from Montreal *via* Sherbrooke, and across the State of Maine to St. John, St. Andrews, and Halifax. This is one of the leased lines of the Canadian Pacific, which finished it last December.

The main line, from Quebec to Montreal and Vancouver, is 3065 miles. The leased lines measure 2412 miles, one under construction 112, making a total mileage of 5589. Adding to this the lines in which the company's influence amounts to a control (including those on American soil to St. Paul and Chicago), the total mileage of the company is over 6500. The branch lines, built or acquired in Quebec, Ontario, and Manitoba, are all necessary feeders to the main line. The cost of the Canadian Pacific, including the line built by the Government and acquired (not leased) lines, is: Cost of road, \$170,689,629.51; equipment, \$10,570,933.22; amount of deposit with Government to guarantee three per cent, on capital stock until August 17, 1893, \$10,310,954.75. Total, \$191,571,517.48.

Without going into the financial statement, nor appending the leases and guarantees, any further than to note that the capital stock is \$65,000,000 and the first mortgage bonds (five per cent.) are \$34,999,633, it is only necessary to say that in the report the capital foots up \$112,908,019. The total earnings for 1885 were \$8,308,493; for 1886, \$10,081,803; for 1887, \$11,600,412, while the working expenses for 1887 were \$8,102,294. The gross earnings for 1888 are about \$14,000,000, and the net earnings about \$4,000,000. These figures show the steady growth of business.

Being a Dominion road, and favored, the company had a monopoly in Manitoba for building roads south of its line and roads connecting with foreign lines. This monopoly was surrendered in 1887 upon agreement of the Dominion Government to guarantee 3 1/2 per cent, interest on \$15,000,000 of the company's land grant bonds for fifty years. The company has paid its debt to the Government, partly by surrender of a portion of its lands, and now absolutely owns its entire line free of Government obligations. It has, however, a claim upon the Government of something like six million dollars, now in litigation, on portions of the mountain sections of the road built by the Government, which are not up to the standard guaranteed in the contract with the company.

The road was extended to the Pacific as a necessity of the national development, and the present Government is convinced that it is worth to the country all it has cost. The Liberals' criticism is that the Government has spent a vast sum for what it can show no assets, and that it has enriched a private company instead of owning the road itself. The property is no doubt a good one, for the road is well built as to grades and road-bed, excellently equipped, and notwithstanding the heavy Lake Superior and mountain work, at a less cost than some roads that preceded it.

The full significance of this transcontinental line to Canada, Great Britain, and the United States will appear upon emphasizing the value of the line across the State of Maine to connect with St. John and Halifax; upon the fact that its western terminus is in regular steamer communication with Hong-Kong via Yokohama; that the company is building new and swift steamers for this line, to which the British Government has granted an annual subsidy of £60,000, and the Dominion one of \$15,000; that a line will run from Vancouver to Australia; and that a part of this round-the-world route is to be a line of fast steamers between Halifax and England. The Canadian Pacific is England's shortest route to her Pacific colonies, and to Japan and China; and in case of a blockade in the Suez Canal it would become of the first importance for Australia and India. It is noted as significant by an enthusiast of the line that the first loaded train that passed over its entire length carried British naval stores transferred from Quebec to Vancouver, and that the first car of merchandise was a cargo of Jamaica sugar refined at Halifax and sent to British Columbia.

II.

We left Montreal, attached to the regular train, on the evening of September 22d. The company runs six through trains a week, omitting the despatch of a train on Sunday from each terminus. The time is six days and five nights. We travelled in the private ear of Mr. T. G. Shaughnessy, the manager, who was on a tour of inspection, and took it leisurely, stopping at points of interest on the way. The weather was bad, rainy and cold, in eastern Canada, as it was all over New England, and as it continued to be through September and October. During our absence there was snow both in Montreal and Quebec. We passed out of the rain into lovely weather north of Lake Superior; encountered rain again at Winnipeg; but a hundred miles west of there, on the prairie, we were blessed with as delightful weather as the globe can furnish, which continued all through the remainder of the trip until our return to Montreal, October 12th. The climate just east of the Rocky Mountains was a little warmer than was needed for comfort (at the time Ontario and Quebec had snow), but the air was always pure and exhilarating; and all through the mountains we had the perfection of lovely days. On the Pacific it was still the dry season, though the autumn rains, which continue all winter,

with scarcely any snow, were not far off. For mere physical pleasure of living and breathing, I know no atmosphere superior to that we encountered on the rolling lands east of the Rockies.

Between Ottawa and Winnipeg (from midnight of the 22d till the morning of the 25th) there is not much to interest the tourist, unless he is engaged in lumbering or mining. What we saw was mainly a monotonous wilderness of rocks and small poplars, though the country has agricultural capacities after leaving Rat Portage (north of Lake of the Woods), just before coming upon the Manitoba prairies. There were more new villages and greater crowds of people at the stations than I expected. From Sudbury the company runs a line to the Sault Sainte Marie to connect with lines it controls to Duluth and St. Paul. At Port Arthur and Fort William is evidence of great transportation activity, and all along the Lake Superior Division there are signs that the expectations of profitable business in lumber and minerals will be realized. At Port Arthur we strike the Western Division. On the Western, Mountain, and Pacific divisions the company has adopted the 24-hour system, by which a.m. and P.M. are abolished, and the hours from noon till midnight are counted as from 12 to 24 o'clock. For instance, the train reaches Eagle River at 24.55, Winnipeg at 9.30, and Brandon at 16.10.

At Winnipeg we come into the real North-west, and a condition of soil, climate, and political development as different from eastern Canada as Montana is from New England. This town, at the junction of the Red and Assiniboin rivers, in a valley which is one of the finest wheat-producing sections of the world, is a very important place. Railways, built and projected, radiate from it like spokes from a wheel hub. Its growth has been marvellous. Formerly known as Fort Garry, the chief post of the Hudson's Bay Company, it had in 1871 a population of only one hundred. It is now the capital of the province of Manitoba, contains the chief workshops of the Canadian Pacific between Montreal and Vancouver, and has a population of 25,000. It is laid out on a grand scale, with very broad streets—Main Street is 200 feet wide—has many substantial public and business buildings, streetcars, and electric-lights, and abundant facilities for trade. At present it is in a condition of subsided "boom;" the whole province has not more than 120,000 people, and the city for that number is out of proportion. Winnipeg must wait a little for the development of the country. It seems to the people that the town would start up again if it had more railroads. Among the projects much discussed is a road northward between Lake Winnipeg and Lake Manitoba, turning eastward to York Factory on Hudson's Bay. The idea is to reach a short water route to Europe. From all the testimony I have read as to ice in Hudson's Bay harbors and in the straits, the short period the straits are open, and the uncertainty from year to year as to the months they will be open, this route seems chimerical. But it does not seem so to its advocates, and there is no doubt that a portion of the line between the lakes first named would develop a good country and pay. A more important line—indeed, of the first importance—is built for 200 miles north-west from Portage la Prairie, destined to go to Prince Albert, on the North Saskatchewan. This is the Manitoba and North-west, and it makes its connection from Portage la Prairie with Winnipeg over the Canadian Pacific. An antagonism has grown up ill Manitoba towards the Canadian Pacific. This arose from the monopoly privileges enjoyed by it as a Dominion road. The province could build no road with extra-territorial connections. This monopoly was surrendered in consideration of the guarantee spoken of from the Government. The people of Winnipeg also say that the company discriminated against them in the matter of rates, and that the province must have a competing outlet. The company says that it did not discriminate, but treated Winnipeg like other towns on the line, having an eye to the development of the whole prairie region, and that the trouble was that it refused to discriminate in favor of Winnipeg, so that it might become the distributing-point of the whole North-west. Whatever the truth may be, the province grew increasingly restless, and determined to build another road. The Canadian Pacific has two lines on either side of the Red River, connecting at Emerson and Gretna with the Red River branches of the St. Paul, Minneapolis, and Manitoba. It has also two branches running westward south of its main line, penetrating the fertile wheat-fields of Manitoba. The province graded a third road, paralleling the two to the border, and the river, southward from Winnipeg to the border connecting there with a branch of the Northern Pacific, which was eager to reach the rich wheat-fields of the North-west. The provincial Red River Railway also proposed to cross the branches of the Canadian Pacific, and connect at Portage la Prairie with the Manitoba and North-west. The Canadian Pacific, which had offered to sell to the province its Emerson branch, saying that there was not business enough for three parallel routes, insisted upon its legal rights and resisted this crossing. Hence the provincial and railroad conflict of the fall of 1888. The province built the new road, but it was alleged that the Northern Pacific was the real party, and that Manitoba has so far put itself into the hands of that corporation. There can be no doubt that Manitoba will have its road and connect the Northern Pacific with the Saskatchewan country, and very likely will parallel the main line of the Canadian Pacific. But whether it will get from the Northern Pacific the relief it thought itself refused by the Canadian, many people in Winnipeg begin to doubt; for however eager rival railways may be for new territory, they are apt to come to an understanding in order to keep up profitable rates. They must live.

I went down on the southern branch of the Canadian Pacific, which runs west, not far from our border, as far as Boissevain. It is a magnificent wheat country, and already very well settled and sprinkled with villages. The whole prairie was covered with yellow wheat-stacks, and teams loaded with wheat were wending their way from all directions to the elevators on the line. There has been quite an emigration of Russian Mennonites to this region, said to be 9000 of them. We passed near two of their villages—a couple of rows of square unbeautiful houses facing each other, with a street of mud between, as we see them in pictures of Russian communes. These people are a peculiar and somewhat mystical sect, separate and unassimilated in habits, customs, and faith from their neighbors, but peaceful, industrious, and thrifty. I shall have occasion to speak of other peculiar immigration, encouraged by the governments and by private companies.

There can be no doubt of the fertility of all the prairie region of Manitoba and Assiniboin. Great heat is developed in the summers, but cereals are liable, as in Dakota, to be touched, as in 1888, by early frost. The great drawback from Winnipeg on westward is the intense cold of winter, regarded not as either agreeable or disagreeable, but as a matter of economy. The region, by reason of extra expense for fuel, clothing, and housing, must always be more expensive to live in than, say, Ontario.

The province of Manitoba is an interesting political and social study. It is very unlike Ontario or British Columbia. Its development has been, in freedom and self-help, very like one of our Western Territories, and it is like them in its free, independent spirit. It has a spirit to resist any imposed authority. We read of the

conflicts between the Hudson's Bay and the Northwestern Fur companies and the Selkirk settlers, who began to come in in 1812. Gradually the vast territory of the North-west had a large number of "freemen," independent of any company, and of half-breed Frenchmen. Other free settlers sifted in. The territory was remote from the Government, and had no facilities of communication with the East, even after the union. The rebellion of 1870-71 was repeated in 1885, when Riel was called back from Montana to head the discontented. The settlers could not get patents for their lands, and they had many grievances, which they demanded should be redressed in a "bill of rights." There were aspects of the insurrection, not connected with the race question, with which many well-disposed persons sympathized. But the discontent became a violent rebellion, and had to be suppressed. The execution of Riel, which some of the Conservatives thought ill-advised, raised a race storm throughout Canada; the French element was in a tumult, and some of the Liberals made opposition capital out of the event. In the province of Quebec it is still a deep grievance, for party purposes partly, as was shown in the recent election of a federal member of Parliament in Montreal.

Manitoba is Western in its spirit and its sympathies. Before the building of the Canadian Pacific its communication was with Minnesota. Its interests now largely lie with its southern neighbors. It has a feeling of irritation with too much federal dictation, and frets under the still somewhat undefined relations of power between the federal and the provincial governments, as was seen in the railway conflict. Besides, the natural exchange of products between south and north—between the lower Mississippi and the Red River of the North and the north-west prairies—is going to increase; the north and south railway lines will have, with the development of industries and exchange of various sorts, a growing importance compared with the great east and west lines. Nothing can stop this exchange and the need of it along our whole border west of Lake Superior. It is already active and growing, even on the Pacific, between Washington Territory and British Columbia.

For these geographical reasons, and especially on account of similarity of social and political development, I was strongly impressed with the notion that if the Canadian Pacific Railway had not been built when it was, Manitoba would by this time have gravitated to the United States, and it would only have been a question of time when the remaining Northwest should have fallen in. The line of the road is very well settled, and yellow with wheat westward to Regina, but the farms are often off from the line, as the railway sections are for the most part still unoccupied; and there are many thriving villages: Portage la Prairie, from which the Manitoba and North-western Railway starts north-west, with a population of 3000; Brandon, a busy grain mart, standing on a rise of ground 1150 feet above the sea, with a population of 4000 and over; Qu'ppelle, in the rich valley of the river of that name, with 700; Regina, the capital of the North-west Territory, on a vast plain, with 800; Moosejey, a market-town towards the western limit of the settled country, with 600. This is all good land, but the winters are severe.

Naturally, on the rail we saw little game, except ducks and geese on the frequent fresh-water ponds, and occasionally coyotes and prairie-dogs. But plenty of large game still can be found farther north. At Stony Mountain, fifteen miles north of Winnipeg, the site of the Manitoba penitentiary, we saw a team of moose, which Colonel Bedson, the superintendent, drives—fleet animals, going easily fifteen miles an hour. They were captured only thirty-five miles north of the prison, where moose are abundant. Colonel Bedson has the only large herd of the practically extinct buffalo. There are about a hundred of these uncouth and picturesque animals, which have a range of twenty or thirty miles over the plains, and are watched by mounted keepers. They were driven in, bulls, cows, and calves, the day before our arrival—it seemed odd that we could order up a herd of buffaloes by telephone, but we did—and we saw the whole troop lumbering over the prairie, exactly as we were familiar with them in pictures. The colonel is trying the experiment of crossing them with common cattle. The result is a half-breed of large size, with heavier hind-quarters and less hump than the buffalo, and said to be good beef. The penitentiary has taken in all the convicts of the North-west Territory, and there were only sixty-five of them. The institution is a model one in its management. We were shown two separate chapels—one for Catholics and another for Protestants.

All along the line settlers are sifting in, and there are everywhere signs of promoted immigration. Not only is Canada making every effort to fill up its lands, but England is interested in relieving itself of troublesome people. The experiment has been tried of bringing out East-Londoners. These barbarians of civilization are about as unfitted for colonists as can be. Small bodies of them have been aided to make settlements, but the trial is not very encouraging; very few of them take to the new life. The Scotch crofters do better. They are accustomed to labor and thrift, and are not a bad addition to the population. A company under the management of Sir John Lister Kaye is making a larger experiment. It has received sections from the Government and bought contiguous sections from the railway, so as to have large blocks of land on the road. A dozen settlements are projected. The company brings over laborers and farmers, paying their expenses and wages for a year. A large central house is built on each block, tools and cattle are supplied, and the men are to begin the cultivation of the soil. At the end of a year they may, if they choose, take up adjacent free Government land and begin to make homes for themselves working meantime on the company land, if they will. By this plan they are guaranteed support for a year at least, and a chance to set up for themselves. The company secures the breaking up of its land and a crop, and the nucleus of a town. The further plan is to encourage farmers, with a capital of a thousand dollars, to follow and settle in the neighborhood. There will then be three ranks—the large company proprietors, the farmers with some capital, and the laborers who are earning their capital. We saw some of these settlements on the line that looked promising. About 150 settlers, mostly men, arrived last fall, and with them were sent out English tools and English cattle. The plan looks to making model communities, on something of the old-world plan of proprietor, farmer, and laborer. It would not work in the United States.

Another important colonization is that of Icelanders. These are settled to the north-east of Winnipeg and in southern Manitoba. About 10,000 have already come over, and the movement has assumed such large proportions that it threatens to depopulate Iceland. This is good and intelligent material. Climate and soil are so superior to that of Iceland that the emigrants are well content. They make good farmers, but they are not so clannish as the Mennonites; many of them scatter about in the towns as laborers.

Before we reached Medicine Hat, and beyond that place, we passed through considerable alkaline country

—little dried-up lakes looking like patches of snow. There was an idea that this land was not fertile. The Canadian Pacific Company have been making several experiments on the line of model farms, which prove the contrary. As soon as the land is broken up and the crust turned under, the soil becomes very fertile, and produces excellent crops of wheat and vegetables.

Medicine Hat, on a branch of the South Saskatchewan, is a thriving town. Here are a station and barracks of the Mounted Police, a picturesque body of civil cavalry in blue pantaloons and red jackets. This body of picked men, numbering about a thousand, and similar in functions to the *Guarda Civil* of Spain, are scattered through the North-west Territory, and are the Dominion police for keeping in order the Indians, and settling disputes between the Indians and whites. The sergeants have powers of police-justices, and the organization is altogether an admirable one for the purpose, and has a fine *esprit de corps*.

Here we saw many Cree Indians, physically a creditable-looking race of men and women, and picturesque in their gay blankets and red and yellow paint daubed on the skin without the least attempt at shading or artistic effect. A fair was going on, an exhibition of horses, cattle, and vegetable and cereal products of the region. The vegetables were large and of good quality. Delicate flowers were still blooming (September 28th) untouched by frost in the gardens. These Crees are not on a reservation. They cultivate the soil a little, but mainly support themselves by gathering and selling buffalo bones, and well set-up and polished horns of cattle, which they swear are buffalo. The women are far from a degraded race in appearance, have good heads, high foreheads, and are well-favored. As to morals, they are reputed not to equal the Blackfeet.

The same day we reached Gleichen, about 2500 feet above the sea. The land is rolling, and all good for grazing and the plough. This region gets the "Chinook" wind. Ploughing is begun in April, sometimes in March; in 1888 they ploughed in January. Flurries of snow may be expected any time after October 1st, but frost is not so early as in eastern Canada. A fine autumn is common, and fine, mild weather may continue up to December. At Dunmore, the station before Medicine Hat, we passed a branch railway running west to the great Lethbridge coal-mines, and Dunmore Station is a large coal depot.

The morning at Gleichen was splendid; cool at sunrise, but no frost. Here we had our first view of the Rockies, a long range of snow-peaks on the horizon, 120 miles distant. There is an immense fascination in this rolling country, the exhilarating air, and the magnificent mountains in the distance. Here is the beginning of a reservation of the Blackfeet, near 3000. They live here on the Bow River, and cultivate the soil to a considerable extent, and have the benefit of a mission and two schools. They are the best-looking race of Indians we have seen, and have most self-respect.

We went over a rolling country to Calgary, at an altitude of 3388 feet, a place of some 3000 inhabitants, and of the most distinction of all between Brandon and Vancouver. On the way we passed two stations where natural gas was used, the boring for which was only about 600 feet. The country is underlaid with coal. Calgary is delightfully situated at the junction of the Bow and Elbow rivers, rapid streams as clear as crystal, with a greenish hue, on a small plateau, surrounded by low hills and overlooked by the still distant snow-peaks. The town has many good shops, several churches, two newspapers, and many fanciful cottages. We drove several miles out on the McCloud trail, up a lovely valley, with good farms, growing wheat and oats, and the splendid mountains in the distance. The day was superb, the thermometer marking 70°. This is, however, a ranch country, wheat being an uncertain crop, owing to summer frosts. But some years, like 1888, are good for all grains and vegetables. A few Saree Indians were loafing about here, inferior savages. Much better are the Stony Indians, who are settled and work the soil beyond Calgary, and are very well cared for by a Protestant mission.

Some of the Indian tribes of Canada are self-supporting. This is true of many of the Siwash and other west coast tribes, who live by fishing. At Lytton, on the upper Fraser, I saw a village of the Siwash civilized enough to live in houses, wear our dress, and earn their living by working on the railway, fishing, etc. The Indians have done a good deal of work on the railway, and many of them are still employed on it. The coast Indians are a different race from the plains Indians, and have a marked resemblance to the Chinese and Japanese. The polished carvings in black slate of the Haida Indians bear a striking resemblance to archaic Mexican work, and strengthen the theory that the coast Indians crossed the straits from Asia, are related to the early occupiers of Arizona and Mexico, and ought not to be classed with the North American Indian. The Dominion has done very well by its Indians, of whom it has probably a hundred thousand. It has tried to civilize them by means of schools, missions, and farm instructors, and it has been pretty successful in keeping ardent spirits away from them. A large proportion of them are still fed and clothed by the Government. It is doubtful if the plains Indians will ever be industrious. The Indian fund from the sale of their lands has accumulated to \$3,000,000. There are 140 teachers and 4000 pupils in school. In 1885 the total expenditure on the Indian population, beyond that provided by the Indian fund, was \$1,109,604, of which \$478,038 was expended for provisions for destitute Indians.

At Cochrane's we were getting well into the hills. Here is a large horse and sheep ranch and a very extensive range. North and south along the foot-hills is fine grazing and ranging country. We enter the mountains by the Bow River Valley, and plunge at once into splendid scenery, bare mountains rising on both sides in sharp, varied, and fantastic peaks, snow-dusted, and in lateral openings assemblages of giant summits of rock and ice. The change from the rolling prairie was magical. At Mountain House the Three Sisters were very impressive. Late in the afternoon we came to Banff.

Banff will have a unique reputation among the resorts of the world. If a judicious plan is formed and adhered to for the development of its extraordinary beauties and grandeur, it will be second to few in attractions. A considerable tract of wilderness about it is reserved as a National Park, and the whole ought to be developed by some master landscape expert. It is in the power of the Government and of the Canadian Pacific Company to so manage its already famous curative hot sulphur springs as to make Banff the resort of invalids as well as pleasure-seekers the year round. This is to be done not simply by established good bathing-places, but by regulations and restrictions such as give to the German baths their virtue.

The Banff Hotel, unsurpassed in situation, amid magnificent mountains, is large, picturesque, many gabled and windowed, and thoroughly comfortable. It looks down upon the meeting of the Bow and the Spray, which spread in a pretty valley closed by a range of snow-peaks. To right and left rise mountains of savage rock ten

thousand feet high. The whole scene has all the elements of beauty and grandeur. The place is attractive for its climate, its baths, and excellent hunting and fishing.

For two days, travelling only by day, passing the Rockies, the Selkirks, and the Gold range, we were kept in a state of intense excitement, in a constant exclamation of wonder and delight. I would advise no one to attempt to take it in the time we did. Nobody could sit through Beethoven's nine symphonies played continuously. I have no doubt that when carriage-roads and foot-paths are made into the mountain recesses, as they will be, and little hotels are established in the valleys and in the passes and advantageous sites, as in Switzerland, this region will rival the Alpine resorts. I can speak of two or three things only.

The highest point on the line is the station at Mount Stephen, 5296 feet above the sea. The mountain, a bald mass of rock in a rounded cone, rises about 8000 feet above this. As we moved away from it the mountain was hidden by a huge wooded intervening mountain. The train was speeding rapidly on the down grade, carrying us away from the base, and we stood upon the rear platform watching the apparent recession of the great mass, when suddenly, and yet deliberately, the vast white bulk of Mount Stephen began to rise over the intervening summit in the blue sky, lifting itself up by a steady motion while one could count twenty, until its magnificence stood revealed. It was like a transformation in a theatre, only the curtain here was lowered instead of raised. The surprise was almost too much for the nerves; the whole company was awe-stricken. It is too much to say that the mountain "shot up;" it rose with conscious grandeur and power. The effect, of course, depends much upon the speed of the train. I have never seen anything to compare with it for awakening the emotion of surprise and wonder.

The station of Field, just beyond Mount Stephen, where there is a charming hotel, is in the midst of wonderful mountain and glacier scenery, and would be a delightful place for rest. From there the descent down the canon of Kickinghorse River, along the edge of precipices, among the snow-monarchs, is very exciting. At Golden we come to the valley of the Columbia River and in view of the Selkirks. The river is navigable about a hundred miles above Golden, and this is the way to the mining district of the Kootenay Valley. The region abounds in gold and silver. The broad Columbia runs north here until it breaks through the Selkirks, and then turns southward on the west side of that range.

The railway follows down the river, between the splendid ranges of the Selkirks and the Rockies, to the mouth of the Beaver, and then ascends its narrow gorge. I am not sure but that the scenery of the Selkirks is finer than that of the Rockies. One is bewildered by the illimitable noble snow-peaks and great glaciers. At Glacier House is another excellent hotel. In savage grandeur, nobility of mountain-peaks, snow-ranges, and extent of glacier it rivals anything in Switzerland. The glacier, only one arm of which is seen from the road, is, I believe, larger than any in Switzerland. There are some thirteen miles of flowing ice; but the monster lies up in the mountains, like a great octopus, with many giant arms. The branch which we saw, overlooked by the striking snow-cone of Sir Donald, some two and a half miles from the hotel, is immense in thickness and breadth, and seems to pour out of the sky. Recent measurements show that it is moving at the rate of twenty inches in twenty-four hours—about the rate of progress of the Mer de Glace. In the midst of the main body, higher up, is an isolated mountain of pure ice three hundred feet high and nearly a quarter of a mile in length. These mountains are the home of the mountain sheep.

From this amphitheatre of giant peaks, snow, and glaciers we drop by marvellous loops—wonderful engineering, four apparently different tracks in sight at one time—down to the valley of the Illicilliweat, the lower part of which is fertile, and blooming with irrigated farms. We pass a cluster of four lovely-lakes, and coast around the great Shuswap Lake, which is fifty miles long. But the traveller is not out of excitement. The ride down the Thompson and Fraser canons is as amazing almost as anything on the line. At Spence's Bridge we come to the old Government road to the Cariboo gold-mines, three hundred miles above. This region has been for a long time a scene of activity in mining and salmon-fishing. It may be said generally of the Coast or Gold range that its riches have yet to be developed. The villages all along these mountain slopes and valleys are waiting for this development.

The city of Vancouver, only two years old since the beginnings of a town were devoured by fire, is already an interesting place of seven to eight thousand inhabitants, fast building up, and with many substantial granite and brick buildings, and spreading over a large area. It lies upon a high point of land between Burrard Inlet on the north and the north arm of the Fraser River. The inner harbor is deep and spacious. Burrard Inlet entrance is narrow but deep, and opens into English Bay, which opens into Georgia Sound, that separates the island of Vancouver, three hundred miles long, from the main-land. The round headland south of the entrance is set apart for a public park, called now Stanley Park, and is being improved with excellent driving-roads, which give charming views. It is a tangled wilderness of nearly one thousand acres. So dense is the undergrowth, in this moist air, of vines, ferns, and small shrubs, that it looks like a tropical thicket. But in the midst of it are gigantic Douglas firs and a few noble cedars. One veteran cedar, partly decayed at the top, measured fifty-six feet in circumference, and another, in full vigor and of gigantic height, over thirty-nine feet. The hotel of the Canadian Pacific Company, a beautiful building in modern style, is, in point of comfort, elegance of appointment, abundant table, and service, not excelled by any in Canada, equalled by few anywhere.

Vancouver would be a very busy and promising city merely as the railway terminus and the shipping-point for Japan and China and the east generally. But it has other resources of growth. There is a very good country back of it, and south of it all the way into Washington Territory. New Westminster, twelve miles south, is a place of importance for fish and lumber. The immensely fertile alluvial bottoms of the Fraser, which now overflows its banks, will some day be diked, and become exceedingly valuable. Its relations to Washington Territory are already close. The very thriving city of Seattle, having a disagreement with the North Pacific and its rival, Tacoma, sends and receives most of its freight and passengers via Vancouver, and is already pushing forward a railway to that point. It is also building to Spokane Falls, expecting some time to be met by an extension of the St. Paul, Minneapolis, and Manitoba from the Great Falls of the Missouri. I found that many of the emigrants in the loaded trains that we travelled with or that passed us were bound to Washington Territory. It is an acknowledged fact that there is a constant "leakage" of emigrants, who had apparently promised to tarry in Canada, into United States territories. Some of them, disappointed of the

easy wealth expected, no doubt return; but the name of "republic" seems to have an attraction for Old World people when they are once set adrift.

We took steamer one afternoon for a five hours sail to Victoria. A part of the way is among beautiful wooded islands. Once out in the open, we had a view of our "native land," and prominent in it the dim, cloud-like, gigantic peak of Mount Baker. Before we passed the islands we were entertained by a rare show of right-whales. A school of them a couple of weeks before had come down through Behring Strait, and pursued a shoal of fish into this landlocked bay. There must have been as many as fifty of the monsters in sight, spouting up slender fountains, lifting their huge bulk out of water, and diving, with their bifurcated tails waving in the air. They played about like porpoises, apparently only for our entertainment.

Victoria, so long isolated, is the most English part of Canada. The town itself does not want solidity and wealth, but it is stationary, and, the Canadians elsewhere think, slow. It was the dry and dusty time of the year. The environs are broken with inlets, hilly and picturesque; there are many pretty cottages and country places in the suburbs; and one visits with interest the Eskimalt naval station, and the elevated Park, which has a coble coast view. The very mild climate is favorable for grapes and apples. The summer is delightful; the winter damp, and constantly rainy. And this may be said of all this coast. Of the thirteen thousand population six thousand are Chinese, and they form in the city a dense, insoluble, unassimilating mass. Victoria has one railway, that to the prosperous Nanaimo coal-mines. The island has abundance of coal, some copper, and timber. But Vancouver has taken away from Victoria all its importance as a port. The Government and Parliament buildings are detached, but pleasant and commodious edifices. There is a decorous British air about everything. Throughout British Columbia the judges and the lawyers wear the gown and band and the horse-hair wig. In an evening trial for murder which I attended in a dingy upper chamber of the Kamloops court-house, lighted only by kerosene lamps, the wigs and gowns of judge and attorneys lent, I confess, a dignity to the administration of justice which the kerosene lamps could not have given. In one of the Government buildings is a capital museum of natural history and geology. The educational department is vigorous and effective, and I find in the bulky report evidence of most intelligent management of the schools.

It is only by traversing the long distance to this coast, and seeing the activity here, that one can appreciate the importance to Canada and to the British Empire of the Canadian Pacific Railway as a bond of unity, a developer of resources, and a world's highway. The out-going steamers were crowded with passengers and laden with freight. We met on the way two solid trains, of twenty cars each, full of tea. When the new swift steamers are put on, which are already heavily subsidized by both the English and the Canadian governments, the traffic in passengers and goods must increase. What effect the possession of such a certain line of communication with her Oriental domains will have upon the English willingness to surrender Canada either to complete independence or to a union with the United States, any political prophet can estimate.

It must be added that the Canadian Pacific Company are doing everything to make this highway popular as well as profitable. Construction and management show English regard for comfort and safety and order. It is one of the most agreeable lines to travel over I am acquainted with. Most of it is well built, and defects are being energetically removed. The "Colonist" cars are clean and convenient. The first class carriages are luxurious. The dining-room cars are uniformly well kept, the company hotels are exceptionally excellent; and from the railway servants one meets with civility and attention.

III.

I had been told that the Canadians are second-hand Englishmen. No estimate could convey a more erroneous impression. A portion of the people have strong English traditions and loyalties to institutions, but in manner and in expectations the Canadians are scarcely more English than the people of the United States; they have their own colonial development, and one can mark already with tolerable distinctness a Canadian type which is neither English nor American. This is noticeable especially in the women. The Canadian girl resembles the American in escape from a purely conventional restraint and in self-reliance, and she has, like the English, a well-modulated voice and distinct articulation. In the cities, also, she has taste in dress and a certain style which we think belongs to the New World. In features and action a certain modification has gone on, due partly to climate and partly to greater social independence. It is unnecessary to make comparisons, and I only note that there is a Canadian type of woman.

But there is great variety in Canada, and in fact a remarkable racial diversity. The man of Nova Scotia is not at all the man of British Columbia or Manitoba. The Scotch in old Canada have made a distinct impression in features and speech. And it may be said generally in eastern Canada that the Scotch element is a leading and conspicuous one in the vigor and push of enterprise and the accumulation of fortune. The Canadian men, as one sees them in official life, at the clubs, in business, are markedly a vigorous, stalwart race, well made, of good stature, and not seldom handsome. This physical prosperity needs to be remembered when we consider the rigorous climate and the long winters; these seem to have at least one advantage—that of breeding virile men. The Canadians generally are fond of out-door sports and athletic games, of fishing and hunting, and they give more time to such recreations than we do. They are a little less driven by the business goad. Abundant animal spirits tend to make men good-natured and little quarrelsome. The Canadians would

make good soldiers. There was a time when the drinking habit pervaded very much in Canada, and there are still places where they do not put water enough in their grog, but temperance reform has taken as strong a hold there as it has in the United States.

The feeling about the English is illustrated by the statement that there is not more aping of English ways in Montreal and Toronto clubs and social life than in New York, and that the English superciliousness, or condescension as to colonists, the ultra-English manner, is ridiculed in Canada, and resented with even more warmth than in the United States. The amusing stories of English presumption upon hospitality are current in Canada as well as on this side. All this is not inconsistent with pride in the empire, loyalty to its traditions and institutions, and even a considerable willingness (for human nature is pretty much alike everywhere) to accept decorative titles. But the underlying fact is that there is a distinct feeling of nationality, and it is increasing.

There is not anywhere so great a contrast between neighboring cities as between Quebec, Montreal, and Toronto. Quebec is mediæval, Toronto is modern, Montreal is in a conflict between the two conditions. As the travelling world knows, they are all interesting cities, and have peculiar attractions. Quebec is French, more decidedly so than Toronto is English, and in Montreal the French have a large numerical majority and complete political control. In the Canadian cities generally municipal affairs are pretty much divorced from general party politics, greatly to the advantage of good city government.

Montreal has most wealth, and from its splendid geographical position it is the railway centre, and has the business and commercial primacy. It has grown rapidly from a population of 140,000 in 1881 to a population of over 200,000—estimated, with its suburbs, at 250,000. Were it part of my plan to describe these cities, I should need much space to devote to the finest public buildings and public institutions of Montreal, the handsome streets in the Protestant quarter, with their solid, tasteful, and often elegant residences, the many churches, and the almost unequalled possession of the Mountain as a park and resort, where one has the most striking and varied prospects in the world. Montreal, being a part of the province of Quebec, is not only under provincial control of the government at Quebec, but it is ruled by the same French party in the city, and there is the complaint always found where the poorer majority taxes the richer and more enterprising minority out of proportion to the benefits the latter receives. Various occasions have produced something like race conflicts in the city, and there are prophecies of more serious ones in the strife for ascendancy. The seriousness of this to the minority lies in the fact that the French race is more prolific than any other in the province.

Perhaps nothing will surprise the visitor more than the persistence of the French type in Canada, and naturally its aggressiveness. Guaranteed their religion, laws, and language, the French have not only failed to assimilate, but have had hopes—maybe still have—of making Canada French. The French “national” party means simply a French consolidation, and has no relation to the “nationalism” of Sir John Macdonald. So far as the Church and the French politicians are concerned, the effort is to keep the French solid as a political force, and whether the French are Liberal or Conservative, this is the underlying thought. The province of Quebec is Liberal, but the liberalism is of a different hue from that of Ontario. The French recognize the truth that language is so integral a part of a people’s growth that the individuality of a people depends upon maintaining it. The French have escaped absorption in Canada mainly by loyalty to their native tongue, aided by the concession to them of their civil laws and their religious privileges. They owe this to William Pitt. I quote from a contributed essay in the *Toronto Week* about three years ago: “Up to 1791 the small French population of Canada was in a position to be converted into an English colony with traces of French sentiment and language, which would have slowly disappeared. But at that date William Pitt the younger brought into the House of Commons two Quebec Acts, which constituted two provinces—Lower Canada, with a full provision of French laws, language, and institutions; Upper Canada, with a reproduction of English laws and social system. During the debate Pitt declared on the floor of the House that his purpose was to create two colonies distinct from and jealous of each other, so as to guard against a repetition of the late unhappy rebellion which had separated the thirteen colonies from the empire.”

The French have always been loyal to the English connection under all temptations, for these guarantees have been continued, which could scarcely be expected from any other power, and certainly not in a legislative union of the Canadian provinces. In literature and sentiment the connection is with France; in religion, with Rome; in politics England has been the guarantee of both. There will be no prevailing sentiment in favor of annexation to the United States so long as the Church retains its authority, nor would it be favored by the accomplished politicians so long as they can use the solid French mass as a political force.

The relegation of the subject of education entirely to the provinces is an element in the persistence of the French type in the province of Quebec, in the same way that it strengthens the Protestant cause in Ontario. In the province of Quebec all the public schools are Roman Catholic, and the separate schools are of other sects. In the council of public instruction the Catholics, of course, have a large majority, but the public schools are managed by a Catholic committee and the others by a Protestant committee. In the academies, model and high schools, subsidized by the Government, those having Protestant teachers are insignificant in number, and there are very few Protestants in Catholic schools, and very few Catholics in Protestant schools; the same is true of the schools of this class not subsidized. The bulky report of the superintendent of public instruction of the province of Quebec (which is translated into English) shows a vigorous and intelligent attention to education. The general statistics give the number of pupils in the province as 219,403 Roman Catholics (the term always used in the report) and 37,484 Protestants. In the elementary schools there are 143,848 Roman Catholics and 30,401 Protestants. Of the ecclesiastical teachers, 808 are Roman Catholics and 8 Protestants; of the certificated lay teachers, 250 are Roman Catholic and 105 Protestant; the proportion of schools is four to one. It must be kept in mind that in the French schools it is French literature that is cultivated. In the Laval University, at Quebec, English literature is as purely an ornamental study as French literature would be in Yale. The Laval University, which has a branch in Montreal, is a strong institution, with departments of divinity, law, medicine, and the arts, 80 professors, and 575 students. The institution has a vast pile of buildings, one of the most conspicuous objects in a view of the city. Besides spacious lecture, assembly rooms, and laboratories, it has extensive collections in geology, mineralogy, botany, ethnology, zoology, coins,

a library of 100,000 volumes, in which theology is well represented, but which contains a large collection of works on Canada, including valuable manuscripts, the original MS. of the *Journal des Jésuites*, and the most complete set of the *Relation des Jésuites* existing in America. It has also a gallery of paintings, chiefly valuable for its portraits.

Of the 62,000 population of Quebec City, by the census of 1881, not over 6000 were Protestants. By the same census Montreal had 140,747, of whom 78,684 were French, and 28,995 of Irish origin. The Roman Catholics numbered 103,579. I believe the proportion has not much changed with the considerable growth in seven years.

One is struck, in looking at the religious statistics of Canada, by the fact that the Church of England has not the primacy, and that the so-called independent sects have a position they have not in England. In the total population of 4,324,810, given by the census of 1881, the Protestants were put down at 2,436,554 and the Roman Catholics at 1,791,982. The larger of the Protestant denominations were, Methodists, 742,981; Presbyterians, 676,165; Church of England, 574,818; Baptists, 296,525. Taking as a specimen of the north-west the province of Manitoba, census of 1886, we get these statistics of the larger sects: Presbyterians, 28,406; Church of England, 23,206; Methodists, 18,648; Roman Catholics, 14,651; Mennonites, 9112; Baptists, 3296; Lutherans, 3131.

Some statistics of general education in the Dominion show the popular interest in the matter. In 1885 the total number of pupils in the Dominion, in public and private schools, was 908,193, and the average attendance was 555,404. The total expenditure of the year, not including school buildings, was \$9,310,745, and the value of school lands, buildings, and furniture was \$25,000,000. Yet in the province of Quebec, out of the total expenditure of \$3,102,410, only \$353,077 was granted by the provincial Legislature. And in Ontario, of the total of \$3,904,797, only \$267,084 was granted by the Legislature.

The McGill University at Montreal, Sir William Dawson principal, is a corporation organized under royal charter, which owes its original endowment of land and money (valued at \$120,000) to James McGill. It receives small grants from the provincial and Dominion governments, but mainly depends upon its own funds, which in 1885 stood at \$791,000. It has numerous endowed professorships and endowments for scholarships and prizes; among them is the Donalda Endowment for the Higher Education of Women (from Sir Donald A. Smith), by which a special course in separate classes, by University professors, is maintained in the University buildings for women. It has faculties of arts, applied sciences, law, and medicine—the latter with one of the most complete anatomical museums and one of the best selected libraries on the continent. It has several colleges affiliated with it for the purpose of conferring University degrees, a model school, and four theological colleges, a Congregational, a Presbyterian, an Episcopalian, and a Wesleyan, the students in which may supplement their own courses in the University. The professors and students wear the University cap and gown, and morning prayers are read to a voluntary attendance. The Redpath Museum, of geology, mineralogy, zoology, and ethnology, has a distinction among museums not only for the size of the collection, but for splendid arrangement and classification. The well-selected library numbers about 30,000 volumes. The whole University is a vigorous educational centre, and its well-planted grounds and fine buildings are an ornament to the city.

Returning to the French element, its influence is not only felt in the province of Quebec, but in the Dominion. The laws of the Dominion and the proceedings are published in French and English; the debates in the Dominion Parliament are conducted indifferently in both languages, although it is observed that as the five years of any Parliament go on English is more and more used by the members, for the French are more likely to learn English than the English are to learn French. Of course the Quebec Parliament is even more distinctly French. And the power of the Roman Catholic Church is pretty much co-extensive with the language. The system of tithes is legal in provincial law, and tithes can be collected of all Roman Catholics by law. The Church has also what is called the fabrique system; that is, a method of raising contributions from any district for churches, priests' houses, and conventual buildings and schools. The tithes and the fabrique assessments make a heavy burden on the peasants. The traveller down the St. Lawrence sees how the interests of religion are emphasized in the large churches raised in the midst of humble villages, and in the great Church establishments of charity and instruction. It is said that the farmers attempted to escape the tithes on cereals by changing to the cultivation of pease, but the Church then decided that pease were cereals. There is no doubt that the French population are devout, and that they support the Church in proportion to their devotion, and that much which seems to the Protestants extortion on the part of the Church is a voluntary contribution. Still the fact remains that the burden is heavy on land that is too cold for the highest productiveness. The desire to better themselves in wages, and perhaps to escape burdens, sends a great many French to New England. Some of them earn money, and return to settle in the land that is dear by tradition and a thousand associations. Many do not return, and I suppose there are over three-quarters of a million of French Canadians now in New England. They go to better themselves, exactly as New Englanders leave their homes for more productive farms in the West. The Church, of course, does not encourage this emigration, but does encourage the acquisition of lands in Ontario or elsewhere in Canada. And there has been recently a marked increase of French in Ontario—so marked that the French representation in the Ontario Parliament will be increased probably by three members in the next election. There are many people in Canada who are seriously alarmed at this increase of the French and of the Roman Catholic power. Others look upon this fear as idle, and say that immigration is sure to make the Protestant element overwhelming. It is to be noted also that Ontario furnishes Protestant emigrants to the United States in large numbers. It may be that the interchange of ideas caused by the French emigration to New England will be an important make-weight in favor of annexation. Individuals, and even French newspapers, are found to advocate it. But these are at present only surface indications. The political leaders, the Church, and the mass of the people are fairly content with things as they are, and with the provincial autonomy, although they resent federal vetoes, and still make a "cry" of the Riel execution.

The French element in Canada may be considered from other points of view. The contribution of romance and tradition is not an unimportant one in any nation. The French in Canada have never broken with their past, as the French in France have. There is a great charm about Quebec—its language, its social life, the

military remains of the last century. It is a Protestant writer who speaks of the volume and wealth of the French Canadian literature as too little known to English-speaking Canada. And it is true that literary men have not realized the richness of the French material, nor the work accomplished by French writers in history, poetry, essays, and romances. Quebec itself is at a commercial stand-still, but its uniquely beautiful situation, its history, and the projection of mediævalism into existing institutions make it one of the most interesting places to the tourist on the continent. The conspicuous, noble, and commodious Parliament building is almost the only one of consequence that speaks of the modern spirit. It was the remark of a high Church dignitary that the object of the French in Canada was the promotion of religion, and the object of the English, commerce. We cannot overlook this attitude against materialism. In the French schools and universities religion is not divorced from education. And even in the highest education, where modern science has a large place, what we may call the literary side is very much emphasized. Indeed, the French students are rather inclined to rhetoric, and in public life the French are distinguished for the graces and charm of oratory. It may be true, as charged, that the public schools of Quebec province, especially in the country, giving special attention to the interest the Church regards as the highest, do little to remove the ignorance of the French peasant. It is our belief that the best Christianity is the most intelligent. Yet there is matter for consideration with all thoughtful men what sort of society we shall ultimately have in States where the common schools have neither religious nor ethical teaching.

Ottawa is a creation of the Federal Government as distinctly as Washington is. The lumber-mills on the Chaudière Falls necessitate a considerable town here, for this industry assumes gigantic proportions, but the beauty and attraction of the city are due to the concentration here of political interest. The situation on the bluffs of the Ottawa River is commanding, and gives fine opportunity for architectural display. The group of Government buildings is surpassingly fine. The Parliament House and the department buildings on three sides of a square are exceedingly effective in color and in the perfection of Gothic details, especially in the noble towers. There are few groups of buildings anywhere so pleasing to the eye, or that appeal more strongly to one's sense of dignity and beauty. The library attached to the Parliament House in the rear, a rotunda in form, has a picturesque exterior, and the interior is exceedingly beautiful and effective. The library, though mainly for Parliamentary uses, is rich in Canadian history, and well up in polite literature. It contains about 90,000 volumes. In the Parliament building, which contains the two fine legislative Chambers, there are residence apartments for the Speakers of the Senate and of the House of Commons and their families, where entertainments are given during the session. The opening of Parliament is an imposing and brilliant occasion, graced by the presence of the Governor-general, who is supposed to visit the Chambers at no other time in the session. Ottawa is very gay during the session, society and politics mingling as in London, and the English habit of night sessions adds a good deal to the excitement and brilliancy of the Parliamentary proceedings.

The growth of the Government business and of official life has made necessary the addition of a third department building, and the new one, departing from the Gothic style, is very solid and tasteful. There are thirteen members of the Privy Council with portfolios, and the volume of public business is attested by the increase of department officials.

I believe there are about 1500 men attached to the civil service in Ottawa. It will be seen at once that the Federal Government, which seemed in a manner superimposed upon the provincial governments, has taken on large proportions, and that there is in Ottawa and throughout the Dominion in federal officials and offices a strengthening vested interest in the continuance of the present form of government. The capital itself, with its investment in buildings, is a conservator of the state of things as they are. The Cabinet has many able men, men who would take a leading rank as parliamentarians in the English Commons, and the Opposition benches in the House furnish a good quota of the same material. The power of the premier is a fact as recognizable as in England. For many years Sir John A. Macdonald has been virtually the ruler of Canada. He has had the ability and skill to keep his party in power, while all the provinces have remained or become Liberal. I believe his continuance is due to his devotion to the national idea, to the development of the country, to bold measures—like the urgency of the Canadian Pacific Railway construction—for binding the provinces together and promoting commercial activity. Canada is proud of this, even while it counts its debt. Sir John is worshipped by his party, especially by the younger men, to whom he furnishes an ideal, as a statesman of bold conceptions and courage. He is disliked as a politician as cordially by the Opposition, who attribute to him the same policy of adventure that was attributed to Beaconsfield. Personally he resembles that remarkable man. Undoubtedly Sir John adds prudence to his knowledge of men, and his habit of never crossing a stream till he gets to it has gained him the sobriquet of "Old To-morrow." He is a man of the world as well as a man of affairs, with a wide and liberal literary taste.

The members of Government are well informed about the United States, and attentive students of its politics. I am sure that, while they prefer their system of responsible government, they have no sentiment but friendliness to American institutions and people, nor any expectation that any differences will not be adjusted in a manner satisfactory and honorable to both. I happened to be in Canada during the fishery and "retaliation" talk. There was no belief that the "retaliation" threatened was anything more than a campaign measure; it may have chilled the *rapport* for the moment, but there was literally no excitement over it, and the opinion was general that retaliation as to transportation would benefit the Canadian railways. The effect of the moment was that importers made large foreign orders for goods to be sent by Halifax that would otherwise have gone to United States ports. The fishery question is not one that can be treated in the space at our command. Naturally Canada sees it from its point of view. To a considerable portion of the maritime provinces fishing means livelihood, and the view is that if the United States shares in it we ought to open our markets to the Canadian fishermen. Some, indeed, and these are generally advocates of freer trade, think that our fishermen ought to have the right of entering the Canadian harbors for bait and shipment of their catch, and think also that Canada would derive an equal benefit from this; but probably the general feeling is that these privileges should be compensated by a United States market. The defence of the treaty in the United States Senate debate was not the defence of the Canadian Government in many particulars. For instance, it was said that the "outrages" had been *disowned* as the acts of irresponsible men. The Canadian defence was that the "outrages"—that is, the most conspicuous of them which appeared in the debate—had

been *disproved* in the investigation. Several of them, which excited indignation in the United States, were declared by a Cabinet minister to have no foundation in fact, and after proof of the falsity of the allegations the complainants were not again heard of. Of course it is known that no arrangement made by England can hold that is not materially beneficial to Canada and the United States; and I believe I state the best judgment of both sides that the whole fishery question, in the hands of sensible representatives of both countries, upon ascertained facts, could be settled between Canada and the United States. Is it not natural that, with England conducting the negotiation, Canada should appear as a somewhat irresponsible litigating party bent on securing all that she can get? But whatever the legal rights are, under treaties or the law of nations, I am sure that the absurdity of making a *casus belli* of them is as much felt in Canada as in the United States. And I believe the Canadians understand that this attitude is consistent with a firm maintenance of treaty or other rights by the United States as it is by Canada.

The province of Ontario is an empire in itself. It is nearly as large as France; it is larger by twenty-five thousand square miles than the combined six New England States, with New York, New Jersey, Pennsylvania, and Maryland. In its varied capacities it is the richest province in Canada, and leaving out the forests and minerals and stony wilderness between the Canadian Pacific and James Bay, it has an area large enough for an empire, which compares favorably in climate and fertility with the most prosperous States of our Union. The climate of the lake region is milder than that of southern New York, and a considerable part of it is easily productive of superior grapes, apples, and other sorts of fruit. The average yield of wheat, per acre, both fall and spring, for five years ending with 1886, was considerably above that of our best grain-producing States, from Pennsylvania to those farthest West. The same is true of oats. The comparison of barley is still more favorable for Ontario, and the barley is of a superior quality. On a carefully cultivated farm in York county, for this period, the average was higher than the general in the province, being, of wheat, 25 bushels to the acre; barley, 47 bushels; oats, 66 bushels; pease, 32 bushels. It has no superior as a wool-producing and cattle-raising country. Its waterpower is unexcelled; in minerals it is as rich as it is in timber; every part of it has been made accessible to market by railways and good highways, which have had liberal Government aid; and its manufactures have been stimulated by a protective tariff. Better than all this, it is the home of a very superior people. There are no better anywhere. The original stock was good, the climate has been favorable, the athletic habits have given them vigor and tone and courage, and there prevails a robust, healthful moral condition. In any company, in the clubs, in business houses, in professional circles, the traveller is impressed with the physical development of the men, and even on the streets of the chief towns with the uncommon number of women who have beauty and that attractiveness which generally goes with good taste in dress.

The original settlers of Ontario were 10,000 loyalists, who left New England during and after our Revolutionary War. They went to Canada impoverished, but they carried there moral and intellectual qualities of a high order, the product of the best civilization of their day, the best materials for making a State. I confess that I never could rid myself of the school-boy idea that the terms "British redcoat" and "enemy" were synonymous, and that a "Tory" was the worst character Providence had ever permitted to live. But these people, who were deported, or went voluntarily away for an idea, were among the best material we had in stanch moral traits, intellectual leadership, social position, and wealth; their crime was superior attachment to England, and utter want of sympathy with the colonial cause, the cause of "liberty" of the hour. It is to them, at any rate, that Ontario owes its solid basis of character, vigor, and prosperity. I do not quarrel with the pride of their descendants in the fact that their ancestors were U. E. (United Empire) loyalists—a designation that still has a vital meaning to them. No doubt they inherit the idea that the revolt was a mistake, that the English connection is better as a form of government than the republic, and some of them may still regard the "Yankees" as their Tory ancestors did. It does not matter. In the development of a century in a new world they are more like us than they are like the English, except in a certain sentiment and in traditions, and in adherence to English governmental ideas. I think I am not wrong in saying that this conservative element in Ontario, or this aristocratical element which believes that it can rule a people better than they can rule themselves, was for a long time an anti-progressive and anti-popular force. They did not give up their power readily—power, however, which they were never accused of using for personal profit in the way of money. But I suppose that the "rule of the best" is only held today as a theory under popular suffrage in a responsible government.

The population of Ontario in 1886 was estimated at 1,819,026. For the seven years from 1872—79 the gain was 250,782. For the seven years from 1879-86 the gain was only 145,459. These figures, which I take from the statistics of Mr. Archibald Blue, secretary of the Ontario Bureau of Industries, become still more significant when we consider that in the second period of seven years the Government had spent more money in developing the railways, in promoting immigration, and raised more money by the protective tariff for the establishing of industries, than in the first. The increase of population in the first period was 174 per cent.; in the second, only 8 2/3 per cent. Mr. Blue also says that but for the accession by immigration in the seven years 1879-86 the population of the province in 1886 would have been 62,640 less than in 1879. The natural increase, added to the immigration reported (208,000), should have given an increase of 442,000. There was an increase of only 145,000. What became of the 297,000? They did not go to Manitoba—the census shows that. "The lamentable truth is that we are growing men for the United States." That is, the province is at the cost of raising thousands of citizens up to a productive age only to lose them by emigration to the United States. Comparisons are also made with Ohio and Michigan, showing in them a proportionally greater increase in population, in acres of land under production, in manufactured products, and in development of mineral wealth. And yet Ontario has as great natural advantages as these neighboring States. The observation is also made that in the six years 1873-79, a period of intense business stringency, the country made decidedly greater progress than in the six years 1879-85, "a period of revival and boom, and vast expenditure of public money." The reader will bear in mind that the repeal (caused mainly by the increase of Canadian duties on American products) of the reciprocity treaty in 1866 (under which an international trade had grown to \$70,000,000 annually) discouraged any annexation sentiment that may have existed, aided the scheme of confederation, and seemed greatly to stimulate Canadian manufactures, and the growth of interior and exterior commerce.

We touch here not only political questions active in Canada, but economic problems affecting both Canada

and the United States. It is the criticism of the Liberals upon the "development" policy, the protective tariff, the subsidy policy of the Liberal-Conservative party now in power, that a great show of activity is made without any real progress either in wealth or population. To put it in a word, the Liberals want unrestricted trade with the United States, with England, or with the world—preferably with the United States. If this caused separation from England they would accept the consequences with composure, but they vehemently deny that they in any way favor annexation because they desire free-trade. Pointing to the more rapid growth of the States of the Union their advantage is said to consist in having free exchange of commodities with sixty millions of people, spread over a continent.

As a matter of fact it seems plain that Ontario would benefit and have a better development by sharing in this large circulation and exchange. Would the State of New York be injured by the prosperity of Ontario?

Is it not benefited by the prosperity of its other neighbor, Pennsylvania?

Toronto represents Ontario. It is its monetary, intellectual, educational centre, and I may add that here, more than anywhere else in Canada, the visitor is conscious of the complicated energy of a very vigorous civilization. The city itself has grown rapidly—an increase from 86,415 in 1881 to probably 170,000 in 1888—and it is growing as rapidly as any city on the continent, according to the indications of building, manufacturing, railway building, and the visible stir of enterprise. It is a very handsome and agreeable city, pleasant for one reason, because it covers a large area, and gives space for the display of its fine buildings. I noticed especially the effect of noble churches, occupying a square—ample grounds that give dignity to the house of God. It extends along the lake about six miles, and runs back about as far, laid out with regularity, and with the general effect of being level, but the outskirts have a good deal of irregularity and picturesqueness. It has many broad, handsome streets and several fine parks; High Park on the west is extensive, the University grounds (or Queen's Park) are beautiful—the new and imposing Parliament Buildings are being erected in a part of its domain ceded for the purpose; and the Island Park, the irregular strip of an island lying in front of the city, suggests the Lido of Venice. I cannot pause upon details, but the town has an air of elegance, of solidity, of prosperity. The well-filled streets present an aspect of great business animation, which is seen also in the shops, the newspapers, the clubs. It is a place of social activity as well, of animation, of hospitality.

There are a few delightful old houses, which date back to the New England loyalists, and give a certain flavor to the town.

If I were to make an accurate picture of Toronto it would appear as one of the most orderly, well-governed, moral, highly civilized towns on the continent—in fact, almost unique in the active elements of a high Christian civilization. The notable fact is that the concentration here of business enterprise is equalled by the concentration of religious and educational activity.

The Christian religion is fundamental in the educational system. In this province the public schools are Protestant, the separate schools Roman Catholic, and the Bible has never been driven from the schools. The result as to positive and not passive religious instruction has not been arrived at without agitation. The mandatory regulations of the provincial Assembly are these: Every public and high school shall be opened daily with the Lord's Prayer, and closed with the reading of the Scriptures and the Lord's Prayer, or the prayer authorized by the Department of Education. The Scriptures shall be read daily and systematically, without comment or explanation. No pupil shall be required to take part in any religious exercise objected to by parent or guardian, and an interval is given for children of Roman Catholics to withdraw. A volume of Scripture selections made up by clergymen of the various denominations or the Bible may be used, in the discretion of the trustees, who may also order the repeating of the ten commandments in the school at least once a week. Clergymen of any denomination, or their authorized representatives, shall have the right to give religious instruction to pupils of their denomination in the school-house at least once a week. The historical portions of the Bible are given with more fulness than the others. Each lesson contains a continuous selection. The denominational rights of the pupils are respected, because the Scripture must be read without comment or explanation. The State thus discharges its duty without prejudice to any sect, but recognizes the truth that ethical and religious instruction is as necessary in life as any other.

I am not able to collate the statistics to show the effect of this upon public morals. I can only testify to the general healthful tone. The schools of Toronto are excellent and comprehensive; the kindergarten is a part of the system, and the law avoids the difficulty experienced in St. Louis about spending money on children under the school age of six by making the kindergarten age three. There is also a school for strays and truant, under private auspices as yet, which reinforces the public schools in an important manner, and an industrial school of promise, on the cottage system, for neglected boys. The heads of educational departments whom I met were Christian men.

I sat one day with the police-magistrate, and saw something of the workings of the Police Department. The chief of police is a gentleman. So far as I could see there was a distinct moral intention in the administration. There are special policemen of high character, with discretionary powers, who seek to prevent crime, to reconcile differences, to suppress vice, to do justice on the side of the erring as well as on the side of the law. The central prison (all offenders sentenced for more than two years go to a Dominion penitentiary) is a well-ordered jail, without any special reformatory features. I cannot even mention the courts, the institutions of charity and reform, except to say that they all show vigorous moral action and sentiment in the community.

The city, though spread over such a large area, permits no horse-cars to run on Sunday. There are no saloons open on Sunday; there are no beer-gardens or places of entertainment in the suburbs, and no Sunday newspapers. It is believed that the effect of not running the cars on Sunday has been to scatter excellent churches all over the city, so that every small section has good churches. Certainly they are well distributed. They are large and fine architecturally; they are well filled on Sunday; the clergymen are able, and the salaries are considered liberal. If I may believe the reports and my limited observation, the city is as active religiously as it is in matters of education. And I do not see that this interferes with an agreeable social life, with a marked tendency of the women to beauty and to taste in dress. The tone of public and private life impresses a stranger as exceptionally good. The police is free from political influence, being under a commission of three, two of whom are life magistrates, and the mayor.

The free-library system of the whole province is good. Toronto has an excellent and most intelligently arranged free public library of about 50,000 volumes. The library trustees make an estimate yearly of the money necessary, and this, under the law, must be voted by the city council. The Dominion Government still imposes a duty on books purchased for the library outside of Canada.

The educational work of Ontario is nobly crowned by the University of Toronto, though it is in no sense a State institution. It is well endowed, and has a fine estate. The central building is dignified and an altogether noble piece of architecture, worthy to stand in its beautiful park. It has a university organization, with a college inside of it, a school of practical science, and affiliated divinity schools of several denominations, including the Roman Catholic. There are fine museums and libraries, and it is altogether well equipped and endowed, and under the presidency of Dr. Daniel Wilson, the venerable ethnologist, it is a great force in Canada. The students and officers wear the cap and gown, and the establishment has altogether a scholastic air. Indeed, this tradition and equipment—which in a sense pervades all life and politics in Canada—has much to do with keeping up the British connection. The conservation of the past is stronger than with us.

A hundred matters touching our relations with Canada press for mention. I must not omit the labor organizations. These are in affiliation with those in the United States, and most of them are international. The plumbers, the bricklayers, the stone-masons and stone-cutters, the Typographical Union, the Brotherhood of Carpenters and Joiners, the wood-carvers, the Knights of Labor, are affiliated; there is a branch of the Brotherhood of Locomotive Engineers in Canada; the railway conductors, with delegates from all our States, held their conference in Toronto last summer. The Amalgamated Society of Carpenters and Joiners is a British association, with headquarters in Manchester, but it has an executive committee in New York, with which all the Canadian and American societies communicate, and it sustains a periodical in New York. The Society of Amalgamated Engine Builders has its office in London, but there is an American branch, with which all the Canadian societies work in harmony. The Cigar-makers' Union is American, but a strike of cigar-makers in Toronto was supported by the American; so with the plumbers. It may be said generally that the societies each side the line will sustain each other. The trade organizations are also taken up by women, and these all affiliate with the United States. When a "National" union affiliates with one on the other side, the name is changed to "International." This union and interchange draws the laborers of both nations closer together. From my best information, and notwithstanding the denial of some politicians, the Canadian unions have love and sympathy for and with America. And this feeling must be reckoned with in speaking of the tendency to annexation. The present much-respected mayor of Toronto is a trade-unionist, and has a seat in the local parliament as a Conservative; he was once arrested for picketing, or some such trade-union performance. I should not say that the trades-unions are in favor of annexation, but they are not afraid to discuss it. There is in Toronto a society of a hundred young men, the greater part of whom are of the artisan class, who meet to discuss questions of economy and politics. One of their subjects was Canadian independence. I am told that there is among young men a considerable desire for independence, accompanied with a determination to be on the best terms with the United States, and that as between a connection with Great Britain and the United States, they would prefer the latter. In my own observation the determination to be on good terms with the United States is general in Canada; the desire for independence is not.

The frequency of the question, "What do you think of the future of Canada?" shows that it is an open question. Undeniably the confederation, which seems to me rather a creation than a growth, works very well, and under it Canada has steadily risen in the consideration of the world and in the development of the sentiment of nationality. But there are many points unadjusted in the federal and provincial relations; more power is desired on one side, more local autonomy on the other. The federal right of disallowance of local legislation is resisted. The stated distribution of federal money to the provinces is an anomaly which we could not reconcile with the public spirit and dignity of the States, nor recognize as a proper function of the Government. The habit of the provinces of asking aid from the central government in emergencies, and getting it, does not cultivate self-reliance, and the grant of aid by the Federal Government, in order to allay dissatisfaction, must be a growing embarrassment. The French privileges in regard to laws, language, and religion make an insoluble core in the heart of the confederacy, and form a compact mass which can be wielded for political purposes. This element, dominant in the province of Quebec, is aggressive. I have read many alarmist articles, both in Canadian and English periodicals, as to the danger of this to the rights of Protestant communities. I lay no present stress upon the expression of the belief by intelligent men that Protestant communities might some time be driven to the shelter of the wider toleration of the United States. No doubt much feeling is involved. I am only reporting a state of mind which is of public notoriety; and I will add that men equally intelligent say that all this fear is idle; that, for instance, the French increase in Ontario means nothing, only that the *habitant* can live on the semisterile Laurentian lands that others cannot profitably cultivate.

In estimating the idea the Canadians have of their future it will not do to take surface indications. One can go to Canada and get almost any opinion and tendency he is in search of. Party spirit—though the newspapers are in every way, as a rule, less sensational than ours—runs as high and is as deeply bitter as it is with us. Motives are unwarrantably attributed. It is always to be remembered that the Opposition criticises the party in power for a policy it might not essentially change if it came in, and the party in power attributes designs to the Opposition which it does not entertain: as, for instance, the Opposition party is not hostile to confederation because it objects to the "development" policy or to the increase of the federal debt, nor is it for annexation because it may favor unrestricted trade or even commercial union. As a general statement it may be said that the Liberal-Conservative party is a protection party, a "development" party, and leans to a stronger federal government; that the Liberal party favors freer trade, would cry halt to debt for the forcing of development, and is jealous of provincial rights. Even the two parties are not exactly homogeneous. There are Conservatives who would like legislative union; the Liberals of the province of Quebec are of one sort, the Liberals of the province of Ontario are of another, and there are Conservative-Liberals as well as Radicals.

The interests of the maritime provinces are closely associated with those of New England; popular votes there have often pointed to political as well as commercial union, but the controlling forces are loyal to the confederation and to British connection. Manitoba is different in origin, as I pointed out, and in temper. It

considers sharply the benefit to itself of the federal domination. My own impression is that it would vote pretty solidly against any present proposition of annexation, but under the spur of local grievances and the impatience of a growth slower than expected there is more or less annexation talk, and one newspaper of a town of six thousand people has advocated it. Whether that is any more significant than the same course taken by a Quebec newspaper recently under local irritation about disallowance I do not know. As to unrestricted trade, Sir John Thompson, the very able Minister of Justice in Ottawa, said in a recent speech that Canada could not permit her financial centre to be shifted to Washington and her tariff to be made there; and in this he not only touched the heart of the difficulty of an arrangement, but spoke, I believe, the prevailing sentiment of Canada.

As to the future, I believe the choice of a strict conservatism would be, first, the government as it is; second, independence; third, imperial federation: annexation never. But imperial federation is generally regarded as a wholly impracticable scheme. The Liberal would choose, first, the framework as it is, with modifications; second, independence, with freer trade; third, trust in Providence, without fear. It will be noted in all these varieties of predilection that separation from England is calmly contemplated as a definite possibility, and I have no doubt that it would be preferred rather than submission to the least loss of the present autonomy. And I must express the belief that, underlying all other thought, unexpressed, or, if expressed, vehemently repudiated, is the idea, widely prevalent, that some time, not now, in the dim future, the destiny of Canada and the United States will be one. And if one will let his imagination run a little, he cannot but feel an exultation in the contemplation of the majestic power and consequence in the world such a nation would be, bounded by three oceans and the Gulf, united under a restricted federal head, with free play for the individuality of every State. If this ever comes to pass, the tendency to it will not be advanced by threats, by unfriendly legislation, by attempts at conquest. The Canadians are as high-spirited as we are. Any sort of union that is of the least value could only come by free action of the Canadian people, in a growth of business interests undisturbed by hostile sentiment. And there could be no greater calamity to Canada, to the United States, to the English-speaking interest in the world, than a collision. Nothing is to be more dreaded for its effect upon the morals of the people of the United States than any war with any taint of conquest in it.

There is, no doubt, with many, an honest preference for the colonial condition. I have heard this said:

"We have the best government in the world, a responsible government, with entire local freedom. England exercises no sort of control; we are as free as a nation can be. We have in the representative of the Crown a certain conservative tradition, and it only costs us ten thousand pounds a year. We are free, we have little expense, and if we get into any difficulty there is the mighty power of Great Britain behind us!" It is as if one should say in life, I have no responsibilities; I have a protector. Perhaps as a "rebel," I am unable to enter into the colonial state of mind. But the boy is never a man so long as he is dependent. There was never a nation great until it came to the knowledge that it had nowhere in the world to go for help.

In Canada to-day there is a growing feeling for independence; very little, taking the whole mass, for annexation. Put squarely to a popular vote, it would make little show in the returns. Among the minor causes of reluctance to a union are distrust of the Government of the United States, coupled with the undoubted belief that Canada has the better government; dislike of our quadrennial elections; the want of a system of civil service, with all the turmoil of our constant official overturning; dislike of our sensational and irresponsible journalism, tending so often to recklessness; and dislike also, very likely, of the very assertive spirit which has made us so rapidly subdue our continental possessions.

But if one would forecast the future of Canada, he needs to take a wider view than personal preferences or the agitations of local parties. The railway development, the Canadian Pacific alone, has changed within five years the prospects of the political situation. It has brought together the widely separated provinces, and has given a new impulse to the sentiment of nationality. It has produced a sort of unity which no Act of Parliament could ever create. But it has done more than this: it has changed the relation of England to Canada. The Dominion is felt to be a much more important part of the British Empire than it was ten years ago, and in England within less than ten years there has been a revolution in colonial policy. With a line of fast steamers from the British Islands to Halifax, with lines of fast steamers from Vancouver to Yokohama, Hong-Kong, and Australia, with an all rail transit, within British limits, through an empire of magnificent capacities, offering homes for any possible British overflow, will England regard Canada as a weakness? It is true that on this continent the day of dynasties is over, and that the people will determine their own place. But there are great commercial forces at work that cannot be ignored, which seem strong enough to keep Canada for a long time on her present line of development in a British connection.

THE END.

PREFACE

IN the winter and spring of 1875 the writer made the tour of Egypt and the Levant. The first portion of the journey is described in a volume published last summer, entitled "My Winter on the Nile, among Mummies and Moslems"; the second in the following pages. The notes of the journey were taken and the books were written before there were any signs of the present Oriental disturbances, and the observations made are therefore uncolored by any expectation of the existing state of affairs. Signs enough were visible of a transition period, extraordinary but hopeful; with the existence of poverty, oppression, superstition, and ignorance were mingling Occidental and Christian influences, the faint beginnings of a revival of learning and the stronger pulsations of awakening commercial and industrial life. The best hope of this revival was their, as it is now, in peace and not in war.

C. D. W.

Hartford, November 10, 1876.

IN THE LEVANT.

I.—FROM JAFFA TO JERUSALEM.

SINCE Jonah made his short and ignominious voyage along the Syrian coast, mariners have had the same difficulty in getting ashore that the sailors experienced who attempted to land the prophet; his tedious though safe method of disembarking was not followed by later navigators, and the landing at Jaffa has remained a vexatious and half the time an impossible achievement.

The town lies upon the open sea and has no harbor. It is only in favorable weather that vessels can anchor within a mile or so from shore, and the Mediterranean steamboats often pass the port without being able to land either freight or passengers, In the usual condition of the sea the big fish would have found it difficult to discharge Jonah without stranding itself, and it seems that it waited three days for the favorable moment. The best chance for landing nowadays is in the early morning, in that calm period when the winds and the waves alike await the movements of the sun. It was at that hour, on the 5th of April, 1875, that we arrived from Port Said on the French steamboat Erymanthe. The night had been pleasant and the sea tolerably smooth, but not to the apprehensions of some of the passengers, who always declare that they prefer, now, a real tempest to a deceitful groundswell. On a recent trip a party had been prevented from landing, owing to the deliberation of the ladies in making their toilet; by the time they had attired themselves in a proper manner to appear in Southern Palestine, the golden hour had slipped away, and they were able only to look upon the land which their beauty and clothes would have adorned. None of us were caught in a like delinquency. At the moment the anchor went down we were bargaining with a villain to take us ashore, a bargain in which the yeasty and waxing uneasy sea gave the boatman all the advantage.

Our little company of four is guided by the philosopher and dragoman Mohammed Abd-el-Atti, of Cairo, who has served us during the long voyage of the Nile. He is assisted in his task by the Abyssinian boy Ahman Abdallah, the brightest and most faithful of servants. In making his first appearance in the Holy Land he has donned over his gay Oriental costume a blue Frank coat, and set his fez back upon his head at an angle exceeding the slope of his forehead. His black face has an unusual lustre, and his eyes dance with more than their ordinary merriment as he points excitedly to the shore and cries, "Yâfa! Mist'r Dunham."

The information is addressed to Madame, whom Ahman, utterly regardless of sex, invariably addresses by the name of one of our travelling companions on the Nile.

"Yes, marm; you see him, Yâfa," interposed Abd-el-Atti; coming forward with the air of brushing aside, as impertinent, the geographical information of his subordinate; "not much, I tink, but him bery old. Let us to go ashore."

Jaffa, or Yâfa, or Joppa, must have been a well-established city, since it had maritime dealings with Tarshish, in that remote period in which the quaint story of Jonah is set,—a piece of Hebrew literature that bears internal evidence of great antiquity in its extreme *naivete*. Although the Canaanites did not come into Palestine till about 2400 b. c., that is to say, about the time of the twelfth dynasty in Egypt, yet there is a reasonable tradition that Jaffa existed before the deluge. For ages it has been the chief Mediterranean port of great Jerusalem. Here Solomon landed his Lebanon timber for the temple. The town swarmed more than once with the Roman legions on their way to crush a Jewish insurrection. It displayed the banner of the Saracen host a few years after the Hegira. And, later, when the Crusaders erected the standard of the cross on its walls, it was the *dépôt* of supplies which Venice and Genoa and other rich cities contributed to the holy war. Great kingdoms and conquerors have possessed it in turn, and for thousands of years merchants have trusted their fortunes to its perilous roadstead. And yet no one has ever thought it worth while to give it a harbor by the construction of a mole, or a pier like that at Port Said. I should say that the first requisite in the industrial, to say nothing of the moral, regeneration of Palestine is a harbor at Jaffa.

The city is a cluster of irregular, flat-roofed houses, and looks from the sea like a brown bowl turned bottom up; the roofs are terraces on which the inhabitants can sleep on summer nights, and to which they can ascend, out of the narrow, evil-smelling streets, to get a whiff of sweet odor from the orange gardens which surround the town. The ordinary pictures of Jaffa do it ample justice. The chief feature in the view is the hundreds of clumsy feluccas tossing about in the aggravating waves, diving endwise and dipping sidewise, guided a little by the long sweeps of the sailors, but apparently the sport of the most uncertain billows. A swarm of them, four or five deep, surrounds our vessel; they are rising and falling in the most sickly motion, and dashing into each other in the frantic efforts of their rowers to get near the gangway ladder. One minute the boat nearest the stairs rises as if it would mount into the ship, and the next it sinks below the steps into a frightful gulf. The passengers watch the passing opportunity to jump on board, as people dive into the "lift" of a hotel. Freight is discharged into lighters that are equally frisky; and it is taken on and off splashed with salt water and liable to a thousand accidents in the violence of the transit.

Before the town stretches a line of rocks worn for ages, upon which the surf is breaking and sending white jets into the air. It is through a narrow opening in this that our boat is borne on the back of a great wave, and we come into a strip of calmer water and approach the single landing-stairs. These stairs are not so convenient as those of the vessel we have just left, and two persons can scarcely pass on them. But this is the only sea entrance to Jaffa; if the Jews attempt to return and enter their ancient kingdom this way, it will take them a long time to get in. A sea-wall fronts the town, fortified by a couple of rusty cannon at one end, and the passage is through the one gate at the head of these stairs.

It seems forever that we are kept waiting at the foot of this shaky stairway. Two opposing currents are

struggling to get up and down it: excited travellers, porters with trunks and knapsacks, and dragomans who appear to be pushing their way through simply to show their familiarity with the country. It is a dangerous ascent for a delicate woman. Somehow, as we wait at this gate where so many men of note have waited, and look upon this sea-wall upon which have stood so many of the mighty from Solomon to Origen, from Tiglath-Pileser to Richard Cour de Lion, the historical figure which most pervades Jaffa is that of the whimsical Jonah, whose connection with it was the slightest. There is no evidence that he ever returned here. Josephus, who takes liberties with the Hebrew Scriptures, says that a whale carried the fugitive into the Euxine Sea, and there discharged him much nearer to Nineveh than he would have been if he had kept with the conveyance in which he first took passage and landed at Tarsus. Probably no one in Jaffa noticed the little man as he slipped through this gate and took ship, and yet his simple embarkation from the town has given it more notoriety than any other event. Thanks to an enduring piece of literature, the unheroic Jonah and his whale are better known than St. Jerome and his lion; they are the earliest associates and Oriental acquaintances of all well-brought-up children in Christendom. For myself, I confess that the strictness of many a New England Sunday has been relieved by the perusal of his unique adventure. He in a manner anticipated the use of the monitors and other cigar-shaped submerged sea-vessels.

When we have struggled up the slippery stairs and come through the gate, we wind about for some time in a narrow passage on the side of the sea, and then cross through the city, still on foot. It is a rubbishy place; the streets are steep and crooked; we pass through archways, we ascend steps, we make unexpected turns; the shops are a little like bazaars, but rather Italian than Oriental; we pass a pillared mosque and a Moslem fountain; we come upon an ancient square, in the centre of which is a round fountain with pillars and a canopy of stone, and close about it are the bazaars of merchants. This old fountain is profusely sculptured with Arabic inscriptions; the stones are worn and have taken the rich tint of age, and the sunlight blends it into harmony with the gay stuffs of the shops and the dark skins of the idlers on the pavement. We come into the great market of fruit and vegetables, where vast heaps of oranges, like apples in a New England orchard, line the way and fill the atmosphere with a golden tinge.

The Jaffa oranges are famous in the Orient; they grow to the size of ostrich eggs, they have a skin as thick as the hide of a rhinoceros, and, in their season, the pulp is sweet, juicy, and tender. It is a little late now, and we open one golden globe after another before we find one that is not dry and tasteless as a piece of punk. But one cannot resist buying such magnificent fruit.

Outside the walls, through broad dusty highways, by lanes of cactus hedges and in sight again of the sea breaking on a rocky shore, we come to the Hotel of the Twelve Tribes, occupied now principally by Cook's tribes, most of whom appear to be lost. In the adjacent lot are pitched the tents of Syrian travellers, and one of Cook's expeditions is in all the bustle of speedy departure. The bony, nervous Syrian horses are assigned by lot to the pilgrims, who are excellent people from England and America, and most of them as unaccustomed to the back of a horse as to that of an ostrich. It is touching to see some of the pilgrims walk around the animals which have fallen to them, wondering how they are to get on, which side they are to mount, and how they are to stay on. Some have already mounted, and are walking the steeds carefully round the enclosure or timidly essaying a trot. Nearly every one concludes, after a trial, that he would like to change,—something not quite so much up and down, you know, an easier saddle, a horse that more unites gentleness with spirit. Some of the dragomans are equipped in a manner to impress travellers with the perils of the country. One, whom I remember on the Nile as a mild though showy person, has bloomed here into a Bedawee: he is fierce in aspect, an arsenal of weapons, and gallops furiously about upon a horse loaded down with accoutrements. This, however, is only the beginning of our real danger.

After breakfast we sallied out to see the sights: besides the house of Simon the tanner, they are not many. The house of Simon is, as it was in the time of St. Peter, by the seaside. We went upon the roof (and it is more roof than anything else) where the apostle lay down to sleep and saw the vision, and looked around upon the other roofs and upon the wide sweep of the tumbling sea. In the court is a well, the stone curb of which is deeply worn in several places by the rope, showing long use. The water is brackish; Simon may have tanned with it. The house has not probably been destroyed and rebuilt more than four or five times since St. Peter dwelt here; the Romans once built the entire city. The chief room is now a mosque. We inquired for the house of Dorcas, but that is not shown, although I understood that we could see her grave outside the city. It is a great oversight not to show the house of Dorcas, and one that I cannot believe will long annoy pilgrims in these days of multiplied discoveries of sacred sites.

Whether this is the actual spot where the house of Simon stood, I do not know, nor does it much matter. Here, or hereabouts, the apostle saw that marvellous vision which proclaimed to a weary world the brotherhood of man. From this spot issued the gospel of democracy: "Of a truth, I perceive that God is no respecter of persons." From this insignificant dwelling went forth the edict that broke the power of tyrants, and loosed the bonds of slaves, and ennobled the lot of woman, and enfranchised the human mind. Of all places on earth I think there is only one more worthy of pilgrimage by all devout and liberty-loving souls.

We were greatly interested, also, in a visit to the well-known school of Miss Amot, a mission school for girls in the upper chambers of a house in the most crowded part of Jaffa. With modest courage and tact and self-devotion this lady has sustained it here for twelve years, and the fruits of it already begin to appear. We found twenty or thirty pupils, nearly all quite young, and most of them daughters of Christians; they are taught in Arabic the common branches, and some English, and they learn to sing. They sang for us English tunes like any Sunday school; a strange sound in a Moslem town. There are one or two other schools of a similar character in the Orient, conducted as private enterprises by ladies of culture; and I think there is no work nobler, and none more worthy of liberal support or more likely to result in giving women a decent position in Eastern society.

On a little elevation a half-mile outside the walls is a cluster of wooden houses, which were manufactured in America. There we found the remnants of the Adams colony, only half a dozen families out of the original two hundred and fifty persons; two or three men and some widows and children. The colony built in the centre of their settlement an ugly little church out of Maine timber; it now stands empty and staring, with broken windows. It is not difficult to make this adventure appear romantic. Those who engaged in it were plain New

England people, many of them ignorant, but devout to fanaticism. They had heard the prophets expounded, and the prophecies of the latter days unravelled, until they came to believe that the day of the Lord was nigh, and that they had laid upon them a mission in the fulfilment of the divine purposes. Most of them were from Maine and New Hampshire, accustomed to bitter winters and to wring their living from a niggardly soil. I do not wonder that they were fascinated by the pictures of a fair land of blue skies, a land of vines and olives and palms, where they were undoubtedly called by the Spirit to a life of greater sanctity and considerable ease and abundance. I think I see their dismay when they first pitched their tents amid this Moslem squalor, and attempted to "squat," Western fashion, upon the skirts of the Plain of Sharon, which has been for some ages pre-empted. They erected houses, however, and joined the other inhabitants of the region in a struggle for existence. But Adams, the preacher and president, had not faith enough to wait for the unfolding of prophecy; he took to strong drink, and with general bad management the whole enterprise came to grief, and the deluded people were rescued from starvation only by the liberality of our government.

There was the germ of a good idea in the rash undertaking. If Palestine is ever to be re-peopled, its coming inhabitants must have the means of subsistence; and if those now here are to be redeemed to a better life, they must learn to work; before all else there must come a revival of industry and a development of the resources of the country. To send here Jews or Gentiles, and to support them by charity, only adds to the existing misery.

It was eight years ago that the Adams community exploded. Its heirs and successors are Germans, a colony from Wurtemberg, an Advent sect akin to the American, but more single-minded and devout. They own the ground upon which they have settled, having acquired a title from the Turkish government; they have erected substantial houses of stone and a large hotel, The Jerusalem, and give many evidences of shrewdness and thrift as well as piety. They have established a good school, in which, with German thoroughness, Latin, English, and the higher mathematics are taught, and an excellent education may be obtained. More land the colony is not permitted to own; but they hire ground outside the walls which they farm to advantage.

I talked with one of the teachers, a thin young ascetic in spectacles, whose severity of countenance and demeanor was sufficient to rebuke all the Oriental levity I had encountered during the winter. There was in him and in the other leaders an air of sincere fanaticism, and a sobriety and integrity in the common laborers, which are the best omens for the success of the colony. The leaders told us that they thought the Americans came here with the expectation of making money uppermost in mind, and hardly in the right spirit. As to themselves, they do not expect to make money; they repelled the insinuation with some warmth; they have had, in fact, a very hard struggle, and are thankful for a fair measure of success. Their sole present purpose is evidently to redeem and reclaim the land, and make it fit for the expected day of jubilee. The Jews from all parts of the world, they say, are to return to Palestine, and there is to issue out of the Holy Land a new divine impulse which is to be the regeneration and salvation of the world. I do not know that anybody but the Jews themselves would oppose their migration to Palestine, though their withdrawal from the business of the world suddenly would create wide disaster. With these doubts, however, we did not trouble the youthful knight of severity. We only asked him upon what the community founded its creed and its mission. Largely, he replied, upon the prophets, and especially upon Isaiah; and he referred us to Isaiah xxxii. 1; xlix. 12 et seq.; and lii. 1. It is not every industrial community that would flourish on a charter so vague as this.

A lad of twelve or fourteen was our guide to the Advent settlement; he was an early polyglot, speaking, besides English, French, and German, Arabic, and, I think, a little Greek; a boy of uncommon gravity of deportment and of precocious shrewdness. He is destined to be a guide and dragoman. I could see that the whole Biblical history was a little *fade* to him, but he does not lose sight of the profit of a knowledge of it. I could not but contrast him with a Sunday-school scholar of his own age in America, whose imagination kindles at the Old Testament stories, and whose enthusiasm for the Holy Land is awakened by the wall maps and the pictures of Solomon's temple. Actual contact has destroyed the imagination of this boy; Jerusalem is not so much a wonder to him as Boston; Samson lived just over there beyond the Plain of Sharon, and is not so much a hero as Old Put.

The boy's mother was a good New Hampshire woman, whose downright Yankeeism of thought and speech was in odd contrast to her Oriental surroundings. I sat in a rocking-chair in the sitting-room of her little wood cottage, and could scarcely convince myself that I was not in a prim New Hampshire parlor. To her mind there were no more Oriental illusions, and perhaps she had never indulged any; certainly, in her presence Palestine seemed to me as commonplace as New England.

"I s'pose you 've seen the meetin' house?"

"Yes."

"Wal' it's goin' to rack and ruin like everything else here. There is n't enough here to have any service now. Sometimes I go to the German; I try to keep up a little feeling."

I have no doubt it is more difficult to keep up a religious feeling in the Holy Land than it is in New Hampshire, but we did not discuss that point. I asked, "Do you have any society?"

"Precious little. The Germans are drefle unsocial. The natives are all a low set. The Arabs will all lie; I don't think much of any of 'em. The Mohammedans are all shiftless; you can't trust any of 'em."

"Why don't you go home?"

"Wal, sometimes I think I'd like to see the old place, but I reckon I could n't stand the winters. This is a nice climate, that's all there is here; and we have grapes and oranges, and loads of flowers,—you see my garden there; I set great store by that and me and my daughter take solid comfort in it, especially when *he* is away, and he has to be off most of the time with parties, guidin' 'em. No, I guess I sha'n'. ever cross the ocean again."

It appeared that the good woman had consoled herself with a second husband, who bears a Jewish name; so that the original object of her mission, to gather in the chosen people, is not altogether lost sight of.

There is a curious interest in these New England transplantations. Climate is a great transformer. The habits and customs of thousands of years will insensibly conquer the most stubborn prejudices. I wonder how long it will require to blend these scions of our vigorous civilization with the motley growth that makes up the

present Syriac population,—people whose blood is streaked with a dozen different strains, Egyptian, Ethiopian, Arabian, Assyrian, Phoenician, Greek, Roman, Canaanite, Jewish, Persian, Turkish, with all the races that have in turn ravaged or occupied the land. I do not, indeed, presume to say what the Syrians are who have occupied Palestine for so many hundreds of years, but I cannot see how it can be otherwise than that their blood is as mixed as that of the modern Egyptians. Perhaps these New England offshoots will maintain their distinction of race for a long time, but I should be still more interested to know how long the New England mind will keep its integrity in these surroundings, and whether those ruggednesses of virtue and those homely simplicities of character which we recognize as belonging to the hilly portions of New England will insensibly melt away in this relaxing air that so much wants moral tone. These Oriental countries have been conquered many times, but they have always conquered their conquerors. I am told that even our American consuls are not always more successful in resisting the undermining seductions of the East than were the Roman proconsuls.

These reflections, however, let it be confessed, did not come to me as I sat in the rocking-chair of my countrywoman. I was rather thinking how completely her presence and accent dispelled all my Oriental illusions and cheapened the associations of Jaffa. There is I know not what in a real living Yankee that puts all appearances to the test and dissipates the colors of romance. It was not until I came again into the highway and found in front of The Jerusalem hotel a company of Arab acrobats and pyramid-builders, their swarthy bodies shining in the white sunlight, and a lot of idlers squatting about in enjoyment of the exertions of others, that I recovered in any degree my delusions.

With the return of these, it seemed not so impossible to believe even in the return of the Jews; especially when we learned that preparations for them multiply. A second German colony has been established outside of the city. There is another at Haifa; on the Jerusalem road the beginning of one has been made by the Jews themselves. It amounts to something like a "movement."

At three o'clock in the afternoon we set out for Ramleh, ignominiously, in a wagon. There is a carriage-road from Jaffa to Jerusalem, and our dragoman had promised us a "private carriage." We decided to take it, thinking it would be more comfortable than horseback for some of our party. We made a mistake which we have never ceased to regret. The road I can confidently commend as the worst in the world. The carriage into which we climbed belonged to the German colony, and was a compromise between the ancient ark, a modern dray, and a threshing-machine. It was one of those contrivances that a German would evolve out of his inner consciousness, and its appearance here gave me grave doubts as to the adaptability of these honest Germans to the Orient. It was, however, a great deal worse than it looked. If it were driven over smooth ground it would soon loosen all the teeth of the passengers, and shatter their spinal columns. But over the Jerusalem road the effect was indescribable. The noise of it was intolerable, the jolting incredible. The little solid Dutchman, who sat in front and drove, shook like the charioteer of an artillery wagon; but I suppose he had no feeling. We pounded along over the roughest stone pavement, with the sensation of victims drawn to execution in a cart, until we emerged into the open country; but there we found no improvement in the road.

Jaffa is surrounded by immense orange groves, which are protected along the highways by hedges of prickly-pear. We came out from a lane of these upon the level and blooming Plain of Sharon, and saw before us, on the left, the blue hills of Judæa. It makes little difference what kind of conveyance one has, it is impossible for him to advance upon this historic, if not sacred plain, and catch the first glimpse of those pale hills which stood to him for a celestial vision in his childhood, without a great quickening of the pulse; and it is a most lovely view after Egypt, or after anything. The elements of it are simple enough,—merely a wide sweep of prairie and a line of graceful mountains; but the forms are pleasing, and the color is incomparable. The soil is warm and red, the fields are a mass of wild-flowers of the most brilliant and variegated hues, and, alternately swept by the shadows of clouds and bathed in the sun, the scene takes on the animation of incessant change.

It was somewhere here, outside the walls, I do not know the spot, that the massacre of Jaffa occurred. I purposely go out of my way to repeat the well-known story of it, and I trust that it will always be recalled whenever any mention is made of the cruel little Corsican who so long imposed the vulgarity and savageness of his selfish nature upon Europe. It was in March, 1799, that Napoleon, toward the close of his humiliating and disastrous campaign in Egypt, carried Jaffa by storm. The town was given over to pillage. During its progress four thousand Albanians of the garrison, taking refuge in some old khans, offered to surrender on condition that their lives should be spared; otherwise they would fight to the bitter end. Their terms were accepted, and two of Napoleon's aids-de-camp pledged their honor for their safety. They were marched out to the general's headquarters and seated in front of the tents with their arms bound behind them. The displeased commander called a council of war and deliberated two days upon their fate, and then signed the order for the massacre of the entire body. The excuse was that the general could not be burdened with so many prisoners. Thus in one day were murdered in cold blood about as many people as Jaffa at present contains. Its inhabitants may be said to have been accustomed to being massacred; eight thousand of them were butchered in one Roman assault; but I suppose all antiquity may be searched in vain for an act of perfidy and cruelty combined equal to that of the Grand Emperor.

The road over which we rattle is a causeway of loose stones; the country is a plain of sand, but clothed with a luxuriant vegetation. In the fields the brown husbandmen are plowing, turning up the soft red earth with a rude plough drawn by cattle yoked wide apart. Red-legged storks, on their way, I suppose, from Egypt to their summer residence further north, dot the meadows, and are too busy picking up worms to notice our halloo. Abd-el-Atti, who has a passion for shooting, begs permission to "go for" these household birds with the gun; but we explain to him that we would no more shoot a stork than one of the green birds of Paradise. Quails are scudding about in the newly turned furrows, and song birds salute us from the tops of swinging cypresses. The Holy Land is rejoicing in its one season of beauty, its spring-time.

Trees are not wanting to the verdant meadows. We still encounter an occasional grove of oranges; olives also appear, and acacias, sycamores, cypresses, and tamarisks. The pods of the carob-tree are, I believe, the husks upon which the prodigal son did not thrive. Large patches of barley are passed. But the fields not occupied with grain are literally carpeted with wild-flowers of the most brilliant hues, such a display as I

never saw elsewhere: scarlet and dark flaming poppies, the scarlet anemone, marigolds, white daisies, the lobelia, the lupin, the vetch, the gorse with its delicate yellow blossom, the pea, something that we agreed to call the white rose of Sharon, the mallow, the asphodel; the leaves of a lily not yet in bloom. About the rose of Sharon we no doubt were mistaken. There is no reason to suppose it was white; but we have somehow associated the purity of that color with the song beginning, "I am the rose of Sharon and the lily of the valleys." It was probably not even a rose. We finally decided to cherish the red mallow as the rose of Sharon; it is very abundant, and the botanist of our company seemed satisfied to accept it. For myself, the rose by the name of mallow does not smell sweet.

We come in sight of Rainleh, which lies on the swelling mounds of the green plain, encompassed by emerald meadows and by groves of orange and olive, and conspicuous from a great distance by its elegant square tower, the most beautiful in form that we have seen in the East. As the sun is sinking, we defer our visit to it and drive to the Latin convent, where we are to lodge, permission to that effect having been obtained from the sister convent at Jaffa; a mere form, since a part of the convent was built expressly for the entertainment of travellers, and the few monks who occupy it find keeping a hotel a very profitable kind of hospitality. The stranger is the guest of the superior, no charge is made, and the little fiction of gratuitous hospitality so pleases the pilgrim that he will not at his departure be outdone in liberality. It would be much more agreeable if all our hotels were upon this system.

