INTRODUCTORY LETTER

MY DEAR MR. FIELDS,—I did promise to write an Introduction to these charming papers but an Introduction,—what is it?—a sort of pilaster, put upon the face of a building for looks' sake, and usually flat,—very flat. Sometimes it may be called a caryatid, which is, as I understand it, a cruel device of architecture, representing a man or a woman, obliged to hold up upon his or her head or shoulders a structure which they did not build, and which could stand just as well without as with them. But an Introduction is more apt to be a pillar, such as one may see in Baalbec, standing up in the air all alone, with nothing on it, and with nothing for it to do.

But an Introductory Letter is different. There is in that no formality, no assumption of function, no awkward propriety or dignity to be sustained. A letter at the opening of a book may be only a footpath, leading the curious to a favorable point of observation, and then leaving them to wander as they will.

Sluggards have been sent to the ant for wisdom; but writers might better be sent to the spider, not because he works all night, and watches all day, but because he works unconsciously. He dare not even bring his work before his own eyes, but keeps it behind him, as if too much knowledge of what one is doing would spoil the delicacy and modesty of one's work.

Almost all graceful and fanciful work is born like a dream, that comes noiselessly, and tarries silently, and goes as a bubble bursts. And yet somewhere work must come in,—real, well-considered work.

Inness (the best American painter of Nature in her moods of real human feeling) once said, "No man can do anything in art, unless he has intuitions; but, between whiles, one must work hard in collecting the materials out of which intuitions are made." The truth could not be hit off better. Knowledge is the soil, and intuitions are the flowers which grow up out of it. The soil must be well enriched and worked.

It is very plain, or will be to those who read these papers, now gathered up into this book, as into a chariot for a race, that the author has long employed his eyes, his ears, and his understanding, in observing and considering the facts of Nature, and in weaving curious analogies. Being an editor of one of the oldest daily news-papers in New England, and obliged to fill its columns day after day (as the village mill is obliged to render every day so many sacks of flour or of meal to its hungry customers), it naturally occurred to him, "Why not write something which I myself, as well as my readers, shall enjoy? The market gives them facts enough; politics, lies enough; art, affectations enough; criminal news, horrors enough; fashion, more than enough of vanity upon vanity, and vexation of purse. Why should they not have some of those wandering and joyous fancies which solace my hours?"

The suggestion ripened into execution. Men and women read, and wanted more. These garden letters began to blossom every week; and many hands were glad to gather pleasure from them. A sign it was of wisdom. In our feverish days it is a sign of health or of convalescence that men love gentle pleasure, and enjoyments that do not rush or roar, but distill as the dew.

The love of rural life, the habit of finding enjoyment in familiar things, that susceptibility to Nature which keeps the nerve gently thrilled in her homliest nooks and by her commonest sounds, is worth a thousand fortunes of money, or its equivalents.

Every book which interprets the secret lore of fields and gardens, every essay that brings men nearer to the understanding of the mysteries which every tree whispers, every brook murmurs, every weed, even, hints, is a contribution to the wealth and the happiness of our kind. And if the lines of the writer shall be traced in quaint characters, and be filled with a grave humor, or break out at times into merriment, all this will be no presumption against their wisdom or his goodness. Is the oak less strong and tough because the mosses and weather-stains stick in all manner of grotesque sketches along its bark? Now, truly, one may not learn from this little book either divinity or horticulture; but if he gets a pure happiness, and a tendency to repeat the happiness from the simple stores of Nature, he will gain from our friend's garden what Adam lost in his, and what neither philosophy nor divinity has always been able to restore.

Wherefore, thanking you for listening to a former letter, which begged you to consider whether these curious and ingenious papers, that go winding about like a half-trodden path between the garden and the field, might not be given in book-form to your million readers, I remain, yours to command in everything but the writing of an Introduction,

HENRY WARD BEECHER.

BY WAY OF DEDICATION

MY DEAR POLLY,—When a few of these papers had appeared in “The Courant,” I was encouraged to continue them by hearing that they had at least one reader who read them with the serious mind from which alone profit is to be expected. It was a maiden lady, who, I am sure, was no more to blame for her singleness than for her age; and she looked to these honest sketches of experience for that aid which the professional agricultural papers could not give in the management of the little bit of garden which she called her own. She may have been my only disciple; and I confess that the thought of her yielding a simple faith to what a gainsaying world may have regarded with levity has contributed much to give an increased practical turn to my reports of what I know about gardening. The thought that I had misled a lady, whose age is not her only singularity, who looked to me for advice which should be not at all the fanciful product of the Garden of Gull, would give me great pain. I trust that her autumn is a peaceful one, and undisturbed by either the humorous or the satirical side of Nature.

You know that this attempt to tell the truth about one of the most fascinating occupations in the world has not been without its dangers. I have received anonymous letters. Some of them were murderously spelled; others were missives in such elegant phrase and dress, that danger was only to be apprehended in them by one skilled in the mysteries of medieval poisoning, when death flew on the wings of a perfume. One lady, whose entreaty that I should pause had something of command in it, wrote that my strictures on “pusley” had so inflamed her husband's zeal, that, in her absence in the country, he had rooted up all her beds of portulaca (a sort of cousin of the fat weed), and utterly cast it out. It is, however, to be expected, that retributive justice would visit the innocent as well as the guilty of an offending family. This is only another proof of the wide sweep of moral forces. I suppose that it is as necessary in the vegetable world as it is elsewhere to avoid the appearance of evil.

In offering you the fruit of my garden, which has been gathered from week to week, without much reference to the progress of the crops or the drought, I desire to acknowledge an influence which has lent half the charm to my labor. If I were in a court of justice, or injustice, under oath, I should not like to say, that, either in the wooing days of spring, or under the suns of the summer solstice, you had been, either with hoe, rake, or miniature spade, of the least use in the garden; but your suggestions have been invaluable, and, whenever used, have been paid for. Your horticultural inquiries have been of a nature to astonish the vegetable world, if it listened, and were a constant inspiration to research. There was almost nothing that you did not wish to know; and this, added to what I wished to know, made a boundless field for discovery. What might have become of the garden, if your advice had been followed, a good Providence only knows; but I never worked there without a consciousness that you might at any moment come down the walk, under the grape-arbor, bestowing glances of approval, that were none the worse for not being critical; exercising a sort of superintendence that elevated gardening into a fine art; expressing a wonder that was as complimentary to me as it was to Nature; bringing an atmosphere which made the garden a region of romance, the soil of which was set apart for fruits native to climes unseen. It was this bright presence that filled the garden, as it did the summer, with light, and now leaves upon it that tender play of color and bloom which is called among the Alps the after-glow.

NOOK FARM, HARTFORD, October, 1870

C. D. W.

PRELIMINARY

The love of dirt is among the earliest of passions, as it is the latest. Mud-pies gratify one of our first and best instincts. So long as we are dirty, we are pure. Fondness for the ground comes back to a man after he has run the round of pleasure and business, eaten dirt, and sown wild-oats, drifted about the world, and taken the wind of all its moods. The love of digging in the ground (or of looking on while he pays another to dig) is as sure to come back to him as he is sure, at last, to go under the ground, and stay there. To own a bit of ground, to scratch it with a hoe, to plant seeds and watch, their renewal of life, this is the commonest delight of the race, the most satisfactory thing a man can do. When Cicero writes of the pleasures of old age, that of agriculture is chief among them:

“Venio nunc ad voluptates agricoliarum, quibus ego incredibiliter delector: quae nec ulla impediuntur senectute, et mihi ad sapientis vitam proxime videntur accedere.” (I am driven to Latin because New York editors have exhausted the English language in the praising of spring, and especially of the month of May.)

Let us celebrate the soil. Most men toil that they may own a piece of it; they measure their success in life by their ability to buy it. It is alike the passion of the parvenu and the pride of the aristocrat. Broad acres are a patent of nobility; and no man but feels more, of a man in the world if he have a bit of ground that he can call his own. However small it is on the surface, it is four thousand miles deep; and that is a very handsome property. And there is a great pleasure in working in the soil, apart from the ownership of it. The man who

has planted a garden feels that he has done something for the good of the World. He belongs to the producers. It is a pleasure to eat of the fruit of one's toil, if it be nothing more than a head of lettuce or an ear of corn. One cultivates a lawn even with great satisfaction; for there is nothing more beautiful than grass and turf in our latitude. The tropics may have their delights, but they have not turf: and the world without turf is a dreary desert. The original Garden of Eden could not have had such turf as one sees in England. The Teutonic races all love turf: they emigrate in the line of its growth.

To dig in the mellow soil-to dig moderately, for all pleasure should be taken sparingly—is a great thing. One gets strength out of the ground as often as one really touches it with a hoe. Antaeus (this is a classical article) was no doubt an agriculturist; and such a prize-fighter as Hercules could n't do anything with him till he got him to lay down his spade, and quit the soil. It is not simply beets and potatoes and corn and string-beans that one raises in his well-hoed garden: it is the average of human life. There is life in the ground; it goes into the seeds; and it also, when it is stirred up, goes into the man who stirs it. The hot sun on his back as he bends to his shovel and hoe, or contemplatively rakes the warm and fragrant loam, is better than much medicine. The buds are coming out on the bushes round about; the blossoms of the fruit trees begin to show; the blood is running up the grapevines in streams; you can smell the Wild flowers on the near bank; and the birds are flying and glancing and singing everywhere. To the open kitchen door comes the busy housewife to shake a white something, and stands a moment to look, quite transfixed by the delightful sights and sounds. Hoeing in the garden on a bright, soft May day, when you are not obliged to, is nearly equal to the delight of going trouting.

Blessed be agriculture! if one does not have too much of it. All literature is fragrant with it, in a gentlemanly way. At the foot of the charming olive-covered hills of Tivoli, Horace (not he of Chappaqua) had a sunny farm: it was in sight of Hadrian's villa, who did landscape gardening on an extensive scale, and probably did not get half as much comfort out of it as Horace did from his more simply tilled acres. We trust that Horace did a little hoeing and farming himself, and that his verse is not all fraudulent sentiment. In order to enjoy agriculture, you do not want too much of it, and you want to be poor enough to have a little inducement to work moderately yourself. Hoe while it is spring, and enjoy the best anticipations. It is not much matter if things do not turn out well.

FIRST WEEK

Under this modest title, I purpose to write a series of papers, some of which will be like many papers of garden-seeds, with nothing vital in them, on the subject of gardening; holding that no man has any right to keep valuable knowledge to himself, and hoping that those who come after me, except tax-gatherers and that sort of person, will find profit in the perusal of my experience. As my knowledge is constantly increasing, there is likely to be no end to these papers. They will pursue no orderly system of agriculture or horticulture, but range from topic to topic, according to the weather and the progress of the weeds, which may drive me from one corner of the garden to the other.

The principal value of a private garden is not understood. It is not to give the possessor vegetables or fruit (that can be better and cheaper done by the market-gardeners), but to teach him patience and philosophy and the higher virtues, hope deferred and expectations blighted, leading directly to resignation and sometimes to alienation. The garden thus becomes a moral agent, a test of character, as it was in the beginning. I shall keep this central truth in mind in these articles. I mean to have a moral garden, if it is not a productive one,—one that shall teach, O my brothers! O my sisters! the great lessons of life.

The first pleasant thing about a garden in this latitude is, that you never know when to set it going. If you want anything to come to maturity early, you must start it in a hot-house. If you put it out early, the chances are all in favor of getting it nipped with frost; for the thermometer will be 90 deg. one day, and go below 32 deg. the night of the day following. And, if you do not set out plants or sow seeds early, you fret continually; knowing that your vegetables will be late, and that, while Jones has early peas, you will be watching your slow-forming pods. This keeps you in a state of mind. When you have planted anything early, you are doubtful whether to desire to see it above ground, or not. If a hot day comes, you long to see the young plants; but, when a cold north wind brings frost, you tremble lest the seeds have burst their bands. Your spring is passed in anxious doubts and fears, which are usually realized; and so a great moral discipline is worked out for you.

Now, there is my corn, two or three inches high this 18th of May, and apparently having no fear of a frost. I was hoeing it this morning for the first time,—it is not well usually to hoe corn until about the 18th of May,—when Polly came out to look at the Lima beans. She seemed to think the poles had come up beautifully. I thought they did look well: they are a fine set of poles, large and well grown, and stand straight. They were inexpensive, too. The cheapness came about from my cutting them on another man's land, and he did not know it. I have not examined this transaction in the moral light of gardening; but I know people in this country take great liberties at the polls. Polly noticed that the beans had not themselves come up in any proper sense, but that the dirt had got off from them, leaving them uncovered. She thought it would be well to sprinkle a slight layer of dirt over them; and I, indulgently, consented. It occurred to me, when she had gone, that beans always come up that way,—wrong end first; and that what they wanted was light, and not dirt.

Observation.—Woman always did, from the first, make a muss in a garden.

I inherited with my garden a large patch of raspberries. Splendid berry the raspberry, when the strawberry has gone. This patch has grown into such a defiant attitude, that you could not get within several feet of it. Its stalks were enormous in size, and cast out long, prickly arms in all directions; but the bushes were pretty much all dead. I have walked into them a good deal with a pruning-knife; but it is very much like fighting original sin. The variety is one that I can recommend. I think it is called Brinckley's Orange. It is exceedingly prolific, and has enormous stalks. The fruit is also said to be good; but that does not matter so much, as the plant does not often bear in this region. The stalks seem to be biennial institutions; and as they get about their growth one year, and bear the next year, and then die, and the winters here nearly always kill them, unless you take them into the house (which is inconvenient if you have a family of small children), it is very difficult to induce the plant to flower and fruit. This is the greatest objection there is to this sort of raspberry. I think of keeping these for discipline, and setting out some others, more hardy sorts, for fruit.

SECOND WEEK

Next to deciding when to start your garden, the most important matter is, what to put in it. It is difficult to decide what to order for dinner on a given day: how much more oppressive is it to order in a lump an endless vista of dinners, so to speak! For, unless your garden is a boundless prairie (and mine seems to me to be that when I hoe it on hot days), you must make a selection, from the great variety of vegetables, of those you will raise in it; and you feel rather bound to supply your own table from your own garden, and to eat only as you have sown.

I hold that no man has a right (whatever his sex, of course) to have a garden to his own selfish uses. He ought not to please himself, but every man to please his neighbor. I tried to have a garden that would give general moral satisfaction. It seemed to me that nobody could object to potatoes (a most useful vegetable); and I began to plant them freely. But there was a chorus of protest against them. "You don't want to take up your ground with potatoes," the neighbors said; "you can buy potatoes" (the very thing I wanted to avoid doing is buying things). "What you want is the perishable things that you cannot get fresh in the market."—"But what kind of perishable things?" A horticulturist of eminence wanted me to sow lines of straw-berries and raspberries right over where I had put my potatoes in drills. I had about five hundred strawberry-plants in another part of my garden; but this fruit-fanatic wanted me to turn my whole patch into vines and runners. I suppose I could raise strawberries enough for all my neighbors; and perhaps I ought to do it. I had a little space prepared for melons,—muskmelons,—which I showed to an experienced friend.

"You are not going to waste your ground on muskmelons?" he asked. "They rarely ripen in this climate thoroughly, before frost." He had tried for years without luck. I resolved to not go into such a foolish experiment. But, the next day, another neighbor happened in. "Ah! I see you are going to have melons. My family would rather give up anything else in the garden than musk-melons,—of the nutmeg variety. They are the most grateful things we have on the table." So there it was. There was no compromise: it was melons, or no melons, and somebody offended in any case. I half resolved to plant them a little late, so that they would, and they would n't. But I had the same difficulty about string-beans (which I detest), and squash (which I tolerate), and parsnips, and the whole round of green things.

I have pretty much come to the conclusion that you have got to put your foot down in gardening. If I had actually taken counsel of my friends, I should not have had a thing growing in the garden to-day but weeds. And besides, while you are waiting, Nature does not wait. Her mind is made up. She knows just what she will raise; and she has an infinite variety of early and late. The most humiliating thing to me about a garden is the lesson it teaches of the inferiority of man. Nature is prompt, decided, inexhaustible. She thrusts up her plants with a vigor and freedom that I admire; and the more worthless the plant, the more rapid and splendid its growth. She is at it early and late, and all night; never tiring, nor showing the least sign of exhaustion.

"Eternal gardening is the price of liberty," is a motto that I should put over the gateway of my garden, if I had a gate. And yet it is not wholly true; for there is no liberty in gardening. The man who undertakes a garden is relentlessly pursued. He felicitates himself that, when he gets it once planted, he will have a season of rest and of enjoyment in the sprouting and growing of his seeds. It is a green anticipation. He has planted a seed that will keep him awake nights; drive rest from his bones, and sleep from his pillow. Hardly is the garden planted, when he must begin to hoe it. The weeds have sprung up all over it in a night. They shine and wave in redundant life. The docks have almost gone to seed; and their roots go deeper than conscience. Talk about the London Docks!—the roots of these are like the sources of the Aryan race. And the weeds are not all. I awake in the morning (and a thriving garden will wake a person up two hours before he ought to be out of bed) and think of the tomato-plants,—the leaves like fine lace-work, owing to black bugs that skip around, and can't be caught. Somebody ought to get up before the dew is off (why don't the dew stay on till after a reasonable breakfast?) and sprinkle soot on the leaves. I wonder if it is I. Soot is so much blacker than the bugs, that they are disgusted, and go away. You can't get up too early, if you have a garden. You must be early due yourself, if you get ahead of the bugs. I think, that, on the whole, it would be best to sit up all night, and sleep daytimes. Things appear to go on in the night in the garden uncommonly. It would be less trouble to stay up than it is to get up so early.

I have been setting out some new raspberries, two sorts,—a silver and a gold color. How fine they will look on the table next year in a cut-glass dish, the cream being in a ditto pitcher! I set them four and five feet apart. I set my strawberries pretty well apart also. The reason is, to give room for the cows to run through when they break into the garden,—as they do sometimes. A cow needs a broader track than a locomotive; and she generally makes one. I am sometimes astonished, to see how big a space in, a flower-bed her foot will cover. The raspberries are called Doolittle and Golden Cap. I don't like the name of the first variety, and, if they do much, shall change it to Silver Top. You never can tell what a thing named Doolittle will do. The one

in the Senate changed color, and got sour. They ripen badly,—either mildew, or rot on the bush. They are apt to Johnsonize,—rot on the stem. I shall watch the Doolittles.

THIRD WEEK

I believe that I have found, if not original sin, at least vegetable total depravity in my garden; and it was there before I went into it. It is the bunch, or joint, or snakegrass,—whatever it is called. As I do not know the names of all the weeds and plants, I have to do as Adam did in his garden,—name things as I find them. This grass has a slender, beautiful stalk: and when you cut it down, or pull up a long root of it, you fancy it is got rid of; but in a day or two it will come up in the same spot in half a dozen vigorous blades. Cutting down and pulling up is what it thrives on. Extermination rather helps it. If you follow a slender white root, it will be found to run under the ground until it meets another slender white root; and you will soon unearth a network of them, with a knot somewhere, sending out dozens of sharp-pointed, healthy shoots, every joint prepared to be an independent life and plant. The only way to deal with it is to take one part hoe and two parts fingers, and carefully dig it out, not leaving a joint anywhere. It will take a little time, say all summer, to dig out thoroughly a small patch; but if you once dig it out, and keep it out, you will have no further trouble.

I have said it was total depravity. Here it is. If you attempt to pull up and root out any sin in you, which shows on the surface,—if it does not show, you do not care for it,—you may have noticed how it runs into an interior network of sins, and an ever-sprouting branch of them roots somewhere; and that you cannot pull out one without making a general internal disturbance, and rooting up your whole being. I suppose it is less trouble to quietly cut them off at the top—say once a week, on Sunday, when you put on your religious clothes and face so that no one will see them, and not try to eradicate the network within.

Remark.—This moral vegetable figure is at the service of any clergyman who will have the manliness to come forward and help me at a day's hoeing on my potatoes. None but the orthodox need apply.

I, however, believe in the intellectual, if not the moral, qualities of vegetables, and especially weeds. There was a worthless vine that (or who) started up about midway between a grape-trellis and a row of bean-poles, some three feet from each, but a little nearer the trellis. When it came out of the ground, it looked around to see what it should do. The trellis was already occupied. The bean-pole was empty. There was evidently a little the best chance of light, air, and sole proprietorship on the pole. And the vine started for the pole, and began to climb it with determination. Here was as distinct an act of choice, of reason, as a boy exercises when he goes into a forest, and, looking about, decides which tree he will climb. And, besides, how did the vine know enough to travel in exactly the right direction, three feet, to find what it wanted? This is intellect. The weeds, on the other hand, have hateful moral qualities. To cut down a weed is, therefore, to do a moral action. I feel as if I were destroying sin. My hoe becomes an instrument of retributive justice. I am an apostle of Nature. This view of the matter lends a dignity to the art of hoeing which nothing else does, and lifts it into the region of ethics. Hoeing becomes, not a pastime, but a duty. And you get to regard it so, as the days and the weeds lengthen.

Observation.—Nevertheless, what a man needs in gardening is a cast-iron back,—with a hinge in it. The hoe is an ingenious instrument, calculated to call out a great deal of strength at a great disadvantage.

The striped bug has come, the saddest of the year. He is a moral double-ender, iron-clad at that. He is unpleasant in two ways. He burrows in the ground so that you cannot find him, and he flies away so that you cannot catch him. He is rather handsome, as bugs go, but utterly dastardly, in that he gnaws the stem of the plant close to the ground, and ruins it without any apparent advantage to himself. I find him on the hills of cucumbers (perhaps it will be a cholera-year, and we shall not want any), the squashes (small loss), and the melons (which never ripen). The best way to deal with the striped bug is to sit down by the hills, and patiently watch for him. If you are spry, you can annoy him. This, however, takes time. It takes all day and part of the night. For he flieth in darkness, and wasteth at noonday. If you get up before the dew is off the plants,—it goes off very early,—you can sprinkle soot on the plant (soot is my panacea: if I can get the disease of a plant reduced to the necessity of soot, I am all right) and soot is unpleasant to the bug. But the best thing to do is to set a toad to catch the bugs. The toad at once establishes the most intimate relations with the bug. It is a pleasure to see such unity among the lower animals. The difficulty is to make the toad stay and watch the hill.

If you know your toad, it is all right. If you do not, you must build a tight fence round the plants, which the toad cannot jump over. This, however, introduces a new element. I find that I have a zoological garden on my hands. It is an unexpected result of my little enterprise, which never aspired to the completeness of the Paris "Jardin des Plantes."

FOURTH WEEK

Orthodoxy is at a low ebb. Only two clergymen accepted my offer to come and help hoe my potatoes for the privilege of using my vegetable total-depravity figure about the snake-grass, or quack-grass as some call it; and those two did not bring hoes. There seems to be a lack of disposition to hoe among our educated clergy. I am bound to say that these two, however, sat and watched my vigorous combats with the weeds, and talked most beautifully about the application of the snake-grass figure. As, for instance, when a fault or sin showed on the surface of a man, whether, if you dug down, you would find that it ran back and into the original organic bunch of original sin within the man. The only other clergyman who came was from out of town,—a half Universalist, who said he wouldn't give twenty cents for my figure. He said that the snake-grass was not in my garden originally, that it sneaked in under the sod, and that it could be entirely rooted out with industry and patience. I asked the Universalist-inclined man to take my hoe and try it; but he said he had n't time, and went away.

But, jubilate, I have got my garden all hoed the first time! I feel as if I had put down the rebellion. Only there are guerrillas left here and there, about the borders and in corners, unsubdued,—Forrest docks, and Quantrell grass, and Beauregard pig-weeds. This first hoeing is a gigantic task: it is your first trial of strength with the never-sleeping forces of Nature. Several times, in its progress, I was tempted to do as Adam did, who abandoned his garden on account of the weeds. (How much my mind seems to run upon Adam, as if there had been only two really moral gardens,—Adam's and mine!) The only drawback to my rejoicing over the finishing of the first hoeing is, that the garden now wants hoeing the second time. I suppose, if my garden were planted in a perfect circle, and I started round it with a hoe, I should never see an opportunity to rest. The fact is, that gardening is the old fable of perpetual labor; and I, for one, can never forgive Adam Sisyphus, or whoever it was, who let in the roots of discord. I had pictured myself sitting at eve, with my family, in the shade of twilight, contemplating a garden hoed. Alas! it is a dream not to be realized in this world.

My mind has been turned to the subject of fruit and shade trees in a garden. There are those who say that trees shade the garden too much, and interfere with the growth of the vegetables. There may be something in

this: but when I go down the potato rows, the rays of the sun glancing upon my shining blade, the sweat pouring from my face, I should be grateful for shade. What is a garden for? The pleasure of man. I should take much more pleasure in a shady garden. Am I to be sacrificed, broiled, roasted, for the sake of the increased vigor of a few vegetables? The thing is perfectly absurd. If I were rich, I think I would have my garden covered with an awning, so that it would be comfortable to work in it. It might roll up and be removable, as the great awning of the Roman Coliseum was,—not like the Boston one, which went off in a high wind. Another very good way to do, and probably not so expensive as the awning, would be to have four persons of foreign birth carry a sort of canopy over you as you hoed. And there might be a person at each end of the row with some cool and refreshing drink. Agriculture is still in a very barbarous stage. I hope to live yet to see the day when I can do my gardening, as tragedy is done, to slow and soothing music, and attended by some of the comforts I have named. These things come so forcibly into my mind sometimes as I work, that perhaps, when a wandering breeze lifts my straw hat, or a bird lights on a near currant-bush, and shakes out a full-throated summer song, I almost expect to find the cooling drink and the hospitable entertainment at the end of the row. But I never do. There is nothing to be done but to turn round, and hoe back to the other end.

Speaking of those yellow squash-bugs, I think I disheartened them by covering the plants so deep with soot and wood-ashes that they could not find them; and I am in doubt if I shall ever see the plants again. But I have heard of another defense against the bugs. Put a fine wire-screen over each hill, which will keep out the bugs and admit the rain. I should say that these screens would not cost much more than the melons you would be likely to get from the vines if you bought them; but then think of the moral satisfaction of watching the bugs hovering over the screen, seeing, but unable to reach the tender plants within. That is worth paying for.

I left my own garden yesterday, and went over to where Polly was getting the weeds out of one of her flower-beds. She was working away at the bed with a little hoe. Whether women ought to have the ballot or not (and I have a decided opinion on that point, which I should here plainly give, did I not fear that it would injure my agricultural influence), 'I am compelled to say that this was rather helpless hoeing. It was patient, conscientious, even pathetic hoeing; but it was neither effective nor finished. When completed, the bed looked somewhat as if a hen had scratched it: there was that touching unevenness about it. I think no one could look at it and not be affected. To be sure, Polly smoothed it off with a rake, and asked me if it was n't nice; and I said it was. It was not a favorable time for me to explain the difference between puttering hoeing, and the broad, free sweep of the instrument, which kills the weeds, spares the plants, and loosens the soil without leaving it in holes and hills. But, after all, as life is constituted, I think more of Polly's honest and anxious care of her plants than of the most finished gardening in the world.

FIFTH WEEK

I left my garden for a week, just at the close of the dry spell. A season of rain immediately set in, and when I returned the transformation was wonderful. In one week every vegetable had fairly jumped forward. The tomatoes which I left slender plants, eaten of bugs and debating whether they would go backward or forward, had become stout and lusty, with thick stems and dark leaves, and some of them had blossomed. The corn waved like that which grows so rank out of the French-English mixture at Waterloo. The squashes—I will not speak of the squashes. The most remarkable growth was the asparagus. There was not a spear above ground when I went away; and now it had sprung up, and gone to seed, and there were stalks higher than my head. I am entirely aware of the value of words, and of moral obligations. When I say that the asparagus had grown six feet in seven days, I expect and wish to be believed. I am a little particular about the statement; for, if there is any prize offered for asparagus at the next agricultural fair, I wish to compete,—speed to govern. What I claim is the fastest asparagus. As for eating purposes, I have seen better. A neighbor of mine, who looked in at the growth of the bed, said, "Well, he'd be ——": but I told him there was no use of affirming now; he might keep his oath till I wanted it on the asparagus affidavit. In order to have this sort of asparagus, you want to manure heavily in the early spring, fork it in, and top-dress (that sounds technical) with a thick layer of chloride of sodium: if you cannot get that, common salt will do, and the neighbors will never notice whether it is the orthodox Na. Cl. 58-5, or not.

I scarcely dare trust myself to speak of the weeds. They grow as if the devil was in them. I know a lady, a member of the church, and a very good sort of woman, considering the subject condition of that class, who says that the weeds work on her to that extent, that, in going through her garden, she has the greatest difficulty in keeping the ten commandments in anything like an unfractured condition. I asked her which one, but she said, all of them: one felt like breaking the whole lot. The sort of weed which I most hate (if I can be said to hate anything which grows in my own garden) is the "pusley," a fat, ground-clinging, spreading, greasy thing, and the most propagatious (it is not my fault if the word is not in the dictionary) plant I know. I saw a Chinaman, who came over with a returned missionary, and pretended to be converted, boil a lot of it in a pot, stir in eggs, and mix and eat it with relish,—“Me likee he.” It will be a good thing to keep the Chinamen on when they come to do our gardening. I only fear they will cultivate it at the expense of the strawberries and melons. Who can say that other weeds, which we despise, may not be the favorite food of some remote people or tribe? We ought to abate our conceit. It is possible that we destroy in our gardens that which is really of most value in some other place. Perhaps, in like manner, our faults and vices are virtues in some remote planet. I cannot see, however, that this thought is of the slightest value to us here, any more than weeds are.

There is another subject which is forced upon my notice. I like neighbors, and I like chickens; but I do not think they ought to be united near a garden. Neighbors' hens in your garden are an annoyance. Even if they did not scratch up the corn, and peck the strawberries, and eat the tomatoes, it is not pleasant to see them straddling about in their jerky, high-stepping, speculative manner, picking inquisitively here and there. It is of

no use to tell the neighbor that his hens eat your tomatoes: it makes no impression on him, for the tomatoes are not his. The best way is to casually remark to him that he has a fine lot of chickens, pretty well grown, and that you like spring chickens broiled. He will take them away at once.

The neighbors' small children are also out of place in your garden, in strawberry and currant time. I hope I appreciate the value of children. We should soon come to nothing without them, though the Shakers have the best gardens in the world. Without them the common school would languish. But the problem is, what to do with them in a garden. For they are not good to eat, and there is a law against making away with them. The law is not very well enforced, it is true; for people do thin them out with constant dosing, paregoric, and soothing-syrups, and scanty clothing. But I, for one, feel that it would not be right, aside from the law, to take the life, even of the smallest child, for the sake of a little fruit, more or less, in the garden. I may be wrong; but these are my sentiments, and I am not ashamed of them. When we come, as Bryant says in his "Iliad," to leave the circus of this life, and join that innumerable caravan which moves, it will be some satisfaction to us, that we have never, in the way of gardening, disposed of even the humblest child unnecessarily. My plan would be to put them into Sunday-schools more thoroughly, and to give the Sunday-schools an agricultural turn; teaching the children the sacredness of neighbors' vegetables. I think that our Sunday-schools do not sufficiently impress upon children the danger, from snakes and otherwise, of going into the neighbors' gardens.

SIXTH WEEK

Somebody has sent me a new sort of hoe, with the wish that I should speak favorably of it, if I can consistently. I willingly do so, but with the understanding that I am to be at liberty to speak just as courteously of any other hoe which I may receive. If I understand religious morals, this is the position of the religious press with regard to bitters and wringing-machines. In some cases, the responsibility of such a recommendation is shifted upon the wife of the editor or clergy-man. Polly says she is entirely willing to make a certificate, accompanied with an affidavit, with regard to this hoe; but her habit of sitting about the garden walk, on an inverted flower-pot, while I hoe, some what destroys the practical value of her testimony.

As to this hoe, I do not mind saying that it has changed my view of the desirableness and value of human life. It has, in fact, made life a holiday to me. It is made on the principle that man is an upright, sensible, reasonable being, and not a groveling wretch. It does away with the necessity of the hinge in the back. The handle is seven and a half feet long. There are two narrow blades, sharp on both edges, which come together at an obtuse angle in front; and as you walk along with this hoe before you, pushing and pulling with a gentle motion, the weeds fall at every thrust and withdrawal, and the slaughter is immediate and widespread. When I got this hoe I was troubled with sleepless mornings, pains in the back, kleptomania with regard to new weeders; when I went into my garden I was always sure to see something. In this disordered state of mind and body I got this hoe. The morning after a day of using it I slept perfectly and late. I regained my respect for the eighth commandment. After two doses of the hoe in the garden, the weeds entirely disappeared. Trying it a third morning, I was obliged to throw it over the fence in order to save from destruction the green things that ought to grow in the garden. Of course, this is figurative language. What I mean is, that the fascination of using this hoe is such that you are sorely tempted to employ it upon your vegetables, after the weeds are laid low, and must hastily withdraw it, to avoid unpleasant results. I make this explanation, because I intend to put nothing into these agricultural papers that will not bear the strictest scientific investigation; nothing that the youngest child cannot understand and cry for; nothing that the oldest and wisest men will not need to study with care.

I need not add that the care of a garden with this hoe becomes the merest pastime. I would not be without one for a single night. The only danger is, that you may rather make an idol of the hoe, and somewhat neglect your garden in explaining it, and fooling about with it. I almost think that, with one of these in the hands of an ordinary day-laborer, you might see at night where he had been working.

Let us have peas. I have been a zealous advocate of the birds. I have rejoiced in their multiplication. I have endured their concerts at four o'clock in the morning without a murmur. Let them come, I said, and eat the worms, in order that we, later, may enjoy the foliage and the fruits of the earth. We have a cat, a magnificent animal, of the sex which votes (but not a pole-cat),—so large and powerful that, if he were in the army, he would be called Long Tom. He is a cat of fine disposition, the most irreproachable morals I ever saw thrown away in a cat, and a splendid hunter. He spends his nights, not in social dissipation, but in gathering in rats, mice, flying-squirrels, and also birds. When he first brought me a bird, I told him that it was wrong, and tried to convince him, while he was eating it, that he was doing wrong; for he is a reasonable cat, and understands pretty much everything except the binomial theorem and the time down the cycloidal arc. But with no effect. The killing of birds went on, to my great regret and shame.

The other day I went to my garden to get a mess of peas. I had seen, the day before, that they were just ready to pick. How I had lined the ground, planted, hoed, bushed them! The bushes were very fine,—seven feet high, and of good wood. How I had delighted in the growing, the blowing, the podding! What a touching thought it was that they had all podded for me! When I went to pick them, I found the pods all split open, and the peas gone. The dear little birds, who are so fond of the strawberries, had eaten them all. Perhaps there were left as many as I planted: I did not count them. I made a rapid estimate of the cost of the seed, the interest of the ground, the price of labor, the value of the bushes, the anxiety of weeks of watchfulness. I looked about me on the face of Nature. The wind blew from the south so soft and treacherous! A thrush sang in the woods so deceitfully! All Nature seemed fair. But who was to give me back my peas? The fowls of the air have peas; but what has man?

I went into the house. I called Calvin. (That is the name of our cat, given him on account of his gravity,

morality, and uprightness. We never familiarly call him John). I petted Calvin. I lavished upon him an enthusiastic fondness. I told him that he had no fault; that the one action that I had called a vice was an heroic exhibition of regard for my interests. I bade him go and do likewise continually. I now saw how much better instinct is than mere unguided reason. Calvin knew. If he had put his opinion into English (instead of his native catalogue), it would have been: "You need not teach your grandmother to suck eggs." It was only the round of Nature. The worms eat a noxious something in the ground. The birds eat the worms. Calvin eats the birds. We eat—no, we do not eat Calvin. There the chain stops. When you ascend the scale of being, and come to an animal that is, like ourselves, inedible, you have arrived at a result where you can rest. Let us respect the cat. He completes an edible chain.

I have little heart to discuss methods of raising peas. It occurs to me that I can have an iron peabush, a sort of trellis, through which I could discharge electricity at frequent intervals, and electrify the birds to death when they alight: for they stand upon my beautiful brush in order to pick out the peas. An apparatus of this kind, with an operator, would cost, however, about as much as the peas. A neighbor suggests that I might put up a scarecrow near the vines, which would keep the birds away. I am doubtful about it: the birds are too much accustomed to seeing a person in poor clothes in the garden to care much for that. Another neighbor suggests that the birds do not open the pods; that a sort of blast, apt to come after rain, splits the pods, and the birds then eat the peas. It may be so. There seems to be complete unity of action between the blast and the birds. But, good neighbors, kind friends, I desire that you will not increase, by talk, a disappointment which you cannot assuage.

SEVENTH WEEK

A garden is an awful responsibility. You never know what you may be aiding to grow in it. I heard a sermon, not long ago, in which the preacher said that the Christian, at the moment of his becoming one, was as perfect a Christian as he would be if he grew to be an archangel; that is, that he would not change thereafter at all, but only develop. I do not know whether this is good theology, or not; and I hesitate to support it by an illustration from my garden, especially as I do not want to run the risk of propagating error, and I do not care to give away these theological comparisons to clergymen who make me so little return in the way of labor. But I find, in dissecting a pea-blossom, that hidden in the center of it is a perfect miniature pea-pod, with the peas all in it,—as perfect a pea-pod as it will ever be, only it is as tiny as a chatelaine ornament. Maize and some other things show the same precocity. This confirmation of the theologic theory is startling, and sets me meditating upon the moral possibilities of my garden. I may find in it yet the cosmic egg.

And, speaking of moral things, I am half determined to petition the Ecumenical Council to issue a bull of excommunication against "pusley." Of all the forms which "error" has taken in this world, I think that is about the worst. In the Middle Ages the monks in St. Bernard's ascetic community at Clairvaux excommunicated a vineyard which a less rigid monk had planted near, so that it bore nothing. In 1120 a bishop of Laon excommunicated the caterpillars in his diocese; and, the following year, St. Bernard excommunicated the flies in the Monastery of Foigny; and in 1510 the ecclesiastical court pronounced the dread sentence against the rats of Autun, Macon, and Lyons. These examples are sufficient precedents. It will be well for the council, however, not to publish the bull either just before or just after a rain; for nothing can kill this pestilent heresy when the ground is wet.

It is the time of festivals. Polly says we ought to have one,—a strawberry-festival. She says they are perfectly delightful: it is so nice to get people together!—this hot weather. They create such a good feeling! I myself am very fond of festivals. I always go,—when I can consistently. Besides the strawberries, there are ice creams and cake and lemonade, and that sort of thing; and one always feels so well the next day after such a diet! But as social reunions, if there are good things to eat, nothing can be pleasanter; and they are very profitable, if you have a good object. I agreed that we ought to have a festival; but I did not know what object to devote it to. We are not in need of an organ, nor of any pulpit-cushions. I do not know that they use pulpit-cushions now as much as they used to, when preachers had to have something soft to pound, so that they would not hurt their fists. I suggested pocket handkerchiefs, and flannels for next winter. But Polly says that will not do at all. You must have some charitable object,—something that appeals to a vast sense of something; something that it will be right to get up lotteries and that sort of thing for. I suggest a festival for the benefit of my garden; and this seems feasible. In order to make everything pass off pleasantly, invited guests will bring or send their own strawberries and cream, which I shall be happy to sell to them at a slight advance. There are a great many improvements which the garden needs; among them a sounding-board, so that the neighbors' children can hear when I tell them to get a little farther off from the currant-bushes. I should also like a selection from the ten commandments, in big letters, posted up conspicuously, and a few traps, that will detain, but not maim, for the benefit of those who cannot read. But what is most important is, that the ladies should crochet nets to cover over the strawberries. A good-sized, well-managed festival ought to produce nets enough to cover my entire beds; and I can think of no other method of preserving the berries from the birds next year. I wonder how many strawberries it would need for a festival and whether they would cost more than the nets.

I am more and more impressed, as the summer goes on, with the inequality of man's fight with Nature; especially in a civilized state. In savagery, it does not much matter; for one does not take a square hold, and put out his strength, but rather accommodates himself to the situation, and takes what he can get, without raising any dust, or putting himself into everlasting opposition. But the minute he begins to clear a spot larger than he needs to sleep in for a night, and to try to have his own way in the least, Nature is at once up, and vigilant, and contests him at every step with all her ingenuity and unwearied vigor. This talk of subduing Nature is pretty much nonsense. I do not intend to surrender in the midst of the summer campaign, yet I cannot but think how much more peaceful my relations would now be with the primal forces, if I had, let Nature make the garden according to her own notion. (This is written with the thermometer at ninety degrees, and the weeds starting up with a freshness and vigor, as if they had just thought of it for the first time, and had not been cut down and dragged out every other day since the snow went off.)

We have got down the forests, and exterminated savage beasts; but Nature is no more subdued than before: she only changes her tactics,—uses smaller guns, so to speak. She reenforces herself with a variety of bugs, worms, and vermin, and weeds, unknown to the savage state, in order to make war upon the things of our planting; and calls in the fowls of the air, just as we think the battle is won, to snatch away the booty. When one gets almost weary of the struggle, she is as fresh as at the beginning,—just, in fact, ready for the fray. I, for my part, begin to appreciate the value of frost and snow; for they give the husbandman a little peace, and enable him, for a season, to contemplate his incessant foe subdued. I do not wonder that the tropical people, where Nature never goes to sleep, give it up, and sit in lazy acquiescence.

Here I have been working all the season to make a piece of lawn. It had to be graded and sowed and rolled; and I have been shaving it like a barber. When it was soft, everything had a tendency to go on to it,—cows, and especially wandering hackmen. Hackmen (who are a product of civilization) know a lawn when they see it. They rather have a fancy for it, and always try to drive so as to cut the sharp borders of it, and leave the marks of their wheels in deep ruts of cut-up, ruined turf. The other morning, I had just been running the mower over the lawn, and stood regarding its smoothness, when I noticed one, two, three puffs of fresh earth in it; and, hastening thither, I found that the mole had arrived to complete the work of the hackmen. In a half-hour he had rooted up the ground like a pig. I found his run-ways. I waited for him with a spade. He did not appear; but, the next time I passed by, he had ridged the ground in all directions,—a smooth, beautiful animal, with fur like silk, if you could only catch him. He appears to enjoy the lawn as much as the hackmen did. He does not care how smooth it is. He is constantly mining, and ridging it up. I am not sure but he could be countermined. I have half a mind to put powder in here and there, and blow the whole thing into the air. Some folks set traps for the mole; but my moles never seem to go twice in the same place. I am not sure but it would bother them to sow the lawn with interlacing snake-grass (the botanical name of which, somebody writes me, is devil-grass: the first time I have heard that the Devil has a botanical name), which would worry them, if it is as difficult for them to get through it as it is for me.

I do not speak of this mole in any tone of complaint. He is only a part of the untiring resources which Nature brings against the humble gardener. I desire to write nothing against him which I should wish to recall at the last,—nothing foreign to the spirit of that beautiful saying of the dying boy, "He had no copy-book, which, dying, he was sorry he had blotted."

EIGHTH WEEK

My garden has been visited by a High Official Person. President Gr-nt was here just before the Fourth, getting his mind quiet for that event by a few days of retirement, staying with a friend at the head of our street; and I asked him if he wouldn't like to come down our way Sunday afternoon and take a plain, simple look at my garden, eat a little lemon ice-cream and jelly-cake, and drink a glass of native lager-beer. I thought of putting up over my gate, "Welcome to the Nation's Gardener;" but I hate nonsense, and did n't do it. I, however, hoed diligently on Saturday: what weeds I could n't remove I buried, so that everything would look all right. The borders of my drive were trimmed with scissors; and everything that could offend the Eye of the Great was hustled out of the way.

In relating this interview, it must be distinctly understood that I am not responsible for anything that the President said; nor is he, either. He is not a great speaker; but whatever he says has an esoteric and an exoteric meaning; and some of his remarks about my vegetables went very deep. I said nothing to him whatever about politics, at which he seemed a good deal surprised: he said it was the first garden he had ever been in, with a man, when the talk was not of appointments. I told him that this was purely vegetable; after which he seemed more at his ease, and, in fact, delighted with everything he saw. He was much interested in my strawberry-beds, asked what varieties I had, and requested me to send him some seed. He said the patent-office seed was as difficult to raise as an appropriation for the St. Domingo business. The playful bean seemed also to please him; and he said he had never seen such impressive corn and potatoes at this time of year; that it was to him an unexpected pleasure, and one of the choicest memories that he should take away with him of his visit to New England.

N. B.—That corn and those potatoes which General Gr-nt looked at I will sell for seed, at five dollars an ear, and one dollar a potato. Office-seekers need not apply.

Knowing the President's great desire for peas, I kept him from that part of the garden where the vines grow. But they could not be concealed. Those who say that the President is not a man easily moved are knaves or fools. When he saw my pea-pods, ravaged by the birds, he burst into tears. A man of war, he knows the value of peas. I told him they were an excellent sort, "The Champion of England." As quick as a flash he said, "Why don't you call them 'The Reverdy Johnson'?"

"He burst into tears." — Page 74.

It was a very clever bon-mot; but I changed the subject.

The sight of my squashes, with stalks as big as speaking-trumpets, restored the President to his usual spirits. He said the summer squash was the most ludicrous vegetable he knew. It was nearly all leaf and blow, with only a sickly, crook-necked fruit after a mighty fuss. It reminded him of the member of Congress from...; but I hastened to change the subject.

As we walked along, the keen eye of the President rested upon some handsome sprays of "pusley," which must have grown up since Saturday night. It was most fortunate; for it led his Excellency to speak of the

Chinese problem. He said he had been struck with one, coupling of the Chinese and the "pusley" in one of my agricultural papers; and it had a significance more far-reaching than I had probably supposed. He had made the Chinese problem a special study. He said that I was right in saying that "pusley" was the natural food of the Chinaman, and that where the "pusley" was, there would the Chinaman be also. For his part, he welcomed the Chinese emigration: we needed the Chinaman in our gardens to eat the "pusley;" and he thought the whole problem solved by this simple consideration. To get rid of rats and "pusley," he said, was a necessity of our civilization. He did not care so much about the shoe-business; he did not think that the little Chinese shoes that he had seen would be of service in the army: but the garden-interest was quite another affair. We want to make a garden of our whole country: the hoe, in the hands of a man truly great, he was pleased to say, was mightier than the pen. He presumed that General B-tl-r had never taken into consideration the garden-question, or he would not assume the position he does with regard to the Chinese emigration. He would let the Chinese come, even if B-tl-r had to leave, I thought he was going to say, but I changed the subject.

During our entire garden interview (operatically speaking, the garden-scene), the President was not smoking. I do not know how the impression arose that he "uses tobacco in any form;" for I have seen him several times, and he was not smoking. Indeed, I offered him a Connecticut six; but he wittily said that he did not like a weed in a garden,—a remark which I took to have a personal political bearing, and changed the subject.

The President was a good deal surprised at the method and fine appearance of my garden, and to learn that I had the sole care of it. He asked me if I pursued an original course, or whether I got my ideas from writers on the subject. I told him that I had had no time to read anything on the subject since I began to hoe, except "Lothair," from which I got my ideas of landscape gardening; and that I had worked the garden entirely according to my own notions, except that I had borne in mind his injunction, "to fight it out on this line if"—The President stopped me abruptly, and said it was unnecessary to repeat that remark: he thought he had heard it before. Indeed, he deeply regretted that he had ever made it. Sometimes, he said, after hearing it in speeches, and coming across it in resolutions, and reading it in newspapers, and having it dropped jocularly by facetious politicians, who were boring him for an office, about twenty-five times a day, say for a month, it would get to running through his head, like the "shoo-fly" song which B-tl-r sings in the House, until it did seem as if he should go distracted. He said, no man could stand that kind of sentence hammering on his brain for years.

The President was so much pleased with my management of the garden, that he offered me (at least, I so understood him) the position of head gardener at the White House, to have care of the exotics. I told him that I thanked him, but that I did not desire any foreign appointment. I had resolved, when the administration came in, not to take an appointment; and I had kept my resolution. As to any home office, I was poor, but honest; and, of course, it would be useless for me to take one. The President mused a moment, and then smiled, and said he would see what could be done for me. I did not change the subject; but nothing further was said by General Gr-nt.

The President is a great talker (contrary to the general impression); but I think he appreciated his quiet hour in my garden. He said it carried him back to his youth farther than anything he had seen lately. He looked forward with delight to the time when he could again have his private garden, grow his own lettuce and tomatoes, and not have to get so much "sarce" from Congress.

The chair in which the President sat, while declining to take a glass of lager I have had destroyed, in order that no one may sit in it. It was the only way to save it, if I may so speak. It would have been impossible to keep it from use by any precautions. There are people who would have sat in it, if the seat had been set with iron spikes. Such is the adoration of Station.

NINTH WEEK

I am more and more impressed with the moral qualities of vegetables, and contemplate forming a science which shall rank with comparative anatomy and comparative philology,—the science of comparative vegetable morality. We live in an age of protoplasm. And, if life-matter is essentially the same in all forms of life, I purpose to begin early, and ascertain the nature of the plants for which I am responsible. I will not associate with any vegetable which is disreputable, or has not some quality that can contribute to my moral growth. I do not care to be seen much with the squashes or the dead-beets. Fortunately I can cut down any sorts I do not like with the hoe, and, probably, commit no more sin in so doing than the Christians did in hewing down the Jews in the Middle Ages.

This matter of vegetable rank has not been at all studied as it should be. Why do we respect some vegetables and despise others, when all of them come to an equal honor or ignominy on the table? The bean is a graceful, confiding, engaging vine; but you never can put beans into poetry, nor into the highest sort of prose. There is no dignity in the bean. Corn, which, in my garden, grows alongside the bean, and, so far as I can see, with no affectation of superiority, is, however, the child of song. It waves in all literature. But mix it with beans, and its high tone is gone. Succotash is vulgar. It is the bean in it. The bean is a vulgar vegetable, without culture, or any flavor of high society among vegetables. Then there is the cool cucumber, like so many people, good for nothing when it is ripe and the wildness has gone out of it. How inferior in quality it is to the melon, which grows upon a similar vine, is of a like watery consistency, but is not half so valuable! The cucumber is a sort of low comedian in a company where the melon is a minor gentleman. I might also contrast the celery with the potato. The associations are as opposite as the dining-room of the duchess and the cabin of the peasant. I admire the potato, both in vine and blossom; but it is not aristocratic. I began digging my potatoes, by the way, about the 4th of July; and I fancy I have discovered the right way to do it. I

treat the potato just as I would a cow. I do not pull them up, and shake them out, and destroy them; but I dig carefully at the side of the hill, remove the fruit which is grown, leaving the vine undisturbed: and my theory is, that it will go on bearing, and submitting to my exactions, until the frost cuts it down. It is a game that one would not undertake with a vegetable of tone.

The lettuce is to me a most interesting study. Lettuce is like conversation: it must be fresh and crisp, so sparkling that you scarcely notice the bitter in it. Lettuce, like most talkers, is, however, apt to run rapidly to seed. Blessed is that sort which comes to a head, and so remains, like a few people I know; growing more solid and satisfactory and tender at the same time, and whiter at the center, and crisp in their maturity. Lettuce, like conversation, requires a good deal of oil to avoid friction, and keep the company smooth; a pinch of attic salt; a dash of pepper; a quantity of mustard and vinegar, by all means, but so mixed that you will notice no sharp contrasts; and a trifle of sugar. You can put anything, and the more things the better, into salad, as into a conversation; but everything depends upon the skill of mixing. I feel that I am in the best society when I am with lettuce. It is in the select circle of vegetables. The tomato appears well on the table; but you do not want to ask its origin. It is a most agreeable parvenu. Of course, I have said nothing about the berries. They live in another and more ideal region; except, perhaps, the currant. Here we see, that, even among berries, there are degrees of breeding. The currant is well enough, clear as truth, and exquisite in color; but I ask you to notice how far it is from the exclusive hauteur of the aristocratic strawberry, and the native refinement of the quietly elegant raspberry.

I do not know that chemistry, searching for protoplasm, is able to discover the tendency of vegetables. It can only be found out by outward observation. I confess that I am suspicious of the bean, for instance. There are signs in it of an unregulated life. I put up the most attractive sort of poles for my Limas. They stand high and straight, like church-spires, in my theological garden,—lifted up; and some of them have even budded, like Aaron's rod. No church-steeple in a New England village was ever better fitted to draw to it the rising generation on Sunday, than those poles to lift up my beans towards heaven. Some of them did run up the sticks seven feet, and then straggled off into the air in a wanton manner; but more than half of them went gallivanting off to the neighboring grape-trellis, and wound their tendrils with the tendrils of the grape, with a disregard of the proprieties of life which is a satire upon human nature. And the grape is morally no better. I think the ancients, who were not troubled with the recondite mystery of protoplasm, were right in the mythic union of Bacchus and Venus.

Talk about the Darwinian theory of development, and the principle of natural selection! I should like to see a garden let to run in accordance with it. If I had left my vegetables and weeds to a free fight, in which the strongest specimens only should come to maturity, and the weaker go to the wall, I can clearly see that I should have had a pretty mess of it. It would have been a scene of passion and license and brutality. The "pusley" would have strangled the strawberry; the upright corn, which has now ears to hear the guilty beating of the hearts of the children who steal the raspberries, would have been dragged to the earth by the wandering bean; the snake-grass would have left no place for the potatoes under ground; and the tomatoes would have been swamped by the lusty weeds. With a firm hand, I have had to make my own "natural selection." Nothing will so well bear watching as a garden, except a family of children next door. Their power of selection beats mine. If they could read half as well as they can steal awhile away, I should put up a notice, "Children, beware! There is Protoplasm here." But I suppose it would have no effect. I believe they would eat protoplasm as quick as anything else, ripe or green. I wonder if this is going to be a cholera-year. Considerable cholera is the only thing that would let my apples and pears ripen. Of course I do not care for the fruit; but I do not want to take the responsibility of letting so much "life-matter," full of crude and even wicked vegetable-human tendencies, pass into the composition of the neighbors' children, some of whom may be as immortal as snake-grass. There ought to be a public meeting about this, and resolutions, and perhaps a clambake. At least, it ought to be put into the catechism, and put in strong.

TENTH WEEK

I think I have discovered the way to keep peas from the birds. I tried the scare-crow plan, in a way which I thought would outwit the shrewdest bird. The brain of the bird is not large; but it is all concentrated on one object, and that is the attempt to elude the devices of modern civilization which injure his chances of food. I knew that, if I put up a complete stuffed man, the bird would detect the imitation at once: the perfection of the thing would show him that it was a trick. People always overdo the matter when they attempt deception. I therefore hung some loose garments, of a bright color, upon a rake-head, and set them up among the vines. The supposition was, that the bird would think there was an effort to trap him, that there was a man behind, holding up these garments, and would sing, as he kept at a distance, "You can't catch me with any such double device." The bird would know, or think he knew, that I would not hang up such a scare, in the expectation that it would pass for a man, and deceive a bird; and he would therefore look for a deeper plot. I expected to outwit the bird by a duplicity that was simplicity itself I may have over-calculated the sagacity and reasoning power of the bird. At any rate, I did over-calculate the amount of peas I should gather.

But my game was only half played. In another part of the garden were other peas, growing and blowing. To these I took good care not to attract the attention of the bird by any scarecrow whatever! I left the old scarecrow conspicuously flaunting above the old vines; and by this means I hope to keep the attention of the birds confined to that side of the garden. I am convinced that this is the true use of a scarecrow: it is a lure, and not a warning. If you wish to save men from any particular vice, set up a tremendous cry of warning about some other; and they will all give their special efforts to the one to which attention is called. This profound truth is about the only thing I have yet realized out of my pea-vines.

However, the garden does begin to yield. I know of nothing that makes one feel more complacent, in these July days, than to have his vegetables from his own garden. What an effect it has on the market-man and the butcher! It is a kind of declaration of independence. The market-man shows me his peas and beets and tomatoes, and supposes he shall send me out some with the meat. "No, I thank you," I say carelessly; "I am raising my own this year." Whereas I have been wont to remark, "Your vegetables look a little wilted this weather," I now say, "What a fine lot of vegetables you've got!" When a man is not going to buy, he can afford to be generous. To raise his own vegetables makes a person feel, somehow, more liberal. I think the butcher is touched by the influence, and cuts off a better roast for me, The butcher is my friend when he sees that I am not wholly dependent on him.

It is at home, however, that the effect is most marked, though sometimes in a way that I had not expected. I have never read of any Roman supper that seemed to me equal to a dinner of my own vegetables; when everything on the table is the product of my own labor, except the clams, which I have not been able to raise yet, and the chickens, which have withdrawn from the garden just when they were most attractive. It is strange what a taste you suddenly have for things you never liked before. The squash has always been to me a dish of contempt; but I eat it now as if it were my best friend. I never cared for the beet or the bean; but I fancy now that I could eat them all, tops and all, so completely have they been transformed by the soil in which they grew. I think the squash is less squashy, and the beet has a deeper hue of rose, for my care of

them.

I had begun to nurse a good deal of pride in presiding over a table whereon was the fruit of my honest industry. But woman!—John Stuart Mill is right when he says that we do not know anything about women. Six thousand years is as one day with them. I thought I had something to do with those vegetables. But when I saw Polly seated at her side of the table, presiding over the new and susceptible vegetables, flanked by the squash and the beans, and smiling upon the green corn and the new potatoes, as cool as the cucumbers which lay sliced in ice before her, and when she began to dispense the fresh dishes, I saw at once that the day of my destiny was over. You would have thought that she owned all the vegetables, and had raised them all from their earliest years. Such quiet, vegetable airs! Such gracious appropriation! At length I said,—“Polly, do you know who planted that squash, or those squashes?”

“James, I suppose.”

“Well, yes, perhaps James did plant them, to a certain extent. But who hoed them?”

“We did.”

“We did!” I said, in the most sarcastic manner.

And I suppose we put on the sackcloth and ashes, when the striped bug came at four o'clock A.M., and we watched the tender leaves, and watered night and morning the feeble plants. “I tell you, Polly,” said I, uncorking the Bordeaux raspberry vinegar, “there is not a pea here that does not represent a drop of moisture wrung from my brow, not a beet that does not stand for a back-ache, not a squash that has not caused me untold anxiety; and I did hope—but I will say no more.”

Observation.—In this sort of family discussion, “I will say no more” is the most effective thing you can close up with.

I am not an alarmist. I hope I am as cool as anybody this hot summer. But I am quite ready to say to Polly, or any other woman, “You can have the ballot; only leave me the vegetables, or, what is more important, the consciousness of power in vegetables.” I see how it is. Woman is now supreme in the house. She already stretches out her hand to grasp the garden. She will gradually control everything. Woman is one of the ablest and most cunning creatures who have ever mingled in human affairs. I understand those women who say they don't want the ballot. They purpose to hold the real power while we go through the mockery of making laws. They want the power without the responsibility. (Suppose my squash had not come up, or my beans—as they threatened at one time—had gone the wrong way: where would I have been?) We are to be held to all the responsibilities. Woman takes the lead in all the departments, leaving us politics only. And what is politics? Let me raise the vegetables of a nation, says Polly, and I care not who makes its politics. Here I sat at the table, armed with the ballot, but really powerless among my own vegetables. While we are being amused by the ballot, woman is quietly taking things into her own hands.

ELEVENTH WEEK

Perhaps, after all, it is not what you get out of a garden, but what you put into it, that is the most remunerative. What is a man? A question frequently asked, and never, so far as I know, satisfactorily answered. He commonly spends his seventy years, if so many are given him, in getting ready to enjoy himself. How many hours, how many minutes, does one get of that pure content which is happiness? I do not mean laziness, which is always discontent; but that serene enjoyment, in which all the natural senses have easy play, and the unnatural ones have a holiday. There is probably nothing that has such a tranquilizing effect, and leads into such content as gardening. By gardening, I do not mean that insane desire to raise vegetables which some have; but the philosophical occupation of contact with the earth, and companionship with gently growing things and patient processes; that exercise which soothes the spirit, and develops the deltoid muscles.

In half an hour I can hoe myself right away from this world, as we commonly see it, into a large place, where there are no obstacles. What an occupation it is for thought! The mind broods like a hen on eggs. The trouble is, that you are not thinking about anything, but are really vegetating like the plants around you. I begin to know what the joy of the grape-vine is in running up the trellis, which is similar to that of the squirrel in running up a tree. We all have something in our nature that requires contact with the earth. In the solitude of garden-labor, one gets into a sort of communion with the vegetable life, which makes the old mythology possible. For instance, I can believe that the dryads are plenty this summer: my garden is like an ash-heap. Almost all the moisture it has had in weeks has been the sweat of honest industry.

The pleasure of gardening in these days, when the thermometer is at ninety, is one that I fear I shall not be able to make intelligible to my readers, many of whom do not appreciate the delight of soaking in the sunshine. I suppose that the sun, going through a man, as it will on such a day, takes out of him rheumatism, consumption, and every other disease, except sudden death—from sun-stroke. But, aside from this, there is an odor from the evergreens, the hedges, the various plants and vines, that is only expressed and set afloat at a high temperature, which is delicious; and, hot as it may be, a little breeze will come at intervals, which can be heard in the treetops, and which is an unobtrusive benediction. I hear a quail or two whistling in the ravine; and there is a good deal of fragmentary conversation going on among the birds, even on the warmest days. The companionship of Calvin, also, counts for a good deal. He usually attends me, unless I work too long in one place; sitting down on the turf, displaying the ermine of his breast, and watching my movements with great intelligence. He has a feline and genuine love for the beauties of Nature, and will establish himself where there is a good view, and look on it for hours. He always accompanies us when we go to gather the vegetables, seeming to be desirous to know what we are to have for dinner. He is a connoisseur in the garden; being fond of almost all the vegetables, except the cucumber,—a dietetic hint to man. I believe it is

also said that the pig will not eat tobacco. These are important facts. It is singular, however, that those who hold up the pigs as models to us never hold us up as models to the pigs.

I wish I knew as much about natural history and the habits of animals as Calvin does. He is the closest observer I ever saw; and there are few species of animals on the place that he has not analyzed. I think he has, to use a euphemism very applicable to him, got outside of every one of them, except the toad. To the toad he is entirely indifferent; but I presume he knows that the toad is the most useful animal in the garden. I think the Agricultural Society ought to offer a prize for the finest toad. When Polly comes to sit in the shade near my strawberry-beds, to shell peas, Calvin is always lying near in apparent obliviousness; but not the slightest unusual sound can be made in the bushes, that he is not alert, and prepared to investigate the cause of it. It is this habit of observation, so cultivated, which has given him such a trained mind, and made him so philosophical. It is within the capacity of even the humblest of us to attain this.

And, speaking of the philosophical temper, there is no class of men whose society is more to be desired for this quality than that of plumbers. They are the most agreeable men I know; and the boys in the business begin to be agreeable very early. I suspect the secret of it is, that they are agreeable by the hour. In the driest days, my fountain became disabled: the pipe was stopped up. A couple of plumbers, with the implements of their craft, came out to view the situation. There was a good deal of difference of opinion about where the stoppage was. I found the plumbers perfectly willing to sit down and talk about it,—talk by the hour. Some of their guesses and remarks were exceedingly ingenious; and their general observations on other subjects were excellent in their way, and could hardly have been better if they had been made by the job. The work dragged a little, as it is apt to do by the hour. The plumbers had occasion to make me several visits. Sometimes they would find, upon arrival, that they had forgotten some indispensable tool; and one would go back to the shop, a mile and a half, after it; and his comrade would await his return with the most exemplary patience, and sit down and talk,—always by the hour. I do not know but it is a habit to have something wanted at the shop. They seemed to me very good workmen, and always willing to stop and talk about the job, or anything else, when I went near them. Nor had they any of that impetuous hurry that is said to be the bane of our American civilization. To their credit be it said, that I never observed anything of it in them. They can afford to wait. Two of them will sometimes wait nearly half a day while a comrade goes for a tool. They are patient and philosophical. It is a great pleasure to meet such men. One only wishes there was some work he could do for them by the hour. There ought to be reciprocity. I think they have very nearly solved the problem of Life: it is to work for other people, never for yourself, and get your pay by the hour. You then have no anxiety, and little work. If you do things by the job, you are perpetually driven: the hours are scourges. If you work by the hour, you gently sail on the stream of Time, which is always bearing you on to the haven of Pay, whether you make any effort, or not. Working by the hour tends to make one moral. A plumber working by the job, trying to unscrew a rusty, refractory nut, in a cramped position, where the tongs continually slipped off, would swear; but I never heard one of them swear, or exhibit the least impatience at such a vexation, working by the hour. Nothing can move a man who is paid by the hour. How sweet the flight of time seems to his calm mind!

TWELFTH WEEK

Mr. Horace Greeley, the introduction of whose name confers an honor upon this page (although I ought to say that it is used entirely without his consent), is my sole authority in agriculture. In politics I do not dare to follow him; but in agriculture he is irresistible. When, therefore, I find him advising Western farmers not to hill up their corn, I think that his advice must be political. You must hill up your corn. People always have hilled up their corn. It would take a constitutional amendment to change the practice, that has pertained ever since maize was raised. "It will stand the drought better," says Mr. Greeley, "if the ground is left level." I have corn in my garden, ten and twelve feet high, strong and lusty, standing the drought like a grenadier; and it is hilled. In advising this radical change, Mr. Greeley evidently has a political purpose. He might just as well say that you should not hill beans, when everybody knows that a "hill of beans" is one of the most expressive symbols of disparagement. When I become too lazy to hill my corn, I, too, shall go into politics.

I am satisfied that it is useless to try to cultivate "pusley." I set a little of it one side, and gave it some extra care. It did not thrive as well as that which I was fighting. The fact is, there is a spirit of moral perversity in the plant, which makes it grow the more, the more it is interfered with. I am satisfied of that. I doubt if any one has raised more "pusley" this year than I have; and my warfare with it has been continual. Neither of us has slept much. If you combat it, it will grow, to use an expression that will be understood by many, like the devil. I have a neighbor, a good Christian man, benevolent, and a person of good judgment. He planted next to me an acre of turnips recently. A few days after, he went to look at his crop; and he found the entire ground covered with a thick and luxurious carpet of "pusley," with a turnip-top worked in here and there as an ornament. I have seldom seen so thrifty a field. I advised my neighbor next time to sow "pusley" and then he might get a few turnips. I wish there was more demand in our city markets for "pusley" as a salad. I can recommend it.

It does not take a great man to soon discover that, in raising anything, the greater part of the plants goes into stalk and leaf, and the fruit is a most inconsiderable portion. I plant and hoe a hill of corn: it grows green and stout, and waves its broad leaves high in the air, and is months in perfecting itself, and then yields us not enough for a dinner. It grows because it delights to do so,—to take the juices out of my ground, to absorb my fertilizers, to wax luxuriant, and disport itself in the summer air, and with very little thought of making any return to me. I might go all through my garden and fruit trees with a similar result. I have heard of places where there was very little land to the acre. It is universally true that there is a great deal of vegetable show and fuss for the result produced. I do not complain of this. One cannot expect vegetables to be better than men: and they make a great deal of ostentatious splurge; and many of them come to no result at last. Usually,

the more show of leaf and wood, the less fruit. This melancholy reflection is thrown in here in order to make dog-days seem cheerful in comparison.

One of the minor pleasures of life is that of controlling vegetable activity and aggressions with the pruning-knife. Vigorous and rapid growth is, however, a necessity to the sport. To prune feeble plants and shrubs is like acting the part of dry-nurse to a sickly orphan. You must feel the blood of Nature bound under your hand, and get the thrill of its life in your nerves. To control and culture a strong, thrifty plant in this way is like steering a ship under full headway, or driving a locomotive with your hand on the lever, or pulling the reins over a fast horse when his blood and tail are up. I do not understand, by the way, the pleasure of the jockey in setting up the tail of the horse artificially. If I had a horse with a tail not able to sit up, I should feed the horse, and curry him into good spirits, and let him set up his own tail. When I see a poor, spiritless horse going by with an artificially set-up tail, it is only a signal of distress. I desire to be surrounded only by healthy, vigorous plants and trees, which require constant cutting-in and management. Merely to cut away dead branches is like perpetual attendance at a funeral, and puts one in low spirits. I want to have a garden and orchard rise up and meet me every morning, with the request to "lay on, Macduff." I respect old age; but an old currant-bush, hoary with mossy bark, is a melancholy spectacle.

I suppose the time has come when I am expected to say something about fertilizers: all agriculturists do. When you plant, you think you cannot fertilize too much: when you get the bills for the manure, you think you cannot fertilize too little. Of course you do not expect to get the value of the manure back in fruits and vegetables; but something is due to science,—to chemistry in particular. You must have a knowledge of soils, must have your soil analyzed, and then go into a course of experiments to find what it needs. It needs analyzing,—that, I am clear about: everything needs that. You had better have the soil analyzed before you buy: if there is "pusley" in it, let it alone. See if it is a soil that requires much hoeing, and how fine it will get if there is no rain for two months. But when you come to fertilizing, if I understand the agricultural authorities, you open a pit that will ultimately swallow you up,—farm and all. It is the great subject of modern times, how to fertilize without ruinous expense; how, in short, not to starve the earth to death while we get our living out of it. Practically, the business is hardly to the taste of a person of a poetic turn of mind. The details of fertilizing are not agreeable. Michael Angelo, who tried every art, and nearly every trade, never gave his mind to fertilizing. It is much pleasanter and easier to fertilize with a pen, as the agricultural writers do, than with a fork. And this leads me to say, that, in carrying on a garden yourself, you must have a "consulting" gardener; that is, a man to do the heavy and unpleasant work. To such a man, I say, in language used by Demosthenes to the Athenians, and which is my advice to all gardeners, "Fertilize, fertilize, fertilize!"

THIRTEENTH WEEK

I find that gardening has unsurpassed advantages for the study of natural history; and some scientific facts have come under my own observation, which cannot fail to interest naturalists and un-naturalists in about the same degree. Much, for instance, has been written about the toad, an animal without which no garden would be complete. But little account has been made of his value: the beauty of his eye alone has been dwelt on; and little has been said of his mouth, and its important function as a fly and bug trap. His habits, and even his origin, have been misunderstood. Why, as an illustration, are toads so plenty after a thunder-shower? All my life long, no one has been able to answer me that question. Why, after a heavy shower, and in the midst of it, do such multitudes of toads, especially little ones, hop about on the gravel-walks? For many years, I believed that they rained down; and I suppose many people think so still. They are so small, and they come in such numbers only in the shower, that the supposition is not a violent one. "Thick as toads after a shower," is one of our best proverbs. I asked an explanation 'of this of a thoughtful woman,—indeed, a leader in the great movement to have all the toads hop in any direction, without any distinction of sex or religion. Her reply was, that the toads come out during the shower to get water. This, however, is not the fact. I have discovered that they come out not to get water. I deluged a dry flower-bed, the other night, with pailful after pailful of water. Instantly the toads came out of their holes in the dirt, by tens and twenties and fifties, to escape death by drowning. The big ones fled away in a ridiculous streak of hopping; and the little ones sprang about in the wildest confusion. The toad is just like any other land animal: when his house is full of water, he quits it. These facts, with the drawings of the water and the toads, are at the service of the distinguished scientists of Albany in New York, who were so much impressed by the Cardiff Giant.

"The toads came out of their holes." -- Page 115.

The domestic cow is another animal whose ways I have a chance to study, and also to obliterate in the garden. One of my neighbors has a cow, but no land; and he seems desirous to pasture her on the surface of the land of other people: a very reasonable desire. The man proposed that he should be allowed to cut the grass from my grounds for his cow. I knew the cow, having often had her in my garden; knew her gait and the size of her feet, which struck me as a little large for the size of the body. Having no cow myself, but acquaintance with my neighbor's, I told him that I thought it would be fair for him to have the grass. He was, therefore, to keep the grass nicely cut, and to keep his cow at home. I waited some time after the grass needed cutting; and, as my neighbor did not appear, I hired it cut. No sooner was it done than he promptly appeared, and raked up most of it, and carried it away. He had evidently been waiting that opportunity. When the grass grew again, the neighbor did not appear with his scythe; but one morning I found the cow tethered on the sward, hitched near the clothes-horse, a short distance from the house. This seemed to be the man's idea of the best way to cut the grass. I disliked to have the cow there, because I knew her inclination to pull up the stake, and transfer her field of mowing to the garden, but especially because of her voice. She has the most melancholy "moo" I ever heard. It is like the wail of one uninfalible, excommunicated, and lost. It is a most distressing perpetual reminder of the brevity of life and the shortness of feed. It is unpleasant to the family. We sometimes hear it in the middle of the night, breaking the silence like a suggestion of coming calamity. It is as bad as the howling of a dog at a funeral.

I told the man about it; but he seemed to think that he was not responsible for the cow's voice. I then told him to take her away; and he did, at intervals, shifting her to different parts of the grounds in my absence, so that the desolate voice would startle us from unexpected quarters. If I were to unhitch the cow, and turn her loose, I knew where she would go. If I were to lead her away, the question was, Where? for I did not fancy leading a cow about till I could find somebody who was willing to pasture her. To this dilemma had my excellent neighbor reduced me. But I found him, one Sunday morning,—a day when it would not do to get angry, tying his cow at the foot of the hill; the beast all the time going on in that abominable voice.

"I told the man that I could not have the cow in the grounds."

Page 119.

I told the man that I could not have the cow in the grounds. He said, "All right, boss;" but he did not go away. I asked him to clear out. The man, who is a French sympathizer from the Republic of Ireland, kept his temper perfectly. He said he wasn't doing anything, just feeding his cow a bit: he wouldn't make me the least trouble in the world. I reminded him that he had been told again and again not to come here; that he might have all the grass, but he should not bring his cow upon the premises. The imperturbable man assented to everything that I said, and kept on feeding his cow. Before I got him to go to fresh scenes and pastures new, the Sabbath was almost broken; but it was saved by one thing: it is difficult to be emphatic when no one is emphatic on the other side. The man and his cow have taught me a great lesson, which I shall recall when I keep a cow. I can recommend this cow, if anybody wants one, as a steady boarder, whose keeping will cost the owner little; but, if her milk is at all like her voice, those who drink it are on the straight road to lunacy.

I think I have said that we have a game-preserve. We keep quails, or try to, in the thickly wooded, bushed, and brushed ravine. This bird is a great favorite with us, dead or alive, on account of its tasteful plumage, its tender flesh, its domestic virtues, and its pleasant piping. Besides, although I appreciate toads and cows, and all that sort of thing, I like to have a game-preserve more in the English style. And we did. For in July, while the game-law was on, and the young quails were coming on, we were awakened one morning by firing,—musketry-firing, close at hand. My first thought was, that war was declared; but, as I should never pay much attention to war declared at that time in the morning, I went to sleep again. But the occurrence was repeated,—and not only early in the morning, but at night. There was calling of dogs, breaking down of brush, and firing of guns. It is hardly pleasant to have guns fired in the direction of the house, at your own quails. The hunters could be sometimes seen, but never caught. Their best time was about sunrise; but, before one could dress and get to the front, they would retire.

One morning, about four o'clock, I heard the battle renewed. I sprang up, but not in arms, and went to a window. Polly (like another 'blessed damozel') flew to another window,—

*"The blessed damozel leaned out
From the gold bar of heaven,"*

and reconnoitered from behind the blinds.

*"The wonder was not yet quite gone
From that still look of hers,"*

when an armed man and a legged dog appeared in the opening. I was vigilantly watching him.

*.... "And now
She spoke through the still weather."*

"Are you afraid to speak to him?" asked Polly.

Not exactly,

... "she spoke as when
The stars sang in their spheres.

"Stung by this inquiry, I leaned out of the window till

"The bar I leaned on (was) warm,"

and cried,— "Halloo, there! What are you doing?"

"Look out he don't shoot you," called out Polly from the other window, suddenly going on another tack.

I explained that a sportsman would not be likely to shoot a gentleman in his own house, with bird-shot, so long as quails were to be had.

"You have no business here: what are you after?" I repeated.

"Looking for a lost hen," said the man as he strode away.

The reply was so satisfactory and conclusive that I shut the blinds and went to bed.

But one evening I overhauled one of the poachers. Hearing his dog in the thicket, I rushed through the brush, and came in sight of the hunter as he was retreating down the road. He came to a halt; and we had some conversation in a high key. Of course I threatened to prosecute him. I believe that is the thing to do in such cases; but how I was to do it, when I did not know his name or ancestry, and couldn't see his face, never occurred to me. (I remember, now, that a farmer once proposed to prosecute me when I was fishing in a trout-brook on his farm, and asked my name for that purpose.) He said he should smile to see me prosecute him.

"You can't do it: there ain't no notice up about trespassing."

This view of the common law impressed me; and I said,

"But these are private grounds."

"Private h—!" was all his response.

You can't argue much with a man who has a gun in his hands, when you have none. Besides, it might be a needle-gun, for aught I knew. I gave it up, and we separated.

There is this disadvantage about having a game preserve attached to your garden: it makes life too lively.

FOURTEENTH WEEK

In these golden latter August days, Nature has come to a serene equilibrium. Having flowered and fruited, she is enjoying herself. I can see how things are going: it is a down-hill business after this; but, for the time being, it is like swinging in a hammock,—such a delicious air, such a graceful repose! I take off my hat as I stroll into the garden and look about; and it does seem as if Nature had sounded a truce. I did n't ask for it. I went out with a hoe; but the serene sweetness disarms me. Thrice is he armed who has a long-handled hoe, with a double blade. Yet to-day I am almost ashamed to appear in such a belligerent fashion, with this terrible mitrailleuse of gardening.

The tomatoes are getting tired of ripening, and are beginning to go into a worthless condition,—green. The cucumbers cumber the ground,—great yellow, over-ripe objects, no more to be compared to the crisp beauty of their youth than is the fat swine of the sty to the clean little pig. The nutmeg-melons, having covered themselves with delicate lace-work, are now ready to leave the vine. I know they are ripe if they come easily off the stem.

Moral Observations.—You can tell when people are ripe by their willingness to let go. Richness and ripeness are not exactly the same. The rich are apt to hang to the stem with tenacity. I have nothing against the rich. If I were not virtuous, I should like to be rich. But we cannot have everything, as the man said when he was down with small-pox and cholera, and the yellow fever came into the neighborhood.

Now, the grapes, soaked in this liquid gold, called air, begin to turn, mindful of the injunction, “to turn or burn.” The clusters under the leaves are getting quite purple, but look better than they taste. I think there is no danger but they will be gathered as soon as they are ripe. One of the blessings of having an open garden is, that I do not have to watch my fruit: a dozen youngsters do that, and let it waste no time after it matures. I wish it were possible to grow a variety of grape like the explosive bullets, that should explode in the stomach: the vine would make such a nice border for the garden,—a masked battery of grape. The pears, too, are getting russet and heavy; and here and there amid the shining leaves one gleams as ruddy as the cheek of the Nutbrown Maid. The Flemish Beauties come off readily from the stem, if I take them in my hand: they say all kinds of beauty come off by handling.

The garden is peace as much as if it were an empire. Even the man's cow lies down under the tree where the man has tied her, with such an air of contentment, that I have small desire to disturb her. She is chewing my cud as if it were hers. Well, eat on and chew on, melancholy brute. I have not the heart to tell the man to take you away: and it would do no good if I had; he wouldn't do it. The man has not a taking way. Munch on, ruminant creature.

The frost will soon come; the grass will be brown. I will be charitable while this blessed lull continues: for our benevolences must soon be turned to other and more distant objects,—the amelioration of the condition of the Jews, the education of theological young men in the West, and the like.

I do not know that these appearances are deceitful; but I sufficiently know that this is a wicked world, to be glad that I have taken it on shares. In fact, I could not pick the pears alone, not to speak of eating them. When I climb the trees, and throw down the dusky fruit, Polly catches it in her apron; nearly always, however, letting go when it drops, the fall is so sudden. The sun gets in her face; and, every time a pear comes down it is a surprise, like having a tooth out, she says.

“If I could n't hold an apron better than that!”

But the sentence is not finished: it is useless to finish that sort of a sentence in this delicious weather. Besides, conversation is dangerous. As, for instance, towards evening I am preparing a bed for a sowing of turnips,—not that I like turnips in the least; but this is the season to sow them. Polly comes out, and extemporizes her usual seat to “consult me” about matters while I work. I well know that something is coming.

“This is a rotation of crops, is n't it?”

“Yes: I have rotated the gone-to-seed lettuce off, and expect to rotate the turnips in; it is a political fashion.”

“Is n't it a shame that the tomatoes are all getting ripe at once? What a lot of squashes! I wish we had an oyster-bed. Do you want me to help you any more than I am helping?”

“No, I thank you.” (I wonder what all this is about?)

“Don't you think we could sell some strawberries next year?”

“By all means, sell anything. We shall no doubt get rich out of this acre.”

“Don't be foolish.”

And now!

“Don't you think it would be nice to have a?”....

And Polly unfolds a small scheme of benevolence, which is not quite enough to break me, and is really to be executed in an economical manner. “Would n't that be nice?”

"Polly unfolds a small scheme of benevolence." — Page 130.

"Oh, yes! And where is the money to come from?"

"I thought we had agreed to sell the strawberries."

"Certainly. But I think we would make more money if we sold the plants now."

"Well," said Polly, concluding the whole matter, "I am going to do it." And, having thus "consulted" me, Polly goes away; and I put in the turnip-seeds quite thick, determined to raise enough to sell. But not even this mercenary thought can ruffle my mind as I rake off the loamy bed. I notice, however, that the spring smell has gone out of the dirt. That went into the first crop.

In this peaceful unison with yielding nature, I was a little taken aback to find that a new enemy had turned up. The celery had just rubbed through the fiery scorching of the drought, and stood a faint chance to grow; when I noticed on the green leaves a big green-and-black worm, called, I believe, the celery-worm: but I don't know who called him; I am sure I did not. It was almost ludicrous that he should turn up here, just at the end of the season, when I supposed that my war with the living animals was over. Yet he was, no doubt, predestinated; for he went to work as cheerfully as if he had arrived in June, when everything was fresh and vigorous. It beats me—Nature does. I doubt not, that, if I were to leave my garden now for a week, it would n't know me on my return. The patch I scratched over for the turnips, and left as clean as earth, is already full of ambitious "pusley," which grows with all the confidence of youth and the skill of old age. It beats the serpent as an emblem of immortality. While all the others of us in the garden rest and sit in comfort a moment, upon the summit of the summer, it is as rampant and vicious as ever. It accepts no armistice.

FIFTEENTH WEEK

It is said that absence conquers all things, love included; but it has a contrary effect on a garden. I was absent for two or three weeks. I left my garden a paradise, as paradises go in this protoplasmic world; and when I returned, the trail of the serpent was over it all, so to speak. (This is in addition to the actual snakes in it, which are large enough to strangle children of average size.) I asked Polly if she had seen to the garden while I was away, and she said she had. I found that all the melons had been seen to, and the early grapes and pears. The green worm had also seen to about half the celery; and a large flock of apparently perfectly domesticated chickens were roaming over the ground, gossiping in the hot September sun, and picking up any odd trifle that might be left. On the whole, the garden could not have been better seen to; though it would take a sharp eye to see the potato-vines amid the rampant grass and weeds.

The new strawberry-plants, for one thing, had taken advantage of my absence. Every one of them had sent

out as many scarlet runners as an Indian tribe has. Some of them had blossomed; and a few had gone so far as to bear ripe berries,—long, pear-shaped fruit, hanging like the ear-pendants of an East Indian bride. I could not but admire the persistence of these zealous plants, which seemed determined to propagate themselves both by seeds and roots, and make sure of immortality in some way. Even the Colfax variety was as ambitious as the others. After having seen the declining letter of Mr. Colfax, I did not suppose that this vine would run any more, and intended to root it out. But one can never say what these politicians mean; and I shall let this variety grow until after the next election, at least; although I hear that the fruit is small, and rather sour. If there is any variety of strawberries that really declines to run, and devotes itself to a private life of fruit-bearing, I should like to get it. I may mention here, since we are on politics, that the Doolittle raspberries had sprawled all over the strawberry-bed's: so true is it that politics makes strange bedfellows.

But another enemy had come into the strawberries, which, after all that has been said in these papers, I am almost ashamed to mention. But does the preacher in the pulpit, Sunday after Sunday, year after year, shrink from speaking of sin? I refer, of course, to the greatest enemy of mankind, "p-sl-y." The ground was carpeted with it. I should think that this was the tenth crop of the season; and it was as good as the first. I see no reason why our northern soil is not as prolific as that of the tropics, and will not produce as many crops in the year. The mistake we make is in trying to force things that are not natural to it. I have no doubt that, if we turn our attention to "pusley," we can beat the world.

I had no idea, until recently, how generally this simple and thrifty plant is feared and hated. Far beyond what I had regarded as the bounds of civilization, it is held as one of the mysteries of a fallen world; accompanying the home missionary on his wanderings, and preceding the footsteps of the Tract Society. I was not long ago in the Adirondacks. We had built a camp for the night, in the heart of the woods, high up on John's Brook and near the foot of Mount Marcy: I can see the lovely spot now. It was on the bank of the crystal, rocky stream, at the foot of high and slender falls, which poured into a broad amber basin. Out of this basin we had just taken trout enough for our supper, which had been killed, and roasted over the fire on sharp sticks, and eaten before they had an opportunity to feel the chill of this deceitful world. We were lying under the hut of spruce-bark, on fragrant hemlock-boughs, talking, after supper. In front of us was a huge fire of birchlogs; and over it we could see the top of the falls glistening in the moonlight; and the roar of the falls, and the brawling of the stream near us, filled all the ancient woods. It was a scene upon which one would think no thought of sin could enter. We were talking with old Phelps, the guide. Old Phelps is at once guide, philosopher, and friend. He knows the woods and streams and mountains, and their savage inhabitants, as well as we know all our rich relations and what they are doing; and in lonely bear-hunts and sable-trappings he has thought out and solved most of the problems of life. As he stands in his wood-gear, he is as grizzly as an old cedar-tree; and he speaks in a high falsetto voice, which would be invaluable to a boatswain in a storm at sea.

We had been talking of all subjects about which rational men are interested,—bears, panthers, trapping, the habits of trout, the tariff, the internal revenue (to wit the injustice of laying such a tax on tobacco, and none on dogs:—"There ain't no dog in the United States," says the guide, at the top of his voice, "that earns his living"), the Adventists, the Gorner Grat, Horace Greeley, religion, the propagation of seeds in the wilderness (as, for instance, where were the seeds lying for ages that spring up into certain plants and flowers as soon as a spot is cleared anywhere in the most remote forest; and why does a growth of oak-trees always come up after a growth of pine has been removed?)—in short, we had pretty nearly reached a solution of many mysteries, when Phelps suddenly exclaimed with uncommon energy,— "Wall, there's one thing that beats me!"

"What's that?" we asked with undisguised curiosity.

"That's 'pusley'!" he replied, in the tone of a man who has come to one door in life which is hopelessly shut, and from which he retires in despair.

"Where it comes from I don't know, nor what to do with it. It's in my garden; and I can't get rid of it. It beats me."

About "pusley" the guide had no theory and no hope. A feeling of awe came over me, as we lay there at midnight, hushed by the sound of the stream and the rising wind in the spruce-tops. Then man can go nowhere that "pusley" will not attend him. Though he camp on the Upper Au Sable, or penetrate the forest where rolls the Allegash, and hear no sound save his own allegations, he will not escape it. It has entered the happy valley of Keene, although there is yet no church there, and only a feeble school part of the year. Sin travels faster than they that ride in chariots. I take my hoe, and begin; but I feel that I am warring against something whose roots take hold on H.

By the time a man gets to be eighty, he learns that he is compassed by limitations, and that there has been a natural boundary set to his individual powers. As he goes on in life, he begins to doubt his ability to destroy all evil and to reform all abuses, and to suspect that there will be much left to do after he has done. I stepped into my garden in the spring, not doubting that I should be easily master of the weeds. I have simply learned that an institution which is at least six thousand years old, and I believe six millions, is not to be put down in one season.

I have been digging my potatoes, if anybody cares to know it. I planted them in what are called "Early Rose,"—the rows a little less than three feet apart; but the vines came to an early close in the drought. Digging potatoes is a pleasant, soothing occupation, but not poetical. It is good for the mind, unless they are too small (as many of mine are), when it begets a want of gratitude to the bountiful earth. What small potatoes we all are, compared with what we might be! We don't plow deep enough, any of us, for one thing. I shall put in the plow next year, and give the tubers room enough. I think they felt the lack of it this year: many of them seemed ashamed to come out so small. There is great pleasure in turning out the brown-jacketed fellows into the sunshine of a royal September day, and seeing them glisten as they lie thickly strewn on the warm soil. Life has few such moments. But then they must be picked up. The picking-up, in this world, is always the unpleasant part of it.

SIXTEENTH WEEK

I do not hold myself bound to answer the question, Does gardening pay? It is so difficult to define what is meant by paying. There is a popular notion that, unless a thing pays, you had better let it alone; and I may say that there is a public opinion that will not let a man or woman continue in the indulgence of a fancy that does not pay. And public opinion is stronger than the legislature, and nearly as strong as the ten commandments: I therefore yield to popular clamor when I discuss the profit of my garden.

As I look at it, you might as well ask, Does a sunset pay? I know that a sunset is commonly looked on as a cheap entertainment; but it is really one of the most expensive. It is true that we can all have front seats, and we do not exactly need to dress for it as we do for the opera; but the conditions under which it is to be enjoyed are rather dear. Among them I should name a good suit of clothes, including some trifling ornament,—not including back hair for one sex, or the parting of it in the middle for the other. I should add also a good dinner, well cooked and digestible; and the cost of a fair education, extended, perhaps, through generations in which sensibility and love of beauty grew. What I mean is, that if a man is hungry and naked, and half a savage, or with the love of beauty undeveloped in him, a sunset is thrown away on him: so that it appears that the conditions of the enjoyment of a sunset are as costly as anything in our civilization.

Of course there is no such thing as absolute value in this world. You can only estimate what a thing is worth to you. Does gardening in a city pay? You might as well ask if it pays to keep hens, or a trotting-horse, or to wear a gold ring, or to keep your lawn cut, or your hair cut. It is as you like it. In a certain sense, it is a sort of profanation to consider if my garden pays, or to set a money-value upon my delight in it. I fear that you could not put it in money. Job had the right idea in his mind when he asked, "Is there any taste in the white of an egg?" Suppose there is not! What! shall I set a price upon the tender asparagus or the crisp lettuce, which made the sweet spring a reality? Shall I turn into merchandise the red strawberry, the pale green pea, the high-flavored raspberry, the sanguinary beet, that love-plant the tomato, and the corn which did not waste its sweetness on the desert air, but, after flowing in a sweet rill through all our summer life, mingled at last with the engaging bean in a pool of succotash? Shall I compute in figures what daily freshness and health and delight the garden yields, let alone the large crop of anticipation I gathered as soon as the first seeds got above ground? I appeal to any gardening man of sound mind, if that which pays him best in gardening is not that which he cannot show in his trial-balance. Yet I yield to public opinion, when I proceed to make such a balance; and I do it with the utmost confidence in figures.

I select as a representative vegetable, in order to estimate the cost of gardening, the potato. In my statement, I shall not include the interest on the value of the land. I throw in the land, because it would otherwise have stood idle: the thing generally raised on city land is taxes. I therefore make the following statement of the cost and income of my potato-crop, a part of it estimated in connection with other garden labor. I have tried to make it so as to satisfy the income-tax collector:—

<i>Plowing.....</i>	<i>\$0.50</i>
<i>Seed.....</i>	<i>\$1.50</i>
<i>Manure.....</i>	<i>8.00</i>
<i>Assistance in planting and digging, 3 days....</i>	<i>6.75</i>
<i>Labor of self in planting, hoeing, digging,</i>	
<i> picking up, 5 days at 17 cents.....</i>	<i>0.85</i>
<i> Total Cost.....</i>	<i>\$17.60</i>
<i>Two thousand five hundred mealy potatoes,</i>	
<i> at 2 cents.....</i>	<i>\$50.00</i>
<i>Small potatoes given to neighbor's pig.....</i>	<i>.50</i>
<i> Total return.....</i>	<i>\$50.50</i>
<i>Balance, profit in cellar.....</i>	<i>\$32.90</i>

Some of these items need explanation. I have charged nothing for my own time waiting for the potatoes to grow. My time in hoeing, fighting weeds, etc., is put in at five days: it may have been a little more. Nor have I put in anything for cooling drinks while hoeing. I leave this out from principle, because I always recommend water to others. I had some difficulty in fixing the rate of my own wages. It was the first time I had an opportunity of paying what I thought labor was worth; and I determined to make a good thing of it for once. I figured it right down to European prices,—seventeen cents a day for unskilled labor. Of course, I boarded myself. I ought to say that I fixed the wages after the work was done, or I might have been tempted to do as some masons did who worked for me at four dollars a day. They lay in the shade and slept the sleep of honest toil full half the time, at least all the time I was away. I have reason to believe that when the wages of mechanics are raised to eight and ten dollars a day, the workmen will not come at all: they will merely send their cards.

I do not see any possible fault in the above figures. I ought to say that I deferred putting a value on the potatoes until I had footed up the debit column. This is always the safest way to do. I had twenty-five bushels. I roughly estimated that there are one hundred good ones to the bushel. Making my own market price, I asked two cents apiece for them. This I should have considered dirt cheap last June, when I was going down the rows with the hoe. If any one thinks that two cents each is high, let him try to raise them.

Nature is "awful smart." I intend to be complimentary in saying so. She shows it in little things. I have mentioned my attempt to put in a few modest turnips, near the close of the season. I sowed the seeds, by the way, in the most liberal manner. Into three or four short rows I presume I put enough to sow an acre; and they all came up,—came up as thick as grass, as crowded and useless as babies in a Chinese village. Of course, they had to be thinned out; that is, pretty much all pulled up; and it took me a long time; for it takes a conscientious man some time to decide which are the best and healthiest plants to spare. After all, I spared

too many. That is the great danger everywhere in this world (it may not be in the next): things are too thick; we lose all in grasping for too much. The Scotch say, that no man ought to thin out his own turnips, because he will not sacrifice enough to leave room for the remainder to grow: he should get his neighbor, who does not care for the plants, to do it. But this is mere talk, and aside from the point: if there is anything I desire to avoid in these agricultural papers, it is digression. I did think that putting in these turnips so late in the season, when general activity has ceased, and in a remote part of the garden, they would pass unnoticed. But Nature never even winks, as I can see. The tender blades were scarcely out of the ground when she sent a small black fly, which seemed to have been born and held in reserve for this purpose,—to cut the leaves. They speedily made lace-work of the whole bed. Thus everything appears to have its special enemy,—except, perhaps, p—y: nothing ever troubles that.

Did the Concord Grape ever come to more luscious perfection than this year? or yield so abundantly? The golden sunshine has passed into them, and distended their purple skins almost to bursting. Such heavy clusters! such bloom! such sweetness! such meat and drink in their round globes! What a fine fellow Bacchus would have been, if he had only signed the pledge when he was a young man! I have taken off clusters that were as compact and almost as large as the Black Hamburgs. It is slow work picking them. I do not see how the gatherers for the vintage ever get off enough. It takes so long to disentangle the bunches from the leaves and the interlacing vines and the supporting tendrils; and then I like to hold up each bunch and look at it in the sunlight, and get the fragrance and the bloom of it, and show it to Polly, who is making herself useful, as taster and companion, at the foot of the ladder, before dropping it into the basket. But we have other company. The robin, the most knowing and greedy bird out of paradise (I trust he will always be kept out), has discovered that the grape-crop is uncommonly good, and has come back, with his whole tribe and family, larger than it was in pea-time. He knows the ripest bunches as well as anybody, and tries them all. If he would take a whole bunch here and there, say half the number, and be off with it, I should not so much care. But he will not. He pecks away at all the bunches, and spoils as many as he can. It is time he went south.

There is no prettier sight, to my eye, than a gardener on a ladder in his grape-arbor, in these golden days, selecting the heaviest clusters of grapes, and handing them down to one and another of a group of neighbors and friends, who stand under the shade of the leaves, flecked with the sunlight, and cry, "How sweet!" "What nice ones!" and the like,—remarks encouraging to the man on the ladder. It is great pleasure to see people eat grapes.

Moral Truth.—I have no doubt that grapes taste best in other people's mouths. It is an old notion that it is easier to be generous than to be stingy. I am convinced that the majority of people would be generous from selfish motives, if they had the opportunity.

Philosophical Observation.—Nothing shows one who his friends are like prosperity and ripe fruit. I had a good friend in the country, whom I almost never visited except in cherry-time. By your fruits you shall know them.

SEVENTEENTH WEEK

I like to go into the garden these warm latter days, and muse. To muse is to sit in the sun, and not think of anything. I am not sure but goodness comes out of people who bask in the sun, as it does out of a sweet apple roasted before the fire. The late September and October sun of this latitude is something like the sun of extreme Lower Italy: you can stand a good deal of it, and apparently soak a winter supply into the system. If one only could take in his winter fuel in this way! The next great discovery will, very likely, be the conservation of sunlight. In the correlation of forces, I look to see the day when the superfluous sunshine will be utilized; as, for instance, that which has burned up my celery this year will be converted into a force to work the garden.

This sitting in the sun amid the evidences of a ripe year is the easiest part of gardening I have experienced. But what a combat has gone on here! What vegetable passions have run the whole gamut of ambition, selfishness, greed of place, fruition, satiety, and now rest here in the truce of exhaustion! What a battle-field, if one may look upon it so! The corn has lost its ammunition, and stacked arms in a slovenly, militia sort of style. The ground vines are torn, trampled, and withered; and the ungathered cucumbers, worthless melons, and golden squashes lie about like the spent bombs and exploded shells of a battle-field. So the cannon-balls lay on the sandy plain before Fort Fisher after the capture. So the great grassy meadow at Munich, any morning during the October Fest, is strewn with empty beermugs. History constantly repeats itself. There is a large crop of moral reflections in my garden, which anybody is at liberty to gather who passes this way.

I have tried to get in anything that offered temptation to sin. There would be no thieves if there was nothing to steal; and I suppose, in the thieves' catechism, the provider is as bad as the thief; and, probably, I am to blame for leaving out a few winter pears, which some predatory boy carried off on Sunday. At first I was angry, and said I should like to have caught the urchin in the act; but, on second thought, I was glad I did not. The interview could not have been pleasant: I shouldn't have known what to do with him. The chances are, that he would have escaped away with his pockets full, and jibed at me from a safe distance. And, if I had got my hands on him, I should have been still more embarrassed. If I had flogged him, he would have got over it a good deal sooner than I should. That sort of boy does not mind castigation any more than he does tearing his trousers in the briars. If I had treated him with kindness, and conciliated him with grapes, showing him the enormity of his offense, I suppose he would have come the next night, and taken the remainder of the grapes. The truth is, that the public morality is lax on the subject of fruit. If anybody puts arsenic or gunpowder into his watermelons, he is universally denounced as a stingy old murderer by the community. A great many people regard growing fruit as lawful prey, who would not think of breaking into your cellar to take it. I found a man once in my raspberry-bushes, early in the season, when we were waiting for a dishful to ripen. Upon inquiring what he was about, he said he was only eating some; and the operation seemed to be so natural and simple, that I disliked to disturb him. And I am not very sure that one has a right to the whole of an abundant crop of fruit until he has gathered it. At least, in a city garden, one might as well conform his theory to the practice of the community.

As for children (and it sometimes looks as if the chief products of my garden were small boys and hens), it is admitted that they are barbarians. There is no exception among them to this condition of barbarism. This is not to say that they are not attractive; for they have the virtues as well as the vices of a primitive people. It is held by some naturalists that the child is only a zoophyte, with a stomach, and feelers radiating from it in search of something to fill it. It is true that a child is always hungry all over: but he is also curious all over; and his curiosity is excited about as early as his hunger. He immediately begins to put out his moral feelers into the unknown and the infinite to discover what sort of an existence this is into which he has come. His imagination is quite as hungry as his stomach. And again and again it is stronger than his other appetites. You can easily engage his imagination in a story which will make him forget his dinner. He is credulous and superstitious, and open to all wonder. In this, he is exactly like the savage races. Both gorge themselves on the marvelous; and all the unknown is marvelous to them. I know the general impression is that children must be governed through their stomachs. I think they can be controlled quite as well through their curiosity; that being the more craving and imperious of the two. I have seen children follow about a person who told them stories, and interested them with his charming talk, as greedily as if his pockets had been full of bon-bons.

Perhaps this fact has no practical relation to gardening; but it occurs to me that, if I should paper the outside of my high board fence with the leaves of "The Arabian Nights," it would afford me a good deal of protection,—more, in fact, than spikes in the top, which tear trousers and encourage profanity, but do not save much fruit. A spiked fence is a challenge to any boy of spirit. But if the fence were papered with fairy-tales, would he not stop to read them until it was too late for him to climb into the garden? I don't know. Human nature is vicious. The boy might regard the picture of the garden of the Hesperides only as an advertisement of what was over the fence. I begin to find that the problem of raising fruit is nothing to that of getting it after it has matured. So long as the law, just in many respects, is in force against shooting birds and small boys, the gardener may sow in tears and reap in vain.

The power of a boy is, to me, something fearful. Consider what he can do. You buy and set out a choice pear-tree; you enrich the earth for it; you train and trim it, and vanquish the borer, and watch its slow growth. At length it rewards your care by producing two or three pears, which you cut up and divide in the family, declaring the flavor of the bit you eat to be something extraordinary. The next year, the little tree blossoms full, and sets well; and in the autumn has on its slender, drooping limbs half a bushel of fruit, daily growing more delicious in the sun. You show it to your friends, reading to them the French name, which you can never remember, on the label; and you take an honest pride in the successful fruit of long care. That night your pears shall be required of you by a boy! Along comes an irresponsible urchin, who has not been growing much longer than the tree, with not twenty-five cents worth of clothing on him, and in five minutes takes off every pear, and retires into safe obscurity. In five minutes the remorseless boy has undone your work of years, and with the easy nonchalance, I doubt not, of any agent of fate, in whose path nothing is sacred or safe.

And it is not of much consequence. The boy goes on his way,—to Congress, or to State Prison: in either

place he will be accused of stealing, perhaps wrongfully. You learn, in time, that it is better to have had pears and lost them than not to have had pears at all. You come to know that the least (and rarest) part of the pleasure of raising fruit is the vulgar eating it. You recall your delight in conversing with the nurseryman, and looking at his illustrated catalogues, where all the pears are drawn perfect in form, and of extra size, and at that exact moment between ripeness and decay which it is so impossible to hit in practice. Fruit cannot be raised on this earth to taste as you imagine those pears would taste. For years you have this pleasure, unalloyed by any disenchanting reality. How you watch the tender twigs in spring, and the freshly forming bark, hovering about the healthy growing tree with your pruning-knife many a sunny morning! That is happiness. Then, if you know it, you are drinking the very wine of life; and when the sweet juices of the earth mount the limbs, and flow down the tender stem, ripening and reddening the pendent fruit, you feel that you somehow stand at the source of things, and have no unimportant share in the processes of Nature. Enter at this moment boy the destroyer, whose office is that of preserver as well; for, though he removes the fruit from your sight, it remains in your memory immortally ripe and desirable. The gardener needs all these consolations of a high philosophy.

EIGHTEENTH WEEK

Regrets are idle; yet history is one long regret. Everything might have turned out so differently! If Ravaiillac had not been imprisoned for debt, he would not have stabbed Henry of Navarre. If William of Orange had escaped assassination by Philip's emissaries; if France had followed the French Calvin, and embraced Protestant Calvinism, as it came very near doing towards the end of the sixteenth century; if the Continental ammunition had not given out at Bunker's Hill; if Blucher had not "come up" at Waterloo,—the lesson is, that things do not come up unless they are planted. When you go behind the historical scenery, you find there is a rope and pulley to effect every transformation which has astonished you. It was the rascality of a minister and a contractor five years before that lost the battle; and the cause of the defeat was worthless ammunition. I should like to know how many wars have been caused by fits of indigestion, and how many more dynasties have been upset by the love of woman than by the hate of man. It is only because we are ill informed that anything surprises us; and we are disappointed because we expect that for which we have not provided.

I had too vague expectations of what my garden would do of itself. A garden ought to produce one everything,—just as a business ought to support a man, and a house ought to keep itself. We had a convention lately to resolve that the house should keep itself; but it won't. There has been a lively time in our garden this summer; but it seems to me there is very little to show for it. It has been a terrible campaign; but where is the indemnity? Where are all "sass" and Lorraine? It is true that we have lived on the country; but we desire, besides, the fruits of the war. There are no onions, for one thing. I am quite ashamed to take people into my garden, and have them notice the absence of onions. It is very marked. In onion is strength; and a garden without it lacks flavor. The onion in its satin wrappings is among the most beautiful of vegetables; and it is the only one that represents the essence of things. It can almost be said to have a soul. You take off coat after coat, and the onion is still there; and, when the last one is removed, who dare say that the onion itself is destroyed, though you can weep over its departed spirit? If there is any one thing on this fallen earth that the angels in heaven weep over—more than another, it is the onion.

I know that there is supposed to be a prejudice against the onion; but I think there is rather a cowardice in regard to it. I doubt not that all men and women love the onion; but few confess their love. Affection for it is concealed. Good New-Englanders are as shy of owning it as they are of talking about religion. Some people have days on which they eat onions,—what you might call "retreats," or their "Thursdays." The act is in the nature of a religious ceremony, an Eleusinian mystery; not a breath of it must get abroad. On that day they see no company; they deny the kiss of greeting to the dearest friend; they retire within themselves, and hold communion with one of the most pungent and penetrating manifestations of the moral vegetable world. Happy is said to be the family which can eat onions together. They are, for the time being, separate from the world, and have a harmony of aspiration. There is a hint here for the reformers. Let them become apostles of the onion; let them eat, and preach it to their fellows, and circulate tracts of it in the form of seeds. In the onion is the hope of universal brotherhood. If all men will eat onions at all times, they will come into a universal sympathy. Look at Italy. I hope I am not mistaken as to the cause of her unity. It was the Reds who preached the gospel which made it possible. All the Reds of Europe, all the sworn devotees of the mystic Mary Ann, eat of the common vegetable. Their oaths are strong with it. It is the food, also, of the common people of Italy. All the social atmosphere of that delicious land is laden with it. Its odor is a practical democracy. In the churches all are alike: there is one faith, one smell. The entrance of Victor Emanuel into Rome is only the pompous proclamation of a unity which garlic had already accomplished; and yet we, who boast of our democracy, eat onions in secret.

I now see that I have left out many of the most moral elements. Neither onions, parsnips, carrots, nor cabbages are here. I have never seen a garden in the autumn before, without the uncouth cabbage in it; but my garden gives the impression of a garden without a head. The cabbage is the rose of Holland. I admire the force by which it compacts its crisp leaves into a solid head. The secret of it would be priceless to the world. We should see less expansive foreheads with nothing within. Even the largest cabbages are not always the best. But I mention these things, not from any sympathy I have with the vegetables named, but to show how hard it is to go contrary to the expectations of society. Society expects every man to have certain things in his garden. Not to raise cabbage is as if one had no pew in church. Perhaps we shall come some day to free churches and free gardens; when I can show my neighbor through my tired garden, at the end of the season, when skies are overcast, and brown leaves are swirling down, and not mind if he does raise his eyebrows when he observes, "Ah! I see you have none of this, and of that." At present we want the moral courage to plant only what we need; to spend only what will bring us peace, regardless of what is going on over the

fence. We are half ruined by conformity; but we should be wholly ruined without it; and I presume I shall make a garden next year that will be as popular as possible.

And this brings me to what I see may be a crisis in life. I begin to feel the temptation of experiment. Agriculture, horticulture, floriculture,—these are vast fields, into which one may wander away, and never be seen more. It seemed to me a very simple thing, this gardening; but it opens up astonishingly. It is like the infinite possibilities in worsted-work. Polly sometimes says to me, "I wish you would call at Bobbin's, and match that skein of worsted for me, when you are in town." Time was, I used to accept such a commission with alacrity and self-confidence. I went to Bobbin's, and asked one of his young men, with easy indifference, to give me some of that. The young man, who is as handsome a young man as ever I looked at, and who appears to own the shop, and whose suave superciliousness would be worth everything to a cabinet minister who wanted to repel applicants for place, says, "I have n't an ounce: I have sent to Paris, and I expect it every day. I have a good deal of difficulty in getting that shade in my assortment." To think that he is in communication with Paris, and perhaps with Persia! Respect for such a being gives place to awe. I go to another shop, holding fast to my scarlet clew. There I am shown a heap of stuff, with more colors and shades than I had supposed existed in all the world. What a blaze of distraction! I have been told to get as near the shade as I could; and so I compare and contrast, till the whole thing seems to me about of one color. But I can settle my mind on nothing. The affair assumes a high degree of importance. I am satisfied with nothing but perfection. I don't know what may happen if the shade is not matched. I go to another shop, and another, and another. At last a pretty girl, who could make any customer believe that green is blue, matches the shade in a minute. I buy five cents worth. That was the order. Women are the most economical persons that ever were. I have spent two hours in this five-cent business; but who shall say they were wasted, when I take the stuff home, and Polly says it is a perfect match, and looks so pleased, and holds it up with the work, at arm's length, and turns her head one side, and then takes her needle, and works it in? Working in, I can see, my own obligingness and amiability with every stitch. Five cents is dirt cheap for such a pleasure.

The things I may do in my garden multiply on my vision. How fascinating have the catalogues of the nurserymen become! Can I raise all those beautiful varieties, each one of which is preferable to the other? Shall I try all the kinds of grapes, and all the sorts of pears? I have already fifteen varieties of strawberries (vines); and I have no idea that I have hit the right one. Must I subscribe to all the magazines and weekly papers which offer premiums of the best vines? Oh, that all the strawberries were rolled into one, that I could inclose all its lusciousness in one bite! Oh for the good old days when a strawberry was a strawberry, and there was no perplexity about it! There are more berries now than churches; and no one knows what to believe. I have seen gardens which were all experiment, given over to every new thing, and which produced little or nothing to the owners, except the pleasure of expectation. People grow pear-trees at great expense of time and money, which never yield them more than four pears to the tree. The fashions of ladies' bonnets are nothing to the fashions of nurserymen. He who attempts to follow them has a business for life; but his life may be short. If I enter upon this wide field of horticultural experiment, I shall leave peace behind; and I may expect the ground to open, and swallow me and all my fortune. May Heaven keep me to the old roots and

herbs of my forefathers! Perhaps in the world of modern reforms this is not possible; but I intend now to cultivate only the standard things, and learn to talk knowingly of the rest. Of course, one must keep up a reputation. I have seen people greatly enjoy themselves, and elevate themselves in their own esteem, in a wise and critical talk about all the choice wines, while they were sipping a decoction, the original cost of which bore no relation to the price of grapes.

NINETEENTH WEEK

The closing scenes are not necessarily funereal. A garden should be got ready for winter as well as for summer. When one goes into winter-quarters, he wants everything neat and trim. Expecting high winds, we bring everything into close reef. Some men there are who never shave (if they are so absurd as ever to shave), except when they go abroad, and who do not take care to wear polished boots in the bosoms of their families. I like a man who shaves (next to one who does n't shave) to satisfy his own conscience, and not for display, and who dresses as neatly at home as he does anywhere. Such a man will be likely to put his garden in complete order before the snow comes, so that its last days shall not present a scene of melancholy ruin and decay.

I confess that, after such an exhausting campaign, I felt a great temptation to retire, and call it a drawn engagement. But better counsels prevailed. I determined that the weeds should not sleep on the field of battle. I routed them out, and leveled their works. I am master of the situation. If I have made a desert, I at least have peace; but it is not quite a desert. The strawberries, the raspberries, the celery, the turnips, wave green above the clean earth, with no enemy in sight. In these golden October days no work is more fascinating than this getting ready for spring. The sun is no longer a burning enemy, but a friend, illuminating all the open space, and warming the mellow soil. And the pruning and clearing away of rubbish, and the fertilizing, go on with something of the hilarity of a wake, rather than the despondency of other funerals. When the wind begins to come out of the northwest of set purpose, and to sweep the ground with low and searching fierceness, very different from the roistering, jolly bluster of early fall, I have put the strawberries under their coverlet of leaves, pruned the grape-vines and laid them under the soil, tied up the tender plants, given the fruit trees a good, solid meal about the roots; and so I turn away, writing Resurgam on the gatepost. And Calvin, aware that the summer is past and the harvest is ended, and that a mouse in the kitchen is worth two birds gone south, scampers away to the house with his tail in the air.

And yet I am not perfectly at rest in my mind. I know that this is only a truce until the parties recover their exhausted energies. All winter long the forces of chemistry will be mustering under ground, repairing the losses, calling up the reserves, getting new strength from my surface-fertilizing bounty, and making ready for the spring campaign. They will open it before I am ready: while the snow is scarcely melted, and the ground is not passable, they will begin to move on my works; and the fight will commence. Yet how deceitfully it will open to the music of birds and the soft enchantment of the spring mornings! I shall even be permitted to win a few skirmishes: the secret forces will even wait for me to plant and sow, and show my full hand, before they come on in heavy and determined assault. There are already signs of an internecine fight with the devil-grass, which has intrenched itself in a considerable portion of my garden-patch. It contests the ground inch by inch; and digging it out is very much such labor as eating a piece of choke-cherry pie with the stones all in. It is work, too, that I know by experience I shall have to do alone. Every man must eradicate his own devil-grass. The neighbors who have leisure to help you in grape-picking time are all busy when devil-grass is most aggressive. My neighbors' visits are well timed: it is only their hens which have seasons for their own.

I am told that abundant and rank weeds are signs of a rich soil; but I have noticed that a thin, poor soil grows little but weeds. I am inclined to think that the substratum is the same, and that the only choice in this world is what kind of weeds you will have. I am not much attracted by the gaunt, flavorless mullein, and the wiry thistle of upland country pastures, where the grass is always gray, as if the world were already weary and sick of life. The awkward, uncouth wickedness of remote country-places, where culture has died out after the first crop, is about as disagreeable as the ranker and richer vice of city life, forced by artificial heat and the juices of an overfed civilization. There is no doubt that, on the whole, the rich soil is the best: the fruit of it has body and flavor. To what affluence does a woman (to take an instance, thank Heaven, which is common) grow, with favoring circumstances, under the stimulus of the richest social and intellectual influences! I am aware that there has been a good deal said in poetry about the fringed gentian and the harebell of rocky districts and waysides, and I know that it is possible for maidens to bloom in very slight soil into a wild-wood grace and beauty; yet, the world through, they lack that wealth of charms, that tropic affluence of both person and mind, which higher and more stimulating culture brings,—the passion as well as the soul glowing in the Cloth-of-Gold rose. Neither persons nor plants are ever fully themselves until they are cultivated to their highest. I, for one, have no fear that society will be too much enriched. The only question is about keeping down the weeds; and I have learned by experience, that we need new sorts of hoes, and more disposition to use them.

Moral Deduction.—The difference between soil and society is evident. We bury decay in the earth; we plant in it the perishing; we feed it with offensive refuse: but nothing grows out of it that is not clean; it gives us back life and beauty for our rubbish. Society returns us what we give it.

Pretending to reflect upon these things, but in reality watching the blue-jays, who are pecking at the purple berries of the woodbine on the south gable, I approach the house. Polly is picking up chestnuts on the sward, regardless of the high wind which rattles them about her head and upon the glass roof of her winter-garden. The garden, I see, is filled with thrifty plants, which will make it always summer there. The callas about the fountain will be in flower by Christmas: the plant appears to keep that holiday in her secret heart all summer. I close the outer windows as we go along, and congratulate myself that we are ready for winter. For the

winter-garden I have no responsibility: Polly has entire charge of it. I am only required to keep it heated, and not too hot either; to smoke it often for the death of the bugs; to water it once a day; to move this and that into the sun and out of the sun pretty constantly: but she does all the work. We never relinquish that theory.

As we pass around the house, I discover a boy in the ravine filling a bag with chestnuts and hickorynuts. They are not plenty this year; and I suggest the propriety of leaving some for us. The boy is a little slow to take the idea: but he has apparently found the picking poor, and exhausted it; for, as he turns away down the glen, he hails me with,

“Mister, I say, can you tell me where I can find some walnuts?”

The coolness of this world grows upon me. It is time to go in and light a wood-fire on the hearth.

CALVIN

NOTE.—The following brief Memoir of one of the characters in this book

is added by his friend, in the hope that the record of an exemplary life in an humble sphere may be of some service to the world.

HARTFORD, January, 1880.

CALVIN

A STUDY OF CHARACTER

Calvin is dead. His life, long to him, but short for the rest of us, was not marked by startling adventures, but his character was so uncommon and his qualities were so worthy of imitation, that I have been asked by those who personally knew him to set down my recollections of his career.

His origin and ancestry were shrouded in mystery; even his age was a matter of pure conjecture. Although he was of the Maltese race, I have reason to suppose that he was American by birth as he certainly was in sympathy. Calvin was given to me eight years ago by Mrs. Stowe, but she knew nothing of his age or origin. He walked into her house one day out of the great unknown and became at once at home, as if he had been always a friend of the family. He appeared to have artistic and literary tastes, and it was as if he had inquired at the door if that was the residence of the author of “Uncle Tom's Cabin,” and, upon being assured that it was, had decided to dwell there. This is, of course, fanciful, for his antecedents were wholly unknown, but in his time he could hardly have been in any household where he would not have heard “Uncle Tom's Cabin” talked about. When he came to Mrs. Stowe, he was as large as he ever was, and apparently as old as he ever became. Yet there was in him no appearance of age; he was in the happy maturity of all his powers, and you would rather have said that in that maturity he had found the secret of perpetual youth. And it was as difficult to believe that he would ever be aged as it was to imagine that he had ever been in immature youth. There was in him a mysterious perpetuity.

After some years, when Mrs. Stowe made her winter home in Florida, Calvin came to live with us. From the first moment, he fell into the ways of the house and assumed a recognized position in the family,—I say recognized, because after he became known he was always inquired for by visitors, and in the letters to the other members of the family he always received a message. Although the least obtrusive of beings, his individuality always made itself felt.

His personal appearance had much to do with this, for he was of royal mould, and had an air of high breeding. He was large, but he had nothing of the fat grossness of the celebrated Angora family; though powerful, he was exquisitely proportioned, and as graceful in every movement as a young leopard. When he stood up to open a door—he opened all the doors with old-fashioned latches—he was portentously tall, and when stretched on the rug before the fire he seemed too long for this world—as indeed he was. His coat was the finest and softest I have ever seen, a shade of quiet Maltese; and from his throat downward, underneath, to the white tips of his feet, he wore the whitest and most delicate ermine; and no person was ever more fastidiously neat. In his finely formed head you saw something of his aristocratic character; the ears were small and cleanly cut, there was a tinge of pink in the nostrils, his face was handsome, and the expression of his countenance exceedingly intelligent—I should call it even a sweet expression, if the term were not inconsistent with his look of alertness and sagacity.

It is difficult to convey a just idea of his gayety in connection with his dignity and gravity, which his name expressed. As we know nothing of his family, of course it will be understood that Calvin was his Christian name. He had times of relaxation into utter playfulness, delighting in a ball of yarn, catching sportively at stray ribbons when his mistress was at her toilet, and pursuing his own tail, with hilarity, for lack of anything

better. He could amuse himself by the hour, and he did not care for children; perhaps something in his past was present to his memory. He had absolutely no bad habits, and his disposition was perfect. I never saw him exactly angry, though I have seen his tail grow to an enormous size when a strange cat appeared upon his lawn. He disliked cats, evidently regarding them as feline and treacherous, and he had no association with them. Occasionally there would be heard a night concert in the shrubbery. Calvin would ask to have the door opened, and then you would hear a rush and a "pestzt," and the concert would explode, and Calvin would quietly come in and resume his seat on the hearth. There was no trace of anger in his manner, but he would n't have any of that about the house. He had the rare virtue of magnanimity. Although he had fixed notions about his own rights, and extraordinary persistency in getting them, he never showed temper at a repulse; he simply and firmly persisted till he had what he wanted. His diet was one point; his idea was that of the scholars about dictionaries,—to "get the best." He knew as well as any one what was in the house, and would refuse beef if turkey was to be had; and if there were oysters, he would wait over the turkey to see if the oysters would not be forthcoming. And yet he was not a gross gourmand; he would eat bread if he saw me eating it, and thought he was not being imposed on. His habits of feeding, also, were refined; he never used a knife, and he would put up his hand and draw the fork down to his mouth as gracefully as a grown person. Unless necessity compelled, he would not eat in the kitchen, but insisted upon his meals in the dining-room, and would wait patiently, unless a stranger were present; and then he was sure to importune the visitor, hoping that the latter was ignorant of the rule of the house, and would give him something. They used to say that he preferred as his table-cloth on the floor a certain well-known church journal; but this was said by an Episcopalian. So far as I know, he had no religious prejudices, except that he did not like the association with Romanists. He tolerated the servants, because they belonged to the house, and would sometimes linger by the kitchen stove; but the moment visitors came in he arose, opened the door, and marched into the drawing-room. Yet he enjoyed the company of his equals, and never withdrew, no matter how many callers—whom he recognized as of his society—might come into the drawing-room. Calvin was fond of company, but he wanted to choose it; and I have no doubt that his was an aristocratic fastidiousness rather than one of faith. It is so with most people.

The intelligence of Calvin was something phenomenal, in his rank of life. He established a method of communicating his wants, and even some of his sentiments; and he could help himself in many things. There was a furnace register in a retired room, where he used to go when he wished to be alone, that he always opened when he desired more heat; but he never shut it, any more than he shut the door after himself. He could do almost everything but speak; and you would declare sometimes that you could see a pathetic longing to do that in his intelligent face. I have no desire to overdraw his qualities, but if there was one thing in him more noticeable than another, it was his fondness for nature. He could content himself for hours at a low window, looking into the ravine and at the great trees, noting the smallest stir there; he delighted, above all things, to accompany me walking about the garden, hearing the birds, getting the smell of the fresh earth, and rejoicing in the sunshine. He followed me and gamboled like a dog, rolling over on the turf and exhibiting his delight in a hundred ways. If I worked, he sat and watched me, or looked off over the bank, and kept his ear open to the twitter in the cherry-trees. When it stormed, he was sure to sit at the window, keenly watching the rain or the snow, glancing up and down at its falling; and a winter tempest always delighted him. I think he was genuinely fond of birds, but, so far as I know, he usually confined himself to one a day; he never killed, as some sportsmen do, for the sake of killing, but only as civilized people do,—from necessity. He was intimate with the flying-squirrels who dwell in the chestnut-trees,—too intimate, for almost every day in the summer he would bring in one, until he nearly discouraged them. He was, indeed, a superb hunter, and would have been a devastating one, if his bump of destructiveness had not been offset by a bump of moderation. There was very little of the brutality of the lower animals about him; I don't think he enjoyed rats for themselves, but he knew his business, and for the first few months of his residence with us he waged an awful campaign against the horde, and after that his simple presence was sufficient to deter them from coming on the premises. Mice amused him, but he usually considered them too small game to be taken seriously; I have seen him play for an hour with a mouse, and then let him go with a royal condescension. In this whole, matter of "getting a living," Calvin was a great contrast to the rapacity of the age in which he lived.

I hesitate a little to speak of his capacity for friendship and the affectionateness of his nature, for I know from his own reserve that he would not care to have it much talked about. We understood each other perfectly, but we never made any fuss about it; when I spoke his name and snapped my fingers, he came to me; when I returned home at night, he was pretty sure to be waiting for me near the gate, and would rise and saunter along the walk, as if his being there were purely accidental,—so shy was he commonly of showing feeling; and when I opened the door, he never rushed in, like a cat, but loitered, and lounged, as if he had no intention of going in, but would condescend to. And yet, the fact was, he knew dinner was ready, and he was bound to be there. He kept the run of dinner-time. It happened sometimes, during our absence in the summer, that dinner would be early, and Calvin, walking about the grounds, missed it and came in late. But he never made a mistake the second day. There was one thing he never did,—he never rushed through an open doorway. He never forgot his dignity. If he had asked to have the door opened, and was eager to go out, he always went deliberately; I can see him now standing on the sill, looking about at the sky as if he was thinking whether it were worth while to take an umbrella, until he was near having his tail shut in.

His friendship was rather constant than demonstrative. When we returned from an absence of nearly two years, Calvin welcomed us with evident pleasure, but showed his satisfaction rather by tranquil happiness than by fuming about. He had the faculty of making us glad to get home. It was his constancy that was so attractive. He liked companionship, but he wouldn't be petted, or fussed over, or sit in any one's lap a moment; he always extricated himself from such familiarity with dignity and with no show of temper. If there was any petting to be done, however, he chose to do it. Often he would sit looking at me, and then, moved by a delicate affection, come and pull at my coat and sleeve until he could touch my face with his nose, and then go away contented. He had a habit of coming to my study in the morning, sitting quietly by my side or on the table for hours, watching the pen run over the paper, occasionally swinging his tail round for a blotter, and then going to sleep among the papers by the inkstand. Or, more rarely, he would watch the writing from a

perch on my shoulder. Writing always interested him, and, until he understood it, he wanted to hold the pen.

He always held himself in a kind of reserve with his friend, as if he had said, "Let us respect our personality, and not make a 'mess' of friendship." He saw, with Emerson, the risk of degrading it to trivial conveniency. "Why insist on rash personal relations with your friend?" "Leave this touching and clawing." Yet I would not give an unfair notion of his aloofness, his fine sense of the sacredness of the me and the not-me. And, at the risk of not being believed, I will relate an incident, which was often repeated. Calvin had the practice of passing a portion of the night in the contemplation of its beauties, and would come into our chamber over the roof of the conservatory through the open window, summer and winter, and go to sleep on the foot of my bed. He would do this always exactly in this way; he never was content to stay in the chamber if we compelled him to go upstairs and through the door. He had the obstinacy of General Grant. But this is by the way. In the morning, he performed his toilet and went down to breakfast with the rest of the family. Now, when the mistress was absent from home, and at no other time, Calvin would come in the morning, when the bell rang, to the head of the bed, put up his feet and look into my face, follow me about when I rose, "assist" at the dressing, and in many purring ways show his fondness, as if he had plainly said, "I know that she has gone away, but I am here." Such was Calvin in rare moments.

He had his limitations. Whatever passion he had for nature, he had no conception of art. There was sent to him once a fine and very expressive cat's head in bronze, by Fremiet. I placed it on the floor. He regarded it intently, approached it cautiously and crouchingly, touched it with his nose, perceived the fraud, turned away abruptly, and never would notice it afterward. On the whole, his life was not only a successful one, but a happy one. He never had but one fear, so far as I know: he had a mortal and a reasonable terror of plumbers. He would never stay in the house when they were here. No coaxing could quiet him. Of course he did n't share our fear about their charges, but he must have had some dreadful experience with them in that portion of his life which is unknown to us. A plumber was to him the devil, and I have no doubt that, in his scheme, plumbers were foreordained to do him mischief.

In speaking of his worth, it has never occurred to me to estimate Calvin by the worldly standard. I know that it is customary now, when any one dies, to ask how much he was worth, and that no obituary in the newspapers is considered complete without such an estimate. The plumbers in our house were one day overheard to say that, "They say that she says that he says that he wouldn't take a hundred dollars for him." It is unnecessary to say that I never made such a remark, and that, so far as Calvin was concerned, there was no purchase in money.

As I look back upon it, Calvin's life seems to me a fortunate one, for it was natural and unforced. He ate when he was hungry, slept when he was sleepy, and enjoyed existence to the very tips of his toes and the end of his expressive and slow-moving tail. He delighted to roam about the garden, and stroll among the trees, and to lie on the green grass and luxuriate in all the sweet influences of summer. You could never accuse him of idleness, and yet he knew the secret of repose. The poet who wrote so prettily of him that his little life was rounded with a sleep, understated his felicity; it was rounded with a good many. His conscience never seemed to interfere with his slumbers. In fact, he had good habits and a contented mind. I can see him now walk in at the study door, sit down by my chair, bring his tail artistically about his feet, and look up at me with unspeakable happiness in his handsome face. I often thought that he felt the dumb limitation which denied him the power of language. But since he was denied speech, he scorned the inarticulate mouthings of the lower animals. The vulgar mewing and yowling of the cat species was beneath him; he sometimes uttered a sort of articulate and well-bred ejaculation, when he wished to call attention to something that he considered remarkable, or to some want of his, but he never went whining about. He would sit for hours at a closed window, when he desired to enter, without a murmur, and when it was opened, he never admitted that he had been impatient by "bolting" in. Though speech he had not, and the unpleasant kind of utterance given to his race he would not use, he had a mighty power of purr to express his measureless content with congenial society. There was in him a musical organ with stops of varied power and expression, upon which I have no doubt he could have performed Scarlatti's celebrated cat's-fugue.

Whether Calvin died of old age, or was carried off by one of the diseases incident to youth, it is impossible to say; for his departure was as quiet as his advent was mysterious. I only know that he appeared to us in this world in his perfect stature and beauty, and that after a time, like Lohengrin, he withdrew. In his illness there was nothing more to be regretted than in all his blameless life. I suppose there never was an illness that had more of dignity, and sweetness and resignation in it. It came on gradually, in a kind of listlessness and want of appetite. An alarming symptom was his preference for the warmth of a furnace-register to the lively sparkle of the open woodfire. Whatever pain he suffered, he bore it in silence, and seemed only anxious not to obtrude his malady. We tempted him with the delicacies of the season, but it soon became impossible for him to eat, and for two weeks he ate or drank scarcely anything. Sometimes he made an effort to take something, but it was evident that he made the effort to please us. The neighbors—and I am convinced that the advice of neighbors is never good for anything—suggested catnip. He would n't even smell it. We had the attendance of an amateur practitioner of medicine, whose real office was the cure of souls, but nothing touched his case. He took what was offered, but it was with the air of one to whom the time for pellets was passed. He sat or lay day after day almost motionless, never once making a display of those vulgar convulsions or contortions of pain which are so disagreeable to society. His favorite place was on the brightest spot of a Smyrna rug by the conservatory, where the sunlight fell and he could hear the fountain play. If we went to him and exhibited our interest in his condition, he always purred in recognition of our sympathy. And when I spoke his name, he looked up with an expression that said, "I understand it, old fellow, but it's no use." He was to all who came to visit him a model of calmness and patience in affliction.

I was absent from home at the last, but heard by daily postal-card of his failing condition; and never again saw him alive. One sunny morning, he rose from his rug, went into the conservatory (he was very thin then), walked around it deliberately, looking at all the plants he knew, and then went to the bay-window in the dining-room, and stood a long time looking out upon the little field, now brown and sere, and toward the garden, where perhaps the happiest hours of his life had been spent. It was a last look. He turned and walked away, laid himself down upon the bright spot in the rug, and quietly died.

It is not too much to say that a little shock went through the neighborhood when it was known that Calvin was dead, so marked was his individuality; and his friends, one after another, came in to see him. There was no sentimental nonsense about his obsequies; it was felt that any parade would have been distasteful to him. John, who acted as undertaker, prepared a candle-box for him and I believe assumed a professional decorum; but there may have been the usual levity underneath, for I heard that he remarked in the kitchen that it was the "driest wake he ever attended." Everybody, however, felt a fondness for Calvin, and regarded him with a certain respect. Between him and Bertha there existed a great friendship, and she apprehended his nature; she used to say that sometimes she was afraid of him, he looked at her so intelligently; she was never certain that he was what he appeared to be.

When I returned, they had laid Calvin on a table in an upper chamber by an open window. It was February. He reposed in a candle-box, lined about the edge with evergreen, and at his head stood a little wine-glass with flowers. He lay with his head tucked down in his arms,—a favorite position of his before the fire,—as if asleep in the comfort of his soft and exquisite fur. It was the involuntary exclamation of those who saw him, "How natural he looks!" As for myself, I said nothing. John buried him under the twin hawthorn-trees,—one white and the other pink,—in a spot where Calvin was fond of lying and listening to the hum of summer insects and the twitter of birds.

Perhaps I have failed to make appear the individuality of character that was so evident to those who knew him. At any rate, I have set down nothing concerning him, but the literal truth. He was always a mystery. I did not know whence he came; I do not know whither he has gone. I would not weave one spray of falsehood in the wreath I lay upon his grave.

FIRST STUDY

I

The fire on the hearth has almost gone out in New England; the hearth has gone out; the family has lost its center; age ceases to be respected; sex is only distinguished by a difference between millinery bills and tailors' bills; there is no more toast-and-cider; the young are not allowed to eat mince-pies at ten o'clock at night; half a cheese is no longer set to toast before the fire; you scarcely ever see in front of the coals a row of roasting apples, which a bright little girl, with many a dive and start, shielding her sunny face from the fire with one hand, turns from time to time; scarce are the gray-haired sires who strop their razors on the family Bible, and doze in the chimney-corner. A good many things have gone out with the fire on the hearth.

I do not mean to say that public and private morality have vanished with the hearth. A good degree of purity and considerable happiness are possible with grates and blowers; it is a day of trial, when we are all passing through a fiery furnace, and very likely we shall be purified as we are dried up and wasted away. Of course the family is gone, as an institution, though there still are attempts to bring up a family round a "register." But you might just as well try to bring it up by hand, as without the rallying-point of a hearthstone. Are there any homesteads nowadays? Do people hesitate to change houses any more than they do to change their clothes? People hire houses as they would a masquerade costume, liking, sometimes, to appear for a year in a little fictitious stone-front splendor above their means. Thus it happens that so many people live in houses that do not fit them. I should almost as soon think of wearing another person's clothes as his house; unless I could let it out and take it in until it fitted, and somehow expressed my own character and taste. But we have fallen into the days of conformity. It is no wonder that people constantly go into their neighbors' houses by mistake, just as, in spite of the Maine law, they wear away each other's hats from an evening party. It has almost come to this, that you might as well be anybody else as yourself.

Am I mistaken in supposing that this is owing to the discontinuance of big chimneys, with wide fireplaces in them? How can a person be attached to a house that has no center of attraction, no soul in it, in the visible form of a glowing fire, and a warm chimney, like the heart in the body? When you think of the old homestead, if you ever do, your thoughts go straight to the wide chimney and its burning logs. No wonder that you are ready to move from one fireplaceless house into another. But you have something just as good, you say. Yes, I have heard of it. This age, which imitates everything, even to the virtues of our ancestors, has invented a fireplace, with artificial, iron, or composition logs in it, hacked and painted, in which gas is burned, so that it has the appearance of a wood-fire. This seems to me blasphemy. Do you think a cat would lie down before it? Can you poke it? If you can't poke it, it is a fraud. To poke a wood-fire is more solid enjoyment than almost anything else in the world. The crowning human virtue in a man is to let his wife poke the fire. I do not know how any virtue whatever is possible over an imitation gas-log. What a sense of insincerity the family must have, if they indulge in the hypocrisy of gathering about it. With this center of untruthfulness, what must the

life in the family be? Perhaps the father will be living at the rate of ten thousand a year on a salary of four thousand; perhaps the mother, more beautiful and younger than her beautified daughters, will rouge; perhaps the young ladies will make wax-work. A cynic might suggest as the motto of modern life this simple legend,—“just as good as the real.” But I am not a cynic, and I hope for the rekindling of wood-fires, and a return of the beautiful home light from them. If a wood-fire is a luxury, it is cheaper than many in which we indulge without thought, and cheaper than the visits of a doctor, made necessary by the want of ventilation of the house. Not that I have anything against doctors; I only wish, after they have been to see us in a way that seems so friendly, they had nothing against us.

My fireplace, which is deep, and nearly three feet wide, has a broad hearthstone in front of it, where the live coals tumble down, and a pair of gigantic brass andirons. The brasses are burnished, and shine cheerfully in the firelight, and on either side stand tall shovel and tongs, like sentries, mounted in brass. The tongs, like the two-handed sword of Bruce, cannot be wielded by puny people. We burn in it hickory wood, cut long. We like the smell of this aromatic forest timber, and its clear flame. The birch is also a sweet wood for the hearth, with a sort of spiritual flame and an even temper,—no snappishness. Some prefer the elm, which holds fire so well; and I have a neighbor who uses nothing but apple-tree wood,—a solid, family sort of wood, fragrant also, and full of delightful suggestions. But few people can afford to burn up their fruit trees. I should as soon think of lighting the fire with sweet-oil that comes in those graceful wicker-bound flasks from Naples, or with manuscript sermons, which, however, do not burn well, be they never so dry, not half so well as printed editorials.

Few people know how to make a wood-fire, but everybody thinks he or she does. You want, first, a large backlog, which does not rest on the andirons. This will keep your fire forward, radiate heat all day, and late in the evening fall into a ruin of glowing coals, like the last days of a good man, whose life is the richest and most beneficent at the close, when the flames of passion and the sap of youth are burned out, and there only remain the solid, bright elements of character. Then you want a forestick on the andirons; and upon these build the fire of lighter stuff. In this way you have at once a cheerful blaze, and the fire gradually eats into the solid mass, sinking down with increasing fervor; coals drop below, and delicate tongues of flame sport along the beautiful grain of the forestick. There are people who kindle a fire underneath. But these are conceited people, who are wedded to their own way. I suppose an accomplished incendiary always starts a fire in the attic, if he can. I am not an incendiary, but I hate bigotry. I don't call those incendiaries very good Christians who, when they set fire to the martyrs, touched off the fagots at the bottom, so as to make them go slow. Besides, knowledge works down easier than it does up. Education must proceed from the more enlightened down to the more ignorant strata. If you want better common schools, raise the standard of the colleges, and so on. Build your fire on top. Let your light shine. I have seen people build a fire under a balky horse; but he wouldn't go, he'd be a horse-martyr first. A fire kindled under one never did him any good. Of course you can make a fire on the hearth by kindling it underneath, but that does not make it right. I want my hearthfire to be an emblem of the best things.

II

It must be confessed that a wood-fire needs as much tending as a pair of twins. To say nothing of fiery projectiles sent into the room, even by the best wood, from the explosion of gases confined in its cells, the brands are continually dropping down, and coals are being scattered over the hearth. However much a careful housewife, who thinks more of neatness than enjoyment, may dislike this, it is one of the chief delights of a wood-fire. I would as soon have an Englishman without side-whiskers as a fire without a big backlog; and I would rather have no fire than one that required no tending,—one of dead wood that could not sing again the imprisoned songs of the forest, or give out in brilliant scintillations the sunshine it absorbed in its growth. Flame is an ethereal sprite, and the spice of danger in it gives zest to the care of the hearth-fire. Nothing is so beautiful as springing, changing flame,—it was the last freak of the Gothic architecture men to represent the fronts of elaborate edifices of stone as on fire, by the kindling flamboyant devices. A fireplace is, besides, a private laboratory, where one can witness the most brilliant chemical experiments, minor conflagrations only wanting the grandeur of cities on fire. It is a vulgar notion that a fire is only for heat. A chief value of it is, however, to look at. It is a picture, framed between the jambs. You have nothing on your walls, by the best masters (the poor masters are not, however, represented), that is really so fascinating, so spiritual. Speaking like an upholsterer, it furnishes the room. And it is never twice the same. In this respect it is like the landscape-view through a window, always seen in a new light, color, or condition. The fireplace is a window into the most charming world I ever had a glimpse of.

Yet direct heat is an agreeable sensation. I am not scientific enough to despise it, and have no taste for a winter residence on Mount Washington, where the thermometer cannot be kept comfortable even by boiling. They say that they say in Boston that there is a satisfaction in being well dressed which religion cannot give. There is certainly a satisfaction in the direct radiance of a hickory fire which is not to be found in the fieriest blasts of a furnace. The hot air of a furnace is a sirocco; the heat of a wood-fire is only intense sunshine, like that bottled in *Lacrimae Christi*. Besides this, the eye is delighted, the sense of smell is regaled by the fragrant decomposition, and the ear is pleased with the hissing, crackling, and singing,—a liberation of so many out-door noises. Some people like the sound of bubbling in a boiling pot, or the fizzing of a frying-spider. But there is nothing gross in the animated crackling of sticks of wood blazing on the earth, not even if chestnuts are roasting in the ashes. All the senses are ministered to, and the imagination is left as free as the leaping tongues of flame.

The attention which a wood-fire demands is one of its best recommendations. We value little that which costs us no trouble to maintain. If we had to keep the sun kindled up and going by private corporate action, or act of Congress, and to be taxed for the support of customs officers of solar heat, we should prize it more

than we do. Not that I should like to look upon the sun as a job, and have the proper regulation of its temperature get into politics, where we already have so much combustible stuff; but we take it quite too much as a matter of course, and, having it free, do not reckon it among the reasons for gratitude. Many people shut it out of their houses as if it were an enemy, watch its descent upon the carpet as if it were only a thief of color, and plant trees to shut it away from the mouldering house. All the animals know better than this, as well as the more simple races of men; the old women of the southern Italian coasts sit all day in the sun and ply the distaff, as grateful as the sociable hens on the south side of a New England barn; the slow tortoise likes to take the sun upon his sloping back, soaking in color that shall make him immortal when the imperishable part of him is cut up into shell ornaments. The capacity of a cat to absorb sunshine is only equaled by that of an Arab or an Ethiopian. They are not afraid of injuring their complexions.

White must be the color of civilization; it has so many natural disadvantages. But this is politics. I was about to say that, however it may be with sunshine, one is always grateful for his wood-fire, because he does not maintain it without some cost.

Yet I cannot but confess to a difference between sunlight and the light of a wood-fire. The sunshine is entirely untamed. Where it rages most freely it tends to evoke the brilliancy rather than the harmonious satisfactions of nature. The monstrous growths and the flaming colors of the tropics contrast with our more subdued loveliness of foliage and bloom. The birds of the middle region dazzle with their contrasts of plumage, and their voices are for screaming rather than singing. I presume the new experiments in sound would project a macaw's voice in very tangled and inharmonious lines of light. I suspect that the fiercest sunlight puts people, as well as animals and vegetables, on extremes in all ways. A wood-fire on the hearth is a kindler of the domestic virtues. It brings in cheerfulness, and a family center, and, besides, it is artistic. I should like to know if an artist could ever represent on canvas a happy family gathered round a hole in the floor called a register. Given a fireplace, and a tolerable artist could almost create a pleasant family round it. But what could he conjure out of a register? If there was any virtue among our ancestors,—and they labored under a great many disadvantages, and had few of the aids which we have to excellence of life,—I am convinced they drew it mostly from the fireside. If it was difficult to read the eleven commandments by the light of a pine-knot, it was not difficult to get the sweet spirit of them from the countenance of the serene mother knitting in the chimney-corner.

III

When the fire is made, you want to sit in front of it and grow genial in its effulgence. I have never been upon a throne,—except in moments of a traveler's curiosity, about as long as a South American dictator remains on one,—but I have no idea that it compares, for pleasantness, with a seat before a wood-fire. A whole leisure day before you, a good novel in hand, and the backlog only just beginning to kindle, with uncounted hours of comfort in it, has life anything more delicious? For "novel" you can substitute "Calvin's Institutes," if you wish to be virtuous as well as happy. Even Calvin would melt before a wood-fire. A great snowstorm, visible on three sides of your wide-windowed room, loading the evergreens, blown in fine powder from the great chestnut-tops, piled up in ever accumulating masses, covering the paths, the shrubbery, the hedges, drifting and clinging in fantastic deposits, deepening your sense of security, and taking away the sin of idleness by making it a necessity, this is an excellent ground to your day by the fire.

To deliberately sit down in the morning to read a novel, to enjoy yourself, is this not, in New England (I am told they don't read much in other parts of the country), the sin of sins? Have you any right to read, especially novels, until you have exhausted the best part of the day in some employment that is called practical? Have you any right to enjoy yourself at all until the fag-end of the day, when you are tired and incapable of enjoying yourself? I am aware that this is the practice, if not the theory, of our society,—to postpone the delights of social intercourse until after dark, and rather late at night, when body and mind are both weary with the exertions of business, and when we can give to what is the most delightful and profitable thing in life, social and intellectual society, only the weariness of dull brains and over-tired muscles. No wonder we take our amusements sadly, and that so many people find dinners heavy and parties stupid. Our economy leaves no place for amusements; we merely add them to the burden of a life already full. The world is still a little off the track as to what is really useful.

I confess that the morning is a very good time to read a novel, or anything else which is good and requires a fresh mind; and I take it that nothing is worth reading that does not require an alert mind. I suppose it is necessary that business should be transacted; though the amount of business that does not contribute to anybody's comfort or improvement suggests the query whether it is not overdone. I know that unremitting attention to business is the price of success, but I don't know what success is. There is a man, whom we all know, who built a house that cost a quarter of a million of dollars, and furnished it for another like sum, who does not know anything more about architecture, or painting, or books, or history, than he cares for the rights of those who have not so much money as he has. I heard him once, in a foreign gallery, say to his wife, as they stood in front of a famous picture by Rubens: "That is the Rape of the Sardines!" What a cheerful world it would be if everybody was as successful as that man! While I am reading my book by the fire, and taking an active part in important transactions that may be a good deal better than real, let me be thankful that a great many men are profitably employed in offices and bureaus and country stores in keeping up the gossip and endless exchange of opinions among mankind, so much of which is made to appear to the women at home as "business." I find that there is a sort of busy idleness among men in this world that is not held in disrepute. When the time comes that I have to prove my right to vote, with women, I trust that it will be remembered in my favor that I made this admission. If it is true, as a witty conservative once said to me, that we never shall have peace in this country until we elect a colored woman president, I desire to be rectus in curia early.

IV

The fireplace, as we said, is a window through which we look out upon other scenes. We like to read of the small, bare room, with cobwebbed ceiling and narrow window, in which the poor child of genius sits with his magical pen, the master of a realm of beauty and enchantment. I think the open fire does not kindle the imagination so much as it awakens the memory; one sees the past in its crumbling embers and ashy grayness, rather than the future. People become reminiscent and even sentimental in front of it. They used to become something else in those good old days when it was thought best to heat the poker red hot before plunging it into the mugs of flip. This heating of the poker has been disapproved of late years, but I do not know on what grounds; if one is to drink bitters and gins and the like, such as I understand as good people as clergymen and women take in private, and by advice, I do not know why one should not make them palatable and heat them with his own poker. Cold whiskey out of a bottle, taken as a prescription six times a day on the sly, is n't my idea of virtue any more than the social ancestral glass, sizzling wickedly with the hot iron. Names are so confusing in this world; but things are apt to remain pretty much the same, whatever we call them.

Perhaps as you look into the fireplace it widens and grows deep and cavernous. The back and the jambs are built up of great stones, not always smoothly laid, with jutting ledges upon which ashes are apt to lie. The hearthstone is an enormous block of trap rock, with a surface not perfectly even, but a capital place to crack butternuts on. Over the fire swings an iron crane, with a row of pot-hooks of all lengths hanging from it. It swings out when the housewife wants to hang on the tea-kettle, and it is strong enough to support a row of pots, or a mammoth caldron kettle on occasion. What a jolly sight is this fireplace when the pots and kettles in a row are all boiling and bubbling over the flame, and a roasting spit is turning in front! It makes a person as hungry as one of Scott's novels. But the brilliant sight is in the frosty morning, about daylight, when the fire is made. The coals are raked open, the split sticks are piled up in openwork criss-crossing, as high as the crane; and when the flame catches hold and roars up through the interstices, it is like an out-of-door bonfire. Wood enough is consumed in that morning sacrifice to cook the food of a Parisian family for a year. How it roars up the wide chimney, sending into the air the signal smoke and sparks which announce to the farming neighbors another day cheerfully begun! The sleepest boy in the world would get up in his red flannel nightgown to see such a fire lighted, even if he dropped to sleep again in his chair before the ruddy blaze. Then it is that the house, which has shrunk and creaked all night in the pinching cold of winter, begins to glow again and come to life. The thick frost melts little by little on the small window-panes, and it is seen that the gray dawn is breaking over the leagues of pallid snow. It is time to blow out the candle, which has lost all its cheerfulness in the light of day. The morning romance is over; the family is astir; and member after member appears with the morning yawn, to stand before the crackling, fierce conflagration. The daily round begins. The most hateful employment ever invented for mortal man presents itself: the "chores" are to be done. The boy who expects every morning to open into a new world finds that to-day is like yesterday, but he believes to-morrow will be different. And yet enough for him, for the day, is the wading in the snowdrifts, or the sliding on the diamond-sparkling crust. Happy, too, is he, when the storm rages, and the snow is piled high against the windows, if he can sit in the warm chimney-corner and read about Burgoyne, and General Fraser, and Miss McCrea, midwinter marches through the wilderness, surprises of wigwams, and the stirring ballad, say, of the Battle of the Kegs:—

*"Come, gallants, attend and list a friend
Thrill forth harmonious ditty;
While I shall tell what late befell
At Philadelphia city."*

I should like to know what heroism a boy in an old New England farmhouse—rough-nursed by nature, and fed on the traditions of the old wars did not aspire to. "John," says the mother, "You'll burn your head to a crisp in that heat." But John does not hear; he is storming the Plains of Abraham just now. "Johnny, dear, bring in a stick of wood." How can Johnny bring in wood when he is in that defile with Braddock, and the Indians are popping at him from behind every tree? There is something about a boy that I like, after all.

The fire rests upon the broad hearth; the hearth rests upon a great substruction of stone, and the substruction rests upon the cellar. What supports the cellar I never knew, but the cellar supports the family. The cellar is the foundation of domestic comfort. Into its dark, cavernous recesses the child's imagination fearfully goes. Bogies guard the bins of choicest apples. I know not what comical sprites sit astride the cider-barrels ranged along the walls. The feeble flicker of the tallow-candle does not at all dispel, but creates, illusions, and magnifies all the rich possibilities of this underground treasure-house. When the cellar-door is opened, and the boy begins to descend into the thick darkness, it is always with a heart-beat as of one started upon some adventure. Who can forget the smell that comes through the opened door;—a mingling of fresh earth, fruit exhaling delicious aroma, kitchen vegetables, the mouldy odor of barrels, a sort of ancestral air,—as if a door had been opened into an old romance. Do you like it? Not much. But then I would not exchange the remembrance of it for a good many odors and perfumes that I do like.

It is time to punch the backlog and put on a new forestick.

SECOND STUDY

I

The log was white birch. The beautiful satin bark at once kindled into a soft, pure, but brilliant flame, something like that of naphtha. There is no other wood flame so rich, and it leaps up in a joyous, spiritual way, as if glad to burn for the sake of burning. Burning like a clear oil, it has none of the heaviness and fatness of the pine and the balsam. Woodsmen are at a loss to account for its intense and yet chaste flame, since the bark has no oily appearance. The heat from it is fierce, and the light dazzling. It flares up eagerly like young love, and then dies away; the wood does not keep up the promise of the bark. The woodsmen, it is proper to say, have not considered it in its relation to young love. In the remote settlements the pine-knot is still the torch of courtship; it endures to sit up by. The birch-bark has alliances with the world of sentiment and of letters. The most poetical reputation of the North American Indian floats in a canoe made of it; his picture-writing was inscribed on it. It is the paper that nature furnishes for lovers in the wilderness, who are enabled to convey a delicate sentiment by its use, which is expressed neither in their ideas nor chirography. It is inadequate for legal parchment, but does very well for deeds of love, which are not meant usually to give a perfect title. With care, it may be split into sheets as thin as the Chinese paper. It is so beautiful to handle that it is a pity civilization cannot make more use of it. But fancy articles manufactured from it are very much like all ornamental work made of nature's perishable seeds, leaves, cones, and dry twigs,—exquisite while the pretty fingers are fashioning it, but soon growing shabby and cheap to the eye. And yet there is a pathos in "dried things," whether they are displayed as ornaments in some secluded home, or hidden religiously in bureau drawers where profane eyes cannot see how white ties are growing yellow and ink is fading from treasured letters, amid a faint and discouraging perfume of ancient rose-leaves.

The birch log holds out very well while it is green, but has not substance enough for a backlog when dry. Seasoning green timber or men is always an experiment. A man may do very well in a simple, let us say, country or backwoods line of life, who would come to nothing in a more complicated civilization. City life is a severe trial. One man is struck with a dry-rot; another develops season-cracks; another shrinks and swells with every change of circumstance. Prosperity is said to be more trying than adversity, a theory which most people are willing to accept without trial; but few men stand the drying out of the natural sap of their greenness in the artificial heat of city life. This, be it noticed, is nothing against the drying and seasoning process; character must be put into the crucible some time, and why not in this world? A man who cannot stand seasoning will not have a high market value in any part of the universe. It is creditable to the race, that so many men and women bravely jump into the furnace of prosperity and expose themselves to the drying influences of city life.

The first fire that is lighted on the hearth in the autumn seems to bring out the cold weather. Deceived by the placid appearance of the dying year, the softness of the sky, and the warm color of the foliage, we have been shivering about for days without exactly comprehending what was the matter. The open fire at once sets up a standard of comparison. We find that the advance guards of winter are besieging the house. The cold rushes in at every crack of door and window, apparently signaled by the flame to invade the house and fill it with chilly drafts and sarcasms on what we call the temperate zone. It needs a roaring fire to beat back the enemy; a feeble one is only an invitation to the most insulting demonstrations. Our pious New England ancestors were philosophers in their way. It was not simply owing to grace that they sat for hours in their barnlike meeting-houses during the winter Sundays, the thermometer many degrees below freezing, with no fire, except the zeal in their own hearts,—a congregation of red noses and bright eyes. It was no wonder that the minister in the pulpit warmed up to his subject, cried aloud, used hot words, spoke a good deal of the hot place and the Person whose presence was a burning shame, hammered the desk as if he expected to drive his text through a two-inch plank, and heated himself by all allowable ecclesiastical gymnastics. A few of their followers in our day seem to forget that our modern churches are heated by furnaces and supplied with gas.

In the old days it would have been thought unphilosophic as well as effeminate to warm the meeting-houses artificially. In one house I knew, at least, when it was proposed to introduce a stove to take a little of the chill from the Sunday services, the deacons protested against the innovation. They said that the stove might benefit those who sat close to it, but it would drive all the cold air to the other parts of the church, and freeze the people to death; it was cold enough now around the edges. Blessed days of ignorance and upright living! Sturdy men who served God by resolutely sitting out the icy hours of service, amid the rattling of windows and the carousal of winter in the high, windswept galleries! Patient women, waiting in the chilly house for consumption to pick out his victims, and replace the color of youth and the flush of devotion with the hectic of disease! At least, you did not doze and droop in our over-heated edifices, and die of vitiated air and disregard of the simplest conditions of organized life. It is fortunate that each generation does not comprehend its own ignorance. We are thus enabled to call our ancestors barbarous. It is something also that each age has its choice of the death it will die. Our generation is most ingenious. From our public assembly-rooms and houses we have almost succeeded in excluding pure air. It took the race ages to build dwellings that would keep out rain; it has taken longer to build houses air-tight, but we are on the eve of success. We are only foiled by the ill-fitting, insincere work of the builders, who build for a day, and charge for all time.

II

When the fire on the hearth has blazed up and then settled into steady radiance, talk begins. There is no place like the chimney-corner for confidences; for picking up the clews of an old friendship; for taking note where one's self has drifted, by comparing ideas and prejudices with the intimate friend of years ago, whose course in life has lain apart from yours. No stranger puzzles you so much as the once close friend, with whose thinking and associates you have for years been unfamiliar. Life has come to mean this and that to you; you have fallen into certain habits of thought; for you the world has progressed in this or that direction; of certain results you feel very sure; you have fallen into harmony with your surroundings; you meet day after day people interested in the things that interest you; you are not in the least opinionated, it is simply your good fortune to look upon the affairs of the world from the right point of view. When you last saw your friend,—less than a year after you left college,—he was the most sensible and agreeable of men; he had no heterodox notions; he agreed with you; you could even tell what sort of a wife he would select, and if you could do that, you held the key to his life.

Well, Herbert came to visit me the other day from the antipodes. And here he sits by the fireplace. I cannot think of any one I would rather see there, except perhaps Thackeray; or, for entertainment, Boswell; or old, Pepys; or one of the people who was left out of the Ark. They were talking one foggy London night at Hazlitt's about whom they would most like to have seen, when Charles Lamb startled the company by declaring that he would rather have seen Judas Iscariot than any other person who had lived on the earth. For myself, I would rather have seen Lamb himself once, than to have lived with Judas. Herbert, to my great delight, has not changed; I should know him anywhere,—the same serious, contemplative face, with lurking humor at the corners of the mouth,—the same cheery laugh and clear, distinct enunciation as of old. There is nothing so winning as a good voice. To see Herbert again, unchanged in all outward essentials, is not only gratifying, but valuable as a testimony to nature's success in holding on to a personal identity, through the entire change of matter that has been constantly taking place for so many years. I know very well there is here no part of the Herbert whose hand I had shaken at the Commencement parting; but it is an astonishing reproduction of him,—a material likeness; and now for the spiritual.

Such a wide chance for divergence in the spiritual. It has been such a busy world for twenty years. So many things have been torn up by the roots again that were settled when we left college. There were to be no more wars; democracy was democracy, and progress, the differentiation of the individual, was a mere question of clothes; if you want to be different, go to your tailor; nobody had demonstrated that there is a man-soul and a woman-soul, and that each is in reality only a half-soul,—putting the race, so to speak, upon the half-shell. The social oyster being opened, there appears to be two shells and only one oyster; who shall have it? So many new canons of taste, of criticism, of morality have been set up; there has been such a resurrection of historical reputations for new judgment, and there have been so many discoveries, geographical, archaeological, geological, biological, that the earth is not at all what it was supposed to be; and our philosophers are much more anxious to ascertain where we came from than whither we are going. In this whirl and turmoil of new ideas, nature, which has only the single end of maintaining the physical identity in the body, works on undisturbed, replacing particle for particle, and preserving the likeness more skillfully than a mosaic artist in the Vatican; she has not even her materials sorted and labeled, as the Roman artist has his thousands of bits of color; and man is all the while doing his best to confuse the process, by changing his climate, his diet, all his surroundings, without the least care to remain himself. But the mind?

It is more difficult to get acquainted with Herbert than with an entire stranger, for I have my prepossessions about him, and do not find him in so many places where I expect to find him. He is full of criticism of the authors I admire; he thinks stupid or improper the books I most read; he is skeptical about the "movements" I am interested in; he has formed very different opinions from mine concerning a hundred men and women of the present day; we used to eat from one dish; we could n't now find anything in common in a dozen; his prejudices (as we call our opinions) are most extraordinary, and not half so reasonable as my prejudices; there are a great many persons and things that I am accustomed to denounce, uncontradicted by anybody, which he defends; his public opinion is not at all my public opinion. I am sorry for him. He appears to have fallen into influences and among a set of people foreign to me. I find that his church has a different steeple on it from my church (which, to say the truth, hasn't any). It is a pity that such a dear friend and a man of so much promise should have drifted off into such general contrariness. I see Herbert sitting here by the fire, with the old look in his face coming out more and more, but I do not recognize any features of his

mind,—except perhaps his contrariness; yes, he was always a little contrary, I think. And finally he surprises me with, “Well, my friend, you seem to have drifted away from your old notions and opinions. We used to agree when we were together, but I sometimes wondered where you would land; for, pardon me, you showed signs of looking at things a little contrary.”

I am silent for a good while. I am trying to think who I am. There was a person whom I thought I knew, very fond of Herbert, and agreeing with him in most things. Where has he gone? and, if he is here, where is the Herbert that I knew?

If his intellectual and moral sympathies have all changed, I wonder if his physical tastes remain, like his appearance, the same. There has come over this country within the last generation, as everybody knows, a great wave of condemnation of pie. It has taken the character of a “movement!” though we have had no conventions about it, nor is any one, of any of the several sexes among us, running for president against it. It is safe almost anywhere to denounce pie, yet nearly everybody eats it on occasion. A great many people think it savors of a life abroad to speak with horror of pie, although they were very likely the foremost of the Americans in Paris who used to speak with more enthusiasm of the American pie at Madame Busque's than of the Venus of Milo. To talk against pie and still eat it is snobbish, of course; but snobbery, being an aspiring failing, is sometimes the prophecy of better things. To affect dislike of pie is something. We have no statistics on the subject, and cannot tell whether it is gaining or losing in the country at large. Its disappearance in select circles is no test. The amount of writing against it is no more test of its desuetude, than the number of religious tracts distributed in a given district is a criterion of its piety. We are apt to assume that certain regions are substantially free of it. Herbert and I, traveling north one summer, fancied that we could draw in New England a sort of diet line, like the sweeping curves on the isothermal charts, which should show at least the leading pie sections. Journeying towards the White Mountains, we concluded that a line passing through Bellows Falls, and bending a little south on either side, would mark northward the region of perpetual pie. In this region pie is to be found at all hours and seasons, and at every meal. I am not sure, however, that pie is not a matter of altitude rather than latitude, as I find that all the hill and country towns of New England are full of those excellent women, the very salt of the housekeeping earth, who would feel ready to sink in mortification through their scoured kitchen floors, if visitors should catch them without a pie in the house. The absence of pie would be more noticed than a scarcity of Bible even. Without it the housekeepers are as distracted as the boarding-house keeper, who declared that if it were not for canned tomato, she should have nothing to fly to. Well, in all this great agitation I find Herbert unmoved, a conservative, even to the under-crust. I dare not ask him if he eats pie at breakfast. There are some tests that the dearest friendship may not apply.

“Will you smoke?” I ask.

“No, I have reformed.”

“Yes, of course.”

“The fact is, that when we consider the correlation of forces, the apparent sympathy of spirit manifestations with electric conditions, the almost revealed mysteries of what may be called the odic force, and the relation of all these phenomena to the nervous system in man, it is not safe to do anything to the nervous system that will—”

“Hang the nervous system! Herbert, we can agree in one thing: old memories, reveries, friendships, center about that:—is n't an open wood-fire good?”

“Yes,” says Herbert, combatively, “if you don't sit before it too long.”

III

The best talk is that which escapes up the open chimney and cannot be repeated. The finest woods make the best fire and pass away with the least residuum. I hope the next generation will not accept the reports of “interviews” as specimens of the conversations of these years of grace.

But do we talk as well as our fathers and mothers did? We hear wonderful stories of the bright generation that sat about the wide fireplaces of New England. Good talk has so much short-hand that it cannot be reported,—the inflection, the change of voice, the shrug, cannot be caught on paper. The best of it is when the subject unexpectedly goes cross-lots, by a flash of short-cut, to a conclusion so suddenly revealed that it has the effect of wit. It needs the highest culture and the finest breeding to prevent the conversation from running into mere persiflage on the one hand—its common fate—or monologue on the other. Our conversation is largely chaff. I am not sure but the former generation preached a good deal, but it had great practice in fireside talk, and must have talked well. There were narrators in those days who could charm a circle all the evening long with stories. When each day brought comparatively little new to read, there was leisure for talk, and the rare book and the in-frequent magazine were thoroughly discussed. Families now are swamped by the printed matter that comes daily upon the center-table. There must be a division of labor, one reading this, and another that, to make any impression on it. The telegraph brings the only common food, and works this daily miracle, that every mind in Christendom is excited by one topic simultaneously with every other mind; it enables a concurrent mental action, a burst of sympathy, or a universal prayer to be made, which must be, if we have any faith in the immaterial left, one of the chief forces in modern life. It is fit that an agent so subtle as electricity should be the minister of it.

When there is so much to read, there is little time for conversation; nor is there leisure for another pastime of the ancient firesides, called reading aloud. The listeners, who heard while they looked into the wide chimney-place, saw there pass in stately procession the events and the grand persons of history, were kindled with the delights of travel, touched by the romance of true love, or made restless by tales of adventure;—the

hearth became a sort of magic stone that could transport those who sat by it to the most distant places and times, as soon as the book was opened and the reader began, of a winter's night. Perhaps the Puritan reader read through his nose, and all the little Puritans made the most dreadful nasal inquiries as the entertainment went on. The prominent nose of the intellectual New-Englander is evidence of the constant linguistic exercise of the organ for generations. It grew by talking through. But I have no doubt that practice made good readers in those days. Good reading aloud is almost a lost accomplishment now. It is little thought of in the schools. It is disused at home. It is rare to find any one who can read, even from the newspaper, well. Reading is so universal, even with the uncultivated, that it is common to hear people mispronounce words that you did not suppose they had ever seen. In reading to themselves they glide over these words, in reading aloud they stumble over them. Besides, our every-day books and newspapers are so larded with French that the ordinary reader is obliged *marcher a pas de loup*,—for instance.

The newspaper is probably responsible for making current many words with which the general reader is familiar, but which he rises to in the flow of conversation, and strikes at with a splash and an unsuccessful attempt at appropriation; the word, which he perfectly knows, hooks him in the gills, and he cannot master it. The newspaper is thus widening the language in use, and vastly increasing the number of words which enter into common talk. The Americans of the lowest intellectual class probably use more words to express their ideas than the similar class of any other people; but this prodigality is partially balanced by the parsimony of words in some higher regions, in which a few phrases of current slang are made to do the whole duty of exchange of ideas; if that can be called exchange of ideas when one intellect flashes forth to another the remark, concerning some report, that "you know how it is yourself," and is met by the response of "that's what's the matter," and rejoins with the perfectly conclusive "that's so." It requires a high degree of culture to use slang with elegance and effect; and we are yet very far from the Greek attainment.

IV

The fireplace wants to be all aglow, the wind rising, the night heavy and black above, but light with sifting snow on the earth, a background of inclemency for the illumined room with its pictured walls, tables heaped with books, capacious easy-chairs and their occupants,—it needs, I say, to glow and throw its rays far through the crystal of the broad windows, in order that we may rightly appreciate the relation of the wide-jambed chimney to domestic architecture in our climate. We fell to talking about it; and, as is usual when the conversation is professedly on one subject, we wandered all around it. The young lady staying with us was roasting chestnuts in the ashes, and the frequent explosions required considerable attention. The mistress, too, sat somewhat alert, ready to rise at any instant and minister to the fancied want of this or that guest, forgetting the reposeful truth that people about a fireside will not have any wants if they are not suggested. The worst of them, if they desire anything, only want something hot, and that later in the evening. And it is an open question whether you ought to associate with people who want that.

I was saying that nothing had been so slow in its progress in the world as domestic architecture. Temples, palaces, bridges, aqueducts, cathedrals, towers of marvelous delicacy and strength, grew to perfection while the common people lived in hovels, and the richest lodged in the most gloomy and contracted quarters. The dwelling-house is a modern institution. It is a curious fact that it has only improved with the social elevation of women. Men were never more brilliant in arms and letters than in the age of Elizabeth, and yet they had no homes. They made themselves thick-walled castles, with slits in the masonry for windows, for defense, and magnificent banquet-halls for pleasure; the stone rooms into which they crawled for the night were often little better than dog-kennels. The Pompeians had no comfortable night-quarters. The most singular thing to me, however, is that, especially interested as woman is in the house, she has never done anything for architecture. And yet woman is reputed to be an ingenious creature.

HERBERT. I doubt if woman has real ingenuity; she has great adaptability. I don't say that she will do the same thing twice alike, like a Chinaman, but she is most cunning in suiting herself to circumstances.

THE FIRE-TENDER. Oh, if you speak of constructive, creative ingenuity, perhaps not; but in the higher ranges of achievement—that of accomplishing any purpose dear to her heart, for instance—her ingenuity is simply incomprehensible to me.

HERBERT. Yes, if you mean doing things by indirection.

THE MISTRESS. When you men assume all the direction, what else is left to us?

THE FIRE-TENDER. Did you ever see a woman refurnish a house?

THE YOUNG LADY STAYING WITH US. I never saw a man do it, unless he was burned out of his rookery.

HERBERT. There is no comfort in new things.

THE FIRE-TENDER (not noticing the interruption). Having set her mind on a total revolution of the house, she buys one new thing, not too obtrusive, nor much out of harmony with the old. The husband scarcely notices it, least of all does he suspect the revolution, which she already has accomplished. Next, some article that does look a little shabby beside the new piece of furniture is sent to the garret, and its place is supplied by something that will match in color and effect. Even the man can see that it ought to match, and so the process goes on, it may be for years, it may be forever, until nothing of the old is left, and the house is transformed as it was predetermined in the woman's mind. I doubt if the man ever understands how or when it was done; his wife certainly never says anything about the refurnishing, but quietly goes on to new conquests.

THE MISTRESS. And is n't it better to buy little by little, enjoying every new object as you get it, and assimilating each article to your household life, and making the home a harmonious expression of your own taste, rather than to order things in sets, and turn your house, for the time being, into a furniture ware-room?

THE FIRE-TENDER. Oh, I only spoke of the ingenuity of it.

THE YOUNG LADY. For my part, I never can get acquainted with more than one piece of furniture at a time.

HERBERT. I suppose women are our superiors in artistic taste, and I fancy that I can tell whether a house is furnished by a woman or a man; of course, I mean the few houses that appear to be the result of individual taste and refinement,—most of them look as if they had been furnished on contract by the upholsterer.

THE MISTRESS. Woman's province in this world is putting things to rights.

HERBERT. With a vengeance, sometimes. In the study, for example. My chief objection to woman is that she has no respect for the newspaper, or the printed page, as such. She is Siva, the destroyer. I have noticed that a great part of a married man's time at home is spent in trying to find the things he has put on his study-table.

THE YOUNG LADY. Herbert speaks with the bitterness of a bachelor shut out of paradise. It is my experience that if women did not destroy the rubbish that men bring into the house, it would become uninhabitable, and need to be burned down every five years.

THE FIRE-TENDER. I confess women do a great deal for the appearance of things. When the mistress is absent, this room, although everything is here as it was before, does not look at all like the same place; it is stiff, and seems to lack a soul. When she returns, I can see that her eye, even while greeting me, takes in the situation at a glance. While she is talking of the journey, and before she has removed her traveling-hat, she turns this chair and moves that, sets one piece of furniture at a different angle, rapidly, and apparently unconsciously, shifts a dozen little knick-knacks and bits of color, and the room is transformed. I couldn't do it in a week.

THE MISTRESS. That is the first time I ever knew a man admit he couldn't do anything if he had time.

HERBERT. Yet with all their peculiar instinct for making a home, women make themselves very little felt in our domestic architecture.

THE MISTRESS. Men build most of the houses in what might be called the ready-made-clothing style, and we have to do the best we can with them; and hard enough it is to make cheerful homes in most of them. You will see something different when the woman is constantly consulted in the plan of the house.

HERBERT. We might see more difference if women would give any attention to architecture. Why are there no women architects?

THE FIRE-TENDER. Want of the ballot, doubtless. It seems to me that here is a splendid opportunity for woman to come to the front.

THE YOUNG LADY. They have no desire to come to the front; they would rather manage things where they are.

THE FIRE-TENDER. If they would master the noble art, and put their brooding taste upon it, we might very likely compass something in our domestic architecture that we have not yet attained. The outside of our houses needs attention as well as the inside. Most of them are as ugly as money can build.

THE YOUNG LADY. What vexes me most is, that women, married women, have so easily consented to give up open fires in their houses.

HERBERT. They dislike the dust and the bother. I think that women rather like the confined furnace heat.

THE FIRE-TENDER. Nonsense; it is their angelic virtue of submission. We wouldn't be hired to stay all-day in the houses we build.

THE YOUNG LADY. That has a very chivalrous sound, but I know there will be no reformation until women rebel and demand everywhere the open fire.

HERBERT. They are just now rebelling about something else; it seems to me yours is a sort of counter-movement, a fire in the rear.

THE MISTRESS. I'll join that movement. The time has come when woman must strike for her altars and her fires.

HERBERT. Hear, hear!

THE MISTRESS. Thank you, Herbert. I applauded you once, when you declaimed that years ago in the old Academy. I remember how eloquently you did it.

HERBERT. Yes, I was once a spouting idiot.

Just then the door-bell rang, and company came in. And the company brought in a new atmosphere, as company always does, something of the disturbance of out-doors, and a good deal of its healthy cheer. The direct news that the thermometer was approaching zero, with a hopeful prospect of going below it, increased to liveliness our satisfaction in the fire. When the cider was heated in the brown stone pitcher, there was difference of opinion whether there should be toast in it; some were for toast, because that was the old-fashioned way, and others were against it, "because it does not taste good" in cider. Herbert said there, was very little respect left for our forefathers.

More wood was put on, and the flame danced in a hundred fantastic shapes. The snow had ceased to fall, and the moonlight lay in silvery patches among the trees in the ravine. The conversation became worldly.

THIRD STUDY

I

Herbert said, as we sat by the fire one night, that he wished he had turned his attention to writing poetry like Tennyson's.

The remark was not whimsical, but satirical. Tennyson is a man of talent, who happened to strike a lucky vein, which he has worked with cleverness. The adventurer with a pickaxe in Washoe may happen upon like good fortune. The world is full of poetry as the earth is of "pay-dirt;" one only needs to know how to "strike" it. An able man can make himself almost anything that he will. It is melancholy to think how many epic poets have been lost in the tea-trade, how many dramatists (though the age of the drama has passed) have wasted their genius in great mercantile and mechanical enterprises. I know a man who might have been the poet, the essayist, perhaps the critic, of this country, who chose to become a country judge, to sit day after day upon a bench in an obscure corner of the world, listening to wrangling lawyers and prevaricating witnesses, preferring to judge his fellow-men rather than enlighten them.

It is fortunate for the vanity of the living and the reputation of the dead, that men get almost as much credit for what they do not as for what they do. It was the opinion of many that Burns might have excelled as a statesman, or have been a great captain in war; and Mr. Carlyle says that if he had been sent to a university, and become a trained intellectual workman, it lay in him to have changed the whole course of British literature! A large undertaking, as so vigorous and dazzling a writer as Mr. Carlyle must know by this time, since British literature has swept by him in a resistless and widening flood, mainly uncontaminated, and leaving his grotesque contrivances wrecked on the shore with other curiosities of letters, and yet among the richest of all the treasures lying there.

It is a temptation to a temperate man to become a sot, to hear what talent, what versatility, what genius, is almost always attributed to a moderately bright man who is habitually drunk. Such a mechanic, such a mathematician, such a poet he would be, if he were only sober; and then he is sure to be the most generous, magnanimous, friendly soul, conscientiously honorable, if he were not so conscientiously drunk. I suppose it is now notorious that the most brilliant and promising men have been lost to the world in this way. It is sometimes almost painful to think what a surplus of talent and genius there would be in the world if the habit of intoxication should suddenly cease; and what a slim chance there would be for the plodding people who have always had tolerably good habits. The fear is only mitigated by the observation that the reputation of a person for great talent sometimes ceases with his reformation.

It is believed by some that the maidens who would make the best wives never marry, but remain free to bless the world with their impartial sweetness, and make it generally habitable. This is one of the mysteries of Providence and New England life. It seems a pity, at first sight, that all those who become poor wives have the matrimonial chance, and that they are deprived of the reputation of those who would be good wives were they not set apart for the high and perpetual office of priestesses of society. There is no beauty like that which was spoiled by an accident, no accomplishments—and graces are so to be envied as those that circumstances rudely hindered the development of. All of which shows what a charitable and good-tempered world it is, notwithstanding its reputation for cynicism and detraction.

Nothing is more beautiful than the belief of the faithful wife that her husband has all the talents, and could, if he would, be distinguished in any walk in life; and nothing will be more beautiful—unless this is a very dry time for signs—than the husband's belief that his wife is capable of taking charge of any of the affairs of this confused planet. There is no woman but thinks that her husband, the green-grocer, could write poetry if he had given his mind to it, or else she thinks small beer of poetry in comparison with an occupation or accomplishment purely vegetable. It is touching to see the look of pride with which the wife turns to her husband from any more brilliant personal presence or display of wit than his, in the perfect confidence that if the world knew what she knows, there would be one more popular idol. How she magnifies his small wit, and

dotes upon the self-satisfied look in his face as if it were a sign of wisdom! What a councilor that man would make! What a warrior he would be! There are a great many corporals in their retired homes who did more for the safety and success of our armies in critical moments, in the late war, than any of the "high-cock-a-lorum" commanders. Mrs. Corporal does not envy the reputation of General Sheridan; she knows very well who really won Five Forks, for she has heard the story a hundred times, and will hear it a hundred times more with apparently unabated interest. What a general her husband would have made; and how his talking talent would shine in Congress!

HERBERT. Nonsense. There isn't a wife in the world who has not taken the exact measure of her husband, weighed him and settled him in her own mind, and knows him as well as if she had ordered him after designs and specifications of her own. That knowledge, however, she ordinarily keeps to herself, and she enters into a league with her husband, which he was never admitted to the secret of, to impose upon the world. In nine out of ten cases he more than half believes that he is what his wife tells him he is. At any rate, she manages him as easily as the keeper does the elephant, with only a bamboo wand and a sharp spike in the end. Usually she flatters him, but she has the means of pricking clear through his hide on occasion. It is the great secret of her power to have him think that she thoroughly believes in him.

THE YOUNG LADY STAYING WITH US. And you call this hypocrisy? I have heard authors, who thought themselves sly observers of women, call it so.

HERBERT. Nothing of the sort. It is the basis on which society rests, the conventional agreement. If society is about to be overturned, it is on this point. Women are beginning to tell men what they really think of them; and to insist that the same relations of downright sincerity and independence that exist between men shall exist between women and men. Absolute truth between souls, without regard to sex, has always been the ideal life of the poets.

THE MISTRESS. Yes; but there was never a poet yet who would bear to have his wife say exactly what she thought of his poetry, any more than he would keep his temper if his wife beat him at chess; and there is nothing that disgusts a man like getting beaten at chess by a woman.

HERBERT. Well, women know how to win by losing. I think that the reason why most women do not want to take the ballot and stand out in the open for a free trial of power, is that they are reluctant to change the certain domination of centuries, with weapons they are perfectly competent to handle, for an experiment. I think we should be better off if women were more transparent, and men were not so systematically puffed up by the subtle flattery which is used to control them.

MANDEVILLE. Deliver me from transparency. When a woman takes that guise, and begins to convince me that I can see through her like a ray of light, I must run or be lost. Transparent women are the truly dangerous. There was one on ship-board [Mandeville likes to say that; he has just returned from a little tour in Europe, and he quite often begins his remarks with "on the ship going over;" the Young Lady declares that he has a sort of roll in his chair, when he says it, that makes her sea-sick] who was the most innocent, artless, guileless, natural bunch of lace and feathers you ever saw; she was all candor and helplessness and dependence; she sang like a nightingale, and talked like a nun. There never was such simplicity. There was n't a sounding-line on board that would have gone to the bottom of her soulful eyes. But she managed the captain and all the officers, and controlled the ship as if she had been the helm. All the passengers were waiting on her, fetching this and that for her comfort, inquiring of her health, talking about her genuineness, and exhibiting as much anxiety to get her ashore in safety, as if she had been about to knight them all and give them a castle apiece when they came to land.

THE MISTRESS. What harm? It shows what I have always said, that the service of a noble woman is the most ennobling influence for men.

MANDEVILLE. If she is noble, and not a mere manager. I watched this woman to see if she would ever do anything for any one else. She never did.

THE FIRE-TENDER. Did you ever see her again? I presume Mandeville has introduced her here for some purpose.

MANDEVILLE. No purpose. But we did see her on the Rhine; she was the most disgusted traveler, and seemed to be in very ill humor with her maid. I judged that her happiness depended upon establishing controlling relations with all about her. On this Rhine boat, to be sure, there was reason for disgust. And that reminds me of a remark that was made.

THE YOUNG LADY. Oh!

MANDEVILLE. When we got aboard at Mayence we were conscious of a dreadful odor somewhere; as it was a foggy morning, we could see no cause of it, but concluded it was from something on the wharf. The fog lifted, and we got under way, but the odor traveled with us, and increased. We went to every part of the vessel to avoid it, but in vain. It occasionally reached us in great waves of disagreeableness. We had heard of the odors of the towns on the Rhine, but we had no idea that the entire stream was infected. It was intolerable.

The day was lovely, and the passengers stood about on deck holding their noses and admiring the scenery. You might see a row of them leaning over the side, gazing up at some old ruin or ivied crag, entranced with the romance of the situation, and all holding their noses with thumb and finger. The sweet Rhine! By and by somebody discovered that the odor came from a pile of cheese on the forward deck, covered with a canvas; it seemed that the Rhinelanders are so fond of it that they take it with them when they travel. If there should ever be war between us and Germany, the borders of the Rhine would need no other defense from American soldiers than a barricade of this cheese. I went to the stern of the steamboat to tell a stout American traveler what was the origin of the odor he had been trying to dodge all the morning. He looked more disgusted than before, when he heard that it was cheese; but his only reply was: "It must be a merciful God who can forgive a smell like that!"

II

The above is introduced here in order to illustrate the usual effect of an anecdote on conversation. Commonly it kills it. That talk must be very well in hand, and under great headway, that an anecdote thrown in front of will not pitch off the track and wreck. And it makes little difference what the anecdote is; a poor one depresses the spirits, and casts a gloom over the company; a good one begets others, and the talkers go to telling stories; which is very good entertainment in moderation, but is not to be mistaken for that unwearied flow of argument, quaint remark, humorous color, and sprightly interchange of sentiments and opinions, called conversation.

The reader will perceive that all hope is gone here of deciding whether Herbert could have written Tennyson's poems, or whether Tennyson could have dug as much money out of the Heliogabalus Lode as Herbert did. The more one sees of life, I think the impression deepens that men, after all, play about the parts assigned them, according to their mental and moral gifts, which are limited and preordained, and that their entrances and exits are governed by a law no less certain because it is hidden. Perhaps nobody ever accomplishes all that he feels lies in him to do; but nearly every one who tries his powers touches the walls of his being occasionally, and learns about how far to attempt to spring. There are no impossibilities to youth and inexperience; but when a person has tried several times to reach high C and been coughed down, he is quite content to go down among the chorus. It is only the fools who keep straining at high C all their lives.

Mandeville here began to say that that reminded him of something that happened when he was on the—

But Herbert cut in with the observation that no matter what a man's single and several capacities and talents might be, he is controlled by his own mysterious individuality, which is what metaphysicians call the substance, all else being the mere accidents of the man. And this is the reason that we cannot with any certainty tell what any person will do or amount to, for, while we know his talents and abilities, we do not know the resulting whole, which is he himself. THE FIRE-TENDER. So if you could take all the first-class qualities that we admire in men and women, and put them together into one being, you wouldn't be sure of the result?

HERBERT. Certainly not. You would probably have a monster. It takes a cook of long experience, with the best materials, to make a dish "taste good;" and the "taste good" is the indefinable essence, the resulting balance or harmony which makes man or woman agreeable or beautiful or effective in the world.

THE YOUNG LADY. That must be the reason why novelists fail so lamentably in almost all cases in creating good characters. They put in real traits, talents, dispositions, but the result of the synthesis is something that never was seen on earth before.

THE FIRE-TENDER. Oh, a good character in fiction is an inspiration. We admit this in poetry. It is as true of such creations as Colonel Newcome, and Ethel, and Beatrix Esmond. There is no patchwork about them.

THE YOUNG LADY. Why was n't Thackeray ever inspired to create a noble woman?

THE FIRE-TENDER. That is the standing conundrum with all the women. They will not accept Ethel Newcome even. Perhaps we shall have to admit that Thackeray was a writer for men.

HERBERT. Scott and the rest had drawn so many perfect women that Thackeray thought it was time for a real one.

THE MISTRESS. That's ill-natured. Thackeray did, however, make ladies. If he had depicted, with his searching pen, any of us just as we are, I doubt if we should have liked it much.

MANDEVILLE. That's just it. Thackeray never pretended to make ideals, and if the best novel is an idealization of human nature, then he was not the best novelist. When I was crossing the Channel—

THE MISTRESS. Oh dear, if we are to go to sea again, Mandeville, I move we have in the nuts and apples, and talk about our friends.

III

There is this advantage in getting back to a wood-fire on the hearth, that you return to a kind of simplicity; you can scarcely imagine any one being stiffly conventional in front of it. It thaws out formality, and puts the company who sit around it into easy attitudes of mind and body,—lounging attitudes,—Herbert said.

And this brought up the subject of culture in America, especially as to manner. The backlog period having passed, we are beginning to have in society people of the cultured manner, as it is called, or polished bearing, in which the polish is the most noticeable thing about the man. Not the courtliness, the easy simplicity of the old-school gentleman, in whose presence the milkmaid was as much at her ease as the countess, but something far finer than this. These are the people of unruffled demeanor, who never forget it for a moment, and never let you forget it. Their presence is a constant rebuke to society. They are never "jolly;" their laugh is never anything more than a well-bred smile; they are never betrayed into any enthusiasm. Enthusiasm is a sign of inexperience, of ignorance, of want of culture. They never lose themselves in any cause; they never heartily praise any man or woman or book; they are superior to all tides of feeling and all outbursts of passion. They are not even shocked at vulgarity. They are simply indifferent. They are calm, visibly calm, painfully calm; and it is not the eternal, majestic calmness of the Sphinx either, but a rigid, self-conscious repression. You would like to put a bent pin in their chair when they are about calmly to sit down.

A sitting hen on her nest is calm, but hopeful; she has faith that her eggs are not china. These people appear to be sitting on china eggs. Perfect culture has refined all blood, warmth, flavor, out of them. We admire them without envy. They are too beautiful in their manners to be either prigs or snobs. They are at

once our models and our despair. They are properly careful of themselves as models, for they know that if they should break, society would become a scene of mere animal confusion.

MANDEVILLE. I think that the best-bred people in the world are the English.

THE YOUNG LADY. You mean at home.

MANDEVILLE. That's where I saw them. There is no nonsense about a cultivated English man or woman. They express themselves sturdily and naturally, and with no subservience to the opinions of others. There's a sort of hearty sincerity about them that I like. Ages of culture on the island have gone deeper than the surface, and they have simpler and more natural manners than we. There is something good in the full, round tones of their voices.

HERBERT. Did you ever get into a diligence with a growling English-man who had n't secured the place he wanted?

[Mandeville once spent a week in London, riding about on the tops of omnibuses.]

THE MISTRESS. Did you ever see an English exquisite at the San Carlo, and hear him cry "Bwavo"?

MANDEVILLE. At any rate, he acted out his nature, and was n't afraid to.

THE FIRE-TENDER. I think Mandeville is right, for once. The men of the best culture in England, in the middle and higher social classes, are what you would call good fellows,—easy and simple in manner, enthusiastic on occasion, and decidedly not cultivated into the smooth calmness of indifference which some Americans seem to regard as the sine qua non of good breeding. Their position is so assured that they do not need that lacquer of calmness of which we were speaking.

THE YOUNG LADY. Which is different from the manner acquired by those who live a great deal in American hotels?

THE MISTRESS. Or the Washington manner?

HERBERT. The last two are the same.

THE FIRE-TENDER. Not exactly. You think you can always tell if a man has learned his society carriage of a dancing-master. Well, you cannot always tell by a person's manner whether he is a habitui of hotels or of Washington. But these are distinct from the perfect polish and politeness of indifferentism.

IV

Daylight disenchants. It draws one from the fireside, and dissipates the idle illusions of conversation, except under certain conditions. Let us say that the conditions are: a house in the country, with some forest trees near, and a few evergreens, which are Christmas-trees all winter long, fringed with snow, glistening with ice-pendants, cheerful by day and grotesque by night; a snow-storm beginning out of a dark sky, falling in a soft profusion that fills all the air, its dazzling whiteness making a light near at hand, which is quite lost in the distant darkling spaces.

If one begins to watch the swirling flakes and crystals, he soon gets an impression of infinity of resources that he can have from nothing else so powerfully, except it be from Adirondack gnats. Nothing makes one feel at home like a great snow-storm. Our intelligent cat will quit the fire and sit for hours in the low window, watching the falling snow with a serious and contented air. His thoughts are his own, but he is in accord with the subtlest agencies of Nature; on such a day he is charged with enough electricity to run a telegraphic battery, if it could be utilized. The connection between thought and electricity has not been exactly determined, but the cat is mentally very alert in certain conditions of the atmosphere. Feasting his eyes on the beautiful out-doors does not prevent his attention to the slightest noise in the wainscot. And the snow-storm brings content, but not stupidity, to all the rest of the household.

I can see Mandeville now, rising from his armchair and swinging his long arms as he strides to the window, and looks out and up, with, "Well, I declare!" Herbert is pretending to read Herbert Spencer's tract on the philosophy of style but he loses much time in looking at the Young Lady, who is writing a letter, holding her portfolio in her lap,—one of her everlasting letters to one of her fifty everlasting friends. She is one of the female patriots who save the post-office department from being a disastrous loss to the treasury. Herbert is thinking of the great radical difference in the two sexes, which legislation will probably never change; that leads a woman always, to write letters on her lap and a man on a table,—a distinction which is commended to the notice of the anti-suffragists.

The Mistress, in a pretty little breakfast-cap, is moving about the room with a feather-duster, whisking invisible dust from the picture-frames, and talking with the Parson, who has just come in, and is thawing the snow from his boots on the hearth. The Parson says the thermometer is 15 deg., and going down; that there is a snowdrift across the main church entrance three feet high, and that the house looks as if it had gone into winter quarters, religion and all. There were only ten persons at the conference meeting last night, and seven of those were women; he wonders how many weather-proof Christians there are in the parish, anyhow.

The Fire-Tender is in the adjoining library, pretending to write; but it is a poor day for ideas. He has written his wife's name about eleven hundred times, and cannot get any farther. He hears the Mistress tell the Parson that she believes he is trying to write a lecture on the Celtic Influence in Literature. The Parson says that it is a first-rate subject, if there were any such influence, and asks why he does n't take a shovel and make a path to the gate. Mandeville says that, by George! he himself should like no better fun, but it wouldn't look well for a visitor to do it. The Fire-Tender, not to be disturbed by this sort of chaff, keeps on writing his wife's name.

Then the Parson and the Mistress fall to talking about the soup-relief, and about old Mrs. Grumples in Pig Alley, who had a present of one of Stowe's Illustrated Self-Acting Bibles on Christmas, when she had n't coal

enough in the house to heat her gruel; and about a family behind the church, a widow and six little children and three dogs; and he did n't believe that any of them had known what it was to be warm in three weeks, and as to food, the woman said, she could hardly beg cold victuals enough to keep the dogs alive.

The Mistress slipped out into the kitchen to fill a basket with provisions and send it somewhere; and when the Fire-Tender brought in a new forestick, Mandeville, who always wants to talk, and had been sitting drumming his feet and drawing deep sighs, attacked him.

MANDEVILLE. Speaking about culture and manners, did you ever notice how extremes meet, and that the savage bears himself very much like the sort of cultured persons we were talking of last night?

THE FIRE-TENDER. In what respect?

MANDEVILLE. Well, you take the North American Indian. He is never interested in anything, never surprised at anything. He has by nature that calmness and indifference which your people of culture have acquired. If he should go into literature as a critic, he would scalp and tomahawk with the same emotionless composure, and he would do nothing else.

THE FIRE-TENDER. Then you think the red man is a born gentleman of the highest breeding?

MANDEVILLE. I think he is calm.

THE FIRE-TENDER. How is it about the war-path and all that?

MANDEVILLE. Oh, these studiously calm and cultured people may have malice underneath. It takes them to give the most effective "little digs;" they know how to stick in the pine-splinters and set fire to them.

HERBERT. But there is more in Mandeville's idea. You bring a red man into a picture-gallery, or a city full of fine architecture, or into a drawing-room crowded with objects of art and beauty, and he is apparently insensible to them all. Now I have seen country people,—and by country people I don't mean people necessarily who live in the country, for everything is mixed in these days,—some of the best people in the world, intelligent, honest, sincere, who acted as the Indian would.

THE MISTRESS. Herbert, if I did n't know you were cynical, I should say you were snobbish.

HERBERT. Such people think it a point of breeding never to speak of anything in your house, nor to appear to notice it, however beautiful it may be; even to slyly glance around strains their notion of etiquette. They are like the countryman who confessed afterwards that he could hardly keep from laughing at one of Yankee Hill's entertainments.

THE YOUNG LADY. Do you remember those English people at our house in Flushing last summer, who pleased us all so much with their apparent delight in everything that was artistic or tasteful, who explored the rooms and looked at everything, and were so interested? I suppose that Herbert's country relations, many of whom live in the city, would have thought it very ill-bred.