While the dragoman is unpacking the luggage in the court-yard and bustling about in a manner to impress the establishment with the importance of its accession, I climb up to the roofs to get the sunset. The house is all roofs, it would seem, at different levels. Steps lead here and there, and one can wander about at will; you could not desire a pleasanter lounging-place in a summer evening. The protecting walls, which are breast-high, are built in with cylinders of tile, like the mud houses in Egypt; the tiles make the walls lighter, and furnish at the same time peep-holes through which the monks can spy the world, themselves unseen. I noticed that the tiles about the entrance court were inclined downwards, so that a curious person could study any new arrival at the convent without being himself observed. The sun went down behind the square tower which is called Saracenic and is entirely Gothic in spirit, and the light lay soft and rosy on the wide compass of green vegetation; I heard on the distant fields the bells of mules returning to the gates, and the sound substituted Italy in my mind for Palestine.

From this prospect I was summoned in haste; the superior of the convent was waiting to receive me, and I had been sought in all directions. I had no idea why I should be received, but I soon found that the occasion was not a trivial one. In the reception-room were seated in some state the superior, attended by two or three brothers, and the remainder of my suite already assembled. The abbot, if he is an abbot, arose and cordially welcomed "the general" to his humble establishment, hoped that he was not fatigued by the journey from Jaffa, and gave him a seat beside himself. The remainder of the party were ranged according to their rank. I replied that the journey was on the contrary delightful, and that any journey could be considered fortunate which had the hospitable convent of Ramleh as its end. The courteous monk renewed his solicitous inquiries, and my astonishment was increased by the botanist, who gravely assured the worthy father that "the general" was accustomed to fatigue, and that such a journey as this was a recreation to him.

"What in the mischief is all this about?" I seized a moment to whisper to the person next me.

"You are a distinguished American general, travelling with his lady in pursuit of Heaven knows what, and accompanied by his suite; don't make a mess of it."

"Oh," I said, "if I *am* a distinguished American general, travelling with my lady in pursuit of Heaven knows what, I am glad to know it."

Fortunately the peaceful father did not know anything more of war than I did, and I suppose my hastily assumed modesty of the soldier seemed to him the real thing. It was my first experience of anything like real war, the first time I had ever occupied any military position, and it did not seem to be so arduous as has been represented.

Great regret was expressed by the superior that they had not anticipated my arrival, in order to have entertained me in a more worthy manner; the convent was uncommonly full of pilgrims, and it would be difficult to lodge my suite as it deserved. Then there followed a long discussion between the father and one of the monks upon our disposition for the night.

"If we give the general and his lady the south room in the court, then the doctor"—etc., etc.

"Or," urged the monk, "suppose the general and his lady occupy the cell number four, then mademoiselle can take"—etc., etc.

The military commander and his lady were at last shown into a cell opening out of the court, a lofty but narrow vaulted room, with brick floor and thick walls, and one small window near the ceiling. Instead of candles we had antique Roman lamps, which made a feeble glimmer in the cavern; the oddest water-jugs served for pitchers. It may not have been damp, but it felt as if no sun had ever penetrated the chill interior.

"What is all this nonsense of the general?" I asked Abd-el-Atti, as soon as I could get hold of that managing factotum.

"Dunno, be sure; these monk always pay more attention to 'stinguish people."

"But what did you say at the convent in Jaffa when you applied for a permit to lodge here?"

"Oh, I tell him my gentleman general American, but 'stinguish; mebbe he done gone wrote 'em that you 'stinguish American general. Very nice man, the superior, speak Italian beautiful; when I give him the letter, he say he do all he can for the general and his suite; he sorry I not let him know 'forehand."

The dinner was served in the long refectory, and there were some twenty-five persons at table, mostly pilgrims to Jerusalem, and most of them of the poorer class. One bright Italian had travelled alone with her little boy all the way from Verona, only to see the Holy Sepulchre. The monks waited at table and served a very good dinner. Travellers are not permitted to enter the portion of the large convent which contains the cells of the monks, nor to visit any part of the old building except the chapel. I fancied that the jolly brothers who waited at table were rather glad to come into contact with the world, even in this capacity.

In the dining-room hangs a notable picture. It is the Virgin, enthroned, with a crown and aureole, holding the holy child, who is also crowned; in the foreground is a choir of white boys or angels. The Virgin and child are both *black*; it is the Virgin of Ethiopia. I could not learn the origin of this picture; it was rude enough in execution to be the work of a Greek artist of the present day; but it was said to come from Ethiopia, where it is necessary to a proper respect for the Virgin that she should be represented black. She seems to bear something the relation to the Virgin of Judæa that Astarte did to the Grecian Venus. And we are again reminded that the East has no prejudice of color: "I am black but comely, O ye daughters of Jerusalem"; "Look not upon me because I am black, because the sun hath looked upon me."

The convent bells are ringing at early dawn, and though we are up at half past five, nearly all the pilgrims have hastily departed for Jerusalem. Upon the roof I find the morning fair. There are more minarets than spires in sight, but they stand together in this pretty little town without discord. The bells are ringing in melodious persuasion, but at the same time, in voices as musical, the muezzins are calling from their galleries; each summoning men to prayer in its own way. From these walls spectators once looked down upon the battles of cross and crescent raging in the lovely meadows,—battles of quite as much pride as piety. A common interest always softens animosity, and I fancy that monks and Moslems will not again resort to the foolish practice of breaking each other's heads so long as they enjoy the profitable stream of pilgrims to the Holy Land.

After breakfast and a gift to the treasury of the convent according to our rank—I think if I were to stay there again it would be in the character of a common soldier—we embarked again in the ark, and jolted along behind the square-shouldered driver, who seemed to enjoy the rattling and rumbling of his clumsy vehicle. But no minor infelicity could destroy for us the freshness of the morning or the enjoyment of the lovely country. Although, in the jolting, one could not utter a remark about the beauty of the way without danger of biting his tongue in two, we feasted our eyes and let our imaginations loose over the vast ranges of the Old Testament story.

After passing through the fertile meadows of Ramleh, we came into a more rolling country, destitute of houses, but clothed on with a most brilliant bloom of wild-flowers, among which the papilionaceous flowers were conspicuous for color and delicacy. I found by the roadside a *black calla* (which I should no more have believed in than in the black Virgin, if I had not seen it). Its leaf is exactly that of our calla-lily; its flower is similar to, but not so open and flaring, as the white calla, and the pistil is large and very long, and of the color of the interior of the flower. The corolla is green on the outside, but the inside is incomparably rich, like velvet, black in some lights and dark maroon in others. Nothing could be finer in color and texture than this superb flower. Besides the blooms of yesterday we noticed buttercups, various sorts of the ranunculus, among them the scarlet and the shooting-star, a light purple flower with a dark purple centre, the Star of Bethlehem, and the purple wind-flower. Scarlet poppies and the still more brilliant scarlet anemones, dandelions, marguerites, filled all the fields with masses of color.

Shortly we come into the hills, through which the road winds upward, and the scenery is very much like that of the Adirondacks, or would be if the rocky hills of the latter were denuded of trees. The way begins to be lively with passengers, and it becomes us to be circumspect, for almost every foot of ground has been consecrated or desecrated, or in some manner made memorable. This heap of rubbish is the remains of a fortress which the Saracens captured, built by the Crusaders to guard the entrance of the pass, upon the site of an older fortification by the Maccabees, or founded upon Roman substructions, and mentioned in Judges as the spot where some very ancient Jew stayed overnight. It is also, no doubt, one of the stations that help us to determine with the accuracy of a surveyor the boundary between the territory of Benjamin and Judah. I try to ascertain all these localities and to remember them all, but I sometimes get Richard Cour de Lion mixed with Jonathan Maccabæus, and I have no doubt I mistook "Job's convent" for the *Castellum boni Latronis*, a place we were specially desirous to see as the birthplace of the "penitent thief." But whatever we confounded, we are certain of one thing: we looked over into the Valley of Ajalon. It was over this valley that Joshua commanded the moon to tarry while he smote the fugitive Amorites on the heights of Gibeon, there to the east.

The road is thronged with pilgrims to Jerusalem, and with travellers and their attendants,—gay cavalcades scattered all along the winding way over the rolling plain, as in the picture of the Pilgrims to Canterbury. All the transport of freight as well as passengers is by the backs of beasts of burden. There are long files of horses and mules staggering under enormous loads of trunks, tents, and bags. Dragomans, some of them got up in fierce style, with baggy yellow trousers, yellow kuffias bound about the head with a twisted fillet, armed with long Damascus swords, their belts stuck full of pistols, and a rifle slung on the back, gallop furiously along the line, the signs of danger but the assurances of protection. Camp boys and waiters dash along also, on the pack-horses, with a great clatter of kitchen furniture; even a scullion has an air of adventure as he pounds his rack-a-bone steed into a vicious gallop. And there are the Cook's tourists, called by everybody "Cookies," men and women struggling on according to the pace of their horses, conspicuous in hats with white muslin drapery hanging over the neck. Villanous-looking fellows with or without long guns, coming and going on the highway, have the air of being neither pilgrims nor strangers. We meet women returning from Jerusalem clad in white, seated astride their horses, or upon beds which top their multifarious baggage.

We are leaving behind us on the right the country of Samson, in which he passed his playful and engaging boyhood, and we look wistfully towards it. Of Zorah, where he was born, nothing is left but a cistern, and there is only a wretched hamlet to mark the site of Timnath, where he got his Philistine wife. "Get her for me, for she pleaseth me well," was his only reply to the entreaty of his father that he would be content with a maid of his own people.

The country gets wilder and more rocky as we ascend. Down the ragged side paths come wretched women and girls, staggering under the loads of brushwood which they have cut in the high ravines; loads borne upon the head that would tax the strength of a strong man. I found it no easy task to lift one of the bundles. The poor creatures were scantily clad in a single garment of coarse brown cloth, but most of them wore a profusion of ornaments; strings of coins, Turkish and Arabic, on the head and breast, and uncouth rings and bracelets. Farther on a rabble of boys besets us, begging for backsheesh in piteous and whining tones, and

throwing up their arms in theatrical gestures of despair.

All the hills bear marks of having once been terraced to the very tops, for vines and olives. The natural ledges seem to have been humored into terraces and occasionally built up and broadened by stone walls; but where the hill was smooth, traces of terraces are yet visible. The grape is still cultivated low down the steeps, and the olives straggle over some of the hills to the very top; but these feeble efforts of culture or of nature do little to relieve the deserted aspect of the scene.

We lunch in a pretty olive grove, upon a slope long ago terraced and now grass-grown and flower-sown; lovely vistas open into cool glades, and paths lead upward among the rocks to inviting retreats. From this high perch in the bosom of the hills we look off upon Ramleh, Jaffa, the broad Plain of Sharon, and the sea. A strip of sand between the sea and the plain produces the effect of a mirage, giving to the plain the appearance of the sea. It would be a charming spot for a country-seat for a resident of Jerusalem, although Jerusalem itself is rural enough at present; and David and Solomon may have had summer pavilions in these cool shades in sight of the Mediterranean. David himself, however, perhaps had enough of this region—when he dodged about in these fastnesses between Ramah and Gath, from the pursuit of Saul—to make him content with a city life. There is nothing to hinder our believing that he often enjoyed this prospect; and we do believe it, for it is already evident that the imagination must be called in to create an enjoyment of this deserted land. David no doubt loved this spot. For David was a poet, even at this early period when his occupation was that of a successful guerilla; and he had all the true poet's adaptability, as witness the exquisite ode he composed on the death of his enemy Saul. I have no doubt that he enjoyed this lovely prospect often, for he was a man who enjoyed heartily everything lovely. He was in this as in all he did a *thorough* man; when he made a raid on an Amorite city, he left neither man, woman, nor child alive to spread the news.

We have already mounted over two thousand feet. The rocks are silicious limestone, crumbling and gray with ages of exposure; they give the landscape an ashy appearance. But there is always a little verdure amid the rocks, and now and then an olive-tree, perhaps a very old one, decrepit and twisted into the most fantastic form, as if distorted by a vegetable rheumatism, casting abroad its withered arms as if the tree writhed in pain. On such ghostly trees I have no doubt the five kings were hanged. Another tree or rather shrub is abundant, the dwarf-oak; and the hawthorn, now in blossom, is frequently seen. The rock-rose—a delicate white single flower—blooms by the wayside and amid the ledges, and the scarlet anemone flames out more brilliantly than ever. Nothing indeed could be more beautiful than the contrast of the clusters of scarlet anemones and white roses with the gray rocks.

We soon descend into a valley and reach the site of Kirjath-Jearim, which has not much ancient interest for me, except that the name is pleasing; but on the other side of the stream and opposite a Moslem fountain are the gloomy stone habitations of the family of the terrible Abu Ghaush, whose robberies of travellers kept the whole country in a panic a quarter of a century ago. He held the key of this pass, and let no one go by without toll. For fifty years he and his companions defied the Turkish government, and even went to the extremity of murdering two pashas who attempted to pass this way. He was disposed of in 1846, but his descendants still live here, having the inclination but not the courage of the old chief. We did not encounter any of them, but I have never seen any buildings that have such a wicked physiognomy as their grim houses.

Near by is the ruin of a low, thick-walled chapel, of a pure Gothic style, a remnant of the Crusaders' occupation. The gloomy wady has another association; a monkish tradition would have us believe it was the birthplace of Jeremiah; if the prophet was born in such a hard country it might account for his lamentations. As we pass out of this wady, the German driver points to a forlorn village clinging to the rocky slope of a hill to the right, and says,—

"That is where John Baptist was born."

The information is sudden and seems improbable, especially as there are other places where he was born.

"How do you know?" we ask.

"O, I know *ganz wohl*; I been five years in dis land, and I ought to know."

Descending into a deep ravine we cross a brook, which we are told is the one that flows into the Valley of Elah, the valley of the "terebinth" or button trees; and if so, it is the brook out of which David took the stone that killed Goliath. It is a bright, dashing stream. I stood upon the bridge, watching it dancing down the ravine, and should have none but agreeable recollections of it, but that close to the bridge stood a vile grog-shop, and in the doorway sat the most villanous-looking man I ever saw in Judæa, rapacity and murder in his eyes. The present generation have much more to fear from him and his drugged liquors than the Israelite had from the giant of Gath.

While the wagon zigzags up the last long hill, I mount by a short path and come upon a rocky plateau, across which runs a broad way, on the bed rock, worn smooth by many centuries of travel: by the passing of caravans and armies to Jerusalem, of innumerable generations of peasants, of chariots, of horses, mules, and foot-soldiers; here went the messengers of the king's pleasure, and here came the heralds and legates of foreign nations; this great highway the kings and prophets themselves must have trodden when they journeyed towards the sea; for I cannot learn that the Jews ever had any decent roads, and perhaps they never attained the civilization necessary to build them. We have certainly seen no traces of anything like a practicable ancient highway on this route.

Indeed, the greatest wonder to me in the whole East is that there has not been a good road built from Jaffa to Jerusalem; that the city sacred to more than half the world, to all the most powerful nations, to Moslems, Jews, Greeks, Roman Catholics, Protestants, the desire of all lands, and the object of pilgrimage with the delicate and the feeble as well as the strong, should not have a highway to it over which one can ride without being jarred and stunned and pounded to a jelly; that the Jews should never have made a road to their seaport; that the Romans, the road-builders, do not seem to have constructed one over this important route. The Sultan began this one over which we have been dragged, for the Empress Eugenie. But he did not finish it; most of the way it is a mere rubble of stones. The track is well engineered, and the road bed is well enough; soft stone is at hand to form an excellent dressing, and it might be, in a short time, as good a

highway as any in Switzerland, if the Sultan would set some of his lazy subjects to work out their taxes on it. Of course, it is now a great improvement over the old path for mules; but as a carriage road it is atrocious. Imagine thirty-six miles of cobble pavement, with every other stone gone and the remainder sharpened!

Perhaps, however, it is best not to have a decent road to the Holy City of the world. It would make going there easy, even for delicate ladies and invalid clergymen; it would reduce the cost of the trip from Jaffa by two thirds; it would take away employment from a lot of vagabonds who harry the traveller over the route; it would make the pilgrimage too much a luxury, in these days of pilgrimages by rail, and of little faith, or rather of a sort of lacquer of faith which is only credulity.

Upon this plateau we begin to discern signs of the neighborhood of the city, and we press forward with the utmost eagerness, disappointed at every turn that a sight of it is not disclosed. Scattered settlements extend for some distance out on the Jaffa road. We pass a school which the Germans have established for Arab boys; an institution which does not meet the approval of our restoration driver; the boys, when they come out, he says, don't know what they are; they are neither Moslems nor Christians. We go rapidly on over the swelling hill, but the city will not reveal itself. We expect it any moment to rise up before us, conspicuous on its ancient hills, its walls shining in the sun.

We pass a guard-house, some towers, and newly built private residences. Our pulses are beating a hundred to the minute, but the city refuses to "burst" upon us as it does upon other travellers. We have advanced far enough to see that there is no elevation before us higher than that we are on. The great sight of all our lives is only a moment separated from us; in a few rods more our hearts will be satisfied by that long-dreamed-of prospect. How many millions of pilgrims have hurried along this road, lifting up their eyes in impatience for the vision! But it does not come suddenly. We have already seen it, when the driver stops, points with his whip, and cries,—

"Jerusalem!"

"What, *that*?"

We are above it and nearly upon it. What we see is chiefly this: the domes and long buildings of the Russian Hospice, on higher ground than the city and concealing a good part of it; a large number of new houses, built of limestone prettily streaked with the red oxide of iron; the roofs of a few of the city houses, and a little portion of the wall that overlooks the Valley of Hinnom. The remainder of the city of David is visible to the imagination.

The suburb through which we pass cannot be called pleasing. Everything outside the walls looks new and naked; the whitish glare of the stone is relieved by little vegetation, and the effect is that of barrenness. As we drive down along the wall of the Russian convent, we begin to meet pilgrims and strangers, with whom the city overflows at this season; many Russian peasants, unkempt, unsavory fellows, with long hair and dirty apparel, but most of them wearing a pelisse trimmed with fur and a huge fur hat. There are coffee-houses and all sorts of cheap booths and shanty shops along the highway. The crowd is motley and far from pleasant; it is sordid, grimy, hard, very different from the more homogeneous, easy, flowing, graceful, and picturesque assemblage of vagabonds at the gate of an Egyptian town. There are Russians, Cossacks, Georgians, Jews, Armenians, Syrians. The northern dirt and squalor and fanaticism do not come gracefully into the Orient. Besides, the rabble is importunate and impudent.

We enter by the Jaffa and Hebron gate, a big square tower, with the exterior entrance to the north and the interior to the east, and the short turn is choked with camels and horses and a clamorous crowd. Beside it stands the ruinous citadel of Saladin and the Tower of David, a noble entrance to a mean street. Through the rush of footmen and horsemen, beggars, venders of olive-wood, Moslems, Jews, and Greeks, we make our way to the Mediterranean Hotel, a rambling new hostelry. In passing to our rooms we pause a moment upon an open balcony to look down into the green Pool of Hezekiah, and off over the roofs to the Mount of Olives. Having secured our rooms, I hasten along narrow and abominably cobbled streets, mere ditches of stone, lined with mean shops, to the Centre of the Earth, the Church of the Holy Sepulchre.

II.—JERUSALEM.

IT was in obedience to a natural but probably mistaken impulse, that I went straight to the Church of the Holy Sepulchre during my first hour in the city. Perhaps it was a mistake to go there at all; certainly I should have waited until I had become more accustomed to holy places. When a person enters this memorable church, as I did, expecting to see only two sacred sites, and is brought immediately face to face with *thirty-seven*, his mind is staggered, and his credulity becomes so enfeebled that it is practically useless to him thereafter in any part of the Holy City. And this is a pity, for it is so much easier and sweeter to believe than to doubt.

It would have been better, also, to have visited Jerusalem many years ago; then there were fewer sacred sites invented, and scholarly investigation had not so sharply questioned the authenticity of the few. But I thought of none of these things as I stumbled along the narrow and filthy streets, which are stony channels of mud and water, rather than foot-paths, and peeped into the dirty little shops that line the way. I thought only that I was in Jerusalem; and it was impossible, at first, for its near appearance to empty the name of its tremendous associations, or to drive out the image of that holy city, "conjubilant with song."

I had seen the dome of the church from the hotel balcony; the building itself is so hemmed in by houses that only its south side, in which is the sole entrance, can be seen from the street. In front of this entrance is a small square; the descent to this square is by a flight of steps down Palmer Street, a lane given up to the traffic in beads, olive-wood, ivory-carving, and the thousand trinkets, most of them cheap and inartistic, which absorb the industry of the Holy City. The little square itself, surrounded by ancient buildings on three sides and by the blackened walls of the church on the north, might be set down in a mediæval Italian town without incongruity. And at the hour I first saw it, you would have said that a market or fair was in progress there. This, however, I found was its normal condition. It is always occupied by a horde of more clamorous and impudent merchants than you will find in any other place in the Orient.

It is with some difficulty that the pilgrim can get through the throng and approach the portal. The pavement is covered with heaps of beads, shells, and every species of holy fancy-work, by which are seated the traders, men and women, in wait for customers. The moment I stopped to look at the church, and it was discovered that I was a new-comer, a rush was made at me from every part of the square, and I was at once the centre of the most eager and hungry crowd. Sharp-faced Greeks, impudent Jews, fair-faced women from Bethlehem, sleek Armenians, thrust strings of rude olive beads and crosses into my face, forced upon my notice trumpery carving in ivory, in nuts, in seeds, and screamed prices and entreaties in chorus, bidding against each other and holding fast to me, as if I were the last man, and this were the last opportunity they would ever have of getting rid of their rubbish. Handfuls of beads rapidly fell from five francs to half a franc, and the dealers insisted upon my buying, with a threatening air; I remember one hard-featured and rapacious wretch who danced about and clung to me, and looked into my eyes with an expression that said plainly, "If you don't buy these beads I 'll murder you." My recollection is that I bought, for I never can resist a persuasion of this sort. Whenever I saw the fellow in the square afterwards, I always fancied that he regarded me with a sort of contempt, but he made no further attempt on my life.

This is the sort of preparation that one daily has in approaching the Church of the Holy Sepulchre. The greed and noise of traffic around it are as fatal to sentiment as they are to devotion. You may be amused one day, you may be indignant the next; at last you will be weary of the importunate crowd; and the only consolation you can get from these daily scenes of the desecration of the temple of pilgrimage is the proof they afford that this is indeed Jerusalem, and that these are the legitimate descendants of the thieves whom Christ scourged from the precincts of the temple. Alas that they should thrive under the new dispensation as they did under the old!

A considerable part of the present Church of the Holy Sepulchre is not more than sixty years old; but the massive, carved, and dark south portal, and the remains of the old towers and walls on this side, may be eight hundred. There has been some sort of a church here ever since the time of Constantine (that is, three centuries after the crucifixion of our Lord), which has marked the spot that was then determined to be the site of the Holy Sepulchre. Many a time the buildings have been swept away by fire or by the fanaticism of enemies, but they have as often been renewed. There would seem at first to have been a cluster of buildings here, each of which arose to cover a newly discovered sacred site. Happily, all the sacred places are now included within the walls of this many-roofed, heterogeneous mass, of chapels, shrines, tombs, and altars of worship of many warring sects, called the Church of the Holy Sepulchre.

Happily also the exhaustive discussion of the question of the true site of the sepulchre, conducted by the most devout and accomplished biblical scholars and the keenest antiquarians of the age, relieves the ordinary tourist from any obligation to enter upon an investigation that would interest none but those who have been upon the spot. No doubt the larger portion of the Christian world accepts this site as the true one.

I make with diffidence a suggestion that struck me, although it may not be new. The Pool of Hezekiah is not over four hundred feet, measured on the map, from the dome of the sepulchre. Under the church itself are several large excavations in the rocks, which were once cisterns. Ancient Jerusalem depended for its water upon these cisterns, which took the drainage from the roofs, and upon a few pools, like that of Hezekiah, which were fed from other reservoirs, such as Solomon's Pool, at a considerable distance from the city. These cisterns under the church may not date back to the time of our Lord, but if they do, they were doubtless at that time within the walls. And of course the Pool of Hezekiah, so near to this alleged site, cannot be supposed to have been beyond the walls.

Within the door of the church, upon a raised divan at one side, as if this were a bazaar and he were the merchant, sat a fat Turk, in official dress, the sneering warden of this Christian edifice, and the perhaps necessary guardian of peace within. His presence there, however, is at first a disagreeable surprise to all those who rebel at owing an approach to the holy place to the toleration of a Moslem; but I was quite relieved of any sense of obligation when, upon coming out, the Turk asked me for backsheesh!

Whatever one may think as to the site of Calvary, no one can approach a spot which even claims to be it, and which has been for centuries the object of worship of millions, and is constantly thronged by believing pilgrims, without profound emotion. It was late in the afternoon when I entered the church, and already the shades of evening increased the artificial gloom of the interior. At the very entrance lies an object that arrests one. It is a long marble slab resting upon the pavement, about which candles are burning. Every devout pilgrim who comes in kneels and kisses it, and it is sometimes difficult to see it for the crowds who press about it. Underneath it is supposed to be the Stone of Unction upon which the Lord's body was laid, according to the Jewish fashion, for anointing, after he was taken from the cross.

I turned directly into the rotunda, under the dome of which is the stone building enclosing the Holy Sepulchre, a ruder structure than that which covers the hut and tomb of St. Francis in the church at Assisi. I met in the way a procession of Latin monks, bearing candles, and chanting as they walked. They were making the round of the holy places in the church, this being their hour for the tour. The sects have agreed upon certain hours for these little daily pilgrimages, so that there shall be no collision. A rabble of pilgrims followed the monks. They had just come from incensing and adoring the sepulchre, and the crowd of other pilgrims who had been waiting their turn were now pressing in at the narrow door. As many times as I have been there, I have always seen pilgrims struggling to get in and struggling to get out. The proud and the humble crowd there together; the greasy boor from beyond the Volga jostles my lady from Naples, and the

dainty pilgrim from America pushes her way through a throng of stout Armenian peasants. But I have never seen any disorder there, nor any rudeness, except the thoughtless eagerness of zeal.

Taking my chance in the line, I passed into the first apartment, called the Chapel of the Angel, a narrow and gloomy antechamber, which takes its name from the fragment of stone in the centre, the stone upon which the angel sat after it had been rolled away from the sepulchre. A stream of light came through the low and narrow door of the tomb. Through the passage to this vault only one person can enter at a time, and the tomb will hold no more than three or four. Stooping along the passage, which is cased with marble like the tomb, and may cover natural rock, I came into the sacred place, and into a blaze of silver lamps, and candles. The vault is not more than six feet by seven, and is covered by a low dome. The sepulchral stone occupies all the right side, and is the object of devotion. It is of marble, supposed to cover natural stone, and is cracked and worn smooth on the edge by the kisses of millions of people. The attendant who stood at one end opened a little trap-door, in which lamp-cloths were kept, and let me see the naked rock, which is said to be that of the tomb. While I stood there in that very centre of the faith and longing of so many souls, which seemed almost to palpitate with a consciousness of its awful position, pilgrim after pilgrim, on bended knees, entered the narrow way, kissed with fervor or with coldness the unresponsive marble, and withdrew in the same attitude. Some approached it with streaming eyes and kissed it with trembling rapture; some ladies threw themselves upon the cold stone and sobbed aloud. Indeed, I did not of my own will intrude upon these acts of devotion, which have the right of secrecy, but it was some time before I could escape, so completely was the entrance blocked up. When I had struggled out, I heard chanting from the hill of Golgotha, and saw the gleaming of a hundred lights from chapel and tomb and remote recesses, but I cared to see no more of the temple itself that day.

The next morning (it was the 7th of April) was very cold, and the day continued so. Without, the air was keen, and within it was nearly impossible to get warm or keep so, in the thick-walled houses, which had gathered the damp and chill of dungeons. You might suppose that the dirtiest and most beggarly city in the world could not be much deteriorated by the weather, but it is. In a cheerful, sunny day you find that the desolation of Jerusalem has a certain charm and attraction: even a tattered Jew leaning against a ruined wall, or a beggar on a dunghill, is picturesque in the sunshine; but if you put a day of chill rain and frosty wind into the city, none of the elements of complete misery are wanting. There is nothing to be done, day or night; indeed, there is nothing ever to be done in the evening, except to read your guide-book—that is, the Bible—and go to bed. You are obliged to act like a Christian here, whatever you are.

Speaking of the weather, a word about the time for visiting Syria may not be amiss. In the last part of March the snow was a foot deep in the streets; parties who had started on their tour northward were snowed in and forced to hide in their tents three days from the howling winter. There is pleasure for you! We found friends in the city who had been waiting two weeks after they had exhausted their sights, for settled weather that would permit them to travel northward. To be sure, the inhabitants say that this last storm ought to have been rain instead of snow, according to the habit of the seasons; and it no doubt would have been if this region were not twenty-five hundred feet above the sea. The hardships of the Syrian tour are enough in the best weather, and I am convinced that our dragoman is right in saying that most travellers begin it too early in the spring.

Jerusalem is not a formidable city to the explorer who is content to remain above ground, and is not too curious about its substructions and buried walls, and has no taste, as some have, for crawling through its drains. I suppose it would elucidate the history of the Jews if we could dig all this hill away and lay bare all the old foundations, and ascertain exactly how the city was watered. I, for one, am grateful to the excellent man and great scholar who crawled on his hands and knees through a subterranean conduit, and established the fact of a connection between the Fountain of the Virgin and the Pool of Siloam. But I would rather contribute money to establish a school for girls in the Holy City, than to aid in laying bare all the aqueducts from Ophel to the Tower of David. But this is probably because I do not enough appreciate the importance of such researches among Jewish remains to the progress of Christian truth and morality in the world. The discoveries hitherto made have done much to clear up the topography of ancient Jerusalem; I do not know that they have yielded anything valuable to art or to philology, any treasures illustrating the habits, the social life, the culture, or the religion of the past, such as are revealed beneath the soil of Rome or in the ashes of Pompeii; it is, however, true that almost every tourist in Jerusalem becomes speedily involved in all these questions of ancient sites,—the identification of valleys that once existed, of walls that are now sunk under the accumulated rubbish of two thousand years, from thirty feet to ninety feet deep, and of foundations that are rough enough and massive enough to have been laid by David and cemented by Solomon. And the fascination of the pursuit would soon send one underground, with a pickaxe and a shovel. But of all the diggings I saw in the Holy City, that which interested me most was the excavation of the church and hospital of the chivalric Knights of St. John; concerning which I shall say a word further on.

The present walls were built by Sultan Suleiman in the middle of the sixteenth century, upon foundations much older, and here and there, as you can see, upon big blocks of Jewish workmanship. The wall is high enough and very picturesque in its zigzag course and re-entering angles, and, I suppose, strong enough to hitch a horse to; but cannon-balls would make short work of it.

Having said thus much of the topography, gratuitously and probably unnecessarily, for every one is supposed to know Jerusalem as well as he knows his native town, we are free to look at anything that may chance to interest us. I do not expect, however, that any words of mine can convey to the reader a just conception of the sterile and blasted character of this promontory and the country round about it, or of the squalor, shabbiness, and unpicturesqueness of the city, always excepting a few of its buildings and some fragments of antiquity built into modern structures here and there. And it is difficult to feel that this spot was ever the splendid capital of a powerful state, that this arid and stricken country could ever have supplied the necessities of such a capital, and, above all, that so many Jews could ever have been crowded within this cramped space as Josephus says perished in the siege by Titus, when ninety-seven thousand were carried into captivity and eleven hundred thousand died by famine and the sword. Almost the entire Jewish nation must have been packed within this small area.

Our first walk through the city was in the Via Dolorosa, as gloomy a thoroughfare as its name implies. Its historical portion is that steep and often angled part between the Holy Sepulchre and the house of Pilate, but we traversed the whole length of it to make our exit from St. Stephen's Gate toward the Mount of Olives. It is only about four hundred years ago that this street obtained the name of the Via Dolorosa, and that the sacred "stations" on it were marked out for the benefit of the pilgrim. It is a narrow lane, steep in places, having frequent sharp angles, running under arches, and passing between gloomy buildings, enlivened by few shops. Along this way Christ passed from the Judgment Hall of Pilate to Calvary. I do not know how many times the houses along it have been destroyed and rebuilt since their conflagration by Titus, but this destruction is no obstacle to the existence intact of all that are necessary to illustrate the Passion-pilgrimage of our Lord. In this street I saw the house of Simon the Cyrenian, who bore the cross after Jesus; I saw the house of St. Veronica, from which that woman stepped forth and gave Jesus a handkerchief to wipe his brow,—the handkerchief, with the Lord's features imprinted on it, which we have all seen exhibited at St. Peter's in Rome; and I looked for the house of the Wandering Jew, or at least for the spot where he stood when he received that awful mandate of fleshly immortality. In this street are recognized the several "stations" that Christ made in bearing the cross; we were shown the places where he fell, a stone having the impress of his hand, a pillar broken by his fall, and also the stone upon which Mary sat when he passed by. Nothing is wanting that the narrative requires. We saw also in this street the house of Dives, and the stone on which Lazarus sat while the dogs ministered unto him. It seemed to me that I must be in a dream, in thus beholding the houses and places of resort of the characters in a *parable*; and I carried my dilemma to a Catholic friend. But a learned father assured him that there was no doubt that this is the house of Dives, for Christ often took his parables from real life. After that I went again to look at the stone, in a corner of a building amid a heap of refuse, upon which the beggar sat, and to admire the pretty stone tracery of the windows in the house of Dives.

At the end of the street, in a new Latin nunnery, are the remains of the house of Pilate, which are supposed to be authentic. The present establishment is called the convent of St. Anne, and the community is very fortunate, at this late day, in obtaining such a historic site for itself. We had the privilege of seeing here some of the original rock that formed part of the foundations of Pilate's house; and there are three stones built into the altar that were taken from the pavement of Gabbatha, upon which Christ walked. These are recent discoveries; it appears probable that the real pavement of Gabbatha has been found, since Pilate's house is so satisfactorily identified. Spanning the street in front of this convent is the Ecce Homo arch, upon which Pilate showed Christ to the populace. The ground of the new building was until recently in possession of the Moslems, who would not sell it for a less price than seventy thousand francs; the arch they would not sell at all; and there now dwells, in a small chamber on top of it, a Moslem saint and hermit. The world of pilgrims flows under his feet; he looks from his window upon a daily procession of Christians, who traverse the Via Dolorosa, having first signified their submission to the Moslem yoke in the Holy City by passing under this arch of humiliation. The hermit, however, has the grace not to show himself, and few know that he sits there, in the holy occupation of letting his hair and his nails grow.

From the house of the Roman procurator we went to the citadel of Sultan Suleiman. This stands close by the Jaffa Gate, and is the most picturesque object in all the circuit of the walls, and, although the citadel is of modern origin, its most characteristic portion lays claim to great antiquity. The massive structure which impresses all strangers who enter by the Jaffa Gate is called the Tower of Hippicus, and also the Tower of David. It is identified as the tower which Herod built and Josephus describes, and there is as little doubt that its foundations are the same that David laid and Solomon strengthened. There are no such stones in any other part of the walls as these enormous bevelled blocks; they surpass those in the Harem wall, at what is called the Jews' Wailing Place. The tower stands upon the northwest corner of the old wall of Zion, and being the point most open to attack it was most strongly built.

It seems also to have been connected with the palace on Zion which David built, for it is the tradition that it was from this tower that the king first saw Bathsheba, the wife of Uriah, when "it came to pass in an eventide that David arose from off his bed, and walked upon the roof of the king's house: and from the roof he saw a woman washing herself; and the woman was very beautiful to look upon." On the other side of the city gate we now look down upon the Pool of Bathsheba, in which there is no water, and we are informed that it was by that pool that the lovely woman, who was destined to be the mother of Solomon, sat when the king took his evening walk. Others say that she sat by the Pool of Gibon. It does not matter. The subject was a very fruitful one for the artists of the Renaissance, who delighted in a glowing reproduction of the biblical stories, and found in such incidents as this and the confusion of Susanna themes in which the morality of the age could express itself without any conflict with the religion of the age. It is a comment not so much upon the character of David as upon the morality of the time in which he lived, that although he repented, and no doubt sincerely, of his sin when reproved for it, his repentance did not take the direction of self-denial; he did not send away Bathsheba.

This square old tower is interiorly so much in ruins that it is not easy to climb to its parapet, and yet it still has a guardhouse attached to it, and is kept like a fortification; a few rusty old cannon, under the charge of the soldiers, would injure only those who attempted to fire them; the entire premises have a tumble-down, Turkish aspect. The view from the top is the best in the city of the city itself; we saw also from it the hills of Moab and a bit of the Dead Sea.

Close by is the Armenian quarter, covering a large part of what was once the hill of Zion. I wish it were the Christian quarter, for it is the only part of the town that makes any pretension to cleanliness, and it has more than any other the aspect of an abode of peace and charity. This is owing to its being under the government of one corporation, for the Armenian convent covers nearly the entire space of this extensive quarter. The convent is a singular, irregular mass of houses, courts, and streets, the latter apparently running over and under and through the houses; you come unexpectedly upon stairways, you traverse roofs, you enter rooms and houses on the roofs of other houses, and it is difficult to say at any time whether you are on the earth or in the air. The convent, at this season, is filled with pilgrims, over three thousand of whom, I was told, were lodged here. We came upon families of them in the little rooms in the courts and corridors, or upon the roofs, pursuing their domestic avocations as if they were at home, cooking, mending, sleeping, a boorish but simple-

minded lot of peasants.

The church is a large and very interesting specimen of religious architecture and splendid, barbaric decoration. In the vestibule hang the "bells." These are long planks of a sonorous wood, which give forth a ringing sound when struck with a club. As they are of different sizes, you get some variation of tone, and they can be heard far enough to call the inmates of the convent to worship. The interior walls are lined with ancient blue tiles to a considerable height, and above them are rude and inartistic sacred pictures. There is in the church much curious inlaid work of mother-of-pearl and olive-wood, especially about the doors of the chapels, and one side shines with the pearl as if it were encrusted with silver. Ostrich eggs are strung about in profusion, with hooks attached for hanging lamps.

The first day of our visit to this church, in one of the doorways of what seemed to be a side chapel, and which was thickly encrusted with mother-of-pearl, stood the venerable bishop, in a light rose-colored robe and a pointed hood, with a cross in his hand, preaching to the pilgrims, who knelt on the pavement before him, talking in a familiar manner, and, our guide said, with great plainness of speech. The Armenian clergy are celebrated for the splendor of their vestments, and I could not but think that this rose-colored bishop, in his shining framework, must seem like a being of another sphere to the boors before him. He almost imposed upon us.

These pilgrims appeared to be of the poorest agricultural class of laborers, and their costume is uncouth beyond description. In a side chapel, where we saw tiles on the walls that excited our envy,—the quaintest figures and illustrations of sacred subjects,—the clerks were taking the names of pilgrims just arrived, who knelt before them and paid a Napoleon each for their lodging in the convent, as long as they should choose to stay. In this chapel were the shoes of the pilgrims who had gone into the church, a motley collection of foot-gear, covering half the floor: leather and straw, square shoes as broad as long, round shoes, pointed shoes, old shoes, patched shoes, shoes with the toes gone, a pathetic gathering that told of poverty and weary travel—and big feet. These shoes were things to muse on, for each pair, made maybe in a different century, seemed to have a character of its own, as it stood there awaiting the owner. People often, make reflections upon a pair of shoes; literature is full of them. Poets have celebrated many a pretty shoe,—a queen's slipper, it may be, or the hobnail brogan of a peasant, or, oftener, the tiny shoes of a child; but it is seldom that one has an opportunity for such comprehensive moralizing as was here given. If we ever regretted the lack of a poet in our party, it was now.

We walked along the Armenian walls, past the lepers' quarter, and outside the walls, through the Gate of Zion, or the Gate of the Prophet David as it is also called, and came upon a continuation of the plateau of the hill of Zion, which is now covered with cemeteries, and is the site of the house of Caiaphas and of the tomb of David and those Kings of Jerusalem who were considered by the people worthy of sepulture here; for the Jews seem to have brought from Egypt the notion of refusing royal burial to their bad kings, and they had very few respectable ones.

The house of Caiaphas the high-priest had suffered a recent tumble-down, and was in such a state of ruin that we could with difficulty enter it or recognize any likeness of a house. On the premises is an Armenian chapel; in it we were shown the prison in which Christ was confined, also the stone door of the sepulchre, which the Latins say the Armenians stole. But the most remarkable object here is the little marble column (having carved on it a figure of Christ bound to a pillar) upon which the cock stood and crowed when Peter denied his Lord. There are some difficulties in the way of believing this now, but they will lessen as the column gets age.

Outside this gate lie the desolate fields strewn with the brown tombstones of the Greeks and Armenians, a melancholy spectacle. Each sect has its own cemetery, and the dead sleep peaceably enough, but the living who bury them frequently quarrel. I saw one day a funeral procession halted outside the walls; for some reason the Greek priest had refused the dead burial in the grave dug for him in the cemetery; the bier was dumped on the slope beside the road, and half overturned; the friends were sitting on the ground, wrangling. The man had been dead three days, and the coffin had been by the roadside in this place since the day before. This was in the morning; towards night I saw the same crowd there, but a Turkish official appeared and ordered the Greeks to bury their dead somewhere, and that without delay; to bury it for the sake of the public health, and quarrel about the grave afterwards if they must. A crowd collected, joining with fiery gesticulation and clamor in the dispute, the shrill voices of women being heard above all; but at last, four men roughly shouldered the box, handling it as if it contained merchandise, and trotted off with it.

As we walked over this pathless, barren necropolis, strewn, as it were, hap-hazard with shapeless, broken, and leaning headstones, it was impossible to connect with it any sentiment of affection or piety. It spoke, like everything else about here, of mortality, and seemed only a part of that historical Jerusalem which is dead and buried, in which no living person can have anything more than an archaeological interest. It was, then, with something like a shock that we heard Demetrius, our guide, say, pointing to a rude stone,—

"That is the grave of my mother!"

Demetrius was a handsome Greek boy, of a beautiful type which has almost disappeared from Greece itself, and as clever a lad as ever spoke all languages and accepted all religions, without yielding too much to any one. He had been well educated in the English school, and his education had failed to put any faith in place of the superstition it had destroyed. The boy seemed to be numerous if not well connected in the city; he was always exchanging a glance and a smile with some pretty, dark-eyed Greek girl whom we met in the way, and when I said, "Demetrius, who was that?" he always answered, "That is my cousin."

The boy was so intelligent, so vivacious, and full of the spirit of adventure,—begging me a dozen times a day to take him with me anywhere in the world,—and so modern, that he had not till this moment seemed to belong to Jerusalem, nor to have any part in its decay. This chance discovery of his intimate relation to this necropolis gave, if I may say so, a living interest to it, and to all the old burying-grounds about the city, some of which link the present with the remote past by an uninterrupted succession of interments for nearly three thousand years.

Just beyond this expanse, or rather in part of it, is a small plot of ground surrounded by high whitewashed

walls, the entrance to which is secured by a heavy door. This is the American cemetery; and the stout door and thick wall are, I suppose, necessary to secure its graves from Moslem insult. It seems not to be visited often, for it was with difficulty that we could turn the huge key in the rusty lock. There are some half-dozen graves within; the graves are grass-grown and flower-sprinkled, and the whole area is a tangle of unrestrained weeds and grass. The high wall cuts off all view, but we did not for the time miss it, rather liking for the moment to be secured from the sight of the awful desolation, and to muse upon the strange fortune that had drawn to be buried here upon Mount Zion, as a holy resting-place for them, people alien in race, language, and customs to the house of David, and removed from it by such spaces of time and distance; people to whom the worship performed by David, if he could renew it in person on Zion, would be as distasteful as is that of the Jews in yonder synagogue.

Only a short distance from this we came to the mosque which contains the tomb of David and probably of Solomon and other Kings of Judah. No historical monument in or about Jerusalem is better authenticated than this. Although now for many centuries the Moslems have had possession of it and forbidden access to it, there is a tolerably connected tradition of its possession. It was twice opened and relieved of the enormous treasure in gold and silver which Solomon deposited in it; once by Hyrcanus Maccabæus, who took what he needed, and again by Herod, who found very little. There are all sorts of stories told about the splendor of this tomb and the state with which the Moslems surround it. But they envelop it in so much mystery that no one can know the truth. It is probable that the few who suppose they have seen it have seen only a sort of cenotaph which is above the real tomb in the rock below. The room which has been seen is embellished with some display of richness in shawls and hangings of gold embroidery, and contains a sarcophagus of rough stone, and lights are always burning there. If the royal tombs are in this place, they are doubtless in the cave below.

Over this spot was built a church by the early Christians; and it is a tradition that in this building was the Conaculum. This site may very likely be that of the building where the Last Supper was laid, and it may be that St. Stephen suffered martyrdom here, and that the Virgin died here; the building may be as old as the fourth century, but the chances of any building standing so long in this repeatedly destroyed city are not good. There is a little house north of this mosque in which the Virgin spent the last years of her life; if she did, she must have lived to be over a thousand years old.

On the very brow of the hill, and overlooking the lower pool of Gibon, is the English school, with its pretty garden and its cemetery. We saw there some excavations, by which the bedrock had been laid bare, disclosing some stone steps cut in it. Search is being made here for the Seat of Solomon, but it does not seem to me a vital matter, for I suppose he sat down all over this hill, which was covered with his palaces and harems and other buildings of pleasure, built of stones that "were of great value, such as are dug out of the earth for the ornaments of temples and to make fine prospects in royal palaces, and which make the mines whence they are dug famous." Solomon's palace was constructed entirely of white stone, and cedar-wood, and gold and silver; in it "were very long cloisters, and those situate in an agreeable place in the palace, and among them a most glorious dining-room for feastings and computations"; indeed, Josephus finds it difficult to reckon up the variety and the magnitude of the royal apartments,—"how many that were subterraneous and invisible, the curiosity of those that enjoyed the fresh air, and the groves for the most delightful prospect, for avoiding the heat, and covering their bodies." If this most luxurious of monarchs introduced here all the styles of architecture which would represent the nationality of his wives, as he built temples to suit their different religions, the hill of Zion must have resembled, on a small scale, the Munich of King Ludwig I.

Opposite the English school, across the Valley of Hinnom, is a long block of modern buildings which is one of the most conspicuous objects outside the city. It was built by another rich Jew, Sir Moses Montefiore, of London, and contains tenements for poor Jews. Sir Moses is probably as rich as Solomon was in his own right, and he makes a most charitable use of his money; but I do not suppose that if he had at his command the public wealth that Solomon had, who made silver as plentiful as stones in the streets of Jerusalem, he could materially alleviate the lazy indigence of the Jewish exiles here. The aged philanthropist made a journey hither in the summer of 1875, to ascertain for himself the condition of the Jews. I believe he has a hope of establishing manufactories in which they can support themselves; but the minds of the Jews who are already restored are not set upon any sort of industry. It seems to me that they could be maintained much more cheaply if they were transported to a less barren land.

We made, one day, an exploration of the Jews' quarter, which enjoys the reputation of being more filthy than the Christian. The approach to it is down a gutter which has the sounding name of the Street of David; it was bad enough, but when we entered the Jews' part of the city we found ourselves in lanes and gutters of incomparable unpleasantness, and almost impassable, with nothing whatever in them interesting or picturesque, except the inhabitants. We had a curiosity to see if there were here any real Jews of the type that inhabited the city in the time of our Lord, and we saw many with fair skin and light hair, with straight nose and regular features. The persons whom we are accustomed to call Jews, and who were found dispersed about Europe at a very early period of modern history, have the Assyrian features, the hook nose, dark hair and eyes, and not at all the faces of the fair-haired race from which our Saviour is supposed to have sprung. The kingdom of Israel, which contained the ten tribes, was gobbled up by the Assyrians about the time Rome was founded, and from that date these tribes do not appear historically. They may have entirely amalgamated with their conquerors, and the modified race subsequently have passed into Europe; for the Jews claim to have been in Europe before the destruction of Jerusalem by Titus, in which nearly all the people of the kingdom of Judah perished.

Some scholars, who have investigated the problem offered by the two types above mentioned, think that the Jew as we know him in Europe and America is not the direct descendant of the Jews of Jerusalem of the time of Herod, and that the true offspring of the latter is the person of the light hair and straight nose who is occasionally to be found in Jerusalem to-day. Until this ethnological problem is settled, I shall most certainly withhold my feeble contributions for the "restoration" of the persons at present doing business under the name of Jews among the Western nations.

But we saw another type of Jew, or rather another variety, in this quarter. He called himself of the tribe of Benjamin, and is, I think, the most unpleasant human being I have ever encountered. Every man who

supposes himself of this tribe wears a dark, corkscrew, stringy curl hanging down each side of his face, and the appearance of nasty effeminacy which this gives cannot be described. The tribe of Benjamin does not figure well in sacred history,—it was left-handed; it was pretty much exterminated by the other tribes once for an awful crime; it was held from going into the settled idolatry of the kingdom of Israel only by its contiguity to Judah,—but it was better than its descendants, if these are its descendants.

More than half of the eight thousand Jews in Jerusalem speak Spanish as their native tongue, and are the offspring of those expelled from Spain by Ferdinand. Now and then, I do not know whether it was Spanish or Arabic, we saw a good face, a noble countenance, a fine Oriental and venerable type, and occasionally, looking from a window, a Jewish beauty; but the most whom we met were debased, mis-begotten, the remnants of sin, squalor, and bad living.

We went into two of the best synagogues,—one new, with a conspicuous green dome. They are not fine; on the contrary, they are slatternly places and very ill-kept. On the benches near the windows sat squalid men and boys reading, the latter, no doubt, students of the law; all the passages, stairs, and by-rooms were dirty and disorderly, as if it were always Monday morning there, but never washing-day; rags and heaps of ancient garments were strewn about; and occasionally we nearly stumbled over a Jew, indistinguishable from a bundle of old clothes, and asleep on the floor. Even the sanctuary is full of unkempt people, and of the evidences of the squalor of the quarter. If this is a specimen of the restoration of the Jews, they had better not be restored any more.

The thing to do (if the worldliness of the expression will be pardoned) Friday is to go and see the Jews wail, as in Constantinople it is to see the Sultan go to prayer, and in Cairo to hear the darwishes howl. The performance, being an open-air one, is sometimes prevented by rain or snow, but otherwise it has not failed for many centuries. This ancient practice is probably not what it once was, having in our modern days, by becoming a sort of fashion, lost its spontaneity; it will, however, doubtless be long kept up, as everything of this sort endures in the East, even if it should become necessary to hire people to wail.

The Friday morning of the day chosen for our visit to the wailing place was rainy, following a rainy night. The rough-paved open alleys were gutters of mud, the streets under arches (for there are shops in subterranean constructions and old vaulted passages) were damper and darker than usual; the whole city, with its narrow lanes, and thick walls, and no sewers, was clammy and uncomfortable. We loitered for a time in the dark and grave-like gold bazaars, where there is but a poor display of attractions. Pilgrims from all lands were sopping about in the streets; conspicuous among them were Persians wearing high, conical frieze hats, and short-legged, big-calfed Russian peasant women,—animated meal-bags.

We walked across to the Zion Gate, and mounting the city wall there—an uneven and somewhat broken, but slightly promenade—followed it round to its junction with the Temple wall, and to Robinson's Arch. Underneath the wall by Zion Gate dwell, in low stone huts and burrows, a considerable number of lepers, who form a horrid community by themselves. These poor creatures, with toeless feet and fingerless hands, came out of their dens and assailed us with piteous cries for charity. What could be done? It was impossible to give to all. The little we threw them they fought for, and the unsuccessful followed us with whetted eagerness. We could do nothing but flee, and we climbed the wall and ran down it, leaving Demetrius behind as a rear-guard. I should have had more pity for them if they had not exhibited so much maliciousness. They knew their power, and brought all their loathsomeness after us, thinking that we would be forced to buy their retreat. Two hideous old women followed us a long distance, and when they became convinced that further howling and whining would be fruitless, they suddenly changed tone and cursed us with healthful vigor; having cursed us, they hobbled home to roost.

This part of the wall crosses what was once the Tyrophoan Valley, which is now pretty much filled up; it ran between Mount Moriah, on which the Temple stood, and Mount Zion. It was spanned in ancient times by a bridge some three hundred and fifty feet long, resting on stone arches whose piers must have been from one hundred to two hundred feet in height; this connected the Temple platform with the top of the steep side of Zion. It was on the Temple end of this bridge that Titus stood and held parley with the Jews who refused to surrender Zion after the loss of Moriah.

The exact locality of this interesting bridge was discovered by Dr. Robinson. Just north of the southwest corner of the Harem wall (that is, the Temple or Mount Moriah wall) he noticed three courses of huge projecting stones, which upon careful inspection proved to be the segment of an arch. The spring of the arch is so plainly to be seen now that it is a wonder it remained so long unknown.

The Wailing Place of the Jews is on the west side of the Temple enclosure, a little to the north of this arch; it is in a long, narrow court formed by the walls of modern houses and the huge blocks of stone of this part of the original wall. These stones are no doubt as old as Solomon's Temple, and the Jews can here touch the very walls of the platform of that sacred edifice.

Every Friday a remnant of the children of Israel comes here to weep and wail. They bring their Scriptures, and leaning against the honey-combed stone, facing it, read the Lamentations and the Psalms, in a wailing voice, and occasionally cry aloud in a chorus of lamentation, weeping, blowing their long noses with blue cotton handkerchiefs, and kissing the stones. We were told that the smoothness of the stones in spots was owing to centuries of osculation. The men stand together at one part of the wall and the women at another. There were not more than twenty Jews present as actors in the solemn ceremony the day we visited the spot, and they did not wail much, merely reading the Scriptures in a mumbling voice and swaying their bodies backward and forward. Still they formed picturesque and even pathetic groups: venerable old men with long white beards and hooked noses, clad in rags and shreds and patches in all degrees of decadence; lank creatures of the tribe of Benjamin with the corkscrew curls; and skinny old women shaking with weeping, real or assumed.

Very likely these wailers were as poor and wretched as they appeared to be, and their tears were the natural outcome of their grief over the ruin of the Temple nearly two thousand years ago. I should be the last one to doubt their enjoyment of this weekly bitter misery. But the demonstration had somewhat the appearance of a set and show performance; while it was going on, a shrewd Israelite went about with a box to

collect mites from the spectators. There were many more travellers. there to see the wailing than there were Jews to wail. This also lent an unfavorable aspect to the scene. I myself felt that if this were genuine, I had no business to be there with my undisguised curiosity, and if it were not genuine, it was the poorest spectacle that Jerusalem offers to the tourist. Cook's party was there in force, this being one of the things promised in the contract; and I soon found myself more interested in Cook's pilgrims than in the others.

The Scripture read and wailed this day was the fifty-first Psalm of David. If you turn to it (you may have already discovered that the covert purpose of these desultory notes is to compel you to read your Bible), you will see that it expresses David's penitence in the matter of Bathsheba.

III.—HOLY PLACES OP THE HOLY CITY.

THE sojourner in Jerusalem falls into the habit of dropping in at the Church of the Holy Sepulchre nearly every afternoon. It is the centre of attraction. There the pilgrims all resort; there one sees, in a day, many races, and the costumes of strange and distant peoples; there one sees the various worship of the many Christian sects. There are always processions making the round of the holy places, sect following sect, with swinging censers, each fumigating away the effect of its predecessor.

The central body of the church, answering to the nave, as the rotunda, which contains the Holy Sepulchre, answers to choir and apse, is the Greek chapel, and the most magnificent in the building. The portion of the church set apart to the Latins, opening also out of the rotunda, is merely a small chapel. The Armenians have still more contracted accommodations, and the poor Copts enjoy a mere closet, but it is in a sacred spot, being attached to the west end of the sepulchre itself.

On the western side of the rotunda we passed through the bare and apparently uncared-for chapel of the Syrians, and entered, through a low door, into a small grotto hewn in the rock. Lighted candles revealed to us some tombs, little pits cut in the rock, two in the side-wall and two in the floor. We had a guide who knew every sacred spot in the city, a man who never failed to satisfy the curiosity of the most credulous tourist.

"Whose tombs are these?" we asked.

"That is the tomb of Joseph of Arimathea, and that beside it is the tomb of Nicodemus."

"How do you know?"

"How do I know? You ask me how I know. Have n't I always lived in Jerusalem? I was born here."

"Then perhaps you can tell us, if this tomb belonged to Joseph of Arimathea and this to Nicodemus, whose is this third one?"

"O yes, that other," replied the guide, with only a moment's paralysis of his invention, "that is the tomb of Arimathea himself."

One afternoon at four, service was going on in the Greek chapel, which shone with silver and blazed with tapers, and was crowded with pilgrims, principally Russians of both sexes, many of whom had made a painful pilgrimage of more than two thousand miles on foot merely to prostrate themselves in this revered place. A Russian bishop and a priest, in the resplendent robes of their office, were intoning the service responsively. In the very centre of this chapel is a round hole covered with a grating, and tapers are generally burning about it. All the pilgrims kneeled there, and kissed the grating and adored the hole. I had the curiosity to push my way through the throng in order to see the object of devotion, but I could discover nothing. It is, however, an important spot: it is the centre of the earth; though why Christians should worship the centre of the earth I do not know. The Armenians have in their chapel also a spot that they say is the real centre; that makes three that we know of, for everybody understands that there is one in the Kaaba at Mecca.

We sat down upon a stone bench near the entrance of the chapel, where we could observe the passing streams of people, and were greatly diverted by a blithe and comical beggar who had stationed himself on the pavement there to intercept the Greek charity of the worshippers when they passed into the rotunda. He was a diminutive man with distorted limbs; he wore a peaked red cap, and dragged himself over the pavement, or rather skipped and flopped about on it like a devil-fish on land. Never was seen in a beggar such vivacity and imperturbable good-humor, with so much devilry in his dancing eyes.

As we appeared to him to occupy a neutral position as to him and his victims, he soon took us into his confidence and let us see his mode of operations. He said (to our guide) that he was a Greek from Damascus, —O yes, a Christian, a pilgrim, who always came down here at this season, which was his harvest-time. He hoped (with a wicked wink) that his devotion would be rewarded.

It was very entertaining to see him watch the people coming out, and select his victims, whom he would indicate to us by a motion of his head as he hopped towards them. He appeared to rely more upon the poor and simple than upon the rich, and he was more successful with the former. But he rarely, such was his insight, made a mistake. Whoever gave him anything he thanked with the utmost *empressement* of manner; then he crossed himself, and turned around and winked at us, his confederates. When an elegantly dressed lady dropped the smallest of copper coins into his cap, he let us know his opinion of her by a significant gesture and a shrug of his shoulders. But no matter from whom he received it, whenever he added a penny to his store the rascal chirped and laughed and caressed himself. He was in the way of being trodden under foot by the crowd; but his agility was extraordinary, and I should not have been surprised at any moment if he had

vaulted over the heads of the throng and disappeared. If he failed to attract the attention of an eligible pilgrim, he did not hesitate to give the skirt of his elect a jerk, for which rudeness he would at once apologize with an indescribable grimace and a joke.

When the crowd had passed, he slid himself into a corner, by a motion such as that with which a fish suddenly darts to one side, and set himself to empty his pocket into his cap and count his plunder, tossing the pieces into the air and catching them with a chuckle, crossing himself and hugging himself by turns. He had four francs and a half. When he had finished counting his money he put it in a bag, and for a moment his face assumed a grave and business-like expression. We thought he would depart without demanding anything of us. But we were mistaken; he had something in view that he no doubt felt would insure him a liberal backsheesh. Wriggling near to us, he set his face into an expression of demure humility, held out his cap, and said, in English, each word falling from his lips as distinctly and unnaturally as if he had been a wooden articulating machine,—

“Come unto me all ye that labor and are heavy laden, and *I* will give you rest.”

The rascal's impiety lessened the charity which our intimacy with him had intended, but he appeared entirely content, chirped, saluted with gravity, and, with a flop, was gone from our sight.

At the moment, a procession of Franciscan monks swept by, chanting in rich bass voices, and followed, as usual, by Latin pilgrims, making the daily round of the holy places; after they had disappeared we could still hear their voices and catch now and again the glimmer of their tapers in the vast dark spaces.

Opposite the place where we were sitting is the Chapel of the Apparition, a room not much more than twenty feet square; it is the Latin chapel, and besides its contiguity to the sepulchre has some specialties of its own. The chapel is probably eight hundred years old. In the centre of the pavement is the spot upon which our Lord stood when he appeared to the Virgin after the resurrection; near it a slab marks the place where the three crosses were laid after they were dug up by Helena, and where the one on which our Lord was crucified was identified by the miracle that it worked in healing a sick man. South of the altar is a niche in the wall, now covered over, but a round hole is left in the covering. I saw pilgrims thrust a long stick into this hole, withdraw it, and kiss the end. The stick had touched a fragment of the porphyry column to which the Saviour was bound when he was scourged.

In the semicircle at the east end of the nave are several interesting places: the prison where Christ was confined before his execution, a chapel dedicated to the centurion who pierced the side of our Lord, and the spot on which the vestments were divided. From thence we descend, by a long flight of steps partly hewn in the rock, to a rude, crypt-like chapel, in the heavy early Byzantine style, a damp, cheerless place, called the Chapel of Helena. At the east end of it another flight of steps leads down into what was formerly a cistern, but is now called the Chapel of the Invention of the Cross. Here the cross was found, and at one side of the steps stands the marble chair in which the mother of Constantine sat while she superintended the digging. Nothing is wanting that the most credulous pilgrim could wish to see; that is, nothing is wanting in *spots* where things were. This chapel belongs to the Latins; that of Helena to the Greeks; the Abyssinian convent is above both of them.

On the south side of the church, near the entrance, is a dark room called the Chapel of Adam, in which there is never more light than a feeble taper can give. I groped my way into it often, in the hope of finding something; perhaps it is purposely involved in an obscurity typical of the origin of mankind. There is a tradition that Adam was buried on Golgotha, but the only tomb in this chapel is that of Melchizedek! The chapel formerly contained that of Godfrey de Bouillon, elected the first king of Jerusalem in 1099, and of Baldwin, his brother. We were shown the two-handed sword of Godfrey, with which he clove a Saracen lengthwise into two equal parts, a genuine relic of a heroic and barbarous age. At the end of this chapel a glimmering light lets us see through a grating a crack in the rock made by the earthquake at the crucifixion.

The gloom of this mysterious chapel, which is haunted by the spectre of that dim shadow of unreality, Melchizedek, prepared us to ascend to Golgotha, above it. The chapels of Golgotha are supported partly upon a rock which rises fifteen feet above the pavement of the church. The first is that of the Elevation of the Cross, and belongs to the Greeks. Under the altar at the east end is a hole in the marble which is over the hole in the rock in which the cross stood; on either side of it are the holes of the crosses of the two thieves. The altar is rich with silver and gold and jewels. The chamber, when we entered it, was blazing with light, and Latin monks were performing their adorations, with chanting and swinging of incense, before the altar. A Greek priest stood at one side, watching them, and there was plain contempt in his face. The Greek priests are not wanting in fanaticism, but they never seem to me to possess the faith of the Latin branch of the Catholic church. When the Latins had gone, the Greek took us behind the altar, and showed us another earthquake-rent in the rock.

Adjoining this chapel is the Latin Chapel of the Crucifixion, marking the spot where Christ was nailed to the cross; from that we looked through a window into an exterior room dedicated to the Sorrowing Virgin, where she stood and beheld the crucifixion. Both these latter rooms do not rest upon the rock, but upon artificial vaults, and of course can mark the spots commemorated by them only *in space*.

Perhaps this sensation of being in the air, and of having no standing-place even for tradition, added something to the strange feeling that took possession of me; a mingled feeling that was no more terror than is the apprehension that one experiences at a theatre from the manufactured thunder behind the scenes. I suppose it arose from cross currents meeting in the mind, the thought of the awful significance of the events here represented and the sight of this theatrical representation. The dreadful name, Golgotha, the gloom of this part of the building,—a sort of mount of darkness, with its rent rock and preternatural shadow,—the blazing contrast of the chapel where the cross stood with the dark passages about it, the chanting and flashing lights of pilgrims ever coming and going, the neighborhood of the sepulchre itself, were well calculated to awaken an imagination the least sensitive. And, so susceptible is the mind to the influence of that mental electricity—if there is no better name for it—which proceeds from a mass of minds having one thought (and is sometimes called public opinion), be it true or false, that whatever one may believe about the real location of the Holy Sepulchre, he cannot witness, unmoved, the vast throng of pilgrims to these shrines,

representing as they do every section of the civilized and of the uncivilized world into which a belief in the cross has penetrated. The undoubted sincerity of the majority of the pilgrims who worship here makes us for the time forget the hundred inventions which so often allure and as often misdirect that worship.

The Church of the Holy Sepulchre offers at all times a great spectacle, and one always novel, in the striking ceremonies and the people who assist at them. One of the most extraordinary, that of the Holy Fire, at the Greek Easter, which is three weeks later than the Roman, and which has been so often described, we did not see. I am not sure that we saw even all the thirty-seven holy places and objects in the church. It may not be unprofitable to set down those I can recall. They are,—

The Stone of Unction.

The spot where the Virgin Mary stood when the body of our Lord was anointed.

The Holy Sepulchre.

The stone on which the angel sat.

The tombs of Joseph of Arimathea and Nicodemus.

The well of Helena.

The stone marking the spot where Christ in the form of a gardener appeared to Mary Magdalene.

The spot where Mary Magdalene stood.

The spot where our Lord appeared to the Virgin after his resurrection.

The place where the true cross, discovered by Helena, was laid, and identified by a miracle.

The fragment of the Column of Flagellation.

The prison of our Lord.

The "Bonds of Christ," a stone with two holes in it.

The place where the *title* on the cross was preserved.

The place of the division of the vestments.

The centre of the earth (Greek).

The centre of the earth (Armenian).

The altar of the centurion who pierced the body of Christ.

The altar of the penitent thief.

The Chapel of Helena.

The chair in which Helena sat when the cross was found.

The spot where the cross was found.

The Chapel of the Mocking, with a fragment of the column upon which Jesus sat when they crowned him with thorns.

The Chapel of the Elevation of the Cross.

The spot where the cross stood.

The spots where the crosses of the thieves stood.

The rent rock near the cross.

The spot where Christ was nailed to the cross.

The spot where the Virgin stood during the crucifixion.

The Chapel of Adam.

The tomb of Melchizedek.

The rent rock in the Chapel of Adam.

The spots where the tombs of Godfrey and Baldwin stood.

No, we did not see them all. Besides, there used to be a piece of the cross in the Latin chapel; but the Armenians are accused of purloining it. All travellers, I suppose, have seen the celebrated Iron Crown of Lombardy, which is kept in the church at Monza, near Milan. It is all of gold except the inner band, which is made of a nail of the cross brought from Jerusalem by Helena. The Church of the Holy Sepulchre has not all the relics it might have, but it is as rich in them as any church of its age.

A place in Jerusalem almost as interesting to Christians as the Holy Sepulchre, and more interesting to antiquarians, is the Harem, or Temple area, with its ancient substructions and its resplendent Saracenic architecture. It is largely an open place, green with grass; it is clean and wholesome, and the sun lies lovingly on it. There is no part of the city where the traveller would so like to wander at will, to sit and muse, to dream away the day on the walls overhanging the valley of the Kidron, to recall at leisure all the wonderful story of its splendor and its disaster. But admission to the area is had only by special permit. Therefore the ordinary tourist goes not so much as he desires to the site of the Temple that Solomon built, and of the porch where Jesus walked and talked with his disciples. When he does go, he feels that he treads upon firm historical ground.

We walked down the gutter (called street) of David; we did not enter the Harem area by the Bab es-Silsileh (Gate of the Chain), but turned northward and went in by the Bab el-Katanm (Gate of the Cotton-Merchants), which is identified with the Beautiful Gate of the Temple. Both these gates have twisted columns and are graceful examples of Saracenic architecture. As soon as we entered the gate the splendor of the area burst upon us; we passed instantly out of the sordid city into a green plain, out of which—it could have been by a magic wand only—had sprung the most charming creations in stone: minarets, domes, colonnades, cloisters, pavilions, columns of all orders, horseshoe arches and pointed arches, every joyous architectural thought expressed in shining marble and brilliant color.

Our dragoman, Abd-el-Atti, did the honors of the place with the air of proprietorship. For the first time in the Holy City he felt quite at home, and appeared to be on the same terms with the Temple area that he is with the tombs of the Pharaohs. The Christian antiquities are too much for him, but his elastic mind expands

readily to all the marvels of the Moslem situation. The Moslems, indeed, consider that they have a much better right to the Temple than the Christians, and Abd-el-Atti acted as our cicerone in the precincts with all the delight of a boy and with the enthusiasm of faith. It was not unpleasant to him, either, to have us see that he was treated with consideration by the mosque attendants and ulemas, and that he was well known and could pass readily into the most reserved places. He had said his prayers that morning, at twelve, in this mosque, a privilege only second to that of praying in the mosque at Mecca, and was in high spirits, as one who had (if the expression is allowable) got a little ahead in the matter of devotion.

Let me give in a few words, without any qualifications of doubt, what seem to be the well-ascertained facts about this area. It is at present a level piece of ground (in the nature of a platform, since it is sustained on all sides by walls), a quadrilateral with its sides not quite parallel, about fifteen hundred feet long by one thousand feet broad. The northern third of it was covered by the Fortress of Antonia, an ancient palace and fortress, rebuilt with great splendor by Herod. The small remains of it in the northeast corner are now barracks.

This level piece of ground is nearly all artificial, either filled in or built up on arches. The original ground (Mount Moriah) was a rocky hill, the summit of which was the rock about which there has been so much controversy. Near the centre of this ground, and upon a broad raised platform, paved with marble, stands the celebrated mosque Kubbet es-Sukhrah, "The Dome of the Rock." It is built over the Sacred Rock.

This rock marks the site of the threshing-floor of Oman, the Jebusite, which David bought, purchasing at the same time the whole of Mount Moriah. Solomon built the Temple over this rock, and it was probably the "stone of sacrifice." At the time Solomon built the Temple, the level place on Moriah was scarcely large enough for the *naos* of that building, and Solomon extended the ground to the east and south by erecting arches and filling in on top of them, and constructing a heavy retaining-wall outside. On the east side also he built a porch, or magnificent colonnade, which must have produced a fine effect of Oriental grandeur when seen from the deep valley below or from the Mount of Olives opposite.

To this rock the Jews used to come, in the fourth century, and anoint it with oil, and wail over it, as the site of the Temple. On it once stood a statue of Hadrian. When the Moslems captured Jerusalem, it became, what it has ever since been, one of their most venerated places. The Khalif Omar cleared away the rubbish from it, and built over it a mosque. The Khalif Abd-el-Melek began to rebuild it in a. d. 686. During the Crusades it was used as a Christian church. Allowing for decay and repairs, the present mosque is probably substantially that built by Abd-el-Melek.

At the extreme south of the area is the vast Mosque of Aksa, a splendid basilica with seven aisles, which may or may not be the Church of St. Mary built by Justinian in the sixth century; architects differ about it. This question it seems to me very difficult to decide from the architecture of the building, because of the habit that Christians and Moslems both had of appropriating columns and capitals of ancient structures in their buildings; and because the Moslems at that time used both the round and the pointed arch.

This platform is beyond all comparison the most beautiful place in Jerusalem, and its fairy-like buildings, when seen from the hill opposite, give to the city its chief claim to Oriental picturesqueness.

The dome of the mosque Kubbet-es-Sukhrah is perhaps the most beautiful in the world; it seems to float in the air like a blown bubble; this effect is produced by a slight drawing in of the base. This contraction of the dome is not sufficient to give the spectator any feeling of insecurity, or to belittle this architectural marvel to the likeness of a big toy; the builder hit the exact mean between massiveness and expanding lightness. The mosque is octagonal in form, and although its just proportions make it appear small, it is a hundred and fifty feet in diameter; outside and in, it is a blaze of color in brilliant marbles, fine mosaics, stained glass, and beautiful Saracenic tiles. The lower part of the exterior wall is covered with colored marbles in intricate patterns; above are pointed windows with stained glass; and the spaces between the windows are covered by glazed tiles, with arabesque designs and very rich in color. In the interior, which has all the soft warmth and richness of Persian needlework, are two corridors, with rows of columns and pillars; within the inner row is the Sacred Rock.

This rock, which is the most remarkable stone in the world, if half we hear of it be true, and which by a singular fortune is sacred to three religions, is an irregular boulder, standing some five feet above the pavement, and is something like sixty feet long. In places it has been chiselled, steps are cut on one side, and various niches are hewn in it; a round hole pierces it from top to bottom. The rock is limestone, a little colored with iron, and beautiful in spots where it has been polished. One would think that by this time it ought to be worn smooth all over.

If we may believe the Moslems and doubt our own senses, this rock is suspended in the air, having no support on any side. It was to this rock that Mohammed made his midnight journey on El Burak; it was from here that he ascended into Paradise, an excursion that occupied him altogether only forty minutes. It is, I am inclined to think, the miraculous suspension of this stone that is the basis of the Christian fable of the suspension of Mohammed's coffin,—a miracle unknown to all Moslems of whom I have inquired concerning it.

"Abd-el-Atti," I said, "does this rock rest on nothing?"

"So I have hunderstood; thim say so."

"But do you believe it?"

"When I read him, I believe; when I come and see him, I can't help what I see."

At the south end of the rock we descended a flight of steps and stood under the rock in what is called the Noble Cave, a small room about six feet high, plastered and whitewashed. This is supposed to be the sink into which the blood of the Jewish sacrifices drained. The plaster and whitewash hide the original rock, and give the Moslems the opportunity to assert that there is no rock foundation under the big stone.

"But," we said to Abd-el-Atti, "if this rock hangs in the air, why cannot we see all around it? Why these plaster walls that seem to support it?"

"So him used to be. This done so, I hear, on account of de women. Thim come here, see this rock, thim berry much frightened. Der little shild, what you call it, get born in de world before him wanted. So thim

make this wall under it."

There are four altars in this cave, one of them dedicated to David; here the Moslem prophets, Abraham, David, Solomon, and Jesus, used to pray. In the rock is a round indentation made by Mohammed's head when he first attempted to rise to heaven; near it is the hole through which he rose. On the upper southeast corner of the rock is the print of the prophet's foot, and close to it the print of the hand of the angel Michael, who held the rock down from following Mohammed into the skies.

In the mosque above, Abd-el-Atti led us, with much solemnity, to a small stone set in the pavement near the north entrance. It was perforated with holes, in some of which were brass nails.

"How many holes you make 'em there?"

"Thirteen."

"How many got nails?"

"Four."

"Not so many. Only three and a half nails. Used to be thirteen nails. Now only three and a half. When these gone, then the world come to an end. I t'ink it not berry long."

"I should think the Moslems would watch this stone very carefully."

"What difference? You not t'ink it come when de time come?"

We noticed some pieces of money on the stone, and asked why that was.

"Whoever he lay backsheesh on this stone, he certain to go into Paradise, and be took by our prophet in his bosom."

We wandered for some time about the green esplanade, dotted with cypress-trees, and admired the little domes: the Dome of the Spirits, the dome that marks the spot where David sat in judgment, etc.; some of them cover cisterns and reservoirs in the rock, as old as the foundations of the Temple.

In the corridor of the Mosque of Aksa are two columns standing close together, and like those at the Mosque of Omar, in Cairo, they are a test of character; it is said that whoever can squeeze between them is certain of Paradise, and must, of course, be a good Moslem. I suppose that when this test was established the Moslems were all lean. A black stone is set in the wall of the porch; whoever can walk, with closed eyes, across the porch pavement and put his finger on this stone may be sure of entering Paradise. According to this criterion, the writer of this is one of the elect of the Mohammedan Paradise and his dragoman is shut out. We were shown in this mosque the print of Christ's foot in a stone; and it is said that with faith one can feel in it, as he can in that of Mohammed's in the rock, the real flesh. Opening from this mosque is the small Mosque of Omar, on the spot where that zealous khalif prayed.

The massive pillared substructions under Aksa are supposed by Moslems to be of Solomon's time. That wise monarch had dealings with the invisible, and no doubt controlled the genii, who went and came and built and dived at his bidding. Abd-el-Atti, with haste and an air of mystery, drew me along under the arches to the window in the south end, and showed me the opening of a passage under the wall, now half choked up with stones. This is the beginning of a subterranean passage made by the prophet Solomon, that extends all the way to Hebron, and has an issue in the mosque over the tomb of Abraham. This fact is known only to Moslems, and to very few of them, and is considered one of the great secrets. Before I was admitted to share it, I am glad that I passed between the two columns, and touched, with my eyes shut, the black stone.

In the southeast corner of the Harem is a little building called the Mosque of Jesus. We passed through it, and descended the stairway into what is called Solomon's Stables, being shown on our way a stone trough which is said to be the cradle of the infant Jesus. These so-called stables are subterranean vaults, built, no doubt, to sustain the south end of the Temple platform. We saw fifteen rows of massive square pillars of unequal sizes and at unequal distances apart (as if intended for supports that would not be seen), and some forty feet high, connected by round arches. We were glad to reascend from this wet and unpleasant cavern to the sunshine and the greensward.

I forgot to mention the Well of the Leaf, near the entrance, in the Mosque of Aksa, and the pretty Moslem legend that gave it a name, which Abd-el-Atti relates, though not in the words of the hand-book:—

"This well berry old; call him Well of the Leaf; water same as Pool of Solomon, healthy water; I like him very much. Not so deep as Bir el-Arwâh; that small well, you see it under the rock; they say it goes down into Gehenna."

"Why is this called the Well of the Leaf?"

"Once, time of Suleiman [it was Omar], a friend of our prophet come here to pray, and when he draw water to wash he drop the bucket in the bottom of the well. No way to get it up, but he must go down. When he was on the bottom, there he much surprised by a door open in the ground, and him berry cur'ous to see what it is. Nobody there, so he look in, and then walk through berry fast, and look over him shoulder to the bucket left in the well. The place where he was come was the most beautiful garden ever was, and he walk long time and find no end, always more garden, so cool, and water run in little streams, and sweet smell of roses and jasmine, and little birds that sing, and big trees and dates and oranges and palms, more kind, I t'ink, than you see in the garden of his vice-royal. When the man have been long time in the garden he begin to have fright, and pick a green leaf off a tree, and run back and come up to his friends. He show 'em the green leaf, but nobody have believe what he say. Then they tell him story to the kadi, and the kadi send men to see the garden in the bottom of the well. They not find any, not find any door. Then the kadi he make him a letter to the Sultan—berry wise man—and he say (so I read it in our history), 'Our prophet say, One of my friends shall walk in Paradise while he is alive. If this is come true, you shall see the leaf, if it still keep green.' Then the kadi make examine of the leaf, and find him green. So it is believe the man has been in Paradise."

"And do you believe it?"

"I cannot say edzacly where him been. Where you t'ink he done got that leaf?"

Along the east wall of the Harem there are no remains of the long colonnade called Solomon's Porch, not a column of that resplendent marble pavilion which caught the first rays of the sun over the mountains of

Moab, and which, with the shining temple towering behind it, must have presented a more magnificent appearance than Babylon, and have rivalled the architectural glories of Baalbek. The only thing in this wail worthy of note now is the Golden Gate, an entrance no longer used. We descended into its archways, and found some fine columns with composite capitals, and other florid stone-work of a rather tasteless and debased Roman style.

We climbed the wall by means of the steps, a series of which are placed at intervals, and sat a long time looking upon a landscape, every foot of which is historical. Merely to look upon it is to recall a great portion of the Jewish history and the momentous events in the brief life of the Saviour, which, brief as it was, sufficed to newly create the earth. There is the Mount of Olives, with its commemorative chapels, heaps of stone, and scattered trees; there is the ancient foot-path up which David fled as a fugitive by night from the conspiracy of Absalom, what time Shimei, the relative of Saul, stoned him and cursed him; and down that Way of Triumph, the old road sweeping round its base, came the procession of the Son of David, in whose path the multitude cast their garments and branches of trees, and cried, "Hosanna in the highest." There on those hills, Mount Scopus and Olivet, were once encamped the Assyrians, and again the Persians; there shone the eagles of Rome, borne by her conquering legions; and there, in turn, Crusaders and Saracens pitched their tents. How many times has the air been darkened with missiles hurled thence upon this shining prize, and how many armies have closed in about this spot and swarmed to its destruction! There the Valley of Jehoshaphat curves down until it is merged in the Valley of the Brook Kidron. There, at the junction of the roads that run over and around Olivet, is a clump of trees surrounded by a white wall; that is the Garden of Gethsemane. Near it is the tomb of Mary. Farther down you see the tomb of Absalom, the tomb of St. James, the monolith pyramid-tipped tomb of Zacharias (none of them apparently as old as they claim to be), and the remains of a little temple, the model of which came from the banks of the Nile, that Solomon built for his Egyptian wife, the daughter of Pharaoh, wherein they worshipped the gods of her country. It is tradition also that near here were some of the temples he built for others of his strange wives: a temple to Chemosh, the Moabite god, and the image of Moloch, the devourer of children. Solomon was wiser than all men, wiser than Heman, and Chalcol, and Darda, the sons of Mahol; his friend Hiram of Tyre used to send riddles to him which no one in the world but Solomon could guess; but his wisdom failed him with the other sex, and there probably never was another Oriental court so completely ruled and ruined by women as his.

This valley below us is perhaps the most melancholy on earth: nowhere else is death so visibly master of the scene; nature is worn out, man tired out; a gray despair has settled down upon the landscape. Down there is the village of Siloam, a village of huts and holes in the rocks, opposite the cave of that name. If it were the abode of wolves it would have a better character than it has now. There is the grim cast of sin and exhaustion upon the scene. I do not know exactly how much of this is owing to the Jewish burying-ground, which occupies so much of the opposite hill. The slope is thickly shingled with gray stones, that lie in a sort of regularity which suggests their purpose. You fall to computing how many Jews there may be in that hill, layer upon layer; for the most part they are dissolved away into the earth, but you think that if they were to put on their mortal bodies and come forth, the valley itself would be filled with them almost to the height of the wall. Out of these gates, giving upon this valley of death, six hundred thousand bodies of those who had starved were thrown during the siege, and long before Titus stormed the city. I do not wonder that the Moslems think of this frightful vale as Gehenna itself.

From an orifice in the battlemented wall where we sat projects a round column, mounted there like a cannon, and perhaps intended to deceive an enemy into the belief that the wall is fortified. It is astride this column, overhanging this dreadful valley, that Mohammed will sit at the last, the judgment day. A line finer than a hair and sharper than a razor will reach from it to the tower on the Mount of Olives, stretching over the valley of the dead. This is the line Es-Serat. Mohammed will superintend the passage over it. For in that day all who ever lived, risen to judgment, must walk this razor-line; the good will cross in safety; the bad will fall into hell, that is, into Gehenna, this blasted gulf and side-hill below, thickly sown with departed Jews. It is in view of this perilous passage that the Moslem every day, during the ablution of his feet, prays: "O, make my feet not to slip on Es-Serat, on that day when feet shall slip."

IV.—NEIGHBORHOODS OF JERUSALEM.

WHEREVER we come upon traces of the Knights of St. John, there a door opens for us into romance; the very name suggests valor and courtesy and charity. Every town in the East that is so fortunate as to have any memorials of them, whatever its other historic associations, obtains an additional and special fame from its connection with this heroic order. The city of Acre recalls the memory of their useless prowess in the last struggle of the Christians to retain a foothold in Palestine; the name of the Knights of Rhodes brings before every traveller, who has seen it, the picturesque city in which the armorial insignia of this order have for him a more living interest than any antiquities of the Grecian Rose; the island fortress at the gate of the Levant owes all the interest we feel in it to the Knights of Malta; and even the city of David and of the Messiah has an added lustre as the birthplace of the Knights of St. John of Jerusalem.

From the eleventh century to the fifteenth, they are the chief figures who in that whirlwind of war contested the possession of the Levant with the Saracens and the Turks. In the forefront of every battle was seen their burnished mail, in the gloomy rear of every retreat were heard their voices of constancy and of

courage; wherever there were crowns to be cracked, or wounds to be bound up, or broken hearts to be ministered to, there were the Knights of St. John, soldiers, priests, servants, laying aside the gown for the coat of mail if need be, or exchanging the cuirass for the white cross on the breast. Originally a charitable order, dwelling in the Hospital of St. John to minister to the pilgrims to Jerusalem, and composed of young soldiers of Godfrey, who took the vows of poverty, chastity, and obedience, they resumed their arms upon the pressure of infidel hostility, and subsequently divided the order into three classes: soldiers, priests, and servants. They speedily acquired great power and wealth; their palaces, their fortifications, their churches, are even in their ruins the admiration and wonder of our age. The purity of the order: was in time somewhat sullied by luxury, but their valor never suffered the slightest eclipse; whether the field they contested was lost or won, their bravery always got new honor from it.

Nearly opposite the court of the Church of the Holy Sepulchre is the green field of Muristan, the site of the palace, church, and hospital of the Knights of St. John. The field was, on an average, twenty-five feet above the surrounding streets, and a portion of it was known to rest upon vaults. This plot of ground was given to the Prussian government, and its agents have been making excavations there; these were going on at the time of our visit. The disclosures are of great architectural and historical interest. The entrance through a peculiar Gothic gateway leads into a court. Here the first excavations were made several years ago, and disclosed some splendid remains: the apse of the costly church, cloisters, fine windows and arches of the best Gothic style. Beyond, the diggings have brought to light some of the features of the palace and hospital; an excavation of twenty-five feet reaches down to the arches of the substructure, which rest upon pillars from forty to fifty feet high. This gives us some notion of the magnificent group of buildings that once occupied this square, and also of the industry of nature as an entomber, since some four centuries have sufficed her to bury these ruins so far beneath the soil, that peasants ploughed over the palaces of the knights without a suspicion of what lay beneath.

In one corner of this field stands a slender minaret, marking the spot where the great Omar once said his prayers; four centuries after this, Saladin is said to have made his military headquarters in the then deserted palace of the Knights of St. John. There is no spot in Jerusalem where one touches more springs of romance than in this field of Muristan.

Perhaps the most interesting and doleful walk one can take near Jerusalem is that into the Valley of Kidron and through Aceldama, round to the Jaffa Gate, traversing "the whole valley of the dead bodies, and of the ashes," in the cheerful words of Jeremiah.

We picked our way through the filthy streets and on the slippery cobble-stones,—over which it seems dangerous to ride and is nearly impossible to walk,—out through St. Stephen's Gate. Near the gate, inside, we turned into an alley and climbed a heap of rubbish to see a pool, which the guide insisted upon calling Bethesda, although it is Birket Israil. Having seen many of these pools, I did not expect much, but I was still disappointed. We saw merely a hole in the ground, which is void of all appearance of ever having been even damp. The fact is, we have come to Jerusalem too late; we ought to have been here about two thousand years ago.

The slope of the hill outside the gate is covered with the turbaned tombs of Moslems; we passed under the walls and through this cemetery into the deep valley below, crossing the bed of the brook near the tombs of Absalom, Jehoshaphat, St. James, and Zacharias. These all seem to be of Roman construction; but that called Absalom's is so firmly believed to be his that for centuries every Jew who has passed it has cast a stone at it, and these pebbles of hate partially cover it. We also added to the heap, but I do not know why, for it is nearly impossible to hate any one who has been dead so long.

The most interesting phenomenon in the valley is the Fountain of the Virgin, or the Fountain of Accused Women, as it used to be called. The Moslem tradition is that it was a test of the unfaithfulness of women; those who drank of it and were guilty, died; those who were innocent received no harm. The Virgin Mary herself, being accused, accepted this test, drank of the water, and proved her chastity. Since then the fountain has borne her name. The fountain, or well, is in the side-hill, under the rocks of Ophel, and the water springs up in an artificial cave. We descended some sixteen steps to a long chamber, arched with ancient masonry; we passed through that and descended fourteen steps more into a grotto, where we saw the water flowing in and escaping by a subterranean passage. About this fountain were lounging groups of Moslem idlers, mostly women and children. Not far off a Moslem was saying his prayers, prostrating himself before a prayer-niche. We had difficulty in making our way down the steps, so encumbered were they with women. Several of them sat upon the lowest steps in the damp cavern, gossiping, filling their water-skins, or paddling about with naked feet.

The well, like many others in Syria, is intermittent and irregular in its rising and falling; sometimes it is dry, and then suddenly it bubbles up and is full again. Some scholars think this is the Pool Bethesda of the New Testament, others think that Bethesda was Siloam, which is below this well and fed by it, and would exhibit the same irregular rising and falling. This intermittent character St. John attributed to an angel who came down and troubled the water; the Moslems, with the same superstition, say that it is caused by a dragon, who sleeps therein and checks the stream when he wakes.

On our way to the Pool of Siloam, we passed the village of Si-loam, which is inhabited by about a thousand Moslems,—a nest of stone huts and caves clinging to the side-hill, and exactly the gray color of its stones. The occupation of the inhabitants appears to be begging, and hunting for old copper coins, mites, and other pieces of Jewish money. These relics they pressed upon us with the utmost urgency. It was easier to satisfy the beggars than the traders, who sallied out upon us like hungry wolves from their caves. There is a great choice of disagreeable places in the East, but I cannot now think of any that I should not prefer as a residence to Siloam.

The Pool of Siloam, magnified in my infant mind as "Siloam's shady rill," is an unattractive sink-hole of dirty water, surrounded by modern masonry. The valley here is very stony. Just below we came to Solomon's Garden, an arid spot, with patches of stonewalls, struggling to be a vegetable-garden, and somewhat green with lettuce and Jerusalem artichokes. I have no doubt it was quite another thing when Solomon and some of his wives used to walk here in the cool of the day, and even when Shallum, the son of Colhozeh, set up "the

wall of the Pool of Siloah by the king's garden."

We continued on, down to Joab's Well, passing on the way Isaiah's Tree, a decrepit sycamore propped up by a stone pillar, where that prophet was sawn asunder. There is no end to the cheerful associations of the valley. The Well of Joab, a hundred and twenty-five feet deep, and walled and arched with fine masonry, has a great appearance of antiquity. We plucked maidenhair from its crevices, and read the Old Testament references. Near it is a square pool fed by its water. Some little distance below this, the waters of all these wells, pools, drains, sinks, or whatever they are, reappear bursting up through a basin of sand and pebbles, as clear as crystal, and run brawling off down the valley under a grove of large olive-trees,—a scene rural and inviting.

I suppose it would be possible to trace the whole system of underground water ways and cisterns, from Solomon's Pool, which send? its water into town by an aqueduct near the Jaffa Gate, to Hezekiah's Pool, to the cisterns under the Harem, and so out to the Virgin's Well, the Pool of Siloam, and the final gush of sweet water below. This valley drains, probably artificially as well as naturally, the whole city, for no sewers exist in the latter.

We turned back from this sparkling brook, which speedily sinks into the ground again, absorbed by the thirsty part of the valley called Tophet, and went up the Valley of Hinnom, passing under the dark and frowning ledges of Aceldama, honey-combed with tombs. In this "field of blood" a grim stone structure forms the front of a natural cave, which is the charnel-house where the dead were cast pell-mell, in the belief that the salts in the earth would speedily consume them. The path we travel is rugged, steep, and incredibly stony. The whole of this region is inexpressibly desolate, worn-out, pale, uncanny. The height above this rocky terrace, stuffed with the dead, is the Hill of Evil Counsel, where the Jews took counsel against Jesus; and to add the last touch of an harmonious picture, just above this Potter's Field stands the accursed tree upon which Judas hanged himself, raising its gaunt branches against the twilight sky, a very gallows-tree to the imagination. It has borne no fruit since Iscariot. Towards dusk, sometimes, as you stand on the wall by Zion Gate, you almost fancy you can see *him* dangling there. It is of no use to tell me that the seed that raised this tree could not have sprouted till a thousand years after Judas was crumbled into dust; one must have faith in something.

This savage gorge, for the Valley of Hinnom is little more than that in its narrowest part, has few associations that are not horrible. Here Solomon set up the images ("the groves," or the graven images), and the temples for the lascivious rites of Ashta-roth or the human sacrifices to Moloch. Here the Jews, the kings and successors of Solomon, with a few exceptions, and save an occasional spasmodic sacrifice to Jehovah when calamity made them fear him, practised all the abominations of idolatry in use in that age. The Jews had always been more or less addicted to the worship of the god of Ammon, but Solomon first formally established it in Hinnom. Jeremiah writes of it historically, "They have built the high places of Tophet, which is in the valley of the son of Hinnom, to burn their sons and their daughters in the fire." This Moloch was as ingenious a piece of cruelty as ever tried the faith of heretics in later times, and, since it was purely a means of human sacrifice, and not a means of grace (as Inquisitorial tortures were supposed to be), its use is conclusive proof of the savage barbarity of the people who delighted in it. Moloch was the monstrous brass image of a man with the head of an ox. It was hollow, and the interior contained a furnace by which the statue was made red-hot. Children—the offerings to the god—were then placed in its glowing arms, and drums were beaten to drown their cries. It is painful to recall these things, but the traveller should always endeavor to obtain the historical flavor of the place he visits.