MANDEVILLE. It's just as I said. The English, the best of them, have become so civilized that they express themselves, in speech and action, naturally, and are not afraid of their emotions.

THE PARSON. I wish Mandeville would travel more, or that he had stayed at home. It's wonderful what a fit of Atlantic sea-sickness will do for a man's judgment and cultivation. He is prepared to pronounce on art, manners, all kinds of culture. There is more nonsense talked about culture than about anything else.

HERBERT. The Parson reminds me of an American country minister I once met walking through the Vatican. You could n't impose upon him with any rubbish; he tested everything by the standards of his native place, and there was little that could bear the test. He had the sly air of a man who could not be deceived, and he went about with his mouth in a pucker of incredulity. There is nothing so placid as rustic conceit. There was something very enjoyable about his calm superiority to all the treasures of art.

MANDEVILLE. And the Parson reminds me of another American minister, a consul in an Italian city, who said he was going up to Rome to have a thorough talk with the Pope, and give him a piece of his mind. Ministers seem to think that is their business. They serve it in such small pieces in order to make it go round.

THE PARSON. Mandeville is an infidel. Come, let's have some music; nothing else will keep him in good humor till lunch-time.

THE MISTRESS. What shall it be?

THE PARSON. Give us the larghetto from Beethoven's second symphony.

The Young Lady puts aside her portfolio. Herbert looks at the young lady. The Parson composes himself for critical purposes. Mandeville settles himself in a chair and stretches his long legs nearly into the fire, remarking that music takes the tangles out of him.

After the piece is finished, lunch is announced. It is still snowing.

is still snowing.

FOURTH STUDY

It is difficult to explain the attraction which the uncanny and even the horrible have for most minds.

It is difficult to explain the attraction which the uncanny and even the horrible have for most minds. I have seen a delicate woman half fascinated, but wholly disgusted, by one of the most unseemly of reptiles, vulgarly known as the "blowing viper" of the Alleghanies. She would look at it, and turn away with irresistible shuddering and the utmost loathing, and yet turn to look at it again and again, only to experience the same spasm of disgust. In spite of her aversion, she must have relished the sort of electric mental shock that the sight gave her.

I can no more account for the fascination for us of the stories of ghosts and "appearances," and those weird tales in which the dead are the chief characters; nor tell why we should fall into converse about them when the winter evenings are far spent, the embers are glazing over on the hearth, and the listener begins to hear the eerie noises in the house. At such times one's dreams become of importance, and people like to tell them and dwell upon them, as if they were a link between the known and unknown, and could give us a clew to that ghostly region which in certain states of the mind we feel to be more real than that we see.

Recently, when we were, so to say, sitting around the borders of the supernatural late at night, MANDEVILLE related a dream of his which he assured us was true in every particular, and it interested us so much that we asked him to write it out. In doing so he has curtailed it, and to my mind shorn it of some of its more vivid and picturesque features. He might have worked it up with more art, and given it a finish which the narration now lacks, but I think best to insert it in its simplicity. It seems to me that it may properly be called,

A NEW "VISION OF SIN"

In the winter of 1850 I was a member of one of the leading colleges of this country. I was in moderate circumstances pecuniarily, though I was perhaps better furnished with less fleeting riches than many others. I was an incessant and indiscriminate reader of books. For the solid sciences I had no particular fancy, but with mental modes and habits, and especially with the eccentric and fantastic in the intellectual and spiritual operations, I was tolerably familiar. All the literature of the supernatural was as real to me as the laboratory of the chemist, where I saw the continual struggle of material substances to evolve themselves into more volatile, less palpable and coarse forms. My imagination, naturally vivid, stimulated by such repasts, nearly mastered me. At times I could scarcely tell where the material ceased and the immaterial began (if I may so express it); so that once and again I walked, as it seemed, from the solid earth onward upon an impalpable plain, where I heard the same voices, I think, that Joan of Arc heard call to her in the garden at Domremy. She was inspired, however, while I only lacked exercise. I do not mean this in any literal sense; I only describe a state of mind. I was at this time of spare habit, and nervous, excitable temperament. I was ambitious, proud, and extremely sensitive. I cannot deny that I had seen something of the world, and had contracted about the average bad habits of young men who have the sole care of themselves, and rather bungle the matter. It is necessary to this relation to admit that I had seen a trifle more of what is called life than a young man ought to see, but at this period I was not only sick of my experience, but my habits were as correct as those of any Pharisee in our college, and we had some very favorable specimens of that ancient sect.

Nor can I deny that at this period of my life I was in a peculiar mental condition. I well remember an illustration of it. I sat writing late one night, copying a prize essay,—a merely manual task, leaving my thoughts free. It was in June, a sultry night, and about midnight a wind arose, pouring in through the open windows, full of mournful reminiscence, not of this, but of other summers,—the same wind that De Quincey heard at noonday in midsummer blowing through the room where he stood, a mere boy, by the side of his dead sister,—a wind centuries old. As I wrote on mechanically, I became conscious of a presence in the room, though I did not lift my eyes from the paper on which I wrote. Gradually I came to know that my grandmother—dead so long ago that I laughed at the idea—was in the room. She stood beside her old-fashioned spinning-wheel, and quite near me. She wore a plain muslin cap with a high puff in the crown, a short woollen gown, a white and blue checked apron, and shoes with heels. She did not regard me, but stood facing the wheel, with the left hand near the spindle, holding lightly between the thumb and forefinger the white roll of wool which was being spun and twisted on it. In her right hand she held a small stick. I heard the sharp click of this against the spokes of the wheel, then the hum of the wheel, the buzz of the spindles as the twisting yarn was teased by the whirl of its point, then a step backwards, a pause, a step forward and the running of the yarn upon the spindle, and again a backward step, the drawing out of the roll and the droning and hum of the wheel, most mournfully hopeless sound that ever fell on mortal ear. Since childhood it has haunted me. All this time I wrote, and I could hear distinctly the scratching of the pen upon the paper. But she stood behind me (why I did not turn my head I never knew), pacing backward and forward by the spinning-wheel, just as I had a hundred times seen her in childhood in the old kitchen on drowsy summer afternoons. And I heard the step, the buzz and whirl of the spindle, and the monotonous and dreary hum of the mournful wheel. Whether her face was ashy pale and looked as if it might crumble at the touch, and the border of her white cap trembled in the June wind that blew, I cannot say, for I tell you I did NOT see her. But I know she was there, spinning yarn that had been knit into hose years and years ago by our fireside. For I was in full possession of my faculties, and never copied more neatly and legibly any manuscript than I did the one that night. And there the phantom (I use the word out of deference to a public prejudice on this subject) most persistently remained until my task was finished, and, closing the portfolio, I abruptly rose. Did I see anything? That is a silly and ignorant question. Could I see the wind which had now risen stronger, and drove a few cloud-scuds across the sky, filling the night, somehow, with a longing that was not altogether born of reminiscence?

In the winter following, in January, I made an effort to give up the use of tobacco,—a habit in which I was confirmed, and of which I have nothing more to say than this: that I should attribute to it almost all the sin and misery in the world, did I not remember that the old Romans attained a very considerable state of corruption without the assistance of the Virginia plant.

On the night of the third day of my abstinence, rendered more nervous and excitable than usual by the privation, I retired late, and later still I fell into an uneasy sleep, and thus into a dream, vivid, illuminated, more real than any event of my life. I was at home, and fell sick. The illness developed into a fever, and then a delirium set in, not an intellectual blank, but a misty and most delicious wandering in places of incomparable beauty. I learned subsequently that our regular physician was not certain to finish me, when a consultation was called, which did the business. I have the satisfaction of knowing that they were of the proper school. I lay sick for three days.

On the morning of the fourth, at sunrise, I died. The sensation was not unpleasant. It was not a sudden shock. I passed out of my body as one would walk from the door of his house. There the body lay,—a blank, so far as I was concerned, and only interesting to me as I was rather entertained with watching the respect paid to it. My friends stood about the bedside, regarding me (as they seemed to suppose), while I, in a different part of the room, could hardly repress a smile at their mistake, solemnized as they were, and I too, for that matter, by my recent demise. A sensation (the word you see is material and inappropriate) of etherealization and imponderability pervaded me, and I was not sorry to get rid of such a dull, slow mass as I now perceived myself to be, lying there on the bed. When I speak of my death, let me be understood to say that there was no change, except that I passed out of my body and floated to the top of a bookcase in the corner of the room, from which I looked down. For a moment I was interested to see my person from the outside, but thereafter I was quite indifferent to the body. I was now simply soul. I seemed to be a globe, impalpable, transparent, about six inches in diameter. I saw and heard everything as before. Of course, matter was no obstacle to me, and I went easily and quickly wherever I willed to go. There was none of that tedious process of communicating my wishes to the nerves, and from them to the muscles. I simply resolved to be at a particular place, and I was there. It was better than the telegraph.

It seemed to have been intimated to me at my death (birth I half incline to call it) that I could remain on this earth for four weeks after my decease, during which time I could amuse myself as I chose.

I chose, in the first place, to see myself decently buried, to stay by myself to the last, and attend my own funeral for once. As most of those referred to in this true narrative are still living, I am forbidden to indulge in personalities, nor shall I dare to say exactly how my death affected my friends, even the home circle. Whatever others did, I sat up with myself and kept awake. I saw the "pennies" used instead of the "quarters" which I should have preferred. I saw myself "laid out," a phrase that has come to have such a slang meaning that I smile as I write it. When the body was put into the coffin, I took my place on the lid.

I cannot recall all the details, and they are commonplace besides. The funeral took place at the church. We all rode thither in carriages, and I, not fancying my place in mine, rode on the outside with the undertaker, whom I found to be a good deal more jolly than he looked to be. The coffin was placed in front of the pulpit when we arrived. I took my station on the pulpit cushion, from which elevation I had an admirable view of all the ceremonies, and could hear the sermon. How distinctly I remember the services. I think I could even at this distance write out the sermon. The tune sung was of—the usual country selection,—Mount Vernon. I recall the text. I was rather flattered by the tribute paid to me, and my future was spoken of gravely and as kindly as possible,—indeed, with remarkable charity, considering that the minister was not aware of my presence. I used to beat him at chess, and I thought, even then, of the last game; for, however solemn the occasion might be to others, it was not so to me. With what interest I watched my kinsfolks, and neighbors as they filed past for the last look! I saw, and I remember, who pulled a long face for the occasion and who exhibited genuine sadness. I learned with the most dreadful certainty what people really thought of me. It was a revelation never forgotten.

Several particular acquaintances of mine were talking on the steps as we passed out.

"Well, old Starr's gone up. Sudden, was n't it? He was a first-rate fellow."

"Yes, queer about some things; but he had some mighty good streaks," said another. And so they ran on.

Streaks! So that is the reputation one gets during twenty years of life in this world. Streaks!

After the funeral I rode home with the family. It was pleasanter than the ride down, though it seemed sad to my relations. They did not mention me, however, and I may remark, that although I stayed about home for a week, I never heard my name mentioned by any of the family. Arrived at home, the tea-kettle was put on and supper got ready. This seemed to lift the gloom a little, and under the influence of the tea they brightened up and gradually got more cheerful. They discussed the sermon and the singing, and the mistake of the sexton in digging the grave in the wrong place, and the large congregation. From the mantel-piece I watched the group. They had waffles for supper,—of which I had been exceedingly fond, but now I saw them disappear without a sigh.

For the first day or two of my sojourn at home I was here and there at all the neighbors, and heard a good deal about my life and character, some of which was not very pleasant, but very wholesome, doubtless, for me to hear. At the expiration of a week this amusement ceased to be such for I ceased to be talked of. I realized the fact that I was dead and gone.

By an act of volition I found myself back at college. I floated into my own room, which was empty. I went to the room of my two warmest friends, whose friendship I was and am yet assured of. As usual, half a dozen of our set were lounging there. A game of whist was just commencing. I perched on a bust of Dante on the top of the book-shelves, where I could see two of the hands and give a good guess at a third. My particular friend Timmins was just shuffling the cards.

"Be hanged if it is n't lonesome without old Starr. Did you cut? I should like to see him lounge in now with his pipe, and with feet on the mantel-piece proceed to expound on the duplex functions of the soul."

"There—misdeal," said his vis-a-vis. "Hope there's been no misdeal for old Starr."

"Spades, did you say?" the talk ran on, "never knew Starr was sickly."

"No more was he; stouter than you are, and as brave and plucky as he was strong. By George, fellows,—how we do get cut down! Last term little Stubbs, and now one of the best fellows in the class."

"How suddenly he did pop off,—one for game, honors easy,—he was good for the Spouts' Medal this year, too."

"Remember the joke he played on Prof. A., freshman year?" asked another.

"Remember he borrowed ten dollars of me about that time," said Timmins's partner, gathering the cards for a new deal.

"Guess he is the only one who ever did," retorted some one.

And so the talk went on, mingled with whist-talk, reminiscent of me, not all exactly what I would have chosen to go into my biography, but on the whole kind and tender, after the fashion of the boys. At least I was in their thoughts, and I could see was a good deal regretted,—so I passed a very pleasant evening. Most of those present were of my society, and wore crape on their badges, and all wore the usual crape on the left arm. I learned that the following afternoon a eulogy would be delivered on me in the chapel.

The eulogy was delivered before members of our society and others, the next afternoon, in the chapel. I need not say that I was present. Indeed, I was perched on the desk within reach of the speaker's hand. The apotheosis was pronounced by my most intimate friend, Timmins, and I must say he did me ample justice. He never was accustomed to "draw it very mild" (to use a vulgarism which I dislike) when he had his head, and on this occasion he entered into the matter with the zeal of a true friend, and a young man who never expected to have another occasion to sing a public "In Memoriam." It made my hair stand on end,—metaphorically, of course. From my childhood I had been extremely precocious. There were anecdotes of preternatural brightness, picked up, Heaven knows where, of my eagerness to learn, of my adventurous, chivalrous young soul, and of my arduous struggles with chill penury, which was not able (as it appeared) to repress my rage, until I entered this institution, of which I had been ornament, pride, cynosure, and fair promising bud blasted while yet its fragrance was mingled with the dew of its youth. Once launched upon my college days, Timmins went on with all sails spread. I had, as it were, to hold on to the pulpit cushion. Latin, Greek, the old literatures, I was perfect master of; all history was merely a light repast to me; mathematics I glanced at, and it disappeared; in the clouds of modern philosophy I was wrapped but not obscured; over the

field of light literature I familiarly roamed as the honey-bee over the wide fields of clover which blossom white in the Junes of this world! My life was pure, my character spotless, my name was inscribed among the names of those deathless few who were not born to die!

It was a noble eulogy, and I felt before he finished, though I had misgivings at the beginning, that I deserved it all. The effect on the audience was a little different. They said it was a "strong" oration, and I think Timmins got more credit by it than I did. After the performance they stood about the chapel, talking in a subdued tone, and seemed to be a good deal impressed by what they had heard, or perhaps by thoughts of the departed. At least they all soon went over to Austin's and called for beer. My particular friends called for it twice. Then they all lit pipes. The old grocery keeper was good enough to say that I was no fool, if I did go off owing him four dollars. To the credit of human nature, let me here record that the fellows were touched by this remark reflecting upon my memory, and immediately made up a purse and paid the bill,—that is, they told the old man to charge it over to them. College boys are rich in credit and the possibilities of life.

It is needless to dwell upon the days I passed at college during this probation. So far as I could see, everything went on as if I were there, or had never been there. I could not even see the place where I had dropped out of the ranks. Occasionally I heard my name, but I must say that four weeks was quite long enough to stay in a world that had pretty much forgotten me. There is no great satisfaction in being dragged up to light now and then, like an old letter. The case was somewhat different with the people with whom I had boarded. They were relations of mine, and I often saw them weep, and they talked of me a good deal at twilight and Sunday nights, especially the youngest one, Carrie, who was handsomer than any one I knew, and not much older than I. I never used to imagine that she cared particularly for me, nor would she have done so, if I had lived, but death brought with it a sort of sentimental regret, which, with the help of a daguerreotype, she nursed into quite a little passion. I spent most of my time there, for it was more congenial than the college.

But time hastened. The last sand of probation leaked out of the glass. One day, while Carrie played (for me, though she knew it not) one of Mendelssohn's "songs without words," I suddenly, yet gently, without self-effort or volition, moved from the house, floated in the air, rose higher, higher, by an easy, delicious, exultant, yet inconceivably rapid motion. The ecstasy of that triumphant flight! Groves, trees, houses, the landscape, dimmed, faded, fled away beneath me. Upward mounting, as on angels' wings, with no effort, till the earth hung beneath me a round black ball swinging, remote, in the universal ether. Upward mounting, till the earth, no longer bathed in the sun's rays, went out to my sight, disappeared in the blank. Constellations, before seen from afar, I sailed among stars, too remote for shining on earth, I neared, and found to be round globes flying through space with a velocity only equaled by my own. New worlds continually opened on my sight; newfields of everlasting space opened and closed behind me.

For days and days—it seemed a mortal forever—I mounted up the great heavens, whose everlasting doors swung wide. How the worlds and systems, stars, constellations, neared me, blazed and flashed in splendor, and fled away! At length,—was it not a thousand years?—I saw before me, yet afar off, a wall, the rocky bourn of that country whence travelers come not back, a battlement wider than I could guess, the height of which I could not see, the depth of which was infinite. As I approached, it shone with a splendor never yet beheld on earth. Its solid substance was built of jewels the rarest, and stones of priceless value. It seemed like one solid stone, and yet all the colors of the rainbow were contained in it. The ruby, the diamond, the emerald, the carbuncle, the topaz, the amethyst, the sapphire; of them the wall was built up in harmonious combination. So brilliant was it that all the space I floated in was full of the splendor. So mild was it and so translucent, that I could look for miles into its clear depths.

Rapidly nearing this heavenly battlement, an immense niche was disclosed in its solid face. The floor was one large ruby. Its sloping sides were of pearl. Before I was aware I stood within the brilliant recess. I say I stood there, for I was there bodily, in my habit as I lived; how, I cannot explain. Was it the resurrection of the body? Before me rose, a thousand feet in height, a wonderful gate of flashing diamond. Beside it sat a venerable man, with long white beard, a robe of light gray, ancient sandals, and a golden key hanging by a cord from his waist. In the serene beauty of his noble features I saw justice and mercy had met and were reconciled. I cannot describe the majesty of his bearing or the benignity of his appearance. It is needless to say that I stood before St. Peter, who sits at the Celestial Gate.

I humbly approached, and begged admission. St. Peter arose, and regarded me kindly, yet inquiringly.

"What is your name?" asked he, "and from what place do you come?"

I answered, and, wishing to give a name well known, said I was from Washington, United States. He looked doubtful, as if he had never heard the name before.

"Give me," said he, "a full account of your whole life."

I felt instantaneously that there was no concealment possible; all disguise fell away, and an unknown power forced me to speak absolute and exact truth. I detailed the events of my life as well as I could, and the good man was not a little affected by the recital of my early trials, poverty, and temptation. It did not seem a very good life when spread out in that presence, and I trembled as I proceeded; but I plead youth, inexperience, and bad examples.

"Have you been accustomed," he said, after a time, rather sadly, "to break the Sabbath?"

I told him frankly that I had been rather lax in that matter, especially at college. I often went to sleep in the chapel on Sunday, when I was not reading some entertaining book. He then asked who the preacher was, and when I told him, he remarked that I was not so much to blame as he had supposed.

"Have you," he went on, "ever stolen, or told any lie?"

I was able to say no, except admitting as to the first, usual college "conveyances," and as to the last, an occasional "blinder" to the professors. He was gracious enough to say that these could be overlooked as incidental to the occasion.

"Have you ever been dissipated, living riotously and keeping late hours?"

"Yes."

This also could be forgiven me as an incident of youth.

"Did you ever," he went on, "commit the crime of using intoxicating drinks as a beverage?"

I answered that I had never been a habitual drinker, that I had never been what was called a "moderate drinker," that I had never gone to a bar and drank alone; but that I had been accustomed, in company with other young men, on convivial occasions to taste the pleasures of the flowing bowl, sometimes to excess, but that I had also tasted the pains of it, and for months before my demise had refrained from liquor altogether. The holy man looked grave, but, after reflection, said this might also be overlooked in a young man.

"What," continued he, in tones still more serious, "has been your conduct with regard to the other sex?"

I fell upon my knees in a tremor of fear. I pulled from my bosom a little book like the one Leperello exhibits in the opera of "Don Giovanni." There, I said, was a record of my flirtation and inconstancy. I waited long for the decision, but it came in mercy.

"Rise," he cried; "young men will be young men, I suppose. We shall forgive this also to your youth and penitence."

"Your examination is satisfactory, he informed me," after a pause; "you can now enter the abodes of the happy."

Joy leaped within me. We approached the gate. The key turned in the lock. The gate swung noiselessly on its hinges a little open. Out flashed upon me unknown splendors. What I saw in that momentary gleam I shall never whisper in mortal ears. I stood upon the threshold, just about to enter.

"Stop! one moment," exclaimed St. Peter, laying his hand on my shoulder; "I have one more question to ask you."

I turned toward him.

"Young man, did you ever use tobacco?"

"I both smoked and chewed in my lifetime," I faltered, "but..."

"THEN TO HELL WITH YOU!" he shouted in a voice of thunder.

Instantly the gate closed without noise, and I was flung, hurled, from the battlement, down! down! down! Faster and faster I sank in a dizzy, sickening whirl into an unfathomable space of gloom. The light faded. Dampness and darkness were round about me. As before, for days and days I rose exultant in the light, so now forever I sank into thickening darkness,—and yet not darkness, but a pale, ashy light more fearful.

In the dimness, I at length discovered a wall before me. It ran up and down and on either hand endlessly into the night. It was solid, black, terrible in its frowning massiveness.

Straightway I lighted at the gate,—a dismal crevice hewn into the dripping rock. The gate was wide open, and there sat—I knew him at once; who does not?—the Arch Enemy of mankind. He cocked his eye at me in an impudent, low, familiar manner that disgusted me. I saw that I was not to be treated like a gentleman.

"Well, young man," said he, rising, with a queer grin on his face, "what are you sent here for?"

"For using tobacco," I replied.

"Ho!" shouted he in a jolly manner, peculiar to devils, "that's what most of 'em are sent here for now."

Without more ado, he called four lesser imps, who ushered me within. What a dreadful plain lay before me! There was a vast city laid out in regular streets, but there were no houses. Along the streets were places of torment and torture exceedingly ingenious and disagreeable. For miles and miles, it seemed, I followed my conductors through these horrors. Here was a deep vat of burning tar. Here were rows of fiery ovens. I noticed several immense caldron kettles of boiling oil, upon the rims of which little devils sat, with pitchforks in hand, and poked down the helpless victims who floundered in the liquid. But I forbear to go into unseemly details. The whole scene is as vivid in my mind as any earthly landscape.

After an hour's walk my tormentors halted before the mouth of an oven,—a furnace heated seven times, and now roaring with flames. They grasped me, one hold of each hand and foot. Standing before the blazing mouth, they, with a swing, and a "one, two, THREE...."

I again assure the reader that in this narrative I have set down nothing that was not actually dreamed, and much, very much of this wonderful vision I have been obliged to omit.

Haec fabula docet: It is dangerous for a young man to leave off the use of tobacco.

FIFTH STUDY

I

I wish I could fitly celebrate the joyousness of the New England winter. Perhaps I could if I more thoroughly believed in it. But skepticism comes in with the south wind. When that begins to blow, one feels the foundations of his belief breaking up. This is only another way of saying that it is more difficult, if it be not impossible, to freeze out orthodoxy, or any fixed notion, than it is to thaw it out; though it is a mere fancy to suppose that this is the reason why the martyrs, of all creeds, were burned at the stake. There is said to be a great relaxation in New England of the ancient strictness in the direction of toleration of opinion, called by some a lowering of the standard, and by others a raising of the banner of liberality; it might be an interesting inquiry how much this change is due to another change,—the softening of the New England winter and the shifting of the Gulf Stream. It is the fashion nowadays to refer almost everything to physical causes, and this hint is a gratuitous contribution to the science of metaphysical physics.

The hindrance to entering fully into the joyousness of a New England winter, except far inland among the mountains, is the south wind. It is a grateful wind, and has done more, I suspect, to demoralize society than any other. It is not necessary to remember that it filled the silken sails of Cleopatra's galley. It blows over New England every few days, and is in some portions of it the prevailing wind. That it brings the soft clouds, and sometimes continues long enough to almost deceive the expectant buds of the fruit trees, and to tempt the robin from the secluded evergreen copses, may be nothing; but it takes the tone out of the mind, and engenders discontent, making one long for the tropics; it feeds the weakened imagination on palm-leaves and the lotus. Before we know it we become demoralized, and shrink from the tonic of the sudden change to sharp weather, as the steamed hydropathic patient does from the plunge. It is the insidious temptation that assails us when we are braced up to profit by the invigorating rigor of winter.

Perhaps the influence of the four great winds on character is only a fancied one; but it is evident on temperament, which is not altogether a matter of temperature, although the good old deacon used to say, in his humble, simple way, that his third wife was a very good woman, but her "temperature was very different from that of the other two." The north wind is full of courage, and puts the stamina of endurance into a man, and it probably would into a woman too if there were a series of resolutions passed to that effect. The west wind is hopeful; it has promise and adventure in it, and is, except to Atlantic voyagers America-bound, the best wind that ever blew. The east wind is peevishness; it is mental rheumatism and grumbling, and curls one up in the chimney-corner like a cat. And if the chimney ever smokes, it smokes when the wind sits in that quarter. The south wind is full of longing and unrest, of effeminate suggestions of luxurious ease, and perhaps we might say of modern poetry,—at any rate, modern poetry needs a change of air. I am not sure but the south is the most powerful of the winds, because of its sweet persuasiveness. Nothing so stirs the blood in spring, when it comes up out of the tropical latitude; it makes men "longen to gon on pilgrimages."

I did intend to insert here a little poem (as it is quite proper to do in an essay) on the south wind, composed by the Young Lady Staying With Us, beginning,—

"Out of a drifting southern cloud

but it never got any farther than this. The Young Lady said it was exceedingly difficult to write the next two lines, because not only rhyme but meaning had to be procured. And this is true; anybody can write first lines, and that is probably the reason we have so many poems which seem to have been begun in just this way, that is, with a south-wind-longing without any thought in it, and it is very fortunate when there is not wind enough to finish them. This emotional poem, if I may so call it, was begun after Herbert went away. I liked it, and thought it was what is called "suggestive;" although I did not understand it, especially what the night-bird was; and I am afraid I hurt the Young Lady's feelings by asking her if she meant Herbert by the "night-bird,"—a very absurd suggestion about two unsentimental people. She said, "Nonsense;" but she afterwards told the Mistress that there were emotions that one could never put into words without the danger of being ridiculous; a profound truth. And yet I should not like to say that there is not a tender lonesomeness in love that can get comfort out of a night-bird in a cloud, if there be such a thing. Analysis is the death of sentiment.

But to return to the winds. Certain people impress us as the winds do. Mandeville never comes in that I do not feel a north-wind vigor and healthfulness in his cordial, sincere, hearty manner, and in his wholesome way of looking at things. The Parson, you would say, was the east wind, and only his intimates know that his peevishness is only a querulous humor. In the fair west wind I know the Mistress herself, full of hope, and always the first one to discover a bit of blue in a cloudy sky. It would not be just to apply what I have said of the south wind to any of our visitors, but it did blow a little while Herbert was here.

II

In point of pure enjoyment, with an intellectual sparkle in it, I suppose that no luxurious lounging on tropical isles set in tropical seas compares with the positive happiness one may have before a great woodfire (not two sticks laid crossways in a grate), with a veritable New England winter raging outside. In order to get the highest enjoyment, the faculties must be alert, and not be lulled into a mere recipient dullness. There are those who prefer a warm bath to a brisk walk in the inspiring air, where ten thousand keen influences minister to the sense of beauty and run along the excited nerves. There are, for instance, a sharpness of horizon outline and a delicacy of color on distant hills which are wanting in summer, and which convey to one rightly organized the keenest delight, and a refinement of enjoyment that is scarcely sensuous, not at all sentimental, and almost passing the intellectual line into the spiritual.

I was speaking to Mandeville about this, and he said that I was drawing it altogether too fine; that he experienced sensations of pleasure in being out in almost all weathers; that he rather liked to breast a north wind, and that there was a certain inspiration in sharp outlines and in a landscape in trim winter-quarters, with stripped trees, and, as it were, scudding through the season under bare poles; but that he must say that he preferred the weather in which he could sit on the fence by the wood-lot, with the spring sun on his back, and hear the stir of the leaves and the birds beginning their housekeeping.

A very pretty idea for Mandeville; and I fear he is getting to have private thoughts about the Young Lady. Mandeville naturally likes the robustness and sparkle of winter, and it has been a little suspicious to hear him express the hope that we shall have an early spring.

I wonder how many people there are in New England who know the glory and inspiration of a winter walk just before sunset, and that, too, not only on days of clear sky, when the west is aflame with a rosy color, which has no suggestion of languor or unsatisfied longing in it, but on dull days, when the sullen clouds hang about the horizon, full of threats of storm and the terrors of the gathering night. We are very busy with our own affairs, but there is always something going on out-doors worth looking at; and there is seldom an hour before sunset that has not some special attraction. And, besides, it puts one in the mood for the cheer and comfort of the open fire at home.

Probably if the people of New England could have a plebiscitum on their weather, they would vote against it, especially against winter. Almost no one speaks well of winter. And this suggests the idea that most people here were either born in the wrong place, or do not know what is best for them. I doubt if these grumblers would be any better satisfied, or would turn out as well, in the tropics. Everybody knows our virtues,—at least if they believe half we tell them,—and for delicate beauty, that rare plant, I should look among the girls of the New England hills as confidently as anywhere, and I have traveled as far south as New Jersey, and west of the Genesee Valley. Indeed, it would be easy to show that the parents of the pretty girls in the West emigrated from New England. And yet—such is the mystery of Providence—no one would expect that one of the sweetest and most delicate flowers that blooms, the trailing arbutus, would blossom in this inhospitable climate, and peep forth from the edge of a snowbank at that.

It seems unaccountable to a superficial observer that the thousands of people who are dissatisfied with their climate do not seek a more congenial one—or stop grumbling. The world is so small, and all parts of it are so accessible, it has so many varieties of climate, that one could surely suit himself by searching; and, then, is it worth while to waste our one short life in the midst of unpleasant surroundings and in a constant friction with that which is disagreeable? One would suppose that people set down on this little globe would seek places on it most agreeable to themselves. It must be that they are much more content with the climate and country upon which they happen, by the accident of their birth, than they pretend to be.

III

Home sympathies and charities are most active in the winter. Coming in from my late walk,—in fact driven in by a hurrying north wind that would brook no delay,—a wind that brought snow that did not seem to fall out of a bounteous sky, but to be blown from polar fields,—I find the Mistress returned from town, all in a glow of philanthropic excitement.

There has been a meeting of a woman's association for Ameliorating the Condition of somebody here at home. Any one can belong to it by paying a dollar, and for twenty dollars one can become a life Ameliorator,—a sort of life assurance. The Mistress, at the meeting, I believe, "seconded the motion" several times, and is one of the Vice-Presidents; and this family honor makes me feel almost as if I were a president of something myself. These little distinctions are among the sweetest things in life, and to see one's name officially printed stimulates his charity, and is almost as satisfactory as being the chairman of a committee or the mover of a resolution. It is, I think, fortunate, and not at all discreditable, that our little vanity, which is reckoned among our weaknesses, is thus made to contribute to the activity of our nobler powers. Whatever we may say, we all of us like distinction; and probably there is no more subtle flattery than that conveyed in the whisper, "That's he," "That's she."

There used to be a society for ameliorating the condition of the Jews; but they were found to be so much more adept than other people in ameliorating their own condition that I suppose it was given up. Mandeville says that to his knowledge there are a great many people who get up ameliorating enterprises merely to be conspicuously busy in society, or to earn a little something in a good cause. They seem to think that the world owes them a living because they are philanthropists. In this Mandeville does not speak with his usual charity. It is evident that there are Jews, and some Gentiles, whose condition needs ameliorating, and if very little is really accomplished in the effort for them, it always remains true that the charitable reap a benefit to themselves. It is one of the beautiful compensations of this life that no one can sincerely try to help another without helping himself.

OUR NEXT-DOOR NEIGHBOR. Why is it that almost all philanthropists and reformers are disagreeable?

I ought to explain who our next-door neighbor is. He is the person who comes in without knocking, drops in in the most natural way, as his wife does also, and not seldom in time to take the after-dinner cup of tea before the fire. Formal society begins as soon as you lock your doors, and only admit visitors through the media of bells and servants. It is lucky for us that our next-door neighbor is honest.

THE PARSON. Why do you class reformers and philanthropists together? Those usually called reformers are not philanthropists at all. They are agitators. Finding the world disagreeable to themselves, they wish to make it as unpleasant to others as possible.

MANDEVILLE. That's a noble view of your fellow-men.

OUR NEXT DOOR. Well, granting the distinction, why are both apt to be unpleasant people to live with?

THE PARSON. As if the unpleasant people who won't mind their own business were confined to the classes you mention! Some of the best people I know are philanthropists,—I mean the genuine ones, and not the uneasy busybodies seeking notoriety as a means of living.

THE FIRE-TENDER. It is not altogether the not minding their own business. Nobody does that. The usual explanation is, that people with one idea are tedious. But that is not all of it. For few persons have more than one idea,—ministers, doctors, lawyers, teachers, manufacturers, merchants,—they all think the world they live in is the central one.

MANDEVILLE. And you might add authors. To them nearly all the life of the world is in letters, and I suppose they would be astonished if they knew how little the thoughts of the majority of people are occupied with books, and with all that vast thought circulation which is the vital current of the world to book-men. Newspapers have reached their present power by becoming unliterary, and reflecting all the interests of the world.

THE MISTRESS. I have noticed one thing, that the most popular persons in society are those who take the world as it is, find the least fault, and have no hobbies. They are always wanted to dinner.

THE YOUNG LADY. And the other kind always appear to me to want a dinner.

THE FIRE-TENDER. It seems to me that the real reason why reformers and some philanthropists are unpopular is, that they disturb our serenity and make us conscious of our own shortcomings. It is only now and then that a whole people get a spasm of reformatory fervor, of investigation and regeneration. At other times they rather hate those who disturb their quiet.

OUR NEXT DOOR. Professional reformers and philanthropists are insufferably conceited and intolerant.

THE MISTRESS. Everything depends upon the spirit in which a reform or a scheme of philanthropy is conducted.

MANDEVILLE. I attended a protracted convention of reformers of a certain evil, once, and had the pleasure of taking dinner with a tableful of them. It was one of those country dinners accompanied with green tea. Every one disagreed with every one else, and you would n't wonder at it, if you had seen them. They were people with whom good food wouldn't agree. George Thompson was expected at the convention, and I remember that there was almost a cordiality in the talk about him, until one sallow brother casually mentioned that George took snuff,—when a chorus of deprecatory groans went up from the table. One long-faced maiden in spectacles, with purple ribbons in her hair, who drank five cups of tea by my count, declared that she was perfectly disgusted, and did n't want to hear him speak. In the course of the meal the talk ran upon the discipline of children, and how to administer punishment. I was quite taken by the remark of a thin, dyspeptic man who summed up the matter by growling out in a harsh, deep bass voice, "Punish 'em in love!" It sounded as if he had said, "Shoot 'em on the spot!"

THE PARSON. I supposed you would say that he was a minister. There is another thing about those people. I think they are working against the course of nature. Nature is entirely indifferent to any reform. She

perpetuates a fault as persistently as a virtue. There's a split in my thumb-nail that has been scrupulously continued for many years, notwithstanding all my efforts to make the nail resume its old regularity. You see the same thing in trees whose bark is cut, and in melons that have had only one summer's intimacy with squashes. The bad traits in character are passed down from generation to generation with as much care as the good ones. Nature, unaided, never reforms anything.

MANDEVILLE. Is that the essence of Calvinism?

THE PARSON. Calvinism has n't any essence, it's a fact.

MANDEVILLE. When I was a boy, I always associated Calvinism and calomel together. I thought that homeopathy—similia, etc.—had done away with both of them.

OUR NEXT DOOR (rising). If you are going into theology, I'm off..

IV

I fear we are not getting on much with the joyousness of winter. In order to be exhilarating it must be real winter. I have noticed that the lower the thermometer sinks the more fiercely the north wind rages, and the deeper the snow is, the higher rise the spirits of the community. The activity of the "elements" has a great effect upon country folk especially; and it is a more wholesome excitement than that caused by a great conflagration. The abatement of a snow-storm that grows to exceptional magnitude is regretted, for there is always the half-hope that this will be, since it has gone so far, the largest fall of snow ever known in the region, burying out of sight the great fall of 1808, the account of which is circumstantially and aggravatingly thrown in our way annually upon the least provocation. We all know how it reads: "Some said it began at daylight, others that it set in after sunrise; but all agree that by eight o'clock Friday morning it was snowing in heavy masses that darkened the air."

The morning after we settled the five—or is it seven?—points of Calvinism, there began a very hopeful snow-storm, one of those wide-sweeping, careering storms that may not much affect the city, but which strongly impress the country imagination with a sense of the personal qualities of the weather,—power, persistency, fierceness, and roaring exultation. Out-doors was terrible to those who looked out of windows, and heard the raging wind, and saw the commotion in all the high tree-tops and the writhing of the low evergreens, and could not summon resolution to go forth and breast and conquer the bluster. The sky was dark with snow, which was not permitted to fall peacefully like a blessed mantle, as it sometimes does, but was blown and rent and tossed like the split canvas of a ship in a gale. The world was taken possession of by the demons of the air, who had their will of it. There is a sort of fascination in such a scene, equal to that of a tempest at sea, and without its attendant haunting sense of peril; there is no fear that the house will founder or dash against your neighbor's cottage, which is dimly seen anchored across the field; at every thundering onset there is no fear that the cook's galley will upset, or the screw break loose and smash through the side, and we are not in momentarily expectation of the tinkling of the little bell to "stop her." The snow rises in drifting waves, and the naked trees bend like strained masts; but so long as the window-blinds remain fast, and the chimney-tops do not go, we preserve an equal mind. Nothing more serious can happen than the failure of the butcher's and the grocer's carts, unless, indeed, the little news-carrier should fail to board us with the world's daily bulletin, or our next-door neighbor should be deterred from coming to sit by the blazing, excited fire, and interchange the trifling, harmless gossip of the day. The feeling of seclusion on such a day is sweet, but the true friend who does brave the storm and come is welcomed with a sort of enthusiasm that his arrival in pleasant weather would never excite. The snow-bound in their Arctic hulk are glad to see even a wandering Esquimau.

On such a day I recall the great snow-storms on the northern New England hills, which lasted for a week with no cessation, with no sunrise or sunset, and no observation at noon; and the sky all the while dark with the driving snow, and the whole world full of the noise of the rioting Boreal forces; until the roads were obliterated, the fences covered, and the snow was piled solidly above the first-story windows of the farmhouse on one side, and drifted before the front door so high that egress could only be had by tunneling the bank.

After such a battle and siege, when the wind fell and the sun struggled out again, the pallid world lay subdued and tranquil, and the scattered dwellings were not unlike wrecks stranded by the tempest and half buried in sand. But when the blue sky again bent over all, the wide expanse of snow sparkled like diamond-fields, and the chimney signal-smokes could be seen, how beautiful was the picture! Then began the stir abroad, and the efforts to open up communication through roads, or fields, or wherever paths could be broken, and the ways to the meeting-house first of all. Then from every house and hamlet the men turned out with shovels, with the patient, lumbering oxen yoked to the sleds, to break the roads, driving into the deepest drifts, shoveling and shouting as if the severe labor were a holiday frolic, the courage and the hilarity rising with the difficulties encountered; and relief parties, meeting at length in the midst of the wide white desolation, hailed each other as chance explorers in new lands, and made the whole country-side ring with the noise of their congratulations. There was as much excitement and healthy stirring of the blood in it as in the Fourth of July, and perhaps as much patriotism. The boy saw it in dumb show from the distant, low farmhouse window, and wished he were a man. At night there were great stories of achievement told by the cavernous fireplace; great latitude was permitted in the estimation of the size of particular drifts, but never any agreement was reached as to the "depth on a level." I have observed since that people are quite as apt to agree upon the marvelous and the exceptional as upon simple facts.

V

By the firelight and the twilight, the Young Lady is finishing a letter to Herbert,—writing it, literally, on her knees, transforming thus the simple deed into an act of devotion. Mandeville says that it is bad for her eyes, but the sight of it is worse for his eyes. He begins to doubt the wisdom of reliance upon that worn apothegm about absence conquering love.

Memory has the singular characteristic of recalling in a friend absent, as in a journey long past, only that which is agreeable. Mandeville begins to wish he were in New South Wales.

I did intend to insert here a letter of Herbert's to the Young Lady,—obtained, I need not say, honorably, as private letters which get into print always are,—not to gratify a vulgar curiosity, but to show how the most unsentimental and cynical people are affected by the master passion. But I cannot bring myself to do it. Even in the interests of science one has no right to make an autopsy of two loving hearts, especially when they are suffering under a late attack of the one agreeable epidemic.

All the world loves a lover, but it laughs at him none the less in his extravagances. He loses his accustomed reticence; he has something of the martyr's willingness for publicity; he would even like to show the sincerity of his devotion by some piece of open heroism. Why should he conceal a discovery which has transformed the world to him, a secret which explains all the mysteries of nature and humanity? He is in that ecstasy of mind which prompts those who were never orators before to rise in an experience-meeting and pour out a flood of feeling in the tritest language and the most conventional terms. I am not sure that Herbert, while in this glow, would be ashamed of his letter in print, but this is one of the cases where chancery would step in and protect one from himself by his next friend. This is really a delicate matter, and perhaps it is brutal to allude to it at all.

In truth, the letter would hardly be interesting in print. Love has a marvelous power of vivifying language and charging the simplest words with the most tender meaning, of restoring to them the power they had when first coined. They are words of fire to those two who know their secret, but not to others. It is generally admitted that the best love-letters would not make very good literature. "Dearest," begins Herbert, in a burst of originality, felicitously selecting a word whose exclusiveness shuts out all the world but one, and which is a whole letter, poem, confession, and creed in one breath. What a weight of meaning it has to carry! There may be beauty and wit and grace and naturalness and even the splendor of fortune elsewhere, but there is one woman in the world whose sweet presence would be compensation for the loss of all else. It is not to be reasoned about; he wants that one; it is her plume dancing down the sunny street that sets his heart beating; he knows her form among a thousand, and follows her; he longs to run after her carriage, which the cruel coachman whirls out of his sight. It is marvelous to him that all the world does not want her too, and he is in a panic when he thinks of it. And what exquisite flattery is in that little word addressed to her, and with what sweet and meek triumph she repeats it to herself, with a feeling that is not altogether pity for those who still stand and wait. To be chosen out of all the available world—it is almost as much bliss as it is to choose. "All that long, long stage-ride from Blim's to Portage I thought of you every moment, and wondered what you were doing and how you were looking just that moment, and I found the occupation so charming that I was almost sorry when the journey was ended." Not much in that! But I have no doubt the Young Lady read it over and over, and dwelt also upon every moment, and found in it new proof of unshaken constancy, and had in that and the like things in the letter a sense of the sweetest communion. There is nothing in this letter that we need dwell on it, but I am convinced that the mail does not carry any other letters so valuable as this sort.

I suppose that the appearance of Herbert in this new light unconsciously gave tone a little to the evening's talk; not that anybody mentioned him, but Mandeville was evidently generalizing from the qualities that make one person admired by another to those that win the love of mankind.

MANDEVILLE. There seems to be something in some persons that wins them liking, special or general, independent almost of what they do or say.

THE MISTRESS. Why, everybody is liked by some one.

MANDEVILLE. I'm not sure of that. There are those who are friendless, and would be if they had endless acquaintances. But, to take the case away from ordinary examples, in which habit and a thousand circumstances influence liking, what is it that determines the world upon a personal regard for authors whom it has never seen?

THE FIRE-TENDER. Probably it is the spirit shown in their writings.

THE MISTRESS. More likely it is a sort of tradition; I don't believe that the world has a feeling of personal regard for any author who was not loved by those who knew him most intimately.

THE FIRE-TENDER. Which comes to the same thing. The qualities, the spirit, that got him the love of his acquaintances he put into his books.

MANDEVILLE. That does n't seem to me sufficient. Shakespeare has put everything into his plays and poems, swept the whole range of human sympathies and passions, and at times is inspired by the sweetest spirit that ever man had.

THE YOUNG LADY. No one has better interpreted love.

MANDEVILLE. Yet I apprehend that no person living has any personal regard for Shakespeare, or that his personality affects many,—except they stand in Stratford church and feel a sort of awe at the thought that the bones of the greatest poet are so near them.

THE PARSON. I don't think the world cares personally for any mere man or woman dead for centuries.

MANDEVILLE. But there is a difference. I think there is still rather a warm feeling for Socrates the man, independent of what he said, which is little known. Homer's works are certainly better known, but no one cares personally for Homer any more than for any other shade.

OUR NEXT DOOR. Why not go back to Moses? We've got the evening before us for digging up people.

MANDEVILLE. Moses is a very good illustration. No name of antiquity is better known, and yet I fancy he does not awaken the same kind of popular liking that Socrates does.

OUR NEXT DOOR. Fudge! You just get up in any lecture assembly and propose three cheers for Socrates, and see where you'll be. Mandeville ought to be a missionary, and read Robert Browning to the Fijis.

THE FIRE-TENDER. How do you account for the alleged personal regard for Socrates?

THE PARSON. Because the world called Christian is still more than half heathen.

MANDEVILLE. He was a plain man; his sympathies were with the people; he had what is roughly known as "horse-sense," and he was homely. Franklin and Abraham Lincoln belong to his class. They were all philosophers of the shrewd sort, and they all had humor. It was fortunate for Lincoln that, with his other qualities, he was homely. That was the last touching recommendation to the popular heart.

THE MISTRESS. Do you remember that ugly brown-stone statue of St. Antonio by the bridge in Sorrento? He must have been a coarse saint, patron of pigs as he was, but I don't know any one anywhere, or the homely stone image of one, so loved by the people.

OUR NEXT DOOR. Ugliness being trump, I wonder more people don't win. Mandeville, why don't you get up a "centenary" of Socrates, and put up his statue in the Central Park? It would make that one of Lincoln in Union Square look beautiful.

THE PARSON. Oh, you'll see that some day, when they have a museum there illustrating the "Science of Religion."

THE FIRE-TENDER. Doubtless, to go back to what we were talking of, the world has a fondness for some authors, and thinks of them with an affectionate and half-pitying familiarity; and it may be that this grows out of something in their lives quite as much as anything in their writings. There seems to be more disposition of personal liking to Thackeray than to Dickens, now both are dead,—a result that would hardly have been predicted when the world was crying over Little Nell, or agreeing to hate Becky Sharp.

THE YOUNG LADY. What was that you were telling about Charles Lamb, the other day, Mandeville? Is not the popular liking for him somewhat independent of his writings?

MANDEVILLE. He is a striking example of an author who is loved. Very likely the remembrance of his tribulations has still something to do with the tenderness felt for him. He supported no dignity and permitted a familiarity which indicated no self-appreciation of his real rank in the world of letters. I have heard that his acquaintances familiarly called him "Charley."

OUR NEXT DOOR. It's a relief to know that! Do you happen to know what Socrates was called?

MANDEVILLE. I have seen people who knew Lamb very well. One of them told me, as illustrating his want of dignity, that as he was going home late one night through the nearly empty streets, he was met by a roystering party who were making a night of it from tavern to tavern. They fell upon Lamb, attracted by his odd figure and hesitating manner, and, hoisting him on their shoulders, carried him off, singing as they went. Lamb enjoyed the lark, and did not tell them who he was. When they were tired of lugging him, they lifted him, with much effort and difficulty, to the top of a high wall, and left him there amid the broken bottles, utterly unable to get down. Lamb remained there philosophically in the enjoyment of his novel adventure, until a passing watchman rescued him from his ridiculous situation.

THE FIRE-TENDER. How did the story get out?

MANDEVILLE. Oh, Lamb told all about it next morning; and when asked afterwards why he did so, he replied that there was no fun in it unless he told it.

SIXTH STUDY

I

The King sat in the winter-house in the ninth month, and there was a fire on the hearth burning before him.... When Jehudi had read three or four leaves he cut it with the penknife.

That seems to be a pleasant and home-like picture from a not very remote period,—less than twenty-five hundred years ago, and many centuries after the fall of Troy. And that was not so very long ago, for Thebes, in the splendid streets of which Homer wandered and sang to the kings when Memphis, whose ruins are older than history, was its younger rival, was twelve centuries old when Paris ran away with Helen.

I am sorry that the original—and you can usually do anything with the “original”—does not bear me out in saying that it was a pleasant picture. I should like to believe that Jehoiakim—for that was the singular name of the gentleman who sat by his hearthstone—had just received the Memphis “Palimpsest,” fifteen days in advance of the date of its publication, and that his secretary was reading to him that monthly, and cutting its leaves as he read. I should like to have seen it in that year when Thales was learning astronomy in Memphis, and Necho was organizing his campaign against Carchemish. If Jehoiakim took the “Attic Quarterly,” he might have read its comments on the banishment of the Alcmaeonida, and its gibes at Solon for his prohibitory laws, forbidding the sale of unguents, limiting the luxury of dress, and interfering with the sacred rights of mourners to passionately bewail the dead in the Asiatic manner; the same number being enriched with contributions from two rising poets,—a lyric of love by Sappho, and an ode sent by Anacreon from Teos, with an editorial note explaining that the Maces was not responsible for the sentiments of the poem.

But, in fact, the gentleman who sat before the backlog in his winter-house had other things to think of. For Nebuchadnezzar was coming that way with the chariots and horses of Babylon and a great crowd of marauders; and the king had not even the poor choice whether he would be the vassal of the Chaldean or of the Egyptian. To us, this is only a ghostly show of monarchs and conquerors stalking across vast historic spaces. It was no doubt a vulgar enough scene of war and plunder. The great captains of that age went about to harry each other's territories and spoil each other's cities very much as we do nowadays, and for similar reasons;—Napoleon the Great in Moscow, Napoleon the Small in Italy, Kaiser William in Paris, Great Scott in Mexico! Men have not changed much;—The Fire-Tender sat in his winter-garden in the third month; there was a fire on the hearth burning before him. He cut the leaves of “Scribner's Monthly” with his penknife, and thought of Jehoiakim.

That seems as real as the other. In the garden, which is a room of the house, the tall callas, rooted in the ground, stand about the fountain; the sun, streaming through the glass, illumines the many-hued flowers. I wonder what Jehoiakim did with the mealy-bug on his passion-vine, and if he had any way of removing the scale-bug from his African acacia? One would like to know, too, how he treated the red spider on the Le Marque rose. The record is silent. I do not doubt he had all these insects in his winter-garden, and the aphidae besides; and he could not smoke them out with tobacco, for the world had not yet fallen into its second stage of the knowledge of good and evil by eating the forbidden tobacco-plant.

I confess that this little picture of a fire on the hearth so many centuries ago helps to make real and interesting to me that somewhat misty past. No doubt the lotus and the acanthus from the Nile grew in that winter-house, and perhaps Jehoiakim attempted—the most difficult thing in the world the cultivation of the wild flowers from Lebanon. Perhaps Jehoiakim was interested also, as I am through this ancient fireplace,—which is a sort of domestic window into the ancient world,—in the loves of Bernice and Abaces at the court of the Pharaohs. I see that it is the same thing as the sentiment—perhaps it is the shrinking which every soul

that is a soul has, sooner or later, from isolation—which grew up between Herbert and the Young Lady Staying With Us. Jeremiah used to come in to that fireside very much as the Parson does to ours. The Parson, to be sure, never prophesies, but he grumbles, and is the chorus in the play that sings the everlasting ai ai of “I told you so!” Yet we like the Parson. He is the sprig of bitter herb that makes the pottage wholesome. I should rather, ten times over, dispense with the flatterers and the smooth-sayers than the grumblers. But the grumblers are of two sorts,—the healthful-toned and the whiners. There are makers of beer who substitute for the clean bitter of the hops some deleterious drug, and then seek to hide the fraud by some cloying sweet. There is nothing of this sickish drug in the Parson's talk, nor was there in that of Jeremiah, I sometimes think there is scarcely enough of this wholesome tonic in modern society. The Parson says he never would give a child sugar-coated pills. Mandeville says he never would give them any. After all, you cannot help liking Mandeville.

II

We were talking of this late news from Jerusalem. The Fire-Tender was saying that it is astonishing how much is telegraphed us from the East that is not half so interesting. He was at a loss philosophically to account for the fact that the world is so eager to know the news of yesterday which is unimportant, and so indifferent to that of the day before which is of some moment.

MANDEVILLE. I suspect that it arises from the want of imagination. People need to touch the facts, and nearness in time is contiguity. It would excite no interest to bulletin the last siege of Jerusalem in a village where the event was unknown, if the date was appended; and yet the account of it is incomparably more exciting than that of the siege of Metz.

OUR NEXT DOOR. The daily news is a necessity. I cannot get along without my morning paper. The other morning I took it up, and was absorbed in the telegraphic columns for an hour nearly. I thoroughly enjoyed the feeling of immediate contact with all the world of yesterday, until I read among the minor items that Patrick Donahue, of the city of New York, died of a sunstroke. If he had frozen to death, I should have enjoyed that; but to die of sunstroke in February seemed inappropriate, and I turned to the date of the paper. When I found it was printed in July, I need not say that I lost all interest in it, though why the trivialities and crimes and accidents, relating to people I never knew, were not as good six months after date as twelve hours, I cannot say.

THE FIRE-TENDER. You know that in Concord the latest news, except a remark or two by Thoreau or Emerson, is the Vedas. I believe the Rig-Veda is read at the breakfast-table instead of the Boston journals.

THE PARSON. I know it is read afterward instead of the Bible.

MANDEVILLE. That is only because it is supposed to be older. I have understood that the Bible is very well spoken of there, but it is not antiquated enough to be an authority.

OUR NEXT DOOR. There was a project on foot to put it into the circulating library, but the title New in the second part was considered objectionable.

HERBERT. Well, I have a good deal of sympathy with Concord as to the news. We are fed on a daily diet of trivial events and gossip, of the unfruitful sayings of thoughtless men and women, until our mental digestion is seriously impaired; the day will come when no one will be able to sit down to a thoughtful, well-wrought book and assimilate its contents.

THE MISTRESS. I doubt if a daily newspaper is a necessity, in the higher sense of the word.

THE PARSON. Nobody supposes it is to women,—that is, if they can see each other.

THE MISTRESS. Don't interrupt, unless you have something to say; though I should like to know how much gossip there is afloat that the minister does not know. The newspaper may be needed in society, but how quickly it drops out of mind when one goes beyond the bounds of what is called civilization. You remember when we were in the depths of the woods last summer how difficult it was to get up any interest in the files of late papers that reached us, and how unreal all the struggle and turmoil of the world seemed. We stood apart, and could estimate things at their true value.

THE YOUNG LADY. Yes, that was real life. I never tired of the guide's stories; there was some interest in the intelligence that a deer had been down to eat the lily-pads at the foot of the lake the night before; that a bear's track was seen on the trail we crossed that day; even Mandeville's fish-stories had a certain air of probability; and how to roast a trout in the ashes and serve him hot and juicy and clean, and how to cook soup and prepare coffee and heat dish-water in one tin-pail, were vital problems.

THE PARSON. You would have had no such problems at home. Why will people go so far to put themselves to such inconvenience? I hate the woods. Isolation breeds conceit; there are no people so conceited as those who dwell in remote wildernesses and live mostly alone.

THE YOUNG LADY. For my part, I feel humble in the presence of mountains, and in the vast stretches of the wilderness.

THE PARSON. I'll be bound a woman would feel just as nobody would expect her to feel, under given circumstances.

MANDEVILLE. I think the reason why the newspaper and the world it carries take no hold of us in the wilderness is that we become a kind of vegetable ourselves when we go there. I have often attempted to improve my mind in the woods with good solid books. You might as well offer a bunch of celery to an oyster. The mind goes to sleep; the senses and the instincts wake up. The best I can do when it rains, or the trout won't bite, is to read Dumas's novels. Their ingenuity will almost keep a man awake after supper, by the camp-fire. And there is a kind of unity about them that I like; the history is as good as the morality.

OUR NEXT DOOR. I always wondered where Mandeville got his historical facts.

THE MISTRESS. Mandeville misrepresents himself in the woods. I heard him one night repeat "The Vision of Sir Launfal"—(THE FIRE-TENDER. Which comes very near being our best poem.)—as we were crossing the lake, and the guides became so absorbed in it that they forgot to paddle, and sat listening with open mouths, as if it had been a panther story.

THE PARSON. Mandeville likes to show off well enough. I heard that he related to a woods' boy up there the whole of the Siege of Troy. The boy was very much interested, and said "there'd been a man up there that spring from Troy, looking up timber." Mandeville always carries the news when he goes into the country.

MANDEVILLE. I'm going to take the Parson's sermon on Jonah next summer; it's the nearest to anything like news we've had from his pulpit in ten years. But, seriously, the boy was very well informed. He'd heard of Albany; his father took in the "Weekly Tribune," and he had a partial conception of Horace Greeley.

OUR NEXT DOOR. I never went so far out of the world in America yet that the name of Horace Greeley did n't rise up before me. One of the first questions asked by any camp-fire is, "Did ye ever see Horace?"

HERBERT. Which shows the power of the press again. But I have often remarked how little real conception of the moving world, as it is, people in remote regions get from the newspaper. It needs to be read in the midst of events. A chip cast ashore in a refluant eddy tells no tale of the force and swiftness of the current.

OUR NEXT DOOR. I don't exactly get the drift of that last remark; but I rather like a remark that I can't understand; like the landlady's indigestible bread, it stays by you.

HERBERT. I see that I must talk in words of one syllable. The newspaper has little effect upon the remote country mind, because the remote country mind is interested in a very limited number of things. Besides, as the Parson says, it is conceited. The most accomplished scholar will be the butt of all the guides in the woods, because he cannot follow a trail that would puzzle a sable (sable the trappers call it).

THE PARSON. It's enough to read the summer letters that people write to the newspapers from the country and the woods. Isolated from the activity of the world, they come to think that the little adventures of their stupid days and nights are important. Talk about that being real life! Compare the letters such people write with the other contents of the newspaper, and you will see which life is real. That's one reason I hate to have summer come, the country letters set in.

THE MISTRESS. I should like to see something the Parson does n't hate to have come.

MANDEVILLE. Except his quarter's salary; and the meeting of the American Board.

THE FIRE-TENDER. I don't see that we are getting any nearer the solution of the original question. The world is evidently interested in events simply because they are recent.

OUR NEXT DOOR. I have a theory that a newspaper might be published at little cost, merely by reprinting the numbers of years before, only altering the dates; just as the Parson preaches over his sermons.

THE FIRE-TENDER. It's evident we must have a higher order of news-gatherers. It has come to this, that the newspaper furnishes thought-material for all the world, actually prescribes from day to day the themes the world shall think on and talk about. The occupation of news-gathering becomes, therefore, the most important. When you think of it, it is astonishing that this department should not be in the hands of the ablest men, accomplished scholars, philosophical observers, discriminating selectors of the news of the world that is worth thinking over and talking about. The editorial comments frequently are able enough, but is it worth while keeping an expensive mill going to grind chaff? I sometimes wonder, as I open my morning paper, if nothing did happen in the twenty-four hours except crimes, accidents, defalcations, deaths of unknown loafers, robberies, monstrous births,—say about the level of police-court news.

OUR NEXT DOOR. I have even noticed that murders have deteriorated; they are not so high-toned and mysterious as they used to be.

THE FIRE-TENDER. It is true that the newspapers have improved vastly within the last decade.

HERBERT. I think, for one, that they are very much above the level of the ordinary gossip of the country.

THE FIRE-TENDER. But I am tired of having the under-world still occupy so much room in the newspapers. The reporters are rather more alert for a dog-fight than a philological convention. It must be that the good deeds of the world outnumber the bad in any given day; and what a good reflex action it would have on society if they could be more fully reported than the bad! I suppose the Parson would call this the Enthusiasm of Humanity.

THE PARSON. You'll see how far you can lift yourself up by your boot-straps.

HERBERT. I wonder what influence on the quality (I say nothing of quantity) of news the coming of women into the reporter's and editor's work will have.

OUR NEXT DOOR. There are the baby-shows; they make cheerful reading.

THE MISTRESS. All of them got up by speculating men, who impose upon the vanity of weak women.

HERBERT. I think women reporters are more given to personal details and gossip than the men. When I read the Washington correspondence I am proud of my country, to see how many Apollo Belvederes, Adonises, how much marble brow and piercing eye and hyacinthine locks, we have in the two houses of Congress.

THE YOUNG LADY. That's simply because women understand the personal weakness of men; they have a long score of personal flattery to pay off too.

MANDEVILLE. I think women will bring in elements of brightness, picturesqueness, and purity very much needed. Women have a power of investing simple ordinary things with a charm; men are bungling narrators compared with them.

THE PARSON. The mistake they make is in trying to write, and especially to "stump-speak," like men; next to an effeminate man there is nothing so disagreeable as a mannish woman.

HERBERT. I heard one once address a legislative committee. The knowing air, the familiar, jocular, smart manner, the nodding and winking innuendoes, supposed to be those of a man "up to snuff," and au fait in

political wiles, were inexpressibly comical. And yet the exhibition was pathetic, for it had the suggestive vulgarity of a woman in man's clothes. The imitation is always a dreary failure.

THE MISTRESS. Such women are the rare exceptions. I am ready to defend my sex; but I won't attempt to defend both sexes in one.

THE FIRE-TENDER. I have great hope that women will bring into the newspaper an elevating influence; the common and sweet life of society is much better fitted to entertain and instruct us than the exceptional and extravagant. I confess (saving the Mistress's presence) that the evening talk over the dessert at dinner is much more entertaining and piquant than the morning paper, and often as important.

THE MISTRESS. I think the subject had better be changed.

MANDEVILLE. The person, not the subject. There is no entertainment so full of quiet pleasure as the hearing a lady of cultivation and refinement relate her day's experience in her daily rounds of calls, charitable visits, shopping, errands of relief and condolence. The evening budget is better than the finance minister's.

OUR NEXT DOOR. That's even so. My wife will pick up more news in six hours than I can get in a week, and I'm fond of news.

MANDEVILLE. I don't mean gossip, by any means, or scandal. A woman of culture skims over that like a bird, never touching it with the tip of a wing. What she brings home is the freshness and brightness of life. She touches everything so daintily, she hits off a character in a sentence, she gives the pith of a dialogue without tediousness, she mimics without vulgarity; her narration sparkles, but it does n't sting. The picture of her day is full of vivacity, and it gives new value and freshness to common things. If we could only have on the stage such actresses as we have in the drawing-room!

THE FIRE-TENDER. We want something more of this grace, sprightliness, and harmless play of the finer life of society in the newspaper.

OUR NEXT DOOR. I wonder Mandeville does n't marry, and become a permanent subscriber to his embodied idea of a newspaper.

THE YOUNG LADY. Perhaps he does not relish the idea of being unable to stop his subscription.

OUR NEXT DOOR. Parson, won't you please punch that fire, and give us more blaze? we are getting into the darkness of socialism.

III

Herbert returned to us in March. The Young Lady was spending the winter with us, and March, in spite of the calendar, turned out to be a winter month. It usually is in New England, and April too, for that matter. And I cannot say it is unfortunate for us. There are so many topics to be turned over and settled at our fireside that a winter of ordinary length would make little impression on the list. The fireside is, after all, a sort of private court of chancery, where nothing ever does come to a final decision. The chief effect of talk on any subject is to strengthen one's own opinions, and, in fact, one never knows exactly what he does believe until he is warmed into conviction by the heat of attack and defence. A man left to himself drifts about like a boat on a calm lake; it is only when the wind blows that the boat goes anywhere.

Herbert said he had been dipping into the recent novels written by women, here and there, with a view to noting the effect upon literature of this sudden and rather overwhelming accession to it. There was a good deal of talk about it evening after evening, off and on, and I can only undertake to set down fragments of it.

HERBERT. I should say that the distinguishing feature of the literature of this day is the prominence women have in its production. They figure in most of the magazines, though very rarely in the scholarly and critical reviews, and in thousands of newspapers; to them we are indebted for the oceans of Sunday-school books, and they write the majority of the novels, the serial stories, and they mainly pour out the watery flood of tales in the weekly papers. Whether this is to result in more good than evil it is impossible yet to say, and perhaps it would be unjust to say, until this generation has worked off its froth, and women settle down to artistic, conscientious labor in literature.

THE MISTRESS. You don't mean to say that George Eliot, and Mrs. Gaskell, and George Sand, and Mrs. Browning, before her marriage and severe attack of spiritism, are less true to art than contemporary men novelists and poets.

HERBERT. You name some exceptions that show the bright side of the picture, not only for the present, but for the future. Perhaps genius has no sex; but ordinary talent has. I refer to the great body of novels, which you would know by internal evidence were written by women. They are of two sorts: the domestic story, entirely unidealized, and as flavorless as water-gruel; and the spiced novel, generally immoral in tendency, in which the social problems are handled, unhappy marriages, affinity and passion attraction, bigamy, and the violation of the seventh commandment. These subjects are treated in the rawest manner, without any settled ethics, with little discrimination of eternal right and wrong, and with very little sense of responsibility for what is set forth. Many of these novels are merely the blind outbursts of a nature impatient of restraint and the conventionalities of society, and are as chaotic as the untrained minds that produce them.

MANDEVILLE. Don't you think these novels fairly represent a social condition of unrest and upheaval?

HERBERT. Very likely; and they help to create and spread abroad the discontent they describe. Stories of bigamy (sometimes disguised by divorce), of unhappy marriages, where the injured wife, through an entire volume, is on the brink of falling into the arms of a sneaking lover, until death kindly removes the obstacle, and the two souls, who were born for each other, but got separated in the cradle, melt and mingle into one in the last chapter, are not healthful reading for maids or mothers.

THE MISTRESS. Or men.

THE FIRE-TENDER. The most disagreeable object to me in modern literature is the man the women novelists have introduced as the leading character; the women who come in contact with him seem to be fascinated by his disdainful mien, his giant strength, and his brutal manner. He is broad across the shoulders, heavily moulded, yet as lithe as a cat; has an ugly scar across his right cheek; has been in the four quarters of the globe; knows seventeen languages; had a harem in Turkey and a Fayaway in the Marquesas; can be as polished as Bayard in the drawing-room, but is as gloomy as Conrad in the library; has a terrible eye and a withering glance, but can be instantly subdued by a woman's hand, if it is not his wife's; and through all his morose and vicious career has carried a heart as pure as a violet.

THE MISTRESS. Don't you think the Count of Monte Cristo is the elder brother of Rochester?

THE FIRE-TENDER. One is a mere hero of romance; the other is meant for a real man.

MANDEVILLE. I don't see that the men novel-writers are better than the women.

HERBERT. That's not the question; but what are women who write so large a proportion of the current stories bringing into literature? Aside from the question of morals, and the absolutely demoralizing manner of treating social questions, most of their stories are vapid and weak beyond expression, and are slovenly in composition, showing neither study, training, nor mental discipline.

THE MISTRESS. Considering that women have been shut out from the training of the universities, and have few opportunities for the wide observation that men enjoy, isn't it pretty well that the foremost living writers of fiction are women?

HERBERT. You can say that for the moment, since Thackeray and Dickens have just died. But it does not affect the general estimate. We are inundated with a flood of weak writing. Take the Sunday-school literature, largely the product of women; it has n't as much character as a dried apple pie. I don't know what we are coming to if the presses keep on running.

OUR NEXT DOOR. We are living, we are dwelling, in a grand and awful time; I'm glad I don't write novels.

THE PARSON. So am I.

OUR NEXT DOOR. I tried a Sunday-school book once; but I made the good boy end in the poorhouse, and the bad boy go to Congress; and the publisher said it wouldn't do, the public wouldn't stand that sort of thing. Nobody but the good go to Congress.

THE MISTRESS. Herbert, what do you think women are good for?

OUR NEXT DOOR. That's a poser.

HERBERT. Well, I think they are in a tentative state as to literature, and we cannot yet tell what they will do. Some of our most brilliant books of travel, correspondence, and writing on topics in which their sympathies have warmly interested them, are by women. Some of them are also strong writers in the daily journals.

MANDEVILLE. I 'm not sure there's anything a woman cannot do as well as a man, if she sets her heart on it.

THE PARSON. That's because she's no conscience.

CHORUS. O Parson!

THE PARSON. Well, it does n't trouble her, if she wants to do anything. She looks at the end, not the means. A woman, set on anything, will walk right through the moral crockery without wincing. She'd be a great deal more unscrupulous in politics than the average man. Did you ever see a female lobbyist? Or a criminal? It is Lady Macbeth who does not falter. Don't raise your hands at me! The sweetest angel or the coolest devil is a woman. I see in some of the modern novels we have been talking of the same unscrupulous daring, a blindness to moral distinctions, a constant exaltation of a passion into a virtue, an entire disregard of the immutable laws on which the family and society rest. And you ask lawyers and trustees how scrupulous women are in business transactions!

THE FIRE-TENDER. Women are often ignorant of affairs, and, besides, they may have a notion often that a woman ought to be privileged more than a man in business matters; but I tell you, as a rule, that if men would consult their wives, they would go a deal straighter in business operations than they do go.

THE PARSON. We are all poor sinners. But I've another indictment against the women writers. We get no good old-fashioned love-stories from them. It's either a quarrel of discordant natures one a panther, and the other a polar bear—for courtship, until one of them is crippled by a railway accident; or a long wrangle of married life between two unpleasant people, who can neither live comfortably together nor apart. I suppose, by what I see, that sweet wooing, with all its torturing and delightful uncertainty, still goes on in the world; and I have no doubt that the majority of married people live more happily than the unmarried. But it's easier to find a dodo than a new and good love-story.

MANDEVILLE. I suppose the old style of plot is exhausted. Everything in man and outside of him has been turned over so often that I should think the novelists would cease simply from want of material.

THE PARSON. Plots are no more exhausted than men are. Every man is a new creation, and combinations are simply endless. Even if we did not have new material in the daily change of society, and there were only a fixed number of incidents and characters in life, invention could not be exhausted on them. I amuse myself sometimes with my kaleidoscope, but I can never reproduce a figure. No, no. I cannot say that you may not exhaust everything else: we may get all the secrets of a nature into a book by and by, but the novel is immortal, for it deals with men.

The Parson's vehemence came very near carrying him into a sermon; and as nobody has the privilege of replying to his sermons, so none of the circle made any reply now.

Our Next Door mumbled something about his hair standing on end, to hear a minister defending the novel; but it did not interrupt the general silence. Silence is unnoticed when people sit before a fire; it would be intolerable if they sat and looked at each other.

The wind had risen during the evening, and Mandeville remarked, as they rose to go, that it had a spring sound in it, but it was as cold as winter. The Mistress said she heard a bird that morning singing in the sun a

spring song, it was a winter bird, but it sang.

SEVENTH STUDY

WE have been much interested in what is called the Gothic revival.

We have been much interested in what is called the Gothic revival. We have spent I don't know how many evenings in looking over Herbert's plans for a cottage, and have been amused with his vain efforts to cover with Gothic roofs the vast number of large rooms which the Young Lady draws in her sketch of a small house.

I have no doubt that the Gothic, which is capable of infinite modification, so that every house built in that style may be as different from every other house as one tree is from every other, can be adapted to our modern uses, and will be, when artists catch its spirit instead of merely copying its old forms. But just now we are taking the Gothic very literally, as we took the Greek at one time, or as we should probably have taken the Saracenic, if the Moors had not been colored. Not even the cholera is so contagious in this country as a style of architecture which we happen to catch; the country is just now broken out all over with the Mansard-roof epidemic.

And in secular architecture we do not study what is adapted to our climate any more than in ecclesiastic architecture we adopt that which is suited to our religion.

We are building a great many costly churches here and there, we Protestants, and as the most of them are ill adapted to our forms of worship, it may be necessary and best for us to change our religion in order to save our investments. I am aware that this would be a grave step, and we should not hasten to throw overboard Luther and the right of private judgment without reflection. And yet, if it is necessary to revive the ecclesiastical Gothic architecture, not in its spirit (that we nowhere do), but in the form which served another age and another faith, and if, as it appears, we have already a great deal of money invested in this

reproduction, it may be more prudent to go forward than to go back. The question is, "Cannot one easier change his creed than his pew?"

I occupy a seat in church which is an admirable one for reflection, but I cannot see or hear much that is going on in what we like to call the apse. There is a splendid stone pillar, a clustered column, right in front of me, and I am as much protected from the minister as Old Put's troops were from the British, behind the stone wall at Bunker's Hill. I can hear his voice occasionally wandering round in the arches overhead, and I recognize the tone, because he is a friend of mine and an excellent man, but what he is saying I can very seldom make out. If there was any incense burning, I could smell it, and that would be something. I rather like the smell of incense, and it has its holy associations. But there is no smell in our church, except of bad air,—for there is no provision for ventilation in the splendid and costly edifice. The reproduction of the old Gothic is so complete that the builders even seem to have brought over the ancient air from one of the churches of the Middle Ages,—you would declare it had n't been changed in two centuries.

I am expected to fix my attention during the service upon one man, who stands in the centre of the apse and has a sounding-board behind him in order to throw his voice out of the sacred semicircular space (where the altar used to stand, but now the sounding-board takes the place of the altar) and scatter it over the congregation at large, and send it echoing up in the groined roof I always like to hear a minister who is unfamiliar with the house, and who has a loud voice, try to fill the edifice. The more he roars and gives himself with vehemence to the effort, the more the building roars in indistinguishable noise and hubbub. By the time he has said (to suppose a case), "The Lord is in his holy temple," and has passed on to say, "let all the earth keep silence," the building is repeating "The Lord is in his holy temple" from half a dozen different angles and altitudes, rolling it and growling it, and is not keeping silence at all. A man who understands it waits until the house has had its say, and has digested one passage, before he launches another into the vast, echoing spaces. I am expected, as I said, to fix my eye and mind on the minister, the central point of the service. But the pillar hides him. Now if there were several ministers in the church, dressed in such gorgeous colors that I could see them at the distance from the apse at which my limited income compels me to sit, and candles were burning, and censers were swinging, and the platform was full of the sacred bustle of a gorgeous ritual worship, and a bell rang to tell me the holy moments, I should not mind the pillar at all. I should sit there, like any other Goth, and enjoy it. But, as I have said, the pastor is a friend of mine, and I like to look at him on Sunday, and hear what he says, for he always says something worth hearing. I am on such terms with him, indeed we all are, that it would be pleasant to have the service of a little more social nature, and more human. When we put him away off in the apse, and set him up for a Goth, and then seat ourselves at a distance, scattered about among the pillars, the whole thing seems to me a trifle unnatural. Though I do not mean to say that the congregations do not "enjoy their religion" in their splendid edifices which cost so much money and are really so beautiful.

A good many people have the idea, so it seems, that Gothic architecture and Christianity are essentially one and the same thing. Just as many regard it as an act of piety to work an altar cloth or to cushion a pulpit. It may be, and it may not be.

Our Gothic church is likely to prove to us a valuable religious experience, bringing out many of the Christian virtues. It may have had its origin in pride, but it is all being overruled for our good. Of course I need n't explain that it is the thirteenth century ecclesiastic Gothic that is epidemic in this country; and I think it has attacked the Congregational and the other non-ritual churches more violently than any others. We have had it here in its most beautiful and dangerous forms. I believe we are pretty much all of us supplied with a Gothic church now. Such has been the enthusiasm in this devout direction, that I should not be surprised to see our rich private citizens putting up Gothic churches for their individual amusement and sanctification. As the day will probably come when every man in Hartford will live in his own mammoth, five-story granite insurance building, it may not be unreasonable to expect that every man will sport his own Gothic church. It is beginning to be discovered that the Gothic sort of church edifice is fatal to the Congregational style of worship that has been prevalent here in New England; but it will do nicely (as they say in Boston) for private devotion.

There isn't a finer or purer church than ours any where, inside and outside Gothic to the last. The elevation of the nave gives it even that "high-shouldered" appearance which seemed more than anything else to impress Mr. Hawthorne in the cathedral at Amiens. I fancy that for genuine high-shoulderness we are not exceeded by any church in the city. Our chapel in the rear is as Gothic as the rest of it,—a beautiful little edifice. The committee forgot to make any more provision for ventilating than the church, and it takes a pretty well-seasoned Christian to stay in it long at a time. The Sunday-school is held there, and it is thought to be best to accustom the children to bad air before they go into the church. The poor little dears shouldn't have the wickedness and impurity of this world break on them too suddenly. If the stranger noticed any lack about our church, it would be that of a spire. There is a place for one; indeed, it was begun, and then the builders seem to have stopped, with the notion that it would grow itself from such a good root. It is a mistake however, to suppose that we do not know that the church has what the profane here call a "stump-tail" appearance. But the profane are as ignorant of history as they are of true Gothic. All the Old World cathedrals were the work of centuries. That at Milan is scarcely finished yet; the unfinished spires of the Cologne cathedral are one of the best-known features of it. I doubt if it would be in the Gothic spirit to finish a church at once. We can tell cavilers that we shall have a spire at the proper time, and not a minute before. It may depend a little upon what the Baptists do, who are to build near us. I, for one, think we had better wait and see how high the Baptist spire is before we run ours up. The church is everything that could be desired inside. There is the nave, with its lofty and beautiful arched ceiling; there are the side aisles, and two elegant rows of stone pillars, stained so as to be a perfect imitation of stucco; there is the apse, with its stained glass and exquisite lines; and there is an organ-loft over the front entrance, with a rose window. Nothing was wanting, so far as we could see, except that we should adapt ourselves to the circumstances; and that we have been trying to do ever since. It may be well to relate how we do it, for the benefit of other inchoate Goths.

It was found that if we put up the organ in the loft, it would hide the beautiful rose window. Besides, we

wanted congregational singing, and if we hired a choir, and hung it up there under the roof, like a cage of birds, we should not have congregational singing. We therefore left the organ-loft vacant, making no further use of it than to satisfy our Gothic cravings. As for choir,—several of the singers of the church volunteered to sit together in the front side-seats, and as there was no place for an organ, they gallantly rallied round a melodeon,—or perhaps it is a cabinet organ,—a charming instrument, and, as everybody knows, entirely in keeping with the pillars, arches, and great spaces of a real Gothic edifice. It is the union of simplicity with grandeur, for which we have all been looking. I need not say to those who have ever heard a melodeon, that there is nothing like it. It is rare, even in the finest churches on the Continent. And we had congregational singing. And it went very well indeed. One of the advantages of pure congregational singing, is that you can join in the singing whether you have a voice or not. The disadvantage is, that your neighbor can do the same. It is strange what an uncommonly poor lot of voices there is, even among good people. But we enjoy it. If you do not enjoy it, you can change your seat until you get among a good lot.

So far, everything went well. But it was next discovered that it was difficult to hear the minister, who had a very handsome little desk in the apse, somewhat distant from the bulk of the congregation; still, we could most of us see him on a clear day. The church was admirably built for echoes, and the centre of the house was very favorable to them. When you sat in the centre of the house, it sometimes seemed as if three or four ministers were speaking.

It is usually so in cathedrals; the Right Reverend So-and-So is assisted by the very Reverend Such-and-Such, and the good deal Reverend Thus-and-Thus, and so on. But a good deal of the minister's voice appeared to go up into the groined arches, and, as there was no one up there, some of his best things were lost. We also had a notion that some of it went into the cavernous organ-loft. It would have been all right if there had been a choir there, for choirs usually need more preaching, and pay less heed to it, than any other part of the congregation. Well, we drew a sort of screen over the organ-loft; but the result was not as marked as we had hoped. We next devised a sounding-board,—a sort of mammoth clamshell, painted white,—and erected it behind the minister. It had a good effect on the minister. It kept him up straight to his work. So long as he kept his head exactly in the focus, his voice went out and did not return to him; but if he moved either way, he was assailed by a Babel of clamoring echoes. There was no opportunity for him to splurge about from side to side of the pulpit, as some do. And if he raised his voice much, or attempted any extra flights, he was liable to be drowned in a refluent sea of his own eloquence. And he could hear the congregation as well as they could hear him. All the coughs, whispers, noises, were gathered in the wooden tympanum behind him, and poured into his ears.

But the sounding-board was an improvement, and we advanced to bolder measures; having heard a little, we wanted to hear more. Besides, those who sat in front began to be discontented with the melodeon. There are depths in music which the melodeon, even when it is called a cabinet organ, with a colored boy at the bellows, cannot sound. The melodeon was not, originally, designed for the Gothic worship. We determined to have an organ, and we speculated whether, by erecting it in the apse, we could not fill up that elegant portion of the church, and compel the preacher's voice to leave it, and go out over the pews. It would of course do something to efface the main beauty of a Gothic church; but something must be done, and we began a series of experiments to test the probable effects of putting the organ and choir behind the minister. We moved the desk to the very front of the platform, and erected behind it a high, square board screen, like a section of tight fence round the fair-grounds. This did help matters. The minister spoke with more ease, and we could hear him better. If the screen had been intended to stay there, we should have agitated the subject of painting it. But this was only an experiment.

Our next move was to shove the screen back and mount the volunteer singers, melodeon and all, upon the platform,—some twenty of them crowded together behind the minister. The effect was beautiful. It seemed as if we had taken care to select the finest-looking people in the congregation,—much to the injury of the congregation, of course, as seen from the platform. There are few congregations that can stand this sort of culling, though ours can endure it as well as any; yet it devolves upon those of us who remain the responsibility of looking as well as we can.

The experiment was a success, so far as appearances went, but when the screen went back, the minister's voice went back with it. We could not hear him very well, though we could hear the choir as plain as day. We have thought of remedying this last defect by putting the high screen in front of the singers, and close to the minister, as it was before. This would make the singers invisible,—“though lost to sight, to memory dear,”—what is sometimes called an “angel choir,” when the singers (and the melodeon) are concealed, with the most subdued and religious effect. It is often so in cathedrals.

This plan would have another advantage. The singers on the platform, all handsome and well dressed, distract our attention from the minister, and what he is saying. We cannot help looking at them, studying all the faces and all the dresses. If one of them sits up very straight, he is a rebuke to us; if he “lops” over, we wonder why he does n't sit up; if his hair is white, we wonder whether it is age or family peculiarity; if he yawns, we want to yawn; if he takes up a hymn-book, we wonder if he is uninterested in the sermon; we look at the bonnets, and query if that is the latest spring style, or whether we are to look for another; if he shaves close, we wonder why he doesn't let his beard grow; if he has long whiskers, we wonder why he does n't trim 'em; if she sighs, we feel sorry; if she smiles, we would like to know what it is about. And, then, suppose any of the singers should ever want to eat fennel, or peppermints, or Brown's troches, and pass them round! Suppose the singers, more or less of them, should sneeze!

Suppose one or two of them, as the handsomest people sometimes will, should go to sleep! In short, the singers there take away all our attention from the minister, and would do so if they were the homeliest people in the world. We must try something else.

It is needless to explain that a Gothic religious life is not an idle one.

EIGHTH STUDY

I

Perhaps the clothes question is exhausted, philosophically. I cannot but regret that the Poet of the Breakfast-Table, who appears to have an uncontrollable penchant for saying the things you would like to say yourself, has alluded to the anachronism of "Sir Coeur de Lion Plantagenet in the mutton-chop whiskers and the plain gray suit."

A great many scribblers have felt the disadvantage of writing after Montaigne; and it is impossible to tell how much originality in others Dr. Holmes has destroyed in this country. In whist there are some men you always prefer to have on your left hand, and I take it that this intuitive essayist, who is so alert to seize the few remaining unappropriated ideas and analogies in the world, is one of them.

No doubt if the Plantagenets of this day were required to dress in a suit of chain-armor and wear iron pots on their heads, they would be as ridiculous as most tragedy actors on the stage. The pit which recognizes Snooks in his tin breastplate and helmet laughs at him, and Snooks himself feels like a sheep; and when the great tragedian comes on, shining in mail, dragging a two-handed sword, and mouths the grandiloquence which poets have put into the speech of heroes, the dress-circle requires all its good-breeding and its feigned love of the traditionary drama not to titter.

If this sort of acting, which is supposed to have come down to us from the Elizabethan age, and which culminated in the school of the Keans, Kembles, and Siddonses, ever had any fidelity to life, it must have been in a society as artificial as the prose of Sir Philip Sidney. That anybody ever believed in it is difficult to think, especially when we read what privileges the fine beaux and gallants of the town took behind the scenes and on the stage in the golden days of the drama. When a part of the audience sat on the stage, and gentlemen lounged or reeled across it in the midst of a play, to speak to acquaintances in the audience, the illusion could not have been very strong.

Now and then a genius, like Rachel as Horatia, or Hackett as Falstaff, may actually seem to be the character assumed by virtue of a transforming imagination, but I suppose the fact to be that getting into a costume, absurdly antiquated and remote from all the habits and associations of the actor, largely accounts for the incongruity and ridiculousness of most of our modern acting. Whether what is called the "legitimate drama" ever was legitimate we do not know, but the advocates of it appear to think that the theatre was some

time cast in a mould, once for all, and is good for all times and peoples, like the propositions of Euclid. To our eyes the legitimate drama of to-day is the one in which the day is reflected, both in costume and speech, and which touches the affections, the passions, the humor, of the present time. The brilliant success of the few good plays that have been written out of the rich life which we now live—the most varied, fruitful, and dramatically suggestive—ought to rid us forever of the buskin-fustian, except as a pantomimic or spectacular curiosity.

We have no objection to Julius Caesar or Richard III. stalking about in impossible clothes, and stepping four feet at a stride, if they want to, but let them not claim to be more “legitimate” than “Ours” or “Rip Van Winkle.” There will probably be some orator for years and years to come, at every Fourth of July, who will go on asking, Where is Thebes? but he does not care anything about it, and he does not really expect an answer. I have sometimes wished I knew the exact site of Thebes, so that I could rise in the audience, and stop that question, at any rate. It is legitimate, but it is tiresome.

If we went to the bottom of this subject, I think we should find that the putting upon actors clothes to which they are unaccustomed makes them act and talk artificially, and often in a manner intolerable.

An actor who has not the habits or instincts of a gentleman cannot be made to appear like one on the stage by dress; he only caricatures and discredits what he tries to represent; and the unaccustomed clothes and situation make him much more unnatural and insufferable than he would otherwise be. Dressed appropriately for parts for which he is fitted, he will act well enough, probably. What I mean is, that the clothes inappropriate to the man make the incongruity of him and his part more apparent. Vulgarity is never so conspicuous as in fine apparel, on or off the stage, and never so self-conscious. Shall we have, then, no refined characters on the stage? Yes; but let them be taken by men and women of taste and refinement and let us have done with this masquerading in false raiment, ancient and modern, which makes nearly every stage a travesty of nature and the whole theatre a painful pretension. We do not expect the modern theatre to be a place of instruction (that business is now turned over to the telegraphic operator, who is making a new language), but it may give amusement instead of torture, and do a little in satirizing folly and kindling love of home and country by the way.

This is a sort of summary of what we all said, and no one in particular is responsible for it; and in this it is like public opinion. The Parson, however, whose only experience of the theatre was the endurance of an oratorio once, was very cordial in his denunciation of the stage altogether.

MANDEVILLE. Yet, acting itself is delightful; nothing so entertains us as mimicry, the personation of character. We enjoy it in private. I confess that I am always pleased with the Parson in the character of grumbler. He would be an immense success on the stage. I don't know but the theatre will have to go back into the hands of the priests, who once controlled it.

THE PARSON. Scoffer!

MANDEVILLE. I can imagine how enjoyable the stage might be, cleared of all its traditionary nonsense, stilted language, stilted behavior, all the rubbish of false sentiment, false dress, and the manners of times that were both artificial and immoral, and filled with living characters, who speak the thought of to-day, with the wit and culture that are current to-day. I've seen private theatricals, where all the performers were persons of cultivation, that....

OUR NEXT DOOR. So have I. For something particularly cheerful, commend me to amateur theatricals. I have passed some melancholy hours at them.

MANDEVILLE. That's because the performers acted the worn stage plays, and attempted to do them in the manner they had seen on the stage. It is not always so.

THE FIRE-TENDER. I suppose Mandeville would say that acting has got into a mannerism which is well described as stagey, and is supposed to be natural to the stage; just as half the modern poets write in a recognized form of literary manufacture, without the least impulse from within, and not with the purpose of saying anything, but of turning out a piece of literary work. That's the reason we have so much poetry that impresses one like sets of faultless cabinet-furniture made by machinery.

THE PARSON. But you need n't talk of nature or naturalness in acting or in anything. I tell you nature is poor stuff. It can't go alone. Amateur acting—they get it up at church sociables nowadays—is apt to be as near nature as a school-boy's declamation. Acting is the Devil's art.

THE MISTRESS. Do you object to such innocent amusement?

MANDEVILLE. What the Parson objects to is, that he isn't amused.

THE PARSON. What's the use of objecting? It's the fashion of the day to amuse people into the kingdom of heaven.

HERBERT. The Parson has got us off the track. My notion about the stage is, that it keeps along pretty evenly with the rest of the world; the stage is usually quite up to the level of the audience. Assumed dress on the stage, since you were speaking of that, makes people no more constrained and self-conscious than it does off the stage.

THE MISTRESS. What sarcasm is coming now?

HERBERT. Well, you may laugh, but the world has n't got used to good clothes yet. The majority do not wear them with ease. People who only put on their best on rare and stated occasions step into an artificial feeling.

OUR NEXT DOOR. I wonder if that's the reason the Parson finds it so difficult to get hold of his congregation.

HERBERT. I don't know how else to account for the formality and vapidness of a set “party,” where all the guests are clothed in a manner to which they are unaccustomed, dressed into a condition of vivid self-consciousness. The same people, who know each other perfectly well, will enjoy themselves together without restraint in their ordinary apparel. But nothing can be more artificial than the behavior of people together who rarely “dress up.” It seems impossible to make the conversation as fine as the clothes, and so it dies in a kind of inane helplessness. Especially is this true in the country, where people have not obtained the mastery

of their clothes that those who live in the city have. It is really absurd, at this stage of our civilization, that we should be so affected by such an insignificant accident as dress. Perhaps Mandeville can tell us whether this clothes panic prevails in the older societies.

THE PARSON. Don't. We've heard it; about its being one of the Englishman's thirty-nine articles that he never shall sit down to dinner without a dress-coat, and all that.

THE MISTRESS. I wish, for my part, that everybody who has time to eat a dinner would dress for that, the principal event of the day, and do respectful and leisurely justice to it.

THE YOUNG LADY. It has always seemed singular to me that men who work so hard to build elegant houses, and have good dinners, should take so little leisure to enjoy either.

MANDEVILLE. If the Parson will permit me, I should say that the chief clothes question abroad just now is, how to get any; and it is the same with the dinners.

II

It is quite unnecessary to say that the talk about clothes ran into the question of dress-reform, and ran out, of course. You cannot converse on anything nowadays that you do not run into some reform. The Parson says that everybody is intent on reforming everything but himself. We are all trying to associate ourselves to make everybody else behave as we do. Said—

OUR NEXT DOOR. Dress reform! As if people couldn't change their clothes without concert of action. Resolved, that nobody should put on a clean collar oftener than his neighbor does. I'm sick of every sort of reform. I should like to retrograde awhile. Let a dyspeptic ascertain that he can eat porridge three times a day and live, and straightway he insists that everybody ought to eat porridge and nothing else. I mean to get up a society every member of which shall be pledged to do just as he pleases.

THE PARSON. That would be the most radical reform of the day. That would be independence. If people dressed according to their means, acted according to their convictions, and avowed their opinions, it would revolutionize society.

OUR NEXT DOOR. I should like to walk into your church some Sunday and see the changes under such conditions.

THE PARSON. It might give you a novel sensation to walk in at any time. And I'm not sure but the church would suit your retrograde ideas. It's so Gothic that a Christian of the Middle Ages, if he were alive, couldn't see or hear in it.

HERBERT. I don't know whether these reformers who carry the world on their shoulders in such serious fashion, especially the little fussy fellows, who are themselves the standard of the regeneration they seek, are more ludicrous than pathetic.

THE FIRE-TENDER. Pathetic, by all means. But I don't know that they would be pathetic if they were not ludicrous. There are those reform singers who have been piping away so sweetly now for thirty years, with never any diminution of cheerful, patient enthusiasm; their hair growing longer and longer, their eyes brighter and brighter, and their faces, I do believe, sweeter and sweeter; singing always with the same constancy for the slave, for the drunkard, for the snufftaker, for the suffragist,—“There's-a-good-time-com-ing-boys (nothing offensive is intended by 'boys,' it is put in for euphony, and sung pianissimo, not to offend the suffragists), it's-almost-here.” And what a brightening up of their faces there is when they say, “it's-al-most-here,” not doubting for a moment that “it's” coming tomorrow; and the accompanying melodeon also wails its wheezy suggestion that “it's-al-most-here,” that “good-time” (delayed so long, waiting perhaps for the invention of the melodeon) when we shall all sing and all play that cheerful instrument, and all vote, and none shall smoke, or drink, or eat meat, “boys.” I declare it almost makes me cry to hear them, so touching is their faith in the midst of a jeer-ing world.

HERBERT. I suspect that no one can be a genuine reformer and not be ridiculous. I mean those who give themselves up to the unction of the reform.

THE MISTRESS. Does n't that depend upon whether the reform is large or petty?

THE FIRE-TENDER. I should say rather that the reforms attracted to them all the ridiculous people, who almost always manage to become the most conspicuous. I suppose that nobody dare write out all that was ludicrous in the great abolition movement. But it was not at all comical to those most zealous in it; they never could see—more's the pity, for thereby they lose much—the humorous side of their performances, and that is why the pathos overcomes one's sense of the absurdity of such people.

THE YOUNG LADY. It is lucky for the world that so many are willing to be absurd.

HERBERT. Well, I think that, in the main, the reformers manage to look out for themselves tolerably well. I knew once a lean and faithful agent of a great philanthropic scheme, who contrived to collect every year for the cause just enough to support him at a good hotel comfortably.

THE MISTRESS. That's identifying one's self with the cause.

MANDEVILLE. You remember the great free-soil convention at Buffalo, in 1848, when Van Buren was nominated. All the world of hope and discontent went there, with its projects of reform. There seemed to be no doubt, among hundreds that attended it, that if they could get a resolution passed that bread should be buttered on both sides, it would be so buttered. The platform provided for every want and every woe.

THE FIRE-TENDER. I remember. If you could get the millennium by political action, we should have had it then.

MANDEVILLE. We went there on the Erie Canal, the exciting and fashionable mode of travel in those days.

I was a boy when we began the voyage. The boat was full of conventionists; all the talk was of what must be done there. I got the impression that as that boat-load went so would go the convention; and I was not alone in that feeling. I can never be grateful enough for one little scrubby fanatic who was on board, who spent most of his time in drafting resolutions and reading them privately to the passengers. He was a very enthusiastic, nervous, and somewhat dirty little man, who wore a woolen muffler about his throat, although it was summer; he had nearly lost his voice, and could only speak in a hoarse, disagreeable whisper, and he always carried a teacup about, containing some sticky compound which he stirred frequently with a spoon, and took, whenever he talked, in order to improve his voice. If he was separated from his cup for ten minutes, his whisper became inaudible. I greatly delighted in him, for I never saw any one who had so much enjoyment of his own importance. He was fond of telling what he would do if the convention rejected such and such resolutions. He'd make it hot for them. I did n't know but he'd make them take his mixture. The convention had got to take a stand on tobacco, for one thing. He'd heard Gid-dings took snuff; he'd see. When we at length reached Buffalo he took his teacup and carpet-bag of resolutions and went ashore in a great hurry. I saw him once again in a cheap restaurant, whispering a resolution to another delegate, but he did n't appear in the convention. I have often wondered what became of him.

OUR NEXT DOOR. Probably he's consul somewhere. They mostly are.

THE FIRE-TENDER. After all, it's the easiest thing in the world to sit and sneer at eccentricities. But what a dead and uninteresting world it would be if we were all proper, and kept within the lines! Affairs would soon be reduced to mere machinery. There are moments, even days, when all interests and movements appear to be settled upon some universal plan of equilibrium; but just then some restless and absurd person is inspired to throw the machine out of gear. These individual eccentricities seem to be the special providences in the general human scheme.

HERBERT. They make it very hard work for the rest of us, who are disposed to go along peaceably and smoothly.

MANDEVILLE. And stagnate. I 'm not sure but the natural condition of this planet is war, and that when it is finally towed to its anchorage—if the universe has any harbor for worlds out of commission—it will look like the Fighting Temeraire in Turner's picture.

HERBERT. There is another thing I should like to understand: the tendency of people who take up one reform, perhaps a personal regeneration in regard to some bad habit, to run into a dozen other isms, and get all at sea in several vague and pernicious theories and practices.

MANDEVILLE. Herbert seems to think there is safety in a man's being anchored, even if it is to a bad habit.

HERBERT. Thank you. But what is it in human nature that is apt to carry a man who may take a step in personal reform into so many extremes?

OUR NEXT DOOR. Probably it's human nature.

HERBERT. Why, for instance, should a reformed drunkard (one of the noblest examples of victory over self) incline, as I have known the reformed to do, to spiritism, or a woman suffragist to "pantarchism" (whatever that is), and want to pull up all the roots of society, and expect them to grow in the air, like orchids; or a Graham-bread disciple become enamored of Communism?

MANDEVILLE. I know an excellent Conservative who would, I think, suit you; he says that he does not see how a man who indulges in the theory and practice of total abstinence can be a consistent believer in the Christian religion.

HERBERT. Well, I can understand what he means: that a person is bound to hold himself in conditions of moderation and control, using and not abusing the things of this world, practicing temperance, not retiring into a convent of artificial restrictions in order to escape the full responsibility of self-control. And yet his theory would certainly wreck most men and women. What does the Parson say?

THE PARSON. That the world is going crazy on the notion of individual ability. Whenever a man attempts to reform himself, or anybody else, without the aid of the Christian religion, he is sure to go adrift, and is pretty certain to be blown about by absurd theories, and shipwrecked on some pernicious ism.

THE FIRE-TENDER. I think the discussion has touched bottom.

III

I never felt so much the value of a house with a backlog in it as during the late spring; for its lateness was its main feature. Everybody was grumbling about it, as if it were something ordered from the tailor, and not ready on the day. Day after day it snowed, night after night it blew a gale from the northwest; the frost sunk deeper and deeper into the ground; there was a popular longing for spring that was almost a prayer; the weather bureau was active; Easter was set a week earlier than the year before, but nothing seemed to do any good. The robins sat under the evergreens, and piped in a disconsolate mood, and at last the bluejays came and scolded in the midst of the snow-storm, as they always do scold in any weather. The crocuses could n't be coaxed to come up, even with a pickaxe. I'm almost ashamed now to recall what we said of the weather only I think that people are no more accountable for what they say of the weather than for their remarks when their corns are stepped on.

We agreed, however, that, but for disappointed expectations and the prospect of late lettuce and peas, we were gaining by the fire as much as we were losing by the frost. And the Mistress fell to chanting the comforts of modern civilization.

THE FIRE-TENDER said he should like to know, by the way, if our civilization differed essentially from any other in anything but its comforts.

HERBERT. We are no nearer religious unity.

THE PARSON. We have as much war as ever.

MANDEVILLE. There was never such a social turmoil.

THE YOUNG LADY. The artistic part of our nature does not appear to have grown.

THE FIRE-TENDER. We are quarreling as to whether we are in fact radically different from the brutes.

HERBERT. Scarcely two people think alike about the proper kind of human government.

THE PARSON. Our poetry is made out of words, for the most part, and not drawn from the living sources.

OUR NEXT DOOR. And Mr. Cumming is uncorking his seventh phial. I never felt before what barbarians we are.

THE MISTRESS. Yet you won't deny that the life of the average man is safer and every way more comfortable than it was even a century ago.

THE FIRE-TENDER. But what I want to know is, whether what we call our civilization has done any thing more for mankind at large than to increase the ease and pleasure of living? Science has multiplied wealth, and facilitated intercourse, and the result is refinement of manners and a diffusion of education and information. Are men and women essentially changed, however? I suppose the Parson would say we have lost faith, for one thing.

MANDEVILLE. And superstition; and gained toleration.

HERBERT. The question is, whether toleration is anything but indifference.

THE PARSON. Everything is tolerated now but Christian orthodoxy.

THE FIRE-TENDER. It's easy enough to make a brilliant catalogue of external achievements, but I take it that real progress ought to be in man himself. It is not a question of what a man enjoys, but what he can produce. The best sculpture was executed two thousand years ago. The best paintings are several centuries old. We study the finest architecture in its ruins. The standards of poetry are Shakespeare, Homer, Isaiah, and David. The latest of the arts, music, culminated in composition, though not in execution, a century ago.

THE MISTRESS. Yet culture in music certainly distinguishes the civilization of this age. It has taken eighteen hundred years for the principles of the Christian religion to begin to be practically incorporated in government and in ordinary business, and it will take a long time for Beethoven to be popularly recognized; but there is growth toward him, and not away from him, and when the average culture has reached his height, some other genius will still more profoundly and delicately express the highest thoughts.

HERBERT. I wish I could believe it. The spirit of this age is expressed by the Calliope.

THE PARSON. Yes, it remained for us to add church-bells and cannon to the orchestra.

OUR NEXT DOOR. It's a melancholy thought to me that we can no longer express ourselves with the bass-drum; there used to be the whole of the Fourth of July in its patriotic throbs.

MANDEVILLE. We certainly have made great progress in one art,—that of war.

THE YOUNG LADY. And in the humane alleviations of the miseries of war.

THE FIRE-TENDER. The most discouraging symptom to me in our undoubted advance in the comforts and refinements of society is the facility with which men slip back into barbarism, if the artificial and external accidents of their lives are changed. We have always kept a fringe of barbarism on our shifting western frontier; and I think there never was a worse society than that in California and Nevada in their early days.

THE YOUNG LADY. That is because women were absent.

THE FIRE-TENDER. But women are not absent in London and New York, and they are conspicuous in the most exceptionable demonstrations of social anarchy. Certainly they were not wanting in Paris. Yes, there was a city widely accepted as the summit of our material civilization. No city was so beautiful, so luxurious, so safe, so well ordered for the comfort of living, and yet it needed only a month or two to make it a kind of pandemonium of savagery. Its citizens were the barbarians who destroyed its own monuments of civilization. I don't mean to say that there was no apology for what was done there in the deceit and fraud that preceded it, but I simply notice how ready the tiger was to appear, and how little restraint all the material civilization was to the beast.

THE MISTRESS. I can't deny your instances, and yet I somehow feel that pretty much all you have been saying is in effect untrue. Not one of you would be willing to change our civilization for any other. In your estimate you take no account, it seems to me, of the growth of charity.

MANDEVILLE. And you might add a recognition of the value of human life.

THE MISTRESS. I don't believe there was ever before diffused everywhere such an element of good-will, and never before were women so much engaged in philanthropic work.

THE PARSON. It must be confessed that one of the best signs of the times is woman's charity for woman. That certainly never existed to the same extent in any other civilization.

MANDEVILLE. And there is another thing that distinguishes us, or is beginning to. That is, the notion that you can do something more with a criminal than punish him; and that society has not done its duty when it has built a sufficient number of schools for one class, or of decent jails for another.

HERBERT. It will be a long time before we get decent jails.

MANDEVILLE. But when we do they will begin to be places of education and training as much as of punishment and disgrace. The public will provide teachers in the prisons as it now does in the common schools.

THE FIRE-TENDER. The imperfections of our methods and means of selecting those in the community who ought to be in prison are so great, that extra care in dealing with them becomes us. We are beginning to learn that we cannot draw arbitrary lines with infallible justice. Perhaps half those who are convicted of crimes are as capable of reformation as half those transgressors who are not convicted, or who keep inside the statutory law.

HERBERT. Would you remove the odium of prison?

THE FIRE-TENDER. No; but I would have criminals believe, and society believe, that in going to prison a man or woman does not pass an absolute line and go into a fixed state.

THE PARSON. That is, you would not have judgment and retribution begin in this world.

OUR NEXT DOOR. Don't switch us off into theology. I hate to go up in a balloon, or see any one else go.

HERBERT. Don't you think there is too much leniency toward crime and criminals, taking the place of justice, in these days?

THE FIRE-TENDER. There may be too much disposition to condone the crimes of those who have been considered respectable.

OUR NEXT DOOR. That is, scarcely anybody wants to see his friend hung.

MANDEVILLE. I think a large part of the bitterness of the condemned arises from a sense of the inequality with which justice is administered. I am surprised, in visiting jails, to find so few respectable-looking convicts.

OUR NEXT DOOR. Nobody will go to jail nowadays who thinks anything of himself.

THE FIRE-TENDER. When society seriously takes hold of the reformation of criminals (say with as much determination as it does to carry an election) this false leniency will disappear; for it partly springs from a feeling that punishment is unequal, and does not discriminate enough in individuals, and that society itself has no right to turn a man over to the Devil, simply because he shows a strong leaning that way. A part of the scheme of those who work for the reformation of criminals is to render punishment more certain, and to let its extent depend upon reformation. There is no reason why a professional criminal, who won't change his trade for an honest one, should have intervals of freedom in his prison life in which he is let loose to prey upon society. Criminals ought to be discharged, like insane patients, when they are cured.

OUR NEXT DOOR. It's a wonder to me, what with our multitudes of statutes and hosts of detectives, that we are any of us out of jail. I never come away from a visit to a State-prison without a new spasm of fear and virtue. The faculties for getting into jail seem to be ample. We want more organizations for keeping people out.

MANDEVILLE. That is the sort of enterprise the women are engaged in, the frustration of the criminal tendencies of those born in vice. I believe women have it in their power to regenerate the world morally.

THE PARSON. It's time they began to undo the mischief of their mother.

THE MISTRESS. The reason they have not made more progress is that they have usually confined their individual efforts to one man; they are now organizing for a general campaign.

THE FIRE-TENDER. I'm not sure but here is where the ameliorations of the conditions of life, which are called the comforts of this civilization, come in, after all, and distinguish the age above all others. They have enabled the finer powers of women to have play as they could not in a ruder age. I should like to live a hundred years and see what they will do.

HERBERT. Not much but change the fashions, unless they submit themselves to the same training and discipline that men do.

I have no doubt that Herbert had to apologize for this remark afterwards in private, as men are quite willing to do in particular cases; it is only in general they are unjust. The talk drifted off into general and particular depreciation of other times. Mandeville described a picture, in which he appeared to have confidence, of a fight between an Iguanodon and a Megalosaurus, where these huge iron-clad brutes were represented chewing up different portions of each other's bodies in a forest of the lower cretaceous period. So far as he could learn, that sort of thing went on unchecked for hundreds of thousands of years, and was typical of the intercourse of the races of man till a comparatively recent period. There was also that gigantic swan, the Plesiosaurus; in fact, all the early brutes were disgusting. He delighted to think that even the lower animals had improved, both in appearance and disposition.

The conversation ended, therefore, in a very amicable manner, having been taken to a ground that nobody knew anything about.

NINTH STUDY

I

Can you have a backlog in July? That depends upon circumstances.

In northern New England it is considered a sign of summer when the housewives fill the fireplaces with branches of mountain laurel, and, later, with the feathery stalks of the asparagus. This is often, too, the timid expression of a tender feeling, under Puritanic repression, which has not sufficient vent in the sweet-william and hollyhock at the front door. This is a yearning after beauty and ornamentation which has no other means of gratifying itself.

In the most rigid circumstances, the graceful nature of woman thus discloses itself in these mute expressions of an undeveloped taste. You may never doubt what the common flowers growing along the pathway to the front door mean to the maiden of many summers who tends them;—love and religion, and the weariness of an uneventful life. The sacredness of the Sabbath, the hidden memory of an unrevealed and unrequited affection, the slow years of gathering and wasting sweetness, are in the smell of the pink and the sweet-clover. These sentimental plants breathe something of the longing of the maiden who sits in the Sunday evenings of summer on the lonesome front doorstep, singing the hymns of the saints, and perennial as the myrtle that grows thereby.

Yet not always in summer, even with the aid of unrequited love and devotional feeling, is it safe to let the fire go out on the hearth, in our latitude. I remember when the last almost total eclipse of the sun happened in August, what a bone-piercing chill came over the world. Perhaps the imagination had something to do with causing the chill from that temporary hiding of the sun to feel so much more penetrating than that from the coming on of night, which shortly followed. It was impossible not to experience a shudder as of the approach of the Judgment Day, when the shadows were flung upon the green lawn, and we all stood in the wan light, looking unfamiliar to each other. The birds in the trees felt the spell. We could in fancy see those spectral camp-fires which men would build on the earth, if the sun should slow its fires down to about the brilliancy of the moon. It was a great relief to all of us to go into the house, and, before a blazing wood-fire, talk of the end of the world.

In New England it is scarcely ever safe to let the fire go out; it is best to bank it, for it needs but the turn of a weather-vane at any hour to sweep the Atlantic rains over us, or to bring down the chill of Hudson's Bay. There are days when the steam ship on the Atlantic glides calmly along under a full canvas, but its central fires must always be ready to make steam against head-winds and antagonistic waves. Even in our most smiling summer days one needs to have the materials of a cheerful fire at hand. It is only by this readiness for a change that one can preserve an equal mind. We are made provident and sagacious by the fickleness of our climate. We should be another sort of people if we could have that serene, unclouded trust in nature which the Egyptian has. The gravity and repose of the Eastern peoples is due to the unchanging aspect of the sky, and the deliberation and regularity of the great climatic processes. Our literature, politics, religion, show the effect of unsettled weather. But they compare favorably with the Egyptian, for all that.

You cannot know, the Young Lady wrote, with what longing I look back to those winter days by the fire; though all the windows are open to this May morning, and the brown thrush is singing in the chestnut-tree, and I see everywhere that first delicate flush of spring, which seems too evanescent to be color even, and amounts to little more than a suffusion of the atmosphere. I doubt, indeed, if the spring is exactly what it used to be, or if, as we get on in years [no one ever speaks of "getting on in years" till she is virtually settled in life], its promises and suggestions do not seem empty in comparison with the sympathies and responses of human friendship, and the stimulation of society. Sometimes nothing is so tiresome as a perfect day in a perfect season.

I only imperfectly understand this. The Parson says that woman is always most restless under the most favorable conditions, and that there is no state in which she is really happy except that of change. I suppose this is the truth taught in what has been called the "Myth of the Garden." Woman is perpetual revolution, and is that element in the world which continually destroys and re-creates. She is the experimenter and the suggester of new combinations. She has no belief in any law of eternal fitness of things. She is never even content with any arrangement of her own house. The only reason the Mistress could give, when she rearranged her apartment, for hanging a picture in what seemed the most inappropriate place, was that it had never been there before. Woman has no respect for tradition, and because a thing is as it is is sufficient reason for changing it. When she gets into law, as she has come into literature, we shall gain something in the destruction of all our vast and musty libraries of precedents, which now fetter our administration of individual justice. It is Mandeville's opinion that women are not so sentimental as men, and are not so easily touched with the unspoken poetry of nature; being less poetical, and having less imagination, they are more fitted for practical affairs, and would make less failures in business. I have noticed the almost selfish passion for their flowers which old gardeners have, and their reluctance to part with a leaf or a blossom from their family. They love the flowers for themselves. A woman raises flowers for their use. She is destruct-ion in a conservatory. She wants the flowers for her lover, for the sick, for the poor, for the Lord on Easter day, for the ornamentation of her house. She delights in the costly pleasure of sacrificing them. She never sees a flower but she has an intense but probably sinless desire to pick it.

It has been so from the first, though from the first she has been thwarted by the accidental superior strength of man. Whatever she has obtained has been by craft, and by the same coaxing which the sun uses to draw the blossoms out of the apple-trees. I am not surprised to learn that she has become tired of indulgences, and wants some of the original rights. We are just beginning to find out the extent to which she has been denied and subjected, and especially her condition among the primitive and barbarous races. I have never seen it in a platform of grievances, but it is true that among the Fijians she is not, unless a better civilization has wrought a change in her behalf, permitted to eat people, even her own sex, at the feasts of the men; the dainty enjoyed by the men being considered too good to be wasted on women. Is anything wanting to this picture of the degradation of woman? By a refinement of cruelty she receives no benefit whatever from the missionaries who are sent out by—what to her must seem a new name for Tantalus—the American Board.

I suppose the Young Lady expressed a nearly universal feeling in her regret at the breaking up of the winter-fireside company. Society needs a certain seclusion and the sense of security. Spring opens the doors and the windows, and the noise and unrest of the world are let in. Even a winter thaw begets a desire to travel, and summer brings longings innumerable, and disturbs the most tranquil souls. Nature is, in fact, a suggester of uneasiness, a promoter of pilgrimages and of excursions of the fancy which never come to any satisfactory haven. The summer in these latitudes is a campaign of sentiment and a season, for the most part, of restlessness and discontent. We grow now in hot-houses roses which, in form and color, are magnificent, and appear to be full of passion; yet one simple June rose of the open air has for the Young Lady, I doubt not, more sentiment and suggestion of love than a conservatory full of them in January. And this suggestion, leavened as it is with the inconstancy of nature, stimulated by the promises which are so often like the peach-blossom of the Judas-tree, unsatisfying by reason of its vague possibilities, differs so essentially from the more limited and attainable and home-like emotion born of quiet intercourse by the winter fireside, that I do not wonder the Young Lady feels as if some spell had been broken by the transition of her life from in-doors to out-doors. Her secret, if secret she has, which I do not at all know, is shared by the birds and the new leaves and the blossoms on the fruit trees. If we lived elsewhere, in that zone where the poets pretend always to dwell, we might be content, perhaps I should say drugged, by the sweet influences of an unchanging summer; but not living elsewhere, we can understand why the Young Lady probably now looks forward to the hearthstone as the most assured center of enduring attachment.

If it should ever become the sad duty of this biographer to write of disappointed love, I am sure he would not have any sensational story to tell of the Young Lady. She is one of those women whose unostentatious lives are the chief blessing of humanity; who, with a sigh heard only by herself and no change in her sunny face, would put behind her all the memories of winter evenings and the promises of May mornings, and give her life to some ministration of human kindness with an assiduity that would make her occupation appear like an election and a first choice. The disappointed man scowls, and hates his race, and threatens self-destruction, choosing oftener the flowing bowl than the dagger, and becoming a reeling nuisance in the world. It would be much more manly in him to become the secretary of a Dorcas society.

I suppose it is true that women work for others with less expectation of reward than men, and give themselves to labors of self-sacrifice with much less thought of self. At least, this is true unless woman goes into some public performance, where notoriety has its attractions, and mounts some cause, to ride it man-fashion, when I think she becomes just as eager for applause and just as willing that self-sacrifice should result in self-elevation as man. For her, usually, are not those unbought—presentations which are forced upon firemen, philanthropists, legislators, railroad-men, and the superintendents of the moral instruction of the young. These are almost always pleasing and unexpected tributes to worth and modesty, and must be received with satisfaction when the public service rendered has not been with a view to procuring them. We should say that one ought to be most liable to receive a "testimonial" who, being a superintendent of any sort,

did not superintend with a view to getting it. But "testimonials" have become so common that a modest man ought really to be afraid to do his simple duty, for fear his motives will be misconstrued. Yet there are instances of very worthy men who have had things publicly presented to them. It is the blessed age of gifts and the reward of private virtue. And the presentations have become so frequent that we wish there were a little more variety in them. There never was much sense in giving a gallant fellow a big speaking-trumpet to carry home to aid him in his intercourse with his family; and the festive ice-pitcher has become a too universal sign of absolute devotion to the public interest. The lack of one will soon be proof that a man is a knave. The legislative cane with the gold head, also, is getting to be recognized as the sign of the immaculate public servant, as the inscription on it testifies, and the steps of suspicion must ere-long dog him who does not carry one. The "testimonial" business is, in truth, a little demoralizing, almost as much so as the "donation;" and the demoralization has extended even to our language, so that a perfectly respectable man is often obliged to see himself "made the recipient of" this and that. It would be much better, if testimonials must be, to give a man a barrel of flour or a keg of oysters, and let him eat himself at once back into the ranks of ordinary men.

III

We may have a testimonial class in time, a sort of nobility here in America, made so by popular gift, the members of which will all be able to show some stick or piece of plated ware or massive chain, "of which they have been the recipients." In time it may be a distinction not to belong to it, and it may come to be thought more blessed to give than to receive. For it must have been remarked that it is not always to the cleverest and the most amiable and modest man that the deputation comes with the inevitable ice-pitcher (and "salver to match"), which has in it the magic and subtle quality of making the hour in which it is received the proudest of one's life. There has not been discovered any method of rewarding all the deserving people and bringing their virtues into the prominence of notoriety. And, indeed, it would be an unreasonable world if there had, for its chief charm and sweetness lie in the excellences in it which are reluctantly disclosed; one of the chief pleasures of living is in the daily discovery of good traits, nobilities, and kindness both in those we have long known and in the chance passenger whose way happens for a day to lie with ours. The longer I live the more I am impressed with the excess of human kindness over human hatred, and the greater willingness to oblige than to disoblige that one meets at every turn. The selfishness in politics, the jealousy in letters, the bickering in art, the bitterness in theology, are all as nothing compared to the sweet charities, sacrifices, and deferences of private life. The people are few whom to know intimately is to dislike. Of course you want to hate somebody, if you can, just to keep your powers of discrimination bright, and to save yourself from becoming a mere mush of good-nature; but perhaps it is well to hate some historical person who has been dead so long as to be indifferent to it. It is more comfortable to hate people we have never seen. I cannot but think that Judas Iscariot has been of great service to the world as a sort of buffer for moral indignation which might have made a collision nearer home but for his utilized treachery. I used to know a venerable and most amiable gentleman and scholar, whose hospitable house was always overrun with wayside ministers, agents, and philanthropists, who loved their fellow-men better than they loved to work for their living; and he, I suspect, kept his moral balance even by indulgence in violent but most distant dislikes. When I met him casually in the street, his first salutation was likely to be such as this: "What a liar that Alison was! Don't you hate him?" And then would follow specifications of historical inaccuracy enough to make one's blood run cold. When he was thus discharged of his hatred by such a conductor, I presume he had not a spark left for those whose mission was partly to live upon him and other generous souls.

Mandeville and I were talking of the unknown people, one rainy night by the fire, while the Mistress was fitfully and interjectionally playing with the piano-keys in an improvising mood. Mandeville has a good deal of sentiment about him, and without any effort talks so beautifully sometimes that I constantly regret I cannot report his language. He has, besides, that sympathy of presence—I believe it is called magnetism by those who regard the brain as only a sort of galvanic battery—which makes it a greater pleasure to see him think, if I may say so, than to hear some people talk.

It makes one homesick in this world to think that there are so many rare people he can never know; and so many excellent people that scarcely any one will know, in fact. One discovers a friend by chance, and cannot but feel regret that twenty or thirty years of life maybe have been spent without the least knowledge of him. When he is once known, through him opening is made into another little world, into a circle of culture and loving hearts and enthusiasm in a dozen congenial pursuits, and prejudices perhaps. How instantly and easily the bachelor doubles his world when he marries, and enters into the unknown fellowship of the to him continually increasing company which is known in popular language as "all his wife's relations."

Near at hand daily, no doubt, are those worth knowing intimately, if one had the time and the opportunity. And when one travels he sees what a vast material there is for society and friendship, of which he can never avail himself. Car-load after car-load of summer travel goes by one at any railway-station, out of which he is sure he could choose a score of life-long friends, if the conductor would introduce him. There are faces of refinement, of quick wit, of sympathetic kindness,—interesting people, traveled people, entertaining people,—as you would say in Boston, "nice people you would admire to know," whom you constantly meet and pass without a sign of recognition, many of whom are no doubt your long-lost brothers and sisters. You can see that they also have their worlds and their interests, and they probably know a great many "nice" people. The matter of personal liking and attachment is a good deal due to the mere fortune of association. More fast friendships and pleasant acquaintanceships are formed on the Atlantic steamships between those who would have been only indifferent acquaintances elsewhere, than one would think possible on a voyage which naturally makes one as selfish as he is indifferent to his personal appearance. The Atlantic is the only power on earth I know that can make a woman indifferent to her personal appearance.

Mandeville remembers, and I think without detriment to himself, the glimpses he had in the White Mountains once of a young lady of whom his utmost efforts could give him no further information than her name. Chance sight of her on a passing stage or amid a group on some mountain lookout was all he ever had, and he did not even know certainly whether she was the perfect beauty and the lovely character he thought her. He said he would have known her, however, at a great distance; there was to her form that command of which we hear so much and which turns out to be nearly all command after the "ceremony;" or perhaps it was something in the glance of her eye or the turn of her head, or very likely it was a sweet inherited reserve or hauteur that captivated him, that filled his days with the expectation of seeing her, and made him hasten to the hotel-registers in the hope that her name was there recorded. Whatever it was, she interested him as one of the people he would like to know; and it piqued him that there was a life, rich in friendships, no doubt, in tastes, in many noblenesses, one of thousands of such, that must be absolutely nothing to him,—nothing but a window into heaven momentarily opened and then closed. I have myself no idea that she was a countess incognito, or that she had descended from any greater heights than those where Mandeville saw her, but I have always regretted that she went her way so mysteriously and left no glow, and that we shall wear out the remainder of our days without her society. I have looked for her name, but always in vain, among the attendants at the rights-conventions, in the list of those good Americans presented at court, among those skeleton names that appear as the remains of beauty in the morning journals after a ball to the wandering prince, in the reports of railway collisions and steamboat explosions. No news comes of her. And so imperfect are our means of communication in this world that, for anything we know, she may have left it long ago by some private way.

IV

The lasting regret that we cannot know more of the bright, sincere, and genuine people of the world is increased by the fact that they are all different from each other. Was it not Madame de Sevigne who said she had loved several different women for several different qualities? Every real person—for there are persons as there are fruits that have no distinguishing flavor, mere gooseberries—has a distinct quality, and the finding it is always like the discovery of a new island to the voyager. The physical world we shall exhaust some day, having a written description of every foot of it to which we can turn; but we shall never get the different qualities of people into a biographical dictionary, and the making acquaintance with a human being will never cease to be an exciting experiment. We cannot even classify men so as to aid us much in our estimate of them. The efforts in this direction are ingenious, but unsatisfactory. If I hear that a man is lymphatic or nervous-sanguine, I cannot tell therefrom whether I shall like and trust him. He may produce a phrenological chart showing that his knobby head is the home of all the virtues, and that the vicious tendencies are represented by holes in his cranium, and yet I cannot be sure that he will not be as disagreeable as if phrenology had not been invented. I feel sometimes that phrenology is the refuge of mediocrity. Its charts are almost as misleading concerning character as photographs. And photography may be described as the art which enables commonplace mediocrity to look like genius. The heavy-jowled man with shallow cerebrum has only to incline his head so that the lying instrument can select a favorable focus, to appear in the picture with the brow of a sage and the chin of a poet. Of all the arts for ministering to human vanity the photographic is the most useful, but it is a poor aid in the revelation of character. You shall learn more of a man's real nature by seeing him walk once up the broad aisle of his church to his pew on Sunday, than by studying his photograph for a month.

No, we do not get any certain standard of men by a chart of their temperaments; it will hardly answer to select a wife by the color of her hair; though it be by nature as red as a cardinal's hat, she may be no more constant than if it were dyed. The farmer who shuns all the lymphatic beauties in his neighborhood, and selects to wife the most nervous-sanguine, may find that she is unwilling to get up in the winter mornings and make the kitchen fire. Many a man, even in this scientific age which professes to label us all, has been cruelly deceived in this way. Neither the blondes nor the brunettes act according to the advertisement of their temperaments. The truth is that men refuse to come under the classifications of the pseudo-scientists, and all our new nomenclatures do not add much to our knowledge. You know what to expect—if the comparison will be pardoned—of a horse with certain points; but you wouldn't dare go on a journey with a man merely upon the strength of knowing that his temperament was the proper mixture of the sanguine and the phlegmatic. Science is not able to teach us concerning men as it teaches us of horses, though I am very far from saying that there are not traits of nobleness and of meanness that run through families and can be calculated to appear in individuals with absolute certainty; one family will be trusty and another tricky through all its members for generations; noble strains and ignoble strains are perpetuated. When we hear that she has eloped with the stable-boy and married him, we are apt to remark, "Well, she was a Bogardus." And when we read that she has gone on a mission and has died, distinguishing herself by some extraordinary devotion to the heathen at Ujiji, we think it sufficient to say, "Yes, her mother married into the Smiths." But this knowledge comes of our experience of special families, and stands us in stead no further.

If we cannot classify men scientifically and reduce them under a kind of botanical order, as if they had a calculable vegetable development, neither can we gain much knowledge of them by comparison. It does not help me at all in my estimate of their characters to compare Mandeville with the Young Lady, or Our Next Door with the Parson. The wise man does not permit himself to set up even in his own mind any comparison of his friends. His friendship is capable of going to extremes with many people, evoked as it is by many qualities. When Mandeville goes into my garden in June I can usually find him in a particular bed of strawberries, but he does not speak disrespectfully of the others. When Nature, says Mandeville, consents to put herself into any sort of strawberry, I have no criticisms to make, I am only glad that I have been created into the same world with such a delicious manifestation of the Divine favor. If I left Mandeville alone in the

garden long enough, I have no doubt he would impartially make an end of the fruit of all the beds, for his capacity in this direction is as all-embracing as it is in the matter of friendships. The Young Lady has also her favorite patch of berries. And the Parson, I am sorry to say, prefers to have them picked for him the elect of the garden—and served in an orthodox manner. The straw-berry has a sort of poetical precedence, and I presume that no fruit is jealous of it any more than any flower is jealous of the rose; but I remark the facility with which liking for it is transferred to the raspberry, and from the raspberry (not to make a tedious enumeration) to the melon, and from the melon to the grape, and the grape to the pear, and the pear to the apple. And we do not mar our enjoyment of each by comparisons.

Of course it would be a dull world if we could not criticise our friends, but the most unprofitable and unsatisfactory criticism is that by comparison. Criticism is not necessarily uncharitableness, but a wholesome exercise of our powers of analysis and discrimination. It is, however, a very idle exercise, leading to no results when we set the qualities of one over against the qualities of another, and disparage by contrast and not by independent judgment. And this method of procedure creates jealousies and heart-burnings innumerable.

Criticism by comparison is the refuge of incapables, and especially is this true in literature. It is a lazy way of disposing of a young poet to bluntly declare, without any sort of discrimination of his defects or his excellences, that he equals Tennyson, and that Scott never wrote anything finer. What is the justice of damning a meritorious novelist by comparing him with Dickens, and smothering him with thoughtless and good-natured eulogy? The poet and the novelist may be well enough, and probably have qualities and gifts of their own which are worth the critic's attention, if he has any time to bestow on them; and it is certainly unjust to subject them to a comparison with somebody else, merely because the critic will not take the trouble to ascertain what they are. If, indeed, the poet and novelist are mere imitators of a model and copyists of a style, they may be dismissed with such commendation as we bestow upon the machines who pass their lives in making bad copies of the pictures of the great painters. But the critics of whom we speak do not intend depreciation, but eulogy, when they say that the author they have in hand has the wit of Sydney Smith and the brilliancy of Macaulay. Probably he is not like either of them, and may have a genuine though modest virtue of his own; but these names will certainly kill him, and he will never be anybody in the popular estimation. The public finds out speedily that he is not Sydney Smith, and it resents the extravagant claim for him as if he were an impudent pretender. How many authors of fair ability to interest the world have we known in our own day who have been thus sky-rocketed into notoriety by the lazy indiscrimination of the critic-by-comparison, and then have sunk into a popular contempt as undeserved! I never see a young aspirant injudiciously compared to a great and resplendent name in literature, but I feel like saying, My poor fellow, your days are few and full of trouble; you begin life handicapped, and you cannot possibly run a creditable race.

I think this sort of critical eulogy is more damaging even than that which kills by a different assumption, and one which is equally common, namely, that the author has not done what he probably never intended to do. It is well known that most of the trouble in life comes from our inability to compel other people to do what we think they ought, and it is true in criticism that we are unwilling to take a book for what it is, and credit the author with that. When the solemn critic, like a mastiff with a ladies' bonnet in his mouth, gets hold of a light piece of verse, or a graceful sketch which catches the humor of an hour for the entertainment of an hour, he tears it into a thousand shreds. It adds nothing to human knowledge, it solves none of the problems of life, it touches none of the questions of social science, it is not a philosophical treatise, and it is not a dozen things that it might have been. The critic cannot forgive the author for this disrespect to him. This isn't a rose, says the critic, taking up a pansy and rending it; it is not at all like a rose, and the author is either a pretentious idiot or an idiotic pretender. What business, indeed, has the author to send the critic a bunch of sweet-peas, when he knows that a cabbage would be preferred,—something not showy, but useful?

A good deal of this is what Mandeville said and I am not sure that it is devoid of personal feeling. He published, some years ago, a little volume giving an account of a trip through the Great West, and a very entertaining book it was. But one of the heavy critics got hold of it, and made Mandeville appear, even to himself, he confessed, like an ass, because there was nothing in the volume about geology or mining prospects, and very little to instruct the student of physical geography. With alternate sarcasm and ridicule, he literally basted the author, till Mandeville said that he felt almost like a depraved scoundrel, and thought he should be held up to less execration if he had committed a neat and scientific murder.

But I confess that I have a good deal of sympathy with the critics. Consider what these public tasters have to endure! None of us, I fancy, would like to be compelled to read all that they read, or to take into our mouths, even with the privilege of speedily ejecting it with a grimace, all that they sip. The critics of the vintage, who pursue their calling in the dark vaults and amid mouldy casks, give their opinion, for the most part, only upon wine, upon juice that has matured and ripened into development of quality. But what crude, unrestrained, unfermented—even raw and drugged liquor, must the literary taster put to his unwilling lips day after day!

TENTH STUDY

I

It was my good fortune once to visit a man who remembered the rebellion of 1745.

It was my good fortune once to visit a man who remembered the rebellion of 1745. Lest this confession should make me seem very aged, I will add that the visit took place in 1851, and that the man was then one hundred and thirteen years old. He was quite a lad before Dr. Johnson drank Mrs. Thrale's tea. That he was as old as he had the credit of being, I have the evidence of my own senses (and I am seldom mistaken in a person's age), of his own family, and his own word; and it is incredible that so old a person, and one so apparently near the grave, would deceive about his age.

The testimony of the very aged is always to be received without question, as Alexander Hamilton once learned. He was trying a land-title with Aaron Burr, and two of the witnesses upon whom Burr relied were venerable Dutchmen, who had, in their youth, carried the surveying chains over the land in dispute, and who were now aged respectively one hundred and four years and one hundred and six years. Hamilton gently attempted to undervalue their testimony, but he was instantly put down by the Dutch justice, who suggested that Mr. Hamilton could not be aware of the age of the witnesses.

My old man (the expression seems familiar and inelegant) had indeed an exaggerated idea of his own age, and sometimes said that he supposed he was going on four hundred, which was true enough, in fact; but for the exact date, he referred to his youngest son,—a frisky and humorsome lad of eighty years, who had

received us at the gate, and whom we had at first mistaken for the veteran, his father. But when we beheld the old man, we saw the difference between age and age. The latter had settled into a grizzliness and grimness which belong to a very aged and stunted but sturdy oak-tree, upon the bark of which the gray moss is thick and heavy. The old man appeared hale enough, he could walk about, his sight and hearing were not seriously impaired, he ate with relish, and his teeth were so sound that he would not need a dentist for at least another century; but the moss was growing on him. His boy of eighty seemed a green sapling beside him.

He remembered absolutely nothing that had taken place within thirty years, but otherwise his mind was perhaps as good as it ever was, for he must always have been an ignoramus, and would never know anything if he lived to be as old as he said he was going on to be. Why he was interested in the rebellion of 1745 I could not discover, for he of course did not go over to Scotland to carry a pike in it, and he only remembered to have heard it talked about as a great event in the Irish market-town near which he lived, and to which he had ridden when a boy. And he knew much more about the horse that drew him, and the cart in which he rode, than he did about the rebellion of the Pretender.

I hope I do not appear to speak harshly of this amiable old man, and if he is still living I wish him well, although his example was bad in some respects. He had used tobacco for nearly a century, and the habit has very likely been the death of him. If so, it is to be regretted. For it would have been interesting to watch the process of his gradual disintegration and return to the ground: the loss of sense after sense, as decaying limbs fall from the oak; the failure of discrimination, of the power of choice, and finally of memory itself; the peaceful wearing out and passing away of body and mind without disease, the natural running down of a man. The interesting fact about him at that time was that his bodily powers seemed in sufficient vigor, but that the mind had not force enough to manifest itself through his organs. The complete battery was there, the appetite was there, the acid was eating the zinc; but the electric current was too weak to flash from the brain. And yet he appeared so sound throughout, that it was difficult to say that his mind was not as good as it ever had been. He had stored in it very little to feed on, and any mind would get enfeebled by a century's rumination on a hearsay idea of the rebellion of '45.

It was possible with this man to fully test one's respect for age, which is in all civilized nations a duty. And I found that my feelings were mixed about him. I discovered in him a conceit in regard to his long sojourn on this earth, as if it were somehow a credit to him. In the presence of his good opinion of himself, I could but question the real value of his continued life, to himself or to others. If he ever had any friends he had outlived them, except his boy; his wives—a century of them—were all dead; the world had actually passed away for him. He hung on the tree like a frost-nipped apple, which the farmer has neglected to gather. The world always renews itself, and remains young. What relation had he to it?

I was delighted to find that this old man had never voted for George Washington. I do not know that he had ever heard of him. Washington may be said to have played his part since his time. I am not sure that he perfectly remembered anything so recent as the American Revolution. He was living quietly in Ireland during our French and Indian wars, and he did not emigrate to this country till long after our revolutionary and our constitutional struggles were over. The Rebellion Of '45 was the great event of the world for him, and of that he knew nothing.

I intend no disrespect to this man,—a cheerful and pleasant enough old person,—but he had evidently lived himself out of the world, as completely as people usually die out of it. His only remaining value was to the moralist, who might perchance make something out of him. I suppose if he had died young, he would have been regretted, and his friends would have lamented that he did not fill out his days in the world, and would very likely have called him back, if tears and prayers could have done so. They can see now what his prolonged life amounted to, and how the world has closed up the gap he once filled while he still lives in it.

A great part of the unhappiness of this world consists in regret for those who depart, as it seems to us, prematurely. We imagine that if they would return, the old conditions would be restored. But would it be so? If they, in any case, came back, would there be any place for them? The world so quickly readjusts itself after any loss, that the return of the departed would nearly always throw it, even the circle most interested, into confusion. Are the Enoch Ardens ever wanted?

II

A popular notion akin to this, that the world would have any room for the departed if they should now and then return, is the constant regret that people will not learn by the experience of others, that one generation learns little from the preceding, and that youth never will adopt the experience of age. But if experience went for anything, we should all come to a standstill; for there is nothing so discouraging to effort. Disbelief in Ecclesiastes is the mainspring of action. In that lies the freshness and the interest of life, and it is the source of every endeavor.

If the boy believed that the accumulation of wealth and the acquisition of power were what the old man says they are, the world would very soon be stagnant. If he believed that his chances of obtaining either were as poor as the majority of men find them to be, ambition would die within him. It is because he rejects the experience of those who have preceded him, that the world is kept in the topsy-turvy condition which we all rejoice in, and which we call progress.

And yet I confess I have a soft place in my heart for that rare character in our New England life who is content with the world as he finds it, and who does not attempt to appropriate any more of it to himself than he absolutely needs from day to day. He knows from the beginning that the world could get on without him, and he has never had any anxiety to leave any result behind him, any legacy for the world to quarrel over.

He is really an exotic in our New England climate and society, and his life is perpetually misunderstood by his neighbors, because he shares none of their uneasiness about getting on in life. He is even called lazy, good-for-nothing, and "shiftless,"—the final stigma that we put upon a person who has learned to wait without the exhausting process of laboring.

I made his acquaintance last summer in the country, and I have not in a long time been so well pleased with any of our species. He was a man past middle life, with a large family. He had always been from boyhood of a contented and placid mind, slow in his movements, slow in his speech. I think he never cherished a hard feeling toward anybody, nor envied any one, least of all the rich and prosperous about whom he liked to talk. Indeed, his talk was a good deal about wealth, especially about his cousin who had been down South and "got fore-handed" within a few years. He was genuinely pleased at his relation's good luck, and pointed him out to me with some pride. But he had no envy of him, and he evinced no desire to imitate him. I inferred from all his conversation about "piling it up" (of which he spoke with a gleam of enthusiasm in his eye), that there were moments when he would like to be rich himself; but it was evident that he would never make the least effort to be so, and I doubt if he could even overcome that delicious inertia of mind and body called laziness, sufficiently to inherit.

Wealth seemed to have a far and peculiar fascination for him, and I suspect he was a visionary in the midst of his poverty. Yet I suppose he had—hardly the personal property which the law exempts from execution. He had lived in a great many towns, moving from one to another with his growing family, by easy stages, and was always the poorest man in the town, and lived on the most niggardly of its rocky and bramble-grown farms, the productiveness of which he reduced to zero in a couple of seasons by his careful neglect of culture. The fences of his hired domain always fell into ruins under him, perhaps because he sat on them so much, and the hovels he occupied rotted down during his placid residence in them. He moved from desolation to desolation, but carried always with him the equal mind of a philosopher. Not even the occasional tart remarks of his wife, about their nomadic life and his serenity in the midst of discomfort, could ruffle his smooth spirit.

He was, in every respect, a most worthy man, truthful, honest, temperate, and, I need not say, frugal; and he had no bad habits,—perhaps he never had energy enough to acquire any. Nor did he lack the knack of the Yankee race. He could make a shoe, or build a house, or doctor a cow; but it never seemed to him, in this brief existence, worth while to do any of these things. He was an excellent angler, but he rarely fished; partly because of the shortness of days, partly on account of the uncertainty of bites, but principally because the trout brooks were all arranged lengthwise and ran over so much ground. But no man liked to look at a string of trout better than he did, and he was willing to sit down in a sunny place and talk about trout-fishing half a day at a time, and he would talk pleasantly and well too, though his wife might be continually interrupting him by a call for firewood.

I should not do justice to his own idea of himself if I did not add that he was most respectably connected, and that he had a justifiable though feeble pride in his family. It helped his self-respect, which no ignoble circumstances could destroy. He was, as must appear by this time, a most intelligent man, and he was a well-informed man; that is to say, he read the weekly newspapers when he could get them, and he had the average country information about Beecher and Greeley and the Prussian war ("Napoleon is gettin' on't, ain't he?"), and the general prospect of the election campaigns. Indeed, he was warmly, or rather luke-warmly, interested in politics. He liked to talk about the inflated currency, and it seemed plain to him that his condition would somehow be improved if we could get to a specie basis. He was, in fact, a little troubled by the national debt; it seemed to press on him somehow, while his own never did. He exhibited more animation over the affairs of the government than he did over his own,—an evidence at once of his disinterestedness and his patriotism. He had been an old abolitionist, and was strong on the rights of free labor, though he did not care to exercise his privilege much. Of course he had the proper contempt for the poor whites down South. I never saw a person with more correct notions on such a variety of subjects. He was perfectly willing that churches (being himself a member), and Sunday-schools, and missionary enterprises should go on; in fact, I do not believe he ever opposed anything in his life. No one was more willing to vote town taxes and road-repairs and schoolhouses than he. If you could call him spirited at all, he was public-spirited.

And with all this he was never very well; he had, from boyhood, "enjoyed poor health." You would say he was not a man who would ever catch anything, not even an epidemic; but he was a person whom diseases would be likely to overtake, even the slowest of slow fevers. And he was n't a man to shake off anything. And yet sickness seemed to trouble him no more than poverty. He was not discontented; he never grumbled. I am not sure but he relished a "spell of sickness" in haying-time.

An admirably balanced man, who accepts the world as it is, and evidently lives on the experience of others. I have never seen a man with less envy, or more cheerfulness, or so contented with as little reason for being so. The only drawback to his future is that rest beyond the grave will not be much change for him, and he has no works to follow him.

III

This Yankee philosopher, who, without being a Brahmin, had, in an uncongenial atmosphere, reached the perfect condition of Nirvina, reminded us all of the ancient sages; and we queried whether a world that could produce such as he, and could, beside, lengthen a man's years to one hundred and thirteen, could fairly be called an old and worn-out world, having long passed the stage of its primeval poetry and simplicity. Many an Eastern dervish has, I think, got immortality upon less laziness and resignation than this temporary sojourner in Massachusetts. It is a common notion that the world (meaning the people in it) has become tame and commonplace, lost its primeval freshness and epigrammatic point. Mandeville, in his argumentative way, dissents from this entirely. He says that the world is more complex, varied, and a thousand times as

interesting as it was in what we call its youth, and that it is as fresh, as individual and capable of producing odd and eccentric characters as ever. He thought the creative vim had not in any degree abated, that both the types of men and of nations are as sharply stamped and defined as ever they were.

Was there ever, he said, in the past, any figure more clearly cut and freshly minted than the Yankee? Had the Old World anything to show more positive and uncompromising in all the elements of character than the Englishman? And if the edges of these were being rounded off, was there not developing in the extreme West a type of men different from all preceding, which the world could not yet define? He believed that the production of original types was simply infinite.

Herbert urged that he must at least admit that there was a freshness of legend and poetry in what we call the primeval peoples that is wanting now; the mythic period is gone, at any rate.

Mandeville could not say about the myths. We couldn't tell what interpretation succeeding ages would put upon our lives and history and literature when they have become remote and shadowy. But we need not go to antiquity for epigrammatic wisdom, or for characters as racy of the fresh earth as those handed down to us from the dawn of history. He would put Benjamin Franklin against any of the sages of the mythic or the classic period. He would have been perfectly at home in ancient Athens, as Socrates would have been in modern Boston. There might have been more heroic characters at the siege of Troy than Abraham Lincoln, but there was not one more strongly marked individually; not one his superior in what we call primeval craft and humor. He was just the man, if he could not have dislodged Priam by a writ of ejectment, to have invented the wooden horse, and then to have made Paris the hero of some ridiculous story that would have set all Asia in a roar.

Mandeville said further, that as to poetry, he did not know much about that, and there was not much he cared to read except parts of Shakespeare and Homer, and passages of Milton. But it did seem to him that we had men nowadays, who could, if they would give their minds to it, manufacture in quantity the same sort of epigrammatic sayings and legends that our scholars were digging out of the Orient. He did not know why Emerson in antique setting was not as good as Saadi. Take for instance, said Mandeville, such a legend as this, and how easy it would be to make others like it:

The son of an Emir had red hair, of which he was ashamed, and wished to dye it. But his father said: "Nay, my son, rather behave in such a manner that all fathers shall wish their sons had red hair."

This was too absurd. Mandeville had gone too far, except in the opinion of Our Next Door, who declared that an imitation was just as good as an original, if you could not detect it. But Herbert said that the closer an imitation is to an original, the more unendurable it is. But nobody could tell exactly why.

The Fire-Tender said that we are imposed on by forms. The nuggets of wisdom that are dug out of the Oriental and remote literatures would often prove to be only commonplace if stripped of their quaint setting. If you gave an Oriental twist to some of our modern thought, its value would be greatly enhanced for many people.

I have seen those, said the Mistress, who seem to prefer dried fruit to fresh; but I like the strawberry and the peach of each season, and for me the last is always the best.

Even the Parson admitted that there were no signs of fatigue or decay in the creative energy of the world; and if it is a question of Pagans, he preferred Mandeville to Saadi.

ELEVENTH STUDY

It happened, or rather, to tell the truth,
it was contrived.

It happened, or rather, to tell the truth, it was contrived,—for I have waited too long for things to turn up to have much faith in “happen,” that we who have sat by this hearthstone before should all be together on Christmas eve. There was a splendid backlog of hickory just beginning to burn with a glow that promised to grow more fiery till long past midnight, which would have needed no apology in a loggers' camp,—not so much as the religion of which a lady (in a city which shall be nameless) said, “If you must have a religion, this one will do nicely.”

There was not much conversation, as is apt to be the case when people come together who have a great deal to say, and are intimate enough to permit the freedom of silence. It was Mandeville who suggested that we read something, and the Young Lady, who was in a mood to enjoy her own thoughts, said, “Do.” And finally it came about that the Fire Tender, without more resistance to the urging than was becoming, went to his library, and returned with a manuscript, from which he read the story of

MY UNCLE IN INDIA

Not that it is my uncle, let me explain. It is Polly's uncle, as I very well know, from the many times she has thrown him up to me, and is liable so to do at any moment. Having small expectations myself, and having wedded Polly when they were smaller, I have come to feel the full force, the crushing weight, of her lightest remark about “My Uncle in India.” The words as I write them convey no idea of the tone in which they fall upon my ears. I think it is the only fault of that estimable woman, that she has an “uncle in India” and does not let him quietly remain there. I feel quite sure that if I had an uncle in Botany Bay, I should never, never throw him up to Polly in the way mentioned. If there is any jar in our quiet life, he is the cause of it; all along of possible “expectations” on the one side calculated to overawe the other side not having expectations. And yet I know that if her uncle in India were this night to roll a barrel of “India's golden sands,” as I feel that he any moment may do, into our sitting-room, at Polly's feet, that charming wife, who is more generous than the month of May, and who has no thought but for my comfort in two worlds, would straightway make it over to me, to have and to hold, if I could lift it, forever and forever. And that makes it more inexplicable that she, being a woman, will continue to mention him in the way she does.

In a large and general way I regard uncles as not out of place in this transitory state of existence. They stand for a great many possible advantages. They are liable to “tip” you at school, they are resources in vacation, they come grandly in play about the holidays, at which season my heart always did warm towards them with lively expectations, which were often turned into golden solidities; and then there is always the prospect, sad to a sensitive mind, that uncles are mortal, and, in their timely taking off, may prove as generous in the will as they were in the deed. And there is always this redeeming possibility in a niggardly uncle. Still there must be something wrong in the character of the uncle per se, or all history would not agree that nepotism is such a dreadful thing.

But, to return from this unnecessary digression, I am reminded that the charioteer of the patient year has brought round the holiday time. It has been a growing year, as most years are. It is very pleasant to see how the shrubs in our little patch of ground widen and thicken and bloom at the right time, and to know that the great trees have added a livery to their trunks. To be sure, our garden,—which I planted under Polly's directions, with seeds that must have been patented, and I forgot to buy the right of, for they are mostly still waiting the final resurrection,—gave evidence that it shared in the misfortune of the Fall, and was never an Eden from which one would have required to have been driven. It was the easiest garden to keep the neighbor's pigs and hens out of I ever saw. If its increase was small its temptations were smaller, and that is no little recommendation in this world of temptations. But, as a general thing, everything has grown, except our house. That little cottage, over which Polly presides with grace enough to adorn a palace, is still small outside and smaller inside; and if it has an air of comfort and of neatness, and its rooms are cozy and sunny by day and cheerful by night, and it is bursting with books, and not unattractive with modest pictures on the walls, which we think do well enough until my uncle—(but never mind my uncle, now),—and if, in the long winter evenings, when the largest lamp is lit, and the chestnuts glow in embers, and the kid turns on the spit, and the house-plants are green and flowering, and the ivy glistens in the firelight, and Polly sits with that contented, far-away look in her eyes that I like to see, her fingers busy upon one of those cruel mysteries

which have delighted the sex since Penelope, and I read in one of my fascinating law-books, or perhaps regale ourselves with a taste of Montaigne,—if all this is true, there are times when the cottage seems small; though I can never find that Polly thinks so, except when she sometimes says that she does not know where she should bestow her uncle in it, if he should suddenly come back from India.

There it is, again. I sometimes think that my wife believes her uncle in India to be as large as two ordinary men; and if her ideas of him are any gauge of the reality, there is no place in the town large enough for him except the Town Hall. She probably expects him to come with his bungalow, and his sedan, and his palanquin, and his elephants, and his retinue of servants, and his principalities, and his powers, and his ha—(no, not that), and his chowchow, and his—I scarcely know what besides.

Christmas eve was a shiny cold night, a creaking cold night, a placid, calm, swingeing cold night.

Out-doors had gone into a general state of crystallization. The snow-fields were like the vast Arctic ice-fields that Kane looked on, and lay sparkling under the moonlight, crisp and Christmasy, and all the crystals on the trees and bushes hung glistening, as if ready, at a breath of air, to break out into metallic ringing, like a million silver joy-bells. I mentioned the conceit to Polly, as we stood at the window, and she said it reminded her of Jean Paul. She is a woman of most remarkable discernment.

Christmas is a great festival at our house in a small way. Among the many delightful customs we did not inherit from our Pilgrim Fathers, there is none so pleasant as that of giving presents at this season. It is the most exciting time of the year. No one is too rich to receive something, and no one too poor to give a trifle. And in the act of giving and receiving these tokens of regard, all the world is kin for once, and brighter for this transient glow of generosity. Delightful custom! Hard is the lot of childhood that knows nothing of the visits of Kriss Kringle, or the stockings hung by the chimney at night; and cheerless is any age that is not brightened by some Christmas gift, however humble. What a mystery of preparation there is in the preceding days, what planning and plottings of surprises! Polly and I keep up the custom in our simple way, and great is the perplexity to express the greatest amount of affection with a limited outlay. For the excellence of a gift lies in its appropriateness rather than in its value. As we stood by the window that night, we wondered what we should receive this year, and indulged in I know not what little hypocrisies and deceptions.

I wish, said Polly, "that my uncle in India would send me a camel's-hair shawl, or a string of pearls, each as big as the end of my thumb."

"Or a white cow, which would give golden milk, that would make butter worth seventy-five cents a pound," I added, as we drew the curtains, and turned to our chairs before the open fire.

It is our custom on every Christmas eve—as I believe I have somewhere said, or if I have not, I say it again, as the member from Erin might remark—to read one of Dickens's Christmas stories. And this night, after punching the fire until it sent showers of sparks up the chimney, I read the opening chapter of "Mrs. Lirriper's Lodgings," in my best manner, and handed the book to Polly to continue; for I do not so much relish reading aloud the succeeding stories of Mr. Dickens's annual budget, since he wrote them, as men go to war in these days, by substitute. And Polly read on, in her melodious voice, which is almost as pleasant to me as the Wasser-fluth of Schubert, which she often plays at twilight; and I looked into the fire, unconsciously constructing stories of my own out of the embers. And her voice still went on, in a sort of running accompaniment to my airy or fiery fancies.

"Sleep?" said Polly, stopping, with what seemed to me a sort of crash, in which all the castles tumbled into ashes.

"Not in the least," I answered brightly, "never heard anything more agreeable." And the reading flowed on and on and on, and I looked steadily into the fire, the fire, fire, fi....

Suddenly the door opened, and into our cozy parlor walked the most venerable personage I ever laid eyes on, who saluted me with great dignity. Summer seemed to have burst into the room, and I was conscious of a puff of Oriental airs, and a delightful, languid tranquillity. I was not surprised that the figure before me was clad in full turban, baggy drawers, and a long loose robe, girt about the middle with a rich shawl. Followed him a swart attendant, who hastened to spread a rug upon which my visitor sat down, with great gravity, as I am informed they do in farthest Ind. The slave then filled the bowl of a long-stemmed chibouk, and, handing it to his master, retired behind him and began to fan him with the most prodigious palm-leaf I ever saw. Soon the fumes of the delicate tobacco of Persia pervaded the room, like some costly aroma which you cannot buy, now the entertainment of the Arabian Nights is discontinued.

Looking through the window I saw, if I saw anything, a palanquin at our door, and attendant on it four dusky, half-naked bearers, who did not seem to fancy the splendor of the night, for they jumped about on the snow crust, and I could see them shiver and shake in the keen air. Oho! thought! this, then, is my uncle from India!

"Yes, it is," now spoke my visitor extraordinary, in a gruff, harsh voice.

"I think I have heard Polly speak of you," I rejoined, in an attempt to be civil, for I did n't like his face any better than I did his voice,—a red, fiery, irascible kind of face.

"Yes I've come over to O Lord,—quick, Jamsetzee, lift up that foot,—take care. There, Mr. Trimings, if that's your name, get me a glass of brandy, stiff."

I got him our little apothecary-labeled bottle and poured out enough to preserve a whole can of peaches. My uncle took it down without a wink, as if it had been water, and seemed relieved. It was a very pleasant uncle to have at our fireside on Christmas eve, I felt.

At a motion from my uncle, Jamsetzee handed me a parcel which I saw was directed to Polly, which I untied, and lo! the most wonderful camel's-hair shawl that ever was, so fine that I immediately drew it through my finger-ring, and so large that I saw it would entirely cover our little room if I spread it out; a dingy red color, but splendid in appearance from the little white hieroglyphic worked in one corner, which is always worn outside, to show that it cost nobody knows how many thousands of dollars.

"A Christmas trifle for Polly. I have come home—as I was saying when that confounded twinge took me—to settle down; and I intend to make Polly my heir, and live at my ease and enjoy life. Move that leg a little,

Jamsetzee."

I meekly replied that I had no doubt Polly would be delighted to see her dear uncle, and as for inheriting, if it came to that, I did n't know any one with a greater capacity for that than she.

"That depends," said the gruff old smoker, "how I like ye. A fortune, scraped up in forty years in Ingy, ain't to be thrown away in a minute. But what a house this is to live in!"; the uncomfortable old relative went on, throwing a contemptuous glance round the humble cottage. "Is this all of it?"

"In the winter it is all of it," I said, flushing up; "but in the summer, when the doors and windows are open, it is as large as anybody's house. And," I went on, with some warmth, "it was large enough just before you came in, and pleasant enough. And besides," I said, rising into indignation, "you can not get anything much better in this city short of eight hundred dollars a year, payable first days of January, April, July, and October, in advance, and my salary...."

"Hang your salary, and confound your impudence and your seven-by-nine hovel! Do you think you have anything to say about the use of my money, scraped up in forty years in Ingy? THINGS HAVE GOT TO BE CHANGED!" he burst out, in a voice that rattled the glasses on the sideboard.

I should think they were. Even as I looked into the little fireplace it enlarged, and there was an enormous grate, level with the floor, glowing with seacoal; and a magnificent mantel carved in oak, old and brown; and over it hung a landscape, wide, deep, summer in the foreground with all the gorgeous coloring of the tropics, and beyond hills of blue and far mountains lying in rosy light. I held my breath as I looked down the marvelous perspective. Looking round for a second, I caught a glimpse of a Hindoo at each window, who vanished as if they had been whisked off by enchantment; and the close walls that shut us in fled away. Had cohesion and gravitation given out? Was it the "Great Consummation" of the year 18-? It was all like the swift transformation of a dream, and I pinched my arm to make sure that I was not the subject of some diablerie.

The little house was gone; but that I scarcely minded, for I had suddenly come into possession of my wife's castle in Spain. I sat in a spacious, lofty apartment, furnished with a princely magnificence. Rare pictures adorned the walls, statues looked down from deep niches, and over both the dark ivy of England ran and drooped in graceful luxuriance. Upon the heavy tables were costly, illuminated volumes; luxurious chairs and ottomans invited to easy rest; and upon the ceiling Aurora led forth all the flower-strewing daughters of the dawn in brilliant frescoes. Through the open doors my eyes wandered into magnificent apartment after apartment. There to the south, through folding-doors, was the splendid library, with groined roof, colored light streaming in through painted windows, high shelves stowed with books, old armor hanging on the walls, great carved oaken chairs about a solid oaken table, and beyond a conservatory of flowers and plants with a fountain springing in the center, the splashing of whose waters I could hear. Through the open windows I looked upon a lawn, green with close-shaven turf, set with ancient trees, and variegated with parterres of summer plants in bloom. It was the month of June, and the smell of roses was in the air.

I might have thought it only a freak of my fancy, but there by the fireplace sat a stout, red-faced, puffy-looking man, in the ordinary dress of an English gentleman, whom I had no difficulty in recognizing as my uncle from India.

"One wants a fire every day in the year in this confounded climate," remarked that amiable old person, addressing no one in particular.

I had it on my lips to suggest that I trusted the day would come when he would have heat enough to satisfy him, in permanent supply. I wish now that I had.

I think things had changed. For now into this apartment, full of the morning sunshine, came sweeping with the air of a countess born, and a maid of honor bred, and a queen in expectancy, my Polly, stepping with that lofty grace which I always knew she possessed, but which she never had space to exhibit in our little cottage, dressed with that elegance and richness that I should not have deemed possible to the most Dutch duchess that ever lived, and, giving me a complacent nod of recognition, approached her uncle, and said in her smiling, cheery way, "How is the dear uncle this morning?" And, as she spoke, she actually bent down and kissed his horrid old cheek, red-hot with currie and brandy and all the biting pickles I can neither eat nor name, kissed him, and I did not turn into stone.

"Comfortable as the weather will permit, my darling!"—and again I did not turn into stone.

"Wouldn't uncle like to take a drive this charming morning?" Polly asked.

Uncle finally grunted out his willingness, and Polly swept away again to prepare for the drive, taking no more notice of me than if I had been a poor assistant office lawyer on a salary. And soon the carriage was at the door, and my uncle, bundled up like a mummy, and the charming Polly drove gayly away.

How pleasant it is to be married rich, I thought, as I arose and strolled into the library, where everything was elegant and prim and neat, with no scraps of paper and piles of newspapers or evidences of literary slovenness on the table, and no books in attractive disorder, and where I seemed to see the legend staring at me from all the walls, "No smoking." So I uneasily lounged out of the house. And a magnificent house it was, a palace, rather, that seemed to frown upon and bully insignificant me with its splendor, as I walked away from it towards town.

And why town? There was no use of doing anything at the dingy office. Eight hundred dollars a year! It wouldn't keep Polly in gloves, let alone dressing her for one of those fashionable entertainments to which we went night after night. And so, after a weary day with nothing in it, I went home to dinner, to find my uncle quite chirruped up with his drive, and Polly regnant, sublimely engrossed in her new world of splendor, a dazzling object of admiration to me, but attentive and even tender to that hypochondriacal, gouty old subject from India.

Yes, a magnificent dinner, with no end of servants, who seemed to know that I couldn't have paid the wages of one of them, and plate and courses endless. I say, a miserable dinner, on the edge of which seemed to sit by permission of somebody, like an invited poor relation, who wishes he had sent a regret, and longing for some of those nice little dishes that Polly used to set before me with beaming face, in the dear old days.

And after dinner, and proper attention to the comfort for the night of our benefactor, there was the

Blibgims's party. No long, confidential interviews, as heretofore, as to what she should wear and what I should wear, and whether it would do to wear it again. And Polly went in one coach, and I in another. No crowding into the hired hack, with all the delightful care about tumbling dresses, and getting there in good order; and no coming home together to our little cozy cottage, in a pleasant, excited state of "flutteration," and sitting down to talk it all over, and "Was n't it nice?" and "Did I look as well as anybody?" and "Of course you did to me," and all that nonsense. We lived in a grand way now, and had our separate establishments and separate plans, and I used to think that a real separation couldn't make matters much different. Not that Polly meant to be any different, or was, at heart; but, you know, she was so much absorbed in her new life of splendor, and perhaps I was a little old-fashioned.

I don't wonder at it now, as I look back. There was an army of dressmakers to see, and a world of shopping to do, and a houseful of servants to manage, and all the afternoon for calls, and her dear, dear friend, with the artless manners and merry heart of a girl, and the dignity and grace of a noble woman, the dear friend who lived in the house of the Seven Gables, to consult about all manner of important things. I could not, upon my honor, see that there was any place for me, and I went my own way, not that there was much comfort in it.

And then I would rather have had charge of a hospital ward than take care of that uncle. Such coddling as he needed, such humoring of whims. And I am bound to say that Polly could n't have been more dutiful to him if he had been a Hindoo idol. She read to him and talked to him, and sat by him with her embroidery, and was patient with his crossness, and wearied herself, that I could see, with her devoted ministrations.

I fancied sometimes she was tired of it, and longed for the old homely simplicity. I was. Nepotism had no charms for me. There was nothing that I could get Polly that she had not. I could surprise her with no little delicacies or trifles, delightedly bought with money saved for the purpose. There was no more coming home weary with office work and being met at the door with that warm, loving welcome which the King of England could not buy. There was no long evening when we read alternately from some favorite book, or laid our deep housekeeping plans, rejoiced in a good bargain or made light of a poor one, and were contented and merry with little. I recalled with longing my little den, where in the midst of the literary disorder I love, I wrote those stories for the "Antarctic" which Polly, if nobody else, liked to read. There was no comfort for me in my magnificent library. We were all rich and in splendor, and our uncle had come from India. I wished, saving his soul, that the ship that brought him over had foundered off Barnegat Light. It would always have been a tender and regretful memory to both of us. And how sacred is the memory of such a loss!

Christmas? What delight could I have in long solicitude and ingenious devices touching a gift for Polly within my means, and hitting the border line between her necessities and her extravagant fancy? A drove of white elephants would n't have been good enough for her now, if each one carried a castle on his back.

"—and so they were married, and in their snug cottage lived happy ever after."—It was Polly's voice, as she closed the book.

"There, I don't believe you have heard a word of it," she said half complainingly.

"Oh, yes, I have," I cried, starting up and giving the fire a jab with the poker; "I heard every word of it, except a few at the close I was thinking"—I stopped, and looked round.

"Why, Polly, where is the camel's-hair shawl?"

"Camel's-hair fiddlestick! Now I know you have been asleep for an hour."

And, sure enough, there was n't any camel's-hair shawl there, nor any uncle, nor were there any Hindoos at our windows.

And then I told Polly all about it; how her uncle came back, and we were rich and lived in a palace and had no end of money, but she didn't seem to have time to love me in it all, and all the comfort of the little house was blown away as by the winter wind. And Polly vowed, half in tears, that she hoped her uncle never would come back, and she wanted nothing that we had not, and she wouldn't exchange our independent comfort and snug house, no, not for anybody's mansion. And then and there we made it all up, in a manner too particular for me to mention; and I never, to this day, heard Polly allude to My Uncle in India.

And then, as the clock struck eleven, we each produced from the place where we had hidden them the modest Christmas gifts we had prepared for each other, and what surprise there was! "Just the thing I needed." And, "It's perfectly lovely." And, "You should n't have done it." And, then, a question I never will answer, "Ten? fifteen? five? twelve?" "My dear, it cost eight hundred dollars, for I have put my whole year into it, and I wish it was a thousand times better."

And so, when the great iron tongue of the city bell swept over the snow the twelve strokes that announced Christmas day, if there was anywhere a happier home than ours, I am glad of it!

PREFACE

TO JOSEPH H. TWICHELL

It would be unfair to hold you responsible for these light sketches of a summer trip, which are now gathered into this little volume in response to the usual demand in such cases; yet you cannot escape altogether. For it was you who first taught me to say the name Baddeck; it was you who showed me its position on the map, and a seductive letter from a home missionary on Cape Breton Island, in relation to the abundance of trout and salmon in his field of labor. That missionary, you may remember, we never found, nor did we see his tackle; but I have no reason to believe that he does not enjoy good fishing in the right season. You understand the duties of a home missionary much better than I do, and you know whether he would be likely to let a couple of strangers into the best part of his preserve.

But I am free to admit that after our expedition was started you speedily relieved yourself of all responsibility for it, and turned it over to your comrade with a profound geographical indifference; you would as readily have gone to Baddeck by Nova Zembla as by Nova Scotia. The flight over the latter island was, you knew, however, no part of our original plan, and you were not obliged to take any interest in it. You know that our design was to slip rapidly down, by the back way of Northumberland Sound, to the Bras d'Or, and spend a week fishing there; and that the greater part of this journey here imperfectly described is not really ours, but was put upon us by fate and by the peculiar arrangement of provincial travel.

It would have been easy after our return to have made up from libraries a most engaging description of the Provinces, mixing it with historical, legendary, botanical, geographical, and ethnological information, and seasoning it with adventure from your glowing imagination. But it seemed to me that it would be a more honest contribution if our account contained only what we saw, in our rapid travel; for I have a theory that any addition to the great body of print, however insignificant it may be, has a value in proportion to its originality and individuality,—however slight either is,—and very little value if it is a compilation of the observations of others. In this case I know how slight the value is; and I can only hope that as the trip was very entertaining to us, the record of it may not be wholly unentertaining to those of like tastes.

Of one thing, my dear friend, I am certain: if the readers of this little journey could have during its persual the companionship that the writer had when it was made, they would think it altogether delightful. There is no pleasure comparable to that of going about the world, in pleasant weather, with a good comrade, if the mind is distracted neither by care, nor ambition, nor the greed of gain. The delight there is in seeing things, without any hope of pecuniary profit from them! We certainly enjoyed that inward peace which the philosopher associates with the absence of desire for money. For, as Plato says in the *Phaedo*, “whence come wars and fightings and factions? whence but from the body and the lusts of the body? For wars are occasioned by the love of money.” So also are the majority of the anxieties of life. We left these behind when we went into the Provinces with no design of acquiring anything there. I hope it may be my fortune to travel further with you in this fair world, under similar circumstances.

NOOK FARM, HARTFORD, April 10, 1874.

C. D. W.

BADDECK AND THAT SORT OF THING

I

*“Ay, now I am in Arden: the more fool I; when I was at home,
I was in a better place; but travellers must be content.”*
—TOUCHSTONE.

Two comrades and travelers, who sought a better country than the United States in the month of August, found themselves one evening in apparent possession of the ancient town of Boston.

The shops were closed at early candle-light; the fashionable inhabitants had retired into the country, or into the second-story-back, of their princely residences, and even an air of tender gloom settled upon the Common. The streets were almost empty, and one passed into the burnt district, where the scarred ruins and the uplifting piles of new brick and stone spread abroad under the flooding light of a full moon like another Pompeii, without any increase in his feeling of tranquil seclusion. Even the news-offices had put up their shutters, and a confiding stranger could nowhere buy a guide-book to help his wandering feet about the reposeful city, or to show him how to get out of it. There was, to be sure, a cheerful tinkle of horse-car bells in the air, and in the creeping vehicles which created this levity of sound were a few lonesome passengers on their way to Scollay's Square; but the two travelers, not having well-regulated minds, had no desire to go there. What would have become of Boston if the great fire had reached this sacred point of pilgrimage no merely human mind can imagine. Without it, I suppose the horse-cars would go continually round and round,

never stopping, until the cars fell away piecemeal on the track, and the horses collapsed into a mere mass of bones and harness, and the brown-covered books from the Public Library, in the hands of the fading virgins who carried them, had accumulated fines to an incalculable amount.

Boston, notwithstanding its partial destruction by fire, is still a good place to start from. When one meditates an excursion into an unknown and perhaps perilous land, where the flag will not protect him and the greenback will only partially support him, he likes to steady and tranquilize his mind by a peaceful halt and a serene start. So we—for the intelligent reader has already identified us with the two travelers resolved to spend the last night, before beginning our journey, in the quiet of a Boston hotel. Some people go into the country for quiet: we knew better. The country is no place for sleep. The general absence of sound which prevails at night is only a sort of background which brings out more vividly the special and unexpected disturbances which are suddenly sprung upon the restless listener. There are a thousand pokerish noises that no one can account for, which excite the nerves to acute watchfulness.

It is still early, and one is beginning to be lulled by the frogs and the crickets, when the faint rattle of a drum is heard,—just a few preliminary taps. But the soul takes alarm, and well it may, for a roll follows, and then a rub-a-dub-dub, and the farmer's boy who is handling the sticks and pounding the distended skin in a neighboring horse-shed begins to pour out his patriotism in that unending repetition of rub-a-dub-dub which is supposed to represent love of country in the young. When the boy is tired out and quits the field, the faithful watch-dog opens out upon the stilly night. He is the guardian of his master's slumbers. The howls of the faithful creature are answered by barks and yelps from all the farmhouses for a mile around, and exceedingly poor barking it usually is, until all the serenity of the night is torn to shreds. This is, however, only the opening of the orchestra. The cocks wake up if there is the faintest moonshine and begin an antiphonal service between responsive barn-yards. It is not the clear clarion of chanticleer that is heard in the morn of English poetry, but a harsh chorus of cracked voices, hoarse and abortive attempts, squawks of young experimenters, and some indescribable thing besides, for I believe even the hens crow in these days. Distracting as all this is, however, happy is the man who does not hear a goat lamenting in the night. The goat is the most exasperating of the animal creation. He cries like a deserted baby, but he does it without any regularity. One can accustom himself to any expression of suffering that is regular. The annoyance of the goat is in the dreadful waiting for the uncertain sound of the next wavering bleat. It is the fearful expectation of that, mingled with the faint hope that the last was the last, that aggravates the tossing listener until he has murder in his heart. He longs for daylight, hoping that the voices of the night will then cease, and that sleep will come with the blessed morning. But he has forgotten the birds, who at the first streak of gray in the east have assembled in the trees near his chamber-window, and keep up for an hour the most rasping dissonance,—an orchestra in which each artist is tuning his instrument, setting it in a different key and to play a different tune: each bird recalls a different tune, and none sings "Annie Laurie,"—to pervert Bayard Taylor's song.

Give us the quiet of a city on the night before a journey. As we mounted skyward in our hotel, and went to bed in a serene altitude, we congratulated ourselves upon a reposeful night. It began well. But as we sank into the first doze, we were startled by a sudden crash. Was it an earthquake, or another fire? Were the neighboring buildings all tumbling in upon us, or had a bomb fallen into the neighboring crockery-store? It was the suddenness of the onset that startled us, for we soon perceived that it began with the clash of cymbals, the pounding of drums, and the blaring of dreadful brass. It was somebody's idea of music. It opened without warning. The men composing the band of brass must have stolen silently into the alley about the sleeping hotel, and burst into the clamor of a rattling quickstep, on purpose. The horrible sound thus suddenly let loose had no chance of escape; it bounded back from wall to wall, like the clapping of boards in a tunnel, rattling windows and stunning all cars, in a vain attempt to get out over the roofs. But such music does not go up. What could have been the intention of this assault we could not conjecture. It was a time of profound peace through the country; we had ordered no spontaneous serenade, if it was a serenade. Perhaps the Boston bands have that habit of going into an alley and disciplining their nerves by letting out a tune too big for the alley, and taking the shock of its reverberation. It may be well enough for the band, but many a poor sinner in the hotel that night must have thought the judgment day had sprung upon him. Perhaps the band had some remorse, for by and by it leaked out of the alley, in humble, apologetic retreat, as if somebody had thrown something at it from the sixth-story window, softly breathing as it retired the notes of "Fair Harvard."

The band had scarcely departed for some other haunt of slumber and weariness, when the notes of singing floated up that prolific alley, like the sweet tenor voice of one bewailing the prohibitory movement; and for an hour or more a succession of young bacchanals, who were evidently wandering about in search of the Maine Law, lifted up their voices in song. Boston seems to be full of good singers; but they will ruin their voices by this night exercise, and so the city will cease to be attractive to travelers who would like to sleep there. But this entertainment did not last the night out.

It stopped just before the hotel porter began to come around to rouse the travelers who had said the night before that they wanted to be awakened. In all well-regulated hotels this process begins at two o'clock and keeps up till seven. If the porter is at all faithful, he wakes up everybody in the house; if he is a shirk, he only rouses the wrong people. We treated the pounding of the porter on our door with silent contempt. At the next door he had better luck. Pound, pound. An angry voice, "What do you want?"

"Time to take the train, sir."

"Not going to take any train."

"Ain't your name Smith?"

"Yes."

"Well, Smith"—

"I left no order to be called." (Indistinct grumbling from Smith's room.)

Porter is heard shuffling slowly off down the passage. In a little while he returns to Smith's door, evidently not satisfied in his mind. Rap, rap, rap!

"Well, what now?"

"What's your initials? A. T.; clear out!"

And the porter shambles away again in his slippers, grumbling something about a mistake. The idea of waking a man up in the middle of the night to ask him his "initials" was ridiculous enough to banish sleep for another hour. A person named Smith, when he travels, should leave his initials outside the door with his boots.

Refreshed by this reposeful night, and eager to exchange the stagnation of the shore for the tumult of the ocean, we departed next morning for Baddeck by the most direct route. This we found, by diligent study of fascinating prospectuses of travel, to be by the boats of the International Steamship Company; and when, at eight o'clock in the morning, we stepped aboard one of them from Commercial Wharf, we felt that half our journey and the most perplexing part of it was accomplished. We had put ourselves upon a great line of travel, and had only to resign ourselves to its flow in order to reach the desired haven. The agent at the wharf assured us that it was not necessary to buy through tickets to Baddeck,—he spoke of it as if it were as easy a place to find as Swampscott,—it was a conspicuous name on the cards of the company, we should go right on from St. John without difficulty. The easy familiarity of this official with Baddeck, in short, made us ashamed to exhibit any anxiety about its situation or the means of approach to it. Subsequent experience led us to believe that the only man in the world, out of Baddeck, who knew anything about it lives in Boston, and sells tickets to it, or rather towards it.

There is no moment of delight in any pilgrimage like the beginning of it, when the traveler is settled simply as to his destination, and commits himself to his unknown fate and all the anticipations of adventure before him. We experienced this pleasure as we ascended to the deck of the steamboat and snuffed the fresh air of Boston Harbor. What a beautiful harbor it is, everybody says, with its irregularly indented shores and its islands. Being strangers, we want to know the names of the islands, and to have Fort Warren, which has a national reputation, pointed out. As usual on a steamboat, no one is certain about the names, and the little geographical knowledge we have is soon hopelessly confused. We make out South Boston very plainly: a tourist is looking at its warehouses through his opera-glass, and telling his boy about a recent fire there. We find out afterwards that it was East Boston. We pass to the stern of the boat for a last look at Boston itself; and while there we have the pleasure of showing inquirers the Monument and the State House. We do this with easy familiarity; but where there are so many tall factory chimneys, it is not so easy to point out the Monument as one may think.

The day is simply delicious, when we get away from the unozoned air of the land. The sky is cloudless, and the water sparkles like the top of a glass of champagne. We intend by and by to sit down and look at it for half a day, basking in the sunshine and pleasing ourselves with the shifting and dancing of the waves. Now we are busy running about from side to side to see the islands, Governor's, Castle, Long, Deer, and the others. When, at length, we find Fort Warren, it is not nearly so grim and gloomy as we had expected, and is rather a pleasure-place than a prison in appearance. We are conscious, however, of a patriotic emotion as we pass its green turf and peeping guns. Leaving on our right Lovell's Island and the Great and Outer Brewster, we stand away north along the jagged Massachusetts shore. These outer islands look cold and wind-swept even in summer, and have a hardness of outline which is very far from the aspect of summer isles in summer seas. They are too low and bare for beauty, and all the coast is of the most retiring and humble description. Nature makes some compensation for this lowness by an eccentricity of indentation which looks very picturesque on the map, and sometimes striking, as where Lynn stretches out a slender arm with knobby Nahant at the end, like a New Zealand war club. We sit and watch this shore as we glide by with a placid delight. Its curves and low promontories are getting to be speckled with villages and dwellings, like the shores of the Bay of Naples; we see the white spires, the summer cottages of wealth, the brown farmhouses with an occasional orchard, the gleam of a white beach, and now and then the flag of some many-piazzaed hotel. The sunlight is the glory of it all; it must have quite another attraction—that of melancholy—under a gray sky and with a lead-colored water foreground.

There was not much on the steamboat to distract our attention from the study of physical geography. All the fashionable travelers had gone on the previous boat or were waiting for the next one. The passengers were mostly people who belonged in the Provinces and had the listless provincial air, with a Boston commercial traveler or two, and a few gentlemen from the republic of Ireland, dressed in their uncomfortable Sunday clothes. If any accident should happen to the boat, it was doubtful if there were persons on board who could draw up and pass the proper resolutions of thanks to the officers. I heard one of these Irish gentlemen, whose satin vest was insufficient to repress the mountainous protuberance of his shirt-bosom, enlightening an admiring friend as to his idiosyncrasies. It appeared that he was that sort of a man that, if a man wanted anything of him, he had only to speak for it "wunst;" and that one of his peculiarities was an instant response of the deltoid muscle to the brain, though he did not express it in that language. He went on to explain to his auditor that he was so constituted physically that whenever he saw a fight, no matter whose property it was, he lost all control of himself. This sort of confidence poured out to a single friend, in a retired place on the guard of the boat, in an unexcited tone, was evidence of the man's simplicity and sincerity. The very act of traveling, I have noticed, seems to open a man's heart, so that he will impart to a chance acquaintance his losses, his diseases, his table preferences, his disappointments in love or in politics, and his most secret hopes. One sees everywhere this beautiful human trait, this craving for sympathy. There was the old lady, in the antique bonnet and plain cotton gloves, who got aboard the express train at a way-station on the Connecticut River Road. She wanted to go, let us say, to Peak's Four Corners. It seemed that the train did not usually stop there, but it appeared afterwards that the obliging conductor had told her to get aboard and he would let her off at Peak's. When she stepped into the car, in a flustered condition, carrying her large handbox, she began to ask all the passengers, in turn, if this was the right train, and if it stopped at Peak's. The information she received was various, but the weight of it was discouraging, and some of the passengers urged her to get off without delay, before the train should start. The poor woman got off, and pretty soon came back again, sent by the conductor; but her mind was not settled, for she repeated her questions to every person who passed her seat, and their answers still more discomposed her. "Sit perfectly still," said the conductor, when he came by. "You must get out and wait for a way train," said the passengers, who knew. In this confusion, the train moved off, just as the old lady had about made up her mind to quit the car, when her

distraction was completed by the discovery that her hair trunk was not on board. She saw it standing on the open platform, as we passed, and after one look of terror, and a dash at the window, she subsided into her seat, grasping her handbox, with a vacant look of utter despair. Fate now seemed to have done its worst, and she was resigned to it. I am sure it was no mere curiosity, but a desire to be of service, that led me to approach her and say, "Madam, where are you going?"

"The Lord only knows," was the utterly candid response; but then, forgetting everything in her last misfortune and impelled to a burst of confidence, she began to tell me her troubles. She informed me that her youngest daughter was about to be married, and that all her wedding-clothes and all her summer clothes were in that trunk; and as she said this she gave a glance out of the window as if she hoped it might be following her. What would become of them all now, all brand new, she did n't know, nor what would become of her or her daughter. And then she told me, article by article and piece by piece, all that that trunk contained, the very names of which had an unfamiliar sound in a railway-car, and how many sets and pairs there were of each. It seemed to be a relief to the old lady to make public this catalogue which filled all her mind; and there was a pathos in the revelation that I cannot convey in words. And though I am compelled, by way of illustration, to give this incident, no bribery or torture shall ever extract from me a statement of the contents of that hair trunk.

We were now passing Nahant, and we should have seen Longfellow's cottage and the waves beating on the rocks before it, if we had been near enough. As it was, we could only faintly distinguish the headland and note the white beach of Lynn. The fact is, that in travel one is almost as much dependent upon imagination and memory as he is at home. Somehow, we seldom get near enough to anything. The interest of all this coast which we had come to inspect was mainly literary and historical. And no country is of much interest until legends and poetry have draped it in hues that mere nature cannot produce. We looked at Nahant for Longfellow's sake; we strained our eyes to make out Marblehead on account of Whittier's ballad; we scrutinized the entrance to Salem Harbor because a genius once sat in its decaying custom-house and made of it a throne of the imagination. Upon this low shore line, which lies blinking in the midday sun, the waves of history have beaten for two centuries and a half, and romance has had time to grow there. Out of any of these coves might have sailed Sir Patrick Spens "to Norway, to Norway,"

*"They hadna sailed upon the sea
A day but barely three,*

*Till loud and boisterous grew the wind,
And gurlly grew the sea."*

The sea was anything but gurlly now; it lay idle and shining in an August holiday. It seemed as if we could sit all day and watch the suggestive shore and dream about it. But we could not. No man, and few women, can sit all day on those little round penitential stools that the company provide for the discomfort of their passengers. There is no scenery in the world that can be enjoyed from one of those stools. And when the traveler is at sea, with the land failing away in his horizon, and has to create his own scenery by an effort of the imagination, these stools are no assistance to him. The imagination, when one is sitting, will not work unless the back is supported. Besides, it began to be cold; notwithstanding the shiny, specious appearance of things, it was cold, except in a sheltered nook or two where the sun beat. This was nothing to be complained of by persons who had left the parching land in order to get cool. They knew that there would be a wind and a draught everywhere, and that they would be occupied nearly all the time in moving the little stools about to get out of the wind, or out of the sun, or out of something that is inherent in a steamboat. Most people enjoy riding on a steamboat, shaking and trembling and chow-chowing along in pleasant weather out of sight of land; and they do not feel any ennui, as may be inferred from the intense excitement which seizes them when a poor porpoise leaps from the water half a mile away. "Did you see the porpoise?" makes conversation for an hour. On our steamboat there was a man who said he saw a whale, saw him just as plain, off to the east, come up to blow; appeared to be a young one. I wonder where all these men come from who always see a whale. I never was on a sea-steamer yet that there was not one of these men.

We sailed from Boston Harbor straight for Cape Ann, and passed close by the twin lighthouses of Thacher, so near that we could see the lanterns and the stone gardens, and the young barbarians of Thacher all at play; and then we bore away, straight over the trackless Atlantic, across that part of the map where the title and the publisher's name are usually printed, for the foreign city of St. John. It was after we passed these lighthouses that we did n't see the whale, and began to regret the hard fate that took us away from a view of the Isles of Shoals. I am not tempted to introduce them into this sketch, much as its surface needs their romantic color, for truth is stronger in me than the love of giving a deceitful pleasure. There will be nothing in this record that we did not see, or might not have seen. For instance, it might not be wrong to describe a coast, a town, or an island that we passed while we were performing our morning toilets in our staterooms. The traveler owes a duty to his readers, and if he is now and then too weary or too indifferent to go out from the cabin to survey a prosperous village where a landing is made, he has no right to cause the reader to suffer by his indolence. He should describe the village.

I had intended to describe the Maine coast, which is as fascinating on the map as that of Norway. We had all the feelings appropriate to nearness to it, but we couldn't see it. Before we came abreast of it night had settled down, and there was around us only a gray and melancholy waste of salt water. To be sure it was a lovely night, with a young moon in its sky,

*"I saw the new moon late yestreen
Wi' the auld moon in her arms,"*

and we kept an anxious lookout for the Maine hills that push so boldly down into the sea. At length we saw them,—faint, dusky shadows in the horizon, looming up in an ashy color and with a most poetical light. We made out clearly Mt. Desert, and felt repaid for our journey by the sight of this famous island, even at such a distance. I pointed out the hills to the man at the wheel, and asked if we should go any nearer to Mt. Desert.

"Them!" said he, with the merited contempt which officials in this country have for inquisitive travelers,—"them's Camden Hills. You won't see Mt. Desert till midnight, and then you won't."

One always likes to weave in a little romance with summer travel on a steamboat; and we came aboard this one with the purpose and the language to do so. But there was an absolute want of material, that would hardly be credited if we went into details. The first meeting of the passengers at the dinner-table revealed it. There is a kind of female plainness which is pathetic, and many persons can truly say that to them it is homelike; and there are vulgarities of manner that are interesting; and there are peculiarities, pleasant or the reverse, which attract one's attention: but there was absolutely nothing of this sort on our boat. The female passengers were all neutrals, incapable, I should say, of making any impression whatever even under the most favorable circumstances. They were probably women of the Provinces, and took their neutral tint from the foggy land they inhabit, which is neither a republic nor a monarchy, but merely a languid expectation of something undefined. My comrade was disposed to resent the dearth of beauty, not only on this vessel but throughout the Provinces generally,—a resentment that could be shown to be unjust, for this was evidently not the season for beauty in these lands, and it was probably a bad year for it. Nor should an American of the United States be forward to set up his standard of taste in such matters; neither in New Brunswick, Nova Scotia, nor Cape Breton have I heard the inhabitants complain of the plainness of the women.

On such a night two lovers might have been seen, but not on our boat, leaning over the taffrail,—if that is the name of the fence around the cabin-deck, looking at the moon in the western sky and the long track of light in the steamer's wake with unutterable tenderness. For the sea was perfectly smooth, so smooth as not to interfere with the most perfect tenderness of feeling; and the vessel forged ahead under the stars of the soft night with an adventurous freedom that almost concealed the commercial nature of her mission. It seemed—this voyaging through the sparkling water, under the scintillating heavens, this resolute pushing into the opening splendors of night—like a pleasure trip. "It is the witching hour of half past ten," said my comrade, "let us turn in." (The reader will notice the consideration for her feelings which has omitted the usual description of "a sunset at sea.")

When we looked from our state-room window in the morning we saw land. We were passing within a stone's throw of a pale-green and rather cold-looking coast, with few trees or other evidences of fertile soil. Upon going out I found that we were in the harbor of Eastport. I found also the usual tourist who had been up, shivering in his winter overcoat, since four o'clock. He described to me the magnificent sunrise, and the lifting of the fog from islands and capes, in language that made me rejoice that he had seen it. He knew all about the harbor. That wooden town at the foot of it, with the white spire, was Lubec; that wooden town we were approaching was Eastport. The long island stretching clear across the harbor was Campobello. We had been obliged to go round it, a dozen miles out of our way, to get in, because the tide was in such a stage that we could not enter by the Lubec Channel. We had been obliged to enter an American harbor by British waters.

We approached Eastport with a great deal of curiosity and considerable respect. It had been one of the cities of the imagination. Lying in the far east of our great territory, a military and even a sort of naval station, a conspicuous name on the map, prominent in boundary disputes and in war operations, frequent in telegraphic dispatches,—we had imagined it a solid city, with some Oriental, if decayed, peculiarity, a port of trade and commerce. The tourist informed me that Eastport looked very well at a distance, with the sun shining on its white houses. When we landed at its wooden dock we saw that it consisted of a few piles of lumber, a sprinkling of small cheap houses along a sidehill, a big hotel with a flag-staff, and a very peaceful looking arsenal. It is doubtless a very enterprising and deserving city, but its aspect that morning was that of cheapness, newness, and stagnation, with no compensating picturesqueness. White paint always looks chilly under a gray sky and on naked hills. Even in hot August the place seemed bleak. The tourist, who went ashore with a view to breakfast, said that it would be a good place to stay in and go a-fishing and picnicking on Campobello Island. It has another advantage for the wicked over other Maine towns. Owing to the contiguity of British territory, the Maine Law is constantly evaded, in spirit. The thirsty citizen or sailor has only to step into a boat and give it a shove or two across the narrow stream that separates the United States from Deer Island and land, when he can ruin his breath, and return before he is missed.

This might be a cause of war with, England, but it is not the most serious grievance here. The possession by the British of the island of Campobello is an insufferable menace and impertinence. I write with the full knowledge of what war is. We ought to instantly dislodge the British from Campobello. It entirely shuts up and commands our harbor, one of our chief Eastern harbors and war stations, where we keep a flag and cannon and some soldiers, and where the customs officers look out for smuggling. There is no way to get into our own harbor, except in favorable conditions of the tide, without begging the courtesy of a passage through British waters. Why is England permitted to stretch along down our coast in this straggling and inquisitive manner? She might almost as well own Long Island. It was impossible to prevent our cheeks mantling with shame as we thought of this, and saw ourselves, free American citizens, land-locked by alien soil in our own harbor.

We ought to have war, if war is necessary to possess Campobello and Deer Islands; or else we ought to give the British Eastport. I am not sure but the latter would be the better course.

With this war spirit in our hearts, we sailed away into the British waters of the Bay of Fundy, but keeping all the morning so close to the New Brunswick shore that we could see there was nothing on it; that is, nothing that would make one wish to land. And yet the best part of going to sea is keeping close to the shore, however tame it may be, if the weather is pleasant. A pretty bay now and then, a rocky cove with scant foliage, a lighthouse, a rude cabin, a level land, monotonous and without noble forests,—this was New Brunswick as we coasted along it under the most favorable circumstances. But we were advancing into the Bay of Fundy; and my comrade, who had been brought up on its high tides in the district school, was on the lookout for this phenomenon. The very name of Fundy is stimulating to the imagination, amid the geographical wastes of youth, and the young fancy reaches out to its tides with an enthusiasm that is given only to Fingal's Cave and other pictorial wonders of the text-book. I am sure the district schools would become what they are not now, if the geographers would make the other parts of the globe as attractive as

the sonorous Bay of Fundy. The recitation about that is always an easy one; there is a lusty pleasure in the mere shouting out of the name, as if the speaking it were an innocent sort of swearing. From the Bay of Fundy the rivers run uphill half the time, and the tides are from forty to ninety feet high. For myself, I confess that, in my imagination, I used to see the tides of this bay go stalking into the land like gigantic waterspouts; or, when I was better instructed, I could see them advancing on the coast like a solid wall of masonry eighty feet high. "Where," we said, as we came easily, and neither uphill nor downhill, into the pleasant harbor of St. John,—“where are the tides of our youth?”

They were probably out, for when we came to the land we walked out upon the foot of a sloping platform that ran into the water by the side of the piles of the dock, which stood up naked and blackened high in the air. It is not the purpose of this paper to describe St. John, nor to dwell upon its picturesque situation. As one approaches it from the harbor it gives a promise which its rather shabby streets, decaying houses, and steep plank sidewalks do not keep. A city set on a hill, with flags flying from a roof here and there, and a few shining spires and walls glistening in the sun, always looks well at a distance. St. John is extravagant in the matter of flagstuffs; almost every well-to-do citizen seems to have one on his premises, as a sort of vent for his loyalty, I presume. It is a good fashion, at any rate, and its more general adoption by us would add to the gayety of our cities when we celebrate the birthday of the President. St. John is built on a steep sidehill, from which it would be in danger of sliding off, if its houses were not mortised into the solid rock. This makes the house-foundations secure, but the labor of blasting out streets is considerable. We note these things complacently as we toil in the sun up the hill to the Victoria Hotel, which stands well up on the backbone of the ridge, and from the upper windows of which we have a fine view of the harbor, and of the hill opposite, above Carleton, where there is the brokenly truncated ruin of a round stone tower. This tower was one of the first things that caught our eyes as we entered the harbor. It gave an antique picturesqueness to the landscape which it entirely wanted without this. Round stone towers are not so common in this world that we can afford to be indifferent to them. This is called a Martello tower, but I could not learn who built it. I could not understand the indifference, almost amounting to contempt, of the citizens of St. John in regard to this their only piece of curious antiquity. "It is nothing but the ruins of an old fort," they said; "you can see it as well from here as by going there." It was, however, the one thing at St. John I was determined to see. But we never got any nearer to it than the ferry-landing. Want of time and the vis inertia of the place were against us. And now, as I think of that tower and its perhaps mysterious origin, I have a longing for it that the possession of nothing else in the Provinces could satisfy.

But it must not be forgotten that we were on our way to Baddeck; that the whole purpose of the journey was to reach Baddeck; that St. John was only an incident in the trip; that any information about St. John, which is here thrown in or mercifully withheld, is entirely gratuitous, and is not taken into account in the price the reader pays for this volume. But if any one wants to know what sort of a place St. John is, we can tell him: it is the sort of a place that if you get into it after eight o'clock on Wednesday morning, you cannot get out of it in any direction until Thursday morning at eight o'clock, unless you want to smuggle goods on the night train to Bangor. It was eleven o'clock Wednesday forenoon when we arrived at St. John. The Intercolonial railway train had gone to Shediac; it had gone also on its roundabout Moncton, Missaquat River, Truro, Stewiack, and Shubenacadie way to Halifax; the boat had gone to Digby Gut and Annapolis to catch the train that way for Halifax; the boat had gone up the river to Frederick, the capital. We could go to none of these places till the next day. We had no desire to go to Frederick, but we made the fact that we were cut off from it an addition to our injury. The people of St. John have this peculiarity: they never start to go anywhere except early in the morning.