Continuing our walks among the antiquities of Jerusalem, we went out of the Damascus Gate, a noble battlemented structure, through which runs the great northern highway to Samaria and Damascus. The road, however, is a mere path over ledges and through loose stones, fit only for donkeys. If Rehoboam went this way in his chariot to visit Jeroboam in Samaria, there must have existed then a better road, or else the king endured hard pounding for the sake of the dignity of his conveyance. As soon as we left the gate we encountered hills of stones and paths of the roughest description. There are several rock tombs on this side of the city, but we entered only one, that called by some the Tombs of the Kings, and by others, with more reason, the Tomb of Helena, a heathen convert to Judaism, who built this sepulchre for herself early in the first century. The tomb, excavated entirely in the solid rock, is a spacious affair, having a large court and ornamented vestibule and many chambers, extending far into the rock, and a singular network of narrow passages and recesses for the deposit of the dead. It had one device that is worthy of the ancient Egyptians. The entrance was closed by a heavy square stone, so hung that it would yield to pressure from without, but would swing to its place by its own weight, and fitted so closely that it could not be moved from the inside. If any thief entered the tomb and left this slab unsecured, he would be instantly caught in the trap and become a permanent occupant. Large as the tomb is, its execution is mean compared with the rock tombs of Egypt; but the exterior stone of the court, from its exposure in this damp and variable climate, appears older than Egyptian work which has been uncovered three times as long.

At the tomb we encountered a dozen students from the Latin convent, fine-looking fellows in long blue-black gowns, red caps, and red sashes. They sat upon the grass, on the brink of the excavation, stringing rosaries and singing student songs, with evident enjoyment of the hour's freedom from the school; they not only made a picturesque appearance, but they impressed us also as a Jerusalem group which was neither sinful nor dirty. Beyond this tomb we noticed a handsome modern dwelling-house; you see others on various eminences outside the city, and we noted them as the most encouraging sign of prosperity about Jerusalem.

We returned over the hill and by the city wall, passing the Cave of Jeremiah and the door in the wall that opens into the stone quarries of Solomon. These quarries underlie a considerable portion of the city, and furnished the stone for its ancient buildings. I will not impose upon you a description of them; for it would be unfair to send you into disagreeable places that I did not explore myself.

The so-called Grotto of Jeremiah is a natural cavern in the rocky hill, vast in extent, I think thirty feet high and a hundred feet long by seventy broad,—as big as a church. The tradition is that Jeremiah lived and lamented here. In front of the cave are cut stones and pieces of polished columns built into walls and seats; these fragments seem to indicate the former existence here of a Roman temple. The cave is occupied by an

old dervish, who has a house in a rock near by, and uses the cavern as a cool retreat and a stable for his donkey. His rocky home is shared by his wife and family. He said that it was better to live alone, apart from the world and its snares. He, however, finds the reputation of Jeremiah profitable, selling admission to the cave at a franc a head, and, judging by the women and children about him, he seemed to have family enough not to be lonely.

The sojourner in Jerusalem who does not care for antiquities can always entertain himself by a study of the pilgrims who throng the city at this season. We hear more of the pilgrimage to Mecca than of that to Jerusalem; but I think the latter is the more remarkable phenomenon of our modern life; I believe it equals the former, which is usually overrated, in numbers, and it certainly equals it in zeal and surpasses it in the variety of nationalities represented. The pilgrims of the cross increase yearly; to supply their wants, to minister to their credulity, to traffic on their faith, is the great business of the Holy City. Few, I imagine, who are not in Palestine in the spring, have any idea of the extent of this vast yearly movement of Christian people upon the Holy Land, or of the simple zeal which characterizes it. If it were in any way obstructed or hindered, we should have a repetition of the Crusades, on a vaster scale and gathered from a broader area than the wildest pilgrimage of the holy war. The dribblets of travel from America and from Western Europe are as nothing in the crowds thronging to Jerusalem from Ethiopia to Siberia, from the Baltic to the Ural Mountains. Already for a year before the Easter season have they been on foot, slowly pushing their way across great steppes, through snows and over rivers, crossing deserts and traversing unfriendly countries; the old, the infirm, women as well as men, their faces set towards Jerusalem. No common curiosity moves this mass, from Ethiopia, from Egypt, from Russia, from European Turkey, from Asia Minor, from the banks of the Tagus and the Araxes; it is a true pilgrimage of faith, the one event in a life of dull monotony and sordid cares, the one ecstasy of poetry in an existence of poverty and ignorance.

We spent a morning in the Russian Hospice, which occupies the hill to the northwest of the city. It is a fine pile of buildings, the most conspicuous of which, on account of its dome, is the church, a large edifice with a showy exterior, but of no great merit or interest. We were shown some holy pictures which are set in frames incrusting with diamonds, emeralds, rubies, and other precious gems, the offerings of rich devotees, and displaying their wealth rather than their taste.

The establishment has one building for the accommodation of rich pilgrims, and a larger one set apart for peasants. The hospice lodges, free of charge, all the Russian pilgrims. The exterior court was full of them. They were sunning themselves, but not inclined to lay aside their hot furs and heavy woollens. We passed into the interior, entering room after room occupied by the pilgrims, who regarded our intrusion with good-natured indifference, or frankly returned our curiosity. Some of the rooms were large, furnished with broad divans about the sides, which served for beds and lounging-places, and were occupied by both sexes. The women, rosy-cheeked, light-haired, broad, honest-looking creatures, were mending their clothes; the men were snoozing on the divans, flat on their backs, presenting to the spectator the bottoms of their monstrous shoes, which had soles eight inches broad; a side of leather would be needed for a pair. In these not very savory rooms they cook, eat, and sleep. Here stood their stoves; here hung their pilgrim knapsacks; here were their kits of shoemaker's tools, for mending their foot-gear, which they had tugged thousands of miles; here were household effects that made their march appear more like an emigration than a pilgrimage; here were the staring pictures of St. George and the Dragon, and of other saints, the beads and the other relics, which they had bought in Jerusalem.

Although all these pilgrims owed allegiance to the Czar, they represented a considerable variety of races. They came from Archangel, from Tobolsk, from the banks of the Ural, from Kurland; they had found their way along the Danube, the Dnieper, the Don. I spoke with a group of men and women who had walked over two thousand miles before they reached Odessa and took ship for Jaffa. There were among them Cossacks, wild and untidy, light-haired barbarians from the Caucasus, dark-skinned men and women from Moscow, representatives from the remotest provinces of great Russia; for the most part simple, rude, clumsy, honest boors. In an interior court we found men and women seated on the sunny flagging, busily occupied in arranging and packing the souvenirs of their visit. There was rosemary spread out to dry; there were little round cakes of blessed bread stamped with the image of the Saviour; there were branches of palm, crowns of thorns, and stalks of cane cut at the Jordan; there were tin cases of Jordan water; there were long strips of cotton cloth stamped in black with various insignia of death, to serve at home for coffin-covers; there were skull-caps in red, yellow, and white, also stamped with holy images, to be put on the heads of the dead. I could not but in mind follow these people to their distant homes, and think of the pride with which they would show these trophies of their pilgrimage; how the rude neighbors would handle with awe a stick cut on the banks of the Jordan, or eat with faith a bit of the holy bread. How sacred, in those homes of frost and snow, will not these mementos of a land of sun, of a land so sacred, become! I can see the wooden chest in the cabin where the rosemary will be treasured, keeping sweet, against the day of need, the caps and the shrouds.

These people will need to make a good many more pilgrimages, and perhaps to quit their morose land altogether, before they can fairly rank among the civilized of the earth. They were thickset, padded-legged, short-bodied, unintelligent. The faces of many of them were worn, as if storm-beaten, and some kept their eyes half closed, as if they were long used to face the sleet and blasts of winter; and I noticed that it gave their faces a very different expression from that produced by the habit the Egyptians have of drawing the eyelids close together on account of the glare of the sun.

We took donkeys one lovely morning, and rode from the Jaffa Gate around the walls on our way to the Mount of Olives. The Jerusalem donkey is a good enough donkey, but he won't go. He is ridden with a halter, and never so elegantly caparisoned as his more genteel brother in Cairo. In order to get him along at all, it needs one man to pull the halter and another to follow behind with a stick; the donkey then moves by inches,—if he is in the humor. The animal that I rode stopped at once, when he perceived that his driver was absent. No persuasions of mine, such as kicks and whacks of a heavy stick, could move him on; he would turn out of the road, put his head against the wall, and pretend to go to sleep. You would not suppose it possible for a beast to exhibit so much contempt for a man.

On the high ground outside the wall were pitched the tents of travellers, making a very pretty effect amid

the olive-trees and the gray rocks. Now and then an Arab horseman came charging down the road, or a Turkish official cantered by; women, veiled, clad in white balloon robes that covered them from head to foot, flitted along in the sunshine, mere white appearances of women, to whom it was impossible to attribute any such errand as going to market; they seemed always to be going to or returning from the cemetery.

Our way lay down the rough path and the winding road to the bottom of the Valley of Jehoshaphat. Leaving the Garden of Gethsemane on our right, we climbed up the rugged, stony, steep path to the summit of the hill. There are a few olive-trees on the way, enough to hinder the view where the stone-walls would permit us to see anything; importunate begging Moslems beset us; all along the route we encountered shabbiness and squalor. The *rural* sweetness and peace that we associate with this dear mount appear to have been worn away centuries ago. We did not expect too much, but we were not prepared for such a shabby show-place. If we could sweep away all the filthy habitations and hideous buildings on the hill, and leave it to nature, or, indeed, convert the surface into a well-ordered garden, the spot would be one of the most attractive in the world.

We hoped that when we reached the summit we should come into an open, green, and shady place, free from the disagreeable presence of human greed and all the artificiality that interposed itself between us and the sentiment of the place. But the traveller need not expect *that* in Palestine. Everything is staked out and made a show of. Arrived at the summit, we could see little or nothing; it is crowned with the dilapidated Chapel of the Ascension. We entered a dirty court, where the custodian and his family and his animals live, and from thence were admitted to the church. In the pavement is shown the footprint of our ascending Lord, although the Ascension was made at Bethany. We paid the custodian for permission to see this manufactured scene of the Ascension. The best point of view to be had here is the old tower of the deserted convent, or the narrow passage to it on the wall, or the top of the minaret near the church. There is no place on wall or tower where one can sit; there is no place anywhere here to sit down, and in peace and quiet enjoy the magnificent prospect, and meditate on the most momentous event in human history. We snatched the view in the midst of annoyances. The most minute features of it are known to every one who reads. The portion of it I did not seem to have been long familiar with is that to the east, comprising the Jordan valley, the mountains of Moab, and the Dead Sea.

Although this mount is consecrated by the frequent presence of Christ, who so often crossed it in going to and from Bethany, and retired here to meditate and to commune with his loved followers, everything that the traveller at present encounters on its summit is out of sympathy with his memory. We escaped from the beggars and the showmen, climbed some stone-walls, and in a rough field near the brow of the hill, in a position neither comfortable nor private, but the best that we found, read the chief events in the life of Christ connected with this mount, the triumphal entry, and the last scenes transacted on yonder hill. And we endeavored to make the divine man live again, who so often and so sorrowfully regarded the then shining city of Zion from this height.

To the south of the church and a little down the hill is the so-called site of the giving of the Lord's Prayer. I do not know on what authority it is thus named. A chapel is built to mark the spot, and a considerable space is enclosed before it, in which are other objects of interest, and these were shown to us by a pleasant-spoken lady, who is connected with the convent, and has faith equal to the demands of her position. We first entered a subterranean vaulted room, with twelve rough half-pillars on each side, called the room where the Apostles composed the creed. We then passed into the chapel. Upon the four walls of its arcade is written, in great characters, the Lord's Prayer in *thirty-two* languages; among them the "Canadian."

In a little side chapel is the tomb of Aurelia de Bossa, Princesse de la Tour d'uvergne, Duchesse de Bouillon, the lady whose munificence established this chapel and executed the prayer in so many tongues. Upon the side of the tomb this fact of her benevolence is announced, and the expectation is also expressed, in French, that "God will overwhelm her with blessing for ever and ever for her good deed." Stretched upon the sarcophagus is a beautiful marble effigy of the princess; the figure is lovely, the face is sweet and seraphic, and it is a perfect likeness of her ladyship.

I do not speak at random. I happen to know that it is a perfect likeness, for a few minutes after I saw it, I met her in the corridor, in a semi-nunlike costume, with a heavy cross hanging by a long gold chain at her side. About her forehead was bound a barbarous frontlet composed of some two hundred gold coins, and ornaments not unlike those worn by the ladies of the ancient Egyptians. This incongruity of costume made me hesitate whether to recognize in this dazzling vision of womanhood a priestess of Astarte or of Christ. At the farther door, Aurelia de Bossa, Princesse de la Tour d'uvergne, Duchesse de Bouillon, stopped and blew shrilly a silver whistle which hung at her girdle, to call her straying poodle, or to summon a servant. In the rear of the chapel this lady lives in a very pretty house, and near it she was building a convent for Carmelite nuns. I cannot but regard her as the most fortunate of her sex. She enjoys not only this life, but, at the same time, all the posthumous reputation that a lovely tomb and a record of her munificence engraved thereon can give. We sometimes hear of, but we seldom see, a person, in these degenerate days, living in this world as if already in the other.

We went on over the hill to Bethany; we had climbed up by the path on which David fled from Absalom, and we were to return by the road of the Triumphal Entry. All along the ridge we enjoyed a magnificent panorama: a blue piece of the Dead Sea, the Jordan plain extending far up towards Herraon with the green ribbon of the river winding through it, and the long, even range of the Moab hills, blue in the distance. The prospect was almost Swiss in its character, but it is a mass of bare hills, with scarcely a tree except in the immediate foreground, and so naked and desolate as to make the heart ache; it would be entirely desolate but for the deep blue of the sky and an atmosphere that bathes all the great sweep of peaks and plains in color.

Bethany is a squalid hamlet clinging to the rocky hillside, with only one redeeming feature about it,—the prospect. A few wretched one-story huts of stone, and a miserable handful of Moslems, occupy this favorite home and resting-place of our Lord. Close at hand, by the roadside, cut in the rock and reached by a steep descent of twenty-six steps, is the damp and doubtful tomb of Lazarus, down into which any one may go for half a franc paid to the Moslem guardian. The house of Mary and Martha is exhibited among the big rocks and fragments of walls; upon older foundations loose walls are laid, rudely and recently patched up with cut

stones in fragments, and pieces of Roman columns. The house of Simon the leper, overlooking the whole, is a mere heap of ruins. It does not matter, however, that all these dwellings are modern; this is Bethany, and when we get away from its present wretchedness we remember only that we have seen the very place that Christ loved.

We returned along the highway of the Entry slowly, pausing to identify the points of that memorable progress, up to the crest where Jerusalem broke upon the sight of the Lord, and whence the procession, coming round the curve of the hill, would have the full view of the city. He who rides that way to-day has a grand prospect. One finds Jerusalem most poetic when seen from Olivet, and Olivet most lovely when seen from the distance of the city walls.

At the foot of the descent we turned and entered the enclosure of the Garden of Gethsemane. Three stone-wall enclosures here claim to be the real garden; one is owned by the Greeks, another by the Armenians, the third by the Latins. We chose the last, as it is the largest and pleasantest; perhaps the garden, which was certainly in this vicinity, once included them all. After some delay we were admitted by a small door in the wall, and taken charge of by a Latin monk, whose young and sweet face was not out of sympathy with the place. The garden contains a few aged olive-trees, and some small plots of earth, fenced about and secured by locked gates, in which flowers grow. The guardian gave us some falling roses, and did what he could to relieve the scene of its artificial appearance; around the wall, inside, are the twelve stations of the Passion, in the usual tawdry style.

But the birds sang sweetly in the garden, the flowers of spring were blooming, and, hemmed in by the high wall, we had some moments of solemn peace, broken only by the sound of a Moslem darabooka drum throbbing near at hand. Desecrated as this spot is, and made cheap by the petty creations of superstition, one cannot but feel the awful significance of the place, and the weight of history crowding upon him, where battles raged for a thousand years, and where the greatest victory of all was won when Christ commanded Peter to put up his sword. Near here Titus formed his columns which stormed the walls and captured the heroic city after its houses, and all this valley itself, were filled with Jewish dead; but all this is as nothing to the event of that awful night when the servants of the high-priest led away the unresisting Lord.

It is this event, and not any other, that puts an immeasurable gulf between this and all other cities, and perhaps this difference is more felt the farther one is from Jerusalem. The visitor expects too much; he is unreasonably impatient of the contrast between the mean appearance of the theatre and the great events that have been enacted on it; perhaps he is not prepared for the ignorance, the cupidity, the credulity, the audacious impostures under Christian names, on the spot where Christianity was born.

When one has exhausted the stock sights of Jerusalem, it is probably the dullest, least entertaining city of the Orient; I mean, in itself, for its pilgrims and its religious fêtes, in the spring of the year, offer always some novelties to the sight-seer; and, besides, there is a certain melancholy pleasure to be derived from roaming about outside the walls, enveloped in a historic illusion that colors and clothes the nakedness of the landscape.

The chief business of the city and the region seems to be the manufacture of religious playthings for the large children who come here. If there is any factory of relics here I did not see it. Nor do I know whether the true cross has still the power of growing, which it had in the fourth century, to renew itself under the constant demand for pieces of it. I did not go to see the place where the tree grew of which it was made; the exact spot is shown in a Greek convent about a mile and a half west of the city. The tree is said to have been planted by Abraham and Noah. This is evidently an error; it may have been planted by Adam and watered by Noah.

There is not much trade in antiquities in the city; the shops offer little to tempt the curiosity-hunter. Copper coins of the Roman period abound, and are constantly turned up in the fields outside the city, most of them battered and defaced beyond recognition. Jewish mites are plenty enough, but the silver shekel would be rare if the ingenious Jews did not keep counterfeits on hand. The tourist is waited on at his hotel by a few patient and sleek sharks with cases of cheap jewelry and doubtful antiques, and if he seeks the shops of the gold and silver bazaars he will find little more. I will not say that he will not now and then pick up a piece of old pottery that has made the journey from Central Asia, or chance upon a singular stone with a talismanic inscription. The hope that he may do so carries the traveller through a great many Eastern slums. The chief shops, however, are those of trinkets manufactured for the pilgrims, of olive-wood, ivory, bone, camels' teeth, and all manner of nuts and seeds. There are more than fifty sorts of beads, strung for profane use or arranged for rosaries, and some of them have pathetic names, like "Job's tears." Jerusalem is entitled to be called the City of Beads.

There is considerable activity in Jewish objects that are old and rather unclean; and I think I discovered something like an attempt to make a "corner" in phylacteries, that is, in old ones, for the new are made in excess of the demand. If a person desires to carry home a phylactery to exhibit to his Sunday school, in illustration of the religion of the Jews, he wants one that has been a long time in use. I do not suppose it possible that the education of any other person is as deficient as mine was in the matter of these ornamental aids in worship. But if there is one, this description is for him: the phylactery, common size, is a leathern box about an inch and a half square, with two narrow straps of leather, about three feet long, sewed to the bottom corners. The box contains a parchment roll of sacred writing. When the worshipper performs his devotions in the synagogue, he binds one of the phylacteries about his left arm and the other about his head, so that the little box has something of the appearance of a leathern horn sprouting out of his forehead. Phylacteries are worn only in the synagogue, and in this respect differ from the greasy leathern talismans of the Nubians, which contain scraps from the Koran, and are never taken off. Whatever significance the phylactery once had to the Jew it seems now to have lost, since he is willing to make it an article of merchandise. Perhaps it is poverty that compels him also to sell his ancient scriptures; parchment rolls of favorite books, such as Esther, that are some centuries old, are occasionally to be bought, and new rolls, deceitfully doctored into an appearance of antiquity, are offered freely.

A few years ago the antiquarian world was put into a ferment by what was called the "Shoepira collection," a large quantity of clay pottery,—gods, votive offerings, images, jars, and other vessels,—with inscriptions in

unknown characters, which was said to have been dug up in the land of Moab, beyond the Jordan, and was expected to throw great light upon certain passages of Jewish history, and especially upon the religion of the heathen who occupied Palestine at the time of the conquest. The collection was sent to Berlin; some eminent German *savans* pronounced it genuine; nearly all the English scholars branded it as an impudent imposture. Two collections of the articles have been sent to Berlin, where they are stored out of sight of the public generally, and Mr. Shoepira has made a third collection, which he still retains.

Mr. Shoepira is a Hebrew antiquarian and bookseller, of somewhat eccentric manners, but an enthusiast. He makes the impression of a man who believes in his discoveries, and it is generally thought in Jerusalem that if his collection is a forgery, he himself is imposed on. The account which he gives of the places where the images and utensils were found is anything but clear or definite. We are required to believe that they have been dug up in caves at night and by stealth, and at the peril of the lives of the discoverers, and that it is not safe to visit these caves in the daytime on account of the Bedaween. The fresh-baked appearance of some of the articles is admitted, and it is said that it was necessary to roast them to prevent their crumbling when exposed to the air. Our theory in regard to these singular objects is that a few of those first shown were actually discovered, and that all the remainder have been made in imitation of them. Of the characters (or alphabet) of the inscriptions, Mr. Schepira says he has determined twenty-three; sixteen of these are Phoenician, and the others, his critics say, are meaningless. All the objects are exceedingly rude and devoid of the slightest art; the images are many of them indecent; the jars are clumsy in shape, but the inscriptions are put on with some skill. The figures are supposed to have been votive offerings, and the jars either memorial or sepulchral urns.

The hideous collection appeared to me *sui generis*, although some of the images resemble the rudest of those called Phoenician which General di Cesnola unearthed in Cyprus. Without merit, they seem to belong to a rude age rather than to be the inartistic product of this age. That is, supposing them to be forgeries, I cannot see how these figures could be conceived by a modern man, who was capable of inventing a fraud of this sort. He would have devised something better, at least something less simple, something that would have somewhere betrayed a little modern knowledge and feeling. All the objects have the same barbarous tone, a kind of character that is distinct from their rudeness, and the same images and designs are repeated over and over again. This gives color to the theory that a few genuine pieces of Moabite pottery were found, which gave the idea for a large manufacture of them. And yet, there are people who see these things, and visit all the holy places, and then go away and lament that there are no manufactories in Jerusalem.

Jerusalem attracts while it repels; and both it and all Palestine exercise a spell out of all proportion to the consideration they had in the ancient world. The student of the mere facts of history, especially if his studies were made in Jerusalem itself, would be at a loss to account for the place that the Holy City occupies in the thought of the modern world, and the importance attached to the history of the handful of people who made themselves a home in this rocky country. The Hebrew nation itself, during the little time it was a nation, did not play a part in Oriental affairs at all commensurate with its posthumous reputation. It was not one of the great kingdoms of antiquity, and in that theatre of war and conquest which spread from Ethiopia to the Caspian Sea, it was scarcely an appreciable force in the great drama.

The country the Hebrews occupied was small; they never conquered or occupied the whole of the Promised Land, which extended from the Mediterranean Sea to the Arabian plain, from Hamath to Sinai. Their territory in actual possession reached only from Dan to Beersheba. The coast they never subdued; the Philistines, who came from Crete and grew to be a great people in the plain, held the lower portion of Palestine on the sea, and the Phoenicians the upper. Except during a brief period in their history, the Jews were confined to the hill-country. Only during the latter part of the reign of David and two thirds of that of Solomon did the Jewish kingdom take on the proportions of a great state. David extended the Israelitish power from the Gulf of Akaba to the Euphrates; Damascus paid him tribute; he occupied the cities of his old enemies, the Philistines, but the kingdom of Tyre, still in the possession of Hiram, marked the limit of Jewish sway in that direction. This period of territorial consequence was indeed brief. Before Solomon was in his grave, the conquests bequeathed to him by his father began to slip from his hand. The life of the Israelites as a united nation, as anything but discordant and warring tribes, after the death of Joshua, is all included in the reigns of David and Solomon,—perhaps sixty or seventy years.

The Israelites were essentially highlanders. Some one has noticed their resemblance to the Scotch Highlanders in modes of warfare. In fighting they aimed to occupy the heights. They descended into the plain reluctantly; they made occasional forays into the lowlands, but their hills were their strength, as the Psalmist said; and they found security among their crags and secluded glens from the agitations which shook the great empires of the Eastern world. Invasions, retreats, pursuits, the advance of devouring hosts or the flight of panic-stricken masses, for a long time passed by their ridge of country on either side, along the Mediterranean or through the land of Moab. They were out of the track of Oriental commerce as well as of war. So removed were they from participation in the stirring affairs of their era that they seem even to have escaped the omnivorous Egyptian conquerors. For a long period conquest passed them by, and it was not till their accumulation of wealth tempted the avarice of the great Asiatic powers that they were involved in the conflicts which finally destroyed them. The small kingdom of Judah, long after that of Israel had been utterly swept away, owed its continuance of life to its very defensible position. Solomon left Jerusalem a strong city, well supplied with water, and capable of sustaining a long siege, while the rugged country around it offered little comfort to a besieging army.

For a short time David made the name of Israel a power in the world, and Solomon, inheriting his reputation, added the triumphs of commerce to those of conquest. By a judicious heathen alliance with Hiram of Tyre he was able to build vessels on the Red Sea and man them with Phoenician sailors, for voyages to India and Ceylon; and he was admitted by Hiram to a partnership in his trading adventures to the Pillars of Hercules. But these are only episodes in the Jewish career; the nation's part in Oriental history is comparatively insignificant until the days of their great calamities. How much attention its heroism and suffering attracted at that time we do not know.

Though the Israelites during their occupation of the hill-country of Palestine were not concerned in the

great dynastic struggles of the Orient, they were not, however, at peace. Either the tribes were fighting among themselves or they were involved in sanguinary fights with the petty heathen chiefs about them. We get a lively picture of the habits of the time in a sentence in the second book of Samuel: "And it came to pass, after the year was expired, at the time when kings go forth to battle, that David sent Joab and his servants with him, and all Israel; and they destroyed the children of Ammon, and besieged Rabbah." It was a pretty custom. In that season when birds pair and build their nests, when the sap mounts in the trees and travellers long to go into far countries, kings felt a noble impulse in their veins to go out and fight other kings. But this primitive simplicity was mingled with shocking barbarity; David once put his captives under the saw, and there is nothing to show that the Israelites were more moved by sentiments of pity and compassion than their heathen neighbors. There was occasionally, however, a grim humor in their cruelty. When Judah captured King Adoni-bezek, in Bezek, he cut off his great toes and his thumbs. Adoni-bezek, who could appreciate a good thing, accepted the mutilation in the spirit in which it was offered, and said that he had himself served seventy kings in that fashion; "threescore and ten kings, having their thumbs and great toes cut off, gathered their meat under my table."

From the death of Joshua to the fall of Samaria, the history of the Jews is largely a history of civil war. From about seven hundred years before Christ, Palestine was essentially a satrapy of the Assyrian kings, as it was later to become one of the small provinces of the Roman empire. At the time when Sennacherib was waiting before Jerusalem for Hezekiah to purchase his withdrawal by stripping the gold from the doors of the Temple, the foundations of a city were laid on the banks of the Tiber, which was to extend its sway over the known world, to whose dominion the utmost power of Jerusalem was only a petty sovereignty, and which was destined to rival Jerusalem itself as the spiritual capital of the earth.

If we do not find in the military power or territorial consequence of the Jews an explanation of their influence in the modern world, still less do we find it in any faithfulness to a spiritual religion, the knowledge of which was their chief distinction among the tribes about them. Their lapses from the worship of Jehovah were so frequent, and of such long duration, that their returns to the worship of the true God seem little more than breaks in their practice of idolatry. And these spasmodic returns were due to calamities, and fears of worse judgments. Solomon sanctioned by national authority gross idolatries which had been long practised. At his death, ten of the tribes seceded from the dominion of Judah and set up a kingdom in which idolatry was made and remained the state religion, until the ten tribes vanished from the theatre of history. The kingdom of Israel, in order to emphasize its separation from that of Judah, set up the worship of Jehovah in the image of a golden calf. Against this state religion of image-worship the prophets seem to have thought it in vain to protest; they contented themselves with battling against the more gross and licentious idolatries of Baal and Ashtaroth; and Israel always continued the idol-worship established by Jeroboam. The worship of Jehovah was the state religion of the little kingdom of Judah, but during the period of its existence, before the Captivity, I think that only four of its kings were not idolaters. The people were constantly falling away into the heathenish practices of their neighbors.

If neither territorial consequence nor religious steadfastness gave the Jews rank among the great nations of antiquity, they would equally fail of the consideration they now enjoy but for one thing, and that is, after all, the chief and enduring product of any nationality; we mean, of course, its literature. It is by that, that the little kingdoms of Judah and Israel hold their sway over the world. It is that which invests ancient Jerusalem with its charm and dignity. Not what the Jews did, but the songs of their poets, the warnings and lamentations of their prophets, the touching tales of their story-tellers, draw us to Jerusalem by the most powerful influences that affect the human mind. And most of this unequalled literature is the product of seasons of turbulence, passion, and insecurity. Except the Proverbs and Song of Solomon, and such pieces as the poem of Job and the story of Ruth, which seem to be the outcome of literary leisure, the Hebrew writings were all the offspring of exciting periods. David composed his Psalms—the most marvellous interpreters of every human aspiration, exaltation, want, and passion—with his sword in his hand; and the prophets always appear to ride upon a whirlwind. The power of Jerusalem over the world is as truly a literary one as that of Athens is one of art. That literature was unknown to the ancients, or unappreciated: otherwise contemporary history would have considered its creators of more consequence than it did.

We speak, we have been speaking, of the Jerusalem before our era, and of the interest it has independent of the great event which is, after all, its chief claim to immortal estimation. It becomes sacred ground to us because there, in Bethlehem, Christ was born; because here—not in these streets, but upon this soil—he walked and talked and taught and ministered; because upon Olivet, yonder, he often sat with his disciples, and here, somewhere,—it matters not where,—he suffered death and conquered death.

This is the scene of these transcendent events. We say it to ourselves while we stand here. We can clearly conceive it when we are at a distance. But with the actual Jerusalem of to-day before our eyes, its naked desolation, its superstition, its squalor, its vivid contrast to what we conceive should be the City of our King, we find it easier to feel that Christ was born in New England than in Judæa.

V.—GOING DOWN TO JERICHO.

IT is on a lovely spring morning that we set out through the land of Benjamin to go down among the

thieves of Jericho, and to the Jordan and the Dead Sea. For protection against the thieves we take some of them with us, since you cannot in these days rely upon finding any good Samaritans there.

For some days Abd-el-Atti has been in mysterious diplomatic relations with the robbers of the wilderness, who live in Jerusalem, and farm out their territory. "Thim is great rascals," says the dragoman; and it is solely on that account that we seek their friendship: the real Bedawee is never known to go back on his word to the traveller who trusts him, so long as it is more profitable to keep it than to break it. We are under the escort of the second sheykh, who shares with the first sheykh the rule of all the Bedaween who patrol the extensive territory from Hebron to the fords of the Jordan, including Jerusalem, Bethlehem, Mar Saba, and the shores of the Dead Sea; these rulers would have been called kings in the old time, and the second sheykh bears the same relation to the first that the Cæsar did to the Augustus in the Roman Empire.

Our train is assembled in the little market-place opposite the hotel, or rather it is assembling, for horses and donkeys are slow to arrive, saddles are wanting, the bridles are broken, and the unpunctuality and shiftlessness of the East manifest themselves. Abd-el-Atti is in fierce altercation with a Koorland nobleman about a horse, which you would not say would be likely to be a bone of contention with anybody. They are both endeavoring to mount at once. Friends are backing each combatant, and the air is thick with curses in guttural German and maledictions in shrill Arabic. Unfortunately I am appealed to.

"What for this Dutchman, he take my horse?"

"Perhaps he hired it first?"

"P'aps not. I make bargain for him with the owner day before yesterday."

"I have become dis *pferd* for four days," cries the Baron.

There seems to be no reason to doubt the Baron's word; he has ridden the horse to Bethlehem, and become accustomed to his jolts, and no doubt has the prior lien on the animal. The owner has let him to both parties, a thing that often happens when the second comer offers a piastre more. Another horse is sent for, and we mount and begin to disentangle ourselves from the crowd. It is no easy matter, especially for the ladies. Our own baggage-mules head in every direction. Donkeys laden with mountains of brushwood push through the throng, scraping right and left; camels shamble against us, their contemptuous noses in the air, stretching their long necks over our heads; market-women from Bethlehem scream at us; and greasy pilgrims block our way and curse our horses' hoofs.

One by one we emerge and get into a straggling line, and begin to comprehend the size of our expedition. Our dragoman has made as extensive preparations as if we were to be the first to occupy Gilgal and Jericho, and that portion of the Promised Land. We are equipped equally well for fighting and for famine. A party of Syrians, who desire to make the pilgrimage to the Jordan, have asked permission to join us, in order to share the protection of our sheykh, and they add both picturesqueness and strength to the grand cavalcade which clatters out of Jaffa Gate and sweeps round the city wall. Heaven keep us from undue pride in our noble appearance!

Perhaps our train would impress a spectator as somewhat mixed, and he would be unable to determine the order of its march. It is true that the horses and the donkeys and the mules all have different rates of speed, and that the Syrian horse has only two gaits,—a run and a slow walk. As soon as we gain the freedom of the open country, these differences develop. The ambitious dragomen and the warlike sheykh put their horses into a run and scour over the hills, and then come charging back upon us, like Don Quixote upon the flock of sheep. The Syrians imitate this madness. The other horses begin to agitate their stiff legs; the donkeys stand still and protest by braying; the pack-mules get temporarily crazy, charge into us with the protruding luggage, and suddenly wheel into the ditch and stop. This playfulness is repeated in various ways, and adds to the excitement without improving the dignity of our march.

We are of many nationalities. There are four Americans, two of them ladies. The Doctor, who is accustomed to ride the mustangs of New Mexico and the wild horses of the Western deserts, endeavors to excite a spirit of emulation in his stiff-kneed animal, but with little success. Our dragoman is Egyptian, a decidedly heavy weight, and sits his steed like a pyramid.

The sheykh is a young man, with the treacherous eye of an eagle; a handsome fellow, who rides a lean white horse, anything but a beauty, and yet of the famous Nedjed breed from Mecca. This desert warrior wears red boots, white trousers and skirt, blue jacket, a yellow kufia, confined about the head by a black cord and falling upon his shoulders, has a long rifle slung at his back, an immense Damascus sword at his side, and huge pistols, with carved and inlaid stocks, in his belt. He is a riding arsenal and a visible fraud, this Bedawee sheykh. We should no doubt be quite as safe without him, and perhaps less liable to various extortions. But on the road, and from the moment we set out, we meet Bedaween, single and in squads, savage-looking vagabonds, every one armed with a gun, a long knife, and pistols with blunderbuss barrels, flaring in such a manner as to scatter shot over an acre of ground. These scarecrows are apparently paraded on the highway to make travellers think it is insecure. But I am persuaded that none of them would dare molest any pilgrim to the Jordan.

Our allies, the Syrians, please us better. There is a Frenchified Syrian, with his wife, from Mansura, in the Delta of Egypt. The wife is a very pretty woman (would that her example were more generally followed in the East), with olive complexion, black eyes, and a low forehead; a native of Sidon. She wears a dark green dress, and a yellow kufia on her head, and is mounted upon a mule, man-fashion, but upon a saddle as broad as a feather-bed. Her husband, in semi-Syrian costume, with top-boots, carries a gun at his back and a frightful knife in his belt. Her brother, who is from Sidon, bears also a gun, and wears an enormous sword. Very pleasant people these, who have armed themselves in the spirit of the hunter rather than of the warrior, and are as completely equipped for the chase as any Parisian who ventures in pursuit of game into any of the dangerous thickets outside of Paris.

The Sidon wife is accompanied by two servants, slaves from Soudan, a boy and a girl, each about ten years old,—two grinning, comical monkeys, who could not by any possibility be of the slightest service to anybody, unless it is a relief to their pretty mistress to vent her ill-humor upon their irresponsible persons. You could n't call them handsome, though their skins are of dazzling black, and their noses so flat that you cannot see

them in profile. The girl wears a silk gown, which reaches to her feet and gives her the quaint appearance of an old woman, and a yellow vest; the boy is clad in motley European clothes, bought second-hand with reference to his growing up to them,—upon which event the trousers-legs and cuffs of his coat could be turned down,—and a red fez contrasting finely with his black face. They are both mounted on a decrepit old horse, whose legs are like sled-stakes, and they sit astride on top of a pile of baggage, beds, and furniture, with bottles and camp-kettles jingling about them. The girl sits behind the boy and clings fast to his waist with one hand, while with the other she holds over their heads a rent white parasol, to prevent any injury to their jet complexions. When the old baggage-horse starts occasionally into a hard trot, they both bob up and down, and strike first one side and then the other, but never together; when one goes up the other goes down, as if they were moved by different springs; but both show their ivory and seem to enjoy themselves. Heaven knows why they should make a pilgrimage to the Jordan.

Our Abyssinian servant, Abdallah, is mounted, also on a pack-horse, and sits high in the air amid bags and bundles; he guides his brute only by a halter, and when the animal takes a fancy to break into a gallop, there is a rattling of dishes and kettles that sets the whole train into commotion; the boy's fez falls farther than ever back on his head, his teeth shine, and his eyes dance as he jolts into the midst of the mules and excites a panic, which starts everything into friskiness, waking up even the Soudan party, which begins to bob about and grin. There are half a dozen mules loaded with tents and bed furniture; the cook, and the cook's assistants, and the servants of the kitchen and the camp are mounted on something, and the train is attended besides by drivers and ostlers, of what nations it pleases Heaven. But this is not all. We carry with us two hunting dogs, the property of the Syrian. The dogs are not for use; they are a piece of ostentation, like the other portion of the hunting outfit, and contribute, as do the Soudan babies, to our appearance of Oriental luxury.

We straggle down through the Valley of Jehoshaphat, and around the Mount of Olives to Bethany; and from that slightly slope our route is spread before us as if we were looking upon a map. It lies through the "wilderness of Judæa." We are obliged to revise our Western notions of a wilderness as a region of gross vegetation. The Jews knew a wilderness when they saw it, and how to name it. You would be interested to know what a person who lived at Jerusalem, or anywhere along the backbone of Palestine, would call a wilderness. Nothing but the absolute nakedness of desolation could seem to him dreary. But this region must have satisfied even a person accustomed to deserts and pastures of rocks. It is a jumble of savage hills and jagged ravines, a land of limestone rocks and ledges, whitish gray in color, glaring in the sun, even the stones wasted by age, relieved nowhere by a tree, or rejoiced by a single blade of grass. Wild beasts would starve in it, the most industrious bird could not collect in its length and breadth enough soft material to make a nest of; it is what a Jew of Hebron or Jerusalem or Hamah would call a "wilderness"! This exhausts the language of description. How vividly in this desolation stands out the figure of the prophet of God, clothed with camel's hair and with a girdle of skin about his loins, "the voice of one crying in the wilderness."

The road is thronged with Jordan pilgrims. We overtake them, they pass us, we meet them in an almost continuous train. Most of them are peasants from Armenia, from the borders of the Black Sea, from the Caucasus, from Abyssinia. The great mass are on foot, trudging wearily along with their bedding and provisions, the thick-legged women carrying the heaviest loads; occasionally you see a pilgrim asleep by the roadside, his pillow a stone. But the travellers are by no means all poor or unable to hire means of conveyance,—you would say that Judæa had been exhausted of its beasts of burden of all descriptions for this pilgrimage, and that even the skeletons had been exhumed to assist in it. The pilgrims are mounted on sorry donkeys, on wrecks of horses, on mules, sometimes an entire family on one animal. Now and then we encounter a "swell" outfit, a wealthy Russian well mounted on a richly caparisoned horse and attended by his servants; some ride in palanquins, some in chairs. We overtake an English party, the central figure of which is an elderly lady, who rides in a sort of high cupboard slung on poles, and borne by a mule before and a mule behind; the awkward vehicle sways and tilts backwards and forwards, and the good woman looks out of the window of her coop as if she were sea-sick of the world. Some ladies, who are unaccustomed to horses, have arm-chairs strapped upon the horses' backs, in which they sit. Now and then two chairs are strapped upon one horse, and the riders sit back to back. Sometimes huge panniers slung on the sides of the horse are used instead of chairs, the passengers riding securely in them without any danger of falling out. It is rather a pretty sight when each basket happens to be full of children. There is, indeed, no end to the strange outfits and the odd costumes. Nearly all the women who are mounted at all are perched upon the top of all their household goods and furniture, astride of a bed on the summit. There approaches a horse which seems to have a sofa on its back, upon which four persons are seated in a row, as much at ease as if at home; it is not, however, a sofa; four baskets have been ingeniously fastened into a frame, so that four persons can ride in them abreast. This is an admirable contrivance for the riders, much better than riding in a row lengthwise on the horse, when the one in front hides the view from those behind.

Diverted by this changing spectacle, we descend from Bethany. At first there are wild-flowers by the wayside and in the fields, and there is a flush of verdure on the hills, all of which disappears later. The sky is deep blue and cloudless, the air is exhilarating; it is a day for enjoyment, and everything and everybody we encounter are in a joyous mood, and on good terms with the world. The only unamiable exception is the horse with which I have been favored. He is a stocky little stallion, of good shape, but ignoble breed, and the devil—which is, I suppose, in the horse what the old Adam is in man—has never been cast out of him. At first I am in love with his pleasant gait and mincing ways, but I soon find that he has eccentricities that require the closest attention on my part, and leave me not a moment for the scenery or for biblical reflections. The beast is neither content to go in front of the caravan nor in the rear he wants society, but the instant he gets into the crowd he lets his heels fly right and left. After a few performances of this sort, and when he has nearly broken the leg of the Syrian, my company is not desired any more by any one. No one is willing to ride within speaking distance of me. This sort of horse may please the giddy and thoughtless, but he is not the animal for me. By the time we reach the fountain 'Ain el-Huad, I have quite enough of him, and exchange steeds with the dragoman, much against the latter's fancy; he keeps the brute the remainder of the day cantering over stones and waste places along the road, and confesses at night that his bridle-hand is so swollen as to be useless.

We descend a steep hill to this fountain, which flows from a broken Saracenic arch, and waters a valley that

is altogether stony and unfertile except in some patches of green. It is a general halting-place for travellers, and presents a most animated appearance when we arrive. Horses, mules, and men are struggling together about the fountain to slake their thirst; but there is no trough nor any pool, and the only mode to get the water is to catch it in the mouth as it drizzles from the hole in the arch. It is difficult for a horse to do this, and the poor things are beside themselves with thirst. Near by are some stone ruins in which a man and woman have set up a damp coffee-shop, sherbet-shop, and smoking station. From them I borrow a shallow dish, and succeed in getting water for my horse, an experiment which seems to surprise all nations. The shop is an open stone shed with a dirt floor, offering only stools to the customers; yet when the motley crowd are seated in and around it, sipping coffee and smoking the narghilehs (water-pipes) with an air of leisure as if to-day would last forever, you have a scene of Oriental luxury.

Our way lies down a winding ravine. The country is exceedingly rough, like the Wyoming hills, but without trees or verdure. The bed of the stream is a mass of rock in shelving ledges; all the rock in sight is a calcareous limestone. After an hour of this sort of secluded travel we ascend again and reach the Red Khan, and a scene still more desolate because more extensive. The khan takes its name from the color of the rocks; perched upon a high ledge are the ruins of this ancient caravansary, little more now than naked walls. We take shelter for lunch in a natural rock grotto opposite, exactly the shadow of a rock longed for in a weary land. Here we spread our gay rugs, the servants unpack the provision hampers, and we sit and enjoy the wide view of barrenness and the picturesque groups of pilgrims. The spot is famous for its excellent well of water. It is, besides, the locality usually chosen for the scene of the adventure of the man who went down to Jericho and fell among thieves, this being the khan at which he was entertained for twopence. We take our siesta here, reflecting upon the great advance in hotel prices, and endeavoring to re-create something of that past when this was the highway between great Jerusalem and the teeming plain of the Jordan. The Syro-Phoenician woman smoked a narghileh, and, looking neither into the past nor the future, seemed to enjoy the present.

From this elevation we see again the brown Jordan Valley and the Dead Sea. Our road is downward more precipitously than it has been before. The rocks are tossed about tumultuously, and the hills are rent, but there is no evidence of any volcanic action. Some of the rock strata are bent, as you see the granite in the White Mountains, but this peculiarity disappears as we approach nearer to the Jordan. The translator of M. François Lenormant's "Ancient History of the East" says that "the miracles which accompanied the entrance of the Israelites into Palestine seem such as might have been produced by volcanic agency." No doubt they might have been; but this whole region is absolutely without any appearance of volcanic disturbance.

As we go on, we have on our left the most remarkable ravine in Palestine; it is in fact a canon in the rocks, some five hundred feet deep, the sides of which are nearly perpendicular. At the bottom of it flows the brook Cherith, finding its way out into the Jordan plain. We ride to the brink and look over into the abyss. It was about two thousand seven hundred and eighty-nine years ago, and probably about this time of the year (for the brook went dry shortly after), that Elijah, having incurred the hostility of Ahab, who held his luxurious court at Samaria, by prophesying against him, came over from Gilead and hid himself in this ravine.

"Down there," explains Abd-el-Atti, "the prophet Elijah fed him the ravens forty days. Not have that kind of ravens now."

Unattractive as this abyss is for any but a temporary summer residence, the example of Elijah recommended it to a great number of people in a succeeding age. In the wall of the precipice are cut grottos, some of them so high above the bed of the stream that they are apparently inaccessible, and not unlike the tombs in the high cliffs along the Nile. In the fourth and fifth centuries monks swarmed in all the desert places of Egypt and Syria like rabbits; these holes, near the scene of Elijah's miraculous support, were the abodes of Christian hermits, most of whom starved themselves down to mere skin and bones waiting for the advent of the crows. On the ledge above are the ruins of ancient chapels, which would seem to show that this was a place of some resort, and that the hermits had spectators of their self-denial. You might as well be a woodchuck and sit in a hole as a monk, unless somebody comes and looks at you.

As we advance, the Jordan valley opens more broadly upon our sight. At this point, which is the historical point, the scene of the passage of the Jordan and the first appearance of the Israelitish clans in the Promised Land, the valley is ten miles broad. It is by no means a level plain; from the west range of mountains it slopes to the river, and the surface is broken by hillocks, ravines, and water-courses. The breadth is equal to that between the Connecticut River at Hartford and the Talcott range of hills. To the north we have in view the valley almost to the Sea of Galilee, and can see the white and round summit of Hermon beyond; on the east and on the west the barren mountains stretch in level lines; and on the south the blue waters of the Dead Sea continue the valley between ranges of purple and poetic rocky cliffs.

The view is magnificent in extent, and plain and hills glow with color in this afternoon light. Yonder, near the foot of the eastern hills, we trace the winding course of the Jordan by a green belt of trees and bushes. The river we cannot see, for the "bottom" of the river, to use a Western phrase, from six hundred to fifteen hundred feet in breadth, is sunk below the valley a hundred feet and more. This bottom is periodically overflowed. The general aspect of the plain is that of a brown desert, the wild vegetation of which is crisped by the scorching sun. There are, however, threads of verdure in it, where the brook Cherith and the waters from the fountain 'Ain es-Sultan wander through the neglected plain, and these strips of green widen into the thickets about the little village of Rîha, the site of ancient Gilgal. This valley is naturally fertile; it may very likely have been a Paradise of fruit-trees and grass and sparkling water when the Jews looked down upon it from the mountains of Moab; it certainly bloomed in the Roman occupation; and the ruins of sugar-mills still existing show that the crusading Christians made the cultivation of the sugar-cane successful here; it needs now only the waters of the Jordan and the streams from the western foot-hills directed by irrigating ditches over its surface, moistening its ashy and nitrous soil, to become again a fair and smiling land.

Descending down the stony and precipitous road, we turn north, still on the slope of the valley. The scant grass is already crisped by the heat, the bushes are dry skeletons. A ride of a few minutes brings us to some artificial mounds and ruins of buildings upon the bank of the brook Cherith. The brickwork is the fine reticulated masonry such as you see in the remains of Roman villas at Tusculum. This is the site of Herod's

Jericho, the Jericho of the New Testament. But the Jericho which Joshua destroyed and the site of which he cursed, the Jericho which Hiel rebuilt in the days of the wicked Ahab, and where Elisha abode after the translation of Elijah, was a half-mile to the north of this modern town.

We have some difficulty in fording the brook Cherith, for the banks are precipitous and the stream is deep and swift; those who are mounted upon donkeys change them for horses, the Arab attendants wade in, guiding the stumbling animals which the ladies ride, the lumbering beast with the Soudan babies comes splashing in at the wrong moment, to the peril of those already in the torrent, and is nearly swept away; the sheykh and the servants who have crossed block the narrow landing; but with infinite noise and floundering about we all come safely over, and gallop along a sort of plateau, interspersed with thorny *nubk* and scraggy bushes. Going on for a quarter of an hour, and encountering cultivated spots, we find our tents already pitched on the bushy bank of a little stream that issues from the fountain of 'Ain es-Sultan a few rods above. Near the camp is a high mound of rubbish. This is the site of our favorite Jericho, a name of no majesty like that of Rome, and endeared to us by no associations like Jerusalem, but almost as widely known as either; probably even its wickedness would not have preserved its reputation, but for the singular incident that attended its first destruction. Jericho must have been a city of some consequence at the time of the arrival of the Israelites; we gain an idea of the civilization of its inhabitants from the nature of the plunder that Joshua secured; there were vessels of silver and of gold, and of brass and iron; and this was over fourteen hundred years before Christ.

Before we descend to our encampment, we pause for a survey of this historic region. There, towards Jordan, among the trees, is the site of Gilgal (another name that shares the half-whimsical reputation of Jericho), where the Jews made their first camp. The king of Jericho, like his royal cousins roundabout, had "no more spirit in him" when he saw the Israelitish host pass the Jordan. He shut himself up in his insufficient walls, and seems to have made no attempt at a defence. Over this upland the Jews swarmed, and all the armed host with seven priests and seven ram's-horns marched seven days round and round the doomed city, and on the seventh day the people shouted the walls down. Every living thing in the city was destroyed except Rahab and her family, the town was burned, and for five hundred years thereafter no man dared to build upon its accursed foundations. Why poor Jericho was specially marked out for malediction we are not told.

When it was rebuilt in Ahab's time, the sons of the prophets found it an agreeable place of residence; large numbers of them were gathered here while Elijah lived, and they conversed with that prophet when he was on his last journey through this valley, which he had so often traversed, compelled by the Spirit of the Lord. No incident in the biblical story so strongly appeals to the imagination, nor is there anything in the poetical conception of any age so sublime as the last passage of Elijah across this plain and his departure into heaven beyond Jordan. When he came from Bethel to Jericho, he begged Elisha, his attendant, to tarry here; but the latter would not yield either to his entreaty or to that of the sons of the prophets. We can see the way the two prophets went hence to Jordan. Fifty men of the sons of the prophets went and stood to view them afar off, and they saw the two stand by Jordan. Already it was known that Elijah was to disappear, and the two figures, lessening in the distance, were followed with a fearful curiosity. Did they pass on swiftly, and was there some premonition, in the wind that blew their flowing mantles, of the heavenly gale? Elijah smites the waters with his mantle, the two pass over dry-shod, and "as they still went on and talked, behold there appeared a chariot of fire, and horses of fire, and parted them both asunder; and Elijah went up by a whirlwind into heaven. And Elisha saw it, and he cried, 'My father, my father, the chariot of Israel and the horsemen thereof.' And he saw him no more."

Elisha returned to Jericho and abode there while the sons of the prophets sought for Elijah beyond Jordan three days, but did not find him. And the men of the city said to Elisha, "Behold, I pray thee, the situation of this city is pleasant, as my lord seeth, but the water is naught and the ground is barren." Then Elisha took salt and healed the spring of water; and ever since, to this day, the fountain, now called 'Ain es-Sultan, has sent forth sweet water.

Turning towards the northwest, we see the passage through the mountain, by the fountain 'Ain Duk, to Bethel. It was out of some woods there, where the mountain is now bare, that Elisha called the two she-bears which administered that dreadful lesson to the children who derided his baldness. All the region, indeed, recalls the miracles of Elisha. It was probably here that Naaman the Syrian came to be healed; there at Gilgal Elisha took the death out of the great pot in which the sons of the prophets were seething their pottage; and it was there in the Jordan that he made the iron axe to swim.

Of all this celebrated and ill-fated Jericho, nothing now remains but a hillock and Elisha's spring. The wild beasts of the desert prowl about it, and the night-bird hoots over its fall,—a sort of echo of the shouts that brought down its walls. Our tents are pitched near the hillock, and the animals are picketed on the open ground before them by the stream. The Syrian tourist in these days travels luxuriously. Our own party has four tents,—the kitchen tent, the dining tent, and two for lodging. They are furnished with tables, chairs, all the conveniences of the toilet, and carpeted with bright rugs. The cook is an artist, and our table is one that would have astonished the sons of the prophets. The Syrian party have their own tents; a family from Kentucky has camped near by; and we give to Jericho a settled appearance. The elder sheykh accompanies the other party of Americans, so that we have now all the protection possible.

The dragoman of the Kentuckians we have already encountered in Egypt and on the journey, and been impressed by his respectable gravity. It would perhaps be difficult for him to tell his nationality or birthplace; he wears the European dress, and his gold spectacles and big stomach would pass him anywhere for a German professor. He seems out of place as a dragoman, but if any one desired a *savant* as a companion in the East, he would be the man. Indeed, his employers soon discover that his *forte* is information, and not work. While the other servants are busy about the camps Antonio comes over to our tent, and opens up the richness of his mind, and illustrates his capacity as a Syrian guide.

"You know that mountain, there, with the chapel on top?" he asks.

"No."

"Well, that is Mt. Nebo, and that one next to it is Pisgah, the mountain of the prophet Moses."

Both these mountains are of course on the other side of the Jordan in the Moab range, but they are not identified,—except by Antonio. The sharp mountain behind us is Quarantania, the Mount of Christ's Temptation. Its whole side to the summit is honey-combed with the cells of hermits who once dwelt there, and it is still the resort of many pilgrims.

The evening is charming, warm but not depressing; the atmosphere is even exhilarating, and this surprises us, since we are so far below the sea level. The Doctor says that it is exactly like Colorado on a July night. We have never been so low before, not even in a coal-mine. We are not only about thirty-seven hundred feet below Jerusalem, we are over twelve hundred below the level of the sea. Sitting outside the tent under the starlight, we enjoy the novelty and the mysteriousness of the scene. Tents, horses picketed among the bushes, the firelight, the groups of servants and drivers taking their supper, the figure of an Arab from Gilgal coming forward occasionally out of the darkness, the singing, the occasional violent outbreak of kicking and squealing among the ill-assorted horses and mules, the running of loose-robed attendants to the rescue of some poor beast, the strong impression of the locality upon us, and I know not what Old Testament flavor about it all, conspire to make the night memorable.

"This place very dangerous," says Antonio, who is standing round, bursting with information. "Him berry wise," is Abdel-Atti's opinion of him. "Know a great deal; I tink him not live long."

"What is the danger?" we ask.

"Wild beasts, wild boars, hyenas,—all these bush full of them. It was three years now I was camped here with Baron Kronkheit. 'Bout twelve o'clock I heard a noise and came out. Right there, not twenty feet from here, stood a hyena as big as a donkey, his two eyes like fire. I did not shoot him for fear to wake up the Baron."

"Did he kill any of your party?"

"Not any man. In the morning I find he has carried off our only mutton."

Notwithstanding these dangers, the night passes without alarm, except the barking of jackals about the kitchen tent. In the morning I ask Antonio if he heard the hyenas howling in the night. "Yes, indeed, plenty of them; they came very near my tent."

We are astir at sunrise, breakfast, and start for the Jordan. It is the opinion of the dragoman and the sheykh that we should go first to the Dead Sea. It is the custom. Every tourist goes to the Dead Sea first, bathes, and then washes off the salt in the Jordan. No one ever thought of going to the Jordan first. It is impossible. We must visit the Dead Sea, and then lunch at the Jordan. We wished, on the contrary, to lunch at the Dead Sea, at which we should otherwise only have a very brief time. We insisted upon our own programme, to the great disgust of all our camp attendants, who predicted disaster.

The Jordan is an hour and a half from Jericho; that is the distance to the bathing-place of the Greek pilgrims. We descend all the way. Wild vegetation is never wanting; wild-flowers abound; we pass through thickets of thorns, bearing the yellow "apples of the Dead Sea," which grow all over this plain. At Gilgal (now called Biha) we find what is probably the nastiest village in the world, and its miserable inhabitants are credited with all the vices of Sodom. The wretched huts are surrounded by a thicket of *nubk* as a protection against the plundering Bedaween. The houses are rudely built of stone, with a covering of cane or brush, and each one is enclosed in a hedge of thorns. These thorns, which grow rankly on the plain, are those of which the "crown of thorns" was plaited, and all devout pilgrims carry away some of them. The habitations within these thorny enclosures are filthy beyond description, and poverty-stricken. And this is in a watered plain which would bloom with all manner of fruits with the least care. Indeed, there are a few tangled gardens of the rankest vegetation; in them we see the orange, the fig, the deceptive pomegranate with its pink blossoms, and the olive. As this is the time of pilgrimage, a company of Turkish soldiers from Jerusalem is encamped at the village, and the broken country about it is covered with tents, booths, shops, kitchens, and presents the appearance of a fair and a camp-meeting combined. There are hundreds, perhaps thousands, of pilgrims, who go every morning, as long as they remain here, to dip in the Jordan. Near the village rises the square tower of an old convent, probably, which is dignified with the name of the "house of Zachæus." This plain was once famed for its fertility; it was covered with gardens and palm-groves; the precious balsam, honey, and henna were produced here; the balsam gardens were the royal gift of Antony to Cleopatra, who transferred the balsam-trees to Heliopolis in Egypt.

As we ride away from Gilgal and come upon a more open and desert plain, I encounter an eagle sitting on the top of a thorn-tree, not the noblest of his species, but, for Palestine, a very fair eagle. Here is a chance for the Syrian hunter; he is armed with gun and pistols; he has his dogs; now, if ever, is the time for him to hunt, and I fall back and point out his opportunity. He does not embrace it. It is an easy shot; perhaps he is looking for wild boars; perhaps he is a tender-minded hunter. At any rate, he makes no effort to take the eagle, and when I ride forward the bird gracefully rises in the air, sweeping upward in magnificent circles, now veering towards the Mount of Temptation, and now towards Nebo, but always as serene as the air in which he floats.

And now occurs one of those incidents which are not rare to travellers in Syria, but which are rare and scarcely believed elsewhere. As the eagle hangs for a second motionless in the empyrean far before me, he drops a feather. I see the gray plume glance in the sun and swirl slowly down in the lucid air. In Judæa every object is as distinct as in a photograph. You can see things at a distance you can make no one believe at home. The eagle plume, detached from the noble bird, begins its leisurely descent.

I see in a moment my opportunity. I might never have another. All travellers in Syria whose books I have ever read have one or more startling adventures. Usually it is with a horse. I do not remember any with a horse and an eagle. I determine at once to have one. Glancing a moment at the company behind me, and then fixing my eye on the falling feather, I speak a word to my steed, and dart forward.

A word was enough. The noble animal seemed to comprehend the situation. He was of the purest Arab breed; four legs, four white ankles, small ears, slender pasterns, nostrils thin as tissue paper, and dilating upon the fall of a leaf; an eye terrible in rage, but melting in affection; a round barrel; gentle as a kitten, but spirited as a game-cock. His mother was a Nedjed mare from Medina, who had been exchanged by a Bedawee chief for nine beautiful Circassians, but only as a compromise after a war by the Pasha of Egypt for

her possession. Her father was one of the most respectable horses in Yemen. Neither father, mother, nor colt had ever eaten anything but selected dates.

At the word, Abdallah springs forward, bounding over the sand, skimming over the thorn bushes, scattering the Jordan pilgrims right and left. He does not seem to be so much a horse as a creation of the imagination,—a Pegasus. At every leap we gain upon the feather, but it is still far ahead of us, and swirling down, down, as the air takes the plume or the weight of gravity acts upon the quill. Abdallah does not yet know the object of our fearful pace, but his docility is such that every time I speak to him he seems to shoot out of himself in sudden bursts of enthusiasm. The terrible strain continues longer than I had supposed it would, for I had undercalculated both the height at which the feather was cast and my distance to the spot upon which it must fall. None but a horse fed on dates could keep up the awful gait. We fly and the feather falls; and it falls with increasing momentum. It is going, going to the ground, and we are not there. At this instant, when I am in despair, the feather twirls, and Abdallah suddenly casts his eye up and catches the glint of it. The glance suffices to put him completely in possession of the situation. He gives a low neigh of joy; I plunge both spurs into his flanks about six or seven inches; he leaps into the air, and sails like a bird,—of course only for a moment; but it is enough; I stretch out my hand and catch the eagle's plume before it touches the ground. We light on the other side of a clump of thorns, and Abdallah walks on as quietly as if nothing had happened; he was not blown; not a hair of his glossy coat was turned. I have the feather to show.

Pilgrims are plenty, returning from the river in a continuous procession, in numbers rivalling the children of Israel when they first camped at Gilgal. We descend into the river-bottom, wind through the clumps of tangled bushes, and at length reach an open place where the river for a few rods is visible. The ground is trampled like a watering-spot for cattle; the bushes are not large enough to give shade; there are no trees of size except one or two at the water's edge; the banks are slimy, there seems to be no comfortable place to sit except on your horse—on Jordan's stormy banks I *stand* and cast a wistful eye; the wistful eye encounters nothing agreeable.

The Jordan here resembles the Arkansas above Little Rock, says the Doctor; I think it is about the size of the Concord where it flows through the classic town of that name in Massachusetts; but it is much swifter. Indeed, it is a rapid current, which would sweep away the strongest swimmer. The opposite bank is steep, and composed of sandy loam or marl. The hither bank is low, but slippery, and it is difficult to dip up water from it. Close to the shore the water is shallow, and a rope is stretched out for the protection of the bathers. This is the Greek bathing-place, but we are too late to see the pilgrims enter the stream; crowds of them are still here, cutting canes to carry away, and filling their tin cans with the holy water. We taste the water, which is very muddy, and find it warm but not unpleasant. We are glad that we have decided to lunch at the Dead Sea, for a more uninviting place than this could not be found; above and below this spot are thickets and boggy ground. It is beneath the historical and religious dignity of the occasion to speak of lunch, but all tourists know what importance it assumes on such an excursion, and that their high reflections seldom come to them on the historical spot. Indeed, one must be removed some distance from the vulgar Jordan before he can glow at the thought of it. In swiftness and volume it exceeds our expectations, but its beauty is entirely a creation of the imagination.

We had the opportunity of seeing only a solitary pilgrim bathe. This was a shock-headed Greek young man, who reluctantly ventured into the dirty water up to his knees and stood there shivering, and whimpering over the orders of the priest on the bank, who insisted upon his dipping. Perhaps the boy lacked faith; perhaps it was his first experiment with water; at any rate, he stood there until his spiritual father waded in and ducked the blubbing and sputtering neophyte under. This was not a baptism, but a meritorious bath. Some seedy fellahs from Gilgal sat on the bank fishing. When I asked them if they had anything, they produced from the corners of their gowns some Roman copper coins, picked up at Jericho, and which they swore were dropped there by the Jews when they assaulted the city with the rams'-horns. These idle fishermen caught now and then a rather soft, light-colored perch, with large scales,—a sickly-looking fish, which the Greeks, however, pronounced "tayeb."

We leave the river and ride for an hour and a half across a nearly level plain, the earth of which shows salts here and there, dotted with a low, fat-leaved plant, something like the American sage-bush. Wild-flowers enliven the way, and although the country is not exactly cheerful, it has no appearance of desolation except such as comes from lack of water.

The Dead Sea is the least dead of any sheet of water I know. When we first arrived the waters were a lovely blue, which changed to green in the shifting light, but they were always animated and sparkling. It has a sloping sandy beach, strewn with pebbles, up which the waves come with a pleasant murmur. The plain is hot; here we find a cool breeze. The lovely plain of water stretches away to the south between blue and purple ranges of mountains, which thrust occasionally bold promontories into it, and add a charm to the perspective.

The sea is not inimical either to vegetable or animal life on its borders. Before we reach it I hear bird-notes high in the air like the song of a lark; birds are flitting about the shore and singing, and gulls are wheeling over the water; a rabbit runs into his hole close by the beach. Growing close to the shore is a high woody stonewort, with abundance of fleshy leaves and thousands of blossoms, delicate protruding stamens hanging over the waters of the sea itself. The plant with the small yellow fruit, which we take to be that of the apples of Sodom, also grows here. It is the *Solarium spinosa*, closely allied to the potato, egg-plant, and tomato; it has a woody stem with sharp recurved thorns, sometimes grows ten feet high, and is now covered with round orange berries.

It is not the scene of desolation that we expected, although some branches and trunks of trees, gnarled and bleached, the drift-wood of the Jordan, strewn along the beach, impart a dead aspect to the shore. These dry branches are, however, useful; we build them up into a wigwam, over which we spread our blankets; under this we sit, sheltered from the sun, enjoying the delightful breeze and the cheering prospect of the sparkling sea. The improvident Arabs, now that it is impossible to get fresh water, begin to want it; they have exhausted their own jugs and ours, having neglected to bring anything like an adequate supply. To see water and not be able to drink it is too much for their philosophy.

The party separates along the shore, seeking for places where bushes grow out upon tongues of land and offer shelter from observation for the bather. The first impression we have of the water is its perfect clearness. It is the most innocent water in appearance, and you would not suspect its saltness and extreme bitterness. No fish live in it; the water is too salt for anything but codfish. Its buoyancy has not been exaggerated by travellers, but I did not expect to find bathing in it so agreeable as it is. The water is of a happy temperature, soft, not exactly oily, but exceedingly agreeable to the skin, and it left a delicious sensation after the bath but it is necessary to be careful not to get any of it into the eyes. For myself, I found swimming in it delightful, and I wish the Atlantic Ocean were like it; nobody then would ever be drowned. Floating is no effort; on the contrary, sinking is impossible. The only annoyance in swimming is the tendency of the feet to strike out of water, and of the swimmer to go over on his head. When I stood upright in the water it came about to my shoulders; but it was difficult to stand, from the constant desire of the feet to go to the surface. I suppose that the different accounts of travellers in regard to the buoyancy of the water are due to the different specific gravity of the writers. We cannot all be doctors of divinity. I found that the best way to float was to make a bow of the body and rest with feet and head out of water, which was something like being in a cushioned chair. Even then it requires some care not to turn over. The bather seems to himself to be a cork, and has little control of his body.

About two hundred yards from the shore is an artificial island of stone, upon which are remains of regular masonry. Probably some crusader had a castle there. We notice upon looking down into the clear depths, some distance out, in the sunlight, that the lake seems, as it flows, to have translucent streaks, which are like a thick solution of sugar, showing how completely saturated it is with salts. It is, in fact, twelve hundred and ninety-two feet below the Mediterranean, nothing but a deep, half-dried-up sea; the chloride of magnesia, which gives it its extraordinarily bitter taste, does not crystallize and precipitate itself so readily as the chloride of sodium.

We look in vain for any evidence of volcanic disturbance or action of fire. Whatever there may be at the other end of the lake, there is none here. We find no bitumen or any fire-stones, although the black stones along the beach may have been supposed to be bituminous. All the pebbles and all the stones of the beach are of chalk flint, and tell no story of fire or volcanic fury.

Indeed, the lake has no apparent hostility to life. An enterprising company could draw off the Jordan thirty miles above here and make all this valley a garden, producing fruits and sugar-cane and cotton, and this lake one of the most lovely watering-places in the world. I have no doubt maladies could be discovered which its waters are exactly calculated to cure. I confidently expect to hear some day that great hotels are built upon this shore, which are crowded with the pious, the fashionable, and the diseased. I seem to see this blue and sunny lake covered with a gay multitude of bathers, floating about the livelong day on its surface; parties of them making a pleasure excursion to the foot of Pisgah; groups of them chatting, singing, amusing themselves as they would under the shade of trees on land, having umbrellas and floating awnings, and perhaps servants to bear their parasols; couples floating here and there at will in the sweet dream of a love that seems to be suspended between the heaven and the earth. No one will be at any expense for boats, for every one will be his own boat, and launch himself without sail or oars whenever he pleases. How dainty will be the little feminine barks that the tossing mariner will hail on that peaceful sea! No more wailing of wives over husbands drowned in the waves, no more rescuing of limp girls by courageous lovers. People may be shipwrecked if there comes a squall from Moab, but they cannot be drowned. I confess that this picture is the most fascinating that I have been able to conjure up in Syria.

We take our lunch under the wigwam, fanned by a pleasant breeze. The persons who partake it present a pleasing variety of nations and colors, and the "spread" itself, though simple, was gathered from many lands. Some one took the trouble to note the variety: raisins from Damascus, bread, chicken, and mutton from Jerusalem, white wine from Bethlehem, figs from Smyrna, cheese from America, dates from Nubia, walnuts from Germany, water from Elisha's well, eggs from Hen.

We should like to linger till night in this enchanting place, but for an hour the sheykh and dragoman have been urging our departure; men and beasts are represented as suffering for water,—all because we have reversed the usual order of travel. As soon as we leave the lake we lose its breeze, the heat becomes severe; the sandy plain is rolling and a little broken, but it has no shade, no water, and is indeed a weary way. The horses feel the want of water sadly. The Arabs, whom we had supposed patient in deprivation, are almost crazy with thirst. After we have ridden for over an hour the sheykh's horse suddenly wheels off and runs over the plain; my nag follows him, apparently without reason, and in spite of my efforts I am run away with. The horses dash along, and soon the whole cavalcade is racing after us. The object is soon visible,—a fringe of trees, which denotes a brook; the horses press on, dash down the steep bank, and plunge their heads into the water up to the eyes. The Arabs follow suit. The sheykh declares that in fifteen minutes more both men and horses would have been dead. Never before did anybody lunch at the Dead Sea.

When the train comes up, the patient donkey that Madame rides is pushed through the brook and not permitted to wet his muzzle. I am indignant at such cruelty, and spring off my horse, push the two donkey-boys aside, and lead the eager donkey to the stream. At once there is a cry of protest from dragomans, sheykh, and the whole crowd, "No drink donkey, no drink donkey, no let donkey, bad for donkey." There could not have been a greater outcry among the Jews when the ark of the covenant was likely to touch the water. I desist from my charitable efforts. Why the poor beast, whose whole body craved water as much as that of the horse, was denied it, I know not. It is said that if you give a donkey water on the road he won't go thereafter. Certainly the donkey is never permitted to drink when travelling. I think the patient and chastened creature will get more in the next world than his cruel masters.

Nearly all the way over the plain we have the long snowy range of Mt. Herinon in sight, a noble object, closing the long northern vista, and a refreshment to the eyes wearied by the parched vegetation of the valley and dazzled by the aerial shimmer. If we turn from the north to the south, we have the entirely different but equally poetical prospect of the blue sea enclosed in the receding hills, which fall away into the violet shade of the horizon. The Jordan Valley is unique; by a geologic fault it is dropped over a thousand feet below the sea-level; it is guarded by mountain-ranges which are from a thousand to two thousand feet high; at one end

is a mountain ten thousand feet high, from which the snow never disappears; at the other end is a lake forty miles long, of the saltiest and bitterest water in the world. All these contrasts the eye embraces at one point.

We dismount at the camp of the Russian pilgrims by Rîha, and walk among the tents and booths. The sharpers of Syria attend the strangers, tempt them with various holy wares, and entice them into their dirty coffee-shops. It is a scene of mingled credulity and knavery, of devotion and traffic. There are great booths for the sale of vegetables, nuts, and dried fruit. The whole may be sufficiently described as a camp-meeting without any prayer-tent.

At sunset I have a quiet hour by the fountain of Elisha. It is a remarkable pool. Under the ledge of limestone rocks the water gushes out with considerable force, and in such volume as to form a large brook which flows out of the basin and murmurs over a stony bed. You cannot recover your surprise to see a river in this dry country burst suddenly out of the ground. A group of native women have come to the pool with jars, and they stay to gossip, sitting about the edge upon the stones with their feet in the water. One of them wears a red gown, and her cheeks are as red as her dress; indeed, I have met several women to-day who had the complexion of a ripe Flemish Beauty pear. As it seems to be the fashion, I also sit on the bank of the stream with my feet in the warm swift water, and enjoy the sunset and the strange concourse of pilgrims who are gathering about the well. They are worthy Greeks, very decent people, men and women, who salute me pleasantly as they arrive, and seem to take my participation in the bath as an act of friendship.

Just below the large pool, by a smaller one, a Greek boy, having bathed, is about to dress, and I am interested to watch the process. The first article to go on is a white shirt; over this he puts on two blue woollen shirts; he then draws on a pair of large, loose trousers; into these the shirts are tucked, and the trousers are tied at the waist,—he is bothered with neither pins nor buttons. Then comes the turban, which is a soft gray and yellow material; a red belt is next wound twice about the waist; the vest is yellow and open in front; and the costume is completed by a jaunty jacket of yellow, prettily embroidered. The heap of clothes on the bank did not promise much, but the result is a very handsome boy, dressed, I am sure, most comfortably for this climate. While I sit here the son of the sheykh rides his horse to the pool. He is not more than ten years old, is very smartly dressed in gay colors, and exceedingly handsome, although he has somewhat the supercilious manner of a lad born in the purple. The little prince speaks French, and ostentatiously displays in his belt a big revolver. I am glad of the opportunity of seeing one of the desert robbers in embryo.

When it is dusk we have an invasion from the neighboring Bedaween, an imposition to which all tourists are subjected, it being taken for granted that we desire to see a native dance. This is one of the ways these honest people have of levying tribute; by the connivance of our protectors, the head sheykh, the entertainment is forced upon us, and the performers will not depart without a liberal backsheesh. We are already somewhat familiar with the fascinating dances of the Orient, and have only a languid curiosity about those of the Jordan; but before we are aware there is a crowd before our tents, and the evening is disturbed by doleful howling and drum-thumping. The scene in the flickering firelight is sufficiently fantastic.

The men dance first. Some twenty or thirty of them form in a half-circle, standing close together; their gowns are in rags, their black hair is tossed in tangled disorder, and their eyes shine with animal wildness. The only dancing they perform consists in a violent swaying of the body from side to side in concert, faster and faster as the excitement rises, with an occasional stamping of the feet, and a continual howling like darwishes. Two vagabonds step into the focus of the half-circle and hop about in the most stiff-legged manner, swinging enormous swords over their heads, and giving from time to time a war-whoop,—it seems to be precisely the dance of the North American Indians. We are told, however, that the howling is a song, and that the song relates to meeting the enemy and demolishing him. The longer the performance goes on the less we like it, for the uncouthness is not varied by a single graceful motion, and the monotony becomes unendurable. We long for the women to begin.

When the women begin, we wish we had the men back again. Creatures uglier and dirtier than these hags could not be found. Their dance is much the same as that of the men, a semicircle, with a couple of women to jump about and whirl swords. But the women display more fierceness and more passion as they warm to their work, and their shrill cries, dishevelled hair, loose robes, and frantic gestures give us new ideas of the capacity of the gentle sex; you think that they would not only slay their enemies, but drink their blood and dance upon their fragments. Indeed, one of their songs is altogether belligerent; it taunts the men with cowardice, it scoffs them for not daring to fight, it declares that the women like the sword and know how to use it,—and thus, and thus, and thus, lunging their swords into the air, would they pierce the imaginary enemy. But these sweet creatures do not sing altogether of war; they sing of love in the same strident voices and fierce manner: "My lover will meet me by the stream, he will take me over the water."

When the performance is over they all clamor for backsheesh; it is given in a lump to their sheykh, and they retire into the bushes and wrangle over its distribution. The women return to us and say. "Why you give our backsheesh to sheykh? We no get any. Men get all." It seems that women are animated nowadays by the same spirit the world over, and make the same just complaints of the injustice of men.

When we turn in, there is a light gleaming from a cell high up on Mt. Temptation, where some modern pilgrim is playing hermit for the night.

We are up early in the morning, and prepare for the journey to Jerusalem. Near our camp some Abyssinian pilgrims, Christians so called, have encamped in the bushes, a priest and three or four laymen, the cleverest and most decent Abyssinians we have met with. They are from Gondar, and have been a year and a half on their pilgrimage from their country to the Jordan. The priest is severely ill with a fever, and his condition excites the compassion of Abd-el-Atti, who procures for him a donkey to ride back to the city. About the only luggage of the party consists of sacred books, written on parchment and preserved with great care, among them the Gospel of St. John, the Psalms, the Pentateuch, and volumes of prayers to the Virgin. They are willing to exchange some of these manuscripts for silver, and we make up besides a little purse for the sick man. These Abyssinian Christians when at home live under the old dispensation, rather than the new, holding rather to the law of Moses than of Christ, and practise generally all the vices of all ages; the colony of them at Jerusalem is a disreputable lot of lewd beggars; so that we are glad to find some of the race who have gentle manners and are outwardly respectable. To be sure, we had come a greater distance than they to the Jordan,

but they had been much longer on the way.

The day is very hot; the intense sun beats upon the white limestone rocks and is reflected into the valleys. Our view in returning is better than it was in coming; the plain and the foot of the pass are covered with a bloom of lilac-colored flowers. We meet and pass more pilgrims than before. We overtake them resting or asleep by the roadside, in the shade of the rocks. They all carry bundles of sticks and canes cut on the banks of the Jordan, and most of them Jordan water in cans, bottles, and pitchers. There are motley loads of baggage, kitchen utensils, beds, children. We see again two, three, and four on one horse or mule, and now and then a row, as if on a bench, across the horse's back, taking up the whole road.

We overtake one old woman, a Russian, who cannot be less than seventy, with a round body, and legs as short as ducks' and as big as the "limbs" of a piano. Her big feet are encased in straw shoes, the shape of a long vegetable-dish. She wears a short calico gown, an old cotton handkerchief enwraps her gray head, she carries on her back a big bundle of clothing, an extra pair of straw shoes, a coffee-pot, and a saucepan, and she staggers under a great bundle of canes on her shoulder. Poor old pilgrim! I should like to give the old mother my horse and ease her way to the heavenly city; but I reflect that this would detract from the merit of her pilgrimage. There are men also as old hobbling along, but usually not so heavily laden. One ancient couple are riding in the deep flaps of a pannier, hanging each side of a mule; they can just see each other across the mule's back, but the swaying, sickening motion of the pannier evidently lessens their interest in life and in each other.

Our Syrian allies are as brave as usual. The Soudan babies did not go to the Jordan or the Dead Sea, and are consequently fresh and full of antics. The Syrian armament has not thus far been used; eagles, rabbits, small game of all sorts, have been disregarded; neither of the men has unslung his gun or drawn his revolvers. The hunting dogs have not once been called on to hunt anything, and now they are so exhausted by the heat that their master is obliged to carry them all the way to Jerusalem; one of the hounds he has in his arms and the other is slung in a pannier under the saddle, his master's foot resting in the other side to balance the dog. The poor creature looks out piteously from his swinging cradle. It is the most inglorious hunting-expedition I have ever been attached to.

Our sheykh becomes more and more friendly. He rides up to me occasionally, and, nobly striking his breast, exclaims, "Me! sheykh, Jordan, Jerusalem, Mar Saba, Hebron, all round; me, big." Sometimes he ends the interview with a demand for tobacco, and again with a hint of the backsheesh he expects in Jerusalem. I want to tell him that he is exactly like our stately red man at home, with his "Me! Big Injun. Chaw-tobac?"

We are very glad to get out of the heat at noon and take shelter in the rock grotto at the Red Khan. We sit here as if in a box at the theatre, and survey the passing show. The Syro-Phoenician woman smokes her narghileh again, the dogs crouching at her feet, and the Soudan babies are pretending to wait on her, and tumbling over each other and spilling everything they attempt to carry. The woman says they are great plagues to her, and cost thirty napoleons each in Soudan. As we sit here after lunch, an endless procession passes before us,—donkeys, horses, camels in long strings tied together, and pilgrims of all grades; and as they come up the hill one after the other, showing their heads suddenly, it is just as if they appeared on the stage; and they all—Bedaween, Negroes, Russians, Copts, Circassians, Greeks, Soudan slaves, and Arab masters—seem struck with a "glad surprise" upon seeing us, and tarry long enough for us to examine them.

Suddenly presents himself a tall, gayly dressed, slim fellow from Soudan (the slave of the sheykh), showing his white teeth, and his face beaming with good-nature. He is so peculiarly black that we ask him to step forward for closer inspection. Abd-el-Atti, who expresses great admiration for him, gets a coal from the tire, and holds it up by his cheek; the skin has the advantage of the coal, not only in lustre but in depth of blackness. He says that he is a Galgam, a tribe whose virtues Abdel-Atti endorses: "Thim very sincere, trusty, thim good breed."

When we have made the acquaintance of the Galgam in this thorough manner, he asks for backsheesh. The Doctor offers him a copper coin. This, without any offence in his manner, and with the utmost courtesy, he refuses, bows very low, says "Thanks," with a little irony, and turns away. In a few moments he comes back, opens his wallet, takes out two silver franc pieces, hands them to the Doctor, says with a proud politeness, "Backsheesh, Bedawee!" bows, runs across the hill, catches his horse, and rides gallantly away. It is beautifully done. Once or twice during the ride to Jerusalem we see him careering over the hills, and he approaches within hail at Bethany, but he does not lower his dignity by joining us again.

The heat is intense until we reach the well within a mile of Bethany, where we find a great concourse of exhausted pilgrims. On the way, wherever there is an open field that admits of it, we have some display of Bedawee horsemanship. The white Arab mare which the sheykh rides is of pure blood and cost him £200, although I should select her as a broken-down stage-horse. These people ride "all abroad," so to say, arms, legs, accoutrements flying; but they stick on, which is the principal thing; and the horses over the rough ground, soft fields, and loose stones, run, stop short, wheel in a flash, and exhibit wonderful training and bottom.

The high opinion we had formed of the proud spirit and generosity of the Bedawee, by the incident at the Bed Khan, was not to be maintained after our return to Jerusalem. Another of our Oriental illusions was to be destroyed forever. The cool acceptance by the Doctor of the two francs so loftily tendered, as a specimen of Bedawee backsheesh, was probably unexpected, and perhaps unprovided for by adequate financial arrangements on the part of the Galgam. At any rate, that evening he was hovering about the hotel, endeavoring to attract the attention of the Doctor, and evidently unwilling to believe that there could exist in the heart of the howadji the mean intention of retaining those francs. The next morning he sent a friend to the Doctor to ask him for the money. The Doctor replied that he should never think of returning a gift, especially one made with so much courtesy; that, indeed, the amount of the money was naught, but that he should keep it as a souvenir of the noble generosity of his Bedawee friend. This sort of sentiment seemed inexplicable to the Oriental mind. The son of the desert was as much astonished that the Frank should retain his gift, as the Spanish gentleman who presents his horse to his guest would be if the guest should take it. The offer of a present in the East is a flowery expression of a sentiment that does not exist, and its acceptance necessarily implies a return of something of greater value. After another day of anxiety the proud

and handsome slave came in person and begged for the francs until he received them. He was no better than his master, the noble sheykh, who waylaid us during the remainder of our stay for additional sixpences in backsheesh. O superb Bedawee, we did not begrudge the money, but our lost ideal!

VI.—BETHLEHEM AND MAR SABA.

BETHLEHEM lies about seven miles south of Jerusalem. It is also a hill village, reposing upon a stony promontory that is thrust out eastward from the central mountain-range; the abrupt slopes below three sides of it are terraced; on the north is a valley which lies in a direct line between it and Jerusalem; on the east are the yawning ravines and the "wilderness" leading to the Dead Sea; on the south is the wild country towards Hebron, and the sharp summit of the Frank mountain in the distance. The village lies on the ridge; and on the point at the east end of it, overlooking a vast extent of seamed and rocky and jagged country, is the gloomy pile of convents, chapels, and churches that mark the spot of the Nativity.

From its earliest mention till now the home of shepherds and of hardy cultivators of its rocky hillsides, it has been noted for the free spirit and turbulence of its inhabitants. The primal character of a place seems to have the power of perpetuating itself in all changes. Bethlehem never seems to have been afflicted with servility. During the period of David's hiding in the Cave Adullam the warlike Philistines occupied it, but David was a fit representative of the pluck and steadfastness of its people. Since the Christian era it has been a Christian town, as it is to-day, and the few Moslems who have settled there, from time to time, have found it more prudent to withdraw than to brave its hostility. Its women incline to be handsome, and have rather European than Oriental features, and they enjoy the reputation of unusual virtue; the men are industrious, and seem to have more selfrespect than the Syrians generally.

Bethlehem is to all the world one of the sweetest of words. A tender and romantic interest is thrown about it as the burial-place of Rachel, as the scene of Ruth's primitive story, and of David's boyhood and kingly consecration; so that no other place in Judæa, by its associations, was so fit to be the gate through which the Divine Child should come into the world. And the traveller to-day can visit it, with, perhaps, less shock to his feelings of reverence, certainly with a purer and simpler enjoyment, than any other place in Holy Land. He finds its ruggedness and desolateness picturesque, in the light of old song and story, and even the puerile inventions of monkish credulity do not affect him as elsewhere.

From Jerusalem we reach Bethlehem by following a curving ridge,—a lovely upland ride, on account of the extensive prospect and the breeze, and because it is always a relief to get out of the city. The country is, however, as stony as the worst portions of New England,—the mountain sheep-pastures; thick, double stone-walls enclosing small fields do not begin to exhaust the stones. On both sides of the ridge are bare, unproductive hills, but the sides of the valleys are terraced, and covered with a good growth of olive-trees. These hollows were no doubt once very fruitful by assiduous cultivation, in spite of the stones. Bethlehem, as we saw it across a deep ravine, was like a castle on a hill; there is nowhere level ground enough for a table to stand, off the ridges, and we looked in vain for the "plains of Bethlehem" about which we had tried, trustfully, to sing in youth.

Within a mile of Bethlehem gate we came to the tomb of Rachel, standing close by the highway. "And Rachel died, and was buried in the way to Ephrath, which is Bethlehem. And Jacob set a pillar upon her grave: that is the pillar of Rachel's grave unto this day." This is the testimony of the author of Genesis, who had not seen the pillar which remained to his day, but repeated the tradition of the sons of Jacob. What remained of this pillar, after the absence of the Israelites for some five centuries from Bethlehem, is uncertain; but it may be supposed that some spot near Bethlehem was identified as the tomb of Rachel upon their return, and that the present site is the one then selected. It is possible, of course, that the tradition of the pagan Canaanites may have preserved the recollection of the precise spot. At any rate, Christians seem to agree that this is one of the few ancient sites in Judæa which are authentic, and the Moslems pay it equal veneration. The square, unpretentious building erected over it is of modern construction, and the pilgrim has to content himself with looking at a sort of Moslem tomb inside, and reflecting, if he can, upon the pathetic story of the death of the mother of Joseph.

There is, alas! everywhere in Judæa something to drive away sentiment as well as pious feeling. The tomb of Rachel is now surrounded by a Moslem cemetery, and as we happened to be there on Thursday we found ourselves in the midst of a great gathering of women, who had come there, according to their weekly custom, to weep and to wail. .

You would not see in farthest Nubia a more barbarous assemblage, and not so fierce an one. In the presence of these wild mourners the term "gentler sex" has a ludicrous sound. Yet we ought not to forget that we were intruders upon their periodic grief, attracted to their religious demonstration merely by curiosity, and fairly entitled to nothing but scowls and signs of aversion. I am sure that we should give bold Moslem intruders upon our hours of sorrow at home no better reception. The women were in the usual Syrian costume; their loose gowns gaped open at the bosom, and they were without veils, and made no pretence of drawing a shawl before their faces; all wore necklaces of coins, and many of them had circlets of coins on the head, with strips depending from them, also stiff with silver pieces. A woman's worth was thus easily to be reckoned, for her entire fortune was on her head. A pretty face was here and there to be seen, but most of

them were flaringly ugly, and—to liken them to what they most resembled—physically and mentally the type of the North American squaws. They were accompanied by all their children, and the little brats were tumbling about the tombs, and learning the language of woe.

Among the hundreds of women present, the expression of grief took two forms,—one active, the other more resigned. A group seated itself about a tomb, and the members swayed their bodies to and fro, howled at the top of their voices, and pretended to weep. I had the infidel curiosity to go from group to group in search of a tear, but I did not see one. Occasionally some interruption, like the arrival of a new mourner, would cause the swaying and howling to cease for a moment, or it would now and then be temporarily left to the woman at the head of the grave, but presently all would fall to again and abandon themselves to the luxury of agony. It was perhaps unreasonable to expect tears from creatures so withered as most of these were; but they worked themselves into a frenzy of excitement, they rolled up their blue checked cotton handkerchiefs, drew them across their eyes, and then wrung them out with gestures of despair. It was the driest grief I ever saw.

The more active mourners formed a ring in a clear spot. Some thirty women standing with their faces toward the centre, their hands on each other's shoulders, circled round with unrhythmic steps, crying and singing, and occasionally jumping up and down with all their energy, like the dancers of Horace, "striking the ground with equal feet," coming down upon the earth with a heavy thud, at the same time slapping their faces with their hands; then circling around again with faster steps, and shriller cries, and more prolonged ululations, and anon pausing to jump and beat the ground with a violence sufficient to shatter their frames. The loose flowing robes, the clinking of the silver ornaments, the wild gleam of their eyes, the Bacchantic madness of their saltations, the shrill shrieking and wailing, conspired to give their demonstration an indescribable barbarity. This scene has recurred every Thursday for, I suppose, hundreds of years, within a mile of the birthplace of Jesus.

Bethlehem at a little distance presents an appearance that its interior does not maintain; but it is so much better than most Syrian villages of its size (it has a population of about three thousand), and is so much cleaner than Jerusalem, that we are content with its ancient though commonplace aspect. But the atmosphere of the town is thoroughly commercial, or perhaps I should say industrial; you do not find in it that rural and reposeful air which you associate with the birthplace of our Lord. The people are sharp, to a woman, and have a keen eye for the purse of the stranger. Every other house is a shop for the manufacture or sale of some of the Bethlehem specialties,—carvings in olive-wood and ivory and mother-of-pearl, crosses and crucifixes, and models of the Holy Sepulchre, and every sort of sacred trinket, and beads in endless variety; a little is done also in silver-work, especially in rings. One may chance upon a Mecca ring there; but the ring peculiar to Bethlehem is a silver wedding-ring; it is a broad and singular band of silver with pendants, and is worn upon the thumb. As soon as we come into the town, we are beset with sellers of various wares, and we never escape them except when we are in the convent.

The Latin convent opens its doors to tourists; it is a hospitable house, and the monks are very civil; they let us sit in a *salle-à-manger*, while waiting for dinner, that was as damp and chill as a dungeon, and they gave us a well-intended but uneatable meal, and the most peculiar wine, all at a good price. The wine, white and red, was made by the monks, they said with some pride; we tried both kinds, and I can recommend it to the American Temperance Union: if it can be introduced to the public, the public will embrace total abstinence with enthusiasm.

While we were waiting for the proper hour to visit the crypt of the Nativity, we went out upon the esplanade before the convent, and looked down into the terraced ravines which are endeared to us by so many associations. Somewhere down there is the patch of ground that the mighty man of wealth, Boaz, owned, in which sweet Ruth went gleaning in the barley-harvest. What a picture of a primitive time it is,—the noonday meal of Boaz and his handmaidens, Ruth invited to join them, and dip her morsel in the vinegar with the rest, and the hospitable Boaz handing her parched corn. We can understand why Ruth had good gleaning over this stony ground, after the rakes of the handmaidens. We know that her dress did not differ from that worn by Oriental women now; for her "veil," which Boaz filled with six measures of barley, was the head-shawl still almost universally worn,—though not by the Bethlehemite women. Their head-dress is peculiar; there seems to be on top of the head a square frame, and over this is thrown and folded a piece of white doth. The women are thus in a manner crowned, and the dress is as becoming as the somewhat similar head-covering of the Roman peasants. We learn also in the story of Ruth that the mother-in-law in her day was as wise in the ways of men as she is now. "Sit still, my daughter," she counselled her after she returned with the veil full of barley, "until thou know how the matter will fall, for the man will not be in rest until he have finished the thing this day."

Down there, somewhere in that wilderness of ravines, David, the great-grandson of Ruth, kept his father's sheep before he went to the combat with Goliath. It was there—the grotto is shown a little more than a mile from this convent—that the shepherds watched their flocks by night when the angel appeared and announced the birth of the Messiah, the Son of David. We have here within the grasp of the eye almost the beginning and the end of the old dispensation, from the burial of Rachel to the birth of our Lord, from the passing of the wandering sheikh, Jacob, with his family, to the end put to the exclusive pretensions of his descendants by the coming of a Saviour to all the world.