The reader to whom time is nothing does not yet appreciate the annoyance of our situation. Our time was strictly limited. The active world is so constituted that it could not spare us more than two weeks. We must reach Baddeck Saturday night or never. To go home without seeing Baddeck was simply intolerable. Had we not told everybody that we were going to Baddeck? Now, if we had gone to Shediac in the train that left St. John that morning, we should have taken the steamboat that would have carried us to Port Hawkesbury, whence a stage connected with a steamboat on the Bras d'Or, which (with all this profusion of relative pronouns) would land us at Baddeck on Friday. How many times had we been over this route on the map and the prospectus of travel! And now, what a delusion it seemed! There would not another boat leave Shediac on this route till the following Tuesday,—quite too late for our purpose. The reader sees where we were, and will be prepared, if he has a map (and any feelings), to appreciate the masterly strategy that followed.

II

During the pilgrimage everything does not suit the tastes of the pilgrim.—TURKISH PROVERB.

One seeking Baddeck, as a possession, would not like to be detained a prisoner even in Eden,—much less in St. John, which is unlike Eden in several important respects. The tree of knowledge does not grow there, for one thing; at least St. John's ignorance of Baddeck amounts to a feature. This encountered us everywhere. So dense was this ignorance, that we, whose only knowledge of the desired place was obtained from the prospectus of travel, came to regard ourselves as missionaries of geographical information in this dark provincial city.

The clerk at the Victoria was not unwilling to help us on our journey, but if he could have had his way, we would have gone to a place on Prince Edward Island which used to be called Bedeque, but is now named Summerside, in the hope of attracting summer visitors. As to Cape Breton, he said the agent of the Intercolonial could tell us all about that, and put us on the route. We repaired to the agent. The kindness of this person dwells in our memory. He entered at once into our longings and perplexities. He produced his

maps and time-tables, and showed us clearly what we already knew. The Port Hawkesbury steamer from Shediac for that week had gone, to be sure, but we could take one of another line which would leave us at Pictou, whence we could take another across to Port Hood, on Cape Breton. This looked fair, until we showed the agent that there was no steamer to Port Hood.

"Ah, then you can go another way. You can take the Intercolonial railway round to Pictou, catch the steamer for Port Hawkesbury, connect with the steamer on the Bras d'Or, and you are all right."

So it would seem. It was a most obliging agent; and it took us half an hour to convince him that the train would reach Pictou half a day too late for the steamer, that no other boat would leave Pictou for Cape Breton that week, and that even if we could reach the Bras d'Or, we should have no means of crossing it, except by swimming. The perplexed agent thereupon referred us to Mr. Brown, a shipper on the wharf, who knew all about Cape Breton, and could tell us exactly how to get there. It is needless to say that a weight was taken off our minds. We pinned our faith to Brown, and sought him in his warehouse. Brown was a prompt business man, and a traveler, and would know every route and every conveyance from Nova Scotia to Cape Breton.

Mr. Brown was not in. He never is in. His store is a rusty warehouse, low and musty, piled full of boxes of soap and candles and dried fish, with a little glass cubby in one corner, where a thin clerk sits at a high desk, like a spider in his web. Perhaps he is a spider, for the cubby is swarming with flies, whose hum is the only noise of traffic; the glass of the window-sash has not been washed since it was put in apparently. The clerk is not writing, and has evidently no other use for his steel pen than spearing flies. Brown is out, says this young votary of commerce, and will not be in till half past five. We remark upon the fact that nobody ever is "in" these dingy warehouses, wonder when the business is done, and go out into the street to wait for Brown.

In front of the store is a dray, its horse fast-asleep, and waiting for the revival of commerce. The travelers note that the dray is of a peculiar construction, the body being dropped down from the axles so as nearly to touch the ground,—a great convenience in loading and unloading; they propose to introduce it into their native land. The dray is probably waiting for the tide to come in. In the deep slip lie a dozen helpless vessels, coasting schooners mostly, tipped on their beam ends in the mud, or propped up by side-pieces as if they were built for land as well as for water. At the end of the wharf is a long English steamerboat unloading railroad iron, which will return to the Clyde full of Nova Scotia coal. We sit down on the dock, where the fresh sea-breeze comes up the harbor, watch the lazily swinging crane on the vessel, and meditate upon the greatness of England and the peacefulness of the drowsy after noon. One's feeling of rest is never complete—unless he can see somebody else at work,—but the labor must be without haste, as it is in the Provinces.

While waiting for Brown, we had leisure to explore the shops of King's Street, and to climb up to the grand triumphal arch which stands on top of the hill and guards the entrance to King's Square.

Of the shops for dry-goods I have nothing to say, for they tempt the unwary American to violate the revenue laws of his country; but he may safely go into the book-shops. The literature which is displayed in the windows and on the counters has lost that freshness which it once may have had, and is, in fact, if one must use the term, fly-specked, like the cakes in the grocery windows on the side streets. There are old illustrated newspapers from the States, cheap novels from the same, and the flashy covers of the London and Edinburgh sixpenny editions. But this is the dull season for literature, we reflect.

It will always be matter of regret to us that we climbed up to the triumphal arch, which appeared so noble in the distance, with the trees behind it. For when we reached it, we found that it was built of wood, painted and sanded, and in a shocking state of decay; and the grove to which it admitted us was only a scant assemblage of sickly locust-trees, which seemed to be tired of battling with the unfavorable climate, and had, in fact, already retired from the business of ornamental shade trees. Adjoining this square is an ancient cemetery, the surface of which has decayed in sympathy with the mouldering remains it covers, and is quite a model in this respect. I have called this cemetery ancient, but it may not be so, for its air of decay is thoroughly modern, and neglect, and not years, appears to have made it the melancholy place of repose it is. Whether it is the fashionable and favorite resort of the dead of the city we did not learn, but there were some old men sitting in its damp shades, and the nurses appeared to make it a rendezvous for their baby-carriages,—a cheerful place to bring up children in, and to familiarize their infant minds with the fleeting nature of provincial life. The park and burying-ground, it is scarcely necessary to say, added greatly to the feeling of repose which stole over us on this sunny day. And they made us long for Brown and his information about Baddeck.

But Mr. Brown, when found, did not know as much as the agent. He had been in Nova Scotia; he had never been in Cape Breton; but he presumed we would find no difficulty in reaching Baddeck by so and so, and so and so. We consumed valuable time in convincing Brown that his directions to us were impracticable and valueless, and then he referred us to Mr. Cope. An interview with Mr. Cope discouraged us; we found that we were imparting everywhere more geographical information than we were receiving, and as our own stock was small, we concluded that we should be unable to enlighten all the inhabitants of St. John upon the subject of Baddeck before we ran out. Returning to the hotel, and taking our destiny into our own hands, we resolved upon a bold stroke.

But to return for a moment to Brown. I feel that Brown has been let off too easily in the above paragraph. His conduct, to say the truth, was not such as we expected of a man in whom we had put our entire faith for half a day,—a long while to trust anybody in these times,—a man whom we had exalted as an encyclopedia of information, and idealized in every way. A man of wealth and liberal views and courtly manners we had decided Brown would be. Perhaps he had a suburban villa on the heights over-looking Kennebeckasis Bay, and, recognizing us as brothers in a common interest in Baddeck, notwithstanding our different nationality, would insist upon taking us to his house, to sip provincial tea with Mrs. Brown and Victoria Louise, his daughter. When, therefore, Mr. Brown whisked into his dingy office, and, but for our importunity, would have paid no more attention to us than to up-country customers without credit, and when he proved to be willingly, it seemed to us, ignorant of Baddeck, our feelings received a great shock. It is incomprehensible that a man in the position of Brown with so many boxes of soap and candles to dispose of—should be so ignorant of a neighboring province. We had heard of the cordial unity of the Provinces in the New Dominion. Heaven help it, if it depends upon such fellows as Brown! Of course, his directing us to Cope was a mere fetch. For as we

have intimated, it would have taken us longer to have given Cope an idea of Baddeck, than it did to enlighten Brown. But we had no bitter feelings about Cope, for we never had reposed confidence in him.

Our plan of campaign was briefly this: To take the steamboat at eight o'clock, Thursday morning, for Digby Gut and Annapolis; thence to go by rail through the poetical Acadia down to Halifax; to turn north and east by rail from Halifax to New Glasgow, and from thence to push on by stage to the Gut of Canso. This would carry us over the entire length of Nova Scotia, and, with good luck, land us on Cape Breton Island Saturday morning. When we should set foot on that island, we trusted that we should be able to make our way to Baddeck, by walking, swimming, or riding, whichever sort of locomotion should be most popular in that province. Our imaginations were kindled by reading that the "most superb line of stages on the continent" ran from New Glasgow to the Gut of Canso. If the reader perfectly understands this programme, he has the advantage of the two travelers at the time they made it.

It was a gray morning when we embarked from St. John, and in fact a little drizzle of rain veiled the Martello tower, and checked, like the cross-strokes of a line engraving, the hill on which it stands. The miscellaneous shining of such a harbor appears best in a golden haze, or in the mist of a morning like this. We had expected days of fog in this region; but the fog seemed to have gone out with the high tides of the geography. And it is simple justice to these possessions of her Majesty, to say that in our two weeks' acquaintance of them they enjoyed as delicious weather as ever falls on sea and shore, with the exception of this day when we crossed the Bay of Fundy. And this day was only one of those cool interludes of low color, which an artist would be thankful to introduce among a group of brilliant pictures. Such a day rests the traveler, who is overstimulated by shifting scenes played upon by the dazzling sun. So the cool gray clouds spread a grateful umbrella above us as we ran across the Bay of Fundy, sighted the headlands of the Gut of Digby, and entered into the Annapolis Basin, and into the region of a romantic history. The white houses of Digby, scattered over the downs like a flock of washed sheep, had a somewhat chilly aspect, it is true, and made us long for the sun on them. But as I think of it now, I prefer to have the town and the pretty hillsides that stand about the basin in the light we saw them; and especially do I like to recall the high wooden pier at Digby, deserted by the tide and so blown by the wind that the passengers who came out on it, with their tossing drapery, brought to mind the windy Dutch harbors that Backhuysen painted. We landed a priest here, and it was a pleasure to see him as he walked along the high pier, his broad hat flapping, and the wind blowing his long skirts away from his ecclesiastical legs.

It was one of the coincidences of life, for which no one can account, that when we descended upon these coasts, the Governor-General of the Dominion was abroad in his Provinces. There was an air of expectation of him everywhere, and of preparation for his coming; his lordship was the subject of conversation on the Digby boat, his movements were chronicled in the newspapers, and the gracious bearing of the Governor and Lady Dufferin at the civic receptions, balls, and picnics was recorded with loyal satisfaction; even a literary favor was given to the provincial journals by quotations from his lordship's condescension to letters in the "High Latitudes." It was not without pain, however, that even in this un-American region we discovered the old Adam of journalism in the disposition of the newspapers of St. John toward sarcasm touching the well-meant attempts to entertain the Governor and his lady in the provincial town of Halifax,—a disposition to turn, in short, upon the demonstrations of loyal worship the faint light of ridicule. There were those upon the boat who were journeying to Halifax to take part in the civic ball about to be given to their excellencies, and as we were going in the same direction, we shared in the feeling of satisfaction which proximity to the Great often excites.

We had other if not deeper causes of satisfaction. We were sailing along the gracefully moulded and tree-covered hills of the Annapolis Basin, and up the mildly picturesque river of that name, and we were about to enter what the provincials all enthusiastically call the Garden of Nova Scotia. This favored vale, skirted by low ranges of hills on either hand, and watered most of the way by the Annapolis River, extends from the mouth of the latter to the town of Windsor on the river Avon. We expected to see something like the fertile valleys of the Connecticut or the Mohawk. We should also pass through those meadows on the Basin of Minas which Mr. Longfellow has made more sadly poetical than any other spot on the Western Continent. It is,—this valley of the Annapolis,—in the belief of provincials, the most beautiful and blooming place in the world, with a soil and climate kind to the husbandman; a land of fair meadows, orchards, and vines. It was doubtless our own fault that this land did not look to us like a garden, as it does to the inhabitants of Nova Scotia; and it was not until we had traveled over the rest of the country, that we saw the appropriateness of the designation. The explanation is, that not so much is required of a garden here as in some other parts of the world. Excellent apples, none finer, are exported from this valley to England, and the quality of the potatoes is said to approach an ideal perfection here. I should think that oats would ripen well also in a good year, and grass, for those who care for it, may be satisfactory. I should judge that the other products of this garden are fish and building-stone. But we anticipate. And have we forgotten the "murmuring pines and the hemlocks"? Nobody, I suppose, ever travels here without believing that he sees these trees of the imagination, so forcibly has the poet projected them upon the uni-versal consciousness. But we were unable to see them, on this route.

It would be a brutal thing for us to take seats in the railway train at Annapolis, and leave the ancient town, with its modern houses and remains of old fortifications, without a thought of the romantic history which saturates the region. There is not much in the smart, new restaurant, where a tidy waiting-maid skillfully depreciates our currency in exchange for bread and cheese and ale, to recall the early drama of the French discovery and settlement. For it is to the French that we owe the poetical interest that still invests, like a garment, all these islands and bays, just as it is to the Spaniards that we owe the romance of the Florida coast. Every spot on this continent that either of these races has touched has a color that is wanting in the prosaic settlements of the English.

Without the historical light of French adventure upon this town and basin of Annapolis, or Port Royal, as they were first named, I confess that I should have no longing to stay here for a week; notwithstanding the guide-book distinctly says that this harbor has "a striking resemblance to the beautiful Bay of Naples." I am not offended at this remark, for it is the one always made about a harbor, and I am sure the passing traveler

can stand it, if the Bay of Naples can. And yet this tranquil basin must have seemed a haven of peace to the first discoverers.

It was on a lovely summer day in 1604, that the Sieur de Monts and his comrades, Champlain and the Baron de Poutrincourt, beating about the shores of Nova Scotia, were invited by the rocky gateway of the Port Royal Basin. They entered the small inlet, says Mr. Parkman, when suddenly the narrow strait dilated into a broad and tranquil basin, compassed with sunny hills, wrapped with woodland verdure and alive with waterfalls. Poutrincourt was delighted with the scene, and would fain remove thither from France with his family. Since Poutrincourt's day, the hills have been somewhat denuded of trees, and the waterfalls are not now in sight; at least, not under such a gray sky as we saw.

The reader who once begins to look into the French occupancy of Acadia is in danger of getting into a sentimental vein, and sentiment is the one thing to be shunned in these days. Yet I cannot but stay, though the train should leave us, to pay my respectful homage to one of the most heroic of women, whose name recalls the most romantic incident in the history of this region. Out of this past there rises no figure so captivating to the imagination as that of Madame de la Tour. And it is noticeable that woman has a curious habit of coming to the front in critical moments of history, and performing some exploit that eclipses in brilliancy all the deeds of contemporary men; and the exploit usually ends in a pathetic tragedy, that fixes it forever in the sympathy of the world. I need not copy out of the pages of De Charlevoix the well-known story of Madame de la Tour; I only wish he had told us more about her. It is here at Port Royal that we first see her with her husband. Charles de St. Etienne, the Chevalier de la Tour,—there is a world of romance in these mere names,—was a Huguenot nobleman who had a grant of Port Royal and of La Hive, from Louis XIII. He ceded La Hive to Razilli, the governor-in-chief of the provinces, who took a fancy to it, for a residence. He was living peacefully at Port Royal in 1647, when the Chevalier d'Aunay Charnise, having succeeded his brother Razilli at La Hive, tired of that place and removed to Port Royal. De Charnise was a Catholic; the difference in religion might not have produced any unpleasantness, but the two noblemen could not agree in dividing the profits of the peltry trade,—each being covetous, if we may so express it, of the hide of the savage continent, and determined to take it off for himself. At any rate, disagreement arose, and De la Tour moved over to the St. John, of which region his father had enjoyed a grant from Charles I. of England,—whose sad fate it is not necessary now to recall to the reader's mind,—and built a fort at the mouth of the river. But the differences of the two ambitious Frenchmen could not be composed. De la Tour obtained aid from Governor Winthrop at Boston, thus verifying the Catholic prediction that the Huguenots would side with the enemies of France on occasion. De Charnise received orders from Louis to arrest De la Tour; but a little preliminary to the arrest was the possession of the fort of St. John, and this he could not obtain, although he sent all his force against it. Taking advantage, however, of the absence of De la Tour, who had a habit of roving about, he one day besieged St. John. Madame de la Tour headed the little handful of men in the fort, and made such a gallant resistance that De Charnise was obliged to draw off his fleet with the loss of thirty-three men,—a very serious loss, when the supply of men was as distant as France. But De Charnise would not be balked by a woman; he attacked again; and this time, one of the garrison, a Swiss, betrayed the fort, and let the invaders into the walls by an unguarded entrance. It was Easter morning when this misfortune occurred, but the peaceful influence of the day did not avail. When Madame saw that she was betrayed, her spirits did not quail; she took refuge with her little band in a detached part of the fort, and there made such a bold show of defense, that De Charnise was obliged to agree to the terms of her surrender, which she dictated. No sooner had this unchivalrous fellow obtained possession of the fort and of this Historic Woman, than, overcome with a false shame that he had made terms with a woman, he violated his noble word, and condemned to death all the men, except one, who was spared on condition that he should be the executioner of the others. And the poltroon compelled the brave woman to witness the execution, with the added indignity of a rope round her neck,—or as De Charlevoix much more neatly expresses it, “obligea sa prisonniere d'assister a l'execution, la corde au cou.”

To the shock of this horror the womanly spirit of Madame de la Tour succumbed; she fell into a decline and died soon after. De la Tour, himself an exile from his province, wandered about the New World in his customary pursuit of peltry. He was seen at Quebec for two years. While there, he heard of the death of De Charnise, and straightway repaired to St. John. The widow of his late enemy received him graciously, and he entered into possession of the estate of the late occupant with the consent of all the heirs. To remove all roots of bitterness, De la Tour married Madame de Charnise, and history does not record any ill of either of them. I trust they had the grace to plant a sweetbrier on the grave of the noble woman to whose faithfulness and courage they owe their rescue from obscurity. At least the parties to this singular union must have agreed to ignore the lamented existence of the Chevalier d'Aunay.

With the Chevalier de la Tour, at any rate, it all went well thereafter. When Cromwell drove the French from Acadia, he granted great territorial rights to De la Tour, which that thrifty adventurer sold out to one of his co-grantees for £16,000; and he no doubt invested the money in peltry for the London market.

As we leave the station at Annapolis, we are obliged to put Madame de la Tour out of our minds to make room for another woman whose name, and we might say presence, fills all the valley before us. So it is that woman continues to reign, where she has once got a foothold, long after her dear frame has become dust. Evangeline, who is as real a personage as Queen Esther, must have been a different woman from Madame de la Tour. If the latter had lived at Grand Pre, she would, I trust, have made it hot for the brutal English who drove the Acadians out of their salt-marsh paradise, and have died in her heroic shoes rather than float off into poetry. But if it should come to the question of marrying the De la Tour or the Evangeline, I think no man who was not engaged in the peltry trade would hesitate which to choose. At any rate, the women who love have more influence in the world than the women who fight, and so it happens that the sentimental traveler who passes through Port Royal without a tear for Madame de la Tour, begins to be in a glow of tender longing and regret for Evangeline as soon as he enters the valley of the Annapolis River. For myself, I expected to see written over the railway crossings the legend,

“Look out for Evangeline while the bell rings.”

When one rides into a region of romance he does not much notice his speed or his carriage; but I am

obliged to say that we were not hurried up the valley, and that the cars were not too luxurious for the plain people, priests, clergymen, and belles of the region, who rode in them. Evidently the latest fashions had not arrived in the Provinces, and we had an opportunity of studying anew those that had long passed away in the States, and of remarking how inappropriate a fashion is when it has ceased to be the fashion.

The river becomes small shortly after we leave Annapolis and before we reach Paradise. At this station of happy appellation we looked for the satirist who named it, but he has probably sold out and removed. If the effect of wit is produced by the sudden recognition of a remote resemblance, there was nothing witty in the naming of this station. Indeed, we looked in vain for the "garden" appearance of the valley. There was nothing generous in the small meadows or the thin orchards; and if large trees ever grew on the bordering hills, they have given place to rather stunted evergreens; the scraggy firs and balsams, in fact, possess Nova Scotia generally as we saw it,—and there is nothing more uninteresting and wearisome than large tracts of these woods. We are bound to believe that Nova Scotia has somewhere, or had, great pines and hemlocks that murmur, but we were not blessed with the sight of them. Slightly picturesque this valley is with its winding river and high hills guarding it, and perhaps a person would enjoy a foot-tramp down it; but, I think he would find little peculiar or interesting after he left the neighborhood of the Basin of Minas.

Before we reached Wolfville we came in sight of this basin and some of the estuaries and streams that run into it; that is, when the tide goes out; but they are only muddy ditches half the time. The Acadia College was pointed out to us at Wolfville by a person who said that it is a feeble institution, a remark we were sorry to hear of a place described as "one of the foremost seats of learning in the Province." But our regret was at once extinguished by the announcement that the next station was Grand Pre! We were within three miles of the most poetic place in North America.

There was on the train a young man from Boston, who said that he was born in Grand Pre. It seemed impossible that we should actually be near a person so felicitously born. He had a justifiable pride in the fact, as well as in the bride by his side, whom he was taking to see for the first time his old home. His local information, imparted to her, overflowed upon us; and when he found that we had read "Evangeline," his delight in making us acquainted with the scene of that poem was pleasant to see. The village of Grand Pre is a mile from the station; and perhaps the reader would like to know exactly what the traveler, hastening on to Baddeck, can see of the famous locality.

We looked over a well-grassed meadow, seamed here and there by beds of streams left bare by the receding tide, to a gentle swell in the ground upon which is a not heavy forest growth. The trees partly conceal the street of Grand Pre, which is only a road bordered by common houses. Beyond is the Basin of Minas, with its sedgy shore, its dreary flats; and beyond that projects a bold headland, standing perpendicular against the sky. This is the Cape Blomidon, and it gives a certain dignity to the picture.

The old Normandy picturesqueness has departed from the village of Grand Pre. Yankee settlers, we were told, possess it now, and there are no descendants of the French Acadians in this valley. I believe that Mr. Cozzens found some of them in humble circumstances in a village on the other coast, not far from Halifax, and it is there, probably, that the

"Maidens still wear their Norman caps and their kirtles of homespun, And by the evening fire repeat Evangeline's story, While from its rocky caverns the deep-voiced, neighboring ocean Speaks, and in accents disconsolate answers the wail of the forest."

At any rate, there is nothing here now except a faint tradition of the French Acadians; and the sentimental traveler who laments that they were driven out, and not left behind their dikes to rear their flocks, and cultivate the rural virtues, and live in the simplicity of ignorance, will temper his sadness by the reflection that it is to the expulsion he owes "Evangeline" and the luxury of his romantic grief. So that if the traveler is honest, and examines his own soul faithfully, he will not know what state of mind to cherish as he passes through this region of sorrow.

Our eyes lingered as long as possible and with all eagerness upon these meadows and marshes which the poet has made immortal, and we regretted that inexorable Baddeck would not permit us to be pilgrims for a day in this Acadian land. Just as I was losing sight of the skirt of trees at Grand Pre, a gentleman in the dress of a rural clergyman left his seat, and complimented me with this remark: "I perceive, sir, that you are fond of reading."

I could not but feel flattered by this unexpected discovery of my nature, which was no doubt due to the fact that I held in my hand one of the works of Charles Reade on social science, called "Love me Little, Love me Long," and I said, "Of some kinds, I am."

"Did you ever see a work called 'Evangeline'?"

"Oh, yes, I have frequently seen it."

"You may remember," continued this Mass of Information, "that there is an allusion in it to Grand Pre. That is the place, sir!"

"Oh, indeed, is that the place? Thank you."

"And that mountain yonder is Cape Blomidon, blow me down, you know."

And under cover of this pun, the amiable clergyman retired, unconscious, I presume, of his prosaic effect upon the atmosphere of the region. With this intrusion of the commonplace, I suffered an eclipse of faith as to Evangeline, and was not sorry to have my attention taken up by the river Avon, along the banks of which we were running about this time. It is really a broad arm of the basin, extending up to Windsor, and beyond in a small stream, and would have been a charming river if there had been a drop of water in it. I never knew before how much water adds to a river. Its slimy bottom was quite a ghastly spectacle, an ugly gash in the land that nothing could heal but the friendly returning tide. I should think it would be confusing to dwell by a river that runs first one way and then the other, and then vanishes altogether.

All the streams about this basin are famous for their salmon and shad, and the season for these fish was not yet passed. There seems to be an untraced affinity between the shad and the strawberry; they appear and disappear in a region simultaneously. When we reached Cape Breton, we were a day or two late for both. It is

impossible not to feel a little contempt for people who do not have these luxuries till July and August; but I suppose we are in turn despised by the Southerners because we do not have them till May and June. So, a great part of the enjoyment of life is in the knowledge that there are people living in a worse place than that you inhabit.

Windsor, a most respectable old town round which the railroad sweeps, with its iron bridge, conspicuous King's College, and handsome church spire, is a great place for plaster and limestone, and would be a good location for a person interested in these substances. Indeed, if a man can live on rocks, like a goat, he may settle anywhere between Windsor and Halifax. It is one of the most sterile regions in the Province. With the exception of a wild pond or two, we saw nothing but rocks and stunted firs, for forty-five miles, a monotony unrelieved by one picturesque feature. Then we longed for the "Garden of Nova Scotia," and understood what is meant by the name.

A member of the Ottawa government, who was on his way to the Governor-General's ball at Halifax, informed us that this country is rich in minerals, in iron especially, and he pointed out spots where gold had been washed out. But we do not covet it. And we were not sorry to learn from this gentleman, that since the formation of the Dominion, there is less and less desire in the Provinces for annexation to the United States. One of the chief pleasures in traveling in Nova Scotia now is in the constant reflection that you are in a foreign country; and annexation would take that away.

It is nearly dark when we reach the head of the Bedford Basin. The noble harbor of Halifax narrows to a deep inlet for three miles along the rocky slope on which the city stands, and then suddenly expands into this beautiful sheet of water. We ran along its bank for five miles, cheered occasionally by a twinkling light on the shore, and then came to a stop at the shabby terminus, three miles out of town. This basin is almost large enough to float the navy of Great Britain, and it could lie here, with the narrows fortified, secure from the attacks of the American navy, hovering outside in the fog. With these patriotic thoughts we enter the town. It is not the fault of the railroad, but its present inability to climb a rocky hill, that it does not run into the city. The suburbs are not impressive in the night, but they look better than they do in the daytime; and the same might be said of the city itself. Probably there is not anywhere a more rusty, forlorn town, and this in spite of its magnificent situation.

It is a gala-night when we rattle down the rough streets, and have pointed out to us the somber government buildings. The Halifax Club House is a blaze of light, for the Governor-General is being received there, and workmen are still busy decorating the Provincial Building for the great ball. The city is indeed pervaded by his lordship, and we regret that we cannot see it in its normal condition of quiet; the hotels are full, and it is impossible to escape the festive feeling that is abroad. It ill accords with our desires, as tranquil travelers, to be plunged into such a vortex of slow dissipation. These people take their pleasures more gravely than we do, and probably will last the longer for their moderation. Having ascertained that we can get no more information about Baddeck here than in St. John, we go to bed early, for we are to depart from this fascinating place at six o'clock.

If any one objects that we are not competent to pass judgment on the city of Halifax by sleeping there one night, I beg leave to plead the usual custom of travelers,—where would be our books of travel, if more was expected than a night in a place?—and to state a few facts. The first is, that I saw the whole of Halifax. If I were inclined, I could describe it building by building. Cannot one see it all from the citadel hill, and by walking down by the horticultural garden and the Roman Catholic cemetery? and did not I climb that hill through the most dilapidated rows of brown houses, and stand on the greensward of the fortress at five o'clock in the morning, and see the whole city, and the British navy riding at anchor, and the fog coming in from the Atlantic Ocean? Let the reader go to! and if he would know more of Halifax, go there. We felt that if we remained there through the day, it would be a day of idleness and sadness. I could draw a picture of Halifax. I could relate its century of history; I could write about its free-school system, and its many noble charities. But the reader always skips such things. He hates information; and he himself would not stay in this dull garrison town any longer than he was obliged to.

There was to be a military display that day in honor of the Governor.

"Why," I asked the bright and light-minded colored boy who sold papers on the morning train, "don't you stay in the city and see it?"

"Pho," said he, with contempt, "I'm sick of 'em. Halifax is played out, and I'm going to quit it."

The withdrawal of this lively trader will be a blow to the enterprise of the place.

When I returned to the hotel for breakfast—which was exactly like the supper, and consisted mainly of green tea and dry toast—there was a commotion among the waiters and the hack-drivers over a nervous little old man, who was in haste to depart for the morning train. He was a specimen of provincial antiquity such as could not be seen elsewhere. His costume was of the oddest: a long-waisted coat reaching nearly to his heels, short trousers, a flowered silk vest, and a napless hat. He carried his baggage tied up in mealbags, and his attention was divided between that and two buxom daughters, who were evidently enjoying their first taste of city life. The little old man, who was not unlike a petrified Frenchman of the last century, had risen before daylight, roused up his daughters, and had them down on the sidewalk by four o'clock, waiting for hack, or horse-car, or something to take them to the station. That he might be a man of some importance at home was evident, but he had lost his head in the bustle of this great town, and was at the mercy of all advisers, none of whom could understand his mongrel language. As we came out to take the horse-car, he saw his helpless daughters driven off in one hack, while he was raving among his meal-bags on the sidewalk. Afterwards we saw him at the station, flying about in the greatest excitement, asking everybody about the train; and at last he found his way into the private office of the ticket-seller. "Get out of here!" roared that official. The old man persisted that he wanted a ticket. "Go round to the window; clear out!" In a very flustered state he was hustled out of the room. When he came to the window and made known his destination, he was refused tickets, because his train did not start for two hours yet!

This mercurial old gentleman only appears in these records because he was the only person we saw in this Province who was in a hurry to do anything, or to go anywhere.

We cannot leave Halifax without remarking that it is a city of great private virtue, and that its banks are sound. The appearance of its paper-money is not, however, inviting. We of the United States lead the world in beautiful paper-money; and when I exchanged my crisp, handsome greenbacks for the dirty, flimsy, ill-executed notes of the Dominion, at a dead loss of value, I could not be reconciled to the transaction. I sarcastically called the stuff I received "Confederate money;" but probably no one was wounded by the severity; for perhaps no one knew what a resemblance in badness there is between the "Confederate" notes of our civil war and the notes of the Dominion; and, besides, the Confederacy was too popular in the Provinces for the name to be a reproach to them. I wish I had thought of something more insulting to say.

By noon on Friday we came to New Glasgow, having passed through a country where wealth is to be won by hard digging if it is won at all; through Truro, at the head of the Cobequid Bay, a place exhibiting more thrift than any we have seen. A pleasant enough country, on the whole, is this which the road runs through up the Salmon and down the East River. New Glasgow is not many miles from Pictou, on the great Cumberland Strait; the inhabitants build vessels, and strangers drive out from here to see the neighboring coal mines. Here we were to dine and take the stage for a ride of eighty miles to the Gut of Canso.

The hotel at New Glasgow we can commend as one of the most unwholesome in the Province; but it is unnecessary to emphasize its condition, for if the traveler is in search of dirty hotels, he will scarcely go amiss anywhere in these regions. There seems to be a fashion in diet which endures. The early travelers as well as the later in these Atlantic provinces all note the prevalence of dry, limp toast and green tea; they are the staples of all the meals; though authorities differ in regard to the third element for discouraging hunger: it is sometimes boiled salt-fish and sometimes it is ham. Toast was probably an inspiration of the first woman of this part of the New World, who served it hot; but it has become now a tradition blindly followed, without regard to temperature; and the custom speaks volumes for the non-inventiveness of woman. At the inn in New Glasgow those who choose dine in their shirt-sleeves, and those skilled in the ways of this table get all they want in seven minutes. A man who understands the use of edged tools can get along twice as fast with a knife and fork as he can with a fork alone.

But the stage is at the door; the coach and four horses answer the advertisement of being "second to none on the continent." We mount to the seat with the driver. The sun is bright; the wind is in the southwest; the leaders are impatient to go; the start for the long ride is propitious.

But on the back seat in the coach is the inevitable woman, young and sickly, with the baby in her arms. The woman has paid her fare through to Guysborough, and holds her ticket. It turns out, however, that she wants to go to the district of Guysborough, to St. Mary's Cross Roads, somewhere in it, and not to the village of Guysborough, which is away down on Chedabucto Bay. (The reader will notice this geographical familiarity.) And this stage does not go in the direction of St. Mary's. She will not get out, she will not surrender her ticket, nor pay her fare again. Why should she? And the stage proprietor, the stage-driver, and the hostler mull over the problem, and sit down on the woman's hair trunk in front of the tavern to reason with her. The baby joins its voice from the coach window in the clamor of the discussion. The baby prevails. The stage company comes to a compromise, the woman dismounts, and we are off, away from the white houses, over the sandy road, out upon a hilly and not cheerful country. And the driver begins to tell us stories of winter hardships, drifted highways, a land buried in snow, and great peril to men and cattle.

III

*"It was then summer, and the weather very fine; so pleased
was I with the country, in which I had never travelled
before, that my delight proved equal to my wonder."
- BENVENUTO CELLINI.*

There are few pleasures in life equal to that of riding on the box-seat of a stagecoach, through a country unknown to you and hearing the driver talk about his horses. We made the intimate acquaintance of twelve horses on that day's ride, and learned the peculiar disposition and traits of each one of them, their ambition of display, their sensitiveness to praise or blame, their faithfulness, their playfulness, the readiness with which they yielded to kind treatment, their daintiness about food and lodging.

May I never forget the spirited little jade, the off-leader in the third stage, the petted belle of the route, the nervous, coquettish, mincing mare of Marshy Hope. A spoiled beauty she was; you could see that as she took the road with dancing step, tossing her pretty head about, and conscious of her shining black coat and her tail done up "in any simple knot,"—like the back hair of Shelley's Beatrice Cenci. How she ambled and sidled and plumed herself, and now and then let fly her little heels high in air in mere excess of larkish feeling.

"So! girl; so! Kitty," murmurs the driver in the softest tones of admiration; "she don't mean anything by it, she's just like a kitten."

But the heels keep flying above the traces, and by and by the driver is obliged to "speak hash" to the beauty. The reproof of the displeased tone is evidently felt, for she settles at once to her work, showing perhaps a little impatience, jerking her head up and down, and protesting by her nimble movements against the more deliberate trot of her companion. I believe that a blow from the cruel lash would have broken her heart; or else it would have made a little fiend of the spirited creature. The lash is hardly ever good for the sex.

For thirteen years, winter and summer, this coachman had driven this monotonous, uninteresting route, with always the same sandy hills, scrubby firs, occasional cabins, in sight. What a time to nurse his thought and feed on his heart! How deliberately he can turn things over in his brain! What a system of philosophy he might evolve out of his consciousness! One would think so. But, in fact, the stagebox is no place for thinking. To handle twelve horses every day, to keep each to its proper work, stimulating the lazy and restraining the

free, humoring each disposition, so that the greatest amount of work shall be obtained with the least friction, making each trip on time, and so as to leave each horse in as good condition at the close as at the start, taking advantage of the road, refreshing the team by an occasional spurt of speed,—all these things require constant attention; and if the driver was composing an epic, the coach might go into the ditch, or, if no accident happened, the horses would be worn out in a month, except for the driver's care.

I conclude that the most delicate and important occupation in life is stage-driving. It would be easier to "run" the Treasury Department of the United States than a four-in-hand. I have a sense of the unimportance of everything else in comparison with this business in hand. And I think the driver shares that feeling. He is the autocrat of the situation. He is lord of all the humble passengers, and they feel their inferiority. They may have knowledge and skill in some things, but they are of no use here. At all the stables the driver is king; all the people on the route are deferential to him; they are happy if he will crack a joke with them, and take it as a favor if he gives them better than they send. And it is his joke that always raises the laugh, regardless of its quality.

We carry the royal mail, and as we go along drop little sealed canvas bags at way offices. The bags would not hold more than three pints of meal, and I can see that there is nothing in them. Yet somebody along here must be expecting a letter, or they would not keep up the mail facilities. At French River we change horses. There is a mill here, and there are half a dozen houses, and a cranky bridge, which the driver thinks will not tumble down this trip. The settlement may have seen better days, and will probably see worse.

I preferred to cross the long, shaky wooden bridge on foot, leaving the inside passengers to take the risk, and get the worth of their money; and while the horses were being put to, I walked on over the hill. And here I encountered a veritable foot-pad, with a club in his hand and a bundle on his shoulder, coming down the dusty road, with the wild-eyed aspect of one who travels into a far country in search of adventure. He seemed to be of a cheerful and sociable turn, and desired that I should linger and converse with him. But he was more meagerly supplied with the media of conversation than any person I ever met. His opening address was in a tongue that failed to convey to me the least idea. I replied in such language as I had with me, but it seemed to be equally lost upon him. We then fell back upon gestures and ejaculations, and by these I learned that he was a native of Cape Breton, but not an aborigine. By signs he asked me where I came from, and where I was going; and he was so much pleased with my destination, that he desired to know my name; and this I told him with all the injunction of secrecy I could convey; but he could no more pronounce it than I could speak his name. It occurred to me that perhaps he spoke a French patois, and I asked him; but he only shook his head. He would own neither to German nor Irish. The happy thought came to me of inquiring if he knew English. But he shook his head again, and said,

"No English, plenty garlic."

This was entirely incomprehensible, for I knew that garlic is not a language, but a smell. But when he had repeated the word several times, I found that he meant Gaelic; and when we had come to this understanding, we cordially shook hands and willingly parted. One seldom encounters a wilder or more good-natured savage than this stalwart wanderer. And meeting him raised my hopes of Cape Breton.

We change horses again, for the last stage, at Marshy Hope. As we turn down the hill into this place of the mournful name, we dash past a procession of five country wagons, which makes way for us: everything makes way for us; even death itself turns out for the stage with four horses. The second wagon carries a long box, which reveals to us the mournful errand of the caravan. We drive into the stable, and get down while the fresh horses are put to. The company's stables are all alike, and open at each end with great doors. The stable is the best house in the place; there are three or four houses besides, and one of them is white, and has vines growing over the front door, and hollyhocks by the front gate. Three or four women, and as many barelegged girls, have come out to look at the procession, and we lounge towards the group.

"It had a winder in the top of it, and silver handles," says one.

"Well, I declare; and you could 'a looked right in?"

"If I'd been a mind to."

"Who has died?" I ask.

"It's old woman Larue; she lived on Gilead Hill, mostly alone. It's better for her."

"Had she any friends?"

"One darter. They're takin' her over Eden way, to bury her where she come from."

"Was she a good woman?" The traveler is naturally curious to know what sort of people die in Nova Scotia.

"Well, good enough. Both her husbands is dead."

The gossips continued talking of the burying. Poor old woman Larue! It was mournful enough to encounter you for the only time in this world in this plight, and to have this glimpse of your wretched life on lonesome Gilead Hill. What pleasure, I wonder, had she in her life, and what pleasure have any of these hard-favored women in this doleful region? It is pitiful to think of it. Doubtless, however, the region isn't doleful, and the sentimental traveler would not have felt it so if he had not encountered this funereal flitting.

But the horses are in. We mount to our places; the big doors swing open.

"Stand away," cries the driver.

The hostler lets go Kitty's bridle, the horses plunge forward, and we are off at a gallop, taking the opposite direction from that pursued by old woman Larue.

This last stage is eleven miles, through a pleasanter country, and we make it in a trifle over an hour, going at an exhilarating gait, that raises our spirits out of the Marshy Hope level. The perfection of travel is ten miles an hour, on top of a stagecoach; it is greater speed than forty by rail. It nurses one's pride to sit aloft, and rattle past the farmhouses, and give our dust to the cringing foot tramps. There is something royal in the swaying of the coach body, and an excitement in the patter of the horses' hoofs. And what an honor it must be to guide such a machine through a region of rustic admiration!

The sun has set when we come thundering down into the pretty Catholic village of Antigonish,—the most

home-like place we have seen on the island. The twin stone towers of the unfinished cathedral loom up large in the fading light, and the bishop's palace on the hill—the home of the Bishop of Arichat—appears to be an imposing white barn with many staring windows. At Antigonish—with the emphasis on the last syllable—let the reader know there is a most comfortable inn, kept by a cheery landlady, where the stranger is served by the comely handmaidens, her daughters, and feels that he has reached a home at last. Here we wished to stay. Here we wished to end this weary pilgrimage. Could Baddeck be as attractive as this peaceful valley? Should we find any inn on Cape Breton like this one?

“Never was on Cape Breton,” our driver had said; “hope I never shall be. Heard enough about it. Taverns? You'll find 'em occupied.”

“Fleas?”

“Wus.”

“But it is a lovely country?”

“I don't think it.”

Into what unknown dangers were we going? Why not stay here and be happy? It was a soft summer night. People were loitering in the street; the young beaux of the place going up and down with the belles, after the leisurely manner in youth and summer; perhaps they were students from St. Xavier College, or visiting gallants from Guysborough. They look into the post-office and the fancy store. They stroll and take their little provincial pleasure and make love, for all we can see, as if Antigonish were a part of the world. How they must look down on Marshy Hope and Addington Forks and Tracadie! What a charming place to live in is this!

But the stage goes on at eight o'clock. It will wait for no man. There is no other stage till eight the next night, and we have no alternative but a night ride. We put aside all else except duty and Baddeck. This is strictly a pleasure-trip.

The stage establishment for the rest of the journey could hardly be called the finest on the continent. The wagon was drawn by two horses. It was a square box, covered with painted cloth. Within were two narrow seats, facing each other, affording no room for the legs of passengers, and offering them no position but a strictly upright one. It was a most ingeniously uncomfortable box in which to put sleepy travelers for the night. The weather would be chilly before morning, and to sit upright on a narrow board all night, and shiver, is not cheerful. Of course, the reader says that this is no hardship to talk about. But the reader is mistaken. Anything is a hardship when it is unpleasantly what one does not desire or expect. These travelers had spent wakeful nights, in the forests, in a cold rain, and never thought of complaining. It is useless to talk about the Polar sufferings of Dr. Kane to a guest at a metropolitan hotel, in the midst of luxury, when the mosquito sings all night in his ear, and his mutton-chop is overdone at breakfast. One does not like to be set up for a hero in trifles, in odd moments, and in inconspicuous places.

There were two passengers besides ourselves, inhabitants of Cape Breton Island, who were returning from Halifax to Plaster Cove, where they were engaged in the occupation of distributing alcoholic liquors at retail. This fact we ascertained incidentally, as we learned the nationality of our comrades by their brogue, and their religion by their lively ejaculations during the night. We stowed ourselves into the rigid box, bade a sorrowing good-night to the landlady and her daughters, who stood at the inn door, and went jingling down the street towards the open country.

The moon rises at eight o'clock in Nova Scotia. It came above the horizon exactly as we began our journey, a harvest-moon, round and red. When I first saw it, it lay on the edge of the horizon as if too heavy to lift itself, as big as a cart-wheel, and its disk cut by a fence-rail. With what a flood of splendor it deluged farmhouses and farms, and the broad sweep of level country! There could not be a more magnificent night in which to ride towards that geographical mystery of our boyhood, the Gut of Canso.

A few miles out of town the stage stopped in the road before a post-station. An old woman opened the door of the farmhouse to receive the bag which the driver carried to her. A couple of sprightly little girls rushed out to “interview” the passengers, climbing up to ask their names and, with much giggling, to get a peep at their faces. And upon the handsomeness or ugliness of the faces they saw in the moonlight they pronounced with perfect candor. We are not obliged to say what their verdict was. Girls here, no doubt, as elsewhere, lose this trustful candor as they grow older.

Just as we were starting, the old woman screamed out from the door, in a shrill voice, addressing the driver, “Did you see ary a sick man 'bout 'Tigonish?”

“Nary.”

“There's one been round here for three or four days, pretty bad off; 's got the St. Vitus's. He wanted me to get him some medicine for it up to Antigonish. I've got it here in a vial, and I wished you could take it to him.”

“Where is he?”

“I dunno. I heern he'd gone east by the Gut. Perhaps you'll hear of him.” All this screamed out into the night.

“Well, I'll take it.”

We took the vial aboard and went on; but the incident powerfully affected us. The weird voice of the old woman was exciting in itself, and we could not escape the image of this unknown man, dancing about this region without any medicine, fleeing perchance by night and alone, and finally flitting away down the Gut of Canso. This fugitive mystery almost immediately shaped itself into the following simple poem:

*“There was an old man of Canso,
Unable to sit or stan' so.
When I asked him why he ran so,
Says he, 'I've St. Vitus' dance so,
All down the Gut of Canso.'”*

This melancholy song is now, I doubt not, sung by the maidens of Antigonish.

In spite of the consolations of poetry, however, the night wore on slowly, and soothing sleep tried in vain to

get a lodgment in the jolting wagon. One can sleep upright, but not when his head is every moment knocked against the framework of a wagon-cover. Even a jolly young Irishman of Plaster Cove, whose nature it is to sleep under whatever discouragement, is beaten by these circumstances. He wishes he had his fiddle along. We never know what men are on casual acquaintance. This rather stupid-looking fellow is a devotee of music, and knows how to coax the sweetness out of the unwilling violin. Sometimes he goes miles and miles on winter nights to draw the seductive bow for the Cape Breton dancers, and there is enthusiasm in his voice, as he relates exploits of fiddling from sunset till the dawn of day. Other information, however, the young man has not; and when this is exhausted, he becomes sleepy again, and tries a dozen ways to twist himself into a posture in which sleep will be possible. He doubles up his legs, he slides them under the seat, he sits on the wagon bottom; but the wagon swings and jolts and knocks him about. His patience under this punishment is admirable, and there is something pathetic in his restraint from profanity.

It is enough to look out upon the magnificent night; the moon is now high, and swinging clear and distant; the air has grown chilly; the stars cannot be eclipsed by the greater light, but glow with a chastened fervor. It is on the whole a splendid display for the sake of four sleepy men, banging along in a coach,—an insignificant little vehicle with two horses. No one is up at any of the farmhouses to see it; no one appears to take any interest in it, except an occasional baying dog, or a rooster that has mistaken the time of night. By midnight we come to Tracadie, an orchard, a farmhouse, and a stable. We are not far from the sea now, and can see a silver mist in the north. An inlet comes lapping up by the old house with a salty smell and a suggestion of oyster-beds. We knock up the sleeping hostlers, change horses, and go on again, dead sleepy, but unable to get a wink. And all the night is blazing with beauty. We think of the criminal who was sentenced to be kept awake till he died.

The fiddler makes another trial. Temperately remarking, "I am very sleepy," he kneels upon the floor and rests his head on the seat. This position for a second promises repose; but almost immediately his head begins to pound the seat, and beat a lively rat-a-plan on the board. The head of a wooden idol couldn't stand this treatment more than a minute. The fiddler twisted and turned, but his head went like a triphammer on the seat. I have never seen a devotional attitude so deceptive, or one that produced less favorable results. The young man rose from his knees, and meekly said,

"It's dam hard."

If the recording angel took down this observation, he doubtless made a note of the injured tone in which it was uttered.

How slowly the night passes to one tipping and swinging along in a slowly moving stage! But the harbinger of the day came at last. When the fiddler rose from his knees, I saw the morning-star burst out of the east like a great diamond, and I knew that Venus was strong enough to pull up even the sun, from whom she is never distant more than an eighth of the heavenly circle. The moon could not put her out of countenance. She blazed and scintillated with a dazzling brilliance, a throbbing splendor, that made the moon seem a pale, sentimental invention. Steadily she mounted, in her fresh beauty, with the confidence and vigor of new love, driving her more domestic rival out of the sky. And this sort of thing, I suppose, goes on frequently. These splendors burn and this panorama passes night after night down at the end of Nova Scotia, and all for the stage-driver, dozing along on his box, from Antigonish to the strait.

"Here you are," cries the driver, at length, when we have become wearily indifferent to where we are. We have reached the ferry. The dawn has not come, but it is not far off. We step out and find a chilly morning, and the dark waters of the Gut of Canso flowing before us lighted here and there by a patch of white mist. The ferryman is asleep, and his door is shut. We call him by all the names known among men. We pound upon his house, but he makes no sign. Before he awakes and comes out, growling, the sky in the east is lightened a shade, and the star of the dawn sparkles less brilliantly. But the process is slow. The twilight is long. There is a surprising deliberation about the preparation of the sun for rising, as there is in the movements of the boatman. Both appear to be reluctant to begin the day.

The ferryman and his shaggy comrade get ready at last, and we step into the clumsy yawl, and the slowly moving oars begin to pull us upstream. The strait is here less than a mile wide; the tide is running strongly, and the water is full of swirls,—the little whirlpools of the rip-tide. The morning-star is now high in the sky; the moon, declining in the west, is more than ever like a silver shield; along the east is a faint flush of pink. In the increasing light we can see the bold shores of the strait, and the square projection of Cape Porcupine below.

On the rocks above the town of Plaster Cove, where there is a black and white sign,—Telegraph Cable,—we set ashore our companions of the night, and see them climb up to their station for retailing the necessary means of intoxication in their district, with the mournful thought that we may never behold them again.

As we drop down along the shore, there is a white sea-gull asleep on the rock, rolled up in a ball, with his head under his wing. The rock is dripping with dew, and the bird is as wet as his hard bed. We pass within an oar's length of him, but he does not heed us, and we do not disturb his morning slumbers. For there is no such cruelty as the waking of anybody out of a morning nap.

When we land, and take up our bags to ascend the hill to the white tavern of Port Hastings (as Plaster Cove now likes to be called), the sun lifts himself slowly over the treetops, and the magic of the night vanishes.

And this is Cape Breton, reached after almost a week of travel. Here is the Gut of Canso, but where is Baddeck? It is Saturday morning; if we cannot make Baddeck by night, we might as well have remained in Boston. And who knows what we shall find if we get there? A forlorn fishing-station, a dreary hotel? Suppose we cannot get on, and are forced to stay here? Asking ourselves these questions, we enter the Plaster Cove tavern. No one is stirring, but the house is open, and we take possession of the dirty public room, and almost immediately drop to sleep in the fluffy rocking-chairs; but even sleep is not strong enough to conquer our desire to push on, and we soon rouse up and go in pursuit of information.

No landlord is to be found, but there is an unkempt servant in the kitchen, who probably does not see any use in making her toilet more than once a week. To this fearful creature is intrusted the dainty duty of preparing breakfast. Her indifference is equal to her lack of information, and her ability to convey

information is fettered by her use of Gaelic as her native speech. But she directs us to the stable. There we find a driver hitching his horses to a two-horse stage-wagon.

"Is this stage for Baddeck?"

"Not much."

"Is there any stage for Baddeck?"

"Not to-day."

"Where does this go, and when?"

"St. Peter's. Starts in fifteen minutes."

This seems like "business," and we are inclined to try it, especially as we have no notion where St. Peter's is.

"Does any other stage go from here to-day anywhere else?"

"Yes. Port Hood. Quarter of an hour."

Everything was about to happen in fifteen minutes. We inquire further. St. Peter's is on the east coast, on the road to Sydney. Port Hood is on the west coast. There is a stage from Port Hood to Baddeck. It would land us there some time Sunday morning; distance, eighty miles.

Heavens! what a pleasure-trip. To ride eighty miles more without sleep! We should simply be delivered dead on the Bras d'Or; that is all. Tell us, gentle driver, is there no other way?

"Well, there's Jim Hughes, come over at midnight with a passenger from Baddeck; he's in the hotel now; perhaps he'll take you."

Our hope hung on Jim Hughes. The frowzy servant piloted us up to his sleeping-room. "Go right in," said she; and we went in, according to the simple custom of the country, though it was a bedroom that one would not enter except on business. Mr. Hughes did not like to be disturbed, but he proved himself to be a man who could wake up suddenly, shake his head, and transact business,—a sort of Napoleon, in fact. Mr. Hughes stared at the intruders for a moment, as if he meditated an assault.

"Do you live in Baddeck?" we asked.

"No; Hogamah,—half-way there."

"Will you take us to Baddeck to-day?"

Mr. Hughes thought. He had intended to sleep—till noon. He had then intended to go over the Judique Mountain and get a boy. But he was disposed to accommodate. Yes, for money—sum named—he would give up his plans, and start for Baddeck in an hour. Distance, sixty miles. Here was a man worth having; he could come to a decision before he was out of bed. The bargain was closed.

We would have closed any bargain to escape a Sunday in the Plaster Cove hotel. There are different sorts of hotel uncleanness. There is the musty old inn, where the dirt has accumulated for years, and slow neglect has wrought a picturesque sort of dilapidation, the mouldiness of time, which has something to recommend it. But there is nothing attractive in new nastiness, in the vulgar union of smartness and filth. A dirty modern house, just built, a house smelling of poor whiskey and vile tobacco, its white paint grimy, its floors unclean, is ever so much worse than an old inn that never pretended to be anything but a rookery. I say nothing against the hotel at Plaster Cove. In fact, I recommend it. There is a kind of harmony about it that I like. There is a harmony between the breakfast and the frowzy Gaelic cook we saw "sozzling" about in the kitchen. There is a harmony between the appearance of the house and the appearance of the buxom young housekeeper who comes upon the scene later, her hair saturated with the fatty matter of the bear. The traveler will experience a pleasure in paying his bill and departing.

Although Plaster Cove seems remote on the map, we found that we were right in the track of the world's news there. It is the transfer station of the Atlantic Cable Company, where it exchanges messages with the Western Union. In a long wooden building, divided into two main apartments, twenty to thirty operators are employed. At eight o'clock the English force was at work receiving the noon messages from London. The American operators had not yet come on, for New York business would not begin for an hour. Into these rooms is poured daily the news of the world, and these young fellows toss it about as lightly as if it were household gossip. It is a marvelous exchange, however, and we had intended to make some reflections here upon the en rapport feeling, so to speak, with all the world, which we experienced while there; but our conveyance was waiting. We telegraphed our coming to Baddeck, and departed. For twenty-five cents one can send a dispatch to any part of the Dominion, except the region where the Western Union has still a foothold.

Our conveyance was a one-horse wagon, with one seat. The horse was well enough, but the seat was narrow for three people, and the entire establishment had in it not much prophecy of Baddeck for that day. But we knew little of the power of Cape Breton driving. It became evident that we should reach Baddeck soon enough, if we could cling to that wagon-seat. The morning sun was hot. The way was so uninteresting that we almost wished ourselves back in Nova Scotia. The sandy road was bordered with discouraged evergreens, through which we had glimpses of sand-drifted farms. If Baddeck was to be like this, we had come on a fool's errand. There were some savage, low hills, and the Judique Mountain showed itself as we got away from the town. In this first stage, the heat of the sun, the monotony of the road, and the scarcity of sleep during the past thirty-six hours were all unfavorable to our keeping on the wagon-seat. We nodded separately, we nodded and reeled in unison. But asleep or awake, the driver drove like a son of Jehu. Such driving is the fashion on Cape Breton Island. Especially downhill, we made the most of it; if the horse was on a run, that was only an inducement to apply the lash; speed gave the promise of greater possible speed. The wagon rattled like a bark-mill; it swirled and leaped about, and we finally got the exciting impression that if the whole thing went to pieces, we should somehow go on,—such was our impetus. Round corners, over ruts and stones, and uphill and down, we went jolting and swinging, holding fast to the seat, and putting our trust in things in general. At the end of fifteen miles, we stopped at a Scotch farmhouse, where the driver kept a relay, and changed horse.

The people were Highlanders, and spoke little English; we had struck the beginning of the Gaelic settlement. From here to Hogamah we should encounter only the Gaelic tongue; the inhabitants are all Catholics. Very civil people, apparently, and living in a kind of niggardly thrift, such as the cold land affords. We saw of this family the old man, who had come from Scotland fifty years ago, his stalwart son, six feet and a half high, maybe, and two buxom daughters, going to the hay-field,—good solid Scotch lassies, who smiled in English, but spoke only Gaelic. The old man could speak a little English, and was disposed to be both communicative and inquisitive. He asked our business, names, and residence. Of the United States he had only a dim conception, but his mind rather rested upon the statement that we lived “near Boston.” He complained of the degeneracy of the times. All the young men had gone away from Cape Breton; might get rich if they would stay and work the farms. But no one liked to work nowadays. From life, we diverted the talk to literature. We inquired what books they had.

“Of course you all have the poems of Burns?”

“What's the name o' the mon?”

“Burns, Robert Burns.”

“Never heard tell of such a mon. Have heard of Robert Bruce. He was a Scotchman.”

This was nothing short of refreshing, to find a Scotchman who had never heard of Robert Burns! It was worth the whole journey to take this honest man by the hand. How far would I not travel to talk with an American who had never heard of George Washington!

The way was more varied during the next stage; we passed through some pleasant valleys and picturesque neighborhoods, and at length, winding around the base of a wooded range, and crossing its point, we came upon a sight that took all the sleep out of us. This was the famous Bras d'Or.

The Bras d'Or is the most beautiful salt-water lake I have ever seen, and more beautiful than we had imagined a body of salt water could be. If the reader will take the map, he will see that two narrow estuaries, the Great and the Little Bras d'Or, enter the island of Cape Breton, on the ragged northeast coast, above the town of Sydney, and flow in, at length widening out and occupying the heart of the island. The water seeks out all the low places, and ramifies the interior, running away into lovely bays and lagoons, leaving slender tongues of land and picturesque islands, and bringing into the recesses of the land, to the remote country farms and settlements, the flavor of salt, and the fish and mollusks of the briny sea. There is very little tide at any time, so that the shores are clean and sightly for the most part, like those of fresh-water lakes. It has all the pleasantness of a fresh-water lake, with all the advantages of a salt one. In the streams which run into it are the speckled trout, the shad, and the salmon; out of its depths are hooked the cod and the mackerel, and in its bays fattens the oyster. This irregular lake is about a hundred miles long, if you measure it skillfully, and in some places ten miles broad; but so indented is it, that I am not sure but one would need, as we were informed, to ride a thousand miles to go round it, following all its incursions into the land. The hills about it are never more than five or six hundred feet high, but they are high enough for reposeful beauty, and offer everywhere pleasing lines.

What we first saw was an inlet of the Bras d'Or, called, by the driver, Hogamah Bay. At its entrance were long, wooded islands, beyond which we saw the backs of graceful hills, like the capes of some poetic sea-coast. The bay narrowed to a mile in width where we came upon it, and ran several miles inland to a swamp, round the head of which we must go. Opposite was the village of Hogamah. I had my suspicions from the beginning about this name, and now asked the driver, who was liberally educated for a driver, how he spelled “Hogamah.”

“Why-ko-ko-magh. Hogamah.”

Sometimes it is called Wykogamah. Thus the innocent traveler is misled. Along the Whykokomagh Bay we come to a permanent encampment of the Micmac Indians,—a dozen wigwams in the pine woods. Though lumber is plenty, they refuse to live in houses. The wigwams, however, are more picturesque than the square frame houses of the whites. Built up conically of poles, with a hole in the top for the smoke to escape, and often set up a little from the ground on a timber foundation, they are as pleasing to the eye as a Chinese or Turkish dwelling. They may be cold in winter, but blessed be the tenacity of barbarism, which retains this agreeable architecture. The men live by hunting in the season, and the women support the family by making moccasins and baskets. These Indians are most of them good Catholics, and they try to go once a year to mass and a sort of religious festival held at St. Peter's, where their sins are forgiven in a yearly lump.

At Whykokomagh, a neat fishing village of white houses, we stopped for dinner at the Inverness House. The house was very clean, and the tidy landlady gave us as good a dinner as she could of the inevitable green tea, toast, and salt fish. She was Gaelic, but Protestant, as the village is, and showed us with pride her Gaelic Bible and hymn-book. A peaceful place, this Whykokomagh; the lapsing waters of Bras d'Or made a summer music all along the quiet street; the bay lay smiling with its islands in front, and an amphitheater of hills rose behind. But for the line of telegraph poles one might have fancied he could have security and repose here.

We put a fresh pony into the shafts, a beast born with an everlasting uneasiness in his legs, and an amount of “go” in him which suited his reckless driver. We no longer stood upon the order of our going; we went. As we left the village, we passed a rocky hay-field, where the Gaelic farmer was gathering the scanty yield of grass. A comely Indian girl was stowing the hay and treading it down on the wagon. The driver hailed the farmer, and they exchanged Gaelic repartee which set all the hay-makers in a roar, and caused the Indian maid to darkly and sweetly beam upon us. We asked the driver what he had said. He had only inquired what the man would take for the load—as it stood! A joke is a joke down this way.

I am not about to describe this drive at length, in order that the reader may skip it; for I know the reader, being of like passion and fashion with him. From the time we first struck the Bras d'Or for thirty miles we rode in constant sight of its magnificent water. Now we were two hundred feet above the water, on the hillside, skirting a point or following an indentation; and now we were diving into a narrow valley, crossing a stream, or turning a sharp corner, but always with the Bras d'Or in view, the afternoon sun shining on it, softening the outlines of its embracing hills, casting a shadow from its wooded islands. Sometimes we opened on a broad water plain bounded by the Watchabaktcht hills, and again we looked over hill after hill receding

into the soft and hazy blue of the land beyond the great mass of the Bras d'Or. The reader can compare the view and the ride to the Bay of Naples and the Cornice Road; we did nothing of the sort; we held on to the seat, prayed that the harness of the pony might not break, and gave constant expression to our wonder and delight. For a week we had schooled ourselves to expect nothing more from this wicked world, but here was an enchanting vision.

The only phenomenon worthy the attention of any inquiring mind, in this whole record, I will now describe. As we drove along the side of a hill, and at least two hundred feet above the water, the road suddenly diverged and took a circuit higher up. The driver said that was to avoid a sink-hole in the old road,—a great curiosity, which it was worth while to examine. Beside the old road was a circular hole, which nipped out a part of the road-bed, some twenty-five feet in diameter, filled with water almost to the brim, but not running over. The water was dark in color, and I fancied had a brackish taste. The driver said that a few weeks before, when he came this way, it was solid ground where this well now opened, and that a large beech-tree stood there. When he returned next day, he found this hole full of water, as we saw it, and the large tree had sunk in it. The size of the hole seemed to be determined by the reach of the roots of the tree. The tree had so entirely disappeared, that he could not with a long pole touch its top. Since then the water had neither subsided nor overflowed. The ground about was compact gravel. We tried sounding the hole with poles, but could make nothing of it. The water seemed to have no outlet nor inlet; at least, it did not rise or fall. Why should the solid hill give way at this place, and swallow up a tree? and if the water had any connection with the lake, two hundred feet below and at some distance away, why didn't the water run out? Why should the unscientific traveler have a thing of this kind thrown in his way? The driver did not know.

This phenomenon made us a little suspicious of the foundations of this island which is already invaded by the jealous ocean, and is anchored to the continent only by the cable.

The drive became more charming as the sun went down, and we saw the hills grow purple beyond the Bras d'Or. The road wound around lovely coves and across low promontories, giving us new beauties at every turn. Before dark we had crossed the Middle River and the Big Baddeck, on long wooden bridges, which straggled over sluggish waters and long reaches of marsh, upon which Mary might have been sent to call the cattle home. These bridges were shaky and wanted a plank at intervals, but they are in keeping with the enterprise of the country. As dusk came on, we crossed the last hill, and were bowling along by the still gleaming water. Lights began to appear in infrequent farmhouses, and under cover of the gathering night the houses seemed to be stately mansions; and we fancied we were on a noble highway, lined with elegant suburban seaside residences, and about to drive into a town of wealth and a port of great commerce. We were, nevertheless, anxious about Baddeck. What sort of haven were we to reach after our heroic (with the reader's permission) week of travel? Would the hotel be like that at Plaster Cove? Were our thirty-six hours of sleepless staging to terminate in a night of misery and a Sunday of discomfort?

We came into a straggling village; that we could see by the starlight. But we stopped at the door of a very unhotel-like appearing hotel. It had in front a flower-garden; it was blazing with welcome lights; it opened hospitable doors, and we were received by a family who expected us. The house was a large one, for two guests; and we enjoyed the luxury of spacious rooms, an abundant supper, and a friendly welcome; and, in short, found ourselves at home. The proprietor of the Telegraph House is the superintendent of the land lines of Cape Breton, a Scotchman, of course; but his wife is a Newfoundland lady. We cannot violate the sanctity of what seemed like private hospitality by speaking freely of this lady and the lovely girls, her daughters, whose education has been so admirably advanced in the excellent school at Baddeck; but we can confidently advise any American who is going to Newfoundland, to get a wife there, if he wants one at all. It is the only new article he can bring from the Provinces that he will not have to pay duty on. And here is a suggestion to our tariff-mongers for the "protection" of New England women.

The reader probably cannot appreciate the delicious sense of rest and of achievement which we enjoyed in this tidy inn, nor share the anticipations of undisturbed, luxurious sleep, in which we indulged as we sat upon the upper balcony after supper, and saw the moon rise over the glistening Bras d'Or and flood with light the islands and headlands of the beautiful bay. Anchored at some distance from the shore was a slender coasting vessel. The big red moon happened to come up just behind it, and the masts and spars and ropes of the vessel came out, distinctly traced on the golden background, making such a night picture as I once saw painted of a ship in a fiord of Norway. The scene was enchanting. And we respected then the heretofore seemingly insane impulse that had driven us on to Baddeck.

IV

*"He had no ill-will to the Scotch; for, if he had been conscious of that, he never would have thrown himself into the bosom of their country, and trusted to the protection of its remote inhabitants with a fearless confidence."
—BOSWELL'S JOHNSON.*

Although it was an open and flagrant violation of the Sabbath day as it is kept in Scotch Baddeck, our kind hosts let us sleep late on Sunday morning, with no reminder that we were not sleeping the sleep of the just. It was the charming Maud, a flitting sunbeam of a girl, who waited to bring us our breakfast, and thereby lost the opportunity of going to church with the rest of the family,—an act of gracious hospitality which the tired travelers appreciated.

The travelers were unable, indeed, to awaken into any feeling of Sabbatical straitness. The morning was delicious,—such a morning as never visits any place except an island; a bright, sparkling morning, with the exhilaration of the air softened by the sea. What a day it was for idleness, for voluptuous rest, after the flight by day and night from St. John! It was enough, now that the morning was fully opened and advancing to the

splendor of noon, to sit upon the upper balcony, looking upon the Bras d'Or and the peaceful hills beyond, reposeful and yet sparkling with the air and color of summer, and inhale the balmy air. (We greatly need another word to describe good air, properly heated, besides this overworked "balmy.") Perhaps it might in some regions be considered Sabbath-keeping, simply to rest in such a soothing situation,—rest, and not incessant activity, having been one of the original designs of the day.

But our travelers were from New England, and they were not willing to be outdone in the matter of Sunday observances by such an out-of-the-way and nameless place as Baddeck. They did not set themselves up as missionaries to these benighted Gaelic people, to teach them by example that the notion of Sunday which obtained two hundred years ago in Scotland had been modified, and that the sacredness of it had pretty much disappeared with the unpleasantness of it. They rather lent themselves to the humor of the hour, and probably by their demeanor encouraged the respect for the day on Cape Breton Island. Neither by birth nor education were the travelers fishermen on Sunday, and they were not moved to tempt the authorities to lock them up for dropping here a line and there a line on the Lord's day.

In fact, before I had finished my second cup of Maud-mixed coffee, my companion, with a little show of haste, had gone in search of the kirk, and I followed him, with more scrupulousness, as soon as I could without breaking the day of rest. Although it was Sunday, I could not but notice that Baddeck was a clean-looking village of white wooden houses, of perhaps seven or eight hundred inhabitants; that it stretched along the bay for a mile or more, straggling off into farmhouses at each end, lying for the most part on the sloping curve of the bay. There were a few country-looking stores and shops, and on the shore three or four rather decayed and shaky wharves ran into the water, and a few schooners lay at anchor near them; and the usual decaying warehouses leaned about the docks. A peaceful and perhaps a thriving place, but not a bustling place. As I walked down the road, a sailboat put out from the shore and slowly disappeared round the island in the direction of the Grand Narrows. It had a small pleasure party on board. None of them were drowned that day, and I learned at night that they were Roman Catholics from Whykokornagh.

The kirk, which stands near the water, and at a distance shows a pretty wooden spire, is after the pattern of a New England meeting-house. When I reached it, the house was full and the service had begun. There was something familiar in the bareness and uncompromising plainness and ugliness of the interior. The pews had high backs, with narrow, uncushioned seats. The pulpit was high,—a sort of theological fortification,—approached by wide, curving flights of stairs on either side. Those who occupied the near seats to the right and left of the pulpit had in front of them a blank board partition, and could not by any possibility see the minister, though they broke their necks backwards over their high coat-collars. The congregation had a striking resemblance to a country New England congregation of say twenty years ago. The clothes they wore had been Sunday clothes for at least that length of time.

Such clothes have a look of I know not what devout and painful respectability, that is in keeping with the worldly notion of rigid Scotch Presbyterianism. One saw with pleasure the fresh and rosy-cheeked children of this strict generation, but the women of the audience were not in appearance different from newly arrived and respectable Irish immigrants. They wore a white cap with long frills over the forehead, and a black handkerchief thrown over it and hanging down the neck,—a quaint and not unpleasing disguise.

The house, as I said, was crowded. It is the custom in this region to go to church,—for whole families to go, even the smallest children; and they not unfrequently walk six or seven miles to attend the service. There is a kind of merit in this act that makes up for the lack of certain other Christian virtues that are practiced elsewhere. The service was worth coming seven miles to participate in!—it was about two hours long, and one might well feel as if he had performed a work of long-suffering to sit through it. The singing was strictly congregational. Congregational singing is good (for those who like it) when the congregation can sing. This congregation could not sing, but it could grind the Psalms of David powerfully. They sing nothing else but the old Scotch version of the Psalms, in a patient and faithful long meter. And this is regarded, and with considerable plausibility, as an act of worship. It certainly has small element of pleasure in it. Here is a stanza from Psalm xlv., which the congregation, without any instrumental nonsense, went through in a dragging, drawling manner, and with perfect individual independence as to time:

"Thine arrows sharply pierce the heart of th' enemies of the king, And under thy sub-jec-shi-on the people down do bring."

The sermon was extempore, and in English with Scotch pronunciation; and it filled a solid hour of time. I am not a good judge of sermons, and this one was mere chips to me; but my companion, who knows a sermon when he hears it, said that this was strictly theological, and Scotch theology at that, and not at all expository. It was doubtless my fault that I got no idea whatever from it. But the adults of the congregation appeared to be perfectly satisfied with it; at least they sat bolt upright and nodded assent continually. The children all went to sleep under it, without any hypocritical show of attention. To be sure, the day was warm and the house was unventilated. If the windows had been opened so as to admit the fresh air from the Bras d'Or, I presume the hard-working farmers and their wives would have resented such an interference with their ordained Sunday naps, and the preacher's sermon would have seemed more musty than it appeared to be in that congenial and drowsy air. Considering that only half of the congregation could understand the preacher, its behavior was exemplary.

After the sermon, a collection was taken up for the minister; and I noticed that nothing but pennies rattled into the boxes,—a melancholy sound for the pastor. This might appear niggardly on the part of these Scotch Presbyterians, but it is on principle that they put only a penny into the box; they say that they want a free gospel, and so far as they are concerned they have it. Although the farmers about the Bras d'Or are well-to-do they do not give their minister enough to keep his soul in his Gaelic body, and his poor support is eked out by the contributions of a missionary society. It was gratifying to learn that this was not from stinginess on the part of the people, but was due to their religious principle. It seemed to us that everybody ought to be good in a country where it costs next to nothing.

When the service was over, about half of the people departed; the rest remained in their seats and prepared to enter upon their Sabbath exercises. These latter were all Gaelic people, who had understood little or nothing of the English service. The minister turned himself at once into a Gaelic preacher and repeated in

that language the long exercises of the morning. The sermon and perhaps the prayers were quite as enjoyable in Gaelic as in English, and the singing was a great improvement. It was of the same Psalms, but the congregation chanted them in a wild and weird tone and manner, as wailing and barbarous to modern ears as any Highland devotional outburst of two centuries ago. This service also lasted about two hours; and as soon as it was over the faithful minister, without any rest or refreshment, organized the Sunday-school, and it must have been half past three o'clock before that was over. And this is considered a day of rest.

These Gaelic Christians, we were informed, are of a very old pattern; and some of them cling more closely to religious observances than to morality. Sunday is nowhere observed with more strictness. The community seems to be a very orderly and thrifty one, except upon solemn and stated occasions. One of these occasions is the celebration of the Lord's Supper; and in this the ancient Highland traditions are preserved. The rite is celebrated not oftener than once a year by any church. It then invites the neighboring churches to partake with it,—the celebration being usually in the summer and early fall months. It has some of the characteristics of a "camp-meeting." People come from long distances, and as many as two thousand and three thousand assemble together. They quarter themselves without special invitation upon the members of the inviting church. Sometimes fifty people will pounce upon one farmer, overflowing his house and his barn and swarming all about his premises, consuming all the provisions he has laid up for his family, and all he can raise money to buy, and literally eating him out of house and home. Not seldom a man is almost ruined by one of these religious raids,—at least he is left with a debt of hundreds of dollars. The multitude assembles on Thursday and remains over Sunday. There is preaching every day, but there is something besides. Whatever may be the devotion of a part of the assembly, the four days are, in general, days of license, of carousing, of drinking, and of other excesses, which our informant said he would not particularize; we could understand what they were by reading St. Paul's rebuke of the Corinthians for similar offenses. The evil has become so great and burdensome that the celebration of this sacred rite will have to be reformed altogether.

Such a Sabbath quiet pervaded the street of Baddeck, that the fast driving of the Gaels in their rattling, one-horse wagons, crowded full of men, women, and children,—released from their long sanctuary privileges, and going home,—was a sort of profanation of the day; and we gladly turned aside to visit the rural jail of the town.

Upon the principal street or road of Baddeck stands the dreadful prison-house. It is a story and a quarter edifice, built of stone and substantially whitewashed; retired a little from the road, with a square of green turf in front of it, I should have taken it for the residence of the Dairyman's Daughter, but for the iron gratings at the lower windows. A more inviting place to spend the summer in, a vicious person could not have. The Scotch keeper of it is an old, garrulous, obliging man, and keeps codfish tackle to loan. I think that if he had a prisoner who was fond of fishing, he would take him with him on the bay in pursuit of the mackerel and the cod. If the prisoner were to take advantage of his freedom and attempt to escape, the jailer's feelings would be hurt, and public opinion would hardly approve the prisoner's conduct.

The jail door was hospitably open, and the keeper invited us to enter. Having seen the inside of a good many prisons in our own country (officially), we were interested in inspecting this. It was a favorable time for doing so, for there happened to be a man confined there, a circumstance which seemed to increase the keeper's feeling of responsibility in his office. The edifice had four rooms on the ground-floor, and an attic sleeping-room above. Three of these rooms, which were perhaps twelve feet by fifteen feet, were cells; the third was occupied by the jailer's family. The family were now also occupying the front cell,—a cheerful room commanding a view of the village street and of the bay. A prisoner of a philosophic turn of mind, who had committed some crime of sufficient magnitude to make him willing to retire from the world for a season and rest, might enjoy himself here very well.

The jailer exhibited his premises with an air of modesty. In the rear was a small yard, surrounded by a board fence, in which the prisoner took his exercise. An active boy could climb over it, and an enterprising pig could go through it almost anywhere. The keeper said that he intended at the next court to ask the commissioners to build the fence higher and stop up the holes. Otherwise the jail was in good condition. Its inmates were few; in fact, it was rather apt to be empty: its occupants were usually prisoners for debt, or for some trifling breach of the peace, committed under the influence of the liquor that makes one "unco happy." Whether or not the people of the region have a high moral standard, crime is almost unknown; the jail itself is an evidence of primeval simplicity. The great incident in the old jailer's life had been the rescue of a well-known citizen who was confined on a charge of misuse of public money. The keeper showed me a place in the outer wall of the front cell, where an attempt had been made to batter a hole through. The Highland clan and kinsfolk of the alleged defaulter came one night and threatened to knock the jail in pieces if he was not given up. They bruised the wall, broke the windows, and finally smashed in the door and took their man away. The jailer was greatly excited at this rudeness, and went almost immediately and purchased a pistol. He said that for a time he did n't feel safe in the jail without it. The mob had thrown stones at the upper windows, in order to awaken him, and had insulted him with cursing and offensive language.

Having finished inspecting the building, I was unfortunately moved by I know not what national pride and knowledge of institutions superior to this at home, to say,

"This is a pleasant jail, but it doesn't look much like our great prisons; we have as many as a thousand to twelve hundred men in some of our institutions."

"Ay, ay, I have heard tell," said the jailer, shaking his head in pity, "it's an awfu' place, an awfu' place,—the United States. I suppose it's the wickedest country that ever was in the world. I don't know,—I don't know what is to become of it. It's worse than Sodom. There was that dreadful war on the South; and I hear now it's very unsafe, full of murders and robberies and corruption."

I did not attempt to correct this impression concerning my native land, for I saw it was a comfort to the simple jailer, but I tried to put a thorn into him by saying,

"Yes, we have a good many criminals, but the majority of them, the majority of those in jails, are foreigners; they come from Ireland, England, and the Provinces."

But the old man only shook his head more solemnly, and persisted, "It's an awfu' wicked country."

Before I came away I was permitted to have an interview with the sole prisoner, a very pleasant and talkative man, who was glad to see company, especially intelligent company who understood about things, he was pleased to say. I have seldom met a more agreeable rogue, or one so philosophical, a man of travel and varied experiences. He was a lively, robust Provincial of middle age, bullet-headed, with a mass of curly black hair, and small, round black eyes, that danced and sparkled with good humor. He was by trade a carpenter, and had a work-bench in his cell, at which he worked on week-days. He had been put in jail on suspicion of stealing a buffalo-robe, and he lay in jail eight months, waiting for the judge to come to Baddeck on his yearly circuit. He did not steal the robe, as he assured me, but it was found in his house, and the judge gave him four months in jail, making a year in all,—a month of which was still to serve. But he was not at all anxious for the end of his term; for his wife was outside.

Jock, for he was familiarly so called, asked me where I was from. As I had not found it very profitable to hail from the United States, and had found, in fact, that the name United States did not convey any definite impression to the average Cape Breton mind, I ventured upon the bold assertion, for which I hope Bostonians will forgive me, that I was from Boston. For Boston is known in the eastern Provinces.

"Are you?" cried the man, delighted. "I've lived in Boston, myself. There's just been an awful fire near there."

"Indeed!" I said; "I heard nothing of it." And I was startled with the possibility that Boston had burned up again while we were crawling along through Nova Scotia.

"Yes, here it is, in the last paper." The man bustled away and found his late paper, and thrust it through the grating, with the inquiry, "Can you read?"

Though the question was unexpected, and I had never thought before whether I could read or not, I confessed that I could probably make out the meaning, and took the newspaper. The report of the fire "near Boston" turned out to be the old news of the conflagration in Portland, Oregon!

Disposed to devote a portion of this Sunday to the reformation of this lively criminal, I continued the conversation with him. It seemed that he had been in jail before, and was not unaccustomed to the life. He was not often lonesome; he had his workbench and newspapers, and it was a quiet place; on the whole, he enjoyed it, and should rather regret it when his time was up, a month from then.

Had he any family?

"Oh, yes. When the census was round, I contributed more to it than anybody in town. Got a wife and eleven children."

"Well, don't you think it would pay best to be honest, and live with your family, out of jail? You surely never had anything but trouble from dishonesty."

"That's about so, boss. I mean to go on the square after this. But, you see," and here he began to speak confidentially, "things are fixed about so in this world, and a man's got to live his life. I tell you how it was. It all came about from a woman. I was a carpenter, had a good trade, and went down to St. Peter's to work. There I got acquainted with a Frenchwoman,—you know what Frenchwomen are,—and I had to marry her. The fact is, she was rather low family; not so very low, you know, but not so good as mine. Well, I wanted to go to Boston to work at my trade, but she wouldn't go; and I went, but she would n't come to me, so in two or three years I came back. A man can't help himself, you know, when he gets in with a woman, especially a Frenchwoman. Things did n't go very well, and never have. I can't make much out of it, but I reckon a man 's got to live his life. Ain't that about so?"

"Perhaps so. But you'd better try to mend matters when you get out. Won't it seem rather good to get out and see your wife and family again?"

"I don't know. I have peace here."

The question of his liberty seemed rather to depress this cheerful and vivacious philosopher, and I wondered what the woman could be from whose companionship the man chose to be protected by jail-bolts. I asked the landlord about her, and his reply was descriptive and sufficient. He only said,

"She's a yelper."

Besides the church and the jail there are no public institutions in Baddeck to see on Sunday, or on any other day; but it has very good schools, and the examination-papers of Maud and her elder sister would do credit to Boston scholars even. You would not say that the place was stuffed with books, or overrun by lecturers, but it is an orderly, Sabbath-keeping, fairly intelligent town. Book-agents visit it with other commercial travelers, but the flood of knowledge, which is said to be the beginning of sorrow, is hardly turned in that direction yet. I heard of a feeble lecture-course in Halifax, supplied by local celebrities, some of them from St. John; but so far as I can see, this is a virgin field for the platform philosophers under whose instructions we have become the well-informed people we are.

The peaceful jail and the somewhat tiresome church exhaust one's opportunities for doing good in Baddeck on Sunday. There seemed to be no idlers about, to reprove; the occasional loungee on the skeleton wharves was in his Sunday clothes, and therefore within the statute. No one, probably, would have thought of rowing out beyond the island to fish for cod,—although, as that fish is ready to bite, and his associations are more or less sacred, there might be excuses for angling for him on Sunday, when it would be wicked to throw a line for another sort of fish. My earliest recollections are of the codfish on the meeting-house spires in New England,—his sacred tail pointing the way the wind went. I did not know then why this emblem should be placed upon a house of worship, any more than I knew why codfish-balls appeared always upon the Sunday breakfast-table. But these associations invested this plebeian fish with something of a religious character, which he has never quite lost, in my mind.

Having attributed the quiet of Baddeck on Sunday to religion, we did not know to what to lay the quiet on Monday. But its peacefulness continued. I have no doubt that the farmers began to farm, and the traders to trade, and the sailors to sail; but the tourist felt that he had come into a place of rest. The promise of the red sky the evening before was fulfilled in another royal day. There was an inspiration in the air that one looks for rather in the mountains than on the sea-coast; it seemed like some new and gentle compound of sea-air and

land-air, which was the perfection of breathing material. In this atmosphere, which seemed to flow over all these Atlantic isles at this season, one endures a great deal of exertion with little fatigue; or he is content to sit still, and has no feeling of sluggishness. Mere living is a kind of happiness, and the easy-going traveler is satisfied with little to do and less to see, Let the reader not understand that we are recommending him to go to Baddeck. Far from it. The reader was never yet advised to go to any place, which he did not growl about if he took the advice and went there. If he discovers it himself, the case is different. We know too well what would happen. A shoal of travelers would pour down upon Cape Breton, taking with them their dyspepsia, their liver-complaints, their "lights" derangements, their discontent, their guns and fishing-tackle, their big trunks, their desire for rapid travel, their enthusiasm about the Gaelic language, their love for nature; and they would very likely declare that there was nothing in it. And the traveler would probably be right, so far as he is concerned. There are few whom it would pay to go a thousand miles for the sake of sitting on the dock at Baddeck when the sun goes down, and watching the purple lights on the islands and the distant hills, the red flush in the horizon and on the lake, and the creeping on of gray twilight. You can see all that as well elsewhere? I am not so sure. There is a harmony of beauty about the Bras d'Or at Baddeck which is lacking in many scenes of more pretension. No. We advise no person to go to Cape Breton. But if any one does go, he need not lack occupation. If he is there late in the fall or early in the winter, he may hunt, with good luck, if he is able to hit anything with a rifle, the moose and the caribou on that long wilderness peninsula between Baddeck and Aspy Bay, where the old cable landed. He may also have his fill of salmon fishing in June and July, especially on the Matjorie River. As late as August, at the time, of our visit, a hundred people were camped in tents on the Marjorie, wiling the salmon with the delusive fly, and leading him to death with a hook in his nose. The speckled trout lives in all the streams, and can be caught whenever he will bite. The day we went for him appeared to be an off-day, a sort of holiday with him.

There is one place, however, which the traveler must not fail to visit. That is St. Ann's Bay. He will go light of baggage, for he must hire a farmer to carry him from the Bras d'Or to the branch of St. Ann's harbor, and a part of his journey will be in a row-boat. There is no ride on the continent, of the kind, so full of picturesque beauty and constant surprises as this around the indentations of St. Ann's harbor. From the high promontory where rests the fishing village of St. Ann, the traveler will cross to English Town. High bluffs, bold shores, exquisite sea-views, mountainous ranges, delicious air, the society of a member of the Dominion Parliament, these are some of the things to be enjoyed at this place. In point of grandeur and beauty it surpasses Mt. Desert, and is really the most attractive place on the whole line of the Atlantic Cable. If the traveler has any sentiment in him, he will visit here, not without emotion, the grave of the Nova Scotia Giant, who recently laid his huge frame along this, his native shore. A man of gigantic height and awful breadth of shoulders, with a hand as big as a shovel, there was nothing mean or little in his soul. While the visitor is gazing at his vast shoes, which now can be used only as sledges, he will be told that the Giant was greatly respected by his neighbors as a man of ability and simple integrity. He was not spoiled by his metropolitan successes, bringing home from his foreign triumphs the same quiet and friendly demeanor he took away; he is almost the only example of a successful public man, who did not feel bigger than he was. He performed his duty in life without ostentation, and returned to the home he loved unspoiled by the flattery of constant public curiosity. He knew, having tried both, how much better it is to be good than to be great. I should like to have known him. I should like to know how the world looked to him from his altitude. I should like to know how much food it took at one time to make an impression on him; I should like to know what effect an idea of ordinary size had in his capacious head. I should like to feel that thrill of physical delight he must have experienced in merely closing his hand over something. It is a pity that he could not have been educated all through, beginning at a high school, and ending in a university. There was a field for the multifarious new education! If we could have annexed him with his island, I should like to have seen him in the Senate of the United States. He would have made foreign nations respect that body, and fear his lightest remark like a declaration of war. And he would have been at home in that body of great men. Alas! he has passed away, leaving little influence except a good example of growth, and a grave which is a new promontory on that ragged coast swept by the winds of the untamed Atlantic.

I could describe the Bay of St. Ann more minutely and graphically, if it were desirable to do so; but I trust that enough has been said to make the traveler wish to go there. I more unreservedly urge him to go there, because we did not go, and we should feel no responsibility for his liking or disliking. He will go upon the recommendation of two gentlemen of taste and travel whom we met at Baddeck, residents of Maine and familiar with most of the odd and striking combinations of land and water in coast scenery. When a Maine man admits that there is any place finer than Mt. Desert, it is worth making a note of.

On Monday we went a-fishing. Davie hitched to a rattling wagon something that he called a horse, a small, rough animal with a great deal of "go" in him, if he could be coaxed to show it. For the first half-hour he went mostly in a circle in front of the inn, moving indifferently backwards or forwards, perfectly willing to go down the road, but refusing to start along the bay in the direction of Middle River. Of course a crowd collected to give advice and make remarks, and women appeared at the doors and windows of adjacent houses. Davie said he did n't care anything about the conduct of the horse,—he could start him after a while,—but he did n't like to have all the town looking at him, especially the girls; and besides, such an exhibition affected the market value of the horse. We sat in the wagon circling round and round, sometimes in the ditch and sometimes out of it, and Davie "whaled" the horse with his whip and abused him with his tongue. It was a pleasant day, and the spectators increased.

There are two ways of managing a balky horse. My companion knew one of them and I the other. His method is to sit quietly in the wagon, and at short intervals throw a small pebble at the horse. The theory is that these repeated sudden annoyances will operate on a horse's mind, and he will try to escape them by going on. The spectators supplied my friend with stones, and he pelted the horse with measured gentleness. Probably the horse understood this method, for he did not notice the attack at all. My plan was to speak gently to the horse, requesting him to go, and then to follow the refusal by one sudden, sharp cut of the lash; to wait a moment, and then repeat the operation. The dread of the coming lash after the gentle word will start any horse. I tried this, and with a certain success. The horse backed us into the ditch, and would probably have backed himself into the wagon, if I had continued. When the animal was at length ready to go,

Davie took him by the bridle, ran by his side, coaxed him into a gallop, and then, leaping in behind, lashed him into a run, which had little respite for ten miles, uphill or down. Remonstrance on behalf of the horse was in vain, and it was only on the return home that this specimen Cape Breton driver began to reflect how he could erase the welts from the horse's back before his father saw them.

Our way lay along the charming bay of the Bras d'Or, over the sprawling bridge of the Big Baddeck, a black, sedgy, lonesome stream, to Middle River, which debouches out of a scraggy country into a bayou with ragged shores, about which the Indians have encampments, and in which are the skeleton stakes of fish-weirs. Saturday night we had seen trout jumping in the still water above the bridge. We followed the stream up two or three miles to a Gaelic settlement of farmers. The river here flows through lovely meadows, sandy, fertile, and sheltered by hills,—a green Eden, one of the few peaceful inhabited spots in the world. I could conceive of no news coming to these Highlanders later than the defeat of the Pretender. Turning from the road, through a lane and crossing a shallow brook, we reached the dwelling of one of the original McGregors, or at least as good as an original. Mr. McGregor is a fiery-haired Scotchman and brother, cordial and hospitable, who entertained our wayward horse, and freely advised us where the trout on his farm were most likely to be found at this season of the year.

It would be a great pleasure to speak well of Mr. McGregor's residence, but truth is older than Scotchmen, and the reader looks to us for truth and not flattery. Though the McGregor seems to have a good farm, his house is little better than a shanty, a rather cheerless place for the "woman" to slave away her uneventful life in, and bring up her scantily clothed and semi-wild flock of children. And yet I suppose there must be happiness in it,—there always is where there are plenty of children, and milk enough for them. A white-haired boy who lacked adequate trousers, small though he was, was brought forward by his mother to describe a trout he had recently caught, which was nearly as long as the boy himself. The young Gael's invention was rewarded by a present of real fish-hooks. We found here in this rude cabin the hospitality that exists in all remote regions where travelers are few. Mrs. McGregor had none of that reluctance, which women feel in all more civilized agricultural regions, to "break a pan of milk," and Mr. McGregor even pressed us to partake freely of that simple drink. And he refused to take any pay for it, in a sort of surprise that such a simple act of hospitality should have any commercial value. But travelers themselves destroy one of their chief pleasures. No doubt we planted the notion in the McGregor mind that the small kindnesses of life may be made profitable, by offering to pay for the milk; and probably the next travelers in that Eden will succeed in leaving some small change there, if they use a little tact.

It was late in the season for trout. Perhaps the McGregor was aware of that when he freely gave us the run of the stream in his meadows, and pointed out the pools where we should be sure of good luck. It was a charming August day, just the day that trout enjoy lying in cool, deep places, and moving their fins in quiet content, indifferent to the skimming fly or to the proffered sport of rod and reel. The Middle River gracefully winds through this Vale of Tempe, over a sandy bottom, sometimes sparkling in shallows, and then gently reposing in the broad bends of the grassy banks. It was in one of these bends, where the stream swirled around in seductive eddies, that we tried our skill. We heroically waded the stream and threw our flies from the highest bank; but neither in the black water nor in the sandy shallows could any trout be coaxed to spring to the deceitful leaders. We enjoyed the distinction of being the only persons who had ever failed to strike trout in that pool, and this was something. The meadows were sweet with the newly cut grass, the wind softly blew down the river, large white clouds sailed high overhead and cast shadows on the changing water; but to all these gentle influences the fish were insensible, and sulked in their cool retreats. At length in a small brook flowing into the Middle River we found the trout more sociable; and it is lucky that we did so, for I should with reluctance stain these pages with a fiction; and yet the public would have just reason to resent a fish-story without any fish in it. Under a bank, in a pool crossed by a log and shaded by a tree, we found a drove of the speckled beauties at home, dozens of them a foot long, each moving lazily a little, their black backs relieved by their colored fins. They must have seen us, but at first they showed no desire for a closer acquaintance. To the red ibis and the white miller and the brown hackle and the gray fly they were alike indifferent. Perhaps the love for made flies is an artificial taste and has to be cultivated. These at any rate were uncivilized-trout, and it was only when we took the advice of the young McGregor and baited our hooks with the angleworm, that the fish joined in our day's sport. They could not resist the lively wiggle of the worm before their very noses, and we lifted them out one after another, gently, and very much as if we were hooking them out of a barrel, until we had a handsome string. It may have been fun for them but it was not much sport for us. All the small ones the young McGregor contemptuously threw back into the water. The sportsman will perhaps learn from this incident that there are plenty of trout in Cape Breton in August, but that the fishing is not exhilarating.

The next morning the semi-weekly steamboat from Sydney came into the bay, and drew all the male inhabitants of Baddeck down to the wharf; and the two travelers, reluctant to leave the hospitable inn, and the peaceful jail, and the double-barreled church, and all the loveliness of this reposeful place, prepared to depart. The most conspicuous person on the steamboat was a thin man, whose extraordinary height was made more striking by his very long-waisted black coat and his very short pantaloons. He was so tall that he had a little difficulty in keeping his balance, and his hat was set upon the back of his head to preserve his equilibrium. He had arrived at that stage when people affected as he was are oratorical, and overflowing with information and good-nature. With what might in strict art be called an excess of expletives, he explained that he was a civil engineer, that he had lost his rubber coat, that he was a great traveler in the Provinces, and he seemed to find a humorous satisfaction in reiterating the fact of his familiarity with Painsec junction. It evidently hovered in the misty horizon of his mind as a joke, and he contrived to present it to his audience in that light. From the deck of the steamboat he addressed the town, and then, to the relief of the passengers, he decided to go ashore. When the boat drew away on her voyage we left him swaying perilously near the edge of the wharf, good-naturedly resenting the grasp of his coat-tail by a friend, addressing us upon the topics of the day, and wishing us prosperity and the Fourth of July. His was the only effort in the nature of a public lecture that we heard in the Provinces, and we could not judge of his ability without hearing a "course."

Perhaps it needed this slight disturbance, and the contrast of this hazy mind with the serene clarity of the

day, to put us into the most complete enjoyment of our voyage. Certainly, as we glided out upon the summer waters and began to get the graceful outlines of the widening shores, it seemed as if we had taken passage to the Fortunate Islands.

V

"One town, one country, is very like another;... there are indeed minute discriminations both of places and manners, which, perhaps, are not wanting of curiosity, but which a traveller seldom stays long enough to investigate and compare."—DR. JOHNSON.

There was no prospect of any excitement or of any adventure on the steamboat from Baddeck to West Bay, the southern point of the Bras d'Or. Judging from the appearance of the boat, the dinner might have been an experiment, but we ran no risks. It was enough to sit on deck forward of the wheel-house, and absorb, by all the senses, the delicious day. With such weather perpetual and such scenery always present, sin in this world would soon become an impossibility. Even towards the passengers from Sydney, with their imitation English ways and little insular gossip, one could have only charity and the most kindly feeling.

The most electric American, heir of all the nervous diseases of all the ages, could not but find peace in this scene of tranquil beauty, and sail on into a great and deepening contentment. Would the voyage could last for an age, with the same sparkling but tranquil sea, and the same environment of hills, near and remote! The hills approached and fell away in lines of undulating grace, draped with a tender color which helped to carry the imagination beyond the earth. At this point the narrative needs to flow into verse, but my comrade did not feel like another attempt at poetry so soon after that on the Gut of Canso. A man cannot always be keyed up to the pitch of production, though his emotions may be highly creditable to him. But poetry-making in these days is a good deal like the use of profane language,—often without the least provocation.

Twelve miles from Baddeck we passed through the Barra Strait, or the Grand Narrows, a picturesque feature in the Bras d'Or, and came into its widest expanse. At the Narrows is a small settlement with a flag-staff and a hotel, and roads leading to farmhouses on the hills. Here is a Catholic chapel; and on shore a fat padre was waiting in his wagon for the inevitable priest we always set ashore at such a place. The missionary we landed was the young father from Arichat, and in appearance the pleasing historical Jesuit. Slender is too corpulent a word to describe his thinness, and his stature was primeval. Enveloped in a black coat, the skirts of which reached his heels, and surmounted by a black hat with an enormous brim, he had the form of an elegant toadstool. The traveler is always grateful for such figures, and is not disposed to quarrel with the faith which preserves so much of the ugly picturesque. A peaceful farming country this, but an unremunerative field, one would say, for the colporteur and the book-agent; and winter must inclose it in a lonesome seclusion.

The only other thing of note the Bras d'Or offered us before we reached West Bay was the finest show of medusa or jelly-fish that could be produced. At first there were dozens of these disk-shaped, transparent creatures, and then hundreds, starrng the water like marguerites sprinkled on a meadow, and of sizes from that of a teacup to a dinner-plate. We soon ran into a school of them, a convention, a herd as extensive as the vast buffalo droves on the plains, a collection as thick as clover-blossoms in a field in June, miles of them, apparently; and at length the boat had to push its way through a mass of them which covered the water like the leaves of the pondlily, and filled the deeps far down with their beautiful contracting and expanding forms. I did not suppose there were so many jelly-fishes in all the world. What a repast they would have made for the Atlantic whale we did not see, and what inward comfort it would have given him to have swum through them once or twice with open mouth! Our delight in this wondrous spectacle did not prevent this generous wish for the gratification of the whale. It is probably a natural human desire to see big corporations swallow up little ones.

At the West Bay landing, where there is nothing whatever attractive, we found a great concourse of country wagons and clamorous drivers, to transport the passengers over the rough and uninteresting nine miles to Port Hawkesbury. Competition makes the fare low, but nothing makes the ride entertaining. The only settlement passed through has the promising name of River Inhabitants, but we could see little river and less inhabitants; country and people seem to belong to that commonplace order out of which the traveler can extract nothing amusing, instructive, or disagreeable; and it was a great relief when we came over the last hill and looked down upon the stragglng village of Port Hawkesbury and the winding Gut of Canso.

One cannot but feel a respect for this historical strait, on account of the protection it once gave our British ancestors. Smollett makes a certain Captain C—tell this anecdote of George II. and his enlightened minister, the Duke of Newcastle: "In the beginning of the war this poor, half-witted creature told me, in a great fright, that thirty thousand French had marched from Acadie to Cape Breton. 'Where did they find transports?' said I. 'Transports!' cried he; 'I tell you, they marched by land.' By land to the island of Cape Breton?' 'What! is Cape Breton an island?' 'Certainly.' 'Ha! are you sure of that?' When I pointed it out on the map, he examined it earnestly with his spectacles; then taking me in his arms, 'My dear C—!' cried he, you always bring us good news. I'll go directly and tell the king that Cape Breton is an island.'"

Port Hawkesbury is not a modern settlement, and its public house is one of the irregular, old-fashioned, stuffy taverns, with low rooms, chintz-covered lounges, and fat-cushioned rocking-chairs, the decay and untidiness of which are not offensive to the traveler. It has a low back porch looking towards the water and over a mouldy garden, damp and unseemly. Time was, no doubt, before the rush of travel rubbed off the bloom of its ancient hospitality and set a vigilant man at the door of the dining-room to collect pay for meals, that this was an abode of comfort and the resort of merry-making and frolicsome provincials. On this now decaying porch no doubt lovers sat in the moonlight, and vowed by the Gut of Canso to be fond of each other

forever. The traveler cannot help it if he comes upon the traces of such sentiment. There lingered yet in the house an air of the hospitable old time; the swift willingness of the waiting-maids at table, who were eager that we should miss none of the home-made dishes, spoke of it; and as we were not obliged to stay in the hotel and lodge in its six-by-four bedrooms, we could afford to make a little romance about its history.

While we were at supper the steamboat arrived from Pictou. We hastened on board, impatient for progress on our homeward journey. But haste was not called for. The steamboat would not sail on her return till morning. No one could tell why. It was not on account of freight to take in or discharge; it was not in hope of more passengers, for they were all on board. But if the boat had returned that night to Pictou, some of the passengers might have left her and gone west by rail, instead of wasting two, or three days lounging through Northumberland Sound and idling in the harbors of Prince Edward Island. If the steamboat would leave at midnight, we could catch the railway train at Pictou. Probably the officials were aware of this, and they preferred to have our company to Shediac. We mention this so that the tourist who comes this way may learn to possess his soul in patience, and know that steamboats are not run for his accommodation, but to give him repose and to familiarize him with the country. It is almost impossible to give the unscientific reader an idea of the slowness of travel by steamboat in these regions. Let him first fix his mind on the fact that the earth moves through space at a speed of more than sixty-six thousand miles an hour. This is a speed eleven hundred times greater than that of the most rapid express trains. If the distance traversed by a locomotive in an hour is represented by one tenth of an inch, it would need a line nine feet long to indicate the corresponding advance of the earth in the same time. But a tortoise, pursuing his ordinary gait without a wager, moves eleven hundred times slower than an express train. We have here a basis of comparison with the provincial steamboats. If we had seen a tortoise start that night from Port Hawkesbury for the west, we should have desired to send letters by him.

In the early morning we stole out of the romantic strait, and by breakfast-time we were over St. George's Bay and round his cape, and making for the harbor of Pictou. During the forenoon something in the nature of an excursion developed itself on the steamboat, but it had so few of the bustling features of an American excursion that I thought it might be a pilgrimage. Yet it doubtless was a highly developed provincial lark. For a certain portion of the passengers had the unmistakable excursion air: the half-jocular manner towards each other, the local facetiousness which is so offensive to uninterested fellow-travelers, that male obsequiousness about ladies' shawls and reticules, the clumsy pretense of gallantry with each other's wives, the anxiety about the company luggage and the company health. It became painfully evident presently that it was an excursion, for we heard singing of that concerted and determined kind that depresses the spirits of all except those who join in it. The excursion had assembled on the lee guards out of the wind, and was enjoying itself in an abandon of serious musical enthusiasm. We feared at first that there might be some levity in this performance, and that the unrestrained spirit of the excursion was working itself off in social and convivial songs. But it was not so. The singers were provided with hymn-and-tune books, and what they sang they rendered in long meter and with a most doleful earnestness. It is agreeable to the traveler to see that the provincials disport themselves within bounds, and that an hilarious spree here does not differ much in its exercises from a prayer-meeting elsewhere. But the excursion enjoyed its staid dissipation amazingly.

It is pleasant to sail into the long and broad harbor of Pictou on a sunny day. On the left is the Halifax railway terminus, and three rivers flow into the harbor from the south. On the right the town of Pictou, with its four thousand inhabitants, lies upon the side of the ridge that runs out towards the Sound. The most conspicuous building in it as we approach is the Roman Catholic church; advanced to the edge of the town and occupying the highest ground, it appears large, and its gilt cross is a beacon miles away. Its builders understood the value of a striking situation, a dominant position; it is a part of the universal policy of this church to secure the commanding places for its houses of worship. We may have had no prejudices in favor of the Papal temporality when we landed at Pictou, but this church was the only one which impressed us, and the only one we took the trouble to visit. We had ample time, for the steamboat after its arduous trip needed rest, and remained some hours in the harbor. Pictou is said to be a thriving place, and its streets have a cindery appearance, betokening the nearness of coal mines and the presence of furnaces. But the town has rather a cheap and rusty look. Its streets rise one above another on the hillside, and, except a few comfortable cottages, we saw no evidences of wealth in the dwellings. The church, when we reached it, was a commonplace brick structure, with a raw, unfinished interior, and weedy and untidy surroundings, so that our expectation of sitting on the inviting hill and enjoying the view was not realized; and we were obliged to descend to the hot wharf and wait for the ferry-boat to take us to the steamboat which lay at the railway terminus opposite. It is the most unfair thing in the world for the traveler, without an object or any interest in the development of the country, on a sleepy day in August, to express any opinion whatever about such a town as Pictou. But we may say of it, without offence, that it occupies a charming situation, and may have an interesting future; and that a person on a short acquaintance can leave it without regret.

By stopping here we had the misfortune to lose our excursion, a loss that was soothed by no know ledge of its destination or hope of seeing it again, and a loss without a hope is nearly always painful. Going out of the harbor we encounter Pictou Island and Light, and presently see the low coast of Prince Edward Island,—a coast indented and agreeable to those idly sailing along it, in weather that seemed let down out of heaven and over a sea that sparkled but still slept in a summer quiet. When fate puts a man in such a position and relieves him of all responsibility, with a book and a good comrade, and liberty to make sarcastic remarks upon his fellow-travelers, or to doze, or to look over the tranquil sea, he may be pronounced happy. And I believe that my companion, except in the matter of the comrade, was happy. But I could not resist a worrying anxiety about the future of the British Provinces, which not even the remembrance of their hostility to us during our mortal strife with the Rebellion could render agreeable. For I could not but feel that the ostentatious and unconcealable prosperity of "the States" over-shadows this part of the continent. And it was for once in vain that I said, "Have we not a common land and a common literature, and no copyright, and a common pride in Shakespeare and Hannah More and Colonel Newcome and Pepys's Diary?" I never knew this sort of consolation to fail before; it does not seem to answer in the Provinces as well as it does in England.

New passengers had come on board at Pictou, new and hungry, and not all could get seats for dinner at the

first table. Notwithstanding the supposed traditional advantage of our birthplace, we were unable to dispatch this meal with the celerity of our fellow-voyagers, and consequently, while we lingered over our tea, we found ourselves at the second table. And we were rewarded by one of those pleasing sights that go to make up the entertainment of travel. There sat down opposite to us a fat man whose noble proportions occupied at the board the space of three ordinary men. His great face beamed delight the moment he came near the table. He had a low forehead and a wide mouth and small eyes, and an internal capacity that was a prophecy of famine to his fellow-men. But a more good-natured, pleased animal you may never see. Seating himself with unrepressed joy, he looked at us, and a great smile of satisfaction came over his face, that plainly said, "Now my time has come." Every part of his vast bulk said this. Most generously, by his friendly glances, he made us partners in his pleasure. With a Napoleonic grasp of his situation, he reached far and near, hauling this and that dish of fragments towards his plate, giving orders at the same time, and throwing into his cheerful mouth odd pieces of bread and pickles in an unstudied and preliminary manner. When he had secured everything within his reach, he heaped his plate and began an attack upon the contents, using both knife and fork with wonderful proficiency. The man's good-humor was contagious, and he did not regard our amusement as different in kind from his enjoyment. The spectacle was worth a journey to see. Indeed, its aspect of comicality almost overcame its grossness, and even when the hero loaded in faster than he could swallow, and was obliged to drop his knife for an instant to arrange matters in his mouth with his finger, it was done with such a beaming smile that a pig would not take offense at it. The performance was not the merely vulgar thing it seems on paper, but an achievement unique and perfect, which one is not likely to see more than once in a lifetime. It was only when the man left the table that his face became serious. We had seen him at his best.

Prince Edward Island, as we approached it, had a pleasing aspect, and nothing of that remote friendlessness which its appearance on the map conveys to one; a warm and sandy land, in a genial climate, without fogs, we are informed. In the winter it has ice communication with Nova Scotia, from Cape Traverse to Cape Tormentine,—the route of the submarine cable. The island is as flat from end to end as a floor. When it surrendered its independent government and joined the Dominion, one of the conditions of the union was that the government should build a railway the whole length of it. This is in process of construction, and the portion that is built affords great satisfaction to the islanders, a railway being one of the necessary adjuncts of civilization; but that there was great need of it, or that it would pay, we were unable to learn.

We sailed through Hillsborough Bay and a narrow strait to Charlottetown, the capital, which lies on a sandy spit of land between two rivers. Our leisurely steamboat tied up here in the afternoon and spent the night, giving the passengers an opportunity to make thorough acquaintance with the town. It has the appearance of a place from which something has departed; a wooden town, with wide and vacant streets, and the air of waiting for something. Almost melancholy is the aspect of its freestone colonial building, where once the colonial legislature held its momentous sessions, and the colonial governor shed the delightful aroma of royalty. The mansion of the governor—now vacant of pomp, because that official does not exist—is a little withdrawn from the town, secluded among trees by the water-side. It is dignified with a winding approach, but is itself only a cheap and decaying house. On our way to it we passed the drill-shed of the local cavalry, which we mistook for a skating-rink, and thereby excited the contempt of an old lady of whom we inquired. Tasteful residences we did not find, nor that attention to flowers and gardens which the mild climate would suggest. Indeed, we should describe Charlottetown as a place where the hollyhock in the dooryard is considered an ornament. A conspicuous building is a large market-house shingled all over (as many of the public buildings are), and this and other cheap public edifices stand in the midst of a large square, which is surrounded by shabby shops for the most part. The town is laid out on a generous scale, and it is to be regretted that we could not have seen it when it enjoyed the glory of a governor and court and ministers of state, and all the paraphernalia of a royal parliament. That the productive island, with its system of free schools, is about to enter upon a prosperous career, and that Charlottetown is soon to become a place of great activity, no one who converses with the natives can doubt; and I think that even now no traveler will regret spending an hour or two there; but it is necessary to say that the rosy inducements to tourists to spend the summer there exist only in the guide-books.

We congratulated ourselves that we should at least have a night of delightful sleep on the steamboat in the quiet of this secluded harbor. But it was wisely ordered otherwise, to the end that we should improve our time by an interesting study of human nature. Towards midnight, when the occupants of all the state-rooms were supposed to be in profound slumber, there was an invasion of the small cabin by a large and loquacious family, who had been making an excursion on the island railway. This family might remind an antiquated novel-reader of the delightful Brangtons in "Evelina;" they had all the vivacity of the pleasant cousins of the heroine of that story, and the same generosity towards the public in regard to their family affairs. Before they had been in the cabin an hour, we felt as if we knew every one of them. There was a great squabble as to where and how they should sleep; and when this was over, the revelations of the nature of their beds and their peculiar habits of sleep continued to pierce the thin deal partitions of the adjoining state-rooms. When all the possible trivialities of vacant minds seemed to have been exhausted, there followed a half-hour of "Goodnight, pa; good-night, ma;" "Goodnight, pet;" and "Are you asleep, ma?" "No." "Are you asleep, pa?" "No; go to sleep, pet." "I'm going. Good-night, pa; good-night, ma." "Goodnight, pet." "This bed is too short." "Why don't you take the other?" "I'm all fixed now." "Well, go to sleep; good-night." "Good-night, ma; goodnight, pa,"—no answer. "Good-night, pa." "Goodnight, pet." "Ma, are you asleep?" "Most." "This bed is all lumps; I wish I'd gone downstairs." "Well, pa will get up." "Pa, are you asleep?" "Yes." "It's better now; good-night, pa." "Goodnight, pet." "Good-night, ma." "Good-night, pet." And so on in an exasperating repetition, until every passenger on the boat must have been thoroughly informed of the manner in which this interesting family habitually settled itself to repose.

Half an hour passes with only a languid exchange of family feeling, and then: "Pa?" "Well, pet." "Don't call us in the morning; we don't want any breakfast; we want to sleep." "I won't." "Goodnight, pa; goodnight, ma. Ma?" "What is it, dear?" "Good-night, ma." "Good-night, pet." Alas for youthful expectations! Pet shared her stateroom with a young companion, and the two were carrying on a private dialogue during this public performance. Did these young ladies, after keeping all the passengers of the boat awake till near the summer

dawn, imagine that it was in the power of pa and ma to insure them the coveted forenoon slumber, or even the morning snooze? The travelers, tossing in their state-room under this domestic infliction, anticipated the morning with grim satisfaction; for they had a presentiment that it would be impossible for them to arise and make their toilet without waking up every one in their part of the boat, and aggravating them to such an extent that they would stay awake. And so it turned out. The family grumbling at the unexpected disturbance was sweeter to the travelers than all the exchange of family affection during the night.

No one, indeed, ought to sleep beyond breakfast-time while sailing along the southern coast of Prince Edward Island. It was a sparkling morning. When we went on deck we were abreast Cape Traverse; the faint outline of Nova Scotia was marked on the horizon, and New Brunswick thrust out Cape Tomentine to greet us. On the still, sunny coasts and the placid sea, and in the serene, smiling sky, there was no sign of the coming tempest which was then raging from Hatteras to Cape Cod; nor could one imagine that this peaceful scene would, a few days later, be swept by a fearful tornado, which should raze to the ground trees and dwelling-houses, and strew all these now inviting shores with wrecked ships and drowning sailors,—a storm which has passed into literature in “The Lord's-Day Gale” of Mr Stedman.

Through this delicious weather why should the steamboat hasten, in order to discharge its passengers into the sweeping unrest of continental travel? Our eagerness to get on, indeed, almost melted away, and we were scarcely impatient at all when the boat lounged into Halifax Bay, past Salutation Point and stopped at Summerside. This little seaport is intended to be attractive, and it would give these travelers great pleasure to describe it, if they could at all remember how it looks. But it is a place that, like some faces, makes no sort of impression on the memory. We went ashore there, and tried to take an interest in the ship-building, and in the little oysters which the harbor yields; but whether we did take an interest or not has passed out of memory. A small, unpicturesque, wooden town, in the languor of a provincial summer; why should we pretend an interest in it which we did not feel? It did not disturb our reposeful frame of mind, nor much interfere with our enjoyment of the day.

On the forward deck, when we were under way again, amid a group reading and nodding in the sunshine, we found a pretty girl with a companion and a gentleman, whom we knew by intuition as the “pa” of the pretty girl and of our night of anguish. The pa might have been a clergyman in a small way, or the proprietor of a female boarding-school; at any rate, an excellent and improving person to travel with, whose willingness to impart information made even the travelers long for a pa. It was no part of his plan of this family summer excursion, upon which he had come against his wish, to have any hour of it wasted in idleness. He held an open volume in his hand, and was questioning his daughter on its contents. He spoke in a loud voice, and without heeding the timidity of the young lady, who shrank from this public examination, and begged her father not to continue it. The parent was, however, either proud of his daughter's acquirements, or he thought it a good opportunity to shame her out of her ignorance. Doubtless, we said, he is instructing her upon the geography of the region we are passing through, its early settlement, the romantic incidents of its history when French and English fought over it, and so is making this a tour of profit as well as pleasure. But the excellent and pottering father proved to be no disciple of the new education. Greece was his theme and he got his questions, and his answers too, from the ancient school history in his hand. The lesson went on:

“Who was Alcibiades?”

“A Greek.”

“Yes. When did he flourish?”

“I can't think.”

“Can't think? What was he noted for?”

“I don't remember.”

“Don't remember? I don't believe you studied this.”

“Yes, I did.”

“Well, take it now, and study it hard, and then I'll hear you again.”

The young girl, who is put to shame by this open persecution, begins to study, while the peevish and small tyrant, her pa, is nagging her with such soothing remarks as, “I thought you'd have more respect for your pride;” “Why don't you try to come up to the expectations of your teacher?” By and by the student thinks she has “got it,” and the public exposition begins again. The date at which Alcibiades “flourished” was ascertained, but what he was “noted for” got hopelessly mixed with what Themistocles was “noted for.” The momentary impression that the battle of Marathon was fought by Salamis was soon dissipated, and the questions continued.

“What did Pericles do to the Greeks?”

“I don't know.”

“Elevated 'em, did n't he? Did n't he elevate 'em?”

“Yes, sir.”

“Always remember that; you want to fix your mind on leading things. Remember that Pericles elevated the Greeks. Who was Pericles?”

“He was a”—

“Was he a philosopher?”

“Yes, sir.”

“No, he was n't. Socrates was a philosopher. When did he flourish?”

And so on, and so on.

O my charming young countrywomen, let us never forget that Pericles elevated the Greeks; and that he did it by cultivating the national genius, the national spirit, by stimulating art and oratory and the pursuit of learning, and infusing into all society a higher intellectual and social life! Pa was this day sailing through seas and by shores that had witnessed some of the most stirring and romantic events in the early history of our continent. He might have had the eager attention of his bright daughter if he had unfolded these things to her

in the midst of this most living landscape, and given her an "object lesson" that she would not have forgotten all her days, instead of this pottering over names and dates that were as dry and meaningless to him as they were uninteresting to his daughter. At least, O Pa, Educator of Youth, if you are insensible to the beauty of these summer isles and indifferent to their history, and your soul is wedded to ancient learning, why do you not teach your family to go to sleep when they go to bed, as the classic Greeks used to?

Before the travelers reached Shediac, they had leisure to ruminate upon the education of American girls in the schools set apart for them, and to conjecture how much they are taught of the geography and history of America, or of its social and literary growth; and whether, when they travel on a summer tour like this, these coasts have any historical light upon them, or gain any interest from the daring and chivalric adventurers who played their parts here so long ago. We did not hear pa ask when Madame de la Tour "flourished," though "flourish" that determined woman did, in Boston as well as in the French provinces. In the present woman revival, may we not hope that the heroic women of our colonial history will have the prominence that is their right, and that woman's achievements will assume their proper place in affairs? When women write history, some of our popular men heroes will, we trust, be made to acknowledge the female sources of their wisdom and their courage. But at present women do not much affect history, and they are more indifferent to the careers of the noted of their own sex than men are.

We expected to approach Shediac with a great deal of interest. It had been, when we started, one of the most prominent points in our projected tour. It was the pivot upon which, so to speak, we expected to swing around the Provinces. Upon the map it was so attractive, that we once resolved to go no farther than there. It once seemed to us that, if we ever reached it, we should be contented to abide there, in a place so remote, in a port so picturesque and foreign. But returning from the real east, our late interest in Shediac seemed unaccountable to us. Firmly resolved as I was to note our entrance into the harbor, I could not keep the place in mind; and while we were in our state-room and before we knew it, the steamboat Jay at the wharf. Shediac appeared to be nothing but a wharf with a railway train on it, and a few shanty buildings, a part of them devoted to the sale of whiskey and to cheap lodgings. This landing, however, is called Point du Chene, and the village of Shediac is two or three miles distant from it; we had a pleasant glimpse of it from the car windows, and saw nothing in its situation to hinder its growth. The country about it is perfectly level, and stripped of its forests. At Painsec Junction we waited for the train from Halifax, and immediately found ourselves in the whirl of intercolonial travel. Why people should travel here, or why they should be excited about it, we could not see; we could not overcome a feeling of the unreality of the whole thing; but yet we humbly knew that we had no right to be otherwise than awed by the extraordinary intercolonial railway enterprise and by the new life which it is infusing into the Provinces. We are free to say, however, that nothing can be less interesting than the line of this road until it strikes the Kennebeckasis River, when the traveler will be called upon to admire the Sussex Valley and a very fair farming region, which he would like to praise if it were not for exciting the jealousy of the "Garden of Nova Scotia." The whole land is in fact a garden, but differing somewhat from the Isle of Wight.

In all travel, however, people are more interesting than land, and so it was at this time. As twilight shut down upon the valley of the Kennebeckasis, we heard the strident voice of pa going on with the Grecian catechism. Pa was unmoved by the beauties of Sussex or by the colors of the sunset, which for the moment made picturesque the scraggy evergreens on the horizon. His eyes were with his heart, and that was in Sparta. Above the roar of the car-wheels we heard his nagging inquiries.

"What did Lycurgus do then?"

Answer not audible.

"No. He made laws. Who did he make laws for?"

"For the Greeks."

"He made laws for the Lacedemonians. Who was another great lawgiver?"

"It was—it was—Pericles."

"No, it was n't. It was Solon. Who was Solon?"

"Solon was one of the wise men of Greece."

"That's right. When did he flourish?"

When the train stops at a station the classics continue, and the studious group attracts the attention of the passengers. Pa is well pleased, but not so the young lady, who beseechingly says,

"Pa, everybody can hear us."

"You would n't care how much they heard, if you knew it," replies this accomplished devotee of learning.

In another lull of the car-wheels we find that pa has skipped over to Marathon; and this time it is the daughter who is asking a question.

"Pa, what is a phalanx?"

"Well, a phalanx—it's a—its difficult to define a phalanx. It's a stretch of men in one line,—a stretch of anything in a line. When did Alexander flourish?"

This domestic tyrant had this in common with the rest of us, that he was much better at asking questions than at answering them. It certainly was not our fault that we were listeners to his instructive struggles with ancient history, nor that we heard his petulant complaining to his cowed family, whom he accused of dragging him away on this summer trip. We are only grateful to him, for a more entertaining person the traveler does not often see. It was with regret that we lost sight of him at St. John.

Night has settled upon New Brunswick and upon ancient Greece before we reach the Kennebeckasis Bay, and we only see from the car windows dimly a pleasant and fertile country, and the peaceful homes of thrifty people. While we are running along the valley and coming under the shadow of the hill whereon St. John sits, with a regal outlook upon a most variegated coast and upon the rising and falling of the great tides of Fundy, we feel a twinge of conscience at the injustice the passing traveler must perforce do any land he hurries over and does not study. Here is picturesque St. John, with its couple of centuries of history and tradition, its

commerce, its enterprise felt all along the coast and through the settlements of the territory to the northeast, with its no doubt charming society and solid English culture; and the summer tourist, in an idle mood regarding it for a day, says it is naught! Behold what "travels" amount to! Are they not for the most part the records of the misapprehensions of the misinformed? Let us congratulate ourselves that in this flight through the Provinces we have not attempted to do any justice to them, geologically, economically, or historically, only trying to catch some of the salient points of the panorama as it unrolled itself. Will Halifax rise up in judgment against us? We look back upon it with softened memory, and already see it again in the light of history. It stands, indeed, overlooking a gate of the ocean, in a beautiful morning light; and we can hear now the repetition of that profane phrase, used for the misdirection of wayward mortals,—“Go to Halifax!” without a shudder.

We confess to some regret that our journey is so near its end. Perhaps it is the sentimental regret with which one always leaves the east, for we have been a thousand miles nearer Ireland than Boston is. Collecting in the mind the detached pictures given to our eyes in all these brilliant and inspiring days, we realize afresh the variety, the extent, the richness of these northeastern lands which the Gulf Stream pets and tempers. If it were not for attracting speculators, we should delight to speak of the beds of coal, the quarries of marble, the mines of gold. Look on the map and follow the shores of these peninsulas and islands, the bays, the penetrating arms of the sea, the harbors filled with islands, the protected straits and sounds. All this is favorable to the highest commercial activity and enterprise. Greece itself and its islands are not more indented and inviting. Fish swarm about the shores and in all the streams. There are, I have no doubt, great forests which we did not see from the car windows, the inhabitants of which do not show themselves to the travelers at the railway-stations. In the dining-room of a friend, who goes away every autumn into the wilds of Nova Scotia at the season when the snow falls, hang trophies—enormous branching antlers of the caribou, and heads of the mighty moose—which I am assured came from there; and I have no reason to doubt that the noble creatures who once carried these superb horns were murdered by my friend at long range. Many people have an insatiate longing to kill, once in their life, a moose, and would travel far and endure great hardships to gratify this ambition. In the present state of the world it is more difficult to do it than it is to be written down as one who loves his fellow-men.

We received everywhere in the Provinces courtesy and kindness, which were not based upon any expectation that we would invest in mines or railways, for the people are honest, kindly, and hearty by nature. What they will become when the railways are completed that are to bind St. John to Quebec, and make Nova Scotia, Cape Breton, and Newfoundland only stepping-stones to Europe, we cannot say. Probably they will become like the rest of the world, and furnish no material for the kindly persiflage of the traveler.

Regretting that we could see no more of St. John, that we could scarcely see our way through its dimly lighted streets, we found the ferry to Carleton, and a sleeping-car for Bangor. It was in the heart of the negro porter to cause us alarm by the intelligence that the customs officer would, search our baggage during the night. A search is a blow to one's self-respect, especially if one has anything dutiable. But as the porter might be an agent of our government in disguise, we preserved an appearance of philosophical indifference in his presence. It takes a sharp observer to tell innocence from assurance. During the night, awaking, I saw a great light. A man, crawling along the aisle of the car, and poking under the seats, had found my traveling-bag and was "going through" it.

I felt a thrill of pride as I recognized in this crouching figure an officer of our government, and knew that I was in my native land.

MISAPPREHENSIONS CORRECTED

I should not like to ask an indulgent and idle public to saunter about with me under a misapprehension. It would be more agreeable to invite it to go nowhere than somewhere; for almost every one has been somewhere, and has written about it. The only compromise I can suggest is, that we shall go somewhere, and not learn anything about it. The instinct of the public against any thing like information in a volume of this kind is perfectly justifiable; and the reader will perhaps discover that this is illy adapted for a text-book in schools, or for the use of competitive candidates in the civil-service examinations.

Years ago, people used to saunter over the Atlantic, and spend weeks in filling journals with their monotonous emotions. That is all changed now, and there is a misapprehension that the Atlantic has been practically subdued; but no one ever gets beyond the "rolling forties" without having this impression corrected.

I confess to have been deceived about this Atlantic, the roughest and windiest of oceans. If you look at it on the map, it does n't appear to be much, and, indeed, it is spoken of as a ferry. What with the eight and nine days' passages over it, and the laying of the cable, which annihilates distance, I had the impression that its tedious three thousand and odd miles had been, somehow, partly done away with; but they are all there. When one has sailed a thousand miles due east and finds that he is then nowhere in particular, but is still out, pitching about on an uneasy sea, under an inconstant sky, and that a thousand miles more will not make any perceptible change, he begins to have some conception of the unconquerable ocean. Columbus rises in my estimation.

I was feeling uncomfortable that nothing had been done for the memory of Christopher Columbus, when I heard some months ago that thirty-seven guns had been fired off for him in Boston. It is to be hoped that they were some satisfaction to him. They were discharged by countrymen of his, who are justly proud that he should have been able, after a search of only a few weeks, to find a land where the hand-organ had never been heard. The Italians, as a people, have not profited much by this discovery; not so much, indeed, as the Spaniards, who got a reputation by it which even now gilds their decay. That Columbus was born in Genoa entitles the Italians to celebrate the great achievement of his life; though why they should discharge exactly thirty-seven guns I do not know. Columbus did not discover the United States: that we partly found ourselves, and partly bought, and gouged the Mexicans out of. He did not even appear to know that there was a continent here. He discovered the West Indies, which he thought were the East; and ten guns would be enough for them. It is probable that he did open the way to the discovery of the New World. If he had waited, however, somebody else would have discovered it,—perhaps some Englishman; and then we might have been spared all the old French and Spanish wars. Columbus let the Spaniards into the New World; and their civilization has uniformly been a curse to it. If he had brought Italians, who neither at that time showed, nor since have shown, much inclination to come, we should have had the opera, and made it a paying institution by this time. Columbus was evidently a person who liked to sail about, and did n't care much for consequences.

Perhaps it is not an open question whether Columbus did a good thing in first coming over here, one that we ought to celebrate with salutes and dinners. The Indians never thanked him, for one party. The Africans had small ground to be gratified for the market he opened for them. Here are two continents that had no use for him. He led Spain into a dance of great expectations, which ended in her gorgeous ruin. He introduced tobacco into Europe, and laid the foundation for more tracts and nervous diseases than the Romans had in a thousand years. He introduced the potato into Ireland indirectly; and that caused such a rapid increase of population, that the great famine was the result, and an enormous emigration to New York—hence Tweed and the constituency of the Ring. Columbus is really responsible for New York. He is responsible for our whole tremendous experiment of democracy, open to all comers, the best three in five to win. We cannot yet tell how it is coming out, what with the foreigners and the communists and the women. On our great stage we are playing a piece of mingled tragedy and comedy, with what denouement we cannot yet say. If it comes out well, we ought to erect a monument to Christopher as high as the one at Washington expects to be; and we presume it is well to fire a salute occasionally to keep the ancient mariner in mind while we are trying our great experiment. And this reminds me that he ought to have had a naval salute.

There is something almost heroic in the idea of firing off guns for a man who has been stone-dead for about four centuries. It must have had a lively and festive sound in Boston, when the meaning of the salute was explained. No one could hear those great guns without a quicker beating of the heart in gratitude to the great discoverer who had made Boston possible. We are trying to "realize" to ourselves the importance of the 12th of October as an anniversary of our potential existence. If any one wants to see how vivid is the gratitude to Columbus, let him start out among our business-houses with a subscription-paper to raise money for powder to be exploded in his honor. And yet Columbus was a well-meaning man; and if he did not discover a perfect continent, he found the only one that was left.

Columbus made voyaging on the Atlantic popular, and is responsible for much of the delusion concerning it. Its great practical use in this fast age is to give one an idea of distance and of monotony.

I have listened in my time with more or less pleasure to very rollicking songs about the sea, the flashing brine, the spray and the tempest's roar, the wet sheet and the flowing sea, a life on the ocean wave, and all the rest of it. To paraphrase a land proverb, let me write the songs of the sea, and I care not who goes to sea and sings 'em. A square yard of solid ground is worth miles of the pitching, turbulent stuff. Its inability to stand still for one second is the plague of it. To lie on deck when the sun shines, and swing up and down, while the waves run hither and thither and toss their white caps, is all well enough to lie in your narrow berth

and roll from side to side all night long; to walk uphill to your state-room door, and, when you get there, find you have got to the bottom of the hill, and opening the door is like lifting up a trap-door in the floor; to deliberately start for some object, and, before you know it, to be flung against it like a bag of sand; to attempt to sit down on your sofa, and find you are sitting up; to slip and slide and grasp at everything within reach, and to meet everybody leaning and walking on a slant, as if a heavy wind were blowing, and the laws of gravitation were reversed; to lie in your berth, and hear all the dishes on the cabin-table go sousing off against the wall in a general smash; to sit at table holding your soup-plate with one hand, and watching for a chance to put your spoon in when it comes high tide on your side of the dish; to vigilantly watch, the lurch of the heavy dishes while holding your glass and your plate and your knife and fork, and not to notice it when Brown, who sits next you, gets the whole swash of the gravy from the roast-beef dish on his light-colored pantaloons, and see the look of dismay that only Brown can assume on such an occasion; to see Mrs. Brown advance to the table, suddenly stop and hesitate, two waiters rush at her, with whom she struggles wildly, only to go down in a heap with them in the opposite corner; to see her partially recover, but only to shoot back again through her state-room door, and be seen no more;—all this is quite pleasant and refreshing if you are tired of land, but you get quite enough of it in a couple of weeks. You become, in time, even a little tired of the Jew who goes about wishing “he vas a veek older;” and the eccentric man, who looks at no one, and streaks about the cabin and on deck, without any purpose, and plays shuffle-board alone, always beating himself, and goes on the deck occasionally through the sky-light instead of by the cabin door, washes himself at the salt-water pump, and won't sleep in his state-room, saying he is n't used to sleeping in a bed,—as if the hard narrow, uneasy shelf of a berth was anything like a bed!—and you have heard at last pretty nearly all about the officers, and their twenty and thirty years of sea-life, and every ocean and port on the habitable globe where they have been. There comes a day when you are quite ready for land, and the scream of the “gull” is a welcome sound.

Even the sailors lose the vivacity of the first of the voyage. The first two or three days we had their quaint and half-doleful singing in chorus as they pulled at the ropes: now they are satisfied with short ha-ho's, and uncadenced grunts. It used to be that the leader sang, in ever-varying lines of nonsense, and the chorus struck in with fine effect, like this:

*“I wish I was in Liverpool town. Handy-pan, handy O!
O captain! where 'd you ship your crew Handy-pan, handy O!
Oh! pull away, my bully crew, Handy-pan, handy O!”*

There are verses enough of this sort to reach across the Atlantic; and they are not the worst thing about it either, or the most tedious. One learns to respect this ocean, but not to love it; and he leaves it with mingled feelings about Columbus.

And now, having crossed it,—a fact that cannot be concealed,—let us not be under the misapprehension that we are set to any task other than that of sauntering where it pleases us.

PARIS AND LONDON

SURFACE CONTRASTS OF PARIS AND LONDON

I wonder if it is the Channel? Almost everything is laid to the Channel: it has no friends. The sailors call it the nastiest bit of water in the world. All travelers anathematize it. I have now crossed it three times in different places, by long routes and short ones, and have always found it as comfortable as any sailing anywhere, sailing being one of the most tedious and disagreeable inventions of a fallen race. But such is not the usual experience: most people would make great sacrifices to avoid the hour and three quarters in one of those loathsome little Channel boats,—they always call them loathsome, though I did n't see but they are as good as any boats. I have never found any boat that hasn't a detestable habit of bobbing round. The Channel is hated: and no one who has much to do with it is surprised at the projects for bridging it and for boring a hole under it; though I have scarcely ever met an Englishman who wants either done,—he does not desire any more facile communication with the French than now exists. The traditional hatred may not be so strong as it was, but it is hard to say on which side is the most ignorance and contempt of the other.

It must be the Channel: that is enough to produce a physical disagreement even between the two coasts; and there cannot be a greater contrast in the cultivated world than between the two lands lying so close to each other; and the contrast of their capitals is even more decided,—I was about to say rival capitals, but they have not enough in common to make them rivals. I have lately been over to London for a week, going by the Dieppe and New Haven route at night, and returning by another; and the contrasts I speak of were impressed upon me anew. Everything here in and about Paris was in the green and bloom of spring, and seemed to me very lovely; but my first glance at an English landscape made it all seem pale and flat. We went up from New Haven to London in the morning, and feasted our eyes all the way. The French foliage is thin, spindling, sparse; the grass is thin and light in color—in contrast. The English trees are massive, solid in substance and color; the grass is thick, and green as emerald; the turf is like the heaviest Wilton carpet. The whole effect is that of vegetable luxuriance and solidity, as it were a tropical luxuriance, condensed and hardened by northern influences. If my eyes remember well, the French landscapes are more like our own, in spring tone, at least; but the English are a revelation to us strangers of what green really is, and what grass and trees can be. I had been told that we did well to see England before going to the Continent, for it would seem small and only pretty afterwards. Well, leaving out Switzerland, I have seen nothing in that beauty which satisfies the eye and wins the heart to compare with England in spring. When we annex it to our sprawling country which

lies out-doors in so many climates, it will make a charming little retreat for us in May and June, a sort of garden of delight, whence we shall draw our May butter and our June roses. It will only be necessary to put it under glass to make it pleasant the year round.

When we passed within the hanging smoke of London town, threading our way amid numberless railway tracks, sometimes over a road and sometimes under one, now burrowing into the ground, and now running along among the chimney-pots,—when we came into the pale light and the thickening industry of a London day, we could but at once contrast Paris. Unpleasant weather usually reduces places to an equality of disagreeableness. But Paris, with its wide streets, light, handsome houses, gay windows and smiling little parks and fountains, keeps up a tolerably pleasant aspect, let the weather do its worst. But London, with its low, dark, smutty brick houses and insignificant streets, settles down hopelessly into the dumps when the weather is bad. Even with the sun doing its best on the eternal cloud of smoke, it is dingy and gloomy enough, and so dirty, after spick-span, shining Paris. And there is a contrast in the matter of order and system; the lack of both in London is apparent. You detect it in public places, in crowds, in the streets. The “social evil” is bad enough in its demonstrations in Paris: it is twice as offensive in London. I have never seen a drunken woman in Paris: I saw many of them in the daytime in London. I saw men and women fight in the streets,—a man kick and pound a woman; and nobody interfered. There is a brutal streak in the Anglo-Saxon, I fear,—a downright animal coarseness, that does not exhibit itself the other side of the Channel. It is a proverb, that the London policemen are never at hand. The stout fellows with their clubs look as if they might do service; but what a contrast they are to the Paris sergents de ville! The latter, with his dress-coat, cocked hat, long rapier, white gloves, neat, polite, attentive, alert,—always with the manner of a jesuit turned soldier,—you learn to trust very much, if not respect; and you feel perfectly secure that he will protect you, and give you your rights in any corner of Paris. It does look as if he might slip that slender rapier through your body in a second, and pull it out and wipe it, and not move a muscle; but I don't think he would do it unless he were directly ordered to. He would not be likely to knock you down and drag you out, in mistake for the rowdy who was assaulting you.

A great contrast between the habits of the people of London and Paris is shown by their eating and drinking. Paris is brilliant with cafes: all the world frequents them to sip coffee (and too often absinthe), read the papers, and gossip over the news; take them away, as all travelers know, and Paris would not know itself. There is not a cafe in London: instead of cafes, there are gin-mills; instead of light wine, there is heavy beer. The restaurants and restaurant life are as different as can be. You can get anything you wish in Paris: you can live very cheaply or very dearly, as you like. The range is more limited in London. I do not fancy the usual run of Paris restaurants. You get a great deal for your money, in variety and quantity; but you don't exactly know what it is: and in time you tire of odds and ends, which destroy your hunger without exactly satisfying you. For myself, after a pretty good run of French cookery (and it beats the world for making the most out of little), when I sat down again to what the eminently respectable waiter in white and black calls “a dinner off the Joint, sir,” with what belongs to it, and ended up with an attack on a section of a cheese as big as a bass-drum, not to forget a pewter mug of amber liquid, I felt as if I had touched bottom again,—got something substantial, had what you call a square meal. The English give you the substantials, and better, I believe, than any other people. Thackeray used to come over to Paris to get a good dinner now and then. I have tried his favorite restaurant here, the cuisine of which is famous far beyond the banks of the Seine; but I think if he, hearty trencher-man that he was, had lived in Paris, he would have gone to London for a dinner oftener than he came here.

And as for a lunch,—this eating is a fascinating theme,—commend me to a quiet inn of England. We happened to be out at Kew Gardens the other afternoon. You ought to go to Kew, even if the Duchess of Cambridge is not at home. There is not such a park out of England, considering how beautiful the Thames is there. What splendid trees it has! the horse-chestnut, now a mass of pink-and-white blossoms, from its broad base, which rests on the ground, to its high rounded dome; the hawthorns, white and red, in full flower; the sweeps and glades of living green,—turf on which you walk with a grateful sense of drawing life directly from the yielding, bountiful earth,—a green set out and heightened by flowers in masses of color (a great variety of rhododendrons, for one thing), to say nothing of magnificent greenhouses and outlying flower-gardens. Just beyond are Richmond Hill and Hampton Court, and five or six centuries of tradition and history and romance. Before you enter the garden, you pass the green. On one side of it are cottages, and on the other the old village church and its quiet churchyard. Some boys were playing cricket on the sward, and children were getting as intimate with the turf and the sweet earth as their nurses would let them. We turned into a little cottage, which gave notice of hospitality for a consideration; and were shown, by a pretty maid in calico, into an upper room,—a neat, cheerful, common room, with bright flowers in the open windows, and white muslin curtains for contrast. We looked out on the green and over to the beautiful churchyard, where one of England's greatest painters, Gainsborough, lies in rural repose. It is nothing to you, who always dine off the best at home, and never encounter dirty restaurants and snuffy inns, or run the gauntlet of Continental hotels, every meal being an experiment of great interest, if not of danger, to say that this brisk little waitress spread a snowy cloth, and set thereon meat and bread and butter and a salad: that conveys no idea to your mind. Because you cannot see that the loaf of wheaten bread was white and delicate, and full of the goodness of the grain; or that the butter, yellow as a guinea, tasted of grass and cows, and all the rich juices of the verdant year, and was not mere flavorless grease; or that the cuts of roast beef, fat and lean, had qualities that indicate to me some moral elevation in the cattle,—high-toned, rich meat; or that the salad was crisp and delicious, and rather seemed to enjoy being eaten, at least, did n't disconsolately wilt down at the prospect, as most salad does. I do not wonder that Walter Scott dwells so much on eating, or lets his heroes pull at the pewter mugs so often. Perhaps one might find a better lunch in Paris, but he surely couldn't find this one.

EMPEROR AT LONGCHAMPS

It was the first of May when we came up from Italy. The spring grew on us as we advanced north; vegetation seemed further along than it was south of the Alps. Paris was bathed in sunshine, wrapped in delicious weather, adorned with all the delicate colors of blushing spring. Now the horse-chestnuts are all in bloom and so is the hawthorn; and in parks and gardens there are rows and alleys of trees, with blossoms of pink and of white; patches of flowers set in the light green grass; solid masses of gorgeous color, which fill all the air with perfume; fountains that dance in the sunlight as if just released from prison; and everywhere the soft suffusion of May. Young maidens who make their first communion go into the churches in processions of hundreds, all in white, from the flowing veil to the satin slipper; and I see them everywhere for a week after the ceremony, in their robes of innocence, often with bouquets of flowers, and attended by their friends; all concerned making it a joyful holiday, as it ought to be. I hear, of course, with what false ideas of life these girls are educated; how they are watched before marriage; how the marriage is only one of arrangement, and what liberty they eagerly seek afterwards. I met a charming Paris lady last winter in Italy, recently married, who said she had never been in the Louvre in her life; never had seen any of the magnificent pictures or world-famous statuary there, because girls were not allowed to go there, lest they should see something that they ought not to see. I suppose they look with wonder at the young American girls who march up to anything that ever was created, with undismayed front.

Another Frenchwoman, a lady of talent and the best breeding, recently said to a friend, in entire unconsciousness that she was saying anything remarkable, that, when she was seventeen, her great desire was to marry one of her uncles (a thing not very unusual with the papal dispensation), in order to keep all the money in the family! That was the ambition of a girl of seventeen.

I like, on these sunny days, to look into the Luxembourg Garden: nowhere else is the eye more delighted with life and color. In the afternoon, especially, it is a baby-show worth going far to see. The avenues are full of children, whose animated play, light laughter, and happy chatter, and pretty, picturesque dress, make a sort of fairy grove of the garden; and all the nurses of that quarter bring their charges there, and sit in the shade, sewing, gossiping, and comparing the merits of the little dears. One baby differs from another in glory, I suppose; but I think on such days that they are all lovely, taken in the mass, and all in sweet harmony with the delicious atmosphere, the tender green, and the other flowers of spring. A baby can't do better than to spend its spring days in the Luxembourg Garden.

There are several ways of seeing Paris besides roaming up and down before the blazing shop-windows, and lounging by daylight or gaslight along the crowded and gay boulevards; and one of the best is to go to the Bois de Boulogne on a fete-day, or when the races are in progress. This famous wood is very disappointing at first to one who has seen the English parks, or who remembers the noble trees and glades and avenues of that at Munich. To be sure, there is a lovely little lake and a pretty artificial cascade, and the roads and walks are good; but the trees are all saplings, and nearly all the "wood" is a thicket of small stuff. Yet there is green grass that one can roll on, and there is a grove of small pines that one can sit under. It is a pleasant place to drive toward evening; but its great attraction is the crowd there. All the principal avenues are lined with chairs, and there people sit to watch the streams of carriages.

I went out to the Bois the other day, when there were races going on; not that I went to the races, for I know nothing about them, per se, and care less. All running races are pretty much alike. You see a lean horse, neck and tail, flash by you, with a jockey in colors on his back; and that is the whole of it. Unless you have some money on it, in the pool or otherwise, it is impossible to raise any excitement. The day I went out, the Champs Elysees, on both sides, its whole length, was crowded with people, rows and ranks of them sitting in chairs and on benches. The Avenue de l'Imperatrice, from the Arc de l'Etoile to the entrance of the Bois, was full of promenaders; and the main avenues of the Bois, from the chief entrance to the race-course, were lined with people, who stood or sat, simply to see the passing show. There could not have been less than ten miles of spectators, in double or triple rows, who had taken places that afternoon to watch the turnouts of fashion and rank. These great avenues were at all times, from three till seven, filled with vehicles; and at certain points, and late in the day, there was, or would have been anywhere else except in Paris, a jam. I saw a great many splendid horses, but not so many fine liveries as one will see on a swell-day in London. There was one that I liked. A handsome carriage, with one seat, was drawn by four large and elegant black horses, the two near horses ridden by postilions in blue and silver,—blue roundabouts, white breeches and topboots, a round-topped silver cap, and the hair, or wig, powdered, and showing just a little behind. A footman mounted behind, seated, wore the same colors; and the whole establishment was exceedingly tonnish.

The race-track (Longchamps, as it is called), broad and beautiful springy turf, is not different from some others, except that the inclosed oblong space is not flat, but undulating just enough for beauty, and so framed in by graceful woods, and looked on by chateaux and upland forests, that I thought I had never seen a sweeter bit of greensward. St. Cloud overlooks it, and villas also regard it from other heights. The day I saw it, the horse-chestnuts were in bloom; and there was, on the edges, a cloud of pink and white blossoms, that gave a soft and charming appearance to the entire landscape. The crowd in the grounds, in front of the stands for judges, royalty, and people who are privileged or will pay for places, was, I suppose, much as usual,—an excited throng of young and jockey-looking men, with a few women-gamblers in their midst, making up the pool; a pack of carriages along the circuit of the track, with all sorts of people, except the very good; and conspicuous the elegantly habited daughters of sin and satin, with servants in livery, as if they had been born to it; gentlemen and ladies strolling about, or reclining on the sward, and a refreshment-stand in lively operation.

When the bell rang, we all cleared out from the track, and I happened to get a position by the railing. I was looking over to the Pavilion, where I supposed the Emperor to be, when the man next to me cried, "Voila!" and, looking up, two horses brushed right by my face, of which I saw about two tails and one neck, and they were gone. Pretty soon they came round again, and one was ahead, as is apt to be the case; and somebody cried, "Bully for Therise!" or French to that effect, and it was all over. Then we rushed across to the Emperor's Pavilion, except that I walked with all the dignity consistent with rapidity, and there, in the midst

of his suite, sat the Man of December, a stout, broad, and heavy-faced man as you know, but a man who impresses one with a sense of force and purpose,—sat, as I say, and looked at us through his narrow, half-shut eyes, till he was satisfied that I had got his features through my glass, when he deliberately arose and went in.

All Paris was out that day,—it is always out, by the way, when the sun shines, and in whatever part of the city you happen to be; and it seemed to me there was a special throng clear down to the gate of the Tuileries, to see the Emperor and the rest of us come home. He went round by the Rue Rivoli, but I walked through the gardens. The soldiers from Africa sat by the gilded portals, as usual,—aliens, and yet always with the port of conquerors here in Paris. Their nonchalant indifference and soldierly bearing always remind me of the sort of force the Emperor has at hand to secure his throne. I think the blouses must look askance at these satraps of the desert. The single jet fountain in the basin was springing its highest,—a quivering pillar of water to match the stone shaft of Egypt which stands close by. The sun illuminated it, and threw a rainbow from it a hundred feet long, upon the white and green dome of chestnut-trees near. When I was farther down the avenue, I had the dancing column of water, the obelisk, and the Arch of Triumph all in line, and the rosy sunset beyond.

AN IMPERIAL REVIEW

The Prince and Princess of Wales came up to Paris in the beginning of May, from Italy, Egypt, and alongshore, stayed at a hotel on the Place Vendome, where they can get beef that is not horse, and is rare, and beer brewed in the royal dominions, and have been entertained with cordiality by the Emperor. Among the spectacles which he has shown them is one calculated to give them an idea of his peaceful intentions,—a grand review of cavalry and artillery at the Bois de Boulogne. It always seems to me a curious comment upon the state of our modern civilization, when one prince visits another here in Europe, the first thing that the visited does, by way of hospitality is to get out his troops, and show his rival how easily he could “lick” him, if it came to that.

It is a little puerile. At any rate, it is an advance upon the old fashion of getting up a joust at arms, and inviting the guest to come out and have his head cracked in a friendly way.

The review, which had been a good deal talked about, came off in the afternoon; and all the world went to it. The avenues of the Bois were crowded with carriages, and the walks with footpads. Such a constellation of royal personages met on one field must be seen; for, besides the imperial family and Albert Edward and his Danish beauty, there was to be the Archduke of Austria and no end of titled personages besides. At three o'clock the royal company, in the Emperor's carriages, drove upon the training-ground of the Bois, where the troops awaited them. All the party, except the Princess of Wales, then mounted horses, and rode along the lines, and afterwards retired to a wood-covered knoll at one end to witness the evolutions. The training-ground is a noble, slightly undulating piece of greensward, perhaps three quarters of a mile long and half that in breadth, hedged about with graceful trees, and bounded on one side by the Seine. Its borders were rimmed that day with thousands of people on foot and in carriages,—a gay sight, in itself, of color and fashion. A more brilliant spectacle than the field presented cannot well be imagined. Attention was divided between the gentle eminence where the imperial party stood,—a throng of noble persons backed by the gay and glittering Guard of the Emperor, as brave a show as chivalry ever made,—and the field of green, with its long lines in martial array; every variety of splendid uniforms, the colors and combinations that most dazzle and attract, with shining brass and gleaming steel, and magnificent horses of war, regiments of black, gray, and bay.

The evolutions were such as to stir the blood of the most sluggish. A regiment, full front, would charge down upon a dead run from the far field, men shouting, sabers flashing, horses thundering along, so that the ground shook, towards the imperial party, and, when near, stop suddenly, wheel to right and left, and gallop back. Others would succeed them rapidly, coming up the center while their predecessors filed down the sides; so that the whole field was a moving mass of splendid color and glancing steel. Now and then a rider was unhorsed in the furious rush, and went scrambling out of harm, while the steed galloped off with free rein. This display was followed by that of the flying artillery, battalion after battalion, which came clattering and roaring along, in double lines stretching half across the field, stopped and rapidly discharged its pieces, waking up all the region with echoes, filling the plain with the smoke of gunpowder, and starting into rearing activity all the carriage-horses in the Bois. How long this continued I do not know, nor how many men participated in the review, but they seemed to pour up from the far end in unending columns. I think the regiments must have charged over and over again. It gave some people the impression that there were a hundred thousand troops on the ground. I set it at fifteen to twenty thousand. Gallignani next morning said there were only six thousand! After the charging was over, the reviewing party rode to the center of the field, and the troops galloped round them; and the Emperor distributed decorations. We could recognize the Emperor and Empress; Prince Albert in huzzar uniform, with a green plume in his cap; and the Prince Imperial, in cap and the uniform of a lieutenant, on horseback in front; while the Princess occupied a carriage behind them.

There was a crush of people at the entrance to see the royals make their exit. Gendarmes were busy, and mounted guards went smashing through the crowd to clear a space. Everybody was on the tiptoe of expectation. There is a portion of the Emperor's guard; there is an officer of the household; there is an emblazoned carriage; and, quick, there! with a rush they come, driving as if there was no crowd, with imperial haste, postilions and outriders and the imperial carriage. There is a sensation, a cordial and not loud greeting, but no Yankee-like cheers. That heavy gentleman in citizen's dress, who looks neither to right nor left, is Napoleon III.; that handsome woman, grown full in the face of late, but yet with the bloom of beauty and the sweet grace of command, in hat and dark riding-habit, bowing constantly to right and left, and smiling, is the Empress Eugenie. And they are gone. As we look for something more, there is a rout in the

side avenue; something is coming, unexpected, from another quarter: dragoons dash through the dense mass, shouting and gesticulating, and a dozen horses go by, turning the corner like a small whirlwind, urged on by whip and spur, a handsome boy riding in the midst,—a boy in cap and simple uniform, riding gracefully and easily and jauntily, and out of sight in a minute. It is the boy Prince Imperial and his guard. It was like him to dash in unexpectedly, as he has broken into the line of European princes. He rides gallantly, and Fortune smiles on him to-day; but he rides into a troubled future. There was one more show,—a carriage of the Emperor, with officers, in English colors and side-whiskers, riding in advance and behind: in it the future King of England, the heavy, selfish-faced young man, and beside him his princess, popular wherever she shows her winning face,—a fair, sweet woman, in light and flowing silken stuffs of spring, a vision of lovely youth and rank, also gone in a minute.

These English visitors are enjoying the pleasures of the French capital. On Sunday, as I passed the Hotel Bristol, a crowd, principally English, was waiting in front of it to see the Prince and Princess come out, and enter one of the Emperor's carriages in waiting. I heard an Englishwoman, who was looking on with admiration "sticking out" all over, remark to a friend in a very loud whisper, "I tell you, the Prince lives every day of his life." The princely pair came out at length, and drove away, going to visit Versailles. I don't know what the Queen would think of this way of spending Sunday; but if Albert Edward never does anything worse, he does n't need half the praying for that he gets every Sunday in all the English churches and chapels.

THE LOW COUNTRIES AND RHINELAND

AMIENS AND QUAIN OLD BRUGES

They have not yet found out the secret in France of banishing dust from railway-carriages. Paris, late in June, was hot, but not dusty: the country was both. There is an uninteresting glare and hardness in a French landscape on a sunny day. The soil is thin, the trees are slender, and one sees not much luxury or comfort. Still, one does not usually see much of either on a flying train. We spent a night at Amiens, and had several hours for the old cathedral, the sunset light on its noble front and towers and spire and flying buttresses, and the morning rays bathing its rich stone. As one stands near it in front, it seems to tower away into heaven, a mass of carving and sculpture,—figures of saints and martyrs who have stood in the sun and storm for ages, as they stood in their lifetime, with a patient waiting. It was like a great company, a Christian host, in attitudes of praise and worship. There they were, ranks on ranks, silent in stone, when the last of the long twilight illumined them; and there in the same impressive patience they waited the golden day. It required little fancy to feel that they had lived, and now in long procession came down the ages. The central portal is lofty, wide, and crowded with figures. The side is only less rich than the front. Here the old Gothic builders let their fancy riot in grotesque gargoyles,—figures of animals, and imps of sin, which stretch out their long necks for waterspouts above. From the ground to the top of the unfinished towers is one mass of rich stonework, the creation of genius that hundreds of years ago knew no other way to write its poems than with the chisel. The interior is very magnificent also, and has some splendid stained glass. At eight o'clock, the priests were chanting vespers to a larger congregation than many churches have on Sunday: their voices were rich and musical, and, joined with the organ notes, floated sweetly and impressively through the dim and vast interior. We sat near the great portal, and, looking down the long, arched nave and choir to the cluster of candles burning on the high altar, before which the priests chanted, one could not but remember how many centuries the same act of worship had been almost uninterrupted within, while the apostles and martyrs stood without, keeping watch of the unchanging heavens.

When I stepped in, early in the morning, the first mass was in progress. The church was nearly empty. Looking within the choir, I saw two stout young priests lustily singing the prayers in deep, rich voices. One of them leaned back in his seat, and sang away, as if he had taken a contract to do it, using, from time to time, an enormous red handkerchief, with which and his nose he produced a trumpet obligato. As I stood there, a poor dwarf bobbed in and knelt on the bare stones, and was the only worshiper, until, at length, a half-dozen priests swept in from the sacristy, and two processions of young school-girls entered from either side. They have the skull of John the Baptist in this cathedral. I did not see it, although I suppose I could have done so for a franc to the beadle: but I saw a very good stone imitation of it; and his image and story fill the church. It is something to have seen the place that contains his skull.

The country becomes more interesting as one gets into Belgium. Windmills are frequent: in and near Lille are some six hundred of them; and they are a great help to a landscape that wants fine trees. At Courtrai, we looked into Notre Dame, a thirteenth century cathedral, which has a Vandyke ("The Raising of the Cross"), and the chapel of the Counts of Flanders, where workmen were uncovering some frescoes that were whitewashed over in the war-times. The town hall has two fine old chimney-pieces carved in wood, with quaint figures,—work that one must go to the Netherlands to see. Toward evening we came into the ancient town of Bruges. The country all day has been mostly flat, but thoroughly cultivated. Windmills appear to do all the labor of the people,—raising the water, grinding the grain, sawing the lumber; and they everywhere lift their long arms up to the sky. Things look more and more what we call "foreign." Harvest is going on, of hay and grain; and men and women work together in the fields. The gentle sex has its rights here. We saw several women acting as switch-tenders. Perhaps the use of the switch comes natural to them. Justice, however, is still in the hands of the men. We saw a Dutch court in session in a little room in the town hall at Courtrai. The justice wore a little red cap, and sat informally behind a cheap table. I noticed that the witnesses were treated with unusual consideration, being allowed to sit down at the table opposite the little justice, who interrogated them in a loud voice. At the stations to-day we see more friars in coarse, woolen dresses, and sandals, and the peasants with wooden sabots.

As the sun goes to the horizon, we have an effect sometimes produced by the best Dutch artists,—a wonderful transparent light, in which the landscape looks like a picture, with its church-spires of stone, its windmills, its slender trees, and red-roofed houses. It is a good light and a good hour in which to enter Bruges, that city of the past. Once the city was greater than Antwerp; and up the Rege came the commerce of the East, merchants from the Levant, traders in jewels and silks. Now the tall houses wait for tenants, and the streets have a deserted air. After nightfall, as we walked in the middle of the roughly paved streets, meeting few people, and hearing only the echoing clatter of the wooden sabots of the few who were abroad, the old spirit of the place came over us. We sat on a bench in the market-place, a treeless square, hemmed in by quaint, gabled houses, late in the evening, to listen to the chimes from the belfry. The tower is less than four hundred feet high, and not so high by some seventy feet as the one on Notre Dame near by; but it is very picturesque, in spite of the fact that it springs out of a rummaged-looking edifice, one half of which is devoted to soldiers' barracks, and the other to markets. The chimes are called the finest in Europe. It is well to hear the finest at once, and so have done with the tedious things. The Belgians are as fond of chimes as the Dutch are of stagnant water. We heard them everywhere in Belgium; and in some towns they are incessant, jangling every seven and a half minutes. The chimes at Bruges ring every quarter hour for a minute, and at the full hour attempt a tune. The revolving machinery grinds out the tune, which is changed at least once a year; and on Sundays a musician, chosen by the town, plays the chimes. In so many bells (there are forty-eight), the least of which weighs twelve pounds, and the largest over eleven thousand, there must be soft notes and sonorous tones; so sweet jangled sounds were showered down: but we liked better than the confused chiming the solemn notes of the great bell striking the hour. There is something very poetical about this chime of bells high in the air, flinging down upon the hum and traffic of the city its oft-repeated benediction of peace; but anybody but a Lowlander would get very weary of it. These chimes, to be sure, are better than those in London, which became a nuisance; but there is in all of them a tinkling attempt at a tune, which always fails, that is very annoying.

Bruges has altogether an odd flavor. Piles of wooden sabots are for sale in front of the shops; and this ugly shoe, which is mysteriously kept on the foot, is worn by all the common sort. We see long, slender carts in the street, with one horse hitched far ahead with rope traces, and no thills or pole.

The women—nearly every one we saw—wear long cloaks of black cloth with a silk hood thrown back. Bruges is famous of old for its beautiful women, who are enticingly described as always walking the streets with covered faces, and peeping out from their mantles. They are not so handsome now they show their faces, I can testify. Indeed, if there is in Bruges another besides the beautiful girl who showed us the old council-chamber in the Palace of justice, she must have had her hood pulled over her face.

Next morning was market-day. The square was lively with carts, donkeys, and country people, and that and all the streets leading to it were filled with the women in black cloaks, who flitted about as numerous as the rooks at Oxford, and very much like them, moving in a winged way, their cloaks outspread as they walked, and distended with the market-basket underneath. Though the streets were full, the town did not seem any less deserted; and the early marketers had only come to life for a day, revisiting the places that once they thronged. In the shade of the tall houses in the narrow streets sat red-cheeked girls and women making lace, the bobbins jumping under their nimble fingers. At the church doors hideous beggars crouched and whined,—specimens of the fifteen thousand paupers of Bruges. In the fishmarket we saw odd old women, with Rembrandt colors in faces and costume; and while we strayed about in the strange city, all the time from the lofty tower the chimes fell down. What history crowds upon us! Here in the old cathedral, with its monstrous tower of brick, a portion of it as old as the tenth century, Philip the Good established, in 1429, the Order of the Golden Fleece, the last chapter of which was held by Philip the Bad in 1559, in the rich old Cathedral of St. Bavon, at Ghent. Here, on the square, is the site of the house where the Emperor Maximilian was imprisoned by his rebellious Flemings; and next it, with a carved lion, that in which Charles II. of England lived after the martyrdom of that patient and virtuous ruler, whom the English Prayerbook calls that "blessed martyr, Charles the First." In Notre Dame are the tombs of Charles the Bold and Mary his daughter.

We begin here to enter the portals of Dutch painting. Here died Jan van Eyck, the father of oil painting; and here, in the hospital of St. John, are the most celebrated pictures of Hans Memling. The most exquisite in color and finish is the series painted on the casket made to contain the arm of St. Ursula, and representing the story of her martyrdom. You know she went on a pilgrimage to Rome, with her lover, Conan, and eleven thousand virgins; and, on their return to Cologne, they were all massacred by the Huns. One would scarcely believe the story, if he did not see all their bones at Cologne.

GHENT AND ANTWERP

What can one do in this Belgium but write down names, and let memory recall the past? We came to Ghent, still a handsome city, though one thinks of the days when it was the capital of Flanders, and its merchants were princes. On the shabby old belfry-tower is the gilt dragon which Philip van Artevelde captured, and brought in triumph from Bruges. It was originally fetched from a Greek church in Constantinople by some Bruges Crusader; and it is a link to recall to us how, at that time, the merchants of Venice and the far East traded up the Scheldt, and brought to its wharves the rich stuffs of India and Persia. The old bell Roland, that was used to call the burghers together on the approach of an enemy, hung in this tower. What fierce broils and bloody fights did these streets witness centuries ago! There in the Marche au Vendredi, a large square of old-fashioned houses, with a statue of Jacques van Artevelde, fifteen hundred corpses were strewn in a quarrel between the hostile guilds of fullers and brewers; and here, later, Alva set blazing the fires of the Inquisition. Near the square is the old cannon, Mad Margery, used in 1382 at the siege of Oudenarde,—a hammered-iron hooped affair, eighteen feet long. But why mention this, or the magnificent town hall, or St. Bavon, rich in pictures and statuary; or try to put you back three hundred years to the wild days when the

iconoclasts sacked this and every other church in the Low Countries?

Up to Antwerp toward evening. All the country flat as the flattest part of Jersey, rich in grass and grain, cut up by canals, picturesque with windmills and red-tiled roofs, framed with trees in rows. It has been all day hot and dusty. The country everywhere seems to need rain; and dark clouds are gathering in the south for a storm, as we drive up the broad Place de Meir to our hotel, and take rooms that look out to the lace-like spire of the cathedral, which is sharply defined against the red western sky.

Antwerp takes hold of you, both by its present and its past, very strongly. It is still the home of wealth. It has stately buildings, splendid galleries of pictures, and a spire of stone which charms more than a picture, and fascinates the eye as music does the ear. It still keeps its strong fortifications drawn around it, to which the broad and deep Scheldt is like a string to a bow, mindful of the unstable state of Europe. While Berlin is only a vast camp of soldiers, every less city must daily beat its drums, and call its muster-roll. From the tower here one looks upon the cockpit of Europe. And yet Antwerp ought to have rest: she has had tumult enough in her time. Prosperity seems returning to her; but her old, comparative splendor can never come back. In the sixteenth century there was no richer city in Europe.

We walked one evening past the cathedral spire, which begins in the richest and most solid Gothic work, and grows up into the sky into an exquisite lightness and grace, down a broad street to the Scheldt. What traffic have not these high old houses looked on, when two thousand and five hundred vessels lay in the river at one time, and the commerce of Europe found here its best mart. Along the stream now is a not very clean promenade for the populace; and it is lined with beer-houses, shabby theaters, and places of the most childish amusements. There is an odd liking for the simple among these people. In front of the booths, drums were beaten and instruments played in bewildering discord. Actors in paint and tights stood without to attract the crowd within. On one low balcony, a copper-colored man, with a huge feather cap and the traditional dress of the American savage, was beating two drums; a burnt-cork black man stood beside him; while on the steps was a woman, in hat and shawl, making an earnest speech to the crowd. In another place, where a crazy band made furious music, was an enormous "go-round" of wooden ponies, like those in the Paris gardens, only here, instead of children, grown men and women rode the hobby-horses, and seemed delighted with the sport. In the general Babel, everybody was good-natured and jolly. Little things suffice to amuse the lower classes, who do not have to bother their heads with elections and mass meetings.

In front of the cathedral is the well, and the fine canopy of iron-work, by Quentin Matsys, the blacksmith of Antwerp, some of whose pictures we saw in the Museum, where one sees, also some of the finest pictures of the Dutch school,—the "Crucifixion" of Rubens, the "Christ on the Cross" of Vandyke; paintings also by Teniers, Otto Vennius, Albert Cuyp, and others, and Rembrandt's portrait of his wife,—a picture whose sweet strength and wealth of color draws one to it with almost a passion of admiration. We had already seen "The Descent from the Cross" and "The Raising of the Cross" by Rubens, in the cathedral. With all his power and rioting luxuriance of color, I cannot come to love him as I do Rembrandt. Doubtless he painted what he saw; and we still find the types of his female figures in the broad-hipped, ruddy-colored women of Antwerp. We walked down to his house, which remains much as it was two hundred and twenty-five years ago. From the interior court, an entrance in the Italian style leads into a pleasant little garden full of old trees and flowers, with a summer-house embellished with plaster casts, and having the very stone table upon which Rubens painted. It is a quiet place, and fit for an artist; but Rubens had other houses in the city, and lived the life of a man who took a strong hold of the world.

AMSTERDAM

The rail from Antwerp north was through a land flat and sterile. After a little, it becomes a little richer; but a forlorn land to live in I never saw. One wonders at the perseverance of the Flemings and Dutchmen to keep all this vast tract above water when there is so much good solid earth elsewhere unoccupied. At Moerdijk we changed from the cars to a little steamer on the Maas, which flows between high banks. The water is higher than the adjoining land, and from the deck we look down upon houses and farms. At Dort, the Rhine comes in with little promise of the noble stream it is in the highlands. Everywhere canals and ditches dividing the small fields instead of fences; trees planted in straight lines, and occasionally trained on a trellis in front of the houses, with the trunk painted white or green; so that every likeness of nature shall be taken away. From Rotterdam, by cars, it is still the same. The Dutchman spends half his life, apparently, in fighting the water. He has to watch the huge dikes which keep the ocean from overwhelming him, and the river-banks, which may break, and let the floods of the Rhine swallow him up. The danger from within is not less than from without. Yet so fond is he of his one enemy, that, when he can afford it, he builds him a fantastic summer-house over a stagnant pool or a slimy canal, in one corner of his garden, and there sits to enjoy the aquatic beauties of nature; that is, nature as he has made it. The river-banks are woven with osiers to keep them from washing; and at intervals on the banks are piles of the long withes to be used in emergencies when the swollen streams threaten to break through.

And so we come to Amsterdam, the oddest city of all,—a city wholly built on piles, with as many canals as streets, and an architecture so quaint as to even impress one who has come from Belgium. The whole town has a wharf-y look; and it is difficult to say why the tall brick houses, their gables running by steps to a peak, and each one leaning forward or backward or sideways, and none perpendicular, and no two on a line, are so interesting. But certainly it is a most entertaining place to the stranger, whether he explores the crowded Jews' quarter, with its swarms of dirty people, its narrow streets, and high houses hung with clothes, as if every day were washing-day; or strolls through the equally narrow streets of rich shops; or lounges upon the bridges, and looks at the queer boats with clumsy rounded bows, great helms' painted in gay colors, with flowers in the cabin windows,—boats where families live; or walks down the Plantage, with the zoological

gardens on the one hand and rows of beer-gardens on the other; or round the great docks; or saunters at sunset by the banks of the Y, and looks upon flat North Holland and the Zuyder Zee.

The palace on the Dam (square) is a square, stately edifice, and the only building that the stranger will care to see. Its interior is richer and more fit to live in than any palace we have seen. There is nothing usually so dreary as your fine Palace. There are some good frescoes, rooms richly decorated in marble, and a magnificent hall, or ball-room, one hundred feet in height, without pillars. Back of it is, of course, a canal, which does not smell fragrantly in the summer; and I do not wonder that William III. and his queen prefer to stop away. From the top is a splendid view of Amsterdam and all the flat region. I speak of it with entire impartiality, for I did not go up to see it. But better than palaces are the picture-galleries, three of which are open to the sightseer. Here the ancient and modern Dutch painters are seen at their best, and I know of no richer feast of this sort. Here Rembrandt is to be seen in his glory; here Van der Helst, Jan Steen, Gerard Douw, Teniers the younger, Hondekoeter, Weenix, Ostade, Cuyp, and other names as familiar. These men also painted what they saw, the people, the landscapes, with which they were familiar. It was a strange pleasure to meet again and again in the streets of the town the faces, or types of them, that we had just seen on canvas so old.

In the Low Countries, the porters have the grand title of commissionaires. They carry trunks and bundles, black boots, and act as valets de place. As guides, they are quite as intolerable in Amsterdam as their brethren in other cities. Many of them are Jews; and they have a keen eye for a stranger. The moment he sallies from his hotel, there is a guide. Let him hesitate for an instant in his walk, either to look at something or to consult his map, or let him ask the way, and he will have a half dozen of the persistent guild upon him; and they cannot easily be shaken off. The afternoon we arrived, we had barely got into our rooms at Brack's Oude Doelan, when a gray-headed commissionaire knocked at our door, and offered his services to show us the city. We deferred the pleasure of his valuable society. Shortly, when we came down to the street, a smartly dressed Israelite took off his hat to us, and offered to show us the city. We declined with impressive politeness, and walked on. The Jew accompanied us, and attempted conversation, in which we did not join. He would show us everything for a guilder an hour,—for half a guilder. Having plainly told the Jew that we did not desire his attendance, he crossed to the other side of the street, and kept us in sight, biding his opportunity. At the end of the street, we hesitated a moment whether to cross the bridge or turn up by the broad canal. The Jew was at our side in a moment, having divined that we were on the way to the Dam and the palace. He obligingly pointed the way, and began to walk with us, entering into conversation. We told him pointedly, that we did not desire his services, and requested him to leave us. He still walked in our direction, with the air of one much injured, but forgiving, and was more than once beside us with a piece of information. When we finally turned upon him with great fierceness, and told him to begone, he regarded us with a mournful and pitying expression; and as the last act of one who returned good for evil, before he turned away, pointed out to us the next turn we were to make. I saw him several times afterward; and I once had occasion to say to him, that I had already told him I would not employ him; and he always lifted his hat, and looked at me with a forgiving smile. I felt that I had deeply wronged him. As we stood by the statue, looking up at the eastern pediment of the palace, another of the tribe (they all speak a little English) asked me if I wished to see the palace. I told him I was looking at it, and could see it quite distinctly. Half a dozen more crowded round, and proffered their aid. Would I like to go into the palace? They knew, and I knew, that they could do nothing more than go to the open door, through which they would not be admitted, and that I could walk across the open square to that, and enter alone. I asked the first speaker if he wished to go into the palace. Oh, yes! he would like to go. I told him he had better go at once,—they had all better go in together and see the palace,—it was an excellent opportunity. They seemed to see the point, and slunk away to the other side to wait for another stranger.

I find that this plan works very well with guides: when I see one approaching, I at once offer to guide him. It is an idea from which he does not rally in time to annoy us. The other day I offered to show a persistent fellow through an old ruin for fifty kreuzers: as his price for showing me was forty-eight, we did not come to terms. One of the most remarkable guides, by the way, we encountered at Stratford-on-Avon. As we walked down from the Red Horse Inn to the church, a full-grown boy came bearing down upon us in the most wonderful fashion. Early rickets, I think, had been succeeded by the St. Vitus' dance. He came down upon us sideways, his legs all in a tangle, and his right arm, bent and twisted, going round and round, as if in vain efforts to get into his pocket, his fingers spread out in impotent desire to clutch something. There was great danger that he would run into us, as he was like a steamer with only one side-wheel and no rudder. He came up puffing and blowing, and offered to show us Shakespeare's tomb. Shade of the past, to be accompanied to thy resting-place by such an object! But he fastened himself on us, and jerked and hitched along in his side-wheel fashion. We declined his help. He paddled on, twisting himself into knots, and grinning in the most friendly manner. We told him to begone. "I am," said he, wrenching himself into a new contortion, "I am what showed Artemus Ward round Stratford." This information he repeated again and again, as if we could not resist him after we had comprehended that. We shook him off; but when we returned at sundown across the fields, from a visit to Anne Hathaway's cottage, we met the sidewheeler cheerfully towing along a large party, upon whom he had fastened.

The people of Amsterdam are only less queer than their houses. The men dress in a solid, old-fashioned way. Every one wears the straight, high-crowned silk hat that went out with us years ago, and the cut of clothing of even the most buckish young fellows is behind the times. I stepped into the Exchange, an immense interior, that will hold five thousand people, where the stock-gamblers meet twice a day. It was very different from the terrible excitement and noise of the Paris Bourse. There were three or four thousand brokers there, yet there was very little noise and no confusion. No stocks were called, and there was no central ring for bidding, as at the Bourse and the New York Gold Room; but they quietly bought and sold. Some of the leading firms had desks or tables at the side, and there awaited orders. Everything was phlegmatically and decorously done.

In the streets one still sees peasant women in native costume. There was a group to-day that I saw by the river, evidently just crossed over from North Holland. They wore short dresses, with the upper skirt looped up, and had broad hips and big waists. On the head was a cap with a fall of lace behind; across the back of

the head a broad band of silver (or tin) three inches broad, which terminated in front and just above the ears in bright pieces of metal about two inches square, like a horse's blinders, Only flaring more from the head; across the forehead and just above the eyes a gilt band, embossed; on the temples two plaits of hair in circular coils; and on top of all a straw hat, like an old-fashioned bonnet stuck on hindside before. Spiral coils of brass wire, coming to a point in front, are also worn on each side of the head by many. Whether they are for ornament or defense, I could not determine.

Water is brought into the city now from Haarlem, and introduced into the best houses; but it is still sold in the streets by old men and women, who sit at the faucets. I saw one dried-up old grandmother, who sat in her little caboose, fighting away the crowd of dirty children who tried to steal a drink when her back was turned, keeping count of the pails of water carried away with a piece of chalk on the iron pipe, and trying to darn her stocking at the same time. Odd things strike you at every turn. There is a sledge drawn by one poor horse, and on the front of it is a cask of water pierced with holes, so that the water squirts out and wets the stones, making it easier sliding for the runners. It is an ingenious people!

After all, we drove out five miles to Broek, the clean village; across the Y, up the canal, over flatness flattened. Broek is a humbug, as almost all show places are. A wooden little village on a stagnant canal, into which carriages do not drive, and where the front doors of the houses are never open; a dead, uninteresting place, neat but not specially pretty, where you are shown into one house got up for the purpose, which looks inside like a crockery shop, and has a stiff little garden with box trained in shapes of animals and furniture. A roomy-breeched young Dutchman, whose trousers went up to his neck, and his hat to a peak, walked before us in slow and cow-like fashion, and showed us the place; especially some horrid pleasure-grounds, with an image of an old man reading in a summer-house, and an old couple in a cottage who sat at a table and worked, or ate, I forget which, by clock-work; while a dog barked by the same means. In a pond was a wooden swan sitting on a stick, the water having receded, and left it high and dry. Yet the trip is worth while for the view of the country and the people on the way: men and women towing boats on the canals; the red-tiled houses painted green, and in the distance the villages, with their spires and pleasing mixture of brown, green, and red tints, are very picturesque. The best thing that I saw, however, was a traditional Dutchman walking on the high bank of a canal, with soft hat, short pipe, and breeches that came to the armpits above, and a little below the knees, and were broad enough about the seat and thighs to carry his no doubt numerous family. He made a fine figure against the sky.

COLOGNE AND ST. URSULA

It is a relief to get out of Holland and into a country nearer to hills. The people also seem more obliging. In Cologne, a brown-cheeked girl pointed us out the way without waiting for a kreuzer. Perhaps the women have more to busy themselves about in the cities, and are not so curious about passers-by. We rarely see a reflector to exhibit us to the occupants of the second-story windows. In all the cities of Belgium and Holland the ladies have small mirrors, with reflectors, fastened to their windows; so that they can see everybody who passes, without putting their heads out. I trust we are not inverted or thrown out of shape when we are thus caught up and cast into my lady's chamber. Cologne has a cheerful look, for the Rhine here is wide and promising; and as for the "smells," they are certainly not so many nor so vile as those at Mainz.

Our windows at the hotel looked out on the finest front of the cathedral. If the Devil really built it, he is to be credited with one good thing, and it is now likely to be finished, in spite of him. Large as it is, it is on the exterior not so impressive as that at Amiens; but within it has a magnificence born of a vast design and the most harmonious proportions, and the grand effect is not broken by any subdivision but that of the choir. Behind the altar and in front of the chapel, where lie the remains of the Wise Men of the East who came to worship the Child, or, as they are called, the Three Kings of Cologne, we walked over a stone in the pavement under which is the heart of Mary de Medicis: the remainder of her body is in St. Denis near Paris. The beadle in red clothes, who stalks about the cathedral like a converted flamingo, offered to open for us the chapel; but we declined a sight of the very bones of the Wise Men. It was difficult enough to believe they were there, without seeing them. One ought not to subject his faith to too great a strain at first in Europe. The bones of the Three Kings, by the way, made the fortune of the cathedral. They were the greatest religious card of the Middle Ages, and their fortunate possession brought a flood of wealth to this old Domkirche. The old feudal lords would swear by the Almighty Father, or the Son, or Holy Ghost, or by everything sacred on earth, and break their oaths as they would break a wisp of straw: but if you could get one of them to swear by the Three Kings of Cologne, he was fast; for that oath he dare not disregard.

The prosperity of the cathedral on these valuable bones set all the other churches in the neighborhood on the same track; and one can study right here in this city the growth of relic worship. But the most successful achievement was the collection of the bones of St. Ursula and the eleven thousand virgins, and their preservation in the church on the very spot where they suffered martyrdom. There is probably not so large a collection of the bones of virgins elsewhere in the world; and I am sorry to read that Professor Owen has thought proper to see and say that many of them are the bones of lower orders of animals. They are built into the walls of the church, arranged about the choir, interred in stone coffins, laid under the pavements; and their skulls grin at you everywhere. In the chapel the bones are tastefully built into the wall and overhead, like rustic wood-work; and the skulls stand in rows, some with silver masks, like the jars on the shelves of an apothecary's shop. It is a cheerful place. On the little altar is the very skull of the saint herself, and that of Conan, her lover, who made the holy pilgrimage to Rome with her and her virgins, and also was slain by the Huns at Cologne. There is a picture of the eleven thousand disembarking from one boat on the Rhine, which is as wonderful as the trooping of hundreds of spirits out of a conjurer's bottle. The right arm of St. Ursula is preserved here: the left is at Bruges. I am gradually getting the hang of this excellent but somewhat scattered woman, and bringing her together in my mind. Her body, I believe, lies behind the altar in this same church.

She must have been a lovely character, if Hans Memling's portrait of her is a faithful one. I was glad to see here one of the jars from the marriage-supper in Cana. We can identify it by a piece which is broken out; and the piece is in Notre Dame in Paris. It has been in this church five hundred years. The sacristan, a very intelligent person, with a shaven crown and his hair cut straight across his forehead, who showed us the church, gave us much useful information about bones, teeth, and the remains of the garments that the virgins wore; and I could not tell from his face how much he expected us to believe. I asked the little fussy old guide of an English party who had joined us, how much he believed of the story. He was a Protestant, and replied, still anxious to keep up the credit of his city, "Thousands is too many; some hundreds maybe; thousands is too many."

A GLIMPSE OF THE RHINE

You have seen the Rhine in pictures; you have read its legends. You know, in imagination at least, how it winds among craggy hills of splendid form, turning so abruptly as to leave you often shut in with no visible outlet from the wall of rock and forest; how the castles, some in ruins so as to be as unsightly as any old pile of rubbish, others with feudal towers and battlements, still perfect, hang on the crags, or stand sharp against the sky, or nestle by the stream or on some lonely island. You know that the Rhine has been to Germans what the Nile was to the Egyptians,—a delight, and the theme of song and story. Here the Roman eagles were planted; here were the camps of Drusus; here Caesar bridged and crossed the Rhine; here, at every turn, a feudal baron, from his high castle, levied toll on the passers; and here the French found a momentary halt to their invasion of Germany at different times. You can imagine how, in a misty morning, as you leave Bonn, the Seven Mountains rise up in their veiled might, and how the Drachenfels stands in new and changing beauty as you pass it and sail away. You have been told that the Hudson is like the Rhine. Believe me, there is no resemblance; nor would there be if the Hudson were lined with castles, and Julius Caesar had crossed it every half mile. The Rhine satisfies you, and you do not recall any other river. It only disappoints you as to its "vine-clad hills." You miss trees and a covering vegetation, and are not enamoured of the patches of green vines on wall-supported terraces, looking from the river like hills of beans or potatoes. And, if you try the Rhine wine on the steamers, you will wholly lose your faith in the vintage. We decided that the wine on our boat was manufactured in the boiler.

There is a mercenary atmosphere about hotels and steamers on the Rhine, a watering-place, show sort of feeling, that detracts very much from one's enjoyment. The old habit of the robber barons of levying toll on all who sail up and down has not been lost. It is not that one actually pays so much for sightseeing, but the charm of anything vanishes when it is made merchandise. One is almost as reluctant to buy his "views" as he is to sell his opinions. But one ought to be weeks on the Rhine before attempting to say anything about it.

One morning, at Bingen,—I assure you it was not six o'clock,—we took a big little rowboat, and dropped down the stream, past the Mouse Tower, where the cruel Bishop Hatto was eaten up by rats, under the shattered Castle of Ehrenfels, round the bend to the little village of Assmannshausen, on the hills back of which is grown the famous red wine of that name. On the bank walked in line a dozen peasants, men and women, in picturesque dress, towing, by a line passed from shoulder to shoulder, a boat filled with marketing for Rudesheim. We were bound up the Niederwald, the mountain opposite Bingen, whose noble crown of forest attracted us. At the landing, donkeys awaited us; and we began the ascent, a stout, good-natured German girl acting as guide and driver. Behind us, on the opposite shore, set round about with a wealth of foliage, was the Castle of Rheinstein, a fortress more pleasing in its proportions and situation than any other. Our way was through the little town which is jammed into the gorge; and as we clattered up the pavement, past the church, its heavy bell began to ring loudly for matins, the sound reverberating in the narrow way, and following us with its benediction when we were far up the hill, breathing the fresh, inspiring morning air. The top of the Niederwald is a splendid forest of trees, which no impious Frenchman has been allowed to trim, and cut into allees of arches, taking one in thought across the water to the free Adirondacks. We walked for a long time under the welcome shade, approaching the brow of the hill now and then, where some tower or hermitage is erected, for a view of the Rhine and the Nahe, the villages below, and the hills around; and then crossed the mountain, down through cherry orchards, and vine yards, walled up, with images of Christ on the cross on the angles of the walls, down through a hot road where wild flowers grew in great variety, to the quaint village of Rudesheim, with its queer streets and ancient ruins. Is it possible that we can have too many ruins? "Oh dear!" exclaimed the jung-frau as we sailed along the last day, "if there is n't another castle!"

HEIDELBERG

If you come to Heidelberg, you will never want to go away. To arrive here is to come into a peaceful state of rest and content. The great hills out of which the Neckar flows, infold the town in a sweet security; and yet there is no sense of imprisonment, for the view is always wide open to the great plains where the Neckar goes to join the Rhine, and where the Rhine runs for many a league through a rich and smiling land. One could settle down here to study, without a desire to go farther, nor any wish to change the dingy, shabby old buildings of the university for anything newer and smarter. What the students can find to fight their little duels about I cannot see; but fight they do, as many a scarred cheek attests. The students give life to the town. They go about in little caps of red, green, and blue, many of them embroidered in gold, and stuck so far

on the forehead that they require an elastic, like that worn by ladies, under the back hair, to keep them on; and they are also distinguished by colored ribbons across the breast. The majority of them are well-behaved young gentlemen, who carry switch-canes, and try to keep near the fashions, like students at home. Some like to swagger about in their little skull-caps, and now and then one is attended by a bull-dog.

I write in a room which opens out upon a balcony. Below it is a garden, below that foliage, and farther down the town with its old speckled roofs, spires, and queer little squares. Beyond is the Neckar, with the bridge, and white statues on it, and an old city gate at this end, with pointed towers. Beyond that is a white road with a wall on one side, along which I see peasant women walking with large baskets balanced on their heads. The road runs down the river to Neuenheim. Above it on the steep hillside are vineyards; and a winding path goes up to the Philosopher's Walk, which runs along for a mile or more, giving delightful views of the castle and the glorious woods and hills back of it. Above it is the mountain of Heiligenberg, from the other side of which one looks off toward Darmstadt and the famous road, the Bergstrasse. If I look down the stream, I see the narrow town, and the Neckar flowing out of it into the vast level plain, rich with grain and trees and grass, with many spires and villages; Mannheim to the northward, shining when the sun is low; the Rhine gleaming here and there near the horizon; and the Vosges Mountains, purple in the last distance: on my right, and so near that I could throw a stone into them, the ruined tower and battlements of the northwest corner of the castle, half hidden in foliage, with statues framed in ivy, and the garden terrace, built for Elizabeth Stuart when she came here the bride of the Elector Frederick, where giant trees grow. Under the walls a steep path goes down into the town, along which little houses cling to the hillside. High above the castle rises the noble Konigstuhl, whence the whole of this part of Germany is visible, and, in a clear day, Strasburg Minster, ninety miles away.

I have only to go a few steps up a narrow, steep street, lined with the queerest houses, where is an ever-running pipe of good water, to which all the neighborhood resorts, and I am within the grounds of the castle. I scarcely know where to take you; for I never know where to go myself, and seldom do go where I intend when I set forth. We have been here several days; and I have not yet seen the Great Tun, nor the inside of the show-rooms, nor scarcely anything that is set down as a "sight." I do not know whether to wander on through the extensive grounds, with splendid trees, bits of old ruin, overgrown, cozy nooks, and seats where, through the foliage, distant prospects open into quiet retreats that lead to winding walks up the terraced hill, round to the open terrace overlooking the Neckar, and giving the best general view of the great mass of ruins. If we do, we shall be likely to sit in some delicious place, listening to the band playing in the "Restauration," and to the nightingales, till the moon comes up. Or shall we turn into the garden through the lovely Arch of the Princess Elizabeth, with its stone columns cut to resemble tree-trunks twined with ivy? Or go rather through the great archway, and under the teeth of the portcullis, into the irregular quadrangle, whose buildings mark the changing style and fortune of successive centuries, from 1300 down to the seventeenth century? There is probably no richer quadrangle in Europe: there is certainly no other ruin so vast, so impressive, so ornamented with carving, except the Alhambra. And from here we pass out upon the broad terrace of masonry, with a splendid flanking octagon tower, its base hidden in trees, a rich facade for a background, and below the town the river, and beyond the plain and floods of golden sunlight. What shall we do? Sit and dream in the Rent Tower under the lindens that grow in its top? The day passes while one is deciding how to spend it, and the sun over Heiligenberg goes down on his purpose.

ALPINE NOTES

ENTERING SWITZERLAND BERNE ITS BEAUTIES AND BEARS

If you come to Bale, you should take rooms on the river, or stand on the bridge at evening, and have a sunset of gold and crimson streaming down upon the wide and strong Rhine, where it rushes between the houses built plumb up to it, or you will not care much for the city. And yet it is pleasant on the high ground, where are some stately buildings, and where new gardens are laid out, and where the American consul on the Fourth of July flies our flag over the balcony of a little cottage smothered in vines and gay with flowers. I had the honor of saluting it that day, though I did not know at the time that gold had risen two or three per cent. under its blessed folds at home. Not being a shipwrecked sailor, or a versatile and accomplished but impoverished naturalized citizen, desirous of quick transit to the land of the free, I did not call upon the consul, but left him under the no doubt correct impression that he was doing a good thing by unfolding the flag on the Fourth.

You have not journeyed far from Bale before you are aware that you are in Switzerland. It was showery the day we went down; but the ride filled us with the most exciting expectations. The country recalled New England, or what New England might be, if it were cultivated and adorned, and had good roads and no fences. Here at last, after the dusty German valleys, we entered among real hills, round which and through which, by enormous tunnels, our train slowly went: rocks looking out of foliage; sweet little valleys, green as in early spring; the dark evergreens in contrast; snug cottages nestled in the hillsides, showing little else than enormous brown roofs that come nearly to the ground, giving the cottages the appearance of huge toadstools; fine harvests of grain; thrifty apple-trees, and cherry-trees purple with luscious fruit. And this shifting panorama continues until, towards evening, behold, on a hill, Berne, shining through showers, the old feudal round tower and buildings overhanging the Aar, and the tower of the cathedral over all. From the balcony of our rooms at the Bellevue, the long range of the Bernese Oberland shows its white summits for a moment in the slant sunshine, and then the clouds shut down, not to lift again for two days. Yet it looks warmer on the snow-peaks than in Berne, for summer sets in in Switzerland with a New England chill and rigor.

The traveler finds no city with more flavor of the picturesque and quaint than Berne; and I think it must have preserved the Swiss characteristics better than any other of the large towns in Helvetia. It stands upon a peninsula, round which the Aar, a hundred feet below, rapidly flows; and one has on nearly every side very pretty views of the green basin of hills which rise beyond the river. It is a most comfortable town on a rainy day; for all the principal streets have their houses built on arcades, and one walks under the low arches, with the shops on one side and the huge stone pillars on the other. These pillars so stand out toward the street as to give the house-fronts a curved look. Above are balconies, in which, upon red cushions, sit the daughters of Berne, reading and sewing, and watching their neighbors; and in nearly every window are quantities of flowers of the most brilliant colors. The gray stone of the houses, which are piled up from the streets, harmonizes well with the colors in the windows and balconies, and the scene is quite Oriental as one looks down, especially if it be upon a market morning, when the streets are as thronged as the Strand. Several terraces, with great trees, overlook the river, and command prospects of the Alps. These are public places; for the city government has a queer notion that trees are not hideous, and that a part of the use of living is the enjoyment of the beautiful. I saw an elegant bank building, with carved figures on the front, and at each side of the entrance door a large stand of flowers,—oleanders, geraniums, and fuchsias; while the windows and balconies above bloomed with a like warmth of floral color. Would you put an American bank president in the Retreat who should so decorate his banking-house? We all admire the tasteful display of flowers in foreign towns: we go home, and carry nothing with us but a recollection. But Berne has also fountains everywhere; some of them grotesque, like the ogre that devours his own children, but all a refreshment and delight. And it has also its clock-tower, with one of those ingenious pieces of mechanism, in which the sober people of this region take pleasure. At the hour, a procession of little bears goes round, a jolly figure strikes the time, a cock flaps his wings and crows, and a solemn Turk opens his mouth to announce the flight of the hours. It is more grotesque, but less elaborate, than the equally childish toy in the cathedral at Strasburg.

We went Sunday morning to the cathedral; and the excellent woman who guards the portal—where in ancient stone the Last Judgment is enacted, and the cheerful and conceited wise virgins stand over against the foolish virgins, one of whom has been in the penitential attitude of having a stone finger in her eye now for over three hundred years—refused at first to admit us to the German Lutheran service, which was just beginning. It seems that doors are locked, and no one is allowed to issue forth until after service. There seems to be an impression that strangers go only to hear the organ, which is a sort of rival of that at Freiburg, and do not care much for the well-prepared and protracted discourse in Swiss-German. We agreed to the terms of admission; but it did not speak well for former travelers that the woman should think it necessary to say, "You must sit still, and not talk." It is a barn-like interior. The women all sit on hard, high-backed benches in the center of the church, and the men on hard, higher-backed benches about the sides, inclosing and facing the women, who are more directly under the droppings of the little pulpit, hung on one of the pillars,—a very solemn and devout congregation, who sang very well, and paid strict attention to the sermon.

I noticed that the names of the owners, and sometimes their coats-of-arms, were carved or painted on the backs of the seats, as if the pews were not put up at yearly auction. One would not call it a dressy congregation, though the homely women looked neat in black waists and white puffed sleeves and broadbrimmed hats.

The only concession I have anywhere seen to women in Switzerland, as the more delicate sex, was in this church: they sat during most of the service, but the men stood all the time, except during the delivery of the sermon. The service began at nine o'clock, as it ought to with us in summer. The costume of the peasant women in and about Berne comes nearer to being picturesque than in most other parts of Switzerland, where it is simply ugly. You know the sort of thing in pictures,—the broad hat, short skirt, black, pointed stomacher, with white puffed sleeves, and from each breast a large silver chain hanging, which passes under the arm and fastens on the shoulder behind,—a very favorite ornament. This costume would not be unbecoming to a pretty face and figure: whether there are any such native to Switzerland, I trust I may not be put upon the witness-stand to declare. Some of the peasant young men went without coats, and with the shirt sleeves fluted; and others wore butternut-colored suits, the coats of which I can recommend to those who like the swallow-tailed variety. I suppose one would take a man into the opera in London, where he cannot go in anything but that sort. The buttons on the backs of these came high up between the shoulders, and the tails did not reach below the waistband. There is a kind of rooster of similar appearance. I saw some of these young men from the country, with their sweethearts, leaning over the stone parapet, and looking into the pit of the bear-garden, where the city bears walk round, or sit on their hind legs for bits of bread thrown to them, or douse themselves in the tanks, or climb the dead trees set up for their gambols. Years ago they ate up a British officer who fell in; and they walk round now ceaselessly, as if looking for another. But one cannot expect good taste in a bear.

If you would see how charming a farming country can be, drive out on the highway towards Thun. For miles it is well shaded with giant trees of enormous trunks, and a clean sidewalk runs by the fine road. On either side, at little distances from the road, are picturesque cottages and rambling old farmhouses peeping from the trees and vines and flowers. Everywhere flowers, before the house, in the windows, at the railway stations. But one cannot stay forever even in delightful Berne, with its fountains and terraces, and girls on red cushions in the windows, and noble trees and flowers, and its stately federal Capitol, and its bears carved everywhere in stone and wood, and its sunrises, when all the Bernese Alps lie like molten silver in the early light, and the clouds drift over them, now hiding, now disclosing, the enchanting heights.

HEARING THE FREIBURG ORGAN—FIRST SIGHT OF LAKE LEMAN

Freiburg, with its aerial suspension-bridges, is also on a peninsula, formed by the Sarine; with its old walls, old watch-towers, its piled-up old houses, and streets that go upstairs, and its delicious cherries, which you can eat while you sit in the square by the famous linden-tree, and wait for the time when the organ will be played in the cathedral. For all the world stops at Freiburg to hear and enjoy the great organ,—all except the self-satisfied English clergyman, who says he does n't care much for it, and would rather go about town and see the old walls; and the young and boorish French couple, whose refined amusement in the railway-carriage consisted in the young man's catching his wife's foot in the window-strap, and hauling it up to the level of the window, and who cross themselves and go out after the first tune; and the two bread-and-butter English young ladies, one of whom asks the other in the midst of the performance, if she has thought yet to count the pipes,—a thoughtful verification of Murray, which is very commendable in a young woman traveling for the improvement of her little mind.

One has heard so much of this organ, that he expects impossibilities, and is at first almost disappointed, although it is not long in discovering its vast compass, and its wonderful imitations, now of a full orchestra, and again of a single instrument. One has not to wait long before he is mastered by its spell. The vox humana stop did not strike me as so perfect as that of the organ in the Rev. Mr. Hale's church in Boston, though the imitation of choir-voices responding to the organ was very effective. But it is not in tricks of imitation that this organ is so wonderful: it is its power of revealing, by all its compass, the inmost part of any musical composition.

The last piece we heard was something like this: the sound of a bell, tolling at regular intervals, like the throbbing of a life begun; about it an accompaniment of hopes, inducements, fears, the flute, the violin, the violoncello, promising, urging, entreating, inspiring; the life beset with trials, lured with pleasures, hesitating, doubting, questioning; its purpose at length grows more certain and fixed, the bell tolling becomes a prolonged undertone, the flow of a definite life; the music goes on, twining round it, now one sweet instrument and now many, in strife or accord, all the influences of earth and heaven and the base underworld meeting and warring over the aspiring soul; the struggle becomes more earnest, the undertone is louder and clearer; the accompaniment indicates striving, contesting passion, an agony of endeavor and resistance, until at length the steep and rocky way is passed, the world and self are conquered, and, in a burst of triumph from a full orchestra, the soul attains the serene summit. But the rest is only for a moment. Even in the highest places are temptations. The sunshine fails, clouds roll up, growling of low, pedal thunder is heard, while sharp lightning-flashes soon break in clashing peals about the peaks. This is the last Alpine storm and trial. After it the sun bursts out again, the wide, sunny valleys are disclosed, and a sweet evening hymn floats through all the peaceful air. We go out from the cool church into the busy streets of the white, gray town awed and comforted.

And such a ride afterwards! It was as if the organ music still continued. All the world knows the exquisite views southward from Freiburg; but such an atmosphere as we had does not overhang them many times in a season. First the Moleross, and a range of mountains bathed in misty blue light,—rugged peaks, scarred sides, white and tawny at once, rising into the clouds which hung large and soft in the blue; soon Mont Blanc, dim and aerial, in the south; the lovely valley of the River Sense; peasants walking with burdens on the white highway; the quiet and soft-tinted mountains beyond; towns perched on hills, with old castles and towers; the land rich with grass, grain, fruit, flowers; at Palezieux a magnificent view of the silver, purple, and blue mountains, with their chalky seams and gashed sides, near at hand; and at length, coming through a long tunnel, as if we had been shot out into the air above a country more surprising than any in dreams, the most wonderful sight burst upon us,—the low-lying, deep-blue Lake Lemman, and the gigantic mountains rising from its shores, and a sort of mist, translucent, suffused with sunlight, like the liquid of the golden wine the Steinberger poured into the vast basin. We came upon it out of total darkness, without warning; and we seemed, from our great height, to be about to leap into the splendid gulf of tremulous light and color.

This Lake of Geneva is said to combine the robust mountain grandeur of Luzerne with all the softness of atmosphere of Lake Maggiore. Surely, nothing could exceed the loveliness as we wound down the hillside, through the vineyards, to Lausanne, and farther on, near the foot of the lake, to Montreux, backed by precipitous but tree-clad hills, fronted by the lovely water, and the great mountains which run away south into Savoy, where Velan lifts up its snows. Below us, round the curving bay, lies white Chillon; and at sunset we row down to it over the bewitched water, and wait under its grim walls till the failing light brings back the romance of castle and prisoner. Our garcon had never heard of the prisoner; but he knew about the gendarmes who now occupy the castle.

OUR ENGLISH FRIENDS

Not the least of the traveler's pleasure in Switzerland is derived from the English people who overrun it: they seem to regard it as a kind of private park or preserve belonging to England; and they establish themselves at hotels, or on steamboats and diligences, with a certain air of ownership that is very pleasant. I am not very fresh in my geology; but it is my impression that Switzerland was created especially for the English, about the year of the Magna Charta, or a little later. The Germans who come here, and who don't care very much what they eat, or how they sleep, provided they do not have any fresh air in diningroom or bedroom, and provided, also, that the bread is a little sour, growl a good deal about the English, and declare that they have spoiled Switzerland. The natives, too, who live off the English, seem to thoroughly hate them; so that one is often compelled, in self-defense, to proclaim his nationality, which is like running from Scylla upon Charybdis; for, while the American is more popular, it is believed that there is no bottom to his pocket.

There was a sprig of the Church of England on the steamboat on Lake Lemman, who spread himself upon a center bench, and discoursed very instructively to his friends,—a stout, fat-faced young man in a white cravat,

whose voice was at once loud and melodious, and whom our manly Oxford student set down as a man who had just rubbed through the university, and got into a scanty living.

"I met an American on the boat yesterday," the oracle was saying to his friends, "who was really quite a pleasant fellow. He—ah really was, you know, quite a sensible man. I asked him if they had anything like this in America; and he was obliged to say that they had n't anything like it in his country; they really had n't. He was really quite a sensible fellow; said he was over here to do the European tour, as he called it."

Small, sympathetic laugh from the attentive, wiry, red-faced woman on the oracle's left, and also a chuckle, at the expense of the American, from the thin Englishman on his right, who wore a large white waistcoat, a blue veil on his hat, and a face as red as a live coal.

"Quite an admission, was n't it, from an American? But I think they have changed since the wah, you know."

At the next landing, the smooth and beaming churchman was left by his friends; and he soon retired to the cabin, where I saw him self-sacrificingly denying himself the views on deck, and consoling himself with a substantial lunch and a bottle of English ale.

There is one thing to be said about the English abroad: the variety is almost infinite. The best acquaintances one makes will be English,—people with no nonsense and strong individuality; and one gets no end of entertainment from the other sort. Very different from the clergyman on the boat was the old lady at table-d'hote in one of the hotels on the lake. One would not like to call her a delightfully wicked old woman, like the Baroness Bernstein; but she had her own witty and satirical way of regarding the world. She had lived twenty-five years at Geneva, where people, years ago, coming over the dusty and hot roads of France, used to faint away when they first caught sight of the Alps. Believe they don't do it now. She never did; was past the susceptible age when she first came; was tired of the people. Honest? Why, yes, honest, but very fond of money. Fine Swiss wood-carving? Yes. You'll get very sick of it. It's very nice, but I 'm tired of it. Years ago, I sent some of it home to the folks in England. They thought everything of it; and it was not very nice, either,—a cheap sort. Moral ideas? I don't care for moral ideas: people make such a fuss about them lately (this in reply to her next neighbor, an eccentric, thin man, with bushy hair, shaggy eyebrows, and a high, falsetto voice, who rallied the witty old lady all dinner-time about her lack of moral ideas, and accurately described the thin wine on the table as "water-bewitched"). Why did n't the baroness go back to England, if she was so tired of Switzerland? Well, she was too infirm now; and, besides, she did n't like to trust herself on the railroads. And there were so many new inventions nowadays, of which she read. What was this nitroglycerine, that exploded so dreadfully? No: she thought she should stay where she was.

There is little risk of mistaking the Englishman, with or without his family, who has set out to do Switzerland. He wears a brandy-flask, a field-glass, and a haversack. Whether he has a silk or soft hat, he is certain to wear a veil tied round it. This precaution is adopted when he makes up his mind to come to Switzerland, I think, because he has read that a veil is necessary to protect the eyes from the snow-glare. There is probably not one traveler in a hundred who gets among the ice and snow-fields where he needs a veil or green glasses: but it is well to have it on the hat; it looks adventurous. The veil and the spiked alpenstock are the signs of peril. Everybody—almost everybody—has an alpenstock. It is usually a round pine stick, with an iron spike in one end. That, also, is a sign of peril. We saw a noble young Briton on the steamer the other day, who was got up in the best Alpine manner. He wore a short sack,—in fact, an entire suit of light gray flannel, which closely fitted his lithe form. His shoes were of undressed leather, with large spikes in the soles; and on his white hat he wore a large quantity of gauze, which fell in folds down his neck. I am sorry to say that he had a red face, a shaven chin, and long side-whiskers. He carried a formidable alpenstock; and at the little landing where we first saw him, and afterward on the boat, he leaned on it in a series of the most graceful and daring attitudes that I ever saw the human form assume. Our Oxford student knew the variety, and guessed rightly that he was an army man. He had his face burned at Malta. Had he been over the Gemmi? Or up this or that mountain? asked another English officer. "No, I have not." And it turned out that he had n't been anywhere, and did n't seem likely to do anything but show himself at the frequented valley places. And yet I never saw one whose gallant bearing I so much admired. We saw him afterward at Interlaken, enduring all the hardships of that fashionable place. There was also there another of the same country, got up for the most dangerous Alpine climbing, conspicuous in red woolen stockings that came above his knees. I could not learn that he ever went up anything higher than the top of a diligence.

THE DILIGENCE TO CHAMOUNY

The greatest diligence we have seen, one of the few of the old-fashioned sort, is the one from Geneva to Chamouny. It leaves early in the morning; and there is always a crowd about it to see the mount and start. The great ark stands before the diligence-office, and, for half an hour before the hour of starting, the porters are busy stowing away the baggage, and getting the passengers on board. On top, in the banquette, are seats for eight, besides the postilion and guard; in the coupe, under the postilion's seat and looking upon the horses, seats for three; in the interior, for three; and on top, behind, for six or eight. The baggage is stowed in the capacious bowels of the vehicle. At seven, the six horses are brought out and hitched on, three abreast. We climb up a ladder to the banquette: there is an irascible Frenchman, who gets into the wrong seat; and before he gets right there is a terrible war of words between him and the guard and the porters and the hostlers, everybody joining in with great vivacity; in front of us are three quiet Americans, and a slim Frenchman with a tall hat and one eye-glass. The postilion gets up to his place. Crack, crack, crack, goes the whip; and, amid "sensation" from the crowd, we are off at a rattling pace, the whip cracking all the time like Chinese fireworks. The great passion of the drivers is noise; and they keep the whip going all day. No sooner does a fresh one mount the box than he gives a half-dozen preliminary snaps; to which the horses pay no heed, as they know it is only for the driver's amusement. We go at a good gait, changing horses every six

miles, till we reach the Baths of St. Gervais, where we dine, from near which we get our first glimpse of Mont Blanc through clouds,—a section of a dazzlingly white glacier, a very exciting thing to the imagination. Thence we go on in small carriages, over a still excellent but more hilly road, and begin to enter the real mountain wonders; until, at length, real glaciers pouring down out of the clouds nearly to the road meet us, and we enter the narrow Valley of Chamouny, through which we drive to the village in a rain.

Everybody goes to Chamouny, and up the Flegere, and to Montanvert, and over the Mer de Glace; and nearly everybody down the Mauvais Pas to the Chapeau, and so back to the village. It is all easy to do; and yet we saw some French people at the Chapeau who seemed to think they had accomplished the most hazardous thing in the world in coming down the rocks of the Mauvais Pas. There is, as might be expected, a great deal of humbug about the difficulty of getting about in the Alps, and the necessity of guides. Most of the dangers vanish on near approach. The Mer de Glace is inferior to many other glaciers, and is not nearly so fine as the Glacier des Bossons: but it has a reputation, and is easy of access; so people are content to walk over the dirty ice. One sees it to better effect from below, or he must ascend it to the Jardin to know that it has deep crevasses, and is as treacherous as it is grand. And yet no one will be disappointed at the view from Montanvert, of the upper glacier, and the needles of rock and snow which rise beyond.

We met at the Chapeau two jolly young fellows from Charleston, S. C. who had been in the war, on the wrong side. They knew no language but American, and were unable to order a cutlet and an omelet for breakfast. They said they believed they were going over the Tete Noire. They supposed they had four mules waiting for them somewhere, and a guide; but they couldn't understand a word he said, and he couldn't understand them. The day before, they had nearly perished of thirst, because they could n't make their guide comprehend that they wanted water. One of them had slung over his shoulder an Alpine horn, which he blew occasionally, and seemed much to enjoy. All this while we sit on a rock at the foot of the Mauvais Pas, looking out upon the green glacier, which here piles itself up finely, and above to the Aiguilles de Charmoz and the innumerable ice-pinnacles that run up to the clouds, while our muleteer is getting his breakfast. This is his third breakfast this morning.

The day after we reached Chamouny, Monseigneur the bishop arrived there on one of his rare pilgrimages into these wild valleys. Nearly all the way down from Geneva, we had seen signs of his coming, in preparations as for the celebration of a great victory. I did not know at first but the Atlantic cable had been laid; or rather that the decorations were on account of the news of it reaching this region. It was a holiday for all classes; and everybody lent a hand to the preparations. First, the little church where the confirmations were to take place was trimmed within and without; and an arch of green spanned the gateway. At Les Pres, the women were sweeping the road, and the men were setting small evergreen-trees on each side. The peasants were in their best clothes; and in front of their wretched hovels were tables set out with flowers. So cheerful and eager were they about the bishop, that they forgot to beg as we passed: the whole valley was in a fever of expectation. At one hamlet on the mulepath over the Tete Noire, where the bishop was that day expected, and the women were sweeping away all dust and litter from the road, I removed my hat, and gravely thanked them for their thoughtful preparation for our coming. But they only stared a little, as if we were not worthy to be even forerunners of Monseigneur.

I do not care to write here how serious a drawback to the pleasures of this region are its inhabitants. You get the impression that half of them are beggars. The other half are watching for a chance to prey upon you in other ways. I heard of a woman in the Zermatt Valley who refused pay for a glass of milk; but I did not have time to verify the report. Besides the beggars, who may or may not be horrid-looking creatures, there are the grinning Cretins, the old women with skins of parchment and the goitre, and even young children with the loathsome appendage, the most wretched and filthy hovels, and the dirtiest, ugliest people in them. The poor women are the beasts of burden. They often lead, mowing in the hayfield; they carry heavy baskets on their backs; they balance on their heads and carry large washtubs full of water. The more appropriate load of one was a cradle with a baby in it, which seemed not at all to fear falling. When one sees how the women are treated, he does not wonder that there are so many deformed, hideous children. I think the pretty girl has yet to be born in Switzerland.

This is not much about the Alps? Ah, well, the Alps are there. Go read your guide-book, and find out what your emotions are. As I said, everybody goes to Chamouny. Is it not enough to sit at your window, and watch the clouds when they lift from the Mont Blanc range, disclosing splendor after splendor, from the Aiguille de Goute to the Aiguille Verte,—white needles which pierce the air for twelve thousand feet, until, jubilate! the round summit of the monarch himself is visible, and the vast expanse of white snow-fields, the whiteness of which is rather of heaven than of earth, dazzles the eyes, even at so great a distance? Everybody who is patient and waits in the cold and inhospitable-looking valley of the Chamouny long enough, sees Mont Blanc; but every one does not see a sunset of the royal order. The clouds breaking up and clearing, after days of bad weather, showed us height after height, and peak after peak, now wreathing the summits, now settling below or hanging in patches on the sides, and again soaring above, until we had the whole range lying, far and brilliant, in the evening light. The clouds took on gorgeous colors, at length, and soon the snow caught the hue, and whole fields were rosy pink, while uplifted peaks glowed red, as with internal fire. Only Mont Blanc, afar off, remained purely white, in a kind of regal inaccessibility. And, afterward, one star came out over it, and a bright light shone from the hut on the Grand Mulets, a rock in the waste of snow, where a Frenchman was passing the night on his way to the summit.

Shall I describe the passage of the Tete Noire? My friend, it is twenty-four miles, a road somewhat hilly, with splendid views of Mont Blanc in the morning, and of the Bernese Oberland range in the afternoon, when you descend into Martigny,—a hot place in the dusty Rhone Valley, which has a comfortable hotel, with a pleasant garden, in which you sit after dinner and let the mosquitoes eat you.

THE MAN WHO SPEAKS ENGLISH

It was eleven o'clock at night when we reached Sion, a dirty little town at the end of the Rhone Valley Railway, and got into the omnibus for the hotel; and it was also dark and rainy. They speak German in this part of Switzerland, or what is called German. There were two very pleasant Americans, who spoke American, going on in the diligence at half-past five in the morning, on their way over the Simplex. One of them was accustomed to speak good, broad English very distinctly to all races; and he seemed to expect that he must be understood if he repeated his observations in a louder tone, as he always did. I think he would force all this country to speak English in two months. We all desired to secure places in the diligence, which was likely to be full, as is usually the case when a railway discharges itself into a postroad.

We were scarcely in the omnibus, when the gentleman said to the conductor:

"I want two places in the coupe of the diligence in the morning. Can I have them?"

"Yah" replied the good-natured German, who did n't understand a word.

"Two places, diligence, coupe, morning. Is it full?"

"Yah," replied the accommodating fellow. "Hotel man spik English."

I suggested the banquette as desirable, if it could be obtained, and the German was equally willing to give it to us. Descending from the omnibus at the hotel, in a drizzling rain, and amidst a crowd of porters and postilions and runners, the "man who spoke English" immediately presented himself; and upon him the American pounced with a torrent of questions. He was a willing, lively little waiter, with his moony face on the top of his head; and he jumped round in the rain like a parching pea, rolling his head about in the funniest manner.

The American steadied the little man by the collar, and began, "I want to secure two seats in the coupe of the diligence in the morning."

"Yaas," jumping round, and looking from one to another. "Diligence, coupe, morning."

"I—want—two seats—in—coupe. If I can't get them, two—in—banquette."

"Yaas banquette, coupe,—yaas, diligence."

"Do you understand? Two seats, diligence, Simplon, morning. Will you get them?"

"Oh, yaas! morning, diligence. Yaas, sirr."

"Hang the fellow! Where is the office?" And the gentleman left the spry little waiter bobbing about in the middle of the street, speaking English, but probably comprehending nothing that was said to him. I inquired the way to the office of the conductor: it was closed, but would soon be open, and I waited; and at length the official, a stout Frenchman, appeared, and I secured places in the interior, the only ones to be had to Visp. I had seen a diligence at the door with three places in the coupe, and one perched behind; no banquette. The office is brightly lighted; people are waiting to secure places; there is the usual crowd of loafers, men and women, and the Frenchman sits at his desk. Enter the American.

"I want two places in coupe, in the morning. Or banquette. Two places, diligence." The official waves him off, and says something.

"What does he say?"

"He tells you to sit down on that bench till he is ready."

Soon the Frenchman has run over his big waybills, and turns to us.

"I want two places in the diligence, coupe," etc, etc, says the American.

This remark being lost on the official, I explain to him as well as I can what is wanted, at first,—two places in the coupe.

"One is taken," is his reply.

"The gentleman will take two," I said, having in mind the diligence in the yard, with three places in the coupe.

"One is taken," he repeats.

"Then the gentleman will take the other two."

"One is taken!" he cries, jumping up and smiting the table,— "one is taken, I tell you!"

"How many are there in the coupe?"

"TWO."

"Oh! then the gentleman will take the one remaining in the coupe and the one on top."

So it is arranged. When I come back to the hotel, the Americans are explaining to the lively waiter "who speaks English" that they are to go in the diligence at half-past five, and that they are to be called at half-past four and have breakfast. He knows all about it,— "Diligence, half-past four breakfast, Oh, yaas!" While I have been at the diligence-office, my companions have secured room and gone to them; and I ask the waiter to show me to my room. First, however, I tell him that we three two ladies and myself, who came together, are going in the diligence at half-past five, and want to be called and have breakfast. Did he comprehend?

"Yaas," rolling his face about on the top of his head violently. "You three gentleman want breakfast. What you have?"

I had told him before what we would I have, and now I gave up all hope of keeping our parties separate in his mind; so I said, "Five persons want breakfast at five o'clock. Five persons, five hours. Call all of them at half-past four." And I repeated it, and made him repeat it in English and French. He then insisted on putting me into the room of one of the American gentlemen and then he knocked at the door of a lady, who cried out in indignation at being disturbed; and, finally, I found my room. At the door I reiterated the instructions for the morning; and he cheerfully bade me good-night. But he almost immediately came back, and poked in his head with,—

"Is you go by de diligence?"

"Yes, you stupid."

In the morning one of our party was called at halfpast three, and saved the rest of us from a like fate; and we were not aroused at all, but woke early enough to get down and find the diligence nearly ready, and no breakfast, but "the man who spoke English" as lively as ever. And we had a breakfast brought out, so filthy in all respects that nobody could eat it. Fortunately, there was not time to seriously try; but we paid for it, and departed. The two American gentlemen sat in front of the house, waiting. The lively waiter had called them at half-past three, for the railway train, instead of the diligence; and they had their wretched breakfast early. They will remember the funny adventure with "the man who speaks English," and, no doubt, unite with us in warmly commending the Hotel Lion d'Or at Sion as the nastiest inn in Switzerland.

A WALK TO THE GORNER GRAT

When one leaves the dusty Rhone Valley, and turns southward from Visp, he plunges into the wildest and most savage part of Switzerland, and penetrates the heart of the Alps. The valley is scarcely more than a narrow gorge, with high precipices on either side, through which the turbid and rapid Visp tears along at a furious rate, boiling and leaping in foam over its rocky bed, and nearly as large as the Rhone at the junction. From Visp to St. Nicolaus, twelve miles, there is only a mule-path, but a very good one, winding along on the slope, sometimes high up, and again descending to cross the stream, at first by vineyards and high stone walls, and then on the edges of precipices, but always romantic and wild. It is noon when we set out from Visp, in true pilgrim fashion, and the sun is at first hot; but as we slowly rise up the easy ascent, we get a breeze, and forget the heat in the varied charms of the walk.

Everything for the use of the upper valley and Zermatt, now a place of considerable resort, must be carried by porters, or on horseback; and we pass or meet men and women, sometimes a dozen of them together, laboring along under the long, heavy baskets, broad at the top and coming nearly to a point below, which are universally used here for carrying everything. The tubs for transporting water are of the same sort. There is no level ground, but every foot is cultivated. High up on the sides of the precipices, where it seems impossible for a goat to climb, are vineyards and houses, and even villages, hung on slopes, nearly up to the clouds, and with no visible way of communication with the rest of the world.

In two hours' time we are at Stalden, a village perched upon a rocky promontory, at the junction of the valleys of the Saas and the Visp, with a church and white tower conspicuous from afar. We climb up to the terrace in front of it, on our way into the town. A seedy-looking priest is pacing up and down, taking the fresh breeze, his broad-brimmed, shabby hat held down upon the wall by a big stone. His clothes are worn threadbare; and he looks as thin and poor as a Methodist minister in a stony town at home, on three hundred a year. He politely returns our salutation, and we walk on. Nearly all the priests in this region look wretchedly poor,—as poor as the people. Through crooked, narrow streets, with houses overhanging and thrusting out corners and gables, houses with stables below, and quaint carvings and odd little windows above, the panes of glass hexagons, so that the windows looked like sections of honey-comb,—we found our way to the inn, a many-storied chalet, with stairs on the outside, stone floors in the upper passages, and no end of queer rooms; built right in the midst of other houses as odd, decorated with German-text carving, from the windows of which the occupants could look in upon us, if they had cared to do so; but they did not. They seem little interested in anything; and no wonder, with their hard fight with Nature. Below is a wine-shop, with a little side booth, in which some German travelers sit drinking their wine, and sputtering away in harsh gutturals. The inn is very neat inside, and we are well served. Stalden is high; but away above it on the opposite side is a village on the steep slope, with a slender white spire that rivals some of the snowy needles. Stalden is high, but the hill on which it stands is rich in grass. The secret of the fertile meadows is the most thorough irrigation. Water is carried along the banks from the river, and distributed by numerous sluiceways below; and above, the little mountain streams are brought where they are needed by artificial channels. Old men and women in the fields were constantly changing the direction of the currents. All the inhabitants appeared to be porters: women were transporting on their backs baskets full of soil; hay was being backed to the stables; burden-bearers were coming and going upon the road: we were told that there are only three horses in the place. There is a pleasant girl who brings us luncheon at the inn; but the inhabitants for the most part are as hideous as those we see all day: some have hardly the shape of human beings, and they all live in the most filthy manner in the dirtiest habitations. A chalet is a sweet thing when you buy a little model of it at home.

After we leave Stalden, the walk becomes more picturesque, the precipices are higher, the gorges deeper. It required some engineering to carry the footpath round the mountain buttresses and over the ravines. Soon the village of Emd appears on the right,—a very considerable collection of brown houses, and a shining white church-spire, above woods and precipices and apparently unscalable heights, on a green spot which seems painted on the precipices; with nothing visible to keep the whole from sliding down, down, into the gorge of the Visp. Switzerland may not have so much population to the square mile as some countries; but she has a population to some of her square miles that would astonish some parts of the earth's surface elsewhere. Farther on we saw a faint, zigzag footpath, that we conjectured led to Emd; but it might lead up to heaven. All day we had been solicited for charity by squalid little children, who kiss their nasty little paws at us, and ask for centimes. The children of Emd, however, did not trouble us. It must be a serious affair if they ever roll out of bed.

Late in the afternoon thunder began to tumble about the hills, and clouds snatched away from our sight the snow-peaks at the end of the valley; and at length the rain fell on those who had just arrived and on the unjust. We took refuge from the hardest of it in a lonely chalet high up on the hillside, where a roughly

dressed, frowzy Swiss, who spoke bad German, and said he was a schoolmaster, gave us a bench in the shed of his schoolroom. He had only two pupils in attendance, and I did not get a very favorable impression of this high school. Its master quite overcame us with thanks when we gave him a few centimes on leaving. It still rained, and we arrived in St. Nicolaus quite damp.

There is a decent road from St. Nicolaus to Zermatt, over which go wagons without springs. The scenery is constantly grander as we ascend. The day is not wholly clear; but high on our right are the vast snow-fields of the Weishorn, and out of the very clouds near it seems to pour the Bies Glacier. In front are the splendid Briethorn, with its white, round summit; the black Riffelhorn; the sharp peak of the little Matterhorn; and at last the giant Matterhorn itself rising before us, the most finished and impressive single mountain in Switzerland. Not so high as Mont Blanc by a thousand feet, it appears immense in its isolated position and its slender aspiration. It is a huge pillar of rock, with sharply cut edges, rising to a defined point, dusted with snow, so that the rock is only here and there revealed. To ascend it seems as impossible as to go up the Column of Luxor; and one can believe that the gentlemen who first attempted it in 1864, and lost their lives, did fall four thousand feet before their bodies rested on the glacier below.

We did not stay at Zermatt, but pushed on for the hotel on the top of the Riffelberg,—a very stiff and tiresome climb of about three hours, an unending pull up a stony footpath. Within an hour of the top, and when the white hotel is in sight above the zigzag on the breast of the precipice, we reach a green and widespread Alp where hundreds of cows are feeding, watched by two forlorn women,—the “milkmaids all forlorn” of poetry. At the rude chalets we stop, and get draughts of rich, sweet cream. As we wind up the slope, the tinkling of multitudinous bells from the herd comes to us, which is also in the domain of poetry. All the way up we have found wild flowers in the greatest profusion; and the higher we ascend, the more exquisite is their color and the more perfect their form. There are pansies; gentians of a deeper blue than flower ever was before; forget-me-nots, a pink variety among them; violets, the Alpine rose and the Alpine violet; delicate pink flowers of moss; harebells; and quantities for which we know no names, more exquisite in shape and color than the choicest products of the greenhouse. Large slopes are covered with them,—a brilliant show to the eye, and most pleasantly beguiling the way of its tediousness. As high as I ascended, I still found some of these delicate flowers, the pink moss growing in profusion amongst the rocks of the GornerGrat, and close to the snowdrifts.

The inn on the Riffelberg is nearly eight thousand feet high, almost two thousand feet above the hut on Mount Washington; yet it is not so cold and desolate as the latter. Grass grows and flowers bloom on its smooth upland, and behind it and in front of it are the snow-peaks. That evening we essayed the Gorner-Grat, a rocky ledge nearly ten thousand feet above the level of the sea; but after a climb of an hour and a half, and a good view of Monte Rosa and the glaciers and peaks of that range, we were prevented from reaching the summit, and driven back by a sharp storm of hail and rain. The next morning I started for the GornerGrat again, at four o'clock. The Matterhorn lifted its huge bulk sharply against the sky, except where fleecy clouds lightly draped it and fantastically blew about it. As I ascended, and turned to look at it, its beautifully cut peak had caught the first ray of the sun, and burned with a rosy glow. Some great clouds drifted high in the air: the summits of the Breithorn, the Lyscamm, and their companions, lay cold and white; but the snow down their sides had a tinge of pink. When I stood upon the summit of the Gorner-Grat, the two prominent silver peaks of Monte Rosa were just touched with the sun, and its great snow-fields were visible to the glacier at its base. The Gorner-Grat is a rounded ridge of rock, entirely encircled by glaciers and snow-peaks. The panorama from it is unexcelled in Switzerland.

Returning down the rocky steep, I descried, solitary in that great waste of rock and snow, the form of a lady whom I supposed I had left sleeping at the inn, overcome with the fatigue of yesterday's tramp. Lured on by the apparently short distance to the backbone of the ridge, she had climbed the rocks a mile or more above the hotel, and come to meet me. She also had seen the great peaks lift themselves out of the gray dawn, and Monte Rosa catch the first rays. We stood awhile together to see how jocund day ran hither and thither along the mountain-tops, until the light was all abroad, and then silently turned downward, as one goes from a mount of devotion.

THE BATHS OF LEUK

In order to make the pass of the Gemmi, it is necessary to go through the Baths of Leuk. The ascent from the Rhone bridge at Susten is full of interest, affording fine views of the valley, which is better to look at than to travel through, and bringing you almost immediately to the old town of Leuk, a queer, old, towered place, perched on a precipice, with the oddest inn, and a notice posted up to the effect, that any one who drives through its steep streets faster than a walk will be fined five francs. I paid nothing extra for a fast walk. The road, which is one of the best in the country, is a wonderful piece of engineering, spanning streams, cut in rock, rounding precipices, following the wild valley of the Dala by many a winding and zigzag.

The Baths of Leuk, or Loeche-les-Bains, or Leukerbad, is a little village at the very head of the valley, over four thousand feet above the sea, and overhung by the perpendicular walls of the Gemmi, which rise on all sides, except the south, on an average of two thousand feet above it. There is a nest of brown houses, clustered together like bee-hives, into which the few inhabitants creep to hibernate in the long winters, and several shops, grand hotels, and bathing-houses open for the season. Innumerable springs issue out of this green, sloping meadow among the mountains, some of them icy cold, but over twenty of them hot, and seasoned with a great many disagreeable sulphates, carbonates, and oxides, and varying in temperature from ninety-five to one hundred and twenty-three degrees Fahrenheit. Italians, French, and Swiss resort here in great numbers to take the baths, which are supposed to be very efficacious for rheumatism and cutaneous affections. Doubtless many of them do up their bathing for the year while here; and they may need no more

after scalding and soaking in this water for a couple of months.

Before we reached the hotel, we turned aside into one of the bath-houses. We stood inhaling a sickly steam in a large, close hall, which was wholly occupied by a huge vat, across which low partitions, with bridges, ran, dividing it into four compartments. When we entered, we were assailed with yells in many languages, and howls in the common tongue, as if all the fiends of the pit had broken loose. We took off our hats in obedience to the demand; but the clamor did not wholly subside, and was mingled with singing and horrible laughter. Floating about in each vat, we at first saw twenty or thirty human heads. The women could be distinguished from the men by the manner of dressing the hair. Each wore a loose woolen gown. Each had a little table floating before him or her, which he or she pushed about at pleasure. One wore a hideous mask; another kept diving in the opaque pool and coming up to blow, like the hippopotamus in the Zoological Gardens; some were taking a lunch from their tables, others playing chess; some sitting on the benches round the edges, with only heads out of water, as doleful as owls, while others roamed about, engaged in the game of spattering with their comrades, and sang and shouted at the top of their voices. The people in this bath were said to be second class; but they looked as well and behaved better than those of the first class, whom we saw in the establishment at our hotel afterward.

It may be a valuable scientific fact, that the water in these vats, in which people of all sexes, all diseases, and all nations spend so many hours of the twenty-four, is changed once a day. The temperature at which the bath is given is ninety-eight. The water is let in at night, and allowed to cool. At five in the morning, the bathers enter it, and remain until ten o'clock,—five hours, having breakfast served to them on the floating tables, "as they sail, as they sail." They then have a respite till two, and go in till five. Eight hours in hot water! Nothing can be more disgusting than the sight of these baths. Gustave Dore must have learned here how to make those ghostly pictures of the lost floating about in the Stygian pools, in his illustrations of the *Inferno*; and the rocks and cavernous precipices may have enabled him to complete the picture. On what principle cures are effected in these filthy vats, I could not learn. I have a theory, that, where so many diseases meet and mingle in one swashing fluid, they neutralize each other. It may be that the action is that happily explained by one of the Hibernian bathmen in an American water-cure establishment. "You see, sir," said he, "that the shock of the water unites with the electricity of the system, and explodes the disease." I should think that the shock to one's feeling of decency and cleanliness, at these baths, would explode any disease in Europe. But, whatever the result may be, I am not sorry to see so many French and Italians soak themselves once a year.

Out of the bath these people seem to enjoy life. There is a long promenade, shaded and picturesque, which they take at evening, sometimes as far as the Ladders, eight of which are fastened, in a shackling manner, to the perpendicular rocks,—a high and somewhat dangerous ascent to the village of Albinen, but undertaken constantly by peasants with baskets on their backs. It is in winter the only mode Leukerbad has of communicating with the world; and in summer it is the only way of reaching Albinen, except by a long journey down the Dala and up another valley and height. The bathers were certainly very lively and social at table-d'hote, where we had the pleasure of meeting some hundred of them, dressed. It was presumed that the baths were the subject of the entertaining conversation; for I read in a charming little work which sets forth the delights of Leuk, that *La pousse* forms the staple of most of the talk. *La pousse*, or, as this book poetically calls it, "that daughter of the waters of Loeche," "that eruption of which we have already spoken, and which proves the action of the baths upon the skin,"—becomes the object, and often the end, of all conversation. And it gives specimens of this pleasant converse, as:

"Comment va votre pousse?"

"Avez-vous la pousse?"

"Je suis en pleine pousse"

"Ma pousse s'est fort bien passee!"

Indeed says this entertaining tract, sans pousse, one would not be able to hold, at table or in the salon, with a neighbor of either sex, the least conversation. Further, it is by grace a *la pousse* that one arrives at those intimacies which are the characteristics of the baths. Blessed, then, be *La pousse*, which renders possible such a high society and such select and entertaining conversation! Long may the bathers of Leuk live to soak and converse! In the morning, when we departed for the ascent of the Gemmi, we passed one of the bathing-houses. I fancied that a hot steam issued out of the crevices; from within came a discord of singing and caterwauling; and, as a door swung open, I saw that the heads floating about on the turbid tide were eating breakfast from the swimming tables.

OVER THE GEMMI

I spent some time, the evening before, studying the face of the cliff we were to ascend, to discover the path; but I could only trace its zigzag beginning. When we came to the base of the rock, we found a way cut, a narrow path, most of the distance hewn out of the rock, winding upward along the face of the precipice. The view, as one rises, is of the break-neck description. The way is really safe enough, even on mule-back, ascending; but one would be foolhardy to ride down. We met a lady on the summit who was about to be carried down on a chair; and she seemed quite to like the mode of conveyance: she had harnessed her husband in temporarily for one of the bearers, which made it still more jolly for her. When we started, a cloud of mist hung over the edge of the rocks. As we rose, it descended to meet us, and sunk below, hiding the valley and its houses, which had looked like Swiss toys from our height. When we reached the summit, the mist came boiling up after us, rising like a thick wall to the sky, and hiding all that great mountain range, the Vallais Alps, from which we had come, and which we hoped to see from this point. Fortunately, there were no clouds on the other side, and we looked down into a magnificent rocky basin, encircled by broken and

overtopping crags and snow-fields, at the bottom of which was a green lake. It is one of the wildest of scenes.

An hour from the summit, we came to a green Alp, where a herd of cows were feeding; and in the midst of it were three or four dirty chalets, where pigs, chickens, cattle, and animals constructed very much like human beings, lived; yet I have nothing to say against these chalets, for we had excellent cream there. We had, on the way down, fine views of the snowy Altels, the Rinderhorn, the Finster-Aarhorn, a deep valley which enormous precipices guard, but which avalanches nevertheless invade, and, farther on, of the Blumlisalp, with its summit of crystalline whiteness. The descent to Kandersteg is very rapid, and in a rain slippery. This village is a resort for artists for its splendid views of the range we had crossed: it stands at the gate of the mountains. From there to the Lake of Thun is a delightful drive,—a rich country, with handsome cottages and a charming landscape, even if the pyramidal Niesen did not lift up its seven thousand feet on the edge of the lake. So, through a smiling land, and in the sunshine after the rain, we come to Spiez, and find ourselves at a little hotel on the slope, overlooking town and lake and mountains.

Spiez is not large: indeed, its few houses are nearly all picturesquely grouped upon a narrow rib of land which is thrust into the lake on purpose to make the loveliest picture in the world. There is the old castle, with its many slim spires and its square-peaked roofed tower; the slender-steeped church; a fringe of old houses below on the lake, one overhanging towards the point; and the promontory, finished by a willow drooping to the water. Beyond, in hazy light, over the lucid green of the lake, are mountains whose masses of rock seem soft and sculptured. To the right, at the foot of the lake, tower the great snowy mountains, the cone of the Schreckhorn, the square top of the Eiger, the Jungfrau, just showing over the hills, and the Blumlisalp rising into heaven clear and silvery.

What can one do in such a spot, but swim in the lake, lie on the shore, and watch the passing steamers and the changing light on the mountains? Down at the wharf, when the small boats put off for the steamer, one can well entertain himself. The small boat is an enormous thing, after all, and propelled by two long, heavy sweeps, one of which is pulled, and the other pushed. The laboring oar is, of course, pulled by a woman; while her husband stands up in the stern of the boat, and gently dips the other in a gallant fashion. There is a boy there, whom I cannot make out,—a short, square boy, with tasseled skull-cap, and a face that never changes its expression, and never has any expression to change; he may be older than these hills; he looks old enough to be his own father: and there is a girl, his counterpart, who might be, judging her age by her face, the mother of both of them. These solemn old-young people are quite busy doing nothing about the wharf, and appear to be afflicted with an undue sense of the responsibility of life. There is a beer-garden here, where several sober couples sit seriously drinking their beer. There are some horrid old women, with the parchment skin and the disagreeable necks. Alone, in a window of the castle, sits a lady at her work, who might be the countess; only, I am sorry, there is no countess, nothing but a frau, in that old feudal dwelling. And there is a foreigner, thinking how queer it all is. And while he sits there, the melodious bell in the church-tower rings its evening song.

BAVARIA.

AMERICAN IMPATIENCE

We left Switzerland, as we entered it, in a rain,—a kind of double baptism that may have been necessary, and was certainly not too heavy a price to pay for the privileges of the wonderful country. The wind blew freshly, and swept a shower over the deck of the little steamboat, on board of which we stepped from the shabby little pier and town of Romanshorn. After the other Swiss lakes, Constance is tame, except at the southern end, beyond which rise the Appenzell range and the wooded peaks of the Bavarian hills. Through the dash of rain, and under the promise of a magnificent rainbow,—rainbows don't mean anything in Switzerland, and have no office as weather-prophets, except to assure you, that, as it rains to-day, so it will rain tomorrow,—we skirted the lower bend of the lake,—and at twilight sailed into the little harbor of Lindau, through the narrow entrance between the piers, on one of which is a small lighthouse, and on the other sits upright a gigantic stone lion,—a fine enough figure of a Bavarian lion, but with a comical, wide-awake, and expectant expression of countenance, as if he might bark right out at any minute, and become a dog. Yet in the moonlight, shortly afterward, the lion looked very grand and stately, as he sat regarding the softly plashing waves, and the high, drifting clouds, and the old Roman tower by the bridge which connects the Island of Lindau with the mainland, and thinking perhaps, if stone lions ever do think, of the time when Roman galleys sailed on Lake Constance, and when Lindau was an imperial town with a thriving trade.

On board the little steamer was an American, accompanied by two ladies, and traveling, I thought, for their gratification, who was very anxious to get on faster than he was able to do,—though why any one should desire to go fast in Europe I do not know. One easily falls into the habit of the country, to take things easily, to go when the slow German fates will, and not to worry one's self beforehand about times and connections. But the American was in a fever of impatience, desirous, if possible, to get on that night. I knew he was from the Land of the Free by a phrase I heard him use in the cars: he said, "I'll bet a dollar." Yet I must flatter myself that Americans do not always thus betray themselves. I happened, on the Isle of Wight, to hear a bland landlord "blow up" his glib-tongued son because the latter had not driven a stiffer bargain with us for the hire of a carriage round the island.

"Didn't you know they were Americans?" asks the irate father. "I knew it at once."

"No," replies young hopeful: "they didn't say GUESS once."

And straightway the fawning-innkeeper returns to us, professing, with his butter-lips, the greatest admiration of all Americans, and the intensest anxiety to serve them, and all for pure good-will. The English are even more bloodthirsty at sight of a travelere than the Swiss, and twice as obsequious. But to return to

our American. He had all the railway timetables that he could procure; and he was busily studying them, with the design of "getting on." I heard him say to his companions, as he ransacked his pockets, that he was a mass of hotel-bills and timetables. He confided to me afterward, that his wife and her friend had got it into their heads that they must go both to Vienna and Berlin. Was Berlin much out of the way in going from Vienna to Paris? He said they told him it was n't. At any rate, he must get round at such a date: he had no time to spare. Then, besides the slowness of getting on, there were the trunks. He lost a trunk in Switzerland, and consumed a whole day in looking it up. While the steamboat lay at the wharf at Rorschach, two stout porters came on board, and shouldered his baggage to take it ashore. To his remonstrances in English they paid no heed; and it was some time before they could be made to understand that the trunks were to go on to Lindau. "There," said he, "I should have lost my trunks. Nobody understands what I tell them: I can't get any information." Especially was he unable to get any information as to how to "get on." I confess that the restless American almost put me into a fidget, and revived the American desire to "get on," to take the fast trains, make all the connections,—in short, in the handsome language of the great West, to "put her through." When I last saw our traveler, he was getting his luggage through the custom-house, still undecided whether to push on that night at eleven o'clock. But I forgot all about him and his hurry when, shortly after, we sat at the table-d'hote at the hotel, and the sedate Germans lit their cigars, some of them before they had finished eating, and sat smoking as if there were plenty of leisure for everything in this world.

A CITY OF COLOR

After a slow ride, of nearly eight hours, in what, in Germany, is called an express train, through a rain and clouds that hid from our view the Tyrol and the Swabian mountains, over a rolling, pleasant country, past pretty little railway station-houses, covered with vines, gay with flowers in the windows, and surrounded with beds of flowers, past switchmen in flaming scarlet jackets, who stand at the switches and raise the hand to the temple, and keep it there, in a military salute, as we go by, we come into old Augsburg, whose Confession is not so fresh in our minds as it ought to be. Portions of the ancient wall remain, and many of the towers; and there are archways, picturesquely opening from street to street, under several of which we drive on our way to the Three Moors, a stately hostelry and one of the oldest in Germany.

It stood here in the year 1500; and the room is still shown, unchanged since then, in which the rich Count Fugger entertained Charles V. The chambers are nearly all immense. That in which we are lodged is large enough for Queen Victoria; indeed, I am glad to say that her sleeping-room at St. Cloud was not half so spacious. One feels either like a count, or very lonesome, to sit down in a lofty chamber, say thirty-five feet square, with little furniture, and historical and tragical life-size figures staring at one from the wall-paper. One fears that they may come down in the deep night, and stand at the bedside,—those narrow, canopied beds there in the distance, like the marble couches in the cathedral. It must be a fearful thing to be a royal person, and dwell in a palace, with resounding rooms and naked, waxed, inlaid floors. At the Three Moors one sees a visitors' book, begun in 1800, which contains the names of many noble and great people, as well as poets and doctors and titled ladies, and much sentimental writing in French. It is my impression, from an inspection of the book, that we are the first untitled visitors.

The traveler cannot but like Augsburg at once, for its quaint houses, colored so diversely and yet harmoniously. Remains of its former brilliancy yet exist in the frescoes on the outside of the buildings, some of which are still bright in color, though partially defaced. Those on the House of Fugger have been restored, and are very brave pictures. These frescoes give great animation and life to the appearance of a street, and I am glad to see a taste for them reviving. Augsburg must have been very gay with them two and three hundred years ago, when, also, it was the home of beautiful women of the middle class, who married princes. We went to see the house in which lived the beautiful Agnes Bernauer, daughter of a barber, who married Duke Albert III. of Bavaria. The house was nought, as old Samuel Pepys would say, only a high stone building, in a block of such; but it is enough to make a house attractive for centuries if a pretty woman once looks out of its latticed windows, as I have no doubt Agnes often did when the duke and his retinue rode by in clanking armor.

But there is no lack of reminders of old times. The cathedral, which was begun before the Christian era could express its age with four figures, has two fine portals, with quaint carving, and bronze doors of very old work, whereon the story of Eve and the serpent is literally given,—a representation of great theological, if of small artistic value. And there is the old clock and watch tower, which for eight hundred years has enabled the Augsburgers to keep the time of day and to look out over the plain for the approach of an enemy. The city is full of fine bronze fountains some of them of very elaborate design, and adding a convenience and a beauty to the town which American cities wholly want. In one quarter of the town is the Fuggerei, a little city by itself, surrounded by its own wall, the gates of which are shut at night, with narrow streets and neat little houses. It was built by Hans Jacob Fugger the Rich, as long ago as 1519, and is still inhabited by indigent Roman-Catholic families, according to the intention of its founder. In the windows were lovely flowers. I saw in the street several of those mysterious, short, old women,—so old and yet so little, all body and hardly any legs, who appear to have grown down into the ground with advancing years.

It happened to be a rainy day, and cold, on the 30th of July, when we left Augsburg; and the flat fields through which we passed were uninviting under the gray light. Large flocks of geese were feeding on the windy plains, tended by boys and women, who are the living fences of this country. I no longer wonder at the number of feather-beds at the inns, under which we are apparently expected to sleep even in the warmest nights. Shepherds with the regulation crooks also were watching herds of sheep. Here and there a cluster of red-roofed houses were huddled together into a village, and in all directions rose tapering spires. Especially we marked the steeple of Blenheim, where Jack Churchill won the name for his magnificent country-seat, early in the eighteenth century. All this plain where the silly geese feed has been marched over and fought

over by armies time and again. We effect the passage of, the Danube without difficulty, and on to Harburg, a little town of little red houses, inhabited principally by Jews, huddled under a rocky ridge, upon the summit of which is a picturesque medieval castle, with many towers and turrets, in as perfect preservation as when feudal flags floated over it. And so on, slowly, with long stops at many stations, to give opportunity, I suppose, for the honest passengers to take in supplies of beer and sausages, to Nuremberg.

A CITY LIVING ON THE PAST

Nuremberg, or Nurnberg, was built, I believe, about the beginning of time. At least, in an old black-letter history of the city which I have seen, illustrated with powerful wood-cuts, the first representation is that of the creation of the world, which is immediately followed by another of Nuremberg. No one who visits it is likely to dispute its antiquity. "Nobody ever goes to Nuremberg but Americans," said a cynical British officer at Chamouny; "but they always go there. I never saw an American who had n't been or was not going to Nuremberg." Well, I suppose they wish to see the oldest-looking, and, next to a true Briton on his travels, the oddest thing on the Continent. The city lives in the past still, and on its memories, keeping its old walls and moat entire, and nearly fourscore wall-towers, in stern array. But grass grows in the moat, fruit trees thrive there, and vines clamber on the walls. One wanders about in the queer streets with the feeling of being transported back to the Middle Ages; but it is difficult to reproduce the impression on paper. Who can describe the narrow and intricate ways; the odd houses with many little gables; great roofs breaking out from eaves to ridgepole, with dozens of dormer-windows; hanging balconies of stone, carved and figure-beset, ornamented and frescoed fronts; the archways, leading into queer courts and alleys, and out again into broad streets; the towers and fantastic steeples; and the many old bridges, with obelisks and memorials of triumphal entries of conquerors and princes?

The city, as I said, lives upon the memory of what it has been, and trades upon relics of its former fame. What it would have been without Albrecht Durer, and Adam Kraft the stone-mason, and Peter Vischer the bronze-worker, and Viet Stoss who carved in wood, and Hans Sachs the shoemaker and poet-minstrel, it is difficult to say. Their statues are set up in the streets; their works still live in the churches and city buildings, —pictures, and groups in stone and wood; and their statues, in all sorts of carving, are reproduced, big and little, in all the shop-windows, for sale. So, literally, the city is full of the memory of them; and the business of the city, aside from its manufactory of endless, curious toys, seems to consist in reproducing them and their immortal works to sell to strangers.

Other cities project new things, and grow with a modern impetus: Nuremberg lives in the past, and traffics on its ancient reputation. Of course, we went to see the houses where these old worthies lived, and the works of art they have left behind them,—things seen and described by everybody. The stone carving about the church portals and on side buttresses is inexpressibly quaint and naive. The subjects are sacred; and with the sacred is mingled the comic, here as at Augsburg, where over one portal of the cathedral, with saints and angels, monkeys climb and gibber. A favorite subject is that of our Lord praying in the Garden, while the apostles, who could not watch one hour, are sleeping in various attitudes of stony comicality. All the stone-cutters seem to have tried their chisels on this group, and there are dozens of them. The wise and foolish virgins also stand at the church doors in time-stained stone,—the one with a perked-up air of conscious virtue, and the other with a penitent dejection that seems to merit better treatment. Over the great portal of St. Lawrence—a magnificent structure, with lofty twin spires and glorious rosewindow is carved "The Last Judgment." Underneath, the dead are climbing out of their stone coffins; above sits the Judge, with the attending angels. On the right hand go away the stiff, prim saints, in flowing robes, and with palms and harps, up steps into heaven, through a narrow door which St. Peter opens for them; while on the left depart the wicked, with wry faces and distorted forms, down into the stone flames, towards which the Devil is dragging them by their stony hair.

The interior of the Church of St. Lawrence is richer than any other I remember, with its magnificent pillars of dark red stone, rising and foliating out to form the roof; its splendid windows of stained glass, glowing with sacred story; a high gallery of stone entirely round the choir, and beautiful statuary on every column. Here, too, is the famous Sacrament House of honest old Adam Kraft, the most exquisite thing I ever saw in stone. The color is light gray; and it rises beside one of the dark, massive pillars, sixty-four feet, growing to a point, which then strikes the arch of the roof, and there curls up like a vine to avoid it. The base is supported by the kneeling figures of Adam Kraft and two fellow-workmen, who labored on it for four years. Above is the Last Supper, Christ blessing little children, and other beautiful tableaux in stone. The Gothic spire grows up and around these, now and then throwing out graceful tendrils, like a vine, and seeming to be rather a living plant than inanimate stone. The faithful artist evidently had this feeling for it; for, as it grew under his hands, he found that it would strike the roof, or he must sacrifice something of its graceful proportion. So his loving and daring genius suggested the happy design of letting it grow to its curving, graceful completeness.

He who travels by a German railway needs patience and a full haversack. Time is of no value. The rate of speed of the trains is so slow, that one sometimes has a desire to get out and walk, and the stoppages at the stations seem eternal; but then we must remember that it is a long distance to the bottom of a great mug of beer. We left Lindau on one of the usual trains at half-past five in the morning, and reached Augsburg at one o'clock in the afternoon: the distance cannot be more than a hundred miles. That is quicker than by diligence, and one has leisure to see the country as he jogs along. There is nothing more sedate than a German train in motion; nothing can stand so dead still as a German train at a station. But there are express trains.

We were on one from Augsburg to Nuremberg, and I think must have run twenty miles an hour. The fare on the express trains is one fifth higher than on the others. The cars are all comfortable; and the officials, who wear a good deal of uniform, are much more civil and obliging than officials in a country where they do not

wear uniforms. So, not swiftly, but safely and in good-humor, we rode to the capital of Bavaria.

OUTSIDE ASPECTS OF MUNICH

I saw yesterday, on the 31st of August, in the English Garden, dead leaves whirling down to the ground, a too evident sign that the summer weather is going. Indeed, it has been sour, chilly weather for a week now, raining a little every day, and with a very autumn feeling in the air. The nightly concerts in the beer-gardens must have shivering listeners, if the bands do not, as many of them do, play within doors. The line of droschke drivers, in front of the post-office colonnade, hide the red facings of their coats under long overcoats, and stand in cold expectancy beside their blanketed horses, which must need twice the quantity of black-bread in this chilly air; for the horses here eat bread, like people. I see the drivers every day slicing up the black loaves, and feeding them, taking now and then a mouthful themselves, wetting it down with a pull from the mug of beer that stands within reach. And lastly (I am still speaking of the weather), the gay military officers come abroad in long cloaks, to some extent concealing their manly forms and smart uniforms, which I am sure they would not do, except under the pressure of necessity.

Yet I think this raw weather is not to continue. It is only a rough visit from the Tyrol, which will give place to kinder influences. We came up here from hot Switzerland at the end of July, expecting to find Munich a furnace. It will be dreadful in Munich everybody said. So we left Luzerne, where it was warm, not daring to stay till the expected rival sun, Victoria of England, should make the heat overpowering. But the first week of August in Munich it was delicious weather,—clear, sparkling, bracing air, with no chill in it and no languor in it, just as you would say it ought to be on a high, gravelly plain, seventeen hundred feet above the sea. Then came a week of what the Muncheners call hot weather, with the thermometer up to eighty degrees Fahrenheit, and the white wide streets and gray buildings in a glare of light; since then, weather of the most uncertain sort.

Munich needs the sunlight. Not that it cannot better spare it than grimy London; for its prevailing color is light gray, and its many-tinted and frescoed fronts go far to relieve the most cheerless day. Yet Munich attempts to be an architectural reproduction of classic times; and, in order to achieve any success in this direction, it is necessary to have the blue heavens and golden sunshine of Greece. The old portion of the city has some remains of the Gothic, and abounds in archways and rambling alleys, that suddenly become broad streets and then again contract to the width of an alderman, and portions of the old wall and city gates; old feudal towers stand in the market-place, and faded frescoes on old clock-faces and over archways speak of other days of splendor.

But the Munich of to-day is as if built to order,—raised in a day by the command of one man. It was the old King Ludwig I., whose flower-wreathed bust stands in these days in the vestibule of the Glyptothek, in token of his recent death, who gave the impulse for all this, though some of the best buildings and streets in the city have been completed by his successors. The new city is laid out on a magnificent scale of distances, with wide streets, fine, open squares, plenty of room for gardens, both public and private; and the art buildings and art monuments are well distributed; in fact, many a stately building stands in such isolation that it seems to ask every passer what it was put there for. Then, again, some of the new adornments lack fitness of location or purpose. At the end of the broad, monotonous Ludwig Strasse, and yet not at the end, for the road runs straight on into the flat country between rows of slender trees, stands the Siegesthor, or Gate of Victory, an imitation of the Constantine arch at Rome. It is surmounted by a splendid group in bronze, by Schwanthaler, Bavaria in her war-chariot, drawn by four lions; and it is in itself, both in its proportions and its numerous sculptural figures and bas-reliefs, a fine recognition of the valor "of the Bavarian army," to whom it is erected. Yet it is so dwarfed by its situation, that it seems to have been placed in the middle of the street as an obstruction. A walk runs on each side of it. The Propylaeum, another magnificent gateway, thrown across the handsome Brienner Strasse, beyond the Glyptothek, is an imitation of that on the Acropolis at Athens. It has fine Doric columns on the outside, and Ionic within, and the pediment groups are bas-reliefs, by Schwanthaler, representing scenes in modern Greek history. The passageways for carriages are through the side arches; and thus the "sidewalk" runs into the center of the street, and foot-passers must twice cross the carriage-drive in going through the gate. Such things as these give one the feeling that art has been forced beyond use in Munich; and it is increased when one wanders through the new churches, palaces, galleries, and finds frescoes so prodigally crowded out of the way, and only occasionally opened rooms so overloaded with them, and not always of the best, as to sacrifice all effect, and leave one with the sense that some demon of unrest has driven painters and sculptors and plasterers, night and day, to adorn the city at a stroke; at least, to cover it with paint and bedeck it with marbles, and to do it at once, leaving nothing for the sweet growth and blossoming of time.

You see, it is easy to grumble, and especially in a cheerful, open, light, and smiling city, crammed with works of art, ancient and modern, its architecture a study of all styles, and its foaming beer, said by antiquarians to be a good deal better than the mead drunk in Odin's halls, only seven and a half kreuzers the quart. Munich has so much, that it, of course, contains much that can be criticised. The long, wide Ludwig Strasse is a street of palaces,—a street built up by the old king, and regarded by him with great pride. But all the buildings are in the Romanesque style,—a repetition of one another to a monotonous degree: only at the lower end are there any shops or shop-windows, and a more dreary promenade need not be imagined. It has neither shade nor fountains; and on a hot day you can see how the sun would pour into it, and blind the passers. But few ever walk there at any time. A street that leads nowhere, and has no gay windows, does not attract. Toward the lower end, in the Odeon Platz, is the equestrian statue of Ludwig, a royally commanding figure, with a page on either side. The street is closed (so that it flows off on either side into streets of handsome shops) by the Feldherrnhalle, Hall of the Generals, an imitation of the beautiful Loggia dei Lanzi, at Florence, that as yet contains only two statues, which seem lost in it. Here at noon, with parade of infantry,

comes a military band to play for half an hour; and there are always plenty of idlers to listen to them. In the high arcade a colony of doves is domesticated; and I like to watch them circling about and wheeling round the spires of the over-decorated Theatine church opposite, and perching on the heads of the statues on the facade.

The royal palace, near by, is a huddle of buildings and courts, that I think nobody can describe or understand, built at different times and in imitation of many styles. The front, toward the Hof Garden, a grassless square of small trees, with open arcades on two sides for shops, and partially decorated with frescoes of landscapes and historical subjects, is "a building of festive halls," a facade eight hundred feet long, in the revived Italian style, and with a fine Ionic porch. The color is the royal, dirty yellow.

On the Max Joseph Platz, which has a bronze statue of King Max, a seated figure, and some elaborate bas-reliefs, is another front of the palace, the Konigsbau, an imitation, not fully carried out, of the Pitti Palace, at Florence. Between these is the old Residenz, adorned with fountain groups and statues in bronze. On another side are the church and theater of the Residenz. The interior of this court chapel is dazzling in appearance: the pillars are, I think, imitation of variegated marble; the sides are imitation of the same; the vaulting is covered with rich frescoes on gold ground. The whole effect is rich, but it is not at all sacred. Indeed, there is no church in Munich, except the old cathedral, the Frauenkirche, with its high Gothic arches, stained windows, and dusty old carvings, that gives one at all the sort of feeling that it is supposed a church should give. The court chapel interior is boastingly said to resemble St. Mark's, in Venice.

You see how far imitation of the classic and Italian is carried here in Munich; so, as I said, the buildings need the southern sunlight. Fortunately, they get the right quality much of the time. The Glyptothek, a Grecian structure of one story, erected to hold the treasures of classic sculpture that King Ludwig collected, has a beautiful Ionic porch and pediment. On the outside are niches filled with statues. In the pure sunshine and under a deep blue sky, its white marble glows with an almost ethereal beauty. Opposite stands another successful imitation of the Grecian style of architecture,—a building with a Corinthian porch, also of white marble. These, with the Propylaeum, before mentioned, come out wonderfully against a blue sky. A few squares distant is the Pinakothek, with its treasures of old pictures, and beyond it the New Pinakothek, containing works of modern artists. Its exterior is decorated with frescoes, from designs by Kaulbach: these certainly appear best in a sparkling light; though I am bound to say that no light can make very much of them.

Yet Munich is not all imitation. Its finest street, the Maximilian, built by the late king of that name, is of a novel and wholly modern style of architecture, not an imitation, though it may remind some of the new portions of Paris. It runs for three quarters of a mile, beginning with the postoffice and its colonnades, with frescoes on one side, and the Hof Theater, with its pediment frescoes, the largest opera-house in Germany, I believe; with stately buildings adorned with statues, and elegant shops, down to the swift-flowing Isar, which is spanned by a handsome bridge; or rather by two bridges, for the Isar is partly turned from its bed above, and made to turn wheels, and drive machinery. At the lower end the street expands into a handsome platz, with young shade trees, plats of grass, and gay beds of flowers. I look out on it as I write; and I see across the Isar the college building begun by Maximilian for the education of government officers; and I see that it is still unfinished, indeed, a staring mass of brick, with unsightly scaffolding and gaping windows. Money was left to complete it; but the young king, who does not care for architecture, keeps only a mason or two on the brick-work, and an artist on the exterior frescoes. At this rate, the Cologne Cathedral will be finished and decay before this is built. On either side of it, on the elevated bank of the river, stretch beautiful grounds, with green lawns, fine trees, and well-kept walks.

Not to mention the English Garden, in speaking of the outside aspects of the city, would be a great oversight. It was laid out originally by the munificent American, Count Rumford, and is called English, I suppose, because it is not in the artificial Continental style. Paris has nothing to compare with it for natural beauty,—Paris, which cannot let a tree grow, but must clip it down to suit French taste. It is a noble park four miles in length, and perhaps a quarter of that in width,—a park of splendid old trees, grand, sweeping avenues, open glades of free-growing grass, with delicious, shady walks, charming drives and rivers of water. For the Isar is trained to flow through it in two rapid streams, under bridges and over rapids, and by willow-hung banks. There is not wanting even a lake; and there is, I am sorry to say, a temple on a mound, quite in the classic style, from which one can see the sun set behind the many spires of Munich. At the Chinese Tower two military bands play every Saturday evening in the summer; and thither the carriages drive, and the promenaders assemble there, between five and six o'clock; and while the bands play, the Germans drink beer, and smoke cigars, and the fashionably attired young men walk round and round the circle, and the smart young soldiers exhibit their handsome uniforms, and stride about with clanking swords.

We felicitated ourselves that we should have no lack of music when we came to Munich. I think we have not; though the opera has only just begun, and it is the vacation of the Conservatoire. There are first the military bands: there is continually a parade somewhere, and the streets are full of military music, and finely executed too. Then of beer-gardens there is literally no end, and there are nightly concerts in them. There are two brothers Hunn, each with his band, who, like the ancient Huns, have taken the city; and its gardens are given over to their unending waltzes, polkas, and opera medleys. Then there is the church music on Sundays and holidays, which is largely of a military character; at least, has the aid of drums and trumpets, and the whole band of brass. For the first few days of our stay here we had rooms near the Maximilian Platz and the Karl's Thor. I think there was some sort of a yearly fair in progress, for the great platz was filled with temporary booths: a circus had set itself up there, and there were innumerable side-shows and lottery-stands; and I believe that each little shanty and puppet-show had its band or fraction of a band, for there was never heard such a tooting and blowing and scraping, such a pounding and dinning and slang-whanging, since the day of stopping work on the Tower of Babel. The circus band confined itself mostly to one tune; and as it went all day long, and late into the night, we got to know it quite well; at least, the bass notes of it, for the lighter tones came to us indistinctly. You know that blurt, blurt, thump, thump, dissolute sort of caravan tune. That was it.

The English Cafe was not far off, and there the Hunns and others also made night melodious. The whole air

was one throb and thrump. The only refuge from it was to go into one of the gardens, and give yourself over to one band. And so it was possible to have delightful music, and see the honest Germans drink beer, and gossip in friendly fellowship and with occasional hilarity. But music we had, early and late. We expected quiet in our present quarters. The first morning, at six o'clock, we were startled by the resonant notes of a military band, that set the echoes flying between the houses, and a regiment of cavalry went clanking down the street. But that is a not unwelcome morning serenade and reveille. Not so agreeable is the young man next door, who gives hilarious concerts to his friends, and sings and bangs his piano all day Sunday; nor the screaming young woman opposite. Yet it is something to be in an atmosphere of music.

THE MILITARY LIFE OF MUNICH

This morning I was awakened early by the strains of a military band. It was a clear, sparkling morning, the air full of life, and yet the sun showing its warm, southern side. As the mounted musicians went by, the square was quite filled with the clang of drum and trumpet, which became fainter and fainter, and at length was lost on the ear beyond the Isar, but preserved the perfection of time and the precision of execution for which the military bands of the city are remarkable. After the band came a brave array of officers in bright uniform, upon horses that pranced and curveted in the sunshine; and the regiment of cavalry followed, rank on rank of splendidly mounted men, who ride as if born to the saddle. The clatter of hoofs on the pavement, the jangle of bit and saber, the occasional word of command, the onward sweep of the well-trained cavalcade, continued for a long time, as if the lovely morning had brought all the cavalry in the city out of barracks. But this is an almost daily sight in Munich. One regiment after another goes over the river to the drill-ground. In the hot mornings I used quite to pity the troopers who rode away in the glare in scorching brazen helmets and breastplates. But only a portion of the regiments dress in that absurd manner. The most wear a simple uniform, and look very soldierly. The horses are almost invariably fine animals, and I have not seen such riders in Europe. Indeed, everybody in Munich who rides at all rides well. Either most of the horsemen have served in the cavalry, or horsemanship, that noble art "to witch the world," is in high repute here.

Speaking of soldiers, Munich is full of them. There are huge caserns in every part of the city, crowded with troops. This little kingdom of Bavaria has a hundred and twenty thousand troops of the line. Every man is obliged to serve in the army continuously three years; and every man between the ages of twenty-one and forty-five must go with his regiment into camp or barrack several weeks in each year, no matter if the harvest rots in the field, or the customers desert the uncared-for shop. The service takes three of the best years of a young man's life. Most of the soldiers in Munich are young one meets hundreds of mere boys in the uniform of officers. I think every seventh man you meet is a soldier. There must be between fifteen and twenty thousand troops quartered in the city now. The young officers are everywhere, lounging in the cafes, smoking and sipping coffee, on all the public promenades, in the gardens, the theaters, the churches. And most of them are fine-looking fellows, good figures in elegantly fitting and tasteful uniforms; but they do like to show their handsome forms and hear their sword-scabbards rattle on the pavement as they stride by. The beer-gardens are full of the common soldiers, who empty no end of quart mugs in alternate pulls from the same earthen jug, with the utmost jollity and good fellowship. On the street, salutes between officers and men are perpetual, punctiliously given and returned,—the hand raised to the temple, and held there for a second. A young gallant, lounging down the Theatiner or the Maximilian Strasse, in his shining and snug uniform, white kids, and polished boots, with jangling spurs and the long sword clanking on the walk, raising his hand ever and anon in condescending salute to a lower in rank, or with affable grace to an equal, is a sight worth beholding, and for which one cannot be too grateful. We have not all been created with the natural shape for soldiers, but we have eyes given us that we may behold them.

Bavaria fought, you know, on the wrong side at Sadowa; but the result of the war left her in confederation with Prussia. The company is getting to be very distasteful, for Austria is at present more liberal than Prussia. Under Prussia one must either be a soldier or a slave, the democrats of Munich say. Bavaria has the most liberal constitution in Germany, except that of Wurtemberg, and the people are jealous of any curtailment of liberty. It seems odd that anybody should look to the house of Hapsburg for liberality. The attitude of Prussia compels all the little states to keep up armies, which eat up their substance, and burden the people with taxes. This is the more to be regretted now, when Bavaria is undergoing a peaceful revolution, and throwing off the trammels of galling customs in other respects.

THE EMANCIPATION OF MUNICH

The 1st of September saw go into complete effect the laws enacted in 1867, which have inaugurated the greatest changes in business and social life, and mark an era in the progress of the people worthy of fetes and commemorative bronzes. We heard the other night at the opera-house "William Tell" unmutilated. For many years this liberty-breathing opera was not permitted to be given in Bavaria, except with all the life of it cut out. It was first presented entire by order of young King Ludwig, who, they say, was induced to command its unmutilated reproduction at the solicitation of Richard Wagner, who used to be, and very likely is now, a "Red," and was banished from Saxony in 1848 for fighting on the people's side of a barricade in Dresden. It is the fashion to say of the young king, that he pays no heed to the business of the kingdom. You hear that the handsome boy cares only for music and horseback exercise: he plays much on the violin, and rides away into the forest attended by only one groom, and is gone for days together. He has composed an opera, which has

not yet been put on the stage. People, when they speak of him, tap their foreheads with one finger. But I don't believe it. The same liberality that induced him, years ago, to restore "William Tell" to the stage has characterized the government under him ever since.

Formerly no one could engage in any trade or business in Bavaria without previous examination before, and permission from, a magistrate. If a boy wished to be a baker, for instance, he had first to serve four years of apprenticeship. If then he wished to set up business for himself, he must get permission, after passing an examination. This permission could rarely be obtained; for the magistrate usually decided that there were already as many bakers as the town needed. His only other resource was to buy out an existing business, and this usually costs a good deal. When he petitioned for the privilege of starting a bakery, all the bakers protested. And he could not even buy out a stand, and carry it on, without strict examination as to qualifications. This was the case in every trade. And to make matters worse, a master workman could not employ a journeyman out of his shop; so that, if a journeyman could not get a regular situation, he had no work. Then there were endless restrictions upon the manufacture and sale of articles: one person could make only one article, or one portion of an article; one might manufacture shoes for women, but not for men; he might make an article in the shop and sell it, but could not sell it if any one else made it outside, or vice versa.

Nearly all this mass of useless restriction on trades and business, which palsied all effort in Bavaria, is removed. Persons are free to enter into any business they like. The system of apprenticeship continues, but so modified as not to be oppressive; and all trades are left to regulate themselves by natural competition. Already Munich has felt the benefit of the removal of these restrictions, which for nearly a year has been anticipated, in a growth of population and increased business.

But the social change is still more important. The restrictions upon marriage were a serious injury to the state. If Hans wished to marry, and felt himself adequate to the burdens and responsibilities of the double state, and the honest fraulein was quite willing to undertake its trials and risks with him, it was not at all enough that in the moonlighted beergarden, while the band played, and they peeled the stinging radish, and ate the Switzer cheese, and drank from one mug, she allowed his arm to steal around her stout waist. All this love and fitness went for nothing in the eyes of the magistrate, who referred the application for permission to marry to his associate advisers, and they inquired into the applicant's circumstances; and if, in their opinion, he was not worth enough money to support a wife properly, permission was refused for him to try. The consequence was late marriages, and fewer than there ought to be, and other ill results. Now the matrimonial gates are lifted high, and the young man has not to ask permission of any snuffy old magistrate to marry. I do not hear that the consent of the maidens is more difficult to obtain than formerly.

No city of its size is more prolific of pictures than Munich. I do not know how all its artists manage to live, but many of them count upon the American public. I hear everywhere that the Americans like this, and do not like that; and I am sorry to say that some artists, who have done better things, paint professedly to suit Americans, and not to express their own conceptions of beauty. There is one who is now quite devoted to dashing off rather lamp-black moonlights, because, he says, the Americans fancy that sort of thing. I see one of his smirchy pictures hanging in a shop window, awaiting the advent of the citizen of the United States. I trust that no word of mine will injure the sale of the moonlights. There are some excellent figure-painters here, and one can still buy good modern pictures for reasonable prices.

FASHION IN THE STREETS

Was there ever elsewhere such a blue, transparent sky as this here in Munich? At noon, looking up to it from the street, above the gray houses, the color and depth are marvelous. It makes a background for the Grecian art buildings and gateways, that would cheat a risen Athenian who should see it into the belief that he was restored to his beautiful city. The color holds, too, toward sundown, and seems to be poured, like something solid, into the streets of the city.

You should see then the Maximilian Strasse, when the light floods the platz where Maximilian in bronze sits in his chair, illuminates the frescoes on the pediments of the Hof Theater, brightens the Pompeian red under the colonnade of the post-office, and streams down the gay thoroughfare to the trees and statues in front of the National Museum, and into the gold-dusted atmosphere beyond the Isar. The street is filled with promenaders: strangers who saunter along with the red book in one hand,—a man and his wife, the woman dragged reluctantly past the windows of fancy articles, which are "so cheap," the man breaking his neck to look up at the buildings, especially at the comical heads and figures in stone that stretch out from the little oriel-windows in the highest story of the Four Seasons Hotel, and look down upon the moving throng; Munich bucks in coats of velvet, swinging light canes, and smoking cigars through long and elaborately carved meerscham holders; Munich ladies in dresses of that inconvenient length that neither sweeps the pavement nor clears it; peasants from the Tyrol, the men in black, tight breeches, that button from the knee to the ankle, short jackets and vests set thickly with round silver buttons, and conical hats with feathers, and the women in short quilted and quilled petticoats, of barrel-like roundness from the broad hips down, short waists ornamented with chains and barbarous brooches of white metal, with the oddest head-gear of gold and silver heirlooms; students with little red or green embroidered brimless caps, with the ribbon across the breast, a folded shawl thrown over one shoulder, and the inevitable switch-cane; porters in red caps, with a coil of twine about the waist; young fellows from Bohemia, with green coats, or coats trimmed with green, and green felt hats with a stiff feather stuck in the side; and soldiers by the hundreds, of all ranks and organizations; common fellows in blue, staring in at the shop windows, officers in resplendent uniforms, clanking their swords as they swagger past. Now and then, an elegant equipage dashes by,—perhaps the four horses of the handsome young king, with mounted postilions and outriders, or a liveried carriage of somebody born with a von before his name. As the twilight comes on, the shutters of the shop windows are put up. It is

time to go to the opera, for the curtain rises at half-past six, or to the beer-gardens, where delicious music marks, but does not interrupt, the flow of excellent beer.

Or you may if you choose, and I advise you to do it, walk at the same hour in the English Garden, which is but a step from the arcades of the Hof Garden,—but a step to the entrance, whence you may wander for miles and miles in the most enchanting scenery. Art has not been allowed here to spoil nature. The trees, which are of magnificent size, are left to grow naturally;—the Isar, which is turned into it, flows in more than one stream with its mountain impetuosity; the lake is gracefully indented and overhung with trees, and presents ever-changing aspects of loveliness as you walk along its banks; there are open, sunny meadows, in which single giant trees or splendid groups of them stand, and walks without end winding under leafy Gothic arches. You know already that Munich owes this fine park to the foresight and liberality of an American Tory, Benjamin Thompson (Count Rumford), born in Rumford, Vt., who also relieved Munich of beggars.

I have spoken of the number of soldiers in Munich. For six weeks the Landwehr, or militia, has been in camp in various parts of Bavaria. There was a grand review of them the other day on the Field of Mars, by the king, and many of them have now gone home. They strike an unmilitary man as a very efficient body of troops. So far as I could see, they were armed with breech-loading rifles. There is a treaty by which Bavaria agreed to assimilate her military organization to that of Prussia. It is thus that Bismarck is continually getting ready. But if the Landwehr is gone, there are yet remaining troops enough of the line. Their chief use, so far as it concerns me, is to make pageants in the streets, and to send their bands to play at noon in the public squares. Every day, when the sun shines down upon the mounted statue of Ludwig I., in front of the Odeon, a band plays in an open Loggia, and there is always a crowd of idlers in the square to hear it. Everybody has leisure for that sort of thing here in Europe; and one can easily learn how to be idle and let the world wag. They have found out here what is disbelieved in America,—that the world will continue to turn over once in about twenty-four hours (they are not accurate as to the time) without their aid. To return to our soldiers. The cavalry most impresses me; the men are so finely mounted, and they ride royally. In these sparkling mornings, when the regiments clatter past, with swelling music and shining armor, riding away to I know not what adventure and glory, I confess that I long to follow them. I have long had this desire; and the other morning, determining to satisfy it, I seized my hat and went after the prancing procession. I am sorry I did. For, after trudging after it through street after street, the fine horsemen all rode through an arched gateway, and disappeared in barracks, to my great disgust; and the troopers dismounted, and led their steeds into stables.

And yet one never loses a walk here in Munich. I found myself that morning by the Isar Thor, a restored medieval city gate. The gate is double, with flanking octagonal towers, inclosing a quadrangle. Upon the inner wall is a fresco of "The Crucifixion." Over the outer front is a representation, in fresco painting, of the triumphal entry into the city of the Emperor Louis of Bavaria after the battle of Ampfing. On one side of the gate is a portrait of the Virgin, on gold ground, and on the other a very passable one of the late Dr. Hawes of Hartford, with a Pope's hat on. Walking on, I came to another arched gateway and clock-tower; near it an old church, with a high wall adjoining, whereon is a fresco of cattle led to slaughter, showing that I am in the vicinity of the Victual Market; and I enter it through a narrow, crooked alley. There is nothing there but an assemblage of shabby booths and fruit-stands, and an ancient stone tower in ruins and overgrown with ivy.

Leaving this, I came out to the Marian Platz, where stands the column, with the statue of the Virgin and Child, set up by Maximilian I. in 1638 to celebrate the victory in the battle which established the Catholic supremacy in Bavaria. It is a favorite praying-place for the lower classes. Yesterday was a fete day, and the base of the column and half its height are lost in a mass of flowers and evergreens. In front is erected an altar with a broad, carpeted platform; and a strip of the platz before it is inclosed with a railing, within which are praying-benches. The sun shines down hot; but there are several poor women kneeling there, with their baskets beside them. I happen along there at sundown; and there are a score of women kneeling on the hard stones, outside the railing saying their prayers in loud voices. The mass of flowers is still sweet and gay and fresh; a fountain with fantastic figures is flashing near by; the crowd, going home to supper and beer, gives no heed to the praying; the stolid droschke-drivers stand listlessly by. At the head of the square is an artillery station, and a row of cannon frowns on it. On one side is a house with a tablet in the wall, recording the fact that Gustavus Adolphus of Sweden once lived in it.

When we came to Munich, the great annual fair was in progress; and the large Maximilian Platz (not to be confounded with the street of that name) was filled with booths of cheap merchandise, puppet-shows, lottery shanties, and all sorts of popular amusements. It was a fine time to study peasant costumes. The city was crowded with them on Sunday; and let us not forget that the first visit of the peasants was to the churches; they invariably attended early mass before they set out upon the day's pleasure. Most of the churches have services at all hours till noon, some of them with fine classical and military music. One could not but be struck with the devotional manner of the simple women, in their queer costumes, who walked into the gaudy edifices, were absorbed in their prayers for an hour, and then went away. I suppose they did not know how odd they looked in their high, round fur hats, or their fantastic old ornaments, nor that there was anything amiss in bringing their big baskets into church with them. At least, their simple, unconscious manner was better than that of many of the city people, some of whom stare about a good deal, while going through the service, and stop in the midst of crossings and genuflections to take snuff and pass it to their neighbors. But there are always present simple and homelike sort of people, who neither follow the fashions nor look round on them; respectable, neat old ladies, in the faded and carefully preserved silk gowns, such as the New England women wear to "meeting."

No one can help admiring the simplicity, kindness, and honesty of the Germans. The universal courtesy and friendliness of manner have a very different seeming from the politeness of the French. At the hotels in the country, the landlord and his wife and the servant join in hoping you will sleep well when you go to bed. The little maid at Heidelberg who served our meals always went to the extent of wishing us a good appetite when she had brought in the dinner. Here in Munich the people we have occasion to address in the street are uniformly courteous. The shop-keepers are obliging, and rarely servile, like the English. You are thanked, and punctiliously wished the good-day, whether you purchase anything or not. In shops tended by women,

gentlemen invariably remove their hats. If you buy only a kreuzer's worth of fruit of an old woman, she says words that would be, literally translated, "I thank you beautifully." With all this, one looks kindly on the childish love the Germans have for titles. It is, I believe, difficult for the German mind to comprehend that we can be in good standing at home, unless we have some title prefixed to our names, or some descriptive phrase added. Our good landlord, who waits at the table and answers our bell, one of whose tenants is a living baron, having no title to put on his doorplate under that of the baron, must needs dub himself "privatier;" and he insists upon prefixing the name of this unambitious writer with the ennobling von; and at the least he insists, in common with the tradespeople, that I am a "Herr Doctor." The bills of purchases by madame come made out to "Frau—, well-born." At a hotel in Heidelberg, where I had registered my name with that distinctness of penmanship for which newspaper men are justly conspicuous, and had added to my own name "& wife," I was not a little flattered to appear in the reckoning as "Herr Doctor Mamesweise."

THE GOTTESACKER AND BAVARIAN FUNERALS

To change the subject from gay to grave. The Gottesacker of Munich is called the finest cemetery in Germany; at least, it surpasses them in the artistic taste of its monuments. Natural beauty it has none: it is simply a long, narrow strip of ground inclosed in walls, with straight, parallel walks running the whole length, and narrow cross-walks; and yet it is a lovely burial-ground. There are but few trees; but the whole inclosure is a conservatory of beautiful flowers. Every grave is covered with them, every monument is surrounded with them. The monuments are unpretending in size, but there are many fine designs, and many finely executed busts and statues and allegorical figures, in both marble and bronze. The place is full of sunlight and color. I noticed that it was much frequented. In front of every place of sepulcher stands a small urn for water, with a brush hanging by, with which to sprinkle the flowers. I saw, also, many women and children coming and going with watering-pots, so that the flowers never droop for want of care. At the lower end of the old ground is an open arcade, wherein are some effigies and busts, and many ancient tablets set into the wall. Beyond this is the new cemetery, an inclosure surrounded by a high wall of brick, and on the inside by an arcade. The space within is planted with flowers, and laid out for the burial of the people; the arcades are devoted to the occupation of those who can afford costly tombs. Only a small number of them are yet occupied; there are some good busts and monuments, and some frescoes on the panels rather more striking for size and color than for beauty.

Between the two cemeteries is the house for the dead. When I walked down the long central alle of the old ground, I saw at the farther end, beyond a fountain, twinkling lights. Coming nearer, I found that they proceeded from the large windows of a building, which was a part of the arcade. People were looking in at the windows, going and coming to and from them continually; and I was prompted by curiosity to look within. A most unexpected sight met my eye. In a long room, upon elevated biers, lay people dead: they were so disposed that the faces could be seen; and there they rested in a solemn repose. Officers in uniform, citizens in plain dress, matrons and maids in the habits that they wore when living, or in the white robes of the grave. About most of them were lighted candles. About all of them were flowers: some were almost covered with bouquets. There were rows of children, little ones scarce a span long,—in the white caps and garments of innocence, as if asleep in beds of flowers. How naturally they all were lying, as if only waiting to be called! Upon the thumb of every adult was a ring in which a string was tied that went through a pulley above and communicated with a bell in the attendant's room. How frightened he would be if the bell should ever sound, and he should go into that hall of the dead to see who rang! And yet it is a most wise and humane provision; and many years ago, there is a tradition, an entombment alive was prevented by it. There are three rooms in all; and all those who die in Munich must be brought and laid in one of them, to be seen of all who care to look therein. I suppose that wealth and rank have some privileges; but it is the law that the person having been pronounced dead by the physician shall be the same day brought to the dead-house, and lie there three whole days before interment.

There is something peculiar in the obsequies of Munich, especially in the Catholic portion of the population. Shortly after the death, there is a short service in the courtyard of the house, which, with the entrance, is hung in costly mourning, if the deceased was rich. The body is then carried in the car to the dead-house, attended by the priests, the male members of the family, and a procession of torch-bearers, if that can be afforded. Three days after, the burial takes place from the dead-house, only males attending. The women never go to the funeral; but some days after, of which public notice is given by advertisement, a public service is held in church, at which all the family are present, and to which the friends are publicly invited. Funeral obsequies are as costly here as in America; but everything is here regulated and fixed by custom. There are as many as five or six classes of funerals recognized. Those of the first class, as to rank and expense, cost about a thousand guldens. The second class is divided into six subclasses. The third is divided into two. The cost of the first of the third class is about four hundred guldens. The lowest class of those able to have a funeral costs twenty-five guldens. A gulden is about two francs. There are no carriages used at the funerals of Catholics, only at those of Protestants and Jews.

I spoke of the custom of advertising the deaths. A considerable portion of the daily newspapers is devoted to these announcements, which are printed in display type, like the advertisements of dry-goods sellers with you. I will roughly translate one which I happen to see just now. It reads, "Death advertisement. It has pleased God the Almighty, in his inscrutable providence, to take away our innermost loved, best husband, father, grandfather, uncle, brother-in-law, and cousin, Herr—, dyer of cloth and silk, yesterday night, at eleven o'clock, after three weeks of severe suffering, having partaken of the holy sacrament, in his sixty-sixth year, out of this earthly abode of calamity into the better Beyond. Those who knew his good heart, his great

honesty, as well as his patience in suffering, will know how justly to estimate our grief." This is signed by the "deep-grieving survivors,"—the widow, son, daughter, and daughter-in-law, in the name of the absent relatives. After the name of the son is written, "Dyer in cloth and silk." The notice closes with an announcement of the funeral at the cemetery, and a service at the church the day after. The advertisement I have given is not uncommon either for quaintness or simplicity. It is common to engrave upon the monument the business as well as the title of the departed.

THE OCTOBER FEST THE PEASANTS AND THE KING

On the 11th of October the sun came out, after a retirement of nearly two weeks. The cause of the appearance was the close of the October Fest. This great popular carnival has the same effect upon the weather in Bavaria that the Yearly Meeting of Friends is known to produce in Philadelphia, and the Great National Horse Fair in New England. It always rains during the October Fest. Having found this out, I do not know why they do not change the time of it; but I presume they are wise enough to feel that it would be useless. A similar attempt on the part of the Pennsylvania Quakers merely disturbed the operations of nature, but did not save the drab bonnets from the annual wetting. There is a subtle connection between such gatherings and the gathering of what are called the elements,—a sympathetic connection, which we shall, no doubt, one day understand, when we have collected facts enough on the subject to make a comprehensive generalization, after Mr. Buckle's method.

This fair, which is just concluded, is a true Folks-Fest, a season especially for the Bavarian people, an agricultural fair and cattle show, but a time of general jollity and amusement as well. Indeed, the main object of a German fair seems to be to have a good time and in this it is in marked contrast with American fairs. The October Fest was instituted for the people by the old Ludwig I. on the occasion of his marriage; and it has ever since retained its position as the great festival of the Bavarian people, and particularly of the peasants. It offers a rare opportunity to the stranger to study the costumes of the peasants, and to see how they amuse themselves. One can judge a good deal of the progress of a people by the sort of amusements that satisfy them. I am not about to draw any philosophical inferences,—I am a mere looker-on in Munich; but I have never anywhere else seen puppet-shows afford so much delight, nor have I ever seen anybody get more satisfaction out of a sausage and a mug of beer, with the tum-tum of a band near, by, than a Bavarian peasant.

The Fest was held on the Theresien Wiese, a vast meadow on the outskirts of the city. The ground rises on one side of this by an abrupt step, some thirty or forty feet high, like the "bench" of a Western river. This bank is terraced for seats the whole length, or as far down as the statue of Bavaria; so that there are turf seats, I should judge, for three quarters of a mile, for a great many thousands of people, who can look down upon the race-course, the tents, houses, and booths of the fair-ground, and upon the roof and spires of the city beyond. The statue is, as you know, the famous bronze Bavaria of Schwanthaler, a colossal female figure fifty feet high, and with its pedestal a hundred feet high, which stands in front of the Hall of Fame, a Doric edifice, in the open colonnades of which are displayed the busts of the most celebrated Bavarians, together with those of a few poets and scholars who were so unfortunate as not to be born here. The Bavaria stands with the right hand upon the sheathed sword, and the left raised in the act of bestowing a wreath of victory; and the lion of the kingdom is beside her. This representative being is, of course, hollow. There is room for eight people in her head, which I can testify is a warm place on a sunny day; and one can peep out through loopholes and get a good view of the Alps of the Tyrol. To say that this statue is graceful or altogether successful would be an error; but it is rather impressive, from its size, if for no other reason. In the cast of the hand exhibited at the bronze foundry, the forefinger measures over three feet long.

Although the Fest did not officially begin until Friday, October 12, yet the essential part of it, the amusements, was well under way on the Sunday before. The town began to be filled with country people, and the holiday might be said to have commenced; for the city gives itself up to the occasion. The new art galleries are closed for some days; but the collections and museums of various sorts are daily open, gratis; the theaters redouble their efforts; the concert-halls are in full blast; there are dances nightly, and masked balls in the Folks' Theater; country relatives are entertained; the peasants go about the streets in droves, in a simple and happy frame of mind, wholly unconscious that they are the oddest-looking guys that have come down from the Middle Ages; there is music in all the gardens, singing in the cafes, beer flowing in rivers, and a mighty smell of cheese, that goes up to heaven. If the eating of cheese were a religious act, and its odor an incense, I could not say enough of the devoutness of the Bavarians.

Of the picturesqueness and oddity of the Bavarian peasants' costumes, nothing but a picture can give you any idea. You can imagine the men in tight breeches, buttoned below the knee, jackets of the jockey cut, and both jacket and waistcoat covered with big metal buttons, sometimes coins, as thickly as can be sewed on: but the women defy the pen; a Bavarian peasant woman, in holiday dress, is the most fearfully and wonderfully made object in the universe. She displays a good length of striped stockings, and wears thin slippers, or sandals; her skirts are like a hogshead in size and shape, and reach so near her shoulders as to make her appear hump-backed; the sleeves are hugely swelled out at the shoulder, and taper to the wrist; the bodice is a stiff and most elaborately ornamented piece of armor; and there is a kind of breastplate, or center-piece, of gold, silver, and precious stones, or what passes for them; and the head is adorned with some monstrous heirloom, of finely worked gold or silver, or a tower, gilded and shining with long streamers, or bound in a simple black turban, with flowing ends. Little old girls, dressed like their mothers, have the air of creations of the fancy, who have walked out of a fairy-book. There is an endless variety in these old costumes; and one sees, every moment, one more preposterous than the preceding. The girls from the Tyrol, with their

bright neckerchiefs and pointed black felt hats, with gold cord and tassels, are some of them very pretty: but one looks a long time for a bright face among the other class; and, when it is discovered, the owner appears like a maiden who was enchanted a hundred years ago, and has not been released from the spell, but is still doomed to wear the garments and the ornaments that should long ago have mouldered away with her ancestors.

The Theresien Wiese was a city of Vanity Fair for two weeks, every day crowded with a motley throng. Booths, and even structures of some solidity, rose on it as if by magic. The lottery-houses were set up early, and, to the last, attracted crowds, who could not resist the tempting display of goods and trinkets, which might be won by investing six kreuzers in a bit of paper, which might, when unrolled, contain a number. These lotteries are all authorized: some of them were for the benefit of the agricultural society; some were for the poor, and others on individual account: and they always thrive; for the German, above all others, loves to try his luck. There were streets of shanties, where various things were offered for sale besides cheese and sausages. There was a long line of booths, where images could be shot at with bird-guns; and when the shots were successful, the images went through astonishing revolutions. There was a circus, in front of which some of the spangled performers always stood beating drums and posturing, in order to entice in spectators. There were the puppet-booths, before which all day stood gaping, delighted crowds, who roared with laughter whenever the little frau beat her loutish husband about the head, and set him to tend the baby, who continued to wail, notwithstanding the man knocked its head against the doorpost. There were the great beer-restaurants, with temporary benches and tables' planted about with evergreens, always thronged with a noisy, jolly crowd. There were the fires, over which fresh fish were broiling on sticks; and, if you lingered, you saw the fish taken alive from tubs of water standing by, dressed and spitted and broiling before the wiggle was out of their tails. There were the old women, who mixed the flour and fried the brown cakes before your eyes, or cooked the fragrant sausage, and offered it piping hot.

And every restaurant and show had its band, brass or string,—a full array of red-faced fellows tooting through horns, or a sorry quartette, the fat woman with the harp, the lean man blowing himself out through the clarinet, the long-haired fellow with the flute, and the robust and thick-necked fiddler. Everywhere there was music; the air was full of the odor of cheese and cooking sausage; so that there was nothing wanting to the most complete enjoyment. The crowd surged round, jammed together, in the best possible humor. Those who could not sit at tables sat on the ground, with a link of an eatable I have already named in one hand, and a mug of beer beside them. Toward evening, the ground was strewn with these gray quart mugs, which gave as perfect evidence of the battle of the day as the cannon-balls on the sand before Fort Fisher did of the contest there. Besides this, for the amusement of the crowd, there is, every day, a wheelbarrow race, a sack race, a blindfold contest, or something of the sort, which turns out to be a very flat performance. But all the time the eating and the drinking go on, and the clatter and clink of it fill the air; so that the great object of the fair is not lost sight of.

Meantime, where is the agricultural fair and cattle-show? You must know that we do these things differently in Bavaria. On the fair-ground, there is very little to be seen of the fair. There is an inclosure where steam-engines are smoking and puffing, and threshing-machines are making a clamor; where some big church-bells hang, and where there are a few stalls for horses and cattle. But the competing horses and cattle are led before the judges elsewhere; the horses, for instance, by the royal stables in the city. I saw no such general exhibition of do mestic animals as you have at your fairs. The horses that took the prizes were of native stock, a very serviceable breed, excellent for carriage-horses, and admirable in the cavalry service. The bulls and cows seemed also native and to the manor born, and were worthy of little remark. The mechanical, vegetable, and fruit exhibition was in the great glass palace, in the city, and was very creditable in the fruit department, in the show of grapes and pears especially. The products of the dairy were less, though I saw one that I do not recollect ever to have seen in America, a landscape in butter. Inclosed in a case, it looked very much like a wood-carving. There was a Swiss cottage, a milkmaid, with cows in the foreground; there were trees, and in the rear rose rocky precipices, with chamois in the act of skipping thereon. I should think something might be done in our country in this line of the fine arts; certainly, some of the butter that is always being sold so cheap at St. Albans, when it is high everywhere else, must be strong enough to warrant the attempt. As to the other departments of the fine arts in the glass palace, I cannot give you a better idea of them than by saying that they were as well filled as the like ones in the American county fairs. There were machines for threshing, for straw-cutting, for apple-paring, and generally such a display of implements as would give one a favorable idea of Bavarian agriculture. There was an interesting exhibition of live fish, great and small, of nearly every sort, I should think, in Bavarian waters. The show in the fire-department was so antiquated, that I was convinced that the people of Munich never intend to have any fires.

The great day of the fete was Sunday, October 5 for on that day the king went out to the fair-ground, and distributed the prizes to the owners of the best horses, and, as they appeared to me, of the most ugly-colored bulls. The city was literally crowded with peasants and country people; the churches were full all the morning with devout masses, which poured into the waiting beer-houses afterward with equal zeal. By twelve o'clock, the city began to empty itself upon the Theresien meadow; and long before the time for the king to arrive—two o'clock—there were acres of people waiting for the performance to begin. The terraced bank, of which I have spoken, was taken possession of early, and held by a solid mass of people; while the fair-ground proper was packed with a swaying concourse, densest near the royal pavilion, which was erected immediately on the race-course, and opposite the bank.

At one o'clock the grand stand opposite to the royal one is taken possession of by a regiment band and by invited guests. All the space, except the race-course, is, by this time, packed with people, who watch the red and white gate at the head of the course with growing impatience. It opens to let in a regiment of infantry, which marches in and takes position. It swings, every now and then, for a solitary horseman, who gallops down the line in all the pride of mounted civic dignity, to the disgust of the crowd; or to let in a carriage, with some overdressed officer or splendid minister, who is entitled to a place in the royal pavilion. It is a people' fete, and the civic officers enjoy one day of conspicuous glory. Now a majestic person in gold lace is set down; and now one in a scarlet coat, as beautiful as a flamingo. These driblets of splendor only feed the popular impatience. Music is heard in the distance, and a procession with colored banners is seen approaching from

the city. That, like everything else that is to come, stops beyond the closed gate; and there it halts, ready to stream down before our eyes in a variegated pageant. The time goes on; the crowd gets denser, for there have been steady rivers of people pouring into the grounds for more than an hour.

The military bands play in the long interval; the peasants jabber in unintelligible dialects; the high functionaries on the royal stand are good enough to move around, and let us see how brave and majestic they are.

At last the firing of cannon announces the coming of royalty. There is a commotion in the vast crowd yonder, the eagerly watched gates swing wide, and a well-mounted company of cavalry dashes down the turf, in uniforms of light blue and gold. It is a citizens' company of butchers and bakers and candlestick-makers, which would do no discredit to the regular army. Driving close after is a four-horse carriage with two of the king's ministers; and then, at a rapid pace, six coal-black horses in silver harness, with mounted postilions, drawing a long, slender, open carriage with one seat, in which ride the king and his brother, Prince Otto, come down the way, and are pulled up in front of the pavilion; while the cannon roars, the big bells ring, all the flags of Bavaria, Prussia, and Austria, on innumerable poles, are blowing straight out, the band plays "God save the King," the people break into enthusiastic shouting, and the young king, throwing off his cloak, rises and stands in his carriage for a moment, bowing right and left before he descends. He wears to-day the simple uniform of the citizens' company which has escorted him, and is consequently more plainly and neatly dressed than any one else on the platform,—a tall (say six feet), slender, gallant-looking young fellow of three and twenty, with an open face and a graceful manner.

But, when he has arrived, things again come to a stand; and we wait for an hour, and watch the thickening of the clouds, while the king goes from this to that delighted dignitary on the stand and converses. At the end of this time, there is a movement. A white dog has got into the course, and runs up and down between the walls of people in terror, headed off by soldiers at either side of the grand stand, and finally, becoming desperate, he makes a dive for the royal pavilion. The consternation is extreme. The people cheer the dog and laugh: a white-handed official, in gold lace, and without his hat, rushes out to "shoo" the dog away, but is unsuccessful; for the animal dashes between his legs, and approaches the royal and carpeted steps. More men of rank run at him, and he is finally captured and borne away; and we all breathe freer that the danger to royalty is averted. At one o'clock six youths in white jackets, with clubs and coils of rope, had stationed themselves by the pavilion, but they did not go into action at this juncture; and I thought they rather enjoyed the activity of the great men who kept off the dog.

At length there was another stir; and the king descended from the rear of his pavilion, attended by his ministers, and moved about among the people, who made way for him, and uncovered at his approach. He spoke with one and another, and strolled about as his fancy took him. I suppose this is called mingling with the common people. After he had mingled about fifteen minutes, he returned, and took his place on the steps in front of the pavilion; and the distribution of prizes began. First the horses were led out; and their owners, approaching the king, received from his hands the diplomas, and a flag from an attendant. Most of them were peasants; and they exhibited no servility in receiving their marks of distinction, but bowed to the king as they would to any other man, and his majesty touched his cocked hat in return. Then came the prize-cattle, many of them led by women, who are as interested as their husbands in all farm matters. Everything goes off smoothly, except there is a momentary panic over a fractious bull, who plunges into the crowd; but the six white jackets are about him in an instant, and entangle him with their ropes.

This over, the gates again open, and the gay cavalcade that has been so long in sight approaches. First a band of musicians in costumes of the Middle Ages; and then a band of pages in the gayest apparel, bearing pictured banners and flags of all colors, whose silken luster would have been gorgeous in sunshine; these were followed by mounted heralds with trumpets, and after them were led the running horses entered for the race. The banners go up on the royal stand, and group themselves picturesquely; the heralds disappear at the other end of the list; and almost immediately the horses, ridden by young jockeys in stunning colors, come flying past in a general scramble. There are a dozen or more horses; but, after the first round, the race lies between two. The course is considerably over an English mile, and they make four circuits; so that the race is fully six-miles,—a very hard one. It was a run in a rain, however, which began when it did, and soon forced up the umbrellas. The vast crowd disappeared under a shed of umbrellas, of all colors,—black, green, red, blue; and the effect was very singular, especially when it moved from the field: there was then a Niagara of umbrellas. The race was soon over: it is only a peasants' race, after all; the aristocratic races of the best horses take place in May. It was over. The king's carriage was brought round, the people again shouted, the cannon roared, the six black horses reared and plunged, and away he went.

After all, says the artist, "the King of Bavaria has not much power."

"You can see," returns a gentleman who speaks English, "just how much he has: it is a six-horse power."

On other days there was horse-trotting, music production, and for several days prize-shooting. The latter was admirably conducted: the targets were placed at the foot of the bank; and opposite, I should think not more than two hundred yards off, were shooting-houses, each with a room for the register of the shots, and on each side of him closets where the shooters stand. Signal-wires run from these houses to the targets, where there are attendants who telegraph the effect of every shot. Each competitor has a little book; and he shoots at any booth he pleases, or at all, and has his shots registered. There was a continual fusillade for a couple of days; but what it all came to, I cannot tell. I can only say, that, if they shoot as steadily as they drink beer, there is no other corps of shooters that can stand before them.

INDIAN SUMMER

We are all quiet along the Isar since the October Fest; since the young king has come back from his

summer castle on the Starnberg See to live in his dingy palace; since the opera has got into good working order, and the regular indoor concerts at the cafes have begun. There is no lack of amusements, with balls, theaters, and the cheap concerts, vocal and instrumental. I stepped into the West Ende Halle the other night, having first surrendered twelve kreuzers to the money-changer at the entrance,—double the usual fee, by the way. It was large and well lighted, with a gallery all round it and an orchestral platform at one end. The floor and gallery were filled with people of the most respectable class, who sat about little round tables, and drank beer. Every man was smoking a cigar; and the atmosphere was of that degree of haziness that we associate with Indian summer at home; so that through it the people in the gallery appeared like glorified objects in a heathen Pantheon, and the orchestra like men playing in a dream. Yet nobody seemed to mind it; and there was, indeed, a general air of social enjoyment and good feeling. Whether this good feeling was in process of being produced by the twelve or twenty glasses of beer which it is not unusual for a German to drink of an evening, I do not know. "I do not drink much beer now," said a German acquaintance,—“not more than four or five glasses in an evening.” This is indeed moderation, when we remember that sixteen glasses of beer is only two gallons. The orchestra playing that night was Gungl's; and it performed, among other things, the whole of the celebrated Third (or Scotch) Symphony of Mendelssohn in a manner that would be greatly to the credit of orchestras that play without the aid of either smoke or beer. Concerts of this sort, generally with more popular music and a considerable dash of Wagner, in whom the Munichers believe, take place every night in several cafes; while comic singing, some of it exceedingly well done, can be heard in others. Such amusements—and nothing can be more harmless—are very cheap.

Speaking of Indian summer, the only approach to it I have seen was in the hazy atmosphere at the West Ende Halle. October outdoors has been an almost totally disagreeable month, with the exception of some days, or rather parts of days, when we have seen the sun, and experienced a mild atmosphere. At such times, I have liked to sit down on one of the empty benches in the Hof Garden, where the leaves already half cover the ground, and the dropping horse-chestnuts keep up a pattering on them. Soon the fat woman who has a fruit-stand at the gate is sure to come waddling along, her beaming face making a sort of illumination in the autumn scenery, and sit down near me. As soon as she comes, the little brown birds and the doves all fly that way, and look up expectant at her. They all know her, and expect the usual supply of bread-crumbs. Indeed, I have seen her on a still Sunday morning, when I have been sitting there waiting for the English ceremony of praying for Queen Victoria and Albert Edward to begin in the Odeon, sit for an hour, and cut up bread for her little brown flock. She sits now knitting a red stocking, the picture of content; one after another her old gossips pass that way, and stop a moment to exchange the chat of the day; or the policeman has his joke with her, and when there is nobody else to converse with, she talks to the birds. A benevolent old soul, I am sure, who in a New England village would be universally called "Aunty," and would lay all the rising generation under obligation to her for doughnuts and sweet-cake. As she rises to go away, she scrapes together a half-dozen shining chestnuts with her feet; and as she cannot possibly stoop to pick them up, she motions to a boy playing near, and smiles so happily as the urchin gathers them and runs away without even a "thank ye."

A TASTE OF ULTRAMONTANISM

If that of which every German dreams, and so few are ready to take any practical steps to attain,—German unity,—ever comes, it must ride roughshod over the Romish clergy, for one thing. Of course there are other obstacles. So long as beer is cheap, and songs of the Fatherland are set to lilting strains, will these excellent people "Ho, ho, my brothers," and "Hi, hi, my brothers," and wait for fate, in the shape of some compelling Bismarck, to drive them into anything more than the brotherhood of brown mugs of beer and Wagner's mysterious music of the future. I am not sure, by the way, that the music of Richard Wagner is not highly typical of the present (1868) state of German unity,—an undefined longing which nobody exactly understands. There are those who think they can discern in his music the same revolutionary tendency which placed the composer on the right side of a Dresden barricade in 1848, and who go so far as to believe that the liberalism of the young King of Bavaria is not a little due to his passion for the disorganizing operas of this transcendental writer. Indeed, I am not sure that any other people than Germans would not find in the repetition of the five hours of the "Meister-Singer von Nurnberg," which was given the other night at the Hof Theater, sufficient reason for revolution.

Well, what I set out to say was, that most Germans would like unity if they could be the unit. Each State would like to be the center of the consolidated system, and thus it happens that every practical step toward political unity meets a host of opponents at once. When Austria, or rather the house of Hapsburg, had a preponderance in the Diet, and it seemed, under it, possible to revive the past reality, or to realize the dream of a great German empire, it was clearly seen that Austria was a tyranny that would crush out all liberties. And now that Prussia, with its vital Protestantism and free schools, proposes to undertake the reconstruction of Germany, and make a nation where there are now only the fragmentary possibilities of a great power, why, Prussia is a military despot, whose subjects must be either soldiers or slaves, and the young emperor at Vienna is indeed another Joseph, filled with the most tender solicitude for the welfare of the chosen German people.

But to return to the clergy. While the monasteries and nunneries are going to the ground in superstition-saturated Spain; while eager workmen are demolishing the last hiding-places of monkery, and letting the daylight into places that have well kept the frightful secrets of three hundred years, and turning the ancient cloister demesne into public parks and pleasure-grounds,—the Romish priesthood here, in free Bavaria, seem to imagine that they cannot only resist the progress of events, but that they can actually bring back the owlish twilight of the Middle Ages. The reactionary party in Bavaria has, in some of the provinces, a strong majority; and its supporters and newspapers are belligerent and aggressive. A few words about the politics of Bavaria will give you a clew to the general politics of the country.

The reader of the little newspapers here in Munich finds evidence of at least three parties. There is first the radical. Its members sincerely desire a united Germany, and, of course, are friendly to Prussia, hate Napoleon, have little confidence in the Hapsburgs, like to read of uneasiness in Paris, and hail any movement that overthrows tradition and the prescriptive right of classes. If its members are Catholic, they are very mildly so; if they are Protestant, they are not enough so to harm them; and, in short, if their religious opinions are not as deep as a well, they are certainly broader than a church door. They are the party of free inquiry, liberal thought, and progress. Akin to them are what may be called the conservative liberals, the majority of whom may be Catholics in profession, but are most likely rationalists in fact; and with this party the king naturally affiliates, taking his music devoutly every Sunday morning in the Allerheiligenkirche, attached to the Residenz, and getting his religion out of Wagner; for, progressive as the youthful king is, he cannot be supposed to long for a unity which would wheel his throne off into the limbo of phantoms. The conservative liberals, therefore, while laboring for thorough internal reforms, look with little delight on the increasing strength of Prussia, and sympathize with the present liberal tendencies of Austria. Opposed to both these parties is the ultramontane, the head of which is the Romish hierarchy, and the body of which is the inert mass of ignorant peasantry, over whom the influence of the clergy seems little shaken by any of the modern moral earthquakes. Indeed I doubt if any new ideas will ever penetrate a class of peasants who still adhere to styles of costume that must have been ancient when the Turks threatened Vienna, which would be highly picturesque if they were not painfully ugly, and arrayed in which their possessors walk about in the broad light of these latter days, with entire unconsciousness that they do not belong to this age, and that their appearance is as much of an anachronism as if the figures should step out of Holbein's pictures (which Heaven forbid), or the stone images come down from the portals of the cathedral and walk about. The ultramontane party, which, so far as it is an intelligent force in modern affairs, is the Romish clergy, and nothing more, hears with aversion any hint of German unity, listens with dread to the needle-guns at Sadowa, hates Prussia in proportion as it fears her, and just now does not draw either with the Austrian Government, whose liberal tendencies are exceedingly distasteful. It relies upon that great unenlightened mass of Catholic people in Southern Germany and in Austria proper, one of whose sins is certainly not skepticism. The practical fight now in Bavaria is on the question of education; the priests being resolved to keep the schools of the people in their own control, and the liberal parties seeking to widen educational facilities and admit laymen to a share in the management of institutions of learning. Now the school visitors must all be ecclesiastics; and although their power is not to be dreaded in the cities, where teachers, like other citizens, are apt to be liberal, it gives them immense power in the rural districts. The election of the Lower House of the Bavarian parliament, whose members have a six years' tenure of office, which takes place next spring, excites uncommon interest; for the leading issue will be that of education. The little local newspapers—and every city has a small swarm of them, which are remarkable for the absence of news and an abundance of advertisements—have broken out into a style of personal controversy, which, to put it mildly, makes me, an American, feel quite at home. Both parties are very much in earnest, and both speak with a freedom that is, in itself, a very hopeful sign.

The pretensions of the ultramontane clergy are, indeed, remarkable enough to attract the attention of others besides the liberals of Bavaria. They assume an influence and an importance in the ecclesiastical profession, or rather an authority, equal to that ever asserted by the Church in its strongest days. Perhaps you will get an idea of the height of this pretension if I translate a passage which the liberal journal here takes from a sermon preached in the parish church of Ebersburg, in Ober-Dorfen, by a priest, Herr Kooperator Anton Hiring, no longer ago than August 16, 1868. It reads: "With the power of absolution, Christ has endued the priesthood with a might which is terrible to hell, and against which Lucifer himself cannot stand,—a might which, indeed, reaches over into eternity, where all other earthly powers find their limit and end,—a might, I say, which is able to break the fetters which, for an eternity, were forged through the commission of heavy sin. Yes, further, this Power of the forgiveness of sins makes the priest, in a certain measure, a second God; for God alone naturally can forgive sins. And yet this is not the highest reach of the priestly might: his power reaches still higher; he compels God himself to serve him. How so? When the priest approaches the altar, in order to bring there the holy mass-offering, there, at that moment, lifts himself up Jesus Christ, who sits at the right hand of the Father, upon his throne, in order to be ready for the beck of his priests upon earth. And scarcely does the priest begin the words of consecration, than there Christ already hovers, surrounded by the heavenly host, come down from heaven to earth, and to the altar of sacrifice, and changes, upon the words of the priest, the bread and wine into his holy flesh and blood, and permits himself then to be taken up and to lie in the hands of the priest, even though the priest is the most sinful and the most unworthy. Further, his power surpasses that of the highest archangels, and of the Queen of Heaven. Right did the holy Franciscus say, 'If I should meet a priest and an angel at the same time, I should salute the priest first, and then the angel; because the priest is possessed of far higher might and holiness than the angel.'"

The radical journal calls this "ultramontane blasphemy," and, the day after quoting it, adds a charge that must be still more annoying to the Herr Kooperator Hiring than that of blasphemy: it accuses him of plagiarism; and, to substantiate the charge, quotes almost the very same language from a sermon preached in 1785—In this it is boldly claimed that "in heaven, on earth, or under the earth, there is nothing mightier than a priest, except God; and, to be exact, God himself must obey the priest in the mass." And then, in words which I do not care to translate, the priest is made greater than the Virgin Mary, because Christ was only born of the Virgin once, while the priest "with five words, as often and wherever he will," can "bring forth the Saviour of the world." So to-day keeps firm hold of the traditions of a hundred years ago, and ultramontanism wisely defends the last citadel where the Middle Age superstition makes a stand,—the popular veneration for the clergy.

And the clergy take good care to keep up the pomps and shows even here in skeptical Munich. It was my inestimable privilege the other morning—it was All-Saints' Day—to see the archbishop in the old Frauenkirche, the ancient cathedral, where hang tattered banners that were captured from the Turks three centuries ago,—to see him seated in the choir, overlooked by saints and apostles carved in wood by some forgotten artist of the fifteenth century. I supposed he was at least an archbishop, from the retinue of priests

who attended and served him, and also from his great size. When he sat down, it required a dignitary of considerable rank to put on his hat; and when he arose to speak a few precious words, the effect was visible a good many yards from where he stood. At the close of the service he went in great state down the center aisle, preceded by the gorgeous beadle—a character that is always awe-inspiring to me in these churches, being a cross between a magnificent drum-major and a verger and two persons in livery, and followed by a train of splendidly attired priests, six of whom bore up his long train of purple silk. The whole cortege was resplendent in embroidery and ermine; and as the great man swept out of my sight, and was carried on a priestly wave into his shining carriage, and the noble footman jumped up behind, and he rolled away to his dinner, I stood leaning against a pillar, and reflected if it could be possible that that religion could be anything but genuine which had so much genuine ermine. And the organ-notes, rolling down the arches, seemed to me to have a very ultramontane sound.

CHANGING QUARTERS

Perhaps it may not interest you to know how we moved, that is, changed our apartments. I did not see it mentioned in the cable dispatches, and it may not be generally known, even in Germany; but then, the cable is so occupied with relating how his Serenity this, and his Highness that, and her Loftiness the other one, went outdoors and came in again, owing to a slight superfluity of the liquid element in the atmosphere, that it has no time to notice the real movements of the people. And yet, so dry are some of these little German newspapers of news, that it is refreshing to read, now and then, that the king, on Sunday, walked out with the Duke of Hesse after dinner (one would like to know if they also had sauerkraut and sausage), and that his prospective mother-in-law, the Empress of Russia, who was here the other day, on her way home from Como, where she was nearly drowned out by the inundation, sat for an hour on Sunday night, after the opera, in the winter garden of the palace, enjoying the most easy family intercourse.

But about moving. Let me tell you that to change quarters in the face of a Munich winter, which arrives here the 1st of November, is like changing front to the enemy just before a battle; and if we had perished in the attempt, it might have been put upon our monuments, as it is upon the out-of-cannon-cast obelisk in the Karolina Platz, erected to the memory of the thirty thousand Bavarian soldiers who fell in the disastrous Russian winter campaign of Napoleon, fighting against all the interests of Germany,—“they, too, died for their Fatherland.” Bavaria happened also to fight on the wrong side at Sadowa and I suppose that those who fell there also died for Fatherland: it is a way the Germans have of doing, and they mean nothing serious by it. But, as I was saying, to change quarters here as late as November is a little difficult, for the wise ones seek to get housed for the winter by October: they select the sunny apartments, get on the double windows, and store up wood. The plants are tied up in the gardens, the fountains are covered over, and the inhabitants go about in furs and the heaviest winter clothing long before we should think of doing so at home. And they are wise: the snow comes early, and, besides, a cruel fog, cold as the grave and penetrating as remorse, comes down out of the near Tyrol. One morning early in November, I looked out of the window to find snow falling, and the ground covered with it. There was dampness and frost enough in the air to make it cling to all the tree-twigs, and to take fantastic shapes on all the queer roofs and the slenderest pinnacles and most delicate architectural ornamentations. The city spires had a mysterious appearance in the gray haze; and above all, the round-topped towers of the old Frauenkirche, frosted with a little snow, loomed up more grandly than ever. When I went around to the Hof Garden, where I late had sat in the sun, and heard the brown horse-chestnuts drop on the leaves, the benches were now full of snow, and the fat and friendly fruit-woman at the gate had retired behind glass windows into a little shop, which she might well warm by her own person, if she radiated heat as readily as she used to absorb it on the warm autumn days, when I have marked her knitting in the sunshine.

But we are not moving. The first step we took was to advertise our wants in the “Neueste Nachrichten” (“Latest News”) newspaper. We desired, if possible, admission into some respectable German family, where we should be forced to speak German, and in which our society, if I may so express it, would be some compensation for our bad grammar. We wished also to live in the central part of the city,—in short, in the immediate neighborhood of all the objects of interest (which are here very much scattered), and to have pleasant rooms. In Dresden, where the people are not so rich as in Munich, and where different customs prevail, it is customary for the best people, I mean the families of university professors, for instance, to take in foreigners, and give them tolerable food and a liberal education. Here it is otherwise. Nearly all families occupy one floor of a building, renting just rooms enough for the family, so that their apartments are not elastic enough to take in strangers, even if they desire to do so. And generally they do not. Munich society is perhaps chargeable with being a little stiff and exclusive. Well, we advertised in the “Neueste Nachrichten.” This is the liberal paper of Munich. It is a poorly printed, black-looking daily sheet, folded in octavo size, and containing anywhere from sixteen to thirty-four pages, more or less, as it happens to have advertisements. It sometimes will not have more than two or three pages of reading matter. There will be a scrap or two of local news, the brief telegrams taken from the official paper of the day before, a bit or two of other news, and perhaps a short and slashing editorial on the ultramontane party. The advantage of printing and folding it in such small leaves is, that the size can be varied according to the demands of advertisements or news (if the German papers ever find out what that is); so that the publisher is always giving, every day, just what it pays to give that day; and the reader has his regular quantity of reading matter, and does not have to pay for advertising space, which in journals of unchangeable form cannot always be used profitably. This little journal was started something like twenty years ago. It probably spends little for news, has only one or, at most, two editors, is crowded with advertisements, which are inserted cheap, and costs, delivered, a little over six francs a year. It circulates in the city some thirty-five thousand. There is another little paper here of the same size, but not so many leaves, called “The Daily Advertiser,” with nothing but advertisements,

principally of theaters, concerts, and the daily sights, and one page devoted to some prodigious yarn, generally concerning America, of which country its readers must get the most extraordinary and frightful impression. The "Nachrichten" made the fortune of its first owner, who built himself a fine house out of it, and retired to enjoy his wealth. It was recently sold for one hundred thousand guildens; and I can see that it is piling up another fortune for its present owner. The Germans, who herein show their good sense and the high state of civilization to which they have reached, are very free advertisers, going to the newspapers with all their wants, and finding in them that aid which all interests and all sorts of people, from kaiser to kerl, are compelled, in these days, to seek in the daily journal. Every German town of any size has three or four of these little journals of flying leaves, which are excellent papers in every respect, except that they look like badly printed handbills, and have very little news and no editorials worth speaking of. An exception to these in Bavaria is the "Allgemeine Zeitung" of Augsburg, which is old and immensely respectable, and is perhaps, for extent of correspondence and splendidly written editorials on a great variety of topics, excelled by no journal in Europe except the London "Times." It gives out two editions daily, the evening one about the size of the New York "Nation;" and it has all the telegraphic news. It is absurdly old-grannyish, and is malevolent in its pretended conservatism and impartiality. Yet it circulates over forty thousand copies, and goes all over Germany.

But were we not saying something about moving? The truth is, that the best German families did not respond to our appeal with that alacrity which we had no right to expect, and did not exhibit that anxiety for our society which would have been such a pleasant evidence of their appreciation of the honor done to the royal city of Munich by the selection of it as a residence during the most disagreeable months of the year by the advertising undersigned. Even the young king, whose approaching marriage to the Russian princess, one would think, might soften his heart, did nothing to win our regard, or to show that he appreciated our residence "near" his court, and, so far as I know, never read with any sort of attention our advertisement, which was composed with as much care as Goethe's "Faust," and probably with the use of more dictionaries. And this, when he has an extraordinary large Residenz, to say nothing about other outlying palaces and comfortable places to live in, in which I know there are scores of elegantly furnished apartments, which stand idle almost the year round, and might as well be let to appreciative strangers, who would accustom the rather washy and fierce frescoes on the walls to be stared at. I might have selected rooms, say on the court which looks on the exquisite bronze fountain, Perseus with the head of Medusa, a copy of the one in Florence by Benvenuto Cellini, where we could have a southern exposure. Or we might, so it would seem, have had rooms by the winter garden, where tropical plants rejoice in perennial summer, and blossom and bear fruit, while a northern winter rages without. Yet the king did not see it "by those lamps;" and I looked in vain on the gates of the Residenz for the notice so frequently seen on other houses, of apartments to let. And yet we had responses. The day after the announcement appeared, our bell ran perpetually; and we had as many letters as if we had advertised for wives innumerable. The German notes poured in upon us in a flood; each one of them containing an offer tempting enough to beguile an angel out of paradise, at least, according to our translation: they proffered us chambers that were positively overheated by the flaming sun (which, I can take my oath, only ventures a few feet above the horizon at this season), which were friendly in appearance, splendidly furnished and near to every desirable thing, and in which, usually, some American family had long resided, and experienced a content and happiness not to be felt out of Germany.

I spent some days in calling upon the worthy frauen who made these alluring offers. The visits were full of profit to the student of human nature, but profitless otherwise. I was ushered into low, dark chambers, small and dreary, looking towards the sunless north, which I was assured were delightful and even elegant. I was taken up to the top of tall houses, through a smell of cabbage that was appalling, to find empty and dreary rooms, from which I fled in fright. We were visited by so many people who had chambers to rent, that we were impressed with the idea that all Munich was to let; and yet, when we visited the places offered, we found they were only to be let alone. One of the frauen who did us the honor to call, also wrote a note, and inclosed a letter that she had just received from an American gentleman (I make no secret of it that he came from Hartford), in which were many kindly expressions for her welfare, and thanks for the aid he had received in his study of German; and yet I think her chambers are the most uninviting in the entire city. There were people who were willing to teach us German, without rooms or board; or to lodge us without giving us German or food; or to feed us, and let us starve intellectually, and lodge where we could.

But all things have an end, and so did our hunt for lodgings. I chanced one day in my walk to find, with no help from the advertisement, very nearly what we desired,—cheerful rooms in a pleasant neighborhood, where the sun comes when it comes out at all, and opposite the Glass Palace, through which the sun streams in the afternoon with a certain splendor, and almost next door to the residence and laboratory of the famous chemist, Professor Liebig; so that we can have our feelings analyzed whenever it is desirable. When we had set up our household gods, and a fire was kindled in the tall white porcelain family monument, which is called here a stove,—and which, by the way, is much more agreeable than your hideous black and air-scorching cast-iron stoves,—and seen that the feather-beds under which we were expected to lie were thick enough to roast the half of the body, and short enough to let the other half freeze, we determined to try for a season the regular German cookery, our table heretofore having been served with food cooked in the English style with only a slight German flavor. A week of the experiment was quite enough. I do not mean to say that the viands served us were not good, only that we could not make up our minds to eat them. The Germans eat a great deal of meat; and we were obliged to take meat when we preferred vegetables. Now, when a deep dish is set before you wherein are chunks of pork reposing on stewed potatoes, and another wherein a fathomless depth of sauerkraut supports coils of boiled sausage, which, considering that you are a mortal and responsible being, and have a stomach, will you choose? Herein Munich, nearly all the bread is filled with anise or caraway seed; it is possible to get, however, the best wheat bread we have eaten in Europe, and we usually have it; but one must maintain a constant vigilance against the inroads of the fragrant seeds. Imagine, then, our despair, when one day the potato, the one vegetable we had always eaten with perfect confidence, appeared stewed with caraway seeds. This was too much for American human nature, constituted as it is. Yet the dish that finally sent us back to our ordinary and excellent way of living is one for which I have no name. It may have been compounded at different times, have been the result of many tastes or distastes: but there

was, after all, a unity in it that marked it as the composition of one master artist; there was an unspeakable harmony in all its flavors and apparently ununitable substances. It looked like a terrapin soup, but it was not. Every dive of the spoon into its dark liquid brought up a different object,—a junk of unmistakable pork, meat of the color of roast hare, what seemed to be the neck of a goose, something in strings that resembled the rags of a silk dress, shreds of cabbage, and what I am quite willing to take my oath was a bit of Astrachan fur. If Professor Liebig wishes to add to his reputation, he could do so by analyzing this dish, and publishing the result to the world.

And, while we are speaking of eating, it may be inferred that the Germans are good eaters; and although they do not begin early, seldom taking much more than a cup of coffee before noon, they make it up by very substantial dinners and suppers. To say nothing of the extraordinary dishes of meats which the restaurants serve at night, the black bread and odorous cheese and beer which the men take on board in the course of an evening would soon wear out a cast-iron stomach in America; and yet I ought to remember the deadly pie and the corroding whisky of my native land. The restaurant life of the people is, of course, different from their home life, and perhaps an evening entertainment here is no more formidable than one in America, but it is different. Let me give you the outlines of a supper to which we were invited the other night: it certainly cannot hurt you to read about it. We sat down at eight. There were first courses of three sorts of cold meat, accompanied with two sorts of salad; the one, a composite, with a potato basis, of all imaginable things that are eaten. Beer and bread were unlimited. There was then roast hare, with some supporting dish, followed by jellies of various sorts, and ornamented plates of something that seemed unable to decide whether it would be jelly or cream; and then came assorted cake and the white wine of the Rhine and the red of Hungary. We were then surprised with a dish of fried eels, with a sauce. Then came cheese; and, to crown all, enormous, triumphal-looking loaves of cake, works of art in appearance, and delicious to the taste. We sat at the table till twelve o'clock; but you must not imagine that everybody sat still all the time, or that, appearances to the contrary notwithstanding, the principal object of the entertainment was eating. The songs that were sung in Hungarian as well as German, the poems that were recited, the burlesques of actors and acting, the imitations that were inimitable, the take-off of table-tipping and of prominent musicians, the wit and constant flow of fun, as constant as the good-humor and free hospitality, the unconstrained ease of the whole evening, these things made the real supper which one remembers when the grosser meal has vanished, as all substantial things do vanish.

CHRISTMAS TIME-MUSIC

For a month Munich has been preparing for Christmas. The shop windows have had a holiday look all December. I see one every day in which are displayed all the varieties of fruits, vegetables, and confectionery possible to be desired for a feast, done in wax,—a most dismal exhibition, and calculated to make the adjoining window, which has a little fountain and some green plants waving amidst enormous pendent sausages and pigs' heads and various disagreeable hashes of pressed meat, positively enticing. And yet there are some vegetables here that I should prefer to have in wax,—for instance, sauerkraut. The toy windows are worthy of study, and next to them the bakers'. A favorite toy of the season is a little crib, with the Holy Child, in sugar or wax, lying in it in the most uncomfortable attitude. Babies here are strapped upon pillows, or between pillows, and so tied up and wound up that they cannot move a muscle, except, perhaps, the tongue; and so, exactly like little mummies, they are carried about the street by the nurses,—poor little things, packed away so, even in the heat of summer, their little faces looking out of the down in a most pitiful fashion. The popular toy is a representation, in sugar or wax, of this period of life. Generally the toy represents twins, so swathed and bound; and, not infrequently, the bold conception of the artist carries the point of the humor so far as to introduce triplets, thus sporting with the most dreadful possibilities of life.

The German bakers are very ingenious; and if they could be convinced of this great error, that because things are good separately, they must be good in combination, the produce of their ovens would be much more eatable. As it is, they make delicious cake, and of endless variety; but they also offer us conglomerate formations that may have a scientific value, but are utterly useless to a stomach not trained in Germany. Of this sort, for the most part, is the famous Lebkuchen, a sort of gingerbread manufactured in Nurnberg, and sent all over Germany: "age does not [seem to] impair, nor custom stale its infinite variety." It is very different from our simple cake of that name, although it is usually baked in flat cards. It may contain nuts or fruit, and is spoiled by a flavor of conflicting spices. I should think it might be sold by the cord, it is piled up in such quantities; and as it grows old and is much handled, it acquires that brown, not to say dirty, familiar look, which may, for aught I know, be one of its chief recommendations. The cake, however, which prevails at this season of the year comes from the Tyrol; and as the holidays approach, it is literally piled up on the fruit-stands. It is called Klatzenbrod, and is not a bread at all, but an amalgamation of fruits and spices. It is made up into small round or oblong forms; and the top is ornamented in various patterns, with split almond meats. The color is a faded black, as if it had been left for some time in a country store; and the weight is just about that of pig-iron. I had formed a strong desire, mingled with dread, to taste it, which I was not likely to gratify,—one gets so tired of such experiments after a time—when a friend sent us a ball of it. There was no occasion to call in Professor Liebig to analyze the substance: it is a plain case. The black mass contains, cut up and pressed together, figs, citron, oranges, raisins, dates, various kinds of nuts, cinnamon, nutmeg, cloves, and I know not what other spices, together with the inevitable anise and caraway seeds. It would make an excellent cannon-ball, and would be specially fatal if it hit an enemy in the stomach. These seeds invade all dishes. The cooks seem possessed of one of the rules of whist,—in case of doubt, play a trump: in case of doubt, they always put in anise seed. It is sprinkled profusely in the blackest rye bread, it gets into all the vegetables, and even into the holiday cakes.

The extensive Maximilian Platz has suddenly grown up into booths and shanties, and looks very much like a

temporary Western village. There are shops for the sale of Christmas articles, toys, cakes, and gimcracks; and there are, besides, places of amusement, if one of the sorry menageries of sick beasts with their hair half worn off can be so classed. One portion of the platz is now a lively and picturesque forest of evergreens, an extensive thicket of large and small trees, many of them trimmed with colored and gilt strips of paper. I meet in every street persons lugging home their little trees; for it must be a very poor household that cannot have its Christmas tree, on which are hung the scanty store of candy, nuts, and fruit, and the simple toys that the needy people will pinch themselves otherwise to obtain.

At this season, usually, the churches get up some representations for the children, the stable at Bethlehem, with the figures of the Virgin and Child, the wise men, and the oxen standing by. At least, the churches must be put in spick-and-span order. I confess that I like to stray into these edifices, some of them gaudy enough when they are, so to speak, off duty, when the choir is deserted, and there is only here and there a solitary worshiper at his prayers; unless, indeed, as it sometimes happens, when I fancy myself quite alone, I come by chance upon a hundred people, in some remote corner before a side chapel, where mass is going on, but so quietly that the sense of solitude in the church is not disturbed. Sometimes, when the place is left entirely to myself, and the servants who are putting it to rights and, as it were, shifting the scenes, I get a glimpse of the reality of all the pomp and parade of the services. At first I may be a little shocked with the familiar manner in which the images and statues and the gilded paraphernalia are treated, very different from the stately ceremony of the morning, when the priests are at the altar, the choir is in the organ-loft, and the people crowd nave and aisles. Then everything is sanctified and inviolate. Now, as I loiter here, the old woman sweeps and dusts about as if she were in an ordinary crockery store: the sacred things are handled without gloves. And, lo! an unclerical servant, in his shirt-sleeves, climbs up to the altar, and, taking down the silver-gilded cherubs, holds them, head down, by one fat foot, while he wipes them off with a damp cloth. To think of submitting a holy cherub to the indignity of a damp cloth!

One could never say too much about the music here. I do not mean that of the regimental bands, or the orchestras in every hall and beer-garden, or that in the churches on Sundays, both orchestral and vocal. Nearly every day, at half-past eleven, there is a parade by the Residenz, and another on the Marian Platz; and at each the bands play for half an hour. In the Loggie by the palace the music-stands can always be set out, and they are used in the platz when it does not storm; and the bands play choice overtures and selections from the operas in fine style. The bands are always preceded and followed by a great crowd as they march through the streets, people who seem to live only for this half hour in the day, and whom no mud or snow can deter from keeping up with the music. It is a little gleam of comfort in the day for the most wearied portion of the community: I mean those who have nothing to do.

But the music of which I speak is that of the conservatoire and opera. The Hof Theater, opera, and conservatoire are all under one royal direction. The latter has been recently reorganized with a new director, in accordance with the Wagner notions somewhat. The young king is cracked about Wagner, and appears to care little for other music: he brings out his operas at great expense, and it is the fashion here to like Wagner whether he is understood or not. The opera of the "Meister-Singer von Nurnberg," which was brought out last summer, occupied over five hours in the representation, which is unbearable to the Germans, who go to the opera at six o'clock or half-past, and expect to be at home before ten. His latest opera, which has not yet been produced, is founded on the Niebelungen Lied, and will take three evenings in the representation, which is almost as bad as a Chinese play. The present director of the conservatoire and opera, a Prussian, Herr von Bulow, is a friend of Wagner. There are formed here in town two parties: the Wagner and the conservative, the new and the old, the modern and classical; only the Wagnerites do not admit that their admiration of Beethoven and the older composers is less than that of the others, and so for this reason Bulow has given us more music of Beethoven than of any other composer. One thing is certain, that the royal orchestra is trained to a high state of perfection: its rendition of the grand operas and its weekly concerts in the Odeon cannot easily be surpassed. The singers are not equal to the orchestra, for Berlin and Vienna offer greater inducements; but there are people here who regard this orchestra as superlative. They say that the best orchestras in the world are in Germany; that the best in Germany is in Munich; and, therefore, you can see the inevitable deduction. We have another parallel syllogism. The greatest pianist in the world is Liszt; but then Herr Bulow is actually a better performer than Liszt; therefore you see again to what you must come. At any rate, we are quite satisfied in this provincial capital; and, if there is anywhere better music, we don't know it. Bulow's orchestra is not very large,—there are less than eighty pieces, but it is so handled and drilled, that when we hear it give one of the symphonies of Beethoven or Mendelssohn, there is little left to be desired. Bulow is a wonderful conductor, a little man, all nerve and fire, and he seems to inspire every instrument. It is worth something to see him lead an orchestra: his baton is magical; head, arms, and the whole body are in motion; he knows every note of the compositions; and the precision with which he evokes a solitary note out of a distant instrument with a jerk of his rod, or brings a wail from the concurring violins, like the moaning of a pine forest in winter, with a sweep of his arm, is most masterly. About the platform of the Odeon are the marble busts of the great composers; and while the orchestra is giving some of Beethoven's masterpieces, I like to fix my eyes on his serious and genius-full face, which seems cognizant of all that is passing, and believe that he has a posthumous satisfaction in the interpretation of his great thoughts.

The managers of the conservatoire also give vocal concerts, and there are, besides, quartette soiries; so that there are few evenings without some attraction. The opera alternates with the theater two or three times a week. The singers are, perhaps, not known in Paris and London, but some of them are not unworthy to be. There is the baritone, Herr Kindermann, who now, at the age of sixty-five, has a superb voice and manner, and has had few superiors in his time on the German stage. There is Frau Dietz, at forty-five, the best of actresses, and with a still fresh and lovely voice. There is Herr Nachbar, a tenor, who has a future; Fraulein Stehle, a soprano, young and with an uncommon voice, who enjoys a large salary, and was the favorite until another soprano, the Malinger, came and turned the heads of king and opera habitués. The resources of the Academy are, however, tolerably large; and the practice of pensioning for life the singers enables them to keep always a tolerable company. This habit of pensioning officials, as well as musicians and poets, is very agreeable to the Germans. A gentleman the other day, who expressed great surprise at the smallness of the

salary of our President, said, that, of course, Andrew Johnson would receive a pension when he retired from office. I could not explain to him how comical the idea was to me; but when I think of the American people pensioning Andrew Johnson,—well, like the fictitious Yankee in “Mugby Junction,” “I laff, I du.”

There is some fashion, in a fudgy, quaint way, here in Munich; but it is not exhibited in dress for the opera. People go—and it is presumed the music is the attraction in ordinary apparel. They save all their dress parade for the concerts; and the hall of the Odeon is as brilliant as provincial taste can make it in toilet. The ladies also go to operas and concerts unattended by gentlemen, and are brought, and fetched away, by their servants. There is a freedom and simplicity about this which I quite like; and, besides, it leaves their husbands and brothers at liberty to spend a congenial evening in the cafes, beer-gardens, and clubs. But there is always a heavy fringe of young officers and gallants both at opera and concert, standing in the outside passages. It is cheaper to stand, and one can hear quite as well, and see more.

LOOKING FOR WARM WEATHER

FROM MUNICH TO NAPLES

At all events, saith the best authority, “pray that your flight be not in winter;” and it might have added, don't go south if you desire warm weather. In January, 1869, I had a little experience of hunting after genial skies; and I will give you the benefit of it in some free running notes on my journey from Munich to Naples.

It was the middle of January, at eleven o'clock at night, that we left Munich, on a mixed railway train, choosing that time, and the slowest of slow trains, that we might make the famous Brenner Pass by daylight. It was no easy matter, at last, to pull up from the dear old city in which we had become so firmly planted, and to leave the German friends who made the place like home to us. One gets to love Germany and the Germans as he does no other country and people in Europe. There has been something so simple, honest, genuine, in our Munich life, that we look back to it with longing eyes from this land of fancy, of hand-organ music, and squalid splendor. I presume the streets are yet half the day hid in a mountain fog; but I know the superb military bands are still playing at noon in the old Marian Platz and in the Loggie by the Residenz; that at half-past six in the evening our friends are quietly stepping in to hear the opera at the Hof Theater, where everybody goes to hear the music, and nobody for display, and that they will be at home before half-past nine, and have dispatched the servant for the mugs of foaming beer; I know that they still hear every week the choice conservatoire orchestral concerts in the Odeon; and, alas that experience should force me to think of it! I have no doubt that they sip, every morning, coffee which is as much superior to that of Paris as that of Paris is to that of London; and that they eat the delicious rolls, in comparison with which those of Paris are tasteless. I wonder, in this land of wine,—and yet it must be so,—if the beer-gardens are still filled nightly; and if it could be that I should sit at a little table there, a comely lass would, before I could ask for what everybody is presumed to want, place before me a tall glass full of amber liquid, crowned with creamy foam. Are the handsome officers still sipping their coffee in the Cafe Maximilian; and, on sunny days, is the crowd of fashion still streaming down to the Isar, and the high, sightly walks and gardens beyond?

As I said, it was eleven o'clock of a clear and not very severe night; for Munich had had no snow on the ground since November. A deputation of our friends were at the station to see us off, and the farewells between the gentlemen were in the hearty fashion of the country. I know there is a prejudice with us against kissing between men; but it is only a question of taste: and the experience of anybody will tell him that the theory that this sort of salutation must necessarily be desirable between opposite sexes is a delusion. But I suppose it cannot be denied that kissing between men was invented in Germany before they wore full beards. Well, our goodbyes said, we climbed into our bare cars. There is no way of heating the German cars, except by tubes filled with hot water, which are placed under the feet, and are called foot-warmers. As we slowly moved out over the plain, we found it was cold; in an hour the foot-warmers, not hot to start with, were stone cold. You are going to sunny Italy, our friends had said: as soon as you pass the Brenner you will have sunshine and delightful weather. This thought consoled us, but did not warm our feet. The Germans, when they travel by rail, wrap themselves in furs and carry foot-sacks.

We creaked along, with many stoppings. At two o'clock we were at Rosenheim. Rosenheim is a windy place, with clear starlight, with a multitude of cars on a multiplicity of tracks, and a large, lighted refreshment-room, which has a glowing, jolly stove. We stay there an hour, toasting by the fire and drinking excellent coffee. Groups of Germans are seated at tables playing cards, smoking, and taking coffee. Other trains arrive; and huge men stalk in, from Vienna or Russia, you would say, enveloped in enormous fur overcoats, reaching to the heels, and with big fur boots coming above the knees, in which they move like elephants. Another start, and a cold ride with cooling foot-warmers, droning on to Kurfstein. It is five o'clock when we reach Kurfstein, which is also a restaurant, with a hot stove, and more Germans going on as if it were daytime; but by this time in the morning the coffee had got to be wretched.

After an hour's waiting, we dream on again, and, before we know it, come out of our cold doze into the cold dawn. Through the thick frost on the windows we see the faint outlines of mountains. Scraping away the incrustation, we find that we are in the Tyrol, high hills on all sides, no snow in the valley, a bright morning, and the snow-peaks are soon rosy in the sunrise. It is just as we expected,—little villages under the hills, and slender church spires with brick-red tops. At nine o'clock we are in Innsbruck, at the foot of the Brenner. No snow yet. It must be charming here in the summer.

During the night we have got out of Bavaria. The waiter at the restaurant wants us to pay him ninety kreuzers for our coffee, which is only six kreuzers a cup in Munich. Remembering that it takes one hundred kreuzers to make a gulden in Austria, I launch out a Bavarian gulden, and expect ten kreuzers in change. I have heard that sixty Bavarian kreuzers are equal to one hundred Austrian; but this waiter explains to me

that my gulden is only good for ninety kreuzers. I, in my turn, explain to the waiter that it is better than the coffee; but we come to no understanding, and I give up, before I begin, trying to understand the Austrian currency. During the day I get my pockets full of coppers, which are very convenient to take in change, but appear to have a very slight purchasing power in Austria even, and none at all elsewhere, and the only use for which I have found is to give to Italian beggars. One of these pieces satisfies a beggar when it drops into his hat; and then it detains him long enough in the examination of it, so that your carriage has time to get so far away that his renewed pursuit is usually unavailing.

The Brenner Pass repaid us for the pains we had taken to see it, especially as the sun shone and took the frost from our windows, and we encountered no snow on the track; and, indeed, the fall was not deep, except on the high peaks about us. Even if the engineering of the road were not so interesting, it was something to be again amidst mountains that can boast a height of ten thousand feet. After we passed the summit, and began the zigzag descent, we were on a sharp lookout for sunny Italy. I expected to lay aside my heavy overcoat, and sun myself at the first station among the vineyards. Instead of that, we bade good-by to bright sky, and plunged into a snowstorm, and, so greeted, drove down into the narrow gorges, whose steep slopes we could see were terraced to the top, and planted with vines. We could distinguish enough to know that, with the old Roman ruins, the churches and convent towers perched on the crags, and all, the scenery in summer must be finer than that of the Rhine, especially as the vineyards here are picturesque,—the vines being trained so as to hide and clothe the ground with verdure.

It was four o'clock when we reached Trent, and colder than on top of the Brenner. As the Council, owing to the dead state of its members for now three centuries, was not in session, we made no long tarry. We went into the magnificent large refreshment-room to get warm; but it was as cold as a New England barn. I asked the proprietor if we could not get at a fire; but he insisted that the room was warm, that it was heated with a furnace, and that he burned good stove-coal, and pointed to a register high up in the wall. Seeing that I looked incredulous, he insisted that I should test it. Accordingly, I climbed upon a table, and reached up my hand. A faint warmth came out; and I gave it up, and congratulated the landlord on his furnace. But the register had no effect on the great hall. You might as well try to heat the dome of St. Peter's with a lucifer-match. At dark, Allah be praised! we reached Ala, where we went through the humbug of an Italian custom-house, and had our first glimpse of Italy in the picturesque-looking idlers in red-tasseled caps, and the jabber of a strange tongue. The snow turned into a cold rain: the foot-warmers, we having reached the sunny lands, could no longer be afforded; and we shivered along till nine o'clock, dark and rainy, brought us to Verona. We emerged from the station to find a crowd of omnibuses, carriages, drivers, runners, and people anxious to help us, all vociferating in the highest key. Amidst the usual Italian clamor about nothing, we gained our hotel omnibus, and sat there for ten minutes watching the dispute over our luggage, and serenely listening to the angry vituperations of policemen and drivers. It sounded like a revolution, but it was only the ordinary Italian way of doing things; and we were at last rattling away over the broad pavements.

Of course, we stopped at a palace turned hotel, drove into a court with double flights of high stone and marble stairways, and were hurried up to the marble-mosaic landing by an active boy, and, almost before we could ask for rooms, were shown into a suite of magnificent apartments. I had a glimpse of a garden in the rear,—flowers and plants, and a balcony up which I suppose Romeo climbed to hold that immortal love-prattle with the lovesick Juliet. Boy began to light the candles. Asked in English the price of such fine rooms. Reply in Italian. Asked in German. Reply in Italian. Asked in French, with the same result. Other servants appeared, each with a piece of baggage. Other candles were lighted. Everybody talked in chorus. The landlady—a woman of elegant manners and great command of her native tongue—appeared with a candle, and joined in the melodious confusion. What is the price of these rooms? More jabber, more servants bearing lights. We seemed suddenly to have come into an illumination and a private lunatic asylum. The landlady and her troop grew more and more voluble and excited. Ah, then, if these rooms do not suit the signor and signoras, there are others; and we were whisked off to apartments yet grander, great suites with high, canopied beds, mirrors, and furniture that was luxurious a hundred years ago. The price? Again a torrent of Italian; servants pouring in, lights flashing, our baggage arriving, until, in the tumult, hopeless of any response to our inquiry for a servant who could speak anything but Italian, and when we had decided, in despair, to hire the entire establishment, a waiter appeared who was accomplished in all languages, the row subsided, and we were left alone in our glory, and soon in welcome sleep forgot our desperate search for a warm climate.

The next day it was rainy and not warm; but the sun came out occasionally, and we drove about to see some of the sights. The first Italian town which the stranger sees he is sure to remember, the outdoor life of the people is so different from that at the North. It is the fiction in Italy that it is always summer; and the people sit in the open market-place, shiver in the open doorways, crowd into corners where the sun comes, and try to keep up the beautiful pretense. The picturesque groups of idlers and traffickers were more interesting to us than the palaces with sculptured fronts and old Roman busts, or tombs of the Scaligers, and old gates. Perhaps I ought to except the wonderful and perfect Roman amphitheater, over every foot of which a handsome boy in rags followed us, looking over every wall that we looked over, peering into every hole that we peered into, thus showing his fellowship with us, and at every pause planting himself before us, and throwing a somerset, and then extending his greasy cap for coppers, as if he knew that the modern mind ought not to dwell too exclusively on hoary antiquity without some relief.

Anxious, as I have said, to find the sunny South, we left Verona that afternoon for Florence, by way of Padua and Bologna. The ride to Padua was through a plain, at this season dreary enough, were it not, here and there, for the abrupt little hills and the snowy Alps, which were always in sight, and towards sundown and between showers transcendently lovely in a purple and rosy light. But nothing now could be more desolate than the rows of unending mulberry-trees, pruned down to the stumps, through which we rode all the afternoon. I suppose they look better when the branches grow out with the tender leaves for the silkworms, and when they are clothed with grapevines. Padua was only to us a name. There we turned south, lost mountains and the near hills, and had nothing but the mulberry flats and ditches of water, and chilly rain and mist. It grew unpleasant as we went south. At dark we were riding slowly, very slowly, for miles through a country overflowed with water, out of which trees and houses loomed up in a ghastly show. At all the stations soldiers were getting on board, shouting and singing discordantly choruses from the operas; for there was a

rising at Padua, and one feared at Bologna the populace getting up insurrections against the enforcement of the grist-tax,—a tax which has made the government very unpopular, as it falls principally upon the poor.

Creeping along at such a slow rate, we reached Bologna too late for the Florence train, It was eight o'clock, and still raining. The next train went at two o'clock in the morning, and was the best one for us to take. We had supper in an inn near by, and a fair attempt at a fire in our parlor. I sat before it, and kept it as lively as possible, as the hours wore away, and tried to make believe that I was ruminating on the ancient greatness of Bologna and its famous university, some of whose chairs had been occupied by women, and upon the fact that it was on a little island in the Reno, just below here, that Octavius and Lepidus and Mark Antony formed the second Triumvirate, which put an end to what little liberty Rome had left; but in reality I was thinking of the draught on my back, and the comforts of a sunny clime. But the time came at length for starting; and in luxurious cars we finished the night very comfortably, and rode into Florence at eight in the morning to find, as we had hoped, on the other side of the Apennines, a sunny sky and balmy air.

As this is strictly a chapter of travel and weather, I may not stop to say how impressive and beautiful Florence seemed to us; how bewildering in art treasures, which one sees at a glance in the streets; or scarcely to hint how lovely were the Boboli Gardens behind the Pitti Palace, the roses, geraniums etc, in bloom, the birds singing, and all in a soft, dreamy air. The next day was not so genial; and we sped on, following our original intention of seeking the summer in winter. In order to avoid trouble with baggage and passports in Rome, we determined to book through for Naples, making the trip in about twenty hours. We started at nine o'clock in the evening, and I do not recall a more thoroughly uncomfortable journey. It grew colder as the night wore on, and we went farther south. Late in the morning we were landed at the station outside of Rome. There was a general appearance of ruin and desolation. The wind blew fiercely from the hills, and the snowflakes from the flying clouds added to the general chilliness. There was no chance to get even a cup of coffee, and we waited an hour in the cold car. If I had not been so half frozen, the consciousness that I was actually on the outskirts of the Eternal City, that I saw the Campagna and the aqueducts, that yonder were the Alban Hills, and that every foot of soil on which I looked was saturated with history, would have excited me. The sun came out here and there as we went south, and we caught some exquisite lights on the near and snowy hills; and there was something almost homelike in the miles and miles of olive orchards, that recalled the apple-trees, but for their shining silvered leaves. And yet nothing could be more desolate than the brown marshy ground, the brown hillocks, with now and then a shabby stone hut or a bit of ruin, and the flocks of sheep shivering near their corrals, and their shepherd, clad in sheepskin, as his ancestor was in the time of Romulus, leaning on his staff, with his back to the wind. Now and then a white town perched on a hillside, its houses piled above each other, relieved the eye; and I could imagine that it might be all the poets have sung of it, in the spring, though the Latin poets, I am convinced, have wonderfully imposed upon us.

To make my long story short, it happened to be colder next morning at Naples than it was in Germany. The sun shone; but the northeast wind, which the natives poetically call the Tramontane, was blowing, and the white smoke of Vesuvius rolled towards the sea. It would only last three days, it was very unusual, and all that. The next day it was colder, and the next colder yet. Snow fell, and blew about unmelted: I saw it in the streets of Pompeii.

The fountains were frozen, icicles hung from the locks of the marble statues in the Chiaia. And yet the oranges glowed like gold among their green leaves; the roses, the heliotrope, the geraniums, bloomed in all the gardens. It is the most contradictory climate. We lunched one day, sitting in our open carriage in a lemon grove, and near at hand the Lucrine Lake was half frozen over. We feasted our eyes on the brilliant light and color on the sea, and the lovely outlined mountains round the shore, and waited for a change of wind. The Neapolitans declare that they have not had such weather in twenty years. It is scarcely one's ideal of balmy Italy.

Before the weather changed, I began to feel in this great Naples, with its roaring population of over half a million, very much like the sailor I saw at the American consul's, who applied for help to be sent home, claiming to be an American. He was an oratorical bummer, and told his story with all the dignity and elevated language of an old Roman. He had been cast away in London. How cast away? Oh! it was all along of a boarding-house. And then he found himself shipped on an English vessel, and he had lost his discharge-papers; and "Listen, your honor," said he, calmly extending his right hand, "here I am cast away on this desolate island with nothing before me but wind and weather."

RAVENNA

A DEAD CITY

Ravenna is so remote from the route of general travel in Italy, that I am certain you can have no late news from there, nor can I bring you anything much later than the sixth century. Yet, if you were to see Ravenna, you would say that that is late enough. I am surprised that a city which contains the most interesting early Christian churches and mosaics, is the richest in undisturbed specimens of early Christian art, and contains the only monuments of Roman emperors still in their original positions, should be so seldom visited. Ravenna has been dead for some centuries; and because nobody has cared to bury it, its ancient monuments are yet above ground. Grass grows in its wide streets, and its houses stand in a sleepy, vacant contemplation of each other: the wind must like to mourn about its silent squares. The waves of the Adriatic once brought the commerce of the East to its wharves; but the deposits of the Po and the tides have, in process of time, made it an inland town, and the sea is four miles away.

In the time of Augustus, Ravenna was a favorite Roman port and harbor for fleets of war and merchandise.

There Theodoric, the great king of the Goths, set up his palace, and there is his enormous mausoleum. As early as A. D. 44 it became an episcopal see, with St. Apollinaris, a disciple of St. Peter, for its bishop. There some of the later Roman emperors fixed their residences, and there they repose. In and about it revolved the adventurous life of Galla Placidia, a woman of considerable talent and no principle, the daughter of Theodosius (the great Theodosius, who subdued the Arian heresy, the first emperor baptized in the true faith of the Trinity, the last who had a spark of genius), the sister of one emperor, and the mother of another,—twice a slave, once a queen, and once an empress; and she, too, rests there in the great mausoleum builded for her. There, also, lies Dante, in his tomb “by the upbraiding shore;” rejected once of ungrateful Florence, and forever after passionately longed for. There, in one of the earliest Christian churches in existence, are the fine mosaics of the Emperor Justinian and Theodora, the handsome courtesan whom he raised to the dignity and luxury of an empress on his throne in Constantinople. There is the famous forest of pines, stretching—unbroken twenty miles down the coast to Rimini, in whose cool and breezy glades Dante and Boccaccio walked and meditated, which Dryden has commemorated, and Byron has invested with the fascination of his genius; and under the whispering boughs of which moved the glittering cavalcade which fetched the bride to Rimini,—the fair Francesca, whose sinful confession Dante heard in hell.

We went down to Ravenna from Bologna one afternoon, through a country level and rich, riding along toward hazy evening, the land getting flatter as we proceeded (you know, there is a difference between level and flat), through interminable mulberry-trees and vines, and fields with the tender green of spring, with church spires in the rosy horizon; on till the meadows became marshes, in which millions of frogs sang the overture of the opening year. Our arrival, I have reason to believe, was an event in the old town. We had a crowd of moldy loafers to witness it at the station, not one of whom had ambition enough to work to earn a sou by lifting our traveling-bags. We had our hotel to ourselves, and wished that anybody else had it. The rival house was quite aware of our advent, and watched us with jealous eyes; and we, in turn, looked wistfully at it, for our own food was so scarce that, as an old traveler says, we feared that we shouldn't have enough, until we saw it on the table, when its quality made it appear too much. The next morning, when I sallied out to hire a conveyance, I was an object of interest to the entire population, who seemed to think it very odd that any one should walk about and explore the quiet streets. If I were to describe Ravenna, I should say that it is as flat as Holland and as lively as New London. There are broad streets, with high houses, that once were handsome, palaces that were once the abode of luxury, gardens that still bloom, and churches by the score. It is an open gate through which one walks unchallenged into the past, with little to break the association with the early Christian ages, their monuments undimmed by time, untouched by restoration and innovation, the whole struck with ecclesiastical death. With all that we saw that day,—churches, basilicas, mosaics, statues, mausoleums,—I will not burden these pages; but I will set down is enough to give you the local color, and to recall some of the most interesting passages in Christian history in this out-of-the-way city on the Adriatic.

Our first pilgrimage was to the Church of St. Apollinare Nuova; but why it is called new I do not know, as Theodoric built it for an Arian cathedral in about the year 500. It is a noble interior, having twenty-four marble columns of gray Cippolino, brought from Constantinople, with composite capitals, on each of which is an impost with Latin crosses sculptured on it. These columns support round arches, which divide the nave from the aisles, and on the whole length of the wall of the nave so supported are superb mosaics, full-length figures, in colors as fresh as if done yesterday, though they were executed thirteen hundred years ago. The mosaic on the left side—which is, perhaps, the finest one of the period in existence—is interesting on another account. It represents the city of Classis, with sea and ships, and a long procession of twenty-two virgins presenting offerings to the Virgin and Child, seated on a throne. The Virgin is surrounded by angels, and has a glory round her head, which shows that homage is being paid to her. It has been supposed, from the early monuments of Christian art, that the worship of the Virgin is of comparatively recent origin; but this mosaic would go to show that Mariolatry was established before the end of the sixth century. Near this church is part of the front of the palace of Theodoric, in which the Exarchs and Lombard kings subsequently resided. Its treasures and marbles Charlemagne carried off to Germany.

DOWN TO THE PINETA

We drove three miles beyond the city, to the Church of St. Apollinare in Classe, a lonely edifice in a waste of marsh, a grand old basilica, a purer specimen of Christian art than Rome or any other Italian town can boast. Just outside the city gate stands a Greek cross on a small fluted column, which marks the site of the once magnificent Basilica of St. Laurentius, which was demolished in the sixteenth century, its stone built into a new church in town, and its rich marbles carried to all-absorbing Rome. It was the last relic of the old port of Caesarea, famous since the time of Augustus. A marble column on a green meadow is all that remains of a once prosperous city. Our road lay through the marshy plain, across an elevated bridge over the sluggish united stream of the Ronco and Montone, from which there is a wide view, including the Pineta (or Pine Forest), the Church of St. Apollinare in the midst of rice-fields and marshes, and on a clear day the Alps and Apennines.

I can imagine nothing more desolate than this solitary church, or the approach to it. Laborers were busy spading up the heavy, wet ground, or digging trenches, which instantly filled with water, for the whole country was afloat. The frogs greeted us with clamorous chorus out of their slimy pools, and the mosquitoes attacked us as we rode along. I noticed about on the bogs, wherever they could find standing-room, half-naked wretches, with long spears, having several prongs like tridents, which they thrust into the grass and shallow water. Calling one of them to us, we found that his business was fishing, and that he forked out very fat and edible-looking fish with his trident. Shaggy, undersized horses were wading in the water, nipping off the thin spears of grass. Close to the church is a rickety farmhouse. If I lived there, I would as lief be a fish as a horse.

The interior of this primitive old basilica is lofty and imposing, with twenty-four handsome columns of the gray Cippolino marble, and an elevated high altar and tribune, decorated with splendid mosaics of the sixth century,—biblical subjects, in all the stiff faithfulness of the holy old times. The marble floor is green and damp and slippery. Under the tribune is the crypt, where the body of St. Apollinaris used to lie (it is now under the high altar above); and as I desired to see where he used to rest, I walked in. I also walked into about six inches of water, in the dim, irreligious light; and so made a cold-water Baptist devotee of myself. In the side aisles are wonderful old sarcophagi, containing the ashes of archbishops of Ravenna, so old that the owners' names are forgotten of two of them, which shows that a man may build a tomb more enduring than his memory. The sculptured bas-reliefs are very interesting, being early Christian emblems and curious devices,—symbols of sheep, palms, peacocks, crosses, and the four rivers of Paradise flowing down in stony streams from stony sources, and monograms, and pious rebuses. At the entrance of the crypt is an open stone book, called the Breviary of Gregory the Great. Detached from the church is the Bell Tower, a circular campanile of a sort peculiar to Ravenna, which adds to the picturesqueness of the pile, and suggests the notion that it is a mast unshipped from its vessel, the church, which consequently stands there water-logged, with no power to catch any wind, of doctrine or other, and move. I forgot to say that the basilica was launched in the year 534.

A little weary with the good but damp old Christians, we ordered our driver to continue across the marsh to the Pineta, whose dark fringe bounded all our horizon toward the Adriatic. It is the largest unbroken forest in Italy, and by all odds the most poetic in itself and its associations. It is twenty-five miles long, and from one to three in breadth, a free growth of stately pines, whose boughs are full of music and sweet odors,—a succession of lovely glades and avenues, with miles and miles of drives over the springy turf. At the point where we entered is a farmhouse. Laborers had been gathering the cones, which were heaped up in immense windrows, hundreds of feet in length. Boys and men were busy pounding out the seeds from the cones. The latter are used for fuel, and the former are pressed for their oil. They are also eaten: we have often had them served at hotel tables, and found them rather tasteless, but not unpleasant. The turf, as we drove into the recesses of the forest, was thickly covered with wild flowers, of many colors and delicate forms; but we liked best the violets, for they reminded us of home, though the driver seemed to think them less valuable than the seeds of the pine-cones. A lovely day and history and romance united to fascinate us with the place. We were driving over the spot where, eighteen centuries ago, the Roman fleet used to ride at anchor. Here, it is certain, the gloomy spirit of Dante found congenial place for meditation, and the gay Boccaccio material for fiction. Here for hours, day after day, Byron used to gallop his horse, giving vent to that restless impatience which could not all escape from his fiery pen, hearing those voices of a past and dead Italy which he, more truthfully and pathetically than any other poet, has put into living verse. The driver pointed out what is called Byron's Path, where he was wont to ride. Everybody here, indeed, knows of Byron; and I think his memory is more secure than any saint of them all in their stone boxes, partly because his poetry has celebrated the region, perhaps rather from the perpetuated tradition of his generosity. No foreigner was ever so popular as he while he lived at Ravenna. At least, the people say so now, since they find it so profitable to keep his memory alive and to point out his haunts. The Italians, to be sure, know how to make capital out of poets and heroes, and are quick to learn the curiosity of foreigners, and to gratify it for a compensation. But the evident esteem in which Byron's memory is held in the Armenian monastery of St. Lazzaro, at Venice, must be otherwise accounted for. The monks keep his library-room and table as they were when he wrote there, and like to show his portrait, and tell of his quick mastery of the difficult Armenian tongue. We have a notable example of a Person who became a monk when he was sick; but Byron accomplished too much work during the few months he was on the Island of St. Lazzaro, both in original composition and in translating English into Armenian, for one physically ruined and broken.

DANTE AND BYRON

The pilgrim to Ravenna, who has any idea of what is due to the genius of Dante, will be disappointed when he approaches his tomb. Its situation is in a not very conspicuous corner, at the foot of a narrow street, bearing the poet's name, and beside the Church of San Francisco, which is interesting as containing the tombs of the Polenta family, whose hospitality to the wandering exile has rescued their names from oblivion. Opposite the tomb is the shabby old brick house of the Polentas, where Dante passed many years of his life. It is tenanted now by all sorts of people, and a dirty carriage-shop in the courtyard kills the poetry of it. Dante died in 1321, and was at first buried in the neighboring church; but this tomb, since twice renewed, was erected, and his body removed here, in 1482. It is a square stuccoed structure, stained light green, and covered by a dome,—a tasteless monument, embellished with stucco medallions, inside, of the poet, of Virgil, of Brunetto Latini, the poet's master, and of his patron, Guido da Polenta. On the sarcophagus is the epitaph, composed in Latin by Dante himself, who seems to have thought, with Shakespeare, that for a poet to make his own epitaph was the safest thing to do. Notwithstanding the mean appearance of this sepulcher, there is none in all the soil of Italy that the traveler from America will visit with deeper interest. Near by is the house where Byron first resided in Ravenna, as a tablet records.

The people here preserve all the memorials of Byron; and, I should judge, hold his memory in something like affection. The Palace Guiccioli, in which he subsequently resided, is in another part of the town. He spent over two years in Ravenna, and said he preferred it to any place in Italy. Why I cannot see, unless it was remote from the route of travel, and the desolation of it was congenial to him. Doubtless he loved these wide, marshy expanses on the Adriatic, and especially the great forest of pines on its shore; but Byron was apt to be governed in his choice of a residence by the woman with whom he was intimate. The palace was certainly pleasanter than his gloomy house in the Strada di Porta Sisi, and the society of the Countess Guiccioli was rather a stimulus than otherwise to his literary activity. At her suggestion he wrote the "Prophecy of Dante;"

and the translation of "Francesca da Rimini" was "executed at Ravenna, where, five centuries before, and in the very house in which the unfortunate lady was born, Dante's poem had been composed." Some of his finest poems were also produced here, poems for which Venice is as grateful as Ravenna. Here he wrote "Marino Faliero," "The Two Foscari," "Morganti Maggiore," "Sardanapalus," "The Blues," "The fifth canto of Don Juan," "Cain," "Heaven and Earth," and "The Vision of Judgment." I looked in at the court of the palace,—a pleasant, quiet place,—where he used to work, and tried to guess which were the windows of his apartments. The sun was shining brightly, and a bird was singing in the court; but there was no other sign of life, nor anything to remind one of the profligate genius who was so long a guest here.

RESTING-PLACE OF CAESARS—PICTURE OF A BEAUTIFUL HERETIC

Very different from the tomb of Dante, and different in the associations it awakes, is the Rotunda or Mausoleum of Theodoric the Goth, outside the Porta Serrata, whose daughter, Amalasantha, as it is supposed, about the year 530, erected this imposing structure as a certain place "to keep his memory whole and mummy hid" for ever. But the Goth had not lain in it long before Arianism went out of fashion quite, and the zealous Roman Catholics despoiled his costly sleeping-place, and scattered his ashes abroad. I do not know that any dead person has lived in it since. The tomb is still a very solid affair,—a rotunda built of solid blocks of limestone, and resting on a ten-sided base, each side having a recess surmounted by an arch. The upper story is also decagonal, and is reached by a flight of modern stone steps. The roof is composed of a single block of Istrian limestone, scooped out like a shallow bowl inside; and, being the biggest roof-stone I ever saw, I will give you the dimensions. It is thirty-six feet in diameter, hollowed out to the depth of ten feet, four feet thick at the center, and two feet nine inches at the edges, and is estimated to weigh two hundred tons. Amalasantha must have had help in getting it up there. The lower story is partly under water. The green grass of the inclosure in which it stands is damp enough for frogs. An old woman opened the iron gate to let us in. Whether she was any relation of the ancient proprietor, I did not inquire; but she had so much trouble in, turning the key in the rusty lock, and letting us in, that I presume we were the only visitors she has had for some centuries.

Old women abound in Ravenna; at least, she was not young who showed us the mausoleum of Galla Placidia. Placidia was also prudent and foreseeing, and built this once magnificent sepulcher for her own occupation. It is in the form of a Latin cross, forty-six feet in length by about forty in width. The floor is paved with rich marbles; the cupola is covered with mosaics of the time of the empress; and in the arch over the door is a fine representation of the Good Shepherd. Behind the altar is the massive sarcophagus of marble (its cover of silver plates was long ago torn off) in which are literally the ashes of the empress. She was immured in it as a mummy, in a sitting position, clothed in imperial robes; and there the ghastly corpse sat in a cypress-wood chair, to be looked at by anybody who chose to peep through the aperture, for more than eleven hundred years, till one day, in 1577, some children introduced a lighted candle, perhaps out of compassion for her who sat so long in darkness, when her clothes caught fire, and she was burned up,—a warning to all children not to play with a dead and dry empress. In this resting-place are also the tombs of Honorius II., her brother, of Constantius III., her second husband, and of Honoria, her daughter.

There are no other undisturbed tombs of the Caesars in existence. Hers is almost the last, and the very small last, of a great succession. What thoughts of a great empire in ruins do not force themselves on one in the confined walls of this little chamber! What a woman was she whose ashes lie there! She saw and aided the ruin of the empire; but it may be said of her, that her vices were greater than her misfortunes. And what a story is her life! Born to the purple, educated in the palace at Constantinople, accomplished but not handsome, at the age of twenty she was in Rome when Alaric besieged it. Carried off captive by the Goths, she became the not unwilling object of the passion of King Adolphus, who at length married her at Narbonne. At the nuptials the king, in a Roman habit, occupied a seat lower than hers, while she sat on a throne habited as a Roman empress, and received homage. Fifty handsome youths bore to her in each hand a dish of gold, one filled with coin, and the other with precious stones,—a small part only, these hundred vessels of treasure, of the spoils the Goths brought from her country. When Adolphus, who never abated his fondness for his Roman bride, was assassinated at Barcelona, she was treated like a slave by his assassins, and driven twelve miles on foot before the horse of his murderer. Ransomed at length for six hundred thousand measures of wheat by her brother Honorius, who handed her over struggling to Constantius, one of his generals. But, once married, her reluctance ceased; and she set herself to advance the interests of herself and husband, ruling him as she had done the first one. Her purpose was accomplished when he was declared joint emperor with Honorius. He died shortly after; and scandalous stories of her intimacy with her brother caused her removal to Constantinople; but she came back again, and reigned long as the regent of her son, Valentinian III.,—a feeble youth, who never grew to have either passions or talents, and was very likely, as was said, enervated by his mother in dissolute indulgence, so that she might be supreme. But she died at Rome in 450, much praised for her orthodoxy and her devotion to the Trinity. And there was her daughter, Honoria, who ran off with a chamberlain, and afterward offered to throw herself into the arms of Attila who wouldn't take her as a gift at first, but afterward demanded her, and fought to win her and her supposed inheritance. But they were a bad lot altogether; and it is no credit to a Christian of the nineteenth century to stay in this tomb so long.

Near this mausoleum is the magnificent Basilica of St. Vitale, built in the reign of Justinian, and consecrated in 547, I was interested to see it because it was erected in confessed imitation of St. Sophia at Constantinople, is in the octagonal form, and has all the accessories of Eastern splendor, according to the architectural authorities. Its effect is really rich and splendid; and it rather dazzled us with its maze of pillars,

its upper and lower columns, its galleries, complicated capitals, arches on arches, and Byzantine intricacies. To the student of the very early ecclesiastical art, it must be an object of more interest than even of wonder. But what I cared most to see were the mosaics in the choir, executed in the time of Justinian, and as fresh and beautiful as on the day they were made. The mosaics and the exquisite arabesques on the roof of the choir, taken together, are certainly unequaled by any other early church decoration I have seen; and they are as interesting as they are beautiful. Any description of them is impossible; but mention may be made of two characteristic groups, remarkable for execution, and having yet a deeper interest.

In one compartment of the tribune is the figure of the Emperor Justinian, holding a vase with consecrated offerings, and surrounded by courtiers and soldiers. Opposite is the figure of the Empress Theodora, holding a similar vase, and attended by ladies of her court. There is a refinement and an elegance about the empress, a grace and sweet dignity, that is fascinating. This is royalty,—stately and cold perhaps: even the mouth may be a little cruel, I begin to perceive, as I think of her; but she wears the purple by divine right. I have not seen on any walls any figure walking out of history so captivating as this lady, who would seem to have been worthy of apotheosis in a Christian edifice. Can there be any doubt that this lovely woman was orthodox? She, also, has a story, which you doubtless have been recalling as you read. Is it worth while to repeat even its outlines? This charming regal woman was the daughter of the keeper of the bears in the circus at Constantinople; and she early went upon the stage as a pantomimist and buffoon. She was beautiful, with regular features, a little pale, but with a tinge of natural color, vivacious eyes, and an easy motion that displayed to advantage the graces of her small but elegant figure. I can see all that in the mosaic. But she sold her charms to whoever cared to buy them in Constantinople; she led a life of dissipation that cannot be even hinted at in these days; she went off to Egypt as the concubine of a general; was deserted, and destitute even to misery in Cairo; wandered about a vagabond in many Eastern cities, and won the reputation everywhere of the most beautiful courtesan of her time; reappeared in Constantinople; and, having, it is said, a vision of her future, suddenly took to a pretension of virtue and plain sewing; contrived to gain the notice of Justinian, to inflame his passions as she did those of all the world besides, to captivate him into first an alliance, and at length a marriage. The emperor raised her to an equal seat with himself on his throne; and she was worshiped as empress in that city where she had been admired as harlot. And on the throne she was a wise woman, courageous and chaste; and had her palaces on the Bosphorus; and took good care of her beauty, and indulged in the pleasures of a good table; had ministers who kissed her feet; a crowd of women and eunuchs in her secret chambers, whose passions she indulged; was avaricious and sometimes cruel; and founded a convent for the irreclaimably bad of her own sex, some of whom liked it, and some of whom threw themselves into the sea in despair; and when she died was an irreparable loss to her emperor. So that it seems to me it is a pity that the historian should say that she was devout, but a little heretic.

A HIGH DAY IN ROME

PALM SUNDAY IN ST. PETER'S

The splendid and tiresome ceremonies of Holy Week set in; also the rain, which held up for two days. Rome without the sun, and with rain and the bone-penetrating damp cold of the season, is a wretched place. Squalor and ruins and cheap splendor need the sun; the galleries need it; the black old masters in the dark corners of the gaudy churches need it; I think scarcely anything of a cardinal's big, blazing footman, unless the sun shines on him, and radiates from his broad back and his splendid calves; the models, who get up in theatrical costumes, and get put into pictures, and pass the world over for Roman peasants (and beautiful many of them are), can't sit on the Spanish Stairs in indolent pose when it rains; the streets are slimy and horrible; the carriages try to run over you, and stand a very good chance of succeeding, where there are no sidewalks, and you are limping along on the slippery round cobble-stones; you can't get into the country, which is the best part of Rome: but when the sun shines all this is changed; the dear old dirty town exercises, its fascinations on you then, and you speedily forget your recent misery.

Holy Week is a vexation to most people. All the world crowds here to see its exhibitions and theatrical shows, and works hard to catch a glimpse of them, and is tired out, if not disgusted, at the end. The things to see and hear are Palm Sunday in St. Peter's; singing of the Miserere by the pope's choir on Wednesday, Thursday, and Friday in the Sistine Chapel; washing of the pilgrims' feet in a chapel of St. Peter's, and serving the apostles at table by the pope on Thursday, with a papal benediction from the balcony afterwards; Easter Sunday, with the illumination of St. Peter's in the evening; and fireworks (this year in front of St. Peter's in Montorio) Monday evening. Raised seats are built up about the high altar under the dome in St. Peter's, which will accommodate a thousand, and perhaps more, ladies; and for these tickets are issued without numbers, and for twice as many as they will seat. Gentlemen who are in evening dress are admitted to stand in the reserved places inside the lines of soldiers. For the Miserere in the Sistine Chapel tickets are also issued. As there is only room for about four hundred ladies, and a thousand and more tickets are given out, you may imagine the scramble. Ladies go for hours before the singing begins, and make a grand rush when the doors are open. I do not know any sight so unseemly and cruel as a crowd of women intent on getting in to such a ceremony: they are perfectly rude and unmerciful to each other. They push and trample one another under foot; veils and dresses are torn; ladies faint away in the scrimmage, and only the strongest and most unscrupulous get in. I have heard some say, who have been in the pellmell, that, not content with elbowing and pushing and pounding, some women even stick pins into those who are in the way. I hope this latter is not true; but it is certain that the conduct of most of the women is brutal. A weak or modest or timid woman stands no more chance than she would in a herd of infuriated Campagna cattle. The same scenes are enacted in the efforts to see the pope wash feet, and serve at the table. For the possession of the seats under the dome on Palm Sunday and Easter there is a like crush. The ceremonies do not begin until half-past nine;

but ladies go between five and six o'clock in the morning, and when the passages are open they make a grand rush. The seats, except those saved for the nobility, are soon all taken, and the ladies who come after seven are lucky if they can get within the charmed circle, and find a spot to sit down on a campstool. They can then see only a part of the proceedings, and have a weary, exhausting time of it for hours. This year Rome is more crowded than ever before. There are American ladies enough to fill all the reserved places; and I fear they are energetic enough to get their share of them.

It rained Sunday; but there was a steady stream of people and carriages all the morning pouring over the Bridge of St. Angelo, and discharging into the piazza of St. Peter's. It was after nine when I arrived on the ground. There was a crowd of carriages under the colonnades, and a heavy fringe in front of them; but the hundreds of people moving over the piazza, and up the steps to the entrances, made only the impression of dozens in the vast space. I do not know if there are people enough in Rome to fill St. Peter's; certainly there was no appearance of a crowd as we entered, although they had been pouring in all the morning, and still thronged the doors. I heard a traveler say that he followed ten thousand soldiers into the church, and then lost them from sight: they disappeared in the side chapels. He did not make his affidavit as to the number of soldiers. The interior area of the building is not much greater than the square of St. Mark in Venice. To go into the great edifice is almost like going outdoors. Lines of soldiers kept a wide passage clear from the front door away down to the high altar; and there was a good mass of spectators on the outside. The tribunes for the ladies, built up under the dome, were of course, filled with masses of ladies in solemn black; and there was more or less of a press of people surging about in that vicinity. Thousands of people were also roaming about in the great spaces of the edifice; but there was nowhere else anything like a crowd. It had very much the appearance of a large fair-ground, with little crowds about favorite booths. Gentlemen in dress-coats were admitted to the circle under the dome. The pope's choir was stationed in a gallery there opposite the high altar. Back of the altar was a wide space for the dignitaries; seats were there, also, for ambassadors and those born to the purple; and the pope's seat was on a raised dais at the end. Outsiders could see nothing of what went on within there; and the ladies under the dome could only partially see, in the seats they had fought so gallantly to obtain.

St. Peter's is a good place for grand processions and ceremonies; but it is a poor one for viewing them. A procession which moves down the nave is hidden by the soldiers who stand on either side, or is visible only by sections as it passes: there is no good place to get the grand effect of the masses of color, and the total of the gorgeous pageantry. I should like to see the display upon a grand stage, and enjoy it in a coup d'oeil. It is a fine study of color and effect, and the groupings are admirable; but the whole affair is nearly lost to the mass of spectators. It must be a sublime feeling to one in the procession to walk about in such monstrous fine clothes; but what would his emotions be if more people could see him! The grand altar stuck up under the dome not only breaks the effect of what would be the fine sweep of the nave back to the apse, but it cuts off all view of the celebration of the mass behind it, and, in effect, reduces what should be the great point of display in the church to a mere chapel. And when you add to that the temporary tribunes erected under the dome for seating the ladies, the entire nave is shut off from a view of the gorgeous ceremony of high mass. The effect would be incomparable if one could stand in the door, or anywhere in the nave, and, as in other churches, look down to the end upon a great platform, with the high altar and all the sublime spectacle in full view, with the blaze of candles and the clouds of incense rising in the distance.

At half-past nine the great doors opened, and the procession began, in slow and stately moving fashion, to enter. One saw a throng of ecclesiastics in robes and ermine; the white plumes of the Guard Noble; the pages and chamberlains in scarlet; other pages, or what not, in black short-clothes, short swords, gold chains, cloak hanging from the shoulder, and stiff white ruffs; thirty-six cardinals in violet robes, with high miter-shaped white silk hats, that looked not unlike the pasteboard "trainer-caps" that boys wear when they play soldier; crucifixes, and a blazoned banner here and there; and, at last, the pope, in his red chair, borne on the shoulders of red lackeys, heaving along in a sea-sicky motion, clad in scarlet and gold, with a silver miter on his head, feebly making the papal benediction with two upraised fingers, and moving his lips in blessing. As the pope came in, a supplementary choir of men and soprano hybrids, stationed near the door, set up a high, welcoming song, or chant, which echoed rather finely through the building. All the music of the day is vocal.

The procession having reached its destination, and disappeared behind the altar of the dome, the pope dismounted, and took his seat on his throne. The blessing of the palms began, the cardinals first approaching, and afterwards the members of the diplomatic corps, the archbishops and bishops, the heads of the religious orders, and such private persons as have had permission to do so. I had previously seen the palms carried in by servants in great baskets. It is, perhaps, not necessary to say that they are not the poetical green waving palms, but stiff sort of wands, woven out of dry, yellow, split palm-leaves, sometimes four or five feet in length, braided into the semblance of a crown on top,—a kind of rough basket-work. The palms having been blessed, a procession was again formed down the nave and out the door, all in it "carrying palms in their hands," the yellow color of which added a new element of picturesqueness to the splendid pageant. The pope was carried as before, and bore in his hand a short braided palm, with gold woven in, flowers added, and the monogram "I. H. S." worked in the top. It is the pope's custom to give this away when the ceremony is over. Last year he presented it to an American lady, whose devotion attracted him; this year I saw it go away in a gilded coach in the hands of an ecclesiastic. The procession disappeared through the great portal into the vestibule, and the door closed. In a moment somebody knocked three times on the door: it opened, and the procession returned, and moved again to the rear of the altar, the singers marching with it and chanting. The cardinals then changed their violet for scarlet robes; and high mass, for an hour, was celebrated by a cardinal priest: and I was told that it was the pope's voice that we heard, high and clear, singing the passion. The choir made the responses, and performed at intervals. The singing was not without a certain power; indeed, it was marvelous how some of the voices really filled the vast spaces of the edifice, and the choruses rolled in solemn waves of sound through the arches. The singing, with the male sopranos, is not to my taste; but it cannot be denied that it had a wild and strange effect.

While this was going on behind the altar, the people outside were wandering about, looking at each other, and on the watch not to miss any of the shows of the day. People were talking, chattering, and greeting each other as they might do in the street. Here and there somebody was kneeling on the pavement, unheeding the

passing through. At several of the chapels, services were being conducted; and there was a large congregation, an ordinary church full, about each of them. But the most of those present seemed to regard it as a spectacle only; and as a display of dress, costumes, and nationalities it was almost unsurpassed. There are few more wonderful sights in this world than an Englishwoman in what she considers full dress. An English dandy is also a pleasing object. For my part, as I have hinted, I like almost as well as anything the big footmen,—those in scarlet breeches and blue gold-embroidered coats. I stood in front of one of the fine creations for some time, and contemplated him as one does the Farnese Hercules. One likes to see to what a splendor his species can come, even if the brains have all run down into the calves of the legs. There were also the pages, the officers of the pope's household, in costumes of the Middle Ages; the pope's Swiss guard in the showy harlequin uniform designed by Michael Angelo; the foot-soldiers in white short-clothes, which threatened to burst, and let them fly into pieces; there were fine ladies and gentlemen, loafers and loungers, from every civilized country, jabbering in all the languages; there were beggars in rags, and boors in coats so patched that there was probably none of the original material left; there were groups of peasants from the Campagna, the men in short jackets and sheepskin breeches with the wool side out, the women with gay-colored folded cloths on their heads, and coarse woolen gowns; a squad of wild-looking Spanish gypsies, burning-eyed, olive-skinned, hair long, black, crinkled, and greasy, as wild in raiment as in face; priests and friars, Zouaves in jaunty light gray and scarlet; rags and velvets, silks and serge cloths,—a cosmopolitan gathering poured into the world's great place of meeting,—a fine religious Vanity Fair on Sunday.

There came an impressive moment in all this confusion, a point of august solemnity. Up to that instant, what with chanting and singing the many services, and the noise of talking and walking, there was a wild babel. But at the stroke of the bell and the elevation of the Host, down went the muskets of the guard with one clang on the marble; the soldiers kneeled; the multitude in the nave, in the aisles, at all the chapels, kneeled; and for a minute in that vast edifice there was perfect stillness: if the whole great concourse had been swept from the earth, the spot where it lately was could not have been more silent. And then the military order went down the line, the soldiers rose, the crowd rose, and the mass and the hum went on.

It was all over before one; and the pope was borne out again, and the vast crowd began to discharge itself. But it was a long time before the carriages were all filled and rolled off. I stood for a half hour watching the stream go by,—the pompous soldiers, the peasants and citizens, the dazzling equipages, and jaded, exhausted women in black, who had sat or stood half a day under the dome, and could get no carriage; and the great state coaches of the cardinals, swinging high in the air, painted and gilded, with three noble footmen hanging on behind each, and a cardinal's broad face in the window.

VESUVIUS

CLIMBING A VOLCANO

Everybody who comes to Naples,—that is, everybody except the lady who fell from her horse the other day at Resina and injured her shoulder, as she was mounting for the ascent,—everybody, I say, goes up Vesuvius, and nearly every one writes impressions and descriptions of the performance. If you believe the tales of travelers, it is an undertaking of great hazard, an experience of frightful emotions. How unsafe it is, especially for ladies, I heard twenty times in Naples before I had been there a day. Why, there was a lady thrown from her horse and nearly killed, only a week ago; and she still lay ill at the next hotel, a witness of the truth of the story. I imagined her plunged down a precipice of lava, or pitched over the lip of the crater, and only rescued by the devotion of a gallant guide, who threatened to let go of her if she didn't pay him twenty francs instantly. This story, which will live and grow for years in this region, a waxing and never-waning peril of the volcano, I found, subsequently, had the foundation I have mentioned above. The lady did go to Resina in order to make the ascent of Vesuvius, mounted a horse there, fell off, being utterly unhorsewomanly, and hurt herself; but her injury had no more to do with Vesuvius than it had with the entrance of Victor Emanuel into Naples, which took place a couple of weeks after. Well, as I was saying, it is the fashion to write descriptions of Vesuvius; and you might as well have mine, which I shall give to you in rough outline.

There came a day when the Tramontane ceased to blow down on us the cold air of the snowy Apennines, and the white cap of Vesuvius, which is, by the way, worn generally like the caps of the Neapolitans, drifted inland instead of toward the sea. Warmer weather had come to make the bright sunshine no longer a mockery. For some days I had been getting the gauge of the mountain. With its white plume it is a constant quantity in the landscape: one sees it from every point of view; and we had been scarcely anywhere that volcanic remains, or signs of such action,—a thin crust shaking under our feet, as at Solfatara, where blasts of sulphurous steam drove in our faces,—did not remind us that the whole ground is uncertain, and undermined by the subterranean fires that have Vesuvius for a chimney. All the coast of the bay, within recent historic periods, in different spots at different times, has risen and sunk and risen again, in simple obedience to the pulsations of the great fiery monster below. It puffs up or sinks, like the crust of a baking apple-pie. This region is evidently not done; and I think it not unlikely it may have to be turned over again before it is. We had seen where Herculaneum lies under the lava and under the town of Resina; we had walked those clean and narrow streets of Pompeii, and seen the workmen picking away at the imbedded gravel, sand, and ashes which still cover nearly two thirds of the nice little, tight little Roman city; we had looked at the black gashes on the mountain-sides, where the lava streams had gushed and rolled and twisted over vineyards and villas and villages; and we decided to take a nearer look at the immediate cause of all this abnormal state of things.

In the morning when I awoke the sun was just rising behind Vesuvius; and there was a mighty display of

gold and crimson in that quarter, as if the curtain was about to be lifted on a grand performance, say a ballet at San Carlo, which is the only thing the Neapolitans think worth looking at. Straight up in the air, out of the mountain, rose a white pillar, spreading out at the top like a palm-tree, or, to compare it to something I have seen, to the Italian pines, that come so picturesquely into all these Naples pictures. If you will believe me, that pillar of steam was like a column of fire, from the sun shining on and through it, and perhaps from the reflection of the background of crimson clouds and blue and gold sky, spread out there and hung there in royal and extravagant profusion, to make a highway and a regal gateway, through which I could just then see coming the horses and the chariot of a southern perfect day. They said that the tree-shaped cloud was the sign of an eruption; but the hotel-keepers here are always predicting that. The eruption is usually about two or three weeks distant; and the hotel proprietors get this information from experienced guides, who observe the action of the water in the wells; so that there can be no mistake about it.

We took carriages at nine o'clock to Resina, a drive of four miles, and one of exceeding interest, if you wish to see Naples life. The way is round the curving bay by the sea; but so continuously built up is it, and so inclosed with high walls of villas, through the open gates of which the golden oranges gleam, that you seem never to leave the city. The streets and quays swarm with the most vociferous, dirty, multitudinous life. It is a drive through Rag Fair. The tall, whitey-yellow houses fronting the water, six, seven, eight stories high, are full as beehives; people are at all the open windows; garments hang from the balconies and from poles thrust out; up every narrow, gloomy, ascending street are crowds of struggling human shapes; and you see how like herrings in a box are packed the over half a million people of Naples. In front of the houses are the markets in the open air,—fish, vegetables, carts of oranges; in the sun sit women spinning from distaffs or weaving fishing-nets; and rows of children who were never washed and never clothed but once, and whose garments have nearly wasted away; beggars, fishermen in red caps, sailors, priests, donkeys, fruit-venders, street-musicians, carriages, carts, two-wheeled break-down vehicles,—the whole tangled in one wild roar and rush and babel,—a shifting, varied panorama of color, rags,—a pandemonium such as the world cannot show elsewhere, that is what one sees on the road to Resina. The drivers all drive in the streets here as if they held a commission from the devil, cracking their whips, shouting to their horses, and dashing into the thickest tangle with entire recklessness. They have one cry, used alike for getting more speed out of their horses or for checking them, or in warning to the endangered crowds on foot. It is an exclamatory grunt, which may be partially expressed by the letters "a-e-ugh." Everybody shouts it, mule-driver, "coachee," or cattle-driver; and even I, a passenger, fancied I could do it to disagreeable perfection after a time. Out of this throng in the streets I like to select the meek, patient, diminutive little donkeys, with enormous panniers that almost hide them. One would have a woman seated on top, with a child in one pannier and cabbages in the other; another, with an immense stock of market-greens on his back, or big baskets of oranges, or with a row of wine-casks and a man seated behind, adhering, by some unknown law of adhesion, to the sloping tail. Then there was the cart drawn by one diminutive donkey, or by an ox, or by an ox and a donkey, or by a donkey and horse abreast, never by any possibility a matched team. And, funniest of all, was the high, two-wheeled caleche, with one seat, and top thrown back, with long thills and poor horse. Upon this vehicle were piled, Heaven knows how, behind, before, on the thills, and underneath the high seat, sometimes ten, and not seldom as many as eighteen people, men, women, and children,—all in flaunting rags, with a colored scarf here and there, or a gay petticoat, or a scarlet cap,—perhaps a priest, with broad black hat, in the center,—driving along like a comet, the poor horse in a gallop, the bells on his ornamented saddle merrily jingling, and the whole load in a roar of merriment.

But we shall never get to Vesuvius at this rate. I will not even stop to examine the macaroni manufactories on the road. The long strips of it were hung out on poles to dry in the streets, and to get a rich color from the dirt and dust, to say nothing of its contact with the filthy people who were making it. I am very fond of macaroni. At Resina we take horses for the ascent. We had sent ahead for a guide and horses for our party of ten; but we found besides, I should think, pretty nearly the entire population of the locality awaiting us, not to count the importunate beggars, the hags, male and female, and the ordinary loafers of the place. We were besieged to take this and that horse or mule, to buy walking-sticks for the climb, to purchase lava cut into charms, and veritable ancient coins, and dug-up cameos, all manufactured for the demand. One wanted to hold the horse, or to lead it, to carry a shawl, or to show the way. In the midst of infinite clamor and noise, we at last got mounted, and, turning into a narrow lane between high walls, began the ascent, our cavalcade attended by a procession of rags and wretchedness up through the village. Some of them fell off as we rose among the vineyards, and they found us proof against begging; but several accompanied us all day, hoping that, in some unguarded moment, they could do us some slight service, and so establish a claim on us. Among these I noticed some stout fellows with short ropes, with which they intended to assist us up the steeps. If I looked away an instant, some urchin would seize my horse's bridle; and when I carelessly let my stick fall on his hand, in token for him to let go, he would fall back with an injured look, and grasp the tail, from which I could only loosen him by swinging my staff and preparing to break his head.

The ascent is easy at first between walls and the vineyards which produce the celebrated *Lachryma Christi*. After a half hour we reached and began to cross the lava of 1858, and the wild desolation and gloom of the mountain began to strike us. One is here conscious of the titanic forces at work. Sometimes it is as if a giant had ploughed the ground, and left the furrows without harrowing them to harden into black and brown stone. We could see again how the broad stream, flowing down, squeezed and squashed like mud, had taken all fantastic shapes,—now like gnarled tree roots; now like serpents in a coil; here the human form, or a part of it,—a torso or a limb,—in agony; now in other nameless convolutions and contortions, as if heaved up and twisted in fiery pain and suffering,—for there was almost a human feeling in it; and again not unlike stone billows. We could see how the cooling crust had been lifted and split and turned over by the hot stream underneath, which, continually oozing from the rent of the eruption, bore it down and pressed it upward. Even so low as the point where we crossed the lava of 1858 were fissures whence came hot air.