The cave called the Grotto of the Nativity has great antiquity. The hand-book says it had this repute as early as the second century. In the year 327 the mother of Constantine built a church over it, and this basilica still stands, and is the oldest specimen of Christian architecture in existence, except perhaps the lower church of St. Clement at Rome. It is the oldest basilica above ground retaining its perfect ancient form. The main part of the church consists of a nave and four aisles, separated by four rows of Corinthian marble columns, tradition says, taken from the temple of Solomon. The walls were once adorned with mosaics, but only fragments of them remain; the roof is decayed and leaky, the pavement is broken. This part of the church is wholly neglected, because it belongs to the several sects in common, and is merely the arena for an occasional fight. The choir is separated from the nave by a wall, and is divided into two chapels, one of the Greeks, the other of the Armenians. The Grotto of the Nativity is underneath these chapels, and each sect has a separate staircase of descent to it. The Latin chapel is on the north side of this choir, and it also has a

stairway to the subterranean apartments.

Making an effort to believe that the stable of the inn in which Christ was born was a small subterranean cave cut in the solid rock, we descended a winding flight of stairs from the Latin chapel, with a monk for our guide, and entered a labyrinth from which we did not emerge until we reached the place of the nativity, and ascended into the Greek chapel above it. We walked between glistening walls of rock, illuminated by oil-lamps here and there, and in our exploration of the gloomy passages and chambers, encountered shrines, pictures, and tombs of the sainted. We saw, or were told that we saw, the spot to which St. Joseph retired at the moment of the nativity, and also the place where the twenty thousand children who were murdered by the order of Herod—a ghastly subject so well improved by the painters of the Renaissance—are buried. But there was one chamber, or rather vault, that we entered with genuine emotion. This was the cell of Jerome, hermit and scholar, whose writings have gained him the title of Father of the Church.

At the close of the fourth century Bethlehem was chiefly famous as the retreat of this holy student, and the fame of his learning and sanctity drew to it from distant lands many faithful women, who renounced the world and its pleasures, and were content to sit at his feet and learn the way of life. Among those who resigned, and, for his sake and the cross, despised, the allurements and honors of the Roman world, was the devout Paula, a Roman matron who traced her origin from Agamemnon, and numbered the Scipios and Gracchi among her ancestors, while her husband, Joxotius, deduced a no less royal lineage from Æneas. Her wealth was sufficient to support the dignity of such a descent; among her possessions, an item in her rent-roll, was the city of Nicopolis, which Augustus built as a monument of the victory of Actium. By the advice and in the company of Jerome, her spiritual guide, she abandoned Rome and all her vast estates, and even her infant son, and retired to the holy village of Bethlehem. The great Jerome, who wrote her biography, and transmitted the story of her virtues to the most distant ages, bestowed upon her the singular title of the Mother-in-law of God! She was buried here, and we look upon her tomb with scarcely less interest than that of Jerome himself, who also rests in this thrice holy ground. At the beginning of the fifth century, when the Goths sacked Rome, a crowd of the noble and the rich, escaping with nothing saved from the wreck but life and honor, attracted also by the reputation of Jerome, appeared as beggars in the streets of this humble village. No doubt they thronged to the cell of the venerable father.

There is, I suppose, no doubt that this is the study in which he composed many of his more important treatises. It is a vaulted chamber, about twenty feet square by nine feet high. There is in Venice a picture of the study of Jerome, painted by Carpaccio, which represents a delightful apartment; the saint is seen in his study, in a rich *négligé* robe; at the side of his desk are musical instruments, music-stands, and sheets of music, as if he were accustomed to give *soirées*; on the chimney-piece are Greek vases and other objects of vertu, and in the middle of the room is a poodle-dog of the most worldly and useless of the canine breed. The artist should have seen the real study of the hermit,—a grim, unornamented vault, in which he passed his days in mortifications of the body, hearing always ringing in his ears, in his disordered mental and physical condition, the last trump of judgment.

We passed, groping our way along in this religious cellar, through a winding, narrow passage in the rock, some twenty-five feet long, and came into the place of places, the very Chapel of the Nativity. In this low vault, thirty-eight feet long and eleven feet wide, hewn in the rock, is an altar at one end. Before this altar—and we can see everything with distinctness, for sixteen silver lamps are burning about it—there is a marble slab in the pavement into which is let a silver star, with this sentence round it: *Hic de Virgine Maria Jesus Christus natus est*. The guardian of this sacred spot was a Turkish soldier, who stood there with his gun and fixed bayonet, an attitude which experience has taught him is necessary to keep the peace among the Christians who meet here. The altar is without furniture, and is draped by each sect which uses it in turn. Near by is the chapel of the “manger,” but the manger in which Christ was laid is in the church of Santa Maria Maggiore in Rome.

There is in Bethlehem another ancient cave which is almost as famous as that of the Nativity; it is called the Milk Grotto, and during all ages of the Church a most marvellous virtue has attached to it; fragments of the stone have been, and still continue to be, broken off and sent into all Christian countries; women also make pilgrimages to it in faith. The grotto is on the edge of the town overlooking the eastern ravines, and is arranged as a show-place. In our walk thither a stately Bedawee, as by accident, fell into our company, and acted as our cicerone. He was desirous that we should know that he also was a man of the world and of travel, and rated at its proper value this little corner of the earth. He had served in the French army and taken part in many battles, and had been in Paris and seen the tomb of the great emperor,—ah, there was a man! As to this grotto, they say that the Virgin used to send to it for milk,—many think so. As for him, he was a soldier, and did not much give his mind to such things.

This grotto is an excavation in the chalky rock, and might be a very good place to store milk, but for the popular prejudice in cities against chalk and water. We entered it through the court of a private house, and the damsel who admitted us also assured us that the Virgin procured milk from it. The tradition is that the Virgin and Child were concealed here for a time before the flight into Egypt; and ever since then its stone has the miraculous power of increasing the flow of the maternal breast. The early fathers encouraged this and the like superstitions in the docile minds of their fair converts, and themselves testified to the efficacy of this remarkable stone. These superstitions belong rather to the Orient than to any form of religion. There is a famous spring at Assiout in Egypt which was for centuries much resorted to by ladies who desired offspring; and the Arabs on the Upper Nile to-day, who wish for an heir male, resort to a plant which grows in the remote desert, rare and difficult to find, the leaves of which are “good for boys.” This grotto scarcely repays the visit, except for the view one obtains of the wild country below it. When we bade good by to the courtly Arab, we had too much delicacy to offer money to such a gentleman and a soldier of the empire; a delicacy not shared by him, however, for he let no false modesty hinder a request for a little backsheesh for tobacco.

On our return, and at some distance from the gate, we diverged into a lane, and sought, in a rocky field, the traditional well whose waters David longed for when he was in the Cave of Adullam,—“O that one would give me drink of the water of the well of Bethlehem, which is by the gate!” Howbeit, when the three mighty men had broken through the Philistine guards and procured him the water, David would not drink that which was

brought at such a sacrifice. Two very comely Bethlehem girls hastened at our approach to draw water from the well and gave us to drink, with all the freedom of Oriental hospitality, in which there is always an expectation of backsheesh. The water is at any rate very good, and there is no reason why these pretty girls should not turn an honest penny upon the strength of David's thirst, whether this be the well whose water he desired or not. We were only too thankful that no miraculous property is attributed to its waters. As we returned, we had the evening light upon the gray walls and towers of the city, and were able to invest it with something of its historical dignity.

The next excursion that we made from Jerusalem was so different from the one to Bethlehem, that by way of contrast I put them together. It was to the convent of Mar Saba, which lies in the wilderness towards the Dead Sea, about two hours and a half from the city.

In those good old days, when piety was measured by frugality in the use of the bath, when the holy fathers praised most those hermits who washed least, when it might perhaps be the boast of more than one virgin, devoted to the ascetic life, that she had lived fifty-eight years during which water had touched neither her hands, her face, her feet, nor any part of her body, Palestine was, after Egypt, the favorite resort of the fanatical, the unfortunate, and the lazy, who, gathered into communities, or dwelling in solitary caves, offered to the barbarian world a spectacle of superstition and abasement under the name of Christianity. But of the swarm of hermits and monks who begged in the cities and burrowed in the caves of the Holy Land in the fifth century, no one may perhaps be spoken of with more respect than St. Sabas, who, besides a reputation for sanctity, has left that of manliness and a virile ability, which his self-mortifications did not extirpate. And of all the monasteries of that period, that of Mar Saba is the only one in Judæa which has preserved almost unbroken the type of that time. St. Sabas was a Cappadocian who came to Palestine in search of a permanent retreat, savage enough to satisfy his austere soul. He found it in a cave in one of the wildest gorges in this most desolate of lands, a ravine which opens into the mountains from the brook Kidron. The fame of his zeal and piety attracted thousands to his neighborhood, so that at one time there were almost as many hermits roosting about in the rocks near him as there are inhabitants in the city of Jerusalem now. He was once enabled to lead an army of monks to that city and chastise the Monophysite heretics. His cave in the steep side of a rocky precipice became the nucleus of his convent, which grew around it and attached itself to the face of the rock as best it could. For the convent of Mar Saba is not a building, nor a collection of buildings, so much as it is a group of nests attached to the side of a precipice.

It was a bright Saturday afternoon that a young divinity student and I, taking the volatile Demetrius with us for interpreter, rode out of St. Stephen's gate, into Jehoshaphat, past the gray field of Jewish graves, down through Tophet and the wild ravine of the Kidron.

It is unpleasant to interrupt the prosperous start of a pilgrimage by a trifling incident, but at our first descent and the slightest tension on the bridle-reins of my horse, they parted from the bit. This accident, which might be serious in other lands, is of the sort that is anticipated here, and I may say assured, by the forethought of the owners of saddle-horses. Upon dismounting with as much haste as dignity, I discovered that the reins had been fastened to the bit by a single rotten string of cotton. Luckily the horse I rode was not an animal to take advantage of the weakness of his toggery. He was a Syrian horse, a light sorrel, and had no one of the good points of a horse except the name and general shape. His walk was slow and reluctant, his trot a high and non-progressive jolt, his gallop a large up-and-down agitation. To his bridle of strings and shreds no martingale was attached; no horse in Syria is subject to that restraint. When I pull the bit he sticks up his nose; when I switch him he kicks. When I hold him in, he won't go; when I let him loose, he goes on his nose. I dismount and look at him with curiosity; I wonder all the journey what his *forte* is, but I never discover. I conclude that he is like the emperor Honorius, whom Gibbon stigmatizes as "without passions, and consequently without talents."

Yet he was not so bad as the roads, and perhaps no horse would do much better on these stony and broken foot-paths. This horse is not a model (for anything but a clothes-horse), but from my observation I think that great injustice has been done to Syrian horses by travellers, who have only themselves to blame for accidents which bring the horses into disrepute. Travellers are thrown from these steeds; it is a daily occurrence; we heard continually that somebody had a fall from his horse on his way to the Jordan, or to Mar Saba, or to Nablous, and was laid up, and it was always in consequence of a vicious brute. The fact is that excellent ministers of the gospel and doctors of divinity and students of the same, who have never in their lives been on the back of a horse in any other land, seem to think when they come here that the holy air of Palestine will transform them into accomplished horsemen; or perhaps they are emulous of Elisha, that they may go to heaven by means of a fiery steed.

For a while we had the company of the singing brook Kidron, flowing clear over the stones; then we left the ravine and wound over rocky steps, which afforded us fine views of broken hills and interlacing ridges, and when we again reached the valley the brook had disappeared in the thirsty ground. The road is strewn, not paved, with stones, and in many places hardly practicable for horses. Occasionally we encountered flocks of goats and of long-wooled sheep feeding on the scant grass of the hills, and tended by boys in the coarse brown and striped garments of the country, which give a state-prison aspect to most of the inhabitants,—but there was no other life, and no trees offer relief to the hard landscape. But the way was now and then bright with flowers, thickly carpeted with scarlet anemones, the Star of Bethlehem, and tiny dandelions. Two hours from the city we passed several camps of Bedaween, their brown low camel's-hair tents pitched among the rocks and scarcely distinguishable in the sombre landscape. About the tents were grouped camels and donkeys, and from them issued and pursued us begging boys and girls. A lazy Bedawee appeared here and there with a long gun, and we could imagine that this gloomy region might be unsafe after nightfall; but no danger ever seems possible in such bright sunshine and under a sky so blue and friendly.

When a half-hour from the convent, we turned to the right from the road to the Dead Sea, and ascending a steep hill found ourselves riding along the edge of a deep winding gorge; a brook flows at the bottom, and its sides are sheer precipices of rock, generally parallel, but occasionally widening into amphitheatres of the most fantastic rocky formation. It is on one side of this narrow ravine that the convent is built, partly excavated in the rock, partly resting on jutting ledges, and partly hung out in the form of balconies,—

buildings clinging to the steep side like a comb of wild bees or wasps to a rock.

Our first note of approach to it was the sight of a square tower and of the roofs of buildings below us. Descending from the road by several short turns, and finally by two steep paved inclines, we came to a lofty wall in which is a small iron door. As we could go no farther without aid from within, Demetrius shouted, and soon we had a response from a slit in the wall fifty feet above us to the left. We could see no one, but the voice demanded who we were, and whether we had a pass. Above the slit from which the angelic voice proceeded a stone projected, and in this was an opening for letting down or drawing up articles. This habit of caution in regard to who or what shall come into the convent is of course a relic of the gone ages of tumult, but it is still necessary as a safeguard against the wandering Bedaween, who would no doubt find means to plunder the convent of its great wealth of gold, silver, and jewels if they were not at all times rigorously excluded. The convent with its walls and towers is still a fortress strong enough to resist any irregular attempts of the wandering tribes. It is also necessary to strictly guard the convent against women, who in these days of speculation, if not scientific curiosity, often knock impatiently and angrily at its gates, and who, if admitted, would in one gay and chatty hour destroy the spell of holy seclusion which has been unbroken for one thousand three hundred and ninety-two years. I know that sometimes it seems an unjust ordination of Providence that a woman cannot *be* a man, but I cannot join those who upbraid the monks of Mar Saba for inhospitality because they refuse to admit women under any circumstances into the precincts of the convent; if I do not sympathize with the brothers, I can understand their adherence to the last shred of man's independence, which is only to be maintained by absolute exclusion of the other sex. It is not necessary to revive the defamation of the early Christian ages, that the devil appeared oftener to the hermit in the form of a beautiful woman than in any other; but we may not regret that there is still one spot on the face of the earth, if it is no bigger than the sod upon which Noah's pioneer dove alighted, in which weak men may be safe from the temptation, the criticism, and the curiosity of the superior being. There is an airy tower on the rocks outside the walls which women may occupy if they cannot restrain their desire to lodge in this neighborhood, or if night overtakes them here on their way from the Dead Sea; there Madame Pfeiffer, Miss Martineau, and other famous travellers of their sex have found refuge, and I am sorry to say abused their proximity to this retreat of shuddering man by estimating the piety of its inmates according to their hospitality to women. So far as I can learn, this convent of Mar Saba is now the only retreat left on this broad earth for Man; and it seems to me only reasonable that it should be respected by his generous and gentle, though inquisitive foe.

After further parley with Demetrius and a considerable interval, we heard a bell ring, and in a few moments the iron door opened, and we entered, stepping our horses carefully over the stone threshold, and showing our pass from the Jerusalem Patriarch to an attendant, and came into a sort of stable hewn in the rock. Here we abandoned our horses, and were taken in charge by a monk whom the bell had summoned from below. He conducted us down several long flights of zigzag stairs in the rock, amid hanging buildings and cells, until we came to what appears to be a broad ledge in the precipice, and found ourselves in the central part of this singular hive, that is, in a small court, with cells and rocks on one side and the convent church, which overhangs the precipice, on the other. Beside the church and also at another side of the court are buildings in which pilgrims are lodged, and in the centre of the court is the tomb of St. Sabas himself. Here our passports were examined, and we were assigned a cheerful and airy room looking upon the court and tomb.

One of the brothers soon brought us coffee, and the promptness of this hospitality augured well for the remainder of our fare; relying upon the reputation of the convent for good cheer, we had brought nothing with us, not so much as a biscuit. Judge of our disgust, then, at hearing the following dialogue between Demetrius and the Greek monk.

"What time can the gentlemen dine?"

"Any time they like."

"What have you for dinner?"

"Nothing."

"You can give us no dinner?"

"To be sure not. It is fast."

"But we have n't a morsel, we shall starve."

"Perhaps I can find a little bread."

"Nothing else?"

"We have very good raisins."

"Well," we interposed, "kill us a chicken, give us a few oysters, stewed or broiled, we are not particular." This levity, which was born of desperation, for the jolting ride from Jerusalem had indisposed us to keep a fast, especially a fast established by a church the orthodoxy of whose creed we had strong reasons to doubt, did not affect the monk. He replied, "Chicken! it is impossible." We shrunk our requisition to eggs.

"If I can find an egg, I will see." And the brother departed, with *carte blanche* from us to squeeze his entire establishment.

Alas, fasting is not in Mar Saba what it is in New England, where an appointed fast-day is hailed as an opportunity to forego lunch in order to have an extraordinary appetite for a better dinner than usual!

The tomb of St. Sabas, the central worship of this hive, is a little plastered hut in the middle of the court; the interior is decorated with pictures in the Byzantine style, and a lamp is always burning there. As we stood at the tomb we heard voices chanting, and, turning towards the rock, we saw a door from which the sound came. Pushing it open, we were admitted into a large chapel, excavated in the rock. The service of vespers was in progress, and a band of Russian pilgrims were chanting in rich bass voices, producing more melody than I had ever heard in a Greek church. The excavation extends some distance into the hill; we were shown the cells of St. John of Damascus and other hermits, and at the end a charnel-house piled full of the bones of men. In the dim light their skulls grinned at us in a horrid familiarity; in that ghastly jocularity which a skull always puts on, with a kind of mocking commentary upon the strong chant of the pilgrims, which

reverberated in all the recesses of the gloomy cave,—fresh, hearty voices, such as these skulls have heard (if they can hear) for many centuries. The pilgrims come, and chant, and depart, generation after generation; the bones and skulls of the fourteen thousand martyrs in this charnel-bin enjoy a sort of repulsive immortality. The monk, who was our guide, appeared to care no more for the remains of the martyrs than for the presence of the pilgrims. In visiting such storehouses one cannot but be struck by the light familiarity with the relics and insignia of death which the monks have acquired.

This St. John of Damascus, whose remains repose here, was a fiery character in his day, and favored by a special miracle before he became a saint. He so distinguished himself by his invectives against Leo and Constantine and other iconoclast emperors at Constantinople who, in the eighth century, attempted to extirpate image-worship from the Catholic church, that he was sentenced to lose his right hand. The story is that it was instantly restored by the Virgin Mary. It is worthy of note that the superstitious Orient more readily gave up idolatry or image-worship under the Moslems than under the Christians.

As the sun was setting we left the pilgrims chanting to the martyrs, and hastened to explore the premises a little, before the light should fade. We followed our guide up stairs and down stairs, sometimes cut in the stone, sometimes wooden stairways, along hanging galleries, through corridors hewn in the rock, amid cells and little chapels,—a most intricate labyrinth, in which the uninitiated would soon lose his way. Here and there we came suddenly upon a little garden spot as big as a bed-blanket, a ledge upon which soil had been deposited. We walked also under grape-trellises, we saw orange-trees, and the single palm-tree that the convent boasts, said to have been planted by St. Sabas himself. The plan of this establishment gradually developed itself to us. It differs from an ordinary convent chiefly in this,—the latter is spread out flat on the earth, Mar Saba is set up edgewise. Put Mar Saba on a plain, and these little garden spots and graperies would be courts and squares amid buildings, these galleries would be bridges, these cells or horizontal caves would be perpendicular tombs and reservoirs.

When we arrived, we supposed that we were almost the only guests. But we found that the place was full of Greek and Russian pilgrims; we encountered them on the terraces, on the flat roofs, in the caves, and in all out-of-the-way nooks. Yet these were not the most pleasing nor the most animated tenants of the place; wherever we went the old rookery was made cheerful by the twittering notes of black birds with yellow wings, a species of grackle, which the monks have domesticated, and which breed in great numbers. Steeled as these good brothers are against the other sex, we were glad to discover this streak of softness in their nature. High up on the precipice there is a bell-tower attached to a little chapel, and in it hang twenty small bells, which are rung to call the inmates to prayer. Even at this height, and indeed wherever we penetrated, we were followed by the monotonous chant which issued from the charnel-house.

We passed by a long row of cells occupied by the monks, but were not permitted to look into them; nor were we allowed to see the library, which is said to be rich in illuminated manuscripts. The convent belongs to the Greek church; its monks take the usual vows of poverty, chastity, and obedience, and fortify themselves in their holiness by opposing walls of adamant to all womankind. There are about fifty monks here at present, and uncommonly fine-looking fellows,—not at all the gross and greasy sort of monk that is sometimes met. Their outward dress is very neat, consisting of a simple black gown and a round, high, flat-topped black cap.

Our dinner, when it was brought into our apartment, answered very well one's idea of a desert, but it was a very good Oriental dinner. The chief articles were a piece of hard black bread, and two boiled eggs, cold, and probably brought by some pilgrim from Jerusalem; but besides, there were raisins, cheese, figs, oranges, a bottle of golden wine, and tea. The wine was worthy to be celebrated in classic verse; none so good is, I am sure, made elsewhere in Syria; it was liquid sunshine; and as it was manufactured by the monks, it gave us a new respect for their fastidious taste.

The vaulted chamber which we occupied was furnished on three sides with a low divan, which answered the double purpose of chairs and couch. On one side, however, and elevated in the wall, was a long niche, exactly like the recessed tombs in cathedrals, upon which, toes turned up, lie the bronze or wooden figures of the occupants. This was the bed of honor. It was furnished with a mattress and a thick counterpane having one sheet sewed to it. With reluctance I accepted the distinction of climbing into it, and there I slept, laid out, for all the world, like my own effigy. From the ceiling hung a dim oil-lamp, which cast a gloom rather than a light upon our sepulchral place of repose. Our windows looked out towards the west, upon the court, upon the stairs, upon the terraces, roofs, holes, caves, grottos, wooden balconies, bird-cages, steps entering the rock and leading to cells; and, towards the south, along the jagged precipice. The convent occupies the precipice from the top nearly to the bottom of the ravine; the precipice opposite is nearly perpendicular, close at hand, and permits no view in that direction. Heaven is the only object in sight from this retreat.

Before the twilight fell the chanting was still going on in the cavern, monks and pilgrims were gliding about the court, and numbers of the latter were clustered in the vestibule of the church, in which they were settling down to lodge for the night; and high above us I saw three gaudily attired Bedaween, who had accompanied some travellers from the Dead Sea, leaning over the balustrade of the stairs, and regarding the scene with Moslem complacency. The hive settled slowly to rest.

But the place was by no means still at night. There was in the court an old pilgrim who had brought a cough from the heart of Russia, who seemed to be trying to cough himself inside out. There were other noises that could not be explained. There was a good deal of clattering about in wooden shoes. Every sound was multiplied and reduplicated from the echoing rocks. The strangeness of the situation did not conduce to sleep, not even to an effigy-like repose; but after looking from the window upon the march of the quiet stars, after watching the new moon disappear between the roofs, and after seeing that the door of St. Sabas's tomb was closed, although his light was still burning, I turned in; and after a time, during which I was conscious that not even vows of poverty, chastity, and obedience are respected by fleas, I fell into a light sleep.

From this I was aroused by a noise that seemed like the call to judgment, by the most clamorous jangle of discordant bells,—all the twenty were ringing at once, and each in a different key. It was not simply a din, it was an earthquake of sound. The peals were echoed from the opposite ledges, and reverberated among the rocks and caves and sharp angles of the convent, until the crash was intolerable. It was worse than the slam, bang, shriek, clang, clash, roar, dissonance, thunder, and hurricane with which all musicians think it

absolutely necessary to close any overture, symphony, or musical composition whatever, however decent and quiet it may be. It was enough to rouse the deafest pilgrim, to wake the dead martyrs and set the fourteen thousand skulls hunting for their bones, to call even St. Sabas himself from his tomb. I arose. I saw in the starlight figures moving about the court, monks in their simple black gowns. It was, I comprehended then, the call to midnight prayer in the chapel, and, resolved not to be disturbed further by it, I climbed back into my tomb.

But the clamor continued; I heard such a clatter of hobnailed shoes on the pavement, besides, that I could bear it no longer, got up, slipped into some of my clothes, opened the door, and descended by our winding private stairway into the court.

The door of St. Sabas's tomb was wide open!

Were the graves opening, and the dead taking the air? Did this tomb open of its own accord? Out of its illuminated interior would the saint stalk forth and join this great procession, the *reveille* of the quick and the slow?

From above and from below, up stairs and down stairs, out of caves and grottos and all odd roosting-places, the monks and pilgrims were pouring and streaming into the court; and the bells incessantly called more and more importunately as the loiterers delayed.

The church was open, and lighted at the altar end. I glided in with the other ghostly, hastily clad, and yawning pilgrims. The screen at the apse before the holy place, a mass of silver and gilding, sparkled in the candlelight; the cross above it gleamed like a revelation out of the gloom; but half of the church was in heavy shadow. From the penetralia came the sound of priestly chanting; in the wooden stalls along each side of the church stood, facing the altar, the black and motionless figures of the brothers. The pilgrims were crowding and jostling in at the door. A brother gave me a stall near the door, and I stood in it, as statue-like as I could, and became a brother for the time being.

At the left of the door stood a monk with impassive face; before him on a table were piles of wax tapers and a solitary lighted candle. Every pilgrim who entered bought a taper and paid two coppers for it. If he had not the change the monk gave him change, and the pilgrim carefully counted what he received and objected to any piece he thought not current. You may wake these people up any time of night, and find their perceptions about money unobscured. The seller never looked at the buyer, nor at anything except the tapers and the money.

The pilgrims were of all ages and grades; very old men, stout, middle-aged men, and young athletic fellows; there were Russians from all the provinces; Greeks from the isles, with long black locks and dark eyes, in fancy embroidered jackets and leggins, swarthy bandits and midnight pirates in appearance. But it tends to make anybody look like a pirate to wake him up at twelve o'clock at night, and haul him into the light with no time to comb his hair. I dare say that I may have appeared to these honest people like a Western land-pirate. And yet I should rather meet some of those Greeks in a lighted church than outside the walls at midnight.

Each pilgrim knelt and bowed himself, then lighted his taper and placed it on one of the tripods before the screen. In time the church was very fairly illuminated, and nearly filled with standing worshippers, bowing, crossing themselves, and responding to the reading and chanting in low murmurs. The chanting was a very nasal intoning, usually slow, but now and then breaking into a lively gallop. The assemblage, quiet and respectful, but clad in all the vagaries of Oriental colors and rags, contained some faces that appeared very wild in the half-light. When the service had gone on half an hour, a priest came out with a tinkling censer and incensed carefully every nook and corner and person (even the vestibule, where some of the pilgrims slept, which needed it), until the church was filled with smoke and perfume. The performance went on for an hour or more, but I crept back to bed long before it was over, and fell to sleep on the drone of the intoning.

We were up before sunrise on Sunday morning. The pilgrims were already leaving for Jerusalem. There was no trace of the last night's revelry; everything was commonplace in the bright daylight. We were served with coffee, and then finished our exploration of the premises.

That which we had postponed as the most interesting sight was the cell of St. Sabas. It is a natural grotto in the rock, somewhat enlarged either by the saint or by his successors. When St. Sabas first came to this spot, he found a lion in possession. It was not the worst kind of a lion, but a sort of Judæan lion, one of those meek beasts over whom the ancient hermits had so much control. St. Sabas looked at the cave and at the lion, but the cave suited him better than the lion. The lion looked at the saint, and evidently knew what was passing in his mind. For the lions in those days were nearly as intelligent as anybody else. And then St. Sabas told the lion to go away, that he wanted that lodging for himself. And the lion, without a growl, put his tail down, and immediately went away. There is a picture of this interview still preserved at the convent, and any one can see that it is probable that such a lion as the artist has represented would move on when requested to do so.

In the cave is a little recess, the entrance to which is a small hole, a recess just large enough to accommodate a person in a sitting posture. In this place St. Sabas sat for seven years, without once coming out. That was before the present walls were built in front of the grotto, and he had some light,—he sat seven years on that hard stone, as long as the present French Assembly intends to sit. It was with him also a provisional sitting, in fact, a Septennate.

In the court-yard, as we were departing, were displayed articles to sell to the pious pilgrims: canes from the Jordan; crosses painted, and inlaid with cedar or olive wood, or some sort of Jordan timber; rude paintings of the sign-board order done by the monks, St. George and the Dragon being the favorite subject; hyperbolic pictures of the convent and the saint, stamped in black upon cotton cloth; and holy olive-oil in tin cans.

Perhaps the most taking article of merchandise offered was dates from the palm-tree that St. Sabas planted. These dates have no seeds. There was something appropriate about this; childless monks, seedless dates. One could understand that. But these dates were bought by the pilgrims to carry to their wives who desire but have not sons. By what reasoning the monks have convinced them that fruitless dates will be a cause of fruitfulness, I do not know.

We paid our tribute, climbed up the stairways and out the grim gate into the highway, and had a glorious ride in the fresh morning air, the way enlivened by wild-flowers, blue sky, Bedaween, and troops of returning

pilgrims, and finally ennobled by the sight of Jerusalem itself, conspicuous on its hill.

VII.—THE FAIR OF MOSES; THE ARMENIAN PATRIARCH.

THE Moslems believe that their religion superseded Judaism and Christianity,—Mohammed closing the culminating series of six great prophets, Adam, Noah, Abraham, Moses, Jesus, Mohammed,—and that they have a right to administer on the effects of both. They appropriate our sacred history and embellish it without the least scruple, assume exclusive right to our sacred places, and enroll in their own calendar all our notable heroes and saints.

On the 16th of April was inaugurated in Jerusalem the *fête* and fair of the Prophet Moses. The fair is held yearly at Neby Mûsa, a Moslem wely, in the wilderness of Judæa, some three or four hours from Jerusalem on a direct line to the Dead Sea. There Moses, according to the Moslem tradition, was buried, and thither the faithful resort in great crowds at this anniversary, and hold a four days' fair.

At midnight the air was humming with preparations; the whole city buzzed like a hive about to swarm. For many days pilgrims had been gathering for this festival, coming in on all the mountain roads, from Grath and Askalon, from Hebron, from Nablous and Jaffa,—pilgrims as zealous and as ragged as those that gather to the Holy Sepulchre and on the banks of the Jordan. In the early morning we heard the pounding of drums, the clash of cymbals, the squeaking of fifes, and an occasional gun, let off as it were by accident,—very much like the dawn of a Fourth of July at home. Processions were straggling about the streets, apparently lost, like ward-delegations in search of the beginning of St. Patrick's Day; a disorderly scramble of rags and color, a rabble hustling along without step or order, preceded usually by half a dozen enormous flags, green, red, yellow, and blue, embroidered with various devices and texts from the Koran, which hung lifeless on their staves, but grouped in mass made as lively a study of color as a bevy of sails of the Chioggia fishing-boats flocking into the port of Venice at sunrise. Before the banners walked the musicians, filling the narrow streets with a fearful uproar of rude drums and cymbals. These people seem to have inherited the musical talent of the ancient Jews, and to have the same passion for noise and discord.

As the procession would not move to the Tomb of Moses until afternoon, we devoted the morning to a visit to the Armenian Patriarch. Isaac, archbishop, and by the grace of God Patriarch of the Armenians of Jerusalem, occupant of the holy apostolic seat of St. James (the Armenian convent stands upon the traditional site of the martyrdom of St. James), claims to be the spiritual head of five millions of Armenians, in Turkey, Syria, Palestine, India, and Persia. By firman from the Sultan, the Copts and the Syrian and the Abyssinian Christians are in some sort under his jurisdiction, but the authority is merely nominal.

The reception-room of the convent is a handsome hall (for Jerusalem), extending over an archway of the street below and looking upon a garden. The walls are hung with engravings and lithographs, most of them portraits of contemporary sovereigns and princes of Europe, in whose august company the Patriarch seems to like to sun himself. We had not to wait long before he appeared and gave us a courteous and simple welcome. As soon as he learned that we were Americans, he said that he had something that he thought would interest us, and going to his table took out of the drawer an old number of an American periodical containing a portrait of an American publisher, which he set great store by. We congratulated him upon his possession of this treasure, and expressed our passionate fondness for this sort of thing, for we soon discovered the delight the Patriarch took in pictures and especially in portraits, and not least in photographs of himself in the full regalia of his sacred office. And with reason, for he is probably the handsomest potentate in the world. He is a tall, finely proportioned man of fifty years, and his deportment exhibits that happy courtesy which is born of the love of approbation and a kindly opinion of self. He was clad in the black cloak with the pointed hood of the convent, which made a fine contrast to his long, full beard, turning white; his complexion is fair, white and red, and his eyes are remarkably pleasant and benignant.

The languages at the command of the Patriarch are two, the Armenian and the Turkish, and we were obliged to communicate with him through the medium of the latter, Abd-el-Atti acting as interpreter. How much Turkish our dragoman knew, and how familiar his holiness is with it, we could not tell, but the conversation went on briskly, as it always does when Abd-el-Atti has control of it. When we had exhausted what the Patriarch knew about America and what we knew about Armenia, which did not take long (it was astonishing how few things in all this world of things we knew in common), we directed the conversation upon what we supposed would be congenial and common ground, the dogma of the Trinity and the point of difference between the Armenian and the Latin church. I cannot say that we acquired much light on the subject, though probably we did better than disputants usually do on this topic. We had some signal advantages. The questions and answers, strained through the Turkish language, were robbed of all salient and noxious points, and solved themselves without difficulty. Thus, the "*Filioque clause*" offered no subtle distinctions to the Moslem mind of Abd-el-Atti, and he presented it to the Patriarch, I have no doubt, with perfect clarity. At any rate, the reply was satisfactory:—

"His excellency, he much oblige, and him say he t'ink so."

The elucidation of this point was rendered the easier, probably, by the fact that neither Abd-el-Atti nor the

Patriarch nor ourselves knew much about it. When I told his highness (if, through Abd-el-Atti, I did tell him) that the great Armenian convent at Venice, which holds with the Pope, accepts the Latin construction of the clause, he seemed never to have heard of the great Armenian convent at Venice. At this point of the conversation we thought it wise to finish the subject by the trite remark that we believed a man's life was after all more important than his creed.

"So am I," responded the dragoman, and the Patriarch seemed to be of like mind.

A new turn was given to our interview by the arrival of refreshments, a succession of sweetmeats, cordials, candies, and coffee. The sweetmeats first served were a delicate preserve of plums. This was handed around in a jar, from which each guest dipped a spoonful, and swallowed it, drinking from a glass of water immediately,—exactly as we used to take medicine in childhood. The preserve was taken away when each person had tasted it, and shortly a delicious orange cordial was brought, and handed around with candy. Coffee followed. The Patriarch then led the way about his palace, and with some pride showed us the gold and silver insignia of his office and his rich vestments. On the wall of his study hung a curious map of the world, printed at Amsterdam in 1692, in Armenian characters. He was so kind also as to give us his photograph, enriched with his unreadable autograph, and a book printed at the convent, entitled *Deux Ans de Séjour en Abyssinie*; and we had the pleasure of seeing also the heroes and the author of the book,—two Armenian monks, who undertook, on an English suggestion, a mission to King Theodore, to intercede for the release of the English prisoners held by the tyrant of that land. They were detained by its treacherous and barbarous chiefs, robbed by people and priests alike, never reached the headquarters of the king, and were released only after two years of miserable captivity and suffering. This book is a faithful record of their journey, and contains a complete description of the religion and customs of the Abyssinians, set down with the candor and verbal nakedness of Herodotus. Whatever Christianity the Abyssinians may once have had, their religion now is an odd mixture of Judaism, fetichism, and Christian dogmas, and their morals a perfect reproduction of those in vogue just before the flood; there is no vice or disease of barbarism or of civilization that is not with them of universal acceptance. And the priest Timotheus, the writer of this narrative, gave the Abyssinians abiding in Jerusalem a character no better than that of their countrymen at home.

The Patriarch, with many expressions of civility, gave us into the charge of a monk, who showed us all the parts of the convent we had not seen on a previous visit. The convent is not only a wealthy and clean, but also an enlightened establishment. Within its precincts are nuns as well as monks, and good schools are maintained for children of both sexes. The school-house, with its commodious apartments, was not unlike one of our buildings for graded schools; in the rooms we saw many cases of antiquities and curiosities from various countries, and specimens of minerals. A map which hung on the wall, and was only one hundred years old, showed the Red Sea flowing into the Dead Sea, and the river Jordan emptying into the Mediterranean. Perhaps the scholars learn ancient geography only.

At twelve the Moslems said prayers in the Mosque of Omar, and at one o'clock the procession was ready to move out of St. Stephen's Gate. We rode around to that entrance. The spectacle spread before us was marvellous. All the gray and ragged slopes and ravines were gay with color and lively with movement. The city walls on the side overlooking the Valley of Jehoshaphat were covered with masses of people, clinging to them like bees; so the defences may have appeared to Titus when he ordered the assault from the opposite hill. The sunken road leading from St. Stephen's Gate, down which the procession was to pass, was lined with spectators, seated in ranks on ranks on the stony slopes. These were mostly women,—this being one of the few days upon which the Moslem women may freely come abroad,—clad in pure white, and with white veils drawn about their heads. These clouds of white robes were relieved here and there by flaming spots of color, for the children and slaves accompanied the women, and their dress added blue and red and yellow to the picture. Men also mingled in the throng, displaying turbans of blue and black and green and white. One could not say that any color or nationality was wanting in the spectacle. Sprinkled in groups all over the hillside, in the Moslem cemetery and beneath it, were like groups of color, and streaks of it marked the descent of every winding path. The Prince of Oldenburg, the only foreign dignitary present, had his tents pitched upon a knoll outside the gate, and other tents dotted the roadside and the hill.

Crowds of people thronged both sides of the road to the Mount of Olives and to Gethsemane, spreading themselves in the valley and extending away up the road of the Triumphal Entry; everywhere were the most brilliant effects of white, red, yellow, gray, green, black, and striped raiment: no matter what these Orientals put on, it becomes picturesque,—old coffee-bags, old rags and carpets, anything. There could not be a finer place for a display than these two opposing hillsides, the narrow valley, and the winding roads, which increased the apparent length of the procession and set it off to the best advantage. We were glad of the opportunity to see this ancient valley of bones revived in a manner to recall the pageants and shows of centuries ago, and as we rode down the sunken road in advance of the procession, we imagined how we might have felt if we had been mounted on horses or elephants instead of donkeys, and if we had been conquerors leading a triumph, and these people on either hand had been cheering us instead of jeering us. Turkish soldiers, stationed every thirty paces, kept the road clear for the expected cavalcade. In order to see it and the spectators to the best advantage, we took position on the opposite side of the valley and below the road around the Mount of Olives.

The procession was a good illustration of the shallow splendor of the Orient; it had no order, no uniformity, no organization; it dragged itself along at the whim of its separate squads. First came a guard of soldiers, then a little huddle of men of all sorts of colors and apparel, bearing several flags, among them the green Flag of Moses; after an interval another squad, bearing large and gorgeous flags, preceded by musicians beating drums and cymbals. In front of the drums danced, or rather hitched forward with stately steps, two shabby fellows, throwing their bodies from side to side and casting their arms about, clashing cymbals and smirking with infinite conceit. At long intervals came other like bands with flags and music, in such disorder as scarcely to be told from the spectators, except that they bore guns and pistols, which they continually fired into the air and close over the heads of the crowd, with a reckless profusion of powder and the most murderous appearance. To these followed mounted soldiers in white, with a Turkish band of music,—worse than any military band in Italy; and after this the pasha, the governor of the city, a number of civil and

military dignitaries and one or two high ulemas, and a green-clad representative of the Prophet,—a beggar on horseback,—on fiery horses which curveted about in the crowd, excited by the guns, the music, and the discharge of a cannon now and then, which was stationed at the gate of St. Stephen. Among the insignia displayed were two tall instruments of brass, which twirled and glittered in the sun, not like the golden candlestick of the Jews, nor the “host” of the Catholics, nor the sistrum of the ancient Egyptians, but, perhaps, as Moslemism is a reminiscence of all religions, a caricature of all three.

The crush in the narrow road round the hill and the grouping of all the gorgeous banners there produced a momentary fine effect; but generally, save for the spectators, the display was cheap and childish. Only once did we see either soldiers or civilians marching in order; there were five fellows in line carrying Nubian spears, and also five sappers and miners in line, wearing leathern aprons and bearing theatrical battle-axes. As to the arms, we could discover no two guns of the same pattern in all the multitude of guns; like most things in the East, the demonstration was one of show, color, and noise, not to be examined too closely, but to be taken with faith, as we eat dates. A company of Sheridan’s cavalry would have scattered the entire army.

The procession, having halted on the brow of the hill, countermarched and returned; but the Flag of Moses and its guard went on to the camp, at his tomb, there to await the arrival of the pilgrims on the Monday following. And the most gorgeous Moslem demonstration of the year was over.

VIII.—DEPARTURE FROM JERUSALEM.

THE day came to leave Jerusalem. Circumstances rendered it impossible for us to make the overland trip to Damascus or even to Haifa. Our regret that we should not see Bethel, Shechem, Samaria, Nazareth, and the Sea of Galilee was somewhat lessened by the thought that we knew the general character of the country and the villages, by what we had already seen, and that experience had taught us the inevitable disenchantment of seeing the historical and the sacred places of Judæa. It is not that one visits a desert and a heap of ruins,—that would be endurable and even stimulating to the imagination; but every locality which is dear to the reader by some divine visitation, or wonderful by some achievement of hero or prophet, is degraded by the presence of sordid habitations, and a mixed, vicious, and unsavory population, or incrustated with the most puerile superstitions, so that the traveller is fain to content himself with a general view of the unchanged features of the country. It must be with a certain feeling of humiliation that at Nazareth, for instance, the object of his pilgrimage is belittled to the inspection of such inventions as the spot upon which the Virgin stood when she received the annunciation, and the carpenter-shop in which Joseph worked.

At any rate, we let such thoughts predominate, when we were obliged to relinquish the overland journey. And whatever we missed, I flatter myself that the readers of these desultory sketches will lose nothing. I should have indulged a certain curiosity in riding over a country as rich in memories as it is poor in aspect, but I should have been able to add nothing to the minute descriptions and vivid pictures with which the Christian world is familiar; and, if the reader will excuse an additional personal remark, I have not had the presumption to attempt a description of Palestine and Syria (which the volumes of Robinson and Thompson and Porter have abundantly given), but only to make a record of limited travel and observation. What I most regretted was that we could not see the green and fertile plain of Esdraelon, the flower-spangled meadow of Jezreel, and the forests of Tabor and Carmel,—seats of beauty and of verdure, and which, with the Plain of Sharon, might serve to mitigate the picture of grim desolation which the tourist comes away from the Holy Land.

Finally, it was with a feeling akin to regret that we looked our last upon gray and melancholy Jerusalem. We had grown a little familiar with its few objects of past or present grandeur, the Saracenic walls and towers, the Temple platform and its resplendent mosque, the agglomeration called the Church of the Holy Sepulchre, the ruins of the palace and hospice of the Knights of St. John, the massive convents and hospices of various nations and sects that rise amid the indistinguishable huddle of wretched habitations, threaded by filthy streets and noisome gutters. And yet we confessed to the inevitable fascination which is always exercised upon the mind by antiquity; the mysterious attraction of association; the undefinable influence in decay and desolation which holds while it repels; the empire, one might say the tyranny, over the imagination and the will which an ancient city asserts, as if by force of an immortal personality, compelling first curiosity, then endurance, then sympathy, and finally love. Jerusalem has neither the art, the climate, the antiquities, nor the society which draw the world and hold it captive in Rome, but its associations enable it to exercise, in a degree, the same attraction. Its attraction is in its historic spell and name, and in spite of the modern city.

Jerusalem, in fact, is incrustated with layer upon layer of inventions, the product of credulity, cunning, and superstition, a monstrous growth always enlarging, so that already the simple facts of history are buried almost beyond recognition beneath this mass of rubbish. Perhaps it would have been better for the growth of Christianity in the world if Jerusalem had been abandoned, had become like Carthage and Memphis and Tadmor in the wilderness, and the modern pilgrim were free to choose his seat upon a fallen wall or mossy rock, and reconstruct for himself the pageant of the past, and recall that Living Presence, undisturbed by the impertinences which belittle the name of religion. It has always been held well that the place of the burial of Moses was unknown. It would perhaps have conduced to the purity of the Christian faith if no attempt had ever been made to break through the obscurity which rests upon the place of the sepulchre of Christ.

Invention has grown upon invention, and we have the Jerusalem of to-day as a result of the exaggerated importance attached to the localization of the Divine manifestation. Whatever interest Jerusalem has for the antiquarian, or for the devout mind, it is undeniable that one must seek in other lands and among other peoples for the robust virtue, the hatred of shams and useless forms, the sweet charity, the invigorating principles, the high thinking, and the simple worship inculcated by the Founder of Christianity.

The horses were ready. Jerusalem had just begun to stir; an itinerant vender of coffee had set up his tray on the street, and was lustily calling to catch the attention of the early workmen, or the vagrants who pick themselves up from the doorsteps at dawn, and begin to reconnoitre for the necessary and cheap taste of coffee, with which the Oriental day opens; the sky was overcast, and a drop or two of rain fell as we were getting into the saddle, but "It is nothing," said the stirrup-holder, "it goes to be a beautiful time"; and so it proved.

Scarcely were we outside the city when it cleared superbly, and we set forward on our long ride of thirty-six miles, to the sea-coast, in high spirits. We turned to catch the first sunlight upon the gray Tower of David, and then went gayly on over the cool free hills, inhaling the sparkling air and the perfume of wild-flowers, and exchanging greetings with the pilgrims, Moslem and Christian, who must have broken up their camps in the hills at the earliest light. There are all varieties of nationality and costume, and many of the peaceful pilgrims are armed as if going to a military rendezvous; perhaps our cavalcade, which is also an assorted one of horses, donkeys, and mules, is as amusing as any we meet. I am certain that the horse that one of the ladies rides is unique, a mere framework of bones which rattle as he agitates himself; a rear view of the animal, and his twisting and interlacing legs, when he moves briskly, suggest a Chinese puzzle.

We halted at the outlet of Wady 'Aly, where there is an inn, which has the appearance of a Den of Thieves, and took our lunch upon some giant rocks under a fig-tree, the fruit of which was already half grown. Here I discovered another black calla, and borrowed a pick of the landlord to endeavor to dig up its bulb. But it was impossible to extract it from the rocks, and when I returned the tool, the owner demanded pay for the use of it; I told him that if he would come to America, I would lend him a pick, and let him dig all day in the garden, —a liberality which he was unable to comprehend.

By four o'clock we were at Bamleh, and turned aside to inspect the so-called Saracen tower; it stands upon one side of a large enclosure of walls and arches, an extensive ruin; under ground are vaulted constructions apparently extending as far as the ruins above, reminding one of the remains of the Hospice of St. John at Jerusalem. In its form and treatment and feeling this noble tower is Gothic, and, taking it in connection with the remains about it, I should have said it was of Christian construction, in spite of the Arabic inscription over one of the doorways, which might have been added when the Saracens took possession of it; but I believe that antiquarians have decided that the tower was erected by Moslems. These are the most "rural" ruins we had seen in the East; they are time-stained and weather-colored, like the remains of an English abbey, and stand in the midst of a green and most lovely country; no sand, no nakedness, no beggars. Grass fills all the enclosure, and grain-fields press close about it. No view could be more enchanting than that of the tower and the rolling plain at that hour: the bloom on the wheat-fields, flecked with flaming poppies; the silver of the olive groves; the beds of scarlet anemones and yellow buttercups, blotching the meadows with brilliant colors like a picture of Turner; the soft gray hills of Judæa; the steeples and minarets of the city. All Ramleh is built on and amid ruins, half-covered arches and vaults.

Twilight came upon us while we were yet in the interminable plain, but Jaffa announced itself by its orange-blossoms long before we entered its straggling suburbs; indeed, when we were three miles away, the odor of its gardens, weighted by the night-air, was too heavy to be agreeable. At a distance this odor was more perceptible than in the town itself; but next day, in the full heat of the sun, we found it so overpowering as to give a tendency to headache.

IX.—ALONG THE SYRIAN COAST.

OUR only business in Jaffa being to get away from it, we impatiently expected the arrival of the Austrian Lloyd steamer for Beyrout, the *Venus*, a fickle and unsteady craft, as its name implies. In the afternoon we got on board, taking note as we left the land of the great stones that jut out into the sea, "where the chains with which Andromeda was bound have left their footsteps, which attest [says Josephus] the antiquity of that fable." The *Venus*, which should have departed at three o'clock, lay rolling about amid the tossing and bobbing and crushing crowd of boats and barges till late in the evening, taking in boxes of oranges and bags of barley, by the slow process of hoisting up one or two at a time. The ship was lightly loaded with freight, but overrun with third-class passengers, returning pilgrims from Mecca and from Jerusalem (whom the waters of the Jordan seemed not to have benefited), who invaded every part of deck, cabin, and hold, and spreading their beds under the windows of the cabins of the first-class passengers, reduced the whole company to a common disgust. The light load caused the vessel to roll a little, and there was nothing agreeable in the situation.

The next morning we were in the harbor of Haifa, under the shadow of Mt. Carmel, and rose early to read about Elijah, and to bring as near to us as we could with an opera-glass the convent and the scene of Elijah's victory over the priests of Baal. The noble convent we saw, and the brow of Carmel, which the prophet

ascended to pray for rain; but the place of the miraculous sacrifice is on the other side, in view of the plain of Esdraelon, and so is the plain by the river Kishon where Elijah slew the four hundred and fifty prophets of Baal, whom he had already mocked and defeated. The grotto of Elijah is shown in the hill, and the monks who inhabit the convent regard themselves as the successors of an unbroken succession of holy occupants since the days of the great prophet. Their sumptuous quarters would no doubt excite the indignation of Elijah and Elisha, who would not properly discriminate between the modern reign of Mammon and the ancient rule of Baal. Haifa itself is only a huddle of houses on the beach. Ten miles across the curving bay we saw the battlements of Akka, on its triangle of land jutting into the sea, above the mouth of Kishon, out of the fertile and world-renowned plain. We see it more distinctly as we pass; and if we were to land we should see little more, for few fragments remain to attest its many masters and strange vicissitudes. A prosperous seat of the Phoenicians, it offered hospitality to the fat-loving tribe of Asher; it was a Greek city of wealth and consequence; it was considered the key of Palestine during the Crusades, and the headquarters of the Templars and the Knights of St. John; and in more modern times it had the credit of giving the checkmate to the feeble imitation of Alexander in the East attempted by Napoleon I.

The day was cloudy and a little cool, and not unpleasant; but there existed all day a ground-swell which is full of all nastiness, and a short sea which aggravated the ground-swell; and although we sailed by the Lebanon mountains and along an historic coast, bristling with suggestions, and with little but suggestions, of an heroic past, by Akka and Tyre and Sidon, we were mostly indifferent to it all. The Mediterranean, on occasion, takes away one's appetite even for ruins and ancient history.

We can distinguish, as we sail by it, the mean modern town which wears still the royal purple name of Tyre, and the peninsula, formerly the island, upon which the old town stood and which gave it its name. The Arabs still call it Tsur or Sur, "the rock," and the ancients fancied that this island of rock had the form of a ship and was typical of the maritime pursuits of its people. Some have thought it more like the cradle of commerce which Tyre is sometimes, though erroneously, said to be; for she was only the daughter of Sidon, and did but inherit from her mother the secret of the mastery of the seas. There were two cities of Tyre,—the one on the island, and another on the shore. Tyre is not an old city in the Eastern reckoning, the date of its foundation as a great power only rising to about 1200 b. c., about the time of the Trojan war, and after the fall of Sidon, although there was a city there a couple of centuries earlier, when Joshua and his followers conquered the hill-countries of Palestine; it could never in its days of greatness have been large, probably containing not more than 30,000 to 40,000 inhabitants, but its reputation was disproportionate to its magnitude; Joshua calls it the "strong city Tyre," and it had the entire respect of Jerusalem in the most haughty days of the latter. Tyre seems to have been included in the "inheritance" allotted to Asher, but that luxurious son of Jacob yielded to the Phoenicians and not they to him; indeed, the parcelling of territory to the Israelitish tribes, on condition that they would conquer it, recalls the liberal dying bequest made by a tender Virginian to his son, of one hundred thousand dollars if he could make it. The sea-coast portion of the Canaanites, or the Phoenicians, was never subdued by the Jews; it preserved a fortunate independence, in order that, under the Providence that protected the Phoenicians, after having given the world "letters" and the first impulse of all the permanent civilization that written language implies, they could still bless it by teaching it commerce, and that wide exchange of products which is a practical brotherhood of man. The world was spared the calamity of the descent of the tribes of Israel upon the Phoenician cities of the coast, and art was permitted to grow with industry; unfortunately the tribes who formed the kingdom of Israel were capable of imitating only the idolatrous worship and the sensuality of their more polished neighbors. Such an ascendancy did Tyre obtain in Jewish affairs through the princess Jezebel and the reception of the priests of Baal, that for many years both Samaria and Jerusalem might almost be called dependencies of the city of the god, "the lord Melkarth, Baal of Tyre."

The arts of the Phoenicians the Jews were not apt to learn; the beautiful bronze-work of their temples was executed by Tyrians, and their curious work in wood also; the secret of the famous purple dye of the royal stuffs which the Jews coveted was known only to the Tyrians, who extracted from a sea-mussel this dark red violet; when the Jews built, Tyrian workmen were necessary; when Solomon undertook his commercial ventures into the far Orient, it was Tyrians who built his ships at Ezion-geber, and it was Tyrian sailors who manned them; the Phoenicians carried the manufacture of glass to a perfection unknown to the ancient Egyptians, producing that beautiful ware the art of which was revived by the Venetians in the sixteenth century; the Jews did not learn from the Phoenicians, but the Greeks did, how to make that graceful pottery and to paint the vases which are the despair of modern imitators; the Tyrian mariners, following the Sidonian, supplied the Mediterranean countries, including Egypt, with tin for the manufacture of bronze, by adventurous voyages as far as Britain, and no people ever excelled them in the working of bronze, as none in their time equalled them in the carving of ivory, the engraving of precious metals, and the cutting and setting of jewels.

Unfortunately scarcely anything remains of the abundant literature of the Phoenicians,—for the Canaanites were a literary people before the invasion of Joshua; their language was Semitic, and almost identical with the Hebrew, although they were descendants of Ham; not only their light literature but their historical records have disappeared, and we have small knowledge of their kings or their great men. The one we are most familiar with is the shrewd and liberal Hiram (I cannot tell why he always reminds me of General Grant), who exchanged riddles with Solomon, and shared with the mountain king the profits of his maritime skill and experience. Hiram's tomb is still pointed out to the curious, at Tyre; and the mutations of religions and the freaks of fortune are illustrated by the chance that has grouped so closely together the graves of Hiram, of Frederick Barbarossa, and of Origen.

Late in the afternoon we came in sight of Sidon, that ancient city which the hand-book infers was famous at the time of the appearance of Joshua, since that skilful captain speaks of it as "Great Zidon." Famous it doubtless had been long before his arrival, but the epithet "great" merely distinguished the two cities; for Sidon was divided like Tyre, "Great Sidon" being on the shore and "Little Sidon" at some distance inland. Tradition says it was built by Sidon, the great-grandson of Noah; but however this may be, it is doubtless the oldest Phoenician city except Gebel, which is on the coast north of Beyrout. It is now for the antiquarian little more than a necropolis, and a heap of stones, on which fishermen dry their nets, although some nine to ten

thousand people occupy its squalid houses. What we see of it is the ridge of rocks forming the shallow harbor, and the picturesque arched bridge (with which engravings have made us familiar) that connects a ruined fortress on a detached rock with the rocky peninsula.

Sidon comes us far back into antiquity. When the Canaanitish tribes migrated from their seat on the Persian Gulf, a part of them continued their march as far as Egypt. It seems to be settled that the Hittites (or Khitas) were the invaders who overran the land of the Pharaohs, sweeping away in their barbarous violence nearly all the monuments of the civilization of preceding eras, and placing upon the throne of that old empire the race of Shepherd kings. It was doubtless during the dynasty of the Shepherds that Abraham visited Egypt, and it was a Pharaoh of Hittite origin who made Joseph his minister. It was after the expulsion of the Shepherds and the establishment of a dynasty "which knew not Joseph" that the Israelites were oppressed.

But the Canaanites did not all pass beyond Syria and Palestine; some among them, who afterwards were distinctively known as Phoenicians, established a maritime kingdom, and founded among other cities that of Sidon. This maritime branch no doubt kept up an intercourse with the other portions of the Canaanite family in Southern Syria and in Egypt, before the one was driven out of Egypt by the revolution which restored the rule of the Egyptian Pharaohs, and the other expelled by the advent of the Philistines. And it seems altogether probable that the Phoenicians received from Egypt many arts which they afterwards improved and perfected. It is tolerably certain that they borrowed from Egypt the hieratic writing, or some of its characters, which taught them to represent the sounds of their language by the alphabet which they gave to the world. The Sidonians were subjugated by Thotmes III., with all Phoenicia, and were for centuries the useful allies of the Egyptians; but their dominion was over the sea, and they spread their colonies first to the Grecian isles and then along the African coast; and in the other direction sent their venturesome barks as far as Colchis on the Black Sea. They seem to have thrived most under the Egyptian supremacy, for the Pharaohs had need of their sailors and their ships. In the later days of the empire, in the reign of Necho, it was Phoenician sailors who, at his command, circumnavigated Africa, passing down the Red Sea and returning through the Pillars of Hercules.

The few remains of Sidon which we see to-day are only a few centuries old,—six or seven; there are no monuments to carry us back to the city famous in arts and arms, of which Homer sang; and if there were, the antiquity of this hoary coast would still elude us. Herodotus says that the temple of Melkarth at Tyre (the "daughter of Sidon") was built about 2300 B.C. Probably he errs by a couple of centuries; for it was only something like twenty-three centuries before Christ that the Canaanites came into Palestine, that is to say, late in the thirteenth Egyptian dynasty,—a dynasty which, according to the list of Manetho and Mariette Bey, is separated from the reign of the first Egyptian king by an interval of twenty-seven centuries. When Abraham wandered from Mesopotamia into Palestine he found the Canaanites in possession. But they were comparatively new comers; they had found the land already occupied by a numerous population who were so far advanced in civilization as to have built many cities. Among the peoples holding the land before them were the Rephaim, who had sixty strong towns in what is now the wilderness of Bashan; there were also the Emim, the Zamzummim, and the Anakim,—perhaps primitive races and perhaps conquerors of a people farther back in the twilight, remnants of whom still remained in Palestine when the Jews began, in their turn, to level its cities to the earth, and who lived in the Jewish traditions as "giants."

X.—BEYROUT.—OVER THE LEBANON.

ALL the afternoon we had the noble range of Mt. Lebanon in view, and towards five o'clock we saw the desert-like promontory upon which Beyrout stands. This bold headland, however, changed its appearance when we had rounded it and came into the harbor; instead of sloping sand we had a rocky coast, and rising from the bay a couple of hundred feet, Beyrout, first the shabby old city, and then the new portion higher, up, with its villas embowered in trees. To the right, upon the cliffs overlooking the sea, is the American college, an institution whose conspicuous position is only a fair indication of its pre-eminent importance in the East; and it is to be regretted that it does not make a better architectural show. Behind Beyrout, in a vast circular sweep, rise the Lebanon mountains, clothed with trees and vineyards, terraced, and studded with villas and villages. The view is scarcely surpassed anywhere for luxuriance and variety. It seems to us that if we had an impulse to go on a mission anywhere it would be to the wicked of this fertile land.

At Beyrout also passengers must land in small boats. We were at once boarded by the most ruffianly gang of boatmen we had yet seen, who poured through the gangways and climbed over the sides of the vessel, like privileged pirates, treading down people in their way. It was only after a severe struggle that we reached our boats and landed at the custom-house, and fell into the hands of the legalized plunderers, who made an attack upon our baggage and demanded our passports, simply to obtain backsheesh for themselves.

"Not to show 'em passport," says Abd-el-Atti, who wastes no affection on the Turks; "tiefs, all of dem; you he six months, not so? in him dominion, come now from Jaffa; I tell him if the kin' of Constantinople want us, he find us at the hotel."

The hotel Bellevue, which looks upon the sea and hears always the waves dashing upon the worn and jagged rocks, was overflowed by one of those swarms, which are the nuisance of independent travellers, known as a "Cook's Party," excellent people individually no doubt, but monopolizing hotels and steamboats,

and driving everybody else into obscurity by reason of their numbers and compact organization. We passed yesterday one of the places on the coast where Jonah is said to have left the whale; it is suspected—though without any contemporary authority—that he was in a Cook's Party of his day, and left it in disgust for this private conveyance.

Our first care in Beyrout was to secure our passage to Damascus. There is a carriage-road over the Lebanon, constructed, owned, and managed by a French company; it is the only road in Syria practicable for wheels, but it is one of the best in the world; I suppose we shall celebrate our second centennial before we have one to compare with it in the United States. The company has the monopoly of all the traffic over it, forwarding freight in its endless trains of wagons, and despatching a diligence each way daily, and a night mail. We went to the office to secure seats in the diligence.

"They are all taken," said the official.

"Then we would like seats for the day after to-morrow."

"They are taken, and for the day after that—for a week."

"Then we must go in a private carriage."

"At present we have none. The two belonging to the company are at Damascus."

"Then we will hire one in the city."

"That is not permitted; no private carriage is allowed to go over the road farther than five kilometres outside of Beyrout."

"So you will neither take us yourselves nor let any one else?"

"Pardon; when the carriage comes from Damascus, you shall have the first chance."

Fortunately one of the carriages arrived that night, and the next morning at nine o'clock we were *en route*. The diligence left at 4 a. M., and makes the trip in thirteen hours; we were to break the journey at Stoura and diverge to Ba'albek. The carriage was a short omnibus, with seats inside for four, a broad seat in front, and a deck for the baggage, painted a royal yellow; three horses were harnessed to it abreast,—one in the shafts and one on each side. As the horses were to be changed at short stages, we went forward at a swinging pace, rattling out of the city and commanding as much respect as if we had been the diligence itself with its six horses, three abreast, and all its haughty passengers.

We leave the promontory of Beyrout, dip into a long depression, and then begin to ascend the Lebanon. The road is hard, smooth, white; the soil on either side is red; the country is exceedingly rich; we pass villas, extensive plantations of figs, and great forests of the mulberry; for the silk culture is the chief industry, and small factories of the famous Syrian silks are scattered here and there. As the road winds upward, we find the hillsides are terraced and luxuriant with fig-trees and grapevines,—the latter flourishing, in fact, to the very top of the mountains, say 5,200 feet above the blue Mediterranean, which sparkles below us. Into these hills the people of Beyrout come to pass the heated months of summer, living in little villas which are embowered in foliage all along these lovely slopes. We encounter a new sort of house; it is one story high, built of limestone in square blocks and without mortar, having a flat roof covered with stones and soil,—a very primitive construction, but universal here. Sometimes the building is in two parts, like a double log-cabin, but the opening between the two is always arched: so much for art; but otherwise the house, without windows, or with slits only, looks like a section of stone-wall.

As we rise, we begin to get glimpses of the snowy peaks which make a sharp contrast with the ravishing view behind us,—the terraced gorges, the profound ravines, the vineyards, gardens, and orchards, the blue sea, and the white road winding back through all like a ribbon. As we look down, the limestone walls of the terraces are concealed, and all the white cliffs are hidden by the ample verdure. Entering farther into the mountains, and ascending through the grim Wady Hammâna, we have the considerable village of that name below us on the left, lying at the bottom of a vast and ash-colored mountain basin, like a gray heap of cinders on the edge of a crater broken away at one side. We look at it with interest, for there Lamartine once lived for some months in as sentimental a seclusion as one could wish. A little higher up we come to snow, great drifts of it by the roadside,—a phenomenon entirely beyond the comprehension of Abdallah, who has never seen sand so cold as this, which, nevertheless, melts in his hands. After encountering the snow, we drive into a cold cloud, which seems much of the time to hang on the top of Lebanon, and have a touch of real winter,—a disagreeable experience which we had hoped to eliminate from this year; snow is only tolerable when seen at a great distance, as the background in a summer landscape; near at hand it congeals the human spirits.

When we were over the summit and had emerged from the thick cloud, suddenly a surprise greeted us. Opposite was the range of Anti-Lebanon; two thousand feet below us, the broad plain, which had not now the appearance of land, but of some painted scene,—a singularity which is partially explained by the red color of the soil. But, altogether, it presented the most bewildering mass of color; if the valley had been strewn with watered silts over a carpet of Persian rugs, the effect might have been the same. There were patches and strips of green and of brown, dashes of red, blotches of burnt-umber and sienna, alternations of ploughed field and young grain, and the whole, under the passing clouds, took the sheen of the opal. The hard, shining road lay down the mountain-side in long loops, in ox-bows, in curves ever graceful, like a long piece of white tape flung by chance from the summit to the valley. We dashed down it at a great speed, winding backwards and forwards on the mountain-side, and continually shifting our point of view of the glowing picture.

At the little post-station of Stoura we left the Damascus road and struck north for an hour towards Ba'albek, over a tolerable carriage-road. But the road ceased at Mu'allakah; beyond that, a horseback journey of six or seven hours, there is a road-bed to Ba'albek, stoned a part of the way, and intended to be passable some day. Mu'allakah lies on the plain at the opening of the wild gorge of the Berduny, a lively torrent which dances down to join the Litany, through the verdure of fruit-trees and slender poplars. Over a mile up the glen, in the bosom of the mountains, is the town of Zahleh, the largest in the Lebanon; and there we purposed to pass the night, having been commended to the hospitality of the missionaries there by Dr. Jessup of Beyrout.

Our halted establishment drew a crowd of curious spectators about it, mostly women and children, who had

probably never seen a carriage before; they examined us and commented upon us with perfect freedom, but that was the extent of their hospitality, not one of them was willing to earn a para by carrying our baggage to Zahleh; and we started up the hill, leaving the dragoman in an animated quarrel with the entire population, who, in turn, resented his comments upon their want of religion and good manners.

Climbing up a stony hill, threading gullies and ravines, and finally rough streets, we came into the amphitheatre in the hills which enclose Zahleh. The town is unique in its construction. Imagine innumerable small whitewashed wooden houses, rising in concentric circles, one above the other, on the slopes of the basin, like the chairs on the terraces of a Roman circus. The town is mostly new, for the Druses captured it and burned it in 1860, and reminds one of a New England factory village. Its situation is a stony, ragged basin, three thousand feet above the sea; the tops of the hills behind it were still covered with snow, and we could easily fancy that we were in Switzerland. The ten or twelve thousand inhabitants are nearly all Maroyites, a sect of Christians whom we should call Greeks, but who are in communion with the Latin church; a people ignorant and superstitious, governed by their priests, occasionally turbulent, and always on the point of open rupture with the mysterious and subtle Druses. Having the name of Christians and few of the qualities, they are most unpromising subjects of missionary labor. Yet the mission here makes progress and converts, and we were glad to see that the American missionaries were universally respected.

Fortunately the American name and Christianity are exceedingly well represented in Northern Syria by gentlemen who unite a thorough and varied scholarship with Christian simplicity, energy, and enthusiasm. At first it seems hard that so much talent and culture should be hidden away in such a place as Zahleh, and we were inclined to lament a lot so far removed from the living sympathies of the world. It seems, indeed, almost hopeless to make any impression in this antique and conceited mass of superstition. But if Syria is to be regenerated, and to be ever the home of an industrious, clean, and moral people, in sympathy with the enlightened world, the change is to be made by exhibiting to the people a higher type of Christianity than they have known hitherto,—a Christianity that reforms manners, and betters the social condition, and adds a new interest to life by lifting it to a higher plane; physical conditions must visibly improve under it. It is not enough in a village like this of Zahleh, for instance, to set up a new form of Christian worship, and let it drone on in a sleepy fashion, however devout and circumspect. It needs *men* of talent, scientific attainment, practical sagacity, who shall make the Christian name respected by superior qualities, as well as by devout lives. They must show a better style of living, more thrift and comfort, than that which prevails here. The people will by and by see a logical connection between a well-ordered house and garden, a farm scientifically cultivated, a prosperous factory, and the profitableness of honesty and industry, with the superior civilization of our Western Christianity. You can already see the influence in Syria of the accomplished scholars, skilful physicians and surgeons, men versed in the sciences, in botany and geology, who are able to understand the resources of the country, who are supported there, but not liberally enough supported, by the Christians of America.

XI.—BA'ALBEK.

WE were entertained at the house of the Rev. Mr. Wood, who accompanied us the next day to Ba'albek, his mission territory including that ancient seat of splendid paganism. Some sort of religious *fête* in the neighborhood had absorbed the best saddle-beasts, and we were indifferently mounted on the refuse of donkeys and horses, Abdallah, our most shining possession, riding, as usual, on the top of a pile of baggage. The inhabitants were very civil as we passed along; we did not know whether to attribute it to the influence of the missionaries or to the rarity of travellers, but the word "backsheesh" we heard not once in Zahleh.

After we had emerged from Mu'allakah upon the open plain, we passed on our left hand the Moslem village of Kerah Nun, which is distinguished as the burial-place of the prophet Noah; but we contented ourselves with a sight of the dome. The mariner lies there in a grave seventy feet long, or seventy yards, some scoffers say; but this, whatever it is, is not the measure of the patriarch. The grave proved too short, and Noah is buried with his knees bent, and his feet extending downward in the ground.

The plain of Bukâ'. is some ninety miles long, and in this portion of it about ten miles broad; it is well watered, and though the red soil is stuffed with small stones, it is very fertile, and would yield abundantly if cultivated; but it is mostly an abandoned waste of weeds. The ground rises gradually all the way to Ba'albek, starting from an elevation of three thousand feet; the plain is rolling, and the streams which rush down from the near mountains are very swift. Nothing could be lovelier than the snowy ranges of mountains on either hand, in contrast with the browns and reds of the slopes,—like our own autumn foliage,—and the green and brown plain, now sprinkled with wild-flowers of many varieties.

The sky was covered with clouds, great masses floating about; the wind from the hills was cold, and at length drove us to our wraps; then a fine rain ensued, but it did not last long, for the rainy season was over. We crossed the plain diagonally, and lunched at a little khan, half house and half stable, raised above a stream, with a group of young poplars in front. We sat on a raised divan in the covered court, and looked out through the arched doorway over a lovely expanse of plain and hills. It was difficult to tell which part of the house was devoted to the stable and which to the family; from the door of the room which I selected as the neatest came the braying of a donkey. The landlord and his wife, a young woman and rather pretty, who had

a baby in her arms, furnished pipes and tobacco, and the travellers or idlers—they are one—sat on the ground smoking narghilelis. A squad of ruffianly Metâwileh, a sect of Moslems who follow the Koran strictly, and reject the traditions,—perhaps like those who call themselves Bible Christians in distinction from theological Christians,—came from the field, deposited their ploughs, which they carried on their shoulders, on the platform outside, and, seating themselves in a row in the khan, looked at us stolidly. And we, having the opportunity of saying so, looked at them intelligently.

We went on obliquely across the plain, rising a little through a region rich, but only half cultivated, crossing streams and floundering in mud-holes for three hours, on a walk, the wind growing stronger from the snow mountains, and the cold becoming almost unendurable. It was in vain that Abd-el-Atti spun hour after hour an Arab romance; not even the warm colors of the Oriental imagination could soften the piteous blast. At length, when patience was nearly gone, in a depression in the plain, close to the foot-hills of Anti-Lebanon, behold the great Ba'albek, that is to say, a Moslem village of three thousand to four thousand inhabitants, fairly clean and sightly, and the ruins just on the edge of it, the six well-known gigantic Corinthian pillars standing out against the gray sky. Never was sight more welcome.

Ba'albek, like Zahleh, has no inn, and we lodged in a private house near the ruins. The house was one story; it consisted of four large rooms in a row, looking upon the stone-wall enclosure, each with its door, and with no communication between them. The kitchen was in a separate building. These rooms had high ceilings of beams supporting the flat roof, windows with shutters but without glass, divans along one side, and in one corner a fireplace and chimney. Each room had a niche extending from the floor almost to the ceiling, in which the beds are piled in the daytime; at night they are made up on the divans or on the floor. This is the common pattern of a Syrian house, and when we got a fire blazing in the big chimney-place and began to thaw out our stiff limbs, and Abd-el-Atti brought in something from the kitchen that was hot and red in color and may have had spice on the top of it, we found this the most comfortable residence in the world.

It is the business of a dragoman to produce the improbable in impossible places. Abd-el-Atti rubbed his lamp and converted this establishment into a tolerable inn, with a prolific kitchen and an abundant table. While he was performing this revolution we went to see the ruins, the most noble portions of which have survived the religion and almost the memory of the builders.

The remains of the temples of Ba'albek, or Hieropolis, are only elevated as they stand upon an artificial platform; they are in the depression of the valley, and in fact a considerable stream flows all about the walls and penetrates the subterranean passages. This water comes from a fountain which bursts out of the Anti-Lebanon hills about half a mile above Ba'albek, in an immense volume, falls into a great basin, and flows away in a small river. These instantaneously born rivers are a peculiarity of Syria; and they often disappear as suddenly as they come. The water of this Ba'albek fountain is cold, pure, and sweet; it deserves to be called a "beverage," and is, so far as my experience goes, the most agreeable water in the world. The Moslems have a proverb which expresses its unique worth: "The water of Ba'albek never leaves its home." It rushes past the village almost a river in size, and then disappears in the plain below as suddenly as it came to the light above.

We made our way across the stream and along aqueducts and over heaps of shattered walls and columns to the west end of the group of ruins. This end is defended by a battlemented wall some fifty feet high, which was built by the Saracens out of incongruous materials from older constructions. The northeast corner of this new wall rests upon the ancient Phoenician wall, which sustained the original platform of the sacred buildings; and at this corner are found the three famous stones which at one time gave a name, "The Three-Stoned," to the great temple. As I do not intend to enter into the details of these often described ruins, I will say here, that this ancient Phoenician wall appears on the north side of the platform detached, showing that the most ancient temple occupied a larger area than the Greek and Roman buildings.

There are many stones in the old platform wall which are thirty feet long; but the three large ones, which are elevated twenty feet above the ground, and are in a line, are respectively 64 feet long, 63 feet 8 inches, and 63 feet, and about 13 feet in height and in depth. When I measured the first stone, I made it 128 feet long, which I knew was an error, but it was only by careful inspection that I discovered the joint of the two stones which I had taken for one. I thought this a practical test of the close fit of these blocks, which, laid without mortar, come together as if the ends had been polished. A stone larger than either of these lies in the neighboring quarry, hewn out but not detached.

These massive constructions, when first rediscovered, were the subject of a great deal of wonder and speculation, and were referred to a remote and misty if not fabulous period. I believe it is now agreed that they were the work of the Phoenicians, or Canaanites, and that they are to be referred to a period subsequent to the conquest of Egypt, or at least of the Delta of Egypt, by the Hittites, when the Egyptian influence was felt in Syria; and that this Temple of the Sun was at least suggested, as well as the worship of the Sun god here, by the Temple of the Sun at Heliopolis on the Nile. There is, to be sure, no record of the great city of Ba'albek, but it may safely be referred to the period of the greatest prosperity of the Phoenician nation.

Much as we had read of the splendor of these ruins, and familiar as we were with photographs of them, we were struck with surprise when we climbed up into the great court, that is, to the platform of the temples. The platform extends over eight hundred feet from east to west, an elevated theatre for the display of some of the richest architecture in the world. The general view is broad, impressive, inspiring beyond anything else in Egypt or Syria; and when we look at details, the ruins charm us with their beauty. Round three sides of the great court runs a wall, the interior of which, recessed and niched, was once adorned with the most elaborate carving in designs more graceful than you would suppose stone could lend itself to, with a frieze of garlands of vines, flowers, and fruits. Of the so-called great Temple of Baal at the west end of the platform, only six splendid Corinthian columns remain. The so-called Temple of the Sun or Jupiter, to the south of the other and on a lower level, larger than the Parthenon, exists still in nearly its original form, although some of the exterior columns have fallen, and time and the art-hating Moslems have defaced some of its finest sculpture. The ceiling between the outer row of columns and the wall of this temple is, or was, one of the most exquisite pieces of stone-carving ever executed; the figures carved in the medallions seem to have anticipated the Gothic genius, and the exquisite patterns in stone to have suggested the subsequent Saracenic invention. The composite capitals of the columns offer an endless study; stone roses stand out upon their stems, fruit and

flowers hang and bloom in the freedom of nature; the carving is all bold and spirited, and the invention endless. This is no doubt work of the Roman period after the Christian era, but it is pervaded by Greek feeling, and would seem to have been executed by Greek artists.

In the centre of the great court (there is a small six-sided court to the east of the larger one, which was once approached by a great flight of steps from below) are remains of a Christian basilica, referred to the reign of Theodosius. Underneath the platform are enormous vaults, which may have served the successive occupants for store-houses. The Saracens converted this position into a fortress, and this military impress the ruins still bear. We have therefore four ages in these ruins: the Phoenician, the Greek and Roman, the Christian, and the Saracenic. The remains of the first are most enduring. The old builders had no other method of perpetuating their memory except by these cyclopean constructions.

We saw the sunset on Ba'albek. The clouds broke away and lay in great rosy masses over Lebanon; the white snow ridge for forty miles sparkled under them. The peak of Lebanon, over ten thousand feet above us, was revealed in all its purity. There was a red light on the columns and on the walls, and the hills of Anti-Lebanon, red as a dull garnet, were speckled with snow patches. The imagination could conceive nothing more beautiful than the rose-color of the ruins, the flaming sky, and the immaculate snow peaks, apparently so close to us.

On our return we stopped at the beautiful circular temple of Venus, which would be a wonder in any other neighborhood. Dinner awaited us, and was marked by only one novelty,—what we at first took to be brown napkins, fantastically folded and laid at each plate, a touch of elegance for which we were not prepared. But the napkins proved to be bread. It is made of coarse dark wheat, baked in circular cakes as thin as brown paper, and when folded its resemblance to a napkin is complete. We found it tolerably palatable, if one could get rid of the notion that he was eating a limp rag. The people had been advertised of our arrival, and men, women, and boys swarmed about us to sell copper coins; most of them Roman, which they find in the ruins. Few are found of the Greeks'. the Romans literally sowed the ground with copper money wherever they went in the Orient. The inhabitants are Moslems, and rather decent in appearance, and the women incline to good looks, though not so modest in dress as Moslem women usually are; they are all persistent beggars, and bring babies in their arms, borrowing for that purpose all the infants in the neighborhood, to incite us to charity.

We yielded to the average sentiment of Christendom, and sallied out in the cold night to see the ruins under the light of a full moon; one of the party going simply that he might avoid the reproach of other travellers,—“It is a pity you did not see Ba'albek by moonlight.” And it must be confessed that these ruins stand the dim light of the moon better than most ruins; they are so broad and distinct that they show themselves even in this disadvantage, which those of Karnak do not. The six isolated columns seemed to float in the sky; between them snowy Lebanon showed itself.

The next morning was clear and sparkling; the sky was almost as blue as it is in Nubia. We were awakened by the drumming of a Moslem procession. It was the great annual *fête* day, upon which was to be performed the miracle of riding over the bodies of the devout. The ceremony took place a couple of miles away upon the hill, and we saw on all the paths leading thither files of men and women in white garments. The sheykh, mounted on horseback, rides over the prostrate bodies of all who throw themselves before him, and the number includes young men as well as darwishes. As they lie packed close together and the horse treads upon their spinal columns, their escape from death is called miraculous. The Christians tried the experiment here a year or two ago, several young fellows submitting to let a horseman trample over them, in order to show the Moslems that they also possessed a religion which could stand horses' hoofs.

The ruins, under the intense blue sky, and in the splendid sunlight, were more impressive than in the dull gray of the day before, or even in the rosy sunset; their imperial dignity is not impaired by the excessive wealth of ornamentation. When upon this platform there stood fifty-eight of these noble columns, instead of six, conspicuous from afar, and the sunlight poured into this superb court, adorned by the genius of Athens and the wealth of Rome, this must have been one of the most resplendent temples in existence, rivalling the group upon the Acropolis itself!

Nothing more marks the contrast between the religions of the Greeks and Romans and of the Egyptians, or rather between the genius of the two civilizations, than their treatment of sacred edifices. And it is all the more to be noted, because the more modern nations accepted without reserve any god or object of veneration or mystery in the Egyptian pantheon. The Roman occupants of the temple of Philæ sacrificed without scruple upon the altars of Osiris, and the voluptuous Græco-Romans of Pompeii built a temple to Isis. Yet always and everywhere the Grecians and the Romans sought conspicuous situations for the temples of the gods; they felt, as did our Pilgrim Fathers, who planted their meeting-houses on the windiest hills of New England, that the deity was most honored when the house of his worship was most visible to men; but the Egyptians, on the contrary, buried the magnificence of their temples within wall around wall, and permitted not a hint of their splendor to the world outside. It is worth while to notice also that the Assyrians did not share the contemporary reticence of the Egyptians, but built their altars and temples high above the plain in pyramidal stages; and if we may judge by this platform at Ba'albek, the Phoenicians did not imitate the exclusive spirit of the Pharaonic worshippers.

We lingered, called again and again by the impatient dragoman, in this fascinating spot, amid the visible monuments of so many great races, bearing the marks of so many religious revolutions, and turned away with slow and reluctant steps, as those who abandon an illusion or have not yet thought out some suggestion of the imagination. We turned also with reluctance from a real illusion of the senses. In the clear atmosphere the ridge of Lebanon was startlingly near to us; the snow summit appeared to overhang Ba'albek as Vesuvius does Pompeii; and yet it is half a day's journey across the plain to the base of the mountain, and a whole day's journey from these ruins to the summit. But although this illusion of distance did not continue as we rode down the valley, we had on either hand the snow ranges all day, making by contrast with the brilliant colors of the plain a lovely picture.

XII.—ON THE ROAD TO DAMASCUS.

THE station at Stoura is a big stable and a dirty little inn, which has the kitchen in one shanty, the dining-room in another, and the beds in a third; a swift mountain stream runs behind it, and a grove of poplars on the banks moans and rustles in the wind that draws down the Lebanon gorge. It was after dark when we arrived, but whether our coming put the establishment into a fluster, I doubt; it seems to be in a chronic state of excitement. The inn was kept by Italians, who have a genius for this sort of hotel; the landlord was Andrea, but I suspect the real authority resided in his plump, bright, vivacious wife. They had an heir, however, a boy of eight, who proved to be the tyrant of the house when he appeared upon the scene. The servants were a tall slender Syrian girl, an active and irresponsible boy, and a dark-eyed little maid, in the limp and dirty single garment which orphans always wear on the stage, and who in fact was an orphan, and appeared to take the full benefit of her neglected and jolly life. The whole establishment was on a lark, and in a perpetual giggle, and communicated its overflowing good-humor even to tired travellers. The well-favored little wife, who exhibited the extremes of fortune in a diamond ring and a torn and dragged calico gown, sputtered alternately French and Italian like a magpie, laughed with a contagious merriment, and actually made the cheerless accommodations she offered us appear desirable. The whole family waited on us, or rather kept us waiting on them, at table, bringing us a dish now and then as if its production were a joke, talking all the while among themselves in Arabic, and apparently about us, and laughing at their own observations, until we, even, came to conceive ourselves as a party in a most comical light; and so amusing did we grow that the slim girl and the sorry orphan were forced to rush into a corner every few minutes and laugh it out.

I spent a pleasant hour in the kitchen,—an isolated, smoke-dried room with an earth floor,—endeavoring to warm my feet at the little fires of charcoal kindled in holes on top of a bank of earth and stone, and watching the pranks of this merry and industrious family. The little heir amused himself by pounding the orphan, kicking the shins of the boy, and dashing water in the face of the slim girl,—treatment which the servants dared not resent, since the father laughed over it as an exhibition of bravery and vivacity. Fragrant steam came from a pot, in which quail were stewing for the passengers by the night mail, and each person who appeared in the kitchen, in turn, gave this pot a stir; the lively boy pounded coffee in a big mortar, put charcoal on the fire, had a tussle with the heir, threw a handspring, doing nothing a minute at a time; the orphan slid in with a bucket of water, slopping it in all directions; the heir set up a howl and kicked his father because he was not allowed to kick the orphan any more; the little wife came in like a breeze, whisking everybody one side, and sympathized with dear little Hobby, whose cruel and ugly papa was holding the love from barking his father's shins. You do not often see a family that enjoys itself so much as this.

It was late next morning when we tore ourselves from this enchanting household, and went at a good pace over the fertile plain, straight towards Anti-Lebanon, having a glimpse of the snow of Mount Hermon,—a long ridge peering over the hills to the? southeast, and crossing in turn the Litany and the deep Anjar, which bursts forth from a single fountain about a mile to the north. On our left we saw some remains of what was once a capital city, Chalcis, of unknown origin, but an old city before it was possessed by the Ptolemies, or by Mark Antony, and once the luxurious residence of the Herod family. At Medjel, a village scattered at the foot of small *tells* rising in the plain, we turned into the hills, leaving unvisited a conspicuous Roman temple on a peak above the town. The road winds gradually up a wady. As we left the plain, and looked back across it to Lebanon, the colors of Bukâ' and the mountain gave us a new surprise; they were brilliant and yet soft, as gay and splendid as the rocks of the Yellowstone, and yet exquisitely blended as in a Persian rug.

The hill-country was almost uninhabited; except the stations and an occasional Bedaween camp there was small sign of occupation; the ground was uncultivated; peasants in rags were grubbing up the roots of cedars for fuel. We met Druses with trains of mules, Moslems with camels and mules, and long processions of white-topped wagons,—like the Western "prairie schooner"—drawn each by three mules tandem. Thirty and forty of these freight vehicles travel in company, and we were continually meeting or passing them; their number is an indication of the large trade that Damascus has with Beyrout and the Mediterranean. There is plenty of color in the people and in their costume. We were told that we could distinguish the Druses by their furtive and bad countenances; but for this information I should not have seen that they differed much from the Maronites; but I endeavored to see the treacherous villain in them. I have noticed in Syria that the Catholic travellers have a good opinion of the Maronites and hate the Druses, that the American residents think little of the Maronites, and that the English have a lenient side for the Druses. The Moslems consistently despise all of them. The Druse has been a puzzle. There are the same horrible stories current about him that were believed of the early Christians; the Moslem believes that infants are slain and eaten in his midnight assemblies, and that once a year the Druse community meets in a cavern at midnight, the lights are extinguished, and the sexes mingling by chance in the license of darkness choose companions for the year. But the Druse creed, long a secret, is now known; they are the disciples of Hâkim, a Khalif of the Fatimite dynasty; they believe in the unity of God and his latest manifestation in Hakim; they are as much a political as a religious society; they are accomplished hypocrites, cunning in plotting and bold in action; they profess to possess "the truth," and having this, they are indifferent to externals, and are willing to be Moslems with the Moslems and Christians with the Christians, while inwardly feeling a contempt for both. They are the most supercilious of all the Eastern sects. What they are about to do is always the subject of anxiety in the Lebanon regions.

At the stations of the road we found usually a wretched family or two dwelling in a shanty, half stable and

half *café*, always a woman with a baby in her arms, and the superabundant fountains for nourishing it displayed to all the world; generally some slatternly girls, and groups of rough muleteers and drivers smoking. At one, I remember a Jew who sold antique gems, rings, and coins, with a shocking face, which not only suggested the first fall of his race, but all the advantages he has since taken of his innocent fellows, by reason of his preoccupation of his position of knowledge and depravity.

We made always, except in the steep ascents, about ten miles an hour. The management of the route is the perfection of French system and bureaucracy. We travel with a way-bill of numbered details, as if we were a royal mail. At every station we change one horse, so that we always have a fresh animal. The way-bill is at every station signed by the agent, and the minute of arrival and departure exactly noted; each horse has its number, and the number of the one taken and the one left is entered. All is life and promptness at the stations; changes are quickly made. The way-bill would show the company the exact time between stations; but I noticed that our driver continually set his watch backwards and forwards, and I found that he and the dragoman had a private understanding to conceal our delays for lunch, for traffic with Jews, or for the enjoyment of scenery.

After we had crossed the summit of the first ridge we dashed down the gate of a magnificent canyon, the rocks heaved up in perpendicular strata, overhanging, craggy, crumbled, wild. We crossed then a dreary and nearly arid basin; climbed, by curves and zigzags, another ridge, and then went rapidly down until we struck the wild and narrow gorge of the sacred Abana. Immediately luxuriant vegetable life began. The air was sweet with the blossoms of the mish-mish (apricot), and splendid walnuts and poplars overshadowed us. The river, swollen and rushing amid the trees on its banks, was frightfully rapid. The valley winds sharply, and gives room only for the river and the road, and sometimes only for one of them. Sometimes the river is taken out of its bed and carried along one bank or the other; sometimes the road crosses it, and again pursues its way between its divided streams. We were excited by its rush and volume, and by the rich vegetation along its sides. We came to fantastic Saracenic country-seats, to arcaded and latticed houses set high up over the river, to evidences of wealth and of proximity to a great city.

Suddenly, for we seemed to have become a part of the rushing torrent and to share its rapidity, we burst out of the gorge, and saw the river, overpassing its narrow banks, flowing straight on before us, and beyond, on a level, the minarets and domes of Damascus! All along the river, on both banks of it, and along the high wall by the roadside, were crowds of men in Turkish costume, of women in pure white, of Arabs sitting quietly by the stream smoking the narghileh, squatting in rows along the wall and along the water, all pulling at the water-pipe. There were tents and booths erected by the river. In a further reach of it men and boys were bathing. Hanks and groups of veiled women and children crouched on the damp soil close to the flood, or sat immovable on some sandy point. It is a delicious holiday for two or three women to sit the livelong day by water, running or stagnant, to sit there with their veils drawn over their heads, as rooted as water-plants, and as inanimate as bags of flour. It was a striking Oriental picture, played on by the sun, enlivened by the swift current, which dashes full into the city.

As we spun on, the crowd thickened,—soldiers, grave Turks on caparisoned horses or white donkeys, Jews, blacks, Persians. We crossed a trembling bridge, and rattled into town over stony pavements, forced our way with difficulty into streets narrow and broken by sharp turns, the carriage-wheels scarcely missing men and children stretched on the ground, who refused, on the theory of their occupation of the soil prior to the invention of wheels, to draw in even a leg; and, in a confused whirl of novel sights and discordant yells, barks, and objurgations, we came to Dimitri's hotel. The carriage stopped in the narrow street; a small door in the wall, a couple of feet above the pavement, opened, and we stepped through into a little court occupied by a fountain and an orange-tree loaded with golden fruit. Thence we passed into a large court, the centre of the hotel, where the Abana pours a generous supply into a vast marble basin, and trees and shrubs offer shelter to singing birds. About us was a wilderness of balconies, staircases, and corridors, the sun flooding it all; and Dimitri himself, sleek, hospitable, stood bowing, in a red fez, silk gown, and long gold chain.

XIII.—THE OLDEST OF CITIES.

IT is a popular opinion that there is nothing of man's work older than Damascus; there is certainly nothing newer. The city preserves its personal identity as a man keeps his from youth to age, through the constant change of substance. The man has in his body not an atom of the boy; but if the boy incurred scars, they are perpetuated in the man. Damascus has some scars. We say of other ancient cities, "This part is old, that part is new." We say of Damascus, its life is that of a tree, decayed at heart, dropping branches, casting leaves, but always renewing itself.

How old is Damascus? Or, rather, how long has a city of that name existed here on the banks of the Abana? According to Jewish tradition, which we have no reason to doubt, it was founded by Uz, the son of Aram, the son of Shem. By the same tradition it was a great city when a remarkable man, of the tenth generation from the Deluge,—a person of great sagacity, not mistaken in his opinions, skilful in the celestial science, compelled to leave Chaldea when he was seventy-five years old, on account of his religious opinions, since he ventured to publish the notion that there was but one God, the Creator of the Universe,—came with an army of dependants and "reigned" in the city of Uz. After some time Abraham removed into Canaan, which was

already occupied by the Canaanites, who had come from the Persian Gulf, established themselves in wall-towns in the hills, built Sidon on the coast, and carried their conquests into Egypt. It was doubtless during the reign of the Hittites, or Shepherd Kings, that Abraham visited Egypt. Those usurpers occupied the throne of the Pharaohs for something like five hundred years, and it was during their occupancy that the Jews settled in the Delta.

Now, if we can at all fix the date of the reign of the Shepherd Kings, we can approximate to the date of the foundation of Damascus, for Uz was the third generation from Noah, and Abraham was the tenth. We do not know how to reckon a generation in those days, when a life-lease was such a valuable estate, but if we should assume it to be a century, we should have about seven hundred years between the foundation of Damascus and the visit of Abraham to Egypt, a very liberal margin. But by the chronology of Mariette Bey, the approximate date of the Shepherds' invasion is 2300 B.C. to 2200 B. C., and somewhat later than that time Abraham was in Damascus. If Damascus was then seven hundred years old, the date of its foundation would be about 3000 B.C. to 2900 B.C.

Assuming that Damascus has this positive old age, how old is it comparatively? When we regard it in this light, we are obliged to confess that it is a modern city. When Uz and his friends wandered out of the prolific East, and pitched their tents by the Abana, there was already on the banks of the Nile a civilized, polished race, which had nearly completed a cycle of national existence much longer than the duration of the Roman Empire. It was about the eleventh dynasty of the Egyptian kingdom, the Great Pyramid had been built more than a thousand years, and the already degenerate Egyptians of the "Old Empire" had forgotten the noble art which adorned and still renders illustrious the reigns of the pyramid-builders..

But if Damascus cannot claim the highest antiquity, it has outlived all its rivals on the earth, and has flourished in a freshness as perennial as the fountain to which it owes its life, through all the revolutions of the Orient. As a necessary commercial capital it has pursued a pretty uniform tenor under all its various masters. Tiglath-Pileser attempted to destroy it; it was a Babylonian and then a Persian satrapy for centuries; it was a Greek city; it was the capital of a Roman province for seven hundred years; it was a Christian city and reared a great temple to John the Baptist; it was the capital of the Saracenic Empire, in which resided the ruler who gave laws to all the lands from India to Spain; it was ravaged by Tamerlane; it now suffers the blight of Turkish imbecility. From of old it was a caravan station and a mart of exchange, a camp by a stream; it is to-day a commercial hive, swarming with an hundred and fifty thousand people, a city without monuments of its past or ambition for its future.

If one could see Damascus, perhaps he could invent a phrase that would describe it; but when you have groped and stumbled about in it for a couple of weeks, endeavoring in vain to get a view of more than a few rods of it at a time, you are utterly at a loss how to convey an impression of it to others.

If Egypt is the gift of the Nile, the river Abana is the life of Damascus; its water is carried into the city on a dozen different levels, making it literally one of fountains and running water. Sometimes the town is flooded; the water had only just subsided from the hotel when we arrived. This inundation makes the city damp for a long time. Indeed, it is at all times rather soaked with water, and is—with all respect to Uz and Abraham and the dynasty of the Omeiyades—a sort of habitable frog-pond on a grand scale. At night the noise of frogs, even at our hotel, is the chief music, the gentle twilight song, broken, it is true, by the incessant howling and yelping of savage dogs, packs of which roam the city like wolves all night. They are mangy yellow curs, without a single good quality, except that they sleep all the daytime. In every quarter of the city you see ranks and rows of them asleep in the sun, occupying half the street and nestling in all the heaps of rubbish. But much as has been said of the dogs here, I think the frogs are the feature of the town; they are as numerous as in the marshes of Ravenna.

Still the water could not be spared. It gives sparkle, life, verdure. In walking you constantly get glimpses through heavy doorways of fountains, marble tanks of running water, of a blooming tree or a rose-trellis in a marble court, of a garden of flowers. The crooked, twisted, narrow streets, mere lanes of mud-walls, would be scarcely endurable but for these occasional glimpses, and the sight now and then of the paved, pillared court of a gayly painted mosque.

One ought not to complain when the Arab barber who trims his hair gives him a narghileh to smoke during the operation; but Damascus is not so Oriental as Cairo, the predominant Turkish element is not so picturesque as the Egyptian. And this must be said in the face of the universal use of the narghileh, which more than any other one thing imparts an Oriental, luxurious tone to the city. The pipe of Egypt is the chibouk, a stem of cherry five feet long with a small clay bowl; however richly it may be ornamented, furnished with a costly amber mouthpiece, wound with wire of gold, and studded, as it often is, with diamonds and other stones of price, it is, at the best, a stiff affair; and even this pipe is more and more displaced by the cigar, just as in Germany the meerschaum has yielded to the cigar as the Germans have become accessible to foreign influences. But in Damascus the picturesque narghileh, encourager of idleness, is still the universal medium of smoke. The management of the narghileh requires that a person should give his undivided mind to it; in return for that, it gives him peace. The simplest narghileh is a cocoanut-shell, with a flexible stem attached, and an open metal bowl on top for the tobacco. The smoke is drawn through the water which the shell contains. Other narghilehs have a glass standard and water-bowl, and a flexible stem two or three yards in length. The smoker, seated cross-legged before this graceful object, appears to be worshipping his idol. The mild Persian tobacco is kept alight by a slowly burning piece of dried refuse which is kindly furnished by the camel for fuel; and the smoke is inhaled into the lungs, and slowly expelled from the nostrils and the mouth. Although the hastily rolled cigarette is the resort of the poor in Egypt, and is somewhat used here, it must be a very abandoned wretch who cannot afford a pull at a narghileh in Damascus. Its universality must excuse the long paragraph I have devoted to this pipe. You see men smoking it in all the cafés, in all the shops, by the roadside, seated in the streets, in every garden, and on the house-tops. The visible occupation of Damascus is sucking this pipe.

Our first walk in the city was on Sunday to the church of the Presbyterian mission; on our way we threaded a wilderness of bazaars, nearly all of them roofed over, most of them sombre and gloomy. Only in the glaring heat of summer could they be agreeable places of refuge. The roofing of these tortuous streets and lanes is

not so much to exclude the sun, I imagine, as to keep out the snow, and the roofs are consequently substantial; for Damascus has an experience of winter, being twenty-two hundred feet above the sea-level, nearly as high as Jerusalem. These bazaars, so much vaunted all through the Orient, disappointed us, not in extent, for they are interminable, but in wanting the picturesqueness, oddity, and richness of those of Cairo. And this, like the general appearance of the city, is a disappointment hard to be borne, for we have been taught to believe that Damascus is a Paradise on earth, and that here, if anywhere, we should come into that region of enchantment which the poets of the Arabian Nights' tales have imposed upon us as the actual Orient. Should we have recognized, in the low and partially flooded strip of grassland through which we drove from the mouth of the Abana gorge to the western gate of the city, the green *Merj* of the Arabian poets, that gem of the earth? The fame of it has gone abroad throughout the world, as if it were a unique gift of Allah to his favorites. Why, every Occidental land has a million glades, watered, green-sodded, tree-embowered, more lovely than this, that no poet has thought it worth while to celebrate.

We found a little handful of worshippers at the mission church, and among them—Heaven forgive us for looking at her on Sunday!—an eccentric and somewhat notorious English lady of title, who shares the bed and board of an Arab sheykh in his harem outside the walls. It makes me blush for the attractiveness of my own country, and the slighted fascination of the noble red man in his paint and shoddy blanket, when I see a lady, sated with the tame civilization of England, throw herself into the arms of one of these coarse bigamists of the desert. Has he no reputation in the Mother country, our noble, chivalrous Walk-Under-the-Ground?

We saw something of the missionaries of Damascus, but as I was not of the established religion at the court of Washington at the time of my departure from home, and had no commission to report to the government, either upon the condition of consulates or of religion abroad, I am not prepared to remark much upon the state of either in this city. I should say, however, that not many direct converts were made either from Moslemism or from other Christian beliefs, but that incalculable good is accomplished by the schools which the missionaries conduct. The influence of these, in encouraging a disposition to read, and to inquire into the truth and into the conditions of a better civilization, is not to be overestimated. What impressed me most, however, in the fortune of these able, faithful servants of the propagandism of Christian civilization, was their pathetic isolation. A gentleman and his wife of this mission had been thirty years absent from the United States. The friends who cheered or regretted their departure, who cried over them, and prayed over them, and followed them with tender messages, had passed away, or become so much absorbed in the ever-exciting life at home as to have almost forgotten those who had gone away to the heathen a generation ago. The Mission Board that personally knew them and lovingly cared for them is now composed of strangers to them. They were, in fact, expatriated, lost sight of. And yet they had gained no country nor any sympathies to supply the place of those lost. They must always be, to a great degree, strangers in this fierce, barbarous city.

We wandered down through the Christian quarter of the town: few shops are here; we were most of the time walking between mud-walls, which have a door now and then. This quarter is new; it was entirely burned by the Moslems and Druses in 1860, when no less than twenty-five hundred adult male Christians, heads of families, were slaughtered, and thousands more perished of wounds and famine consequent upon the total destruction of their property. That the Druses were incited to this persecution by the Turkish rulers is generally believed. We went out of the city by the eastern gate, called Bab Shurky, which name profanely suggested the irrelevant colored image of Bob Sharkey, and found ourselves in the presence of huge mounds of rubbish, the accumulations of refuse carted out of the city during many centuries, which entirely concealed from view the country beyond. We skirted these for a while, with the crumbling city wall on the left hand, passed through the hard, gray, desolate Turkish cemetery, and came at length into what might be called country. Not that we could see any country, however; we were always between high mud-walls, and could see nothing beyond them, except the sky, unless we stepped through an open door into a garden.

Into one of these gardens, a public one, and one of the most celebrated in the rhapsodies of travellers and by the inventive poets, we finally turned. When you are walking for pleasure in your native land, and indulging a rural feeling, would you voluntarily go into a damp swale, and sit on a moist sod under a willow? This garden is low, considerably lower than the city, which has gradually elevated itself on its own decay, and is cut by little canals or sluiceways fed by the Abana, which run with a good current. The ground is well covered with coarse grass, of the vivid green that one finds usually in low ground, and is liberally sprinkled with a growth of willows and poplars. In this garden of the Hesperides, in which there are few if any flowers, and no promise of fruit, there is a rough wooden shed, rickety and decaying, having, if I remember rightly, a balcony,—it must have a balcony,—and there pipes, poor lemonade, and poorer ice cream are served to customers. An Arab band of four persons, one of them of course blind of an eye, seated cross-legged on a sort of bedstead, was picking and thumping a monotonous, never-ending tune out of the usual instruments. You could not deny that the vivid greenery, and the gayly appalled groups, sitting about under the trees and on the water's edge, made a lively scene. In another garden, farther on around the wall, the shanty of entertainment is a many-gallied shaky construction, or a series of platforms and terraces of wood, overhanging the swift Abana. In the daytime it is but a shabby sight; but at night, when a thousand colored globes light it without revealing its poverty, and the lights dance in the water, and hundreds of turbaned, gowned narghileh-smokers and coffee-drinkers lounge in the galleries, or gracefully take their ease by the sparkling current, and the faint thump of the darabouka is heard, and some gesticulating story-teller, mounted upon a bench, is reeling off to an attentive audience an interminable Arabian tale, you might fancy that the romance of the Orient is not all invented.

Of other and private gardens and enclosures we had glimpses, on our walk, through open gates, and occasionally over the walls; we could imagine what a fragrance and color would greet the senses when the apricots are in bloom, and the oranges and lemons in flower, and how beautiful the view might be if the ugly walls did not conceal it. We returned by the saddlers' bazaar, and by a famous plane-tree, which may be as old as the Moslem religion; its gnarled limbs are like the stems of ordinary trees, and its trunk is forty feet around.

The remark that Damascus is without monuments of its past needs qualification; it was made with reference to its existence before the Christian era, and in comparison with other capitals of antiquity.

Remains may, indeed, be met in its exterior walls, and in a broken column here and there built into a modern house, of Roman workmanship, and its Great Mosque is an historical monument of great interest, if not of the highest antiquity. In its structure it represents three religions and three periods of art; like the mosque of St. Sophia at Constantinople, it was for centuries a Christian cathedral; like the Dome of the Rock at Jerusalem, it is built upon a spot consecrated by the most ancient religious rites. Situated in the midst of the most densely peopled part of the city, and pressed on all sides by its most crowded bazaars, occupying a quadrangle nearly five hundred feet one way by over three hundred the other, the wanderer among the shops is constantly coming to one side or another of it, and getting glimpses through the spacious portals of the colonnaded court within. Hemmed in as it is, it is only by diving into many alleys and pushing one's way into the rear of dirty shops and climbing upon the roofs of houses, that one can get any idea of the exterior of the mosque. It is, indeed, only from an eminence that you can see its three beautiful minarets.

It does not appear that Chosroes, the Persian who encamped his army in the delicious gardens of Damascus, in the year 614, when he was on his way to the destruction of Jerusalem and the massacre of its Christian inhabitants, disturbed the church of John the Baptist in this city. But twenty years later it fell into the hands of the Saracens, who for a few years were content to share it with the Christian worshippers. It is said that when Khâled, the most redoubtable of the Friends of the Prophet, whose deeds entitled him to the sobriquet of The Sword of God, entered this old church, he asked to be conducted into the sacred vault (which is now beneath the *kubbeh* of the mosque), and that he was there shown the head of John the Baptist in a gold casket, which had in Greek this inscription: "This casket contains the head of John the Baptist, son of Zachariah."

The building had been then for over three centuries a Christian church. And already, when Constantine dedicated it to Christian use, it had for over three hundred years witnessed the worship of pagan deities. The present edifice is much shorn of its original splendor and proportions, but sufficient remains to show that it was a worthy rival of the temples of Ba'albek, Palmyra, and Jerusalem. No part of the building is older than the Roman occupation, but the antiquarians are agreed to think that this was the site of the old Syrian temple, in which Ahaz saw the beautiful altar which he reproduced in the temple at Jerusalem.

Pieces of superb carving, recalling the temple of the Sun at Ba'albek, may still be found in some of the gateways, and the noble Corinthian columns of the interior are to be referred to Roman or Greek workmen. Christian art is represented in the building in some part of the walls and in the round-topped windows; and the Moslems have superimposed upon all minarets, a dome, and the gay decorations of colored marbles and flaring inscriptions.

The Moslems have either been too ignorant or too careless to efface all the evidences of Christian occupation. The doors of the eastern gate are embossed with brass, and among the emblems is the Christian sacramental cup. Over an arch, which can only be seen from the roof of the silversmiths' bazaar, is this inscription in Greek: "Thy kingdom, O Christ, is an everlasting kingdom, and thy dominion endureth throughout all generations."

It required a special permit to admit us to the mosque, but when we were within the sacred precincts and shod with slippers, lest our infidel shoes should touch the pavement, we were followed by a crowd of attendants who for the moment overcame their repugnance to our faith in expectation of our backsheesh. The interior view is impressive by reason of the elegant minarets and the fine colonnaded open court. Upon one of the minarets Jesus will descend when he comes to judge the world. The spacious mosque, occupying one side of the court, and open on that side to its roof, is divided in its length by two rows of Corinthian columns, and has a certain cheerfulness and hospitality. The tessellated marble pavement of the interior is much worn, and is nearly all covered with carpets of Persia and of Smyrna. The only tomb in the mosque is that of St. John the Baptist, which is draped in a richly embroidered cloth.

We were anew impressed by the home-like, democratic character of the great mosques. This, opening by its four gates into the busiest bazaars, as we said, is much frequented at all hours. At the seasons of prayer you may see great numbers prostrating themselves in devotion, and at all other times this cool retreat is a refuge for the poor and the weary. The fountains of running water in the court attract people,—those who desire only to sit there and rest, as well as those who wash and pray. About the fountains and in the mosque were seated groups of women, eating their noonday bread, or resting in that dumb attitude under which Eastern women disguise their discontent or their intrigues. This is, at any rate, a haven of rest for all, and it is a goodly sight to see all classes, rich and poor, flocking in here, leaving their shoes at the door or carrying them in their hands.

The view from the minaret which we ascended is peculiar. On the horizon we saw the tops of hills and mountains, snowy Hermon among them. Far over the plain we could not look, for the city is beset by a thicket of slender trees, which were just then in fresh leafage. Withdrawing our gaze from the environs, we looked down upon the wide-spread oval-shaped city. Most conspicuous were the minarets, then a few domes, and then thousands of dome-shaped roofs. You see the top of a covered city, but not the city. In fact, it scarcely looks like a city; you see no streets, and few roofs proper, for we have to look twice to convince ourselves that the flat spaces covered with earth and often green with vegetation (gardens in the air) are actually roofs of houses. The streets are either roofed over or are so narrow that we cannot see them from this height. Damascus is a sort of rabbit-burrow.

Not far from the Great Mosque is the tomb of Saladin. We looked from the street through a grated window, to the bars of which the faithful have tied innumerable rags and strings (pious offerings, which it is supposed will bring them good luck) into a painted enclosure, and saw a large catafalque, or sarcophagus; covered with a green mantle. The tomb is near a mosque, and beside a busy cotton-bazaar; it is in the midst of traffic and travel, among activities and the full rush of life,—just where a man would like to be buried in order to be kept in remembrance.

In going about the streets we notice the prevalence of color in portals, in the interior courts of houses, and in the baths; there is a fondness for decorating with broad gay stripes of red, yellow, and white. Even the white pet sheep which are led about by children have their wool stained with dabs of brilliant color,—perhaps in honor of the Greek Easter.

The baths of Damascus are many and very good, not so severe and violent as those of New York, nor so thorough as those of Cairo, but, the best of them, clean and agreeable. We push aside a gay curtain from the street and descend by steps into a square apartment. It has a dome like a mosque. Under the dome is a large marble basin into which water is running; the floor is tessellated with colored marbles. Each side is a recess with a halfdome, and in the recesses are elevated divans piled with cushions for reclining. The walls are painted in stripes of blue, yellow, and red, and the room is bright with various Oriental stuffs. There are turbaned and silken-attired attendants, whose gentle faces might make them mistaken for ministers of religion as well as of cleanliness, and upon the divans recline those who have come from the bath, enjoying *kief*, with pipes and coffee. There is an atmosphere of perfect contentment in the place, and I can imagine how an effeminate ruler might see, almost without a sigh, the empire of the world slip from his grasp while he surrendered himself to this delicious influence.

We undressed, were towelled, shod with wooden clogs, and led through marble paved passages and several rooms into an inner, long chamber, which has a domed roof pierced by bulls'-eyes of party-colored glass. The floor, of colored marbles, was slippery with water running from the overflowing fountains, or dashed about by the attendants. Out of this room open several smaller chambers, into which an unsocial person might retire. We sat down on the floor by a marble basin into which both hot and cold water poured. After a little time spent in contemplating the humidity of the world, and reflecting on the equality of all men before the law without clothes, an attendant approached, and began to deluge us with buckets of hot water, dashing them over us with a jocular enjoyment and as much indifference to our personality as if we had been statues. I should like to know how life looks to a man who passes his days in this dimly illumined chamber of steam, and is permitted to treat his fellow-men with every mark of disrespect. When we were sufficiently drenched, the agile Arab who had selected me as his mine of backsheesh, knelt down and began to scrub me with hair mittens, with a great show of energy, uttering jocose exclamations in his own language, and practising the half-dozen English words he had mastered, one of them being "dam," which he addressed to me both affirmatively and interrogatively, as if under the impression that it conveyed the same meaning as *tyeb* in his vocabulary. I suppose he had often heard wicked Englishmen, who were under his hands, use it, and he took it for an expression of profound satisfaction. He continued this operation for some time, putting me in a sitting position, turning me over, telling me to "sleep" when he desired me to lie down, encouraging me by various barbarous cries, and slapping his hand from time to time to make up by noise for his economical expenditure of muscular force.

After my hilarious bather had finished this process, he lathered me thoroughly, drenched me from head to heels in suds, and then let me put the crowning touch to my happiness by entering one of the little rooms, and sliding into a tank of water hot enough to take the skin off. It is easy enough to make all this process read like a martyrdom, but it is, on the contrary, so delightful that you do not wonder that the ancients spent so much time in the bath, and that next to the amphitheatre the emperors and tyrants lavished most money upon these establishments, of which the people were so extravagantly fond.

Fresh towels were wound round us, turbans were put on our heads, and we were led back to the room first entered, where we were re-enveloped in cloths and towels, and left to recline upon the cushioned divans; pipes and coffee were brought, and we enjoyed a delicious sense of repose and bodily lightness, looking dimly at the grave figures about us, and recognizing in them not men but dreamy images of a physical paradise. No rude voices or sharp movements broke the repose of the chamber. It was as in a dream that I watched a handsome boy, who, with a long pole, was handling the washed towels, and admired the unerring skill that tossed the strips of cloth high in the air and caused them to catch and hang squarely upon the cords stretched across the recesses. The mind was equal to the observation, but not to the comprehension, of this feat. When we were sufficiently cooled, we were assisted to dress, the various articles of Frank apparel affording great amusement to the Orientals. The charge for the whole entertainment was two francs each, probably about four times what a native would have paid.

XIV.—OTHER SIGHTS IN DAMASCUS.

DAY after day we continued, like the mourners, to go about the streets, in the tangle of the bazaars, under the dark roofs, endeavoring to see Damascus. When we emerged from the city gate, the view was not much less limited. I made the circuit of the wall on the north, in lanes, by running streams, canals, enclosed gardens, seeing everywhere hundreds of patient, summer-loving men and women squatting on the brink of every rivulet, by every damp spot, in idle and perfect repose.

We stumbled about also on the south side of the town, and saw the reputed place of St. Paul's escape, which has been lately changed. It is a ruined Saracenic tower in the wall, under which is Bab Kisan, a gate that has been walled up for seven hundred years. The window does not any more exist from which the apostle was let down in a basket, but it used to be pointed out with confidence, and I am told that the basket is still shown, but we did not see it. There are still some houses on this south wall, and a few of them have projecting windows from which a person might easily be lowered. It was in such a house that the harlot of Jericho lived, who contrived the escape of the spies of Joshua. And we see how thick and substantial the town walls of that city must have been to support human habitations. But they were blown down.

Turning southward into the country, we came to the tomb of the porter who assisted Paul's escape, and who now sleeps here under the weight of the sobriquet of St. George. A little farther out on the same road is located the spot of Said's conversion.

Near it is the English cemetery, a small high-walled enclosure, containing a domed building surmounted by a cross; and in this historical spot, whose mutations of race, religion, and government would forbid the most superficial to construct for it any cast-iron scheme of growth or decay, amid these almost melancholy patches of vegetation which still hover in the Oriental imagination as the gardens of all delights, sleeps undisturbed by ambition or by criticism, having at last, let us hope, solved the theory of "averages," the brilliant Henry T. Buckle.

Not far off is the Christian cemetery. "Who is buried here?" I asked our thick-witted guide.

"O, anybody," he replied, cheerfully, "Greeks, French, Italians, anybody you like"; as if I could please myself by interring here any one I chose.

Among the graves was a group of women, hair dishevelled and garments loosened in the *abandon* of mourning, seated about a rough coffin open its entire length. In it lay the body of a young man who had been drowned, and recovered from the water after three days. The women lifted up his dead hands, let them drop heavily, and then wailed and howled, throwing themselves into attitudes of the most passionate grief. It was a piteous sight, there under the open sky, in the presence of an unsympathizing crowd of spectators.

Returning, we went round by the large Moslem cemetery, situated at the southwest corner of the city. It is, like all Moslem burying-grounds, a melancholy spectacle,—a mass of small whitewashed mounds of mud or brick, with an inscribed headstone,—but here rest some of the most famous men and women of Moslem history. Here is the grave of Ibn' Asâker, the historian of Damascus; here rests the fierce Moawveh, the founder of the dynasty of the Omeiyades; and here are buried three of the wives of Mohammed, and Fatimeh, his granddaughter, the child of Ali, whose place of sepulture no man knows. Upon nearly every tomb is a hollow for water, and in it is a sprig of myrtle, which is renewed every Friday by the women who come here to mourn and to gossip.

Much of the traveller's time, and perhaps the most enjoyable part of it, in Damascus, is spent in the bazaars, cheapening scarfs and rugs and the various silken products of Syrian and Persian looms, picking over dishes of antique coins, taking impressions of intaglios, hunting for curious amulets, and searching for the quaintest and most brilliant Saracenic tiles. The quest of the antique is always exciting, and the inexperienced is ever hopeful that he will find a gem of value in a heap of rubbish; this hope never abandons the most *blase* tourist, though in time he comes to understand that the sharp-nosed Jew, or the oily Armenian, or the respectable Turk, who spreads his delusive wares before him, knows quite as well as the Seeker the value of any bit of antiquity, not only in Damascus, but in Constantinople, Paris, and London, and is an adept in all the counterfeits and impositions of the Orient.

The bazaars of the antique, of old armor, ancient brasses, and of curiosities generally, and even of the silver and gold smiths, are disappointing after Cairo; they are generally full of rubbish from which the choice things seem to have been culled; indeed, the rage for antiquities is now so great that sharp buyers from Europe range all the Orient and leave little for the innocent and hopeful tourist, who is aghast at the prices demanded, and usually finds himself a victim of his own cleverness when he pays for any article only a fourth of the price at first asked.

The silk bazaars of Damascus still preserve, however, a sort of pre-eminence of opportunity, although they are largely supplied by the fabrics manufactured at Beyrout and in other Syrian towns. Certainly no place is more tempting than one of the silk khans,—gloomy old courts, in the galleries of which you find little apartments stuffed full of the seductions of Eastern looms. For myself, I confess to the fascination of those stuffs of brilliant dyes, shot with threads of gold and of silver. I know a tall, oily-tongued Armenian, who has a little chamber full of shelves, from which he takes down one rich scarf after another, unfolds it, shakes out its shining hues, and throws it on the heap, until the room is littered with gorgeous stuffs. He himself is clad in silk attire, he is tall, suave, insinuating, grave, and overwhelmingly condescending. I can see him now, when I question the value put upon a certain article which I hold in my hand and no doubt betray my admiration of in my eyes,—I can see him now throw back his head, half close his Eastern eyes, and exclaim, as if he had hot pudding in his mouth, "Thot is ther larster price."

I can see Abd-el-Atti now, when we had made up a package of scarfs, and offered a certain sum for the lot, which the sleek and polite trader refused, with his eternal, "Thot is ther larster price," sling the articles about the room, and depart in rage. And I can see the Armenian bow us into the corridor with the same sweet courtesy, knowing very well that the trade is only just begun; that it is, in fact, under good headway; that the Arab will return, that he will yield a little from the "larster price," and that we shall go away loaded with his wares, leaving him ruined by the transaction, but proud to be our friend.

Our experience in purchasing old Saracenic and Persian tiles is perhaps worth relating as an illustration of the character of the traders of Damascus. Tiles were plenty enough, for several ancient houses had recently been torn down, and the dealers continually acquire them from ruined mosques or those that are undergoing repairs. The dragoman found several lots in private houses, and made a bargain for a certain number at two francs and a half each; and when the bargain was made, I spent half a day in selecting the specimens we desired.

The next morning, before breakfast, we went to make sure that the lots we had bought would be at once packed and shipped. But a change had taken place in twelve hours. There was an Englishman in town who was also buying tiles; this produced a fever in the market; an impression went abroad that there was a fortune to be made in tiles, and we found that our bargain was entirely ignored. The owners supposed that the tiles we had selected must have some special value; and they demanded for the thirty-eight which we had chosen—agreeing to pay for them two francs and a half apiece—thirty pounds. In the house where we had laid aside seventy-three others at the same price, not a tile was to be discovered; the old woman who showed us the vacant chamber said she knew not what had become of them, but she believed they had been sold to an Englishman.

We returned to the house first mentioned, resolved to devote the day if necessary to the extraction of the desired tiles from the grip of their owners. The contest began about eight o'clock in the morning; it was not finished till three in the afternoon, and it was maintained on our side with some disadvantage, the only nutriment that sustained us being a cup of tea which we drank very early in the morning. The scene of the bargain was the paved court of the house, in which there was a fountain and a lemon-tree, and some rose-trees trained on espaliers along the walls. The tempting enamelled tiles were piled up at one side of the court and spread out in rows in the *lewân*,—the open recess where guests are usually received. The owners were two Greeks, brothers-in-law, polite, cunning, sharp, the one inflexible, the other yielding,—a combination against which it is almost impossible to trade with safety, for the yielding one constantly allures you into the grip of the inflexible. The women of the establishment, comely Greeks, clattered about the court on their high wooden pattens for a time, and at length settled down, in an adjoining apartment, to their regular work of embroidering silken purses and tobacco-pouches, taking time, however, for an occasional cigarette or a pull at a narghileh, and, in a constant chatter, keeping a lively eye upon the trade going on in the court. The handsome children added not a little to the liveliness of the scene, and their pranks served to soften the asperities of the encounter; although I could not discover, after repeated experiments, that any affection lavished upon the children lowered the price of the tiles. The Greek does not let sentiment interfere with business, and he is much more difficult to deal with than an Arab, who occasionally has impulses.

Each tile was the subject of a separate bargain and conflict. The dicker went on in Arabic, Greek, broken English, and dislocated French, and was participated in not only by the parties most concerned, but by the young Greek guide and by the donkey-boys. Abd-el-Atti exhibited all the qualities of his generalship. He was humorous, engaging, astonished, indignant, serious, playful, threatening, indifferent. Beaten on one grouping of specimens, he made instantly a new combination; more than once the transaction was abruptly broken off in mutual rage, obstinacy, and recriminations; and it was set going again by a timely jocularly or a seeming concession. I can see now the soft Greek take up a tile which had painted on it some quaint figure or some lovely flower, dip it in the fountain to bring out its brilliant color, and then put it in the sun for our admiration; and I can see the dragoman shake his head in slow depreciation, and push it one side, when that tile was the one we had resolved to possess of all others, and was the undeclared centre of contest in all the combinations for an hour thereafter.

When the day was two thirds spent we had purchased one hundred tiles, jealously watched the packing of each one, and seen the boxes nailed and corded. We could not have been more exhausted if we had undergone an examination for a doctorate of law in a German university. Two boxes, weighing two hundred pounds each, were hoisted upon the backs of mules and sent to the French company's station; there does not appear to be a dray or a burden-cart in Damascus; all freight is carried upon the back of a mule or a horse, even long logs and whole trunks of trees.

When this transaction was finished, our Greek guide, who had heard me ask the master of the house for brass trays, told me that a fellow whom I had noticed hanging about there all the morning had some trays to show me; in fact, he had at his house "seventeen trays." I thought this a rich find, for the beautiful antique brasses of Persia are becoming rare even in Damascus; and, tired as we were, we rode across the city for a mile to a secluded private house, and were shown into an upper chamber. What was our surprise to find spread out there the same "seventy-three" tiles that we had purchased the day before, and which had been whisked away from us. By "seventeen tray," the guide meant "seventy-three." We told the honest owner that he was too late; we had already tiles enough to cover his tomb.

XV.—SOME PRIVATE HOUSES.

THE private houses of Damascus are a theme of wonder and admiration throughout the Orient. In a land in which a moist spot is called a garden, and a canal bordered by willows a Paradise, the fancy constructs a palace of the utmost splendor and luxury out of materials which in a less glowing country would scarcely satisfy moderate notions of comfort or of ostentation.

But the East is a region of contrasts as well as of luxury, and it is difficult to say how much of their reputation the celebrated mansions of Damascus owe to the wretchedness of the ordinary dwellings, and also to the raggedness of their surroundings. We spent a day in visiting several of the richest dwellings, and stepping ourselves in the dazzling luxury they offer.

The exterior of a private house gives no idea of its interior. Sometimes its plain mud-wall has a solid handsome street-door, and if it is very old, perhaps a rich Saracenic portal; but usually you slip from the gutter, lined with mud-walls, called a street, into an alley, crooked, probably dirty, pass through a stable-yard and enter a small court, which may be cheered by a tree and a basin of water. Thence you wind through a narrow passage into a large court, a parallelogram of tessellated marble, having a fountain in the centre and about it orange and lemon trees, and roses and vines. The house, two stories high, is built about this court, upon which all the rooms open without communicating with each other. Perhaps the building is of marble, and carved, or it may be highly ornamented with stucco, and painted in gay colors. If the establishment belongs to a Moslem, it will have beyond this court a second, larger and finer, with more fountains, trees, and flowers, and a house more highly decorated. This is the harem, and the way to it is a crooked alley, so that by

no chance can the slaves or visitors of the master get a glimpse into the apartments of the women. The first house we visited was of this kind; all the portion the gentlemen of the party were admitted into was in a state of shabby decay; its court in disrepair, its rooms void of comfort,—a condition of things to which we had become well accustomed in everything Moslem. But the ladies found the court of the harem beautiful, and its apartments old and very rich in wood-carving and in arabesques, something like the best old Saracenic houses in Cairo.

The houses of the rich Jews which we saw are built like those of the Moslems, about a paved court with a fountain, but totally different in architecture and decoration.

In speaking of a fountain, in or about Damascus, I always mean a basin into which water is discharged from a spout. If there are any jets or upspringing fountains, I was not so fortunate as to see them.

In passing through the streets of the Jews' quarter we encountered at every step beautiful children, not always clean Sunday-school children, but ravishingly lovely, the handsomest, as to exquisite complexions, grace of features, and beauty of eyes, that I have ever seen. And looking out from the open windows of the balconies which hang over the street were lovely Jewish women, the mothers of the beautiful children, and the maidens to whom the humble Christian is grateful that they tire themselves and look out of windows now as they did in the days of the prophets.

At the first Jewish house we entered, we were received by the entire family, old and young, newly married, betrothed, cousins, uncles, and maiden aunts. They were evidently expecting company about these days, and not at all averse to exhibiting their gorgeous house and their rich apparel. Three dumpy, middle-aged women, who would pass for ugly anywhere, welcomed us at first in the raised recess, or *lewân*, at one end of the court; we were seated upon the divans, while the women squatted upon cushions. Then the rest of the family began to appear. There were the handsome owner of the house, his younger brother just married, and the wife of the latter, a tall and pretty woman of the strictly wax-doll order of beauty, with large, swimming eyes. She wore a short-waisted gown of blue silk, and diamonds, and, strange to say, a dark wig; it is the fashion at marriage to shave the head and put on a wig, a most disenchanting performance for a bride. The numerous children, very pretty and sweet-mannered, came forward and kissed our hands. The little girls were attired in white short-waisted dresses, and all, except the very smallest, wore diamonds. One was a bride of twelve years, whose marriage was to be concluded the next year. She wore an orange-wreath, her high corsage of white silk sparkled with diamonds, and she was sweet and engaging in manner, and spoke French prettily.

The girls evidently had on the family diamonds, and I could imagine that the bazaar of Moses in the city had been stripped to make a holiday for his daughters. Surely, we never saw such a display out of the Sultan's treasure-chamber. The head-dress of one of the cousins of the family, who was recently married, was a pretty hat, the coronal front of which was a mass of diamonds. We saw this same style of dress in other houses afterwards, and were permitted to admire other young women who were literally plastered with these precious stones, in wreaths on the head, in brooches and necklaces,—masses of dazzling diamonds, which after a time came to have no more value in our eyes than glass, so common and cheap did they seem. If a wicked person could persuade one of these dazzling creatures to elope with him, he would be in possession of treasure enough to found a college for the conversion of the Jews. I could not but be struck with the resemblance of one of the plump, glowing-cheeked young girls, who was set before us for worship, clad in white silk and inestimable jewels, to the images of the Madonna, decked with equal affection and lavish wealth, which one sees in the Italian churches.

All the women and children of the family walked about upon wooden pattens, ingeniously inlaid with ivory or pearl, the two supports of which raise them about three inches from the ground.

They are confined to the foot by a strap across the ball, but being otherwise loose, they clatter at every step; of course, graceful walking on these little stilts is impossible, and the women go about like hens whose toes have been frozen off. When they step up into the *lewân*, they leave their pattens on the marble floor, and sit in their stocking-feet. Our conversation with this hospitable collection of relations consisted chiefly in inquiries about their connection with each other, and an effort on their part to understand our relationship, and to know why we had not brought our entire families. They were also extremely curious to know about our houses in America, chiefly, it would seem, to enforce the contrast between our plainness and their luxury. When we had been served with coffee and cigarettes, they all rose and showed us about the apartments.

The first one, the *salon*, will give an idea of the others. It was a lofty, but not large room, with a highly painted ceiling, and consisted of two parts; the first, level with the court and paved with marble, had a marble basin in the centre supported on carved lions; the other two thirds of the apartment was raised about a foot, carpeted, and furnished with chairs of wood, inlaid with mother-of-pearl, stiffly set against the walls. The chairs were not comfortable to sit in, and they were the sole furniture. The wainscoting was of marble, in screen-work, and most elaborately carved. High up, near the ceiling, were windows, double windows in fact, with a space between like a gallery, so that the lacelike screen-work was exhibited to the utmost advantage. There was much gilding and color on the marble, and the whole was costly and gaudy. The sleeping-rooms, in the second story, were also handsome in this style, but they were literally all windows, on all sides; the space between the windows was never more than three or four inches. They are admirable for light and air, but to enter them is almost like stepping out of doors. They are all *en suite*, so that it would seem that the family must retire simultaneously, exchanging the comparative privacy of the isolated rooms below for the community of these glass apartments.

The *salons* that we saw in other houses were of the same general style of the first; some had marble niches in the walls, the arch of which was supported by slender marble columns, and these recesses, as well as the walls, were decorated with painting, usually landscapes and cities. The painting gives you a perfectly accurate idea of the condition of art in the Orient; it was not only pre-Raphaelite, it was pre-Adamite, worse than Byzantine, and not so good as Chinese. Money had been freely lavished in these dwellings, and whatever the Eastern chisel or brush could do to enrich and ornament them had been done. I was much pleased by the picture of a city,—it may have been Damascus—freely done upon the wall. The artist had dotted the plaster with such houses as children are accustomed to make on a slate, arranging some of them in rows, and inserting here and there a minaret and a dome. There was not the slightest attempt at shading or

perspective. Yet the owners contemplated the result with visible satisfaction, and took a simple and undisguised pleasure in our admiration of the work of art.

"Alas," I said to the delighted Jew connoisseur who had paid for this picture, "we have nothing like that in our houses in America, not even in the Capitol at Washington!"

"But your country is new," he replied with amiable consideration; "you will have of it one day."

In none of these veneered and stuccoed palaces did we find any comfort; everywhere a profuse expenditure of money in Italian marble, in carving, in gilding, and glaring color, but no taste, except in some of the woodwork, cut in Arabesque, and inlaid—a reminiscence of the almost extinct Saracenic grace and invention. And the construction of all the buildings and the ornamentation were shabby and cheap in appearance, in spite of the rich materials; the marbles in the pavement or the walls were badly joined and raggedly cemented, and by the side of the most costly work was sure to be something mean and frail.

We supposed at first that we ought to feel a little delicacy about intruding our bare-faced curiosity into private houses,—perhaps an unpardonable feeling in a traveller who has been long enough in the Orient to lose the bloom of Occidental modesty. But we need not have feared. Our hosts were only too glad that we should see their state and luxury. There was something almost comical in these Jewish women arraying themselves in their finest gowns, and loading themselves with diamonds, so early in the day (for they were ready to receive us at ten o'clock), and in their naïve enjoyment of our admiration. Surely we ought not to have thought that comical which was so kindly intended. I could not but wonder, however, what resource for the rest of the day could remain to a woman who had begun it by dressing in all her ornaments, by crowning herself with coronets and sprays of diamonds, by hanging her neck and arms with glittering gems, as if she had been a statue set up for idolatry. After this supreme effort of the sex, the remainder of the day must be intolerably flat. For I think one of the pleasures of life must be the gradual transformation, the blooming from the chrysalis of elegant morning *déshabille* into the perfect flower of the evening toilet.

These princesses of Turkish diamonds all wore dresses with the classic short waist, which is the most womanly and becoming, and perhaps their apparel imparted a graciousness to their manner. We were everywhere cordially received, and usually offered coffee, or sherbet and confections.

H. H. the Emir Abd-el-Kader lives in a house suitable to a wealthy Moslem who has a harem. The old chieftain had expressed his willingness to receive us, and N. Meshaka, the American consular agent, sent his *kawass* to accompany us to his residence at the appointed hour. The old gentleman met us at the door of his reception-room, which is at one end of the fountained court. He wore the plain Arab costume, with a white turban. I had heard so much of the striking, venerable, and even magnificent appearance of this formidable desert hero, that I experienced a little disappointment in the reality, and learned anew that the hero should be seen in action, or through the lenses of imaginative description which can clothe the body with all the attributes of the soul. The demigods so seldom come up to their reputation! Abd-el-Kader may have appeared a gigantic man when on horseback in the smoke and whirl of an Algerine combat; but he is a man of medium size and scarcely medium height; his head, if not large, is finely shaped and intellectual, and his face is open and pleasing. He wore a beard, trimmed, which I suspect ought to be white, but which was black, and I fear dyed. You would judge him to be, at least, seventy-five, and his age begins to show by a little pallor, by a visible want of bodily force, and by a lack of lustre in those once fiery and untamable eyes.

His manner was very gracious, and had a simple dignity, nor did our interview mainly consist in the usual strained compliments of such occasions. In reply to a question, he said that he had lived over twenty years in Damascus, but it was evident that his long exile had not dulled his interest in the progress of the world, and that he watched with intense feeling all movements of peoples in the direction of freedom. There is no such teacher of democracy as misfortune, but I fancy that Abd-el-Kader sincerely desires for others the liberty he covets for himself. He certainly has the courage of his opinions; while he is a very strict Moslem, he is neither bigoted nor intolerant, as he showed by his conduct during the massacre of the Christians here, in 1860. His face lighted up with pleasure when I told him that Americans remembered with much gratitude his interference in behalf of the Christians at that time.

The talk drifting to the state of France and Italy, he expressed his full sympathy with the liberal movement of the Italian government, but as to France he had no hope of a republic at present, he did not think the people capable of it.

"But America," he said with sudden enthusiasm, "that is the country, in all the world that is the *only* country, that is the land of real freedom. I hope," he added, "that you will have no more trouble among yourselves."

We asked him what he thought of the probability of another outburst of the Druses, which was getting to be so loudly whispered. Nobody, he said, could tell what the Druses were thinking or doing; he had no doubt that in the former rising and massacre they were abetted by the Turkish government. This led him to speak of the condition of Syria; the people were fearfully ground down, and oppressed with taxation and exactions of all sorts; in comparison he did not think Egypt was any better off, but much the same.

In all our conversation we were greatly impressed by the calm and comprehensive views of the old hero, his philosophical temper, and his serenity; although it was easy to see that he chafed under the banishment which kept so eager a soul from participation in the great movements which he weighed so well and so longed to aid. When refreshments had been served, we took our leave; but the emir insisted upon accompanying us through the court and the dirty alleys, even to the public street where our donkeys awaited us, and bade us farewell with a profusion of Oriental salutations.

XVI.—SOME SPECIMEN TRAVELLERS.

IT is to be regretted that some one has not the leisure and the genius for it would require both—to study and to sketch the more peculiar of the travellers who journey during a season in the Orient, to photograph *their* impressions, and to unravel the motives that have set them wandering. There was at our hotel a countryman whose observations on the East pleased me mightily. I inferred, correctly, from his slow and deliberate manner of speech, that he was from the great West. A gentleman spare in figure and sallow in complexion, you might have mistaken him for a "member" from Tennessee or Illinois. What you specially admired in him was his entire sincerity, and his imperviousness to all the glamour, historical or romantic, which interested parties, like poets and historians, have sought to throw over the Orient. A heap of refuse in the street or an improvident dependant on Allah, in rags, was just as offensive to him in Damascus as it would be in Big Lickopolis. He carried his scales with him; he put into one balance his county-seat and into the other the entire Eastern civilization, and the Orient kicked the beam,—and it was with a mighty, though secret joy that you saw it.

It was not indeed for his own pleasure that he had left the familiar cronies of his own town and come into foreign and uncomfortable parts; you could see that he would much prefer to be again among the "directors" and "stockholders" and operators, exchanging the dry chips of gossip about stocks and rates; but, being a man of "means," he had yielded to the imperious pressure of our modern society which, insists on travel, and to the natural desire of his family to see the world. Europe had not pleased him, although it was interesting for an old country, and there were a few places, the Grand Hotel in Paris for instance, where one feels a little at home. Buildings, cathedrals? Yes, some of them were very fine, but there was nothing in Europe to equal or approach the Capitol in Washington. And galleries; my wife likes them, and my daughter,—I suppose I have walked through miles and miles of them. It may have been in the nature of a confidential confession, that he was dragged into the East, though he made no concealment of his repugnance to being here. But when he had crossed the Mediterranean, Europe had attractions for him which he had never imagined while he was in it. If he had been left to himself he would have fled back from Cairo as if it were infested with plague; he had gone no farther up the Nile; that miserable hole, Cairo, was sufficient for him.

"They talk," he was saying, speaking with that deliberate pause and emphasis upon every word which characterizes the conversation of his section of the country,—*"they talk about the climate of Egypt; it is all a humbug. Cairo is the most disagreeable city in the world, no sun, nothing but dust and wind. I give you my word that we had only one pleasant day in a week; cold,—you can't get warm in the hotel; the only decent day we had in Egypt was at Suez. Fruit? What do you get? Some pretend to like those dry dates. The oranges are so sour you can't eat them, except the Jaffa, which are all peel. Yes, the pyramids are big piles of stone, but when you come to architecture, what is there in Cairo to compare to the Tuileries? The mosque of Mohammed Ali is a fine building; it suits me better than the mosque at Jerusalem. But what a city to live in!"*

The farther our friend journeyed in the Orient, the deeper became his disgust. It was extreme in Jerusalem; but it had a pathetic tone of resignation in Damascus; hope was dead within him. The day after we had visited the private houses, some one asked him at table if he was not pleased with Damascus.

"Damascus!" he repeated, "Damascus is the most God-forsaken place I have ever been in. There is nothing to *eat*, and nothing to *see*. I had heard about the bazaars of Damascus; my daughter must see the bazaars of Damascus. There is nothing in them; I have been from one end of them to the other,—it is a mess of rubbish. I suppose you were hauled through what they call the private houses? There is a good deal of marble and a good deal of show, but there is n't a house in Damascus that a respectable American would *live* in; there is n't one he could be comfortable in. The old mosque is an interesting place: I like the mosque, and I have been there a couple of times, and should n't mind going again; but I've had enough of Damascus, I don't intend to go out doors again until my family are ready to leave."

All these intense dislikes of the Western observer were warmly combated by the ladies present, who found Damascus almost a paradise, and were glowing with enthusiasm over every place and incident of their journey. Having delivered his opinion, our friend let the conversation run on without interference, as it ranged all over Palestine. He sat in silence, as if he were patiently enduring anew the martyrdom of his pleasure-trip, until at length, obeying a seeming necessity of relieving his feelings, he leaned forward and addressed the lady next but one to him, measuring every word with judicial slowness,—

"Madame—I—hate—the—*name*—of Palestine—and Judæa—and—the Jordan—and—Damascus—and—Jerusalem."

It is always refreshing in travel to meet a candid man who is not hindered by any weight of historic consciousness from expressing his opinions; and without exactly knowing why I felt under great obligations to this gentleman,—for gentleman he certainly was, even to an old-fashioned courtesy that shamed the best breeding of the Arabs. And after this wholesale sweep of the Oriental board, I experienced a new pleasure in going about and picking up the fragments of romance and sentiment that one might still admire.

There was another pilgrim at Damascus to whom Palestine was larger than all the world besides, and who magnified its relation to the rest of the earth as much as our more widely travelled friend belittled it. In a waste but damp spot outside the Bab-el-Hadid an incongruous Cook's Party had pitched its tents,—a camp which swarmed during the day with itinerant merchants and beggars, and at night was the favorite resort of the most dissolute dogs of Damascus. In knowing this party one had an opportunity to observe the various motives that bring people to the Holy Land; there were a divinity student, a college professor, a well-known publisher, some indomitable English ladies, some London cockneys, and a group of young men who made a lark of the pilgrimage, and saw no more significance in the tour than in a jaunt to the Derby or a sail to Margate. I was told that the guide-book most read and disputed over by this party was the graphic itinerary of Mark Twain. The pilgrim to whom I refer, however, scarcely needed any guide in the Holy Land. He was,

by his own representation, an illiterate shoemaker from the South of England; of schooling he had never enjoyed a day, nor of education, except such as sprung from his "conversion," which happened in his twentieth year. At that age he joined the "Primitive Methodists," and became, without abandoning his bench, an occasional exhorter and field-preacher; his study, to which he gave every moment not demanded by his trade, was the Bible. To exhorting he added the labor on Sunday of teaching, and for nearly forty years, without interruption, he had taken charge of a Sunday-school class. He was very poor, and the incessant labor of six days in the week hardly sufficed to the support of himself and his wife, and the family that began to fill his humble lodging. Nevertheless, at the very time of his conversion he was seized with an intense longing to make a pilgrimage to the Holy Land. This desire strengthened the more he read the Bible and became interested in the scenes of its prophecies and miracles. He resolved to go; yet to undertake so expensive a journey at the time was impossible, nor could his family spare his daily labor. But, early in his married life, he came to a notable resolution, and that was to lay by something every year, no matter how insignificant the sum, as a fund for his pilgrimage. And he trusted if his life were spared long enough he should be able to see with his own eyes the Promised Land; if that might be granted him, his object in life would be attained, and he should be willing to depart in peace.

Filled with this sole idea he labored at his trade without relaxation, and gave his Sundays and evenings to a most diligent study of the Bible; and at length extended his reading to other books, commentaries and travels, which bore upon his favorite object. Years passed by; his Palestine fund accumulated more slowly than his information about that land, but he was never discouraged; he lost at one time a considerable sum by misplaced confidence in a comrade, but, nothing disheartened, he set to work to hammer out what would replace it. Of course such industry and singleness of purpose were not without result; his business prospered and his fund increased; but with his success new duties opened; his children must be educated, for he was determined that they should have a better chance in England than their father had been given. The expenses of their education and his contributions to the maintenance of the worship of his society interfered sadly with his pilgrimage, and more than thirty years passed before he saw himself in possession of the sum that he could spare for the purchase of a Cook's ticket to the Holy Land. It was with pardonable pride that he told this story of his life, and added that his business of shoemaking was now prosperous, that he had now a shop of his own and men working under him, and that one of his sons, who would have as good an education as any nobleman in the kingdom, was a student at the college in London.

Of all the party with whom he travelled no one knew the Bible, so well as this shoemaker; he did not need to read it as they explored the historical places, he quoted chapter after chapter of it, without hesitation or consciousness of any great achievement, and he knew almost as well the books of travel that relate to the country. Familiarity with the English of the Bible had not, however, caused him to abandon his primitive speech, and he did not show his respect for the sacred book by adopting its grammatical forms. Such phrases as, "It does I good to see he eat," in respect to a convalescent comrade, exhibited this peculiarity. Indeed, he preserved his independence, and vindicated the reputation of his craft the world over for a certain obstinacy of opinion, if not philosophic habit of mind, which pounding upon leather seems to promote. He surprised his comrades by a liberality of view and an absence of narrowness which were scarcely to be expected in a man of one idea. I was pained to think that the reality of the Holy Land might a little impair the celestial vision he had cherished of it for forty years; but perhaps it will be only a temporary obscuration; for the imagination is stronger than the memory, as we see so often illustrated in the writings of Oriental travellers; and I have no doubt that now he is again seated on his bench, the kingdoms he beholds are those of Israel and Judah, and not those that Mr. Cook showed him for an hundred pounds.

We should, perhaps, add, that our shoemaker cared for no part of the Orient except Palestine, and for no history except that in the Bible. He told me that he was forwarded from London to Rome, on his way to join Cook's Pilgrims at Cairo, in the company of a party of Select Baptists (so they were styled in the prospectus of their journey), and that, unexpectedly to himself (for he was a man who could surmount prejudices), he found them very good fellows; but that he was obliged to spend a whole day in Rome greatly against his will; it was an old and dilapidated city, and he did not see why so much fuss was made over it. Egypt did not more appeal to his fancy; I think he rather loathed it, both its past and its present, as the seat of a vain heathenism. For ruins or antiquities not mentioned in the Bible he cared nothing, for profane architecture still less; Palestine was his goal, and I doubt if since the first crusade any pilgrim has trod the streets of Jerusalem with such fervor of enthusiasm as this illiterate, Bible-grounded, and spiritual-minded shoemaker.

We rode one afternoon up through the suburb of Salahiyyeh to the sheikh's tomb on the naked hill north of the city, and down along the scarred side of it into the Abana gorge. This much-vaunted ride is most of the way between mud-walls so high that you have a sight of nothing but the sky and the tops of trees, and an occasional peep, through chinks in a rickety gate, into a damp and neglected garden, or a ragged field of grain under trees. But the view from the heights over the vast plain of Damascus, with the city embowered in its green, is superb, both for extent and color, and quite excuses the enthusiasm expended on this perennial city of waters. We had occasional glimpses of the Abana after it leaves the city, and we could trace afar off the course of the Pharpar by its winding ribbon of green. The view was best long before we reached the summit, at the cemetery and the ruined mosque, when the minarets showed against the green beyond. A city needs to be seen from some distance, and from not too high an elevation; looking directly down upon it is always uninteresting.

Somewhere in the side of the mountain, to the right of our course, one of the Moslem legends has located the cave of the Seven Sleepers. Knowing that the cave is really at Ephesus, we did not care to anticipate it.

The sheikh's tomb is simply a stucco dome on the ridge, and exposed to the draft of air from a valley behind it. The wind blew with such violence that we could scarcely stand there, and we made all our observations with great discomfort. What we saw was the city of Damascus, shaped like an oval dish with a long handle; the handle is the suburb on the street running from the Gate of God that sees the annual procession of pilgrims depart for Mecca. Many brown villages dot the emerald,—there are said to be forty in the whole plain. Towards the east we saw the desert and the gray sand fading into the gray sky of the horizon. That way lies Palmyra; by that route goes the dromedary post to Bagdad. I should like to send a

letter by it.

The view of the Abana gorge from the height before we descended was unique. The narrow pass is filled with trees; but through them we could see the white French road, and the Abana divided into five streams, carried at different levels along the sides, in order to convey water widely over the plain. Along the meadow road, as we trotted towards the city, as, indeed, everywhere about the city at this season, we found the ground marshy and vivacious with frogs.

The street called Straight runs the length of the city from east to west, and is straight in its general intention, although it appears to have been laid out by a donkey, whose attention was constantly diverted to one side or the other. It is a totally uninteresting lane. There is no reason, however, to suppose that St. Paul intended to be facetious when he spoke of it. In his day it was a magnificent straight avenue, one hundred feet wide; and two rows of Corinthian colonnades extending a mile from gate to gate divided it lengthwise. This was an architectural fashion of that time; the colonnade at Palmyra, which is seen stalking in a purposeless manner across the desert, was doubtless the ornament of such a street.

The street life of Damascus is that panorama of the mean and the picturesque, the sordid and the rich, of silk and rags, of many costumes and all colors, which so astonishes the Oriental traveller at first, but to which he speedily becomes so accustomed that it passes almost unnoticed. The majority of the women are veiled, but not so scrupulously as those of Cairo. Yet the more we see of the women of the East the more convinced we are that they are exceedingly good-hearted; it is out of consideration for the feelings of the persons they meet in the street that they go veiled. This theory is supported by the fact that the daughters of Bethlehem, who are all comely and many of them handsome, never wear veils.

In lounging through the streets the whole life and traffic of the town is exposed to you: donkeys loaded with panniers of oranges, or with sickly watermelon cut up, stop the way (all the melons of the East that I have tasted are flavorless); men bearing trays of sliced boiled beets cry aloud their deliciousness as if they were some fruit of paradise; boys and women seated on the ground, having spread before them on a paper some sort of uninviting candy; anybody planted by the roadside; dogs by the dozen snoozing in all the paths,—the dogs that wake at night and make Rome howl; the various tradesmen hammering in their open shops; the silk-weavers plying the shuttle; the makers of "sweets" stirring the sticky compounds in their shining copper pots and pans; and what never ceases to excite your admiration is the good-nature of the surging crowd, the indifference to being jostled and run over by horses, donkeys, and camels.

Damascus may be—we have abundant testimony that it is—a good city, if, as I said, one could see it. Arriving, you dive into a hole, and scarcely see daylight again; you never can look many yards before you; you move in a sort of twilight, which is deepened under the heavy timber roofs of the bazaars; winding through endless mazes of lanes with no view except of a slender strip of sky, you occasionally may step through an opening in the wall into a court with a square of sunshine, a tank of water, and a tree or two. The city can be seen only from the hill or from a minaret, and then you look only upon roofs. After a few days the cooping up in this gorgeous Oriental paradise became oppressive.

We drove out of the city very early one morning. I was obliged to the muezzin of the nearest minaret for awakening me at four o'clock. From our window we can see his aerial balcony,—it almost overhangs us; and day and night at his appointed hours we see the turbaned muezzin circling his high pinnacle, and hear him projecting his long call to prayer over the city roofs. When we came out at the west gate, the sun was high enough to color Hermon and the minarets of the west side of the city, and to gleam on the Abana. As we passed the diligence station, a tall Nubian, an employee of the company, stood there in the attitude of seneschal of the city; ugliness had marked him for her own, giving him a large, damaged expanse of face, from which exuded, however, an inexpugible good-nature; he sent us a cheerful *salam aloykem*,—"the peace of God be with you"; we crossed the shaky bridge, and got away up the swift stream at the rate of ten miles an hour.

Our last view, with the level sun coming over the roofs and spires, and the foreground of rapid water and verdure, gave us Damascus in its loveliest aspect.

XVII.—INTO DAYLIGHT AGAIN.—AN EPISODE OF TURKISH JUSTICE.

IT was an immense relief to emerge from Damascus into Bey-rout,—into a city open, cheerful; it was to re-enter the world. How brightly it lies upon its sunny promontory, climbing up the slopes and crowning every eminence with tree-embowered villas! What a varied prospect it commands of sparkling sea and curving shore; of country broken into the most pleasing diversity of hill and vale, woodlands and pastures; of precipices that are draped in foliage; of glens that retain their primitive wildness, strips of dark pine forest, groups of cypresses and of palms, spreading mulberry orchards, and terraces draped by vines; of villages dotting the landscape; of convents clinging to the heights, and the snowy peaks of Lebanon! Bounteous land of silk and wine!

Beyrout is the brightest spot in Syria or Palestine, the only pleasant city that we saw, and the centre of a moral and intellectual impulse the importance of which we cannot overestimate. The mart of the great silk

industry of the region, and the seaport of Damascus and of all Upper Syria, the fitful and unintelligent Turkish rule even cannot stifle its exuberant prosperity; but above all the advantages which nature has given it, I should attribute its brightest prospects to the influence of the American Mission, and to the establishment of Beyrout College. For almost thirty years that Mission has sustained here a band of erudite scholars, whose investigations have made the world more familiar with the physical character of Palestine than the people of Connecticut are with the resources of their own State, and of wise managers whose prudence and foresight have laid deep and broad the foundations of a Syrian civilization.

I do not know how many converts have been made in thirty years,—the East has had ample illustration, from the Abyssinians to the Colchians, of “conversion” without knowledge or civilization,—nor do I believe that any “reports” of the workmen themselves to the “Board” can put in visible array adequately the results of the American Mission in Syria. But the transient visitor can see something of them, in the dawning of a better social life, in the beginning of an improvement in the condition of women, in an unmistakable spirit of inquiry, and a recognizable taste for intellectual pursuits. It is not too much to say that the birth of a desire for instruction, for the enjoyment of literature, and, to a certain extent, of science, is due to their schools; and that their admirably conducted press, which has sent out not only translations of the Scriptures, but periodicals of secular literature and information, and elementary geographies, histories, and scientific treatises, has satisfied the want which the schools created. And this new leaven is not confined to a sect, nor limited to a race; it is working, slowly it is true, in the whole of Syrian society.

The press establishment is near the pretty and substantial church of the Mission; it is a busy and well-ordered printing and publishing house; sending out, besides its religious works and school-books, a monthly and a weekly publication and a child’s paper, which has a large and paying circulation, a great number of its subscribers being Moslems. These regenerating agencies—the schools and the press—are happily supplemented by the college, which offers to the young men of the Orient the chance of a high education, and attracts students even from the banks of the Nile. We were accompanied to the college by Dr. Jessup and Dr. Post, and spent an interesting morning in inspecting the buildings and in the enjoyment of the lovely prospect they command. As it is not my desire to enter into details regarding the Mission or the college any further than is necessary to emphasize the supreme importance of this enterprise to the civilization of the Orient, I will only add that the college has already some interesting collections in natural history, a particularly valuable herbarium, and that the medical department is not second in promise to the literary.

It is sometimes observed that a city is like a man, in that it will preserve through all mutations and disasters certain fundamental traits; the character that it obtains at first is never wholly lost, but reappears again and again, asserting its individuality after, it may be, centuries of obscurity. Beyrout was early a seat of learning and a centre of literary influence for nearly three hundred years before its desolation by an earthquake in the middle of the sixth century, and its subsequent devastation by the followers of the Arabian prophet, it was thronged with students from all the East, and its schools of philosophy and law enjoyed the highest renown. We believe that it is gradually resuming its ancient *prestige*.

While we were waiting day after day the arrival of the Austrian steamboat for Constantinople, we were drawn into a little drama which afforded us alternate vexation and amusement; an outline of it may not be out of place here as an illustration of the vicissitudes of travel in the East, or for other reasons which may appear. I should premise that the American consul who resided here with his family was not in good repute with many of the foreign residents; that he was charged with making personal contributions to himself the condition of the continuance in office of his subagents in Syria; that the character of his dragomans, or at least one of them named Ouardy, was exceedingly bad, and brought the consular office and the American name into contempt; and that these charges had been investigated by an agent sent from the ministerial bureau in Constantinople. The dragomans of the consulate, who act as interpreters, and are executors of the consul’s authority, have no pay, but their position gives them a consideration in the community, and a protection which they turn to pecuniary account. It should be added that the salary of the consul at Beyrout is two thousand dollars,—a sum, in this expensive city, which is insufficient to support a consul, who has a family, in the style of a respectable citizen, and is wholly inadequate to the maintenance of any equality with the representatives of other nations; the government allows no outfit, nor does it provide for the return of its consul; the cost of transporting himself and family home would consume almost half a year’s salary, and the tenure of the office is uncertain. To accept any of several of our Oriental consulships, a man must either have a private fortune or an unscrupulous knack of living by his wits. The English name is almost universally respected in the East, so far as my limited experience goes, in the character of its consuls; the same cannot be said of the American.

The morning after our arrival, descending the steps of the hotel, I found our dragoman in a violent altercation with another dragoman, a Jew, and a resident of Beyrout. There is always a latent enmity between the Egyptian and the Syrian dragomans, a national hostility, as old perhaps as the Shepherds’ invasion, which it needs only an occasion to blow into a flame. The disputants were surrounded by a motley crowd, nearly all of them the adherents of the Syrian. I had seen Antoine Ouardy at Luxor, when he was the dragoman of an English traveller. He was now in Frank dress, wearing a shining hat, an enormous cluster shirt-pin, and a big seal ring; and with his aggressive nose and brazen face he had the appearance of a leading mock-auctioneer in the Bowery. On the Nile, where Abd-el-Atti enjoys the distinction of Sultan among his class, the fellow was his humble servant; but he had now caught the Egyptian away from home, and was disposed to make the most of his advantage. Chancing to meet Ouardy this morning, Abd-el-Atti had asked for the payment of two pounds lent at Luxor; the debt was promptly denied, and when his own due-bill for the money was produced, he declared that he had received the money from Abd-el-Atti in payment for some cigars which he had long ago purchased for him in Alexandria. Of course if this had been true, he would not have given a note for the money; and it happened that I had been present when the sum was borrowed.

The brazen denial exasperated our dragoman, and when I arrived the quarrel had come nearly to blows, all the injurious Arabic epithets having been exhausted. The lie direct had been given back and forth, but the crowning insult was added, in English, when Abd-el-Atti cried,—

“You ’re a humbug!”

This was more than Ouardy could stand. Bursting with rage, he shook his fist in the Egyptian's face:—

"You call *me* humbug; you *humbug*, yourself. You pay for this, I shall have satisfaction by the law."

We succeeded in separating and, I hoped, in reducing them to reason, but Antoine went off muttering vengeance, and Abd-el-Atti was determined to bring suit for his money. I represented the hopelessness of a suit in a Turkish court, the delay and the cost of lawyers, and the certainty that Ouardy would produce witnesses to anything he desired to prove.

"What I care for two pound!" exclaimed the heated dragoman. "I go to spend a hundred pound, but I have justice." Shortly after, as Abd-el-Atti was walking through the bazaars, with one of the ladies of our party, he was set upon by a gang of Ouardy's friends and knocked down; the old man recovered himself and gave battle like a valiant friend of the Prophet; Ouardy's brother sallied out from his shop to take a hand in the scrimmage, and happened to get a rough handling from Abd-el-Atti, who was entirely ignorant of his relationship to Antoine. The whole party were then carried off to the seraglio, where Abd-el-Atti, as the party attacked, was presumed to be in the wrong, and was put into custody. In the inscrutable administration of Turkish justice, the man who is knocked down in a quarrel is always arrested. When news was brought to us at the hotel of this mishap, I sent for the American consul, as our dragoman was in the service of an American citizen. The consul sent his son and his dragoman. And the dragoman sent to assist an American, embarrassed by the loss of his servant in a strange city, turned out to be the brother of Antoine Ouardy, and the very fellow that Abd-el-Atti had just beaten. Here was a complication. Dragoman Ouardy showed his wounds, and wanted compensation for his injuries. At the very moment we needed the protection of the American government, its representative appeared as our chief prosecutor.

However, we sent for Abd-el-Atti, and procured his release from the seraglio; and after an hour of conference, in which we had the assistance of some of the most respectable foreign residents of the city, we flattered ourselves that a compromise was made. The injured Ouardy, who was a crafty rogue, was persuaded not to insist upon a suit for damages, which would greatly incommode an American citizen, and Abd-el-Atti seemed willing to drop his suit for the two pounds. Antoine, however, was still menacing.

"You heard him," he appealed to me, "you heard him call me humbug."

The injurious nature of this mysterious epithet could not be erased from his mind. It was in vain that I told him it had been freely applied to a well-known American, until it had become a badge of distinction. But at length a truce was patched up; and, confident that there would be no more trouble, I went into the country for a long walk over the charming hills.

When I returned at six o'clock, the camp was in commotion. Abd-el-Atti was in jail! There was a suit against him for 20,000 francs for horrible and unprovoked injuries to the dragoman of the American consul! The consul, upon written application for assistance, made by the ladies at the hotel, had curtly declined to give any aid, and espoused the quarrel of his dragoman. It appeared that Abd-el-Atti, attempting again to accompany a lady in a shopping expedition through the bazaars, had been sent for by a messenger from the seraglio. As he could not leave the lady in the street, he carelessly answered that he would come by and by. A few minutes after he was arrested by a squad of soldiers, and taken before the military governor. Abd-el-Atti respectfully made his excuse that he could not leave the lady alone in the street, but the pasha said that he would teach him not to insult his authority. Both the Ouardy brothers were beside the pasha, whispering in his ear, and as the result of their deliberations Abd-el-Atti was put in prison. It was Saturday afternoon, and the conspirators expected to humiliate the old man by keeping him locked up till Monday. This was the state of the game when I came to dinner; the faithful Abdallah, who had reluctantly withdrawn from watching the outside of the seraglio where his master was confined, was divided in mind between grief and alarm on the one side and his duty of habitual cheerfulness to us on the other, and consequently announced, "Abd-el-Atti, seraglio," as a piece of good news; the affair had got wind among the *cafés*, where there was a buzz of triumph over the Egyptians; and at the hotel everybody was drawn into the excitement, discussing the assault and the arrest of the assaulted party, the American consul and the character of his dragoman, and the general inability of American consuls to help their countrymen in time of need.

The principal champion of Abd-el-Atti was Mohammed Achmed, the dragoman of two American ladies who had been travelling in Egypt and Palestine. Achmed was a character. He had the pure Arab physiognomy, the vivacity of an Italian, the restlessness of an American, the courtesy of the most polished Oriental, and a unique use of the English tongue. Copious in speech, at times flighty in manner, gravely humorous, and more sharp-witted than the "cutest" Yankee, he was an exceedingly experienced and skilful dragoman, and perfectly honest to his employers. Achmed was clad in baggy trousers, a silk scarf about his waist, short open jacket, and wore his tarboosh on the back of his sloping head. He had a habit of throwing back his head and half closing his wandering, restless black eyes in speaking, and his gestures and attitudes might have been called theatrical but for a certain simple sincerity; yet any extravagance of speech or action was always saved from an appearance of absurdity by a humorous twinkle in his eyes. Alexandria was his home, while Abd-el-Atti lived in Cairo; the natural rivalry between the dragomans of the two cities had been embittered by some personal disagreement, and they were only on terms of the most distant civility. But Abd-el-Atti's misfortune not only roused his national pride, but touched his quick generosity, and he surprised his employers by the enthusiasm with which he espoused the cause and defended the character of the man he had so lately regarded as anything but a friend. He went to work with unselfish zeal to procure his release; he would think of nothing else, talk of nothing else.

"How is it, Achmed," they said, "that you and Abd-el-Atti have suddenly become such good friends?"

"Ah, my lady," answers Achmed, taking an attitude, "you know not Abd-el-Atti, one of the first-class men in all Egypt. Not a common dragoman like these in Beyrout, my lady; you shall ask in Cairo what a man of esteem. To tell it in Cairo that he is in jail! Abd-el-Atti is my friend. What has been some time, that is nothing. It must not be that he is in jail. And he come out in half an hour, if your consul say so."

"That is not so certain; but what can we do?"

"Write to the consul American that he shall let Abd-el-Atti go. You, my lady," said Achmed, throwing himself on his knees before the person he was addressing, "make a letter, and say I want my dragoman immediate. If

he will not, I go to the English consul, I know he will do it. Excuse me, but will you make the letter? When it was the English consul, he does something; when it was the American, I pick your pargin, my lady, he is not so much esteem here."

In compliance with Achmed's entreaty a note was written to the consul, but it produced no effect, except an uncivil reply that it was after office hours.

When I returned, Achmed was in a high fever of excitement. He believed that Abd-el-Atti would be released if I would go personally to the consul and insist upon it.

"The consul, I do not know what kind of man this is for consul; does he know what man is Abd-el-Atti? Take my advice," continued Achmed, half closing his eyes, throwing back his head and moving it alertly on the axis of his neck, and making at the same time a deprecatory gesture with the back of his hands turned out,—“take my advice, Mesr. Vahl, Abd-el-Atti is a man of respect; he is a man very rich, God forgive me! Firste-class man. There is no better family in Egypt than Abd-el-Atti Effendi. You have seen, he is the friend of governors and pashas. There is no man of more respect. In Cairo, to put Abd-el-Atti in jail, they would not believe it! When he is at home, no one could do it. The Khedive himself,” he continued, warming with his theme, “would not touch Abd-el-Atti. He has houses in the city and farms and plantations in the country, a man very well known. Who in Cairo is to put him in jail? [This, with a smile of derision.] I think he take out and put in prison almost anybody else he like, Mohammed Effendi Abd-el-Atti. See, when this Ouardy comes in Egypt!”

We hastened to the consul's. I told the consul that I was deprived of the service of my dragoman, that he was unjustly imprisoned, simply for defending himself when he was assailed by a lot of rowdies, and that as the complaint against him was supposed to issue from the consulate, I doubted not that the consul's influence could release him. The consul replied, with suavity, that he had nothing to do with the quarrel of his dragoman, and was not very well informed about it, only he knew that Ouardy had been outrageously assaulted and beaten by Abd-el-Atti; that he could do nothing at any rate with the pasha, even if that functionary had not gone to his harem outside the city, where nobody would disturb him. I ventured to say that both the Ouardys had a very bad reputation in the city,—it was, in fact, infamous,—and that the consulate was brought into contempt by them. The consul replied that the reputation of Antoine might be bad, but that his dragoman was a respectable merchant; and then he complained of the missionaries, who had persecuted him ever since he had been in Beyrout. I said that I knew nothing of his grievances; that my information about his dragoman came from general report, and from some of the bankers and most respectable citizens, and that I knew that in this case my dragoman had been set upon in the first instance, and that it was believed that the Ouardys were now attempting to extort money from him, knowing him to be rich, and having got him in, their clutches away from his friends. The consul still said that he could do nothing that night; he was very sorry, very sorry for my embarrassment, and he would send for Ouardy and advise him to relinquish his prosecution on my account. “Very well,” I said, rising to go, “if you cannot help me I must go elsewhere. Will you give me a note of introduction to the pasha?” He would do that with pleasure, although he was certain that nothing would come of it.

Achmed, who had been impatiently waiting on the high piazza (it is a charming situation overlooking the Mediterranean), saw that I had not succeeded, and was for going at once to the English consul; for all dragomans have entire confidence that English consuls are all-powerful.

“No,” I said, “we will try the pasha, to whom I have a letter, though the consul says the pasha is a friend of Ouardy.”

“I believe you. Ouardy has women in his house; the pasha goes often there; so I hear. But we will go. I will speak to the pasha also, and tell him what for a man is Abd-el-Atti. A very pleasant man, the pasha, and speak all languages, very well English.”

It was encouraging to know this, and I began to feel that I could make some impression on him. We took a carriage and drove into the suburbs, to the house of the pasha. His Excellency was in his harem, and dining, at that hour. I was shown by a barefooted servant into a barren parlor furnished in the European style, and informed that the pasha would see me presently. After a while cigarettes and coffee—a poor substitute for dinner for a person who had had none—were brought in; but no pasha.

I waited there, I suppose, nearly an hour for the governor to finish his dinner; and meantime composed a complimentary oration to deliver upon his arrival. When his Excellency at last appeared, I beheld a large, sleek Turk, whose face showed good-nature and self-indulgence. I had hopes of him, and, advancing to salute him, began an apology for disturbing his repose at this unseasonable hour, but his Excellency looked perfectly blank. He did not understand a word of English. I gave him the letter of the consul, and mentioned the name “American Consul.” The pasha took the letter and opened it; but as he was diligently examining it upside down, I saw that he did not read English. I must introduce myself.

Opening the door, I called Achmed. In coming into the presence of this high rank, all his buoyancy and bravado vanished; he obsequiously waited. I told him to say to his Excellency how extremely sorry I was to disturb his repose at such an unseasonable hour, but that my dragoman, whose services I needed, had been unfortunately locked up; that I was an American citizen, as he would perceive by the letter from the consul, and that I would detain him only a moment with my business. Achmed put this into choice Arabic. His Excellency looked more blank than before. He did not understand a word of Arabic. The interview was getting to be interesting.

The pasha then stepped to the door and called in his dragoman, a barefooted fellow in a tattered gown. The two interpreters stood in line before us, and the pasha nodded to me to begin. I opened, perhaps, a little too elaborately; Achmed put my remarks into Arabic, and the second dragoman translated that again into Turkish. What the speech became by the time it reached the ear of the pasha I could not tell, but his face darkened at once, and he peremptorily shook his head. The word came back to me that the pasha would n't let him out; Abd-el-Atti must stay in jail till his trial. I then began to argue the matter,—to say that there was no criminal suit against him, only an action for damages, and that I would be responsible for his appearance when required. The translations were made; but I saw that I was every moment losing ground; no one could tell what my solicitations became after being strained through Arabic and Turkish. My case was lost, because

it could not be heard.

Suddenly it occurred to me that the pasha might know some European language. I turned to him, and asked him if he spoke German. O, yes! The prospect brightened, and if I also had spoken that language, we should have had no further trouble. However, desperation beat up my misty recollection, and I gave the pasha a torrent of broken German that evidently astonished him. At any rate, he became gracious as soon as he understood me. He said that Abd-el-Atti was not confined on account of the suit,—he knew nothing and cared nothing for his difficulty with Ouardy,—but for his contempt of the police and soldiers. I explained that, and added that Abd-el-Atti was an old man, that I had been doctoring him for a fever ever since we were in Damascus, that I feared to have him stay in that damp jail over Sunday, and that I would be responsible for his appearance.

“Do you mean to say,” he asked, “that you will be personally responsible that he appears at the seraglio Monday morning?”

“Certainly,” I said, “for his appearance at any time and place your Excellency may name.”

“Then he may go.” He gave the order to his dragoman to accompany us and procure his release, and we retired, with mutual protestations of the highest consideration. Achmed was nearly beside himself with joy. The horses seemed to him to crawl; he could not wait the moment to announce to Abd-el-Atti his deliverance. “Ah, they thought to keep Abd-el-Atti in jail all night, and sent word to Cairo, ‘Abd-el-Atti is in jail.’ Abd-el-Atti Effendi! Take my advice, a man of respect.”

The cobble-paved court of the old seraglio prison, to which the guards admitted us without question, was only dimly lighted by an oil-lamp or two, and we could distinguish a few figures flitting about, who looked like malefactors, but were probably keepers. We were shown into a side room, where sat upon the ground an official, perhaps a judge, and two assistants. Abd-el-Atti was sent for. The old man was brought in, swinging his string of beads in his hand, looking somewhat crest-fallen, but preserving a portentous gravity. I arose and shook hands with him, and told him we had come to take him out. When we were seated, a discussion of the case sprung up, the official talked, his two assistants talked, and Abd-el-Atti and Achmed talked, and there was evidently a disposition to go over the affair from the beginning. It was a pity to cut short so much eloquence, but I asked the pasha’s dragoman to deliver his message, and told Achmed that we would postpone the discussion till Monday, and depart at once. The prisoner was released, and, declining coffee, we shook hands and got away with all haste. As we drove to the hotel, Abd-el-Atti was somewhat pensive, but declared that he would rather give a hundred pounds than not be let out that night; and when we reached home, Achmed, whose spirits were exuberant, insisted on dragging him to the *café* opposite, to exhibit him in triumph.

When I came down in the morning, Achmed was in the hall.

“Well, Achmed, how are you?”

“Firste-class,” closing his eyes with a humorous twinkle. “I’m in it now.”

“In what?”

“In the case with Mohammed Abd-el-Atti. That Ouardy says I pay him damage twenty thousand francs. Twenty thousand francs, I wish he may get it! How much, I suppose, for the consul? Take my advice, the consul want money.”

“Then the suit will keep you here with Abd-el-Atti?”

“Keep, I don’t know. I not pay him twenty thousand francs, not one thousand, not one franc. What my ladies do? Who go to Constantinople with my ladies? To-morrow morning come the steamer. To leave the old man alone with these thieves, what would anybody say of Mohammed Achmed for that? What for consul is this? I want to go to Constantinople with my ladies, and then to see my family in Alexandria. For one day in five months have I see my wife and child. O yes, I have very nice wife. Yes, one wife quite plenty for me. And I have a fine house, cost me twenty thousand dollars; I am not rich, but I have plenty, God forgive me. My shop is in the silk bazaar. I am merchant. My father-in-law say what for I go dragoman? I like to see nice peoples and go in the world. When I am dragoman, I am servant. When I am merchant, O, I am very well in Alexandria. I think I not go any more. Ah, here is Abd-el-Atti. Take my advice, he not need to be dragoman; he is pooty off. Good morning, my friend. Have they told you I am to be put in jail also?”

“So I hear; Ouardy sue you and Abdallah so you cannot be witness.”

“O, they think they get money from us. Mebbe the pasha and the consul. I think so.”

“So am I,” responded Abd-el-Atti in his most serious manner. The “Eastern question,” with these experienced dragomans, instantly resolves itself into a question of money, whoever is concerned and whatever is the tribunal. I said that I would see the consul in the morning, and that I hoped to have all proceedings stopped, so that we could get off in the steamer. Abd-el-Atti shook his head.

“The consul not to do anything. Ouardy have lent him money; so I hunderstood.”

Beyrout had a Sunday appearance. The shops were nearly all closed, and the churches, especially the Catholic, were crowded. It might have been a peaceful day but for our imbroglio, which began to be serious; we could not afford the time to wait two weeks for the next Cyprus steamer, we did not like to abandon our dragomans, and we needed their services. The ladies who depended upon Achmed were in a quandary. Notes went to the consul, but produced no effect. The bankers were called into the council, and one of them undertook to get Achmed free. Travellers, citizens, and all began to get interested or entangled in the case. There was among respectable people but one opinion about the consul’s dragoman. At night it was whispered about that the American consul had already been removed and that his successor was on his way to Beyrout. Achmed came to us in the highest spirits with the news.

All day Monday we expected the steamer. The day was frittered away in interviews with the consul and the pasha, and in endeavoring to learn something of the two cases, the suit for damages and for the debt, supposed to be going on somewhere in the seraglio. After my interview with the consul, who expressed considerable ignorance of the case and the strongest desire to stop it, I was surprised to find at the seraglio all the papers in the consul’s name, and all the documents written on consular paper; so that when I

appeared as an American citizen, to endeavor to get my dragoman released, it appeared to the Turkish officials that they would please the American government by detaining and punishing him.

The court-room was a little upper chamber, with no furniture except a long table and chairs; three Moslem judges sat at one end of the table, apparently waiting to see what would turn up. The scene was not unlike that in an office of a justice of the peace in America. The parties to the case, witnesses, attendants, spectators, came and went as it pleased them, talked or whispered to the judges or to each other. There seemed to be no rule for the reception or rejection of evidence. The judges smoked and gathered the facts as they drifted in, and would by and by make up their minds. It is truth to say, however, that they seemed to be endeavoring to get at the facts, and that they appeared to be above prejudice or interest. A new complication developed itself, however; Antoine Ouardy claimed to be a French citizen, and the French consul was drawn into the fray. This was a new device to delay proceedings.

When I had given my evidence to the judges, which I was required to put in writing, I went with Abd-el-Atti to the room of the pasha. This official was gracious enough, but gave us no hopes of release. He took me one side and advised me, as a traveller, to look out for another dragoman; there was no prospect that Abd-el-Atti could get away to accompany me on this steamer,—in fact, the process in court might detain him six months. However, the best thing to do would be to go to the American consul with Ouardy and settle it. He thought Ouardy would settle it for a reasonable amount. It was none of his business, but that was his advice. We were obliged to his Excellency for this glimpse behind the scenes of a Turkish court, and thanked him for his advice; but we did not follow it. Abd-el-Atti thought that if he abandoned the attempt to collect a debt in a Turkish city, he ought not, besides, to pay for the privilege of doing so.

Tuesday morning the steamer came into the harbor. Although we had registered our names at the office of the company for passage, nothing was reserved for us. Detained at the seraglio and the consul's, we could not go off to secure places, and the consequence was that we were subject to the black-mail of the steward when we did go. By noon there were signs of the failure of the prosecution; and we sent off our luggage. In an hour or two Abd-el-Atti appeared with a troop of friends, triumphant. Somewhere, I do not know how, he and Achmed had raked up fourteen witnesses in his favor; the judges would n't believe Ouardy nor any one he produced, and his case had utterly broken down. This mountain of a case, which had annoyed us so many days and absorbed our time, suddenly collapsed. We were not sorry to leave even beautiful Beyrout, and would have liked to see the last of Turkish rule as well. At sunset, on the steamer *Achille*, swarming above and below with pilgrims from Jerusalem and Mecca, we sailed for Cyprus.

XVIII.—CYPRUS.

IN the early morning we were off Cyprus, in the open harbor of Larnaka,—a row of white houses on the low shore. The town is not peculiar and not specially attractive, but the *Marina* lies prettily on the blue sea, and the palms, the cypresses, the minarets and church-towers, form an agreeable picture behind it, backed by the lovely outline of mountains, conspicuous among them Santa Croce. The highest, Olympus, cannot be seen from this point.

A night had sufficed to transport us into another world, a world in which all outlines are softened and colored, a world in which history appears like romance. We might have imagined that we had sailed into some tropical harbor, except that the island before us was bare of foliage; there was the calm of perfect repose in the sky, on the sea, and the land; Cyprus made no harsh contrast with the azure water in which it seemed to be anchored for the morning, as our ship was. You could believe that the calm of summer and of early morning always rested on the island, and that it slept exhausted in the memory of its glorious past.

Taking a cup of coffee, we rowed ashore. It was the festival of St. George, and the flags of various nations were hung out along the *riva*, or displayed from the staffs of the consular residences. It is one of the chief *fête* days of the year, and the foreign representatives, who have not too much excitement, celebrated it by formal visits to the Greek consul. Larnaka does not keep a hotel, and we wandered about for some time before we could discover its sole *locanda*, where we purposed to breakfast. This establishment would please an artist, but it had few attractions for a person wishing to break his fast, and our unusual demand threw it into confusion. The *locanda* was nothing but a kitchen in a tumble-down building, smoke-dried, with an earth floor and a rickety table or two. After long delay, the cheerful Greek proprietor and his lively wife—whose good-humored willingness both to furnish us next to nothing, but the best they had, from their scanty larder, and to cipher up a long reckoning for the same, excited our interest—produced some fried veal, sour bread, harsh wine, and tart oranges; and we breakfasted more sumptuously, I have no doubt, than any natives of the island that morning. The scant and hard fare of nearly all the common people in the East would be unendurable to any American; but I think that the hardy peasantry of the Levant would speedily fall into dyspeptic degeneracy upon the introduction of American rural cooking.

After we had killed our appetites at the *locanda*, we presented our letters to the American consul, General di Cesnola, in whose spacious residence we experienced a delightful mingling of Oriental and Western hospitality. The kawâss of the General was sent to show us the town. This kawâss was a gorgeous official, a kind of glorified being, in silk and gold-lace, who marched before us, huge in bulk, waving his truncheon of office, and gave us the appearance, in spite of our humility, of a triumphal procession. Larnaka has not many

sights, although it was the residence of the Lusignan dynasty,—Richard Cour de Lion having, toward the close of the twelfth century, made a gift of the island to Guy de Lusignan. It has, however, some mosques and Greek churches. The church of St. Lazarus, which contains the now vacant tomb of the Lazarus who was raised from the dead at Bethany and afterwards became bishop of Citium, is an interesting old Byzantine edifice, and has attached to it an English burial-ground, with tombs of the seventeenth century. The Greek priest who showed us the church does not lose sight of the gain of godliness in this life while pursuing in this remote station his heavenly journey. He sold my friend some exquisite old crucifixes, carved in wood, mounted in antique silver, which he took from the altar, and he let the church part with some of its quaint old pictures, commemorating the impossible exploits of St. Demetrius and St. George. But he was very careful that none of the Greeks who were lounging about the church should be witnesses of the transfer. He said that these ignorant people had a prejudice about these sacred objects, and might make trouble.

The excavations made at Larnaka have demonstrated that this was the site of ancient Citium, the birthplace of Zeno, the Stoic, and the Chittim so often alluded to by the Hebrew prophets; it was a Phoenician colony, and when Ezekiel foretold the unrecoverable fall of Tyre, among the luxuries of wealth he enumerated were the “benches of ivory brought out of the isles of Chittim.” Paul does not mention it, but he must have passed through it when he made his journey over the island from Salamis to Paphos, where he had his famous encounter with the sorcerer Bar-jesus. A few miles out of town on the road to Citti is a Turkish mosque, which shares the high veneration of Moslems with those of Mecca and Jerusalem. In it is interred the wet-nurse of Mohammed.

We walked on out of the town to the most considerable church in the place, newly built by the Roman Catholics. There is attached to it a Franciscan convent, a neat establishment with a garden; and the hospitable monks, when they knew we were Americans, insisted upon entertaining us; the contributions for their church had largely come from America, they said, and they seemed to regard us as among the number of their benefactors. This Christian charity expressed itself also in some bunches of roses, which the brothers plucked for our ladies. One cannot but suspect and respect that timid sentiment the monk retains for the sex whose faces he flies from, which he expresses in the care of flowers; the blushing rose seems to be the pure and only link between the monk and womankind; he may cultivate it without sin, and offer it to the chance visitor without scandal.

The day was lovely, but the sun had intense power, and in default of donkeys we took a private carriage into the country to visit the church of St. George, at which the *fête* day of that saint was celebrated by a fair, and a concourse of peasants. Our carriage was a four-wheeled cart, a sort of hay-wagon, drawn by two steers, and driven by a Greek boy in an embroidered jacket. The Franciscans lent us chairs for the cart; the resplendent kawass marched ahead; Abd-el-Atti hung his legs over the tail of the cart in an attitude of dejection; and we moved on, but so slowly that my English friend, Mr. Edward Rae, was able to sketch us, and the Cyprians could enjoy the spectacle.

The country lay bare and blinking under the sun; save here and there a palm or a bunch of cypresses, this part of the island has not a tree or a large shrub. The view of the town and the sea with its boats, as we went inland, was peculiar, not anything real, but a skeleton picture; the sky and sea were indigo blue. We found a crowd of peasants at the church of St. George, which has a dirty interior, like all the Greek churches. The Greeks, as well as the other Orientals, know how to mingle devotion with the profits of trade, and while there were rows of booths outside, and traffic went on briskly, the church was thronged with men and women who bought tapers for offerings, and kissed with fervor the holy relics which were exposed. The articles for sale at the booths and stands were chiefly eatables and the coarsest sort of merchandise. The only specialty of native manufacture was rude but pleasant-sounding little bells, which are sometimes strung upon the necks of donkeys. But so fond are these simple people of musical noise, that these bells are attached to the handles of sickles also. The barley was already dead-ripe in the fields, and many of the peasants at the fair brought their sickles with them. They were, both men and women, a good-humored, primitive sort of people, certainly not a handsome race, but picturesque in appearance; both sexes affect high colors, and the bright petticoats of the women matched the gay jackets of their husbands and lovers.

We do not know what was the ancient standard of beauty in Cyprus; it may have been no higher than it is now, and perhaps the swains at this *fête* of St. George would turn from any other type of female charms as uninviting. The Cyprian or Paphian Venus could not have been a beauty according to our notions.

The images of her which General di Cesnola found in her temple all have a long and sharp nose. These images are Phoenician, and were made six hundred to a thousand years before the Christian era, at the time that wonderful people occupied this fertile island. It is an interesting fact, and an extraordinary instance of the persistence of nature in perpetuating a type, that all the women of Cyprus to-day—who are, with scarcely any exception, ugly—have exactly the nose of the ancient Paphian Venus, that is to say, the nose of the Phoenician women whose husbands and lovers sailed the Mediterranean as long ago as the siege of Troy.

It was off the southern coast of this island, near Paphos, that Venus Aphrodite, born of the foam, is fabled to have risen from the sea. The anniversary of her birth is still perpetuated by an annual *fête* on the 11th of August,—a rite having its foundation in nature, that has proved to be stronger than religious instruction or prejudice. Originally, these *fêtes* were the scenes of a too literal worship of Venus, and even now the Cyprian maiden thinks that her chance of matrimony is increased by her attendance at this annual fair. Upon that day all the young people go upon the sea in small boats, and, until recently, it used to be the custom to dip a virgin into the water in remembrance of the mystic birth of Venus. That ceremony is still partially maintained; instead of sousing the maiden in the sea, her companions spatter the representative of the goddess with salt water,—immersion has given way here also to sprinkling.

The lively curiosity of the world has been of late years turned to Cyprus as the theatre of some of the most important and extensive archaeological discoveries of this century; discoveries unique, and illustrative of the manners and religion of a race, once the most civilized in the Levant, of which only the slightest monuments had hitherto been discovered; discoveries which supply the lost link between Egyptian and Grecian art. These splendid results, which by a stroke of good fortune confer some credit upon the American nation, are wholly due to the scholarship, patient industry, address, and enthusiasm of one man. To those who are familiar with

the magnificent Cesnola Collection, which is the chief attraction of the Metropolitan Museum of New York, I need make no apology for devoting a few paragraphs to the antiquities of Cyprus and their explorer.

Cyprus was the coveted prize of all the conquerors of the Orient in turn. The fair island, with an area not so large as the State of Connecticut, owns in its unequal surface the extremes of the temperate climate; snow lies during the greater part of the year upon its mountains, which attain an altitude of over seven thousand feet, and the palm spreads its fan-leaves along the southern coast and in the warm plains; irregular in shape, it has an extreme length of over one hundred and forty miles, and an average breadth of about forty miles, and its deeply indented coast gives an extraordinarily long shore-line and offers the facilities of harbors for the most active commerce.

The maritime Phoenicians early discovered its advantages, and in the seventeenth century b. c., or a little later, a colony from Sidon settled at Citium; and in time these Yankees of the Levant occupied all the southern portion of the island with their busy ports and royal cities. There is a tradition that Teucer, after the Trojan war, founded the city of Salamis on the east coast. But however this may be, and whatever may be the exact date of the advent of the Sidonians upon the island, it is tolerably certain that they were in possession about the year 1600 b.c., when the navy of Thotmes III., the greatest conqueror and statesman in the long line of Pharaohs, visited Cyprus and collected tribute. The Egyptians were never sailors, and the fleet of Thotmes III. was no doubt composed of Phoenician ships manned by Phoenician sailors. He was already in possession of the whole of Syria, the Phoenicians were his tributaries and allies, their ships alone sailed the Grecian seas and carried the products of Egypt and of Asia to the Pelasgic populations. The Phoenician supremacy, established by Sidon in Cyprus, was maintained by Tyre; and it was not seriously subverted until 708 b. c., when the Assyrian ravager of Syria, Sargon, sent a fleet and conquered Cyprus. He set up a *stèle* in Citium, commemorating his exploit, which has been preserved and is now in the museum at Berlin. Two centuries later the island owned the Persians as masters, and was comprised in the fifth satrapy of Darius. It became a part of the empire of the Macedonian Alexander after his conquest of Asia Minor, and was again an Egyptian province under the Ptolemies, until the Roman eagles swooped down upon it. Coins are not seldom found that tell the story of these occupations. Those bearing the head of Ptolemy Physcon, Euergetes VII., found at Paphos and undoubtedly struck there, witness the residence on the island of that licentious and literary tyrant, whom a popular outburst had banished from Alexandria. Another with the head of Vespasian, and on the obverse an outline of the temple of Venus at Paphos, attests the Roman hospitality to the gods and religious rites of all their conquered provinces.