An hour brought us to the resting-place called the Hermitage, an osteria and observatory established by the government. Standing upon the end of a spur, it seems to be safe from the lava, whose course has always been on either side; but it must be an uncomfortable place in a shower of stones and ashes. We rode half an hour longer on horseback, on a nearly level path, to the foot of the steep ascent, the base of the great crater.

This ride gave us completely the wide and ghastly desolation of the mountain, the ruin that the lava has wrought upon slopes that were once green with vine and olive, and busy with the hum of life. This black, contorted desert waste is more sterile and hopeless than any mountain of stone, because the idea of relentless destruction is involved here. This great hummocked, sloping plain, ridged and seamed, was all about us, without cheer or relaxation of grim solitude. Before us rose, as black and bare, what the guides call the mountain, and which used to be the crater. Up one side is worked in the lava a zigzag path, steep, but not very fatiguing, if you take it slowly. Two thirds of the way up, I saw specks of people climbing. Beyond it rose the cone of ashes, out of which the great cloud of sulphurous smoke rises and rolls night and day now. On the very edge of that, on the lip of it, where the smoke rose, I also saw human shapes; and it seemed as if they stood on the brink of Tartarus and in momentarily imminent peril.

We left our horses in a wild spot, where scorched boulders had fallen upon the lava bed; and guides and boys gathered about us like cormorants: but, declining their offers to pull us up, we began the ascent, which took about three quarters of an hour. We were then on the summit, which is, after all, not a summit at all, but an uneven waste, sloping away from the Cone in the center. This sloping lava waste was full of little cracks,—not fissures with hot lava in them, or anything of the sort,—out of which white steam issued, not unlike the smoke from a great patch of burned timber; and the wind blew it along the ground towards us. It was cool, for the sun was hidden by light clouds, but not cold. The ground under foot was slightly warm. I had expected to feel some dread, or shrinking, or at least some sense of insecurity, but I did not the slightest, then or afterwards; and I think mine is the usual experience. I had no more sense of danger on the edge of the crater than I had in the streets of Naples.

We next addressed ourselves to the Cone, which is a loose hill of ashes and sand,—a natural slope, I should say, of about one and a half to one, offering no foothold. The climb is very fatiguing, because you sink in to the ankles, and slide back at every step; but it is short,—we were up in six to eight minutes,—though the ladies, who had been helped a little by the guides, were nearly exhausted, and sank down on the very edge of the crater, with their backs to the smoke. What did we see? What would you see if you looked into a steam boiler? We stood on the ashy edge of the crater, the sharp edge sloping one way down the mountain, and the other into the bowels, whence the thick, stifling smoke rose. We rolled stones down, and heard them rumbling for half a minute. The diameter of the crater on the brink of which we stood was said to be an eighth of a mile; but the whole was completely filled with vapor. The edge where we stood was quite warm.

We ate some rolls we had brought in our pockets, and some of the party tried a bottle of the wine that one of the cormorants had brought up, but found it anything but the *Lachryma Christi* it was named. We looked with longing eyes down into the vapor-boiling caldron; we looked at the wide and lovely view of land and sea; we tried to realize our awful situation, munched our dry bread, and laughed at the monstrous demands of the vagabonds about us for money, and then turned and went down quicker than we came up.

We had chosen to ascend to the old crater rather than to the new one of the recent eruption on the side of the mountain, where there is nothing to be seen. When we reached the bottom of the Cone, our guide led us to the north side, and into a region that did begin to look like business. The wind drove all the smoke round there, and we were half stifled with sulphur fumes to begin with. Then the whole ground was discolored red and yellow, and with many more gay and sulphur-suggesting colors. And it actually had deep fissures in it, over which we stepped and among which we went, out of which came blasts of hot, horrid vapor, with a roaring as if we were in the midst of furnaces. And if we came near the cracks the heat was powerful in our faces, and if we thrust our sticks down them they were instantly burned; and the guides cooked eggs; and the crust was thin, and very hot to our boots; and half the time we couldn't see anything; and we would rush away where the vapor was not so thick, and, with handkerchiefs to our mouths, rush in again to get the full effect. After we came out again into better air, it was as if we had been through the burning, fiery furnace, and had the smell of it on our garments. And, indeed, the sulphur had changed to red certain of our clothes, and noticeably my pantaloons and the black velvet cap of one of the ladies; and it was some days before they recovered their color. But, as I say, there was no sense of danger in the adventure.

We descended by a different route, on the south side of the mountain, to our horses, and made a lark of it. We went down an ash slope, very steep, where we sank in a foot or little less at every step, and there was nothing to do for it, but to run and jump. We took steps as long as if we had worn seven-league boots. When the whole party got in motion, the entire slope seemed to slide a little with us, and there appeared some danger of an avalanche. But we did n't stop for it. It was exactly like plunging down a steep hillside that is covered thickly with light, soft snow. There was a gray-haired gentleman with us, with a good deal of the boy in him, who thought it great fun.

I have said little about the view; but I might have written about nothing else, both in the ascent and descent. Naples, and all the villages which rim the bay with white, the gracefully curving arms that go out to sea, and do not quite clasp rocky Capri, which lies at the entrance, made the outline of a picture of surpassing loveliness. But as we came down, there was a sight that I am sure was unique. As one in a balloon sees the earth concave beneath, so now, from where we stood, it seemed to rise, not fall, to the sea, and all the white villages were raised to the clouds; and by the peculiar light, the sea looked exactly like sky, and the little boats on it seemed to float, like balloons in the air. The illusion was perfect. As the day waned, a heavy cloud hid the sun, and so let down the light that the waters were a dark purple. Then the sun went behind Posilipo in a perfect blaze of scarlet, and all the sea was violet. Only it still was not the sea at all; but the little chopping waves looked like flecked clouds; and it was exactly as if one of the violet, cloud-beautified skies that we see at home over some sunsets had fallen to the ground. And the slant white sails and the black specks of boats on it hung in the sky, and were as unsubstantial as the whole pageant. Capri alone was dark and solid. And as we descended and a high wall hid it, a little handsome rascal, who had attended me for an hour, now at the head and now at the tail of my pony, recalled me to the realities by the request that I should give him a franc. For what? For carrying signor's coat up the mountain. I rewarded the little liar with a German copper. I had carried my own overcoat all day.

SORRENTO DAYS

OUTLINES

The day came when we tired of the brilliancy and din of Naples, most noisy of cities. Neapolis, or Parthenope, as is well known, was founded by Parthenope, a siren who was cast ashore there. Her descendants still live here; and we have become a little weary of their inherited musical ability: they have learned to play upon many new instruments, with which they keep us awake late at night, and arouse us early in the morning. One of them is always there under the window, where the moonlight will strike him, or the early dawn will light up his love-worn visage, strumming the guitar with his horny thumb, and wailing through his nose as if his throat was full of seaweed. He is as inexhaustible as Vesuvius. We shall have to flee, or stop our ears with wax, like the sailors of Ulysses.

The day came when we had checked off the Posilipo, and the Grotto, Pozzuoli, Baiae, Cape Misenum, the Museum, Vesuvius, Pompeii, Herculaneum, the moderns buried at the Campo Santo; and we said, Let us go and lie in the sun at Sorrento. But first let us settle our geography.

The Bay of Naples, painted and sung forever, but never adequately, must consent to be here described as essentially a parallelogram, with an opening towards the southwest. The northeast side of this, with Naples in the right-hand corner, looking seaward and Castellamare in the left-hand corner, at a distance of some fourteen miles, is a vast rich plain, fringed on the shore with towns, and covered with white houses and gardens. Out of this rises the isolated bulk of Vesuvius. This growing mountain is manufactured exactly like an ant-hill.

The northwest side of the bay, keeping a general westerly direction, is very uneven, with headlands, deep bays, and outlying islands. First comes the promontory of Posilipo, pierced by two tunnels, partly natural and partly Greek and Roman work, above the entrance of one of which is the tomb of Virgil, let us believe; then a beautiful bay, the shore of which is incrustated with classic ruins. On this bay stands Pozzuoli, the ancient Puteoli where St. Paul landed one May day, and doubtless walked up this paved road, which leads direct to Rome. At the entrance, near the head of Posilipo, is the volcanic island of "shining Nisida," to which Brutus retired after the assassination of Caesar, and where he bade Portia good-by before he departed for Greece and Philippi: the favorite villa of Cicero, where he wrote many of his letters to Atticus, looked on it. Baiae, epitome of the luxury and profligacy, of the splendor and crime of the most sensual years of the Roman empire, spread there its temples, palaces, and pleasure-gardens, which crowded the low slopes, and extended over the water; and yonder is Cape Misenum, which sheltered the great fleets of Rome.

This region, which is still shaky from fires bubbling under the thin crust, through which here and there the sulphurous vapor breaks out, is one of the most sacred in the ancient world. Here are the Lucrine Lake, the Elysian Fields, the cave of the Cumean Sibyl, and the Lake Avernus. This entrance to the infernal regions was frozen over the day I saw it; so that the profane prophecy of skating on the bottomless pit might have been realized. The islands of Procida and Ischia continue and complete this side of the bay, which is about twenty miles long as the boat sails.

At Castellamare the shore makes a sharp bend, and runs southwest along the side of the Sorrentine promontory. This promontory is a high, rocky, diversified ridge, which extends out between the bays of Naples and Salerno, with its short and precipitous slope towards the latter. Below Castellamare, the mountain range of the Great St. Angelo (an offshoot of the Apennines) runs across the peninsula, and cuts off that portion of it which we have to consider. The most conspicuous of the three parts of this short range is over four thousand seven hundred feet above the Bay of Naples, and the highest land on it. From Great St. Angelo to the point, the Punta di Campanella, it is, perhaps, twelve miles by balloon, but twenty by any other conveyance. Three miles off this point lies Capri.

This promontory has a backbone of rocky ledges and hills; but it has at intervals transverse ledges and ridges, and deep valleys and chains cutting in from either side; so that it is not very passable in any direction. These little valleys and bays are warm nooks for the olive and the orange; and all the precipices and sunny slopes are terraced nearly to the top. This promontory of rocks is far from being barren.

From Castellamare, driving along a winding, rockcut road by the bay,—one of the most charming in southern Italy,—a distance of seven miles, we reach the Punta di Scutolo. This point, and the opposite headland, the Capo di Sorrento, inclose the Piano di Sorrento, an irregular plain, three miles long, encircled by limestone hills, which protect it from the east and south winds. In this amphitheater it lies, a mass of green foliage and white villages, fronting Naples and Vesuvius.

If nature first scooped out this nook level with the sea, and then filled it up to a depth of two hundred to three hundred feet with volcanic tufa, forming a precipice of that height along the shore, I can understand how the present state of things came about.

This plain is not all level, however. Decided spurs push down into it from the hills; and great chasms, deep, ragged, impassable, split in the tufa, extend up into it from the sea. At intervals, at the openings of these ravines, are little marinas, where the fishermen have their huts' and where their boats land. Little villages, separate from the world, abound on these marinas. The warm volcanic soil of the sheltered plain makes it a paradise of fruits and flowers.

Sorrento, ancient and romantic city, lies at the southwest end of this plain, built along the sheer sea precipice, and running back to the hills,—a city of such narrow streets, high walls, and luxuriant groves that it can be seen only from the heights adjacent. The ancient boundary of the city proper was the famous ravine on the east side, a similar ravine on the south, which met it at right angles, and was supplemented by a high Roman wall, and the same wall continued on the west to the sea. The growing town has pushed away the wall on the west side; but that on the south yet stands as good as when the Romans made it. There is a little attempt at a mall, with double rows of trees, under that wall, where lovers walk, and ragged, handsome

urchins play the exciting game of fives, or sit in the dirt, gambling with cards for the Sorrento currency. I do not know what sin it may be to gamble for a bit of printed paper which has the value of one sou.

The great ravine, three quarters of a mile long, the ancient boundary which now cuts the town in two, is bridged where the main street, the Corso, crosses, the bridge resting on old Roman substructions, as everything else about here does. This ravine, always invested with mystery, is the theme of no end of poetry and legend. Demons inhabit it. Here and there, in its perpendicular sides, steps have been cut for descent. Vines and lichens grow on the walls: in one place, at the bottom, an orange grove has taken root. There is even a mill down there, where there is breadth enough for a building; and altogether, the ravine is not so delivered over to the power of darkness as it used to be. It is still damp and slimy, it is true; but from above, it is always beautiful, with its luxuriant growth of vines, and at twilight mysterious. I like as well, however, to look into its entrance from the little marina, where the old fishwives are weaving nets.

These little settlements under the cliff, called marinas, are worlds in themselves, picturesque at a distance, but squalid seen close at hand. They are not very different from the little fishing-stations on the Isle of Wight; but they are more sheltered, and their inhabitants sing at their work, wear bright colors, and bask in the sun a good deal, feeling no sense of responsibility for the world they did not create. To weave nets, to fish in the bay, to sell their fish at the wharves, to eat unexciting vegetables and fish, to drink moderately, to go to the chapel of St. Antonino on Sunday, not to work on fast and feast days, nor more than compelled to any day, this is life at the marinas. Their world is what they can see, and Naples is distant and almost foreign. Generation after generation is content with the same simple life. They have no more idea of the bad way the world is in than bees in their cells.

THE VILLA NARDI

The Villa Nardi hangs over the sea. It is built on a rock, and I know not what Roman and Greek foundations, and the remains of yet earlier peoples, traders, and traffickers, whose galleys used to rock there at the base of the cliff, where the gentle waves beat even in this winter-time with a summer swing and sound of peace.

It was at the close of a day in January that I first knew the Villa Nardi,—a warm, lovely day, at the hour when the sun was just going behind the Capo di Sorrento, in order to disrobe a little, I fancy, before plunging into the Mediterranean off the end of Capri, as is his wont about this time of year. When we turned out of the little piazza, our driver was obliged to take off one of our team of three horses driven abreast, so that we could pass through the narrow and crooked streets, or rather lanes of blank walls. With cracking whip, rattling wheels, and shouting to clear the way, we drove into the Strada di San Francisca, and to an arched gateway. This led down a straight path, between olives and orange and lemon-trees, gleaming with shining leaves and fruit of gold, with hedges of rose-trees in full bloom, to another leafy arch, through which I saw tropical trees, and a terrace with a low wall and battered busts guarding it, and beyond, the blue sea, a white sail or two slanting across the opening, and the whiteness of Naples some twenty miles away on the shore.

The noble family of the Villa did not descend into the garden to welcome us, as we should have liked; in fact, they have been absent now for a long time, so long that even their ghosts, if they ever pace the terrace-walk towards the convent, would appear strange to one who should meet them; and yet our hostess, the Tramontano, did what the ancient occupants scarcely could have done, gave us the choice of rooms in the entire house. The stranger who finds himself in this secluded paradise, at this season, is always at a loss whether to take a room on the sea, with all its changeable loveliness, but no sun, or one overlooking the garden, where the sun all day pours itself into the orange boughs, and where the birds are just beginning to get up a spring twitteration. My friend, whose capacity for taking in the luxurious repose of this region is something extraordinary, has tried, I believe, nearly every room in the house, and has at length gone up to a solitary room on the top, where, like a bird on a tree he looks all ways, and, so to say, swings in the entrancing air. But, wherever you are, you will grow into content with your situation.

At the Villa Nardi we have no sound of wheels, no noise of work or traffic, no suggestion of conflict. I am under the impression that everything that was to have been done has been done. I am, it is true, a little afraid that the Saracens will come here again, and carry off more of the nut-brown girls, who lean over the walls, and look down on us from under the boughs. I am not quite sure that a French Admiral of the Republic will not some morning anchor his three-decker in front, and open fire on us; but nothing else can happen. Naples is a thousand miles away. The boom of the saluting guns of Castel Nuovo is to us scarcely an echo of modern life. Rome does not exist. And as for London and New York, they send their people and their newspapers here, but no pulse of unrest from them disturbs our tranquillity. Hemmed in on the land side by high walls, groves, and gardens, perched upon a rock two hundred feet above the water, how much more secure from invasion is this than any fabled island of the southern sea, or any remote stream where the boats of the lotus-eaters float!

There is a little terrace and flower-plot, where we sometimes sit, and over the wall of which we like to lean, and look down the cliff to the sea. This terrace is the common ground of many exotics as well as native trees and shrubs. Here are the magnolia, the laurel, the Japanese medlar, the oleander, the pepper, the bay, the date-palm, a tree called the plumbago, another from the Cape of Good Hope, the pomegranate, the elder in full leaf, the olive, salvia, heliotrope; close by is a banana-tree.

I find a good deal of companionship in the rows of plaster busts that stand on the wall, in all attitudes of listlessness, and all stages of decay. I thought at first they were penates of the premises; but better acquaintance has convinced me that they never were gods, but the clayey representations of great men and noble dames. The stains of time are on them; some have lost a nose or an ear; and one has parted with a still more important member—his head,—an accident that might profitably have befallen his neighbor, whose curly locks and villainously low forehead proclaim him a Roman emperor. Cut in the face of the rock is a

walled and winding way down to the water. I see below the archway where it issues from the underground recesses of our establishment; and there stands a bust, in serious expectation that some one will walk out and saunter down among the rocks; but no one ever does. Just at the right is a little beach, with a few old houses, and a mimic stir of life, a little curve in the cliff, the mouth of the gorge, where the waves come in with a lazy swash. Some fishing-boats ride there; and the shallow water, as I look down this sunny morning, is thickly strewn with floating peels of oranges and lemons, as if some one was brewing a gigantic bowl of punch. And there is an uncommon stir of life; for a schooner is shipping a cargo of oranges, and the entire population is in a clamor. Donkeys are coming down the winding way, with a heavy basket on either flank; stout girls are stepping lightly down with loads on their heads; the drivers shout, the donkeys bray, the people jabber and order each other about; and the oranges, in a continual stream, are poured into the long, narrow vessel, rolling in with a thud, until there is a yellow mass of them. Shouting, scolding, singing, and braying, all come up to me a little mellowed. The disorder is not so great as on the opera stage of San Carlo in Naples; and the effect is much more pleasing.

This settlement, the marina, under the cliff, used to extend along the shore; and a good road ran down there close by the water. The rock has split off, and covered it; and perhaps the shore has sunk. They tell me that those who dig down in the edge of the shallow water find sunken walls, and the remains of old foundations of Roman workmanship. People who wander there pick up bits of marble, serpentine, and malachite,—remains of the palaces that long ago fell into the sea, and have not left even the names of their owners and builders,—the ancient loafers who idled away their days as everybody must in this seductive spot. Not far from here, they point out the veritable caves of the Sirens, who have now shut up house, and gone away, like the rest of the nobility. If I had been a mariner in their day, I should have made no effort to sail by and away from their soothing shore.

I went, one day, through a long, sloping arch, near the sailors' Chapel of St. Antonino, past a pretty shrine of the Virgin, down the zigzag path to this little marina; but it is better to be content with looking at it from above, and imagining how delightful it would be to push off in one of the little tubs of boats. Sometimes, at night, I hear the fishermen coming home, singing in their lusty fashion; and I think it is a good haven to arrive at. I never go down to search for stones on the beach: I like to believe that there are great treasures there, which I might find; and I know that the green and brown and spotty appearance of the water is caused by the showing through of the pavements of courts, and marble floors of palaces, which might vanish if I went nearer, such a place of illusion is this.

The Villa Nardi stands in pleasant relations to Vesuvius, which is just across the bay, and is not so useless as it has been represented; it is our weather-sign and prophet. When the white plume on his top floats inland, that is one sort of weather; when it streams out to sea, that is another. But I can never tell which is which: nor in my experience does it much matter; for it seems impossible for Sorrento to do anything but woo us with gentle weather. But the use of Vesuvius, after all, is to furnish us a background for the violet light at sundown, when the villages at its foot gleam like a silver fringe. I have become convinced of one thing: it is always best when you build a house to have it front toward a volcano, if you can. There is just that lazy activity about a volcano, ordinarily, that satisfies your demand for something that is not exactly dead, and yet does not disturb you.

Sometimes when I wake in the night,—though I don't know why one ever wakes in the night, or the daytime either here,—I hear the bell of the convent, which is in our demesne,—a convent which is suppressed, and where I hear, when I pass in the morning, the humming of a school. At first I tried to count the hour; but when the bell went on to strike seventeen, and even twenty-one o'clock, the absurdity of the thing came over me, and I wondered whether it was some frequent call to prayer for a feeble band of sisters remaining, some reminder of midnight penance and vigil, or whether it was not something more ghostly than that, and was not responded to by shades of nuns, who were wont to look out from their narrow latticed windows upon these same gardens, as long ago as when the beautiful Queen Joanna used to come down here to repent—if she ever did repent—of her wanton ways in Naples.

On one side of the garden is a suppressed monastery. The narrow front towards the sea has a secluded little balcony, where I like to fancy the poor orphaned souls used to steal out at night for a breath of fresh air, and perhaps to see, as I did one dark evening, Naples with its lights like a conflagration on the horizon. Upon the tiles of the parapet are cheerful devices, the crossbones tied with a cord, and the like. How many heavy-hearted recluses have stood in that secluded nook, and been tempted by the sweet, lulling sound of the waves below; how many have paced along this narrow terrace, and felt like prisoners who wore paths in the stone floor where they trod; and how many stupid louts have walked there, insensible to all the charm of it!

If I pass into the Tramontano garden, it is not to escape the presence of history, or to get into the modern world, where travelers are arriving, and where there is the bustle and proverbial discontent of those who travel to enjoy themselves. In the pretty garden, which is a constant surprise of odd nooks and sunny hiding-places, with ruins, and most luxuriant ivy, is a little cottage where, I am told in confidence, the young king of Bavaria slept three nights not very long ago. I hope he slept well. But more important than the sleep, or even death, of a king, is the birth of a poet, I take it; and within this inclosure, on the eleventh day of March, 1541, Torquato Tasso, most melancholy of men, first saw the light; and here was born his noble sister Cornelia, the descendants of whose union with the cavalier Spasiano still live here, and in a manner keep the memory of the poet green with the present generation. I am indebted to a gentleman who is of this lineage for many favors, and for precise information as to the position in the house that stood here of the very room in which Tasso was born. It is also minutely given in a memoir of Tasso and his family, by Bartolommeo Capasso, whose careful researches have disproved the slipshod statements of the guidebooks, that the poet was born in a house which is still standing, farther to the west, and that the room has fallen into the sea. The descendant of the sister pointed out to me the spot on the terrace of the Tramontano where the room itself was, when the house still stood; and, of course, seeing is believing. The sun shone full upon it, as we stood there; and the air was full of the scent of tropical fruit and just-coming blossoms. One could not desire a more tranquil scene of advent into life; and the wandering, broken-hearted author of "Jerusalem Delivered" never found at court or palace any retreat so soothing as that offered him here by his steadfast sister.

If I were an antiquarian, I think I should have had Tasso born at the Villa Nardi, where I like best to stay, and where I find traces of many pilgrims from other countries. Here, in a little corner room on the terrace, Mrs. Stowe dreamed and wrote; and I expect, every morning, as I take my morning sun here by the gate, Agnes of Sorrento will come down the sweet-scented path with a basket of oranges on her head.

SEA AND SHORE

It is not always easy, when one stands upon the highlands which encircle the Piano di Sorrento, in some conditions of the atmosphere, to tell where the sea ends and the sky begins. It seems practicable, at such times, for one to take ship and sail up into heaven. I have often, indeed, seen white sails climbing up there, and fishing-boats, at secure anchor I suppose, riding apparently like balloons in the hazy air. Sea and air and land here are all kin, I suspect, and have certain immaterial qualities in common. The contours of the shores and the outlines of the hills are as graceful as the mobile waves; and if there is anywhere ruggedness and sharpness, the atmosphere throws a friendly veil over it, and tones all that is inharmonious into the repose of beauty.

The atmosphere is really something more than a medium: it is a drapery, woven, one could affirm, with colors, or dipped in oriental dyes. One might account thus for the prismatic colors I have often seen on the horizon at noon, when the sun was pouring down floods of clear golden light. The simple light here, if one could ever represent it by pen, pencil, or brush, would draw the world hither to bathe in it. It is not thin sunshine, but a royal profusion, a golden substance, a transforming quality, a vesture of splendor for all these Mediterranean shores.

The most comprehensive idea of Sorrento and the great plain on which it stands, imbedded almost out of sight in foliage, we obtained one day from our boat, as we put out round the Capo di Sorrento, and stood away for Capri. There was not wind enough for sails, but there were chopping waves, and swell enough to toss us about, and to produce bright flashes of light far out at sea. The red-shirted rowers silently bent to their long sweeps; and I lay in the tossing bow, and studied the high, receding shore. The picture is simple, a precipice of rock or earth, faced with masonry in spots, almost of uniform height from point to point of the little bay, except where a deep gorge has split the rock, and comes to the sea, forming a cove, where a cluster of rude buildings is likely to gather. Along the precipice, which now juts and now recedes a little, are villas, hotels, old convents, gardens, and groves. I can see steps and galleries cut in the face of the cliff, and caves and caverns, natural and artificial: for one can cut this tufa with a knife; and it would hardly seem preposterous to attempt to dig out a cool, roomy mansion in this rocky front with a spade.

As we pull away, I begin to see the depth of the plain of Sorrento, with its villages, walled roads, its groves of oranges, olives, lemons, its figs, pomegranates, almonds, mulberries, and acacias; and soon the terraces above, where the vineyards are planted, and the olives also. These terraces must be a brave sight in the spring, when the masses of olives are white as snow with blossoms, which fill all the plain with their sweet perfume. Above the terraces, the eye reaches the fine outline of the hill; and, to the east, the bare precipice of rock, softened by the purple light; and turning still to the left, as the boat lazily swings, I have Vesuvius, the graceful dip into the plain, and the rise to the heights of Naples, Nisida, the shining houses of Pozzuoli, Cape Misenum, Procida, and rough Ischia. Rounding the headland, Capri is before us, so sharp and clear that we seem close to it; but it is a weary pull before we get under its rocky side.

Returning from Capri late in the afternoon, we had one of those effects which are the despair of artists. I had been told that twilights are short here, and that, when the sun disappeared, color vanished from the sky. There was a wonderful light on all the inner bay, as we put off from shore. Ischia was one mass of violet color, as we got from under the island, there was the sun, a red ball of fire, just dipping into the sea. At once the whole horizon line of water became a bright crimson, which deepened as evening advanced, glowing with more intense fire, and holding a broad band of what seemed solid color for more than three quarters of an hour. The colors, meantime, on the level water, never were on painter's palette, and never were counterfeited by the changeable silks of eastern looms; and this gorgeous spectacle continued till the stars came out, crowding the sky with silver points.

Our boatmen, who had been reinforced at Capri, and were inspired either by the wine of the island or the beauty of the night, pulled with new vigor, and broke out again and again into the wild songs of this coast. A favorite was the Garibaldi song, which invariably ended in a cheer and a tiger, and threw the singers into such a spurt of excitement that the oars forgot to keep time, and there was more splash than speed. The singers all sang one part in minor: there was no harmony, the voices were not rich, and the melody was not remarkable; but there was, after all, a wild pathos in it. Music is very much here what it is in Naples. I have to keep saying to myself that Italy is a land of song; else I should think that people mistake noise for music.

The boatmen are an honest set of fellows, as Italians go; and, let us hope, not unworthy followers of their patron, St. Antonino, whose chapel is on the edge of the gorge near the Villa Nardi. A silver image of the saint, half life-size, stands upon the rich marble altar. This valuable statue has been, if tradition is correct, five times captured and carried away by marauders, who have at different times sacked Sorrento of its marbles, bronzes, and precious things, and each time, by some mysterious providence, has found its way back again,—an instance of constancy in a solid silver image which is worthy of commendation. The little chapel is hung all about with votive offerings in wax of arms, legs, heads, hands, effigies, and with coarse lithographs, in frames, of storms at sea and perils of ships, hung up by sailors who, having escaped the dangers of the deep, offer these tributes to their dear saint. The skirts of the image are worn quite smooth with kissing. Underneath it, at the back of the altar, an oil light is always burning; and below repose the bones of the holy man.

The whole shore is fascinating to one in an idle mood, and is good mousing-ground for the antiquarian. For

myself, I am content with one generalization, which I find saves a world of bother and perplexity: it is quite safe to style every excavation, cavern, circular wall, or arch by the sea, a Roman bath. It is the final resort of the antiquarians. This theory has kept me from entering the discussion, whether the substructions in the cliff under the Poggio Syracuse, a royal villa, are temples of the Sirens, or caves of Ulysses. I only know that I descend to the sea there by broad interior flights of steps, which lead through galleries and corridors, and high, vaulted passages, whence extend apartments and caves far reaching into the solid rock. At intervals are landings, where arched windows are cut out to the sea, with stone seats and protecting walls. At the base of the cliff I find a hewn passage, as if there had once been here a way of embarkation; and enormous fragments of rocks, with steps cut in them, which have fallen from above.

Were these anything more than royal pleasure galleries, where one could sit in coolness in the heat of summer and look on the bay and its shipping, in the days when the great Roman fleet used to lie opposite, above the point of Misenum? How many brave and gay retinues have swept down these broad interior stairways, let us say in the picturesque Middle Ages, to embark on voyages of pleasure or warlike forays! The steps are well worn, and must have been trodden for ages, by nobles and robbers, peasants and sailors, priests of more than one religion, and traders of many seas, who have gone, and left no record. The sun was slanting his last rays into the corridors as I musingly looked down from one of the arched openings, quite spellbound by the strangeness and dead silence of the place, broken only by the splash of waves on the sandy beach below. I had found my way down through a wooden door half ajar; and I thought of the possibility of some one's shutting it for the night, and leaving me a prisoner to await the spectres which I have no doubt throng here when it grows dark. Hastening up out of these chambers of the past, I escaped into the upper air, and walked rapidly home through the narrow orange lanes.

ON TOP OF THE HOUSE

The tiptop of the Villa Nardi is a flat roof, with a wall about it three feet high, and some little turreted affairs, that look very much like chimneys. Joseph, the gray-haired servitor, has brought my chair and table up here to-day, and here I am, established to write.

I am here above most earthly annoyances, and on a level with the heavenly influences. It has always seemed to me that the higher one gets, the easier it must be to write; and that, especially at a great elevation, one could strike into lofty themes, and launch out, without fear of shipwreck on any of the earthly headlands, in his aerial voyages. Yet, after all, he would be likely to arrive nowhere, I suspect; or, to change the figure, to find that, in parting with the taste of the earth, he had produced a flavorless composition. If it were not for the haze in the horizon to-day, I could distinguish the very house in Naples—that of Manso, Marquis of Villa, —where Tasso found a home, and where John Milton was entertained at a later day by that hospitable nobleman. I wonder, if he had come to the Villa Nardi and written on the roof, if the theological features of his epic would have been softened, and if he would not have received new suggestions for the adornment of the garden. Of course, it is well that his immortal production was not composed on this roof, and in sight of these seductive shores, or it would have been more strongly flavored with classic mythology than it is. But, letting Milton go, it may be necessary to say that my writing to-day has nothing to do with my theory of composition in an elevated position; for this is the laziest place that I have yet found.

I am above the highest olive-trees, and, if I turned that way, should look over the tops of what seems a vast grove of them, out of which a white roof, and an old time-eaten tower here and there, appears; and the sun is flooding them with waves of light, which I think a person delicately enough organized could hear beat. Beyond the brown roofs of the town, the terraced hills arise, in semicircular embrace of the plain; and the fine veil over them is partly the natural shimmer of the heat, and partly the silver duskiness of the olive-leaves. I sit with my back to all this, taking the entire force of this winter sun, which is full of life and genial heat, and does not scorch one, as I remember such a full flood of it would at home. It is putting sweetness, too, into the oranges, which, I observe, are getting redder and softer day by day. We have here, by the way, such a habit of taking up an orange, weighing it in the hand, and guessing if it is ripe, that the test is extending to other things. I saw a gentleman this morning, at breakfast, weighing an egg in the same manner; and some one asked him if it was ripe.

It seems to me that the Mediterranean was never bluer than it is to-day. It has a shade or two the advantage of the sky: though I like the sky best, after all; for it is less opaque, and offers an illimitable opportunity of exploration. Perhaps this is because I am nearer to it. There are some little ruffles of air on the sea, which I do not feel here, making broad spots of shadow, and here and there flecks and sparkles. But the schooners sail idly, and the fishing-boats that have put out from the marina float in the most dreamy manner. I fear that the fishermen who have made a show of industry, and got away from their wives, who are busily weaving nets on shore, are yielding to the seductions of the occasion, and making a day of it. And, as I look at them, I find myself debating which I would rather be, a fisherman there in the boat, rocked by the swell, and warmed by the sun, or a friar, on the terrace of the garden on the summit of Deserto, lying perfectly tranquil, and also soaked in the sun. There is one other person, now that I think of it, who may be having a good time to-day, though I do not know that I envy him. His business is a new one to me, and is an occupation that one would not care to recommend to a friend until he had tried it: it is being carried about in a basket. As I went up the new Massa road the other day, I met a ragged, stout, and rather dirty woman, with a large shallow basket on her head. In it lay her husband, a large man, though I think a little abbreviated as to his legs. The woman asked alms. Talk of Diogenes in his tub! How must the world look to a man in a basket, riding about on his wife's head? When I returned, she had put him down beside the road in the sun, and almost in danger of the passing vehicles. I suppose that the affectionate creature thought that, if he got a new injury in this way, his value in the beggar market would be increased. I do not mean to do this exemplary wife any injustice; and I only suggest the idea in this land, where every beggar who is born with a deformity has

something to thank the Virgin for. This custom of carrying your husband on your head in a basket has something to recommend it, and is an exhibition of faith on the one hand, and of devotion on the other, that is seldom met with. Its consideration is commended to my countrywomen at home. It is, at least, a new commentary on the apostolic remark, that the man is the head of the woman. It is, in some respects, a happy division of labor in the walk of life: she furnishes the locomotive power, and he the directing brains, as he lies in the sun and looks abroad; which reminds me that the sun is getting hot on my back. The little bunch of bells in the convent tower is jangling out a suggestion of worship, or of the departure of the hours. It is time to eat an orange.

Vesuvius appears to be about on a level with my eyes and I never knew him to do himself more credit than to-day. The whole coast of the bay is in a sort of obscuration, thicker than an Indian summer haze; and the veil extends almost to the top of Vesuvius. But his summit is still distinct, and out of it rises a gigantic billowy column of white smoke, greater in quantity than on any previous day of our sojourn; and the sun turns it to silver. Above a long line of ordinary looking clouds, float great white masses, formed of the sulphurous vapor. This manufacture of clouds in a clear, sunny day has an odd appearance; but it is easy enough, if one has such a laboratory as Vesuvius. How it tumbles up the white smoke! It is piled up now, I should say, a thousand feet above the crater, straight into the blue sky,—a pillar of cloud by day. One might sit here all day watching it, listening the while to the melodious spring singing of the hundreds of birds which have come to take possession of the garden, receiving southern reinforcements from Sicily and Tunis every morning, and think he was happy. But the morning has gone; and I have written nothing.

THE PRICE OF ORANGES

If ever a northern wanderer could be suddenly transported to look down upon the Piano di Sorrento, he would not doubt that he saw the Garden of the Hesperides. The orange-trees cannot well be fuller: their branches bend with the weight of fruit. With the almond-trees in full flower, and with the silver sheen of the olive leaves, the oranges are apples of gold in pictures of silver. As I walk in these sunken roads, and between these high walls, the orange boughs everywhere hang over; and through the open gates of villas I look down alleys of golden glimmer, roses and geraniums by the walk, and the fruit above,—gardens of enchantment, with never a dragon, that I can see, to guard them.

All the highways and the byways, the streets and lanes, wherever I go, from the sea to the tops of the hills, are strewn with orange-peel; so that one, looking above and below, comes back from a walk with a golden dazzle in his eyes,—a sense that yellow is the prevailing color. Perhaps the kerchiefs of the dark-skinned girls and women, which take that tone, help the impression. The inhabitants are all orange-eaters. The high walls show that the gardens are protected with great care; yet the fruit seems to be as free as apples are in a remote New England town about cider-time.

I have been trying, ever since I have been here, to ascertain the price of oranges; not for purposes of exportation, nor yet for the personal importation that I daily practice, but in order to give an American basis of fact to these idle chapters. In all the paths I meet, daily, girls and boys bearing on their heads large baskets of the fruit, and little children with bags and bundles of the same, as large as they can stagger under; and I understand they are carrying them to the packers, who ship them to New York, or to the depots, where I see them lying in yellow heaps, and where men and women are cutting them up, and removing the peel, which goes to England for preserves. I am told that these oranges are sold for a couple of francs a hundred. That seems to me so dear that I am not tempted into any speculation, but stroll back to the Tramontano, in the gardens of which I find better terms.

The only trouble is to find a sweet tree; for the Sorrento oranges are usually sour in February; and one needs to be a good judge of the fruit, and know the male orange from the female, though which it is that is the sweeter I can never remember (and should not dare to say, if I did, in the present state of feeling on the woman question),—or he might as well eat a lemon. The mercenary aspect of my query does not enter in here. I climb into a tree, and reach out to the end of the branch for an orange that has got reddish in the sun, that comes off easily and is heavy; or I tickle a large one on the top bough with a cane pole; and if it drops readily, and has a fine grain, I call it a cheap one. I can usually tell whether they are good by splitting them open and eating a quarter. The Italians pare their oranges as we do apples; but I like best to open them first, and see the yellow meat in the white casket. After you have eaten a few from one tree, you can usually tell whether it is a good tree; but there is nothing certain about it,—one bough that gets the sun will be better than another that does not, and one half of an orange will fill your mouth with more delicious juices than the other half.

The oranges that you knock off with your stick, as you walk along the lanes, don't cost anything; but they are always sour, as I think the girls know who lean over the wall, and look on with a smile: and, in that, they are more sensible than the lively dogs which bark at you from the top, and wake all the neighborhood with their clamor. I have no doubt the oranges have a market price; but I have been seeking the value the gardeners set on them themselves. As I walked towards the heights, the other morning, and passed an orchard, the gardener, who saw my ineffectual efforts, with a very long cane, to reach the boughs of a tree, came down to me with a basketful he had been picking. As an experiment on the price, I offered him a two-centime piece, which is a sort of satire on the very name of money,—when he desired me to help myself to as many oranges as I liked. He was a fine-looking fellow, with a spick-span new red Phrygian cap; and I had n't the heart to take advantage of his generosity, especially as his oranges were not of the sweetest. One ought never to abuse generosity.

Another experience was of a different sort, and illustrates the Italian love of bargaining, and their notion of a sliding scale of prices. One of our expeditions to the hills was one day making its long, straggling way

through the narrow street of a little village of the Piano, when I lingered behind my companions, attracted by a handcart with several large baskets of oranges. The cart stood untended in the street; and selecting a large orange, which would measure twelve inches in circumference, I turned to look for the owner. After some time a fellow got from the open front of the neighboring cobbler's shop, where he sat with his lazy cronies, listening to the honest gossip of the follower of St. Crispin, and sauntered towards me.

"How much for this?" I ask.

"One franc, signor," says the proprietor, with a polite bow, holding up one finger.

I shake my head, and intimate that that is altogether too much, in fact, preposterous.

The proprietor is very indifferent, and shrugs his shoulders in an amiable manner. He picks up a fair, handsome orange, weighs it in his hand, and holds it up temptingly. That also is one, franc.

I suggest one sou as a fair price, a suggestion which he only receives with a smile of slight pity, and, I fancy, a little disdain. A woman joins him, and also holds up this and that gold-skinned one for my admiration.

As I stand, sorting over the fruit, trying to please myself with size, color, and texture, a little crowd has gathered round; and I see, by a glance, that all the occupations in that neighborhood, including loafing, are temporarily suspended to witness the trade. The interest of the circle visibly increases; and others take such a part in the transaction that I begin to doubt if the first man is, after all, the proprietor.

At length I select two oranges, and again demand the price. There is a little consultation and jabber, when I am told that I can have both for a franc. I, in turn, sigh, shrug my shoulders, and put down the oranges, amid a chorus of exclamations over my graspingness. My offer of two sous is met with ridicule, but not with indifference. I can see that it has made a sensation. These simple, idle children of the sun begin to show a little excitement. I at length determine upon a bold stroke, and resolve to show myself the Napoleon of oranges, or to meet my Waterloo. I pick out four of the largest oranges in the basket, while all eyes are fixed on me intently, and, for the first time, pull out a piece of money. It is a two-sous piece. I offer it for the four oranges.

"No, no, no, no, signor! Ah, signor! ah, signor!" in a chorus from the whole crowd.

I have struck bottom at last, and perhaps got somewhere near the value; and all calmness is gone. Such protestations, such indignation, such sorrow, I have never seen before from so small a cause. It cannot be thought of; it is mere ruin! I am, in turn, as firm, and nearly as excited in seeming. I hold up the fruit, and tender the money.

"No, never, never! The signor cannot be in earnest."

Looking round me for a moment, and assuming a theatrical manner, befitting the gestures of those about me, I fling the fruit down, and, with a sublime renunciation, stalk away.

There is instantly a buzz and a hum that rises almost to a clamor. I have not proceeded far, when a skinny old woman runs after me, and begs me to return. I go back, and the crowd parts to receive me.

The proprietor has a new proposition, the effect of which upon me is intently watched. He proposes to give me five big oranges for four sous. I receive it with utter scorn, and a laugh of derision. I will give two sous for the original four, and not a centesimo more. That I solemnly say, and am ready to depart. Hesitation and renewed conference; but at last the proprietor relents; and, with the look of one who is ruined for life, and who yet is willing to sacrifice himself, he hands me the oranges. Instantly the excitement is dead, the crowd disperses, and the street is as quiet as ever; when I walk away, bearing my hard-won treasures.

A little while after, as I sat upon the outer wall of the terrace of the Camaldoli, with my feet hanging over, these same oranges were taken from my pockets by Americans; so that I am prevented from making any moral reflections upon the honesty of the Italians.

There is an immense garden of oranges and lemons at the village of Massa, through which travelers are shown by a surly fellow, who keeps watch of his trees, and has a bulldog lurking about for the unwary. I hate to see a bulldog in a fruit orchard. I have eaten a good many oranges there, and been astonished at the boughs of immense lemons which bend the trees to the ground. I took occasion to measure one of the lemons, called a citron-lemon, and found its circumference to be twenty-one inches one way by fifteen inches the other,—about as big as a railway conductor's lantern. These lemons are not so sour as the fellow who shows them: he is a mercenary dog, and his prices afford me no clew to the just value of oranges.

I like better to go to a little garden in the village of Meta, under a sunny precipice of rocks overhung by the ruined convent of Camaldoli. I turn up a narrow lane, and push open the wooden door in the garden of a little villa. It is a pretty garden; and, besides the orange and lemon-trees on the terrace, it has other fruit-trees, and a scent of many flowers. My friend, the gardener, is sorting oranges from one basket to another, on a green bank, and evidently selling the fruit to some women, who are putting it into bags to carry away.

When he sees me approach, there is always the same pantomime. I propose to take some of the fruit he is sorting. With a knowing air, and an appearance of great mystery, he raises his left hand, the palm toward me, as one says hush. Having dispatched his business, he takes an empty basket, and with another mysterious flourish, desiring me to remain quiet, he goes to a storehouse in one corner of the garden, and returns with a load of immense oranges, all soaked with the sun, ripe and fragrant, and more tempting than lumps of gold. I take one, and ask him if it is sweet. He shrugs his shoulders, raises his hands, and, with a sidewise shake of the head, and a look which says, How can you be so faithless? makes me ashamed of my doubts.

I cut the thick skin, which easily falls apart and discloses the luscious quarters, plump, juicy, and waiting to melt in the mouth. I look for a moment at the rich pulp in its soft incasement, and then try a delicious morsel. I nod. My gardener again shrugs his shoulders, with a slight smile, as much as to say, It could not be otherwise, and is evidently delighted to have me enjoy his fruit. I fill capacious pockets with the choicest; and, if I have friends with me, they do the same. I give our silent but most expressive entertainer half a franc, never more; and he always seems surprised at the size of the largesse. We exhaust his basket, and he proposes to get more.

When I am alone, I stroll about under the heavily-laden trees, and pick up the largest, where they lie thickly on the ground, liking to hold them in my hand and feel the agreeable weight, even when I can carry away no

more. The gardener neither follows nor watches me; and I think perhaps knows, and is not stingy about it, that more valuable to me than the oranges I eat or take away are those on the trees among the shining leaves. And perhaps he opines that I am from a country of snow and ice, where the year has six hostile months, and that I have not money enough to pay for the rich possession of the eye, the picture of beauty, which I take with me.

FASCINATION

There are three places where I should like to live; naming them in the inverse order of preference,—the Isle of Wight, Sorrento, and Heaven. The first two have something in common, the almost mystic union of sky and sea and shore, a soft atmospheric suffusion that works an enchantment, and puts one into a dreamy mood. And yet there are decided contrasts. The superabundant, soaking sunshine of Sorrento is of very different quality from that of the Isle of Wight. On the island there is a sense of home, which one misses on this promontory, the fascination of which, no less strong, is that of a southern beauty, whose charms conquer rather than win. I remember with what feeling I one day unexpectedly read on a white slab, in the little inclosure of Bonchurch, where the sea whispered as gently as the rustle of the ivy-leaves, the name of John Sterling. Could there be any fitter resting-place for that most, weary, and gentle spirit? There I seemed to know he had the rest that he could not have anywhere on these brilliant historic shores. Yet so impressible was his sensitive nature, that I doubt not, if he had given himself up to the enchantment of these coasts in his lifetime, it would have led him by a spell he could not break.

I am sometimes in doubt what is the spell of Sorrento, and half believe that it is independent of anything visible. There is said to be a fatal enchantment about Capri. The influences of Sorrento are not so dangerous, but are almost as marked. I do not wonder that the Greeks peopled every cove and sea-cave with divinities, and built temples on every headland and rocky islet here; that the Romans built upon the Grecian ruins; that the ecclesiastics in succeeding centuries gained possession of all the heights, and built convents and monasteries, and set out vineyards, and orchards of olives and oranges, and took root as the creeping plants do, spreading themselves abroad in the sunshine and charming air. The Italian of to-day does not willingly emigrate, is tempted by no seduction of better fortune in any foreign clime. And so in all ages the swarming populations have clung to these shores, filling all the coasts and every nook in these almost inaccessible hills with life. Perhaps the delicious climate, which avoids all extremes, sufficiently accounts for this; and yet I have sometimes thought there is a more subtle reason why travelers from far lands are spellbound here, often against will and judgment, week after week, month after month.

However this may be, it is certain that strangers who come here, and remain long enough to get entangled in the meshes which some influence, I know not what, throws around them, are in danger of never departing. I know there are scores of travelers, who whisk down from Naples, guidebook in hand, goaded by the fell purpose of seeing every place in Europe, ascend some height, buy a load of the beautiful inlaid woodwork, perhaps row over to Capri and stay five minutes in the azure grotto, and then whisk away again, untouched by the glamour of the place. Enough that they write "delightful spot" in their diaries, and hurry off to new scenes, and more noisy life. But the visitor who yields himself to the place will soon find his power of will departing. Some satirical people say, that, as one grows strong in body here, he becomes weak in mind. The theory I do not accept: one simply folds his sails, unships his rudder, and waits the will of Providence, or the arrival of some compelling fate. The longer one remains, the more difficult it is to go. We have a fashion—indeed, I may call it a habit—of deciding to go, and of never going. It is a subject of infinite jest among the habitués of the villa, who meet at table, and who are always bidding each other good-by. We often go so far as to write to Naples at night, and bespeak rooms in the hotels; but we always countermand the order before we sit down to breakfast. The good-natured mistress of affairs, the head of the bureau of domestic relations, is at her wits' end, with guests who always promise to go and never depart. There are here a gentleman and his wife, English people of decision enough, I presume, in Cornwall, who packed their luggage before Christmas to depart, but who have not gone towards the end of February,—who daily talk of going, and little by little unpack their wardrobe, as their determination oozes out. It is easy enough to decide at night to go next day; but in the morning, when the soft sunshine comes in at the window, and when we descend and walk in the garden, all our good intentions vanish. It is not simply that we do not go away, but we have lost the motive for those long excursions which we made at first, and which more adventurous travelers indulge in. There are those here who have intended for weeks to spend a day on Capri. Perfect day for the expedition succeeds perfect day, boatload after boatload sails away from the little marina at the base of the cliff, which we follow with eyes of desire, but—to-morrow will do as well. We are powerless to break the enchantment.

I confess to the fancy that there is some subtle influence working this sea-change in us, which the guidebooks, in their enumeration of the delights of the region, do not touch, and which maybe reaches back beyond the Christian era. I have always supposed that the story of Ulysses and the Sirens was only a fiction of the poets, intended to illustrate the allurements of a soul given over to pleasure, and deaf to the call of duty and the excitement of a grapple with the world. But a lady here, herself one of the entranced, tells me that whoever climbs the hills behind Sorrento, and looks upon the Isle of the Sirens, is struck with an inability to form a desire to depart from these coasts. I have gazed at those islands more than once, as they lie there in the Bay of Salerno; and it has always happened that they have been in a half-misty and not uncolored sunlight, but not so draped that I could not see they were only three irregular rocks, not far from shore, one of them with some ruins on it. There are neither sirens there now, nor any other creatures; but I should be sorry to think I should never see them again. When I look down on them, I can also turn and behold on the other side, across the Bay of Naples, the Posilipo, where one of the enchanters who threw magic over them is said to lie in his high tomb at the opening of the grotto. Whether he does sleep in his urn in that exact spot is of no moment. Modern life has disillusioned this region to a great extent; but the romance that the old poets

have woven about these bays and rocky promontories comes very easily back upon one who submits himself long to the eternal influences of sky and sea which made them sing. It is all one,—to be a Roman poet in his villa, a lazy friar of the Middle Ages toasting in the sun, or a modern idler, who has drifted here out of the active currents of life, and cannot make up his mind to depart.

MONKISH PERCHES

On heights at either end of the Piano di Sorrento, and commanding it, stood two religious houses: the Convent of the Carnaldoli to the northeast, on the crest of the hill above Meta; the Carthusian Monastery of the Deserto, to the southwest, three miles above Sorrento. The longer I stay here, the more respect I have for the taste of the monks of the Middle Ages. They invariably secured the best places for themselves. They seized all the strategic points; they appropriated all the commanding heights; they knew where the sun would best strike the grapevines; they perched themselves wherever there was a royal view. When I see how unerringly they did select and occupy the eligible places, I think they were moved by a sort of inspiration. In those days, when the Church took the first choice in everything, the temptation to a Christian life must have been strong.

The monastery at the Deserto was suppressed by the French of the first republic, and has long been in a ruinous condition. Its buildings crown the apex of the highest elevation in this part of the promontory: from its roof the fathers paternally looked down upon the churches and chapels and nunneries which thickly studded all this region; so that I fancy the air must have been full of the sound of bells, and of incense perpetually ascending. They looked also upon St. Agata under the hill, with a church bigger than itself; upon more distinct Massa, with its chapels and cathedral and overlooking feudal tower; upon Torca, the Greek Theorica, with its Temple of Apollo, the scene yet of an annual religious festival, to which the peasants of Sorrento go as their ancestors did to the shrine of the heathen god; upon olive and orange orchards, and winding paths and wayside shrines innumerable. A sweet and peaceful scene in the foreground, it must have been, and a whole horizon of enchantment beyond the sunny peninsula over which it lorded: the Mediterranean, with poetic Capri, and Ischia, and all the classic shore from Cape Misenum, Baiae, and Naples, round to Vesuvius; all the sparkling Bay of Naples; and on the other side the Bay of Salerno, covered with the fleets of the commerce of Amalfi, then a republican city of fifty thousand people; and Grecian Paestum on the marshy shore, even then a ruin, its deserted porches and columns monuments of an architecture never equaled elsewhere in Italy. Upon this charming perch, the old Carthusian monks took the summer breezes and the winter sun, pruned their olives, and trimmed their grapevines, and said prayers for the poor sinners toiling in the valleys below.

The monastery is a desolate old shed now. We left our donkeys to eat thistles in front, while we climbed up some dilapidated steps, and entered the crumbling hall. The present occupants are half a dozen monks, and fine fellows too, who have an orphan school of some twenty lads. We were invited to witness their noonday prayers. The flat-roofed rear buildings extend round an oblong, quadrangular space, which is a rich garden, watered from capacious tanks, and coaxed into easy fertility by the impregnating sun. Upon these roofs the brothers were wont to walk, and here they sat at peaceful evening. Here, too, we strolled; and here I could not resist the temptation to lie an unheeded hour or two, soaking in the benignant February sun, above every human concern and care, looking upon a land and sea steeped in romance. The sky was blue above; but in the south horizon, in the direction of Tunis, were the prismatic colors. Why not be a monk, and lie in the sun?

One of the handsome brothers invited us into the refectory, a place as bare and cheerless as the feeding-room of a reform school, and set before us bread and cheese, and red wine, made by the monks. I notice that the monks do not water their wine so much as the osteria keepers do; which speaks equally well for their religion and their taste. The floor of the room was brick, the table plain boards, and the seats were benches; not much luxury. The monk who served us was an accomplished man, traveled, and master of several languages. He spoke English a little. He had been several years in America, and was much interested when we told him our nationality.

“Does the signor live near Mexico?”

“Not in dangerous proximity,” we replied; but we did not forfeit his good opinion by saying that we visited it but seldom.

Well, he had seen all quarters of the globe: he had been for years a traveler, but he had come back here with a stronger love for it than ever; it was to him the most delightful spot on earth, he said. And we could not tell him where its equal is. If I had nothing else to do, I think I should cast in my lot with him,—at least for a week.

But the monks never got into a cozier nook than the Convent of the Camaldoli. That also is suppressed: its gardens, avenues, colonnaded walks, terraces, buildings, half in ruins. It is the level surface of a hill, sheltered on the east by higher peaks, and on the north by the more distant range of Great St. Angelo, across the valley, and is one of the most extraordinarily fertile plots of ground I ever saw. The rich ground responds generously to the sun. I should like to have seen the abbot who grew on this fat spot. The workmen were busy in the garden, spading and pruning.

A group of wild, half-naked children came about us begging, as we sat upon the walls of the terrace,—the terrace which overhangs the busy plain below, and which commands the entire, varied, nooky promontory, and the two bays. And these children, insensible to beauty, want centesimi!

In the rear of the church are some splendid specimens of the umbrella-like Italian pine. Here we found, also, a pretty little ruin,—it might be Greek and—it might be Druid for anything that appeared, ivy-clad, and suggesting a religion older than that of the convent. To the east we look into a fertile, terraced ravine; and

beyond to a precipitous brown mountain, which shows a sharp outline against the sky; halfway up are nests of towns, white houses, churches, and above, creeping along the slope, the thread of an ancient road, with stone arches at intervals, as old as Caesar.

We descend, skirting for some distance the monastery walls, over which patches of ivy hang like green shawls. There are flowers in profusion, scented violets, daisies, dandelions, and crocuses, large and of the richest variety, with orange pistils, and stamens purple and violet, the back of every alternate leaf exquisitely penciled.

We descend into a continuous settlement, past shrines, past brown, sturdy men and handsome girls working in the vineyards; we descend—but words express nothing—into a wonderful ravine, a sort of refined Swiss scene,—high, bare steps of rock butting over a chasm, ruins, old walls, vines, flowers. The very spirit of peace is here, and it is not disturbed by the sweet sound of bells echoed in the passes. On narrow ledges of precipices, aloft in the air where it would seem that a bird could scarcely light, we distinguish the forms of men and women; and their voices come down to us. They are peasants cutting grass, every spire of which is too precious to waste.

We descend, and pass by a house on a knoll, and a terrace of olives extending along the road in front. Half a dozen children come to the road to look at us as we approach, and then scamper back to the house in fear, tumbling over each other and shouting, the eldest girl making good her escape with the baby. My companion swings his hat, and cries, "Hullo, baby!" And when we have passed the gate, and are under the wall, the whole ragged, brown-skinned troop scurry out upon the terrace, and run along, calling after us, in perfect English, as long as we keep in sight, "Hullo, baby!" "Hullo, baby!" The next traveler who goes that way will no doubt be hailed by the quick-witted natives with this salutation; and, if he is of a philological turn, he will probably benefit his mind by running the phrase back to its ultimate Greek roots.

A DRY TIME

For three years, once upon a time, it did not rain in Sorrento. Not a drop out of the clouds for three years, an Italian lady here, born in Ireland, assures me. If there was an occasional shower on the Piano during all that drought, I have the confidence in her to think that she would not spoil the story by noticing it.

The conformation of the hills encircling the plain would be likely to lead any shower astray, and discharge it into the sea, with whatever good intentions it may have started down the promontory for Sorrento. I can see how these sharp hills would tear the clouds asunder, and let out all their water, while the people in the plain below watched them with longing eyes. But it can rain in Sorrento. Occasionally the northeast wind comes down with whirling, howling fury, as if it would scoop villages and orchards out of the little nook; and the rain, riding on the whirlwind, pours in drenching floods. At such times I hear the beat of the waves at the foot of the rock, and feel like a prisoner on an island. Eden would not be Eden in a rainstorm.

The drought occurred just after the expulsion of the Bourbons from Naples, and many think on account of it. There is this to be said in favor of the Bourbons: that a dry time never had occurred while they reigned,—a statement in which all good Catholics in Sorrento will concur. As the drought went on, almost all the wells in the place dried up, except that of the Tramontano and the one in the suppressed convent of the Sacred Heart,—I think that is its name.

It is a rambling pile of old buildings, in the center of the town, with a courtyard in the middle, and in it a deep well, boring down I know not how far into the rock, and always full of cold sweet water. The nuns have all gone now; and I look in vain up at the narrow slits in the masonry, which served them for windows, for the glance of a worldly or a pious eye. The poor people of Sorrento, when the public wells and fountains had gone dry, used to come and draw at the Tramontano; but they were not allowed to go to the well of the convent, the gates were closed. Why the government shut them I cannot see: perhaps it knew nothing of it, and some stupid official took the pompous responsibility. The people grumbled, and cursed the government; and, in their simplicity, probably never took any steps to revoke the prohibitory law. No doubt, as the government had caused the drought, it was all of a piece, the good rustics thought.

For the government did indirectly occasion the dry spell. I have the information from the Italian lady of whom I have spoken. Among the first steps of the new government of Italy was the suppression of the useless convents and nunneries. This one at Sorrento early came under the ban. It always seemed to me almost a pity to rout out this asylum of praying and charitable women, whose occupation was the encouragement of beggary and idleness in others, but whose prayers were constant, and whose charities to the sick of the little city were many. If they never were of much good to the community, it was a pleasure to have such a sweet little hive in the center of it; and I doubt not that the simple people felt a genuine satisfaction, as they walked around the high walls, in believing that pure prayers within were put up for them night and day; and especially when they waked at night, and heard the bell of the convent, and knew that at that moment some faithful soul kept her vigils, and chanted prayers for them and all the world besides; and they slept the sounder for it thereafter. I confess that, if one is helped by vicarious prayer, I would rather trust a convent of devoted women (though many of them are ignorant, and some of them are worldly, and none are fair to see) to pray for me, than some of the houses of coarse monks which I have seen.

But the order came down from Naples to pack off all the nuns of the Sacred Heart on a day named, to close up the gates of the nunnery, and hang a flaming sword outside. The nuns were to be pulled up by the roots, so to say, on the day specified, and without postponement, and to be transferred to a house prepared for them at Massa, a few miles down the promontory, and several hundred feet nearer heaven. Sorrento was really in mourning: it went about in grief. It seemed as if something sacrilegious were about to be done. It was the intention of the whole town to show its sense of it in some way.

The day of removal came, and it rained! It poured: the water came down in sheets, in torrents, in deluges; it came down with the wildest tempest of many a year. I think, from accurate reports of those who witnessed it, that the beginning of the great Deluge was only a moisture compared to this. To turn the poor women out of doors such a day as this was unchristian, barbarous, impossible. Everybody who had a shelter was shivering indoors. But the officials were inexorable. In the order for removal, nothing was said about postponement on account of weather; and go the nuns must.

And go they did; the whole town shuddering at the impiety of it, but kept from any demonstration by the tempest. Carriages went round to the convent; and the women were loaded into them, packed into them, carried and put in, if they were too infirm to go themselves. They were driven away, cross and wet and bedraggled. They found their dwelling on the hill not half prepared for them, leaking and cold and cheerless. They experienced very rough treatment, if I can credit my informant, who says she hates the government, and would not even look out of her lattice that day to see the carriages drive past.

And when the Lady Superior was driven away from the gate, she said to the officials, and the few faithful attendants, prophesying in the midst of the rain that poured about her, "The day will come shortly, when you will want rain, and shall not have it; and you will pray for my return."

And it did not rain, from that day for three years.

And the simple people thought of the good Superior, whose departure had been in such a deluge, and who had taken away with her all the moisture of the land; and they did pray for her return, and believed that the gates of heaven would be again opened if only the nunnery were repeopled. But the government could not see the connection between convents and the theory of storms, and the remnant of pious women was permitted to remain in their lodgings at Massa. Perhaps the government thought they could, if they bore no malice, pray as effectually for rain there as anywhere.

I do not know, said my informant, that the curse of the Lady Superior had anything to do with the drought, but many think it had; and those are the facts.

CHILDREN OF THE SUN

The common people of this region are nothing but children; and ragged, dirty, and poor as they are, apparently as happy, to speak idiomatically, as the day is long. It takes very little to please them; and their easily-excited mirth is contagious. It is very rare that one gets a surly return to a salutation; and, if one shows the least good-nature, his greeting is met with the most jolly return. The boatman hauling in his net sings; the brown girl, whom we meet descending a steep path in the hills, with an enormous bag or basket of oranges on her head, or a building-stone under which she stands as erect as a pillar, sings; and, if she asks for something, there is a merry twinkle in her eye, that says she hardly expects money, but only puts in a "beg" at a venture because it is the fashion; the workmen clipping the olive-trees sing; the urchins, who dance about the foreigner in the street, vocalize their petitions for un po' di moneta in a tuneful manner, and beg more in a spirit of devilry than with any expectation of gain. When I see how hard the peasants labor, what scraps and vegetable odds and ends they eat, and in what wretched, dark, and smoke-dried apartments they live, I wonder they are happy; but I suppose it is the all-nourishing sun and the equable climate that do the business for them. They have few artificial wants, and no uneasy expectation—bred by the reading of books and newspapers—that anything is going to happen in the world, or that any change is possible. Their fruit-trees yield abundantly year after year; their little patches of rich earth, on the built-up terraces and in the crevices of the rocks, produce fourfold. The sun does it all.

Every walk that we take here with open mind and cheerful heart is sure to be an adventure. Only yesterday, we were coming down a branch of the great gorge which splits the plain in two. On one side the path is a high wall, with garden trees overhanging. On the other, a stone parapet; and below, in the bed of the ravine, an orange orchard. Beyond rises a precipice; and, at its foot, men and boys were quarrying stone, which workmen raised a couple of hundred feet to the platform above with a windlass. As we came along, a handsome girl on the height had just taken on her head a large block of stone, which I should not care to lift, to carry to a pile in the rear; and she stopped to look at us. We stopped, and looked at her. This attracted the attention of the men and boys in the quarry below, who stopped work, and set up a cry for a little money. We laughed, and responded in English. The windlass ceased to turn. The workmen on the height joined in the conversation. A grizzly beggar hobbled up, and held out his greasy cap. We nonplussed him by extending our hats, and beseeching him for just a little something. Some passers on the road paused, and looked on, amused at the transaction. A boy appeared on the high wall, and began to beg. I threatened to shoot him with my walkingstick, whereat he ran nimbly along the wall in terror. The workmen shouted; and this started up a couple of yellow dogs, which came to the edge of the wall and barked violently. The girl, alone calm in the confusion, stood stock still under her enormous load looking at us. We swung out hats, and hurrahed. The crowd replied from above, below, and around us, shouting, laughing, singing, until the whole little valley was vocal with a gale of merriment, and all about nothing. The beggar whined; the spectators around us laughed; and the whole population was aroused into a jolly mood. Fancy such a merry hullabaloo in America. For ten minutes, while the funny row was going on, the girl never moved, having forgotten to go a few steps and deposit her load; and when we disappeared round a bend of the path, she was still watching us, smiling and statuesque.

As we descend, we come upon a group of little children seated about a doorstep, black-eyed, chubby little urchins, who are cutting oranges into little bits, and playing "party," as children do on the other side of the Atlantic. The instant we stop to speak to them, the skinny hand of an old woman is stretched out of a window just above our heads, the wrinkled palm itching for money. The mother comes forward out of the house, evidently pleased with our notice of the children, and shows us the baby in her arms. At once we are on good

terms with the whole family. The woman sees that there is nothing impertinent in our cursory inquiry into her domestic concerns, but, I fancy, knows that we are genial travelers, with human sympathies. So the people universally are not quick to suspect any imposition, and meet frankness with frankness, and good-nature with good-nature, in a simple-hearted, primeval manner. If they stare at us from doorway and balcony, or come and stand near us when we sit reading or writing by the shore, it is only a childlike curiosity, and they are quite unconscious of any breach of good manners. In fact, I think travelers have not much to say in the matter of staring. I only pray that we Americans abroad may remember that we are in the presence of older races, and conduct ourselves with becoming modesty, remembering always that we were not born in Britain.

Very likely I am in error; but it has seemed to me that even the funerals here are not so gloomy as in other places. I have looked in at the churches when they are in progress, now and then, and been struck with the general good feeling of the occasion. The real mourners I could not always distinguish; but the seats would be filled with a motley gathering of the idle and the ragged, who seemed to enjoy the show and the ceremony. On one occasion, it was the obsequies of an officer in the army. Guarding the gilded casket, which stood upon a raised platform before the altar, were four soldiers in uniform. Mass was being said and sung; and a priest was playing the organ. The church was light and cheerful, and pervaded by a pleasant bustle. Ragged boys and beggars, and dirty children and dogs, went and came wherever they chose—about the unoccupied spaces of the church. The hired mourners, who are numerous in proportion to the rank of the deceased, were clad in white cotton,—a sort of nightgown put on over the ordinary clothes, with a hood of the same drawn tightly over the face, in which slits were cut for the eyes and mouth. Some of them were seated on benches near the front; others were wandering about among the pillars, disappearing in the sacristy, and reappearing with an aimless aspect, altogether conducting themselves as if it were a holiday, and if there was anything they did enjoy, it was mourning at other people's expense. They laughed and talked with each other in excellent spirits; and one varlet near the coffin, who had slipped off his mask, winked at me repeatedly, as if to inform me that it was not his funeral. A masquerade might have been more gloomy and depressing.

SAINT ANTONINO

The most serviceable saint whom I know is St. Antonino. He is the patron saint of the good town of Sorrento; he is the good genius of all sailors and fishermen; and he has a humbler office,—that of protector of the pigs. On his day the pigs are brought into the public square to be blessed; and this is one reason why the pork of Sorrento is reputed so sweet and wholesome. The saint is the friend, and, so to say, companion of the common people. They seem to be all fond of him, and there is little of fear in their confiding relation. His humble origin and plebeian appearance have something to do with his popularity, no doubt. There is nothing awe-inspiring in the brown stone figure, battered and cracked, that stands at one corner of the bridge, over the chasm at the entrance of the city. He holds a crosier in one hand, and raises the other, with fingers uplifted, in act of benediction. If his face is an indication of his character, he had in him a mixture of robust good-nature with a touch of vulgarity, and could rough it in a jolly manner with fishermen and peasants. He may have appeared to better advantage when he stood on top of the massive old city gate, which the present government, with the impulse of a vandal, took down a few years ago. The demolition had to be accomplished in the night, under a guard of soldiers, so indignant were the populace. At that time the homely saint was deposed; and he wears now, I think, a snubbed and cast-aside aspect. Perhaps he is dearer to the people than ever; and I confess that I like him much better than many grander saints, in stone, I have seen in more conspicuous places. If ever I am in rough water and foul weather, I hope he will not take amiss anything I have here written about him.

Sunday, and it happened to be St. Valentine's also, was the great fete-day of St. Antonino. Early in the morning there was a great clanging of bells; and the ceremony of the blessing of the pigs took place,—I heard, but I was not abroad early enough to see it,—a laziness for which I fancy I need not apologize, as the Catholic is known to be an earlier religion than the Protestant. When I did go out, the streets were thronged with people, the countryfolk having come in for miles around. The church of the patron saint was the great center of attraction. The blank walls of the little square in front, and of the narrow streets near, were hung with cheap and highly-colored lithographs of sacred subjects, for sale; tables and booths were set up in every available space for the traffic in pre-Raphaelite gingerbread, molasses candy, strings of dried nuts, pinecone and pumpkin seeds, scarfs, boots and shoes, and all sorts of trumpery. One dealer had preempted a large space on the pavement, where he had spread out an assortment of bits of old iron, nails, pieces of steel traps, and various fragments which might be useful to the peasants. The press was so great, that it was difficult to get through it; but the crowd was a picturesque one, and in the highest good humor. The occasion was a sort of Fourth of July, but without its worry and powder and flowing bars.

The spectacle of the day was the procession bearing the silver image of the saint through the streets. I think there could never be anything finer or more impressive; at least, I like these little fussy provincial displays,—these tag-rags and ends of grandeur, in which all the populace devoutly believe, and at which they are lost in wonder,—better than those imposing ceremonies at the capital, in which nobody believes. There was first a band of musicians, walking in more or less disorder, but blowing away with great zeal, so that they could be heard amid the clangor of bells the peals of which reverberate so deafeningly between the high houses of these narrow streets. Then follow boys in white, and citizens in black and white robes, carrying huge silken banners, triangular like sea-pennants, and splendid silver crucifixes which flash in the sun. Then come ecclesiastics, walking with stately step, and chanting in loud and pleasant unison. These are followed by nobles, among whom I recognize, with a certain satisfaction, two descendants of Tasso, whose glowing and bigoted soul may rejoice in the devotion of his posterity, who help to bear today the gilded platform upon which is the solid silver image of the saint. The good old bishop walks humbly in the rear, in full canonical rig, with crosier and miter, his rich robes upborne by priestly attendants, his splendid footman at a respectful

distance, and his roomy carriage not far behind.

The procession is well spread out and long; all its members carry lighted tapers, a good many of which are not lighted, having gone out in the wind. As I squeeze into a shallow doorway to let the cortege pass, I am sorry to say that several of the young fellows in white gowns tip me the wink, and even smile in a knowing fashion, as if it were a mere lark, after all, and that the saint must know it. But not so thinks the paternal bishop, who waves a blessing, which I catch in the flash of the enormous emerald on his right hand. The procession ends, where it started, in the patron's church; and there his image is set up under a gorgeous canopy of crimson and gold, to hear high mass, and some of the choicest solos, choruses, and bravuras from the operas.

In the public square I find a gaping and wondering crowd of rustics collected about one of the mountebanks whose trade is not peculiar to any country. This one might be a clock-peddler from Connecticut. He is mounted in a one-seat vettura, and his horse is quietly eating his dinner out of a bag tied to his nose. There is nothing unusual in the fellow's dress; he wears a shiny silk hat, and has one of those grave faces which would be merry if their owner were not conscious of serious business on hand. On the driver's perch before him are arranged his attractions,—a box of notions, a grinning skull, with full teeth and jaws that work on hinges, some vials of red liquid, and a closed jar containing a most disagreeable anatomical preparation. This latter he holds up and displays, turning it about occasionally in an admiring manner. He is discoursing, all the time, in the most voluble Italian. He has an ointment, wonderfully efficacious for rheumatism and every sort of bruise: he pulls up his sleeve, and anoints his arm with it, binding it up with a strip of paper; for the simplest operation must be explained to these grown children. He also pulls teeth, with an ease and expedition hitherto unknown, and is in no want of patients among this open-mouthed crowd. One sufferer after another climbs up into the wagon, and goes through the operation in the public gaze. A stolid, good-natured hind mounts the seat. The dentist examines his mouth, and finds the offending tooth. He then turns to the crowd and explains the case. He takes a little instrument that is neither forceps nor turnkey, stands upon the seat, seizes the man's nose, and jerks his head round between his knees, pulling his mouth open (there is nothing that opens the mouth quicker than a sharp upward jerk of the nose) with a rude jollity that sets the spectators in a roar. Down he goes into the cavern, and digs away for a quarter of a minute, the man the while as immovable as a stone image, when he holds up the bloody tooth. The patient still persists in sitting with his mouth stretched open to its widest limit, waiting for the operation to begin, and will only close the orifice when he is well shaken and shown the tooth. The dentist gives him some yellow liquid to hold in his mouth, which the man insists on swallowing, wets a handkerchief and washes his face, roughly rubbing his nose the wrong way, and lets him go. Every step of the process is eagerly watched by the delighted spectators.

He is succeeded by a woman, who is put through the same heroic treatment, and exhibits like fortitude. And so they come; and the dentist after every operation waves the extracted trophy high in air, and jubilates as if he had won another victory, pointing to the stone statue yonder, and reminding them that this is the glorious day of St. Antonino. But this is not all that this man of science does. He has the genuine elixir d'amour, love-philters and powders which never fail in their effects. I see the bashful girls and the sheepish swains come slyly up to the side of the wagon, and exchange their hard-earned francs for the hopeful preparation. O my brown beauty, with those soft eyes and cheeks of smothered fire, you have no need of that red philter! What a simple, childlike folk! The shrewd fellow in the wagon is one of a race as old as Thebes and as new as Porkopolis; his brazen face is older than the invention of bronze, but I think he never had to do with a more credulous crowd than this. The very cunning in the face of the peasants is that of the fox; it is a sort of instinct, and not an intelligent suspicion.

This is Sunday in Sorrento, under the blue sky. These peasants, who are fooled by the mountebank and attracted by the piles of adamantine gingerbread, do not forget to crowd the church of the saint at vespers, and kneel there in humble faith, while the choir sings the Agnus Dei, and the priests drone the service. Are they so different, then, from other people? They have an idea on Capri that England is such another island, only not so pleasant; that all Englishmen are rich and constantly travel to escape the dreariness at home; and that, if they are not absolutely mad, they are all a little queer. It was a fancy prevalent in Hamlet's day. We had the English service in the Villa Nardi in the evening. There are some Englishmen staying here, of the class one finds in all the sunny spots of Europe, ennuye and growling, in search of some elixir that shall bring back youth and enjoyment. They seem divided in mind between the attractions of the equable climate of this region and the fear of the gout which lurks in the unfermented wine. One cannot be too grateful to the sturdy islanders for carrying their prayers, like their drumbeat, all round the globe; and I was much edified that night, as the reading went on, by a row of rather battered men of the world, who stood in line on one side of the room, and took their prayers with a certain British fortitude, as if they were conscious of performing a constitutional duty, and helping by the act to uphold the majesty of English institutions.

PUNTA DELLA CAMPANELLA

There is always a mild excitement about mounting donkeys in the morning here for an excursion among the hills. The warm sun pouring into the garden, the smell of oranges, the stimulating air, the general openness and freshness, promise a day of enjoyment. There is always a doubt as to who will go; generally a donkey wanting; somebody wishes to join the party at the last moment; there is no end of running up and downstairs, calling from balconies and terraces; some never ready, and some waiting below in the sun; the whole house in a tumult, drivers in a worry, and the sleepy animals now and then joining in the clatter with a vocal performance that is neither a trumpet-call nor a steam-whistle, but an indescribable noise, that begins in agony and abruptly breaks down in despair. It is difficult to get the train in motion. The lady who ordered Succarina has got a strange donkey, and Macaroni has on the wrong saddle. Succarina is a favorite, the kindest, easiest, and surest-footed of beasts,—a diminutive animal, not bigger than a Friesland sheep; old, in

fact grizzily with years, and not unlike the aged, wizened little women who are so common here: for beauty in this region dries up; and these handsome Sorrento girls, if they live, and almost everybody does live, have the prospect, in their old age, of becoming mummies, with parchment skins. I have heard of climates that preserve female beauty; this embalms it, only the beauty escapes in the process. As I was saying, Succarina is little, old, and grizzily; but her head is large, and one might be contented to be as wise as she looks.

The party is at length mounted, and clatters away through the narrow streets. Donkey-riding is very good for people who think they cannot walk. It looks very much like riding, to a spectator; and it deceives the person undertaking it into an amount of exercise equal to walking. I have a great admiration for the donkey character. There never was such patience under wrong treatment, such return of devotion for injury. Their obstinacy, which is so much talked about, is only an exercise of the right of private judgment, and an intelligent exercise of it, no doubt, if we could take the donkey point of view, as so many of us are accused of doing in other things. I am certain of one thing: in any large excursion party there will be more obstinate people than obstinate donkeys; and yet the poor brutes get all the thwacks and thumps. We are bound to-day for the Punta della Campanella, the extreme point of the promontory, and ten miles away. The path lies up the steps from the new Massa carriage-road, now on the backbone of the ridge, and now in the recesses of the broken country. What an animated picture is the donkeycade, as it mounts the steeps, winding along the zigzags! Hear the little bridlebells jingling, the drivers groaning their "a-e-ugh, a-e-ugh," the riders making a merry din of laughter, and firing off a fusillade of ejaculations of delight and wonder.

The road is between high walls; round the sweep of curved terraces which rise above and below us, bearing the glistening olive; through glens and gullies; over and under arches, vine-grown,—how little we make use of the arch at home!—round sunny dells where orange orchards gleam; past shrines, little chapels perched on rocks, rude villas commanding most extensive sweeps of sea and shore. The almond trees are in full bloom, every twig a thickly-set spike of the pink and white blossoms; daisies and dandelions are out; the purple crocuses sprinkle the ground, the petals exquisitely varied on the reverse side, and the stamens of bright salmon color; the large double anemones have come forth, certain that it is spring; on the higher crags by the wayside the Mediterranean heather has shaken out its delicate flowers, which fill the air with a mild fragrance; while blue violets, sweet of scent like the English, make our path a perfumed one. And this is winter.

We have made a late start, owing to the fact that everybody is captain of the expedition, and to the Sorrento infirmity that no one is able to make up his mind about anything. It is one o'clock when we reach a high transverse ridge, and find the headlands of the peninsula rising before us, grim hills of limestone, one of them with the ruins of a convent on top, and no road apparent thither, and Capri ahead of us in the sea, the only bit of land that catches any light; for as we have journeyed the sky has thickened, the clouds of the sirocco have come up from the south; there has been first a mist, and then a fine rain; the ruins on the peak of Santa Costanza are now hid in mist. We halt for consultation. Shall we go on and brave a wetting, or ignominiously retreat? There are many opinions, but few decided ones. The drivers declare that it will be a bad time. One gentleman, with an air of decision, suggests that it is best to go on, or go back, if we do not stand here and wait. The deaf lady, from near Dublin, being appealed to, says that, perhaps, if it is more prudent, we had better go back if it is going to rain. It does rain. Waterproofs are put on, umbrellas spread, backs turned to the wind; and we look like a group of explorers under adverse circumstances, "silent on a peak in Darien," the donkeys especially downcast and dejected. Finally, as is usual in life, a compromise prevails. We decide to continue for half an hour longer and see what the weather is. No sooner have we set forward over the brow of a hill than it grows lighter on the sea horizon in the southwest, the ruins on the peak become visible, Capri is in full sunlight. The clouds lift more and more, and still hanging overhead, but with no more rain, are like curtains gradually drawn up, opening to us a glorious vista of sunshine and promise, an illumined, sparkling, illimitable sea, and a bright foreground of slopes and picturesque rocks. Before the half hour is up, there is not one of the party who does not claim to have been the person who insisted upon going forward.

We halt for a moment to look at Capri, that enormous, irregular rock, raising its huge back out of the sea, its back broken in the middle, with the little village for a saddle. On the farther summit, above Anacapri, a precipice of two thousand feet sheer down to the water on the other side, hangs a light cloud. The east elevation, whence the playful Tiberius used to amuse his green old age by casting his prisoners eight hundred feet down into the sea, has the strong sunlight on it; and below, the row of tooth-like rocks, which are the extreme eastern point, shine in a warm glow. We descend through a village, twisting about in its crooked streets. The inhabitants, who do not see strangers every day, make free to stare at and comment on us, and even laugh at something that seems very comical in our appearance; which shows how ridiculous are the costumes of Paris and New York in some places. Stalwart girls, with only an apology for clothes, with bare legs, brown faces, and beautiful eyes, stop in their spinning, holding the distaff suspended, while they examine us at leisure. At our left, as we turn from the church and its sunny piazza, where old women sit and gabble, down the ravine, is a snug village under the mountain by the shore, with a great square medieval tower. On the right, upon rocky points, are remains of round towers, and temples perhaps.

We sweep away to the left round the base of the hill, over a difficult and stony path. Soon the last dilapidated villa is passed, the last terrace and olive-tree are left behind; and we emerge upon a wild, rocky slope, barren of vegetation, except little tufts of grass and a sort of lentil; a wide sweep of limestone strata set on edge, and crumbling in the beat of centuries, rising to a considerable height on the left. Our path descends toward the sea, still creeping round the end of the promontory. Scattered here and there over the rocks, like conies, are peasants, tending a few lean cattle, and digging grasses from the crevices. The women and children are wild in attire and manner, and set up a clamor of begging as we pass. A group of old hags begin beating a poor child as we approach, to excite our compassion for the abused little object, and draw out centimes.

Walking ahead of the procession, which gets slowly down the rugged path, I lose sight of my companions, and have the solitude, the sun on the rocks, the glistening sea, all to myself. Soon I espy a man below me sauntering down among the rocks. He sees me and moves away, a solitary figure. I say solitary; and so it is in effect, although he is leading a little boy, and calling to his dog, which runs back to bark at me. Is this the

brigand of whom I have read, and is he luring me to his haunt? Probably. I follow. He throws his cloak about his shoulders, exactly as brigands do in the opera, and loiters on. At last there is the point in sight, a gray wall with blind arches. The man disappears through a narrow archway, and I follow. Within is an enormous square tower. I think it was built in Spanish days, as an outlook for Barbary pirates. A bell hung in it, which was set clanging when the white sails of the robbers appeared to the southward; and the alarm was repeated up the coast, the towers were manned, and the brown-cheeked girls flew away to the hills, I doubt not, for the touch of the sirocco was not half so much to be dreaded as the rough importunity of a Saracen lover. The bell is gone now, and no Moslem rovers are in sight. The maidens we had just passed would be safe if there were. My brigand disappears round the tower; and I follow down steps, by a white wall, and lo! a house,—a red stucco, Egyptian-looking building,—on the very edge of the rocks. The man unlocks a door and goes in. I consider this an invitation, and enter. On one side of the passage a sleeping-room, on the other a kitchen,—not sumptuous quarters; and we come then upon a pretty circular terrace; and there, in its glass case, is the lantern of the point. My brigand is a lighthouse-keeper, and welcomes me in a quiet way, glad, evidently, to see the face of a civilized being. It is very solitary, he says. I should think so. It is the end of everything. The Mediterranean waves beat with a dull thud on the worn crags below. The rocks rise up to the sky behind. There is nothing there but the sun, an occasional sail, and quiet, petrified Capri, three miles distant across the strait. It is an excellent place for a misanthrope to spend a week, and get cured. There must be a very dispiriting influence prevailing here; the keeper refused to take any money, the solitary Italian we have seen so affected.

We returned late. The young moon, lying in the lap of the old one, was superintending the brilliant sunset over Capri, as we passed the last point commanding it; and the light, fading away, left us stumbling over the rough path among the hills, darkened by the high walls. We were not sorry to emerge upon the crest above the Massa road. For there lay the sea, and the plain of Sorrento, with its darkening groves and hundreds of twinkling lights. As we went down the last descent, the bells of the town were all ringing, for it was the eve of the fete of St. Antonino.

CAPRI

“CAP, signor? Good day for Grott.” Thus spoke a mariner, touching his Phrygian cap. The people here abbreviate all names. With them Massa is Mas, Meta is Met, Capri becomes Cap, the Grotta Azzurra is reduced familiarly to Grott, and they even curtail musical Sorrento into Serent.

Shall we go to Capri? Should we dare return to the great Republic, and own that we had not been into the Blue Grotto? We like to climb the steeps here, especially towards Massa, and look at Capri. I have read in some book that it used to be always visible from Sorrento. But now the promontory has risen, the Capo di Sorrento has thrust out its rocky spur with its ancient Roman masonry, and the island itself has moved so far round to the south that Sorrento, which fronts north, has lost sight of it.

We never tire of watching it, thinking that it could not be spared from the landscape. It lies only three miles from the curving end of the promontory, and is about twenty miles due south of Naples. In this atmosphere distances dwindle. The nearest land, to the northwest, is the larger island of Ischia, distant nearly as far as Naples; yet Capri has the effect of being anchored off the bay to guard the entrance. It is really a rock, three miles and a half long, rising straight out of the water, eight hundred feet high at one end, and eighteen hundred feet at the other, with a depression between. If it had been chiseled by hand and set there, it could not be more sharply defined. So precipitous are its sides of rock, that there are only two fit boat-landings, the marina on the north side, and a smaller place opposite. One of those light-haired and freckled Englishmen, whose pluck exceeds their discretion, rowed round the island alone in rough water, last summer, against the advice of the boatman, and unable to make a landing, and weary with the strife of the waves, was in considerable peril.

Sharp and clear as Capri is in outline, its contour is still most graceful and poetic. This wonderful atmosphere softens even its ruggedness, and drapes it with hues of enchanting beauty. Sometimes the haze plays fantastic tricks with it,—a cloud-cap hangs on Monte Solaro, or a mist obscures the base, and the massive summits of rock seem to float in the air, baseless fabrics of a vision that the rising wind will carry away perhaps. I know now what Homer means by “wandering islands.” Shall we take a boat and sail over there, and so destroy forever another island of the imagination? The bane of travel is the destruction of illusions.

We like to talk about Capri, and to talk of going there. The Sorrento people have no end of gossip about the wild island; and, simple and primitive as they are, Capri is still more out of the world. I do not know what enchantment there is on the island; but—whoever sets foot there, they say, goes insane or dies a drunkard. I fancy the reason of this is found in the fact that the Capri girls are raving beauties. I am not sure but the monotony of being anchored off there in the bay, the monotony of rocks and precipices that goats alone can climb, the monotony of a temperature that scarcely ever, winter and summer, is below 55 or above 75 Fahrenheit indoors, might drive one into lunacy. But I incline to think it is due to the handsome Capri girls.

There are beautiful girls in Sorrento, with a beauty more than skin deep, a glowing, hidden fire, a ripeness like that of the grape and the peach which grows in the soft air and the sun. And they wither, like grapes that hang upon the stem. I have never seen a handsome, scarcely a decent-looking, old woman here. They are lank and dry, and their bones are covered with parchment. One of these brown-cheeked girls, with large, longing eyes, gives the stranger a start, now and then, when he meets her in a narrow way with a basket of oranges on her head. I hope he has the grace to go right by. Let him meditate what this vision of beauty will be like in twenty ears.

The Capri girls are famed as magnificent beauties, but they fade like their mainland sisters. The Saracens

used to descend on their island, and carry them off to their harems. The English, a very adventurous people, who have no harems, have followed the Saracens. The young lords and gentlemen have a great fondness for Capri. I hear gossip enough about elopements, and not seldom marriages, with the island girls,—bright girls, with the Greek mother-wit, and surpassingly handsome; but they do not bear transportation to civilized life (any more than some of the native wines do): they accept no intellectual culture; and they lose their beauty as they grow old. What then? The young English blade, who was intoxicated by beauty into an injudicious match and might, as the proverb says, have gone insane if he could not have made it, takes to drink now, and so fulfills the other alternative. Alas! the fatal gift of beauty.

But I do not think Capri is so dangerous as it is represented. For (of course we went to Capri) neither at the marina, where a crowd of bare-legged, vociferous maidens with donkeys assailed us, nor in the village above, did I see many girls for whom and one little isle a person would forswear the world. But I can believe that they grow here. One of our donkey girls was a handsome, dark-skinned, black-eyed girl; but her little sister, a mite of a being of six years, who could scarcely step over the small stones in the road, and was forced to lead the donkey by her sister in order to establish another lien on us for *buona mano*, was a dirty little angel in rags, and her great soft black eyes will look somebody into the asylum or the drunkard's grave in time, I have no doubt. There was a stout, manly, handsome little fellow of five years, who established himself as the guide and friend of the tallest of our party. His hat was nearly gone; he was sadly out of repair in the rear; his short legs made the act of walking absurd; but he trudged up the hill with a certain dignity. And there was nothing mercenary about his attachment: he and his friend got upon very cordial terms: they exchanged gifts of shells and copper coin, but nothing was said about pay.

Nearly all the inhabitants, young and old, joined us in lively procession, up the winding road of three quarters of a mile, to the town. At the deep gate, entering between thick walls, we stopped to look at the sea. The crowd and clamor at our landing had been so great that we enjoyed the sight of the quiet old woman sitting here in the sun, and the few beggars almost too lazy to stretch out their hands. Within the gate is a large paved square, with the government offices and the tobacco-shop on one side, and the church opposite; between them, up a flight of broad stone steps, is the Hotel Tiberio. Our donkeys walk up them and into the hotel. The church and hotel are six hundred years old; the hotel was a villa belonging to Joanna II. of Naples. We climb to the roof of the quaint old building, and sit there to drink in the strange oriental scene. The landlord says it is like Jaffa or Jerusalem. The landlady, an Irish woman from Devonshire, says it is six francs a day. In what friendly intercourse the neighbors can sit on these flat roofs! How sightly this is, and yet how sheltered! To the east is the height where Augustus, and after him Tiberius, built palaces. To the west, up that vertical wall, by means of five hundred steps cut in the face of the rock, we go to reach the tableland of Anacapri, the primitive village of that name, hidden from view here; the medieval castle of Barbarossa, which hangs over a frightful precipice; and the height of Monte Solaro. The island is everywhere strewn with Roman ruins, and with faint traces of the Greeks.

Capri turns out not to be a barren rock. Broken and picturesque as it is, it is yet covered with vegetation. There is not a foot, one might say a point, of soil that does not bear something; and there is not a niche in the rock, where a scrap of dirt will stay, that is not made useful. The whole island is terraced. The most wonderful thing about it, after all, is its masonry. You come to think, after a time, that the island is not natural rock, but a mass of masonry. If the labor that has been expended here, only to erect platforms for the soil to rest on, had been given to our country, it would have built half a dozen Pacific railways, and cut a canal through the Isthmus.

But the Blue Grotto? Oh, yes! Is it so blue? That depends upon the time of day, the sun, the clouds, and something upon the person who enters it. It is frightfully blue to some. We bend down in our rowboat, slide into the narrow opening which is three feet high, and passing into the spacious cavern, remain there for half an hour. It is, to be sure, forty feet high, and a hundred by a hundred and fifty in extent, with an arched roof, and clear water for a floor. The water appears to be as deep as the roof is high, and is of a light, beautiful blue, in contrast with the deep blue of the bay. At the entrance the water is illuminated, and there is a pleasant, mild light within: one has there a novel subterranean sensation; but it did not remind me of anything I have seen in the "Arabian Nights." I have seen pictures of it that were much finer.

As we rowed close to the precipice in returning, I saw many similar openings, not so deep, and perhaps only sham openings; and the water-line was fretted to honeycomb by the eating waves. Beneath the water-line, and revealed here and there when the waves receded, was a line of bright red coral.

THE STORY OF FIAMMETTA

At vespers on the fete of St. Antonino, and in his church, I saw the Signorina Fiammetta. I stood leaning against a marble pillar near the altar-steps, during the service, when I saw the young girl kneeling on the pavement in act of prayer. Her black lace veil had fallen a little back from her head; and there was something in her modest attitude and graceful figure that made her conspicuous among all her kneeling companions, with their gay kerchiefs and bright gowns. When she rose and sat down, with folded hands and eyes downcast, there was something so pensive in her subdued mien that I could not take my eyes from her. To say that she had the rich olive complexion, with the gold struggling through, large, lustrous black eyes, and harmonious features, is only to make a weak photograph, when I should paint a picture in colors and infuse it with the sweet loveliness of a maiden on the way to sainthood. I was sure that I had seen her before, looking down from the balcony of a villa just beyond the Roman wall, for the face was not one that even the most unimpressible idler would forget. I was sure that, young as she was, she had already a history; had lived her life, and now walked amid these groves and old streets in a dream. The story which I heard is not long.

In the drawing-room of the Villa Nardi was shown, and offered for sale, an enormous counterpane,

crocheted in white cotton. Loop by loop, it must have been an immense labor to knit it; for it was fashioned in pretty devices, and when spread out was rich and showy enough for the royal bed of a princess. It had been crocheted by Fiammetta for her marriage, the only portion the poor child could bring to that sacrament. Alas! the wedding was never to be; and the rich work, into which her delicate fingers had knit so many maiden dreams and hopes and fears, was offered for sale in the resort of strangers. It could not have been want only that induced her to put this piece of work in the market, but the feeling, also, that the time never again could return when she would have need of it. I had no desire to purchase such a melancholy coverlet, but I could well enough fancy why she would wish to part with what must be rather a pall than a decoration in her little chamber.

Fiammetta lived with her mother in a little villa, the roof of which is in sight from my sunny terrace in the Villa Nardi, just to the left of the square old convent tower, rising there out of the silver olive-boughs,—a tumble-down sort of villa, with a flat roof and odd angles and parapets, in the midst of a thrifty but small grove of lemons and oranges. They were poor enough, or would be in any country where physical wants are greater than here, and yet did not belong to that lowest class, the young girls of which are little more than beasts of burden, accustomed to act as porters, bearing about on their heads great loads of stone, wood, water, and baskets of oranges in the shipping season. She could not have been forced to such labor, or she never would have had the time to work that wonderful coverlet.

Giuseppe was an honest and rather handsome young fellow of Sorrento, industrious and good-natured, who did not bother his head much about learning. He was, however, a skillful workman in the celebrated inlaid and mosaic woodwork of the place, and, it is said, had even invented some new figures for the inlaid pictures in colored woods. He had a little fancy for the sea as well, and liked to pull an oar over to Capri on occasion, by which he could earn a few francs easier than he could saw them out of the orangewood. For the stupid fellow, who could not read a word in his prayer-book, had an idea of thrift in his head, and already, I suspect, was laying up liras with an object. There are one or two dandies in Sorrento who attempt to dress as they do in Naples. Giuseppe was not one of these; but there was not a gayer or handsomer gallant than he on Sunday, or one more looked at by the Sorrento girls, when he had on his clean suit and his fresh red Phrygian cap. At least the good Fiammetta thought so, when she met him at church, though I feel sure she did not allow even his handsome figure to come between her and the Virgin. At any rate, there can be no doubt of her sentiments after church, when she and her mother used to walk with him along the winding Massa road above the sea, and stroll down to the shore to sit on the greensward over the Temple of Hercules, or the Roman Baths, or the remains of the villa of C. Fulvius Cunctatus Cocles, or whatever those ruins subterranean are, there on the Capo di Sorrento. Of course, this is mere conjecture of mine. They may have gone on the hills behind the town instead, or they may have stood leaning over the garden-wall of her mother's little villa, looking at the passers-by in the deep lane, thinking about nothing in the world, and talking about it all the sunny afternoon, until Ischia was purple with the last light, and the olive terraces behind them began to lose their gray bloom. All I do know is, that they were in love, blossoming out in it as the almond-trees do here in February; and that all the town knew it, and saw a wedding in the future, just as plain as you can see Capri from the heights above the town.

It was at this time that the wonderful counterpane began to grow, to the continual astonishment of Giuseppe, to whom it seemed a marvel of skill and patience, and who saw what love and sweet hope Fiammetta was knitting into it with her deft fingers. I declare, as I think of it, the white cotton spread out on her knees, in such contrast to the rich olive of her complexion and her black shiny hair, while she knits away so merrily, glancing up occasionally with those liquid, laughing eyes to Giuseppe, who is watching her as if she were an angel right out of the blue sky, I am tempted not to tell this story further, but to leave the happy two there at the open gate of life, and to believe that they entered in.

This was about the time of the change of government, after this region had come to be a part of the Kingdom of Italy. After the first excitement was over, and the simple people found they were not all made rich, nor raised to a condition in which they could live without work, there began to be some dissatisfaction. Why the convents need have been suppressed, and especially the poor nuns packed off, they couldn't see; and then the taxes were heavier than ever before; instead of being supported by the government, they had to support it; and, worst of all, the able young fellows must still go for soldiers. Just as one was learning his trade, or perhaps had acquired it, and was ready to earn his living and begin to make a home for his wife, he must pass the three best years of his life in the army. The conscription was relentless.

The time came to Giuseppe, as it did to the others. I never heard but he was brave enough; there was no storm on the Mediterranean that he dare not face in his little boat; and he would not have objected to a campaign with the red shirts of Garibaldi. But to be torn away from his occupations by which he was daily laying aside a little for himself and Fiammetta, and to leave her for three years,—that seemed dreadful to him. Three years is a longtime; and though he had no doubt of the pretty Fiammetta, yet women are women, said the shrewd fellow to himself, and who knows what might happen, if a gallant came along who could read and write, as Fiammetta could, and, besides, could play the guitar?

The result was, that Giuseppe did not appear at the mustering-office on the day set; and, when the file of soldiers came for him, he was nowhere to be found. He had fled to the mountains. I scarcely know what his plan was, but he probably trusted to some good luck to escape the conscription altogether, if he could shun it now; and, at least, I know that he had many comrades who did the same, so that at times the mountains were full of young fellows who were lurking in them to escape the soldiers. And they fared very roughly usually, and sometimes nearly perished from hunger; for though the sympathies of the peasants were undoubtedly with the quasi-outlaws rather than with the carbineers, yet the latter were at every hamlet in the hills, and liable to visit every hut, so that any relief extended to the fugitives was attended with great danger; and, besides, the hunted men did not dare to venture from their retreats. Thus outlawed and driven to desperation by hunger, these fugitives, whom nobody can defend for running away from their duties as citizens, became brigands. A cynical German, who was taken by them some years ago on the road to Castellamare, a few miles above here, and held for ransom, declared that they were the most honest fellows he had seen in Italy; but I never could see that he intended the remark as any compliment to them. It is certain that the inhabitants of

all these towns held very loose ideas on the subject of brigandage: the poor fellows, they used to say, only robbed because they were hungry, and they must live somehow.

What Fiammetta thought, down in her heart, is not told: but I presume she shared the feelings of those about her concerning the brigands, and, when she heard that Giuseppe had joined them, was more anxious for the safety of his body than of his soul; though I warrant she did not forget either, in her prayers to the Virgin and St. Antonino. And yet those must have been days, weeks, months, of terrible anxiety to the poor child; and if she worked away at the counterpane, netting in that elaborate border, as I have no doubt she did, it must have been with a sad heart and doubtful fingers. I think that one of the psychological sensitives could distinguish the parts of the bedspread that were knit in the sunny days from those knit in the long hours of care and deepening anxiety.

It was rarely that she received any message from him and it was then only verbal and of the briefest; he was in the mountains above Amalfi; one day he had come so far round as the top of the Great St. Angelo, from which he could look down upon the piano of Sorrento, where the little Fiammetta was; or he had been on the hills near Salerno, hunted and hungry; or his company had descended upon some travelers going to Paestum, made a successful haul, and escaped into the steep mountains beyond. He didn't intend to become a regular bandit, not at all. He hoped that something might happen so that he could steal back into Sorrento, unmarked by the government; or, at least, that he could escape away to some other country or island, where Fiammetta could join him. Did she love him yet, as in the old happy days? As for him, she was now everything to him; and he would willingly serve three or thirty years in the army, if the government could forget he had been a brigand, and permit him to have a little home with Fiammetta at the end of the probation. There was not much comfort in all this, but the simple fellow could not send anything more cheerful; and I think it used to feed the little maiden's heart to hear from him, even in this downcast mood, for his love for her was a dear certainty, and his absence and wild life did not dim it.

My informant does not know how long this painful life went on, nor does it matter much. There came a day when the government was shamed into new vigor against the brigands. Some English people of consequence (the German of whom I have spoken was with them) had been captured, and it had cost them a heavy ransom. The number of the carbineers was quadrupled in the infested districts, soldiers penetrated the fastnesses of the hills, there were daily fights with the banditti; and, to show that this was no sham, some of them were actually shot, and others were taken and thrown into prison. Among those who were not afraid to stand and fight, and who would not be captured, was our Giuseppe. One day the Italia newspaper of Naples had an account of a fight with brigands; and in the list of those who fell was the name of Giuseppe—, of Sorrento, shot through the head, as he ought to have been, and buried without funeral among the rocks.

This was all. But when the news was read in the little post office in Sorrento, it seemed a great deal more than it does as I write it; for, if Giuseppe had an enemy in the village, it was not among the people; and not one who heard the news did not think at once of the poor girl to whom it would be more than a bullet through the heart. And so it was. The slender hope of her life then went out. I am told that there was little change outwardly, and that she was as lovely as before; but a great cloud of sadness came over her, in which she was always enveloped, whether she sat at home, or walked abroad in the places where she and Giuseppe used to wander. The simple people respected her grief, and always made a tender-hearted stillness when the bereft little maiden went through the streets,—a stillness which she never noticed, for she never noticed anything apparently. The bishop himself when he walked abroad could not be treated with more respect.

This was all the story of the sweet Fiammetta that was confided to me. And afterwards, as I recalled her pensive face that evening as she kneeled at vespers, I could not say whether, after all, she was altogether to be pitied, in the holy isolation of her grief, which I am sure sanctified her, and, in some sort, made her life complete. For I take it that life, even in this sunny Sorrento, is not alone a matter of time.

ST. MARIA A CASTELLO

The Great St. Angelo and that region are supposed to be the haunts of brigands. From those heights they spy out the land, and from thence have, more than once, descended upon the sea-road between Castellamare and Sorrento, and caught up English and German travelers. This elevation commands, also, the Paestum way. We have no faith in brigands in these days; for in all our remote and lonely explorations of this promontory we have never met any but the most simple-hearted and good-natured people, who were quite as much afraid of us as we were of them. But there are not wanting stories, every day, to keep alive the imagination of tourists.

We are waiting in the garden this sunny, enticing morning—just the day for a tramp among the purple hills—for our friend, the long Englishman, who promised, over night, to go with us. This excellent, good-natured giant, whose head rubs the ceiling of any room in the house, has a wife who is fond of him, and in great dread of the brigands. He comes down with a sheepish air, at length, and informs us that his wife won't let him go.

"Of course I can go, if I like," he adds. "But the fact is, I have n't slept much all night: she kept asking me if I was going!" On the whole, the giant don't care to go. There are things more to be feared than brigands.

The expedition is, therefore, reduced to two unarmed persons. In the piazza we pick up a donkey and his driver for use in case of accident; and, mounting the driver on the donkey,—an arrangement that seems entirely satisfactory to him,—we set forward. If anything can bring back youth, it is a day of certain sunshine and a bit of unexplored country ahead, with a whole day in which to wander in it without a care or a responsibility. We walk briskly up the walled road of the piano, striking at the overhanging golden fruit with our staves; greeting the orange-girls who come down the side lanes; chaffing with the drivers, the beggars, the old women who sit in the sun; looking into the open doors of houses and shops upon women weaving, boys and girls slicing up heaps of oranges, upon the makers of macaroni, the sellers of sour wine, the merry

shoemakers, whose little dens are centers of gossip here, as in all the East: the whole life of these people is open and social; to be on the street is to be at home.

We wind up the steep hill behind Meta, every foot of which is terraced for olive-trees, getting, at length, views over the wayside wall of the plain and bay and rising into the purer air and the scent of flowers and other signs of coming spring, to the little village of Arola, with its church and bell, its beggars and idlers,—just a little street of houses jammed in between the hills of Camaldoli and Pergola, both of which we know well.

Upon the cliff by Pergola is a stone house, in front of which I like to lie, looking straight down a thousand or two feet upon the roofs of Meta, the map of the plain, and the always fascinating bay. I went down the backbone of the limestone ridge towards the sea the other afternoon, before sunset, and unexpectedly came upon a group of little stone cottages on a ledge, which are quite hidden from below. The inhabitants were as much surprised to see a foreigner break through their seclusion as I was to come upon them. However, they soon recovered presence of mind to ask for a little money. Half a dozen old hags with the parchment also sat upon the rocks in the sun, spinning from distaffs, exactly as their ancestors did in Greece two thousand years ago, I doubt not. I do not know that it is true, as Tasso wrote, that this climate is so temperate and serene that one almost becomes immortal in it. Since two thousand years all these coasts have changed more or less, risen and sunk, and the temples and palaces of two civilizations have tumbled into the sea. Yet I do not know but these tranquil old women have been sitting here on the rocks all the while, high above change and worry and decay, gossiping and spinning, like Fates. Their yarn must be uncanny.

But we wander. It is difficult to go to any particular place here; impossible to write of it in a direct manner. Our mulepath continues most delightful, by slopes of green orchards nestled in sheltered places, winding round gorges, deep and ragged with loose stones, and groups of rocks standing on the edge of precipices, like medieval towers, and through village after village tucked away in the hills. The abundance of population is a constant surprise. As we proceed, the people are wilder and much more curious about us, having, it is evident, seen few strangers lately. Women and children, half-dressed in dirty rags which do not hide the form, come out from their low stone huts upon the windy terraces, and stand, arms akimbo, staring at us, and not seldom hailing us in harsh voices. Their sole dress is often a single split and torn gown, not reaching to the bare knees, evidently the original of those in the Naples ballet (it will, no doubt, be different when those creatures exchange the ballet for the ballot); and, with their tangled locks and dirty faces, they seem rather beasts than women. Are their husbands brigands, and are they in wait for us in the chestnut-grove yonder?

The grove is charming; and the men we meet there gathering sticks are not so surly as the women. They point the way; and when we emerge from the wood, St. Maria a Castello is before us on a height, its white and red church shining in the sun. We climb up to it. In front is a broad, flagged terrace; and on the edge are deep wells in the rock, from which we draw cool water. Plentifully victualed, one could stand a siege here, and perhaps did in the gamey Middle Ages. Monk or soldier need not wish a pleasanter place to lounge. Adjoining the church, but lower, is a long, low building with three rooms, at once house and stable, the stable in the center, though all of them have hay in the lofts. The rooms do not communicate. That is the whole of the town of St. Maria a Castello.

In one of the apartments some rough-looking peasants are eating dinner, a frugal meal: a dish of unclean polenta, a plate of grated cheese, a basket of wormy figs, and some sour red wine; no bread, no meat. They looked at us askance, and with no sign of hospitality. We made friends, however, with the ragged children, one of whom took great delight in exhibiting his litter of puppies; and we at length so far worked into the good graces of the family that the mother was prevailed upon to get us some milk and eggs. I followed the woman into one of the apartments to superintend the cooking of the eggs. It was a mere den, with an earth floor. A fire of twigs was kindled against the farther wall, and a little girl, half-naked, carrying a baby still more economically clad, was stooping down to blow the smudge into a flame. The smoke, some of it, went over our heads out at the door. We boiled the eggs. We desired salt; and the woman brought us pepper in the berry. We insisted on salt, and at length got the rock variety, which we pounded on the rocks. We ate our eggs and drank our milk on the terrace, with the entire family interested spectators. The men were the hardest-looking ruffians we had met yet: they were making a bit of road near by, but they seemed capable of turning their hands to easier money-getting; and there couldn't be a more convenient place than this.

When our repast was over, and I had drunk a glass of wine with the proprietor, I offered to pay him, tendering what I knew was a fair price in this region. With some indignation of gesture, he refused it, intimating that it was too little. He seemed to be seeking an excuse for a quarrel with us; so I pocketed the affront, money and all, and turned away. He appeared to be surprised, and going indoors presently came out with a bottle of wine and glasses, and followed us down upon the rocks, pressing us to drink. Most singular conduct; no doubt drugged wine; travelers put into deep sleep; robbed; thrown over precipice; diplomatic correspondence, flattering, but no compensation to them. Either this, or a case of hospitality. We declined to drink, and the brigand went away.

We sat down upon the jutting ledge of a precipice, the like of which is not in the world: on our left, the rocky, bare side of St. Angelo, against which the sunshine dashes in waves; below us, sheer down two thousand feet, the city of Positano, a nest of brown houses, thickly clustered on a conical spur, and lying along the shore, the home of three thousand people,—with a running jump I think I could land in the midst of it,—a pygmy city, inhabited by mites, as we look down upon it; a little beach of white sand, a sailboat lying on it, and some fishermen just embarking; a long hotel on the beach; beyond, by the green shore, a country seat charmingly situated amid trees and vines; higher up, the ravine-seamed hill, little stone huts, bits of ruin, towers, arches. How still it is! All the stiller that I can, now and then, catch the sound of an axe, and hear the shouts of some children in a garden below. How still the sea is! How many ages has it been so? Does the purple mist always hang there upon the waters of Salerno Bay, forever hiding from the gaze Paestum and its temples, and all that shore which is so much more Grecian than Roman?

After all, it is a satisfaction to turn to the towering rock of St. Angelo; not a tree, not a shrub, not a spire of grass, on its perpendicular side. We try to analyze the satisfaction there is in such a bald, treeless, verdureless mass. We can grasp it intellectually, in its sharp solidity, which is undisturbed by any ornament:

it is, to the mind, like some complete intellectual performance; the mind rests on it, like a demonstration in Euclid. And yet what a color of beauty it takes on in the distance!

When we return, the bandits have all gone to their road-making; the suspicious landlord is nowhere to be seen. We call the woman from the field, and give her money, which she seemed not to expect, and for which she shows no gratitude. Life appears to be indifferent to these people. But, if these be brigands, we prefer them to those of Naples, and even to the innkeepers of England. As we saunter home in the pleasant afternoon, the vesper-bells are calling to each other, making the sweetest echoes of peace everywhere in the hills, and all the piano is jubilant with them, as we come down the steeps at sunset.

"You see there was no danger," said the giant to his wife that evening at the supper-table.

"You would have found there was danger, if you had gone," returned the wife of the giant significantly.

THE MYTH OF THE SIRENS

I like to walk upon the encircling ridge behind Sorrento, which commands both bays. From there I can look down upon the Isles of the Sirens. The top is a broad, windy strip of pasture, which falls off abruptly to the Bay of Salerno on the south: a regular embankment of earth runs along the side of the precipitous steeps, towards Sorrento. It appears to be a line of defence for musketry, such as our armies used to throw up: whether the French, who conducted siege operations from this promontory on Capri, under Murat, had anything to do with it, does not appear.

Walking there yesterday, we met a woman shepherdess, cowherd, or siren—standing guard over three steers while they fed; a scantily-clad, brown woman, who had a distaff in her hand, and spun the flax as she watched the straying cattle, an example of double industry which the men who tend herds never imitate. Very likely her ancestors so spun and tended cattle on the plains of Thessaly. We gave the rigid woman good-morning, but she did not heed or reply; we made some inquiries as to paths, but she ignored us; we bade her good-day, and she scowled at us: she only spun. She was so out of tune with the people, and the gentle influences of this region, that we could only regard her as an anomaly,—the representative of some perversity and evil genius, which, no doubt, lurks here as it does elsewhere in the world. She could not have descended from either of the groups of the Sirens; for she was not fascinating enough to be fatal.

I like to look upon these islets or rocks of the Sirens, barren and desolate, with a few ruins of the Roman time and remains of the Middle-Age prisons of the doges of Amalfi; but I do not care to dissipate any illusions by going to them. I remember how the Sirens sat on flowery meads by the shore and sang, and are vulgarly supposed to have allured passing mariners to a life of ignoble pleasure, and then let them perish, hungry with all unsatisfied longings. The bones of these unfortunates, whitening on the rocks, of which Virgil speaks, I could not see. Indeed, I think any one who lingers long in this region will doubt if they were ever there, and will come to believe that the characters of the Sirens are popularly misconceived. Allowing Ulysses to be only another name for the sun-god, who appears in myths as Indra, Apollo, William Tell, the sure-hitter, the great archer, whose arrows are sunbeams, it is a degrading conception of him that he was obliged to lash himself to the mast when he went into action with the Sirens, like Farragut at Mobile, though for a very different reason. We should be forced to believe that Ulysses was not free from the basest mortal longings, and that he had not strength of mind to resist them, but must put himself in durance; as our moderns who cannot control their desires go into inebriate asylums.

Mr. Ruskin says that "the Sirens are the great constant desires, the infinite sicknesses of heart, which, rightly placed, give life, and, wrongly placed, waste it away; so that there are two groups of Sirens, one noble and saving, as the other is fatal." Unfortunately we are all, as were the Greeks, ministered unto by both these groups, but can fortunately, on the other hand, choose which group we will listen to the singing of, though the strains are somewhat mingled; as, for instance, in the modern opera, where the music quite as often wastes life away, as gives to it the energy of pure desire. Yet, if I were to locate the Sirens geographically, I should place the beneficent desires on this coast, and the dangerous ones on that of wicked Baiae; to which group the founder of Naples no doubt belonged.

Nowhere, perhaps, can one come nearer to the beautiful myths of Greece, the springlike freshness of the idyllic and heroic age, than on this Sorrentine promontory. It was no chance that made these coasts the home of the kind old monarch Eolus, inventor of sails and storm-signals. On the *Telegrafo di Mare Cuccola* is a rude signal-apparatus for communication with Capri,—to ascertain if wind and wave are propitious for entrance to the Blue Grotto,—which probably was not erected by Eolus, although he doubtless used this sightly spot as one of his stations. That he dwelt here, in great content, with his six sons and six daughters, the Months, is nearly certain; and I feel as sure that the Sirens, whose islands were close at hand, were elevators and not destroyers of the primitive races living here.

It seems to me this must be so; because the pilgrim who surrenders himself to the influences of these peaceful and sun-inundated coasts, under this sky which the bright Athena loved and loves, loses, by and by, those longings and heart-sicknesses which waste away his life, and comes under the dominion, more and more, of those constant desires after that which is peaceful and enduring and has the saving quality of purity. I know, indeed, that it is not always so; and that, as Boreas is a better nurse of rugged virtue than Zephyr, so the soft influences of this clime only minister to the fatal desires of some: and such are likely to sail speedily back to Naples.

The Sirens, indeed, are everywhere; and I do not know that we can go anywhere that we shall escape the infinite longings, or satisfy them. Here, in the purple twilight of history, they offered men the choice of good and evil. I have a fancy, that, in stepping out of the whirl of modern life upon a quiet headland, so blessed of two powers, the air and the sea, we are able to come to a truer perception of the drift of the eternal desires

within us. But I cannot say whether it is a subtle fascination, linked with these mythic and moral influences, or only the physical loveliness of this promontory, that lures travelers hither, and detains them on flowery meads.

I. HOW I KILLED A BEAR

So many conflicting accounts have appeared about my casual encounter with an Adirondack bear last summer that in justice to the public, to myself, and to the bear, it is necessary to make a plain statement of the facts. Besides, it is so seldom I have occasion to kill a bear, that the celebration of the exploit may be excused.

The encounter was unpremeditated on both sides. I was not hunting for a bear, and I have no reason to suppose that a bear was looking for me. The fact is, that we were both out blackberrying, and met by chance, the usual way. There is among the Adirondack visitors always a great deal of conversation about bears,—a general expression of the wish to see one in the woods, and much speculation as to how a person would act if he or she chanced to meet one. But bears are scarce and timid, and appear only to a favored few.

It was a warm day in August, just the sort of day when an adventure of any kind seemed impossible. But it occurred to the housekeepers at our cottage—there were four of them—to send me to the clearing, on the mountain back of the house, to pick blackberries. It was rather a series of small clearings, running up into the forest, much overgrown with bushes and briers, and not unromantic. Cows pastured there, penetrating through the leafy passages from one opening to another, and browsing among the bushes. I was kindly furnished with a six-quart pail, and told not to be gone long.

Not from any predatory instinct, but to save appearances, I took a gun. It adds to the manly aspect of a person with a tin pail if he also carries a gun. It was possible I might start up a partridge; though how I was to hit him, if he started up instead of standing still, puzzled me. Many people use a shotgun for partridges. I prefer the rifle: it makes a clean job of death, and does not prematurely stuff the bird with globules of lead. The rifle was a Sharps, carrying a ball cartridge (ten to the pound),—an excellent weapon belonging to a friend of mine, who had intended, for a good many years back, to kill a deer with it. He could hit a tree with it—if the wind did not blow, and the atmosphere was just right, and the tree was not too far off—nearly every time. Of course, the tree must have some size. Needless to say that I was at that time no sportsman. Years ago I killed a robin under the most humiliating circumstances. The bird was in a low cherry-tree. I loaded a big shotgun pretty full, crept up under the tree, rested the gun on the fence, with the muzzle more than ten feet from the bird, shut both eyes, and pulled the trigger. When I got up to see what had happened, the robin was scattered about under the tree in more than a thousand pieces, no one of which was big enough to enable a naturalist to decide from it to what species it belonged. This disgusted me with the life of a sportsman. I mention the incident to show that, although I went blackberrying armed, there was not much inequality between me and the bear.

In this blackberry-patch bears had been seen. The summer before, our colored cook, accompanied by a little girl of the vicinage, was picking berries there one day, when a bear came out of the woods, and walked

towards them. The girl took to her heels, and escaped. Aunt Chloe was paralyzed with terror. Instead of attempting to run, she sat down on the ground where she was standing, and began to weep and scream, giving herself up for lost. The bear was bewildered by this conduct. He approached and looked at her; he walked around and surveyed her. Probably he had never seen a colored person before, and did not know whether she would agree with him: at any rate, after watching her a few moments, he turned about, and went into the forest. This is an authentic instance of the delicate consideration of a bear, and is much more remarkable than the forbearance towards the African slave of the well-known lion, because the bear had no thorn in his foot.

When I had climbed the hill,—I set up my rifle against a tree, and began picking berries, lured on from bush to bush by the black gleam of fruit (that always promises more in the distance than it realizes when you reach it); penetrating farther and farther, through leaf-shaded cow-paths flecked with sunlight, into clearing after clearing. I could hear on all sides the tinkle of bells, the cracking of sticks, and the stamping of cattle that were taking refuge in the thicket from the flies. Occasionally, as I broke through a covert, I encountered a meek cow, who stared at me stupidly for a second, and then shambled off into the brush. I became accustomed to this dumb society, and picked on in silence, attributing all the wood noises to the cattle, thinking nothing of any real bear. In point of fact, however, I was thinking all the time of a nice romantic bear, and as I picked, was composing a story about a generous she-bear who had lost her cub, and who seized a small girl in this very wood, carried her tenderly off to a cave, and brought her up on bear's milk and honey. When the girl got big enough to run away, moved by her inherited instincts, she escaped, and came into the valley to her father's house (this part of the story was to be worked out, so that the child would know her father by some family resemblance, and have some language in which to address him), and told him where the bear lived. The father took his gun, and, guided by the unfeeling daughter, went into the woods and shot the bear, who never made any resistance, and only, when dying, turned reproachful eyes upon her murderer. The moral of the tale was to be kindness to animals.

I was in the midst of this tale when I happened to look some rods away to the other edge of the clearing, and there was a bear! He was standing on his hind legs, and doing just what I was doing,—picking blackberries. With one paw he bent down the bush, while with the other he clawed the berries into his mouth,—green ones and all. To say that I was astonished is inside the mark. I suddenly discovered that I didn't want to see a bear, after all. At about the same moment the bear saw me, stopped eating berries, and regarded me with a glad surprise. It is all very well to imagine what you would do under such circumstances. Probably you wouldn't do it: I didn't. The bear dropped down on his forefeet, and came slowly towards me. Climbing a tree was of no use, with so good a climber in the rear. If I started to run, I had no doubt the bear would give chase; and although a bear cannot run down hill as fast as he can run up hill, yet I felt that he could get over this rough, brush-tangled ground faster than I could.

The bear was approaching. It suddenly occurred to me how I could divert his mind until I could fall back upon my military base. My pail was nearly full of excellent berries, much better than the bear could pick himself. I put the pail on the ground, and slowly backed away from it, keeping my eye, as beast-tamers do, on the bear. The ruse succeeded.

The bear came up to the berries, and stopped. Not accustomed to eat out of a pail, he tipped it over, and nosed about in the fruit, "gorming" (if there is such a word) it down, mixed with leaves and dirt, like a pig. The bear is a worse feeder than the pig. Whenever he disturbs a maple-sugar camp in the spring, he always upsets the buckets of syrup, and tramples round in the sticky sweets, wasting more than he eats. The bear's manners are thoroughly disagreeable.

As soon as my enemy's head was down, I started and ran. Somewhat out of breath, and shaky, I reached my faithful rifle. It was not a moment too soon. I heard the bear crashing through the brush after me. Enraged at my duplicity, he was now coming on with blood in his eye. I felt that the time of one of us was probably short. The rapidity of thought at such moments of peril is well known. I thought an octavo volume, had it illustrated and published, sold fifty thousand copies, and went to Europe on the proceeds, while that bear was loping across the clearing. As I was cocking the gun, I made a hasty and unsatisfactory review of my whole life. I noted, that, even in such a compulsory review, it is almost impossible to think of any good thing you have done. The sins come out uncommonly strong. I recollected a newspaper subscription I had delayed paying years and years ago, until both editor and newspaper were dead, and which now never could be paid to all eternity.

The bear was coming on.

I tried to remember what I had read about encounters with bears. I couldn't recall an instance in which a man had run away from a bear in the woods and escaped, although I recalled plenty where the bear had run from the man and got off. I tried to think what is the best way to kill a bear with a gun, when you are not near enough to club him with the stock. My first thought was to fire at his head; to plant the ball between his eyes: but this is a dangerous experiment. The bear's brain is very small; and, unless you hit that, the bear does not mind a bullet in his head; that is, not at the time. I remembered that the instant death of the bear would follow a bullet planted just back of his fore-leg, and sent into his heart. This spot is also difficult to reach, unless the bear stands off, side towards you, like a target. I finally determined to fire at him generally.

The bear was coming on.

The contest seemed to me very different from anything at Creedmoor. I had carefully read the reports of the shooting there; but it was not easy to apply the experience I had thus acquired. I hesitated whether I had better fire lying on my stomach or lying on my back, and resting the gun on my toes. But in neither position, I reflected, could I see the bear until he was upon me. The range was too short; and the bear wouldn't wait for me to examine the thermometer, and note the direction of the wind. Trial of the Creedmoor method, therefore, had to be abandoned; and I bitterly regretted that I had not read more accounts of offhand shooting.

For the bear was coming on.

I tried to fix my last thoughts upon my family. As my family is small, this was not difficult. Dread of

displeasing my wife, or hurting her feelings, was uppermost in my mind. What would be her anxiety as hour after hour passed on, and I did not return! What would the rest of the household think as the afternoon passed, and no blackberries came! What would be my wife's mortification when the news was brought that her husband had been eaten by a bear! I cannot imagine anything more ignominious than to have a husband eaten by a bear. And this was not my only anxiety. The mind at such times is not under control. With the gravest fears the most whimsical ideas will occur. I looked beyond the mourning friends, and thought what kind of an epitaph they would be compelled to put upon the stone.

Something like this:

HERE LIE THE REMAINS

OF

EATEN BY A BEAR

Aug. 20, 1877

It is a very unheroic and even disagreeable epitaph. That "eaten by a bear" is intolerable. It is grotesque. And then I thought what an inadequate language the English is for compact expression. It would not answer to put upon the stone simply "eaten"; for that is indefinite, and requires explanation: it might mean eaten by a cannibal. This difficulty could not occur in the German, where *essen* signifies the act of feeding by a man, and *fressen* by a beast. How simple the thing would be in German!

*HIER LIEGT
HOCHWOHLGEBOREN
HERR — —*

*GEFRESSEN
Aug. 20, 1877*

That explains itself. The well-born one was eaten by a beast, and presumably by a bear,—an animal that has a bad reputation since the days of Elisha.

The bear was coming on; he had, in fact, come on. I judged that he could see the whites of my eyes. All my subsequent reflections were confused. I raised the gun, covered the bear's breast with the sight, and let drive. Then I turned, and ran like a deer. I did not hear the bear pursuing. I looked back. The bear had stopped. He was lying down. I then remembered that the best thing to do after having fired your gun is to reload it. I slipped in a charge, keeping my eyes on the bear. He never stirred. I walked back suspiciously. There was a quiver in the hindlegs, but no other motion. Still, he might be shamming; bears often sham. To make sure, I approached, and put a ball into his head. He didn't mind it now: he minded nothing. Death had come to him with a merciful suddenness. He was calm in death. In order that he might remain so, I blew his brains out, and then started for home. I had killed a bear!

Notwithstanding my excitement, I managed to saunter into the house with an unconcerned air. There was a chorus of voices:

"Where are your blackberries?" "Why were you gone so long?" "Where's your pail?"

"I left the pail."

"Left the pail? What for?"

"A bear wanted it."

"Oh, nonsense!"

"Well, the last I saw of it, a bear had it."

"Oh, come! You didn't really see a bear?"

"Yes, but I did really see a real bear."

"Did he run?"

"Yes: he ran after me."

"I don't believe a word of it. What did you do?"

"Oh! nothing particular—except kill the bear."

Cries of "Gammon!" "Don't believe it!" "Where's the bear?"

"If you want to see the bear, you must go up into the woods. I couldn't bring him down alone."

Having satisfied the household that something extraordinary had occurred, and excited the posthumous fear of some of them for my own safety, I went down into the valley to get help. The great bear-hunter, who keeps one of the summer boarding-houses, received my story with a smile of incredulity; and the incredulity spread to the other inhabitants and to the boarders as soon as the story was known. However, as I insisted in all soberness, and offered to lead them to the bear, a party of forty or fifty people at last started off with me to bring the bear in. Nobody believed there was any bear in the case; but everybody who could get a gun carried one; and we went into the woods armed with guns, pistols, pitchforks, and sticks, against all contingencies or surprises,—a crowd made up mostly of scoffers and jeerers.

But when I led the way to the fatal spot, and pointed out the bear, lying peacefully wrapped in his own skin, something like terror seized the boarders, and genuine excitement the natives. It was a no-mistake bear, by George! and the hero of the fight well, I will not insist upon that. But what a procession that was, carrying the bear home! and what a congregation, was speedily gathered in the valley to see the bear! Our best preacher up there never drew anything like it on Sunday.

And I must say that my particular friends, who were sportsmen, behaved very well, on the whole. They didn't deny that it was a bear, although they said it was small for a bear. Mr... Deane, who is equally good with a rifle and a rod, admitted that it was a very fair shot. He is probably the best salmon fisher in the United States, and he is an equally good hunter. I suppose there is no person in America who is more desirous to kill a moose than he. But he needlessly remarked, after he had examined the wound in the bear,

that he had seen that kind of a shot made by a cow's horn.

This sort of talk affected me not. When I went to sleep that night, my last delicious thought was, "I've killed a bear!"

II. LOST IN THE WOODS

It ought to be said, by way of explanation, that my being lost in the woods was not premeditated. Nothing could have been more informal. This apology can be necessary only to those who are familiar with the Adirondack literature. Any person not familiar with it would see the absurdity of one going to the Northern Wilderness with the deliberate purpose of writing about himself as a lost man. It may be true that a book about this wild tract would not be recognized as complete without a lost-man story in it, since it is almost as easy for a stranger to get lost in the Adirondacks as in Boston. I merely desire to say that my unimportant adventure is not narrated in answer to the popular demand, and I do not wish to be held responsible for its variation from the typical character of such experiences.

We had been in camp a week, on the Upper Au Sable Lake. This is a gem—emerald or turquoise as the light changes it—set in the virgin forest. It is not a large body of water, is irregular in form, and about a mile and a half in length; but in the sweep of its wooded shores, and the lovely contour of the lofty mountains that guard it, the lake is probably the most charming in America. Why the young ladies and gentlemen who camp there occasionally vex the days and nights with hooting, and singing sentimental songs, is a mystery even to the laughing loon.

I left my companions there one Saturday morning, to return to Keene Valley, intending to fish down the Au Sable River. The Upper Lake discharges itself into the Lower by a brook which winds through a mile and a half of swamp and woods. Out of the north end of the Lower Lake, which is a huge sink in the mountains, and mirrors the savage precipices, the Au Sable breaks its rocky barriers, and flows through a wild gorge, several miles, to the valley below. Between the Lower Lake and the settlements is an extensive forest, traversed by a cart-path, admirably constructed of loose stones, roots of trees, decayed logs, slippery rocks, and mud. The gorge of the river forms its western boundary. I followed this caricature of a road a mile or more; then gave my luggage to the guide to carry home, and struck off through the forest, by compass, to the river. I promised myself an exciting scramble down this little-frequented canyon, and a creel full of trout. There was no difficulty in finding the river, or in descending the steep precipice to its bed: getting into a scrape is usually the easiest part of it. The river is strewn with boulders, big and little, through which the amber water rushes with an unceasing thunderous roar, now plunging down in white falls, then swirling round in dark pools. The day, already past meridian, was delightful; at least, the blue strip of it I could see overhead.

Better pools and rapids for trout never were, I thought, as I concealed myself behind a boulder, and made the first cast. There is nothing like the thrill of expectation over the first throw in unfamiliar waters. Fishing is like gambling, in that failure only excites hope of a fortunate throw next time. There was no rise to the "leader" on the first cast, nor on the twenty-first; and I cautiously worked my way down stream, throwing right and left. When I had gone half a mile, my opinion of the character of the pools was unchanged: never were there such places for trout; but the trout were out of their places. Perhaps they didn't care for the fly: some trout seem to be so unsophisticated as to prefer the worm. I replaced the fly with a baited hook: the worm squirmed; the waters rushed and roared; a cloud sailed across the blue: no trout rose to the lonesome opportunity. There is a certain companionship in the presence of trout, especially when you can feel them flopping in your fish basket; but it became evident that there were no trout in this wilderness, and a sense of isolation for the first time came over me. There was no living thing near. The river had by this time entered a deeper gorge; walls of rocks rose perpendicularly on either side,—picturesque rocks, painted many colors by the oxide of iron. It was not possible to climb out of the gorge; it was impossible to find a way by the side of the river; and getting down the bed, over the falls, and through the flumes, was not easy, and consumed time.

Was that thunder? Very likely. But thunder showers are always brewing in these mountain fortresses, and it did not occur to me that there was anything personal in it. Very soon, however, the hole in the sky closed in, and the rain dashed down. It seemed a providential time to eat my luncheon; and I took shelter under a scraggy pine that had rooted itself in the edge of the rocky slope. The shower soon passed, and I continued my journey, creeping over the slippery rocks, and continuing to show my confidence in the unresponsive trout. The way grew wilder and more grewsome. The thunder began again, rolling along over the tops of the mountains, and reverberating in sharp concussions in the gorge: the lightning also darted down into the darkening passage, and then the rain. Every enlightened being, even if he is in a fisherman's dress of shirt and pantaloons, hates to get wet; and I ignominiously crept under the edge of a sloping boulder. It was all very well at first, until streams of water began to crawl along the face of the rock, and trickle down the back of my neck. This was refined misery, unheroic and humiliating, as suffering always is when unaccompanied by resignation.

A longer time than I knew was consumed in this and repeated efforts to wait for the slackening and renewing storm to pass away. In the intervals of calm I still fished, and even descended to what a sportsman considers incredible baseness: I put a "sinker" on my line. It is the practice of the country folk, whose only object is to get fish, to use a good deal of bait, sink the hook to the bottom of the pools, and wait the slow appetite of the summer trout. I tried this also. I might as well have fished in a pork barrel. It is true that in one deep, black, round pool I lured a small trout from the bottom, and deposited him in the creel; but it was an accident. Though I sat there in the awful silence (the roar of water and thunder only emphasized the stillness) full half an hour, I was not encouraged by another nibble. Hope, however, did not die: I always expected to find the trout in the next flume; and so I toiled slowly on, unconscious of the passing time. At each turn of the stream I expected to see the end, and at each turn I saw a long, narrow stretch of rocks and

foaming water. Climbing out of the ravine was, in most places, simply impossible; and I began to look with interest for a slide, where bushes rooted in the scant earth would enable me to scale the precipice. I did not doubt that I was nearly through the gorge. I could at length see the huge form of the Giant of the Valley, scarred with avalanches, at the end of the vista; and it seemed not far off. But it kept its distance, as only a mountain can, while I stumbled and slid down the rocky way. The rain had now set in with persistence, and suddenly I became aware that it was growing dark; and I said to myself, "If you don't wish to spend the night in this horrible chasm, you'd better escape speedily." Fortunately I reached a place where the face of the precipice was bushgrown, and with considerable labor scrambled up it.

Having no doubt that I was within half a mile, perhaps within a few rods, of the house above the entrance of the gorge, and that, in any event, I should fall into the cart-path in a few minutes, I struck boldly into the forest, congratulating myself on having escaped out of the river. So sure was I of my whereabouts that I did not note the bend of the river, nor look at my compass. The one trout in my basket was no burden, and I stepped lightly out.

The forest was of hard-wood, and open, except for a thick undergrowth of moose-bush. It was raining,—in fact, it had been raining, more or less, for a month,—and the woods were soaked. This moose-bush is most annoying stuff to travel through in a rain; for the broad leaves slap one in the face, and sop him with wet. The way grew every moment more dingy. The heavy clouds above the thick foliage brought night on prematurely. It was decidedly premature to a near-sighted man, whose glasses the rain rendered useless: such a person ought to be at home early. On leaving the river bank I had borne to the left, so as to be sure to strike either the clearing or the road, and not wander off into the measureless forest. I confidently pursued this course, and went gayly on by the left flank. That I did not come to any opening or path only showed that I had slightly mistaken the distance: I was going in the right direction.

I was so certain of this that I quickened my pace and got up with alacrity every time I tumbled down amid the slippery leaves and catching roots, and hurried on. And I kept to the left. It even occurred to me that I was turning to the left so much that I might come back to the river again. It grew more dusky, and rained more violently; but there was nothing alarming in the situation, since I knew exactly where I was. It was a little mortifying that I had miscalculated the distance: yet, so far was I from feeling any uneasiness about this that I quickened my pace again, and, before I knew it, was in a full run; that is, as full a run as a person can indulge in in the dusk, with so many trees in the way. No nervousness, but simply a reasonable desire to get there. I desired to look upon myself as the person "not lost, but gone before." As time passed, and darkness fell, and no clearing or road appeared, I ran a little faster. It didn't seem possible that the people had moved, or the road been changed; and yet I was sure of my direction. I went on with an energy increased by the ridiculousness of the situation, the danger that an experienced woodsman was in of getting home late for supper; the lateness of the meal being nothing to the gibes of the unlost. How long I kept this course, and how far I went on, I do not know; but suddenly I stumbled against an ill-placed tree, and sat down on the soaked ground, a trifle out of breath. It then occurred to me that I had better verify my course by the compass. There was scarcely light enough to distinguish the black end of the needle. To my amazement, the compass, which was made near Greenwich, was wrong. Allowing for the natural variation of the needle, it was absurdly wrong. It made out that I was going south when I was going north. It intimated that, instead of turning to the left, I had been making a circuit to the right. According to the compass, the Lord only knew where I was.

The inclination of persons in the woods to travel in a circle is unexplained. I suppose it arises from the sympathy of the legs with the brain. Most people reason in a circle: their minds go round and round, always in the same track. For the last half hour I had been saying over a sentence that started itself: "I wonder where that road is!" I had said it over till it had lost all meaning. I kept going round on it; and yet I could not believe that my body had been traveling in a circle. Not being able to recognize any tracks, I have no evidence that I had so traveled, except the general testimony of lost men.

The compass annoyed me. I've known experienced guides utterly discredit it. It couldn't be that I was to turn about, and go the way I had come. Nevertheless, I said to myself, "You'd better keep a cool head, my boy, or you are in for a night of it. Better listen to science than to spunk." And I resolved to heed the impartial needle. I was a little weary of the rough tramping: but it was necessary to be moving; for, with wet clothes and the night air, I was decidedly chilly. I turned towards the north, and slipped and stumbled along. A more uninviting forest to pass the night in I never saw. Every-thing was soaked. If I became exhausted, it would be necessary to build a fire; and, as I walked on, I couldn't find a dry bit of wood. Even if a little punk were discovered in a rotten log I had no hatchet to cut fuel. I thought it all over calmly. I had the usual three matches in my pocket. I knew exactly what would happen if I tried to build a fire. The first match would prove to be wet. The second match, when struck, would shine and smell, and fizz a little, and then go out. There would be only one match left. Death would ensue if it failed. I should get close to the log, crawl under my hat, strike the match, see it catch, flicker, almost go out (the reader painfully excited by this time), blaze up, nearly expire, and finally fire the punk,—thank God! And I said to myself, "The public don't want any more of this thing: it is played out. Either have a box of matches, or let the first one catch fire."

In this gloomy mood I plunged along. The prospect was cheerless; for, apart from the comfort that a fire would give, it is necessary, at night, to keep off the wild beasts. I fancied I could hear the tread of the stealthy brutes following their prey. But there was one source of profound satisfaction,—the catamount had been killed. Mr. Colvin, the triangulating surveyor of the Adirondacks, killed him in his last official report to the State. Whether he despatched him with a theodolite or a barometer does not matter: he is officially dead, and none of the travelers can kill him any more. Yet he has served them a good turn.

I knew that catamount well. One night when we lay in the bogs of the South Beaver Meadow, under a canopy of mosquitoes, the serene midnight was parted by a wild and humanlike cry from a neighboring mountain. "That's a cat," said the guide. I felt in a moment that it was the voice of "modern cultchah." "Modern culture," says Mr. Joseph Cook in a most impressive period,—"modern culture is a child crying in the wilderness, and with no voice but a cry." That describes the catamount exactly. The next day, when we ascended the mountain, we came upon the traces of this brute,—a spot where he had stood and cried in the

night; and I confess that my hair rose with the consciousness of his recent presence, as it is said to do when a spirit passes by.

Whatever consolation the absence of catamount in a dark, drenched, and howling wilderness can impart, that I experienced; but I thought what a satire upon my present condition was modern culture, with its plain thinking and high living! It was impossible to get much satisfaction out of the real and the ideal,—the me and the not-me. At this time what impressed me most was the absurdity of my position looked at in the light of modern civilization and all my advantages and acquirements. It seemed pitiful that society could do absolutely nothing for me. It was, in fact, humiliating to reflect that it would now be profitable to exchange all my possessions for the woods instinct of the most unlettered guide. I began to doubt the value of the “culture” that blunts the natural instincts.

It began to be a question whether I could hold out to walk all night; for I must travel, or perish. And now I imagined that a spectre was walking by my side. This was Famine. To be sure, I had only recently eaten a hearty luncheon: but the pangs of hunger got hold on me when I thought that I should have no supper, no breakfast; and, as the procession of unattainable meals stretched before me, I grew hungrier and hungrier. I could feel that I was becoming gaunt, and wasting away: already I seemed to be emaciated. It is astonishing how speedily a jocund, well-conditioned human being can be transformed into a spectacle of poverty and want, Lose a man in the Woods, drench him, tear his pantaloons, get his imagination running on his lost supper and the cheerful fireside that is expecting him, and he will become haggard in an hour. I am not dwelling upon these things to excite the reader's sympathy, but only to advise him, if he contemplates an adventure of this kind, to provide himself with matches, kindling wood, something more to eat than one raw trout, and not to select a rainy night for it.

Nature is so pitiless, so unresponsive, to a person in trouble! I had read of the soothing companionship of the forest, the pleasure of the pathless woods. But I thought, as I stumbled along in the dismal actuality, that, if I ever got out of it, I would write a letter to the newspapers, exposing the whole thing. There is an impassive, stolid brutality about the woods that has never been enough insisted on. I tried to keep my mind fixed upon the fact of man's superiority to Nature; his ability to dominate and outwit her. My situation was an amusing satire on this theory. I fancied that I could feel a sneer in the woods at my detected conceit. There was something personal in it. The downpour of the rain and the slipperiness of the ground were elements of discomfort; but there was, besides these, a kind of terror in the very character of the forest itself. I think this arose not more from its immensity than from the kind of stolidity to which I have alluded. It seemed to me that it would be a sort of relief to kick the trees. I don't wonder that the bears fall to, occasionally, and scratch the bark off the great pines and maples, tearing it angrily away. One must have some vent to his feelings. It is a common experience of people lost in the woods to lose their heads; and even the woodsmen themselves are not free from this panic when some accident has thrown them out of their reckoning. Fright unsettles the judgment: the oppressive silence of the woods is a vacuum in which the mind goes astray. It's a hollow sham, this pantheism, I said; being “one with Nature” is all humbug: I should like to see somebody. Man, to be sure, is of very little account, and soon gets beyond his depth; but the society of the least human being is better than this gigantic indifference. The “rapture on the lonely shore” is agreeable only when you know you can at any moment go home.

I had now given up all expectation of finding the road, and was steering my way as well as I could northward towards the valley. In my haste I made slow progress. Probably the distance I traveled was short, and the time consumed not long; but I seemed to be adding mile to mile, and hour to hour. I had time to review the incidents of the Russo-Turkish war, and to forecast the entire Eastern question; I outlined the characters of all my companions left in camp, and sketched in a sort of comedy the sympathetic and disparaging observations they would make on my adventure; I repeated something like a thousand times, without contradiction, “What a fool you were to leave the river!” I stopped twenty times, thinking I heard its loud roar, always deceived by the wind in the tree-tops; I began to entertain serious doubts about the compass,—when suddenly I became aware that I was no longer on level ground: I was descending a slope; I was actually in a ravine. In a moment more I was in a brook newly formed by the rain. “Thank Heaven!” I cried: “this I shall follow, whatever conscience or the compass says.” In this region, all streams go, sooner or later, into the valley. This ravine, this stream, no doubt, led to the river. I splashed and tumbled along down it in mud and water. Down hill we went together, the fall showing that I must have wandered to high ground. When I guessed that I must be close to the river, I suddenly stepped into mud up to my ankles. It was the road,—running, of course, the wrong way, but still the blessed road. It was a mere canal of liquid mud; but man had made it, and it would take me home. I was at least three miles from the point I supposed I was near at sunset, and I had before me a toilsome walk of six or seven miles, most of the way in a ditch; but it is truth to say that I enjoyed every step of it. I was safe; I knew where I was; and I could have walked till morning. The mind had again got the upper hand of the body, and began to plume itself on its superiority: it was even disposed to doubt whether it had been “lost” at all.

III. A FIGHT WITH A TROUT

Trout fishing in the Adirondacks would be a more attractive pastime than it is but for the popular notion of its danger. The trout is a retiring and harmless animal, except when he is aroused and forced into a combat; and then his agility, fierceness, and vindictiveness become apparent. No one who has studied the excellent pictures representing men in an open boat, exposed to the assaults of long, enraged trout flying at them through the open air with open mouth, ever ventures with his rod upon the lonely lakes of the forest without a certain terror, or ever reads of the exploits of daring fishermen without a feeling of admiration for their heroism. Most of their adventures are thrilling, and all of them are, in narration, more or less unjust to the trout: in fact, the object of them seems to be to exhibit, at the expense of the trout, the shrewdness, the skill,

and the muscular power of the sportsman. My own simple story has few of these recommendations.

We had built our bark camp one summer and were staying on one of the popular lakes of the Saranac region. It would be a very pretty region if it were not so flat, if the margins of the lakes had not been flooded by dams at the outlets, which have killed the trees, and left a rim of ghastly deadwood like the swamps of the under-world pictured by Dore's bizarre pencil,—and if the pianos at the hotels were in tune. It would be an excellent sporting region also (for there is water enough) if the fish commissioners would stock the waters, and if previous hunters had not pulled all the hair and skin off from the deers' tails. Formerly sportsmen had a habit of catching the deer by the tails, and of being dragged in mere wantonness round and round the shores. It is well known that if you seize a deer by this "holt" the skin will slip off like the peel from a banana—This reprehensible practice was carried so far that the traveler is now hourly pained by the sight of peeled-tail deer mournfully sneaking about the wood.

We had been hearing, for weeks, of a small lake in the heart of the virgin forest, some ten miles from our camp, which was alive with trout, unsophisticated, hungry trout: the inlet to it was described as stiff with them. In my imagination I saw them lying there in ranks and rows, each a foot long, three tiers deep, a solid mass. The lake had never been visited except by stray sable hunters in the winter, and was known as the Unknown Pond. I determined to explore it, fully expecting, however, that it would prove to be a delusion, as such mysterious haunts of the trout usually are. Confiding my purpose to Luke, we secretly made our preparations, and stole away from the shanty one morning at daybreak. Each of us carried a boat, a pair of blankets, a sack of bread, pork, and maple-sugar; while I had my case of rods, creel, and book of flies, and Luke had an axe and the kitchen utensils. We think nothing of loads of this sort in the woods.

Five miles through a tamarack swamp brought us to the inlet of Unknown Pond, upon which we embarked our fleet, and paddled down its vagrant waters. They were at first sluggish, winding among triste fir-trees, but gradually developed a strong current. At the end of three miles a loud roar ahead warned us that we were approaching rapids, falls, and cascades. We paused. The danger was unknown. We had our choice of shouldering our loads and making a detour through the woods, or of "shooting the rapids." Naturally we chose the more dangerous course. Shooting the rapids has often been described, and I will not repeat the description here. It is needless to say that I drove my frail bark through the boiling rapids, over the successive waterfalls, amid rocks and vicious eddies, and landed, half a mile below with whitened hair and a boat half full of water; and that the guide was upset, and boat, contents, and man were strewn along the shore.

After this common experience we went quickly on our journey, and, a couple of hours before sundown, reached the lake. If I live to my dying day, I never shall forget its appearance. The lake is almost an exact circle, about a quarter of a mile in diameter. The forest about it was untouched by axe, and unkilld by artificial flooding. The azure water had a perfect setting of evergreens, in which all the shades of the fir, the balsam, the pine, and the spruce were perfectly blended; and at intervals on the shore in the emerald rim blazed the ruby of the cardinal flower. It was at once evident that the unruffled waters had never been vexed by the keel of a boat. But what chiefly attracted my attention, and amused me, was the boiling of the water, the bubbling and breaking, as if the lake were a vast kettle, with a fire underneath. A tyro would have been astonished at this common phenomenon; but sportsmen will at once understand me when I say that the water boiled with the breaking trout. I studied the surface for some time to see upon what sort of flies they were feeding, in order to suit my cast to their appetites; but they seemed to be at play rather than feeding, leaping high in the air in graceful curves, and tumbling about each other as we see them in the Adirondack pictures.

It is well known that no person who regards his reputation will ever kill a trout with anything but a fly. It requires some training on the part of the trout to take to this method. The uncultivated, unsophisticated trout in unfrequented waters prefers the bait; and the rural people, whose sole object in going a-fishing appears to be to catch fish, indulge them in their primitive taste for the worm. No sportsman, however, will use anything but a fly, except he happens to be alone.

While Luke launched my boat and arranged his seat in the stern, I prepared my rod and line. The rod is a bamboo, weighing seven ounces, which has to be spliced with a winding of silk thread every time it is used. This is a tedious process; but, by fastening the joints in this way, a uniform spring is secured in the rod. No one devoted to high art would think of using a socket joint. My line was forty yards of untwisted silk upon a multiplying reel. The "leader" (I am very particular about my leaders) had been made to order from a domestic animal with which I had been acquainted. The fisherman requires as good a catgut as the violinist. The interior of the house cat, it is well known, is exceedingly sensitive; but it may not be so well known that the reason why some cats leave the room in distress when a piano-forte is played is because the two instruments are not in the same key, and the vibrations of the chords of the one are in discord with the catgut of the other. On six feet of this superior article I fixed three artificial flies,—a simple brown hackle, a gray body with scarlet wings, and one of my own invention, which I thought would be new to the most experienced fly-catcher. The trout-fly does not resemble any known species of insect. It is a "conventionalized" creation, as we say of ornamentation. The theory is that, fly-fishing being a high art, the fly must not be a tame imitation of nature, but an artistic suggestion of it. It requires an artist to construct one; and not every bungler can take a bit of red flannel, a peacock's feather, a flash of tinsel thread, a cock's plume, a section of a hen's wing, and fabricate a tiny object that will not look like any fly, but still will suggest the universal conventional fly.

I took my stand in the center of the tipsy boat; and Luke shoved off, and slowly paddled towards some lily-pads, while I began casting, unlimbering my tools, as it were. The fish had all disappeared. I got out, perhaps, fifty feet of line, with no response, and gradually increased it to one hundred. It is not difficult to learn to cast; but it is difficult to learn not to snap off the flies at every throw. Of this, however, we will not speak. I continued casting for some moments, until I became satisfied that there had been a miscalculation. Either the trout were too green to know what I was at, or they were dissatisfied with my offers. I reeled in, and changed the flies (that is, the fly that was not snapped off). After studying the color of the sky, of the water, and of the foliage, and the moderated light of the afternoon, I put on a series of beguilers, all of a subdued brilliancy, in harmony with the approach of evening. At the second cast, which was a short one, I saw a splash where the

leader fell, and gave an excited jerk. The next instant I perceived the game, and did not need the unfeigned "dam" of Luke to convince me that I had snatched his felt hat from his head and deposited it among the lilies. Discouraged by this, we whirled about, and paddled over to the inlet, where a little ripple was visible in the tinted light. At the very first cast I saw that the hour had come. Three trout leaped into the air. The danger of this manoeuvre all fishermen understand. It is one of the commonest in the woods: three heavy trout taking hold at once, rushing in different directions, smash the tackle into flinders. I evaded this catch, and threw again. I recall the moment. A hermit thrush, on the tip of a balsam, uttered his long, liquid, evening note. Happening to look over my shoulder, I saw the peak of Marcy gleam rosy in the sky (I can't help it that Marcy is fifty miles off, and cannot be seen from this region: these incidental touches are always used). The hundred feet of silk swished through the air, and the tail-fly fell as lightly on the water as a three-cent piece (which no slamming will give the weight of a ten) drops upon the contribution plate. Instantly there was a rush, a swirl. I struck, and "Got him, by—!" Never mind what Luke said I got him by. "Out on a fly!" continued that irreverent guide; but I told him to back water, and make for the center of the lake. The trout, as soon as he felt the prick of the hook, was off like a shot, and took out the whole of the line with a rapidity that made it smoke. "Give him the butt!" shouted Luke. It is the usual remark in such an emergency. I gave him the butt; and, recognizing the fact and my spirit, the trout at once sank to the bottom, and sulked. It is the most dangerous mood of a trout; for you cannot tell what he will do next. We reeled up a little, and waited five minutes for him to reflect. A tightening of the line enraged him, and he soon developed his tactics. Coming to the surface, he made straight for the boat faster than I could reel in, and evidently with hostile intentions. "Look out for him!" cried Luke as he came flying in the air. I evaded him by dropping flat in the bottom of the boat; and, when I picked my traps up, he was spinning across the lake as if he had a new idea: but the line was still fast. He did not run far. I gave him the butt again; a thing he seemed to hate, even as a gift. In a moment the evil-minded fish, lashing the water in his rage, was coming back again, making straight for the boat as before. Luke, who was used to these encounters, having read of them in the writings of travelers he had accompanied, raised his paddle in self-defense. The trout left the water about ten feet from the boat, and came directly at me with fiery eyes, his speckled sides flashing like a meteor. I dodged as he whisked by with a vicious slap of his bifurcated tail, and nearly upset the boat. The line was of course slack, and the danger was that he would entangle it about me, and carry away a leg. This was evidently his game; but I untangled it, and only lost a breast button or two by the swiftly-moving string. The trout plunged into the water with a hissing sound, and went away again with all the line on the reel. More butt; more indignation on the part of the captive. The contest had now been going on for half an hour, and I was getting exhausted. We had been back and forth across the lake, and round and round the lake. What I feared was that the trout would start up the inlet and wreck us in the bushes. But he had a new fancy, and began the execution of a manoeuvre which I had never read of. Instead of coming straight towards me, he took a large circle, swimming rapidly, and gradually contracting his orbit. I reeled in, and kept my eye on him. Round and round he went, narrowing his circle. I began to suspect the game; which was, to twist my head off.—When he had reduced the radius of his circle to about twenty-five feet, he struck a tremendous pace through the water. It would be false modesty in a sportsman to say that I was not equal to the occasion. Instead of turning round with him, as he expected, I stepped to the bow, braced myself, and let the boat swing. Round went the fish, and round we went like a top. I saw a line of Mount Marcys all round the horizon; the rosy tint in the west made a broad band of pink along the sky above the tree-tops; the evening star was a perfect circle of light, a hoop of gold in the heavens. We whirled and reeled, and reeled and whirled. I was willing to give the malicious beast butt and line, and all, if he would only go the other way for a change.

When I came to myself, Luke was gaffing the trout at the boat-side. After we had got him in and dressed him, he weighed three-quarters of a pound. Fish always lose by being "got in and dressed." It is best to weigh them while they are in the water. The only really large one I ever caught got away with my leader when I first struck him. He weighed ten pounds.

IV. A-HUNTING OF THE DEER

If civilization owes a debt of gratitude to the self-sacrificing sportsmen who have cleared the Adirondack regions of catamounts and savage trout, what shall be said of the army which has so nobly relieved them of the terror of the deer? The deer-slayers have somewhat celebrated their exploits in print; but I think that justice has never been done them.

The American deer in the wilderness, left to himself, leads a comparatively harmless but rather stupid life, with only such excitement as his own timid fancy raises. It was very seldom that one of his tribe was eaten by the North American tiger. For a wild animal he is very domestic, simple in his tastes, regular in his habits, affectionate in his family. Unfortunately for his repose, his haunch is as tender as his heart. Of all wild creatures he is one of the most graceful in action, and he poses with the skill of an experienced model. I have seen the goats on Mount Pentelicus scatter at the approach of a stranger, climb to the sharp points of projecting rocks, and attitudinize in the most self-conscious manner, striking at once those picturesque postures against the sky with which Oriental pictures have made us and them familiar. But the whole proceeding was theatrical.

Greece is the home of art, and it is rare to find anything there natural and unstudied. I presume that these goats have no nonsense about them when they are alone with the goatherds, any more than the goatherds have, except when they come to pose in the studio; but the long ages of culture, the presence always to the eye of the best models and the forms of immortal beauty, the heroic friezes of the Temple of Theseus, the marble processions of sacrificial animals, have had a steady molding, educating influence equal to a society of decorative art upon the people and the animals who have dwelt in this artistic atmosphere. The Attic goat has become an artificially artistic being; though of course he is not now what he was, as a poser, in the days of

Polycletus. There is opportunity for a very instructive essay by Mr. E. A. Freeman on the decadence of the Attic goat under the influence of the Ottoman Turk.

The American deer, in the free atmosphere of our country, and as yet untouched by our decorative art, is without self-consciousness, and all his attitudes are free and unstudied. The favorite position of the deer—his fore-feet in the shallow margin of the lake, among the lily-pads, his antlers thrown back and his nose in the air at the moment he hears the stealthy breaking of a twig in the forest—is still spirited and graceful, and wholly unaffected by the pictures of him which the artists have put upon canvas.

Wherever you go in the Northern forest you will find deer-paths. So plainly marked and well-trodden are they that it is easy to mistake them for trails made by hunters; but he who follows one of them is soon in difficulties. He may find himself climbing through cedar thickets an almost inaccessible cliff, or immersed in the intricacies of a marsh. The "run," in one direction, will lead to water; but, in the other, it climbs the highest hills, to which the deer retires, for safety and repose, in impenetrable thickets. The hunters, in winter, find them congregated in "yards," where they can be surrounded and shot as easily as our troops shoot Comanche women and children in their winter villages. These little paths are full of pitfalls among the roots and stones; and, nimble as the deer is, he sometimes breaks one of his slender legs in them. Yet he knows how to treat himself without a surgeon. I knew of a tame deer in a settlement in the edge of the forest who had the misfortune to break her leg. She immediately disappeared with a delicacy rare in an invalid, and was not seen for two weeks. Her friends had given her up, supposing that she had dragged herself away into the depths of the woods, and died of starvation, when one day she returned, cured of lameness, but thin as a virgin shadow. She had the sense to shun the doctor; to lie down in some safe place, and patiently wait for her leg to heal. I have observed in many of the more refined animals this sort of shyness, and reluctance to give trouble, which excite our admiration when noticed in mankind.

The deer is called a timid animal, and taunted with possessing courage only when he is "at bay"; the stag will fight when he can no longer flee; and the doe will defend her young in the face of murderous enemies. The deer gets little credit for this eleventh-hour bravery. But I think that in any truly Christian condition of society the deer would not be conspicuous for cowardice. I suppose that if the American girl, even as she is described in foreign romances, were pursued by bull-dogs, and fired at from behind fences every time she ventured outdoors, she would become timid, and reluctant to go abroad. When that golden era comes which the poets think is behind us, and the prophets declare is about to be ushered in by the opening of the "vials," and the killing of everybody who does not believe as those nations believe which have the most cannon; when we all live in real concord,—perhaps the gentle-hearted deer will be respected, and will find that men are not more savage to the weak than are the cougars and panthers. If the little spotted fawn can think, it must seem to her a queer world in which the advent of innocence is hailed by the baying of fierce hounds and the "ping" of the rifle.

Hunting the deer in the Adirondacks is conducted in the most manly fashion. There are several methods, and in none of them is a fair chance to the deer considered. A favorite method with the natives is practiced in winter, and is called by them "still hunting." My idea of still hunting is for one man to go alone into the forest, look about for a deer, put his wits fairly against the wits of the keen-scented animal, and kill his deer, or get lost in the attempt. There seems to be a sort of fairness about this. It is private assassination, tempered with a little uncertainty about finding your man. The still hunting of the natives has all the romance and danger attending the slaughter of sheep in an abattoir. As the snow gets deep, many deer congregate in the depths of the forest, and keep a place trodden down, which grows larger as they tramp down the snow in search of food. In time this refuge becomes a sort of "yard," surrounded by unbroken snow-banks. The hunters then make their way to this retreat on snowshoes, and from the top of the banks pick off the deer at leisure with their rifles, and haul them away to market, until the enclosure is pretty much emptied. This is one of the surest methods of exterminating the deer; it is also one of the most merciful; and, being the plan adopted by our government for civilizing the Indian, it ought to be popular. The only people who object to it are the summer sportsmen. They naturally want some pleasure out of the death of the deer.

Some of our best sportsmen, who desire to protract the pleasure of slaying deer through as many seasons as possible, object to the practice of the hunters, who make it their chief business to slaughter as many deer in a camping season as they can. Their own rule, they say, is to kill a deer only when they need venison to eat. Their excuse is specious. What right have these sophists to put themselves into a desert place, out of the reach of provisions, and then ground a right to slay deer on their own improvidence? If it is necessary for these people to have anything to eat, which I doubt, it is not necessary that they should have the luxury of venison.

One of the most picturesque methods of hunting the poor deer is called "floating." The person, with murder in his heart, chooses a cloudy night, seats himself, rifle in hand, in a canoe, which is noiselessly paddled by the guide, and explores the shore of the lake or the dark inlet. In the bow of the boat is a light in a "jack," the rays of which are shielded from the boat and its occupants. A deer comes down to feed upon the lily-pads. The boat approaches him. He looks up, and stands a moment, terrified or fascinated by the bright flames. In that moment the sportsman is supposed to shoot the deer. As an historical fact, his hand usually shakes so that he misses the animal, or only wounds him; and the stag limps away to die after days of suffering. Usually, however, the hunters remain out all night, get stiff from cold and the cramped position in the boat, and, when they return in the morning to camp, cloud their future existence by the assertion that they "heard a big buck" moving along the shore, but the people in camp made so much noise that he was frightened off.

By all odds, the favorite and prevalent mode is hunting with dogs. The dogs do the hunting, the men the killing. The hounds are sent into the forest to rouse the deer, and drive him from his cover. They climb the mountains, strike the trails, and go baying and yelping on the track of the poor beast. The deer have their established runways, as I said; and, when they are disturbed in their retreat, they are certain to attempt to escape by following one which invariably leads to some lake or stream. All that the hunter has to do is to seat himself by one of these runways, or sit in a boat on the lake, and wait the coming of the pursued deer. The frightened beast, fleeing from the unreasoning brutality of the hounds, will often seek the open country, with a mistaken confidence in the humanity of man. To kill a deer when he suddenly passes one on a runway

demands presence of mind and quickness of aim: to shoot him from the boat, after he has plunged panting into the lake, requires the rare ability to hit a moving object the size of a deer's head a few rods distant. Either exploit is sufficient to make a hero of a common man. To paddle up to the swimming deer, and cut his throat, is a sure means of getting venison, and has its charms for some. Even women and doctors of divinity have enjoyed this exquisite pleasure. It cannot be denied that we are so constituted by a wise Creator as to feel a delight in killing a wild animal which we do not experience in killing a tame one.

The pleasurable excitement of a deer-hunt has never, I believe, been regarded from the deer's point of view. I happen to be in a position, by reason of a lucky Adirondack experience, to present it in that light. I am sorry if this introduction to my little story has seemed long to the reader: it is too late now to skip it; but he can recoup himself by omitting the story.

Early on the morning of the 23d of August, 1877, a doe was feeding on Basin Mountain. The night had been warm and showery, and the morning opened in an undecided way. The wind was southerly: it is what the deer call a dog-wind, having come to know quite well the meaning of "a southerly wind and a cloudy sky." The sole companion of the doe was her only child, a charming little fawn, whose brown coat was just beginning to be mottled with the beautiful spots which make this young creature as lovely as the gazelle. The buck, its father, had been that night on a long tramp across the mountain to Clear Pond, and had not yet returned: he went ostensibly to feed on the succulent lily-pads there. "He feedeth among the lilies until the day break and the shadows flee away, and he should be here by this hour; but he cometh not," she said, "leaping upon the mountains, skipping upon the hills." Clear Pond was too far off for the young mother to go with her fawn for a night's pleasure. It was a fashionable watering-place at this season among the deer; and the doe may have remembered, not without uneasiness, the moonlight meetings of a frivolous society there. But the buck did not come: he was very likely sleeping under one of the ledges on Tight Nippin. Was he alone? "I charge you, by the roes and by the hinds of the field, that ye stir not nor awake my love till he please."

The doe was feeding, daintily cropping the tender leaves of the young shoots, and turning from time to time to regard her offspring. The fawn had taken his morning meal, and now lay curled up on a bed of moss, watching contentedly, with his large, soft brown eyes, every movement of his mother. The great eyes followed her with an alert entreaty; and, if the mother stepped a pace or two farther away in feeding, the fawn made a half movement, as if to rise and follow her. You see, she was his sole dependence in all the world. But he was quickly reassured when she turned her gaze on him; and if, in alarm, he uttered a plaintive cry, she bounded to him at once, and, with every demonstration of affection, licked his mottled skin till it shone again.

It was a pretty picture,—maternal love on the one part, and happy trust on the other. The doe was a beauty, and would have been so considered anywhere, as graceful and winning a creature as the sun that day shone on,—slender limbs, not too heavy flanks, round body, and aristocratic head, with small ears, and luminous, intelligent, affectionate eyes. How alert, supple, free, she was! What untaught grace in every movement! What a charming pose when she lifted her head, and turned it to regard her child! You would have had a companion picture if you had seen, as I saw that morning, a baby kicking about among the dry pine-needles on a ledge above the Au Sable, in the valley below, while its young mother sat near, with an easel before her, touching in the color of a reluctant landscape, giving a quick look at the sky and the outline of the Twin Mountains, and bestowing every third glance upon the laughing boy,—art in its infancy.

The doe lifted her head a little with a quick motion, and turned her ear to the south. Had she heard something? Probably it was only the south wind in the balsams. There was silence all about in the forest. If the doe had heard anything, it was one of the distant noises of the world. There are in the woods occasional moanings, premonitions of change, which are inaudible to the dull ears of men, but which, I have no doubt, the forest-folk hear and understand. If the doe's suspicions were excited for an instant, they were gone as soon. With an affectionate glance at her fawn, she continued picking up her breakfast.

But suddenly she started, head erect, eyes dilated, a tremor in her limbs. She took a step; she turned her head to the south; she listened intently. There was a sound,—a distant, prolonged note, bell-toned, pervading the woods, shaking the air in smooth vibrations. It was repeated. The doe had no doubt now. She shook like the sensitive mimosa when a footstep approaches. It was the baying of a hound! It was far off,—at the foot of the mountain. Time enough to fly; time enough to put miles between her and the hound, before he should come upon her fresh trail; time enough to escape away through the dense forest, and hide in the recesses of Panther Gorge; yes, time enough. But there was the fawn. The cry of the hound was repeated, more distinct this time. The doe, mother instinctively bounded away a few paces. The fawn started up with an anxious bleat: the doe turned; she came back; she couldn't leave it. She bent over it, and licked it, and seemed to say, "Come, my child: we are pursued: we must go." She walked away towards the west, and the little thing skipped after her. It was slow going for the slender legs, over the fallen logs, and through the rasping bushes. The doe bounded in advance, and waited: the fawn scrambled after her, slipping and tumbling along, very groggy yet on its legs, and whining a good deal because its mother kept always moving away from it. The fawn evidently did not hear the hound: the little innocent would even have looked sweetly at the dog, and tried to make friends with it, if the brute had been rushing upon him. By all the means at her command the doe urged her young one on; but it was slow work. She might have been a mile away while they were making a few rods. Whenever the fawn caught up, he was quite content to frisk about. He wanted more breakfast, for one thing; and his mother wouldn't stand still. She moved on continually; and his weak legs were tangled in the roots of the narrow deer-path.

Shortly came a sound that threw the doe into a panic of terror,—a short, sharp yelp, followed by a prolonged howl, caught up and reechoed by other bayings along the mountain-side. The doe knew what that meant. One hound had caught her trail, and the whole pack responded to the "view-haloo." The danger was certain now; it was near. She could not crawl on in this way: the dogs would soon be upon them. She turned again for flight: the fawn, scrambling after her, tumbled over, and bleated piteously. The baying, emphasized now by the yelp of certainty, came nearer. Flight with the fawn was impossible. The doe returned and stood by it, head erect, and nostrils distended. She stood perfectly still, but trembling. Perhaps she was thinking. The fawn took advantage of the situation, and began to draw his luncheon ration. The doe seemed to have made up her mind. She let him finish. The fawn, having taken all he wanted, lay down contentedly, and the

doe licked him for a moment. Then, with the swiftness of a bird, she dashed away, and in a moment was lost in the forest. She went in the direction of the hounds.

According to all human calculations, she was going into the jaws of death. So she was: all human calculations are selfish. She kept straight on, hearing the baying every moment more distinctly. She descended the slope of the mountain until she reached the more open forest of hard-wood. It was freer going here, and the cry of the pack echoed more resoundingly in the great spaces. She was going due east, when (judging by the sound, the hounds were not far off, though they were still hidden by a ridge) she turned short away to the north, and kept on at a good pace. In five minutes more she heard the sharp, exultant yelp of discovery, and then the deep-mouthed howl of pursuit. The hounds had struck her trail where she turned, and the fawn was safe.

The doe was in good running condition, the ground was not bad, and she felt the exhilaration of the chase. For the moment, fear left her, and she bounded on with the exaltation of triumph. For a quarter of an hour she went on at a slapping pace, clearing the moose-bushes with bound after bound, flying over the fallen logs, pausing neither for brook nor ravine. The baying of the hounds grew fainter behind her. But she struck a bad piece of going, a dead-wood slash. It was marvelous to see her skim over it, leaping among its intricacies, and not breaking her slender legs. No other living animal could do it. But it was killing work. She began to pant fearfully; she lost ground. The baying of the hounds was nearer. She climbed the hard-wood hill at a slower gait; but, once on more level, free ground, her breath came back to her, and she stretched away with new courage, and maybe a sort of contempt of her heavy pursuers.

After running at high speed perhaps half a mile farther, it occurred to her that it would be safe now to turn to the west, and, by a wide circuit, seek her fawn. But, at the moment, she heard a sound that chilled her heart. It was the cry of a hound to the west of her. The crafty brute had made the circuit of the slash, and cut off her retreat. There was nothing to do but to keep on; and on she went, still to the north, with the noise of the pack behind her. In five minutes more she had passed into a hillside clearing. Cows and young steers were grazing there. She heard a tinkle of bells. Below her, down the mountain slope, were other clearings, broken by patches of woods. Fences intervened; and a mile or two down lay the valley, the shining Au Sable, and the peaceful farmhouses. That way also her hereditary enemies were. Not a merciful heart in all that lovely valley. She hesitated: it was only for an instant. She must cross the Slidebrook Valley if possible, and gain the mountain opposite. She bounded on; she stopped. What was that? From the valley ahead came the cry of a searching hound. All the devils were loose this morning. Every way was closed but one, and that led straight down the mountain to the cluster of houses. Conspicuous among them was a slender white wooden spire. The doe did not know that it was the spire of a Christian chapel. But perhaps she thought that human pity dwelt there, and would be more merciful than the teeth of the hounds.

*"The hounds are baying on my track:
O white man! will you send me back?"*

In a panic, frightened animals will always flee to human-kind from the danger of more savage foes. They always make a mistake in doing so. Perhaps the trait is the survival of an era of peace on earth; perhaps it is a prophecy of the golden age of the future. The business of this age is murder,—the slaughter of animals, the slaughter of fellow-men, by the wholesale. Hilarious poets who have never fired a gun write hunting-songs,—Ti-ra-la: and good bishops write war-songs,—Ave the Czar!

The hunted doe went down the "open," clearing the fences splendidly, flying along the stony path. It was a beautiful sight. But consider what a shot it was! If the deer, now, could only have been caught I No doubt there were tenderhearted people in the valley who would have spared her life, shut her up in a stable, and petted her. Was there one who would have let her go back to her waiting-fawn? It is the business of civilization to tame or kill.

The doe went on. She left the sawmill on John's Brook to her right; she turned into a wood-path. As she approached Slide Brook, she saw a boy standing by a tree with a raised rifle. The dogs were not in sight; but she could hear them coming down the hill. There was no time for hesitation. With a tremendous burst of speed she cleared the stream, and, as she touched the bank, heard the "ping" of a rifle bullet in the air above her. The cruel sound gave wings to the poor thing. In a moment more she was in the opening: she leaped into the traveled road. Which way? Below her in the wood was a load of hay: a man and a boy, with pitchforks in their hands, were running towards her. She turned south, and flew along the street. The town was up. Women and children ran to the doors and windows; men snatched their rifles; shots were fired; at the big boarding-houses, the summer boarders, who never have anything to do, came out and cheered; a campstool was thrown from a veranda. Some young fellows shooting at a mark in the meadow saw the flying deer, and popped away at her; but they were accustomed to a mark that stood still. It was all so sudden! There were twenty people who were just going to shoot her; when the doe leaped the road fence, and went away across a marsh toward the foothills. It was a fearful gauntlet to run. But nobody except the deer considered it in that light. Everybody told what he was just going to do; everybody who had seen the performance was a kind of hero,—everybody except the deer. For days and days it was the subject of conversation; and the summer boarders kept their guns at hand, expecting another deer would come to be shot at.

The doe went away to the foothills, going now slower, and evidently fatigued, if not frightened half to death. Nothing is so appalling to a recluse as half a mile of summer boarders. As the deer entered the thin woods, she saw a rabble of people start across the meadow in pursuit. By this time, the dogs, panting, and lolling out their tongues, came swinging along, keeping the trail, like stupids, and consequently losing ground when the deer doubled. But, when the doe had got into the timber, she heard the savage brutes howling across the meadow. (It is well enough, perhaps, to say that nobody offered to shoot the dogs.)

The courage of the panting fugitive was not gone: she was game to the tip of her high-bred ears. But the fearful pace at which she had just been going told on her. Her legs trembled, and her heart beat like a trip-hammer. She slowed her speed perforce, but still fled industriously up the right bank of the stream. When she had gone a couple of miles, and the dogs were evidently gaining again, she crossed the broad, deep brook,

climbed the steep left bank, and fled on in the direction of the Mount-Marcy trail. The fording of the river threw the hounds off for a time. She knew, by their uncertain yelping up and down the opposite bank, that she had a little respite: she used it, however, to push on until the baying was faint in her ears; and then she dropped, exhausted, upon the ground.

This rest, brief as it was, saved her life. Roused again by the baying pack, she leaped forward with better speed, though without that keen feeling of exhilarating flight that she had in the morning. It was still a race for life; but the odds were in her—favor, she thought. She did not appreciate the dogged persistence of the hounds, nor had any inspiration told her that the race is not to the swift.

She was a little confused in her mind where to go; but an instinct kept her course to the left, and consequently farther away from her fawn. Going now slower, and now faster, as the pursuit seemed more distant or nearer, she kept to the southwest, crossed the stream again, left Panther Gorge on her right, and ran on by Haystack and Skylight in the direction of the Upper Au Sable Pond. I do not know her exact course through this maze of mountains, swamps, ravines, and frightful wildernesses. I only know that the poor thing worked her way along painfully, with sinking heart and unsteady limbs, lying down "dead beat" at intervals, and then spurred on by the cry of the remorseless dogs, until, late in the afternoon, she staggered down the shoulder of Bartlett, and stood upon the shore of the lake. If she could put that piece of water between her and her pursuers, she would be safe. Had she strength to swim it?

At her first step into the water she saw a sight that sent her back with a bound. There was a boat mid-lake: two men were in it. One was rowing: the other had a gun in his hand. They were looking towards her: they had seen her. (She did not know that they had heard the baying of hounds on the mountains, and had been lying in wait for her an hour.) What should she do? The hounds were drawing near. No escape that way, even if she could still run. With only a moment's hesitation she plunged into the lake, and struck obliquely across. Her tired legs could not propel the tired body rapidly. She saw the boat headed for her. She turned toward the centre of the lake. The boat turned. She could hear the rattle of the oarlocks. It was gaining on her. Then there was a silence. Then there was a splash of the water just ahead of her, followed by a roar round the lake, the words "Confound it all!" and a rattle of the oars again. The doe saw the boat nearing her. She turned irresolutely to the shore whence she came: the dogs were lapping the water, and howling there. She turned again to the center of the lake.

The brave, pretty creature was quite exhausted now. In a moment more, with a rush of water, the boat was on her, and the man at the oars had leaned over and caught her by the tail.

"Knock her on the head with that paddle!" he shouted to the gentleman in the stern.

The gentleman was a gentleman, with a kind, smooth-shaven face, and might have been a minister of some sort of everlasting gospel. He took the paddle in his hand. Just then the doe turned her head, and looked at him with her great, appealing eyes.

"I can't do it! my soul, I can't do it!" and he dropped the paddle. "Oh, let her go!"

"Let H. go!" was the only response of the guide as he slung the deer round, whipped out his hunting-knife, and made a pass that severed her jugular.

And the gentleman ate that night of the venison.

The buck returned about the middle of the afternoon. The fawn was bleating piteously, hungry and lonesome. The buck was surprised. He looked about in the forest. He took a circuit, and came back. His doe was nowhere to be seen. He looked down at the fawn in a helpless sort of way. The fawn appealed for his supper. The buck had nothing whatever to give his child,—nothing but his sympathy. If he said anything, this is what he said: "I'm the head of this family; but, really, this is a novel case. I've nothing whatever for you. I don't know what to do. I've the feelings of a father; but you can't live on them. Let us travel."

The buck walked away: the little one toddled after him. They disappeared in the forest.

V. A CHARACTER STUDY

There has been a lively inquiry after the primeval man. Wanted, a man who would satisfy the conditions of the miocene environment, and yet would be good enough for an ancestor. We are not particular about our ancestors, if they are sufficiently remote; but we must have something. Failing to apprehend the primeval man, science has sought the primitive man where he exists as a survival in present savage races. He is, at best, only a mushroom growth of the recent period (came in, probably, with the general raft of mammalian fauna); but he possesses yet some rudimentary traits that may be studied.

It is a good mental exercise to try to fix the mind on the primitive man divested of all the attributes he has acquired in his struggles with the other mammalian fauna. Fix the mind on an orange, the ordinary occupation of the metaphysician: take from it (without eating it) odor, color, weight, form, substance, and peel; then let the mind still dwell on it as an orange. The experiment is perfectly successful; only, at the end of it, you haven't any mind. Better still, consider the telephone: take away from it the metallic disk, and the magnetized iron, and the connecting wire, and then let the mind run abroad on the telephone. The mind won't come back. I have tried by this sort of process to get a conception of the primitive man. I let the mind roam away back over the vast geologic spaces, and sometimes fancy I see a dim image of him stalking across the terrace epoch of the quaternary period.

But this is an unsatisfying pleasure. The best results are obtained by studying the primitive man as he is left here and there in our era, a witness of what has been; and I find him most to my mind in the Adirondack system of what geologists call the Champlain epoch. I suppose the primitive man is one who owes more to nature than to the forces of civilization. What we seek in him are the primal and original traits, unmixed with the sophistications of society, and unimpaired by the refinements of an artificial culture. He would retain the

primitive instincts, which are cultivated out of the ordinary, commonplace man. I should expect to find him, by reason of an unrelinquished kinship, enjoying a special communion with nature,—admitted to its mysteries, understanding its moods, and able to predict its vagaries. He would be a kind of test to us of what we have lost by our gregarious acquisitions. On the one hand, there would be the sharpness of the senses, the keen instincts (which the fox and the beaver still possess), the ability to find one's way in the pathless forest, to follow a trail, to circumvent the wild denizens of the woods; and, on the other hand, there would be the philosophy of life which the primitive man, with little external aid, would evolve from original observation and cogitation. It is our good fortune to know such a man; but it is difficult to present him to a scientific and caviling generation. He emigrated from somewhat limited conditions in Vermont, at an early age, nearly half a century ago, and sought freedom for his natural development backward in the wilds of the Adirondacks. Sometimes it is a love of adventure and freedom that sends men out of the more civilized conditions into the less; sometimes it is a constitutional physical lassitude which leads them to prefer the rod to the hoe, the trap to the sickle, and the society of bears to town meetings and taxes. I think that Old Mountain Phelps had merely the instincts of the primitive man, and never any hostile civilizing intent as to the wilderness into which he plunged. Why should he want to slash away the forest and plow up the ancient mould, when it is infinitely pleasanter to roam about in the leafy solitudes, or sit upon a mossy log and listen to the chatter of birds and the stir of beasts? Are there not trout in the streams, gum exuding from the spruce, sugar in the maples, honey in the hollow trees, fur on the sables, warmth in hickory logs? Will not a few days' planting and scratching in the "open" yield potatoes and rye? And, if there is steadier diet needed than venison and bear, is the pig an expensive animal? If Old Phelps bowed to the prejudice or fashion of his age (since we have come out of the tertiary state of things), and reared a family, built a frame house in a secluded nook by a cold spring, planted about it some apple trees and a rudimentary garden, and installed a group of flaming sunflowers by the door, I am convinced that it was a concession that did not touch his radical character; that is to say, it did not impair his reluctance to split oven-wood.

He was a true citizen of the wilderness. Thoreau would have liked him, as he liked Indians and woodchucks, and the smell of pine forests; and, if Old Phelps had seen Thoreau, he would probably have said to him, "Why on airth, Mr. Thoreau, don't you live accordin' to your preachin'?" You might be misled by the shaggy suggestion of Old Phelps's given name—Orson—into the notion that he was a mighty hunter, with the fierce spirit of the Berserkers in his veins. Nothing could be farther from the truth. The hirsute and grisly sound of Orson expresses only his entire affinity with the untamed and the natural, an uncouth but gentle passion for the freedom and wildness of the forest. Orson Phelps has only those unconventional and humorous qualities of the bear which make the animal so beloved in literature; and one does not think of Old Phelps so much as a lover of nature,—to use the sentimental slang of the period,—as a part of nature itself.

His appearance at the time when as a "guide" he began to come into public notice fostered this impression,—a sturdy figure with long body and short legs, clad in a woolen shirt and butternut-colored trousers repaired to the point of picturesqueness, his head surmounted by a limp, light-brown felt hat, frayed away at the top, so that his yellowish hair grew out of it like some nameless fern out of a pot. His tawny hair was long and tangled, matted now many years past the possibility of being entered by a comb.

His features were small and delicate, and set in the frame of a reddish beard, the razor having mowed away a clearing about the sensitive mouth, which was not seldom wreathed with a childlike and charming smile. Out of this hirsute environment looked the small gray eyes, set near together; eyes keen to observe, and quick to express change of thought; eyes that made you believe instinct can grow into philosophic judgment. His feet and hands were of aristocratic smallness, although the latter were not worn away by ablutions; in fact, they assisted his toilet to give you the impression that here was a man who had just come out of the ground,—a real son of the soil, whose appearance was partially explained by his humorous relation to-soap. "Soap is a thing," he said, "that I hain't no kinder use for." His clothes seemed to have been put on him once for all, like the bark of a tree, a long time ago. The observant stranger was sure to be puzzled by the contrast of this realistic and uncouth exterior with the internal fineness, amounting to refinement and culture, that shone through it all. What communion had supplied the place of our artificial breeding to this man?

Perhaps his most characteristic attitude was sitting on a log, with a short pipe in his mouth. If ever man was formed to sit on a log, it was Old Phelps. He was essentially a contemplative person. Walking on a country road, or anywhere in the "open," was irksome to him. He had a shambling, loose-jointed gait, not unlike that of the bear: his short legs bowed out, as if they had been more in the habit of climbing trees than of walking. On land, if we may use that expression, he was something like a sailor; but, once in the rugged trail or the unmarked route of his native forest, he was a different person, and few pedestrians could compete with him. The vulgar estimate of his contemporaries, that reckoned Old Phelps "lazy," was simply a failure to comprehend the conditions of his being. It is the unjustness of civilization that it sets up uniform and artificial standards for all persons. The primitive man suffers by them much as the contemplative philosopher does, when one happens to arrive in this busy, fussy world.

If the appearance of Old Phelps attracts attention, his voice, when first heard, invariably startles the listener. A small, high-pitched, half-querulous voice, it easily rises into the shrillest falsetto; and it has a quality in it that makes it audible in all the tempests of the forest, or the roar of rapids, like the piping of a boatswain's whistle at sea in a gale. He has a way of letting it rise as his sentence goes on, or when he is opposed in argument, or wishes to mount above other voices in the conversation, until it dominates everything. Heard in the depths of the woods, quavering aloft, it is felt to be as much a part of nature, an original force, as the northwest wind or the scream of the hen-hawk. When he is pottering about the camp-fire, trying to light his pipe with a twig held in the flame, he is apt to begin some philosophical observation in a small, slow, stumbling voice, which seems about to end in defeat; when he puts on some unsuspected force, and the sentence ends in an insistent shriek. Horace Greeley had such a voice, and could regulate it in the same manner. But Phelps's voice is not seldom plaintive, as if touched by the dreamy sadness of the woods themselves.

When Old Mountain Phelps was discovered, he was, as the reader has already guessed, not understood by his contemporaries. His neighbors, farmers in the secluded valley, had many of them grown thrifty and

prosperous, cultivating the fertile meadows, and vigorously attacking the timbered mountains; while Phelps, with not much more faculty of acquiring property than the roaming deer, had pursued the even tenor of the life in the forest on which he set out. They would have been surprised to be told that Old Phelps owned more of what makes the value of the Adirondacks than all of them put together, but it was true. This woodsman, this trapper, this hunter, this fisherman, this sitter on a log, and philosopher, was the real proprietor of the region over which he was ready to guide the stranger. It is true that he had not a monopoly of its geography or its topography (though his knowledge was superior in these respects); there were other trappers, and more deadly hunters, and as intrepid guides: but Old Phelps was the discoverer of the beauties and sublimities of the mountains; and, when city strangers broke into the region, he monopolized the appreciation of these delights and wonders of nature. I suppose that in all that country he alone had noticed the sunsets, and observed the delightful processes of the seasons, taken pleasure in the woods for themselves, and climbed mountains solely for the sake of the prospect. He alone understood what was meant by "scenery." In the eyes of his neighbors, who did not know that he was a poet and a philosopher, I dare say he appeared to be a slack provider, a rather shiftless trapper and fisherman; and his passionate love of the forest and the mountains, if it was noticed, was accounted to him for idleness. When the appreciative tourist arrived, Phelps was ready, as guide, to open to him all the wonders of his possessions; he, for the first time, found an outlet for his enthusiasm, and a response to his own passion. It then became known what manner of man this was who had grown up here in the companionship of forests, mountains, and wild animals; that these scenes had highly developed in him the love of beauty, the aesthetic sense, delicacy of appreciation, refinement of feeling; and that, in his solitary wanderings and musings, the primitive man, self-taught, had evolved for himself a philosophy and a system of things. And it was a sufficient system, so long as it was not disturbed by external skepticism. When the outer world came to him, perhaps he had about as much to give to it as to receive from it; probably more, in his own estimation; for there is no conceit like that of isolation.

Phelps loved his mountains. He was the discoverer of Marcy, and caused the first trail to be cut to its summit, so that others could enjoy the noble views from its round and rocky top. To him it was, in noble symmetry and beauty, the chief mountain of the globe. To stand on it gave him, as he said, "a feeling of heaven up-h'istedness." He heard with impatience that Mount Washington was a thousand feet higher, and he had a childlike incredulity about the surpassing sublimity of the Alps. Praise of any other elevation he seemed to consider a slight to Mount Marcy, and did not willingly hear it, any more than a lover hears the laudation of the beauty of another woman than the one he loves. When he showed us scenery he loved, it made him melancholy to have us speak of scenery elsewhere that was finer. And yet there was this delicacy about him, that he never over-praised what he brought us to see, any more than one would over-praise a friend of whom he was fond. I remember that when for the first time, after a toilsome journey through the forest, the splendors of the Lower Au Sable Pond broke upon our vision,—that low-lying silver lake, imprisoned by the precipices which it reflected in its bosom,—he made no outward response to our burst of admiration: only a quiet gleam of the eye showed the pleasure our appreciation gave him. As some one said, it was as if his friend had been admired—a friend about whom he was unwilling to say much himself, but well pleased to have others praise.

Thus far, we have considered Old Phelps as simply the product of the Adirondacks; not so much a self-made man (as the doubtful phrase has it) as a natural growth amid primal forces. But our study is interrupted by another influence, which complicates the problem, but increases its interest. No scientific observer, so far as we know, has ever been able to watch the development of the primitive man, played upon and fashioned by the hebdomadal iteration of "Greeley's Weekly Tri-bune." Old Phelps educated by the woods is a fascinating study; educated by the woods and the Tri-bune, he is a phenomenon. No one at this day can reasonably conceive exactly what this newspaper was to such a mountain valley as Keene. If it was not a Providence, it was a Bible. It was no doubt owing to it that Democrats became as scarce as moose in the Adirondacks. But it is not of its political aspect that I speak. I suppose that the most cultivated and best informed portion of the earth's surface—the Western Reserve of Ohio, as free from conceit as it is from a suspicion that it lacks anything owes its pre-eminence solely to this comprehensive journal. It received from it everything except a collegiate and a classical education,—things not to be desired, since they interfere with the self-manufacture of man. If Greek had been in this curriculum, its best known dictum would have been translated, "Make thyself." This journal carried to the community that fed on it not only a complete education in all departments of human practice and theorizing, but the more valuable and satisfying assurance that there was nothing more to be gleaned in the universe worth the attention of man. This panoplied its readers in completeness. Politics, literature, arts, sciences, universal brotherhood and sisterhood, nothing was omitted; neither the poetry of Tennyson, nor the philosophy of Margaret Fuller; neither the virtues of association, nor of unbolted wheat. The laws of political economy and trade were laid down as positively and clearly as the best way to bake beans, and the saving truth that the millennium would come, and come only when every foot of the earth was subsoiled.

I do not say that Orson Phelps was the product of nature and the Tri-bune: but he cannot be explained without considering these two factors. To him Greeley was the Tri-bune, and the Tri-bune was Greeley; and yet I think he conceived of Horace Greeley as something greater than his newspaper, and perhaps capable of producing another journal equal to it in another part of the universe. At any rate, so completely did Phelps absorb this paper and this personality that he was popularly known as "Greeley" in the region where he lived. Perhaps a fancied resemblance of the two men in the popular mind had something to do with this transfer of name. There is no doubt that Horace Greeley owed his vast influence in the country to his genius, nor much doubt that he owed his popularity in the rural districts to James Gordon Bennett; that is, to the personality of the man which the ingenious Bennett impressed upon the country. That he despised the conventionalities of society, and was a sloven in his toilet, was firmly believed; and the belief endeared him to the hearts of the people. To them "the old white coat"—an antique garment of unrenewed immortality—was as much a subject of idolatry as the redingote grise to the soldiers of the first Napoleon, who had seen it by the campfires on the Po and on the Borysthenes, and believed that he would come again in it to lead them against the enemies of France. The Greeley of the popular heart was clad as Bennett said he was clad. It was in vain, even pathetically in vain, that he published in his newspaper the full bill of his fashionable tailor (the fact that it

was receipted may have excited the animosity of some of his contemporaries) to show that he wore the best broadcloth, and that the folds of his trousers followed the city fashion of falling outside his boots. If this revelation was believed, it made no sort of impression in the country. The rural readers were not to be wheedled out of their cherished conception of the personal appearance of the philosopher of the Tri-bune.

That the Tri-bune taught Old Phelps to be more Phelps than he would have been without it was part of the independence-teaching mission of Greeley's paper. The subscribers were an army, in which every man was a general. And I am not surprised to find Old Phelps lately rising to the audacity of criticising his exemplar. In some recently-published observations by Phelps upon the philosophy of reading is laid down this definition: "If I understand the necessity or use of reading, it is to reproduce again what has been said or proclaimed before. Hence, letters, characters, &c., are arranged in all the perfection they possibly can be, to show how certain language has been spoken by the original author. Now, to reproduce by reading, the reading should be so perfectly like the original that no one standing out of sight could tell the reading from the first time the language was spoken."

This is illustrated by the highest authority at hand: I have heard as good readers read, and as poor readers, as almost any one in this region. If I have not heard as many, I have had a chance to hear nearly the extreme in variety. Horace Greeley ought to have been a good reader. Certainly but few, if any, ever knew every word of the English language at a glance more readily than he did, or knew the meaning of every mark of punctuation more clearly; but he could not read proper. 'But how do you know?' says one. From the fact I heard him in the same lecture deliver or produce remarks in his own particular way, that, if they had been published properly in print, a proper reader would have reproduced them again the same way. In the midst of those remarks Mr. Greeley took up a paper, to reproduce by reading part of a speech that some one else had made; and his reading did not sound much more like the man that first read or made the speech than the clatter of a nail factory sounds like a well-delivered speech. Now, the fault was not because Mr. Greeley did not know how to read as well as almost any man that ever lived, if not quite: but in his youth he learned to read wrong; and, as it is ten times harder to unlearn anything than it is to learn it, he, like thousands of others, could never stop to unlearn it, but carried it on through his whole life.

Whether a reader would be thanked for reproducing one of Horace Greeley's lectures as he delivered it is a question that cannot detain us here; but the teaching that he ought to do so, I think, would please Mr. Greeley.

The first dribblets of professional tourists and summer boarders who arrived among the Adirondack Mountains a few years ago found Old Phelps the chief and best guide of the region. Those who were eager to throw off the usages of civilization, and tramp and camp in the wilderness, could not but be well satisfied with the aboriginal appearance of this guide; and when he led off into the woods, axe in hand, and a huge canvas sack upon his shoulders, they seemed to be following the Wandering Jew. The contents—of this sack would have furnished a modern industrial exhibition, provisions cooked and raw, blankets, maple-sugar, tinware, clothing, pork, Indian meal, flour, coffee, tea, &c. Phelps was the ideal guide: he knew every foot of the pathless forest; he knew all woodcraft, all the signs of the weather, or, what is the same thing, how to make a Delphic prediction about it. He was fisherman and hunter, and had been the comrade of sportsmen and explorers; and his enthusiasm for the beauty and sublimity of the region, and for its untamable wildness, amounted to a passion. He loved his profession; and yet it very soon appeared that he exercised it with reluctance for those who had neither ideality, nor love for the woods. Their presence was a profanation amid the scenery he loved. To guide into his private and secret haunts a party that had no appreciation of their loveliness disgusted him. It was a waste of his time to conduct flippant young men and giddy girls who made a noisy and irreverent lark of the expedition. And, for their part, they did not appreciate the benefit of being accompanied by a poet and a philosopher. They neither understood nor valued his special knowledge and his shrewd observations: they didn't even like his shrill voice; his quaint talk bored them. It was true that, at this period, Phelps had lost something of the activity of his youth; and the habit of contemplative sitting on a log and talking increased with the infirmities induced by the hard life of the woodsman. Perhaps he would rather talk, either about the woods-life or the various problems of existence, than cut wood, or busy himself in the drudgery of the camp. His critics went so far as to say, "Old Phelps is a fraud." They would have said the same of Socrates. Xantippe, who never appreciated the world in which Socrates lived, thought he was lazy. Probably Socrates could cook no better than Old Phelps, and no doubt went "gumming" about Athens with very little care of what was in the pot for dinner.

If the summer visitors measured Old Phelps, he also measured them by his own standards. He used to write out what he called "short-faced descriptions" of his comrades in the woods, which were never so flattering as true. It was curious to see how the various qualities which are esteemed in society appeared in his eyes, looked at merely in their relation to the limited world he knew, and judged by their adaptation to the primitive life. It was a much subtler comparison than that of the ordinary guide, who rates his traveler by his ability to endure on a march, to carry a pack, use an oar, hit a mark, or sing a song. Phelps brought his people to a test of their naturalness and sincerity, tried by contact with the verities of the woods. If a person failed to appreciate the woods, Phelps had no opinion of him or his culture; and yet, although he was perfectly satisfied with his own philosophy of life, worked out by close observation of nature and study of the Tri-bune, he was always eager for converse with superior minds, with those who had the advantage of travel and much reading, and, above all, with those who had any original "speckerlation." Of all the society he was ever permitted to enjoy, I think he prized most that of Dr. Bushnell. The doctor enjoyed the quaint and first-hand observations of the old woodsman, and Phelps found new worlds open to him in the wide ranges of the doctor's mind. They talked by the hour upon all sorts of themes, the growth of the tree, the habits of wild animals, the migration of seeds, the succession of oak and pine, not to mention theology, and the mysteries of the supernatural.

I recall the bearing of Old Phelps, when, several years ago, he conducted a party to the summit of Mount Marcy by the way he had "bushed out." This was his mountain, and he had a peculiar sense of ownership in it. In a way, it was holy ground; and he would rather no one should go on it who did not feel its sanctity. Perhaps it was a sense of some divine relation in it that made him always speak of it as "Mercy." To him this

ridiculously dubbed Mount Marcy was always "Mount Mercy." By a like effort to soften the personal offensiveness of the nomenclature of this region, he invariably spoke of Dix's Peak, one of the southern peaks of the range, as "Dixie." It was some time since Phelps himself had visited his mountain; and, as he pushed on through the miles of forest, we noticed a kind of eagerness in the old man, as of a lover going to a rendezvous. Along the foot of the mountain flows a clear trout stream, secluded and undisturbed in those awful solitudes, which is the "Mercy Brook" of the old woodsman. That day when he crossed it, in advance of his company, he was heard to say in a low voice, as if greeting some object of which he was shyly fond, "So, little brook, do I meet you once more?" and when we were well up the mountain, and emerged from the last stunted fringe of vegetation upon the rock-bound slope, I saw Old Phelps, who was still foremost, cast himself upon the ground, and heard him cry, with an enthusiasm that was intended for no mortal ear, "I'm with you once again!" His great passion very rarely found expression in any such theatrical burst. The bare summit that day was swept by a fierce, cold wind, and lost in an occasional chilling cloud. Some of the party, exhausted by the climb, and shivering in the rude wind, wanted a fire kindled and a cup of tea made, and thought this the guide's business. Fire and tea were far enough from his thought. He had withdrawn himself quite apart, and wrapped in a ragged blanket, still and silent as the rock he stood on, was gazing out upon the wilderness of peaks. The view from Marcy is peculiar. It is without softness or relief. The narrow valleys are only dark shadows; the lakes are bits of broken mirror. From horizon to horizon there is a tumultuous sea of billows turned to stone. You stand upon the highest billow; you command the situation; you have surprised Nature in a high creative act; the mighty primal energy has only just become repose. This was a supreme hour to Old Phelps. Tea! I believe the boys succeeded in kindling a fire; but the enthusiastic stoic had no reason to complain of want of appreciation in the rest of the party. When we were descending, he told us, with mingled humor and scorn, of a party of ladies he once led to the top of the mountain on a still day, who began immediately to talk about the fashions! As he related the scene, stopping and facing us in the trail, his mild, far-in eyes came to the front, and his voice rose with his language to a kind of scream.

"Why, there they were, right before the greatest view they ever saw, talkin' about the fashions!"

Impossible to convey the accent of contempt in which he pronounced the word "fashions," and then added, with a sort of regretful bitterness, "I was a great mind to come down, and leave 'em there."

In common with the Greeks, Old Phelps personified the woods, mountains, and streams. They had not only personality, but distinctions of sex. It was something beyond the characterization of the hunter, which appeared, for instance, when he related a fight with a panther, in such expressions as, "Then Mr. Panther thought he would see what he could do," etc. He was in "imaginative sympathy" with all wild things. The afternoon we descended Marcy, we went away to the west, through the primeval forests, toward Avalanche and Colden, and followed the course of the charming Opalescent. When we reached the leaping stream, Phelps exclaimed,

"Here's little Miss Opalescent!"

"Why don't you say Mr. Opalescent?" some one asked.

"Oh, she's too pretty!" And too pretty she was, with her foam-white and rainbow dress, and her downfalls, and fountainlike uprising. A bewitching young person we found her all that summer afternoon.

This sylph-like person had little in common with a monstrous lady whose adventures in the wilderness Phelps was fond of relating. She was built some thing on the plan of the mountains, and her ambition to explore was equal to her size. Phelps and the other guides once succeeded in raising her to the top of Marcy; but the feat of getting a hogshead of molasses up there would have been easier. In attempting to give us an idea of her magnitude that night, as we sat in the forest camp, Phelps hesitated a moment, while he cast his eye around the woods: "Waal, there ain't no tree!"

It is only by recalling fragmentary remarks and incidents that I can put the reader in possession of the peculiarities of my subject; and this involves the wrenching of things out of their natural order and continuity, and introducing them abruptly, an abruptness illustrated by the remark of "Old Man Hoskins" (which Phelps liked to quote), when one day he suddenly slipped down a bank into a thicket, and seated himself in a wasps' nest: "I hain't no business here; but here I be!"

The first time we went into camp on the Upper Au Sable Pond, which has been justly celebrated as the most prettily set sheet of water in the region, we were disposed to build our shanty on the south side, so that we could have in full view the Gothics and that loveliest of mountain contours. To our surprise, Old Phelps, whose sentimental weakness for these mountains we knew, opposed this. His favorite camping ground was on the north side,—a pretty site in itself, but with no special view. In order to enjoy the lovely mountains, we should be obliged to row out into the lake: we wanted them always before our eyes,—at sunrise and sunset, and in the blaze of noon. With deliberate speech, as if weighing our arguments and disposing of them, he replied, "Waal, now, them Gothics ain't the kinder scenery you want ter hog down!"

It was on quiet Sundays in the woods, or in talks by the camp-fire, that Phelps came out as the philosopher, and commonly contributed the light of his observations. Unfortunate marriages, and marriages in general, were, on one occasion, the subject of discussion; and a good deal of darkness had been cast on it by various speakers; when Phelps suddenly piped up, from a log where he had sat silent, almost invisible, in the shadow and smoke, "Waal, now, when you've said all there is to be said, marriage is mostly for discipline."

Discipline, certainly, the old man had, in one way or another; and years of solitary communing in the forest had given him, perhaps, a childlike insight into spiritual concerns. Whether he had formulated any creed or what faith he had, I never knew. Keene Valley had a reputation of not ripening Christians any more successfully than maize, the season there being short; and on our first visit it was said to contain but one Bible Christian, though I think an accurate census disclosed three. Old Phelps, who sometimes made abrupt remarks in trying situations, was not included in this census; but he was the disciple of supernaturalism in a most charming form. I have heard of his opening his inmost thoughts to a lady, one Sunday, after a noble sermon of Robertson's had been read in the cathedral stillness of the forest. His experience was entirely first-hand, and related with unconsciousness that it was not common to all. There was nothing of the mystic or the sentimentalist, only a vivid realism, in that nearness of God of which he spoke,—"as near some-times as those

trees,"—and of the holy voice, that, in a time of inward struggle, had seemed to him to come from the depths of the forest, saying, "Poor soul, I am the way."

In later years there was a "revival" in Keene Valley, the result of which was a number of young "converts," whom Phelps seemed to regard as a veteran might raw recruits, and to have his doubts what sort of soldiers they would make.

"Waal, Jimmy," he said to one of them, "you've kindled a pretty good fire with light wood. That's what we do of a dark night in the woods, you know but we do it just so as we can look around and find the solid wood: so now put on your solid wood."

In the Sunday Bible classes of the period Phelps was a perpetual anxiety to the others, who followed closely the printed lessons, and beheld with alarm his discursive efforts to get into freer air and light. His remarks were the most refreshing part of the exercises, but were outside of the safe path into which the others thought it necessary to win him from his "speckerlations." The class were one day on the verses concerning "God's word" being "written on the heart," and were keeping close to the shore, under the guidance of "Barnes's Notes," when Old Phelps made a dive to the bottom, and remarked that he had "thought a good deal about the expression, 'God's word written on the heart,' and had been asking himself how that was to be done; and suddenly it occurred to him (having been much interested lately in watching the work of a photographer) that, when a photograph is going to be taken, all that has to be done is to put the object in position, and the sun makes the picture; and so he rather thought that all we had got to do was to put our hearts in place, and God would do the writin'."

Phelps's theology, like his science, is first-hand. In the woods, one day, talk ran on the Trinity as being nowhere asserted as a doctrine in the Bible, and some one suggested that the attempt to pack these great and fluent mysteries into one word must always be more or less unsatisfactory. "Ye-es," droned Phelps: "I never could see much speckerlation in that expression the Trinity. Why, they'd a good deal better say Legion."

The sentiment of the man about nature, or his poetic sensibility, was frequently not to be distinguished from a natural religion, and was always tinged with the devoutness of Wordsworth's verse. Climbing slowly one day up the Balcony,—he was more than usually calm and slow,—he espied an exquisite fragile flower in the crevice of a rock, in a very lonely spot.

"It seems as if," he said, or rather dreamed out, "it seems as if the Creator had kept something just to look at himself."

To a lady whom he had taken to Chapel Pond (a retired but rather uninteresting spot), and who expressed a little disappointment at its tameness, saying, of this "Why, Mr. Phelps, the principal charm of this place seems to be its loneliness."

"Yes," he replied in gentle and lingering tones, and its nativeness. "It lies here just where it was born."

Rest and quiet had infinite attractions for him. A secluded opening in the woods was a "calm spot." He told of seeing once, or rather being in, a circular rainbow. He stood on Indian Head, overlooking the Lower Lake, so that he saw the whole bow in the sky and the lake, and seemed to be in the midst of it; "only at one place there was an indentation in it, where it rested on the lake, just enough to keep it from rolling off." This "resting" of the sphere seemed to give him great comfort.

One Indian-summer morning in October, some ladies found the old man sitting on his doorstep smoking a short pipe.

He gave no sign of recognition except a twinkle of the eye, being evidently quite in harmony with the peaceful day. They stood there a full minute before he opened his mouth: then he did not rise, but slowly took his pipe from his mouth, and said in a dreamy way, pointing towards the brook,—

"Do you see that tree?" indicating a maple almost denuded of leaves, which lay like a yellow garment cast at its feet. "I've been watching that tree all the morning. There hain't been a breath of wind: but for hours the leaves have been falling, falling, just as you see them now; and at last it's pretty much bare." And after a pause, pensively: "Waal, I suppose its hour had come."

This contemplative habit of Old Phelps is wholly unappreciated by his neighbors; but it has been indulged in no inconsiderable part of his life. Rising after a time, he said, "Now I want you to go with me and see my golden city I've talked so much about." He led the way to a hill-outlook, when suddenly, emerging from the forest, the spectators saw revealed the winding valley and its stream. He said quietly, "There is my golden city." Far below, at their feet, they saw that vast assemblage of birches and "popples," yellow as gold in the brooding noonday, and slender spires rising out of the glowing mass. Without another word, Phelps sat a long time in silent content: it was to him, as Bunyan says, "a place desirous to be in."

Is this philosopher contented with what life has brought him? Speaking of money one day, when we had asked him if he should do differently if he had his life to live over again, he said, "Yes, but not about money. To have had hours such as I have had in these mountains, and with such men as Dr. Bushnell and Dr. Shaw and Mr. Twichell, and others I could name, is worth all the money the world could give." He read character very well, and took in accurately the boy nature. "Tom" (an irrepressible, rather overdone specimen),—"Tom's a nice kind of a boy; but he's got to come up against a snubbin'-post one of these days."—"Boys!" he once said: "you can't git boys to take any kinder notice of scenery. I never yet saw a boy that would look a second time at a sunset. Now, a girl will some times; but even then it's instantaneous,—comes an goes like the sunset. As for me," still speaking of scenery, "these mountains about here, that I see every day, are no more to me, in one sense, than a man's farm is to him. What mostly interests me now is when I see some new freak or shape in the face of Nature."

In literature it may be said that Old Phelps prefers the best in the very limited range that has been open to him. Tennyson is his favorite among poets an affinity explained by the fact that they are both lotos-eaters. Speaking of a lecture-room talk of Mr. Beecher's which he had read, he said, "It filled my cup about as full as I callerlate to have it: there was a good deal of truth in it, and some poetry; waal, and a little spice, too. We've got to have the spice, you know." He admired, for different reasons, a lecture by Greeley that he once heard,

into which so much knowledge of various kinds was crowded that he said he "made a reg'lar gobble of it." He was not without discrimination, which he exercised upon the local preaching when nothing better offered. Of one sermon he said, "The man began way back at the creation, and just preached right along down; and he didn't say nothing, after all. It just seemed to me as if he was tryin' to git up a kind of a fix-up."

Old Phelps used words sometimes like algebraic signs, and had a habit of making one do duty for a season together for all occasions. "Speckerlation" and "callerlation" and "fix-up" are specimens of words that were prolific in expression. An unusual expression, or an unusual article, would be characterized as a "kind of a scientific literary git-up."

"What is the program for tomorrow?" I once asked him. "Waal, I callerlate, if they rig up the callerlation they callerlate on, we'll go to the Boreas." Starting out for a day's tramp in the woods, he would ask whether we wanted to take a "reg'lar walk, or a random scoot,"—the latter being a plunge into the pathless forest. When he was on such an expedition, and became entangled in dense brush, and maybe a network of "slash" and swamp, he was like an old wizard, as he looked here and there, seeking a way, peering into the tangle, or withdrawing from a thicket, and muttering to himself, "There ain't no speckerlation there." And when the way became altogether inscrutable,—"Waal, this is a reg'lar random scoot of a rigmarole." As some one remarked, "The dictionary in his hands is like clay in the hands of the potter." "A petrification was a kind of a hard-wood chemical git-up."

There is no conceit, we are apt to say, like that born of isolation from the world, and there are no such conceited people as those who have lived all their lives in the woods. Phelps was, however, unsophisticated in his until the advent of strangers into his life, who brought in literature and various other disturbing influences. I am sorry to say that the effect has been to take off something of the bloom of his simplicity, and to elevate him into an oracle. I suppose this is inevitable as soon as one goes into print; and Phelps has gone into print in the local papers. He has been bitten with the literary "git up." Justly regarding most of the Adirondack literature as a "perfect fizzle," he has himself projected a work, and written much on the natural history of his region. Long ago he made a large map of the mountain country; and, until recent surveys, it was the only one that could lay any claim to accuracy. His history is no doubt original in form, and unconventional in expression. Like most of the writers of the seventeenth century, and the court ladies and gentlemen of the eighteenth century, he is an independent speller. Writing of his work on the Adirondacks, he says, "If I should ever live to get this wonderful thing written, I expect it will show one thing, if no more; and that is, that every thing has an opposite. I expect to show in this that literature has an opposite, if I do not show any thing els. We could not enjoy the blessings and happiness of riteousness if we did not know innicity was in the world: in fact, there would be no riteousness without innicity." Writing also of his great enjoyment of being in the woods, especially since he has had the society there of some people he names, he adds, "And since I have Literature, Siance, and Art all spread about on the green moss of the mountain woods or the gravell banks of a cristle stream, it seems like finding roses, honeysuckles, and violets on a crisp brown cliff in December. You know I don't believe much in the religion of seramony; but any riteous thing that has life and spirit in it is food for me." I must not neglect to mention an essay, continued in several numbers of his local paper, on "The Growth of the Tree," in which he demolishes the theory of Mr. Greeley, whom he calls "one of the best vegetable philosophers," about "growth without seed." He treats of the office of sap: "All trees have some kind of sap and some kind of operation of sap flowing in their season," the dissemination of seeds, the processes of growth, the power of healing wounds, the proportion of roots to branches, &c. Speaking of the latter, he says, "I have thought it would be one of the greatest curiosities on earth to see a thrifty growing maple or elm, that had grown on a deep soil interval to be two feet in diameter, to be raised clear into the air with every root and fibre down to the minutest thread, all entirely cleared of soil, so that every particle could be seen in its natural position. I think it would astonish even the wise ones." From his instinctive sympathy with nature, he often credits vegetable organism with "instinctive judgment." "Observation teaches us that a tree is given powerful instincts, which would almost appear to amount to judgment in some cases, to provide for its own wants and necessities."

Here our study must cease. When the primitive man comes into literature, he is no longer primitive.

VI. CAMPING OUT

It seems to be agreed that civilization is kept up only by a constant effort: Nature claims its own speedily when the effort is relaxed. If you clear a patch of fertile ground in the forest, uproot the stumps, and plant it, year after year, in potatoes and maize, you say you have subdued it. But, if you leave it for a season or two, a kind of barbarism seems to steal out upon it from the circling woods; coarse grass and brambles cover it; bushes spring up in a wild tangle; the raspberry and the blackberry flower and fruit; and the humorous bear feeds upon them. The last state of that ground is worse than the first.

Perhaps the cleared spot is called Ephesus. There is a splendid city on the plain; there are temples and theatres on the hills; the commerce of the world seeks its port; the luxury of the Orient flows through its marble streets. You are there one day when the sea has receded: the plain is a pestilent marsh; the temples, the theatres, the lofty gates have sunken and crumbled, and the wild-brier runs over them; and, as you grow pensive in the most desolate place in the world, a bandit lounges out of a tomb, and offers to relieve you of all that which creates artificial distinctions in society. The higher the civilization has risen, the more abject is the desolation of barbarism that ensues. The most melancholy spot in the Adirondacks is not a tamarack-swamp, where the traveler wades in moss and mire, and the atmosphere is composed of equal active parts of black-flies, mosquitoes, and midges. It is the village of the Adirondack Iron-Works, where the streets of gaunt houses are falling to pieces, tenantless; the factory-wheels have stopped; the furnaces are in ruins; the iron and wooden machinery is strewn about in helpless detachment; and heaps of charcoal, ore, and slag proclaim

an arrested industry. Beside this deserted village, even Calamity Pond, shallow, sedgy, with its ragged shores of stunted firs, and its melancholy shaft that marks the spot where the proprietor of the iron-works accidentally shot himself, is cheerful.

The instinct of barbarism that leads people periodically to throw aside the habits of civilization, and seek the freedom and discomfort of the woods, is explicable enough; but it is not so easy to understand why this passion should be strongest in those who are most refined, and most trained in intellectual and social fastidiousness. Philistinism and shoddy do not like the woods, unless it becomes fashionable to do so; and then, as speedily as possible, they introduce their artificial luxuries, and reduce the life in the wilderness to the vulgarity of a well-fed picnic. It is they who have strewn the Adirondacks with paper collars and tin cans. The real enjoyment of camping and tramping in the woods lies in a return to primitive conditions of lodging, dress, and food, in as total an escape as may be from the requirements of civilization. And it remains to be explained why this is enjoyed most by those who are most highly civilized. It is wonderful to see how easily the restraints of society fall off. Of course it is not true that courtesy depends upon clothes with the best people; but, with others, behavior hangs almost entirely upon dress. Many good habits are easily got rid of in the woods. Doubt sometimes seems to be felt whether Sunday is a legal holiday there. It becomes a question of casuistry with a clergyman whether he may shoot at a mark on Sunday, if none of his congregation are present. He intends no harm: he only gratifies a curiosity to see if he can hit the mark. Where shall he draw the line? Doubtless he might throw a stone at a chipmunk, or shout at a loon. Might he fire at a mark with an air-gun that makes no noise? He will not fish or hunt on Sunday (although he is no more likely to catch anything that day than on any other); but may he eat trout that the guide has caught on Sunday, if the guide swears he caught them Saturday night? Is there such a thing as a vacation in religion? How much of our virtue do we owe to inherited habits?

I am not at all sure whether this desire to camp outside of civilization is creditable to human nature, or otherwise. We hear sometimes that the Turk has been merely camping for four centuries in Europe. I suspect that many of us are, after all, really camping temporarily in civilized conditions; and that going into the wilderness is an escape, longed for, into our natural and preferred state. Consider what this "camping out" is, that is confessedly so agreeable to people most delicately reared. I have no desire to exaggerate its delights.

The Adirondack wilderness is essentially unbroken. A few bad roads that penetrate it, a few jolting wagons that traverse them, a few barn-like boarding-houses on the edge of the forest, where the boarders are soothed by patent coffee, and stimulated to unnatural gayety by Japan tea, and experimented on by unique cookery, do little to destroy the savage fascination of the region. In half an hour, at any point, one can put himself into solitude and every desirable discomfort. The party that covets the experience of the camp comes down to primitive conditions of dress and equipment. There are guides and porters to carry the blankets for beds, the raw provisions, and the camp equipage; and the motley party of the temporarily decivilized files into the woods, and begins, perhaps by a road, perhaps on a trail, its exhilarating and weary march. The exhilaration arises partly from the casting aside of restraint, partly from the adventure of exploration; and the weariness, from the interminable toil of bad walking, a heavy pack, and the grim monotony of trees and bushes, that shut out all prospect, except an occasional glimpse of the sky. Mountains are painfully climbed, streams forded, lonesome lakes paddled over, long and muddy "carries" traversed. Fancy this party the victim of political exile, banished by the law, and a more sorrowful march could not be imagined; but the voluntary hardship becomes pleasure, and it is undeniable that the spirits of the party rise as the difficulties increase.

For this straggling and stumbling band the world is young again: it has come to the beginning of things; it has cut loose from tradition, and is free to make a home anywhere: the movement has all the promise of a revolution. All this virginal freshness invites the primitive instincts of play and disorder. The free range of the forests suggests endless possibilities of exploration and possession. Perhaps we are treading where man since the creation never trod before; perhaps the waters of this bubbling spring, which we deepen by scraping out the decayed leaves and the black earth, have never been tasted before, except by the wild denizens of these woods. We cross the trails of lurking animals,—paths that heighten our sense of seclusion from the world. The hammering of the infrequent woodpecker, the call of the lonely bird, the drumming of the solitary partridge,—all these sounds do but emphasize the lonesomeness of nature. The roar of the mountain brook, dashing over its bed of pebbles, rising out of the ravine, and spreading, as it were, a mist of sound through all the forest (continuous beating waves that have the rhythm of eternity in them), and the fitful movement of the air-tides through the balsams and firs and the giant pines,—how these grand symphonies shut out the little exasperations of our vexed life! It seems easy to begin life over again on the simplest terms. Probably it is not so much the desire of the congregation to escape from the preacher, or of the preacher to escape from himself, that drives sophisticated people into the wilderness, as it is the unconquered craving for primitive simplicity, the revolt against the everlasting dress-parade of our civilization. From this monstrous compositeness even the artificial rusticity of a Petit Trianon is a relief. It was only human nature that the jaded Frenchman of the regency should run away to the New World, and live in a forest-hut with an Indian squaw; although he found little satisfaction in his act of heroism, unless it was talked about at Versailles.

When our trampers come, late in the afternoon, to the bank of a lovely lake where they purpose to enter the primitive life, everything is waiting for them in virgin expectation. There is a little promontory jutting into the lake, and sloping down to a sandy beach, on which the waters idly lapse, and shoals of red-fins and shiners come to greet the stranger; the forest is untouched by the axe; the tender green sweeps the water's edge; ranks of slender firs are marshaled by the shore; clumps of white-birch stems shine in satin purity among the evergreens; the boles of giant spruces, maples, and oaks, lifting high their crowns of foliage, stretch away in endless galleries and arcades; through the shifting leaves the sunshine falls upon the brown earth; overhead are fragments of blue sky; under the boughs and in chance openings appear the bluer lake and the outline of the gracious mountains. The discoverers of this paradise, which they have entered to destroy, note the babbling of the brook that flows close at hand; they hear the splash of the leaping fish; they listen to the sweet, metallic song of the evening thrush, and the chatter of the red squirrel, who angrily challenges their right to be there. But the moment of sentiment passes. This party has come here to eat and to sleep, and not to encourage Nature in her poetic attitudinizing.

The spot for a shanty is selected. This side shall be its opening, towards the lake; and in front of it the fire, so that the smoke shall drift into the hut, and discourage the mosquitoes; yonder shall be the cook's fire and the path to the spring. The whole colony bestir themselves in the foundation of a new home,—an enterprise that has all the fascination, and none of the danger, of a veritable new settlement in the wilderness. The axes of the guides resound in the echoing spaces; great trunks fall with a crash; vistas are opened towards the lake and the mountains. The spot for the shanty is cleared of underbrush; forked stakes are driven into the ground, cross-pieces are laid on them, and poles sloping back to the ground. In an incredible space of time there is the skeleton of a house, which is entirely open in front. The roof and sides must be covered. For this purpose the trunks of great spruces are skinned. The woodman rims the bark near the foot of the tree, and again six feet above, and slashes it perpendicularly; then, with a blunt stick, he crowds off this thick hide exactly as an ox is skinned. It needs but a few of these skins to cover the roof; and they make a perfectly water-tight roof, except when it rains. Meantime busy hands have gathered boughs of the spruce and the feathery balsam, and shingled the ground underneath the shanty for a bed. It is an aromatic bed: in theory it is elastic and consoling. Upon it are spread the blankets. The sleepers, of all sexes and ages, are to lie there in a row, their feet to the fire, and their heads under the edge of the sloping roof. Nothing could be better contrived. The fire is in front: it is not a fire, but a conflagration—a vast heap of green logs set on fire—of pitch, and split dead-wood, and crackling balsams, raging and roaring. By the time, twilight falls, the cook has prepared supper. Everything has been cooked in a tin pail and a skillet,—potatoes, tea, pork, mutton, slapjacks. You wonder how everything could have been prepared in so few utensils. When you eat, the wonder ceases: everything might have been cooked in one pail. It is a noble meal; and nobly is it disposed of by these amateur savages, sitting about upon logs and roots of trees. Never were there such potatoes, never beans that seemed to have more of the bean in them, never such curly pork, never trout with more Indian-meal on them, never mutton more distinctly sheepy; and the tea, drunk out of a tin cup, with a lump of maple-sugar dissolved in it,—it is the sort of tea that takes hold, lifts the hair, and disposes the drinker to anecdote and hilarity. There is no deception about it: it tastes of tannin and spruce and creosote. Everything, in short, has the flavor of the wilderness and a free life. It is idyllic. And yet, with all our sentimentality, there is nothing feeble about the cooking. The slapjacks are a solid job of work, made to last, and not go to pieces in a person's stomach like a trivial bun: we might record on them, in cuneiform characters, our incipient civilization; and future generations would doubtless turn them up as Acadian bricks. Good, robust victuals are what the primitive man wants.

Darkness falls suddenly. Outside the ring of light from our conflagration the woods are black. There is a tremendous impression of isolation and lonesomeness in our situation. We are the prisoners of the night. The woods never seemed so vast and mysterious. The trees are gigantic. There are noises that we do not understand,—mysterious winds passing overhead, and rambling in the great galleries, tree-trunks grinding against each other, undefinable stirs and uneasinesses. The shapes of those who pass into the dimness are outlined in monstrous proportions. The spectres, seated about in the glare of the fire, talk about appearances and presentiments and religion. The guides cheer the night with bear-fights, and catamount encounters, and frozen-to-death experiences, and simple tales of great prolixity and no point, and jokes of primitive lucidity. We hear catamounts, and the stealthy tread of things in the leaves, and the hooting of owls, and, when the moon rises, the laughter of the loon. Everything is strange, spectral, fascinating.

By and by we get our positions in the shanty for the night, and arrange the row of sleepers. The shanty has become a smoke-house by this time: waves of smoke roll into it from the fire. It is only by lying down, and getting the head well under the eaves, that one can breathe. No one can find her "things"; nobody has a pillow. At length the row is laid out, with the solemn protestation of intention to sleep. The wind, shifting, drives away the smoke.

Good-night is said a hundred times; positions are readjusted, more last words, new shifting about, final remarks; it is all so comfortable and romantic; and then silence. Silence continues for a minute. The fire flashes up; all the row of heads is lifted up simultaneously to watch it; showers of sparks sail aloft into the blue night; the vast vault of greenery is a fairy spectacle. How the sparks mount and twinkle and disappear like tropical fireflies, and all the leaves murmur, and clap their hands! Some of the sparks do not go out: we see them flaming in the sky when the flame of the fire has died down. Well, good-night, goodnight. More folding of the arms to sleep; more grumbling about the hardness of a hand-bag, or the insufficiency of a pocket-handkerchief, for a pillow. Good-night. Was that a remark?—something about a root, a stub in the ground sticking into the back. "You couldn't lie along a hair?"—"Well, no: here's another stub. It needs but a moment for the conversation to become general,—about roots under the shoulder, stubs in the back, a ridge on which it is impossible for the sleeper to balance, the non-elasticity of boughs, the hardness of the ground, the heat, the smoke, the chilly air. Subjects of remarks multiply. The whole camp is awake, and chattering like an aviary. The owl is also awake; but the guides who are asleep outside make more noise than the owls. Water is wanted, and is handed about in a dipper. Everybody is yawning; everybody is now determined to go to sleep in good earnest. A last good-night. There is an appalling silence. It is interrupted in the most natural way in the world. Somebody has got the start, and gone to sleep. He proclaims the fact. He seems to have been brought up on the seashore, and to know how to make all the deep-toned noises of the restless ocean. He is also like a war-horse; or, it is suggested, like a saw-horse. How malignantly he snorts, and breaks off short, and at once begins again in another key! One head is raised after another.

"Who is that?"

"Somebody punch him."

"Turn him over."

"Reason with him."

The sleeper is turned over. The turn was a mistake. He was before, it appears, on his most agreeable side. The camp rises in indignation. The sleeper sits up in bewilderment. Before he can go off again, two or three others have preceded him. They are all alike. You never can judge what a person is when he is awake. There are here half a dozen disturbers of the peace who should be put in solitary confinement. At midnight, when a philosopher crawls out to sit on a log by the fire, and smoke a pipe, a duet in tenor and mezzo-soprano is

going on in the shanty, with a chorus always coming in at the wrong time. Those who are not asleep want to know why the smoker doesn't go to bed. He is requested to get some water, to throw on another log, to see what time it is, to note whether it looks like rain. A buzz of conversation arises. She is sure she heard something behind the shanty. He says it is all nonsense. "Perhaps, however, it might be a mouse."

"Mercy! Are there mice?"

"Plenty."

"Then that's what I heard nibbling by my head. I shan't sleep a wink! Do they bite?"

"No, they nibble; scarcely ever take a full bite out."

"It's horrid!"

Towards morning it grows chilly; the guides have let the fire go out; the blankets will slip down. Anxiety begins to be expressed about the dawn.

"What time does the sun rise?"

"Awful early. Did you sleep?"

"Not a wink. And you?"

"In spots. I'm going to dig up this root as soon as it is light enough."

"See that mist on the lake, and the light just coming on the Gothics! I'd no idea it was so cold: all the first part of the night I was roasted."

"What were they talking about all night?"

When the party crawls out to the early breakfast, after it has washed its faces in the lake, it is disorganized, but cheerful. Nobody admits much sleep; but everybody is refreshed, and declares it delightful. It is the fresh air all night that invigorates; or maybe it is the tea, or the slap-jacks. The guides have erected a table of spruce bark, with benches at the sides; so that breakfast is taken in form. It is served on tin plates and oak chips. After breakfast begins the day's work. It may be a mountain-climbing expedition, or rowing and angling in the lake, or fishing for trout in some stream two or three miles distant. Nobody can stir far from camp without a guide. Hammocks are swung, bowers are built novel-reading begins, worsted work appears, cards are shuffled and dealt. The day passes in absolute freedom from responsibility to one's self. At night when the expeditions return, the camp resumes its animation. Adventures are recounted, every statement of the narrator being disputed and argued. Everybody has become an adept in woodcraft; but nobody credits his neighbor with like instinct. Society getting resolved into its elements, confidence is gone.

Whilst the hilarious party are at supper, a drop or two of rain falls. The head guide is appealed to. Is it going to rain? He says it does rain. But will it be a rainy night? The guide goes down to the lake, looks at the sky, and concludes that, if the wind shifts a p'int more, there is no telling what sort of weather we shall have. Meantime the drops patter thicker on the leaves overhead, and the leaves, in turn, pass the water down to the table; the sky darkens; the wind rises; there is a kind of shiver in the woods; and we scud away into the shanty, taking the remains of our supper, and eating it as best we can. The rain increases. The fire sputters and fumes. All the trees are dripping, dripping, and the ground is wet. We cannot step outdoors without getting a drenching. Like sheep, we are penned in the little hut, where no one can stand erect. The rain swirls into the open front, and wets the bottom of the blankets. The smoke drives in. We curl up, and enjoy ourselves. The guides at length conclude that it is going to be damp. The dismal situation sets us all into good spirits; and it is later than the night before when we crawl under our blankets, sure this time of a sound sleep, lulled by the storm and the rain resounding on the bark roof. How much better off we are than many a shelter-less wretch! We are as snug as dry herrings. At the moment, however, of dropping off to sleep, somebody unfortunately notes a drop of water on his face; this is followed by another drop; in an instant a stream is established. He moves his head to a dry place. Scarcely has he done so, when he feels a dampness in his back. Reaching his hand outside, he finds a puddle of water soaking through his blanket. By this time, somebody inquires if it is possible that the roof leaks. One man has a stream of water under him; another says it is coming into his ear. The roof appears to be a discriminating sieve. Those who are dry see no need of such a fuss. The man in the corner spreads his umbrella, and the protective measure is resented by his neighbor. In the darkness there is recrimination. One of the guides, who is summoned, suggests that the rubber blankets be passed out, and spread over the roof. The inmates dislike the proposal, saying that a shower-bath is no worse than a tub-bath. The rain continues to soak down. The fire is only half alive. The bedding is damp. Some sit up, if they can find a dry spot to sit on, and smoke. Heartless observations are made. A few sleep. And the night wears on. The morning opens cheerless. The sky is still leaking, and so is the shanty. The guides bring in a half-cooked breakfast. The roof is patched up. There are reviving signs of breaking away, delusive signs that create momentary exhilaration. Even if the storm clears, the woods are soaked. There is no chance of stirring. The world is only ten feet square.

This life, without responsibility or clean clothes, may continue as long as the reader desires. There are, those who would like to live in this free fashion forever, taking rain and sun as heaven pleases; and there are some souls so constituted that they cannot exist more than three days without their worldly—baggage. Taking the party altogether, from one cause or another it is likely to strike camp sooner than was intended. And the stricken camp is a melancholy sight. The woods have been despoiled; the stumps are ugly; the bushes are scorched; the pine-leaf-strewn earth is trodden into mire; the landing looks like a cattle-ford; the ground is littered with all the unsightly dibris of a hand-to-hand life; the dismantled shanty is a shabby object; the charred and blackened logs, where the fire blazed, suggest the extinction of family life. Man has wrought his usual wrong upon Nature, and he can save his self-respect only by moving to virgin forests.

And move to them he will, the next season, if not this. For he who has once experienced the fascination of the woods-life never escapes its enticement: in the memory nothing remains but its charm.

VII. A WILDERNESS ROMANCE

At the south end of Keene Valley, in the Adirondacks, stands Noon Mark, a shapely peak thirty-five hundred feet above the sea, which, with the aid of the sun, tells the Keene people when it is time to eat dinner. From its summit you look south into a vast wilderness basin, a great stretch of forest little trodden, and out of whose bosom you can hear from the heights on a still day the loud murmur of the Boquet. This basin of unbroken green rises away to the south and southeast into the rocky heights of Dix's Peak and Nipple Top,—the latter a local name which neither the mountain nor the fastidious tourist is able to shake off. Indeed, so long as the mountain keeps its present shape as seen from the southern lowlands, it cannot get on without this name.

These two mountains, which belong to the great system of which Marcy is the giant centre, and are in the neighborhood of five thousand feet high, on the southern outposts of the great mountains, form the gate-posts of the pass into the south country. This opening between them is called Hunter's Pass. It is the most elevated and one of the wildest of the mountain passes. Its summit is thirty-five hundred feet high. In former years it is presumed the hunters occasionally followed the game through; but latterly it is rare to find a guide who has been that way, and the tin-can and paper-collar tourists have not yet made it a runway. This seclusion is due not to any inherent difficulty of travel, but to the fact that it lies a little out of the way.

We went through it last summer; making our way into the jaws from the foot of the great slides on Dix, keeping along the ragged spurs of the mountain through the virgin forest. The pass is narrow, walled in on each side by precipices of granite, and blocked up with bowlders and fallen trees, and beset with pitfalls in the roads ingeniously covered with fair-seeming moss. When the climber occasionally loses sight of a leg in one of these treacherous holes, and feels a cold sensation in his foot, he learns that he has dipped into the sources of the Boquet, which emerges lower down into falls and rapids, and, recruited by creeping tributaries, goes brawling through the forest basin, and at last comes out an amiable and boat-bearing stream in the valley of Elizabeth Town. From the summit another rivulet trickles away to the south, and finds its way through a frightful tamarack swamp, and through woods scarred by ruthless lumbering, to Mud Pond, a quiet body of water, with a ghastly fringe of dead trees, upon which people of grand intentions and weak vocabulary are trying to fix the name of Elk Lake. The descent of the pass on that side is precipitous and exciting. The way is in the stream itself; and a considerable portion of the distance we swung ourselves down the faces of considerable falls, and tumbled down cascades. The descent, however, was made easy by the fact that it rained, and every footstep was yielding and slippery. Why sane people, often church-members respectably connected, will subject themselves to this sort of treatment,—be wet to the skin, bruised by the rocks, and flung about among the bushes and dead wood until the most necessary part of their apparel hangs in shreds,—is one of the delightful mysteries of these woods. I suspect that every man is at heart a roving animal, and likes, at intervals, to revert to the condition of the bear and the catamount.

There is no trail through Hunter's Pass, which, as I have intimated, is the least frequented portion of this wilderness. Yet we were surprised to find a well-beaten path a considerable portion of the way and wherever a path is possible. It was not a mere deer's runway: these are found everywhere in the mountains. It is trodden by other and larger animals, and is, no doubt, the highway of beasts. It bears marks of having been so for a long period, and probably a period long ago. Large animals are not common in these woods now, and you seldom meet anything fiercer than the timid deer and the gentle bear. But in days gone by, Hunter's Pass was the highway of the whole caravan of animals who were continually going backward; and forwards, in the aimless, roaming way that beasts have, between Mud Pond and the Boquet Basin. I think I can see now the procession of them between the heights of Dix and Nipple Top; the elk and the moose shambling along, cropping the twigs; the heavy bear lounging by with his exploring nose; the frightened deer trembling at every twig that snapped beneath his little hoofs, intent on the lily-pads of the pond; the raccoon and the hedgehog, sidling along; and the velvet-footed panther, insouciant and conscienceless, scenting the path with a curious glow in his eye, or crouching in an overhanging tree ready to drop into the procession at the right moment. Night and day, year after year, I see them going by, watched by the red fox and the comfortably clad sable, and grinned at by the black cat,—the innocent, the vicious, the timid and the savage, the shy and the bold, the chattering slanderer and the screaming prowler, the industrious and the peaceful, the tree-top critic and the crawling biter,—just as it is elsewhere. It makes me blush for my species when I think of it. This charming society is nearly extinct now: of the larger animals there only remain the bear, who minds his own business more thoroughly than any person I know, and the deer, who would like to be friendly with men, but whose winning face and gentle ways are no protection from the savageness of man, and who is treated with the same unpitying destruction as the snarling catamount. I have read in history that the amiable natives of Hispaniola fared no better at the hands of the brutal Spaniards than the fierce and warlike Caribs. As society is at present constituted in Christian countries, I would rather for my own security be a cougar than a fawn.

There is not much of romantic interest in the Adirondacks. Out of the books of daring travelers, nothing. I do not know that the Keene Valley has any history. The mountains always stood here, and the Au Sable, flowing now in shallows and now in rippling reaches over the sands and pebbles, has for ages filled the air with continuous and soothing sounds. Before the Vermonters broke into it some three-quarters of a century ago, and made meadows of its bottoms and sugar-camps of its fringing woods, I suppose the red Indian lived here in his usual discomfort, and was as restless as his successors, the summer boarders. But the streams were full of trout then, and the moose and the elk left their broad tracks on the sands of the river. But of the Indian there is no trace. There is a mound in the valley, much like a Tel in the country of Bashan beyond the Jordan, that may have been built by some pre-historic race, and may contain treasure and the seated figure of a preserved chieftain on his slow way to Paradise. What the gentle and accomplished race of the Mound-Builders should want in this savage region where the frost kills the early potatoes and stunts the scanty oats, I do not know. I have seen no trace of them, except this Tel, and one other slight relic, which came to light last summer, and is not enough to found the history of a race upon.

Some workingmen, getting stone from the hillside on one of the little plateaus, for a house-cellar, discovered, partly embedded, a piece of pottery unique in this region. With the unerring instinct of workmen

in regard to antiquities, they thrust a crowbar through it, and broke the bowl into several pieces. The joint fragments, however, give us the form of the dish. It is a bowl about nine inches high and eight inches across, made of red clay, baked but not glazed. The bottom is round, the top flares into four comers, and the rim is rudely but rather artistically ornamented with criss-cross scratches made when the clay was soft. The vessel is made of clay not found about here, and it is one that the Indians formerly living here could not form. Was it brought here by roving Indians who may have made an expedition to the Ohio; was it passed from tribe to tribe; or did it belong to a race that occupied the country before the Indian, and who have left traces of their civilized skill in pottery scattered all over the continent?

If I could establish the fact that this jar was made by a prehistoric race, we should then have four generations in this lovely valley:—the amiable Pre-Historic people (whose gentle descendants were probably killed by the Spaniards in the West Indies); the Red Indians; the Keene Flaters (from Vermont); and the Summer Boarders, to say nothing of the various races of animals who have been unable to live here since the advent of the Summer Boarders, the valley being not productive enough to sustain both. This last incursion has been more destructive to the noble serenity of the forest than all the preceding.

But we are wandering from Hunter's Pass. The western walls of it are formed by the precipices of Nipple Top, not so striking nor so bare as the great slides of Dix which glisten in the sun like silver, but rough and repelling, and consequently alluring. I have a great desire to scale them. I have always had an unreasonable wish to explore the rough summit of this crabbed hill, which is too broken and jagged for pleasure and not high enough for glory. This desire was stimulated by a legend related by our guide that night in the Mud Pond cabin. The guide had never been through the pass before; although he was familiar with the region, and had ascended Nipple Top in the winter in pursuit of the sable. The story he told doesn't amount to much, none of the guides' stories do, faithfully reported, and I should not have believed it if I had not had a good deal of leisure on my hands at the time, and been of a willing mind, and I may say in rather of a starved condition as to any romance in this region.

The guide said then—and he mentioned it casually, in reply to our inquiries about ascending the mountain—that there was a cave high up among the precipices on the southeast side of Nipple Top. He scarcely volunteered the information, and with seeming reluctance gave us any particulars about it. I always admire this art by which the accomplished story-teller lets his listener drag the reluctant tale of the marvelous from him, and makes you in a manner responsible for its improbability. If this is well managed, the listener is always eager to believe a great deal more than the romancer seems willing to tell, and always resents the assumed reservations and doubts of the latter.

There were strange reports about this cave when the old guide was a boy, and even then its very existence had become legendary. Nobody knew exactly where it was, but there was no doubt that it had been inhabited. Hunters in the forests south of Dix had seen a light late at night twinkling through the trees high up the mountain, and now and then a ruddy glare as from the flaring-up of a furnace. Settlers were few in the wilderness then, and all the inhabitants were well known. If the cave was inhabited, it must be by strangers, and by men who had some secret purpose in seeking this seclusion and eluding observation. If suspicious characters were seen about Port Henry, or if any such landed from the steamers on the shore of Lake Champlain, it was impossible to identify them with these invaders who were never seen. Their not being seen did not, however, prevent the growth of the belief in their existence. Little indications and rumors, each trivial in itself, became a mass of testimony that could not be disposed of because of its very indefiniteness, but which appealed strongly to man's noblest faculty, his imagination, or credulity.

The cave existed; and it was inhabited by men who came and went on mysterious errands, and transacted their business by night. What this band of adventurers or desperadoes lived on, how they conveyed their food through the trackless woods to their high eyrie, and what could induce men to seek such a retreat, were questions discussed, but never settled. They might be banditti; but there was nothing to plunder in these savage wilds, and, in fact, robberies and raids either in the settlements of the hills or the distant lake shore were unknown. In another age, these might have been hermits, holy men who had retired from the world to feed the vanity of their godliness in a spot where they were subject neither to interruption nor comparison; they would have had a shrine in the cave, and an image of the Blessed Virgin, with a lamp always burning before it and sending out its mellow light over the savage waste. A more probable notion was that they were romantic Frenchmen who had grown weary of vice and refinement together,—possibly princes, expectants of the throne, Bourbon remainders, named Williams or otherwise, unhatched eggs, so to speak, of kings, who had withdrawn out of observation to wait for the next turn-over in Paris. Frenchmen do such things. If they were not Frenchmen, they might be honest-thieves or criminals, escaped from justice or from the friendly state-prison of New York. This last supposition was, however, more violent than the others, or seems so to us in this day of grace. For what well-brought-up New York criminal would be so insane as to run away from his political friends the keepers, from the easily had companionship of his pals outside, and from the society of his criminal lawyer, and, in short, to put himself into the depths of a wilderness out of which escape, when escape was desired, is a good deal more difficult than it is out of the swarming jails of the Empire State? Besides, how foolish for a man, if he were a really hardened and professional criminal, having established connections and a regular business, to run away from the governor's pardon, which might have difficulty in finding him in the craggy bosom of Nipple Top!

This gang of men—there is some doubt whether they were accompanied by women—gave little evidence in their appearance of being escaped criminals or expectant kings. Their movements were mysterious but not necessarily violent. If their occupation could have been discovered, that would have furnished a clew to their true character. But about this the strangers were as close as mice. If anything could betray them, it was the steady light from the cavern, and its occasional ruddy flashing. This gave rise to the opinion, which was strengthened by a good many indications equally conclusive, that the cave was the resort of a gang of coiners and counterfeiters. Here they had their furnace, smelting-pots, and dies; here they manufactured those spurious quarters and halves that their confidants, who were pardoned, were circulating, and which a few honest men were “nailing to the counter.”

This prosaic explanation of a romantic situation satisfies all the requirements of the known facts, but the

lively imagination at once rejects it as unworthy of the subject. I think the guide put it forward in order to have it rejected. The fact is,—at least, it has never been disproved,—these strangers whose movements were veiled belonged to that dark and mysterious race whose presence anywhere on this continent is a nest-egg of romance or of terror. They were Spaniards! You need not say buccaneers, you need not say gold-hunters, you need not say swarthy adventurers even: it is enough to say Spaniards! There is no tale of mystery and fanaticism and daring I would not believe if a Spaniard is the hero of it, and it is not necessary either that he should have the high-sounding name of Bodadilla or Ojeda.

Nobody, I suppose, would doubt this story if the moose, quaffing deep draughts of red wine from silver tankards, and then throwing themselves back upon divans, and lazily puffing the fragrant Havana. After a day of toil, what more natural, and what more probable for a Spaniard?

Does the reader think these inferences not warranted by the facts? He does not know the facts. It is true that our guide had never himself personally visited the cave, but he has always intended to hunt it up. His information in regard to it comes from his father, who was a mighty hunter and trapper. In one of his expeditions over Nipple Top he chanced upon the cave. The mouth was half concealed by undergrowth. He entered, not without some apprehension engendered by the legends which make it famous. I think he showed some boldness in venturing into such a place alone. I confess that, before I went in, I should want to fire a Gatling gun into the mouth for a little while, in order to rout out the bears which usually dwell there. He went in, however. The entrance was low; but the cave was spacious, not large, but big enough, with a level floor and a vaulted ceiling. It had long been deserted, but that it was once the residence of highly civilized beings there could be no doubt. The dead brands in the centre were the remains of a fire that could not have been kindled by wild beasts, and the bones scattered about had been scientifically dissected and handled. There were also remnants of furniture and pieces of garments scattered about. At the farther end, in a fissure of the rock, were stones regularly built up, the remains of a larger fire,—and what the hunter did not doubt was the smelting furnace of the Spaniards. He poked about in the ashes, but found no silver. That had all been carried away.

But what most provoked his wonder in this rude cave was a chair. This was not such a seat as a woodman might knock up with an axe, with rough body and a seat of woven splits, but a manufactured chair of commerce, and a chair, too, of an unusual pattern and some elegance. This chair itself was a mute witness of luxury and mystery. The chair itself might have been accounted for, though I don't know how; but upon the back of the chair hung, as if the owner had carelessly flung it there before going out an hour before, a man's waistcoat. This waistcoat seemed to him of foreign make and peculiar style, but what endeared it to him was its row of metal buttons. These buttons were of silver! I forget now whether he did not say they were of silver coin, and that the coin was Spanish. But I am not certain about this latter fact, and I wish to cast no air of improbability over my narrative. This rich vestment the hunter carried away with him. This was all the plunder his expedition afforded. Yes: there was one other article, and, to my mind, more significant than the vest of the *hidalgo*. This was a short and stout crowbar of iron; not one of the long crowbars that farmers use to pry up stones, but a short handy one, such as you would use in digging silver-ore out of the cracks of rocks.

This was the guide's simple story. I asked him what became of the vest and the buttons, and the bar of iron. The old man wore the vest until he wore it out; and then he handed it over to the boys, and they wore it in turn till they wore it out. The buttons were cut off, and kept as curiosities. They were about the cabin, and the children had them to play with. The guide distinctly remembers playing with them; one of them he kept for a long time, and he didn't know but he could find it now, but he guessed it had disappeared. I regretted that he had not treasured this slender verification of an interesting romance, but he said in those days he never paid much attention to such things. Lately he has turned the subject over, and is sorry that his father wore out the vest and did not bring away the chair. It is his steady purpose to find the cave some time when he has leisure, and capture the chair, if it has not tumbled to pieces. But about the crowbar? Oh I that is all right. The guide has the bar at his house in Keene Valley, and has always used it.

I am happy to be able to confirm this story by saying that next day I saw the crowbar, and had it in my hand. It is short and thick, and the most interesting kind of crowbar. This evidence is enough for me. I intend in the course of this vacation to search for the cave; and, if I find it, my readers shall know the truth about it, if it destroys the only bit of romance connected with these mountains.

VIII. WHAT SOME PEOPLE CALL PLEASURE

My readers were promised an account of Spaniard's Cave on Nipple-Top Mountain in the Adirondacks, if such a cave exists, and could be found. There is none but negative evidence that this is a mere cave of the imagination, the void fancy of a vacant hour; but it is the duty of the historian to present the negative testimony of a fruitless expedition in search of it, made last summer. I beg leave to offer this in the simple language befitting all sincere exploits of a geographical character.

The summit of Nipple-Top Mountain has been trodden by few white men of good character: it is in the heart of a hirsute wilderness; it is itself a rough and unsocial pile of granite nearly five thousand feet high, bristling with a stunted and unpleasant growth of firs and balsams, and there is no earthly reason why a person should go there. Therefore we went. In the party of three there was, of course, a chaplain. The guide was Old Mountain Phelps, who had made the ascent once before, but not from the northwest side, the direction from which we approached it. The enthusiasm of this philosopher has grown with his years, and outlived his endurance: we carried our own knapsacks and supplies, therefore, and drew upon him for nothing but moral reflections and a general knowledge of the wilderness. Our first day's route was through the Gill-brook woods and up one of its branches to the head of Caribou Pass, which separates Nipple Top from Colvin.

It was about the first of September; no rain had fallen for several weeks, and this heart of the forest was as

dry as tinder; a lighted match dropped anywhere would start a conflagration. This dryness has its advantages: the walking is improved; the long heat has expressed all the spicy odors of the cedars and balsams, and the woods are filled with a soothing fragrance; the waters of the streams, though scant and clear, are cold as ice; the common forest chill is gone from the air. The afternoon was bright; there was a feeling of exultation and adventure in stepping off into the open but pathless forest; the great stems of deciduous trees were mottled with patches of sunlight, which brought out upon the variegated barks and mosses of the old trunks a thousand shifting hues. There is nothing like a primeval wood for color on a sunny day. The shades of green and brown are infinite; the dull red of the hemlock bark glows in the sun, the russet of the changing moose-bush becomes brilliant; there are silvery openings here and there; and everywhere the columns rise up to the canopy of tender green which supports the intense blue sky and holds up a part of it from falling through in fragments to the floor of the forest. Decorators can learn here how Nature dares to put blue and green in juxtaposition: she has evidently the secret of harmonizing all the colors.

The way, as we ascended, was not all through open woods; dense masses of firs were encountered, jagged spurs were to be crossed, and the going became at length so slow and toilsome that we took to the rocky bed of a stream, where boulders and flumes and cascades offered us sufficient variety. The deeper we penetrated, the greater the sense of savageness and solitude; in the silence of these hidden places one seems to approach the beginning of things. We emerged from the defile into an open basin, formed by the curved side of the mountain, and stood silent before a waterfall coming down out of the sky in the centre of the curve. I do not know anything exactly like this fall, which some poetical explorer has named the Fairy-Ladder Falls. It appears to have a height of something like a hundred and fifty feet, and the water falls obliquely across the face of the cliff from left to right in short steps, which in the moonlight might seem like a veritable ladder for fairies. Our impression of its height was confirmed by climbing the very steep slope at its side some three or four hundred feet. At the top we found the stream flowing over a broad bed of rock, like a street in the wilderness, slanting up still towards the sky, and bordered by low firs and balsams, and boulders completely covered with moss. It was above the world and open to the sky.

On account of the tindery condition of the woods we made our fire on the natural pavement, and selected a smooth place for our bed near by on the flat rock, with a pool of limpid water at the foot. This granite couch we covered with the dry and springy moss, which we stripped off in heavy fleeces a foot thick from the boulders. First, however, we fed upon the fruit that was offered us. Over these hills of moss ran an exquisite vine with a tiny, ovate, green leaf, bearing small, delicate berries, oblong and white as wax, having a faint flavor of wintergreen and the slightest acid taste, the very essence of the wilderness; fairy food, no doubt, and too refined for palates accustomed to coarser viands. There must exist somewhere sinless women who could eat these berries without being reminded of the lost purity and delicacy of the primeval senses. Every year I doubt not this stainless berry ripens here, and is unplucked by any knight of the Holy Grail who is worthy to eat it, and keeps alive, in the prodigality of nature, the tradition of the unperverted conditions of taste before the fall. We ate these berries, I am bound to say, with a sense of guilty enjoyment, as if they had been a sort of shew-bread of the wilderness, though I cannot answer for the chaplain, who is by virtue of his office a little nearer to these mysteries of nature than I. This plant belongs to the heath family, and is first cousin to the blueberry and cranberry. It is commonly called the creeping snowberry, but I like better its official title of *chiogenes*,—the snow-born.

Our mossy resting-place was named the Bridal Chamber Camp, in the enthusiasm of the hour, after darkness fell upon the woods and the stars came out. We were two thousand five hundred feet above the common world. We lay, as it were, on a shelf in the sky, with a basin of illimitable forests below us and dim mountain-passes-in the far horizon.

And as we lay there courting sleep which the blinking stars refused to shower down, our philosopher discoursed to us of the principle of fire, which he holds, with the ancients, to be an independent element that comes and goes in a mysterious manner, as we see flame spring up and vanish, and is in some way vital and indestructible, and has a mysterious relation to the source of all things. "That flame," he says, "you have put out, but where has it gone?" We could not say, nor whether it is anything like the spirit of a man which is here for a little hour, and then vanishes away. Our own philosophy of the correlation of forces found no sort of favor at that elevation, and we went to sleep leaving the principle of fire in the apostolic category of "any other creature."

At daylight we were astir; and, having pressed the principle of fire into our service to make a pot of tea, we carefully extinguished it or sent it into another place, and addressed ourselves to the climb of some thing over two thousand feet. The arduous labor of scaling an Alpine peak has a compensating glory; but the dead lift of our bodies up Nipple Top had no stimulus of this sort. It is simply hard work, for which the strained muscles only get the approbation of the individual conscience that drives them to the task. The pleasure of such an ascent is difficult to explain on the spot, and I suspect consists not so much in positive enjoyment as in the delight the mind experiences in tyrannizing over the body. I do not object to the elevation of this mountain, nor to the uncommonly steep grade by which it attains it, but only to the other obstacles thrown in the way of the climber. All the slopes of Nipple Top are hirsute and jagged to the last degree. Granite ledges interpose; granite boulders seem to have been dumped over the sides with no more attempt at arrangement than in a rip-rap wall; the slashes and windfalls of a century present here and there an almost impenetrable *chevalier des arbres*; and the steep sides bristle with a mass of thick balsams, with dead, protruding spikes, as unyielding as iron stakes. The mountain has had its own way forever, and is as untamed as a wolf; or rather the elements, the frightful tempests, the frosts, the heavy snows, the coaxing sun, and the avalanches have had their way with it until its surface is in hopeless confusion. We made our way very slowly; and it was ten o'clock before we reached what appeared to be the summit, a ridge deeply covered with moss, low balsams, and blueberry-bushes.

I say, appeared to be; for we stood in thick fog or in the heart of clouds which limited our dim view to a radius of twenty feet. It was a warm and cheerful fog, stirred by little wind, but moving, shifting, and boiling as by its own volatile nature, rolling up black from below and dancing in silvery splendor overhead. As a fog it could not have been improved; as a medium for viewing the landscape it was a failure and we lay down upon

the Sybarite couch of moss, as in a Russian bath, to await revelations.

We waited two hours without change, except an occasional hopeful lightness in the fog above, and at last the appearance for a moment of the spectral sun. Only for an instant was this luminous promise vouchsafed. But we watched in intense excitement. There it was again; and this time the fog was so thin overhead that we caught sight of a patch of blue sky a yard square, across which the curtain was instantly drawn. A little wind was stirring, and the fog boiled up from the valley caldrons thicker than ever. But the spell was broken. In a moment more Old Phelps was shouting, "The sun!" and before we could gain our feet there was a patch of sky overhead as big as a farm. "See! quick!" The old man was dancing like a lunatic. There was a rift in the vapor at our feet, down, down, three thousand feet into the forest abyss, and lo! lifting out of it yonder the tawny side of Dix,—the vision of a second, snatched away in the rolling fog. The play had just begun. Before we could turn, there was the gorge of Caribou Pass, savage and dark, visible to the bottom. The opening shut as suddenly; and then, looking over the clouds, miles away we saw the peaceful farms of the Au Sable Valley, and in a moment more the plateau of North Elba and the sentinel mountains about the grave of John Brown. These glimpses were as fleeting as thought, and instantly we were again isolated in the sea of mist. The expectation of these sudden strokes of sublimity kept us exultingly on the alert; and yet it was a blow of surprise when the curtain was swiftly withdrawn on the west, and the long ridge of Colvin, seemingly within a stone's throw, heaved up like an island out of the ocean, and was the next moment engulfed. We waited longer for Dix to show its shapely peak and its glistening sides of rock gashed by avalanches. The fantastic clouds, torn and streaming, hurried up from the south in haste as if to a witch's rendezvous, hiding and disclosing the great summit in their flight. The mist boiled up from the valley, whirled over the summit where we stood, and plunged again into the depths. Objects were forming and disappearing, shifting and dancing, now in sun and now gone in fog, and in the elemental whirl we felt that we were "assisting" in an original process of creation. The sun strove, and his very striving called up new vapors; the wind rent away the clouds, and brought new masses to surge about us; and the spectacle to right and left, above and below, changed with incredible swiftness. Such glory of abyss and summit, of color and form and transformation, is seldom granted to mortal eyes. For an hour we watched it until our vast mountain was revealed in all its bulk, its long spurs, its abysses and its savagery, and the great basins of wilderness with their shining lakes, and the giant peaks of the region, were one by one disclosed, and hidden and again tranquil in the sunshine.

Where was the cave? There was ample surface in which to look for it. If we could have flitted about, like the hawks that came circling round, over the steep slopes, the long spurs, the jagged precipices, I have no doubt we should have found it. But moving about on this mountain is not a holiday pastime; and we were chiefly anxious to discover a practicable mode of descent into the great wilderness basin on the south, which we must traverse that afternoon before reaching the hospitable shanty on Mud Pond. It was enough for us to have discovered the general whereabouts of the Spanish Cave, and we left the fixing of its exact position to future explorers.

The spur we chose for our escape looked smooth in the distance; but we found it bristling with obstructions, dead balsams set thickly together, slashes of fallen timber, and every manner of woody chaos; and when at length we swung and tumbled off the ledge to the general slope, we exchanged only for more disagreeable going. The slope for a couple of thousand feet was steep enough; but it was formed of granite rocks all moss-covered, so that the footing could not be determined, and at short intervals we nearly went out of sight in holes under the treacherous carpeting. Add to this that stems of great trees were laid longitudinally and transversely and criss-cross over and among the rocks, and the reader can see that a good deal of work needs to be done to make this a practicable highway for anything but a squirrel....

We had had no water since our daylight breakfast: our lunch on the mountain had been moistened only by the fog. Our thirst began to be that of Tantalus, because we could hear the water running deep down among the rocks, but we could not come at it. The imagination drank the living stream, and we realized anew what delusive food the imagination furnishes in an actual strait. A good deal of the crime of this world, I am convinced, is the direct result of the unlicensed play of the imagination in adverse circumstances. This reflection had nothing to do with our actual situation; for we added to our imagination patience, and to our patience long-suffering, and probably all the Christian virtues would have been developed in us if the descent had been long enough. Before we reached the bottom of Caribou Pass, the water burst out from the rocks in a clear stream that was as cold as ice. Shortly after, we struck the roaring brook that issues from the Pass to the south. It is a stream full of character, not navigable even for trout in the upper part, but a succession of falls, cascades, flumes, and pools that would delight an artist. It is not an easy bed for anything except water to descend; and before we reached the level reaches, where the stream flows with a murmurous noise through open woods, one of our party began to show signs of exhaustion.

This was Old Phelps, whose appetite had failed the day before,—his imagination being in better working order than his stomach: he had eaten little that day, and his legs became so groggy that he was obliged to rest at short intervals. Here was a situation! The afternoon was wearing away. We had six or seven miles of unknown wilderness to traverse, a portion of it swampy, in which a progress of more than a mile an hour is difficult, and the condition of the guide compelled even a slower march. What should we do in that lonesome solitude if the guide became disabled? We couldn't carry him out; could we find our own way out to get assistance? The guide himself had never been there before; and although he knew the general direction of our point of egress, and was entirely adequate to extricate himself from any position in the woods, his knowledge was of that occult sort possessed by woodsmen which it is impossible to communicate. Our object was to strike a trail that led from the Au Sable Pond, the other side of the mountain-range, to an inlet on Mud Pond. We knew that if we traveled southwestward far enough we must strike that trail, but how far? No one could tell. If we reached that trail, and found a boat at the inlet, there would be only a row of a couple of miles to the house at the foot of the lake. If no boat was there, then we must circle the lake three or four miles farther through a cedar-swamp, with no trail in particular. The prospect was not pleasing. We were short of supplies, for we had not expected to pass that night in the woods. The pleasure of the excursion began to develop itself.

We stumbled on in the general direction marked out, through a forest that began to seem endless as hour

after hour passed, compelled as we were to make long detours over the ridges of the foothills to avoid the swamp, which sent out from the border of the lake long tongues into the firm ground. The guide became more ill at every step, and needed frequent halts and long rests. Food he could not eat; and tea, water, and even brandy he rejected. Again and again the old philosopher, enfeebled by excessive exertion and illness, would collapse in a heap on the ground, an almost comical picture of despair, while we stood and waited the waning of the day, and peered forward in vain for any sign of an open country. At every brook we encountered, we suggested a halt for the night, while it was still light enough to select a camping-place, but the plucky old man wouldn't hear of it: the trail might be only a quarter of a mile ahead, and we crawled on again at a snail's pace. His honor as a guide seemed to be at stake; and, besides, he confessed to a notion that his end was near, and he didn't want to die like a dog in the woods. And yet, if this was his last journey, it seemed not an inappropriate ending for the old woodsman to lie down and give up the ghost in the midst of the untamed forest and the solemn silences he felt most at home in. There is a popular theory, held by civilians, that a soldier likes to die in battle. I suppose it is as true that a woodsman would like to "pass in his chips,"—the figure seems to be inevitable, struck down by illness and exposure, in the forest solitude, with heaven in sight and a tree-root for his pillow.

The guide seemed really to fear that, if we did not get out of the woods that night, he would never go out; and, yielding to his dogged resolution, we kept on in search of the trail, although the gathering of dusk over the ground warned us that we might easily cross the trail without recognizing it. We were traveling by the light in the upper sky, and by the forms of the tree-stems, which every moment grew dimmer. At last the end came. We had just felt our way over what seemed to be a little run of water, when the old man sunk down, remarking, "I might as well die here as anywhere," and was silent.

Suddenly night fell like a blanket on us. We could neither see the guide nor each other. We became at once conscious that miles of night on all sides shut us in. The sky was clouded over: there wasn't a gleam of light to show us where to step. Our first thought was to build a fire, which would drive back the thick darkness into the woods, and boil some water for our tea. But it was too dark to use the axe. We scraped together leaves and twigs to make a blaze, and, as this failed, such dead sticks as we could find by groping about. The fire was only a temporary affair, but it sufficed to boil a can of water. The water we obtained by feeling about the stones of the little run for an opening big enough to dip our cup in. The supper to be prepared was fortunately simple. It consisted of a decoction of tea and other leaves which had got into the pail, and a part of a loaf of bread. A loaf of bread which has been carried in a knapsack for a couple of days, bruised and handled and hacked at with a hunting-knife, becomes an uninteresting object. But we ate of it with thankfulness, washed it down with hot fluid, and bitterly thought of the morrow. Would our old friend survive the night? Would he be in any condition to travel in the morning? How were we to get out with him or without him?

The old man lay silent in the bushes out of sight, and desired only to be let alone. We tried to tempt him with the offer of a piece of toast: it was no temptation. Tea we thought would revive him: he refused it. A drink of brandy would certainly quicken his life: he couldn't touch it. We were at the end of our resources. He seemed to think that if he were at home, and could get a bit of fried bacon, or a piece of pie, he should be all right. We knew no more how to doctor him than if he had been a sick bear. He withdrew within himself, rolled himself up, so to speak, in his primitive habits, and waited for the healing power of nature. Before our feeble fire disappeared, we smoothed a level place near it for Phelps to lie on, and got him over to it. But it didn't suit: it was too open. In fact, at the moment some drops of rain fell. Rain was quite outside of our program for the night. But the guide had an instinct about it; and, while we were groping about some yards distant for a place where we could lie down, he crawled away into the darkness, and curled himself up amid the roots of a gigantic pine, very much as a bear would do, I suppose, with his back against the trunk, and there passed the night comparatively dry and comfortable; but of this we knew nothing till morning, and had to trust to the assurance of a voice out of the darkness that he was all right.

Our own bed where we spread our blankets was excellent in one respect,—there was no danger of tumbling out of it. At first the rain pattered gently on the leaves overhead, and we congratulated ourselves on the snugness of our situation. There was something cheerful about this free life. We contrasted our condition with that of tired invalids who were tossing on downy beds, and wooing sleep in vain. Nothing was so wholesome and invigorating as this bivouac in the forest. But, somehow, sleep did not come. The rain had ceased to patter, and began to fall with a steady determination, a sort of soak, soak, all about us. In fact, it roared on the rubber blanket, and beat in our faces. The wind began to stir a little, and there was a moaning on high. Not contented with dripping, the rain was driven into our faces. Another suspicious circumstance was noticed. Little rills of water got established along the sides under the blankets, cold, undeniable streams, that interfered with drowsiness. Pools of water settled on the bed; and the chaplain had a habit of moving suddenly, and letting a quart or two inside, and down my neck. It began to be evident that we and our bed were probably the wettest objects in the woods. The rubber was an excellent catch-all. There was no trouble about ventilation, but we found that we had established our quarters without any provision for drainage. There was not exactly a wild tempest abroad; but there was a degree of liveliness in the thrashing limbs and the creaking of the tree-branches which rubbed against each other, and the pouring rain increased in volume and power of penetration. Sleep was quite out of the question, with so much to distract our attention. In fine, our misery became so perfect that we both broke out into loud and sarcastic laughter over the absurdity of our situation. We had subjected ourselves to all this forlornness simply for pleasure. Whether Old Phelps was still in existence, we couldn't tell: we could get no response from him. With daylight, if he continued ill and could not move, our situation would be little improved. Our supplies were gone, we lay in a pond, a deluge of water was pouring down on us. This was summer recreation. The whole thing was so excessively absurd that we laughed again, louder than ever. We had plenty of this sort of amusement. Suddenly through the night we heard a sort of reply that started us bolt upright. This was a prolonged squawk. It was like the voice of no beast or bird with which we were familiar. At first it was distant; but it rapidly approached, tearing through the night and apparently through the tree-tops, like the harsh cry of a web-footed bird with a snarl in it; in fact, as I said, a squawk. It came close to us, and then turned, and as rapidly as it came fled away through the forest, and we lost the unearthly noise far up the mountain-slope.

"What was that, Phelps?" we cried out. But no response came; and we wondered if his spirit had been rent away, or if some evil genius had sought it, and then, baffled by his serene and philosophic spirit, had shot off into the void in rage and disappointment.

The night had no other adventure. The moon at length coming up behind the clouds lent a spectral aspect to the forest, and deceived us for a time into the notion that day was at hand; but the rain never ceased, and we lay wishful and waiting, with no item of solid misery wanting that we could conceive.

Day was slow a-coming, and didn't amount to much when it came, so heavy were the clouds; but the rain slackened. We crawled out of our water-cure "pack," and sought the guide. To our infinite relief he announced himself not only alive, but in a going condition. I looked at my watch. It had stopped at five o'clock. I poured the water out of it, and shook it; but, not being constructed on the hydraulic principle, it refused to go. Some hours later we encountered a huntsman, from whom I procured some gun-grease; with this I filled the watch, and heated it in by the fire. This is a most effectual way of treating a delicate Genevan timepiece.

The light disclosed fully the suspected fact that our bed had been made in a slight depression: the under rubber blanket spread in this had prevented the rain from soaking into the ground, and we had been lying in what was in fact a well-contrived bathtub. While Old Phelps was pulling himself together, and we were wringing some gallons of water out of our blankets, we questioned the old man about the "squawk," and what bird was possessed of such a voice. It was not a bird at all, he said, but a cat, the black-cat of the woods, larger than the domestic animal, and an ugly customer, who is fond of fish, and carries a pelt that is worth two or three dollars in the market. Occasionally he blunders into a sable-trap; and he is altogether hateful in his ways, and has the most uncultivated voice that is heard in the woods. We shall remember him as one of the least pleasant phantoms of that cheerful night when we lay in the storm, fearing any moment the advent to one of us of the grimmest messenger.

We rolled up and shouldered our wet belongings, and, before the shades had yet lifted from the saturated bushes, pursued our march. It was a relief to be again in motion, although our progress was slow, and it was a question every rod whether the guide could go on. We had the day before us; but if we did not find a boat at the inlet a day might not suffice, in the weak condition of the guide, to extricate us from our ridiculous position. There was nothing heroic in it; we had no object: it was merely, as it must appear by this time, a pleasure excursion, and we might be lost or perish in it without reward and with little sympathy. We had something like a hour and a half of stumbling through the swamp when suddenly we stood in the little trail! Slight as it was, it appeared to us a very Broadway to Paradise if broad ways ever lead thither. Phelps hailed it and sank down in it like one reprieved from death. But the boat? Leaving him, we quickly ran a quarter of a mile down to the inlet. The boat was there. Our shout to the guide would have roused him out of a death-slumber. He came down the trail with the agility of an aged deer: never was so glad a sound in his ear, he said, as that shout. It was in a very jubilant mood that we emptied the boat of water, pushed off, shipped the clumsy oars, and bent to the two-mile row through the black waters of the winding, desolate channel, and over the lake, whose dark waves were tossed a little in the morning breeze. The trunks of dead trees stand about this lake, and all its shores are ragged with ghastly drift-wood; but it was open to the sky, and although the heavy clouds still obscured all the mountain-ranges we had a sense of escape and freedom that almost made the melancholy scene lovely.

How lightly past hardship sits upon us! All the misery of the night vanished, as if it had not been, in the shelter of the log cabin at Mud Pond, with dry clothes that fitted us as the skin of the bear fits him in the spring, a noble breakfast, a toasting fire, solicitude about our comfort, judicious sympathy with our suffering, and willingness to hear the now growing tale of our adventure. Then came, in a day of absolute idleness, while the showers came and went, and the mountains appeared and disappeared in sun and storm, that perfect physical enjoyment which consists in a feeling of strength without any inclination to use it, and in a delicious languor which is too enjoyable to be surrendered to sleep.

=====F=====

HOW SPRING CAME IN NEW ENGLAND

By Charles Dudley Warner

New England is the battle-ground of the seasons. It is La Vendee. To conquer it is only to begin the fight. When it is completely subdued, what kind of weather have you? None whatever.

What is this New England? A country? No: a camp. It is alternately invaded by the hyperborean legions and by the wilting sirens of the tropics. Icicles hang always on its northern heights; its seacoasts are fringed with mosquitoes. There is for a third of the year a contest between the icy air of the pole and the warm wind of the gulf. The result of this is a compromise: the compromise is called Thaw. It is the normal condition in New England. The New-Englander is a person who is always just about to be warm and comfortable. This is the stuff of which heroes and martyrs are made. A person thoroughly heated or frozen is good for nothing. Look

at the Bongos. Examine (on the map) the Dog-Rib nation. The New-Englander, by incessant activity, hopes to get warm. Edwards made his theology. Thank God, New England is not in Paris!

Hudson's Bay, Labrador, Grinnell's Land, a whole zone of ice and walruses, make it unpleasant for New England. This icy cover, like the lid of a pot, is always suspended over it: when it shuts down, that is winter. This would be intolerable, were it not for the Gulf Stream. The Gulf Stream is a benign, liquid force, flowing from under the ribs of the equator,—a white knight of the South going up to battle the giant of the North. The two meet in New England, and have it out there.

This is the theory; but, in fact, the Gulf Stream is mostly a delusion as to New England. For Ireland it is quite another thing. Potatoes ripen in Ireland before they are planted in New England. That is the reason the Irish emigrate—they desire two crops the same year. The Gulf Stream gets shunted off from New England by the formation of the coast below: besides, it is too shallow to be of any service. Icebergs float down against its surface-current, and fill all the New-England air with the chill of death till June: after that the fogs drift down from Newfoundland. There never was such a mockery as this Gulf Stream. It is like the English influence on France, on Europe. Pitt was an iceberg.

Still New England survives. To what purpose? I say, as an example: the politician says, to produce "Poor Boys." Bah! The poor boy is an anachronism in civilization. He is no longer poor, and he is not a boy. In Tartary they would hang him for sucking all the asses' milk that belongs to the children: in New England he has all the cream from the Public Cow. What can you expect in a country where one knows not today what the weather will be tomorrow? Climate makes the man. Suppose he, too, dwells on the Channel Islands, where he has all climates, and is superior to all. Perhaps he will become the prophet, the seer, of his age, as he is its Poet. The New-Englander is the man without a climate. Why is his country recognized? You won't find it on any map of Paris.

And yet Paris is the universe. Strange anomaly! The greater must include the less; but how if the less leaks out? This sometimes happens.

And yet there are phenomena in that country worth observing. One of them is the conduct of Nature from the 1st of March to the 1st of June, or, as some say, from the vernal equinox to the summer solstice. As Tourmalain remarked, "You'd better observe the unpleasant than to be blind." This was in 802. Tourmalain is dead; so is Gross Alain; so is little Pee-Wee: we shall all be dead before things get any better.

That is the law. Without revolution there is nothing. What is revolution? It is turning society over, and putting the best underground for a fertilizer. Thus only will things grow. What has this to do with New England? In the language of that flash of social lightning, Beranger, "May the Devil fly away with me if I can see!"

Let us speak of the period in the year in New England when winter appears to hesitate. Except in the calendar, the action is ironical; but it is still deceptive. The sun mounts high: it is above the horizon twelve hours at a time. The snow gradually sneaks away in liquid repentance. One morning it is gone, except in shaded spots and close by the fences. From about the trunks of the trees it has long departed: the tree is a living thing, and its growth repels it. The fence is dead, driven into the earth in a rigid line by man: the fence, in short, is dogma: icy prejudice lingers near it. The snow has disappeared; but the landscape is a ghastly sight,—bleached, dead. The trees are stakes; the grass is of no color; and the bare soil is not brown with a healthful brown; life has gone out of it. Take up a piece of turf: it is a clod, without warmth, inanimate. Pull it in pieces: there is no hope in it: it is a part of the past; it is the refuse of last year. This is the condition to which winter has reduced the landscape. When the snow, which was a pall, is removed, you see how ghastly it is. The face of the country is sodden. It needs now only the south wind to sweep over it, full of the damp breath of death; and that begins to blow. No prospect would be more dreary.

And yet the south wind fills credulous man with joy. He opens the window. He goes out, and catches cold. He is stirred by the mysterious coming of something. If there is sign of change nowhere else, we detect it in the newspaper. In sheltered corners of that truculent instrument for the diffusion of the prejudices of the few among the many begin to grow the violets of tender sentiment, the early greens of yearning. The poet feels the sap of the new year before the marsh-willow. He blossoms in advance of the catkins. Man is greater than Nature. The poet is greater than man: he is nature on two legs,—ambulatory.

At first there is no appearance of conflict. The winter garrison seems to have withdrawn. The invading hosts of the South are entering without opposition. The hard ground softens; the sun lies warm upon the southern bank, and water oozes from its base. If you examine the buds of the lilac and the flowering shrubs, you cannot say that they are swelling; but the varnish with which they were coated in the fall to keep out the frost seems to be cracking. If the sugar-maple is hacked, it will bleed,—the pure white blood of Nature.

At the close of a sunny day the western sky has a softened aspect: its color, we say, has warmth in it. On such a day you may meet a caterpillar on the footpath, and turn out for him. The house-fly thaws out; a company of cheerful wasps take possession of a chamber-window. It is oppressive indoors at night, and the window is raised. A flock of millers, born out of time, flutter in. It is most unusual weather for the season: it is so every year. The delusion is complete, when, on a mild evening, the tree-toads open their brittle-brattle chorus on the edge of the pond. The citizen asks his neighbor, "Did you hear the frogs last night?" That seems to open the new world. One thinks of his childhood and its innocence, and of his first loves. It fills one with sentiment and a tender longing, this voice of the tree-toad. Man is a strange being. Deaf to the prayers of friends, to the sermons and warnings of the church, to the calls of duty, to the pleadings of his better nature, he is touched by the tree-toad. The signs of the spring multiply. The passer in the street in the evening sees the maid-servant leaning on the area-gate in sweet converse with some one leaning on the other side; or in the park, which is still too damp for anything but true affection, he sees her seated by the side of one who is able to protect her from the policeman, and hears her sigh, "How sweet it is to be with those we love to be with!"

All this is very well; but next morning the newspaper nips these early buds of sentiment. The telegraph announces, "Twenty feet of snow at Ogden, on the Pacific Road; winds blowing a gale at Omaha, and snow still falling; mercury frozen at Duluth; storm-signals at Port Huron."

Where now are your tree-toads, your young love, your early season? Before noon it rains, by three o'clock it hails; before night the bleak storm-cloud of the northwest envelops the sky; a gale is raging, whirling about a tempest of snow. By morning the snow is drifted in banks, and two feet deep on a level. Early in the seventeenth century, Drebbel of Holland invented the weather-glass. Before that, men had suffered without knowing the degree of their suffering. A century later, Romer hit upon the idea of using mercury in a thermometer; and Fahrenheit constructed the instrument which adds a new because distinct terror to the weather. Science names and registers the ills of life; and yet it is a gain to know the names and habits of our enemies. It is with some satisfaction in our knowledge that we say the thermometer marks zero.

In fact, the wild beast called Winter, untamed, has returned, and taken possession of New England. Nature, giving up her melting mood, has retired into dumbness and white stagnation. But we are wise. We say it is better to have it now than later. We have a conceit of understanding things.

The sun is in alliance with the earth. Between the two the snow is uncomfortable. Compelled to go, it decides to go suddenly. The first day there is slush with rain; the second day, mud with hail; the third day a flood with sunshine. The thermometer declares that the temperature is delightful. Man shivers and sneezes. His neighbor dies of some disease newly named by science; but he dies all the same as if it hadn't been newly named. Science has not discovered any name that is not fatal.

This is called the breaking-up of winter.

Nature seems for some days to be in doubt, not exactly able to stand still, not daring to put forth anything tender. Man says that the worst is over. If he should live a thousand years, he would be deceived every year. And this is called an age of skepticism. Man never believed in so many things as now: he never believed so much in himself. As to Nature, he knows her secrets: he can predict what she will do. He communicates with the next world by means of an alphabet which he has invented. He talks with souls at the other end of the spirit-wire. To be sure, neither of them says anything; but they talk. Is not that something? He suspends the law of gravitation as to his own body—he has learned how to evade it—as tyrants suspend the legal writs of habeas corpus. When Gravitation asks for his body, she cannot have it. He says of himself, "I am infallible; I am sublime." He believes all these things. He is master of the elements. Shakespeare sends him a poem just made, and as good a poem as the man could write himself. And yet this man—he goes out of doors without his overcoat, catches cold, and is buried in three days. "On the 21st of January," exclaimed Mercier, "all kings felt for the backs of their necks." This might be said of all men in New England in the spring. This is the season that all the poets celebrate. Let us suppose that once, in Thessaly, there was a genial spring, and there was a poet who sang of it. All later poets have sung the same song. "Voilà tout!" That is the root of poetry.

Another delusion. We hear toward evening, high in air, the "conk" of the wild-geese. Looking up, you see the black specks of that adventurous triangle, winging along in rapid flight northward. Perhaps it takes a wide returning sweep, in doubt; but it disappears in the north. There is no mistaking that sign. This unmusical "conk" is sweeter than the "kerchunk" of the bull-frog. Probably these birds are not idiots, and probably they turned back south again after spying out the nakedness of the land; but they have made their sign. Next day there is a rumor that somebody has seen a bluebird. This rumor, unhappily for the bird (which will freeze to death), is confirmed. In less than three days everybody has seen a bluebird; and favored people have heard a robin or rather the yellow-breasted thrush, misnamed a robin in America. This is no doubt true: for angle-worms have been seen on the surface of the ground; and, wherever there is anything to eat, the robin is promptly on hand. About this time you notice, in protected, sunny spots, that the grass has a little color. But you say that it is the grass of last fall. It is very difficult to tell when the grass of last fall became the grass of this spring. It looks "warmed over." The green is rusty. The lilac-buds have certainly swollen a little, and so have those of the soft maple. In the rain the grass does not brighten as you think it ought to, and it is only when the rain turns to snow that you see any decided green color by contrast with the white. The snow gradually covers everything very quietly, however. Winter comes back without the least noise or bustle, tireless, malicious, implacable. Neither party in the fight now makes much fuss over it; and you might think that Nature had surrendered altogether, if you did not find about this time, in the Woods, on the edge of a snow-bank, the modest blossoms of the trailing arbutus, shedding their delicious perfume. The bravest are always the tenderest, says the poet. The season, in its blind way, is trying to express itself.

And it is assisted. There is a cheerful chatter in the trees. The blackbirds have come, and in numbers, households of them, villages of them,—communes, rather. They do not believe in God, these black-birds. They think they can take care of themselves. We shall see. But they are well informed. They arrived just as the last snow-bank melted. One cannot say now that there is not greenness in the grass; not in the wide fields, to be sure, but on lawns and banks sloping south. The dark-spotted leaves of the dog-tooth violet begin to show. Even Fahrenheit's contrivance joins in the upward movement: the mercury has suddenly gone up from thirty degrees to sixty-five degrees. It is time for the ice-man. Ice has no sooner disappeared than we desire it.

There is a smile, if one may say so, in the blue sky, and there is softness in the south wind. The song-sparrow is singing in the apple-tree. Another bird-note is heard,—two long, musical whistles, liquid but metallic. A brown bird this one, darker than the song-sparrow, and without the latter's light stripes, and smaller, yet bigger than the queer little chipping-bird. He wants a familiar name, this sweet singer, who appears to be a sort of sparrow. He is such a contrast to the blue-jays, who have arrived in a passion, as usual, screaming and scolding, the elegant, spoiled beauties! They wrangle from morning till night, these beautiful, high-tempered aristocrats.

Encouraged by the birds, by the bursting of the lilac-buds, by the peeping-up of the crocuses, by tradition, by the sweet flutterings of a double hope, another sign appears. This is the Easter bonnets, most delightful flowers of the year, emblems of innocence, hope, devotion. Alas that they have to be worn under umbrellas, so much thought, freshness, feeling, tenderness have gone into them! And a northeast storm of rain, accompanied with hail, comes to crown all these virtues with that of self-sacrifice. The frail hat is offered up to the implacable season. In fact, Nature is not to be forestalled nor hurried in this way. Things cannot be pushed. Nature hesitates. The woman who does not hesitate in April is lost. The appearance of the bonnets is premature. The blackbirds see it. They assemble. For two days they hold a noisy convention, with high

debate, in the tree-tops. Something is going to happen.

Say, rather, the usual thing is about to occur. There is a wind called Auster, another called Eurus, another called Septentrio, another Meridies, besides Aquilo, Vulturinus, Africus. There are the eight great winds of the classical dictionary,—arsenal of mystery and terror and of the unknown,—besides the wind Euroaquilo of St. Luke. This is the wind that drives an apostle wishing to gain Crete upon the African Syrtis. If St. Luke had been tacking to get to Hyannis, this wind would have forced him into Holmes's Hole. The Euroaquilo is no respecter of persons.

These winds, and others unnamed and more terrible, circle about New England. They form a ring about it: they lie in wait on its borders, but only to spring upon it and harry it. They follow each other in contracting circles, in whirlwinds, in maelstroms of the atmosphere: they meet and cross each other, all at a moment. This New England is set apart: it is the exercise-ground of the weather. Storms bred elsewhere come here full-grown: they come in couples, in quartets, in choruses. If New England were not mostly rock, these winds would carry it off; but they would bring it all back again, as happens with the sandy portions. What sharp Eurus carries to Jersey, Africus brings back. When the air is not full of snow, it is full of dust. This is called one of the compensations of Nature.

This is what happened after the convention of the blackbirds: A moaning south wind brought rain; a southwest wind turned the rain to snow; what is called a zephyr, out of the west, drifted the snow; a north wind sent the mercury far below freezing. Salt added to snow increases the evaporation and the cold. This was the office of the northeast wind: it made the snow damp, and increased its bulk; but then it rained a little, and froze, thawing at the same time. The air was full of fog and snow and rain. And then the wind changed, went back round the circle, reversing everything, like dragging a cat by its tail. The mercury approached zero. This was nothing uncommon. We know all these winds. We are familiar with the different "forms of water."

All this was only the prologue, the overture. If one might be permitted to speak scientifically, it was only the tuning of the instruments. The opera was to come,—the Flying Dutchman of the air.

There is a wind called Euroclydon: it would be one of the Eumenides; only they are women. It is half-brother to the gigantic storm-wind of the equinox. The Euroclydon is not a wind: it is a monster. Its breath is frost. It has snow in its hair. It is something terrible. It peddles rheumatism, and plants consumption.

The Euroclydon knew just the moment to strike into the discord of the weather in New England. From its lair about Point Desolation, from the glaciers of the Greenland continent, sweeping round the coast, leaving wrecks in its track, it marched right athwart the other conflicting winds, churning them into a fury, and inaugurating chaos. It was the Marat of the elements. It was the revolution marching into the "dreaded wood of La Sandraie."

Let us sum it all up in one word: it was something for which there is no name.

Its track was destruction. On the sea it leaves wrecks. What does it leave on land? Funerals. When it subsides, New England is prostrate. It has left its legacy: this legacy is coughs and patent medicines. This is an epic; this is destiny. You think Providence is expelled out of New England? Listen!

Two days after Euroclydon, I found in the woods the hepatica—earliest of wildwood flowers, evidently not intimidated by the wild work of the armies trampling over New England—daring to hold up its tender blossom. One could not but admire the quiet pertinacity of Nature. She had been painting the grass under the snow. In spots it was vivid green. There was a mild rain,—mild, but chilly. The clouds gathered, and broke away in light, fleecy masses. There was a softness on the hills. The birds suddenly were on every tree, glancing through the air, filling it with song, sometimes shaking raindrops from their wings. The cat brings in one in his mouth. He thinks the season has begun, and the game-laws are off. He is fond of Nature, this cat, as we all are: he wants to possess it. At four o'clock in the morning there is a grand dress-rehearsal of the birds. Not all the pieces of the orchestra have arrived; but there are enough. The grass-sparrow has come. This is certainly charming. The gardener comes to talk about seeds: he uncovers the straw-berries and the grape-vines, salts the asparagus-bed, and plants the peas. You ask if he planted them with a shot-gun. In the shade there is still frost in the ground. Nature, in fact, still hesitates; puts forth one hepatica at a time, and waits to see the result; pushes up the grass slowly, perhaps draws it in at night.

This indecision we call Spring.

It becomes painful. It is like being on the rack for ninety days, expecting every day a reprieve. Men grow hardened to it, however.

This is the order with man,—hope, surprise, bewilderment, disgust, facetiousness. The people in New England finally become facetious about spring. This is the last stage: it is the most dangerous. When a man has come to make a jest of misfortune, he is lost. "It bores me to die," said the journalist Carra to the headsman at the foot of the guillotine: "I would like to have seen the continuation." One is also interested to see how spring is going to turn out.

A day of sun, of delusive bird-singing, sight of the mellow earth,—all these begin to beget confidence. The night, even, has been warm. But what is this in the morning journal, at breakfast?—"An area of low pressure is moving from the Tortugas north." You shudder.

What is this Low Pressure itself,—it? It is something frightful, low, crouching, creeping, advancing; it is a foreboding; it is misfortune by telegraph; it is the "93" of the atmosphere.

This low pressure is a creation of Old Prob. What is that? Old Prob. is the new deity of the Americans, greater than AEolus, more despotic than Sans-Culotte. The wind is his servitor, the lightning his messenger. He is a mystery made of six parts electricity, and one part "guess." This deity is worshiped by the Americans; his name is on every man's lips first in the morning; he is the Frankenstein of modern science. Housed at Washington, his business is to direct the storms of the whole country upon New England, and to give notice in advance. This he does. Sometimes he sends the storm, and then gives notice. This is mere playfulness on his part: it is all one to him. His great power is in the low pressure.

On the Bexar plains of Texas, among the hills of the Presidio, along the Rio Grande, low pressure is bred; it

is nursed also in the Atchafalaya swamps of Louisiana; it moves by the way of Thibodeaux and Bonnet Carre. The southwest is a magazine of atmospheric disasters. Low pressure may be no worse than the others: it is better known, and is most used to inspire terror. It can be summoned any time also from the everglades of Florida, from the morasses of the Okeechobee.

When the New-Englander sees this in his news paper, he knows what it means. He has twenty-four hours' warning; but what can he do? Nothing but watch its certain advance by telegraph. He suffers in anticipation. That is what Old Prob. has brought about, suffering by anticipation. This low pressure advances against the wind. The wind is from the northeast. Nothing could be more unpleasant than a northeast wind? Wait till low pressure joins it. Together they make spring in New England. A northeast storm from the southwest!—there is no bitterer satire than this. It lasts three days. After that the weather changes into something winter-like.

A solitary song-sparrow, without a note of joy, hops along the snow to the dining-room window, and, turning his little head aside, looks up. He is hungry and cold. Little Minnette, clasping her hands behind her back, stands and looks at him, and says, "Po' birdie!" They appear to understand each other. The sparrow gets his crumb; but he knows too much to let Minnette get hold of him. Neither of these little things could take care of itself in a New-England spring not in the depths of it. This is what the father of Minnette, looking out of the window upon the wide waste of snow, and the evergreens bent to the ground with the weight of it, says, "It looks like the depths of spring." To this has man come: to his facetiousness has succeeded sarcasm. It is the first of May.

Then follows a day of bright sun and blue sky. The birds open the morning with a lively chorus. In spite of Auster, Euroclydon, low pressure, and the government bureau, things have gone forward. By the roadside, where the snow has just melted, the grass is of the color of emerald. The heart leaps to see it. On the lawn there are twenty robins, lively, noisy, worm-seeking. Their yellow breasts contrast with the tender green of the newly-springing clover and herd's-grass. If they would only stand still, we might think the dandelions had blossomed. On an evergreen-bough, looking at them, sits a graceful bird, whose back is bluer than the sky. There is a red tint on the tips of the boughs of the hard maple. With Nature, color is life. See, already, green, yellow, blue, red! In a few days—is it not so?—through the green masses of the trees will flash the orange of the oriole, the scarlet of the tanager; perhaps tomorrow.

But, in fact, the next day opens a little sourly. It is almost clear overhead: but the clouds thicken on the horizon; they look leaden; they threaten rain. It certainly will rain: the air feels like rain, or snow. By noon it begins to snow, and you hear the desolate cry of the phoebe-bird. It is a fine snow, gentle at first; but it soon drives in swerving lines, for the wind is from the southwest, from the west, from the northeast, from the zenith (one of the ordinary winds of New England), from all points of the compass. The fine snow becomes rain; it becomes large snow; it melts as it falls; it freezes as it falls. At last a storm sets in, and night shuts down upon the bleak scene.

During the night there is a change. It thunders and lightens. Toward morning there is a brilliant display of aurora borealis. This is a sign of colder weather.

The gardener is in despair; so is the sportsman. The trout take no pleasure in biting in such weather.

Paragraphs appear in the newspapers, copied from the paper of last year, saying that this is the most severe spring in thirty years. Every one, in fact, believes that it is, and also that next year the spring will be early. Man is the most gullible of creatures.

And with reason: he trusts his eyes, and not his instinct. During this most sour weather of the year, the anemone blossoms; and, almost immediately after, the fairy pencil, the spring beauty, the dog-tooth violet, and the true violet. In clouds and fog, and rain and snow, and all discouragement, Nature pushes on her forces with progressive haste and rapidity. Before one is aware, all the lawns and meadows are deeply green, the trees are opening their tender leaves. In a burst of sunshine the cherry-trees are white, the Judas-tree is pink, the hawthorns give a sweet smell. The air is full of sweetness; the world, of color.

In the midst of a chilling northeast storm the ground is strewed with the white-and-pink blossoms from the apple-trees. The next day the mercury stands at eighty degrees. Summer has come.

There was no Spring.

The winter is over. You think so? Robespierre thought the Revolution was over in the beginning of his last Thermidor. He lost his head after that.

When the first buds are set, and the corn is up, and the cucumbers have four leaves, a malicious frost steals down from the north and kills them in a night.

That is the last effort of spring. The mercury then mounts to ninety degrees. The season has been long, but, on the whole, successful. Many people survive it.

PREFACE

When I consented to prepare this volume for a series, which should deal with the notables of American history with some familiarity and disregard of historic gravity, I did not anticipate the seriousness of the task. But investigation of the subject showed me that while Captain John Smith would lend himself easily enough to the purely facetious treatment, there were historic problems worthy of a different handling, and that if the life of Smith was to be written, an effort should be made to state the truth, and to disentangle the career of the adventurer from the fables and misrepresentations that have clustered about it.

The extant biographies of Smith, and the portions of the history of Virginia that relate to him, all follow his own narrative, and accept his estimate of himself, and are little more than paraphrases of his story as told by himself. But within the last twenty years some new contemporary evidence has come to light, and special scholars have expended much critical research upon different portions of his career. The result of this modern investigation has been to discredit much of the romance gathered about Smith and Pocahontas, and a good deal to reduce his heroic proportions. A vague report of—these scholarly studies has gone abroad, but no effort has been made to tell the real story of Smith as a connected whole in the light of the new researches.

This volume is an effort to put in popular form the truth about Smith's adventures, and to estimate his exploits and character. For this purpose I have depended almost entirely upon original contemporary material, illumined as it now is by the labors of special editors. I believe that I have read everything that is attributed to his pen, and have compared his own accounts with other contemporary narratives, and I think I have omitted the perusal of little that could throw any light upon his life or character. For the early part of his career—before he came to Virginia—there is absolutely no authority except Smith himself; but when he emerges from romance into history, he can be followed and checked by contemporary evidence. If he was always and uniformly untrustworthy it would be less perplexing to follow him, but his liability to tell the truth

when vanity or prejudice does not interfere is annoying to the careful student.

As far as possible I have endeavored to let the actors in these pages tell their own story, and I have quoted freely from Capt. Smith himself, because it is as a writer that he is to be judged no less than as an actor. His development of the Pocahontas legend has been carefully traced, and all the known facts about that Indian—or Indese, as some of the old chroniclers call the female North Americans—have been consecutively set forth in separate chapters. The book is not a history of early Virginia, nor of the times of Smith, but merely a study of his life and writings. If my estimate of the character of Smith is not that which his biographers have entertained, and differs from his own candid opinion, I can only plead that contemporary evidence and a collation of his own stories show that he was mistaken. I am not aware that there has been before any systematic effort to collate his different accounts of his exploits. If he had ever undertaken the task, he might have disturbed that serene opinion of himself which marks him as a man who realized his own ideals.

The works used in this study are, first, the writings of Smith, which are as follows:

"A True Relation," etc., London, 1608.

"A Map of Virginia, Description and Appendix," Oxford, 1612.

"A Description of New England," etc., London, 1616.

"New England's Trials," etc., London, 1620. Second edition, enlarged, 1622.

"The Generall Historie," etc., London, 1624. Reissued, with date of title-page altered, in 1626, 1627, and twice in 1632.

"An Accidence: or, The Pathway to Experience," etc., London, 1626.

"A Sea Grammar," etc., London, 1627. Also editions in 1653 and 1699.

"The True Travels," etc., London, 1630.

"Advertisements for the Unexperienced Planters of New England," etc., London, 1631.

Other authorities are:

"The Historie of Travaile into Virginia," etc., by William Strachey, Secretary of the colony 1609 to 1612. First printed for the Hakluyt Society, London, 1849.

"Newport's Relatyon," 1607. Am. Ant. Soc., Vol. 4.

"Wingfield's Discourse," etc., 1607. Am. Ant. Soc., Vol. 4.

"Purchas his Pilgrimage," London, 1613.

"Purchas his Pilgrimes," London, 1625-6.

"Ralph Hamor's True Discourse," etc., London, 1615.

"Relation of Virginia," by Henry Spelman, 1609. First printed by J. F. Hunnewell, London, 1872.

"History of the Virginia Company in London," by Edward D. Neill, Albany, 1869.

"William Stith's History of Virginia," 1753, has been consulted for the charters and letters-patent. The Pocahontas discussion has been followed in many magazine papers. I am greatly indebted to the scholarly labors of Charles Deane, LL.D., the accomplished editor of the "True Relation," and other Virginia monographs. I wish also to acknowledge the courtesy of the librarians of the Astor, the Lenox, the New York Historical, Yale, and Cornell libraries, and of Dr. J. Hammond Trumbull, the custodian of the Brinley collection, and the kindness of Mr. S. L. M. Barlow of New York, who is ever ready to give students access to his rich "Americana."

C. D. W. HARTFORD, June, 1881

CAPTAIN JOHN SMITH

I. BIRTH AND TRAINING

Fortunate is the hero who links his name romantically with that of a woman. A tender interest in his fame is assured. Still more fortunate is he if he is able to record his own achievements and give to them that form and color and importance which they assume in his own gallant consciousness. Captain John Smith, the first of an honored name, had this double good fortune.

We are indebted to him for the glowing picture of a knight-errant of the sixteenth century, moving with the port of a swash-buckler across the field of vision, wherever cities were to be taken and heads cracked in Europe, Asia, and Africa, and, in the language of one of his laureates—

"To see bright honor sparkled all in gore."

But we are specially his debtor for adventures on our own continent, narrated with naivete and vigor by a pen as direct and clear-cutting as the sword with which he shaved off the heads of the Turks, and for one of the few romances that illumine our early history.

Captain John Smith understood his good fortune in being the recorder of his own deeds, and he preceded Lord Beaconsfield (in "Endymion") in his appreciation of the value of the influence of women upon the career of a hero. In the dedication of his "General Historie" to Frances, Duchess of Richmond, he says:

"I have deeply hazarded myself in doing and suffering, and why should I sticke to hazard my reputation in recording? He that acteth two parts is the more borne withall if he come short, or fayle in one of them. Where shall we looke to finde a Julius Caesar whose atchievements shine as cleare in his owne Commentaries, as they did in the field? I confesse, my hand though able to wield a weapon among the Barbarous, yet well may tremble in handling a Pen among so many judicious; especially when I am so bold as to call so piercing and so glorious an Eye, as your Grace, to view these poore ragged lines. Yet my comfort is that heretofore honorable and vertuous Ladies, and comparable but amongst themselves, have offered me rescue and protection in my greatest dangers: even in forraine parts, I have felt reliefe from that sex. The beauteous Lady Tragabigzanda, when I was a slave to the Turks, did all she could to secure me. When I overcame the Bashaw of Nalbrits in Tartaria, the charitable Lady Callamata supplied my necessities. In the utmost of my extremities, that blessed Pokahontas, the great King's daughter of Virginia, oft saved my life. When I escaped the cruelties of Pirats and most furious stormes, a long time alone in a small Boat at Sea, and driven ashore in France, the good Lady Chanoyes bountifully assisted me."

It is stated in his "True Travels" that John Smith was born in Willoughby, in Lincolnshire. The year of his birth is not given, but it was probably in 1579, as it appears by the portrait prefixed to that work that he was aged 37 years in 1616. We are able to add also that the rector of the Willoughby Rectory, Alford, finds in the register an entry of the baptism of John, son of George Smith, under date of Jan. 9, 1579. His biographers, following his account, represent him as of ancient lineage: "His father actually descended from the ancient Smiths of Crudley in Lancashire, his mother from the Rickands at great Heck in Yorkshire;" but the circumstances of his boyhood would indicate that like many other men who have made themselves a name, his origin was humble. If it had been otherwise he would scarcely have been bound as an apprentice, nor had so much difficulty in his advancement. But the boy was born with a merry disposition, and in his earliest years was impatient for adventure. The desire to rove was doubtless increased by the nature of his native shire, which offered every inducement to the lad of spirit to leave it.

Lincolnshire is the most uninteresting part of all England. It is frequently water-logged till late in the summer: invisible a part of the year, when it emerges it is mostly a dreary flat. Willoughby is a considerable village in this shire, situated about three miles and a half southeastward from Alford. It stands just on the edge of the chalk hills whose drives gently slope down to the German Ocean, and the scenery around offers an unvarying expanse of flats. All the villages in this part of Lincolnshire exhibit the same character. The name ends in by, the Danish word for hamlet or small village, and we can measure the progress of the Danish invasion of England by the number of towns which have the terminal by, distinguished from the Saxon thorpe, which generally ends the name of villages in Yorkshire. The population may be said to be Danish light-haired and blue-eyed. Such was John Smith. The sea was the natural element of his neighbors, and John when a boy must have heard many stories of the sea and enticing adventures told by the sturdy mariners who were recruited from the neighborhood of Willoughby, and whose oars had often cloven the Baltic Sea.

Willoughby boasts some antiquity. Its church is a spacious structure, with a nave, north and south aisles, and a chancel, and a tower at the west end. In the floor is a stone with a Latin inscription, in black letter, round the verge, to the memory of one Gilbert West, who died in 1404. The church is dedicated to St. Helen. In the village the Wesleyan Methodists also have a place of worship. According to the parliamentary returns of 1825, the parish including the hamlet of Sloothby contained 108 houses and 514 inhabitants. All the churches in Lincolnshire indicate the existence of a much larger population who were in the habit of attending service than exists at present. Many of these now empty are of size sufficient to accommodate the entire population of several villages. Such a one is Willoughby, which unites in its church the adjacent village of Sloothby.

The stories of the sailors and the contiguity of the salt water had more influence on the boy's mind than the free, schools of Alford and Louth which he attended, and when he was about thirteen he sold his books and satchel and intended to run away to sea: but the death of his father stayed him. Both his parents being now dead, he was left with, he says, competent means; but his guardians regarding his estate more than himself, gave him full liberty and no money, so that he was forced to stay at home.

At the age of fifteen he was bound apprentice to Mr. Thomas S. Tendall of Lynn. The articles, however, did not bind him very fast, for as his master refused to send him to sea, John took leave of his master and did not see him again for eight years. These details exhibit in the boy the headstrong independence of the man.

At length he found means to attach himself to a young son of the great soldier, Lord Willoughby, who was going into France. The narrative is not clear, but it appears that upon reaching Orleans, in a month or so the services of John were found to be of no value, and he was sent back to his friends, who on his return generously gave him ten shillings (out of his own estate) to be rid of him. He is next heard of enjoying his liberty at Paris and making the acquaintance of a Scotchman named David Hume, who used his purse—ten shillings went a long ways in those days—and in return gave him letters of commendation to prefer him to King James. But the boy had a disinclination to go where he was sent. Reaching Rouen, and being nearly out of money, he dropped down the river to Havre de Grace, and began to learn to be a soldier.

Smith says not a word of the great war of the Leaguers and Henry IV., nor on which side he fought, nor is it probable that he cared. But he was doubtless on the side of Henry, as Havre was at this time in possession of that soldier. Our adventurer not only makes no reference to the great religious war, nor to the League, nor to Henry, but he does not tell who held Paris when he visited it. Apparently state affairs did not interest him. His reference to a "peace" helps us to fix the date of his first adventure in France. Henry published the Edict of Nantes at Paris, April 13, 1598, and on the 2d of May following, concluded the treaty of France with Philip II. at Vervins, which closed the Spanish pretensions in France. The Duc de Mercoeur (of whom we shall hear later as Smith's "Duke of Mercury" in Hungary), Duke of Lorraine, was allied with the Guises in the League, and had the design of holding Bretagne under Spanish protection. However, fortune was against him and he submitted to Henry in February, 1598, with no good grace. Looking about for an opportunity to distinguish

himself, he offered his services to the Emperor Rudolph to fight the Turks, and it is said led an army of his French followers, numbering 15,000, in 1601, to Hungary, to raise the siege of Coniza, which was beleaguered by Ibrahim Pasha with 60,000 men.

Chance of fighting and pay failing in France by reason of the peace, he enrolled himself under the banner of one of the roving and fighting captains of the time, who sold their swords in the best market, and went over into the Low Countries, where he hacked and hewed away at his fellow-men, all in the way of business, for three or four years. At the end of that time he bethought himself that he had not delivered his letters to Scotland. He embarked at Aucusan for Leith, and seems to have been shipwrecked, and detained by illness in the "holy isle" in Northumberland, near Barwick. On his recovery he delivered his letters, and received kind treatment from the Scots; but as he had no money, which was needed to make his way as a courtier, he returned to Willoughby.

The family of Smith is so "ancient" that the historians of the county of Lincoln do not allude to it, and only devote a brief paragraph to the great John himself. Willoughby must have been a dull place to him after his adventures, but he says he was glutted with company, and retired into a woody pasture, surrounded by forests, a good ways from any town, and there built himself a pavilion of boughs—less substantial than the cabin of Thoreau at Walden Pond—and there he heroically slept in his clothes, studied Machiavelli's "Art of War," read "Marcus Aurelius," and exercised on his horse with lance and ring. This solitary conduct got him the name of a hermit, whose food was thought to be more of venison than anything else, but in fact his men kept him supplied with provisions. When John had indulged in this ostentatious seclusion for a time, he allowed himself to be drawn out of it by the charming discourse of a noble Italian named Theodore Palaloga, who just then was Rider to Henry, Earl of Lincoln, and went to stay with him at Tattershall. This was an ancient town, with a castle, which belonged to the Earls of Lincoln, and was situated on the River Bane, only fourteen miles from Boston, a name that at once establishes a connection between Smith's native county and our own country, for it is nearly as certain that St. Botolph founded a monastery at Boston, Lincoln, in the year 654, as it is that he founded a club afterwards in Boston, Massachusetts.

Whatever were the pleasures of Tattershall, they could not long content the restless Smith, who soon set out again for the Netherlands in search of adventures.

The life of Smith, as it is related by himself, reads like that of a belligerent tramp, but it was not uncommon in his day, nor is it in ours, whenever America produces soldiers of fortune who are ready, for a compensation, to take up the quarrels of Egyptians or Chinese, or go wherever there is fighting and booty. Smith could now handle arms and ride a horse, and longed to go against the Turks, whose anti-Christian contests filled his soul with lamentations; and besides he was tired of seeing Christians slaughter each other. Like most heroes, he had a vivid imagination that made him credulous, and in the Netherlands he fell into the toils of three French gallants, one of whom pretended to be a great lord, attended by his gentlemen, who persuaded him to accompany them to the "Duchess of Mercury," whose lord was then a general of Rodolphus of Hungary, whose favor they could command. Embarking with these arrant cheats, the vessel reached the coast of Picardy, where his comrades contrived to take ashore their own baggage and Smith's trunk, containing his money and goodly apparel, leaving him on board. When the captain, who was in the plot, was enabled to land Smith the next day, the noble lords had disappeared with the luggage, and Smith, who had only a single piece of gold in his pocket, was obliged to sell his cloak to pay his passage.

Thus stripped, he roamed about Normandy in a forlorn condition, occasionally entertained by honorable persons who had heard of his misfortunes, and seeking always means of continuing his travels, wandering from port to port on the chance of embarking on a man-of-war. Once he was found in a forest near dead with grief and cold, and rescued by a rich farmer; shortly afterwards, in a grove in Brittany, he chanced upon one of the gallants who had robbed him, and the two out swords and fell to cutting. Smith had the satisfaction of wounding the rascal, and the inhabitants of a ruined tower near by, who witnessed the combat, were quite satisfied with the event.

Our hero then sought out the Earl of Ployer, who had been brought up in England during the French wars, by whom he was refurnished better than ever. After this streak of luck, he roamed about France, viewing the castles and strongholds, and at length embarked at Marseilles on a ship for Italy. Rough weather coming on, the vessel anchored under the lee of the little isle St. Mary, off Nice, in Savoy.

The passengers on board, among whom were many pilgrims bound for Rome, regarded Smith as a Jonah, cursed him for a Huguenot, swore that his nation were all pirates, railed against Queen Elizabeth, and declared that they never should have fair weather so long as he was on board. To end the dispute, they threw him into the sea. But God got him ashore on the little island, whose only inhabitants were goats and a few kine. The next day a couple of trading vessels anchored near, and he was taken off and so kindly used that he decided to cast in his fortune with them. Smith's discourse of his adventures so entertained the master of one of the vessels, who is described as "this noble Britaine, his neighbor, Captaine la Roche, of Saint Malo," that the much-tossed wanderer was accepted as a friend. They sailed to the Gulf of Turin, to Alessandria, where they discharged freight, then up to Scanderon, and coasting for some time among the Grecian islands, evidently in search of more freight, they at length came round to Cephalonia, and lay to for some days betwixt the isle of Corfu and the Cape of Otranto. Here it presently appeared what sort of freight the noble Britaine, Captain la Roche, was looking for.

An argosy of Venice hove in sight, and Captaine la Roche desired to speak to her. The reply was so "untoward" that a man was slain, whereupon the Britaine gave the argosy a broadside, and then his stem, and then other broadsides. A lively fight ensued, in which the Britaine lost fifteen men, and the argosy twenty, and then surrendered to save herself from sinking. The noble Britaine and John Smith then proceeded to rifle her. He says that "the Silkes, Velvets, Cloth of Gold, and Tissue, Pyasters, Chiqueenes, and Suitanies, which is gold and silver, they unloaded in four-and-twenty hours was wonderful, whereof having sufficient, and tired with toils, they cast her off with her company, with as much good merchandise as would have freighted another Britaine, that was but two hundred Tunnes, she four or five hundred." Smith's share of this booty was modest. When the ship returned he was set ashore at "the Road of Antibo in Piamon," "with five hundred chiqueenes [sequins] and a little box God sent him worth neere as much more." He always devoutly

acknowledged his dependence upon divine Providence, and took willingly what God sent him.

II. FIGHTING IN HUNGARY

Smith being thus "refurnished," made the tour of Italy, satisfied himself with the rarities of Rome, where he saw Pope Clement the Eighth and many cardinals creep up the holy stairs, and with the fair city of Naples and the kingdom's nobility; and passing through the north he came into Styria, to the Court of Archduke Ferdinand; and, introduced by an Englishman and an Irish Jesuit to the notice of Baron Kisell, general of artillery, he obtained employment, and went to Vienna with Colonel Voldo, Earl of Meldritch, with whose regiment he was to serve.

He was now on the threshold of his long-desired campaign against the Turks. The arrival on the scene of this young man, who was scarcely out of his teens, was a shadow of disaster to the Turks. They had been carrying all before them. Rudolph II., Emperor of Germany, was a weak and irresolute character, and no match for the enterprising Sultan, Mahomet III., who was then conducting the invasion of Europe. The Emperor's brother, the Archduke Mathias, who was to succeed him, and Ferdinand, Duke of Styria, also to become Emperor of Germany, were much abler men, and maintained a good front against the Moslems in Lower Hungary, but the Turks all the time steadily advanced. They had long occupied Buda (Pesth), and had been in possession of the stronghold of Alba Regalis for some sixty years. Before Smith's advent they had captured the important city of Caniza, and just as he reached the ground they had besieged the town of Olumpagh, with two thousand men. But the addition to the armies of Germany, France, Styria, and Hungary of John Smith, "this English gentleman," as he styles himself, put a new face on the war, and proved the ruin of the Turkish cause. The Bashaw of Buda was soon to feel the effect of this re-enforcement.

Caniza is a town in Lower Hungary, north of the River Drave, and just west of the Platen Sea, or Lake Balatin, as it is also called. Due north of Caniza a few miles, on a bend of the little River Raab (which empties into the Danube), and south of the town of Kerment, lay Smith's town of Olumpagh, which we are able to identify on a map of the period as Olimacum or Oberlymback. In this strong town the Turks had shut up the garrison under command of Governor Ebersbraught so closely that it was without intelligence or hope of succor.

In this strait, the ingenious John Smith, who was present in the reconnoitering army in the regiment of the Earl of Meldritch, came to the aid of Baron Kisell, the general of artillery, with a plan of communication with the besieged garrison. Fortunately Smith had made the acquaintance of Lord Ebersbraught at Gratza, in Styria, and had (he says) communicated to him a system of signaling a message by the use of torches. Smith seems to have elaborated this method of signals, and providentially explained it to Lord Ebersbraught, as if he had a presentiment of the latter's use of it. He divided the alphabet into two parts, from A to L and from M to Z. Letters were indicated and words spelled by the means of torches: "The first part, from A to L, is signified by showing and holding one linke so oft as there is letters from A to that letter you name; the other part, from M to Z, is mentioned by two lights in like manner. The end of a word is signified by showing of three lights."

General Kisell, inflamed by this strange invention, which Smith made plain to him, furnished him guides, who conducted him to a high mountain, seven miles distant from the town, where he flashed his torches and got a reply from the governor. Smith signaled that they would charge on the east of the town in the night, and at the alarm Ebersbraught was to sally forth. General Kisell doubted that he should be able to relieve the town by this means, as he had only ten thousand men; but Smith, whose fertile brain was now in full action, and who seems to have assumed charge of the campaign, hit upon a stratagem for the diversion and confusion of the Turks.

On the side of the town opposite the proposed point of attack lay the plain of Hysnaburg (Eisnaburg on Ortelius's map). Smith fastened two or three charred pieces of match to divers small lines of an hundred fathoms in length, armed with powder. Each line was tied to a stake at each end. After dusk these lines were set up on the plain, and being fired at the instant the alarm was given, they seemed to the Turks like so many rows of musketeers. While the Turks therefore prepared to repel a great army from that side, Kisell attacked with his ten thousand men, Ebersbraught sallied out and fell upon the Turks in the trenches, all the enemy on that side were slain or drowned, or put to flight. And while the Turks were busy routing Smith's sham musketeers, the Christians threw a couple of thousand troops into the town. Whereupon the Turks broke up the siege and retired to Caniza. For this exploit General Kisell received great honor at Kerment, and Smith was rewarded with the rank of captain, and the command of two hundred and fifty horsemen. From this time our hero must figure as Captain John Smith. The rank is not high, but he has made the title great, just as he has made the name of John Smith unique.

After this there were rumors of peace for these tormented countries; but the Turks, who did not yet appreciate the nature of this force, called John Smith, that had come into the world against them, did not intend peace, but went on levying soldiers and launching them into Hungary. To oppose these fresh invasions, Rudolph II., aided by the Christian princes, organized three armies: one led by the Archduke Mathias and his lieutenant, Duke Mercury, to defend Low Hungary; the second led by Ferdinand, the Archduke of Styria, and the Duke of Mantua, his lieutenant, to regain Caniza; the third by Gonzago, Governor of High Hungary, to join with Georgio Busca, to make an absolute conquest of Transylvania.

In pursuance of this plan, Duke Mercury, with an army of thirty thousand, whereof nearly ten thousand were French, besieged Stowell-Weisenberg, otherwise called Alba Regalis, a place so strong by art and nature that it was thought impregnable.

This stronghold, situated on the northeast of the Platen Sea, was, like Caniza and Oberlympack, one of the Turkish advanced posts, by means of which they pushed forward their operations from Buda on the Danube.

This noble friend of Smith, the Duke of Mercury, whom Haylyn styles Duke Mercurio, seems to have puzzled the biographers of Smith. In fact, the name of "Mercury" has given a mythological air to Smith's narration and aided to transfer it to the region of romance. He was, however, as we have seen, identical with a historical character of some importance, for the services he rendered to the Church of Rome, and a commander of some considerable skill. He is no other than Philip de Lorraine, Duc de Mercœur.'

[So far as I know, Dr. Edward Eggleston was the first to identify him. There is a sketch of him in the "Biographie Universelle," and a life with an account of his exploits in Hungary, entitled: *Histoire de Duc Mercoeur*, par Bruseles de Montplain Champs, Cologne, 1689-97]

At the siege of Alba Regalis, the Turks gained several successes by night sallies, and, as usual, it was not till Smith came to the front with one of his ingenious devices that the fortune of war changed. The Earl Meldritch, in whose regiment Smith served, having heard from some Christians who escaped from the town at what place there were the greatest assemblies and throngs of people in the city, caused Captain Smith to put in practice his "fiery dragons." These instruments of destruction are carefully described: "Having prepared fortie or fiftie round-bellied earthen pots, and filled them with hand Gunpowder, then covered them with Pitch, mingled with Brimstone and Turpentine, and quartering as many Musket-bullets, that hung together but only at the center of the division, stucke them round in the mixture about the pots, and covered them againe with the same mixture, over that a strong sear-cloth, then over all a goode thickness of Towze-match, well tempered with oyle of Linseed, Campheer, and powder of Brimstone, these he fitly placed in slings, graduated so neere as they could to the places of these assemblies."

These missiles of Smith's invention were flung at midnight, when the alarum was given, and "it was a perfect sight to see the short flaming course of their flight in the air, but presently after their fall, the lamentable noise of the miserable slaughtered Turkes was most wonderful to heare."

While Smith was amusing the Turks in this manner, the Earl Rosworme planned an attack on the opposite suburb, which was defended by a muddy lake, supposed to be impassable. Furnishing his men with bundles of sedge, which they threw before them as they advanced in the dark night, the lake was made passable, the suburb surprised, and the captured guns of the Turks were turned upon them in the city to which they had retreated. The army of the Bashaw was cut to pieces and he himself captured.

The Earl of Meldritch, having occupied the town, repaired the walls and the ruins of this famous city that had been in the possession of the Turks for some threescore years.

It is not our purpose to attempt to trace the meteoric course of Captain Smith in all his campaigns against the Turks, only to indicate the large part he took in these famous wars for the possession of Eastern Europe. The siege of Alba Regalis must have been about the year 1601—Smith never troubles himself with any dates—and while it was undecided, Mahomet III.—this was the prompt Sultan who made his position secure by putting to death nineteen of his brothers upon his accession—raised sixty thousand troops for its relief or its recovery. The Duc de Mercoeur went out to meet this army, and encountered it in the plains of Girke. In the first skirmishes the Earl Meldritch was very nearly cut off, although he made "his valour shine more bright than his armour, which seemed then painted with Turkish blood." Smith himself was sore wounded and had his horse slain under him. The campaign, at first favorable to the Turks, was inconclusive, and towards winter the Bashaw retired to Buda. The Duc de Mercoeur then divided his army. The Earl of Rosworme was sent to assist the Archduke Ferdinand, who was besieging Caniza; the Earl of Meldritch, with six thousand men, was sent to assist Georgio Busca against the Transylvanians; and the Duc de Mercoeur set out for France to raise new forces. On his way he received great honor at Vienna, and staying overnight at Nuremberg, he was royally entertained by the Archdukes Mathias and Maximilian. The next morning after the feast—how it chanced is not known—he was found dead His brother-inlaw died two days afterwards, and the hearts of both, with much sorrow, were carried into France.

We now come to the most important event in the life of Smith before he became an adventurer in Virginia, an event which shows Smith's readiness to put in practice the chivalry which had in the old chronicles influenced his boyish imagination; and we approach it with the satisfaction of knowing that it loses nothing in Smith's narration.

It must be mentioned that Transylvania, which the Earl of Meldritch, accompanied by Captain Smith, set out to relieve, had long been in a disturbed condition, owing to internal dissensions, of which the Turks took advantage. Transylvania, in fact, was a Turkish dependence, and it gives us an idea of the far reach of the Moslem influence in Europe, that Stephen VI., vaivode of Transylvania, was, on the commendation of Sultan Armurath III., chosen King of Poland.

To go a little further back than the period of Smith's arrival, John II. of Transylvania was a champion of the Turk, and an enemy of Ferdinand and his successors. His successor, Stephen VI., surnamed Batori, or Bathor, was made vaivode by the Turks, and afterwards, as we have said, King of Poland. He was succeeded in 1575 by his brother Christopher Batori, who was the first to drop the title of vaivode and assume that of Prince of Transylvania. The son of Christopher, Sigismund Batori, shook off the Turkish bondage, defeated many of their armies, slew some of their pashas, and gained the title of the Scanderbeg of the times in which he lived. Not able to hold out, however, against so potent an adversary, he resigned his estate to the Emperor Rudolph II., and received in exchange the dukedoms of Oppelon and Ratibor in Silesia, with an annual pension of fifty thousand joachims. The pension not being well paid, Sigismund made another resignation of his principality to his cousin Andrew Batori, who had the ill luck to be slain within the year by the vaivode of Valentia. Thereupon Rudolph, Emperor and King of Hungary, was acknowledged Prince of Transylvania. But the Transylvania soldiers did not take kindly to a foreign prince, and behaved so unsoldierly that Sigismund was called back. But he was unable to settle himself in his dominions, and the second time he left his country in the power of Rudolph and retired to Prague, where, in 1615, he died unlamented.

It was during this last effort of Sigismund to regain his position that the Earl of Meldritch, accompanied by Smith, went to Transylvania, with the intention of assisting Georgio Busca, who was the commander of the Emperor's party. But finding Prince Sigismund in possession of the most territory and of the hearts of the people, the earl thought it best to assist the prince against the Turk, rather than Busca against the prince.

Especially was he inclined to that side by the offer of free liberty of booty for his worn and unpaid troops, of what they could get possession of from the Turks.

This last consideration no doubt persuaded the troops that Sigismund had "so honest a cause." The earl was born in Transylvania, and the Turks were then in possession of his father's country. In this distracted state of the land, the frontiers had garrisons among the mountains, some of which held for the emperor, some for the prince, and some for the Turk. The earl asked leave of the prince to make an attempt to regain his paternal estate. The prince, glad of such an ally, made him camp-master of his army, and gave him leave to plunder the Turks. Accordingly the earl began to make incursions of the frontiers into what Smith calls the Land of Zarkam—among rocky mountains, where were some Turks, some Tartars, but most Brandittoes, Renegadoes, and such like, which he forced into the Plains of Regall, where was a city of men and fortifications, strong in itself, and so environed with mountains that it had been impregnable in all these wars.

It must be confessed that the historians and the map-makers did not always attach the importance that Smith did to the battles in which he was conspicuous, and we do not find the Land of Zarkam or the city of Regall in the contemporary chronicles or atlases. But the region is sufficiently identified. On the River Maruch, or Morusus, was the town of Alba Julia, or Weisenberg, the residence of the vaivode or Prince of Transylvania. South of this capital was the town Millenberg, and southwest of this was a very strong fortress, commanding a narrow pass leading into Transylvania out of Hungary, probably where the River Maruct: broke through the mountains. We infer that it was this pass that the earl captured by a stratagem, and carrying his army through it, began the siege of Regall in the plain. "The earth no sooner put on her green habit," says our knight-errant, "than the earl overspread her with his troops." Regall occupied a strong fortress on a promontory and the Christians encamped on the plain before it.

In the conduct of this campaign, we pass at once into the age of chivalry, about which Smith had read so much. We cannot but recognize that this is his opportunity. His idle boyhood had been soaked in old romances, and he had set out in his youth to do what equally dreamy but less venturesome devourers of old chronicles were content to read about. Everything arranged itself as Smith would have had it. When the Christian army arrived, the Turks sallied out and gave it a lively welcome, which cost each side about fifteen hundred men. Meldritch had but eight thousand soldiers, but he was re-enforced by the arrival of nine thousand more, with six-and-twenty pieces of ordnance, under Lord Zachel Moyses, the general of the army, who took command of the whole.

After the first skirmish the Turks remained within their fortress, the guns of which commanded the plain, and the Christians spent a month in intrenching themselves and mounting their guns.

The Turks, who taught Europe the art of civilized war, behaved all this time in a courtly and chivalric manner, exchanging with the besiegers wordy compliments until such time as the latter were ready to begin. The Turks derided the slow progress of the works, inquired if their ordnance was in pawn, twitted them with growing fat for want of exercise, and expressed the fear that the Christians should depart without making an assault.

In order to make the time pass pleasantly, and exactly in accordance with the tales of chivalry which Smith had read, the Turkish Bashaw in the fortress sent out his challenge: "That to delight the ladies, who did long to see some courtlike pastime, the Lord Tubashaw did defy any captaine that had the command of a company, who durst combat with him for his head."

This handsome offer to swap heads was accepted; lots were cast for the honor of meeting the lord, and, fortunately for us, the choice fell upon an ardent fighter of twenty-three years, named Captain John Smith. Nothing was wanting to give dignity to the spectacle. Truce was made; the ramparts of this fortress-city in the mountains (which we cannot find on the map) were "all beset with faire Dames and men in Armes"; the Christians were drawn up in battle array; and upon the theatre thus prepared the Turkish Bashaw, armed and mounted, entered with a flourish of hautboys; on his shoulders were fixed a pair of great wings, compacted of eagles' feathers within a ridge of silver richly garnished with gold and precious stones; before him was a janissary bearing his lance, and a janissary walked at each side leading his steed.

This gorgeous being Smith did not keep long waiting. Riding into the field with a flourish of trumpets, and only a simple page to bear his lance, Smith favored the Bashaw with a courteous salute, took position, charged at the signal, and before the Bashaw could say "Jack Robinson," thrust his lance through the sight of his beaver, face, head and all, threw him dead to the ground, alighted, unbraced his helmet, and cut off his head. The whole affair was over so suddenly that as a pastime for ladies it must have been disappointing. The Turks came out and took the headless trunk, and Smith, according to the terms of the challenge, appropriated the head and presented it to General Moyses.

This ceremonious but still hasty procedure excited the rage of one Gualgo, the friend of the Bashaw, who sent a particular challenge to Smith to regain his friend's head or lose his own, together with his horse and armor. Our hero varied the combat this time. The two combatants shivered lances and then took to pistols; Smith received a mark upon the "placard," but so wounded the Turk in his left arm that he was unable to rule his horse. Smith then unhorsed him, cut off his head, took possession of head, horse, and armor, but returned the rich apparel and the body to his friends in the most gentlemanly manner.

Captain Smith was perhaps too serious a knight to see the humor of these encounters, but he does not lack humor in describing them, and he adopted easily the witty courtesies of the code he was illustrating. After he had gathered two heads, and the siege still dragged, he became in turn the challenger, in phrase as courteously and grimly facetious as was permissible, thus:

"To delude time, Smith, with so many incontestable perswading reasons, obtained leave that the Ladies might know he was not so much enamored of their servants' heads, but if any Turke of their ranke would come to the place of combat to redeem them, should have also his, upon like conditions, if he could winne it."

This considerate invitation was accepted by a person whom Smith, with his usual contempt for names, calls "Bonny Mulgro." It seems difficult to immortalize such an appellation, and it is a pity that we have not the real one of the third Turk whom Smith honored by killing. But Bonny Mulgro, as we must call the worthiest

foe that Smith's prowess encountered, appeared upon the field. Smith understands working up a narration, and makes this combat long and doubtful. The challenged party, who had the choice of weapons, had marked the destructiveness of his opponent's lance, and elected, therefore, to fight with pistols and battle-axes. The pistols proved harmless, and then the battle-axes came in play, whose piercing bills made sometime the one, sometime the other, to have scarce sense to keep their saddles. Smith received such a blow that he lost his battle-axe, whereat the Turks on the ramparts set up a great shout. "The Turk prosecuted his advantage to the utmost of his power; yet the other, what by the readiness of his horse, and his judgment and dexterity in such a business, beyond all men's expectations, by God's assistance, not only avoided the Turke's violence, but having drawn his Faulchion, pierced the Turke so under the Culets throrow backe and body, that although he alighted from his horse, he stood not long ere he lost his head, as the rest had done."

There is nothing better than this in all the tales of chivalry, and John Smith's depreciation of his inability to equal Caesar in describing his own exploits, in his dedicatory letter to the Duchess of Richmond, must be taken as an excess of modesty. We are prepared to hear that these beheadings gave such encouragement to the whole army that six thousand soldiers, with three led horses, each preceded by a soldier bearing a Turk's head on a lance, turned out as a guard to Smith and conducted him to the pavilion of the general, to whom he presented his trophies. General Moyses (occasionally Smith calls him Moses) took him in his arms and embraced him with much respect, and gave him a fair horse, richly furnished, a scimeter, and a belt worth three hundred ducats. And his colonel advanced him to the position of sergeant-major of his regiment. If any detail was wanting to round out and reward this knightly performance in strict accord with the old romances, it was supplied by the subsequent handsome conduct of Prince Sigismund.

When the Christians had mounted their guns and made a couple of breaches in the walls of Regall, General Moyses ordered an attack one dark night "by the light that proceeded from the murdering muskets and peace-making cannon." The enemy were thus awaited, "whilst their slothful governor lay in a castle on top of a high mountain, and like a valiant prince asketh what's the matter, when horror and death stood amazed at each other, to see who should prevail to make him victorious." These descriptions show that Smith could handle the pen as well as the battleaxe, and distinguish him from the more vulgar fighters of his time. The assault succeeded, but at great cost of life. The Turks sent a flag of truce and desired a "composition," but the earl, remembering the death of his father, continued to batter the town and when he took it put all the men in arms to the sword, and then set their heads upon stakes along the walls, the Turks having ornamented the walls with Christian heads when they captured the fortress. Although the town afforded much pillage, the loss of so many troops so mixed the sour with the sweet that General Moyses could only allay his grief by sacking three other towns, Veratis, Solmos, and Kapronka. Taking from these a couple of thousand prisoners, mostly women and children, Earl Moyses marched north to Weisenberg (Alba Julia), and camped near the palace of Prince Sigismund.

When Sigismund Battori came out to view his army he was made acquainted with the signal services of Smith at "Olumpagh, Stowell-Weisenberg, and Regall," and rewarded him by conferring upon him, according to the law of—arms, a shield of arms with "three Turks' heads." This was granted by a letter-patent, in Latin, which is dated at "Lipswick, in Misenland, December 9, 1603" It recites that Smith was taken captive by the Turks in Wallachia November 18, 1602; that he escaped and rejoined his fellow-soldiers. This patent, therefore, was not given at Alba Julia, nor until Prince Sigismund had finally left his country, and when the Emperor was, in fact, the Prince of Transylvania. Sigismund styles himself, by the grace of God, Duke of Transylvania, etc. Appended to this patent, as published in Smith's "True Travels," is a certificate by William Segar, knight of the garter and principal king of arms of England, that he had seen this patent and had recorded a copy of it in the office of the Herald of Armes. This certificate is dated August 19, 1625, the year after the publication of the General Historie.

Smith says that Prince Sigismund also gave him his picture in gold, and granted him an annual pension of three hundred ducats. This promise of a pension was perhaps the most unsubstantial portion of his reward, for Sigismund himself became a pensioner shortly after the events last narrated.

The last mention of Sigismund by Smith is after his escape from captivity in Tartaria, when this mirror of virtues had abdicated. Smith visited him at "Lipswicke in Misenland," and the Prince "gave him his Passe, intimating the service he had done, and the honors he had received, with fifteen hundred ducats of gold to repair his losses." The "Passe" was doubtless the "Patent" before introduced, and we hear no word of the annual pension.

Affairs in Transylvania did not mend even after the capture of Regall, and of the three Turks' heads, and the destruction of so many villages. This fruitful and strong country was the prey of faction, and became little better than a desert under the ravages of the contending armies. The Emperor Rudolph at last determined to conquer the country for himself, and sent Busca again with a large army. Sigismund finding himself poorly supported, treated again with the Emperor and agreed to retire to Silicia on a pension. But the Earl Moyses, seeing no prospect of regaining his patrimony, and determining not to be under subjection to the Germans, led his troops against Busca, was defeated, and fled to join the Turks. Upon this desertion the Prince delivered up all he had to Busca and retired to Prague. Smith himself continued with the imperial party, in the regiment of Earl Meldritch. About this time the Sultan sent one Jeremy to be vaivode of Wallachia, whose tyranny caused the people to rise against him, and he fled into Moldavia. Busca proclaimed Lord Rodoll vaivode in his stead. But Jeremy assembled an army of forty thousand Turks, Tartars, and Moldavians, and retired into Wallachia. Smith took active part in Rodoll's campaign to recover Wallachia, and narrates the savage war that ensued. When the armies were encamped near each other at Raza and Argish, Rodoll cut off the heads of parties he captured going to the Turkish camp, and threw them into the enemy's trenches. Jeremy retorted by skinning alive the Christian parties he captured, hung their skins upon poles, and their carcasses and heads on stakes by them. In the first battle Rodoll was successful and established himself in Wallachia, but Jeremy rallied and began ravaging the country. Earl Meldritch was sent against him, but the Turks' force was much superior, and the Christians were caught in a trap. In order to reach Rodoll, who was at Rottenton, Meldritch with his small army was obliged to cut his way through the solid body of the enemy. A device of Smith's assisted him. He covered two or three hundred trunks—probably small branches of trees—

with wild-fire. These fixed upon the heads of lances and set on fire when the troops charged in the night, so terrified the horses of the Turks that they fled in dismay. Meldritch was for a moment victorious, but when within three leagues of Rottenton he was overpowered by forty thousand Turks, and the last desperate fight followed, in which nearly all the friends of the Prince were slain, and Smith himself was left for dead on the field.

On this bloody field over thirty thousand lay headless, armless, legless, all cut and mangled, who gave knowledge to the world how dear the Turk paid for his conquest of Transylvania and Wallachia—a conquest that might have been averted if the three Christian armies had been joined against the “cruel devouring Turk.” Among the slain were many Englishmen, adventurers like the valiant Captain whom Smith names, men who “left there their bodies in testimony of their minds.” And there, “Smith among the slaughtered dead bodies, and many a gasping soule with toils and wounds lay groaning among the rest, till being found by the Pillagers he was able to live, and perceiving by his armor and habit, his ransome might be better than his death, they led him prisoner with many others.” The captives were taken to Axopolis and all sold as slaves. Smith was bought by Bashaw Bogall, who forwarded him by way of Adrianople to Constantinople, to be a slave to his mistress. So chained by the necks in gangs of twenty they marched to the city of Constantine, where Smith was delivered over to the mistress of the Bashaw, the young Charatza Tragabigzanda.

III. CAPTIVITY AND WANDERING

Our hero never stirs without encountering a romantic adventure. Noble ladies nearly always take pity on good-looking captains, and Smith was far from ill-favored. The charming Charatza delighted to talk with her slave, for she could speak Italian, and would feign herself too sick to go to the bath, or to accompany the other women when they went to weep over the graves, as their custom is once a week, in order to stay at home to hear from Smith how it was that Bogall took him prisoner, as the Bashaw had written her, and whether Smith was a Bohemian lord conquered by the Bashaw's own hand, whose ransom could adorn her with the glory of her lover's conquests. Great must have been her disgust with Bogall when she heard that he had not captured this handsome prisoner, but had bought him in the slave-market at Axopolis. Her compassion for her slave increased, and the hero thought he saw in her eyes a tender interest. But she had no use for such a slave, and fearing her mother would sell him, she sent him to her brother, the Tymor Bashaw of Nalbrits in the country of Cambria, a province of Tartaria (wherever that may be). If all had gone on as Smith believed the kind lady intended, he might have been a great Bashaw and a mighty man in the Ottoman Empire, and we might never have heard of Pocahontas. In sending him to her brother, it was her intention, for she told him so, that he should only sojourn in Nalbrits long enough to learn the language, and what it was to be a Turk, till time made her master of herself. Smith himself does not dissent from this plan to metamorphose him into a Turk and the husband of the beautiful Charatza Tragabigzanda. He had no doubt that he was commended to the kindest treatment by her brother; but Tymor “diverted all this to the worst of cruelty.” Within an hour of his arrival, he was stripped naked, his head and face shaved as smooth as his hand, a ring of iron, with a long stake bowed like a sickle, riveted to his neck, and he was scantily clad in goat's skin. There were many other slaves, but Smith being the last, was treated like a dog, and made the slave of slaves.

The geographer is not able to follow Captain Smith to Nalbrits. Perhaps Smith himself would have been puzzled to make a map of his own career after he left Varna and passed the Black Sea and came through the straits of Niger into the Sea Disbacca, by some called the Lake Moetis, and then sailed some days up the River Bruapo to Cambria, and two days more to Nalbrits, where the Tynor resided.

Smith wrote his travels in London nearly thirty years after, and it is difficult to say how much is the result of his own observation and how much he appropriated from preceding romances. The Cambrians may have been the Cossacks, but his description of their habits and also those of the “Crym-Tartars” belongs to the marvels of Mandeville and other wide-eyed travelers. Smith fared very badly with the Tymor. The Tymor and his friends ate pillaw; they esteemed “samboyses” and “musselbits” “great dainties, and yet,” exclaims Smith, “but round pies, full of all sorts of flesh they can get, chopped with variety of herbs.” Their best drink was “coffa” and sherbet, which is only honey and water. The common victual of the others was the entrails of horses and “ulgries” (goats?) cut up and boiled in a caldron with “cuskus,” a preparation made from grain. This was served in great bowls set in the ground, and when the other prisoners had raked it thoroughly with their foul fists the remainder was given to the Christians. The same dish of entrails used to be served not many years ago in Upper Egypt as a royal dish to entertain a distinguished guest.

It might entertain but it would too long detain us to repeat Smith's information, probably all secondhand, about this barbarous region. We must confine ourselves to the fortunes of our hero. All his hope of deliverance from thralldom was in the love of Tragabigzanda, whom he firmly believed was ignorant of his bad usage. But she made no sign. Providence at length opened a way for his escape. He was employed in thrashing in a field more than a league from the Tymor's home. The Bashaw used to come to visit his slave there, and beat, spurn, and revile him. One day Smith, unable to control himself under these insults, rushed upon the Tymor, and beat out his brains with a thrashing bat—“for they had no flails,” he explains—put on the dead man's clothes, hid the body in the straw, filled a knapsack with corn, mounted his horse and rode away into the unknown desert, where he wandered many days before he found a way out. If we may believe Smith this wilderness was more civilized in one respect than some parts of our own land, for on all the crossings of the roads were guide-boards. After traveling sixteen days on the road that leads to Muscova, Smith reached a Muscovite garrison on the River Don. The governor knocked off the iron from his neck and used him so kindly that he thought himself now risen from the dead. With his usual good fortune there was a lady to take interest in him—“the good Lady Callamata largely supplied all his wants.”

After Smith had his purse filled by Sigismund he made a thorough tour of Europe, and passed into Spain, where being satisfied, as he says, with Europe and Asia, and understanding that there were wars in Barbary, this restless adventurer passed on into Morocco with several comrades on a French man-of-war. His observations on and tales about North Africa are so evidently taken from the books of other travelers that they add little to our knowledge of his career. For some reason he found no fighting going on worth his while. But good fortune attended his return. He sailed in a man-of-war with Captain Merham. They made a few unimportant captures, and at length fell in with two Spanish men-of-war, which gave Smith the sort of entertainment he most coveted. A sort of running fight, sometimes at close quarters, and with many boardings and repulses, lasted for a couple of days and nights, when having battered each other thoroughly and lost many men, the pirates of both nations separated and went cruising, no doubt, for more profitable game. Our wanderer returned to his native land, seasoned and disciplined for the part he was to play in the New World. As Smith had traveled all over Europe and sojourned in Morocco, besides sailing the high seas, since he visited Prince Sigismund in December, 1603, it was probably in the year 1605 that he reached England. He had arrived at the manly age of twenty-six years, and was ready to play a man's part in the wonderful drama of discovery and adventure upon which the Britons were then engaged.

IV. FIRST ATTEMPTS IN VIRGINIA

John Smith has not chosen to tell us anything of his life during the interim—perhaps not more than a year and a half—between his return from Morocco and his setting sail for Virginia. Nor do his contemporaries throw any light upon this period of his life.

One would like to know whether he went down to Willoughby and had a reckoning with his guardians; whether he found any relations or friends of his boyhood; whether any portion of his estate remained of that "competent means" which he says he inherited, but which does not seem to have been available in his career. From the time when he set out for France in his fifteenth year, with the exception of a short sojourn in Willoughby seven or eight years after, he lived by his wits and by the strong hand. His purse was now and then replenished by a lucky windfall, which enabled him to extend his travels and seek more adventures. This is the impression that his own story makes upon the reader in a narrative that is characterized by the boastfulness and exaggeration of the times, and not fuller of the marvelous than most others of that period.

The London to which Smith returned was the London of Shakespeare. We should be thankful for one glimpse of him in this interesting town. Did he frequent the theatre? Did he perhaps see Shakespeare himself at the Globe? Did he loaf in the coffee-houses, and spin the fine thread of his adventures to the idlers and gallants who resorted to them? If he dropped in at any theatre of an afternoon he was quite likely to hear some allusion to Virginia, for the plays of the hour were full of chaff, not always of the choicest, about the attractions of the Virgin-land, whose gold was as plentiful as copper in England; where the prisoners were fettered in gold, and the dripping-pans were made of it; and where—an unheard-of thing—you might become an alderman without having been a scavenger.

Was Smith an indulger in that new medicine for all ills, tobacco? Alas! we know nothing of his habits or his company. He was a man of piety according to his lights, and it is probable that he may have had the then rising prejudice against theatres. After his return from Virginia he and his exploits were the subject of many a stage play and spectacle, but whether his vanity was more flattered by this mark of notoriety than his piety was offended we do not know. There is certainly no sort of evidence that he engaged in the common dissipation of the town, nor gave himself up to those pleasures which a man rescued from the hardships of captivity in Tartaria might be expected to seek. Mr. Stith says that it was the testimony of his fellow soldiers and adventurers that "they never knew a soldier, before him, so free from those military vices of wine, tobacco, debts, dice, and oaths."

But of one thing we may be certain: he was seeking adventure according to his nature, and eager for any heroic employment; and it goes without saying that he entered into the great excitement of the day—adventure in America. Elizabeth was dead. James had just come to the throne, and Raleigh, to whom Elizabeth had granted an extensive patent of Virginia, was in the Tower. The attempts to make any permanent lodgment in the countries of Virginia had failed. But at the date of Smith's advent Captain Bartholomew Gosnold had returned from a voyage undertaken in 1602 under the patronage of the Earl of Southampton, and announced that he had discovered a direct passage westward to the new continent, all the former voyagers having gone by the way of the West Indies. The effect of this announcement in London, accompanied as it was with Gosnold's report of the fruitfulness of the coast of New England which he explored, was something like that made upon New York by the discovery of gold in California in 1849. The route by the West Indies, with its incidents of disease and delay, was now replaced by the direct course opened by Gosnold, and the London Exchange, which has always been quick to scent any profit in trade, shared the excitement of the distinguished soldiers and sailors who were ready to embrace any chance of adventure that offered.

It is said that Captain Gosnold spent several years in vain, after his return, in soliciting his friends and acquaintances to join him in settling this fertile land he had explored; and that at length he prevailed upon Captain John Smith, Mr. Edward Maria Wingfield, the Rev. Mr. Robert Hunt, and others, to join him. This is the first appearance of the name of Captain John Smith in connection with Virginia. Probably his life in London had been as idle as unprofitable, and his purse needed replenishing. Here was a way open to the most honorable, exciting, and profitable employment. That its mere profit would have attracted him we do not believe; but its danger, uncertainty, and chance of distinction would irresistibly appeal to him. The distinct object of the projectors was to establish a colony in Virginia. This proved too great an undertaking for private persons. After many vain projects the scheme was commended to several of the nobility, gentry, and

merchants, who came into it heartily, and the memorable expedition of 1606 was organized.

The patent under which this colonization was undertaken was obtained from King James by the solicitation of Richard Hakluyt and others. Smith's name does not appear in it, nor does that of Gosnold nor of Captain Newport. Richard Hakluyt, then clerk prebendary of Westminster, had from the first taken great interest in the project. He was chaplain of the English colony in Paris when Sir Francis Drake was fitting out his expedition to America, and was eager to further it. By his diligent study he became the best English geographer of his time; he was the historiographer of the East India Company, and the best informed man in England concerning the races, climates, and productions of all parts of the globe. It was at Hakluyt's suggestion that two vessels were sent out from Plymouth in 1603 to verify Gosnold's report of his new short route. A further verification of the feasibility of this route was made by Captain George Weymouth, who was sent out in 1605 by the Earl of Southampton.

The letters-patent of King James, dated April 10, 1606, licensed the planting of two colonies in the territories of America commonly called Virginia. The corporators named in the first colony were Sir Thos. Gates, Sir George Somers, knights, and Richard Hakluyt and Edward Maria Wingfield, adventurers, of the city of London. They were permitted to settle anywhere in territory between the 34th and 41st degrees of latitude.

The corporators named in the second colony were Thomas Hankam, Raleigh Gilbert, William Parker, and George Popham, representing Bristol, Exeter, and Plymouth, and the west counties, who were authorized to make a settlement anywhere between the 38th and 48th degrees of latitude.

The—letters commended and generously accepted this noble work of colonization, "which may, by the Providence of Almighty God, hereafter tend to the glory of his Divine Majesty, in propagating of Christian religion to such people as yet live in darkness and miserable ignorance of all true knowledge and worship of God, and may in time bring the infidels and savages living in those parts to human civility and to a settled and quiet government." The conversion of the Indians was as prominent an object in all these early adventures, English or Spanish, as the relief of the Christians has been in all the Russian campaigns against the Turks in our day.

Before following the fortunes of this Virginia colony of 1606, to which John Smith was attached, it is necessary to glance briefly at the previous attempt to make settlements in this portion of America.

Although the English had a claim upon America, based upon the discovery of Newfoundland and of the coast of the continent from the 38th to the 68th north parallel by Sebastian Cabot in 1497, they took no further advantage of it than to send out a few fishing vessels, until Sir Humphrey Gilbert, a noted and skillful seaman, took out letters-patent for discovery, bearing date the 11th of January, 1578. Gilbert was the half-brother of Sir Walter Raleigh and thirteen years his senior. The brothers were associated in the enterprise of 1579, which had for its main object the possession of Newfoundland. It is commonly said, and in this the biographical dictionaries follow one another, that Raleigh accompanied his brother on this voyage of 1579 and went with him to Newfoundland. The fact is that Gilbert did not reach Newfoundland on that voyage, and it is open to doubt if Raleigh started with him. In April, 1579, when Gilbert took active steps under the charter of 1578, diplomatic difficulties arose, growing out of Elizabeth's policy with the Spaniards, and when Gilbert's ships were ready to sail he was stopped by an order from the council. Little is known of this unsuccessful attempt of Gilbert's. He did, after many delays, put to sea, and one of his contemporaries, John Hooker, the antiquarian, says that Raleigh was one of the assured friends that accompanied him. But he was shortly after driven back, probably from an encounter with the Spaniards, and returned with the loss of a tall ship.

Raleigh had no sooner made good his footing at the court of Elizabeth than he joined Sir Humphrey in a new adventure. But the Queen peremptorily retained Raleigh at court, to prevent his incurring the risks of any "dangerous sea-fights." To prevent Gilbert from embarking on this new voyage seems to have been the device of the council rather than the Queen, for she assured Gilbert of her good wishes, and desired him, on his departure, to give his picture to Raleigh for her, and she contributed to the large sums raised to meet expenses "an anchor guarded by a lady," which the sailor was to wear at his breast. Raleigh risked L 2,000 in the venture, and equipped a ship which bore his name, but which had ill luck. An infectious fever broke out among the crew, and the "Ark Raleigh" returned to Plymouth. Sir Humphrey wrote to his brother admiral, Sir George Peckham, indignantly of this desertion, the reason for which he did not know, and then proceeded on his voyage with his four remaining ships. This was on the 11th of January, 1583. The expedition was so far successful that Gilbert took formal possession of Newfoundland for the Queen. But a fatality attended his further explorations: the gallant admiral went down at sea in a storm off our coast, with his crew, heroic and full of Christian faith to the last, uttering, it is reported, this courageous consolation to his comrades at the last moment: "Be of good heart, my friends. We are as near to heaven by sea as by land."

In September, 1583, a surviving ship brought news of the disaster to Falmouth. Raleigh was not discouraged. Within six months of this loss he had on foot another enterprise. His brother's patent had expired. On the 25th of March, 1584, he obtained from Elizabeth a new charter with larger powers, incorporating himself, Adrian Gilbert, brother of Sir Humphrey, and John Davys, under the title of "The College of the Fellowship for the Discovery of the Northwest Passage." But Raleigh's object was colonization. Within a few days after his charter was issued he despatched two captains, Philip Amadas and Arthur Barlow, who in July of that year took possession of the island of Roanoke.

The name of Sir Walter Raleigh is intimately associated with Carolina and Virginia, and it is the popular impression that he personally assisted in the discovery of the one and the settlement of the other. But there is no more foundation for the belief that he ever visited the territory of Virginia, of which he was styled governor, than that he accompanied Sir Humphrey Gilbert to Newfoundland. An allusion by William Strachey, in his "Historie of Travaile into Virginia," hastily read, may have misled some writers. He speaks of an expedition southward, "to some parts of Chawonock and the Mangoangs, to search them there left by Sir Walter Raleigh." But his further sketch of the various prior expeditions shows that he meant to speak of settlers left by Sir Ralph Lane and other agents of Raleigh in colonization. Sir Walter Raleigh never saw any portion of the coast of the United States.

In 1592 he planned an attack upon the Spanish possessions of Panama, but his plans were frustrated. His only personal expedition to the New World was that to Guana in 1595.

The expedition of Captain Amadas and Captain Barlow is described by Captain Smith in his compilation called the "General Historie," and by Mr. Strachey. They set sail April 27, 1584, from the Thames. On the 2d of July they fell with the coast of Florida in shoal water, "where they felt a most delicate sweet smell," but saw no land. Presently land appeared, which they took to be the continent, and coasted along to the northward a hundred and thirty miles before finding a harbor. Entering the first opening, they landed on what proved to be the Island of Roanoke. The landing-place was sandy and low, but so productive of grapes or vines overrunning everything, that the very surge of the sea sometimes overflowed them. The tallest and reddest cedars in the world grew there, with pines, cypresses, and other trees, and in the woods plenty of deer, conies, and fowls in incredible abundance.

After a few days the natives came off in boats to visit them, proper people and civil in their behavior, bringing with them the King's brother, Granganameo (Quangimino, says Strachey). The name of the King was Winginia, and of the country Wingandacoa. The name of this King might have suggested that of Virginia as the title of the new possession, but for the superior claim of the Virgin Queen. Granganameo was a friendly savage who liked to trade. The first thing he took a fancy was a pewter dish, and he made a hole through it and hung it about his neck for a breastplate. The liberal Christians sold it to him for the low price of twenty deer-skins, worth twenty crowns, and they also let him have a copper kettle for fifty skins. They drove a lively traffic with the savages for much of such "truck," and the chief came on board and ate and drank merrily with the strangers. His wife and children, short of stature but well-formed and bashful, also paid them a visit. She wore a long coat of leather, with a piece of leather about her loins, around her forehead a band of white coral, and from her ears bracelets of pearls of the bigness of great peas hung down to her middle. The other women wore pendants of copper, as did the children, five or six in an ear. The boats of these savages were hollowed trunks of trees. Nothing could exceed the kindness and trustfulness the Indians exhibited towards their visitors. They kept them supplied with game and fruits, and when a party made an expedition inland to the residence of Granganameo, his wife (her husband being absent) came running to the river to welcome them; took them to her house and set them before a great fire; took off their clothes and washed them; removed the stockings of some and washed their feet in warm water; set plenty of victual, venison and fish and fruits, before them, and took pains to see all things well ordered for their comfort. "More love they could not express to entertain us." It is noted that these savages drank wine while the grape lasted. The visitors returned all this kindness with suspicion.

They insisted upon retiring to their boats at night instead of lodging in the house, and the good woman, much grieved at their jealousy, sent down to them their half-cooked supper, pots and all, and mats to cover them from the rain in the night, and caused several of her men and thirty women to sit all night on the shore over against them. "A more kind, loving people cannot be," say the voyagers.

In September the expedition returned to England, taking specimens of the wealth of the country, and some of the pearls as big as peas, and two natives, Wanchese and Manteo. The "lord proprietary" obtained the Queen's permission to name the new lands "Virginia," in her honor, and he had a new seal of his arms cut, with the legend, *Propria insignia Walteri Raleigh, militis, Domini et Gubernatoris Virginia*.

The enticing reports brought back of the fertility of this land, and the amiability of its pearl-decked inhabitants, determined Raleigh at once to establish a colony there, in the hope of the ultimate salvation of the "poor seduced infidell" who wore the pearls. A fleet of seven vessels, with one hundred householders, and many things necessary to begin a new state, departed from Plymouth in April, 1585. Sir Richard Grenville had command of the expedition, and Mr. Ralph Lane was made governor of the colony, with Philip Amadas for his deputy. Among the distinguished men who accompanied them were Thomas Hariot, the mathematician, and Thomas Cavendish, the naval discoverer. The expedition encountered as many fatalities as those that befell Sir Humphrey Gilbert; and Sir Richard was destined also to an early and memorable death. But the new colony suffered more from its own imprudence and want of harmony than from natural causes.

In August, Grenville left Ralph Lane in charge of the colony and returned to England, capturing a Spanish ship on the way. The colonists pushed discoveries in various directions, but soon found themselves involved in quarrels with the Indians, whose conduct was less friendly than formerly, a change partly due to the greed of the whites. In June, when Lane was in fear of a conspiracy which he had discovered against the life of the colony, and it was short of supplies, Sir Francis Drake appeared off Roanoke, returning homeward with his fleet from the sacking of St. Domingo, Carthagen, and St. Augustine. Lane, without waiting for succor from England, persuaded Drake to take him and all the colony back home. Meantime Raleigh, knowing that the colony would probably need aid, was preparing a fleet of three well appointed ships to accompany Sir Richard Grenville, and an "advice ship," plentifully freighted, to send in advance to give intelligence of his coming. Great was Grenville's chagrin, when he reached Hatorask, to find that the advice boat had arrived, and finding no colony, had departed again for England. However, he established fifteen men ("fifty," says the "General Historie") on the island, provisioned for two years, and then returned home.

[Sir Richard Grenville in 1591 was vice-admiral of a fleet, under command of Lord Thomas Howard, at the Azores, sent against a Spanish Plate-fleet. Six English vessels were suddenly opposed by a Spanish convoy of 53 ships of war. Left behind his comrades, in embarking from an island, opposed by five galleons, he maintained a terrible fight for fifteen hours, his vessel all cut to pieces, and his men nearly all slain. He died uttering aloud these words: "Here dies Sir Richard Grenville, with a joyful and quiet mind, for that I have ended my life as a true soldier ought to do, fighting for his country, queen, religion, and honor."]

Mr. Ralph Lane's colony was splendidly fitted out, much better furnished than the one that Newport, Wingfield, and Gosnold conducted to the River James in 1607; but it needed a man at the head of it. If the governor had possessed Smith's pluck, he would have held on till the arrival of Grenville.

Lane did not distinguish himself in the conduct of this governorship, but he nevertheless gained immortality. For he is credited with first bringing into England that valuable medicinal weed called tobacco, which Sir Walter Raleigh made fashionable, not in its capacity to drive "rheums" out of the body, but as a soother, when burned in the bowl of a pipe and drawn through the stem in smoke, of the melancholy spirit.

The honor of introducing tobacco at this date is so large that it has been shared by three persons—Sir Francis Drake, who brought Mr. Lane home; Mr. Lane, who carried the precious result of his sojourn in America; and Sir Walter Raleigh, who commended it to the use of the ladies of Queen Elizabeth's court.

But this was by no means its first appearance in Europe. It was already known in Spain, in France, and in Italy, and no doubt had begun to make its way in the Orient. In the early part of the century the Spaniards had discovered its virtues. It is stated by John Neander, in his "Tobacco Logia," published in Leyden in 1626, that Tobacco took its name from a province in Yucatan, conquered by Fernando Cortez in 1519. The name Nicotiana he derives from D. Johanne Nicotino Nemansensi, of the council of Francis II., who first introduced the plant into France. At the date of this volume (1626) tobacco was in general use all over Europe and in the East. Pictures are given of the Persian water pipes, and descriptions of the mode of preparing it for use. There are reports and traditions of a very ancient use of tobacco in Persia and in China, as well as in India, but we are convinced that the substance supposed to be tobacco, and to be referred to as such by many writers, and described as "intoxicating," was really India hemp, or some plant very different from the tobacco of the New World. At any rate there is evidence that in the Turkish Empire as late as 1616 tobacco was still somewhat a novelty, and the smoking of it was regarded as vile, and a habit only of the low. The late Hekekian Bey, foreign minister of old Mahomet Ali, possessed an ancient Turkish MS which related an occurrence at Smyrna about the year 1610, namely, the punishment of some sailors for the use of tobacco, which showed that it was a novelty and accounted a low vice at that time. The testimony of the trustworthy George Sandys, an English traveler into Turkey, Egypt, and Syria in 1610 (afterwards, 1621, treasurer of the colony in Virginia), is to the same effect as given in his "Relation," published in London in 1621. In his minute description of the people and manners of Constantinople, after speaking of opium, which makes the Turks "giddy-headed" and "turbulent dreamers," he says: "But perhaps for the self-same cause they delight in Tobacco: which they take through reedes that have joyned with them great heads of wood to containe it, I doubt not but lately taught them as brought them by the English; and were it not sometimes lookt into (for Morat Bassa [Murad III.?] not long since commanded a pipe to be thrust through the nose of a Turke, and to be led in derision through the Citie), no question but it would prove a principal commodity. Nevertheless they will take it in corners; and are so ignorant therein, that that which in England is not saleable, doth passe here among them for most excellent."

Mr. Stith ("History of Virginia," 1746) gives Raleigh credit for the introduction of the pipe into good society, but he cautiously says, "We are not informed whether the queen made use of it herself: but it is certain she gave great countenance to it as a vegetable of singular strength and power, which might therefore prove of benefit to mankind, and advantage to the nation." Mr. Thomas Hariot, in his observations on the colony at Roanoke, says that the natives esteemed their tobacco, of which plenty was found, their "chief physicke."

It should be noted, as against the claim of Lane, that Stowe in his "Annales" (1615) says: "Tobacco was first brought and made known in England by Sir John Hawkins, about the year 1565, but not used by Englishmen in many years after, though at this time commonly used by most men and many women." In a side-note to the edition of 1631 we read: "Sir Walter Raleigh was the first that brought tobacco in use, when all men wondered what it meant." It was first commended for its medicinal virtues. Harrison's "Chronologie," under date of 1573, says: "In these daies the taking in of the smoke of the Indian herbe called 'Tabaco' by an instrument formed like a little ladell, whereby it passeth from the mouth into the hed and stomach, is gretlie taken-up and used in England, against Rewmes and some other diseases ingendred in the longes and inward partes, and not without effect." But Barnaby Rich, in "The Honestie of this Age," 1614, disagrees with Harrison about its benefit: "They say it is good for a cold, for a pose, for rewmes, for aches, for dropsies, and for all manner of diseases proceeding of moyst humours; but I cannot see but that those that do take it fastest are as much (or more) subject to all these infirmities (yea, and to the poxe itself) as those that have nothing at all to do with it." He learns that 7,000 shops in London live by the trade of tobacco-selling, and calculates that there is paid for it £ 399,375 a year, "all spent in smoake." Every base groom must have his pipe with his pot of ale; it "is vendible in every taverne, inne, and ale-house; and as for apothecaries shops, grosers shops, chandlers shops, they are (almost) never without company that, from morning till night, are still taking of tobacco." Numbers of houses and shops had no other trade to live by. The wrath of King James was probably never cooled against tobacco, but the expression of it was somewhat tempered when he perceived what a source of revenue it became.

The savages of North America gave early evidence of the possession of imaginative minds, of rare power of invention, and of an amiable desire to make satisfactory replies to the inquiries of their visitors. They generally told their questioners what they wanted to know, if they could ascertain what sort of information would please them. If they had known the taste of the sixteenth century for the marvelous they could not have responded more fitly to suit it. They filled Mr. Lane and Mr. Hariot full of tales of a wonderful copper mine on the River Maratock (Roanoke), where the metal was dipped out of the stream in great bowls. The colonists had great hopes of this river, which Mr. Hariot thought flowed out of the Gulf of Mexico, or very near the South Sea. The Indians also conveyed to the mind of this sagacious observer the notion that they had a very respectably developed religion; that they believed in one chief god who existed from all eternity, and who made many gods of less degree; that for mankind a woman was first created, who by one of the gods brought forth children; that they believed in the immortality of the soul, and that for good works a soul will be conveyed to bliss in the tabernacles of the gods, and for bad deeds to pokogusso, a great pit in the furthest part of the world, where the sun sets, and where they burn continually. The Indians knew this because two men lately dead had revived and come back to tell them of the other world. These stories, and many others of like kind, the Indians told of themselves, and they further pleased Mr. Hariot by kissing his Bible and rubbing it all over their bodies, notwithstanding he told them there was no virtue in the material book itself, only in its doctrines. We must do Mr. Hariot the justice to say, however, that he had some little suspicion of the "subtiltie" of the weroances (chiefs) and the priests.

Raleigh was not easily discouraged; he was determined to plant his colony, and to send relief to the handful of men that Grenville had left on Roanoke Island. In May, 1587, he sent out three ships and a hundred and fifty householders, under command of Mr. John White, who was appointed Governor of the colony, with twelve assistants as a Council, who were incorporated under the name of "The Governor and Assistants of the

City of Raleigh in Virginia," with instructions to change their settlement to Chesapeake Bay. The expedition found there no one of the colony (whether it was fifty or fifteen the writers disagree), nothing but the bones of one man where the plantation had been; the houses were unhurt, but overgrown with weeds, and the fort was defaced. Captain Stafford, with twenty men, went to Croatan to seek the lost colonists. He heard that the fifty had been set upon by three hundred Indians, and, after a sharp skirmish and the loss of one man, had taken boats and gone to a small island near Hatorask, and afterwards had departed no one knew whither.

Mr. White sent a band to take revenge upon the Indians who were suspected of their murder through treachery, which was guided by Mateo, the friendly Indian, who had returned with the expedition from England. By a mistake they attacked a friendly tribe. In August of this year Mateo was Christianized, and baptized under the title of Lord of Roanoke and Dassomonpeake, as a reward for his fidelity. The same month Elinor, the daughter of the Governor, the wife of Ananias Dare, gave birth to a daughter, the first white child born in this part of the continent, who was named Virginia.

Before long a dispute arose between the Governor and his Council as to the proper person to return to England for supplies. White himself was finally prevailed upon to go, and he departed, leaving about a hundred settlers on one of the islands of Hatorask to form a plantation.

The Spanish invasion and the Armada distracted the attention of Europe about this time, and the hope of plunder from Spanish vessels was more attractive than the colonization of America. It was not until 1590 that Raleigh was able to despatch vessels to the relief of the Hatorask colony, and then it was too late. White did, indeed, start out from Biddeford in April, 1588, with two vessels, but the temptation to chase prizes was too strong for him, and he went on a cruise of his own, and left the colony to its destruction.

In March, 1589-90, Mr. White was again sent out, with three ships, from Plymouth, and reached the coast in August. Sailing by Croatan they went to Hatorask, where they descried a smoke in the place they had left the colony in 1587. Going ashore next day, they found no man, nor sign that any had been there lately. Preparing to go to Roanoke next day, a boat was upset and Captain Spicer and six of the crew were drowned. This accident so discouraged the sailors that they could hardly be persuaded to enter on the search for the colony. At last two boats, with nineteen men, set out for Hatorask, and landed at that part of Roanoke where the colony had been left. When White left the colony three years before, the men had talked of going fifty miles into the mainland, and had agreed to leave some sign of their departure. The searchers found not a man of the colony; their houses were taken down, and a strong palisade had been built. All about were relics of goods that had been buried and dug up again and scattered, and on a post was carved the name "CROATAN." This signal, which was accompanied by no sign of distress, gave White hope that he should find his comrades at Croatan. But one mischance or another happening, his provisions being short, the expedition decided to run down to the West Indies and "refresh" (chiefly with a little Spanish plunder), and return in the spring and seek their countrymen; but instead they sailed for England and never went to Croatan. The men of the abandoned colonies were never again heard of. Years after, in 1602, Raleigh bought a bark and sent it, under the charge of Samuel Mace, a mariner who had been twice to Virginia, to go in search of the survivors of White's colony. Mace spent a month lounging about the Hatorask coast and trading with the natives, but did not land on Croatan, or at any place where the lost colony might be expected to be found; but having taken on board some sassafras, which at that time brought a good price in England, and some other barks which were supposed to be valuable, he basely shirked the errand on which he was hired to go, and took himself and his spicy woods home.

The "Lost Colony" of White is one of the romances of the New World. Governor White no doubt had the feelings of a parent, but he did not allow them to interfere with his more public duties to go in search of Spanish prizes. If the lost colony had gone to Croatan, it was probable that Ananias Dare and his wife, the Governor's daughter, and the little Virginia Dare, were with them. But White, as we have seen, had such confidence in Providence that he left his dear relatives to its care, and made no attempt to visit Croatan.

Stith says that Raleigh sent five several times to search for the lost, but the searchers returned with only idle reports and frivolous allegations. Tradition, however, has been busy with the fate of these deserted colonists. One of the unsupported conjectures is that the colonists amalgamated with the tribe of Hatteras Indians, and Indian tradition and the physical characteristics of the tribe are said to confirm this idea. But the sporadic birth of children with white skins (albinos) among black or copper-colored races that have had no intercourse with white people, and the occurrence of light hair and blue eyes among the native races of America and of New Guinea, are facts so well attested that no theory of amalgamation can be sustained by such rare physical manifestations. According to Captain John Smith, who wrote of Captain Newport's explorations in 1608, there were no tidings of the waifs, for, says Smith, Newport returned "without a lump of gold, a certainty of the South Sea, or one of the lost company sent out by Sir Walter Raleigh."

In his voyage of discovery up the Chickahominy, Smith seem; to have inquired about this lost colony of King Paspahagh, for he says, "what he knew of the dominions he spared not to acquaint me with, as of certaine men cloathed at a place called Ocanahonan, cloathcd like me."

[Among these Hatteras Indians Captain Amadas, in 1584, saw children with chestnut-colored hair.]

We come somewhat nearer to this matter in the "Historie of Travaile into Virginia Britannia," published from the manuscript by the Hakluyt Society in 1849, in which it is intimated that seven of these deserted colonists were afterwards rescued. Strachey is a first-rate authority for what he saw. He arrived in Virginia in 1610 and remained there two years, as secretary of the colony, and was a man of importance. His "Historie" was probably written between 1612 and 1616. In the first portion of it, which is descriptive of the territory of Virginia, is this important passage: "At Peccarecamek and Ochanahoen, by the relation of Machumps, the people have houses built with stone walls, and one story above another, so taught them by those English who escaped the slaughter of Roanoke. At what time this our colony, under the conduct of Captain Newport, landed within the Chesapeake Bay, where the people breed up tame turkies about their houses, and take apes in the mountains, and where, at Ritanoë, the Weroance Eyanaco, preserved seven of the English alive—four men, two boys, and one young maid (who escaped [that is from Roanoke] and fled up the river of Chanoke), to beat his copper, of which he hath certain mines at the said Ritanoë, as also at Pamawauk are said to be store of salt stones."

This, it will be observed, is on the testimony of Machumps. This pleasing story is not mentioned in Captain Newport's "Discoveries" (May, 1607). Machumps, who was the brother of Winganuske, one of the many wives of Powhatan, had been in England. He was evidently a lively Indian. Strachey had heard him repeat the "Indian grace," a sort of incantation before meat, at the table of Sir Thomas Dale. If he did not differ from his red brothers he had a powerful imagination, and was ready to please the whites with any sort of a marvelous tale. Newport himself does not appear to have seen any of the "apes taken in the mountains." If this story is to be accepted as true we have to think of Virginia Dare as growing up to be a woman of twenty years, perhaps as other white maidens have been, Indianized and the wife of a native. But the story rests only upon a romancing Indian. It is possible that Strachey knew more of the matter than he relates, for in his history he speaks again of those betrayed people, "of whose end you shall hereafter read in this decade." But the possessed information is lost, for it is not found in the remainder of this "decade" of his writing, which is imperfect. Another reference in Strachey is more obscure than the first. He is speaking of the merciful intention of King James towards the Virginia savages, and that he does not intend to root out the natives as the Spaniards did in Hispaniola, but by degrees to change their barbarous nature, and inform them of the true God and the way to Salvation, and that his Majesty will even spare Powhatan himself. But, he says, it is the intention to make "the common people likewise to understand, how that his Majesty has been acquainted that the men, women, and children of the first plantation of Roanoke were by practice of Powhatan (he himself persuaded thereunto by his priests) miserably slaughtered, without any offense given him either by the first planted (who twenty and odd years had peaceably lived intermixed with those savages, and were out of his territory) or by those who are now come to inhabit some parts of his distant lands," etc.

Strachey of course means the second plantation and not the first, which, according to the weight of authority, consisted of only fifteen men and no women.

In George Percy's Discourse concerning Captain Newport's exploration of the River James in 1607 (printed in Purchas's "Pilgrims") is this sentence: "At Port Cotage, in our voyage up the river, we saw a savage boy, about the age of ten years, which had a head of hair of a perfect yellow, and reasonably white skin, which is a miracle amongst all savages." Mr. Neill, in his "History of the Virginia Company," says that this boy "was no doubt the offspring of the colonists left at Roanoke by White, of whom four men, two boys, and one young maid had been preserved from slaughter by an Indian Chief." Under the circumstances, "no doubt" is a very strong expression for a historian to use.

This belief in the sometime survival of the Roanoke colonists, and their amalgamation with the Indians, lingered long in colonial gossip. Lawson, in his History, published in London in 1718, mentions a tradition among the Hatteras Indians, "that several of their ancestors were white people and could talk from a book; the truth of which is confirmed by gray eyes being among these Indians and no others."

But the myth of Virginia Dare stands no chance beside that of Pocahontas.

V. FIRST PLANTING OF THE COLONY

The way was now prepared for the advent of Captain John Smith in Virginia. It is true that we cannot give him his own title of its discoverer, but the plantation had been practically abandoned, all the colonies had ended in disaster, all the governors and captains had lacked the gift of perseverance or had been early drawn into other adventures, wholly disposed, in the language of Captain John White, "to seek after purchase and spoils," and but for the energy and persistence of Captain Smith the expedition of 1606 might have had no better fate. It needed a man of tenacious will to hold a colony together in one spot long enough to give it root. Captain Smith was that man, and if we find him glorying in his exploits, and repeating upon single big Indians the personal prowess that distinguished him in Transylvania and in the mythical Nalbrits, we have only to transfer our sympathy from the Turks to the Sasquesahanocks if the sense of his heroism becomes oppressive.

Upon the return of Samuel Mace, mariner, who was sent out in 1602 to search for White's lost colony, all Raleigh's interest in the Virginia colony had, by his attainder, escheated to the crown. But he never gave up his faith in Virginia: neither the failure of nine several expeditions nor twelve years imprisonment shook it. On the eve of his fall he had written, "I shall yet live to see it an English nation:" and he lived to see his prediction come true.

The first or Virginian colony, chartered with the Plymouth colony in April, 1606, was at last organized by the appointment of Sir Thomas Smith, the 'Chief of Raleigh's assignees, a wealthy London merchant, who had been ambassador to Persia, and was then, or shortly after, governor of the East India Company, treasurer and president of the meetings of the council in London; and by the assignment of the transportation of the colony to Captain Christopher Newport, a mariner of experience in voyages to the West Indies and in plundering the Spaniards, who had the power to appoint different captains and mariners, and the sole charge of the voyage. No local councilors were named for Virginia, but to Captain Newport, Captain Bartholomew Gosnold, and Captain John Ratcliffe were delivered sealed instructions, to be opened within twenty-four hours after their arrival in Virginia, wherein would be found the names of the persons designated for the Council.

This colony, which was accompanied by the prayers and hopes of London, left the Thames December 19, 1606, in three vessels—the Susan Constant, one hundred tons, Captain Newport, with seventy-one persons; the God-Speed, forty tons, Captain Gosnold, with fifty-two persons; and a pinnacle of twenty tons, the Discovery, Captain Ratcliffe, with twenty persons. The *Mercure Francais*, Paris, 1619, says some of the passengers were women and children, but there is no other mention of women. Of the persons embarked, one hundred and five were planters, the rest crews. Among the planters were Edward Maria Wingfield, Captain John Smith, Captain John Martin, Captain Gabriel Archer, Captain George Kendall, Mr. Robert Hunt, preacher, and Mr. George Percie, brother of the Earl of Northumberland, subsequently governor for a brief

period, and one of the writers from whom Purchas compiled. Most of the planters were shipped as gentlemen, but there were four carpenters, twelve laborers, a blacksmith, a sailor, a barber, a bricklayer, a mason, a tailor, a drummer, and a chirurgion.

The composition of the colony shows a serious purpose of settlement, since the trades were mostly represented, but there were too many gentlemen to make it a working colony. And, indeed, the gentlemen, like the promoters of the enterprise in London, were probably more solicitous of discovering a passage to the South Sea, as the way to increase riches, than of making a state. They were instructed to explore every navigable river they might find, and to follow the main branches, which would probably lead them in one direction to the East Indies or South Sea, and in the other to the Northwest Passage. And they were forcibly reminded that the way to prosper was to be of one mind, for their own and their country's good.

This last advice did not last the expedition out of sight of land. They sailed from Blackwell, December 19, 1606, but were kept six weeks on the coast of England by contrary winds. A crew of saints cabined in those little caravels and tossed about on that coast for six weeks would scarcely keep in good humor. Besides, the position of the captains and leaders was not yet defined. Factious quarrels broke out immediately, and the expedition would likely have broken up but for the wise conduct and pious exhortations of Mr. Robert Hunt, the preacher. This faithful man was so ill and weak that it was thought he could not recover, yet notwithstanding the stormy weather, the factions on board, and although his home was almost in sight, only twelve miles across the Downs, he refused to quit the ship. He was unmoved, says Smith, either by the weather or by "the scandalous imputations (of some few little better than atheists, of the greatest rank amongst us)." With "the water of his patience" and "his godly exhortations" he quenched the flames of envy and dissension.

They took the old route by the West Indies. George Percy notes that on the 12th of February they saw a blazing star, and presently a storm. They watered at the Canaries, traded with savages at San Domingo, and spent three weeks refreshing themselves among the islands. The quarrels revived before they reached the Canaries, and there Captain Smith was seized and put in close confinement for thirteen weeks.

We get little light from contemporary writers on this quarrel. Smith does not mention the arrest in his "True Relation," but in his "General Historie," writing of the time when they had been six weeks in Virginia, he says: "Now Captain Smith who all this time from their departure from the Canaries was restrained as a prisoner upon the scandalous suggestion of some of the chiefs (envying his repute) who fancied he intended to usurp the government, murder the Council, and make himself King, that his confederates were dispersed in all three ships, and that divers of his confederates that revealed it, would affirm it, for this he was committed a prisoner; thirteen weeks he remained thus suspected, and by that time they should return they pretended out of their commiserations, to refer him to the Council in England to receive a check, rather than by particulating his designs make him so odious to the world, as to touch his life, or utterly overthrow his reputation. But he so much scorned their charity and publically defied the uttermost of their cruelty, he wisely prevented their policies, though he could not suppress their envies, yet so well he demeaned himself in this business, as all the company did see his innocency, and his adversaries' malice, and those suborned to accuse him accused his accusers of subornation; many untruths were alleged against him; but being apparently disproved, begot a general hatred in the hearts of the company against such unjust Commanders, that the President was adjudged to give him L 200, so that all he had was seized upon, in part of satisfaction, which Smith presently returned to the store for the general use of the colony."—

Neither in Newport's "Relatyon" nor in Mr. Wingfield's "Discourse" is the arrest mentioned, nor does Strachey speak of it.

About 1629, Smith, in writing a description of the Isle of Mevis (Nevis) in his "Travels and Adventures," says: "In this little [isle] of Mevis, more than twenty years ago, I have remained a good time together, to wot and water—and refresh my men." It is characteristic of Smith's vivid imagination, in regard to his own exploits, that he should speak of an expedition in which he had no command, and was even a prisoner, in this style: "I remained," and "my men." He goes on: "Such factions here we had as commonly attend such voyages, and a pair of gallows was made, but Captaine Smith, for whom they were intended, could not be persuaded to use them; but not any one of the inventors but their lives by justice fell into his power, to determine of at his pleasure, whom with much mercy he favored, that most basely and unjustly would have betrayed him." And it is true that Smith, although a great romancer, was often magnanimous, as vain men are apt to be.

King James's elaborate lack of good sense had sent the expedition to sea with the names of the Council sealed up in a box, not to be opened till it reached its destination. Consequently there was no recognized authority. Smith was a young man of about twenty-eight, vain and no doubt somewhat "bumptious," and it is easy to believe that Wingfield and the others who felt his superior force and realized his experience, honestly suspected him of designs against the expedition. He was the ablest man on board, and no doubt was aware of it. That he was not only a born commander of men, but had the interest of the colony at heart, time was to show.

The voyagers disported themselves among the luxuries of the West Indies. At Guadaloupe they found a bath so hot that they boiled their pork in it as well as over the fire. At the Island of Monaca they took from the bushes with their hands near two hogsheads full of birds in three or four hours. These, it is useless to say, were probably not the "barnacle geese" which the nautical travelers used to find, and picture growing upon bushes and dropping from the eggs, when they were ripe, full-fledged into the water. The beasts were fearless of men. Wild birds and natives had to learn the whites before they feared them.

"In Mevis, Mona, and the Virgin Isles," says the "General Historie," "we spent some time, where with a lothsome beast like a crocodile, called a gwayn [guana], tortoises, pellicans, parrots, and fishes, we feasted daily."

Thence they made sail in search of Virginia, but the mariners lost their reckoning for three days and made no land; the crews were discomfited, and Captain Ratcliffe, of the pinnace, wanted to up helm and return to England. But a violent storm, which obliged them "to hull all night," drove them to the port desired. On the

26th of April they saw a bit of land none of them had ever seen before. This, the first land they descried, they named Cape Henry, in honor of the Prince of Wales; as the opposite cape was called Cape Charles, for the Duke of York, afterwards Charles I. Within these capes they found one of the most pleasant places in the world, majestic navigable rivers, beautiful mountains, hills, and plains, and a fruitful and delightsome land.

Mr. George Percy was ravished at the sight of the fair meadows and goodly tall trees. As much to his taste were the large and delicate oysters, which the natives roasted, and in which were found many pearls. The ground was covered with fine and beautiful strawberries, four times bigger than those in England.

Masters Wingfield, Newport, and Gosnold., with thirty men, went ashore on Cape Henry, where they were suddenly set upon by savages, who came creeping upon all-fours over the hills, like bears, with their bows in their hands; Captain Archer was hurt in both hands, and a sailor dangerously wounded in two places on his body. It was a bad omen.

The night of their arrival they anchored at Point Comfort, now Fortress Monroe; the box was opened and the orders read, which constituted Edward Maria Wingfield, Bartholomew Gosnold, John Smith, Christopher Newport, John Ratcliffe, John Martin, and George Kendall the Council, with power to choose a President for a year. Until the 13th of May they were slowly exploring the River Powhatan, now the James, seeking a place for the settlement. They selected a peninsula on the north side of the river, forty miles from its mouth, where there was good anchorage, and which could be readily fortified. This settlement was Jamestown. The Council was then sworn in, and Mr. Wingfield selected President. Smith being under arrest was not sworn in of the Council, and an oration was made setting forth the reason for his exclusion.

When they had pitched upon a site for the fort, every man set to work, some to build the fort, others to pitch the tents, fell trees and make clapboards to reload the ships, others to make gardens and nets. The fort was in the form of a triangle with a half-moon at each corner, intended to mount four or five guns.

President Wingfield appears to have taken soldierly precautions, but Smith was not at all pleased with him from the first. He says "the President's overweening jealousy would admit of no exercise at arms, or fortifications but the boughs of trees cast together in the form of a half-moon by the extraordinary pains and diligence of Captain Kendall." He also says there was contention between Captain Wingfield and Captain Gosnold about the site of the city.

The landing was made at Jamestown on the 14th of May, according to Percy. Previous to that considerable explorations were made. On the 18th of April they launched a shallop, which they built the day before, and "discovered up the bay." They discovered a river on the south side running into the mainland, on the banks of which were good stores of mussels and oysters, goodly trees, flowers of all colors, and strawberries. Returning to their ships and finding the water shallow, they rowed over to a point of land, where they found from six to twelve fathoms of water, which put them in good comfort, therefore they named that part of the land Cape Comfort. On the 29th they set up a cross on Chesapeake Bay, on Cape Henry, and the next day coasted to the Indian town of Kecoughton, now Hampton, where they were kindly entertained. When they first came to land the savages made a doleful noise, laying their paws to the ground and scratching the earth with their nails. This ceremony, which was taken to be a kind of idolatry, ended, mats were brought from the houses, whereon the guests were seated, and given to eat bread made of maize, and tobacco to smoke. The savages also entertained them with dancing and singing and antic tricks and grimaces. They were naked except a covering of skins about the loins, and many were painted in black and red, with artificial knots of lovely colors, beautiful and pleasing to the eye. The 4th of May they were entertained by the chief of Paspika, who favored them with a long oration, making a foul noise and vehement in action, the purport of which they did not catch. The savages were full of hospitality. The next day the weroance, or chief, of Rapahanna sent a messenger to invite them to his seat. His majesty received them in as modest a proud fashion as if he had been a prince of a civil government. His body was painted in crimson and his face in blue, and he wore a chain of beads about his neck and in his ears bracelets of pearls and a bird's claw. The 8th of May they went up the river to the country Apomatica, where the natives received them in hostile array, the chief, with bow and arrows in one hand, and a pipe of tobacco in the other, offering them war or peace.

These savages were as stout and able as any heathen or Christians in the world. Mr. Percy said they bore their years well. He saw among the Pamunkeys a savage reported to be 160, years old, whose eyes were sunk in his head, his teeth gone his hair all gray, and quite a big beard, white as snow; he was a lusty savage, and could travel as fast as anybody.

The Indians soon began to be troublesome in their visits to the plantations, skulking about all night, hanging around the fort by day, bringing sometimes presents of deer, but given to theft of small articles, and showing jealousy of the occupation. They murmured, says Percy, at our planting in their country. But worse than the disposition of the savages was the petty quarreling in the colony itself.

In obedience to the orders to explore for the South Sea, on the 22d of May, Newport, Percy, Smith, Archer, and twenty others were sent in the shallop to explore the Powhatan, or James River.

Passing by divers small habitations, and through a land abounding in trees, flowers, and small fruits, a river full of fish, and of sturgeon such as the world beside has none, they came on the 24th, having passed the town of Powhatan, to the head of the river, the Falls, where they set up the cross and proclaimed King James of England.

Smith says in his "General Historie" they reached Powhatan on the 26th. But Captain Newport's "Relatyon" agrees with Percy's, and with, Smith's "True Relation." Captain Newport, says Percy, permitted no one to visit Powhatan except himself.

Captain Newport's narration of the exploration of the James is interesting, being the first account we have of this historic river. At the junction of the Appomattox and the James, at a place he calls Wynauk, the natives welcomed them with rejoicing and entertained them with dances. The Kingdom of Wynauk was full of pearl-mussels. The king of this tribe was at war with the King of Paspahagh. Sixteen miles above this point, at an inlet, perhaps Turkey Point, they were met by eight savages in a canoe, one of whom was intelligent enough to lay out the whole course of the river, from Chesapeake Bay to its source, with a pen and paper which they showed him how to use. These Indians kept them company for some time, meeting them here and there with

presents of strawberries, mulberries, bread, and fish, for which they received pins, needles, and beads. They spent one night at Poore Cottage (the Port Cottage of Percy, where he saw the white boy), probably now Haxall. Five miles above they went ashore near the now famous Dutch Gap, where King Arahatic gave them a roasted deer, and caused his women to bake cakes for them. This king gave Newport his crown, which was of deer's hair dyed red. He was a subject of the great King Powhatan. While they sat making merry with the savages, feasting and taking tobacco and seeing the dances, Powhatan himself appeared and was received with great show of honor, all rising from their seats except King Arahatic, and shouting loudly. To Powhatan ample presents were made of penny-knives, shears, and toys, and he invited them to visit him at one of his seats called Powhatan, which was within a mile of the Falls, where now stands the city of Richmond. All along the shore the inhabitants stood in clusters, offering food to the strangers. The habitation of Powhatan was situated on a high hill by the water side, with a meadow at its foot where was grown wheat, beans, tobacco, peas, pumpions, flax, and hemp.

Powhatan served the whites with the best he had, and best of all with a friendly welcome and with interesting discourse of the country. They made a league of friendship. The next day he gave them six men as guides to the falls above, and they left with him one man as a hostage.

On Sunday, the 24th of May, having returned to Powhatan's seat, they made a feast for him of pork, cooked with peas, and the Captain and King ate familiarly together; "he eat very freshly of our meats, drank of our beere, aquavite, and sack." Under the influence of this sack and aquavite the King was very communicative about the interior of the country, and promised to guide them to the mines of iron and copper; but the wary chief seems to have thought better of it when he got sober, and put them off with the difficulties and dangers of the way.

On one of the islets below the Falls, Captain Newport set up a cross with the inscription "Jacobus, Rex, 1607," and his own name beneath, and James was proclaimed King with a great shout. Powhatan was displeased with their importunity to go further up the river, and departed with all the Indians, except the friendly Navirans, who had accompanied them from Arahatic. Navirans greatly admired the cross, but Newport hit upon an explanation of its meaning that should dispel the suspicions of Powhatan. He told him that the two arms of the cross signified King Powhatan and himself, the fastening of it in the middle was their united league, and the shout was the reverence he did to Powhatan. This explanation being made to Powhatan greatly contented him, and he came on board and gave them the kindest farewell when they dropped down the river. At Arahatic they found the King had provided victuals for them, but, says Newport, "the King told us that he was very sick and not able to sit up long with us." The inability of the noble red man to sit up was no doubt due to too much Christian sack and aquavite, for on "Monday he came to the water side, and we went ashore with him again. He told us that our hot drinks, he thought, caused him grief, but that he was well again, and we were very welcome."

It seems, therefore, that to Captain Newport, who was a good sailor in his day, and has left his name in Virginia in Newport News, must be given the distinction of first planting the cross in Virginia, with a lie, and watering it, with aquavite.

They dropped down the river to a place called Mulberry Shade, where the King killed a deer and prepared for them another feast, at which they had rolls and cakes made of wheat. "This the women make and are very cleanly about it. We had parched meal, excellent good, sodd [cooked] beans, which eat as sweet as filbert kernels, in a manner, strawberries; and mulberries were shaken off the tree, dropping on our heads as we sat. He made ready a land turtle, which we ate; and showed that he was heartily rejoiced in our company." Such was the amiable disposition of the natives before they discovered the purpose of the whites to dispossess them of their territory. That night they stayed at a place called "Kynd Woman's Care," where the people offered them abundant victual and craved nothing in return.

Next day they went ashore at a place Newport calls Queen Apumatic's Bower. This Queen, who owed allegiance to Powhatan, had much land under cultivation, and dwelt in state on a pretty hill. This ancient representative of woman's rights in Virginia did honor to her sex. She came to meet the strangers in a show as majestic as that of Powhatan himself: "She had an usher before her, who brought her to the matt prepared under a faire mulberry-tree; where she sat down by herself, with a stayed countenance. She would permitt none to stand or sitt neare her. She is a fatt, lustie, manly woman. She had much copper about her neck, a coronet of copper upon her hed. She had long, black haire, which hanged loose down her back to her myddle; which only part was covered with a deare's skyn, and ells all naked. She had her women attending her, adorned much like herself (except they wanted the copper). Here we had our accustomed eates, tobacco, and welcome. Our Captaine presented her with guyfts liberally, whereupon shee cheered somewhat her countenance, and requested him to shoote off a piece; whereat (we noted) she showed not near the like feare as Arahatic, though he be a goodly man."

The company was received with the same hospitality by King Pamunkey, whose land was believed to be rich in copper and pearls. The copper was so flexible that Captain Newport bent a piece of it the thickness of his finger as if it had been lead. The natives were unwilling to part with it. The King had about his neck a string of pearls as big as peas, which would have been worth three or four hundred pounds, if the pearls had been taken from the mussels as they should have been.

Arriving on their route at Weanock, some twenty miles above the fort, they were minded to visit Paspahagh and another chief Jamestown lay in the territory of Paspahagh—but suspicious signs among the natives made them apprehend trouble at the fort, and they hastened thither to find their suspicions verified. The day before, May 26th, the colony had been attacked by two hundred Indians (four hundred, Smith says), who were only beaten off when they had nearly entered the fort, by the use of the artillery. The Indians made a valiant fight for an hour; eleven white men were wounded, of whom one died afterwards, and a boy was killed on the pinnace. This loss was concealed from the Indians, who for some time seem to have believed that the whites could not be hurt. Four of the Council were hurt in this fight, and President Wingfield, who showed himself a valiant gentleman, had a shot through his beard. They killed eleven of the Indians, but their comrades lugged them away on their backs and buried them in the woods with a great noise. For several days alarms and attacks continued, and four or five men were cruelly wounded, and one gentleman, Mr. Eustace

Cloville, died from the effects of five arrows in his body.