Upon the breaking up of the Roman world, Cyprus fell to the Greek Empire, and for centuries maintained under its ducal governors a sort of independent life, enjoying as much prosperity as was possible under the almost uniform imbecility and corruption of the Byzantine rule. We have already spoken of its transfer to the Lusignans by Richard Cour de Lion; and again a romantic chapter was added to its history by the reign of Queen Catharine Cornaro, who gave her kingdom to the Venetian republic. Since its final conquest by the Turks in 1571, Cyprus has interested the world only by its sufferings; for Turkish history here, as elsewhere, is little but a record of exactions, rapine, and massacre.

From time to time during the present century efforts have been made by individuals and by learned societies to explore the antiquities of Cyprus; but although many interesting discoveries were made, yet the field was comparatively virgin when General di Cesnola was appointed American consul in 1866. Here and there a *stèle*, or some fragments of pottery, or the remains of a temple, had been unearthed by chance or by superficial search, but the few objects discovered served only to pique curiosity. For one reason or another, the efforts made to establish the site of ancient cities had been abandoned, the expeditions sent out by France had been comparatively barren of results, and it seemed as if the traces of the occupation of the Phoenicians, the Egyptians, the Assyrians, the Persians, and the Romans were irrecoverably concealed.

General L. P. di Cesnola, the explorer of Cyprus, is of a noble Piedmontese family; he received a military and classical education at Turin; identified with the party of Italian unity, his sympathies were naturally excited by the contest in America; he offered his sword to our government, and served with distinction in the war for the Union. At its close he was appointed consul at Cyprus, a position of no pecuniary attraction, but I presume that the new consul had in view the explorations which have given his name such honorable celebrity in both hemispheres.

The difficulties of his undertaking were many. He had to encounter at every step the jealousy of the Turkish government, and the fanaticism and superstition of the occupants of the soil. Archaeological researches are not easy in the East under the most favorable circumstances, and in places where the traces of ancient habitations are visible above ground, and ancient sites are known; but in Cyprus no ruins exist in sight to aid the explorer, and, with the exception of one or two localities, no names of ancient places are known to the present generation. But the consul was convinced that the great powers which had from age to age held Cyprus must have left some traces of their occupation, and that intelligent search would discover the ruins of the prosperous cities described by Strabo and mentioned by the geographer Ptolemy. Without other guides than the descriptions of these and other ancient writers, the consul began his search in 1867, and up to 1875 he had ascertained the exact sites of *eleven ancient cities* mentioned by Strabo and Ptolemy, most of which had ceased to exist before the Christian era, and none of which has left vestiges above the soil.

In the time of David and of Solomon the Phoenicians formed the largest portion of the population of the island; their royal cities of Paphos, Amathus, Carpassa, Citium, and Ammochosto, were in the most flourishing condition. Not a stone remained of them above ground; their sites were unknown in 1867.

When General di Cesnola had satisfied himself of the probable site of an ancient city or temple, it was difficult to obtain permission to dig, even with the authority of the Sultan's firman. He was obliged to wait for harvests to be gathered, in some cases, to take a lease of the ground; sometimes the religious fanaticism of the occupants could not be overcome, and his working parties were frequently beaten and driven away in his absence. But the consul exhibited tact, patience, energy, the qualities necessary, with knowledge, to a successful explorer. He evaded or cast down all obstacles.

In 1868 he discovered the necropoli of Ledra, Citium, and Idalium, and opened during three years in these localities over ten thousand tombs, bringing to light a mass of ancient objects of art which enable us to

understand the customs, religion, and civilization of the earlier inhabitants. Idalium was famous of old as the place where Grecian pottery was first made, and fragments of it have been found from time to time on its site.

In 1869 and 1870 he surveyed Aphrodisium, in the northeastern part of the island, and ascertained, in the interior, the site of Golgos, a city known to have been in existence before the Trojan war. The disclosures at this place excited both the wonder and the incredulity of the civilized world, and it was not until the marvellous collection of the explorer was exhibited, partially in London, but fully in New York, that the vast importance of the labors of General di Cesnola began to be comprehended. In exploring the necropolis of Golgos, he came, a few feet below the soil, upon the remains of the temple of Venus, strewn with mutilated sculptures of the highest interest, supplying the missing link between Egyptian and Greek art, and indeed illustrating the artistic condition of most of the Mediterranean nations during the period from about 1200 to about 500 b. c. It would require too much space to tell how the British Museum missed and the Metropolitan of New York secured this first priceless "Cesnola Collection." Suffice it to say, that it was sold to a generous citizen of New York, Mr. John Taylor Johnson, for fifty thousand dollars,—a sum which would not compensate the explorer for his time and labor, and would little more than repay his pecuniary outlay, which reached the amount of over sixty thousand dollars in 1875. But it was enough that the treasure was secured by his adopted country; the loss of it to the Old World, which was publicly called an "European misfortune," was a piece of good fortune to the United States, which time will magnify.

From 1870 to 1872 the General's attention was directed to the southwestern portion of the island, and he laid open the necropoli of Marium, Paphos, Alamas, and Soli, and three ancient cities whose names are yet unknown. In 1873 he explored and traced the cities of Throni, Leucolla, and Arsinôe, and the necropoli of several towns still unknown. In 1874 and 1875 he brought to light the royal cities of Amathus and Curium, and located the little town of Kury.

It would not be possible here to enumerate all the objects of art or worship, and of domestic use, which these excavations have yielded. The statuary and the thousands of pieces of glass, some of them rivalling the most perfect Grecian shapes in form, and excelling the Venetian colors in the iridescence of age, perhaps attract most attention in the Metropolitan Museum. From the tombs were taken thousands of vases of earthenware, some in alabaster and bronze, statuettes in terra-cotta, arms, coins, scarabæi, cylinders, intaglios, cameos, gold ornaments, and mortuary *steles*. In the temples were brought to light inscriptions, bas-reliefs, architectural fragments, and statues of the different nations who have conquered and occupied the island. The inscriptions are in the Egyptian, Assyrian, Phoenician, Greek, and the Cypriote languages; the last-mentioned being, in the opinion of the explorer, an ancient Greek dialect.

At Curium, nineteen feet below the surface of the ground, were found the remains of the Temple of Apollo Hylates; the sculptures contained in it belong to the Greek period from 700 to 100 B.C. At Amathus some royal tombs were opened, and two marble sarcophagi of large dimensions, one of them intact, were discovered, which are historically important, and positive additions to the remains of the best Greek art.

After Golgos, Paleo Paphos yielded the most interesting treasures. Here existed a temple to the Paphian Venus, whose birthplace was in sight of its portals, famous throughout the East; devotees and pilgrims constantly resorted to it, as they do now to the shrines of Mecca and Jerusalem. Not only the maritime adventurers and traders from Asia Minor and the Grecian mainland crowded to the temple of this pleasing and fortunate goddess, and quitted their vows or propitiated her favor by gifts, but the religious or the superstitious from Persia and Assyria and farthest Egypt deposited there their votive offerings. The collector of a museum of antiquity that should illustrate the manners and religion of the thousand years before the Christian era could ask nothing better than these deposits of many races during many centuries in one place.

The excavations at Paphos were attended with considerable danger; more than once the workmen were obliged to flee to save their lives from the fanatic Moslems. The town, although it has lost its physical form, and even its name (its site is now called Baffo), retains the character of superstition it had when St. Paul found it expedient to darken the vision of Elymas there, as if a city, like a man, possessed a soul that outlives the body.

We spent the afternoon in examining the new collection of General di Cesnola, not so large as that in the Metropolitan Museum, but perhaps richer in some respects, particularly in iridescent glass.

In the summer of 1875, however, the labors of the indefatigable explorer were crowned with a discovery the riches of which cast into the shade the real or pretended treasures of the "House of Priam,"—a discovery not certainly of more value to art than those that preceded it, but well calculated to excite popular wonder. The finding of this subterranean hoard reads like an adventure of Aladdin.

In pursuing his researches at Curium, on the southwestern side of the island, General di Cesnola came upon the site of an ancient temple, and uncovered its broken mosaic pavement. Beneath this, and at the depth of twenty-five feet, he broke into a subterranean passage cut in the rock. This passage led to a door; no genie sat by it, but it was securely closed by a stone slab. When this was removed, a suite of four rooms was disclosed, but they were not immediately accessible; earth sifting through the roofs for ages had filled them, and it required the labor of a month to clean out the chambers. Imagine the feverish enthusiasm of the explorer as he slowly penetrated this treasure-house, where every stroke of the pick disclosed the gleam of buried treasure! In the first room were found only *gold* objects; in the second only *silver* and silver-gilt ornaments and utensils; in the third alabasters, terra-cottas, vases, and groups of figures; in the fourth *bronzes*, and nothing else. It is the opinion of the discoverer that these four rooms were the depositories where the crafty priests and priestesses of the old temple used to hide their treasures during times of war or sudden invasion. I cannot but think that the mysterious subterranean passages and chambers in the ancient temples of Egypt served a similar purpose. The treasure found scattered in these rooms did not appear to be the whole belonging to the temple, but only a part, left perhaps in the confusion of a hasty flight.

Among the articles found in the first room, dumped in a heap in the middle (as if they had been suddenly, in a panic, stripped from the altar in the temple and cast into a place of concealment), were a gold cup covered with Egyptian embossed work, and two bracelets of pure gold weighing over *three pounds*, inscribed with the name of "Etevander, King of Paphos." This king lived in 635 B.C., and in 620 b. c. paid tribute to the Assyrian

monarch Assurbanapal (Sardanapalus), as is recorded on an Assyrian tablet now in the British Museum. There were also many gold necklaces, bracelets, ear-rings, finger-rings, brooches, seals, armlets, etc., in all four hundred and eighty gold articles.

In the silver-room, arranged on the benches at the sides, were vases, bottles, cups, bowls, bracelets, finger-rings, ear-rings, seals, etc. One of the most curious and valuable objects is a silver-gilt bowl, having upon it very fine embossed Egyptian work, and evidently of high antiquity.

In the third room of vases and terra-cottas were some most valuable and interesting specimens. The bronze-room yielded several high candelabra, lamp-holders, lamps, statuettes, bulls'-heads, bowls, vases, jugs, patera, fibula, rings, bracelets, mirrors, etc. Nearly all the objects in the four rooms seem to have been "votive offerings," and testify a pagan devotion to the gods not excelled by Christian generosity to the images and shrines of modern worship. The inscriptions betoken the votive character of these treasures; that upon the heavy gold armlets is in the genitive case, and would be literally translated "Etevandri Regis Paplii," the words "offering of" being understood to precede it.

I confess that the glitter of these treasures, and the glamour of these associations with the ingenious people of antiquity, transformed the naked island of Cyprus, as we lay off it in the golden sunset, into a region of all possibilities, and I longed to take my Strabo and my spade and wander off prospecting for its sacred placers. It seemed to me, when we weighed anchor at seven o'clock, that we were sailing away from subterranean passages stuffed with the curious treasures of antiquity, from concealed chambers in which one, if he could only remove the stone slab of the door, would pick up the cunning work of the Phoenician jewellers, the barbarous ornaments of the Assyrians, the conceits in gold and silver of the most ancient of peoples, the Egyptians.

XIX.—THROUGH SUMMER SEAS.—RHODES.

AT daylight next morning we could just discern Cyprus sinking behind us in the horizon. The day had all the charm with which the poets have invested this region; the sea was of the traditional indigo blue,—of which the Blue Grotto of Capri is only a cheap imitation. No land was in sight, after we lost Cyprus, but the spirit of the ancient romance lay upon the waters, and we were soothed with the delights of an idle existence. As good a world as can be made with a perfect sea and a perfect sky and delicious atmosphere we had.

Through this summer calm voyages our great steamer, a world in itself, an exhibition, a fair, a *fête*, a camp-meeting, cut loose from the earth and set afloat. There are not less than eight hundred pilgrims on board, people known as first-class and second-class stowed in every nook and corner. Forward of the first cabin, the deck of the long vessel is packed with human beings, two deep and sometimes crossed, a crowd which it is almost impossible to penetrate. We look down into the hold upon a mass of bags and bundles and Russians heaped indiscriminately together,—and it is very difficult to distinguish a Russian woman from a bundle of old clothes, when she is in repose. These people travel with their bedding, their babies, and their cooking utensils, and make a home wherever they sit down.

The forward passengers have overflowed their limits and extend back upon our portion of the deck, occupying all one side of it to the stern, leaving the so-called privileged class only a narrow promenade on the starboard side. These intruders are, however, rather first-class second-class. Parties of them are camped down in small squares, which become at once miniature seraglios. One square is occupied by wealthy Moslems from Damascus, and in another is a stately person who is rumored to be the Prince of Damascus. These turbaned and silk-clad Orientals have spread their bright rugs and cushions, and lounge here all day and sleep here at night; some of them entertain themselves with chess, but the most of them only smoke and talk little. Why should they talk? has not enough already been said in the world? At intervals during the day, ascertaining, I do not know how, the direction of Mecca, these grave men arise, spread their prayer-carpet, and begin in unison their kneelings and prostrations, servants and masters together, but the servants behind their masters. Next to them, fenced off by benches, is a harem square, occupied by veiled women, perhaps the wives of these Moslems and perhaps "some others." All the deck is a study of brilliant costume.

A little later the Oriental prince turns out to be only a Turkish pasha, who has a state-room below for himself, and another for his harem; but in another compartment of our flower-bed of a deck is a merchant-prince of Damascus, whose gorgeousness would impose upon people more sophisticated than we.

"He no prince; merchant like me," explains Achmed, "and very rich, God be merciful."

"But why don't you travel about like that, Achmed, and make a fine display?"

"For why? Anybody say Mohammed Achmed any more respect? What for I show my rich? Take my advice. When I am dragoman, I am servant; and dress [here a comico-sarcastic glance at his plain but handsome dragoman apparel] not in monkey shine, like Selim—you remember him—at Jaffa, fierce like a Bedawee. I make business. When I am by my house, that is another thing."

The pasha has rooms below, and these contiguous squares on deck are occupied, the one by his suite and the other by *their* ladies and slaves, all veiled and presumably beautiful, lolling on the cushions in the *ennui* that appears to be their normal condition. One of them is puffing a cigarette under her white veil at the risk of a conflagration. One of the slaves, with an olive complexion and dark eyes, is very pretty, and rather likes

to casually leave her face uncovered for the benefit of the infidels who are about; that her feet and legs are bare she cares still less. This harem is, however, encroached upon by Greek women, who sprawl about with more freedom, and regard the world without the hindrance of a veil. If they are not handsome, they are at least not self-conscious, as you would think women would be in baggy silk trousers and embroidered jackets.

In the afternoon we came in sight of the ancient coasts of Pamphylia and Lycia and a lovely range of what we took to be the Karamanian mountains, snow-covered and half hid in clouds, all remote and dim to our vision as the historical pageant of Assyrian, Persian, and Roman armies on these shores is to our memory. Eastward on that rugged coast we know is Cilicia and the Tarsus of Paul and Haroun al Raschid. The sunset on the Lycian mountains was glorious; the foot by the water was veiled in golden mist; the sea sank from indigo to purple, and when the light waves broke flecks of rose or blood flowed on the surface.

After dark, and before we were abreast of old Xanthus, we descried the famous natural light which is almost as mysterious to the moderns as it was to the ancients. The Handbook says of it: "About two miles from the coast, through a fertile plain, and then ascending a woody glen, the traveller arrives at the *Zanar*, or volcanic flame, which issues perpetually from the mountain." Pliny says: "*Mount Chimaera*, near Phaselis, emits an unceasing flame that burns day and night." Captain Beaufort observed it from the ship during the night as a small but steady light among the hills. We at first mistook it for a lighthouse. But it was too high above the water for that, and the flame was too large; it was rather a smoky radiance than a point of light, and yet it had a dull red centre and a duller luminous surrounding. We regarded with curiosity and some awe a flame that had been burning for over twenty centuries, and perhaps was alight before the signal-fires were kindled to announce the fall of Troy,—Nature's own Pharos to the ancient mariners who were without compass on these treacherous seas.

Otherwise, this classic coast is dark, extinguished is the fire on the altar of Apollo at Patera, silent is the winter oracle of this god, and desolate is the once luxurious metropolis of Lycia. Even Xanthus, the capital, a name disused by the present inhabitants, has little to show of Greek culture or Persian possession, and one must seek the fragments of its antique art in the British Museum.

Coming on deck the next morning at the fresh hour of sunrise, I found we were at Rhodes. We lay just off the semicircular harbor, which is clasped by walls—partly shaken down by earthquakes—which have noble round towers at each embracing end. Rhodes is, from the sea, one of the most picturesque cities in the Mediterranean, although it has little remains of that ancient splendor which caused Strabo to prefer it to Rome or Alexandria. The harbor wall, which is flanked on each side by stout and round stone windmills, extends up the hill, and, becoming double, surrounds the old town; these massive fortifications of the Knights of St. John have withstood the onsets of enemies and the tremors of the earth, and, with the ancient moat, excite the curiosity of this so-called peaceful age of iron-clads and monster cannon. The city ascends the slope of the hill and passes beyond the wall. Outside and on the right towards the sea are a picturesque group of a couple of dozen stone windmills, and some minarets and a church-tower or two. Higher up the hill is sprinkled a little foliage, a few mulberry-trees, and an isolated palm or two; and, beyond, the island is only a mass of broken, bold, rocky mountains. Of its forty-five miles of length, running southwesterly from the little point on which the city stands, we can see but little.

Whether or not Rhodes emerged from the sea at the command of Apollo, the Greeks expressed by this tradition of its origin their appreciation of its gracious climate, fertile soil, and exquisite scenery. From remote antiquity it had fame as a seat of arts and letters, and of a vigorous maritime power, and the romance of its early centuries was equalled if not surpassed when it became the residence of the Knights of St. John. I believe that the first impress of its civilization was given by the Phoenicians; it was the home of the Dorian race before the time of the Trojan war, and its three cities were members of the Dorian Hexapolis; it was in fact a flourishing maritime confederacy, strong enough to send colonies to the distant Italian coast, and Sybaris and Parthenope (modern Naples) perpetuated the luxurious refinement of their founders. The city of Rhodes itself was founded about four hundred years before Christ, and the splendor of its palaces, its statues and paintings, gave it a pre-eminence among the most magnificent cities of the ancient world. If the earth of this island could be made to yield its buried treasures as Cyprus has, we should doubtless have new proofs of the influence of Asiatic civilization upon the Greeks, and be able to trace in the early Doric arts and customs the superior civilization of the Phoenicians, and of the masters of the latter, in science and art, the Egyptians.

Naturally, every traveller who enters the harbor of Rhodes hopes to see the site of one of the seven wonders of the world, the Colossus. He is free to place it on either mole at the entrance of the harbor, but he comprehends at once that a statue which was only one hundred and five feet high could never have extended its legs across the port. The fame of this colossal bronze statue of the sun is disproportioned to the period of its existence; it stood only fifty-six years after its erection, being shaken down by an earthquake in the year 224 b.c., and encumbering the ground with its fragments till the advent of the Moslem conquerors.

When we landed, the town was not yet awake, except the boatmen and the coffee-houses by the landing-stairs. The Greek boatman, whom we accepted as our guide, made an unsuccessful excursion for bread, finding only a black uneatable mixture, sprinkled with aromatic seeds; but we sat under the shelter of an old sycamore in a lovely place by the shore, and sipped our coffee, and saw the sun coming over Lycia, and shining on the old towers and walls of the Knights.

Passing from the quay through a highly ornamented Gothic gateway, we ascended the famous historic street, still called the Street of the Knights, the massive houses of which have withstood the shocks of earthquakes and the devastation of Saracenic and Turkish occupation. At this hour the street was as deserted as it was three centuries and a half ago, when the Knights sorrowfully sailed out of the harbor in search of a new home. Their four months' defence of the city., against the overwhelming force of Suleiman the Magnificent, added a new lustre to their valor, and extorted the admiration of the victor and the most honorable terms of surrender. With them departed the prosperity of Rhodes. This street, of whose palaces we have heard so much, is not imposing; it is not wide, its solid stone houses are only two stories high, and their fronts are now disfigured by cheap Arab balconies, but the façades are gray with age. All along are remains of carved windows. Gothic sculptured doorways, and shields and coats of arms, crosses and armorial legends, are set in the walls, partially defaced by time and accident; for the Moslems, apparently inheriting the

respect of Suleiman for the Knights, have spared the mementos of their faith and prowess. I saw no inscriptions that are intact, but made out upon one shield the words *voluntas mei est*. The carving is all beautiful.

We went through the silent streets, waking only echoes of the past, out to the ruins of the once elegant church of St. John, which was shaken down by a powder-explosion some thirty years ago, and utterly flattened by an earthquake some years afterwards. Outside the ramparts we met, and saluted with the freedom of travellers, a gorgeous Turk who was taking the morning air, and whom our guide in bated breath said was the governor. In this part of the town is the Mosque of Suleiman; in the portal are two lovely marble columns, rich with age; the lintels are exquisitely carved with flowers, arms, casques, musical instruments, the crossed sword and the torch, and the mandolin, perhaps the emblem of some troubadour knight. Wherever we went we found bits of old carving, remains of columns, sections of battlemented roofs. The town is saturated with the old Knights. Near the mosque is a foundation of charity, a public kitchen, at which the poor were fed or were free to come and cook their food; it is in decay now, and the rooks were sailing about its old round-topped chimneys.

There are no Hellenic remains in the city, and the only remembrance of that past which we searched for was the antique coin, which has upon one side the head of Medusa and upon the other the rose (*rhoda*) which gave the town its name. The town was quiet; but in pursuit of this coin in the Jews' quarter we started up swarms of traders, were sent from Isaac to Jacob, and invaded dark shops and private houses where Jewish women and children were just beginning to complain of the morning light. Our guide was a jolly Greek, who was willing to awaken the whole town in search of a silver coin. The traders, when we had routed them out, had little to show in the way of antiquities. Perhaps the best representative of the modern manufactures of Rhodes is the wooden shoe, which is in form like the Damascus clog, but is inlaid with more taste. The people whom we encountered in our morning walk were Greeks or Jews.

The morning atmosphere was delicious, and we could well believe that the climate of Rhodes is the finest in the Mediterranean, and also that it is the least exciting of cities.

"Is it always so peaceful here?" we asked the guide.

"Nothing, if you please," said he, "has happened here since the powder-explosion, nothing in the least."

"And is the town as healthy as they say?"

"Nobody dies."

The town is certainly clean, if it is in decay. In one street we found a row of mulberry-trees down the centre, but they were half decayed, like the street. I shall always think of Rhodes as a silent city,—except in the Jews' quarter, where the hope of selling an old coin set the whole hive humming,—and I suspect that is its normal condition.

XX.—AMONG THE ÆGEAN ISLANDS.

OUR sail all day among the Ægean islands was surpassingly lovely; our course was constantly changing to wind among them; their beautiful outlines and the soft atmosphere that enwrapped them disposed us to regard them in the light of Homeric history, and we did not struggle against the illusion. They are all treeless, and for the most part have scant traces of vegetation, except a thin green grass which seems rather a color than a substance. Here are the little islands of Chalce and Syme, once seats of Grecian culture, now the abode of a few thousand sponge-fishers. We pass Telos, and Nisyros, which was once ruled by Queen Artemisia, and had its share in the fortunes of the wars of Athens and Sparta. It is a small round mass of rock, but it rises twenty-two hundred feet out of the sea, and its volcanic soil is favorable to the grape. Opposite is the site of the ruins of Cnidus, a Dorian city of great renown, and famous for its shrine of Venus, and her statue by Praxiteles. We get an idea of the indentation of this coast of Asia Minor (and its consequent accessibility to early settlement and civilization) from the fact that Cnidus is situated on a very narrow peninsula ninety miles long.

Kos is celebrated not only for its size, loveliness, and fertility, but as the birthplace of Apelles and of Hippocrates; the inhabitants still venerate an enormous plane-tree under which the good physician is said to have dispensed his knowledge of healing. The city of Kos is on a fine plain, which gradually slopes from the mountain to the sea and is well covered with trees. The attractive town lies prettily along the shore, and is distinguished by a massive square mediaeval fortress, and by round stone windmills with specially long arms.

As we came around the corner of Kos, we had a view, distant but interesting, of the site of Halicarnassus, the modern town of Boudroum, with its splendid fortress, which the Turks wrested from the Knights of St. John. We sail by it with regret, for the student and traveller in the East comes to have a tender feeling for the simple nature of the father of history, and would forego some other pleasant experiences to make a pilgrimage to the birthplace of Herodotus. Here, also, was born the historian Dionysius. And here, a few years ago, were identified the exact site and rescued the remains of another of the Seven Wonders, the Tomb of Mausolus, built in honor of her husband by the Carian Artemisia, who sustained to him the double relation of sister and queen. This monument, which exhibited the perfection of Greek art, was four hundred and eleven feet in circumference and one hundred and forty feet high. It consisted of a round building, surrounded by

thirty-six columns surmounted by a pyramid, and upon the latter stood a colossal group of a chariot and four horses. Some of the beautiful sculpture of this mausoleum can be seen in the British Museum.

We were all the afternoon endeavoring to get sight of Patinos, which the intervening islands hid from view. Every half-hour some one was discovering it, and announcing the fact. No doubt half the passengers will go to their graves comforted by the belief that they saw it. Some of them actually did have a glimpse of it towards night, between the islands of Lipso and Arki. It is a larger island than we expected to see; and as we had understood that the Revelations were written on a small rocky island, in fact a mere piece of rock, the feat seemed less difficult on a good-sized island. Its height is now crowned by the celebrated monastery of St. John, but the island is as barren and uninviting as it was when the Romans used it as a place of banishment.

We passed Astypatæa, Kalyminos, Leros, and a sprinkling of islets (as if a giant had sown this sea with rocks), each of which has a history, or is graced by a legend; but their glory is of the past. The chief support of their poor inhabitants is now the sponge-fishery. At sunset we had before us Icaria and Samos, and on the mainland the site of Miletus, now a fever-smitten place, whose vast theatre is almost the sole remains of the metropolis of the Ionic confederacy. Perhaps the centre of Ionic art and culture was, however, the island of Samos, but I doubt not the fame of its Samian wine has carried its name further than the exploits of its warriors, the works of its artists, or the thoughts of its philosophers. It was the birthplace of Pythagoras; it was once governed by Polycrates; there for a time Antony and Cleopatra established their court of love and luxury. In the evening we sailed close under its high cliffs, and saw dimly opposite Icaria, whose only merit or interest lies in its association with the ill-judged aerial voyage of Icarus, the soil of Daedalus.

Although the voyager amid these islands and along this historic coast profoundly feels the influence of the past, and, as he reads and looks and reflects, becomes saturated with its half-mysterious and delicious romance, he is nevertheless scarcely able to believe that these denuded shores and purple, rocky islets were the homes of heroes, the theatres of world-renowned exploits, the seats of wealth and luxury and power; that the marble of splendid temples gleamed from every summit and headland; that rich cities clustered on every island and studded the mainland; and that this region, bounteous in the fruits of the liberal earth, was not less prolific in vigorous men and beautiful women, who planted adventurous and remote colonies, and sowed around the Mediterranean the seeds of our modern civilization. In the present desolation and soft decay it is difficult to recall the wealth, the diversified industry, the martial spirit, the refinement of the races whose art and literature are still our emulation and despair. Here, indeed, were the beginnings of our era, of our modern life,—separated by a great gulf from the ancient civilization of the Nile,—the life of the people, the attempts at self-government, the individual adventure, the new development of human relations consequent upon commerce, and the freer exchange of products and ideas.

What these islands and this variegated and genial coast of Asia Minor might become under a government that did not paralyze effort and rob industry, it is impossible to say; but the impression is made upon the traveller that Nature herself is exhausted in these regions, and that it will need the rest or change of a geologic era to restore her pristine vigor. The prodigality and avarice of thousands of years have left the land—now that the flame of civilization has burned out—like the crater of an extinct volcano. But probably it is society and not nature that is dead. The island of Rhodes, for an example, might in a few years of culture again produce the forests that once supplied her hardy sons with fleets of vessels, and her genial soil, under any intelligent agriculture, would yield abundant harvests. The land is now divided into petty holdings, and each poor proprietor scratches it just enough to make it yield a scanty return.

During the night the steamer had come to Chios (Scio), and I rose at dawn to see—for we had no opportunity to land—the spot almost equally famous as the birthplace of Homer and the land of the Chian wine. The town lies along the water for a mile or more around a shallow bay opening to the east, a city of small white houses, relieved by a minaret or two; close to the water's edge are some three-story edifices, and in front is an ancient square fort, which has a mole extending into the water, terminated by a mediaeval bastion, behind which small vessels find shelter. Low by the shore, on the north, are some of the sturdy windmills peculiar to these islands, and I can distinguish with a glass a few fragments of Byzantine and mediaeval architecture among the common buildings. Staring at us from the middle of the town were two big signs, with the word "Hotel."

To the south of the town, amid a grove of trees, are the white stones of the cemetery; the city of the dead is nearly as large as that of the living. Behind the city are orange orchards and many a bright spot of verdure, but the space for it is not broad. Sharp, bare, serrated, perpendicular ridges of mountain rise behind the town, encircling it like an amphitheatre. In the morning light these mountains are tawny and rich in color, tinged with purple and red. Chios is a pretty picture in the shelter of these hills, which gather for it the rays of the rising sun.

It is now half a century since the name of Scio rang through the civilized world as the theatre of a deed which Turkish history itself can scarcely parallel, and the island is vigorously regaining its prosperity. It only needs to recall the outlines of the story. The fertile island, which is four times the extent of the Isle of Wight, was the home of one hundred and ten thousand inhabitants, of whom only six thousand were Turks. The Greeks of Scio were said to differ physically and morally from all their kindred; their merchants were princes at home and abroad, art and literature flourished, with grace and refinement of manner, and there probably nowhere existed a society more industrious, gay, contented, and intelligent. Tempted by some adventurers from Samos to rebel, they drew down upon themselves the vengeance of the Turks, who retaliated the bloody massacre of Turkish men, women, and children by the insurrectionists, with a universal destruction. The city of Scio, with its thirty thousand inhabitants, and seventy villages, were reduced to ashes; twenty-five thousand of all ages and both sexes were slain, forty-five thousand were carried away as slaves, among them women and children who had been reared in luxury, and most of the remainder escaped, in a destitute state, into other parts of Greece. At the end of the summer's harvest of death, only two thousand Sciotes were left on the island. An apologist for the Turks could only urge that the Greeks would have been as unmerciful under like circumstances.

None of the first-class passengers were up to see Chios,—not one for poor Homer's sake; but the second-class were stirring for their own, crawling out of their comfortables, giving the babies a turn, and the vigilant

flea a taste of the morning air. When the Russian peasant, who sleeps in the high truncated frieze cap, and in the coat which he wore in Jerusalem,—a garment short in the waist, gathered in pleats underneath the shoulders, and falling in stiff expanding folds below,—when he first gets up and rubs his eyes, he is an astonished being. His short-legged wife is already astir, and beginning to collect the materials of breakfast. Some of the Greeks are making coffee; there is a smell of coffee, and there are various other unanalyzed odors. But for pilgrims, and pilgrims so closely packed that no one can stir without moving the entire mass, these are much cleaner than they might be expected to be, and cleaner, indeed, than they can continue to be, and keep up their reputation. And yet, half an hour among them, looking out from the bow for a comprehensive view of Chios, is quite enough. I wished, then, that these people would change either their religion or their clothes.

Last night we had singing on deck by an extemporized quartette of young Americans, with harmonious and well-blended voices, and it was a most delightful contrast to the caterwauling, accompanied by the darabouka, which we constantly hear on the forward deck, and which the Arabs call singing. Even the fat, good-humored little Moslem from Damascus, who lives in the pen with the merchant-prince of that city, listened with delight and declared that it was *tyeb kateer*. Who knows but these people, who are always singing, have some appreciation of music after all?

XXI.—SMYRNA AND EPHEBUS.

WHEN we left Chios we sailed at first east, right into the sun, gradually turned north and rounded the promontory of the mainland, and then, east by south, came into the beautiful landlocked bay of Smyrna, in which the blue water changes into a muddy green. At length we passed on the right a Turkish fortress, which appeared as formidable as a bathing establishment, and Smyrna lay at the bottom of the gulf, circling the shore,—white houses, fruit-trees, and hills beyond.

The wind was north, as it always is here in the morning, and the landing was difficult. We had the usual excitement of swarming boats and clamorous boatmen and lively waves. One passenger went into the water instead of the boat, but was easily fished out by his baggy trousers, and, as he was a Greek pilgrim, it was thought that a little water would n't injure him. Coming to the shore we climbed with difficulty out of the bobbing boat upon the sea-wall; the shiftless Turkish government will do nothing to improve the landing at this great port,—if the Sultan can borrow any money he builds a new palace on the Bosphorus, or an ironclad to anchor in front of it.

Smyrna may be said to have a character of its own in not having any character of its own. One of the most ancient cities on the globe, it has no appearance of antiquity; containing all nationalities, it has no nationality; the second commercial city of the East, it has no chamber of commerce, no *Bourse*, no commercial unity; its citizens are of no country and have no impulse of patriotism; it is an Asiatic city with a European face; it produces nothing, it exchanges everything,—the fabrics of Europe, the luxuries of the Orient; the children of the East are sent to its schools, but it has no literary character nor any influence of culture; it is hospitable to all religions, and conspicuous for none; it is the paradise of the Turks, the home of luxury and of beautiful women, but it is also a favorite of the mosquito, and, until recently, it has been the yearly camp of the plague; it is not the most healthful city in the world, and yet it is the metropolis of the drug-trade.

Smyrna can be compared to Damascus in its age and in its perpetuity under all discouragements and changes,—the shocks of earthquakes, the constant visitations of pestilence, and the rule of a hundred masters. It was a great city before the migration of the Ionians into Asia Minor, it saw the rise and fall of Sardis, it was restored from a paralysis of four centuries by Alexander. Under all vicissitudes it seems to have retained its character of a great mart of exchange, a necessity for the trade of Asia; and perhaps the indifference of its conglomerate inhabitants to freedom and to creeds contributed to its safety. Certainly it thrived as well under the Christians, when it was the seat of one of the seven churches, as it did under the Romans, when it was a seat of a great school of sophists and rhetoricians, and it is equally prosperous under the sway of the successor of Mohammed. During the thousand years of the always decaying Byzantine Empire it had its share of misfortunes, and its walls alternately, at a later day, displayed the star and crescent, and the equal arms of the cross of St. John. Yet, in all its history, I seem to see the trading, gay, free, but not disorderly Smyrna passing on its even way of traffic and of pleasure.

Of its two hundred thousand and more inhabitants, about ninety thousand are Rayah Greeks, and about eighty thousand are Turks. There is a changing population of perhaps a thousand Europeans, there are large bodies of Jews and Armenians, and it was recently estimated to have as many as fifteen thousand Levantines. These latter are the descendants of the marriage of Europeans with Greek and Jewish women; and whatever moral reputation the Levantines enjoy in the Levant, the women of this mixture are famous for their beauty. But the race is said to be not self-sustaining, and is yielding to the original types. The languages spoken in Smyrna are Turkish, a Greek dialect (the Romaic), Spanish, Italian, Trench, English, and Arabic, probably prevailing in the order named. Our own steamer was much more Oriental than the city of Smyrna. As soon as we stepped ashore we seemed to have come into a European city; the people almost all wear the Frank dress, the shops offer little that is peculiar. One who was unfamiliar with bazaars might wonder at the tangle of various lanes, but we saw nothing calling for comment. A walk through the Jewish quarter, here as

everywhere else the dirtiest and most picturesque in the city, will reward the philosophic traveller with the sight of lovely women lolling at every window. It is not the fashion for Smyrniote ladies to promenade the streets, but they mercifully array themselves in full toilet and stand in their doorways.

The programme of the voyage of the *Achille* promised us a day and a half in Smyrna, which would give us time to visit Ephesus. We were due Friday noon; we did not arrive till Saturday noon. This vexatious delay had caused much agitation on board; to be cheated out of Ephesus was an outrage which the tourists could not submit to; they had come this way on purpose to see Ephesus. They would rather give up anything else in the East. The captain said he had no discretion, he must sail at 4 p. M. The passengers then prepared a handsome petition to the agent, begging him to detain the steamer till eight o'clock, in order to permit them to visit Ephesus by a special train. There is a proclivity in all those who can write to sign any and every thing except a subscription paper, and this petition received fifty-six eager and first-class signatures. The agent at Smyrna plumply refused our request, with unnecessary surliness; but upon the arrival of the captain, and a consultation which no doubt had more reference to freight than to the petition, the official agreed, as a special favor, to detain the steamer till eight o'clock, but not a moment longer.

We hastened to the station of the Aidin Railway, which runs eighty miles to Aidin, the ancient Tralles, a rich Lydian metropolis of immemorial foundation. The modern town has perhaps fifty thousand inhabitants, and is a depot for cotton and figs; that sweetmeat of Paradise, the *halva*, is manufactured there, and its great tanneries produce fine yellow Morocco leather. The town lies only three miles from the famous tortuous Mæander, and all the region about it is a garden of vines and fruit-trees. The railway company is under English management, which signifies promptness, and the special train was ready in ten minutes; when lo! of the fifty-six devotees of Ephesus only eleven appeared. We were off at once; good engine, solid track, clean, elegant, comfortable carnages. As we moved out of the city the air was full of the odor of orange-blossoms; we crossed the Meles, and sped down a valley, very fertile, smiling with grain-fields, green meadows, groves of midberry, oranges, figs, with blue hills,—an ancient Mount Olympus, beyond which lay green Sardis, in the distance, a country as lovely and home-like as an English or American farm-land. We had seen nothing so luxuriant and thriving in the East before. The hills, indeed, were stripped of trees, but clad on the tops with verdure, the result of plentiful rains.

We went "express." The usual time of trains is three hours; we ran over the fifty miles in an hour and a quarter. We could hardly believe our senses, that we were in a luxurious carriage, flying along at this rate in Asia, and going to Ephesus! While we were confessing that the lazy swing of the carriage was more agreeable than that of the donkey or the dromedary, the train pulled up at station Ayasolook, once the residence of the Sultans of Ayasolook, and the camp of Tamerlane, now a cluster of coffeehouses and railway-offices, with a few fever-stricken inhabitants, who prey upon travellers, not with Oriental courtesy, but with European insolence.

On our right was a round hill surmounted by a Roman castle; from the hills on the left, striding across the railway towards Ephesus, were the tall stone pillars of a Roman aqueduct, the brick arches and conductor nearly all fallen away. On the summit of nearly every pillar a white, red-legged stork had built, from sticks and grass, a high round nest, which covered the top; and the bird stood in it motionless, a beautiful object at that height against the sky.

The station people had not obeyed our telegram to furnish enough horses, and those of us who were obliged to walk congratulated ourselves on the mistake, since the way was as rough as the steeds. The path led over a ground full of stone *débris*. This was the site of Ayasolook, which had been built out of the ruins of the old city; most picturesque objects were the small mosque-tombs and minarets, which revived here the most graceful forms and fancies of Saracenic art. One, I noticed, which had the ideal Persian arch and slender columns, Nature herself had taken into loving care and draped with clinging green and hanging vines. There were towers of brick, to which age has given a rich tone, flaring at the top in a curve that fascinated the eye. On each tomb, tower, and minaret the storks had nested, and upon each stood the mother looking down upon her brood. About the crumbling sides of a tower, thus draped and crowned, innumerable swallows had built their nests, so that it was alive with birds, whose cheerful occupation gave a kind of pathos to the human desertion and decay.

Behind the Roman castle stands the great but ruinous mosque of Sultan Selim, which was formerly the Church of St. John. We did not turn aside for its empty glory, but to the theologian or the student of the formation of Christian dogmas, and of the gladiatorial spectacles of an ancient convocation, there are few arenas in the East more interesting than this; for in this church it is supposed were held the two councils of a. d. 431 and 449. St. John, after his release from Patmos, passed the remainder of his life here; the Virgin Mary followed him to the city, so favored by the presence of the first apostles, and here she died and was buried. From her entombment, Ephesus for a long time enjoyed the reputation of the City of the Virgin, until that honor was transferred to Jerusalem, where, however, her empty tomb soon necessitated her resurrection and assumption,—the subject which inspired so many artists after the revival of learning in Europe. In the hill near this church Mary Magdalene was buried; in Ephesus also reposed the body of St. Timothy, its first bishop.

This church of St. John was at some distance from the heart of the city, which lay in the plain to the south and near the sea, but in the fifth century Ephesus was a city of churches. The reader needs to remember that in that century the Christian controversy had passed from the nature of the Trinity to the incarnation, and that the first council of Ephesus was called by the emperor Theodosius in the hope of establishing the opinion of the Syrian Nestorius, the primate of Constantinople, who refused to give to the mother of Christ the title, then come into use, of the Mother of God, and discriminated nicely the two natures of the Saviour. His views were anathematized by Cyril, the patriarch of Alexandria, and the dispute involved the entire East in a fierce contest. In the council convened of Greek bishops, Nestorius had no doubt but he would be sustained by the weight of authority; but the prompt Cyril, whose qualities would have found a conspicuous and useful theatre at the head of a Roman army against the Scythians, was first on the ground, with an abundance of spiritual and temporal arms. In reading of this council, one recalls without effort the once famous and now historical conventions of the Democratic party of the State of New York, in the days when political salvation, offered in

the creeds of the "Hard Shells" and of the "Soft Shells," was enforced by the attendance of gangs of "Short boys" and "Tammany boys," who understood the use of slung-shot against heretical opinions. It is true that Nestorius had in reserve behind his prelates the stout slaves of the bath of Zeuxippus, but Cyril had secured the alliance of the bishop of Ephesus, and the support of the rabble of peasants and slaves who were easily excited to jealousy for the honor of the Virgin of their city; and he landed from Egypt, with his great retinue of bishops, a band of merciless monks of the Nile, of fanatics, mariners, and slaves, who took a ready interest in the theological discussions of those days. The council met in this church, surrounded by the fierce if not martial array of Cyril; deliberations were begun before the arrival of the most weighty supporters of Nestorius,—for Cyril anticipated the slow approach of John of Antioch and his bishops,—and in one day the primate of Constantinople was hastily deposed and cursed, together with his heresy. Upon the arrival of John, he also formed a council, which deposed and cursed the opposite party and heresy, and for three months Ephesus was a scene of clamor and bloodshed. The cathedral was garrisoned, the churches were shut against the Nestorians; the imperial troops assaulted them and were repelled; the whole city was thrown into a turmoil by the encounters of the rival factions, each council hurled its anathemas at the other, and peace was only restored by the dissolution of the council by command of the emperor. The second session, in the year 449, was shorter and more decisive; it made quick work of the heresy of Nestorius. Africa added to its delegation of bullies and fanatics a band of archers; the heresy of the two natures was condemned and anathematized,—

"May those who divide Christ be divided with the sword, may they be hewn in pieces, may they be burned alive,"—and the scene in the cathedral ended in a mob of monks and soldiers, who trampled upon Flavian, the then primate of Constantinople, so that in three days thereafter he died of his wounds.

It is as difficult to make real now upon this spot those fierce theologic wars of Ephesus, as it is the fabled exploits of Bacchus and Hercules and the Amazons in this valley; to believe that here were born Apollo and Diana, and that hither fled Latona, and that great Pan lurked in its groves.

We presently came upon the site of the great Temple of Diana, recently identified by Mr. Wood. We encountered on our way a cluster of stone huts, wretched habitations of the only representatives of the renowned capital. Before us was a plain broken by small hillocks and mounds, and strewn with cut and fractured stone. The site of the temple can be briefly and accurately described as a rectangular excavation, perhaps one hundred and fifty feet wide by three hundred long and twelve feet deep, with two feet of water in it, out of which rises a stump of a column of granite and another of marble, and two bases of marble. Round this hole are heaps of fractured stone and marble. In this excavation Mr. Wood found the statue of Diana, which we may hope is the ancient sacred image, guarded by the priests as the most precious treasure of the temple, and imposed upon the credulity of men as heaven-descended. This is all that remains of one of the Seven Wonders of the world,—a temple whose fame is second to none in antiquity; a temple seven times burned and eight times built, and always with increased magnificence; a temple whose origin, referable doubtless to the Cyclopean builders of this coast, cannot be less than fifteen hundred years before our era; a temple which still had its votaries and its rites in the fourth century. We picked up a bit of marble from its ruins, as a help-both to memory and imagination, but we went our way utterly unable to conceive that there ever existed any such person as great Diana of the Ephesians.

We directed our steps over the bramble-grown plain to the hill Pion. I suppose Pion may have been the acropolis of Ephesus, the spot of the earliest settlement, and on it and around it clustered many of the temples and public buildings. The reader will recall Argos, and Athens, and Corinth, and a dozen other cities of antiquity, for which nature furnished in the midst of a plain such a convenient and easily defended hill-fortress. On our way thither we walked amid mounds that form a street of tombs; many of the sarcophagi are still in place, and little injured; but we explore the weed-hid ground with caution, for it is full of pitfalls.

North of the hill Pion is a low green valley, encircled with hills, and in the face of one of its ledges, accessible only by a ladder, we were pointed out the cave of the Seven Sleepers. This favorite myth, which our patriotism has transferred to the highlands of the Hudson in a modified shape, took its most popular form in the legend of the Seven Sleepers, and this grotto at Ephesus was for many centuries the object of Christian and Moslem pilgrimage. The Christian legend, that in the time of the persecution of Diocletian seven young men escaped to this cave and slept there two centuries, and awoke to find Christianity the religion of the empire, was adopted and embellished by Mohammed. In his version, the wise dog Ketmehr, or Al Rakiin as the Koran names him, becomes an important character.

"When the young men," says Abd-el-Atti, "go along the side of the hill to the cave, the dog go to follow them. They take up stones to make him go back, for they 'fraid of him bark, and let the people know where they hide. But the dog not to go back, he sit down on him hind, and him look berry wise. By and by he speak, he say the name of God.

"How did you know that?' ask him the young men.

"I know it,' the dog say, 'before you born!'

"Then they see the dog he wise by Allah, and know great deal, and let him to go with 'em. This dog, Ketmehr, he is gone, so our Prophet say, to be in Paradise; no other dog be there. So I hope."

The names of the Seven Sleepers and Ketmehr are in great talismanic repute throughout the East; they are engraved upon swords and upon gold and precious stones, and in Smyrna you may buy these charms against evil.

Keeping round the hill Pion, we reached the ruins of the gymnasium, heaps of stone amid brick arches, the remains of an enormous building; near it is the north gate of the city, a fine marble structure, now almost buried. Still circling Pion we found ourselves in a narrow valley, on the other side of which was the long ridge of Conessus, which runs southward towards the sea. Conessus seems to have been the burial-place of the old town. This narrow valley is stuffed with remains of splendid buildings, of which nothing is now to be seen but heaps of fine marble, walls, capitals, columns, in prodigal waste. We stopped to admire a bit of carving, or to notice a Greek inscription, and passed on to the Stadium, to the Little Theatre, to the tomb of St. Luke. On one of the lintels of the entrance of this tomb, in white marble, as fresh as if carved yesterday, is a cross, and

under it the figure of an *Egyptian ox*, the emblem of that saint.

We emerged from this gorge to a wide view of the plain, and a glimpse of an arm of the sea. On this plain are the scattered ruins of the old city, brick, stone, and marble,—absolute desolation. On the left, near the sea, is a conical hill, crowned by one of the towers of the ancient wall, and dignified with the name of the “prison of St. Paul.” In this plain is neither life nor cultivation, but vegetation riots over the crumbling remains of Ephesus, and fever waits there its chance human prey. We stood on the side of the hill Pion, amid the fallen columns and heaped walls of its Great Theatre. It was to this theatre that the multitude rushed when excited against Paul by Demetrius, the silversmith, who earned his religion into his business; and here the companions of Paul endeavored to be heard and could not, for “all with one voice about the space of two hours cried out, Great is Diana of the Ephesians.” This amphitheatre for fifty thousand spectators is scooped out of the side of the hill, and its tiers of seats are still indicated. What a magnificent view they must have enjoyed of the city and the sea beyond; for the water then came much nearer; and the spectator who may have wearied of the strutting of the buskined heroes on the stage, or of the monotonous chant of the chorus, could rest his eye upon the purple slopes of Conessus, upon the colonnades and domes of the opulent city, upon the blue waves that bore the merchants’ ships of Rome and Alexandria and Berytus.

The theatre is a mine of the most exquisite marbles, and we left its treasures with reluctance; we saw other ruins, bases of columns, the remains of the vast city magazines for the storage of corn, and solid walls of huge stones once washed by the sea; we might have wandered for days amid the fragments, but to what purpose?

At Ephesus we encountered no living thing. Man has deserted it, silence reigns over the plain, nature slowly effaces the evidence of his occupation, and the sea even slinks away from it. No great city that I have seen is left to such absolute desolation; not Pæstum in its marsh, not Thebes in its sand, not Ba’albek, not even Memphis, swept clean as it is of monuments, for its site is vocal with labor and bounteous in harvests. Time was, doubtless, when gold pieces piled two deep on this ground could not have purchased it; and the buyers or sellers never imagined that the city lots of Ephesus could become worth so little as they are to-day.

If one were disposed to muse upon the vagaries of human progress, this would be the spot. No civilization, no religion, has been wanting to it. Its vast Cyclopean foundations were laid by simple pagans; it was in the polytheistic belief of the Greeks that it attained the rank of one of the most polished and wealthy cities of antiquity, famed for its arts, its schools of poetry, of painting and sculpture, of logic and magic, attracting to its opportunities the devout, the seekers of pleasure and of wisdom, the poets, the men of the world, the conquerors and the defeated; here Artemisia sheltered the children of Xerxes after the disaster of Salamis; here Alexander sat for his portrait to Apelles (who was born in the city) when he was returning from the capture of Sardis; Spartans and Athenians alike, Lysander and Alcibiades, sought Ephesus, for it had something for all; Hannibal here conferred with Antiochus; Cicero was entertained with games by the people when he was on his way to his province of Cilicia; and Antony in the character of inebriate Bacchus, accompanied by Cleopatra, crowned with flowers and attended by bands of effeminate musicians, made here one of the pageants of his folly. In fact, scarcely any famous name of antiquity is wanting to the adornment of this hospitable city. Under the religion of Christ it has had the good fortune to acquire equal celebrity, thanks to the residence of Paul, the tent-maker, and to its conspicuous position at the head of the seven churches of Asia. From Ephesus went forth the * news of the gospel, as formerly had spread the rites of Diana, and Christian* churches and schools of philosophy succeeded the temples and gymnasia of the polytheists. And, in turn, the cross was supplanted by the crescent; but it was in the day when Islamism was no longer a vital faith, and except a few beautiful ruins the Moslem occupation has contributed nothing to the glory of Ephesus. And now paganism, Christianity, and Moslemism seem alike to have forsaken the weary theatre of so much brilliant history. As we went out to the station, by the row of booths and coffee-shops, a modern Greek, of I do not know what religion, offered to sell me an image of I do not know what faith.

There is great curiosity at present about the relics and idols of dead religions, and a brisk manufacture of them has sprung up; it is in the hands of sceptics who indifferently propagate the images of the Virgin Mary or of the chaste huntress Diana.

The swift Asiatic train took us back to Smyrna in a golden sunset. We had been warned by the agent not to tarry a moment beyond eight o’clock, and we hurried breathless to the boat. Fortunately the steamer had not sailed; we were in time, and should have been if we had remained on shore till eight the next morning. All night long we were loading freight, with an intolerable rattling of chains, puffing of the donkey-engine, and swearing of boatmen; after the novelty of swearing in an Oriental tongue has worn off, it is no more enjoyable than any other kind of profanity.

XII.—THE ADVENTURERS.

WE sailed away from Smyrna Sunday morning, with the *Achille* more crowded than when we entered that port. The second-class passengers still further encroached upon the first-class. The Emir of Damascus, with all his rugs and beds, had been pushed farther towards the stern, and more harems occupied temporary pens on our deck, and drew away our attention from the natural scenery.

The venerable, white-bearded, Greek bishop of Smyrna was a passenger, also the tall noble-looking pasha

of that city, just relieved and ordered to Constantinople, as pashas are continually, at the whim of the Sultan. We had three pashas on board,—one recalled from Haifa, who had been only twenty days at his post. The pasha of Smyrna was accompanied by his family, described on the register as his wife and “four others,” an indefinite expression to define an indefinite condition. The wife had a room below; the “four others” were penned up in a cushioned area on the saloon deck, and there they squatted all day, veiled and robed in white, poor things, without the least occupation for hand or mind. Near them, other harems of Greeks and Turks, women, babies, slaves, all in an Oriental mess, ate curds and green lettuce.

We coasted along the indented, picturesque shore of Asia, having in view the mountains about ancient Pergamus, the seat of one of the seven churches; and before noon came to Mitylene, the ancient Lesbos, a large island which bears another Mount Olympus, and cast anchor in the bay upon which the city stands.

By the bend of the bay and the opposite coast, the town is charmingly land-locked. The site of Mitylene, like so many of these island cities, is an amphitheatre, and the mountain-slopes, green and blooming with fruit-trees, are dotted with white houses and villages. The scene is Italian rather than Oriental, and gives one the general impression of Castellamare or Sorrento; but the city is prettier to look at than to explore, as its broad and clean streets, its ordinary houses and European-dressed inhabitants, take us out of our ideal voyaging, and into the regions of the commonplace. The shops were closed, and the country people, who in all countries appear to derive an unexplained pleasure in wandering about the streets of a city hand in hand, were seeking this mild recreation. A youthful Jew, to whom the Sunday was naught, under pretence of showing us something antique, led us into the den of a Greek, to whom it was also naught, and whose treasures were bags of defaced copper coins of the Roman period.

Upon the point above the city is a fine mediæval fortress, now a Turkish fort, where we encountered, in the sentinel at the gate, the only official in the Orient who ever refused backsheesh; I do not know what his idea is. From the walls we looked upon the blue strait, the circling, purple hills of Asia, upon islands, pretty villages, and distant mountains, soft, hazy, serrated, in short, upon a scene of poetry and peace, into which the ancient stone bastion by the harbor, which told of days of peril, and a ruined aqueduct struggling down the hill back of the town,—the remnant of more vigorous days,—brought no disturbance.

In Lesbos we are at the source of lyric poetry, the Æolian spring of Greece; here Alcæus was born. Here we come upon the footsteps of Sappho. We must go back to a period when this and all the islands of these heavenly seas were blooming masses of vegetation, the hills hung with forests, the slopes purple with the vine, the valleys laughing with flowers and fruit, and everywhere the primitive, joyful Greek life. No doubt, manners were somewhat rude, and passions, love, and hate, and revenge, were frankly exhibited; but in all the homely life ran a certain culture, which seems to us beautiful even in the refinement of this shamefaced age. The hardy youth of the islands sailed into far seas, and in exchange for the bounty of their soil brought back foreign fabrics of luxury. We know that Lesbos was no stranger to the Athenian influence, its scholars had heard Plato and Aristotle, and the warriors of Athens respected it both as a foe and an ally. Charakos, a brother of Sappho, went to Egypt with a ship full of wine, and returned with the beautiful slave Doricha, as part at least of the reward of his venture.

After the return of Sappho and her husband from their flight into Sicily, the poet lived for many years at Mitylene; but she is supposed to have been born in Eressos, on the southwestern point of the island, where the ruins of the acropolis and remains of a sea-wall still mark the site of the famous town. At any rate, she lived there, with her husband Kerkylas, a landed proprietor and a person of consequence, like a dame of noble birth and gentle breeding as she was; and in her verse we have a glimpse of her walking upon the sandy shore, with her little daughter, the beautiful child whom she would not give up for the kingdom of Lydia, nor for heavenly Lesbos itself. That Sappho was beautiful as her image on the ancient coins represents her, and that she was consumed by passion for a handsome youth, the world likes to believe. But Maximus of Tyre says that she was small and dark;—graces are not so plenty, even in heaven, that genius and beauty can be lavished upon one person. We are prone to insist that the poet who revels in imagination and sounds the depth of passion is revealing his own heart, and that the tale that seems so real must be a personal experience. The little glimpse we have of Sappho's life does not warrant us to find in it the passionate tempest of her burning lyrics, nor is it consistent with her social position that she should expose upon the market-place her passion for the handsome Phaon, like a troubadour of the Middle Ages or a Zingara of Bohemia. If that consuming fire was only quenched in the sea at the foot of “Leucadia's far-projecting rock of woe,” at least our emotion may be tempered by the soothing knowledge that the leap must have been taken when the enamored singer had passed her sixtieth year.

We did not see them at Mitylene, but travellers into the interior speak of the beautiful women, the descendants of kings' daughters, the rewards of Grecian heroes; near old Eressos the women preserve the type of that indestructible beauty, and in the large brown eyes, voluptuous busts, and elastic gait one may deem that he sees the originals of the antique statues.

Another famous woman flits for a moment before us at Lesbos. It is the celebrated Empress Irene, whose cruelty was hardly needed to preserve a name that her talent could have perpetuated. An Athenian virgin and an orphan, at seventeen she became the wife of Leo IV. (a. d. 780), and at length the ruler of the Eastern Empire. Left the guardian of the empire and her son Constantine VI., she managed both, until the lad in his maturity sent his mother into retirement. The restless woman conspired against him; he fled, was captured and brought to the palace and lodged in the porphyry chamber where he first had seen the light, and where he last saw it; for his eyes were put out by the order of Irene. His very existence was forgotten in the depths of the palace, and for several years the ambitious mother reigned with brilliancy and the respect of distant potentates, until a conspiracy of eunuchs overturned her power, and she was banished to Lesbos. Here history, which delights in these strokes of poetic justice, represents the empress earning her bread by the use of her distaff.

As we came from Mitylene into the open sea, the view was surpassingly lovely, islands green and poetic, a coast ever retreating and advancing, as if in coquetry with the blue waves, purple robing the hills,—a voyage for poets and lotus-eaters. We were coming at night to Tenedos, to which the crafty Greeks withdrew their fleet when they pretended to abandon the siege, and to old Troy, opposite; we should be able to feel their

presence in the darkness.

Our steamer, as we have intimated, was a study of nationalities and languages, as well as of manners. We were English, American, Greek, Italian, Turkish, Arab, Russian, French, Armenian, Egyptian, Jew, Georgian, Abyssinian, Nubian, German, Koor-land, Persian, Kurd; one might talk with a person just from Mecca or Medina, from Bagdad, from Calcutta, from every Greek or Turkish island, and from most of the capitals of Europe. A couple of Capuchins, tonsured, in brown serge with hanging crosses, walked up and down amid the throng of Christians, Moslems, and pagans, withdrawn from the world while in it, like beings of a new sex. There was a couple opposite us at table whom we could not make out,—either recently married or recently eloped, the man apparently a Turkish officer, and his companion a tall, showy woman, you might say a Frenchman's idea of physical beauty, a little like a wax Madonna, but with nothing holy about her; said by some to be a Circassian, by others to be a French grisette on an Eastern tour; but she spoke Italian, and might be one of the Continental countesses.

The square occupied by the emir and his suite—a sort of bazaar of rugs and narghilehs—had music all day long; a soloist, on three notes, singing, in the Arab drawl, an unending improvised ballad, and accompanying himself on the mandolin. When we go to look at and listen to him, the musician betrays neither self-consciousness nor pride, unless you detect the latter in a superior smile that plays about his lips, as he throws back his head and lets his voice break into a falsetto. It probably does not even occur to his Oriental conceit that he does well,—*that* his race have taken for granted a thousand years,—and he could not be instructed by the orchestra of Von Bulow, nor be astonished by the Lohengrin of Wagner.

Among the adventurers on board—we all had more or less the appearance of experiments in that odd assembly—I particularly liked the French *prestidigitateur* Caseneau, for his bold eye, utter self-possession, and that indefinable varnish upon him, which belonged as much to his dress as to his manner, and suggested the gentleman without concealing the adventurer. He had a taste for antiquities, and wore some antique gems, which had I know not what mysterious about them, as if he had inherited them from an Ephesian magician or a Saracenic doctor of the black art. At the table after dinner, surrounded by French and Italians, the conjurer exhibited some tricks at cards. I dare say they were not extraordinary, yet they pleased me just as well as the manifestations of the spiritists. One of them I noted. The trickster was blindfolded. A gentleman counted out a pack of cards, and while doing so mentally fixed upon one of them by number. Caseneau took the pack, still blinded, and threw out the card the gentleman had thought of. The experiment was repeated by sceptics, who suspected a confederate, but the result was always the same.

The Circassian beauty turned out to be a Jewess from Smyrna. I believe the Jewesses of that luxurious city imitate all the kinds of beauty in the world.

In the evening the Italians were grouped around the tables in the saloon, upon which cards were cast about, matched, sorted, and redistributed, and there were little piles of silver at the corners, the occasional chinking of which appeared to add to the interest of the amusement. On deck the English and Americans were singing the hymns of the Protestant faith; and in the lull of the strains of "O mother dear, Jerusalem," you might hear the twang of strings and the whine of some Arab improvisatore on the forward deck, and the chink of changing silver below. We were making our way through a superb night,—a thousand people packed so closely that you could not move without stepping into a harem or a mass of Greek pilgrims,—singing hymns, gambling, listening to a recital of the deeds of Antar, over silver waves, under a flooding moon, and along the dim shores of Asia. That mysterious continent lay in the obscurity of the past; here and there solitary lights, from some shepherd's hut in the hills or fortress casemate by the shore, were the rents in the veil through which we saw antiquity.

XXIII.—THROUGH THE DARDANELLES.

THE *Achille*, which has a nose for freight, but none for poetry, did not stop at Tenedos, puffed steadily past the plain of Troy, turned into the broad opening of the Dardanelles, and by daylight was anchored midway between the Two Castles. On such a night, if ever, one might see the evolution of shadowy armies upon the windy plain,—if, indeed, this conspicuous site was anything more than the theatre of Homer's creations,—the spectators on the walls of Ilium, the Greeks hastily embarking on their ships for Tenedos, the joyful procession that drew the fatal gift into the impregnable walls.

There is a strong current southward through the Dardanelles, which swung the vessel round as we came to anchor. The forts which, with their heavy modern guns, completely command this strait, are something less than a mile and a half apart, and near each is a large and handsome town,—Khilid-bahri on the European shore and Chanak-Kalesi on the Asiatic. The latter name signifies the pottery-castle, and is derived from the chief manufactory of the place; the town of a couple of thousand houses, gayly painted and decorated in lively colors, lies upon a sandy flat and presents a very cheerful appearance. It is a great Asiatic *entrepôt* for European products, and consular flags attest its commercial importance.

When I came upon deck its enterprising traders had already boarded the steamer, and encumbered it with their pottery, which found a ready market with the pilgrims, for it is both cheap and ugly. Perhaps we should rather say fantastic than ugly. You see specimens of it all over the East, and in the bazaars of Cairo, Jerusalem, and Damascus it may be offered you as something rare. Whatever the vessel is,—a pitcher, cup,

vase, jar, or cream-pot,—its form is either that of some impossible animal, some griffin, or dragon, or dog of the underworld, or its spout is the neck and head of some fantastic monster. The ware is painted in the most startling reds, greens, yellows, and blacks, and sometimes gilt, and then glazed. It is altogether hideous, and fascinating enough to drive the majolica out of favor.

Above these two towns the strait expands into a sort of bay, formed on the north by a promontory jutting out from the Asiatic shore, and upon this promontory it is now agreed stood old Abydos; it is occupied by a fort which grimly regards a corresponding one on the opposite shore, not a mile distant. Here Leander swam to Hero, Byron to aquatic fame, and here Xerxes laid his bridge. All this is plain to be seen; this is the narrowest part of the passage; exactly opposite this sloping site of Abydos is a depression between two high cliffs, the only point where the Persian could have rested the European extremity of his bridge; and it surely requires no stretch of the imagination to see Hero standing upon this projecting point holding the torch for her lover.

The shore is very pretty each side, not bold, but quiet scenery; and yet there is a contrast: on the Asiatic horizon are mountains, rising behind each other, while the narrow peninsula, the Thracian Chersonesus of the ancients, which forms the western bank of the Dardanelles, offers only a range of moderate hills. What a beautiful stream, indeed, is this, and how fond history has been of enacting its spectacles upon it! How the civilizations of the East and West, in a continual flow and reflow, push each other across it! With a sort of periodic regularity it is the scene of a great movement, and from age to age the destinies of the race have seemed to hang upon its possession; and from time to time the attention of the world is concentrated upon this water-street between two continents. Under whatever name, the Oriental civilization has been a misfortune, and the Western a blessing to the border-land; and how narrowly has Europe, more than once, from Xerxes to Chosroes, from Omar to the Osmanlis, seemed to escape the torrent of Eastern slavery. Once the culture of Greece passed these limits, and annexed all Asia Minor and the territory as far as the Euphrates to the empire of intelligence. Who shall say that the day is not at hand when the ancient movement of free thought, if not of Grecian art and arms, is about to be renewed, and Europe is not again to impose its laws and manners upon Little Asia? The conquest, which one sees going on under his eyes, is not indeed with the pomp of armies, but by the more powerful and enduring might of commerce, intercourse, and the weight of a world's opinion diffused by travel and literature. The Osmanli sits supinely and watches the change; the Greeks, the rajahs of all religions, establish schools, and the new generation is getting ready for the revolution; the Turk does not care for schools. That it may be his fate to abandon European Turkey and even Constantinople, he admits. But it is plain that if he goes thus far he must go farther; and that he must surrender a good part of the Roman Eastern Empire. For any one can see that the Hellespont could not be occupied by two powers, and that it is no more possible to divide the control of the Bosphorus than it is that of the Hudson or the Thames.

The morning was cold, and the temperature as well as the sky admonished us that we were passing out of the warm latitude. Twenty-five miles from the Chang and Eng forts we passed near but did not call at Gallipoli, an ancient city with few antiquities, but of great strategic importance. Whoever holds it has the key to Constantinople and the Black Sea; it was seized by the Moslems in the thirteenth century before they imposed the religion of the Koran upon the city of Constantine, and it was early occupied by the English and French, in 1854, in the war that secured that city to the successor of the Prophet.

Entering upon the Sea of Marmora, the "vexed Propontis," we had fortunately smooth water but a cold north-wind. The Propontis has enjoyed a nauseous reputation with all mariners, ancient and modern. I don't know that its form has anything to do with it, but if the reader will take the trouble to consult a map, he will see how nearly this hag of water, with its two ducts, the Bosphorus and the Hellespont, resembles a human stomach. There is nothing to be seen in the voyage from Gallipoli to Constantinople, except the island of Marmora, famous for the quarries which furnish marbles for the palaces of the Bosphorus and for Eyoub and Scutari, the two great cities of the dead. We passed near enough to distinguish clearly its fine perpendicular cliffs.

It was dark before we saw the lights of Stamboul rise out of the water; it is impossible, at night, to enter the Golden Horn through the mazes of shipping, and we cast anchor outside. The mile or two of gas-lights along the promontory of the old city and the gleams upon the coast of ancient Chalcedon were impressive and exciting to the imagination, but, owing to the lateness of our arrival, we lost all the emotions which have, struck other travellers anything but dumb upon coming in sight of the capital of the Moslem Empire.

XIV.—CONSTANTINOPLE.

THE capital which we know as Constantinople, lying in two continents, presents itself as three cities.

The long, hornshaped promontory, between the Sea of Marmora and the Golden Horn, is the site of ancient Byzantium, which Constantine baptized with his own name, and which the Turks call Stamboul. The ancient city was on the eastern extremity, now known as Seraglio Point; its important position was always recognized, and it was sharply contended for by the Spartans, the Athenians, the Macedonians, and the Persians. Like the city of Romulus, it occupies seven hills, and its noble heights are conspicuous from afar by sea or land. In the fourth century it was surrounded by a wall, which followed the water on three sides, and

ran across the base of the promontory, over four miles from the Seven Towers on the Propontis to the Cemetery of Eyoub on the Golden Horn. The land-wall, which so many times saved the effeminate city from the barbarians of the north and the Saracens of Arabia, stands yet with its battered towers and score of crumbling gates.

The second city, on a blunt promontory between the Golden Horn and the Bosphorus, overlooks the ancient Byzantium, and is composed of three districts,—Galata and Tophanna, on the water and climbing up the hill; and Pera, which crowns the summit. Galata was a commercial settlement of the thirteenth century; Pera is altogether modern.

The third city is Scutari, exactly opposite the mouth of the Golden Horn, and a little north of ancient Chalcedon, which was for over a thousand years the camp of successive besieging armies, Georgians, Persians, Saracens, and Turks.

The city of the Crescent, like a veiled beauty of the harem, did not at once disclose to us its charms. It was at six o'clock in the morning on the eleventh day of blooming May, that we landed on the dirty quay of Tophanna. The morning was cloudy, cold, misty, getting its weather from the Black Sea, and during the day rain fell in a very Occidental dreariness. Through the mist loomed the heights of Seraglio Point; and a hundred minaret peaks and domes appeared to float in the air above the veiled city. Along the floating lower bridge, across the Golden Horn, poured an unceasing procession of spectres; caïques were shooting about in every direction, steamers for the Bosphorus, for Scutari, for the Islands, were momentarily arriving and departing from their stations below the bridge, and the huge bulk of the Turkish ironclads could be discerned at their anchorage before the palace of Beshiktash. The scene was animated, but there was not visible as much shipping as I had expected to see in this great port.

The customs' official on the quay was of a very inquisitive turn of mind, but we could excuse him on the ground of his age and ignorance, for he was evidently endeavoring to repair the neglected opportunities of his youth. Our large luggage had gone to the custom-house in charge of Abd-el-Atti, who has a genius for free-trade, and only our small parcels and hand-bags were at the mercy of the inspector on the quay. But he insisted upon opening every bag and investigating every article of the toilet and garment of the night; he even ripped open a feather pillow which one of the ladies carried with her, and neither the rain on the open dock nor our respectable appearance saved our effects from his most searching attentions. The discoveries of General di Ces-nola and the interest that Europeans take in antiquities have recently convinced the Turks that these relics must have some value, and an order had been issued to seize and confiscate all curiosities of this sort. I trembled, therefore, when the inspector got his hands upon a baby's nursing-bottle, which I had brought from Cyprus, where it had been used by some Phoenician baby probably three thousand years ago. The fellow turned it round and regarded it with serious ignorance and doubt.

"What is that?" he asked Achmed.

"O, that's nothing but a piece of pottery, something for a child without his mother, I think,—it is nothing, not worth two paras."

The confiscator of antiquities evidently had not the slightest knowledge of his business; he hesitated, but Achmed's perfect indifference of manner determined him, and he slowly put the precious relic back into the box. The inspector parted from us with regret, but we left him to the enjoyment of a virtue unassailed by the least bribe,—an unusual, and, I imagine, an unwelcome possession in this region.

Donkeys were not to be had, nor carriages, and we climbed on foot the very steep hill to the hotel in Pera; ascending roughly paved, crooked streets, lined with rickety houses, and occasionally mounting stairs for a mile through a quarter that has the shabbiness but not the picturesqueness of the Orient. A squad of porters seized our luggage and bore it before us. The porters are the beasts of burden, and most of them wear heavy saddles, upon which boxes and trunks can be strapped. No drays were visible. Heavy burdens, hogsheads, barrels, and cases of goods were borne between two long stout poles carried by four athletic men; as they move along the street, staggering under the heavy load, everybody is obliged, precipitately, to make way for them, for their impetus is such that they cannot check their career. We see these gigantic fellows at every street-corner, with their long poles, waiting for a job. Sedan-chairs, which were formerly in much request, are gradually disappearing, though there is nothing at present to exactly take the place of these lumbering conveyances. Carriages increase every year, but they are expensive, and they can only ascend the height of Pera by a long circuit. The place of the sedan and the carriage is, however, to some extent supplied by a railway in Galata, the cars of which are drawn up by a stationary engine. And on each side of the Golden Horn is a horse-railway, running wherever the ground is practicable.

To one coming from the West, I suppose that Constantinople would present a very mixed and bizarre appearance, and that he would be impressed by the silence of the busiest streets, in which the noise of wheels and the hum of a Western capital is wanting. But to one coming from the East, Galata and Pera seem a rather vulgarized European town. The Frank dress predominates, although it is relieved by the red fez, which the Turks generally and many Europeans wear. Variety enough there is in costumes, but the Grecian, the Bulgarian, the Albanian, etc., have taken the place of the purely Oriental; and the traveller in the Turkish capital to-day beholds not only the conflux of Asia and Europe, but the transition, in buildings, in apparel, in manners, to modern fashions. Few veiled women are seen, and they wear a white strip of gauze which conceals nothing. The street hawkers, the sellers of sweets, of sponges, and of cakes, are not more peculiar in their cries than those of London and Paris.

When we had climbed the hill, we came into the long main street of Pera, the street of the chief shops, the hotels and foreign embassies, a quarter of the city which has been burned over as often as San Francisco, and is now built up substantially with stone and brick, and contains very little to interest the seeker of novelty. After we had secured rooms, and breakfasted, at the hotel Byzance, we descended the hill again to the water, and crossed the long, floating bridge to Stamboul. This bridge is a very good symbol of the Sultan's Empire; its wooden upper works are decayed, its whole structure is rickety, the floats that support it are unevenly sunken, so that the bridge is a succession of swells and hollows; it is crowded by opposing streams of the most incongruous people, foot and horse jumbled together; it is encumbered by venders of eatables and

auctioneers of cheap Wares, and one has to pay toll to cross it. But it is a microcosm of the world. In an hour one may see pass there every nationality, adventurers from every clime, traders, priests, sailors, soldiers, fortune-hunters of Europe, rude peasants of the provinces, sleek merchants of the Orient, darwishes, furtive-eyed Jews; here is a Circassian beauty seeking a lover through the carriage window; here a Turkish grandee on a prancing, richly caparisoned horse; here moves a squad of black soldiers, and now the bridge shakes under the weight of a train of flying artillery.

The water is alive with the ticklish caiques. The caique is a long narrow boat, on the model of the Indian birch-bark, canoe, and as thin and light on the water; the passenger, if he accomplishes the feat of getting into one without overturning it, sits upon the bottom, careful not to wink and upset it; the oars have a heavy swell near the handle, to counterbalance the weight of the long blade, and the craft skims the water with swiftness and a most agreeable motion. The caiques are as numerous on the water as the yellow, mangy dogs on shore, and the two are the most characteristic things in Constantinople.

We spent a good part of the day in wandering about the bazaars of Stamboul, and we need not repeat what has been heretofore said of these peculiar shops. During our stay in the city we very thoroughly explored them, and visited most of the great khans, where are to be found the silks of Broussa, of Beyrout and Damascus, the rugs of Persia, the carpets of Asia Minor, the arms and the cunning work in gold, silver, and jewels gathered from every region between Ispahan and Darfour. We found the bazaars extensive, well filled and dear, at least the asking price was enormous, and we wanted the time and patience which are needed for the slow siege of reducing the merchants to decent, terms. The bazaars are solidly roofed arcades, at once more cleanly and less picturesque than those of Cairo, and not so Oriental or attractive. Book-stalls, which are infrequent in Cairo, abound here; and the long arcades lined with cases of glittering gems, enormous pearls, sparkling diamonds, emeralds fit for the Pope's finger, and every gold and silver temptation, exceed anything else in the East in magnificence. And yet they have a certain modern air, and you do not expect to find in them those quaint and fascinating antique patterns of goldsmiths' work, the inherited skill of the smiths of the Pharaohs, which draw you into the dingy recesses of the Copt artificers in the city of the Nile.

From the Valideh Khan we ascended to the public square, where stands the Seraskier's Eire-tower; a paved, open place, surrounded by government buildings of considerable architectural pretensions, and dedicated, I should say, to drumming, to the shifting about of squads of soldiers, and the cantering hither and thither of Turkish beys. Near it is the old mosque of Sultan Beyezid II., which, with its magnificent arabesque gates, makes a fine external impression. The outer court is surrounded by a cloister with columns of verd-antique and porphyry, enclosing a fountain and three stately, venerable, trees. The trees and the arcades are alive with doves, and, as we entered, more than a thousand flew towards us in a cloud, with a great rustling and cooing. They are protected as an almost sacred appendage of the mosque, and are said to be bred from a single pair which the Sultan bought of a poor woman and presented to the house he had built, three centuries and a half ago. This mosque has also another claim to the gratitude of animals; for all the dogs of Stamboul, none of whom have any home but the street, nor any other owner than the Prophet, resort here every Friday, as regularly, if not as piously, as the Sultan goes to pray, and receive their weekly bread.

Near this mosque are lines of booths and open-air shops, which had a fascination for me as long as I remained in the city. They extend from the trees in the place of the mosque down through lanes to the bazaars. The keepers of them were typical Orientals, honest Jews, honest Moslems, withered and one-eyed waiters on Providence and a good bargain, suave, gracious, patient, gowned and turbaned, sitting cross-legged behind their trays and showcases. These are the dealers in stones, both precious and common, in old and new ornaments, and the thousand cheap adornments in glass and metal which the humbler classes love. Here are heaps of blood-stones, of carnelians, of agates, of jasper, of onyx, dishes of turquoise, strings of doubtful pearls, barbarous rings and brooches, charms and amulets,—a feast of color for the eye, and a sight to kindle the imagination. For these bawbles came out of the recesses of the Orient, were gathered by wild tribes in remote deserts, and transported by caravan to this common mart. These dealers buy of the Persian merchants, and of adventurous Jew travellers who range all the deserts from Teheran to Upper Nubia in search of these shining stones. Some of the turquoises are rudely set in silver rings, but most of them are merely glued to the end of little sticks; these generally are the refuse of the trade, for the finer stones go to the great jewellers in the bazaar, or to the Western markets. A large and perfect turquoise of good color is very rare, and commands a large price; but the cunning workmen of Persia have a method of at once concealing the defects of a good-sized turquoise which has the true color, and at the same time enhancing its value, by engraving upon it some sentence from the Koran, or some word which is a charm against the evil eye; the skill of the engraver is shown in fitting his letters and flourishes to the flaws in the surface of the stone. To further hide any appearance of imperfection, the engraved lines are often gilded. With a venerable Moslem, who sat day after day under a sycamore-tree, I had great content, and we both enjoyed the pleasure of endless bargaining without cheating each other, for except in some trifles we never came to an exact agreement. He was always promising me the most wonderful things for the next day, which he would procure from a mysterious Jew friend who carried on a clandestine commerce with some Bedawee in Arabia. When I was seated, he would pull from his bosom a knotted silk handkerchief, and, carefully untying it, produce a talisman, presenting it between his thumb and finger, with a lift of the eyebrows and a cluck of the tongue that expressed the rapture I would feel at the sight of it. To be sure, I found it a turquoise set in rude silver, faded to a sickly green, and not worth sixpence; but I handed it back with a sigh that such a jewel was beyond my means, and intimated that something less costly, and of a blue color, would suit me as well. We were neither of us deceived, while we maintained the courtesies of commercial intercourse. Sometimes he would produce from his bosom an emerald of real value or an opal of lovely hues, and occasionally a stone in some peculiar setting which I had admired the day before in the jewelry bazaar; for these trinkets, upon which the eye of the traveller has been seen longingly to rest, are shifted about among this mysterious fraternity to meet him again.

I suppose it was known all over Stamboul that a Prank had been looking for a Persian amulet. As long as I sat with my friend, I never saw him actually sell anything, but he seemed to be the centre of mysterious transactions; furtive traders continually came to him to borrow or return a jewel, or to exchange a handful of trumpery. Delusive old man! I had no confidence in you, but I would go far to pass another day in your

tranquil society. How much more agreeable you were than the young Nubian at an opposite stand, who repelled purchasers by his supreme indifference, and met all my feeble advances with the toss of the head and the cluck in the left cheek, which is the peremptory "no" in Nubia.

In this quarter are workers in shell and ivory, the makers of spoons of tortoise-shell with handles of ivory and coral, the fabricators of combs, dealers in books, and a long street of little shops devoted to the engraving of seals. To wander about among these craftsmen is one of the chief pleasures of the traveller. Vast as Stamboul is, if you remove from it the mosques and nests of bazaars, it would not be worth a visit.

XXV.—THE SERAGLIO AND ST. SOPHIA, HIPPODROME, etc.

HAVING procured a firman, we devoted a day to the old Seraglio and some of the principal mosques of Stamboul. After an occupation of fifteen centuries as a royal residence, the Seraglio has been disused for nearly forty years, and fire, neglect, and decay have done their work on it, so that it is but a melancholy reminiscence of its former splendor. It occupies the ancient site of Byzantium, upon the Point, and is enclosed by a crumbling wall three miles in circuit. No royal seat in the world has a more lovely situation. Upon the summit of the promontory, half concealed in cypresses, is the cluster of buildings, of all ages and degrees of cheapness, in which are the imperial apartments and offices; on the slopes towards the sea are gardens, terraces, kiosks, and fountains.

We climbed up the hill on the side towards Pera, through a shabby field, that had almost the appearance, of a city dumping-ground, and through a neglected grove of cypresses, where some deer were feeding, and came round to the main entrance, a big, ugly pavilion with eight openings over the arched *porte*,—the gate which is known the world over as the Sublime Porte. Through this we passed into a large court, and thence to the small one into which the Sultan only is permitted to ride on horseback. In the centre of this is a fountain where formerly pashas foreordained to lose their heads lost them. On the right, a low range of buildings covered with domes but no chimneys, are the royal kitchens; there are nine of them,—one for the Sultan, one for the chief sultanas, and so on down to the one devoted to the cooking of the food for the servants. Hundreds of beasts, hecatombs, were slaughtered daily and cooked here to feed the vast household. From this court open the doors into the halls and divans and various apartments; one of them, leading into the interior, is called the Gate of Felicity; in the old times that could only be called a gate of felicity which let a person out of this spider's parlor. In none of these rooms is there anything specially attractive; cheap magnificence in decay is only melancholy.

We were better pleased in the gardens, where we looked upon Galata and Pera, upon the Golden Horn and the long bridges streaming with their picturesque processions, upon the Bosphorus and its palaces, and thousands of sails, steamers, and caiques, and the shining heights of Scutari. Overhanging the slope is the kiosk or summer palace of Sultan Moorad, a Saracenic octagonal structure, the interior walls lined with Persian tiles, the ceilings painted in red arabesques and gilded in mosaics, the gates of bronze inlaid with mother-of-pearl; a most charming building, said to be in imitation of a kiosk of Bagdad. In it we saw the Sultan's private library, a hundred or two volumes in a glass case, that had no appearance of having been read either by the Sultan or his wife.

The apartment in the Seraglio which is the object of curiosity and desire is the treasure-room. I suppose it is the richest in the world in gems; it is certainly a most wearisome place, and gave me a contempt for earthly treasure. In the centre stands a Persian throne,—a chair upon a board platform, and both incrustated with rubies, pearls, emeralds, diamonds; there are toilet-tables covered to the feet with diamonds, pipe-stems glistening with huge diamonds, old armor thickly set with precious stones, saddle-cloths and stirrups stiff with diamonds and emeralds, robes embroidered with pearls. Nothing is so cheap as wealth lavished in this manner; at first we were dazzled by the flashing display, but after a time these heaps of gems seemed as common in our eyes as pebbles in the street. I did not even covet an emerald as large as my fist, nor a sword-hilt in which were fifteen diamonds, each as large as the end of my thumb, nor a carpet sown with pearls, some of which were of the size of pigeon's eggs, nor aigrettes which were blazing with internal fires, nor chairs of state, clocks and vases, the whole surfaces of which were on fire with jewels. I have seen an old oaken table, carved in the fifteenth century, which gave me more pleasure than one of lapis lazuli, which is exhibited as the most costly article in this collection; though it is inlaid with precious stones, and the pillars that support the mirror are set with diamonds, and the legs and claws are a mass of diamonds, rubies, carbuncles, emeralds, topazes, etc., and huge diamond pendants ornament it, and the deep fringe in front is altogether of diamonds. This is but a barbarous, ostentatious, and tasteless use of the beautiful, and I suppose gives one an idea of the inartistic magnificence of the Oriental courts in centuries gone by.

This treasure-house has, I presume, nothing that belonged to the Byzantine emperors before the Moslem conquest, some of whom exceeded in their magnificence any of the Osmanli sultans. Arcadius, the first Eastern emperor after the division of the Roman world, rivalled, in the appointments of his palace (which stood upon this spot) and in his dress, the magnificence of the Persian monarchs; and perhaps the luxurious califs of Bagdad at a later day did not equal his splendor. His robes were of purple, a color reserved exclusively for his sacred person, and of silk, embroidered with gold dragons; his diadem was of gold set with

gems of inestimable worth; his throne was massy gold, and when he went abroad he rode in a chariot of solid, pure gold, drawn by two milk-white mules shining in harness and trappings of gold.

No spot on earth has been the scene of such luxury, cruelty, treachery, murder, infidelity of women, and rapacity of men, as this site of the old palace; and the long record of the Christian emperors—the occasionally interrupted anarchy and usurpation of a thousand years—loses nothing in these respects in comparison with the Turkish occupation, although the world shudders at the unrevealed secrets of the Seraglio. At least we may suppose that nobody's conscience was violated if a pretty woman was occasionally dropped into the Bosphorus, and there was the authority of custom for the strangling of all the children of the sisters of the Sultan, so that the succession might not be embarrassed. In this court is the *cage*, a room accessible only by a window, where the royal children were shut up to keep them from conspiracy against the throne; and there Sultan Abdul Aziz spent some years of his life.

We went from the treasure-room to the ancient and large Church of St. Irene, which is now the arsenal of the Seraglio, and become, one might say, a church militant. The nave and aisles are stacked with arms, the walls, the holy apse, the pillars, are cased in guns, swords, pistols, and armor, arranged in fanciful patterns, and with an ingenuity I have seen nowhere else. Here are preserved battle-flags and famous trophies, an armet of Tamerlane, a sword of Scanderbeg, and other pieces of cold, pliant steel that have a reputation for many murders. There is no way so sure to universal celebrity as wholesale murder. Adjoining the arsenal is a museum of Greek and Roman antiquities of the city, all in Turkish disorder; the Cyprus Collections, sent by General di Cesnola, are flung upon shelves or lie in heaps unarranged, and most of the cases containing them had not been opened. Near this is an interesting museum of Turkish costumes for the past five hundred years, —rows on rows of ghastly wax figures clad in the garments of the dead. All of them are ugly, many of them are comical in their exaggeration. The costumes of the Janizaries attract most attention, perhaps from the dislike with which we regard those cruel mercenaries, who deposed and decapitated sultans at their will, and partly because many of the dresses seem more fit for harlequins or eunuchs of the harem than for soldiers.

When the Church of Santa Sophia, the House of Divine Wisdom, was finished, and Justinian entered it, accompanied only by the patriarch, and ran from the porticos to the pulpit with outstretched arms, crying, "Solomon, I have surpassed thee!" it was doubtless the most magnificently decorated temple that had ever stood upon the earth. The exterior was as far removed in simple grandeur as it was in time from the still matchless Doric temples of Athens and of Pæstum, or from the ornate and lordly piles of Ba'albek; but the interior surpassed in splendor almost the conception of man. The pagan temples of antiquity had been despoiled, the quarries of the known world had been ransacked for marbles of various hues and textures to enrich it; and the gold, the silver, the precious stones, employed in its decoration, surpassed in measure the barbaric ostentation of the Temple at Jerusalem. Among its forest of columns, one recognized the starred syenite from the First Cataract of the Nile; the white marble of Phrygia, striped with rose; the green of Laconia, and the blue of Libya; the black Celtic, white-veined, and the white Bosphorus, black-veined; polished shafts which had supported the roof of the Temple of the Delian Apollo, others which had beheld the worship of Diana at Ephesus and of Pallas Athene on the Acropolis, and, yet more ancient, those that had served in the mysterious edifices of Osiris and Isis; while, more conspicuous and beautiful than all, were the eight columns of porphyry, which, transported by Aurelian from the Temple of the Sun at Heliopolis to Home, the pious Marina had received as her dowry and dedicated to the most magnificent building ever reared to the worship of the True God, and fitly dominating the shores of Europe and Asia.

One reads of doors of cedar, amber, and ivory; of hundreds of sacred vessels of pure gold, of exquisitely wrought golden candelabra, and crosses of an hundred pounds' weight each; of a score of books of the Evangelists, the gold covers of which weighed twenty pounds; of golden lilies and golden trumpets; of forty-two thousand chalice-cloths embroidered with pearls and jewels; and of the great altar, for which gold was too cheap a material, a mass of the most precious and costly stones imbedded in gold and silver. We may recall also the arches and the clear spaces of the walls inlaid with marbles and covered with brilliant mosaics. It was Justinian's wish to pave the floor with plates of gold, but, restrained by the fear of the avarice of his successors, he laid it in variegated marbles, which run in waving lines, imitating the flowing of rivers from the four corners to the vestibules. But the wonder of the edifice was the dome, one hundred and seven feet in span, hanging in the air one hundred and eighty feet above the pavement. The aerial lightness of its position is increased by the two half-domes of equal span and the nine cupolas which surround it.

More than one volume has been exclusively devoted to a description of the Mosque of St. Sophia, and less than a volume would not suffice. But the traveller will not see the ancient glories. If he expects anything approaching the exterior richness and grandeur of the cathedrals of Europe, or the colossal proportions of St. Peter's at Rome, or the inexhaustible wealth of the interior of St. Mark's at Venice, he will be disappointed. The area of St. Peter's exceeds that of the grand Piazza of St. Mark, while St. Sophia is only two hundred and thirty-five feet broad by three hundred and fifty feet long; and while the Church of St. Mark has been accumulating spoils of plunder and of piety for centuries, the Church of the Divine Wisdom has been ransacked by repeated pillages and reduced to the puritan plainness of the Moslem worship.

Exceedingly impressive, however, is the first view of the interior; we stood silent with wonder and delight in the presence of the noble columns, the bold soaring arches, the dome in the sky. The temple is flooded with light, perhaps it is too bright; the old mosaics and paintings must have softened it; and we found very offensive the Arabic inscriptions on the four great arches, written in characters ten yards long. They are the names of companions of the Prophet, but they look like sign-boards. Another disagreeable impression is produced by the position of the *Mihrab*, or prayer-niche; as this must be in the direction of Mecca, it is placed at one side of the apse, and everything in the mosque is forced to conform to it. Thus everything is askew; the pulpits are set at hateful angles, and the stripes of the rugs on the floor all run diagonally across. When one attempts to walk from the entrance, pulled one way by the architectural plan, and the other by the religious diversion of it, he has a sensation of being intoxicated.

Gone from this temple are the sacred relics which edified the believers of former ages, such as the trumpets that blew down Jericho and planks from the Ark of Noah, but the Moslems have prodigies to replace them. The most curious of these is the sweating marble column, which emits a dampness that cures diseases.

I inserted my hand in a cavity which has been dug in it, and certainly experienced a clammy sensation. It is said to sweat most early in the morning. I had the curiosity to ascend the gallery to see the seat of the courtesan and Empress Theodora, daughter of the keeper of the bears of the circus,—a public and venal pantomimist, who, after satisfying the immoral curiosity of her contemporaries in many cities, illustrated the throne of the Cæsars by her talents, her intrigues, and her devotion. The fondness of Justinian has preserved her initials in the capitals of the columns, the imperial eagle marks the screen that hid her seat, and the curious traveller may see her name carved on the balustrade where she sat.