Upon this hostility, says Smith, the President was contented the fort should be palisaded, and the ordnance mounted, and the men armed and exercised. The fortification went on, but the attacks continued, and it was unsafe for any to venture beyond the fort.

Dissatisfaction arose evidently with President Wingfield's management. Captain Newport says: "There being among the gentlemen and all the company a murmur and grudge against certain proceedings and inconvenient courses [Newport] put up a petition to the Council for reformation." The Council heeded this petition, and urged to amity by Captain Newport, the company vowed faithful love to each other and obedience to the superiors. On the 10th of June, Captain Smith was sworn of the Council. In his "General Historie," not published till 1624, he says: "Many were the mischiefs that daily sprung from their ignorant (yet ambitious) spirits; but the good doctrine and exhortation of our preacher Mr. Hunt, reconciled them and caused Captain Smith to be admitted to the Council." The next day they all partook of the holy communion.

In order to understand this quarrel, which was not by any means appeased by this truce, and to determine Captain Smith's responsibility for it, it is necessary to examine all the witnesses. Smith is unrestrained in his expression of his contempt for Wingfield. But in the diary of Wingfield we find no accusation against Smith at this date. Wingfield says that Captain Newport before he departed asked him how he thought himself settled in the government, and that he replied "that no disturbance could endanger him or the colony, but it must be wrought either by Captain Gosnold or Mr. Archer, for the one was strong with friends and followers and could if he would; and the other was troubled with an ambitious spirit and would if he could."

The writer of Newport's "Relatyon" describes the Virginia savages as a very strong and lusty race, and swift warriors. "Their skin is tawny; not so borne, but with dyeing and painting themselves, in which they delight greatly." That the Indians were born white was, as we shall see hereafter, a common belief among the first settlers in Virginia and New England. Percy notes a distinction between maids and married women: "The maids shave close the fore part and sides of their heads, and leave it long behind, where it is tied up and hangs down to the hips. The married women wear their hair all of a length, but tied behind as that of maids is. And the women scratch on their bodies and limbs, with a sharp iron, pictures of fowls, fish, and beasts, and rub into the 'drawings' lively colors which dry into the flesh and are permanent." The "Relatyon" says the people are witty and ingenious and allows them many good qualities, but makes this exception: "The people steal anything comes near them; yea, are so practiced in this art, that looking in our face, they would with their foot, between their toes, convey a chisel, knife, percer, or any indifferent light thing, which having once conveyed, they hold it an injury to take the same from them. They are naturally given to treachery; howbeit we could not find it in our travel up the river, but rather a most kind and loving people."

VI. QUARRELS AND HARDSHIPS

On Sunday, June 21st, they took the communion lovingly together. That evening Captain Newport gave a farewell supper on board his vessel. The 22d he sailed in the Susan Constant for England, carrying specimens of the woods and minerals, and made the short passage of five weeks. Dudley Carleton, in a letter to John Chamberlain dated Aug. 18, 1607, writes "that Captain Newport has arrived without gold or silver, and that the adventurers, cumbered by the presence of the natives, have fortified themselves at a place called Jamestown." The colony left numbered one hundred and four.

The good harmony of the colony did not last. There were other reasons why the settlement was unprosperous. The supply of wholesome provisions was inadequate. The situation of the town near the Chickahominy swamps was not conducive to health, and although Powhatan had sent to make peace with them, and they also made a league of amity with the chiefs Paspahegh and Tapanahagh, they evidently had little freedom of movement beyond sight of their guns. Percy says they were very bare and scant of victuals, and in wars and dangers with the savages.

Smith says in his "True Relation," which was written on the spot, and is much less embittered than his "General Historie," that they were in good health and content when Newport departed, but this did not long continue, for President Wingfield and Captain Gosnold, with the most of the Council, were so discontented with each other that nothing was done with discretion, and no business transacted with wisdom. This he charges upon the "hard-dealing of the President," the rest of the Council being diversely affected through his audacious command. "Captain Martin, though honest, was weak and sick; Smith was in disgrace through the malice of others; and God sent famine and sickness, so that the living were scarce able to bury the dead. Our want of sufficient good food, and continual watching, four or five each night, at three bulwarks, being the chief cause; only of sturgeon we had great store, whereon we would so greedily surfeit, as it cost many their lives; the sack, Aquavite, and other preservations of our health being kept in the President's hands, for his own diet and his few associates."

In his "General Historie," written many years later, Smith enlarges this indictment with some touches of humor characteristic of him. He says:

"Being thus left to our fortunes, it fortuned that within ten days scarce ten amongst us could either go, or well stand, such extreme weakness and sicknes oppressed us. And thereat none need marvaile if they consider the cause and reason, which was this: whilst the ships stayed, our allowance was somewhat bettered, by a daily proportion of Bisket, which the sailors would pilfer to sell, give, or exchange with us for money, Saxefras, fures, or love. But when they departed, there remained neither taverne, beere-house, nor place of reliefe, but the common Kettell. Had we beene as free from all sinnes as gluttony, and drunkennesse, we might have been canonized for Saints. But our President would never have been admitted, for ingrissing to his private, Oatmeale, Sacke, Oyle, Aquavitz, Beef, Egges, or what not, but the Kettell: that indeed he allowed equally to be distributed, and that was half a pint of wheat, and as much barley boyled with water for

a man a day, and this being fryed some twenty-six weeks in the ship's hold, contained as many wormes as graines; so that we might truly call it rather so much bran than corne, our drinke was water, our lodgings Castles in the ayre; with this lodging and dyet, our extreme toile in bearing and planting Pallisadoes, so strained and bruised us, and our continual labour in the extremitie of the heat had so weakened us, as were cause sufficient to have made us miserable in our native countrey, or any other place in the world."

Affairs grew worse. The sufferings of this colony in the summer equaled that of the Pilgrims at Plymouth in the winter and spring. Before September forty-one were buried, says Wingfield; fifty, says Smith in one statement, and forty-six in another; Percy gives a list of twenty-four who died in August and September. Late in August Wingfield said, "Sickness had not now left us seven able men in our town." "As yet," writes Smith in September, "we had no houses to cover us, our tents were rotten, and our cabins worse than nought."

Percy gives a doleful picture of the wretchedness of the colony: "Our men were destroyed with cruel sickness, as swellings, fluxes, burning-fevers, and by wars, and some departed suddenly, but for the most part they died of mere famine.... We watched every three nights, lying on the cold bare ground what weather soever came, worked all the next day, which brought our men to be most feeble wretches, our food was but a small can of barley, sod in water to five men a day, our drink but cold water taken out of the river, which was at the flood very salt, at a low tide full of shrimp and filth, which was the destruction of many of our men. Thus we lived for the space of five months in this miserable distress, but having five able men to man our bulwarks upon any occasion. If it had not pleased God to put a terror in the savage hearts, we had all perished by those wild and cruel Pagans, being in that weak state as we were: our men night and day groaning in every corner of the fort, most pitiful to hear. If there were any conscience in men, it would make their hearts to bleed to hear the pitiful murmurings and outcries of our sick men, without relief, every night and day, for the space of six weeks: some departing out of the world; many times three or four in a night; in the morning their bodies trailed out of their cabins, like dogs, to be buried. In this sort did I see the mortality of divers of our people."

A severe loss to the colony was the death on the 22d of August of Captain Bartholomew Gosnold, one of the Council, a brave and adventurous mariner, and, says Wingfield, a "worthy and religious gentleman." He was honorably buried, "having all the ordnance in the fort shot off with many volleys of small shot." If the Indians had known that those volleys signified the mortality of their comrades, the colony would no doubt have been cut off entirely. It is a melancholy picture, this disheartened and half-famished band of men quarreling among themselves; the occupation of the half-dozen able men was nursing the sick and digging graves. We anticipate here by saying, on the authority of a contemporary manuscript in the State Paper office, that when Captain Newport arrived with the first supply in January, 1608, "he found the colony consisting of no more than forty persons; of those, ten only able men."

After the death of Gosnold, Captain Kendall was deposed from the Council and put in prison for sowing discord between the President and Council, says Wingfield; for heinous matters which were proved against him, says Percy; for "divers reasons," says Smith, who sympathized with his dislike of Wingfield. The colony was in very low estate at this time, and was only saved from famine by the providential good-will of the Indians, who brought them corn half ripe, and presently meat and fruit in abundance.

On the 7th of September the chief Paspashegh gave a token of peace by returning a white boy who had run away from camp, and other runaways were returned by other chiefs, who reported that they had been well used in their absence. By these returns Mr. Wingfield was convinced that the Indians were not cannibals, as Smith believed.

On the 10th of September Mr. Wingfield was deposed from the presidency and the Council, and Captain John Ratcliffe was elected President. Concerning the deposition there has been much dispute; but the accounts of it by Captain Smith and his friends, so long accepted as the truth, must be modified by Mr. Wingfield's "Discourse of Virginia," more recently come to light, which is, in a sense, a defense of his conduct.

In his "True Relation" Captain Smith is content to say that "Captain Wingfield, having ordered the affairs in such sort that he was hated of them all, in which respect he was with one accord deposed from the presidency."

In the "General Historie" the charges against him, which we have already quoted, are extended, and a new one is added, that is, a purpose of deserting the colony in the pinnace: "the rest seeing the President's projects to escape these miseries in our pinnace by flight (who all this time had neither felt want nor sickness), so moved our dead spirits we deposed him."

In the scarcity of food and the deplorable sickness and death, it was inevitable that extreme dissatisfaction should be felt with the responsible head. Wingfield was accused of keeping the best of the supplies to himself. The commonalty may have believed this. Smith himself must have known that the supplies were limited, but have been willing to take advantage of this charge to depose the President, who was clearly in many ways incompetent for his trying position. It appears by Mr. Wingfield's statement that the supply left with the colony was very scant, a store that would only last thirteen weeks and a half, and prudence in the distribution of it, in the uncertainty of Newport's return, was a necessity. Whether Wingfield used the delicacies himself is a question which cannot be settled. In his defense, in all we read of him, except that written by Smith and his friends, he seems to be a temperate and just man, little qualified to control the bold spirits about him.

As early as July, "in his sickness time, the President did easily fortell his own deposing from his command," so much did he differ from the Council in the management of the colony. Under date of September 7th he says that the Council demanded a larger allowance for themselves and for some of the sick, their favorites, which he declined to give without their warrants as councilors. Captain Martin of the Council was till then ignorant that only store for thirteen and a half weeks was in the hands of the Cape Merchant, or treasurer, who was at that time Mr. Thomas Studley. Upon a representation to the Council of the lowness of the stores, and the length of time that must elapse before the harvest of grain, they declined to enlarge the allowance, and even ordered that every meal of fish or flesh should excuse the allowance of porridge. Mr. Wingfield goes on to say: "Nor was the common store of oyle, vinegar, sack, and aquavite all spent, saving two gallons of

each: the sack reserved for the Communion table, the rest for such extremities as might fall upon us, which the President had only made known to Captain Gosnold; of which course he liked well. The vessels wear, therefore, boonged upp. When Mr. Gosnold was dead, the President did acquaint the rest of the Council with the said remnant; but, Lord, how they then longed for to supp up that little remnant: for they had now emptied all their own bottles, and all other that they could smell out."

Shortly after this the Council again importuned the President for some better allowance for themselves and for the sick. He protested his impartiality, showed them that if the portions were distributed according to their request the colony would soon starve; he still offered to deliver what they pleased on their warrants, but would not himself take the responsibility of distributing all the stores, and when he divined the reason of their impatience he besought them to bestow the presidency among themselves, and he would be content to obey as a private. Meantime the Indians were bringing in supplies of corn and meat, the men were so improved in health that thirty were able to work, and provision for three weeks' bread was laid up.

Nevertheless, says Mr. Wingfield, the Council had fully plotted to depose him. Of the original seven there remained, besides Mr. Wingfield, only three in the Council. Newport was in England, Gosnold was dead, and Kendall deposed. Mr. Wingfield charged that the three—Ratcliffe, Smith, and Martin—forsook the instructions of his Majesty, and set up a Triumvirate. At any rate, Wingfield was forcibly deposed from the Council on the 10th of September. If the object had been merely to depose him, there was an easier way, for Wingfield was ready to resign. But it appears, by subsequent proceedings, that they wished to fasten upon him the charge of embezzlement, the responsibility of the sufferings of the colony, and to mulct him in fines. He was arrested, and confined on the pinnace. Mr. Ratcliffe was made President.

On the 11th of September Mr. Wingfield was brought before the Council sitting as a court, and heard the charges against him. They were, as Mr. Wingfield says, mostly frivolous trifles. According to his report they were these:

First, Mister President [Radcliffe] said that I had denied him a penny whitle, a chicken, a spoonful of beer, and served him with foul corn; and with that pulled some grain out of a bag, showing it to the company.

Then starts up Mr. Smith and said that I had told him plainly how he lied; and that I said, though we were equal here, yet if we were in England, he [I] would think scorn his man should be my companion.

Mr. Martin followed with: "He reported that I do slack the service in the colony, and do nothing but tend my pot, spit, and oven; but he hath starved my son, and denied him a spoonful of beer. I have friends in England shall be revenged on him, if ever he come in London."

Voluminous charges were read against Mr. Wingfield by Mr. Archer, who had been made by the Council, Recorder of Virginia, the author, according to Wingfield, of three several mutinies, as "always hatching of some mutiny in my time."

Mr. Percy sent him word in his prison that witnesses were hired to testify against him by bribes of cakes and by threats. If Mr. Percy, who was a volunteer in this expedition, and a man of high character, did send this information, it shows that he sympathized with him, and this is an important piece of testimony to his good character.

Wingfield saw no way of escape from the malice of his accusers, whose purpose he suspected was to fine him fivefold for all the supplies whose disposition he could not account for in writing: but he was finally allowed to appeal to the King for mercy, and recommitted to the pinnace. In regard to the charge of embezzlement, Mr. Wingfield admitted that it was impossible to render a full account: he had no bill of items from the Cape Merchant when he received the stores, he had used the stores for trade and gifts with the Indians; Captain Newport had done the same in his expedition, without giving any memorandum. Yet he averred that he never expended the value of these penny whittles [small pocket-knives] to his private use.

There was a mutinous and riotous spirit on shore, and the Council professed to think Wingfield's life was in danger. He says: "In all these disorders was Mr. Archer a ringleader." Meantime the Indians continued to bring in supplies, and the Council traded up and down the river for corn, and for this energy Mr. Wingfield gives credit to "Mr. Smith especially," "which relieved the colony well." To the report that was brought him that he was charged with starving the colony, he replies with some natural heat and a little show of petulance, that may be taken as an evidence of weakness, as well as of sincerity, and exhibiting the undignified nature of all this squabbling:

"I did alwaies give every man his allowance faithfully, both of corne, oyle, aquivite, etc., as was by the counsell proportioned: neyther was it bettered after my tyme, untill, towards th' end of March, a bisket was allowed to every working man for his breakfast, by means of the provision brought us by Captn. Newport: as will appeare hereafter. It is further said, I did much banquit and ryot. I never had but one squirrel roasted; whereof I gave part to Mr. Ratcliffe then sick: yet was that squirrel given me. I did never heate a flesh pott but when the comon pott was so used likewise. Yet how often Mr. President's and the Counsellors' spitts have night and daye bene endaangered to break their backes-so, laden with swanns, geese, ducks, etc.! how many times their flesh potts have swelled, many hungrie eies did behold, to their great longing: and what great theeves and theeving thear hath been in the comon stoare since my tyme, I doubt not but is already made knowne to his Majesty's Councell for Virginia."

Poor Wingfield was not left at ease in his confinement. On the 17th he was brought ashore to answer the charge of Jehu [John?] Robinson that he had with Robinson and others intended to run away with the pinnace to Newfoundland; and the charge by Mr. Smith that he had accused Smith of intending mutiny. To the first accuser the jury awarded one hundred pounds, and to the other two hundred pounds damages, for slander. "Seeing their law so speedy and cheap," Mr. Wingfield thought he would try to recover a copper kettle he had lent Mr. Crofts, worth half its weight in gold. But Crofts swore that Wingfield had given it to him, and he lost his kettle: "I told Mr. President I had not known the like law, and prayed they would be more sparing of law till we had more witt or wealth." Another day they obtained from Wingfield the key to his coffers, and took all his accounts, note-books, and "owne proper goods," which he could never recover. Thus was I made good prize on all sides.

During one of Smith's absences on the river President Ratcliffe did beat James Read, the blacksmith.

Wingfield says the Council were continually beating the men for their own pleasure. Read struck back.

For this he was condemned to be hanged; but "before he turned of the lather," he desired to speak privately with the President, and thereupon accused Mr. Kendall—who had been released from the pinnace when Wingfield was sent aboard—of mutiny. Read escaped. Kendall was convicted of mutiny and shot to death. In arrest of judgment he objected that the President had no authority to pronounce judgment because his name was Sicklemore and not Ratcliffe. This was true, and Mr. Martin pronounced the sentence. In his "True Relation," Smith agrees with this statement of the death of Kendall, and says that he was tried by a jury. It illustrates the general looseness of the "General Historie," written and compiled many years afterwards, that this transaction there appears as follows: "Wingfield and Kendall being in disgrace, seeing all things at random in the absence of Smith, the company's dislike of their President's weakness, and their small love to Martin's never-mending sickness, strengthened themselves with the sailors and other confederates to regain their power, control, and authority, or at least such means aboard the pinnace (being fitted to sail as Smith had appointed for trade) to alter her course and to goe for England. Smith unexpectedly returning had the plot discovered to him, much trouble he had to prevent it, till with store of sakre and musket-shot he forced them to stay or sink in the river, which action cost the life of Captain Kendall."

In a following sentence he says: "The President [Ratcliffe] and Captain Archer not long after intended also to have abandoned the country, which project also was curbed and suppressed by Smith." Smith was always suppressing attempts at flight, according to his own story, unconfirmed by any other writers. He had before accused President Wingfield of a design to escape in the pinnace.

Communications were evidently exchanged with Mr. Wingfield on the pinnace, and the President was evidently ill at ease about him. One day he was summoned ashore, but declined to go, and requested an interview with ten gentlemen. To those who came off to him he said that he had determined to go to England to make known the weakness of the colony, that he could not live under the laws and usurpations of the Triumvirate; however, if the President and Mr. Archer would go, he was willing to stay and take his fortune with the colony, or he would contribute one hundred pounds towards taking the colony home. "They did like none of my proffers, but made divers shott at uss in the pynnassee." Thereupon he went ashore and had a conference.

On the 10th of December Captain Smith departed on his famous expedition up the Chickahominy, during which the alleged Pocahontas episode occurred. Mr. Wingfield's condensed account of this journey and captivity we shall refer to hereafter. In Smith's absence President Ratcliffe, contrary to his oath, swore Mr. Archer one of the Council; and Archer was no sooner settled in authority than he sought to take Smith's life. The enmity of this man must be regarded as a long credit mark to Smith. Archer had him indicted upon a chapter in Leviticus (they all wore a garb of piety) for the death of two men who were killed by the Indians on his expedition. "He had had his trials the same daie of his retourne," says Wingfield, "and I believe his hanging the same, or the next daie, so speedy is our law there. But it pleased God to send Captain Newport unto us the same evening, to our unspeakable comfort; whose arrivall saved Mr. Smyth's leif and mine, because he took me out of the pynnassee, and gave me leave to lyve in the towne. Also by his comyng was prevented a parliament, which the newe counsailor, Mr. Recorder, intended thear to summon."

Captain Newport's arrival was indeed opportune. He was the only one of the Council whose character and authority seem to have been generally respected, the only one who could restore any sort of harmony and curb the factious humors of the other leaders. Smith should have all credit for his energy in procuring supplies, for his sagacity in dealing with the Indians, for better sense than most of the other colonists exhibited, and for more fidelity to the objects of the plantation than most of them; but where ability to rule is claimed for him, at this juncture we can but contrast the deference shown by all to Newport with the want of it given to Smith. Newport's presence at once quelled all the uneasy spirits.

Newport's arrival, says Wingfield, "saved Mr Smith's life and mine." Smith's account of the episode is substantially the same. In his "True Relation" he says on his return to the fort "each man with truest signs of joy they could express welcomed me, except Mr. Archer, and some two or three of his, who was then in my absence sworn councilor, though not with the consent of Captain Martin; great blame and imputation was laid upon me by them for the loss of our two men which the Indians slew: insomuch that they purposed to depose me, but in the midst of my miseries, it pleased God to send Captain Newport, who arriving there the same night, so tripled our joy, as for a while those plots against me were deferred, though with much malice against me, which Captain Newport in short time did plainly see." In his "Map of Virginia," the Oxford tract of 1612, Smith does not allude to this; but in the "General Historie" it had assumed a different aspect in his mind, for at the time of writing that he was the irresistible hero, and remembered himself as always nearly omnipotent in Virginia. Therefore, instead of expressions of gratitude to Newport we read this: "Now in Jamestown they were all in combustion, the strongest preparing once more to run away with the pinnace; which with the hazard of his life, with Sakre, falcon and musket shot, Smith forced now the third time to stay or sink. Some no better than they should be, had plotted to put him to death by the Levitical law, for the lives of Robinson and Emry, pretending that the fault was his, that led them to their ends; but he quickly took such order with such Lawyers, that he laid them by the heels till he sent some of them prisoners to England."

Clearly Captain Smith had no authority to send anybody prisoner to England. When Newport returned, April 10th, Wingfield and Archer went with him. Wingfield no doubt desired to return. Archer was so insolent, seditious, and libelous that he only escaped the halter by the interposition of Newport. The colony was willing to spare both these men, and probably Newport it was who decided they should go. As one of the Council, Smith would undoubtedly favor their going. He says in the "General Historie": "We not having any use of parliaments, plaisses, petitions, admirals, recorders, interpreters, chronologers, courts of plea, or justices of peace, sent Master Wingfield and Captain Archer home with him, that had engrossed all those titles, to seek some better place of employment." Mr. Wingfield never returned. Captain Archer returned in 1609, with the expedition of Gates and Somers, as master of one of the ships.

Newport had arrived with the first supply on the 8th of January, 1608. The day before, according to Wingfield, a fire occurred which destroyed nearly all the town, with the clothing and provisions. According to Smith, who is probably correct in this, the fire did not occur till five or six days after the arrival of the ship.

The date is uncertain, and some doubt is also thrown upon the date of the arrival of the ship. It was on the day of Smith's return from captivity: and that captivity lasted about four weeks if the return was January 8th, for he started on the expedition December 10th. Smith subsequently speaks of his captivity lasting six or seven weeks.

In his "General Historie" Smith says the fire happened after the return of the expedition of Newport, Smith, and Scrivener to the Pamunkey: "Good Master Hunt, our Preacher, lost all his library, and all he had but the clothes on his back; yet none ever heard him repine at his loss." This excellent and devoted man is the only one of these first pioneers of whom everybody speaks well, and he deserved all affection and respect.

One of the first labors of Newport was to erect a suitable church. Services had been held under many disadvantages, which Smith depicts in his "Advertisements for Unexperienced Planters," published in London in 1631:

"When I first went to Virginia, I well remember, we did hang an awning (which is an old saile) to three or foure trees to shadow us from the Sunne, our walls were rales of wood, our seats unhewed trees, till we cut planks, our Pulpit a bar of wood nailed to two neighboring trees, in foule weather we shifted into an old rotten tent, for we had few better, and this came by the way of adventure for me; this was our Church, till we built a homely thing like a barne, set upon Cratchets, covered with rafts, sedge and earth, so was also the walls: the best of our houses of the like curiosity, but the most part farre much worse workmanship, that could neither well defend wind nor raine, yet we had daily Common Prayer morning and evening, every day two Sermons, and every three moneths the holy Communion, till our Minister died, [Robert Hunt] but our Prayers daily, with an Homily on Sundaies."

It is due to Mr. Wingfield, who is about to disappear from Virginia, that something more in his defense against the charges of Smith and the others should be given. It is not possible now to say how the suspicion of his religious soundness arose, but there seems to have been a notion that he had papal tendencies. His grandfather, Sir Richard Wingfield, was buried in Toledo, Spain. His father, Thomas Maria Wingfield, was christened by Queen Mary and Cardinal Pole. These facts perhaps gave rise to the suspicion. He answers them with some dignity and simplicity, and with a little querulousness:

"It is noised that I combynd with the Spanniards to the distruccon of the Collony; that I ame an atheist, because I carryed not a Bible with me, and because I did forbid the preacher to preache; that I affected a kingdome; that I did hide of the comon provision in the ground.

"I confesse I have alwayes admyred any noble vertue and prowesse, as well in the Spanniards (as in other nations): but naturally I have alwayes distrusted and disliked their neighborhoode. I sorted many bookes in my house, to be sent up to me at my goeing to Virginia; amongst them a Bible. They were sent up in a trunk to London, with divers fruite, conserves, and preserves, which I did sett in Mr. Crofts his house in Ratcliff. In my beeing at Virginia, I did understand my trunk was thear broken up, much lost, my sweetmeates eaten at his table, some of my bookes which I missed to be seene in his hands: and whether amongst them my Bible was so ymbeasiled or mislaid by my servants, and not sent me, I knowe not as yet.

"Two or three Sunday mornings, the Indians gave us allarums at our towne. By that tymes they weare answered, the place about us well discovered, and our devyne service ended, the daie was farr spent. The preacher did aske me if it were my pleasure to have a sermon: hee said hee was prepared for it. I made answeare, that our men were weary and hungry, and that he did see the time of the daie farr past (for at other tymes bee never made such question, but, the service finished he began his sermon); and that, if it pleased him, wee would spare him till some other tyme. I never failed to take such noates by wrighting out of his doctrine as my capacity could comprehend, unless some raynie day hindred my endeavor. My mynde never swelled with such ympossible mountebank humors as could make me affect any other kingdome than the kingdom of heaven.

"As truly as God liveth, I gave an ould man, then the keeper of the private store, 2 glasses with sallet oyle which I brought with me out of England for my private stoare, and willed him to bury it in the ground, for that I feared the great heate would spoile it. Whatsoever was more, I did never consent unto or know of it, and as truly was it protested unto me, that all the remaynder before mencioned of the oyle, wyne, &c., which the President receyved of me when I was deposed they themselves poored into their owne bellies.

"To the President's and Counsell's objections I saie that I doe knowe curtesey and civility became a governor. No penny whittle was asked me, but a knife, whereof I have none to spare The Indyans had long before stoallen my knife. Of chickins I never did eat but one, and that in my sicknes. Mr. Ratcliff had before that time tasted Of 4 or 5. I had by my owne huswiferie bred above 37, and the most part of them my owne poultrye; of all which, at my comyng awaie, I did not see three living. I never denyed him (or any other) beare, when I had it. The corne was of the same which we all lived upon.

"Mr. Smyth, in the time of our hungar, had spread a rumor in the Collony, that I did feast myself and my servants out of the comon stoare, with entent (as I gathered) to have stirred the discontented company against me. I told him privately, in Mr. Gosnold's tent, that indeede I had caused half a pint of pease to be sodden with a peese of pork, of my own provision, for a poore old man, which in a sicknes (whereof he died) he much desired; and said, that if out of his malice he had given it out otherwise, that hee did tell a lye. It was proved to his face, that he begged in Ireland like a rogue, without a lycence. To such I would not my nam should be a companyon."

The explanation about the Bible as a part of his baggage is a little far-fetched, and it is evident that that book was not his daily companion. Whether John Smith habitually carried one about with him we are not informed. The whole passage quoted gives us a curious picture of the mind and of the habits of the time. This allusion to John Smith's begging is the only reference we can find to his having been in Ireland. If he was there it must have been in that interim in his own narrative between his return from Morocco and his going to Virginia. He was likely enough to seek adventure there, as the hangers-on of the court in Raleigh's day occasionally did, and perhaps nothing occurred during his visit there that he cared to celebrate. If he went to Ireland he probably got in straits there, for that was his usual luck.

Whatever is the truth about Mr. Wingfield's inefficiency and embezzlement of corn meal, Communion sack,

and penny whittles, his enemies had no respect for each other or concord among themselves. It is Wingfield's testimony that Ratcliffe said he would not have been deposed if he had visited Ratcliffe during his sickness. Smith said that Wingfield would not have been deposed except for Archer; that the charges against him were frivolous. Yet, says Wingfield, "I do believe him the first and only practiser in these practices," and he attributed Smith's hostility to the fact that "his name was mentioned in the intended and confessed mutiny by Galthrop." Nother reference is made to this mutiny. Galthrop was one of those who died in the previous August.

One of the best re-enforcements of the first supply was Matthew Scrivener, who was appointed one of the Council. He was a sensible man, and he and Smith worked together in harmony for some time. They were intent upon building up the colony. Everybody else in the camp was crazy about the prospect of gold: there was, says Smith, "no talk, no hope, no work, but dig gold, wash gold, refine gold, load gold, such a bruit of gold that one mad fellow desired to be buried in the sands, lest they should by their art make gold of his bones." He charges that Newport delayed his return to England on account of this gold fever, in order to load his vessel (which remained fourteen weeks when it might have sailed in fourteen days) with gold-dust. Captain Martin seconded Newport in this; Smith protested against it; he thought Newport was no refiner, and it did torment him "to see all necessary business neglected, to fraught such a drunken ship with so much gilded durt." This was the famous load of gold that proved to be iron pyrites.

In speaking of the exploration of the James River as far as the Falls by Newport, Smith, and Percy, we have followed the statements of Percy and the writer of Newport's discovery that they saw the great Powhatan. There is much doubt of this. Smith in his "True Relation" does not say so; in his voyage up the Chickahominy he seems to have seen Powhatan for the first time; and Wingfield speaks of Powhatan, on Smith's return from that voyage, as one "of whom before we had no knowledge." It is conjectured that the one seen at Powhatan's seat near the Falls was a son of the "Emperor." It was partly the exaggeration of the times to magnify discoveries, and partly English love of high titles, that attributed such titles as princes, emperors, and kings to the half-naked barbarians and petty chiefs of Virginia.

In all the accounts of the colony at this period, no mention is made of women, and it is not probable that any went over with the first colonists. The character of the men was not high. Many of them were "gentlemen" adventurers, turbulent spirits, who would not work, who were much better fitted for piratical maraudings than the labor of founding a state. The historian must agree with the impression conveyed by Smith, that it was poor material out of which to make a colony.

VII. SMITH TO THE FRONT

It is now time to turn to Smith's personal adventures among the Indians during this period. Almost our only authority is Smith himself, or such presumed writings of his companions as he edited or rewrote. Strachey and others testify to his energy in procuring supplies for the colony, and his success in dealing with the Indians, and it seems likely that the colony would have famished but for his exertions. Whatever suspicion attaches to Smith's relation of his own exploits, it must never be forgotten that he was a man of extraordinary executive ability, and had many good qualities to offset his vanity and impatience of restraint.

After the departure of Wingfield, Captain Smith was constrained to act as Cape Merchant; the leaders were sick or discontented, the rest were in despair, and would rather starve and rot than do anything for their own relief, and the Indian trade was decreasing. Under these circumstances, Smith says in his "True Relation," "I was sent to the mouth of the river, to Kegquoughtan [now Hampton], an Indian Towne, to trade for corn, and try the river for fish." The Indians, thinking them near famished, tantalized them with offers of little bits of bread in exchange for a hatchet or a piece of copper, and Smith offered trifles in return. The next day the Indians were anxious to trade. Smith sent men up to their town, a display of force was made by firing four guns, and the Indians kindly traded, giving fish, oysters, bread, and deer. The town contained eighteen houses, and heaps of grain. Smith obtained fifteen bushels of it, and on his homeward way he met two canoes with Indians, whom he accompanied to their villages on the south side of the river, and got from them fifteen bushels more.

This incident is expanded in the "General Historie." After the lapse of fifteen years Smith is able to remember more details, and to conceive himself as the one efficient man who had charge of everything outside the fort, and to represent his dealings with the Indians in a much more heroic and summary manner. He was not sent on the expedition, but went of his own motion. The account opens in this way: "The new President [Ratcliffe] and Martin, being little beloved, of weake judgement in dangers, and loose industrie in peace, committed the management of all things abroad to Captain Smith; who by his own example, good words, and fair promises, set some to mow, others to binde thatch, some to builde houses, others to thatch them, himselfe always bearing the greatest taske for his own share, so that in short time he provided most of them with lodgings, neglecting any for himselfe. This done, seeing the Salvage superfluties beginne to decrease (with some of his workmen) shipped himself in the Shallop to search the country for trade."

In this narration, when the Indians trifled with Smith he fired a volley at them, ran his boat ashore, and pursued them fleeing towards their village, where were great heaps of corn that he could with difficulty restrain his soldiers [six or seven] from taking. The Indians then assaulted them with a hideous noise: "Sixty or seventy of them, some black, some red, some white, some particoloured, came in a square order, singing and dancing out of the woods, with their Okee (which is an Idol made of skinnes, stuffed with mosse, and painted and hung with chains and copper) borne before them; and in this manner being well armed with clubs, targets, bowes and arrowes, they charged the English that so kindly received them with their muskets loaden with pistol shot, that down fell their God, and divers lay sprawling on the ground; the rest fled againe to the woods, and ere long sent men of their Quiyoughkasoucks [conjurers] to offer peace and redeeme the

Okee." Good feeling was restored, and the savages brought the English "venison, turkies, wild fowl, bread all that they had, singing and dancing in sign of friendship till they departed." This fantastical account is much more readable than the former bare narration.

The supplies which Smith brought gave great comfort to the despairing colony, which was by this time reasonably fitted with houses. But it was not long before they again ran short of food. In his first narrative Smith says there were some motions made for the President and Captain Arthur to go over to England and procure a supply, but it was with much ado concluded that the pinnace and the barge should go up the river to Powhatan to trade for corn, and the lot fell to Smith to command the expedition. In his "General Historie" a little different complexion is put upon this. On his return, Smith says, he suppressed an attempt to run away with the pinnace to England. He represents that what food "he carefully provided the rest carelessly spent," and there is probably much truth in his charges that the settlers were idle and improvident. He says also that they were in continual broils at this time. It is in the fall of 1607, just before his famous voyage up the Chickahominy, on which he departed December 10th—that he writes: "The President and Captain Arthur intended not long after to have abandoned the country, which project was curbed and suppressed by Smith. The Spaniard never more greedily desired gold than he victual, nor his soldiers more to abandon the country than he to keep it. But finding plenty of corn in the river of Chickahomania, where hundreds of salvages in divers places stood with baskets expecting his coming, and now the winter approaching, the rivers became covered with swans, geese, ducks, and cranes, that we daily feasted with good bread, Virginia peas, pumpions, and putchamins, fish, fowls, and divers sorts of wild beasts as fat as we could eat them, so that none of our Tuftaffaty humorists desired to go to England."

While the Chickahominy expedition was preparing, Smith made a voyage to Popohanock or Quiyoughcohanock, as it is called on his map, a town on the south side of the river, above Jamestown. Here the women and children fled from their homes and the natives refused to trade. They had plenty of corn, but Smith says he had no commission to spoil them. On his return he called at Pasphegh, a town on the north side of the James, and on the map placed higher than Popohanock, but evidently nearer to Jamestown, as he visited it on his return. He obtained ten bushels of corn of the churlish and treacherous natives, who closely watched and dogged the expedition.

Everything was now ready for the journey to Powhatan. Smith had the barge and eight men for trading and discovery, and the pinnace was to follow to take the supplies at convenient landings. On the 9th of November he set out in the barge to explore the Chickahominy, which is described as emptying into the James at Pasphegh, eight miles above the fort. The pinnace was to ascend the river twenty miles to Point Weanock, and to await Smith there. All the month of November Smith toiled up and down the Chickahominy, discovering and visiting many villages, finding the natives kindly disposed and eager to trade, and possessing abundance of corn. Notwithstanding this abundance, many were still mutinous. At this time occurred the President's quarrel with the blacksmith, who, for assaulting the President, was condemned to death, and released on disclosing a conspiracy of which Captain Kendall was principal; and the latter was executed in his place. Smith returned from a third voyage to the Chickahominy with more supplies, only to find the matter of sending the pinnace to England still debated.

This project, by the help of Captain Martin, he again quieted and at last set forward on his famous voyage into the country of Powhatan and Pocahontas.

VIII. THE FAMOUS CHICKAHOMINY VOYAGE

We now enter upon the most interesting episode in the life of the gallant captain, more thrilling and not less romantic than the captivity in Turkey and the tale of the faithful love of the fair young mistress Charatza Tragabigzanda.

Although the conduct of the lovely Charatza in despatching Smith to her cruel brother in Nalbrits, where he led the life of a dog, was never explained, he never lost faith in her. His loyalty to women was equal to his admiration of them, and it was bestowed without regard to race or complexion. Nor is there any evidence that the dusky Pocahontas, who is about to appear, displaced in his heart the image of the too partial Tragabigzanda. In regard to women, as to his own exploits, seen in the light of memory, Smith possessed a creative imagination. He did not create Pocahontas, as perhaps he may have created the beautiful mistress of Bashaw Bogall, but he invested her with a romantic interest which forms a lovely halo about his own memory.

As this voyage up the Chickahominy is more fruitful in its consequences than Jason's voyage to Colchis; as it exhibits the energy, daring, invention, and various accomplishments of Captain Smith, as warrior, negotiator, poet, and narrator; as it describes Smith's first and only captivity among the Indians; and as it was during this absence of four weeks from Jamestown, if ever, that Pocahontas interposed to prevent the beating out of Smith's brains with a club, I shall insert the account of it in full, both Smith's own varying relations of it, and such contemporary notices of it as now come to light. It is necessary here to present several accounts, just as they stand, and in the order in which they were written, that the reader may see for himself how the story of Pocahontas grew to its final proportions. The real life of Pocahontas will form the subject of another chapter.

The first of these accounts is taken from "The True Relation," written by Captain John Smith, composed in Virginia, the earliest published work relating to the James River Colony. It covers a period of a little more than thirteen months, from the arrival at Cape Henry on April 26, 1607, to the return of Captain Nelson in the Phoenix, June 2, 1608. The manuscript was probably taken home by Captain Nelson, and it was published in London in 1608. Whether it was intended for publication is doubtful; but at that time all news of the venture in Virginia was eagerly sought, and a narrative of this importance would naturally speedily get into print.

In the several copies of it extant there are variations in the titlepage, which was changed while the edition was being printed. In some the name of Thomas Watson is given as the author, in others "A Gentleman of the

Colony," and an apology appears signed "T. H.," for the want of knowledge or inadvertence of attributing it to any one except Captain Smith.

There is no doubt that Smith was its author. He was still in Virginia when it was printed, and the printers made sad work of parts of his manuscript. The question has been raised, in view of the entire omission of the name of Pocahontas in connection with this voyage and captivity, whether the manuscript was not cut by those who published it. The reason given for excision is that the promoters of the Virginia scheme were anxious that nothing should appear to discourage capitalists, or to deter emigrants, and that this story of the hostility and cruelty of Powhatan, only averted by the tender mercy of his daughter, would have an unfortunate effect. The answer to this is that the hostility was exhibited by the captivity and the intimation that Smith was being fatted to be eaten, and this was permitted to stand. It is wholly improbable that an incident so romantic, so appealing to the imagination, in an age when wonder-tales were eagerly welcomed, and which exhibited such tender pity in the breast of a savage maiden, and such paternal clemency in a savage chief, would have been omitted. It was calculated to lend a lively interest to the narration, and would be invaluable as an advertisement of the adventure.

[For a full bibliographical discussion of this point the reader is referred to the reprint of "The True Relation," by Charles Deane, Esq., Boston, 1864, the preface and notes to which are a masterpiece of critical analysis.]

That some portions of "The True Relation" were omitted is possible. There is internal evidence of this in the abrupt manner in which it opens, and in the absence of allusions to the discords during the voyage and on the arrival. Captain Smith was not the man to pass over such questions in silence, as his subsequent caustic letter sent home to the Governor and Council of Virginia shows. And it is probable enough that the London promoters would cut out from the "Relation" complaints and evidence of the seditions and helpless state of the colony. The narration of the captivity is consistent as it stands, and wholly inconsistent with the Pocahontas episode.

We extract from the narrative after Smith's departure from Apocant, the highest town inhabited, between thirty and forty miles up the river, and below Orapaks, one of Powhatan's seats, which also appears on his map. He writes:

"Ten miles higher I discovered with the barge; in the midway a great tree hindered my passage, which I cut in two: heere the river became narrower, 8, 9 or 10 foote at a high water, and 6 or 7 at a lowe: the stream exceeding swift, and the bottom hard channell, the ground most part a low plaine, sandy soyle, this occasioned me to suppose it might issue from some lake or some broad ford, for it could not be far to the head, but rather then I would endanger the barge, yet to have beene able to resolve this doubt, and to discharge the imputating malicious tungs, that halfe suspected I durst not for so long delaying, some of the company, as desirous as myself, we resolved to hier a canow, and returne with the barge to Apocant, there to leave the barge secure, and put ourselves upon the adventure: the country onely a vast and wilde wilderness, and but only that Towne: within three or foure mile we hired a canow, and 2 Indians to row us ye next day a fowling: having made such provision for the barge as was needfull, I left her there to ride, with expresse charge not any to go ashore til my returne. Though some wise men may condemne this too bould attempt of too much indiscretion, yet if they well consider the friendship of the Indians, in conducting me, the desolatenes of the country, the probabilitie of some lacke, and the malicious judges of my actions at home, as also to have some matters of worth to incourage our adventurers in england, might well have caused any honest minde to have done the like, as wel for his own discharge as for the publike good: having 2 Indians for my guide and 2 of our own company, I set forward, leaving 7 in the barge; having discovered 20 miles further in this desart, the river stil kept his depth and bredth, but much more combred with trees; here we went ashore (being some 12 miles higher than ye barge had bene) to refresh our selves, during the boyling of our vituals: one of the Indians I tooke with me, to see the nature of the soile, and to cross the boughts of the river, the other Indian I left with M. Robbinson and Thomas Emry, with their matches light and order to discharge a peece, for my retreat at the first sight of any Indian, but within a quarter of an houre I heard a loud cry, and a hollowing of Indians, but no warning peece, supposing them surprised, and that the Indians had betraid us, presently I seized him and bound his arme fast to my hand in a garter, with my pistoll ready bent to be revenged on him: he advised me to fly and seemed ignorant of what was done, but as we went discoursing, I was struck with an arrow on the right thigh, but without harme: upon this occasion I espied 2 Indians drawing their bowes, which I prevented in discharging a french pistoll: by that I had charged again 3 or 4 more did the 'like, for the first fell downe and fled: at my discharge they did the like, my hinde I made my barricade, who offered not to strive, 20 or 30 arrowes were shot at me but short, 3 or 4 times I had discharged my pistoll ere the king of Pamauck called Opeckakenough with 200 men, environed me, each drawing their bowe, which done they laid them upon the ground, yet without shot, my hinde treated betwixt them and me of conditions of peace, he discovered me to be the captaine, my request was to retire to ye boate, they demanded my armes, the rest they saide were slaine, onely me they would reserve: the Indian importuned me not to shoot. In retiring being in the midst of a low quagmire, and minding them more than my steps, I stept fast into the quagmire, and also the Indian in drawing me forth: thus surprised, I resolved to trie their mercies, my armes I caste from me, till which none durst approach me: being ceazed on me, they drew me out and led me to the King, I presented him with a compasse diall, describing by my best meanes the use thereof, whereat he so amazedly admired, as he suffered me to proceed in a discourse of the roundnes of the earth, the course of the sunne, moone, starres and plannets, with kinde speeches and bread he requited me, conducting me where the canow lay and John Robbinson slaine, with 20 or 30 arrowes in him. Emry I saw not, I perceived by the abundance of fires all over the woods, at each place I expected when they would execute me, yet they used me with what kindnes they could: approaching their Towne which was within 6 miles where I was taken, onely made as arbors and covered with mats, which they remove as occasion requires: all the women and children, being advertised of this accident came forth to meet, the King well guarded with 20 bow men 5 flanck and rear and each flanck before him a sword and a peece, and after him the like, then a bowman, then I on each hand a bowman, the rest in file in the reare, which reare led forth amongst the trees in a bishon, eache his bowe and a handfull of arrowes, a quiver at his back grimly painted: on eache flanck a sargeant, the one running alwaiss towards the front the other towards the reare,

each a true pace and in exceeding good order, this being a good time continued, they caste themselves in a ring with a daunce, and so each man departed to his lodging, the captain conducting me to his lodging, a quarter of Venison and some ten pound of bread I had for supper, what I left was reserved for me, and sent with me to my lodging: each morning three women presented me three great platters of fine bread, more venison than ten men could devour I had, my gowne, points and garters, my compas and a tablet they gave me again, though 8 ordinarily guarded me, I wanted not what they could devise to content me: and still our longer acquaintance increased our better affection: much they threatened to assault our forte as they were solicited by the King of Paspahugh, who shewed at our fort great signs of sorrow for this mischance: the King took great delight in understanding the manner of our ships and sayling the seas, the earth and skies and of our God: what he knew of the dominions he spared not to acquaint me with, as of certaine men cloathed at a place called Ocanahonun, cloathed like me, the course of our river, and that within 4 or 5 daies journey of the falles, was a great turning of salt water: I desired he would send a messenger to Paspahugh, with a letter I would write, by which they should understand, how kindly they used me, and that I was well, lest they should revenge my death; this he granted and sent three men, in such weather, as in reason were unpossible, by any naked to be indured: their cruell mindes towards the fort I had deverted, in describing the ordinance and the mines in the fields, as also the revenge Captain Newport would take of them at his returne, their intent, I incerted the fort, the people of Ocanahomm and the back sea, this report they after found divers Indians that confirmed: the next day after my letter, came a salvage to my lodging, with his sword to have slaine me, but being by my guard intercepted, with a bowe and arrow he offred to have effected his purpose: the cause I knew not, till the King understanding thereof came and told me of a man a dying wounded with my pistoll: he tould me also of another I had slayne, yet the most concealed they had any hurte: this was the father of him I had slayne, whose fury to prevent, the King presently conducted me to another kingdome, upon the top of the next northerly river, called Youghtanan, having feasted me, he further led me to another branch of the river called Mattapament, to two other hunting townes they led me, and to each of these Countries, a house of the great Emperour of Pewhakan, whom as yet I supposed to be at the Fals, to him I tolde him I must goe, and so returne to Paspahugh, after this foure or five dayes march we returned to Rasawrack, the first towne they brought me too, where binding the mats in bundles, they marched two dayes journey and crossed the River of Youghtanan, where it was as broad as Thames: so conducting me too a place called Menapacute in Pamunke, where ye King inhabited; the next day another King of that nation called Kekataugh, having received some kindness of me at the Fort, kindly invited me to feast at his house, the people from all places flocked to see me, each shewing to content me. By this the great King hath foure or five houses, each containing fourscore or an hundred foote in length, pleasantly seated upon an high sandy hill, from whence you may see westerly a goodly low country, the river before the which his crooked course causeth many great Marshes of exceeding good ground. An hundred houses, and many large plaines are here together inhabited, more abundance of fish and fowle, and a pleasanter seat cannot be imagined: the King with fortie bowmen to guard me, intreated me to discharge my Pistoll, which they there presented me with a mark at six score to strike therewith but to spoil the practice I broke the cocke, whereat they were much discontented though a chaunce supposed. From hence this kind King conducted me to a place called Topahanocke, a kingdome upon another river northward; the cause of this was, that the yeare before, a shippe had bene in the River of Pamunke, who having been kindly entertained by Powhatan their Emperour, they returned thence, and discovered the River of Topahanocke, where being received with like kindnesse, yet he slue the King, and tooke of his people, and they supposed I were bee, but the people reported him a great man that was Captaine, and using mee kindly, the next day we departed. This River of Topahanock, seemeth in breadth not much lesse than that we dwell upon. At the mouth of the River is a Countrey called Cuttata women, upwards is Marraugh tacum Tapohanock, Apparnatuck, and Nantaugs tacum, at Topmanahocks, the head issuing from many Mountains, the next night I lodged at a hunting town of Powhatam's, and the next day arrived at Waranacomoco upon the river of Parnauncke, where the great king is resident: by the way we passed by the top of another little river, which is betwixt the two called Payankatank. The most of this country though Desert, yet exceeding fertil, good timber, most hils and in dales, in each valley a cristall spring.

“Arriving at Weramacomoco, their Emperour, proudly lying upon a Bedstead a foote high upon tenne or twelve Mattes, richly hung with manie Chaynes of great Pearles about his necke, and covered with a great covering of Rahaughcums: At heade sat a woman, at his feete another, on each side sitting upon a Matte upon the ground were raunged his chiefe men on each side the fire, tenne in a ranke and behinde them as many yong women, each a great Chaîne of white Beades over their shoulders: their heades painted in redde and with such a grave and Majesticall countenance, as drove me into admiration to see such state in a naked Salvage, bee kindly welcomed me with good wordes, and great Platters of sundrie victuals, asiuring mee his friendship and my libertie within foure dayes, bee much delighted in Opechan Conough's relation of what I had described to him, and oft examined me upon the same. Hee asked me the cause of our comming, I tolde him being in fight with the Spaniards our enemie, being over powred, neare put to retreat, and by extreme weather put to this shore, where landing at Chesipiack, the people shot us, but at Kequoughtan they kindly used us, wee by signes demaunded fresh water, they described us up the River was all fresh water, at Paspahugh, also they kindly used us, our Pinnasse being leake wee were inforced to stay to mend her, till Captain Newport my father came to conduct us away. He demaunded why we went further with our Boate, I tolde him, in that I would have occasion to talke of the backe Sea, that on the other side the maine, where was salt water, my father had a childe slaine, which we supposed Monocan his enemie, whose death we intended to revenge. After good deliberation, hee began to describe me the countreys beyond the Falles, with many of the rest, confirming what not only Opechancanoyes, and an Indian which had been prisoner to Powhatan had before tolde mee, but some called it five days, some sixe, some eight, where the sayde water dashed amongst many stones and rocks, each storme which caused oft tymes the heade of the River to bee brackish: Anchanachuck he described to bee the people that had slaine my brother, whose death hee would revenge. Hee described also upon the same Sea, a mighty nation called Pocoughtronack, a fierce nation that did eate men and warred with the people of Moyaoncer, and Pataromerke, Nations upon the toppe of the heade of the Bay, under his territories, where the yeare before they had slain an hundred, he signified their crownes were shaven, long haire in the necke, tied on a knot, Swords like Pollaxes.

"Beyond them he described people with short Coates, and Sleeves to the Elbowes, that passed that way in Shippes like ours. Many Kingdomes hee described mee to the heade of the Bay, which seemed to bee a mightie River, issuing from mightie mountaines, betwixt the two seas; the people clothed at Ocamahowan. He also confirmed, and the Southerly Countries also, as the rest, that reported us to be within a day and a halfe of Mangoge, two dayes of Chawwonock, 6 from Roonock, to the South part of the backe sea: he described a countrie called Anone, where they have abundance of Brasse, and houses walled as ours. I requited his discourse, seeing what pride he had in his great and spacious Dominions, seeing that all hee knewe were under his Territories.

"In describing to him the territories of Europe which was subject to our great King whose subject I was, the innumerable multitude of his ships, I gave him to understand the noyse of Trumpets and terrible manner of fighting were under Captain Newport my father, whom I intituled the Meworames which they call King of all the waters, at his greatnesse bee admired and not a little feared; he desired mee to forsake Paspahogh, and to live with him upon his River, a countrie called Capa Howasicke; he promised to give me corne, venison, or what I wanted to feede us, Hatchets and Copper wee should make him, and none should disturbe us. This request I promised to performe: and thus having with all the kindnes hee could devise, sought to content me, he sent me home with 4 men, one that usually carried my Gunne and Knapsacke after me, two other loded with bread, and one to accompanie me."

The next extract in regard to this voyage is from President Wingfield's "Discourse of Virginia," which appears partly in the form of a diary, but was probably drawn up or at least finished shortly after Wingfield's return to London in May, 1608. He was in Jamestown when Smith returned from his captivity, and would be likely to allude to the romantic story of Pocahontas if Smith had told it on his escape. We quote:

"Decem.—The 10th of December, Mr. Smyth went up the ryver of the Chechomynies to trade for corne; he was desirous to see the heade of that river; and, when it was not passible with the shallop, he hired a cannaw and an Indian to carry him up further. The river the higher grew worse and worse. Then hee went on shoare with his guide, and left Robinson and Emmery, and twoe of our Men, in the cannaw; which were presently slayne by the Indians, Pamaonke's men, and hee himself taken prysoner, and, by the means of his guide, his lief was saved; and Pamaonche, haveing him prisoner, carryed him to his neybons wyroances, to see if any of them knew him for one of those which had bene, some two or three eeres before us, in a river amongst them Northward, and taken awaie some Indians from them by force. At last he brought him to the great Powaton (of whome before wee had no knowledg), who sent him home to our towne the 8th of January."

The next contemporary document to which we have occasion to refer is Smith's Letter to the Treasurer and Council of Virginia in England, written in Virginia after the arrival of Newport there in September, 1608, and probably sent home by him near the close of that year. In this there is no occasion for a reference to Powhatan or his daughter, but he says in it: "I have sent you this Mappe of the Bay and Rivers, with an annexed Relation of the Countryes and Nations that inhabit them as you may see at large." This is doubtless the "Map of Virginia," with a description of the country, published some two or three years after Smith's return to England, at Oxford, 1612. It is a description of the country and people, and contains little narrative. But with this was published, as an appendix, an account of the proceedings of the Virginia colonists from 1606 to 1612, taken out of the writings of Thomas Studley and several others who had been residents in Virginia. These several discourses were carefully edited by William Symonds, a doctor of divinity and a man of learning and repute, evidently at the request of Smith. To the end of the volume Dr. Symonds appends a note addressed to Smith, saying: "I return you the fruit of my labors, as Mr. Cranshaw requested me, which I bestowed in reading the discourses and hearing the relations of such as have walked and observed the land of Virginia with you." These narratives by Smith's companions, which he made a part of his Oxford book, and which passed under his eye and had his approval, are uniformly not only friendly to him, but eulogistic of him, and probably omit no incident known to the writers which would do him honor or add interest to him as a knight of romance. Nor does it seem probable that Smith himself would have omitted to mention the dramatic scene of the prevented execution if it had occurred to him. If there had been a reason in the minds of others in 1608 why it should not appear in the "True Relation," that reason did not exist for Smith at this time, when the discords and discouragements of the colony were fully known. And by this time the young girl Pocahontas had become well known to the colonists at Jamestown. The account of this Chickahominy voyage given in this volume, published in 1612, is signed by Thomas Studley, and is as follows:

"The next voyage he proceeded so farre that with much labour by cutting of trees in sunder he made his passage, but when his Barge could passe no farther, he left her in a broad bay out of danger of shot, commanding none should go ashore till his returne; himselfe with 2 English and two Salvages went up higher in a Canowe, but he was not long absent, but his men went ashore, whose want of government gave both occasion and opportunity to the Salvages to surprise one George Casson, and much failed not to have cut of the boat and all the rest. Smith little dreaming of that accident, being got to the marshes at the river's head, 20 miles in the desert, had his 2 men slaine (as is supposed) sleeping by the Canowe, whilst himselfe by fowling sought them victual, who finding he was beset by 200 Salvages, 2 of them he slew, stil defending himselfe with the aid of a Salvage his guid (whome bee bound to his arme and used as his buckler), till at last slipping into a bogmire they tooke him prisoner: when this news came to the fort much was their sorrow for his losse, fewe expecting what ensued. A month those Barbarians kept him prisoner, many strange triumphs and conjurations they made of him, yet he so demeaned himselfe amongst them, as he not only diverted them from surprising the Fort, but procured his own liberty, and got himselfe and his company such estimation amongst them, that those Salvages admired him as a demi-God. So returning safe to the Fort, once more staid the pinnas her flight for England, which til his returne could not set saile, so extreme was the weather and so great the frost."

The first allusion to the salvation of Captain Smith by Pocahontas occurs in a letter or "little booke" which he wrote to Queen Anne in 1616, about the time of the arrival in England of the Indian Princess, who was then called the Lady Rebecca, and was wife of John Rolfe, by whom she had a son, who accompanied them. Pocahontas had by this time become a person of some importance. Her friendship had been of substantial service to the colony. Smith had acknowledged this in his "True Relation," where he referred to her as the

"nonpareil" of Virginia. He was kind-hearted and naturally magnanimous, and would take some pains to do the Indian convert a favor, even to the invention of an incident that would make her attractive. To be sure, he was vain as well as inventive, and here was an opportunity to attract the attention of his sovereign and increase his own importance by connecting his name with hers in a romantic manner. Still, we believe that the main motive that dictated this epistle was kindness to Pocahontas. The sentence that refers to her heroic act is this: "After some six weeks [he was absent only four weeks] fattening amongst those Salvage Countries, at the minute of my execution she hazarded the beating out of her own braines to save mine, and not only that, but so prevailed with her father [of whom he says, in a previous paragraph, 'I received from this great Salvage exceeding great courtesie], that I was safely conducted to Jamestown."

This guarded allusion to the rescue stood for all known account of it, except a brief reference to it in his "New England's Trials" of 1622, until the appearance of Smith's "General Historie" in London, 1624. In the first edition of "New England's Trials," 1620, there is no reference to it. In the enlarged edition of 1622, Smith gives a new version to his capture, as resulting from "the folly of them that fled," and says: "God made Pocahontas, the King's daughter the means to deliver me."

The "General Historie" was compiled—as was the custom in making up such books at the time from a great variety of sources. Such parts of it as are not written by Smith—and these constitute a considerable portion of the history—bear marks here and there of his touch. It begins with his description of Virginia, which appeared in the Oxford tract of 1612; following this are the several narratives by his comrades, which formed the appendix of that tract. The one that concerns us here is that already quoted, signed Thomas Studley. It is reproduced here as "written by Thomas Studley, the first Cape Merchant in Virginia, Robert Fenton, Edward Harrington, and I. S." [John Smith]. It is, however, considerably extended, and into it is interjected a detailed account of the captivity and the story of the stones, the clubs, and the saved brains.

It is worthy of special note that the "True Relation" is not incorporated in the "General Historie." This is the more remarkable because it was an original statement, written when the occurrences it describes were fresh, and is much more in detail regarding many things that happened during the period it covered than the narratives that Smith uses in the "General Historie." It was his habit to use over and over again his own publications. Was this discarded because it contradicted the Pocahontas story—because that story could not be fitted into it as it could be into the Studley relation?

It should be added, also, that Purchas printed an abstract of the Oxford tract in his "Pilgrimage," in 1613, from material furnished him by Smith. The Oxford tract was also republished by Purchas in his "Pilgrimes," extended by new matter in manuscript supplied by Smith. The "Pilgrimes" did not appear till 1625, a year after the "General Historie," but was in preparation long before. The Pocahontas legend appears in the "Pilgrimes," but not in the earlier "Pilgrimage."

We have before had occasion to remark that Smith's memory had the peculiarity of growing stronger and more minute in details the further he was removed in point of time from any event he describes. The revamped narrative is worth quoting in full for other reasons. It exhibits Smith's skill as a writer and his capacity for rising into poetic moods. This is the story from the "General Historie":

"The next voyage hee proceeded so farre that with much labour by cutting of trees in sunder he made his passage, but when his Barge could pass no farther, he left her in a broad bay out of danger of shot, commanding none should goe ashore till his return: himselfe with two English and two Salvages went up higher in a Canowe, but he was not long absent, but his men went ashore, whose want of government, gave both occasion and opportunity to the Salvages to surprise one George Cassen, whom they slew, and much failed not to have cut of the boat and all the rest. Smith little dreaming of that accident, being got to the marshes at the river's head, twentie myles in the desert, had his two men slaine (as is supposed) sleeping by the Canowe, whilst himselfe by fowling sought them victuall, who finding he was beset with 200 Salvages, two of them hee slew, still defending himself with the ayd of a Salvage his guide, whom he bound to his arme with his garters, and used him as a buckler, yet he was shot in his thigh a little, and had many arrowes stucke in his cloathes but no great hurt, till at last they tooke him prisoner. When this newes came to Jamestowne, much was their sorrow for his losse, fewe expecting what ensued. Sixe or seven weekes those Barbarians kept him prisoner, many strange triumphes and conjurations they made of him, yet hee so demeaned himselfe amongst them, as he not onely diverted them from surprising the Fort, but procured his owne libertie, and got himself and his company such estimation amongst them, that those Salvages admired him more than their owne Quiyouckosucks. The manner how they used and delivered him, is as followeth.

"The Salvages having drawne from George Cassen whether Captaine Smith was gone, prosecuting that opportunity they followed him with 300 bowmen, conducted by the King of Pamaunkee, who in divisions searching the turnings of the river, found Robinson and Entry by the fireside, those they shot full of arrowes and slew. Then finding the Captaine as is said, that used the Salvage that was his guide as his shield (three of them being slaine and divers others so gauld) all the rest would not come neere him. Thinking thus to have returned to his boat, regarding them, as he marched, more then his way, slipped up to the middle in an oasie creeke and his Salvage with him, yet durst they not come to him till being neere dead with cold, he threw away his armes. Then according to their composition they drew him forth and led him to the fire, where his men were slaine. Diligently they chafed his benumbed limbs. He demanding for their Captaine, they shewed him Opechankanough, King of Pamaunkee, to whom he gave a round Ivory double compass Dyall. Much they marvelled at the playing of the Fly and Needle, which they could see so plainly, and yet not touch it, because of the glass that covered them. But when he demonstrated by that Globe-like Jewell, the roundnesse of the earth and skies, the sphaere of the Sunne, Moone, and Starres, and how the Sunne did chase the night round about the world continually: the greatnesse of the Land and Sea, the diversitie of Nations, varietie of Complexions, and how we were to them Antipodes, and many other such like matters, they all stood as amazed with admiration. Notwithstanding within an houre after they tyed him to a tree, and as many as could stand about him prepared to shoot him, but the King holding up the Compass in his hand, they all laid downe their Bowes and Arrowes, and in a triumphant manner led him to Orapaks, where he was after their manner kindly feasted and well used.

"Their order in conducting him was thus: Drawing themselves all in fyle, the King in the midst had all

their Peeces and Swords borne before him. Captaine Smith was led after him by three great Salvages, holding him fast by each arme: and on each side six went in fyle with their arrowes nocked. But arriving at the Towne (which was but onely thirtie or fortie hunting houses made of Mats, which they remove as they please, as we our tents) all the women and children staring to behold him, the souldiers first all in file performe the forme of a Bissom so well as could be: and on each flanke, officers as Serieants to see them keepe their orders. A good time they continued this exercise, and then cast themselves in a ring, dauncing in such severall Postures, and singing and yelling out such hellish notes and screeches: being strangely painted, every one his quiver of arrowes, and at his backe a club: on his arme a Fox or an Otters skinne, or some such matter for his vambrace: their heads and shoulders painted red, with oyle and Pocones mingled together, which Scarlet like colour made an exceeding handsome shew, his Bow in his hand, and the skinne of a Bird with her wings abroad dried, tyed on his head, a peece of copper, a white shell, a long feather, with a small rattle growing at the tayles of their snaks tyed to it, or some such like toy. All this time Smith and the King stood in the midst guarded, as before is said, and after three dances they all departed. Smith they conducted to a long house, where thirtie or fortie tall fellowes did guard him, and ere long more bread and venison were brought him then would have served twentie men. I thinke his stomacke at that time was not very good; what he left they put in baskets and tyed over his head. About midnight they set the meat again before him, all this time not one of them would eat a bit with him, till the next morning they brought him as much more, and then did they eat all the old, and reserved the new as they had done the other, which made him think they would fat him to eat him. Yet in this desperate estate to defend him from the cold, one Maocassater brought him his gowne, in requitall of some beads and toyes Smith had given him at his first arrival in Firginia.

“Two days a man would have slaine him (but that the guard prevented it) for the death of his sonne, to whom they conducted him to recover the poore man then breathing his last. Smith told them that at James towne he had a water would doe it if they would let him fetch it, but they would not permit that: but made all the preparations they could to assault James towne, craving his advice, and for recompence he should have life, libertie, land, and women. In part of a Table booke he writ his mind to them at the Fort, what was intended, how they should follow that direction to affright the messengers, and without fayle send him such things as he writ for. And an Inventory with them. The difficultie and danger he told the Salvages, of the Mines, great gunnes, and other Engins, exceedingly affrighted them, yet according to his request they went to James towne in as bitter weather as could be of frost and snow, and within three days returned with an answer.

“But when they came to James towne, seeing men sally out as he had told them they would, they fled: yet in the night they came again to the same place where he had told them they should receive an answer, and such things as he had promised them, which they found accordingly, and with which they returned with no small expedition, to the wonder of them all that heard it, that he could either divine or the paper could speake. Then they led him to the Youthtanunds, the Mattapanients, the Payankatanks, the Nantaughtacunds and Onawmanients, upon the rivers of Rapahanock and Patawomek, over all those rivers and backe againe by divers other severall Nations, to the King's habitation at Pamaunkee, where they entertained him with most strange and fearefull conjurations;

*'As if neare led to hell,
Amongst the Devils to dwell.'*

“Not long after, early in a morning, a great fire was made in a long house, and a mat spread on the one side as on the other; on the one they caused him to sit, and all the guard went out of the house, and presently came skipping in a great grim fellow, all painted over with coale mingled with oyle; and many Snakes and Wesels skins stuffed with mosse, and all their tayles tyed together, so as they met on the crowne of his head in a tassell; and round about the tassell was a Coronet of feathers, the skins hanging round about his head, backe, and shoulders, and in a manner covered his face; with a hellish voyce and a rattle in his hand. With most strange gestures and passions he began his invocation, and environed the fire with a circle of meale; which done three more such like devils came rushing in with the like antique tricks, painted halfe blacke, halfe red: but all their eyes were painted white, and some red stroakes like Mutchato's along their cheekes: round about him those fiends daunced a pretty while, and then came in three more as ugly as the rest; with red eyes and stroakes over their blacke faces, at last they all sat downe right against him; three of them on the one hand of the chiefe Priest, and three on the other. Then all with their rattles began a song, which ended, the chiefe Priest layd downe five wheat cornes: then straying his arms and hands with such violence that he sweat, and his veynes swelled, he began a short Oration: at the conclusion they all gave a short groane; and then layd downe three graines more. After that began their song againe, and then another Oration, ever laying downe so many cornes as before, til they had twice incirculed the fire; that done they tooke a bunch of little stickes prepared for that purpose, continuing still their devotion, and at the end of every song and Oration they layd downe a sticke betwixt the divisions of Corne. Til night, neither he nor they did either eate or drinke, and then they feasted merrily, and with the best provisions they could make. Three dayes they used this Ceremony: the meaning whereof they told him was to know if he intended them well or no. The circle of meale signified their Country, the circles of corne the bounds of the Sea, and the stickes his Country. They imagined the world to be flat and round, like a trencher, and they in the midst. After this they brought him a bagge of gunpowder, which they carefully preserved till the next spring, to plant as they did their corne, because they would be acquainted with the nature of that seede. Opitchapam, the King's brother, invited him to his house, where with many platters of bread, foule, and wild beasts, as did environ him, he bid him wellcome: but not any of them would eate a bit with him, but put up all the remainder in Baskets. At his returne to Opechancanoughs, all the King's women and their children flocked about him for their parts, as a due by Custome, to be merry with such fragments.

“But his waking mind in hydeous dreames did oft see wondrous shapes Of bodies strange, and huge in growth, and of stupendious makes.”

“At last they brought him to Meronocomoco, where was Powhatan their Emperor. Here more than two hundred of those grim Courtiers stood wondering at him, as he had beene a monster, till Powhatan and his

trayne had put themselves in their greatest braveries. Before a fire upon a seat like a bedstead, he sat covered with a great robe, made of Rarowcun skinnes and all the tayles hanging by. On either hand did sit a young wench of sixteen or eighteen years, and along on each side the house, two rowes of men, and behind them as many women, with all their heads and shoulders painted red; many of their heads bedecked with the white downe of Birds; but everyone with something; and a great chayne of white beads about their necks. At his entrance before the King, all the people gave a great shout. The Queene of Appamatuck was appointed to bring him water to wash his hands, and another brought him a bunch of feathers, instead of a Towell to dry them: having feasted him after their best barbarous manner they could. A long consultation was held, but the conclusion was two great stones were brought before Powhatan; then as many as could layd hands on him, dragged him to them, and thereon laid his head, and being ready with their clubs, to beate out his braines. Pocahontas, the King's dearest daughter, when no entreaty could prevaile, got his head in her armes, and laid her owne upon his to save him from death: whereat the Emperour was contented he should live to make him hatchets, and her bells, beads, and copper: for they thought him as well of all occupations as themselves. For the King himselfe will make his owne robes, shooes, bowes, arrowes, pots, plant, hunt, or doe any thing so well as the rest.

*'They say he bore a pleasant shew,
But sure his heart was sad
For who can pleasant be, and rest,
That lives in feare and dread.
And having life suspected, doth
If still suspected lead.'*

"Two days after, Powhatan having disguised himselfe in the most fearfullest manner he could, caused Capt. Smith to be brought forth to a great house in the woods and there upon a mat by the fire to be left alone. Not long after from behinde a mat that divided the house, was made the most dolefullest noyse he ever heard: then Powhatan more like a devill than a man with some two hundred more as blacke as himseffe, came unto him and told him now they were friends, and presently he should goe to James town, to send him two great gunnes, and a gryndstone, for which he would give him the country of Capahowojick, and for ever esteeme him as his sonn Nantaquoud. So to James towne with 12 guides Powhatan sent him. That night they quartered in the woods, he still expecting (as he had done all this long time of his imprisonment) every houre to be put to one death or other; for all their feasting. But almightie God (by his divine providence) had mollified the hearts of those sterne Barbarians with compassion. The next morning betimes they came to the Fort, where Smith having used the salvages with what kindnesse he could, he shewed Rawhunt, Powhatan's trusty servant, two demiculverings and a millstone to carry Powhatan; they found them somewhat too heavie; but when they did see him discharge them, being loaded with stones, among the boughs of a great tree loaded with Isickles, the yce and branches came so tumbling downe, that the poore Salvages ran away halfe dead with feare. But at last we regained some conference with them and gave them such toys: and sent to Powhatan, his women, and children such presents, and gave them in generall full content. Now in James Towne they were all in combustion, the strongest preparing once more to run away with the Pinnace; which with the hazard of his life, with Sakre falcon and musketshot, Smith forced now the third time to stay or sinke. Some no better then they should be had plotted with the President, the next day to have put him to death by the Leviticall law, for the lives of Robinson and Emry, pretending the fault was his that had led them to their ends; but he quickly tooke such order with such Lawyers, that he layed them by the heeles till he sent some of them prisoners for England. Now ever once in four or five dayes, Pocahontas with her attendants, brought him so much provision, that saved many of their lives, that els for all this had starved with hunger.

*'Thus from numbe death our good God sent reliefe,
The sweete asswager of all other grieffe.'*

"His relation of the plenty he had scene, especially at Werawocomoco, and of the state and bountie of Powhatan (which till that time was unknowne), so revived their dead spirits (especially the love of Pocahontas) as all men's feare was abandoned."

We should like to think original, in the above, the fine passage, in which Smith, by means of a simple compass dial, demonstrated the roundness of the earth, and skies, the sphere of the sun, moon, and stars, and how the sun did chase the night round about the world continually; the greatness of the land and sea, the diversity of nations, variety of complexions, and how we were to them antipodes, so that the Indians stood amazed with admiration.

Captain Smith up to his middle in a Chickahominy swamp, discoursing on these high themes to a Pamunkey Indian, of whose language Smith was wholly ignorant, and who did not understand a word of English, is much more heroic, considering the adverse circumstances, and appeals more to the imagination, than the long-haired Iopas singing the song of Atlas, at the banquet given to AEneas, where Trojans and Tyrians drained the flowing bumpers while Dido drank long draughts of love. Did Smith, when he was in the neighborhood of Carthage pick up some such literal translations of the song of Atlas' as this:

"He sang the wandering moon, and the labors of the Sun; From whence the race of men and flocks; whence rain and lightning; Of Arcturus, the rainy Hyades, and the twin Triones; Why the winter suns hasten so much to touch themselves in the ocean, And what delay retards the slow nights."

The scene of the rescue only occupies seven lines and the reader feels that, after all, Smith has not done full justice to it. We cannot, therefore, better conclude this romantic episode than by quoting the description of it given with an elaboration of language that must be, pleasing to the shade of Smith, by John Burke in his History of Virginia:

"Two large stones were brought in, and placed at the feet of the emperor; and on them was laid the head of the prisoner; next a large club was brought in, with which Powhatan, for whom, out of respect, was reserved this honor, prepared to crush the head of his captive. The assembly looked on with sensations of awe, probably not unmixed with pity for the fate of an enemy whose bravery had commanded their admiration, and in whose misfortunes their hatred was possibly forgotten.

"The fatal club was uplifted: the breasts of the company already by anticipation felt the dreadful crash,

which was to bereave the wretched victim of life: when the young and beautiful Pocahontas, the beloved daughter of the emperor, with a shriek of terror and agony threw herself on the body of Smith; Her hair was loose, and her eyes streaming with tears, while her whole manner bespoke the deep distress and agony of her bosom. She cast a beseeching look at her furious and astonished father, deprecating his wrath, and imploring his pity and the life of his prisoner, with all the eloquence of mute but impassioned sorrow.

"The remainder of this scene is honorable to Powhatan. It will remain a lasting monument, that tho' different principles of action, and the influence of custom, have given to the manners and opinions of this people an appearance neither amiable nor virtuous, they still retain the noblest property of human character, the touch of pity and the feeling of humanity.

"The club of the emperor was still uplifted; but pity had touched his bosom, and his eye was every moment losing its fierceness; he looked around to collect his fortitude, or perhaps to find an excuse for his weakness in the faces of his attendants. But every eye was suffused with the sweetly contagious softness. The generous savage no longer hesitated. The compassion of the rude state is neither ostentatious nor dilating: nor does it insult its object by the exaction of impossible conditions. Powhatan lifted his grateful and delighted daughter, and the captive, scarcely yet assured of safety, from the earth...."

"The character of this interesting woman, as it stands in the concurrent accounts of all our historians, is not, it is with confidence affirmed, surpassed by any in the whole range of history; and for those qualities more especially which do honor to our nature—an humane and feeling heart, an ardor and unshaken constancy in her attachments—she stands almost without a rival.

"At the first appearance of the Europeans her young heart was impressed with admiration of the persons and manners of the strangers; but it is not during their prosperity that she displays her attachment. She is not influenced by awe of their greatness, or fear of their resentment, in the assistance she affords them. It was during their severest distresses, when their most celebrated chief was a captive in their hands, and was dragged through the country as a spectacle for the sport and derision of their people, that she places herself between him and destruction.

"The spectacle of Pocahontas in an attitude of entreaty, with her hair loose, and her eyes streaming with tears, supplicating with her enraged father for the life of Captain Smith when he was about to crush the head of his prostrate victim with a club, is a situation equal to the genius of Raphael. And when the royal savage directs his ferocious glance for a moment from his victim to reprove his weeping daughter, when softened by her distress his eye loses its fierceness, and he gives his captive to her tears, the painter will discover a new occasion for exercising his talents."

The painters have availed themselves of this opportunity. In one picture Smith is represented stiffly extended on the greensward (of the woods), his head resting on a stone, appropriately clothed in a dresscoat, knee-breeches, and silk stockings; while Powhatan and the other savages stand ready for murder, in full-dress parade costume; and Pocahontas, a full-grown woman, with long, disheveled hair, in the sentimental dress and attitude of a Letitia E. Landon of the period, is about to cast herself upon the imperiled and well-dressed Captain.

Must we, then, give up the legend altogether, on account of the exaggerations that have grown up about it, our suspicion of the creative memory of Smith, and the lack of all contemporary allusion to it? It is a pity to destroy any pleasing story of the past, and especially to discharge our hard struggle for a foothold on this continent of the few elements of romance. If we can find no evidence of its truth that stands the test of fair criticism, we may at least believe that it had some slight basis on which to rest. It is not at all improbable that Pocahontas, who was at that time a precocious maid of perhaps twelve or thirteen years of age (although Smith mentions her as a child of ten years old when she came to the camp after his release), was touched with compassion for the captive, and did influence her father to treat him kindly.

IX. SMITH'S WAY WITH THE INDIANS

As we are not endeavoring to write the early history of Virginia, but only to trace Smith's share in it, we proceed with his exploits after the arrival of the first supply, consisting of near a hundred men, in two ships, one commanded by Captain Newport and the other by Captain Francis Nelson. The latter, when in sight of Cape Henry, was driven by a storm back to the West Indies, and did not arrive at James River with his vessel, the Phoenix, till after the departure of Newport for England with his load of "golddust," and Master Wingfield and Captain Arthur.

In his "True Relation," Smith gives some account of his exploration of the Pamunkey River, which he sometimes calls the "Youghtamand," upon which, where the water is salt, is the town of Werowocomoco. It can serve no purpose in elucidating the character of our hero to attempt to identify all the places he visited.

It was at Werowocomoco that Smith observed certain conjurations of the medicine men, which he supposed had reference to his fate. From ten o'clock in the morning till six at night, seven of the savages, with rattles in their hands, sang and danced about the fire, laying down grains of corn in circles, and with vehement actions, casting cakes of deer suet, deer, and tobacco into the fire, howling without ceasing. One of them was "disfigured with a great skin, his head hung around with little skins of weasels and other vermin, with a crownlet of feathers on his head, painted as ugly as the devil." So fat they fed him that he much doubted they intended to sacrifice him to the Quiyoughquosicke, which is a superior power they worship: a more uglier thing cannot be described. These savages buried their dead with great sorrow and weeping, and they acknowledge no resurrection. Tobacco they offer to the water to secure a good passage in foul weather. The descent of the crown is to the first heirs of the king's sisters, "for the kings have as many women as they will, the subjects two, and most but one."

After Smith's return, as we have read, he was saved from a plot to take his life by the timely arrival of Captain Newport. Somewhere about this time the great fire occurred. Smith was now one of the Council; Martin and Matthew Scrivener, just named, were also councilors. Ratcliffe was still President. The savages, owing to their acquaintance with and confidence in Captain Smith, sent in abundance of provision. Powhatan sent once or twice a week "deer, bread, raugroughcuns (probably not to be confounded with the rahaughcuns [raccoons] spoken of before, but probably 'rawcomens,' mentioned in the Description of Virginia), half for Smith, and half for his father, Captain Newport." Smith had, in his intercourse with the natives, extolled the greatness of Newport, so that they conceived him to be the chief and all the rest his children, and regarded him as an oracle, if not a god.

Powhatan and the rest had, therefore, a great desire to see this mighty person. Smith says that the President and Council greatly envied his reputation with the Indians, and wrought upon them to believe, by giving in trade four times as much as the price set by Smith, that their authority exceeded his as much as their bounty.

We must give Smith the credit of being usually intent upon the building up of the colony, and establishing permanent and livable relations with the Indians, while many of his companions in authority seemed to regard the adventure as a temporary occurrence, out of which they would make what personal profit they could. The new-comers on a vessel always demoralized the trade with the Indians, by paying extravagant prices. Smith's relations with Captain Newport were peculiar. While he magnified him to the Indians as the great power, he does not conceal his own opinion of his ostentation and want of shrewdness. Smith's attitude was that of a priest who puts up for the worship of the vulgar an idol, which he knows is only a clay image stuffed with straw.

In the great joy of the colony at the arrival of the first supply, leave was given to sailors to trade with the Indians, and the new-comers soon so raised prices that it needed a pound of copper to buy a quantity of provisions that before had been obtained for an ounce. Newport sent great presents to Powhatan, and, in response to the wish of the "Emperor," prepared to visit him. "A great coyle there was to set him forward," says Smith. Mr. Scrivener and Captain Smith, and a guard of thirty or forty, accompanied him. On this expedition they found the mouth of the Pamaunck (now York) River. Arriving at Werowocomoco, Newport, fearing treachery, sent Smith with twenty men to land and make a preliminary visit. When they came ashore they found a network of creeks which were crossed by very shaky bridges, constructed of crotched sticks and poles, which had so much the appearance of traps that Smith would not cross them until many of the Indians had preceded him, while he kept others with him as hostages. Three hundred savages conducted him to Powhatan, who received him in great state. Before his house were ranged forty or fifty great platters of fine bread. Entering his house, "with loude tunes they made all signs of great joy." In the first account Powhatan is represented as surrounded by his principal women and chief men, "as upon a throne at the upper end of the house, with such majesty as I cannot express, nor yet have often seen, either in Pagan or Christian." In the later account he is "sitting upon his bed of mats, his pillow of leather embroidered (after their rude manner with pearls and white beads), his attire a fair robe of skins as large as an Irish mantel; at his head and feet a handsome young woman; on each side of his house sat twenty of his concubines, their heads and shoulders painted red, with a great chain of white beads about each of their necks. Before those sat his chieftest men in like order in his arbor-like house." This is the scene that figures in the old copper-plate engravings. The Emperor welcomed Smith with a kind countenance, caused him to sit beside him, and with pretty discourse they renewed their old acquaintance. Smith presented him with a suit of red cloth, a white greyhound, and a hat. The Queen of Apamatuc, a comely young savage, brought him water, a turkeycock, and bread to eat. Powhatan professed great content with Smith, but desired to see his father, Captain Newport. He inquired also with a merry countenance after the piece of ordnance that Smith had promised to send him, and Smith, with equal jocularly, replied that he had offered the men four demi-culverins, which they found too heavy to carry. This night they quartered with Powhatan, and were liberally feasted, and entertained with singing, dancing, and orations.

The next day Captain Newport came ashore. The two monarchs exchanged presents. Newport gave Powhatan a white boy thirteen years old, named Thomas Savage. This boy remained with the Indians and served the colony many years as an interpreter. Powhatan gave Newport in return a bag of beans and an Indian named Namontack for his servant. Three or four days they remained, feasting, dancing, and trading with the Indians.

In trade the wily savage was more than a match for Newport. He affected great dignity; it was unworthy such great werowances to dicker; it was not agreeable to his greatness in a peddling manner to trade for trifles; let the great Newport lay down his commodities all together, and Powhatan would take what he wished, and recompense him with a proper return. Smith, who knew the Indians and their ostentation, told Newport that the intention was to cheat him, but his interference was resented. The result justified Smith's suspicion. Newport received but four bushels of corn when he should have had twenty hogsheads. Smith then tried his hand at a trade. With a few blue beads, which he represented as of a rare substance, the color of the skies, and worn by the greatest kings in the world, he so inflamed the desire of Powhatan that he was half mad to possess such strange jewels, and gave for them 200 to 300 bushels of corn, "and yet," says Smith, "parted good friends."

At this time Powhatan, knowing that they desired to invade or explore Monacan, the country above the Falls, proposed an expedition, with men and boats, and "this faire tale had almost made Captain Newport undertake by this means to discover the South Sea," a project which the adventurers had always in mind. On this expedition they sojourned also with the King of Pamaunke.

Captain Newport returned to England on the 10th of April. Mr. Scrivener and Captain Smith were now in fact the sustainers of the colony. They made short expeditions of exploration. Powhatan and other chiefs still professed friendship and sent presents, but the Indians grew more and more offensive, lurking about and stealing all they could lay hands on. Several of them were caught and confined in the fort, and, guarded, were conducted to the morning and evening prayers. By threats and slight torture, the captives were made to confess the hostile intentions of Powhatan and the other chiefs, which was to steal their weapons and then

overpower the colony. Rigorous measures were needed to keep the Indians in check, but the command from England not to offend the savages was so strict that Smith dared not chastise them as they deserved. The history of the colony all this spring of 1608 is one of labor and discontent, of constant annoyance from the Indians, and expectations of attacks. On the 20th of April, while they were hewing trees and setting corn, an alarm was given which sent them all to their arms. Fright was turned into joy by the sight of the Phoenix, with Captain Nelson and his company, who had been for three months detained in the West Indies, and given up for lost.

Being thus re-enforced, Smith and Scrivener desired to explore the country above the Falls, and got ready an expedition. But this, Martin, who was only intent upon loading the return ship with "his phantastical gold," opposed, and Nelson did not think he had authority to allow it, unless they would bind themselves to pay the hire of the ships. The project was therefore abandoned. The Indians continued their depredations. Messages daily passed between the fort and the Indians, and treachery was always expected. About this time the boy Thomas Savage was returned, with his chest and clothing.

The colony had now several of the Indians detained in the fort. At this point in the "True Relation" occurs the first mention of Pocahontas. Smith says: "Powhatan, understanding we detained certain Salvages, sent his daughter, a child of tenne years old, which not only for feature, countenance, and proportion much exceeded any of his people, but for wit and spirit, the only nonpareil of his country." She was accompanied by his trusty messenger Rawhunt, a crafty and deformed savage, who assured Smith how much Powhatan loved and respected him and, that he should not doubt his kindness, had sent his child, whom he most esteemed, to see him, and a deer, and bread besides for a present; "desiring us that the boy might come again, which he loved exceedingly, his little daughter he had taught this lesson also: not taking notice at all of the Indians that had been prisoners three days, till that morning that she saw their fathers and friends come quietly and in good terms to entreat their liberty."

Opechancanough (the King of "Pamauk") also sent asking the release of two that were his friends; and others, apparently with confidence in the whites, came begging for the release of the prisoners. "In the afternoon they being gone, we guarded them [the prisoners] as before to the church, and after prayer gave them to Pocahuntas, the King's daughter, in regard to her father's kindness in sending her: after having well fed them, as all the time of their imprisonment, we gave them their bows, arrows, or what else they had, and with much content sent them packing; Pocahuntas, also, we requited with such trifles as contented her, to tell that we had used the Paspahayans very kindly in so releasing them."

This account would show that Pocahontas was a child of uncommon dignity and self-control for her age. In his letter to Queen Anne, written in 1616, he speaks of her as aged twelve or thirteen at the time of his captivity, several months before this visit to the fort.

The colonists still had reasons to fear ambushes from the savages lurking about in the woods. One day a Paspahayan came with a glittering mineral stone, and said he could show them great abundance of it. Smith went to look for this mine, but was led about hither and thither in the woods till he lost his patience and was convinced that the Indian was fooling him, when he gave him twenty lashes with a rope, handed him his bows and arrows, told him to shoot if he dared, and let him go. Smith had a prompt way with the Indians. He always traded "squarely" with them, kept his promises, and never hesitated to attack or punish them when they deserved it. They feared and respected him.

The colony was now in fair condition, in good health, and contented; and it was believed, though the belief was not well founded, that they would have lasting peace with the Indians. Captain Nelson's ship, the Phoenix, was freighted with cedar wood, and was despatched for England June 8, 1608. Captain Martin, "always sickly and unserviceable, and desirous to enjoy the credit of his supposed art of finding the gold mine," took passage. Captain Nelson probably carried Smith's "True Relation."

X. DISCOVERY OF THE CHESAPEAKE

On the same day that Nelson sailed for England, Smith set out to explore the Chesapeake, accompanying the Phoenix as far as Cape Henry, in a barge of about three tons. With him went Dr. Walter Russell, six gentlemen, and seven soldiers. The narrative of the voyage is signed by Dr. Russell, Thomas Momford, gentleman, and Anas Todkill, soldier. Master Scrivener remained at the fort, where his presence was needed to keep in check the prodigal waste of the stores upon his parasites by President Ratcliffe.

The expedition crossed the bay at "Smith's Isles," named after the Captain, touched at Cape Charles, and coasted along the eastern shore. Two stout savages hailed them from Cape Charles, and directed them to Accomack, whose king proved to be the most comely and civil savage they had yet encountered.

He told them of a strange accident that had happened. The parents of two children who had died were moved by some phantasy to revisit their dead carcasses, "whose benumbed bodies reflected to the eyes of the beholders such delightful countenances as though they had regained their vital spirits." This miracle drew a great part of the King's people to behold them, nearly all of whom died shortly afterward. These people spoke the language of Powhatan. Smith explored the bays, isles, and islets, searching for harbors and places of habitation. He was a born explorer and geographer, as his remarkable map of Virginia sufficiently testifies. The company was much tossed about in the rough waves of the bay, and had great difficulty in procuring drinking-water. They entered the Wighcocomoco, on the east side, where the natives first threatened and then received them with songs, dancing, and mirth. A point on the mainland where they found a pond of fresh water they named "Poynt Ployer in honer of the most honorable house of Monsay, in Britaine, that in an extreme extremitie once relieved our Captain." This reference to the Earl of Ployer, who was kind to Smith in his youth, is only an instance of the care with which he edited these narratives of his own exploits, which were nominally written by his companions.

The explorers were now assailed with violent storms, and at last took refuge for two days on some uninhabited islands, which by reason of the ill weather and the hurly-burly of thunder, lightning, wind, and rain, they called "Limbo." Repairing their torn sails with their shirts, they sailed for the mainland on the east, and ran into a river called Cuskarawook (perhaps the present Annomessie), where the inhabitants received them with showers of arrows, ascending the trees and shooting at them. The next day a crowd came dancing to the shore, making friendly signs, but Smith, suspecting villainy, discharged his muskets into them. Landing toward evening, the explorers found many baskets and much blood, but no savages. The following day, savages to the number, the account wildly says, of two or three thousand, came to visit them, and were very friendly. These tribes Smith calls the Sarapinagh, Nause, Arseek, and Nantaquak, and says they are the best merchants of that coast. They told him of a great nation, called the Massawomeks, of whom he set out in search, passing by the Limbo, and coasting the west side of Chesapeake Bay. The people on the east side he describes as of small stature.

They anchored at night at a place called Richard's Cliffs, north of the Pawtuxet, and from thence went on till they reached the first river navigable for ships, which they named the Bolus, and which by its position on Smith's map may be the Severn or the Patapasco.

The men now, having been kept at the oars ten days, tossed about by storms, and with nothing to eat but bread rotten from the wet, supposed that the Captain would turn about and go home. But he reminded them how the company of Ralph Lane, in like circumstances, importuned him to proceed with the discovery of Moratico, alleging that they had yet a dog that boiled with sassafrks leaves would richly feed them. He could not think of returning yet, for they were scarce able to say where they had been, nor had yet heard of what they were sent to seek. He exhorted them to abandon their childish fear of being lost in these unknown, large waters, but he assured them that return he would not, till he had seen the Massawomeks and found the Patowomek.

On the 16th of June they discovered the River Patowomek (Potomac), seven miles broad at the mouth, up which they sailed thirty miles before they encountered any inhabitants. Four savages at length appeared and conducted them up a creek where were three or four thousand in ambush, "so strangely painted, grimed, and disguised, shouting, yelling, and crying as so many spirits from hell could not have showed more terrible." But the discharge of the firearms and the echo in the forest so appeased their fury that they threw down their bows, exchanged hostages, and kindly used the strangers. The Indians told him that Powhatan had commanded them to betray them, and the serious charge is added that Powhatan, "so directed from the discontents at Jamestown because our Captain did cause them to stay in their country against their wills." This reveals the suspicion and thoroughly bad feeling existing among the colonists.

The expedition went up the river to a village called Patowomek, and thence rowed up a little River Quiyough (Acquia Creek?) in search of a mountain of antimony, which they found. The savages put this antimony up in little bags and sold it all over the country to paint their bodies and faces, which made them look like Blackamoors dusted over with silver. Some bags of this they carried away, and also collected a good amount of furs of otters, bears, martens, and minks. Fish were abundant, "lying so thick with their heads above water, as for want of nets (our barge driving among them) we attempted to catch them with a frying-pan; but we found it a bad instrument to catch fish with; neither better fish, more plenty, nor more variety for small fish, had any of us ever seen in any place, so swimming in the water, but they are not to be caught with frying-pans."

In all his encounters and quarrels with the treacherous savages Smith lost not a man; it was his habit when he encountered a body of them to demand their bows, arrows, swords, and furs, and a child or two as hostages.

Having finished his discovery he returned. Passing the mouth of the Rappahannock, by some called the Tappahannock, where in shoal water were many fish lurking in the weeds, Smith had his first experience of the Stingray. It chanced that the Captain took one of these fish from his sword, "not knowing her condition, being much the fashion of a Thornbeck, but a long tayle like a riding rodde whereon the middest is a most poysonne sting of two or three inches long, bearded like a saw on each side, which she struck into the wrist of his arme neare an inch and a half." The arm and shoulder swelled so much, and the torment was so great, that "we all with much sorrow concluded his funerale, and prepared his grave in an island by, as himself directed." But it "pleased God by a precious oyle Dr. Russell applied to it that his tormenting paine was so assuaged that he ate of that fish to his supper."

Setting sail for Jamestown, and arriving at Kecoughtan, the sight of the furs and other plunder, and of Captain Smith wounded, led the Indians to think that he had been at war with the Massawomeks; which opinion Smith encouraged. They reached Jamestown July 21st, in fine spirits, to find the colony in a mutinous condition, the last arrivals all sick, and the others on the point of revenging themselves on the silly President, who had brought them all to misery by his riotous consumption of the stores, and by forcing them to work on an unnecessary pleasure-house for himself in the woods. They were somewhat appeased by the good news of the discovery, and in the belief that their bay stretched into the South Sea; and submitted on condition that Ratcliffe should be deposed and Captain Smith take upon himself the government, "as by course it did belong." He consented, but substituted Mr. Scrivener, his dear friend, in the presidency, distributed the provisions, appointed honest men to assist Mr. Scrivener, and set out on the 24th, with twelve men, to finish his discovery.

He passed by the Patowomek River and hasted to the River Bolus, which he had before visited. In the bay they fell in with seven or eight canoes full of the renowned Massawomeks, with whom they had a fight, but at length these savages became friendly and gave them bows, arrows, and skins. They were at war with the Tockwoghes. Proceeding up the River Tockwogh, the latter Indians received them with friendship, because they had the weapons which they supposed had been captured in a fight with the Massawomeks. These Indians had hatchets, knives, pieces of iron and brass, they reported came from the Susquesahanocks, a mighty people, the enemies of the Massawomeks, living at the head of the bay. As Smith in his barge could not ascend to them, he sent an interpreter to request a visit from them. In three or four days sixty of these giant-like people came down with presents of venison, tobacco-pipes three feet in length, baskets, targets,

and bows and arrows. Some further notice is necessary of this first appearance of the Susquehannocks, who became afterwards so well known, by reason of their great stature and their friendliness. Portraits of these noble savages appeared in De Bry's voyages, which were used in Smith's map, and also by Strachey. These beautiful copperplate engravings spread through Europe most exaggerated ideas of the American savages.

"Our order," says Smith, "was daily to have prayers, with a psalm, at which solemnity the poor savages wondered." When it was over the Susquesahanocks, in a fervent manner, held up their hands to the sun, and then embracing the Captain, adored him in like manner. With a furious manner and "a hellish voyce" they began an oration of their loves, covered him with their painted bear-skins, hung a chain of white beads about his neck, and hailed his creation as their governor and protector, promising aid and victuals if he would stay and help them fight the Massawomeks. Much they told him of the Atquanachuks, who live on the Ocean Sea, the Massawomeks and other people living on a great water beyond the mountain (which Smith understood to be some great lake or the river of Canada), and that they received their hatchets and other commodities from the French. They mourned greatly at Smith's departure. Of Powhatan they knew nothing but the name.

Strachey, who probably enlarges from Smith his account of the same people, whom he calls Sasquesahanougs, says they were well-proportioned giants, but of an honest and simple disposition. Their language well beseeemed their proportions, "sounding from them as it were a great voice in a vault or cave, as an ecco." The picture of one of these chiefs is given in De Bry, and described by Strachey, "the calf of whose leg was three-quarters of a yard about, and all the rest of his limbs so answerable to the same proportions that he seemed the goodliest man they ever saw."

It would not entertain the reader to follow Smith in all the small adventures of the exploration, during which he says he went about 3,000 miles (three thousand miles in three or four weeks in a rowboat is nothing in Smith's memory), "with such watery diet in these great waters and barbarous countries." Much hardship he endured, alternately skirmishing and feasting with the Indians; many were the tribes he struck an alliance with, and many valuable details he added to the geographical knowledge of the region. In all this exploration Smith showed himself skillful as he was vigorous and adventurous.

He returned to James River September 7th. Many had died, some were sick, Ratcliffe, the late President, was a prisoner for mutiny, Master Scrivener had diligently gathered the harvest, but much of the provisions had been spoiled by rain. Thus the summer was consumed, and nothing had been accomplished except Smith's discovery.

XI. SMITH'S PRESIDENCY AND PROWESS

On the 10th of September, by the election of the Council and the request of the company, Captain Smith received the letters-patent, and became President. He stopped the building of Ratcliffe's "palace," repaired the church and the storehouse, got ready the buildings for the supply expected from England, reduced the fort to a "five square form," set and trained the watch and exercised the company every Saturday on a plain called Smithfield, to the amazement of the on-looking Indians.

Captain Newport arrived with a new supply of seventy persons. Among them were Captain Francis West, brother to Lord Delaware, Captain Peter Winne, and Captain Peter Waldo, appointed on the Council, eight Dutchmen and Poles, and Mistress Forest and Anne Burrows her maid, the first white women in the colony.

Smith did not relish the arrival of Captain Newport nor the instructions under which he returned. He came back commanded to discover the country of Monacan (above the Falls) and to perform the ceremony of coronation on the Emperor Powhatan.

How Newport got this private commission when he had returned to England without a lump of gold, nor any certainty of the South Sea, or one of the lost company sent out by Raleigh; and why he brought a "fine peeced barge" which must be carried over unknown mountains before it reached the South Sea, he could not understand. "As for the coronation of Powhatan and his presents of basin and ewer, bed, bedding, clothes, and such costly novelties, they had been much better well spared than so ill spent, for we had his favor and better for a plain piece of copper, till this stately kind of soliciting made him so much overvalue himself that he respected us as much as nothing at all." Smith evidently understood the situation much better than the promoters in England; and we can quite excuse him in his rage over the foolishness and greed of most of his companions. There was little nonsense about Smith in action, though he need not turn his hand on any man of that age as a boaster.

To send out Poles and Dutchmen to make pitch, tar, and glass would have been well enough if the colony had been firmly established and supplied with necessaries; and they might have sent two hundred colonists instead of seventy, if they had ordered them to go to work collecting provisions of the Indians for the winter, instead of attempting this strange discovery of the South Sea, and wasting their time on a more strange coronation. "Now was there no way," asks Smith, "to make us miserable," but by direction from England to perform this discovery and coronation, "to take that time, spend what victuals we had, tire and starve our men, having no means to carry victuals, ammuniton, the hurt or the sick, but on their own backs?"

Smith seems to have protested against all this nonsense, but though he was governor, the Council overruled him. Captain Newport decided to take one hundred and twenty men, fearing to go with a less number and journey to Werowocomoco to crown Powhatan. In order to save time Smith offered to take a message to Powhatan, and induce him to come to Jamestown and receive the honor and the presents. Accompanied by only four men he crossed by land to Werowocomoco, passed the Pamaunkee (York) River in a canoe, and sent for Powhatan, who was thirty miles off. Meantime Pocahontas, who by his own account was a mere child, and her women entertained Smith in the following manner:

"In a fayre plaine they made a fire, before which, sitting upon a mat, suddenly amongst the woods was

heard such a hydeous noise and shreeking that the English betook themselves to their armes, and seized upon two or three old men, by them supposing Powhatan with all his power was come to surprise them. But presently Pocahontas came, willing him to kill her if any hurt were intended, and the beholders, which were men, women and children, satisfied the Captaine that there was no such matter. Then presently they were presented with this anticke: Thirty young women came naked out of the woods, only covered behind and before with a few greene leaves, their bodies all painted, some of one color, some of another, but all differing; their leader had a fayre payre of Bucks hornes on her head, and an Otters skinne at her girdle, and another at her arme, a quiver of arrows at her backe, a bow and arrows in her hand; the next had in her hand a sword, another a club, another a pot-sticke: all horned alike; the rest every one with their several devises. These fiends with most hellish shouts and cries, rushing from among the trees, cast themselves in a ring about the fire, singing and dancing with most excellent ill-varietie, oft falling into their infernal passions, and solemnly again to sing and dance; having spent nearly an hour in this Mascarado, as they entered, in like manner they departed.

“Having reaccommodated themselves, they solemnly invited him to their lodgings, where he was no sooner within the house, but all these Nymphs more tormented him than ever, with crowding, pressing, and hanging about him, most tediously crying, ‘Love you not me? Love you not me?’ This salutation ended, the feast was set, consisting of all the Salvage dainties they could devise: some attending, others singing and dancing about them: which mirth being ended, with fire brands instead of torches they conducted him to his lodging.”

The next day Powhatan arrived. Smith delivered up the Indian Namontuck, who had just returned from a voyage to England—whither it was suspected the Emperor wished him to go to spy out the weakness of the English tribe—and repeated Father Newport's request that Powhatan would come to Jamestown to receive the presents and join in an expedition against his enemies, the Monacans.

Powhatan's reply was worthy of his imperial highness, and has been copied ever since in the speeches of the lords of the soil to the pale faces: “If your king has sent me present, I also am a king, and this is my land: eight days I will stay to receive them. Your father is to come to me, not I to him, nor yet to your fort, neither will I bite at such a bait; as for the Monacans, I can revenge my own injuries.”

This was the lofty potentate whom Smith, by his way of management, could have tickled out of his senses with a glass bead, and who would infinitely have preferred a big shining copper kettle to the misplaced honor intended to be thrust upon him, but the offer of which puffed him up beyond the reach of negotiation. Smith returned with his message. Newport despatched the presents round by water a hundred miles, and the Captains, with fifty soldiers, went over land to Werowocomoco, where occurred the ridiculous ceremony of the coronation, which Smith describes with much humor. “The next day,” he says, “was appointed for the coronation. Then the presents were brought him, his bason and ewer, bed and furniture set up, his scarlet cloke and apparel, with much adoe put on him, being persuaded by Namontuck they would not hurt him. But a foule trouble there was to make him kneel to receive his Crown; he not knowing the majesty nor wearing of a Crown, nor bending of the knee, endured so many persuasions, examples and instructions as tyred them all. At last by bearing hard on his shoulders, he a little stooped, and three having the crown in their hands put it on his head, when by the warning of a pistoll the boats were prepared with such a volley of shot that the king start up in a horrible feare, till he saw all was well. Then remembering himself to congratulate their kindness he gave his old shoes and his mantell to Captain Newport!”

The Monacan expedition the King discouraged, and refused to furnish for it either guides or men. Besides his old shoes, the crowned monarch charitably gave Newport a little heap of corn, only seven or eight bushels, and with this little result the absurd expedition returned to Jamestown.

Shortly after Captain Newport with a chosen company of one hundred and twenty men (leaving eighty with President Smith in the fort) and accompanied by Captain Waldo, Lieutenant Percy, Captain Winne, Mr. West, and Mr. Scrivener, who was eager for adventure, set off for the discovery of Monacan. The expedition, as Smith predicted, was fruitless: the Indians deceived them and refused to trade, and the company got back to Jamestown, half of them sick, all grumbling, and worn out with toil, famine, and discontent.

Smith at once set the whole colony to work, some to make glass, tar, pitch, and soap-ashes, and others he conducted five miles down the river to learn to fell trees and make clapboards. In this company were a couple of gallants, lately come over, Gabriel Beadle and John Russell, proper gentlemen, but unused to hardships, whom Smith has immortalized by his novel cure of their profanity. They took gayly to the rough life, and entered into the attack on the forest so pleasantly that in a week they were masters of chopping: “making it their delight to hear the trees thunder as they fell, but the axes so often blistered their tender fingers that many times every third blow had a loud othe to drown the echo; for remedie of which sinne the President devised how to have every man's othes numbered, and at night for every othe to have a Canne of water powred downe his sleeve, with which every offender was so washed (himself and all), that a man would scarce hear an othe in a weake.” In the clearing of our country since, this excellent plan has fallen into desuetude, for want of any pious Captain Smith in the logging camps.

These gentlemen, says Smith, did not spend their time in wood-logging like hirelings, but entered into it with such spirit that thirty of them would accomplish more than a hundred of the sort that had to be driven to work; yet, he sagaciously adds, “twenty good workmen had been better than them all.”

Returning to the fort, Smith, as usual, found the time consumed and no provisions got, and Newport's ship lying idle at a great charge. With Percy he set out on an expedition for corn to the Chickahominy, which the insolent Indians, knowing their want, would not supply. Perceiving that it was Powhatan's policy to starve them (as if it was the business of the Indians to support all the European vagabonds and adventurers who came to dispossess them of their country), Smith gave out that he came not so much for corn as to revenge his imprisonment and the death of his men murdered by the Indians, and proceeded to make war. This high-handed treatment made the savages sue for peace, and furnish, although they complained of want themselves, owing to a bad harvest, a hundred bushels of corn.

This supply contented the company, who feared nothing so much as starving, and yet, says Smith, so envied him that they would rather hazard starving than have him get reputation by his vigorous conduct. There is no

contemporary account of that period except this which Smith indited. He says that Newport and Ratcliffe conspired not only to depose him but to keep him out of the fort; since being President they could not control his movements, but that their horns were much too short to effect it.

At this time in the "old Taverne," as Smith calls the fort, everybody who had money or goods made all he could by trade; soldiers, sailors, and savages were agreed to barter, and there was more care to maintain their damnable and private trade than to provide the things necessary for the colony. In a few weeks the whites had bartered away nearly all the axes, chisels, hoes, and picks, and what powder, shot, and pikeheads they could steal, in exchange for furs, baskets, young beasts and such like commodities. Though the supply of furs was scanty in Virginia, one master confessed he had got in one voyage by this private trade what he sold in England for thirty pounds. "These are the Saint-seeming Worthies of Virginia," indignantly exclaims the President, "that have, notwithstanding all this, meate, drinke, and wages." But now they began to get weary of the country, their trade being prevented. "The loss, scorn, and misery was the poor officers, gentlemen and careless governors, who were bought and sold." The adventurers were cheated, and all their actions overthrown by false information and unwise directions.

Master Scrivener was sent with the barges and pinnace to Werowocomoco, where by the aid of Namontuck he procured a little corn, though the savages were more ready to fight than to trade. At length Newport's ship was loaded with clapboards, pitch, tar, glass, frankincense (?) and soapshes, and despatched to England. About two hundred men were left in the colony. With Newport, Smith sent his famous letter to the Treasurer and Council in England. It is so good a specimen of Smith's ability with the pen, reveals so well his sagacity and knowledge of what a colony needed, and exposes so clearly the ill-management of the London promoters, and the condition of the colony, that we copy it entire. It appears by this letter that Smith's "Map of Virginia," and his description of the country and its people, which were not published till 1612, were sent by this opportunity. Captain Newport sailed for England late in the autumn of 1608. The letter reads:

RIGHT HONORABLE, ETC.:

I received your letter wherein you write that our minds are so set upon faction, and idle conceits in dividing the country without your consents, and that we feed you but with ifs and ands, hopes and some few proofes; as if we would keepe the mystery of the businesse to ourselves: and that we must expressly follow your instructions sent by Captain Newport: the charge of whose voyage amounts to neare two thousand pounds, the which if we cannot defray by the ships returne we are likely to remain as banished men. To these particulars I humbly intreat your pardons if I offend you with my rude answer.

For our factions, unless you would have me run away and leave the country, I cannot prevent them; because I do make many stay that would else fly away whither. For the Idle letter sent to my Lord of Salisbury, by the President and his confederates, for dividing the country, &c., what it was I know not, for you saw no hand of mine to it; nor ever dream't I of any such matter. That we feed you with hopes, &c. Though I be no scholar, I am past a schoolboy; and I desire but to know what either you and these here doe know, but that I have learned to tell you by the continuall hazard of my life. I have not concealed from you anything I know; but I feare some cause you to believe much more than is true.

Expressly to follow your directions by Captain Newport, though they be performed, I was directly against it; but according to our commission, I was content to be overouled by the major part of the Councill, I feare to the hazard of us all; which now is generally confessed when it is too late. Onely Captaine Winne and Captaine Walclo I have sworne of the Councill, and crowned Powhattan according to your instructions.

For the charge of the voyage of two or three thousand pounds we have not received the value of one hundred pounds, and for the quartered boat to be borne by the souldiers over the falls. Newport had 120 of the best men he could chuse. If he had burnt her to ashes, one might have carried her in a bag, but as she is, five hundred cannot to a navigable place above the falls. And for him at that time to find in the South Sea a mine of gold; or any of them sent by Sir Walter Raleigh; at our consultation I told them was as likely as the rest. But during this great discovery of thirtie miles (which might as well have been done by one man, and much more, for the value of a pound of copper at a seasonable tyme), they had the pinnace and all the boats with them but one that remained with me to serve the fort. In their absence I followed the new begun works of Pitch and Tarre, Glasse, Sope-ashes, Clapboord, whereof some small quantities we have sent you. But if you rightly consider what an infinite toyle it is in Russia and Swethland, where the woods are proper for naught els, and though there be the helpe both of man and beast in those ancient commonwealths, which many an hundred years have used it, yet thousands of those poor people can scarce get necessaries to live, but from hand to mouth, and though your factors there can buy as much in a week as will fraught you a ship, or as much as you please, you must not expect from us any such matter, which are but as many of ignorant, miserable soules, that are scarce able to get wherewith to live, and defend ourselves against the inconstant Salvages: finding but here and there a tree fit for the purpose, and want all things else the Russians have. For the Coronation of Powhattan, by whose advice you sent him such presents, I know not; but this give me leave to tell you, I feare they will be the confusion of us all ere we heare from you again. At your ships arrivall, the Salvages harvest was newly gathered, and we going to buy it, our owne not being halve sufficient for so great a number. As for the two ships loading of corne Newport promised to provide us from Powhattan, he brought us but fourteen bushels; and from the Monacans nothing, but the most of the men sicke and neare famished. From your ship we had not provision in victuals worth twenty pound, and we are more than two hundred to live upon this, the one halfe sicke, the other little better. For the saylers (I confesse), they daily make good cheare, but our dyet is a little meale and water, and not sufficient of that. Though there be fish in the Sea, fowles in the ayre, and beasts in the woods, their bounds are so large, they so wilde, and we so weake and ignorant, we cannot much trouble them. Captaine Newport we much suspect to be the Author of these inventions. Now that you should know, I have made you as great a discovery as he, for less charge than he spendeth you every meale; I had sent you this mappe of the Countries and Nations that inhabit them, as you may see at large. Also two barrels of stones, and such as I take to be good. Iron ore at the least; so divided, as by their notes you may see in what places I found them. The souldiers say many of your officers maintaine their families out of that you sent us, and that Newport hath an hundred pounds a year for carrying newes. For every master you have yet sent can find the way as well as he, so that an hundred pounds might be

spared, which is more than we have all, that helps to pay him wages. Cap. Ratliffe is now called Sicklemore, a poore counterfeited Imposture. I have sent you him home least the Company should cut his throat. What he is, now every one can tell you: if he and Archer returne againe, they are sufficient to keep us always in factions. When you send againe I entreat you rather send but thirty carpenters, husbandmen, gardeners, fishermen, blacksmiths, masons, and diggers up of trees roots, well provided, then a thousand of such as we have; for except wee be able both to lodge them, and feed them, the most will consume with want of necessaries before they can be made good for anything. Thus if you please to consider this account, and the unnecessary wages to Captaine Newport, or his ships so long lingering and staying here (for notwithstanding his boasting to leave us victuals for 12 months, though we had 89 by this discovery lame and sicke, and but a pinte of corne a day for a man, we were constrained to give him three hogsheads of that to victuall him homeward), or yet to send into Germany or Poleland for glassemen and the rest, till we be able to sustaine ourselves, and releve them when they come. It were better to give five hundred pound a ton for those grosse Commodities in Denmarke, then send for them hither, till more necessary things be provided. For in overtoyling our weake and unskilfull bodies, to satisfy this desire of present profit, we can scarce ever recover ourselves from one supply to another. And I humbly intreat you hereafter, let us have what we should receive, and not stand to the Saylers courtesie to leave us what they please, els you may charge us what you will, but we not you with anything. These are the causes that have kept us in Virginia from laying such a foundation that ere this might have given much better content and satisfaction, but as yet you must not look for any profitable returning. So I humbly rest.

After the departure of Newport, Smith, with his accustomed resolution, set to work to gather supplies for the winter. Corn had to be extorted from the Indians by force. In one expedition to Nansemond, when the Indians refused to trade, Smith fired upon them, and then landed and burned one of their houses; whereupon they submitted and loaded his three boats with corn. The ground was covered with ice and snow, and the nights were bitterly cold. The device for sleeping warm in the open air was to sweep the snow away from the ground and build a fire; the fire was then raked off from the heated earth and a mat spread, upon which the whites lay warm, sheltered by a mat hung up on the windward side, until the ground got cold, when they builded a fire on another place. Many a cold winter night did the explorers endure this hardship, yet grew fat and lusty under it.

About this time was solemnized the marriage of John Laydon and Anne Burrows, the first in Virginia. Anne was the maid of Mistress Forrest, who had just come out to grow up with the country, and John was a laborer who came with the first colony in 1607. This was actually the "First Family of Virginia," about which so much has been eloquently said.

Provisions were still wanting. Mr. Scrivener and Mr. Percy returned from an expedition with nothing. Smith proposed to surprise Powhatan, and seize his store of corn, but he says he was hindered in this project by Captain Winne and Mr. Scrivener (who had heretofore been considered one of Smith's friends), whom he now suspected of plotting his ruin in England.

Powhatan on his part sent word to Smith to visit him, to send him men to build a house, give him a grindstone, fifty swords, some big guns, a cock and a hen, much copper and beads, in return for which he would load his ship with corn. Without any confidence in the crafty savage, Smith humored him by sending several workmen, including four Dutchmen, to build him a house. Meantime with two barges and the pinnace and forty-six men, including Lieutenant Percy, Captain Wirt, and Captain William Phittiplace, on the 29th of December he set out on a journey to the Pamaunky, or York, River.

The first night was spent at "Warraskogack," the king of which warned Smith that while Powhatan would receive him kindly he was only seeking an opportunity to cut their throats and seize their arms. Christmas was kept with extreme winds, rain, frost and snow among the savages at Kecoughton, where before roaring fires they made merry with plenty of oysters, fish, flesh, wild fowls and good bread. The President and two others went gunning for birds, and brought down one hundred and forty-eight fowls with three shots.

Ascending the river, on the 12th of January they reached Werowocomoco. The river was frozen half a mile from the shore, and when the barge could not come to land by reason of the ice and muddy shallows, they effected a landing by wading. Powhatan at their request sent them venison, turkeys, and bread; the next day he feasted them, and then inquired when they were going, ignoring his invitation to them to come. Hereupon followed a long game of fence between Powhatan and Captain Smith, each trying to overreach the other, and each indulging profusely in lies and pledges. Each professed the utmost love for the other.

Smith upbraided him with neglect of his promise to supply them with corn, and told him, in reply to his demand for weapons, that he had no arms to spare. Powhatan asked him, if he came on a peaceful errand, to lay aside his weapons, for he had heard that the English came not so much for trade as to invade his people and possess his country, and the people did not dare to bring in their corn while the English were around.

Powhatan seemed indifferent about the building. The Dutchmen who had come to build Powhatan a house liked the Indian plenty better than the risk of starvation with the colony, revealed to Powhatan the poverty of the whites, and plotted to betray them, of which plot Smith was not certain till six months later. Powhatan discoursed eloquently on the advantage of peace over war: "I have seen the death of all my people thrice," he said, "and not any one living of those three generations but myself; I know the difference of peace and war better than any in my country. But I am now old and ere long must die." He wanted to leave his brothers and sisters in peace. He heard that Smith came to destroy his country. He asked him what good it would do to destroy them that provided his food, to drive them into the woods where they must feed on roots and acorns; "and be so hunted by you that I can neither rest, eat nor sleep, but my tired men must watch, and if a twig but break every one crieth, there cometh Captain Smith!" They might live in peace, and trade, if Smith would only lay aside his arms. Smith, in return, boasted of his power to get provisions, and said that he had only been restrained from violence by his love for Powhatan; that the Indians came armed to Jamestown, and it was the habit of the whites to wear their arms. Powhatan then contrasted the liberality of Newport, and told Smith that while he had used him more kindly than any other chief, he had received from him (Smith) the least kindness of any.

Believing that the palaver was only to get an opportunity to cut his throat, Smith got the savages to break

the ice in order to bring up the barge and load it with corn, and gave orders for his soldiers to land and surprise Powhatan; meantime, to allay his suspicions, telling him the lie that next day he would lay aside his arms and trust Powhatan's promises. But Powhatan was not to be caught with such chaff. Leaving two or three women to talk with the Captain he secretly fled away with his women, children, and luggage. When Smith perceived this treachery he fired into the "naked devils" who were in sight. The next day Powhatan sent to excuse his flight, and presented him a bracelet and chain of pearl and vowed eternal friendship.

With matchlocks lighted, Smith forced the Indians to load the boats; but as they were aground, and could not be got off till high water, he was compelled to spend the night on shore. Powhatan and the treacherous Dutchmen are represented as plotting to kill Smith that night. Provisions were to be brought him with professions of friendship, and Smith was to be attacked while at supper. The Indians, with all the merry sports they could devise, spent the time till night, and then returned to Powhatan.

The plot was frustrated in the providence of God by a strange means. "For Pocahuntas his dearest jewele and daughter in that dark night came through the irksome woods, and told our Captaine good cheer should be sent us by and by; but Powhatan and all the power he could make would after come and kill us all, if they that brought it could not kill us with our own weapons when we were at supper. Therefore if we would live she wished us presently to be gone. Such things as she delighted in he would have given her; but with the tears rolling down her cheeks she said she durst not to be seen to have any; for if Powhatan should know it, she were but dead, and so she ran away by herself as she came."

[This instance of female devotion is exactly paralleled in D'Albertis's "New Guinea." Abia, a pretty Biota girl of seventeen, made her way to his solitary habitation at the peril of her life, to inform him that the men of Rapa would shortly bring him insects and other presents, in order to get near him without suspicion, and then kill him. He tried to reward the brave girl by hanging a gold chain about her neck, but she refused it, saying it would betray her. He could only reward her with a fervent kiss, upon which she fled. Smith omits that part of the incident.]

In less than an hour ten burly fellows arrived with great platters of victuals, and begged Smith to put out the matches (the smoke of which made them sick) and sit down and eat. Smith, on his guard, compelled them to taste each dish, and then sent them back to Powhatan. All night the whites watched, but though the savages lurked about, no attack was made. Leaving the four Dutchmen to build Powhatan's house, and an Englishman to shoot game for him, Smith next evening departed for Pamaunkey.

No sooner had he gone than two of the Dutchmen made their way overland to Jamestown, and, pretending Smith had sent them, procured arms, tools, and clothing. They induced also half a dozen sailors, "expert thieves," to accompany them to live with Powhatan; and altogether they stole, besides powder and shot, fifty swords, eight pieces, eight pistols, and three hundred hatchets. Edward Boynton and Richard Savage, who had been left with Powhatan, seeing the treachery, endeavored to escape, but were apprehended by the Indians.

At Pamaunkey there was the same sort of palaver with Opechancanough, the king, to whom Smith the year before had expounded the mysteries of history, geography, and astronomy. After much fencing in talk, Smith, with fifteen companions, went up to the King's house, where presently he found himself betrayed and surrounded by seven hundred armed savages, seeking his life. His company being dismayed, Smith restored their courage by a speech, and then, boldly charging the King with intent to murder him, he challenged him to a single combat on an island in the river, each to use his own arms, but Smith to be as naked as the King. The King still professed friendship, and laid a great present at the door, about which the Indians lay in ambush to kill Smith. But this hero, according to his own account, took prompt measures. He marched out to the King where he stood guarded by fifty of his chiefs, seized him by his long hair in the midst of his men, and pointing a pistol at his breast led, him trembling and near dead with fear amongst all his people. The King gave up his arms, and the savages, astonished that any man dare treat their king thus, threw down their bows. Smith, still holding the King by the hair, made them a bold address, offering peace or war. They chose peace.

In the picture of this remarkable scene in the "General Historie," the savage is represented as gigantic in stature, big enough to crush the little Smith in an instant if he had but chosen. Having given the savages the choice to load his ship with corn or to load it himself with their dead carcasses, the Indians so thronged in with their commodities that Smith was tired of receiving them, and leaving his comrades to trade, he lay down to rest. When he was asleep the Indians, armed some with clubs, and some with old English swords, entered into the house. Smith awoke in time, seized his arms, and others coming to his rescue, they cleared the house.

While enduring these perils, sad news was brought from Jamestown. Mr. Scrivener, who had letters from England (writes Smith) urging him to make himself Caesar or nothing, declined in his affection for Smith, and began to exercise extra authority. Against the advice of the others, he needs must make a journey to the Isle of Hogs, taking with him in the boat Captain Waldo, Anthony Gosnoll (or Gosnold, believed to be a relative of Captain Bartholomew Gosnold), and eight others. The boat was overwhelmed in a storm, and sunk, no one knows how or where. The savages were the first to discover the bodies of the lost. News of this disaster was brought to Captain Smith (who did not disturb the rest by making it known) by Richard Wiffin, who encountered great dangers on the way. Lodging overnight at Powhatan's, he saw great preparations for war, and found himself in peril. Pocahontas hid him for a time, and by her means, and extraordinary bribes, in three days' travel he reached Smith.

Powhatan, according to Smith, threatened death to his followers if they did not kill Smith. At one time swarms of natives, unarmed, came bringing great supplies of provisions; this was to put Smith off his guard, surround him with hundreds of savages, and slay him by an ambush. But he also laid in ambush and got the better of the crafty foe with a superior craft. They sent him poisoned food, which made his company sick, but was fatal to no one. Smith apologizes for temporizing with the Indians at this time, by explaining that his purpose was to surprise Powhatan and his store of provisions. But when they stealthily stole up to the seat of that crafty chief, they found that those "damned Dutchmen" had caused Powhatan to abandon his new house at Werowocomoco, and to carry away all his corn and provisions.

The reward of this wearisome winter campaign was two hundred weight of deer-suet and four hundred and seventy-nine bushels of corn for the general store. They had not to show such murdering and destroying as the Spaniards in their "relations," nor heaps and mines of gold and silver; the land of Virginia was barbarous and ill-planted, and without precious jewels, but no Spanish relation could show, with such scant means, so much country explored, so many natives reduced to obedience, with so little bloodshed.

XII. TRIALS OF THE SETTLEMENT

Without entering at all into the consideration of the character of the early settlers of Virginia and of Massachusetts, one contrast forces itself upon the mind as we read the narratives of the different plantations. In Massachusetts there was from the beginning a steady purpose to make a permanent settlement and colony, and nearly all those who came over worked, with more or less friction, with this end before them. The attempt in Virginia partook more of the character of a temporary adventure. In Massachusetts from the beginning a commonwealth was in view. In Virginia, although the London promoters desired a colony to be fixed that would be profitable to themselves, and many of the adventurers, Captain Smith among them, desired a permanent planting, a great majority of those who went thither had only in mind the advantages of trade, the excitement of a free and licentious life, and the adventure of something new and startling. It was long before the movers in it gave up the notion of discovering precious metals or a short way to the South Sea. The troubles the primitive colony endured resulted quite as much from its own instability of purpose, recklessness, and insubordination as from the hostility of the Indians. The majority spent their time in idleness, quarreling, and plotting mutiny.

The ships departed for England in December, 1608. When Smith returned from his expedition for food in the winter of 1609, he found that all the provision except what he had gathered was so rotted from the rain, and eaten by rats and worms, that the hogs would scarcely eat it. Yet this had been the diet of the soldiers, who had consumed the victuals and accomplished nothing except to let the savages have the most of the tools and a good part of the arms.

Taking stock of what he brought in, Smith found food enough to last till the next harvest, and at once organized the company into bands of ten or fifteen, and compelled them to go to work. Six hours a day were devoted to labor, and the remainder to rest and merry exercises. Even with this liberal allowance of pastime a great part of the colony still sulked. Smith made them a short address, exhibiting his power in the letters-patent, and assuring them that he would enforce discipline and punish the idle and froward; telling them that those that did not work should not eat, and that the labor of forty or fifty industrious men should not be consumed to maintain a hundred and fifty idle loiterers. He made a public table of good and bad conduct; but even with this inducement the worst had to be driven to work by punishment or the fear of it.

The Dutchmen with Powhatan continued to make trouble, and confederates in the camp supplied them with powder and shot, swords and tools. Powhatan kept the whites who were with him to instruct the Indians in the art of war. They expected other whites to join them, and those not coming, they sent Francis, their companion, disguised as an Indian, to find out the cause. He came to the Glass house in the woods a mile from Jamestown, which was the rendezvous for all their villainy. Here they laid an ambush of forty men for Smith, who hearing of the Dutchman, went thither to apprehend him. The rascal had gone, and Smith, sending twenty soldiers to follow and capture him, started alone from the Glass house to return to the fort. And now occurred another of those personal adventures which made Smith famous by his own narration.

On his way he encountered the King of Paspahugh, "a most strong, stout savage," who, seeing that Smith had only his falchion, attempted to shoot him. Smith grappled him; the savage prevented his drawing his blade, and bore him into the river to drown him. Long they struggled in the water, when the President got the savage by the throat and nearly strangled him, and drawing his weapon, was about to cut off his head, when the King begged his life so pitifully, that Smith led him prisoner to the fort and put him in chains.

In the pictures of this achievement, the savage is represented as about twice the size and stature of Smith; another illustration that this heroic soul was never contented to take one of his size.

The Dutchman was captured, who, notwithstanding his excuses that he had escaped from Powhatan and did not intend to return, but was only walking in the woods to gather walnuts, on the testimony of Paspahugh of his treachery, was also "laid by the heels." Smith now proposed to Paspahugh to spare his life if he would induce Powhatan to send back the renegade Dutchmen. The messengers for this purpose reported that the Dutchmen, though not detained by Powhatan, would not come, and the Indians said they could not bring them on their backs fifty miles through the woods. Daily the King's wives, children, and people came to visit him, and brought presents to procure peace and his release. While this was going on, the King, though fettered, escaped. A pursuit only resulted in a vain fight with the Indians. Smith then made prisoners of two Indians who seemed to be hanging around the camp, Kemps and Tussore, "the two most exact villains in all the country," who would betray their own king and kindred for a piece of copper, and sent them with a force of soldiers, under Percy, against Paspahugh. The expedition burned his house, but did not capture the fugitive. Smith then went against them himself, killed six or seven, burned their houses, and took their boats and fishing wires. Thereupon the savages sued for peace, and an amnesty was established that lasted as long as Smith remained in the country.

Another incident occurred about this time which greatly raised Smith's credit in all that country. The Chicahomianians, who always were friendly traders, were great thieves. One of them stole a Pistol, and two proper young fellows, brothers, known to be his confederates, were apprehended. One of them was put in the dungeon and the other sent to recover the pistol within twelve hours, in default of which his brother would be hanged. The President, pitying the wretched savage in the dungeon, sent him some victuals and charcoal for a fire. "Ere midnight his brother returned with the pistol, but the poor savage in the dungeon was so

smothered with the smoke he had made, and so piteously burnt, that we found him dead. The other most lamentably bewailed his death, and broke forth in such bitter agonies, that the President, to quiet him, told him that if hereafter they would not steal, he would make him alive again; but he (Smith) little thought he could be recovered." Nevertheless, by a liberal use of aqua vitae and vinegar the Indian was brought again to life, but "so drunk and affrighted that he seemed lunatic, the which as much tormented and grieved the other as before to see him dead." Upon further promise of good behavior Smith promised to bring the Indian out of this malady also, and so laid him by a fire to sleep. In the morning the savage had recovered his perfect senses, his wounds were dressed, and the brothers with presents of copper were sent away well contented. This was spread among the savages for a miracle, that Smith could make a man alive that was dead. He narrates a second incident which served to give the Indians a wholesome fear of the whites: "Another ingenious savage of Powhatan having gotten a great bag of powder and the back of an armour at Werowocomoco, amongst a many of his companions, to show his extraordinary skill, he did dry it on the back as he had seen the soldiers at Jamestown. But he dried it so long, they peeping over it to see his skill, it took fire, and blew him to death, and one or two more, and the rest so scorched they had little pleasure any more to meddle with gunpowder."

"These and many other such pretty incidents," says Smith, "so amazed and affrighted Powhatan and his people that from all parts they desired peace;" stolen articles were returned, thieves sent to Jamestown for punishment, and the whole country became as free for the whites as for the Indians.

And now ensued, in the spring of 1609, a prosperous period of three months, the longest season of quiet the colony had enjoyed, but only a respite from greater disasters. The friendship of the Indians and the temporary subordination of the settlers we must attribute to Smith's vigor, shrewdness, and spirit of industry. It was much easier to manage the Indian's than the idle and vicious men that composed the majority of the settlement.

In these three months they manufactured three or four lasts (fourteen barrels in a last) of tar, pitch, and soap-ashes, produced some specimens of glass, dug a well of excellent sweet water in the fort, which they had wanted for two years, built twenty houses, repaired the church, planted thirty or forty acres of ground, and erected a block-house on the neck of the island, where a garrison was stationed to trade with the savages and permit neither whites nor Indians to pass except on the President's order. Even the domestic animals partook the industrious spirit: "of three sowes in eighteen months increased 60 and od Pigs; and neare 500 chickings brought up themselves without having any meat given them." The hogs were transferred to Hog Isle, where another block house was built and garrisoned, and the garrison were permitted to take "exercise" in cutting down trees and making clapboards and wainscot. They were building a fort on high ground, intended for an easily defended retreat, when a woful discovery put an end to their thriving plans.

Upon examination of the corn stored in casks, it was found half-rotten, and the rest consumed by rats, which had bred in thousands from the few which came over in the ships. The colony was now at its wits end, for there was nothing to eat except the wild products of the country. In this prospect of famine, the two Indians, Kemps and Tussore, who had been kept fettered while showing the whites how to plant the fields, were turned loose; but they were unwilling to depart from such congenial company. The savages in the neighborhood showed their love by bringing to camp, for sixteen days, each day at least a hundred squirrels, turkeys, deer, and other wild beasts. But without corn, the work of fortifying and building had to be abandoned, and the settlers dispersed to provide victuals. A party of sixty or eighty men under Ensign Laxon were sent down the river to live on oysters; some twenty went with Lieutenant Percy to try fishing at Point Comfort, where for six weeks not a net was cast, owing to the sickness of Percy, who had been burnt with gunpowder; and another party, going to the Falls with Master West, found nothing to eat but a few acorns.

Up to this time the whole colony was fed by the labors of thirty or forty men: there was more sturgeon than could be devoured by dog and man; it was dried, pounded, and mixed with caviare, sorrel, and other herbs, to make bread; bread was also made of the "Tockwhogh" root, and with the fish and these wild fruits they lived very well. But there were one hundred and fifty of the colony who would rather starve or eat each other than help gather food. These "distracted, gluttonous loiterers" would have sold anything they had—tools, arms, and their houses—for anything the savages would bring them to eat. Hearing that there was a basket of corn at Powhatan's, fifty miles away, they would have exchanged all their property for it. To satisfy their factious humors, Smith succeeded in getting half of it: "they would have sold their souls," he says, for the other half, though not sufficient to last them a week.

The clamors became so loud that Smith punished the ringleader, one Dyer, a crafty fellow, and his ancient maligner, and then made one of his conciliatory addresses. Having shown them how impossible it was to get corn, and reminded them of his own exertions, and that he had always shared with them anything he had, he told them that he should stand their nonsense no longer; he should force the idle to work, and punish them if they railed; if any attempted to escape to Newfoundland in the pinnace they would arrive at the gallows; the sick should not starve; every man able must work, and every man who did not gather as much in a day as he did should be put out of the fort as a drone.

Such was the effect of this speech that of the two hundred only seven died in this pinching time, except those who were drowned; no man died of want. Captain Winne and Master Leigh had died before this famine occurred. Many of the men were billeted among the savages, who used them well, and stood in such awe of the power at the fort that they dared not wrong the whites out of a pin. The Indians caught Smith's humor, and some of the men who ran away to seek Kemps and Tussore were mocked and ridiculed, and had applied to them—Smith's law of "who cannot work must not eat;" they were almost starved and beaten nearly to death. After amusing himself with them, Kemps returned the fugitives, whom Smith punished until they were content to labor at home, rather than adventure to live idly among the savages, "of whom," says our shrewd chronicler, "there was more hope to make better christians and good subjects than the one half of them that counterfeited themselves both." The Indians were in such subjection that any who were punished at the fort would beg the President not to tell their chief, for they would be again punished at home and sent back for another round.

We hear now of the last efforts to find traces of the lost colony of Sir Walter Raleigh. Master Sicklemore

returned from the Chawwonoke (Chowan River) with no tidings of them; and Master Powell, and Anas Todkill who had been conducted to the Mangoags, in the regions south of the James, could learn nothing but that they were all dead. The king of this country was a very proper, devout, and friendly man; he acknowledged that our God exceeded his as much as our guns did his bows and arrows, and asked the President to pray his God for him, for all the gods of the Mangoags were angry.

The Dutchmen and one Bentley, another fugitive, who were with Powhatan, continued to plot against the colony, and the President employed a Swiss, named William Volday, to go and regain them with promises of pardon. Volday turned out to be a hypocrite, and a greater rascal than the others. Many of the discontented in the fort were brought into the scheme, which was, with Powhatan's aid, to surprise and destroy Jamestown. News of this getting about in the fort, there was a demand that the President should cut off these Dutchmen. Percy and Cuderington, two gentlemen, volunteered to do it; but Smith sent instead Master Wiffin and Jeffrey Abbot, to go and stab them or shoot them. But the Dutchmen were too shrewd to be caught, and Powhatan sent a conciliatory message that he did not detain the Dutchmen, nor hinder the slaying of them.

While this plot was simmering, and Smith was surrounded by treachery inside the fort and outside, and the savages were being taught that King James would kill Smith because he had used the Indians so unkindly, Captain Argall and Master Thomas Sedan arrived out in a well-furnished vessel, sent by Master Cornelius to trade and fish for sturgeon. The wine and other good provision of the ship were so opportune to the necessities of the colony that the President seized them. Argall lost his voyage; his ship was revictualled and sent back to England, but one may be sure that this event was so represented as to increase the fostered dissatisfaction with Smith in London. For one reason or another, most of the persons who returned had probably carried a bad report of him. Argall brought to Jamestown from London a report of great complaints of him for his dealings with the savages and not returning ships freighted with the products of the country. Misrepresented in London, and unsupported and conspired against in Virginia, Smith felt his fall near at hand. On the face of it he was the victim of envy and the rascality of incompetent and bad men; but whatever his capacity for dealing with savages, it must be confessed that he lacked something which conciliates success with one's own people. A new commission was about to be issued, and a great supply was in preparation under Lord De La Ware.

XIII. SMITH'S LAST DAYS IN VIRGINIA

The London company were profoundly dissatisfied with the results of the Virginia colony. The South Sea was not discovered, no gold had turned up, there were no valuable products from the new land, and the promoters received no profits on their ventures. With their expectations, it is not to be wondered at that they were still further annoyed by the quarreling amongst the colonists themselves, and wished to begin over again.

A new charter, dated May 23, 1609, with enlarged powers, was got from King James. Hundreds of corporators were named, and even thousands were included in the various London trades and guilds that were joined in the enterprise. Among the names we find that of Captain John Smith. But he was out of the Council, nor was he given then or ever afterward any place or employment in Virginia, or in the management of its affairs. The grant included all the American coast two hundred miles north and two hundred miles south of Point Comfort, and all the territory from the coast up into the land throughout from sea to sea, west and northwest. A leading object of the project still being (as we have seen it was with Smith's precious crew at Jamestown) the conversion and reduction of the natives to the true religion, no one was permitted in the colony who had not taken the oath of supremacy.

Under this charter the Council gave a commission to Sir Thomas West, Lord Delaware, Captain-General of Virginia; Sir Thomas Gates, Lieutenant-General; Sir George Somers, Admiral; Captain Newport, Vice-Admiral; Sir Thomas Dale, High Marshal; Sir Frederick Wainman, General of the Horse, and many other officers for life.

With so many wealthy corporators money flowed into the treasury, and a great expedition was readily fitted out. Towards the end of May, 1609, there sailed from England nine ships and five hundred people, under the command of Sir Thomas Gates, Sir George Somers, and Captain Newport. Each of these commanders had a commission, and the one who arrived first was to call in the old commission; as they could not agree, they all sailed in one ship, the Sea Venture.

This brave expedition was involved in a contest with a hurricane; one vessel was sunk, and the Sea Venture, with the three commanders, one hundred and fifty men, the new commissioners, bills of lading, all sorts of instructions, and much provision, was wrecked on the Bermudas. With this company was William Strachey, of whom we shall hear more hereafter. Seven vessels reached Jamestown, and brought, among other annoyances, Smith's old enemy, Captain Ratcliffe, alias Sicklemore, in command of a ship. Among the company were also Captains Martin, Archer, Wood, Webbe, Moore, King, Davis, and several gentlemen of good means, and a crowd of the riff-raff of London. Some of these Captains whom Smith had sent home, now returned with new pretensions, and had on the voyage prejudiced the company against him. When the fleet was first espied, the President thought it was Spaniards, and prepared to defend himself, the Indians promptly coming to his assistance.

This hurricane tossed about another expedition still more famous, that of Henry Hudson, who had sailed from England on his third voyage toward Nova Zembla March 25th, and in July and August was beating down the Atlantic coast. On the 18th of August he entered the Capes of Virginia, and sailed a little way up the Bay. He knew he was at the mouth of the James River, "where our Englishmen are," as he says. The next day a gale from the northeast made him fear being driven aground in the shallows, and he put to sea. The storm continued for several days. On the 21st "a sea broke over the fore-course and split it;" and that night

something more ominous occurred: "that night [the chronicle records] our cat ran crying from one side of the ship to the other, looking overboard, which made us to wonder, but we saw nothing." On the 26th they were again off the bank of Virginia, and in the very bay and in sight of the islands they had seen on the 18th. It appeared to Hudson "a great bay with rivers," but too shallow to explore without a small boat. After lingering till the 29th, without any suggestion of ascending the James, he sailed northward and made the lucky stroke of river exploration which immortalized him.

It seems strange that he did not search for the English colony, but the adventurers of that day were independent actors, and did not care to share with each other the glories of discovery.

The first of the scattered fleet of Gates and Somers came in on the 11th, and the rest straggled along during the three or four days following. It was a narrow chance that Hudson missed them all, and one may imagine that the fate of the Virginia colony and of the New York settlement would have been different if the explorer of the Hudson had gone up the James.

No sooner had the newcomers landed than trouble began. They would have deposed Smith on report of the new commission, but they could show no warrant. Smith professed himself willing to retire to England, but, seeing the new commission did not arrive, held on to his authority, and began to enforce it to save the whole colony from anarchy. He depicts the situation in a paragraph: "To a thousand mischiefs these lewd Captains led this lewd company, wherein were many unruly gallants, packed thither by their friends to escape ill destinies, and those would dispose and determine of the government, sometimes to one, the next day to another; today the old commission must rule, tomorrow the new, the next day neither; in fine, they would rule all or ruin all; yet in charity we must endure them thus to destroy us, or by correcting their follies, have brought the world's censure upon us to be guilty of their blouds. Happie had we beene had they never arrived, and we forever abandoned, as we were left to our fortunes; for on earth for their number was never more confusion or misery than their factions occasioned." In this company came a boy, named Henry Spelman, whose subsequent career possesses considerable interest.

The President proceeded with his usual vigor: he "laid by the heels" the chief mischief-makers till he should get leisure to punish them; sent Mr. West with one hundred and twenty good men to the Falls to make a settlement; and despatched Martin with near as many and their proportion of provisions to Nansemond, on the river of that name emptying into the James, obliquely opposite Point Comfort.

Lieutenant Percy was sick and had leave to depart for England when he chose. The President's year being about expired, in accordance with the charter, he resigned, and Captain Martin was elected President. But knowing his inability, he, after holding it three hours, resigned it to Smith, and went down to Nansemond. The tribe used him kindly, but he was so frightened with their noisy demonstration of mirth that he surprised and captured the poor naked King with his houses, and began fortifying his position, showing so much fear that the savages were emboldened to attack him, kill some of his men, release their King, and carry off a thousand bushels of corn which had been purchased, Martin not offering to intercept them. The frightened Captain sent to Smith for aid, who despatched to him thirty good shot. Martin, too chicken-hearted to use them, came back with them to Jamestown, leaving his company to their fortunes. In this adventure the President commends the courage of one George Forrest, who, with seventeen arrows sticking into him and one shot through him, lived six or seven days.

Meantime Smith, going up to the Falls to look after Captain West, met that hero on his way to Jamestown. He turned him back, and found that he had planted his colony on an unfavorable flat, subject not only to the overflowing of the river, but to more intolerable inconveniences. To place him more advantageously the President sent to Powhatan, offering to buy the place called Powhatan, promising to defend him against the Monacans, to pay him in copper, and make a general alliance of trade and friendship.

But "those furies," as Smith calls West and his associates, refused to move to Powhatan or to accept these conditions. They contemned his authority, expecting all the time the new commission, and, regarding all the Monacans' country as full of gold, determined that no one should interfere with them in the possession of it. Smith, however, was not intimidated from landing and attempting to quell their mutiny. In his "General Historie" it is written "I doe more than wonder to think how onely with five men he either durst or would adventure as he did (knowing how greedy they were of his bloud) to come amongst them." He landed and ordered the arrest of the chief disturbers, but the crowd hustled him off. He seized one of their boats and escaped to the ship which contained the provision. Fortunately the sailors were friendly and saved his life, and a considerable number of the better sort, seeing the malice of Ratcliffe and Archer, took Smith's part.

Out of the occurrences at this new settlement grew many of the charges which were preferred against Smith. According to the "General Historie" the company of Ratcliffe and Archer was a disorderly rabble, constantly tormenting the Indians, stealing their corn, robbing their gardens, beating them, and breaking into their houses and taking them prisoners. The Indians daily complained to the President that these "protectors" he had given them were worse enemies than the Monacans, and desired his pardon if they defended themselves, since he could not punish their tormentors. They even proposed to fight for him against them. Smith says that after spending nine days in trying to restrain them, and showing them how they deceived themselves with "great guilded hopes of the South Sea Mines," he abandoned them to their folly and set sail for Jamestown.

No sooner was he under way than the savages attacked the fort, slew many of the whites who were outside, rescued their friends who were prisoners, and thoroughly terrified the garrison. Smith's ship happening to go aground half a league below, they sent off to him, and were glad to submit on any terms to his mercy. He "put by the heels" six or seven of the chief offenders, and transferred the colony to Powhatan, where were a fort capable of defense against all the savages in Virginia, dry houses for lodging, and two hundred acres of ground ready to be planted. This place, so strong and delightful in situation, they called Non-such. The savages appeared and exchanged captives, and all became friends again.

At this moment, unfortunately, Captain West returned. All the victuals and munitions having been put ashore, the old factious projects were revived. The soft-hearted West was made to believe that the rebellion had been solely on his account. Smith, seeing them bent on their own way, took the row-boat for Jamestown.

The colony abandoned the pleasant Non-such and returned to the open air at West's Fort. On his way down, Smith met with the accident that suddenly terminated his career in Virginia.

While he was sleeping in his boat his powder-bag was accidentally fired; the explosion tore the flesh from his body and thighs, nine or ten inches square, in the most frightful manner. To quench the tormenting fire, frying him in his clothes, he leaped into the deep river, where, ere they could recover him, he was nearly drowned. In this pitiable condition, without either surgeon or surgery, he was to go nearly a hundred miles.

It is now time for the appearance upon the scene of the boy Henry Spelman, with his brief narration, which touches this period of Smith's life. Henry Spelman was the third son of the distinguished antiquarian, Sir Henry Spelman, of Coughan, Norfolk, who was married in 1581. It is reasonably conjectured that he could not have been over twenty-one when in May, 1609, he joined the company going to Virginia. Henry was evidently a scapegrace, whose friends were willing to be rid of him. Such being his character, it is more than probable that he was shipped bound as an apprentice, and of course with the conditions of apprenticeship in like expeditions of that period—to be sold or bound out at the end of the voyage to pay for his passage. He remained for several years in Virginia, living most of the time among the Indians, and a sort of indifferent go between of the savages and the settlers. According to his own story it was on October 20, 1609, that he was taken up the river to Powhatan by Captain Smith, and it was in April, 1613, that he was rescued from his easy-setting captivity on the Potomac by Captain Argall. During his sojourn in Virginia, or more probably shortly after his return to England, he wrote a brief and bungling narration of his experiences in the colony, and a description of Indian life. The MS. was not printed in his time, but mislaid or forgotten. By a strange series of chances it turned up in our day, and was identified and prepared for the press in 1861. Before the proof was read, the type was accidentally broken up and the MS. again mislaid. Lost sight of for several years, it was recovered and a small number of copies of it were printed at London in 1872, edited by Mr. James F. Hunnewell.

Spelman's narration would be very important if we could trust it. He appeared to have set down what he saw, and his story has a certain simplicity that gains for it some credit. But he was a reckless boy, unaccustomed to weigh evidence, and quite likely to write as facts the rumors that he heard. He took very readily to the ways of Indian life. Some years after, Spelman returned to Virginia with the title of Captain, and in 1617 we find this reference to him in the "General Historie": "Here, as at many other times, we are beholden to Capt. Henry Spelman, an interpreter, a gentleman that lived long time in this country, and sometimes a prisoner among the Salvages, and done much good service though but badly rewarded." Smith would probably not have left this on record had he been aware of the contents of the MS. that Spelman had left for after-times.

Spelman begins his Relation, from which I shall quote substantially, without following the spelling or noting all the interlineations, with the reason for his emigration, which was, "being in displeasure of my friends, and desirous to see other countries." After a brief account of the voyage and the joyful arrival at Jamestown, the Relation continues:

"Having here unloaded our goods and bestowed some senight or fortnight in viewing the country, I was carried by Capt. Smith, our President, to the Falls, to the little Powhatan, where, unknown to me, he sold me to him for a town called Powhatan; and, leaving me with him, the little Powhatan, he made known to Capt. West how he had bought a town for them to dwell in. Whereupon Capt. West, growing angry because he had bestowed cost to begin a town in another place, Capt. Smith desiring that Capt. West would come and settle himself there, but Capt. West, having bestowed cost to begin a town in another place, disliked it, and unkindness thereupon arising between them, Capt. Smith at that time replied little, but afterward combined with Powhatan to kill Capt. West, which plot took but small effect, for in the meantime Capt. Smith was apprehended and sent aboard for England."

That this roving boy was "thrown in" as a makeweight in the trade for the town is not impossible; but that Smith combined with Powhatan to kill Captain West is doubtless West's perversion of the offer of the Indians to fight on Smith's side against him.

According to Spelman's Relation, he stayed only seven or eight days with the little Powhatan, when he got leave to go to Jamestown, being desirous to see the English and to fetch the small articles that belonged to him. The Indian King agreed to wait for him at that place, but he stayed too long, and on his return the little Powhatan had departed, and Spelman went back to Jamestown. Shortly after, the great Powhatan sent Thomas Savage with a present of venison to President Percy. Savage was loath to return alone, and Spelman was appointed to go with him, which he did willingly, as victuals were scarce in camp. He carried some copper and a hatchet, which he presented to Powhatan, and that Emperor treated him and his comrade very kindly, seating them at his own mess-table. After some three weeks of this life, Powhatan sent this guileless youth down to decoy the English into his hands, promising to freight a ship with corn if they would visit him. Spelman took the message and brought back the English reply, whereupon Powhatan laid the plot which resulted in the killing of Captain Ratcliffe and thirty-eight men, only two of his company escaping to Jamestown. Spelman gives two versions of this incident. During the massacre Spelman says that Powhatan sent him and Savage to a town some sixteen miles away. Smith's "General Historie" says that on this occasion "Pocahuntas saved a boy named Henry Spelman that lived many years afterward, by her means, among the Patawomekes." Spelman says not a word about Pocahuntas. On the contrary, he describes the visit of the King of the Patawomekes to Powhatan; says that the King took a fancy to him; that he and Dutch Samuel, fearing for their lives, escaped from Powhatan's town; were pursued; that Samuel was killed, and that Spelman, after dodging about in the forest, found his way to the Potomac, where he lived with this good King Patomecke at a place called Pasptanzie for more than a year. Here he seems to have passed his time agreeably, for although he had occasional fights with the squaws of Patomecke, the King was always his friend, and so much was he attached to the boy that he would not give him up to Captain Argall without some copper in exchange.

When Smith returned wounded to Jamestown, he was physically in no condition to face the situation. With no medical attendance, his death was not improbable. He had no strength to enforce discipline nor organize expeditions for supplies; besides, he was acting under a commission whose virtue had expired, and the

mutinous spirits rebelled against his authority. Ratcliffe, Archer, and the others who were awaiting trial conspired against him, and Smith says he would have been murdered in his bed if the murderer's heart had not failed him when he went to fire his pistol at the defenseless sick man. However, Smith was forced to yield to circumstances. No sooner had he given out that he would depart for England than they persuaded Mr. Percy to stay and act as President, and all eyes were turned in expectation of favor upon the new commanders. Smith being thus divested of authority, the most of the colony turned against him; many preferred charges, and began to collect testimony. "The ships were detained three weeks to get up proofs of his ill-conduct"—"time and charges," says Smith, dryly, "that might much better have been spent."

It must have enraged the doughty Captain, lying thus helpless, to see his enemies triumph, the most factious of the disturbers in the colony in charge of affairs, and become his accusers. Even at this distance we can read the account with little patience, and should have none at all if the account were not edited by Smith himself. His revenge was in his good fortune in setting his own story afloat in the current of history. The first narrative of these events, published by Smith in his Oxford tract of 1612, was considerably remodeled and changed in his "General Historie" of 1624. As we have said before, he had a progressive memory, and his opponents ought to be thankful that the pungent Captain did not live to work the story over a third time.

It is no doubt true, however, that but for the accident to our hero, he would have continued to rule till the arrival of Gates and Somers with the new commissions; as he himself says, "but had that unhappy blast not happened, he would quickly have qualified the heat of those humors and factions, had the ships but once left them and us to our fortunes; and have made that provision from among the salvages, as we neither feared Spaniard, Salvage, nor famine: nor would have left Virginia nor our lawful authority, but at as dear a price as we had bought it, and paid for it."

He doubtless would have fought it out against all comers; and who shall say that he does not merit the glowing eulogy on himself which he inserts in his General History? "What shall I say but this, we left him, that in all his proceedings made justice his first guide, and experience his second, ever hating baseness, sloth, pride, and indignity, more than any dangers; that upon no danger would send them where he would not lead them himself; that would never see us want what he either had or could by any means get us; that would rather want than borrow; or starve than not pay; that loved action more than words, and hated falsehood and covetousness worse than death; whose adventures were our lives, and whose loss our deaths."

A handsomer thing never was said of another man than Smith could say of himself, but he believed it, as also did many of his comrades, we must suppose. He suffered detraction enough, but he suffered also abundant eulogy both in verse and prose. Among his eulogists, of course, is not the factious Captain Ratcliffe. In the English Colonial State papers, edited by Mr. Noel Sainsbury, is a note, dated Jamestown, October 4, 1609, from Captain "John Radclyffe comenly called," to the Earl of Salisbury, which contains this remark upon Smith's departure after the arrival of the last supply: "They heard that all the Council were dead but Capt. [John] Smith, President, who reigned sole Governor, and is now sent home to answer some misdemeanor."

Captain Archer also regards this matter in a different light from that in which Smith represents it. In a letter from Jamestown, written in August, he says:

"In as much as the President [Smith], to strengthen his authority, accorded with the variances and gave not any due respect to many worthy gentlemen that were in our ships, wherefore they generally, with my consent, chose Master West, my Lord De La Ware's brother, their Governor or President de bene esse, in the absence of Sir Thomas Gates, or if he be miscarried by sea, then to continue till we heard news from our counsell in England. This choice of him they made not to disturb the old President during his term, but as his authority expired, then to take upon him the sole government, with such assistants of the captains or discreet persons as the colony afforded.

"Perhaps you shall have it blamed as a mutinie by such as retaine old malice, but Master West, Master Piercie, and all the respected gentlemen of worth in Virginia, can and will testify otherwise upon their oaths. For the King's patent we ratified, but refused to be governed by the President—that is, after his time was expired and only subjected ourselves to Master West, whom we labor to have next President."

It is clear from this statement that the attempt was made to supersede Smith even before his time expired, and without any authority (since the new commissions were still with Gates and Somers in Bermuda), for the reason that Smith did not pay proper respect to the newly arrived "gentlemen." Smith was no doubt dictatorial and offensive, and from his point of view he was the only man who understood Virginia, and knew how successfully to conduct the affairs of the colony. If this assumption were true it would be none the less disagreeable to the new-comers.

At the time of Smith's deposition the colony was in prosperous condition. The "General Historie" says that he left them "with three ships, seven boats, commodities ready to trade, the harvest newly gathered, ten weeks' provision in store, four hundred ninety and odd persons, twenty-four pieces of ordnance, three hundred muskets, snaphances and fire-locks, shot, powder, and match sufficient, curats, pikes, swords, and morrios, more than men; the Salvages, their language and habitations well known to a hundred well-trained and expert soldiers; nets for fishing; tools of all kinds to work; apparel to supply our wants; six mules and a horse; five or six hundred swine; as many hens and chickens; some goats; some sheep; what was brought or bred there remained." Jamestown was also strongly palisaded and contained some fifty or sixty houses; besides there were five or six other forts and plantations, "not so sumptuous as our succerers expected, they were better than they provided any for us."

These expectations might well be disappointed if they were founded upon the pictures of forts and fortifications in Virginia and in the Somers Islands, which appeared in De Bry and in the "General Historie," where they appear as massive stone structures with all the finish and elegance of the European military science of the day.

Notwithstanding these ample provisions for the colony, Smith had small expectation that it would thrive without him. "They regarding nothing," he says, "but from hand to mouth, did consume what we had, took care for nothing but to perfect some colorable complaint against Captain Smith."

Nor was the composition of the colony such as to beget high hopes of it. There was but one carpenter, and three others that desired to learn, two blacksmiths, ten sailors; those called laborers were for the most part footmen, brought over to wait upon the adventurers, who did not know what a day's work was—all the real laborers were the Dutchmen and Poles and some dozen others. "For all the rest were poor gentlemen, tradesmen, serving men, libertines, and such like, ten times more fit to spoil a commonwealth than either begin one or help to maintain one. For when neither the fear of God, nor the law, nor shame, nor displeasure of their friends could rule them here, there is small hope ever to bring one in twenty of them to be good there." Some of them proved more industrious than was expected; "but ten good workmen would have done more substantial work in a day than ten of them in a week."

The disreputable character of the majority of these colonists is abundantly proved by other contemporary testimony. In the letter of the Governor and Council of Virginia to the London Company, dated Jamestown, July 7, 1610, signed by Lord De La Ware, Thomas Gates, George Percy, Ferd. Wenman, and William Strachey, and probably composed by Strachey, after speaking of the bountiful capacity of the country, the writer exclaims: "Only let me truly acknowledge there are not one hundred or two of deoboisht hands, dropt forth by year after year, with penury and leysure, ill provided for before they come, and worse governed when they are here, men of such distempered bodies and infected minds, whom no examples daily before their eyes, either of goodness or punishment, can deterr from their habituall impieties, or terrifie from a shameful death, that must be the carpenters and workmen in this so glorious a building."

The chapter in the "General Historie" relating to Smith's last days in Virginia was transferred from the narrative in the appendix to Smith's "Map of Virginia," Oxford, 1612, but much changed in the transfer. In the "General Historie" Smith says very little about the nature of the charges against him. In the original narrative signed by Richard Potts and edited by Smith, there are more details of the charges. One omitted passage is this: "Now all those Smith had either whipped or punished, or in any way disgraced, had free power and liberty to say or sweare anything, and from a whole armful of their examinations this was concluded."

Another omitted passage relates to the charge, to which reference is made in the "General Historie," that Smith proposed to marry Pocahontas:

"Some prophetically spirit calculated he had the salvages in such subjection, he would have made himself a king by marrying Pocahontas, Powhatan's daughter. It is true she was the very nonpareil of his kingdom, and at most not past thirteen or fourteen years of age. Very oft she came to our fort with what she could get for Capt. Smith, that ever loved and used all the country well, but her especially he ever much respected, and she so well requited it, that when her father intended to have surprised him, she by stealth in the dark night came through the wild woods and told him of it. But her marriage could in no way have entitled him by any right to the kingdom, nor was it ever suspected he had such a thought, or more regarded her or any of them than in honest reason and discretion he might. If he would he might have married her, or have done what he listed. For there were none that could have hindered his determination."

It is fair, in passing, to remark that the above allusion to the night visit of Pocahontas to Smith in this tract of 1612 helps to confirm the story, which does not appear in the previous narration of Smith's encounter with Powhatan at Werowocomoco in the same tract, but is celebrated in the "General Historie." It is also hinted plainly enough that Smith might have taken the girl to wife, Indian fashion.

XIV. THE COLONY WITHOUT SMITH

It was necessary to follow for a time the fortune of the Virginia colony after the departure of Captain Smith. Of its disasters and speedy decline there is no more doubt than there is of the opinion of Smith that these were owing to his absence. The savages, we read in his narration, no sooner knew he was gone than they all revolted and spoiled and murdered all they encountered.

The day before Captain Smith sailed, Captain Davis arrived in a small pinnace with sixteen men. These, with a company from the fort under Captain Ratcliffe, were sent down to Point Comfort. Captain West and Captain Martin, having lost their boats and half their men among the savages at the Falls, returned to Jamestown. The colony now lived upon what Smith had provided, "and now they had presidents with all their appurtenances." President Percy was so sick he could neither go nor stand. Provisions getting short, West and Ratcliffe went abroad to trade, and Ratcliffe and twenty-eight of his men were slain by an ambush of Powhatan's, as before related in the narrative of Henry Spelman. Powhatan cut off their boats, and refused to trade, so that Captain West set sail for England. What ensued cannot be more vividly told than in the "General Historie":

"Now we all found the losse of Capt. Smith, yea his greatest maligners could now curse his losse; as for corne provision and contribution from the salvages, we had nothing but mortall wounds, with clubs and arrowes; as for our hogs, hens, goats, sheep, horse, or what lived, our commanders, officers and salvages daily consumed them, some small proportions sometimes we tasted, till all was devoured; then swords, arms, pieces or anything was traded with the salvages, whose cruell fingers were so oft imbrued in our blouds, that what by their crueltie, our Governor's indiscretion, and the losse of our ships, of five hundred within six months after Capt. Smith's departure, there remained not past sixty men, women and children, most miserable and poore creatures; and those were preserved for the most part, by roots, herbes, acorns, walnuts, berries, now and then a little fish; they that had starch in these extremities made no small use of it, yea, even the very skinnes of our horses. Nay, so great was our famine, that a salvage we slew and buried, the poorer sort took him up again and eat him, and so did divers one another boyled, and stewed with roots and herbs. And one amongst the rest did kill his wife, powdered her and had eaten part of her before it was knowne, for which he was executed, as he well deserved; now whether she was better roasted, boyled, or

carbonaded, I know not, but of such a dish as powdered wife I never heard of. This was that time, which still to this day we called the starving time; it were too vile to say and scarce to be believed what we endured; but the occasion was our owne, for want of providence, industrie and government, and not the barrenness and defect of the country as is generally supposed."

This playful allusion to powdered wife, and speculation as to how she was best cooked, is the first instance we have been able to find of what is called "American humor," and Captain Smith has the honor of being the first of the "American humorists" who have handled subjects of this kind with such pleasing gayety.

It is to be noticed that this horrible story of cannibalism and wife-eating appears in Smith's "General Historie" of 1624, without a word of contradiction or explanation, although the company as early as 1610 had taken pains to get at the facts, and Smith must have seen their "Declaration," which supposes the story was started by enemies of the colony. Some reported they saw it, some that Captain Smith said so, and some that one Beadle, the lieutenant of Captain Davis, did relate it. In "A True Declaration of the State of the Colonie in Virginia," published by the advice and direction of the Council of Virginia, London, 1610, we read:

"But to clear all doubt, Sir Thomas Yates thus relateth the tragedie:

"There was one of the company who mortally hated his wife, and therefore secretly killed her, then cut her in pieces and hid her in divers parts of his house: when the woman was missing, the man suspected, his house searched, and parts of her mangled body were discovered, to excuse himself he said that his wife died, that he hid her to satisfie his hunger, and that he fed daily upon her. Upon this his house was again searched, when they found a good quantitie of meale, oatmeale, beanes and pease. Hee therefore was arraigned, confessed the murder, and was burned for his horrible villainy."

This same "True Declaration," which singularly enough does not mention the name of Captain Smith, who was so prominent an actor in Virginia during the period to which it relates, confirms all that Smith said as to the character of the colonists, especially the new supply which landed in the eight vessels with Ratcliffe and Archer. "Every man overvalueing his own strength would be a commander; every man underprizing another's value, denied to be commanded." They were negligent and improvident. "Every man sharked for his present bootie, but was altogether careless of succeeding penurie." To idleness and faction was joined treason. About thirty "unhallowed creatures," in the winter of 1610, some five months before the arrival of Captain Gates, seized upon the ship Swallow, which had been prepared to trade with the Indians, and having obtained corn conspired together and made a league to become pirates, dreaming of mountains of gold and happy robberies. By this desertion they weakened the colony, which waited for their return with the provisions, and they made implacable enemies of the Indians by their violence. "These are that scum of men," which, after roving the seas and failing in their piracy, joined themselves to other pirates they found on the sea, or returned to England, bound by a mutual oath to discredit the land, and swore they were drawn away by famine. "These are they that roared at the tragicall historie of the man eating up his dead wife in Virginia"—"scandalous reports of a viperous generation."

If further evidence were wanting, we have it in "The New Life of Virginia," published by authority of the Council, London, 1612. This is the second part of the "Nova Britannia," published in London, 1609. Both are prefaced by an epistle to Sir Thomas Smith, one of the Council and treasurer, signed "R. I." Neither document contains any allusion to Captain John Smith, or the part he played in Virginia. The "New Life of Virginia," after speaking of the tempest which drove Sir Thomas Gates on Bermuda, and the landing of the eight ships at Jamestown, says: "By which means the body of the plantation was now augmented with such numbers of irregular persons that it soon became as so many members without a head, who as they were bad and evil affected for the most part before they went hence; so now being landed and wanting restraint, they displayed their condition in all kinds of looseness, those chief and wisest guides among them (whereof there were not many) did nothing but bitterly contend who should be first to command the rest, the common sort, as is ever seen in such cases grew factious and disordered out of measure, in so much as the poor colony seemed (like the Colledge of English fugitives in Rome) as a hostile camp within itself; in which distemper that envious man stept in, sowing plentiful tares in the hearts of all, which grew to such speedy confusion, that in few months ambition, sloth and idleness had devoured the fruit of former labours, planting and sowing were clean given over, the houses decayed, the church fell to ruin, the store was spent, the cattle consumed, our people starved, and the Indians by wrongs and injuries made our enemies.... As for those wicked Impes that put themselves a shipboard, not knowing otherwise how to live in England; or those ungratious sons that daily vexed their fathers hearts at home, and were therefore thrust upon the voyage, which either writing thence, or being returned back to cover their own leudnes, do fill mens ears with false reports of their miserable and perilous life in Virginia, let the imputation of misery be to their idleness, and the blood that was spilt upon their own heads that caused it."

Sir Thomas Gates affirmed that after his first coming there he had seen some of them eat their fish raw rather than go a stone's cast to fetch wood and dress it.

The colony was in such extremity in May, 1610, that it would have been extinct in ten days but for the arrival of Sir Thomas Gates and Sir George Somers and Captain Newport from the Bermudas. These gallant gentlemen, with one hundred and fifty souls, had been wrecked on the Bermudas in the Sea Venture in the preceding July. The terrors of the hurricane which dispersed the fleet, and this shipwreck, were much dwelt upon by the writers of the time, and the Bermudas became a sort of enchanted islands, or realms of the imagination. For three nights, and three days that were as black as the nights, the water logged Sea Venture was scarcely kept afloat by bailing. We have a vivid picture of the stanch Somers sitting upon the poop of the ship, where he sat three days and three nights together, without much meat and little or no sleep, conning the ship to keep her as upright as he could, until he happily descried land. The ship went ashore and was wedged into the rocks so fast that it held together till all were got ashore, and a good part of the goods and provisions, and the tackling and iron of the ship necessary for the building and furnishing of a new ship.

This good fortune and the subsequent prosperous life on the island and final deliverance was due to the noble Somers, or Sommers, after whom the Bermudas were long called "Sommers Isles," which was gradually corrupted into "The Summer Isles." These islands of Bermuda had ever been accounted an enchanted pile of rocks and a desert inhabitation for devils, which the navigator and mariner avoided as Scylla and Charybdis,

or the devil himself. But this shipwrecked company found it the most delightful country in the world, the climate was enchanting, delicious fruits abounded, the waters swarmed with fish, some of them big enough to nearly drag the fishers into the sea, while whales could be heard spouting and nosing about the rocks at night; birds fat and tame and willing to be eaten covered all the bushes, and such droves of wild hogs covered the island that the slaughter of them for months seemed not to diminish their number. The friendly disposition of the birds seemed most to impress the writer of the "True Declaration of Virginia." He remembers how the ravens fed Elias in the brook Cedron; "so God provided for our disconsolate people in the midst of the sea by fowles; but with an admirable difference; unto Elias the ravens brought meat, unto our men the fowles brought (themselves) for meate: for when they whistled, or made any strange noyse, the fowles would come and sit on their shoulders, they would suffer themselves to be taken and weighed by our men, who would make choice of the fairest and fattest and let flie the leane and lightest, an accident [the chronicler exclaims], I take it [and everybody will take it], that cannot be paralleled by any Historie, except when God sent abundance of Quayles to feed his Israel in the barren wilderness."

The rescued voyagers built themselves comfortable houses on the island, and dwelt there nine months in good health and plentifully fed. Sunday was carefully observed, with sermons by Mr. Buck, the chaplain, an Oxford man, who was assisted in the services by Stephen Hopkins, one of the Puritans who were in the company. A marriage was celebrated between Thomas Powell, the cook of Sir George Somers, and Elizabeth Persons, the servant of Mrs. Horlow. Two children were also born, a boy who was christened Bermudas and a girl Bermuda. The girl was the child of Mr. John Rolfe and wife, the Rolfe who was shortly afterward to become famous by another marriage. In order that nothing should be wanting to the ordinary course of a civilized community, a murder was committed. In the company were two Indians, Machumps and Namontack, whose acquaintance we have before made, returning from England, whither they had been sent by Captain Smith. Falling out about something, Machumps slew Namontack, and having made a hole to bury him, because it was too short he cut off his legs and laid them by him. This proceeding Machumps concealed till he was in Virginia.

Somers and Gates were busy building two cedar ships, the Deliverer, of eighty tons, and a pinnacle called the Patience. When these were completed, the whole company, except two scamps who remained behind and had adventures enough for a three-volume novel, embarked, and on the 16th of May sailed for Jamestown, where they arrived on the 23d or 24th, and found the colony in the pitiable condition before described. A few famished settlers watched their coming. The church bell was rung in the shaky edifice, and the emaciated colonists assembled and heard the "zealous and sorrowful prayer" of Chaplain Buck. The commission of Sir Thomas Gates was read, and Mr. Percy retired from the governorship.

The town was empty and unfurnished, and seemed like the ruin of some ancient fortification rather than the habitation of living men. The palisades were down; the ports open; the gates unhinged; the church ruined and unfrequented; the houses empty, torn to pieces or burnt; the people not able to step into the woods to gather fire-wood; and the Indians killing as fast without as famine and pestilence within. William Strachey was among the new-comers, and this is the story that he despatched as Lord Delaware's report to England in July. On taking stock of provisions there was found only scant rations for sixteen days, and Gates and Somers determined to abandon the plantation, and, taking all on board their own ships, to make their way to Newfoundland, in the hope of falling in with English vessels. Accordingly, on the 7th of June they got on board and dropped down the James.

Meantime the news of the disasters to the colony, and the supposed loss of the Sea Venture, had created a great excitement in London, and a panic and stoppage of subscriptions in the company. Lord Delaware, a man of the highest reputation for courage and principle, determined to go himself, as Captain-General, to Virginia, in the hope of saving the fortunes of the colony. With three ships and one hundred and fifty persons, mostly artificers, he embarked on the 1st of April, 1610, and reached the Chesapeake Bay on the 5th of June, just in time to meet the forlorn company of Gates and Somers putting out to sea.

They turned back and ascended to Jamestown, when landing on Sunday, the 10th, after a sermon by Mr. Buck, the commission of Lord Delaware was read, and Gates turned over his authority to the new Governor. He swore in as Council, Sir Thomas Gates, Lieutenant-General; Sir George Somers, Admiral; Captain George Percy; Sir Ferdinando Wenman, Marshal; Captain Christopher Newport, and William Strachey, Esq., Secretary and Recorder.

On the 19th of June the brave old sailor, Sir George Somers, volunteered to return to the Bermudas in his pinnacle to procure hogs and other supplies for the colony. He was accompanied by Captain Argall in the ship Discovery. After a rough voyage this noble old knight reached the Bermudas. But his strength was not equal to the memorable courage of his mind. At a place called Saint George he died, and his men, confounded at the death of him who was the life of them all, embalmed his body and set sail for England. Captain Argall, after parting with his consort, without reaching the Bermudas, and much beating about the coast, was compelled to return to Jamestown.

Captain Gates was sent to England with despatches and to procure more settlers and more supplies. Lord Delaware remained with the colony less than a year; his health failing, he went in pursuit of it, in March, 1611, to the West Indies. In June of that year Gates sailed again, with six vessels, three hundred men, one hundred cows, besides other cattle, and provisions of all sorts. With him went his wife, who died on the passage, and his daughters. His expedition reached the James in August. The colony now numbered seven hundred persons. Gates seated himself at Hampton, a "delicate and necessary site for a city."

Percy commanded at Jamestown, and Sir Thomas Dale went up the river to lay the foundations of Henrico.

We have no occasion to follow further the fortunes of the Virginia colony, except to relate the story of Pocahontas under her different names of Amonate, Matoaka, Mrs. Rolfe, and Lady Rebecca.

XV. NEW ENGLAND ADVENTURES

Captain John Smith returned to England in the autumn of 1609, wounded in body and loaded with accusations of misconduct, concocted by his factious companions in Virginia. There is no record that these charges were ever considered by the London Company. Indeed, we cannot find that the company in those days ever took any action on the charges made against any of its servants in Virginia. Men came home in disgrace and appeared to receive neither vindication nor condemnation. Some sunk into private life, and others more pushing and brazen, like Ratcliffe, the enemy of Smith, got employment again after a time. The affairs of the company seem to have been conducted with little order or justice.

Whatever may have been the justice of the charges against Smith, he had evidently forfeited the good opinion of the company as a desirable man to employ. They might esteem his energy and profit by his advice and experience, but they did not want his services. And in time he came to be considered an enemy of the company.

Unfortunately for biographical purposes, Smith's life is pretty much a blank from 1609 to 1614. When he ceases to write about himself he passes out of sight. There are scarcely any contemporary allusions to his existence at this time. We may assume, however, from our knowledge of his restlessness, ambition, and love of adventure, that he was not idle. We may assume that he besieged the company with his plans for the proper conduct of the settlement of Virginia; that he talked at large in all companies of his discoveries, his exploits, which grew by the relating, and of the prospective greatness of the new Britain beyond the Atlantic. That he wearied the Council by his importunity and his acquaintances by his hobby, we can also surmise. No doubt also he was considered a fanatic by those who failed to comprehend the greatness of his schemes, and to realize, as he did, the importance of securing the new empire to the English before it was occupied by the Spanish and the French. His conceit, his boasting, and his overbearing manner, which no doubt was one of the causes why he was unable to act in harmony with the other adventurers of that day, all told against him. He was that most uncomfortable person, a man conscious of his own importance, and out of favor and out of money.

Yet Smith had friends, and followers, and men who believed in him. This is shown by the remarkable eulogies in verse from many pens, which he prefixes to the various editions of his many works. They seem to have been written after reading the manuscripts, and prepared to accompany the printed volumes and tracts. They all allude to the envy and detraction to which he was subject, and which must have amounted to a storm of abuse and perhaps ridicule; and they all tax the English vocabulary to extol Smith, his deeds, and his works. In putting forward these tributes of admiration and affection, as well as in his constant allusion to the ill requital of his services, we see a man fighting for his reputation, and conscious of the necessity of doing so. He is ever turning back, in whatever he writes, to rehearse his exploits and to defend his motives.

The London to which Smith returned was the London of Shakespeare's day; a city dirty, with ill-paved streets unlighted at night, no sidewalks, foul gutters, wooden houses, gable ends to the street, set thickly with small windows from which slops and refuse were at any moment of the day or night liable to be emptied upon the heads of the passers by; petty little shops in which were beginning to be displayed the silks and luxuries of the continent; a city crowded and growing rapidly, subject to pestilences and liable to sweeping conflagrations. The Thames had no bridges, and hundreds of boats plied between London side and Southwark, where were most of the theatres, the bull-baitings, the bear-fighting, the public gardens, the residences of the hussies, and other amusements that Bankside, the resort of all classes bent on pleasure, furnished high or low. At no time before or since was there such fantastical fashion in dress, both in cut and gay colors, nor more sumptuousness in costume or luxury in display among the upper classes, and such squalor in low life. The press teemed with tracts and pamphlets, written in language "as plain as a pikestaff," against the immoralities of the theatres, those "seminaries of vice," and calling down the judgment of God upon the cost and the monstrosities of the dress of both men and women; while the town roared on its way, warned by sermons, and instructed in its chosen path by such plays and masques as Ben Jonson's "Pleasure reconciled to Virtue."

The town swarmed with idlers, and with gallants who wanted advancement but were unwilling to adventure their ease to obtain it. There was much lounging in apothecaries' shops to smoke tobacco, gossip, and hear the news. We may be sure that Smith found many auditors for his adventures and his complaints. There was a good deal of interest in the New World, but mainly still as a place where gold and other wealth might be got without much labor, and as a possible short cut to the South Sea and Cathay. The vast number of Londoners whose names appear in the second Virginia charter shows the readiness of traders to seek profit in adventure. The stir for wider freedom in religion and government increased with the activity of exploration and colonization, and one reason why James finally annulled the Virginia charter was because he regarded the meetings of the London Company as opportunities of sedition.

Smith is altogether silent about his existence at this time. We do not hear of him till 1612, when his "Map of Virginia" with his description of the country was published at Oxford. The map had been published before: it was sent home with at least a portion of the description of Virginia. In an appendix appeared (as has been said) a series of narrations of Smith's exploits, covering the time he was in Virginia, written by his companions, edited by his friend Dr. Symonds, and carefully overlooked by himself.

Failing to obtain employment by the Virginia company, Smith turned his attention to New England, but neither did the Plymouth company avail themselves of his service. At last in 1614 he persuaded some London merchants to fit him out for a private trading adventure to the coast of New England. Accordingly with two ships, at the charge of Captain Marmaduke Roydon, Captain George Langam, Mr. John Buley, and William Skelton, merchants, he sailed from the Downs on the 3d of March, 1614, and in the latter part of April "chanced to arrive in New England, a part of America at the Isle of Monahiggan in 43 1/2 of Northerly latitude." This was within the territory appropriated to the second (the Plymouth) colony by the patent of 1606, which gave leave of settlement between the 38th and 44th parallels.

Smith's connection with New England is very slight, and mainly that of an author, one who labored for

many years to excite interest in it by his writings. He named several points, and made a map of such portion of the coast as he saw, which was changed from time to time by other observations. He had a remarkable eye for topography, as is especially evident by his map of Virginia. This New England coast is roughly indicated in Venazzani's Plot Of 1524, and better on Mercator's of a few years later, and in Ortelius's "Theatrum Orbis Terarum" of 1570; but in Smith's map we have for the first time a fair approach to the real contour.

Of Smith's English predecessors on this coast there is no room here to speak. Gosnold had described Elizabeth's Isles, explorations and settlements had been made on the coast of Maine by Popham and Weymouth, but Smith claims the credit of not only drawing the first fair map of the coast, but of giving the name "New England" to what had passed under the general names of Virginia, Canada, Norumbaga, etc.

Smith published his description of New England June 18, 1616, and it is in that we must follow his career. It is dedicated to the "high, hopeful Charles, Prince of Great Britain," and is prefaced by an address to the King's Council for all the plantations, and another to all the adventurers into New England. The addresses, as usual, call attention to his own merits. "Little honey [he writes] hath that hive, where there are more drones than bees; and miserable is that land where more are idle than are well employed. If the endeavors of these vermin be acceptable, I hope mine may be excusable: though I confess it were more proper for me to be doing what I say than writing what I know. Had I returned rich I could not have erred; now having only such food as came to my net, I must be taxed. But, I would my taxers were as ready to adventure their purses as I, purse, life, and all I have; or as diligent to permit the charge, as I know they are vigilant to reap the fruits of my labors." The value of the fisheries he had demonstrated by his catch; and he says, looking, as usual, to large results, "but because I speak so much of fishing, if any mistake me for such a devote fisher, as I dream of nought else, they mistake me. I know a ring of gold from a grain of barley as well as a goldsmith; and nothing is there to be had which fishing doth hinder, but further us to obtain."

John Smith first appears on the New England coast as a whale fisher. The only reference to his being in America in Josselyn's "Chronological Observations of America" is under the wrong year, 1608: "Capt. John Smith fished now for whales at Monhiggen." He says: "Our plot there was to take whales, and made tryall of a Myne of gold and copper;" these failing they were to get fish and furs. Of gold there had been little expectation, and (he goes on) "we found this whale fishing a costly conclusion; we saw many, and spent much time in chasing them; but could not kill any; they being a kind of Jubartes, and not the whale that yeeldes finnes and oyle as we expected." They then turned their attention to smaller fish, but owing to their late arrival and "long lingering about the whale"—chasing a whale that they could not kill because it was not the right kind—the best season for fishing was passed. Nevertheless, they secured some 40,000 cod—the figure is naturally raised to 60,000 when Smith retells the story fifteen years afterwards.

But our hero was a born explorer, and could not be content with not examining the strange coast upon which he found himself. Leaving his sailors to catch cod, he took eight or nine men in a small boat, and cruised along the coast, trading wherever he could for furs, of which he obtained above a thousand beaver skins; but his chance to trade was limited by the French settlements in the east, by the presence of one of Popham's ships opposite Monhegan, on the main, and by a couple of French vessels to the westward. Having examined the coast from Penobscot to Cape Cod, and gathered a profitable harvest from the sea, Smith returned in his vessel, reaching the Downs within six months after his departure. This was his whole experience in New England, which ever afterwards he regarded as particularly his discovery, and spoke of as one of his children, Virginia being the other.

With the other vessel Smith had trouble. He accuses its master, Thomas Hunt, of attempting to rob him of his plots and observations, and to leave him "alone on a desolate isle, to the fury of famine, And all other extremities." After Smith's departure the rascally Hunt decoyed twenty-seven unsuspecting savages on board his ship and carried them off to Spain, where he sold them as slaves. Hunt sold his furs at a great profit. Smith's cargo also paid well: in his letter to Lord Bacon in 1618 he says that with forty-five men he had cleared L 1,500 in less than three months on a cargo of dried fish and beaver skins—a pound at that date had five times the purchasing power of a pound now.

The explorer first landed on Monhegan, a small island in sight of which in the war of 1812 occurred the lively little seafight of the American Wasp and the British Frolic, in which the Wasp was the victor, but directly after, with her prize, fell into the hands of an English seventy-four.

He made certainly a most remarkable voyage in his open boat. Between Penobscot and Cape Cod (which he called Cape James) he says he saw forty several habitations, and sounded about twenty-five excellent harbors. Although Smith accepted the geographical notion of his time, and thought that Florida adjoined India, he declared that Virginia was not an island, but part of a great continent, and he comprehended something of the vastness of the country he was coasting along, "dominions which stretch themselves into the main, God doth know how many thousand miles, of which one could no more guess the extent and products than a stranger sailing betwixt England and France could tell what was in Spain, Italy, Germany, Bohemia, Hungary, and the rest." And he had the prophetic vision, which he more than once refers to, of one of the greatest empires of the world that would one day arise here. Contrary to the opinion that prevailed then and for years after, he declared also that New England was not an island.

Smith describes with considerable particularity the coast, giving the names of the Indian tribes, and cataloguing the native productions, vegetable and animal. He bestows his favorite names liberally upon points and islands—few of which were accepted. Cape Ann he called from his charming Turkish benefactor, "Cape Tragabigzanda"; the three islands in front of it, the "Three Turks' Heads"; and the Isles of Shoals he simply describes: "Smyth's Isles are a heape together, none neare them, against Acconimticus." Cape Cod, which appears upon all the maps before Smith's visit as "Sandy" cape, he says "is only a headland of high hills of sand, overgrown with shrubbie pines, hurts [whorts, whortleberries] and such trash; but an excellent harbor for all weathers. This Cape is made by the maine Sea on the one side, and a great bay on the other in the form of a sickle."

A large portion of this treatise on New England is devoted to an argument to induce the English to found a permanent colony there, of which Smith shows that he would be the proper leader. The main staple for the present would be fish, and he shows how Holland has become powerful by her fisheries and the training of

hardy sailors. The fishery would support a colony until it had obtained a good foothold, and control of these fisheries would bring more profit to England than any other occupation. There are other reasons than gain that should induce in England the large ambition of founding a great state, reasons of religion and humanity, erecting towns, peopling countries, informing the ignorant, reforming things unjust, teaching virtue, finding employment for the idle, and giving to the mother country a kingdom to attend her. But he does not expect the English to indulge in such noble ambitions unless he can show a profit in them.

"I have not [he says] been so ill bred but I have tasted of plenty and pleasure, as well as want and misery; nor doth a necessity yet, nor occasion of discontent, force me to these endeavors; nor am I ignorant that small thank I shall have for my pains; or that many would have the world imagine them to be of great judgment, that can but blemish these my designs, by their witty objections and detractions; yet (I hope) my reasons and my deeds will so prevail with some, that I shall not want employment in these affairs to make the most blind see his own senselessness and incredulity; hoping that gain will make them affect that which religion, charity and the common good cannot.... For I am not so simple to think that ever any other motive than wealth will ever erect there a Commonwealth; or draw company from their ease and humours at home, to stay in New England to effect any purpose."

But lest the toils of the new settlement should affright his readers, our author draws an idyllic picture of the simple pleasures which nature and liberty afford here freely, but which cost so dearly in England. Those who seek vain pleasure in England take more pains to enjoy it than they would spend in New England to gain wealth, and yet have not half such sweet content. What pleasure can be more, he exclaims, when men are tired of planting vines and fruits and ordering gardens, orchards and building to their mind, than "to recreate themselves before their owne doore, in their owne boates upon the Sea, where man, woman and child, with a small hooke and line, by angling, may take divers sorts of excellent fish at their pleasures? And is it not pretty sport, to pull up two pence, six pence, and twelve pence as fast as you can hale and veere a line?... And what sport doth yield more pleasing content, and less hurt or charge than angling with a hooke, and crossing the sweet ayre from Isle to Isle, over the silent streams of a calme Sea? wherein the most curious may finde pleasure, profit and content."

Smith made a most attractive picture of the fertility of the soil and the fruitfulness of the country. Nothing was too trivial to be mentioned. "There are certain red berries called Alkermes which is worth ten shillings a pound, but of these hath been sold for thirty or forty shillings the pound, may yearly be gathered a good quantity." John Josselyn, who was much of the time in New England from 1638 to 1671 and saw more marvels there than anybody else ever imagined, says, "I have sought for this berry he speaks of, as a man should for a needle in a bottle of hay, but could never light upon it; unless that kind of Solomon's seal called by the English treacle-berry should be it."

Towards the last of August, 1614, Smith was back at Plymouth. He had now a project of a colony which he imparted to his friend Sir Ferdinand Gorges. It is difficult from Smith's various accounts to say exactly what happened to him next. It would appear that he declined to go with an expedition of four ship which the Virginia company despatched in 1615, and incurred their ill-will by refusing, but he considered himself attached to the western or Plymouth company. Still he experienced many delays from them: they promised four ships to be ready at Plymouth; on his arrival "he found no such matter," and at last he embarked in a private expedition, to found a colony at the expense of Gorges, Dr. Sutcliffe, Bishop of Exeter, and a few gentlemen in London. In January 1615, he sailed from Plymouth with a ship of 20 tons, and another of 50. His intention was, after the fishing was over, to remain in New England with only fifteen men and begin a colony.

These hopes were frustrated. When only one hundred and twenty leagues out all the masts of his vessels were carried away in a storm, and it was only by diligent pumping that he was able to keep his craft afloat and put back to Plymouth. Thence on the 24th of June he made another start in a vessel of sixty tons with thirty men. But ill-luck still attended him. He had a queer adventure with pirates. Lest the envious world should not believe his own story, Smith had Baker, his steward, and several of his crew examined before a magistrate at Plymouth, December 8, 1615, who support his story by their testimony up to a certain point.

It appears that he was chased two days by one Fry, an English pirate, in a greatly superior vessel, heavily armed and manned. By reason of the foul weather the pirate could not board Smith, and his master, mate, and pilot, Chambers, Minter, and Digby, importuned him to surrender, and that he should send a boat to the pirate, as Fry had no boat. This singular proposal Smith accepted on condition Fry would not take anything that would cripple his voyage, or send more men aboard (Smith furnishing the boat) than he allowed. Baker confessed that the quartermaster and Chambers received gold of the pirates, for what purpose it does not appear. They came on board, but Smith would not come out of his cabin to entertain them, "although a great many of them had been his sailors, and for his love would have wafted us to the Isle of Flowers."

Having got rid of the pirate Fry by this singular manner of receiving gold from him, Smith's vessel was next chased by two French pirates at Fayal. Chambers, Minter, and Digby again desired Smith to yield, but he threatened to blow up his ship if they did not stand to the defense; and so they got clear of the French pirates. But more were to come.

At "Flowers" they were chased by four French men-of-war. Again Chambers, Minter, and Digby importuned Smith to yield, and upon the consideration that he could speak French, and that they were Protestants of Rochelle and had the King's commission to take Spaniards, Portuguese, and pirates, Smith, with some of his company, went on board one of the French ships. The next day the French plundered Smith's vessel and distributed his crew among their ships, and for a week employed his boat in chasing all the ships that came in sight. At the end of this bout they surrendered her again to her crew, with victuals but no weapons. Smith exhorted his officers to proceed on their voyage for fish, either to New England or Newfoundland. This the officers declined to do at first, but the soldiers on board compelled them, and thereupon Captain Smith busied himself in collecting from the French fleet and sending on board his bark various commodities that belonged to her—powder, match, books, instruments, his sword and dagger, bedding, aquavite, his commission, apparel, and many other things. These articles Chambers and the others divided among themselves, leaving Smith, who was still on board the Frenchman, only his waistcoat and breeches. The next day, the weather being foul, they ran so near the Frenchman as to endanger their yards, and Chambers called

to Captain Smith to come aboard or he would leave him. Smith ordered him to send a boat; Chambers replied that his boat was split, which was a lie, and told him to come off in the Frenchman's boat. Smith said he could not command that, and so they parted. The English bark returned to Plymouth, and Smith was left on board the French man-of-war.

Smith himself says that Chambers had persuaded the French admiral that if Smith was let to go on his boat he would revenge himself on the French fisheries on the Banks.

For over two months, according to his narration, Smith was kept on board the Frenchman, cruising about for prizes, "to manage their fight against the Spaniards, and be in a prison when they took any English." One of their prizes was a sugar caravel from Brazil; another was a West Indian worth two hundred thousand crowns, which had on board fourteen coffers of wedges of silver, eight thousand royals of eight, and six coffers of the King of Spain's treasure, besides the pillage and rich coffers of many rich passengers. The French captain, breaking his promise to put Smith ashore at Fayal, at length sent him towards France on the sugar caravel. When near the coast, in a night of terrible storm, Smith seized a boat and escaped. It was a tempest that wrecked all the vessels on the coast, and for twelve hours Smith was drifting about in his open boat, in momentary expectation of sinking, until he was cast upon the oozy isle of "Charowne," where the fowlers picked him up half dead with water, cold, and hunger, and he got to Rochelle, where he made complaint to the Judge of Admiralty. Here he learned that the rich prize had been wrecked in the storm and the captain and half the crew drowned. But from the wreck of this great prize thirty-six thousand crowns' worth of jewels came ashore. For his share in this Smith put in his claim with the English ambassador at Bordeaux. The Captain was hospitably treated by the Frenchmen. He met there his old friend Master Crampton, and he says: "I was more beholden to the Frenchmen that escaped drowning in the man-of-war, Madam Chanoyes of Rotchell, and the lawyers of Burdeaux, than all the rest of my countrymen I met in France." While he was waiting there to get justice, he saw the "arrival of the King's great marriage brought from Spain." This is all his reference to the arrival of Anne of Austria, eldest daughter of Philip III., who had been betrothed to Louis XIII. in 1612, one of the double Spanish marriages which made such a commotion in France.

Leaving his business in France unsettled (forever), Smith returned to Plymouth, to find his reputation covered with infamy and his clothes, books, and arms divided among the mutineers of his boat. The chiefest of these he "laid by the heels," as usual, and the others confessed and told the singular tale we have outlined. It needs no comment, except that Smith had a facility for unlucky adventures unequaled among the uneasy spirits of his age. Yet he was as buoyant as a cork, and emerged from every disaster with more enthusiasm for himself and for new ventures. Among the many glowing tributes to himself in verse that Smith prints with this description is one signed by a soldier, Edw. Robinson, which begins:

*"Oft thou hast led, when I brought up the Rere,
In bloody wars where thousands have been slaine."*

This common soldier, who cannot help breaking out in poetry when he thinks of Smith, is made to say that Smith was his captain "in the fierce wars of Transylvania," and he apostrophizes him:

*"Thou that to passe the worlds foure parts dost deeme
No more, than ewere to goe to bed or drinke,
And all thou yet hast done thou dost esteeme
As nothing."*

*"For mee: I not commend but much admire
Thy England yet unknown to passers by-her,
For it will praise itselpe in spight of me:
Thou, it, it, thou, to all posteritie."*

XVI. NEW ENGLAND'S TRIALS

Smith was not cast down by his reverses. No sooner had he laid his latest betrayers by the heels than he set himself resolutely to obtain money and means for establishing a colony in New England, and to this project and the cultivation in England of interest in New England he devoted the rest of his life.

His Map and Description of New England was published in 1616, and he became a colporteur of this, beseeching everywhere a hearing for his noble scheme. It might have been in 1617, while Pocahontas was about to sail for Virginia, or perhaps after her death, that he was again in Plymouth, provided with three good ships, but windbound for three months, so that the season being past, his design was frustrated, and his vessels, without him, made a fishing expedition to Newfoundland.

It must have been in the summer of this year that he was at Plymouth with divers of his personal friends, and only a hundred pounds among them all. He had acquainted the nobility with his projects, and was afraid to see the Prince Royal before he had accomplished anything, "but their great promises were nothing but air to prepare the voyage against the next year." He spent that summer in the west of England, visiting "Bristol, Exeter, Bastable? Bodman, Perin, Foy, Milborow, Saltash, Dartmouth, Absom, Pattnesse, and the most of the gentry in Cornwall and Devonshire, giving them books and maps," and inciting them to help his enterprise.

So well did he succeed, he says, that they promised him twenty sail of ships to go with him the next year, and to pay him for his pains and former losses. The western commissioners, in behalf of the company, contracted with him, under indented articles, "to be admiral of that country during my life, and in the renewing of the letters-patent so to be nominated"; half the profits of the enterprise to be theirs, and half to go to Smith and his companions.

Nothing seems to have come out of this promising induction except the title of "Admiral of New England," which Smith straightway assumed and wore all his life, styling himself on the title-page of everything he printed, "Sometime Governor of Virginia and Admiral of New England." As the generous Captain had before this time assumed this title, the failure of the contract could not much annoy him. He had about as good right to take the sounding name of Admiral as merchants of the west of England had to propose to give it to him.