To the ancient building the Moslems have added the minarets at the four corners and the enormous crescent on the dome, the gilding of which cost fifty thousand ducats, and the shining of which, a golden moon in the day, is visible at the distance of a hundred miles. The crescent, adopted by the Osmanli upon the conquest of Jerusalem, was the emblem of Byzantium before the Christian era. There is no spot in Constantinople more flooded with historical associations, or more interesting to the student of the history of the Eastern Empire, than the site of St. Sophia. Here arose the church of the same name erected by Constantine; it was twice burned, once by the party of St. John Chrysostom, and once in a tumult of the factions of the Hippodrome. I should like to have seen some of the pageants that took place here. After reposing in their graves for three centuries, the bodies of St. Andrew, St. Luke, and St. Timothy were transported hither. Fifty years after it was honored by a still more illustrious presence; the ashes of the prophet Samuel, deposited in a golden vase covered with a silken veil, left their resting-place in Palestine for the banks of the Bosphorus. The highways from the hills of Judæa to the gates of Constantinople were filled by an uninterrupted procession, who testified their enthusiasm and joy, and the Emperor Arcadius himself, attended by the most illustrious of the clergy and the Senate, advanced to receive his illustrious guest, and conducted the holy remains to this magnificent but insecure place of repose. It was here that Gregory Nazianzen was by force installed upon the Episcopal throne by Theodosius. The city was fanatically Arian. Theodosius proclaimed the Nicene creed, and ordered the primate to deliver the cathedral and all the churches to the orthodox, who were few in number, but strong in the presence of Gregory. This extraordinary man had set up an orthodox pulpit in a private house; he had been mobbed by a motley crowd which issued from the Cathedral of St. Sophia, “common beggars who had forfeited their claim to pity, monks who had the appearance of goats or satyrs, and women more horrible than so many Jezebels”; he had his triumph when Theodosius led him by the hand through the streets—filled with a multitude crowding pavement, roofs, and windows, and venting their rage, grief, astonishment, and despair—into the church, which was held by soldiers, though the prelate confessed that the city had the appearance of a town stormed by barbarians. It was here that Eutropius, the eunuch, when his career of rapacity exceeded even the toleration of Arcadius, sought sanctuary, and was protected by John Chrysostom, archbishop, who owed his ecclesiastical dignity to the late sexless favorite. And it was up this very nave that Mohammed II., the conqueror, spurred his horse through a crowd of fugitives, dismounted at the foot of the altar, cried, “There is no God but God, and Mohammed is his prophet!” and let loose his soldiery upon the priests, virgins, and promiscuous multitude who had sought shelter here.

I should only weary you with unintelligible details in attempting a description of other mosques which we visited. They are all somewhat alike, though varying in degrees of splendor. There is that of Sultan Ahmed, on the site of the Hippodrome, distinguished as the only one in the empire that has six minarets,—the state mosque of the Sultan, whence the Mecca pilgrimages proceed and where the great festivals are held. From a distance it is one of the most conspicuous and poetically beautiful objects in the city. And there is the Mosque of Suleiman the Magnificent, a copy of St. Sophia and excelling it in harmonious grandeur,—indeed, it is called the finest mosque in the empire. Its forecourt measures a thousand paces, and the enclosure contains, besides the mosque and the tomb of the founder, many foundations of charity and of learning,—three schools for the young, besides one for the reading of the Koran and one of medicine, four academies for the four Moslem sects, a hospital, a kitchen for the poor, a library, a fountain, a resting-place for travellers, and a house of refuge for strangers. From it one enjoys a magnificent view of the Golden Horn, the Bosphorus, and the piled-up city opposite. When we entered the mosque hundreds of worshippers were at prayer, bowing their turbans towards Mecca in silent unison. The throng soon broke up into groups of from ten to forty, which seated themselves in circles on the floor for the reading of the Koran. The shoes were heaped in the centre of each circle, the chief reader squatted at a low desk on one side, and all read together in a loud voice, creating an extraordinary vocal tumult. It was like a Sunday school in fancy dress.

Stamboul is a very interesting place to those who have a taste for gorgeous sepulchres, and I do not know any such pleasant residences of the dead as the *turbehs*, or tombs of the imperial family. Usually attached to the mosques, but sometimes standing apart, they are elegant edifices, such as might be suitable for the living; in their airy, light, and stately chambers the occupants are deprived of no splendor to which they were accustomed in life. One of the most beautiful of these *turbehs*, that of Sultan Mahmood II., I mistook for a fountain; it is a domed, circular building of white marble, with Corinthian pilasters, and lighted by seven large windows with gilded grating. Within, in a cheerful, carpeted apartment, are the biers of the sultan, his valideh sultana, and five daughters, covered with cloths of velvet, richly embroidered, upon which are thrown the most superb India shawls; the principal sarcophagi are surrounded by railings of mother-of-pearl; massive silver candlesticks and Koran-stands, upon which are beautiful manuscripts of the Koran, are disposed about the room, and at the head of the Sultan’s bier is a fez with a plume and aigrette of diamonds. In the court of Santa Sophia you may see the beautiful mausoleum of Selim II., who reposes beside the Lady of Light; and not far from it the *turbeh* containing the remains of Mohammed III., surrounded by the biers of seventeen brothers whom he murdered. It is pleasant to see brothers united and in peace at last. I found something pathetic in other like apartments where families were gathered together, sultans and sultanas in the midst of little span-long biers of sons and daughters, incipient sultans and sultanas, who were never permitted by state policy, if I may be allowed the expression, to hatch. Strangled in their golden cradles, perhaps, these innocents! Worthless little bodies, mocked by the splendor of their interments. One could not but feel a little respect for what might have been a “Sublime Porte” or a Light of the Seraglio.

The Imperial Palace, the Church of Santa Sophia, the Hippodrome,—these are the triangle of Byzantine history, the trinity of tyranny, religion, and faction. The Circus of Constantinople, like that on the banks of the

Tiber, was the arena for the exhibition of games, races, spectacles, and triumphs; like that, it was the arena of a licentious democracy, but the most disorderly mob of Rome never attained the power or equalled the vices of the murderous and incendiary factions of Byzantium. The harmless colors that at first only distinguished the ignoble drivers in the chariot races became the badges of parties, which claimed the protection and enjoyed the favor of emperors and prelates; and the *blue* and the *green* factions not only more than once involved the city in conflagration and blood, but carried discord and frenzy into all the provinces. Although they respected no human or divine law, they affected religious zeal for one or another Christian sect or dogma; the "blues" long espoused the orthodox cause, and enjoyed the partiality of Justinian. The dissolute youth of Constantinople, wearing the livery of the factions, possessed the city at night, and abandoned themselves to any deed of violence that fancy or revenge suggested; neither the sanctity of the church, nor the peace of the private house, nor the innocence of youth, nor the chastity of matron or maid, was safe from these assassins and ravishers. It was in one of their seditious outbreaks that the palace and Santa Sophia were delivered to the flames.

The oblong ground of the Hippodrome is still an open place, although a portion of the ground is covered by the Mosque of Ahmed. But the traveller will find there few relics of this historical arena; nothing of the marble seats and galleries that surrounded it. The curious may look at the Egyptian obelisk of syenite, at the crumbling pyramid which was the turning goal of the chariots; and he may find more food for reflection in the bronze spiral column, formed by the twinings of three serpents whose heads have been knocked off. It deserves to be housed and cared for. There is no doubt of its venerable antiquity; it was seen by Thucydides and Herodotus in the Temple of Delphi, where its three branching heads formed a tripod upon which rested the dish of gold which the Greeks captured among the spoils of the battle of Plataea. The column is not more than fifteen feet high; it has stood here since the time of Constantine.

This is the most famous square of Constantinople, yet in its present unromantic aspect it is difficult to reanimate its interest. It is said that its statues of marble and bronze once excelled the living population of the city. In its arena emperors, whose vices have alone saved their names to a conspicuous contempt, sought the popular applause by driving in the chariot races, or stripped themselves for the sports with wild beasts, proud to remind the spectators of the exploits of Caligula and Heliogabalus. Here, in the reign of Anastasius, the "green" faction, entering the place with concealed daggers, interrupted a solemn festival and assassinated three thousand of the "blues." This place was in the first quarter of this century the exercise and parade ground of the Janizaries, until they were destroyed. Let us do justice to the Turks. In two memorable instances they exhibited a nerve which the Roman emperors lacked, who never had either the firmness or the courage to extirpate the Prætorian Guards. The Janizaries set up, deposed, murdered sultans, as the Guards did Emperors; and the Mamelukes of Egypt imitated their predecessors at Rome. Mahmood II. in Constantinople, and Mohammed Ali in Cairo, had the courage to extinguish these enemies of Turkish sovereignty.

In this neighborhood are several ancient monuments; the Burnt Column, a blackened shaft of porphyry; the column called Historical; and that of Theodosius,—I shall not fatigue you with further mention of them. Not far from the Hippodrome we descended into the reservoir called A Thousand and One Columns; I suppose this number is made up by counting one as three, for each column consists of three superimposed shafts. It is only partially excavated. We found a number of Jews occupying these subterranean colonnades, engaged in twisting silk, the even temperature of the cellar being favorable to this work.

As if we had come out of a day in another age, we walked down through the streets of the artificers of brass and ivory and leather, to the floating bridge, and crossed in a golden sunset, in which the minarets and domes of the mosque of Mohammed II. appeared like some aerial creation in the yellow sky.

XXVI.—SAUNTERINGS ABOUT CONSTANTINOPLE.

DURING the day steamers leave the Galata bridge every halfhour for the villages and palaces along the Bosphorus; there is a large fleet of them, probably thirty, but they are always crowded, like the ferry-boats that ply the waters of New York Bay.

We took our first sail on the Bosphorus one afternoon toward sunset, ascending as far as Bebek, where we had been invited to spend the night by Dr. Washburne, the President of Roberts College. I shall not soon forget the animation of the harbor, crowded with shipping, amid which the steamers and caïques were darting about like shuttles, the first impression made by the palaces and ravishingly lovely shores of this winding artery between two seas. Seven promontories from Asia and seven promontories from Europe project into the stream, creating as many corresponding bays; but the villages are more numerous than bays and promontories together, for there are over forty in the fourteen miles from the Sea of Marmora to the Black Sea; on the shores is an almost unbroken line of buildings, many of them palaces of marble; the heights are crowned with cottages and luxurious villas, and abodes of taste and wealth peep out along the slopes. If you say that we seem to be sailing in the street of a city, I can only answer that it is not so; nature is still supreme here, and the visible doweress of the scene. These lovely hills rising on both sides, these gracious curves are hers, as are these groves and gardens of fruits and flowers, these vines and the abundant green that

sometimes conceals and always softens the work of man.

Before we reached the Sultan's palace at Beshiktash, our steamer made a *détour* to the east bank, outside of the grim ironclads that lie before the imperial residence. No steamers are permitted to approach nearer, lest the smoke should soil the sparkling white marble of the palace, or their clamor and dangerous freight of men should disturb the serenity of the harem. The palace, which is a beautiful building, stretches for some distance along the water, with its gardens and conservatories, and seems to be a very comfortable home for a man who has no more ready money than the Sultan.

We landed at Bebek and climbed the steep hill, on whose slope nightingales were singing in the forest, just in time to see the sunset. Roberts College occupies the most commanding situation on the strait, and I do not know any view that surpasses in varied beauty that to be enjoyed from it. I shall make myself comprehended by many when I say that it strongly reminded me of the Hudson at West Point; if nature could be suspected of copying herself, I should say that she had the one in mind when she made the other. At that point the Hudson resembles the Bosphorus, but it wants the palaces, the Yale of the Heavenly Water into which we looked from this height, and some charming mediaeval towers, walls, and castles.

The towers and walls belong to the fortress built in 1451 by Mohammed II., and are now fallen into that decrepitude in which I like best to see all fortresses. But this was interesting before it was a ruin. It stands just above the college, at Roomeli Hissar, where the Bosphorus is narrowest,—not more than half a mile broad,—and with the opposite fortress of Anatolia could perfectly close the stream. Two years before the capture of the city, Mohammed built this fort, and gave it the most peculiar form of any fortress existing. His idea was that the towers and the circuit of the walls should spell the name of the Prophet, and consequently his own. As we looked down upon it, my friend read for me this singular piece of calligraphy, but I could understand it no further than the tower which stands for the Arabic ring in the first letter. It was at this place that Darius threw a bridge across the Bosphorus, and there is a tradition of a stone seat which he occupied here while his Asiatics passed into Europe.

So far as I know, there is no other stream in the world upon which the wealth of palaces and the beauty of gardens may be so advantageously displayed. So far as I know, there is no other place where nature and art have so combined to produce an enchanting prospect. As the situation and appearance of Constantinople are unequalled, so the Bosphorus is unique.

Whatever may be the political changes of the Turkish Empire, I do not believe that this pleasing picture will be destroyed; rather let us expect to see it more lovely in the rapidly developing taste of a new era of letters and refinement. It was a wise forethought that planted the American College just here. It is just where it should be to mould the new order of things. I saw among its two hundred pupils scholars of all creeds and races, who will carry from here living ideas to every part of the empire, and I learned to respect that thirst for knowledge and ability to acquire it which exist in the neighboring European provinces. If impatient men could wait the process of education, the growth of schools, and the development of capacity now already most promising, the Eastern question might be solved by the appearance on the scene in less than a score of years, of a stalwart and intelligent people, who would not only be able to grasp Constantinople, but to administer upon the decaying Turkish Empire as the Osmanli administered upon the Greek.

On Friday the great business of everybody is to see the Sultan go to pray; and the eagerness with which foreigners crowd to the spectacle must convince the Turks that we enjoy few religious privileges at home. It is not known beforehand, even to the inmates of the palace, to what mosque the Sultan will go, nor whether he will make a street progress on horseback, or embark upon the water, for the chosen place of prayer. Before twelve o'clock we took carriage and drove down the hill, past the parade-ground and the artillery barracks to the rear of the palace of Beshiktash; crowds on foot and in carriages were streaming in that direction; regiments of troops were drifting down the slopes and emptying into the avenue that leads between the palace and the plantation of gardens; colors were unfurled, drums beaten, trumpets called from barrack and guard-house; gorgeous officers on caparisoned horses, with equally gaudy attendants, cantered to the rendezvous; and all the air was full of the expectation of a great event. At the great square of the palace we waited amid an intense throng; four or five lines of carriages stretched for a mile along; troops were in marching rank along the avenue and disposed in hollow square on the place; the palace gates were closed, and everybody looked anxiously toward the high and gilded portal from which it was said the announcement of the Sultan's intention would be made. From time to time our curiosity was fed by the arrival of a splendid pasha, who dismounted and walked about; and at intervals a gilded personage emerged from the palace court and raised our expectation on tiptoe. We send our dragoman to interrogate the most awful dignities, especially some superb beings in yellow silk and gold, but they know nothing of the Sultan's mind. At the last moment he might, on horseback, issue from the gate with a brilliant throng, or he might depart in his caïque by the water front. In either case there would be a rush and a scramble to see and to accompany him. More regiments were arriving, bands were playing, superb officers galloping up and down; carriages, gilded with the arms of foreign embassies, or filled with Turkish ladies, pressed forward to the great gate, which still gave no sign. I have never seen such a religious excitement. For myself, I found some compensation in the usual Oriental crowd and unconscious picturesqueness; swart Africans in garments of yellow, sellers of sherbet clinking their glasses, venders of faint sweetmeats walking about with trays and tripods, and the shifting kaleidoscope of races, colors, and graceful attitudes.

Suddenly, I do not know how, or from what quarter, the feeling—for I could not call it information—was diffused that the successor of the Prophet would pray at the mosque in Ortakeui, and that he would go by caïque; and we all scampered up the road, a mile or two, racing carriages, troops and foot men, in eager outset, in order to arrive before the pious man. The mosque stands upon the Bosphorus, where its broad marble steps and pillared front and dome occupy as conspicuous a position as the Dogana at Venice. We secured a standing-place on the dock close to the landing, but outside the iron railing, and waited. A cordon of troops in blue regimentals with red facings was drawn around the streets in the rear of the mosque, and two companies of soldiers in white had stacked their guns on the marble landing, and were lounging about in front of the building.

The scene on the Bosphorus was as gay as a flower-garden. The water was covered with graceful caiques

and painted barges and every sort of craft, mean and splendid, that could be propelled by oars or sails. A dozen men-of-war were decked with flags from keel to maintop; on every yard, and from bowsprit to stern, stood a line of sailors sharply defined against the blue sky. At one o'clock a cannon announced that the superior devotee had entered his caique, and then from every vessel of war in the harbor salute answered salute in thunder that awoke the echoes of two continents; until on all the broad water lay a thick battle-smoke, through which we could distinguish only the tops of the masts, and the dim hulks spouting fire.

In the midst of this earthquake of piety, there was a cry, "He comes, he comes!" The soldiers grasped their arms and drew a line each side of the landing, and the officials of the mosque arranged themselves on the steps. Upon the water, advancing with the speed of race-horses, we saw two splendid gilded caiques, the one containing the Sultan, the other his attendants. At the moment, a light carriage with two bay horses, unattended, dashed up to the side door, and there descended from it and entered the mosque the imperial heir, the son of the late Sultan and the nephew of the present, a slender, pale youth of apparently twenty-five or thirty years. We turn (not knowing how soon he is to become Sultan Murad V.) our eyes to him only for a moment, for the Sultan's caique comes with imperious haste, with the rush as it were of victory,—an hundred feet long, narrow, rising at the stern like the Venetian Bucentaur, carved and gilded like the golden chariot in which Alexander entered Babylon,—propelled by fifty-two long sweeps, rising and falling in unison with the bending backs of twenty-six black rowers, clad in white and with naked feet. The Sultan is throned in the high stern, hung with silk, on silken cushions, under a splendid canopy on the top of which glisten his arms and a blazing sun. The Sultan, who is clad in the uniform of a general, steps quickly out, walks up the steps over a carpet spread for his royal feet,—the soldiers saluting, everybody with arms crossed bending the body,—and disappears in the mosque. The second caique lands immediately, and the imperial ministers step from it and follow their master.

At the side entrance an immense closed baggage-wagon, drawn by four horses and said to contain the sacred wardrobe, was then unlocked and unloaded, and out of it came trunks, boxes, carpetbags, as if the imperial visitor had come to stay a week. After a half-hour of prayer he came out, his uniform concealed under his overcoat, got quickly into a plain carriage, drawn by four magnificent gray horses, and drove rapidly away, attended by a dozen outriders. His heir followed in the carriage in which he came. We had a good view of the chief of Islam. He was a tall, stout man, with a full gray beard, and on the whole a good face and figure. All this parade is weekly enacted over one man going to pray. It is, after all, more simple than the pageantry that often attends the public devotion of the vicegerent of Christ in St. Peter's.

Upon our return we stopped at the *tekke*, in Pera, to see the performance of the Turning Darwishes. I do not know that I have anything to add to the many animated descriptions which have been written of it. It is not far from the Little Field of the Dead, and all about the building are tombs of the faithful, in which were crowds of people enjoying that peculiar Oriental pleasure, graveyard festivity. The mosque is pleasant, and has a polished dancing-floor, surrounded by a gallery supported on columns. I thought it would be a good place for a "hop." Everybody has seen a picture of the darwishes, with closed eyes, outstretched arms, and long gowns inflated at the bottom like an old-fashioned churn, turning smoothly round upon their toes, a dozen or twenty of them revolving without collision. The motion is certainly poetic and pleasing, and the plaintive fluting of the Arab *nay* adds I know not what of pathos to the exercise. I think this dance might advantageously be substituted in Western *salons* for the German, for it is graceful and perfectly moral.

Constantinople is a city of the dead as much as of the living, and one encounters everywhere tombs and cemeteries sentinelled by the mournful dark-green cypress. On our way to take boat for the Sweet Waters of Europe we descended through the neglected Little Field of the Dead. It is on a steep acclivity, and the stones stand and lean thickly there, each surmounted by a turban in fashion at the period of the occupant's death, and with inscription neatly carved. That "every man has his date" strikes Abd-el-Atti as a remarkable fact. The ground is netted by haphazard paths, and the careless living tread the graves with thoughtless feet, as if the rights of the dead to their scanty bit of soil were no longer respected. We said to the boatman that this did not seem well. There was a weary touch of philosophy in his reply: "Ah, master, the world grows old!"

It is the fashion for the world to go on Friday to the Sweet Waters of Europe, the inlet of the Golden Horn, flowing down between two ranges of hills. This vale, which is almost as celebrated in poetry as that of the Heavenly Water on the Asiatic shore, is resorted to by thousands, in hundreds of carriages from Fera, in thousands of caiques and barges. On the water, the excursion is a festival of the people, of strangers, of adventurers of both sexes; the more fashionable though not moral part of society, who have equipages to display, go by land. We chose the water, and selected a large four-oared caique, in the bottom of which we seated ourselves, after a dozen narrow escapes from upsetting the tottlish craft, and rowed away, with the grave Abd-el-Atti balanced behind and under bonds to preserve his exact equilibrium.

All the city seems to be upon the water; the stream is alive with the slender, swift caiques; family parties, rollicking midshipmen from some foreign vessel, solitary beauties reclining in selfish loveliness, grave fat Turks, in stupid enjoyment. No voyage could be gayer than this through the shipping, with the multitudinous houses of the city rising on either hand. As we advance, the shore is lined with people, mostly ladies in gay holiday apparel, squatting along the stream; as on a spring day in Paris, those who cannot afford carriages line the avenues to the Bois de Boulogne to watch the passing pageant. The stream grows more narrow, at length winds in graceful turns, and finally is only a few yards wide, and the banks are retained by masonry. The vale narrows also, and the hills draw near. The water-way is choked with gayly painted caiques, full of laughing beauties and reckless pleasure-seekers, and the reader of Egyptian history might think himself in a saturnalia of the revel-makers in the ancient *fête* of Bubastis on the Nile. The women are clad in soft silks,—blue, red, pink, yellow, and gray,—some of them with their faces tied up as if they were victims of toothache, others wearing the gauze veils, which enhance without concealing charms; and the color and beauty that nature has denied to many are imitated by paint and enamel.

We land and walk on. Singers and players on curious instruments sit along the bank and in groups under the trees, and fill the festive air with the plaintive and untrained Oriental music. The variety of costumes is infinite; here we meet all that is gay and fantastic in Europe and Asia. The navigation ends at the white marble palace and mosque which we now see shining amid the trees, fresh with May foliage. Booths and

tents, green and white, are erected everywhere, and there are many groups of gypsies and fortune-tellers. The olive-complexioned, black-eyed, long-haired women, who trade in the secrets of the Orient and the vices of the Occident, do a thriving business with those curious of the future, or fascinated by the mysterious beauty of the soothsayers. Besides the bands of music, there are solitary bagpipers whose instrument is a skin, with a pipe for a mouthpiece and another at the opposite end having graduated holes for fingering; and I noticed with pleasure that the fingering and the music continued long after the musician had ceased to blow into the inflated skin. Nothing was wanting to the most brilliant scene; ladies in bright groups on gay rugs and mats, children weaving head-dresses from leaves and rushes, crowds of carriages, fine horses and gallant horsemen, sellers of refreshments balancing great trays on their heads, and bearing tripod stools, and all degrees of the most cosmopolitan capital enjoying the charming spring holiday.

In the palace grounds dozens of peacocks were sunning themselves, and the Judas-trees were in full pink bloom. Above the palace the river flows in walled banks, and before it reaches it tumbles over an artificial fall of rocks, and sweeps round the garden in a graceful curve. Beyond the palace, also on the bank of the stream, is a grove of superb trees and a greensward; here a military band plays, and this is the fashionable meeting-place of carriages, where hundreds were circling round and round in the imitated etiquette of Hyde Park.

We came down at sunset, racing swiftly among the returning *caïques*, passing and passed by laughing boatsful, whose gay hangings trailed in the stream, as in a pageant on the Grand Canal of Venice, and watching with the interest of the philosopher only, the light boat of beauty and frailty pursued by the youthful *caïque* of inexperience and desire. The hour contributed to make the scene one of magical beauty. To our right lay the dark cypresses of the vast cemetery of Eyoub (or Ayub) and the shining mosque where, at their inauguration, the Osmanli Sultans are still girt with the sword of their founder. At this spot, in the first siege of Constantinople by the Arabs, fell, amid thirty thousand Moslems, slain outside the Golden Gate, the Aboo Ayub, or Job, one of the last companions of the Prophet. He was one of the immortal auxiliaries; he had fought at Beder and Obud side by side with Abubeker, and he had the honor to be one of the first assailants of the Christian capital, which Mohammed had predicted that his followers should one day possess. The site of his grave, forgotten for seven centuries, was revealed to the conqueror of the city by a fortunate vision, and the spot was commemorated by a mosque, and a gathering congregation of the dead.

Clouds had collected in the west, and the heavy smoke of innumerable steamers lay dark upon the Bosphorus. But as we came down, the sun broke out and gave us one of those effects of which nature is sparing. On the heights of Stamboul, a dozen minarets, only half distinct, were touched by the gold rays; the windows of both cities, piled above each other, blazed in it; the smooth river and the swift *caïques* were gilded by it; and behind us, domes and spires, and the tapering shafts of the Muezzin, the bases hid by the mist, rose into the heaven of the golden sunset and appeared like mansions, and most unsubstantial ones, in the sky. And ever the light *caïques* flew over the rosy water in a chase of pleasure, in a motion that satisfied the utmost longing for repose, while the enchantment of heaven seemed to have dropped upon the earth.

“The world has lost its gloss for us,
Since we went boating on the Bosphorus.”

Constantinople enjoys or suffers the changeable weather appropriate to its cosmopolitan inhabitants and situation, and we waited for a day suitable to cross to Scutari and obtain the view from Boolgoorloo. We finally accepted one of alternate clouds and sunshine. The connection between the European city and its great suburb is maintained by frequent ferry-steamers, and I believe that no other mile-passage in the world can offer the traveller a scene more animated or views so varied and magnificent. Near the landing at Scutari stands a beacon-tower ninety feet high, erected upon a rock; it has the name of the Maiden's Tower, but I do not know why, unless by courtesy to one of the mistresses of Sultan Mohammed, who is said to have been shut up in it. Scutari,—pronounced with the accent on the first syllable, a corruption of the Turkish name *Uskudar*,—the site of the old Greek and Persian Chrysopolis, is a town sprawling over seven hills, has plenty of mosques, baths, and cemeteries,—the three Oriental luxuries,—but little to detain the traveller, already familiar with Eastern towns of the sort. The spot has been in all ages an arriving and starting point for Asiatic couriers, caravans, and armies; here the earliest Greek sea-robbers hauled up their venturesome barks; here Xenophon rested after his campaign against Cyrus; here the Roman and then the Byzantine emperors had their hunting-palaces; here for a long time the Persians menaced and wrung tribute from the city they could not capture.

We took a carriage and ascended through the city to the mountain of Boolgoorloo. On the slopes above the town are orchards and vineyards and pretty villas. The last ten minutes of the climb was accomplished on foot, and when we stood upon the summit the world was at our feet. I do not know any other view that embraces so much and such variety. The swelling top was carpeted with grass, sprinkled with spring flowers, and here and there a spreading pine offered a place of shade and repose. Behind us continued range on range the hills of the peninsula; to the south the eye explored Asia Minor, the ancient Bithynia and Mysia, until it rested on the monstrous snowy summits of Olympus, which rears itself beyond Broussa, city famed for its gauzy silk and the first capital of the Osman dynasty. There stretches the blue Sea of Marmora, bearing lightly on the surface the nine enchanting Princes' Islands, whose equable climate and fertile soil have obtained for them the epithet of the Isles of the Blest. Opposite, Stamboul rises out of the water on every side; in the distance a city of domes and pinnacles and glass, the dark-green spires of cypress tempering its brilliant lustre; there the Golden Horn and its thronged bridges and its countless masts and steamers' funnels; Galata and Pera, also lifted up into nobility, and all their shabby details lost, and the Bosphorus, its hills, marble palaces, mosques, and gardens, on either side. I do not know any scene that approaches this in beauty except the Bay of Naples, and the charm of that is so different from this that no comparison is forced upon the mind. The Bay of New York has many of the elements of this charming prospect, on the map. But Constantinople and its environs can be seen from many points in one view, while one would need to ascend a balloon to comprehend in like manner the capital of the Western world. It is the situation of Constantinople, lifted up into a conspicuousness that permits no one of its single splendors to be lost in the general view, that

makes it in appearance the unrivalled empress of cities.

In the foreground lay Scutari, and in a broad sweep the heavy mass of cypress forest that covers the great cemetery of the Turks, which they are said to prefer to Eyoub, under the prophetic impression that they will one day be driven out of Europe. The precaution seems idle. If in the loss of Constantinople the Osmanli sultans still maintain the supremacy of Islam, the Moslem capital could not be on these shores, and the caliphate in its migrations might again be established on the Nile, on the Euphrates, or in the plains of Guta on the Abana. The iron-clads that lie in the Bosphorus, the long guns of a dozen fortresses that command every foot of the city and shore, forbid that these contiguous coasts should fly hostile flags.

We drove down to and through this famous cemetery in one direction and another. In its beauty I was disappointed. It is a dense and gloomy cypress forest; as a place of sepulture, without the architectural pretensions of Père-la-Chaise, and only less attractive than that. Its dark recesses are crowded with gravestones, slender at the bottom and swelling at the top, painted in lively colors,—green, red, and gray, a necessary relief to the sombre woods,—having inscriptions in gilt and red letters, and leaning at all angles, as if they had fallen out in a quarrel over night. The graves of the men are distinguished by stones crowned with turbans, or with tarbooshes painted red,—an imitation, in short, of whatever head-dress the owner wore when alive, so that perhaps his acquaintances can recognize his tomb without reading his name. Some of the more ancient have the form of a mould of Charlotte Busse. I saw more than one set jauntily on one side, which gave the monument a rakish air, singularly *débonnaire* for a tombstone.

In contrast to this vast assembly of the faithful is the pretty English cemetery, dedicated to the fallen in the Crimean war,—a well-kept flower-garden, which lies close to the Bosphorus on a point opposite the old Seraglio. We sat down on the sea-wall in this quiet spot, where the sun falls lovingly and the undisturbed birds sing, and looked long at the shifting, busy panorama of a world that does not disturb this repose; and then walked about the garden, noting the headstones of soldiers,—this one killed at Alma, that at Inkermann, another at Balaklava, and the tall, graceless granite monument to eight thousand nameless dead; nameless here, but not in many a home and many a heart, any more than the undistinguished thousands who sleep at Gettysburg or on a hundred other patriot fields.

Near by is the great hospital which Florence Nightingale controlled, and in her memory we asked permission to enter its wards and visit its garden. After some delay this was granted, but the Turkish official said that the hospital was for men, that there was no woman there, and as for Miss Nightingale, he had never heard of her. But we persevered and finally found an officer who led us to the room she occupied,—a large apartment now filled with the beds of the sick, and, like every other part of the establishment, neat and orderly. But our curiosity to see where the philanthropist had labored was an enigma to the Turkish officials to the last. They insisted at first that we must be relations of Miss Nightingale,—a supposition which I saw that Abd-el-Atti, who always seeks the advantage of distinction, was inclined to favor. But we said no. Well, perhaps it was natural that Englishmen should indulge in the sentiment that moved us. But we were not Englishmen, we were Americans,—they gave it up entirely. The superintendent of the hospital, a courtly and elderly bey, who had fought in the Crimean war, and whom our dragoman, dipping his hand to the ground, saluted with the most profound Egyptian obeisance, insisted upon serving us coffee in the garden by the fountain of gold-fish, and we spent an hour of quiet there.

On Sunday at about the hour that the good people in America were beginning to think what they should wear to church, we walked down to the service in the English Memorial Church, on the brow of the hill in Pera, a pointed Gothic building of a rich and pleasing interior. Only once or twice in many months had we been in a Christian church, and it was, at least, interesting to contrast its simple forms with the elaborate Greek ritual and the endless repetitions of the Moslem prayers. A choir of boys intoned or chanted a portion of the service, with marked ability, and wholly relieved the audience of the necessity of making responses. The clergymen executed the reading so successfully that we could only now and then catch a word. The service, so far as we were concerned, might as well have been in Turkish; and yet it was not altogether lost on us. We could distinguish occasionally the Lord's Prayer, and the name of Queen Victoria, and we caught some of the Commandments as they whisked past us. We knew also when we were in the Litany, from the regular cadence of the boys' responses. But as the entertainment seemed to be for the benefit of the clergymen and boys, I did not feel like intruding beyond the office of a spectator, and I soon found myself reflecting whether a machine could not be invented that should produce the same effect of sound, which was all that the congregation enjoyed.

Rome has been until recently less tolerant of the Protestant faith than Constantinople; and it was an inspiration of reciprocity to build here a church in memory of the Christian soldiers who fell in the crusade to establish the Moslem rule in European Turkey.

Of the various views about Constantinople we always pronounced that best which we saw last, and at the time we said that those from Seraglio Point, from Boolgoorloo, and from Roberts College were crowned by that from Giant's Grave Mountain, a noble height on the Asiatic side of the Bosphorus near the Black Sea.

One charming morning, we ascended the strait in a steamboat that calls at the landings on the eastern shore. The Bosphorus, if you will have it in a phrase, is a river of lapis lazuli lined with marble palaces. As we saw it that morning, its sloping gardens, terraces, trees, and vines in the tender bloom of spring, all the extravagance of the Oriental poets in praise of it was justified, and it was easy to believe the nature-romance with which the earliest adventurers had clothed it. There, at Beshiktash, Jason landed to rest his weary sailors on the voyage to Colchis; and above there at Koroo Ghesmeh stood a laurel-tree which Medea planted on the return of the Argonauts. Tradition has placed near it, on the point, the site of a less attractive object, the pillar upon which Simeon Stylites spent forty years of a life which was just forty years too long; but I do not know by what authority, for I believe that the perch of the Syrian hermit was near Antioch, where his noble position edified thousands of Christians, who enjoyed their piety in contemplating his, and took their pleasures in the groves of Daphne.

Our steamer was, at this moment, a craft more dangerous to mankind than an iron-clad; it was a sort of floating harem; we sat upon the awning-covered upper deck; the greater part of the lower deck was jealously curtained off and filled with Turkish ladies. Among them we recognized a little flock of a couple of dozen, the

harem of Mustapha Pasha, the uncle of the Khedive of Egypt. They left the boat at his palace in Chenguel Keuy, and we saw them, in silk gowns of white, red, blue, and yellow, streaming across the flower-garden into the marble portal,—a pretty picture. The pasha was transferring his household to the country for the summer, and we imagined that the imprisoned troop entered these blooming May gardens with the elation of freedom, which might, however, be more perfect if eunuchs did not watch every gate and foot of the garden wall. I suppose, however, that few of them would be willing to exchange their lives of idle luxury for the misery and chance of their former condition, and it is said that the maids of the so-called Christian Georgia hear with envy of the good fortune of their sisters, who have brought good prices in the Turkish capital.

When the harem disappeared we found some consolation in a tall Croat, who strutted up and down the deck in front of us, that we might sicken with envy of his splendid costume. He wore tight trousers of blue cloth, baggy in the rear but fitting the legs like a glove, and terminating over the shoes in a quilled inverted funnel; a brilliant scarf of Syrian silk in loose folds about his loins; a vest stiff with gold-embroidery; a scarlet jacket decked with gold-lace, and on his head a red fez. This is the costly dress of a Croatian gardener, who displays all his wealth to make a holiday spectacle of himself.

We sailed close to the village of Kandili and the promontory under which and upon which it lies, a site which exhausts the capacity of the loveliness of nature and the skill of art. From the villas on its height one commands, by a shifted glance, the Euxine and the Marmora, and whatever is most lovely in the prospect of two continents; the purity of the air is said to equal the charm of the view. Above this promontory opens the valley down which flows the river Geuksoo (sky-water), and at the north of it stands a white marble kiosk of the Sultan, the most beautiful architectural creation on the strait. Near it, shaded by great trees, is a handsome fountain; beyond the green turf in the tree-decked vale which pierces the hill were groups of holiday-makers in gay attire. I do not know if this Valley of the Heavenly Water is the loveliest in the East, but it is said that its charms of meadow, shade, sweet water, and scented flowers are a substantial foretaste of the paradise of the true believer. But it is in vain to catalogue the charming villages, the fresh beauties of nature and art to which each revolution of the paddle-wheel carried us. We thought we should be content with a summer residence of the Khedive, on the European side below the lovely bay of Terapea, with its vast hillside of gardens and orchards and the long line of palaces on the water. Fanned by the invigorating breezes from the Black Sea, its summer climate must be perfect.

We landed at Beicos, and, in default of any conveyance, walked up through the straggling village, along the shore, to a verdant, shady meadow, sweet with clover and wild-flowers. This is in the valley of Hun-Kiar Iskelesi, a favorite residence of the sultans; here on a projecting rocky point is a reddish palace built and given to the Sultan by the Khedive. The meadow, in which we were, is behind a palace of old Mohammed Ali, and it is now used as a pasture for the Sultan's horses, dozens of which were tethered and feeding in the lush grass and clover. The tents of their attendants were pitched on the plain, and groups of Turkish ladies were picnicking under the large sycamores. It was a charming rural scene. I made the silent acquaintance of an old man, in a white turban and flowing robes, who sat in the grass knitting and watching his one white lamb feed; probably knitting the fleece of his lamb of the year before.

We were in search of an *araba* and team to take us up the mountain; one stood in the meadow which we could hire, but oxen were wanting, and we despatched a Greek boy in search of the animals. The Turkish ladies of fashion delight in the *araba* when they ride into the country, greatly preferring it to the horse or donkey, or to any other carriage. It is a long cart of four wheels, without springs, but it is as stately in appearance as the band-wagon of a circus; its sloping side-boards and even the platform in front are elaborately carved and gilded. While we waited the motions of the boy, who joined to himself two others even more prone to go astray than himself, an officer of the royal stables invited us to take seats under the shade of his tent and served us with coffee. After an hour the boy returned with two lean steers. The rude, hooped top of the *araba* was spread with a purple cloth, a thick bedquilt covered the bottom, and by the aid of a ladder we climbed into the ark and sat or lay as we could best stow ourselves. A boy led the steers by a rope, another walked at the side gently goading them with a stick, and we rumbled along slowly through the brilliant meadows. It became evident after a time that we were not ascending the mountain, but going into the heart of the country; the cart was stopped and the wild driver was interrogated. I never saw a human being so totally devoid of a conscience. We had hired him to take us up to Giant's Grave Mountain. He was deliberately cheating us out of it. At first he insisted that he was going in the right direction, but upon the application of the dragoman's fingers to his ear, he pleaded that the mountain road was bad and that it was just as well for us to visit the Sultan's farm up the valley. We had come seven thousand miles to see the view from the mountain, but this boy had not the least scruple in depriving us of it. We turned about and entered a charming glen, thoroughly New England in its character, set with small trees and shrubs and carpeted with a turf of short sweet grass. One needs to be some months in the Orient to appreciate the delight experienced by the sight of genuine turf.

As we ascended, the road, gullied by the spring torrents, at last became impassable for wheels, and we were obliged to abandon the *araba* and perform the last half-mile of the journey on foot. The sightly summit of the mountain is nearly six hundred feet above the water. There, in a lovely grove, we found a coffeehouse and a mosque and the Giant's Grave, which the Moslems call the grave of Joshua. It is a flower-planted enclosure, seventy feet long and seven wide, ample for any hero; the railing about it is tagged with bits of cloth which pious devotees have tied there in the expectation that their diseases, perhaps their sins, will vanish with the airing of these shreds. From the minaret is a wonderful view,—the entire length of the Bosphorus, with all its windings and lovely bays enlivened with white sails, ships at anchor, and darting steamers, rich in villages, ancient castles, and forts; a great portion of Asia Minor, with the snow peaks of Olympus; on the south, the Islands of the Blest and the Sea of Marmora; on the north, the Cyanean rocks and the wide sweep of the Euxine, blue as heaven and dotted with a hundred white sails, overlooked by the ruin of a Genoese castle, at the entrance of the Bosphorus, built on the site of a temple of Jupiter, and the spot where the Argonauts halted before they ventured among the Symplegades; and immediately below, Terapea and the deep bay of Buyukdereh, the summer resort of the foreign residents of Constantinople, a paradise of palaces and gardens, of vales and stately plane-trees, and the entrance to the interior village of Belgrade, with its sacred forest unprofaned as yet by the axe.

The Cyanean rocks which Jason and his mariners regarded as floating islands, or sentient monsters, vanishing and reappearing, are harmlessly anchored now, and do not appear at all formidable, though they disappear now as of old when the fierce Euxine rolls in its storm waves. For a long time and with insatiable curiosity we followed with the eye the line of the coast of the Pontus Euxinus, once as thickly set with towns as the Riviera of Italy,—cities of Ionian, Dorian, and Athenian colonies, who followed the Phoenicians and perhaps the Egyptians,—in the vain hope of extending our vision to Trebizond, to the sea fortress of Petra, renowned for its defence by the soldiers of Chosroes against the arms of Justinian, and, further, to the banks of the Pliasis, to Colchis, whose fabulous wealth tempted Jason and his sea-robbers. The waters of this land were so impregnated with particles of gold that fleeces of sheep were used to strain out the yellow metal. Its palaces shone with gold and silver, and you might expect in its gardens the fruit of the Hesperides. In the vales of the Caucasus, we are taught, our race has attained its most perfect form; in other days its men were as renowned for strength and valor as its women were for beauty,—the one could not be permanently subdued, the others conquered, even in their slavery. Early converts to the Christian faith, they never adopted its morals nor comprehended its metaphysics; and perhaps a more dissolute and venal society does not exist than that whose business for centuries has been the raising of maids for the Turkish harems. And the miserable, though willing, victims are said to possess not even beauty, until after a training in luxury by the slave-dealers.

We made our way, not without difficulty, down the rough, bush-grown hillside, invaded a new Turkish fortification, and at length found a place where we could descend the precipitous bank and summon a boat to ferry us across to Buyukdereh. This was not easy to obtain; but finally an aged Greek boatman appeared with a caique as aged and decayed as himself. The chances seemed to be that it could make the voyage, and we all packed ourselves into it, sitting on the bottom and filling it completely. There was little margin of boat above the water, and any sudden motion would have reduced that to nothing. We looked wise and sat still, while the old Greek pulled feebly and praised the excellence of his craft. On the opposite slope our attention was called to a pretty cottage, and a Constantinople lady, who was of the party, began to tell us the story of its occupant. So dramatic and exciting did it become that we forgot entirely the peril of our frail and overloaded boat. The story finished as we drew up to the landing, which we instantly comprehended we had not reached a moment too soon. For when we arose our clothes were soaked; we were sitting in water, which was rapidly filling the boat, and would have swamped it in five minutes. The landing-place of Buyukdereh, the bay, the hills and villas, reminded us of Lake Como, and the quay and streets were rather Italian than Oriental. The most soaked of the voyagers stood outside the railing of the pretty garden of the *café* to dry in the sun, while the others sat inside, under the vines, and passed out to the unfortunates, through the iron bars, tiny cups of coffee, and fed them with *rahat-al-lacoom* and other delicious sweetmeats, until the arrival of the steamer. The ride down was lovely; the sun made the barracks and palaces on the east shore a blaze of diamonds; and the minarets seen through the steamer's smoke which, transfused with the rosy light, overhung the city, had a phantasmagorical aspect.

Constantinople shares with many other cities the reputation of being the most dissolute in the world. The traveller is not required to decide the rival claims of this sort of pre-eminence, which are eagerly put forward; he may better, in each city, acquiesce in the complaisant assumption of the inhabitants. But when he is required to see in the moral state of the Eastern capital signs of its speedy decay, and the near extinction of the Othman rule, he takes a leaf out of history and reflects. It is true, no doubt, that the Turks are enfeebled by luxury and sensuality, and have, to a great extent, lost those virile qualities which gave to their ancestors the dominion of so many kingdoms in Asia, Africa, and Europe; in short, that the race is sinking into an incapacity to propagate itself in the world. If one believes what he hears, the morals of society could not be worse. The women, so many of whom have been bought in the market, or are daughters of slaves, are educated only for pleasure; and a great proportion of the male population are adventurers from all lands, with few domestic ties. The very relaxation of the surveillance of the harem (the necessary prelude to the emancipation of woman) opens the door to opportunity, and gives freer play to feminine intrigue. One hears, indeed, that even the inmates of the royal harem find means of clandestine intercourse with the foreigners of Pera. The history of the Northern and Western occupation of the East has been, for fifteen centuries, only a repetition of yielding to the seductive influences of a luxurious climate and to soft and pleasing invitation.

But, heighten as we may the true and immoral picture of social life in Constantinople, I doubt if it is so loose and unrestrained as it was for centuries under the Greek Emperors; I doubt if the imbecility, the luxurious effeminacy of the Turks has sunk to the level of the Byzantine Empire; and when we are asked to expect in the decay of to-day a speedy dissolution, we remember that for a period of over a thousand years, from the partition of the Roman Empire between the two sons of Theodosius to the capture of Constantinople by Mohammed II., the empire subsisted in a state of premature and perpetual decay. These Oriental dynasties are a long time in dying, and we cannot measure their decrepitude by the standards of Occidental morality.

The trade and the commerce of the city are largely in the hands of foreigners; but it has nearly always been so, since the days of the merchants and manufacturers of Pisa, Genoa, and Venice. We might draw an inference of Turkish insecurity from the implacable hatred of the so-called Greek subjects, if the latter were not in the discord of a thousand years of anarchy and servitude. The history of the islands of the Eastern Mediterranean has been a succession of Turkish avarice and rapacity, horrible Greek revenge and Turkish wholesale devastation and massacre, repeated over and over again; but there appears as yet no power able either to expel the Turks or unite the Greeks. That the leaven of change is working in the Levant is evident to the most superficial observation, and one sees everywhere the introduction of Western civilization, of business habits, and, above all, of schools. However indifferent the Osmanlis are to education, they are not insensible to European opinion; and in reckoning up their bad qualities, we ought not to forget that they have set some portions of Christendom a lesson of religious toleration,—both in Constantinople and Jerusalem the Christians were allowed a freedom of worship in their own churches which was not permitted to Protestants within the sacred walls of Pontifical Rome.

One who would paint the manners or the morals of Constantinople might adorn his theme with many anecdotes, characteristic of a condition of society which is foreign to our experience. I select one which has

the merit of being literally true. You who believe that modern romance exists only in tales of fiction, listen to the story of a beauty of Constantinople, the vicissitudes of whose life equal in variety if not in importance those of Theodora and Athenais. For obvious reasons, I shall mention no names.

There lives now on the banks of the Bosphorus an English physician, who, at the entreaty of Lord Byron, went to Greece in 1824 as a volunteer surgeon in the war of independence; he arrived only in time to see the poet expire at Missolonghi. In the course of the war, he was taken prisoner by the Egyptian troops, who in their great need of surgeons kept him actively employed in his profession. He did not regain his freedom until after the war, and then only on condition that he should reside in Constantinople as one of the physicians of the Sultan, Mohammed II.

We may suppose that the Oriental life was not unpleasant, nor the position irksome to him, for he soon so far yielded to the temptations of the capital as to fall in love with a very pretty face which he saw daily in a bay-window of the street he traversed on the way to the Seraglio. Acquaintance, which sometimes precedes love, in this case followed it; the doctor declared his passion and was accepted by the willing maid. But an Oriental bay-window is the opportunity of the world, and the doctor, becoming convinced that his affianced was a desperate flirt, and yielding to the entreaties of his friends, broke off the engagement and left her free, in her eery, to continue her observations upon mankind. This, however, did not suit the plans of the lovely and fickle girl. One morning, shortly after, he was summoned to see two Turkish ladies who awaited him in his office; when he appeared, the young girl (for it was she) and her mother threw aside their disguise, and declared that they would not leave the house until the doctor married the daughter, for the rupture of the engagement had rendered it impossible to procure any other husband. Whether her own beauty or the terrible aspect of the mother prevailed, I do not know, but the English chaplain was sent for; he refused to perform the ceremony, and a Greek priest was found who married them.

This marriage, which took the appearance of duress, might have been happy if the compelling party to it had left her fondness of adventure and variety at the wedding threshold; but her constancy was only assumed, like the Turkish veil, for an occasion; lovers were not wanting, and after the birth of three children, two sons and a daughter, she deserted her husband and went to live with a young Turk, who has since held high office in the government of the Sultan. It was in her character of Madame Mehemet Pasha that she wrote (or one of her sons wrote for her) a book well known in the West, entitled "Thirty Years in a Harem." But her intriguing spirit was not extinct even in a Turkish harem; she attempted to palm off upon the pasha, as her own, a child that she had bought; her device was detected by one of the palace eunuchs, and at the same time her amour with a Greek of the city came to light. The eunuch incurred her displeasure for his officiousness, and she had him strangled and thrown into the Bosphorus! Some say that the resolute woman even assisted with her own hands. For these breaches of decorum, however, she paid dear; the pasha banished her to Kutayah, with orders to the guard who attended her to poison her on the way; but she so won upon the affection of the officer that he let her escape at Broussa. There her beauty, if not her piety, recommended her to an Imam of one of the mosques, and she married him and seems for a time to have led a quiet life; at any rate, nothing further was heard of her until just before the famous cholera season, when news came of the death of her husband, the Moslem priest, and that she was living in extreme poverty, all her beauty gone forever, and consequently her ability to procure another husband.

The pasha, Mehemet, lived in a beautiful palace on the eastern shore of the Bosphorus, near Kandili. During the great cholera epidemic of 1865, the pasha was taken ill. One day there appeared at the gate an unknown woman, who said that she had come to cure the pasha; no one knew her, but she spoke with authority, and was admitted. It was our adventuress. She nursed the pasha with the most tender care and watchful skill, so that he recovered; and, in gratitude for the preservation of his life, he permitted her and her daughter to remain in the palace. For some time they were contented with the luxury of such a home, but one day—it was the evening of Wednesday—neither mother nor daughter was to be found; and upon examination it was discovered that a large collection of precious stones and some ready money had disappeared with them. They had departed on the French steamer, in order to transfer their talents to the fields of Europe. The fate of the daughter I do not know; for some time she and her mother were conspicuous in the dissipation of Paris life; subsequently the mother lived with a son in London, and, since I heard her story in Constantinople, she has died in London in misery and want.

The further history of the doctor and his family may detain our curiosity for a moment. When his wife left him for the arms of the pasha, he experienced so much difficulty in finding any one in Constantinople to take care of his children that he determined to send them to Scotland to be educated, and intrusted them, for that purpose, to a friend who was returning to England. They went by way of Rome. It happened that the mother and sister of the doctor had some time before that come to Rome, for the sake of health, and had there warmly embraced the Roman Catholic faith. Of course the three children were taken to see their grandmother and aunt, and the latter, concerned for their eternal welfare, diverted them from their journey, and immured the boys in a monastery and the girl in a convent. The father, when he heard of this abduction, expressed indignation, but, having at that time only such religious faith as may be floating in the Oriental air and common to all, he made no vigorous effort to recover his children. Indeed, he consoled himself, in the fashion of the country, by marrying again; this time a Greek lady, who died, leaving two boys. The doctor was successful in transporting the offspring of his second marriage to Scotland, where they were educated; and they returned to do him honor,—one of them as the eloquent and devoted pastor of a Protestant church in Pera, and the other as a physician in the employment of the government.

After the death of his second wife, the doctor—I can but tell the story as I heard it—became a changed man, and—married again; this time a Swiss lady, of lovely Christian character. In his changed condition, he began to feel anxious to recover his children from the grasp of Rome. He wrote for information, but his sister refused to tell where they were, and his search could discover no trace of them. At length the father obtained leave of absence from the Seraglio, and armed with an autograph letter from Abdul Aziz to Pius IX., he went to Rome. The Pope gave him an order for the restoration of his children. He drove first to the convent to see his daughter. In place of the little girl whom he had years ago parted with, he found a young lady of extraordinary beauty, and a devoted Romanist. At first she refused to go with him, and it was only upon his

promise to allow her perfect liberty of conscience, and never to interfere with any of the observances of her church, that she consented. Not daring to lose sight of her, he waited for her to pack her trunk, and then, putting her into a carriage, drove to the monastery where he heard, after many inquiries, that his boys were confined. The monk who admitted him denied that they were there, and endeavored to lock him into the waiting-room while he went to call the Superior. But the doctor anticipated his movements, and as soon as the monk was out of sight, started to explore the house. By good luck the first door he opened led into a chamber where a sick boy was lying on a bed. The doctor believed that he recognized one of his sons; a few questions satisfied him that he was right. "I am your father," he said to the astonished lad, "run quickly and call your brother and come with me." Monastic discipline had not so many attractions for the boys as convent life for the girl, and the child ran with alacrity and brought his brother, just as the abbot and a score of monks appeared upon the scene. As the celerity of the doctor had given no opportunity to conceal the boys, opposition to the order of the Pope was useless, and the father hastened to the gate where he had left the carriage. Meantime the aunt had heard of the rescue, and followed the girl from the convent; she implored her, by tears and prayers, to reverse her decision. The doctor cut short the scene by shoving his sons into the carriage and driving rapidly away. Nor did he trust them long in Rome.

The subsequent career of the boys is not dwelt on with pleasure. One of them enlisted in the Turkish army, married a Turkish wife, and, after some years, deserted her, and ran away to England. His wife was taken into a pasha's family, who offered to adopt her only child, a boy of four years; but the mother preferred to bring him to his grandfather. None of the family had seen her, but she established her identity, and begged that her child might be adopted by a good man, which she knew his grandfather to be, and receive a Christian training. The doctor, therefore, adopted the grandchild, which had come to him in such a strange way, and the mother shortly after died.

The daughter, whose acquired accomplishments matched her inherited beauty, married, in time, a Venetian Count of wealth; and the idler in Venice may see on the Grand Canal, among those mouldy edifices that could reveal so many romances, their sumptuous palace, and learn, if he cares to learn, that it is the home of a family happy in the enjoyment of most felicitous fortune. In the gossip with which the best Italian society sometimes amuses itself, he might hear that the Countess was the daughter of a slave of the Sultan's harem. I have given, however, the true version of the romantic story; but I am ignorant of the social condition or the race of the mother of the heroine of so many adventures. She may have been born in the Caucasus.

XXVII.—FROM THE GOLDEN HORN TO THE ACROPOLIS.

OUR last day in Constantinople was a bright invitation for us to remain forever. We could have departed without regret in a rain-storm, but it was not so easy to resolve to look our last upon this shining city and marvellous landscape under the blue sky of May. Early in the morning we climbed up the Genoese Tower in Galata and saw the hundred crescents of Stamboul sparkle in the sun, the Golden Horn and the Bosphorus, shifting panoramas of trade and pleasure, the Propontis with its purple islands, and the azure and snowy mountains of Asia. This massive tower is now a fire-signal station, and night and day watchmen look out from its battlemented gallery; the Seraskier Tower opposite in Stamboul, and another on the heights of the Asiatic shore, keep the same watch over the inflammable city. The guard requested us not to open our parasols upon the gallery for fear they would be hailed as fire-signals.

The day was spent in last visits to the bazaars, in packing and leave-takings, and the passage of the custom-house, for the government encourages trade by an export as well as an import duty. I did not see any of the officials, but Abd-el-Atti, who had charge of shipping our baggage, reported that the eyes of the customs inspector were each just the size of a five-franc piece. Chief among our regrets at setting our faces toward Europe was the necessity of parting with Abd-el-Atti and Ahmed; the former had been our faithful dragoman and daily companion for five months, and we had not yet exhausted his adventures nor his stores of Oriental humor; and we could not expect to find elsewhere a character like Ahmed, a person so shrewd and obliging, and of such amusing vivacity. At four o'clock we embarked upon an Italian steamer for Salonica and Athens, a four days' voyage. At the last moment Abd-el-Atti would have gone with us upon the least encouragement, but we had no further need of dragoman or interpreter, and the old man sadly descended the ladder to his boat. I can see him yet, his red fez in the stern of the caique, waving his large silk handkerchief, and slowly rowing back to Pera,—a melancholy figure.

As we steamed out of the harbor we enjoyed the view we had missed on entering: the Seraglio Point where blind old Dandolo ran his galley aground and leaped on shore to the assault; the shore of Chalcedon; the seven towers and the old wall behind Stamboul, which Persians, Arabs, Scythians, and Latins have stormed; the long sweeping coast and its minarets; the Princes' Islands and Mt. Olympus,—all this in a setting sun was superb; and we said, "There is not its equal in the world." And the evening was more magnificent,—a moon nearly full, a sweet and rosy light on the smooth water, which was at first azure blue, and then pearly gray and glowing like an amethyst.

Smoothly sailing all night, we came at sunrise to the entrance of the Dardanelles, and stopped for a couple of hours at Chanak Kalessi, before the guns of the Castle of Asia. The wide-awake traders immediately

swarmed on board with their barbarous pottery, and with trays of cooked fish, onions, and bread for the deck passengers. The latter were mostly Greeks, and men in the costume which one sees still in the islands and the Asiatic coasts, but very seldom on the Grecian mainland; it consists of baggy trousers, close at the ankles, a shawl about the waist, an embroidered jacket usually of sober color, and, the most prized part of their possessions, an arsenal of pistols and knives in huge leathern holsters, with a heavy leathern flap, worn in front. Most of them wore a small red fez, the hair cut close in front and falling long behind the ears. They are light in complexion, not tall, rather stout, and without beauty. Though their dress is picturesque in plan, it is usually very dirty, ragged, and, the last confession of poverty, patched. They were all armed like pirates; and when we stopped a cracking fusillade along the deck suggested a mutiny; but it was only a precautionary measure of the captain, who compelled them to discharge their pistols into the water and then took them from them.

Passing out of the strait we saw the Rabbit Islands and Tene-dos, and caught a glimpse of the Plain of Troy about as misty as its mythic history; and then turned west between Imbros and Lemnos, on whose bold eastern rock once blazed one of the signal-fires which telegraphed the fall of Troy to Clytemnestra. The first women of Lemnos were altogether beautiful, but they had some peculiarities which did not recommend them to their contemporaries, and indeed their husbands were accustomed occasionally to hoist sail and bask in the smiles of the damsels of the Thracian coast. The Lemnian women, to avoid any legal difficulties, such as arise nowadays when a woman asserts her right to slay her partner, killed all their husbands, and set up an Amazonian state which they maintained with pride and splendor, permitting no man to set foot on the island. In time this absolute freedom became a little tedious, and when the Argonauts came that way, the women advanced to meet the heroes with garlands, and brought them wine and food. This conduct pleased the Argonauts, who made Lemnos their headquarters and celebrated there many a festive combat. Their descendants, the Minyæ, were afterwards overcome by the Pelasgians, from Attica, who, remembering with regret the beautiful girls of their home, returned and brought back with them the willing and the lovely. But the children of the Attic women took on airs over their superior birth, which the Pelasgian women resented, and the latter finally removed all cause of dispute by murdering all the mothers of Attica and their offspring. These events gave the ladies of Lemnos a formidable reputation in the ancient world, and furnish an illustration of what society would be without the refining and temperate influence of man.

To the northward lifted itself the bare back of Samothrace, and beyond the dim outline of Thasos, ancient gold-island, the home of the poet Archilochus, one of the few Grecian islands which still retains something of its pristine luxuriance of vegetation, where the songs of innumerable nightingales invite to its deep, flowery valleys. Beyond Thasos is the Thracian coast and Mt. Pangaus, and at the foot of it Philippi, the Macedonian town where republican Rome fought its last battle, where Cassius leaned upon his sword-point, believing everything lost. Brutus transported the body of his comrade to Thasos and raised for him a funeral pyre; and twenty days later, on the same field, met again that spectre of death which had summoned him to Philippi. It was only eleven years after this victory of the Imperial power that a greater triumph was won at Philippi, when Paul and Silas, cast into prison, sang praises unto God at midnight, and an earthquake shook the house and opened the prison doors.

In the afternoon we came in sight of snowy Mt. Athos, an almost perpendicular limestone rock, rising nearly six thousand four hundred feet out of the sea. The slender promontory which this magnificent mountain terminates is forty miles long and has only an average breadth of four miles. The ancient canal of Xerxes quite severed it from the mainland. The peninsula, level at the canal, is a jagged stretch of mountains (seamed by chasms), which rise a thousand, two thousand, four thousand feet, and at last front the sea with the sublime peak of Athos, the site of the most conspicuous beacon-fire of Agamemnon. The entire promontory is, and has been since the time of Constantine, ecclesiastic ground; every mountain and valley has its convent; besides the twenty great monasteries are many pious retreats. All the sects of the Greek church are here represented; the communities pay a tribute to the Sultan, but the government is in the hands of four presidents, chosen by the synod, which holds weekly sessions and takes the presidents, yearly, from the monasteries in rotation. Since their foundation these religious houses have maintained against Christians and Saracens an almost complete independence, and preserved in their primitive simplicity the manners and usages of the earliest foundations. Here, as nowhere else in Europe or Asia, can one behold the architecture, the dress, the habits of the Middle Ages. The good devotees have been able to keep themselves thus in the darkness and simplicity of the past by a rigorous exclusion of the sex always impatient of monotony, to which all the changes of the world are due. No woman, from the beginning till now, has ever been permitted to set foot on the peninsula. Nor is this all; no female animal is suffered on the holy mountain, not even a hen. I suppose, though I do not know, that the monks have an inspector of eggs, whose inherited instincts of aversion to the feminine gender enable him to detect and reject all those in which lurk the dangerous sex. Few of the monks eat meat, half the days of the year are fast days, they practise occasionally abstinence from food for two or three days, reducing their pulses to the feeblest beating, and subduing their bodies to a point that destroys their value even as spiritual tabernacles. The united community is permitted to keep a guard of fifty Christian soldiers, and the only Moslem on the island is the solitary Turkish officer who represents the Sultan; his position cannot be one generally coveted by the Turks, since the society of women is absolutely denied him. The libraries of Mt. Athos are full of unarranged manuscripts, which are probably mainly filled with the theologic rubbish of the controversial ages, and can scarcely be expected to yield again anything so valuable as the Tischendorf Scriptures.

At sunset we were close under Mt. Athos, and could distinguish the buildings of the Laura Convent, amid the woods beneath the frowning cliff. And now was produced the apparition of a sunset, with this towering mountain cone for a centre-piece, that surpassed all our experience and imagination. The sea was like satin for smoothness, absolutely waveless, and shone with the colors of changeable silk, blue, green, pink, and amethyst. Heavy clouds gathered about the sun, and from behind them he exhibited burning spectacles, magnificent fireworks, vast shadow-pictures, scarlet cities, and gigantic figures stalking across the sky. From one crater of embers he shot up a fan-like flame that spread to the zenith and was reflected on the water. His rays lay along the sea in pink, and the water had the sheen of iridescent glass. The whole sea for leagues was like this; even Lemnos and Samothrace lay in a dim pink and purple light in the east. There were vast clouds

in huge walls, with towers and battlements, and in all fantastic shapes,—one a gigantic cat with a preternatural tail, a cat of doom four degrees long. All this was piled about Mt. Athos, with its sharp summit of snow, its dark sides of rock.

It is a pity that the sounding and somewhat sacred name of Thessalonica has been abbreviated to Salonica; it might better have reverted to its ancient name of Therma, which distinguished the Macedonian capital up to the time of Alexander. In the early morning we were lying before the city, and were told that we should stay till midnight, waiting for the mail. From whence a mail was expected I do not know; the traveller who sails these seas with a cargo of ancient history resents in these classic localities such attempts to imitate modern fashions. Were the Dardanians or the Mesians to send us letters in a leathern bag? We were prepared for a summons from Calo-John, at the head of his wild barbarians, to surrender the city; and we should have liked to see Boniface, Marquis of Montferrat and King of Thessalonica, issue from the fortress above the town, the shields and lances of his little band of knights shining in the sun, and answer in person the insolent demand. We were prepared to see the troop return, having left the head of Boniface in the possession of Calo-John; and if our captain had told us that the steamer would wait to attend the funeral of the Bulgarian chief himself, which occurred not long after the encounter with Boniface, we should have thought it natural.

The city lies on a fine bay, and presents an attractive appearance from the harbor, rising up the hill in the form of an amphitheatre. On all sides, except the sea, ancient walls surround it, fortified at the angles by large round towers and crowned in the centre, on the hill, by a respectable citadel. I suppose that portions of these walls are of Hellenic and perhaps Pelasgic date, but the most are probably of the time of the Latin crusaders' occupation, patched and repaired by Saracens and Turks. We had come to Thessalonica on St. Paul's account, not expecting to see much that would excite us, and we were not disappointed. When we went ashore we found ourselves in a city of perhaps sixty thousand inhabitants, commonplace in aspect, although its bazaars are well filled with European goods, and a fair display of Oriental stuffs and antiquities, and animated by considerable briskness of trade. I presume there are more Jews here than there were in Paul's time, but Turks and Greeks, in nearly equal numbers, form the bulk of the population.

In modern Salonica there is not much respect for pagan antiquities, and one sees only the usual fragments of columns and sculptures worked into walls or incorporated in Christian churches. But those curious in early Byzantine architecture will find more to interest them here than in any place in the world except Constantinople. We spent the day wandering about the city, under the guidance of a young Jew, who was without either prejudices or information. On our way to the Mosque of St. Sophia, we passed through the quarter of the Jews, which is much cleaner than is usual with them. These are the descendants of Spanish Jews, who were expelled by Isabella, and they still retain, in a corrupt form, the language of Spain. In the doors and windows were many pretty Jewesses; banishment and vicissitude appear to agree with this elastic race, for in all the countries of Europe Jewish women develop more beauty in form and feature than in Palestine. We saw here and in other parts of the city a novel head-dress, which may commend itself to America in the revolutions of fashion. A great mass of hair, real or assumed, was gathered into a long slender green bag, which hung down the back and was terminated by a heavy fringe of silver. Otherwise, the dress of the Jewish women does not differ much from that of the men; the latter wear a fez or turban, and a tunic which reaches to the ankles, and is bound about the waist by a gay sash or shawl.

The Mosque of St. Sophia, once a church, and copied in its proportions and style from its namesake in Constantinople, is retired, in a delightful court, shaded by gigantic trees and cheered by a fountain. So peaceful a spot we had not seen in many a day; birds sang in the trees without disturbing the calm of the meditative pilgrim. In the portico and also in the interior are noble columns of marble and verd-antique, and in the dome is a wonderfully quaint mosaic of the Transfiguration. We were shown also a magnificent pulpit of the latter beautiful stone cut from a solid block, in which it is said St. Paul preached. As the Apostle, according to his custom, reasoned with the people out of the Scriptures in a synagogue, and this church was not built for centuries after his visit, the statement needs confirmation; but pious ingenuity suggests that the pulpit stood in a subterranean church underneath this. I should like to believe that Paul sanctified this very spot with his presence; but there is little in its quiet seclusion to remind one of him who had the reputation when he was in Thessalonica of one of those who turn the world upside down. Paul had a great affection for the brethren of this city, in spite of his rough usage here, for he mingles few reproaches in his fervent commendations of their faith, and comforts them with the assurance of a speedy release from the troubles of this world, and the certainty that while they are yet alive they will be caught up into the clouds to meet the Lord in the air. Happily the Apostle could not pierce the future and see the dissensions, the schisms, the corruptions and calamities of the Church in the succeeding centuries, nor know that near this spot, in the Imperial Hippodrome, the sedition of the citizens would one day be punished by the massacre of ninety thousand,—one of the few acts of inhumanity which stains the clemency and the great name of Theodosius. And it would have passed even the belief of the Apostle to the Gentiles could he have foreseen that, in eighteen centuries, this pulpit would be exhibited to curious strangers from a distant part of the globe, of which he never heard, where the doctrines of Paul are the bulwark of the Church and the stamina of the government, by a descendant of Abraham who confessed that he did not know who Paul was.

The oldest church in the city is now the Mosque of St. George, built about the year 400, if indeed it was not transformed from a heathen temple; its form is that of the Roman Pantheon. The dome was once covered with splendid mosaics; enough remains of the architectural designs, the brilliant peacocks and bright blue birds, to show what the ancient beauty was, but the walls of the mosque are white and barn-like. Religions inherit each other's edifices in the East without shame, and we found in the Mosque of Eske Djuma the remains of a temple of Venus, and columns of ancient Grecian work worthy of the best days of Athens. The most perfect basilica is now the Mosque of St. Demetrius (a name sacred to the Greeks), which contains his tomb. It is a five-aisled basilica; about the gallery, over the pillars of the centre aisle, are some fine mosaics of marble, beautiful in design and color. The Moslems have spoiled the exquisite capitals of the pillars by painting them, and have destroyed the effect of the aisles by twisting the pulpit and prayer-niche away from the apse, in the direction of Mecca. We noticed, however, a relaxation of bigotry at all these mosques: we were permitted to enter without taking off our shoes; and, besides the figures of Christian art left in the mosaics, we saw some Moslem pictures, among them rude paintings of the holy city Mecca.

On our way to the citadel we stopped to look at the Arch of Constantine before the Gate of Cassander,—a shabby ruin, with four courses of defaced figures, carved in marble, and representing the battles and triumphs of a Roman general. Fortunately for the reader we did not visit all the thirty-seven churches of the city; but we made the acquaintance in a Greek church, which is adorned with quaint Byzantine paintings, of St. Palema, who lies in public repose, in a coffin of exquisite silver filigree-work, while his skull is enclosed in solid silver and set with rubies and emeralds. This may please St. Palema, but death is never so ghastly as when it is adorned with jewelry that becomes cheap in its presence.

The view from the citadel, which embraces the Gulf of Salonica and Mt. Olympus, the veritable heaven of the Grecian pantheon, and Mt. Ossa and Mt. Pelion, piercing the blue with their snow-summits, is grand enough to repay the ascent; and there is a noble walk along the wall above the town. In making my roundabout way through modern streets, back to the bazaars, I encountered a number of negro women, pure Africans, who had the air and carriage of the aristocracy of the place; they rejoiced in the gay attire which the natives of the South love, and their fine figures and independent bearing did not speak of servitude.

This Thessalonica was doubtless a healthful and attractive place at the time Cicero chose to pass a portion of his exile here, but it has now a bad reputation for malaria, which extends to all the gulf,—the malaria seems everywhere to have been one of the consequences of the fall of the Roman Empire. The handbook recommends the locality for its good “shooting”; but if there is any part of the Old World that needs rest from arms, I think it is this highway of ancient and modern conquerors and invaders.

In the evening, when the lights of the town and the shore were reflected in the water, and a full moon hung in the sky, we did not regret our delay. The gay Thessalonians, ignorant of the Epistles, were rowing about the harbor, circling round and round the steamer, beating the darabouka drum, and singing in that nasal whine which passes for music all over the East. And, indeed, on such a night it is not without its effect upon a sentimental mind.

At early light of a cloudless morning we were going easily down the Gulf of Therma or Salonica, having upon our right the Pierian plain; and I tried to distinguish the two mounds which mark the place of the great battle near Pydna, one hundred and sixty-eight years before Christ, between Æmilius Paulus and King Perseus, which gave Macedonia to the Roman Empire. Beyond, almost ten thousand feet in the air, towered Olympus, upon whose “broad” summit Homer displays the ethereal palaces and inaccessible abode of the Grecian gods. Shaggy forests still clothe its sides, but snow now, and for the greater part of the year, covers the wide surface of the height, which is a sterile, light-colored rock. The gods did not want snow to cool the nectar at their banquets. This is the very centre of the mythologic world; there between Olympus and Ossa is the Yale of Tempe, where the Peneus, breaking through a narrow gorge fringed with the sacred laurel, reaches the gulf, south of ancient Heracleum. Into this charming but secluded retreat the gods and goddesses, weary of the icy air, or the Pumblehookian deportment of the court of Olympian Jove, descended to pass the sunny hours with the youths and maidens of mortal mould; through this defile marks of chariot-wheels still attest the passages of armies which flowed either way, in invasion or retreat; and here Pompey, after a ride of forty miles from the fatal field of Pharsalia, quenched his thirst. Did the Greeks really believe that the gods dwelt on this mountain in clouds and snow? Did Baldwin II. believe that he sold, and Louis IX. of France that he bought, for ten thousand marks of silver, at Constantinople, in the thirteenth century, the veritable *crown of thorns* that the Saviour wore in the judgment-hall of Pilate?

At six o’clock the Cape of Posilio was on our left, we were sinking Olympus in the white haze of morning, Ossa, in its huge silver bulk, was near us, and Pelion stretched its long white back below. The sharp cone of Ossa might well ride upon the extended back of Pelion, and it seems a pity that the Titans did not succeed in their attempt. We were leaving, and looking our last on the Thracian coasts, once rimmed from Mt. Athos to the Bosphorus with a wreath of prosperous cities. What must once have been the splendor of the Ægean Sea and its islands, when every island was the seat of a vigorous state, and every harbor the site of a commercial town which sent forth adventurous galleys upon any errand of trade or conquest! Since the fall of Constantinople, these coasts and islands have been stripped and neglected by Turkish avarice and improvidence, and perhaps their naked aspect is attributable more to the last owners than to all the preceding possessors; it remained for the Turk to exhaust Nature herself, and to accomplish that ruin, that destruction of peoples, which certainly not the Athenian, the Roman, or the Macedonian accomplished, to destroy that which survived the contemptible Byzantines and escaped the net of the pillaging Christian crusaders. Yet it needs only repose, the confidence of the protection of industry, and a spirit of toleration, which the Greeks must learn as well as the Turks, that the traveller in the beginning of the next century may behold in the Archipelago the paradise of the world.

We sailed along by the peninsula of Magnesia, which separates the Ægean from the Bay of Pagasæus, and hinders us from seeing the plains of Thessaly, where were trained the famous cavalry, the perfect union of horse and man that gave rise to the fable of centaurs; the same conception of double prowess which our own early settlers exaggerated in the notion that the Kentuckian was half horse and half alligator. Just before we entered the group of lovely Sporades, we looked down the long narrow inlet to the Bay of Maliacus and saw the sharp snow-peaks of Mt. OËta, at the foot of which are the marsh and hot springs of Thermopylae. We passed between Skiathos and Skopelos,—steep, rocky islands, well wooded and enlivened with villages perched on the hillsides, and both draped in lovely color. In the strait between Skiathos and Magnesia the Greek vessels made a stand against the Persians until the defeat at Thermopylae compelled a retreat to Salamis. The monks of the Middle Ages, who had an eye for a fertile land, covered the little island with monasteries, of which one only now remains. Its few inhabitants are chiefly sailors, and to-day it would be wholly without fame were it not for the beauty of its women. Skopelos, which is larger, has a population of over six thousand,—industrious people who cultivate the olive and produce a good red wine, that they export in their own vessels.

Nearly all day we sailed outside and along Euboea; and the snow dusting its high peaks and lonely ravines was a not unwelcome sight, for the day was warm, oppressively so even at sea. All the elements lay in a languid truce. Before it was hidden by Skopelos, Mt. Athos again asserted its lordship over these seas, more gigantic than when we were close to it, the sun striking the snow on its face (it might be the Whiteface of the

Adirondacks, except that it is piled up more like the Matterhorn), while the base, bathed in a silver light, was indistinguishable from the silver water out of which it rose. The islands were all purple, the shores silver, and the sea around us deeply azure. What delicious color!

Perhaps it was better to coast along the Euboean land and among the Sporades, clothed in our minds with the historic hues which the atmosphere reproduced to our senses, than to break the dream by landing, to find only broken fragments where cities once were, and a handful of fishermen or shepherds the only inheritors of the homes of heroes. We should find nothing on Ikos, except rabbits and a hundred or two of fishers, perhaps not even the grave of Peleus, the father of Achilles; and the dozen little rocky islets near, which some giant in sportive mood may have tossed into the waves, would altogether scarcely keep from famine a small flock of industrious sheep. Skyros, however, has not forgotten its ancient fertility; the well-watered valleys, overlooked by bold mountains and rocky peaks (upon one of which stood "the lofty Skyros" of Homer's song) still bear corn and wine, the fig and the olive, the orange and the lemon, as in the days when Achilles, in woman's apparel, was hidden among the maidens in the gardens of King Lycomedes. The mountains are clothed with oaks, beeches, firs, and plane-trees. Athens had a peculiar affection for Skyros, for it was there that Cymon found the bones of Theseus, and transported them thence to the temple of the hero, where they were deposited with splendid obsequies, Æschylus and Sophocles adding to the festivities the friendly rivalry of a dramatic contest. In those days everything was for the state and nothing for the man; and naturally—such is the fruit of self-abnegation—the state was made immortal by the genius of its men.

Of the three proud flagstaffs erected in front of St. Mark's, one, for a long time, bore the banner of Euboea, or Negropont, symbol of the Venetian sovereignty for nearly three centuries over this island, which for four centuries thereafter was to be cursed by the ascendancy of the crescent. From the outer shore one can form little notion of the extraordinary fertility of this land, and we almost regretted that a rough sea had not driven us to take the inner passage, by Rootia and through the narrow Euripus, where the Venetian-built town and the Lion of St. Mark occupy and guard the site of ancient Chalkis. The Turks made the name of Negropont odious to the world, but with the restoration of the Grecian nationality the ancient name is restored, and slowly, Euboea, spoiled by the Persians, trampled by Macedonians and Romans, neglected by Justinian (the depopulator of the Eastern Empire), drained by the Venetians, blighted by the Osmanlis, is beginning to attract the attention of capital and travel, by its unequalled fertility and its almost unequalled scenery.

Romance, mythology, and history start out of the waves on' either hand; at twilight we were entering the Cyclades, and beginning to feel the yet enduring influence of a superstition which so mingled itself with the supremest art and culture, that after two thousand years its unreal creations are nearly as mighty as ever in the realms of poetry and imagination. These islands are still under the spell of genius, and we cannot, if we would, view them except through the medium of poetic history. I suppose that the island of Andros, which is cultivated largely by Albanians, an Illyrian race, having nothing in common with the ancient Ionians, would little interest us; if we cared to taste its wine, it would be because it was once famous throughout Greece, and if we visited the ruins of its chief city, it would be to recall an anecdote of Herodotus: when Themistocles besieged the town and demanded tribute, because the Andrians had been compelled to join the fleet of Xerxes at Salamis, and threatened them with the two mighty deities of Athens, Persuasion and Necessity, the spirited islanders replied that they were protected by two churlish gods, Poverty and Inability.

It was eleven o'clock at night when we sailed between Keos and Helena, the latter a long barren strip that never seems to have been inhabited at all, except from the tradition that Helen once landed there; but Keos and its old town of Iulis was the home of legends and poets, and famous for its code of laws, one of which tended to banish sickness and old age from its precincts, by a provision that every man above sixty should end his life by poison. Its ancient people had a reputation for purity and sobriety, which was probably due to the hegira of the nymphs, who were frightened away to the mainland by a roaring lion. The colossal image of the lion is still to be seen in marble near the ruins of the old city. The island of the Cyclades, which we should have liked most to tread, but did not see, is Delos, the holy, the religious and political centre of the Greek confederation, the birthplace of Apollo and Artemis, the seat of the oracle, second only to that of Delphi, the diminutive and now almost deserted rock, shaken and sunken by repeated earthquakes, once crowned with one of the most magnificent temples of antiquity, the spot of pilgrimage, the arena of games and mystic dances and poetic contests, and of the joyous and solemn festivities of the Delian Apollo.

We were too late to see, though we sat long on deck and watched for it by the aid of a full moon, the white Doric columns of the temple of Minerva on Sunium, which are visible by daylight a long distance at sea. The ancient mariners, who came from Delos or from a more adventurous voyage into the Ægean, beheld here, at the portals of Attica, the temple of its tutelary deity, a welcome and a beacon; and as they shifted their sails to round the cape, they might have seen the shining helmet of the goddess herself,—the lofty statue of Minerva Promachus on the Acropolis.

XXVIII.—ATHENS.

IN the thought of the least classical reader, Attica occupies a space almost as large as the rest of the world. He hopes that it will broaden on his sight as it does in his imagination, although he knows that it is only two thirds as large as the little State of Rhode Island. But however reason may modify enthusiasm, the

diminutive scale on which everything is drawn is certain to disappoint the first view of the reality. Who, he asks, has made this little copy of the great Athenian picture?

When we came upon deck early in the morning, the steamer lay in the land-locked harbor of the peninsula of Piræus. It is a round, deep, pretty harbor; several merchant and small vessels lay there, a Greek and an Austrian steamer, and a war-vessel, and the scene did not lack a look of prosperous animation. About the port clusters a well-to-do village of some ten thousand inhabitants, many of whom dwell in handsome houses. It might be an American town; it is too new to be European. There, at the entrance of the harbor, on a low projecting rock, are some ruins of columns, said to mark the tomb of Themistocles; sometimes the water nearly covers the rock. There could be no more fitting resting-place for the great commander than this, in sight of the strait of Salamis, and washed by the waves that tossed the broken and flying fleet of Xerxes. Beyond is the Bay of Phalerum, the more ancient seaport of the little state. And there—how small it seems!—is the plain of Athens, enclosed by Hymettus, Pentelicus, and Parnes. This rocky peninsula of Piræus, which embraced three small harbors, was fortified by Themistocles with strong walls that extended, in parallel lines, five miles to Athens. Between them ran the great carriage-road, and I suppose the whole distance was a street of gardens and houses.

A grave *commissionnaire*,—I do not know but he would call himself an embassy,—from one of the hotels of Athens, came off and quietly took charge of us. On our way to the shore with our luggage, a customs officer joined us and took a seat in the boat. For this polite attention on the part of the government our plenipotentiary sent by the officer (who did not open the trunks) three francs to the treasury; but I do not know if it ever reached its destination. We shunned the ignoble opportunity of entering the classic city by rail, and were soon whirling along the level and dusty road which follows the course of the ancient Long Wall. Even at this early hour the day had become very warm, and the shade of the poplar-trees, which line the road nearly all the way, was grateful. The fertile fields had yet the freshness of spring, and were gay with scarlet poppies; the vines were thrifty. The near landscape was Italian in character: there was little peculiar in the costumes of the people whom we met walking beside their market-wagons or saw laboring in the gardens; turbans, fezes, flowing garments of white and blue and yellow, all had vanished, and we felt that we were out of the Orient and about to enter a modern city. At a half-way inn, where we stopped to water the horses, there was an hostler in the Albanian, or as it is called, the Grecian national, costume, wearing the *fustanella* and the short jacket; but the stiff white petticoat was rumpled and soiled, and I fancied he was somewhat ashamed of the half-womanly attire, and shrank from inspection, like an actor in harlequin dress, surprised by daylight outside the theatre.

This sheepish remnant of the picturesque could not preserve for us any illusions; the roses blooming by the wayside we knew; the birds singing in the fields we had heard before; the *commissionnaire* persisted in pointing out the evidences of improvement. But we burned with a secret fever; we were impatient even of the grateful avenue of trees that hid what we at every moment expected to see. I do not envy him who without agitation approaches for the first time, and feels that he is about to look upon the Acropolis! There are three supreme sensations, not twice to be experienced, for the traveller: when he is about to behold the ancient seats of art, of discipline, of religion,—Athens, Rome, Jerusalem. But it is not possible for the reality to equal the expectation. "There!" cried the *commissionnaire*, "is the Acropolis!" A small oblong hill lifting itself some three hundred and fifty feet above the city, its sides upheld by walls, its top shining with marble, an isolated fortress in appearance! The bulk of the city lies to the north of the Acropolis, and grows round to the east of it along the valley of the Ilissus.

In five minutes more we had caught a glimpse of the new excavations of the Keramicus, the ancient cemetery, and of the old walls on our left, and were driving up the straight broad Hermes Street towards the palace. Midway in the centre of the street is an ancient Byzantine church, which we pass round. Hermes Street is intersected by Æolus Street; these two cut the city like a Greek cross, and all other streets flow into them. The shops along the way are European, the people in the streets are European in dress, the *cafés*, the tables in front of hotels and restaurants, with their groups of loungers, suggest Paris by reminding one of Brussels. Athens, built of white stone, not yet mellowed by age, is new, bright, clean, cheerful; the broad streets are in the uninteresting style of the new part of Munich, and due to the same Bavarian influence. If Ludwig I. did not succeed in making Munich look like Athens, Otho was more fortunate in giving Athens a resemblance to Munich. And we were almost ashamed to confess how pleasant it appeared, after our long experience of the tumble-down Orient.

We alighted at our hotel on the palace place, ascended steps decked with flowering plants, and entered cool apartments looking upon the square, which is surrounded with handsome buildings, planted with native and exotic trees, and laid out in walks and beds of flowers. To the right rises the plain façade of the royal residence, having behind it a magnificent garden, where the pine rustles to the palm, and a thousand statues revive the dead mythology; beyond rises the singular cone of Lycabettus. Commendable foresight is planting the principal streets with trees, the shade of which is much needed in the long, dry, and parching summer.

From the side windows we looked also over the roofs to the Acropolis, which we were impatient and yet feared to approach. For myself, I felt like deferring the decisive moment, playing with my imagination, lingering about among things I did not greatly care for, whetting impatience and desire by restraining them, and postponing yet a little the realization of the dream of so many years,—to stand at the centre of the world's thought, at the spring of its ideal of beauty. While my companions rested from the fatigue of our sea voyage, I went into the street and walked southward towards the Ilissus. The air was bright and sparkling, the sky deep blue like that of Egypt, the hills sharp and clear in every outline, and startlingly near; the long reach of Hymettus wears ever a purple robe, which nature has given it in place of its pine forests. Travellers from Constantinople complained of the heat: but I found it inspiring; the air had no languor in it; this was the very joyous Athens I had hoped to see.

When you take up the favorite uncut periodical of the month, you like to skirmish about the advertisements and tease yourself with dipping in here and there before you plunge into the serial novel. It was absurd, but my first visit in Athens was to the building of the Quadrennial Exposition of the Industry and Art of Greece,—a long, painted wooden structure, decked with flags, and called, I need not say, the Olympium. To enter this

imitation of a country fair at home, was the rudest shock one could give to the sentiment of antiquity, and perhaps a dangerous experiment, however strong in the mind might be the subtone of Acropolis. The Greek gentleman who accompanied me said that the exhibition was a great improvement over the one four years before. It was, in fact, a very hopeful sign of the prosperity of the new state; there was a good display of cereals and fruits, of silk and of jewelry, and various work in gold and silver,—the latter all from Corfu; but from the specimens of the fine arts, in painting and sculpture, I think the ancient Greeks have not much to fear or to hope from the modern; and the books, in printing and binding, were rude enough. But the specimens from the mines and quarries of Greece could not be excelled elsewhere; the hundred varieties of exquisite marbles detained us long; there were some polished blocks, lovely in color, and you might almost say in design, that you would like to frame and hang as pictures on the wall. Another sign of the decadence of the national costume, perhaps more significant than its disappearance in the streets, was its exhibition here upon lay figures. I saw a countryman who wore it sneaking round one of these figures, and regarding it with the curiosity of a savage who for the first time sees himself in a mirror. Since the revolution the Albanian has been adopted as the Grecian costume, in default of anything more characteristic, and perhaps because it would puzzle one to say of what race the person calling himself a modern Greek is. But the ridiculous *fustanella* is nearly discarded; it is both inconvenient and costly; to make one of the proper fulness requires forty yards of cotton cloth; this is gathered at the waist, and hangs in broad pleats to the knees, and it is starched so stiffly that it stands out like a half-open Chinese umbrella. As the garment cannot be worn when it is the least soiled, and must be done up and starched two or three times a week, the wearer finds it an expensive habit; and in the whole outfit—the jacket and sleeves may be a reminiscence of defensive armor—he has the appearance of a *landsknecht* above and a ballet-girl below.

Nearly as rare in the streets as this dress are the drooping red caps with tassels of blue. The women of Athens whom we saw would not take a premium anywhere for beauty; but we noticed here and there one who wore upon her dark locks the long hanging red fez and gold tassel, who might have attracted the eye of a roving poet, and been passed down to the next age as the Maid of Athens. The Athenian men of the present are a fine race; we were constantly surprised by noble forms and intelligent faces. That they are Greek in feature or expression, as we know the Greek from coins and statuary, we could not say. Perhaps it was only the ancient Lacedemonian rivalry that prompted the remark of a gentleman in Athens, who was born in Sparta, that there is not a drop of the ancient Athenian blood in Athens. There are some patrician families in the city who claim this honorable descent, but it is probable that Athens is less Greek than any other town in the kingdom; and that if there remain any Hellenic descendants they must be sought in remote districts of the Morea. If we trusted ourselves to decide by types of face, we should say that the present inhabitants of Athens were of Northern origin, and that their relation to the Greeks was no stronger than that of Englishmen to the ancient Britons. That the people who now inhabit Attica and the Peloponnesus are descendants of the Greeks whom the Romans conquered, I suppose no one can successfully claim; that they are all from the Slavonians, who so long held and almost exclusively occupied the Greek mainland, it is equally difficult to prove. All we know is, that the Greek language has survived the Byzantine anarchy, the Slavonic conquest, the Frank occupation; and that the nimble wit, the acquisitiveness and inquisitiveness, the cunning and craft of the modern Greek, seem to be the perversion of the nobler and yet not altogether dissimilar qualities which made the ancient Greeks the leaders of the human race. And those who ascribe the character of a people to climate and geographical position may expect to see the mongrel inheritors of the ancient soil moulded, by the enduring influences of nature, into homogeneity, and reproduce in a measure a copy of that splendid civilization of whose ruins they are now unappreciative possessors.

Beyond the temporary Olympium, the eye is caught by the Arch of Hadrian, and fascinated by the towering Corinthian columns of the Olympicum or Temple of Jupiter. Against the background of Hymettus and the blue sky stood fourteen of these beautiful columns, all that remain of the original one hundred and twenty-four, but enough to give us an impression of what was one of the most stately buildings of antiquity. This temple, which was begun by Pisistratus, was not finished till Hadrian's time, or until the worship of Jupiter had become cold and sceptical. The columns stand upon a terrace overlooking the bed of the Hissus; there coffee is served, and there we more than once sat at sundown, and saw the vast columns turn from rose to gray in the fading light.

Athens, like every other city of Europe in this age of science and Christianity, was full of soldiers; we saw squads of them drilling here and there, their uniforms sprinkled the streets and the *cafés*, and their regimental bands enlivened the town. The Greeks, like all the rest of us, are beating their pruning-hooks into spears and preparing for the millennium. If there was not much that is peculiar to interest us in wandering about among the shops, and the so-called, but unroofed and not real, bazaars, there was much to astonish us in the size and growth of a city of over fifty thousand inhabitants, in forty years, from the heap of ruins and ashes which the Turks left it. When the venerable American missionaries, Dr. Hill and his wife, came to the city, they were obliged to find shelter in a portion of a ruined tower, and they began their labors literally in a field of smoking desolation. The only attractive shops are those of the antiquity dealers, the collectors of coins, vases, statuettes, and *figurines*. Of course the extraordinary demand for these most exquisite mementos of a race of artists has created a host of imitations, and set an extravagant and fictitious price upon most of the articles, a price which the professor who lets you have a specimen as a favor, or the dealer who calmly assumes that he has gathered the last relics of antiquity, mentions with equal equanimity. I looked in the face of a handsome graybeard, who asked me two thousand francs for a silver coin, which he said was a Solon, to see if there was any guile in his eye; but there was not. I cannot but hope that this race which has learned to look honest will some time become so.

Late in the afternoon we walked around the south side of the Acropolis, past the ruins of theatres that strew its side, and ascended by the carriage-road to the only entrance, at the southwest end of the hill, towards the Piræus. We pass through a gate pierced in the side wall, and come to the front of the Propylæa, the noblest gateway ever built. At the risk of offending the travelled, I shall try in a paragraph to put the untravelled reader in possession of the main features of this glorious spot.

The Acropolis is an irregular oblong hill, the somewhat uneven summit of which is about eleven hundred feet long by four hundred and fifty feet broad at its widest. The hill is steep on all sides, and its final spring is

perpendicular rock, in places a hundred and fifty feet high. It is lowest at the southwest end, where it dips down, and, by a rocky neck, joins the Areopagus, or Mars Hill. Across this end is built the Propylæa, high with reference to the surrounding country, and commanding the view, but low enough not to hide from a little distance the buildings on the summit. This building, which is of the Doric order, and of pure Pentelic marble, was the pride of the Athenians. Its entire front is about one hundred and seventy feet; this includes the central portico (pierced with five entrances, the centre one for carriages) and the forward projecting north and south wings. In the north wing was the picture-gallery; the south wing was never completed to correspond, but the balance is preserved by the little Temple of the Wingless Victory, which from its ruins has been restored to its original form and beauty. The Propylæa is approached by broad flights of marble steps, which were defended by fortifications on the slope of the hill. The distant reader may form a little conception of the original splendor of this gateway from its cost, which was nearly two and a half millions of dollars, and by remembering that it was built under the direction of Pericles at a time when the cost of a building represented its real value, and not the profits of city officials and contractors.

Passing slowly between the columns, and with many a backward glance over the historic landscape, lingering yet lest we should abruptly break the spell, we came into the area. Straight before us, up the red rock, ran the carriage-road, seamed across with chisel-marks to prevent the horses' hoofs from slipping, and worn in deep ruts by heavy chariot-wheels. In the field before us a mass of broken marble; on the right the creamy columns of the Parthenon; on the left the irregular but beautiful Ionic Erechtheum. The reader sees that the entrance was contrived so that the beholder's first view of the Parthenon should be at the angle which best exhibits its exquisite proportions.

We were alone. The soldier detailed to watch that we did not carry off any of the columns sat down upon a broken fragment by the entrance, and let us wander at our will. I am not sure that I would, if I could, have the temples restored. There is an indescribable pathos in these fragments of columns and architraves and walls, in these broken sculptures and marred inscriptions, which time has softened to the loveliest tints, and in these tottering buildings, which no human skill, if it could restore the pristine beauty, could reanimate with the Greek idealism.

And yet, as we sat upon the western steps of the temple dedicated to Pallas Athene, I could imagine what this area was, say in the August days of the great Panathenaic festival, when the gorgeous procession, which I saw filing along the Via Sacra, returning from Eleusis, swept up these broad steps, garlanded with flowers and singing the hymn to the protecting goddess. This platform was not then a desolate stone heap, but peopled with almost living statues in bronze and marble, the creations of the genius of Phidias, of Praxiteles, of Lycius, of Clecetas, of Myron; there, between the two great temples, but overtopping them both, stood the bronze figure of Minerva Promachus, cast by Phidias out of the spoils of Marathon, whose glittering helmet and spear-point gladdened the returning mariner when far at sea, and defied the distant watcher on the Acropolis of Corinth. First in the procession come the sacrificial oxen, and then follow in order a band of virgins, the quadriga, each drawn by four noble steeds, the *élite* of the Athenian youth on horseback, magistrates, daughters of noble citizens bearing vases and pateræ, men carrying trays of offerings, flute-players and the chorus, singers. They pass around to the entrance of the Parthenon, which is toward the east, and those who are permitted enter the *naos* and come into the presence of the gold-ivory statue of Minerva. The undraped portions of this statue show the ivory; the drapery was of solid gold, made so that it could be removed in time of danger from a public enemy. The golden plates weighed ten thousand pounds. This work of Phidias, since it was celebrated as the perfection of art by the best judges of art, must have been as exquisite in its details as it was harmonious in its proportions; but no artist of our day would dare to attempt to construct a statue in that manner. In its right, outstretched hand it held a statue of Victory, four cubits high; and although it was erected nearly five hundred years before the Christian era, we are curious to notice the already decided influence of Egyptian ideas in the figure of the sphinx surmounting the helmet of the goddess.

The sun was setting behind the island of Salamis. There was a rosy glow on the bay of Phalerum, on the sea to the south, on the side of Hymettus, on the yellow columns of the Parthenon, on the Temple of the Wingless Victory, and on the faces of the ever-youthful Caryatides in the portico of the Erechtheum, who stand reverently facing the Parthenon, worshipping now only the vacant pedestal of Athene the Protector. What overpowering associations throng the mind as one looks off upon the crooked strait of Salamis, down upon the bare rock of the Areopagus; upon the Pnyx and the *bema*, where we know Demosthenes, Solon, Themistocles, Pericles, Aristides, were wont to address the populace who crowded up from this valley, the Agora, the tumultuous market-place, to listen; upon the Museum Hill, crowned by the monument of Philopappus, pierced by grottos, one of which tradition calls the prison of Socrates,—the whole history of Athens is in a nutshell! Yet if one were predetermined to despise this mite of a republic in the compass of a quart measure, he could not do it here. A little of Cæsar's dust outweighs the world. We are not imposed upon by names. It was, it could only have been, in comparison with modern naval engagements, a petty fight in the narrow limits of that strait, and yet neither the Persian soldiers who watched it from the Acropolis and in terror saw the ships of Xerxes flying down the bay, nor the Athenians, who had abandoned their citadel and trusted their all to the "wooden walls" of their ships, could have imagined that the result was laden with such consequences. It gives us pause to think what course all subsequent history would have taken, what would be the present complexion of the Christian system itself, if on that day Asiatic barbarism had rendered impossible the subsequent development of Grecian art and philosophy.

We waited on the Acropolis for the night and the starlight and the thousand lights in the city spread below, but we did not stay for the slow coming of the midnight moon over Hymettus.

On Sunday morning we worshipped with the Greeks in the beautiful Russian church; the interior is small but rich, and is like a private parlor; there are no seats, and the worshippers stand or kneel, while gilded and painted figures of saints and angels encompass them. The ceremony is simple, but impressive. The priests are in gorgeous robes of blue and silver; choir-boys sing soprano, and the bass, as it always is in Russian churches, is magnificent. A lady, tall, elegant, superb, in black faced and trimmed with a stuff of gold, sweeps up to the desks, kisses the books and the crucifix, and then stands one side crossing herself. We are most of

us mortal, and all, however rich in apparel, poor sinners one day in the week. No one of the worshippers carries a prayer-book. There is reading behind the screen, and presently the priests bring out the elements of communion and exhibit them, the one carrying the bread in a silver vessel on his head, and the other the wine. The central doors are then closed on the mysterious consecration. At the end of the service the holy elements are brought out, the communicants press up, kiss the cross, take a piece of bread, and then turn and salute their friends, and break up in a cheerful clatter of talk. In contrast to this, we attended afterwards the little meeting, in an upper chamber, of the Greek converts of the American Mission, and listened to a sermon in Greek which inculcated the religion of New England,—a gospel which, with the aid of schools, makes slow but hopeful progress in the city of the unknown God.

The longer one remains in Athens the more he will be impressed with two things: the one is the perfection of the old art and civilization, and what must have been the vivacious, joyous life of the ancient Athenians, in a climate so vital, when this plain was a garden, and these beautiful hills were clad with forests, and the whispers of the pine answered the murmurs of the sea; the other is the revival of letters and architecture and culture, visible from day to day, in a progress as astonishing as can be seen in any Occidental city. I cannot undertake to describe, not even to mention, the many noble buildings, either built or in construction, from the quarries of Pentelicus,—the University, the Academy, the new Olympium,—all the voluntary contributions of wealthy Greeks, most of them merchants in foreign cities, whose highest ambition seems to be to restore Athens to something of its former splendor. It is a point of honor with every Greek, in whatever foreign city he may live and die, to leave something in his last will for the adornment or education of the city of his patriotic devotion. In this, if in nothing else, they resemble the ancient patriots who thought no sacrifice too costly for the republic. Among the ruins we find no palaces, no sign that the richest citizen used his wealth in ostentatious private mansions. Although some of the Greek merchants now build for themselves elegant villas, the next generation will see the evidences of their wealth rather in the public buildings they have erected. In this little city the University has eighty professors and over twelve hundred students, gathered from all parts of Greece; there are in the city forty lady teachers with eight hundred female pupils; and besides these there are two gymnasiums and several graded schools. Professors and teachers are well paid, and the schools are free, even to the use of books. The means flow from the same liberality, that of the Greek merchants, who are continually leaving money for new educational foundations. There is but one shadow upon this hopeful picture, and that is the bigotry of the Greek church, to which the government yields. I do not now speak of the former persecutions suffered by the Protestant missionaries, but recently the schools for girls opened by Protestants, and which have been of the highest service in the education of women, have been obliged to close or else “conform” to the Greek religion and admit priestly teachers. At the time of our visit, one of the best of them, that of Miss Kyle of New York, was only tolerated from week to week under perpetual warnings, and liable at any moment to be suppressed by the police. This narrow policy is a disgrace to the government, and if it is continued must incline the world to hope that the Greeks will never displace the Moslems in Constantinople.

In the front of the University stands a very good statue of the scholar-patriot Korais, and in the library we saw the busts of other distinguished natives and foreigners. The library, which is every day enriched by private gifts, boasts already over one hundred and thirty thousand volumes. As we walked through the rooms, the director said that the University had no bust of an American, though it had often been promised one. I suggested one of Lincoln. No, he wanted Washington; he said he cared to have no other. I did not tell him that Washington was one of the heroes of our mythic period, that we had filled up a tolerably large pantheon since then, and that a century in America was as good as a thousand years in Byzantium. But I fell into something of a historic reverie over the apparent fact that America is as yet to Greece nothing but the land of Washington, and I rather liked the old-fashioned notion, and felt sure that there must be somewhere in the United States an antiquated and rich patriot who remembered Washington and would like to send a marble portrait of our one great man to the University of Athens.

XXIX.—ELEUSIS, PLATO'S ACADEME, ETC.

HERE was a nightingale who sang and sobbed all night in the garden before the hotel, and only ceased her plaintive reminiscence of Athenian song and sorrow with the red dawn. But this is a sad world of contrasts. Called upon the balcony at midnight by her wild notes, I saw,—how can I ever say it?—upon the balcony below, a white figure advance, and with a tragic movement of haste, if not of rage, draw his garment of the night over his head and shake it out over the public square; and I knew—for the kingdom of knowledge comes by experience as well as by observation—that the lively flea was as wakeful in Greece as the nightingale.

In the morning the north-wind arose,—it seems to blow constantly from Boeotia at this time of the year,—but the day was bright and sparkling, and we took carriage for Eleusis. It might have been such a morning—for the ancient Athenians always anticipated the dawn in their festivals—that the Panathenaic processions moved along this very Via Sacra to celebrate the Mysteries of Ceres at Eleusis. All the hills stood in clear outline,—long Pentelicus and the wavy lines of Parnes and Corydallus; we drove over the lovely and fertile plain, amid the olive-orchards of the Kephissus, and up the stony slope to the narrowing Pass of Daphne, a defile in Mt. Ægaleos; but we sought in vain the laurel grove, or a single specimen of that tree whose twisted

trunk and outstretched arms express the struggle of vanishing humanity. Passing on our right the Chapel of St. Elias, on a commanding eminence, and traversing the level plateau of the rocky gorge, we alighted at the Monastery of Daphne, whose half-ruined cloister and chapel occupy the site of a temple of Apollo. We sat for half an hour in its quiet, walled churchyard, carpeted with poppies and tender flowers of spring, amid the remains of old columns and fragments of white marble, sparkling amid the green grass and blue violets, and looked upon the blue bay of Eleusis and Salamis, and the heights of Megara beyond. Surely nature has a tenderness for such a spot; and I fancied that even the old dame who unlocked for us the chapel and its cheap treasures showed us with some interest, in a carving here and a capital there, the relics of a former religion, and perhaps mingled with her adoration of the Virgin and the *bambino* a lurking regard for Venus and Apollo. A mile beyond, at the foot of a rocky precipice, are pointed out the foundations of a temple of Venus, where the handbook assured us doves had been found carved in white marble; none were left, however, for us, and we contented ourselves with reading on the rock *Phile Aphrodite*, and making a vain effort to recall life to this sterile region.

Enchanting was the view as we drove down the opening pass to the bay, which spreads out a broad sheet, completely landlocked by the irregular bulk of Salamis Island. When we emerged through the defile we turned away from the narrow strait where the battle was fought, and from the "rocky brow" on which Xerxes sat, a crowned spectator of his ruin, and swept around the circular shore, past the Rheiti, or salt-springs,—clear, greenish pools,—and over the level Thriasian Plain. The bay of Eleusis, guarded by the lofty amphitheatre of mountains, the curving sweep of Ægaleos and Kithæron, and by Salamis, is like a lovely lake, and if anywhere on earth there could be peace, you would say it would be on its sunny and secluded shores. Salamis appears only a bare and rocky island, but the vine still flourishes in the scant soil, and from its wild-flowers the descendants of the Attic bees make honey as famous as that of two thousand years ago.

Across the bay, upon a jutting rocky point, above which rises the crown of its Acropolis, lies the straggling, miserable village of Eleusis. Our first note of approach to it was an ancient pavement, and a few indistinguishable fragments of walls and columns. In a shallow stream which ran over the stones the women of the town were washing clothes; and throngs of girls were filling their pails of brass at an old well, as of old at the same place did the daughters of Keleos. Shriller tones and laughter mingled with their incessant chatter as we approached, and we thought,—perhaps it was imagination,—a little wild defiance and dislike. I had noticed already in Athens, and again here, the extraordinary rapidity with which the Greeks in conversation exchange words; I think they are the fastest talkers in the world. And the Greek has a hard, sharp, ringing, metallic sound; it is staccato. You can see how easily Aristophanes imitated the brittle-brattle of frogs. I have heard two women whose rapid, incessant cackle sounded exactly like the conversation of hens. The sculptor need not go further than these nut-brown maids for classic forms; the rounded limbs, the generous bust, the symmetrical waist, which fashion has not made an hour-glass to mark the flight of time and health. The mothers of heroes were of this mould; although I will not say that some of them were not a trifle stout for grace, and that their well-formed faces would not have been improved by the interior light of a little culture. Their simple dress was a white, short chemise, that left the legs bare, a heavy and worked tunic, like that worn by men, and a colored kerchief tied about the head. Many of the men of the village wore the *fustanella* and the full Albanian costume.

The Temple of Ceres lies at the foot of the hill; only a little portion of its vast extent has been relieved of the superincumbent, accumulated soil, and in fact its excavation is difficult, because the village is built over the greater part of it. What we saw was only a confused heap of marble, some pieces finely carved, arches, capitals, and shattered columns. The Greek government, which is earnestly caring for the remains of antiquity and diligently collecting everything for the National Museum, down to broken toes and fingers, has stationed a keeper over the ruins; and he showed us, in a wooden shanty, the interesting fragments of statues which had been found in the excavation. I coveted a little hand, plump, with tapering fingers, which the conservator permitted us to hold,—a slight but a most suggestive memento of the breeding and beauty of the lady who was the sculptor's model; and it did not so much seem a dead hand stretched out to us from the past, as a living thing which returned our furtive pressure.

We climbed up the hill where the fortress of the Acropolis stood, and where there is now a little chapel. Every Grecian city seems to have had its Acropolis, the first nucleus of the rude tribe which it fortified against incursion, and the subsequent site of temples to the gods. The traveller will find these steep hills, rising out of plains, everywhere from Ephesus to Argos, and will almost conclude that Nature had consciously adapted herself to the wants of the aboriginal occupants. It is well worth ascending this summit to get the fine view of plain and bay, of Mt. Kerata and its double peaks, and the road that pierces the pass of Kithæron, and leads to the field of Platæa and the remains of Thebes.

In a little wine-shop, near the ruins, protected from the wind and the importunate swarms of children, we ate our lunch, and tried to impress ourselves with the knowledge that Æschylus was born in Eleusis; and to imagine the nature of the Eleusinian mysteries, the concealed representations by which the ancients attempted to symbolize, in the myths of Ceres and Proserpine, the primal forces of nature, perhaps the dim suggestions of immortality,—a secret not to be shared by the vulgar,—borrowed from the deep wisdom of the Egyptians.

The children of Eleusis deserve more space than I can afford them, since they devoted their entire time to our annoyance. They are handsome rascals, and there were enough of them, if they had been sufficiently clothed, to form a large Sunday school. When we sat down in the ruins and tried to meditate on Ceres, they swarmed about us, capering and yelling incessantly, and when I made a charge upon them they scattered over the rocks and saluted us with stones. But I find that at this distance I have nothing against them; I recall only their beauty and vivacity, and if they were the worst children that ever tormented travellers, I reflect, yes, but they were Greeks, and the gods loved their grandmothers. One slender, liquid-eyed, slim-shanked girl offered me a silver coin. I saw that it was a beautiful Athenian piece of the time of Pericles, and after some bargaining I bought it of her for a reasonable price. But as we moved away to our carriage, I was followed by the men and women of the settlement, who demanded it back. They looked murder and talked Greek. I inquired how much they wanted. Fifty francs! But that is twice as much as it is worth in Athens; and

the coin was surrendered. All through the country, the peasants have a most exaggerated notion of the value of anything antique.

We returned through the pass of Daphne and by the site of the academic grove of Plato, though olive-groves and gardens of pomegranates in scarlet bloom, quinces, roses, and jasmines, the air sweet and delightful. Perhaps nowhere else can the traveller so enter into the pure spirit of Attic thought and feeling as among these scattered remains that scholars have agreed to call the ruins of Plato's Academe. We turned through a lane into the garden of a farm-house, watered by a branch rivulet of the Kephissus. What we saw was not much,—some marble columns under a lovely cypress-grove, some fragments of antique carving built into a wall; but we saw it as it were privately and with a feeling of the presence of the mighty shade. And then, under a row of young plane-trees, by the meagre stream, we reclined on ripe wheat-straw, in full sight of the Acropolis,—perhaps the most poetic view of that magnetic hill. So Plato saw it as he strolled along this bank and listened to the wisdom of his master, Socrates, or, pacing the colonnade of the Academe, meditated the republic. Here indeed Aristotle, who was born the year that Plato died, may have lain and woven that subtle web of metaphysics which no subsequent system of thought or religion has been able to disregard. The centuries-old wind blew strong and fresh through the trees, and the scent of flowers and odorous shrubs, the murmur of the leaves, the unchanged blue vault of heaven, the near hill of the sacred Colonus, celebrated by Sophocles as the scene of the death of Oedipus, all conspired to flood us with the poetic past. What intimations of immortality do we need, since the spell of genius is so deathless?

After dinner we laboriously, by a zigzag path, climbed the sharp cone of Lycabettus, whose six hundred and fifty feet of height commands the whole region. The rock summit has just room enough for a tiny chapel, called of St. George, and a narrow platform in front, where we sat in the shelter of the building and feasted upon the prospect. At sunset it is a marvellous view,—all Athens and its plain, the bays, Salamis and the strait of the battle, Acro-Corinth; Megara, Hymettus, Pentelicus, Kithæron.

When, in descending, we had nearly reached the foot on the west side, we heard the violent ringing of a bell high above us, and, turning about, saw what seemed to be a chapel under the northwest edge of the rock upon which we had lately stood. Bandits in laced leggings and embroidered jackets, chattering girls in short skirts and gay kerchiefs, were descending the wandering path, and the clamor of the bell piqued our curiosity to turn and ascend. When we reached our goal, the affair seemed to be pretty much all bell, and nobody but a boy in the lusty exuberance of youth could have made so much noise by the swinging of a single clapper. In a niche or rather cleft in the rock was a pent-roofed bell-tower, and a boy, whose piety seemed inspired by the Devil, was hauling the rope and sending the sonorous metal over and over on its axis. In front of the bell is a narrow terrace, sufficient, however, to support three fig-trees, under which were tables and benches, and upon the low terrace-wall were planted half a dozen large and differently colored national banners. A hole in the rock was utilized as a fireplace, and from a pot over the coals came the fumes of coffee. Upon this perch of a terrace people sat sipping coffee and looking down upon the city, whose evening lights were just beginning to twinkle here and there. Behind the belfry is a chapel, perhaps ten feet by twelve, partly a natural grotto and partly built of rough stones; it was brilliantly lighted with tapers, and hung with quaint pictures. At the entrance, which is a door cut in the rock, stood a Greek priest and an official in uniform selling wax-tapers, and raking in the *leptas* of the devout. We threw down some coppers, declined the tapers, and walked in. The adytum of the priest was wholly in the solid rock. There seemed to be no service; but the women and children stood and crossed themselves, and passionately kissed the poor pictures on the walls. Yet there was nothing exclusive or pharisaic in the worshippers, for priest and people showed us friendly faces, and cordially returned our greetings. The whole rock quivered with the clang of the bell, for the boy at the rope leaped at his task, and with ever-increasing fury summoned the sinful world below to prayer. Young ladies with their gallants came and went; and whenever there was any slacking of stragglers up the hillside the bell clamored more importunately.

As dusk crept on, torches were set along the wall of the terrace, and as we went down the hill they shone on the red and blue flags and the white belfry, and illuminated the black mass of overhanging rock with a red glow. There is time for religion in out-of-the-way places here, and it is rendered picturesque, and even easy and enjoyable, by the aid of coffee and charming scenery. When we reached the level of the town, the lights still glowed high up in the recess of the rocks, girls were laughing and chattering as they stumbled down the steep, and the wild bell still rang. How easy it is to be good in Greece!

One day we stole a march on Marathon, and shared the glory of those who say they have seen it, without incurring the fatigue of a journey there. We ascended Mt. Pentelicus. Hymettus and Pentelicus are about the same height,—thirty-five hundred feet,—but the latter, ten miles to the northeast of Athens, commands every foot of the Attic territory; if one should sit on its summit and read a history of the little state, he would need no map. We were away at half past five in the morning, in order to anticipate if possible the rising of the daily wind. As we ascended, we had on our left, at the foot of the mountain, the village of Kephisia, now, as in the days of Herodes Atticus, the summer resort of wealthy Athenians, who find in its fountains, the sources of the Kephissus, and in its groves relief from the heat and glare of the scorched Athenian plain. Half-way we halted at a monastery, left our carriage, and the ladies mounted horses. There is a handsome church here, and the situation is picturesque and commands a wide view of the plain and the rugged north slope of Hymettus, but I could not learn that the monastery was in an active state; it is only a hive of drones which consumes the honey produced by the working-bees from the wild thyme of the neighboring mountain. The place, however, is a great resort of parties of pleasure, who picnic under the grove of magnificent forest-trees, and once a year the king and queen come hither to see the youths and maidens dance on the greensward.

Up to the highest quarries the road is steep, and strewn with broken marble, and after that there is an hour's scramble through bushes and over a rocky path. We rested in a large grotto near the principal of the ancient quarries; it was the sleeping-place of the workmen, subsequently a Christian church, and then, and not long ago, a haunt and home of brigands. Here we found a party of four fellows, half clad in sheep-skins, playing cards, who seemed to be waiting our arrival; but they were entirely civil, and I presume were only shepherds, whatever they may have been formerly. From these quarries was hewn the marble for the Temple of Theseus, the Parthenon, the Propylæa, the theatres, and other public buildings, to which age has now

given a soft and creamy tone; the Pentelic marble must have been too brilliant for the eye, and its dazzling lustre was no doubt softened by the judicious use of color. Fragments which we broke off had the sparkle and crystalline grain of loaf-sugar, and if they were placed upon the table one would unhesitatingly take them to sweeten his tea. The whole mountain-side is overgrown with laurel, and we found wild-flowers all the way to the summit. Amid the rocks of the higher slopes, little shepherd-boys, carrying the traditional crooks, were guarding flocks of black and white goats, and, invariably as we passed, these animals scampered off and perched themselves upon sharp rocks in a photographic *pose*.

Early as we were, the wind had risen before us, and when we reached the bare back of the summit it blew so strongly that we could with difficulty keep our feet, and gladly took refuge in a sort of stone corral, which had been a camp and lookout of brigands. From this commanding point they spied both their victims and pursuers. Our guide went into the details of the capture of the party of Englishmen who spent a night here, and pointed out to us the several hiding-places in the surrounding country to which they were successively dragged. But my attention was not upon this exploit. We looked almost directly down upon Marathon. There is the bay and the curving sandy shore where the Persian galleys landed; here upon a spur, jutting out from the hill, the Athenians formed before, they encountered the host in the plain, and there—alas! it was hidden by a hill—is the mound where the one hundred and ninety-two Athenian dead are buried. It is only a small field, perhaps six miles along the shore and a mile and a half deep, and there is a considerable marsh on the north and a small one at the south end. The victory at so little cost, of ten thousand over a hundred thousand, is partially explained by the nature of the ground; the Persians had not room enough to manœuvre, and must have been thrown into confusion on the skirts of the northern swamp, and if over six thousand of them were slain, they must have been killed on the shore in the panic of their embarkation. But still the shore is broad, level, and firm, and the Greeks must have been convinced that the gods themselves terrified the hearts of the barbarians, and enabled them to discomfit a host which had chosen this plain as the most feasible in all Attica for the action of cavalry.

A sea-haze lay upon the strait of Euripus and upon Euboea, and nearly hid from our sight the forms of the Cyclades; but away in the northwest were snow peaks, which the guide said were the heights of Parnassus above Delphi. In the world there can be few prospects so magnificent as this, and none more inspiring to the imagination. No one can properly appreciate the Greek literature or art who has not looked upon the Greek nature which seems to have inspired both.

Nothing now remains of the monuments and temples which the pride and piety of the Athenians erected upon the field of Marathon. The visitor at the Arsenal of Venice remembers the clumsy lion which is said to have stood on this plain, and in the Temple of Theseus, at Athens, he may see a slab which was found in this meadow; on it is cut in very low relief the figure of a soldier, but if the work is Greek the style of treatment is Assyrian.

The Temple of Theseus, which occupies an elevation above the city and west of the Areopagus, is the best-preserved monument of Grecian antiquity, and if it were the only one, Athens would still be worthy of a pilgrimage from the ends of the earth. Behind it is a level esplanade, used as a drill-ground, upon one side of which have been gathered some relics of ancient buildings and sculptures; seated there in an ancient marble chair, we never wearied of studying the beautiful proportions of this temple, which scarcely suffers by comparison with the Parthenon or that at Pæstum. In its construction the same subtle secret of curved lines and inclined verticals was known, a secret which increases its apparent size and satisfies the eye with harmony.

While we were in Athens the antiquarians were excited by the daily discoveries in the excavations at the Keramicus (the field where the Athenian potters worked). Through the portion of this district outside the gate Dipylum ran two streets, which were lined with tombs; one ran to the Academe, the other was the sacred way to Eleusis. The excavations have disclosed many tombs and lovely groups of funereal sculpture, some of which are *in situ*, but many have been removed to the new Museum. The favorite device is the seated figure of the one about to die, who in this position of dignity takes leave of those most loved; perhaps it is a wife, a husband, a lovely daughter, a handsome boy, who calmly awaits the inevitable moment, while the relatives fondly look or half avert their sorrowful faces. In all sculpture I know nothing so touching as these family farewells. I obtained from them a new impression of the Greek dignity and tenderness, of the simplicity and nobility of their domestic life.

The Museum, which was unarranged, is chiefly one of fragments, but what I saw there and elsewhere scattered about the town gave me a finer conception of the spirit of the ancient art than all the more perfect remains in Europe put together; and it seems to me that nowhere except in Athens is it possible to attain a comprehension of its depth and loveliness. Something, I know, is due to the *genius loci*, but you come to the knowledge that the entire life, even the commonest, was pervaded by something that has gone from modern art. In the Museum we saw a lovely statue of Isis, a noble one of Patroclus, fine ones of athletes, and also, showing the intercourse with Egypt, several figures holding the sacred *sistrum*, and one of Rameses II. But it is the humbler and funereal art that gives one a new conception of the Greek grace, tenderness, and sensibility. I have spoken of the sweet dignity, the high-born grace, that accepted death with lofty resignation, and yet not with stoical indifference, of some of the sepulchral groups. There was even more poetry in some that are simpler. Upon one slab was carved a figure, pensive, alone, wrapping his drapery about him and stepping into the silent land, on that awful journey that admits of no companion. On another, which was also without inscription, a solitary figure sat in one corner; he had removed helmet and shield, and placed them on the ground behind him; a line upon the stone indicated the boundary of the invisible world, and, with a sad contemplation, the eyes of the soldier were fixed upon that unknown region into which he was about to descend.

Scarcely a day passed that we did not ascend the Acropolis; and again and again we traversed the Areopagus, the Pnyx, the Museum hills. From the valley of the Agora stone steps lead up the Areopagus to a bench cut in the rock. Upon this open summit the Areopagite Council held, in the open air, its solemn sessions; here it sat, it is said, at night and in the dark, that no face of witness or criminal, or gesture of advocate, should influence the justice of its decisions. Dedicated to divine justice, it was the most sacred and

awful place in Athens; in a cavern underneath it was the sanctuary of the dread Erinnyes, the avenging Euries, whom a later superstition represented with snakes twisted in their hair; whatever the gay frivolity of the city, this spot was silent, and respected as the dread seat of judicature of the highest causes of religion or of politics. To us Mars Hill is chiefly associated with the name of St. Paul; and I do not suppose it matters much whether he spoke to the men of Athens in this sacred place or, as is more probable, from a point farther down the hill, now occupied by a little chapel, where he would be nearer to the multitude of the market-place. It does not matter; it was on the Areopagus, and in the centre of temples and a thousand statues that bespoke the highest civilization of the pagan world, that Paul proclaimed the truth, which man's egotism continually forgets, that in temples made with hands the Deity does not dwell.

From this height, on the side of the Museum Hill, we see the grotto that has been dignified with the title of the "prison of Socrates," but upon slight grounds. When the philosopher was condemned, the annual sacred ship which was sent with thank-offerings to Delos was still absent, and until its return no execution was permitted in Athens. Every day the soldiers who guarded Socrates ascended this hill, and went round the point to see if the expected vessel was in sight; and it is for their convenience that some antiquarian designated this grotto as the prison. The delay of the ship gave us his last immortal discourse.

We went one evening by the Temple of Jupiter, along the Ilissus, to the old Stadium. This classic stream, the Ilissus, is a gully, with steep banks and a stony bottom, and apparently never wet except immediately after a rain. You would think by the flattery it received from the ancient Athenians that it was larger than the Mississippi. The Panathenaic Stadium, as it is called, because its chief use was in the celebration of the games of the great quadrennial festival, was by nature and art exceedingly well adapted to chariot races and other contests. Open at the end, where a bridge crossed the Ilissus, it extended a hundred feet broad six hundred and fifty feet into the hill, upon the three sloping sides of which, in seats of marble, could be accommodated fifty thousand spectators. Here the Greek youth contended for the prizes in the chariot race, and the more barbarous Roman emperors amused a degenerate people with the sight of a thousand wild beasts hunted and slain in a single celebration.

The Stadium has been lately re-excavated, and at the time of our visit the citizens were erecting some cheap benches at one end, and preparing, in a feeble way, for what it pleases them to call the Olympic Games, which were to be inaugurated the following Sunday. The place must inevitably dwarf the performance, and comparison render it ridiculous. The committee-men may seem to themselves Olympic heroes, and they had the earnest air of trying to make themselves believe that they were really reviving the ancient glory of Greece, or that they could bring it back by calling a horse-race and the wrestling of some awkward peasants an "Olympiad." The revival could be, as we afterwards learned it was, only a sickly and laughable affair. The life of a nation is only preserved in progress, not in attempts to make dead forms live again. It is difficult to have chariot races or dramatic contests without chariots or poets, and I suppose the modern imitation would scarcely be saved from ludicrousness, even if the herald should proclaim that now a Patroclus and now an Aristophanes was about to enter the arena. The modern occupants of Athens seem to be deceiving themselves a little with names and shadows. In the genuine effort to revive in its purity the Greek language, and to inspire a love of art and literature, the Western traveller will wholly sympathize. In the growth of a liberal commercial spirit he will see still more hope of a new and enduring Greek state. But a puerile imitation of a society and a religion which cannot possibly have a resurrection excites only a sad smile. There is no more pitiful sight than a man who has lost his ideals, unless it be a nation which has lost its ideals. So long as the body of the American people hold fast to the simple and primitive conception of a republican society,—to the ideals of a century ago,—the nation can survive, as England did, a period of political corruption. There never was, not under Themistocles nor under Scanderbeg, a more glorious struggle for independence than that which the battle of Navarino virtually terminated. The world had a right to expect from the victors a new and vigorous national life, not a pale and sentimental copy of a splendid original, which is now as impossible of revival as the Roman Empire. To do the practical and money-getting Greeks justice, I could not learn that they took a deep interest in the "Olympiad"; nor that the inhabitants of ancient Sparta were jealous of the re-institution of the national games in Athens, since, they say, there are no longer any Athenians to be jealous of.

The ancient Athenians were an early people; they liked the dewy freshness of the morning; they gave the first hours of the day to the market and to public affairs, and the rising sun often greeted the orators on the *bema*, and an audience on the terrace below. We had seen the Acropolis in almost every aspect, but I thought that one might perhaps catch more of its ancient spirit at sunrise than at any other hour.

It is four o'clock when my companion and I descend into the silent street and take our way to the ancient citadel by the shortest and steepest path. Dawn is just breaking in pink, and the half-moon is in the sky. The sleepy guard unbolts the gate and admits us, but does not care to follow; and we pass the Propylæa and have the whole field to ourselves. There is a great hush as we come into the silent presence of the gray Parthenon; the shades of night are still in its columns. We take our station on a broken pillar, so that we can enjoy a three-quarters view of the east front. As the light strengthens we have a pink sky for background to the temple, and the smooth bay of Phalerum is like a piece of the sky dropped down. Very gradually the light breaks on the Parthenon, and in its glowing awakening it is like a sentient thing, throwing shadows from its columns and kindling more and more; the lion gargoyles on the corners of the pediment have a life which we had not noticed before. There is now a pink tint on the fragments of columns lying at the side; there is a reddish hue on the plain about Piræus; the strait of Salamis is green, but growing blue; Phalerum is taking an iridescent sheen; I can see, beyond the Gulf of Ægina, the distant height of Acro-Corinth. .

The city is still in heavy shadow, even the Temple of Theseus does not relax from its sombreness. But the light mounts; it catches the top of the white columns of the Propylæa, it shines on the cornice of the Erechtheum, and creeps down in blushes upon the faces of the Caryatides, which seem to bow yet in worship of the long-since-departed Pallas Athene. The bugles of the soldiers called to drill on the Thesean esplanade float up to us; they are really bugle-notes summoning the statues and the old Panathenaic cavalcades on the friezes to life and morning action. The day advances, the red sun commanding the hill and flooding it with light, and the buildings glowing more and more in it, but yet casting shadows. A hawk sweeps around from

the north and hangs poised on motionless wings over the building just as the sun touches it. We climb to the top of the western pediment for the wide sweep of view. The world has already got wind of day, and is putting off its nightcaps and opening its doors. As we descend we peer about for a bit of marble as a memento of our visit; but Lord Elgin has left little for the kleptomaniac to carry away.

At this hour the Athenians ought to be assembling on the Pnyx to hear Demosthenes, who should be already on the *bema*; but the *bema* has no orator, and the terrace is empty. We might perhaps see an early representation at the theatre of Dionysus, into which we can cast a stone from this wall. We pass the gate, scramble along the ragged hillside,—the dumping-ground of the excavators on the Acropolis,—and stand above the highest seats of the Amphitheatre. No one has come. The white marble chairs in the front row—carved with the names of the priests of Bacchus and reserved for them—wait, and even the seats not reserved are empty. There is no white-clad chorus manoeuvring on the paved orchestra about the altar; the stage is broken in, and the crouching figures that supported it are the only sign of life. One would like to have sat upon these benches, that look on the sea, and listened to a chorus from the Antigone this morning. One would like to have witnessed that scene when Aristophanes, on this stage, mimicked and ridiculed Socrates, and the philosopher, rising from his undistinguished seat high up among the people, replied.

XXX.—THROUGH THE GULF OF CORINTH.

WITH deep reluctance we tore ourselves from the fascinations of Athens very early one morning.

After these things, says the Christian's guide, Paul departed from Athens and came to Corinth. Our departure was in the same direction. We had no choice of time, for the only steamer leaves on Sunday morning, and, besides, our going then removed us from the temptation of the Olympic games. At half past five we were on board the little Greek steamer at the Piraeus.

We sailed along Salamis. It was a morning of clouds; but Ægina (once mistress of these seas, and the hated rival of Athens) and the Peloponnesus were robed in graceful garments that, like the veils of the Circassian girls, did not conceal their forms. In four hours we landed at Kalamaki, which is merely a station for the transfer of passengers across the Isthmus. Six miles south on the coast we had a glimpse of Cenchreæ, which is famous as the place where Paul, still under the bonds of Jewish superstition, having accomplished his vow, shaved his head. The neck of limestone rock, which connects the Peloponnesus with the mainland, is ten miles long, and not more than four miles broad from Kalamaki to Lutraki on the Gulf of Corinth, and as it is not, at its highest elevation, over a hundred feet above the sea, the project of piercing it with a canal, which was often entertained and actually begun by Nero, does not seem preposterous. The traveller over it to-day will see some remains of the line of fortification, the Isthmian Wall, which served in turn Greeks, Macedonians, Saracens, Latin Crusaders, and Slavonic settlers; and fragments of the ancient buildings of the Isthmian Sanctuary, where the Panhellenic festivals were celebrated.

The drive across was exceedingly pleasant. The Isthmus is seamed with ravines and ridges, picturesque with rocks which running vines drape and age has colored, and variegated with corn-fields. We enjoyed on either hand the splendid mountain forms; on the north white Helicon and Parnassus; on the south the nearly two-thousand-feet wall-crowned height of Acro-Corinth and the broken snowy hills of the Morea.

Familiar as we were with the atlas, we had not until now any adequate conception how much indented the Grecian mainland and islands are, nor how broken into peaks, narrow valleys, and long serrated summits are the contours. When we appreciate, by actual sight, the multitude of islands that compose Greece, how subject to tempests its seas are, how difficult is communication between the villages of the mainland, or even those on the same island, we understand the naturalness of the ancient divisions and strifes; and we see the physical obstacles to the creation of a feeling of unity in the present callow kingdom. And one hears with no surprise that Corfu wishes herself back under English protection.

We drove through the cluster of white houses on the bay, which is now called Corinth, and saw at three miles' distance the site of the old city and the Acropolis beyond it. Earthquakes and malaria have not been more lenient to the ancient town than was Roman vengeance, and of the capital which was to Greece in luxury what Athens was in wit, only a few columns and sinking walls remain. Even the voluptuousness of Corinth is a tale of two thousand years ago, and the name might long ago have sunk with the fortunes of the city, but for the long residence there of a poor tent-maker, in whom no proud citizen of that day, of all those who "sat down to eat and drink and rose up to play," would have recognized the chief creator of its fame.

Our little Greek steamer was crowded excessively, and mainly with Greeks going to Patras and Zante, who noisily talked politics and business in a manner that savored more of New England than of the land of Solon and Plato. For the first time in a travel of many months we met families together, gentlemen with their wives and children, and saw the evidences of a happy home-life. It is everything in favor of the Greeks that they have preserved the idea of home, and cherish, as the centre of all good and strength, domestic purity.

At dinner there was an undisguised rush for seats at the table, and the strongest men got them. We looked down through the skylights and beheld the valiant Greeks flourishing their knives, attacking, while expecting soup, the caviare and pickles, and thrusting the naked blades into their mouths without fear. The knife seems seldom to hurt the Greek, whose display of deadly weapons is mainly for show. There are dozens of stout swarthy fellows on board, in petticoats and quilted leggings, with each a belly full of weapons,—the

protruding leathern pouch contains a couple of pistols, a cheese-knife, cartridges, and pipes and tobacco.

The sail through the Gulf of Corinth is one to be enjoyed and remembered, but the reader shall not be wearied with a catalogue of names. What is it to him that we felt the presence of Delphi, that we had Parnassus on our right, and Mt. Panachaicum, lifting itself higher than Mt. Washington, on our left, the Locrian coast on one side, and the range of Arcadia on the other? The strait narrowed as we came at evening near Patras, and between the opposite forts of Rheum and Antirheum it is no broader than the Bosphorus; it was already dusky when we peered into the Bay of Lepanto, which is not, however, the site of the battle of that name in which the natural son of the pretty innkeeper of Ratisbon rendered such a signal service to Christendom. Patras, a thriving new city, which inherits the name but not the site of the ancient, lies open in the narrow strait, subject to the high wind which always blows through the passage, and is usually a dangerous landing. All the time that we lay there in the dark we thought a tempest was prevailing, but the clamor subsided when we moved into the open sea. Of Patras we saw nothing except a circle of lights on the shore a mile long, a procession of colored torches which illumined for an instant the façade of the city hall, and some rockets which went up in honor of a local patriot who had returned on our boat from Athens. And we had not even a glimpse of Missolonghi, which we passed in the night.

At daylight we are at Zante, anchored in its eastward-looking harbor opposite the Peloponnesian coast. The town is most charmingly situated, and gives one an impression of wealth and elegance. Old Zacynthus was renowned for its hospitality before the days of the Athenian and Spartan wars, and—such is the tenacity with which traits are perpetuated amid a thousand changes—its present wealthy and enterprising merchant-farmers, whose villas are scattered about the slopes, enjoy a reputation for the same delightful gift. The gentlemen are distinguished among the Ionians for their fondness of country life and convivial gayety. Early as it was, the town welcomed us with its most gracious offerings of flowers and fruit; for the peddlers who swarmed on board brought nothing less poetical than handfuls of dewy roses, carnations, heliotrope, freshly cut mignonette, baskets of yellow oranges, and bottles of red wine. The wine, of which the Zante passengers had boasted, was very good, and the oranges, solid, juicy, sweet, the best I have ever eaten, except, perhaps, some grown in a fortunate year in Florida. Sharp hills rise behind the town, and, beyond, a most fertile valley broadens out to the sea. Almost all the land is given up to the culture of the currant-vine, the grapes of *Corinth*, for in the transfer of the chief cultivation of this profitable fruit from Corinth to Zante, the name went with the dwarf vines. On the hillsides, as we sailed away, we observed innumerable terraces, broad, flat, and hard like threshing-floors, and learned that they were the drying-grounds of the ripe currants.

We were all day among the Ionian Islands, and were able to see all of them except Cythera, off Cape Malea, esteemed for its honey and its magnificent temple to the foam-born Venus. They lay in such a light as the reader of Homer likes to think of them. We sailed past them as in a dream, not caring to distinguish history from fable. It was off the little Echinades, near the coast, by the mouth of the Achelous, that Don John, three hundred years ago, broke the European onset of the Ottoman arms; it was nearly a dear victory for Christendom, for among the severely wounded was Cervantes, and Don Quixote had not yet been written. But this battle is not more real to us than the story of Ulysses and Penelope which the rocky surface of Ithaca recalls. And as we lingered along the shores of Cephalonia and Leucadia, it was not of any Cæsar or Byzantine emperor or Norman chieftain that we thought, but of the poet whose verses will outlast all their renown. Leucadia still harbors, it is said, the breed of wolves that, perhaps, of all the inhabitants of these islands preserve in purity the Hellenic blood. We sailed close to the long promontory, "Leucadia's far-projecting rock of woe," and saw, if any one may see, the very precipice from which Sappho, leaping, quenched in brine the amatory flames of a heart that sixty years of song and trouble had not cooled.

Through the strait of Actium we looked upon the smooth inland sea of Ambracia, while our steamer churned along the very waters that saw the flight of the purple sails of Cleopatra, whom the enamored Antony followed and left the world to Augustus. The world was a small affair then, when its possession could be decided on a bit of water where, as Byron says, two frigates could hardly manouvre. These historical empires were fleeting shows at the best, not to be compared to the permanent conquests and empire of the mind. The voyager from the Bosphorus to Corfu feels that it is not any Alexander or Cæsar, Chagan or Caliph, but Homer, who rules over the innumerable islands and sunny mainlands of Greece.

It was deep twilight when we passed the barren rock of Anti-paxos, and the mountain in the sea called Paxos. There is no island in all these seas that has not its legend; that connected with Paxos, and recorded by Plutarch, I am tempted to transcribe from the handbook, in the quaint language in which it is quoted, for it expresses not only the spirit of this wild coast, but also our own passage out of the domain of mythology into the sunlight of Christian countries: "Here, about the time that our Lord suffered his most bitter passion, certain persons sailing from Italy to Cyprus at night heard a voice calling aloud, Thamus! Thamus! who giving ear to the cry was bidden (for he was pilot of the ship), when he came near to Pelodes to tell that the great god Pan was dead, which he doubting to do, yet for that when he came to Pelodes there was such a calm of wind that the ship stood still in the sea unmoored, he was forced to cry aloud that Pan was dead; wherewithal there were such piteous outcries and dreadful shrieking as hath not been the like. By which Pan, of some is understood the great Sathanas, whose kingdom was at that time by Christ conquered, and the gates of hell broken up; for at that time all oracles surceased, and enchanted spirits that were wont to delude the people henceforth held their peace."

It was ten o'clock at night when we reached Corfu, and sailed in under the starlight by the frowning hill of the fortress, gliding spectrally among the shipping, with steam shut off, and at a signal given by the bowsman letting go the anchor in front of the old battery.

Corfu, in the opinion of Napoleon, enjoys the most beautiful situation in the world. Its loveliness is in no danger of being overpraised. Shut in by the Albanian coast opposite, the town appears to lie upon a lake, surrounded by the noblest hills and decorated with a tropical vegetation. Very picturesque in its moss-grown rock is the half-dismantled old double fortress, which the English, in surrendering to the weak Greek state, endeavored to render as weak as possible. It and a part of the town occupy a bold promontory; the remainder of the city lies around a little bay formed by this promontory and Quarantine Island. The more we see of the charming situation, and become familiar with the delicious mountain outlines, we regret that we can tarry but

a day, and almost envy those who make it a winter home. The interior of the city itself, when we ascend the height and walk in the palace square, appears bright and cheerful, but retains something of the dull and decorous aspect of an English garrison town. In the shops the traveller does not find much to interest him, except the high prices of all antiquities. We drove five miles into the country, to the conical hill and garden of Gasturi, whose mistress gathered for us flowers and let us pluck from the trees the ripe and rather tasteless *nespoli*. From this summit is an extraordinary prospect of blue sea, mountains, snowy summits, the town, and the island, broken into sharp peaks and most luxuriant valleys and hillsides. Ancient, gnarled olive-trees abound, thousands of acres of grapevines were in sight, the hedges were the prickly-pear cactus, and groves of walnuts and most vigorous fig-trees interspersed the landscape. There was even here and there a palm. A lovely land, most poetical in its contours.

The Italian steamer for Brindisi was crowded with passengers. On the forward deck was a picturesque horde of Albanian gypsies. The captain said that he counted eighty, without the small ones, which, to avoid the payment of fare, were done up in handkerchiefs and carried in bags like kittens. The men, in broad, short breeches and the jackets of their country, were stout and fine fellows physically. The women, wearing no marked costume, but clad in any rags of dresses that may have been begged or stolen, were strikingly wild in appearance, and if it is true that the women of a race best preserve the primeval traits, these preserve, in their swarthy complexions, burning black eyes, and jet black hair, the characteristics of some savage Oriental tribe. The hair in front was woven into big braids, which were stiff with coins and other barbarous ornaments in silver. A few among them might be called handsome, since their profiles were classic; but it was a wild beauty which woman sometimes shares with the panther. They slept about the deck amidst their luggage, one family usually crawling into a single sack. In the morning there were nests of them all about, and, as they crawled forth, especially as the little ones swarmed out, it was difficult to believe that the number of passengers had not been miraculously increased in the night. The women carry the fortune of the family on their heads; certainly their raiment, which drapes but does not conceal their forms, would scarcely have a value in the rag-market of Naples. I bought of one of them a silver ornament, cutting it from the woman's hair, but I observed that her husband appropriated the money.

It was like entering a new world of order and civilization, next morning, to sail through the vast outer harbor of Brindisi into the inner one, and lie, for the first time in the Mediterranean, at a dock. The gypsies made a more picturesque landing than the other passengers, trudging away with their hags, tags, rags, and tent-poles, the women and children lugging their share. It was almost touching to see their care for the heaps of rubbish which constitute all their worldly possessions. They come like locusts to plunder sunny Italy; on a pretence of seeking work in the fields, they will spend the summer in the open air, gaining health and living, as their betters like to live, upon the labor of others.

Brindisi has a beautiful Roman column, near it the house where Virgil is said to have died, and an ancient fortress, which is half crumbling walls and half dwelling-houses, and is surrounded, like the city wall, by a moat, now converted into a vegetable garden. As I was peacefully walking along the rampart, intending to surround the town, a soldier motioned me back, as if it had been time of war. I offered to stroll over the drawbridge into the mouldy fortress. A soldier objected. As I turned away, he changed his mind, and offered to show me the interior. But it was now my turn to decline; and I told him that, the idle impulse passed, I would rather not go in. Of all human works I care the least for fortresses, except to look at from the outside; it is not worth while to enter one except by storming it or strolling in, and when one must ask permission the charm is gone. You get sick to death almost of these soldier-folk who start up and bar your way with a bayonet wherever you seek to walk in Europe. No, soldier; I like the view from the wall of the moat, and the great fields of ripe wheat waving in the sweet north-wind, but I don't care for you or your fortress.

Brindisi is clean, but dull. Yet it was characteristically Italian that I should encounter in the Duomo square a smart, smooth-tongued charlatan, who sold gold chains at a franc each,—which did not seem to be dear; and a jolly, almost hilarious cripple, who, having no use of his shrunken legs, had mounted himself on a wooden bottom, like a cheese-box, and, by the aid of his hands, went about as lively as a centipede.

I stepped into the cathedral; a service was droning on, with few listeners. On one side of the altar was a hideous, soiled wax image of the dead Christ. Over the altar, in the central place of worship, was a flaring figure of the Virgin, clad in the latest mode of French millinery, and underneath it was the legend, *Viva Maria*. This was the salutation of our return to a Christian land: Christ is dead; the Virgin lives!

Here our journey, which began on the other coast of Italy in November, ends in June. In ascending the Nile to the Second Cataract, and making the circuit of the Levant, we have seen a considerable portion of the Moslem Empire and of the nascent Greek kingdom, which aspires, at least in Europe, to displace it. We have seen both in a transition period, as marked as any since the Saracens trampled out the last remnants of the always sickly Greek Empire. The prospect is hopeful, although the picture of social and political life is far from agreeable. But for myself, now that we are out of the Orient and away from all its squalor and cheap magnificence, I turn again to it with a longing which I cannot explain; it is still the land of the imagination.

PASSAGES AND SHORT QUOTATIONS FROM CHARLES DUDLEY WARNER

WASHINGTON IRVING

"Some persons, in looking upon life, view it as they would view a picture, with a stern and criticising eye. He also looks upon life as a picture, but to catch its beauties, its lights,—not its defects and shadows. On the former he loves to dwell. He has a wonderful knack at shutting his eyes to the sinister side of anything. Never beat a more kindly heart than his; alive to the sorrows, but not to the faults, of his friends, but doubly alive to their virtues and goodness. Indeed, people seemed to grow more good with one so unselfish and so gentle." —Emily Foster.

...authors are particularly candid in admitting the faults of their friends.

The governor, from the stern of his schooner, gave a short but truly patriarchal address to his citizens, wherein he recommended them to comport like loyal and peaceable subjects,—to go to church regularly on Sundays, and to mind their business all the week besides. That the women should be dutiful and affectionate to their husbands,—looking after nobody's concerns but their own,—eschewing all gossipings and morning gaddings,—and carrying short tongues and long petticoats. That the men should abstain from intermeddling in public concerns, intrusting the cares of government to the officers appointed to support them, staying at home, like good citizens, making money for themselves, and getting children for the benefit of their country.

It happens to the princes of literature to encounter periods of varying duration when their names are revered and their books are not read. The growth, not to say the fluctuation, of Shakespeare's popularity is one of the curiosities of literary history. Worshiped by his contemporaries, apostrophized by Milton only fourteen years after his death as the "dear son of memory, great heir to fame,"—"So sepulchred in such pomp dost lie, That kings, for such a tomb, would wish to die,"—he was neglected by the succeeding age, the subject of violent extremes of opinion in the eighteenth century, and so lightly esteemed by some that Hume could doubt if he were a poet "capable of furnishing a proper entertainment to a refined and intelligent audience," and attribute to the rudeness of his "disproportioned and misshapen" genius the "reproach of barbarism" which the English nation had suffered from all its neighbors.

I have lost confidence in the favorable disposition of my countrymen, and look forward to cold scrutiny and stern criticism, and this is a line of writing in which I have not hitherto ascertained my own powers. Could I afford it, I should like to write, and to lay my writings aside when finished. There is an independent delight in study and in the creative exercise of the pen; we live in a world of dreams, but publication lets in the noisy rabble of the world, and there is an end of our dreaming.

THEIR PILGRIMAGE

*Act of eating is apt to be disenchanting
Air of endurance that fathers of families put on
Anxiously asked at every turn how he likes it
As much by what they did not say as by what they did say
Asked Mr King if this was his first visit
Beautifully regular and more satisfactorily monotonous
Best part of a conversation is the things not said
Comfort of leaving some things to the imagination
Common attitude of the wholesale to the retail dealer
Confident opinions about everything
Couldn't stand this sort of thing much longer
Designed by a carpenter, and executed by a stone-mason
Facetious humor that is more dangerous than grumbling
Fat men/women were never intended for this sort of exhibition
Feeding together in a large room must be a little humiliating
Fish, they seemed to say, are not so easily caught as men
Florid man, who "swelled" in, patronizing the entire room
Hated a fellow that was always in high spirits
Irresponsibility of hotel life
It is a kind of information I have learned to dispense with
It's an occupation for a man to keep up a cottage
Let me be unhappy now and then, and not say anything about it
Live, in short, rather more for one's self than for society
Loftily condescending
Lunch was dinner and that dinner was supper
Man in love is poor company for himself and for everybody else
Nearsighted, you know, about seeing people that are not
Not to care about anything you do care about
Notion of duty has to account for much of the misery in life
People who haven't so many corners as our people have
People who leave home on purpose to grumble
Pet dogs of all degrees of ugliness
Satisfy the average taste without the least aid from art
Seemed only a poor imitation of pleasure
Shrinking little man, whose whole appearance was an apology
Small frame houses hopelessly decorated with scroll-work
So many swearing colors
Thinking of themselves and the effect they are producing
Vanishing shades of an attractive and consolable grief
Women are cruelest when they set out to be kind
Wore their visible exclusiveness like a garment
Young ones who know what is best for the elders*

LITTLE JOURNEY IN THE WORLD

*Absurd to be so interested in fictitious trouble
And in this way I crawled out of the discussion, as usual
Anything can be borne if he knows that he shall see her tomorrow
Clubs and circles
Democracy is intolerant of variations from the general level
Do you think so?
Eagerness to acquire the money of other people, not to make it
Easier to be charitable than to be just
Everybody has read it
Great deal of mind, it takes him so long to make it up
How much good do you suppose condescending charity does?
In youth, as at the opera, everything seems possible
It is so easy to turn life into a comedy!
It is so painful to shrink, and so delightful to grow!
Knew how roughly life handles all youthful enthusiasms
Liberty to indulge in republican simplicity
Much easier to forgive a failure than a success
Not the use of money, but of the use money makes of you
One thing to entertain and another to be entertaining
Possessory act of readjusting my necktie*

*Process which is called weighing a thing in the mind
Simple enjoyment being considered an unworthy motive
Society that exists mainly to pay its debts gets stupid
Talk is always tame if no one dares anything
Tastes and culture were of the past age
Unhappy are they whose desires are all ratified
World has become so tolerant that it doesn't care*

THE GOLDEN HOUSE

*Absolutely necessary that the world should be amused
Affectation of familiarity
Air of determined enjoyment
Always did what he said he would do
Desire to do something rather than the desire to make something
Don't know what it's all for—I doubt if there is much in it
Easier to make art fashionable than to make fashion artistic
Emanation of aggressive prosperity
Everybody is superficially educated
Grateful for her forbearance of verbal expression
Happy life: an income left, not earned by toil
Her very virtues are enemies of her peace
How little a thing can make a woman happy
Human vanity will feed on anything within its reach
If one man wins, somebody else has got to lose
Knew how to be confidential without disclosing anything
Long-established habits of aversion or forbearance
Moral hazard bravely incurred in the duty of knowing life
Nature is such a beautiful painter of wood
No confidences are possible outside of that relation
No one expected anything, and no one was disappointed
No such thing as a cheap yacht
Ordering and eating the right sort of lunch
Pitiful about habitual hypocrisy is that it never deceives anybody
"Squares," where the poor children get their idea of forests
To be commanded with such gentleness was a sort of luxury
Was getting to be the fashion; but now it's fashionable
Whatever he disclosed was always in confidence
World requires a great variety of people to keep it going*

THAT FORTUNE

*Artist who cannot paint a rail-fence cannot paint a pyramid
Best things for us in this world are the things we don't get
Big subject does not make a big writer
Bud will never come to flower if you pull it in pieces
Do you know what it is to want what you don't want?
Few people can resist doing what is universally expected of them
Freedom to excel in nothing
Had gained everything he wanted in life except happiness
Indefeasible right of the public to have news
Intellectual poverty
Known something if I hadn't been kept at school
Longing is one thing and reason another
Making himself instead of in making money
Mediocrity of the amazing art product
Never go fishing without both fly and bait
Nothing like it certainly had happened to anybody
Object was to win a case rather than to do justice in a case
Public that gets tired of anything in about three days
Remaining enjoyment is the indulgence of frank speech
Sell your manuscripts, but don't sell your soul
Success is often a misfortune
Summer days that come but to go
There isn't much to feel here except what you see
Things that are self-evident nobody seems to see
Vanity at the bottom of even a reasonable ambition
We confound events with causes
What is society for?*

AS WE WERE SAYING

*Absorption in self
American pronunciation of the letter 'a' a reproach to the Republic
Annual good intentions
Art of listening and the art of talking both being lost
Attempt to fill up our minds as if they were jars
Barbarians of civilization
Blessed are those that expect nothing
But is it true that a woman is ever really naturalized?
Ceased to relish the act of studying
Content with the superficial
Could play anybody else's hand better than his own
Culture is certain to mock itself in time
Disease of conformity
Disposition of people to shift labor on to others' shoulders
Do not like to be insulted with originality
Eve trusted the serpent, and Adam trusted Eve
Fit for nothing else, they can at least write
Good form to be enthusiastic and not disgraceful to be surprised
Housecleaning, that riot of cleanliness which men fear
Idle desire to be busy without doing anything
Imagining that the more noise there is in the room the better
Imitateness of the race
Insist that he shall admire at the point of the social bayonet
It is beautiful to witness our reliance upon others
Lady intending suicide always throw on a waterproof
Let it be common, and what distinction will there be in it?
Man's inability to "match" anything is notorious
Needs no reason if fashion or authority condemns it
Nothing is so easy to bear as the troubles of other people
Passion for display is implanted in human nature
Platitudinous is to be happy?
Reader, who has enough bad weather in his private experience
Seldom that in her own house a lady gets a chance to scream
Taste usually implies a sort of selection
To read anything or study anything we resort to a club
Vast flocks of sheep over the satisfying plain of mediocrity
Vitality of a fallacy is incalculable
Want our literature (or what passes for that) in light array
We move in spirals, if not in circles*

AS WE GO

*Agreeable people are pretty evenly distributed over the country
As wealth is attained the capacity of enjoying it departs
Assertive sort of smartness that was very disagreeable
Attention to his personal appearance is only spasmodic
Boy who is a man before he is an infant
Bringing a man to her feet, where he belongs
Chief object in life is to "get there" quickly
Climate which is rather worse now than before the scientists
Content: not wanting that we can get
Excuse is found for nearly every moral delinquency
Frivolous old woman fighting to keep the skin-deep beauty
Granted that woman is the superior being
Held to strict responsibility for her attractiveness
History is strewn with the wreck of popular delusions
Hot arguments are usually the bane of conversation
Idleness seems to be the last accomplishment of civilization
Insists upon applying everywhere the yardstick of his own local
It is not enough to tell the truth (that has been told before)
Knows more than he will ever know again
Land where things are so much estimated by what they cost
Listen appreciatively even if deceptively
Man and wife are one, and that one is the husband
Mean more by its suggestions and allusions than is said
Must we be always either vapid or serious?
Newspaper-made person
No power on earth that can prevent the return of the long skirt
No room for a leisure class that is not useful
Persistence of privilege is an unexplained thing in human affairs
Poor inhabitants living along only from habit
Repose in activity
Responsibility of attractiveness
Responsible for all the mischief her attractiveness produces
Rights cannot all be on one side and the duties on the other
Servile imitation of nature degrades art
They have worn off the angular corners of existence
They who build without woman build in vain
Those who use their time merely to kill it
Trying to escape winter when we are not trying to escape summer
Use their time merely to kill it*

*Want of toleration of sectional peculiarities
Wantonly sincere
We are already too near most people
Woman can usually quote accurately*

NINE SHORT ESSAYS

*A Night in the Garden of the Tuilleries
Truthfulness
The Pursuit of Happiness
Literature and the Stage
The Life-saving and Life Prolonging Art
"H.H." in Southern California
Simplicity
The English Volunteers During the Late Invasion
Nathan Hale*

*Affection for the old-fashioned, all-round country doctor
Applauds what would have blushed at a few years ago
Architectural measles in this country
Avoid comparisons, similes, and even too much use of metaphor
Book a window, through which I am to see life
Cannot be truthfulness about life without knowledge
Contemporary play instead of character we have "characters,"
Disposition to make the best of whatever comes to us
Do not habitually postpone that season of happiness
Dwelling here. And here content to dwell
Explainable, if not justifiable
Eye demands simple lines, proportion, harmony in mass, dignity
Happiness is an inner condition, not to be raced after
Instead of simply being happy in the condition where we are
Lawyers will divide the oyster between them
Make a newspaper to suit the public
Making the journey of this life with just baggage enough
Moral specialist, who has only one hobby
Name an age that has cherished more delusions than ours
No amount of failure seems to lessen this belief
No man can count himself happy while in this life
No satisfaction in gaining more than we personally want
Not the thing itself, but the pursuit, that is an illusion
Profession which demands so much self-sacrifice
Proprietary medicine business is popular ignorance and credulity
"Purely vegetable" seem most suitable to the wooden-heads
Relapsing into the tawdry and the over-ornamented
Secrecy or low origin of the remedy that is its attraction
Simplicity: This is the stamp of all enduring work
Thinks he may be exempt from the general rules
Treated the patient, as the phrase is, for all he was worth
Unrelieved realism is apt to give a false impression
Warm up to the doctor when the judgment Day heaves in view
Yankee ingenuity,—he "could do anything but spin,"*

FASHIONS IN LITERATURE

*Discrimination between the manifold shadings of insincerity
Great deal of the reading done is mere contagion
His own tastes and prejudices the standard of his judgment
Inability to keep up with current literature
Main object of life is not to keep up with the printing-press
Man who is past the period of business activity
Never to read a book until it is from one to five years old
Quietly putting himself on common ground with his reader
Simplicity
Slovenly literature, unrebuked and uncorrected
Suggestion rather than by commandment
Unenlightened popular preference for a book
Waste precious time in chasing meteoric appearances*

AMERICAN NEWSPAPER

*American newspaper is susceptible of some improvement
Borderland between literature and common sense
Casualties as the chief news
Continue to turn round when there is no grist to grind
Elevates the trivial in life above the essential
If it does not pay its owner, it is valueless to the public
Looking for something spicy and sensational
Most newspapers cost more than they sell for
Newspaper's object is to make money for its owner
Power, the opportunity, the duty, the "mission," of the press
Public craves eagerly for only one thing at a time
Quotations of opinions as news
Should be a sharp line drawn between the report and the editorial*

DIVERSITIES OF AMERICAN LIFE

It appears, therefore, that speed,—the ability to move rapidly from place to place,—a disproportionate reward of physical over intellectual science, an intense desire to be rich, which is strong enough to compel even education to grind in the mill of the Philistines, and an inordinate elevation in public consideration of rich men simply because they are rich, are characteristics of this little point of time on which we stand. They are not the only characteristics; in a reasonably optimistic view, the age is distinguished for unexampled achievements, and for opportunities for the well-being of humanity never before in all history attainable. But these characteristics are so prominent as to beget the fear that we are losing the sense of the relative value of things in this life.

PILGRIM AND AMERICAN

What republics have most to fear is the rule of the boss, who is a tyrant without responsibility. He makes the nominations, he dickers and trades for the elections, and at the end he divides the spoils. The operation is more uncertain than a horse race, which is not decided by the speed of the horses, but by the state of the wagers and the manipulation of the jockeys. We strike directly at his power for mischief when we organize the entire civil service of the nation and of the States on capacity, integrity, experience, and not on political power.

And if we look further, considering the danger of concentration of power in irresponsible hands, we see a new cause for alarm in undue federal mastery and interference.

Poverty is not commonly a nurse of virtue, long continued, it is a degeneration. It is almost as difficult for the very poor man to be virtuous as for the very rich man; and very good and very rich at the same time, says Socrates, a man cannot be. It is a great people that can withstand great prosperity

We are in no vain chase of an equality which would eliminate all individual initiative, and check all progress, by ignoring differences of capacity and strength, and rating muscles equal to brains. But we are in pursuit of equal laws, and a fairer chance of leading happy lives than humanity in general ever had yet.

CAUSES OF DISCONTENT

Now, content does not depend so much upon a man's actual as his relative condition. Often it is not so much what I need, as what others have that disturbs me. I should be

content to walk from Boston to New York, and be a fortnight on the way, if everybody else was obliged to walk who made that journey. It becomes a hardship when my neighbor is whisked over the route in six hours and I have to walk. It would still be a hardship if he attained the ability to go in an hour, when I was only able to accomplish the distance in six hours.

It ought to be said, as to the United States, that a very considerable part of the discontent is imported, it is not native, nor based on any actual state of things existing here. Agitation has become a business. A great many men and some women, to whom work of any sort is distasteful, live by it.

Compared with the freedom of action in such a government as ours, any form of communism is an iniquitous and meddling despotism.

Doubtless men might have been created equal to each other in every respect, with the same mental capacity, the same physical ability, with like inheritances of good or bad qualities, and born into exactly similar conditions, and not dependent on each other. But men never were so created and born, so far as we have any record of them, and by analogy we have no reason to suppose that they ever will be. Inequality is the most striking fact in life. Absolute equality might be better, but so far as we can see, the law of the universe is infinite diversity in unity; and variety in condition is the essential of what we call progress—it is, in fact, life.

It sometimes seems as if half the American people were losing the power to apply logical processes to the ordinary affairs of life.

It is human nature, it is the lesson of history, that real wrongs, unredressed, grow into preposterous demands. Men are much like nature in action; a little disturbance of atmospheric equilibrium becomes a cyclone, a slight break in the levee a crevasse with immense destructive power.

EDUCATION OF THE NEGRO

But slavery brought about one result, and that the most difficult in the development of a race from savagery, and especially a tropical race, a race that has always been idle in the luxuriance of a nature that supplied its physical needs with little labor. It taught the negro to work, it transformed him, by compulsion it is true, into an industrial being, and held him in the habit of industry for several generations. Perhaps only force could do this, for it was a radical transformation. I am glad to see that this result of slavery is recognized by Mr. Booker Washington, the ablest and most clear-sighted leader the Negro race has ever had.

Conceit of gentility of which the world has already enough.

It is this character, quality, habit, the result of a slow educational process, which distinguishes one race from another. It is this that the race transmits, and not the more or less accidental education of a decade or an era. The Brahmins carry this idea into the next life, and say that the departing spirit carries with him nothing except this individual character, no acquirements or information or extraneous culture. It was perhaps in the same spirit that the sad preacher in Ecclesiastes said there is no "knowledge nor wisdom in the grave, whither thou goest." It is by this character that we classify civilized and even semi-civilized races; by this slowly developed fibre, this slow accumulation of inherent quality in the evolution of the human being from lower to higher, that continues to exist notwithstanding the powerful influence of governments and religions.

INDETERMINATE SENTENCE

The proposed method is the indeterminate sentence. This strikes directly at the criminal class. It puts that class beyond the power of continuing its depredations upon society. It is truly deterrent, because it is a notification to any one intending to enter

upon that method of living that his career ends with his first felony. As to the general effects of the indeterminate sentence, I will repeat here what I recently wrote for the Yale Law Journal.

It happens, therefore, that there is great sympathy with the career of the lawbreakers, many people are hanging on them for support, and among them the so-called criminal lawyers. Any legislation likely to interfere seriously with the occupation of the criminal class or with its increase is certain to meet with the opposition of a large body of voters. With this active opposition of those interested, and the astonishing indifference of the general public, it is easy to see why so little is done to relieve us of this intolerable burden. The fact is, we go on increasing our expenses for police, for criminal procedure, for jails and prisons, and we go on increasing the criminal class and those affiliated with it.

I will suggest that the convict should, for his own sake, have the indeterminate sentence applied to him upon conviction of his first penal offense. He is much more likely to reform than he would be after he had had a term in the State prison and was again convicted, and the chance of his reformation would be lessened by each subsequent experience of this kind. The great object of the indeterminate sentence, so far as the security of society is concerned, is to diminish the number of the criminal class, and this will be done when it is seen that the first felony a man commits is likely to be his last, and that for a young criminal contemplating this career there is in this direction: "No Thoroughfare."

It is very significant that the criminal class adapted itself readily to the parole system with its sliding scale. It was natural that this should be so, for it fits in perfectly well with their scheme of life. This is to them a sort of business career, interrupted now and then only by occasional limited periods of seclusion. Any device that shall shorten those periods is welcome to them. As a matter of fact, we see in the State prisons that the men most likely to shorten their time by good behavior, and to get released on parole before the expiration of their sentence, are the men who make crime their career. They accept this discipline as a part of their lot in life, and it does not interfere with their business any more than the occasional bankruptcy of a merchant interferes with his pursuits.

No tribunal is able with justice to mete out punishment in any individual case, for probably the same degree of guilt does not attach to two men in the violation of the same statute.

It is purely an economic and educational problem, and must rest upon the same principles that govern in any successful industry, or in education, and that we recognize in the conduct of life. That little progress has been made is due to public indifference to a vital question and to the action of sentimentalists, who, in their philanthropic zeal; fancy that a radical reform can come without radical discipline. We are largely wasting our energies in petty contrivances instead of striking at the root of the evil.

LITERARY COPYRIGHT

It is the habit of some publishing houses, not of all, let me distinctly say, to seek always notoriety, not to nurse and keep before the public mind the best that has been evolved from time to time, but to offer always something new. The year's flooring is threshed off and the floor swept to make room for a fresh batch. Effort eventually ceases for the old and approved, and is concentrated on experiments. This is like the conduct of a newspaper. It is assumed that the public must be startled all the time.

Consider first the author, and I mean the author, and not the mere craftsman who manufactures books for a recognized market. His sole capital is his talent. His brain may be likened to a mine, gold, silver, copper, iron, or tin, which looks like silver when new. Whatever it is, the vein of valuable ore is limited, in most cases it is slight. When it is worked out, the man is at the end of his resources.

It is generally conceded that what literature in America needs at this moment is honest, competent, sound criticism. This is not likely to be attained by sporadic efforts, especially in a democracy of letters where the critics are not always superior to the criticised, where the man in front of the book is not always a better marksman than the man behind the book.

The fashion of the day is rarely the judgment of posterity. You will recall what Byron wrote to Coleridge: "I trust you do not permit yourself to be depressed by the temporary partiality of what is called 'the public' for the favorites of the moment; all experience is against the permanency of such impressions. You must have lived to see many of these pass away, and will survive many more."

LITERATURE AND LIFE

*All the world is diseased and in need of remedies
Arrive at the meaning by the definition of exclusion
Care of riches should have the last place in our thoughts
Each in turn contends that his art produces the greatest good
Impress and reduce to obsequious deference the hotel clerk
Opinions inherited, not formed
Prejudice working upon ignorance
Pursuit of office—which is sometimes called politics
Rab and his Friends
Refuge of the aged in failing activity
Riches and rich men are honored in the state
Set aside as literature that which is original
To the lawyer everybody is or ought to be a litigant
Touching hopefulness
Very rich and very good at the same time he cannot be
Want of the human mind which is higher than the want of knowledge
What we call life is divided into occupations and interest
Without Plato there would be no Socrates*

EQUALITY

In accordance with the advice of Diogenes of Apollonia in the beginning of his treatise on Natural Philosophy—"It appears to me to be well for every one who commences any sort of philosophical treatise to lay down some undeniable principle to start with"—we offer this: "All men are created unequal." It would be a most interesting study to trace the growth in the world of the doctrine of "equality."

Every one talked of "the state of nature" as if he knew all about it. "The conditions of primitive man," says Mr. Morley, "were discussed by very incompetent ladies and gentlemen at convivial supper-parties, and settled with complete assurance." That was the age when solitary Frenchmen plunged into the wilderness of North America, confidently expecting to recover the golden age under the shelter of a wigwam and in the society of a squaw.

It is to be noticed that rights are mentioned, but not duties, and that if political rights only are meant, political duties are not inculcated as of equal moment. It is not announced that political power is a function to be discharged for the good of the whole body, and not a mere right to be enjoyed for the advantage of the possessor; and it is to be noted also that this idea did not enter into the conception of Rousseau.

We are attempting the regeneration of society with a misleading phrase; we are wasting our time with a theory that does not fit the facts.

WHAT IS YOUR CULTURE TO ME

It is not an unreasonable demand of the majority that the few who have the advantages of the training of college and university should exhibit the breadth and sweetness of a generous culture, and should shed everywhere that light which ennobles common things, and without which life is like one of the old landscapes in which the artist forgot to put sunlight. One of the reasons why the college-bred man does not

meet this reasonable expectation is that his training, too often, has not been thorough and conscientious, it has not been of himself; he has acquired, but he is not educated. Another is that, if he is educated, he is not impressed with the intimacy of his relation to that which is below him as well as that which is above him, and his culture is out of sympathy with the great mass that needs it, and must have it, or it will remain a blind force in the world, the lever of demagogues who preach social anarchy and misname it progress.

Let him not be discouraged at his apparent little influence, even though every sally of every young life may seem like a forlorn hope. No man can see the whole of the battle.

To suggest remedies is much more difficult than to see evils; but the comprehension of dangers is the first step towards mastering them.

MODERN FICTION

One of the worst characteristics of modern fiction is its so-called truth to nature. For fiction is an art, as painting is, as sculpture is, as acting is. A photograph of a natural object is not art; nor is the plaster cast of a man's face, nor is the bare setting on the stage of an actual occurrence. Art requires an idealization of nature. The amateur, though she may be a lady, who attempts to represent upon the stage the lady of the drawing-room, usually fails to convey to the spectators the impression of a lady. She lacks the art by which the trained actress, who may not be a lady, succeeds. The actual transfer to the stage of the drawing-room and its occupants, with the behavior common in well-bred society, would no doubt fail of the intended dramatic effect, and the spectators would declare the representation unnatural.

Tragedy and the pathos of failure have their places in literature as well as in life. I only say that, artistically, a good ending is as proper as a bad ending.

Perhaps the most inane thing ever put forth in the name of literature is the so-called domestic novel, an indigestible, culinary sort of product, that might be named the doughnut of fiction. The usual apology for it is that it depicts family life with fidelity. Its characters are supposed to act and talk as people act and talk at home and in society. I trust this is a libel, but, for the sake of the argument, suppose they do. Was ever produced so insipid a result?

The characteristics which are prominent, when we think of our recent fiction, are a wholly unidealized view of human society, which has got the name of realism; a delight in representing the worst phases of social life; an extreme analysis of persons and motives; the sacrifice of action to psychological study; the substitution of studies of character for anything like a story; a notion that it is not artistic, and that it is untrue to nature, to bring any novel to a definite consummation, and especially to end it happily; and a despondent tone about society, politics, and the whole drift of modern life. Judged by our fiction, we are in an irredeemably bad way.

The vulgar realism in pictorial art, which holds ugliness and beauty in equal esteem; or against aestheticism gone to seed in languid affectations; or against the enthusiasm of a social life which wrecks its religion on the color of a vestment, or sighs out its divine soul over an ancient pewter mug.

MR. FROUDE'S PROGRESS

For, as skepticism is in one sense the handmaid of truth, discontent is the mother of progress. The man is comparatively of little use in the world who is contented.

Education of the modern sort unsettles the peasant, renders him unfit for labor, and gives us a half-educated idler in place of a conscientious workman.

Education must go forward; the man must not be half but wholly educated. It is only half-knowledge like half-training in a trade that is dangerous.

Mr. Froude runs lightly over a list of subjects upon which the believer in progress relies for his belief, and then says of them that the world calls this progress—he calls it only change.

There are some select souls who sit apart in calm endurance, waiting to be translated out of a world they are almost tired of patronizing, to whom the whole thing seems, doubtless, like a cheap performance. They sit on the fence of criticism, and cannot for the life of them see what the vulgar crowd make such a toil and sweat about.

ENGLAND

Both parties, however, like parties elsewhere, propose and oppose measures and movements, and accept or reject policies, simply to get office or keep office.

In the judgment of many good observers, a dissolution of the empire, so far as the Western colonies are concerned, is inevitable, unless Great Britain, adopting the plan urged by Franklin, becomes an imperial federation, with parliaments distinct and independent, the crown the only bond of union—the crown, and not the English parliament, being the titular and actual sovereign. Sovereign power over America in the parliament Franklin never would admit.

It is safe, we think, to say that if the British Empire is to be dissolved, disintegration cannot be permitted to begin at home. Ireland has always been a thorn in the side of England. And the policy towards it could not have been much worse, either to impress it with a respect for authority or to win it by conciliation; it has been a strange mixture of untimely concession and untimely cruelty. The problem, in fact, has physical and race elements that make it almost insolvable. A water-logged country, of which nothing can surely be predicted but the uncertainty of its harvests, inhabited by a people of most peculiar mental constitution, alien in race, temperament, and religion, having scarcely one point of sympathy with the English.

NOVEL AND SCHOOL

Note the seeming anomaly of a scientific age peculiarly credulous; the ease with which any charlatan finds followers; the common readiness to fall in with any theory of progress which appeals to the sympathies, and to accept the wildest notions of social reorganization. We should be obliged to note also, among scientific men themselves, a disposition to come to conclusions on inadequate evidence—a disposition usually due to one-sided education which lacks metaphysical training and the philosophic habit.

Often children have only one book even of this sort, at which they are kept until they learn it through by heart, and they have been heard to "read" it with the book bottom side up or shut! All these books cultivate inattention and intellectual vacancy. They are—the best of them—only reading exercises; and reading is not perceived to have any sort of value. The child is not taught to think, and not a step is taken in informing him of his relation to the world about him. His education is not begun.

The lower-grade books are commonly inane (I will not say childish, for that is a libel on the open minds of children) beyond description.

The novel, mediocre, banal, merely sensational, and worthless for any purpose of intellectual stimulus or elevation of the ideal, is thus encouraged in this age as it never was before. The making of novels has become a process of manufacture. Usually, after the fashion of the silk-weavers of Lyons, they are made for the central establishment on individual looms at home.

An honest acceptance of the law of gravitation would banish many popular delusions; a comprehension that something cannot be made out of nothing would dispose of others; and the application of the ordinary principles of evidence, such as men require to establish a title to property, would end most of the remaining.

When the trash does not sell, the trash will not be produced, and those who are only capable of supplying the present demand will perhaps find a more useful occupation. It will be again evident that literature is not a trade, but an art requiring peculiar powers and patient training. When people know how to read, authors will need to know how to write.

FOR WHOM SHAKESPEARE WROTE

*Any parish which let a thief escape was fined
Beer making
Capable of weeping like children, and of dying like men
Complaint then, as now, that in many trades men scamped their work
Courageous gentlemen wore in their ears rings of gold and stones
Credulity and superstition of the age
Devil's liquor, I mean starch
Down a peg
Dramas which they considered as crude as they were coarse
Eve will be Eve, though Adam would say nay
Italy generally a curious custom of using a little fork for meat
Landlord let no one depart dissatisfied with his bill
Mistake ribaldry and loquacity for wit and wisdom
Pillows were thought meet only for sick women
Portuguese receipts
Prepare bills of fare (a trick lately taken up)
Sir Francis Bacon
So much cost upon the body, so little upon souls
Stagecoach
Teeth black—a defect the English seem subject to*

ON HORSEBACK

*Anxious to reach it, we were glad to leave it
Establishment had the air of taking care of itself
Fond of lawsuits seems a characteristic of an isolated people
It is not much use to try to run a jail without liquor
Man's success in court depended upon the length of his purse
Married? No, she hoped not
Monument of procrastination
Not much inclination to change his clothes or his cabin
One has to dodge this sort of question
Ornamentation is apt to precede comfort in our civilization
What a price to pay for mere life!*

BEING A BOY

*Appear to be very active, and yet not do much
As they forgot they were a party, they began to enjoy themselves
As you get used to being a boy, you have to be something else
Boys have a great power of helping each other to do nothing
Conversation ran aground again
Expected nothing that he did not earn
Fed the poor boy's vanity, the weakness by which women govern
Felt wronged, and worked himself up to pass a wretched evening
Girls have a great deal more good sense in such matters than boys
Gladly do all the work if somebody else would do the chores
He is, like a barrel of beer, always on draft
Law will not permit men to shoot each other in plain clothes
Natural genius for combining pleasure with business
Not very disagreeable, or would not be if it were play
People hardly ever do know where to be born until it is too late
Spider-web is stronger than a cable
Undemonstrative affection
Very busy about nothing
Wearisome part is the waiting on the people who do the work
Why did n't the people who were sleepy go to bed?*

*Willing to do any amount of work if it is called play
Willing to repent if he could think of anything to repent of*

SAUNTERINGS

*Bane of travel is the destruction of illusions
Discontent of those who travel to enjoy themselves
Excellent but somewhat scattered woman
Inability to stand still for one second is the plague of it
Leaves it with mingled feelings about Columbus
One ought not to subject his faith to too great a strain*

POCAHONTAS

According to the long-accepted story of Pocahontas, she did something more than interfere to save from barbarous torture and death a stranger and a captive, who had forfeited his life by shooting those who opposed his invasion. In all times, among the most savage tribes and in civilized society, women have been moved to heavenly pity by the sight of a prisoner, and risked life to save him—the impulse was as natural to a Highland lass as to an African maid. Pocahontas went further than efforts to make peace between the superior race and her own. When the whites forced the Indians to contribute from their scanty stores to the support of the invaders, and burned their dwellings and shot them on sight if they refused, the Indian maid sympathized with the exposed whites and warned them of stratagems against them; captured herself by a base violation of the laws of hospitality, she was easily reconciled to her situation, adopted the habits of the foreigners, married one of her captors, and in peace and in war cast in her lot with the strangers. History has not preserved for us the Indian view of her conduct.

This savage was the Tomocomo spoken of above, who had been sent by Powhatan to take a census of the people of England, and report what they and their state were. At Plymouth he got a long stick and began to make notches in it for the people he saw. But he was quickly weary of that task. He told Smith that Powhatan bade him seek him out, and get him to show him his God, and the King, Queen, and Prince, of whom Smith had told so much. Smith put him off about showing his God, but said he had heard that he had seen the King. This the Indian denied, James probably not coming up to his idea of a king, till by circumstances he was convinced he had seen him. Then he replied very sadly: "You gave Powhatan a white dog, which Powhatan fed as himself, but your king gave me nothing, and I am better than your white dog."

*Sir Thomas Dale was on the whole the most efficient and discreet Governor the colony had had. One element of his success was no doubt the change in the charter. By the first charter everything had been held in common by the company, and there had been no division of property or allotment of land among the colonists. Under the new regime land was held in severalty, and the spur of individual interest began at once to improve the condition of the settlement. The character of the colonists was also gradually improving. They had not been of a sort to fulfill the earnest desire of the London promoter's to spread vital piety in the New World. A zealous defense of Virginia and Maryland, against "scandalous imputation," entitled "*Leah and Rachel; or, The Two Fruitful Sisters*," by Mr John Hammond, London, considers the charges that Virginia "is an unhealthy place, a nest of rogues, abandoned women, dissolute and rookery persons; a place of intolerable labour, bad usage and hard diet"; and admits that "at the first settling, and for many years after, it deserved most of these aspersions, nor were they then aspersions but truths. There were jails supplied, youth seduced, infamous women drilled in, the provision all brought out of England, and that embezzled by the Trustees."*

CAPTAIN JOHN SMITH

After fifteen years Smith is able to remember more details
Assertion in an insecure position
Cheaper credited than confuted
Entertaining if one did not see too much of him
Knew not the secret of having his own way
Long stick and began to make notches in it for the people he saw
Making religion their color
Peculiarly subject to such coincidences
Prince's mind imprisoned in a poor man's purse
Progressive memory
Somewhat damaging to an estimate of his originality
Thames had no bridges
Those that did not work should not eat
Tobacco-selling
Wanted advancement but were unwilling to adventure their ease
Would if he could
Writ too much, and done too little

SPRING IN NEW ENGLAND

Then follows a day of bright sun and blue sky. The birds open the morning with a lively chorus. In spite of Auster, Euroclydon, low pressure, and the government bureau, things have gone forward. By the roadside, where the snow has just melted, the grass is of the color of emerald. The heart leaps to see it. On the lawn there are twenty robins, lively, noisy, worm-seeking. Their yellow breasts contrast with the tender green of the newly-springing clover and herd's-grass. If they would only stand still, we might think the dandelions had blossomed. On an evergreen-bough, looking at them, sits a graceful bird, whose back is bluer than the sky. There is a red tint on the tips of the boughs of the hard maple. With Nature, color is life. See, already, green, yellow, blue, red! In a few days—is it not so?—through the green masses of the trees will flash the orange of the oriole, the scarlet of the tanager; perhaps tomorrow.

But, in fact, the next day opens a little sourly. It is almost clear overhead: but the clouds thicken on the horizon; they look leaden; they threaten rain. It certainly will rain: the air feels like rain, or snow. By noon it begins to snow, and you hear the desolate cry of the phoebe-bird. It is a fine snow, gentle at first; but it soon drives in swerving lines, for the wind is from the southwest, from the west, from the northeast, from the zenith (one of the ordinary winds of New England), from all points of the compass. The fine snow becomes rain; it becomes large snow; it melts as it falls; it freezes as it falls. At last a storm sets in, and night shuts down upon the bleak scene.

During the night there is a change. It thunders and lightens. Toward morning there is a brilliant display of aurora borealis. This is a sign of colder weather.

The gardener is in despair; so is the sportsman. The trout take no pleasure in biting in such weather.

Paragraphs appear in the newspapers, copied from the paper of last year, saying that this is the most severe spring in thirty years. Every one, in fact, believes that it is, and also that next year the spring will be early. Man is the most gullible of creatures.

And with reason: he trusts his eyes, and not his instinct. During this most sour weather of the year, the anemone blossoms; and, almost immediately after, the fairy pencil, the spring beauty, the dog-tooth violet, and the true violet. In clouds and fog, and rain and snow, and all discouragement, Nature pushes on her forces with progressive haste and rapidity. Before one is aware, all the lawns and meadows are deeply green, the trees are opening their tender leaves. In a burst of sunshine the cherry-trees are white, the Judas-tree is pink, the hawthorns give a sweet smell. The air is full of sweetness; the world, of color.

In the midst of a chilling northeast storm the ground is strewn with the white-and-pink blossoms from the apple-trees. The next day the mercury stands at eighty degrees. Summer has come.

There was no Spring.

The winter is over. You think so? Robespierre thought the Revolution was over in the beginning of his last Thermidor. He lost his head after that.

When the first buds are set, and the corn is up, and the cucumbers have four leaves, a

malicious frost steals down from the north and kills them in a night.

That is the last effort of spring. The mercury then mounts to ninety degrees. The season has been long, but, on the whole, successful. Many people survive it.

IN THE WILDERNESS

*According to the compass, the Lord only knew where I was
Business of civilization to tame or kill
Canopy of mosquitoes
Caricature of a road
Compass, which was made near Greenwich, was wrong
Democrats became as scarce as moose in the Adirondacks
Everlasting dress-parade of our civilization
Grand intentions and weak vocabulary
How lightly past hardship sits upon us!
I hain't no business here; but here I be!
Kept its distance, as only a mountain can
Man's noblest faculty, his imagination, or credulity.
Marriage is mostly for discipline
Misery, unheroic and humiliating
Near-sighted man, whose glasses the rain rendered useless
No conceit like that of isolation
No nervousness, but simply a reasonable desire to get there
Not lost, but gone before
Posthumous fear
Procession of unattainable meals stretched before me
Sense to shun the doctor; to lie down in some safe place
Solitude and every desirable discomfort
Stumbled against an ill-placed tree
Suffering when unaccompanied by resignation
Ten times harder to unlearn anything than it is to learn it
There is an impassive, stolid brutality about the woods*

BADDECK

*Best part of going to sea is keeping close to the shore
Can leave it without regret
Dependent upon imagination and memory
Great part of the enjoyment of life
Luxury of his romantic grief
Picturesque sort of dilapidation
Rest is never complete—unless he can see somebody else at work
Won't see Mt. Desert till midnight, and then you won't*

BACKLOG STUDIES

*A good many things have gone out with the fire on the hearth
Abatement of a snow-storm that grows to exceptional magnitude
Anywhere a happier home than ours? I am glad of it!
Associate ourselves to make everybody else behave as we do.
Chilly drafts and sarcasms on what we call the temperate zone
Criticism by comparison is the refuge of incapables
Crowning human virtue in a man is to let his wife poke the fire
Don't know what success is
Each generation does not comprehend its own ignorance
Enjoyed poor health
Enthusiasm is a sign of inexperience, of ignorance
Fallen into the days of conformity
Few people know how to make a wood-fire
Finding the world disagreeable to themselves
Have almost succeeded in excluding pure air
Just as good as the real
Lived himself out of the world
Long score of personal flattery to pay off
Not half so reasonable as my prejudices*

Pathos overcomes one's sense of the absurdity of such people
Permit the freedom of silence
Poetical reputation of the North American Indian
Point of breeding never to speak of anything in your house
Reformers manage to look out for themselves tolerably well
Refuge of mediocrity
Rest beyond the grave will not be much change for him
Said, or if I have not, I say it again
Severe attack of spiritism
Shares none of their uneasiness about getting on in life
Silence is unnoticed when people sit before a fire
Some men you always prefer to have on your left hand
Sort of busy idleness among men
There are no impossibilities to youth and inexperience
Things are apt to remain pretty much the same
Think the world they live in is the central one
To-day is like yesterday,
Usual effect of an anecdote on conversation
Women know how to win by losing
World owes them a living because they are philanthropists

SUMMER IN A GARDEN

But I found him, one Sunday morning,—a day when it would not do to get angry, tying his cow at the foot of the hill; the beast all the time going on in that abominable voice. I told the man that I could not have the cow in the grounds. He said, "All right, boss;" but he did not go away. I asked him to clear out. The man, who is a French sympathizer from the Republic of Ireland, kept his temper perfectly. He said he wasn't doing anything, just feeding his cow a bit: he wouldn't make me the least trouble in the world. I reminded him that he had been told again and again not to come here; that he might have all the grass, but he should not bring his cow upon the premises. The imperturbable man assented to everything that I said, and kept on feeding his cow. Before I got him to go to fresh scenes and pastures new, the Sabbath was almost broken; but it was saved by one thing: it is difficult to be emphatic when no one is emphatic on the other side. The man and his cow have taught me a great lesson, which I shall recall when I keep a cow. I can recommend this cow, if anybody wants one, as a steady boarder, whose keeping will cost the owner little; but, if her milk is at all like her voice, those who drink it are on the straight road to lunacy.

Moral Truth.—I have no doubt that grapes taste best in other people's mouths. It is an old notion that it is easier to be generous than to be stingy. I am convinced that the majority of people would be generous from selfish motives, if they had the opportunity. Philosophical Observation.—Nothing shows one who his friends are like prosperity and ripe fruit. I had a good friend in the country, whom I almost never visited except in cherry-time. By your fruits you shall know them.

Pretending to reflect upon these things, but in reality watching the blue-jays, who are pecking at the purple berries of the woodbine on the south gable, I approach the house. Polly is picking up chestnuts on the sward, regardless of the high wind which rattles them about her head and upon the glass roof of her winter-garden. The garden, I see, is filled with thrifty plants, which will make it always summer there. The callas about the fountain will be in flower by Christmas: the plant appears to keep that holiday in her secret heart all summer. I close the outer windows as we go along, and congratulate myself that we are ready for winter. For the winter-garden I have no responsibility: Polly has entire charge of it. I am only required to keep it heated, and not too hot either; to smoke it often for the death of the bugs; to water it once a day; to move this and that into the sun and out of the sun pretty constantly: but she does all the work. We never relinquish that theory.

I have been digging my potatoes, if anybody cares to know it. I planted them in what are called "Early Rose,"—the rows a little less than three feet apart; but the vines came to an early close in the drought. Digging potatoes is a pleasant, soothing occupation, but not poetical. It is good for the mind, unless they are too small (as many of mine are), when it begets a want of gratitude to the bountiful earth. What small potatoes we all are, compared with what we might be! We don't plow deep enough, any of us, for one thing. I shall put in the plow next year, and give the tubers room enough. I think they felt the lack of it this year: many of them seemed ashamed to come out so small. There is great pleasure in turning out the brown-jacketed fellows into the sunshine of a royal September day, and seeing them glisten as they lie thickly strewn on the warm soil. Life has few such moments. But then they must be picked up. The picking-up, in this world, is always the unpleasant part of it.

Nature is "awful smart." I intend to be complimentary in saying so. She shows it in little things. I have mentioned my attempt to put in a few modest turnips, near the close of the season. I sowed the seeds, by the way, in the most liberal manner. Into three or four short rows I presume I put enough to sow an acre; and they all came up,—came up as thick as grass, as crowded and useless as babies in a Chinese village. Of course, they had to be thinned out; that is, pretty much all pulled up; and it took me a long time; for it takes a conscientious man some time to decide which are the best and healthiest plants to spare. After all, I spared too many. That is the great danger everywhere in this world (it may not be in the next): things are too thick; we lose all in grasping for too much. The Scotch say, that no man ought to thin out his own turnips, because he will not sacrifice enough to leave room for the remainder to grow: he should get his neighbor, who does not care for the plants, to do it. But this is mere talk, and aside from the point: if there is anything I desire to avoid in these agricultural papers, it is digression. I did think that putting in these turnips so late in the season, when general activity has ceased, and in a remote part of the garden, they would pass unnoticed. But Nature never even winks, as I can see. The tender blades were scarcely out of the ground when she sent a small black fly, which seemed to have been born and held in reserve for this purpose,—to cut the leaves. They speedily made lace-work of the whole bed. Thus everything appears to have its special enemy,—except, perhaps, p—y: nothing ever troubles that.

*** END OF THE PROJECT GUTENBERG EBOOK THE WORKS OF CHARLES DUDLEY WARNER ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™

works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on

different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you ‘AS-IS’, WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™’s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation’s EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state’s laws.

The Foundation’s business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation’s website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