The years wore away, and Smith was beseeching aid, republishing his works, which grew into new forms with each issue, and no doubt making himself a bore wherever he was known. The first edition of "New England's Trials"—by which he meant the various trials and attempts to settle New England was published in 1620. It was to some extent a repetition of his "Description" of 1616. In it he made no reference to Pocahontas. But in the edition of 1622, which is dedicated to Charles, Prince of Wales, and considerably enlarged, he drops into this remark about his experience at Jamestown: "It Is true in our greatest extremitie they shot me, slue three of my men, and by the folly of them that fled tooke me prisoner; yet God made Pocahontas the king's daughter the meanes to deliver me: and thereby taught me to know their treacheries to preserve the rest. [This is evidently an allusion to the warning Pocahontas gave him at Werowocomoco.] It was also my chance in single combat to take the king of Paspahugh prisoner, and by keeping him, forced his subjects to work in chains till I made all the country pay contribution having little else whereon to live."

This was written after he had heard of the horrible massacre of 1622 at Jamestown, and he cannot resist the temptation to draw a contrast between the present and his own management. He explains that the Indians did not kill the English because they were Christians, but to get their weapons and commodities. How different it was when he was in Virginia. "I kept that country with but 38, and had not to eat but what we had from the savages. When I had ten men able to go abroad, our commonwealth was very strong: with such a number I ranged that unknown country 14 weeks: I had but 18 to subdue them all." This is better than Sir John Falstaff. But he goes on: "When I first went to those desperate designes it cost me many a forgotten pound to hire men to go, and procrastination caused more run away than went." "Twice in that time I was President." [It will be remembered that about the close of his first year he gave up the command, for form's sake, to Capt. Martin, for three hours, and then took it again.] "To range this country of New England in like manner, I had but eight, as is said, and amongst their brute conditions I met many of their silly encounters, and without any hurt, God be thanked." The valiant Captain had come by this time to regard himself as the inventor and discoverer of Virginia and New England, which were explored and settled at the cost of his private pocket, and which he is not ashamed to say cannot fare well in his absence. Smith, with all his good opinion of himself, could not have imagined how delicious his character would be to readers in after-times. As he goes on he warms up: "Thus you may see plainly the yearly success from New England by Virginia, which hath been so costly to this kingdom and so dear to me.

"By that acquaintance I have with them I may call them my children [he spent between two and three months on the New England coast] for they have been my wife, my hawks, my hounds, my cards, my dice, and total my best content, as indifferent to my heart as my left hand to my right.... Were there not one Englishman remaining I would yet begin again as I did at the first; not that I have any secret encouragement for any I protest, more than lamentable experiences; for all their discoveries I can yet hear of are but pigs of my sowe: nor more strange to me than to hear one tell me he hath gone from Billigate and discovered Greenwich!"

As to the charge that he was unfortunate, which we should think might have become current from the Captain's own narratives, he tells his maligners that if they had spent their time as he had done, they would rather believe in God than in their own calculations, and peradventure might have had to give as bad an account of their actions. It is strange they should tax him before they have tried what he tried in Asia, Europe, and America, where he never needed to importune for a reward, nor ever could learn to beg: "These sixteen years I have spared neither pains nor money, according to my ability, first to procure his majesty's letters patent, and a Company here to be the means to raise a company to go with me to Virginia [this is the expedition of 1606 in which he was without command] as is said: which beginning here and there cost me near five years work, and more than 500 pounds of my own estate, besides all the dangers, miseries and encumbrances I endured gratis, where I stayed till I left 500 better provided than ever I was: from which blessed Virgin (ere I returned) sprung the fortunate habitation of Somer Isles." "Ere I returned" is in Smith's best vein. The casual reader would certainly conclude that the Somers Isles were somehow due to the providence of John Smith, when in fact he never even heard that Gates and Smith were shipwrecked there till he had returned to England, sent home from Virginia. Neill says that Smith ventured L 9 in the Virginia company! But he does not say where he got the money.

New England, he affirms, hath been nearly as chargeable to him and his friends: he never got a shilling but it cost him a pound. And now, when New England is prosperous and a certainty, "what think you I undertook when nothing was known, but that there was a vast land." These are some of the considerations by which he urges the company to fit out an expedition for him: "thus betwixt the spur of desire and the bridle of reason I am near ridden to death in a ring of despair; the reins are in your hands, therefore I entreat you to ease me."

The Admiral of New England, who since he enjoyed the title had had neither ship, nor sailor, nor rod of land, nor cubic yard of salt water under his command, was not successful in his several "Trials." And in the hodge-podge compilation from himself and others, which he had put together shortly after,—the "General Historie," he pathetically exclaims: "Now all these proofs and this relation, I now called New England's Trials. I caused two or three thousand of them to be printed, one thousand with a great many maps both of Virginia and New England, I presented to thirty of the chief companies in London at their Halls, desiring either generally or particularly (them that would) to imbrace it and by the use of a stock of five thousand pounds to ease them of the superfluity of most of their companies that had but strength and health to labor; near a year I spent to understand their resolutions, which was to me a greater toil and torment, than to have been in New England about my business but with bread and water, and what I could get by my labor; but in conclusion, seeing nothing would be effected I was contented as well with this loss of time and change as all the rest."

In his "Advertisements" he says that at his own labor, cost, and loss he had "divulged more than seven thousand books and maps," in order to influence the companies, merchants and gentlemen to make a

plantation, but "all availed no more than to hew Rocks with Oyster-shells."

His suggestions about colonizing were always sensible. But we can imagine the group of merchants in Cheapside gradually dissolving as Smith hove in sight with his maps and demonstrations.

In 1618, Smith addressed a letter directly to Lord Bacon, to which there seems to have been no answer. The body of it was a condensation of what he had repeatedly written about New England, and the advantage to England of occupying the fisheries. "This nineteen years," he writes, "I have encountered no few dangers to learn what here I write in these few leaves:... their fruits I am certain may bring both wealth and honor for a crown and a kingdom to his majesty's posterity." With 5,000 pounds he will undertake to establish a colony, and he asks of his Majesty a pinnacle to lodge his men and defend the coast for a few months, until the colony gets settled. Notwithstanding his disappointments and losses, he is still patriotic, and offers his experience to his country: "Should I present it to the Biskayners, French and Hollanders, they have made me large offers. But nature doth bind me thus to beg at home, whom strangers have pleased to create a commander abroad.... Though I can promise no mines of gold, the Hollanders are an example of my project, whose endeavors by fishing cannot be suppressed by all the King of Spain's golden powers. Worth is more than wealth, and industrious subjects are more to a kingdom than gold. And this is so certain a course to get both as I think was never propounded to any state for so small a charge, seeing I can prove it, both by example, reason and experience."

Smith's maxims were excellent, his notions of settling New England were sound and sensible, and if writing could have put him in command of New England, there would have been no room for the Puritans. He addressed letter after letter to the companies of Virginia and Plymouth, giving them distinctly to understand that they were losing time by not availing themselves of his services and his project. After the Virginia massacre, he offered to undertake to drive the savages out of their country with a hundred soldiers and thirty sailors. He heard that most of the company liked exceedingly well the notion, but no reply came to his overture.

He laments the imbecility in the conduct of the new plantations. At first, he says, it was feared the Spaniards would invade the plantations or the English Papists dissolve them: but neither the councils of Spain nor the Papists could have desired a better course to ruin the plantations than have been pursued; "It seems God is angry to see Virginia in hands so strange where nothing but murder and indiscretion contends for the victory."

In his letters to the company and to the King's commissions for the reformation of Virginia, Smith invariably reproduces his own exploits, until we can imagine every person in London, who could read, was sick of the story. He reminds them of his unrequited services: "in neither of those two countries have I one foot of land, nor the very house I builded, nor the ground I digged with my own hands, nor ever any content or satisfaction at all, and though I see ordinarily those two countries shared before me by them that neither have them nor knows them, but by my descriptions.... For the books and maps I have made, I will thank him that will show me so much for so little recompense, and bear with their errors till I have done better. For the materials in them I cannot deny, but am ready to affirm them both there and here, upon such ground as I have propounded, which is to have but fifteen hundred men to subdue again the Salvages, fortify the country, discover that yet unknown, and both defend and feed their colony."

There is no record that these various petitions and letters of advice were received by the companies, but Smith prints them in his History, and gives also seven questions propounded to him by the commissioners, with his replies; in which he clearly states the cause of the disasters in the colonies, and proposes wise and statesman-like remedies. He insists upon industry and good conduct: "to rectify a commonwealth with debauched people is impossible, and no wise man would throw himself into such society, that intends honestly, and knows what he understands, for there is no country to pillage, as the Romans found; all you expect from thence must be by labour."

Smith was no friend to tobacco, and although he favored the production to a certain limit as a means of profit, it is interesting to note his true prophecy that it would ultimately be a demoralizing product. He often proposes the restriction of its cultivation, and speaks with contempt of "our men rooting in the ground about tobacco like swine." The colony would have been much better off "had they not so much doated on their tobacco, on whose furnish foundation there is small stability."

So long as he lived, Smith kept himself informed of the progress of adventure and settlement in the New World, reading all relations and eagerly questioning all voyagers, and transferring their accounts to his own History, which became a confused patchwork of other men's exploits and his own reminiscences and reflections. He always regards the new plantations as somehow his own, and made in the light of his advice; and their mischances are usually due to the neglect of his counsel. He relates in this volume the story of the Pilgrims in 1620 and the years following, and of the settlement of the Somers Isles, making himself appear as a kind of Providence over the New World.

Out of his various and repetitious writings might be compiled quite a hand-book of maxims and wise saws. Yet all had in steady view one purpose—to excite interest in his favorite projects, to shame the laggards of England out of their idleness, and to give himself honorable employment and authority in the building up of a new empire. "Who can desire," he exclaims, "more content that hath small means, or but only his merit to advance his fortunes, than to tread and plant that ground he hath purchased by the hazard of his life; if he have but the taste of virtue and magnanimity, what to such a mind can be more pleasant than planting and building a foundation for his posterity, got from the rude earth by God's blessing and his own industry without prejudice to any; if he have any grace of faith or zeal in Religion, what can be more healthful to any or more agreeable to God than to convert those poor salvages to know Christ and humanity, whose labours and discretion will triply requite any charge and pain."

"Then who would live at home idly," he exhorts his countrymen, "or think in himself any worth to live, only to eat, drink and sleep, and so die; or by consuming that carelessly his friends got worthily, or by using that miserably that maintained virtue honestly, or for being descended nobly, or pine with the vain vaunt of great kindred in penury, or to maintain a silly show of bravery, toil out thy heart, soul and time basely; by shifts,

tricks, cards and dice, or by relating news of other men's actions, sharke here and there for a dinner or supper, deceive thy friends by fair promises and dissimulations, in borrowing when thou never meanest to pay, offend the laws, surfeit with excess, burden thy country, abuse thyself, despair in want, and then cozen thy kindred, yea, even thy own brother, and wish thy parent's death (I will not say damnation), to have their estates, though thou seest what honors and rewards the world yet hath for them that will seek them and worthily deserve them."

"I would be sorry to offend, or that any should mistake my honest meaning: for I wish good to all, hurt to none; but rich men for the most part are grown to that dotage through their pride in their wealth, as though there were no accident could end it or their life."

"And what hellish care do such take to make it their own misery and their countrie's spoil, especially when there is such need of their employment, drawing by all manner of inventions from the Prince and his honest subjects, even the vital spirits of their powers and estates; as if their bags or brags were so powerful a defense, the malicious could not assault them, when they are the only bait to cause us not only to be assaulted, but betrayed and smothered in our own security ere we will prevent it."

And he adds this good advice to those who maintain their children in wantonness till they grow to be the masters: "Let this lamentable example [the ruin of Constantinople] remember you that are rich (seeing there are such great thieves in the world to rob you) not grudge to lend some proportion to breed them that have little, yet willing to learn how to defend you, for it is too late when the deed is done."

No motive of action did Smith omit in his importunity, for "Religion above all things should move us, especially the clergy, if we are religious." "Honor might move the gentry, the valiant and industrious, and the hope and assurance of wealth all, if we were that we would seem and be accounted; or be we so far inferior to other nations, or our spirits so far dejected from our ancient predecessors, or our minds so upon spoil, piracy and such villainy, as to serve the Portugall, Spaniard, Dutch, French or Turke (as to the cost of Europe too many do), rather than our own God, our king, our country, and ourselves; excusing our idleness and our base complaints by want of employment, when here is such choice of all sorts, and for all degrees, in the planting and discovering these North parts of America."

It was all in vain so far as Smith's fortunes were concerned. The planting and subjection of New England went on, and Smith had no part in it except to describe it. The Brownists, the Anabaptists, the Papists, the Puritans, the Separatists, and "such factious Humorists," were taking possession of the land that Smith claimed to have "discovered," and in which he had no foothold. Failing to get employment anywhere, he petitioned the Virginia Company for a reward out of the treasury in London or the profits in Virginia.

At one of the hot discussions in 1623 preceding the dissolution of the Virginia Company by the revocation of their charter, Smith was present, and said that he hoped for his time spent in Virginia he should receive that year a good quantity of tobacco. The charter was revoked in 1624 after many violent scenes, and King James was glad to be rid of what he called "a seminary for a seditious parliament." The company had made use of lotteries to raise funds, and upon their disuse, in 1621, Smith proposed to the company to compile for its benefit a general history. This he did, but it does not appear that the company took any action on his proposal. At one time he had been named, with three others, as a fit person for secretary, on the removal of Mr. Pory, but as only three could be balloted for, his name was left out. He was, however, commended as entirely competent.

After the dissolution of the companies, and the granting of new letters-patent to a company of some twenty noblemen, there seems to have been a project for dividing up the country by lot. Smith says: "All this they divided in twenty parts, for which they cast lots, but no lot for me but Smith's Isles, which are a many of barren rocks, the most overgrown with shrubs, and sharp whins, you can hardly pass them; without either grass or wood, but three or four short shrubby old cedars."

The plan was not carried out, and Smith never became lord of even these barren rocks, the Isles of Shoals. That he visited them when he sailed along the coast is probable, though he never speaks of doing so. In the Virginia waters he had left a cluster of islands bearing his name also.

In the Captain's "True Travels," published in 1630, is a summary of the condition of colonization in New England from Smith's voyage thence till the settlement of Plymouth in 1620, which makes an appropriate close to our review of this period:

"When I first went to the North part of Virginia, where the Westerly Colony had been planted, it had dissolved itself within a year, and there was not one Christian in all the land. I was set forth at the sole charge of four merchants of London; the Country being then reputed by your westerlings a most rocky, barren, desolate desart; but the good return I brought from thence, with the maps and relations of the Country, which I made so manifest, some of them did believe me, and they were well embraced, both by the Londoners, and Westerlings, for whom I had promised to undertake it, thinking to have joyned them all together, but that might well have been a work for Hercules. Betwixt them long there was much contention: the Londoners indeed went bravely forward: but in three or four years I and my friends consumed many hundred pounds amongst the Plimothians, who only fed me but with delays, promises, and excuses, but no performance of anything to any purpose. In the interim, many particular ships went thither, and finding my relations true, and that I had not taken that I brought home from the French men, as had been reported: yet further for my pains to discredit me, and my calling it New England, they obscured it, and shadowed it, with the title of Canada, till at my humble suit, it pleased our most Royal King Charles, whom God long keep, bless and preserve, then Prince of Wales, to confirm it with my map and book, by the title of New England; the gain thence returning did make the fame thereof so increase that thirty, forty or fifty sail went yearly only to trade and fish; but nothing would be done for a plantation, till about some hundred of your Brownists of England, Amsterdam and Leyden went to New Plimouth, whose humorous ignorances, caused them for more than a year, to endure a wonderful deal of misery, with an infinite patience; saying my books and maps were much better cheap to teach them than myself: many others have used the like good husbandry that have payed soundly in trying their self-willed conclusions; but those in time doing well, diverse others have in small handfulls undertaken to go there, to be several Lords and Kings of themselves, but most vanished to nothing."

XVII. WRITINGS-LATER YEARS

If Smith had not been an author, his exploits would have occupied a small space in the literature of his times. But by his unwearied narrations he impressed his image in gigantic features on our plastic continent. If he had been silent, he would have had something less than justice; as it is, he has been permitted to greatly exaggerate his relations to the New World. It is only by noting the comparative silence of his contemporaries and by winnowing his own statements that we can appreciate his true position.

For twenty years he was a voluminous writer, working off his superfluous energy in setting forth his adventures in new forms. Most of his writings are repetitions and recastings of the old material, with such reflections as occur to him from time to time. He seldom writes a book, or a tract, without beginning it or working into it a resume of his life. The only exception to this is his "Sea Grammar." In 1626 he published "An Accidence or the Pathway to Experience, necessary to all Young Seamen," and in 1627 "A Sea Grammar, with the plain Exposition of Smith's Accidence for Young Seamen, enlarged." This is a technical work, and strictly confined to the building, rigging, and managing of a ship. He was also engaged at the time of his death upon a "History of the Sea," which never saw the light. He was evidently fond of the sea, and we may say the title of Admiral came naturally to him, since he used it in the title-page to his "Description of New England," published in 1616, although it was not till 1617 that the commissioners at Plymouth agreed to bestow upon him the title of "Admiral of that country."

In 1630 he published "The True Travels, Adventures and Observations of Captain John Smith, in Europe, Asia, Affrica and America, from 1593 to 1629. Together with a Continuation of his General History of Virginia, Summer Isles, New England, and their proceedings since 1624 to this present 1629: as also of the new Plantations of the great River of the Amazons, the Isles of St. Christopher, Mevis and Barbadoes in the West Indies." In the dedication to William, Earl of Pembroke, and Robert, Earl of Lindsay, he says it was written at the request of Sir Robert Cotton, the learned antiquarian, and he the more willingly satisfies this noble desire because, as he says, "they have acted my fatal tragedies on the stage, and racked my relations at their pleasure. To prevent, therefore, all future misprisions, I have compiled this true discourse. Envy hath taxed me to have writ too much, and done too little; but that such should know how little, I esteem them, I have writ this more for the satisfaction of my friends, and all generous and well-disposed readers: To speak only of myself were intolerable ingratitude: because, having had many co-partners with me, I cannot make a Monument for myself, and leave them unburied in the fields, whose lives begot me the title of Soldier, for as they were companions with me in my dangers, so shall they be partakers with me in this Tombe." In the same dedication he spoke of his "Sea Grammar" caused to be printed by his worthy friend Sir Samuel Saltonstall.

This volume, like all others Smith published, is accompanied by a great number of swollen panegyrics in verse, showing that the writers had been favored with the perusal of the volume before it was published. Valor, piety, virtue, learning, wit, are by them ascribed to the "great Smith," who is easily the wonder and paragon of his age. All of them are stuffed with the affected conceits fashionable at the time. One of the most pedantic of these was addressed to him by Samuel Purchas when the "General Historie" was written.

The portrait of Smith which occupies a corner in the Map of Virginia has in the oval the date, "Æta 37, A. 1616," and round the rim the inscription: "Portraictuer of Captaine John Smith, Admirall of New England," and under it these lines engraved:

*"These are the Lines that show thy face: but those
That show thy Grace and Glory brighter bee:
Thy Faire Discoveries and Fowle-Overthrowes
Of Salvages, much Civilized by thee
Best shew thy Spirit; and to it Glory Wyn;
So, thou art Brasse without, but Golde within,
If so, in Brasse (too soft smiths Acts to beare)
I fix thy Fame to make Brasse steele outweare.*

"Thine as thou art Virtues

"JOHN DAVIES, Heref."

In this engraving Smith is clad in armor, with a high starched collar, and full beard and mustache formally cut. His right hand rests on his hip, and his left grasps the handle of his sword. The face is open and pleasing and full of decision.

This "true discourse" contains the wild romance with which this volume opens, and is pieced out with recapitulations of his former writings and exploits, compilations from others' relations, and general comments. We have given from it the story of his early life, because there is absolutely no other account of that part of his career. We may assume that up to his going to Virginia he did lead a life of reckless adventure and hardship, often in want of a decent suit of clothes and of "regular meals." That he took some part in the wars in Hungary is probable, notwithstanding his romancing narrative, and he may have been captured by the Turks. But his account of the wars there, and of the political complications, we suspect are cribbed from the old chronicles, probably from the Italian, while his vague descriptions of the lands and people in Turkey and "Tartaria" are evidently taken from the narratives of other travelers. It seems to me that the whole of his story of his oriental captivity lacks the note of personal experience. If it were not for the "patent" of Sigismund (which is only produced and certified twenty years after it is dated), the whole Transylvania legend would appear entirely apocryphal.

The "True Travels" close with a discourse upon the bad life, qualities, and conditions of pirates. The most ancient of these was one Collis, "who most refreshed himself upon the coast of Wales, and Clinton and Pursser, his companions, who grew famous till Queen Elizabeth of blessed memory hanged them at Wapping.

The misery of a Pirate (although many are as sufficient seamen as any) yet in regard of his superfluity, you shall find it such, that any wise man would rather live amongst wild beasts, than them; therefore let all unadvised persons take heed how they entertain that quality; and I could wish merchants, gentlemen, and all setters-forth of ships not to be sparing of a competent pay, nor true payment; for neither soldiers nor seamen can live without means; but necessity will force them to steal, and when they are once entered into that trade they are hardly reclaimed."

Smith complains that the play-writers had appropriated his adventures, but does not say that his own character had been put upon the stage. In Ben Jonson's "Staple of News," played in 1625, there is a reference to Pocahontas in the dialogue that occurs between Pick-lock and Pennyboy Canter:

Pick.—A tavern's unfit too for a princess.

P. Cant.—No, I have known a Princess and a great one, Come forth of a tavern.

Pick.—Not go in Sir, though.

A Cant.—She must go in, if she came forth. The blessed Pocahontas, as the historian calls her, And great King's daughter of Virginia, Hath been in womb of tavern.

The last work of our author was published in 1631, the year of his death. Its full title very well describes the contents: "Advertisements for the Unexperienced Planters of New England, or anywhere. Or, the Pathway to Experience to erect a Plantation. With the yearly proceedings of this country in fishing and planting since the year 1614 to the year 1630, and their present estate. Also, how to prevent the greatest inconvenience by their proceedings in Virginia, and other plantations by approved examples. With the countries armes, a description of the coast, harbours, habitations, landmarks, latitude and longitude: with the map allowed by our Royall King Charles."

Smith had become a trifle cynical in regard to the newsmongers of the day, and quaintly remarks in his address to the reader: "Apelles by the proportion of a foot could make the whole proportion of a man: were he now living, he might go to school, for now thousands can by opinion proportion kingdoms, cities and lordships that never durst adventure to see them. Malignancy I expect from these, have lived 10 or 12 years in those actions, and return as wise as they went, claiming time and experience for their tutor that can neither shift Sun nor moon, nor say their compass, yet will tell you of more than all the world betwixt the Exchange, Paul's and Westminster.... and tell as well what all England is by seeing but Mitford Haven as what Apelles was by the picture of his great toe."

This is one of Smith's most characteristic productions. Its material is ill-arranged, and much of it is obscurely written; it runs backward and forward along his life, refers constantly to his former works and repeats them, complains of the want of appreciation of his services, and makes himself the centre of all the colonizing exploits of the age. Yet it is interspersed with strokes of humor and observations full of good sense.

It opens with the airy remark: "The wars in Europe, Asia and Africa, taught me how to subdue the wild savages in Virginia and New England." He never did subdue the wild savages in New England, and he never was in any war in Africa, nor in Asia, unless we call his piratical cruising in the Mediterranean "wars in Asia."

As a Church of England man, Smith is not well pleased with the occupation of New England by the Puritans, Brownists, and such "factious humorists" as settled at New Plymouth, although he acknowledges the wonderful patience with which, in their ignorance and willfulness, they have endured losses and extremities; but he hopes better things of the gentlemen who went in 1629 to supply Endicott at Salem, and were followed the next year by Winthrop. All these adventurers have, he says, made use of his "aged endeavors." It seems presumptuous in them to try to get on with his maps and descriptions and without him. They probably had never heard, except in the title-pages of his works, that he was "Admiral of New England."

Even as late as this time many supposed New England to be an island, but Smith again asserts, what he had always maintained—that it was a part of the continent. The expedition of Winthrop was scattered by a storm, and reached Salem with the loss of threescore dead and many sick, to find as many of the colony dead, and all disconsolate. Of the discouraged among them who returned to England Smith says: "Some could not endure the name of a bishop, others not the sight of a cross or surplice, others by no means the book of common prayer. This absolute crew, only of the Elect, holding all (but such as themselves) reprobates and castaways, now made more haste to return to Babel, as they termed England, than stay to enjoy the land they called Canaan." Somewhat they must say to excuse themselves. Therefore, "some say they could see no timbers of ten foot diameter, some the country is all wood; others they drained all the springs and ponds dry, yet like to famish for want of fresh water; some of the danger of the ratell-snake." To compel all the Indians to furnish them corn without using them cruelly they say is impossible. Yet this "impossible," Smith says, he accomplished in Virginia, and offers to undertake in New England, with one hundred and fifty men, to get corn, fortify the country, and "discover them more land than they all yet know."

This homily ends—and it is the last published sentence of the "great Smith"—with this good advice to the New England colonists:

"Lastly, remember as faction, pride, and security produces nothing but confusion, misery and dissolution; so the contraries well practised will in short time make you happy, and the most admired people of all our plantations for your time in the world.

"John Smith writ this with his owne hand."

The extent to which Smith retouched his narrations, as they grew in his imagination, in his many reproductions of them, has been referred to, and illustrated by previous quotations. An amusing instance of his care and ingenuity is furnished by the interpolation of Pocahontas into his stories after 1623. In his "General Historie" of 1624 he adopts, for the account of his career in Virginia, the narratives in the Oxford tract of 1612, which he had supervised. We have seen how he interpolated the wonderful story of his rescue by the Indian child. Some of his other insertions of her name, to bring all the narrative up to that level, are curious. The following passages from the "Oxford Tract" contain in italics the words inserted when they were transferred to the "General Historie":

"So revived their dead spirits (especially the love of Pocahuntas) as all anxious fears were abandoned."

"Part always they brought him as presents from their king, or Pocahuntas."

In the account of the "masques" of girls to entertain Smith at Werowocomoco we read:

"But presently Pocahuntas came, wishing him to kill her if any hurt were intended, and the beholders, which were women and children, satisfied the Captain there was no such matter."

In the account of Wyffin's bringing the news of Scrivener's drowning, when Wyffin was lodged a night with Powhatan, we read:

"He did assure himself some mischief was intended. Pocahontas hid him for a time, and sent them who pursued him the clean contrary way to seek him; but by her means and extraordinary bribes and much trouble in three days' travel, at length he found us in the midst of these turmoyles."

The affecting story of the visit and warning from Pocahontas in the night, when she appeared with "tears running down her cheeks," is not in the first narration in the Oxford Tract, but is inserted in the narrative in the "General Historie." Indeed, the first account would by its terms exclude the later one. It is all contained in these few lines:

"But our barge being left by the ebb, caused us to staie till the midnight tide carried us safe aboard, having spent that half night with such mirth as though we never had suspected or intended anything, we left the Dutchmen to build, Brinton to kill foule for Powhatan (as by his messengers he importunately desired), and left directions with our men to give Powhatan all the content they could, that we might enjoy his company on our return from Pamaunke."

It should be added, however, that there is an allusion to some warning by Pocahontas in the last chapter of the "Oxford Tract." But the full story of the night visit and the streaming tears as we have given it seems without doubt to have been elaborated from very slight materials. And the subsequent insertion of the name of Pocahontas—of which we have given examples above—into old accounts that had no allusion to her, adds new and strong presumptions to the belief that Smith invented what is known as the Pocahontas legend.

As a mere literary criticism on Smith's writings, it would appear that he had a habit of transferring to his own career notable incidents and adventures of which he had read, and this is somewhat damaging to an estimate of his originality. His wonderful system of telegraphy by means of torches, which he says he put in practice at the siege of Olympack, and which he describes as if it were his own invention, he had doubtless read in Polybius, and it seemed a good thing to introduce into his narrative.

He was (it must also be noted) the second white man whose life was saved by an Indian princess in America, who subsequently warned her favorite of a plot to kill him. In 1528 Pamphilo de Narvaes landed at Tampa Bay, Florida, and made a disastrous expedition into the interior. Among the Spaniards who were missing as a result of this excursion was a soldier named Juan Ortiz. When De Soto marched into the same country in 1539 he encountered this soldier, who had been held in captivity by the Indians and had learned their language. The story that Ortiz told was this: He was taken prisoner by the chief Ucita, bound hand and foot, and stretched upon a scaffold to be roasted, when, just as the flames were seizing him, a daughter of the chief interposed in his behalf, and upon her prayers Ucita spared the life of the prisoner. Three years afterward, when there was danger that Ortiz would be sacrificed to appease the devil, the princess came to him, warned him of his danger, and led him secretly and alone in the night to the camp of a chieftain who protected him.

This narrative was in print before Smith wrote, and as he was fond of such adventures he may have read it. The incidents are curiously parallel. And all the comment needed upon it is that Smith seems to have been peculiarly subject to such coincidences.

Our author's selection of a coat of arms, the distinguishing feature of which was "three Turks' heads," showed little more originality. It was a common device before his day: on many coats of arms of the Middle Ages and later appear "three Saracens' heads," or "three Moors' heads"—probably most of them had their origin in the Crusades. Smith's patent to use this charge, which he produced from Sigismund, was dated 1603, but the certificate appended to it by the Garter King at Arms, certifying that it was recorded in the register and office of the heralds, is dated 1625. Whether Smith used it before this latter date we are not told. We do not know why he had not as good right to assume it as anybody.

[Burke's "Encyclopedia of Heraldry" gives it as granted to Capt. John Smith, of the Smiths of Cruffley, Co. Lancaster, in 1629, and describes it: "Vert, a chev. gu. betw. three Turks' heads couped ppr. turbaned or. Crest-an Ostrich or, holding in the mouth a horseshoe or."]

XVIII. DEATH AND CHARACTER

Hardship and disappointment made our hero prematurely old, but could not conquer his indomitable spirit. The disastrous voyage of June, 1615, when he fell into the hands of the French, is spoken of by the Council for New England in 1622 as "the ruin of that poor gentleman, Captain Smith, who was detained prisoner by them, and forced to suffer many extremities before he got free of his troubles;" but he did not know that he was ruined, and did not for a moment relax his efforts to promote colonization and obtain a command, nor relinquish his superintendence of the Western Continent.

His last days were evidently passed in a struggle for existence, which was not so bitter to him as it might have been to another man, for he was sustained by ever-elating "great expectations." That he was pinched for means of living, there is no doubt. In 1623 he issued a prospectus of his "General Historie," in which he said: "These observations are all I have for the expenses of a thousand pounds and the loss of eighteen years' time, besides all the travels, dangers, miseries and incumbrances for my countries good, I have endured gratis:... this is composed in less than eighty sheets, besides the three maps, which will stand me near in a hundred pounds, which sum I cannot disburse: nor shall the stationers have the copy for nothing. I therefore, humbly

entreat your Honour, either to adventure, or give me what you please towards the impression, and I will be both accountable and thankful."

He had come before he was fifty to regard himself as an old man, and to speak of his "aged endeavors." Where and how he lived in his later years, and with what surroundings and under what circumstances he died, there is no record. That he had no settled home, and was in mean lodgings at the last, may be reasonably inferred. There is a manuscript note on the fly-leaf of one of the original editions of "The Map of Virginia..." (Oxford, 1612), in ancient chirography, but which from its reference to Fuller could not have been written until more than thirty years after Smith's death. It says: "When he was old he lived in London poor but kept up his spirits with the commemoration of his former actions and bravery. He was buried in St. Sepulcher's Church, as Fuller tells us, who has given us a line of his Ranting Epitaph."

That seems to have been the tradition of the man, buoyantly supporting himself in the commemoration of his own achievements. To the end his industrious and hopeful spirit sustained him, and in the last year of his life he was toiling on another compilation, and promised his readers a variety of actions and memorable observations which they shall "find with admiration in my History of the Sea, if God be pleased I live to finish it."

He died on the 21st of June, 1631, and the same day made his last will, to which he appended his mark, as he seems to have been too feeble to write his name. In this he describes himself as "Captain John Smith of the parish of St. Sepulcher's London Esquior." He commends his soul "into the hands of Almighty God, my maker, hoping through the merits of Christ Jesus my Redeemer to receive full remission of all my sins and to inherit a place in the everlasting kingdom"; his body he commits to the earth whence it came; and "of such worldly goods whereof it hath pleased God in his mercy to make me an unworthy receiver," he bequeathes: first, to Thomas Packer, Esq., one of his Majesty's clerks of the Privy Seal, "all my houses, lands, tenements and hereditaments whatsoever, situate lying and being in the parishes of Louthe and Great Carleton, in the county of Lincoln together with my coat of armes"; and charges him to pay certain legacies not exceeding the sum of eighty pounds, out of which he reserves to himself twenty pounds to be disposed of as he chooses in his lifetime. The sum of twenty pounds is to be disbursed about the funeral. To his most worthy friend, Sir Samuel Saltonstall Knight, he gives five pounds; to Morris Treadway, five pounds; to his sister Smith, the widow of his brother, ten pounds; to his cousin Steven Smith, and his sister, six pounds thirteen shillings and fourpence between them; to Thomas Packer, Joane, his wife, and Eleanor, his daughter, ten pounds among them; to "Mr. Reynolds, the lay Mr of the Goldsmiths Hall, the sum of forty shillings"; to Thomas, the son of said Thomas Packer, "my trunk standing in my chamber at Sir Samuel Saltonstall's house in St. Sepulcher's parish, together with my best suit of apparel of a tawny color viz. hose, doublet jirkin and cloak," "also, my trunk bound with iron bars standing in the house of Richard Hinde in Lambeth, together—with half the books therein"; the other half of the books to Mr. John Tredeskin and Richard Hinde. His much honored friend, Sir Samuel Saltonstall, and Thomas Packer, were joint executors, and the will was acknowledged in the presence "of Willmu Keble Snr civitas, London, William Packer, Elizabeth Sewster, Marmaduke Walker, his mark, witness."

We have no idea that Thomas Packer got rich out of the houses, lands and tenements in the county of Lincoln. The will is that of a poor man, and reference to his trunks standing about in the houses of his friends, and to his chamber in the house of Sir Samuel Saltonstall, may be taken as proof that he had no independent and permanent abiding-place.

It is supposed that he was buried in St. Sepulcher's Church. The negative evidence of this is his residence in the parish at the time of his death, and the more positive, a record in Stow's "Survey of London," 1633, which we copy in full:

This Table is on the south side of the Quire in Saint Sepulchers, with this Inscription:

To the living Memory of his deceased Friend, Captaine John Smith, who departed this mortall life on the 21 day of June, 1631, with his Armes, and this Motto,

Accordamus, vincere est vivere.

Here lies one conquer'd that hath conquer'd Kings, Subdu'd large Territories, and done things Which to the World impossible would seeme, But that the truth is held in more esteeme, Shall I report His former service done In honour of his God and Christendome: How that he did divide from Pagans three, Their heads and Lives, types of his chivalry: For which great service in that Climate done, Brave Sigismundus (King of Hungarion) Did give him as a Coat of Armes to weare, Those conquer'd heads got by his Sword and Speare? Or shall I tell of his adventures since, Done in Firginia, that large Continnence: I-low that he subdu'd Kings unto his yoke, And made those heathen flie, as wind doth smoke: And made their Land, being of so large a Station, A habitation for our Christian Nation: Where God is glorifi'd, their wants suppli'd, Which else for necessities might have di'd? But what avails his Conquest now he lyes Inter'd in earth a prey for Wormes & Flies?

O may his soule in sweet Mizium sleepe, Untill the Keeper that all soules doth keepe, Returne to judgement and that after thence, With Angels he may have his recompence. Captaine John Smith, sometime Governour of Firginia, and Admirall of New England.

This remarkable epitaph is such an autobiographical record as Smith might have written himself. That it was engraved upon a tablet and set up in this church rests entirely upon the authority of Stow. The present pilgrim to the old church will find no memorial that Smith was buried there, and will encounter besides incredulity of the tradition that he ever rested there.

The old church of St. Sepulcher's, formerly at the confluence of Snow Hill and the Old Bailey, now lifts its head far above the pompous viaduct which spans the valley along which the Fleet Ditch once flowed. All the registers of burial in the church were destroyed by the great fire of 1666, which burnt down the edifice from floor to roof, leaving only the walls and tower standing. Mr. Charles Deane, whose lively interest in Smith led him recently to pay a visit to St. Sepulcher's, speaks of it as the church "under the pavement of which the remains of our hero were buried; but he was not able to see the stone placed over those remains, as the floor of the church at that time was covered with a carpet.... The epitaph to his memory, however, it is understood,

cannot now be deciphered upon the tablet,"—which he supposes to be the one in Stow.

The existing tablet is a slab of bluish-black marble, which formerly was in the chancel. That it in no way relates to Captain Smith a near examination of it shows. This slab has an escutcheon which indicates three heads, which a lively imagination may conceive to be those of Moors, on a line in the upper left corner on the husband's side of a shield, which is divided by a perpendicular line. As Smith had no wife, this could not have been his cognizance. Nor are these his arms, which were three Turks' heads borne over and beneath a chevron. The cognizance of "Moors' heads," as we have said, was not singular in the Middle Ages, and there existed recently in this very church another tomb which bore a Moor's head as a family badge. The inscription itself is in a style of lettering unlike that used in the time of James I., and the letters are believed not to belong to an earlier period than that of the Georges. This bluish-black stone has been recently gazed at by many pilgrims from this side of the ocean, with something of the feeling with which the Moslems regard the Kaaba at Mecca. This veneration is misplaced, for upon the stone are distinctly visible these words:

*"Departed this life September....
....sixty-six....years....
....months...."*

As John Smith died in June, 1631, in his fifty-second year, this stone is clearly not in his honor: and if his dust rests in this church, the fire of 1666 made it probably a labor of wasted love to look hereabouts for any monument of him.

A few years ago some American antiquarians desired to place some monument to the "Admiral of New England" in this church, and a memorial window, commemorating the "Baptism of Pocahontas," was suggested. We have been told, however, that a custom of St. Sepulcher's requires a handsome bonus to the rector for any memorial set up in the church which the kindly incumbent had no power to set aside (in his own case) for a foreign gift and act of international courtesy of this sort; and the project was abandoned.

Nearly every trace of this insatiable explorer of the earth has disappeared from it except in his own writings. The only monument to his memory existing is a shabby little marble shaft erected on the southerly summit of Star Island, one of the Isles of Shoals. By a kind of irony of fortune, which Smith would have grimly appreciated, the only stone to perpetuate his fame stands upon a little heap of rocks in the sea; upon which it is only an inference that he ever set foot, and we can almost hear him say again, looking round upon this roomy earth, so much of which he possessed in his mind, "No lot for me but Smith's Isles, which are an array of barren rocks, the most overgrown with shrubs and sharpe whins you can hardly passe them: without either grasse or wood but three or foure short shrubby old cedars."

Nearly all of Smith's biographers and the historians of Virginia have, with great respect, woven his romances about his career into their narratives, imparting to their paraphrases of his story such an elevation as his own opinion of himself seemed to demand. Of contemporary estimate of him there is little to quote except the panegyrics in verse he has preserved for us, and the inference from his own writings that he was the object of calumny and detraction. Enemies he had in plenty, but there are no records left of their opinion of his character. The nearest biographical notice of him in point of time is found in the "History of the Worthies of England," by Thomas Fuller, D.D., London, 1662.

Old Fuller's schoolmaster was Master Arthur Smith, a kinsman of John, who told him that John was born in Lincolnshire, and it is probable that Fuller received from his teacher some impression about the adventurer.

Of his "strange performances" in Hungary, Fuller says: "The scene whereof is laid at such a distance that they are cheaper credited than confuted."

"From the Turks in Europe he passed to the pagans in America, where towards the latter end of the reign of Queen Elizabeth [it was in the reign of James] such his perils, preservations, dangers, deliverances, they seem to most men above belief, to some beyond truth. Yet have we two witnesses to attest them, the prose and the pictures, both in his own book; and it soundeth much to the diminution of his deeds that he alone is the herald to publish and proclaim them."

"Surely such reports from strangers carry the greater reputation. However, moderate men must allow Captain Smith to have been very instrumental in settling the plantation in Virginia, whereof he was governor, as also Admiral of New England."

"He led his old age in London, where his having a prince's mind imprisoned in a poor man's purse, rendered him to the contempt of such as were not ingenuous. Yet he efforted his spirits with the remembrance and relation of what formerly he had been, and what he had done."

Of the "ranting epitaph," quoted above, Fuller says: "The orthography, poetry, history and divinity in this epitaph are much alike."

Without taking Captain John Smith at his own estimate of himself, he was a peculiar character even for the times in which he lived. He shared with his contemporaries the restless spirit of roving and adventure which resulted from the invention of the mariner's compass and the discovery of the New World; but he was neither so sordid nor so rapacious as many of them, for his boyhood reading of romances had evidently fired him with the conceits of the past chivalric period. This imported into his conduct something inflated and something elevated. And, besides, with all his enormous conceit, he had a stratum of practical good sense, a shrewd wit, and the salt of humor.

If Shakespeare had known him, as he might have done, he would have had a character ready to his hand that would have added one of the most amusing and interesting portraits to his gallery. He faintly suggests a moral Falstaff, if we can imagine a Falstaff without vices. As a narrator he has the swagger of a Captain Dalghetty, but his actions are marked by honesty and sincerity. He appears to have had none of the small vices of the gallants of his time. His chivalric attitude toward certain ladies who appear in his adventures, must have been sufficiently amusing to his associates. There is about his virtue a certain antique flavor which must have seemed strange to the adventurers and court hangers-on in London. Not improbably his assumptions were offensive to the ungodly, and his ingenuous boastings made him the object of amusement to the skeptics. Their ridicule would naturally appear to him to arise from envy. We read between the lines of

his own eulogies of himself, that there was a widespread skepticism about his greatness and his achievements, which he attributed to jealousy. Perhaps his obtrusive virtues made him enemies, and his rectitude was a standing offense to his associates.

It is certain he got on well with scarcely anybody with whom he was thrown in his enterprises. He was of common origin, and always carried with him the need of assertion in an insecure position. He appears to us always self-conscious and ill at ease with gentlemen born. The captains of his own station resented his assumptions of superiority, and while he did not try to win them by an affectation of comradeship, he probably repelled those of better breeding by a swaggering manner. No doubt his want of advancement was partly due to want of influence, which better birth would have given him; but the plain truth is that he had a talent for making himself disagreeable to his associates. Unfortunately he never engaged in any enterprise with any one on earth who was so capable of conducting it as himself, and this fact he always made plain to his comrades. Skill he had in managing savages, but with his equals among whites he lacked tact, and knew not the secret of having his own way without seeming to have it. He was insubordinate, impatient of any authority over him, and unwilling to submit to discipline he did not himself impose.

Yet it must be said that he was less self-seeking than those who were with him in Virginia, making glory his aim rather than gain always; that he had a superior conception of what a colony should be, and how it should establish itself, and that his judgment of what was best was nearly always vindicated by the event. He was not the founder of the Virginia colony, its final success was not due to him, but it was owing almost entirely to his pluck and energy that it held on and maintained an existence during the two years and a half that he was with it at Jamestown. And to effect this mere holding on, with the vagabond crew that composed most of the colony, and with the extravagant and unintelligent expectations of the London Company, was a feat showing decided ability. He had the qualities fitting him to be an explorer and the leader of an expedition. He does not appear to have had the character necessary to impress his authority on a community. He was quarrelsome, irascible, and quick to fancy that his full value was not admitted. He shines most upon such small expeditions as the exploration of the Chesapeake; then his energy, self-confidence, shrewdness, inventiveness, had free play, and his pluck and perseverance are recognized as of the true heroic substance.

Smith, as we have seen, estimated at their full insignificance such flummeries as the coronation of Powhatan, and the foolishness of taxing the energies of the colony to explore the country for gold and chase the phantom of the South Sea. In his discernment and in his conceptions of what is now called "political economy" he was in advance of his age. He was an advocate of "free trade" before the term was invented. In his advice given to the New England plantation in his "Advertisements" he says:

"Now as his Majesty has made you custome-free for seven yeares, have a care that all your countrymen shall come to trade with you, be not troubled with pilotage, boyage, ancorage, wharfage, custome, or any such tricks as hath been lately used in most of our plantations, where they would be Kings before their folly; to the discouragement of many, and a scorne to them of understanding, for Dutch, French, Biskin, or any will as yet use freely the Coast without controule, and why not English as well as they? Therefore use all commers with that respect, courtesie, and liberty is fitting, which will in a short time much increase your trade and shipping to fetch it from you, for as yet it were not good to adventure any more abroad with factors till you bee better provided; now there is nothing more enricheth a Common-wealth than much trade, nor no meanes better to increase than small custome, as Holland, Genua, Ligorne, as divers other places can well tell you, and doth most beggar those places where they take most custome, as Turkie, the Archipelegan Iles, Cicilia, the Spanish ports, but that their officers will connive to enrich themselves, though undo the state."

It may perhaps be admitted that he knew better than the London or the Plymouth company what ought to be done in the New World, but it is absurd to suppose that his success or his ability forfeited him the confidence of both companies, and shut him out of employment. The simple truth seems to be that his arrogance and conceit and importunity made him unpopular, and that his proverbial ill luck was set off against his ability.

Although he was fully charged with the piety of his age, and kept in mind his humble dependence on divine grace when he was plundering Venetian argosies or lying to the Indians, or fighting anywhere simply for excitement or booty, and was always as devout as a modern Sicilian or Greek robber; he had a humorous appreciation of the value of the religions current in his day. He saw through the hypocrisy of the London Company, "making religion their color, when all their aim was nothing but present profit." There was great talk about Christianizing the Indians; but the colonists in Virginia taught them chiefly the corruptions of civilized life, and those who were despatched to England soon became debauched by London vices. "Much they blamed us [he writes] for not converting the Salvages, when those they sent us were little better, if not worse, nor did they all convert any of those we sent them to England for that purpose."

Captain John Smith died unmarried, nor is there any record that he ever had wife or children. This disposes of the claim of subsequent John Smiths to be descended from him. He was the last of that race; the others are imitations. He was wedded to glory. That he was not insensible to the charms of female beauty, and to the heavenly pity in their hearts, which is their chief grace, his writings abundantly evince; but to taste the pleasures of dangerous adventure, to learn war and to pick up his living with his sword, and to fight wherever piety showed recompense would follow, was the passion of his youth, while his manhood was given to the arduous ambition of enlarging the domains of England and enrolling his name among those heroes who make an ineffaceable impression upon their age. There was no time in his life when he had leisure to marry, or when it would have been consistent with his schemes to have tied himself to a home.

As a writer he was wholly untrained, but with all his introversions and obscurities he is the most readable chronicler of his time, the most amusing and as untrustworthy as any. He is influenced by his prejudices, though not so much by them as by his imagination and vanity. He had a habit of accurate observation, as his maps show, and this trait gives to his statements and descriptions, when his own reputation is not concerned, a value beyond that of those of most contemporary travelers. And there is another thing to be said about his writings. They are uncommonly clean for his day. Only here and there is coarseness encountered. In an age when nastiness was written as well as spoken, and when most travelers felt called upon to satisfy a curiosity for prurient observations, Smith preserved a tone quite remarkable for general purity.

Captain Smith is in some respects a very good type of the restless adventurers of his age; but he had a little more pseudo-chivalry at one end of his life, and a little more piety at the other, than the rest. There is a decidedly heroic element in his courage, hardihood, and enthusiasm, softened to the modern observer's comprehension by the humorous contrast between his achievements and his estimate of them. Between his actual deeds as he relates them, and his noble sentiments, there is also sometimes a contrast pleasing to the worldly mind. He is just one of those characters who would be more agreeable on the stage than in private life. His extraordinary conceit would be entertaining if one did not see too much of him. Although he was such a romancer that we can accept few of his unsupported statements about himself, there was, nevertheless, a certain verity in his character which showed something more than loyalty to his own fortune; he could be faithful to an ambition for the public good. Those who knew him best must have found in him very likable qualities, and acknowledged the generousities of his nature, while they were amused at his humorous spleen and his serious contemplation of his own greatness. There is a kind of simplicity in his self-appreciation that wins one, and it is impossible for the candid student of his career not to feel kindly towards the "sometime Governor of Virginia and Admiral of New England."

=====G2=====

THE STORY OF POCAHONTAS

By Charles Dudley Warner

STORY OF POCAHONTAS, CONTINUED

The simple story of the life of Pocahontas is sufficiently romantic without the embellishments which have been wrought on it either by the vanity of Captain Smith or the natural pride of the descendants of this dusky princess who have been ennobled by the smallest rivulet of her red blood.

That she was a child of remarkable intelligence, and that she early showed a tender regard for the whites and rendered them willing and unwilling service, is the concurrent evidence of all contemporary testimony. That as a child she was well-favored, sprightly, and prepossessing above all her copper-colored companions, we can believe, and that as a woman her manners were attractive. If the portrait taken of her in London—the best engraving of which is by Simon de Passe—in 1616, when she is said to have been twenty-one years old, does her justice, she had marked Indian features.

The first mention of her is in "The True Relation," written by Captain Smith in Virginia in 1608. In this narrative, as our readers have seen, she is not referred to until after Smith's return from the captivity in which Powhatan used him "with all the kindness he could devise." Her name first appears, toward the close of the relation, in the following sentence:

"Powhatan understanding we detained certain salvages, sent his daughter, a child of tenne yeares old, which not only for feature, countenance, and proportion, much exceedeth any of the rest of his people, but for wit and spirit the only nonpareil of his country: this hee sent by his most trusty messenger, called Rawhunt, as much exceeding in deformitie of person, but of a subtile wit and crafty understanding, he with a long circumstance told mee how well Powhatan loved and respected mee, and in that I should not doubt any way of his kindness, he had sent his child, which he most esteemed, to see mee, a Deere, and bread, besides for a present: desiring mee that the Boy [Thomas Savage, the boy given by Newport to Powhatan] might come again, which he loved exceedingly, his little Daughter he had taught this lesson also: not taking notice at all of the Indians that had been prisoners three daies, till that morning that she saw their fathers and friends come quietly, and in good termes to entreate their libertie.

"In the afternoon they [the friends of the prisoners] being gone, we guarded them [the prisoners] as before to the church, and after prayer, gave them to Pocahuntas the King's Daughter, in regard of her father's kindness in sending her: after having well fed them, as all the time of their imprisonment, we gave them their bows, arrowes, or what else they had, and with much content, sent them packing: Pocahuntas, also we requited with such trifles as contented her, to tel that we had used the Paspahayans very kindly in so releasing them."

The next allusion to her is in the fourth chapter of the narratives which are appended to the "Map of Virginia," etc. This was sent home by Smith, with a description of Virginia, in the late autumn of 1608. It was published at Oxford in 1612, from two to three years after Smith's return to England. The appendix contains the narratives of several of Smith's companions in Virginia, edited by Dr. Symonds and overlooked by Smith. In one of these is a brief reference to the above-quoted incident.

This Oxford tract, it is scarcely necessary to repeat, contains no reference to the saving of Smith's life by Pocahontas from the clubs of Powhatan.

The next published mention of Pocahontas, in point of time, is in Chapter X. and the last of the appendix to the "Map of Virginia," and is Smith's denial, already quoted, of his intention to marry Pocahontas. In this passage he speaks of her as "at most not past 13 or 14 years of age." If she was thirteen or fourteen in 1609, when Smith left Virginia, she must have been more than ten when he wrote his "True Relation," composed in the winter of 1608, which in all probability was carried to England by Captain Nelson, who left Jamestown

June 2d.

The next contemporary authority to be consulted in regard to Pocahontas is William Strachey, who, as we have seen, went with the expedition of Gates and Somers, was shipwrecked on the Bermudas, and reached Jamestown May 23 or 24, 1610, and was made Secretary and Recorder of the colony under Lord Delaware. Of the origin and life of Strachey, who was a person of importance in Virginia, little is known. The better impression is that he was the William Strachey of Saffron Walden, who was married in 1588 and was living in 1620, and that it was his grandson of the same name who was subsequently connected with the Virginia colony. He was, judged by his writings, a man of considerable education, a good deal of a pedant, and shared the credulity and fondness for embellishment of the writers of his time. His connection with Lord Delaware, and his part in framing the code of laws in Virginia, which may be inferred from the fact that he first published them, show that he was a trusted and capable man.

William Strachey left behind him a manuscript entitled "The Historie of Travaile into Virginia Britanica, &c., gathered and observed as well by those who went first thither, as collected by William Strachey, gent., three years thither, employed as Secretaire of State." How long he remained in Virginia is uncertain, but it could not have been "three years," though he may have been continued Secretary for that period, for he was in London in 1612, in which year he published there the laws of Virginia which had been established by Sir Thomas Gates May 24, 1610, approved by Lord Delaware June 10, 1610, and enlarged by Sir Thomas Dale June 22, 1611.

The "Travaile" was first published by the Hakluyt Society in 1849. When and where it was written, and whether it was all composed at one time, are matters much in dispute. The first book, descriptive of Virginia and its people, is complete; the second book, a narration of discoveries in America, is unfinished. Only the first book concerns us. That Strachey made notes in Virginia may be assumed, but the book was no doubt written after his return to England.

[This code of laws, with its penalty of whipping and death for what are held now to be venial offenses, gives it a high place among the Black Codes. One clause will suffice:

"Every man and woman duly twice a day upon the first towling of the Bell shall upon the working daies repaire unto the church, to hear divine service upon pain of losing his or her allowance for the first omission, for the second to be whipt, and for the third to be condemned to the Gallies for six months. Likewise no man or woman shall dare to violate the Sabbath by any gaming, publique or private, abroad or at home, but duly sanctifie and observe the same, both himselfe and his familie, by preparing themselves at home with private prayer, that they may be the better fitted for the publique, according to the commandments of God, and the orders of our church, as also every man and woman shall repaire in the morning to the divine service, and sermons preached upon the Sabbath day, and in the afternoon to divine service, and Catechism upon paine for the first fault to lose their provision, and allowance for the whole week following, for the second to lose the said allowance and also to be whipt, and for the third to suffer death."]

Was it written before or after the publication of Smith's "Map and Description" at Oxford in 1612? The question is important, because Smith's "Description" and Strachey's "Travaile" are page after page literally the same. One was taken from the other. Commonly at that time manuscripts seem to have been passed around and much read before they were published. Purchas acknowledges that he had unpublished manuscripts of Smith when he compiled his narrative. Did Smith see Strachey's manuscript before he published his Oxford tract, or did Strachey enlarge his own notes from Smith's description? It has been usually assumed that Strachey cribbed from Smith without acknowledgment. If it were a question to be settled by the internal evidence of the two accounts, I should incline to think that Smith condensed his description from Strachey, but the dates incline the balance in Smith's favor.

Strachey in his "Travaile" refers sometimes to Smith, and always with respect. It will be noted that Smith's "Map" was engraved and published before the "Description" in the Oxford tract. Purchas had it, for he says, in writing of Virginia for his "Pilgrimage" (which was published in 1613):

"Concerning the latter [Virginia], Capt. John Smith, partly by word of mouth, partly by his mappe thereof in print, and more fully by a Manuscript which he courteously communicated to mee, hath acquainted me with that whereof himselfe with great perill and paine, had been the discoverer." Strachey in his "Travaile" alludes to it, and pays a tribute to Smith in the following: "Their severall habitations are more plainly described by the annexed mappe, set forth by Capt. Smith, of whose paines taken herein I leave to the censure of the reader to judge. Sure I am there will not return from thence in hast, any one who hath been more industrious, or who hath had (Capt. Geo. Percie excepted) greater experience amongst them, however misconstruction may traduce here at home, where is not easily seen the mixed sufferances, both of body and mynd, which is there daylie, and with no few hazards and hearty griefes undergon."

There are two copies of the Strachey manuscript. The one used by the Hakluyt Society is dedicated to Sir Francis Bacon, with the title of "Lord High Chancellor," and Bacon had not that title conferred on him till after 1618. But the copy among the Ashmolean manuscripts at Oxford is dedicated to Sir Allen Apsley, with the title of "Purveyor to His Majestie's Navie Royall"; and as Sir Allen was made "Lieutenant of the Tower" in 1616, it is believed that the manuscript must have been written before that date, since the author would not have omitted the more important of the two titles in his dedication.

Strachey's prefatory letter to the Council, prefixed to his "Laws" (1612), is dated "From my lodging in the Black Friars. At your best pleasures, either to return unto the colony, or pray for the success of it heere." In his letter he speaks of his experience in the Bermudas and Virginia: "The full storie of both in due time [I] shall consecrate unto your view.... Howbeit since many impediments, as yet must detaine such my observations in the shadow of darknesse, untill I shall be able to deliver them perfect unto your judgments," etc.

This is not, as has been assumed, a statement that the observations were not written then, only that they were not "perfect"; in fact, they were detained in the "shadow of darknesse" till the year 1849. Our own inference is, from all the circumstances, that Strachey began his manuscript in Virginia or shortly after his return, and added to it and corrected it from time to time up to 1616.

We are now in a position to consider Strachey's allusions to Pocahontas. The first occurs in his description of the apparel of Indian women:

"The better sort of women cover themselves (for the most part) all over with skin mantells, finely drest, shagged and fringed at the skyrt, carved and coloured with some pretty work, or the proportion of beasts, fowle, tortayses, or other such like imagry, as shall best please or expresse the fancy of the wearer; their younger women goe not shadowed amongst their owne companie, until they be nigh eleaven or twelve returnes of the leafe old (for soe they accompt and bring about the yeare, calling the fall of the leaf tagnitock); nor are they much ashamed thereof, and therefore would the before remembered Pocahontas, a well featured, but wanton yong girle, Powhatan's daughter, sometymes resorting to our fort, of the age then of eleven or twelve yeares, get the boyes forth with her into the markett place, and make them wheele, falling on their hands, turning up their heeles upwards, whome she would followe and wheele so herself, naked as she was, all the fort over; but being once twelve yeares, they put on a kind of semecinctum lethern apron (as do our artificers or handycrafts men) before their bellies, and are very shamefac't to be seene bare. We have seene some use mantells made both of Turkey feathers, and other fowle, so prettily wrought and woven with threds, that nothing could be discerned but the feathers, which were exceedingly warme and very handsome."

Strachey did not see Pocahontas. She did not resort to the camp after the departure of Smith in September, 1609, until she was kidnapped by Governor Dale in April, 1613. He repeats what he heard of her. The time mentioned by him of her resorting to the fort, "of the age then of eleven or twelve yeares," must have been the time referred to by Smith when he might have married her, namely, in 1608-9, when he calls her "not past 13 or 14 years of age." The description of her as a "yong girle" tumbling about the fort, "naked as she was," would seem to preclude the idea that she was married at that time.

The use of the word "wanton" is not necessarily disparaging, for "wanton" in that age was frequently synonymous with "playful" and "sportive"; but it is singular that she should be spoken of as "well featured, but wanton." Strachey, however, gives in another place what is no doubt the real significance of the Indian name "Pocahontas." He says:

"Both men, women, and children have their severall names; at first according to the severall humor of their parents; and for the men children, at first, when they are young, their mothers give them a name, calling them by some affectionate title, or perhaps observing their promising inclination give it accordingly; and so the great King Powhatan called a young daughter of his, whom he loved well, Pocahontas, which may signify a little wanton; howbeyt she was rightly called Amonata at more ripe years."

The Indian girls married very young. The polygamous Powhatan had a large number of wives, but of all his women, his favorites were a dozen "for the most part very young women," the names of whom Strachey obtained from one Kemps, an Indian a good deal about camp, whom Smith certifies was a great villain. Strachey gives a list of the names of twelve of them, at the head of which is Winganuske. This list was no doubt written down by the author in Virginia, and it is followed by a sentence, quoted below, giving also the number of Powhatan's children. The "great darling" in this list was Winganuske, a sister of Machumps, who, according to Smith, murdered his comrade in the Bermudas. Strachey writes:

"He [Powhatan] was reported by the said Kemps, as also by the Indian Machumps, who was sometyme in England, and comes to and fro amongst us as he dares, and as Powhatan gives him leave, for it is not otherwise safe for him, no more than it was for one Amarice, who had his braynes knockt out for selling but a baskett of corne, and lying in the English fort two or three days without Powhatan's leave; I say they often reported unto us that Powhatan had then lyving twenty sonnes and ten daughters, besyde a young one by Winganuske, Machumps his sister, and a great darling of the King's; and besides, younge Pocohunta, a daughter of his, using sometyme to our fort in tymes past, nowe married to a private Captaine, called Kocoum, some two years since."

This passage is a great puzzle. Does Strachey intend to say that Pocahontas was married to an Iniaan named Kocoum? She might have been during the time after Smith's departure in 1609, and her kidnapping in 1613, when she was of marriageable age. We shall see hereafter that Powhatan, in 1614, said he had sold another favorite daughter of his, whom Sir Thomas Dale desired, and who was not twelve years of age, to be wife to a great chief. The term "private Captain" might perhaps be applied to an Indian chief. Smith, in his "General Historie," says the Indians have "but few occasions to use any officers more than one commander, which commonly they call Werowance, or Caucorouse, which is Captaine." It is probably not possible, with the best intentions, to twist Kocoum into Caucorouse, or to suppose that Strachey intended to say that a private captain was called in Indian a Kocoum. Werowance and Caucorouse are not synonymous terms. Werowance means "chief," and Caucorouse means "talker" or "orator," and is the original of our word "caucus."

Either Strachey was uninformed, or Pocahontas was married to an Indian—a not violent presumption considering her age and the fact that war between Powhatan and the whites for some time had cut off intercourse between them—or Strachey referred to her marriage with Rolfe, whom he calls by mistake Kocoum. If this is to be accepted, then this paragraph must have been written in England in 1616, and have referred to the marriage to Rolfe it "some two years since," in 1614.

That Pocahontas was a gentle-hearted and pleasing girl, and, through her acquaintance with Smith, friendly to the whites, there is no doubt; that she was not different in her habits and mode of life from other Indian girls, before the time of her kidnapping, there is every reason to suppose. It was the English who magnified the imperialism of her father, and exaggerated her own station as Princess. She certainly put on no airs of royalty when she was "cart-wheeling" about the fort. Nor does this detract anything from the native dignity of the mature, and converted, and partially civilized woman.

We should expect there would be the discrepancies which have been noticed in the estimates of her age. Powhatan is not said to have kept a private secretary to register births in his family. If Pocahontas gave her age correctly, as it appears upon her London portrait in 1616, aged twenty-one, she must have been eighteen years of age when she was captured in 1613. This would make her about twelve at the time of Smith's

captivity in 1607-8. There is certainly room for difference of opinion as to whether so precocious a woman, as her intelligent apprehension of affairs shows her to have been, should have remained unmarried till the age of eighteen. In marrying at least as early as that she would have followed the custom of her tribe. It is possible that her intercourse with the whites had raised her above such an alliance as would be offered her at the court of Werowocomoco.

We are without any record of the life of Pocahontas for some years. The occasional mentions of her name in the "General Historie" are so evidently interpolated at a late date, that they do not aid us. When and where she took the name of Matoaka, which appears upon her London portrait, we are not told, nor when she was called Amonata, as Strachey says she was "at more ripe yeares." How she was occupied from the departure of Smith to her abduction, we can only guess. To follow her authentic history we must take up the account of Captain Argall and of Ralph Hamor, Jr., secretary of the colony under Governor Dale.

Captain Argall, who seems to have been as bold as he was unscrupulous in the execution of any plan intrusted to him, arrived in Virginia in September, 1612, and early in the spring of 1613 he was sent on an expedition up the Patowomek to trade for corn and to effect a capture that would bring Powhatan to terms. The Emperor, from being a friend, had become the most implacable enemy of the English. Captain Argall says: "I was told by certain Indians, my friends, that the great Powhatan's daughter Pokahuntis was with the great King Potowomek, whither I presently repaired, resolved to possess myself of her by any stratagem that I could use, for the ransoming of so many Englishmen as were prisoners with Powhatan, as also to get such armes and tooles as he and other Indians had got by murther and stealing some others of our nation, with some quantity of corn for the colonies relief."

By the aid of Japazeus, King of Pasptancy, an old acquaintance and friend of Argall's, and the connivance of the King of Potowomek, Pocahontas was enticed on board Argall's ship and secured. Word was sent to Powhatan of the capture and the terms on which his daughter would be released; namely, the return of the white men he held in slavery, the tools and arms he had gotten and stolen, and a great quantity of corn. Powhatan, "much grieved," replied that if Argall would use his daughter well, and bring the ship into his river and release her, he would accede to all his demands. Therefore, on the 13th of April, Argall repaired to Governor Gates at Jamestown, and delivered his prisoner, and a few days after the King sent home some of the white captives, three pieces, one broad-axe, a long whip-saw, and a canoe of corn. Pocahontas, however, was kept at Jamestown.

Why Pocahontas had left Werowocomoco and gone to stay with Patowomek we can only conjecture. It is possible that Powhatan suspected her friendliness to the whites, and was weary of her importunity, and it may be that she wanted to escape the sight of continual fighting, ambushes, and murders. More likely she was only making a common friendly visit, though Hamor says she went to trade at an Indian fair.

The story of her capture is enlarged and more minutely related by Ralph Hamor, Jr., who was one of the colony shipwrecked on the Bermudas in 1609, and returned to England in 1614, where he published (London, 1615) "A True Discourse of Virginia, and the Success of the Affairs there till the 18th of June, 1614." Hamor was the son of a merchant tailor in London who was a member of the Virginia company. Hamor writes:

"It chanced Powhatan's delight and darling, his daughter Pocahuntas (whose fame has even been spread in England by the title of Nonparella of Firginia) in her princely progresse if I may so terme it, tooke some pleasure (in the absence of Captaine Argall) to be among her friends at Pataomecke (as it seemeth by the relation I had), implored thither as shopkeeper to a Fare, to exchange some of her father's commodities for theirs, where residing some three months or longer, it fortun'd upon occasion either of promise or profit, Captaine Argall to arrive there, whom Pocahuntas, desirous to renew her familiaritie with the English, and delighting to see them as unknown, fearefull perhaps to be surpris'd, would gladly visit as she did, of whom no sooner had Captaine Argall intelligence, but he delt with an old friend Iapazeus, how and by what meanes he might procure her caption, assuring him that now or never, was the time to pleasure him, if he intended indeede that love which he had made profession of, that in ransome of hir he might redeeme some of our English men and armes, now in the possession of her father, promising to use her withall faire and gentle entreaty; Iapazeus well assured that his brother, as he promised, would use her courteously, promised his best endeavors and service to accomplish his desire, and thus wrought it, making his wife an instrument (which sex have ever been most powerful in beguiling inticements) to effect his plot which hee had thus laid, he agreed that himself, his wife and Pocahuntas, would accompanie his brother to the water side, whither come, his wife should faine a great and longing desire to goe aboorde, and see the shippe, which being there three or four times before she had never seene, and should be earnest with her husband to permit her—he seemed angry with her, making as he pretended so unnecessary request, especially being without the company of women, which denial she taking unkindly, must faine to weepe (as who knows not that women can command teares) whereupon her husband seeming to pittie those counterfeit teares, gave her leave to goe aboord, so that it would please Pocahuntas to accompany her; now was the greatest labour to win her, guilty perhaps of her father's wrongs, though not knowne as she supposed, to goe with her, yet by her earnest persuasions, she assented: so forthwith aboord they went, the best cheere that could be made was seasonably provided, to supper they went, merry on all hands, especially Iapazeus and his wife, who to expres their joy would ere be treading upon Captaine Argall's foot, as who should say tis don, she is your own. Supper ended Pocahuntas was lodged in the gunner's roome, but Iapazeus and his wife desired to have some conference with their brother, which was onely to acquaint him by what stratagem they had betraied his prisoner as I have already related: after which discourse to sleepe they went, Pocahuntas nothing mistrusting this policy, who nevertheless being most possessed with feere, and desire of returne, was first up, and hastened Iapazeus to be gon. Capt. Argall having secretly well rewarded him, with a small Copper kittle, and some other les valuable toies so highly by him esteemed, that doubtlesse he would have betraied his own father for them, permitted both him and his wife to returne, but told him that for divers considerations, as for that his father had then eight of our Englishe men, many swords, peeces, and other tooles, which he hid at severall times by trecherous murdering our men, taken from them which though of no use to him, he would not redeliver, he would reserve Pocahuntas, whereat she began to be exceeding pensive, and discontented, yet ignorant of the dealing of Japazeus who in outward appearance was no les discontented that he should be

the means of her captivity, much adoe there was to persuade her to be patient, which with extraordinary courteous usage, by little and little was wrought in her, and so to Jamestowne she was brought."

Smith, who condenses this account in his "General Historie," expresses his contempt of this Indian treachery by saying: "The old Jew and his wife began to howle and crie as fast as Pocahuntas." It will be noted that the account of the visit (apparently alone) of Pocahontas and her capture is strong evidence that she was not at this time married to "Kocoum" or anybody else.

Word was despatched to Powhatan of his daughter's duress, with a demand made for the restitution of goods; but although this savage is represented as dearly loving Pocahontas, his "delight and darling," it was, according to Hamor, three months before they heard anything from him. His anxiety about his daughter could not have been intense. He retained a part of his plunder, and a message was sent to him that Pocahontas would be kept till he restored all the arms.

This answer pleased Powhatan so little that they heard nothing from him till the following March. Then Sir Thomas Dale and Captain Argall, with several vessels and one hundred and fifty men, went up to Powhatan's chief seat, taking his daughter with them, offering the Indians a chance to fight for her or to take her in peace on surrender of the stolen goods. The Indians received this with bravado and flights of arrows, reminding them of the fate of Captain Ratcliffe. The whites landed, killed some Indians, burnt forty houses, pillaged the village, and went on up the river and came to anchor in front of Matchcot, the Emperor's chief town. Here were assembled four hundred armed men, with bows and arrows, who dared them to come ashore. Ashore they went, and a palaver was held. The Indians wanted a day to consult their King, after which they would fight, if nothing but blood would satisfy the whites.

Two of Powhatan's sons who were present expressed a desire to see their sister, who had been taken on shore. When they had sight of her, and saw how well she was cared for, they greatly rejoiced and promised to persuade their father to redeem her and conclude a lasting peace. The two brothers were taken on board ship, and Master John Rolfe and Master Sparkes were sent to negotiate with the King. Powhatan did not show himself, but his brother Apachamo, his successor, promised to use his best efforts to bring about a peace, and the expedition returned to Jamestown.

"Long before this time," Hamor relates, "a gentleman of approved behaviour and honest carriage, Master John Rolfe, had been in love with Pocahuntas and she with him, which thing at the instant that we were in parlee with them, myselfe made known to Sir Thomas Dale, by a letter from him [Rolfe] whereby he entreated his advice and furtherance to his love, if so it seemed fit to him for the good of the Plantation, and Pocahuntas herself acquainted her brethren therewith." Governor Dale approved this, and consequently was willing to retire without other conditions. "The bruite of this pretended marriage [Hamor continues] came soon to Powhatan's knowledge, a thing acceptable to him, as appeared by his sudden consent thereunto, who some ten daies after sent an old uncle of hirs, named Opachisco, to give her as his deputy in the church, and two of his sonnes to see the mariage solemnized which was accordingly done about the fifth of April 1614, and ever since we have had friendly commerce and trade, not only with Powhatan himself, but also with his subjects round about us; so as now I see no reason why the collonie should not thrive a pace."

This marriage was justly celebrated as the means and beginning of a firm peace which long continued, so that Pocahontas was again entitled to the grateful remembrance of the Virginia settlers. Already, in 1612, a plan had been mooted in Virginia of marrying the English with the natives, and of obtaining the recognition of Powhatan and those allied to him as members of a fifth kingdom, with certain privileges. Cunega, the Spanish ambassador at London, on September 22, 1612, writes: "Although some suppose the plantation to decrease, he is credibly informed that there is a determination to marry some of the people that go over to Virginia; forty or fifty are already so married, and English women intermingle and are received kindly by the natives. A zealous minister hath been wounded for reprehending it."

Mr. John Rolfe was a man of industry, and apparently devoted to the welfare of the colony. He probably brought with him in 1610 his wife, who gave birth to his daughter Bermuda, born on the Somers Islands at the time of the shipwreck. We find no notice of her death. Hamor gives him the distinction of being the first in the colony to try, in 1612, the planting and raising of tobacco. "No man [he adds] hath labored to his power, by good example there and worthy encouragement into England by his letters, than he hath done, witness his marriage with Powhatan's daughter, one of rude education, manners barbarous and cursed generation, meerely for the good and honor of the plantation: and least any man should conceive that some sinister respects allured him hereunto, I have made bold, contrary to his knowledge, in the end of my treatise to insert the true coppie of his letter written to Sir Thomas Dale."

The letter is a long, labored, and curious document, and comes nearer to a theological treatise than any love-letter we have on record. It reeks with unction. Why Rolfe did not speak to Dale, whom he saw every day, instead of inflicting upon him this painful document, in which the flutterings of a too susceptible widower's heart are hidden under a great resolve of self-sacrifice, is not plain.

The letter protests in a tedious preamble that the writer is moved entirely by the Spirit of God, and continues:

"Let therefore this my well advised protestation, which here I make between God and my own conscience, be a sufficient witness, at the dreadful day of judgment (when the secrets of all men's hearts shall be opened) to condemne me herein, if my chieffest interest and purpose be not to strive with all my power of body and mind, in the undertaking of so weighty a matter, no way led (so far forth as man's weakness may permit) with the unbridled desire of carnall affection; but for the good of this plantation, for the honour of our cuntry, for the glory of God, for my owne salvation, and for the converting to the true knowledge of God and Jesus Christ, an unbelieving creature, namely Pokahuntas. To whom my heartie and best thoughts are, and have a long time bin so entangled, and inthrallled in so intricate a laborinth, that I was even awearied to unwind myself thereout."

Master Rolfe goes on to describe the mighty war in his meditations on this subject, in which he had set before his eyes the frailty of mankind and his proneness to evil and wicked thoughts. He is aware of God's displeasure against the sons of Levi and Israel for marrying strange wives, and this has caused him to look

about warily and with good circumspection "into the grounds and principall agitations which should thus provoke me to be in love with one, whose education hath bin rude, her manners barbarous, her generation accursed, and so discrepant in all nurtriture from myselve, that oftentimes with feare and trembling, I have ended my private controversie with this: surely these are wicked instigations, fetched by him who seeketh and delighteth in man's distruction; and so with fervent prayers to be ever preserved from such diabolical assaults (as I looke those to be) I have taken some rest."

The good man was desperately in love and wanted to marry the Indian, and consequently he got no peace; and still being tormented with her image, whether she was absent or present, he set out to produce an ingenious reason (to show the world) for marrying her. He continues:

"Thus when I thought I had obtained my peace and quietnesse, beholde another, but more gracious tentation hath made breaches into my holiest and strongest meditations; with which I have been put to a new triall, in a straighter manner than the former; for besides the weary passions and sufferings which I have dailey, hourelly, yea and in my sleepe indured, even awaking me to astonishment, taxing me with remissnesse, and carelesnesse, refusing and neglecting to perform the duteie of a good Christian, pulling me by the eare, and crying: Why dost thou not indeavor to make her a Christian? And these have happened to my greater wonder, even when she hath been furthest seperated from me, which in common reason (were it not an undoubted work of God) might breede forgetfulnesse of a far more worthie creature."

He accurately describes the symptoms and appears to understand the remedy, but he is after a large-sized motive:

"Besides, I say the holy Spirit of God hath often demanded of me, why I was created? If not for transitory pleasures and worldly vanities, but to labour in the Lord's vineyard, there to sow and plant, to nourish and increase the fruites thereof, daily adding with the good husband in the gospell, somewhat to the tallent, that in the ends the fruites may be reaped, to the comfort of the labourer in this life, and his salvation in the world to come.... Likewise, adding hereunto her great appearance of love to me, her desire to be taught and instructed in the knowledge of God, her capablenesse of understanding, her aptnesse and willingness to receive anie good impression, and also the spirituall, besides her owne incitements stirring me up hereunto."

The "incitements" gave him courage, so that he exclaims: "Shall I be of so untoward a disposition, as to refuse to lead the blind into the right way? Shall I be so unnatural, as not to give bread to the hungrie, or uncharitable, as not to cover the naked?"

It wasn't to be thought of, such wickedness; and so Master Rolfe screwed up his courage to marry the glorious Princess, from whom thousands of people were afterwards so anxious to be descended. But he made the sacrifice for the glory of the country, the benefit of the plantation, and the conversion of the unregenerate, and other and lower motive he vigorously repels: "Now, if the vulgar sort, who square all men's actions by the base rule of their own filthinesse, shall tax or taunt mee in this my godly labour: let them know it is not hungry appetite, to gorge myselve with incontineny; sure (if I would and were so sensually inclined) I might satisfy such desire, though not without a seared conscience, yet with Christians more pleasing to the eie, and less fearefull in the offense unlawfully committed. Nor am I in so desperate an estate, that I regard not what becometh of me; nor am I out of hope but one day to see my country, nor so void of friends, nor mean in birth, but there to obtain a mach to my great con'tent.... But shall it please God thus to dispose of me (which I earnestly desire to fulfill my ends before set down) I will heartily accept of it as a godly taxe appointed me, and I will never cease (God assisting me) untill I have accomplished, and brought to perfection so holy a worke, in which I will daily pray God to bless me, to mine and her eternal happiness."

It is to be hoped that if sanctimonious John wrote any love-letters to Amonata they had less cant in them than this. But it was pleasing to Sir Thomas Dale, who was a man to appreciate the high motives of Mr. Rolfe. In a letter which he despatched from Jamestown, June 18, 1614, to a reverend friend in London, he describes the expedition when Pocahontas was carried up the river, and adds the information that when she went on shore, "she would not talk to any of them, scarcely to them of the best sort, and to them only, that if her father had loved her, he would not value her less than old swords, pieces, or axes; wherefore she would still dwell with the Englishmen who loved her."

"Powhatan's daughter [the letter continues] I caused to be carefully instructed in Christian Religion, who after she had made some good progress therein, renounced publically her countrey idolatry, openly confessed her Christian faith, was, as she desired, baptized, and is since married to an English Gentleman of good understanding (as by his letter unto me, containing the reasons for his marriage of her you may perceive), an other knot to bind this peace the stronger. Her father and friends gave approbation to it, and her uncle gave her to him in the church; she lives civilly and lovingly with him, and I trust will increase in goodness, as the knowledge of God increaseth in her. She will goe into England with me, and were it but the gayning of this one soule, I will think my time, toile, and present stay well spent."

Hamor also appends to his narration a short letter, of the same date with the above, from the minister Alexander Whittaker, the genuineness of which is questioned. In speaking of the good deeds of Sir Thomas Dale it says: "But that which is best, one Pocahuntas or Matoa, the daughter of Powhatan, is married to an honest and discreet English Gentleman—Master Rolfe, and that after she had openly renounced her countrey Idolatry, and confessed the faith of Jesus Christ, and was baptized, which thing Sir Thomas Dale had laboured a long time to ground her in." If, as this proclaims, she was married after her conversion, then Rolfe's tender conscience must have given him another twist for wedding her, when the reason for marrying her (her conversion) had ceased with her baptism. His marriage, according to this, was a pure work of supererogation. It took place about the 5th of April, 1614. It is not known who performed the ceremony.

How Pocahontas passed her time in Jamestown during the period of her detention, we are not told. Conjectures are made that she was an inmate of the house of Sir Thomas Dale, or of that of the Rev. Mr. Whittaker, both of whom labored zealously to enlighten her mind on religious subjects. She must also have been learning English and civilized ways, for it is sure that she spoke our language very well when she went to London. Mr. John Rolfe was also laboring for her conversion, and we may suppose that with all these ministrations, mingled with her love of Mr. Rolfe, which that ingenious widower had discovered, and her

desire to convert him into a husband, she was not an unwilling captive. Whatever may have been her barbarous instincts, we have the testimony of Governor Dale that she lived "civilly and lovingly" with her husband.

STORY OF POCAHONTAS, CONTINUED

Sir Thomas Dale was on the whole the most efficient and discreet Governor the colony had had. One element of his success was no doubt the change in the charter of 1609. By the first charter everything had been held in common by the company, and there had been no division of property or allotment of land among the colonists. Under the new regime land was held in severalty, and the spur of individual interest began at once to improve the condition of the settlement. The character of the colonists was also gradually improving. They had not been of a sort to fulfill the earnest desire of the London promoter's to spread vital piety in the New World. A zealous defense of Virginia and Maryland, against "scandalous imputation," entitled "Leah and Rachel; or, The Two Fruitful Sisters," by Mr. John Hammond, London, 1656, considers the charges that Virginia "is an unhealthy place, a nest of rogues, abandoned women, dissolut and rookery persons; a place of intolerable labour, bad usage and hard diet"; and admits that "at the first settling, and for many years after, it deserved most of these aspersions, nor were they then aspersions but truths.... There were jails supplied, youth seduced, infamous women drilled in, the provision all brought out of England, and that embezzled by the Trustees."

Governor Dale was a soldier; entering the army in the Netherlands as a private he had risen to high position, and received knighthood in 1606. Shortly after he was with Sir Thomas Gates in South Holland. The States General in 1611 granted him three years' term of absence in Virginia. Upon his arrival he began to put in force that system of industry and frugality he had observed in Holland. He had all the imperiousness of a soldier, and in an altercation with Captain Newport, occasioned by some injurious remarks the latter made about Sir Thomas Smith, the treasurer, he pulled his beard and threatened to hang him. Active operations for settling new plantations were at once begun, and Dale wrote to Cecil, the Earl of Salisbury, for 2,000 good colonists to be sent out, for the three hundred that came were "so profane, so riotous, so full of mutiny, that not many are Christians but in name, their bodies so diseased and crazed that not sixty of them may be employed." He served afterwards with credit in Holland, was made commander of the East Indian fleet in 1618, had a naval engagement with the Dutch near Bantam in 1619, and died in 1620 from the effects of the climate. He was twice married, and his second wife, Lady Fanny, the cousin of his first wife, survived him and received a patent for a Virginia plantation.

Governor Dale kept steadily in view the conversion of the Indians to Christianity, and the success of John Rolfe with Matoaka inspired him with a desire to convert another daughter of Powhatan, of whose exquisite perfections he had heard. He therefore despatched Ralph Hamor, with the English boy, Thomas Savage, as interpreter, on a mission to the court of Powhatan, "upon a message unto him, which was to deale with him, if by any means I might procure a daughter of his, who (Pocahuntas being already in our possession) is generally reported to be his delight and darling, and surely he esteemed her as his owne Soule, for surer pledge of peace." This visit Hamor relates with great naivete.

At his town of Matchcot, near the head of York River, Powhatan himself received his visitors when they landed, with great cordiality, expressing much pleasure at seeing again the boy who had been presented to him by Captain Newport, and whom he had not seen since he gave him leave to go and see his friends at Jamestown four years before; he also inquired anxiously after Namontack, whom he had sent to King James's land to see him and his country and report thereon, and then led the way to his house, where he sat down on his bedstead side. "On each hand of him was placed a comely and personable young woman, which they called his Queenes, the howse within round about beset with them, the outside guarded with a hundred bowmen."

The first thing offered was a pipe of tobacco, which Powhatan "first drank," and then passed to Hamor, who "drank" what he pleased and then returned it. The Emperor then inquired how his brother Sir Thomas Dale fared, "and after that of his daughter's welfare, her marriage, his unknown son, and how they liked, lived and loved together." Hamor replied "that his brother was very well, and his daughter so well content that she would not change her life to return and live with him, whereat he laughed heartily, and said he was very glad of it."

Powhatan then desired to know the cause of his unexpected coming, and Mr. Hamor said his message was private, to be delivered to him without the presence of any except one of his councilors, and one of the guides, who already knew it.

Therefore the house was cleared of all except the two Queens, who may never sequester themselves, and Mr. Hamor began his palaver. First there was a message of love and inviolable peace, the production of presents of coffee, beads, combs, fish-hooks, and knives, and the promise of a grindstone when it pleased the Emperor to send for it. Hamor then proceeded:

"The brute of the exquisite perfection of your youngest daughter, being famous through all your territories, hath come to the hearing of your brother, Sir Thomas Dale, who for this purpose hath addressed me hither, to intreat you by that brotherly friendship you make profession of, to permit her (with me) to returne unto him, partly for the desire which himselfe hath, and partly for the desire her sister hath to see her of whom, if fame hath not been prodigall, as like enough it hath not, your brother (by your favour) would gladly make his nearest companion, wife and bed fellow [many times he would have interrupted my speech, which I entreated him to heare out, and then if he pleased to returne me answer], and the reason hereof is, because being now friendly and firmly united together, and made one people [as he supposeth and believes] in the bond of love, he would make a natural union between us, principally because himself hath taken

resolution to dwell in your country so long as he liveth, and would not only therefore have the firmest assurance hee may, of perpetuall friendship from you, but also hereby binde himselfe thereunto."

Powhatan replied with dignity that he gladly accepted the salute of love and peace, which he and his subjects would exactly maintain. But as to the other matter he said: "My daughter, whom my brother desireth, I sold within these three days to be wife to a great Weroance for two bushels of Roanoke [a small kind of beads made of oyster shells], and it is true she is already gone with him, three days' journey from me."

Hamor persisted that this marriage need not stand in the way; "that if he pleased herein to gratify his Brother he might, restoring the Roanoke without the imputation of injustice, take home his daughter again, the rather because she was not full twelve years old, and therefore not marriageable; assuring him besides the bond of peace, so much the firmer, he should have treble the price of his daughter in beads, copper, hatchets, and many other things more useful for him."

The reply of the noble old savage to this infamous demand ought to have brought a blush to the cheeks of those who made it. He said he loved his daughter as dearly as his life; he had many children, but he delighted in none so much as in her; he could not live if he did not see her often, as he would not if she were living with the whites, and he was determined not to put himself in their hands. He desired no other assurance of friendship than his brother had given him, who had already one of his daughters as a pledge, which was sufficient while she lived; "when she dieth he shall have another child of mine." And then he broke forth in pathetic eloquence: "I hold it not a brotherly part of your King, to desire to bereave me of two of my children at once; further give him to understand, that if he had no pledge at all, he should not need to distrust any injury from me, or any under my subjection; there have been too many of his and my men killed, and by my occasion there shall never be more; I which have power to perform it have said it; no not though I should have just occasion offered, for I am now old and would gladly end my days in peace; so as if the English offer me any injury, my country is large enough, I will remove myself farther from you."

The old man hospitably entertained his guests for a day or two, loaded them with presents, among which were two dressed buckskins, white as snow, for his son and daughter, and, requesting some articles sent him in return, bade them farewell with this message to Governor Dale: "I hope this will give him good satisfaction, if it do not I will go three days' journey farther from him, and never see Englishmen more." It speaks well for the temperate habits of this savage that after he had feasted his guests, "he caused to be fetched a great glass of sack, some three quarts or better, which Captain Newport had given him six or seven years since, carefully preserved by him, not much above a pint in all this time spent, and gave each of us in a great oyster shell some three spoonfuls."

We trust that Sir Thomas Dale gave a faithful account of all this to his wife in England.

Sir Thomas Gates left Virginia in the spring of 1614 and never returned. After his departure scarcity and severity developed a mutiny, and six of the settlers were executed. Rolfe was planting tobacco (he has the credit of being the first white planter of it), and his wife was getting an inside view of Christian civilization.

In 1616 Sir Thomas Dale returned to England with his company and John Rolfe and Pocahontas, and several other Indians. They reached Plymouth early in June, and on the 20th Lord Carew made this note: "Sir Thomas Dale returned from Virginia; he hath brought divers men and women of thatt countrye to be educated here, and one Rolfe who married a daughter of Pohetan (the barbarous prince) called Pocahuntas, hath brought his wife with him into England." On the 22d Sir John Chamberlain wrote to Sir Dudley Carlton that there were "ten or twelve, old and young, of that country."

The Indian girls who came with Pocahontas appear to have been a great care to the London company. In May, 1620, is a record that the company had to pay for physic and cordials for one of them who had been living as a servant in Cheapside, and was very weak of a consumption. The same year two other of the maids were shipped off to the Bermudas, after being long a charge to the company, in the hope that they might there get husbands, "that after they were converted and had children, they might be sent to their country and kindred to civilize them." One of them was there married. The attempt to educate them in England was not very successful, and a proposal to bring over Indian boys obtained this comment from Sir Edwin Sandys:

"Now to send for them into England, and to have them educated here, he found upon experience of those brought by Sir Thomas Dale, might be far from the Christian work intended." One Nanamack, a lad brought over by Lord Delaware, lived some years in houses where "he heard not much of religion but sins, had many times examples of drinking, swearing and like evils, ran as he was a mere Pagan," till he fell in with a devout family and changed his life, but died before he was baptized. Accompanying Pocahontas was a councilor of Powhatan, one Tomocomo, the husband of one of her sisters, of whom Purchas says in his "Pilgrimes": "With this savage I have often conversed with my good friend Master Doctor Goldstone where he was a frequent geust, and where I have seen him sing and dance his diabolical measures, and heard him discourse of his country and religion.... Master Rolfe lent me a discourse which I have in my Pilgrimage delivered. And his wife did not only accustom herself to civility, but still carried herself as the daughter of a king, and was accordingly respected, not only by the Company which allowed provision for herself and her son, but of divers particular persons of honor, in their hopeful zeal by her to advance Christianity. I was present when my honorable and reverend patron, the Lord Bishop of London, Doctor King, entertained her with festival state and pomp beyond what I had seen in his great hospitality offered to other ladies. At her return towards Virginia she came at Gravesend to her end and grave, having given great demonstration of her Christian sincerity, as the first fruits of Virginia conversion, leaving here a goodly memory, and the hopes of her resurrection, her soul aspiring to see and enjoy permanently in heaven what here she had joyed to hear and believe of her blessed Saviour. Not such was Tomocomo, but a blasphemmer of what he knew not and preferring his God to ours because he taught them (by his own so appearing) to wear their Devil-lock at the left ear; he acquainted me with the manner of that his appearance, and believed that their Okee or Devil had taught them their husbandry."

Upon news of her arrival, Captain Smith, either to increase his own importance or because Pocahontas was neglected, addressed a letter or "little booke" to Queen Anne, the consort of King James. This letter is found in Smith's "General Historie" (1624), where it is introduced as having been sent to Queen Anne in 1616.

Probably he sent her such a letter. We find no mention of its receipt or of any acknowledgment of it. Whether the "abstract" in the "General Historie" is exactly like the original we have no means of knowing. We have no more confidence in Smith's memory than we have in his dates. The letter is as follows:

"To the most high and vertuous Princesse Queene Anne of Great Brittain.

"Most ADMIREDE QUEENE.

"The love I beare my God, my King and Countrie hath so oft emboldened me in the worst of extreme dangers, that now honestie doth constraine mee presume thus farre beyond my selfe, to present your Majestie this short discourse: if ingratitude be a deadly poyson to all honest vertues, I must be guiltie of that crime if I should omit any meanes to bee thankful. So it is.

"That some ten yeeres agoe being in Virginia, and taken prisoner by the power of Powhatan, their chiefe King, I received from this great Salvage exceeding great courtesie, especially from his sonne Nantaquaus, the most manliest, comeliest, boldest spirit, I ever saw in a Salvage and his sister Pocahontas, the Kings most deare and well-beloved daughter, being but a childe of twelve or thirteen yeeres of age, whose compassionate pitifull heart, of desperate estate, gave me much cause to respect her: I being the first Christian this proud King and his grim attendants ever saw, and thus enthralled in their barbarous power, I cannot say I felt the least occasion of want that was in the power of those my mortall foes to prevent notwithstanding al their threats. After some six weeks fattig amongst those Salvage Courtiers, at the minute of my execution, she hazarded the beating out of her owne braines to save mine, and not onely that, but so prevailed with her father, that I was safely conducted to Jamestowne, where I found about eight and thirty miserable poore and sicke creatures, to keepe possession of all those large territories of Virginia, such was the weaknesse of this poore Commonwealth, as had the Salvages not fed us, we directly had starved.

"And this reliefe, most gracious Queene, was commonly brought us by this Lady Pocahontas, notwithstanding all these passages when inconstant Fortune turned our Peace to warre, this tender Virgin would still not spare to dare to visit us, and by her our jarres have been oft appeased, and our wants still supplied; were it the policie of her father thus to imploy her, or the ordinance of God thus to make her his instrument, or her extraordinarie affection to our Nation, I know not: but of this I am sure: when her father with the utmost of his policie and power, sought to surprize mee, having but eighteene with mee, the dark night could not affright her from comming through the irksome woods, and with watered eies gave me intilligence, with her best advice to escape his furie: which had hee known hee had surely slaine her. Jamestowne with her wild traine she as freely frequented, as her father's habitation: and during the time of two or three yeares, she next under God, was still the instrument to preserve this Colonie from death, famine and utter confusion, which if in those times had once beene dissolved, Virginia might have laine as it was at our first arrivall to this day. Since then, this buisnesse having been turned and varied by many accidents from that I left it at: it is most certaine, after a long and troublesome warre after my departure, betwixt her father and our Colonie, all which time shee was not heard of, about two yeeres longer, the Colonie by that meanes was releived, peace concluded, and at last rejecting her barbarous condition, was married to an English Gentleman, with whom at this present she is in England; the first Christian ever of that Nation, the first Virginian ever spake English, or had a childe in mariage by an Englishman, a matter surely, if my meaning bee truly considered and well understood, worthy a Princes understanding.

"Thus most gracious Lady, I have related to your Majestic, what at your best leasure our approved Histories will account you at large, and done in the time of your Majesties life, and however this might bee presented you from a more worthy pen, it cannot from a more honest heart, as yet I never begged anything of the State, or any, and it is my want of abilitie and her exceeding desert, your birth, meanes, and authoritie, her birth, vertue, want and simplicitie, doth make mee thus bold, humbly to beseech your Majestic: to take this knowledge of her though it be from one so unworthy to be the reporter, as my selfe, her husband's estate not being able to make her fit to attend your Majestic: the most and least I can doe, is to tell you this, because none so oft hath tried it as my selfe: and the rather being of so great a spirit, however her station: if she should not be well received, seeing this Kingdome may rightly have a Kingdome by her meanes: her present love to us and Christianitie, might turne to such scorne and furie, as to divert all this good to the worst of evill, when finding so great a Queene should doe her some honour more than she can imagine, for being so kinde to your servants and subjects, would so ravish her with content, as endeare her dearest blood to effect that, your Majestic and all the Kings honest subjects most earnestly desire: and so I humbly kisse your gracious hands."

The passage in this letter, "She hazarded the beating out of her owne braines to save mine," is inconsistent with the preceding portion of the paragraph which speaks of "the exceeding great courtesie" of Powhatan; and Smith was quite capable of inserting it afterwards when he made up his

"General Historie."

Smith represents himself at this time—the last half of 1616 and the first three months of 1617—as preparing to attempt a third voyage to New England (which he did not make), and too busy to do Pocahontas the service she desired. She was staying at Branford, either from neglect of the company or because the London smoke disagreed with her, and there Smith went to see her. His account of his intercourse with her, the only one we have, must be given for what it is worth. According to this she had supposed Smith dead, and took umbrage at his neglect of her. He writes:

"After a modest salutation, without any word, she turned about, obscured her face, as not seeming well contented; and in that humour, her husband with divers others, we all left her two or three hours repenting myself to have writ she could speak English. But not long after she began to talke, remembering me well what courtesies she had done: saying, 'You did promise Powhatan what was yours should be his, and he the like to you; you called him father, being in his land a stranger, and by the same reason so must I do you:' which though I would have excused, I durst not allow of that title, because she was a king's daughter. With a well set countenance she said: 'Were you not afraid to come into my father's country and cause fear in him and all his people (but me), and fear you have I should call you father; I tell you then I will, and you shall call me childe, and so I will be forever and ever, your contrieman. They did tell me alwaies you were dead, and I

knew no other till I came to Plymouth, yet Powhatan did command Uttamatomakkin to seek you, and know the truth, because your countriemen will lie much."

This savage was the Tomocomo spoken of above, who had been sent by Powhatan to take a census of the people of England, and report what they and their state were. At Plymouth he got a long stick and began to make notches in it for the people he saw. But he was quickly weary of that task. He told Smith that Powhatan bade him seek him out, and get him to show him his God, and the King, Queen, and Prince, of whom Smith had told so much. Smith put him off about showing his God, but said he had heard that he had seen the King. This the Indian denied, James probably not coming up to his idea of a king, till by circumstances he was convinced he had seen him. Then he replied very sadly: "You gave Powhatan a white dog, which Powhatan fed as himself, but your king gave me nothing, and I am better than your white dog."

Smith adds that he took several courtiers to see Pocahontas, and "they did think God had a great hand in her conversion, and they have seen many English ladies worse favoured, proportioned, and behaved;" and he heard that it had pleased the King and Queen greatly to esteem her, as also Lord and Lady Delaware, and other persons of good quality, both at the masques and otherwise.

Much has been said about the reception of Pocahontas in London, but the contemporary notices of her are scant. The Indians were objects of curiosity for a time in London, as odd Americans have often been since, and the rank of Pocahontas procured her special attention. She was presented at court. She was entertained by Dr. King, Bishop of London. At the playing of Ben Jonson's "Christmas his Mask" at court, January 6, 1616-17, Pocahontas and Tomocomo were both present, and Chamberlain writes to Carleton: "The Virginian woman Pocahontas with her father counsellor have been with the King and graciously used, and both she and her assistant were pleased at the Masque. She is upon her return though sore against her will, if the wind would about to send her away."

Mr. Neill says that "after the first weeks of her residence in England she does not appear to be spoken of as the wife of Rolfe by the letter writers," and the Rev. Peter Fontaine says that "when they heard that Rolfe had married Pocahontas, it was deliberated in council whether he had not committed high treason by so doing, that is marrying an Indian princesse."

It was like James to think so. His interest in the colony was never the most intelligent, and apt to be in things trivial. Lord Southampton (Dec. 15, 1609) writes to Lord Salisbury that he had told the King of the Virginia squirrels brought into England, which are said to fly. The King very earnestly asked if none were provided for him, and said he was sure Salisbury would get him one. Would not have troubled him, "but that you know so well how he is affected to these toys."

There has been recently found in the British Museum a print of a portrait of Pocahontas, with a legend round it in Latin, which is translated: "Matoaka, alias Rebecka, Daughter of Prince Powhatan, Emperor of Virginia; converted to Christianity, married Mr. Rolff; died on shipboard at Gravesend 1617." This is doubtless the portrait engraved by Simon De Passe in 1616, and now inserted in the extant copies of the London edition of the "General Historie," 1624. It is not probable that the portrait was originally published with the "General Historie." The portrait inserted in the edition of 1624 has this inscription:

Round the portrait:

"Matoaka als Rebecca Filia Potentiss Princ: Pohatani Imp: Virginim."

In the oval, under the portrait:

"Aetatis suae 21 A.

1616"

"Matoaks als Rebecka daughter to the mighty Prince Powhatan Emprour of Attanoughkomouck als virginia converted and baptized in the Christian faith, and wife to the worth Mr. job Rolff. i: Pass: sculp. Compton Holland excud."

Camden in his "History of Gravesend" says that everybody paid this young lady all imaginable respect, and it was believed she would have sufficiently acknowledged those favors, had she lived to return to her own country, by bringing the Indians to a kinder disposition toward the English; and that she died, "giving testimony all the time she lay sick, of her being a very good Christian."

The Lady Rebecka, as she was called in London, died on shipboard at Gravesend after a brief illness, said to be of only three days, probably on the 21st of March, 1617. I have seen somewhere a statement, which I cannot confirm, that her disease was smallpox. St. George's Church, where she was buried, was destroyed by fire in 1727. The register of that church has this record:

*"1616, May 21 Rebecca Wrothe
Wyff of Thomas Wroth gent
A Virginia lady borne, here was buried
in ye chauncle."*

Yet there is no doubt, according to a record in the Calendar of State Papers, dated "1617, 29 March, London," that her death occurred March 21, 1617.

John Rolfe was made Secretary of Virginia when Captain Argall became Governor, and seems to have been associated in the schemes of that unscrupulous person and to have forfeited the good opinion of the company. August 23, 1618, the company wrote to Argall: "We cannot imagine why you should give us warning that Opechankano and the natives have given the country to Mr. Rolfe's child, and that they reserve it from all others till he comes of years except as we suppose as some do here report it be a device of your own, to some special purpose for yourself." It appears also by the minutes of the company in 1621 that Lady Delaware had trouble to recover goods of hers left in Rolfe's hands in Virginia, and desired a commission directed to Sir Thomas Wyatt and Mr. George Sandys to examine what goods of the late "Lord Deleware had come into

Rolfe's possession and get satisfaction of him." This George Sandys is the famous traveler who made a journey through the Turkish Empire in 1610, and who wrote, while living in Virginia, the first book written in the New World, the completion of his translation of Ovid's "Metamorphosis."

John Rolfe died in Virginia in 1622, leaving a wife and children. This is supposed to be his third wife, though there is no note of his marriage to her nor of the death of his first. October 7, 1622, his brother Henry Rolfe petitioned that the estate of John should be converted to the support of his relict wife and children and to his own indemnity for having brought up John's child by Powhatan's daughter.

This child, named Thomas Rolfe, was given after the death of Pocahontas to the keeping of Sir Lewis Stukely of Plymouth, who fell into evil practices, and the boy was transferred to the guardianship of his uncle Henry Rolfe, and educated in London. When he was grown up he returned to Virginia, and was probably there married. There is on record his application to the Virginia authorities in 1641 for leave to go into the Indian country and visit Cleopatra, his mother's sister. He left an only daughter who was married, says Stith (1753), "to Col. John Bolling; by whom she left an only son, the late Major John Bolling, who was father to the present Col. John Bolling, and several daughters, married to Col. Richard Randolph, Col. John Fleming, Dr. William Gay, Mr. Thomas Eldridge, and Mr. James Murray." Campbell in his "History of Virginia" says that the first Randolph that came to the James River was an esteemed and industrious mechanic, and that one of his sons, Richard, grandfather of the celebrated John Randolph, married Jane Bolling, the great granddaughter of Pocahontas.

In 1618 died the great Powhatan, full of years and satiated with fighting and the savage delights of life. He had many names and titles; his own people sometimes called him Ottaniack, sometimes Mamauatonick, and usually in his presence Wahunsenasawk. He ruled, by inheritance and conquest, with many chiefs under him, over a large territory with not defined borders, lying on the James, the York, the Rappahannock, the Potomac, and the Pawtuxet Rivers. He had several seats, at which he alternately lived with his many wives and guard of bowmen, the chief of which at the arrival of the English was Werowocomo, on the Pamunkey (York) River. His state has been sufficiently described. He is said to have had a hundred wives, and generally a dozen—the youngest—personally attending him. When he had a mind to add to his harem he seems to have had the ancient oriental custom of sending into all his dominions for the fairest maidens to be brought from whom to select. And he gave the wives of whom he was tired to his favorites.

Strachey makes a striking description of him as he appeared about 1610: "He is a goodly old man not yet shrincking, though well beaten with cold and stormeye winters, in which he hath been patient of many necessities and attempts of his fortune to make his name and famely great. He is supposed to be little lesse than eighty yeares old, I dare not saye how much more; others saye he is of a tall stature and cleane lymbes, of a sad aspect, rownd fatt visaged, with graie haire, but plaine and thin, hanging upon his broad showlders; some few haire upon his chin, and so on his upper lippe: he hath been a strong and able salvadge, synowye, vigilant, ambitious, subtile to enlarge his dominions:... cruell he hath been, and quarellous as well with his own wcrowanccs for trifles, and that to strike a terrour and awe into them of his power and condicion, as also with his neighberrs in his younger days, though now delighted in security and pleasure, and therefore stands upon reasonable conditions of peace with all the great and absolute werowanccs about him, and is likewise more quietly settled amongst his own."

It was at this advanced age that he had the twelve favorite young wives whom Strachey names. All his people obeyed him with fear and adoration, presenting anything he ordered at his feet, and trembling if he frowned. His punishments were cruel; offenders were beaten to death before him, or tied to trees and dismembered joint by joint, or broiled to death on burning coals. Strachey wondered how such a barbarous prince should put on such ostentation of majesty, yet he accounted for it as belonging to the necessary divinity that doth hedge in a king: "Such is (I believe) the impression of the divine nature, and however these (as other heathens forsaken by the true light) have not that porcion of the knowing blessed Christian spirit, yet I am perswaded there is an infused kind of divinities and extraordinary (appointed that it shall be so by the King of kings) to such as are his ymedyate instruments on earth."

Here is perhaps as good a place as any to say a word or two about the appearance and habits of Powhatan's subjects, as they were observed by Strachey and Smith. A sort of religion they had, with priests or conjurers, and houses set apart as temples, wherein images were kept and conjurations performed, but the ceremonies seem not worship, but propitiations against evil, and there seems to have been no conception of an overruling power or of an immortal life. Smith describes a ceremony of sacrifice of children to their deity; but this is doubtful, although Parson Whittaker, who calls the Indians "naked slaves of the devil," also says they sacrificed sometimes themselves and sometimes their own children. An image of their god which he sent to England "was painted upon one side of a toadstool, much like unto a deformed monster." And he adds: "Their priests, whom they call Quockosoughs, are no other but such as our English witches are." This notion I believe also pertained among the New England colonists. There was a belief that the Indian conjurers had some power over the elements, but not a well-regulated power, and in time the Indians came to a belief in the better effect of the invocations of the whites. In "Winslow's Relation," quoted by Alexander Young in his "Chronicles of the Pilgrim Fathers," under date of July, 1623, we read that on account of a great drought a fast day was appointed. When the assembly met the sky was clear. The exercise lasted eight or nine hours. Before they broke up, owing to prayers the weather was overcast. Next day began a long gentle rain. This the Indians seeing, admired the goodness of our God: "showing the difference between their conjuration and our invocation in the name of God for rain; theirs being mixed with such storms and tempests, as sometimes, instead of doing them good, it layeth the corn flat on the ground; but ours in so gentle and seasonable a manner, as they never observed the like."

It was a common opinion of the early settlers in Virginia, as it was of those in New England, that the Indians were born white, but that they got a brown or tawny color by the use of red ointments, made of earth and the juice of roots, with which they besmear themselves either according to the custom of the country or as a defense against the stinging of mosquitoes. The women are of the same hue as the men, says Strachey; "howbeit, it is supposed neither of them naturally borne so discolored; for Captain Smith (lyving sometymes amongst them) affirmeth how they are from the womb indifferent white, but as the men, so doe the women,"

"dye and disguise themselves into this tawny cowler, esteeming it the best beauty to be nearest such a kind of murrey as a sodden quince is of," as the Greek women colored their faces and the ancient Britain women dyed themselves with red; "howbeit [Strachey slyly adds] he or she that hath obtained the perfected art in the tempering of this collour with any better kind of earth, yearb or root preserves it not yet so secrett and precious unto herself as doe our great ladyes their oyle of talchum, or other painting white and red, but they frindly communicate the secret and teach it one another."

Thomas Lechford in his "Plain Dealing; or Newes from New England," London, 1642, says: "They are of complexion swarthy and tawny; their children are borne white, but they bedawbe them with oyle and colors presently."

The men are described as tall, straight, and of comely proportions; no beards; hair black, coarse, and thick; noses broad, flat, and full at the end; with big lips and wide mouths', yet nothing so unsightly as the Moors; and the women as having "handsome limbs, slender arms, pretty hands, and when they sing they have a pleasant tange in their voices. The men shaved their hair on the right side, the women acting as barbers, and left the hair full length on the left side, with a lock an ell long." A Puritan divine—"New England's Plantation, 1630"—says of the Indians about him, "their hair is generally black, and cut before like our gentlewomen, and one lock longer than the rest, much like to our gentlemen, which fashion I think came from hence into England."

Their love of ornaments is sufficiently illustrated by an extract from Strachey, which is in substance what Smith writes:

"Their eares they boare with wyde holes, commonly two or three, and in the same they doe hang chaines of stayned pearle braceletts, of white bone or shreeds of copper, beaten thinne and bright, and wounde up hollowe, and with a grate pride, certaine fowles' legges, eagles, hawkes, turkeys, etc., with beasts claws, bears, arrahacounes, squirrells, etc. The clawes thrust through they let hang upon the cheeke to the full view, and some of their men there be who will weare in these holes a small greene and yellow-couloured live snake, neere half a yard in length, which crawling and lapping himself about his neck oftentimes familiarly, he suffreeth to kisse his lippes. Others weare a dead ratt tyed by the tayle, and such like conundrums."

This is the earliest use I find of our word "conundrum," and the sense it bears here may aid in discovering its origin.

Powhatan is a very large figure in early Virginia history, and deserves his prominence. He was an able and crafty savage, and made a good fight against the encroachments of the whites, but he was no match for the crafty Smith, nor the double-dealing of the Christians. There is something pathetic about the close of his life, his sorrow for the death of his daughter in a strange land, when he saw his territories overrun by the invaders, from whom he only asked peace, and the poor privilege of moving further away from them into the wilderness if they denied him peace.

In the midst of this savagery Pocahontas blooms like a sweet, wild rose. She was, like the Douglas, "tender and true." Wanting apparently the cruel nature of her race generally, her heroic qualities were all of the heart. No one of all the contemporary writers has anything but gentle words for her. Barbarous and untaught she was like her comrades, but of a gentle nature. Stripped of all the fictions which Captain Smith has woven into her story, and all the romantic suggestions which later writers have indulged in, she appears, in the light of the few facts that industry is able to gather concerning her, as a pleasing and unrestrained Indian girl, probably not different from her savage sisters in her habits, but bright and gentle; struck with admiration at the appearance of the white men, and easily moved to pity them, and so inclined to a growing and lasting friendship for them; tractable and apt to learn refinements; accepting the new religion through love for those who taught it, and finally becoming in her maturity a well-balanced, sensible, dignified Christian woman.

According to the long-accepted story of Pocahontas, she did something more than interfere to save from barbarous torture and death a stranger and a captive, who had forfeited his life by shooting those who opposed his invasion. In all times, among the most savage tribes and in civilized society, women have been moved to heavenly pity by the sight of a prisoner, and risked life to save him—the impulse was as natural to a Highland lass as to an African maid. Pocahontas went further than efforts to make peace between the superior race and her own. When the whites forced the Indians to contribute from their scanty stores to the support of the invaders, and burned their dwellings and shot them on sight if they refused, the Indian maid sympathized with the exposed whites and warned them of stratagems against them; captured herself by a base violation of the laws of hospitality, she was easily reconciled to her situation, adopted the habits of the foreigners, married one of her captors, and in peace and in war cast in her lot with the strangers. History has not preserved for us the Indian view of her conduct.

It was no doubt fortunate for her, though perhaps not for the colony, that her romantic career ended by an early death, so that she always remains in history in the bloom of youth. She did not live to be pained by the contrast, to which her eyes were opened, between her own and her adopted people, nor to learn what things could be done in the Christian name she loved, nor to see her husband in a less honorable light than she left him, nor to be involved in any way in the frightful massacre of 1622. If she had remained in England after the novelty was over, she might have been subject to slights and mortifying neglect. The struggles of the fighting colony could have brought her little but pain. Dying when she did, she rounded out one of the prettiest romances of all history, and secured for her name the affection of a great nation, whose empire has spared little that belonged to her childhood and race, except the remembrance of her friendship for those who destroyed her people.

I. BEING A BOY

BEING A BOY

One of the best things in the world to be is a boy; it requires no experience, though it needs some practice to be a good one. The disadvantage of the position is that it does not last long enough; it is soon over; just as you get used to being a boy, you have to be something else, with a good deal more work to do and not half so much fun. And yet every boy is anxious to be a man, and is very uneasy with the restrictions that are put upon him as a boy. Good fun as it is to yoke up the calves and play work, there is not a boy on a farm but would rather drive a yoke of oxen at real work. What a glorious feeling it is, indeed, when a boy is for the first time given the long whip and permitted to drive the oxen, walking by their side, swinging the long lash, and shouting "Gee, Buck!" "Haw, Golden!" "Whoa, Bright!" and all the rest of that remarkable language, until he is red in the face, and all the neighbors for half a mile are aware that something unusual is going on. If I were

a boy, I am not sure but I would rather drive the oxen than have a birthday. The proudest day of my life was one day when I rode on the neap of the cart, and drove the oxen, all alone, with a load of apples to the cider-mill. I was so little that it was a wonder that I did n't fall off, and get under the broad wheels. Nothing could make a boy, who cared anything for his appearance, feel flatter than to be run over by the broad tire of a cart-wheel. But I never heard of one who was, and I don't believe one ever will be. As I said, it was a great day for me, but I don't remember that the oxen cared much about it. They sagged along in their great clumsy way, switching their tails in my face occasionally, and now and then giving a lurch to this or that side of the road, attracted by a choice tuft of grass. And then I "came the Julius Caesar" over them, if you will allow me to use such a slang expression, a liberty I never should permit you. I don't know that Julius Caesar ever drove cattle, though he must often have seen the peasants from the Campagna "haw" and "gee" them round the Forum (of course in Latin, a language that those cattle understood as well as ours do English); but what I mean is, that I stood up and "hollered" with all my might, as everybody does with oxen, as if they were born deaf, and whacked them with the long lash over the head, just as the big folks did when they drove. I think now that it was a cowardly thing to crack the patient old fellows over the face and eyes, and make them wink in their meek manner. If I am ever a boy again on a farm, I shall speak gently to the oxen, and not go screaming round the farm like a crazy man; and I shall not hit them a cruel cut with the lash every few minutes, because it looks big to do so and I cannot think of anything else to do. I never liked lickings myself, and I don't know why an ox should like them, especially as he cannot reason about the moral improvement he is to get out of them.

Speaking of Latin reminds me that I once taught my cows Latin. I don't mean that I taught them to read it, for it is very difficult to teach a cow to read Latin or any of the dead languages,—a cow cares more for her cud than she does for all the classics put together. But if you begin early, you can teach a cow, or a calf (if you can teach a calf anything, which I doubt), Latin as well as English. There were ten cows, which I had to escort to and from pasture night and morning. To these cows I gave the names of the Roman numerals, beginning with Unus and Duo, and going up to Decem. Decem was, of course, the biggest cow of the party, or at least she was the ruler of the others, and had the place of honor in the stable and everywhere else. I admire cows, and especially the exactness with which they define their social position. In this case, Decem could "lick" Novem, and Novem could "lick" Octo, and so on down to Unus, who could n't lick anybody, except her own calf. I suppose I ought to have called the weakest cow Una instead of Unus, considering her sex; but I did n't care much to teach the cows the declensions of adjectives, in which I was not very well up myself; and, besides, it would be of little use to a cow. People who devote themselves too severely to study of the classics are apt to become dried up; and you should never do anything to dry up a cow. Well, these ten cows knew their names after a while, at least they appeared to, and would take their places as I called them. At least, if Octo attempted to get before Novem in going through the bars (I have heard people speak of a "pair of bars" when there were six or eight of them), or into the stable, the matter of precedence was settled then and there, and, once settled, there was no dispute about it afterwards. Novem either put her horns into Octo's ribs, and Octo shambled to one side, or else the two locked horns and tried the game of push and gore until one gave up. Nothing is stricter than the etiquette of a party of cows. There is nothing in royal courts equal to it; rank is exactly settled, and the same individuals always have the precedence. You know that at Windsor Castle, if the Royal Three-Ply Silver Stick should happen to get in front of the Most Royal Double-and-Twisted Golden Rod, when the court is going in to dinner, something so dreadful would happen that we don't dare to think of it. It is certain that the soup would get cold while the Golden Rod was pitching the Silver Stick out of the Castle window into the moat, and perhaps the island of Great Britain itself would split in two. But the people are very careful that it never shall happen, so we shall probably never know what the effect would be. Among cows, as I say, the question is settled in short order, and in a different manner from what it sometimes is in other society. It is said that in other society there is sometimes a great scramble for the first place, for the leadership, as it is called, and that women, and men too, fight for what is called position; and in order to be first they will injure their neighbors by telling stories about them and by backbiting, which is the meanest kind of biting there is, not excepting the bite of fleas. But in cow society there is nothing of this detraction in order to get the first place at the crib, or the farther stall in the stable. If the question arises, the cows turn in, horns and all, and settle it with one square fight, and that ends it. I have often admired this trait in COWS.

Besides Latin, I used to try to teach the cows a little poetry, and it is a very good plan. It does not do the cows much good, but it is very good exercise for a boy farmer. I used to commit to memory as good short poems as I could find (the cows liked to listen to "Thanatopsis" about as well as anything), and repeat them when I went to the pasture, and as I drove the cows home through the sweet ferns and down the rocky

slopes. It improves a boy's elocution a great deal more than driving oxen.

It is a fact, also, that if a boy repeats "Thanatopsis" while he is milking, that operation acquires a certain dignity.

II. THE BOY AS A FARMER

AT THE PASTURE BARS

Boys in general would be very good farmers if the current notions about farming were not so very different from those they entertain. What passes for laziness is very often an unwillingness to farm in a particular way. For instance, some morning in early summer John is told to catch the sorrel mare, harness her into the spring wagon, and put in the buffalo and the best whip, for father is obliged to drive over to the "Corners, to see a man" about some cattle, to talk with the road commissioner, to go to the store for the "women folks," and to attend to other important business; and very likely he will not be back till sundown. It must be very pressing business, for the old gentleman drives off in this way somewhere almost every pleasant day, and appears to have a great deal on his mind.

Meantime, he tells John that he can play ball after he has done up the chores. As if the chores could ever be "done up" on a farm. He is first to clean out the horse-stable; then to take a bill-hook and cut down the thistles and weeds from the fence corners in the home mowing-lot and along the road towards the village; to dig up the docks round the garden patch; to weed out the beet-bed; to hoe the early potatoes; to rake the sticks and leaves out of the front yard; in short, there is work enough laid out for John to keep him busy, it seems to him, till he comes of age; and at half an hour to sundown he is to go for the cows "and mind he don't run 'em!"

"Yes, sir," says John, "is that all?"

"Well, if you get through in good season, you might pick over those potatoes in the cellar; they are sprouting; they ain't fit to eat."

John is obliged to his father, for if there is any sort of chore more cheerful to a boy than another, on a pleasant day, it is rubbing the sprouts off potatoes in a dark cellar. And the old gentleman mounts his wagon and drives away down the enticing road, with the dog bounding along beside the wagon, and refusing to come back at John's call. John half wishes he were the dog. The dog knows the part of farming that suits him.

He likes to run along the road and see all the dogs and other people, and he likes best of all to lie on the store steps at the Corners—while his master's horse is dozing at the post and his master is talking politics in the store—with the other dogs of his acquaintance, snapping at mutually annoying flies, and indulging in that delightful dog gossip which is expressed by a wag of the tail and a sniff of the nose. Nobody knows how many dogs' characters are destroyed in this gossip, or how a dog may be able to insinuate suspicion by a wag of the tail as a man can by a shrug of the shoulders, or sniff a slander as a man can suggest one by raising his eyebrows.

John looks after the old gentleman driving off in state, with the odorous buffalo-robe and the new whip, and he thinks that is the sort of farming he would like to do. And he cries after his departing parent,

IN THE CATTLE PASTURE

“Say, father, can't I go over to the farther pasture and salt the cattle?” John knows that he could spend half a day very pleasantly in going over to that pasture, looking for bird's nests and shying at red squirrels on the way, and who knows but he might “see” a sucker in the meadow brook, and perhaps get a “jab” at him with a sharp stick. He knows a hole where there is a whopper; and one of his plans in life is to go some day and snare him, and bring him home in triumph. It is therefore strongly impressed upon his mind that the cattle want salting. But his father, without turning his head, replies,

“No, they don't need salting any more 'n you do!” And the old equipage goes rattling down the road, and John whistles his disappointment. When I was a boy on a farm, and I suppose it is so now, cattle were never salted half enough!

John goes to his chores, and gets through the stable as soon as he can, for that must be done; but when it comes to the out-door work, that rather drags. There are so many things to distract the attention—a chipmunk in the fence, a bird on a near-tree, and a hen-hawk circling high in the air over the barnyard. John loses a little time in stoning the chipmunk, which rather likes the sport, and in watching the bird, to find where its nest is; and he convinces himself that he ought to watch the hawk, lest it pounce upon the chickens, and therefore, with an easy conscience, he spends fifteen minutes in hallooing to that distant bird, and follows it away out of sight over the woods, and then wishes it would come back again. And then a carriage with two horses, and a trunk on behind, goes along the road; and there is a girl in the carriage who looks out at John, who is suddenly aware that his trousers are patched on each knee and in two places behind; and he wonders if she is rich, and whose name is on the trunk, and how much the horses cost, and whether that nice-looking man is the girl's father, and if that boy on the seat with the driver is her brother, and if he has to do chores; and as the gay sight disappears, John falls to thinking about the great world beyond the farm, of cities, and people who are always dressed up, and a great many other things of which he has a very dim notion. And then a boy, whom John knows, rides by in a wagon with his father, and the boy makes a face at

John, and John returns the greeting with a twist of his own visage and some symbolic gestures. All these things take time. The work of cutting down the big weeds gets on slowly, although it is not very disagreeable, or would not be if it were play. John imagines that yonder big thistle is some whiskered villain, of whom he has read in a fairy book, and he advances on him with "Die, ruffian!" and slashes off his head with the bill-hook; or he charges upon the rows of mullein-stalks as if they were rebels in regimental ranks, and hews them down without mercy. What fun it might be if there were only another boy there to help. But even war, single handed, gets to be tiresome. It is dinner-time before John finishes the weeds, and it is cow-time before John has made much impression on the garden.

This garden John has no fondness for. He would rather hoe corn all day than work in it. Father seems to think that it is easy work that John can do, because it is near the house! John's continual plan in this life is to go fishing. When there comes a rainy day, he attempts to carry it out. But ten chances to one his father has different views. As it rains so that work cannot be done out-doors, it is a good time to work in the garden. He can run into the house between the heavy showers. John accordingly detests the garden; and the only time he works briskly in it is when he has a stent set, to do so much weeding before the Fourth of July. If he is spry, he can make an extra holiday the Fourth and the day after. Two days of gunpowder and ball-playing! When I was a boy, I supposed there was some connection between such and such an amount of work done on the farm and our national freedom. I doubted if there could be any Fourth of July if my stent was not done. I, at least, worked for my Independence.

III. THE DELIGHTS OF FARMING

There are so many bright spots in the life of a farm-boy, that I sometimes think I should like to live the life over again; I should almost be willing to be a girl if it were not for the chores. There is a great comfort to a boy in the amount of work he can get rid of doing. It is sometimes astonishing how slow he can go on an errand,—he who leads the school in a race. The world is new and interesting to him, and there is so much to take his attention off, when he is sent to do anything. Perhaps he himself couldn't explain why, when he is sent to the neighbor's after yeast, he stops to stone the frogs; he is not exactly cruel, but he wants to see if he can hit 'em. No other living thing can go so slow as a boy sent on an errand. His legs seem to be lead, unless he happens to espy a woodchuck in an adjoining lot, when he gives chase to it like a deer; and it is a curious fact about boys, that two will be a great deal slower in doing anything than one, and that the more you have to help on a piece of work the less is accomplished. Boys have a great power of helping each other to do nothing; and they are so innocent about it, and unconscious. "I went as quick as ever I could," says the boy; his father asks him why he did n't stay all night, when he has been absent three hours on a ten-minute errand. The sarcasm has no effect on the boy.

AFTER A CROW'S NEST

Going after the cows was a serious thing in my day. I had to climb a hill, which was covered with wild strawberries in the season. Could any boy pass by those ripe berries? And then in the fragrant hill pasture there were beds of wintergreen with red berries, tufts of columbine, roots of sassafras to be dug, and dozens of things good to eat or to smell, that I could not resist. It sometimes even lay in my way to climb a tree to look for a crow's nest, or to swing in the top, and to try if I could see the steeple of the village church. It became very important sometimes for me to see that steeple; and in the midst of my investigations the tin horn would blow a great blast from the farmhouse, which would send a cold chill down my back in the hottest days. I knew what it meant. It had a frightfully impatient quaver in it, not at all like the sweet note that called us to dinner from the hay-field. It said, "Why on earth does n't that boy come home? It is almost dark, and the cows ain't milked!" And that was the time the cows had to start into a brisk pace and make up for lost time. I wonder if any boy ever drove the cows home late, who did not say that the cows were at the very farther end of the pasture, and that "Old Brindle" was hidden in the woods, and he couldn't find her for ever so long! The brindle cow is the boy's scapegoat, many a time.

No other boy knows how to appreciate a holiday as the farm-boy does; and his best ones are of a peculiar kind. Going fishing is of course one sort. The excitement of rigging up the tackle, digging the bait, and the anticipation of great luck! These are pure pleasures, enjoyed because they are rare. Boys who can go a-fishing any time care but little for it. Tramping all day through bush and brier, fighting flies and mosquitoes, and branches that tangle the line, and snags that break the hook, and returning home late and hungry, with wet feet and a string of speckled trout on a willow twig, and having the family crowd out at the kitchen door to look at 'em, and say, "Pretty well done for you, bub; did you catch that big one yourself?"—this is also pure happiness, the like of which the boy will never have again, not if he comes to be selectman and deacon and to "keep store."

But the holidays I recall with delight were the two days in spring and fall, when we went to the distant pasture-land, in a neighboring town, maybe, to drive thither the young cattle and colts, and to bring them back again. It was a wild and rocky upland where our great pasture was, many miles from home, the road to it running by a brawling river, and up a dashing brook-side among great hills. What a day's adventure it was! It was like a journey to Europe. The night before, I could scarcely sleep for thinking of it! and there was no trouble about getting me up at sunrise that morning. The breakfast was eaten, the luncheon was packed in a large basket, with bottles of root beer and a jug of switchel, which packing I superintended with the greatest interest; and then the cattle were to be collected for the march, and the horses hitched up. Did I shirk any duty? Was I slow? I think not. I was willing to run my legs off after the frisky steers, who seemed to have an idea they were going on a lark, and frolicked about, dashing into all gates, and through all bars except the right ones; and how cheerfully I did yell at them.

It was a glorious chance to "holler," and I have never since heard any public speaker on the stump or at camp-meeting who could make more noise. I have often thought it fortunate that the amount of noise in a boy does not increase in proportion to his size; if it did, the world could not contain it.

The whole day was full of excitement and of freedom. We were away from the farm, which to a boy is one of the best parts of farming; we saw other farms and other people at work; I had the pleasure of marching along, and swinging my whip, past boys whom I knew, who were picking up stones. Every turn of the road, every bend and rapid of the river, the great bowlders by the wayside, the watering-troughs, the giant pine that had been struck by lightning, the mysterious covered bridge over the river where it was, most swift and rocky and foamy, the chance eagle in the blue sky, the sense of going somewhere,—why, as I recall all these things I feel that even the Prince Imperial, as he used to dash on horseback through the Bois de Boulogne, with fifty mounted hussars clattering at his heels, and crowds of people cheering, could not have been as happy as was I, a boy in short jacket and shorter pantaloons, trudging in the dust that day behind the steers and colts, cracking my black-stock whip.

A STRING OF SPECKED TROUT

I wish the journey would never end; but at last, by noon, we reach the pastures and turn in the herd; and after making the tour of the lots to make sure there are no breaks in the fences, we take our luncheon from the wagon and eat it under the trees by the spring. This is the supreme moment of the day. This is the way to live; this is like the Swiss Family Robinson, and all the rest of my delightful acquaintances in romance. Baked beans, rye-and-indian bread (moist, remember), doughnuts and cheese, pie, and root beer. What richness! You may live to dine at Delmonico's, or, if those Frenchmen do not eat each other up, at Philippe's, in Rue Montorgueil in Paris, where the dear old Thackeray used to eat as good a dinner as anybody; but you will get there neither doughnuts, nor pie, nor root beer, nor anything so good as that luncheon at noon in the old pasture, high among the Massachusetts hills! Nor will you ever, if you live to be the oldest boy in the world, have any holiday equal to the one I have described. But I always regretted that I did not take along a fishline, just to "throw in" the brook we passed. I know there were trout there.

IV. NO FARMING WITHOUT A BOY

Say what you will about the general usefulness of boys, it is my impression that a farm without a boy would very soon come to grief. What the boy does is the life of the farm. He is the factotum, always in demand, always expected to do the thousand indispensable things that nobody else will do. Upon him fall all the odds and ends, the most difficult things. After everybody else is through, he has to finish up. His work is like a woman's,—perpetual waiting on others. Everybody knows how much easier it is to eat a good dinner than it is to wash the dishes afterwards. Consider what a boy on a farm is required to do; things that must be done, or life would actually stop.

It is understood, in the first place, that he is to do all the errands, to go to the store, to the post office, and to carry all sorts of messages. If he had as many legs as a centipede, they would tire before night. His two short limbs seem to him entirely inadequate to the task. He would like to have as many legs as a wheel has spokes, and rotate about in the same way. This he sometimes tries to do; and people who have seen him "turning cart-wheels" along the side of the road have supposed that he was amusing himself, and idling his time; he was only trying to invent a new mode of locomotion, so that he could economize his legs and do his errands with greater dispatch. He practices standing on his head, in order to accustom himself to any position. Leapfrog is one of his methods of getting over the ground quickly. He would willingly go an errand any distance if he could leap-frog it with a few other boys. He has a natural genius for combining pleasure with business. This is the reason why, when he is sent to the spring for a pitcher of water, and the family are waiting at the dinner-table, he is absent so long; for he stops to poke the frog that sits on the stone, or, if there is a penstock, to put his hand over the spout and squirt the water a little while. He is the one who spreads the grass when the men have cut it; he mows it away in the barn; he rides the horse to cultivate the corn, up and down the hot, weary rows; he picks up the potatoes when they are dug; he drives the cows night and morning; he brings wood and water and splits kindling; he gets up the horse and puts out the horse; whether he is in the house or out of it, there is always something for him to do. Just before school in winter he shovels paths; in summer he turns the grindstone. He knows where there are lots of winter-greens and sweet flag-root, but instead of going for them, he is to stay in-doors and pare apples and stone raisins and pound

something in a mortar. And yet, with his mind full of schemes of what he would like to do, and his hands full of occupations, he is an idle boy who has nothing to busy himself with but school and chores! He would gladly do all the work if somebody else would do the chores, he thinks, and yet I doubt if any boy ever amounted to anything in the world, or was of much use as a man, who did not enjoy the advantages of a liberal education in the way of chores.

A boy on a farm is nothing without his pets; at least a dog, and probably rabbits, chickens, ducks, and guinea-hens. A guinea-hen suits a boy. It is entirely useless, and makes a more disagreeable noise than a Chinese gong. I once domesticated a young fox which a neighbor had caught. It is a mistake to suppose the fox cannot be tamed. Jacko was a very clever little animal, and behaved, in all respects, with propriety. He kept Sunday as well as any day, and all the ten commandments that he could understand. He was a very graceful playfellow, and seemed to have an affection for me. He lived in a wood-pile in the dooryard, and when I lay down at the entrance to his house and called him, he would come out and sit on his tail and lick my face just like a grown person. I taught him a great many tricks and all the virtues. That year I had a large number of hens, and Jacko went about among them with the most perfect indifference, never looking on them to lust after them, as I could see, and never touching an egg or a feather. So excellent was his reputation that I would have trusted him in the hen-roost in the dark without counting the hens. In short, he was domesticated, and I was fond of him and very proud of him, exhibiting him to all our visitors as an example of what affectionate treatment would do in subduing the brute instincts. I preferred him to my dog, whom I had, with much patience, taught to go up a long hill alone and surround the cows, and drive them home from the remote pasture. He liked the fun of it at first, but by and by he seemed to get the notion that it was a "chore," and when I whistled for him to go for the cows, he would turn tail and run the other way, and the more I whistled and threw stones at him, the faster he would run. His name was Turk, and I should have sold him if he had not been the kind of dog that nobody will buy. I suppose he was not a cow-dog, but what they call a sheep-dog. At least, when he got big enough, he used to get into the pasture and chase the sheep to death. That was the way he got into trouble, and lost his valuable life. A dog is of great use on a farm, and that is the reason a boy likes him. He is good to bite peddlers and small children, and run out and yelp at wagons that pass by, and to howl all night when the moon shines. And yet, if I were a boy again, the first thing I would have should be a dog; for dogs are great companions, and as active and spry as a boy at doing nothing. They are also good to bark at woodchuck-holes.

A good dog will bark at a woodchuck-hole long after the animal has retired to a remote part of his residence, and escaped by another hole. This deceives the woodchuck. Some of the most delightful hours of my life have been spent in hiding and watching the hole where the dog was not. What an exquisite thrill ran through my frame when the timid nose appeared, was withdrawn, poked out again, and finally followed by the entire animal, who looked cautiously about, and then hopped away to feed on the clover. At that moment I rushed in, occupied the "home base," yelled to Turk, and then danced with delight at the combat between the spunky woodchuck and the dog. They were about the same size, but science and civilization won the day. I did not reflect then that it would have been more in the interest of civilization if the woodchuck had killed the dog. I do not know why it is that boys so like to hunt and kill animals; but the excuse that I gave in this case for the murder was, that the woodchuck ate the clover and trod it down, and, in fact, was a woodchuck. It was not till long after that I learned with surprise that he is a rodent mammal, of the species *Arctomys monax*, is called at the West a ground-hog, and is eaten by people of color with great relish.

WATCHING FOR SUNSET

But I have forgotten my beautiful fox. Jacko continued to deport himself well until the young chickens came; he was actually cured of the fox vice of chicken-stealing. He used to go with me about the coops, pricking up his ears in an intelligent manner, and with a demure eye and the most virtuous droop of the tail. Charming fox! If he had held out a little while longer, I should have put him into a Sunday-school book. But I began to miss chickens. They disappeared mysteriously in the night. I would not suspect Jacko at first, for he looked so honest, and in the daytime seemed to be as much interested in the chickens as I was. But one morning, when I went to call him, I found feathers at the entrance of his hole,—chicken feathers. He couldn't deny it. He was a thief. His fox nature had come out under severe temptation. And he died an unnatural death. He had a thousand virtues and one crime. But that crime struck at the foundation of society. He deceived and stole; he was a liar and a thief, and no pretty ways could hide the fact. His intelligent, bright face couldn't save him. If he had been honest, he might have grown up to be a large, ornamental fox.

V. THE BOY'S SUNDAY

Sunday in the New England hill towns used to begin Saturday night at sundown; and the sun is lost to sight behind the hills there before it has set by the almanac. I remember that we used to go by the almanac Saturday night and by the visible disappearance Sunday night. On Saturday night we very slowly yielded to the influences of the holy time, which were settling down upon us, and submitted to the ablutions which were as inevitable as Sunday; but when the sun (and it never moved so slow) slid behind the hills Sunday night, the effect upon the watching boy was like a shock from a galvanic battery; something flashed through all his limbs and set them in motion, and no "play" ever seemed so sweet to him as that between sundown and dark Sunday night. This, however, was on the supposition that he had conscientiously kept Sunday, and had not gone in swimming and got drowned. This keeping of Saturday night instead of Sunday night we did not very well understand; but it seemed, on the whole, a good thing that we should rest Saturday night when we were tired, and play Sunday night when we were rested. I supposed, however, that it was an arrangement made to suit the big boys who wanted to go "courting" Sunday night. Certainly they were not to be blamed, for Sunday was the day when pretty girls were most fascinating, and I have never since seen any so lovely as those who used to sit in the gallery and in the singers' seats in the bare old meeting-houses.

Sunday to the country farmer-boy was hardly the relief that it was to the other members of the family; for

the same chores must be done that day as on others, and he could not divert his mind with whistling, hand-springs, or sending the dog into the river after sticks. He had to submit, in the first place, to the restraint of shoes and stockings. He read in the Old Testament that when Moses came to holy ground, he put off his shoes; but the boy was obliged to put his on, upon the holy day, not only to go to meeting, but while he sat at home. Only the emancipated country-boy, who is as agile on his bare feet as a young kid, and rejoices in the pressure of the warm soft earth, knows what a hardship it is to tie on stiff shoes. The monks who put peas in their shoes as a penance do not suffer more than the country-boy in his penitential Sunday shoes. I recall the celerity with which he used to kick them off at sundown.

Sunday morning was not an idle one for the farmer-boy. He must rise tolerably early, for the cows were to be milked and driven to pasture; family prayers were a little longer than on other days; there were the Sunday-school verses to be relearned, for they did not stay in mind over night; perhaps the wagon was to be greased before the neighbors began to drive by; and the horse was to be caught out of the pasture, ridden home bareback, and harnessed.

This catching the horse, perhaps two of them, was very good fun usually, and would have broken the Sunday if the horse had not been wanted for taking the family to meeting. It was so peaceful and still in the pasture on Sunday morning; but the horses were never so playful, the colts never so frisky. Round and round the lot the boy went calling, in an entreating Sunday voice, "Jock, jock, jock, jock," and shaking his salt-dish, while the horses, with heads erect, and shaking tails and flashing heels, dashed from corner to corner, and gave the boy a pretty good race before he could coax the nose of one of them into his dish. The boy got angry, and came very near saying "dum it," but he rather enjoyed the fun, after all.

The boy remembers how his mother's anxiety was divided between the set of his turn-over collar, the parting of his hair, and his memory of the Sunday-school verses; and what a wild confusion there was through the house in getting off for meeting, and how he was kept running hither and thither, to get the hymn-book, or a palm-leaf fan, or the best whip, or to pick from the Sunday part of the garden the bunch of caraway-seed. Already the deacon's mare, with a wagon-load of the deacon's folks, had gone shambling past, head and tail drooping, clumsy hoofs kicking up clouds of dust, while the good deacon sat jerking the reins, in an automatic way, and the "womenfolks" patiently saw the dust settle upon their best summer finery. Wagon after wagon went along the sandy road, and when our boy's family started, they became part of a long procession, which sent up a mile of dust and a pungent, if not pious smell of buffalo-ropes. There were fiery horses in the trail which had to be held in, for it was neither etiquette nor decent to pass anybody on Sunday. It was a great delight to the farmer-boy to see all this procession of horses, and to exchange sly winks with the other boys, who leaned over the wagon-seats for that purpose. Occasionally a boy rode behind, with his back to the family, and his pantomime was always some thing wonderful to see, and was considered very daring and wicked.

The meeting-house which our boy remembers was a high, square building, without a steeple. Within it had a lofty pulpit, with doors underneath and closets where sacred things were kept, and where the tithing-men were supposed to imprison bad boys. The pews were square, with seats facing each other, those on one side low for the children, and all with hinges, so that they could be raised when the congregation stood up for prayers and leaned over the backs of the pews, as horses meet each other across a pasture fence. After prayers these seats used to be slammed down with a long-continued clatter, which seemed to the boys about the best part of the exercises. The galleries were very high, and the singers' seats, where the pretty girls sat, were the most conspicuous of all. To sit in the gallery away from the family, was a privilege not often granted to the boy. The tithing-man, who carried a long rod and kept order in the house, and out-doors at noontime, sat in the gallery, and visited any boy who whispered or found curious passages in the Bible and showed them to another boy. It was an awful moment when the bushy-headed tithing-man approached a boy in sermon-time. The eyes of the whole congregation were on him, and he could feel the guilt ooze out of his burning face.

TURNING THE GRINDSTONE

At noon was Sunday-school, and after that, before the afternoon service, in summer, the boys had a little time to eat their luncheon together at the watering-trough, where some of the elders were likely to be gathered, talking very solemnly about cattle; or they went over to a neighboring barn to see the calves; or they slipped off down the roadside to a place where they could dig sassafras or the root of the sweet-flag, roots very fragrant in the mind of many a boy with religious associations to this day. There was often an odor of sassafras in the afternoon service. It used to stand in my mind as a substitute for the Old Testament incense of the Jews. Something in the same way the big bass-viol in the choir took the place of "David's harp of solemn sound."

The going home from meeting was more cheerful and lively than the coming to it. There was all the bustle of getting the horses out of the sheds and bringing them round to the meeting-house steps. At noon the boys sometimes sat in the wagons and swung the whips without cracking them: now it was permitted to give them a little snap in order to bring the horses up in good style; and the boy was rather proud of the horse if it pranced a little while the timid "women-folks" were trying to get in. The boy had an eye for whatever life and stir there was in a New England Sunday. He liked to drive home fast. The old house and the farm looked pleasant to him. There was an extra dinner when they reached home, and a cheerful consciousness of duty performed made it a pleasant dinner. Long before sundown the Sunday-school book had been read, and the boy sat waiting in the house with great impatience the signal that the "day of rest" was over. A boy may not be very wicked, and yet not see the need of "rest." Neither his idea of rest nor work is that of older farmers.

VI. THE GRINDSTONE OF LIFE

If there is one thing more than another that hardens the lot of the farmer-boy, it is the grindstone. Turning grindstones to grind scythes is one of those heroic but unobtrusive occupations for which one gets no credit. It is a hopeless kind of task, and, however faithfully the crank is turned, it is one that brings little reputation. There is a great deal of poetry about haying—I mean for those not engaged in it. One likes to hear the whetting of the scythes on a fresh morning and the response of the noisy bobolink, who always sits upon the fence and superintends the cutting of the dew-laden grass. There is a sort of music in the "swish" and a rhythm in the swing of the scythes in concert. The boy has not much time to attend to it, for it is lively business "spreading" after half a dozen men who have only to walk along and lay the grass low, while the boy

has the whole hay-field on his hands. He has little time for the poetry of haying, as he struggles along, filling the air with the wet mass which he shakes over his head, and picking his way with short legs and bare feet amid the short and freshly cut stubble.

But if the scythes cut well and swing merrily, it is due to the boy who turned the grindstone. Oh, it was nothing to do, just turn the grindstone a few minutes for this and that one before breakfast; any "hired man" was authorized to order the boy to turn the grindstone. How they did bear on, those great strapping fellows! Turn, turn, turn, what a weary go it was. For my part, I used to like a grindstone that "wabbled" a good deal on its axis, for when I turned it fast, it put the grinder on a lively lookout for cutting his hands, and entirely satisfied his desire that I should "turn faster." It was some sport to make the water fly and wet the grinder, suddenly starting up quickly and surprising him when I was turning very slowly. I used to wish sometimes that I could turn fast enough to make the stone fly into a dozen pieces. Steady turning is what the grinders like, and any boy who turns steadily, so as to give an even motion to the stone, will be much praised, and will be in demand. I advise any boy who desires to do this sort of work to turn steadily. If he does it by jerks and in a fitful manner, the "hired men" will be very apt to dispense with his services and turn the grindstone for each other.

This is one of the most disagreeable tasks of the boy farmer, and, hard as it is, I do, not know why it is supposed to belong especially to childhood. But it is, and one of the certain marks that second childhood has come to a man on a farm is, that he is asked to turn the grindstone as if he were a boy again. When the old man is good for nothing else, when he can neither mow nor pitch, and scarcely "rake after," he can turn grindstone, and it is in this way that he renews his youth. "Ain't you ashamed to have your granther turn the grindstone?" asks the hired man of the boy. So the boy takes hold and turns himself, till his little back aches. When he gets older, he wishes he had replied, "Ain't you ashamed to make either an old man or a little boy do such hard grinding work?"

Doing the regular work of this world is not much, the boy thinks, but the wearisome part is the waiting on the people who do the work. And the boy is not far wrong. This is what women and boys have to do on a farm, wait upon everybody who—works. The trouble with the boy's life is, that he has no time that he can call his own. He is, like a barrel of beer, always on draft. The men-folks, having worked in the regular hours, lie down and rest, stretch themselves idly in the shade at noon, or lounge about after supper. Then the boy, who has done nothing all day but turn grindstone, and spread hay, and rake after, and run his little legs off at everybody's beck and call, is sent on some errand or some household chore, in order that time shall not hang heavy on his hands. The boy comes nearer to perpetual motion than anything else in nature, only it is not altogether a voluntary motion. The time that the farm-boy gets for his own is usually at the end of a stent. We used to be given a certain piece of corn to hoe, or a certain quantity of corn to husk in so many days. If we finished the task before the time set, we had the remainder to ourselves. In my day it used to take very sharp work to gain anything, but we were always anxious to take the chance. I think we enjoyed the holiday in anticipation quite as much as we did when we had won it. Unless it was training-day, or Fourth of July, or the circus was coming, it was a little difficult to find anything big enough to fill our anticipations of the fun we would have in the day or the two or three days we had earned. We did not want to waste the time on any common thing. Even going fishing in one of the wild mountain brooks was hardly up to the mark, for we could sometimes do that on a rainy day. Going down to the village store was not very exciting, and was, on the whole, a waste of our precious time. Unless we could get out our military company, life was apt to be a little blank, even on the holidays for which we had worked so hard. If you went to see another boy, he was probably at work in the hay-field or the potato-patch, and his father looked at you askance. You sometimes took hold and helped him, so that he could go and play with you; but it was usually time to go for the cows before the task was done. The fact is, or used to be, that the amusements of a boy in the country are not many. Snaring "suckers" out of the deep meadow brook used to be about as good as any that I had. The North American sucker is not an engaging animal in all respects; his body is comely enough, but his mouth is puckered up like that of a purse. The mouth is not formed for the gentle angle-worm nor the delusive fly of the fishermen. It is necessary, therefore, to snare the fish if you want him. In the sunny days he lies in the deep pools, by some big stone or near the bank, poisoning himself quite still, or only stirring his fins a little now and then, as an elephant moves his ears. He will lie so for hours, or rather float, in perfect idleness and apparent bliss. The boy who also has a holiday, but cannot keep still, comes along and peeps over the bank. "Golly, ain't he a big one!" Perhaps he is eighteen inches long, and weighs two or three pounds. He lies there among his friends, little fish and big ones, quite a school of them, perhaps a district school, that only keeps in warm days in the summer. The pupils seem to have little to learn, except to balance themselves and to turn gracefully with a flirt of the tail. Not much is taught but "deportment," and some of the old suckers are perfect Turveydrops in that.

SNARING SUCKERS

The boy is armed with a pole and a stout line, and on the end of it a brass wire bent into a hoop, which is a slipnoose, and slides together when anything is caught in it. The boy approaches the bank and looks over. There he lies, calm as a whale. The boy devours him with his eyes. He is almost too much excited to drop the snare into the water without making a noise. A puff of wind comes and ruffles the surface, so that he cannot see the fish. It is calm again, and there he still is, moving his fins in peaceful security. The boy lowers his snare behind the fish and slips it along. He intends to get it around him just back of the gills and then elevate him with a sudden jerk. It is a delicate operation, for the snare will turn a little, and if it hits the fish, he is off. However, it goes well; the wire is almost in place, when suddenly the fish, as if he had a warning in a dream, for he appears to see nothing, moves his tail just a little, glides out of the loop, and with no seeming appearance of frustrating any one's plans, lounges over to the other side of the pool; and there he reposes just as if he was not spoiling the boy's holiday. This slight change of base on the part of the fish requires the boy to reorganize his whole campaign, get a new position on the bank, a new line of approach, and patiently wait for the wind and sun before he can lower his line. This time, cunning and patience are rewarded. The hoop encircles the unsuspecting fish. The boy's eyes almost start from his head as he gives a tremendous jerk, and feels by the dead-weight that he has got him fast. Out he comes, up he goes in the air, and the boy runs to look at him. In this transaction, however, no one can be more surprised than the sucker.

VII. FICTION AND SENTIMENT

The boy farmer does not appreciate school vacations as highly as his city cousin. When school keeps, he has only to "do chores and go to school," but between terms there are a thousand things on the farm that have been left for the boy to do. Picking up stones in the pastures and piling them in heaps used to be one of them. Some lots appeared to grow stones, or else the sun every year drew them to the surface, as it coaxes the round cantelopes out of the soft garden soil; it is certain that there were fields that always gave the boys this sort of fall work. And very lively work it was on frosty mornings for the barefooted boys, who were continually turning up the larger stones in order to stand for a moment in the warm place that had been covered from the frost. A boy can stand on one leg as well as a Holland stork; and the boy who found a warm spot for the sole of his foot was likely to stand in it until the words, "Come, stir your stumps," broke in discordantly upon his meditations. For the boy is very much given to meditations. If he had his way, he would do nothing in a hurry; he likes to stop and think about things, and enjoy his work as he goes along. He picks up potatoes as if each one were a lump of gold just turned out of the dirt, and requiring careful examination.

PICKING UP POTATOES

Although the country-boy feels a little joy when school breaks up (as he does when anything breaks up, or any change takes place), since he is released from the discipline and restraint of it, yet the school is his opening into the world,—his romance. Its opportunities for enjoyment are numberless. He does not exactly know what he is set at books for; he takes spelling rather as an exercise for his lungs, standing up and shouting out the words with entire recklessness of consequences; he grapples doggedly with arithmetic and geography as something that must be cleared out of his way before recess, but not at all with the zest he would dig a woodchuck out of his hole. But recess! Was ever any enjoyment so keen as that with which a boy rushes out of the schoolhouse door for the ten minutes of recess? He is like to burst with animal spirits; he runs like a deer; he can nearly fly; and he throws himself into play with entire self-forgetfulness, and an energy that would overturn the world if his strength were proportioned to it. For ten minutes the world is absolutely his; the weights are taken off, restraints are loosed, and he is his own master for that brief time,—as he never again will be if he lives to be as old as the king of Thule,—and nobody knows how old he was. And there is the nooning, a solid hour, in which vast projects can be carried out which have been slyly matured during the school-hours: expeditions are undertaken; wars are begun between the Indians on one side and the settlers on the other; the military company is drilled (without uniforms or arms), or games are carried on which involve miles of running, and an expenditure of wind sufficient to spell the spelling-book through at the highest pitch.

LEAP-FROG AT RECESS

Friendships are formed, too, which are fervent, if not enduring, and enmities contracted which are frequently "taken out" on the spot, after a rough fashion boys have of settling as they go along; cases of long credit, either in words or trade, are not frequent with boys; boot on jack-knives must be paid on the nail; and it is considered much more honorable to out with a personal grievance at once, even if the explanation is made with the fists, than to pretend fair, and then take a sneaking revenge on some concealed opportunity. The country-boy at the district school is introduced into a wider world than he knew at home, in many ways. Some big boy brings to school a copy of the Arabian Nights, a dog-eared copy, with cover, title-page, and the last leaves missing, which is passed around, and slyly read under the desk, and perhaps comes to the little boy whose parents disapprove of novel-reading, and have no work of fiction in the house except a pious fraud called "Six Months in a Convent," and the latest comic almanac. The boy's eyes dilate as he steals some of the treasures out of the wondrous pages, and he longs to lose himself in the land of enchantment open before him. He tells at home that he has seen the most wonderful book that ever was, and a big boy has promised to lend it to him. "Is it a true book, John?" asks the grandmother; "because, if it is n't true, it is the worst thing that a boy can read." (This happened years ago.) John cannot answer as to the truth of the book, and so does not bring it home; but he borrows it, nevertheless, and conceals it in the barn and, lying in the hay-mow, is lost in its enchantments many an odd hour when he is supposed to be doing chores. There were no chores in the Arabian Nights; the boy there had but to rub the ring and summon a genius, who would feed the calves and pick up chips and bring in wood in a minute. It was through this emblazoned portal that the boy walked into the world of books, which he soon found was larger than his own, and filled with people he longed to know.

And the farmer-boy is not without his sentiment and his secrets, though he has never been at a children's party in his life, and, in fact, never has heard that children go into society when they are seven, and give regular wine-parties when they reach the ripe age of nine. But one of his regrets at having the summer school close is dimly connected with a little girl, whom he does not care much for, would a great deal rather play with a boy than with her at recess,—but whom he will not see again for some time,—a sweet little thing, who is very friendly with John, and with whom he has been known to exchange bits of candy wrapped up in paper, and for whom he cut in two his lead-pencil, and gave her half. At the last day of school she goes part way with John, and then he turns and goes a longer distance towards her home, so that it is late when he reaches his own. Is he late? He did n't know he was late; he came straight home when school was dismissed, only going a little way home with Alice Linton to help her carry her books. In a box in his chamber, which he has lately put a padlock on, among fishhooks and lines and baitboxes, odd pieces of brass, twine, early sweet apples, popcorn, beechnuts, and other articles of value, are some little billets-doux, fancifully folded, three-cornered or otherwise, and written, I will warrant, in red or beautifully blue ink. These little notes are parting gifts at the close of school, and John, no doubt, gave his own in exchange for them, though the writing was an immense labor, and the folding was a secret bought of another boy for a big piece of sweet flag-root baked in sugar, a delicacy which John used to carry in his pantaloons-pocket until his pocket was in such a state that putting his fingers into it was about as good as dipping them into the sugar-bowl at home. Each precious note contained a lock or curl of girl's hair,—a rare collection of all colors, after John had been in school many terms, and had passed through a great many parting scenes,—black, brown, red, tow-color, and some that looked like spun gold and felt like silk. The sentiment contained in the notes was that which was common in the school, and expressed a melancholy foreboding of early death, and a touching desire to leave hair enough this side the grave to constitute a sort of strand of remembrance. With little variation, the poetry that made the hair precious was in the words, and, as a Cockney would say, set to the hair, following:

*"This lock of hair,
Which I did wear,
Was taken from my head;
When this you see,
Remember me,
Long after I am dead."*

John liked to read these verses, which always made a new and fresh impression with each lock of hair, and he was not critical; they were for him vehicles of true sentiment, and indeed they were what he used when he inclosed a clip of his own sandy hair to a friend. And it did not occur to him until he was a great deal older and less innocent, to smile at them. John felt that he would sacredly keep every lock of hair intrusted to him, though death should come on the wings of cholera and take away every one of these sad, red-ink correspondents. When John's big brother one day caught sight of these treasures, and brutally told him that

he "had hair enough to stuff a horse-collar," John was so outraged and shocked, as he should have been, at this rude invasion of his heart, this coarse suggestion, this profanation of his most delicate feeling, that he was kept from crying only by the resolution to "lick" his brother as soon as ever he got big enough.

VIII. THE COMING OF THANKSGIVING

One of the best things in farming is gathering the chestnuts, hickory-nuts, butternuts, and even beechnuts, in the late fall, after the frosts have cracked the husks and the high winds have shaken them, and the colored leaves have strewn the ground. On a bright October day, when the air is full of golden sunshine, there is nothing quite so exhilarating as going nutting. Nor is the pleasure of it altogether destroyed for the boy by the consideration that he is making himself useful in obtaining supplies for the winter household. The getting-in of potatoes and corn is a different thing; that is the prose, but nutting is the poetry, of farm life. I am not sure but the boy would find it very irksome, though, if he were obliged to work at nut-gathering in order to procure food for the family. He is willing to make himself useful in his own way. The Italian boy, who works day after day at a huge pile of pine-cones, pounding and cracking them and taking out the long seeds, which are sold and eaten as we eat nuts (and which are almost as good as pumpkin-seeds, another favorite with the Italians), probably does not see the fun of nutting. Indeed, if the farmer-boy here were set at pounding off the walnut-shucks and opening the prickly chestnut-burs as a task, he would think himself an ill-used boy. What a hardship the prickles in his fingers would be! But now he digs them out with his jack-knife, and enjoys the process, on the whole. The boy is willing to do any amount of work if it is called play.

In nutting, the squirrel is not more nimble and industrious than the boy. I like to see a crowd of boys swarm over a chestnut-grove; they leave a desert behind them like the seventeen-year locusts. To climb a tree and shake it, to club it, to strip it of its fruit, and pass to the next, is the sport of a brief time. I have seen a legion of boys scamper over our grass-plot under the chestnut-trees, each one as active as if he were a new patent picking-machine, sweeping the ground clean of nuts, and disappear over the hill before I could go to the door and speak to them about it. Indeed, I have noticed that boys don't care much for conversation with the owners of fruit-trees. They could speedily make their fortunes if they would work as rapidly in cotton-fields. I have never seen anything like it, except a flock of turkeys removing the grasshoppers from a piece of pasture.

POUNDING OFF SHUCKS

Perhaps it is not generally known that we get the idea of some of our best military maneuvers from the turkey. The deploying of the skirmish-line in advance of an army is one of them. The drum-major of our holiday militia companies is copied exactly from the turkey gobbler; he has the same splendid appearance, the same proud step, and the same martial aspect. The gobbler does not lead his forces in the field, but goes behind them, like the colonel of a regiment, so that he can see every part of the line and direct its movements. This resemblance is one of the most singular things in natural history. I like to watch the gobbler maneuvering his forces in a grasshopper-field. He throws out his company of two dozen turkeys in a crescent-shaped skirmish-line, the number disposed at equal distances, while he walks majestically in the rear. They advance rapidly, picking right and left, with military precision, killing the foe and disposing of the dead bodies with the same peck. Nobody has yet discovered how many grasshoppers a turkey will hold; but he is very much like a boy at a Thanksgiving dinner,—he keeps on eating as long as the supplies last. The gobbler, in one of these raids, does not condescend to grab a single grasshopper,—at least, not while anybody is watching him. But I suppose he makes up for it when his dignity cannot be injured by having spectators of his voracity; perhaps he falls upon the grasshoppers when they are driven into a corner of the field. But he is only fattening himself for destruction; like all greedy persons, he comes to a bad end. And if the turkeys had any Sunday-school, they would be taught this.

The New England boy used to look forward to Thanksgiving as the great event of the year. He was apt to get stents set him,—so much corn to husk, for instance, before that day, so that he could have an extra play-spell; and in order to gain a day or two, he would work at his task with the rapidity of half a dozen boys. He always had the day after Thanksgiving as a holiday, and this was the day he counted on. Thanksgiving itself was rather an awful festival,—very much like Sunday, except for the enormous dinner, which filled his imagination for months before as completely as it did his stomach for that day and a week after. There was an impression in the house that that dinner was the most important event since the landing from the Mayflower. Heliogabalus, who did not resemble a Pilgrim Father at all, but who had prepared for himself in his day some

very sumptuous banquets in Rome, and ate a great deal of the best he could get (and liked peacocks stuffed with asafetida, for one thing), never had anything like a Thanksgiving dinner; for do you suppose that he, or Sardanapalus either, ever had twenty-four different kinds of pie at one dinner? Therein many a New England boy is greater than the Roman emperor or the Assyrian king, and these were among the most luxurious eaters of their day and generation. But something more is necessary to make good men than plenty to eat, as Heliogabalus no doubt found when his head was cut off. Cutting off the head was a mode the people had of expressing disapproval of their conspicuous men. Nowadays they elect them to a higher office, or give them a mission to some foreign country, if they do not do well where they are.

For days and days before Thanksgiving the boy was kept at work evenings, pounding and paring and cutting up and mixing (not being allowed to taste much), until the world seemed to him to be made of fragrant spices, green fruit, raisins, and pastry,—a world that he was only yet allowed to enjoy through his nose. How filled the house was with the most delicious smells! The mince-pies that were made! If John had been shut in solid walls with them piled about him, he could n't have eaten his way out in four weeks. There were dainties enough cooked in those two weeks to have made the entire year luscious with good living, if they had been scattered along in it. But people were probably all the better for scrimping themselves a little in order to make this a great feast. And it was not by any means over in a day. There were weeks deep of chicken-pie and other pastry. The cold buttery was a cave of Aladdin, and it took a long time to excavate all its riches.

Thanksgiving Day itself was a heavy day, the hilarity of it being so subdued by going to meeting, and the universal wearing of the Sunday clothes, that the boy could n't see it. But if he felt little exhilaration, he ate a great deal. The next day was the real holiday. Then were the merry-making parties, and perhaps the skatings and sleigh-rides, for the freezing weather came before the governor's proclamation in many parts of New England. The night after Thanksgiving occurred, perhaps, the first real party that the boy had ever attended, with live girls in it, dressed so bewitchingly. And there he heard those philandering songs, and played those sweet games of forfeits, which put him quite beside himself, and kept him awake that night till the rooster crowed at the end of his first chicken-nap. What a new world did that party open to him! I think it likely that he saw there, and probably did not dare say ten words to, some tall, graceful girl, much older than himself, who seemed to him like a new order of being. He could see her face just as plainly in the darkness of his chamber. He wondered if she noticed how awkward he was, and how short his trousers-legs were. He blushed as he thought of his rather ill-fitting shoes; and determined, then and there, that he wouldn't be put off with a ribbon any longer, but would have a young man's necktie. It was somewhat painful, thinking the party over, but it was delicious, too. He did not think, probably, that he would die for that tall, handsome girl; he did not put it exactly in that way. But he rather resolved to live for her, which might in the end amount to the same thing. At least, he thought that nobody would live to speak twice disrespectfully of her in his presence.

IX. THE SEASON OF PUMPKIN-PIE

What John said was, that he did n't care much for pumpkin-pie; but that was after he had eaten a whole one. It seemed to him then that mince would be better.

The feeling of a boy towards pumpkin-pie has never been properly considered. There is an air of festivity about its approach in the fall. The boy is willing to help pare and cut up the pumpkin, and he watches with the greatest interest the stirring-up process and the pouring into the scalloped crust. When the sweet savor of the baking reaches his nostrils, he is filled with the most delightful anticipations. Why should he not be? He knows that for months to come the buttery will contain golden treasures, and that it will require only a slight ingenuity to get at them.

The fact is, that the boy is as good in the buttery as in any part of farming. His elders say that the boy is always hungry; but that is a very coarse way to put it. He has only recently come into a world that is full of good things to eat, and there is, on the whole, a very short time in which to eat them; at least, he is told, among the first information he receives, that life is short. Life being brief, and pie and the like fleeting, he very soon decides upon an active campaign. It may be an old story to people who have been eating for forty or fifty years, but it is different with a beginner. He takes the thick and thin as it comes, as to pie, for instance. Some people do make them very thin. I knew a place where they were not thicker than the poor man's plaster; they were spread so thin upon the crust that they were better fitted to draw out hunger than to satisfy it. They used to be made up by the great oven-full and kept in the dry cellar, where they hardened and dried to a toughness you would hardly believe. This was a long time ago, and they make the pumpkin-pie in the country better now, or the race of boys would have been so discouraged that I think they would have stopped coming into the world.

The truth is, that boys have always been so plenty that they are not half appreciated. We have shown that a farm could not get along without them, and yet their rights are seldom recognized. One of the most amusing things is their effort to acquire personal property. The boy has the care of the calves; they always need feeding, or shutting up, or letting out; when the boy wants to play, there are those calves to be looked after,—until he gets to hate the name of calf. But in consideration of his faithfulness, two of them are given to him. There is no doubt that they are his: he has the entire charge of them. When they get to be steers he spends all his holidays in breaking them in to a yoke. He gets them so broken in that they will run like a pair of deer all over the farm, turning the yoke, and kicking their heels, while he follows in full chase, shouting the ox language till he is red in the face. When the steers grow up to be cattle, a drover one day comes along and takes them away, and the boy is told that he can have another pair of calves; and so, with undiminished faith, he goes back and begins over again to make his fortune. He owns lambs and young colts in the same way,

and makes just as much out of them.

There are ways in which the farmer-boy can earn money, as by gathering the early chestnuts and taking them to the corner store, or by finding turkeys' eggs and selling them to his mother; and another way is to go without butter at the table—but the money thus made is for the heathen. John read in Dr. Livingstone that some of the tribes in Central Africa (which is represented by a blank spot in the atlas) use the butter to grease their hair, putting on pounds of it at a time; and he said he had rather eat his butter than have it put to that use, especially as it melted away so fast in that hot climate.

Of course it was explained to John that the missionaries do not actually carry butter to Africa, and that they must usually go without it themselves there, it being almost impossible to make it good from the milk in the cocoanuts. And it was further explained to him that even if the heathen never received his butter or the money for it, it was an excellent thing for a boy to cultivate the habit of self-denial and of benevolence, and if the heathen never heard of him, he would be blessed for his generosity. This was all true.

But John said that he was tired of supporting the heathen out of his butter, and he wished the rest of the family would also stop eating butter and save the money for missions; and he wanted to know where the other members of the family got their money to send to the heathen; and his mother said that he was about half right, and that self-denial was just as good for grown people as it was for little boys and girls.

The boy is not always slow to take what he considers his rights. Speaking of those thin pumpkin-pies kept in the cellar cupboard. I used to know a boy, who afterwards grew to be a selectman, and brushed his hair straight up like General Jackson, and went to the legislature, where he always voted against every measure that was proposed, in the most honest manner, and got the reputation of being the "watch-dog of the treasury." Rats in the cellar were nothing to be compared to this boy for destructiveness in pies. He used to go down whenever he could make an excuse, to get apples for the family, or draw a mug of cider for his dear old grandfather (who was a famous story-teller about the Revolutionary War, and would no doubt have been wounded in battle if he had not been as prudent as he was patriotic), and come upstairs with a tallow candle in one hand and the apples or cider in the other, looking as innocent and as unconscious as if he had never done anything in his life except deny himself butter for the sake of the heathen. And yet this boy would have buttoned under his jacket an entire round pumpkin-pie. And the pie was so well made and so dry that it was not injured in the least, and it never hurt the boy's clothes a bit more than if it had been inside of him instead of outside; and this boy would retire to a secluded place and eat it with another boy, being never suspected because he was not in the cellar long enough to eat a pie, and he never appeared to have one about him. But he did something worse than this. When his mother saw that pie after pie departed, she told the family that she suspected the hired man; and the boy never said a word, which was the meanest kind of lying. That hired man was probably regarded with suspicion by the family to the end of his days, and if he had been accused of robbing, they would have believed him guilty.

I shouldn't wonder if that selectman occasionally has remorse now about that pie; dreams, perhaps, that it is buttoned up under his jacket and sticking to him like a breastplate; that it lies upon his stomach like a round and red-hot nightmare, eating into his vitals. Perhaps not. It is difficult to say exactly what was the sin of stealing that kind of pie, especially if the one who stole it ate it. It could have been used for the game of pitching quoits, and a pair of them would have made very fair wheels for the dog-cart. And yet it is probably as wrong to steal a thin pie as a thick one; and it made no difference because it was easy to steal this sort. Easy stealing is no better than easy lying, where detection of the lie is difficult. The boy who steals his mother's pies has no right to be surprised when some other boy steals his watermelons. Stealing is like charity in one respect,—it is apt to begin at home.

X. FIRST EXPERIENCE OF THE WORLD

If I were forced to be a boy, and a boy in the country,—the best kind of boy to be in the summer,—I would be about ten years of age. As soon as I got any older, I would quit it. The trouble with a boy is, that just as he begins to enjoy himself he is too old, and has to be set to doing something else. If a country boy were wise, he would stay at just that age when he could enjoy himself most, and have the least expected of him in the way of work.

Of course the perfectly good boy will always prefer to work and to do "chores" for his father and errands for his mother and sisters, rather than enjoy himself in his own way. I never saw but one such boy. He lived in the town of Goshen,—not the place where the butter is made, but a much better Goshen than that. And I never saw him, but I heard of him; and being about the same age, as I supposed, I was taken once from Zoah, where I lived, to Goshen to see him. But he was dead. He had been dead almost a year, so that it was impossible to see him. He died of the most singular disease: it was from not eating green apples in the season of them. This boy, whose name was Solomon, before he died, would rather split up kindling-wood for his mother than go a-fishing,—the consequence was, that he was kept at splitting kindling-wood and such work most of the time, and grew a better and more useful boy day by day.

RUNNING ON THE STONE WALL

Solomon would not disobey his parents and eat green apples,—not even when they were ripe enough to knock off with a stick, but he had such a longing for them, that he pined, and passed away. If he had eaten the green apples, he would have died of them, probably; so that his example is a difficult one to follow. In fact, a boy is a hard subject to get a moral from. All his little playmates who ate green apples came to Solomon's funeral, and were very sorry for what they had done.

John was a very different boy from Solomon, not half so good, nor half so dead. He was a farmer's boy, as Solomon was, but he did not take so much interest in the farm. If John could have had his way, he would have discovered a cave full of diamonds, and lots of nail-kegs full of gold-pieces and Spanish dollars, with a pretty little girl living in the cave, and two beautifully caparisoned horses, upon which, taking the jewels and money, they would have ridden off together, he did not know where. John had got thus far in his studies, which were apparently arithmetic and geography, but were in reality the Arabian Nights, and other books of high and mighty adventure. He was a simple country-boy, and did not know much about the world as it is, but he had one of his own imagination, in which he lived a good deal. I daresay he found out soon enough what the world is, and he had a lesson or two when he was quite young, in two incidents, which I may as well relate.

If you had seen John at this time, you might have thought he was only a shabbily dressed country lad, and you never would have guessed what beautiful thoughts he sometimes had as he went stubbing his toes along the dusty road, nor what a chivalrous little fellow he was. You would have seen a short boy, barefooted, with trousers at once too big and too short, held up perhaps by one suspender only, a checked cotton shirt, and a hat of braided palm-leaf, frayed at the edges and bulged up in the crown. It is impossible to keep a hat neat if you use it to catch bumblebees and whisk 'em; to bail the water from a leaky boat; to catch minnows in; to put over honey-bees' nests, and to transport pebbles, strawberries, and hens' eggs. John usually carried a sling in his hand, or a bow, or a limber stick, sharp at one end, from which he could sling apples a great distance. If he walked in the road, he walked in the middle of it, shuffling up the dust; or if he went elsewhere, he was likely to be running on the top of the fence or the stone wall, and chasing chipmunks.

John knew the best place to dig sweet-flag in all the farm; it was in a meadow by the river, where the bobolinks sang so gayly. He never liked to hear the bobolink sing, however, for he said it always reminded him of the whetting of a scythe, and that reminded him of spreading hay; and if there was anything he hated, it was spreading hay after the mowers. "I guess you would n't like it yourself," said John, "with the stubbs getting into your feet, and the hot sun, and the men getting ahead of you, all you could do."

Towards evening, once, John was coming along the road home with some stalks of the sweet-flag in his hand; there is a succulent pith in the end of the stalk which is very good to eat,—tender, and not so strong as the root; and John liked to pull it, and carry home what he did not eat on the way. As he was walking along he met a carriage, which stopped opposite to him; he also stopped and bowed, as country boys used to bow in John's day. A lady leaned from the carriage, and said:

"What have you got, little boy?"

She seemed to be the most beautiful woman John had ever seen; with light hair, dark, tender eyes, and the sweetest smile. There was that in her gracious mien and in her dress which reminded John of the beautiful castle ladies, with whom he was well acquainted in books. He felt that he knew her at once, and he also seemed to be a sort of young prince himself. I fancy he did n't look much like one. But of his own appearance he thought not at all, as he replied to the lady's question, without the least embarrassment:

"It's sweet-flag stalk; would you like some?"

"Indeed, I should like to taste it," said the lady, with a most winning smile. "I used to be very fond of it when I was a little girl."

John was delighted that the lady should like sweet-flag, and that she was pleased to accept it from him. He thought himself that it was about the best thing to eat he knew. He handed up a large bunch of it. The lady took two or three stalks, and was about to return the rest, when John said:

"Please keep it all, ma'am. I can get lots more."

"I know where it's ever so thick."

"Thank you, thank you," said the lady; and as the carriage started, she reached out her hand to John. He did not understand the motion, until he saw a cent drop in the road at his feet. Instantly all his illusion and his pleasure vanished. Something like tears were in his eyes as he shouted:

"I don't want your cent. I don't sell flag!"

John was intensely mortified. "I suppose," he said, "she thought I was a sort of beggar-boy. To think of

selling flag!"

At any rate, he walked away and left the cent in the road, a humiliated boy. The next day he told Jim Gates about it. Jim said he was green not to take the money; he'd go and look for it now, if he would tell him about where it dropped. And Jim did spend an hour poking about in the dirt, but he did not find the cent. Jim, however, had an idea; he said he was going to dig sweet-flag, and see if another carriage wouldn't come along.

John's next rebuff and knowledge of the world was of another sort. He was again walking the road at twilight, when he was overtaken by a wagon with one seat, upon which were two pretty girls, and a young gentleman sat between them, driving. It was a merry party, and John could hear them laughing and singing as they approached him. The wagon stopped when it overtook him, and one of the sweet-faced girls leaned from the seat and said, quite seriously and pleasantly:

"Little boy, how's your mar?"

John was surprised and puzzled for a moment. He had never seen the young lady, but he thought that she perhaps knew his mother; at any rate, his instinct of politeness made him say:

"She's pretty well, I thank you."

"Does she know you are out?"

And thereupon all three in the wagon burst into a roar of laughter, and dashed on.

It flashed upon John in a moment that he had been imposed on, and it hurt him dreadfully. His self-respect was injured somehow, and he felt as if his lovely, gentle mother had been insulted. He would like to have thrown a stone at the wagon, and in a rage he cried:

"You're a nice...." but he could n't think of any hard, bitter words quick enough.

Probably the young lady, who might have been almost any young lady, never knew what a cruel thing she had done.

XI. HOME INVENTIONS

The winter season is not all sliding downhill for the farmer-boy, by any means; yet he contrives to get as much fun out of it as from any part of the year. There is a difference in boys: some are always jolly, and some go scowling always through life as if they had a stone-bruise on each heel. I like a jolly boy.

I used to know one who came round every morning to sell molasses candy, offering two sticks for a cent apiece; it was worth fifty cents a day to see his cheery face. That boy rose in the world. He is now the owner of a large town at the West. To be sure, there are no houses in it except his own; but there is a map of it, and roads and streets are laid out on it, with dwellings and churches and academies and a college and an opera-house, and you could scarcely tell it from Springfield or Hartford,—on paper. He and all his family have the fever and ague, and shake worse than the people at Lebanon; but they do not mind it; it makes them lively, in fact. Ed May is just as jolly as he used to be. He calls his town Mayopolis, and expects to be mayor of it; his wife, however, calls the town Maybe.

The farmer-boy likes to have winter come for one thing, because it freezes up the ground so that he can't dig in it; and it is covered with snow so that there is no picking up stones, nor driving the cows to pasture. He would have a very easy time if it were not for the getting up before daylight to build the fires and do the "chores." Nature intended the long winter nights for the farmer-boy to sleep; but in my day he was expected to open his sleepy eyes when the cock crew, get out of the warm bed and light a candle, struggle into his cold pantaloons, and pull on boots in which the thermometer would have gone down to zero, rake open the coals on the hearth and start the morning fire, and then go to the barn to "fodder." The frost was thick on the kitchen windows, the snow was drifted against the door, and the journey to the barn, in the pale light of dawn, over the creaking snow, was like an exile's trip to Siberia. The boy was not half awake when he stumbled into the cold barn, and was greeted by the lowing and bleating and neighing of cattle waiting for their breakfast. How their breath steamed up from the mangers, and hung in frosty spears from their noses. Through the great lofts above the hay, where the swallows nested, the winter wind whistled, and the snow sifted. Those old barns were well ventilated.

I used to spend much valuable time in planning a barn that should be tight and warm, with a fire in it, if necessary, in order to keep the temperature somewhere near the freezing-point. I could n't see how the cattle could live in a place where a lively boy, full of young blood, would freeze to death in a short time if he did not swing his arms and slap his hands, and jump about like a goat. I thought I would have a sort of perpetual manger that should shake down the hay when it was wanted, and a self-acting machine that should cut up the turnips and pass them into the mangers, and water always flowing for the cattle and horses to drink. With these simple arrangements I could lie in bed, and know that the "chores" were doing themselves. It would also be necessary, in order that I should not be disturbed, that the crow should be taken out of the roosters, but I could think of no process to do it. It seems to me that the hen-breeders, if they know as much as they say they do, might raise a breed of crowless roosters for the benefit of boys, quiet neighborhoods, and sleepy families.

There was another notion that I had about kindling the kitchen fire, that I never carried out. It was to have a spring at the head of my bed, connecting with a wire, which should run to a torpedo which I would plant over night in the ashes of the fireplace. By touching the spring I could explode the torpedo, which would scatter the ashes and cover the live coals, and at the same time shake down the sticks of wood which were standing by the side of the ashes in the chimney, and the fire would kindle itself. This ingenious plan was frowned on by the whole family, who said they did not want to be waked up every morning by an explosion. And yet they expected me to wake up without an explosion! A boy's plans for making life agreeable are hardly ever heeded.

I never knew a boy farmer who was not eager to go to the district school in the winter. There is such a chance for learning, that he must be a dull boy who does not come out in the spring a fair skater, an accurate snow-baller, and an accomplished slider-down-hill, with or without a board, on his seat, on his stomach, or on his feet. Take a moderate hill, with a foot-slide down it worn to icy smoothness, and a "go-round" of boys on it, and there is nothing like it for whittling away boot-leather. The boy is the shoemaker's friend. An active lad can wear down a pair of cowhide soles in a week so that the ice will scrape his toes. Sledding or coasting is also slow fun compared to the "bareback" sliding down a steep hill over a hard, glistening crust. It is not only dangerous, but it is destructive to jacket and pantaloons to a degree to make a tailor laugh. If any other animal wore out his skin as fast as a schoolboy wears out his clothes in winter, it would need a new one once a month. In a country district-school patches were not by any means a sign of poverty, but of the boy's courage and adventurous disposition. Our elders used to threaten to dress us in leather and put sheet-iron seats in our trousers. The boy said that he wore out his trousers on the hard seats in the schoolhouse ciphering hard sums. For that extraordinary statement he received two castigations,—one at home, that was mild, and one from the schoolmaster, who was careful to lay the rod upon the boy's sliding-place, punishing him, as he jocosely called it, on a sliding scale, according to the thinness of his pantaloons.

What I liked best at school, however, was the study of history,—early history,—the Indian wars. We studied it mostly at noontime, and we had it illustrated as the children nowadays have "object-lessons," though our object was not so much to have lessons as it was to revive real history.

IN SCHOOL

Back of the schoolhouse rose a round hill, upon which, tradition said, had stood in colonial times a block-house, built by the settlers for defense against the Indians. For the Indians had the idea that the whites were not settled enough, and used to come nights to settle—they with a tomahawk. It was called Fort Hill. It was very steep on each side, and the river ran close by. It was a charming place in summer, where one could find laurel, and checkerberries, and sassafras roots, and sit in the cool breeze, looking at the mountains across the river, and listening to the murmur of the Deerfield. The Methodists built a meeting-house there afterwards, but the hill was so slippery in winter that the aged could not climb it and the wind raged so fiercely that it blew nearly all the young Methodists away (many of whom were afterwards heard of in the West), and finally the meeting-house itself came down into the valley, and grew a steeple, and enjoyed itself ever afterwards. It used to be a notion in New England that a meeting-house ought to stand as near heaven as possible.

The boys at our school divided themselves into two parties: one was the Early Settlers and the other the Pequots, the latter the most numerous. The Early Settlers built a snow fort on the hill, and a strong fortress it was, constructed of snowballs, rolled up to a vast size (larger than the cyclopean blocks of stone which form the ancient Etruscan walls in Italy), piled one upon another, and the whole cemented by pouring on water which froze and made the walls solid. The Pequots helped the whites build it. It had a covered way under the snow, through which only could it be entered, and it had bastions and towers and openings to fire from, and a great many other things for which there are no names in military books. And it had a glacis and a ditch outside.

When it was completed, the Early Settlers, leaving the women in the schoolhouse, a prey to the Indians, used to retire into it, and await the attack of the Pequots. There was only a handful of the garrison, while the Indians were many, and also barbarous. It was agreed that they should be barbarous. And it was in this light that the great question was settled whether a boy might snowball with balls that he had soaked over night in water and let freeze. They were as hard as cobble-stones, and if a boy should be hit in the head by one of them, he could not tell whether he was a Pequot or an Early Settler. It was considered as unfair to use these ice-balls in open fight, as it is to use poisoned ammunition in real war. But as the whites were protected by the fort, and the Indians were treacherous by nature, it was decided that the latter might use the hard missiles.

The Pequots used to come swarming up the hill, with hideous war-whoops, attacking the fort on all sides with great noise and a shower of balls. The garrison replied with yells of defiance and well-directed shots, hurling back the invaders when they attempted to scale the walls. The Settlers had the advantage of position, but they were sometimes overpowered by numbers, and would often have had to surrender but for the ringing of the school-bell. The Pequots were in great fear of the school-bell.

I do not remember that the whites ever hauled down their flag and surrendered voluntarily; but once or twice the fort was carried by storm and the garrison were massacred to a boy, and thrown out of the fortress, having been first scalped. To take a boy's cap was to scalp him, and after that he was dead, if he played fair. There were a great many hard hits given and taken, but always cheerfully, for it was in the cause of our early history. The history of Greece and Rome was stuff compared to this. And we had many boys in our school who could imitate the Indian war whoop enough better than they could scan arma, virumque cano.

XII. THE LONELY FARMHOUSE

The winter evenings of the farmer-boy in New England used not to be so gay as to tire him of the pleasures of life before he became of age. A remote farmhouse, standing a little off the road, banked up with sawdust and earth to keep the frost out of the cellar, blockaded with snow, and flying a blue flag of smoke from its chimney, looks like a besieged fort. On cold and stormy winter nights, to the traveler wearily dragging along in his creaking sleigh, the light from its windows suggests a house of refuge and the cheer of a blazing fire. But it is no less a fort, into which the family retire when the New England winter on the hills really sets in.

The boy is an important part of the garrison. He is not only one of the best means of communicating with the outer world, but he furnishes half the entertainment and takes two thirds of the scolding of the family circle. A farm would come to grief without a boy-on it, but it is impossible to think of a farmhouse without a boy in it.

"That boy" brings life into the house; his tracks are to be seen everywhere; he leaves all the doors open; he has n't half filled the wood-box; he makes noise enough to wake the dead; or he is in a brown-study by the fire and cannot be stirred, or he has fastened a grip into some Crusoe book which cannot easily be shaken off. I suppose that the farmer-boy's evenings are not now what they used to be; that he has more books, and less to do, and is not half so good a boy as formerly, when he used to think the almanac was pretty lively reading, and the comic almanac, if he could get hold of that, was a supreme delight.

Of course he had the evenings to himself, after he had done the "chores" at the barn, brought in the wood and piled it high in the box, ready to be heaped upon the great open fire. It was nearly dark when he came from school (with its continuation of snowballing and sliding), and he always had an agreeable time stumbling and fumbling around in barn and wood-house, in the waning light.

John used to say that he supposed nobody would do his "chores" if he did not get home till midnight; and he was never contradicted. Whatever happened to him, and whatever length of days or sort of weather was produced by the almanac, the cardinal rule was that he should be at home before dark.

John used to imagine what people did in the dark ages, and wonder sometimes whether he was n't still in them.

Of course, John had nothing to do all the evening, after his "chores,"—except little things. While he drew his chair up to the table in order to get the full radiance of the tallow candle on his slate or his book, the women of the house also sat by the table knitting and sewing. The head of the house sat in his chair, tipped back against the chimney; the hired man was in danger of burning his boots in the fire. John might be deep in the excitement of a bear story, or be hard at writing a "composition" on his greasy slate; but whatever he was doing, he was the only one who could always be interrupted. It was he who must snuff the candles, and put on a stick of wood, and toast the cheese, and turn the apples, and crack the nuts. He knew where the fox-and-geese board was, and he could find the twelve-men-Morris. Considering that he was expected to go to bed at eight o'clock, one would say that the opportunity for study was not great, and that his reading was rather interrupted. There seemed to be always something for him to do, even when all the rest of the family came as near being idle as is ever possible in a New England household.

No wonder that John was not sleepy at eight o'clock; he had been flying about while the others had been yawning before the fire. He would like to sit up just to see how much more solemn and stupid it would become as the night went on; he wanted to tinker his skates, to mend his sled, to finish that chapter. Why should he go away from that bright blaze, and the company that sat in its radiance, to the cold and solitude of his chamber? Why did n't the people who were sleepy go to bed?

How lonesome the old house was; how cold it was, away from that great central fire in the heart of it; how its timbers creaked as if in the contracting pinch of the frost; what a rattling there was of windows, what a concerted attack upon the clapboards; how the floors squeaked, and what gusts from round corners came to snatch the feeble flame of the candle from the boy's hand. How he shivered, as he paused at the staircase window to look out upon the great fields of snow, upon the stripped forest, through which he could hear the wind raving in a kind of fury, and up at the black flying clouds, amid which the young moon was dashing and driven on like a frail shallop at sea. And his teeth chattered more than ever when he got into the icy sheets, and drew himself up into a ball in his flannel nightgown, like a fox in his hole.

For a little time he could hear the noises downstairs, and an occasional laugh; he could guess that now they were having cider, and now apples were going round; and he could feel the wind tugging at the house, even sometimes shaking the bed. But this did not last long. He soon went away into a country he always delighted to be in: a calm place where the wind never blew, and no one dictated the time of going to bed to any one else. I like to think of him sleeping there, in such rude surroundings, ingenious, innocent, mischievous, with no thought of the buffeting he is to get from a world that has a good many worse places for a boy than the hearth of an old farmhouse, and the sweet, though undemonstrative, affection of its family life.

But there were other evenings in the boy's life, that were different from these at home, and one of them he will never forget. It opened a new world to John, and set him into a great flutter. It produced a revolution in his mind in regard to neckties; it made him wonder if greased boots were quite the thing compared with blacked boots; and he wished he had a long looking-glass, so that he could see, as he walked away from it, what was the effect of round patches on the portion of his trousers he could not see, except in a mirror; and if patches were quite stylish, even on everyday trousers. And he began to be very much troubled about the parting of his hair, and how to find out on which side was the natural part.

The evening to which I refer was that of John's first party. He knew the girls at school, and he was interested in some of them with a different interest from that he took in the boys. He never wanted to "take it out" with one of them, for an insult, in a stand-up fight, and he instinctively softened a boy's natural rudeness when he was with them. He would help a timid little girl to stand erect and slide; he would draw her on his sled, till his hands were stiff with cold, without a murmur; he would generously give her red apples into which he longed to set his own sharp teeth; and he would cut in two his lead-pencil for a girl, when he would not for a boy. Had he not some of the beautiful auburn tresses of Cynthia Rudd in his skate, spruce-gum, and wintergreen box at home? And yet the grand sentiment of life was little awakened in John. He liked best to be with boys, and their rough play suited him better than the amusements of the shrinking, fluttering, timid, and sensitive little girls. John had not learned then that a spider-web is stronger than a cable; or that a pretty little girl could turn him round her finger a great deal easier than a big bully of a boy could make him cry "enough."

John had indeed been at spelling-schools, and had accomplished the feat of "going home with a girl" afterwards; and he had been growing into the habit of looking around in meeting on Sunday, and noticing how Cynthia was dressed, and not enjoying the service quite as much if Cynthia was absent as when she was present. But there was very little sentiment in all this, and nothing whatever to make John blush at hearing her name.

But now John was invited to a regular party. There was the invitation, in a three-cornered billet, sealed with a transparent wafer: "Miss C. Rudd requests the pleasure of the company of," etc., all in blue ink, and the finest kind of pin-scratching writing. What a precious document it was to John! It even exhaled a faint sort of perfume, whether of lavender or caraway-seed he could not tell. He read it over a hundred times, and showed it confidentially to his favorite cousin, who had beaux of her own and had even "sat up" with them in the parlor. And from this sympathetic cousin John got advice as to what he should wear and how he should conduct himself at the party.

XIII. JOHN'S FIRST PARTY

It turned out that John did not go after all to Cynthia Rudd's party, having broken through the ice on the river when he was skating that day, and, as the boy who pulled him out said, "come within an inch of his life." But he took care not to tumble into anything that should keep him from the next party, which was given with due formality by Melinda Mayhew.

John had been many a time to the house of Deacon Mayhew, and never with any hesitation, even if he knew that both the deacon's daughters—Melinda and Sophronia were at home. The only fear he had felt was of the deacon's big dog, who always surlily watched him as he came up the tan-bark walk, and made a rush at him if he showed the least sign of wavering. But upon the night of the party his courage vanished, and he thought he would rather face all the dogs in town than knock at the front door.

The parlor was lighted up, and as John stood on the broad flagging before the front door, by the lilac-bush, he could hear the sound of voices—girls' voices—which set his heart in a flutter. He could face the whole district school of girls without flinching,—he didn't mind 'em in the meeting-house in their Sunday best; but he began to be conscious that now he was passing to a new sphere, where the girls are supreme and superior, and he began to feel for the first time that he was an awkward boy. The girl takes to society as naturally as a duckling does to the placid pond, but with a semblance of shy timidity; the boy plunges in with a great splash, and hides his shy awkwardness in noise and commotion.

When John entered, the company had nearly all come. He knew them every one, and yet there was something about them strange and unfamiliar. They were all a little afraid of each other, as people are apt to be when they are well dressed and met together for social purposes in the country. To be at a real party was a novel thing for most of them, and put a constraint upon them which they could not at once overcome.

Perhaps it was because they were in the awful parlor,—that carpeted room of haircloth furniture, which was so seldom opened. Upon the wall hung two certificates framed in black,—one certifying that, by the payment of fifty dollars, Deacon Mayhew was a life member of the American Tract Society, and the other that, by a like outlay of bread cast upon the waters, his wife was a life member of the A. B. C. F. M., a portion of the alphabet which has an awful significance to all New England childhood. These certificates are a sort of receipt in full for charity, and are a constant and consoling reminder to the farmer that he has discharged his religious duties.

There was a fire on the broad hearth, and that, with the tallow candles on the mantelpiece, made quite an illumination in the room, and enabled the boys, who were mostly on one side of the room, to see the girls, who were on the other, quite plainly. How sweet and demure the girls looked, to be sure! Every boy was thinking if his hair was slick, and feeling the full embarrassment of his entrance into fashionable life. It was queer that these children, who were so free everywhere else, should be so constrained now, and not know what to do with themselves. The shooting of a spark out upon the carpet was a great relief, and was accompanied by a deal of scrambling to throw it back into the fire, and caused much giggling. It was only gradually that the formality was at all broken, and the young people got together and found their tongues.

John at length found himself with Cynthia Rudd, to his great delight and considerable embarrassment, for Cynthia, who was older than John, never looked so pretty. To his surprise he had nothing to say to her. They had always found plenty to talk about before—but now nothing that he could think of seemed worth saying at a party.

“It is a pleasant evening,” said John.

“It is quite so,” replied Cynthia.

“Did you come in a cutter?” asked John anxiously.

“No; I walked on the crust, and it was perfectly lovely walking,” said Cynthia, in a burst of confidence.

“Was it slippery?” continued John.

“Not very.”

John hoped it would be slippery—very—when he walked home with Cynthia, as he determined to do, but he did not dare to say so, and the conversation ran aground again. John thought about his dog and his sled and his yoke of steers, but he didn't see any way to bring them into conversation. Had she read the “Swiss Family Robinson”? Only a little ways. John said it was splendid, and he would lend it to her, for which she thanked him, and said, with such a sweet expression, she should be so glad to have it from him. That was encouraging.

And then John asked Cynthia if she had seen Sally Hawkes since the husking at their house, when Sally found so many red ears; and didn't she think she was a real pretty girl.

“Yes, she was right pretty;” and Cynthia guessed that Sally knew it pretty well. But did John like the color of her eyes?

No; John didn't like the color of her eyes exactly.

“Her mouth would be well enough if she did n't laugh so much and show her teeth.”

John said her mouth was her worst feature.

“Oh, no,” said Cynthia warmly; “her mouth is better than her nose.”

John did n't know but it was better than her nose, and he should like her looks better if her hair was n't so dreadful black.

But Cynthia, who could afford to be generous now, said she liked black hair, and she wished hers was dark. Whereupon John protested that he liked light hair—auburn hair—of all things.

And Cynthia said that Sally was a dear, good girl, and she did n't believe one word of the story that she only really found one red ear at the husking that night, and hid that and kept pulling it out as if it were a new one.

And so the conversation, once started, went on as briskly as possible about the paring-bee, and the spelling-school, and the new singing-master who was coming, and how Jack Thompson had gone to Northampton to be a clerk in a store, and how Elvira Reddington, in the geography class at school, was asked what was the capital of Massachusetts, and had answered “Northampton,” and all the school laughed. John enjoyed the conversation amazingly, and he half wished that he and Cynthia were the whole of the party.
